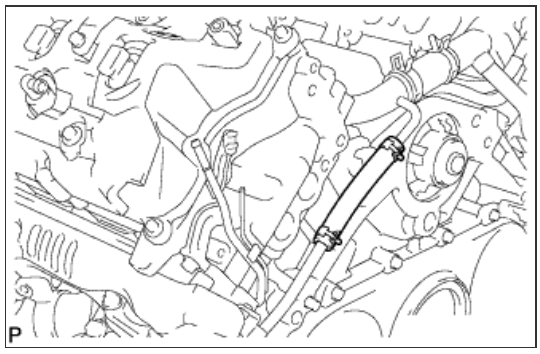
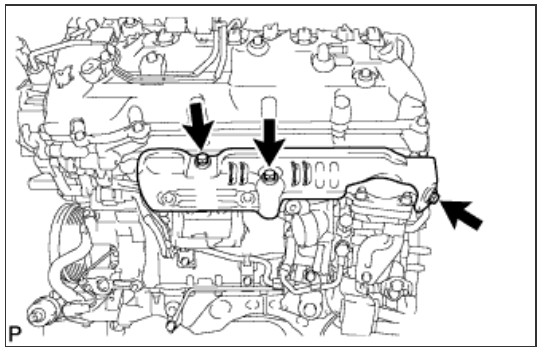
c. Remove the gasket from the cylinder head RH.

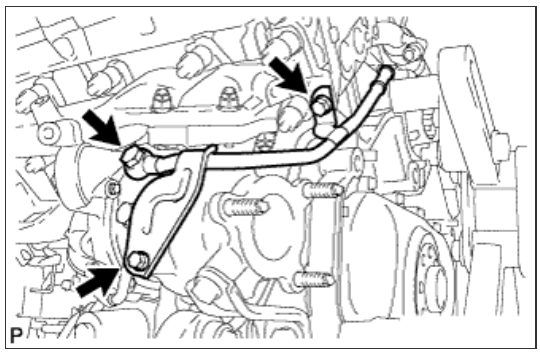


1 . DISCONNECT NO. 3 VENTILATION HOSE

17. DISCONNECT BREATHER PLUG LH

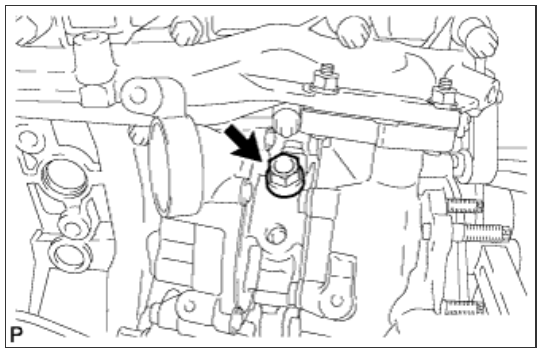


18. DISCONNECT NO. 2 TURBO WATER HOSE



1 . REMOVE NO. 2 E HAUST MANIFOLD HEAT INSULATOR

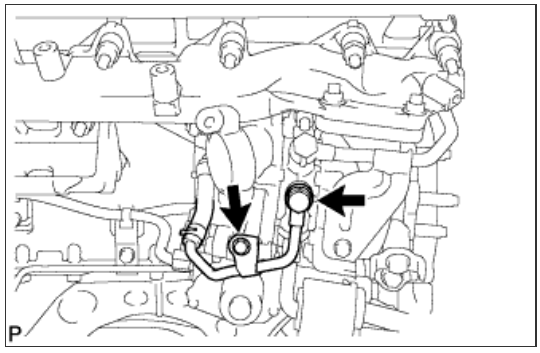
a. Remove the 3 bolts and No. 2 exhaust manifold heat insulator.



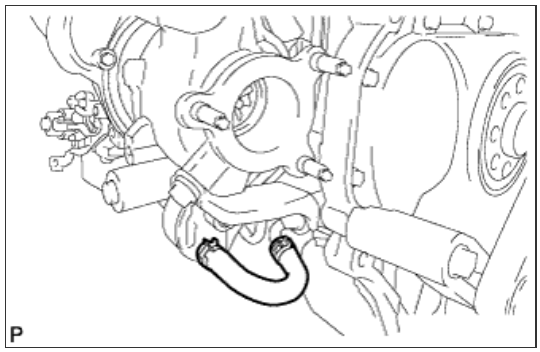
20. REMOVE NO. 3 TURBO WATER PIPE SUB ASSEMBLY

a. Remove the 2 bolts, union bolt, No. 3 turbo water pipe and gasket.

21. REMOVE FRONT WATER BY-PASS JOINT



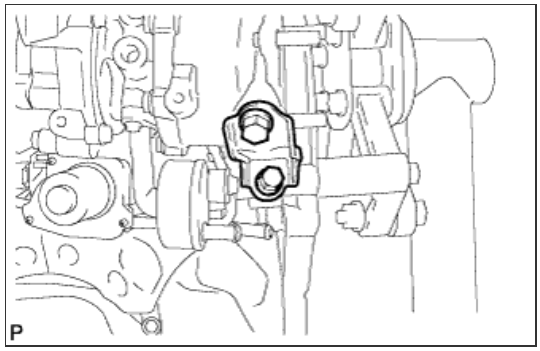
a. Remove the front water by-pass joint and gasket.



22. REMOVE NO. 2 TURBO WATER PIPE SUB-ASSEMBLY

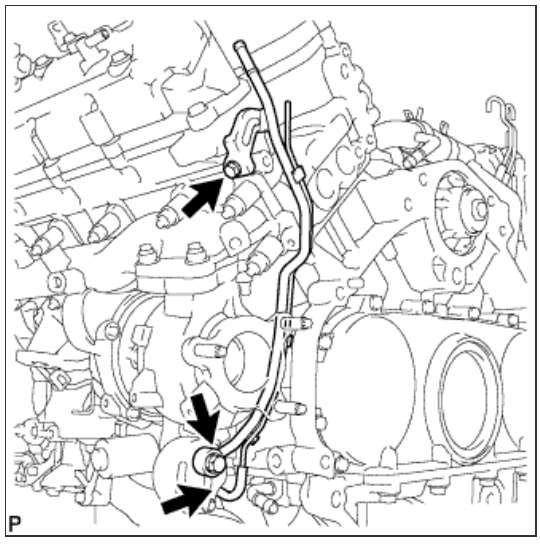
a. Disconnect the water hose.

b. Remove the union bolt, bolt, No. 2 turbo water pipe and gasket.



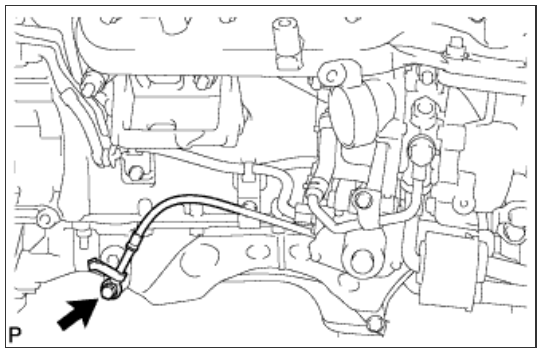
23. DISCONNECT NO. 2 OUTLET TURBO OIL HOSE

24. REMOVE NO. 2 TURBOCHARGER STAY



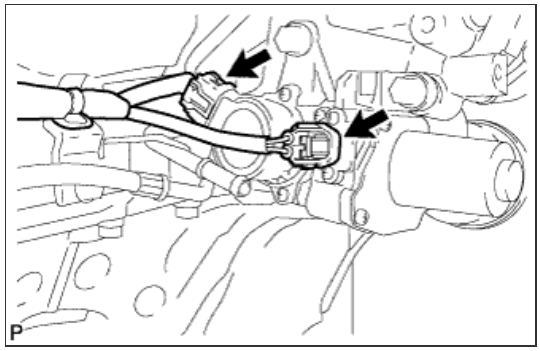
a. Remove the 2 bolts and No. 2 turbocharger stay.

2 . REMOVE NO. 2 VENTILATION TUBE SUB ASSEMBLY

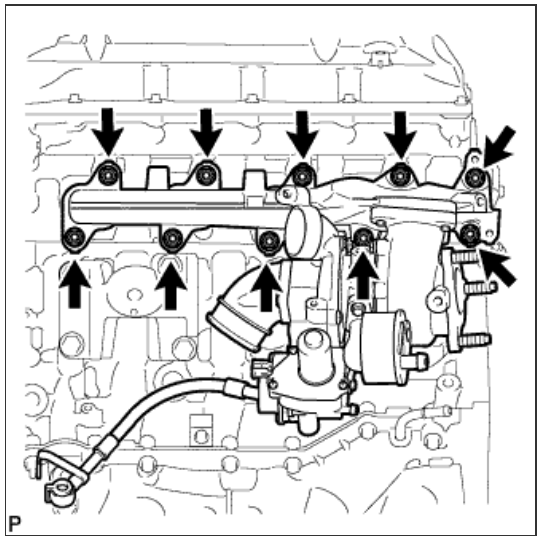


a. Disconnect the No. 2 vacuum transmitting hose.

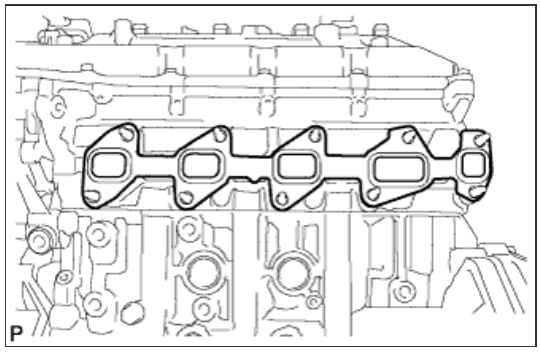
b. Remove the union bolt, bolt, No. 2 ventilation tube and gasket.



2 . REMOVE NO. 2 TURBOCHARGER SUB ASSEMBLY WITH E HAUST MANIFOLD LH

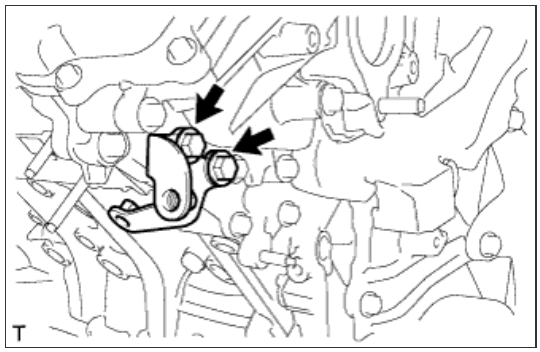


a. Remove the union bolt and gasket, and disconnect the No. 2 inlet turbo oil pipe.

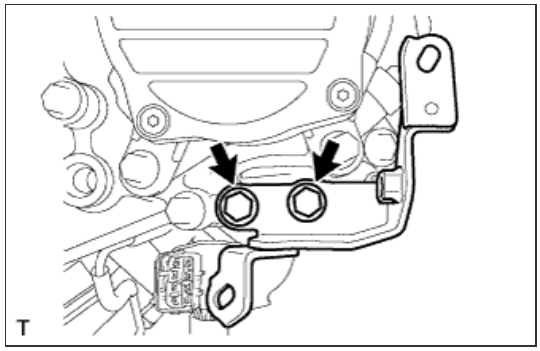


b. Disconnect the 2 connectors from the turbocharger.

c. Remove the 10 nuts, 10 collars, and No. 2 turbocharger with exhaust manifold LH.

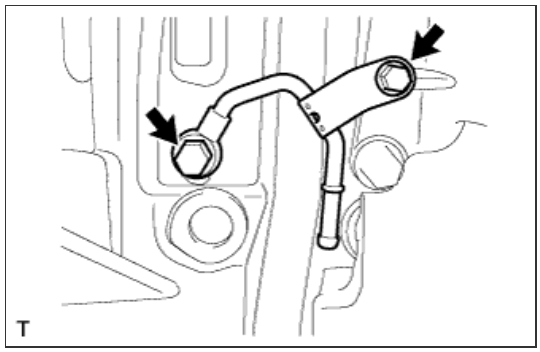


d. Remove the gasket from the cylinder head LH.



27. REMOVE NO. 1 INTAKE AIR CONNECTOR BRACKET

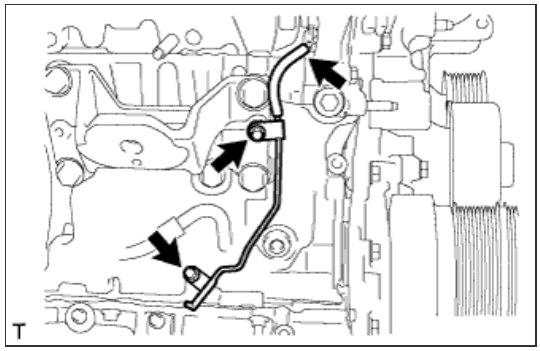
a. Remove the 2 bolts and No. 1 intake air connector bracket.



28. REMOVE AIR TUBE SUPPORT

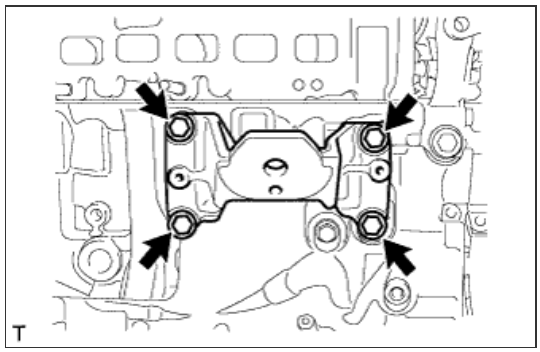
a. Remove the 2 bolts and air tube support.

2 . REMOVE NO. 1 WATER BY PASS PIPE SUB ASSEMBLY



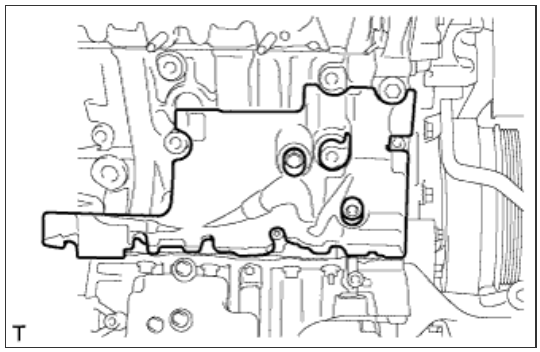
a. Remove the union bolt, bolt, No. 1 water by-pass pipe and gasket.

30. REMOVE NO. 4 VACUUM TRANSMITTING PIPE SUB ASSEMBLY (w/ Intercooler)



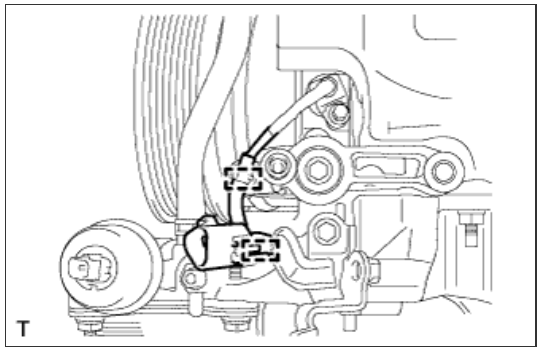
a. Disconnect the vacuum hose.

b. Remove the 2 bolts and No. 4 vacuum transmitting pipe.

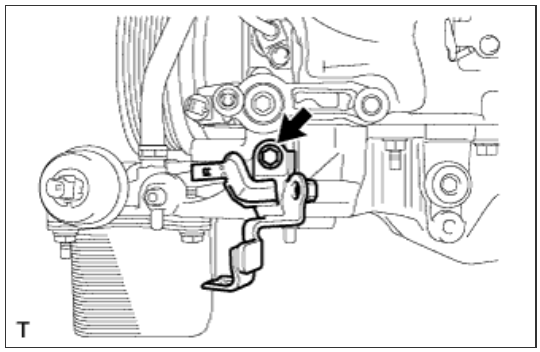


31. REMOVE ENGINE MOUNTING BRACKET RH

a. Remove the 4 bolts and engine mounting bracket RH.

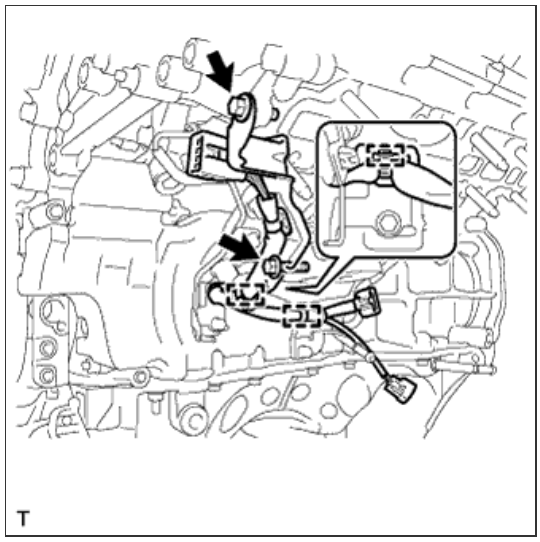


32. REMOVE NO. 1 CYLINDER BLOCK INSULATOR



33. REMOVE NO. 2 INTAKE AIR CONNECTOR BRACKET

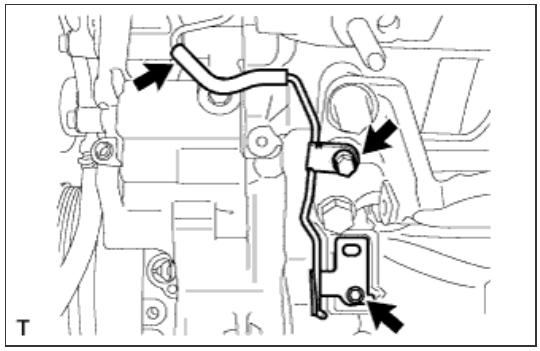
a. Detach the 2 wire harness clamps.



b. Remove the bolt and No. 2 intake air connector bracket.

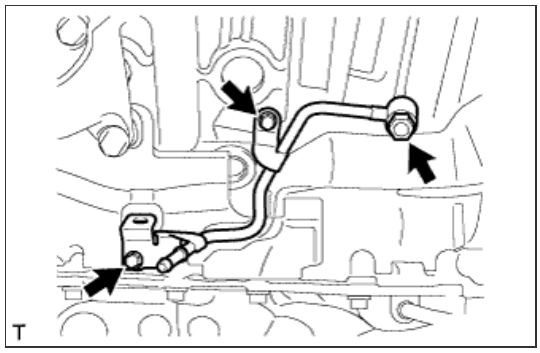
34. REMOVE TURBOCHARGER WIRE

a. Detach the 3 wire harness clamps.



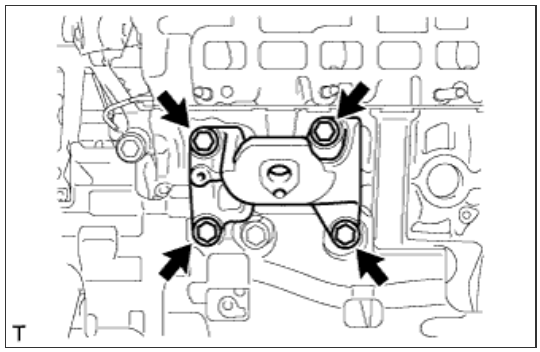
b. Remove the 2 bolts and turbocharger wire.

3 . REMOVE NO. 3 VACUUM TRANSMITTING PIPE SUB ASSEMBLY



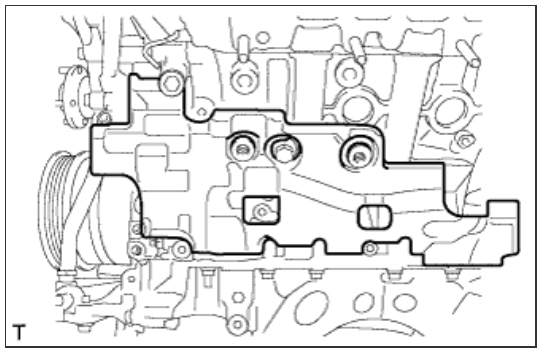
a. w/ Intercooler:
Disconnect the vacuum hose.

b. Remove the 2 bolts and No. 3 vacuum transmitting pipe.



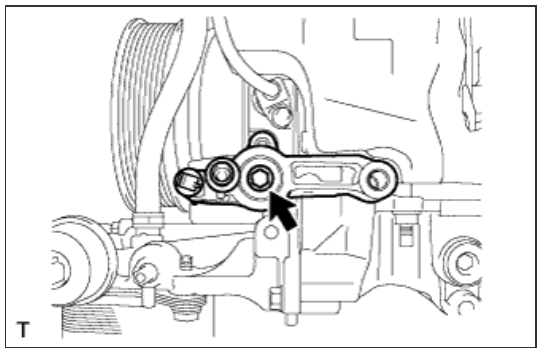
3 . REMOVE NO. 2 WATER BY PASS PIPE SUB ASSEMBLY

a. Remove the union bolt, 2 bolts, No. 2 water by-pass pipe and gasket.

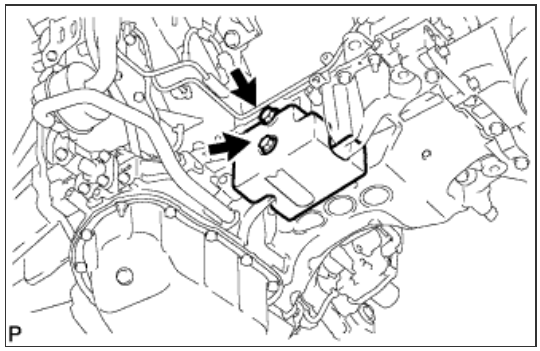


37. REMOVE ENGINE MOUNTING BRACKET LH

a. Remove the 4 bolts and engine mounting bracket LH.

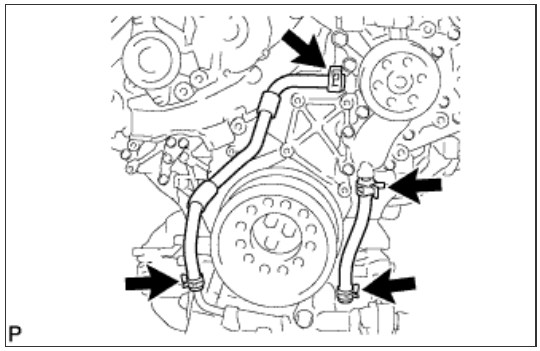


38. REMOVE NO. 2 CYLINDER BLOCK INSULATOR



3 . REMOVE COMPRESSOR BRACKET

a. Remove the bolt and compressor bracket.



40. REMOVE STIFFENER INSULATOR RH (w/ Intercooler)

a. Remove the 2 bolts and stiffener insulator RH.

41. DISCONNECT NO. 1 OIL COOLER HOSE

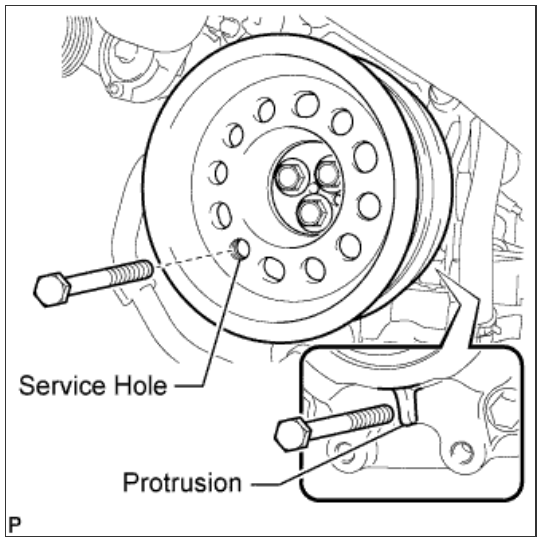
42. DISCONNECT NO. 2 OIL COOLER HOSE

43. REMOVE CRANKSHAFT PULLEY

NOTICE:

This procedure is intended for removal/installation of the crankshaft pulley only. Do not use this procedure for removal/installation of the flywheel or the drive plate and ring gear.

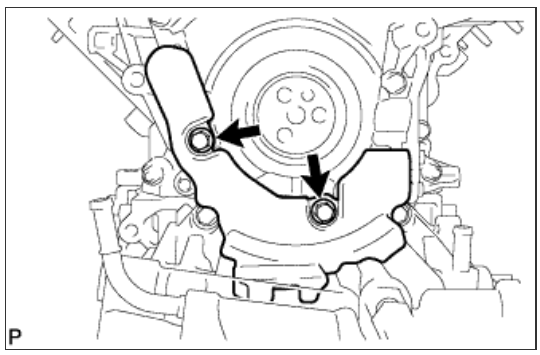
a. Install the 2 bolts to the bolt holes of the crankshaft rear side.



b. Using a bar, turn the crankshaft until the crankshaft pulley service hole is a little to the left of bottom dead center.

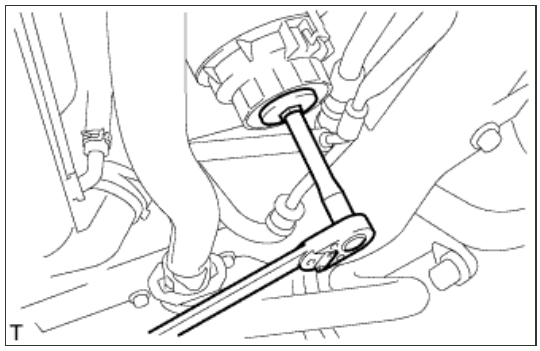
c. Install a 14 mm x 1.5 pitch service bolt with a length of 70 mm or more to the crankshaft pulley service hole, and hold the crankshaft using the timing chain cover protrusion.

d. Remove the 3 bolts and crankshaft pulley.



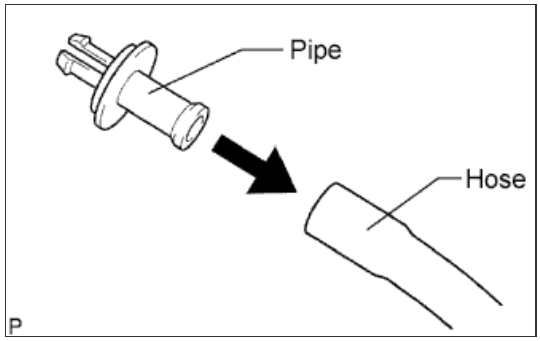
NOTICE:

If the crankshaft pulley cannot be removed, temporarily install a bolt to the crankshaft so that the pulley does not fall, and lightly tap the outer edge of the mass damper with a plastic-faced hammer to remove the pulley. Do not tap the pulley V-ribbed belt ribs, as the crankshaft may be damaged.



44. REMOVE TIMING GEAR COVER SPACER (w/ Intercooler)

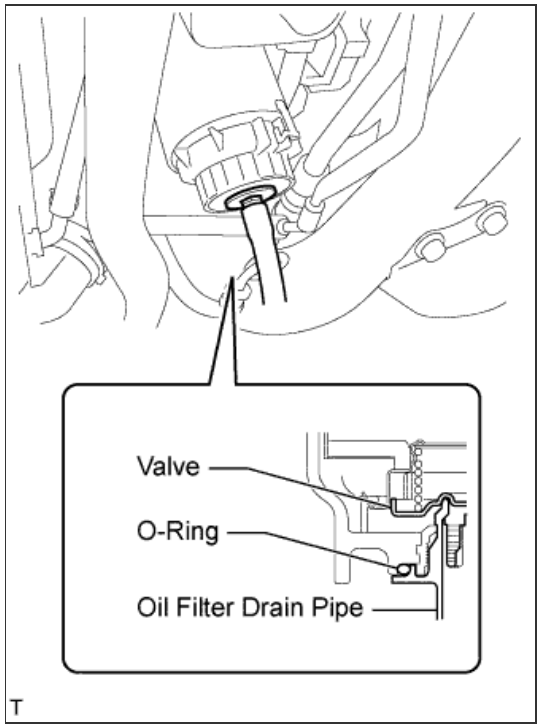
a. Remove the 2 bolts and timing gear cover spacer.



45. REMOVE OIL FILTER ELEMENT

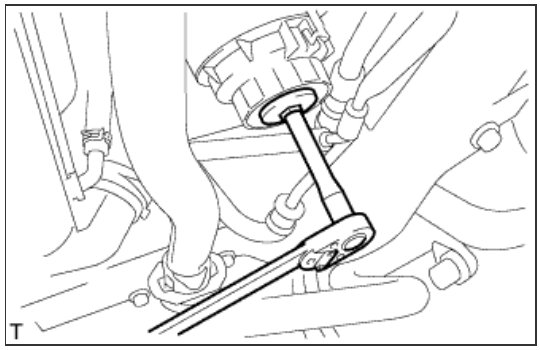
a. Remove the oil filter drain plug.

b. Connect a hose with an inside diameter of 15 mm (0.591 in.) to the pipe.



c. Remove the O-ring from the oil filter drain plug and install it to the drain pipe.

d. Install the oil filter drain pipe to the oil filter cap and drain the engine oil.

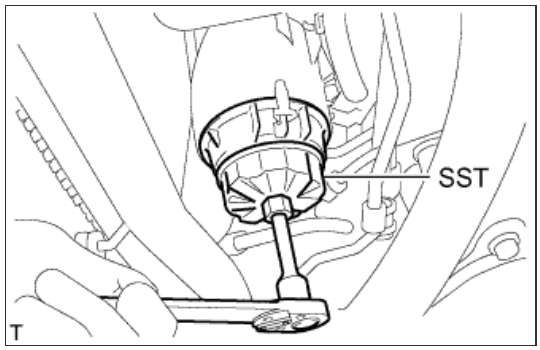


e. Remove the oil filter drain pipe.

f. Apply a light coat of engine oil to a new O-ring, and install it to the oil filter drain plug.

g. Install the oil filter drain plug to the oil filter cap.

Torque:
13 N m 127 kgf cm , ft. lbf

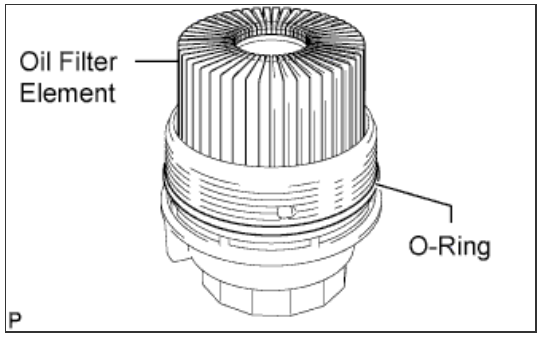


h. Using SST, remove the oil filter cap.

SST

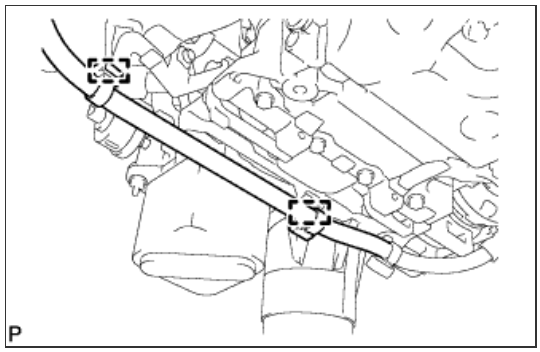
0 228 0 01

HINT:



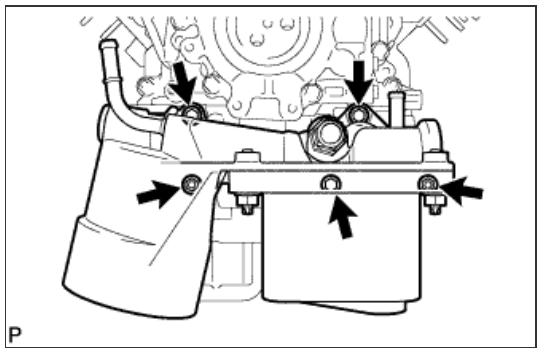
Use a container to catch the draining oil. After the oil filter cap is loosened approximately 4 turns and the cap ribs are vertical, engine oil drains from the gap between the oil filter cap and oil pan.

i. Remove the oil filter element and O-ring from the oil filter cap.

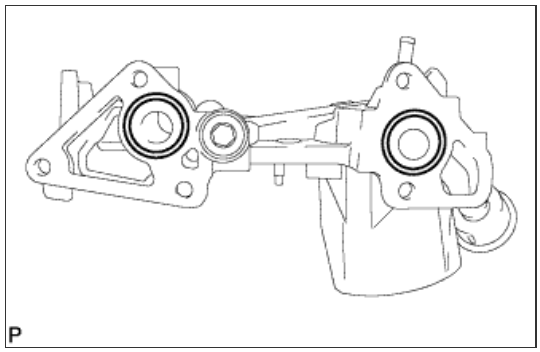


NOTICE:

Be sure to remove the cap O-ring by hand, without using any tools, to prevent damage to the cap O-ring groove.

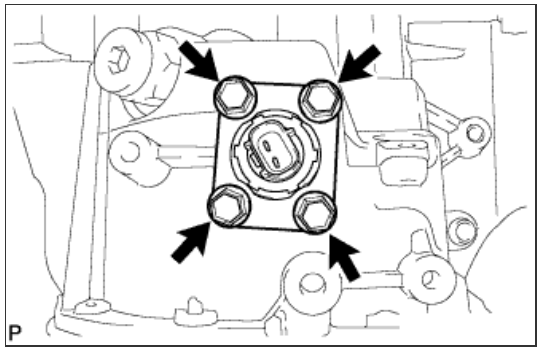


4 . REMOVE OIL FILTER BRACKET SUB-ASSEMBLY



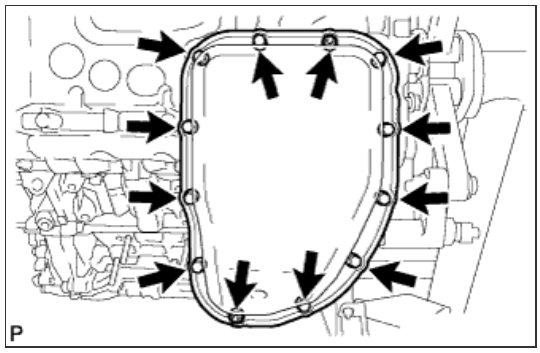
a. Disconnect the 2 wire harness clamps.

b. Remove the 3 bolts, 2 nuts and oil filter bracket.



c. Remove the 2 O-rings.

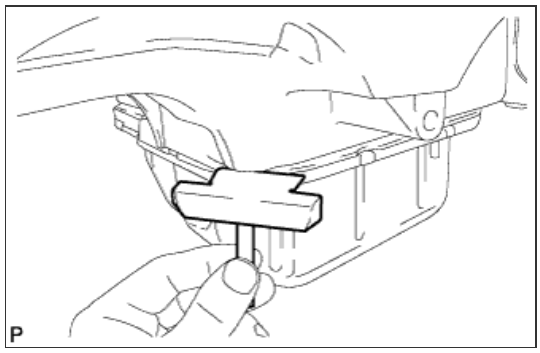
47. REMOVE ENGINE OIL LEVEL SENSOR



a. Remove the 4 bolts and engine oil level sensor.

b. Remove the gasket.

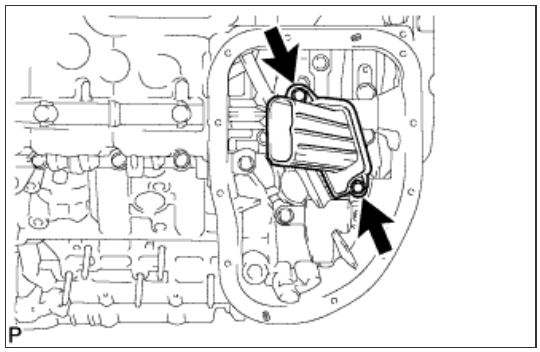
48. REMOVE NO. 2 OIL PAN SUB ASSEMBLY



a. Remove the 10 bolts and 2 nuts.

b. Insert the blade of an oil pan seal cutter between the oil pans. Cut through the applied sealer and remove the No. 2 oil pan.

NOTICE:



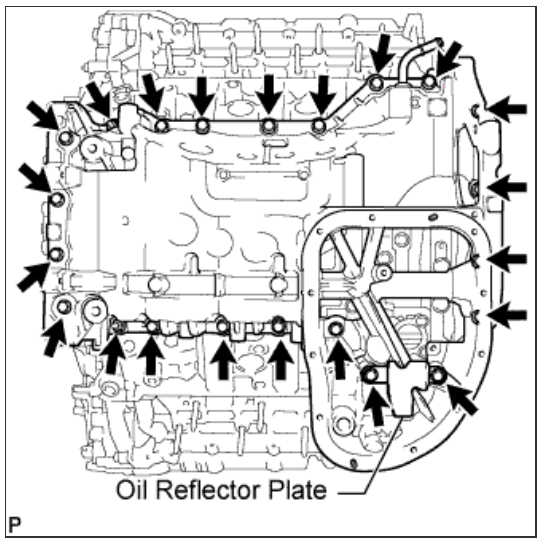
Be careful not to damage the contact surfaces of the oil pans.

4 . REMOVE OIL STRAINER SUB ASSEMBLY

a. Remove the 2 bolts and oil strainer.

b. Remove the O-ring from the oil strainer.

0. REMOVE NO. 1 OIL PAN SUB ASSEMBLY



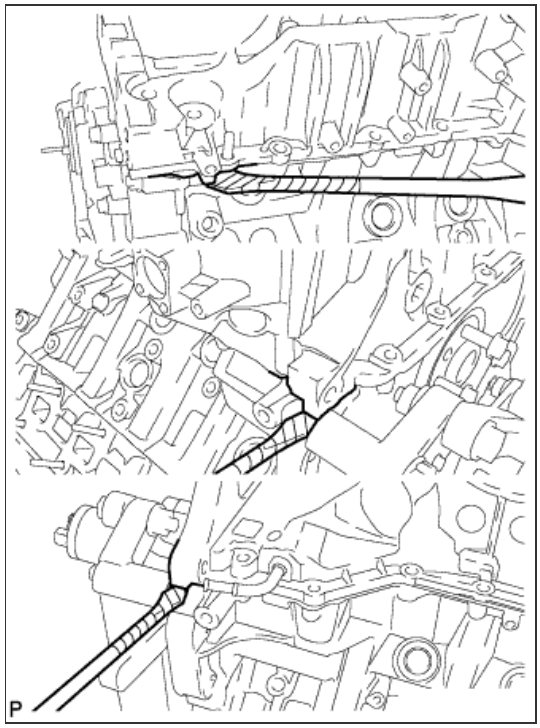
a. Remove the 20 bolts, 2 nuts and oil reflector plate.

NOTICE:

If the oil reflector plate is deformed, replace it.

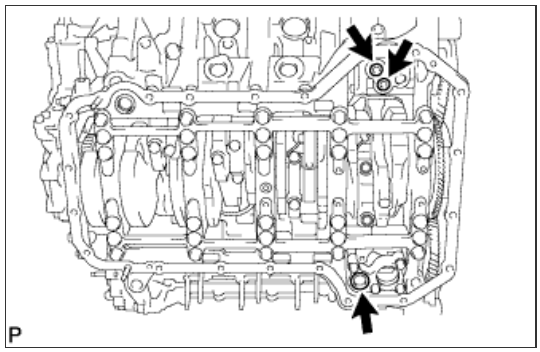
HINT:

Be sure to clean the bolts and stud bolts, and check the threads for cracks or other damage.



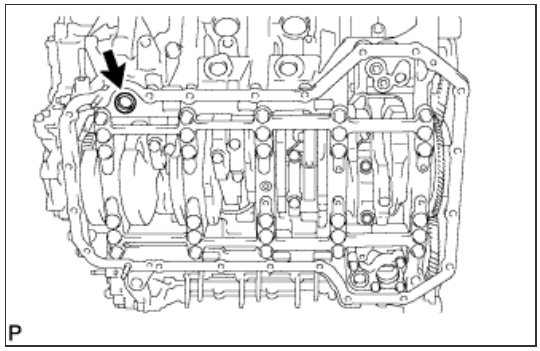
b. Remove the No. 1 oil pan by prying between the No. 1 oil pan and cylinder block with a screwdriver.

NOTICE:



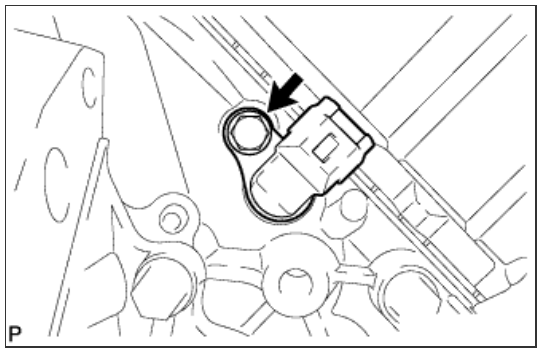
Be careful not to damage the contact surfaces of the cylinder block and oil pan.

HINT:

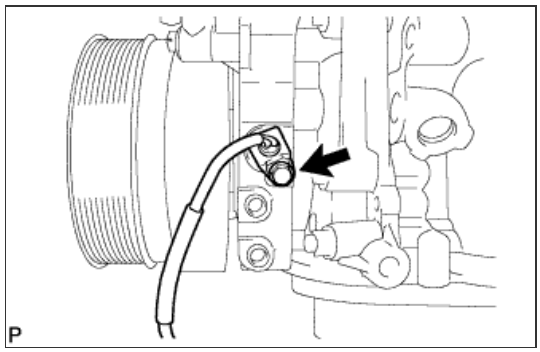


Tape the screwdriver tip before use.

c. Remove the 3 O-rings.



d. Remove the cylinder block oil hole gasket.

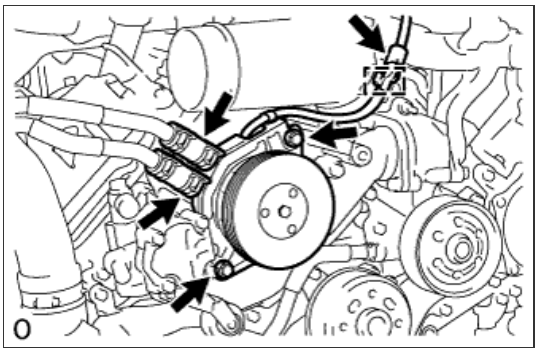


1. REMOVE CAMSHAFT POSITION SENSOR

a. Remove the bolt and sensor.

52. REMOVE CRANKSHAFT POSITION SENSOR

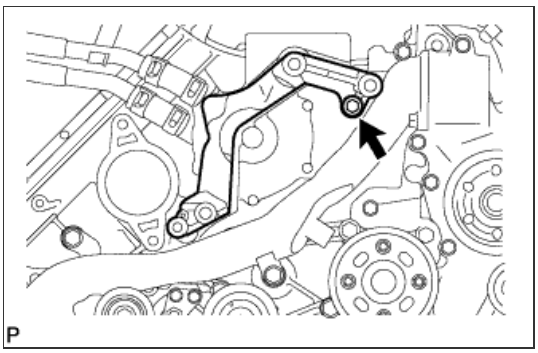
a. Remove the bolt and sensor.



53. REMOVE VISCOUS HEATER ASSEMBLY WITH MAGNET CLUTCH (w/ Viscous Heater)

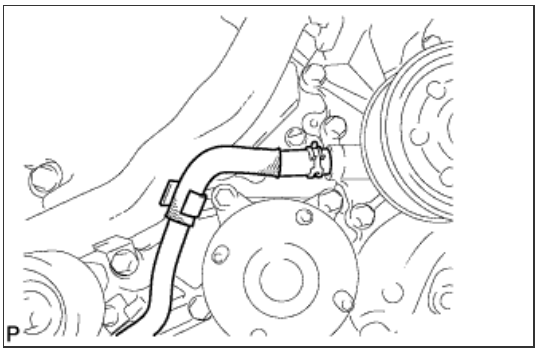
a. Disconnect the connector and detach the clamp.

b. Using pliers, grip the claws of the clips and slide the 2 clips.



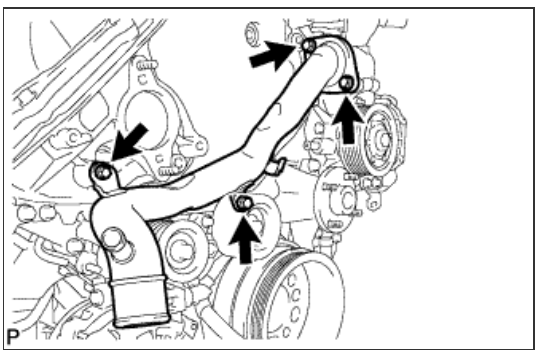
c. Disconnect the 2 heater hoses.

d. Remove the 2 bolts and heater assembly.



. REMOVE NO. 1 IDLER PULLEY BRACKET (w/ Viscous Heater)

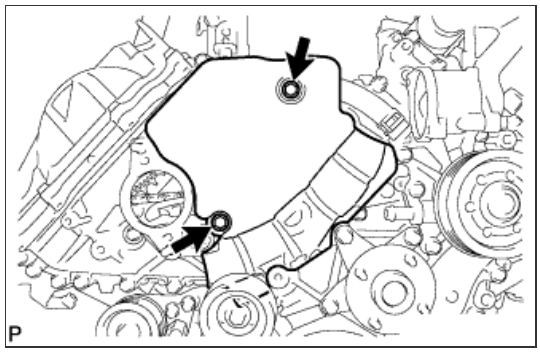
a. Remove the bolt and No. 1 idler pulley bracket.



55. REMOVE WATER INLET

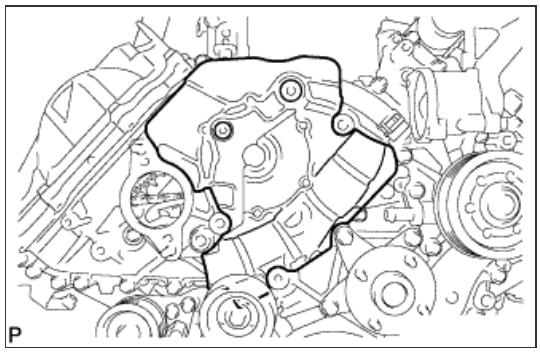
a. Disconnect the No. 2 oil cooler hose from the water pump and clamp.

b. Remove the 4 bolts and water inlet.



56. REMOVE THERMOSTAT

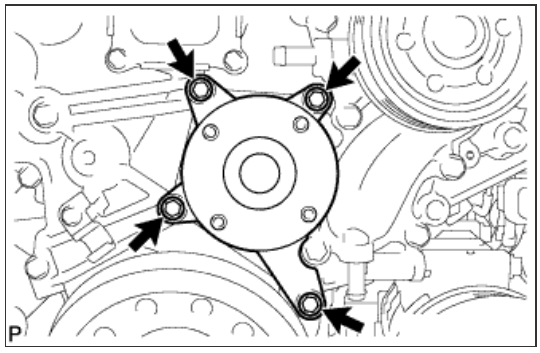
a. Remove the thermostat.



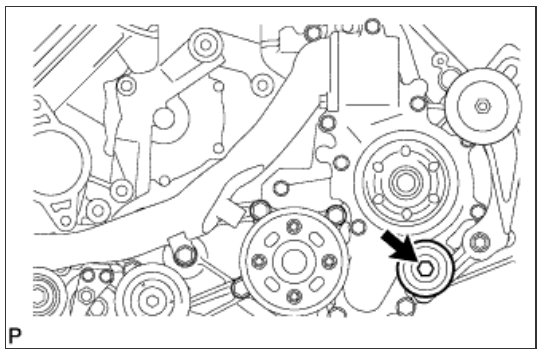
b. Remove the gasket from the thermostat.

. REMOVE TIMING GEAR COVER INSULATOR (w/ Intercooler)

a. w/o Viscous Heater:
Remove the 2 bolts and timing gear cover insulator.

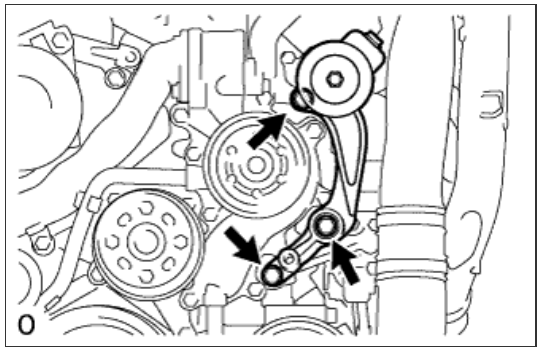


b. w/ Viscous Heater:
Remove the timing gear cover insulator.



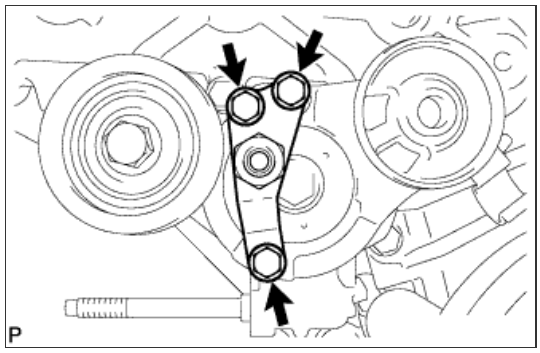
58. REMOVE FAN BRACKET SUB-ASSEMBLY

a. Remove the 4 bolts and fan bracket.



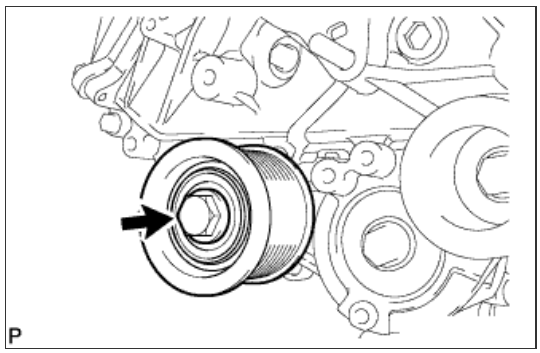
59. REMOVE NO. 2 IDLER PULLEY (w/ Viscous Heater)

a. Remove the bolt, cover, No. 2 idler pulley and collar.

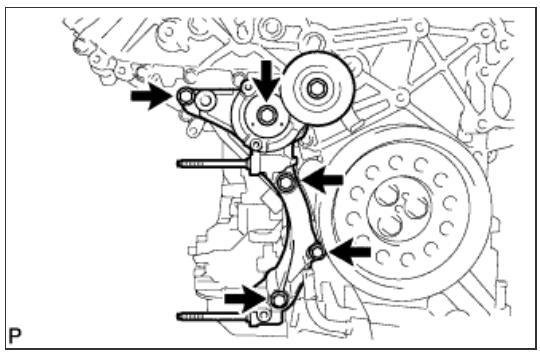


60. REMOVE NO. 2 IDLER PULLEY BRACKET (w/ Viscous Heater)

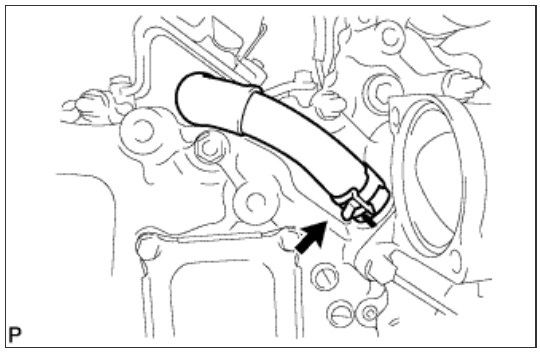
a. Remove the 3 bolts and idler pulley bracket.



1. REMOVE V RIBBED BELT TENSIONER ASSEMBLY

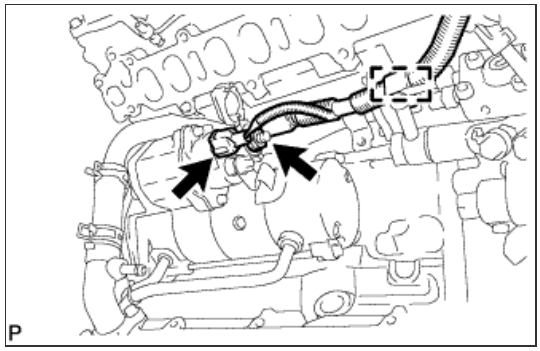


a. Remove the 3 bolts and V-ribbed belt tensioner bracket.

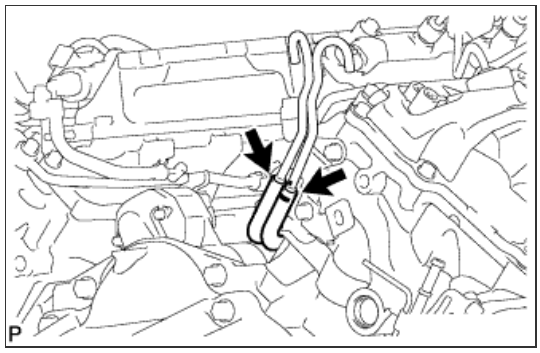


b. Remove the bolt and No. 1 idler pulley.

c. Remove the 5 bolts and V-ribbed belt tensioner.

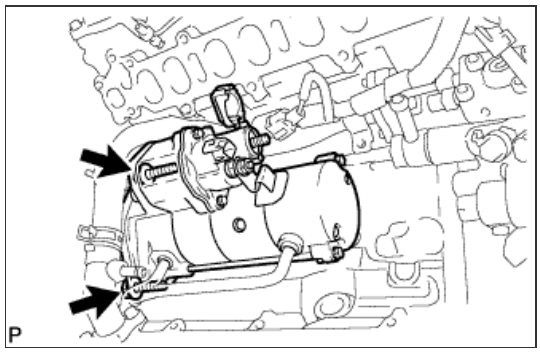


2. DISCONNECT INLET WATER HOSE



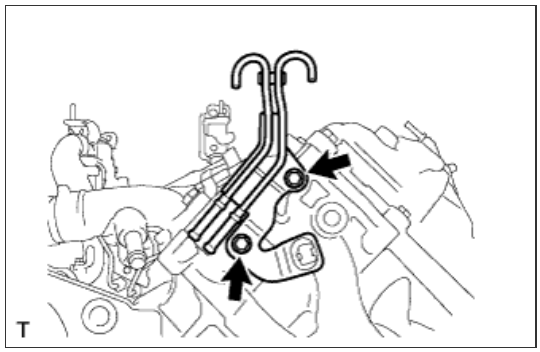
3. REMOVE STARTER ASSEMBLY

a. Disconnect the connector and detach the wire harness clamp.

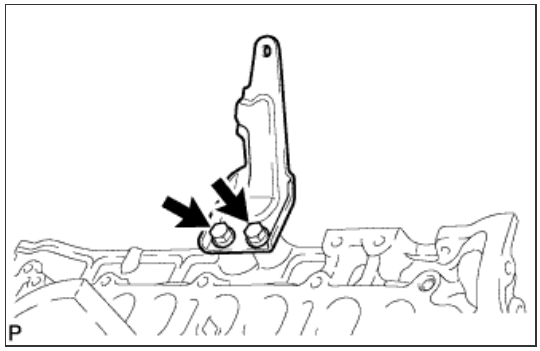


b. Remove the nut and No. 2 engine wire.

c. Disconnect the 2 hoses.

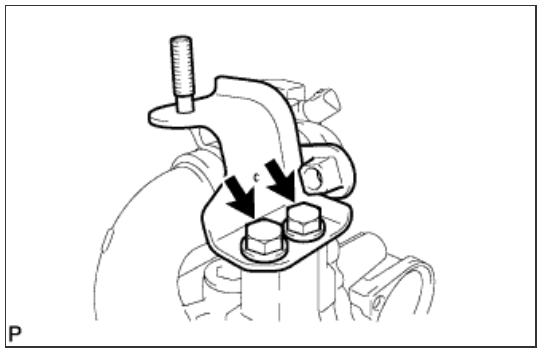


d. Remove the 2 bolts and starter.



. REMOVE STARTER HOSE BRACKET

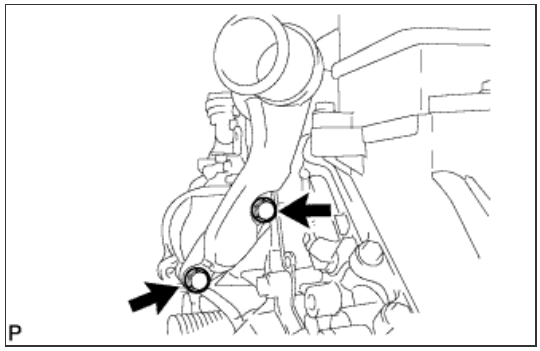
a. Remove the 2 bolts and starter hose bracket.



. REMOVE CLUTCH FLEXIBLE HOSE BRACKET (for Manual Transmission)

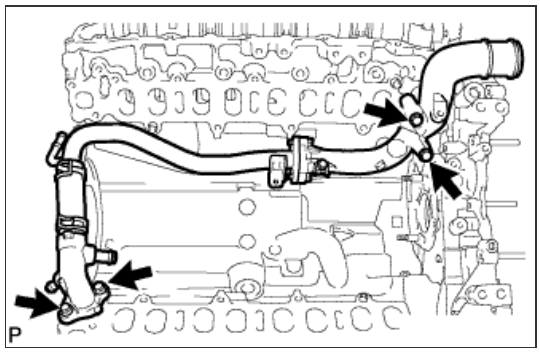
a. Remove the 2 bolts and clutch flexible hose bracket.

66. REMOVE NO. 2 INTERCOOLER SUPPORT BRACKET



a. Remove the 2 bolts and No. 2 intercooler support bracket.

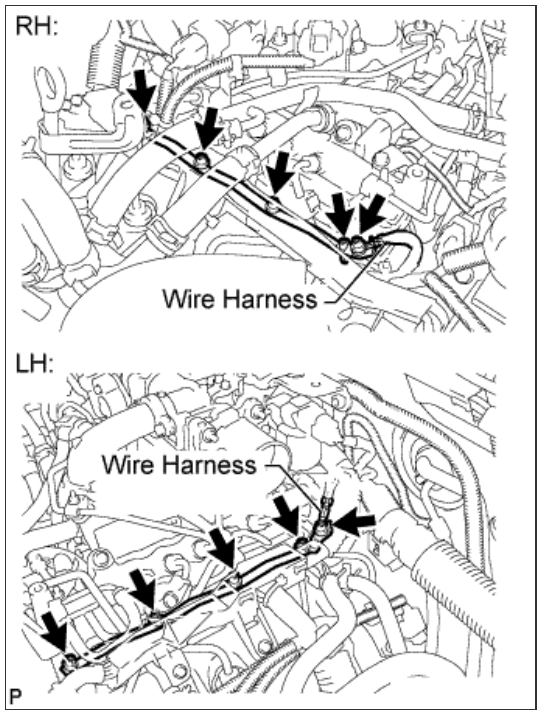
67. REMOVE WATER OUTLET



a. Disconnect the engine coolant temperature sensor connector.

b. Remove the 2 bolts, disconnect the water outlet from the No. 2 water hose joint, and remove the water outlet and gasket.

68. REMOVE WATER OUTLET PIPE

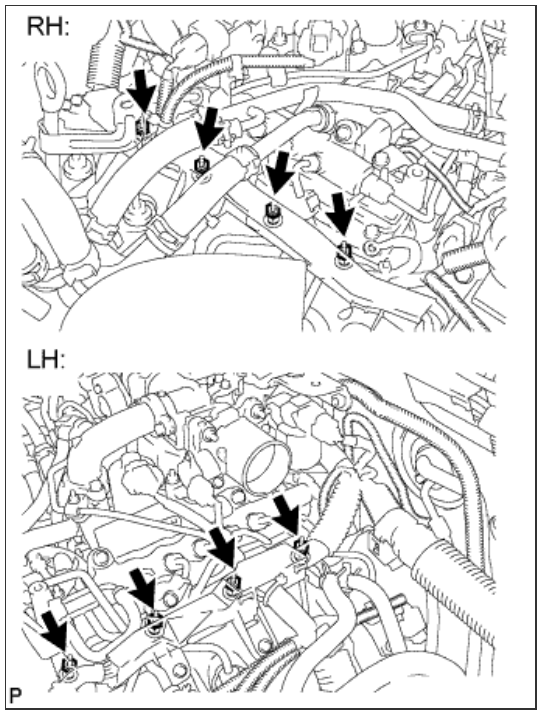


a. Remove the 4 bolts, water outlet pipe and 2 gaskets.

. REMOVE NO. 1 GLOW PLUG CONNECTOR

a. Remove the 2 screw grommets and 2 nuts, and disconnect the 2 wire harnesses.

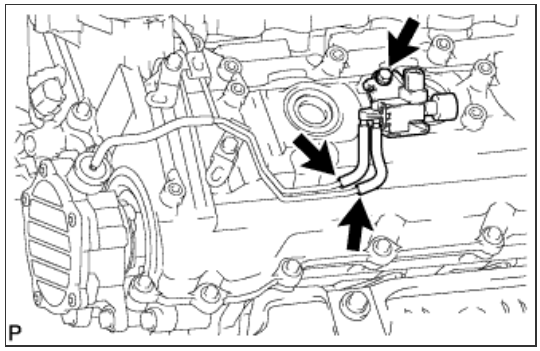
b. Remove the screw grommets, nuts and 2 glow plug connectors.



70. REMOVE GLOW PLUG ASSEMBLY

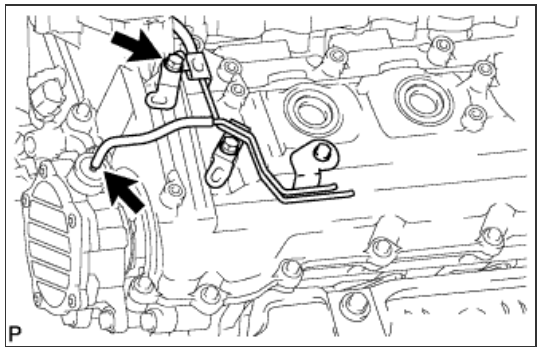
a. Using a 10 mm deep socket wrench, remove the glow plugs.

HINT:



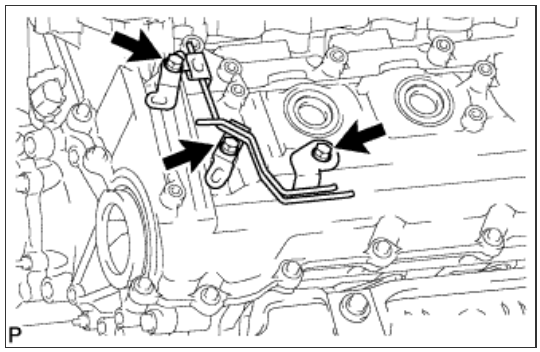
Before removing the glow plugs, thoroughly clean off all dirt, sand, etc.

71. REMOVE NO. 1 VACUUM SWITCHING VALVE ASSEMBLY (w/ Intercooler)



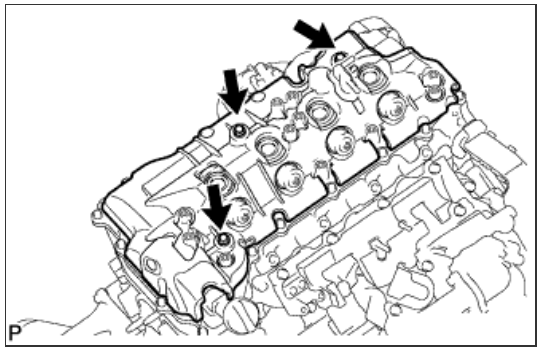
a. Disconnect the 2 vacuum hoses.

b. Remove the bolt and vacuum switching valve.

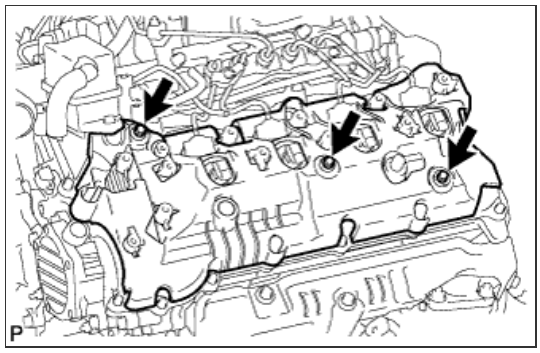


72. REMOVE NO. 1 VACUUM TRANSMITTING PIPE SUB-ASSEMBLY

a. w/ Intercooler:
Disconnect the 2 vacuum hoses.



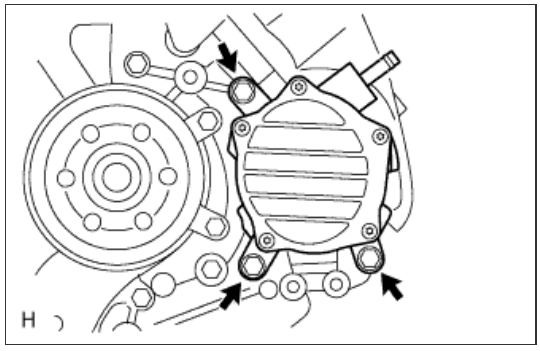
b. Remove the 3 bolts and vacuum transmitting pipe.



73. REMOVE CYLINDER HEAD COVER SILENCER RH (w/ Intercooler)

a. Remove the 3 bolts and cylinder head cover silencer.

74. REMOVE CYLINDER HEAD COVER SILENCER LH (w/ Intercooler)

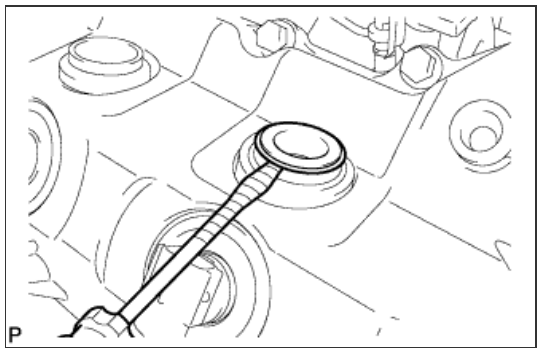


a. Remove the 3 bolts and cylinder head cover silencer.

75. REMOVE VACUUM PUMP ASSEMBLY (w/ Intercooler)

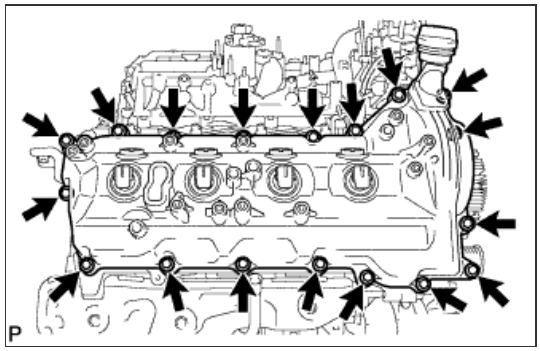
a. Remove the 3 bolts and vacuum pump.

b. Remove the 2 O-rings.



76. REMOVE NOZZLE HOLDER SEAL RH

a. Using a small screwdriver, remove the 4 holder seals by prying the portion between each holder seal and the cutout part of the cylinder head cover.

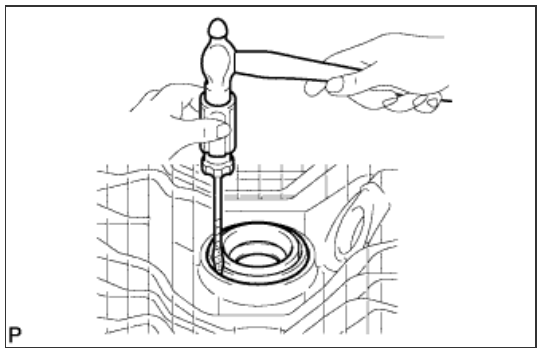


HINT:

Tape the screwdriver tip before use.

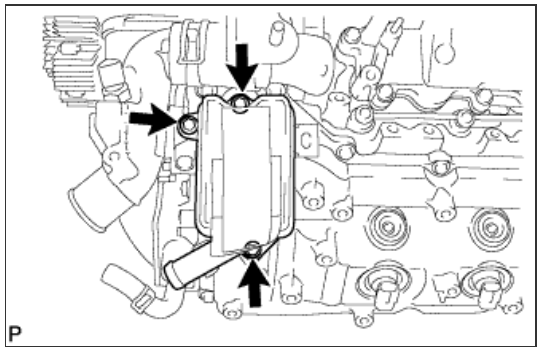
77. REMOVE CYLINDER HEAD COVER SUB ASSEMBLY RH

a. Remove the 1 bolts, cylinder head cover and gasket.



78. REMOVE NO LE HOLDER GASKET RH

a. Using a small screwdriver and hammer, remove the 4 nozzle holder gaskets.

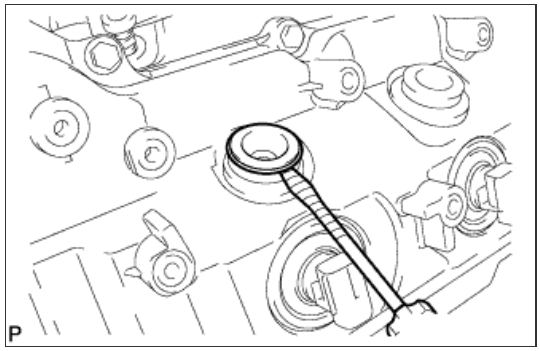


HINT:

Tape the screwdriver tip before use.

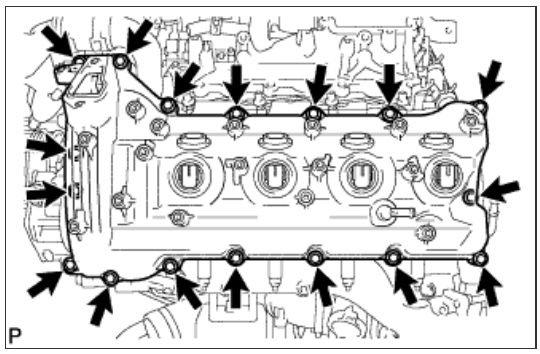
7 . REMOVE OIL SEPARATOR ASSEMBLY

a. Remove the 3 bolts, oil separator and gasket.



80. REMOVE NO LE HOLDER SEAL LH

a. Using a small screwdriver, remove the 4 holder seals by prying the portion between each holder seal and the cutout part of the cylinder head cover.

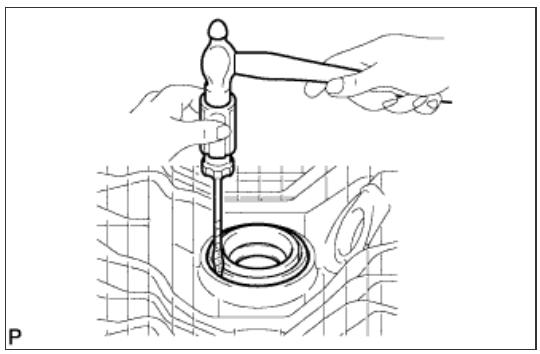


HINT:

Tape the screwdriver tip before use.

81. REMOVE CYLINDER HEAD COVER SUB ASSEMBLY LH

a. Remove the 17 bolts, cylinder head cover and gasket.

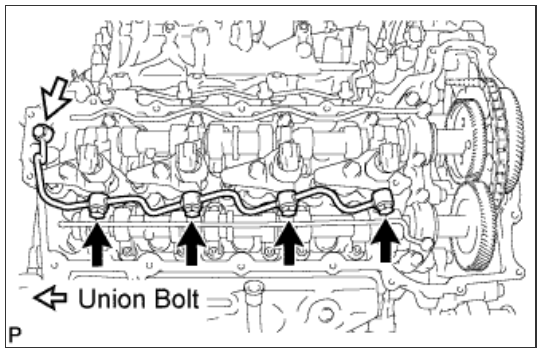


82. REMOVE NO LE HOLDER GASKET LH

a. Using a small screwdriver and hammer, remove the 4 nozzle holder gaskets.

HINT:

Tape the screwdriver tip before use.

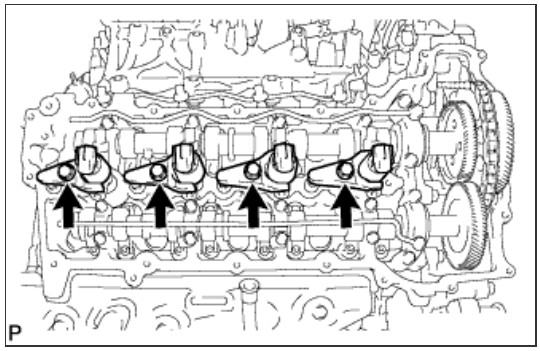


83. REMOVE FUEL INJECTOR RH

a. Remove the union bolt, 4 hollow screws, 5 gaskets and nozzle leakage pipe.

NOTICE:

- **When removing the nozzle leakage pipe, place a cushion under the pipe.**
- **Be careful not to deform or scratch the union seal surface.**
- **After removing the nozzle leakage pipe, put it in a plastic bag to prevent foreign matter from contaminating its injector inlet.**



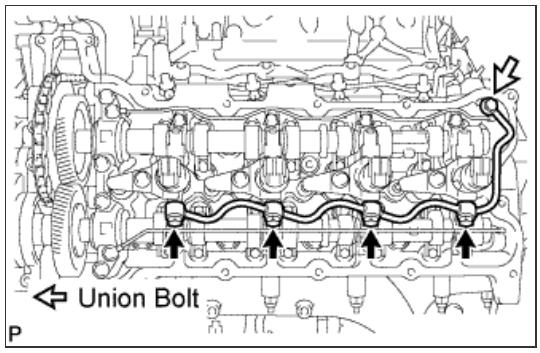
b. Remove the 4 bolts, 4 washers, 4 nozzle holder clamps and 4 injectors.

HINT:

Arrange the injectors, holder clamps, washers and bolts in the correct order.

c. Remove the O-ring from each injector.

d. Remove the 4 injection nozzle seats from the cylinder head.

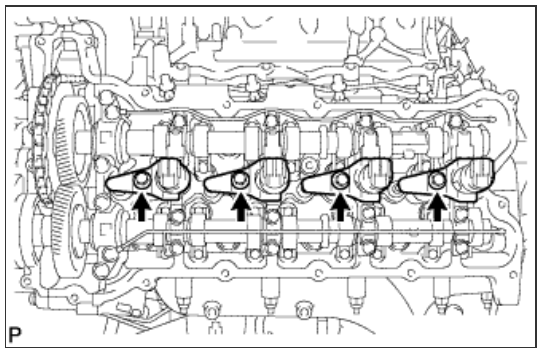


84. REMOVE FUEL INJECTOR LH

a. Remove the union bolt, 4 hollow screws, 5 gaskets and No. 2 nozzle leakage pipe.

NOTICE:

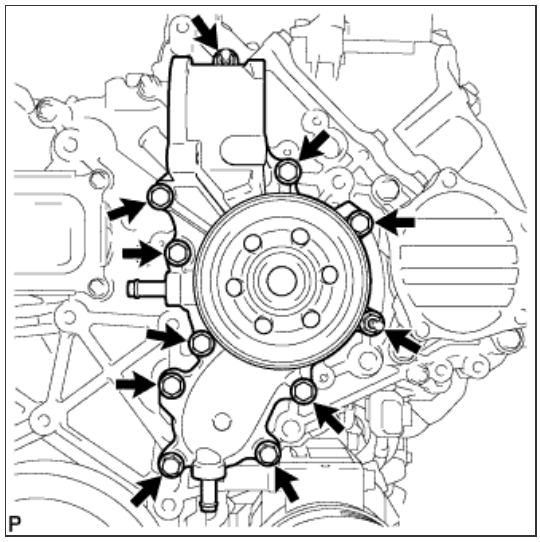
- **When removing the nozzle leakage pipe, place a cushion under the pipe.**
- **Be careful not to deform or scratch the union seal surface.**
- **After removing the nozzle leakage pipe, put it in a plastic bag to prevent foreign matter from contaminating its injector inlet.**



b. Remove the 4 bolts, 4 washers, 4 nozzle holder clamps and 4 injectors.

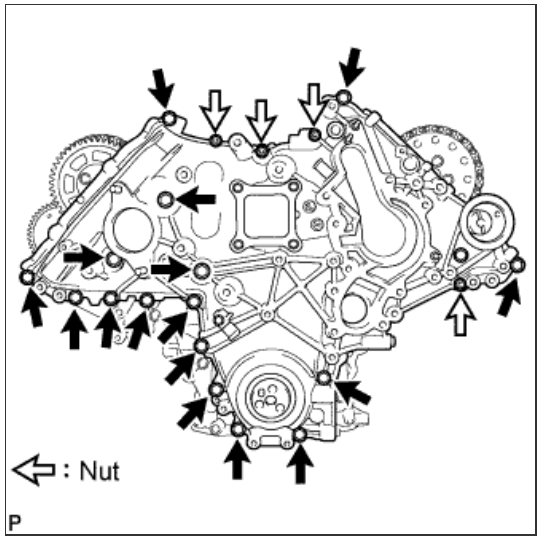
HINT:

Arrange the injectors, holder clamps, washers and bolts in the correct order.



c. Remove the O-ring from each injector.

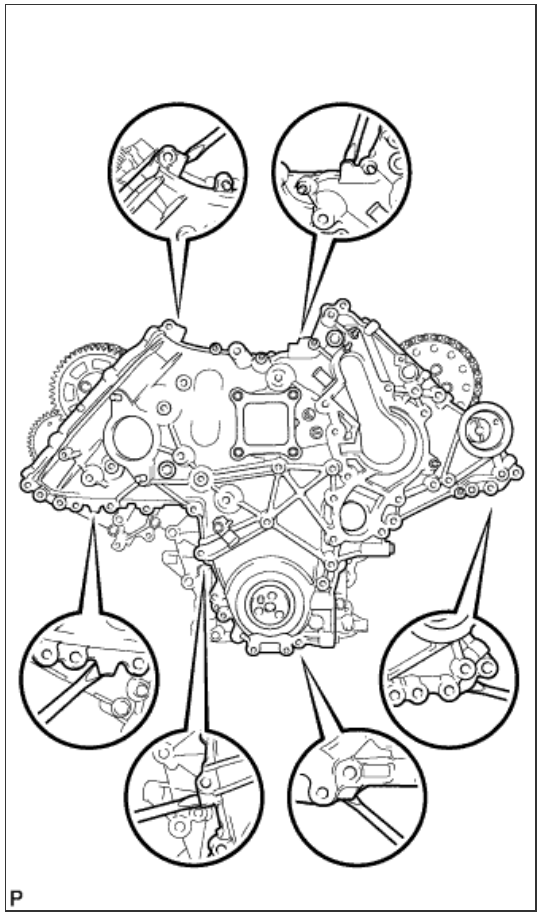
d. Remove the 4 injection nozzle seats from the cylinder head.



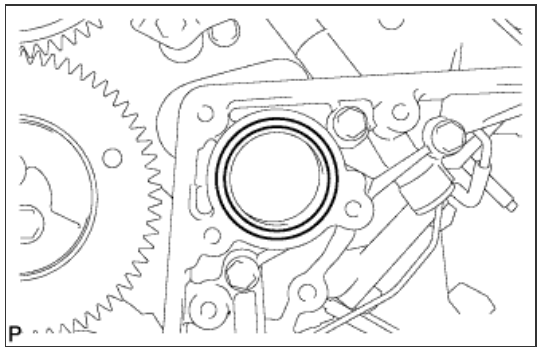
85. REMOVE WATER PUMP ASSEMBLY

a. Remove the 9 bolts, 2 nuts, water pump and gasket.

8 . REMOVE TIMING CHAIN COVER SUB ASSEMBLY



a. Remove the 4 nuts and 16 bolts.



b. Using a screwdriver, remove the timing chain cover by prying between the timing chain cover and cylinder head or cylinder block.

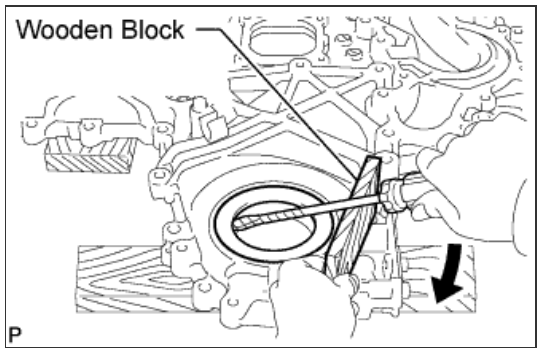
HINT:

Tape the screwdriver tip before use.

c. Remove the O-ring from the timing gear case.

87. REMOVE FRONT CRANKSHAFT OIL SEAL

a. Place the timing chain cover on wooden blocks.



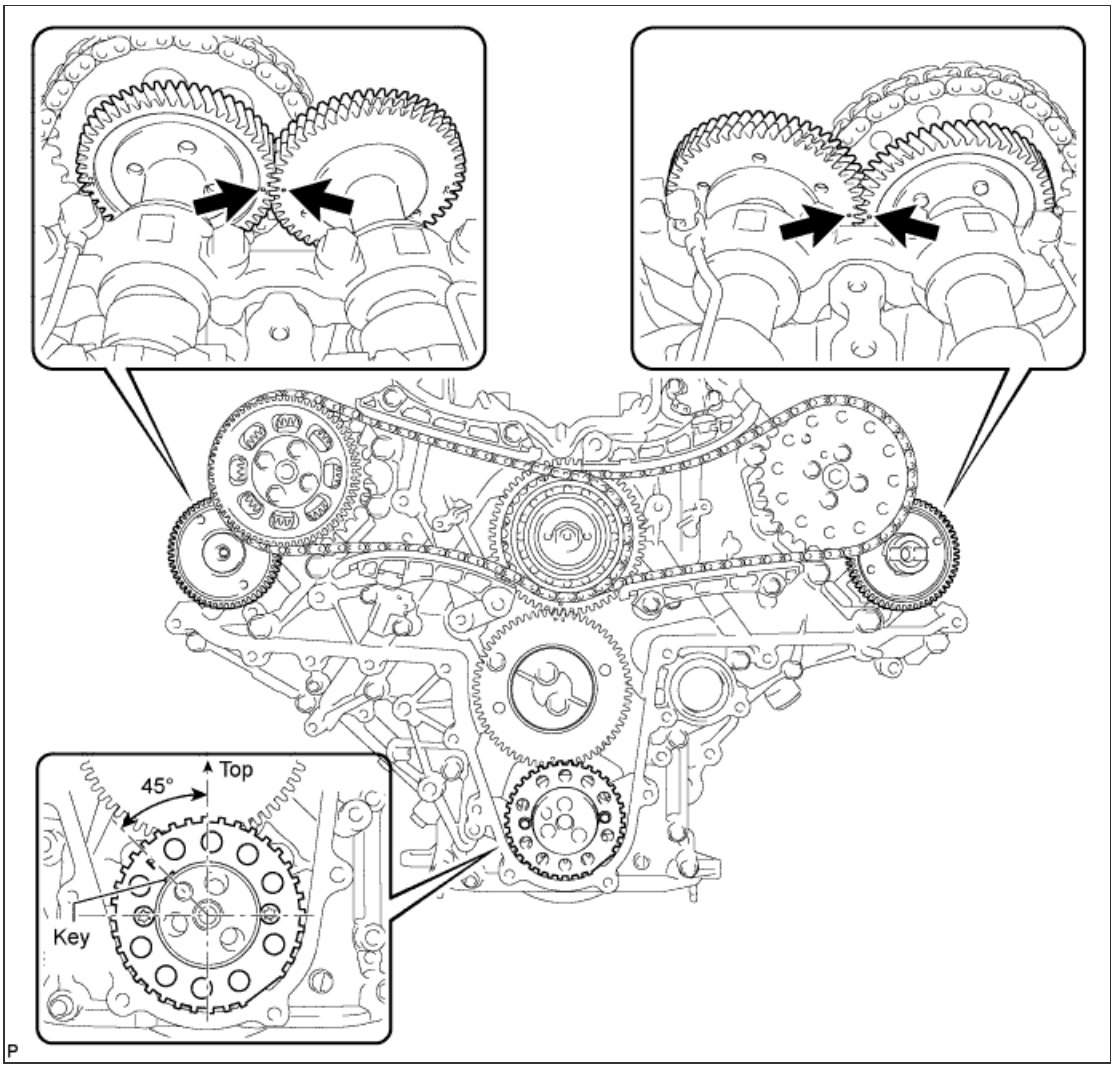
b. Using a screwdriver and wooden block, pry out the oil seal.

NOTICE:

Do not damage the surface of the oil seal press fit hole.

HINT:

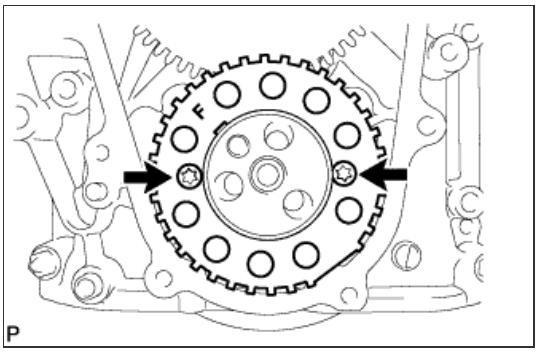
Tape the screwdriver tip before use.



88. SET NO. 1 CYLINDER TO TDC/COMPRESSION

a. Temporarily install the 2 crankshaft pulley set bolts to the crankshaft.

b. Turn the crankshaft clockwise to set the No. 1 cylinder to TDC.

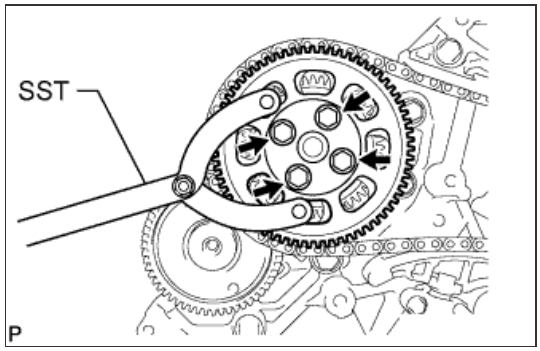


c. With the crankshaft key 45° counterclockwise from the top position, check that the timing marks of the RH and LH camshaft timing gears are aligned. If not as specified, turn the crankshaft 1 revolution (360°) and align the timing marks as shown below.

d. Remove the 2 crankshaft pulley set bolts.

8 . REMOVE NO. 1 CRANKSHAFT POSITION SENSOR PLATE

a. Using a T30 "TORX" wrench, remove the 2 screws and crankshaft position sensor plate.

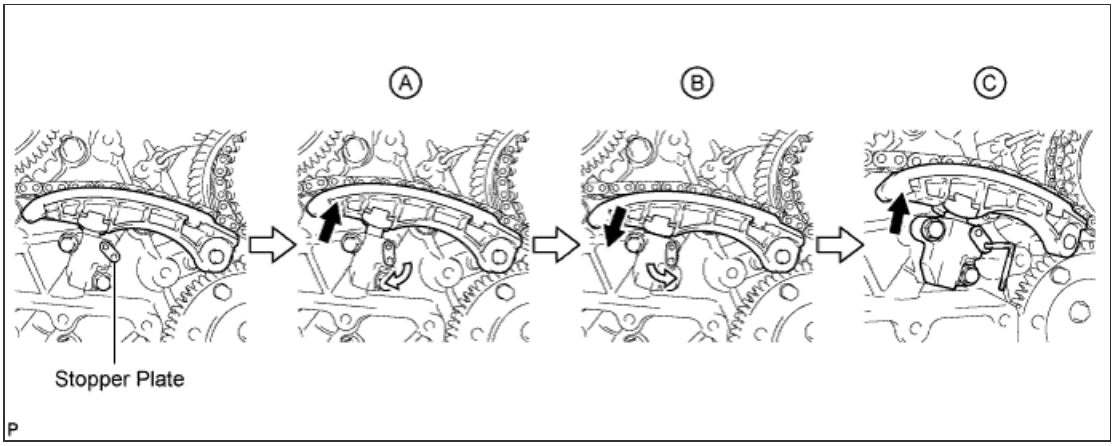


90. REMOVE PUMP DRIVE SHAFT GEAR

a. Using SST, hold the pump drive shaft gear.

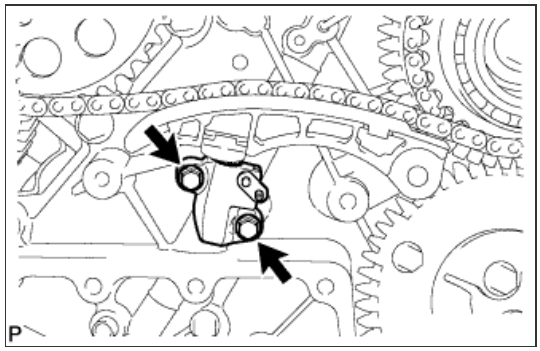
SST

0 0 10010 (09962-01000, 09963-01000)



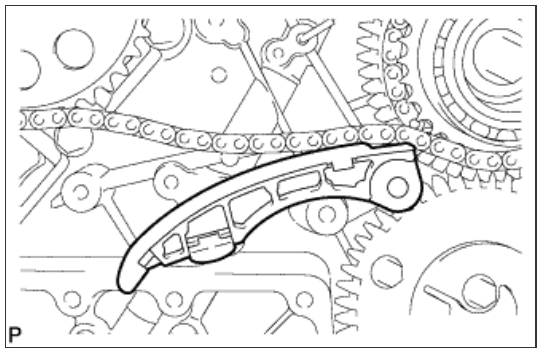
b. Remove the 4 bolts and pump drive shaft gear.

91. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY



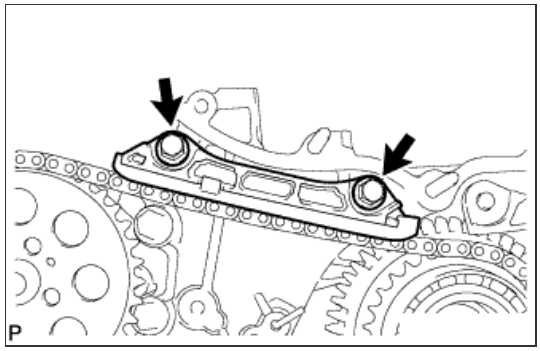
a. Push the tensioner slipper away from the tensioner, and move the stopper plate clockwise to release the lock as shown in A.

b. Push down the tensioner slipper and move the stopper plate counterclockwise to set the lock as shown in B.

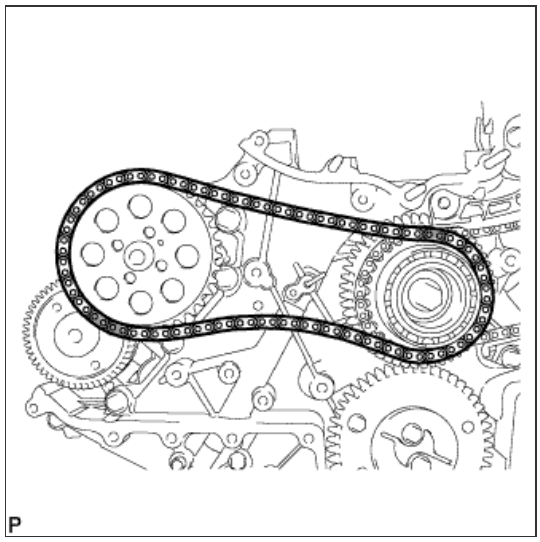


c. Push the tensioner slipper away from the tensioner, and insert a hexagon wrench into the stopper plate hole as shown in C.

d. Remove the 2 bolts and No. 1 chain tensioner.



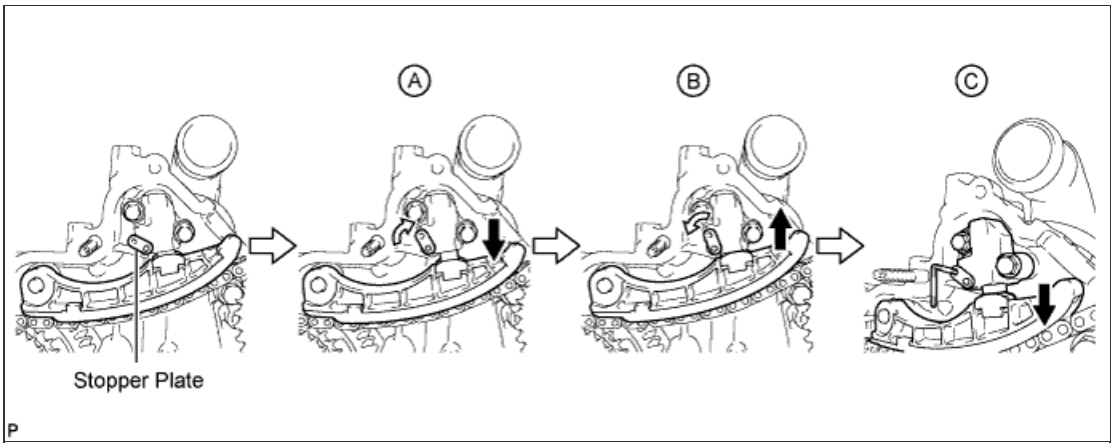
92. REMOVE NO. 1 CHAIN TENSIONER SLIPPER



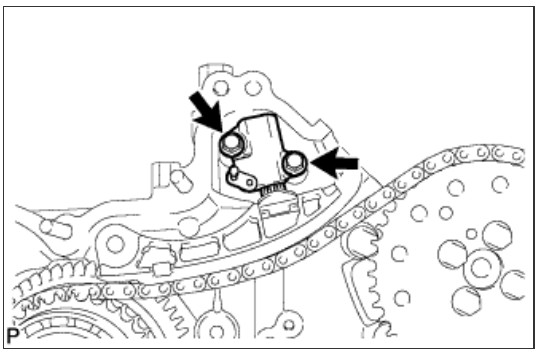
3. REMOVE NO. 1 CHAIN VIBRATION DAMPER

a. Remove the 2 bolts and No. 1 chain vibration damper.

. REMOVE NO. 1 CAMSHAFT TIMING SPROCKET AND NO. 1 TIMING CHAIN

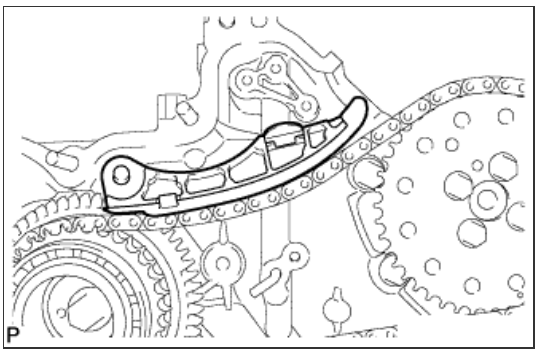


95. REMOVE NO. 2 CHAIN TENSIONER ASSEMBLY



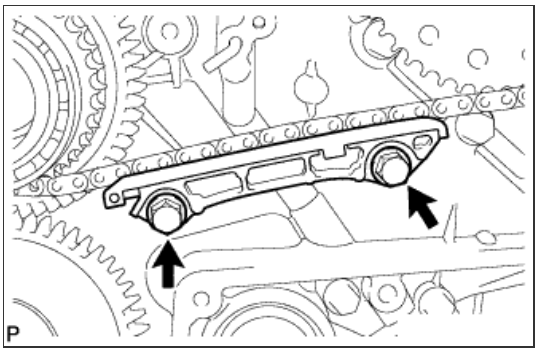
a. Push the tensioner slipper away from the tensioner, and move the stopper plate clockwise to release the lock as shown in A.

b. Push up the tensioner slipper and move the stopper plate counterclockwise to set the lock as shown in B.



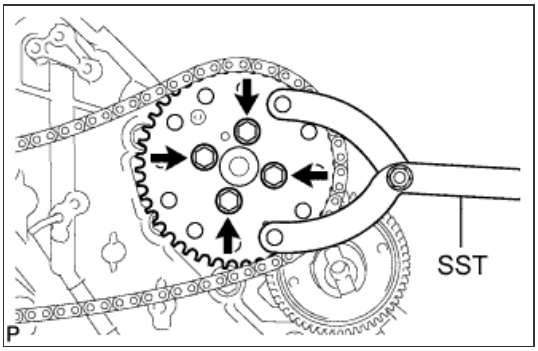
c. Push the tensioner slipper away from the tensioner, and insert a hexagon wrench into the stopper plate hole as shown in C.

d. Remove the 2 bolts and No. 2 chain tensioner.



. REMOVE NO. 2 CHAIN TENSIONER SLIPPER

. REMOVE NO. 2 CHAIN VIBRATION DAMPER

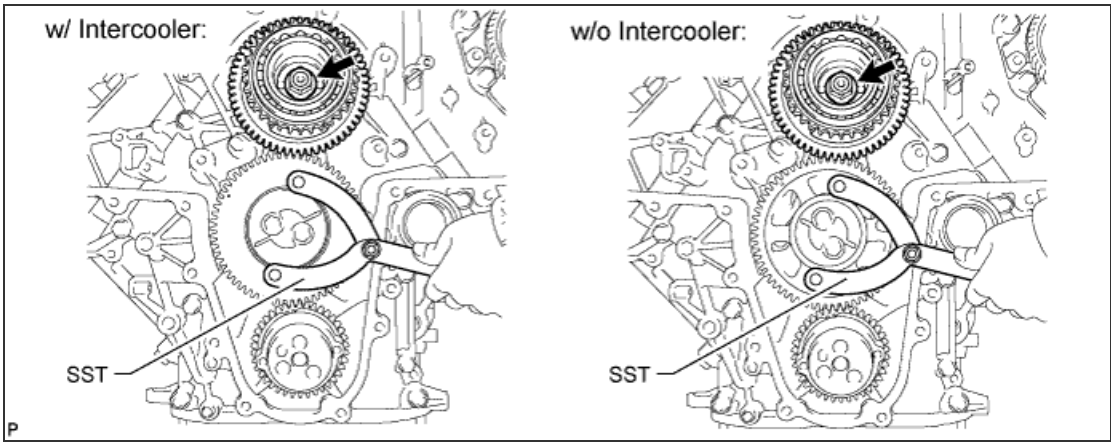


a. Remove the 2 bolts and No. 2 chain vibration damper.

. REMOVE NO. 2 CAMSHAFT TIMING SPROCKET AND NO. 2 TIMING CHAIN

a. Using SST, hold the No. 2 camshaft timing sprocket.

SST
0 0 10010 (09962-01000, 09963-01000)

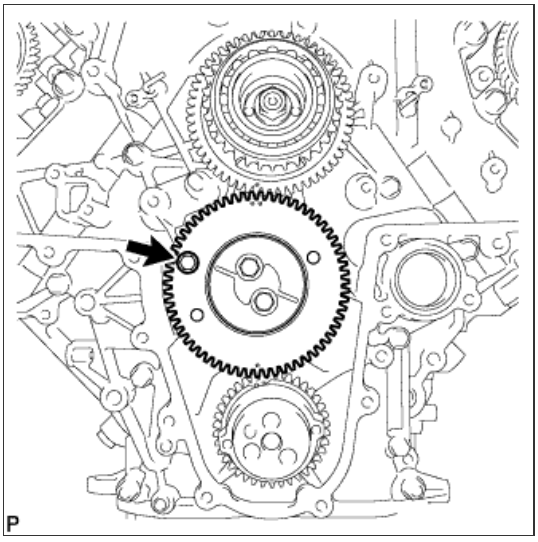


b. Remove the 4 bolts, No. 2 camshaft timing sprocket and No. 2 timing chain.

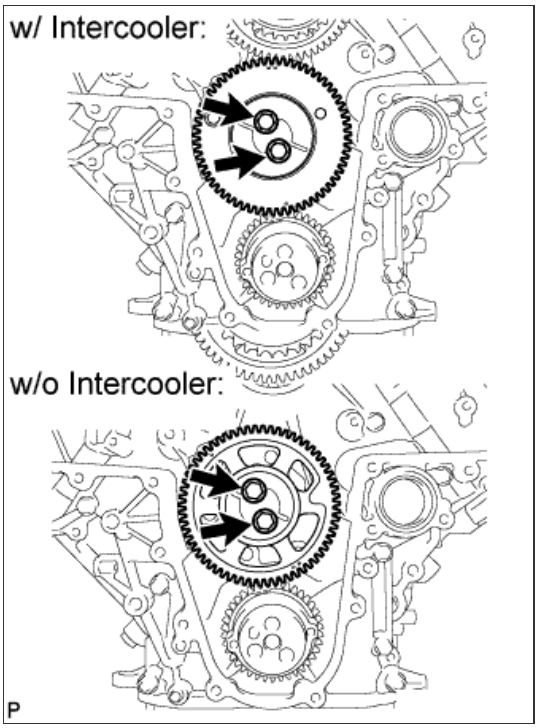
99. REMOVE FUEL SUPPLY PUMP DRIVE GEAR NUT

a. Using SST, hold the idle gear.

SST
09960-10010 (09962-01000, 09963-00700)

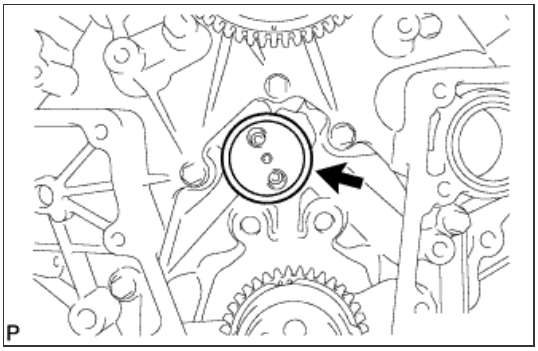


b. Remove the nut.



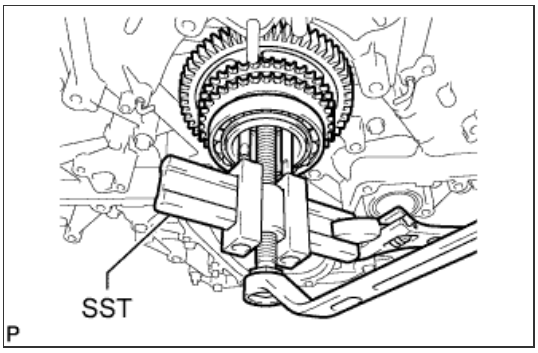
100. REMOVE IDLE GEAR ASSEMBLY

a. w/ Intercooler:
Using a mm x 1.25 pitch service bolt with a length of 15 mm or more, fix the idle gear in place.



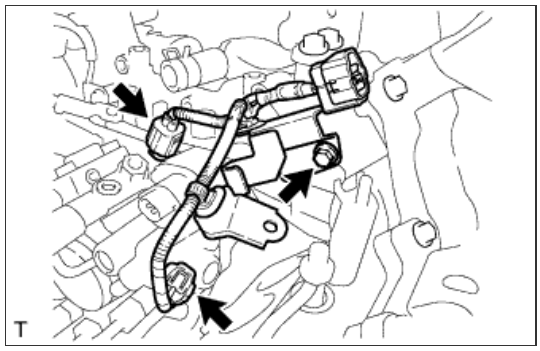
Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }

b. Remove the 2 bolts, idle gear thrust plate and idle gear.



101. REMOVE NO. 1 IDLE GEAR SHAFT

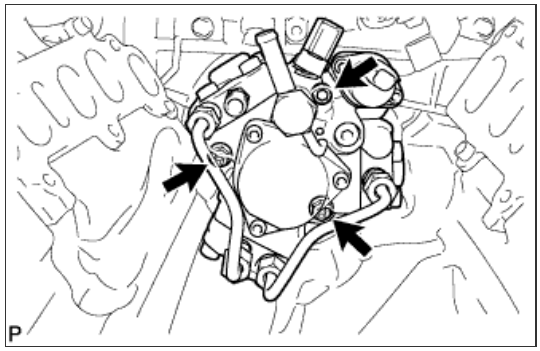
102. REMOVE FUEL SUPPLY PUMP DRIVE GEAR



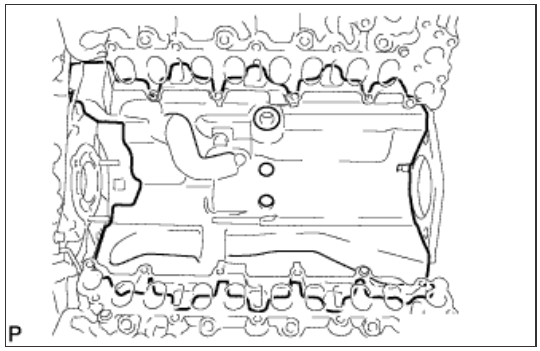
a. Using SST, remove the fuel supply pump drive gear.

SST
09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05031)

103. REMOVE FUEL PUMP MOTOR WIRE



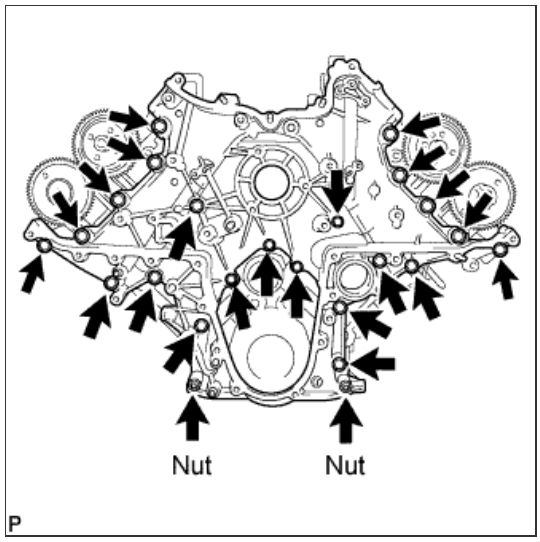
a. Disconnect the 2 connectors and remove the bolt and fuel pump motor wire.



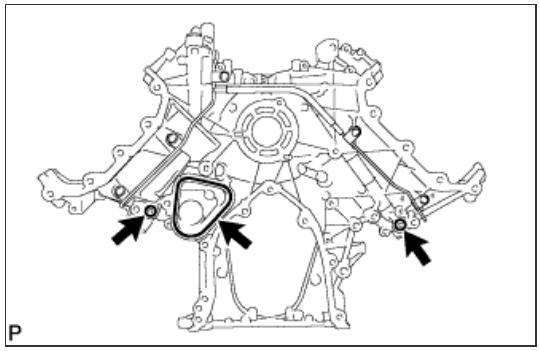
104. REMOVE FUEL SUPPLY PUMP ASSEMBLY

a. Using a 6 mm hexagon wrench, remove the hexagon bolt. Then remove the 2 nuts and fuel supply pump.

b. Remove the O-ring.

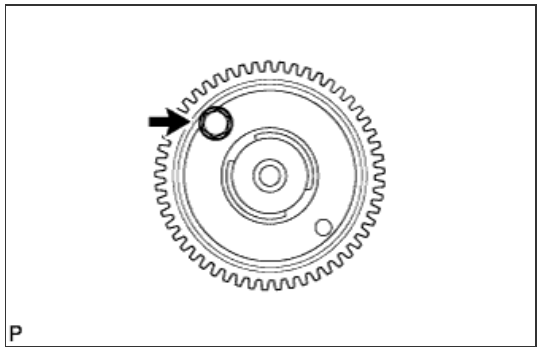


105. REMOVE V-BANK SILENCER

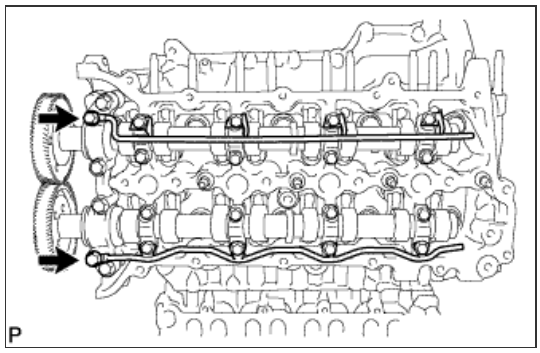


106. REMOVE TIMING GEAR CASE SUB-ASSEMBLY

a. Remove the 22 bolts, 2 nuts and timing gear case shown in the illustration.

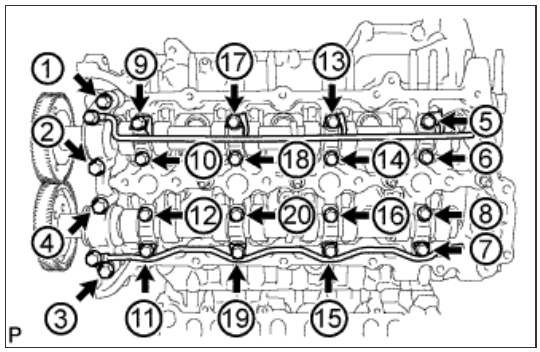


b. Remove the 2 O-rings and timing gear case gasket.

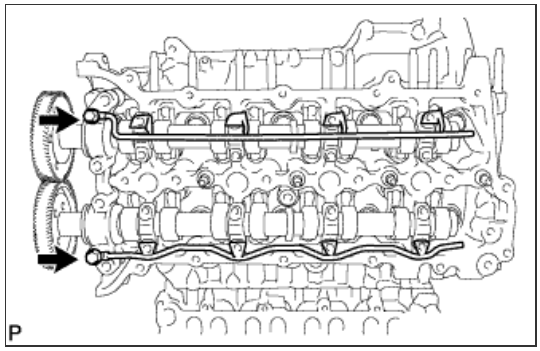


107. REMOVE NO. 1 AND NO. 2 CAMSHAFTS

a. Using a 6 mm x 1.0 pitch service bolt with a length of 16 mm or more, fix the No. 1 camshaft in place.

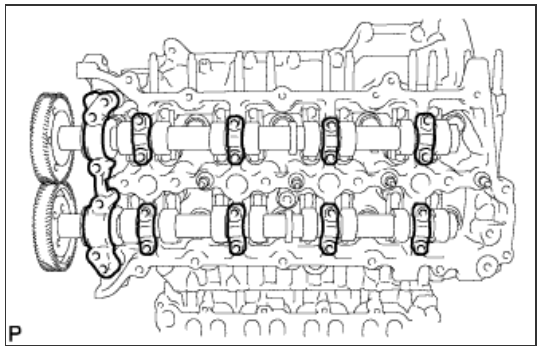


Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

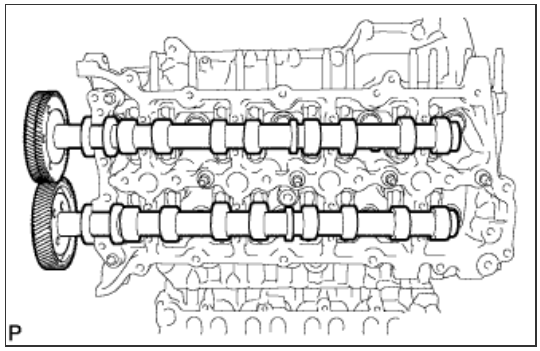


b. Loosen the 2 union bolts.

c. Uniformly loosen and remove the 20 bolts in the sequence shown in the illustration.



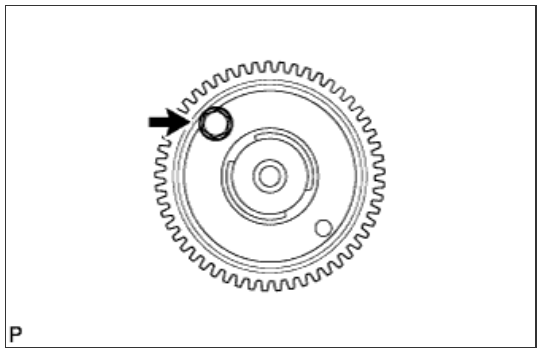
d. Remove the 2 union bolts and No. 1 and No. 2 oil feed pipes.



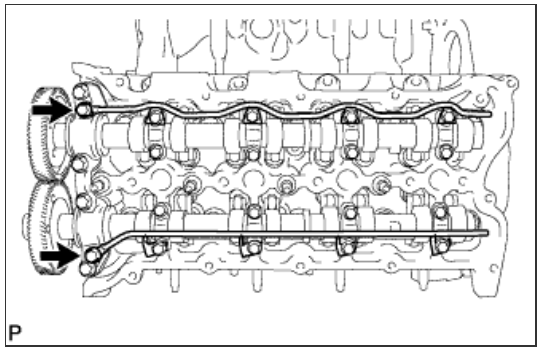
e. Remove the No. 3 camshaft bearing caps and No. 1 camshaft bearing cap.

HINT:

Be sure to arrange the removed parts for each installation position separately.

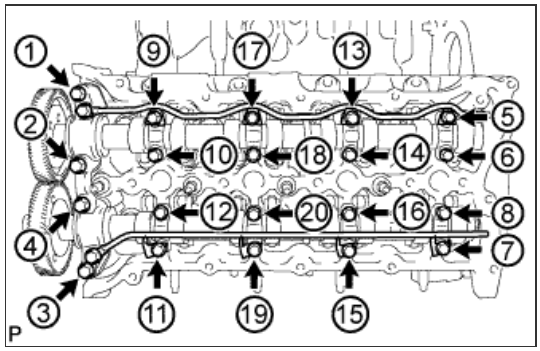


f. Remove the No. 1 and No. 2 camshafts.

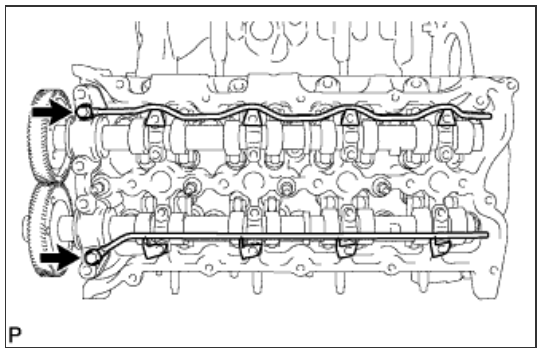


108. REMOVE NO. 3 AND NO. 4 CAMSHAFTS

a. Using an 6 mm x 1.0 pitch service bolt with a length of 16 mm or more, fix the No. 4 camshaft in place.

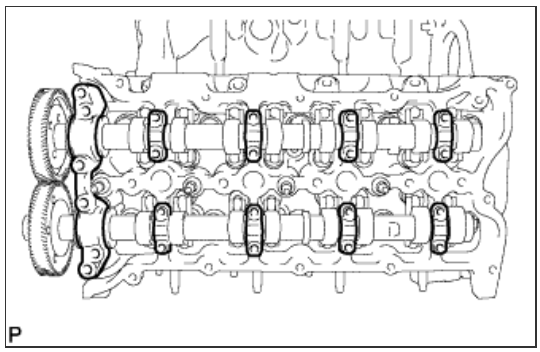


Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

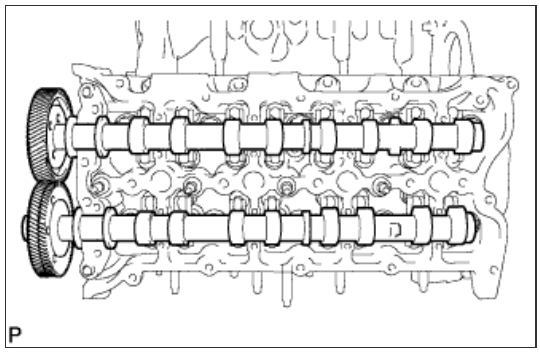


b. Loosen the 2 union bolts.

c. Uniformly loosen and remove the 20 bolts in the sequence shown in the illustration.

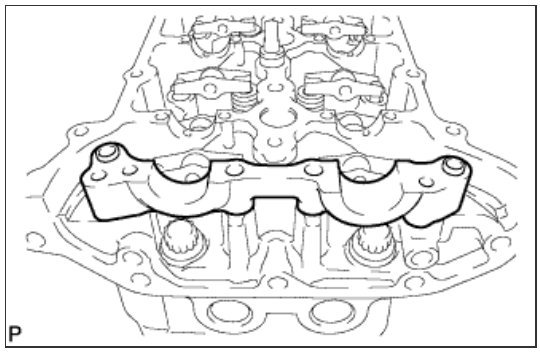


d. Remove the 2 union bolts, and No. 3 and No. 4 oil feed pipes.

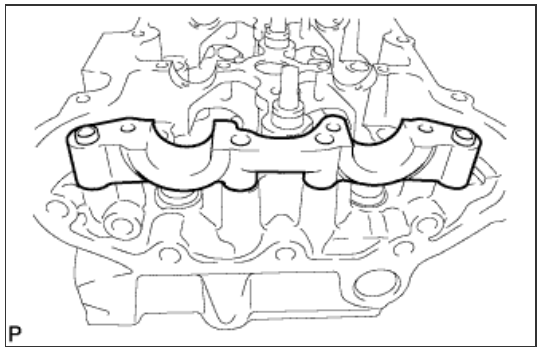


e. Remove the No. 3 camshaft bearing caps and No. 4 camshaft bearing cap.

HINT:



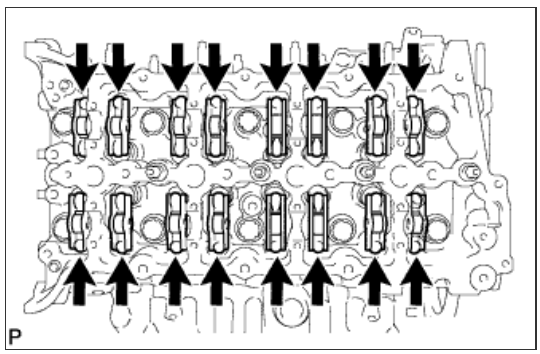
Be sure to arrange the removed parts for each installation position separately.



f. Remove the No. 3 and No. 4 camshafts.

10 . REMOVE NO. 2 CAMSHAFT BEARING CAP

110. REMOVE NO. 5 CAMSHAFT BEARING CAP

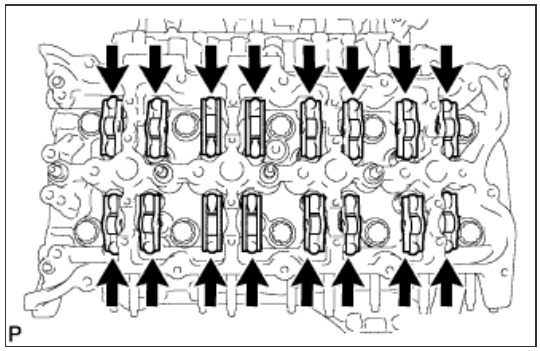


111. REMOVE NO. 1 VALVE ROCKER ARM

a. Remove the 16 No. 1 valve rocker arms.

HINT:

Be sure to arrange the removed parts for each installation position separately.

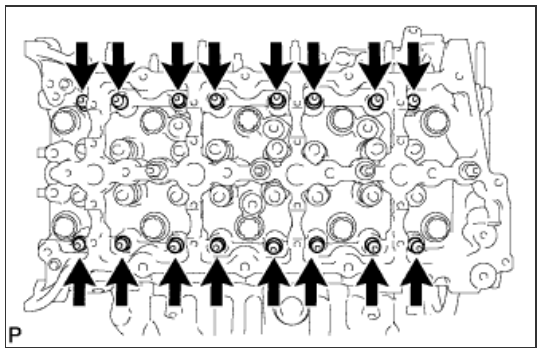


112. REMOVE NO. 2 VALVE ROCKER ARM

a. Remove the 16 No. 2 valve rocker arms.

HINT:

Be sure to arrange the removed parts for each installation position separately.

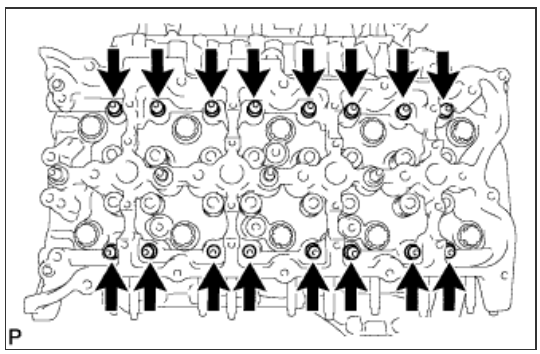


113. REMOVE NO. 1 VALVE LASH ADJUSTER ASSEMBLY

a. Remove the 16 No. 1 valve lash adjusters.

HINT:

Be sure to arrange the removed parts for each installation position separately.



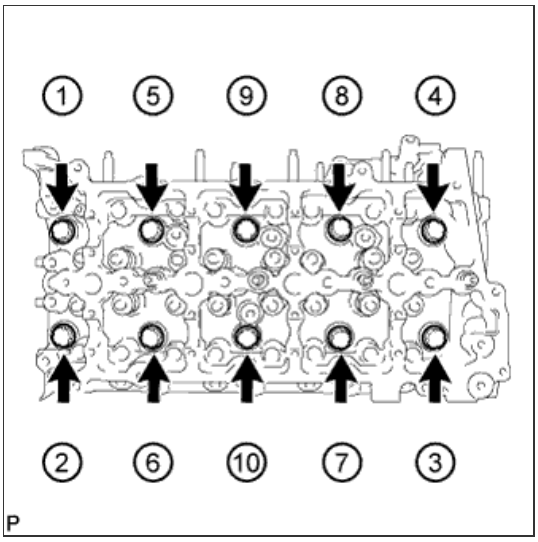
114. REMOVE NO. 2 VALVE LASH ADJUSTER ASSEMBLY

a. Remove the 16 No. 2 valve lash adjusters.

HINT:

Be sure to arrange the removed parts for each installation position separately.

115. REMOVE CYLINDER HEAD SUB-ASSEMBLY RH



a. Uniformly loosen and remove the 10 bolts and 10 spacers in the sequence shown in the illustration. Then remove the cylinder head.

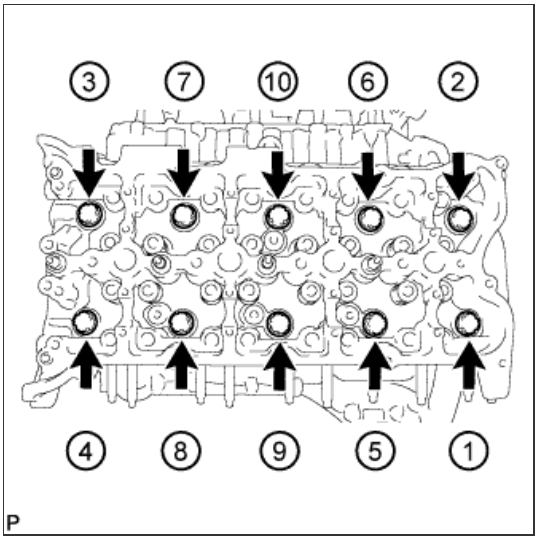
NOTICE:

- **Be careful not to drop washers into the cylinder head.**
- **Head warpage or cracking could result from removing bolts in an incorrect order.**

HINT:

Be sure to arrange the removed parts for each installation position separately.

11 . REMOVE CYLINDER HEAD SUB ASSEMBLY LH



a. Uniformly loosen and remove the 10 bolts and 10 spacers in the sequence shown in the illustration. Then remove the cylinder head.

NOTICE:

- **Be careful not to drop washers into the cylinder head.**
- **Head warpage or cracking could result from removing bolts in an incorrect order.**

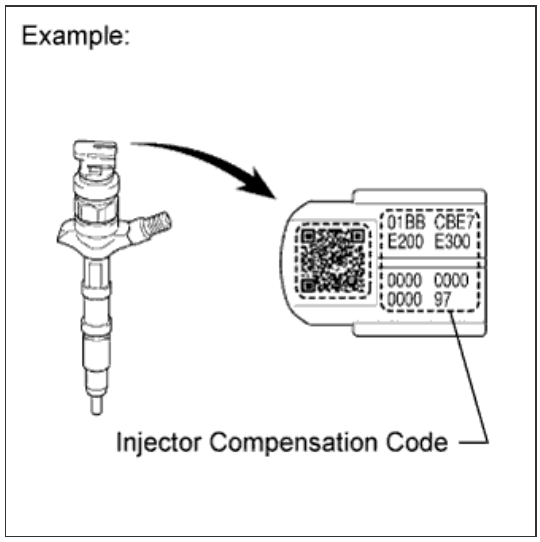
HINT:

Be sure to arrange the removed parts for each installation position separately.

117. REMOVE NO. 1 CYLINDER HEAD GASKET

118. REMOVE NO. 2 CYLINDER HEAD GASKET

for Preparation Click here



NOTICE:

- **Before performing these installation procedures, sufficiently clean and remove any foreign matter from the cylinder block, cylinder head, camshaft and other parts.**
- **When replacing an injector (including interchanging injectors between cylinders), common rail, cylinder head, or intake manifold, replace the corresponding injection pipes with a new one.**

1. CHECK INJECTOR COMPENSATION CODE

NOTICE:

- **When a fuel injector is replaced, the new fuel injector compensation code must be input into the ECM. When the ECM is replaced, all of the existing fuel injector compensation codes must be input into the new ECM.**
- **Fuel injector compensation codes are unique, 30 digit, alphanumeric values printed on the head portion of each fuel injector. If an incorrect fuel injector compensation code is input into the ECM, the engine assembly may rattle or engine idling may become rough. In addition, engine failure may occur and the life of the engine may be shortened.**

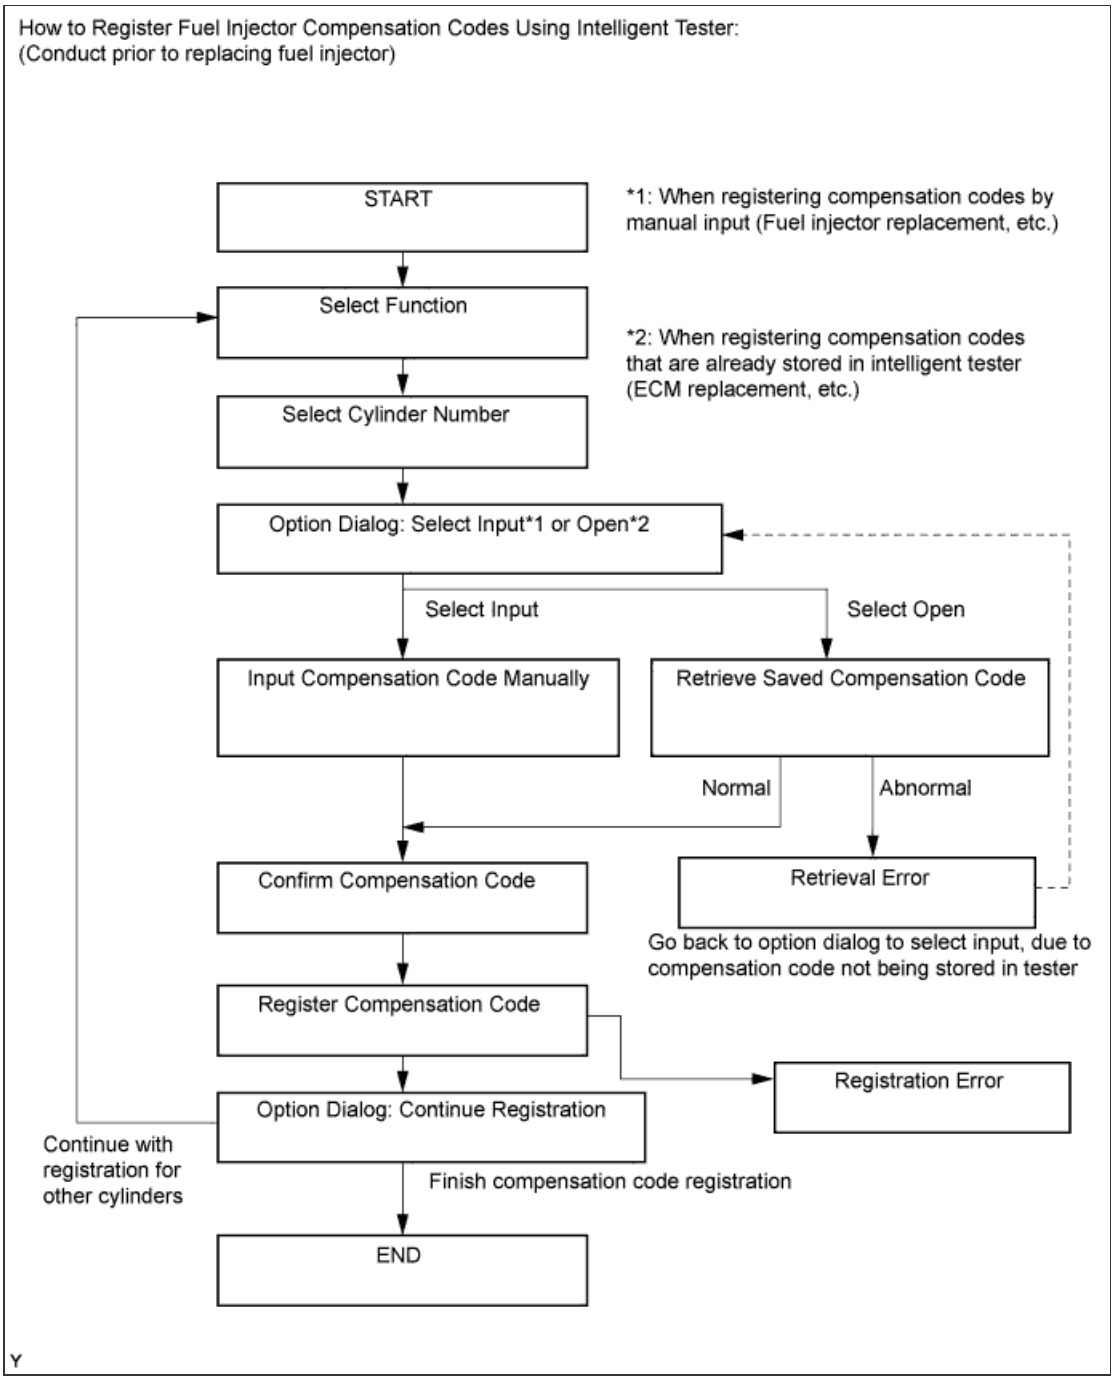
a. After replacing fuel injector(s) with new one(s), input compensation code(s) of fuel injector(s) into ECM as follows:

HINT:

- **Each fuel injector has different fuel injection characteristics. In order to optimize the fuel injections, the ECM uses the compensation codes to balance the different fuel injections between each fuel injector.**
- **When you first turn the ignition switch to ON after replacing the ECM or a fuel injector(s), DTC P1601 is set. This is to inform you that registration of a fuel injector compensation code(s) is/are required. Manually clear the DTC upon completion of the compensation code registration.**

i. npt the compensation code(s), which is/are imprinted on the head portion(s) of the new fuel injector(s), into the intelligent tester.

ii. npt the new compensation code(s) into the ECM using the tester.



iii. Turn the tester off and turn the ignition switch off.

iv. Wait for at least 30 seconds.

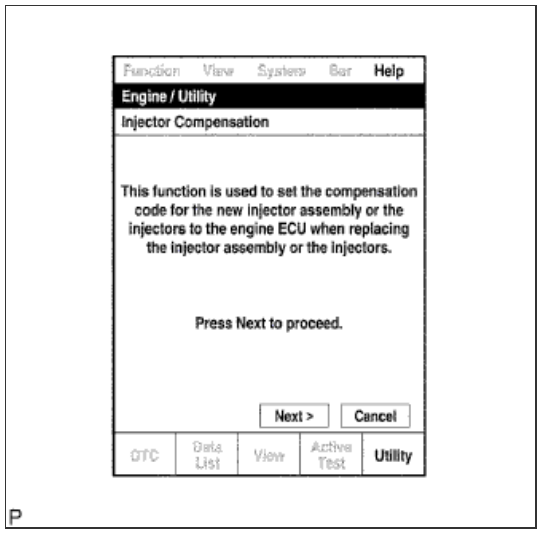
v. Turn the ignition switch to ON and turn the tester on.

vi. Clear DTC P1601 stored in the ECM using the tester (Click here).

b. Register compensation code.

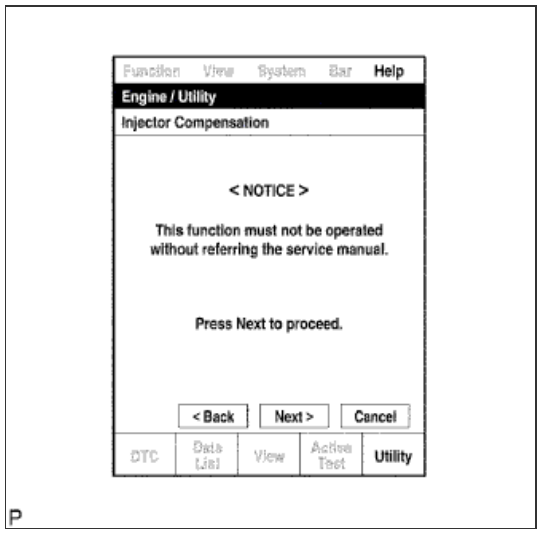
i. Connect the intelligent tester to the DLC3.

ii. Turn the ignition switch to ON.



NOTICE:

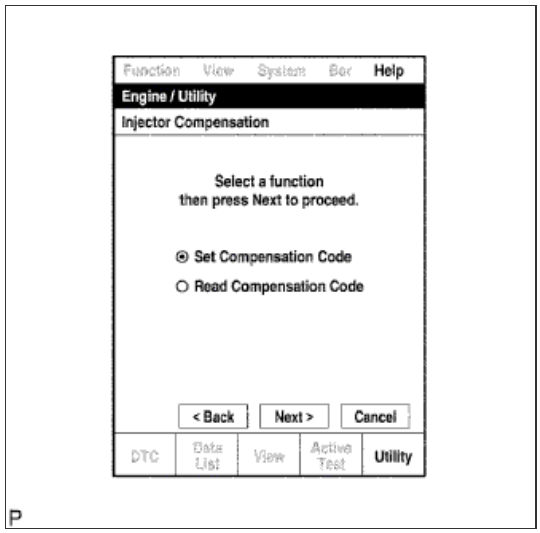
Do not start the engine.



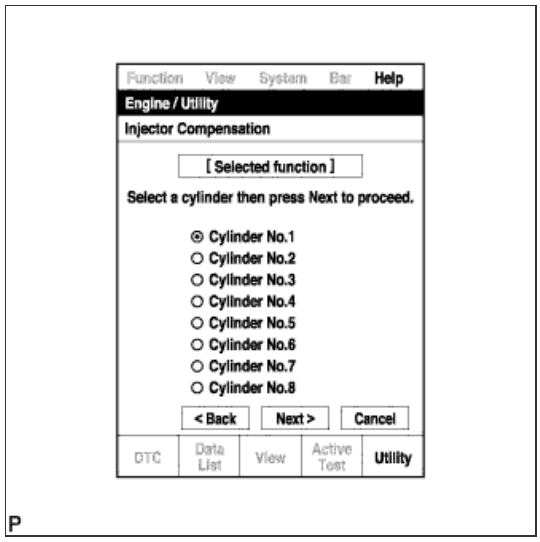
iii. Turn the tester on.

iv. Enter the following menus: Powertrain / Engine / Utility / rector Compensation.

v. Press Next.



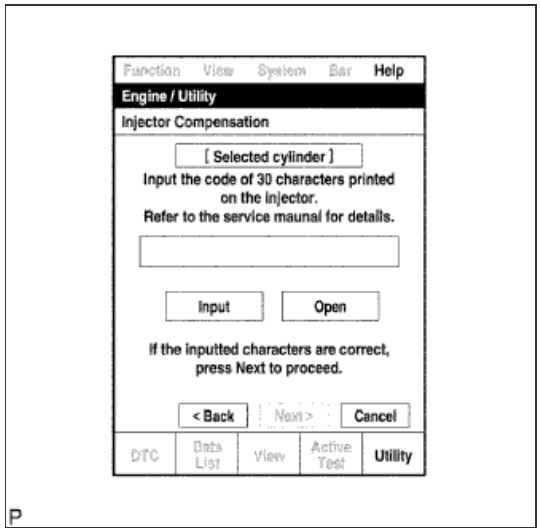
vi. Press Next again to proceed.



vii. Select "Set Compensation Code".

viii. Press Next.

ix. Select the num er of the cylinder corresponding to the fuel injector compensation code that you want to read.



x. Press Next.

P

xi. Register compensation code.

1. Press npt.

P

2. Manually input the cylinder compensation code using the key oard on the tester screen. The code is a 30 digit, alphanumeric value printed on the injector head portion.

HINT:

Each fuel injector compensation code is uni ue. The compensation code for each selected cylinder must e input into the tester correctly.

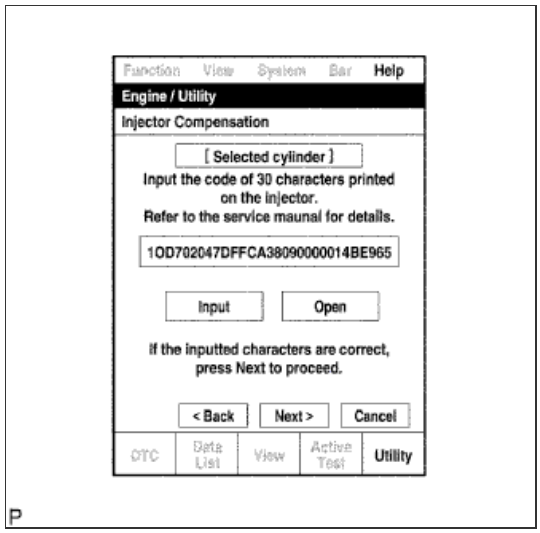
3. Confirm that the compensation code for the selected cylinder is correct, and then press O .

P

xii. Check that the compensation code displayed on the screen is correct y comparing it with the 30 digit alphanumeric value on the head portion of the fuel injector.

NOTICE:

f an incorrect fuel injector compensation code is input into the ECM, the engine may rattle or engine idling may ecome rough. n a tidn, engine failure may occur and the life of the engine may e shortened.



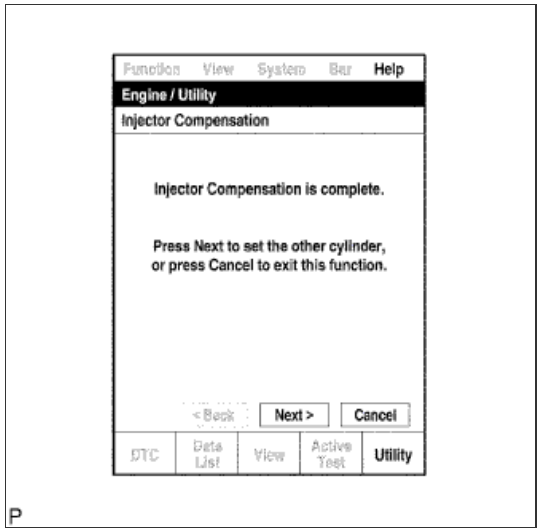
HINT:

- **If a wrong compensation code is input or read, return to the Input Value screen by pressing Input.**
- **The saving process may fail due to a problem with the wire harness or a bad connection with the DLC3. Check the wire harness and DLC3 connection. If no problem is found with either, the ECM may be malfunctioning. Check the ECM and repeat this operation.**

xiii. Press Next to register the compensation code in the ECM.

HINT:

- **If the registration process fails, the compensation code may be incorrect. Check the compensation code again.**
- **If the input compensation code fails to register even though it is input correctly, there may be a problem with the wire harness or a bad connection with the DLC3. Check the wire harness and DLC3 connection. If no problem is found with either, the ECM may be malfunctioning. Check the ECM and restart this operation.**



xiv. f you want to continue with other compensation code registrations, press Next. To finish the registration, press Cancel.

xv. Turn the ignition switch off and then turn the tester off.

xvi. Wait for at least 30 seconds.

xvii. Turn the ignition switch to ON and then turn the tester on.

xviii. Clear DTC P1601 stored in the ECM using the tester (Click here).

2. SELECT CYLINDER HEAD GASKET

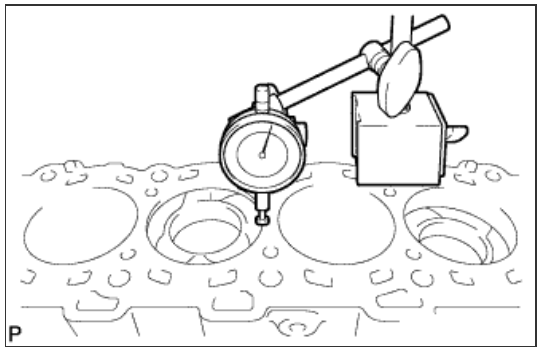
a. Set the 2 crankshaft pulley set olts to the crankshaft.

b. Clean the cylinder dck with solvent.

c. n ept the protrusion for each cylinder.

i. Set the piston of the cylinder to e measured to slightly efore TDC.

ii. Place a dial indicator on the cylinder dck, and set the measuring tip as shown in the illustration.



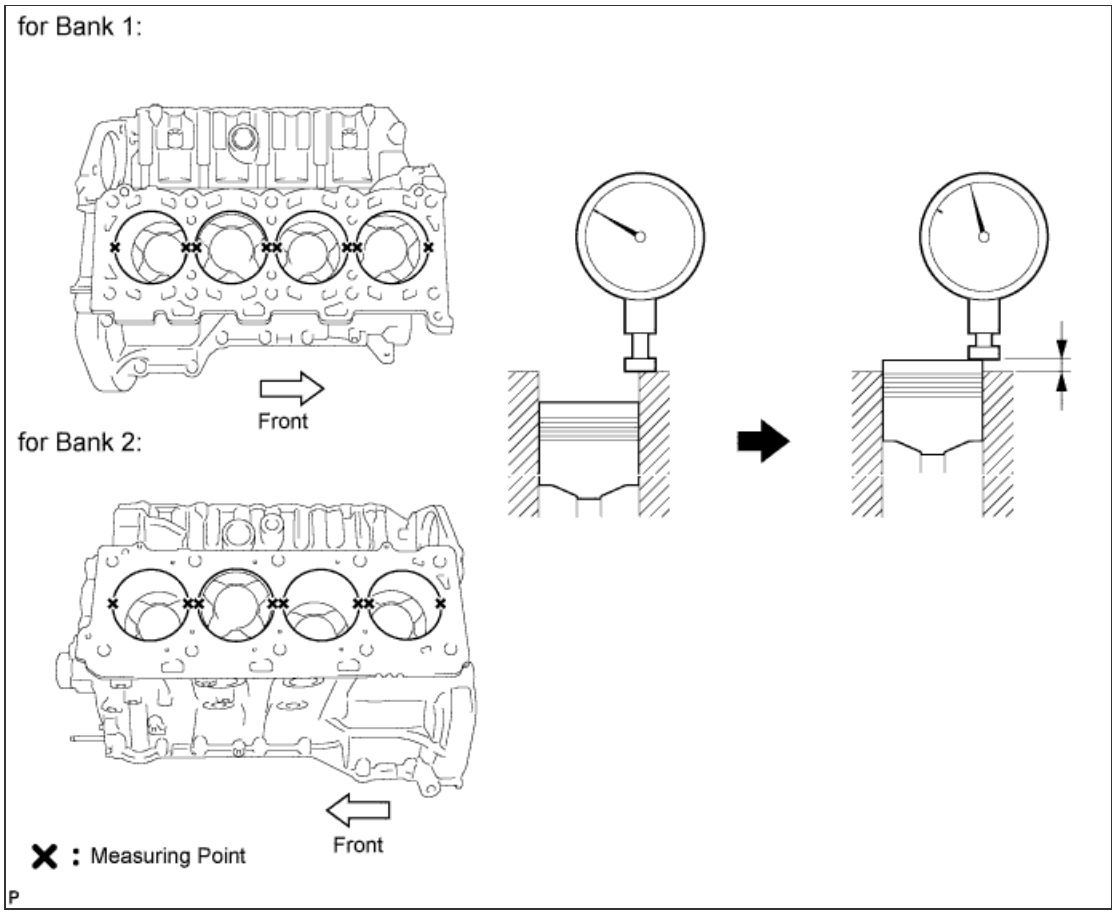
NOTICE:

Make sure that the dial indicator is at a right angle to the cylinder dck top surface.

iii. Set the dial indicator at 0 mm (0 in.).

HINT:

Make sure that the measuring tip is flat against the cylinder dck surface and piston head when taking the measurements.



iv. ind where the piston head protrudes most y slowly turning the crankshaft clockwise and counterclockwise.

v. Measure the piston protrusion value of each cylinder at 2 places as shown in the illustration elow, making a total of 8 measurements.

Standard piston protrusion:
0.520 to 0.780 mm (0.0205 to 0.0307 in.)

f the protrusion is not as specified, remove and reinstall the piston and connecting rod.

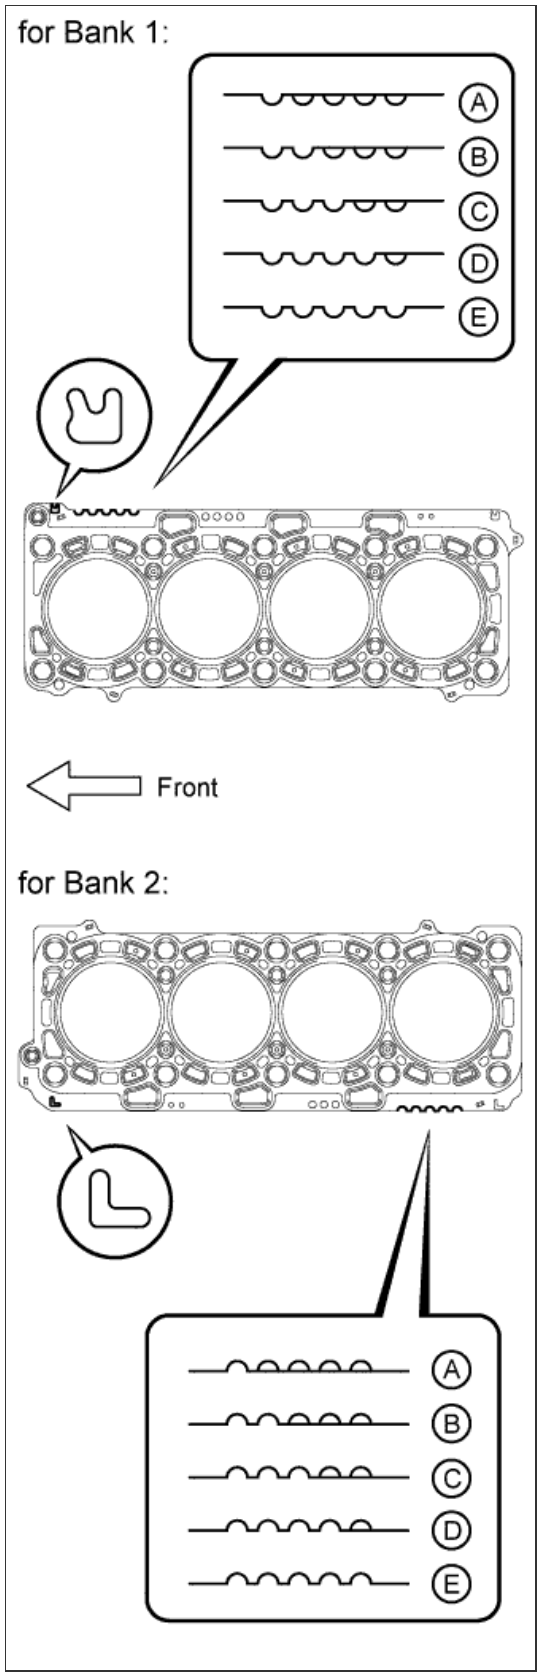
d. Select a new cylinder head gasket.

HINT:

Cylinder head gaskets are marked A, B, C, D or E accordingly.

New Installed Cylinder Head Gasket Thickness:

tem	Cutout	Specified Condition
A	1	1.20 to 1.30 mm (0.0472 to 0.0512 in.)
B	2	1.25 to 1.35 mm (0.0492 to 0.0394 in.)
C	3	1.30 to 1.40 mm (0.0512 to 0.0551 in.)
D	4	1.35 to 1.45 mm (0.0531 to 0.0571 in.)
E	5	1.40 to 1.50 mm (0.0551 to 0.0591 in.)

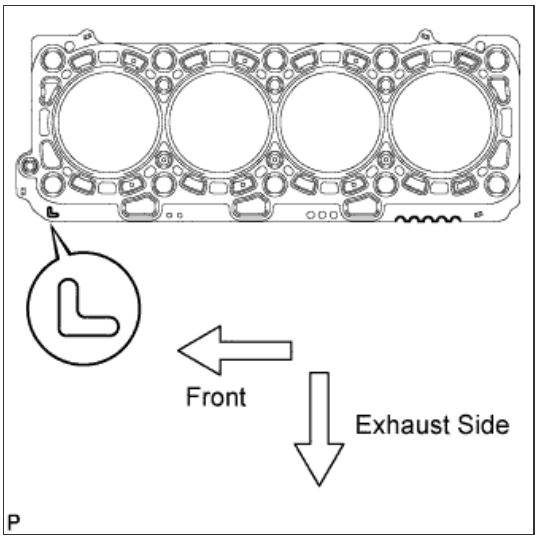


HINT:

: The specified condition indicates the thickness of the gasket after tightening the cylinder head.

i. Select the largest piston protrusion value from the measurements and then select a new appropriate gasket according to the ta d elow.

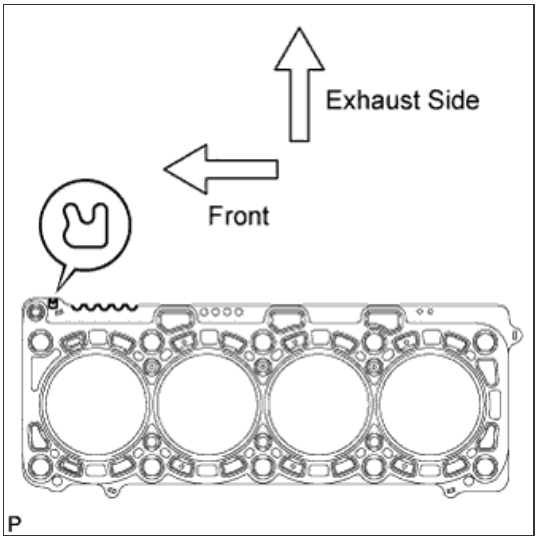
Standard Piston Protrusion:



tem	Specified Condition
A	0.520 to 0.575 mm (0.0205 to 0.0226 in.)
B	0.575 to 0.625 mm (0.0226 to 0.0246 in.)
C	0.625 to 0.675 mm (0.0246 to 0.0266 in.)
D	0.675 to 0.725 mm (0.0266 to 0.0285 in.)
E	0.725 to 0.780 mm (0.0285 to 0.0307 in.)

3. INSTALL NO. 2 CYLINDER HEAD GASKET

a. Remove any oil from the contact surface.



b. Place the cylinder head gasket on the cylinder dck surface with the front face of the indicated mark "L" upward and facing the exhaust side.

4. INSTALL NO. 1 CYLINDER HEAD GASKET

a. Remove any oil from the contact surface.

b. Place the cylinder head gasket on the cylinder dck surface with the front face of the indicated mark "R" upward and facing the exhaust side.

5. INSTALL CYLINDER HEAD SUB-ASSEMBLY LH

a. Place the cylinder head on the cylinder head gasket.

NOTICE:

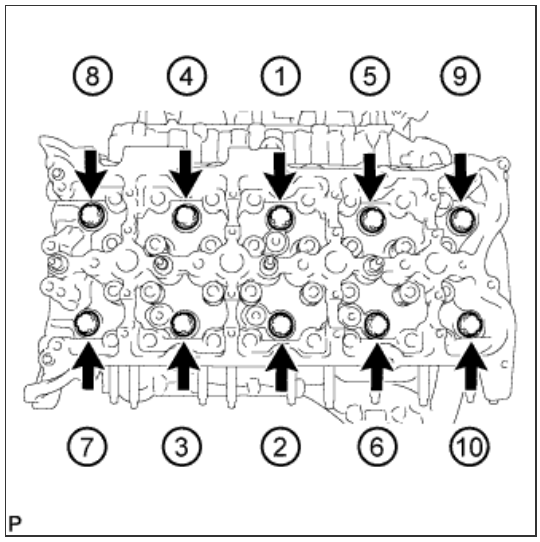
Ensure that no oil is on the mounting surface of the cylinder head.

b. n ept the cylinder head olts (Click here).

c. Apply a light coat of engine oil to the threads and under the heads of the cylinder head olts.

d. Step 1:

i. ntall and uniformly tighten the 10 cylinder head olts with the spacers in several steps, in the se uence shown in the illustration.

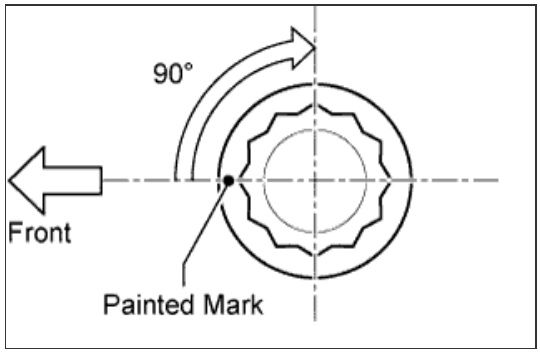


Torque:
80 N*m{ 816 kgf*cm , 59 ft.*lbf }

HINT:

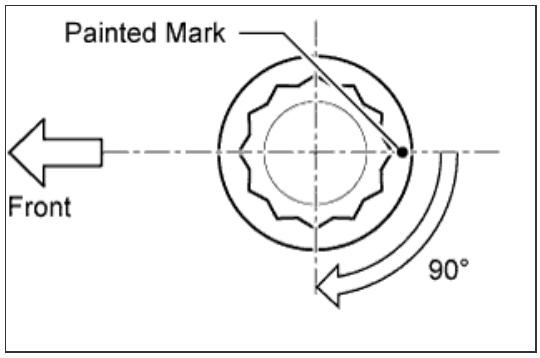
- **The cylinder head bolts are tightened in 4 progressive**

steps.



- If a cylinder head bolt is broken or deformed, replace it.

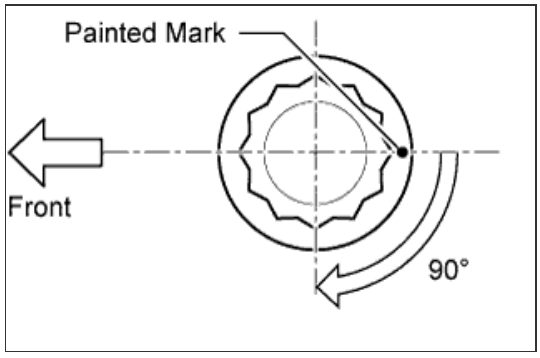
e. Step 2:



i. Mark the cylinder head olt heads with paint as shown in the illustration.

ii. Tighten the cylinder head olts 90° in the se uence shown in step 1.

f. Step 3:



i. Tighten the cylinder head olts another 90° in the se uence shown in step 1.

g. Step 4:

i. Tighten the cylinder head olts y an additional 90° in the se uence shown in step 1.

h. Check that the painted marks are now facing the exhaust port side.

6. INSTALL CYLINDER HEAD SUB-ASSEMBLY RH

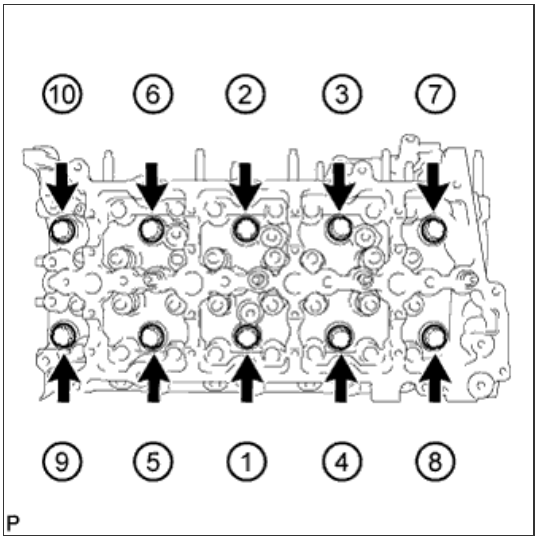
a. Place the cylinder head on the cylinder head gasket.

NOTICE:

Ensure that no oil is on the mounting surface of the cylinder head.

b. n ept the cylinder head olts (Click here).

c. Apply a light coat of engine oil to the threads and under the heads of the cylinder head olts.

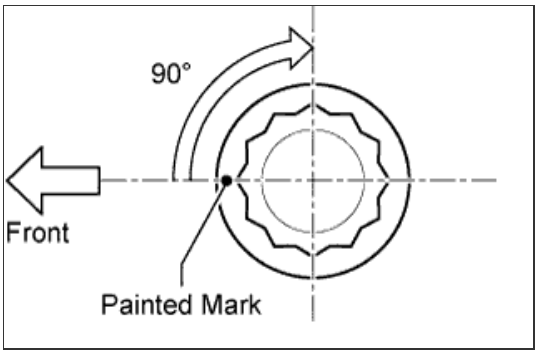


d. Step 1:

i. ntall and uniformly tighten the 10 cylinder head olts with the spacers in several steps, in the se uence shown in the illustration.

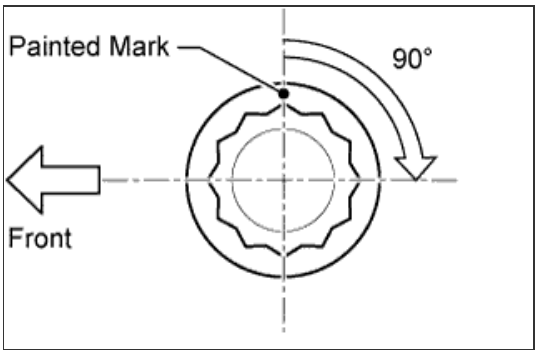
Torque:
80 N*m{ 816 kgf*cm , 59 ft.*lbf }

HINT:



- **The cylinder head bolts are tightened in 4 progressive steps.**
- **If a cylinder head bolt is broken or deformed, replace it.**

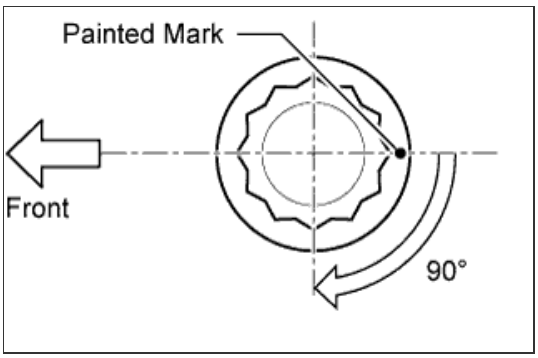
e. Step 2:



i. Mark the cylinder head olt heads with paint as shown in the illustration.

ii. Tighten the cylinder head olts 90° in the se uence shown in step 1.

f. Step 3:



i. Tighten the cylinder head olts another 90° in the se uence shown in step 1.

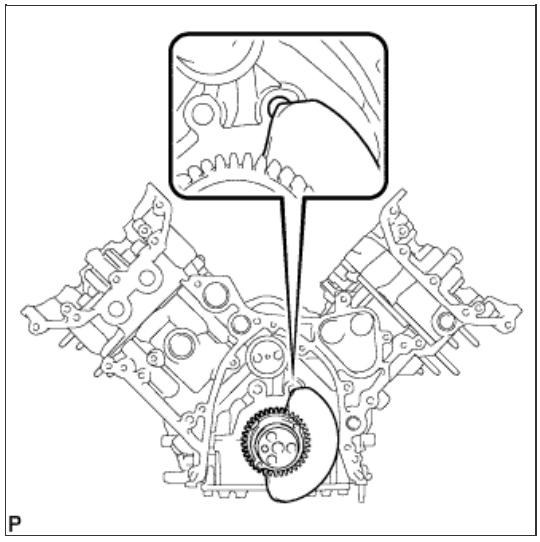
g. Step 4:

i. Tighten the cylinder head olts y an additional 90° in the se uence shown in step 1.

h. Check that the painted marks are now facing the intake port side.

. SET NO. 1 CYLINDER TO 45° BEFORE TDC

a. Using a ar, turn the crankshaft counterclockwise until the No. 1 cylinder is at a position 45° efore TDC.



NOTICE:

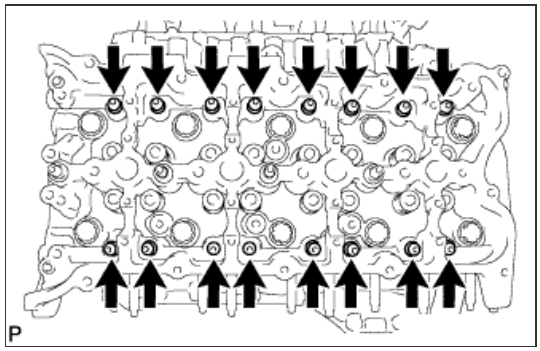
Do not turn the crankshaft again until after the timing gear is installed.

HINT:

The No. 1 cylinder is at a position 45° efore TDC if the crankshaft counterweight is overlapping the cylinder dck hole as shown in the illustration.

b. Remove the 2 crankshaft pulley set olts.

8. INSTALL NO. 2 VALVE LASH ADJUSTER ASSEMBLY



NOTICE:

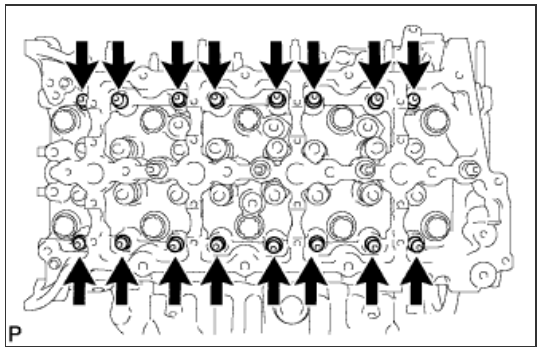
Be sure to inspect the valve lash adjuster efore installing it (Click here).

a. ntall the 16 No. 2 valve lash adjusters to the cylinder head.

HINT:

ntall the lash adjuster at the same place it was removed from.

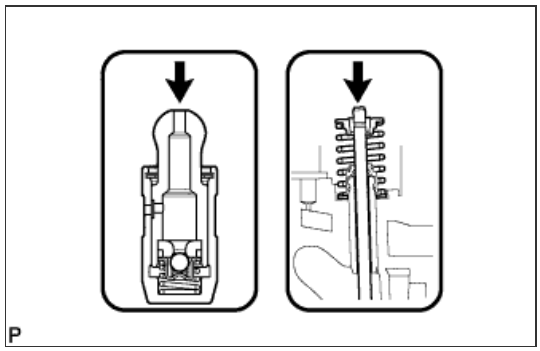
9. INSTALL NO. 1 VALVE LASH ADJUSTER ASSEMBLY



NOTICE:

Be sure to inspect the valve lash adjuster efore installing it (Click here).

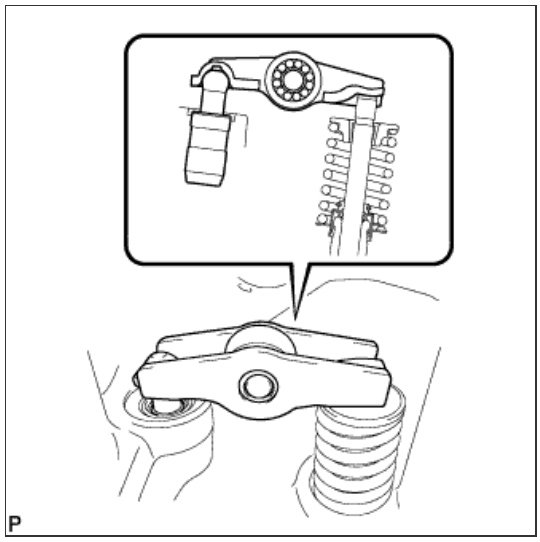
a. ntall the 16 No. 1 valve lash adjusters to the cylinder head.



HINT:

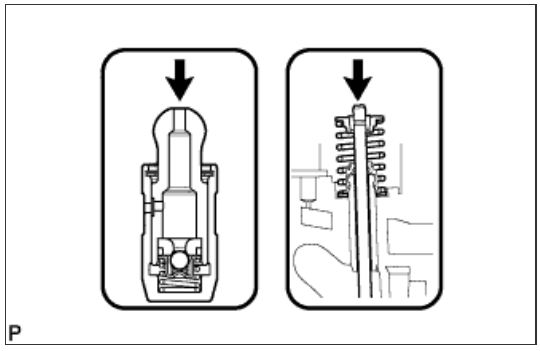
ntall the lash adjuster at the same place it was removed from.

10. INSTALL NO. 2 VALVE ROCKER ARM



a. Apply engine oil to the lash adjuster tips and valve stem ends.

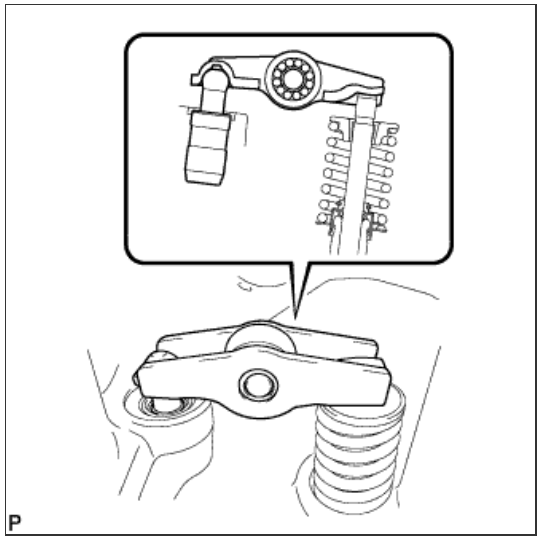
b. ntall the 16 No. 2 valve rocker arms as shown in the illustration.



HINT:

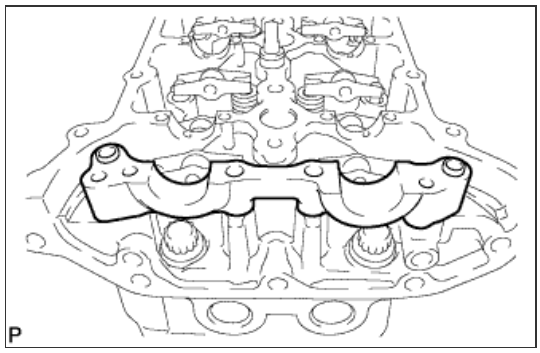
ntall the valve rocker arm at the same place it was removed from.

11. INSTALL NO. 1 VALVE ROCKER ARM



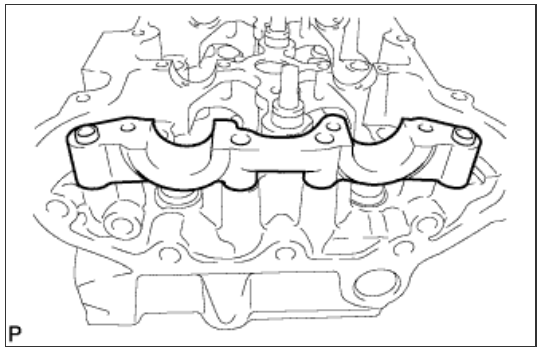
a. Apply engine oil to the lash adjuster tips and valve stem ends.

b. ntall the 16 No. 1 valve rocker arms as shown in the illustration.



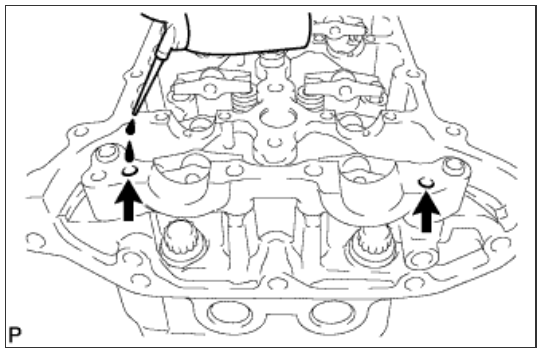
HINT:

ntall the valve rocker arm at the same place it was removed from.



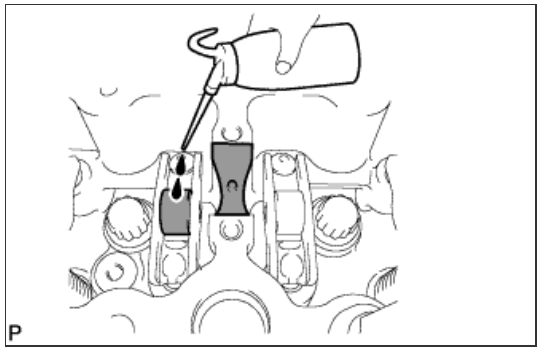
12. INSTALL NO. 5 CAMSHAFT BEARING CAP

a. Align the camshaft earing cap and the ring pins of the cylinder head, and install the cap.

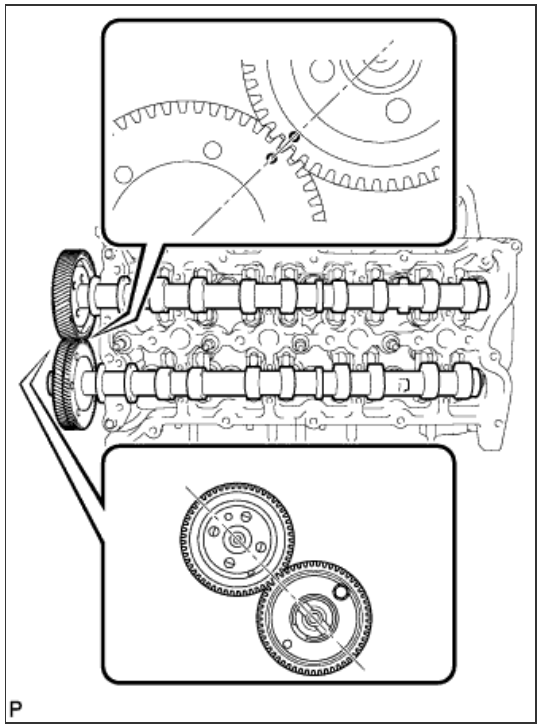


13. INSTALL NO. 2 CAMSHAFT BEARING CAP

a. Align the camshaft earing cap and the ring pins of the cylinder head, and install the cap.



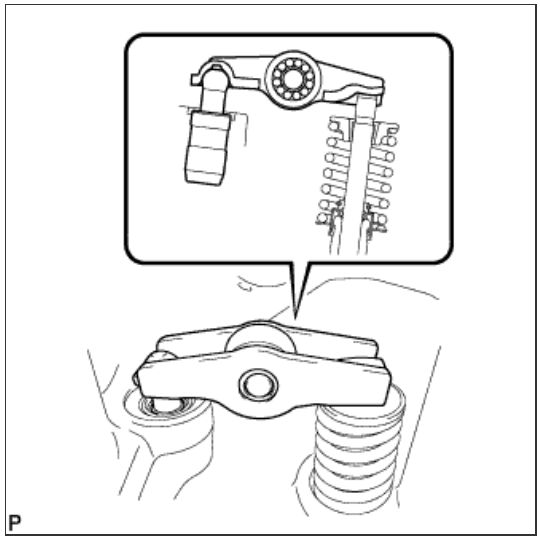
14. INSTALL NO. 3 AND NO. 4 CAMSHAFTS



a. Add more than 19 cc (1.16 cu. in.) of engine oil into the cylinder head side oil holes.

b. Apply engine oil to the rollers of the valve rocker arms and the camshaft housing of the cylinder head.

c. ntall the camshafts.

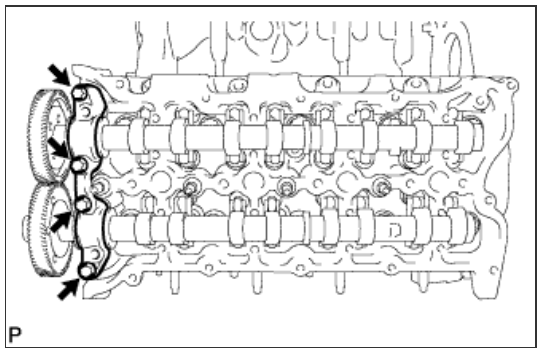


i. Apply engine oil to the camshaft journals, lo es, thrust portion and gears.

ii. Align the timing marks (1 dot mark) on the ack side of the No. 3 and No. 4 camshaft timing gears as shown in the illustration.

iii. Place the camshafts into the cylinder head.

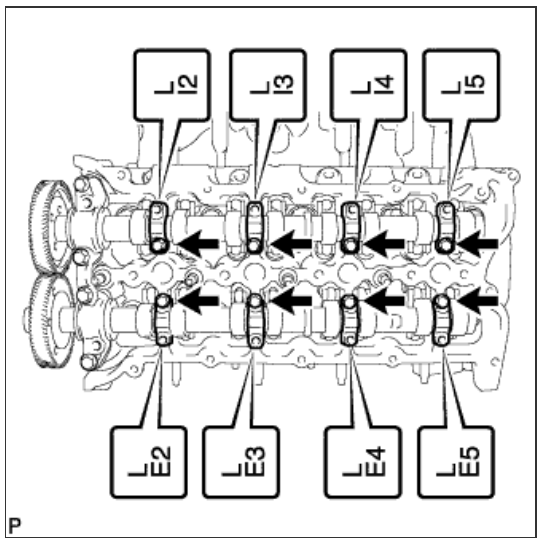
NOTICE:



Before and after setting the camshafts, firmly set the rocker arms to the lash adjusters.

d. ntall the No. 4 camshaft earing cap.

i. Align the No. 4 camshaft earing cap and the ring pins of the No. 5 camshaft earing cap.

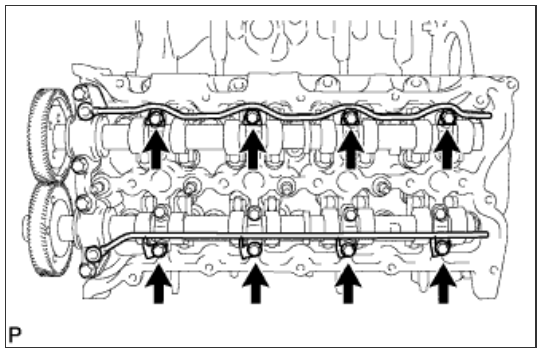


ii. Temporarily install the 4 olts y hand.

e. ntall the No. 3 camshaft earing caps.

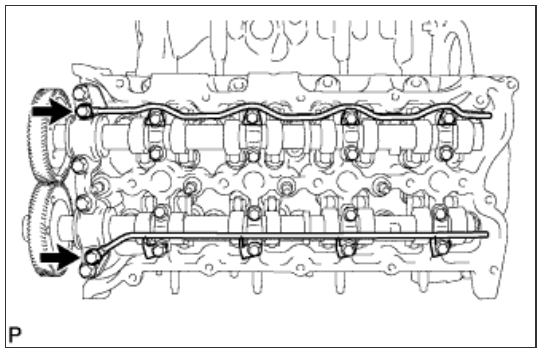
i. Confirm the marks and num ers on the camshaft earing caps and place them in their proper position and direction.

ii. Temporarily install the 8 olts, which are not installed with the oil feed pipe, y hand.



f. Temporarily install the No. 3 and No. 4 camshaft oil feed pipes with the 8 olts y hand.

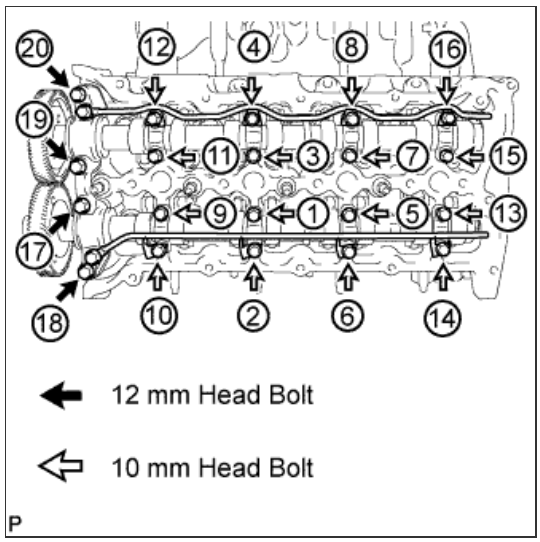
NOTICE:



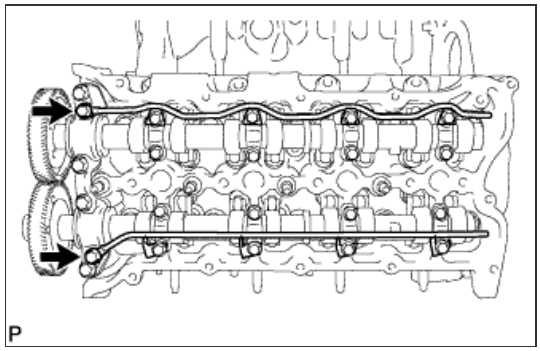
f even one of the pipe olt holes does not match its camshaft earing cap olt hole, replace the camshaft oil feed pipe.

HINT:

The pipe is ent on the intake side, and straight on the exhaust side.



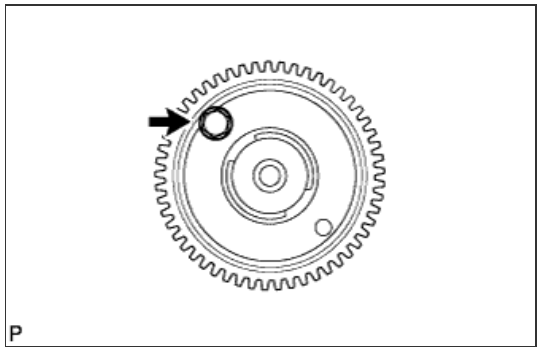
g. Temporarily install the 2 union olts y hand.



h. Uniformly tighten the 20 olts in several steps in the order shown in the illustration.

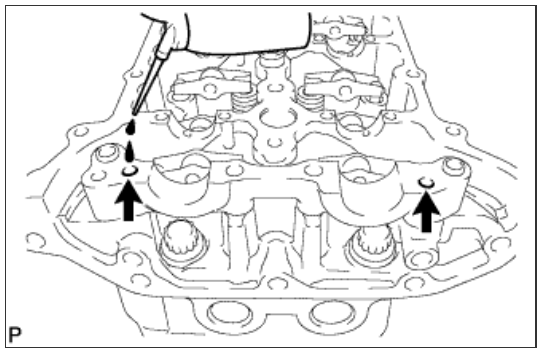
Torque:
for 12 mm head bolt of No. 4 camshaft bearing cap:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
for 10 mm head bolt of No. 3 camshaft bearing cap:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

i. Tighten the 2 union olts.



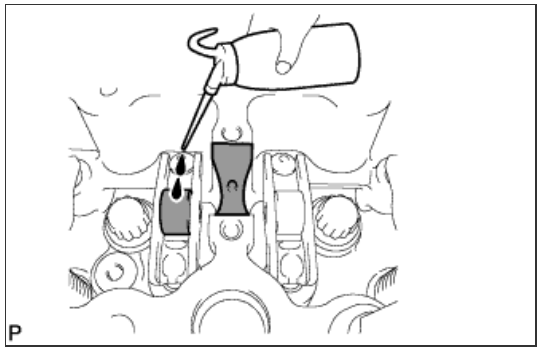
Torque:
17 N*m{ 173 kgf*cm , 13 ft.*lbf }

j. Remove the olt from the No. 4 camshaft timing gear.

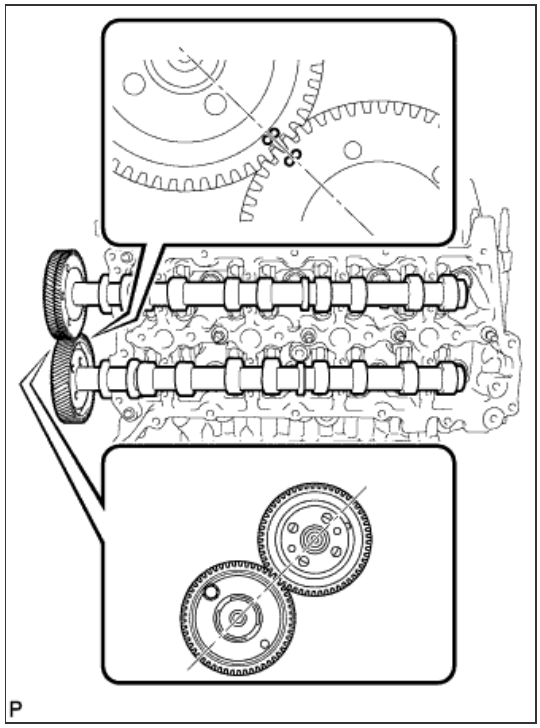


NOTICE:

Do not drop the olt into the engine.



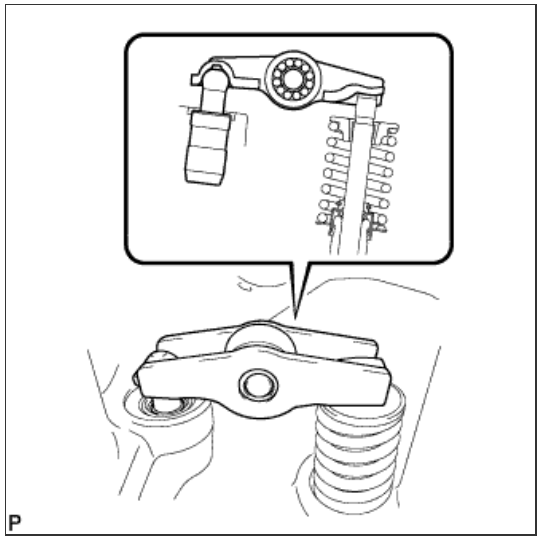
15. INSTALL NO. 1 AND NO. 2 CAMSHAFT



a. Add more than 19 cc (1.16 cu. in.) of engine oil into the cylinder head side oil holes.

b. Apply engine oil to the rollers of the valve rocker arms and the camshaft housing of the cylinder head.

c. ntall the camshafts.

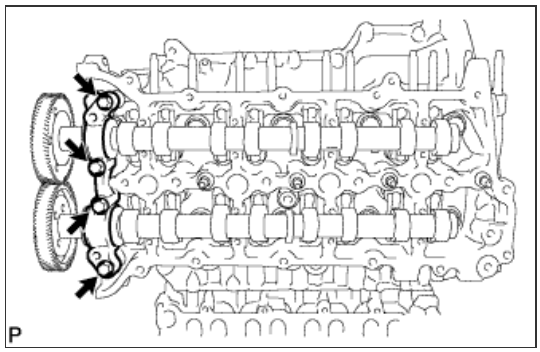


i. Apply engine oil to the camshaft journals, lo es, thrust portion and gears.

ii. Align the timing marks (2 dot marks) on the ack side of the No. 1 and No. 2 camshaft timing gears as shown in the illustration.

iii. Place the camshafts into the cylinder head.

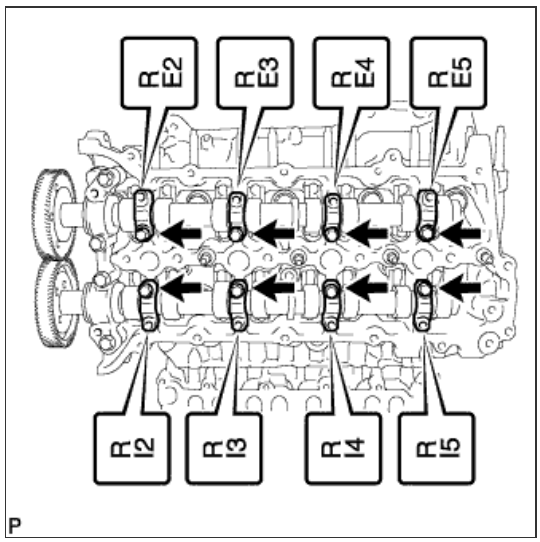
NOTICE:



Before and after setting the camshafts, firmly set the rocker arms to the lash adjusters.

d. ntall the No. 1 camshaft earing cap.

i. Align the No. 1 camshaft earing cap and the ring pins of the No. 2 camshaft earing cap.

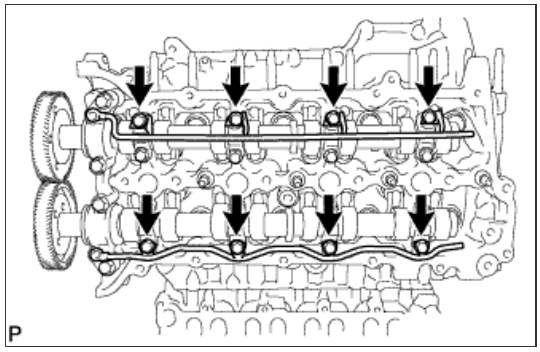


ii. Temporarily install the 4 olts y hand.

e. ntall the No. 3 camshaft earing caps.

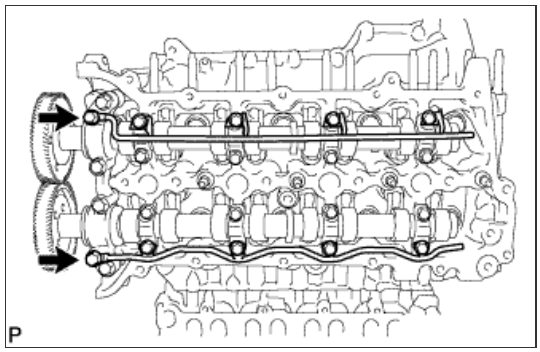
i. Confirm the marks and num ers on the camshaft earing caps and place them in their proper position and direction.

ii. Temporarily install the 8 olts, which are not installed with the oil feed pipe, y hand.



f. Temporarily install the No. 1 and No. 2 camshaft oil feed pipes with the 8 olts y hand.

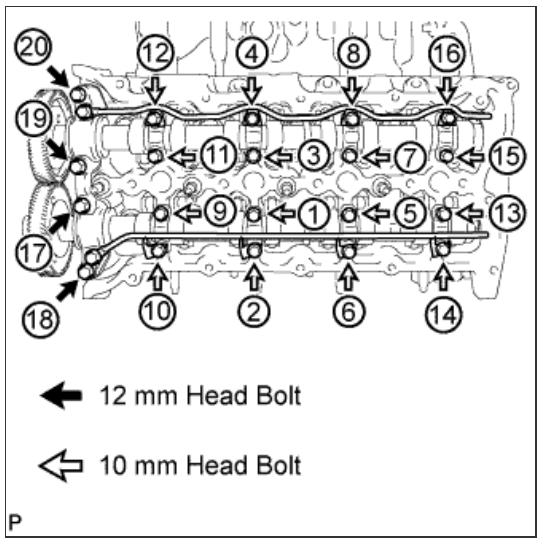
NOTICE:



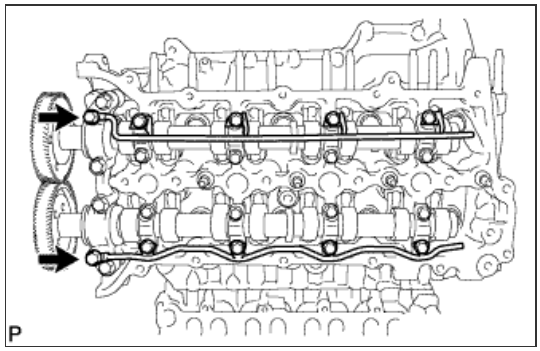
f even one of the pipe olt holes does not match its camshaft earing cap olt hole, replace the camshaft oil feed pipe.

HINT:

The pipe is ent on the intake side, and straight on the exhaust side.



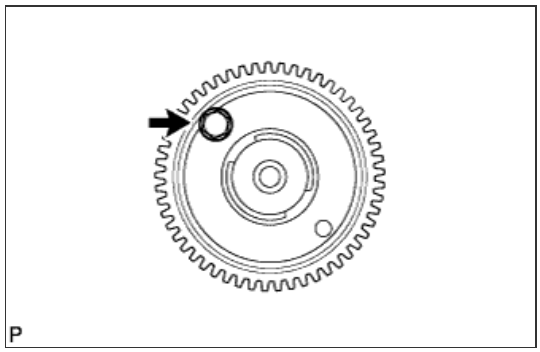
g. Temporarily install the 2 union olts y hand.



h. Uniformly tighten the 20 olts in several steps in the order shown in the illustration.

Torque:
for 12 mm head bolt of No. 1 camshaft bearing cap:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
for 10 mm head bolt of No. 3 camshaft bearing cap:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

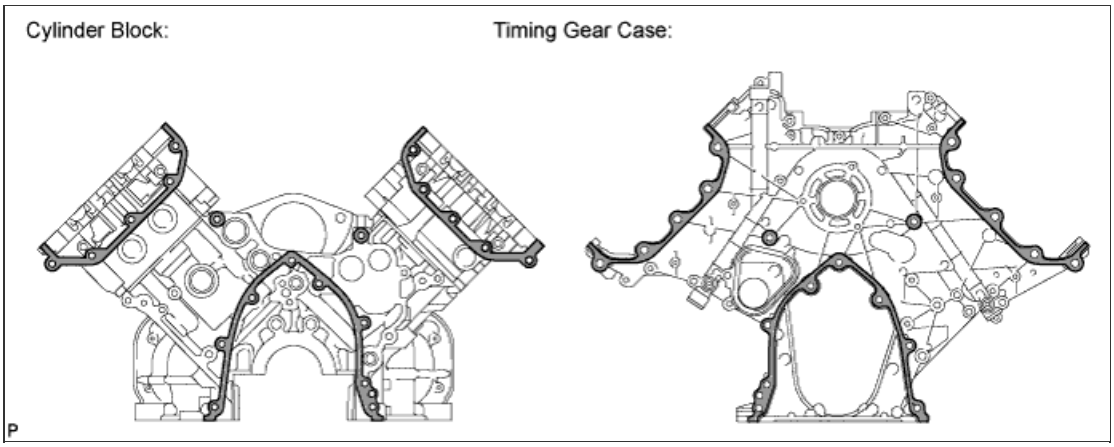
i. Tighten the 2 union olts.



Torque:
17 N*m{ 173 kgf*cm , 13 ft.*lbf }

j. Remove the olt from the No. 1 camshaft timing gear.

NOTICE:



Do not drop the olt into the engine.

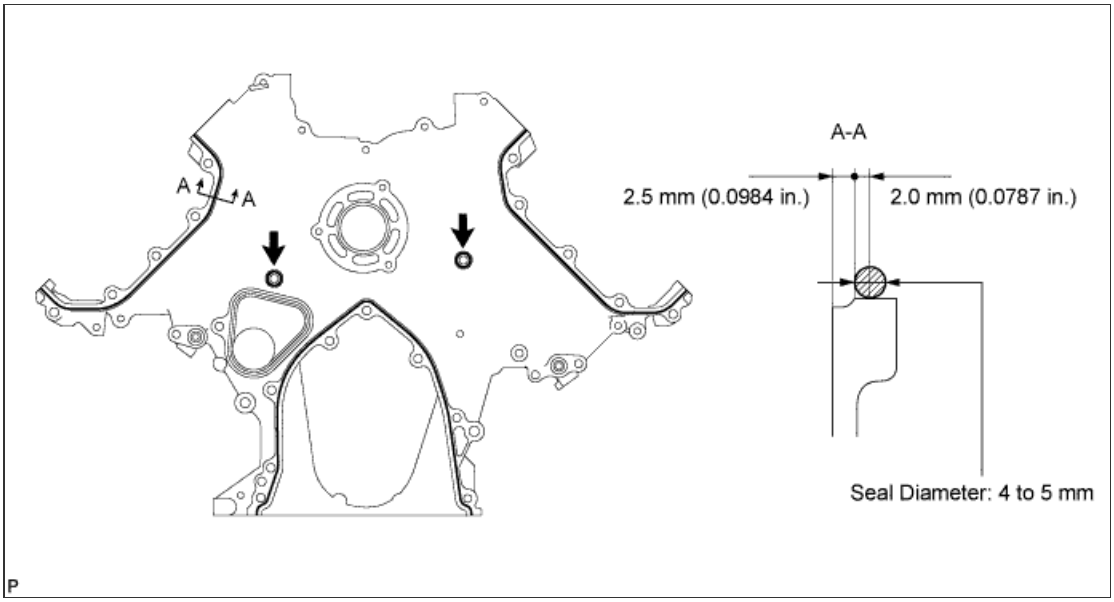
16. INSTALL TIMING GEAR CASE SUB-ASSEMBLY

NOTICE:

When the contact surfaces shown elow are wet, wipe them with an oil free cloth efore applying seal packing.

a. Apply seal packing to the timing gear case as shown in the following illustration.

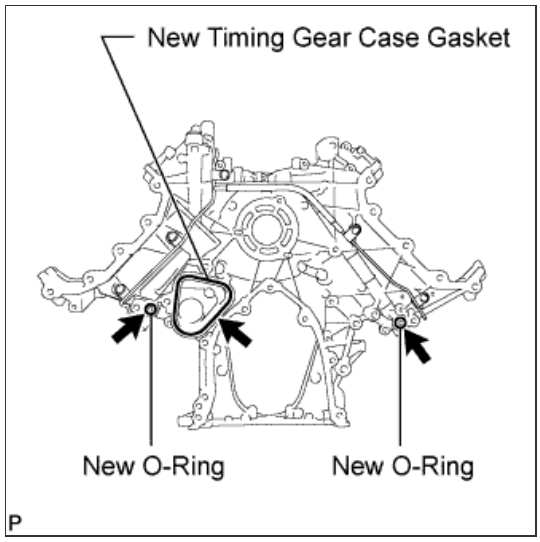
Standard seal diameter:
4 to 5 mm (0.157 to 0.197 in.)



Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

NOTICE:

- **After applying seal packing, align the timing gear case with the engine within 3 minutes and tighten the bolts and nuts within 15 minutes.**
- **Apply the seal packing in a continuous line.**



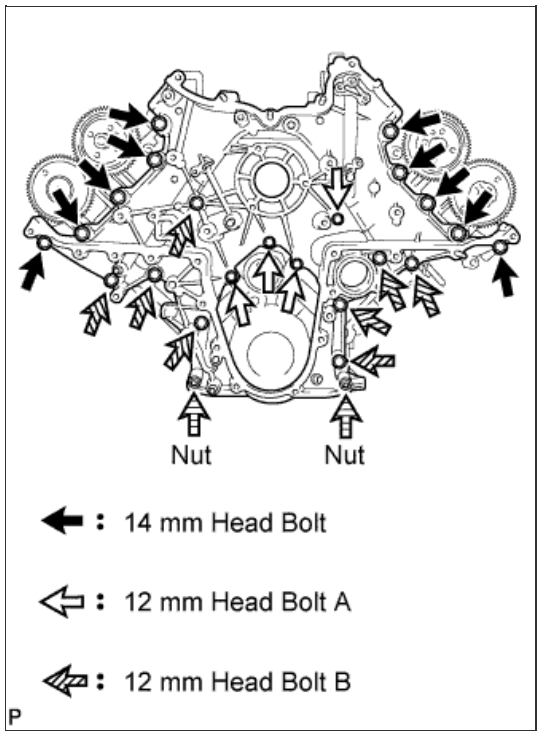
HINT:

- **The FIPG line is shown below.**
- **Apply packing to the 5 seal surface areas.**

b. ntall a new timing gear case gasket.

c. Apply engine oil to 2 new O rings and install them to the timing gear case.

d. ntall the timing gear case with the 22 olts and 2 nuts.



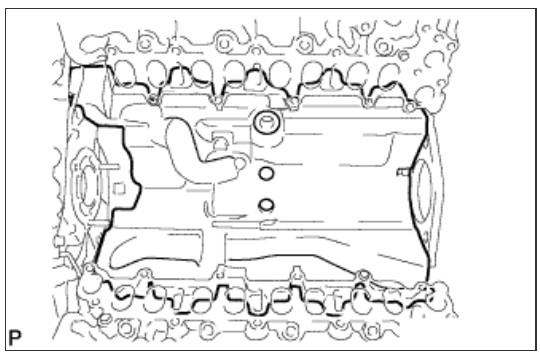
Torque:
for 14 mm head bolt (case is dry):
46 N*m{ 469 kgf*cm , 34 ft.*lbf }
for 14 mm head bolt (case is wet):
42 N*m{ 428 kgf*cm , 31 ft.*lbf }
for 12 mm head bolt A and B:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }
for nut:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

NOTICE:

- **The case is "dry" when there is absolutely no engine oil on the 14 mm head bolts and cylinder head bolt holes.**
- **The case is "wet" when there is engine oil on the 14 mm head bolts and cylinder head bolt holes.**

Bolt Length

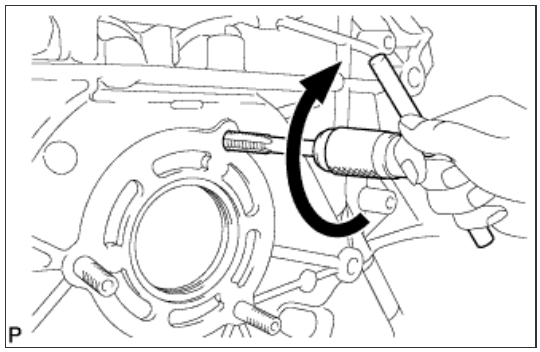
tem	uantity	Length
A	4	20 mm (0.787 in.)
B	8	45 mm (1.77 in.)



17. INSTALL V-BANK SILENCER

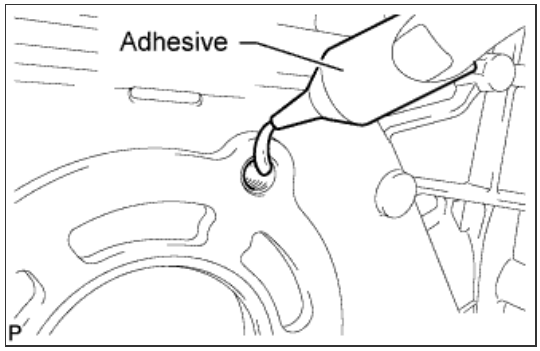
a. Align the alignment areas of the ank silencer and cylinder dck, and install the ank silencer.

NOTICE:



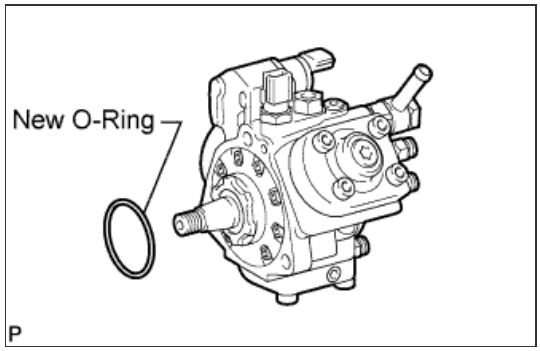
erify that the ank silencer is elow the top surface of the intake port of the cylinder head R and L .

18. INSTALL FUEL SUPPLY PUMP ASSEMBLY



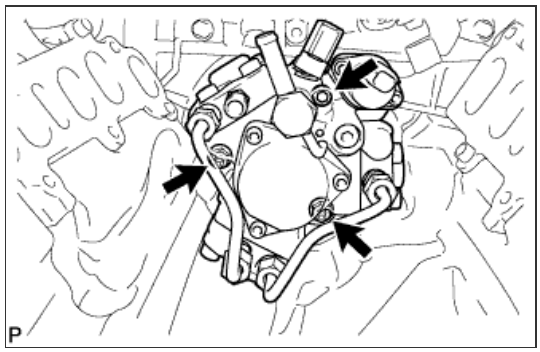
a. Using an 8 mm x 1.25 pitch tap, remove the adhesive from the timing gear case

side olt hole.



b. Apply adhesive to 2 or more threads of the timing gear case olt hole.

Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

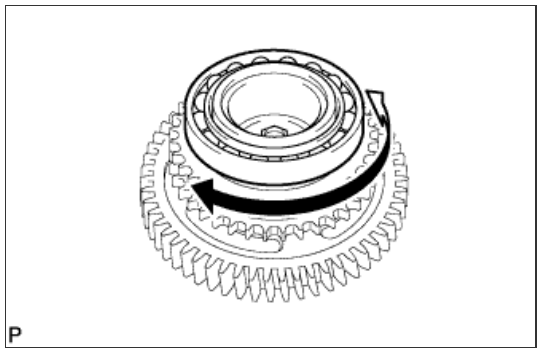


c. Apply engine oil to a new O ring and install it to the supply pump.

d. ntall the supply pump to the timing gear case.

NOTICE:

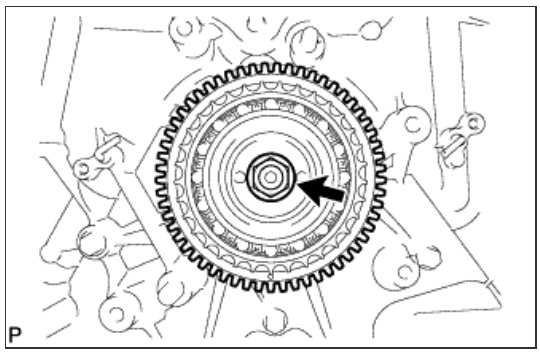
When installing the supply pump, do not hold the fuel pipe to prevent fuel leaks.



i. Temporarily install the 2 nuts.

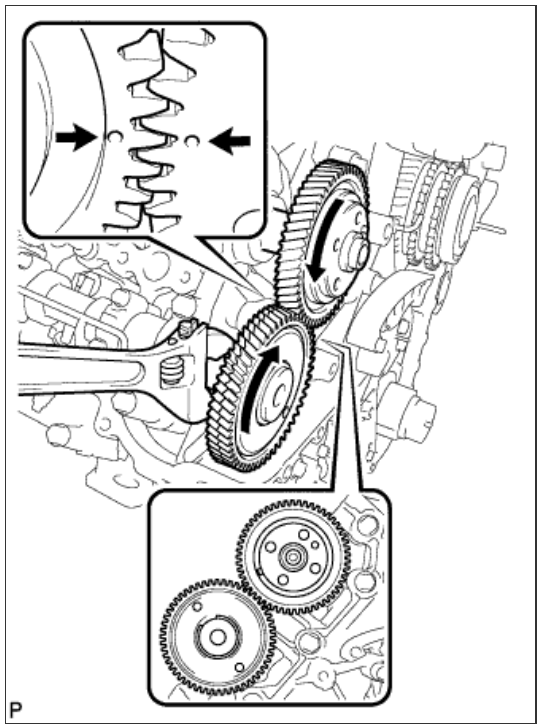
ii. Using a 6 mm hexagon wrench, install the hexagon olt, and then tighten the 2 nuts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



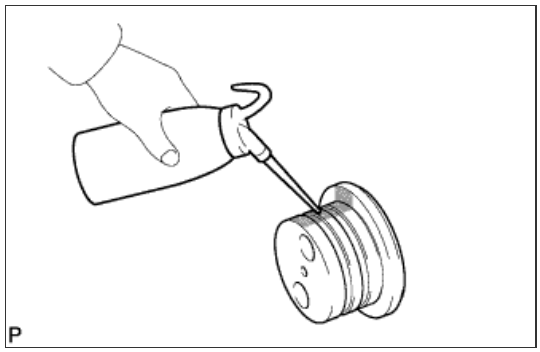
19. INSPECT RADIAL BALL BEARING

a. Turn the earing, and check that the earing moves smoothly and uietly.
f it moves roughly or noisily, replace the radial all earing.



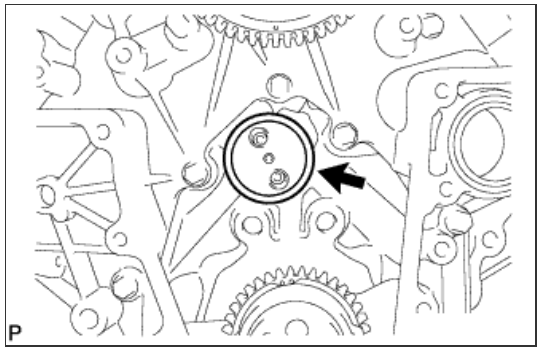
0. TEMPORARILY INSTALL FUEL SUPPLY PUMP DRIVE GEAR

a. Align the cutout of the supply pump drive gear and key of the supply pump, and temporarily install the nut.



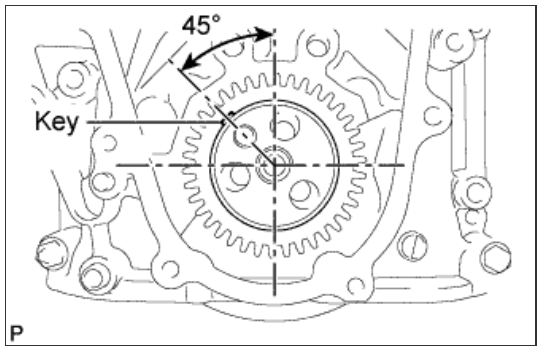
21. SET NO. 1 AND NO. 2 CAMSHAFTS TO TDC

a. Using a wrench, turn the No. 1 camshaft and align the timing marks (1 dot mark) on the ack side of the timing gears as shown in the illustration.

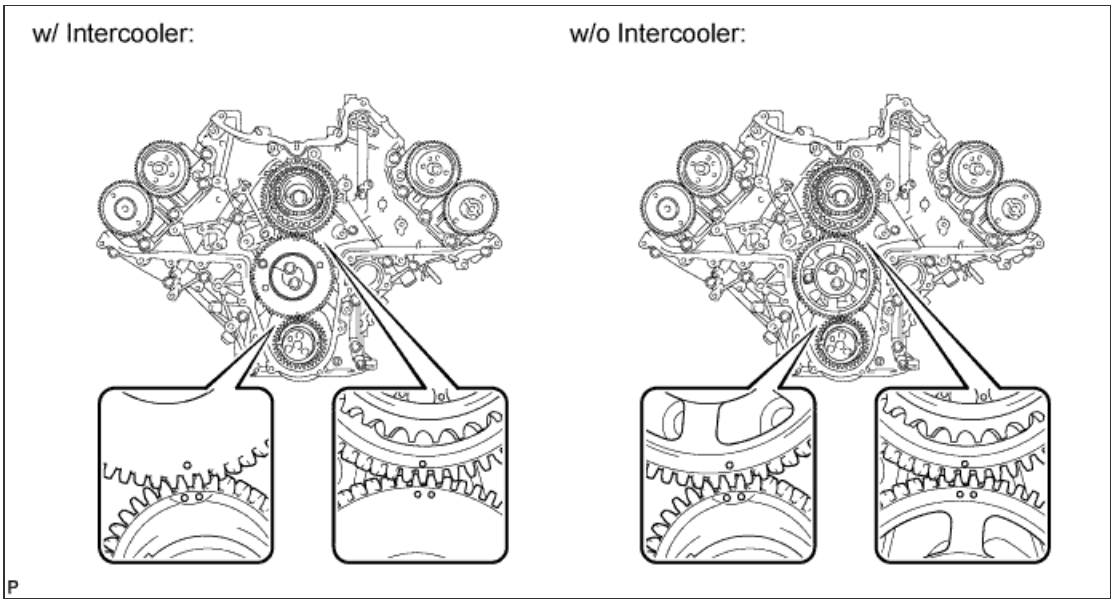


22. INSTALL NO. 1 IDLE GEAR SHAFT

a. Apply engine oil to the contact surface of the idle gear shaft and the ack side of the protrusion.



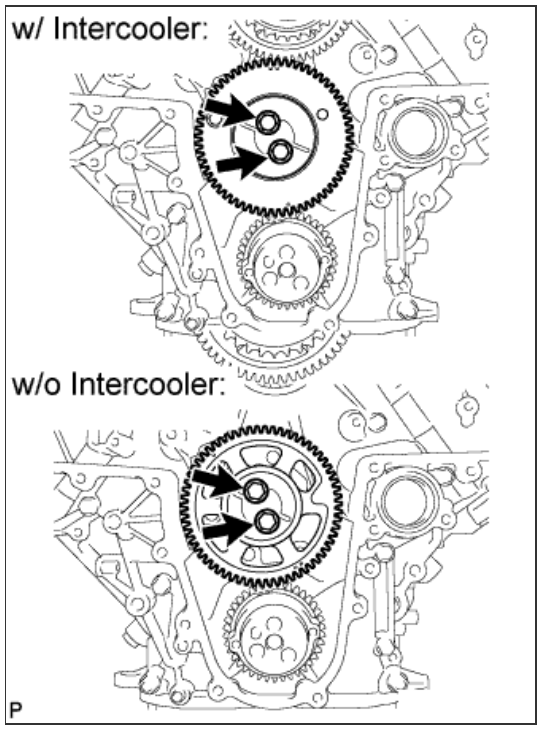
b. ntall the idle gear shaft to the cylinder dck.



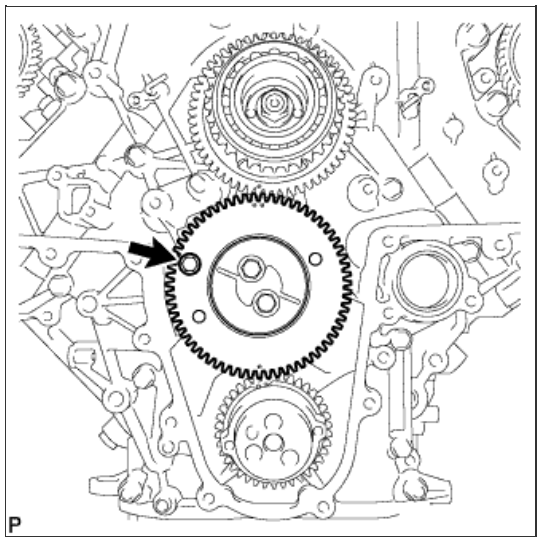
23. INSTALL IDLE GEAR ASSEMBLY

a. Temporarily install the 2 crankshaft pulley set olts to the crankshaft.

b. Using a ar, turn the crankshaft clockwise to the No. 1 cylinder TDC position.



c. Align the timing marks of the supply pump drive gear and idle gear, and the timing marks of the crankshaft timing gear and idle gear as shown in the illustration.

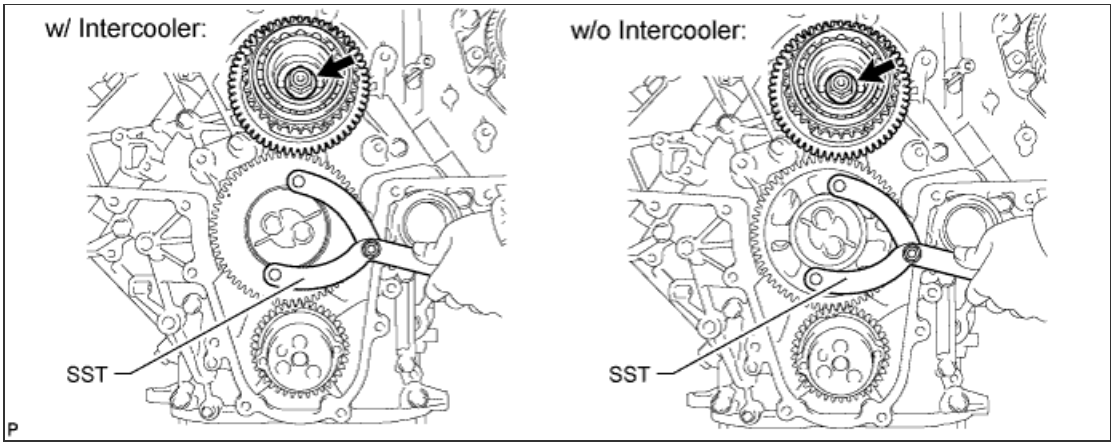


d. Apply engine oil to the idle gear thrust plate and gears.

e. ntall the idle gear thrust plate with the 2 olts.

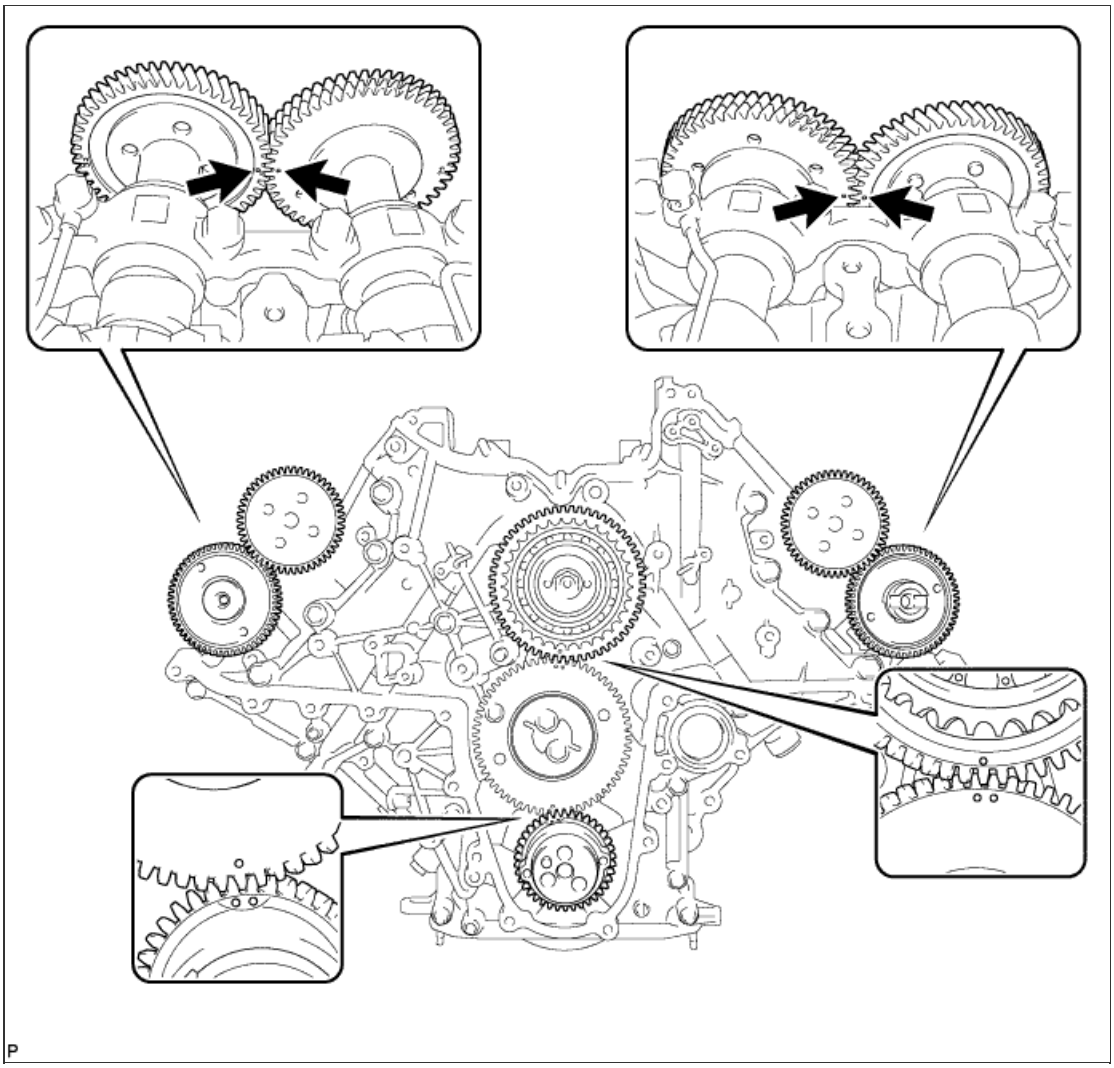
Torque:
47 N*m{ 479 kgf*cm , 35 ft.*lbf }

f. w/ tercooler:
Remove the service olt.



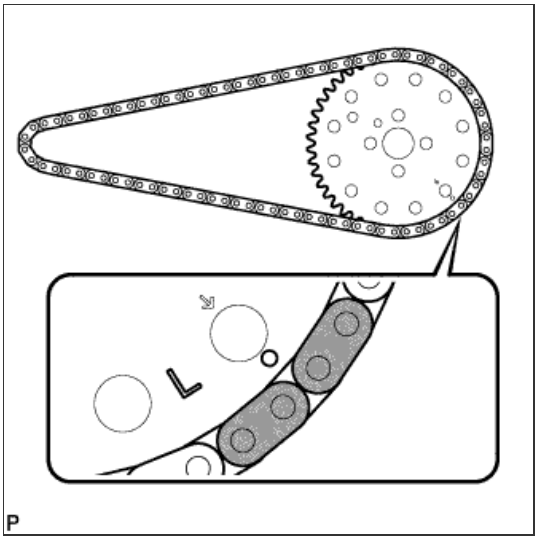
. TIGHTEN FUEL SUPPLY PUMP DRIVE GEAR NUT

a. Using SST, hold the idle gear and tighten the nut.



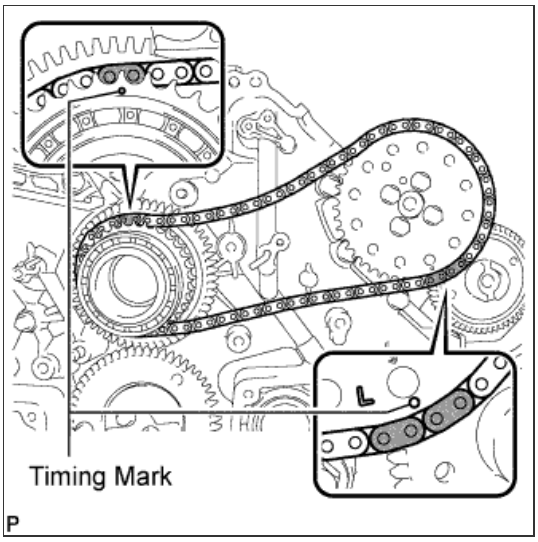
SST
09960-10010 (09962-01000, 09963-00700)

Torque:
68 N*m{ 693 kgf*cm , 50 ft.*lbf }



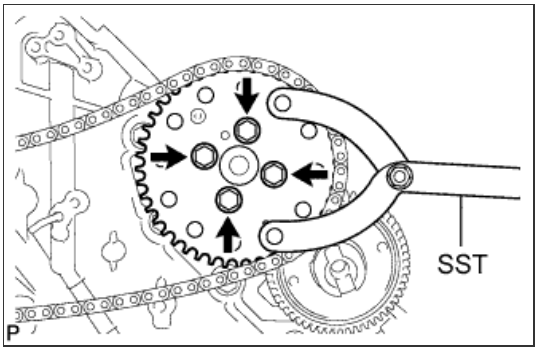
25. CHECK NO. 1 CYLINDER TO TDC/COMPRESSION

a. Check that the timing marks of the following pairs of parts are aligned: 1) supply pump drive gear and idle gear: 2) crankshaft timing gear and idle gear: 3) R and L camshaft timing gears.



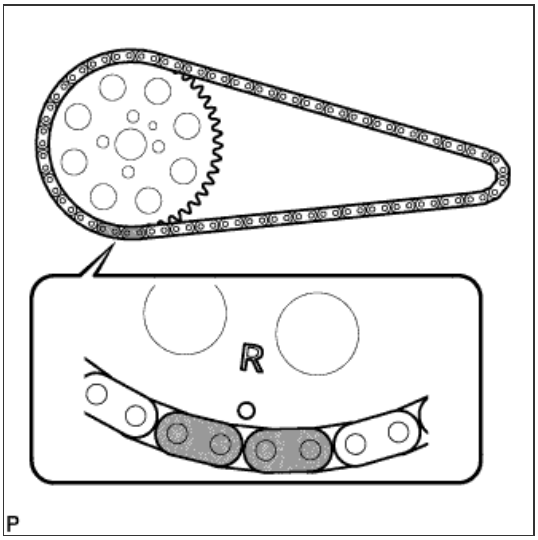
6. INSTALL NO. 2 CAMSHAFT TIMING SPROCKET AND NO. 2 TIMING CHAIN

a. Align the 2 mark plates (yellow) on the No. 2 timing chain with the timing mark (1 dot mark) of the No. 2 camshaft timing sprocket as shown in the illustration.



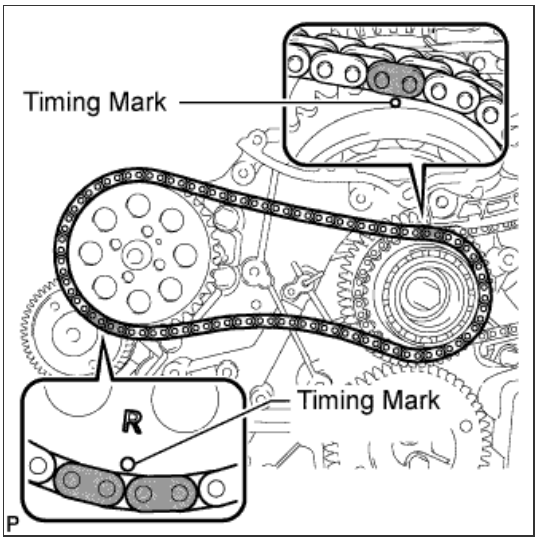
b. Align the No. 2 timing chain mark plate (yellow) with the supply pump drive gear timing mark, and temporarily install the No. 2 camshaft timing sprocket with the 4 olts.

c. Using SST, hold the No. 2 camshaft timing sprocket, and tighten the 4 olts.



SST
09960-10010 (09962-01000, 09963-01000)

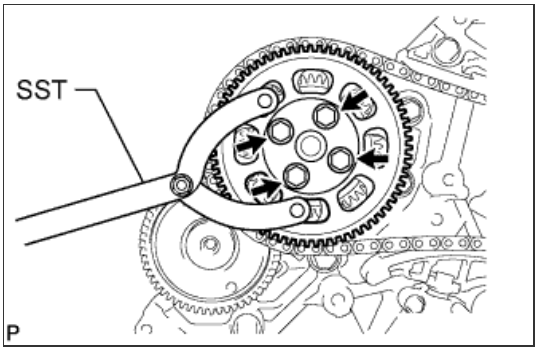
Torque:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }



27. INSTALL NO. 1 CAMSHAFT TIMING SPROCKET AND NO. 1 TIMING CHAIN

a. Align the 2 mark plates (yellow) on the No. 1 timing chain with the timing mark (1 dot mark) of the No. 1 camshaft timing sprocket as shown in the illustration.

b. Align the No. 1 timing chain mark plate (yellow) with the supply pump drive gear timing mark, and temporarily install the No. 1 camshaft timing sprocket.

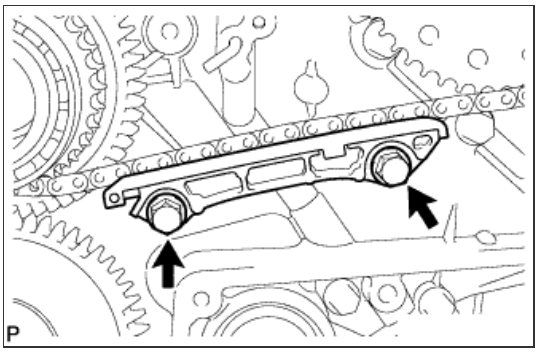


. INSTALL PUMP DRIVE SHAFT GEAR

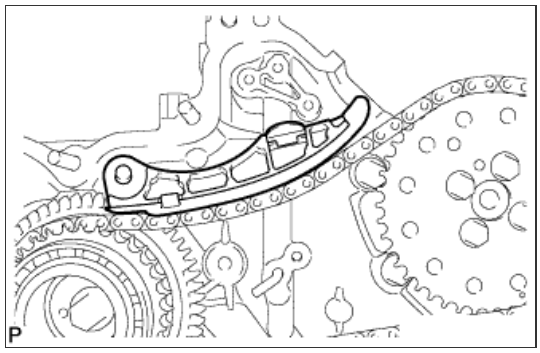
a. Temporarily install the pump drive shaft gear with the 4 olts.

b. Using SST, hold the pump drive shaft gear and tighten the 4 olts.

SST
09960-10010 (09962-01000, 09963-01000)



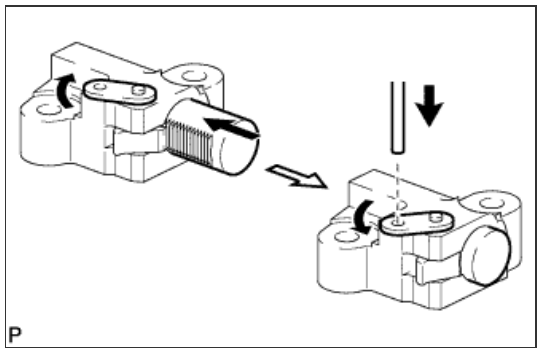
Torque:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }



29. INSTALL NO. 2 CHAIN VIBRATION DAMPER

a. ntall the No. 2 chain vi ration damper with the 2 olts.

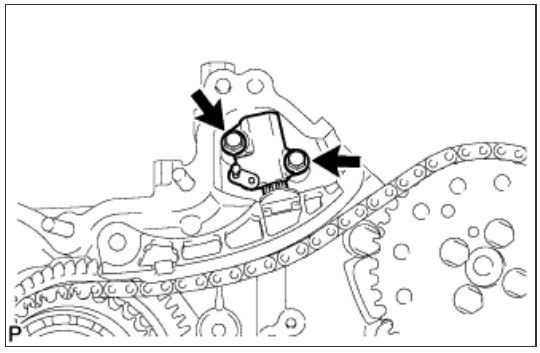
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



30. INSTALL NO. 2 CHAIN TENSIONER SLIPPER

31. INSTALL NO. 2 CHAIN TENSIONER ASSEMBLY

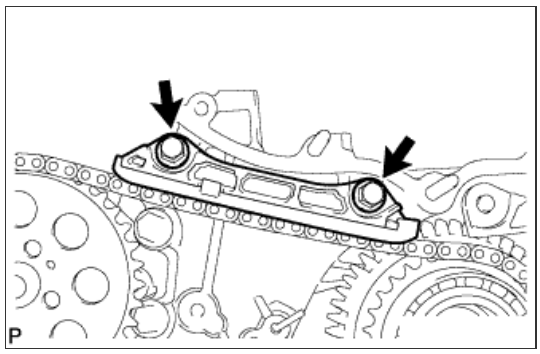
a. Move the stopper plate clockwise to release the lock, and push the plunger into the tensioner.



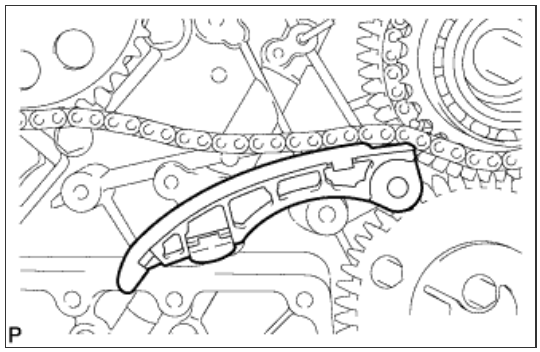
b. Move the stopper plate counterclockwise to set the lock, and insert a hexagon wrench into the stopper plate hole.

c. ntall the No. 2 chain tensioner with the 2 olts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



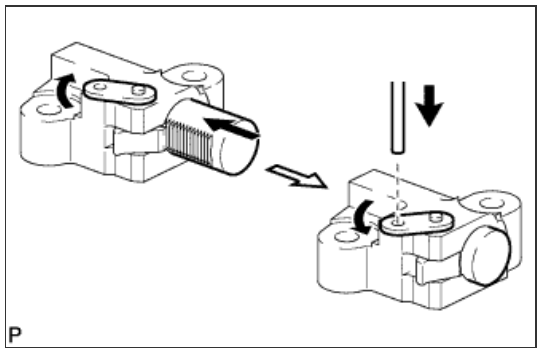
d. Remove the hexagon wrench.



32. INSTALL NO. 1 CHAIN VIBRATION DAMPER

a. ntall the No. 1 chain vi ration damper with the 2 olts.

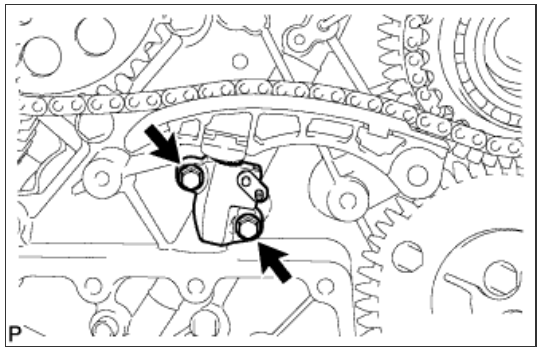
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



33. INSTALL NO. 1 CHAIN TENSIONER SLIPPER

34. INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY

a. Move the stopper plate clockwise to release the lock, and push the plunger into the tensioner.

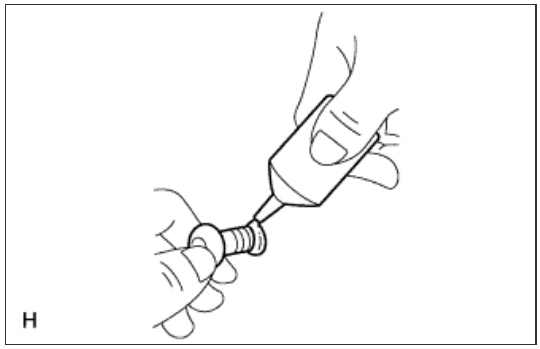


b. Move the stopper plate counterclockwise to set the lock, and insert a hexagon wrench into the stopper plate hole.

c. ntall the No. 1 chain tensioner with the 2 olts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

d. Remove the hexagon wrench.

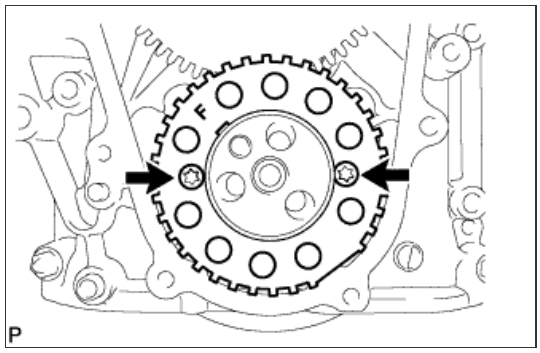


35. INSTALL NO. 1 CRANKSHAFT POSITION SENSOR PLATE

a. Remove the adhesive from the threads of the screws and the olt holes of the crankshaft.

b. Apply adhesive to 2 or 3 threads of the 2 screws.

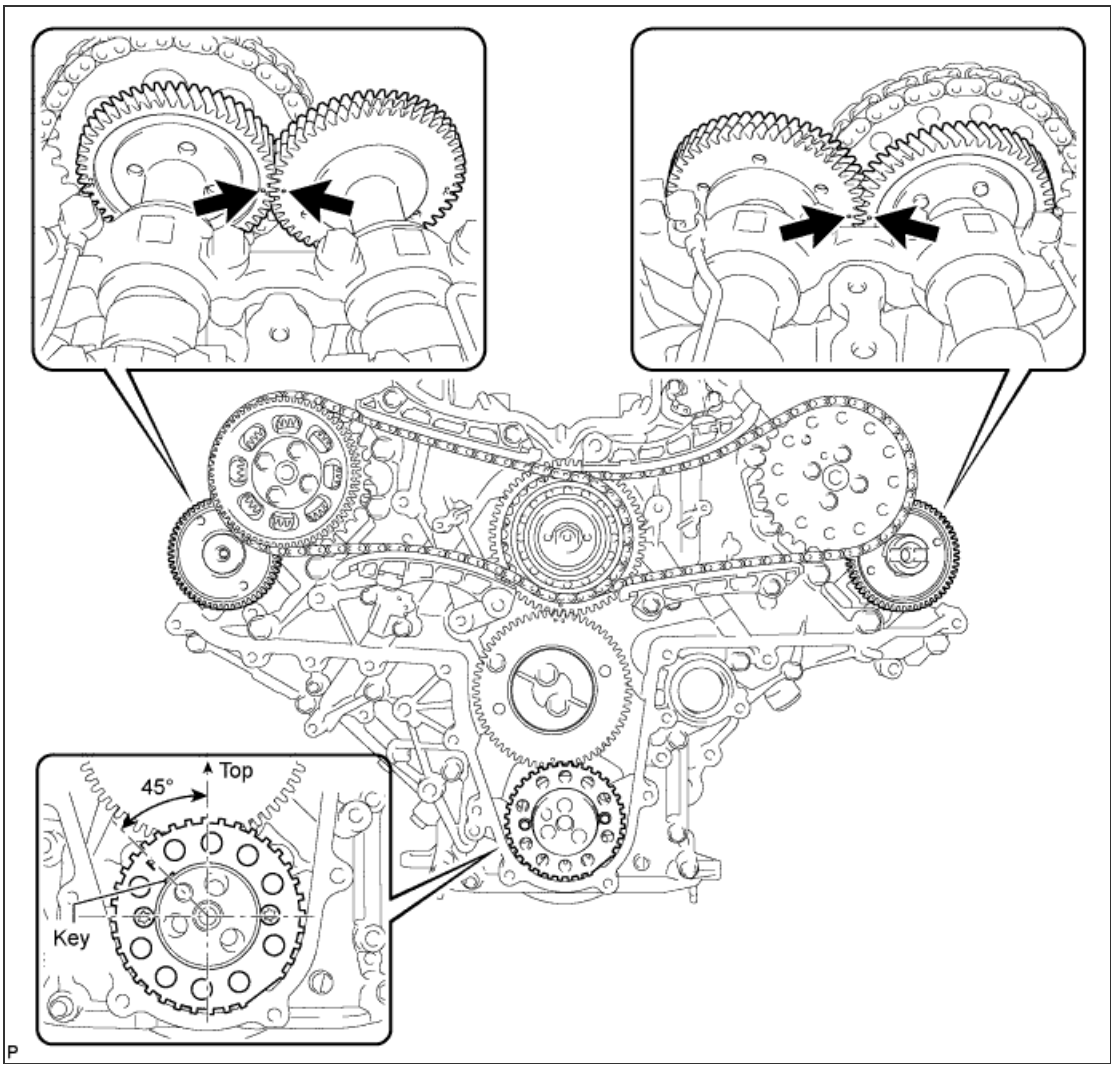
Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent



c. Using a T30 "TOR " wrench, install the No. 1 crankshaft position sensor plate with the 2 screws.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

NOTICE:



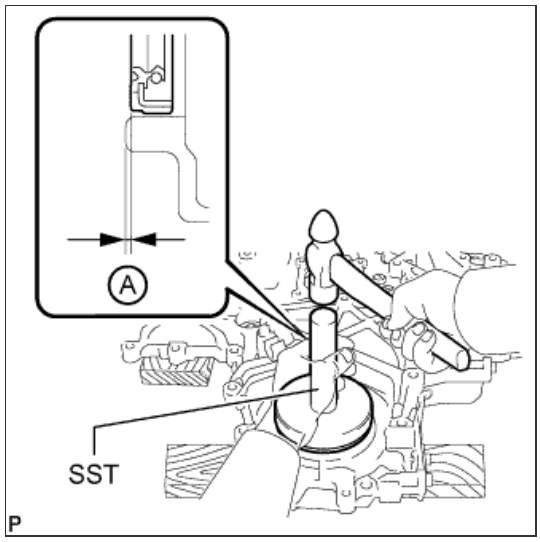
Make sure the " " mark on the plate is facing towards the front side of the engine.

36. CHECK NO. 1 CYLINDER TO TDC/COMPRESSION

a. Temporarily install the 2 crankshaft pulley set olts to the crankshaft.

b. Rotate the crankshaft 2 revolutions or more so that the crankshaft key is 45° counterclockwise from the top. Check that the timing marks (1 dot mark each) of the R and L camshaft timing gears align. f not as specified, turn the crankshaft 1 revolution (360°) and align the timing marks. f the timing marks are deviated, reinstall the chain and camshaft.

c. Remove the 2 crankshaft pulley set olts.

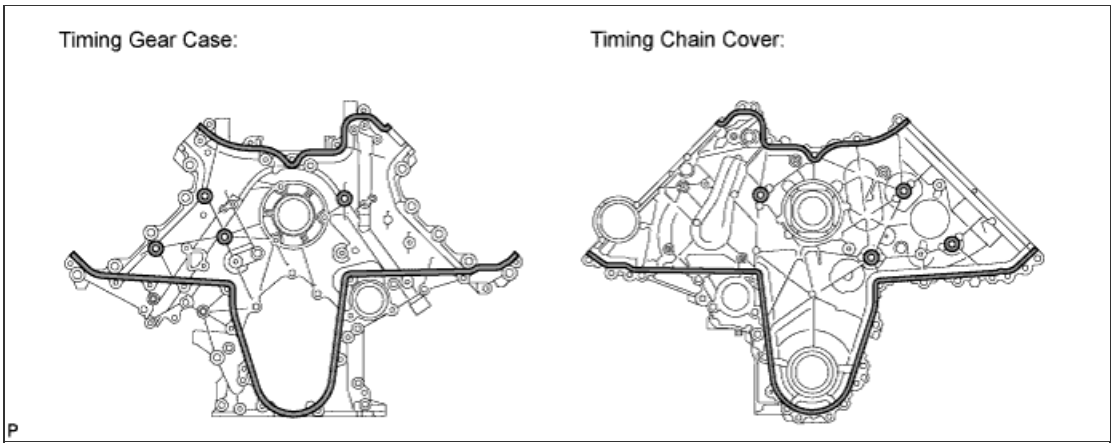


37. INSTALL FRONT CRANKSHAFT OIL SEAL

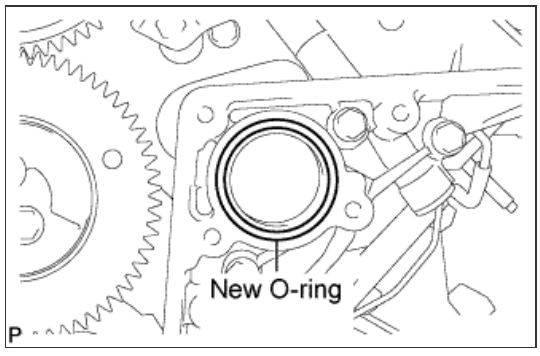
a. Place the timing chain cover on wooden dcks.

b. Using SST and a hammer, tap in a new oil seal as shown in the illustration.

SST
09316-12010
09950-70010 (09951-07100)
09950-60020 (09951-00890)



Standard depth A:
0.6 to 1.4 mm (0.0236 to 0.0551 in.)



38. INSTALL TIMING CHAIN COVER SUB-ASSEMBLY

NOTICE:

When the contact surfaces shown elow are wet, wipe them with an oil free cloth efore applying seal packing.

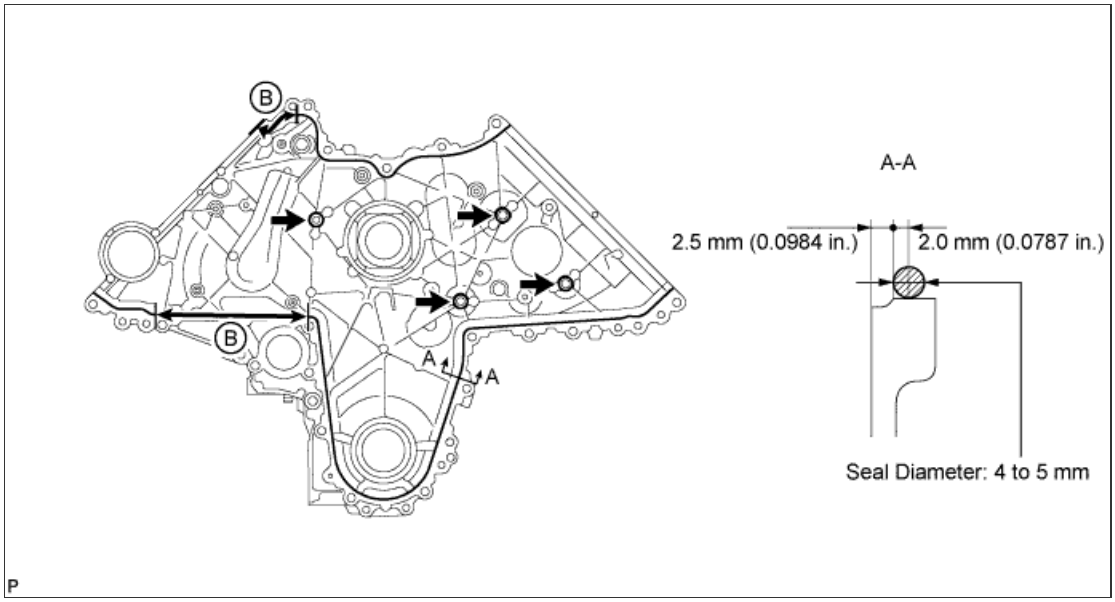
a. ntall a new O ring to the timing gear case.

b. Apply seal packing to the timing chain cover as shown in the following illustration.

Standard seal diameter:
4 to 5 mm (0.157 to 0.197 in.)

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

NOTICE:



- **After applying seal packing, align the timing chain cover with the timing gear case within 3 minutes and tighten the**

bolts and nuts within 15 minutes.

- Apply the seal packing in a continuous line.
- Make sure the seal packing does not become thinner than 4 mm (0.157 in.) at the areas labeled "B" in the illustration below.

HINT:

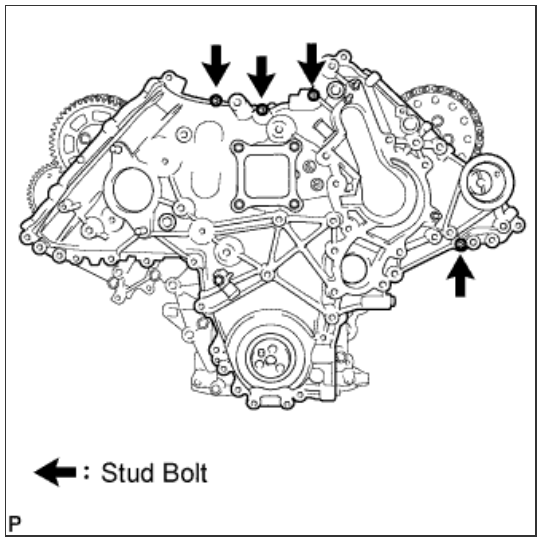
- The FIPG line is shown below.
- Apply packing to the 6 seal surface areas.

c. Apply engine oil to the lip of the oil seal.

d. Align and install the timing chain cover to the timing gear case knock pin and supply pump earing.

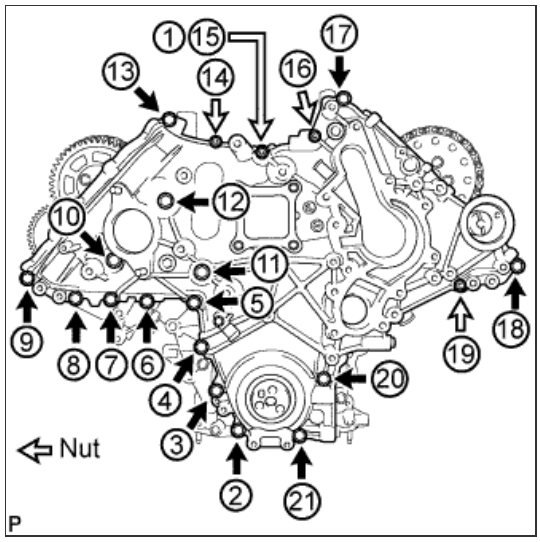
NOTICE:

Make sure that the lip of the oil seal is properly installed.



Torque:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }

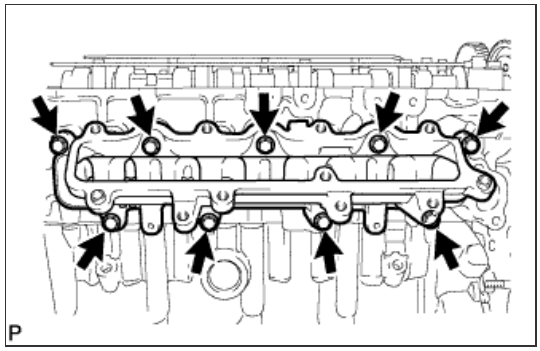
HINT:



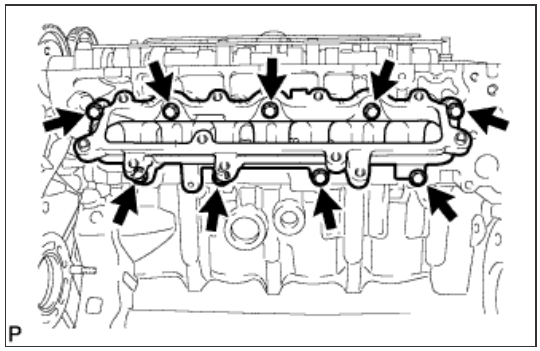
f the stud olts are loose, tighten them efore performing this procedure.

i. Using an E7 "TOR " wrench, tighten the stud olts.

Torque:
6.0 N*m{ 61 kgf*cm , 53 in.*lbf }

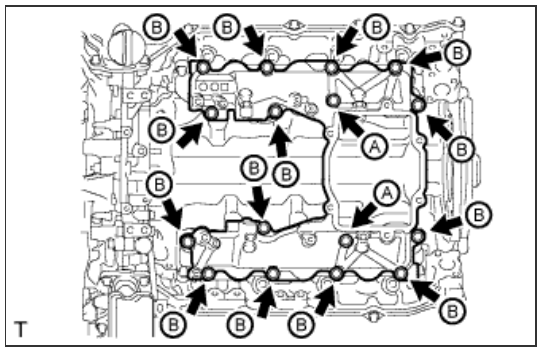


e. ntall and uniformly tighten the 16 olts and 4 nuts in the order shown in the illustration.



3 . TEMPORARILY INSTALL INTAKE MANIFOLD

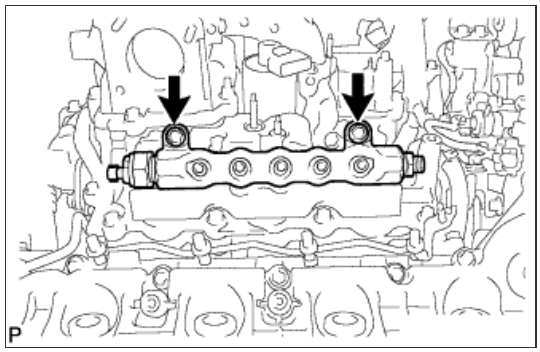
a. ntall the gasket and temporarily install the No. 2 intake manifold with the 9 olts.



b. ntall the gasket and temporarily install the No. 1 intake manifold with the 9 olts.

c. ntall the 2 gaskets and temporarily install the No. 3 intake manifold with the 16 olts.

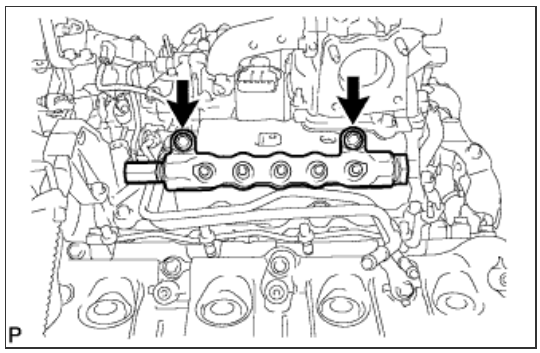
Bolt Length



tem	Length
Bolt A	70 mm (2.76 in.)
Bolt B	25 mm (0.984 in.)

40. TEMPORARILY INSTALL COMMON RAIL ASSEMBLY RH

a. ntall the common rail with the 2 olts.

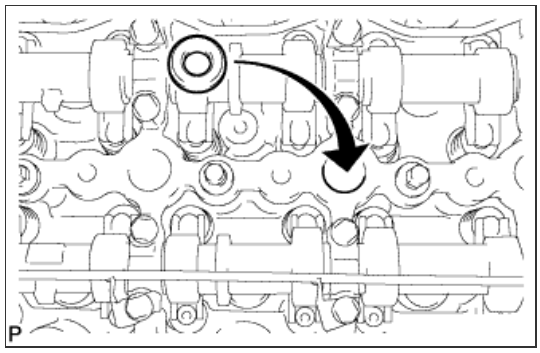


Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

41. TEMPORARILY INSTALL COMMON RAIL ASSEMBLY LH

a. ntall the common rail with the 2 olts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

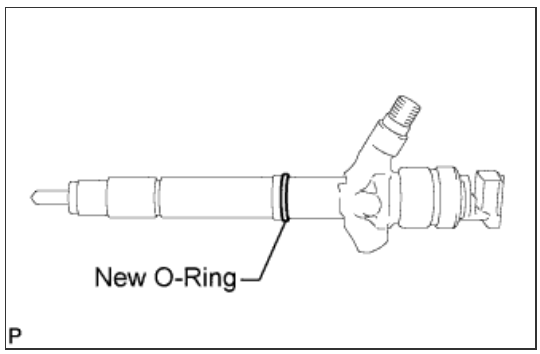


42. INSTALL FUEL INJECTOR RH

NOTICE:

Be sure to install the injector, holder clamp and olt in their original positions.

a. ntall 4 new injection nozzle seats to the cylinder head.



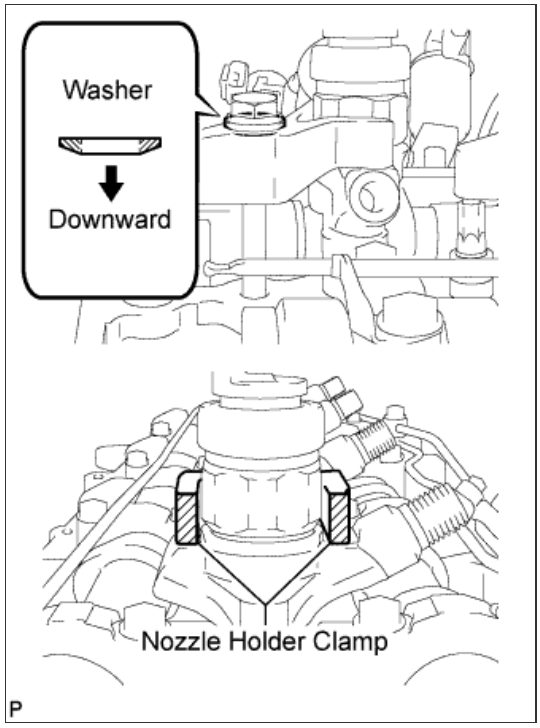
b. Apply a light amount of clean engine oil to 4 new O rings.

c. ntall the O rings to each injector as shown in the illustration.

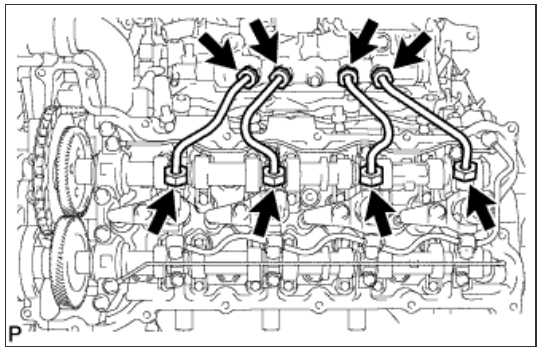
d. nert the 4 injectors into the cylinder head.

NOTICE:

- **Insert the injector until it touches the nozzle seat surface.**
- **After installing the injector to the cylinder head, the O-ring may prevent the injector from fully seating. If so, pull out the injector and reinstall it.**
- **Always return an injector to the same place it was removed from.**



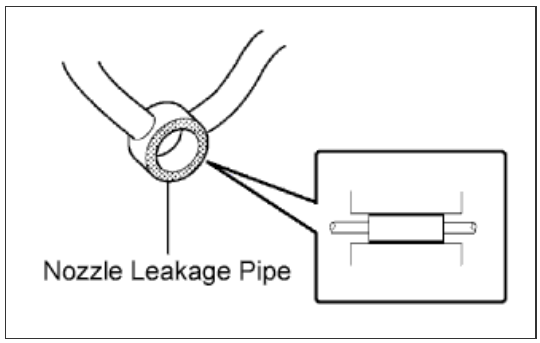
e. or an injector that has een replaced with a new injector, register the injector compensation code.



f. Temporarily install 4 new washers and the 4 nozzle clamps with the 4 clamp olts.

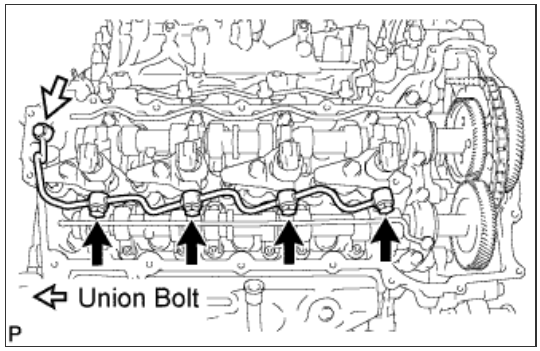
NOTICE:

- **The fork portion of the nozzle holder clamp must be set to the injector.**
- **Before tightening the bolts, check that the nozzle holder clamp is set properly.**
- **To tighten the clamp bolts, first tighten them by hand until they cannot be turned further. Then, tighten the bolts to the specified torque in a later step.**
- **When tightening the bolts, be careful not to tilt the bolt and clamp.**
- **Do not reuse the washer.**



g. Temporarily install the 4 new injection pipes to the common rail and injector.

h. Check the nozzle leakage pipe. Check that there are no scratches or dents on the 5 union seal surfaces. f scratches or dents are present, replace the nozzle leakage pipe.

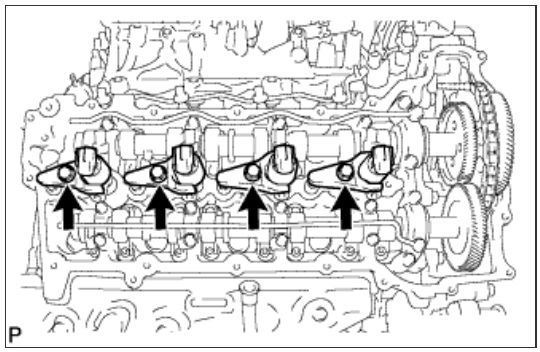


i. Set the leakage pipe and 5 new gaskets in place.

j. Temporarily install the leakage pipe with the 4 hollow screws and union olt.

HINT:

To position the injectors, loosely tighten the 4 hollow screws and union olt.

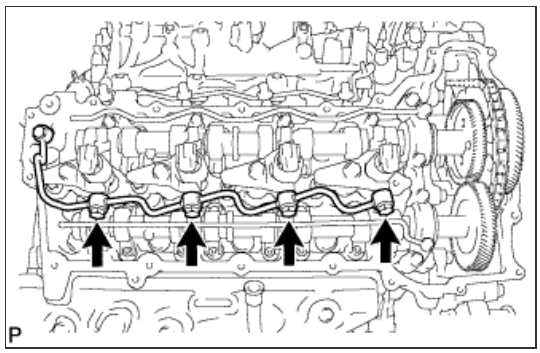


k. Tighten the 4 holder clamp olts.

Torque:

N*m{ 255 kgf*cm , 18 ft.*lbf }

l. Remove the 4 injection pipes.



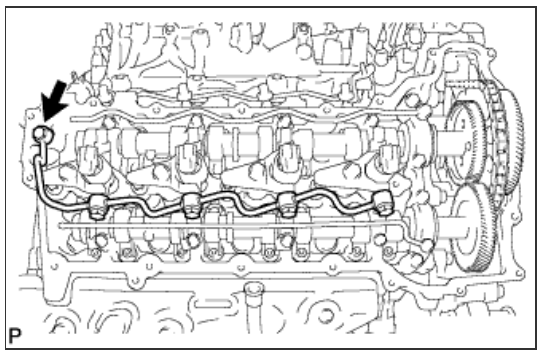
m. Tighten the 4 hollow screws.

Torque:

18 N*m{ 184 kgf*cm , 13 ft.*lbf }

NOTICE:

f a hollow screw is accidentally tightened eyond the tor ue specification, it must e replaced together with the nozzle leakage pipe.



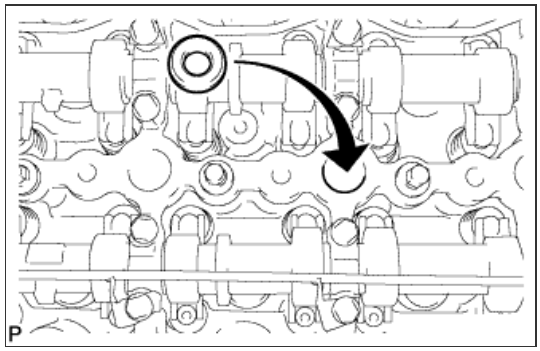
n. Tighten the union olt.

Torque:

21 N*m{ 214 kgf*cm , 15 ft.*lbf }

NOTICE:

f a hollow screw is accidentally tightened eyond the tor ue specification, it must e replaced together with the nozzle leakage pipe.



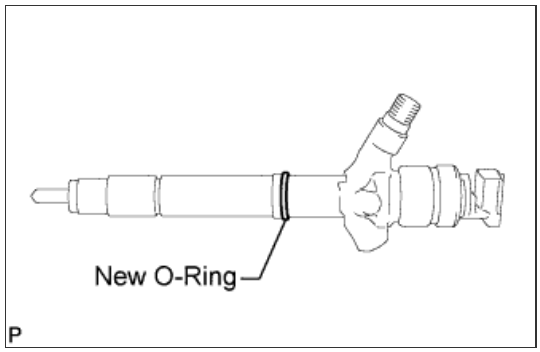
43. INSTALL FUEL INJECTOR LH

NOTICE:

Be sure to install the injector, holder clamp and olt in their original positions.

a. ntall 4 new injection nozzle seats to the cylinder head.

b. Apply a light amount of clean engine oil to 4 new O rings.

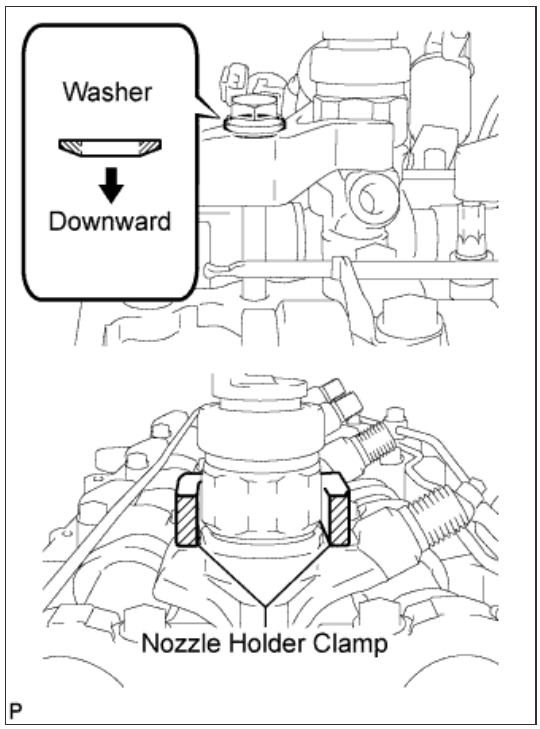


c. ntall the O rings to each injector as shown in the illustration.

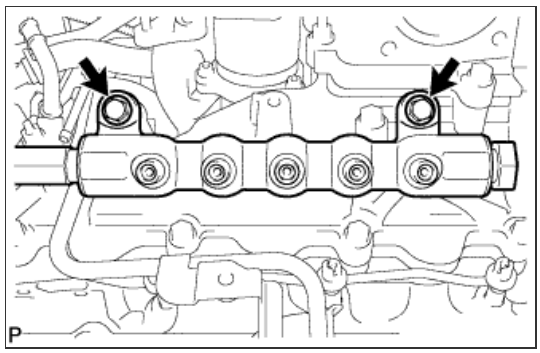
d. nert the 4 injectors into the cylinder head.

NOTICE:

- **Insert the injector until it touches the nozzle seat surface.**
- **After installing the injector to the cylinder head, the O-ring may prevent the injector from fully seating. If so, pull out the injector and reinstall it.**
- **Always return an injector to the same place it was removed from.**

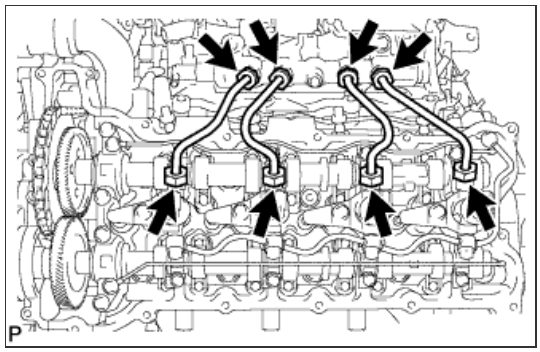


e. or an injector that has een replaced with a new injector, register the injector compensation code.



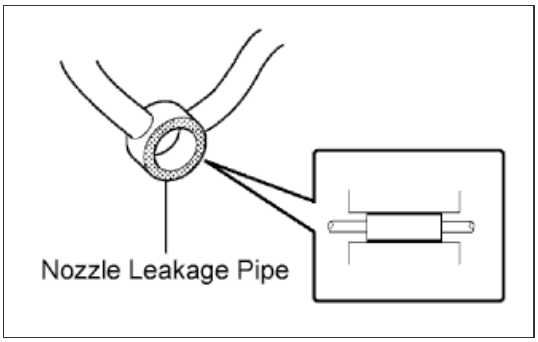
f. Temporarily install 4 new washers and the 4 nozzle clamps with the 4 clamp olts.

NOTICE:



- **The fork portion of the nozzle holder clamp must be set to the injector.**
- **Before tightening the bolts, check that the nozzle holder clamp is set properly.**
- **To tighten the clamp bolts, first tighten them by hand until they cannot be turned further. Then, tighten the bolts to the specified torque in a later step.**
- **When tightening the bolts, be careful not to tilt the bolt and clamp.**
- **Do not reuse the washer.**

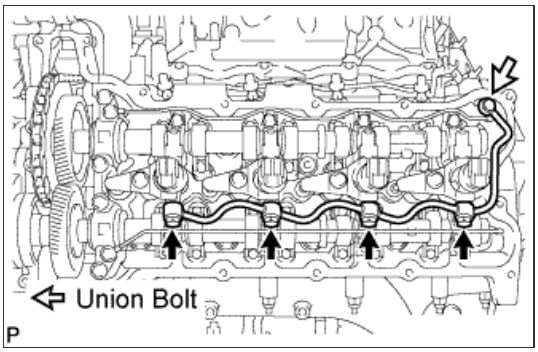
g. Temporarily install the common rail L with the 2 olts.



h. Temporarily install the 4 new injection pipes to the common rail and injector.

i. Check the nozzle leakage pipe. Check that there are no scratches or dents on the 5 union seal surfaces. f scratches or dents are present, replace the nozzle

leakage pipe.

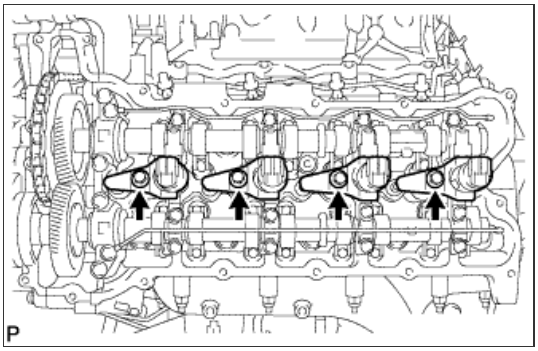


j. Set the leakage pipe and 5 new gaskets in place.

k. Temporarily install the leakage pipe with the 4 hollow screws and union olt.

HINT:

To position the injectors, loosely tighten the 4 hollow screws and union olt.

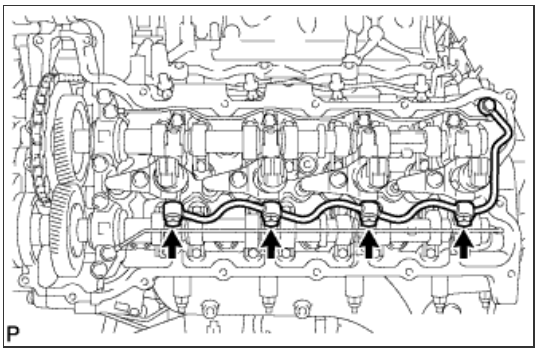


l. Tighten the 4 holder clamp olts.

Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf }

m. Remove the 4 injection pipes.

n. Remove the 2 olts and common rail L .

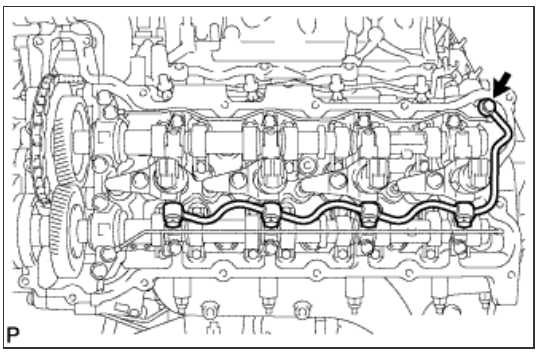


o. Tighten the 4 hollow screws.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

NOTICE:

f a hollow screw is accidentally tightened eyond the tor ue specification, it must e replaced together with the nozzle leakage pipe.

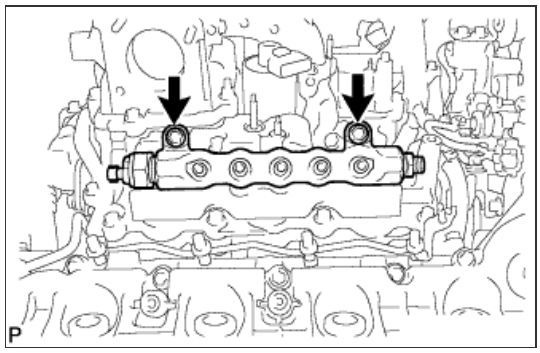


p. Tighten the union olt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

NOTICE:

f a hollow screw is accidentally tightened eyond the tor ue specification, it must e replaced together with the nozzle leakage pipe.

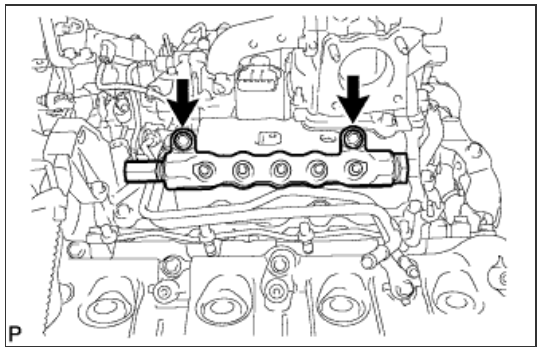


44. REMOVE COMMON RAIL ASSEMBLY RH

a. Remove the 2 olts and common rail.

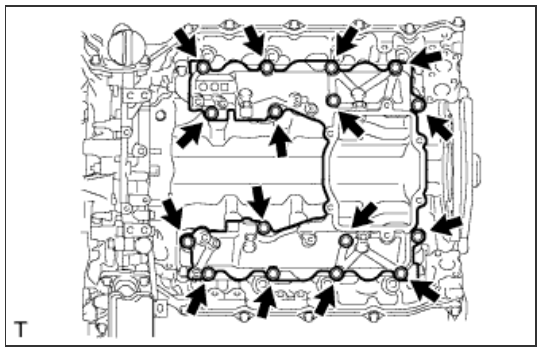
NOTICE:

Do not remove the fuel pressure sensor from the common rail. f it is removed, replace the common rail.



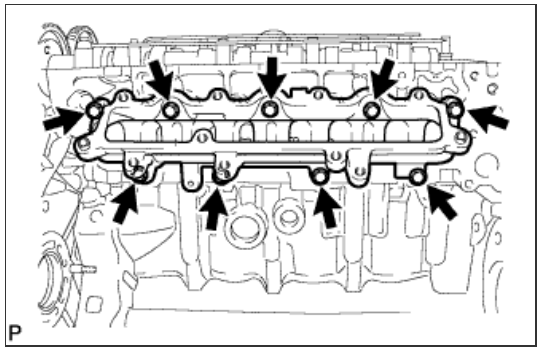
45. REMOVE COMMON RAIL ASSEMBLY LH

a. Remove the 2 olts and common rail.

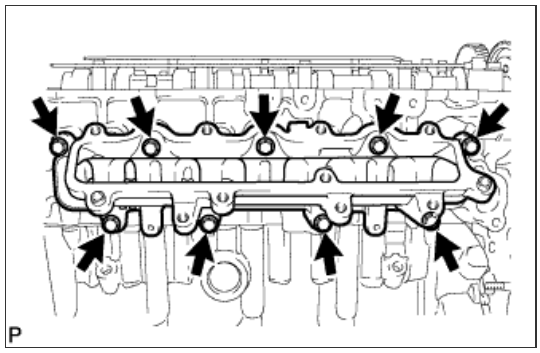


NOTICE:

Do not remove the fuel pressure limiter from the common rail. f it is removed, replace the common rail.



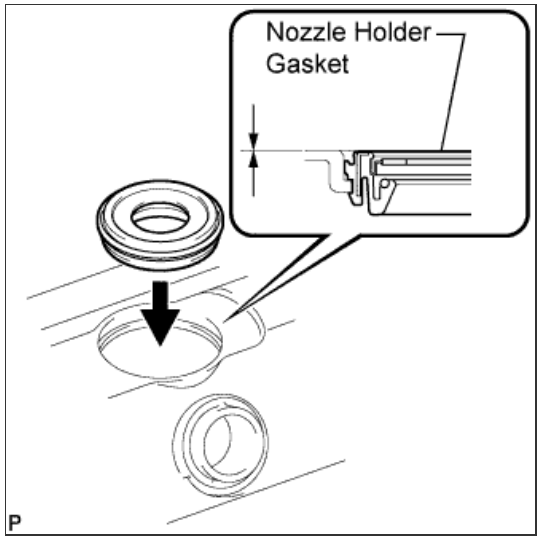
46. REMOVE INTAKE MANIFOLD



a. Remove the 16 olts, 2 gaskets and intake manifold.

b. Remove the 9 olts, No. 1 intake manifold and gasket.

c. Remove the 9 olts, No. 2 intake manifold and gasket.

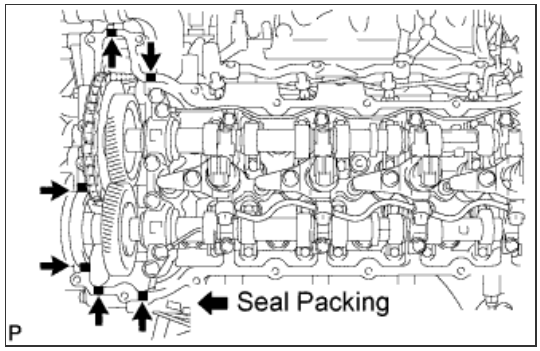


4 . INSTALL NOZZLE HOLDER GASKET LH

a. Press 4 new nozzle holder gaskets into the cylinder head cover L .

NOTICE:

After installing the nozzle holder gasket, check that it dose not protrude from the cylinder head cover.



48. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY LH

a. Apply seal packing as shown in the illustration.

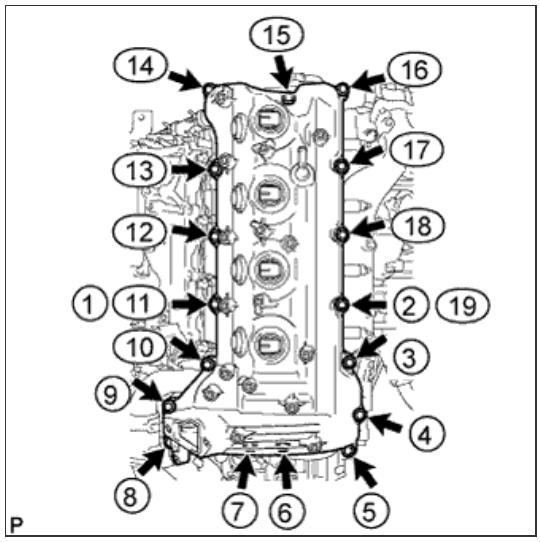
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**

b. ntall a new gasket to the cylinder head cover.

NOTICE:



Remove any oil from the contact surface.

c. Temporarily install the cylinder head cover with the 17 olts. Tighten the 17 olts in the order shown in the illustration.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

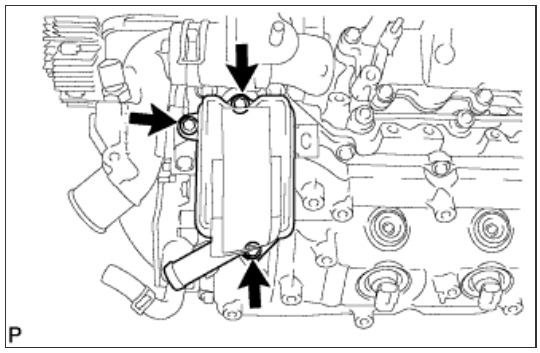
HINT:

After tightening the olts, check that the olts at step 11 and 19 are tightened to the specified tor ue.

4 . INSTALL NOZZLE HOLDER SEAL LH

a. Press 4 new holder seals into the cylinder head cover L .

50. INSTALL OIL SEPARATOR ASSEMBLY



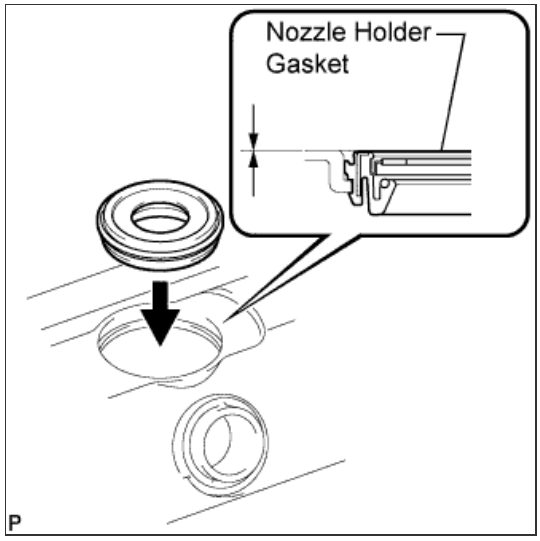
a. ntall a new gasket to the oil separator.

NOTICE:

Remove any oil from the contact surface.

b. ntall the oil separator with the 3 olts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

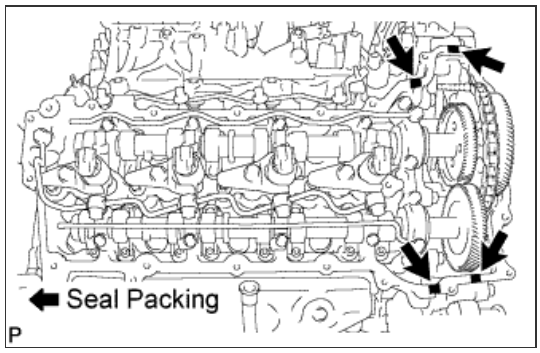


51. INSTALL NOZZLE HOLDER GASKET RH

a. Press 4 new nozzle holder gaskets into the cylinder head cover R .

NOTICE:

After installing the nozzle holder gasket, check that it dose not protrude from the cylinder head cover.



52. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY RH

a. Apply seal packing as shown in the illustration.

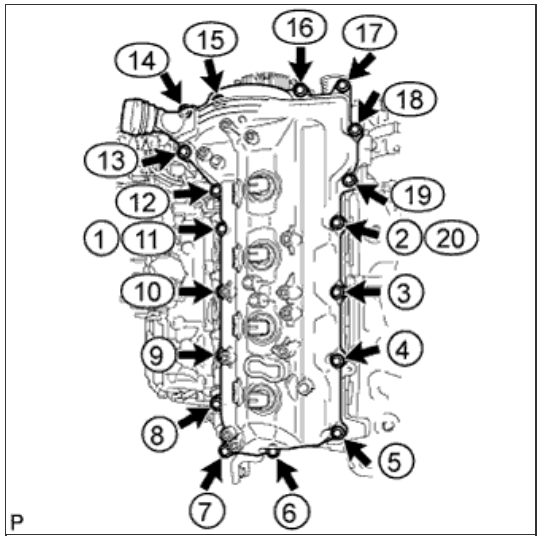
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**

b. ntall a new gasket to the cylinder head cover.

NOTICE:



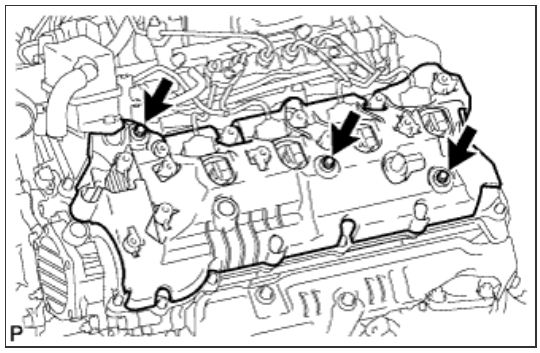
Remove any oil from the contact surface.

c. Temporarily install the cylinder head cover with the 18 olts. Tighten the 18 olts in the order shown in the illustration.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

HINT:

After tightening the olts, check that the olts at step 11 and 20 are tightened to the specified tor ue.

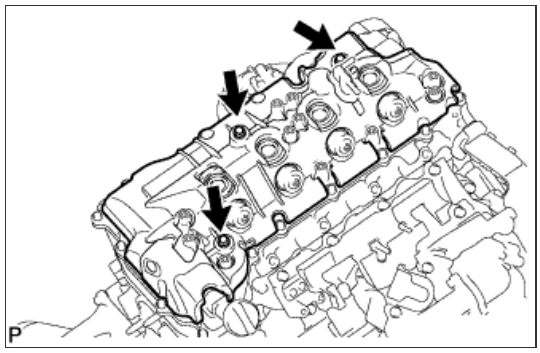


53. INSTALL NOZZLE HOLDER SEAL RH

a. Press 4 new holder seals into the cylinder head cover R .

54. INSTALL CYLINDER HEAD COVER SILENCER LH (w/ Intercooler)

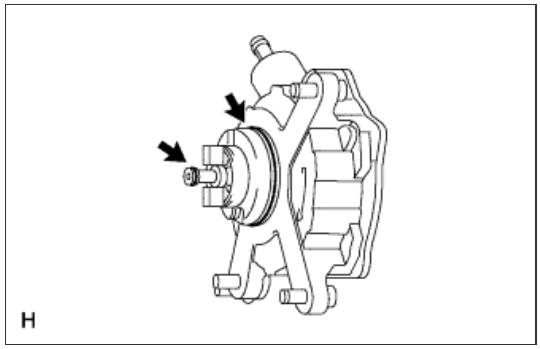
a. ntall the cylinder head cover silencer with the 3 olts.



Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

55. INSTALL CYLINDER HEAD COVER SILENCER RH (w/ Intercooler)

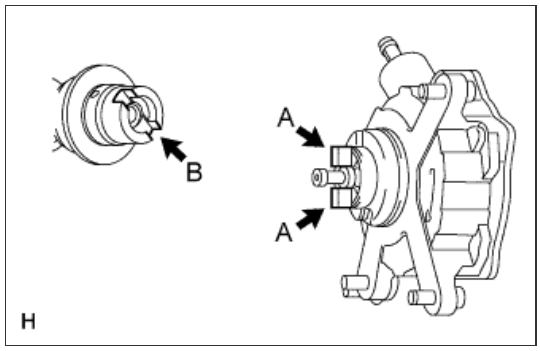
a. ntall the cylinder head cover silencer with the 3 olts.



Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

56. INSTALL VACUUM PUMP ASSEMBLY (w/ Intercooler)

a. Apply engine oil to 2 new O rings.

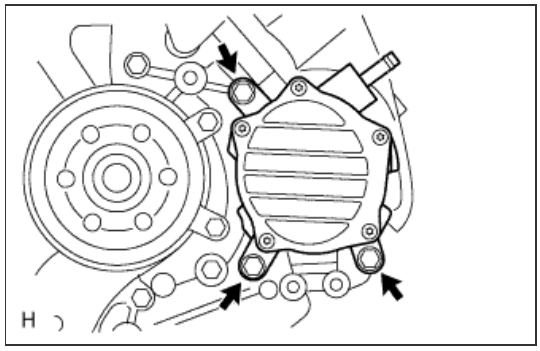


b. ntall the 2 O rings to the vacuum pump.

c. ntall the vacuum pump so that the coupling teeth of the vacuum pump (la eled A) and the groove of the camshaft (la eled B) are aligned.

NOTICE:

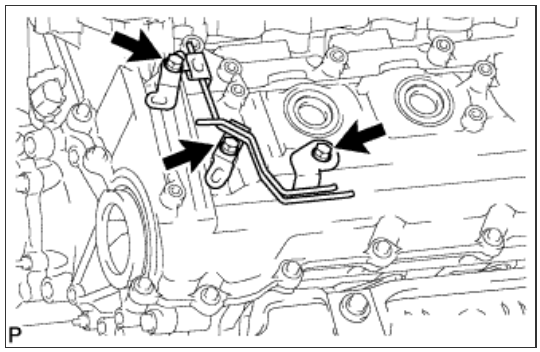
Be careful not to damage the O ring.



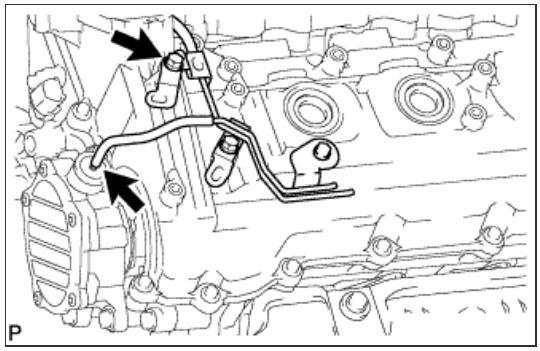
d. ntall the vacuum pump with the 3 olts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

NOTICE:



Confirm that the vacuum pump is not at an angle, and that there is no clearance etween the fitting surfaces.

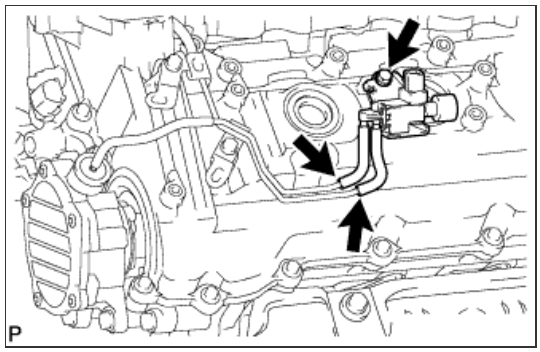


57. INSTALL NO. 1 VACUUM TRANSMITTING PIPE SUB-ASSEMBLY

a. ntall the vacuum transmitting pipe with the 3 olts.

Torque:
6.0 N*m{ 61 kgf*cm , 53 in.*lbf }

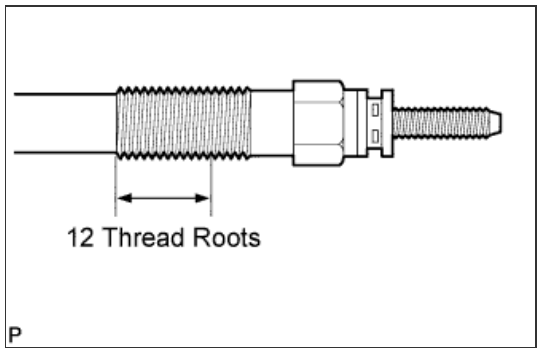
b. w/ tercooler:
Connect the 2 vacuum hoses.



58. INSTALL NO. 1 VACUUM SWITCHING VALVE ASSEMBLY (w/ Intercooler)

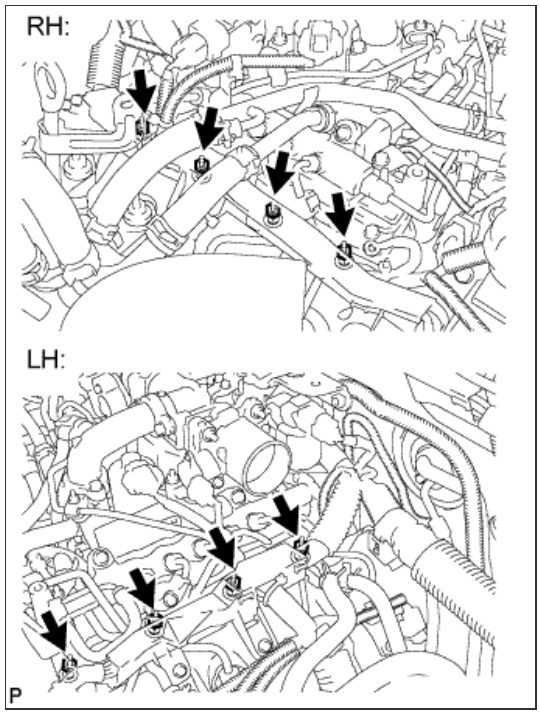
a. ntall vacuum switching valve with the olt.

Torque:
6.0 N*m{ 61 kgf*cm , 53 in.*lbf }



b. Connect the 2 vacuum hoses.

59. INSTALL GLOW PLUG ASSEMBLY



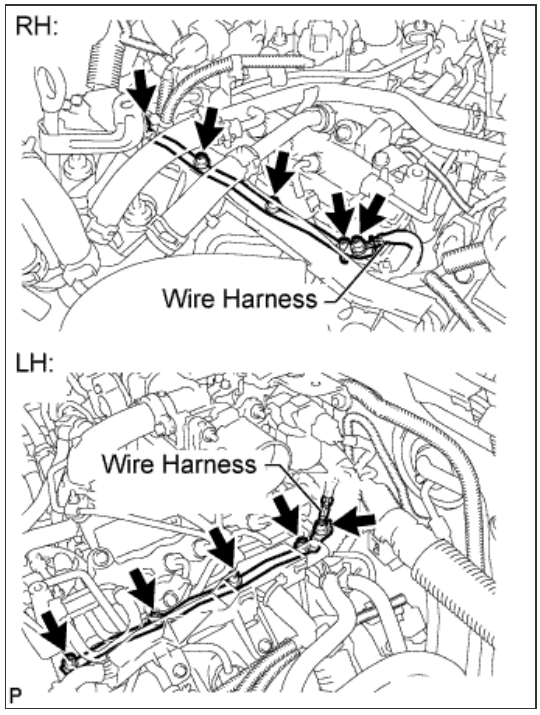
a. Apply adhesive to 3 or more thread roots in the area shown in the illustration.

Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent

b. Using a 10 mm deep socket wrench, install the 8 glow plugs.

Torque:
12 N*m{ 125 kgf*cm , 9 ft.*lbf }

60. INSTALL NO. 1 GLOW PLUG CONNECTOR



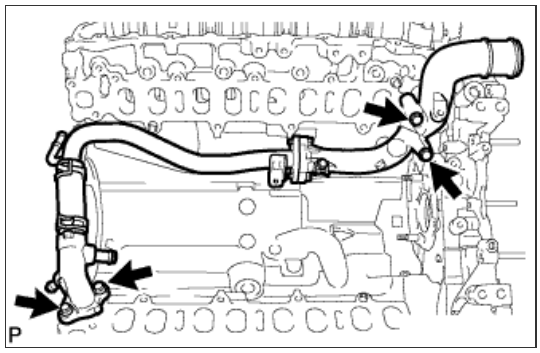
a. ntall the 2 glow plug connectors y uniformly tightening the 8 nuts.

Torque:
2.2 N*m{ 22 kgf*cm , 19 in.*lbf }

b. ntall the 8 screw grommets.

c. Connect the 2 wire harnesses with the 2 nuts and 2 screw grommets.

Torque:
4.0 N*m{ 41 kgf*cm , 35 in.*lbf }

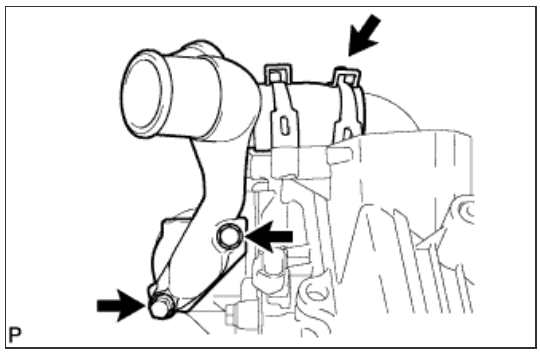


61. INSTALL WATER OUTLET PIPE

a. ntall 2 new gaskets and the water outlet pipe with the 4 olts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

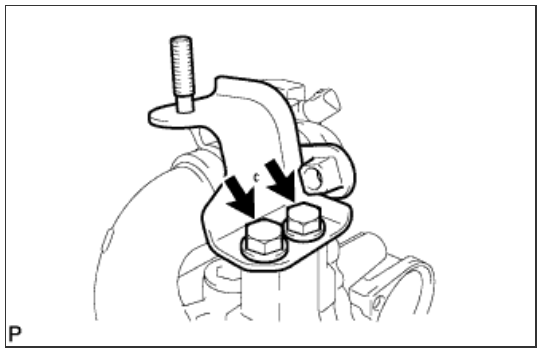
HINT:



The gasket claw should face toward the water outlet pipe.

6 . INSTALL WATER OUTLET

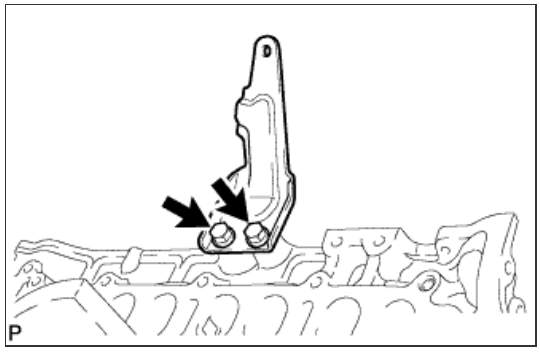
a. ntall a new gasket and the water outlet with the 2 olts, and then connect the water outlet to the No. 2 water hose joint.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

63. INSTALL NO. 2 INTERCOOLER SUPPORT BRACKET

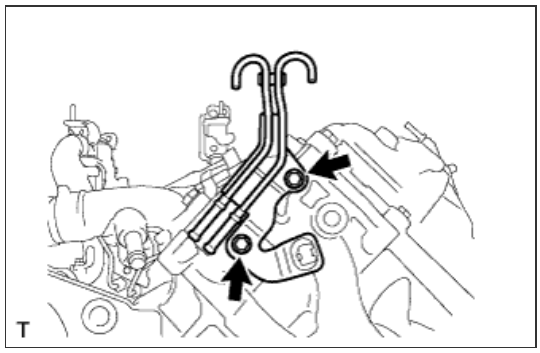
a. ntall the No. 2 intercooler support racket with the 2 olts.



Torque:
43 N*m{ 438 kgf*cm , 32 ft.*lbf }

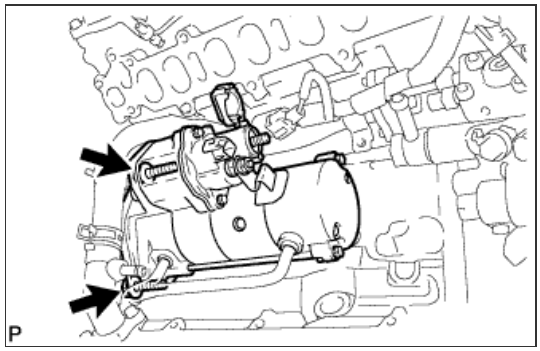
64. INSTALL CLUTCH FLEXIBLE HOSE BRACKET (for Manual Transmission)

a. ntall the clutch flexi d hose racket with the 2 olts.



Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

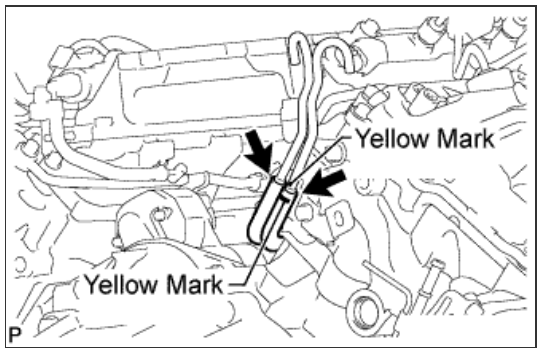
65. INSTALL STARTER HOSE BRACKET



a. ntall the starter hose racket with the 2 olts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

66. INSTALL STARTER ASSEMBLY

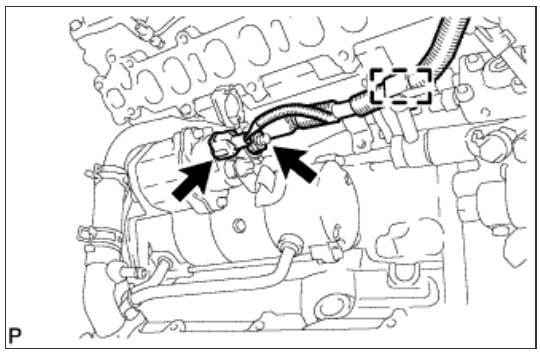


a. ntall the starter with the 2 olts.

b. Connect the 2 hoses to the starter hose racket.

HINT:

Align the paint marks of the hose and racket.

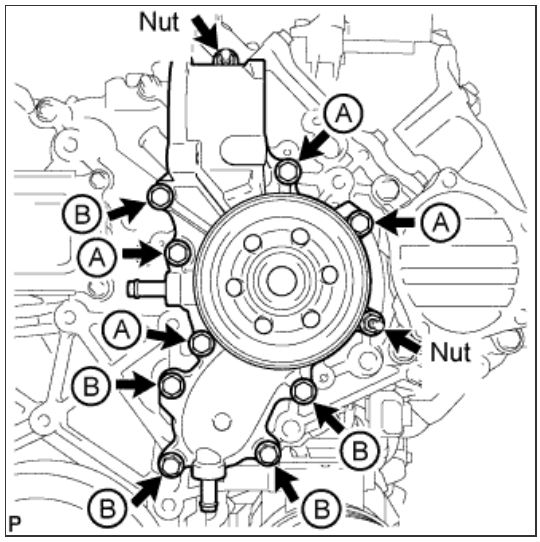


c. ntall the No. 2 engine wire to the starter with the nut.

Torque:
80 N*m{ 816 kgf*cm , 59 ft.*lbf }

d. Connect the connector to the starter.

e. Attach the wire harness clamp.



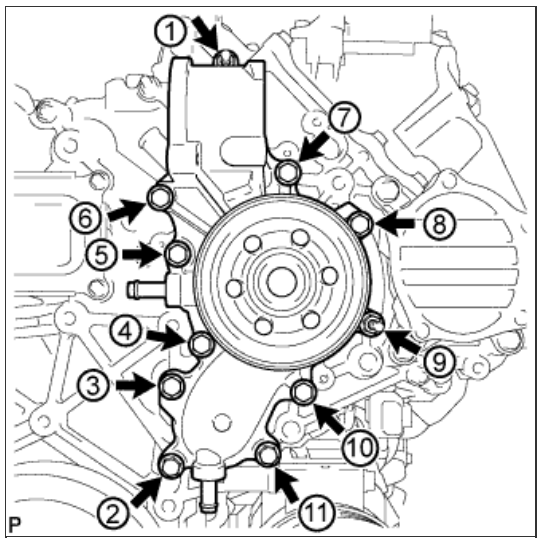
67. INSTALL WATER PUMP ASSEMBLY

a. Temporarily install a new gasket and the water pump with the 9 olts and 2 nuts.

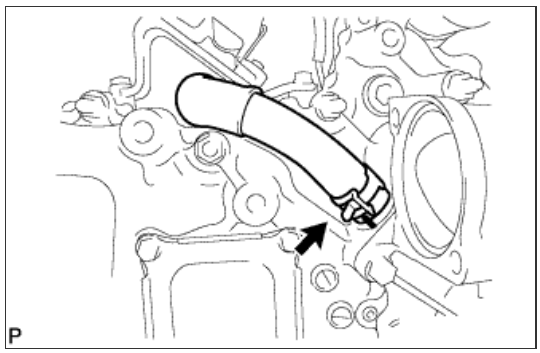
Bolt Length

tem	Length

Bolt A	30 mm (1.18 in.)
Bolt B	80 mm (3.15 in.)



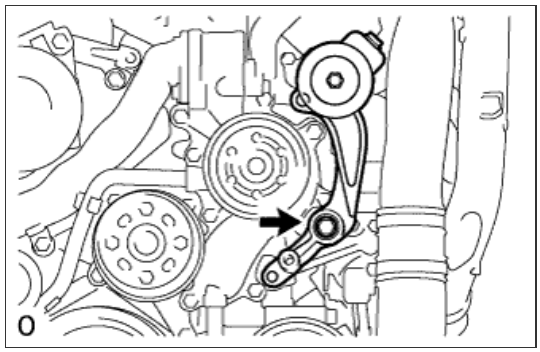
b. Uniformly tighten the 9 olts and 2 nuts of the water pump in the order shown in the illustration.



Torque:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }

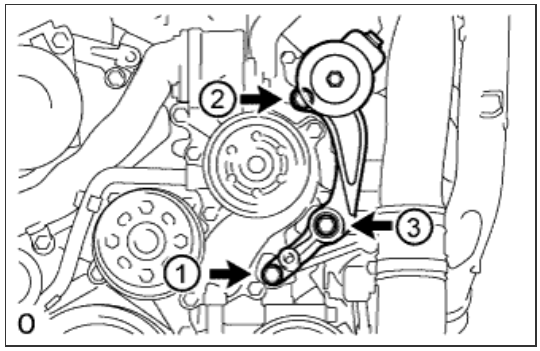
NOTICE:

After installing all of the olts and nuts, check that all of the olts and nuts are tightened to the tor ue specification.



68. CONNECT INLET WATER HOSE

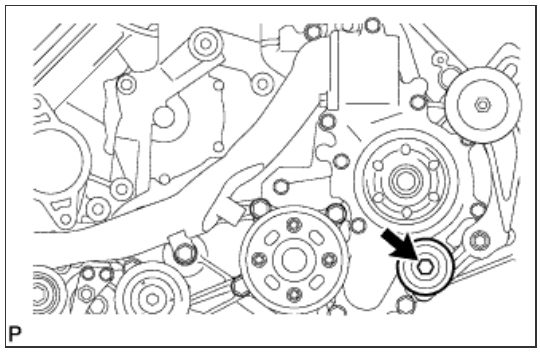
69. INSTALL NO. 2 IDLER PULLEY BRACKET (w/ Viscous Heater)



a. Temporarily install the No. 2 idler pulley racket with the olt.

b. Temporarily install the 2 olts to the No. 2 idler pulley racket olt hole.

c. Uniformly tighten the 3 olts of the No. 2 idler pulley racket in the order shown in the illustration.

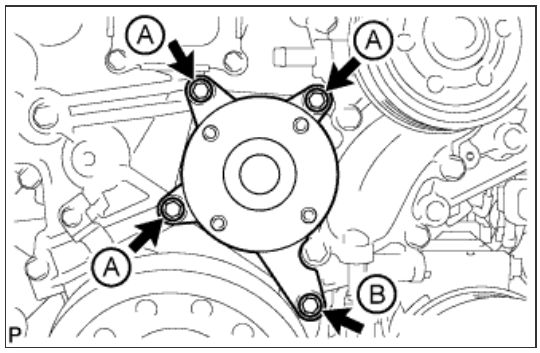


Torque:
49 N*m{ 495 kgf*cm , 36 ft.*lbf }

70. INSTALL NO. 2 IDLER PULLEY (w/ Viscous Heater)

a. ntall the collar, No. 2 idler pulley and cover with the olt.

Torque:
49 N*m{ 495 kgf*cm , 36 ft.*lbf }

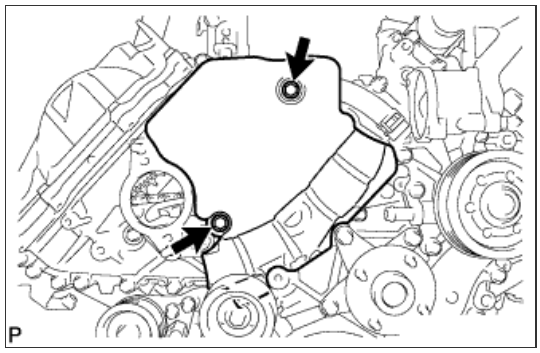


71. INSTALL FAN BRACKET SUB-ASSEMBLY

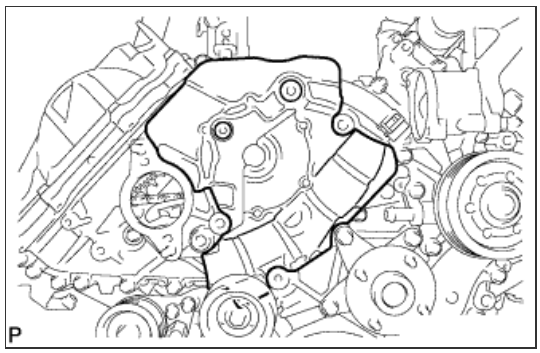
a. ntall the fan racket with the 4 olts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

Bolt Length



tem	Length
Bolt A	30 mm (1.18 in.)
Bolt B	80 mm (3.15 in.)



72. INSTALL TIMING GEAR COVER INSULATOR (w/ Intercooler)

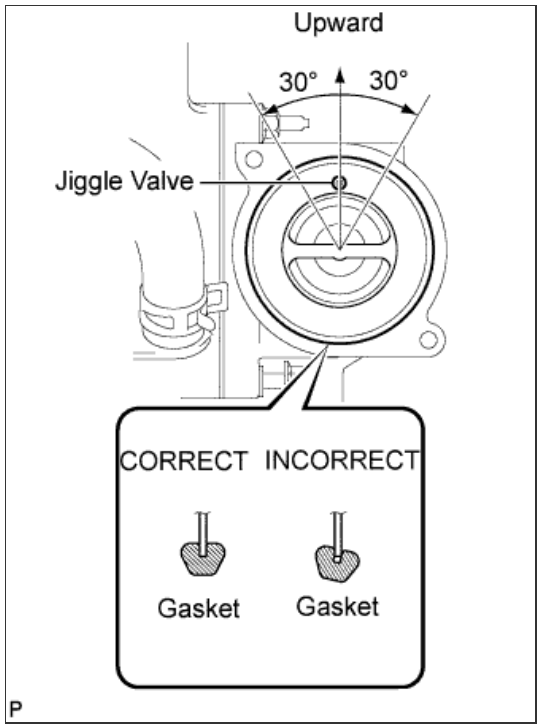
a. w/o iscous eater:
ntall the timing gear cover insulator with the 2 olts.

Torque:
1 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. w/ iscous eater:
ntall the timing gear cover insulator.

73. INSTALL THERMOSTAT

a. ntall a new gasket to the thermostat.

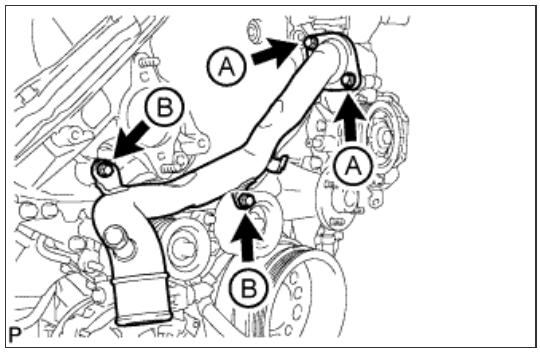


NOTICE:

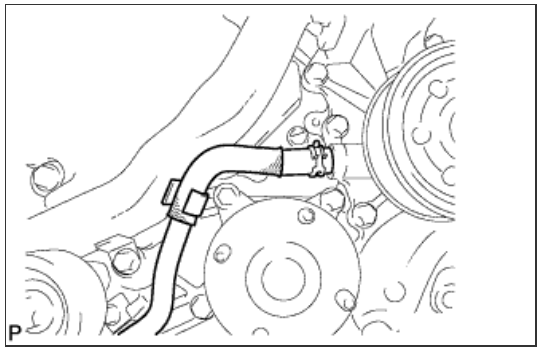
When installing the gasket to the thermostat, e careful not to deform the gasket. Make sure that the groove of the gasket is properly installed onto the thermostat, as shown in the illustration.

b. nert the thermostat into the water pump with the jiggle valve facing straight upward.

HINT:



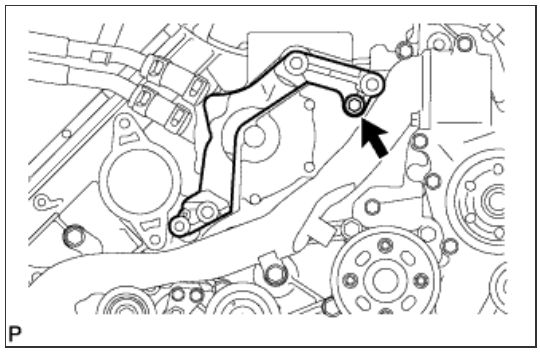
The jiggle valve may e set within 30° of either side of the prescri ed position.



74. INSTALL WATER INLET

a. ntall the water inlet with the 4 olts.

Torque:
for bolt A:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
for bolt B:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }



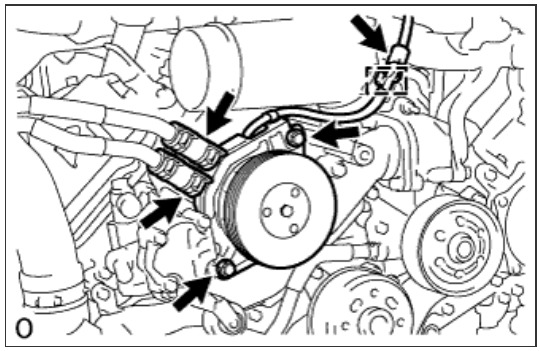
b. Connect the No. 2 oil cooler hose to the clamp and water pump.

75. INSTALL NO. 1 IDLER PULLEY BRACKET (w/ Viscous Heater)

a. ntall the No. 1 idler pulley racket with the olt.

Torque:
49 N*m{ 495 kgf*cm , 36 ft.*lbf }

76. INSTALL VISCOUS HEATER ASSEMBLY WITH MAGNET CLUTCH (w/ Viscous Heater)



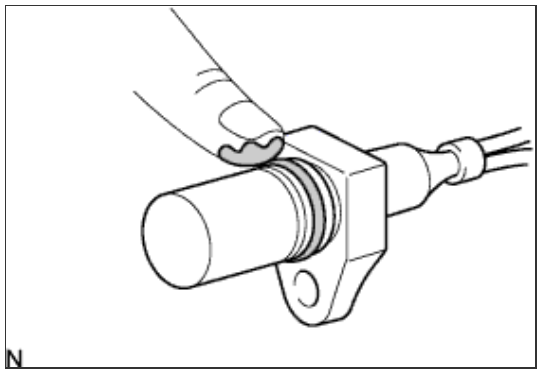
a. ntall the heater assem y with the 2 olts.

Torque:
48.5 N*m{ 495 kgf*cm , 36 ft.*lbf }

b. Connect the 2 heater hoses.

c. Using pliers, grip the claws of the clips and slide the 2 clips.

d. Connect the connector and attach the clamp.

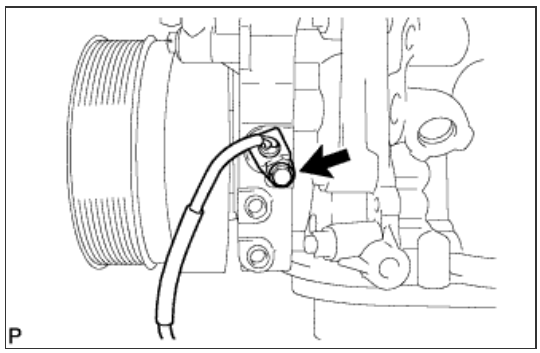


77. INSTALL CRANKSHAFT POSITION SENSOR

a. Apply a light coat of engine oil to the O ring.

NOTICE:

When reusing the sensor, inspect the O ring.

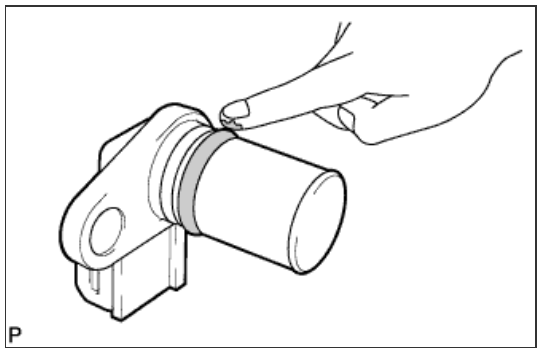


f the O ring has scratches of cuts, replace the crankshaft position sensor.

b. ntall the sensor with the olt.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

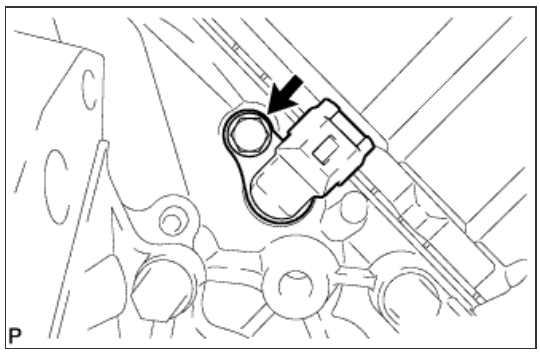
c. Connect the wire harness to the clamp.



78. INSTALL CAMSHAFT POSITION SENSOR

a. Apply a light coat of engine oil to the O ring.

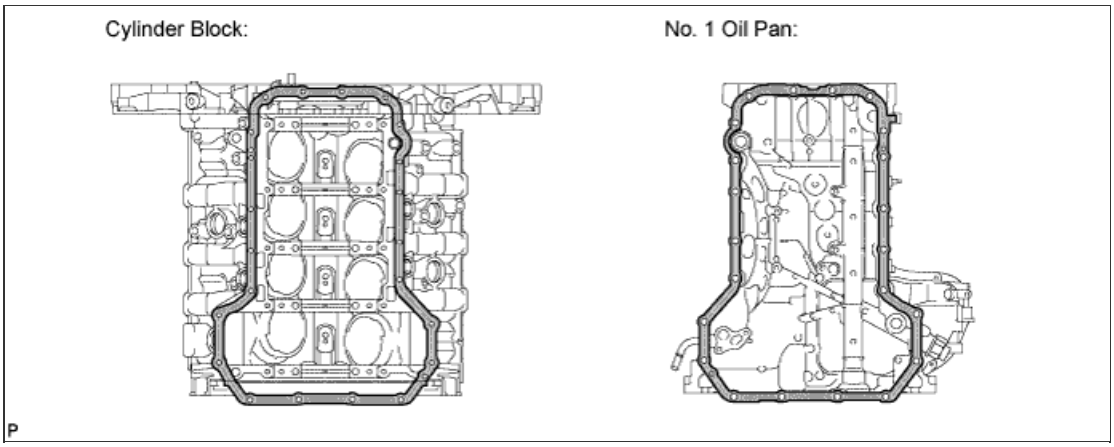
NOTICE:



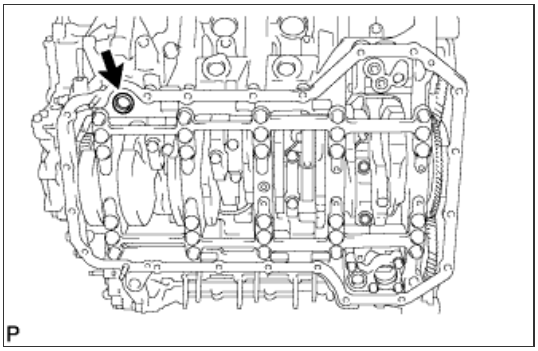
When reusing the sensor, inspect the O ring.

f the O ring has scratches of cuts, replace the crankshaft position sensor.

b. ntall the sensor with the olt.

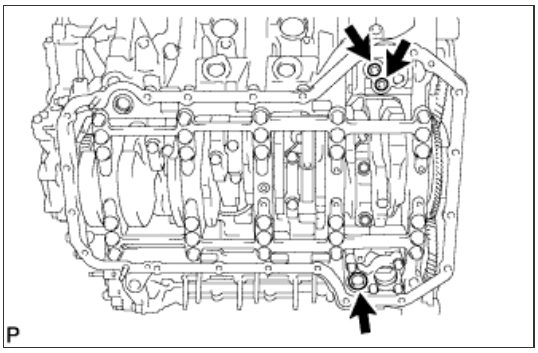


Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }



79. INSTALL NO. 1 OIL PAN SUB-ASSEMBLY

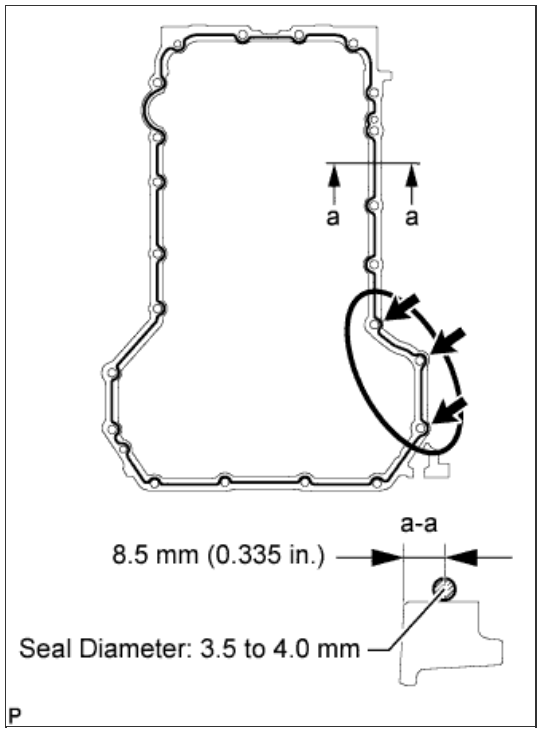
NOTICE:



When the contact surfaces shown elow are wet, wipe them with an oil free cloth efore applying seal packing.

a. ntall the cylinder dck oil hole gasket.

b. Apply a light coat of engine oil to 3 new O rings and set the 3 O rings to the oil regulator and scavenging pump.



c. Apply seal packing to the No. 1 oil pan as shown in the illustration.

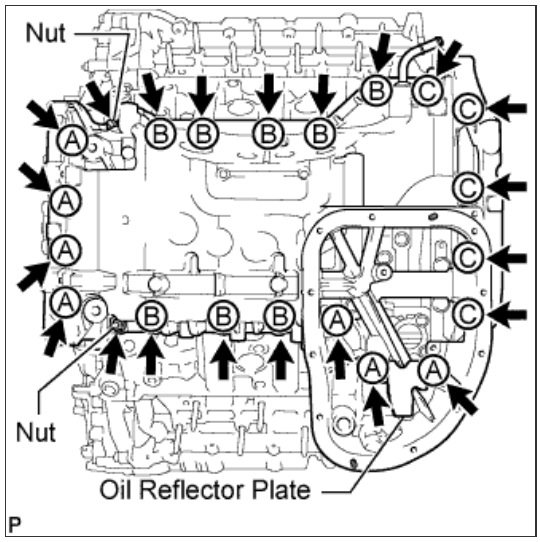
Standard seal diameter:
3.5 to 4.0 mm (0.134 to 0.157 in.)

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

NOTICE:

- **For the 3 bolt holes labeled with arrows, apply the seal packing on the outer edges. For the other bolt holes, apply the seal packing on the inner edges.**
- **Make sure to apply a continuous bead of seal packing as shown in the illustration. If the bead breaks, overlap 3 mm (0.118 in.) of seal packing and continue the bead.**
- **Install the No. 1 oil pan within 3 minutes and tighten the bolts and nuts within 15 minutes after applying seal packing.**
- **Remove any oil and old seal packing from the contact surface.**
- **Do not start the engine for at least 2 hours after installation.**

d. ntall the No. 1 oil pan and oil reflector plate with the 20 olts and 2 nuts.



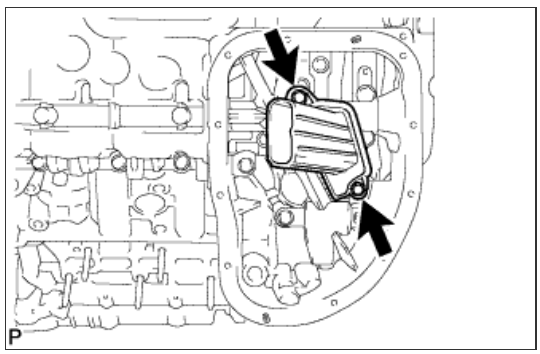
NOTICE:

f the oil reflector plate is deformed, replace it.

Torque:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }

Bolt Length

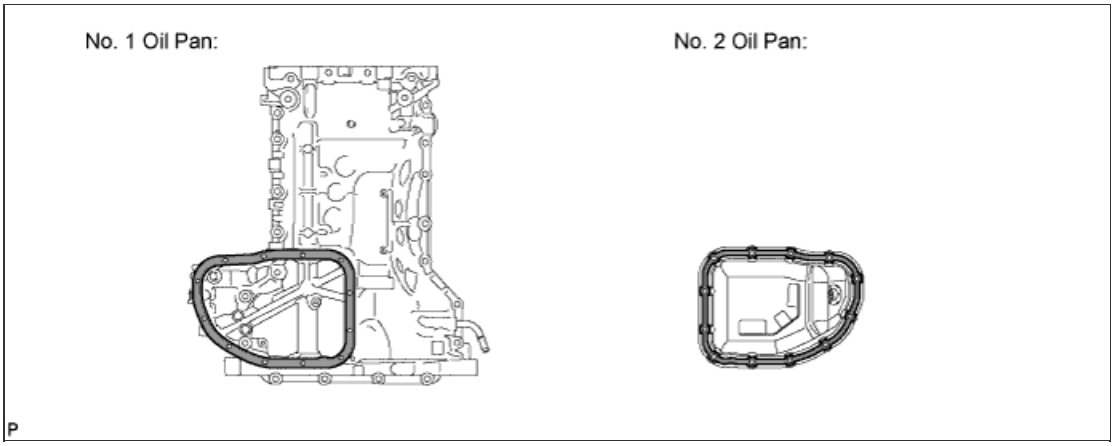
tem	uantity	Length
Bolt A	7	70 mm (2.76 in.)
Bolt B	8	20 mm (0.787 in.)
Bolt C	5	30 mm (1.18 in.)



80. INSTALL OIL STRAINER SUB-ASSEMBLY

a. Apply a light coat of engine oil to a new O ring, and install it to the oil strainer.

b. ntall the oil strainer with the 2 olts.

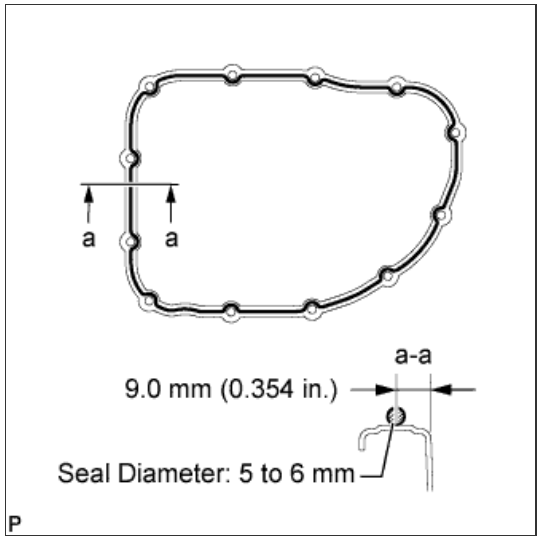


Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

81. INSTALL NO. 2 OIL PAN SUB-ASSEMBLY

NOTICE:

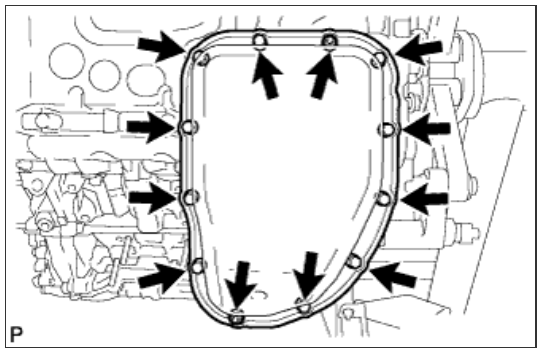
When the contact surfaces shown elow are wet, wipe them with an oil free cloth efore applying seal packing.



a. Apply seal packing to the No. 2 oil pan as shown in the illustration.

Standard seal diameter:
5 to 6 mm (0.197 to 0.236 in.)

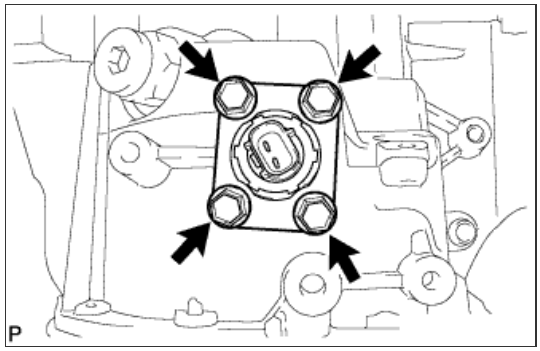
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent



NOTICE:

- **For the bolt and pin holes, make sure to apply seal packing to the inner sides.**
- **Make sure to apply a continuous bead of seal packing as shown in the illustration. If the bead breaks, overlap 3 mm (0.118 in.) of seal packing and continue the bead.**
- **Install the No. 2 oil pan within 3 minutes and tighten the bolts and nuts within 15 minutes after applying seal packing.**
- **Remove any oil from the contact surface.**
- **Do not start the engine for at least 2 hours after installation.**

b. ntall the No. 2 oil pan with the 10 olts and 2 nuts.

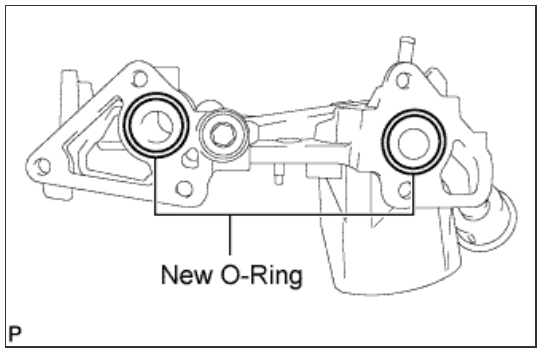


Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

82. INSTALL ENGINE OIL LEVEL SENSOR

a. ntall a new gasket and the engine oil level sensor with the 4 olts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



3. INSTALL OIL FILTER BRACKET SUB-ASSEMBLY

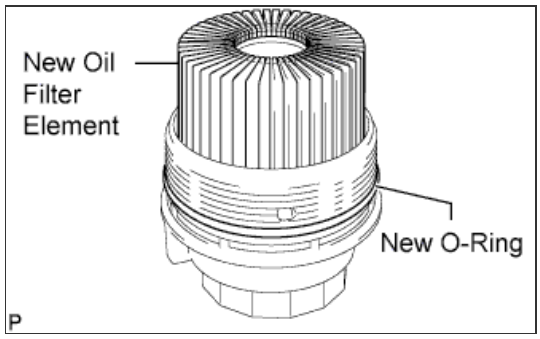
a. Apply a light coat of engine oil to 2 new O rings, and set them to the oil filter racket.

b. ntall the oil filter racket with the 3 olts and 2 nuts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

c. Connect the 2 wire harness clamps.

84. INSTALL OIL FILTER ELEMENT



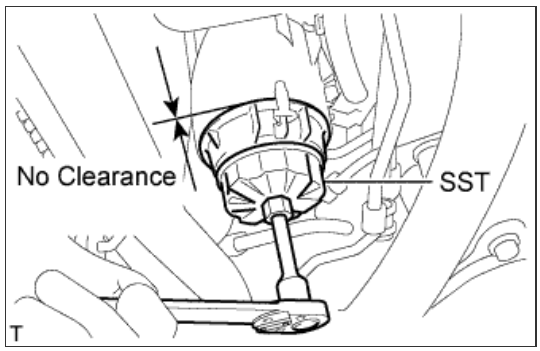
a. Clean the inside of the oil filter cap, its threads and its O ring groove.

b. Apply a small amount of engine oil to a new O ring and install it to the oil filter cap.

c. Set a new oil filter element in the oil filter cap.

d. Remove any dirt or foreign matter from the installation surface of the engine.

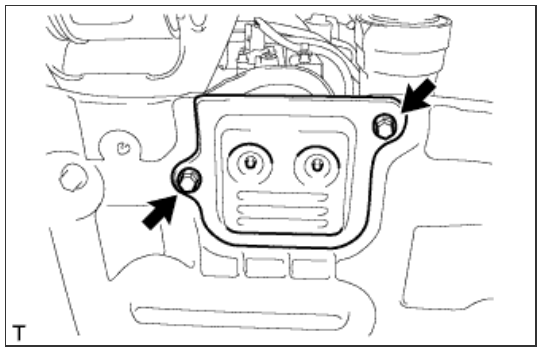
e. Apply a small amount of engine oil to the O ring again and temporarily install the oil filter cap y hand.



f. Using SST, tighten the oil filter cap.

SST
09228-06501

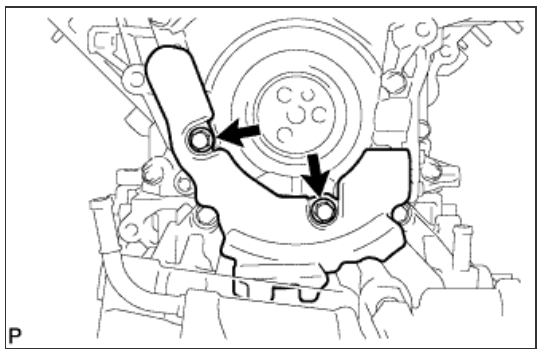
Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf }



NOTICE:

- **Make sure that the oil filter is installed securely as shown in the illustration.**
- **Be careful that the O-ring does not get caught between any surrounding parts.**

g. ntall the No. 2 engine under cover seal to the No. 2 engine under cover with the 2 olts.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

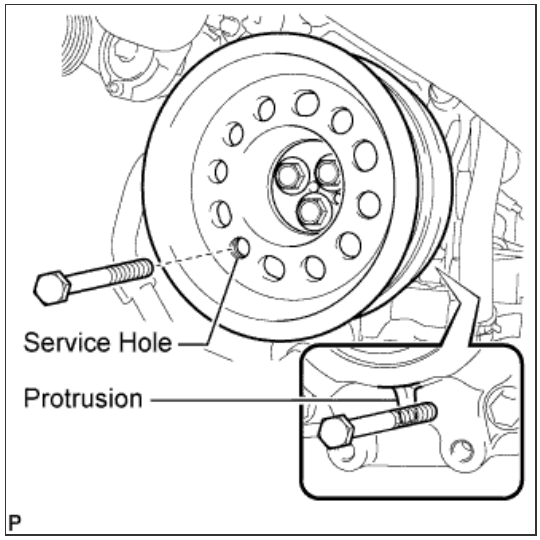
85. INSTALL TIMING GEAR COVER SPACER (w/ Intercooler)

a. ntall the timing gear cover spacer with the 2 olts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

86. INSTALL CRANKSHAFT PULLEY

NOTICE:

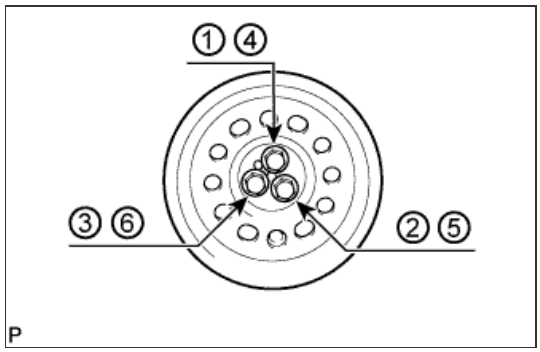


This procedure is intended for removal/installation of the crankshaft pulley only. Do not use this procedure for removal/installation of the flywheel or the drive plate and ring gear.

a. Align the crankshaft pulley and the crankshaft knock pin, and temporarily install the crankshaft pulley with the 3 olts.

b. ntall the 2 olts to the olt holes of the crankshaft rear side.

c. Using a ar, turn the crankshaft until the crankshaft pulley service hole is a little to the right of ottom dead center.

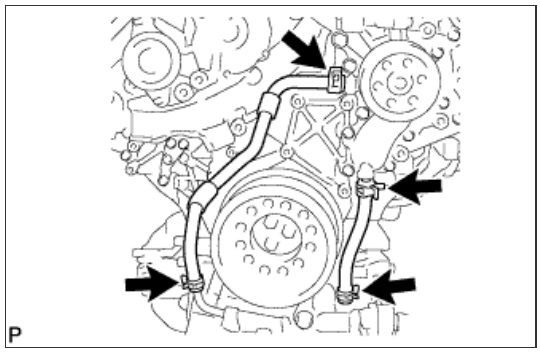


d. ntall a 14 mm x 1.5 pitch service olt with a length of 70 mm or more to the crankshaft pulley service hole, and hold the crankshaft using the timing chain cover protrusion.

e. Uniformly tighten the 3 olts in 2 passes in the order shown in the illustration.

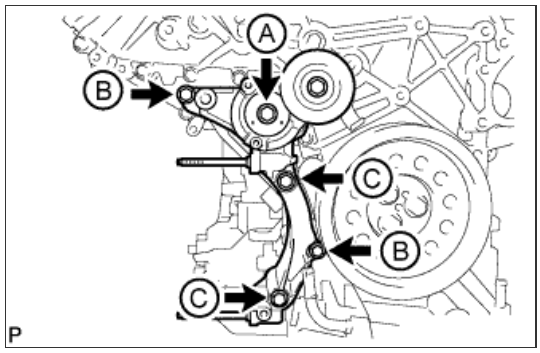
Torque:
115 N*m{ 1168 kgf*cm , 84 ft.*lbf }

f. Remove the service olt.



87. CONNECT NO. 2 OIL COOLER HOSE

a. Align the white paint marks on the oil cooler hose and oil filter racket and connect the hose. Then connect the other side to the water pump and attach the oil cooler hose to the clamp.



NOTICE:

Make sure to maintain a space etween the oil cooler hose and crankshaft pulley, and the oil cooler hose and ri ed elt idler pulley.

. CONNECT NO. 1 OIL COOLER HOSE

89. INSTALL V-RIBBED BELT TENSIONER ASSEMBLY

a. ntall the ri ed elt tensioner with the 5 olts.

Torque:
for bolt A and C:
43 N*m{ 438 kgf*cm , 32 ft.*lbf }
for bolt B:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

Bolt Length

tem	uantity	Length
Bolt A	1	116 mm (4.57 in.)
Bolt B	2	40 mm (1.58 in.)
Bolt C	2	95 mm (3.74 in.)

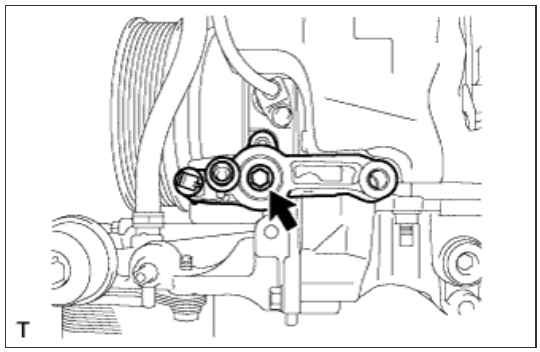
b. ntall the No. 1 idler pulley with the olt.

Torque:
43 N*m{ 438 kgf*cm , 32 ft.*lbf }

c. ntall the ri ed elt tensioner racket with the 3 olts.

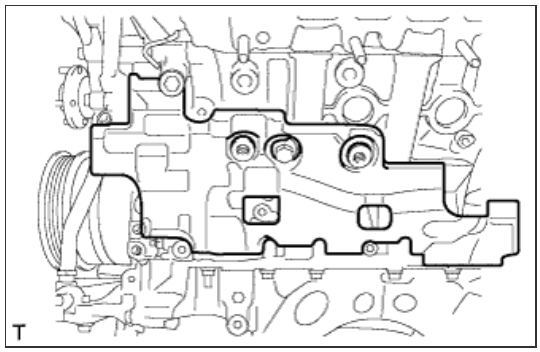
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

90. INSTALL STIFFENER INSULATOR RH (w/ Intercooler)



a. ntall the stiffener insulator R with the 2 olts.

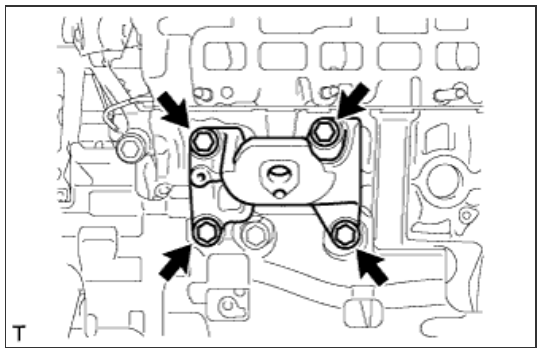
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



91. INSTALL COMPRESSOR BRACKET

a. ntall the compressor racket with the olt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

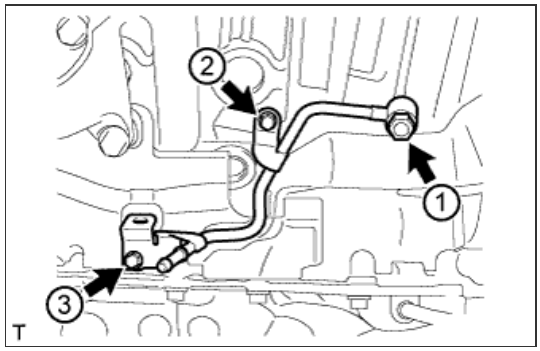


. INSTALL NO. 2 CYLINDER BLOCK INSULATOR

93. INSTALL ENGINE MOUNTING BRACKET LH

a. ntall the engine mounting racket L with the 4 olts.

Torque:
80 N*m{ 816 kgf*cm , 59 ft.*lbf }

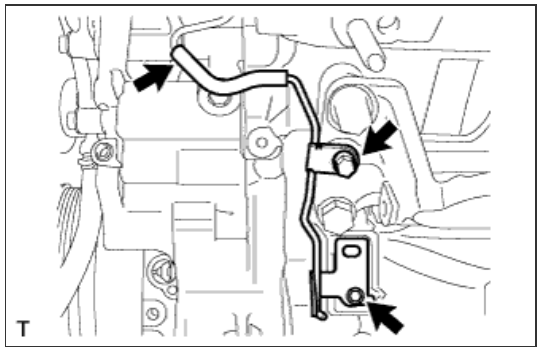


94. INSTALL NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY

a. Temporarily install a new gasket and No. 2 water y pass pipe with the union olt and 2 olts.

b. Tighten the union olt and 2 olts of the No. 2 water y pass pipe in the order shown in the illustration.

Torque:
for union bolt:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }
for bolt:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

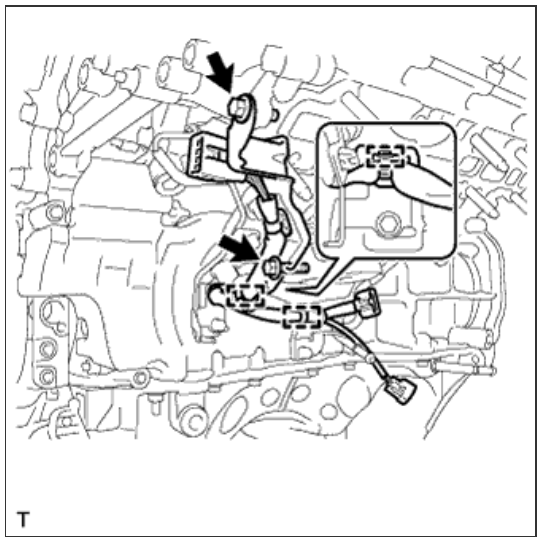


95. INSTALL NO. 3 VACUUM TRANSMITTING PIPE SUB-ASSEMBLY

a. ntall the No. 3 vacuum transmitting pipe with the 2 olts.

Torque:
6.0 N*m{ 61 kgf*cm , 53 in.*lbf }

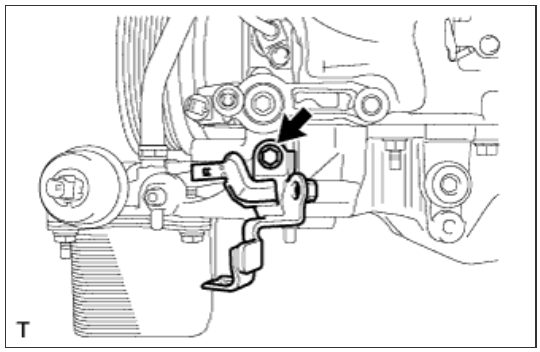
b. w/ tercooler:
Connect the vacuum hose.



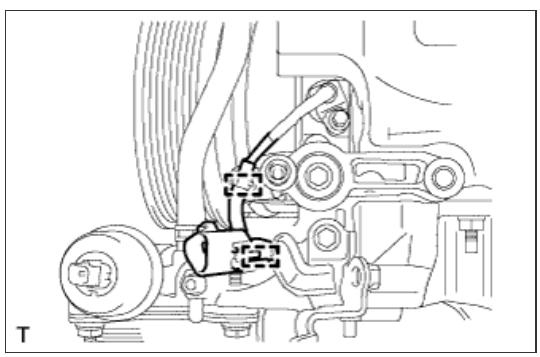
96. INSTALL TURBOCHARGER WIRE

a. ntall the tur ocharger wire with the 2 olts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

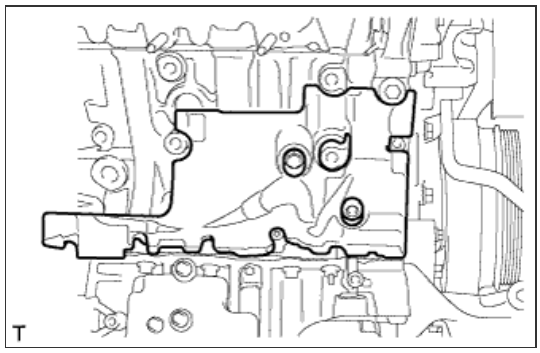


b. Attach the 3 wire harness clamps.



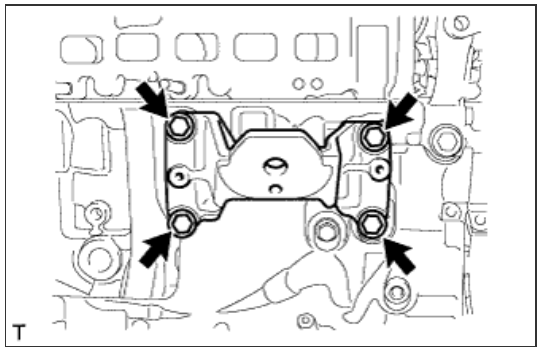
97. INSTALL NO. 2 INTAKE AIR CONNECTOR BRACKET

a. ntall the No. 2 intake air connector racket with the olt.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. Attach the 2 wire clamps.

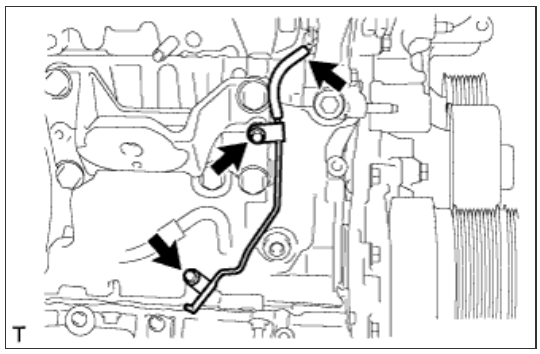


. INSTALL NO. 1 CYLINDER BLOCK INSULATOR

99. INSTALL ENGINE MOUNTING BRACKET RH

a. ntall the engine mounting racket R with the 4 olts.

Torque:
80 N*m{ 816 kgf*cm , 59 ft.*lbf }

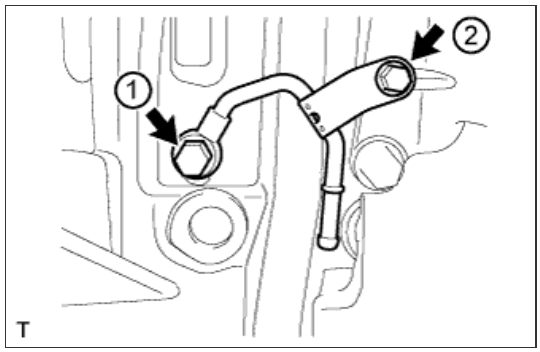


100. INSTALL NO. 4 VACUUM TRANSMITTING PIPE SUB-ASSEMBLY (w/ Intercooler)

a. ntall the No. 4 vacuum transmitting pipe with the 2 olts.

Torque:
6.0 N*m{ 61 kgf*cm , 53 in.*lbf }

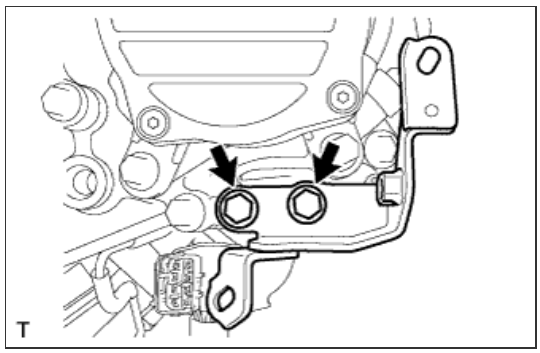
b. Connect the vacuum hose.



101. INSTALL NO. 1 WATER BY-PASS PIPE SUB-ASSEMBLY

a. Temporarily install a new gasket and the No. 1 water y pass pipe with the union olt and olt.

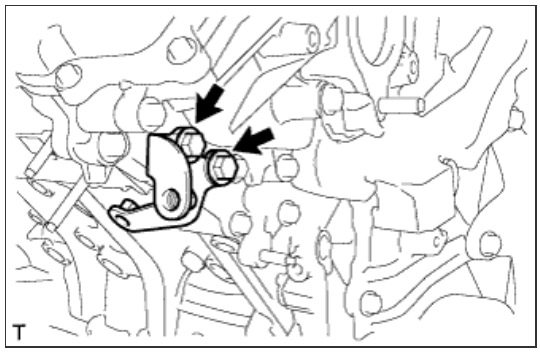
b. Tighten the union olt and olt of the No. 1 water y pass pipe in the order shown in the illustration.



Torque:
for union bolt:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }
for bolt:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

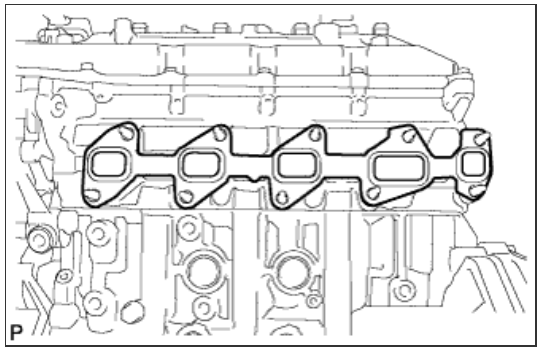
102. INSTALL AIR TUBE SUPPORT

a. ntall the air tu e support with the 2 olts.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

103. INSTALL NO. 1 INTAKE AIR CONNECTOR BRACKET

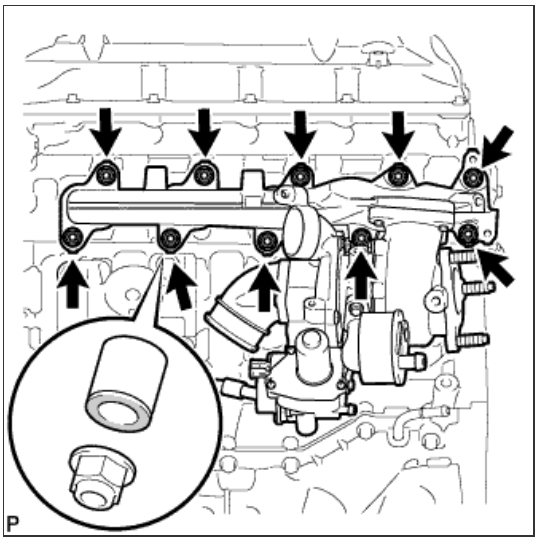


a. ntall the No. 1 intake air connector racket with the 2 olts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

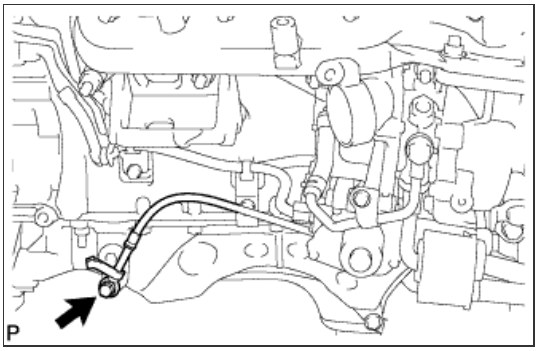
104. INSTALL NO. 2 TURBOCHARGER SUB-ASSEMBLY WITH EXHAUST MANIFOLD LH

a. Set a new gasket to the cylinder head L .



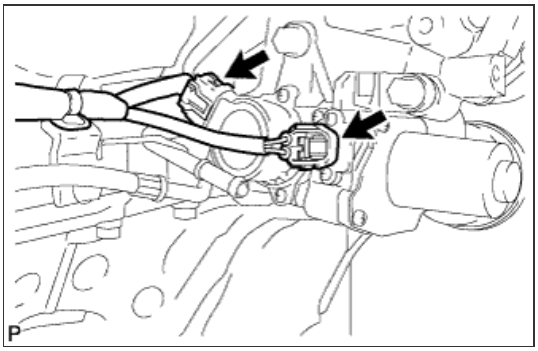
b. ntall the No. 2 tur ocharger with exhaust manifold L and 10 collars to the cylinder head L with 10 new nuts.

Torque:
36 N m{ 367 kgf*cm , 27 ft.*lbf }



HINT:

ntall the collars with the colored side facing the nuts.



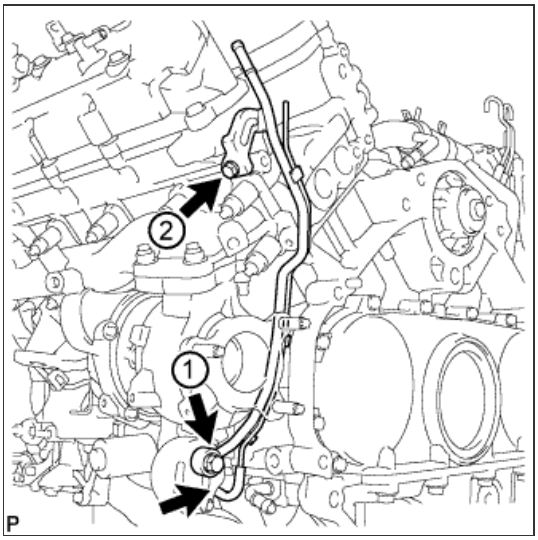
c. ntall a new gasket and the No. 2 inlet tur o oil pipe to the No. 1 oil pan with the union olt.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

d. Connect the 2 connectors to the tur ocharger.

105. INSTALL NO. 2 VENTILATION TUBE SUB-ASSEMBLY

a. Temporarily install a new gasket and the No. 2 ventilation tu e with the union olt and olt.

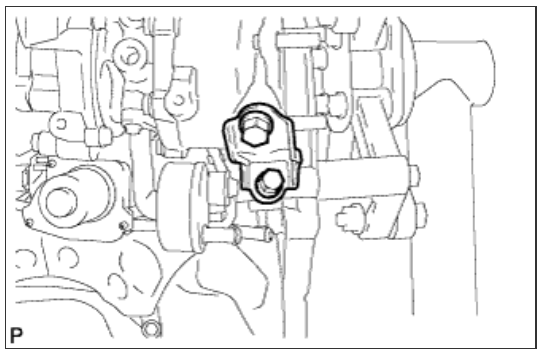


b. Tighten the union olt and olt in the order shown in the illustration.

Torque:
for union bolt:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }
for bolt:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

NOTICE:

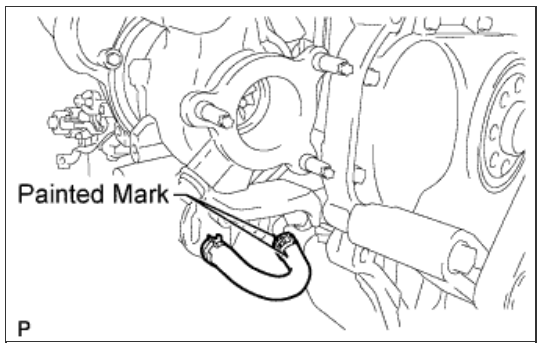
Clean and remove any oil la eled 1shown in the illustration.



c. Connect the No. 2 vacuum transmitting hose.

106. INSTALL NO. 2 TURBOCHARGER STAY

a. ntall the No. 2 tur ocharger stay with the 2 olts.

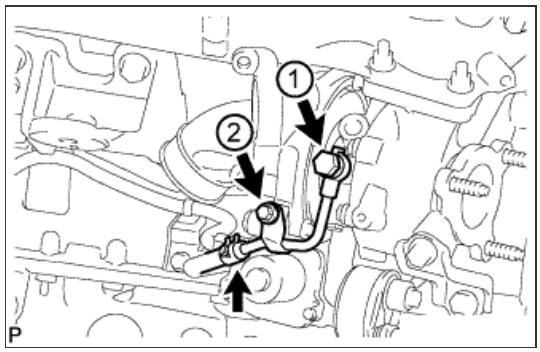


Torque:
49 N*m{ 495 kgf*cm , 36 ft.*lbf }

107. CONNECT NO. 2 OUTLET TURBO OIL HOSE

HINT:

Align the white paint marks on the oil hose and pipe, and connect the hose.

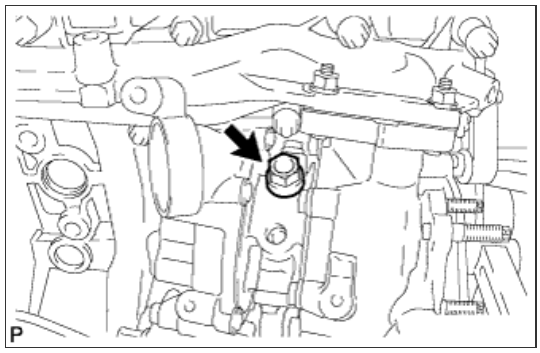


108. INSTALL NO. 2 TURBO WATER PIPE SUB-ASSEMBLY

a. Temporarily install a new gasket and the No. 2 tur o water pipe with the union olt and olt.

b. Tighten the union olt and olt in the order shown in the illustration.

Torque:
for union bolt:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }
for bolt:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

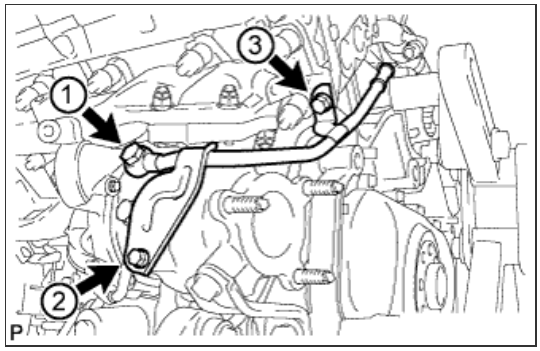


c. Connect the water hose to the pipe.

109. INSTALL FRONT WATER BY-PASS JOINT

a. ntall a new gasket and the front water y pass joint.

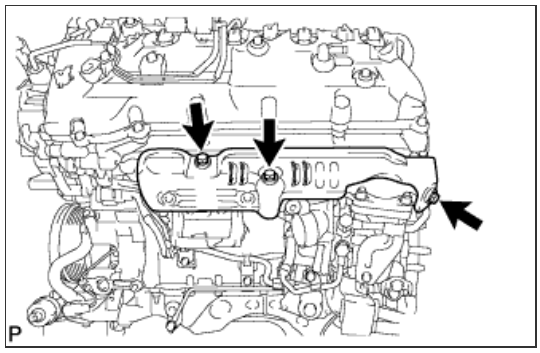
Torque:
50 N*m{ 510 kgf*cm , 37 ft.*lbf }



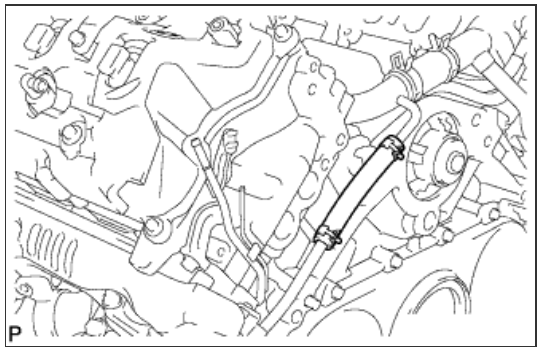
110. INSTALL NO. 3 TURBO WATER PIPE SUB-ASSEMBLY

a. Temporarily install a new gasket and the No. 3 tur o water pipe with the union olt and 2 olts.

b. Tighten the union olt and 2 olts in the order shown in the illustration.

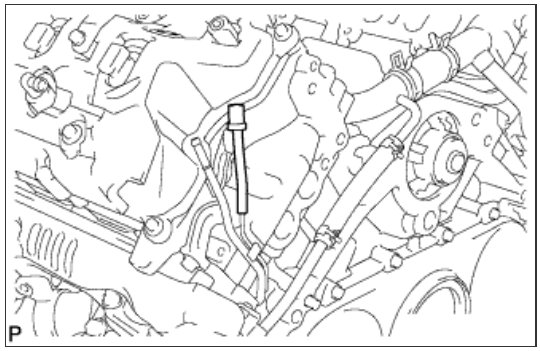


Torque:
for union bolt:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }
for bolt:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

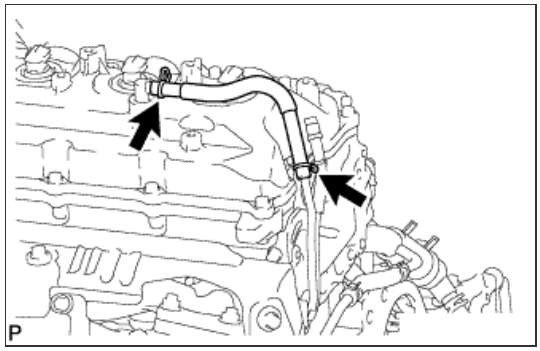


111. INSTALL NO. 2 EXHAUST MANIFOLD HEAT INSULATOR

a. ntall the No. 2 exhaust manifold heat insulator with the 3 olts.

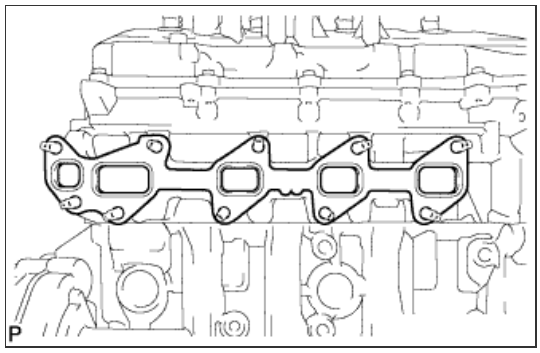


Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf }



112. CONNECT NO. 2 TURBO WATER HOSE

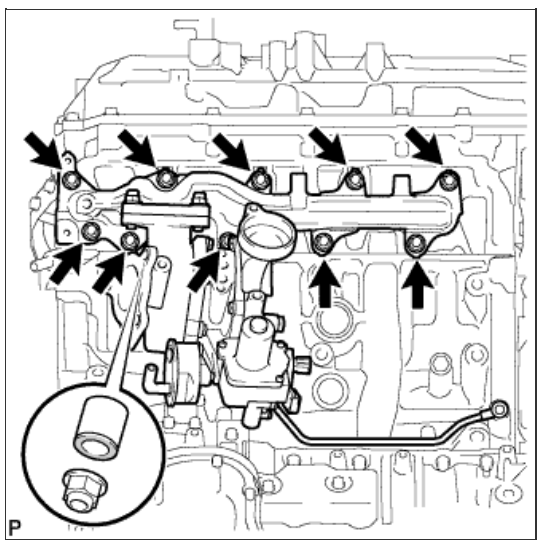
113. CONNECT BREATHER PLUG LH



114. CONNECT NO. 3 VENTILATION HOSE

115. INSTALL NO. 1 TURBOCHARGER SUB-ASSEMBLY WITH EXHAUST MANIFOLD RH

a. Set a new gasket to the cylinder head R .

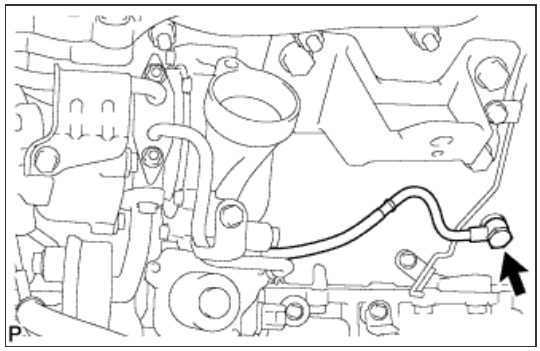


b. ntall the No. 1 tur ocharger with exhaust manifold R and 10 collars to the cylinder head R with 10 new nuts.

Torque:
36 N*m{ 367 kgf*cm , 27 ft.*lbf }

HINT:

ntall the collars with the colored side facing the nuts.



c. ntall a new gasket and the No. 1 inlet tur o oil pipe to the cylinder dck with the union olt.

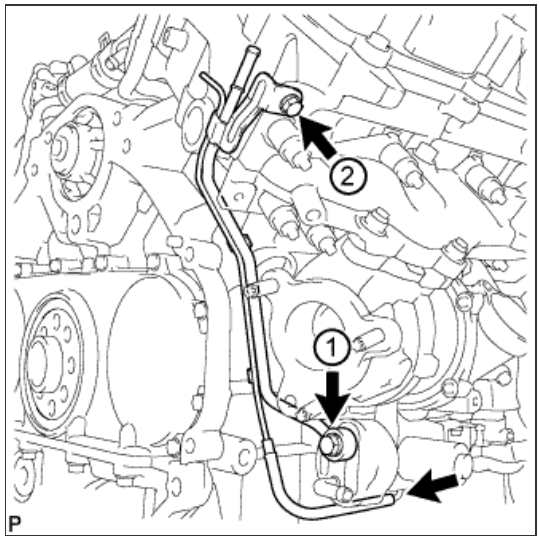
Torque:
Case is dry:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }
Case is wet:
23 N*m{ 235 kgf*cm , 17 ft.*lbf }

NOTICE:

- **The case is "dry" when there is absolutely no engine oil on the union bolt and cylinder block bolt hole.**
- **The case is "wet" when there is engine oil on the union bolt and cylinder block bolt hole.**

116. INSTALL NO. 1 VENTILATION TUBE SUB-ASSEMBLY

a. Temporarily install a new gasket and the No. 1 ventilation tu e with the union olt and olt.



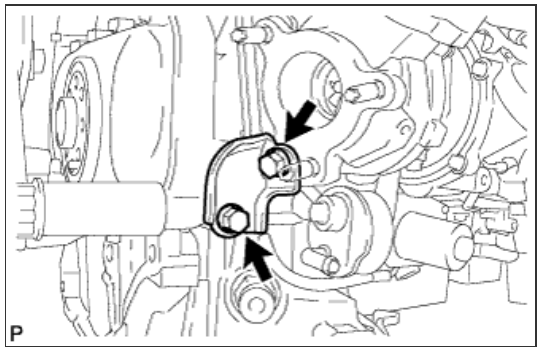
b. Tighten the union olt and olt in the order shown in the illustration.

Torque:
for union bolt:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }
for bolt:
10 N*m{ 102 kgf*cm , 7 in.*lbf }

NOTICE:

Clean and remove any oil la eled 1 shown in the illustration.

c. Connect the vacuum hose.

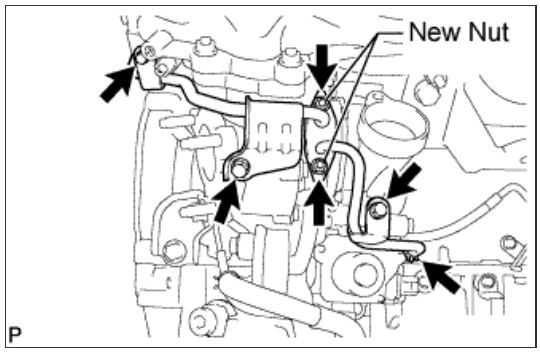


117. INSTALL NO. 1 TURBOCHARGER STAY

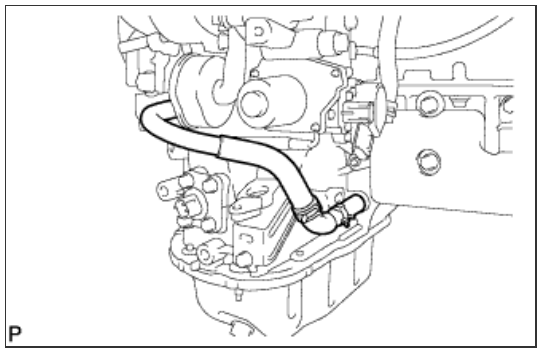
a. Temporarily install the No. 1 tur ocharger stay with the 2 olts.

b. Tighten the 2 olts.

Torque:
49 N*m{ 495 kgf*cm , 36 ft.*lbf }



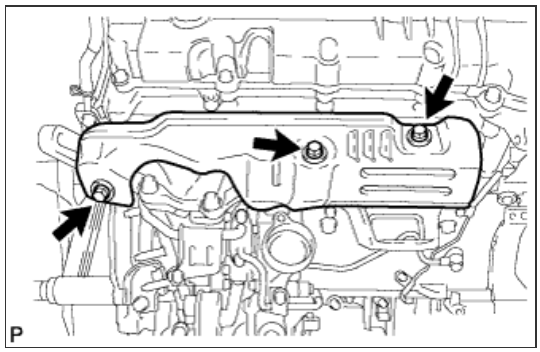
118. INSTALL NO. 1 TURBO WATER PIPE SUB-ASSEMBLY



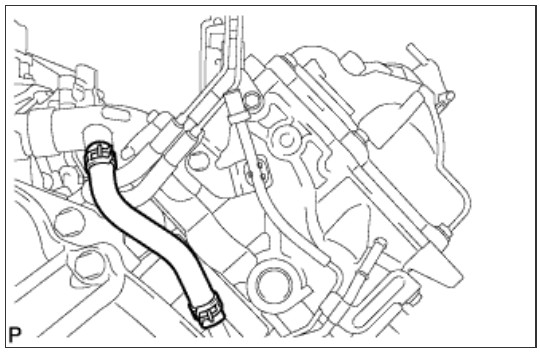
a. ntall a new gasket and the No. 1 tur o water pipe with 2 new nuts and 3 olts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. Connect the water hose.

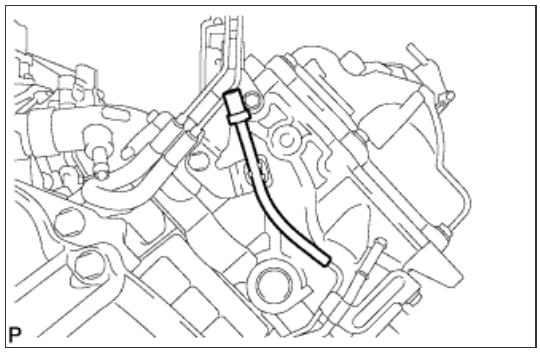


119. CONNECT NO. 1 OUTLET TURBO OIL HOSE

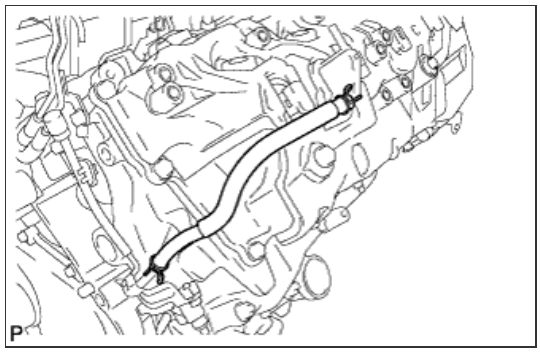


120. INSTALL NO. 1 EXHAUST MANIFOLD HEAT INSULATOR

a. ntall the No. 1 exhaust manifold heat insulator with the 3 olts.



Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf }

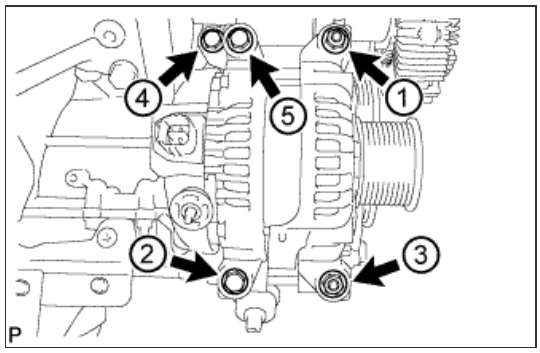


121. CONNECT NO. 2 TURBO WATER HOSE

122. CONNECT BREATHER PLUG RH

123. CONNECT NO. 2 VENTILATION HOSE

124. INSTALL GENERATOR ASSEMBLY

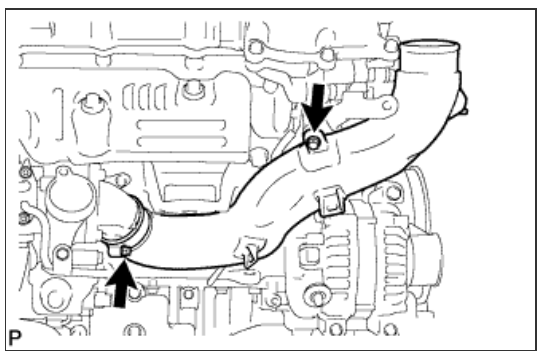


a. Temporarily install the generator with the 3 olts and 2 nuts.

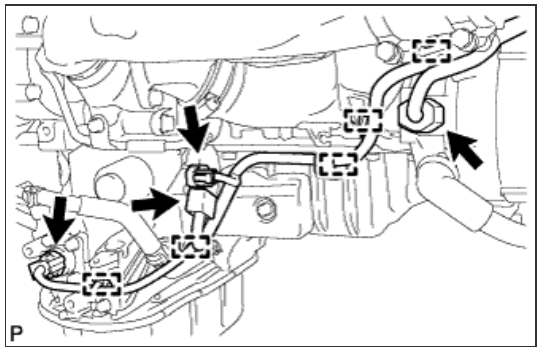
b. Uniformly tighten the 3 olts and 2 nuts in the order shown in the illustration.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

c. Connect the generator ca d and install the nut and olt.



Torque:
for bolt:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }
for nut (130A Type and 150A Type:):
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }
for nut (180A Type:):
12 N*m{ 122 kgf*cm , 9 ft.*lbf }



125. INSTALL NO. 1 INTAKE AIR CONNECTOR PIPE

a. ntall the No. 1 intake air connector pipe with the olt. Then tighten the hose clamp.

Torque:
for bolt:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
for clamp:
6.0 N*m{ 61 kgf*cm , 53 in.*lbf }

b. Connect the 4 connectors and attach the 5 wire harness clamps.

126. INSTALL NO. 1 ENGINE OIL LEVEL DIPSTICK GUIDE

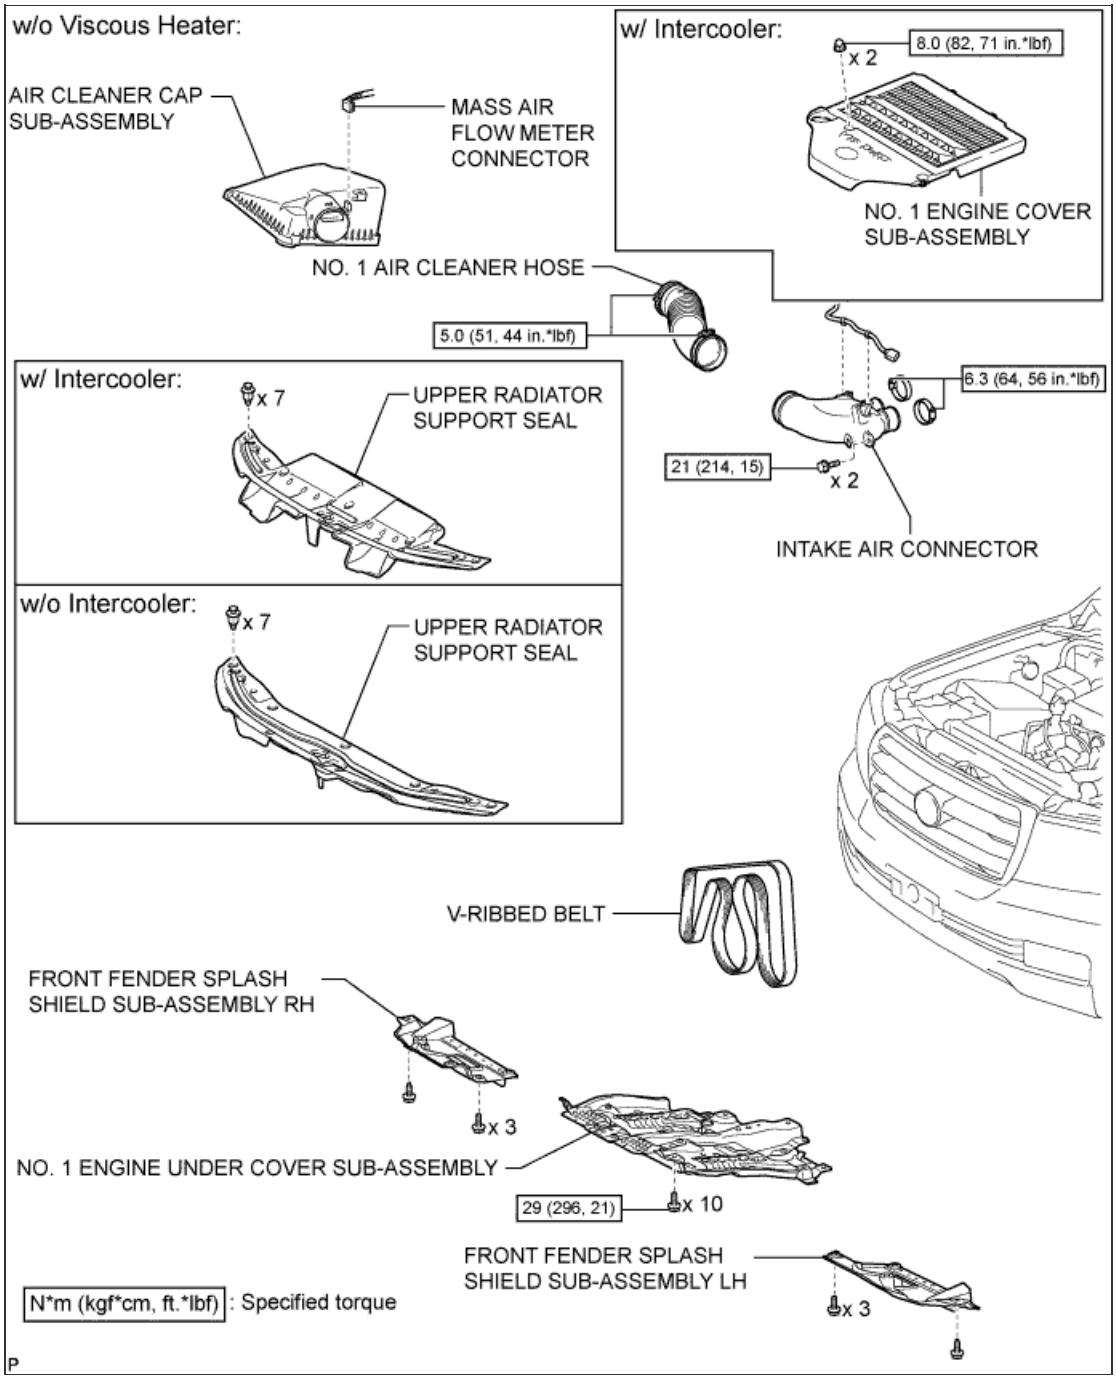
a. Apply a light coat of engine oil to a new O ring, and install it to the No. 1 engine oil level dipstick guide.

b. ntall the No. 1 engine oil level dipstick guide with the 2 olts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

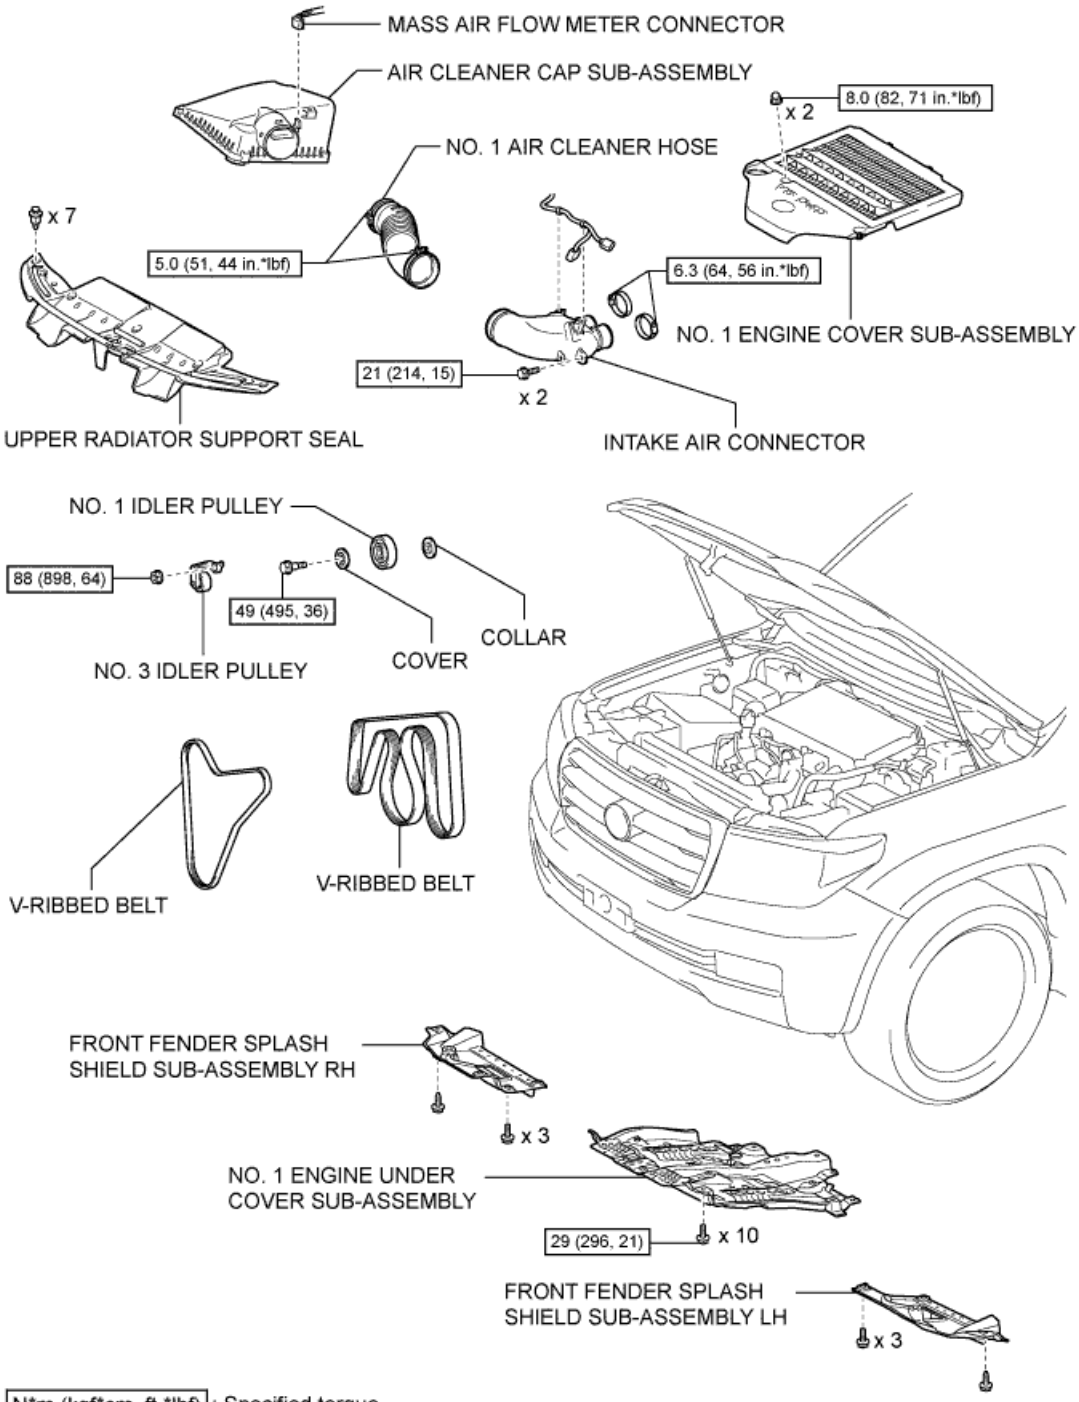
127. INSTALL ENGINE ASSEMBLY

a. ntall the engine assem yl to the vehicle (Click here).



128. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:



When disconnecting the ca d, some systems need to e initialized after the ca d is reconnected (Click here).

a. Connect the ca ds to the negative ( ) main attery and su attery terminals.

P

for Preparation Click here

1. REMOVE RADIATOR ASSEMBLY

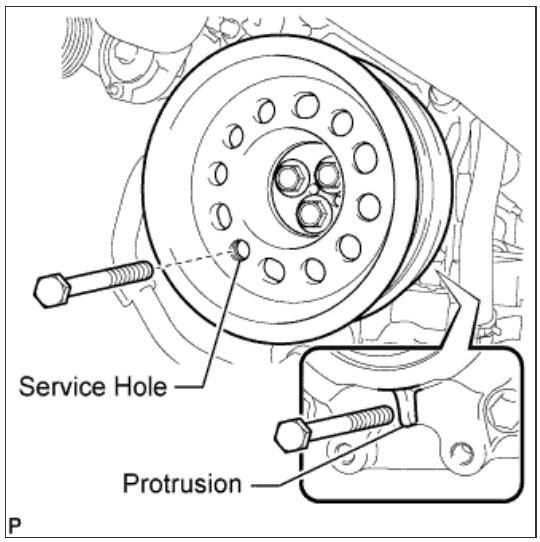
a. Remove the radiator (Click here).

2. REMOVE CRANKSHAFT PULLEY SUB-ASSEMBLY

NOTICE:

This procedure is intended for removal installation of the crankshaft pulley only. Do not use this procedure for removal installation of the flywheel or the drive plate and ring gear.

a. Install the 2 bolts to the bolt holes of the crankshaft rear side.



b. Using a bar, turn the crankshaft until the crankshaft pulley service hole is a little to the left of bottom dead center.

c. Install a 14 mm x 1.5 pitch service bolt with a length of 70 mm or more to the crankshaft pulley service hole, and hold the crankshaft using the timing chain cover protrusion.

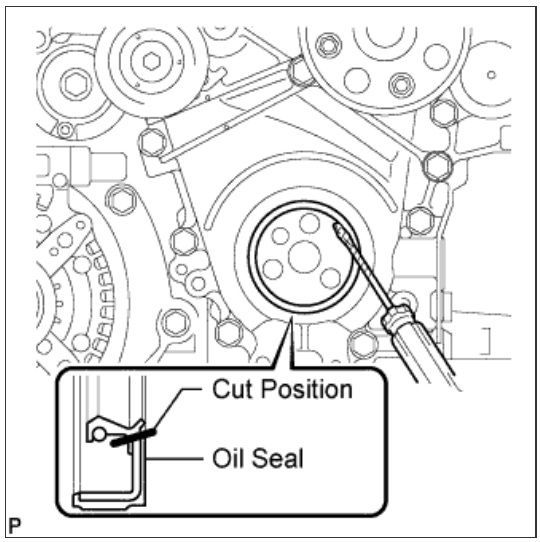
d. Remove the 3 bolts and crankshaft pulley.

NOTICE:

If the crankshaft pulley cannot be removed, temporarily install a bolt to the crankshaft so that the pulley does not fall, and lightly tap the outer edge of the mass damper with a plastic-faced hammer to remove the pulley. Do not tap the pulley V-ribbed belt ribs, as the crankshaft may be damaged.

3. REMOVE FRONT CRANKSHAFT OIL SEAL

a. Using a knife, cut off the lip of the oil seal.



b. Using a screwdriver, pry out the oil seal.

NOTICE:

Be careful not to damage the crankshaft.

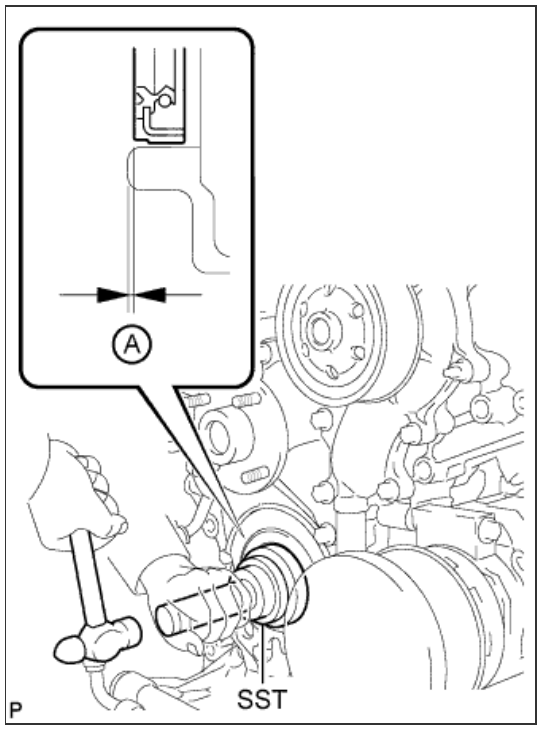
HINT:

Tape the screwdriver tip before use.

for Preparation Click here

1. INSTALL FRONT CRANKSHAFT OIL SEAL

a. Apply engine oil to the lip of a new oil seal.



b. Using nd a hammer, tap in the oil seal as shown in the illustration.

SST
09316-12010
09950-70010 (09951-07100)
09950-60020 (09951-00890)

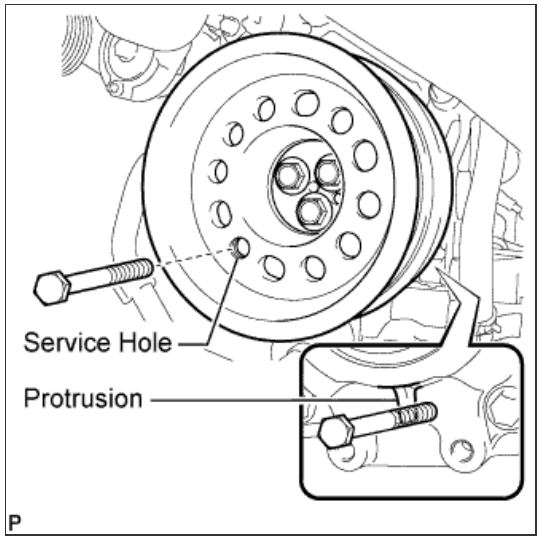
Standard depth A:
0.6 to 1.4 mm (0.0236 to 0.0551 in.)

NOTICE:

Make sure that the lip of the oil seal is properly installed.

2. INSTALL CRANKSHAFT PULLEY SUB-ASSEMBLY

NOTICE:

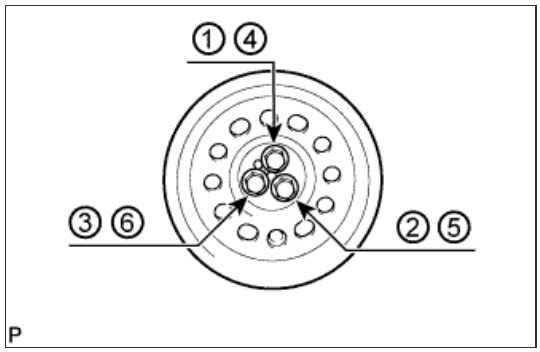


This procedure is intended for removal installation of the crankshaft pulley only. Do not use this procedure for removal installation of the flywheel or the drive plate and ring gear.

a. Align the crankshaft pulley and the crankshaft knock pin, and temporarily install the crankshaft pulley with the 3 bolts.

b. Install the 2 bolts to the bolt holes of the crankshaft rear side.

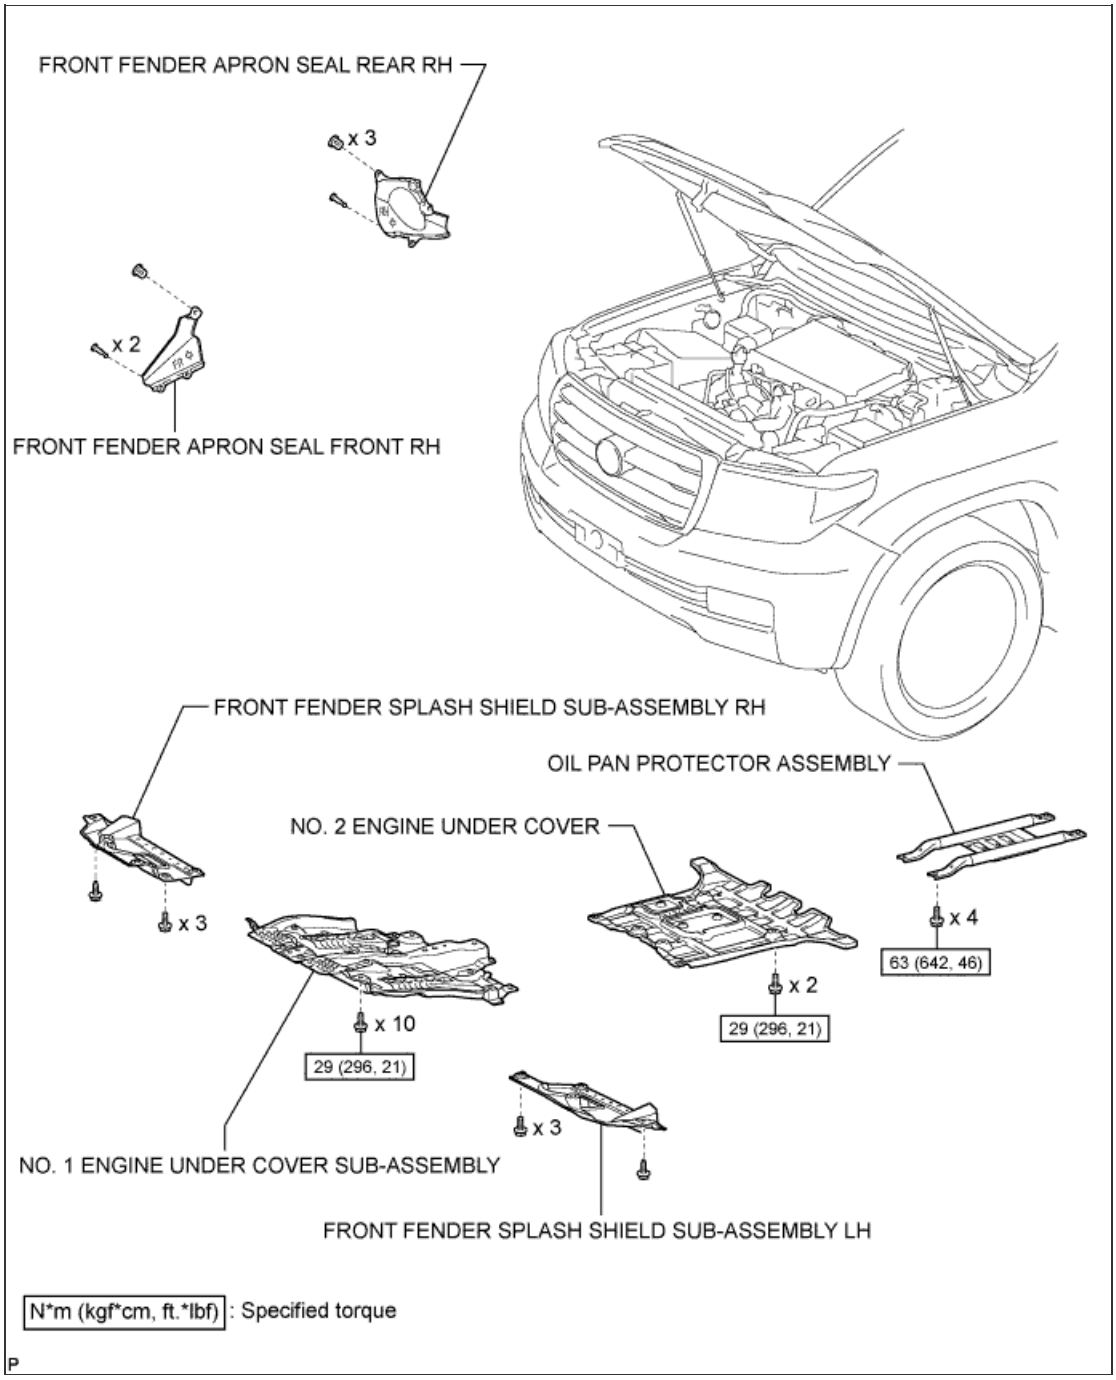
c. Using a bar, turn the crankshaft until the crankshaft pulley service hole is a little to the right of bottom dead center.



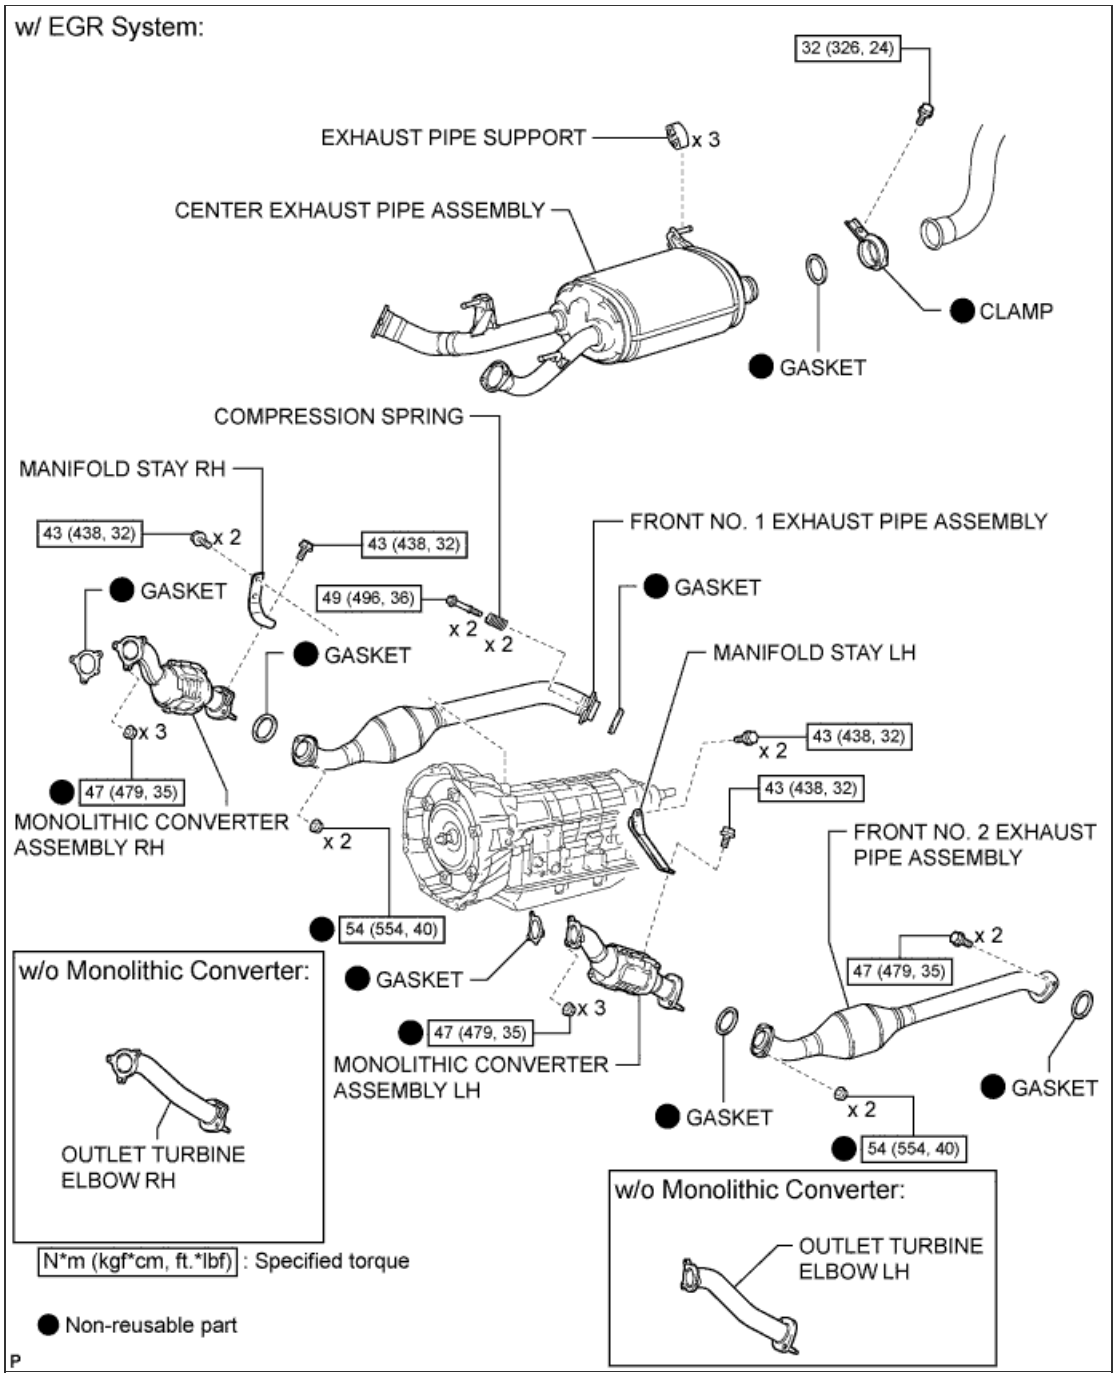
d. Install a 14 mm x 1.5 pitch service bolt with a length of 70 mm or more to the crankshaft pulley service hole, and hold the crankshaft using the timing chain cover protrusion.

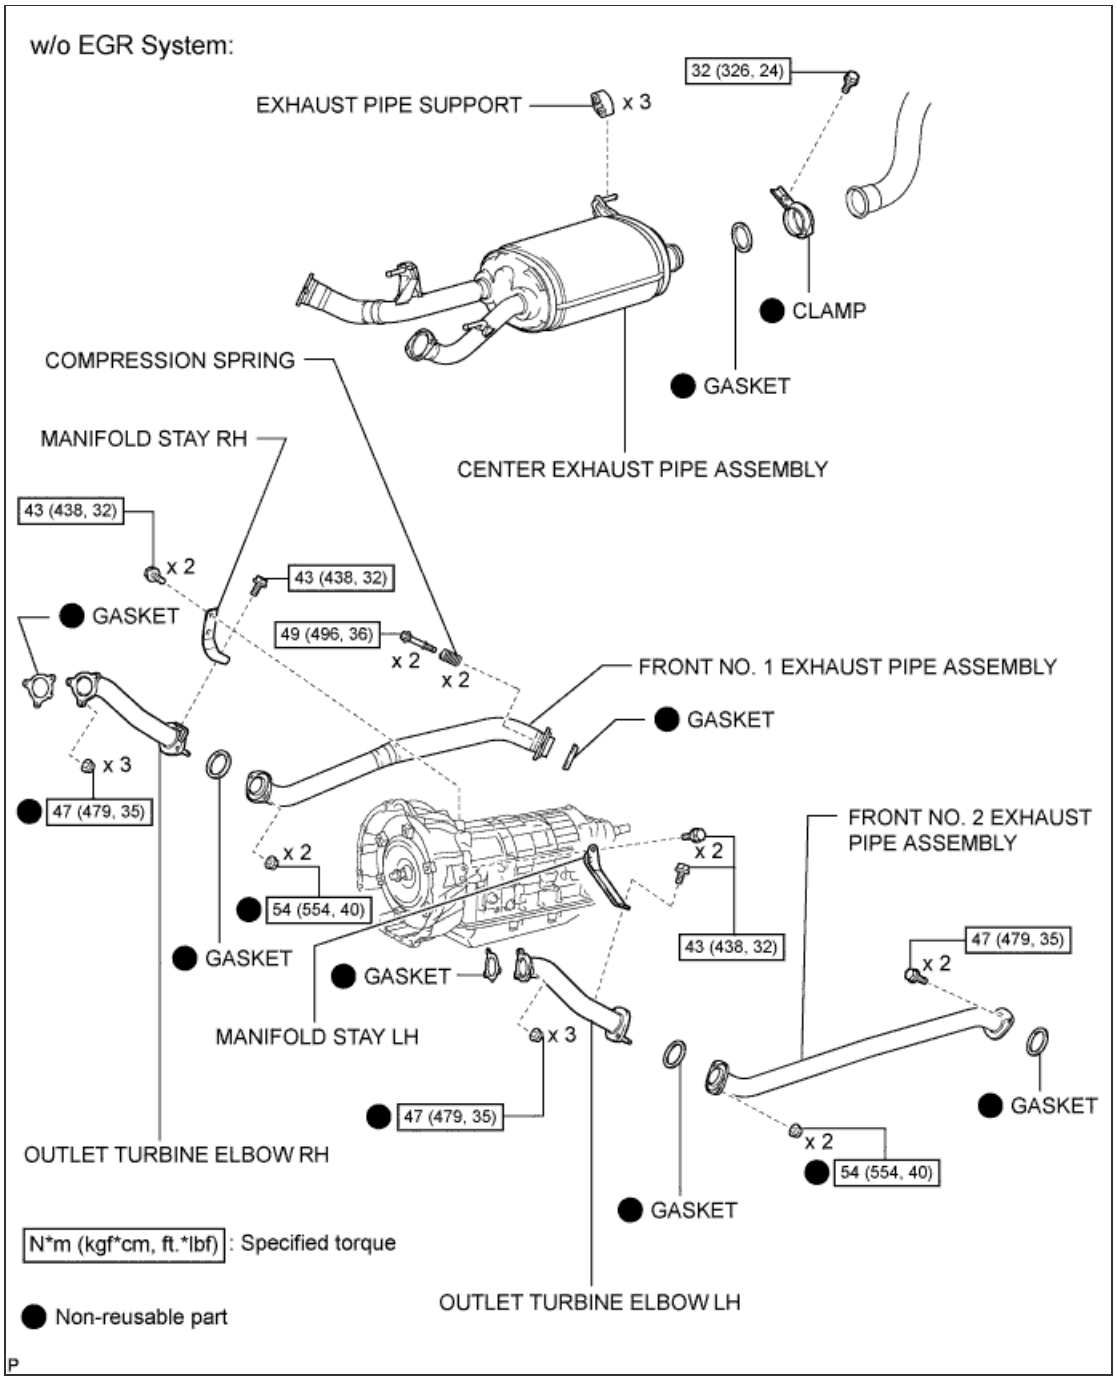
e. Uniformly tighten the 3 bolts in 2 passes in the order shown in the illustration.

Torque:
115 N*m{ 1168 kgf*cm , 84 ft.*lbf }

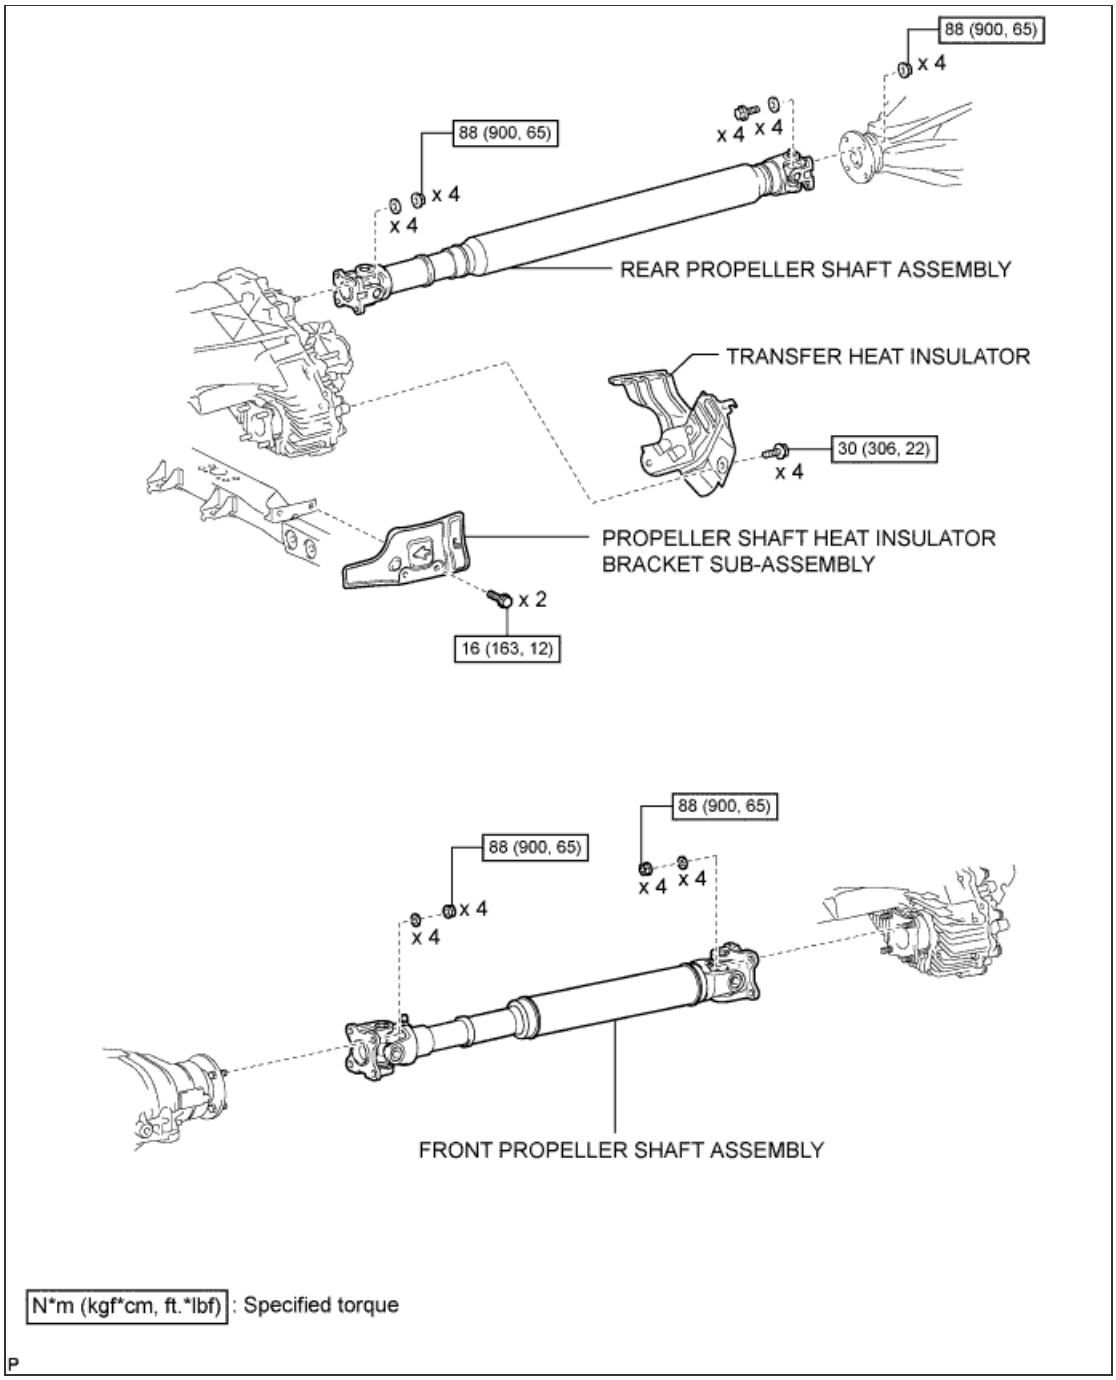


f. Remove the service bolt.





3. INSTALL RADIATOR ASSEMBLY



a. Install the radiator (Click here).

P

for Manual Transmission:

P

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

a. Disconnect the cable from the negative (-) main battery and sub-battery terminals.

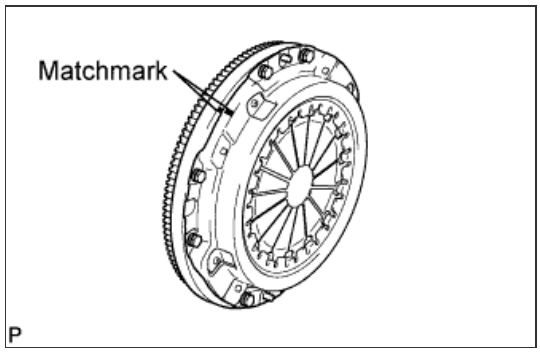
2. REMOVE AUTOMATIC TRANSMISSION ASSEMBLY

a. Remove the automatic transmission assembly (Click here).

3. REMOVE MANUAL TRANSMISSION UNIT ASSEMBLY

a. Remove the manual transmission unit assembly (Click here).

4. REMOVE CLUTCH COVER ASSEMBLY (for Manual Transmission)



a. Put matchmarks on the clutch cover and flywheel.

b. Loosen each set bolt one turn at a time until spring tension is released.

c. Remove the 8 set bolts, and pull off the clutch cover.

NOTICE:

Do not drop the clutch disc.

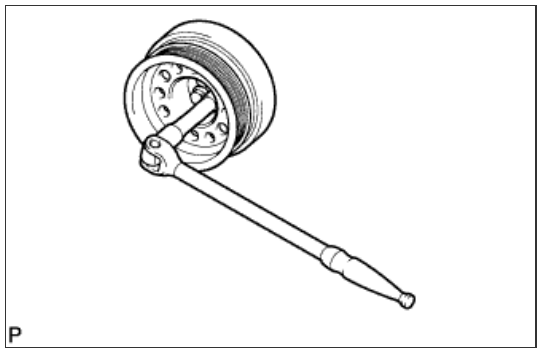
5. REMOVE CLUTCH DISC ASSEMBLY (for Manual Transmission)

NOTICE:

Keep the lining part of the clutch disc, pressure plate and surface of the flywheel away from oil and foreign matter.

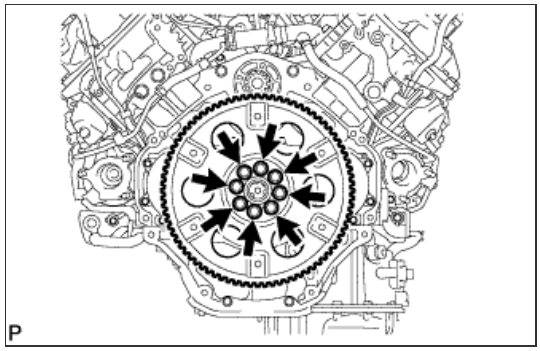
6. REMOVE DRIVE PLATE AND RING GEAR SUB-ASSEMBLY (for Automatic Transmission)

a. Using a wrench, hold the crankshaft.



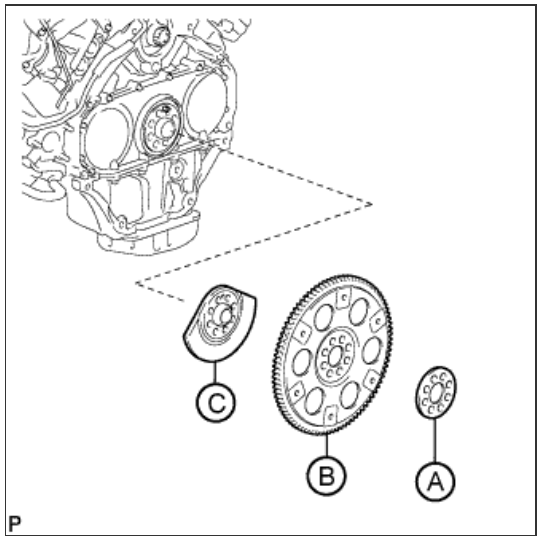
NOTICE:

Do not turn the crankshaft counterclockwise.



If it is turned counterclockwise, check that the crankshaft pulley set bolt is not loose. If loose, tighten the bolt (Click here).

Torque:



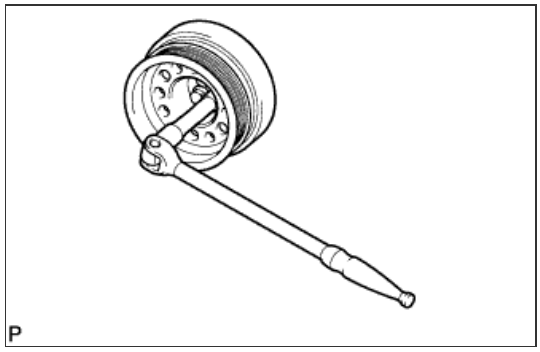
108 N*m{ 1101 kgf*cm , 80 ft.*lbf } or more

b. Remove the 8 bolts.

c. Remove the rear drive plate spacer labeled A, drive plate and ring gear labeled B and rear crankshaft balancer weight labeled C.

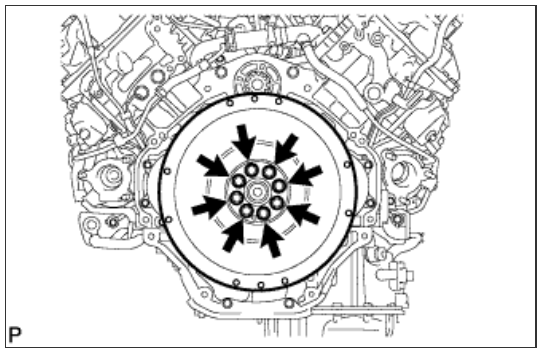
7. REMOVE FLYWHEEL SUB-ASSEMBLY (for Manual Transmission)

a. Using a wrench, hold the crankshaft.



NOTICE:

Do not turn the crankshaft counterclockwise.



If it is turned counterclockwise, check that the crankshaft pulley set bolt is not loose. If loose, tighten the bolt (Click here).

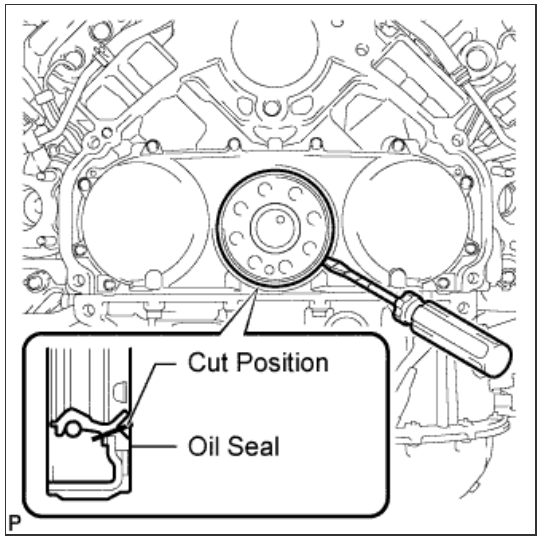
Torque:

108 N*m{ 1101 kgf*cm , 80 ft.*lbf } or more

b. Remove the 8 bolts and flywheel.

8. REMOVE REAR CRANKSHAFT OIL SEAL

a. Using a knife, cut off the lip of the oil seal.



b. Using a screwdriver, pry out the oil seal.

NOTICE:

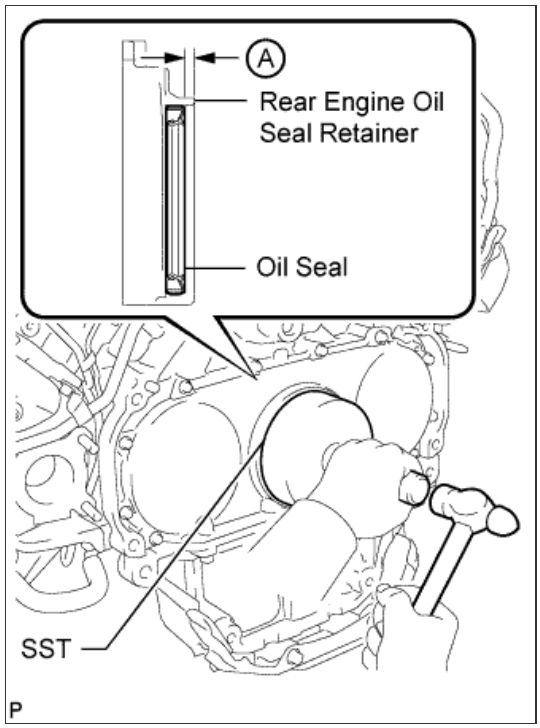
Be careful not to damage the crankshaft.

HINT:

Tape the screwdriver tip before use.

for Preparation Click here

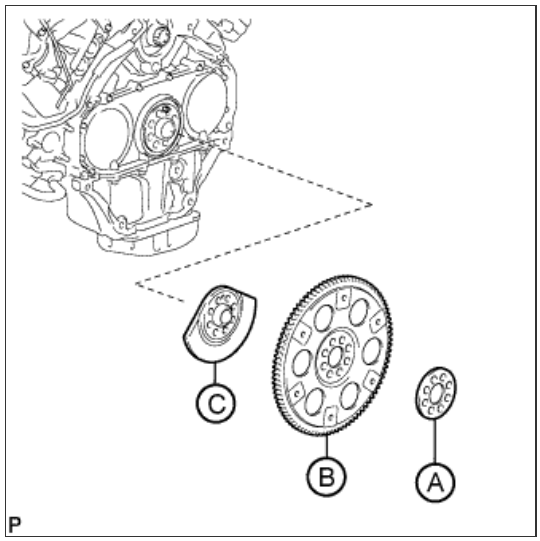
1. INSTALL REAR CRANKSHAFT OIL SEAL



a. Using SST and a hammer, tap in a new oil seal as shown in the illustration.

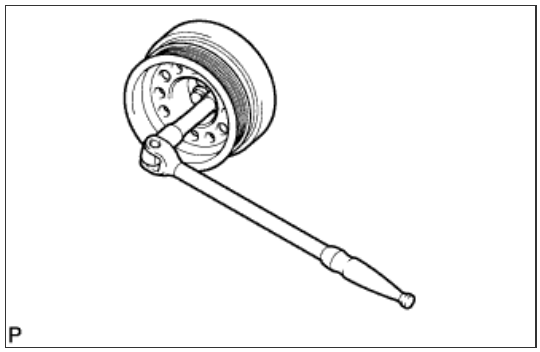
SST
09223-56010

Standard depth A:
2.7 to 3.7 mm (0.106 to 0.147 in.)



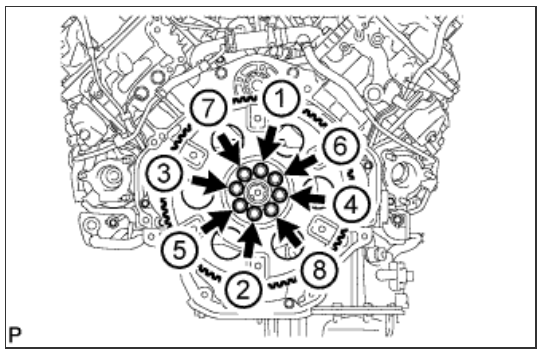
NOTICE:

- **Keep the lip free from foreign matter.**
- **Do not tap on the seal at an angle.**
- **Make sure that the lip of the oil seal is properly installed.**



2. INSTALL DRIVE PLATE AND RING GEAR SUB-ASSEMBLY (for Automatic Transmission)

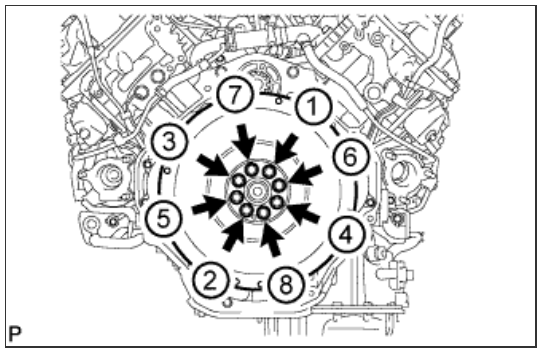
a. Install the rear crankshaft balancer weight labeled C, ring gear labeled B and rear drive plate spacer labeled A with 8 new bolts.



b. Using a wrench, hold the crankshaft.

c. Uniformly install and tighten the 8 bolts in the sequence shown in the illustration.

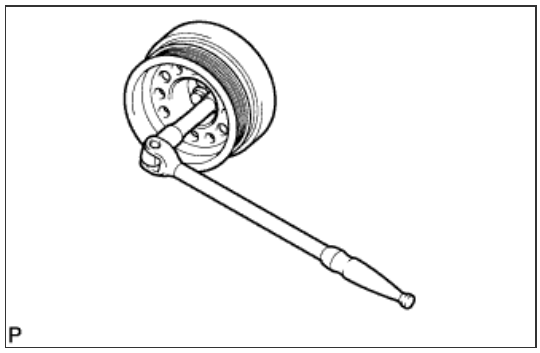
Torque:
182 N*m{ 1856 kgf*cm , 134 ft.*lbf }



3. INSTALL FLYWHEEL SUB-ASSEMBLY (for Manual Transmission)

a. Temporarily install the flywheel with 8 new bolts.

NOTICE:

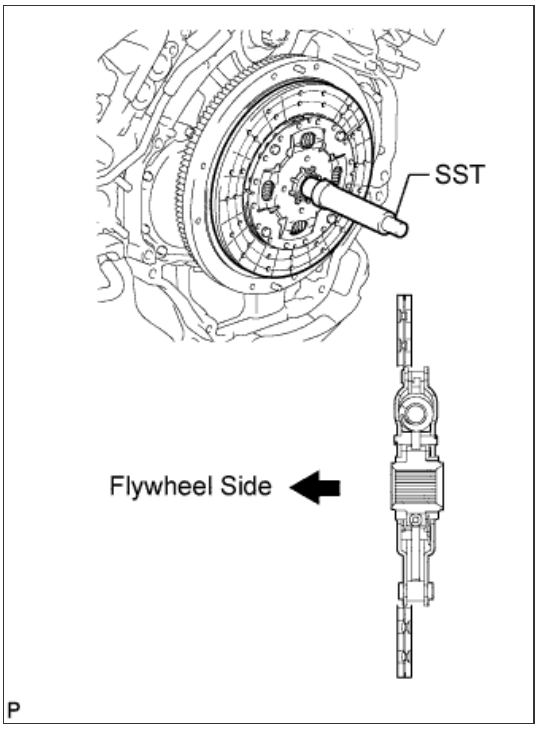


- **Align the crankshaft knock pin and flywheel knock pin hole.**
- **Do not strike or damage the flywheel installation bolts. Be sure to handle them carefully.**
- **Make sure there is no oil on the bolts.**

b. Using a wrench, hold the crankshaft.

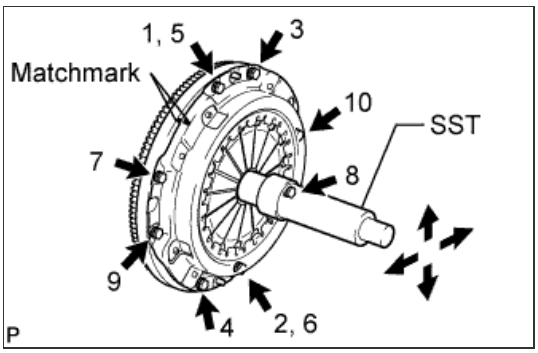
c. Uniformly install and tighten the 8 bolts in the sequence shown in the illustration.

Torque:
182 N*m{ 1856 kgf*cm , 134 ft.*lbf }



4. INSTALL CLUTCH DISC ASSEMBLY (for Manual Transmission)

a. Insert SST into the clutch disc, then insert the clutch disc into the flywheel.



SST
09301-00120

NOTICE:

Take care not to insert the clutch disc in the wrong direction.

5. INSTALL CLUTCH COVER ASSEMBLY (for Manual Transmission)

a. Align the matchmark on the clutch cover with the one on the flywheel.

b. In the order shown in the illustration, temporarily install the 8 bolts starting from the bolt located near the knock pin on the top.

c. Check that the disc is in the center by lightly moving SST up and down, and left and right.

SST
09301-00120

d. Evenly tighten the bolts by following the order shown in the illustration.

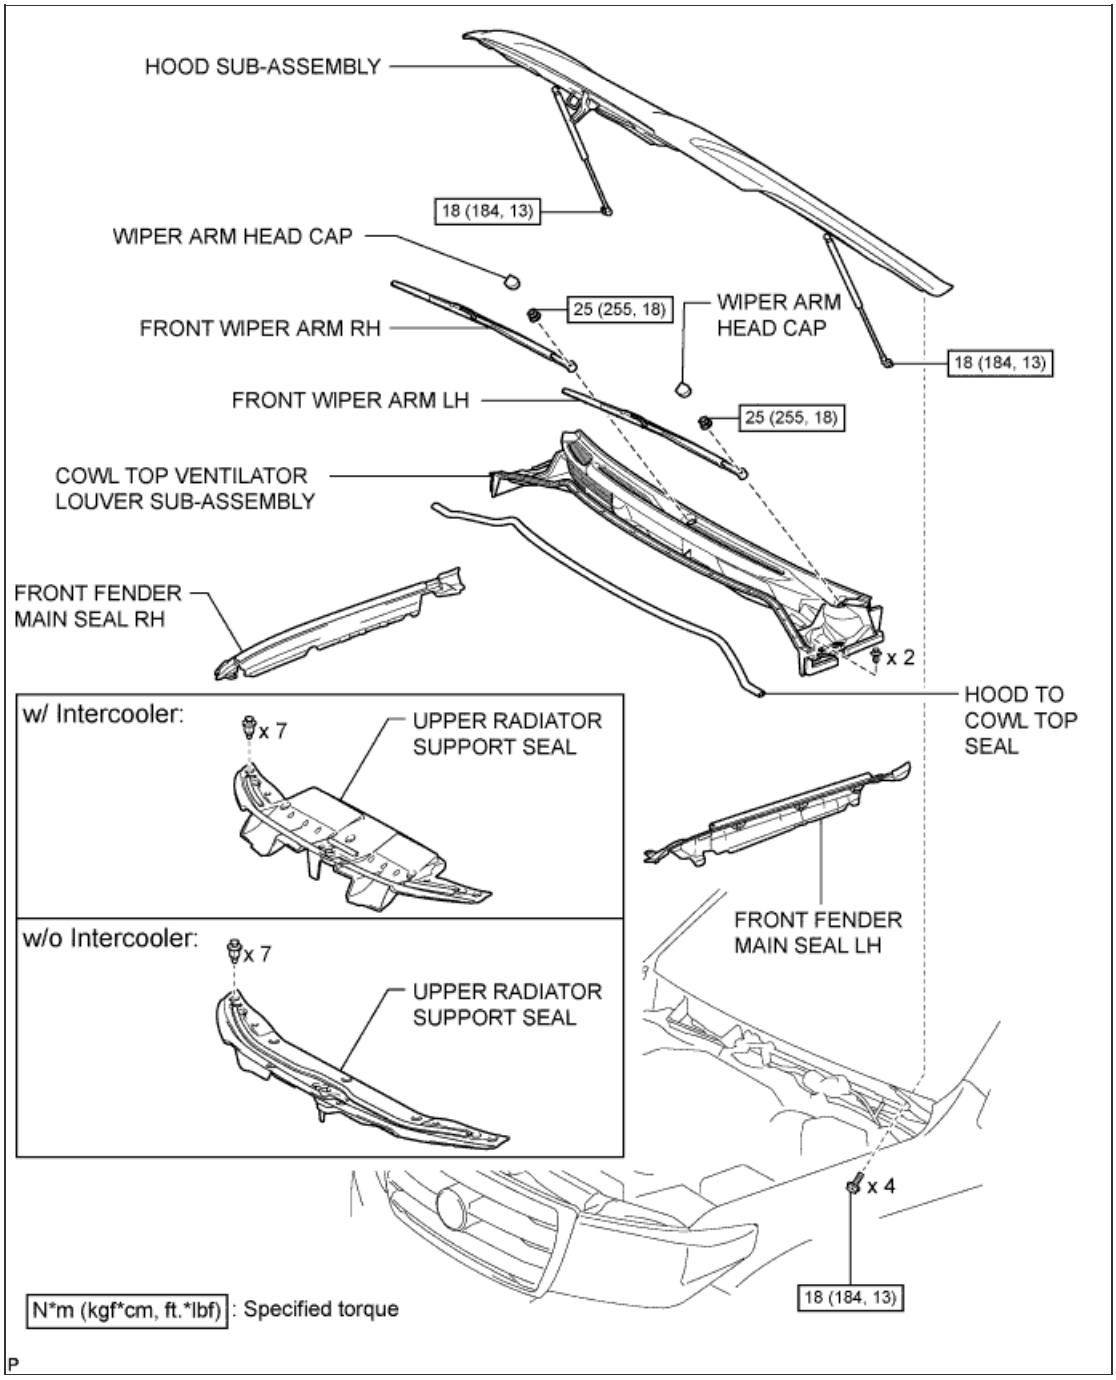
Torque:
39 N*m{ 400 kgf*cm , 29 ft.*lbf }

6. INSTALL AUTOMATIC TRANSMISSION ASSEMBLY

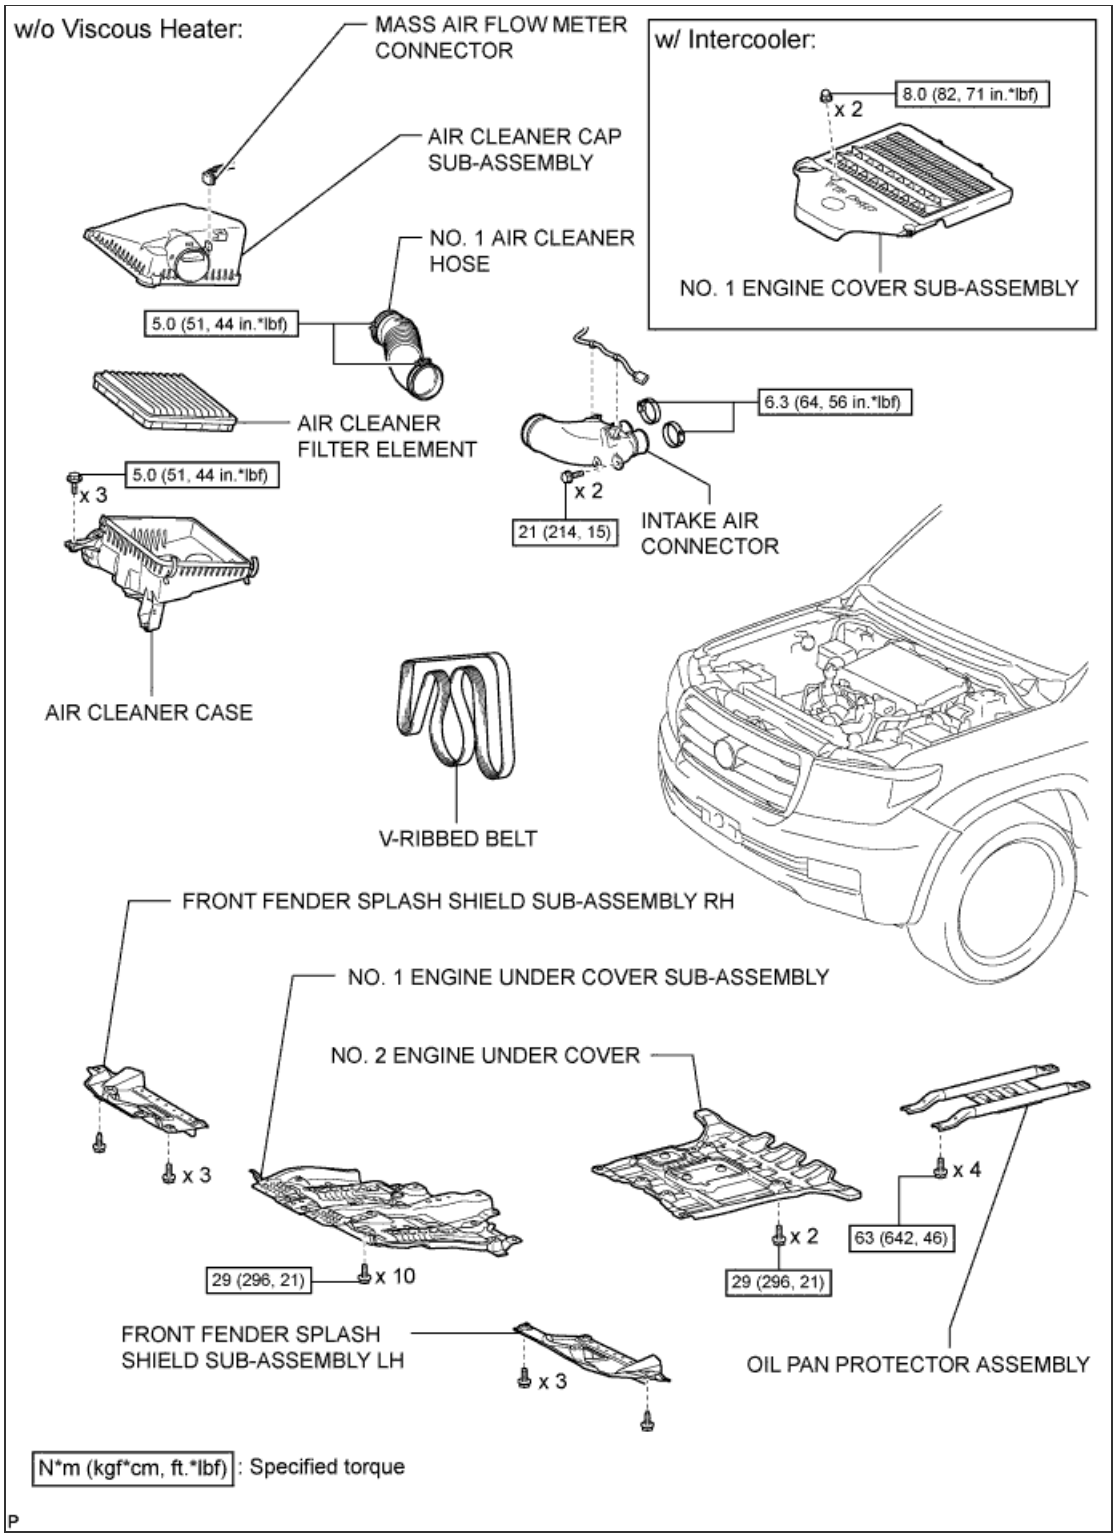
a. Install the automatic transmission assembly (Click here).

7. INSTALL MANUAL TRANSMISSION UNIT ASSEMBLY

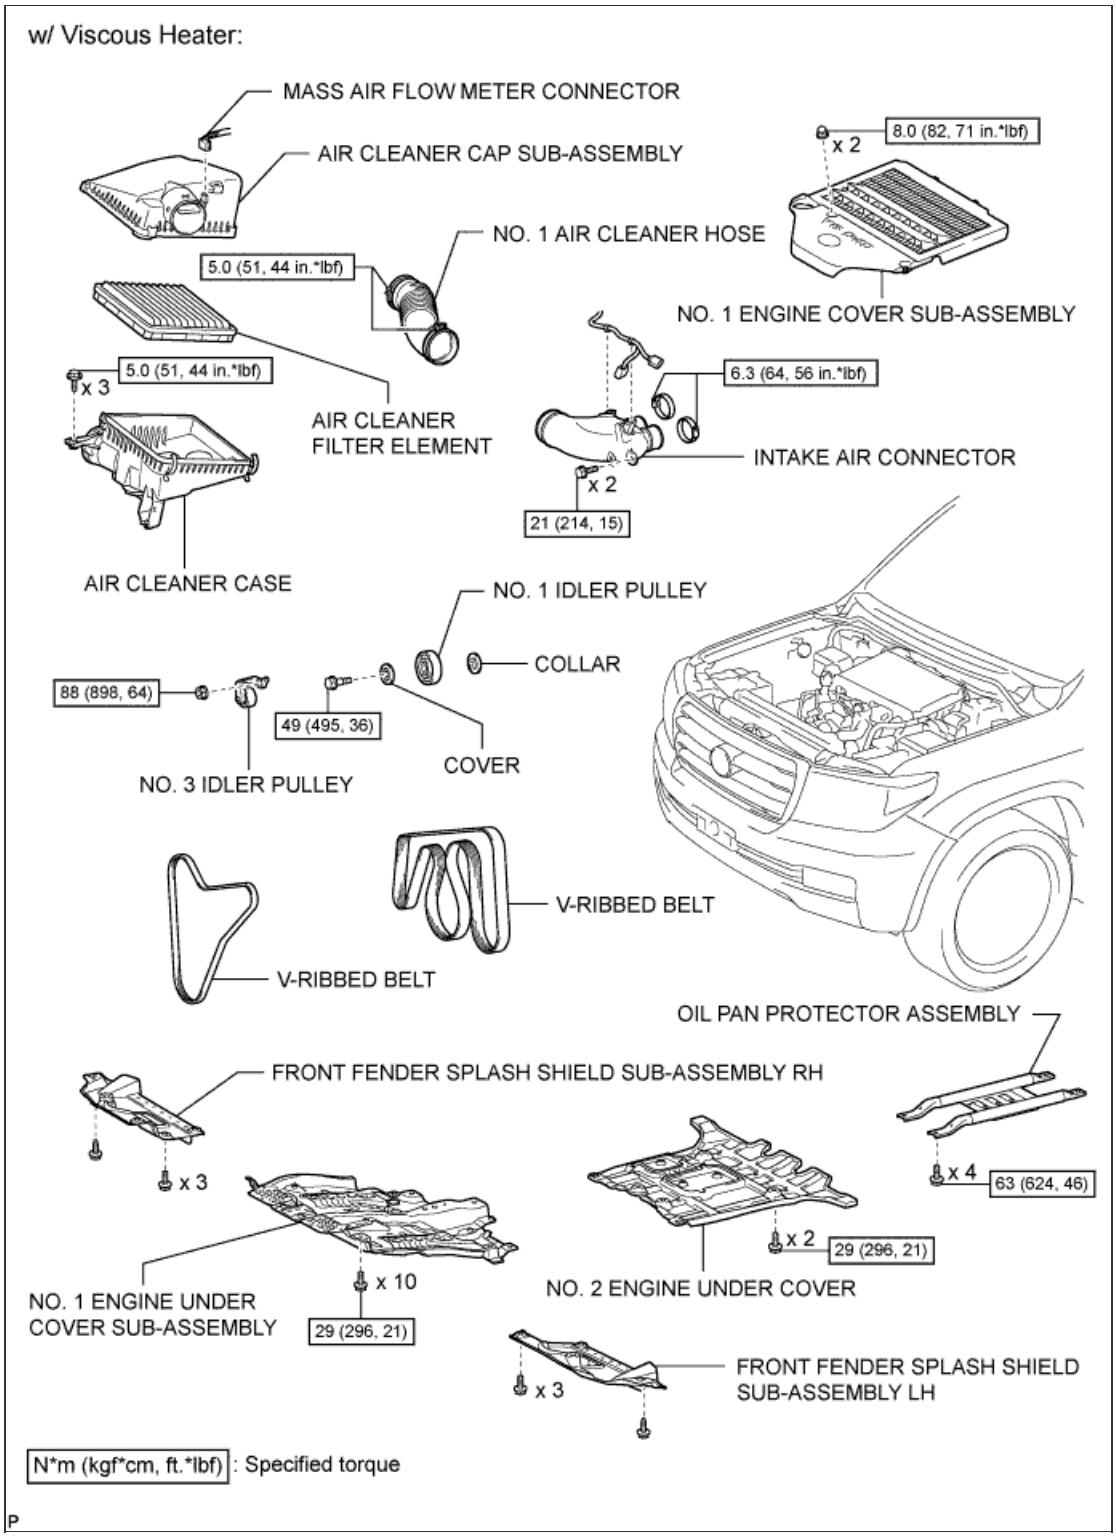
a. Install the manual transmission unit assembly (Click here).



8. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



NOTICE:



When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

a. Connect the cables to the negative (-) main battery and sub-battery terminals.

P

for Preparation Click here

1. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM

a. Start the engine.

b. Turn the A/C switch on.

c. Operate the cooler compressor while the engine speed is approximately 1000 rpm for 5 to 6 minutes to circulate the refrigerant and collect the compressor oil remaining in each component into the cooler compressor.

d. Stop the engine.

e. Recover the refrigerant from the A/C system using a refrigerant recovery unit.

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

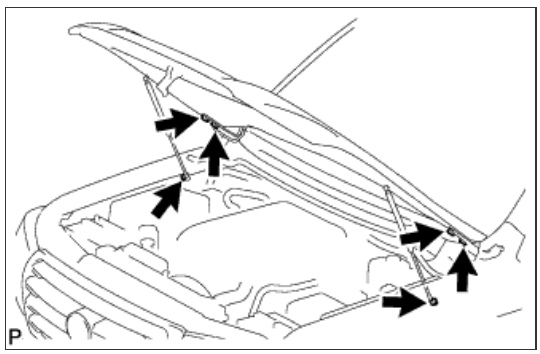
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

a. Disconnect the cables from the negative (-) main battery and sub-battery terminals.

3. REMOVE MAIN BATTERY

4. REMOVE SUB-BATTERY



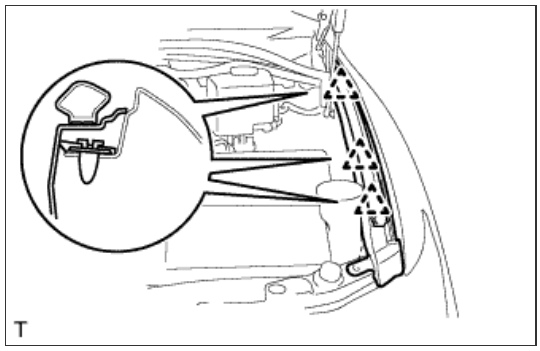
5. REMOVE FRONT WHEEL

6. REMOVE HOOD SUB-ASSEMBLY

a. Remove the 2 hood stay bolts. Then disconnect the 2 hood supports.

NOTICE:

- **Avoid touching the stroke portions of the rod as much as possible to prevent foreign matter from attaching to it. Be sure to hold the cylinders while servicing.**
- **Do not wear cotton gloves or other similar materials when handling the rod. Fibers may attach to the rod and result in gas leaks.**
- **Do not apply any load to the cylinders in the horizontal direction in order to prevent the rod from being deformed.**
- **Remove the hood support while supporting the hood by hand.**



b. Remove the 4 bolts and hood.

7. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 7 clips and upper radiator support seal.

8. REMOVE FRONT FENDER MAIN SEAL LH

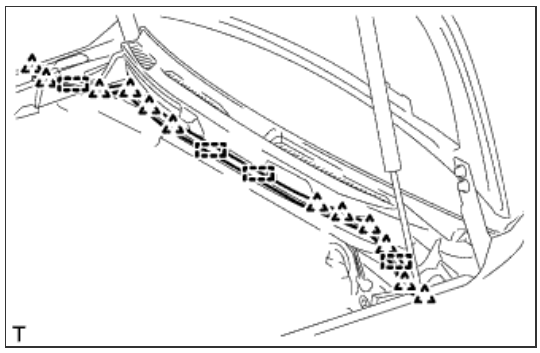
a. Using a clip remover, detach the 3 clips and remove the fender main seal.

9. REMOVE FRONT FENDER MAIN SEAL RH

HINT:

Use the same procedures described for the LH side.

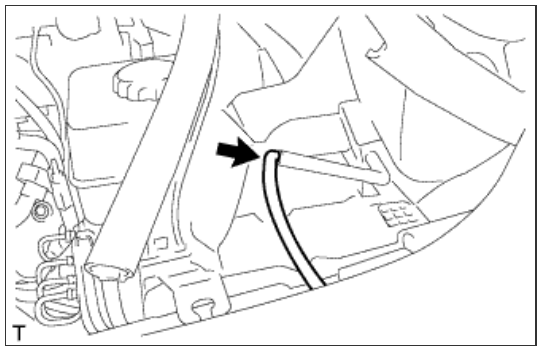
10. REMOVE FRONT WIPER ARM LH



a. Remove the nut, wiper arm and blade.

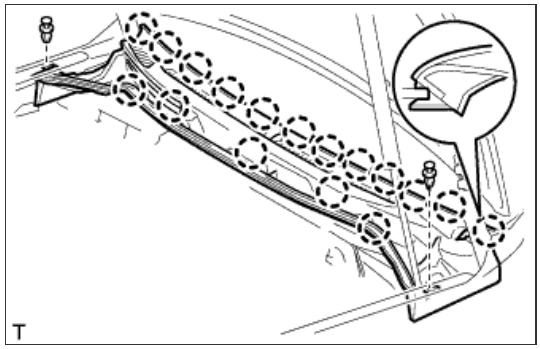
11. REMOVE FRONT WIPER ARM RH

a. Remove the nut, wiper arm and blade.



12. REMOVE HOOD TO COWL TOP SEAL

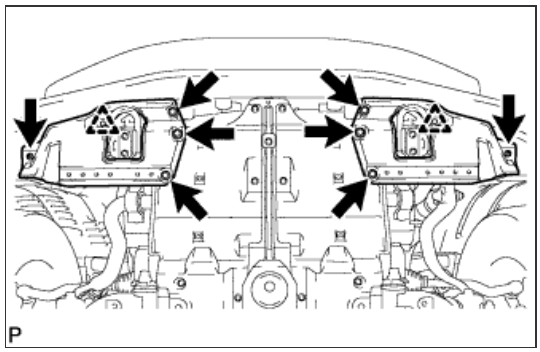
a. Using a clip remover, detach the 12 clips, 4 clamps and remove the hood to cowl top seal.



13. REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

a. Remove the washer hose.

b. Remove the 2 clips.

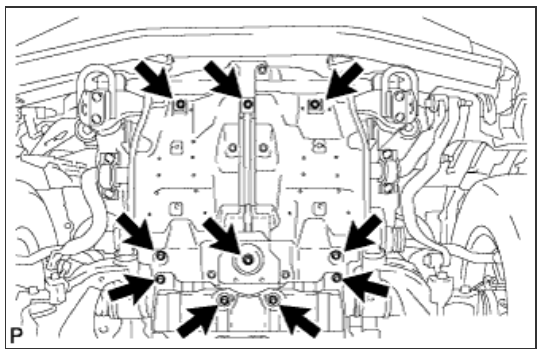


c. Detach the 17 claws and remove the cowl top ventilator louver sub-assembly.

14. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and screw.

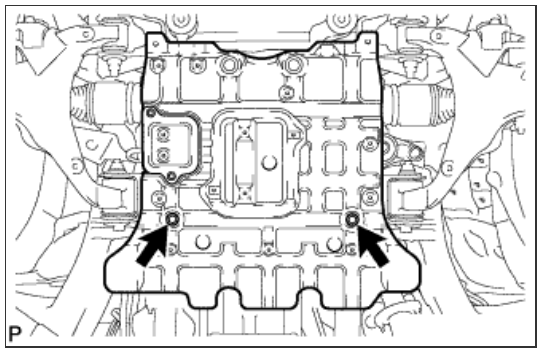
b. Loosen the clip and remove the splash shield.



15. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

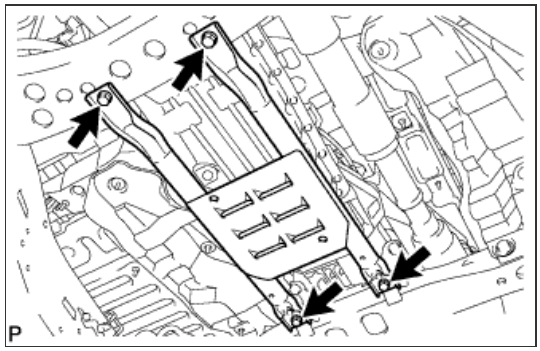
a. Remove the 3 bolts and screw.

b. Loosen the clip and remove the splash shield.



16. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and under cover.



17. REMOVE NO. 2 ENGINE UNDER COVER

a. Remove the 2 bolts and under cover.

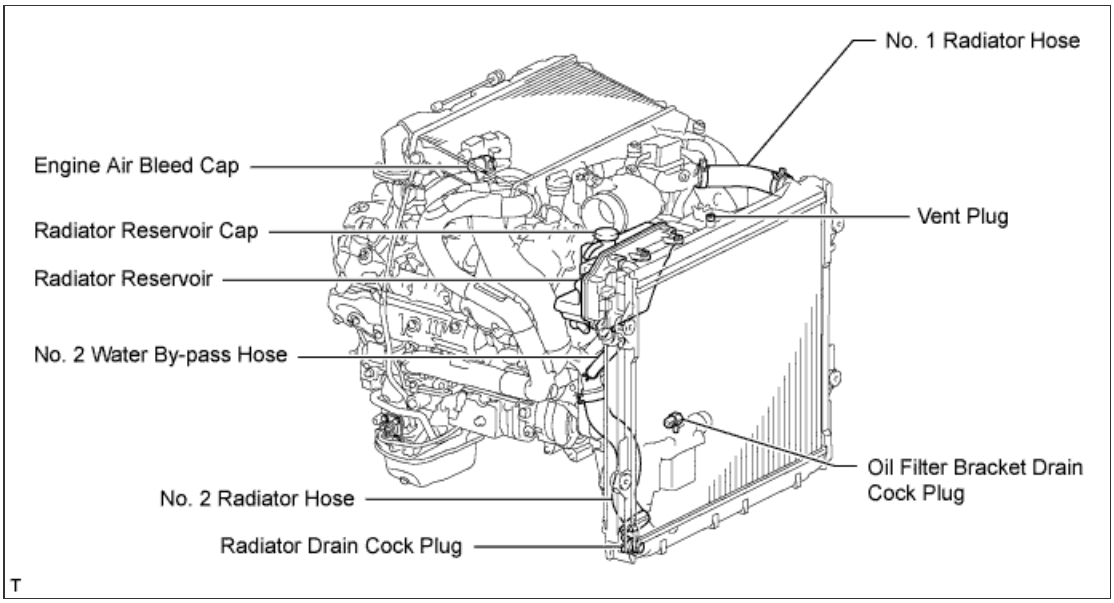
18. REMOVE OIL PAN PROTECTOR ASSEMBLY

a. Remove the 4 bolts and oil pan protector.

19. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator reservoir cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

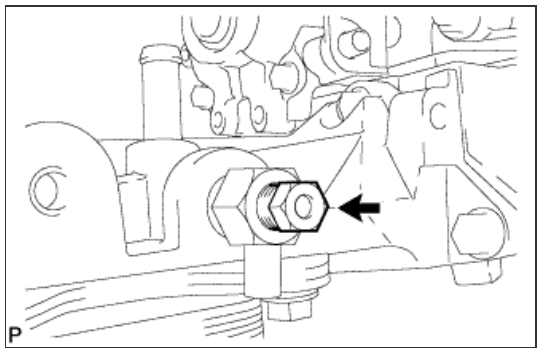


HINT:

Collect the coolant in a container and dispose of it according to the regulations in your area.

a. Loosen the radiator drain cock plug.

b. Remove the radiator reservoir cap to drain the coolant in the radiator.

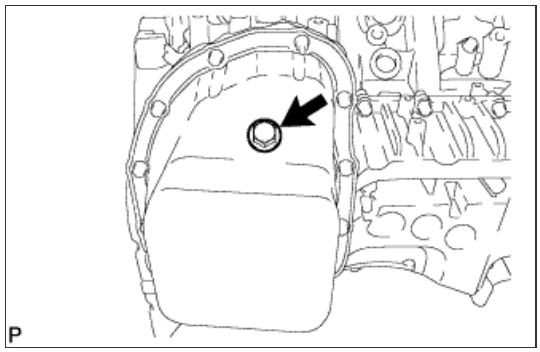


c. Loosen the oil filter bracket drain cock plug to drain the coolant in the engine.

d. Tighten the radiator drain cock plug by hand.

e. Tighten the oil filter bracket drain cock plug.

Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }

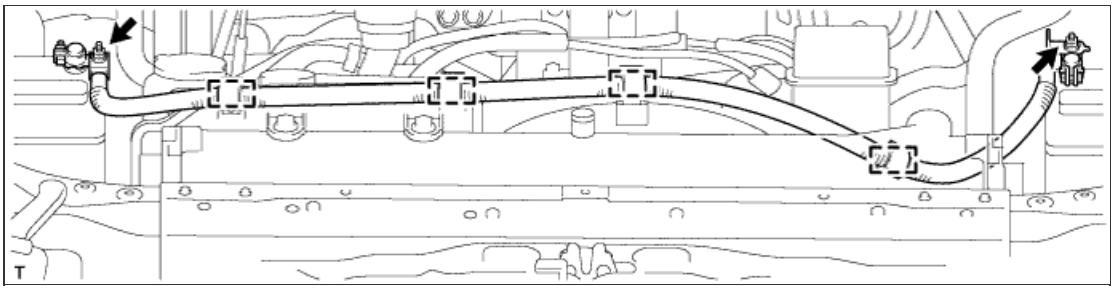


20. DRAIN ENGINE OIL

a. Remove the oil filler cap.

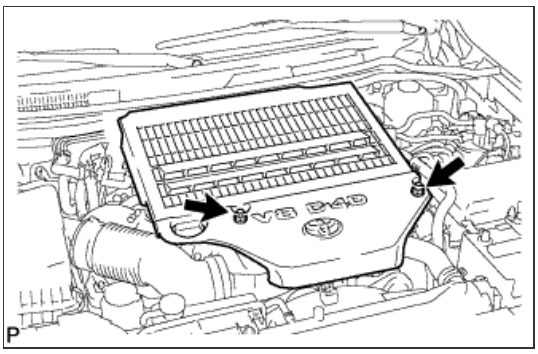
b. Remove the oil pan drain plug and gasket, and then drain the engine oil into a container.

c. Install a new gasket and the oil pan drain plug.



Torque:
38 N*m{ 387 kgf*cm , 28 ft.*lbf }

21. REMOVE NO. 3 ENGINE ROOM WIRE

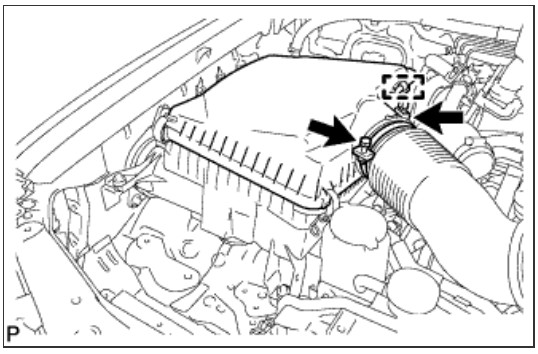


a. Disconnect the 4 wire harness clamps.

b. Remove the 2 nuts and No. 3 engine room wire.

22. REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY (w/ Intercooler)

a. Remove the 2 nuts and No. 1 engine cover.

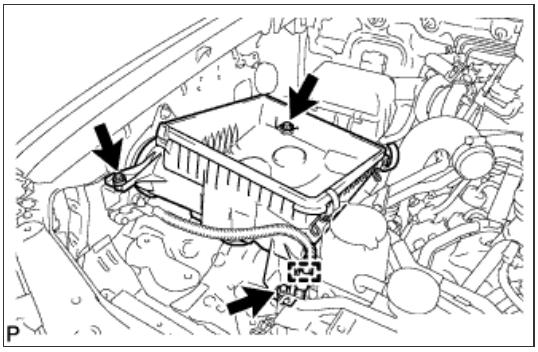


23. REMOVE AIR CLEANER CAP SUB-ASSEMBLY

a. Loosen the hose clamp.

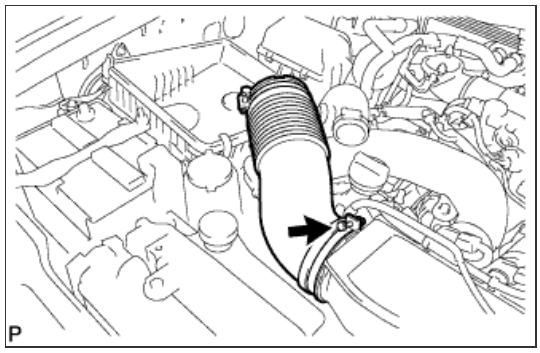
b. Disconnect the mass air flow meter connector and using a clip remover, detach the wire harness clamp from the air cleaner cap.

c. Detach the 4 clamps and remove the air cleaner cap.



24. REMOVE AIR CLEANER FILTER ELEMENT

25. REMOVE AIR CLEANER CASE



a. Using a clip remover, detach the wire harness clamp.

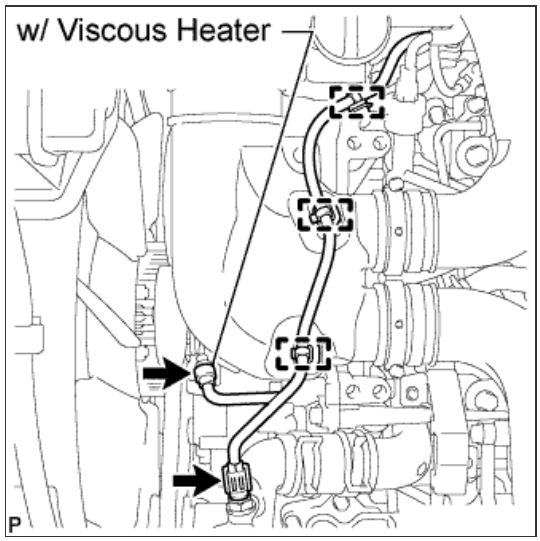
b. Remove the 3 bolts and air cleaner case.

26. REMOVE NO. 1 AIR CLEANER HOSE

a. Loosen the hose clamp and remove the No. 1 air cleaner hose.

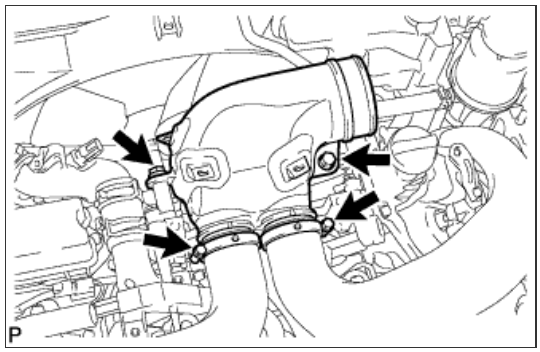
27. REMOVE INTAKE AIR CONNECTOR

a. w/o Viscous Heater:



i. Disconnect the connector from the water temperature sensor.

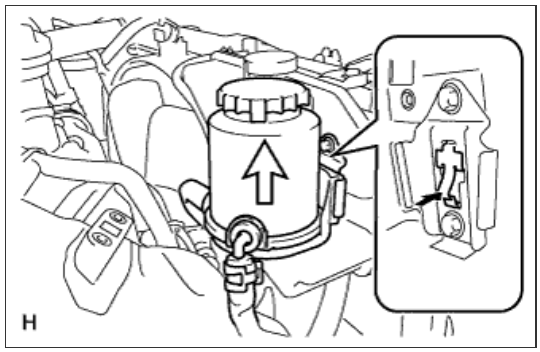
ii. Using a clip remover, detach the 3 wire harness clamps.



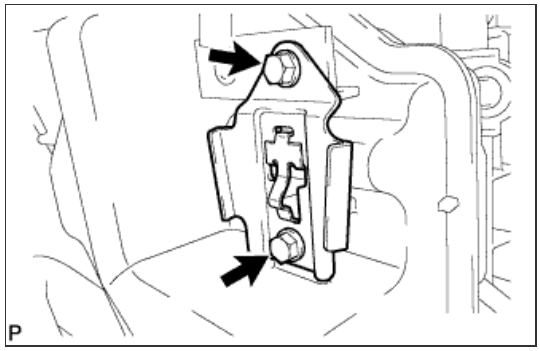
b. w/ Viscous Heater:

i. Disconnect the 2 connectors from the viscous with magnet clutch heater and water temperature sensor.

ii. Using a clip remover, detach the 3 wire harness clamps.



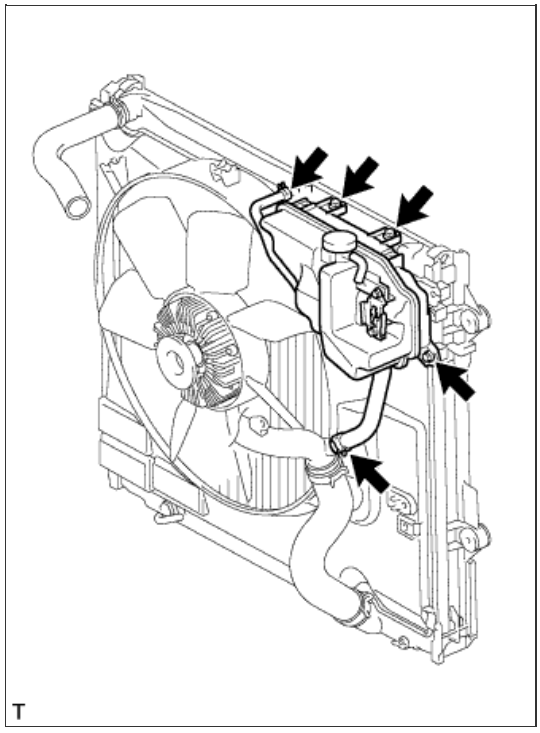
c. Loosen the 2 hose clamps and remove the 2 bolts and intake air connector.



28. REMOVE VANE PUMP OIL RESERVOIR ASSEMBLY

a. Insert a screwdriver between the reservoir and oil reservoir bracket, push the claw, and then disconnect the reservoir by pulling it upwards.

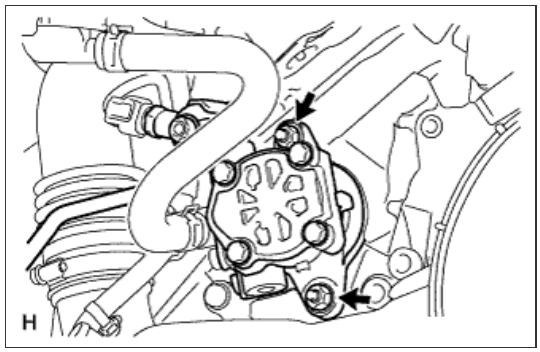
29. REMOVE NO. 1 OIL RESERVOIR BRACKET



a. Remove the 2 bolts and bracket.

30. REMOVE RADIATOR RESERVOIR ASSEMBLY

a. Disconnect the 2 hoses.

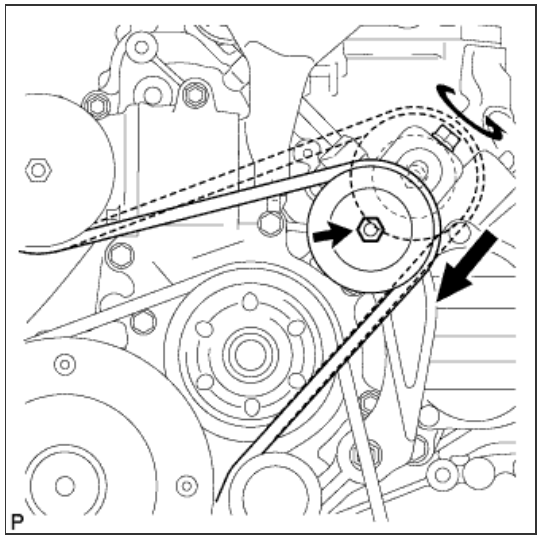


b. Remove the 3 bolts and radiator reservoir.

31. REMOVE VANE PUMP ASSEMBLY

a. Remove the 2 nuts and vane pump.

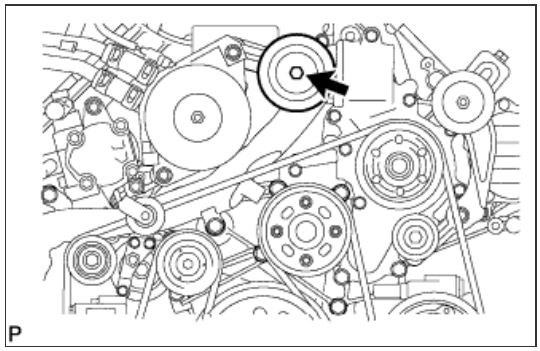
b. Remove the O-ring from the vane pump.



32. DISCONNECT NO. 1 RADIATOR HOSE

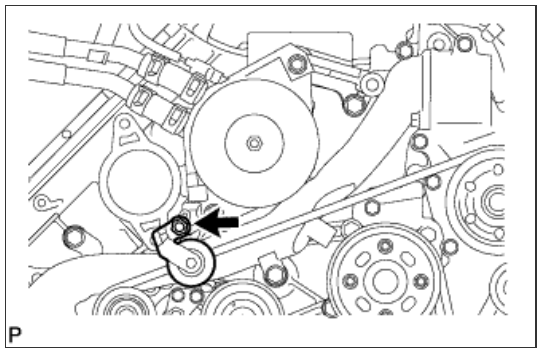
33. DISCONNECT NO. 2 RADIATOR HOSE

34. REMOVE V-RIBBED BELT (w/ Viscous Heater)



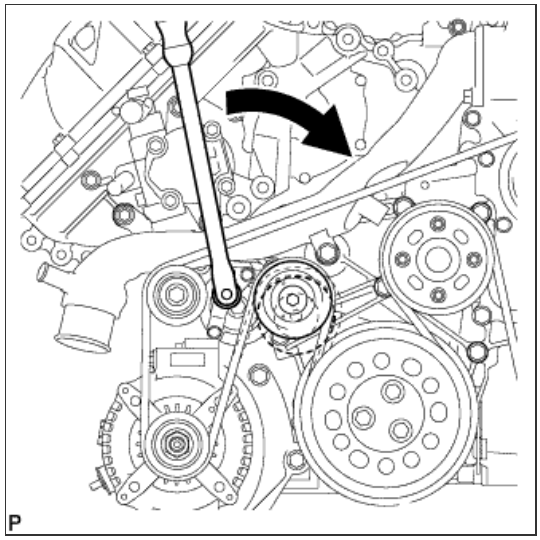
a. Loosen the lock nut and turn the bolt counterclockwise.

b. Remove the V-ribbed belt.



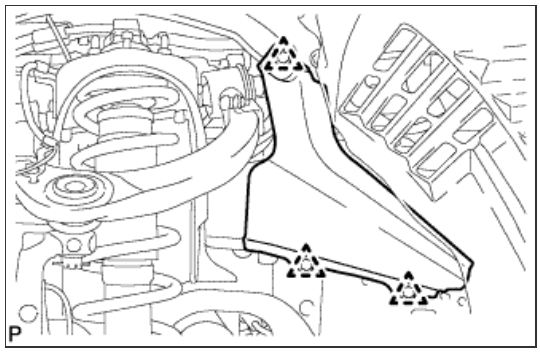
35. REMOVE NO. 1 IDLER PULLEY (w/ Viscous Heater)

a. Remove the bolt, cover, No. 1 idler pulley and collar.



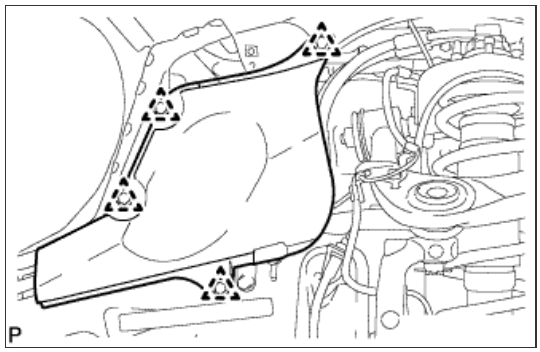
36. REMOVE NO. 3 IDLER PULLEY (w/ Viscous Heater)

a. Remove the nut and No. 3 idler pulley.



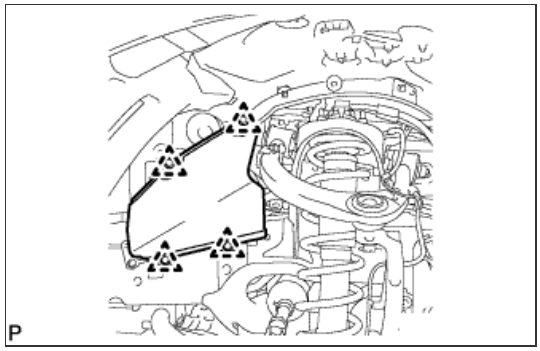
37. REMOVE V-RIBBED BELT

a. Using a wrench to the V-ribbed belt tensioner bracket, turn the wrench clockwise and remove the V-ribbed belt.



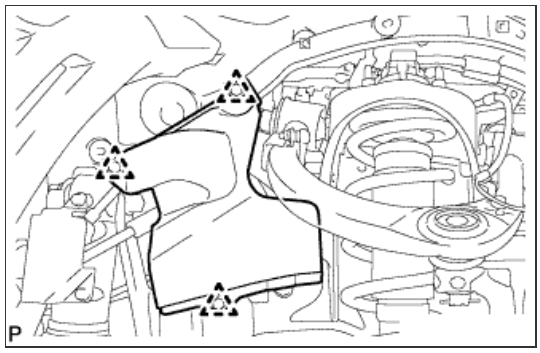
38. REMOVE FRONT FENDER APRON SEAL FRONT RH

a. Remove the 3 clips and front fender apron seal front RH.



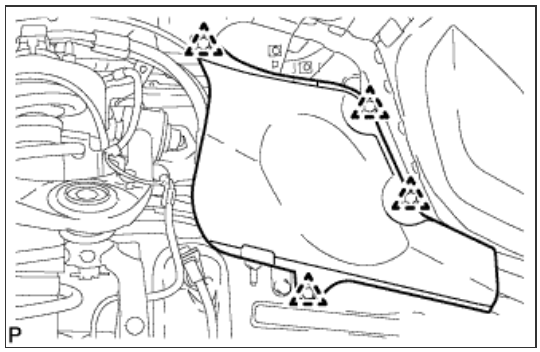
39. REMOVE FRONT FENDER APRON SEAL REAR RH

a. Remove the 4 clips and front fender apron seal rear RH.

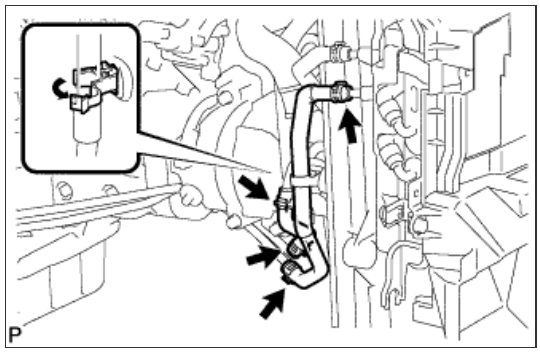


40. REMOVE FRONT FENDER APRON SEAL FRONT LH

a. w/o KDSS:
Remove the 4 clips and front fender apron seal front LH.

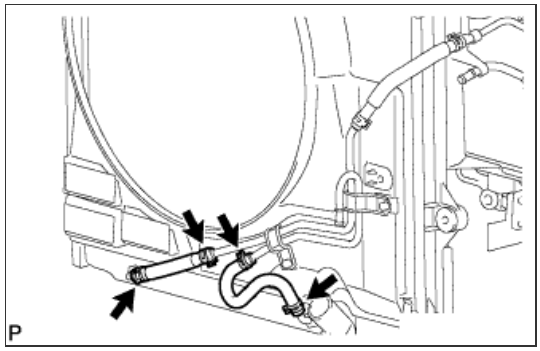


b. w/ KDSS:
Remove the 3 clips and front fender apron seal front LH.

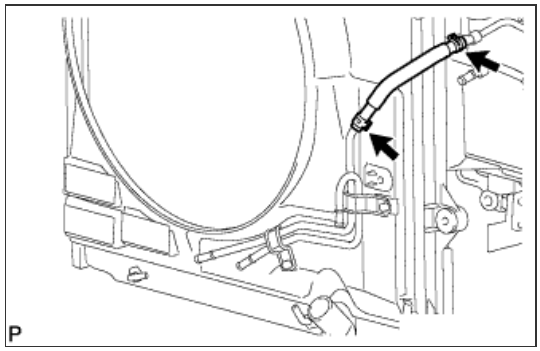


41. REMOVE FRONT FENDER APRON SEAL REAR LH

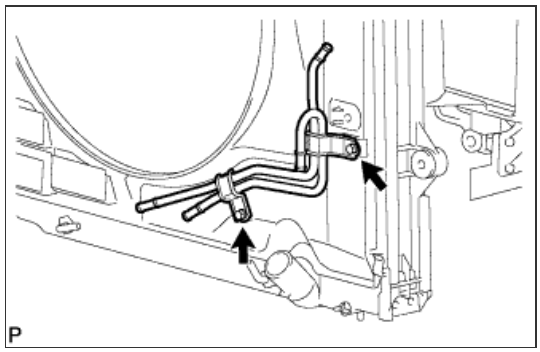
a. Remove the 4 clips and front fender apron seal rear LH.



42. REMOVE OIL COOLER TUBE (for Automatic Transmission)

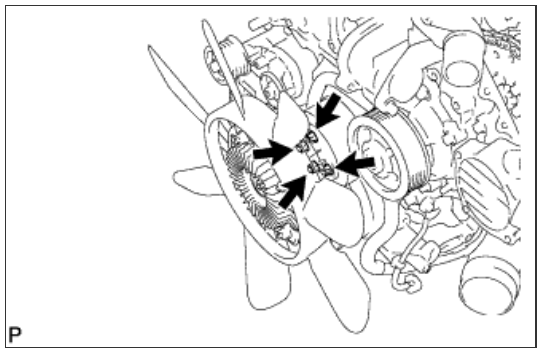


a. Disconnect the inlet and outlet No. 1 oil cooler hose.

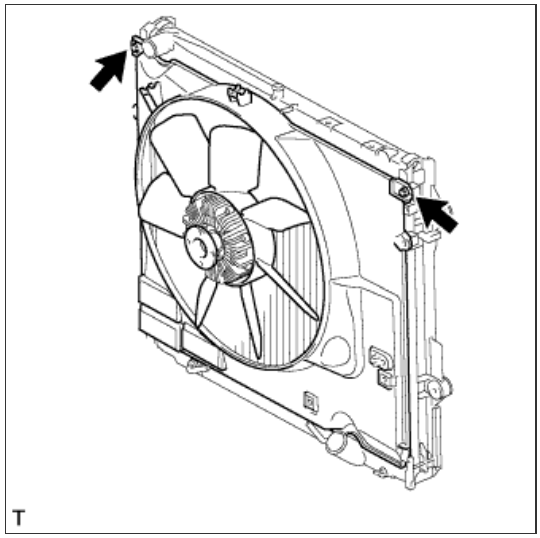


b. Disconnect the inlet No. 2 and No. 3 oil cooler hoses.

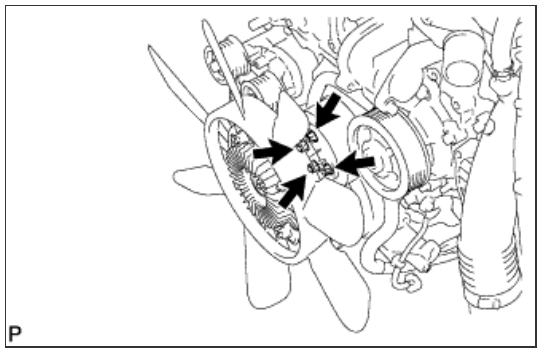
c. Disconnect the inlet No. 4 oil cooler hose.



d. Remove the 2 bolts and transmission oil cooler tube.



43. REMOVE FAN SHROUD WITH FAN

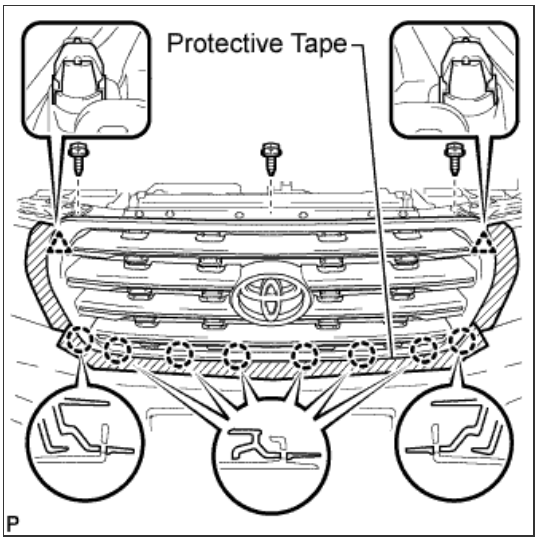


a. Loosen the 4 nuts holding the fluid coupling fan.

b. Remove the 2 bolts holding the fan shroud.

c. Remove the 4 nuts of the fluid coupling fan, and then remove the shroud together with the fluid coupling fan.

44. REMOVE FAN PULLEY



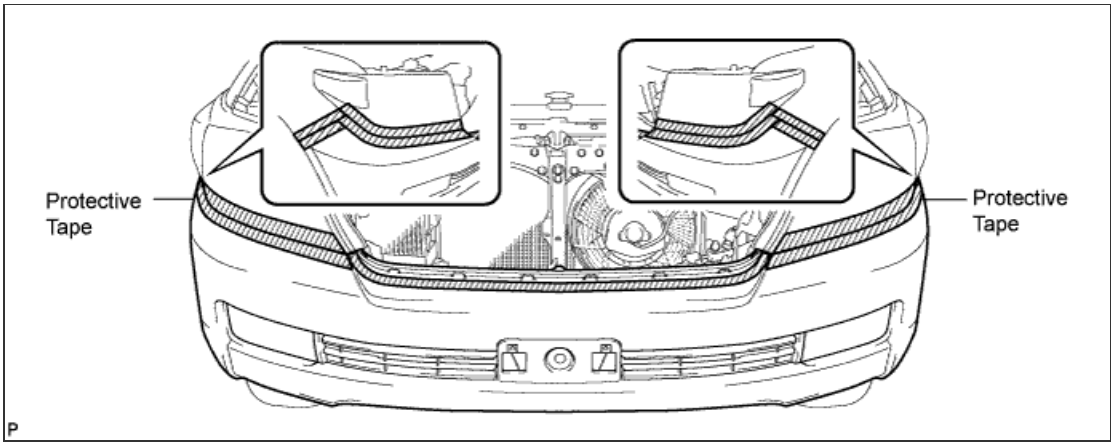
45. REMOVE FRONT BUMPER WINCH COVER (w/ Winch)

46. REMOVE RADIATOR GRILLE

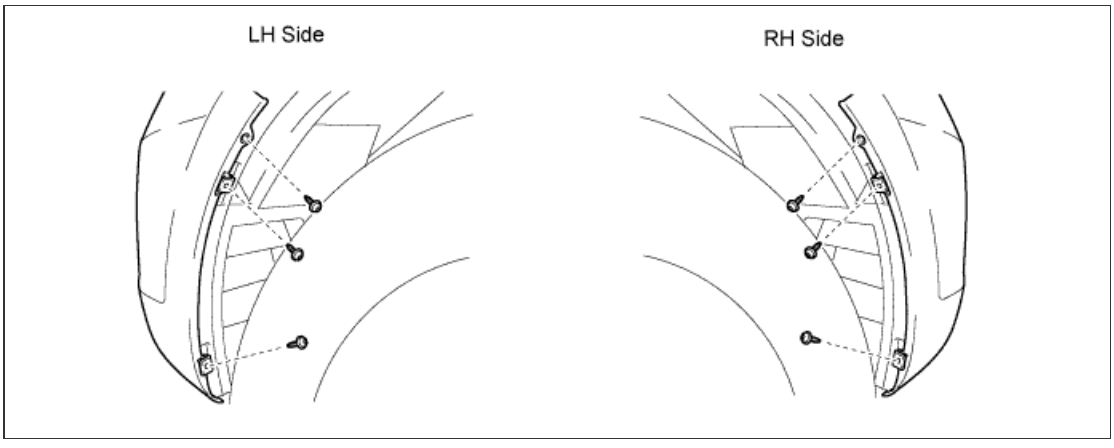
a. Put protective tape around the radiator grille.

b. Remove the 3 screws.

c. Detach the 2 clips and 8 claws, and remove the radiator grille.



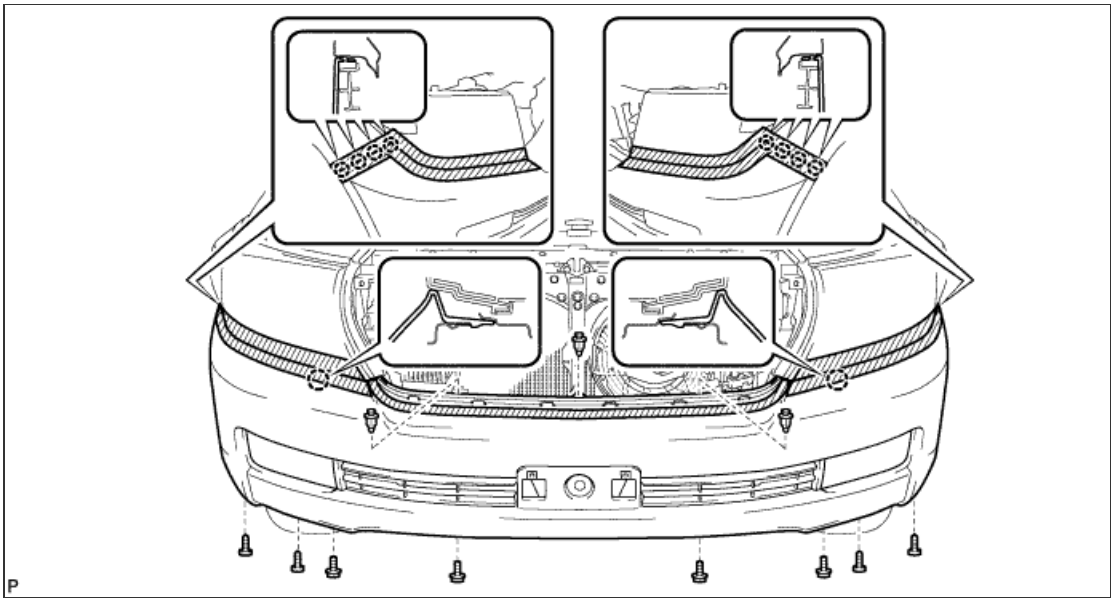
47. REMOVE FRONT BUMPER COVER



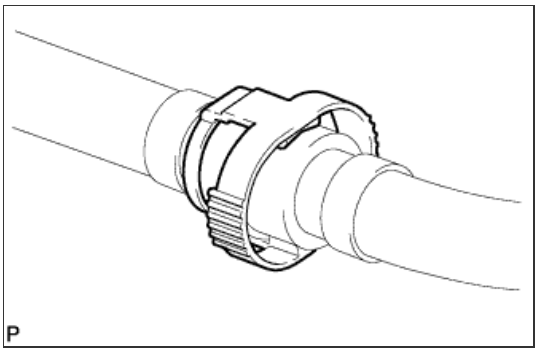
HINT:

For the front bumper cover with garnish, use the procedures described below.

a. Put protective tape around the bumper cover.



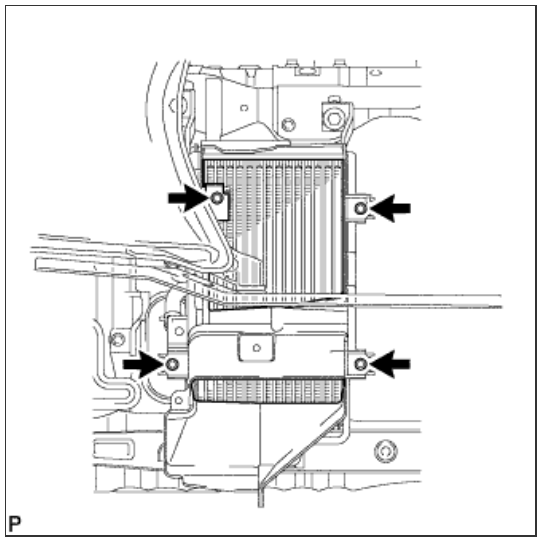
b. Using a T30 "TORX" socket, remove the 6 screws.



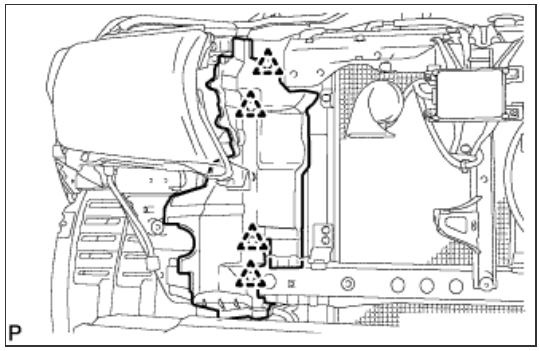
c. Remove the 3 clips, 4 screws and 4 bolts.

d. w/o TOYOTA Parking Assist-sensor System, w/o Fog Light:
Detach the 10 claws and remove the bumper cover.

e. w/ TOYOTA Parking Assist-sensor System or w/ Fog Light:
Detach the 10 claws, disconnect the No. 4 engine room wire connector and remove the bumper cover.

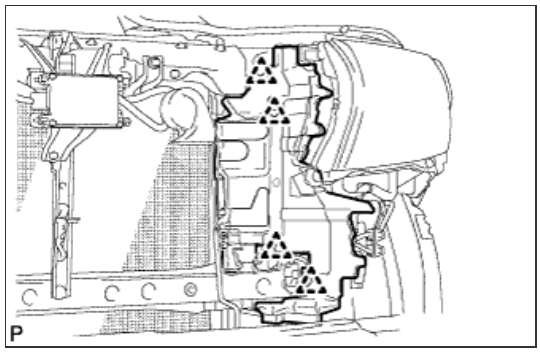


f. w/ Headlight Cleaner System:
Disconnect the headlight cleaner hose and remove the bumper cover.



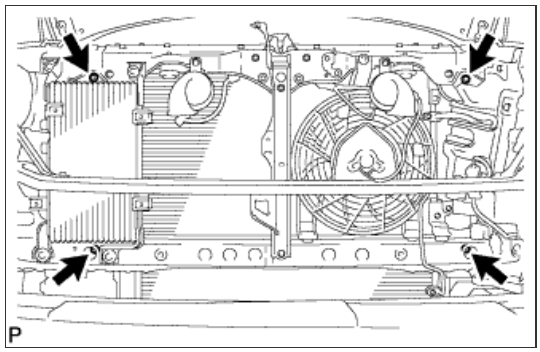
48. REMOVE TRANSMISSION OIL COOLER AIR DUCT (for Automatic Transmission)

a. Remove the 4 bolts and oil cooler air duct.



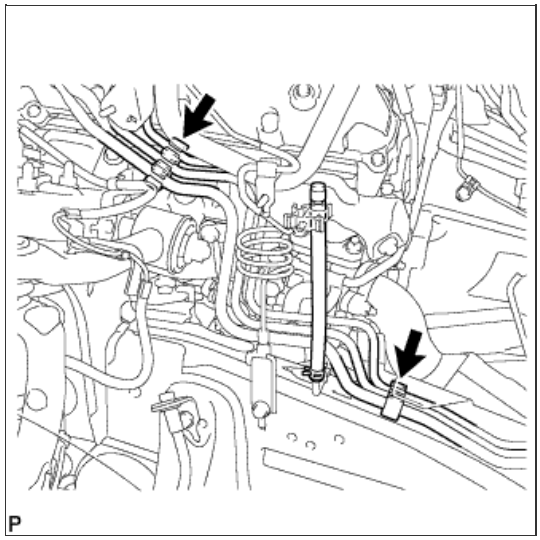
49. DISCONNECT RADIATOR SIDE DEFLECTOR RH (for Manual Transmission)

a. Using a clip remover, remove the 4 clips, and remove the side deflector.



50. DISCONNECT RADIATOR SIDE DEFLECTOR LH

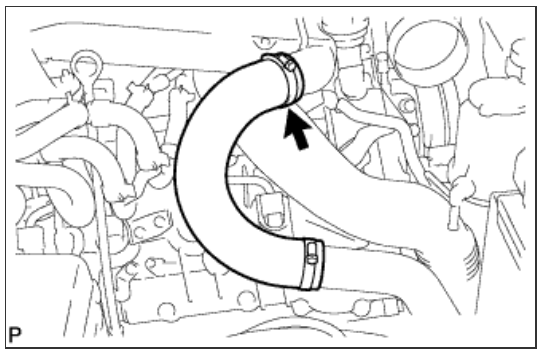
a. Using a clip remover, remove the 4 clips, and remove the side deflector.



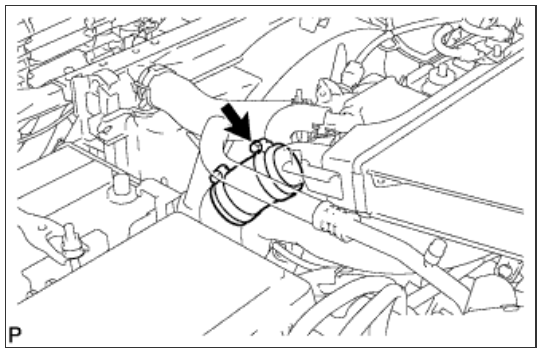
51. REMOVE RADIATOR ASSEMBLY

a. Remove the 4 bolts and radiator.

52. DISCONNECT FRONT DIFFERENTIAL BREATHER TUBE

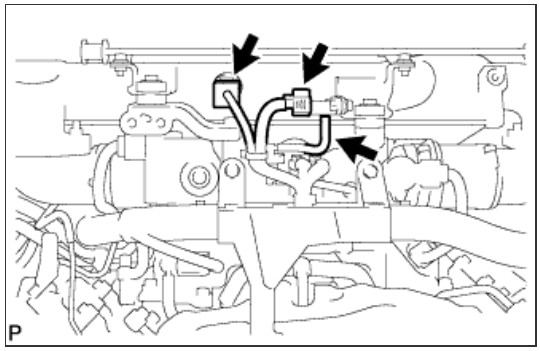


53. DISCONNECT FUEL TUBE



a. Disconnect the 3 fuel tubes from the No. 1 and No. 3 fuel tube clamps.

54. REMOVE INTERCOOLER ASSEMBLY (w/ Intercooler)

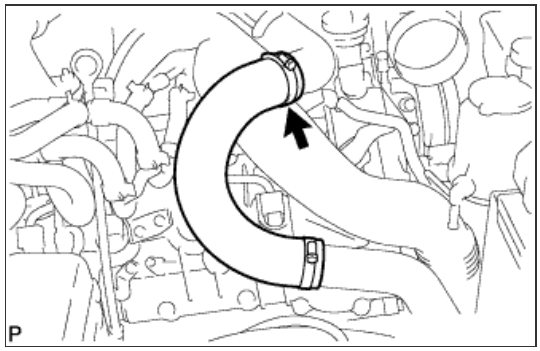


a. Loosen the No. 1 air hose clamp.

b. Loosen the No. 2 air hose clamp.

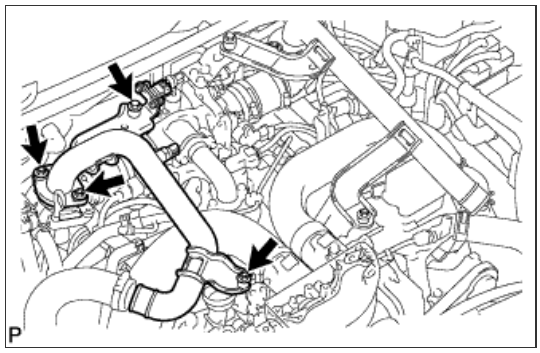
c. Disconnect the turbo pressure sensor connector, intake air temperature sensor connector and vacuum hose.

d. Remove the 6 nuts, 2 bolts and intercooler.



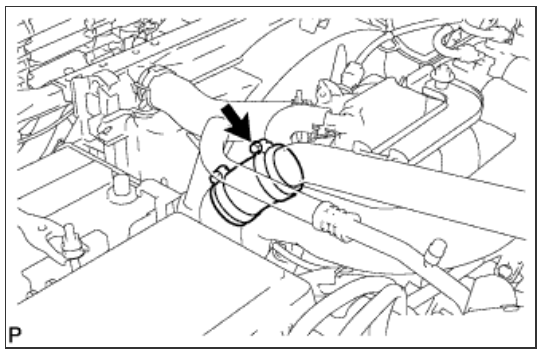
e. Remove the 2 gaskets from the air tube LH and RH.

55. REMOVE NO. 1 COOL AIR INLET (w/o Intercooler)



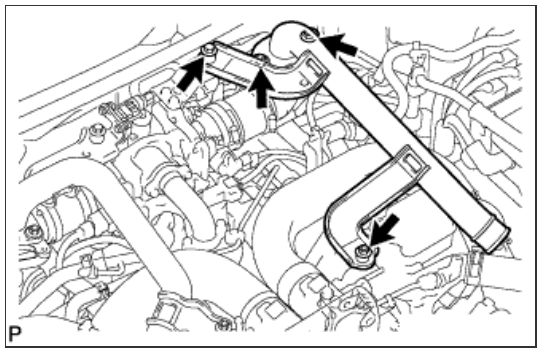
a. Loosen the No. 1 air hose clamp.

b. Disconnect the turbo pressure sensor connector, intake air temperature sensor connector and vacuum hose.



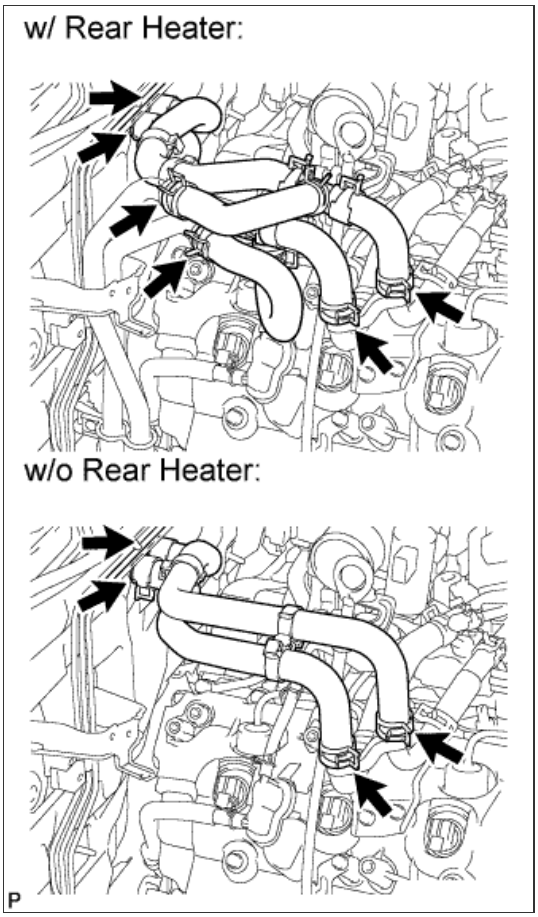
c. Remove the 3 nuts, bolt and No. 1 cool air inlet.

d. Remove the gasket from the air tube RH.



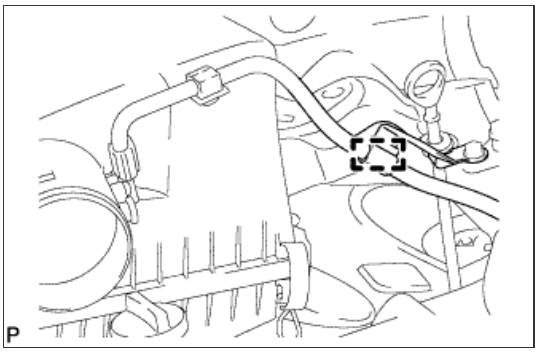
56. REMOVE NO. 2 COOL AIR INLET (w/o Intercooler)

a. Loosen the No. 2 air hose clamp.



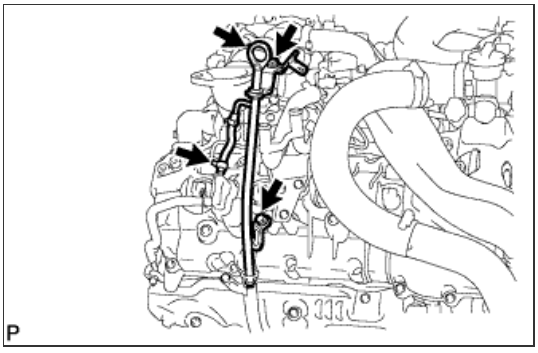
b. Remove the 3 nuts, bolt and No. 2 cool air inlet.

c. Remove the gasket from the air tube LH.



57. DISCONNECT WATER HOSE SUB-ASSEMBLY

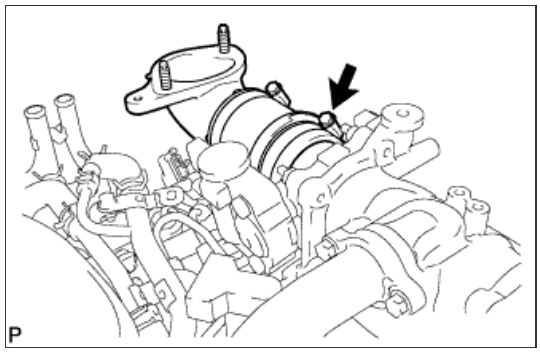
58. REMOVE NO. 2 ENGINE OIL LEVEL DIPSTICK GUIDE



a. Disconnect the wire harness clamp from the No. 2 engine oil level dipstick guide.

b. Disconnect the ventilation hose from the cylinder head cover RH.

c. Remove the 2 bolts and No. 2 engine oil level dipstick guide.

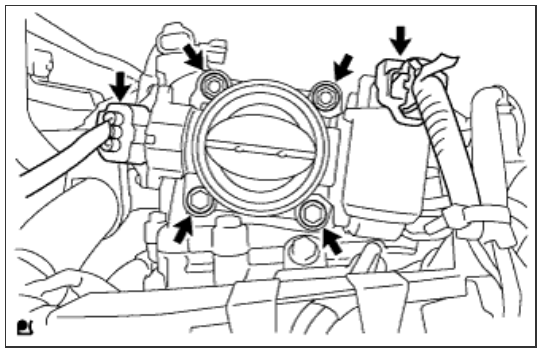


d. Remove the O-ring from the No. 2 engine oil level dipstick guide.

59. REMOVE AIR TUBE SUB-ASSEMBLY RH

a. Loosen the hose clamp.

b. Remove the air tube from the throttle body.



60. REMOVE DIESEL THROTTLE BODY ASSEMBLY RH

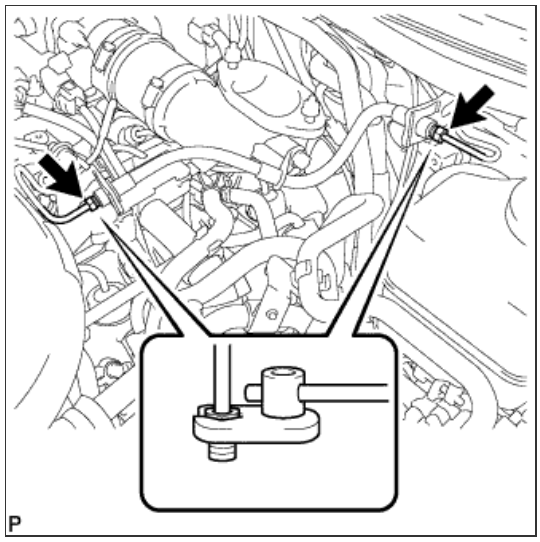
a. Disconnect the throttle position sensor connector.

b. Disconnect the throttle motor connector.

c. Remove the 2 bolts, 2 nuts and throttle body.

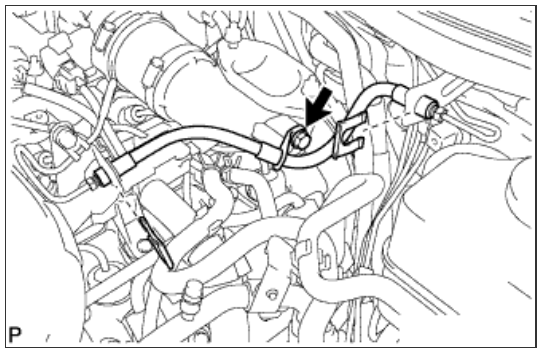
d. Remove the gasket from the intake pipe.

61. DRAIN CLUTCH FLUID (for Manual Transmission)



62. REMOVE CLUTCH HOSE (for Manual Transmission)

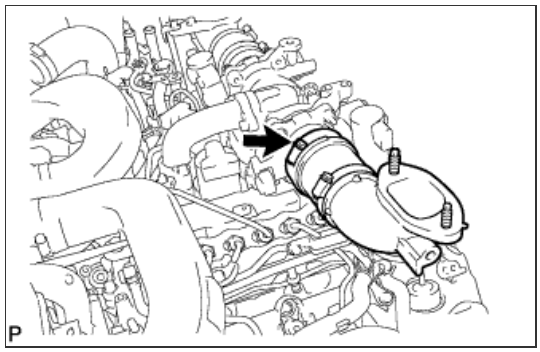
a. Disconnect the 2 flexible hose tubes from the clutch hose with a 10 mm union nut wrench while holding the flexible hose with a wrench.



NOTICE:

- **Do not bend or damage the flexible hose tubes.**
- **Do not allow any foreign matter such as dirt and dust to enter the flexible hose tubes from the connecting point.**

b. Remove the 2 clips.

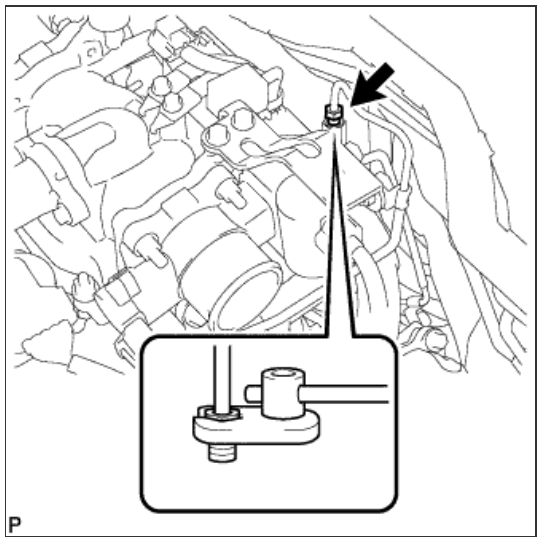


c. Remove the bolt and clutch hose.

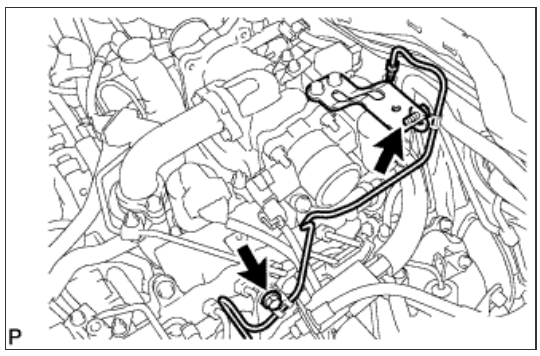
63. REMOVE AIR TUBE SUB-ASSEMBLY LH

a. Loosen the hose clamp.

b. Remove the air tube from the throttle body.



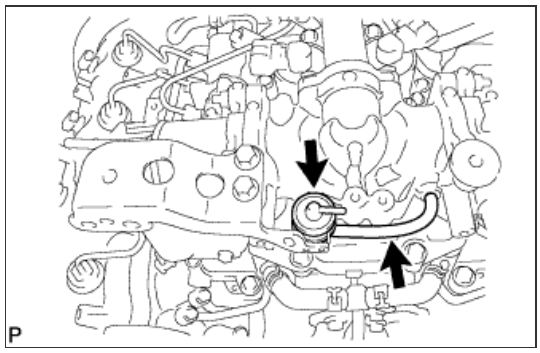
64. REMOVE TUBE CONNECTOR TO FLEXIBLE HOSE TUBE (for Manual Transmission)



a. Using a 10 mm union nut wrench, disconnect the tube connector to flexible hose tube from the clutch tube to release cylinder 2 way.

NOTICE:

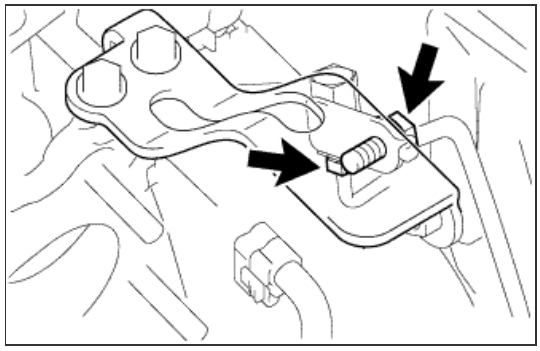
- **Do not bend or damage the flexible hose tube.**
- **Do not allow any foreign matter such as dirt and dust to enter the flexible hose tube from the connecting point.**



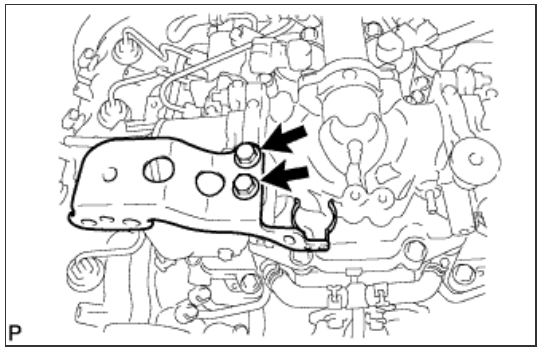
b. Remove the 2 bolts and tube connector to flexible hose tube.

65. REMOVE NO. 1 GAS FILTER

a. Disconnect the hose from the intake pipe.



b. Remove the gas filter.

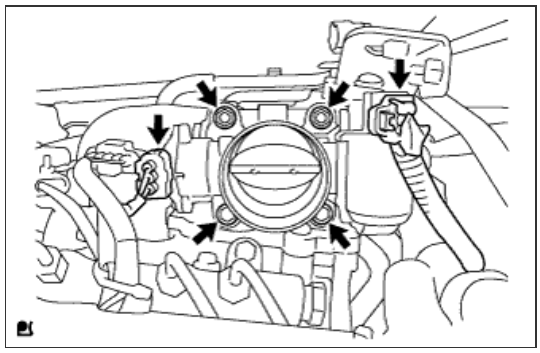


66. REMOVE NO. 3 INTERCOOLER SUPPORT BRACKET

a. for Manual Transmission:

i. Remove the bolt and disconnect the clutch tube to release cylinder 2 way from the bracket.

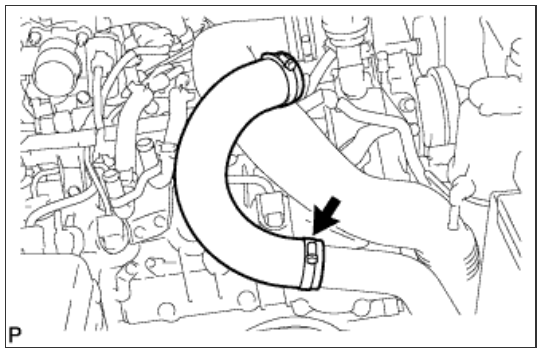
b. Remove the 2 bolts and bracket.



67. REMOVE DIESEL THROTTLE BODY ASSEMBLY LH

a. Disconnect the throttle position sensor connector.

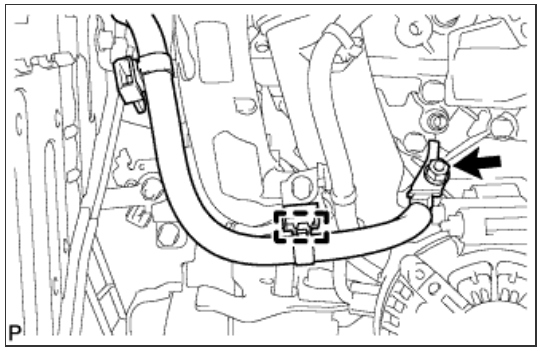
b. Disconnect the throttle motor connector.



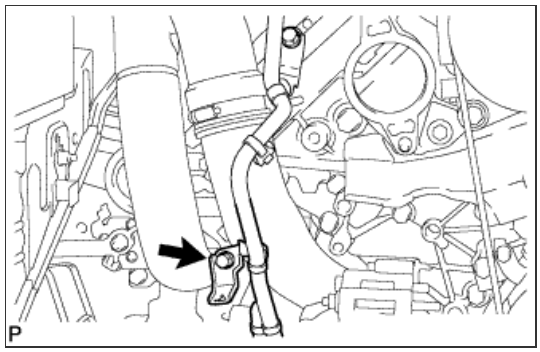
c. Remove the 2 bolts, 2 nuts and throttle body.

d. Remove the gasket from the intake pipe.

68. REMOVE NO. 1 AIR HOSE

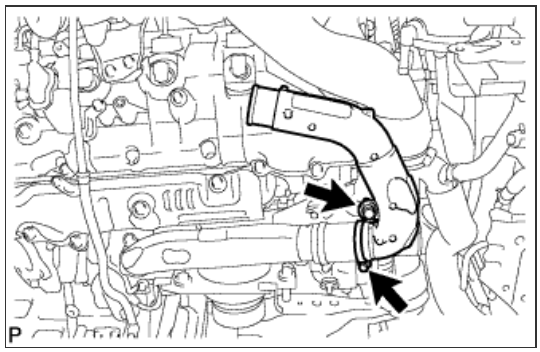


a. Loosen the hose clamp and remove the No. 1 air hose.



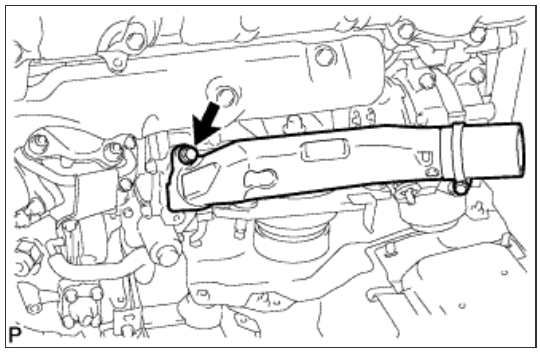
69. REMOVE NO. 3 AIR TUBE

a. Disconnect the wire harness from the clamp.



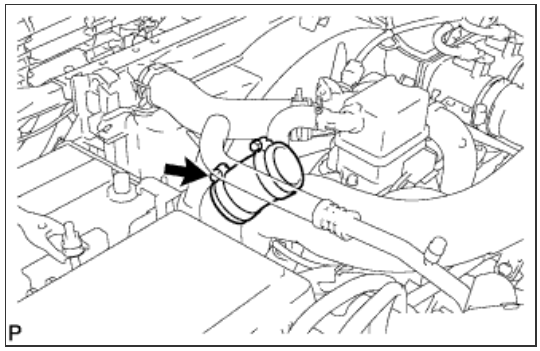
b. Remove the nut and ground wire.

c. Remove the bolt and disconnect the wire harness bracket.



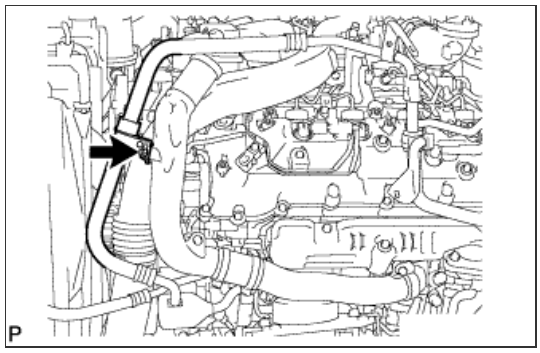
d. Loosen the hose clamp and remove the bolt and No. 3 air tube.

70. REMOVE NO. 1 AIR TUBE ASSEMBLY



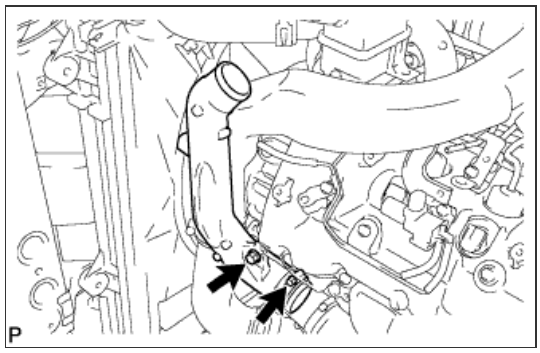
a. Remove the bolt and No. 1 air tube.

b. Remove the O-ring.



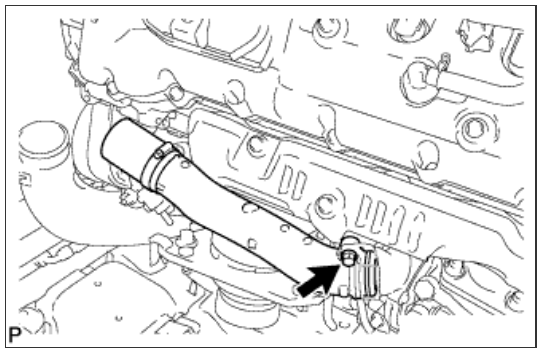
71. REMOVE NO. 2 AIR HOSE

a. Loosen the hose clamp and remove the No. 2 air hose.



72. REMOVE NO. 4 AIR TUBE

a. Remove the bolt and disconnect the suction hose.

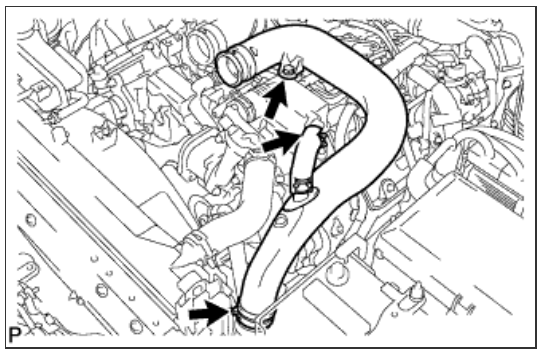


b. Loosen the hose clamp and remove the bolt and No. 4 air tube.

73. REMOVE NO. 2 AIR TUBE ASSEMBLY

a. Remove the bolt and No. 2 air tube.

b. Remove the O-ring.

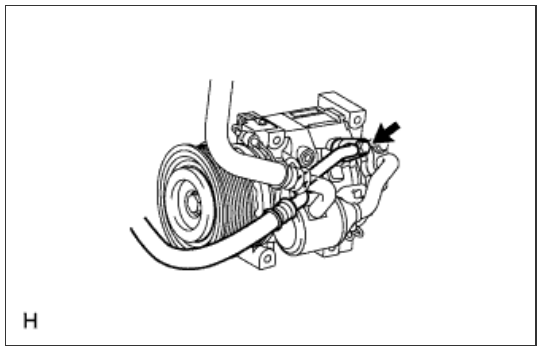


74. REMOVE NO. 2 AIR CLEANER PIPE SUB-ASSEMBLY

a. Disconnect the ventilation hose from the oil separator.

b. Loosen the hose clamp.

c. Remove the bolt and No. 2 air cleaner pipe.



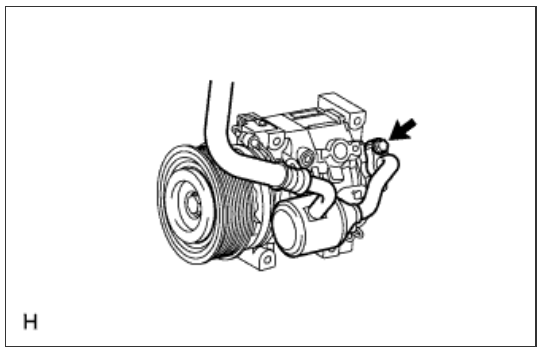
75. REMOVE NO. 1 COOLER REFRIGERANT DISCHARGE HOSE

a. Remove the bolt and disconnect the discharge hose from the cooler compressor.

b. Remove the O-ring from the discharge hose.

NOTICE:

Seal the openings of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering them.

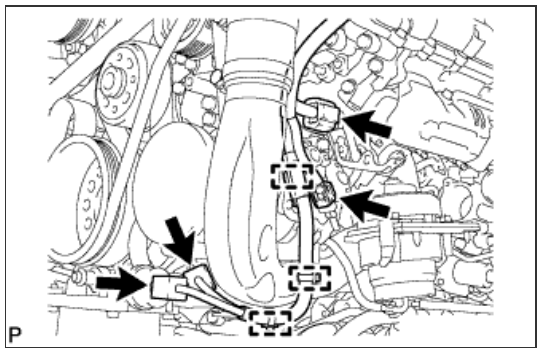


76. REMOVE SUCTION HOSE SUB-ASSEMBLY

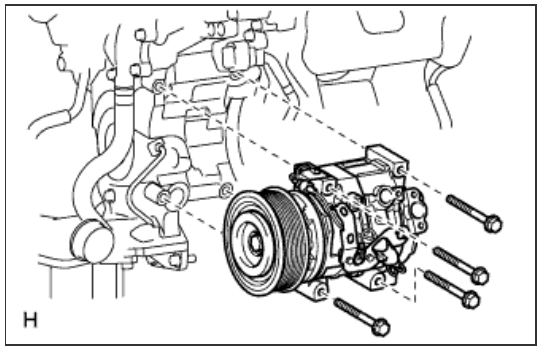
a. Remove the bolt and disconnect the suction hose from the cooler compressor.

b. Remove the O-ring from the suction hose.

NOTICE:



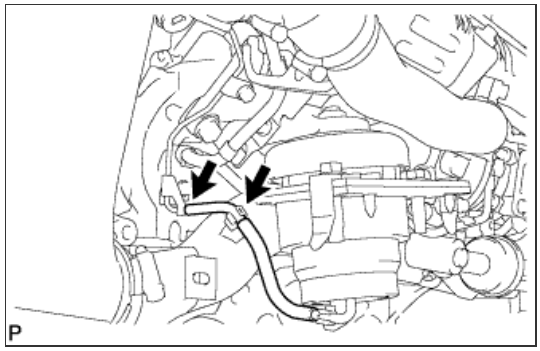
Seal the openings of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering them.



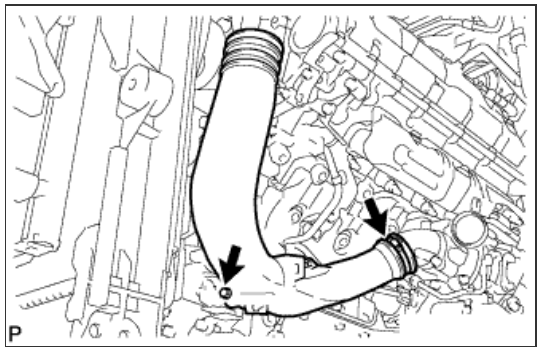
77. REMOVE COOLER COMPRESSOR ASSEMBLY

a. Disconnect the 4 connectors.

b. Using a clip remover, detach the 3 wire harness clamps.

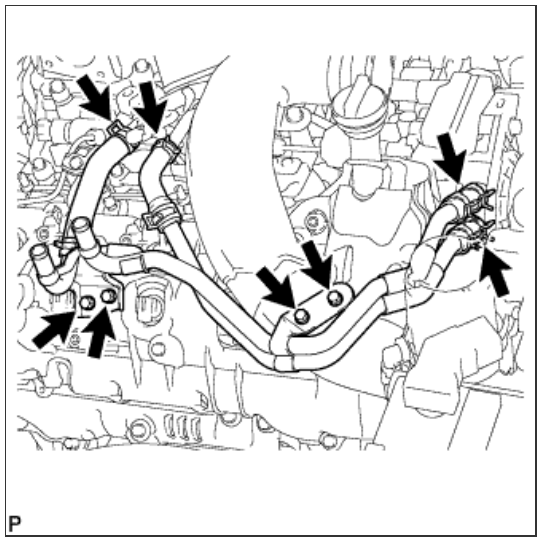


c. Remove the 4 bolts and cooler compressor.



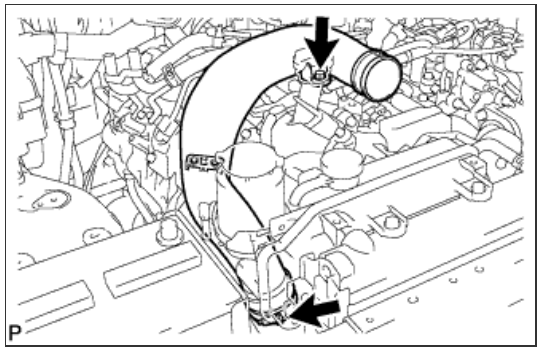
78. REMOVE NO. 2 INTAKE AIR CONNECTOR PIPE

a. w/ Intercooler:
Disconnect the vacuum hose.

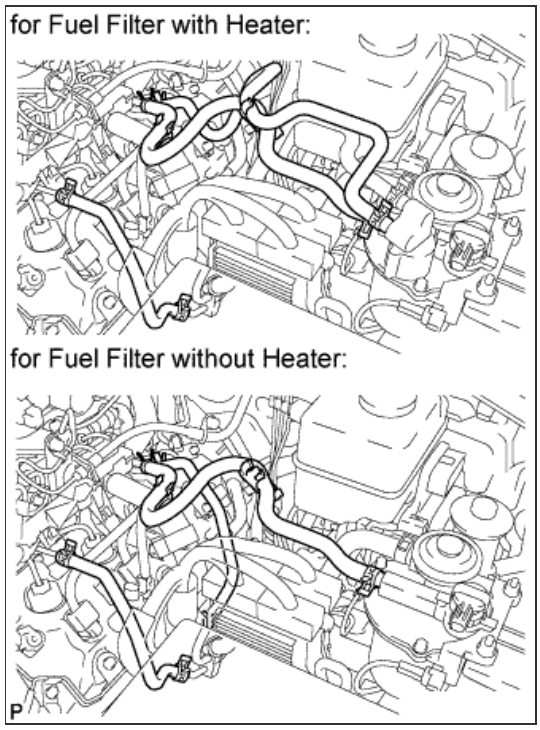


b. Loosen the hose clamp, and remove the bolt and No. 2 intake air connector pipe.

79. REMOVE HEATER WATER PIPE SUB-ASSEMBLY (w/ Viscous Heater)



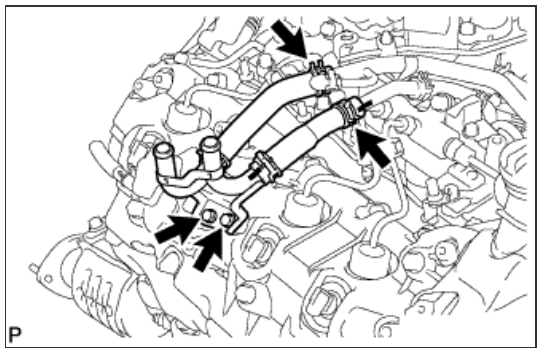
a. Remove the 4 bolts and disconnect the 4 water hose ends, and then remove the heater water pipe.



80. REMOVE NO. 1 AIR CLEANER PIPE SUB-ASSEMBLY

a. Loosen the hose clamp.

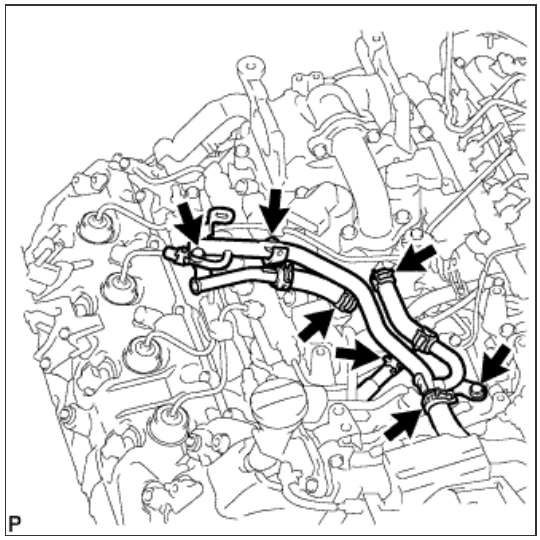
b. Remove the bolt and No. 1 air cleaner pipe.



81. DISCONNECT FUEL HOSE

82. REMOVE NO. 3 WATER BY-PASS PIPE (w/o Viscous Heater)

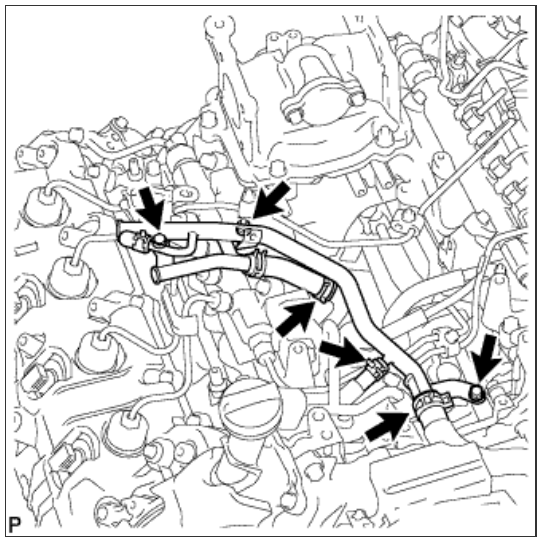
a. Remove the 2 bolts and disconnect the 2 water hose ends, and then remove the No. 3 water by-pass pipe.



83. REMOVE NO. 4 WATER BY-PASS PIPE

a. w/ EGR System:

i. Remove the 2 bolts and nut.



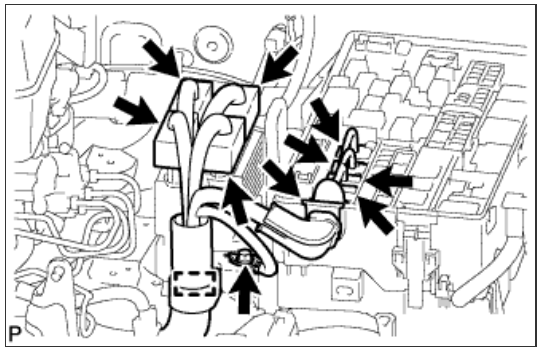
ii. Disconnect the 4 water hose ends, and then remove the No. 4 water by-pass pipe.

b. w/o EGR System:

i. Remove the 2 bolts and nut.

ii. Disconnect the 3 water hose ends, and then remove the No. 4 water by-pass pipe.

84. DISCONNECT ENGINE WIRE

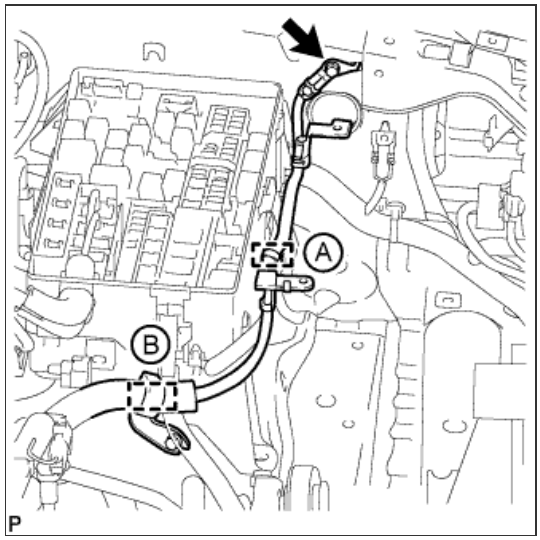


a. LH Side:

i. Disconnect the 4 connectors from the injector driver.

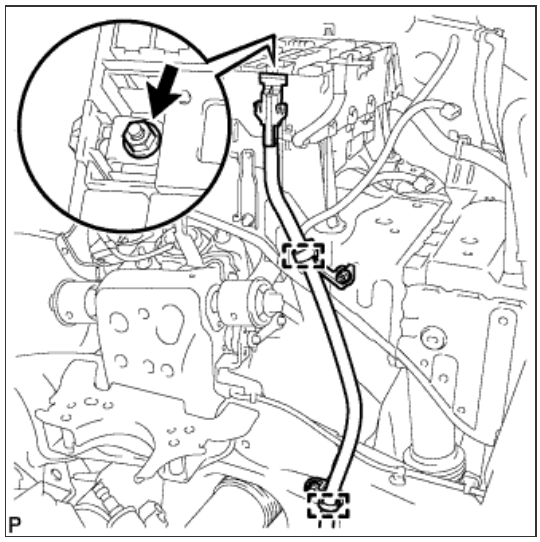
ii. Disconnect the 4 connectors and detach the wire harness holder from the relay block.

iii. Remove the bolt and disconnect the ground wire.



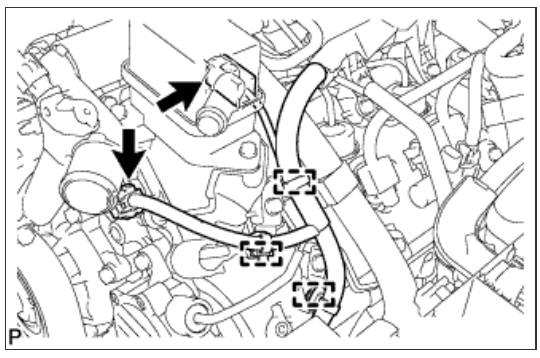
iv. Disconnect the wire harness from the wire harness clamp holder.

v. Remove the bolt and disconnect the ground wire from the body panel.



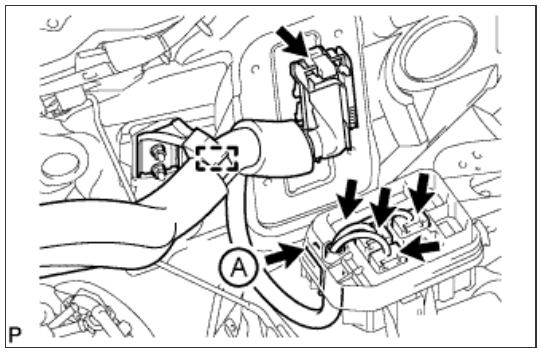
vi. Using a clip remover, detach the ground wire clamp labeled A from the relay block side.

vii. Disconnect the wire harness from the wire harness clamp holder labeled B.



viii. Remove the nut and detach the generator positive (+) cable holder from the relay block.

ix. Disconnect the generator positive (+) cable from the 2 clamps.



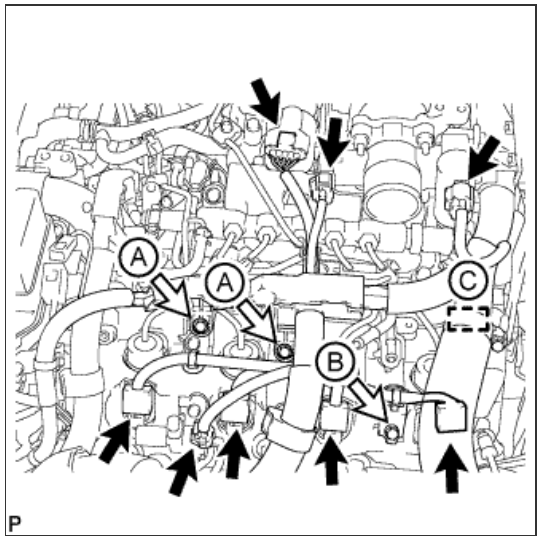
x. Disconnect the 2 connectors.

xi. Using a clip remover, detach the 3 wire harness clamps.

xii. for RHD:

Disconnect the 4 connectors and detach the wire harness tab labeled A from the relay block.

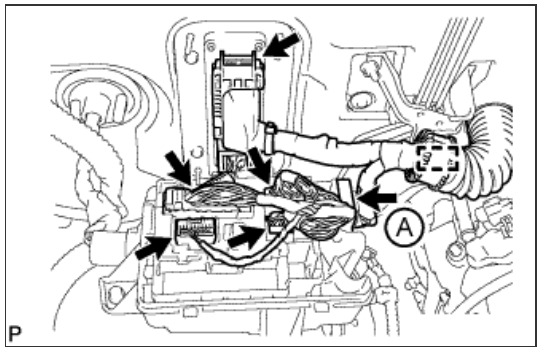
xiii. for RHD:
Disconnect the ECM connector.



xiv. for RHD:
Disconnect the wire harness from the wire harness clamp holder.

xv. Disconnect the 8 connectors.

xvi. Remove the 2 bolts labeled A and disconnect the engine wire protector.



xvii. Remove the bolt labeled B and the engine wire harness bracket.

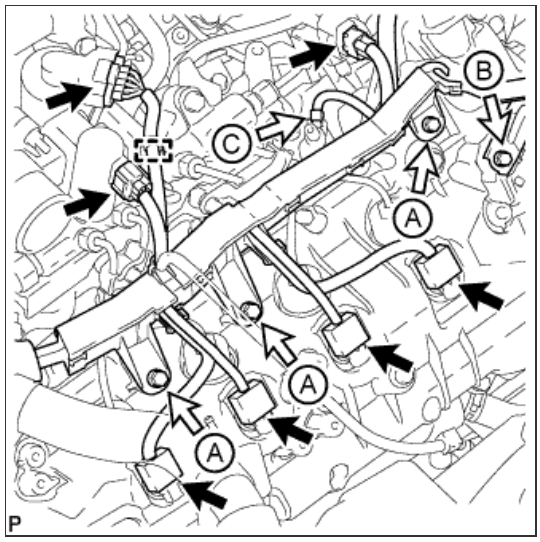
xviii. for RHD:
Disconnect the ECM wire harness from the wire harness clamp holder labeled C.

b. RH Side:

i. for LHD:
Disconnect the 4 connectors, and detach the wire harness holder labeled A from the relay block.

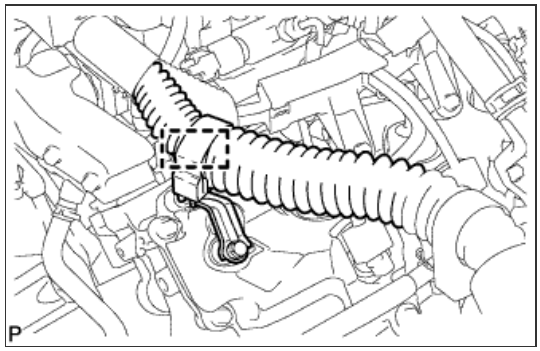
ii. for LHD:
Disconnect the ECM connector.

iii. for LHD:
Disconnect the wire harness from the wire harness clamp holder.



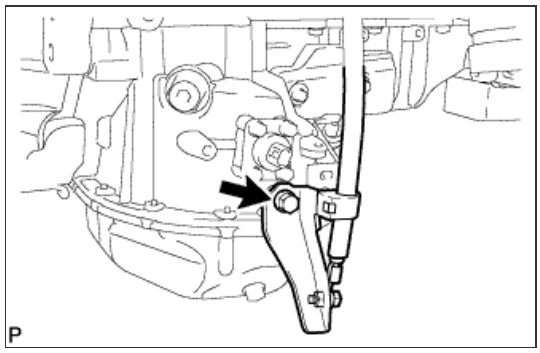
iv. Disconnect the 7 connectors.

v. Using a clip remover, detach the wire harness clamp.



vi. Remove the 3 bolts labeled A and disconnect the engine wire protector.

vii. Remove the bolt labeled B and the wire harness bracket.

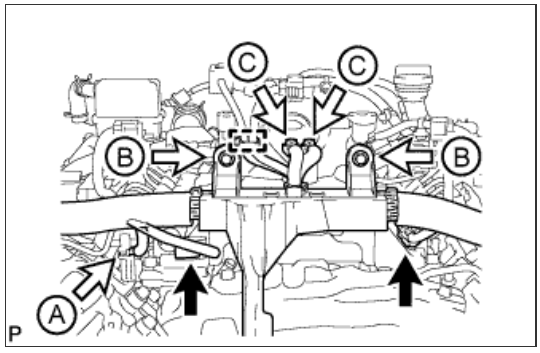


viii. Remove the nut labeled C and the glow plug wire harness.

ix. for RHD:
Disconnect the wire harness from the wire harness clamp holder.

x. w/ Winch:
Remove the bolt and disconnect the ground wire.

c. Rear Side:



i. Using a clip remover, detach the wire harness clamp.

ii. Remove the 2 bolts and 2 ground wires labeled C.

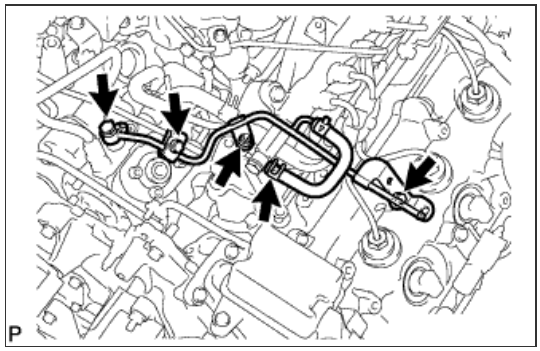
iii. Remove the 2 bolts labeled B and disconnect the engine wire harness protector.

iv. Disconnect the 2 common rail connectors.

v. Remove the nut and disconnect the glow plug wire harness labeled A.

85. REMOVE NO. 2 FUEL PIPE SUB-ASSEMBLY

NOTICE:



- **After removing a fuel pipe, to prevent dirt or foreign objects from entering the fuel pipe ends, cover the fuel pipe ends with plastic bags.**
- **After removing a fuel pipe, to prevent dirt or foreign objects from entering the fuel supply pump hole, cover the hole with protective tape.**

a. Disconnect the fuel hose from the No. 5 nozzle leakage pipe.

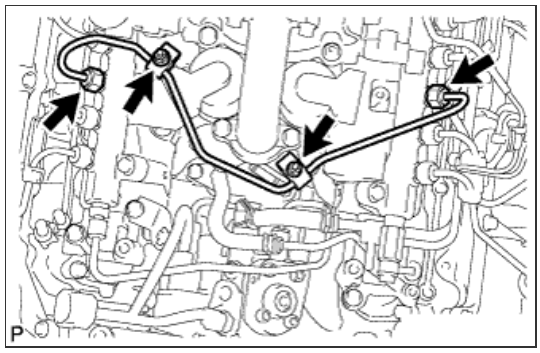
b. Remove the bolt and No. 2 injection pipe clamp.

c. Remove the union bolt and gasket.

d. Remove the bolt, nut and No. 2 fuel pipe.

86. REMOVE NO. 6 INJECTION PIPE SUB-ASSEMBLY

NOTICE:



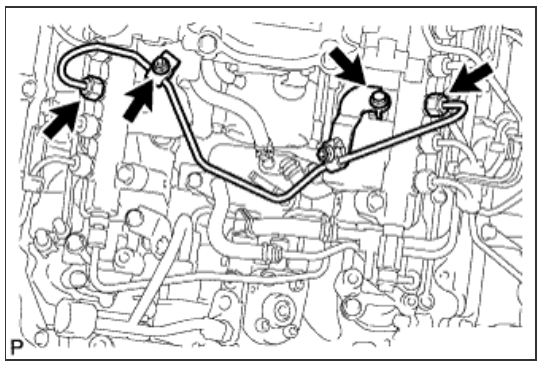
After removing an injection pipe, to prevent dirt or foreign objects from entering the common rail holes, cover the holes with protective tape.

a. w/ EGR System:

i. Using a union nut wrench, loosen the No. 6 injection pipe ends.

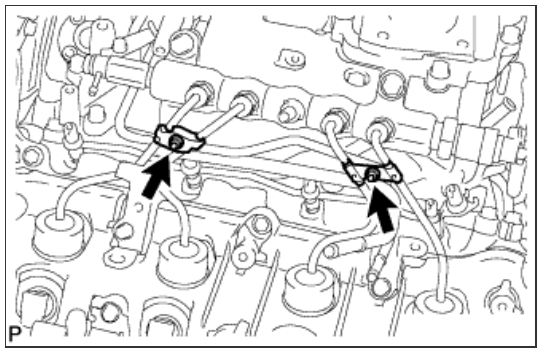
ii. Remove the 2 nuts and 2 No. 2 injection pipe clamps.

iii. Remove the No. 6 injection pipe.



b. w/o EGR System:

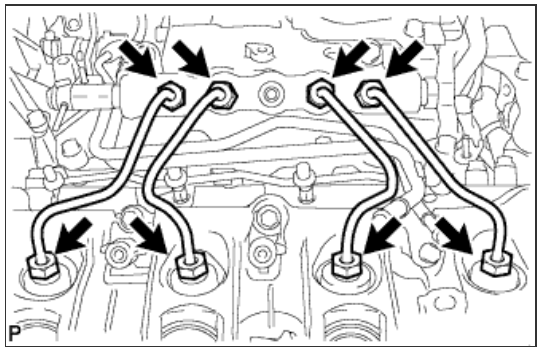
i. Using a union nut wrench, loosen the No. 6 injection pipe ends.



ii. Remove the nut and No. 2 injection pipe clamp.

iii. Remove the bolt and No. 6 injection pipe.

87. REMOVE INJECTION PIPE LH

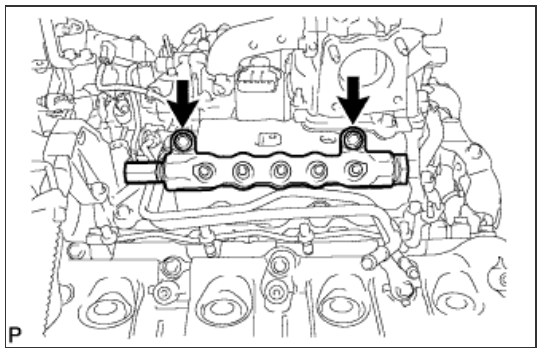


a. w/ Intercooler:
Remove the 2 nuts and 4 injection pipe clamps.

b. Using a union nut wrench, remove the 4 injection pipes.

NOTICE:

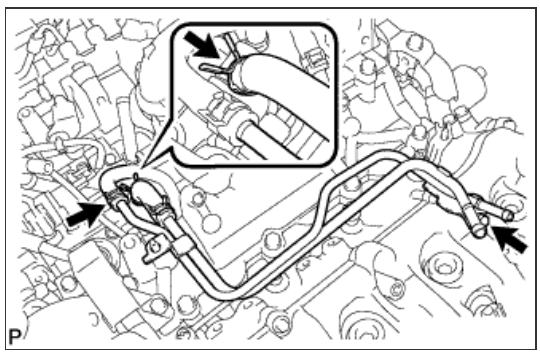
After removing an injection pipe, to prevent dirt or foreign objects from entering the common rail holes or injector holes, cover the holes with protective tape.



88. REMOVE COMMON RAIL ASSEMBLY LH

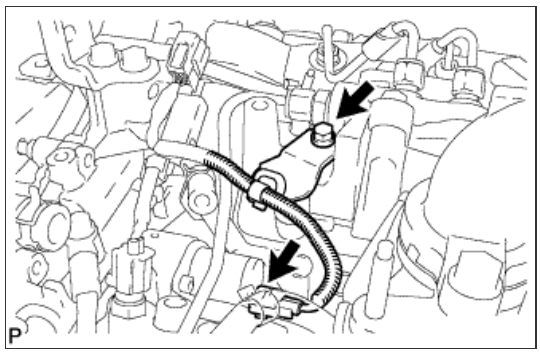
a. Remove the 2 bolts and common rail.

NOTICE:



Do not remove the fuel pressure limiter from the common rail. If it is removed, replace the common rail.

89. REMOVE FUEL FILTER TO INJECTION PUMP FUEL PIPE SUB-ASSEMBLY

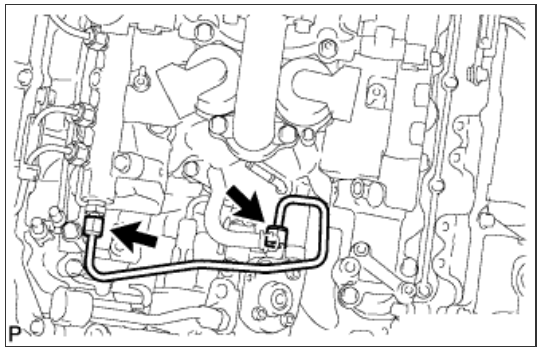


a. Disconnect the 2 hoses from the fuel pipe.

b. Remove the bolt and fuel filter to injection pump fuel pipe.

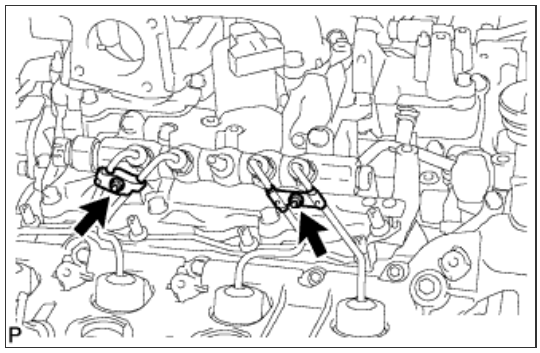
90. DISCONNECT FUEL PUMP MOTOR WIRE

a. Remove the bolt and disconnect the connector from the fuel supply pump.



91. REMOVE NO. 5 INJECTION PIPE SUB-ASSEMBLY

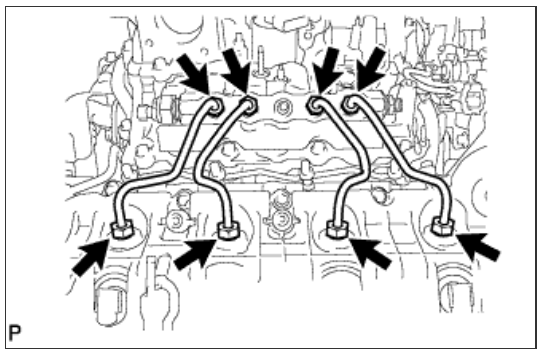
a. Using a union nut wrench, remove the No. 5 injection pipe.



NOTICE:

After removing an injection pipe, to prevent dirt or foreign objects from entering the common rail hole or injection pump hole, cover the holes with protective tape.

92. REMOVE INJECTION PIPE RH

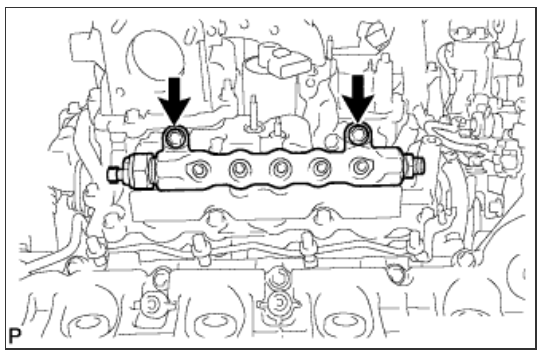


a. w/ Intercooler:
Remove the 2 nuts and 4 injection pipe clamps.

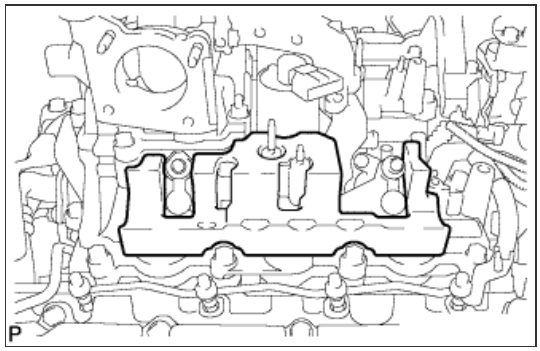
b. Using a union nut wrench, remove the 4 injection pipes.

NOTICE:

After removing an injection pipe, to prevent dirt or foreign objects from entering the common rail holes or injector holes, cover the holes with protective tape.

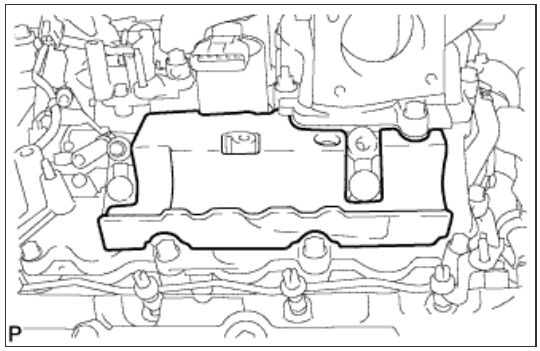


93. REMOVE COMMON RAIL ASSEMBLY RH



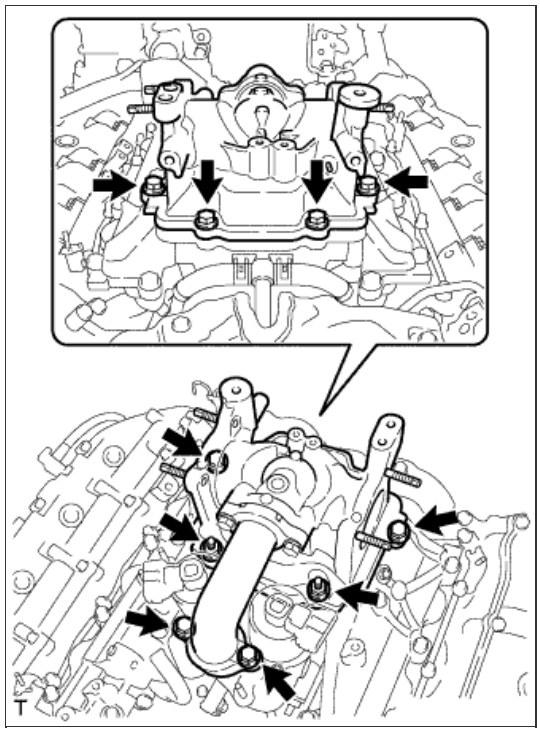
a. Remove the 2 bolts and common rail.

NOTICE:

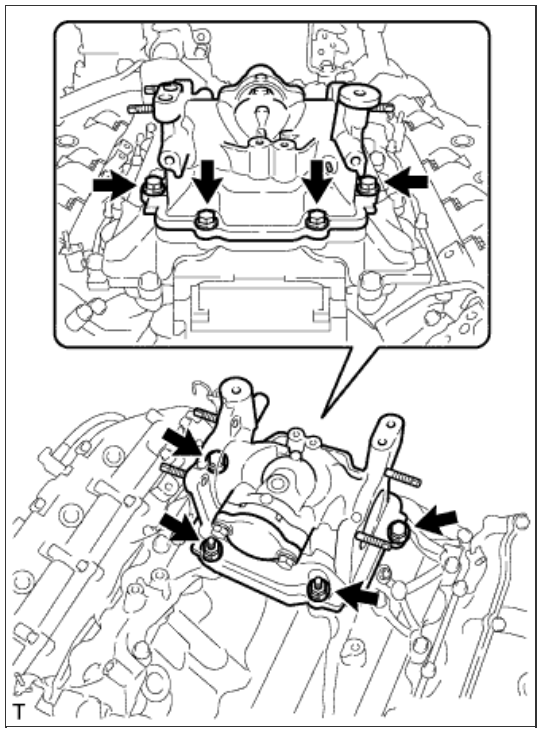


Do not remove the fuel pressure sensor from the common rail. If it is removed, replace the common rail.

94. REMOVE NO. 1 INTAKE MANIFOLD INSULATOR (w/ Intercooler)

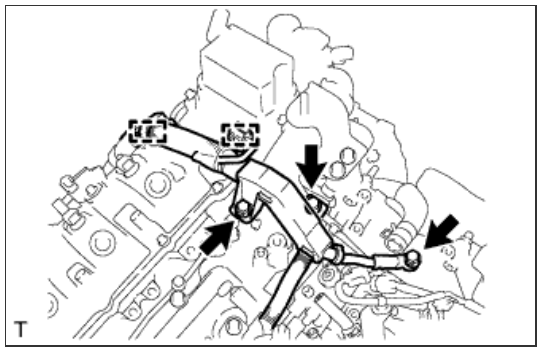


95. REMOVE NO. 2 INTAKE MANIFOLD INSULATOR (w/ Intercooler)

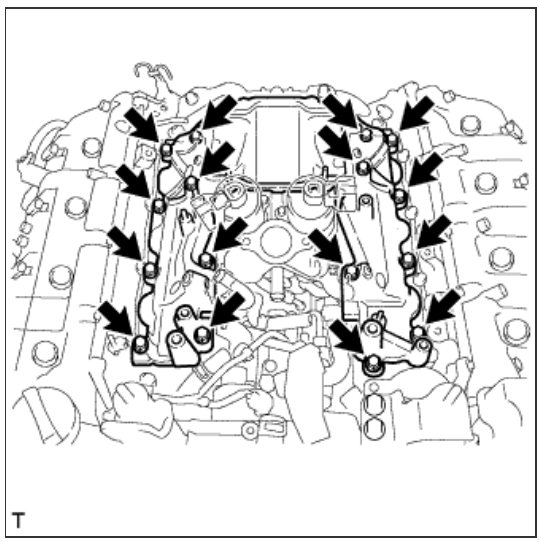


96. REMOVE INTAKE PIPE

a. w/ EGR System:
Remove the 2 nuts, 6 bolts, intake pipe and 2 gaskets.

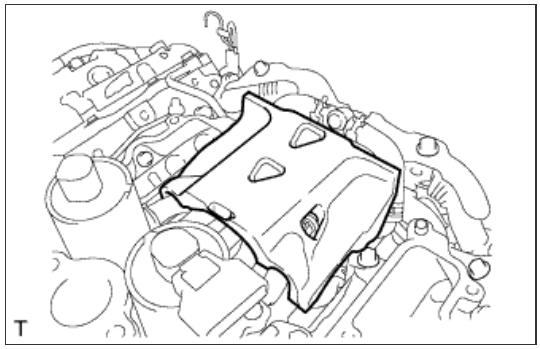


b. w/o EGR System:
Remove the 2 nuts, 4 bolts, intake pipe and gasket.



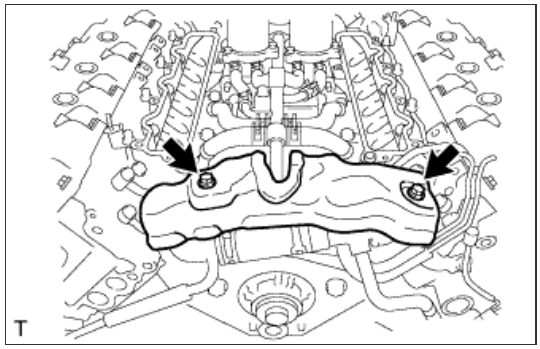
97. DISCONNECT NO. 2 ENGINE WIRE

a. Remove the 3 bolts and using a clip remover, detach the 2 wire harness clamps, and then disconnect the No. 2 engine wire.

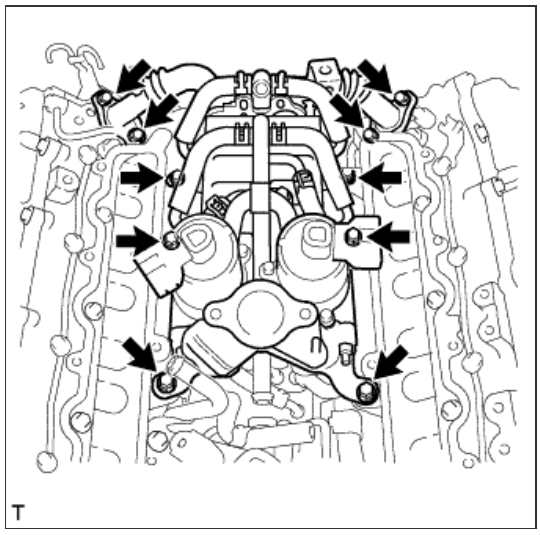


98. REMOVE NO. 3 INTAKE MANIFOLD

a. Remove the 16 bolts, No. 3 intake manifold and 2 gaskets.

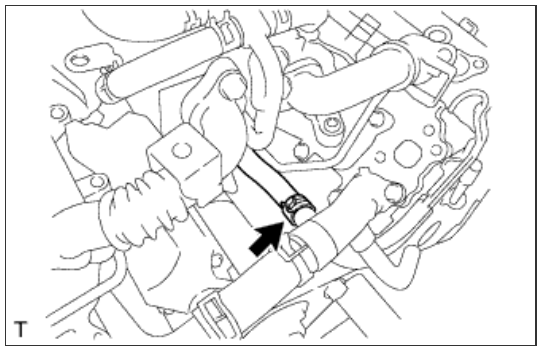


99. REMOVE INTAKE MANIFOLD INSULATOR (w/ EGR System)

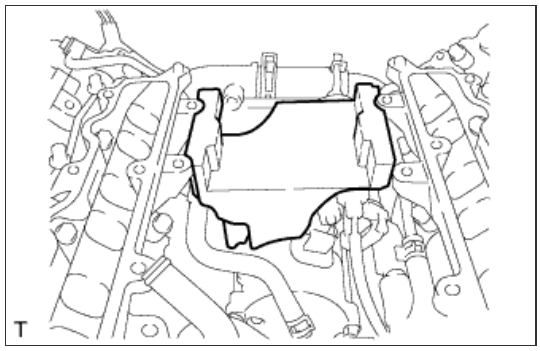


100. REMOVE EGR PIPE INSULATOR (w/ EGR System)

a. Remove the 2 bolts and EGR pipe insulator.



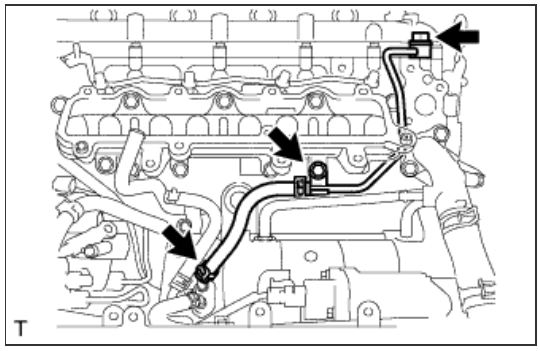
101. REMOVE EGR VALVE ASSEMBLY WITH EGR COOLER (w/ EGR System)



a. Remove the 10 bolts, EGR valve with EGR cooler and 2 gaskets.

b. Disconnect the No. 5 water by-pass hose from the water by-pass outlet.

102. REMOVE EGR COOLER INSULATOR (w/ EGR System)



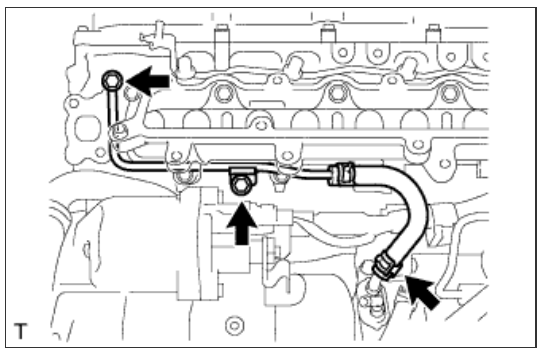
103. REMOVE NO. 3 NOZZLE LEAKAGE PIPE

a. Disconnect the No. 1 fuel hose from the fuel cooler.

b. Remove the union bolt, bolt, No. 3 nozzle leakage pipe and gasket.

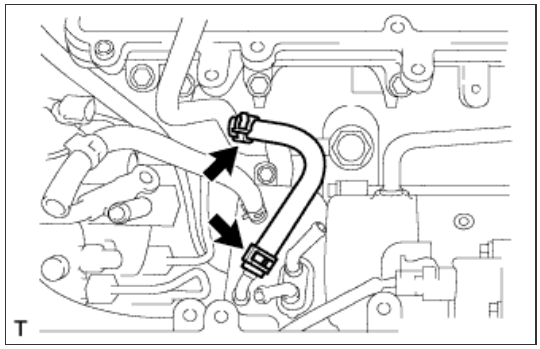
NOTICE:

After removing the nozzle leakage pipe, to prevent dirt or foreign objects from entering the nozzle leakage pipe, cover the nozzle leakage pipe ends with plastic bags.



104. REMOVE NO. 4 NOZZLE LEAKAGE PIPE

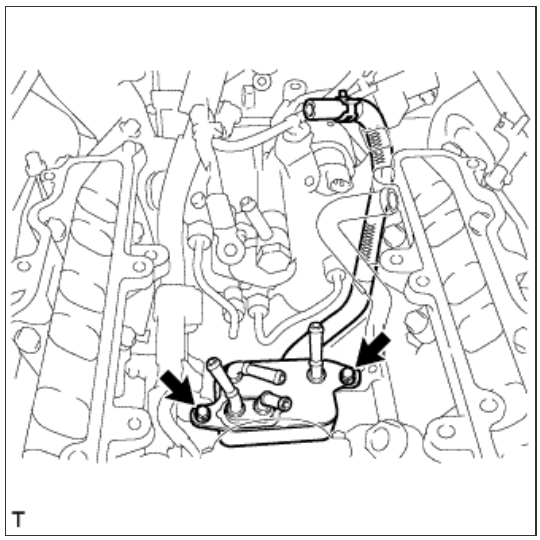
a. Disconnect the No. 2 fuel hose from the fuel cooler.



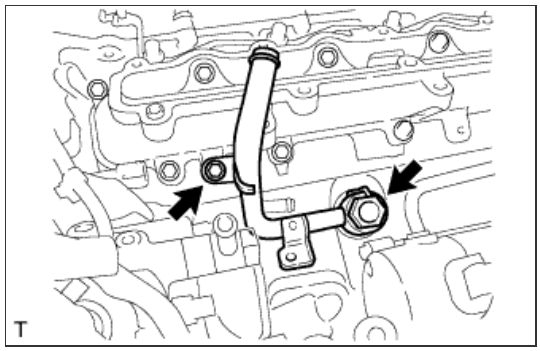
b. Remove the union bolt, bolt, No. 4 nozzle leakage pipe and gasket.

NOTICE:

After removing the nozzle leakage pipe, to prevent dirt or foreign objects from entering the nozzle leakage pipe, cover the nozzle leakage pipe ends with plastic bags.

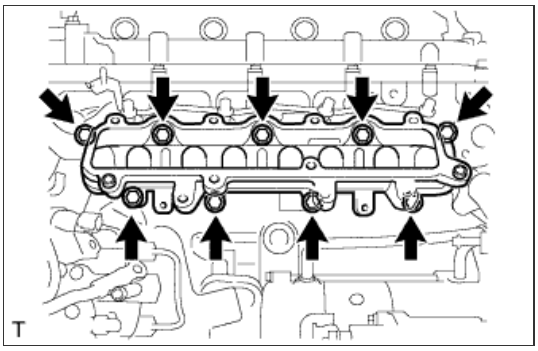


105. DISCONNECT NO. 6 WATER BY-PASS HOSE



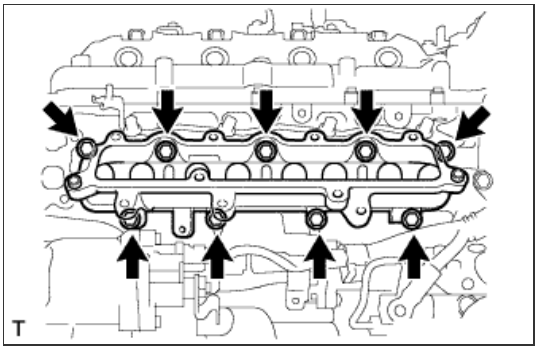
106. REMOVE FUEL COOLER ASSEMBLY

a. Remove the 2 bolts and fuel cooler.



107. REMOVE NO. 1 WATER BY-PASS PIPE

a. Remove the union bolt, bolt, No. 1 water by-pass pipe and gasket.

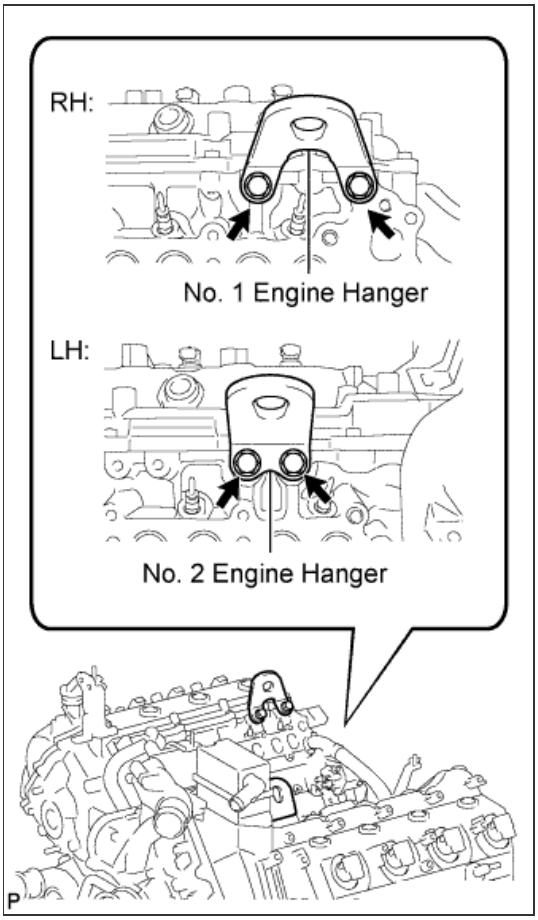


108. REMOVE NO. 1 INTAKE MANIFOLD

a. Remove the 9 bolts, No. 1 intake manifold and gasket.

109. REMOVE NO. 2 INTAKE MANIFOLD

a. Remove the 9 bolts, No. 2 intake manifold and gasket.



110. INSTALL NO. 1 AND NO. 2 ENGINE HANGER

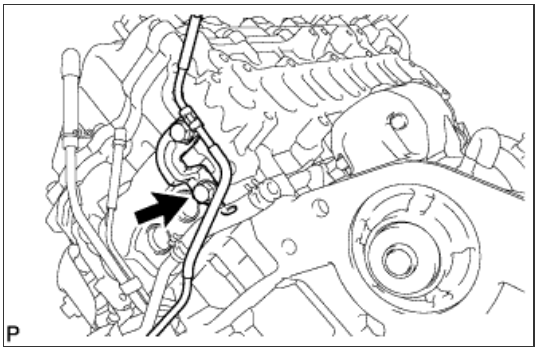
a. Install the No. 1 and No. 2 engine hangers to the cylinder head RH and LH with the 4 bolts as shown in the illustration.

Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf }

Engine Hanger Part No.

Item	Part No.
No. 1 engine hanger	12281-51040
No. 2 engine hanger	12282-51040
Bolt	91671-80825

111. REMOVE AUTOMATIC TRANSMISSION ASSEMBLY



a. Remove the automatic transmission assembly (Click here).

112. REMOVE MANUAL TRANSMISSION UNIT ASSEMBLY

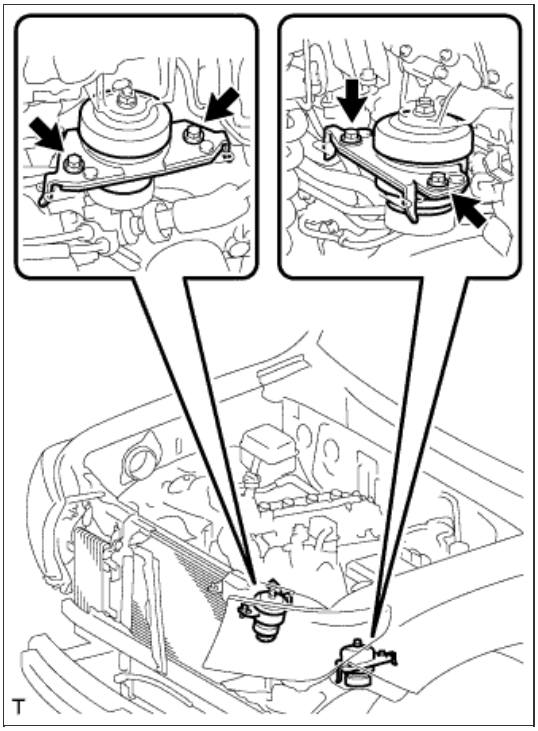
a. Remove the manual transmission unit assembly (Click here).

113. REMOVE CLUTCH RELEASE CYLINDER TO FLEXIBLE HOSE TUBE (for Manual Transmission)

a. Remove the bolt and tube.

114. REMOVE ENGINE ASSEMBLY

a. Attach an engine sling device and hang the engine with a chain block.



b. Remove the 4 bolts from the engine mounting RH and LH side.

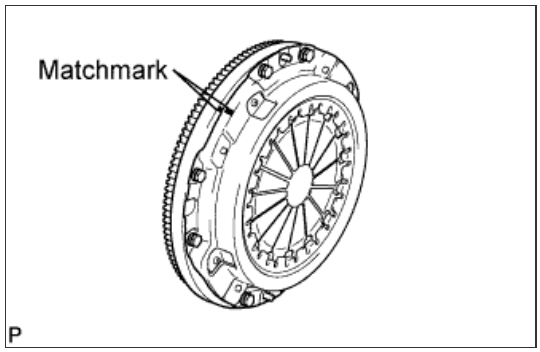
c. Lift the engine out of the vehicle carefully.

NOTICE:

Make sure the engine is clear of all wiring and hoses.

d. Place the engine onto a work bench.

115. REMOVE CLUTCH COVER ASSEMBLY (for Manual Transmission)



a. Put matchmarks on the clutch cover and flywheel.

b. Loosen each set bolt one turn at a time until spring tension is released.

c. Remove the 8 set bolts, and pull off the clutch cover.

NOTICE:

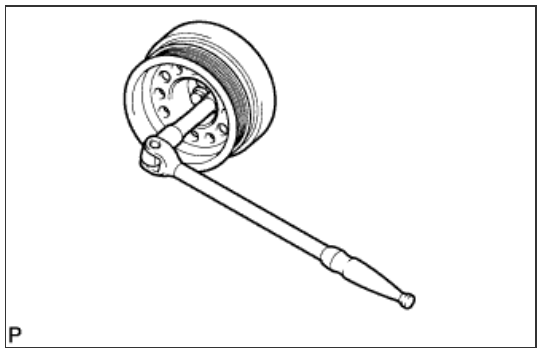
Do not drop the clutch disc.

116. REMOVE CLUTCH DISC ASSEMBLY (for Manual Transmission)

NOTICE:

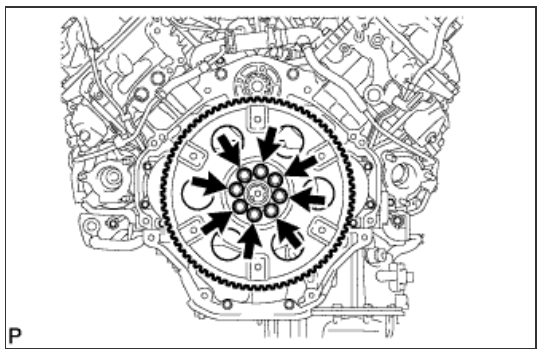
Keep the lining part of the clutch disc, pressure plate and surface of the flywheel away from oil and foreign matter.

117. REMOVE DRIVE PLATE AND RING GEAR SUB-ASSEMBLY (for Automatic Transmission)



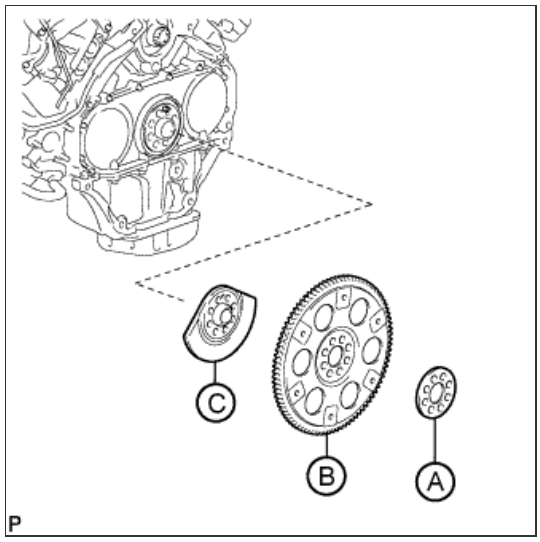
a. Using a wrench, hold the crankshaft.

NOTICE:



Do not turn the crankshaft counterclockwise.

If it is turned counterclockwise, check that the crankshaft pulley set bolt is not loose. If loose, tighten the bolt (Click here).

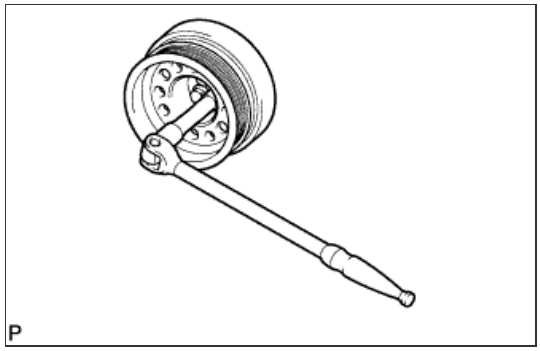


Torque:
108 N*m{ 1101 kgf*cm , 80 ft.*lbf } or more

b. Remove the 8 bolts.

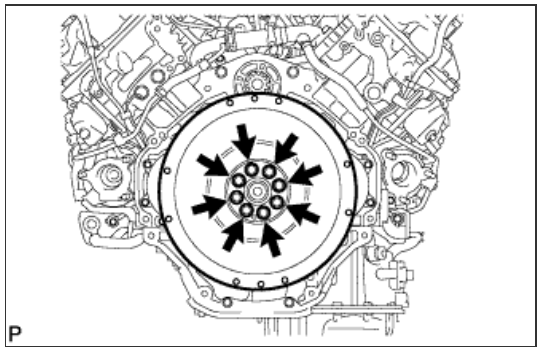
c. Remove the rear drive plate spacer labeled A, drive plate and ring gear labeled B and rear crankshaft balancer weight labeled C.

118. REMOVE FLYWHEEL SUB-ASSEMBLY (for Manual Transmission)



a. Using a wrench, hold the crankshaft.

NOTICE:



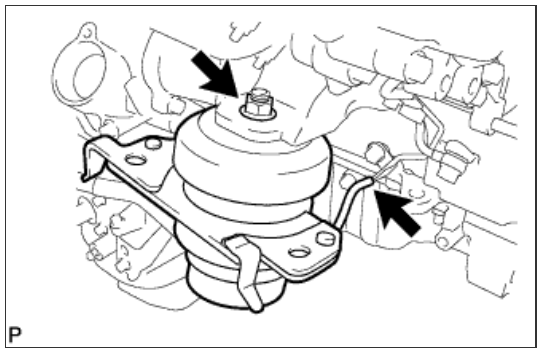
Do not turn the crankshaft counterclockwise.

If it is turned counterclockwise, check that the crankshaft pulley set bolt is not loose. If loose, tighten the bolt (Click here).

Torque:
108 N*m{ 1101 kgf*cm , 80 ft.*lbf } or more

b. Remove the 8 bolts and flywheel.

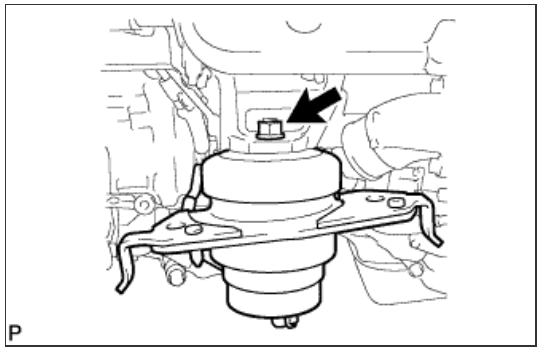
119. INSTALL ENGINE STAND



a. Install the engine onto an engine stand with bolts.

b. Remove the 4 bolts and No. 1 and No. 2 engine hangers.

120. REMOVE FRONT ENGINE MOUNTING INSULATOR RH

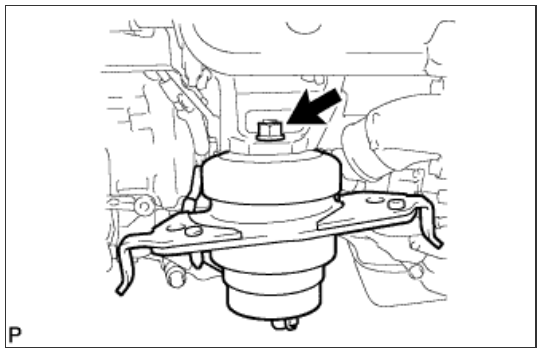


a. Disconnect the vacuum hose.

b. Remove the nut and mounting insulator.

121. REMOVE FRONT ENGINE MOUNTING INSULATOR LH

a. Remove the nut and mounting insulator.

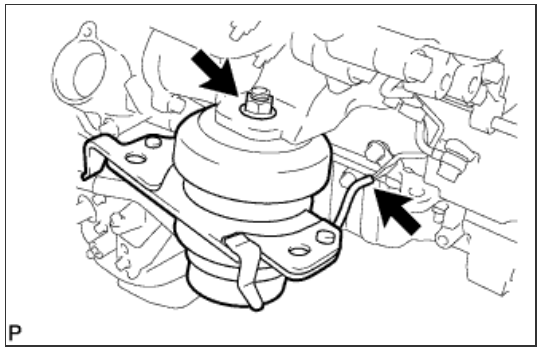


for Preparation Click here

1. INSTALL FRONT ENGINE MOUNTING INSULATOR LH

a. Install the mounting insulator with the nut.

Torque:
80 N*m{ 816 kgf*cm , 59 ft.*lbf }

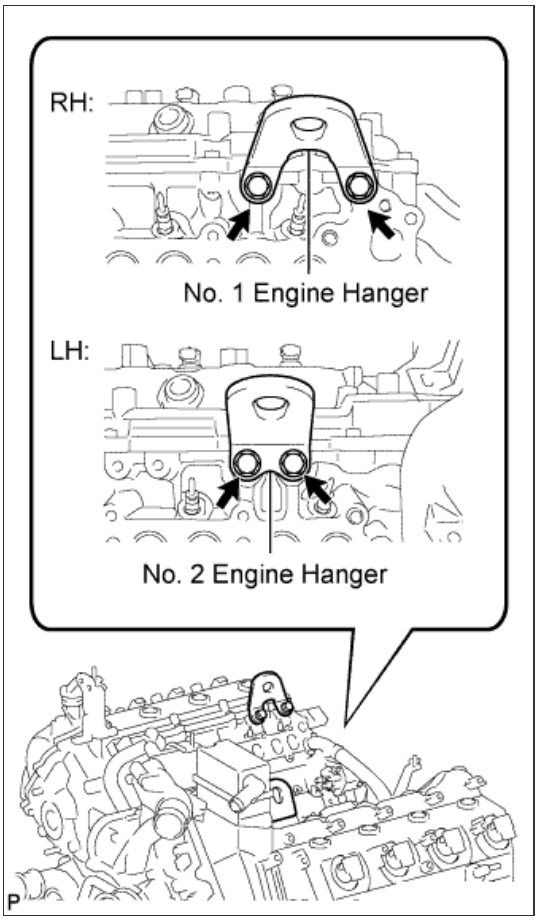


2. INSTALL FRONT ENGINE MOUNTING INSULATOR RH

a. Install the mounting insulator with the nut.

Torque:
80 N*m{ 816 kgf*cm , 59 ft.*lbf }

b. Connect the vacuum hose.



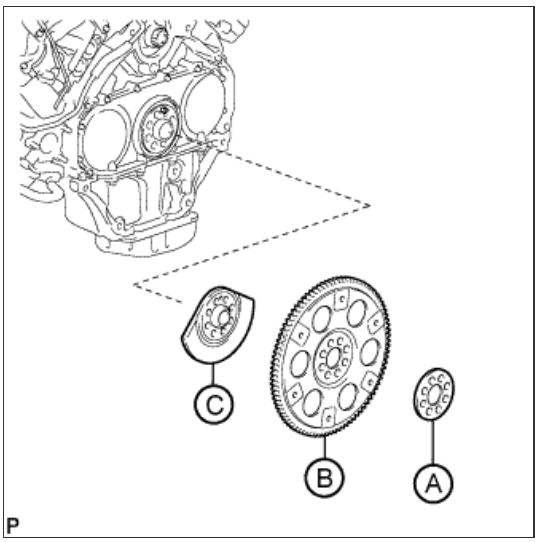
3. INSTALL NO. 1 AN NO. 2 ENGINE HANGER

a. Install the No. and No. engine hangers to the cylinder head R and L with the bolts as shown in the illustration.

Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf }

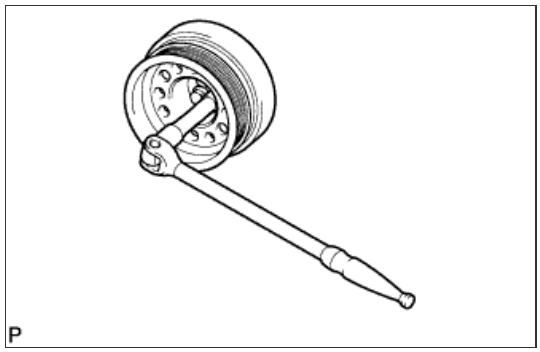
Engine Hanger Part No.

Item	art No.
No. engine hanger	
o. engine hanger	
olt	9



4. REMOVE ENGINE STAN

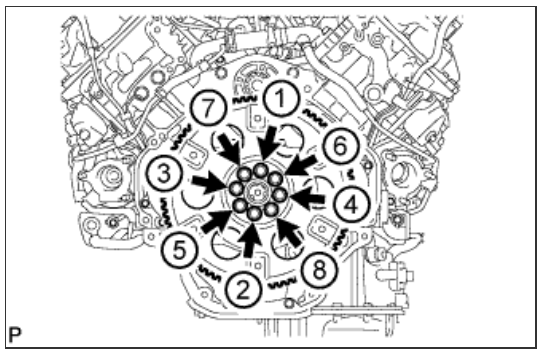
a. Attach an engine sling device and hang the engine with a chain block.



b. Lift the engine, and remove it from the engine stand.

5. INSTALL RIVE PLATE AN RING GEAR SUB-ASSEMBLY (for Automatic Transmission)

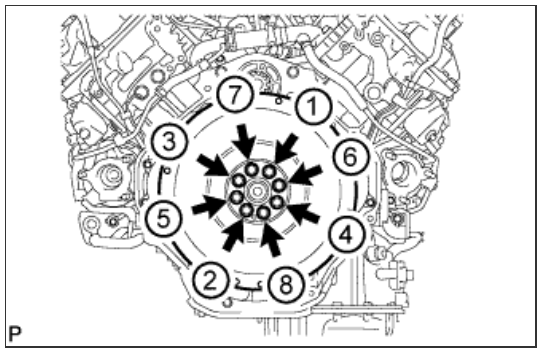
a. Install the rear crankshaft balancer weight labeled C, ring gear labeled B and rear drive late s acer labeled A with 8 new bolts.



b. Using a wrench, hold the crankshaft.

c. Uniforml install and tighten the 8 bolts in the sequence shown in the illustration.

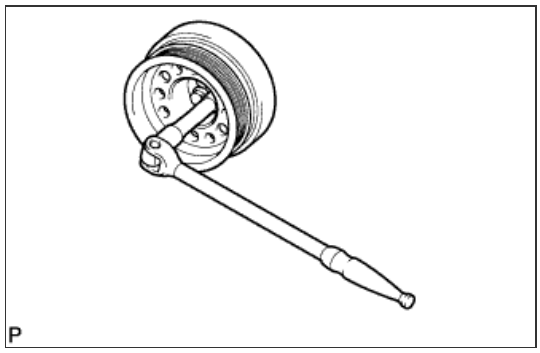
Torque:
182 N*m{ 1856 kgf*cm , 134 ft.*lbf }



6. INSTALL FLYWHEEL SUB-ASSEMBLY (for Manual Transmission)

a. Tem orarily install the flywheel with 8 new bolts.

NOTICE:

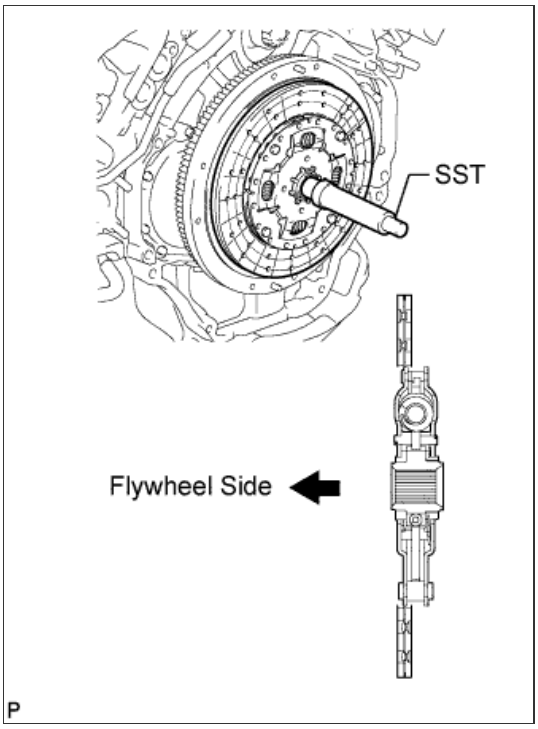


- **Align the crankshaft knock pin an flywheel knock pin hole.**
- **o not strike or amage the flywheel installation bolts. Be sure to han le them carefully.**
- **Make sure there is no oil on the bolts.**

b. Using a wrench, hold the crankshaft.

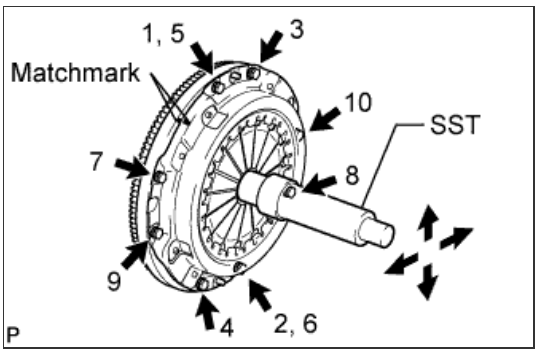
c. Uniforml install and tighten the 8 bolts in the sequence shown in the illustration.

Torque:
182 N*m{ 1856 kgf*cm , 134 ft.*lbf }



7. INSTALL CLUTCH ISC ASSEMBLY (for Manual Transmission)

a. Insert SST into the clutch disc, then insert the clutch disc into the flywheel.



SST
09301-00120

NOTICE:

Take care not to insert the clutch disc in the wrong direction.

8. INSTALL CLUTCH COVER ASSEMBLY (for Manual Transmission)

a. Align the matchmark on the clutch cover with the one on the flywheel.

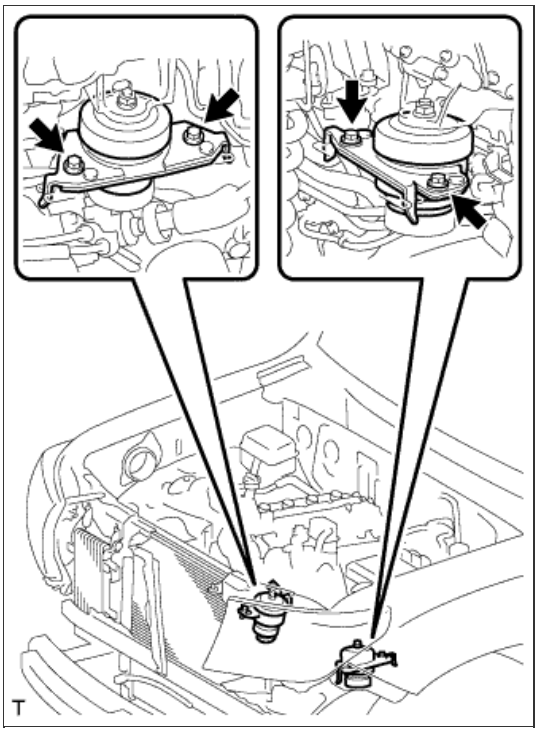
b. In the order shown in the illustration, tem orarily install the 8 bolts starting from the bolt located near the knock n on the to

c. ck that the disc is in the center by lightly moving SST up and down, and left and right.

SST
09301-00120

. Evenly tighten the bolts by following the order shown in the illustration.

Torque:
39 N*m{ 400 kgf*cm , 29 ft.*lbf }

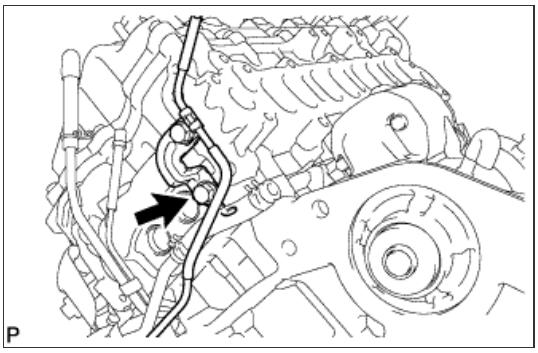


9. INSTALL ENGINE ASSEMBLY

a. Slowly lower the engine into the engine com artment.

b. Install the 4 bolts to the front mounting insulator R and L

Torque:
58 N*m{ 591 kgf*cm , 43 ft.*lbf }



c. emove the 4 bolts and No. and No. engine hangers.

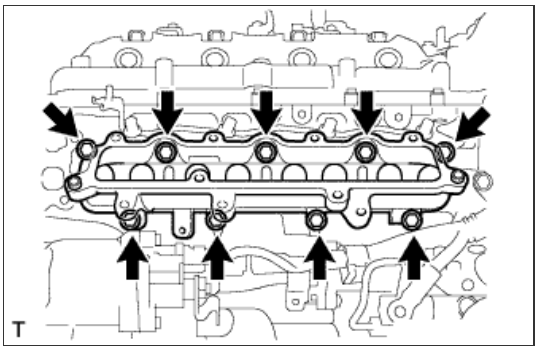
10. INSTALL CLUTCH RELEASE CYLIN ER TO FLEXIBLE HOSE TUBE (for Manual Transmission)

a. Install the tube with the bolt.

Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

11. INSTALL MANUAL TRANSMISSION UNIT ASSEMBLY

a. Install the manual transm ssion unit assem l (Click here).

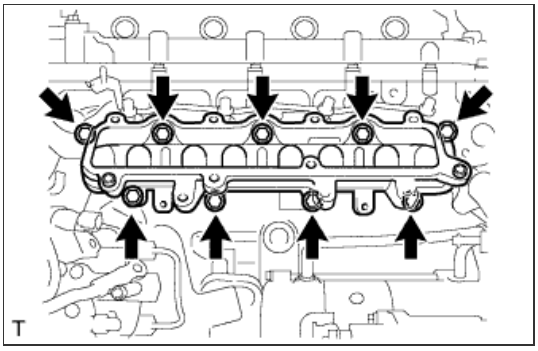


12. INSTALL AUTOMATIC TRANSMISSION ASSEMBLY

a. Install the automatic transm ssion assem l (Click here).

13. INSTALL NO. 2 INTAKE MANIFOL

a. Install a new gasket and the No. intake manifold with the 9 bolts.

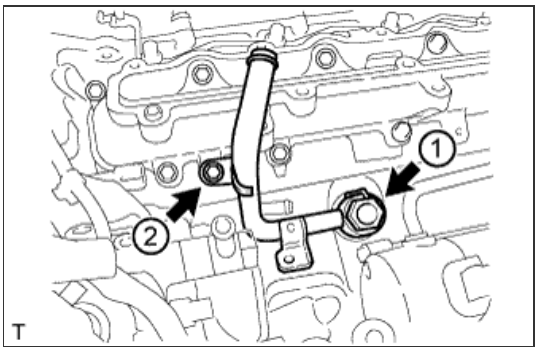


Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

14. INSTALL NO. 1 INTAKE MANIFOL

a. Install a new gasket and the No. intake manifold with the 9 bolts.

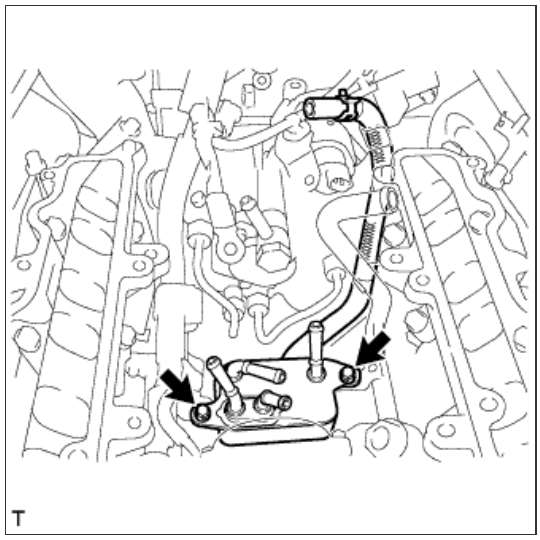
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



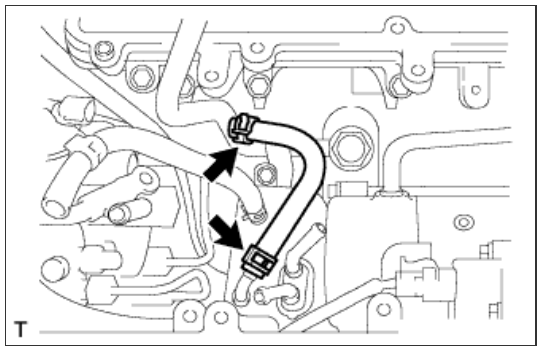
15. INSTALL NO. 1 WATER BY-PASS PIPE

a. Tem orarily install a new gasket and the No. water by-pass pipe with the union bolt and bolt.

b. Tighten the union bolt and bolt in the order shown in the illustration.



Torque:
for union bolt:
59 N*m{ 600 kgf*cm , 43 ft.*lbf }
for bolt:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

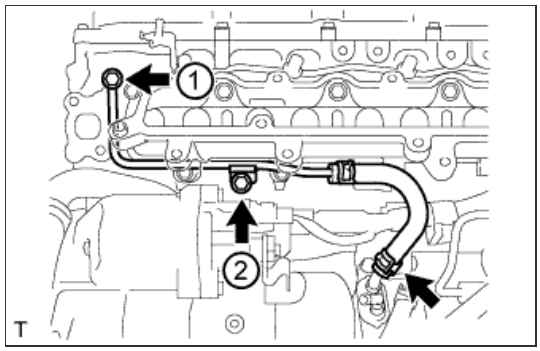


16. INSTALL FUEL COOLER ASSEMBLY

a. Install the fuel cooler with the bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

17. CONNECT NO. 6 WATER BY-PASS HOSE



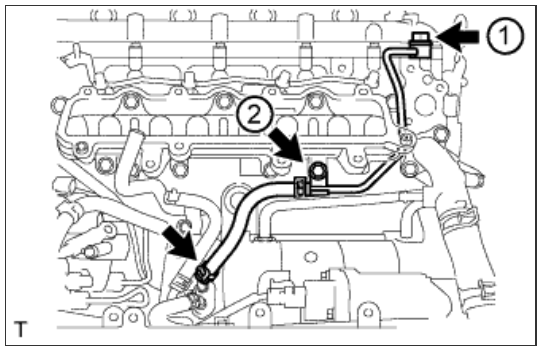
18. INSTALL NO. 4 NO LE LEAKAGE PIPE

a. Tem orarily install a new gasket and the No. 4 nozzle leakage pipe with the union bolt and bolt.

b. Tighten the union bolt and bolt in the order shown in the illustration.

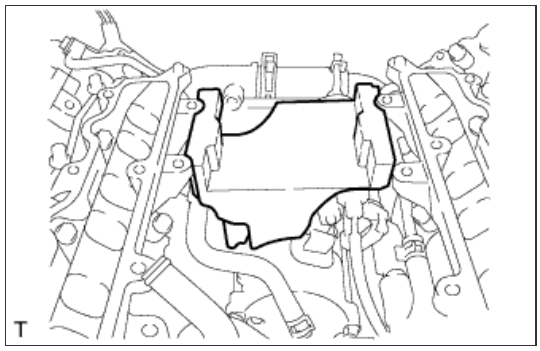
Torque:
for union bolt:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
for bolt:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

c. Connect the No. fuel hose to the fuel cooler.



19. INSTALL NO. 3 NO LE LEAKAGE PIPE

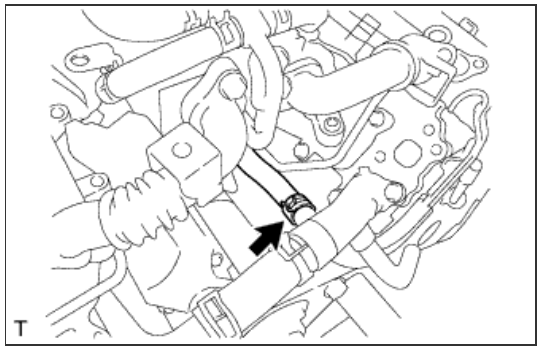
a. Tem orarily install a new gasket and the No. 3 nozzle leakage pipe with the union bolt and bolt.



b. Tighten the union bolt and bolt in the order shown in the illustration.

Torque:
for union bolt:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
for bolt:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

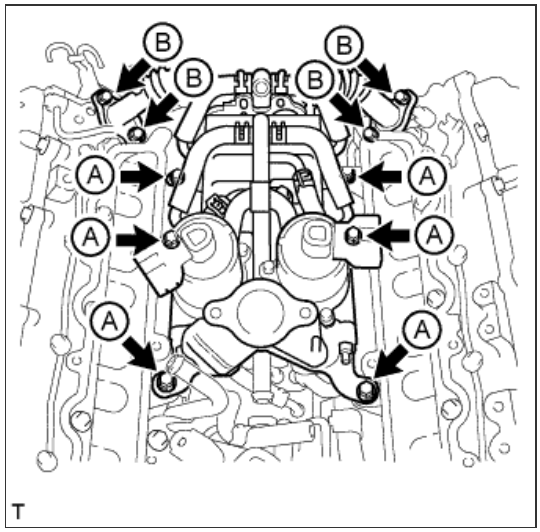
c. Connect the No. fuel hose to the fuel cooler.



20. INSTALL EGR COOLER INSULATOR (w/ EGR System)

21. INSTALL EGR VALVE ASSEMBLY WITH EGR COOLER (w/ EGR System)

a. Connect the No. 5 water by-pass hose to the water by-pass outlet.

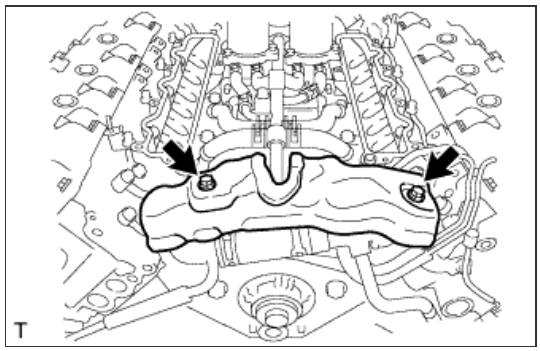


b. Install new gaskets and the EGR valve with EGR cooler with the 6 bolts labeled A and 4 bolts labeled B shown in the illustration.

Torque:
for bolt A:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
for bolt B:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

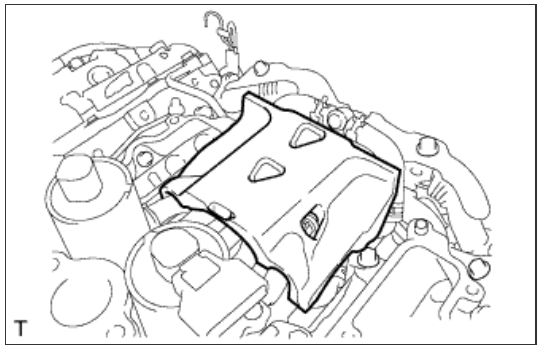
HINT:

The gasket claws should face toward the No. and No. EGR pipes.



22. INSTALL EGR PIPE INSULATOR (w/ EGR System)

a. Install the EGR pipe insulator with the bolts.



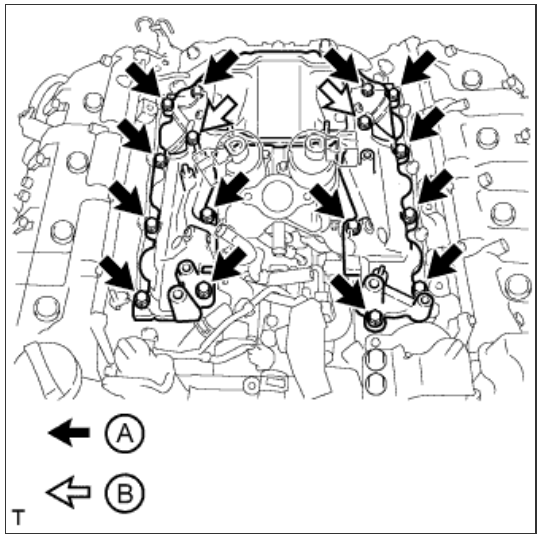
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

NOTICE:

If the No. and No. EGR pipe insulator installation stay is deformed, or the bolt holes of the EGR pipe insulator do not align, replace the No. and No. pipes as a set.

23. INSTALL INTAKE MANIFOL INSULATOR (w/ EGR System)

24. INSTALL NO. 3 INTAKE MANIFOL



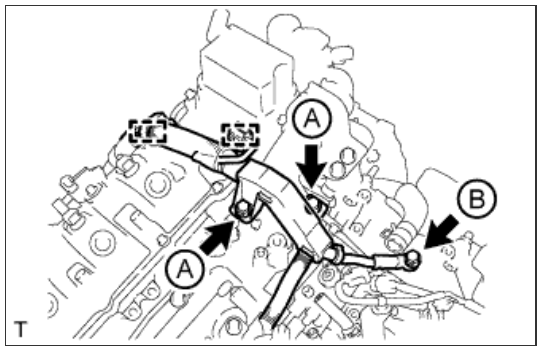
a. Set new gaskets to the No. and No. intake manifolds.

b. Install the No. 3 intake manifold with the bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

Bolt Length

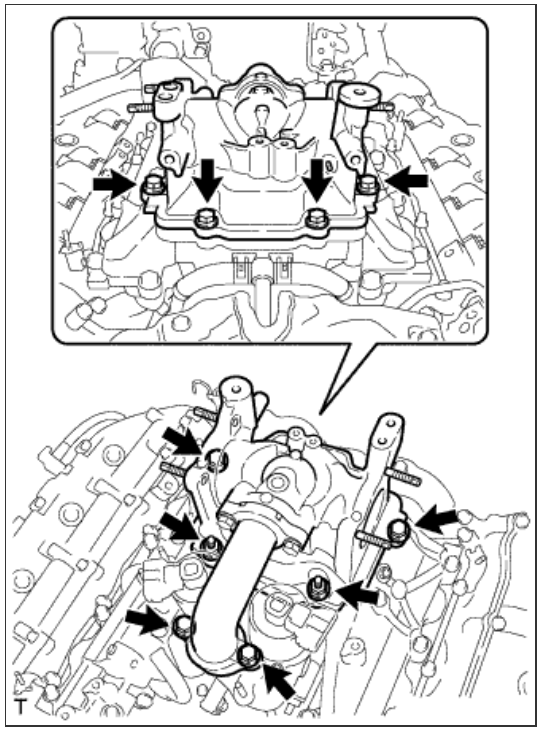
Item	engthength
Bolt A	mm (0.984 in.)
Bolt B	70 mm (in.)



25. CONNECT NO. 2 ENGINE WIRE

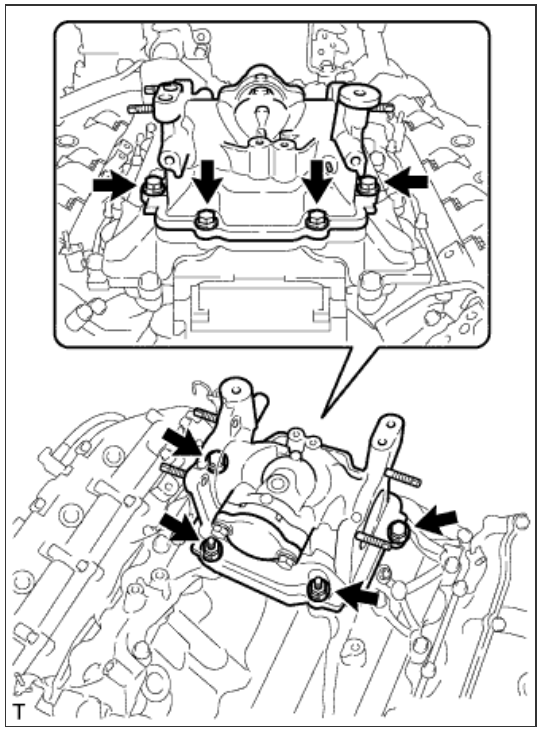
a. Connect the No. engine wire with the 3 bolts.

Torque:
for bolt A:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }
for bolt B:
32 N*m{ 326 kgf*cm , 24 ft.*lbf }



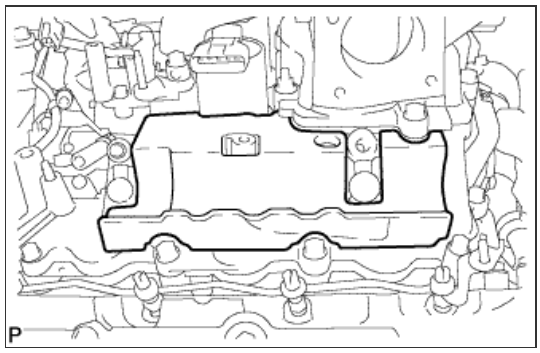
b. Attach the wire harness clam s.

26. INSTALL INTAKE PIPE

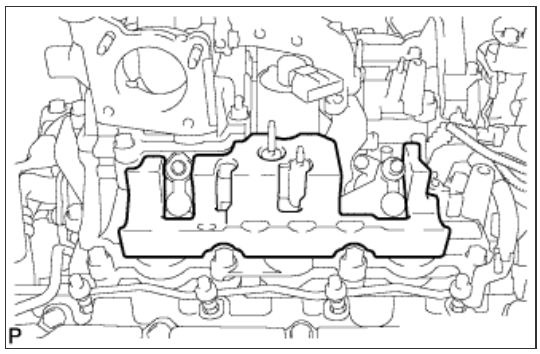


a. w/ EGR System
Install new gaskets and the intake pipe with the 6 bolts and nuts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

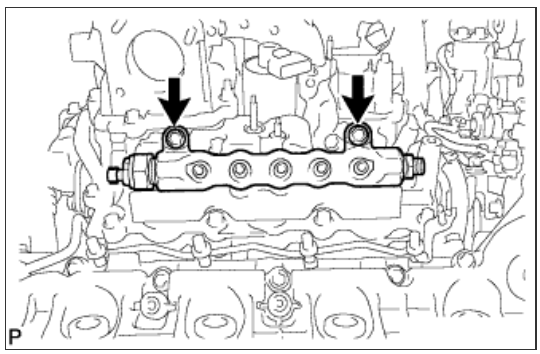


b. w/o EGR System
Install a new gasket and the intake pipe with the 4 bolts and nuts.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

27. INSTALL NO. 2 INTAKE MANIFOL INSULATOR (w/ Intercooler)

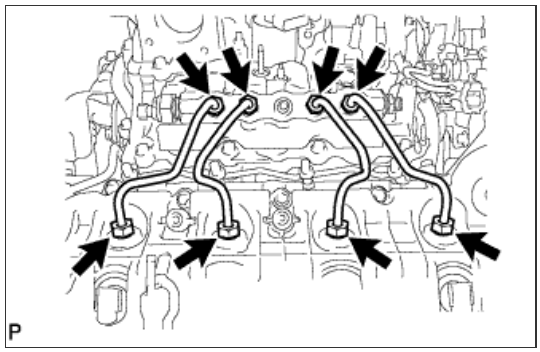


28. INSTALL NO. 1 INTAKE MANIFOL INSULATOR (w/ Intercooler)

29. INSTALL COMMON RAIL ASSEMBLY RH

a. Install the common rail with the bolts.

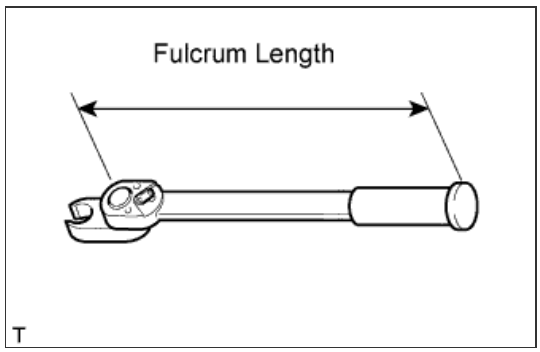
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



30. INSTALL INJECTION PIPE RH

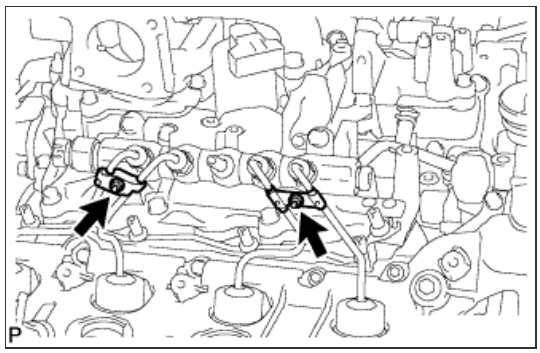
a. Using a union nut wrench, install the 4 new injection pipes.

Torque:
without union nut wrench:
34 N*m{ 347 kgf*cm , 25 ft.*lbf }
with union nut wrench:
31 N*m{ 316 kgf*cm , 23 ft.*lbf }



NOTICE:

Make sure there is no damage or foreign matter on the seal surfaces.

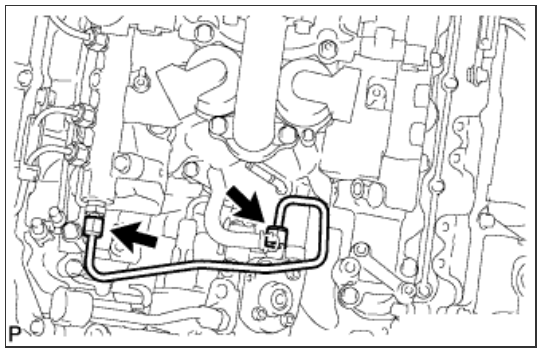


HINT:

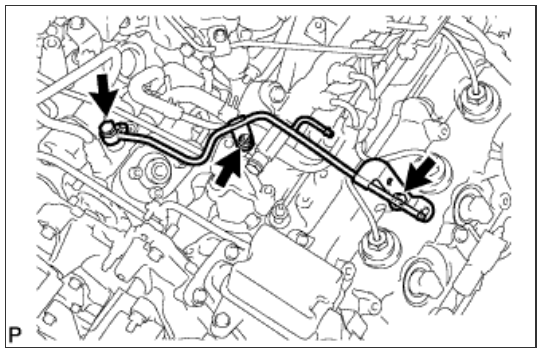
- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.).**
- **Make sure the union nut wrench an the torque wrench are connecte in a straight line.**

b. w/ Intercooler:
Install the 4 injection pipe clam s with the nuts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }



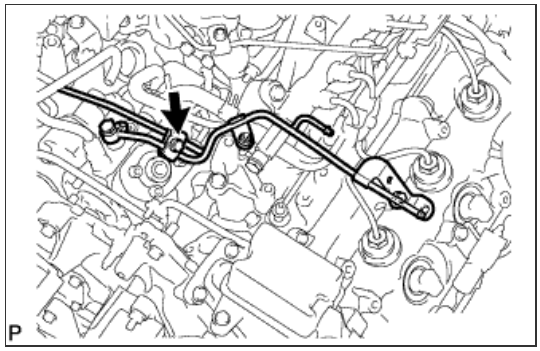
31. INSTALL NO. 5 INJECTION PIPE SUB-ASSEMBLY



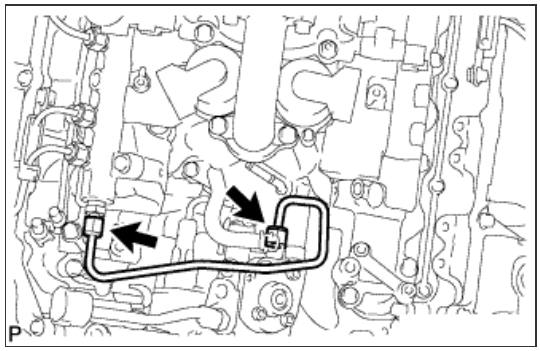
a. Tem orarily install a new No. 5 injection pipe by hand.

NOTICE:

Make sure there is no damage or foreign matter on the seal surfaces.

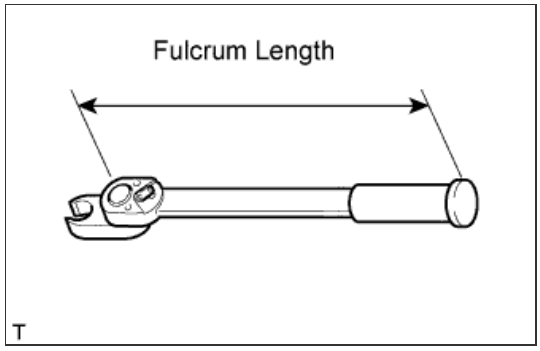


b. Tem orarily install the used gasket and No. fuel pipe with the nut, bolt and union bolt.



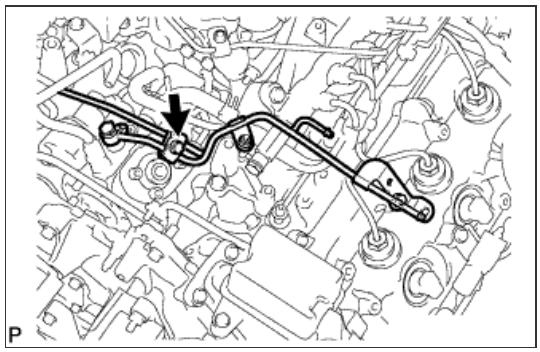
c. Tem orarily install the No. injection pipe clam with the bolt.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }



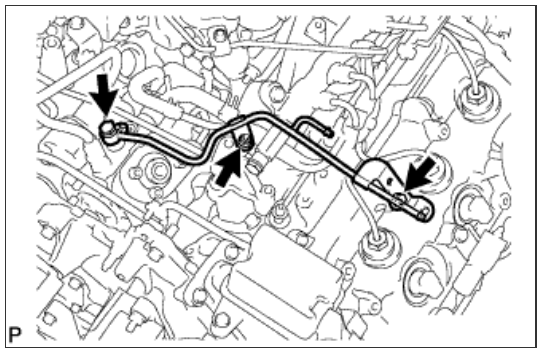
. Using a union nut wrench, tighten the No. 5 injection pipe ends.

Torque:
without union nut wrench:
34 N*m{ 347 kgf*cm , 25 ft.*lbf }
with union nut wrench:
31 N*m{ 316 kgf*cm , 23 ft.*lbf }



HINT:

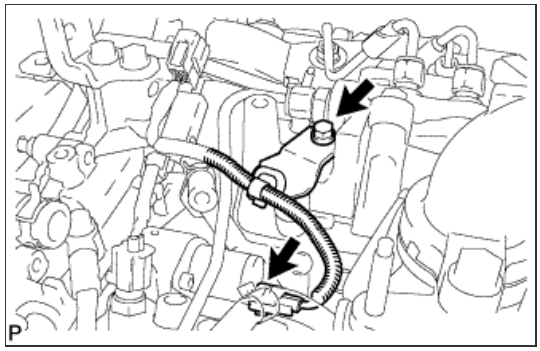
- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.).**
- **Make sure the union nut wrench an the torque wrench are connecte in a straight line.**



e. Remove the bolt and No. injection pipe clam

f. Remove the union bolt and gasket.

g. Remove the bolt, nut and No. fuel pipe.

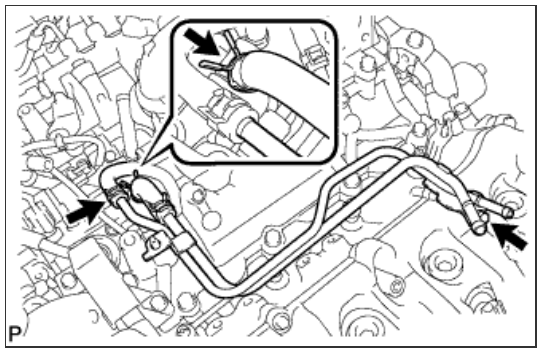


32. CONNECT FUEL PUMP MOTOR WIRE

a. Install the fuel pum motor wire bracket to the No. 3 intake manifold with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

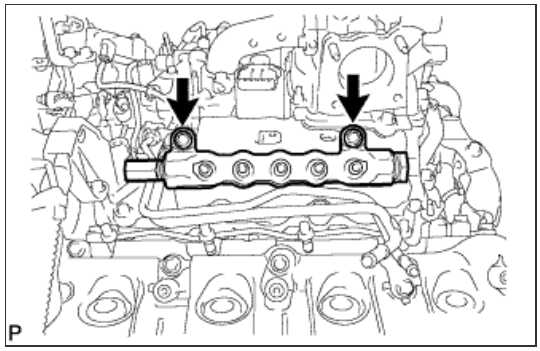
b. Connect the connector to the fuel supply pum



33. INSTALL FUEL FILTER TO INJECTION PUMP FUEL PIPE SUB-ASSEMBLY

a. Install the fuel filter to injection pum fuel pipe with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

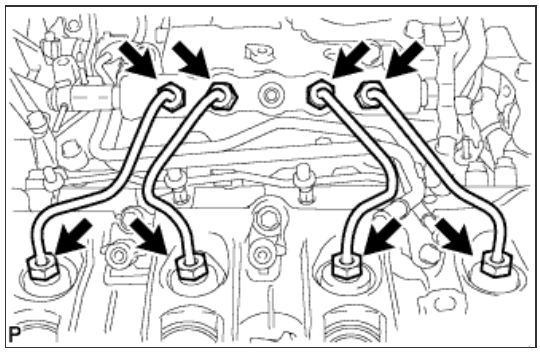


b. Connect the hoses to the fuel pipe.

34. INSTALL COMMON RAIL ASSEMBLY LH

a. Install the common rail with the bolts.

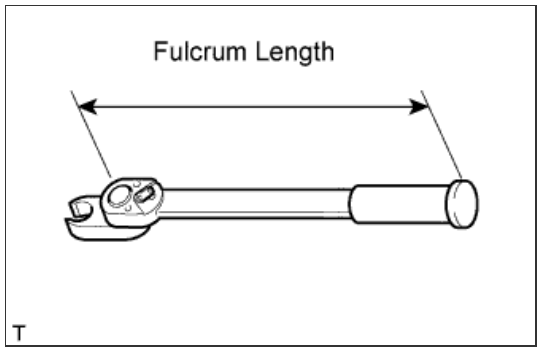
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



35. INSTALL INJECTION PIPE LH

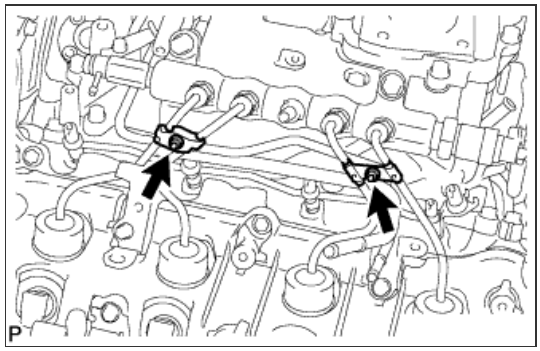
a. Using a union nut wrench, install the 4 new injection pipes.

Torque:
without union nut wrench:
34 N*m{ 347 kgf*cm , 25 ft.*lbf }
with union nut wrench:
31 N*m{ 316 kgf*cm , 23 ft.*lbf }



NOTICE:

Make sure there is no damage or foreign matter on the seal surfaces.



HINT:

- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.).**
- **Make sure the union nut wrench an the torque wrench are connecte in a straight line.**

b. w/ Intercooler:
Install the 4 injection pipe clam s with the nuts.

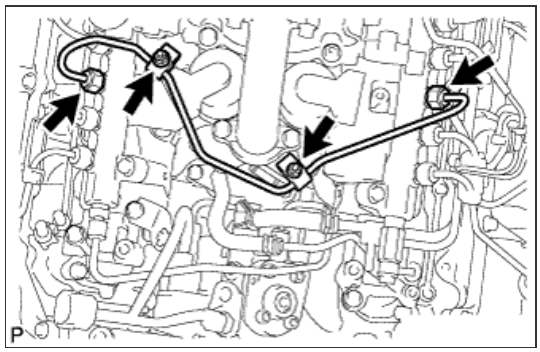
Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

36. CONNECT NO. 6 IN ETION PIPE SUB-ASSEMBLY

a. w/ EGR System

i. em orarily install a new No. 6 injection pipe to the common rail L and R

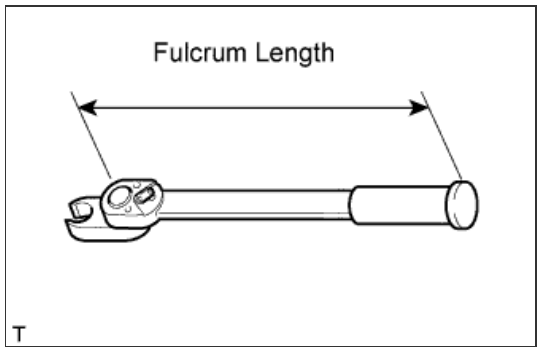
NOTICE:



ake sure there is no damage or foreign matter on the seal surfaces.

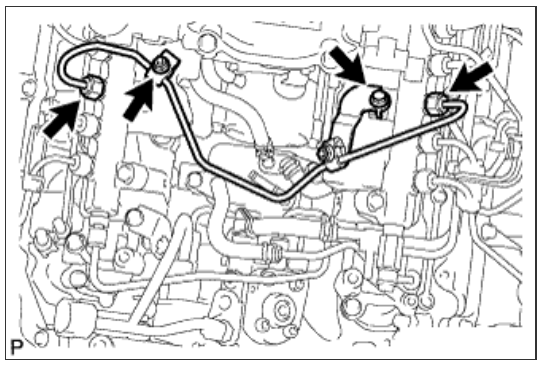
ii. Install the No. injection pipe clam s with the nuts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }



iii. Using a union nut wrench, tighten the No. 6 injection pipe ends.

Torque:
without union nut wrench:
34 N*m{ 347 kgf*cm , 25 ft.*lbf }
with union nut wrench:
31 N*m{ 316 kgf*cm , 23 ft.*lbf }



HINT:

- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.).**
- **Make sure the union nut wrench an the torque wrench are connecte in a straight line.**

b. w/o EGR System

i. em orarily install a new No. 6 injection pipe to the common rail L and R

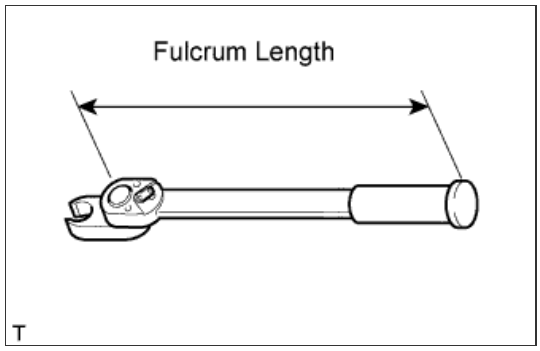
NOTICE:

ake sure there is no damage or foreign matter on the seal surfaces.

ii. Install the bracket to the No. 3 intake manifold with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

iii. Install the No. injection pipe clam with the nut.



Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

i . Using a union nut wrench, tighten the No. 6 injection pipe ends.

Torque:
without union nut wrench:
34 N*m{ 347 kgf*cm , 25 ft.*lbf }
with union nut wrench:
31 N*m{ 316 kgf*cm , 23 ft.*lbf }

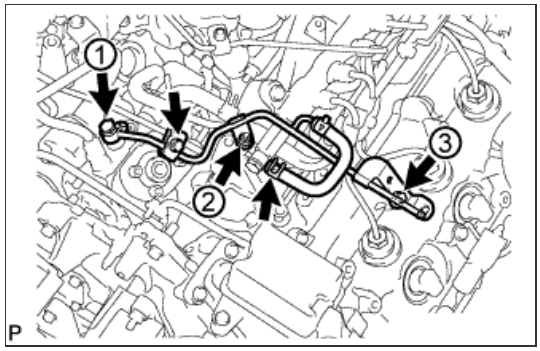
HINT:

- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.).**
- **Make sure the union nut wrench an the torque wrench are connecte in a straight line.**

37. INSTALL NO. 2 FUEL PIPE SUB-ASSEMBLY

NOTICE:

Check for damage and foreign matter on the fuel pipe installation surface of the supply pum



If there is foreign matter, remove it from the installation surface. If the installation surface is damaged, replace the fuel supply pum

a. em orarily install a new gasket and the No. fuel pipe with the union

bolt, nut and bolt.

b. Tighten the union bolt, nut and bolt in the order shown in the illustration.

Torque:
for union bolt:
10 N*m{ 105 kgf*cm , 8 ft.*lbf }
for bolt an nut:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

c. Install the No. injection pipe clam with the bolt.

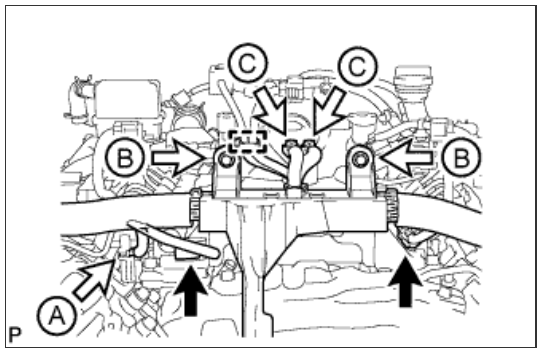
Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

. Connect the fuel hose to the No. 5 nozzle leakage pipe.

38. CONNECT ENGINE WIRE

a. Rear Side:

i. Install the glow plug wire harness with the nut labeled A.



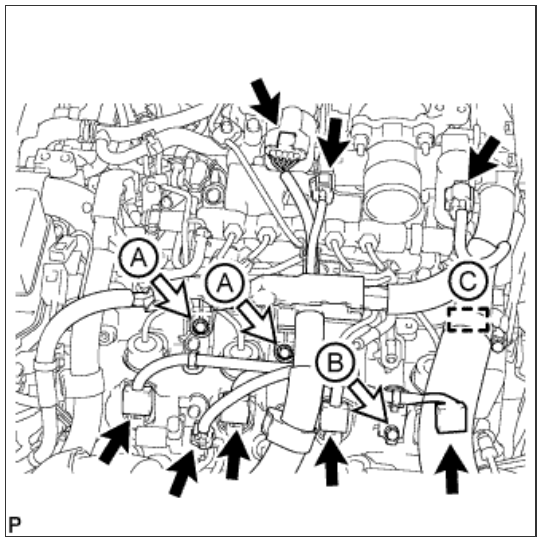
Torque:
4.0 N*m{ 41 kgf*cm , 35 in.*lbf }

ii. Connect the common rail connectors.

iii. Install the engine wire harness protector with the bolts labeled B.

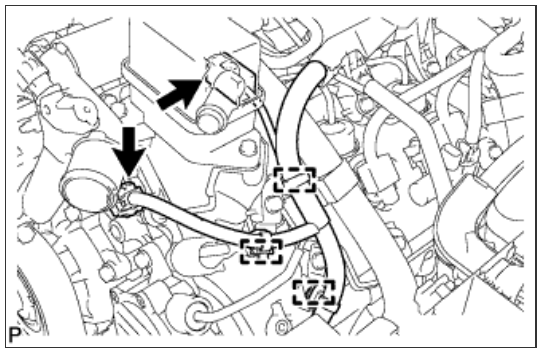
i . Install the ground wires with the bolts labeled C.

Torque:
8.4 N*m{ 87 kgf*cm , 74 in.*lbf }



b. L Side:

i. Install the engine wire protector with the bolts labeled A.



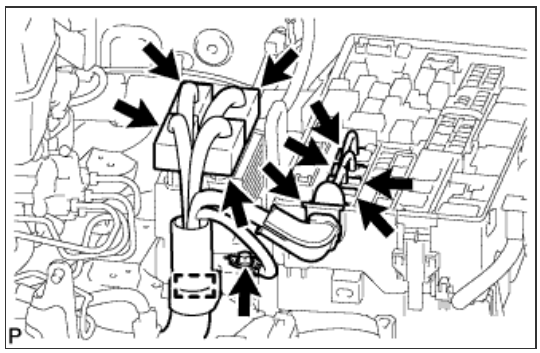
ii. Connect the 8 connectors.

iii. Install the engine wire harness bracket with the bolt labeled B.

i . for R
onnect the wire harness with the wire harness clam holder labeled C.

. Attach the 3 wire harness clam s and connect the connectors.

.i Connect the 4 connectors to the injection driver.



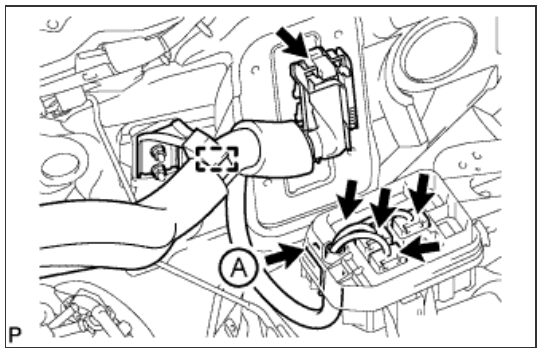
ii Install the ground wire with the bolt.

Torque:
8.4 N*m{ 87 kgf*cm , 74 in.*lbf }

iii Connect the wire harness holder to the relay block.

ix. Connect the 4 connectors to the relay block.

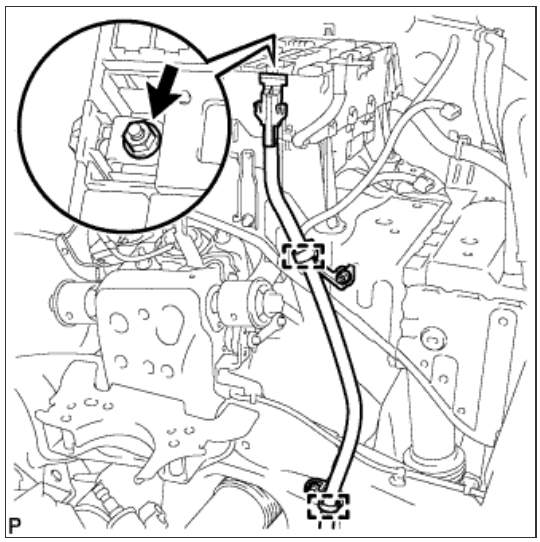
x. Connect the wire harness with the wire harness clam holder.



xi. for R
onnect the wire harness with the wire harness clam holder.

xii. for R
onnect the ECM connector to the ECM.

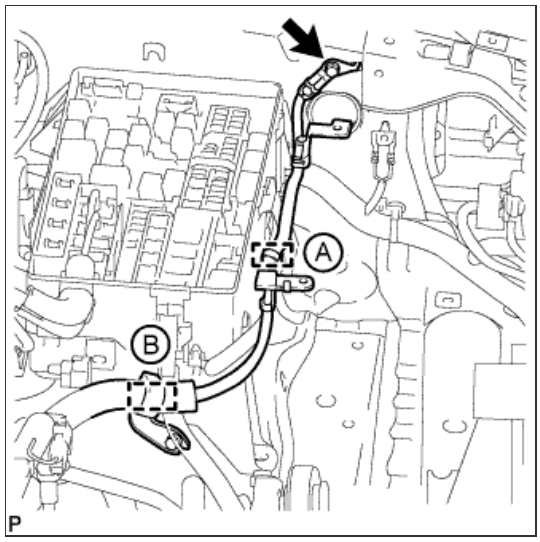
xiii. for R
ttach the wire harness tab labeled A to the relay block.



xi . Connect the 4 connectors to the relay block.

x . Connect the generator positive (+) cable to the body panel with the
dm s.

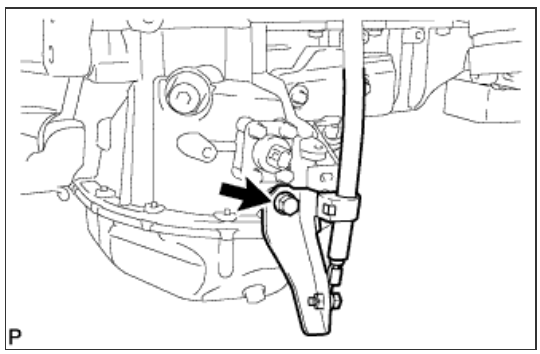
x .i Attach the generator positive (+) cable holder to the relay block, and install the cable to the relay block with the nut.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

x ii Connect the wire harness with the wire harness clam holder labeled B, and attach the ground wire clam to the relay block side labeled A.

x iii Install the ground wire to the body panel with the bolt.

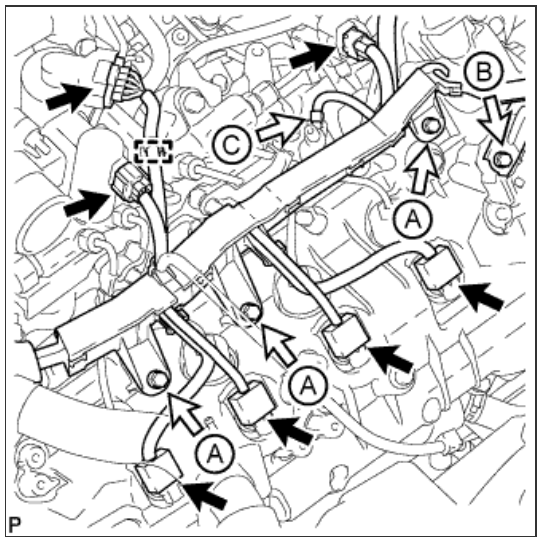


Torque:
8.4 N*m{ 87 kgf*cm , 74 in.*lbf }

c. R Side:

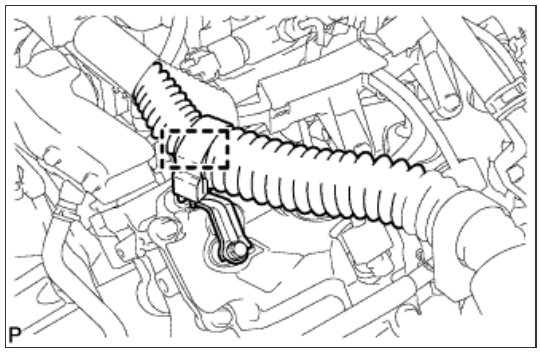
i. w/ Winch:
Install the ground wire with the bolt.

Torque:
19 N*m{ 194 kgf*cm , 14 ft.*lbf }



ii. Install the engine wire harness protector with the 3 bolts labeled A.

iii. Connect the 7 connectors.

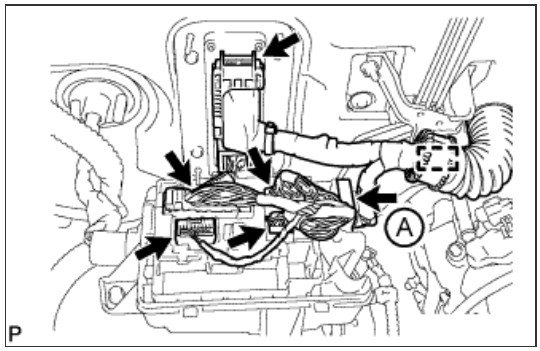


i . Install the wire harness bracket with the bolt labeled B.

. Install the glow plug wire harness with the nut labeled C.

Torque:
4.0 N*m{ 41 kgf*cm , 35 in.*lbf }

.i for R
onnect the wire harness with the wire harness holder.

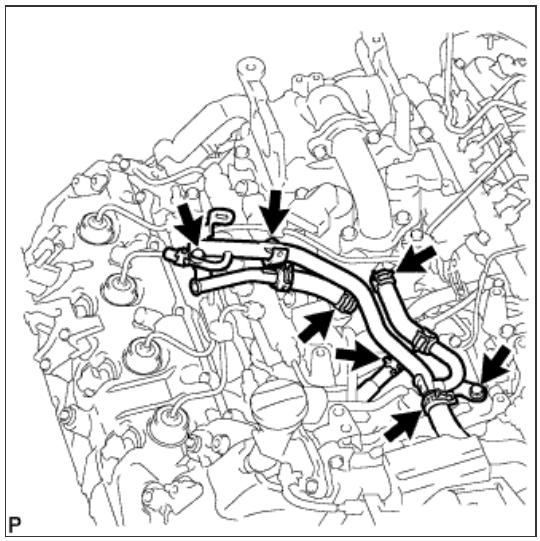


ii for L
onnect the wire harness with the wire harness clam holder.

iii for L
onnect the ECM connector to the ECM.

ix. for L
ttach the wire harness tab labeled A to the relay block.

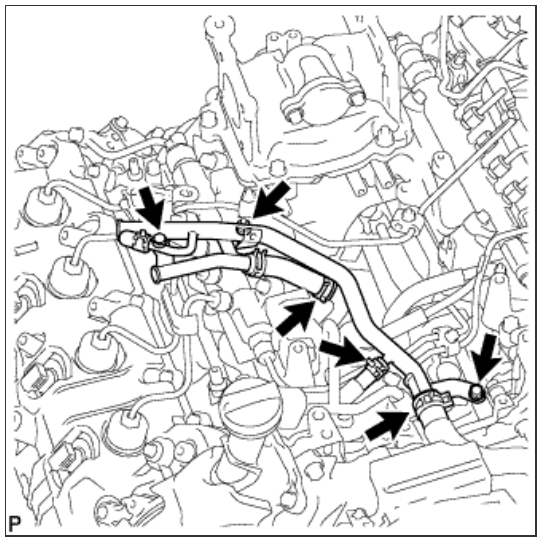
x. for L
onnect the 4 connectors to the relay block.



39. INSTALL NO. 4 WATER BY-PASS PIPE

a. w/ EGR System
onnect the 4 water hose ends, and tem orarily install the No. 4 water by-pass pipe with the bolts and nut.

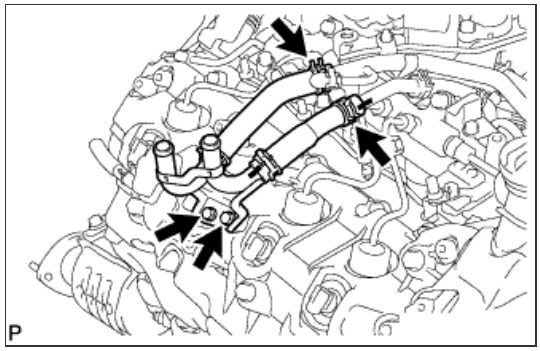
b. First tighten the bolts and then tighten the nut.



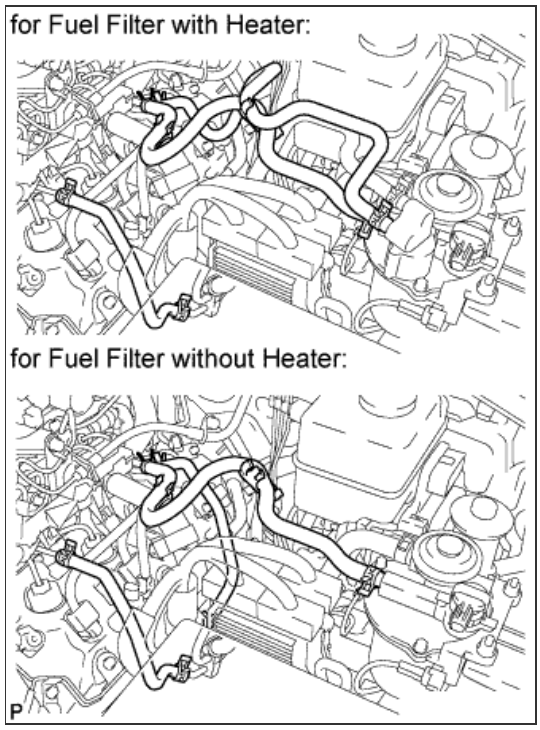
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

c. w/o EGR System
onnect the 3 water hose ends, and tem orarily install the No. 4 water by-pass pipe with the bolts and nut.

. First tighten the bolts and then tighten the nut.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



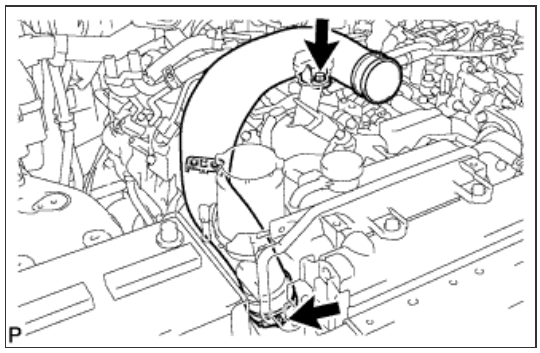
40. INSTALL NO. 3 WATER BY-PASS PIPE (w/o Viscous Heater)

a. Connect the water hose ends, and install the No. 3 water by-pass pipe with the bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

41. CONNECT FUEL HOSE

42. INSTALL NO. 1 AIR CLEANER PIPE SUB-ASSEMBLY

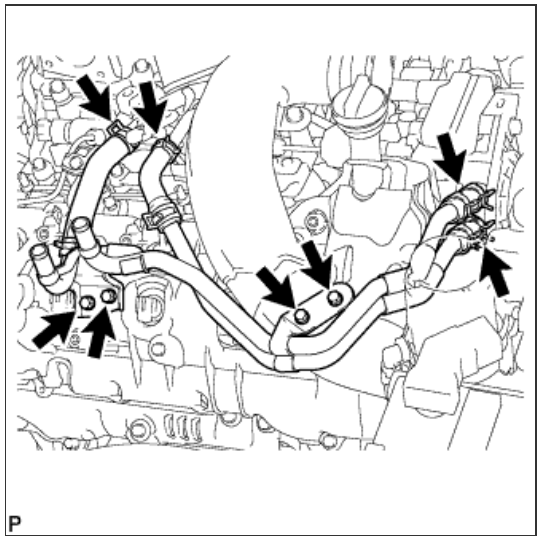


a. Connect the No. air cleaner pipe to the No. intake air connector pipe.

b. Install the pipe with the bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

c. Tighten the hose clam

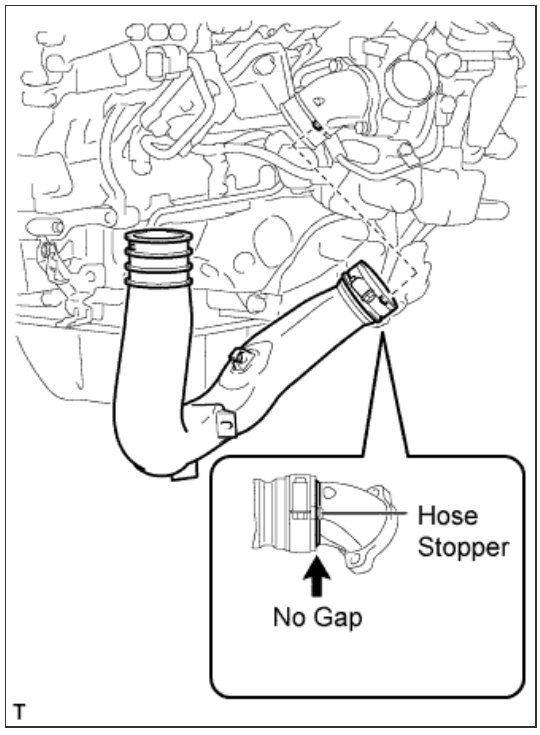


Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

43. INSTALL HEATER WATER PIPE SUB-ASSEMBLY (w/ Viscous Heater)

a. onnect the 4 water hose ends, and install the water pipe with the 4 bolts.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

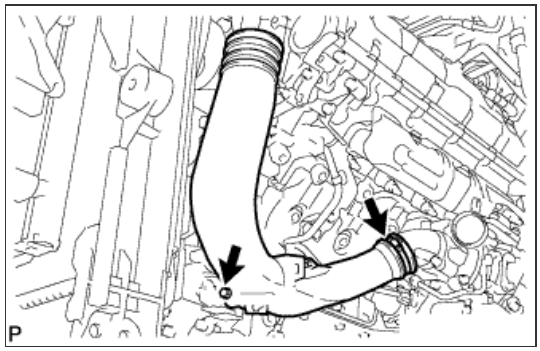


44. INSTALL NO. 2 INTAKE AIR CONNECTOR PIPE

a. Install the No. intake air connector pipe to the No. inlet com essor elbow.

NOTICE:

Make sure there is no gap between the air pipe and hose stopper on the elbow side.

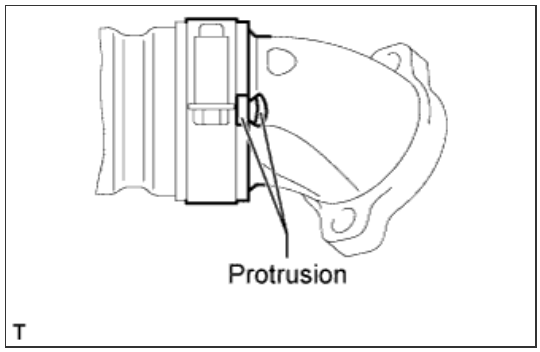


b. Install the bolt of the air pipe.

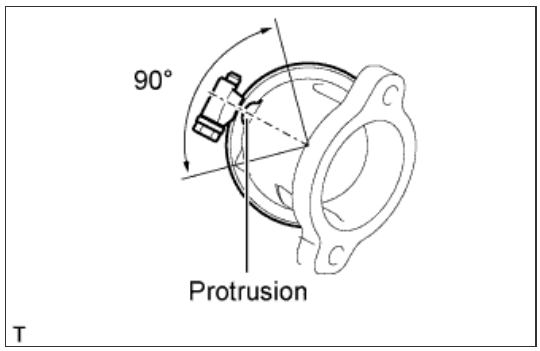
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

NOTICE:

Do not excessively pull the air pipe towards the front of the engine.

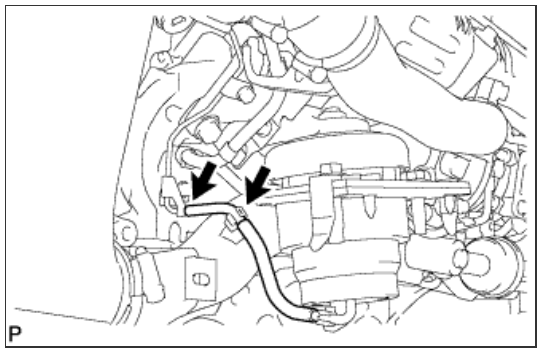


c. Tighten the hose clam on the elbow side.



Torque:
6.0 N*m{ 61 kgf*cm , 53 in.*lbf }

HINT:



- **Align the 2 protrusions of the air pipe an elbow.**
- **Install the air pipe so that the protrusion on the pipe si ds within the range of the protrusion on the elbow si e**
- **After tightening, a gap between the air pipe an hose stopper on the elbow si ds acceptable.**

- **Make sure the rection of the hose clamp is as shown in the illustration.**

. w/ Intercooler:
Connect the vacuum hose.

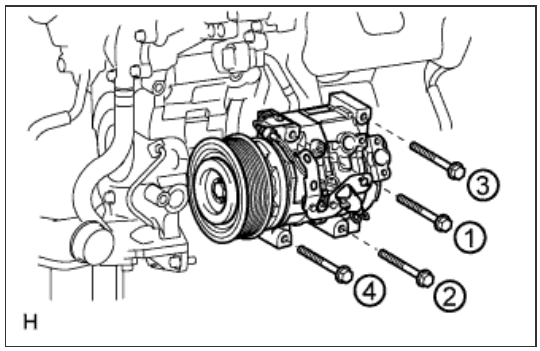
45. A UST COMPRESSOR OIL

a. When replacing the com essor and magnetic clutch with a new one, gradually discharge the refrigerant gas from the service valve, and drain the following amount of oil from the new com essor and magnetic clutch before installation.

Stan a :
V 200L-GNMN V, GNTN V, GPMN V:
(Oil capacity insi the new compressor an magnetic clutch: 140 + 15 cc (4.7 + 0.51 fl.o .)) - (Remaining oil amount in the remo e compressor an magnetic clutch) (Oil amount to be remo e from the new compressor when replacing)
Except V 200L-GNMN V, GNTN V, GPMN V:
(Oil capacity insi the new compressor an magnetic clutch: 135 + 15 cc (4.6 0.51 fl.o .)) - (Remaining oil amount in the remo e compressor an magnetic clutch) (Oil amount to be remo e from the new compressor when replacing)

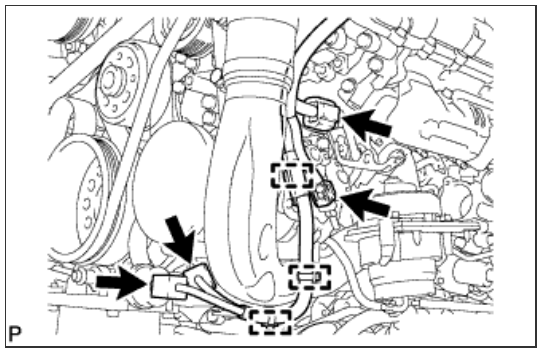
NOTICE:

- **When checking the compressor oil le , follow the A/C system precautions.**



- If a new compressor an magnetic clutch is installe without remo ig some oil remaining in the pipes of the icle, the oil amount will be too large. This pre ent heat exchange in the refrigerant cycle an causes refrigerant failure.
- If the olume of oil remaining in the remo e compressor an magnetic clutch is too small, check for oil leakage.
- Be sure to use N OIL 8 or equi lent for compressor oil.

46. INSTALL COOLER COMPRESSOR ASSEMBLY



a. Tem orarily install the cooler com essor with the 4 bolts.

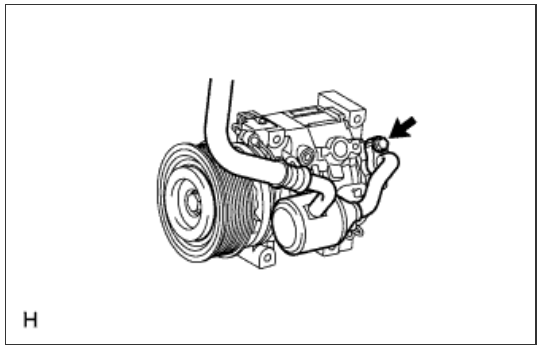
b. Tighten the 4 bolts in the order shown in the illustration.

Torque:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }

c. Attach the 3 wire harness clam s and connect the 4 connectors.

47. INSTALL SUCTION HOSE SUB-ASSEMBLY

a. Remove the attached vinyl tape from the cooler refrigerant suction hose.



b. Sufficiently apply com essor oil to a new O-ring and the fitting surface of the cooler com essor.

Compressor oil:
N OIL 8 or equi lent

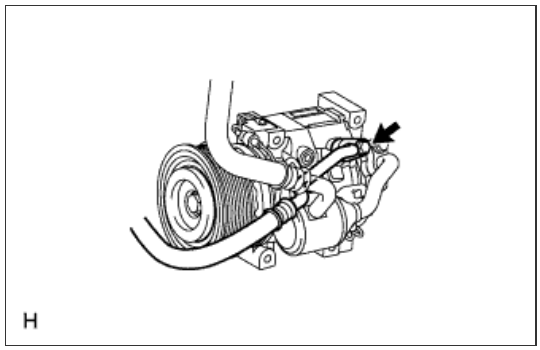
c. Install the O-ring to the suction hose.

. Connect the suction hose to the cooler com essor with the bolt.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

48. INSTALL NO. 1 COOLER REFRIGERANT ISCHARGE HOSE

a. Remove the attached vinyl tape from the discharge hose.



b. Sufficiently apply com essor oil to a new O-ring and the fitting surface of the cooler com essor.

Compressor oil:
N OIL 8 or equi lent

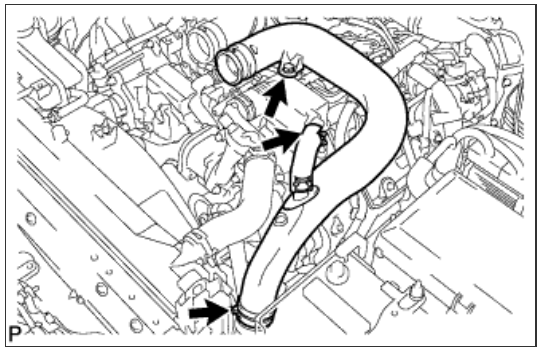
c. Install the O-ring to the discharge hose.

. Connect the discharge hose to the cooler com essor with the bolt.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

49. INSTALL NO. 2 AIR CLEANER PIPE SUB-ASSEMBLY

a. Connect the No. air cleaner pipe to the No. intake air connector pipe.



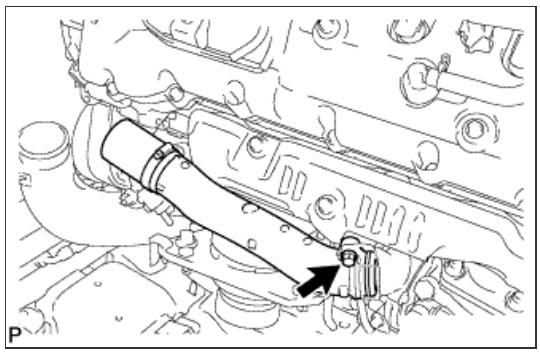
b. Connect the ventilation hose to the oil separator.

c. Install the pipe with the bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

. Tighten the hose clam

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }



50. INSTALL NO. 2 AIR TUBE ASSEMBLY

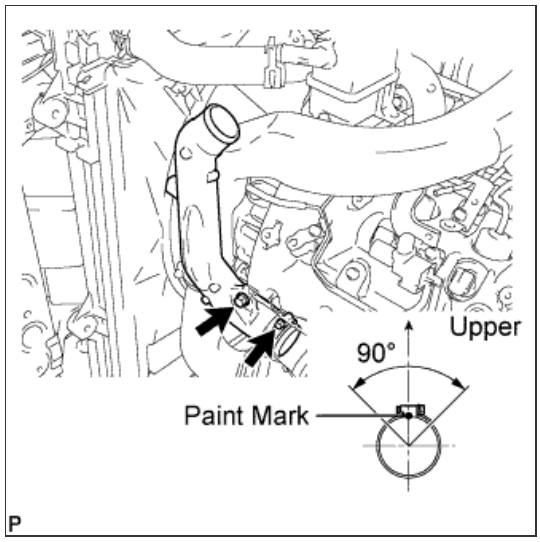
a. allight coat of washer fluid to a new O-ring, and install it to the No. air tube.

b. Install the No. air tube with the bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

51. INSTALL NO. 4 AIR TUBE

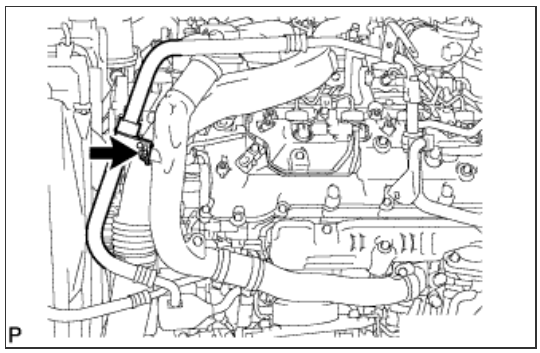
a. Install the No. 4 air tube with the bolt.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. Tighten the hose clam

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

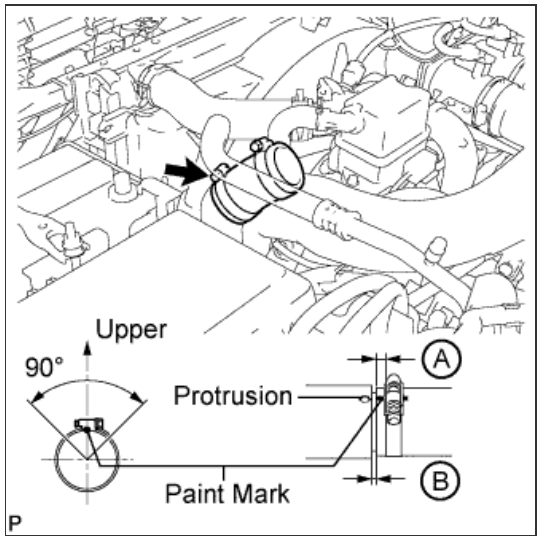


HINT:

ake sure the direction of the hose clam is as shown in the illustration.

c. Install the suction hose with the bolt.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }



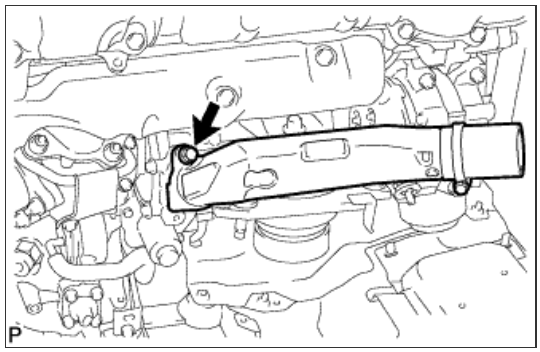
52. INSTALL NO. 2 AIR HOSE

a. Connect the No. air hose with the hose clam

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

HINT:

- **Align the paint mark of the air hose with the protrusion an push in the air hose so that stance B is 0 to 3 mm (0 to 0.118 in.).**
- **Position the clamp so that stance A is 2 to 6 mm (0.0787 to 0.236 in.).**
- **Make sure the rection of the hose clamp is as shown in the illustration.**



53. INSTALL NO. 1 AIR TUBE ASSEMBLY

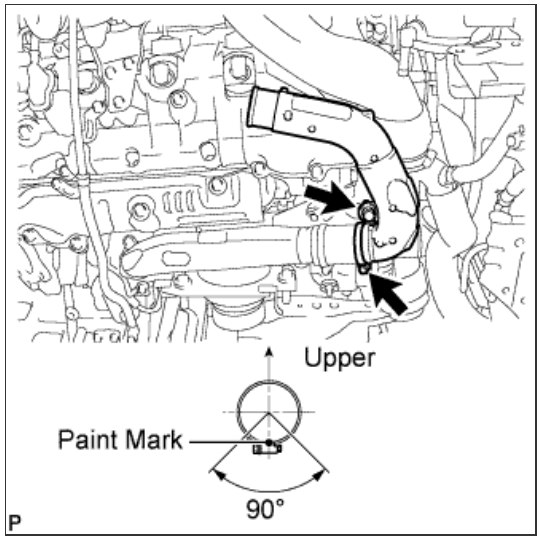
a. allight coat of washer fluid to a new O-ring, and install it to the No. air tube.

b. Install the No. air tube with the bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

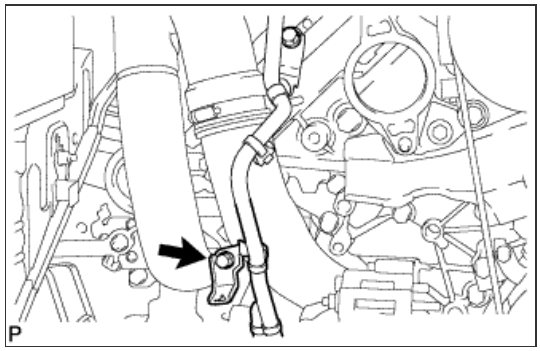
54. INSTALL NO. 3 AIR TUBE

a. Install the No. 3 air tube with the bolt.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

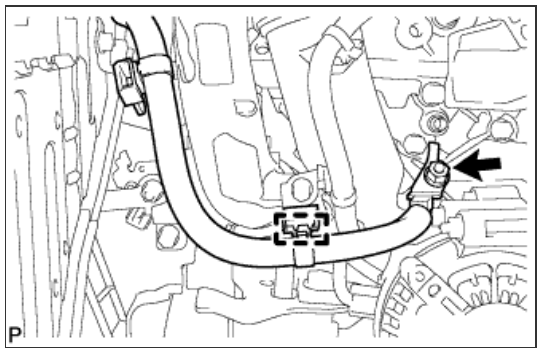
b. Tighten the hose clam



Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

HINT:

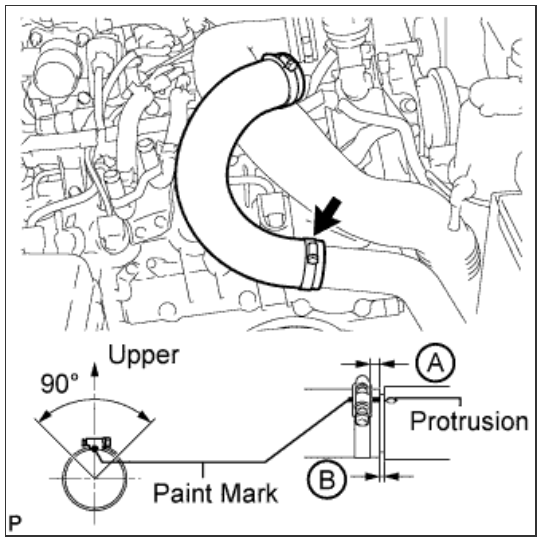
ake sure the direction of the hose clam is as shown in the illustration.



c. Install the wire harness bracket with the bolt.

. Install the ground wire with the nut, and attach the wire harness clam

Torque:
8.4 N*m{ 87 kgf*cm , 74 in.*lbf }



55. INSTALL NO. 1 AIR HOSE

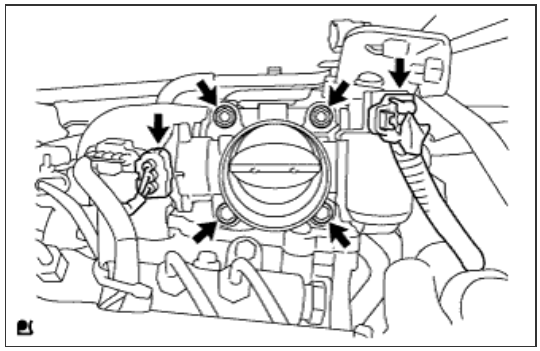
a. Connect the No. air hose with the hose clam

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

HINT:

- **Align the paint mark of the air hose with the protrusion an push in the air hose so that stance B is 0 to 3 mm (0 to 0.118 in.).**
- **Position the clamp so that stance A is 2 to 6 mm (0.0787 to 0.236 in.).**
- **Make sure the rection of the hose clamp is as shown in the illustration.**

56. INSTALL IESEL THROTTLE BO Y ASSEMBLY LH

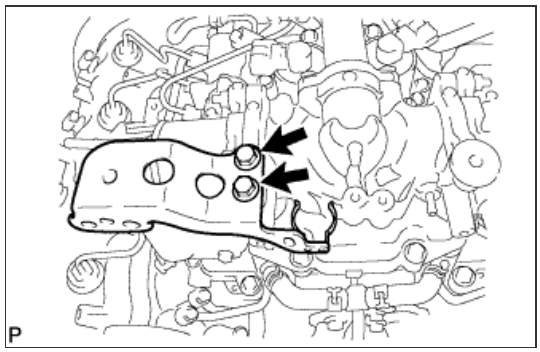


a. Install a new gasket to the intake pipe.

b. Install the throttle body with the bolts and nuts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

c. Connect the throttle position sensor connector.

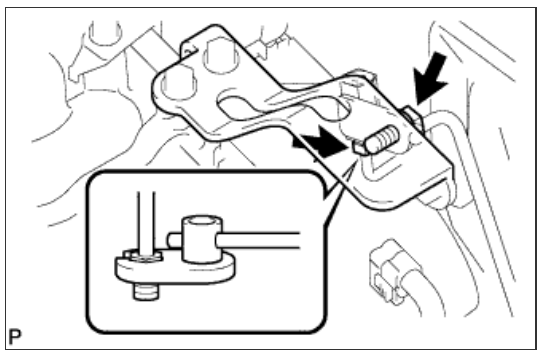


. Connect the throttle motor connector.

5 . INSTALL NO. 3 INTERCOOLER SUPPORT BRACKET

a. Install the bracket with the bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

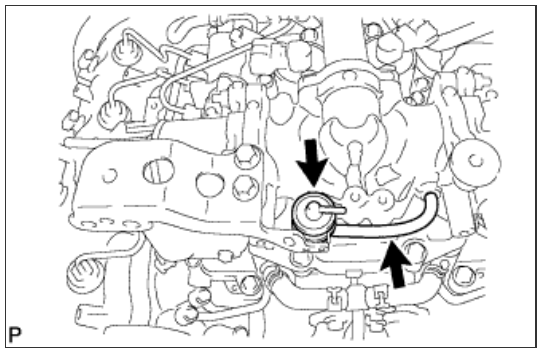


b. for Manual Transm ssion:

i. Connect the clutch tube to release cylinder way with the bolt.

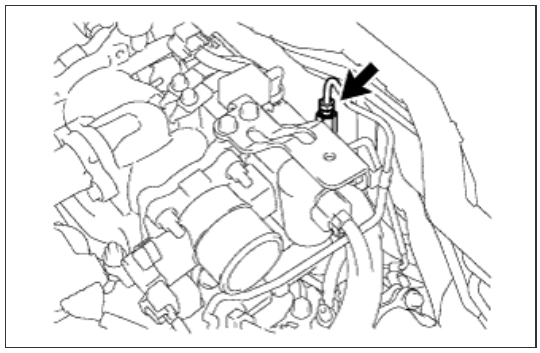
Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

ii. Check that the union nut is tightened to the specified torque.



Torque:
without union nut wrench:
15 N*m{ 154 kgf*cm , 11 ft.*lbf }
with union nut wrench:
14 N*m{ 141 kgf*cm , 10 ft.*lbf }

58. INSTALL NO. 1 GAS FILTER

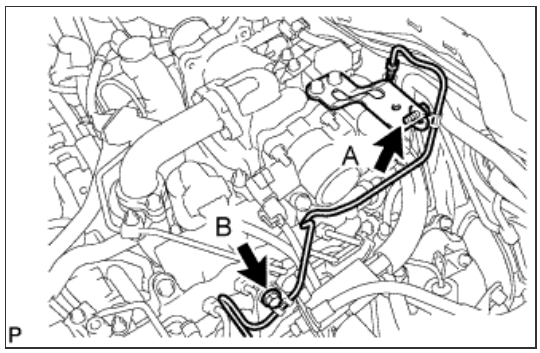


a. Install the gas filter.

b. Connect the hose to the intake pipe.

59. INSTALL TUBE CONNECTOR TO FLEXIBLE HOSE TUBE (for Manual Transmission)

a. Tem orarily install the flare nut of the tube connector to flexible hose tube to the clutch tube to release cylinder way by hand.

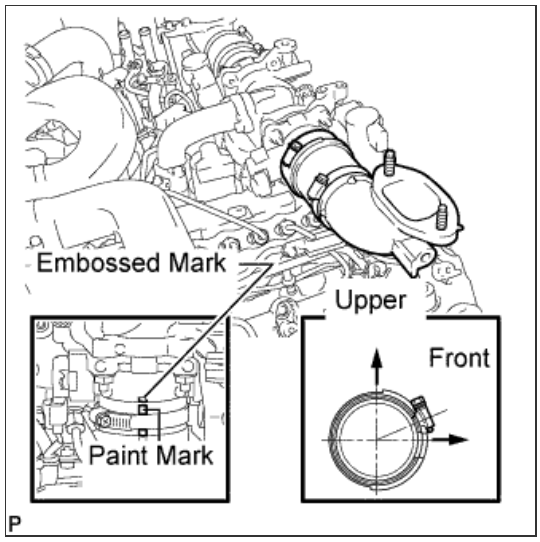


b. Tem orarily install the tube connector to flexible hose tube with the bolts.

c. Tighten the bolt labeled A.

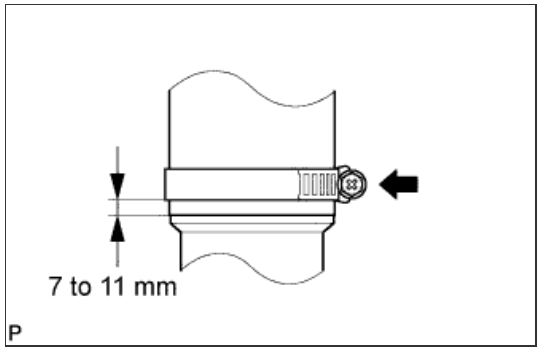
Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

NOTICE:



Tighten the bolt labeled B after installing the clutch hose.

60. INSTALL AIR TUBE SUB-ASSEMBLY LH



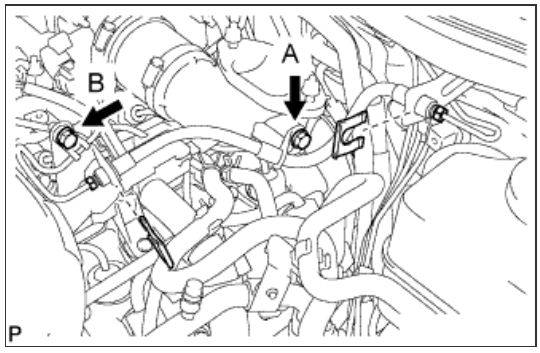
a. Install the air tube to the throttle body.

b. Align the em ossed mark of the throttle body with the paint mark of the No. 4 air hose.

c. Tighten the hose clam so that it is 7 to mm (0. to 0.433 in.) from the end of the hose as shown in the illustration.

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

61. INSTALL CLUTCH HOSE (for Manual Transmission)



a. Connect the clutch hose to the air tube with the bolt labeled A.

b. Tem orarily install the clutch hose to the clutch master cylinder tube to flexible hose tube and tube connector to flexible hose tube, and fix it in place with the l s.

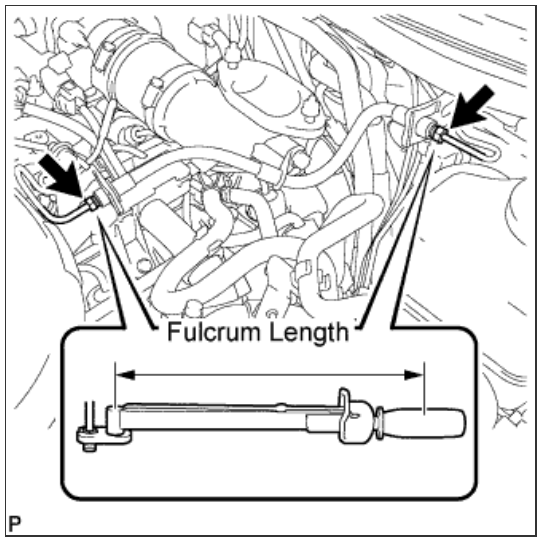
Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

c. Tighten the bolt labeled B.

Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

. Tighten the flexible hose tube.

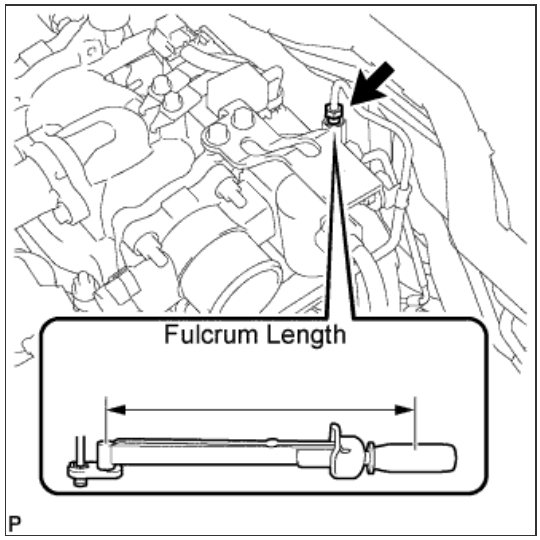
NOTICE:



- **o not ben or mage the flexible hose tube.**
- **o not allow any foreign matter such as nt an ust to enter the flexible hose tube from the connecting points.**

HINT:

- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.). If using a torque wrench with a length that is not 30 cm (11.8 in.), calculate the torque specification for the torque wrench an SST base on the without SST torque specification (Click here).**
- **Make sure union nut wrench an the wrench are connecte in a straight line.**



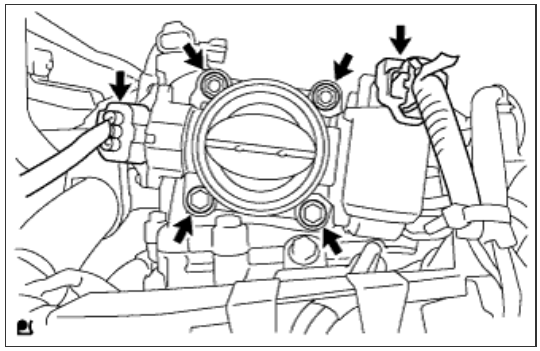
i. Using a mm union nut wrench, tighten the flare nuts of the flexible hose tube.

Torque:
without union nut wrench:
15 N*m{ 154 kgf*cm , 11 ft.*lbf }
with union nut wrench:
14 N*m{ 141 kgf*cm , 10 ft.*lbf }

ii. Using a mm union nut wrench, tighten the flare nut of the flexible hose tube.

Torque:
without union nut wrench:
15 N*m{ 154 kgf*cm , 11 ft.*lbf }
with union nut wrench:
14 N*m{ 141 kgf*cm , 10 ft.*lbf }

62. INSTALL IESEL THROTTLE BO Y ASSEMBLY RH

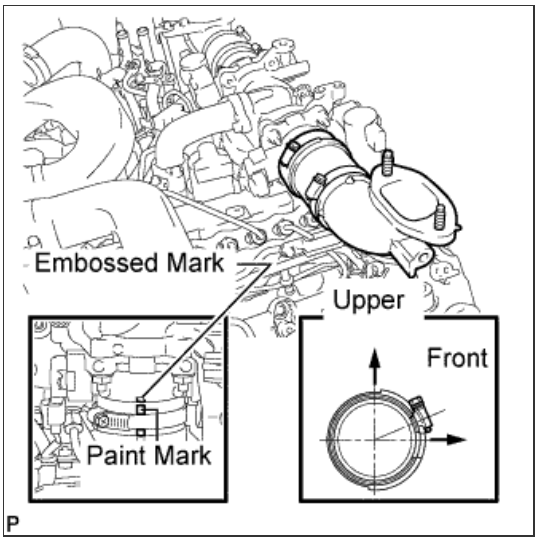


a. Install a new gasket to the intake pipe.

b. Install the throttle body with the bolts and nuts.

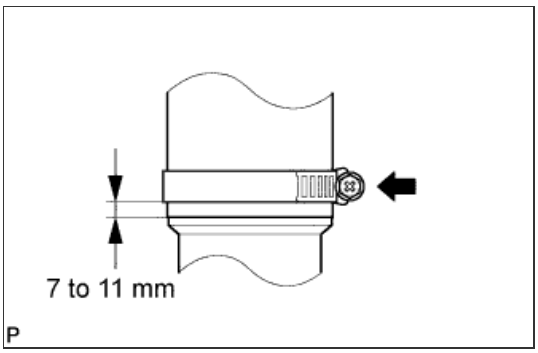
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

c. Connect the throttle position sensor connector.



. Connect the throttle motor connector.

63. INSTALL AIR TUBE SUB-ASSEMBLY RH



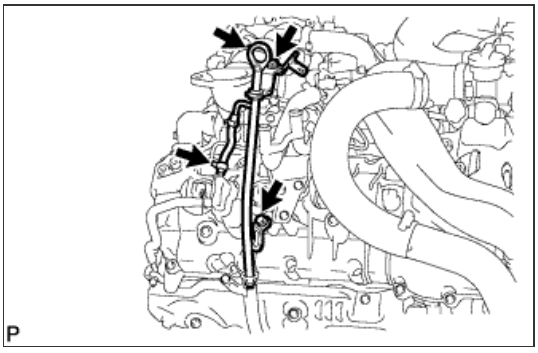
a. Install the air tube to the throttle body.

b. Align the em ossed mark of the throttle body with the paint mark of the No. 4 air hose.

c. Tighten the hose clam so that it is 7 to mm (0. to 0.433 in.) from the end of the hose as shown in the illustration.

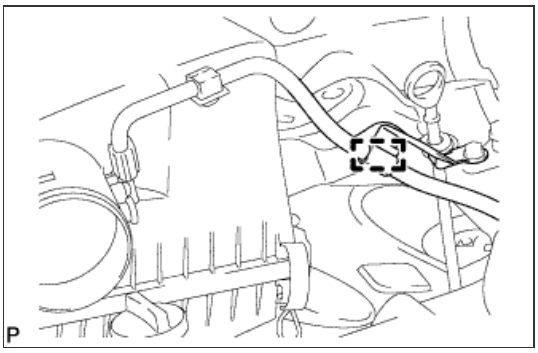
Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

64. INSTALL NO. 2 ENGINE OIL LEVEL IPSTICK GUI E



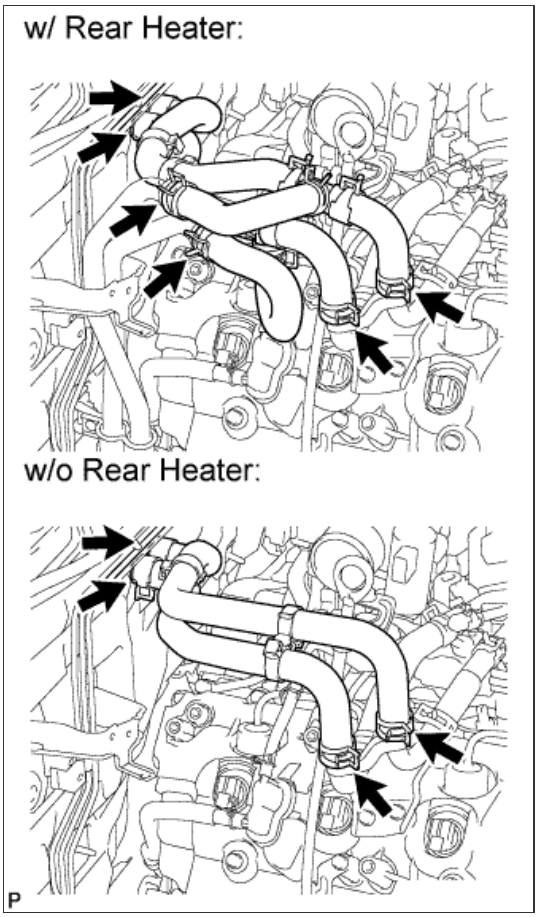
a. Apply a light coat of engine oil to a new O-ring.

b. Install the O-ring to the No. engine oil level dipstick guide.



c. Install the No. engine oil level dipstick guide with the bolts.

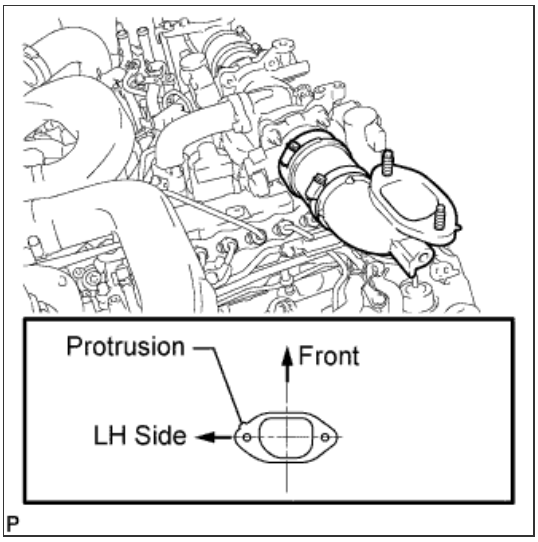
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



. Connect the ventilation hose to the cylinder head cover R

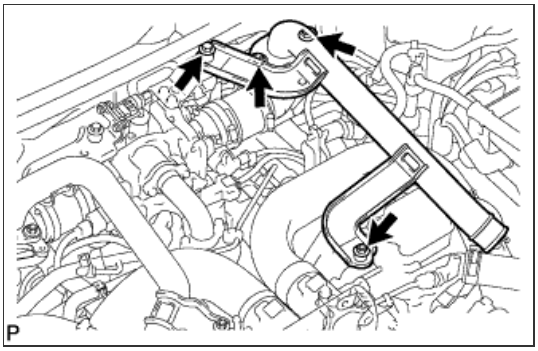
e. onnect the wire harness clam to the No. engine oil level dipstick guide bracket.

65. CONNECT WATER HOSE SUB-ASSEMBLY



66. INSTALL NO. 2 COOL AIR INLET (w/o Intercooler)

a. Install a new gasket to the air tube L

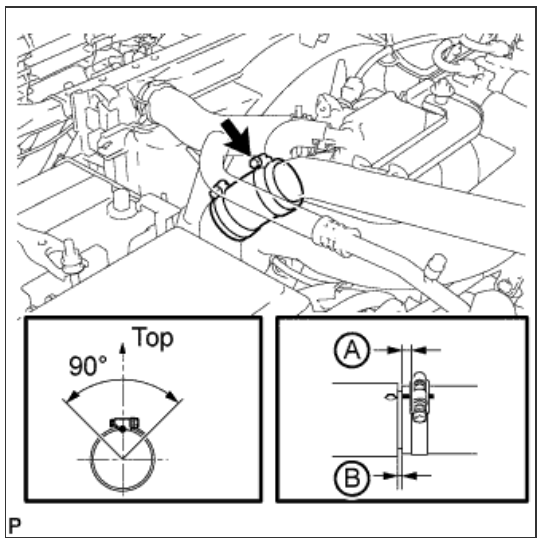


HINT:

Install the gasket with the protrusion facing as shown in the illustration.

b. Install the No. cool air inlet with the 3 nuts and bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



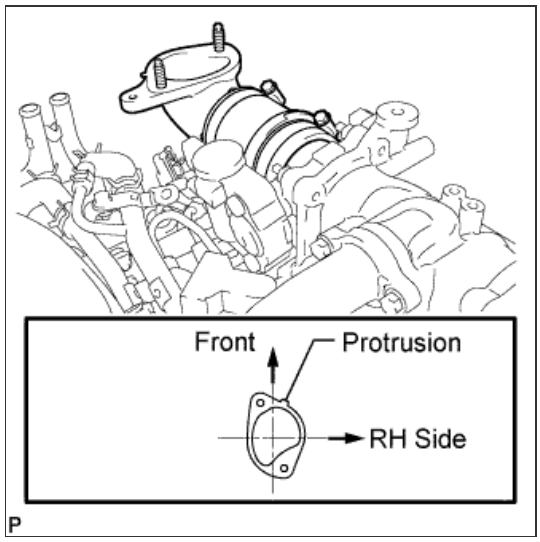
c. Connect the No. air hose to the No. cool air inlet.

. Tighten the No. air hose clam

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

HINT:

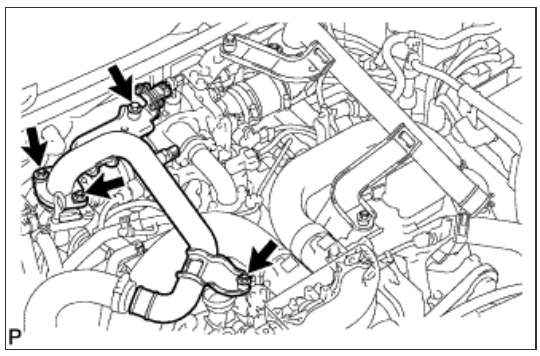
- **Align the paint mark of the air hose with the protrusion an push on the air hose so that stance B is 0 to 3 mm (0 to 0.118 in.).**
- **Position the clamp so that stance A is 2 to 6 mm (0.0787 to 0.236 in.).**
- **Make sure the rection of the hose clamp is as shown in the illustration.**



67. INSTALL NO. 1 COOL AIR INLET (w/o Intercooler)

a. Install a new gasket to the air tube R

HINT:



Install the gasket with the protrusion facing as shown in the illustration.

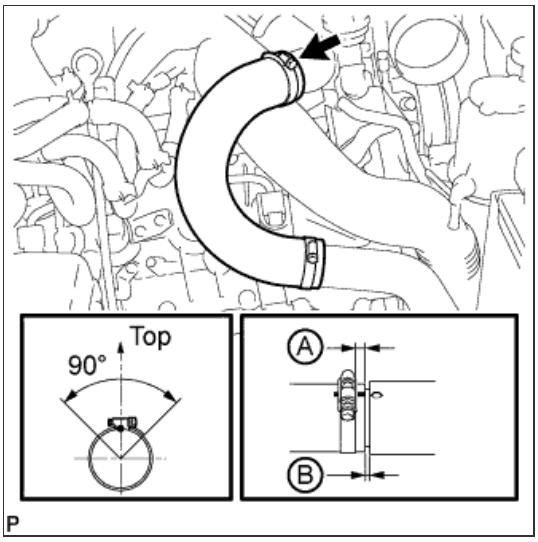
b. Install the No. cool air inlet with the 3 nuts and bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

c. Connect the vacuum hose, intake air tem erature sensor connector and turbo pressure sensor connector.

. Connect the No. air hose to the No. cool air inlet.

e. Tighten the No. air hose clam



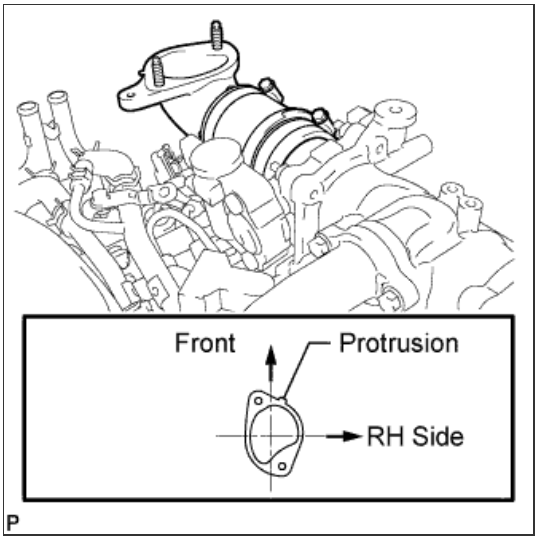
Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

HINT:

- **Align the paint mark of the air hose with the protrusion an push on the air hose so that stance B is 0 to 3 mm (0 to 0.118 in.).**
- **Position the clamp so that stance A is 2 to 6 mm (0.0787 to**

0.236 in.).

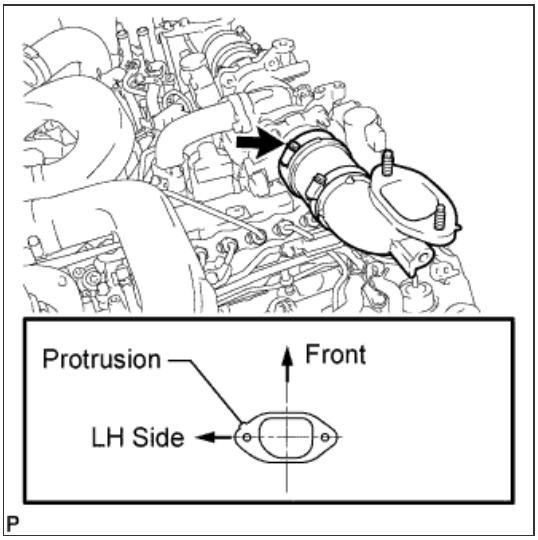
- Make sure the direction of the hose clamp is as shown in the illustration.



68. INSTALL INTERCOOLER ASSEMBLY (w/ Intercooler)

a. Install a new gasket to the air tube R

HINT:

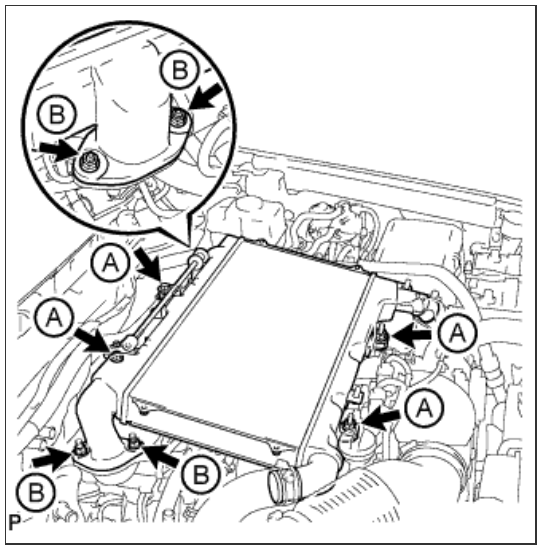


Install the gasket with the protrusion facing as shown in the illustration.

b. Install a new gasket to the air tube L

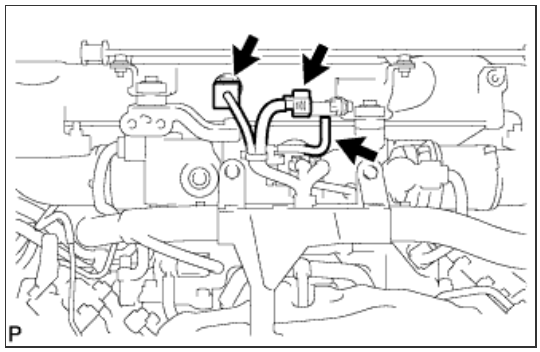
HINT:

Install the gasket with the protrusion facing as shown in the illustration.



c. Align the No. and No. air hoses and intercooler pipes and connect them and install the intercooler with the bolts and nuts labeled A in the illustration.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

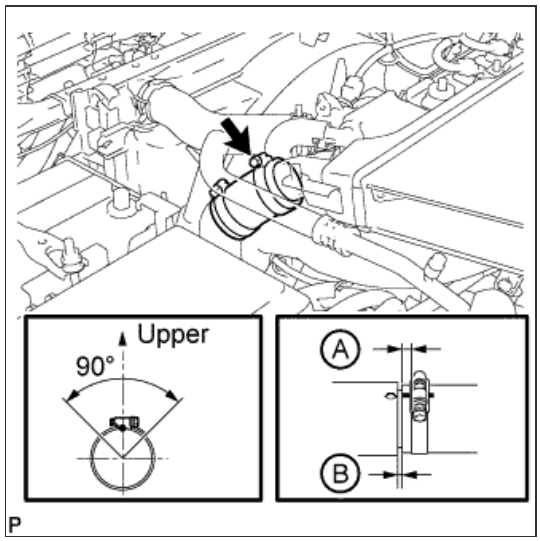


. Tem orarily install the 4 nuts labeled B in the illustration.

e. Tighten the air tube L and R with the 4 nuts labeled B shown in the illustration.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

f. Connect the vacuum hose, intake air tem erature sensor connector and turbo pressure sensor connector.

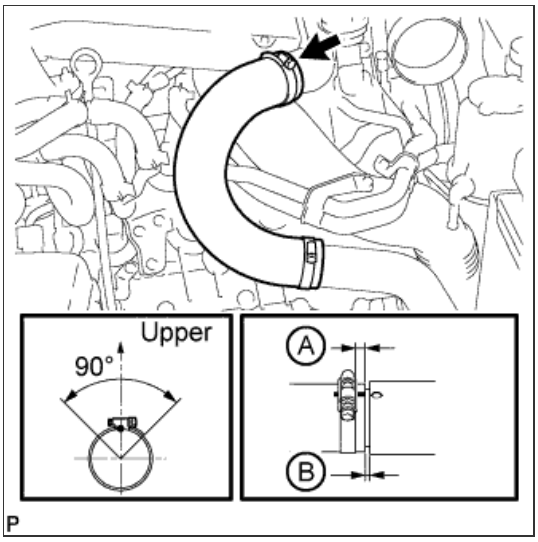


g. Tighten the clam of the No. air hose.

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

HINT:

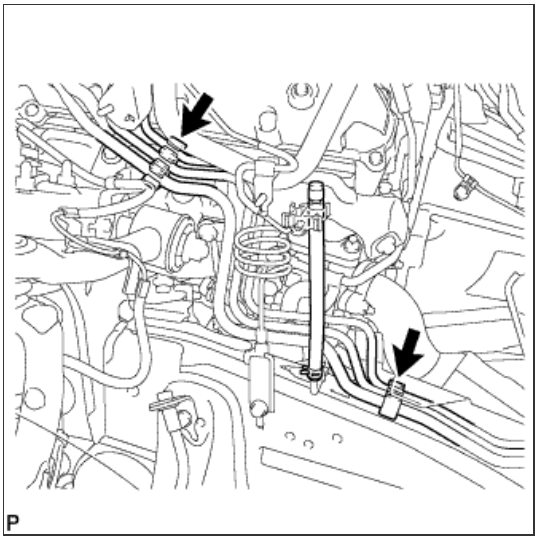
- **Align the paint mark of the air hose with the protrusion an push in the air hose so that stance B is 0 to 3 mm (0 to 0.118 in.).**
- **Position the clamp so that stance A is 2 to 6 mm (0.0787 to 0.236 in.).**
- **Make sure the rection of the hose clamp is as shown in the illustration.**



h. Tighten the clam of the No. air hose.

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

HINT:



- **Align the paint mark of the air hose with the protrusion an push in the air hose so that stance B is 0 to 3 mm (0 to 0.118 in.).**
- **Position the clamp so that stance A is 2 to 6 mm (0.0787 to 0.236 in.).**
- **Make sure the rection of the hose clamp is as shown in the illustration.**

69. CONNECT FUEL TUBE

a. Install new No. and No. 3 fuel tube clam s.

b. Connect the 3 fuel tubes to the clam s.

70. CONNECT FRONT IFFERENTIAL BREATHER TUBE

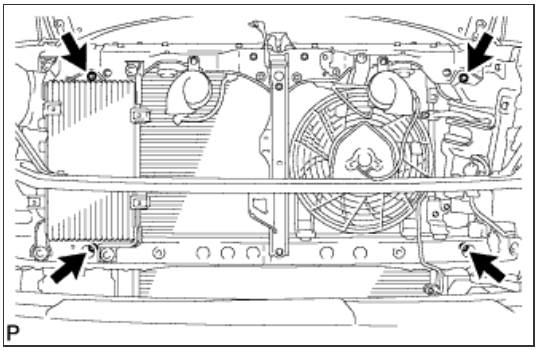
71. A ENGINE OIL

a. Add fresh oil.

Stan a Engine Oil:

Oil Grade	Oil iscosity (SAE)
G-DLD- API CF-4, API CF or ACEA B ou may also use API CE or CD)	- 5W-30 - is best choice for fuel econom and good starting in cold weather).

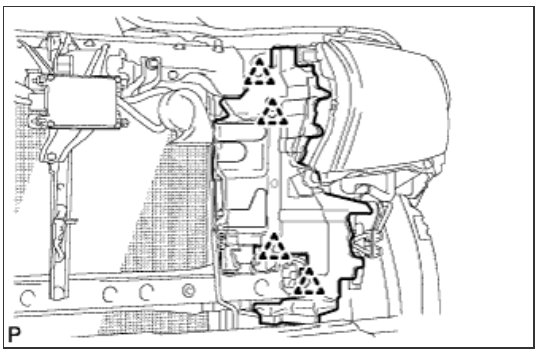
Stan a Capacity:



Item	ecified Condition
Drain and refill with oil filter change	9. liters (9.7 US qts, 8. lm qts)
Drain and refill without oil filter change	8. liters (8.7 US qts, 7. lm qts)
Dry fill	9.9 liters (US qts, 8.7 lm qts)

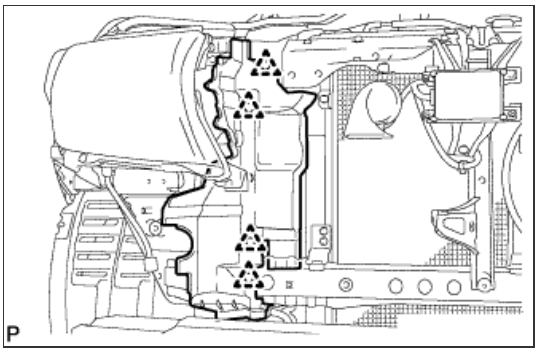
b. Install the oil filler cap.

72. INSTALL RA IATOR ASSEMBLY



a. Install the radiator with the 4 bolts.

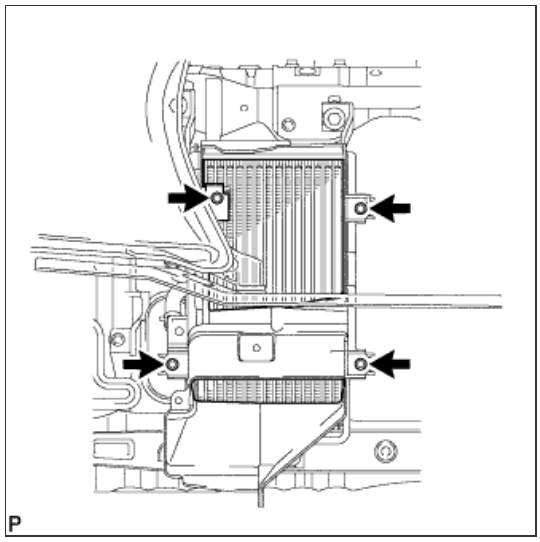
Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }



73. CONNECT RA IATOR SI E EFLECTOR LH

a. Install the side deflector with the 4 clips.

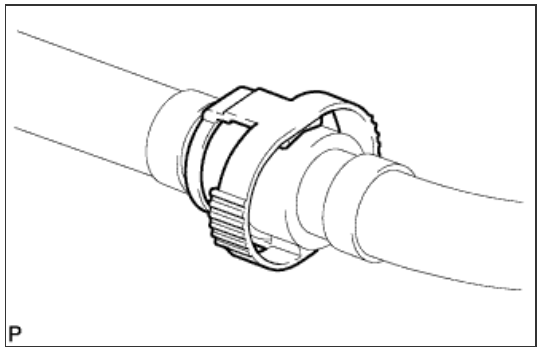
74. CONNECT RA IATOR SI E EFLECTOR RH (for Manual Transmission)



a. Install the deflector with the 4 clips.

75. INSTALL TRANSMISSION OIL COOLER AIR UCT (for Automatic Transmission)

a. Install the oil cooler air duct with the 4 bolts.

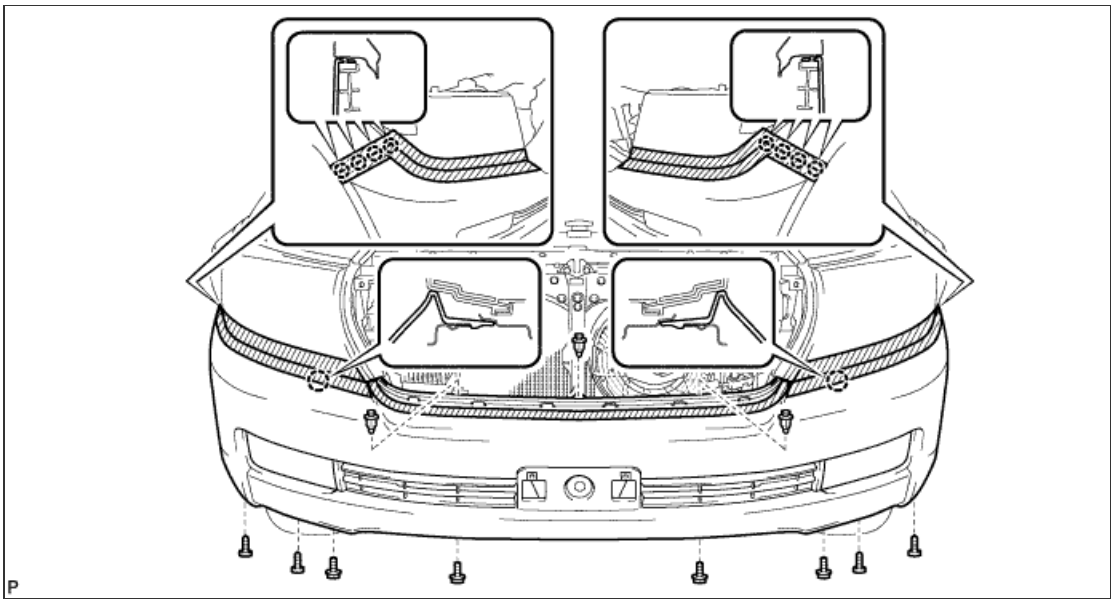


Torque:
4.9 N*m{ 50 kgf*cm , 43 in.*lbf }

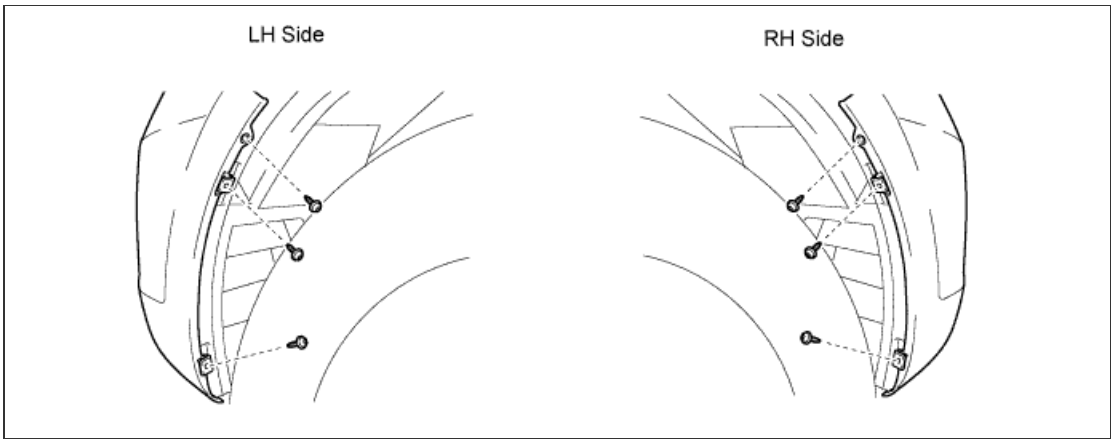
76. INSTALL FRONT BUMPER COVER

HINT:

For the front bum er cover with garnish, use the procedures described below.



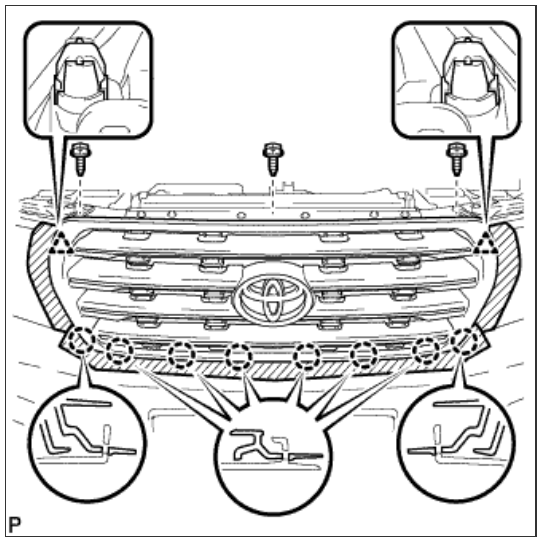
a. w/ eadlight Cleaner System
onnect the headlight cleaner hose.



b. w/o TO TA Parking Assist-sensor System w/o Fog Light:
Attach the claws to install the bum er cover.

c. w/ TO TA Parking Assist-sensor System or w/ Fog Light:
Connect the No. 4 engine room wire connector and attach the claws to install the bum er cover.

. Install the 3 clips, 4 screws and 4 bolts.



e. Using a T30 "TOR socket, install the 6 screws.

77. INSTALL RA IATOR GRILLE

a. Attach the clips and 8 claws to install the radiator grille.

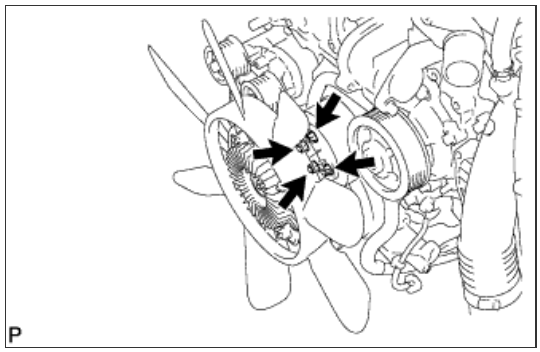
b. Install the 3 screws.

78. INSTALL FRONT BUMPER WINCH COVER (w/ Winch)

79. INSTALL FAN PULLEY

80. INSTALL FAN SHROU WITH FAN

a. Install the shroud together with the fluid coupling fan between the radiator and engine com onents.

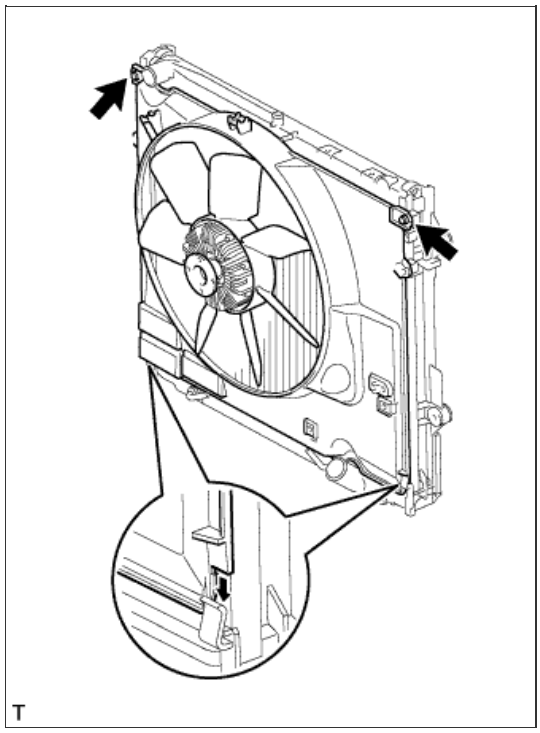


NOTICE:

Be careful not to damage the radiator core.

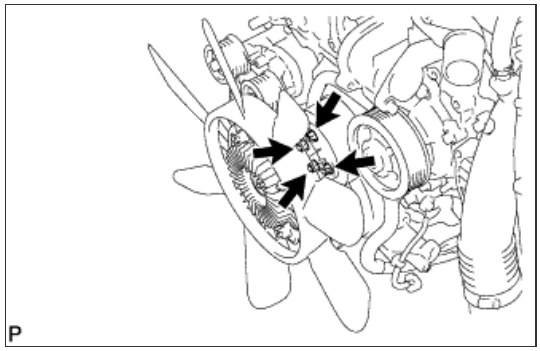
b. Tem orarily install the fluid coupling fan to the fan bracket with the 4 nuts.

HINT:



Tighten the nuts as much as possible by hand.

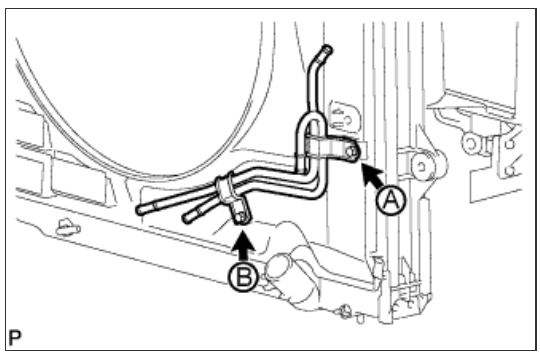
c. Attach the shroud claws to the radiator.



. Install the shroud with the bolts.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

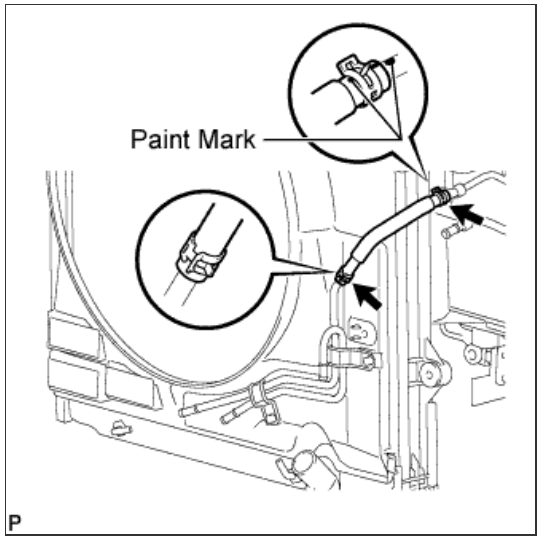
e. Tighten the 4 nuts of the fluid coupling fan.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

81. INSTALL OIL COOLER TUBE (for Automatic Transmission)

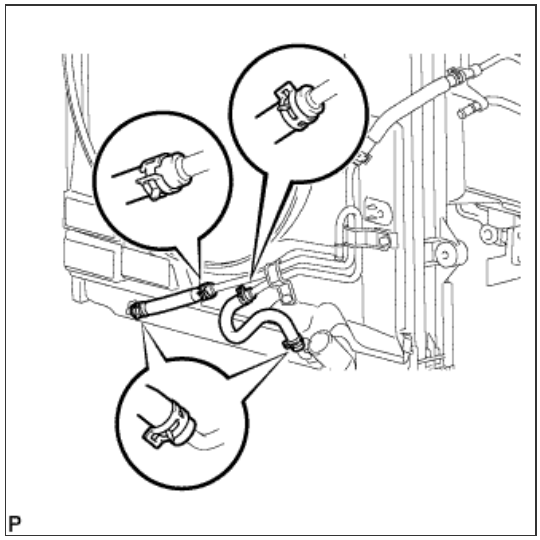
a. Tem orarily install the oil cooler tube to the fan shroud with the bolt labeled A. Install the bolt labeled B. Then tighten the bolt labeled A to the specified torque.



Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

b. Connect the inlet No. 4 oil cooler hose as shown in the illustration.

NOTICE:

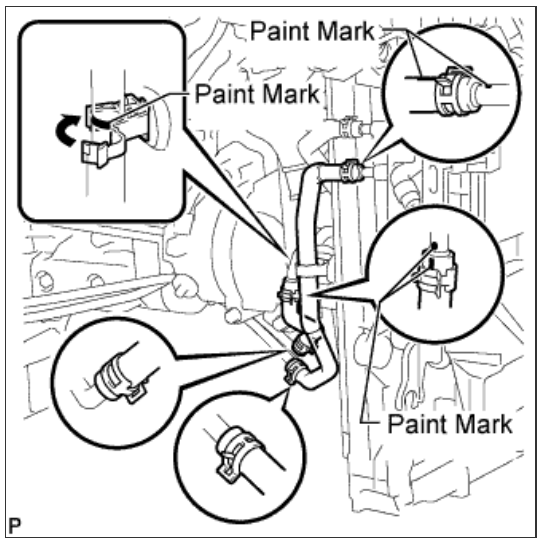


Make sure the pinching portion of each clip is facing the direction shown in the illustration.

c. Connect the inlet No. and No. 3 oil cooler hoses as shown in the illustration.

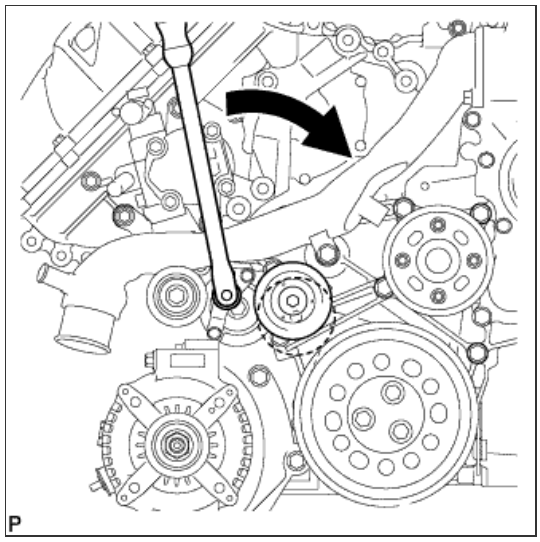
NOTICE:

Make sure the pinching portion of each clip is facing the direction shown in the illustration.



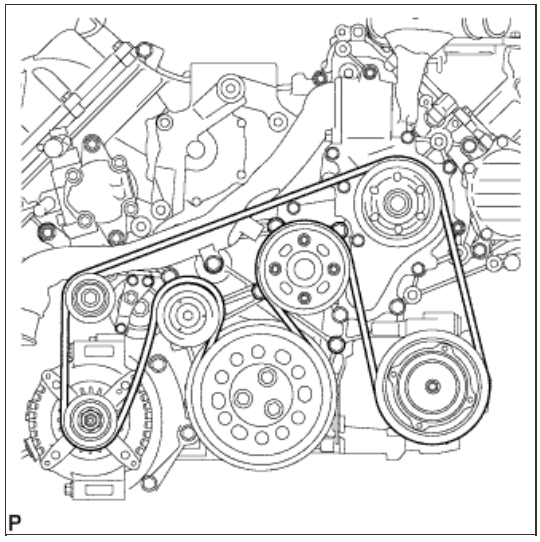
. Connect the inlet and outlet No. oil cooler hoses as shown in the illustration.

NOTICE:



Make sure the pinching portion of each clip is facing the direction shown in the illustration.

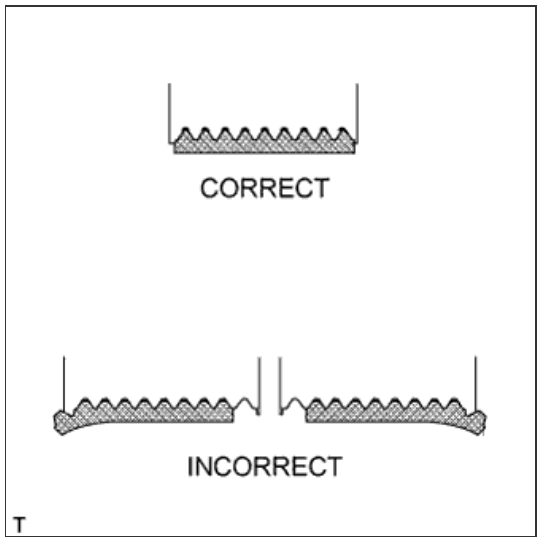
e. Pass the hose through the flexible hose clam and close the clam shown in the illustration.



82. INSTALL V-RIBBE BELT

a. Attach a wrench to the -ribbed belt tensioner bracket and turn the wrench clockwise.

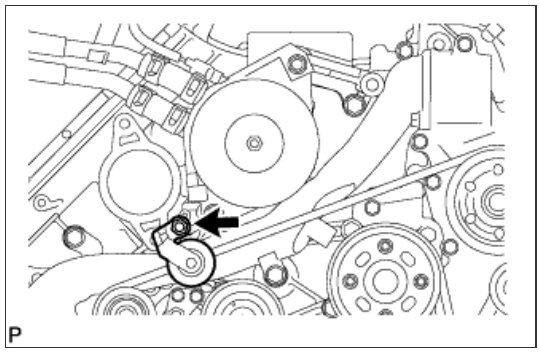
b. Install the -ribbed belt as shown in the illustration.



c. Check that the belt fits properly in the ribbed grooves.

HINT:

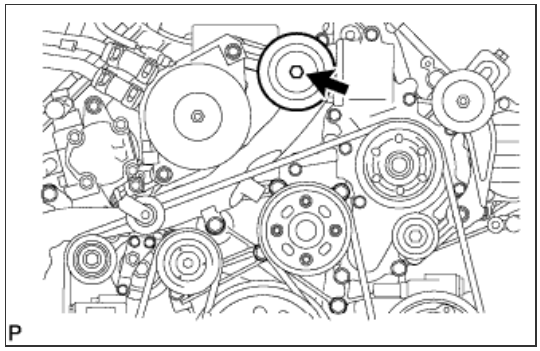
Check with your hand to confirm that the belt has not slipped out of the groove on the bottom of the pulley.



If it has slipped out, replace the -ribbed belt. Install a new -ribbed belt.

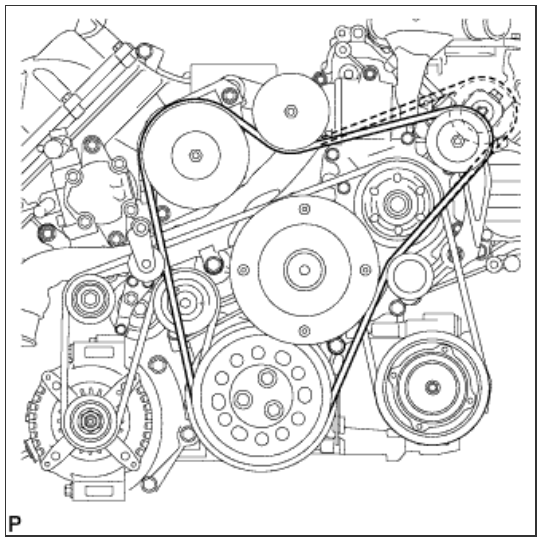
83. INSTALL NO. 3 I LER PULLEY (w/ Viscous Heater)

a. Align the No. 3 idler pulley bracket knock pin and No. idler pulley bracket knock pin hole and install the No. 3 idler pulley with the nut.



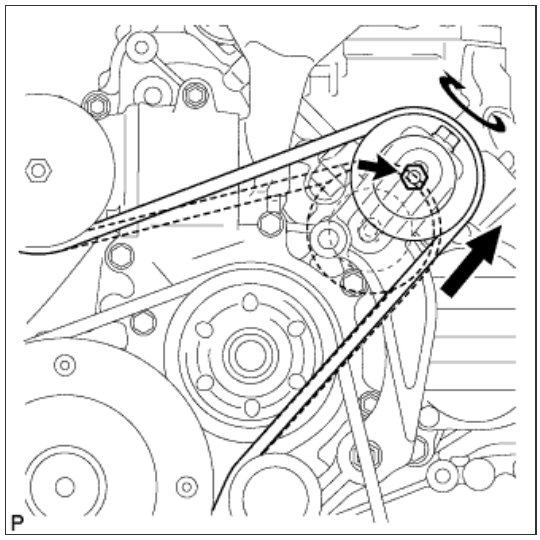
Torque:
88 N*m{ 898 kgf*cm , 64 ft.*lbf }

84. INSTALL NO. 1 I LER PULLEY (w/ Viscous Heater)



a. Install the collar, No. idler pulley and cover with the bolt.

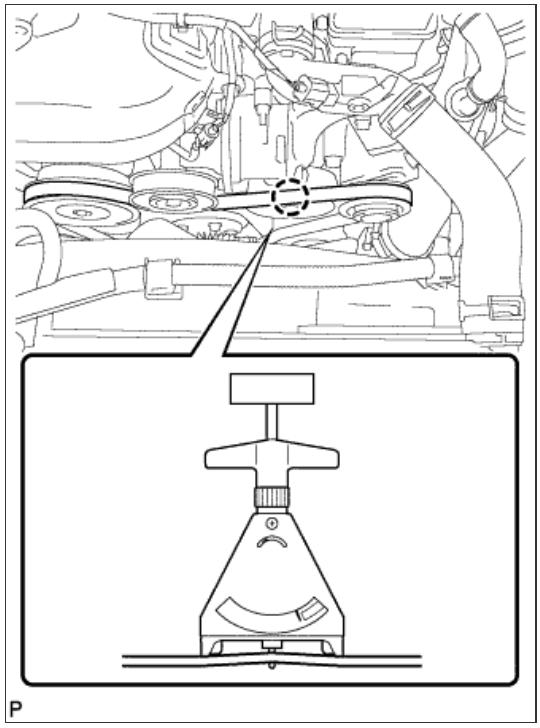
Torque:
49 N*m{ 495 kgf*cm , 36 ft.*lbf }



85. INSTALL V-RIBBE BELT (w/ Viscous Heater)

a. Install the -ribbed belt as shown in the illustration.

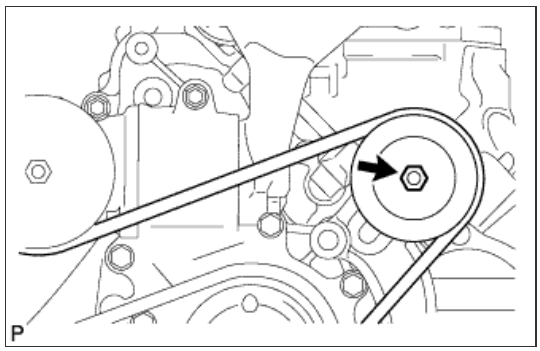
b. Tem orarily install the lock nut, and turn the bolt clockwise.



c. Using a belt tension gauge, adjust belt tension.

Stan a Belt Tension:

Item	ecified Condition
New belt	400 to 650 N (4 to 66 kgf, 89.9 to lbf)
Used belt	300 to 500 N (3 to 5 kgf, 67.4 to lbf)

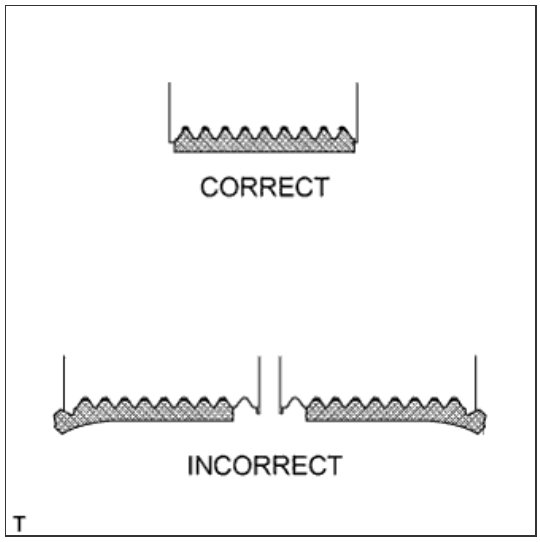


HINT:

- **A new belt is a belt which has been use for less than 5 minutes on a running engine.**
- **A use belt is a belt which has been use on a running engine for 5 minutes or more.**
- **After installing a new belt, run the engine for approximately 5 minutes an then recheck the tension.**

. Tighten the nut.

Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }



e. Check that the belt fits properly in the ribbed grooves.

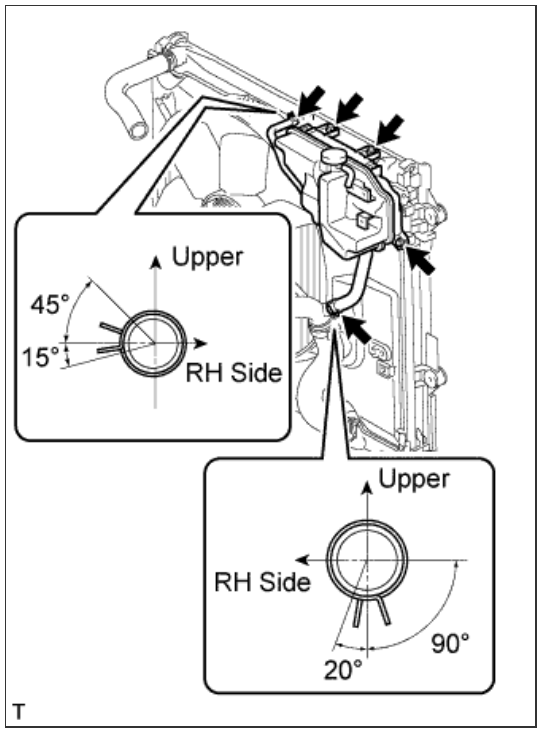
HINT:

Check with your hand to confirm that the belt has not slipped out of the groove on the bottom of the pulley.

If it has slipped out, replace the -ribbed belt. Install a new -ribbed belt.

86. CONNECT NO. 2 RA IATOR HOSE

87. CONNECT NO. 1 RA IATOR HOSE

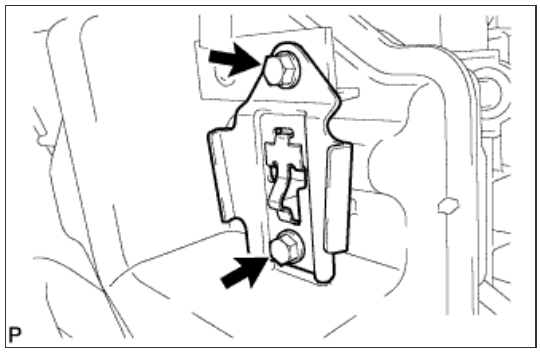


88. INSTALL RA IATOR RESERVOIR ASSEMBLY

a. Install the radiator reservoir with the 3 bolts.

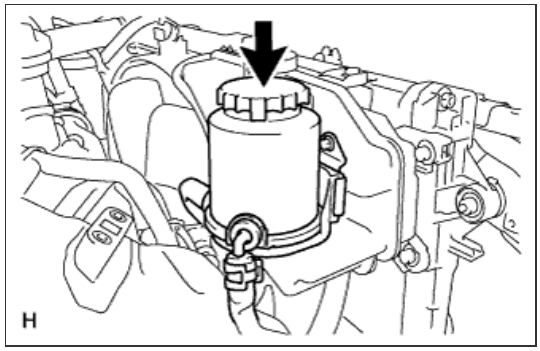
b. Connect the hoses to the upper radiator tank and water inlet.

HINT:



Make sure the directions of the hose clam s are as shown in the illustration.

89. INSTALL NO. 1 OIL RESERVOIR BRACKET

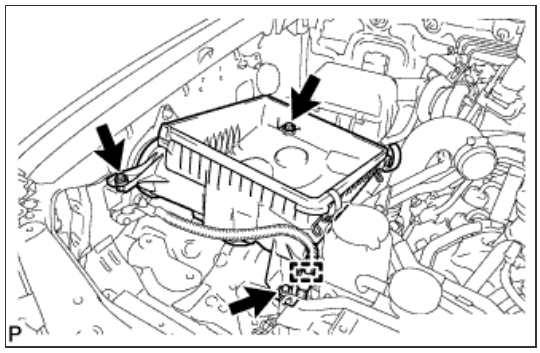


a. Install a new bracket with the bolts.

Torque:
4.5 N*m{ 46 kgf*cm , 40 in.*lbf }

90. INSTALL VANE PUMP OIL RESERVOIR ASSEMBLY

a. Install the vane pum oil reservoir to the bracket.



91. INSTALL AIR CLEANER CASE

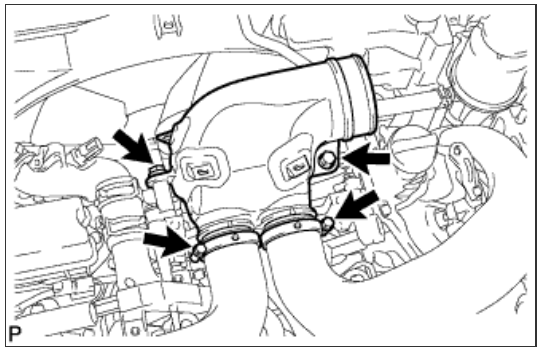
a. Install the air cleaner case with the 3 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

b. Attach the wire harness clam to the air cleaner case.

92. INSTALL AIR CLEANER FILTER ELEMENT

93. INSTALL INTAKE AIR CONNECTOR

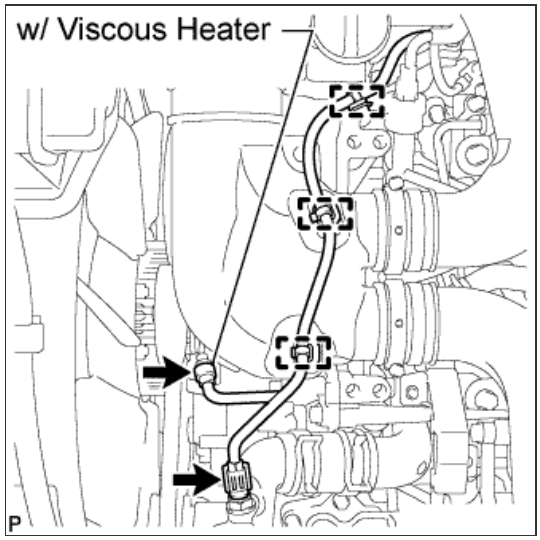


a. Connect the intake air connector to the No. and No. air cleaner pipes.

b. Install the connector with the bolts.

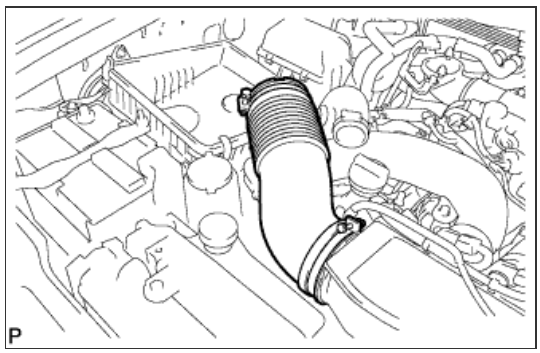
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

c. Tighten the hose clam s.



Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

. Attach the 3 wire harness clam s.

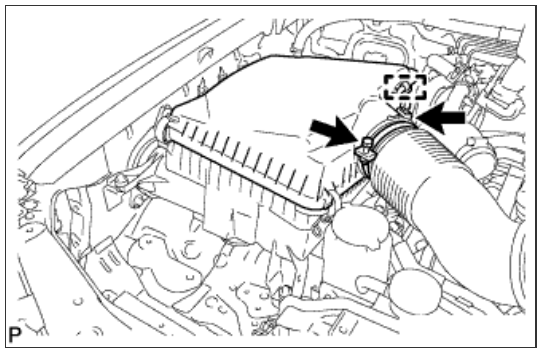


e. w/o iscous eater:
Connect the connector to the water tem erature sensor.

f. w/ iscous eater:
Connect the connectors to the water tem erature sensor and viscous with magnet clutch heater.

94. TEMPORARILY INSTALL NO. 1 AIR CLEANER HOSE

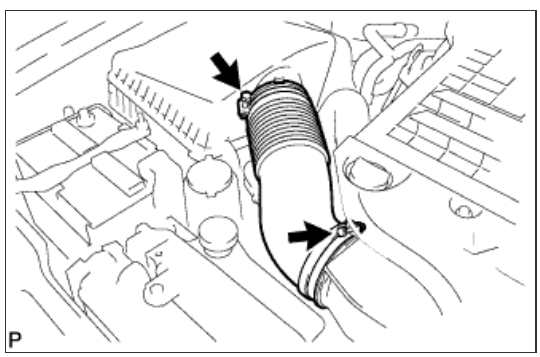
a. Tem orarily install the air cleaner hose to the intake air connector.



95. INSTALL AIR CLEANER CAP SUB-ASSEMBLY

a. Connect the air cleaner cap to the air cleaner hose, and install the air cleaner cap with the 4 clam s.

b. Connect the mass air flow meter connector and attach the wire harness clam to the air cleaner cap.



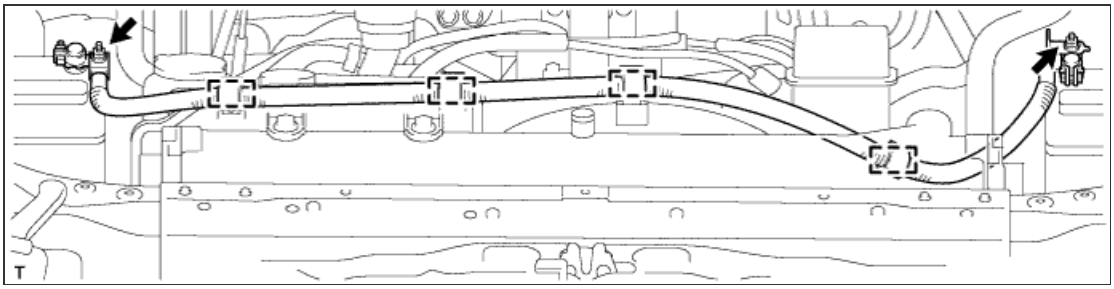
c. Attach the wire harness clam

. I n the protrusion of air cleaner cap and concave portion of air cleaner hose.

e. Tighten the hose clam s.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

96. INSTALL SUB-BATTERY



97. INSTALL MAIN BATTERY

98. INSTALL NO. 3 ENGINE ROOM WIRE

a. Install the No. 3 engine room wire to the main battery and sub-battery positive term nals with the nuts.

Torque:
7.6 N*m{ 77 kgf*cm , 67 in.*lbf }

b. Connect the No. 3 engine room wire with the 4 clam s.

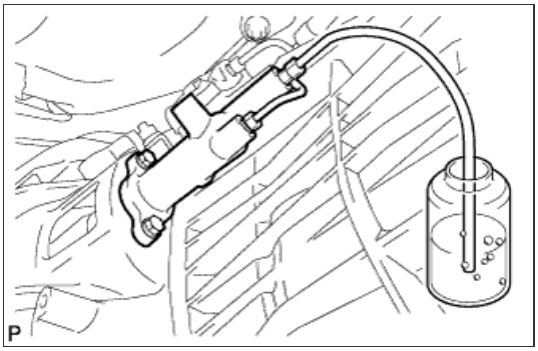
99. BLEE CLUTCH LINE

a. Remove the release cylinder bleeder plug cap.

b. Connect a vinyl tube to the bleeder plug.

c. Depress the clutch pedal several times, and then loosen the bleeder plug while the pedal is depressed.

. When fluid no longer comes out, tighten the bleeder plug, and then release the clutch pedal.

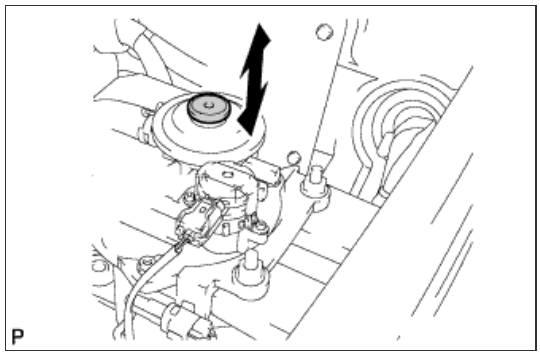


e. Repeat the previous steps until all the air in the fluid is com dtely bled.

f. Tighten the bleeder plug.

Torque:
11 N*m{ 110 kgf*cm , 8 ft.*lbf }

g. Install the bleeder plug cap.



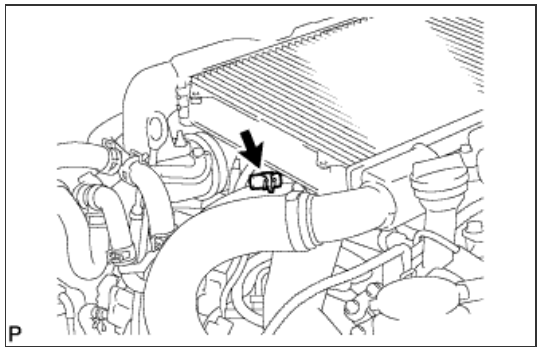
h. Check that all the air has been bled from the clutch line.

100. CHECK FOR CLUTCH FLUI LEAK

101. BLEE AIR FROM FUEL SYSTEM

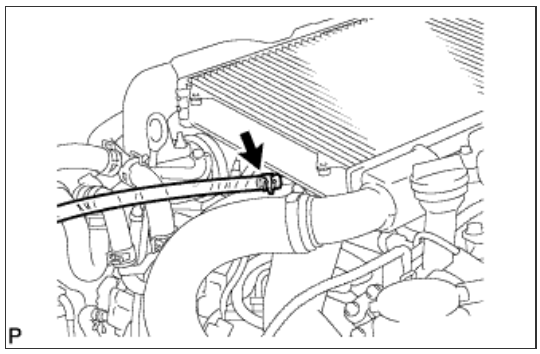
a. Using the hand pum indicated by the arrow in the illustration, bleed the fuel system Continue pum ng until pum ng becomes difficult.

102. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



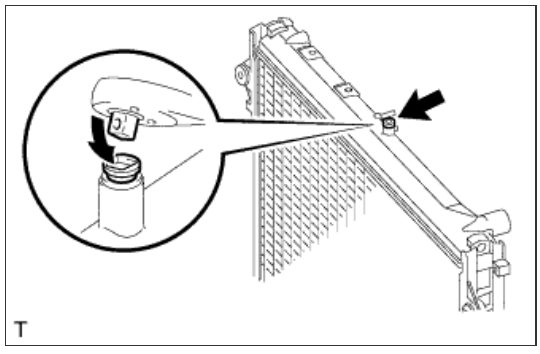
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).



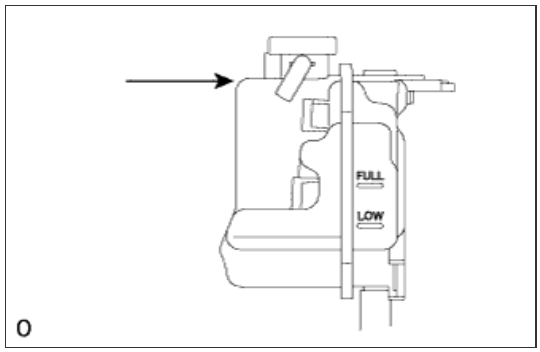
a. Connect the cables to the negative (-) main battery and sub-battery term nals.

103. A ENGINE COOLANT



a. Remove the engine air bleed cap.

b. Connect a clear hose to the engine air bleed pipe.



c. Using a wrench, remove the vent plug.

. Fill the radiator with TO TA SLLC to the radiator reservoir filler neck.

HINT:

Pour TO TA SLLC until it spills out of the engine air bleed pipe.

Stan a Capacity (for Automatic Transmission):

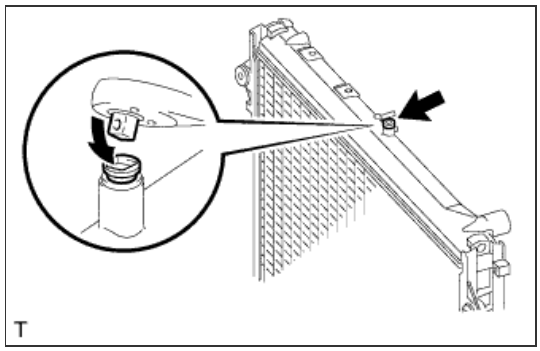
Item	ecified Condition
Front heater only	liters (US qts, Im qts)
Front heater and rear heater	liters (US qts, Im qts)
Front heater with viscous heater	liters (US qts, Im qts)
Front heater and rear heater with viscous heater	liters (US qts, Im qts)

Stan a capacity (for Manual Transmission):
15.4 liters (16.3 US qts, 13.6 Imp. qts)

NOTICE:

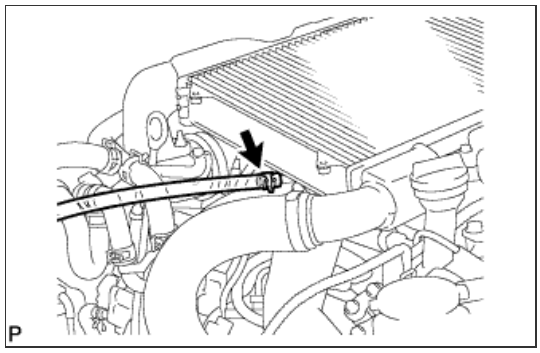
Do not substitute plain water for engine coolant.

HINT:



TO TA vehicles are filled with TO TA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TO TA SLLC or sim ar high quality ethylene glycol based non-silicate, non-am ne, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a com nation of low phosphates and organic acids).

e. Install the vent plug.



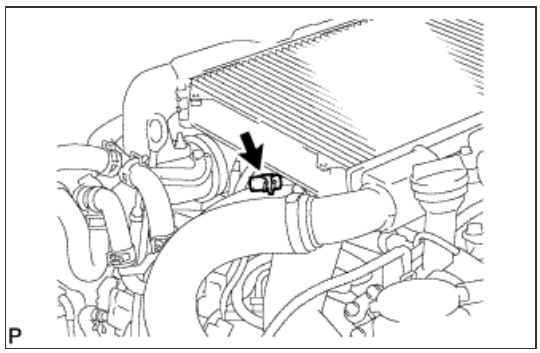
Torque:
2.0 N*m{ 20 kgf*cm , 18 in.*lbf }

NOTICE:

Do not tighten the plug to 5.0 N m (5 kgf cm 44 in. lbf) or more, as the plug will be damaged.

f. Disconnect the clear hose from the engine air bleed pipe.

g. Install the engine air bleed cap when coolant comes out.



h. Install the radiator reservoir cap.

i. Start the engine.

NOTICE:

Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: stop the engine, wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the FULL line.

. Maintain an engine speed of 3000 rpm for approximately m nutes so that the thermostat opens and air bleeding is performed.

CAUTION:

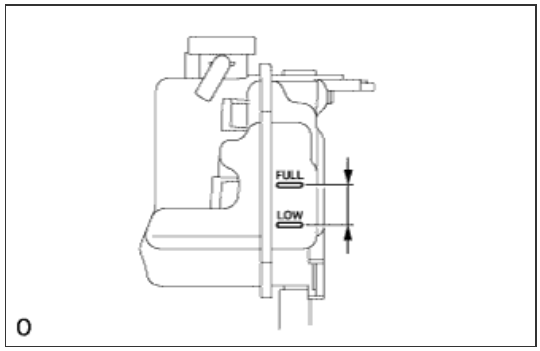
When pressing the ra iador hoses:

- **Wear protecti eglo es.**
- **Be careful as the ra iador hoses are hot.**
- **Keep your han s away from the ra iador fan**

NOTICE:

- **Pay attention to the nee le of the water temperature meter. Make sure that the nee le oes not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or o eheat.**

HINT:



The thermostat opening tim ng can be confirmed by pressing the No. radiator hose by hand, and checking when the engine coolant starts to flow inside the hose.

k. Stop the engine, and wait until the engine coolant cools down to am ent tem erature.

CAUTION:

Do not remove the radiator reservoir cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

l. Check that the coolant level is between the FULL and LOW lines.
If the coolant level is above the FULL line, drain coolant so that the coolant level is between the FULL and LOW lines.

104. INSPECT FOR FUEL LEAK

a. Perform Active Test.

i. Connect the intelligent tester to the DLC3.

ii. Turn the ignition switch to ON.

iii. Start the engine.

i . Turn the intelligent tester ON.

. Enter the following menus: Powertrain / Engine / Active Test.

.i Perform the Active Test.

Tester Display	Test Detail	Control Range	Diagnostic Note
Test the Fuel Leak	Pressurizes fuel inside common rail and checks for fuel leaks	Stop/Start	• The fuel inside the common rail is pressurized to the specified value and the engine speed increases to rpm when Start is selected. • The above conditions are preserved while Start is selected.

105. INSPECT FOR OIL LEAK

a. Perform Active Test.

i. Connect the intelligent tester to the DLC3.

ii. Turn the ignition switch to ON.

iii. Start the engine.

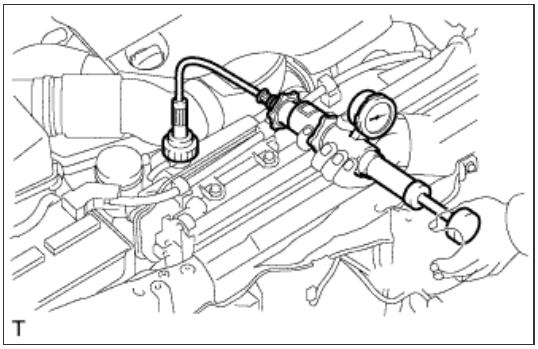
i . Turn the intelligent tester ON.

. Enter the following menus: Powertrain / Engine / Active Test.

.i Perform the Active Test.

Tester Display	Test Detail	Control Range	Diagnostic Note
Test the Fuel Leak	Pressurizes fuel inside common rail and checks for fuel leaks	Stop/Start	• The fuel inside the common rail is pressurized to the specified value and the engine speed increases to rpm when Start is selected. • The above conditions are preserved while Start is selected.

106. INSPECT FOR COOLANT LEAK



CAUTION:

Do not remove the radiator reservoir cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Fill the radiator with coolant and attach a radiator cap tester to the radiator reservoir.

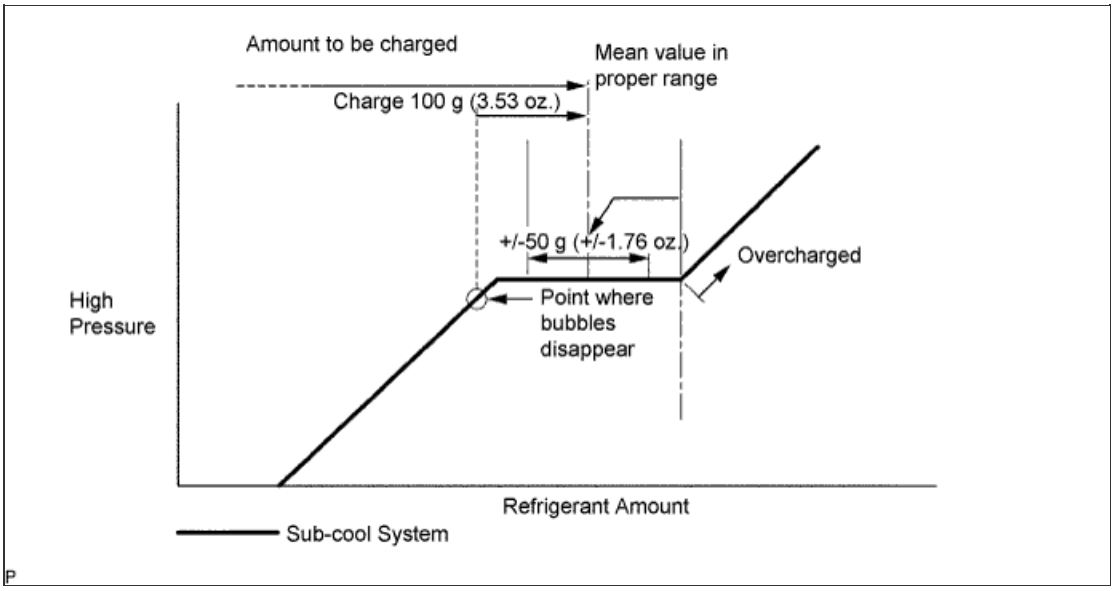
b. Warm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to a (kgf/cm psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pum for leaks.
If no external leaks are found, check the cylinder block and cylinder head.

107. INSPECT FOR EXHAUST GAS LEAK

108. CHARGE REFRIGERANT

SST



09985-20010 (09985-02130, 09985-02150, 09985-02090, 09985-02110, 09985-02010, 09985-02050, 09985-02060, 09985-02070)

a. Perform vacuum purging using a vacuum pum

b. Charge refrigerant a (R a).

Stan a :

Condenser Core Thickness	Air Conditioning Type	Cool Box	Refrigerant Charging Amount
mm (0.866 in.)	w/o Rear Cooler	w/ Cool Box	870 +/-30 g (30.7 +/- oz.)
		w/o Cool Box	870 +/-30 g (30.7 +/- oz.)
	w/ Rear Cooler	w/ Cool Box	+/-30 g (35.6 +/- oz.)
		w/o Cool Box	960 +/-30 g (33.9 +/- oz.)
mm (0.630 in.)	w/o Rear Cooler	w/ Cool Box	770 +/-30 g (+/- oz.)
		w/o Cool Box	770 +/-30 g (+/- oz.)
	w/ Rear Cooler	w/ Cool Box	970 +/-30 g (34. +/- oz.)
		w/o Cool Box	9 +/-30 g (3 +/- oz.)

NOTICE:

- **o not operate the cooler compressor before charging refrigerant as the cooler compressor will not work properly without any refrigerant, an will o eheat.**
- **Approximately 200 g (7.05 o .) of refrigerant may nee to be charge after bubbles sappear. The refrigerant amount shoul be checke by measuring its quantity, an not with the sight glass.**

109. WARM UP ENGINE

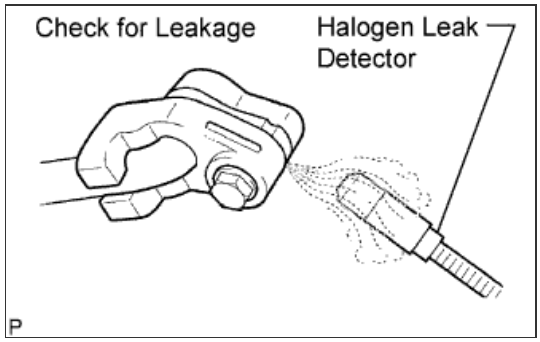
a. Warm up the engine at less than rpm for m nutes or more after charging the refrigerant.

NOTICE:

Be sure to warm up the com essor when turning the A/C switch is on after removing and installing the cooler refrigerant lines (including the com essor), to prevent damage to the com essor.

110. CHECK FOR REFRIGERANT GAS LEAK

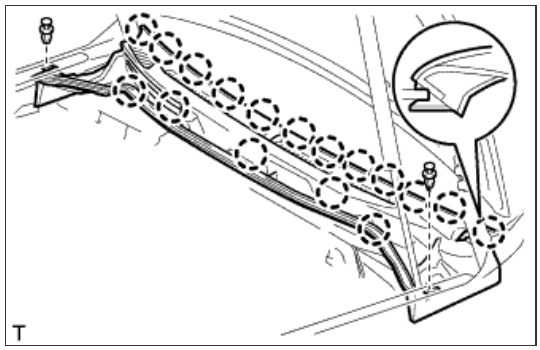
a. After recharging the refrigerant gas, check for refrigerant gas leakage using a halogen leak detector.



b. Perform the operation under these conditions:

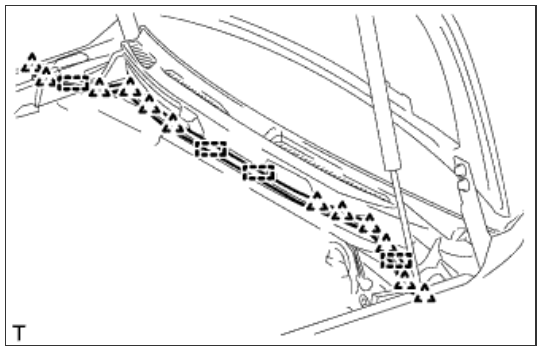
- Stop the engine.
- Secure good ventilation (the halogen leak detector may react to volatile gases other than refrigerant, such as evaporated gasoline or exhaust gas).
- Repeat the test or 3 times.
- Make sure that some refrigerant remains in the refrigeration system When com essor is off: approximately 39 to 588 kPa (4.0 to 6.0 kgf/cm 57 to 85 psi).

c. Using a halogen leak detector, check the refrigerant line for leakage.



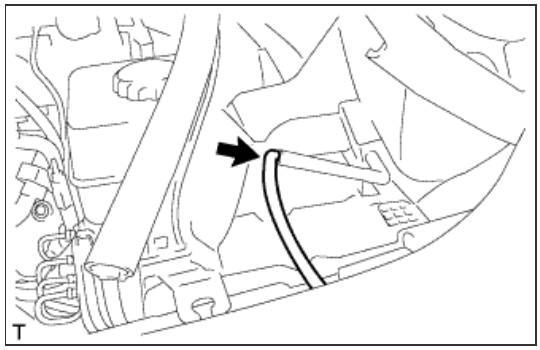
. If a gas leak is not detected on the drain hose, remove the blower motor control (blower resistor) from the cooling unit. Insert the halogen leak detector sensor into the unit and perform the test.

e. Disconnect the connector and wait for approximately m nutes. Bring the halogen leak detector close to the pressure switch and perform the test.



111. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

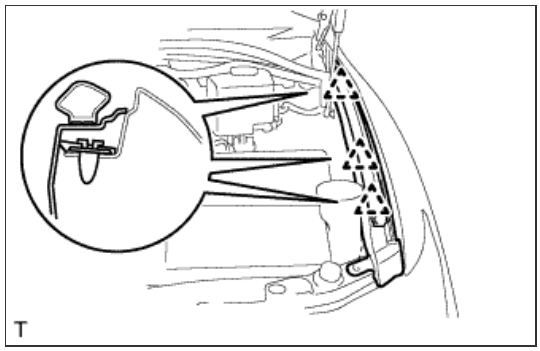
a. Push the ventilator louver in the direction indicated by the arrow in the illustration to attach the claws and clips and install the ventilator louver.



112. INSTALL HOO TO COWL TOP SEAL

a. Attach the clips and 4 clam s to install the hood to cowl top seal.

b. Install the washer hose.

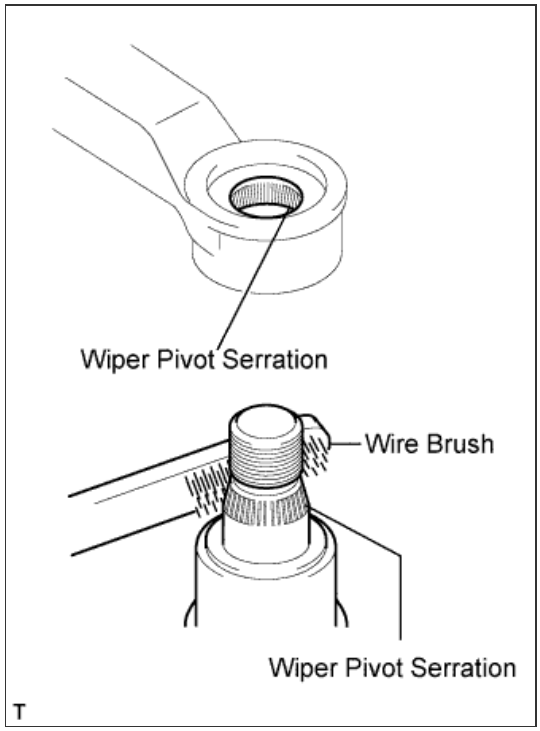


113. INSTALL FRONT FEN ER MAIN SEAL RH

HINT:

Use the same procedures described for the L side.

114. INSTALL FRONT FEN ER MAIN SEAL LH



a. Attach the 3 clips to install the fender main seal.

115. INSTALL FRONT WIPER ARM RH

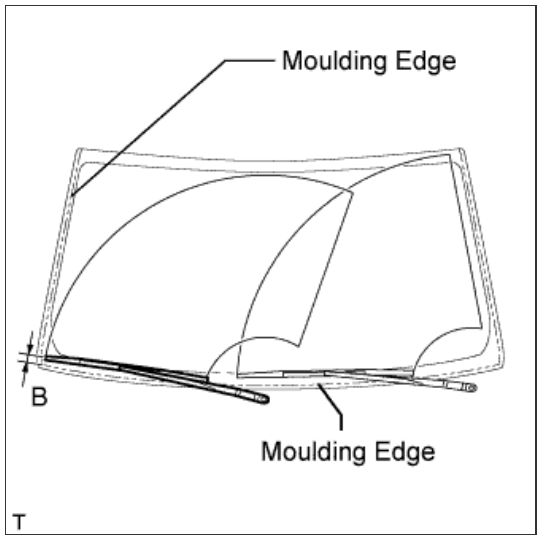
a. Stop the wiper motor at the automatic stop position.

b. Clean the wiper pivot serration with a wire brush.

c. Install the wiper arm and blade with the nut. Make sure that the wiper arm and blade comes to the position shown in the illustration.

Stan a Measurement:

Position	Specified Condition
B	to 40.0 mm (0.787 to in.)

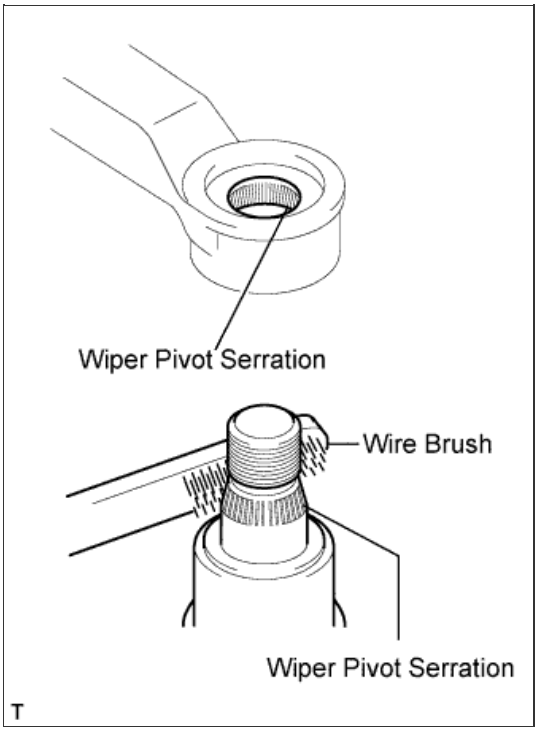


Torque:

25 N*m{ 255 kgf*cm , 18 ft.*lbf }

HINT:

old down the wiper arm hinge with your hand while tightening the nut.



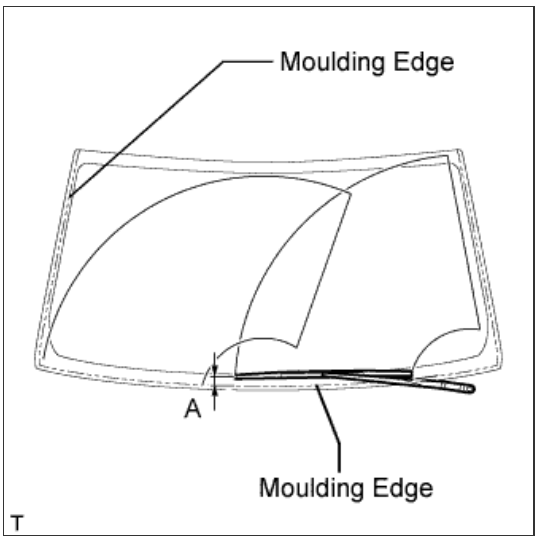
. Operate the front wipers while spraying washer fluid on the windshield glass. Make sure that the front wipers function properly and there is no interference with the vehicle body.

116. INSTALL FRONT WIPER ARM LH

a. Stop the wiper motor at the automatic stop position.

b. Clean the wiper pivot serration with a wire brush.

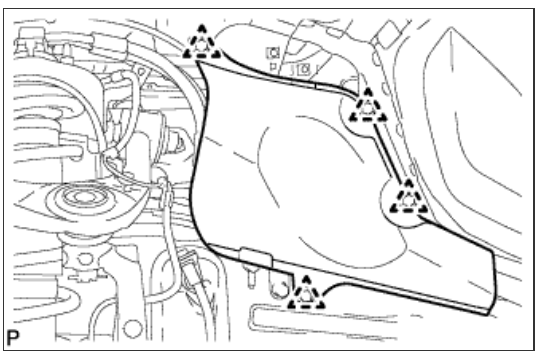
c. Install the wiper arm and blade with the nut. Make sure that the wiper arm and blade comes to the position shown in the illustration.



Stan a Measurement:

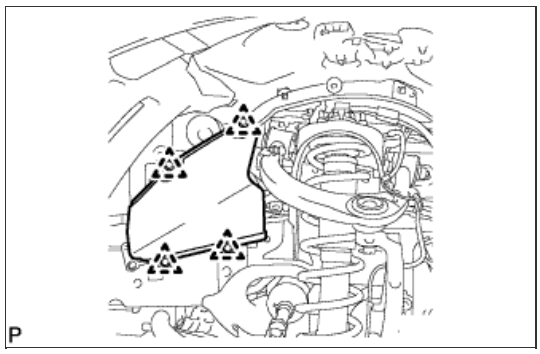
Position	Specified Condition
A	to 36.8 mm (0.66 to in.)

Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf }



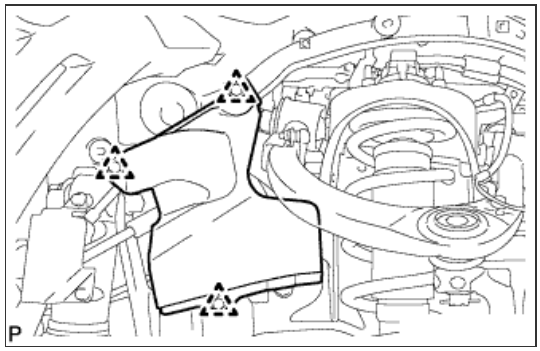
HINT:

old down the wiper arm hinge with your hand while tightening the nut.



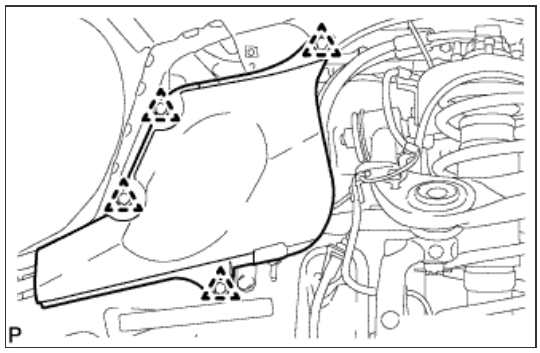
117. INSTALL FRONT FEN ER APRON SEAL REAR LH

a. Install the front fender apron seal rear L with the 4 clips.

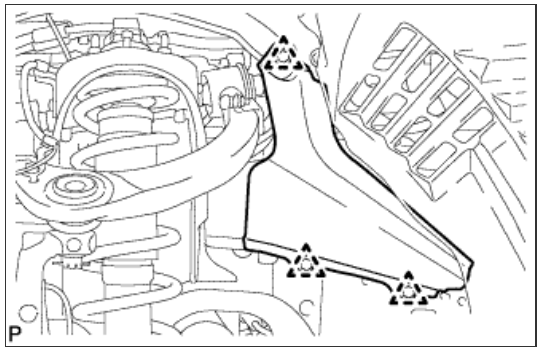


118. INSTALL FRONT FEN ER APRON SEAL FRONT LH

a. w/o KDSS:
Install the front fender apron seal front L with the 4 clips.



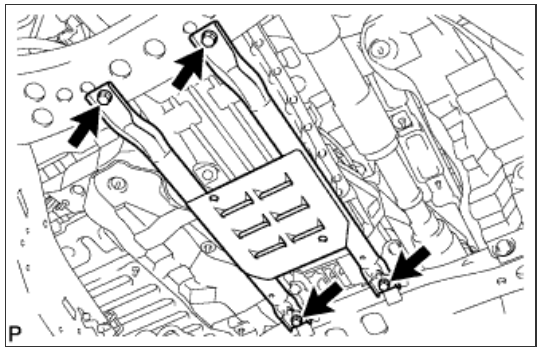
b. w/ KDSS:
Install the front fender apron seal front L with the 3 clips.



119. INSTALL FRONT FEN ER APRON SEAL REAR RH

a. Install the front fender apron seal rear R with the 4 clips.

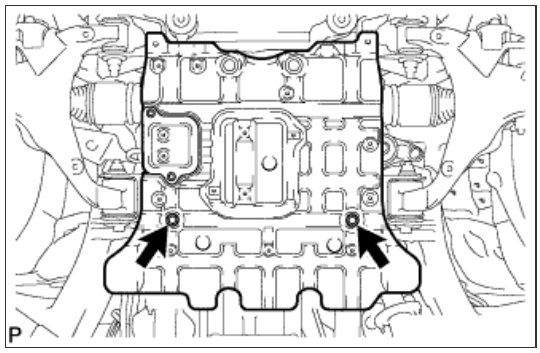
120. INSTALL FRONT FEN ER APRON SEAL FRONT RH



a. Install the front fender apron seal front R with the 3 clips.

121. INSTALL OIL PAN PROTECTOR ASSEMBLY

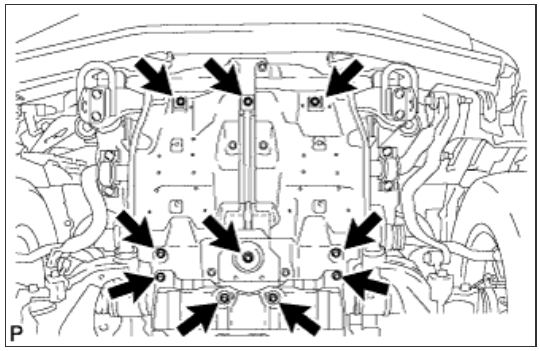
a. Install the oil pan protector with the 4 bolts.



Torque:
63 N*m{ 642 kgf*cm , 46 ft.*lbf }

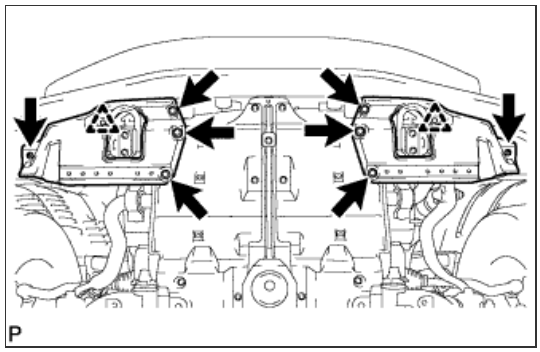
122. INSTALL NO. 2 ENGINE UN ER COVER

a. Install the engine under cover with the bolts.



Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

123. INSTALL NO. 1 ENGINE UN ER COVER SUB-ASSEMBLY



a. Install the engine under cover with the bolts.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

124. INSTALL FRONT FEN ER SPLASH SHIEL SUB-ASSEMBLY RH

a. Install the splash shield with the clip, and then install the 3 bolts and screw.

125. INSTALL FRONT FEN ER SPLASH SHIEL SUB-ASSEMBLY LH

a. Install the splash shield with the clip, and then install the 3 bolts and screw.

126. INSTALL HOO SUB-ASSEMBLY

a. Install the hood with the 4 bolts.

Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }

b. Install the hood supports with the bolts.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

NOTICE:

- **As much as possible a oi touching the stroke portions of the ro to pre enforeign matter from attaching to it. Be sure to hol the cylin es while ser ding.**
- **o not wear cotton glo e or other similar materials when han ling the ro . Fibers may attach to the ro an result in gas leaks.**
- **o not apply any loa to the cylin es in the hori ontal rection in or e to pre entthe ro from being torme .**
- **Install the hoo support while supporting the hoo by han .**

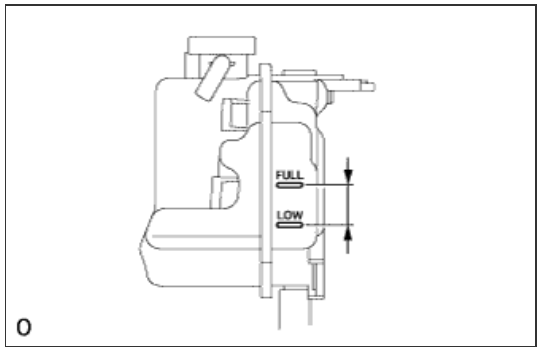
127. A UST HOO SUB-ASSEMBLY

a. Adjust the hood (Click here).

128. INSPECT ENGINE OIL LEVEL

a. Warm up the engine, stop the engine and wait 5 m nutes. The engine oil level should be between the dipstick low level mark and full level mark.
If low, check for leakage and add oil up to the full level mark.

NOTICE:



Do not fill engine oil above the full level mark.

129. INSPECT ENGINE COOLANT LEVEL IN RESERVOIR

a. Check that the engine coolant level is between the LOW and FULL lines when the engine is cold.
If the engine coolant is low, check for leaks and add "TO TA Super Long Life Coolant (SLLC)" or sim ar high quality ethylene glycol based non-silicate, non-am ne, non-nitrite and non-borate coolant with long-life hybrid organic acid technology to the FULL line.

NOTICE:

Do not substitute plain water for engine coolant.

130. INSPECT ENGINE I LE SPEE

NOTICE:

- **Turn all the electrical systems an the A/C off.**
- **When checking the i le spee , mo e the shift le e to neutral.**

HINT:

- **For more information about the intelligent tester, refer to its operator s manual.**
- **If an intelligent tester is not a dable, use a tachometer tester probe as a substitute.**

a. When using the intelligent tester:

i. Warm up the engine.

ii. Connect the intelligent tester to the DLC3.

iii. Enter the following menus:
Powertrain / Engine / Data List / Engine Speed.

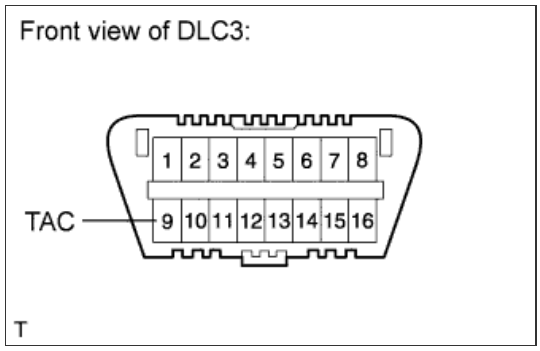
HINT:

Refer to the intelligent tester operator's manual for help selecting the Data List.

i . Inspect the engine idle speed.

Stan a l le Spee :

Item	ecified Condition
for Automatic Transm ssion	550 to 650 rpm
or Manual Transm ssion	500 to 600 rpm



. sconnect the intelligent tester from the DLC3.

b. When not using the intelligent tester:

i. Warm up and stop the engine.

ii. Connect a tester probe of a tachometer to term nal 9 (TAC) of the DLC3 with SST.

SST
09843-18030

iii. Inspect the engine idle speed.

Stan a l le Spee :

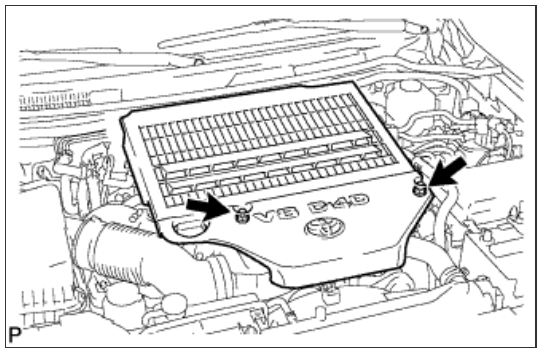
Item	ecified Condition
for Automatic Transm ssion	550 to 650 rpm
or Manual Transm ssion	500 to 600 rpm

i . sconnect the tester probe from term nal 9 (TAC) of the DLC3.

131. INSPECT MAXIMUM ENGINE SPEE

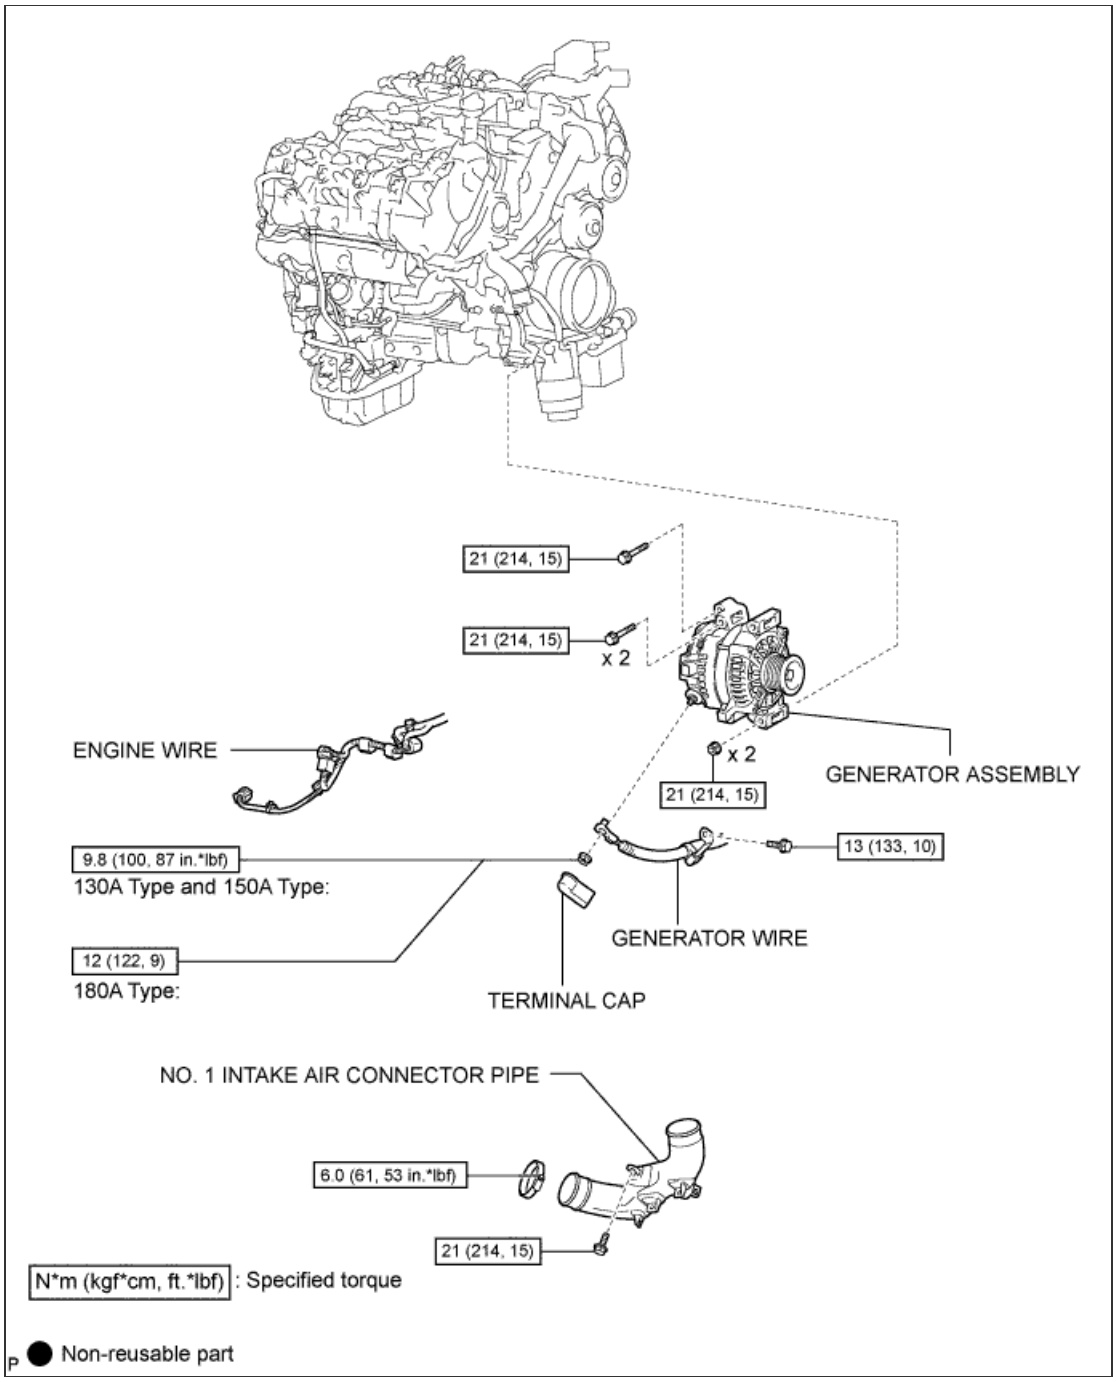
a. Start the engine.

b. Fully depress the accelerator pedal.

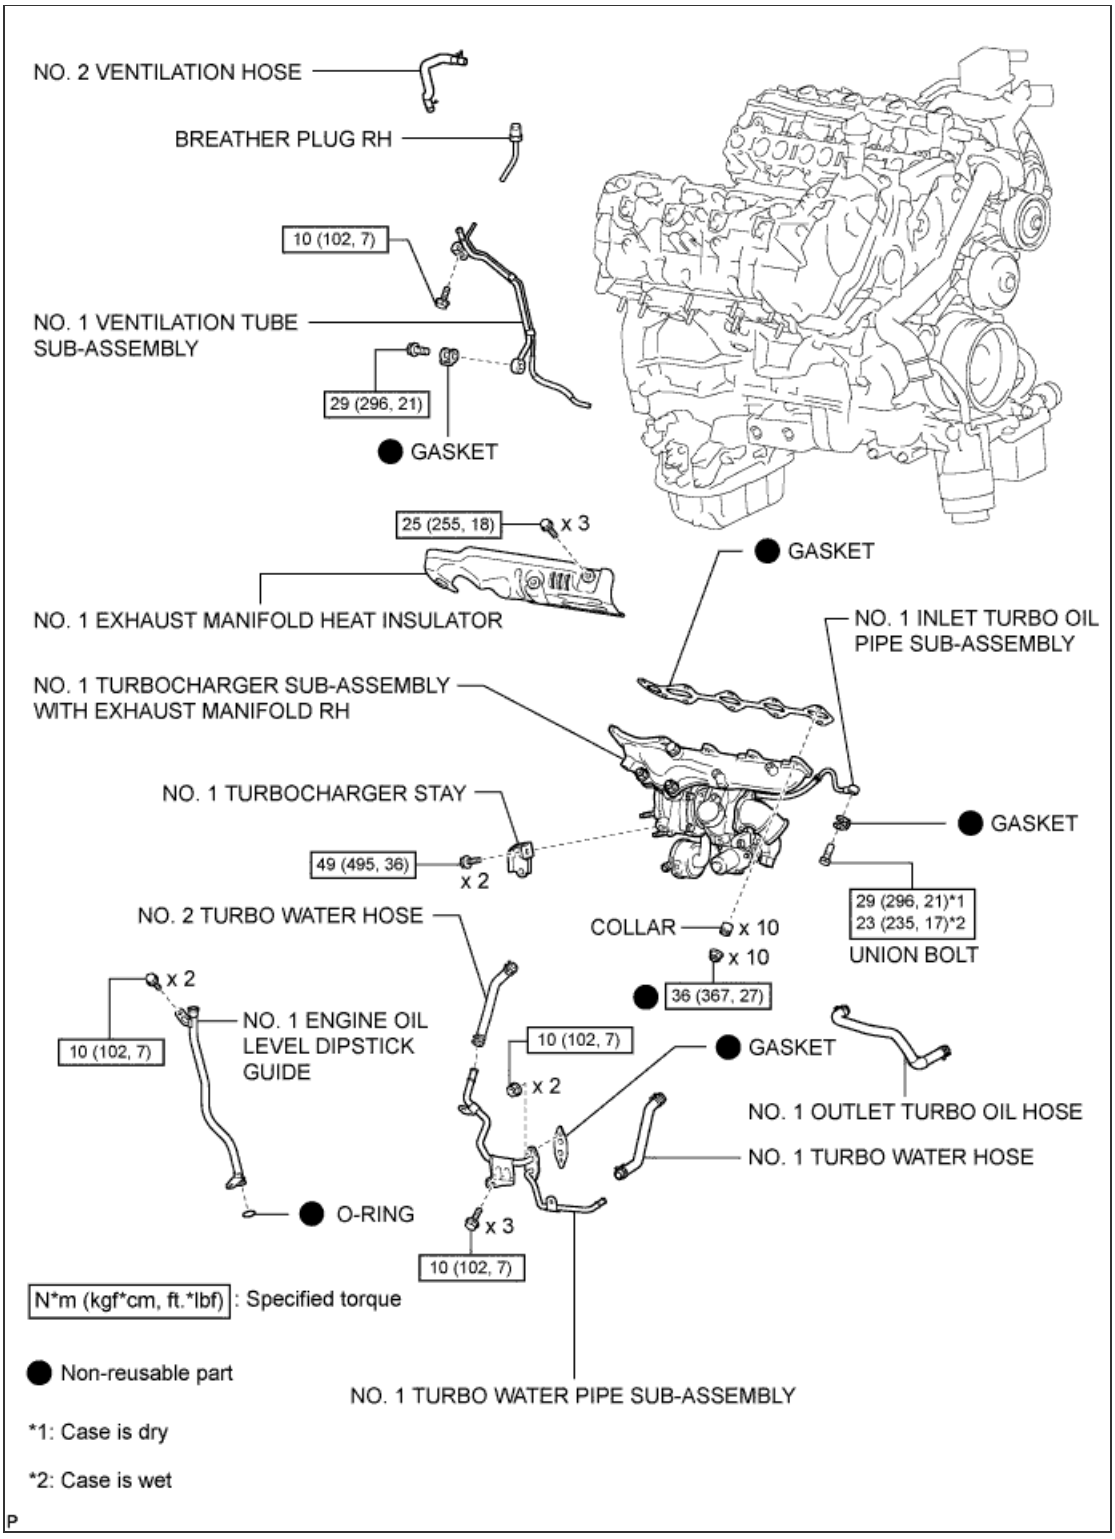


c. Check the maximum engine speed.

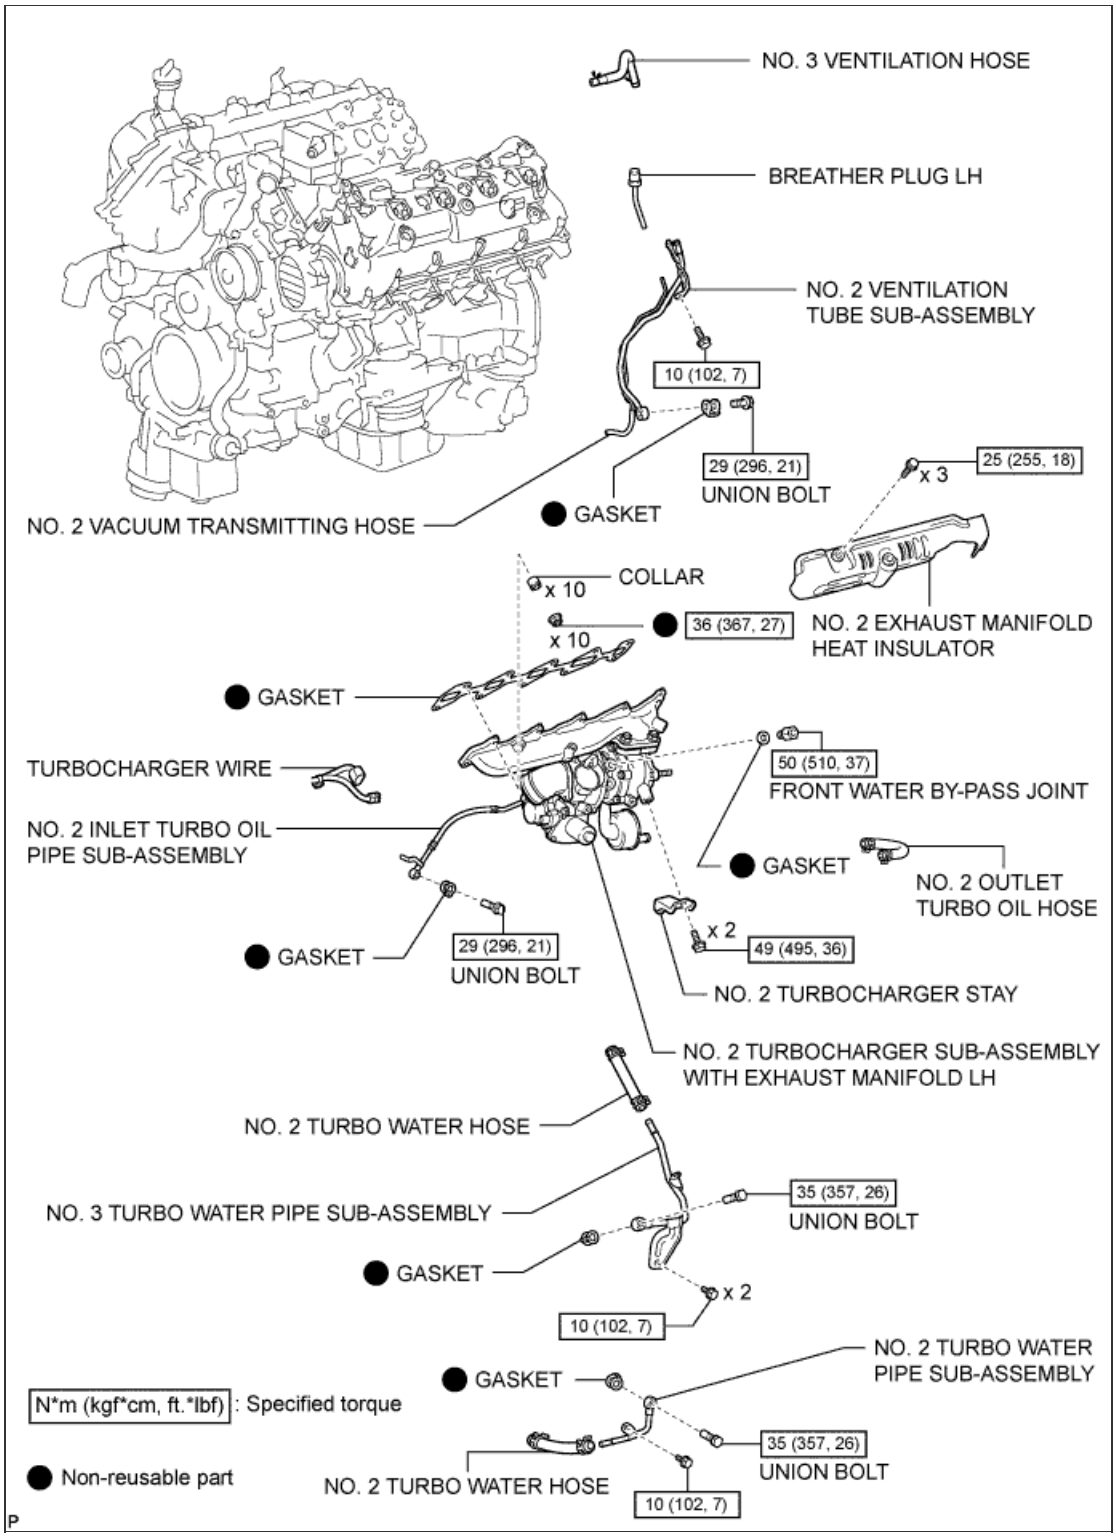
Maximum engine spee :
4700 to 4900 rpm



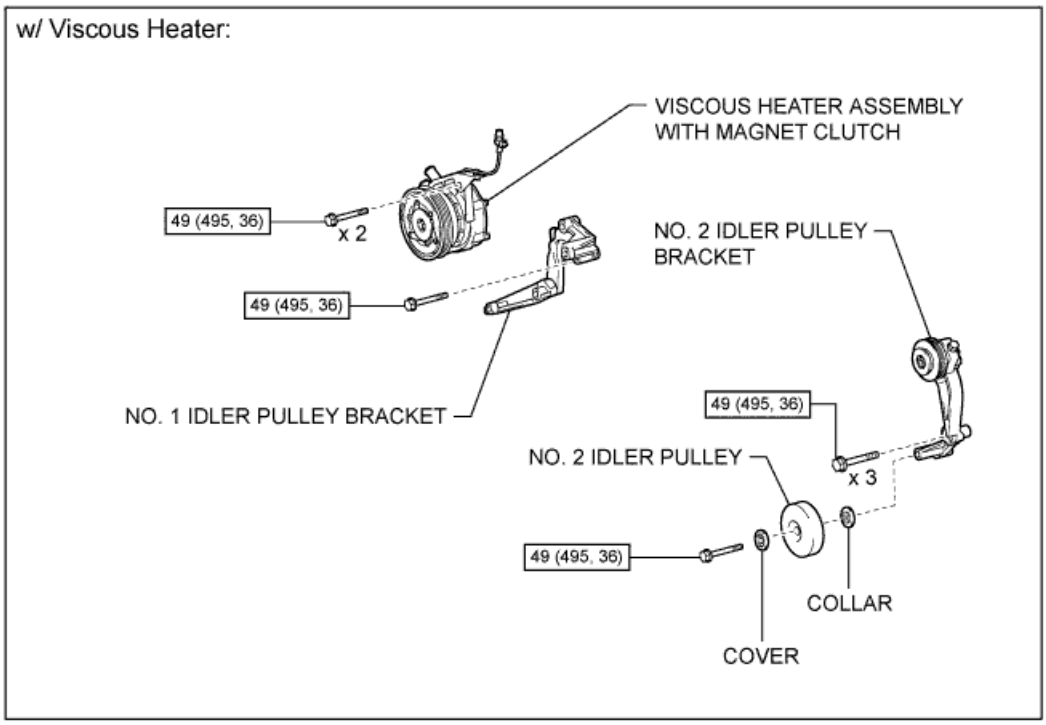
132. INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY (w/ Intercooler)



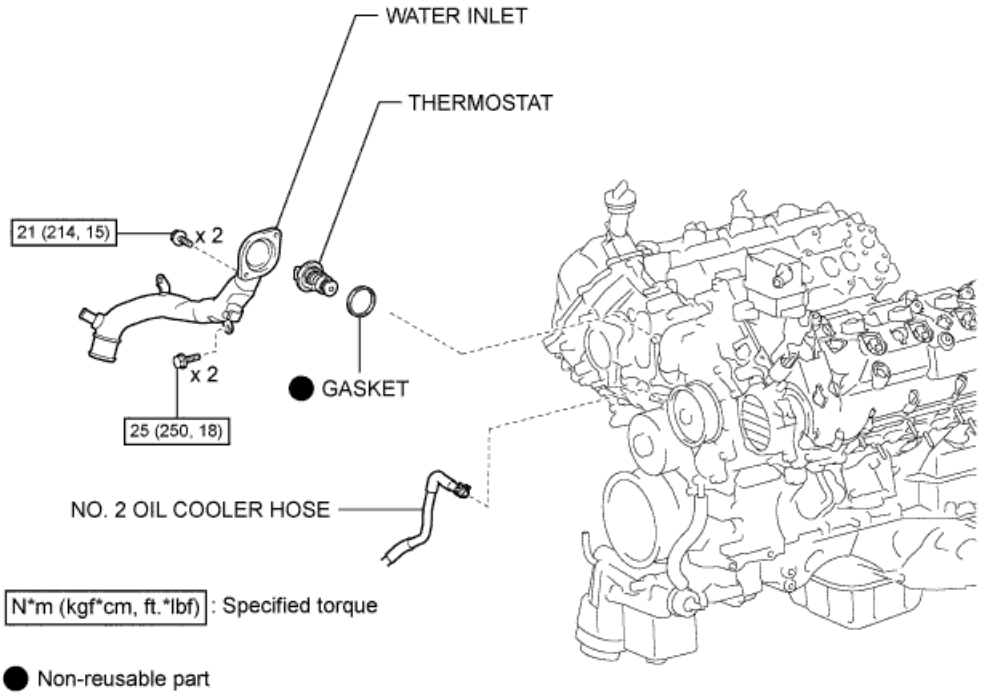
a. Install the engine cover with the nuts.



Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



V8 D4D



for Preparation Click here

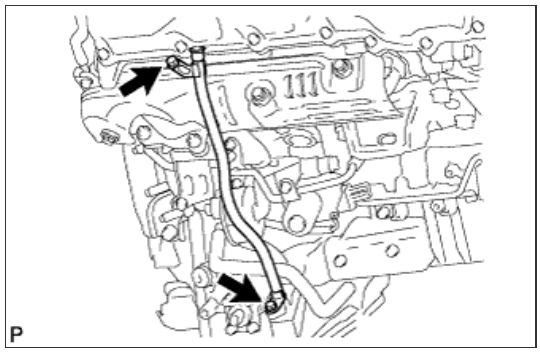
1. REMOVE VACUUM PUMP ASSEMBLY (w/ Intercooler)

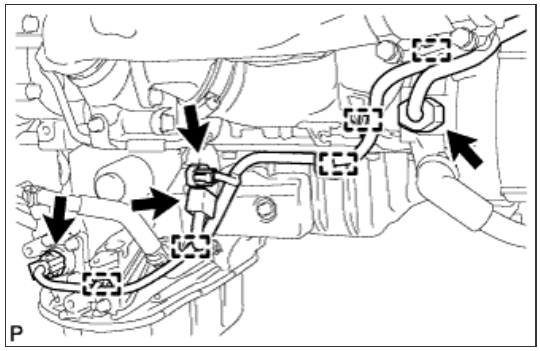
a. Remove the 3 bolts and vacuum pump.



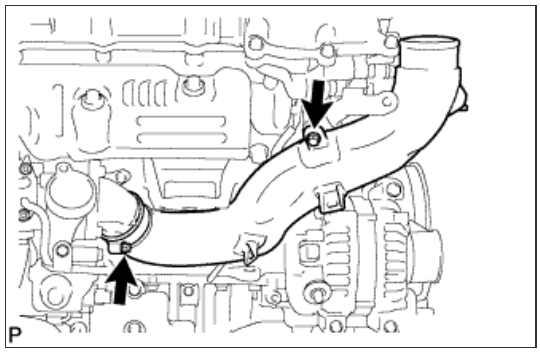
b. Remove the O s.

2. REMOVE NO. 1 ENGINE OIL LEVEL DIPSTICK GUIDE

a. Remove the bolts and No. 1 engine oil level dipstick guide.



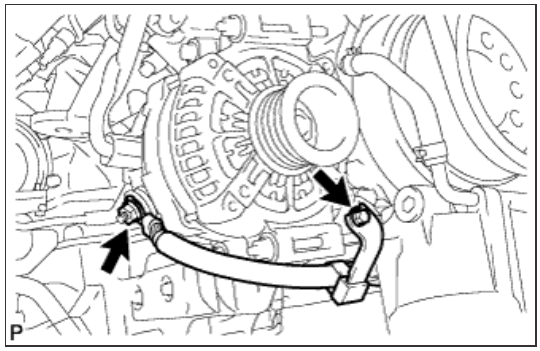
b. Remove the O f om the No. 1 engine oil level dipstick.



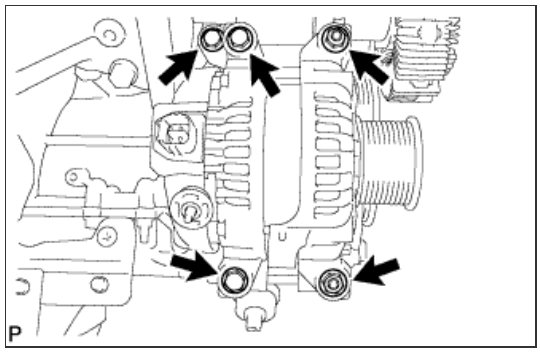
3. REMOVE NO. 1 INTAKE AIR CONNECTOR PIPE

a. Remove the 4 connecto s.

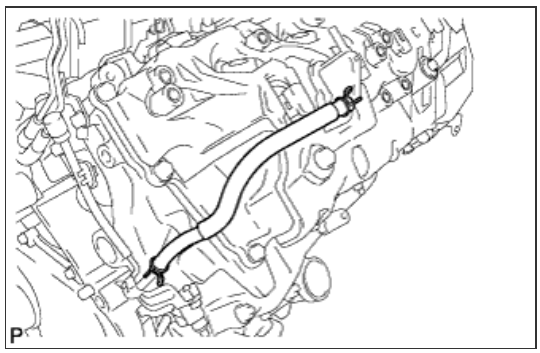
b. Using a clip emove detach the 5 wi e ha ess clamps.



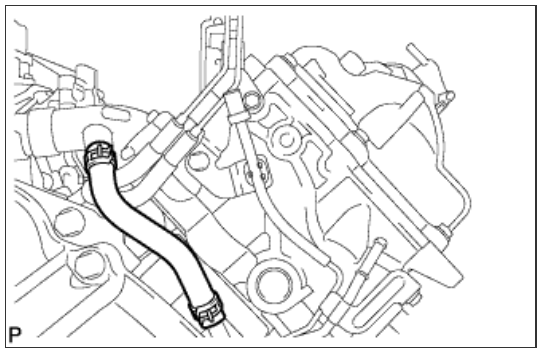
c. Loosen the hose clamp, and emove the bolt and No. 1 intake ai connecto e.



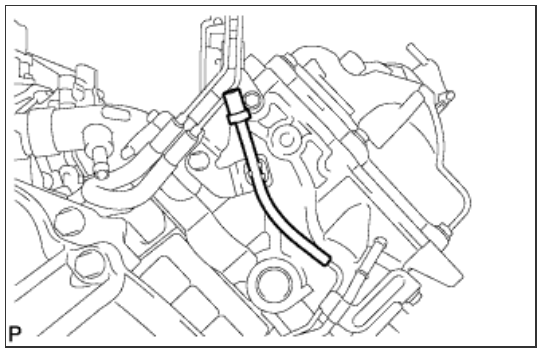
4. REMOVE GENERATOR ASSEMBLY



a. Remove the nut and bolt, and disconnect the gene to positive (cable.

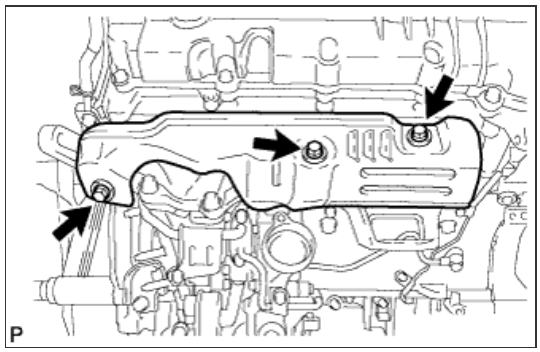


b. Remove the 3 bolts, nuts and gene to

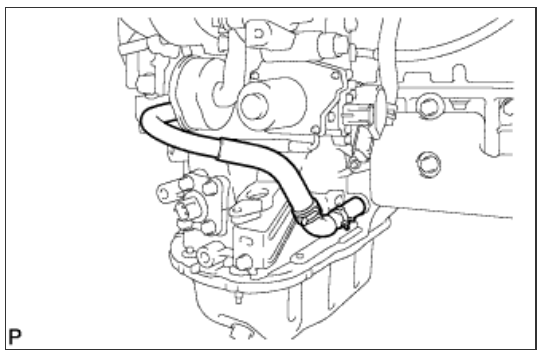


5. DISCONNECT NO. 2 VENTILATION HOSE

6. DISCONNECT NO. 2 TURBO WATER HOSE

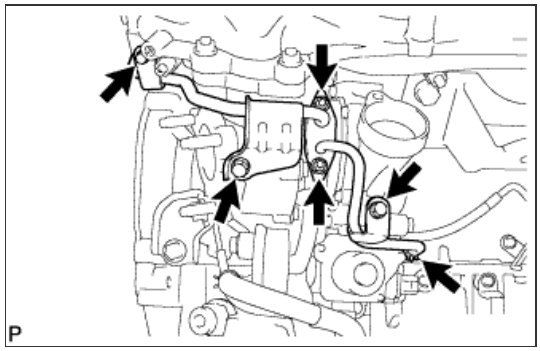


7. DISCONNECT BREATHER PLUG RH



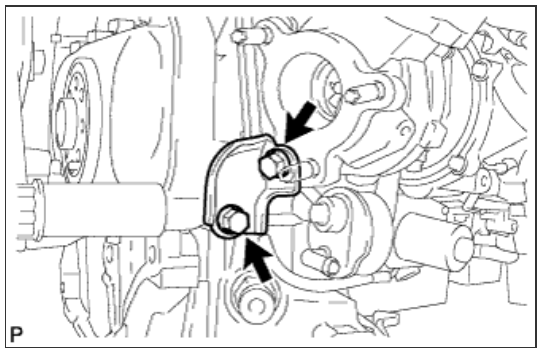
8. REMOVE NO. 1 EXHAUST MANIFOLD HEAT INSULATOR

a. Remove the 3 bolts and No. 1 exhaust manifold heat insulato



9. DISCONNECT NO. 1 OUTLET TURBO OIL HOSE

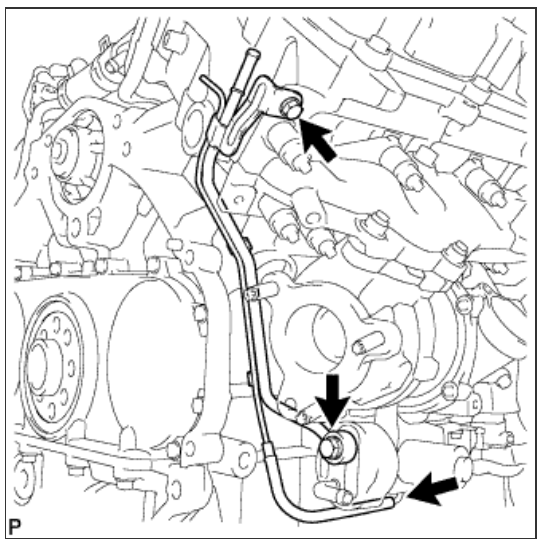
10. REMOVE NO. 1 TURBO WATER PIPE SUB-ASSEMBLY



a. Disconnect the wate hose.

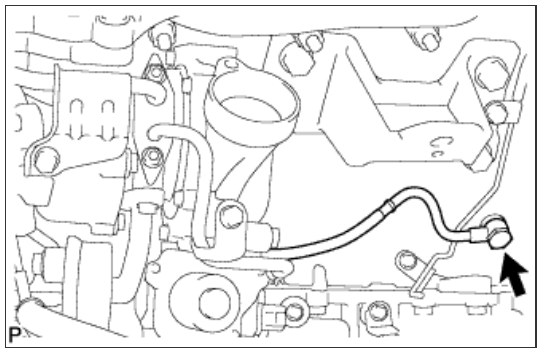
b. Remove the 3 bolts, nuts, No. 1 tu bo wate pipe and gasket.

11. REMOVE NO. 1 TURBOCHARGER STAY



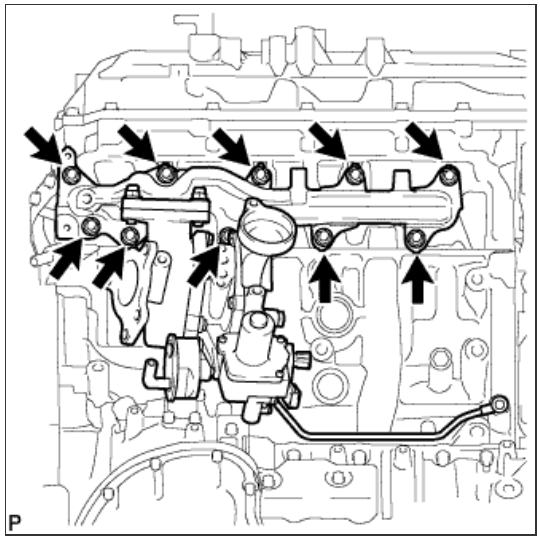
a. Remove the bolts and No. 1 tu bocha e stay.

12. REMOVE NO. 1 VENTILATION TUBE SUB-ASSEMBLY

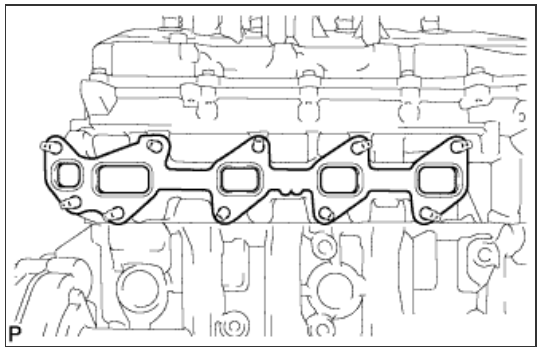


a. Disconnect the vacuum hose.

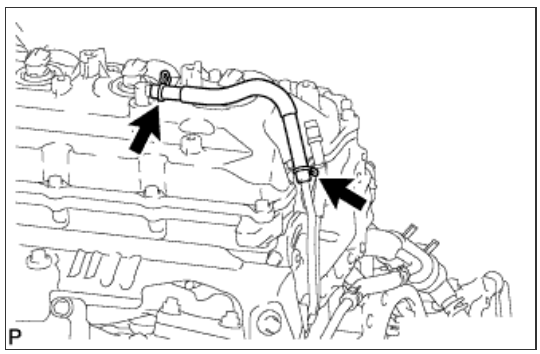
b. Remove the union bolt, bolt, No. 1 ventilation tube and gasket.



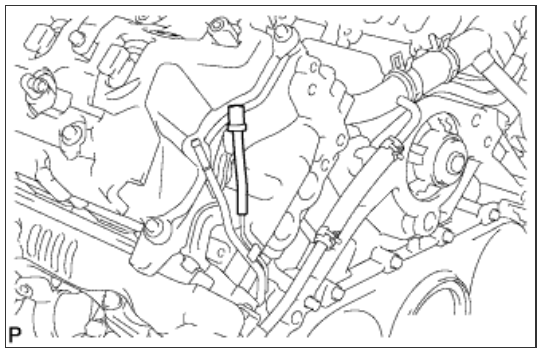
13. REMOVE NO. 1 TURBOCHARGER SUB-ASSEMBLY WITH EXHAUST MANIFOLD RH



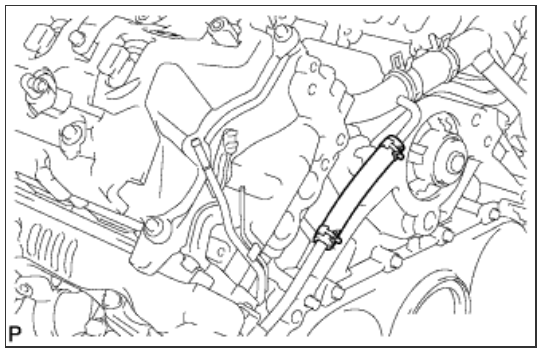
a. Remove the union bolt and gasket, and disconnect the No. 1 inlet tu bo oil pipe f om the cylinde block.



b. Remove the 10 nuts, 10 colla s, and No. 1 tu bocha e with exhaust manifold RH.

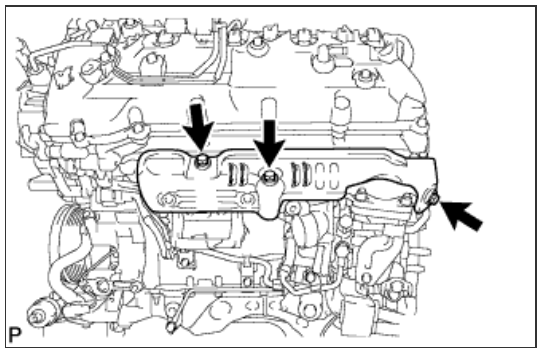


c. Remove the gasket f om the cylinde head RH.

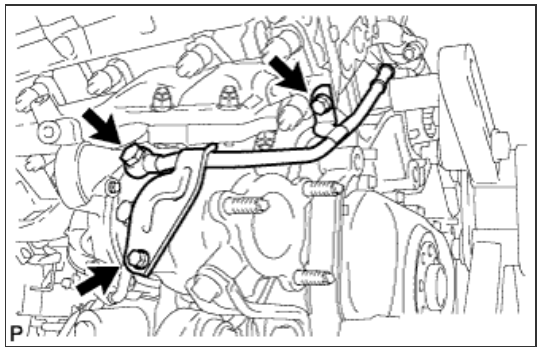


14. DISCONNECT NO. 3 VENTILATION HOSE

15. DISCONNECT BREATHER PLUG LH

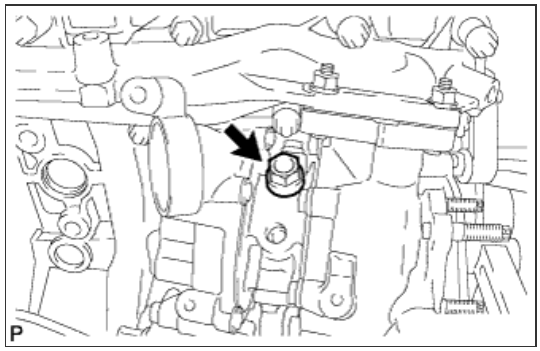


16. DISCONNECT NO. 2 TURBO WATER HOSE



17. REMOVE NO. 2 EXHAUST MANIFOLD HEAT INSULATOR

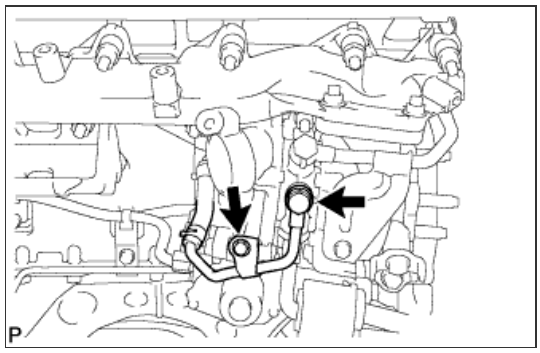
a. Remove the 3 bolts and No. exhaust manifold heat insulato



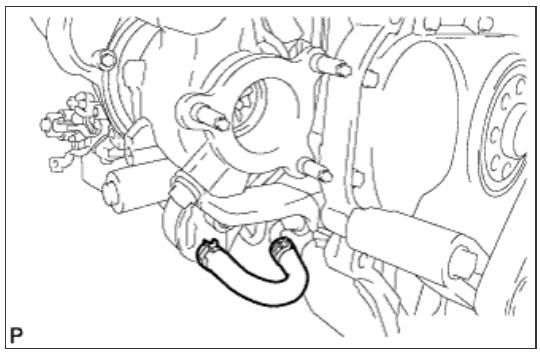
18. REMOVE NO. 3 TURBO WATER PIPE SUB-ASSEMBLY

a. Remove the bolts, union bolt, No. 3 tu bo wate pipe and gasket.

19. REMOVE FRONT WATER BY-PASS JOINT



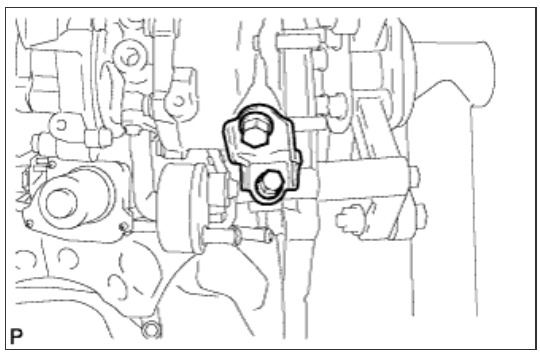
a. Remove the f ont wate by ss joint and gasket.



20. REMOVE NO. 2 TURBO WATER PIPE SUB-ASSEMBLY

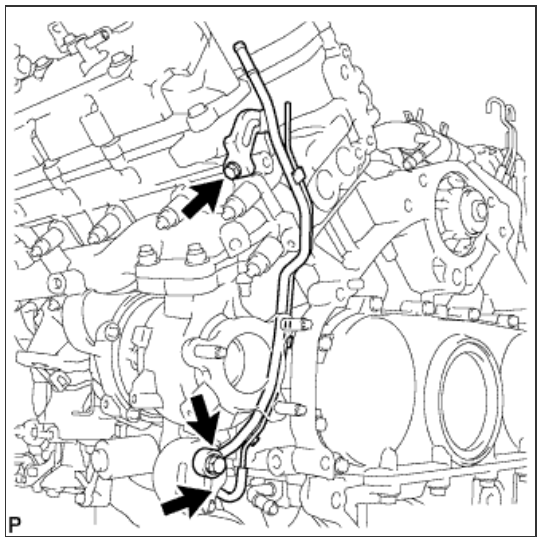
a. Disconnect the wate hose.

b. Remove the union bolt, bolt, No. tu bo wate pipe and gasket.



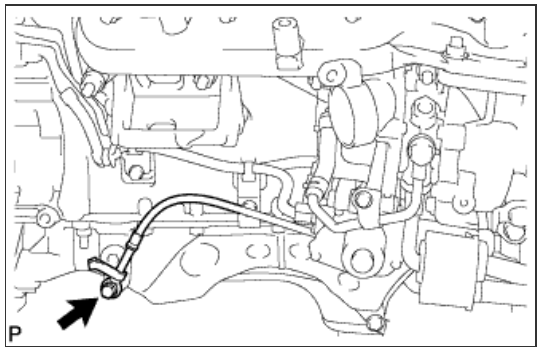
21. DISCONNECT NO. 2 OUTLET TURBO OIL HOSE

22. REMOVE NO. 2 TURBOCHARGER STAY



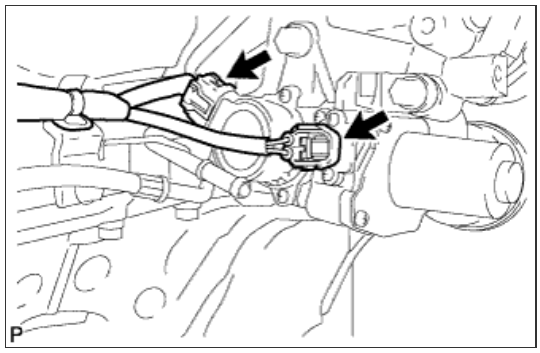
a. Remove the bolts and No. tu bocha e stay.

23. REMOVE NO. 2 VENTILATION TUBE SUB-ASSEMBLY

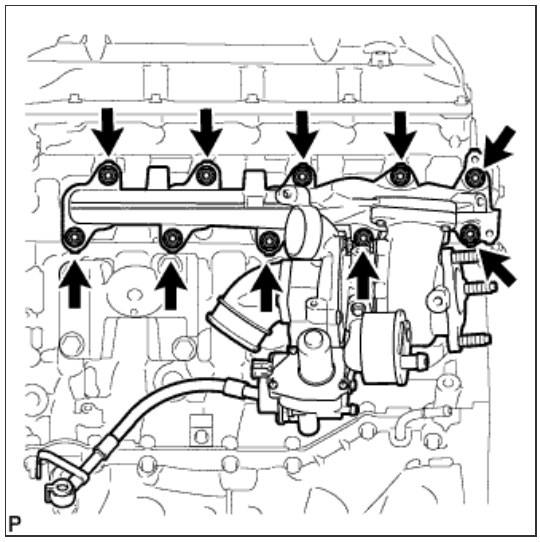


a. Disconnect the No. vacuum t smitting hose.

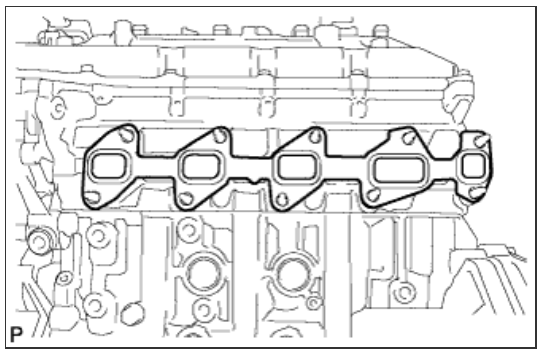
b. Remove the union bolt, bolt, No. ventilation tube and gasket.



24. REMOVE NO. 2 TURBOCHARGER SUB-ASSEMBLY WITH EXHAUST MANIFOLD LH



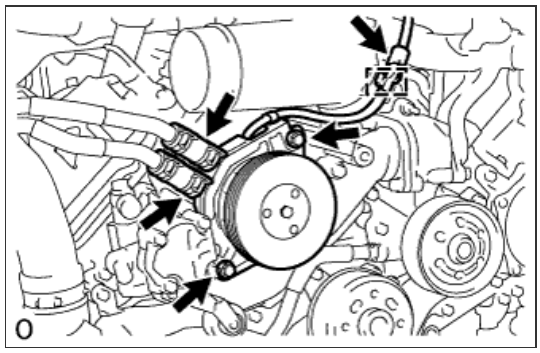
a. Remove the union bolt and gasket, and disconnect the No. inlet tu bo oil pipe.



b. Disconnect the connecto s f om the tu bocha e

c. Remove the 10 nuts, 10 colla s, and No. tu bocha e with exhaust manifold LH.

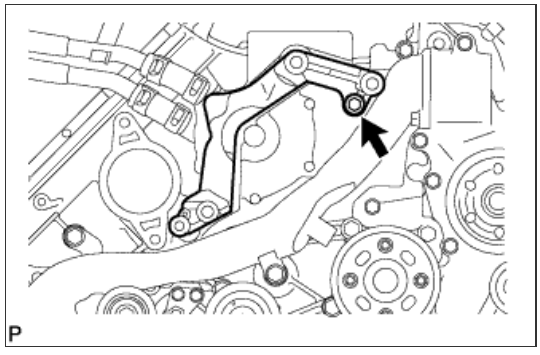
d. Remove the gasket f om the cylinde head LH.



25. REMOVE VISCOUS HEATER ASSEMBLY WITH MAGNET CLUTCH (w/ Viscous Heater)

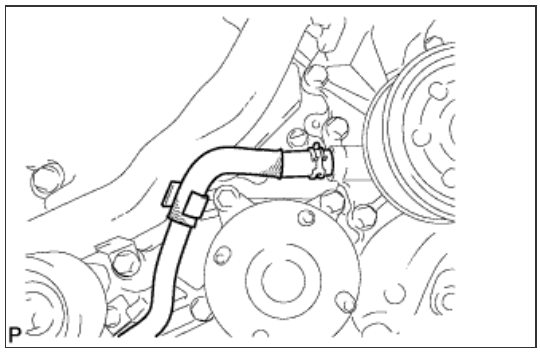
a. Disconnect the connecto and detach the clamp.

b. Using plie s, g the claws of the clips and slide the clips.



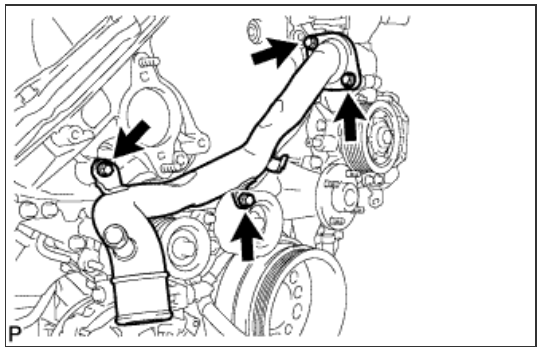
c. Disconnect the heate hoses.

d. Remove the bolts and heate assembly.



26. REMOVE NO. 1 IDLER PULLEY BRACKET (w/ Viscous Heater)

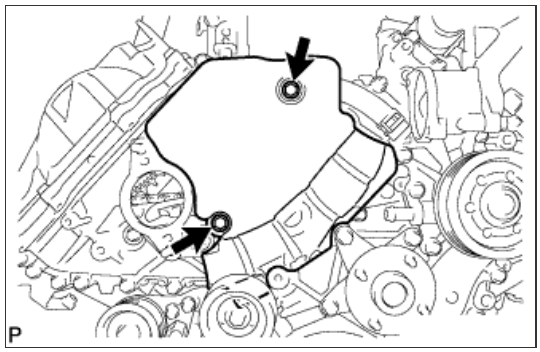
a. Remove the bolt and No. 1 idle pulley b et.



27. REMOVE WATER INLET

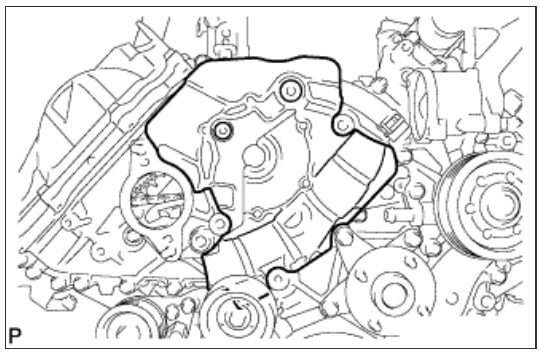
a. Disconnect the No. oil coole hose f om the wate pump and clamp.

b. Remove the 4 bolts and wate inlet.



28. REMOVE THERMOSTAT

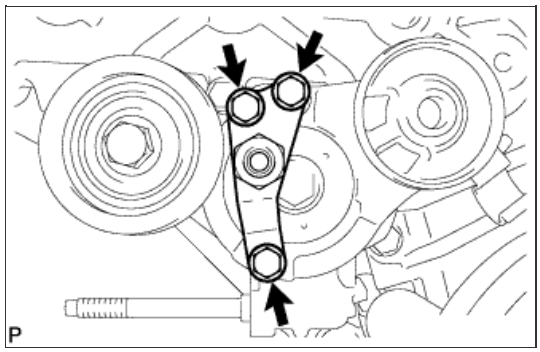
a. Remove the the mostat.



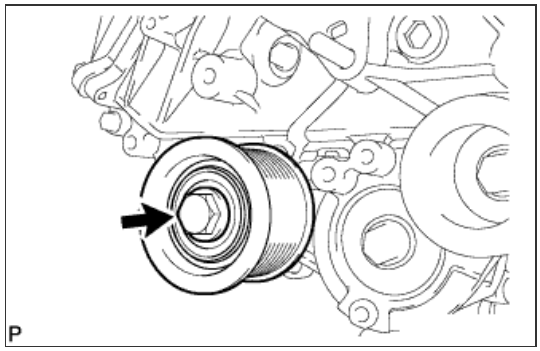
b. Remove the gasket f om the the mostat.

29. REMOVE TIMING GEAR COVER INSULATOR (w/ Intercooler)

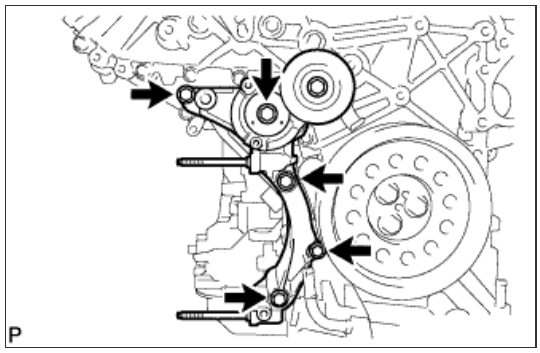
a. w/o Viscous Heate
Remove the bolts and timing gea cove insulato



b. Viscous Heate
Remove the timing gea cove insulato

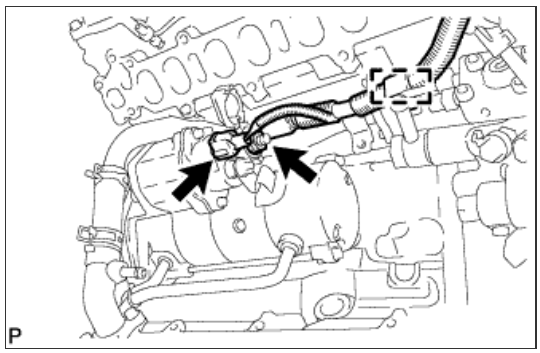


30. REMOVE V-RIBBED BELT TENSIONER ASSEMBLY

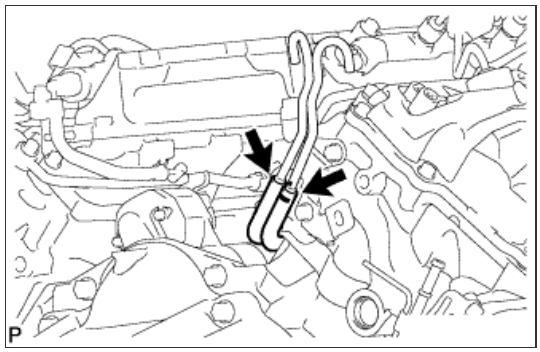


a. Remove the 3 bolts and V bbed belt tensione b et.

b. Remove the bolt and No. 1 idle pulley.

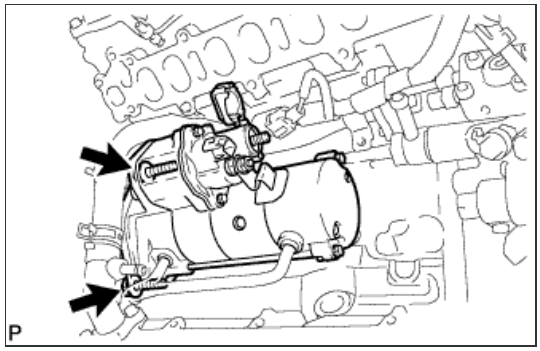


c. Remove the 5 bolts and V bbed belt tensione



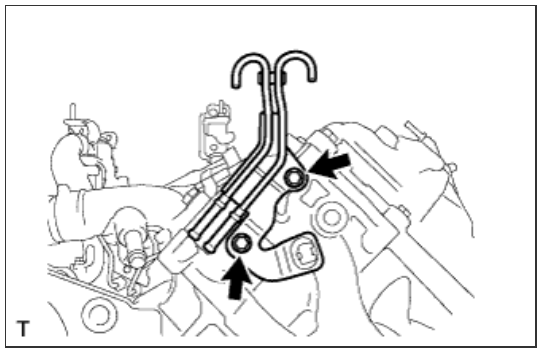
31. REMOVE STARTER ASSEMBLY

a. sconnect the connecto and detach the wi e ha ess clamp.

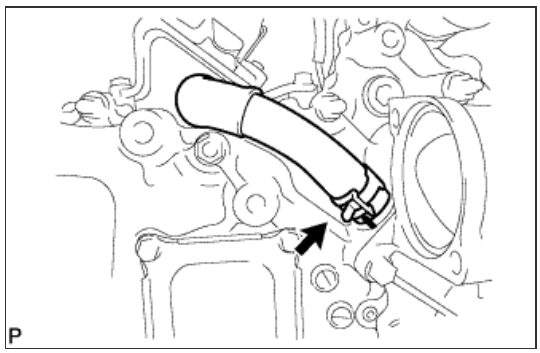


b. Remove the nut and No. engine wi e.

c. Disconnect the hoses.

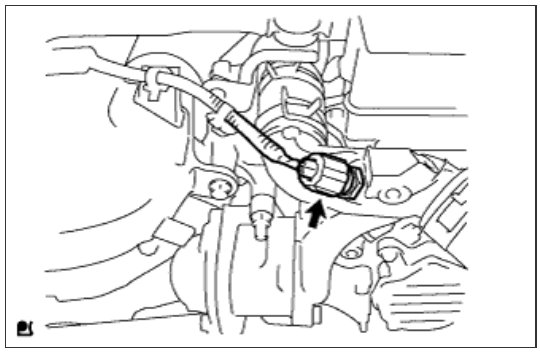


d. Remove the bolts and sta te



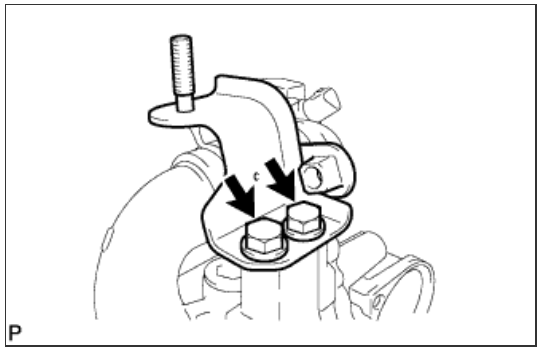
32. REMOVE STARTER HOSE BRACKET

a. Remove the bolts and sta te hose b et.



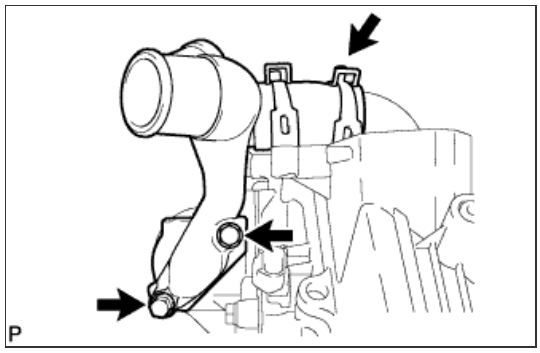
33. DISCONNECT INLET WATER HOSE

34. REMOVE DIESEL ENGINE COOLANT TEMPERATURE SENSOR



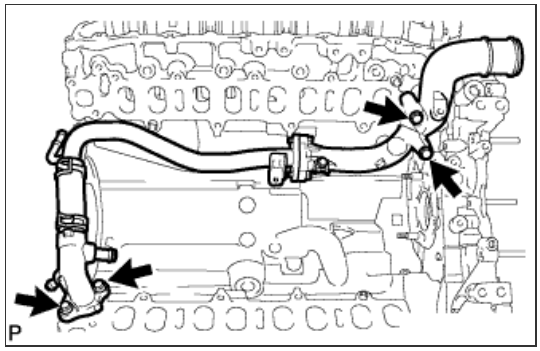
a. Disconnect the senso connecto

b. sing a 19 mm deep socket w ench, emove the senso and gasket.



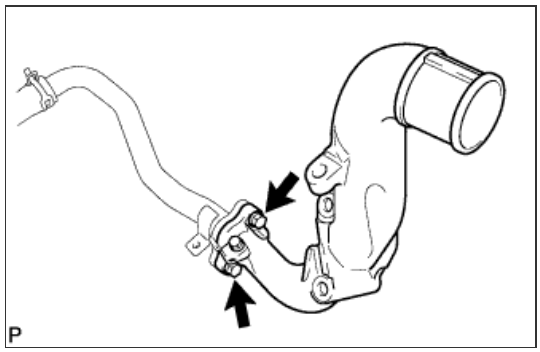
35. REMOVE NO. 2 INTERCOOLER SUPPORT BRACKET

a. Remove the bolts and No. inte oole suppo t b et.



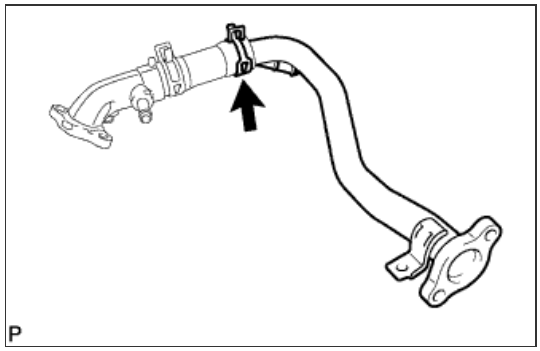
36. REMOVE WATER OUTLET

a. Remove the bolts and gasket and disconnect the wate outlet f om the No. te hose joint.

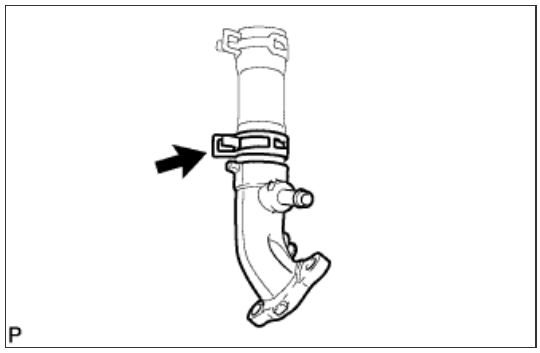


37. REMOVE WATER OUTLET PIPE

a. Remove the 4 bolts, wate outlet pipe and gaskets.

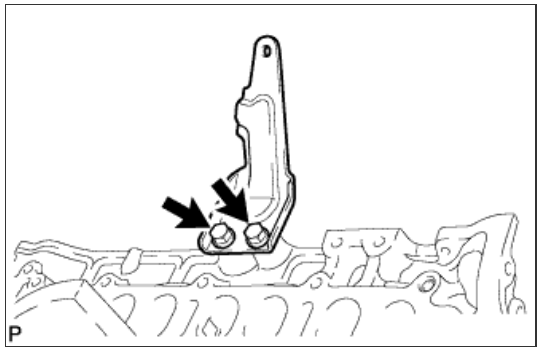


38. SEPARATE NO. 1 AND NO. 2 WATER OUTLET PIPES AND WATER BY-PASS OUTLET



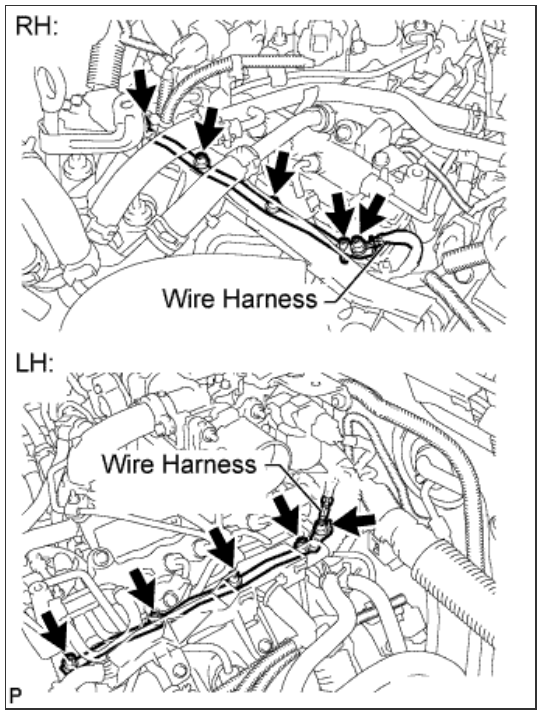
a. Remove the bolts and No. 1 water outlet pipe from the No. water outlet pipe.

b. Disconnect the No. water outlet pipe from the No. 1 water hose joint.



c. Disconnect the water bypass outlet from the No. 1 water hose joint.

39. REMOVE CLUTCH FLEXIBLE HOSE BRACKET (for Manual Transmission)

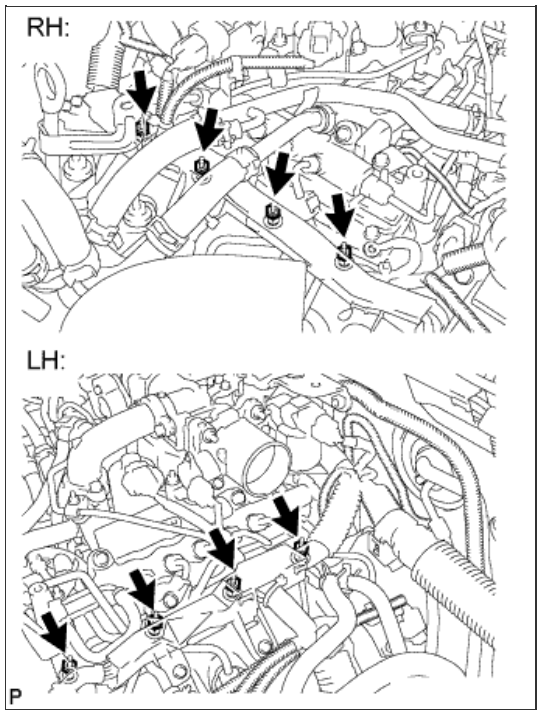


a. Remove the bolts and clutch flexible hose bracket.

40. REMOVE NO. 1 GLOW PLUG CONNECTOR

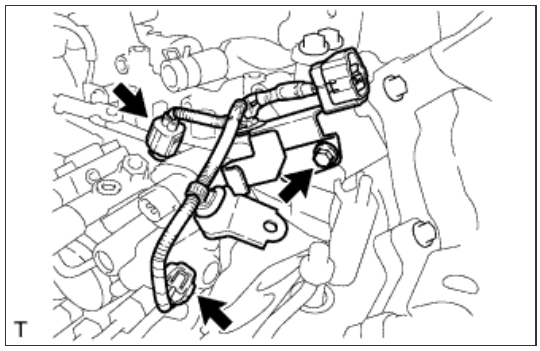
a. Remove the screw grommets and nuts, and disconnect the wire harnesses.

b. Remove the 8 screw grommets, 8 nuts and glow plug connectors.



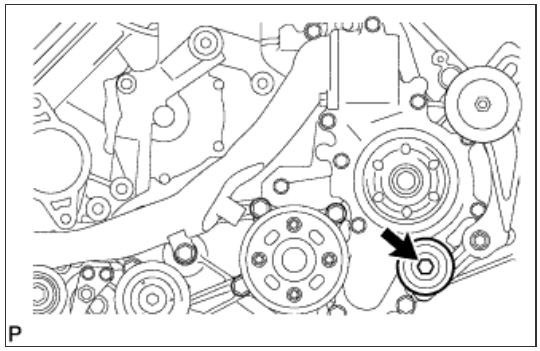
41. REMOVE GLOW PLUG ASSEMBLY

a. Using a 10 mm deep socket w ench, emove the 8 glow plugs.



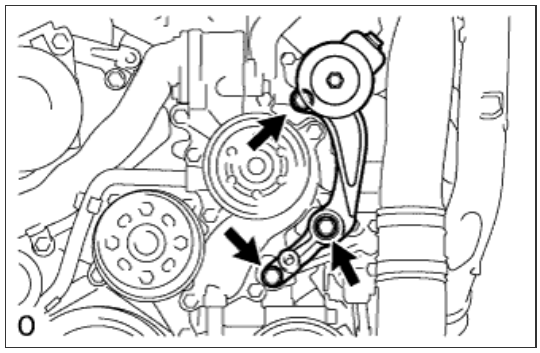
HINT

Befo e emoving the glow plugs, tho oughly clean off all di t, sand, etc.



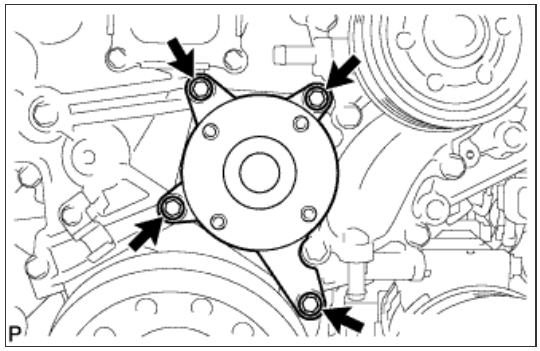
42. REMOVE FUEL PUMP MOTOR WIRE

a. Disconnect the connecto s and emove the bolt and fuel pump moto wi e.



43. REMOVE NO. 2 IDLER PULLEY (w/ Viscous Heater)

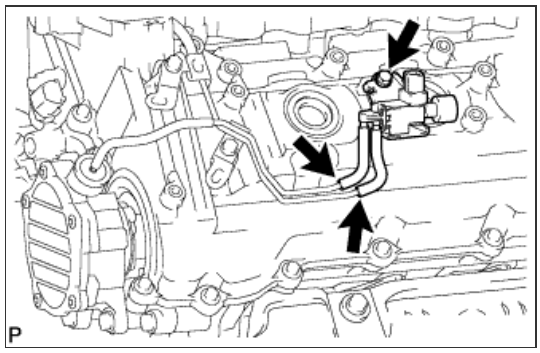
a. Remove the bolt and No. idle pulley.



44. REMOVE NO. 2 IDLER PULLEY BRACKET (w/ Viscous Heater)

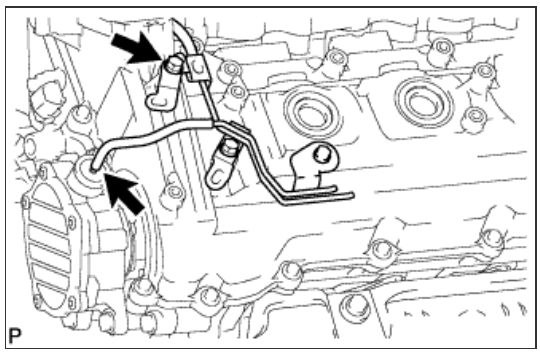
a. Remove the 3 bolts and idle pulley b et.

45. REMOVE FAN BRACKET SUB-ASSEMBLY



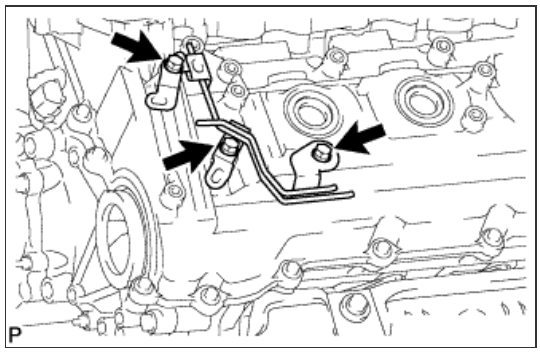
a. Remove the 4 bolts and fan b et.

46. REMOVE NO. 1 VACUUM SWITCHING VALVE ASSEMBLY (w/ Intercooler)



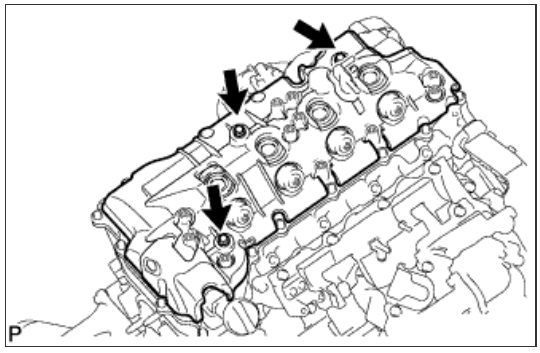
a. Disconnect the vacuum hoses.

b. Remove the bolt and vacuum switching valve.

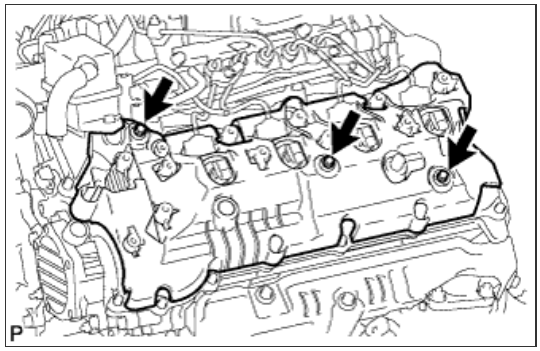


47. REMOVE NO. 1 VACUUM TRANSMITTING PIPE SUB-ASSEMBLY

a. w/ Inte oole
sconnect the vacuum hoses.

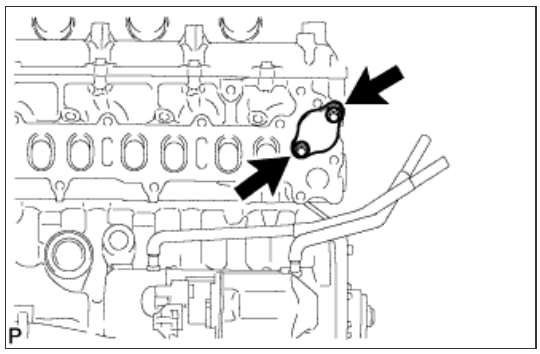


b. Remove the 3 bolts and vacuum t smitting pipe.



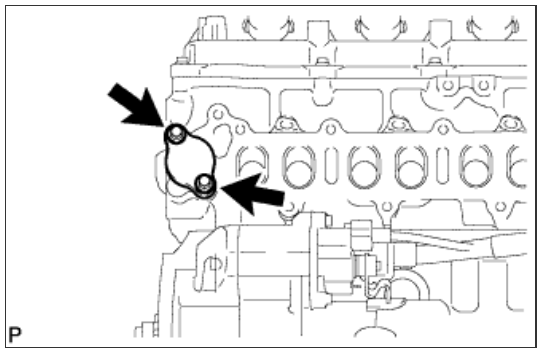
48. REMOVE CYLINDER HEAD COVER SILENCER RH (w/ Intercooler)

a. Remove the 3 bolts and cylinde head cove silence



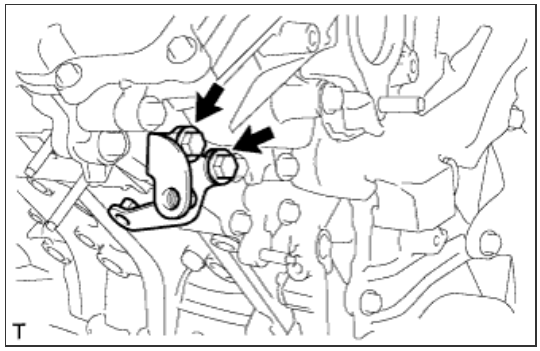
49. REMOVE CYLINDER HEAD COVER SILENCER LH (w/ Intercooler)

a. Remove the 3 bolts and cylinde head cove silence



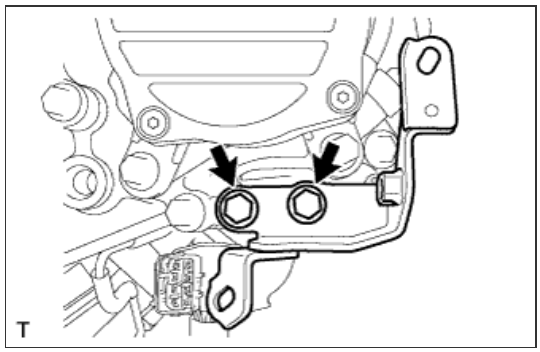
50. REMOVE REAR CYLINDER HEAD PLATE RH (w/o EGR Syste)

a. Remove the bolts, ea cylinde head plate RH and gasket.



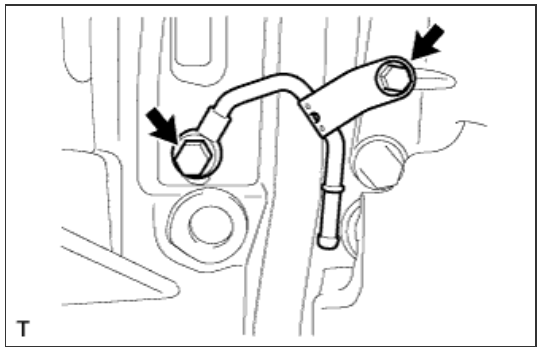
51. REMOVE REAR CYLINDER HEAD PLATE LH (w/o EGR Syste)

a. Remove the bolts, ea cylinde head plate LH and gasket.



52. REMOVE NO. 1 INTAKE AIR CONNECTOR BRACKET

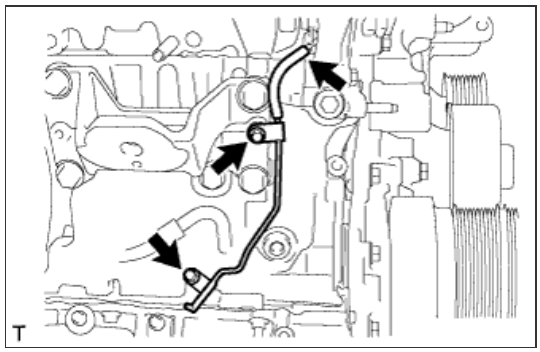
a. Remove the bolts and No. 1 intake ai connecto b et.



53. REMOVE AIR TUBE SUPPORT

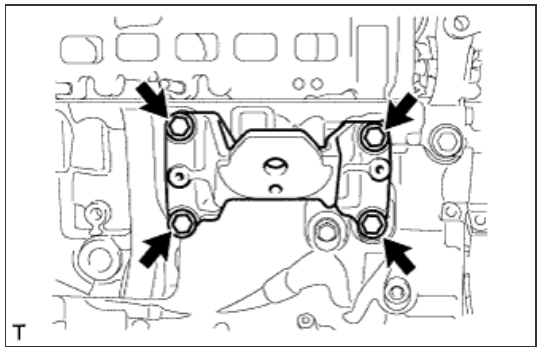
a. Remove the bolts and air tube support.

54. REMOVE NO. 1 WATER BY-PASS PIPE SUB-ASSEMBLY



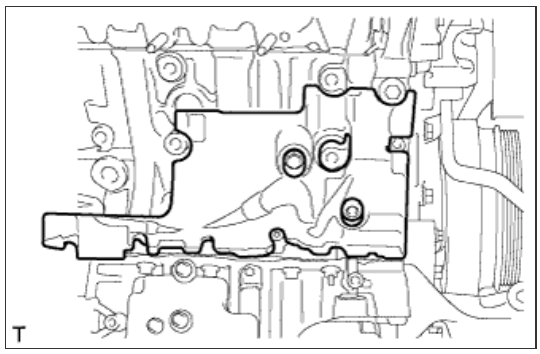
a. Remove the union bolt, bolt, No. 1 water bypass pipe and gasket.

55. REMOVE NO. 4 VACUUM TRANSMITTING PIPE SUB-ASSEMBLY (w/ Intercooler)



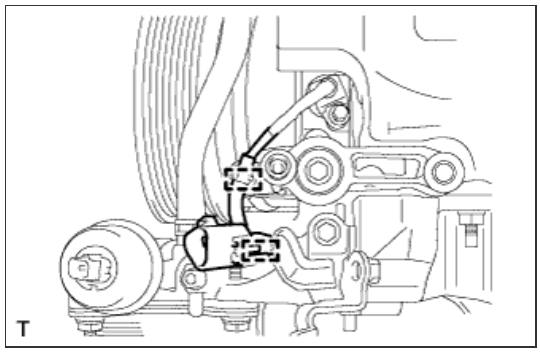
a. Disconnect the vacuum hose.

b. Remove the bolts and No. 4 vacuum transmitting pipe.

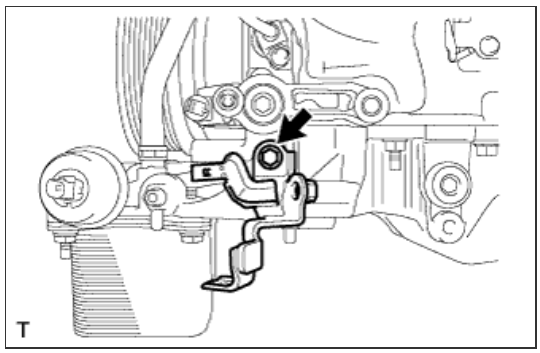


56. REMOVE ENGINE MOUNTING BRACKET RH

a. Remove the 4 bolts and engine mounting bracket RH.

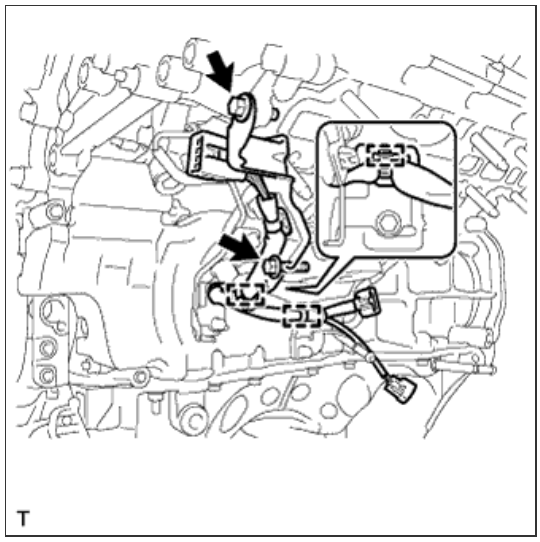


57. REMOVE NO. 1 CYLINDER BLOCK INSULATOR



58. REMOVE NO. 2 INTAKE AIR CONNECTOR BRACKET

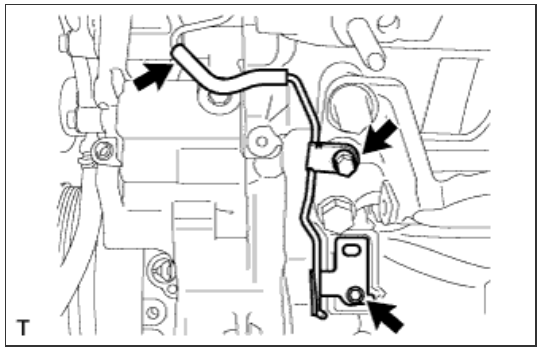
a. Detach the wire harness clamps.



b. Remove the bolt and No. intake air connector bracket.

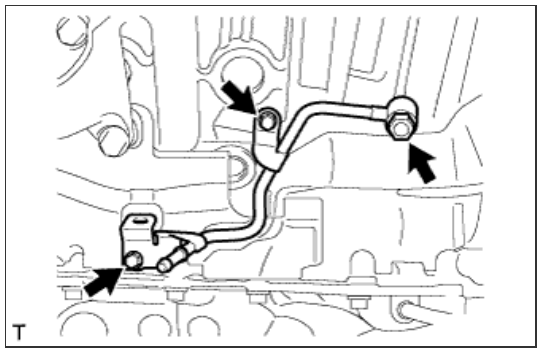
59. REMOVE TURBOCHARGER WIRE

a. Detach the 3 wire harness clamps.



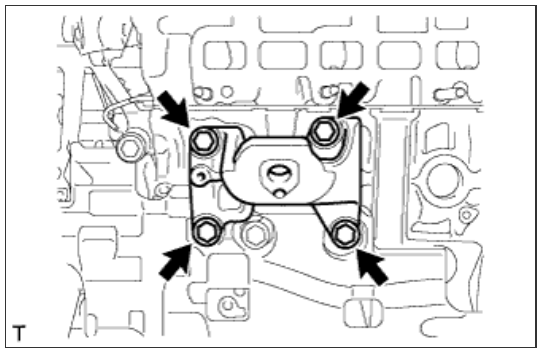
b. Remove the bolts and turbocharger wire.

60. REMOVE NO. 3 VACUUM TRANSMITTING PIPE SUB-ASSEMBLY



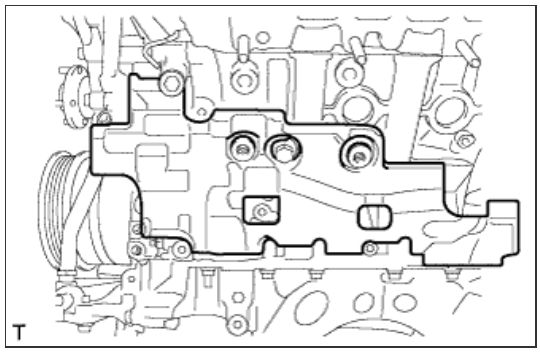
a. w/ Inte oole
sconnect the vacuum hose.

b. Remove the bolts and No. 3 vacuum t smitting pipe.



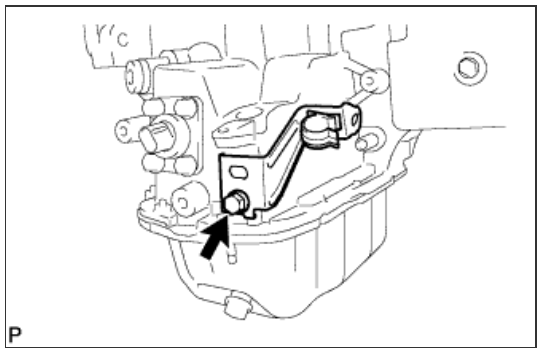
61. REMOVE NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY

a. Remove the union bolt, bolts, No. wate by ss pipe and gasket.

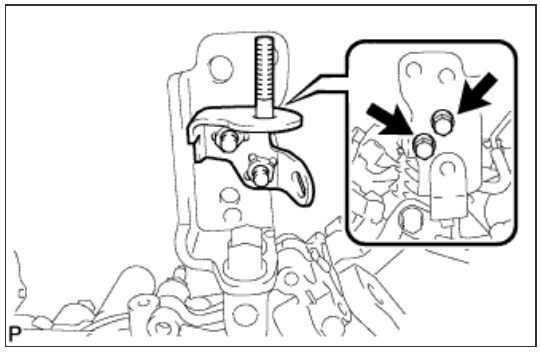


62. REMOVE ENGINE MOUNTING BRACKET LH

a. Remove the 4 bolts and engine mounting b et LH.

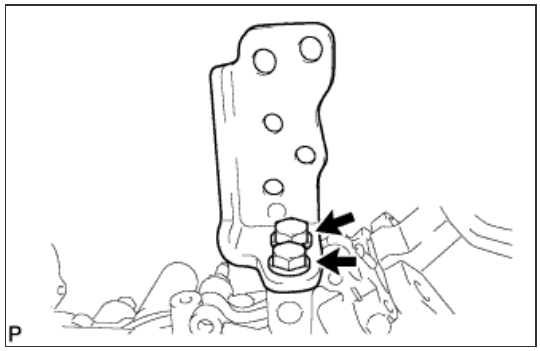


63. REMOVE NO. 2 CYLINDER BLOCK INSULATOR



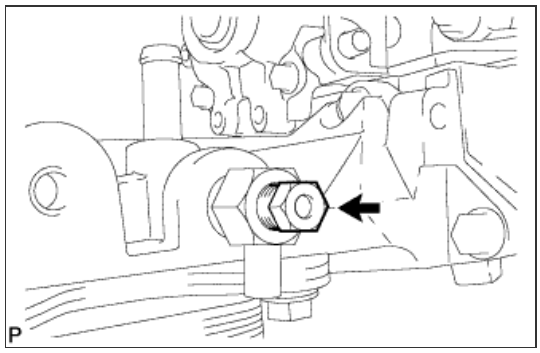
64. REMOVE OIL TANK BRACKET

a. Remove the bolt and oil tank b et.



65. REMOVE NO. 1 INTERCOOLER SUPPORT BRACKET

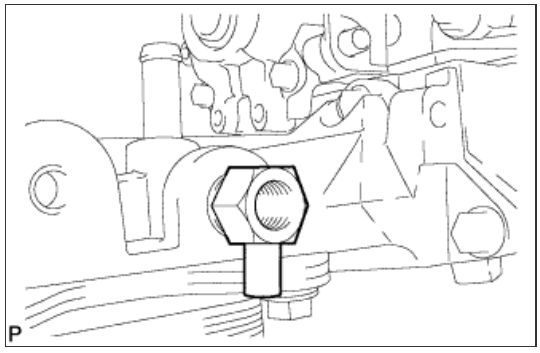
a. Remove the bolts and No. 1 inte oole suppo t b et.



66. REMOVE NO. 3 ENGINE HANGER

a. Remove the bolts and No. 3 engine hange

67. REMOVE OIL FILTER BRACKET DRAIN COCK ASSEMBLY



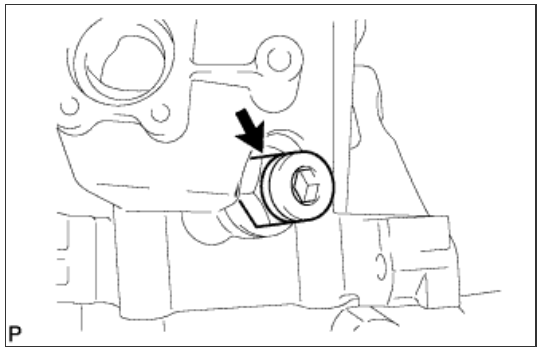
a. Remove the oil filte d cock plug.

b. Remove the oil filte d cock body.

HINT

If the d cock is defo med o clogged, eplace o epai it.

68. REMOVE OIL PRESSURE REGULATOR ASSEMBLY



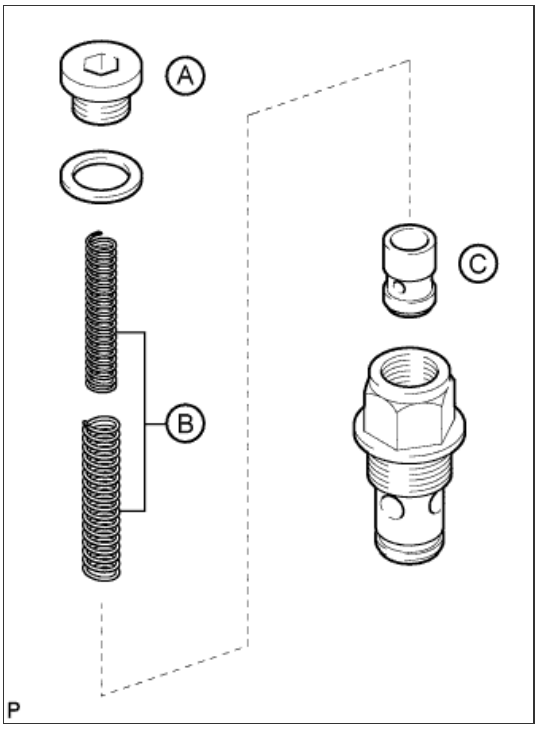
a. Using a mm w ench, emove the oil p essu e egulato and gasket.

b. Remove the O f om the oil p essu e egulato body.

c. Hold the oil p essu e egulato body in a vise between aluminum plates.

NOTICE

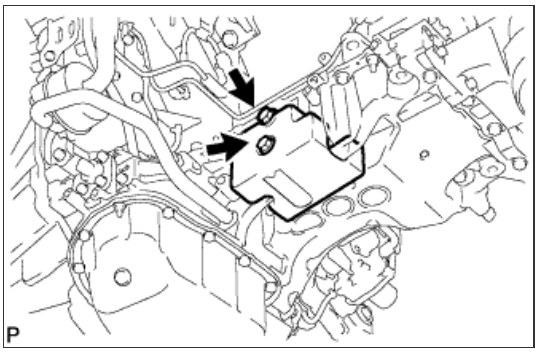
Be ca eful not to damage the oil p essu e egulato body.



d. Using a 10 mm hexagon w ench, emove the oil pump elief valve plug labeled A.

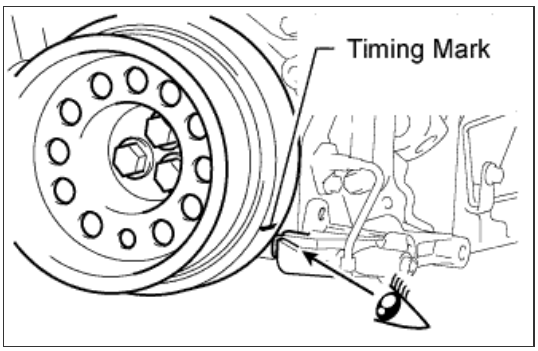
CAUTION

When removing the plug, be careful as the spring will be jumped out.



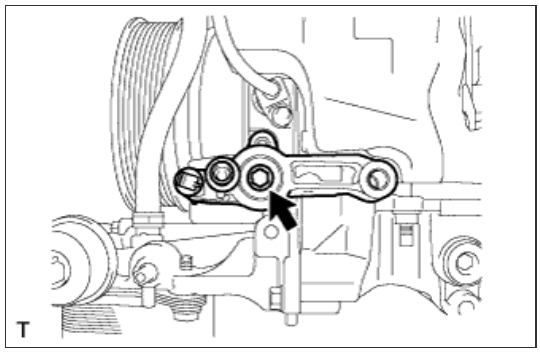
e. Remove the spring labeled B.

f. Remove the oil pump relief valve labeled C.



69. REMOVE STIFFENER INSULATOR RH (w/ Intercooler)

a. Remove the 2 bolts and stiffener insulator RH.



70. SET NO. 1 CYLINDER TO TDC/COMPRESSION

a. Align the timing mark of the crankshaft pulley and the chain cover and compression bolt.

71. REMOVE COMPRESSOR BRACKET

a. Remove the bolt and compression bolt.

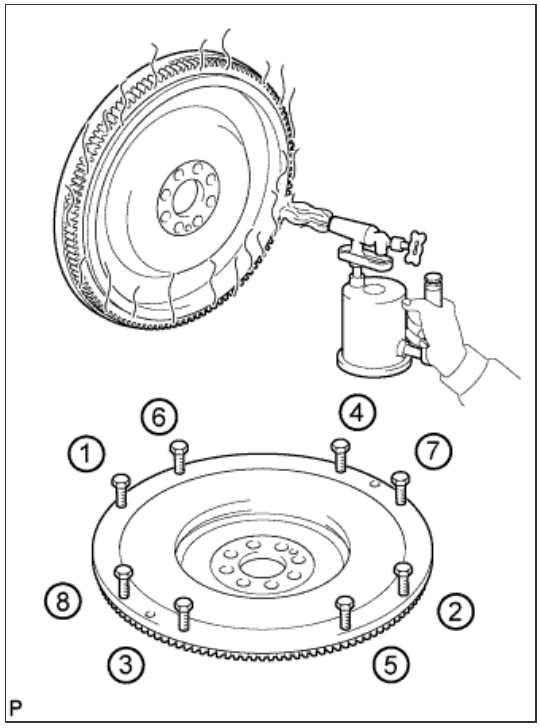
72. REPLACE FLYWHEEL RING GEAR

CAUTION

When to ing the flywheel:

- **Wear protective gloves.**
- **Be careful as the flywheel is hot.**

HINT



If the flywheel ring gear is deformed or the gear teeth are damaged, replace it.

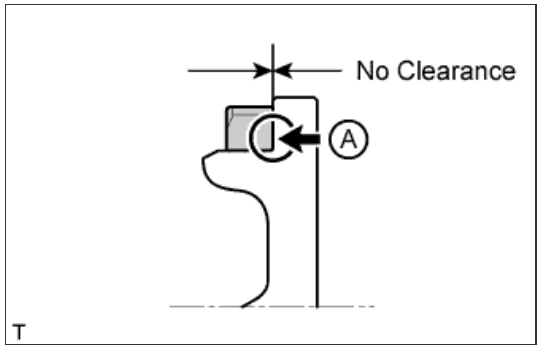
a. Using a torch, heat the ring gear evenly to approximately 200°C (392°F).

b. Install 8 10 mm x 1.25 pitch bolts with a length of 70 mm or more to the flywheel.

c. Uniformly tighten the 8 bolts in the order shown in the illustration.

d. Remove the ring gear from the flywheel.

e. Using a torch, heat a new ring gear evenly to approximately 200°C (392°F).



NOTICE

Be careful not to overheat the ring gear.

f. Using a brass bar, tap the ring gear onto the flywheel with its chamfered gear teeth facing the block.

NOTICE

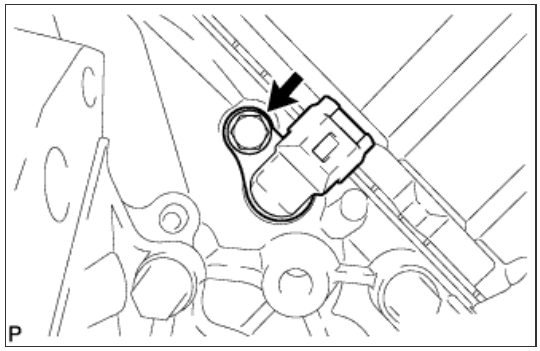
- **Make sure to press in the ring gear until the ring gear contacts the flywheel as shown in A in the illustration.**
- **After installing allow the ring gear to cool before handling.**

73. REPLACE FLYWHEEL STRAIGHT PIN

HINT

It is not necessary to remove the straight pin unless it is being replaced.

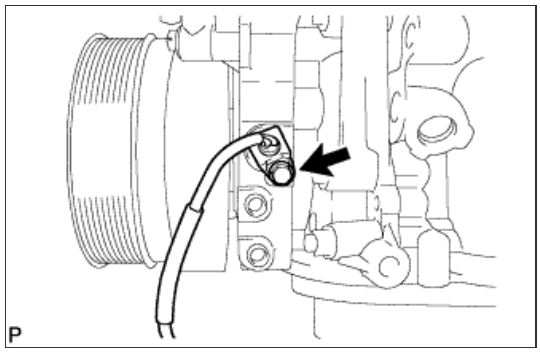
a. Replace the flywheel straight pin.



for Preparation Click here

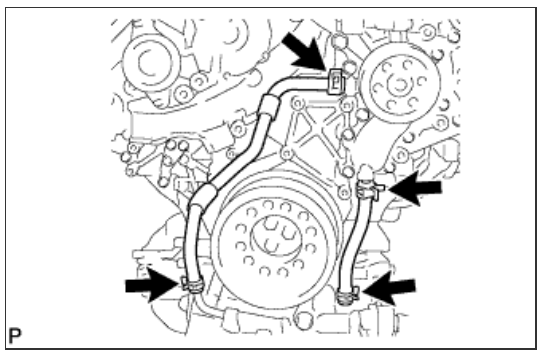
CAUTION:

When replacing an injector (including interchanging injectors between cylinders), common rail, cylinder head, or intake manifold, replace the corresponding injection pipes with a new one.



1. REMOVE CAMSHAFT POSITION SENSOR

a. Remove the bolt and sensor.



2. REMOVE CRANKSHAFT POSITION SENSOR

a. Remove the bolt and sensor.

3. DISCONNECT NO. 1 OIL COOLER HOSE

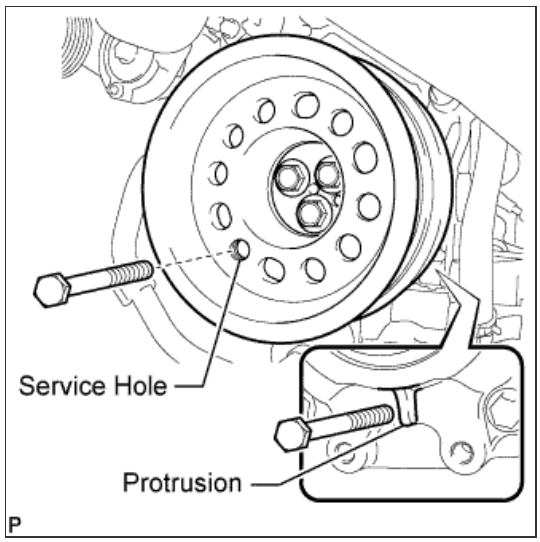
4. DISCONNECT NO. 2 OIL COOLER HOSE

5. REMOVE CRANKSHAFT PULLEY

NOTICE:

This procedure is intended for removal/installation of the crankshaft pulley only. Do not use this procedure for removal/installation of the flywheel or the drive plate and ring gear.

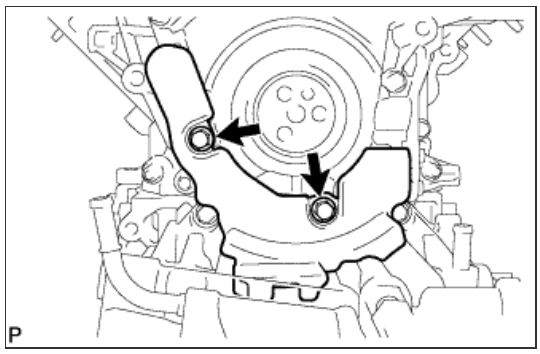
a. Install the 2 bolts to the bolt holes of the crankshaft rear side.



b. Using a bar, turn the crankshaft until the crankshaft pulley service hole is a little to the left of bottom dead center.

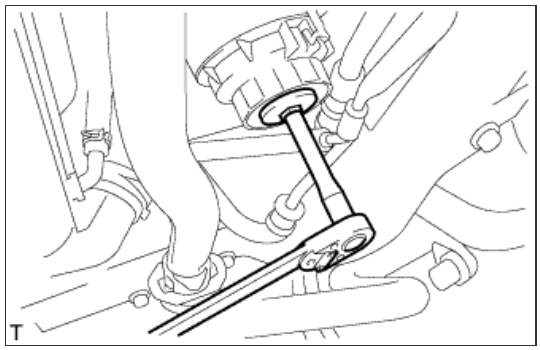
c. Install a 14 mm x 1.5 pitch service bolt with a length of 70 mm or more to the crankshaft pulley service hole, and hold the crankshaft using the timing chain cover protrusion.

d. Remove the 3 bolts and crankshaft pulley.



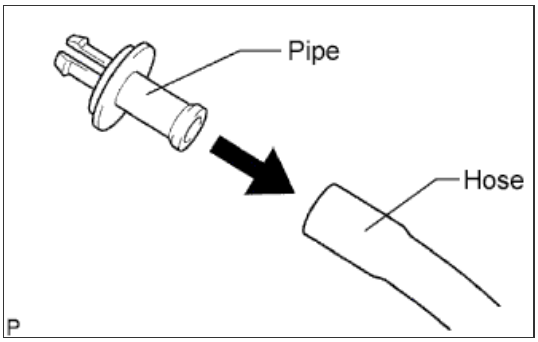
NOTICE:

If the crankshaft pulley cannot be removed, temporarily install a bolt to the crankshaft so that the pulley does not fall, and lightly tap the outer edge of the mass damper with a plastic-faced hammer to remove the pulley. Do not tap the pulley V-ribbed belt ribs, as the crankshaft may be damaged.



6. REMOVE TIMING GEAR COVER SPACER (w/ Intercooler)

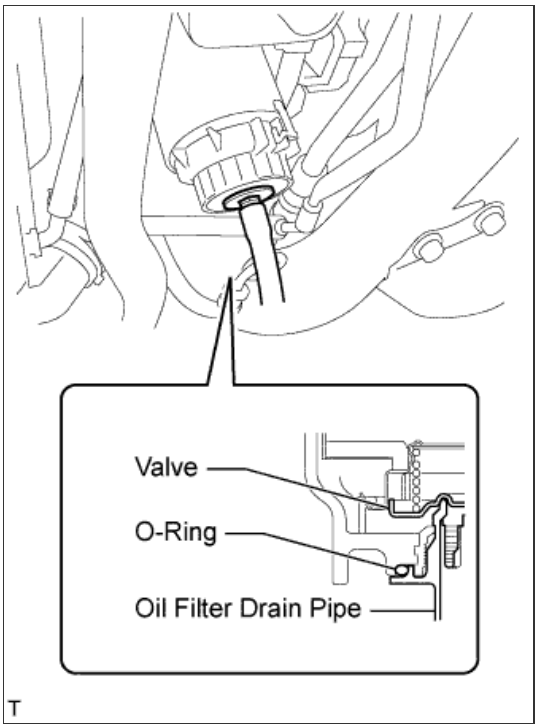
a. Remove the 2 bolts and timing gear cover spacer.



7. REMOVE OIL FILTER CAP WITH ELEMENT

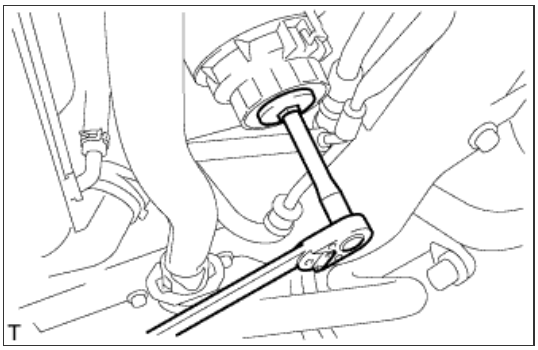
a. Remove the oil filter drain plug.

b. Connect a hose with an inside diameter of 15 mm (0.591 in.) to the pipe.



c. Remove the O-ring from the oil filter drain plug and install it to the drain pipe.

d. Install the oil filter drain pipe to the oil filter cap and drain the engine oil.

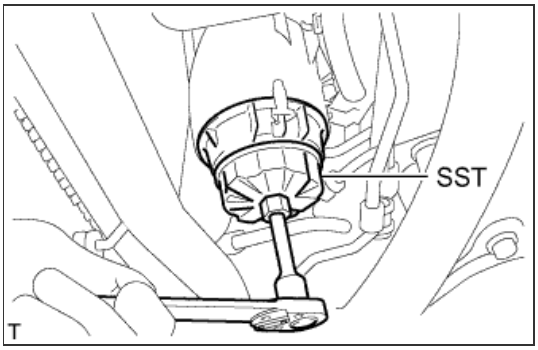


e. Remove the oil filter drain pipe.

f. Apply a light coat of engine oil to a new O-ring, and install it to the oil filter drain plug.

g. Install the oil filter drain plug to the oil filter cap.

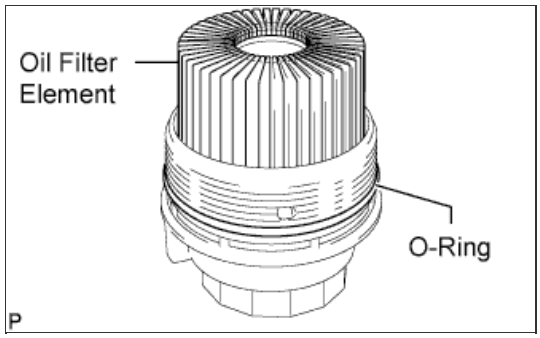
Torq e:
13 N*m{ 127 kgf*cm 9 ft.*lbf }



h. Using SST, remove the oil filter cap.

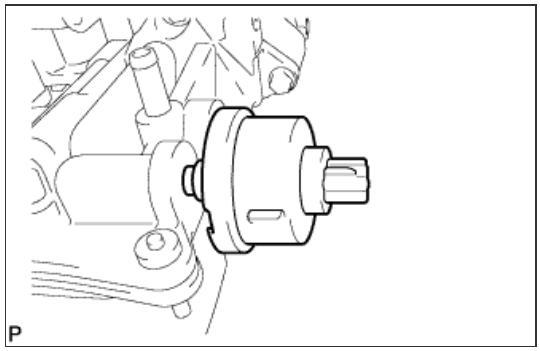
SST
922 65 1

HINT:



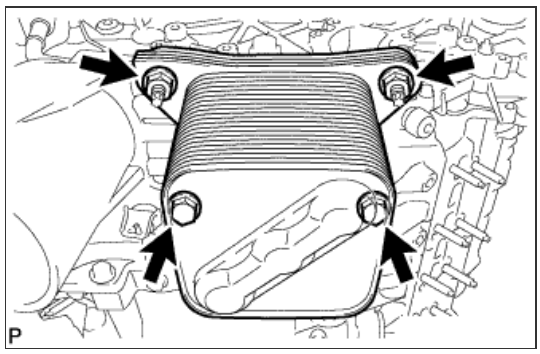
Use a container to catch the draining oil. After the oil filter cap is loosened approximately 4 turns and the cap ribs are vertical, engine oil drains from the gap between the oil filter cap and oil pan.

i. Remove the oil filter element and O-ring from the oil filter cap.



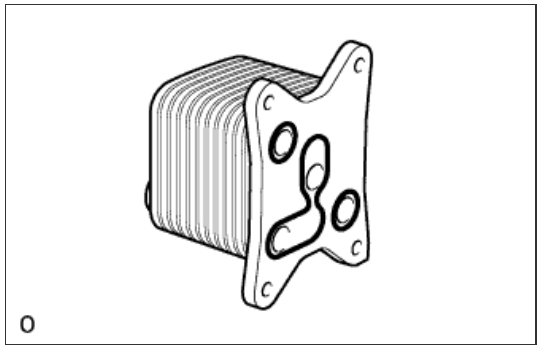
NOTICE:

Be sure to remove the cap O-ring by hand, without using any tools, to prevent damage to the cap O-ring groove.



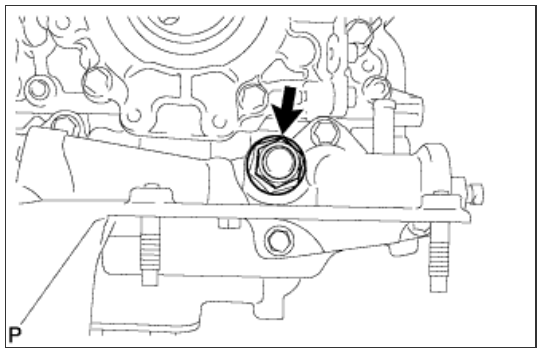
. REMOVE OIL PRESSURE SENDER GAUGE ASSEMBLY

a. Remove the oil pressure sender gauge.

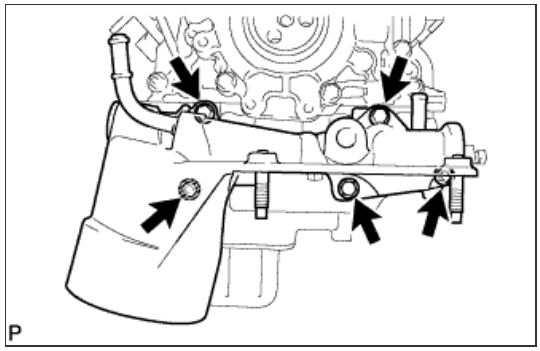


9. REMOVE OIL COOLER ASSEMBLY

a. Remove the 2 bolts, 2 nuts and oil cooler.

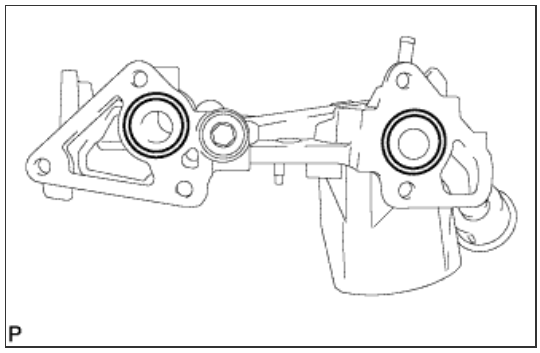


b. Remove the 2 O-rings and oil cooler gasket.



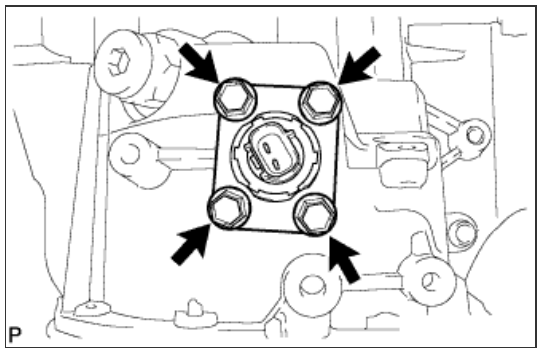
1 . REMOVE OIL COOLER RELIEF VALVE ASSEMBLY

a. Remove the oil cooler relief valve and gasket.



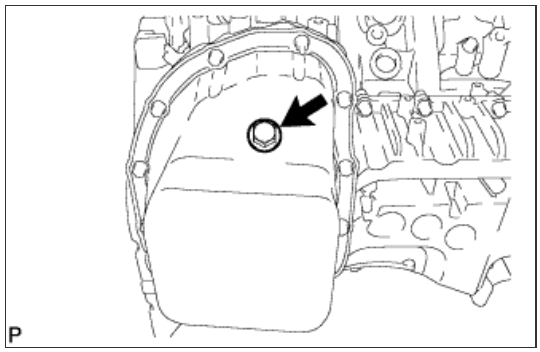
11. REMOVE OIL FILTER BRACKET SUB-ASSEMBLY

a. Remove the 3 bolts, 2 nuts and oil filter bracket.



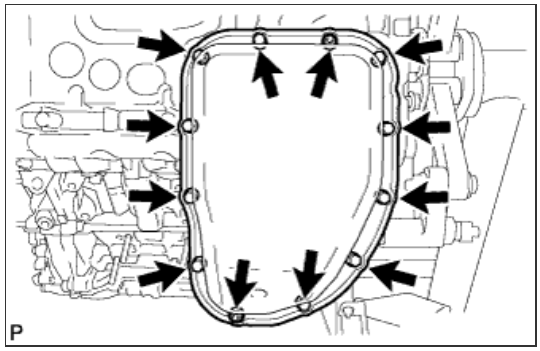
b. Remove the 2 O-rings.

12. REMOVE ENGINE OIL LEVEL SENSOR



a. Remove the 4 bolts and engine oil level sensor.

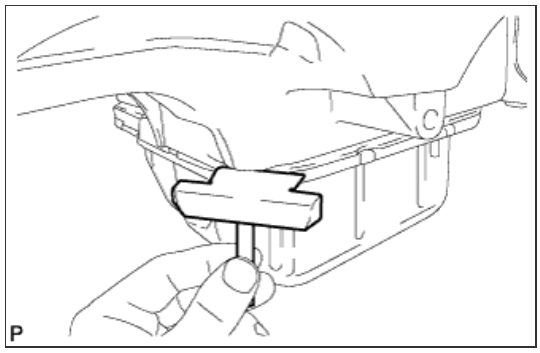
b. Remove the gasket.



13. REMOVE OIL PAN DRAIN PLUG

a. Remove the oil pan drain plug and gasket.

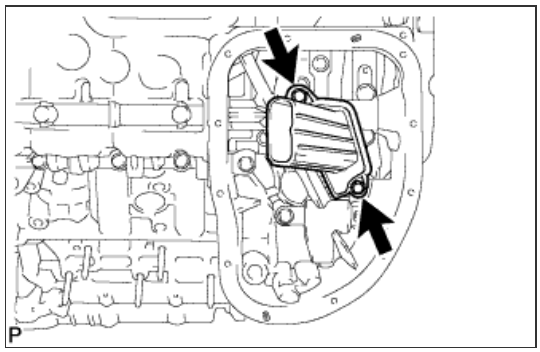
14. REMOVE NO. 2 OIL PAN SUB-ASSEMBLY



a. Remove the 10 bolts and 2 nuts.

b. Insert the blade of an oil pan seal cutter between the oil pans. Cut through the applied sealer and remove the No. 2 oil pan.

NOTICE:



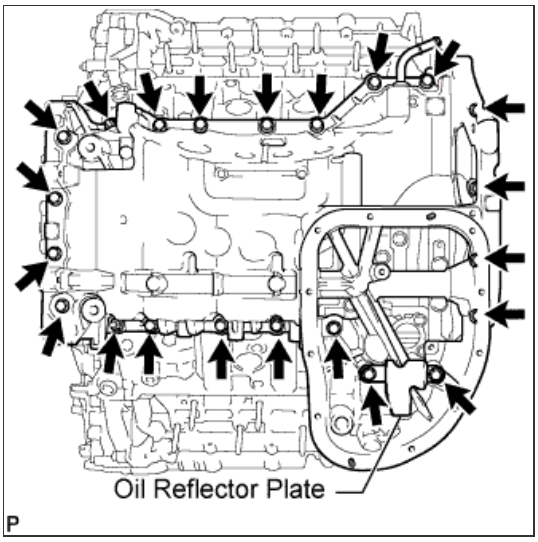
Be careful not to damage the contact surfaces of the oil pans.

15. REMOVE OIL STRAINER SUB-ASSEMBLY

a. Remove the 2 bolts and oil strainer.

b. Remove the O-ring from the oil strainer.

16. REMOVE NO. 1 OIL PAN SUB-ASSEMBLY



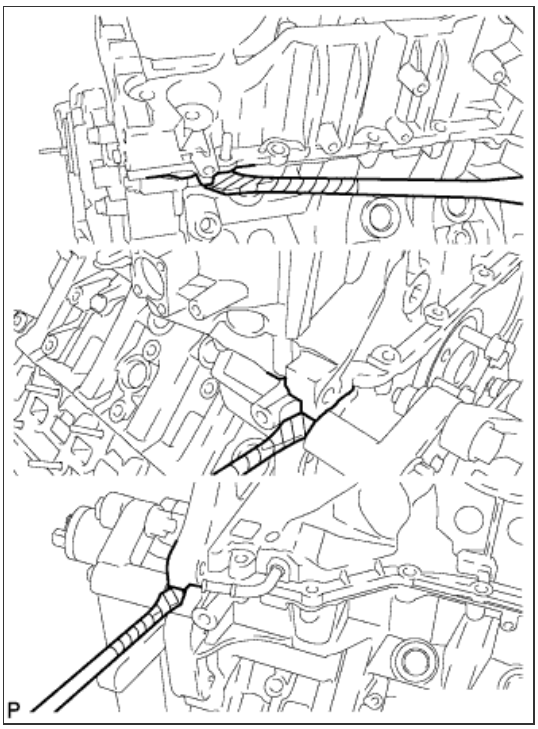
a. Remove the 20 bolts, 2 nuts and oil reflector plate.

NOTICE:

If the oil reflector plate is deformed, replace it.

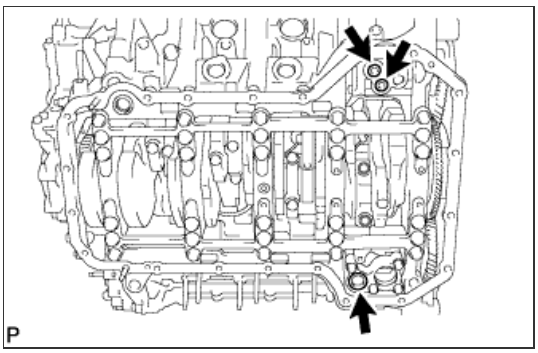
HINT:

Be sure to clean the bolts and stud bolts, and check the threads for cracks or other damage.



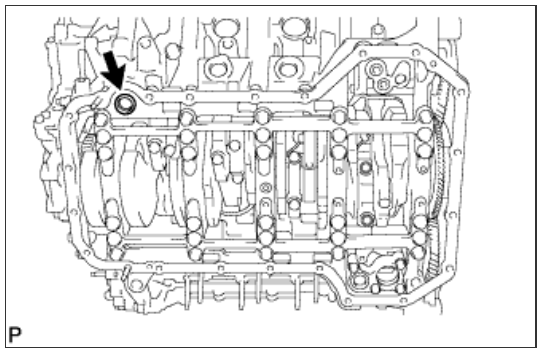
b. Remove the No. 1 oil pan by prying between the No. 1 oil pan and cylinder block with a screwdriver.

NOTICE:



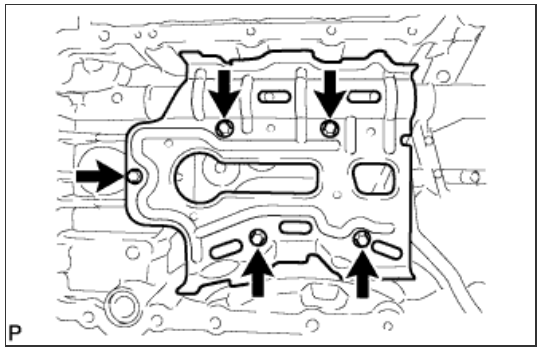
Be careful not to damage the contact surfaces of the cylinder block and oil pan.

HINT:



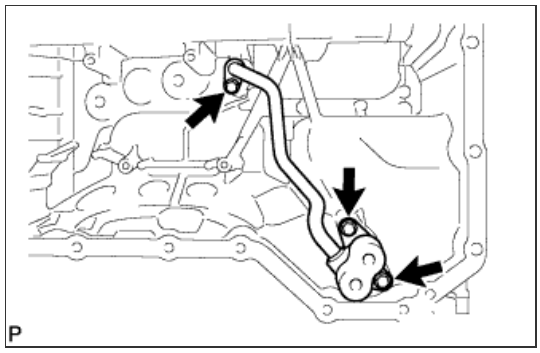
Tape the screwdriver tip before use.

c. Remove the 3 O-rings.



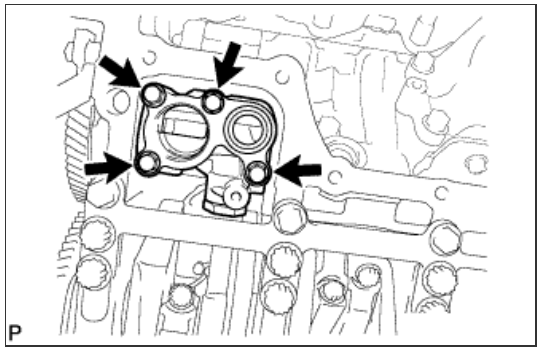
d. Remove the cylinder block oil hole gasket.

17. REMOVE NO. 1 OIL PAN BAFFLE PLATE



a. Remove the 5 bolts and No. 1 oil pan baffle plate.

1 . REMOVE INLET OIL PUMP PIPE

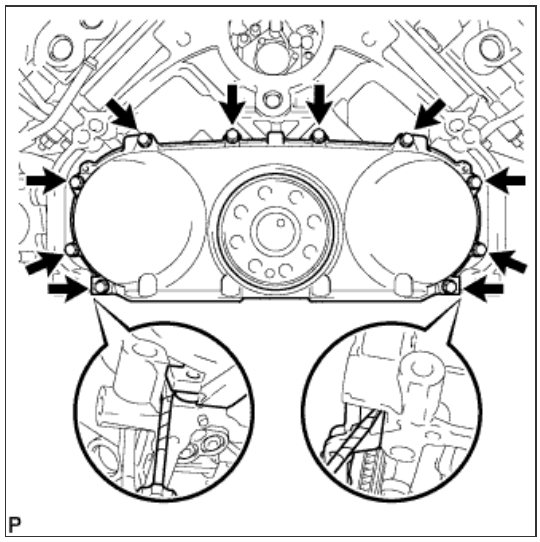


a. Remove the 3 bolts and inlet oil pump pipe.

b. Remove the O-ring from the inlet oil pump pipe.

19. REMOVE OIL REGULATOR ASSEMBLY

a. Remove the 4 bolts and oil regulator.



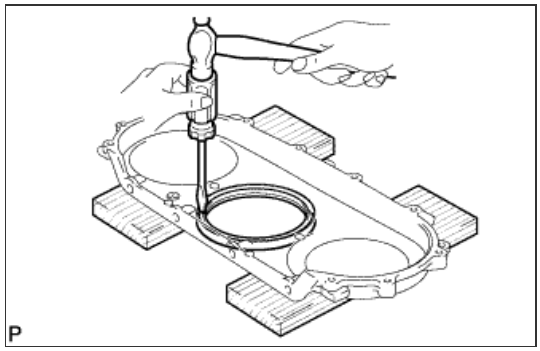
2 . REMOVE REAR ENGINE OIL SEAL RETAINER

a. Remove the 10 bolts.

b. Remove the oil seal retainer by prying between the oil seal retainer and cylinder block with a screwdriver.

HINT:

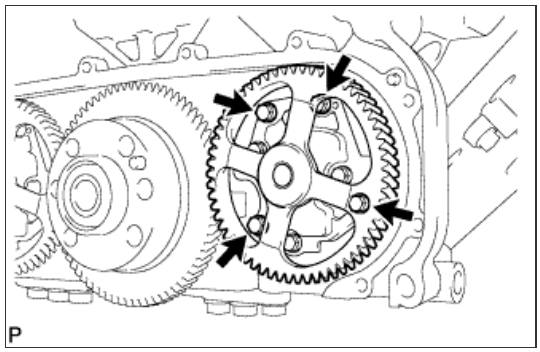
Tape the screwdriver tip before use.



21. REMOVE REAR CRANKSHAFT OIL SEAL

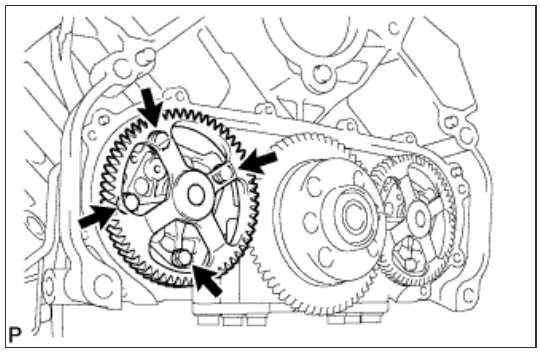
a. Place the oil seal retainer on wooden blocks.

b. Using a screwdriver and hammer, tap out the oil seal.



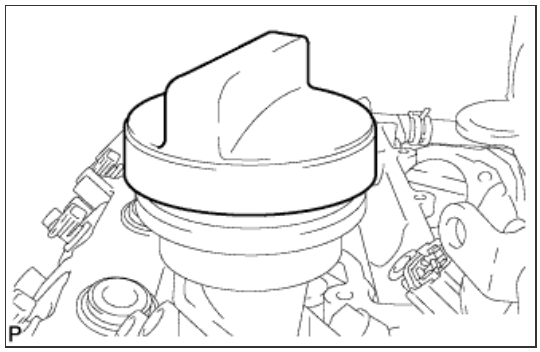
HINT:

Tape the screwdriver tip before use.



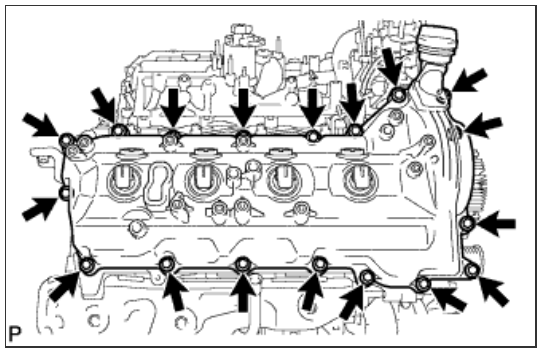
22. REMOVE OIL PUMP ASSEMBLY

a. Remove the 4 bolts and oil pump.



23. REMOVE SCAVENGING PUMP ASSEMBLY

a. Remove the 4 bolts and scavenging pump.

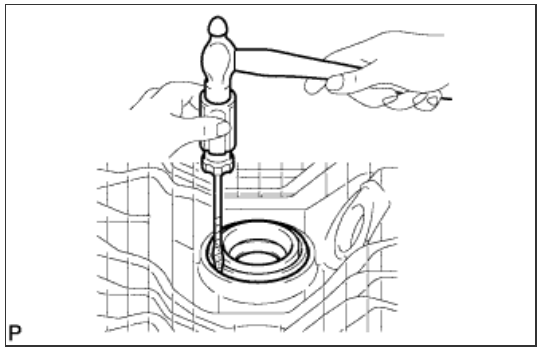


24. REMOVE OIL FILLER CAP SUB-ASSEMBLY

25. REMOVE OIL FILLER CAP GASKET

26. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY RH

a. Remove the 18 bolts, cylinder head cover and gasket.

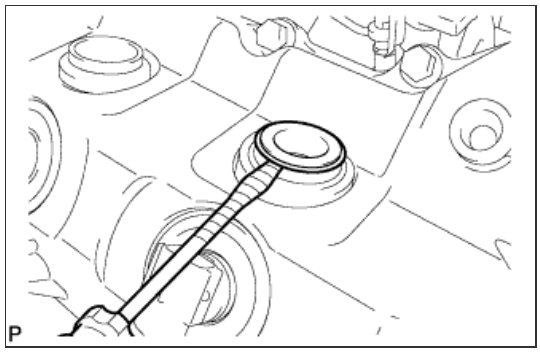


27. REMOVE NO LE HOLDER GASKET RH

a. Using a small screwdriver and hammer, remove the 4 nozzle holder gaskets.

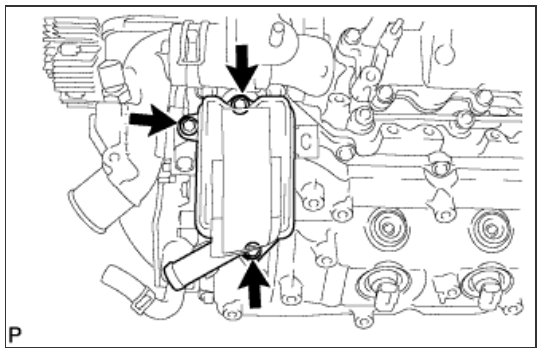
HINT:

Tape the screwdriver tip before use.



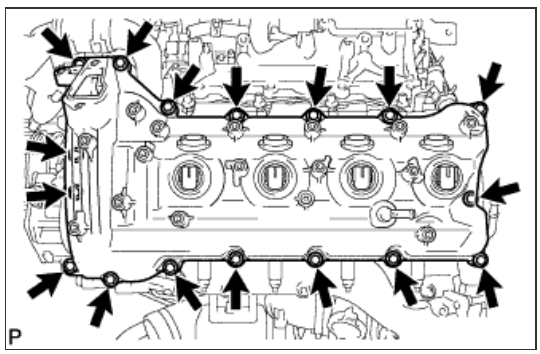
2 . REMOVE NO LE HOLDER SEAL RH

a. Using a small screwdriver, remove the 4 holder seals by prying the portion between each holder seal and the cutout part of the cylinder head cover.



HINT:

Tape the screwdriver tip before use.

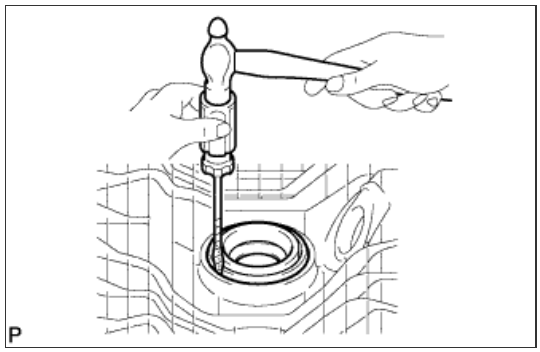


29. REMOVE OIL SEPARATOR ASSEMBLY

a. Remove the 3 bolts, oil separator and gasket.

3 . REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY LH

a. Remove the 17 bolts, cylinder head cover and gasket.

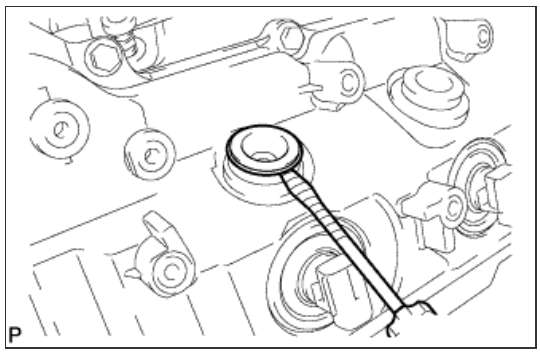


31. REMOVE NO LE HOLDER GASKET LH

a. Using a small screwdriver and hammer, remove the 4 nozzle holder gaskets.

HINT:

Tape the screwdriver tip before use.

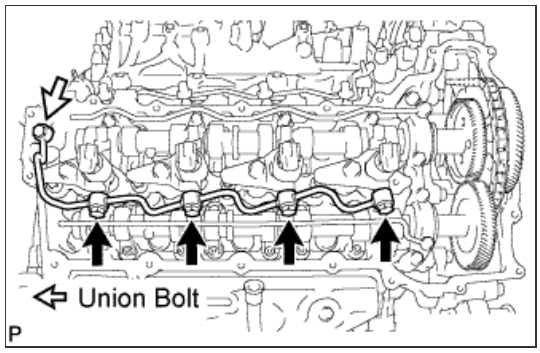


32. REMOVE NO LE HOLDER SEAL LH

a. Using a small screwdriver, remove the 4 holder seals by prying the portion between each holder seal and the cutout part of the cylinder head cover.

HINT:

Tape the screwdriver tip before use.

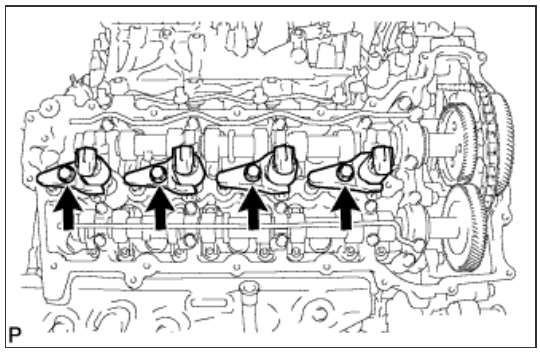


33. REMOVE FUEL IN ECTOR RH

a. Remove the union bolt, 4 hollow screws, 5 gaskets and nozzle leakage pipe.

NOTICE:

- **When remo ing the nozzle leakage pipe place a c hion nder the pipe.**
- **Be caref l not to deform or cratch the nion eal rface.**
- **After remo ing the nozzle leakage pipe p t it in a pla tic bag to pre ent foreign matter from contaminating it injector inlet.**



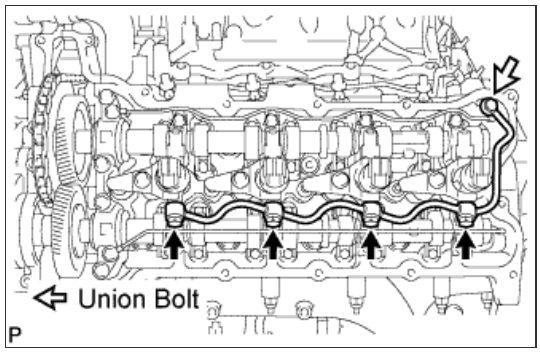
b. Remove the 4 bolts, 4 washers, 4 nozzle holder clamps and 4 injectors.

HINT:

Arrange the injectors, holder clamps, washers and bolts in the correct order.

c. Remove the O-ring from each injector.

d. Remove the 4 injection nozzle seats from the cylinder head.

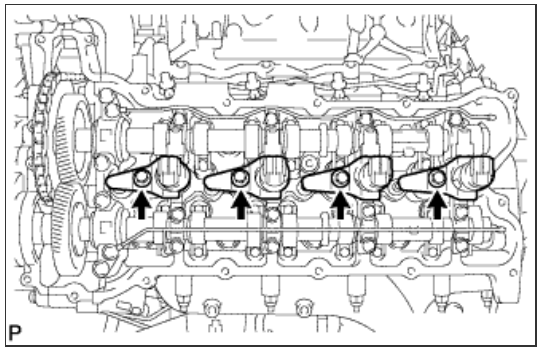


34. REMOVE FUEL IN ECTOR LH

a. Remove the union bolt, 4 hollow screws, 5 gaskets and No. 2 nozzle leakage pipe.

NOTICE:

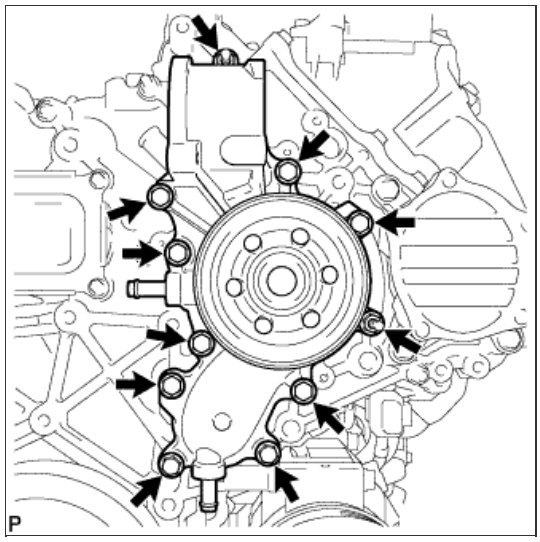
- **When remo ing the nozzle leakage pipe place a c hion nder the pipe.**
- **Be caref l not to deform or cratch the nion eal rface.**
- **After remo ing the nozzle leakage pipe p t it in a pla tic bag to pre ent foreign matter from contaminating it injector inlet.**



b. Remove the 4 bolts, 4 washers, 4 nozzle holder clamps and 4 injectors.

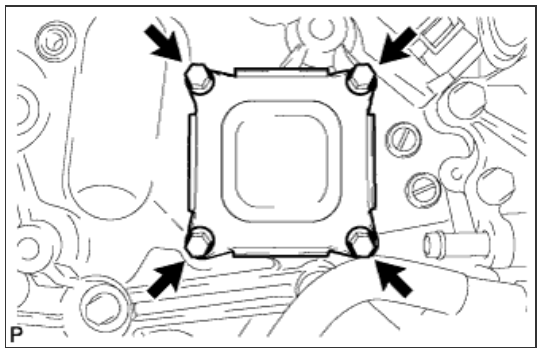
HINT:

Arrange the injectors, holder clamps, washers and bolts in the correct order.



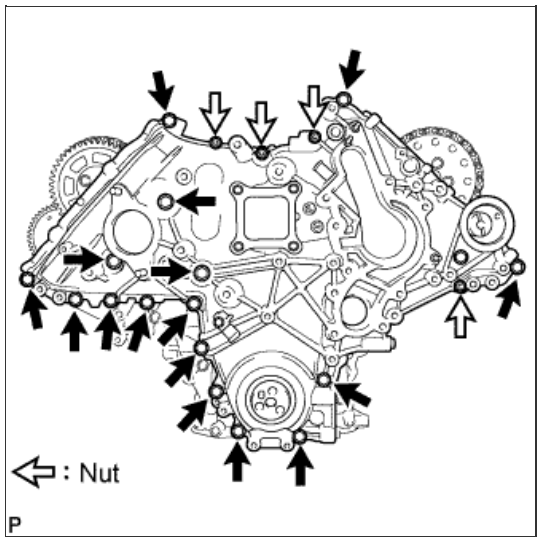
c. Remove the O-ring from each injector.

d. Remove the 4 injection nozzle seats from the cylinder head.



35. REMOVE WATER PUMP ASSEMBLY

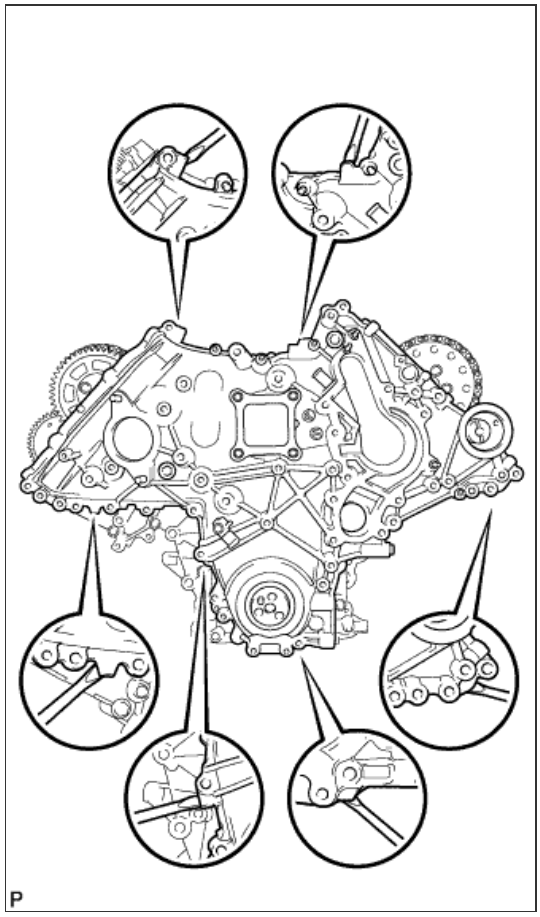
a. Remove the 9 bolts, 2 nuts, water pump and gasket.



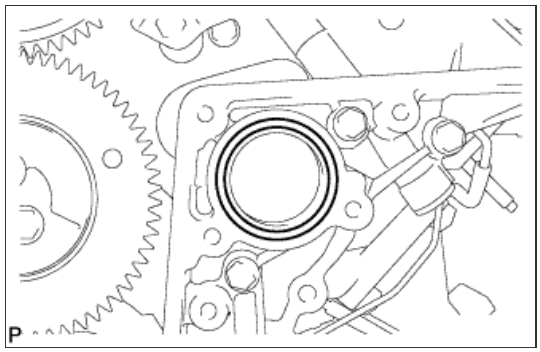
36. REMOVE TIMING CHAIN COVER PLATE

a. Remove the 4 bolts, timing chain cover plate and gasket.

37. REMOVE TIMING CHAIN COVER SUB-ASSEMBLY



a. Remove the 4 nuts and 16 bolts.



b. Using a screwdriver, remove the timing chain cover by prying between the timing chain cover and timing gear case.

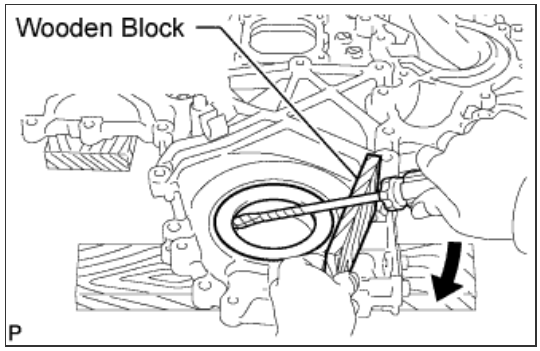
HINT:

Tape the screwdriver tip before use.

c. Remove the O-ring from the timing gear case.

3 . REMOVE FRONT CRANKSHAFT OIL SEAL

a. Place the timing chain cover on wooden blocks.



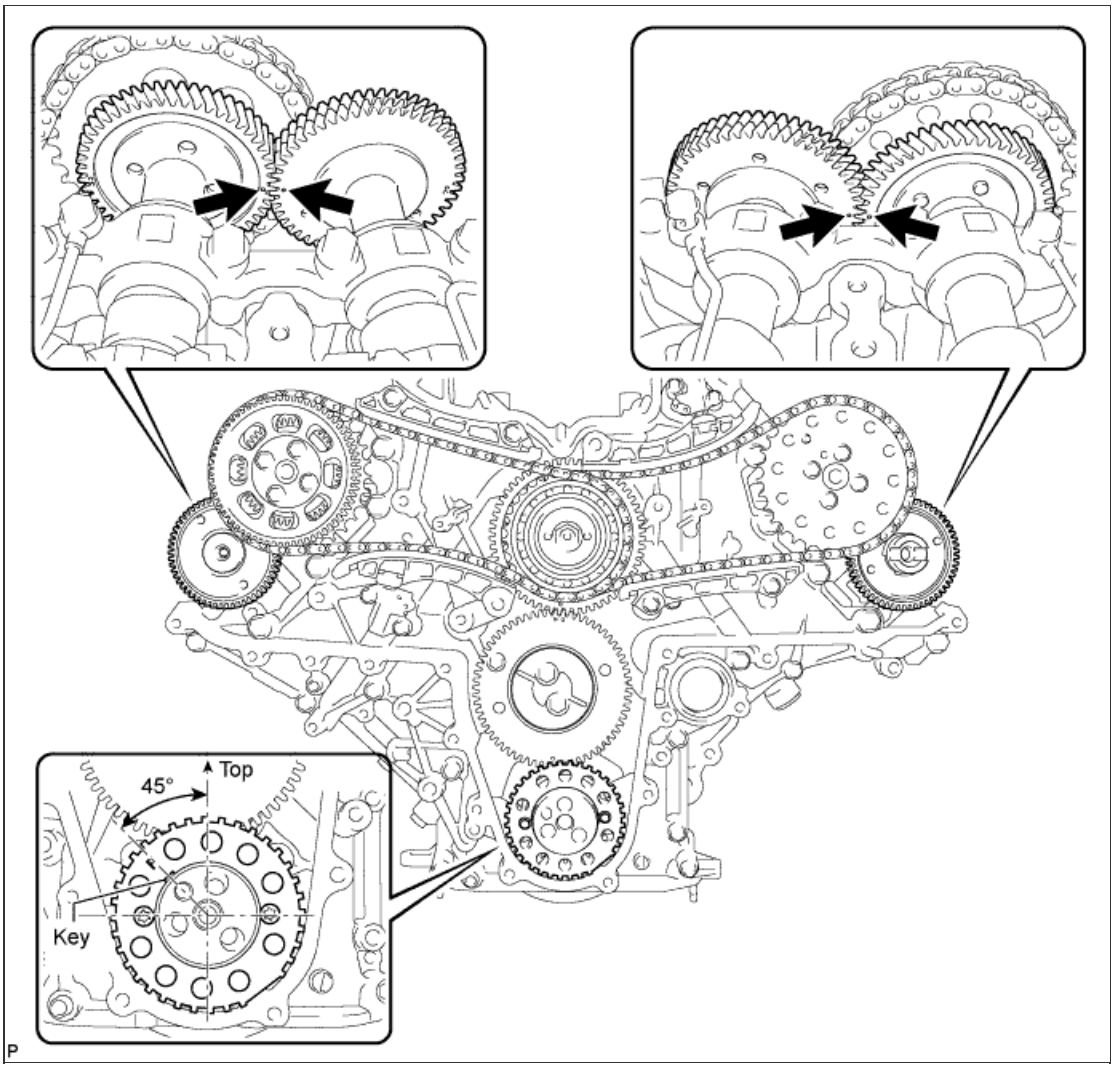
b. Using a screwdriver and wooden block, pry out the oil seal.

NOTICE:

Do not damage the surface of the oil seal press fit hole.

HINT:

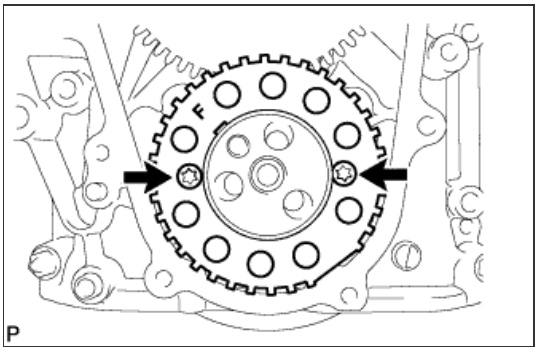
Tape the screwdriver tip before use.



39. SET NO. 1 CYLINDER TO TDC/COMPRESSION

a. Temporarily install the 2 crankshaft pulley set bolts to the crankshaft.

b. Turn the crankshaft clockwise to set the No. 1 cylinder to TDC.

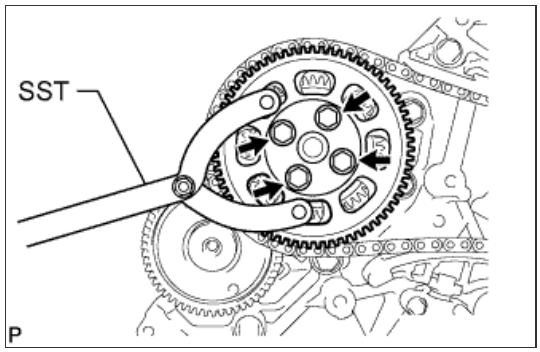


c. With the crankshaft key 45° counterclockwise from the top position, check that the timing marks of the RH and LH camshaft timing gears are aligned. If not as specified, turn the crankshaft 1 revolution (360°) and align the timing marks as shown below.

d. Remove the 2 crankshaft pulley set bolts.

4 . REMOVE NO. 1 CRANKSHAFT POSITION SENSOR PLATE

a. Using a T30 "TORX" wrench, remove the 2 screws and crankshaft position sensor plate.



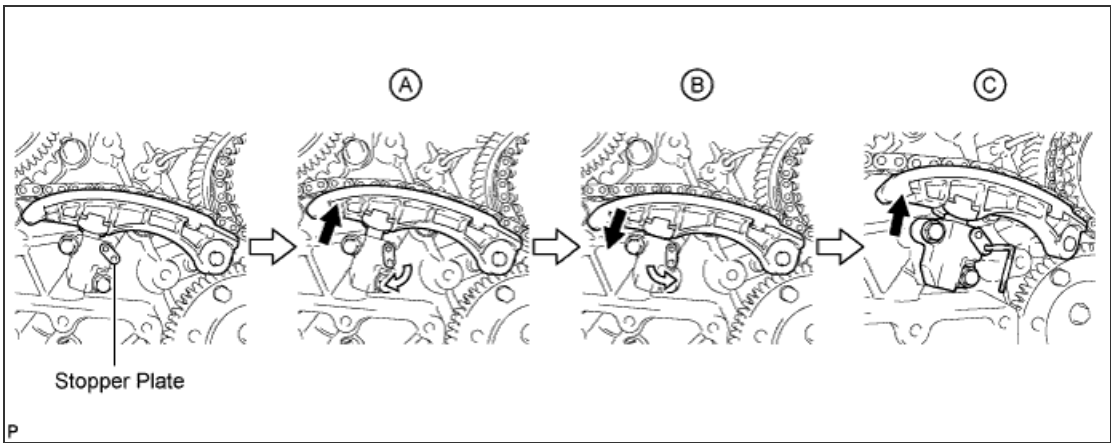
41. REMOVE PUMP DRIVE SHAFT GEAR

a. Using SST, hold the pump drive shaft gear.

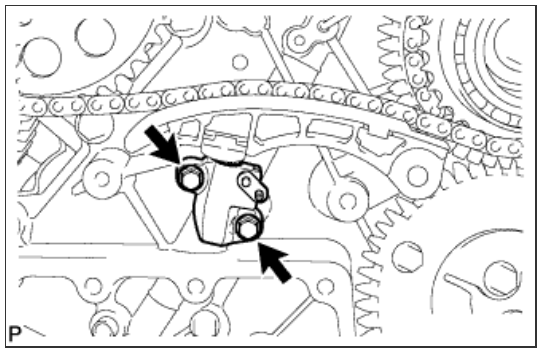
SST

996 1 1 (9962- 1 9963- 1)

b. Remove the 4 bolts and pump drive shaft gear.

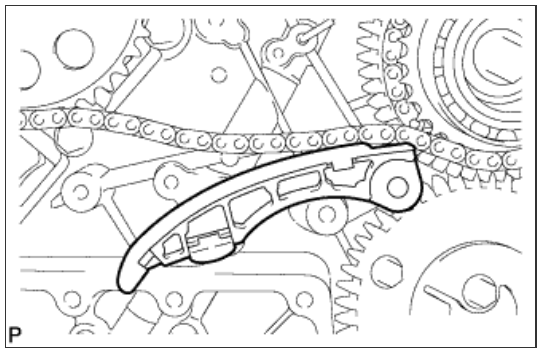


42. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY



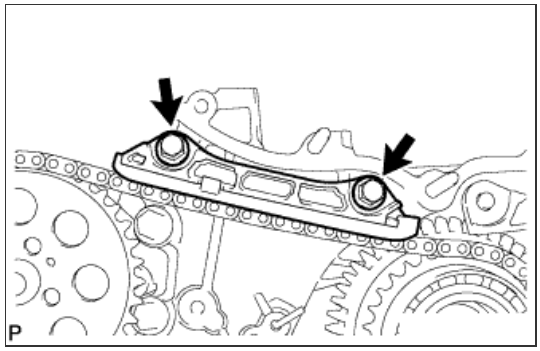
a. Push the tensioner slipper away from the tensioner, and move the stopper plate clockwise to release the lock as shown in A.

b. Push down the tensioner slipper and move the stopper plate counterclockwise to set the lock as shown in B.

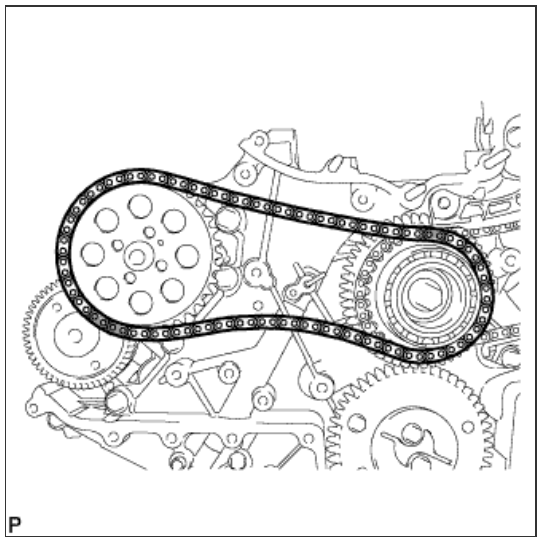


c. Push the tensioner slipper away from the tensioner, and insert a hexagon wrench into the stopper plate hole as shown in C.

d. Remove the 2 bolts and No. 1 chain tensioner.



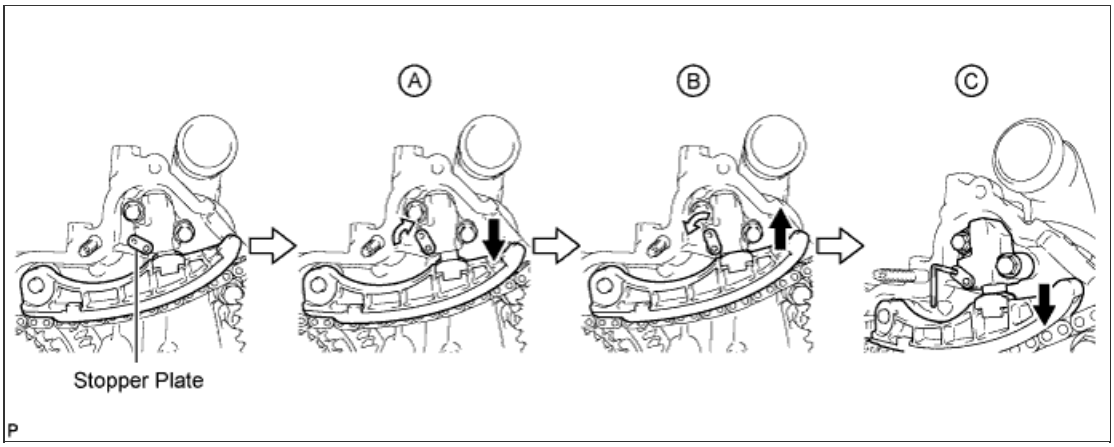
43. REMOVE NO. 1 CHAIN TENSIONER SLIPPER



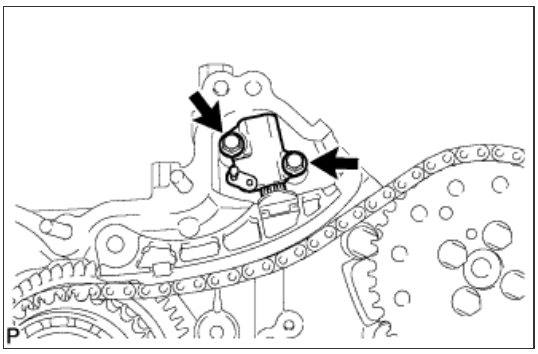
44. REMOVE NO. 1 CHAIN VIBRATION DAMPER

a. Remove the 2 bolts and No. 1 chain vibration damper.

45. REMOVE NO. 1 CAMSHAFT TIMING SPROCKET AND NO. 1 TIMING CHAIN

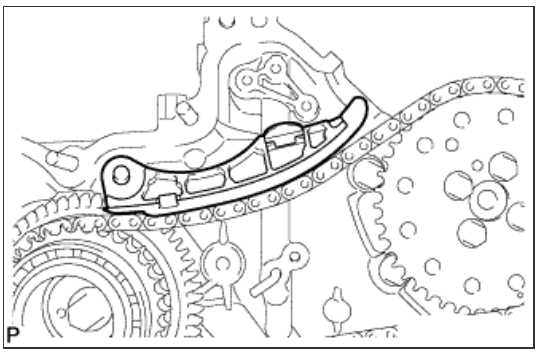


46. REMOVE NO. 2 CHAIN TENSIONER ASSEMBLY



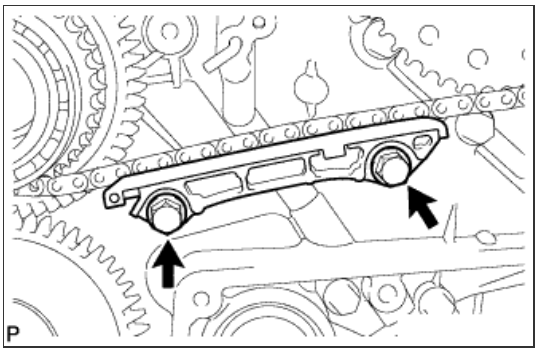
a. Push the tensioner slipper away from the tensioner, and move the stopper plate clockwise to release the lock as shown in A.

b. Push up the tensioner slipper and move the stopper plate counterclockwise to set the lock as shown in B.



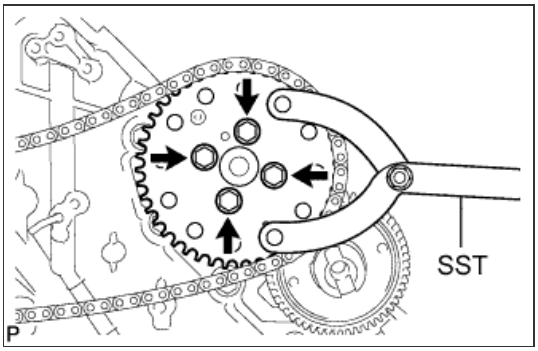
c. Push the tensioner slipper away from the tensioner, and insert a hexagon wrench into the stopper plate hole as shown in C.

d. Remove the 2 bolts and No. 2 chain tensioner.



47. REMOVE NO. 2 CHAIN TENSIONER SLIPPER

4 . REMOVE NO. 2 CHAIN VIBRATION DAMPER

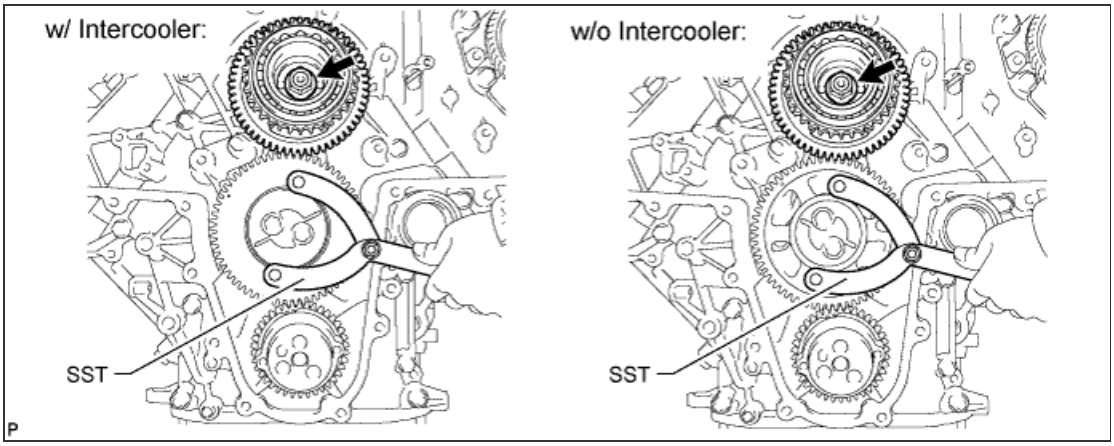


a. Remove the 2 bolts and No. 2 chain vibration damper.

49. REMOVE NO. 2 CAMSHAFT TIMING SPROCKET AND NO. 2 TIMING CHAIN

a. Using SST, hold the No. 2 camshaft timing sprocket.

SST
996 1 1 (9962- 1 9963- 1)

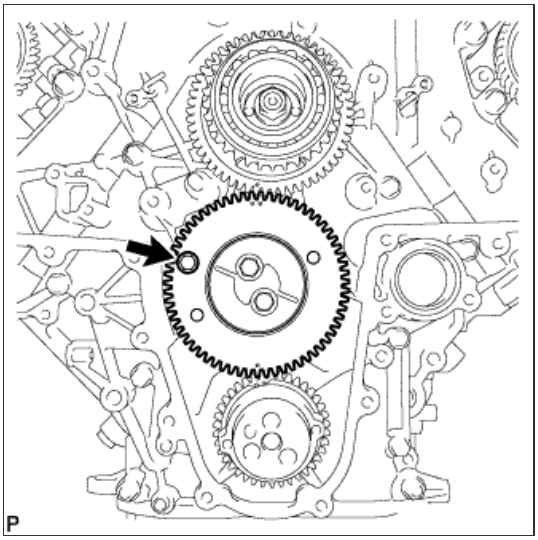


b. Remove the 4 bolts, No. 2 camshaft timing sprocket and No. 2 timing chain.

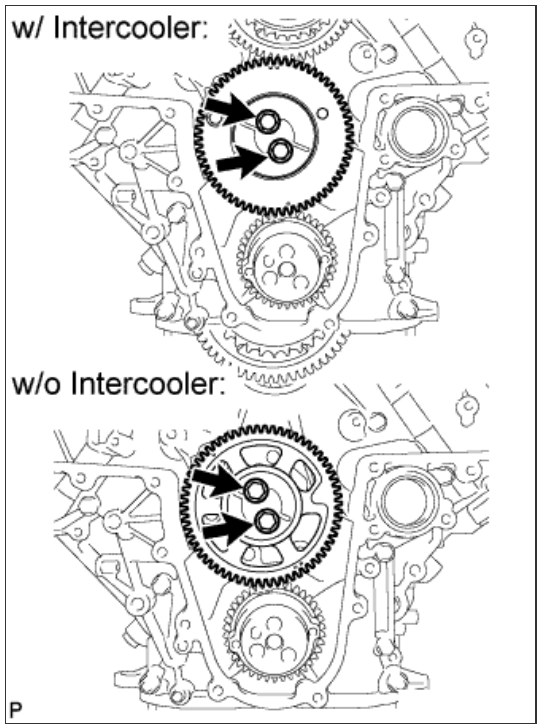
5 . REMOVE FUEL SUPPLY PUMP DRIVE GEAR NUT

a. Using SST, hold the idle gear.

SST
996 1 1 (9962- 1 9963- 7)



b. Remove the nut.

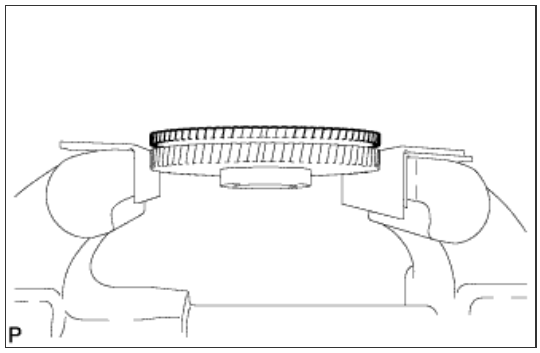


51. REMOVE IDLE GEAR ASSEMBLY

a. w/ Intercooler:
Using a 8 mm x 1.25 pitch bolt with a length of 15 mm or more, fix the idle gear in place.

Torq e:
13 N*m{ 133 kgf*cm 1 ft.*lbf }

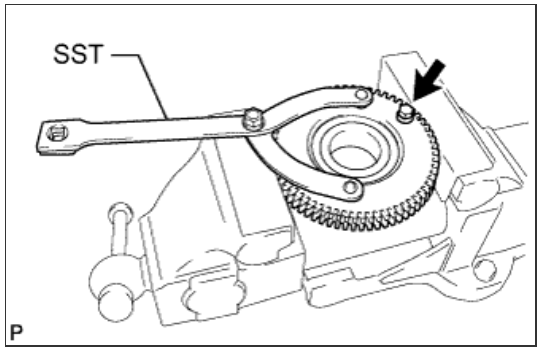
b. Remove the 2 bolts, idle gear thrust plate and idle gear.



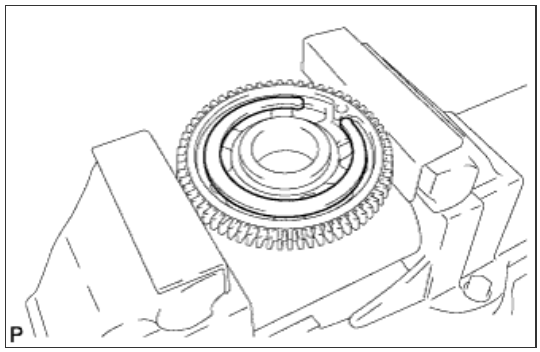
52. SEPARATE SUB IDLE GEAR IDLE GEAR SPRING AND IDLE GEAR (w/ Intercooler)

a. Hold the idle gear in a vise between aluminum plates.

NOTICE:

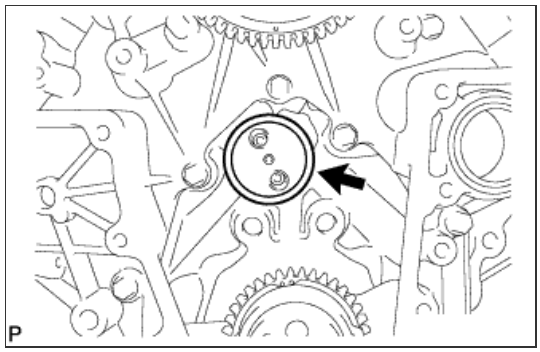


Be careful not to damage the gears.



b. Using SST, hole the idle gear, and remove the bolt and sub idle gear.

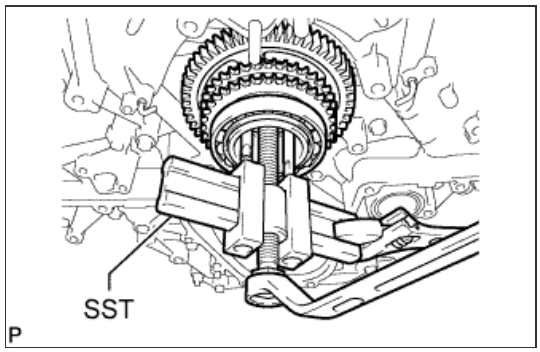
SST



996 1 1 (9962- 1 9963- 7)

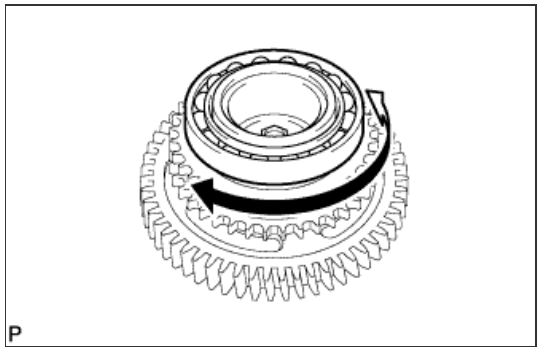
c. Remove the idle gear spring from the idle gear.

53. REMOVE NO. 1 IDLE GEAR SHAFT



54. REMOVE FUEL SUPPLY PUMP DRIVE GEAR

a. Using SST, remove the fuel supply pump drive gear.



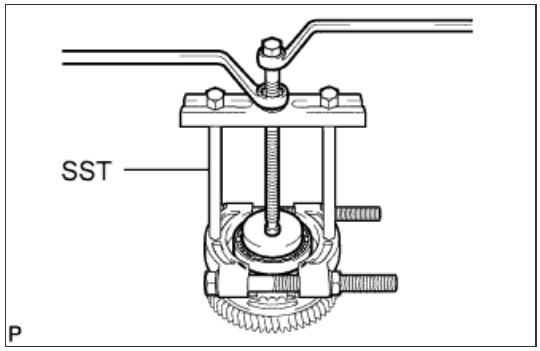
SST

995 5 13 (9951- 5 1 9952- 5 1 9953- 5 2 9954- 5 31)

55. INSPECT RADIAL BALL BEARING

a. Turn the bearing, and check that the bearing moves smoothly and quietly.
If it moves roughly or noisily, replace the radial ball bearing.

56. REMOVE RADIAL BALL BEARING



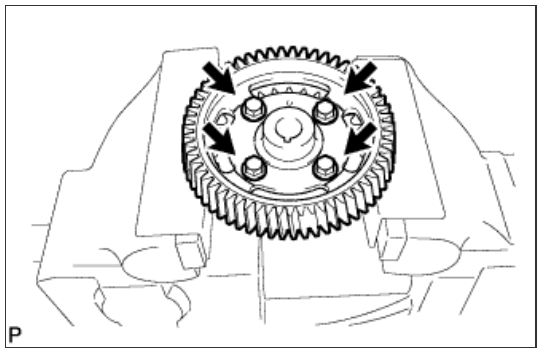
HINT:

It is not necessary to remove the bearing unless it is being replaced.

a. Using SST, remove the radial ball bearing.

SST

995		2		
995		3		
995	6	1	(9951-	5)
995	4	11	(9957-	4 1)



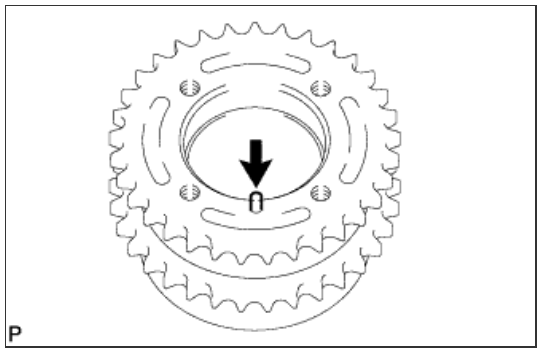
57. SEPARATE FUEL SUPPLY PUMP DRIVE GEAR AND FUEL SUPPLY PUMP SHAFT SPROCKET

a. Hold the fuel supply pump shaft sprocket in a vise between aluminum plates.

NOTICE:

Be careful not to damage the gears.

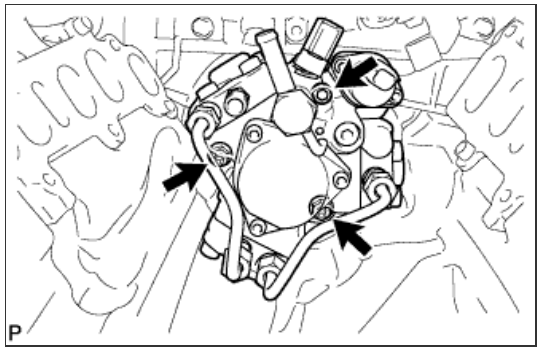
b. Remove the 4 bolts and separate the fuel supply pump drive gear and fuel supply pump shaft sprocket.



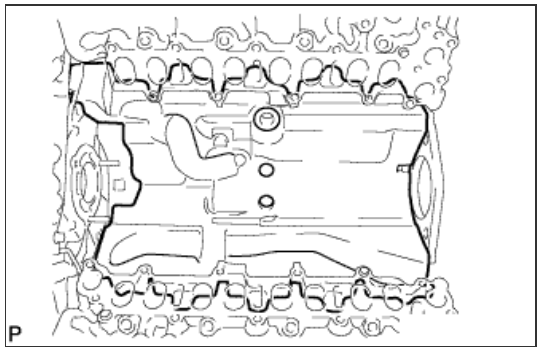
5 . REMOVE STRAIGHT PIN

HINT:

It is not necessary to remove the straight pin unless it is being replaced.



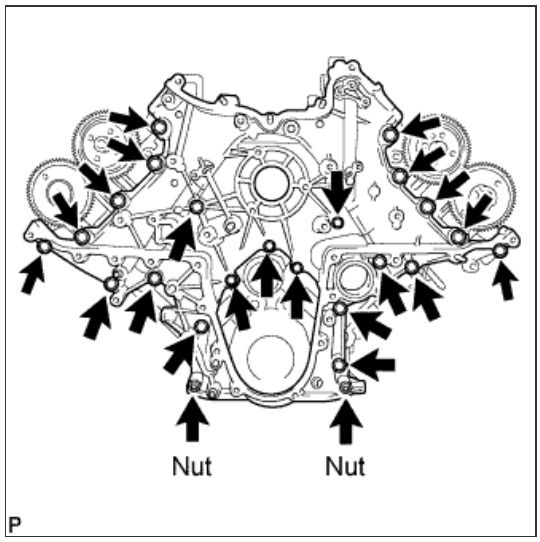
a. Remove the straight pin.



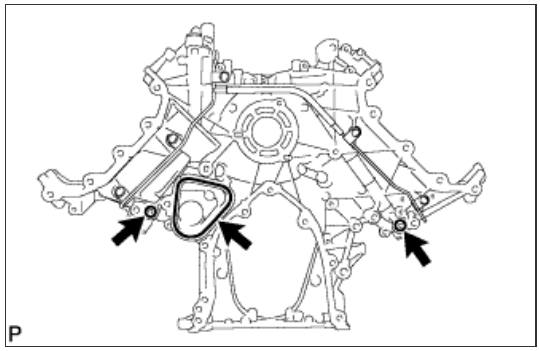
59. REMOVE FUEL SUPPLY PUMP ASSEMBLY

a. Using a 6 mm hexagon wrench, remove the hexagon bolt. Then remove the 2 nuts and fuel supply pump.

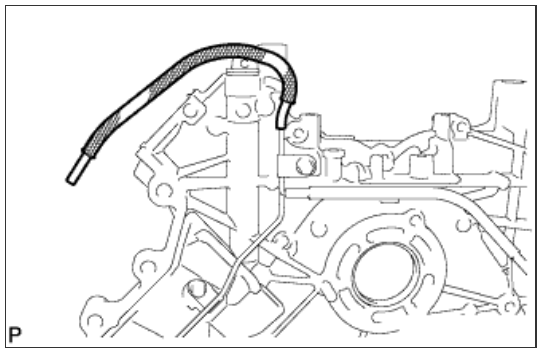
b. Remove the O-ring.



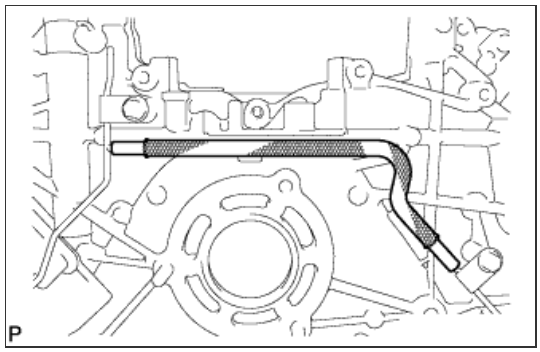
6 . REMOVE V-BANK SILENCER



61. REMOVE TIMING GEAR CASE SUB-ASSEMBLY

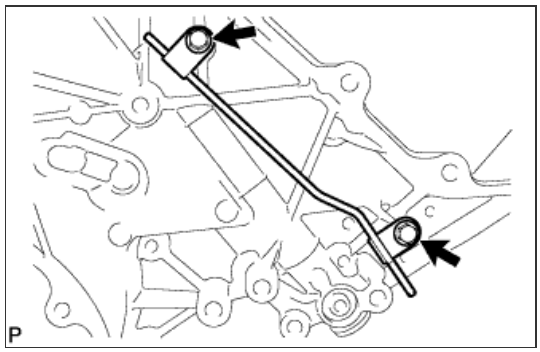


a. Remove the 22 bolts, 2 nuts and timing gear case shown in the illustration.

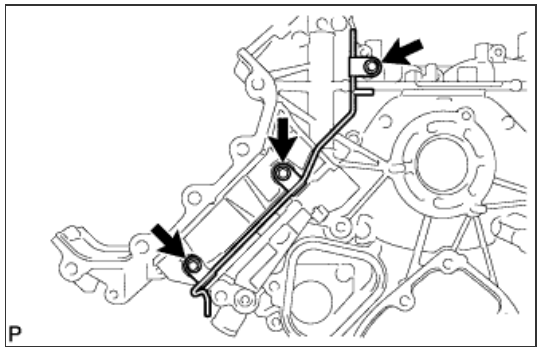


b. Remove the 2 O-rings and timing gear case gasket.

62. DISCONNECT NO. 2 VACUUM TRANSMITTING HOSE (w/ Intercooler)

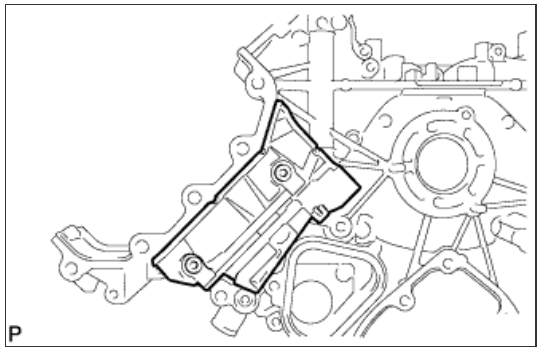


63. DISCONNECT NO. 3 VACUUM TRANSMITTING HOSE (w/ Intercooler)



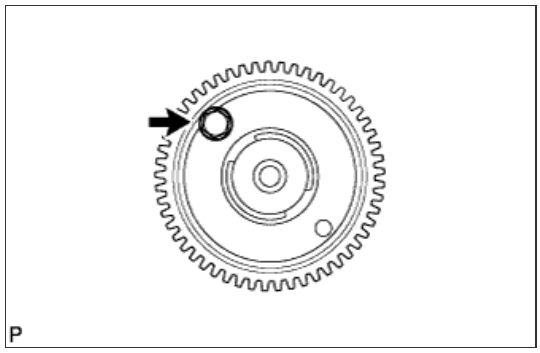
64. REMOVE NO. 1 VACUUM TRANSMITTING PIPE SUB-ASSEMBLY (w/ Intercooler)

a. Remove the 2 bolts and No. 1 vacuum transmitting pipe.

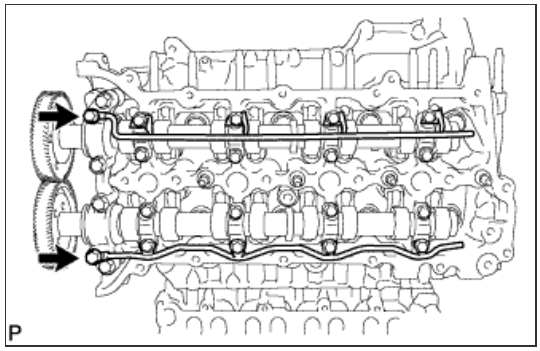


65. REMOVE NO. 2 VACUUM TRANSMITTING PIPE SUB-ASSEMBLY (w/ Intercooler)

a. Remove the 3 bolts and No. 2 vacuum transmitting pipe.

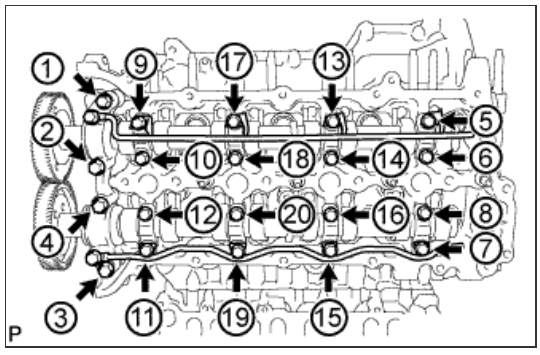


66. REMOVE NO. 2 TIMING GEAR CASE INSULATOR (w/ Intercooler)

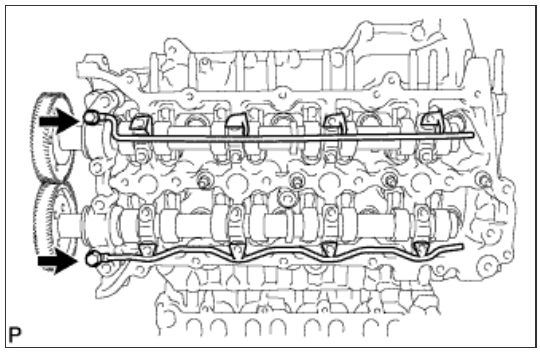


67. REMOVE NO. 1 AND NO. 2 CAMSHAFTS

a. Using a 6 mm x 1.0 pitch service bolt with a length of 16 mm or more, fix the No. 1 camshaft in place.

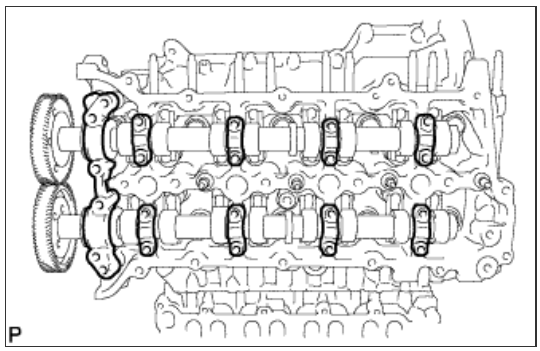


Torq e:
. N*m{ 2 kgf*cm 71 in.*lbf }

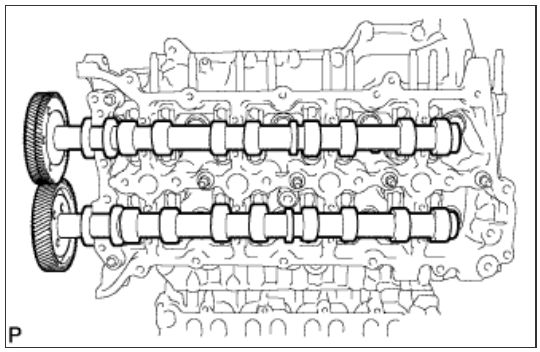


b. Loosen the 2 union bolts.

c. Uniformly loosen and remove the 20 bolts in the sequence shown in the illustration.

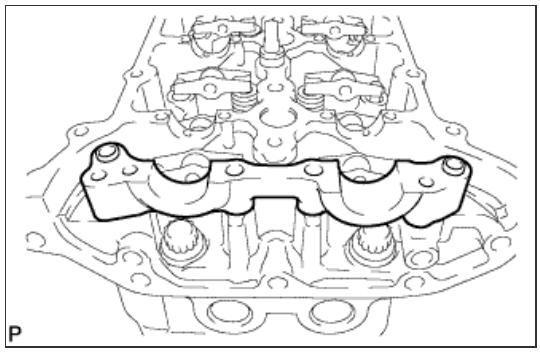


d. Remove the 2 union bolts and No. 1 and No. 2 oil feed pipes.



e. Remove the 8 No. 3 camshaft bearing caps and No. 1 camshaft bearing cap.

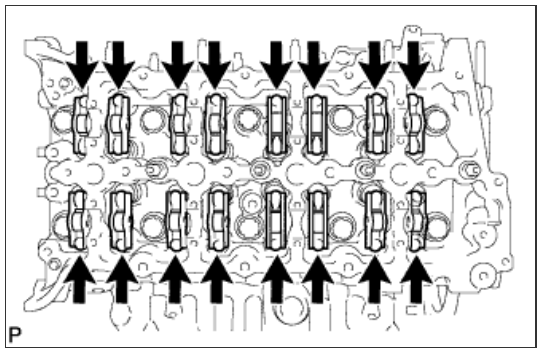
HINT:



Be sure to arrange the removed parts for each installation position separately.

f. Remove the No. 1 and No. 2 camshafts.

6 . REMOVE NO. 2 CAMSHAFT BEARING CAP

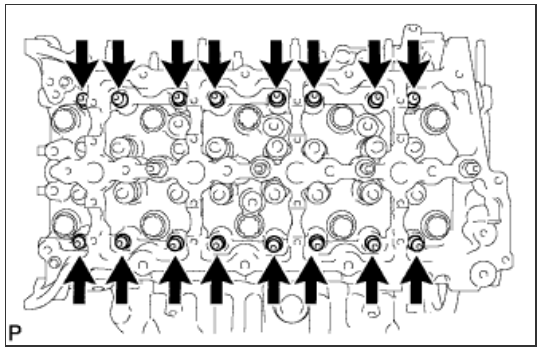


69. REMOVE NO. 1 VALVE ROCKER ARM

a. Remove the 16 No. 1 valve rocker arms.

HINT:

Be sure to arrange the removed parts for each installation position separately.

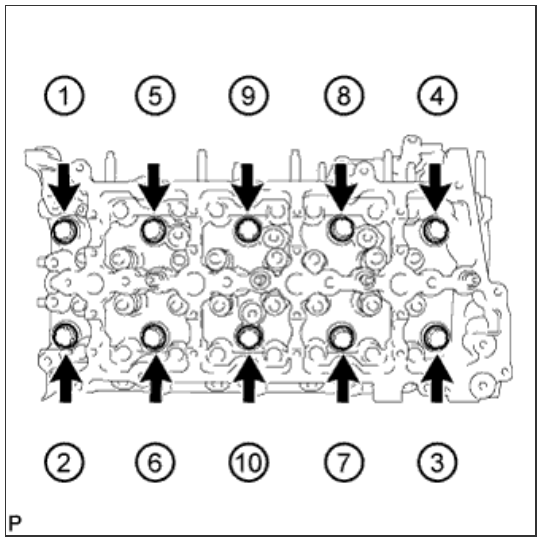


7 . REMOVE NO. 1 VALVE LASH AD USTER ASSEMBLY

a. Remove the 16 No. 1 valve lash adjusters.

HINT:

Be sure to arrange the removed parts for each installation position separately.

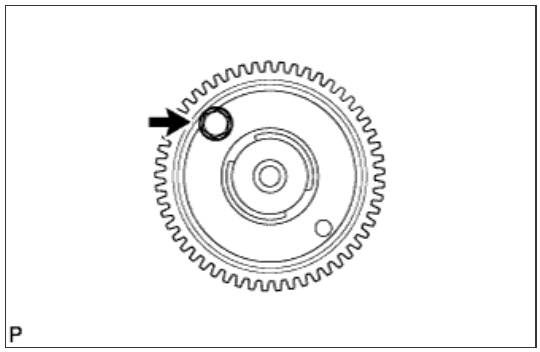


71. REMOVE CYLINDER HEAD SUB-ASSEMBLY RH

a. Uniformly loosen and remove the 10 bolts and 10 spacers in the sequence shown in the illustration. Then remove the cylinder head.

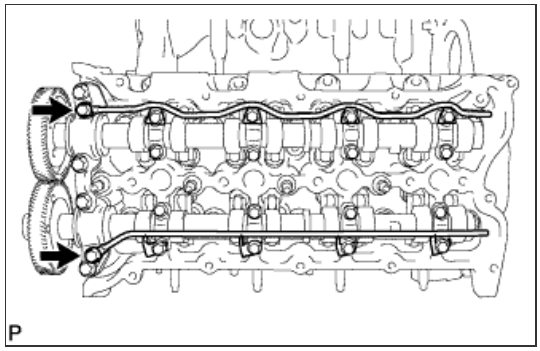
NOTICE:

- **Be caref l not to drop wa her into the c linder head.**
- **Head warpage or cracking co ld re lt from remo ing bolt in an incorrect order.**



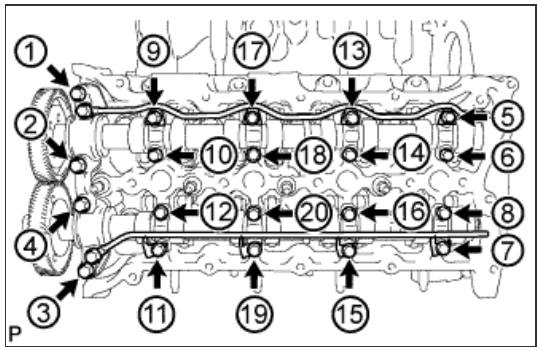
72. REMOVE NO. 1 CYLINDER HEAD GASKET

73. REMOVE NO. 3 AND NO. 4 CAMSHAFTS

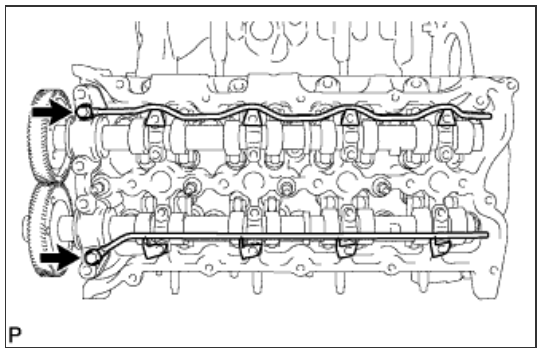


a. Using a 6 mm x 1.0 pitch service bolt with a length of 16 mm or more, fix the No. 4 camshaft in place.

Torq e:

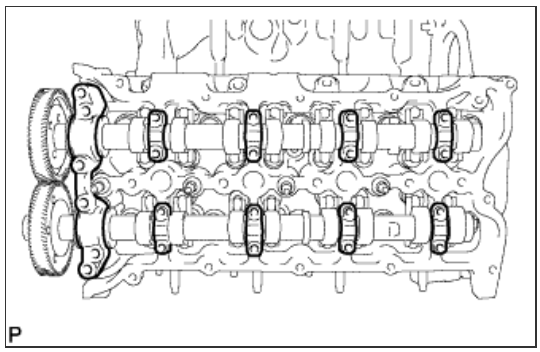


. N*m{ 2 kgf*cm 71 in.*lbf }

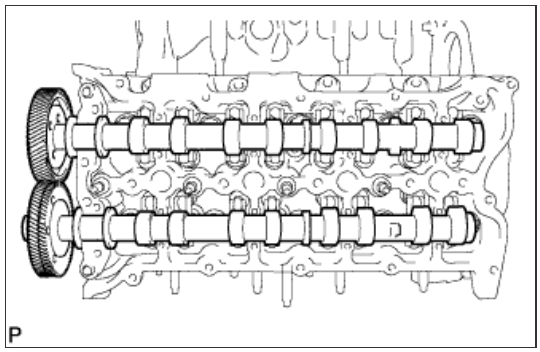


b. Loosen the 2 union bolts.

c. Uniformly loosen and remove the 20 bolts in the sequence shown in the illustration.

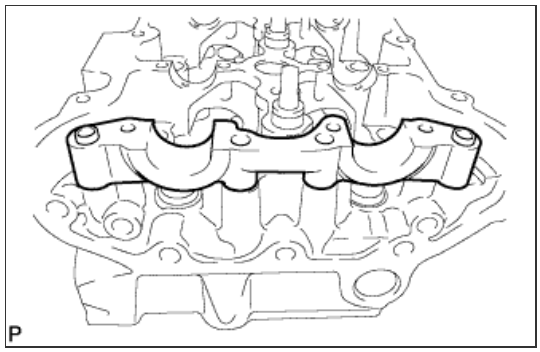


d. Remove the 2 union bolts and No. 3 and No. 4 oil feed pipes.



e. Remove the 8 No. 3 camshaft bearing caps and No. 4 camshaft bearing cap.

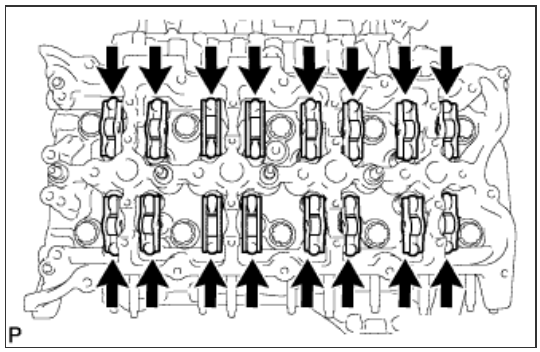
HINT:



Be sure to arrange the removed parts for each installation position separately.

f. Remove the No. 3 and No. 4 camshafts.

74. REMOVE NO. 5 CAMSHAFT BEARING CAP

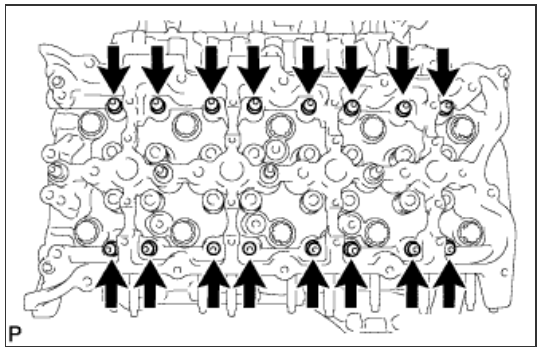


75. REMOVE NO. 2 VALVE ROCKER ARM

a. Remove the 16 No. 2 valve rocker arms.

HINT:

Be sure to arrange the removed parts for each installation position separately.

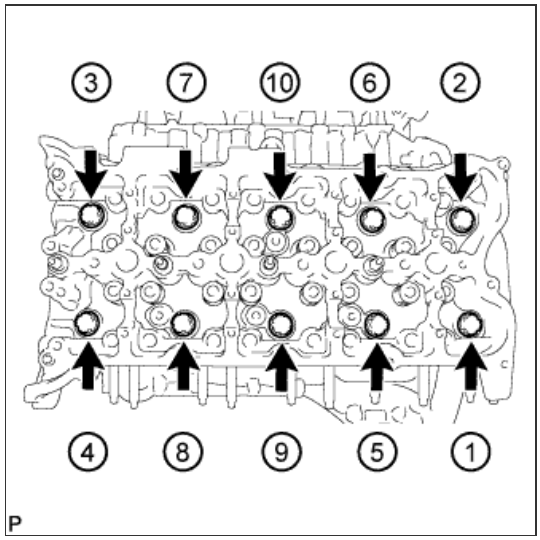


76. REMOVE NO. 2 VALVE LASH AD USTER ASSEMBLY

a. Remove the 16 No. 2 valve lash adjusters.

HINT:

Be sure to arrange the removed parts for each installation position separately.



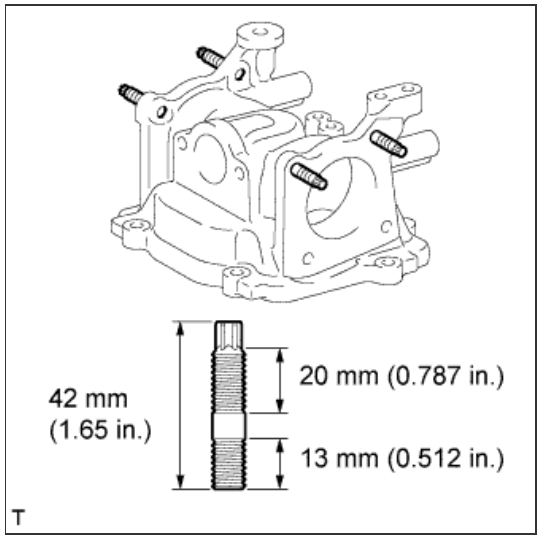
77. REMOVE CYLINDER HEAD SUB-ASSEMBLY LH

a. Uniformly loosen and remove the 10 bolts and 10 spacers in the sequence shown in the illustration. Then remove the cylinder head.

NOTICE:

- **Be caref l not to drop wa her into the c linder head.**
- **Head warpage or cracking co ld re lt from remo ing bolt in an incorrect order.**

7 . REMOVE NO. 2 CYLINDER HEAD GASKET



79. REPLACE STUD BOLT

HINT:

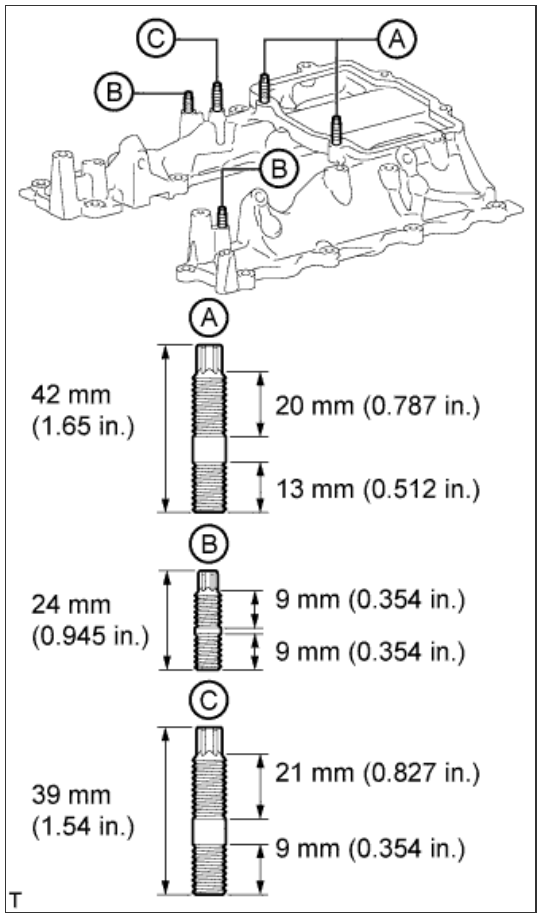
If the stud bolt is deformed or the threads are damaged, replace it.

a. Intake Pipe:

i. Using an E8 "TORX" wrench, replace the 4 stud bolts.

b. No. 3 Intake anifold:

i. Using an E8 "TORX" wrench, replace the 2 stud bolts labeled A.

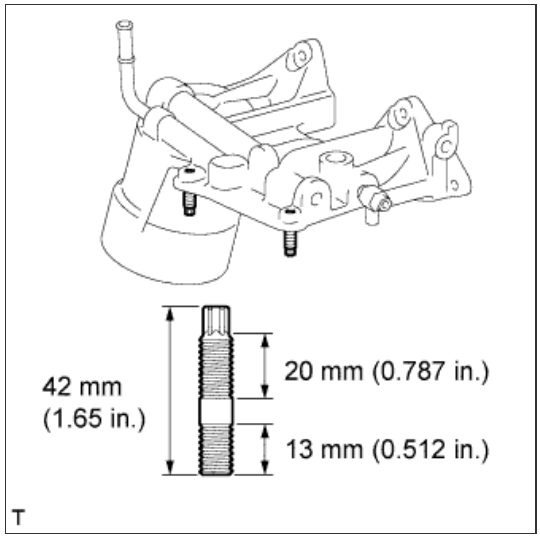


Torq e:
6. N*m{ 61 kgf*cm 53 in.*lbf }

ii. Using an E6 "TORX" wrench, replace the 2 stud bolts labeled B.

Torq e:
4.5 N*m{ 46 kgf*cm 4 in.*lbf }

iii. Using an E6 "TORX" wrench, replace the stud bolt labeled C.

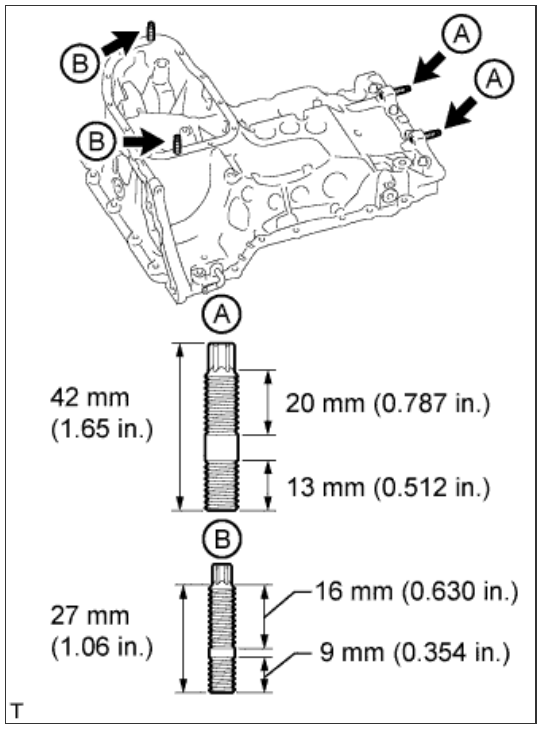


Torq e:
4. N*m{ 41 kgf*cm 35 in.*lbf }

c. Oil Filter Bracket:

i. Using an E8 "TORX" wrench, replace the 2 stud bolts.

Torq e:
6. N*m{ 61 kgf*cm 53 in.*lbf }



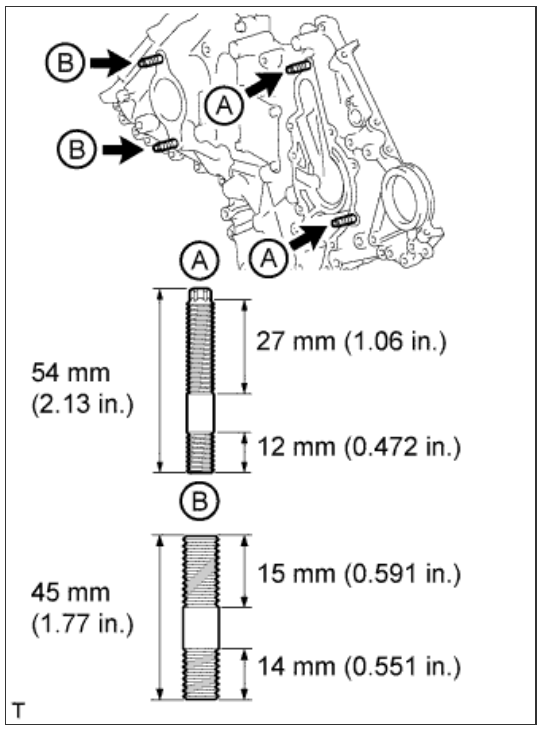
d. No. 1 Oil Pan:

i. Using an E8 "TORX" wrench, replace the 2 stud bolts labeled A.

Torq e:
6. N*m{ 61 kgf*cm 53 in.*lbf }

ii. Using an E7 "TORX" wrench, replace the 2 stud bolts labeled B.

Torq e:
5.2 N*m{ 53 kgf*cm 46 in.*lbf }

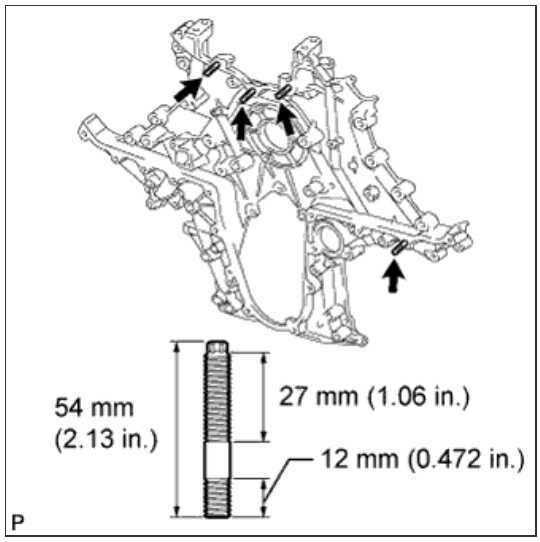


e. Timing Chain Cover:

i. Using an E7 "TORX" wrench, replace the 2 stud bolts labeled A.

Torq e:
6. N*m{ 61 kgf*cm 53 in.*lbf }

ii. Replace the 2 stud bolts labeled B.

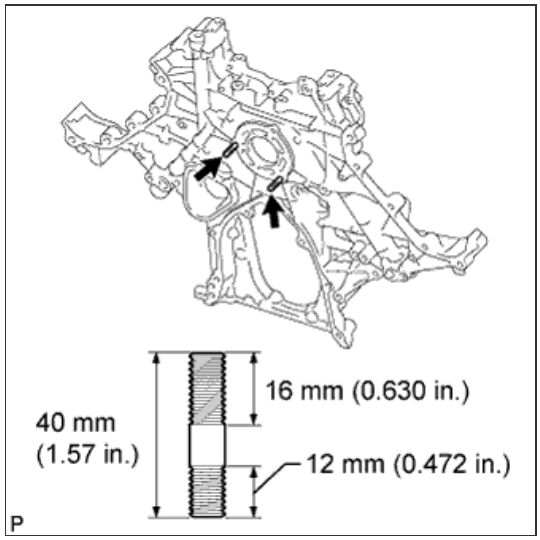


Torq e:
12 N*m{ 12 kgf*cm 9 ft.*lbf }

f. Timing ear Case:

i. Using an E7 "TORX" wrench, replace the 4 stud bolts.

Torq e:
6. N*m{ 61 kgf*cm 53 in.*lbf }

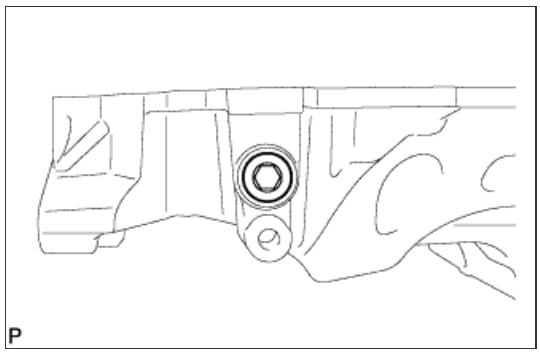


ii. Remove the 2 stud bolts.

iii. Remove the adhesive from the threads of the timing gear case.

i . Apply adhesive to 2 or more threads of the 2 stud bolts.

. Install the 2 stud bolts.



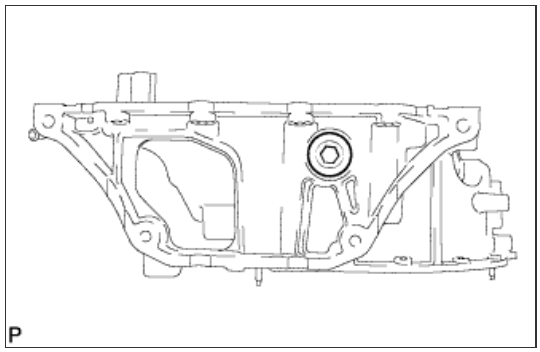
Torq e:
1 N*m{ 1 2 kgf*cm 7 ft.*lbf }

. REPLACE STRAIGHT SCREW PLUG

HINT:

If water or oil leaks from the straight screw plug or the plug is corroded, replace it.

a. No. 1 Oil Pan:

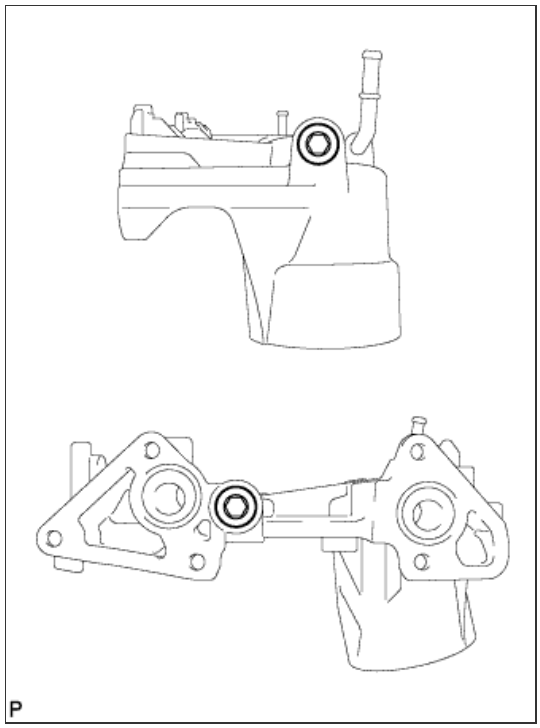


i. Using a 10 mm hexagon wrench, replace the straight screw plug and/or gasket.

Torq e:
5 N*m{ 51 kgf*cm 37 ft.*lbf }

ii. Using a 14 mm hexagon wrench, replace the straight screw plug

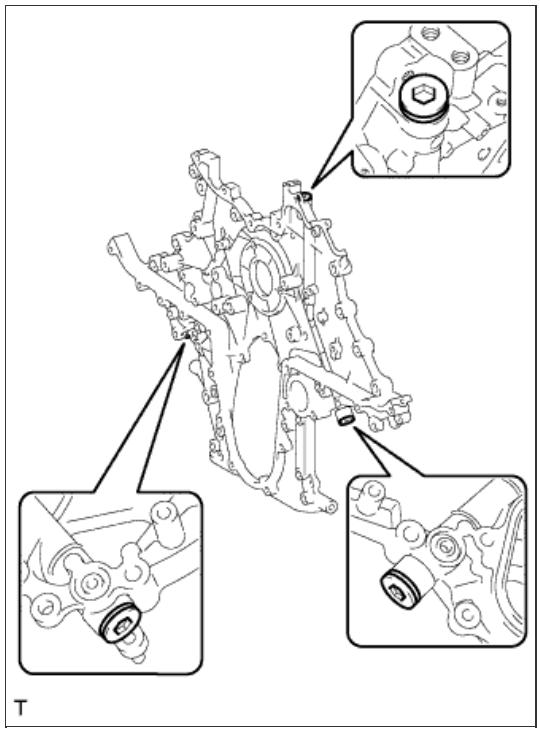
and/or gasket.



Torq e:
6 N*m{ 77 kgf*cm 63 ft.*lbf }

b. Oil Filter Bracket:

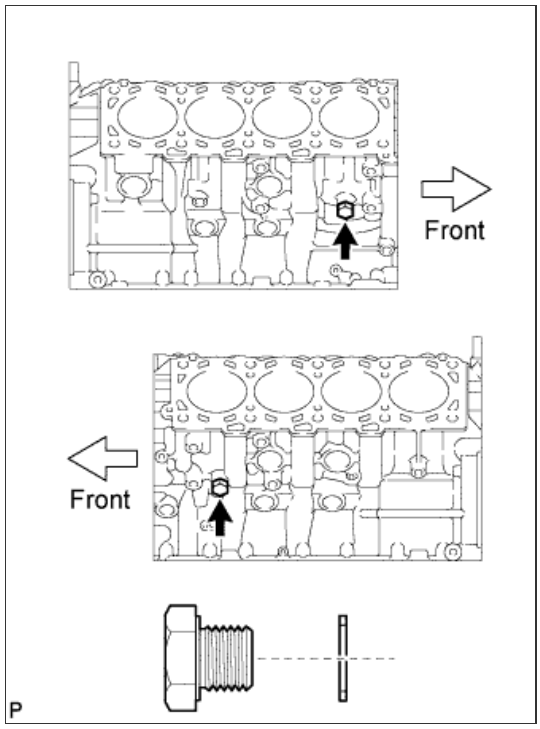
i. Using a 10 mm hexagon wrench, replace the straight screw plug and/or gasket.



Torq e:
5 N*m{ 51 kgf*cm 37 ft.*lbf }

c. Timing ear Case:

i. Using a 10 mm hexagon wrench, replace the straight screw plug and/or gasket.



Torq e:
4 N*m{ 4 kgf*cm 3 ft.*lbf }

1. REPLACE CYLINDER BLOCK STRAIGHT SCREW PLUG

HINT:

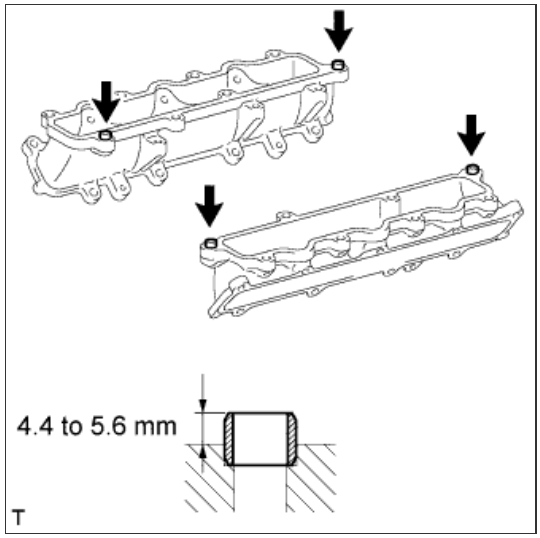
If water leaks from the straight screw plug or the plug is corroded, replace it.

a. Replace the 2 straight screw plugs and 2 gaskets.

Torq e:
3 N*m{ 3 7 kgf*cm 2 ft.*lbf }

2. REPLACE RING PIN

HINT:

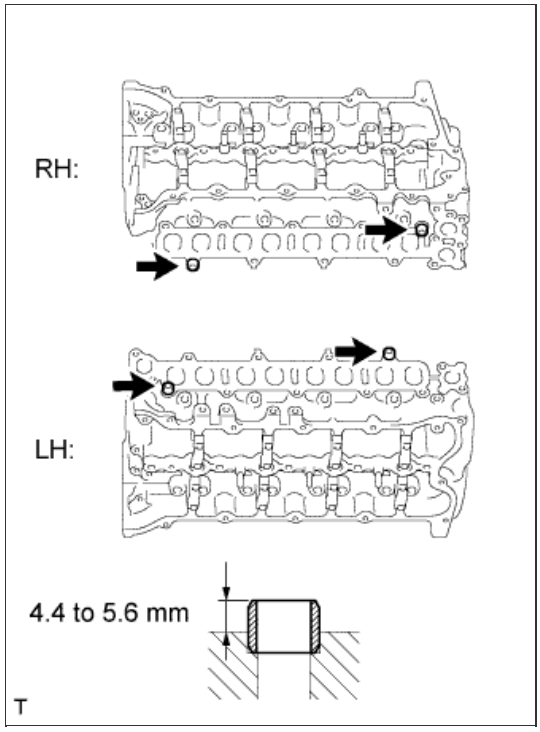


It is not necessary to remove the ring pin unless it is being replaced.

a. No. 1 and No. 2 Intake anifold:

i. Replace the ring pin.

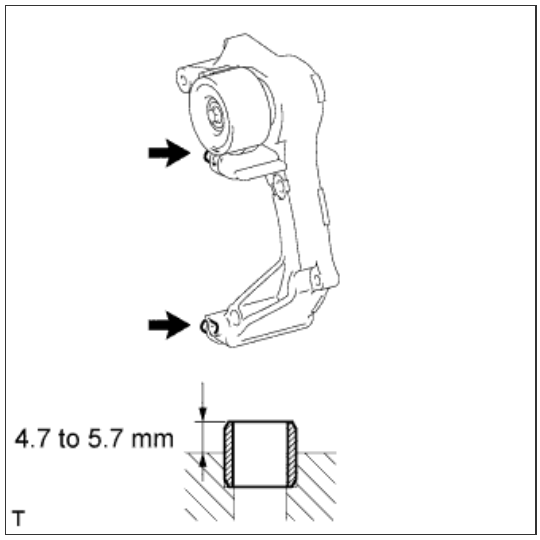
Standard protr ion:



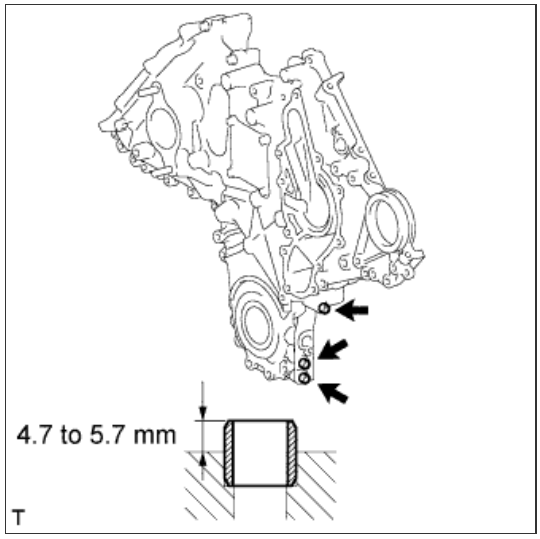
4.4 to 5.6 mm (.173 to .222 in.)

b. Cylinder Head:

i. Replace the ring pin.



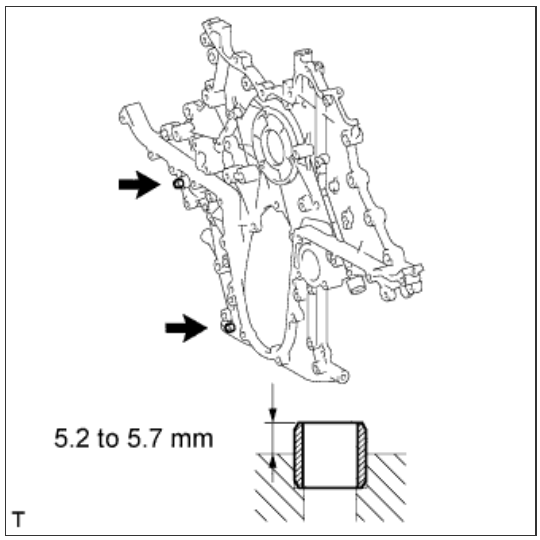
Standard protr ion:
4.4 to 5.6 mm (.173 to .222 in.)



c. V-ribbed Belt Tensioner:

i. Replace the ring pin.

Standard protr ion:
4.7 to 5.7 mm (.1 5 to .224 in.)

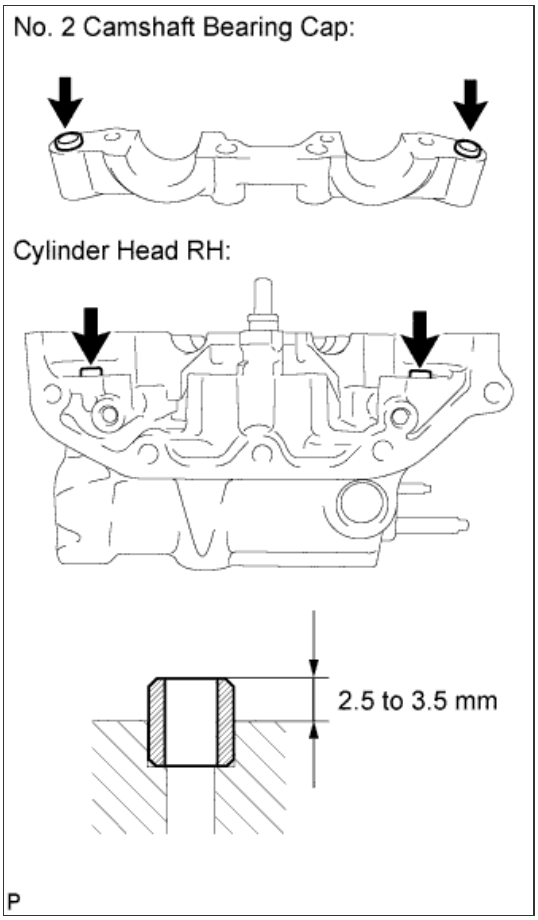


d. Timing Chain Case:

i. Replace the ring pin.

Standard protr ion:
4.7 to 5.7 mm (.1 5 to .224 in.)

e. Timing ear Case:

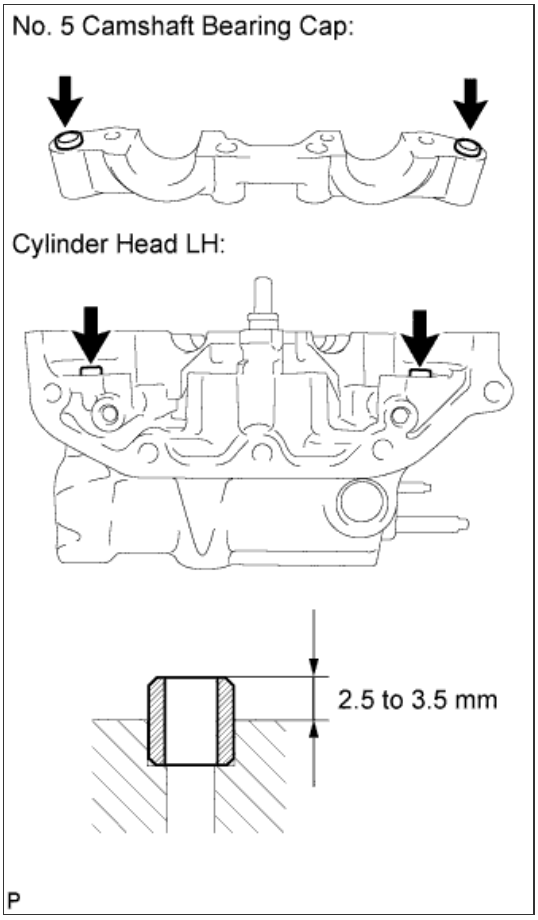


i. Replace the ring pin.

Standard protr ion:
5.2 to 5.7 mm (.2 5 to .224 in.)

f. Cylinder Head RH:

i. Replace the ring pin.

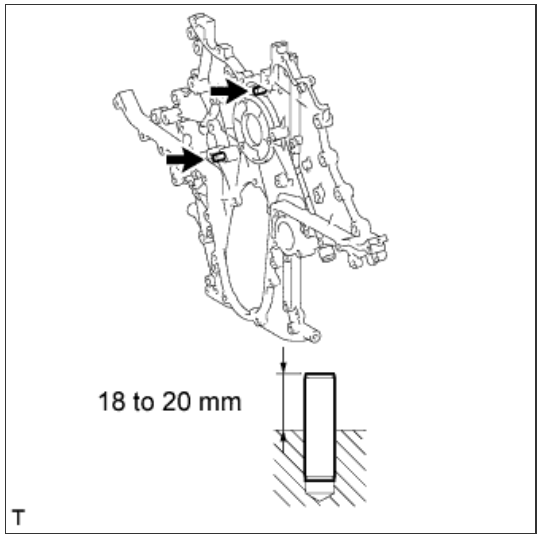


Standard protr ion:
2.5 to 3.5 mm (. 9 4 to .13 in.)

g. Cylinder Head LH:

i. Replace the ring pin.

Standard protr ion:
2.5 to 3.5 mm (. 9 4 to .13 in.)



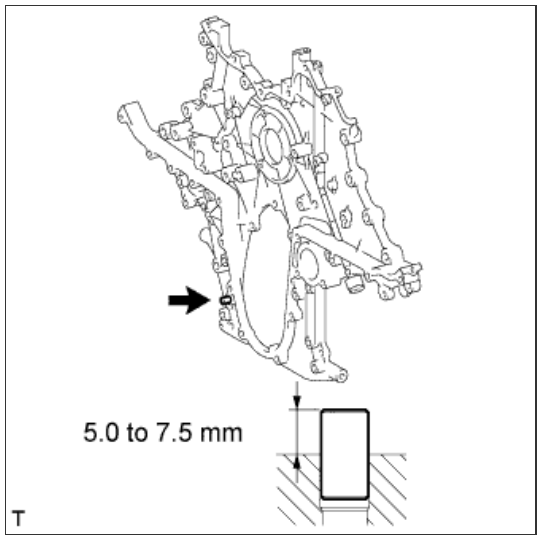
3. REPLACE CHAIN TENSIONER STRAIGHT PIN

HINT:

It is not necessary to remove the straight pin unless it is being replaced.

a. Replace the straight pin.

Standard protr ion:
1 to 2 mm (.7 9 to .7 7 in.)



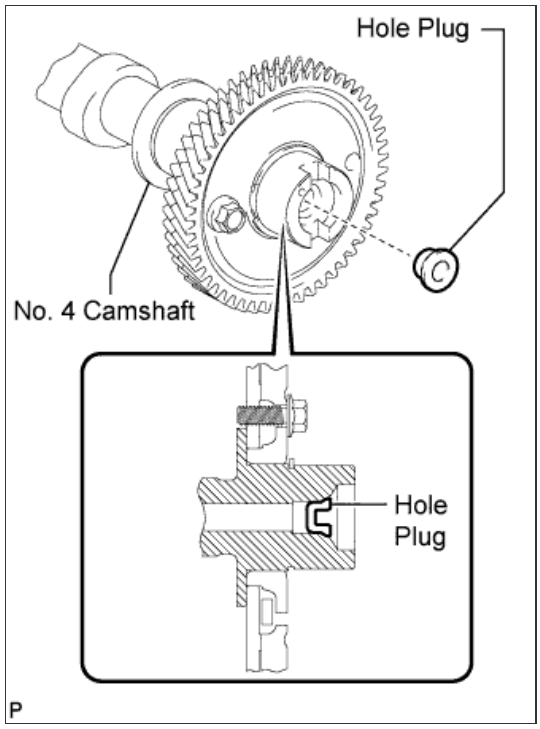
4. REPLACE TIMING GEAR COVER SET STRAIGHT PIN

HINT:

It is not necessary to remove the straight pin unless it is being replaced.

a. Replace the straight pin.

Standard protr ion:
5. to 7.5 mm (.197 to .295 in.)



5. REPLACE HOLE PLUG (w/o Intercooler)

HINT:

It is not necessary to remove a hole plug unless it is being replaced.

a. Remove the hole plug from the No. 4 camshaft.

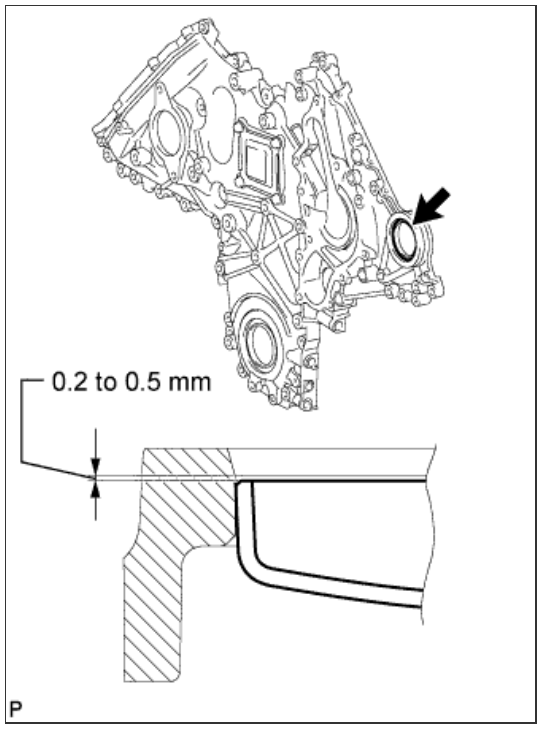
b. Using a 12 mm steel bar and hammer, tap in the hole plug as shown in the illustration.

6. REPLACE TIGHT PLUG (w/o Intercooler)

NOTICE:

If oil leaks from a tight plug or a plug is corroded, replace it.

a. Remove the tight plug from the timing chain cover.



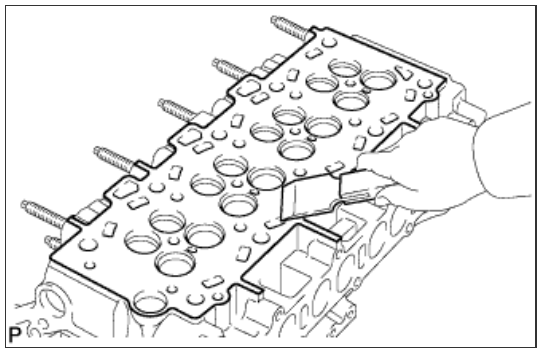
b. Apply adhesive to a new tight plug.

Adhesive:
Toyota Genuine Adhesive 1324 Three Bond 1324 or equivalent

c. Using SST and a hammer, tap in the tight plug as shown in the illustration.

SST
995 6 1 (9951- 55)
995 7 1 (9951- 71)

Standard depth:
.2 to .5 mm (. 7 7 to . 197 in.)

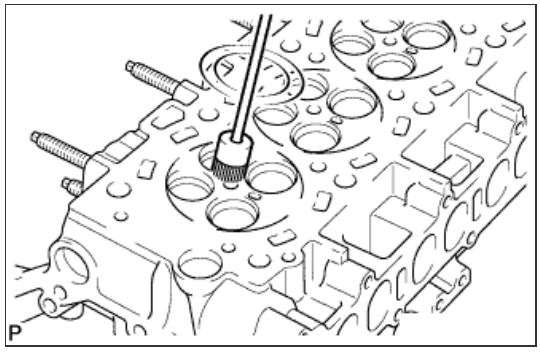


for Preparation Click here

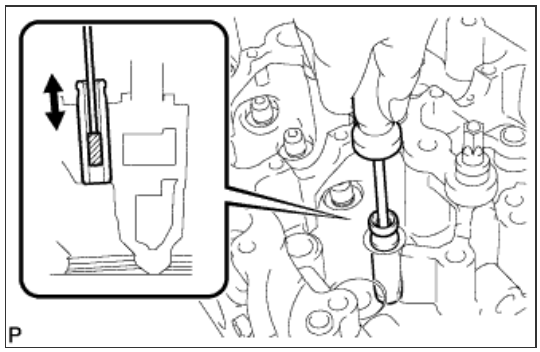
1. CLEAN CYLINDER HEAD SUB-ASSEMBLY

a. Using a gasket scraper, remove all the gasket material from the cylinder block contact surface.

NOTICE:

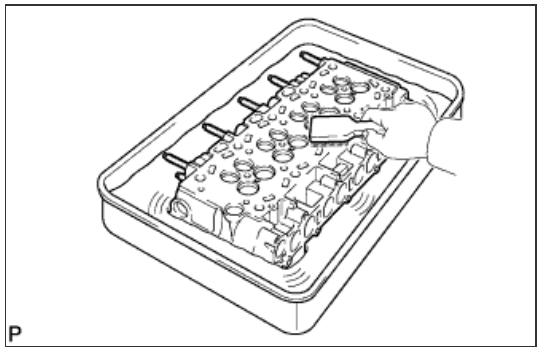


Be careful not to scratch the cylinder block contact surface.



b. Using a wire brush, remove all the carbon from the combustion chambers.

NOTICE:



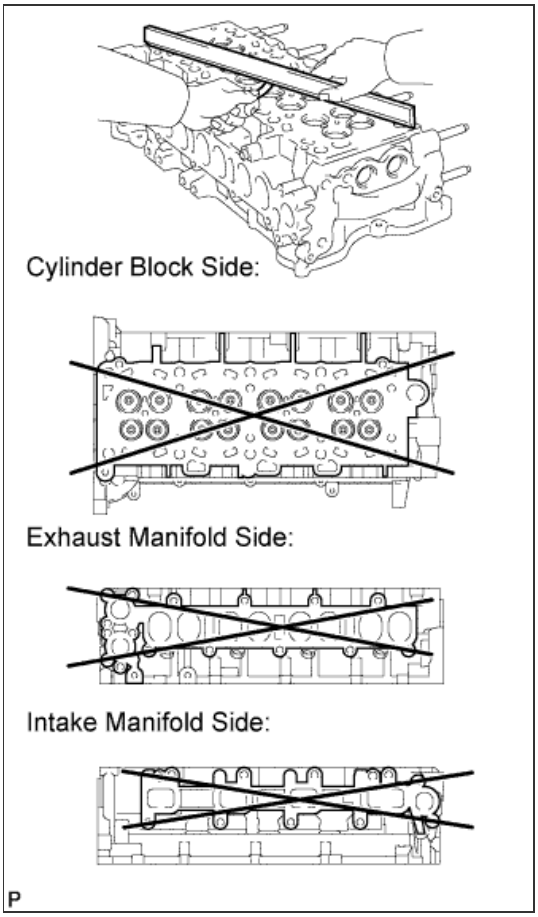
Be careful not to damage the combustion chambers and valve seats.

c. Using a valve guide bushing brush and solvent, clean all the valve guide bushes.

d. Using a soft brush and solvent, thoroughly clean the cylinder head.

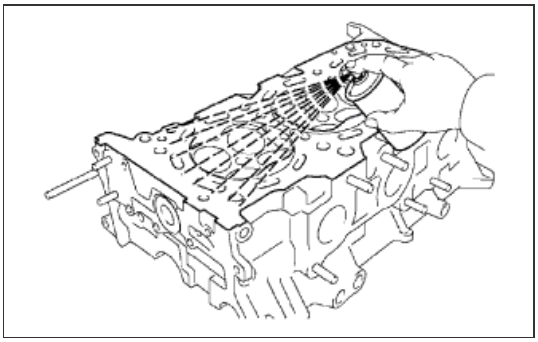
2. INSPECT CYLINDER HEAD SUB-ASSEMBLY

a. Using a precision straightedge and feeler gauge, measure the warpage of the contact surface between the cylinder head and cylinder block, and the cylinder head and manifolds.



Standard Warpage:

Item	Specified Condition
Cylinder block side	0 to 0.05 mm (0 to 0.00197 in.)
Intake manifold side	0 to 0.08 mm (0 to 0.00315 in.)
Exhaust manifold side	0 to 0.08 mm (0 to 0.00315 in.)



Maximum Warpage:

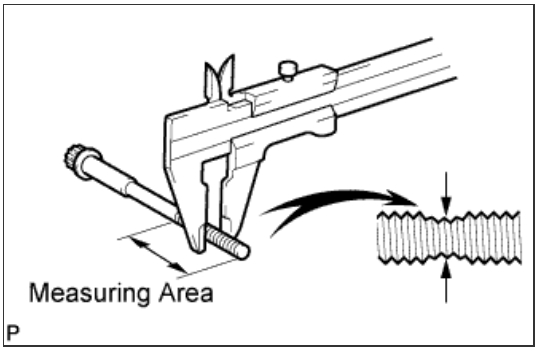
Item	Specified Condition
Cylinder block side	0.05 mm (0.00197 in.)
Intake manifold side	0.08 mm (0.00315 in.)
Exhaust manifold side	0.08 mm (0.00315 in.)

If the warpage is more than the maximum, replace the cylinder head sub-assembly.

b. Using a dye penetrant, check the intake ports, exhaust ports and cylinder surface for cracks.
If there are cracks, replace the cylinder head sub-assembly.

3. INSPECT CYLINDER HEAD BOLT

a. Using a vernier caliper, measure the outside thread diameter of the bolt.



Standard diameter:
12.8 to 13.0 mm (0.504 to 0.512 in.)

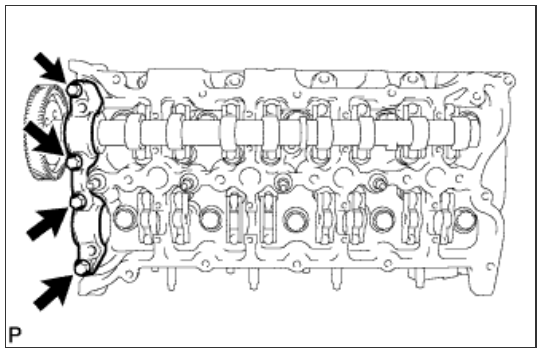
Minimum diameter:
12.5 mm (0.492 in.)

HINT:

If a visual check reveals no excessively thin areas, check the center of the bolt (see illustration) and find the area that has the smallest diameter.

If the diameter is less than the minimum, replace the cylinder head bolt.

4. INSPECT NO. 2 AND NO. 3 CAMSHAFT THRUST CLEARANCE (for Intake Camshaft)

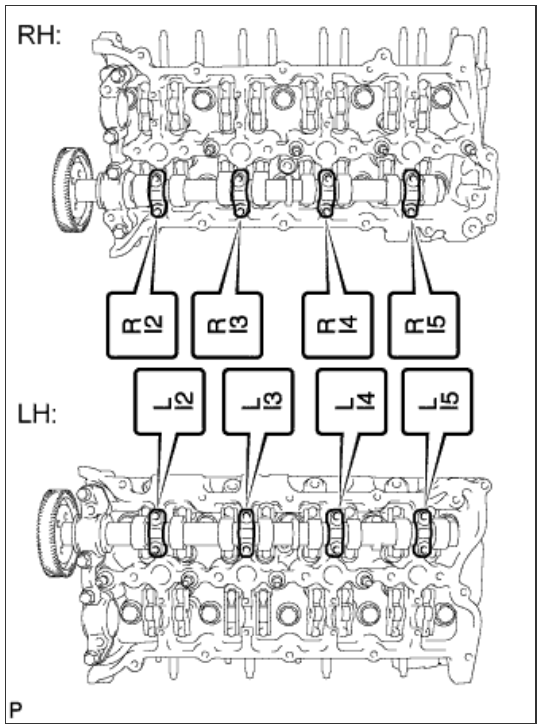


a. Install the No. 2 and No. 5 camshaft bearing caps to the cylinder head.

b. Place the camshafts on the cylinder head.

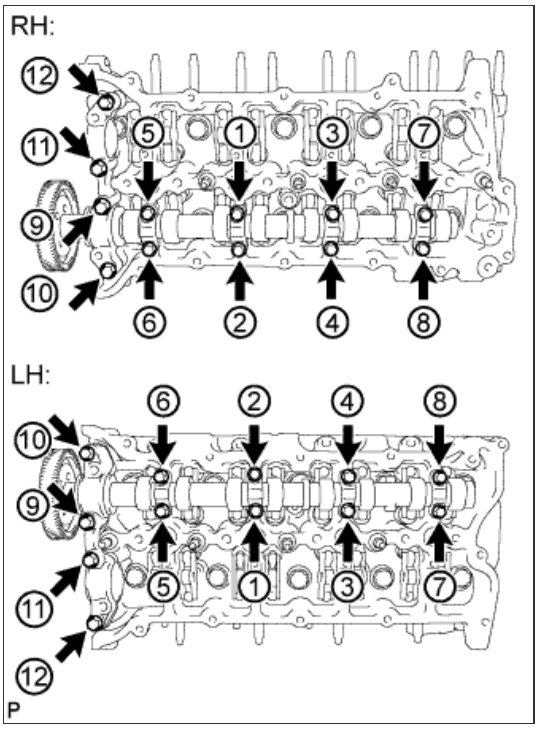
c. Temporarily install the No. 1 and No. 4 camshaft bearing caps with the 4 bolts by hand.

NOTICE:



Do not turn the camshafts.

d. Install the No. 3 camshaft bearing caps.

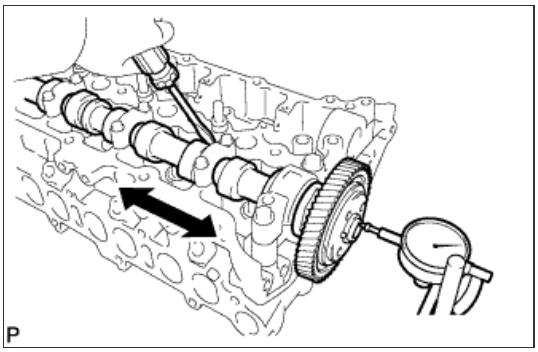


i. Confirm the marks and numbers on the camshaft bearing caps and place them in their proper position and direction.

ii. Temporarily install the 16 bolts.

e. Uniformly tighten the 24 bolts in several steps in the order shown in the illustration.

Tor ue:
for 12 mm head bolt of No. 1 and No. 4 camshaft bearing cap:
21 N*m{ 214 kgf*cm 15 ft.*lbf
for 10 mm head bolt of No. 3 camshaft bearing cap:
10 N*m{ 102 kgf*cm 7 ft.*lbf



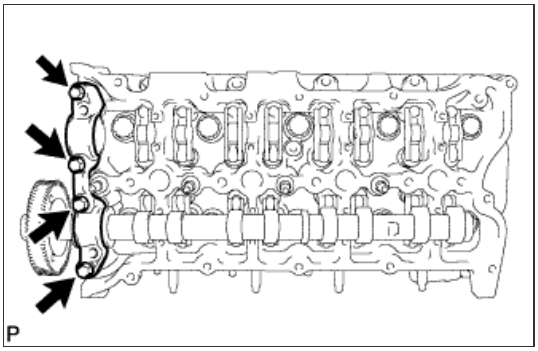
f. Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.

Standard thrust clearance:
0.035 to 0.160 mm (0.00138 to 0.00630 in.)

Maximum thrust clearance:
0.180 mm (0.00709 in.)

If the thrust clearance is more than the maximum, replace the camshaft.
If necessary, replace the cylinder head sub-assembly.

5. INSPECT NO. 1 AND NO. 4 CAMSHAFT THRUST CLEARANCE (for Exhaust Camshaft)

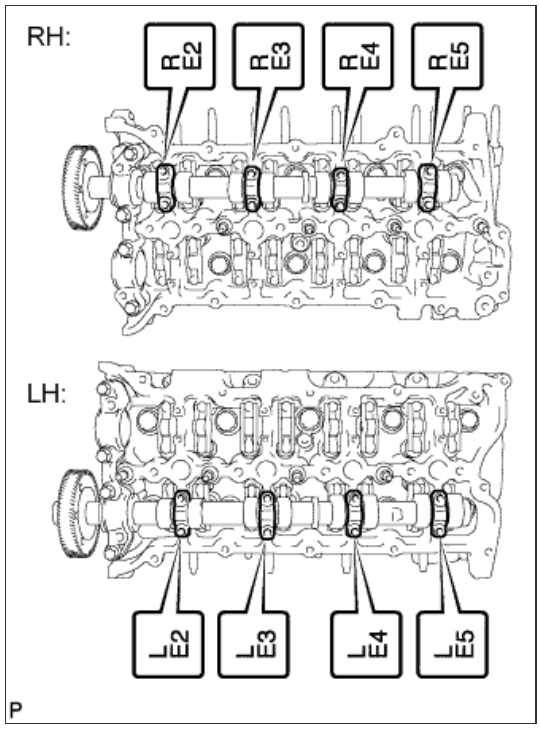


a. Install the No. 2 and No. 5 camshaft bearing caps to the cylinder head.

b. Place the camshafts on the cylinder head.

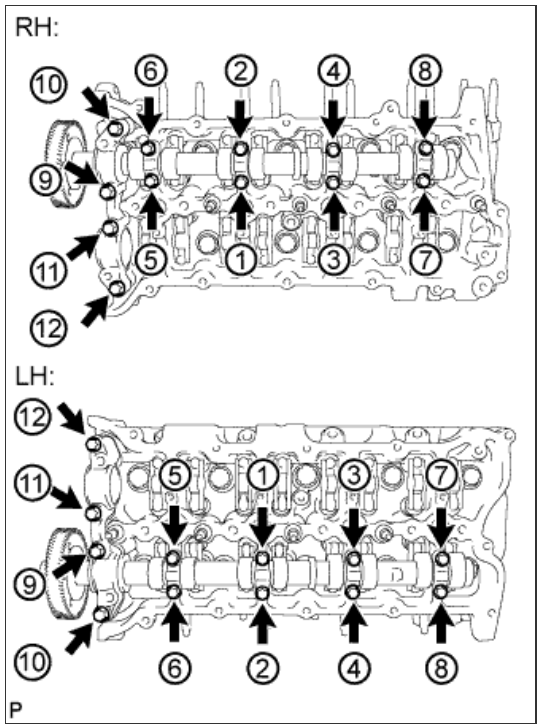
c. Temporarily install the No. 1 and No. 4 camshaft bearing caps with the 4 bolts by hand.

NOTICE:



Do not turn the camshafts.

d. Install the No. 3 camshaft bearing caps.

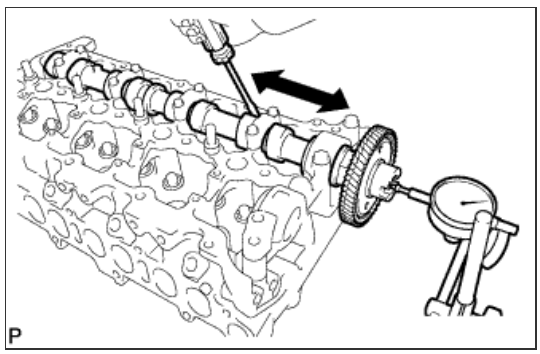


i. Confirm the marks and numbers on the camshaft bearing caps and place them in their proper position and direction.

ii. Temporarily install the 16 bolts.

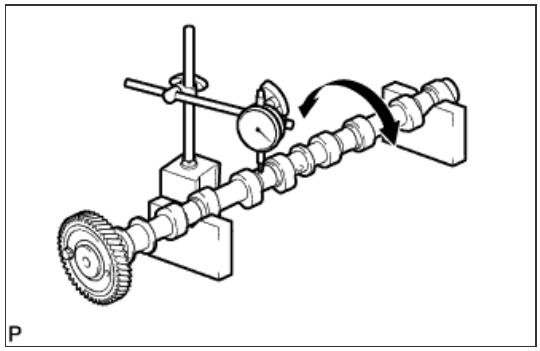
e. Uniformly tighten the 24 bolts in several steps in the order shown in the illustration.

Tor ue:
for 12 mm head bolt of No. 1 and No. 4 camshaft bearing cap:
21 N*m{ 214 kgf*cm 15 ft.*lbf
for 10 mm head bolt of No. 3 camshaft bearing cap:
10 N*m{ 102 kgf*cm 7 ft.*lbf



f. Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.

Standard thrust clearance:
0.035 to 0.160 mm (0.00138 to 0.00630 in.)

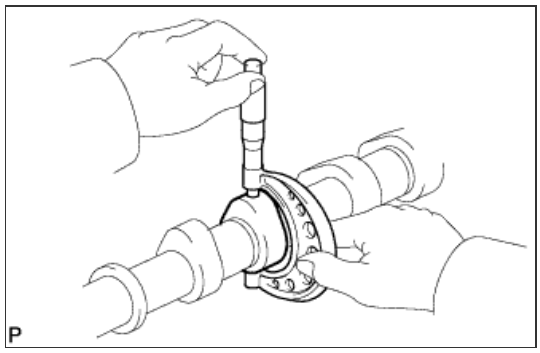


Maximum thrust clearance:
0.180 mm (0.00709 in.)

If the thrust clearance is more than the maximum, replace the camshafts.
If necessary, replace the cylinder head sub-assembly.

6. INSPECT CAMSHAFT

a. Inspect the camshaft for runout.



i. Place the camshaft on V-blocks.

ii. Using a dial indicator, measure the runout at the center journal.

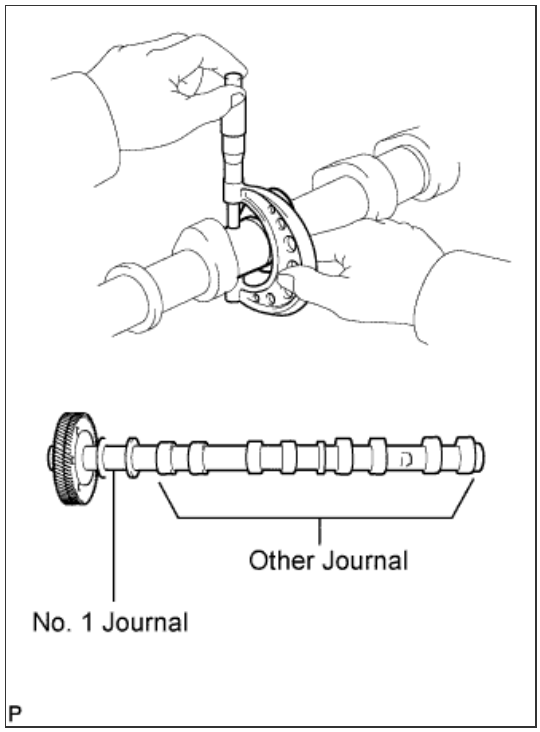
Maximum runout:
0.03 mm (0.00118 in.)

If the runout is more than the maximum, replace the camshaft.

b. Inspect the cam lobe height.

i. Using a micrometer, measure the cam lobe height.

Standard Cam Lobe Height:



Item	Specified Condition
No. 2 and No. 3 camshaft (intake)	37.277 to 37.387 mm (1.468 to 1.472 in.)
No. 1 and No. 4 camshaft (exhaust)	38.324 to 38.434 mm (1.509 to 1.513 in.)

Minimum Cam Lobe Height:

Item	Specified Condition
No. 2 and No. 3 camshaft (intake)	37.277 mm (1.468 in.)
No. 1 and No. 4 camshaft (exhaust)	38.324 mm (1.509 in.)

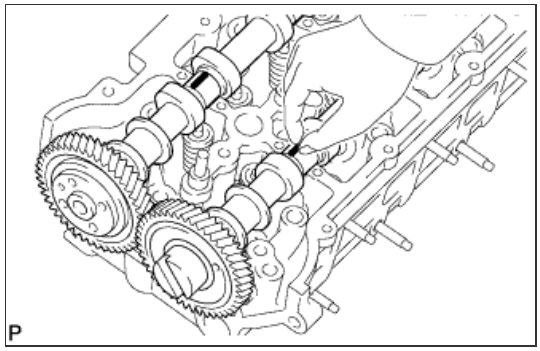
If the cam lobe height is less than the minimum, replace the camshaft.

c. Inspect the camshaft journal diameter.

i. Using a micrometer, measure the journal diameter.

Standard Journal Diameter:

Item	Specified Condition
No. 1 journal	29.969 to 29.985 mm (1.180 to 1.181 in.)
Other journal	26.969 to 26.985 mm (1.0618 to 1.0624 in.)

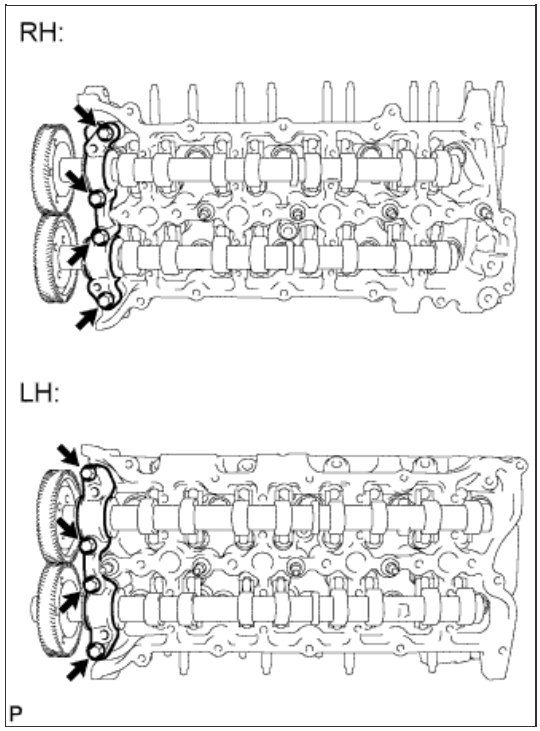


If the journal diameter is not as specified, check the oil clearance.

7. INSPECT CAMSHAFT OIL CLEARANCE

a. Clean the camshaft bearing caps and camshaft journals.

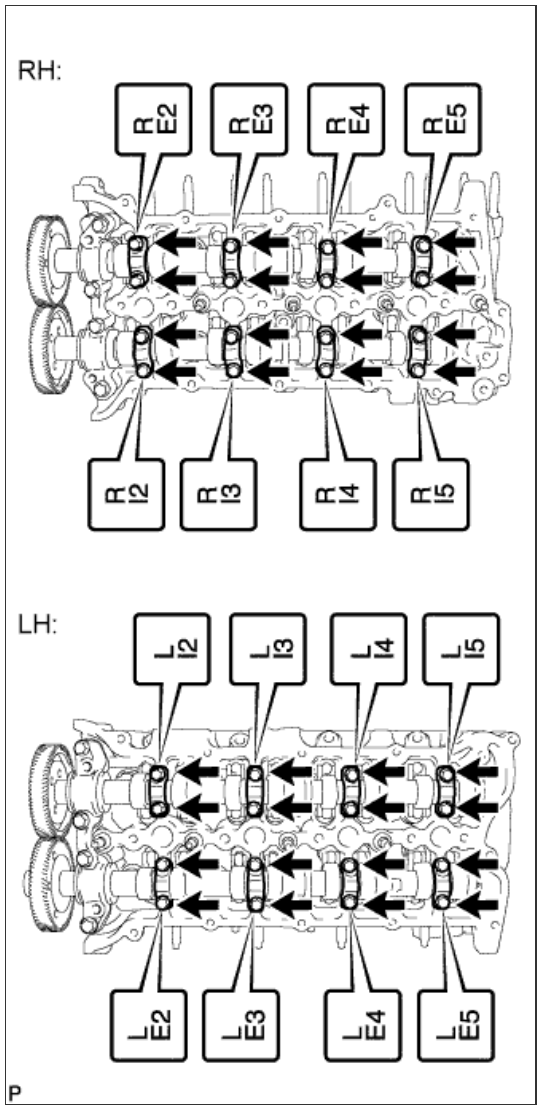
b. Place the camshafts on the cylinder head.



c. Lay a strip of Plastigage across each of the camshaft journals.

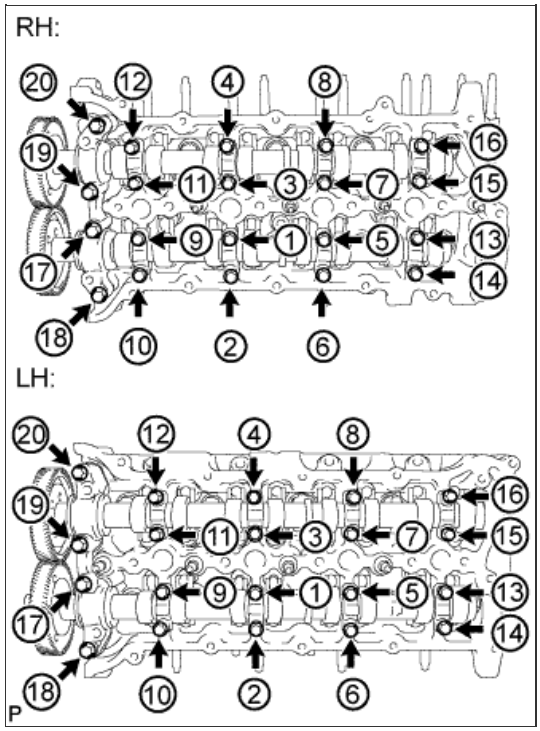
d. Temporarily install the camshaft bearing cap with the 4 bolts by hand.

NOTICE:



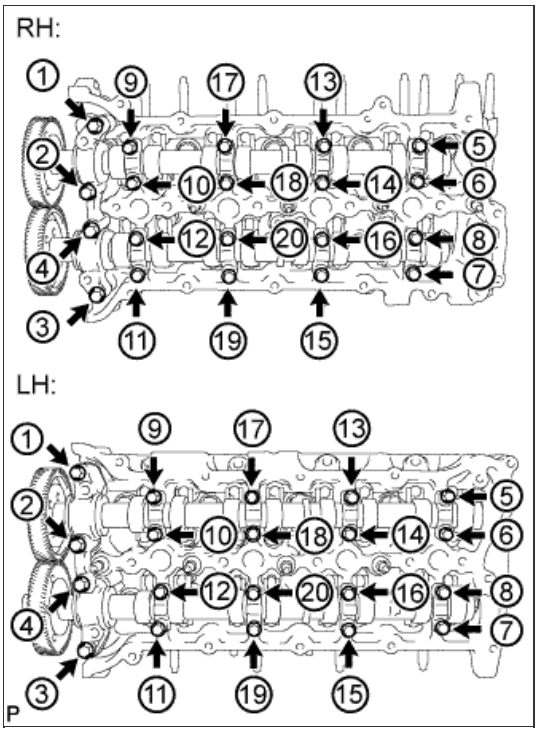
Do not turn the camshafts.

e. Install the No. 3 camshaft bearing caps with the 16 bolts.



i. Confirm the marks and numbers on the camshaft bearing caps and place them in their proper position and direction.

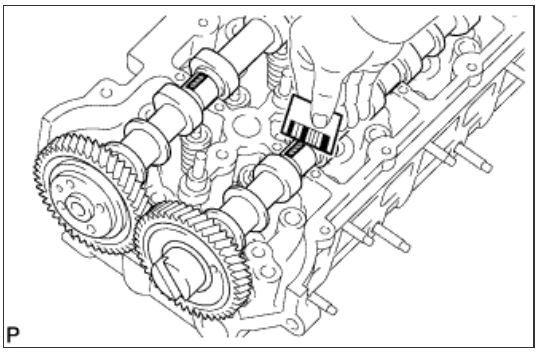
ii. Temporarily install the 16 bolts.



f. Uniformly tighten the 20 bolts in several steps in the order shown in the illustration.

Tor ue:
for 12 mm head bolt of No. 1 and No. 4 camshaft bearing cap:
21 N*m{ 214 kgf*cm 15 ft.*lbf
for 10 mm head bolt of No. 3 camshaft bearing cap:
10 N*m{ 102 kgf*cm 7 ft.*lbf

g. Uniformly loosen and remove the 20 bolts in the sequence shown in the illustration.

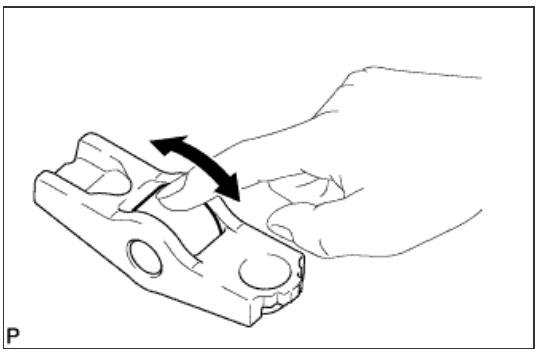


h. Measure the Plastigage at its widest point.

Standard oil clearance:
0.025 to 0.062 mm (0.000984 to 0.00244 in.)

Maximum oil clearance:
0.072 mm (0.00283 in.)

If the oil clearance is more than the maximum, replace the camshaft.
If necessary, replace the cylinder head sub-assembly.



i. Remove the Plastigage completely.

j. Remove the camshafts.

8. INSPECT VALVE ROCKER ARM SUB-ASSEMBLY

a. Turn the roller by hand to check that it turns smoothly.
If the roller does not turn smoothly, replace the valve rocker arm.

9. INSPECT VALVE LASH ADJUSTER ASSEMBLY

NOTICE:

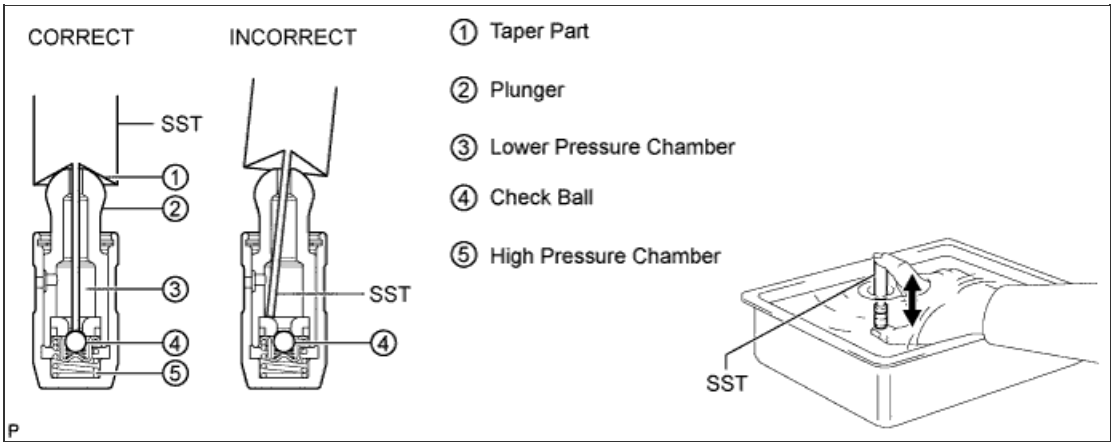
- **Keep the adjuster free from dirt and foreign objects.**
- **Use only clean engine oil.**

a. Place the lash adjuster into a container full of new engine oil.

b. Insert SST tip into the lash adjuster plunger and use the tip to press down on the check ball inside the plunger.

SST

09276-75010



c. Squeeze SST and the lash adjuster together to move the plunger up and down 5 to 6 times.

d. Check the movement of the plunger and bleed air.

OK:
Plunger moves up and down.

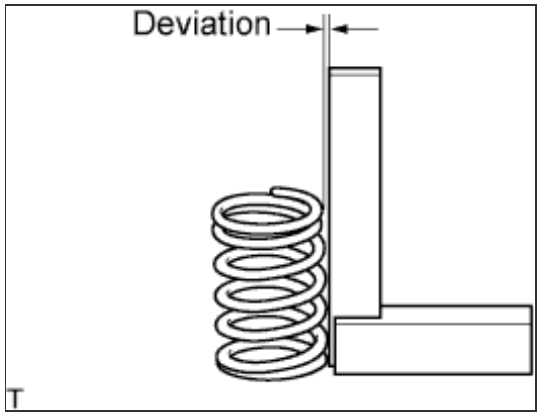
NOTICE:

When bleeding high-pressure air from the compression chamber, make sure that the tip of SST is actually pressing the check ball as shown in the illustration. If the check ball is not pressed, air will not bleed.

e. After bleeding the air, remove SST. Then try to quickly and firmly press the plunger with your fingers.

OK:
Plunger can be pressed 3 times.

If the plunger can still be compressed after pressing it 3 times, replace the lash adjuster with a new one.



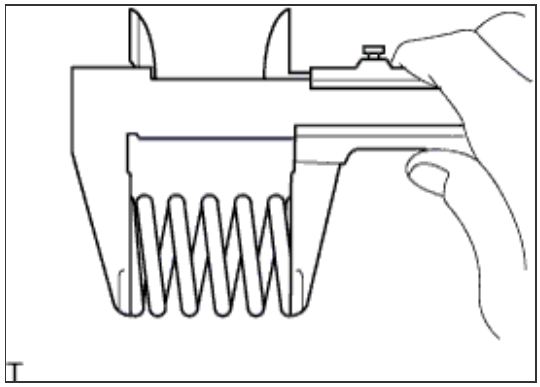
10. INSPECT INNER COMPRESSION SPRING

a. Inspect the inner compression spring deviation.

i. Using a steel square, measure the deviation of the inner compression spring.

Maximum deviation:
1.5 mm (0.0591 in.)

If the deviation is more than the maximum, replace the inner compression spring.

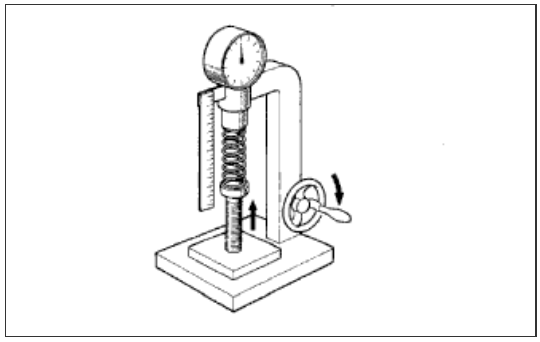


b. Inspect the inner compression spring free length.

i. Using a vernier caliper, measure the free length of the inner compression spring.

Standard free length:
45.9 mm (1.81 in.)

If the free length is not as specified, replace the inner compression spring.



c. Inspect the inner compression spring tension.

i. Using a spring tester, measure the tension of the inner compression spring at the specified installed length.

Installed tension:
219 to 242 N (22 to 25 kgf 49.2 to 54.4 lbf) at 31.0 mm (1.22 in.)

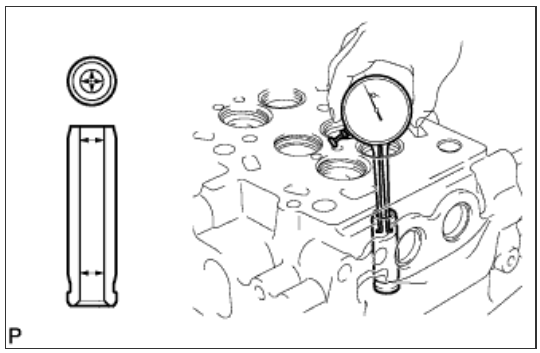
If the installed tension is not as specified, replace the inner compression spring.

11. INSPECT VALVE GUIDE BUSH OIL CLEARANCE

a. Using a caliper gauge, measure the inside diameter of the guide bush.

Standard bush inside diameter:
6.01 to 6.03 mm (0.2366 to 0.2374 in.)

b. Subtract the valve stem diameter measurement from the guide bush inside diameter measurement.



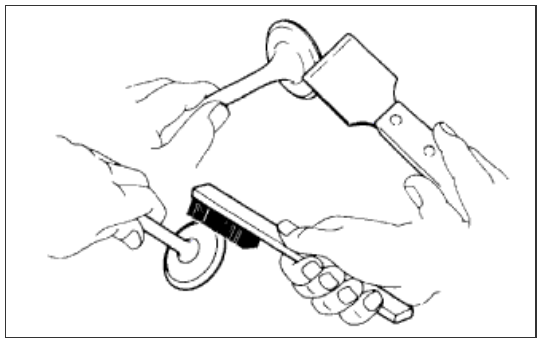
Standard Oil Clearance:

Item	Specified Condition
Intake	0.025 to 0.060 mm (0.000984 to 0.00236 in.)
Exhaust	0.035 to 0.070 mm (0.00138 to 0.00276 in.)

Maximum Oil Clearance:

Item	Specified Condition
Intake	0.120 mm (0.00472 in.)
Exhaust	0.130 mm (0.00512 in.)

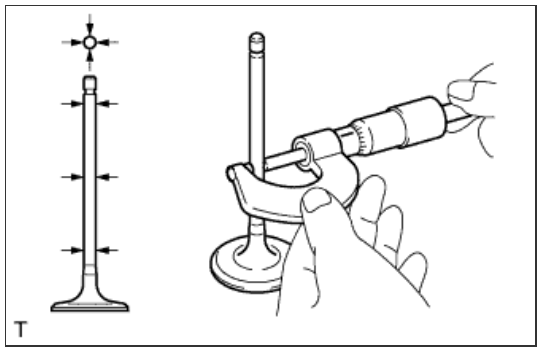
If the oil clearance is more than the maximum, replace the valve guide bush.



12. CLEAN VALVE

a. Using a gasket scraper, chip off any carbon from the valve head.

NOTICE:

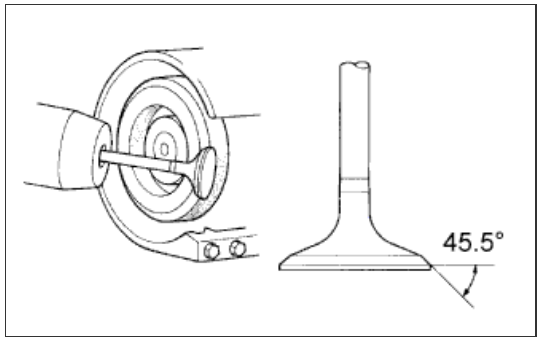


Be careful not to damage the valve face.

b. Using a wire brush, thoroughly clean the valve.

13. INSPECT VALVE

a. Inspect the valve stem diameter.

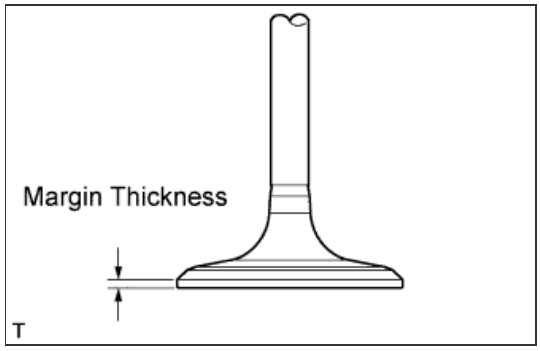


i. Using a micrometer, measure the diameter of the valve stem.

Standard Valve Stem Diameter:

Item	Specified Condition
Intake	5.970 to 5.985 mm (0.2350 to 0.2356 in.)
Exhaust	5.960 to 5.975 mm (0.2346 to 0.2352 in.)

b. Inspect the valve face angle.



i. Grind the valve enough to remove pits and carbon.

ii. Check that the valve is ground to the correct valve face angle.

Standard valve face angle:
45.5°

c. Inspect the valve head margin thickness.

i. Using a vernier caliper, measure the valve head margin thickness.

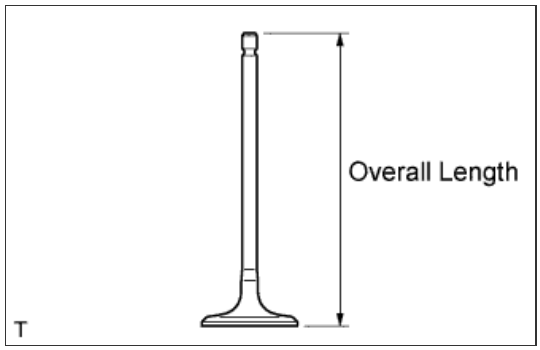
Standard margin thickness:
1.0 mm (0.0394 in.)

Minimum margin thickness:
0.5 mm (0.0197 in.)

If the margin thickness is less than the minimum, replace the valve.

d. Inspect the valve overall length.

i. Using a vernier caliper, measure the overall length.



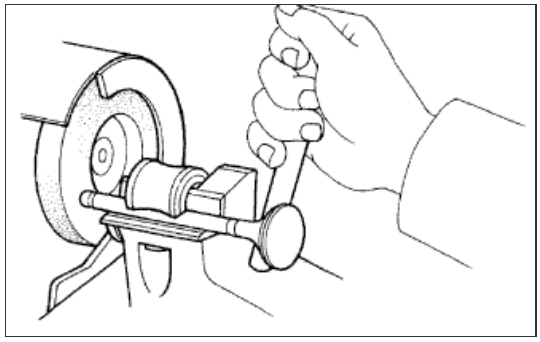
Standard Overall Length:

Item	Specified Condition
Intake	104.4 mm (4.11 in.)
Exhaust	104.1 mm (4.10 in.)

Minimum Overall Length:

Item	Specified Condition
Intake	104.1 mm (4.10 in.)
Exhaust	103.8 mm (4.09 in.)

If the overall length is less than the minimum, replace the valve.



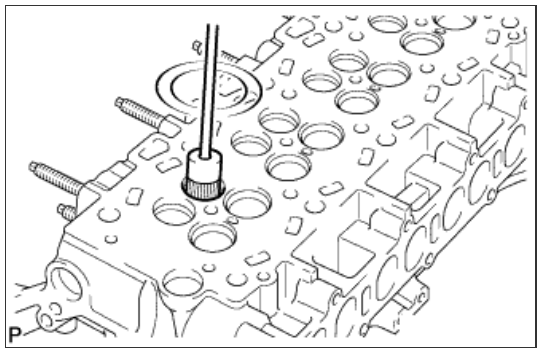
e. Inspect the valve stem tip.

i. Check the surface of the valve stem tip for wear.

NOTICE:

Do not grind the valve so it becomes shorter than the minimum overall length.

If the valve stem tip is worn, resurface the tip with a grinder or replace the valve.



14. CLEAN VALVE SEAT

a. Using a 45° carbide cutter, resurface the valve seats.

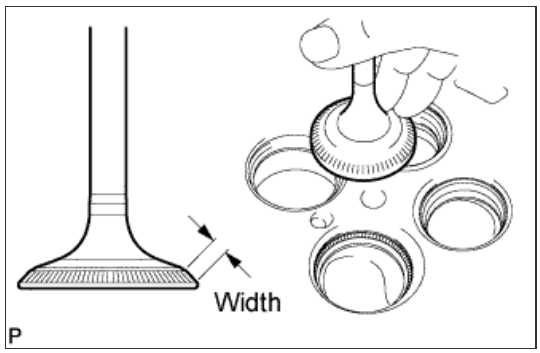
NOTICE:

Be careful not to damage the combustion chambers and valve seats.

b. Clean the valve seats.

15. INSPECT INTA E VALVE SEAT

a. Apply a light coat of Prussian blue to the valve face.



b. Lightly press the valve face against the valve seat.

NOTICE:

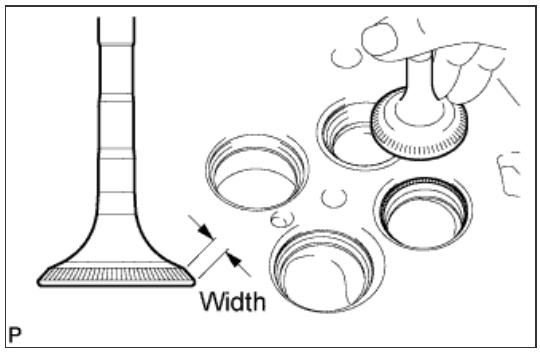
Do not rotate the valve while pressing the valve.

c. Check the valve face and valve seat.

i. Check that the contact surfaces of the valve seat and valve face are in the middle area of their respective surfaces, with the width between 1.0 to 1.4 mm (0.0394 to 0.0551 in.).
If not, correct the valve seat.

ii. Check that the contact surfaces of the valve seat and valve face are even around the entire valve seat.
If not, correct the valve seat.

16. INSPECT E HAUST VALVE SEAT



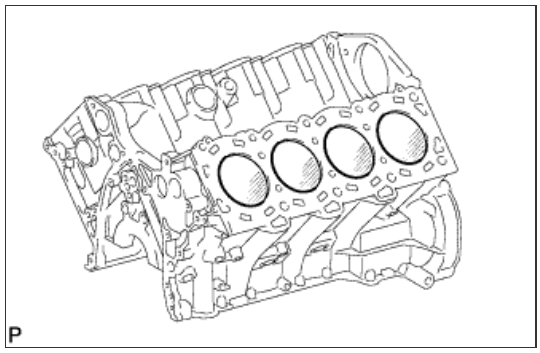
a. Apply a light coat of Prussian blue to the valve face.

b. Lightly press the valve face against the valve seat.

NOTICE:

Do not rotate the valve while pressing the valve.

c. Check the valve face and valve seat.

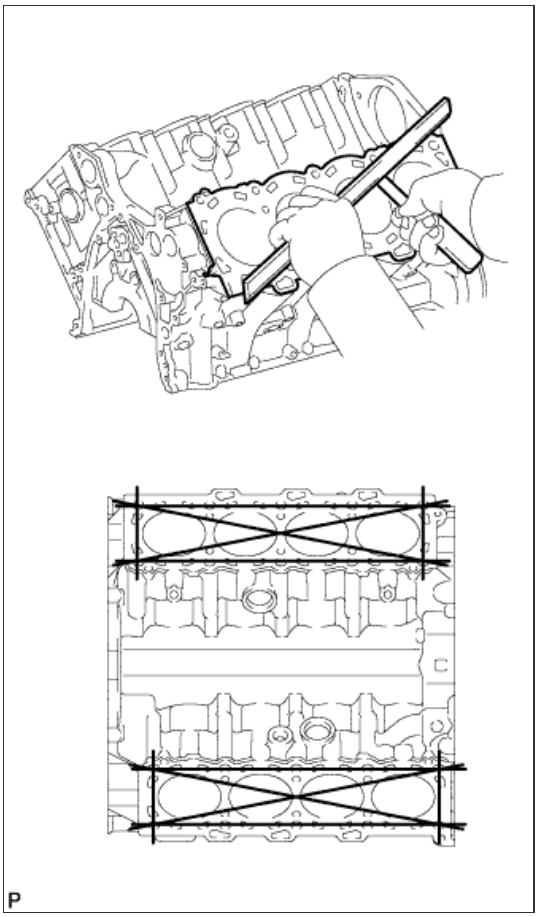


i. Check that the contact surfaces of the valve seat and valve face are in the middle area of their respective surfaces, with the width between 1.0 to 1.4 mm (0.0394 to 0.0551 in.).
If not, correct the valve seat.

ii. Check that the contact surfaces of the valve seat and valve face are even around the entire valve seat.
If not, correct the valve seat.

17. VISUALLY CHECK CYLINDER BLOCK

a. Visually check the cylinder for vertical scratches.
If deep scratches are present, rebore all 8 cylinders. If necessary, replace the cylinder block sub-assembly.

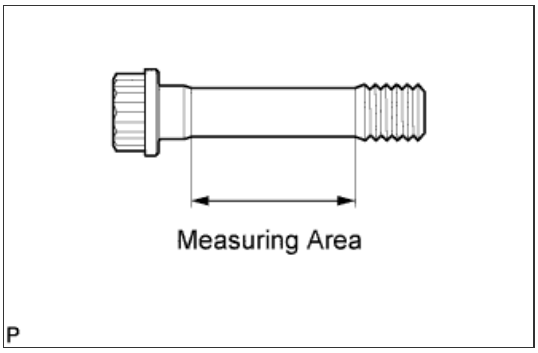


18. INSPECT CYLINDER BLOCK FOR FLATNESS

a. Using a precision straightedge and feeler gauge, measure the warpage of the contact surface between the cylinder head and cylinder head gaskets.

Maximum warpage:
0.05 mm (0.00197 in.)

If the warpage is more than the maximum, replace the cylinder block sub-assembly.



19. INSPECT CONNECTING ROD BOLT

a. Using a vernier caliper, measure the tension portion diameter of the bolt.

Standard diameter:
8.7 to 8.8 mm (0.343 to 0.346 in.)

Minimum diameter:
8.5 mm (0.335 in.)

If the diameter is less than the minimum, replace the connecting rod bolt.

20. INSPECT CRANKSHAFT BEARING CAP BOLT

a. Using a vernier caliper, measure the outside thread diameter of bolt A and B.

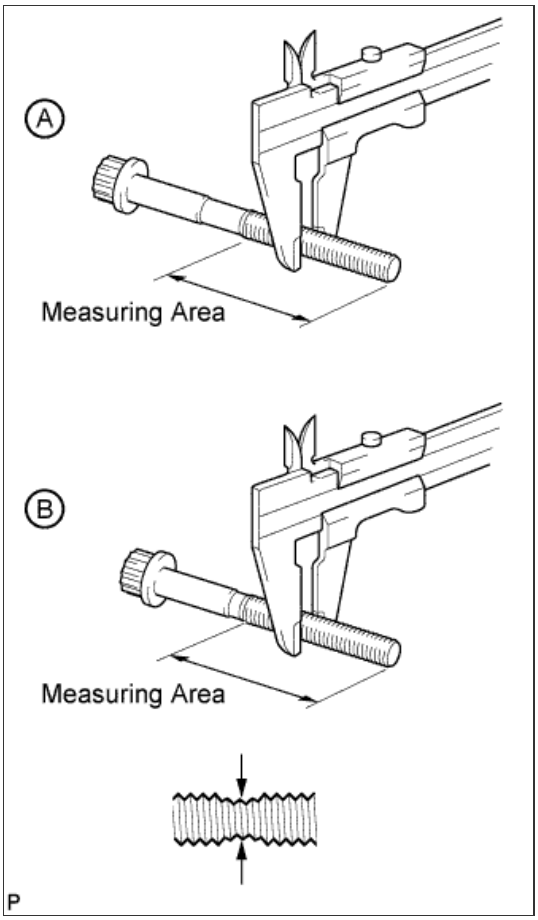
Bolt Length

Item	Specified Condition
Bolt A	106 mm (4.17 in.)
Bolt B	90.5 mm (3.56 in.)

Measuring Area:

Item	Specified Condition
Bolt A	73 mm (2.87 in.)
Bolt B	63 mm (2.48 in.)

Standard diameter:
for bolt A:
10.8 to 11.0 mm (0.425 to 0.433 in.)



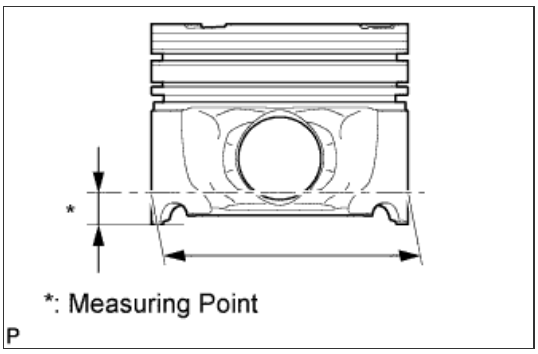
for bolt B:
9.8 to 10.0 mm (0.386 to 0.394 in.)

Minimum diameter:
for bolt A:
10.5 mm (0.413 in.)
for bolt B:
9.5 mm (0.374 in.)

HINT:

If a visual check reveals no excessively thin areas, check the center of the bolt (see illustration) and find the area that has the lowest diameter.

If the diameter is less than the minimum, replace the crankshaft bearing cap bolt.



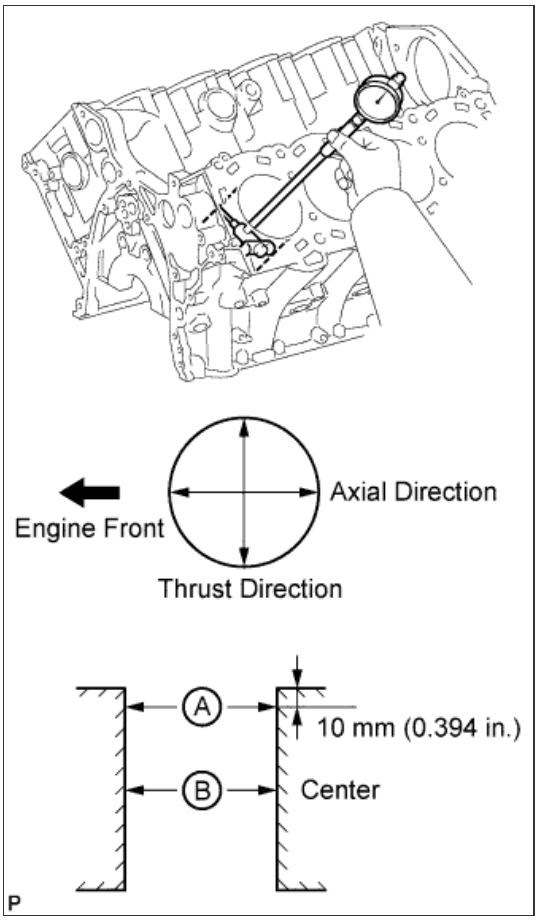
21. INSPECT PISTON WITH PIN SUB-ASSEMBLY

a. Using a micrometer, measure the piston diameter at a right angle to the piston pin center line, 12 mm (0.472 in.) from the piston skirt.

Standard piston diameter:
85.932 to 85.966 mm (3.383 to 3.384 in.)

Minimum piston diameter:
85.910 mm (3.382 in.)

If the diameter is less than the minimum, replace the piston with pin sub-assembly.



22. INSPECT CYLINDER BORE

a. Using a cylinder gauge, measure the cylinder bore diameter at positions A and B in the thrust and axial directions.

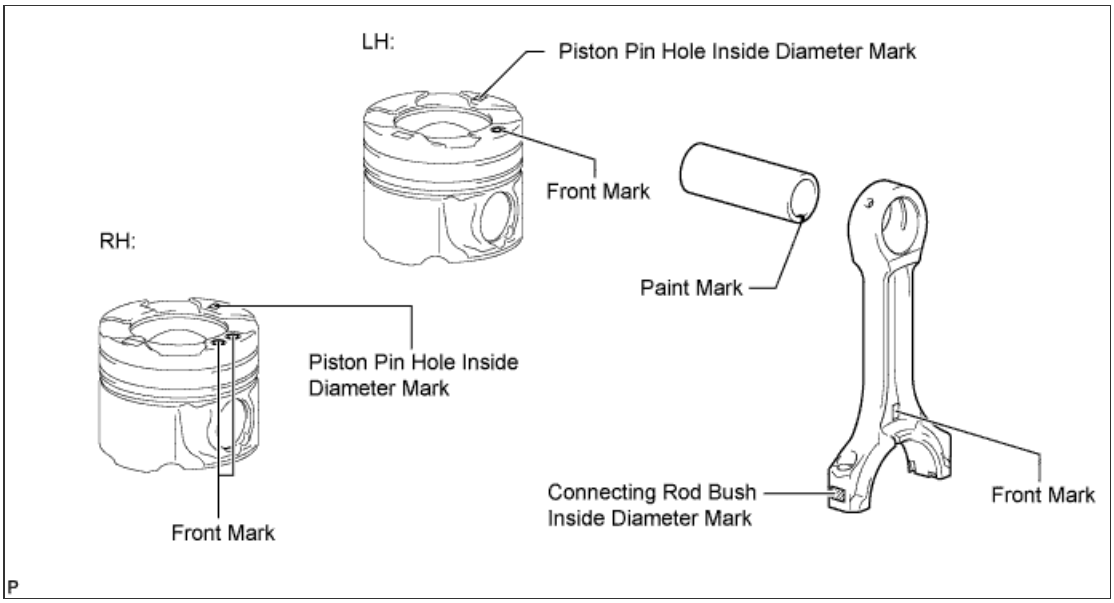
Standard diameter:
86.000 to 86.013 mm (3.3858 to 3.3863 in.)

Maximum diameter:
86.03 mm (3.3870 in.)

If the diameter is more than the maximum, replace the cylinder block.

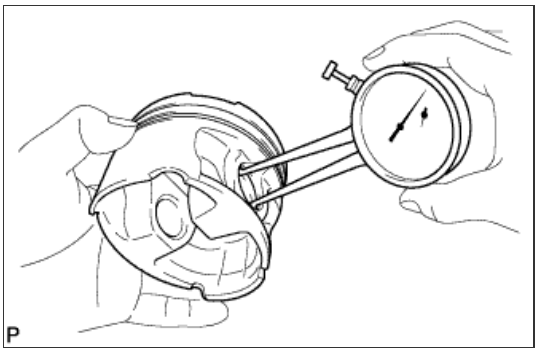
23. INSPECT PISTON OIL CLEARANCE

a. Subtract the piston diameter measurement from the cylinder bore diameter measurement.



Standard oil clearance:
0.034 to 0.081 mm (0.00134 to 0.00319 in.)

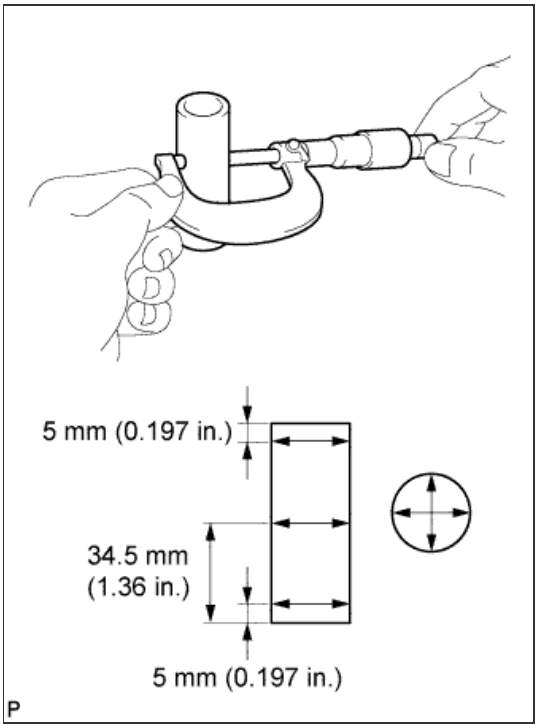
Maximum oil clearance:
0.091 mm (0.00358 in.)



If the oil clearance is more than the maximum, replace all 8 pistons. If necessary, replace the cylinder block.

24. INSPECT PISTON PIN OIL CLEARANCE

a. Check each mark on the piston, piston pin and connecting rod.



b. Using a caliper gauge, measure the inside diameter of the piston pin hole.

Standard Piston Pin Hole Inside Diameter:

Mark	Specified Condition
A	29.009 to 29.013 mm (1.1421 to 1.1422 in.)
B	29.013 to 29.017 mm (1.1422 to 1.1424 in.)
C	29.017 to 29.021 mm (1.1424 to 1.1426 in.)

c. Using a micrometer, measure the piston pin diameter.

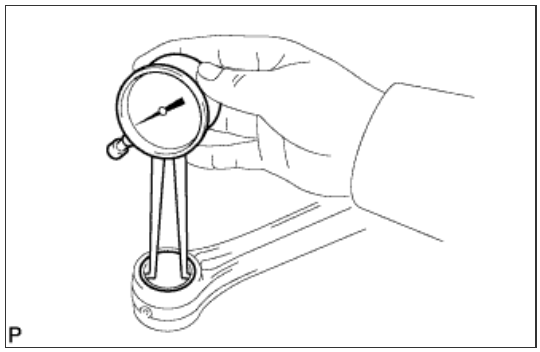
Standard Piston Pin Diameter:

Mark	Paint Color	Specified Condition
A	White	29.000 to 29.004 mm (1.1417 to 1.1419 in.)
B	Pink	29.004 to 29.008 mm (1.1419 to 1.1420 in.)
C	Blue	29.008 to 29.012 mm (1.1420 to 1.1422 in.)

d. Subtract the piston pin diameter measurement from the piston pin hole diameter measurement.

Standard oil clearance:
0.005 to 0.013 mm (0.000197 to 0.000512 in.)

Maximum oil clearance:
0.018 mm (0.000709 in.)



If the oil clearance is more than the maximum, replace the piston and piston pin as a set.

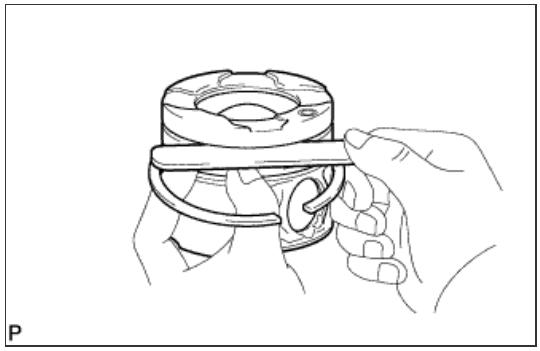
e. Using a caliper gauge, measure the inside diameter of the connecting rod bush.

Standard Bush Inside Diameter:

Mark	Specified Condition
A	29.019 to 29.023 mm (1.1425 to 1.1426 in.)

B	29.023 to 29.027 mm (1.1426 to 1.1428 in.)
C	29.027 to 29.031 mm (1.1428 to 1.1430 in.)

f. Subtract the piston pin diameter measurement from the bush inside diameter measurement.



Standard oil clearance:
0.015 to 0.023 mm (0.000591 to 0.000906 in.)

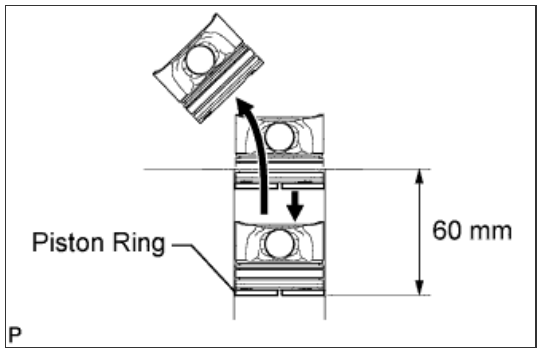
Maximum oil clearance:
0.028 mm (0.00110 in.)

If the oil clearance is more than the maximum, replace the connecting rod and piston with pin as a set.

25. INSPECT RING GROOVE CLEARANCE

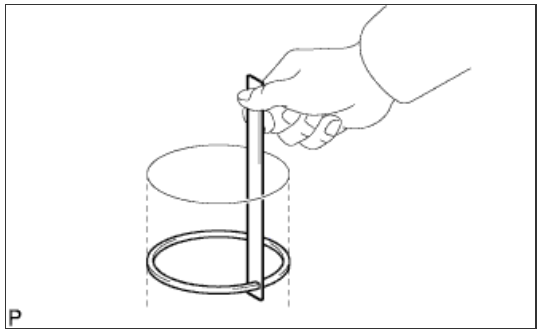
a. Using a feeler gauge, measure the clearance between a new piston ring and the wall of the ring groove.

Standard Ring Groove Clearance:



Item	Specified Condition
No. 1 compression ring	0.11 to 0.15 mm (0.00433 to 0.00591 in.)
No. 2 compression ring	0.08 to 0.12 mm (0.00315 to 0.00472 in.)
Oil ring	0.03 to 0.07 mm (0.00118 to 0.00276 in.)

If the clearance is not as specified, replace the piston.



26. INSPECT PISTON RING END GAP

a. Insert the piston ring into the cylinder bore.

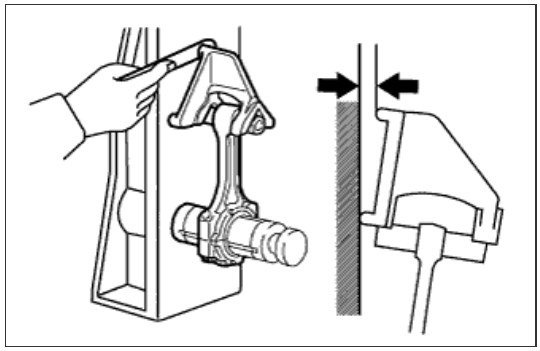
b. Using a piston, push the piston ring a little beyond the bottom of the ring travel, 60 mm (2.36 in.) from the top of the cylinder block.

c. Using a feeler gauge, measure the end gap.

Standard End Gap:

Item	Type of Engine	Specified Condition
No. 1 compression ring	w/ EGR System	0.22 to 0.32 mm (0.00866 to 0.0126 in.)
	w/o EGR System	0.20 to 0.30 mm (0.00787 to 0.0118 in.)
No. 2 compression ring	-	0.47 to 0.62 mm (0.0185 to 0.0244 in.)
Oil ring	-	0.10 to 0.40 mm (0.00394

		to 0.0157 in.)



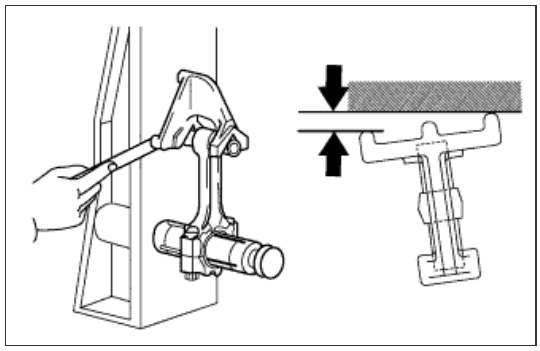
Maximum End Gap:

Item	Specified Condition
No. 1 compression ring	0.40 mm (0.0157 in.)
No. 2 compression ring	0.75 mm (0.0295 in.)
Oil ring	0.50 mm (0.0197 in.)

If the end gap is more than the maximum, replace the piston ring. If the end gap is more than the maximum even with a new piston ring, replace the cylinder block.

27. INSPECT CONNECTING ROD SUB-ASSEMBLY

a. Using a rod aligner and feeler gauge, check the connecting rod alignment.

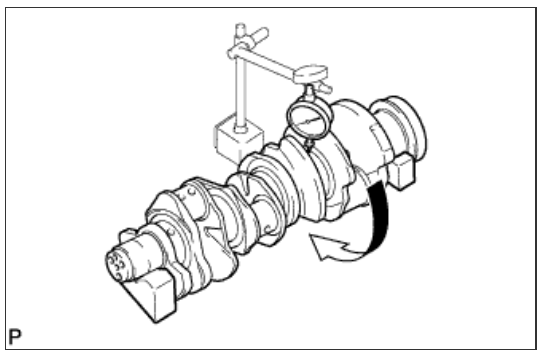


i. Check for bend.

Maximum bend:
0.07 mm (0.00276 in.) per 100 mm (3.94 in.)

If the bend is more than the maximum, replace the connecting rod sub-assembly.

ii. Check for twist.



Maximum twist:
0.15 mm (0.00591 in.) per 100 mm (3.94 in.)

If the twist is more than the maximum, replace the connecting rod sub-assembly.

28. INSPECT CRANKSHAFT

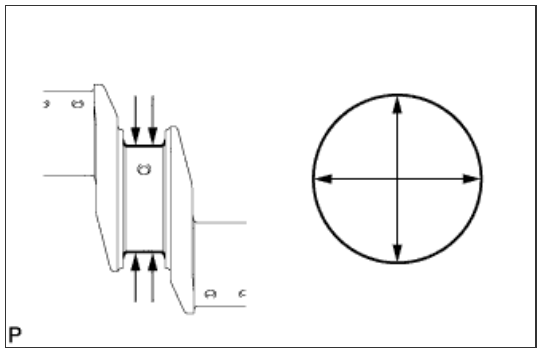
a. Using a dial indicator and V-blocks, measure the runout as shown in the illustration.

Maximum circle runout:
0.04 mm (0.00157 in.)

If the circle runout is more than the maximum, replace the crankshaft.

b. Using a micrometer, measure the diameter of each main journal.

Standard diameter:
74.982 to 75.000 mm (2.9520 to 2.9527 in.)



If the diameter is not as specified, check the oil clearance. If necessary, replace

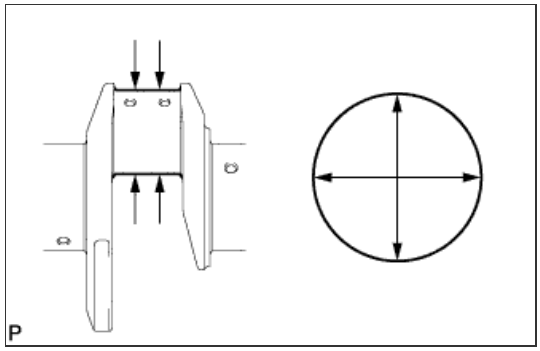
the crankshaft.

c. Check each main journal for taper and out-of-round as shown in the illustration.

Maximum taper and out-of-round:
0.01 mm (0.000394 in.)

If the taper and out-of-round is more than the maximum, replace the crankshaft.

d. Using a micrometer, measure the diameter of each crank pin.



Standard diameter:
54.982 to 55.000 mm (2.1646 to 2.1653 in.)

If the diameter is not as specified, check the oil clearance. If necessary, replace the crankshaft.

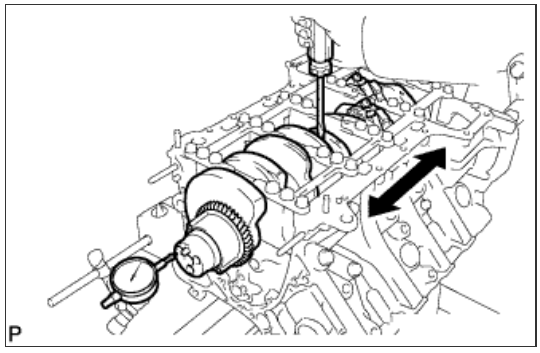
e. Check each crank pin for taper and out-of-round as shown in the illustration.

Maximum taper and out-of-round:
0.01 mm (0.000394 in.)

If the taper and out-of-round is more than the maximum, replace the crankshaft.

29. INSPECT CRANKSHAFT THRUST CLEARANCE

a. Using a dial indicator, measure the thrust clearance while prying the crankshaft back and forth with a screwdriver.



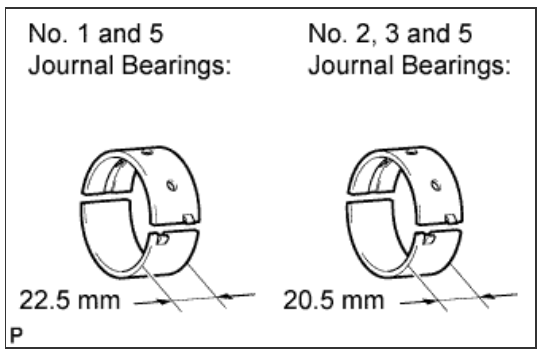
Standard thrust clearance:
0.02 to 0.22 mm (0.000787 to 0.00866 in.)

Maximum thrust clearance:
0.30 mm (0.0118 in.)

If the thrust clearance is more than the maximum, replace the thrust washers as a set.

Standard thrust washer thickness:
2.44 to 2.49 mm (0.0961 to 0.0980 in.)

If necessary, replace the crankshaft.

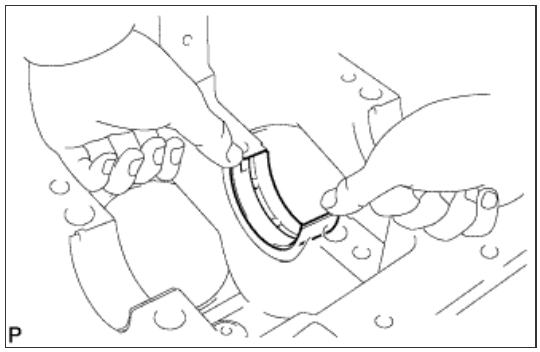


30. INSPECT CRANKSHAFT OIL CLEARANCE

HINT:

Main bearings come in widths of 20.5 mm (0.807 in.) and 22.5 mm (0.886 in.).

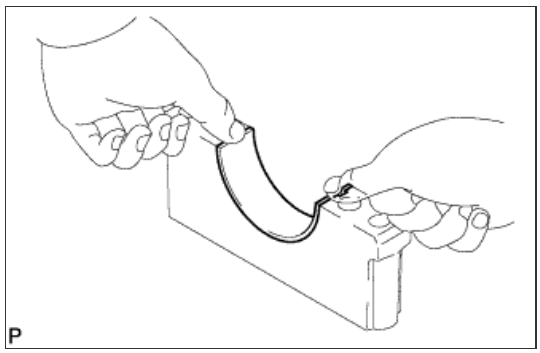
Standard Bearing Width



Item	Specified Condition
No. 1 and 5 journal bearings	22.5 mm (0.886 in.)
No. 2, 3 and 4 journal bearings	20.5 mm (0.807 in.)

a. Clean each main journal and bearing.

b. Align the bearing claw with the claw groove of the cylinder block, and push in the

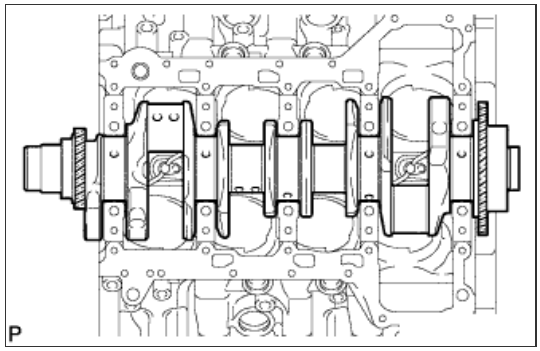


5 upper bearings.

NOTICE:

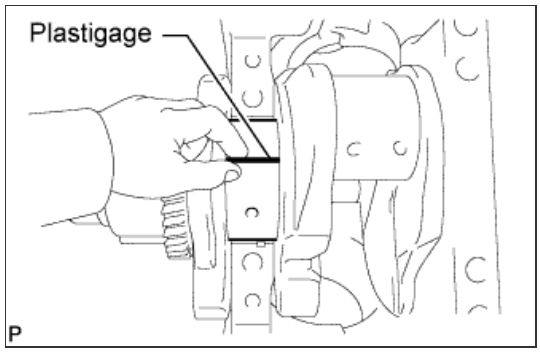
- **Do not apply engine oil to the bearings and the contact surfaces.**
- **Do not allow coolant to come into contact with the bearing inner surface. If any coolant comes into contact with the bearing inner surface replace the bearing with a new one.**
- **Both sides of the oil groove in the cylinder block should be visible through the oil feed holes in the bearing. The amount visible on each side of the holes should be e ual.**

c. Align the bearing claw with the claw groove of the main bearing cap, and push in the 5 lower bearings.



NOTICE:

- **Do not apply engine oil to the bearings and the contact surfaces.**
- **Do not allow coolant to come into contact with the bearing inner surface.**
  If any coolant comes into contact with the bearing inner surface replace the bearing with a new one.

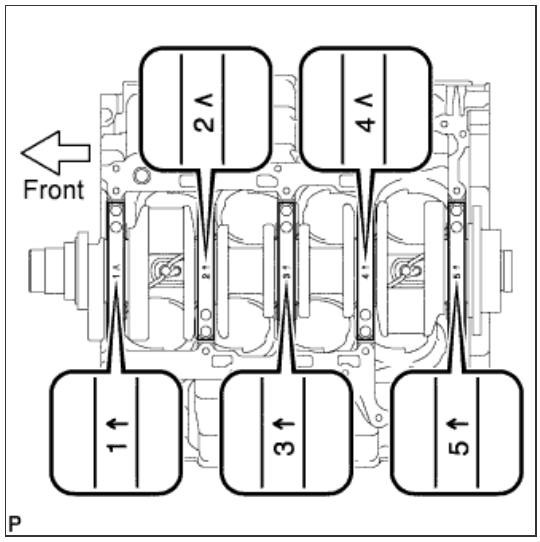


HINT:

A number marked on each main bearing cap indicates the installation position.

d. Place the crankshaft on the cylinder block.

e. Lay a strip of Plastigage across each journal.



f. Examine the front marks and numbers and install the crankshaft bearing caps to the cylinder block.

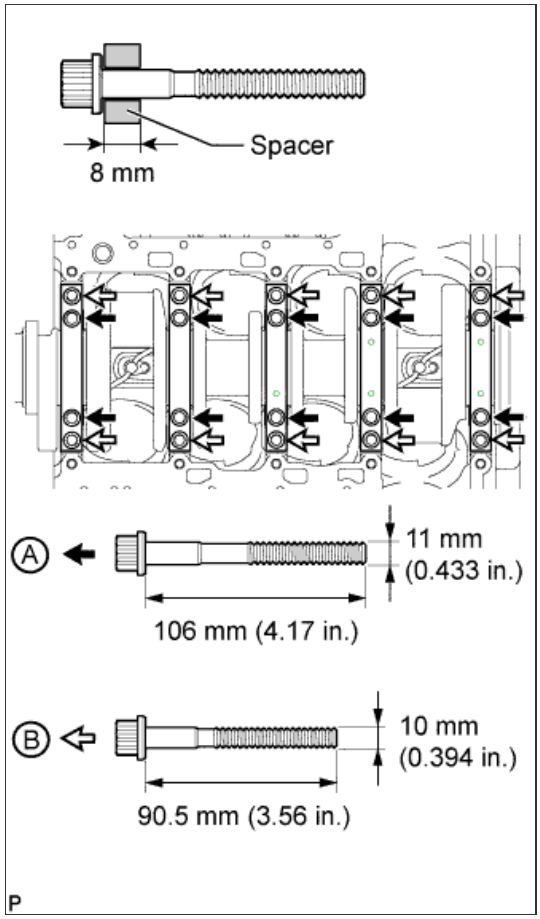
NOTICE:

Do not turn the crankshaft.

g. Apply a light coat of engine oil to the threads of the crankshaft bearing cap bolts.

h. Temporarily install the crankshaft bearing cap bolts labeled A or the bolts labeled B.

HINT:

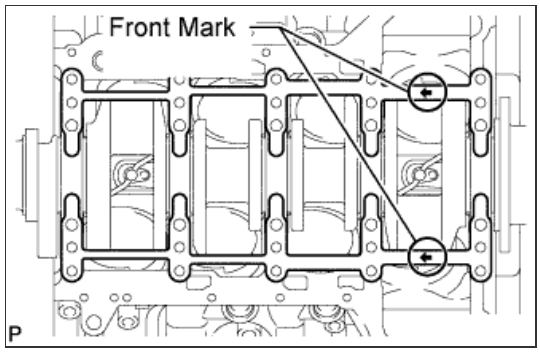


In place of cylinder block stiffening plates, install 8 mm (0.315 in.) thick spacers to the crankshaft bearing cap bolts.

i. Uniformly tighten the 2 crankshaft bearing cap bolts for each bearing cap in several passes to ensure a proper fit.

NOTICE:

Do not tap the bearing cap with a plastic-faced hammer.



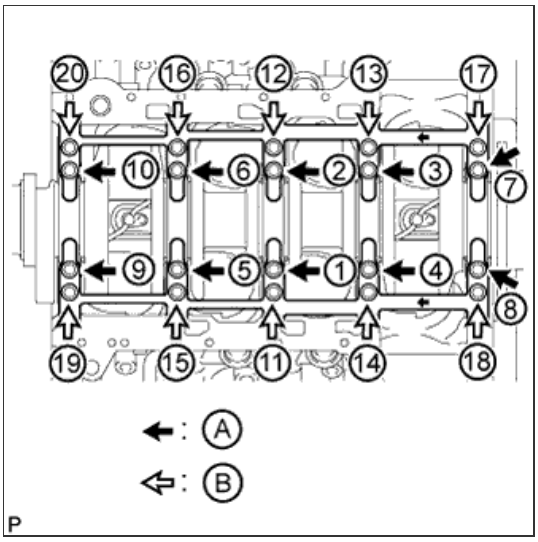
j. Remove the crankshaft bearing cap bolts and spacers.

k. Set the 2 cylinder block stiffening plates on the cylinder block.

HINT:

Make sure the arrows on the stiffening plates face the engine front.

l. Step 1:

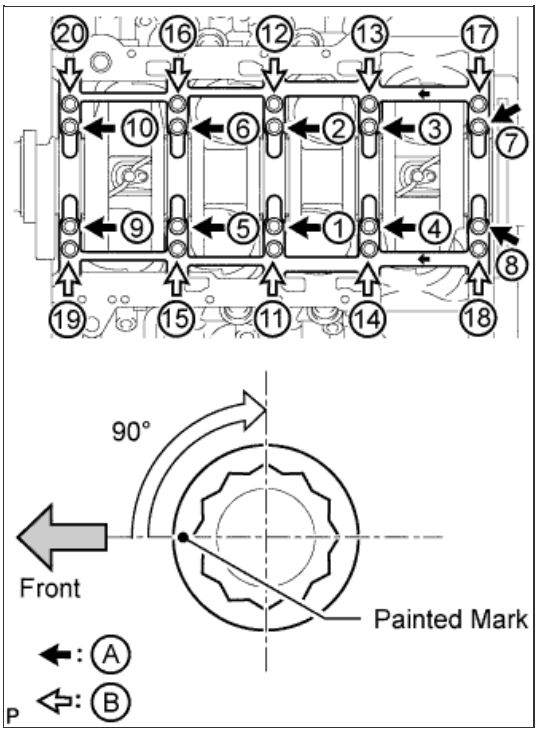


HINT:

- **The crankshaft bearing cap bolts are tightened in 3 progressive steps.**
- **If any crankshaft bearing cap bolt is broken or deformed replace it.**

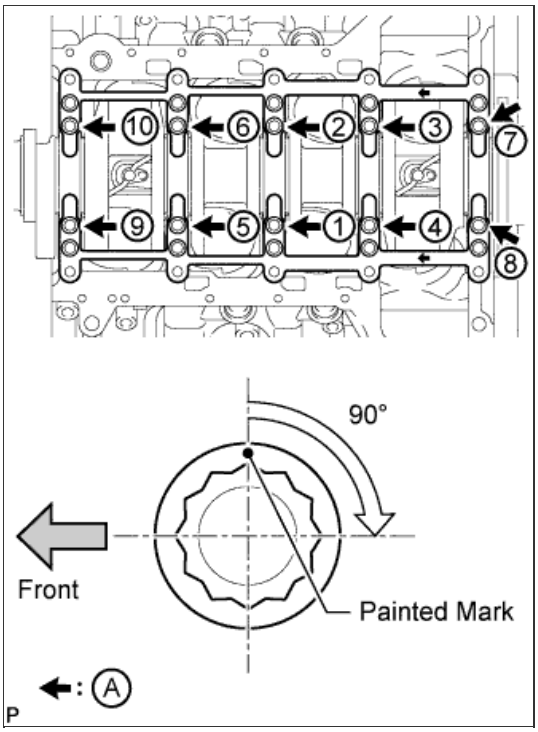
i. Apply a light coat of engine oil to the threads and under the heads of the 20 crankshaft bearing cap bolts.

ii. Install the 20 crankshaft bearing cap bolts. Using several steps, tighten the bolts uniformly in the sequence shown in the illustration.



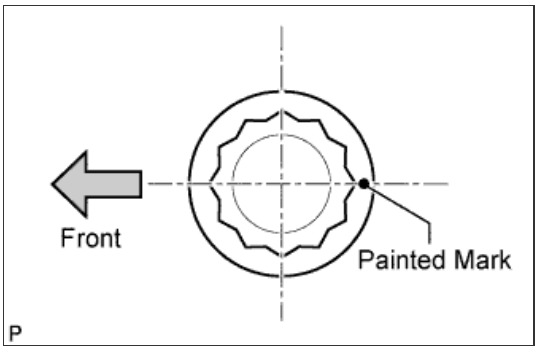
Tor ue:
for bolt A:
35 N*m{ 357 kgf*cm 26 ft.*lbf
for bolt B:
60 N*m{ 612 kgf*cm 44 ft.*lbf

m. Step 2:



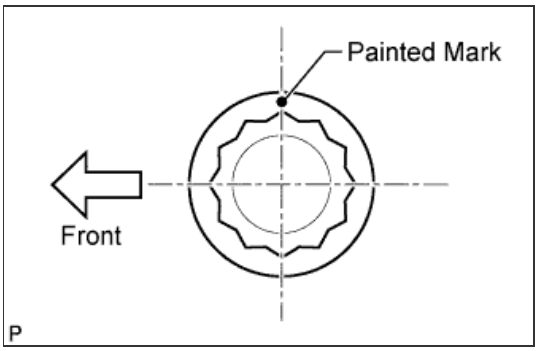
i. Mark the front side of the crankshaft bearing cap bolts A and B with paint.

ii. Tighten the crankshaft bearing cap bolts A and B 90° in the sequence shown in the illustration.



n. Step 3:

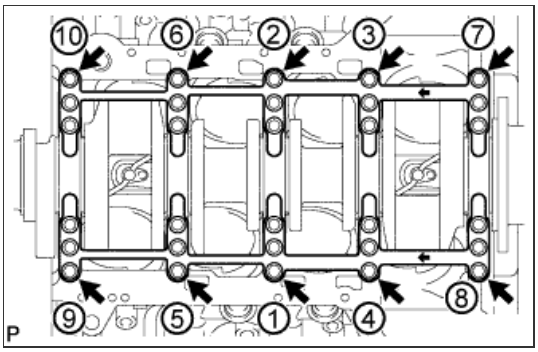
i. Tighten the crankshaft bearing cap bolts A another 90° in the sequence shown in the illustration.



ii. Check that the painted marks of bolts A are now at a 180° angle to the front.

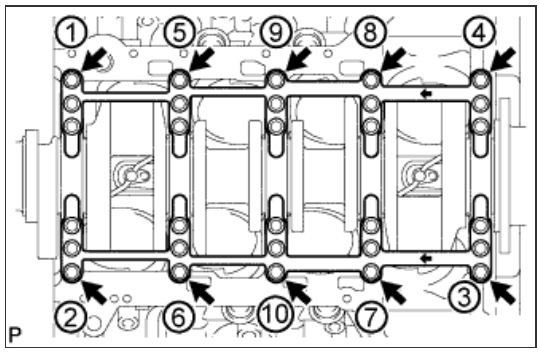
iii. Check that the painted marks of bolts B are now at a 90° angle to the front.

NOTICE:



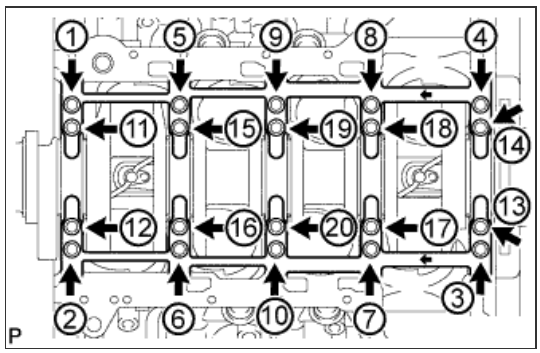
Do not turn the crankshaft.

o. Step 4:

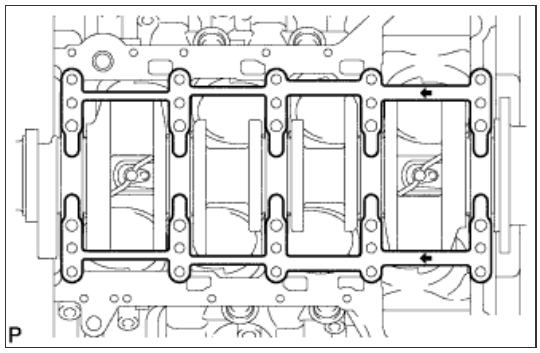


i. Using several steps, install the 10 crankshaft bearing cap bolts uniformly in the sequence shown in the illustration.

Tor ue:
56 N*m{ 571 kgf*cm 41 ft.*lbf

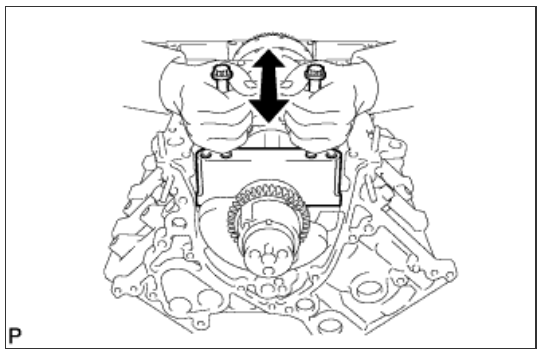


p. Remove the crankshaft bearing caps.



i. Step 1:
Using several steps, loosen and remove the 10 crankshaft bearing cap set bolts uniformly in the sequence shown in the illustration.

ii. Step 2:
Using several steps, loosen and remove the 20 crankshaft bearing cap set bolts uniformly in the sequence shown in the illustration.

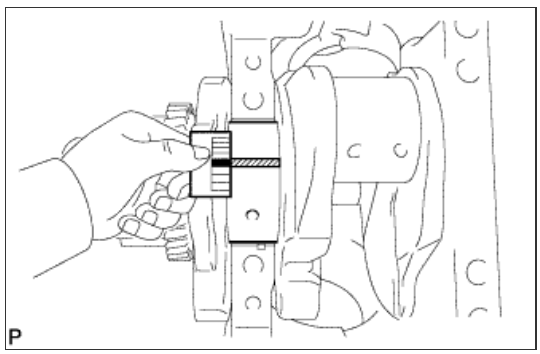


. Remove the 2 cylinder block stiffening plates.

r. Using 2 crankshaft bearing cap set bolts, pull out the 5 bearing caps.

NOTICE:

Take care not to damage the contact surface of the crankshaft bearing cap and cylinder block.



s. Measure the Plastigage at its widest point.

Standard Oil Clearance:

Item	Specified Condition
No. 1 and 3 journals	0.020 to 0.038 mm (0.000787 to 0.00150 in.)
No. 2, 4 and 5 journals	0.032 to 0.050 mm (0.00126 to 0.00197 in.)

Maximum Clearance:

Item	Specified Condition
No. 1 and 3 journals	0.048 mm (0.00189 in.)

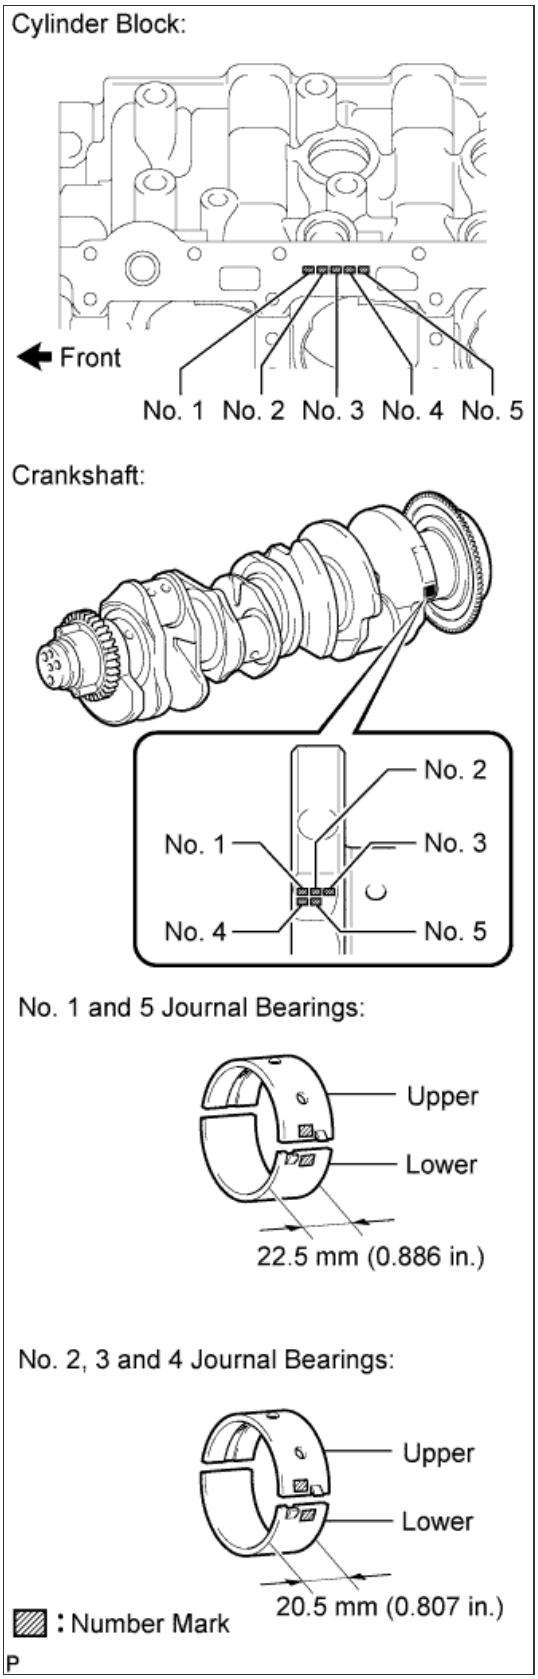
No. 2, 4 and 5 journals	0.060 mm (0.00236 in.)

If the oil clearance is more than the maximum, use an over size bearing and correct or regrind the crankshaft so that the oil clearance is as shown in the table below.

Oil Clearance (Use for Over Size Bearing):

Item	Specified Condition
No. 1 and 3 journals	0.021 to 0.061 mm (0.000827 to 0.00240 in.)
No. 2, 4 and 5 journals	0.033 to 0.073 mm (0.00130 to 0.00287 in.)

HINT:



Make sure to replace the upper and lower main bearings as one set.

t. Completely remove the Plastigage.

u. If replacing a bearing, replace it with one that has the same number. If the number of the bearing cannot be determined, select the correct bearing by adding together the numbers imprinted on the cylinder block and crankshaft, then refer to the appropriate bearing number. There are 7 sizes of standard bearings, marked "1", "2", "3", "4", "5", "6" and "7" accordingly.
E PLE
Cylinder block main journal bore diameter "1" (A) + Crankshaft main journal diameter "2" (B) = Total number 3 (use bearing "3" (C))

No. 1 to No. 5 on Cylinder Block:

Cylinder Block (A)	Crankshaft (B)	Use Bearing (C)
"1"	"0"	"1"
	"1"	"2"
	"2"	"3"
	"3"	"4"
	"4"	"5"
"2"	"0"	"2"
	"1"	"3"
	"2"	"4"
	"3"	"5"
	"4"	"6"
"3"	"0"	"3"
	"1"	"4"
	"2"	"5"
	"3"	"6"
	"4"	"7"

Standard Cylinder Block Main Journal Bore Diameter (A):

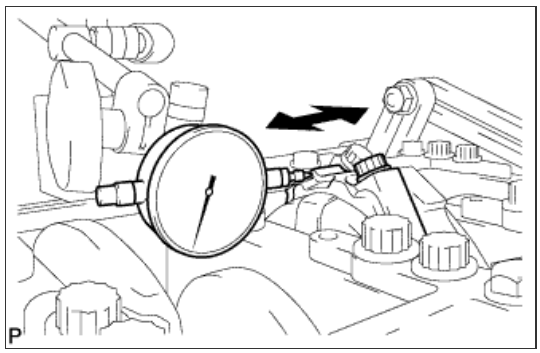
Item	Mark	Specified Condition
No. 1 and 3 journals	"1"	79.000 to 79.006 mm (3.11023 to 3.11047 in.)
	"2"	More than 79.006 to 79.012 mm (more than 3.11047 to 3.11070 in.)
	"3"	More than 79.012 to 79.018 mm (more than 3.11070 to 3.11094 in.)
No. 2, 4 and 5 journals	"1"	79.000 to 79.006 mm (3.11023 to 3.11047 in.)
	"2"	More than 79.006 to 79.012 mm (more than 3.11047 to 3.11070 in.)
	"3"	More than 79.012 to 79.018 mm (more than 3.11070 to 3.11094 in.)

Standard Crankshaft Main Journal Diameter (B):

Item	Mark	Specified Condition
No. 1 and 3 journals	"2"	More than 74.994 to 75.000 mm (more than 2.95251 to 2.95275 in.)
	"3"	More than 74.988 to 74.994 mm (more than 2.95228 to 2.95251 in.)
	"4"	74.982 to 74.988 mm (2.95204 to 2.95228 in.)
No. 2, 4 and 5 journals	"0"	More than 74.994 to 75.000 mm (more than 2.95251 to 2.95275 in.)
	"1"	More than 74.988 to 74.994 mm (more than 2.95288 to 2.95251 in.)
	"2"	74.982 to 74.988 mm (2.95204 to 2.95228 in.)

Standard Crankshaft Bearing Center Wall Thickness (C):

Item	Mark	Specified Condition (for Upper Bearing)	Specified Condition (for Lower Bearing)
No. 1 and 5 journal bearings	"1"	More than 1.987 to 1.990 mm (more than 0.07823 to 0.07835 in.)	More than 1.975 to 1.978 mm (more than 0.07776 to 0.07787 in.)
	"2"	More than 1.990 to 1.993 mm (more than 0.07835 to 0.07846 in.)	More than 1.978 to 1.981 mm (more than 0.07787 to 0.07799 in.)
	"3"	More than 1.993 to 1.996 mm (more than 0.07846 to 0.07858 in.)	More than 1.981 to 1.984 mm (more than 0.07799 to 0.07811 in.)
	"4"	More than 1.996 to 1.999 mm (more than 0.07858 to 0.07870 in.)	More than 1.984 to 1.987 mm (more than 0.07811 to 0.07823 in.)
	"5"	More than 1.999 to 2.002 mm (more than 0.07870 to 0.07882 in.)	More than 1.987 to 1.990 mm (more than 0.07823 to 0.07835 in.)
	"6"	More than 2.002 to 2.005 mm (more than 0.07882 to 0.07894 in.)	More than 1.990 to 1.993 mm (more than 0.07835 to 0.07846 in.)
	"7"	More than 2.005 to 2.008 mm (more than 0.07894 to 0.07905 in.)	More than 1.993 to 1.996 mm (more than 0.07846 to 0.07858 in.)
No. 2, 3 and 4 journal bearings	"1"	More than 1.975 to 1.978 mm (more than 0.07776 to 0.07787 in.)	More than 1.987 to 1.990 mm (more than 0.07823 to 0.07835 in.)
	"2"	More than 1.978 to 1.981 mm (more than 0.07787 to 0.07799 in.)	More than 1.990 to 1.993 mm (more than 0.07835 to 0.07846 in.)
	"3"	More than 1.981 to 1.984 mm (more than 0.07799 to 0.07811 in.)	More than 1.993 to 1.996 mm (more than 0.07846 to 0.07858 in.)
	"4"	More than 1.984 to 1.987 mm (more than 0.07811 to 0.07823 in.)	More than 1.996 to 1.999 mm (more than 0.07858 to 0.07870 in.)
	"5"	More than 1.987 to 1.990 mm (more than 0.07823 to 0.07835 in.)	More than 1.999 to 2.002 mm (more than 0.07870 to 0.07882 in.)
	"6"	More than 1.990 to 1.993 mm (more than 0.07835 to 0.07846 in.)	More than 2.002 to 2.005 mm (more than 0.07882 to 0.07894 in.)
	"7"	More than 1.993 to 1.996 mm (more than 0.07846 to 0.07858 in.)	More than 2.005 to 2.008 mm (more than 0.07894 to 0.07905 in.)



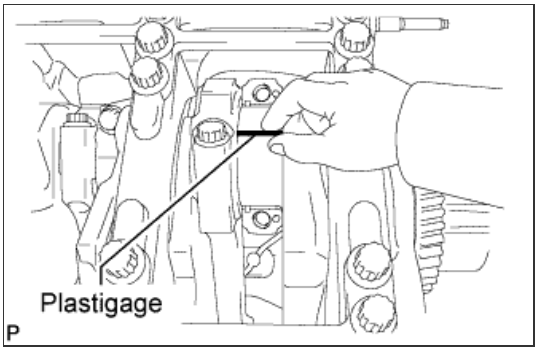
31. INSPECT CONNECTING ROD THRUST CLEARANCE

a. Using a dial indicator, measure the thrust clearance while moving the connecting rod back and forth.

Standard thrust clearance:
0.14 to 0.54 mm (0.00551 to 0.0213 in.)

Maximum thrust clearance:
0.60 mm (0.0236 in.)

If the thrust clearance is more than the maximum, replace one or more connecting rods as necessary.
If necessary, replace the crankshaft.

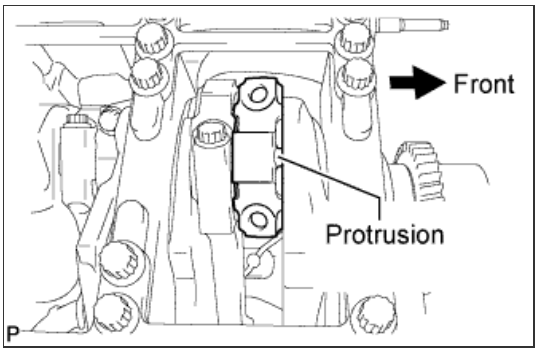


32. INSPECT CONNECTING ROD OIL CLEARANCE

a. Install the crankshaft bearing (Click here).

b. Install the crankshaft (Click here).

c. Lay a strip of Plastigage across the crank pin.

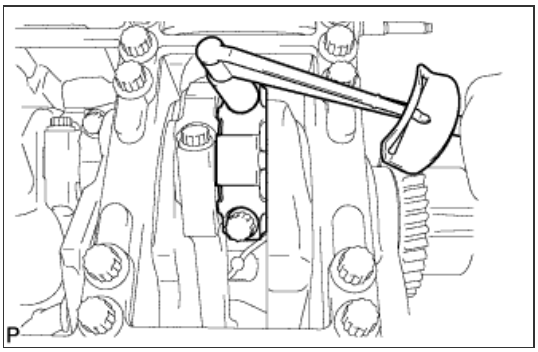


d. Install the connecting rod cap so that its protrusion is facing the correct direction.

NOTICE:

Match the numbered connecting rod cap with the connecting rod.

e. Apply a light coat of engine oil to the threads of the connecting rod cap bolts.



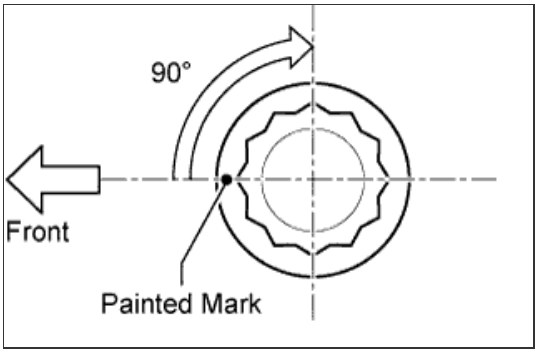
f. Step 1:

HINT:

- **The connecting rod bearing cap bolts are tightened in 2 progressive steps.**
- **If any connecting rod bearing cap bolt is broken or deformed replace it.**

i. Install and alternately tighten the bolts of the connecting rod cap in several steps.

Tor ue:
35 N*m{ 357 kgf*cm 26 ft.*lbf

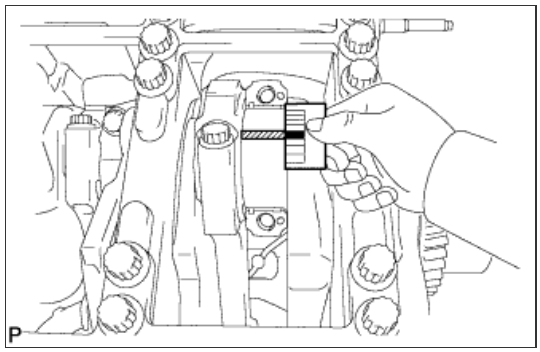


g. Step 2:

i. Mark the front side of each connecting rod cap bolt with paint.

ii. Tighten the bearing cap bolts in step 1 90°.

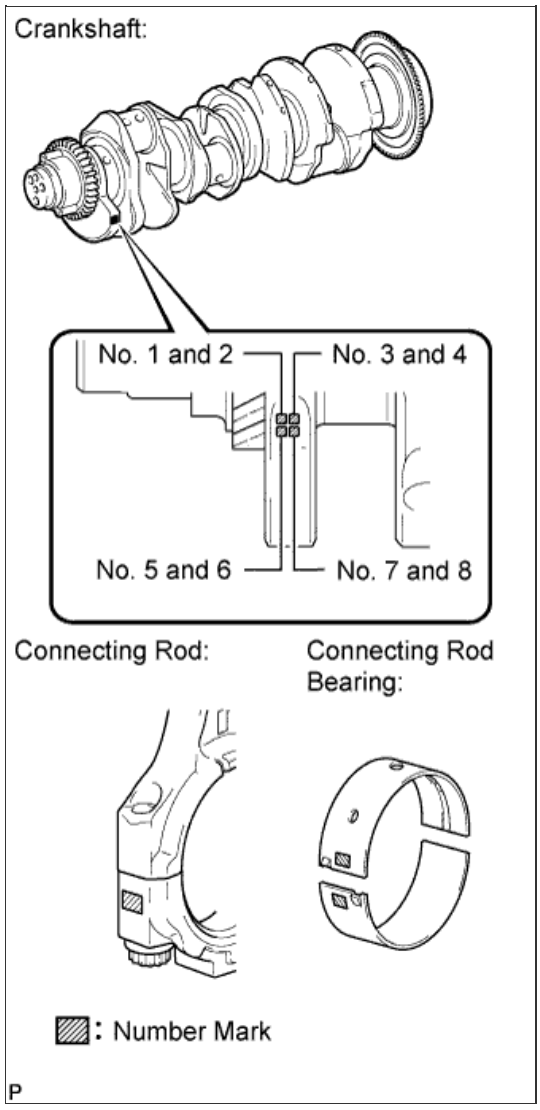
h. Remove the 2 bolts, connecting rod cap and lower bearing.



i. Measure the Plastigage at its widest point.

Standard oil clearance:
0.024 to 0.042 mm (0.000945 to 0.00165 in.)

Maximum oil clearance:



0.052 mm (0.00205 in.)

If the oil clearance is more than the maximum, replace the bearings. If necessary, replace the crankshaft.

j. Completely remove the Plastigage.

k. If replacing a bearing, replace it with one that has the same number marked on the connecting rod. There are 5 sizes of standard bearings, marked "1 ", "2", "3", "4" and "5" accordingly.
Select the correct bearing by adding together the number marks imprinted on the connecting rod and crankshaft.
E PLE
Connecting rod "1" (A) + Crank pin "2" (B) = Total number 3 (use bearing "3" (C))

Standard Connecting Rod Big End Inside Diameter (A):

Mark	Specified Condition
"1"	58.000 to 58.006 mm (2.28346 to 2.28370 in.)
"2"	More than 58.006 to 58.012 mm (more than 2.28370 to 2.28393 in.)
"3"	More than 58.012 to 58.018 mm (more than 2.28393 to 2.28417 in.)

Standard Crankshaft Pin Diameter (B):

Mark	Specified Condition
"0"	More than 54.994 to 55.000 mm (more than 2.16511 to 2.16535 in.)
"1"	More than 54.988 to 54.994 mm (more than 2.16488 to 2.16511 in.)
"2"	54.982 to 54.988 mm (2.16464 to 2.16488 in.)

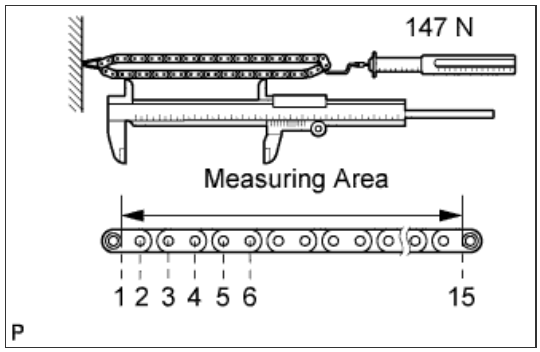
Standard Bearing Center Wall Thickness (C):

Mark	Specified Condition
"1"	More than 1.485 to 1.488 mm (more than 0.05846 to 0.05858 in.)
"2"	More than 1.488 to 1.491 mm (more than 0.05858 to 0.05870 in.)
"3"	More than 1.491 to 1.494 mm (more than 0.05870 to 0.05882 in.)
"4"	More than 1.494 to 1.497 mm (more than 0.05882 to 0.05894 in.)
"5"	More than 1.497 to 1.500 mm (more than 0.05894 to 0.05910 in.)

l. Remove the crankshaft (Click here).

m. Remove the crankshaft bearing.

33. INSPECT NO. 1 CHAIN



a. Using a spring scale, pull the No. 1 chain with a force of 147 N (15 kgf, 33.1 lbf) and measure the length of the No. 1 chain using a vernier caliper.

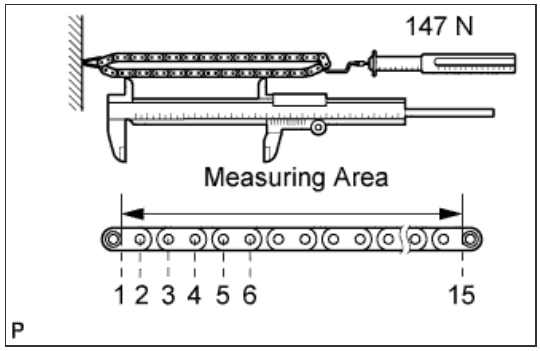
Maximum chain elongation:
143.95 mm (5.67 in.)

NOTICE:

Perform the measurement at 3 random places.

If the elongation is more than the maximum, replace the No. 1 chain.

34. INSPECT NO. 2 CHAIN



a. Using a spring scale, pull the No. 2 chain with a force of 147 N (15 kgf, 33.1 lbf) and measure the length of the No. 2 chain using a vernier caliper.

Maximum chain elongation:
143.95 mm (5.67 in.)

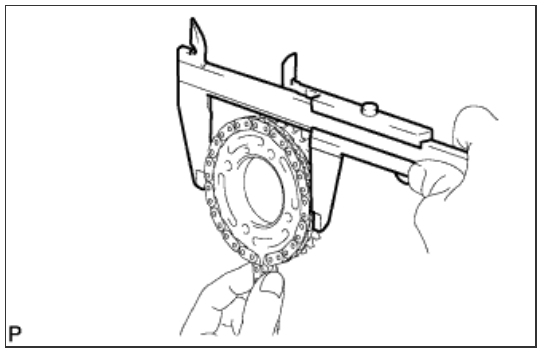
NOTICE:

Perform the measurement at 3 random places.

If the elongation is more than the maximum, replace the No. 2 chain.

35. INSPECT FUEL SUPPLY PUMP SHAFT SPROCKET

a. Wrap the No. 1 chain around the sprocket place for the No. 1 chain.



b. Using a vernier caliper, measure the sprocket with the chain.

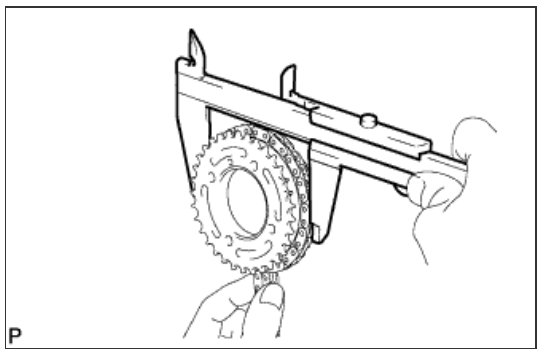
Minimum gear diameter (with chain):
101.55 mm (4.00 in.)

HINT:

The vernier caliper must contact the chain rollers for the measurement.

If the diameter is less than the minimum, replace the No. 1 chain sub-assembly and fuel supply pump shaft sprocket.

c. Wrap the No. 2 chain around the sprocket place for the No. 2 chain.



d. Using a vernier caliper, measure the sprocket with the No. 2 chain.

Minimum gear diameter (with chain):
101.55 mm (4.00 in.)

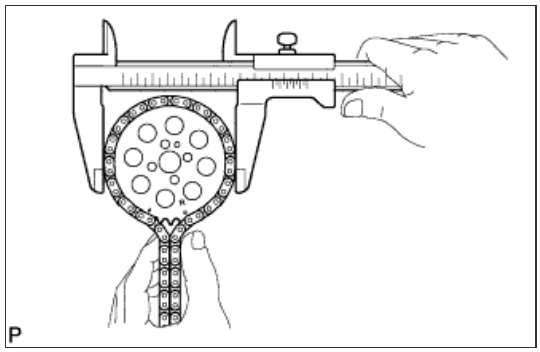
HINT:

The vernier caliper must contact the chain rollers for the measurement.

If the diameter is less than the minimum, replace the No. 2 chain sub-assembly and fuel supply pump shaft sprocket.

36. INSPECT NO. 1 CAMSHAFT TIMING SPROCKET

a. Wrap the No. 1 chain around the sprocket.



b. Using a vernier caliper, measure the No. 1 camshaft timing sprocket diameter with the No. 1 chain.

Minimum gear diameter (with chain):
134.90 mm (5.31 in.)

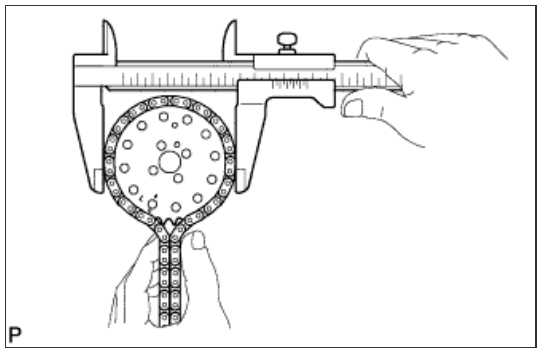
HINT:

The vernier caliper must contact the chain rollers for the measurement.

If the diameter is less than the minimum, replace the No. 1 chain sub-assembly and No. 1 camshaft timing sprocket.

37. INSPECT NO. 2 CAMSHAFT TIMING SPROCKET

a. Wrap the No. 2 chain around the sprocket.

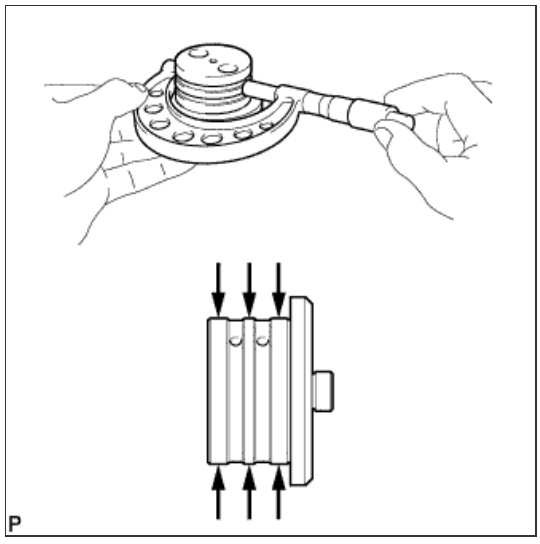


b. Using a vernier caliper, measure the No. 2 camshaft timing sprocket diameter with the No. 2 chain.

Minimum gear diameter (with chain):
134.90 mm (5.31 in.)

HINT:

The vernier caliper must contact the chain rollers for the measurement.



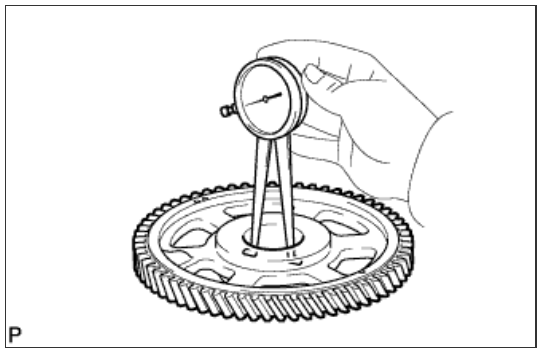
If the diameter is less than the minimum, replace the No. 2 chain sub-assembly and No. 2 camshaft timing sprocket.

38. INSPECT NO. 1 IDLE GEAR SHAFT OIL CLEARANCE

a. Using a micrometer, measure the No. 1 idle gear shaft diameter.

Standard idle gear shaft diameter:
44.947 to 44.975 mm (1.770 to 1.771 in.)

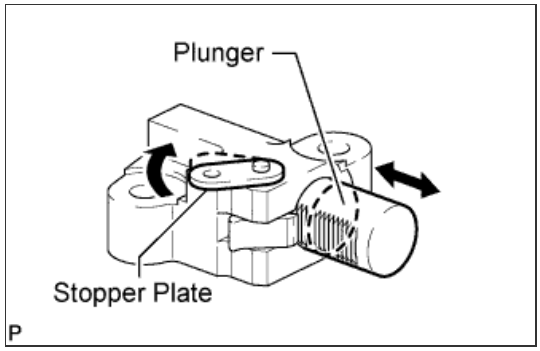
b. Using a caliper gauge, measure the inside diameter of the idle gear.



Standard idle gear inside diameter:
45.000 to 45.025 mm (1.772 to 1.773 in.)

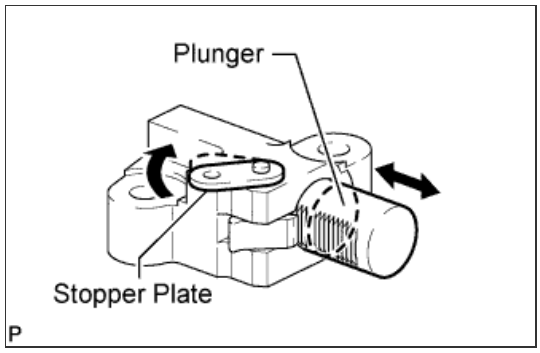
c. Subtract the No. 1 idle gear shaft diameter measurement from the idle gear inside diameter measurement.

Standard oil clearance:
0.025 to 0.078 mm (0.000984 to 0.00307 in.)



Maximum oil clearance:
0.078 mm (0.00307 in.)

If the thrust oil clearance is more than the maximum, replace the No. 1 idle gear shaft and idle gear as a set.

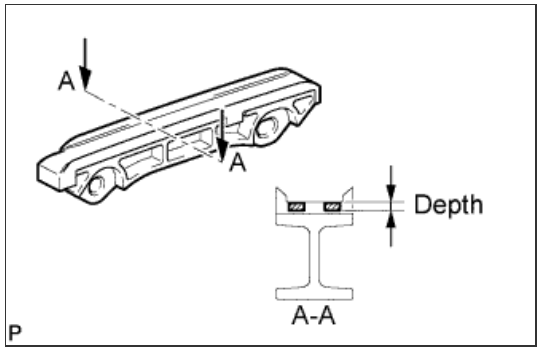


39. INSPECT NO. 1 CHAIN TENSIONER ASSEMBLY

a. Move the stopper plate clockwise to release the lock. Push the plunger and check that it moves smoothly.
If necessary, replace the No. 1 chain tensioner assembly.

40. INSPECT NO. 2 CHAIN TENSIONER ASSEMBLY

a. Move the stopper plate clockwise to release the lock. Push the plunger and check that it moves smoothly.
If necessary, replace the No. 2 chain tensioner assembly.

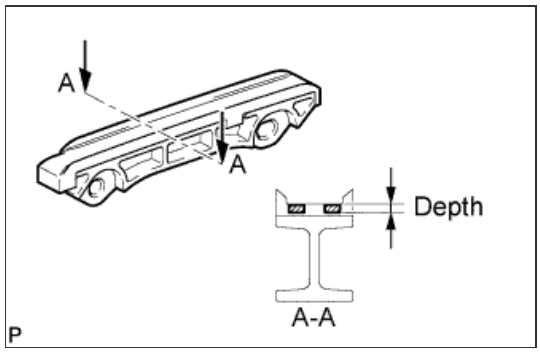


41. INSPECT NO. 1 CHAIN TENSIONER SLIPPER

a. Measure the worn depth of the No. 1 chain tensioner slipper.

Maximum depth:
1.0 mm (0.0394 in.)

If the depth is more than the maximum, replace the No. 1 chain tensioner slipper.

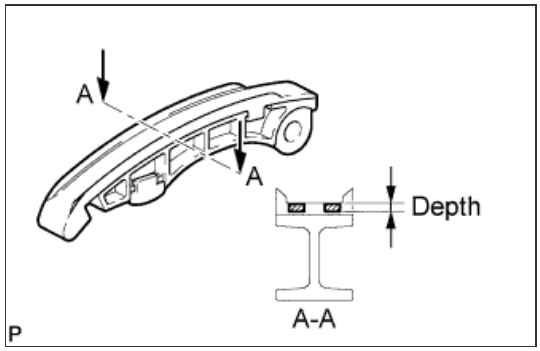


42. INSPECT NO. 2 CHAIN TENSIONER SLIPPER

a. Measure the worn depth of the No. 2 chain tensioner slipper.

Maximum depth:
1.0 mm (0.0394 in.)

If the depth is more than the maximum, replace the No. 2 chain tensioner slipper.

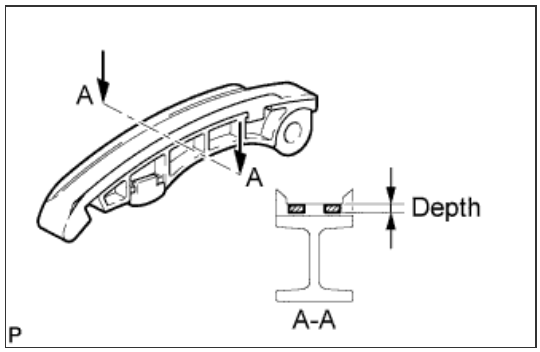


43. INSPECT NO. 1 CHAIN VIBRATION DAMPER

a. Measure the worn depth of the No. 1 chain vibration damper.

Maximum depth:
1.0 mm (0.0394 in.)

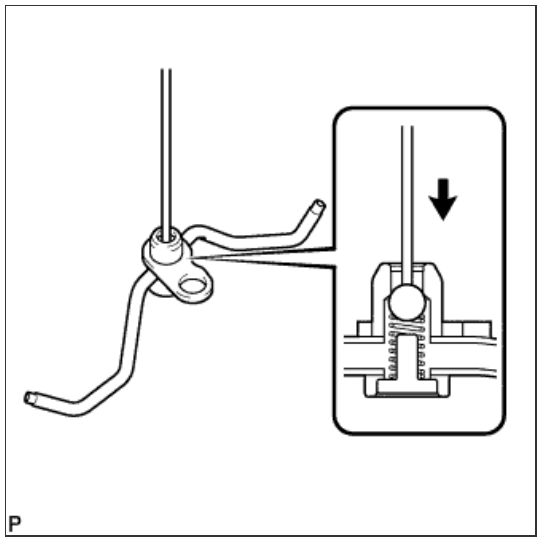
If the depth is more than the maximum, replace the No. 1 chain vibration damper.



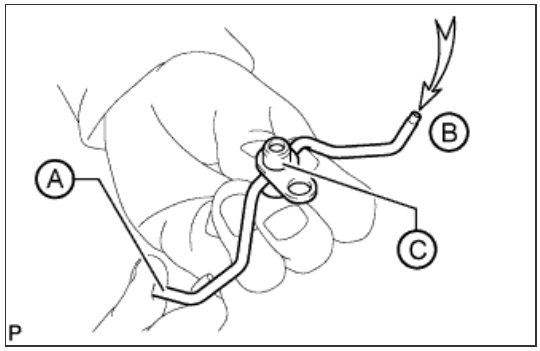
44. INSPECT NO. 2 CHAIN VIBRATION DAMPER

a. Measure the worn depth of the No. 2 chain vibration damper.

Maximum depth:
1.0 mm (0.0394 in.)

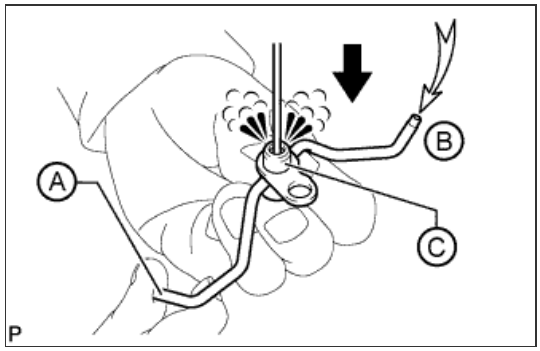


If the depth is more than the maximum, replace the No. 2 chain vibration damper.



45. INSPECT NO. 1 OIL NOZZLE SUB-ASSEMBLY

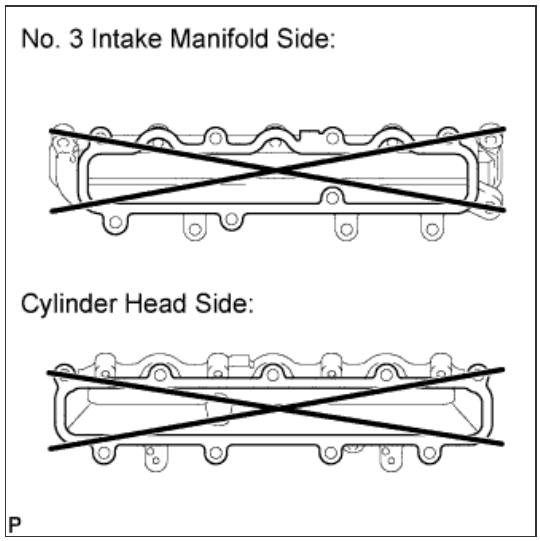
a. Push the check valve with a pin to check if it is stuck.
If stuck, replace the No. 1 oil nozzle sub-assembly.



b. Push the check valve with a pin to check if it moves smoothly.

c. While covering A, apply air into B. Check that air does not leak through C.
Perform the check again while covering B and applying air into A.
If air leaks, clean or replace the No. 1 oil nozzle sub-assembly.

d. Push the check valve while covering A, and apply air into B. Check that air passes through C. Perform the check again while covering B, pushing the check valve and applying air into A.
If air does not pass through C, clean or replace the No. 1 oil nozzle sub-assembly.



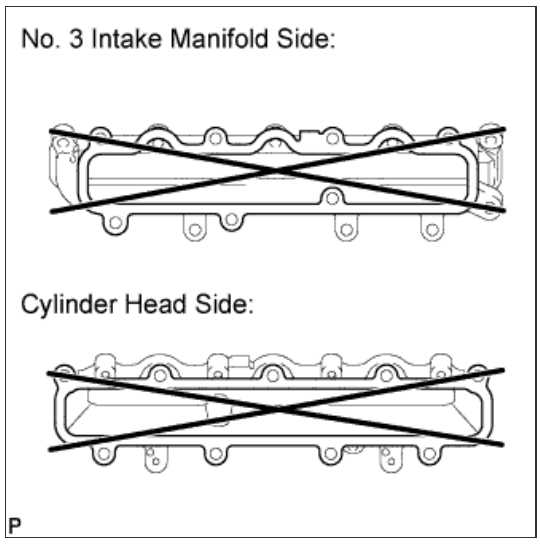
46. INSPECT NO. 1 INTA E MANIFOLD FOR FLATNESS

a. Using a precision straightedge and feeler gauge, measure the warpage of the contact surface between the No. 1 and No. 3 intake manifold, and the No. 1 intake manifold and cylinder head.

Maximum Warpage:

Item	Specified Condition
No. 3 intake manifold	0.10 mm (0.00394 in.)
Cylinder head	0.10 mm (0.00394 in.)

If the warpage is more than the maximum, replace the No. 1 intake manifold.



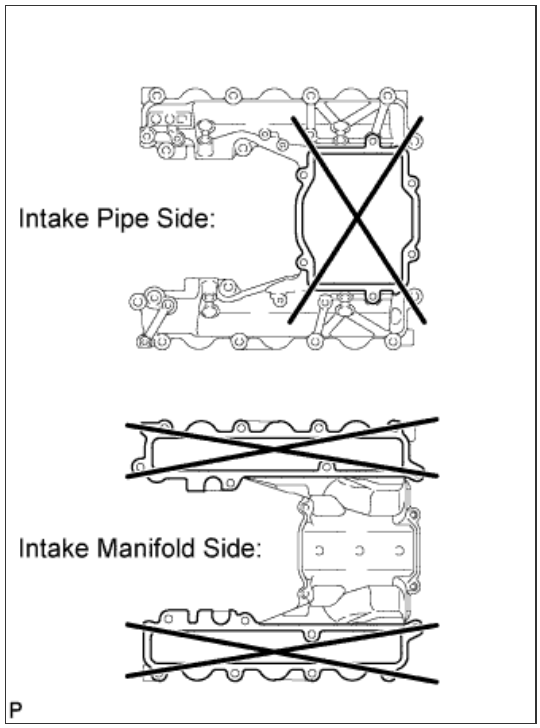
47. INSPECT NO. 2 INTA E MANIFOLD FOR FLATNESS

a. Using a precision straightedge and feeler gauge, measure the warpage of the contact surface between the No. 2 and No. 3 intake manifold, and the No. 2 intake manifold and cylinder head.

Maximum Warpage:

Item	Specified Condition
No. 3 intake manifold	0.10 mm (0.00394 in.)
Cylinder head	0.10 mm (0.00394 in.)

If the warpage is more than the maximum, replace the No. 2 intake manifold.



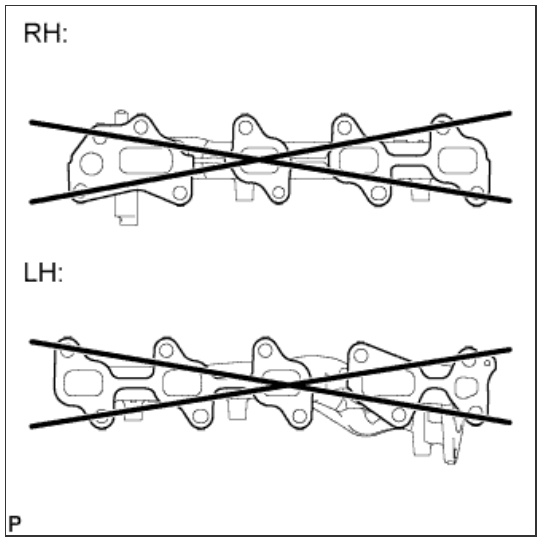
48. INSPECT NO. 3 INTA E MANIFOLD FOR FLATNESS

a. Using a precision straightedge and feeler gauge, measure the warpage of the contact surface between the No. 3 and No. 1 intake manifold, the No. 3 and No. 2 intake manifold, and the No. 3 intake manifold and intake pipe.

Maximum Warpage:

Item	Specified Condition
Intake pipe	0.10 mm (0.00394 in.)
No. 2 and No. 3 intake manifold	0.15 mm (0.00591 in.)

If the warpage is more than the maximum, replace the No. 3 intake manifold.



49. INSPECT E HAUST MANIFOLD FOR FLATNESS

a. Using a precision straightedge and feeler gauge, measure the warpage of the contact surface between the exhaust manifold and cylinder head.

Maximum warpage:
0.80 mm (0.0315 in.)

If the warpage is more than the maximum, replace the exhaust manifold.

RH:
LH:
P

for Preparation Click here

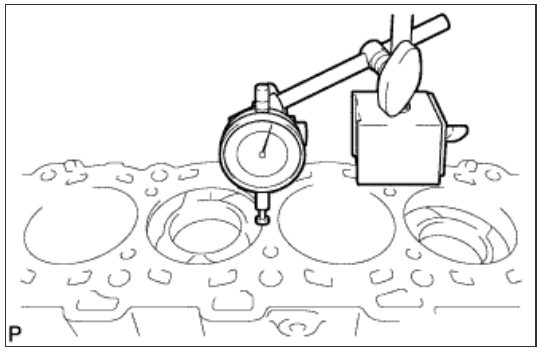
NOTICE:

- **Before performing these installation procedures, sufficiently clean and remove any foreign matter from the cylinder block, cylinder head, crankshaft, connecting rod, camshaft and other parts.**
- **When replacing an injector (including interchanging injectors between cylinders), common rail, cylinder head, or intake manifold, replace the corresponding injection pipes with a new one.**

1. SELECT NO. 2 CYLINDER HEAD GASKET

a. Set the 2 crankshaft pulley set bolts to the crankshaft.

b. Clean the cylinder block with solvent.



c. Inspect the protrusion for each cylinder.

i. Set the piston of the cylinder to be measured to slightly before TDC.

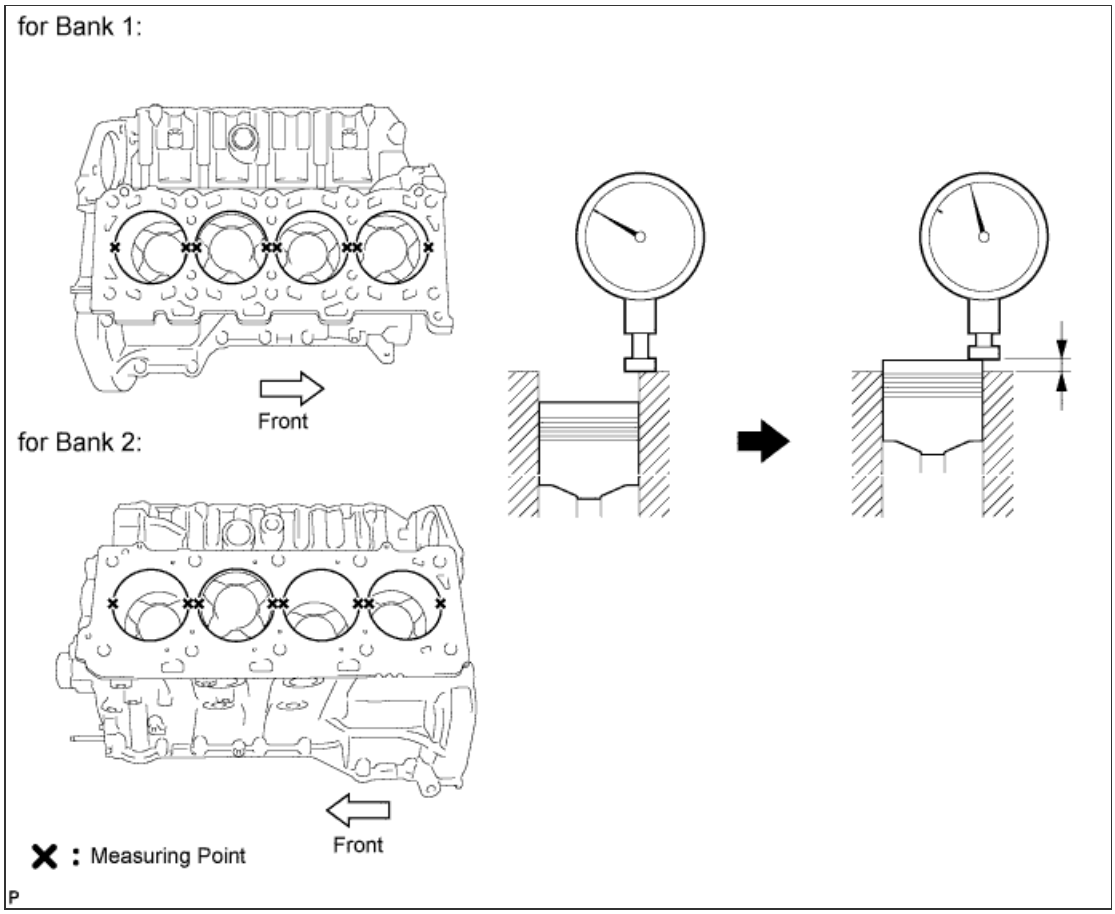
ii. Place a dial indicator on the cylinder block, and set the measuring tip as shown in the illustration.

NOTICE:

Make sure that the dial indicator is at a right angle to the cylinder block top surface.

iii. Set the dial indicator at 0 mm (0 in.).

HINT:



Make sure that the measuring tip is flat against the cylinder block surface and piston head when taking the measurements.

iv. Find where the piston head protrudes most by slowly turning the crankshaft clockwise and counterclockwise.

v. Measure the piston protrusion value of each cylinder at 2 places as shown in the illustration below, making a total of 8 measurements.

Standard piston protrusion:
0.520 to 0.780 mm (0.0205 to 0.0307 in.)

If the protrusion is not as specified, remove and reinstall the piston and connecting rod.

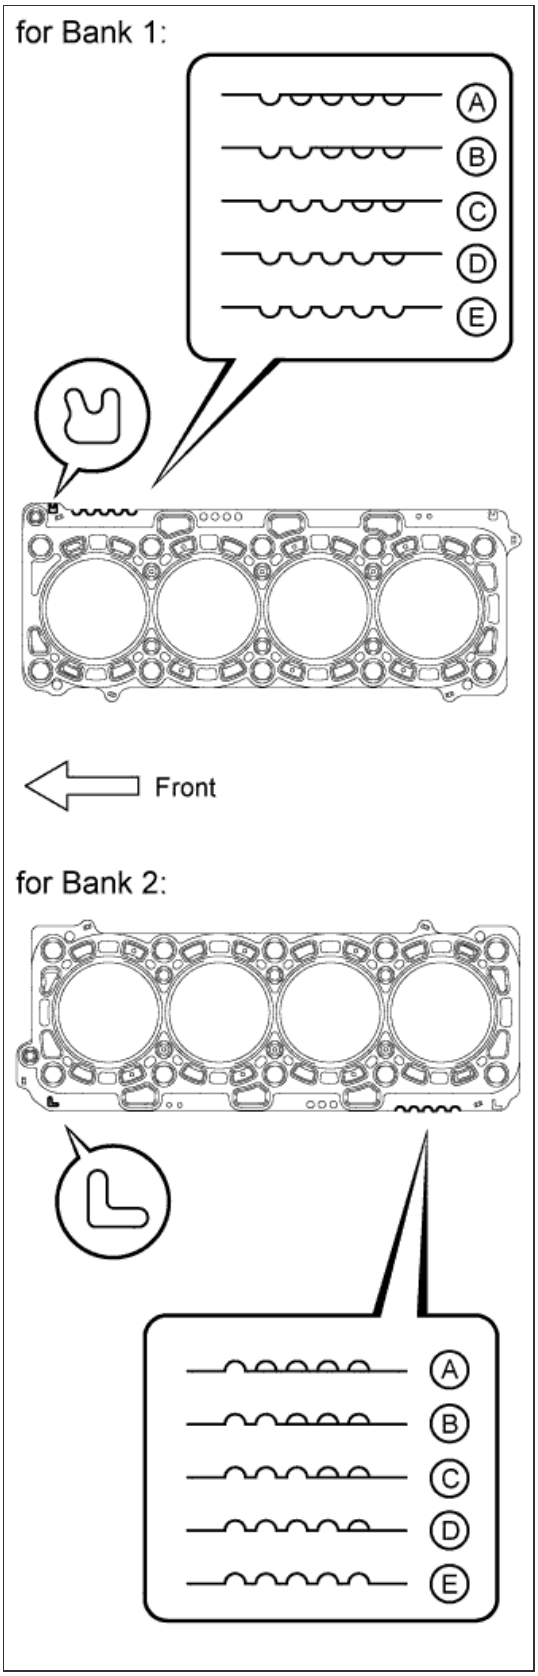
d. Select a new cylinder head gasket.

HINT:

Cylinder head gaskets are marked A, B, C, D or E accordingly.

New Installed Cylinder Head Gasket Thickness:

Item	Cutout	Specified Condition*
A	1	1.20 to 1.30 mm (0.0472 to 0.0512 in.)
B	2	1.25 to 1.35 mm (0.0492 to 0.0394 in.)
C	3	1.30 to 1.40 mm (0.0512 to 0.0551 in.)
D	4	1.35 to 1.45 mm (0.0531 to 0.0571 in.)
E	5	1.40 to 1.50 mm (0.0551 to 0.0591 in.)

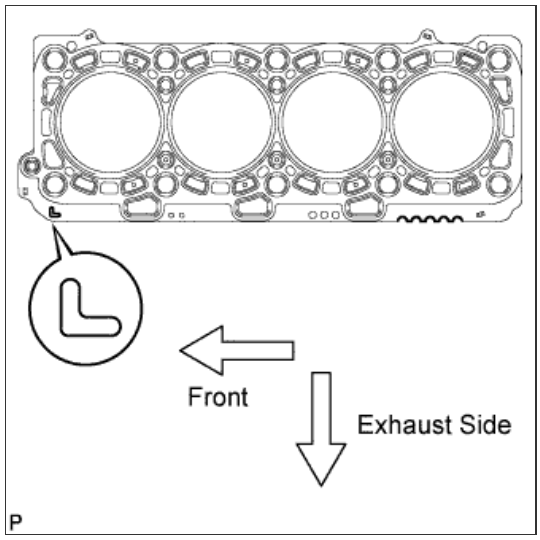


HINT:

*: The specified condition indicates the thickness of the gasket after tightening the cylinder head.

i. Select the largest piston protrusion value from the measurements and then select a new appropriate gasket according to the table below.

Standard Piston Protrusion:



Item	Specified Condition
A	0.520 to 0.575 mm (0.0205 to 0.0226 in.)
B	0.575 to 0.625 mm (0.0226 to 0.0246 in.)
C	0.625 to 0.675 mm (0.0246 to 0.0266 in.)
D	0.675 to 0.725 mm (0.0266 to 0.0285 in.)
E	0.725 to 0.780 mm (0.0285 to 0.0307 in.)

2. INSTALL NO. 2 CYLINDER HEAD GASKET

a. Remove any oil from the contact surface.

b. Place the cylinder head gasket on the cylinder block surface with the front face of the indicated mark "L" upward and facing the exhaust side.

3. INSTALL CYLINDER HEAD SUB-ASSEMBLY LH

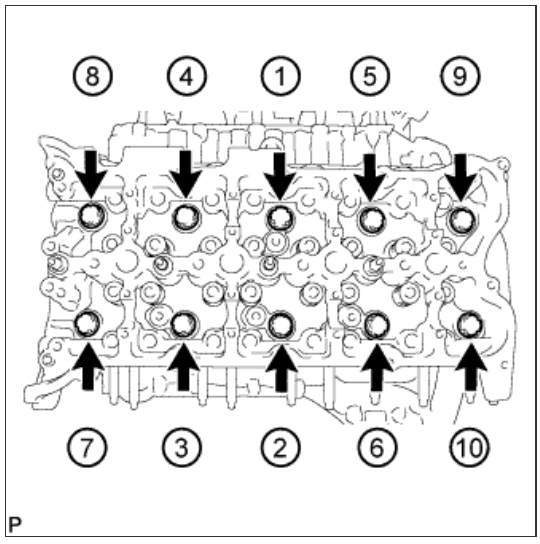
a. Place the cylinder head on the cylinder head gasket.

NOTICE:

Ensure that no oil is on the mounting surface of the cylinder head.

b. Inspect the cylinder head bolts (Click here).

c. Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.

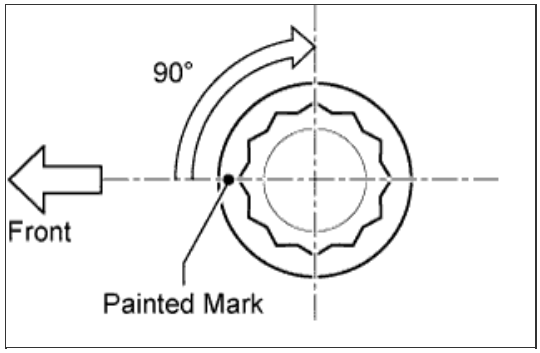


d. Step 1:

i. Install and uniformly tighten the 10 cylinder head bolts with the spacers in several steps, in the sequence shown in the illustration.

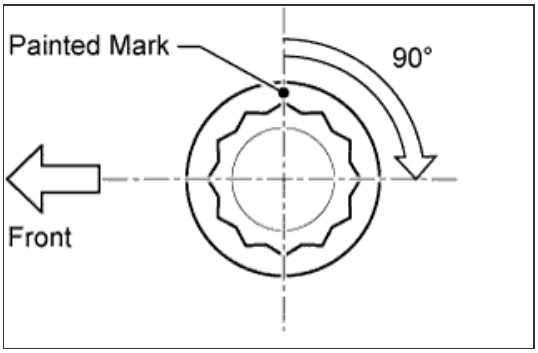
Torque:
80 N*m{ 816 kgf*cm , 59 ft.*lbf }

HINT:



- **The cylinder head bolts are tightened in 4 progressive steps.**
- **If a cylinder head bolt is broken or deformed, replace it.**

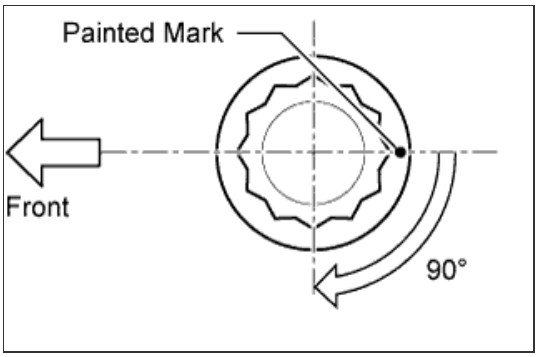
e. Step 2:



i. Mark the cylinder head bolt heads with paint as shown in the illustration.

ii. Tighten the cylinder head bolts 90° in the sequence shown in step 1.

f. Step 3:



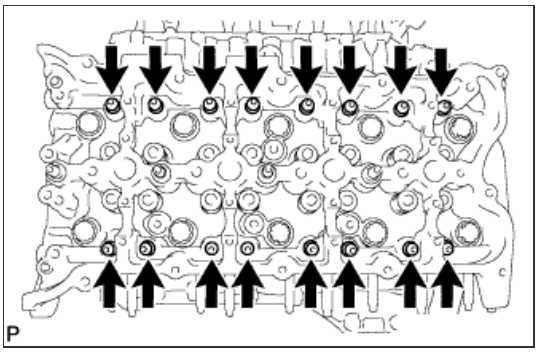
i. Tighten the cylinder head bolts another 90° in the sequence shown in step 1.

g. Step 4:

i. Tighten the cylinder head bolts by an additional 90° in the sequence shown in step 1.

h. Check that the painted marks are now facing the exhaust port side.

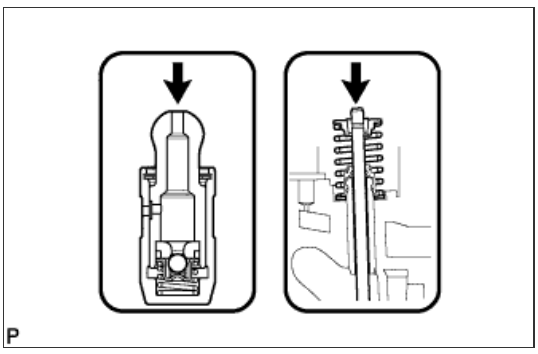
4. INSTALL NO. 2 VALVE LASH ADJUSTER ASSEMBLY



NOTICE:

Be sure to inspect the valve lash adjuster before installing it (Click here).

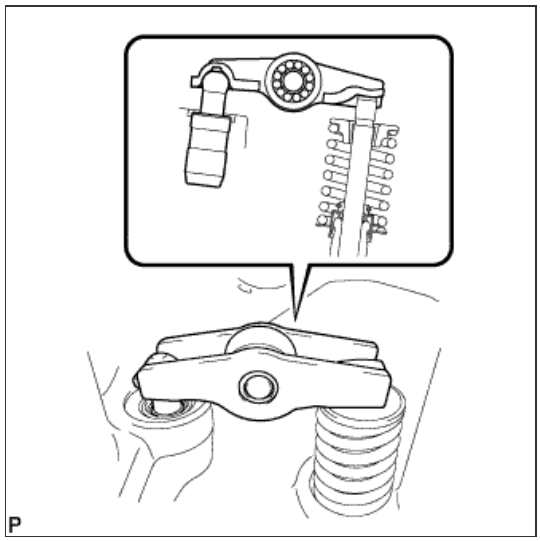
a. Install the 16 No. 2 valve lash adjusters to the cylinder head.



HINT:

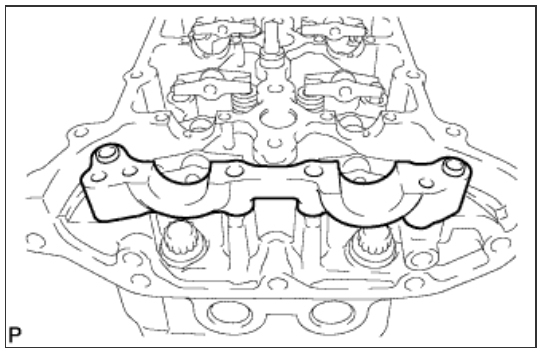
Install the lash adjuster at the same place it was removed from.

5. INSTALL NO. 2 VALVE ROCKER ARM



a. Apply engine oil to the lash adjuster tips and valve stem ends.

b. Install the 16 No. 2 valve rocker arms as shown in the illustration.



HINT:

Install the valve rocker arm at the same place it was removed from.

6. INSTALL NO. 5 CAMSHAFT BEARING CAP

a. Align the camshaft bearing cap and the ring pins of the cylinder head, and install the cap.

7. SELECT NO. 1 CYLINDER HEAD GASKET

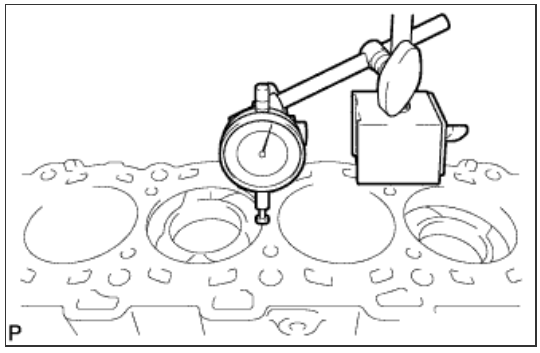
a. Set the 2 crankshaft pulley set bolts to the crankshaft.

b. Clean the cylinder block with solvent.

c. Inspect the protrusion for each cylinder.

i. Set the piston of the cylinder to be measured to slightly before TDC.

ii. Place a dial indicator on the cylinder block, and set the measuring tip as shown in the illustration.



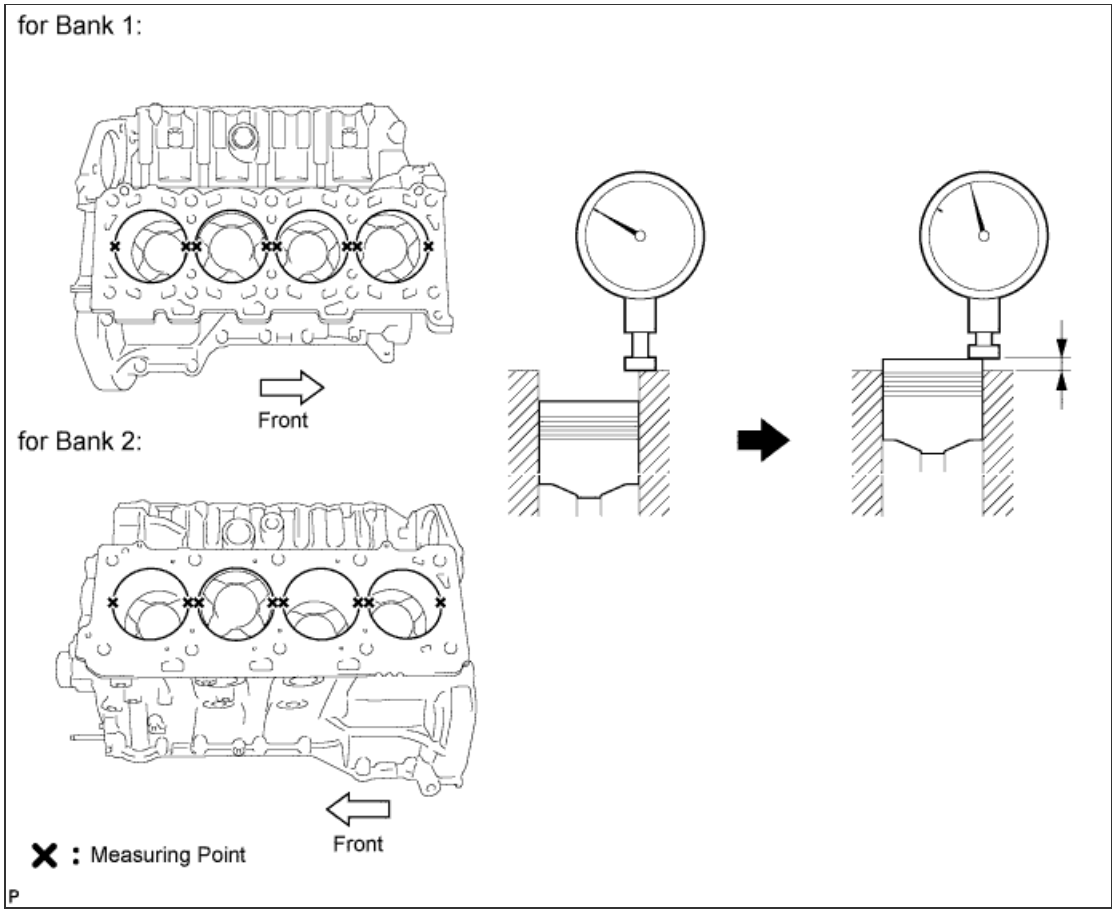
NOTICE:

Make sure that the dial indicator is at a right angle to the cylinder block top surface.

iii. Set the dial indicator at 0 mm (0 in.).

HINT:

Make sure that the measuring tip is flat against the cylinder block surface and piston head when taking the measurements.



iv. Find where the piston head protrudes most by slowly turning the crankshaft clockwise and counterclockwise.

v. Measure the piston protrusion value of each cylinder at 2 places as shown in the illustration below, making a total of 8 measurements.

Standard piston protrusion:
0.520 to 0.780 mm (0.0205 to 0.0307 in.)

If the protrusion is not as specified, remove and reinstall the piston and connecting rod.

d. Select a new cylinder head gasket.

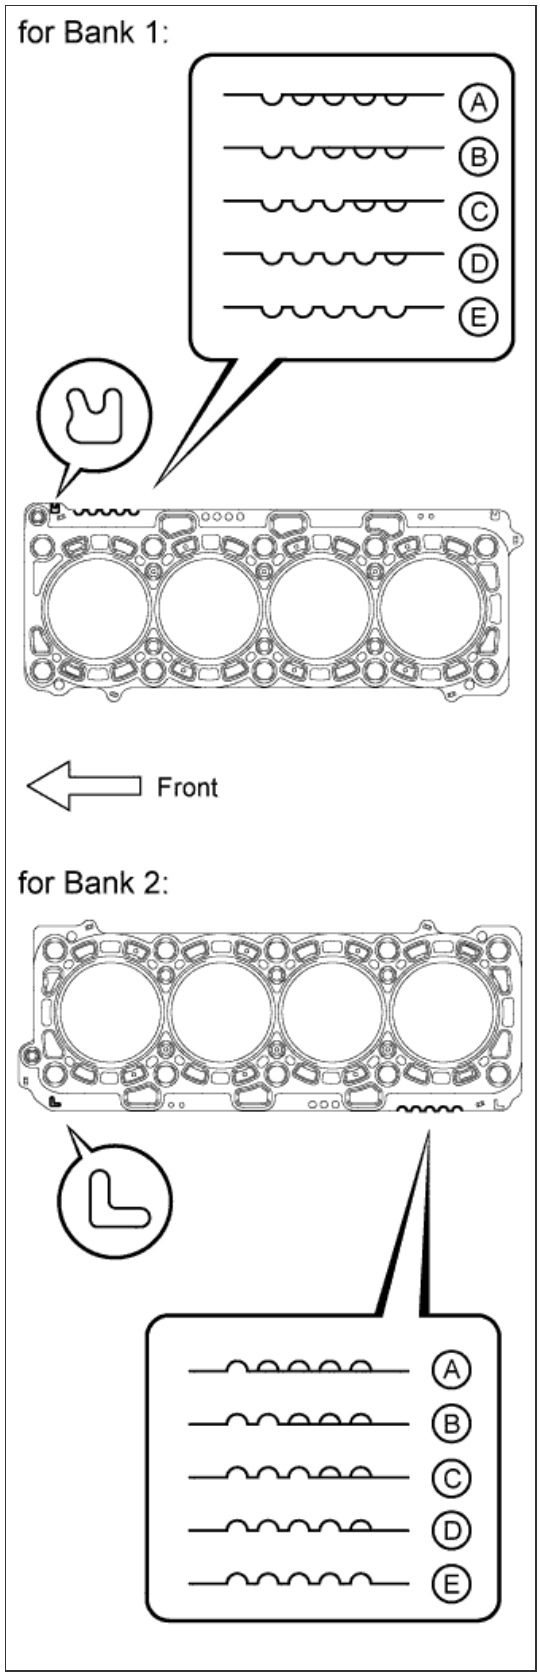
HINT:

Cylinder head gaskets are marked A, B, C, D or E accordingly.

New Installed Cylinder Head Gasket Thickness:

Item	Cutout	Specified Condition*
A	1	1.20 to 1.30 mm (0.0472 to 0.0512 in.)
B	2	1.25 to 1.35 mm (0.0492 to 0.0394 in.)
C	3	1.30 to 1.40 mm (0.0512 to 0.0551 in.)
D	4	1.35 to 1.45 mm (0.0531 to 0.0571 in.)
E	5	1.40 to 1.50 mm (0.0551 to 0.0591 in.)

HINT:

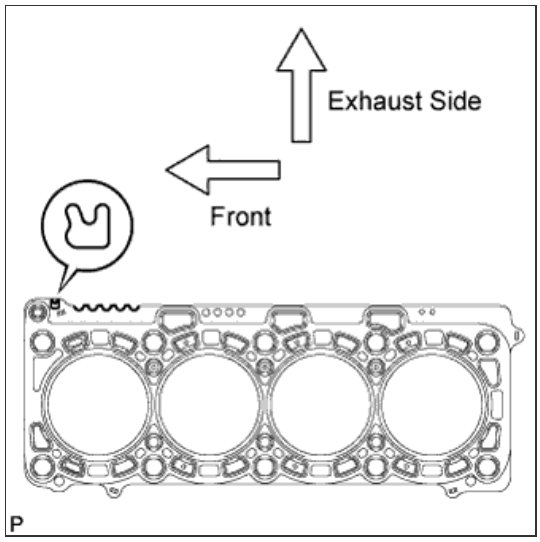


*: The specified condition indicates the thickness of the gasket after tightening the cylinder head.

i. Select the largest piston protrusion value from the measurements and then select a new appropriate gasket according to the table below.

Standard Piston Protrusion:

Item	Specified Condition



A	0.520 to 0.575 mm (0.0205 to 0.0226 in.)
B	0.575 to 0.625 mm (0.0226 to 0.0246 in.)
C	0.625 to 0.675 mm (0.0246 to 0.0266 in.)
D	0.675 to 0.725 mm (0.0266 to 0.0285 in.)
E	0.725 to 0.780 mm (0.0285 to 0.0307 in.)

8. INSTALL NO. 1 CYLINDER HEAD GASKET

a. Remove any oil from the contact surface.

b. Place the cylinder head gasket on the cylinder block surface with the front face of the indicated mark "R" upward and facing the exhaust side.

9. INSTALL CYLINDER HEAD SUB-ASSEMBLY RH

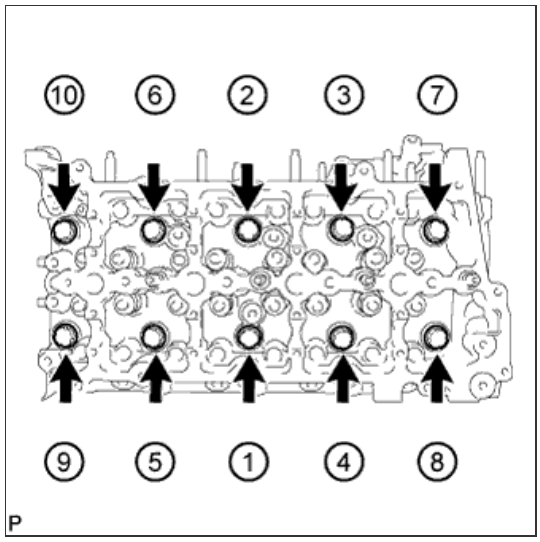
a. Place the cylinder head on the cylinder head gasket.

NOTICE:

Ensure that no oil is on the mounting surface of the cylinder head.

b. Inspect the cylinder head bolts (Click here).

c. Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.

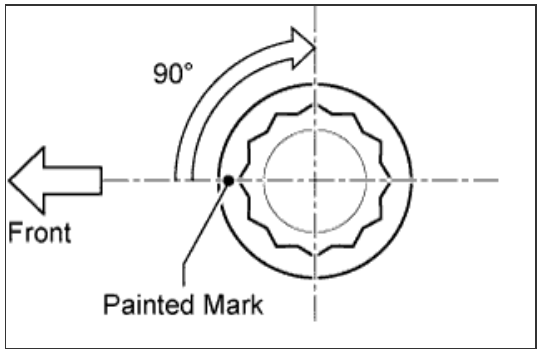


d. Step 1:

i. Install and uniformly tighten the 10 cylinder head bolts with the spacers in several steps, in the sequence shown in the illustration.

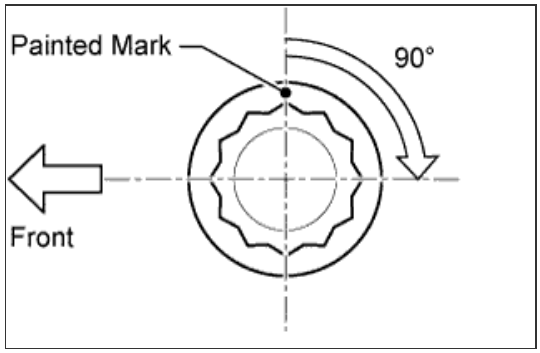
Torque:
80 N*m{ 816 kgf*cm , 59 ft.*lbf }

HINT:



- **The cylinder head bolts are tightened in 4 progressive steps.**
- **If a cylinder head bolt is broken or deformed, replace it.**

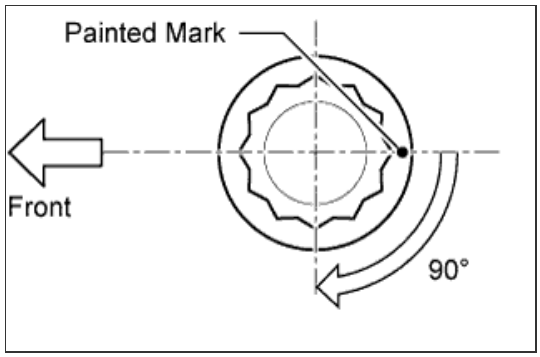
e. Step 2:



i. Mark the cylinder head bolt heads with paint as shown in the illustration.

ii. Tighten the cylinder head bolts 90° in the sequence shown in step 1.

f. Step 3:



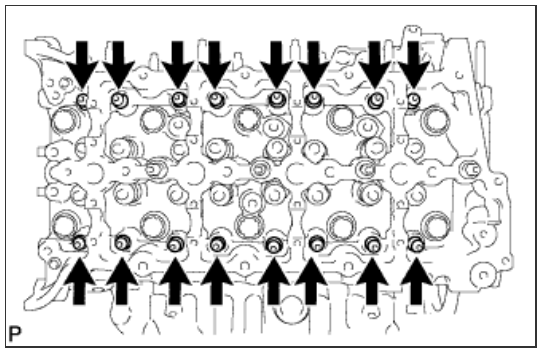
i. Tighten the cylinder head bolts another 90° in the sequence shown in step 1.

g. Step 4:

i. Tighten the cylinder head bolts by an additional 90° in the sequence shown in step 1.

h. Check that the painted marks are now facing the intake port side.

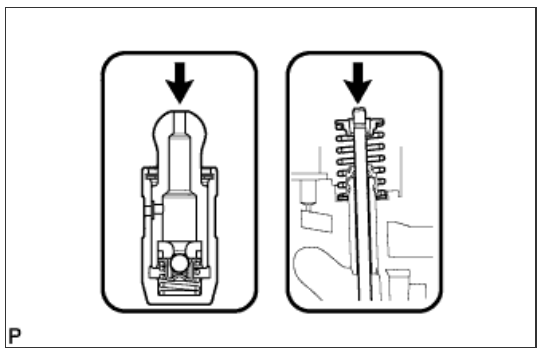
10. INSTALL NO. 1 VALVE LASH ADJUSTER ASSEMBLY



NOTICE:

Be sure to inspect the valve lash adjuster before installing it (Click here).

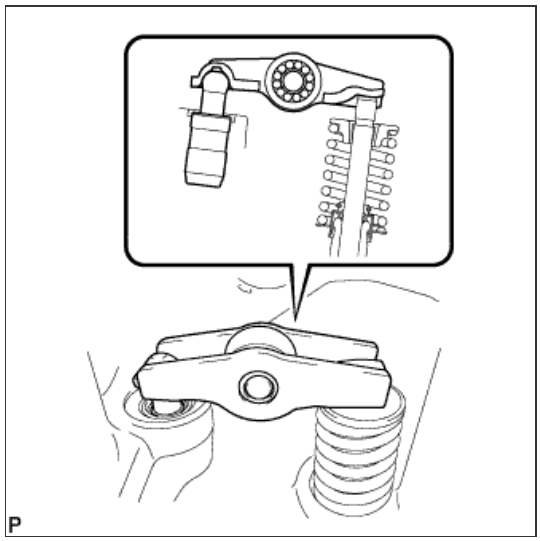
a. Install the 16 No. 1 valve lash adjusters to the cylinder head.



HINT:

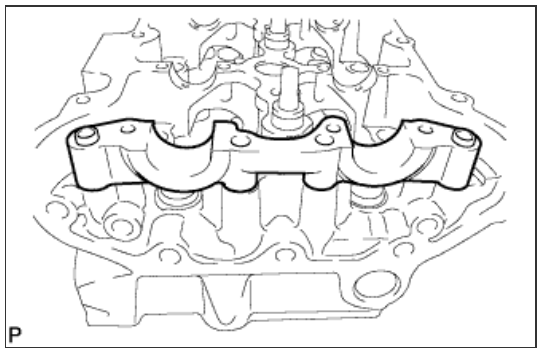
Install the lash adjuster at the same place it was removed from.

11. INSTALL NO. 1 VALVE ROCKER ARM



a. Apply engine oil to the lash adjuster tips and valve stem ends.

b. Install the 16 No. 1 valve rocker arms as shown in the illustration.



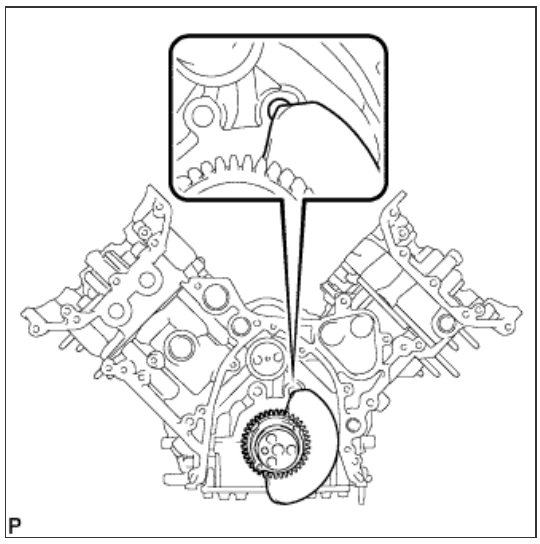
HINT:

Install the valve rocker arm at the same place it was removed from.

12. INSTALL NO. 2 CAMSHAFT BEARING CAP

a. Align the camshaft bearing cap and the ring pins of the cylinder head, and install the cap.

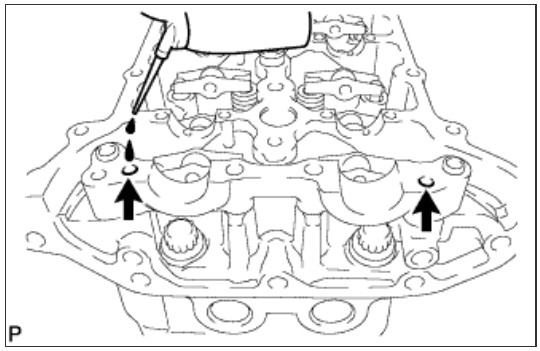
13. SET NO. 1 CYLINDER TO 45° BEFORE TDC



a. Turn the crankshaft counterclockwise until the No. 1 cylinder is at a position 45° before TDC.

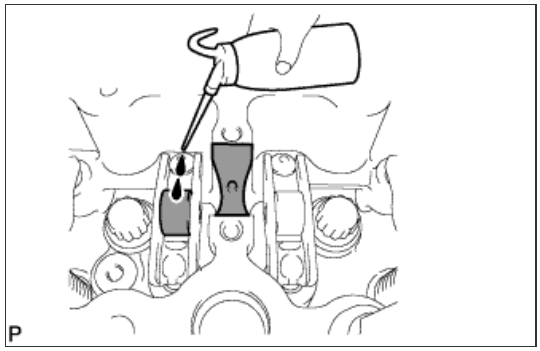
NOTICE:

Do not turn the crankshaft again until after the timing gear is installed.



HINT:

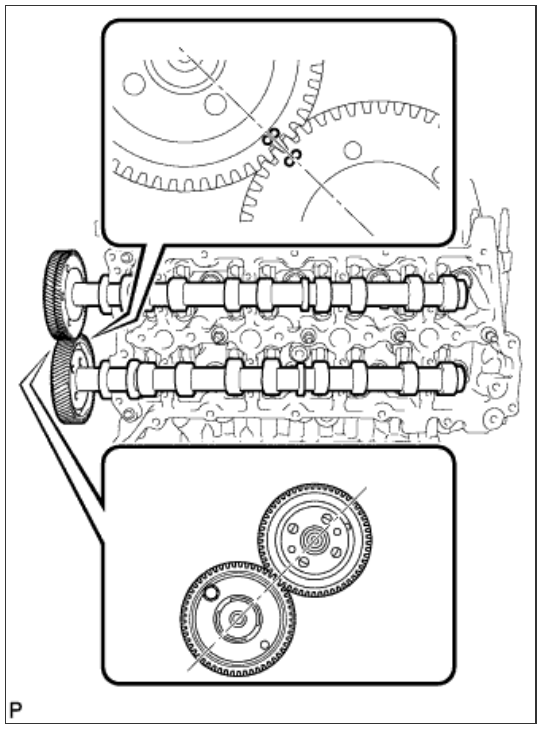
The No. 1 cylinder is at a position 45° before TDC if the crankshaft counterweight is overlapping the cylinder block hole as shown in the illustration.



14. INSTALL NO. 1 AND NO. 2 CAMSHAFTS

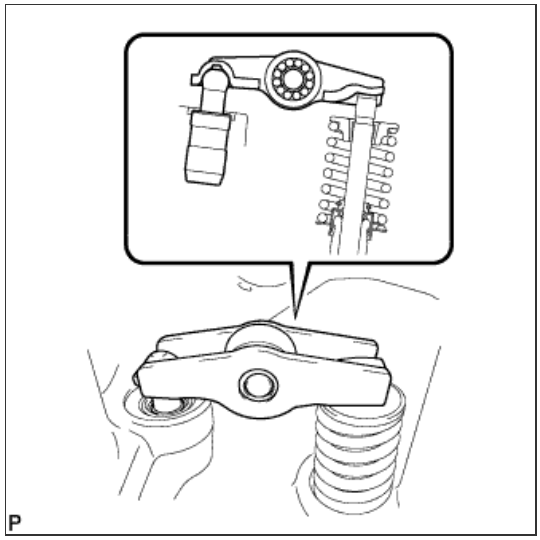
a. Add more than 19 cc (1.16 cu. in.) of engine oil into the cylinder head side oil holes.

b. Apply engine oil to the rollers of the valve rocker arms and camshaft housing of the cylinder head.



c. Install the camshafts.

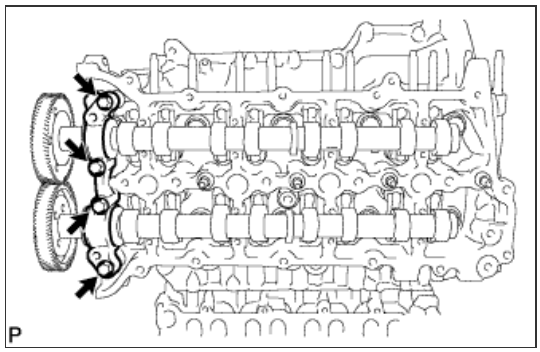
i. Apply engine oil to the camshaft journals, lobes, thrust portion and gears.



ii. Align the timing marks (2 dot marks) on the back side of the No. 1 and No. 2 camshaft timing gears as shown in the illustration.

iii. Place the camshafts into the cylinder head.

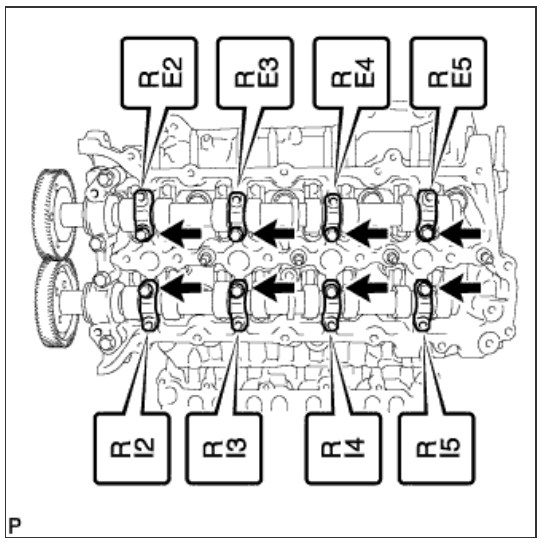
NOTICE:



Before and after setting the camshafts, firmly set the rocker arms to the lash adjusters.

d. Install the No. 1 camshaft bearing cap.

i. Align the No. 1 camshaft bearing cap and the ring pins of the No. 2 camshaft bearing cap.

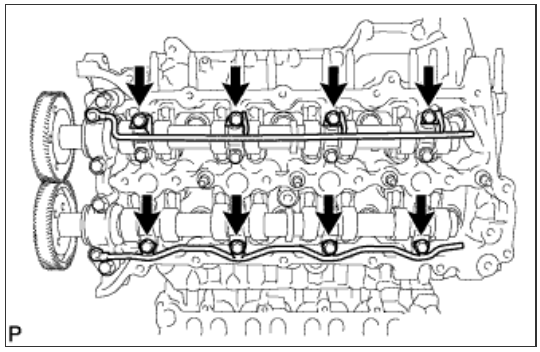


ii. Temporarily install the 4 bolts by hand.

e. Install the No. 3 camshaft bearing caps.

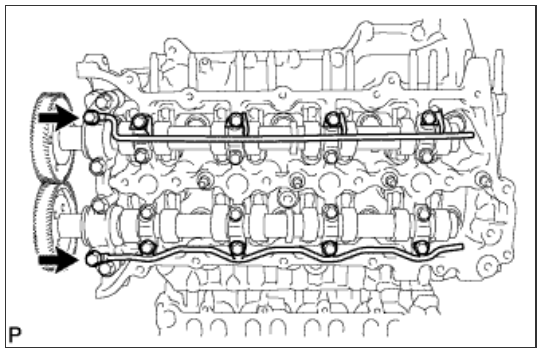
i. Confirm the marks and numbers on the camshaft bearing caps and place them in their proper position and direction.

ii. Temporarily install the 8 bolts, which are not installed with the oil feed pipe, by hand.



f. Temporarily install the No. 1 and No. 2 camshaft oil feed pipes with the 8 bolts by hand.

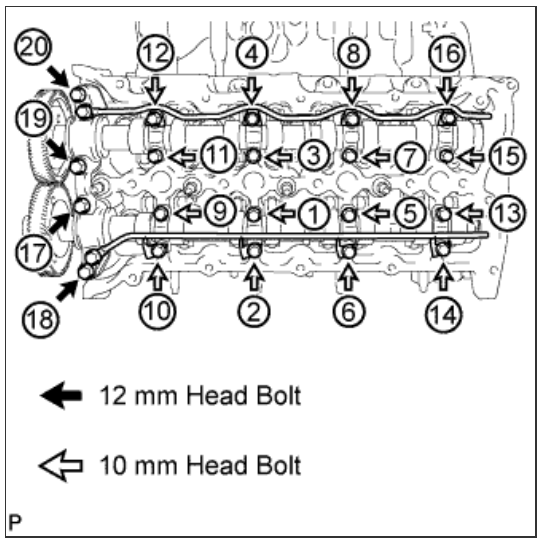
NOTICE:



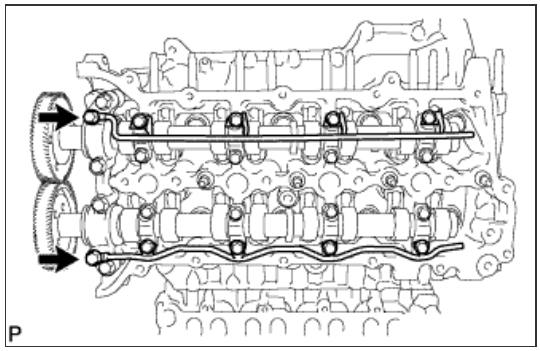
If even one of the pipe bolt holes does not match its camshaft bearing cap bolt hole, replace the camshaft oil feed pipe.

HINT:

The pipe is bent on the intake side, and straight on the exhaust side.



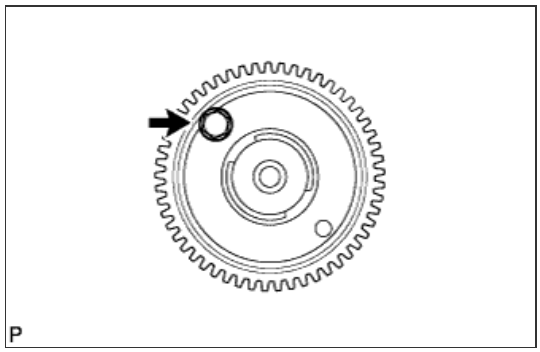
g. Temporarily install the 2 union bolts by hand.



h. Uniformly tighten the 20 bolts in several steps in the order shown in the illustration.

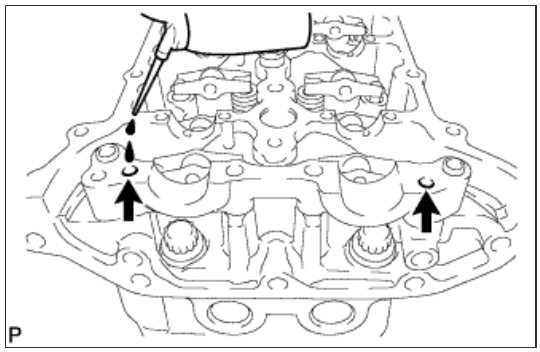
Torque:
for 12 mm head bolt of No. 1 camshaft bearing cap:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
for 10 mm head bolt of No. 3 camshaft bearing cap:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

i. Tighten the 2 union bolts.



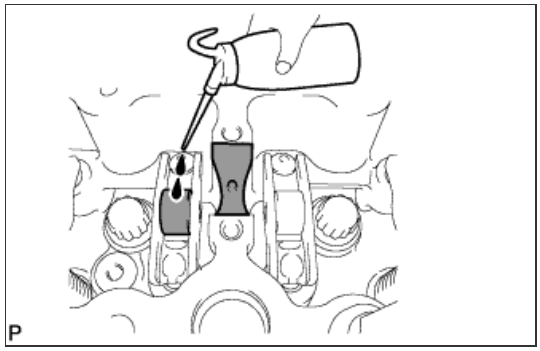
Torque:
17 N*m{ 173 kgf*cm , 13 ft.*lbf }

j. Remove the service bolt from the No. 1 camshaft timing gear.



NOTICE:

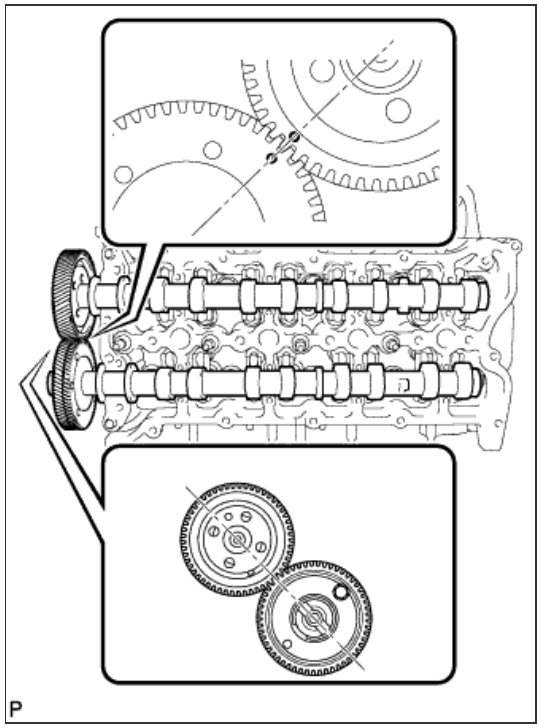
Do not drop the bolt into the engine.



15. INSTALL NO. 3 AND NO. 4 CAMSHAFTS

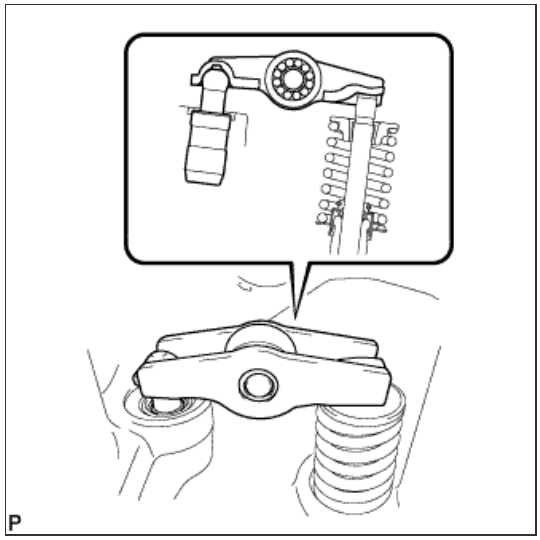
a. Add more than 19 cc (1.16 cu. in.) of engine oil into the cylinder head side oil holes.

b. Apply engine oil to the rollers of the valve rocker arms and camshaft housing of the cylinder head.



c. Install the camshafts.

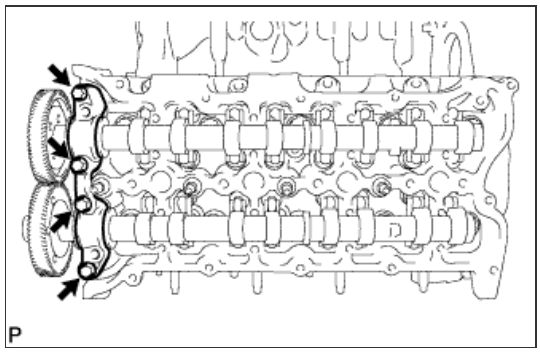
i. Apply engine oil to the camshaft journals, lobes, thrust portion and gears.



ii. Align the timing marks (1 dot mark) on the back side of the No. 3 and No. 4 camshaft timing gears as shown in the illustration.

iii. Place the camshafts into the cylinder head.

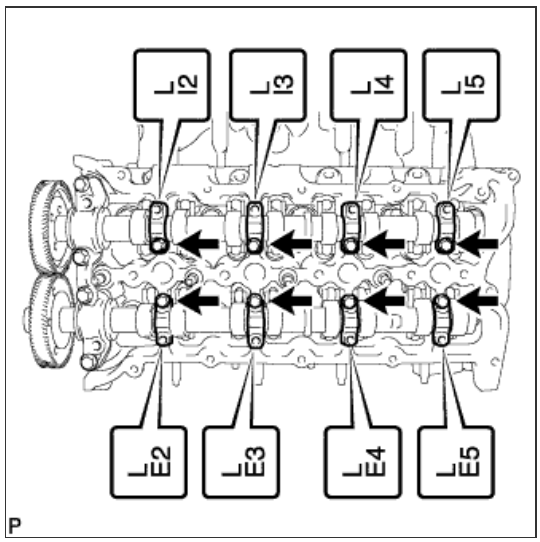
NOTICE:



Before and after setting the camshafts, firmly set the rocker arms to the lash adjusters.

d. Install the No. 4 camshaft bearing cap.

i. Align the No. 4 camshaft bearing cap and the ring pins of the No. 5 camshaft bearing cap.

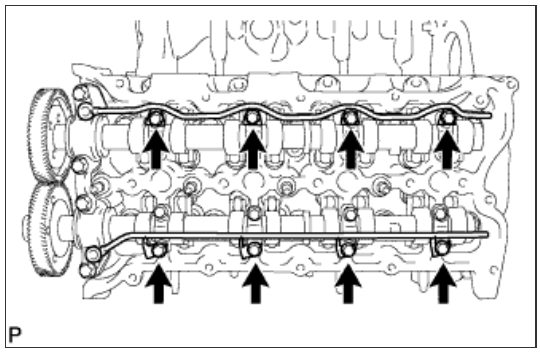


ii. Temporarily install the 4 bolts by hand.

e. Install the No. 3 camshaft bearing caps.

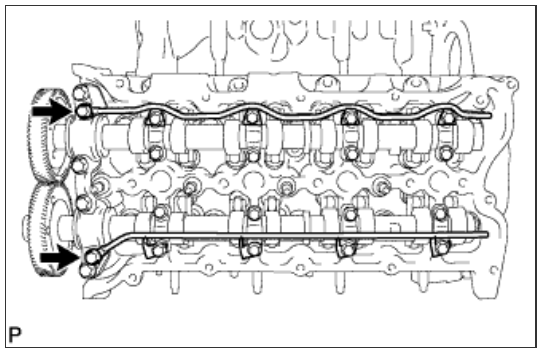
i. Confirm the marks and numbers on the camshaft bearing caps and place them in their proper position and direction.

ii. Temporarily install the 8 bolts, which are not installed with the oil feed pipe, by hand.



f. Temporarily install the No. 3 and No. 4 camshaft oil feed pipes with the 8 bolts by hand.

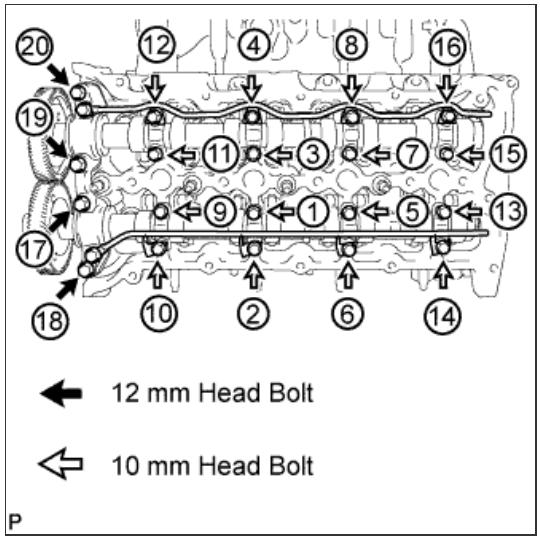
NOTICE:



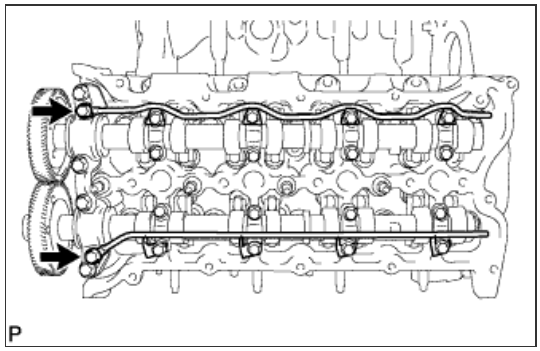
If even one of the pipe bolt holes does not match its camshaft bearing cap bolt hole, replace the camshaft oil feed pipe.

HINT:

The pipe is bent on the intake side, and straight on the exhaust side.



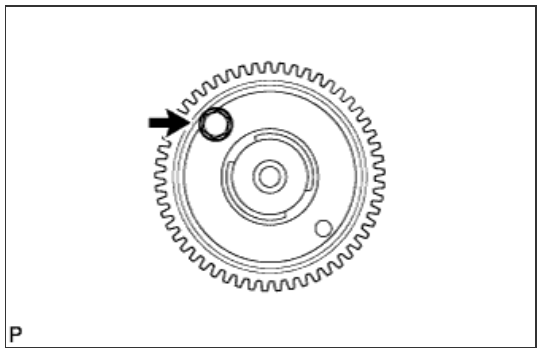
g. Temporarily install the 2 union bolts by hand.



h. Uniformly tighten the 20 bolts in several steps in the order shown in the illustration.

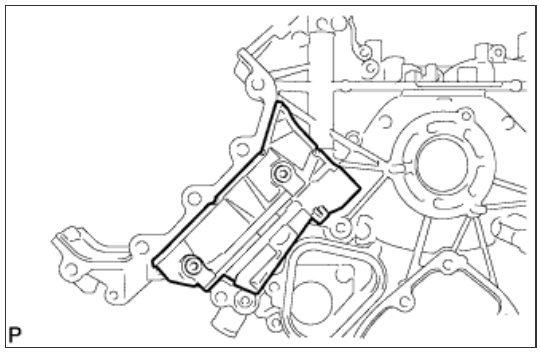
Torque:
for 12 mm head bolt of No. 4 camshaft bearing cap:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
for 10 mm head bolt of No. 3 camshaft bearing cap:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

i. Tighten the 2 union bolts.



Torque:
17 N*m{ 173 kgf*cm , 13 ft.*lbf }

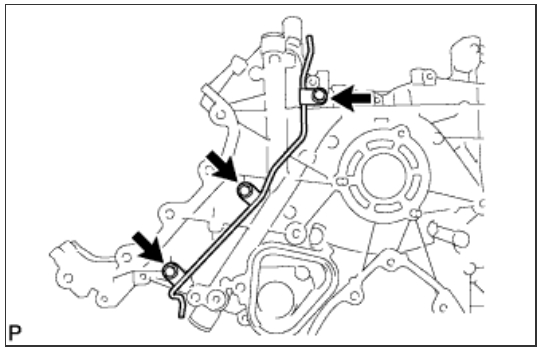
j. Remove the service bolt from the No. 4 camshaft timing gear.



NOTICE:

Do not drop the bolt into the engine.

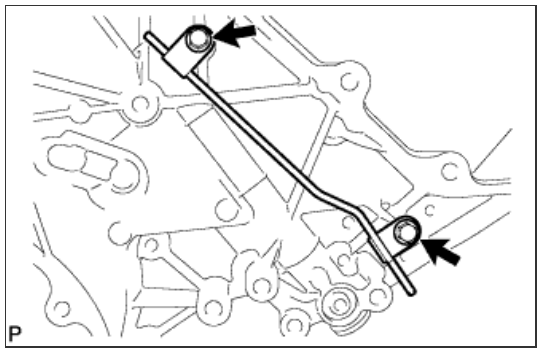
16. INSTALL NO. 2 TIMING GEAR CASE INSULATOR (w/ Intercooler)



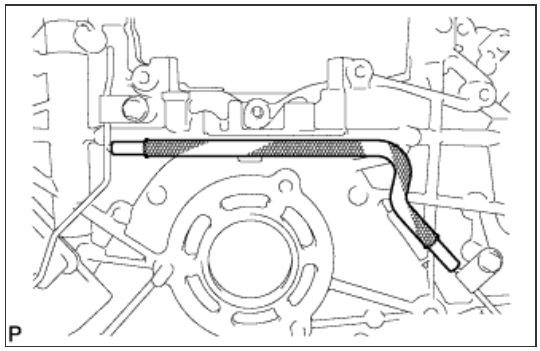
a. Install the No. 2 timing gear case insulator.

17. INSTALL NO. 2 VACUUM TRANSMITTING PIPE SUB-ASSEMBLY (w/ Intercooler)

a. Install the No. 2 vacuum transmitting pipe with the 3 bolts.

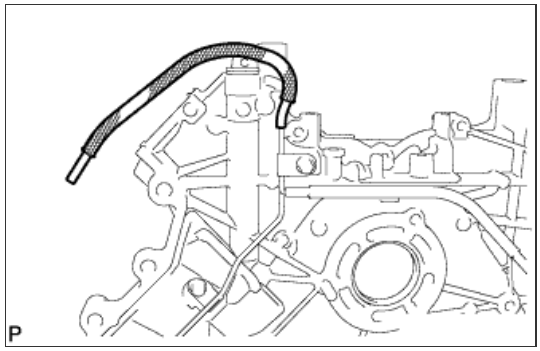


Torque:
6.0 N*m{ 61 kgf*cm , 53 in.*lbf }



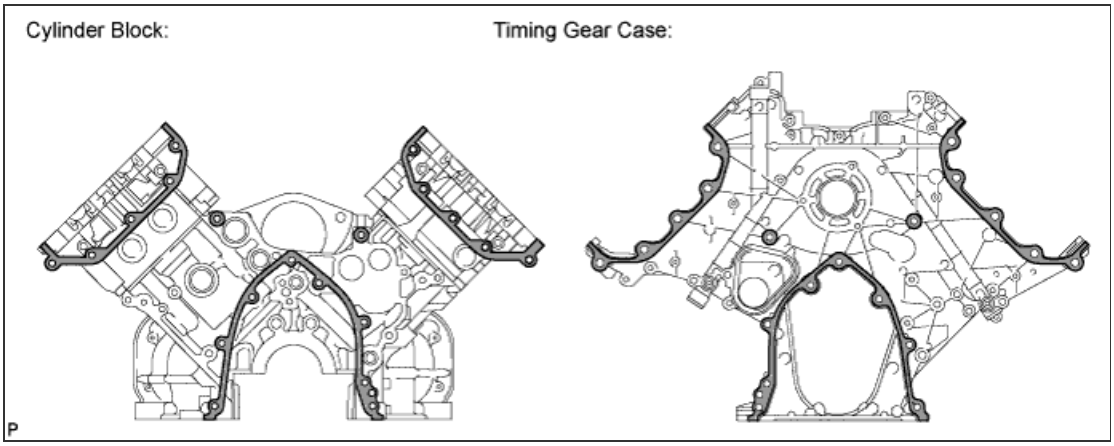
18. INSTALL NO. 1 VACUUM TRANSMITTING PIPE SUB-ASSEMBLY (w/ Intercooler)

a. Install the No. 1 vacuum transmitting pipe with the 2 bolts.



Torque:
6.0 N*m{ 61 kgf*cm , 53 in.*lbf }

19. CONNECT NO. 3 VACUUM TRANSMITTING HOSE (w/ Intercooler)



20. CONNECT NO. 2 VACUUM TRANSMITTING HOSE (w/ Intercooler)

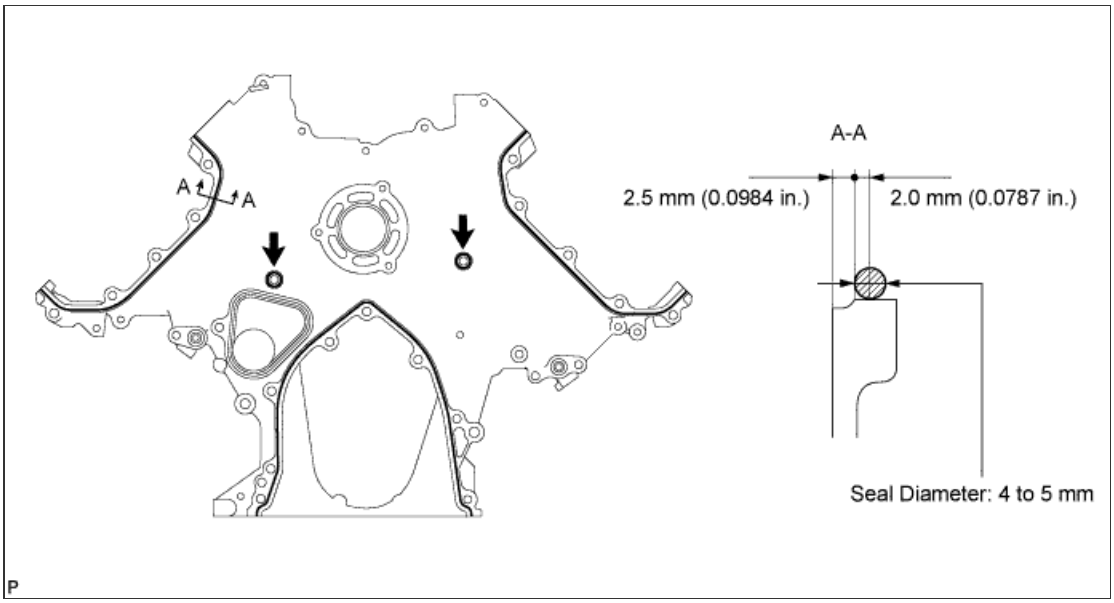
21. INSTALL TIMING GEAR CASE SUB-ASSEMBLY

NOTICE:

When the contact surfaces shown below are wet, wipe them with an oil-free cloth before applying seal packing.

a. Apply seal packing to the timing gear case as shown in the following illustration.

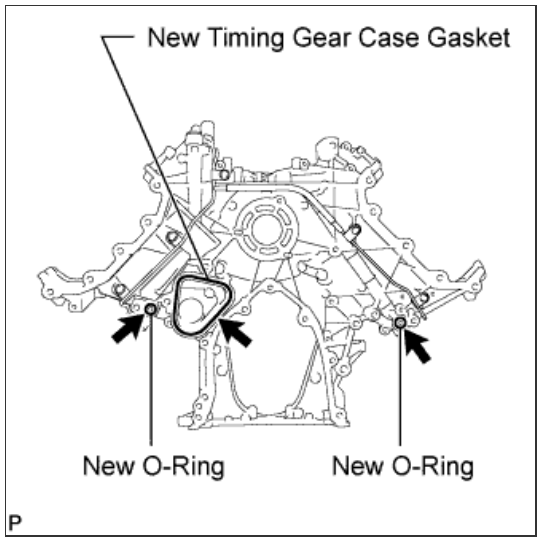
Standard seal diameter:
4 to 5 mm (0.157 to 0.197 in.)



Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

NOTICE:

- **After applying seal packing, align the timing gear case with the engine within 3 minutes and tighten the bolts and nuts within 15 minutes.**
- **Apply the seal packing in a continuous line.**



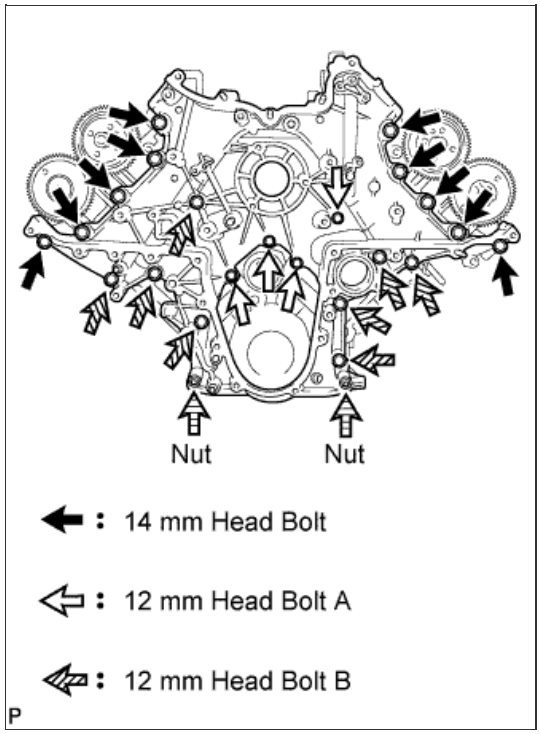
HINT:

- **The FIPG line is shown below.**
- **Apply packing to the 5 seal surface areas.**

b. Install a new timing gear case gasket.

c. Apply engine oil to 2 new O-rings and install them to the timing gear case.

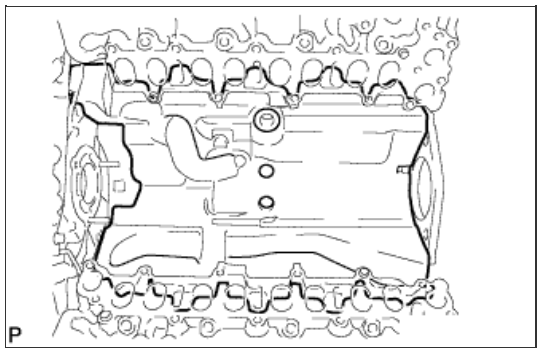
d. Install the timing gear case with the 22 bolts and 2 nuts.



Torque:
for 14 mm head bolt (case is dry):
46 N*m{ 469 kgf*cm , 34 ft.*lbf }
for 14 mm head bolt (case is wet):
42 N*m{ 428 kgf*cm , 31 ft.*lbf }
for 12 mm head bolt A and B:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }
for nut:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

NOTICE:

- **The case is "dry" when there is absolutely no engine oil on the 14 mm head bolts and cylinder head bolt holes.**
- **The case is "wet" when there is engine oil on the 14 mm head bolts and cylinder head bolt holes.**

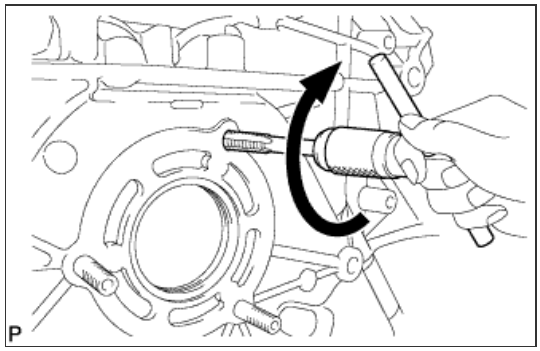


Bolt Length

Item	Quantity	Length
A	4	20 mm (0.787 in.)
B	8	45 mm (1.77 in.)

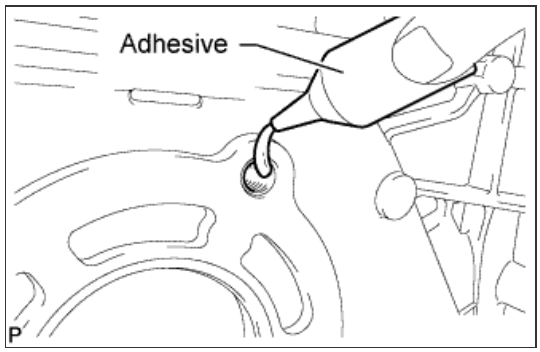
22. INSTALL V-BANK SILENCER

a. Align the alignment areas of the V-bank silencer and cylinder block, and install the V-bank silencer.



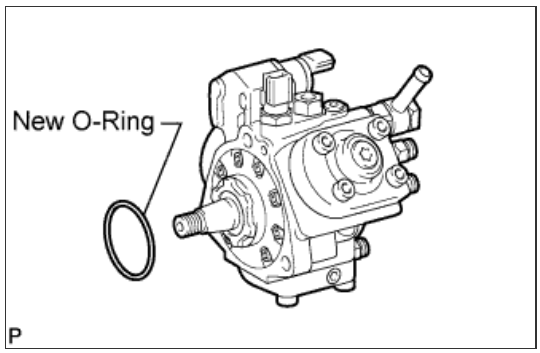
NOTICE:

Verify that the V-bank silencer is below the top surface of the intake port of the cylinder head RH and LH.



23. INSTALL FUEL SUPPLY PUMP ASSEMBLY

a. Using an 8 mm x 1.25 pitch tap, remove the adhesive from the timing gear case side bolt hole.

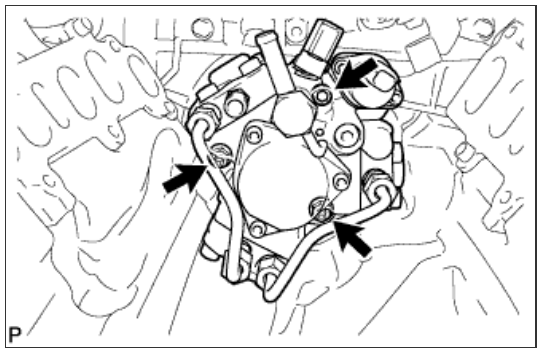


b. Apply adhesive to 2 or more threads of the timing gear case bolt hole.

Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

c. Apply engine oil to a new O-ring and install it to the supply pump.

d. Install the supply pump to the timing gear case.

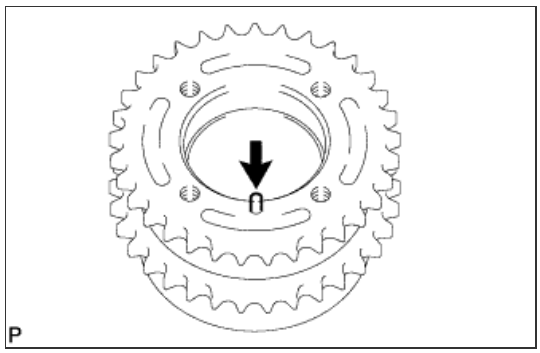


NOTICE:

When installing the supply pump, do not hold the fuel pipe to prevent fuel leaks.

i. Temporarily install the 2 nuts.

ii. Using a 6 mm hexagon wrench, install the hexagon bolt, and then tighten the 2 nuts.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

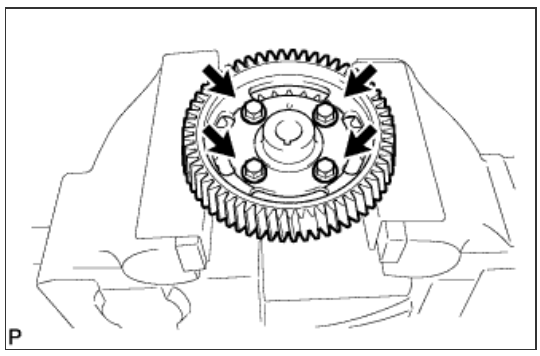
24. INSTALL STRAIGHT PIN

a. Install the straight pin.

Standard protrusion height:
4.5 to 7.0 mm (0.177 to 0.276 in.)

25. ASSEMBLE FUEL SUPPLY PUMP DRIVE GEAR AND FUEL SUPPLY PUMP SHAFT SPROCKET

a. Align the fuel supply pump drive gear to the fuel supply pump shaft sprocket straight pin and temporarily install it with the 4 bolts.



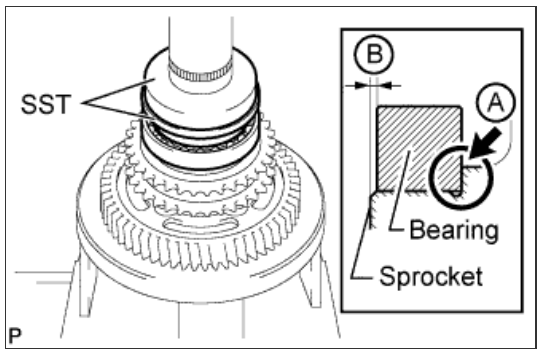
b. Hold the fuel supply pump shaft sprocket in a vise between aluminum plates.

NOTICE:

Be careful not to damage the gears.

c. Tighten the 4 bolts.

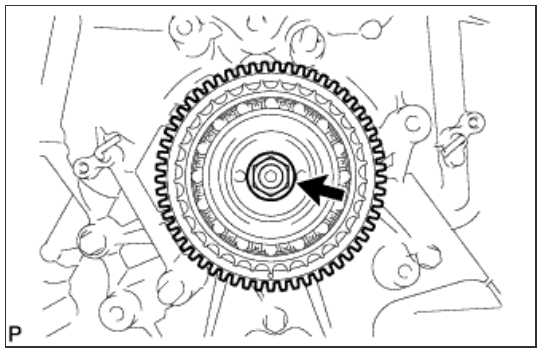
Torque:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }



26. INSTALL RADIAL BALL BEARING

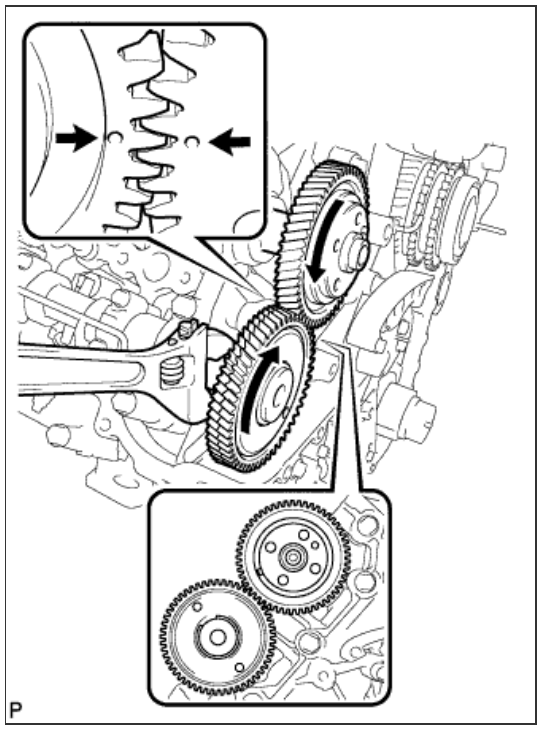
a. Using SST and a press, press in the radial ball bearing to the fuel supply pump shaft sprocket.

SST
09316-12010
09950-60010 (09951-00580)



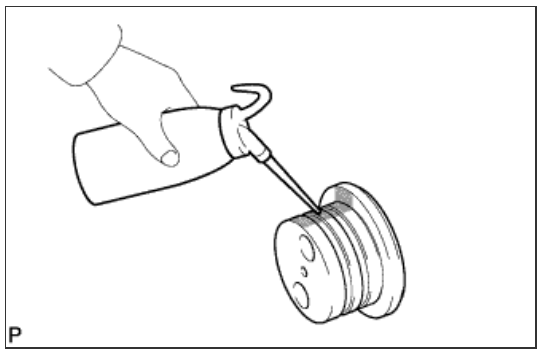
NOTICE:

- **Make sure to press in the bearing until the bearing contacts the fuel supply pump shaft sprocket, as shown in A in the illustration.**
- **Make sure the sprocket outer edge is further outward than the bearing outer edge, as shown in B in the illustration.**



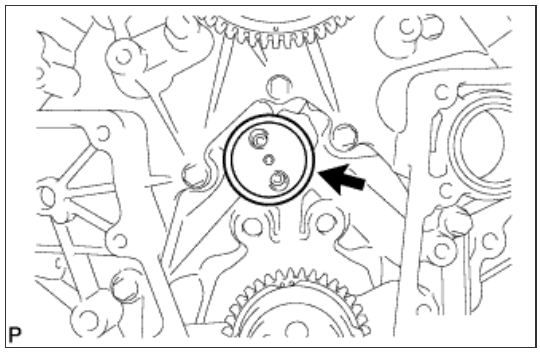
27. TEMPORARILY INSTALL FUEL SUPPLY PUMP DRIVE GEAR

a. Align the cutout of the supply pump drive gear and key of the supply pump, and temporarily install the nut.



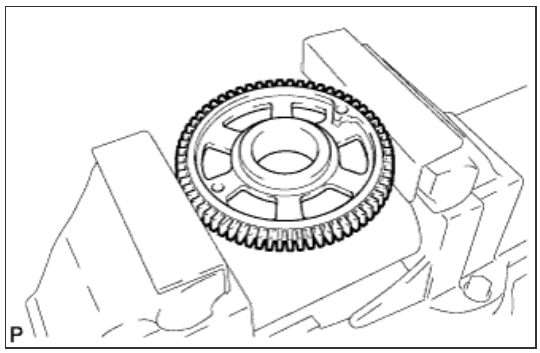
28. SET NO. 1 AND NO. 2 CAMSHAFTS TO TDC

a. Using a wrench, turn the No. 1 camshaft and align the timing marks (1 dot mark) on the back side of the timing gears as shown in the illustration.



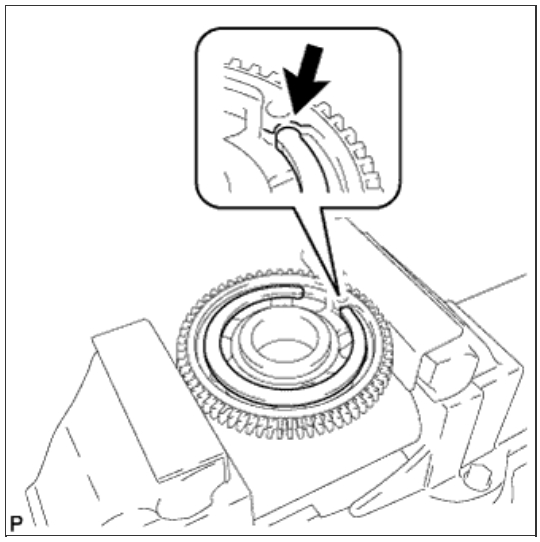
29. INSTALL NO. 1 IDLE GEAR SHAFT

a. Apply engine oil to the contact surface of the idle gear shaft.



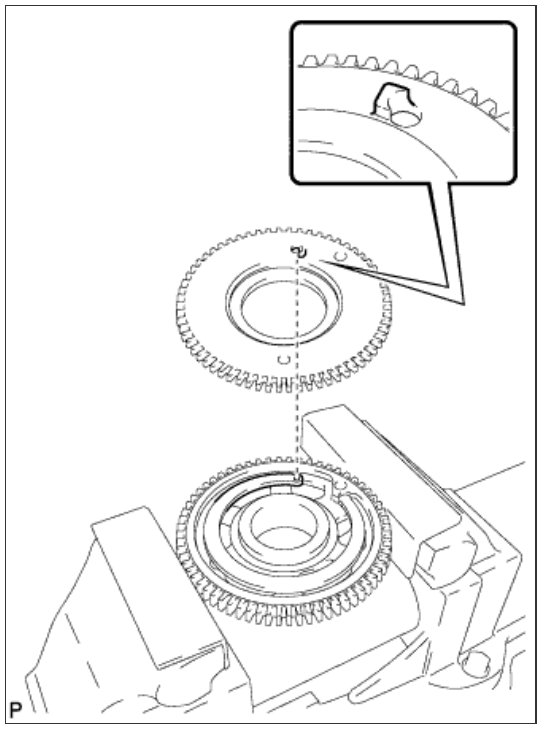
b. Install the idle gear shaft to the cylinder block.

30. ASSEMBLE SUB GEAR, IDLE GEAR SPRING AND IDLE GEAR (w/ Intercooler)



a. Hold the idle gear in a vise between aluminum plates.

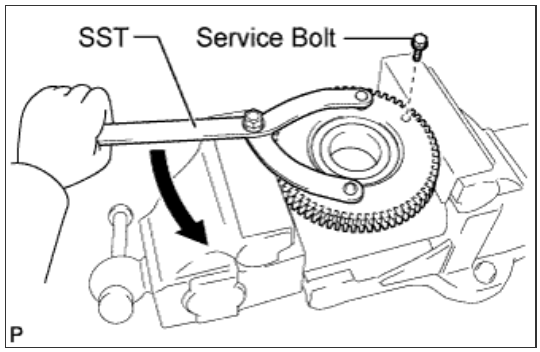
NOTICE:



Be careful not to damage the gears.

b. Align the right end of the idle gear spring to the notch of the idle gear and set it to the gear.

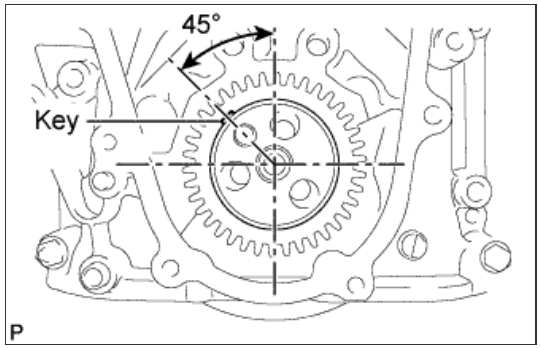
c. Install the sub idle gear.



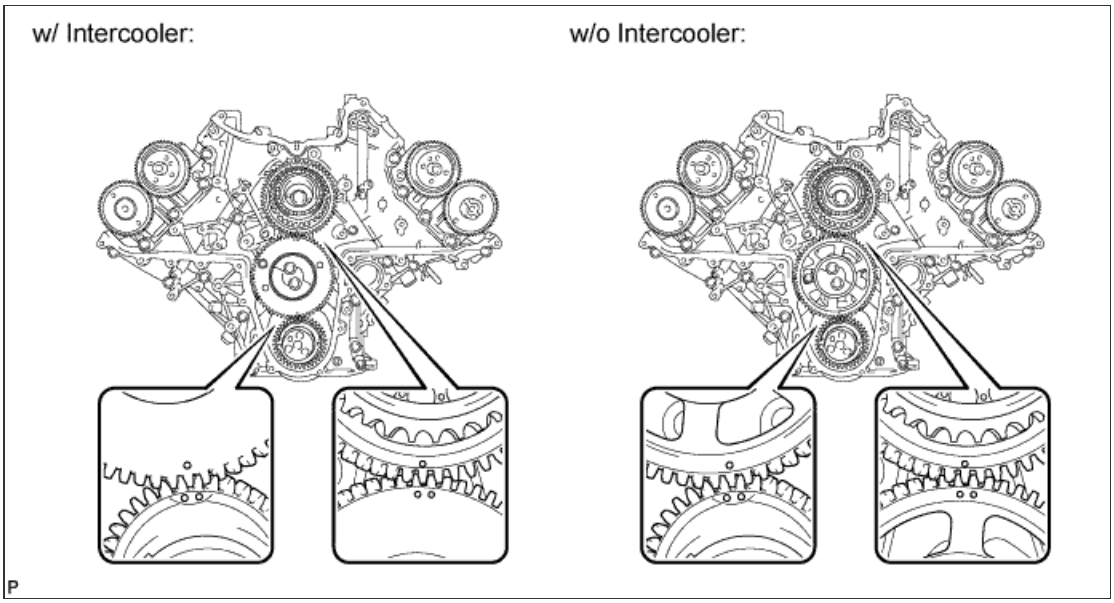
i. Align the notch of the sub idle gear protrusion with the left end of the idle gear spring and install the sub idle gear to the idle gear.

ii. Using SST, turn the sub idle gear counterclockwise, and install an 8 mm x 1.25 pitch bolt with a length of 15 mm or more to the service hole.

SST
09960-10010 (09962-01000, 09963-00700)



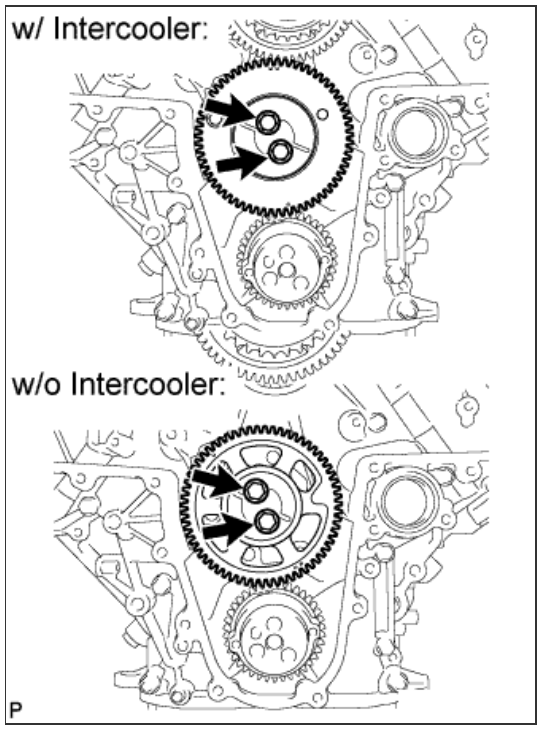
Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }



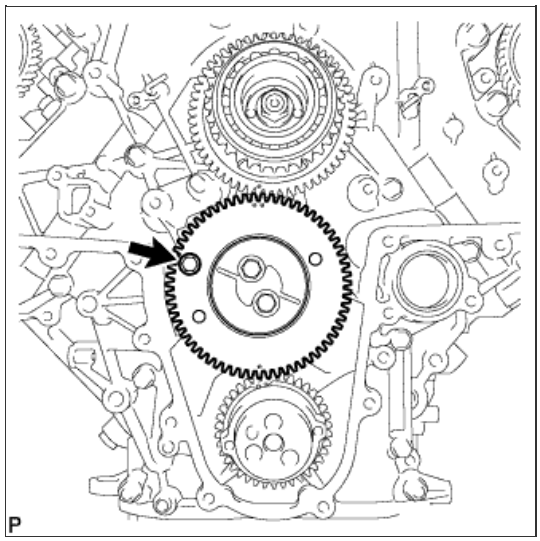
31. INSTALL IDLE GEAR ASSEMBLY

a. Temporarily install the 2 crankshaft pulley set bolts to the crankshaft.

b. Using a bar, turn the crankshaft clockwise to the No. 1 cylinder TDC position.



c. Align the timing marks of the supply pump drive gear and idle gear, and the timing marks of the crankshaft timing gear and idle gear as shown in the illustration.

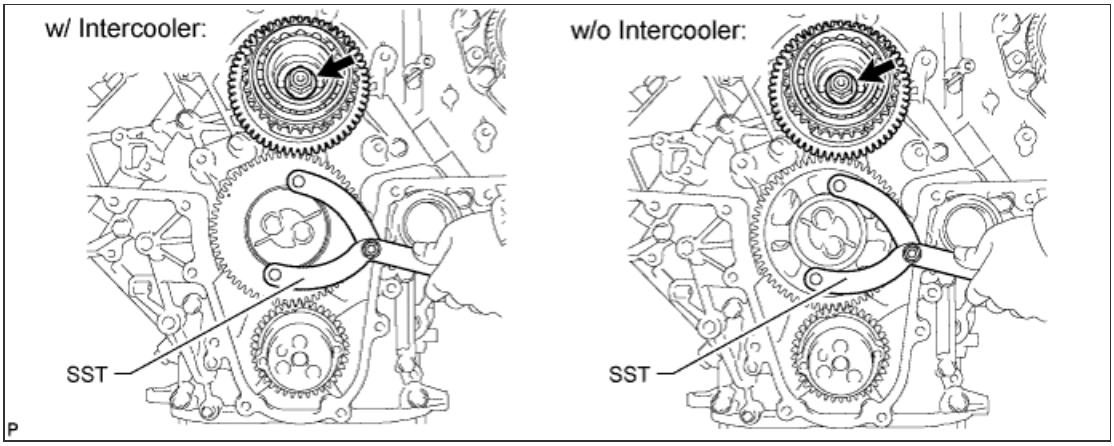


d. Apply engine oil to the idle gear thrust plate and gears.

e. Install the idle gear thrust plate with the 2 bolts.

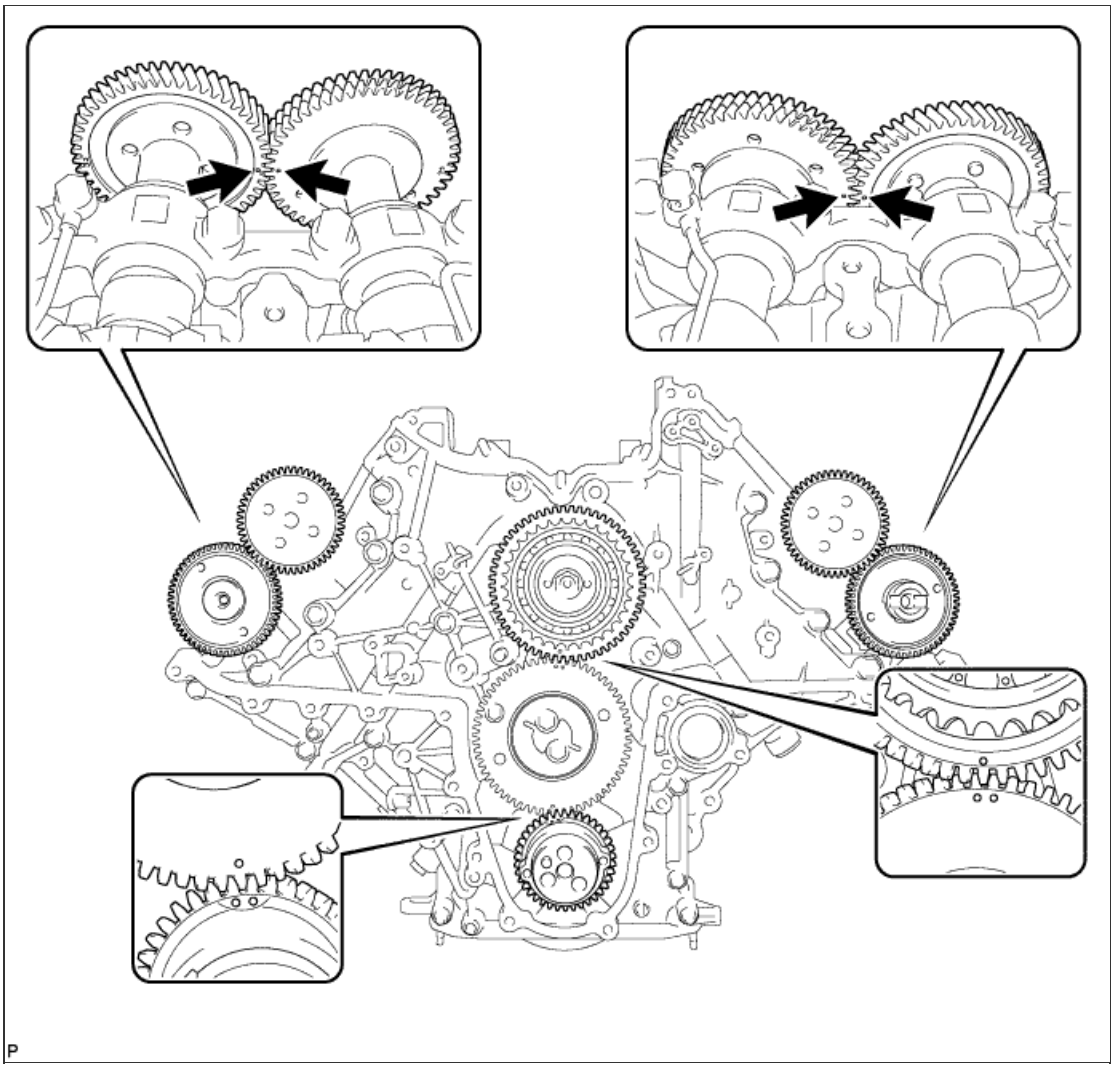
Torque:
47 N*m{ 479 kgf*cm , 35 ft.*lbf }

f. w/ Intercooler:
Remove the service bolt.



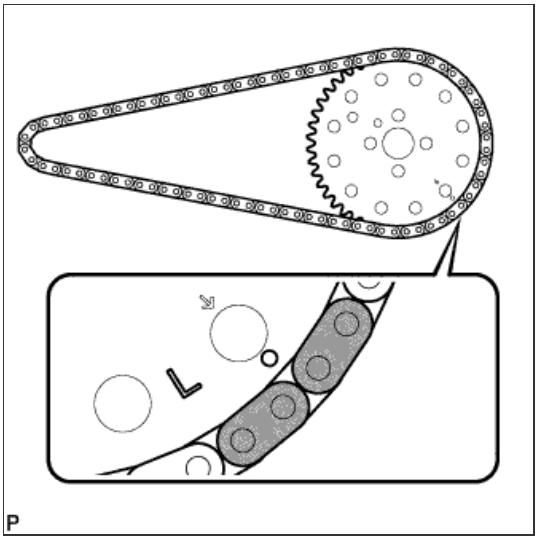
32. TIGHTEN FUEL SUPPLY PUMP DRIVE GEAR NUT

a. Using SST, hold the idle gear and tighten the nut.



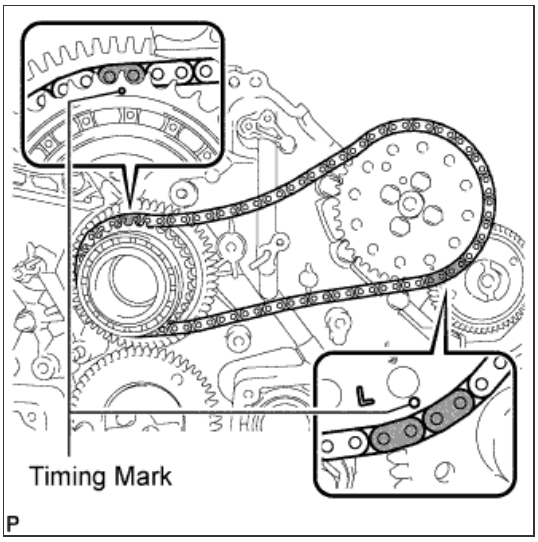
SST
09960-10010 (09962-01000, 09963-00700)

Torque:
68 N*m{ 693 kgf*cm , 50 ft.*lbf }



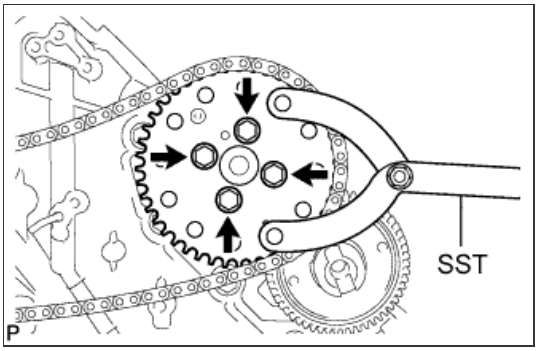
33. CHECK NO. 1 CYLINDER TO TDC/COMPRESSION

a. Check that the timing marks of the following pairs of parts are aligned: 1) supply pump drive gear and idle gear: 2) crankshaft timing gear and idle gear: 3) RH and LH camshaft timing gears.



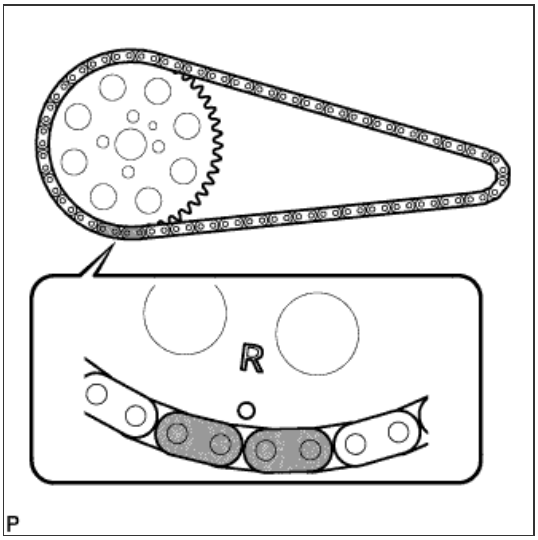
34. INSTALL NO. 2 CAMSHAFT TIMING SPROCKET AND NO. 2 TIMING CHAIN

a. Align the 2 mark plates (yellow) on the No. 2 timing chain with the timing mark (1 dot mark) of the No. 2 camshaft timing sprocket as shown in the illustration.



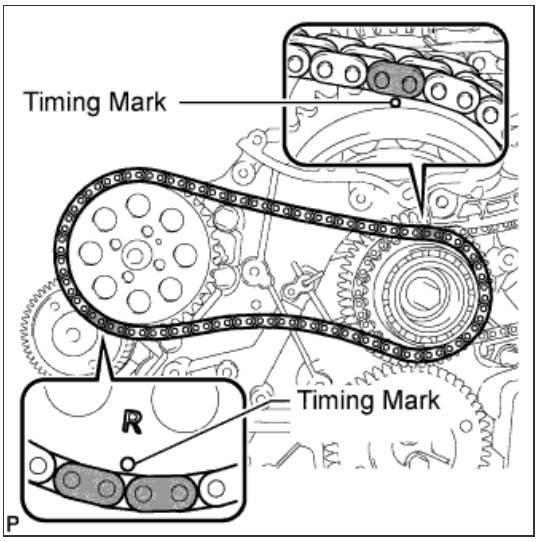
b. Align the No. 2 timing chain mark plate (yellow) with the supply pump drive gear timing mark, and temporarily install the No. 2 camshaft timing sprocket with the 4 bolts.

c. Using SST, hold the No. 2 camshaft timing sprocket, and tighten the 4 bolts.



SST
09960-10010 (09962-01000, 09963-01000)

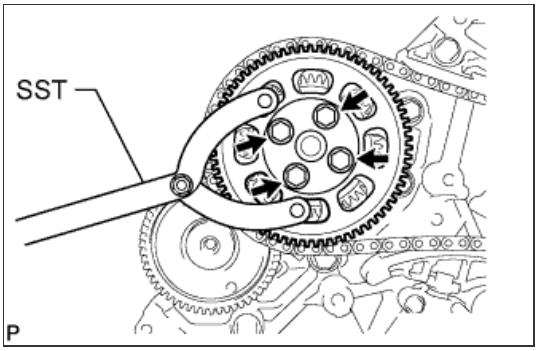
Torque:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }



35. INSTALL NO. 1 CAMSHAFT TIMING SPROCKET AND NO. 1 TIMING CHAIN

a. Align the 2 mark plates (yellow) on the No. 1 timing chain with the timing mark (1 dot mark) of the No. 1 camshaft timing sprocket as shown in the illustration.

b. Align the No. 1 timing chain mark plate (yellow) with the supply pump drive gear timing mark, and temporarily install the No. 1 camshaft timing sprocket.

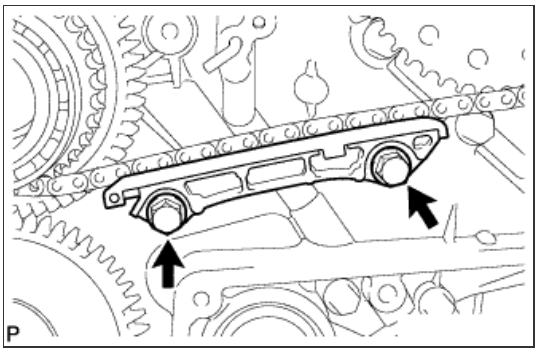


36. INSTALL PUMP DRIVE SHAFT GEAR

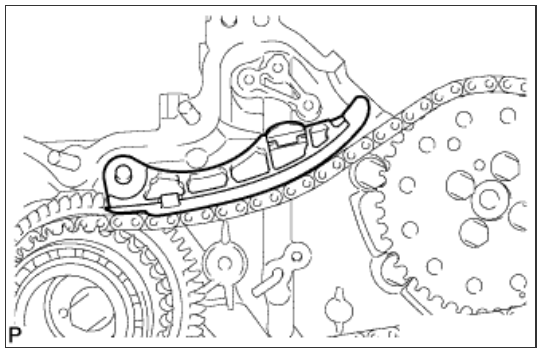
a. Temporarily install the pump drive shaft gear with the 4 bolts.

b. Using SST, hold the pump drive shaft gear and tighten the 4 bolts.

SST
09960-10010 (09962-01000, 09963-01000)



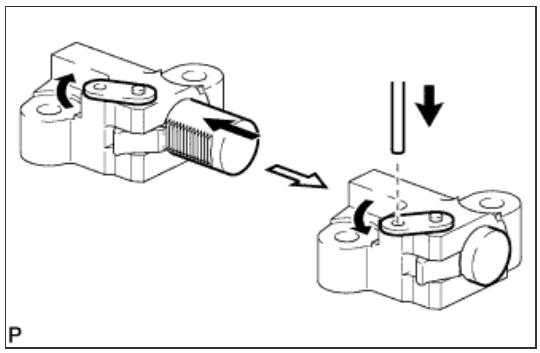
Torque:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }



37. INSTALL NO. 2 CHAIN VIBRATION DAMPER

a. Install the No. 2 chain vibration damper with the 2 bolts.

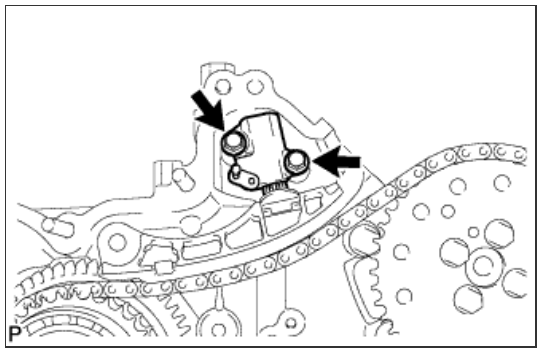
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



38. INSTALL NO. 2 CHAIN TENSIONER SLIPPER

39. INSTALL NO. 2 CHAIN TENSIONER ASSEMBLY

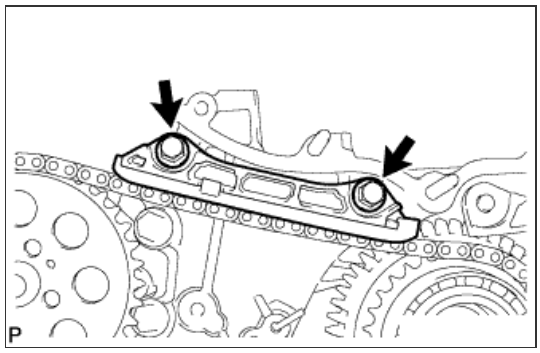
a. Move the stopper plate clockwise to release the lock, and push the plunger into the tensioner.



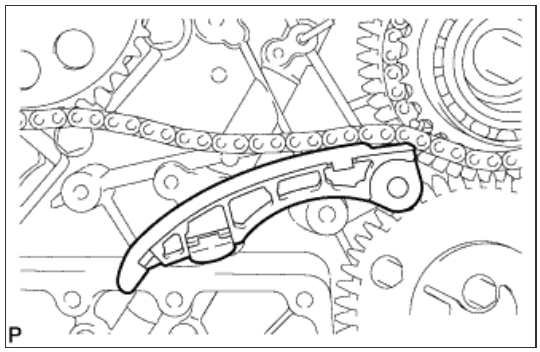
b. Move the stopper plate counterclockwise to set the lock, and insert a hexagon wrench into the stopper plate hole.

c. Install the No. 2 chain tensioner with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



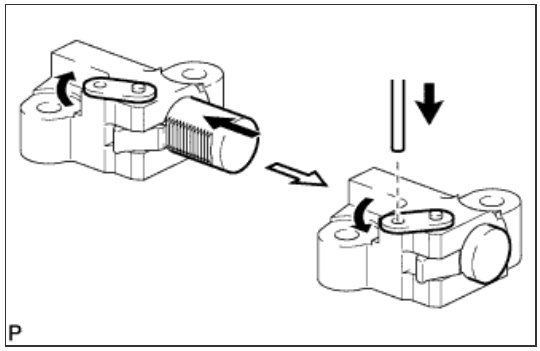
d. Remove the hexagon wrench.



40. INSTALL NO. 1 CHAIN VIBRATION DAMPER

a. Install the No. 1 chain vibration damper with the 2 bolts.

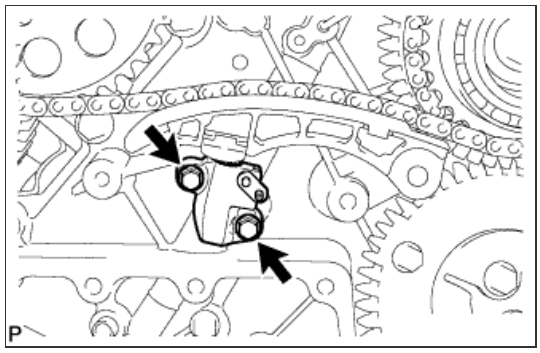
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



41. INSTALL NO. 1 CHAIN TENSIONER SLIPPER

42. INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY

a. Move the stopper plate clockwise to release the lock, and push the plunger into the tensioner.

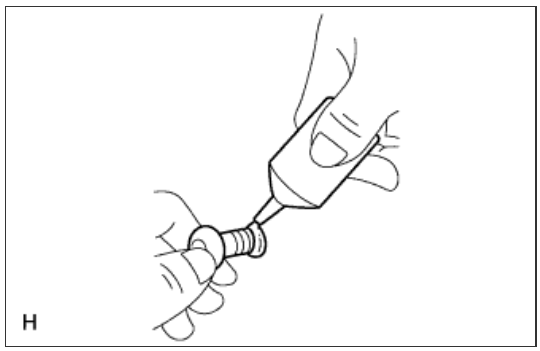


b. Move the stopper plate counterclockwise to set the lock, and insert a hexagon wrench into the stopper plate hole.

c. Install the No. 1 chain tensioner with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

d. Remove the hexagon wrench.

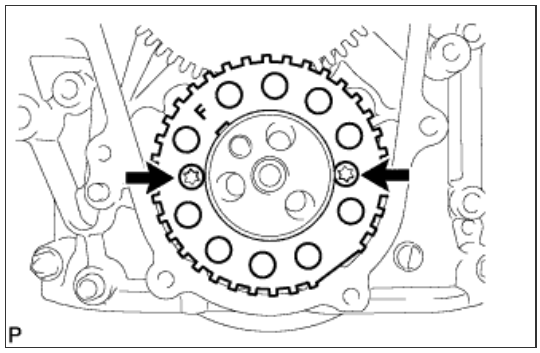


43. INSTALL NO. 1 CRANKSHAFT POSITION SENSOR PLATE

a. Remove the adhesive from the threads of the 2 screws and the bolt holes of the crankshaft.

b. Apply adhesive to 2 or 3 threads of the 2 screws.

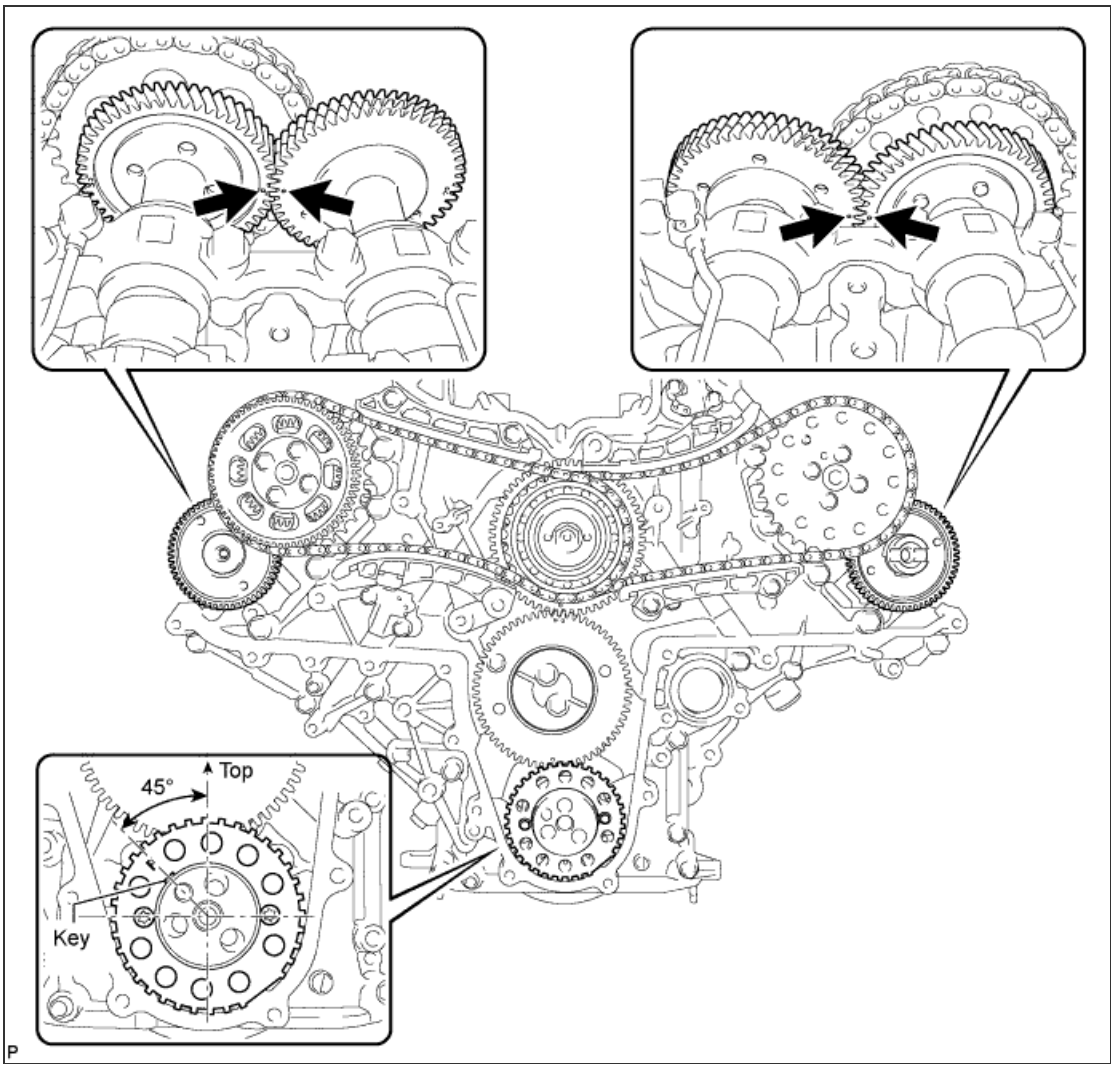
Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent



c. Using a T30 "TORX" wrench, install the No. 1 crankshaft position sensor plate with the 2 screws.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

NOTICE:

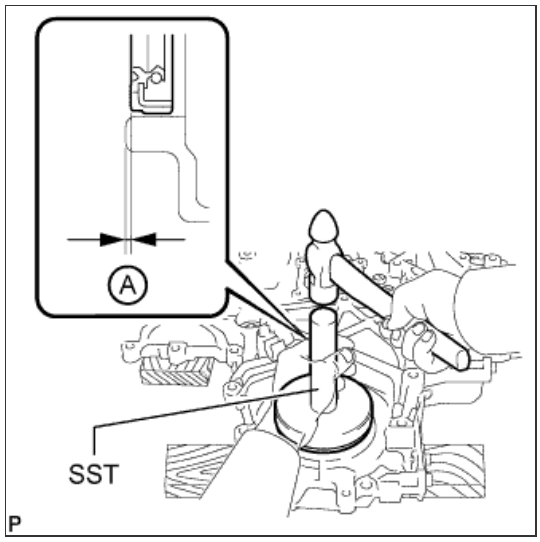


Make sure the "F" mark on the plate is facing towards the front side of the engine.

44. CHECK NO. 1 CYLINDER TO TDC/COMPRESSION

a. Temporarily install the 2 crankshaft pulley set bolts to the crankshaft.

b. Rotate the crankshaft 2 revolutions or more so that the crankshaft key is 45° counterclockwise from the top. Check that the timing marks (1 dot mark each) of the RH and LH camshaft timing gears align. If not as specified, turn the crankshaft 1 revolution (360°) and align the timing marks. If the timing marks are deviated, reinstall the chain and camshaft.

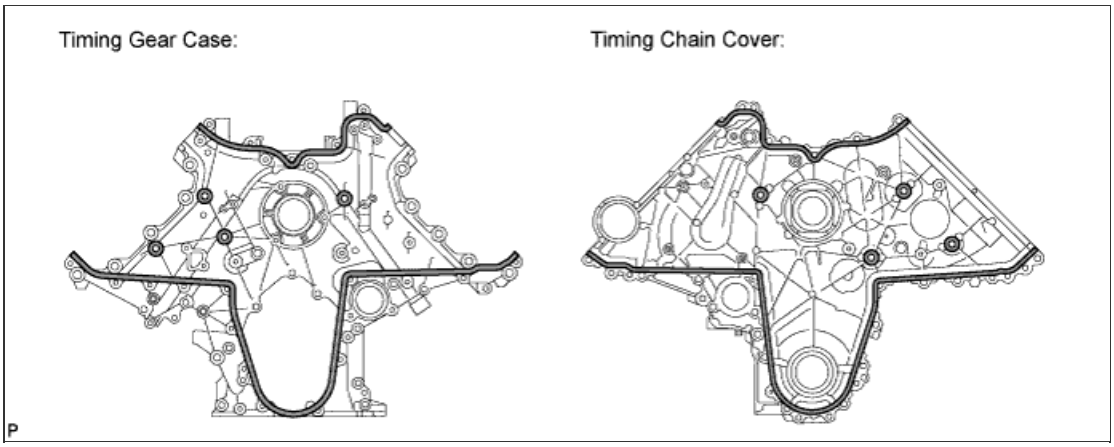


45. INSTALL FRONT CRANKSHAFT OIL SEAL

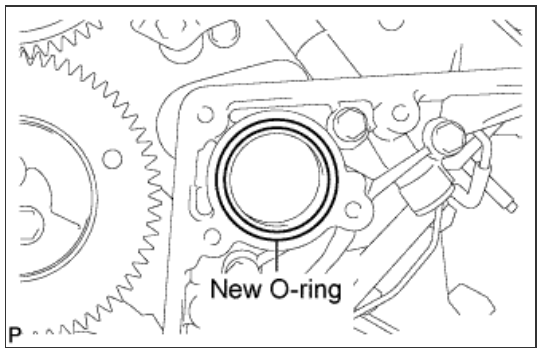
a. Place the timing chain cover on wooden blocks.

b. Using SST and a hammer, tap in a new oil seal as shown in the illustration.

SST
09316-12010
09950-70010 (09951-07100)
09950-60020 (09951-00890)



Standard depth A:
0.6 to 1.4 mm (0.0236 to 0.0551 in.)



46. INSTALL TIMING CHAIN COVER SUB-ASSEMBLY

NOTICE:

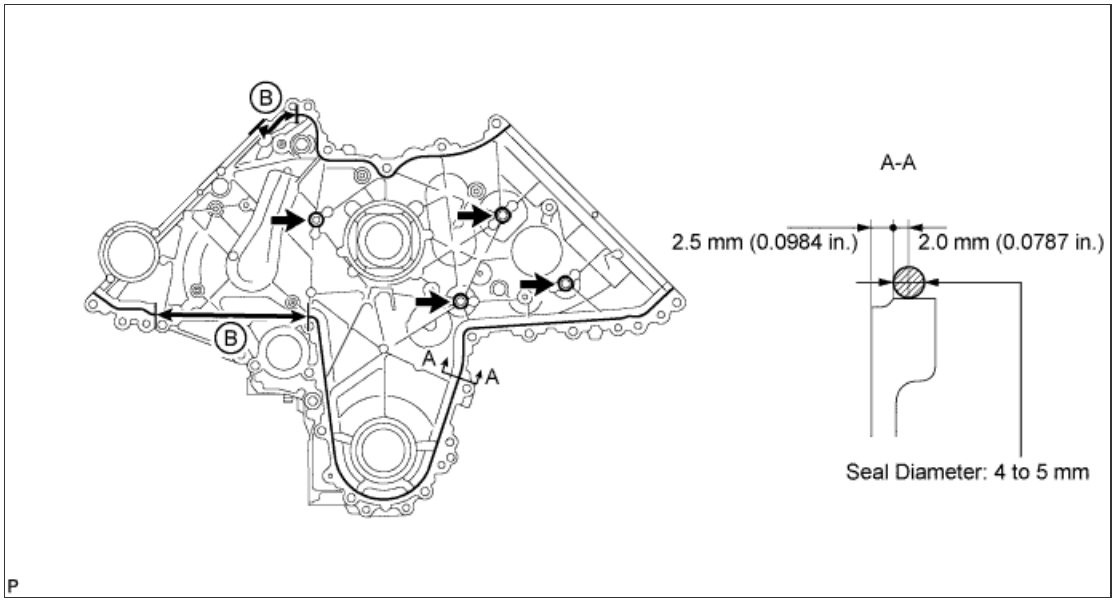
When the contact surfaces shown below are wet, wipe them with an oil-free cloth before applying seal packing.

a. Install a new O-ring to the timing gear case.

b. Apply seal packing to the timing chain cover as shown in the following illustration.

Standard seal diameter:
4 to 5 mm (0.157 to 0.197 in.)

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent



NOTICE:

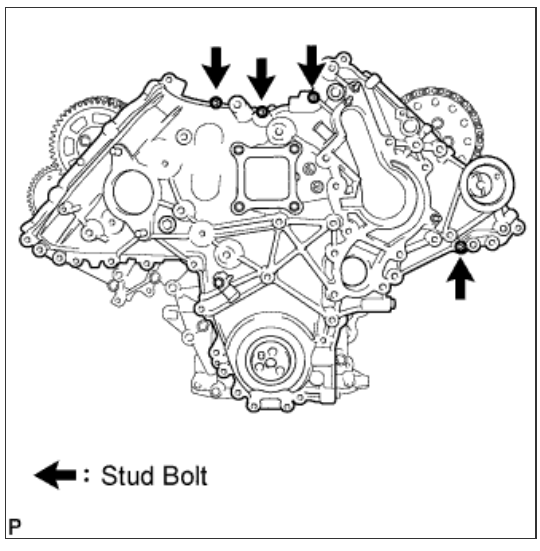
- **After applying seal packing, align the timing chain cover with the timing gear case within 3 minutes and tighten the bolts and nuts within 15 minutes.**

- Apply the seal packing in a continuous line.
- Make sure the seal packing does not become thinner than 4 mm (0.157 in.) at the areas labeled "B" in the illustration below.

HINT:

- The FIPG line is shown below.
- Apply packing to the 6 seal surface areas.

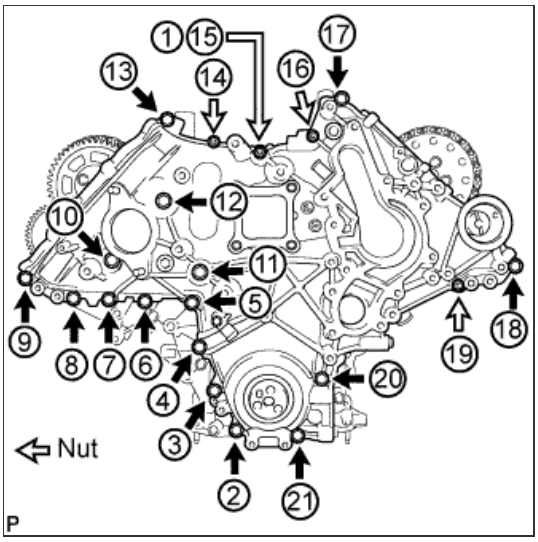
c. Apply engine oil to the lip of the oil seal.



d. Align and install the timing chain cover to the timing gear case knock pin and supply pump bearing.

NOTICE:

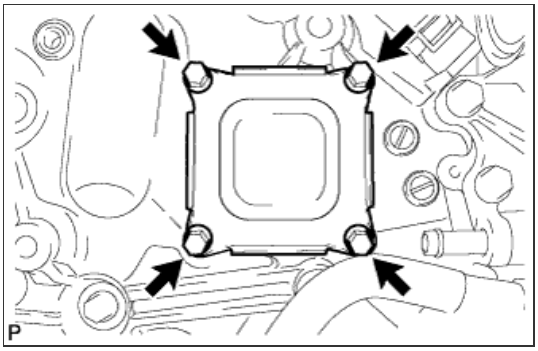
Make sure that the lip of the oil seal is properly installed.



e. If the stud bolts are loose, tighten them using an E7 "TORX" wrench.

Torque:
6.0 N*m{ 61 kgf*cm , 53 in.*lbf }

f. Install and uniformly tighten the 16 bolts and 4 nuts in the order shown in the illustration.

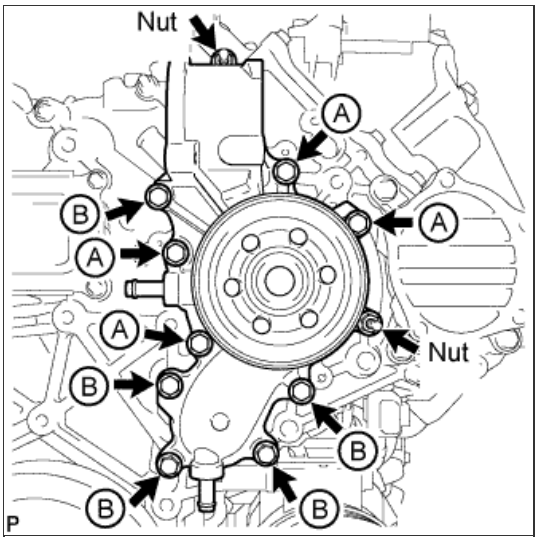


Torque:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }

47. INSTALL TIMING CHAIN COVER PLATE

a. Install a new gasket and the timing chain cover plate with the 4 bolts.

Torque:
9.1 N*m{ 93 kgf*cm , 81 in.*lbf }

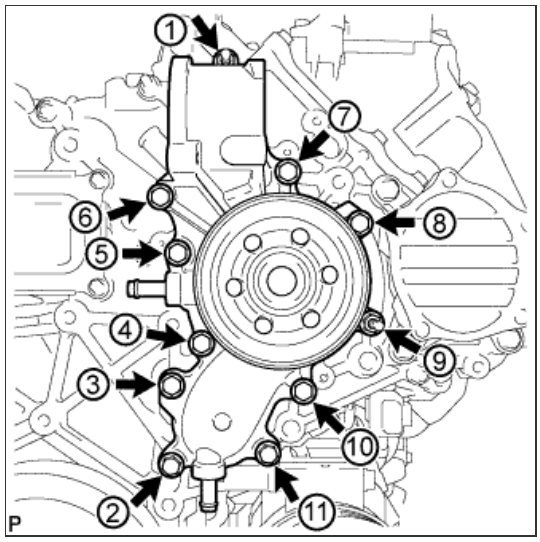


48. INSTALL WATER PUMP ASSEMBLY

a. Temporarily install a new gasket and the water pump with the 9 bolts and 2 nuts.

Bolt Length

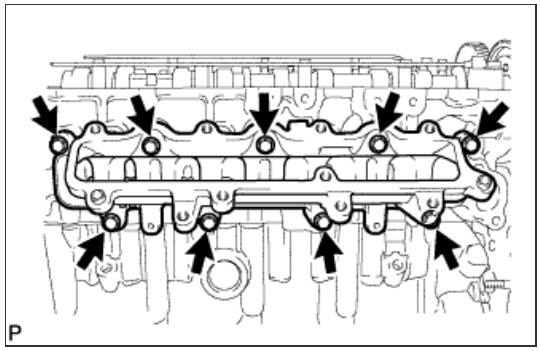
Item	Length
Bolt A	30 mm (1.18 in.)
Bolt B	80 mm (3.15 in.)



b. Uniformly tighten the 9 bolts and 2 nuts of the water pump in the order shown in the illustration.

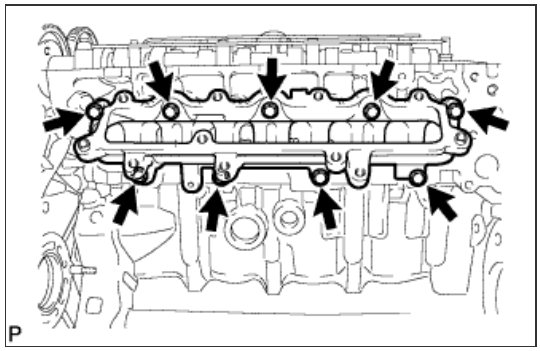
Torque:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }

NOTICE:



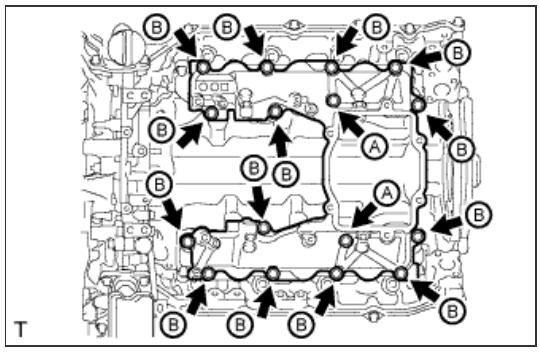
After installing all of the bolts and nuts, check that all of the bolts and nuts are

tightened to the torque specification.



49. TEMPORARILY INSTALL INTAKE MANIFOLD

a. Install the gasket and temporarily install the No. 2 intake manifold with the 9 bolts.

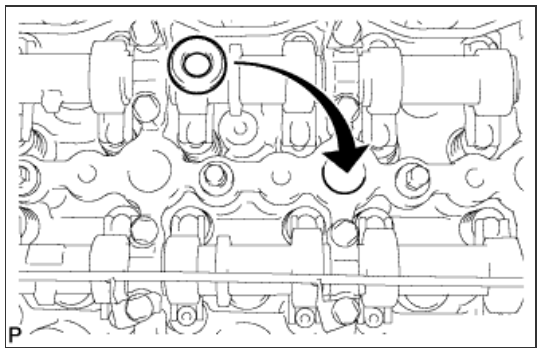


b. Install the gasket and temporarily install the No. 1 intake manifold with the 9 bolts.

c. Install the 2 gaskets and temporarily install the No. 3 intake manifold with the 16 bolts.

Bolt Length

Item	Length
Bolt A	70 mm (2.76 in.)
Bolt B	25 mm (0.984 in.)

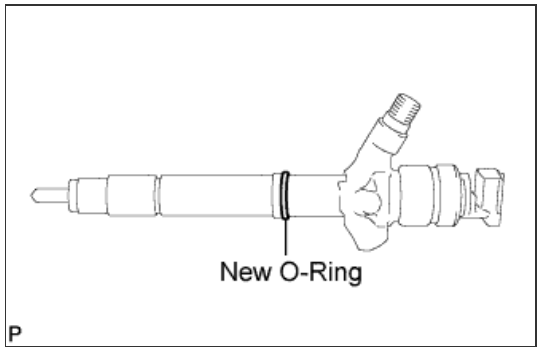


50. INSTALL FUEL INJECTOR LH

NOTICE:

Be sure to install the injector, holder clamp and bolt in their original positions.

a. Install 4 new injection nozzle seats to the cylinder head.



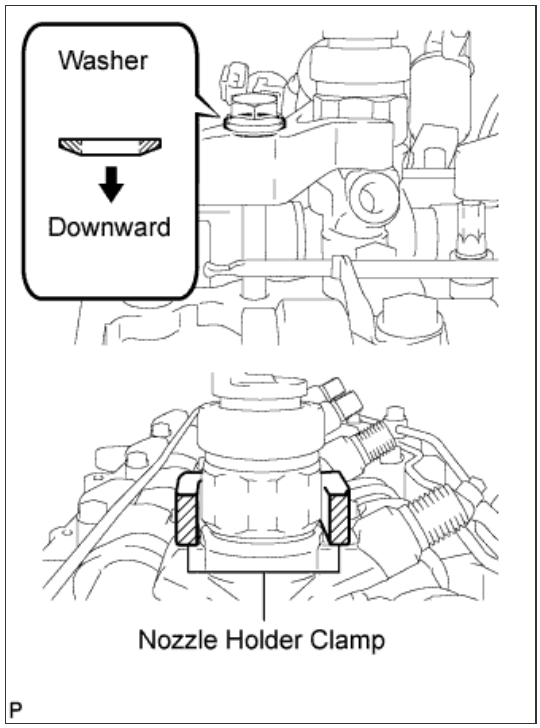
b. Apply a light coat of clean engine oil to 4 new O-rings.

c. Install an O-ring to each injector as shown in the illustration.

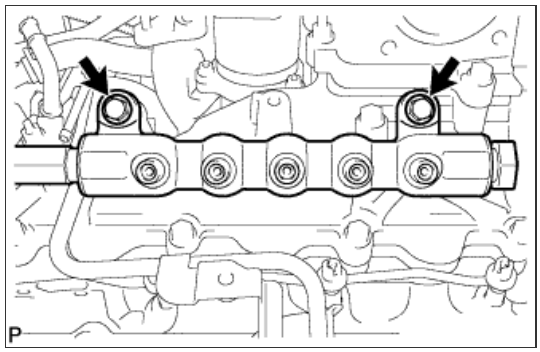
d. Insert the 4 injectors into the cylinder head.

NOTICE:

- **Insert the injector until it touches the nozzle seat surface.**
- **After installing the injector to the cylinder head, the O-ring may prevent the injector from fully seating. If so, pull out the injector and reinstall it.**
- **Always return an injector to the same place it was removed from.**

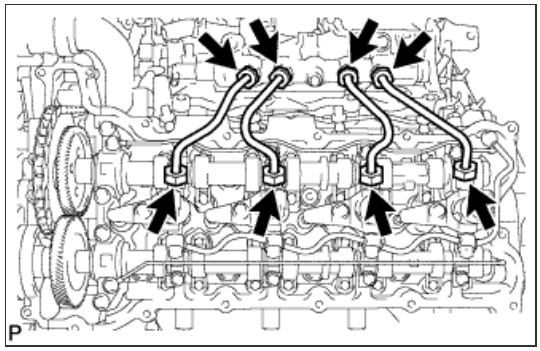


e. For an injector that has been replaced with a new injector, register the new injector compensation code.



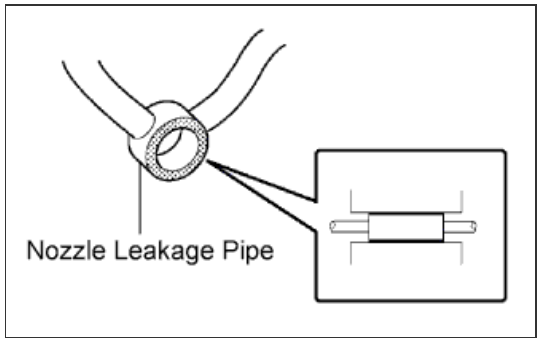
f. Temporarily install 4 new washers and the 4 nozzle clamps with the 4 clamp bolts.

NOTICE:



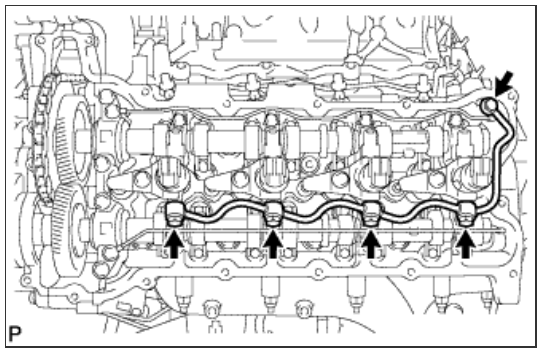
- **The fork portion of the nozzle holder clamp must be set to the injector.**
- **Before tightening the bolts, check that the nozzle holder clamps are set properly.**
- **To tighten the clamp bolts, first tighten them by hand until they cannot be turned further. Then, tighten the bolts to the specified torque in a later step.**
- **When tightening the bolts, pay attention not to tilt the bolt and clamp.**
- **Do not reuse the washer.**

g. Temporarily install the common rail LH with the 2 bolts.



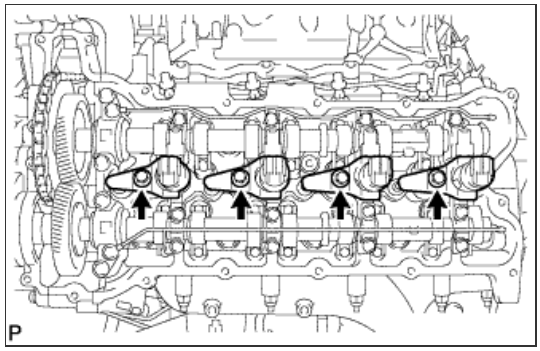
h. Temporarily install the 4 new injector pipes to the common rail and injectors.

i. Check the nozzle leakage pipe. Check that there are no scratches or dents on the 5 union seal surfaces. If scratches or dents are present, replace the nozzle leakage pipe.



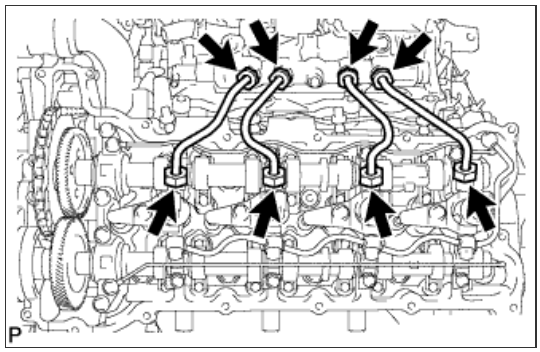
j. Set the leakage pipe and 5 new gaskets in place.

k. Temporarily install the leakage pipe with the 4 hollow screws and union bolt.

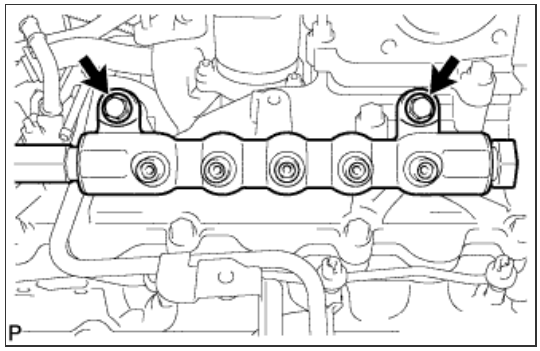


HINT:

To position the injectors, loosely tighten the 4 hollow screws and union bolt.



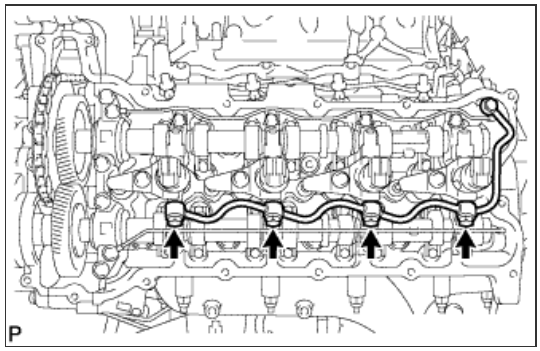
l. Tighten the 4 holder clamp bolts.



Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf }

m. Remove the 4 injection pipes.

n. Remove the 2 bolts and common rail LH.

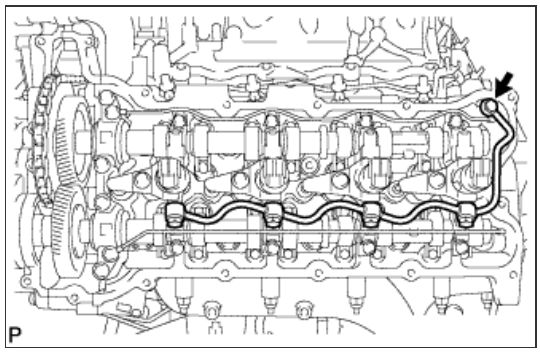


o. Tighten the 4 hollow screws.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

NOTICE:

If a hollow screw is accidentally tightened beyond the torque specification, it must be replaced.

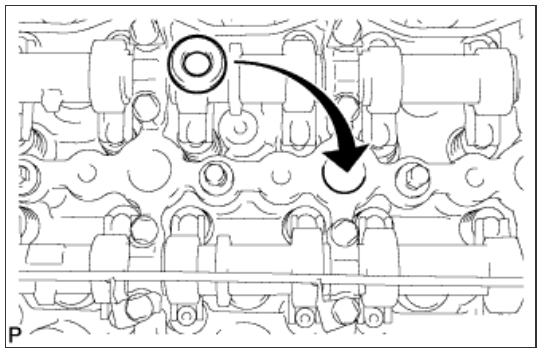


p. Tighten the union bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

NOTICE:

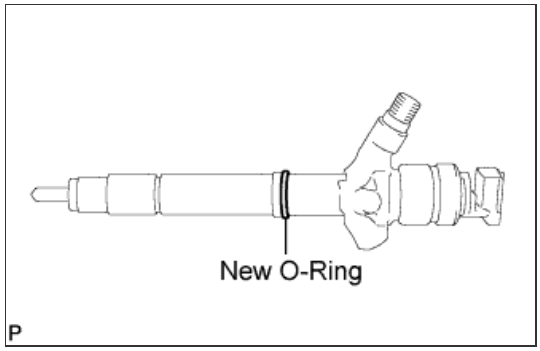
If the union bolt is accidentally tightened beyond the torque specification, it must be replaced.



51. INSTALL FUEL INJECTOR RH

NOTICE:

Be sure to install the injector, holder clamp and bolt in their original positions.



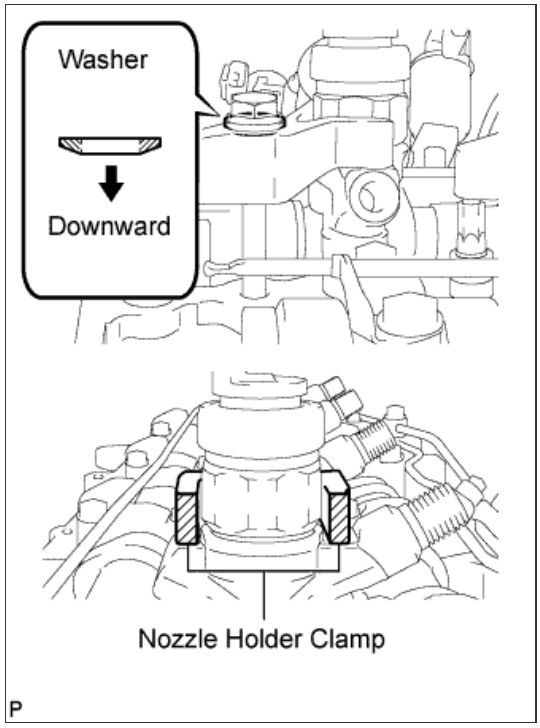
a. Install 4 new injection nozzle seats to the cylinder head.

b. Apply a light coat of clean engine oil to 4 new O-rings.

c. Install an O-ring to each injector as shown in the illustration.

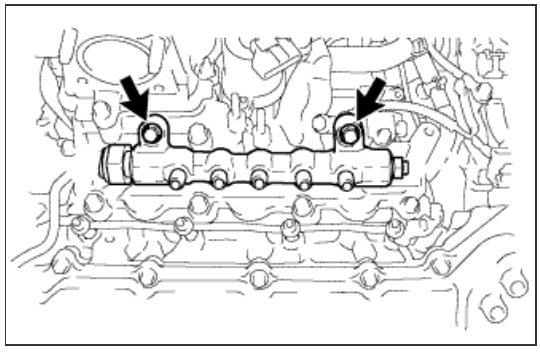
d. Insert the 4 injectors into the cylinder head.

NOTICE:



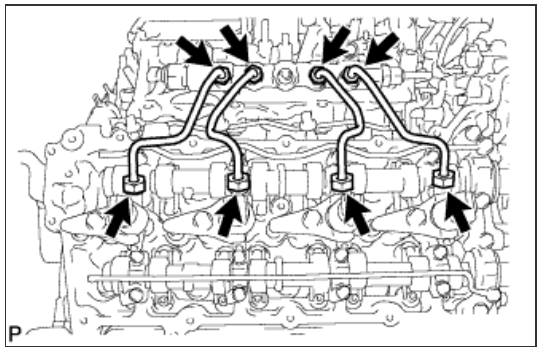
- **Insert the injector until it touches the nozzle seat surface.**
- **After installing the injector to the cylinder head, the O-ring may prevent the injector from fully seating. If so, pull out the injector and reinstall it.**
- **Always return an injector to the same place it was removed from.**

e. For an injector that has been replaced with a new injector, register the injector compensation code.



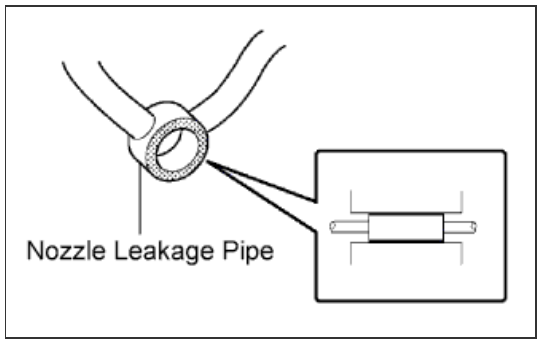
f. Temporarily install 4 new washers and the 4 nozzle clamps with the 4 clamp bolts.

NOTICE:



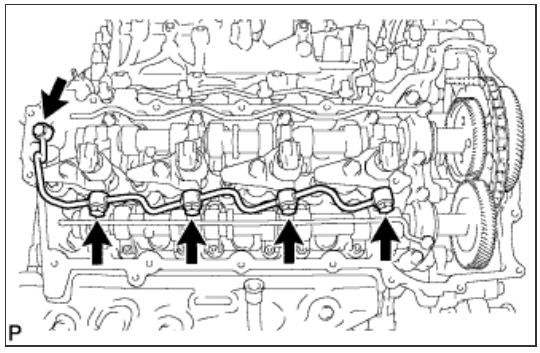
- **The fork portion of the nozzle holder clamp must be set to the injector.**
- **Before tightening the bolts, check that the nozzle holder clamp is set properly.**
- **To tighten the clamp bolts, first tighten them by hand until they cannot be turned further. Then, tighten the bolts to the specified torque in a later step.**
- **When tightening the bolts, pay attention not to tilt the bolt and clamp.**
- **Do not reuse the washer.**

g. Temporarily install the common rail RH with the 2 bolts.



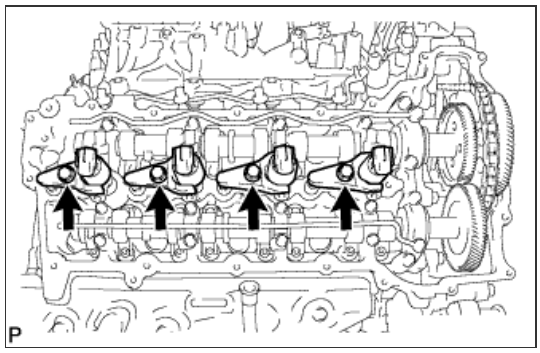
h. Temporarily install the 4 new injector pipes to the common rail and injectors.

i. Check the nozzle leakage pipe. Check that there are no scratches or dents on the 5 union seal surfaces. If scratches or dents are present, replace the nozzle leakage pipe.



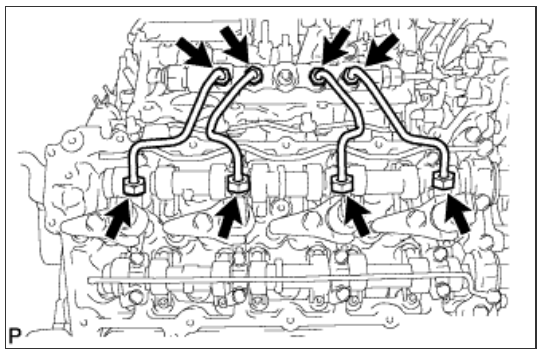
j. Set the leakage pipe and 5 new gaskets in place.

k. Temporarily install the leakage pipe with the 4 hollow screws and union bolt.

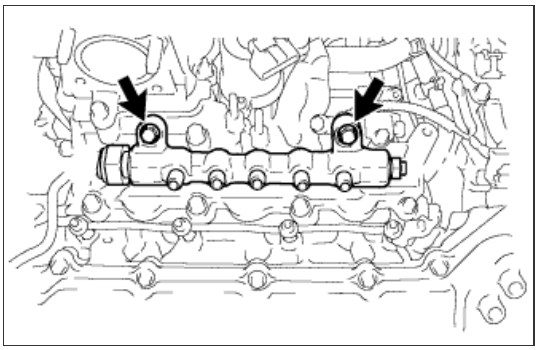


HINT:

To position the injectors, loosely tighten the 4 hollow screws and union bolt.



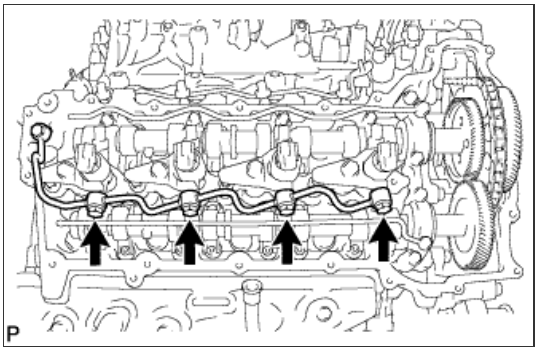
l. Tighten the 4 holder clamp bolts.



Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf }

m. Remove the 4 injection pipes.

n. Remove the 2 bolts and common rail RH.

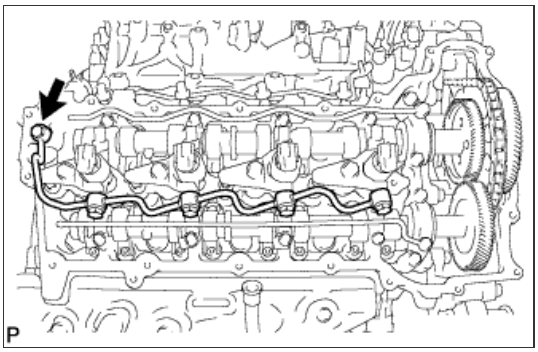


o. Tighten the 4 hollow screws.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

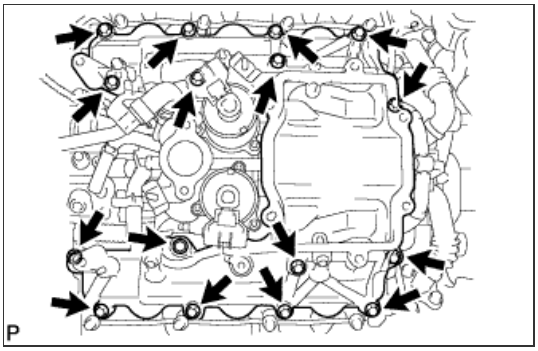
NOTICE:

If a hollow screw is accidentally tightened beyond the torque specification, it must be replaced.



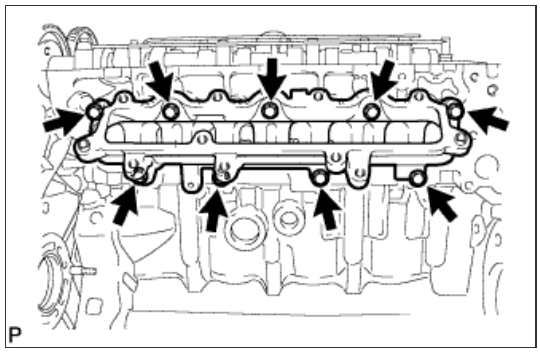
p. Tighten the union bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

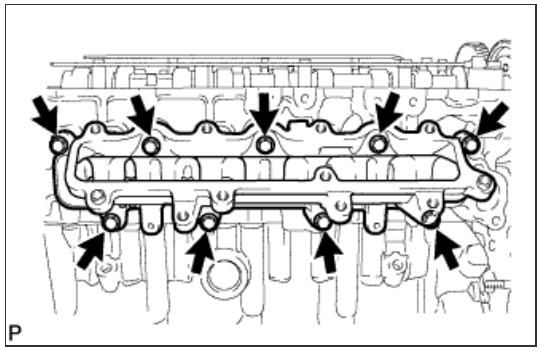


NOTICE:

If the union bolt is accidentally tightened beyond the torque specification, it must be replaced.



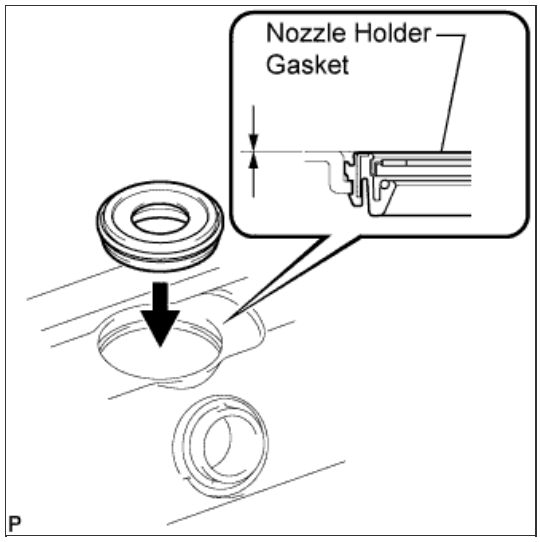
52. REMOVE INTAKE MANIFOLD



a. Remove the 16 bolts, 2 gaskets and intake manifold.

b. Remove the 9 bolts, No. 1 intake manifold and gasket.

c. Remove the 9 bolts, No. 2 intake manifold and gasket.



53. INSTALL NOZZLE HOLDER GASKET LH

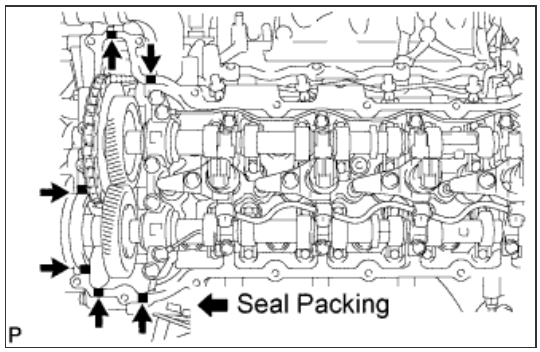
a. Press 4 new nozzle holder gaskets into the cylinder head cover LH.

NOTICE:

After installing the nozzle holder gasket, check that it dose not protrude from the cylinder head cover.

54. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY LH

a. Apply seal packing as shown in the illustration.



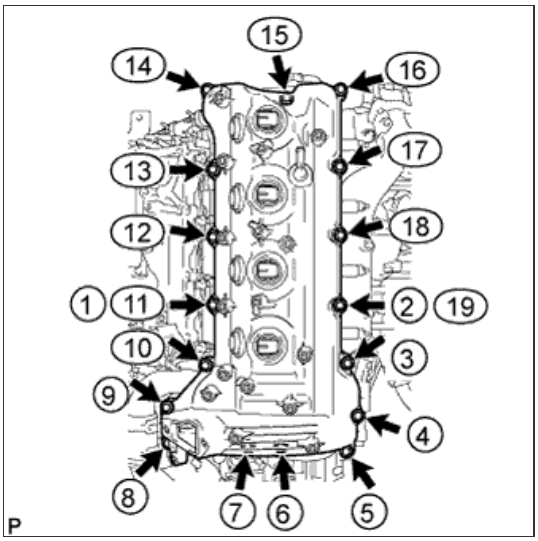
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**

b. Install a new gasket to the cylinder head cover.

NOTICE:



Remove any oil from the contact surface.

c. Temporarily install the cylinder head cover with the 17 bolts. Tighten the 17 bolts in the order shown in the illustration.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

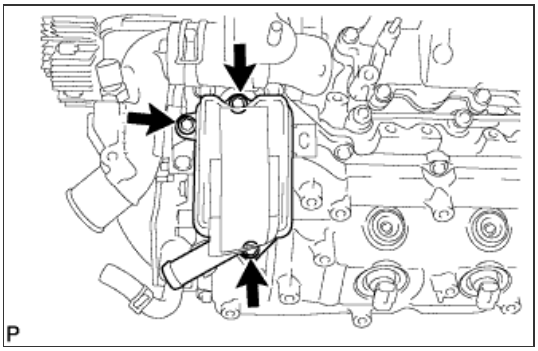
HINT:

After tightening the bolts, check that the bolts at step 11 and 19 are tightened to the specified torque.

55. INSTALL NOZZLE HOLDER SEAL LH

a. Press 4 new holder seals into the cylinder head cover LH.

56. INSTALL OIL SEPARATOR ASSEMBLY



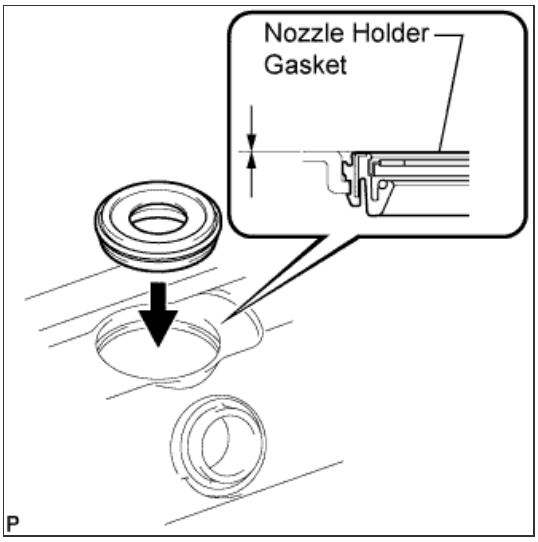
a. Install a new gasket to the oil separator.

NOTICE:

Remove any oil from the contact surface.

b. Install the oil separator with the 3 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

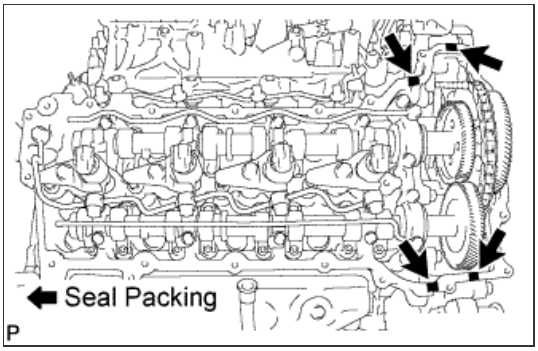


57. INSTALL NOZZLE HOLDER GASKET RH

a. Press 4 new nozzle holder gaskets into the cylinder head cover RH.

NOTICE:

After installing the nozzle holder gasket, check that it dose not protrude from the cylinder head cover.



58. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY RH

a. Apply seal packing as shown in the illustration.

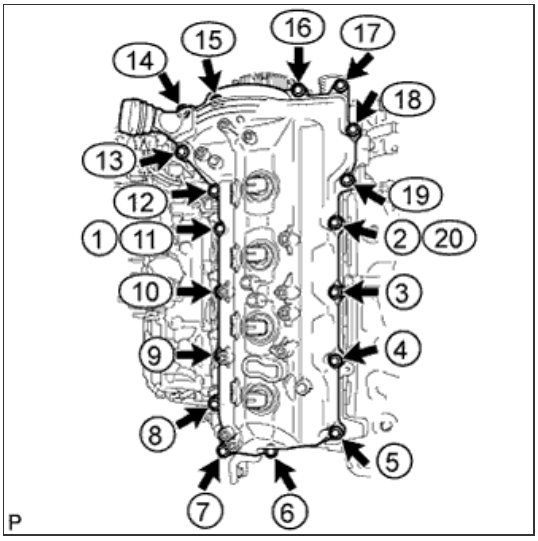
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**

b. Install a new gasket to the cylinder head cover.

NOTICE:



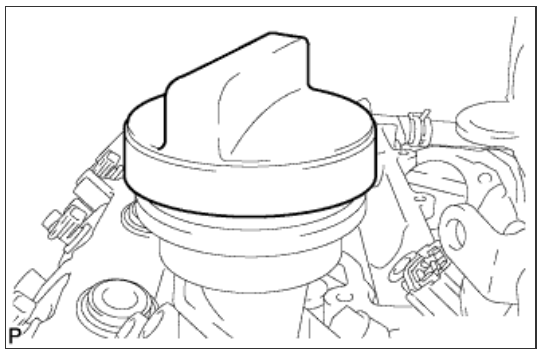
Remove any oil from the contact surface.

c. Temporarily install the cylinder head cover with the 18 bolts. Tighten the 18 bolts in the order shown in the illustration.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

HINT:

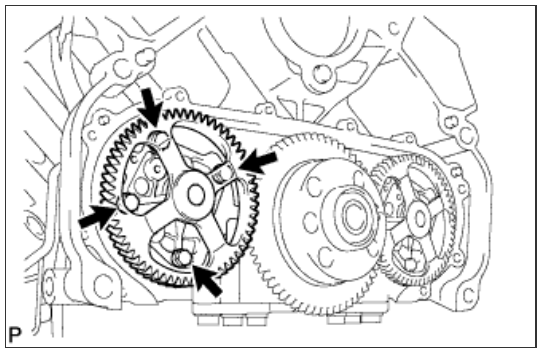
After tightening the bolts, check that the bolts at step 11 and 20 are tightened to the specified torque.



59. INSTALL NOZZLE HOLDER SEAL RH

a. Press 4 new holder seals into the cylinder head cover RH.

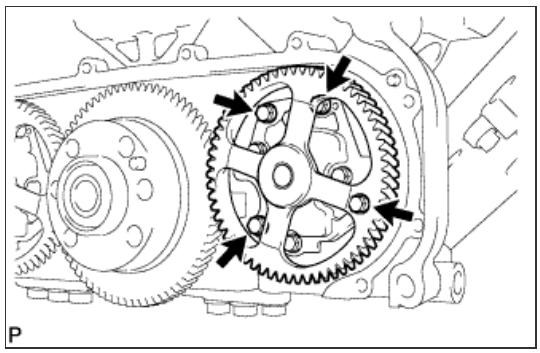
60. INSTALL OIL FILLER CAP GASKET



61. INSTALL OIL FILLER CAP SUB-ASSEMBLY

62. INSTALL SCAVENGING PUMP ASSEMBLY

a. Install the scavenging pump with the 4 bolts.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

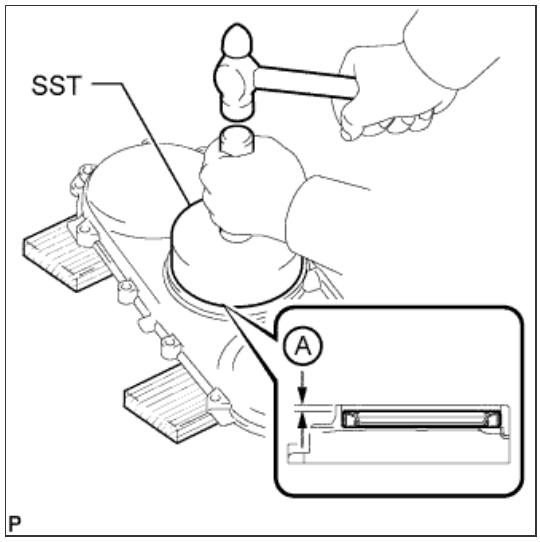
63. INSTALL OIL PUMP ASSEMBLY

a. Install the oil pump with the 4 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

64. INSTALL REAR CRANKSHAFT OIL SEAL

a. Place the oil seal retainer on wooden blocks.

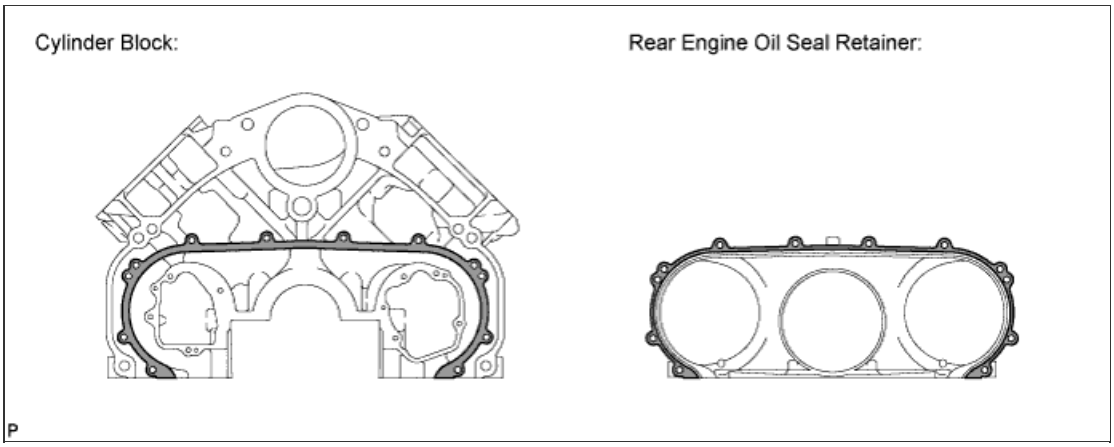


b. Using SST and a hammer, tap in a new oil seal as shown in the illustration.

SST
09223-56010

Standard depth A:
2.7 to 3.7 mm (0.106 to 0.147 in.)

NOTICE:

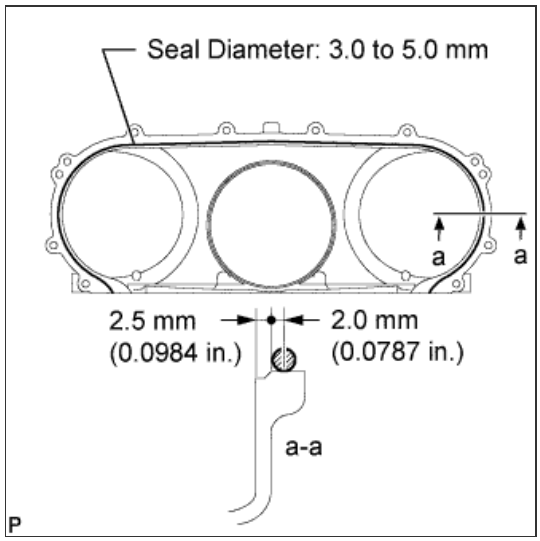


- **Keep the lip free from foreign matter.**
- **Do not tap on the seal at an angle.**

65. INSTALL REAR ENGINE OIL SEAL RETAINER

NOTICE:

When the contact surfaces shown below are wet, wipe them with an oil-free cloth before applying seal packing.



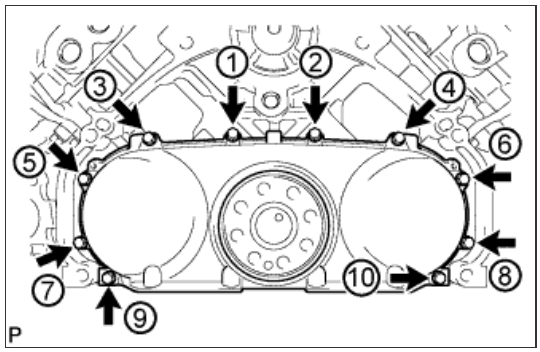
a. Apply seal packing in a continuous line as shown in the illustration.

Seal diameter:
3.0 to 5.0 mm (0.118 to 0.197 in.)

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the rear engine oil seal retainer within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after installation.**

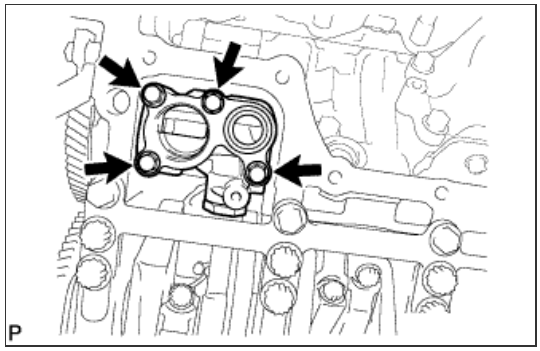


b. Apply engine oil to the lip of a new oil seal.

c. Install and uniformly tighten the 10 bolts in the order shown in the illustration.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

NOTICE:

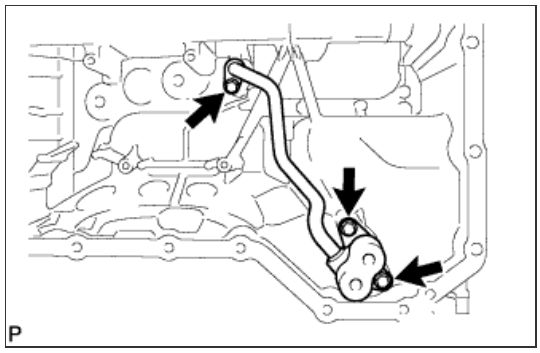


- **Make sure that the lip of the oil seal is properly installed.**
- **When installing the oil seal retainer, make sure the lip of the oil seal is not damaged.**
- **When installing the oil seal retainer, make sure the lip of the oil seal is not folded incorrectly.**

66. INSTALL OIL REGULATOR ASSEMBLY

a. Install the oil regulator with the 4 bolts.

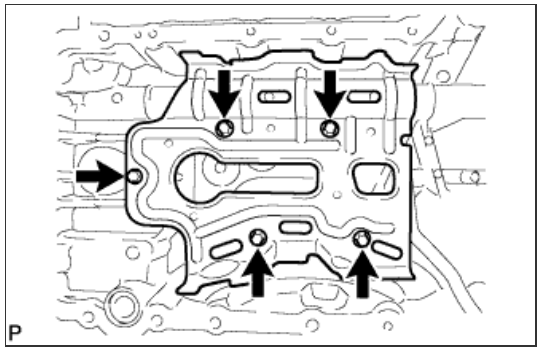
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



67. INSTALL INLET OIL PUMP PIPE

a. Apply a light coat of engine oil to a new O-ring, and install it to the inlet oil pump pipe.

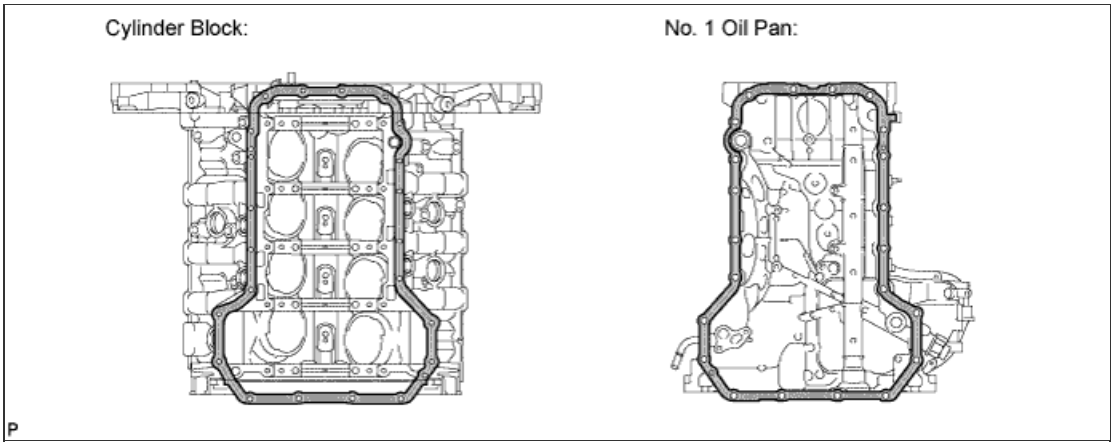
b. Install the inlet oil pump pipe with the 3 bolts.



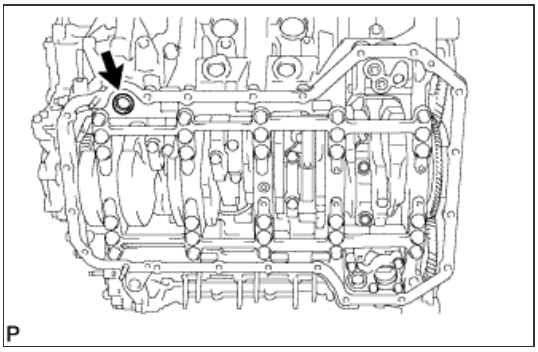
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

68. INSTALL NO. 1 OIL PAN BAFFLE PLATE

a. Install the No. 1 oil pan baffle plate with the 5 bolts.

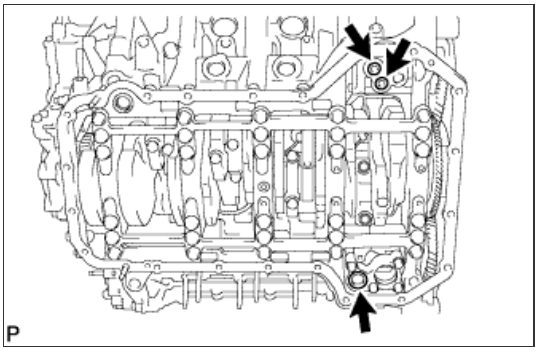


Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



69. INSTALL NO. 1 OIL PAN SUB-ASSEMBLY

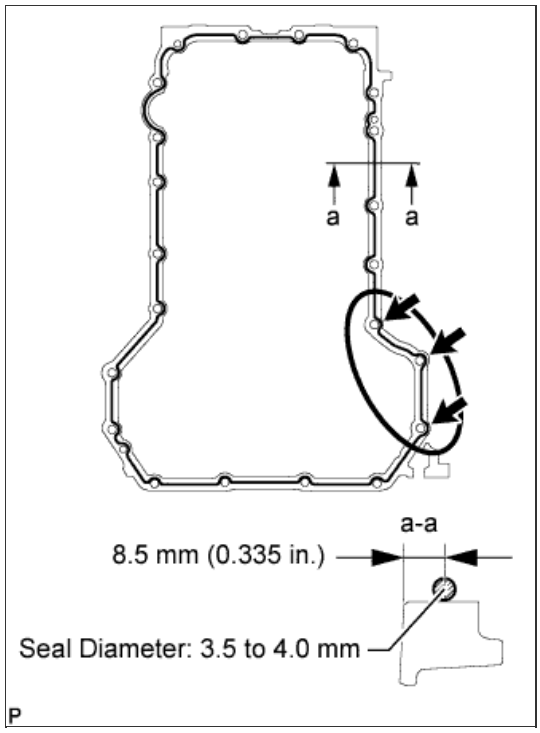
NOTICE:



When the contact surfaces shown below are wet, wipe them with an oil-free cloth before applying seal packing.

a. Install the cylinder block oil hole gasket.

b. Apply a light coat of engine oil to 3 new O-rings and set the 3 O-rings to the oil regulator and scavenging pump.



c. Apply seal packing to the No. 1 oil pan as shown in the illustration.

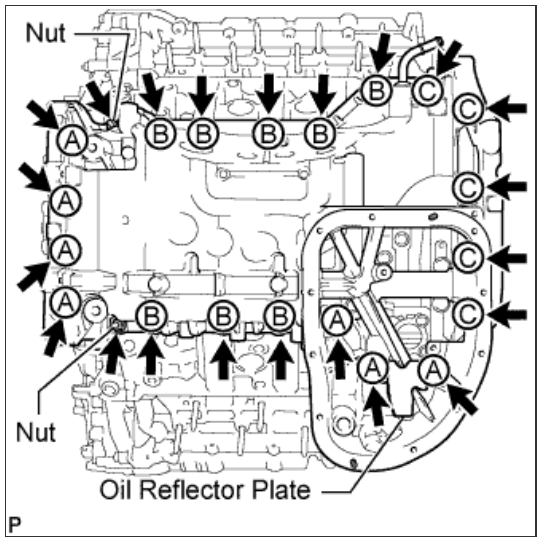
Standard seal diameter:
3.5 to 4.0 mm (0.134 to 0.157 in.)

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

NOTICE:

- **For the 3 bolt holes labeled with arrows, apply the seal packing on the outer edges. For the other bolt holes, apply the seal packing on the inner edges.**
- **Make sure to apply a continuous bead of seal packing as shown in the illustration. If the bead breaks, overlap 3 mm (0.118 in.) of seal packing and continue the bead.**
- **Install the No. 1 oil pan within 3 minutes and tighten the bolts and nuts within 15 minutes after applying seal packing.**
- **Remove any oil and old seal packing from the contact surface.**
- **Do not start the engine for at least 2 hours after installation.**

d. Install the No. 1 oil pan and oil reflector plate with the 20 bolts and 2 nuts.



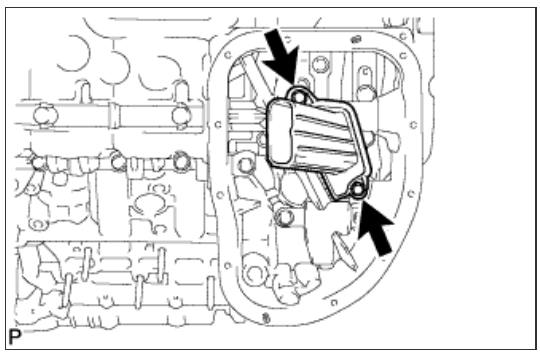
NOTICE:

If the oil reflector plate is deformed, replace it.

Torque:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }

Bolt Length

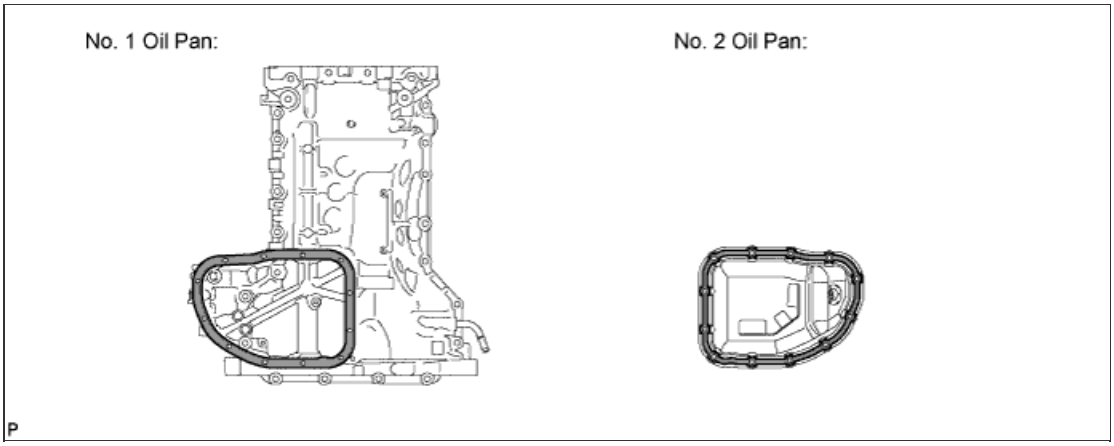
Item	Quantity	Length
Bolt A	7	70 mm (2.76 in.)
Bolt B	8	20 mm (0.787 in.)
Bolt C	5	30 mm (1.18 in.)



70. INSTALL OIL STRAINER SUB-ASSEMBLY

a. Apply a light coat of engine oil to a new O-ring, and install it to the oil strainer.

b. Install the oil strainer with the 2 bolts.

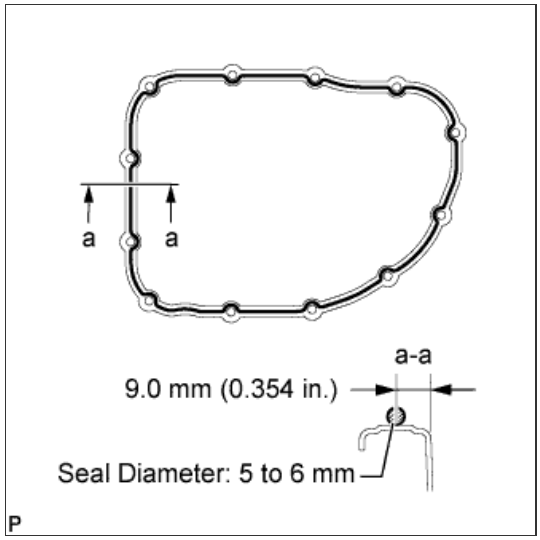


Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

71. INSTALL NO. 2 OIL PAN SUB-ASSEMBLY

NOTICE:

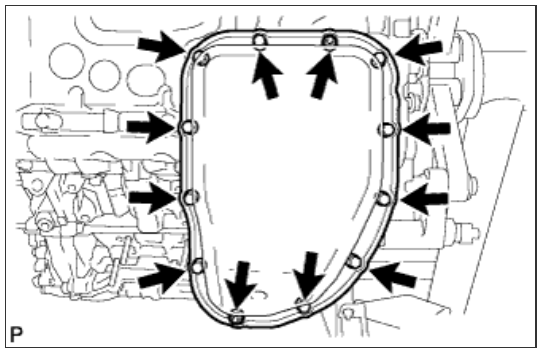
When the contact surfaces shown below are wet, wipe them with an oil-free cloth before applying seal packing.



a. Apply seal packing to the No. 2 oil pan as shown in the illustration.

Standard seal diameter:
5 to 6 mm (0.197 to 0.236 in.)

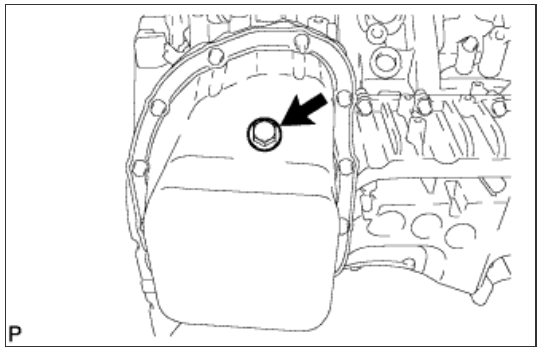
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent



NOTICE:

- **For the bolt and pin holes, make sure to apply seal packing to the inner sides.**
- **Make sure to apply a continuous bead of seal packing as shown in the illustration. If the bead breaks, overlap 3 mm (0.118 in.) of seal packing and continue the bead.**
- **Install the No. 2 oil pan within 3 minutes and tighten the bolts and nuts within 15 minutes after applying seal packing.**
- **Remove any oil from the contact surface.**
- **Do not start the engine for at least 2 hours after installation.**

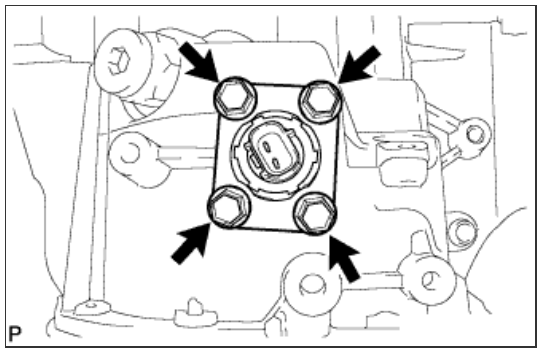
b. Install the No. 2 oil pan with the 10 bolts and 2 nuts.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

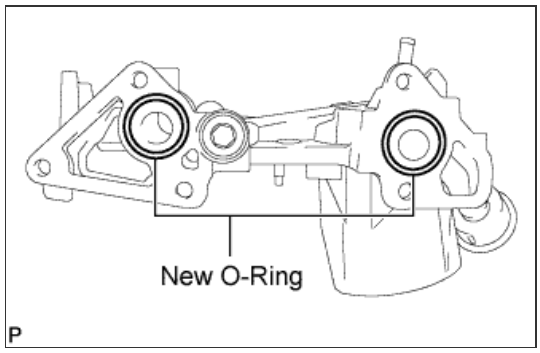
72. INSTALL OIL PAN DRAIN PLUG

a. Install a new gasket and the oil pan drain plug.



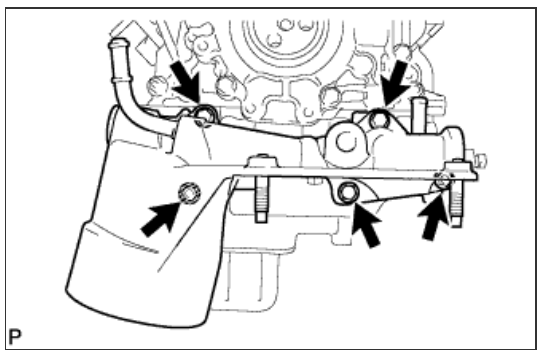
Torque:
38 N*m{ 387 kgf*cm , 28 ft.*lbf }

73. INSTALL ENGINE OIL LEVEL SENSOR



a. Install a new gasket and the engine oil level sensor with the 4 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



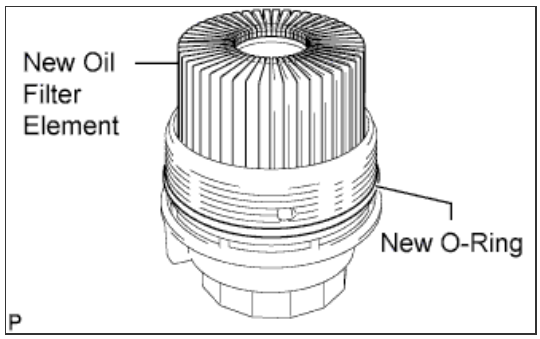
74. INSTALL OIL FILTER BRACKET SUB-ASSEMBLY

a. Apply a light coat of engine oil to 2 new O-rings, and set them to the oil filter bracket.

b. Install the oil filter bracket with the 3 bolts and 2 nuts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

75. INSTALL OIL FILTER ELEMENT



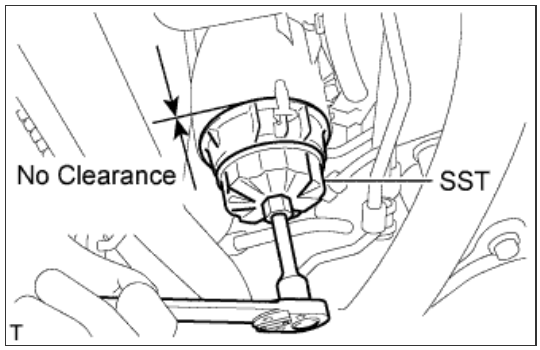
a. Clean the inside of the oil filter cap, its threads and its O-ring groove.

b. Apply a small amount of engine oil to a new O-ring and install it to the oil filter cap.

c. Set a new oil filter element in the oil filter cap.

d. Remove any dirt or foreign matter from the installation surface of the engine.

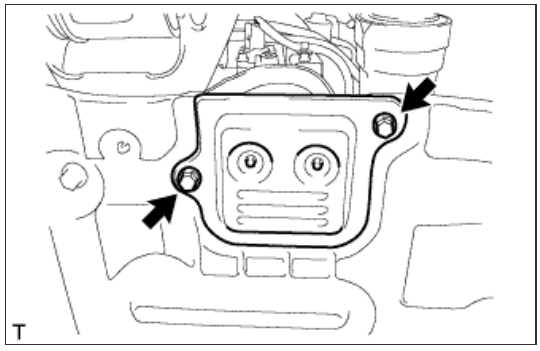
e. Apply a small amount of engine oil to the O-ring again and temporarily install the oil filter cap by hand.



f. Using SST, tighten the oil filter cap.

SST
09228-06501

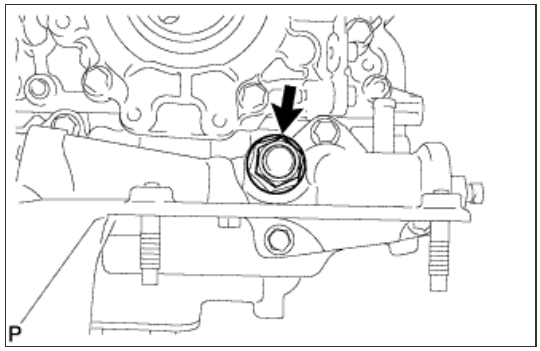
Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf }



NOTICE:

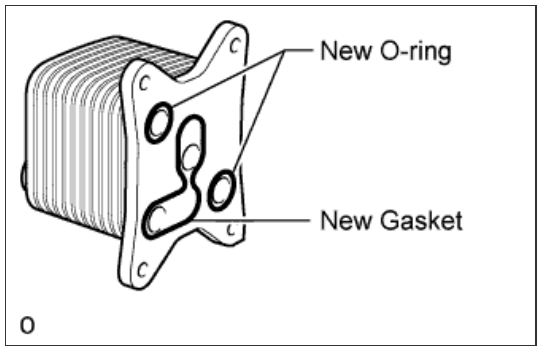
- **Make sure that the oil filter is installed securely as shown in the illustration.**
- **Be careful that the O-ring does not get caught between any surrounding parts.**

g. Install the No. 2 engine under cover seal to the No. 2 engine under cover with the 2 bolts.



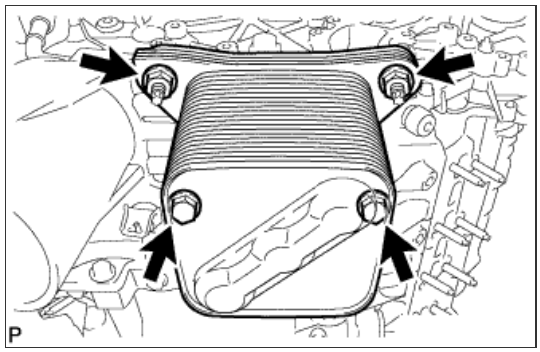
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

76. INSTALL OIL COOLER RELIEF VALVE ASSEMBLY



a. Install a new gasket and the oil cooler relief valve.

Torque:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }

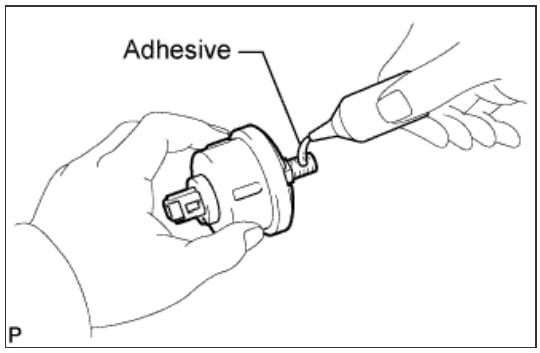


77. INSTALL OIL COOLER ASSEMBLY

a. Apply a light coat of engine oil to 2 new O-rings and a new oil cooler gasket, and install them to the oil cooler.

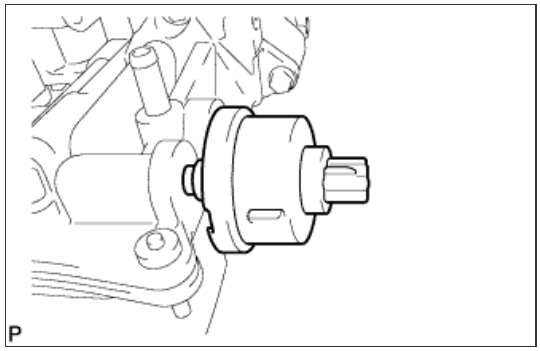
b. Install the oil cooler with the 2 bolts and 2 nuts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



78. INSTALL OIL PRESSURE SENDER GAUGE ASSEMBLY

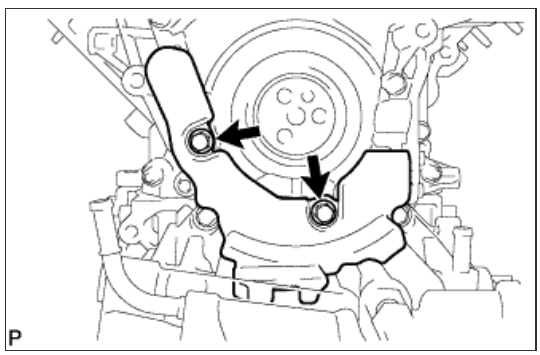
a. Remove the adhesive from the oil pressure sender gauge and the bolt hole f the oil filter bracket.



b. Apply adhesive to 2 or 3 threads of the oil pressure sender gauge.

Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

c. Install the oil pressure sender gauge.



Torque:
15 N*m{ 153 kgf*cm , 11 ft.*lbf }

79. INSTALL TIMING GEAR COVER SPACER (w/ Intercooler)

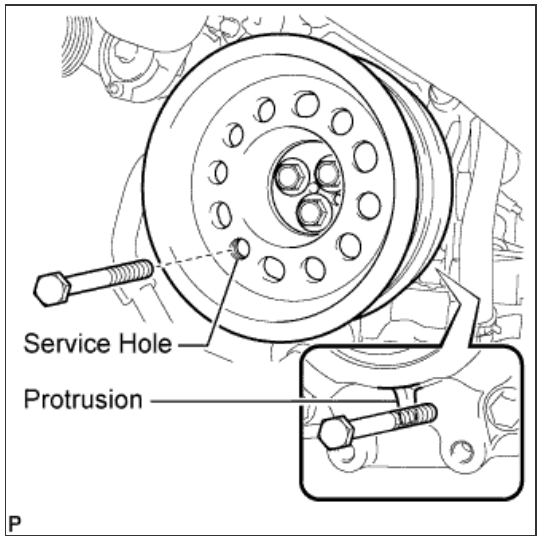
a. Install the timing gear cover spacer with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

80. INSTALL CRANKSHAFT PULLEY

NOTICE:

This procedure is intended for removal/installation of the crankshaft pulley only. Do not use this procedure for removal/installation of the flywheel or

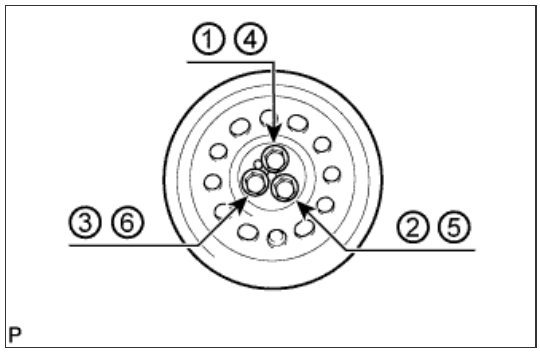


the drive plate and ring gear.

a. Align the crankshaft pulley and the crankshaft knock pin, and temporarily install the crankshaft pulley with the 3 bolts.

b. Install the 2 bolts to the bolt holes of the crankshaft rear side.

c. Using a bar, turn the crankshaft until the crankshaft pulley service hole is a little to the right of bottom dead center.

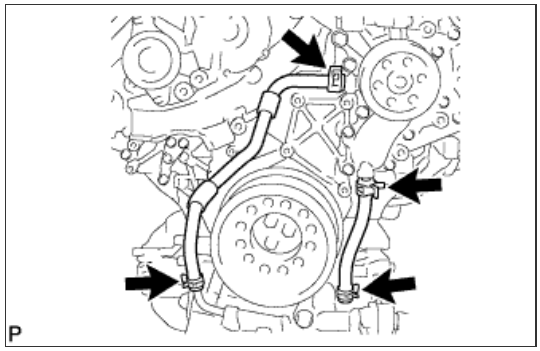


d. Install a 14 mm x 1.5 pitch service bolt with a length of 70 mm or more to the crankshaft pulley service hole, and hold the crankshaft using the timing chain cover protrusion.

e. Uniformly tighten the 3 bolts in 2 passes in the order shown in the illustration.

Torque:
115 N*m{ 1168 kgf*cm , 84 ft.*lbf }

f. Remove the service bolt.



81. CONNECT NO. 2 OIL COOLER HOSE

a. Align the white paint marks on the oil cooler hose and oil filter bracket and connect the hose. Then connect the other side to the water pump and attach the oil cooler hose to the clamp.

NOTICE:

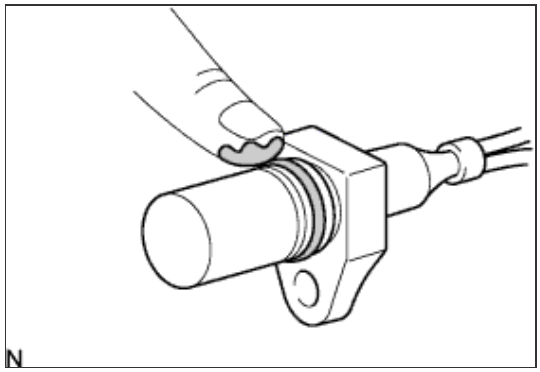
Make sure to maintain a space between the oil cooler hose and crankshaft pulley, and the oil cooler hose and V-ribbed belt idler pulley.

82. CONNECT NO. 1 OIL COOLER HOSE

a. Face the pink paint mark on the oil cooler hose toward the front side of the engine and connect the hose to the oil filter bracket. Then connect the other side to the water pump.

NOTICE:

Make sure to maintain a space between the oil cooler hose and crankshaft pulley.

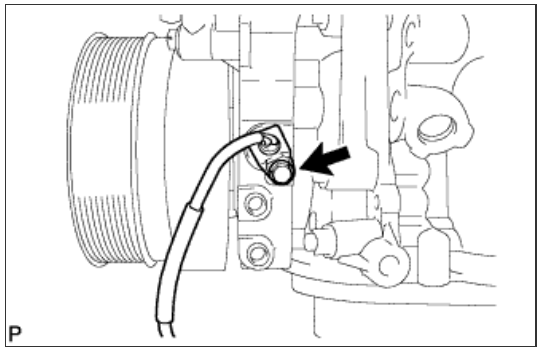


83. INSTALL CRANKSHAFT POSITION SENSOR

a. Apply a light coat of engine oil to the O-ring.

NOTICE:

When reusing the sensor, inspect the O-ring.

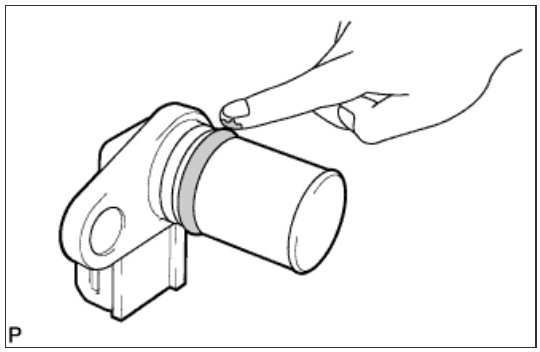


If the O-ring has scratches of cuts, replace the crankshaft position sensor.

b. Install the sensor with the bolt.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

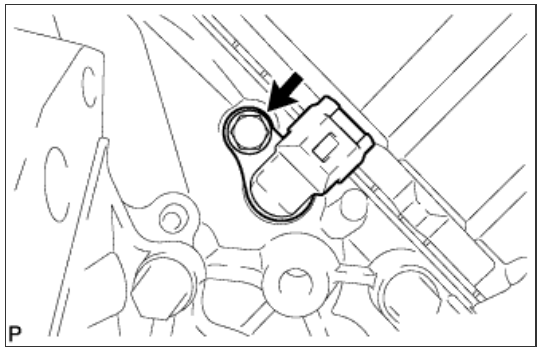
c. Connect the wire harness to the clamp.



84. INSTALL CAMSHAFT POSITION SENSOR

a. Apply a light coat of engine oil to the O-ring.

NOTICE:

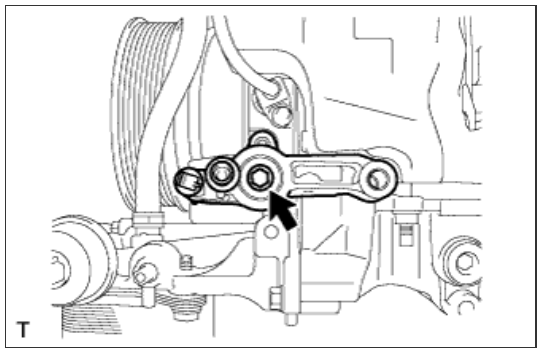


When reusing the sensor, inspect the O-ring.

If the O-ring has scratches of cuts, replace the crankshaft position sensor.

b. Install the sensor with the bolt.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

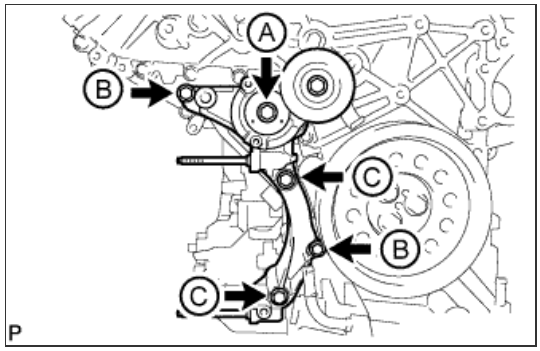


for Preparation Click here

1. INSTALL COMPRESSOR BRACKET

a. Install the compressor bracket with the bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



2. INSTALL V-RIBBED BELT TENSIONER ASSEMBLY

a. Install the V-ribbed belt tensioner with the 5 bolts.

Torque:
for bolt A and C:
43 N*m{ 438 kgf*cm , 32 ft.*lbf }
for bolt B:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

Bolt Length

Item	Quantity	Length
Bolt A	1	116 mm (4.57 in.)
Bolt B	2	40 mm (1.58 in.)
Bolt C	2	95 mm (3.74 in.)

b. Install the No. 1 idler pulley with the bolt.

Torque:
43 N*m{ 438 kgf*cm , 32 ft.*lbf }

c. Install the V-ribbed belt tensioner bracket with the 3 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

3. INSTALL STIFFENER INSULATOR RH (w/ Intercooler)

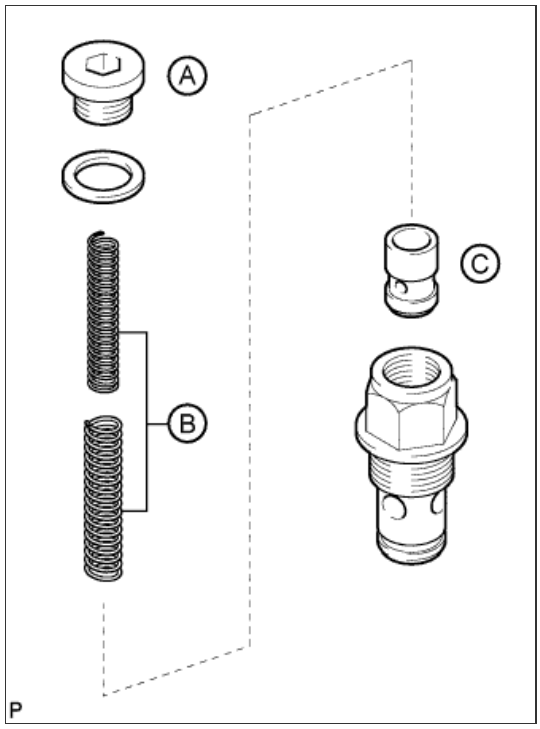
a. Install the stiffener insulator RH with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

4. INSTALL OIL PRESSURE REGULATOR ASSEMBLY

a. Hold the oil pressure regulator body in a vise between aluminum plates.

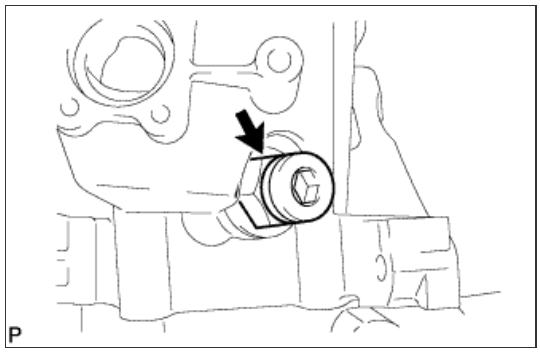
b. Apply a light coat of engine oil to the oil pump relief valve labeled C.



c. Install the oil pump relief valve labeled C to the oil pressure regulator body.

d. Install the 2 springs labeled B to the oil pressure regulator body.

e. Using a 10 mm hexagon wrench, install a new gasket and the oil pump relief valve plug labeled A.



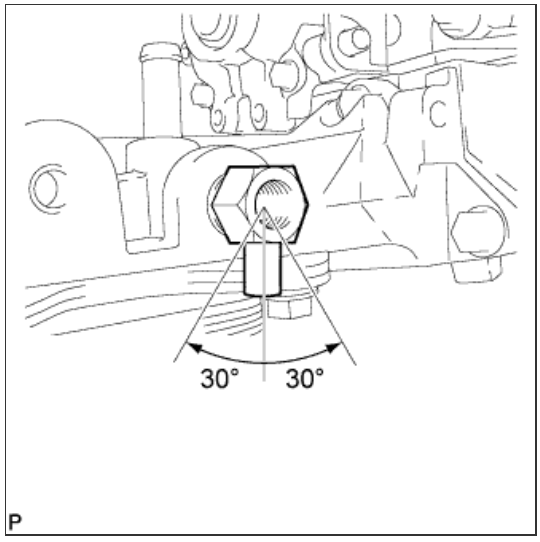
Torque:
50 N*m{ 510 kgf*cm , 37 ft.*lbf }

f. Apply a light coat of engine oil to a new O-ring, and install it to the oil pressure regulator body.

g. Using a 26 mm wrench, install a new gasket and the oil pressure regulator.

Torque:
86 N*m{ 877 kgf*cm , 63 ft.*lbf }

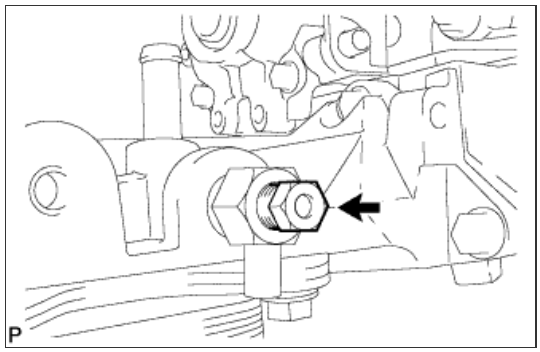
5. INSTALL OIL FILTER BRACKET DRAIN COCK ASSEMBLY



a. Install the drain cock.

Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

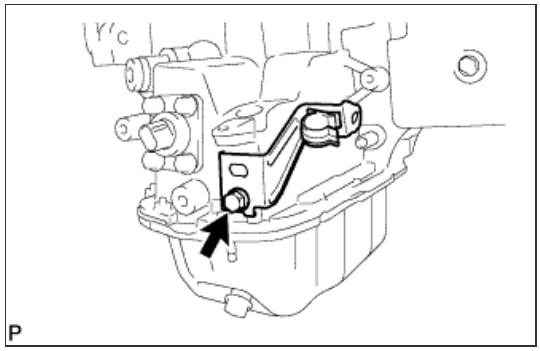
b. Using a 17 mm wrench, rotate the drain cock clockwise (360°) and align the position of the drain hole so that it is within the range shown in the illustration after tightening the drain cock to the specified torque.



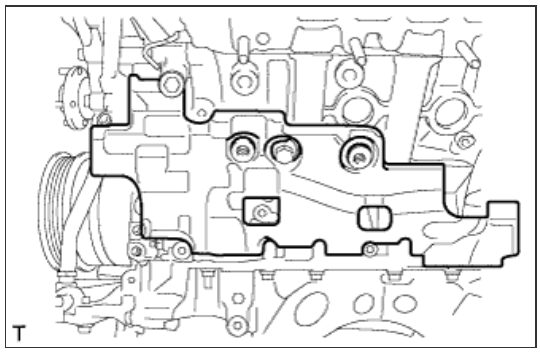
NOTICE:

- **As the oil filter bracket ma be damaged, the maximum tightening torque should be 80 N*m (816 kgf*cm, 59 ft.*lbf) or less.**
- **Do not rotate the drain cock more than 1 re olution (360) after tightening the drain cock with the specified torque.**
- **Do not expose the drain cock to coolant within 1 hour after installation.**

c. Install the oil filter drain cock plug.



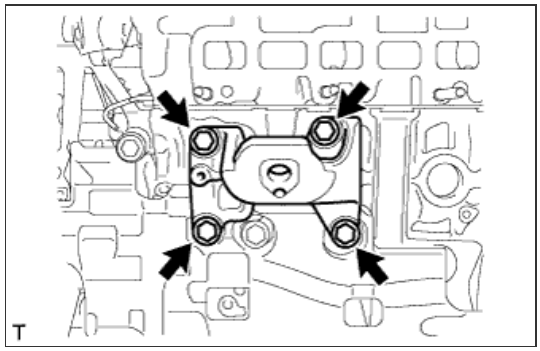
Torque:
13 N*m{ 130 kgf*cm , 9 ft.*lbf }



6. INSTALL OIL TANK BRACKET

a. Install the oil tank bracket with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

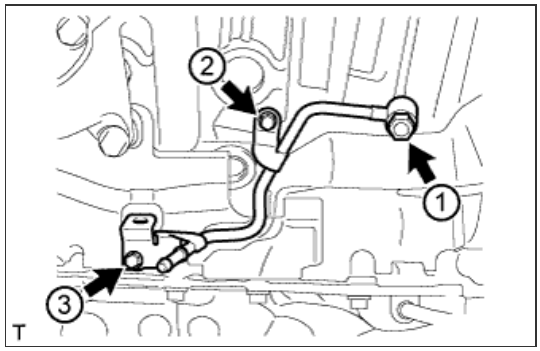


7. INSTALL NO. 2 CYLINDER BLOCK INSULATOR

8. INSTALL ENGINE MOUNTING BRACKET LH

a. Install the engine mounting bracket LH with the 4 bolts.

Torque:
80 N*m{ 816 kgf*cm , 59 ft.*lbf }

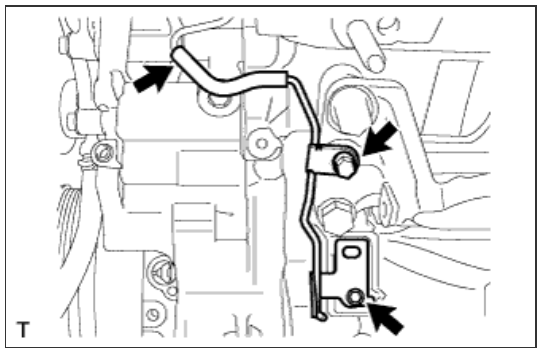


9. INSTALL NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY

a. emporarily install a new gasket and No. 2 water by-pass pipe with the union bolt and 2 bolts.

b. Tighten the union bolt and 2 bolts of the No. 2 water by-pass pipe in the order shown in the illustration.

Torque:
for union bolt:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }
for bolt:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

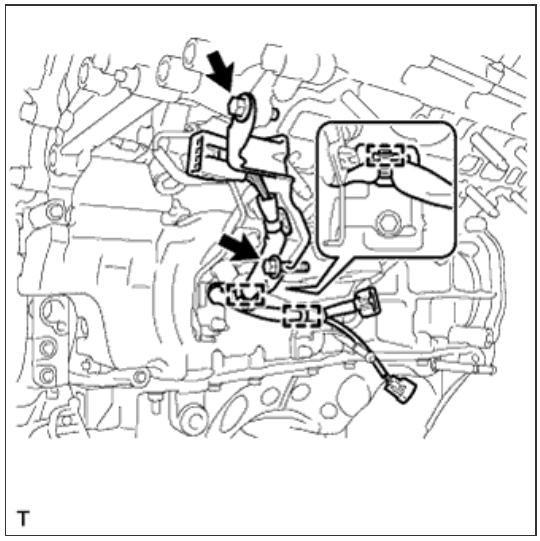


10. INSTALL NO. 3 VACUUM TRANSMITTING PIPE SUB-ASSEMBLY

a. Install the No. 3 vacuum transmitting pipe with the 2 bolts.

Torque:
6.0 N*m{ 61 kgf*cm , 53 in.*lbf }

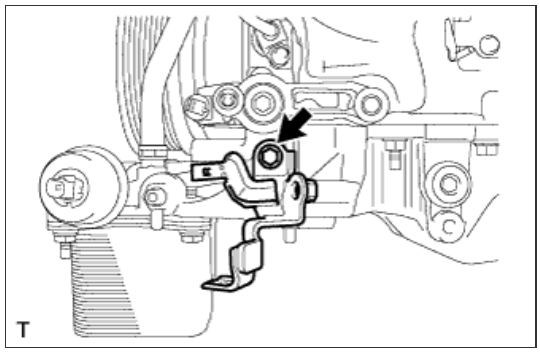
b. w/ Intercooler:
Connect the vacuum hose.



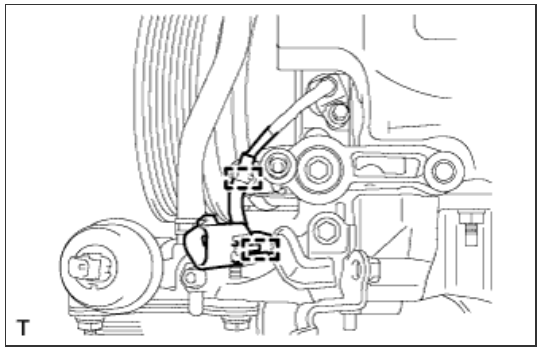
11. INSTALL TURBOCHARGER WIRE

a. Install the turbocharger wire with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

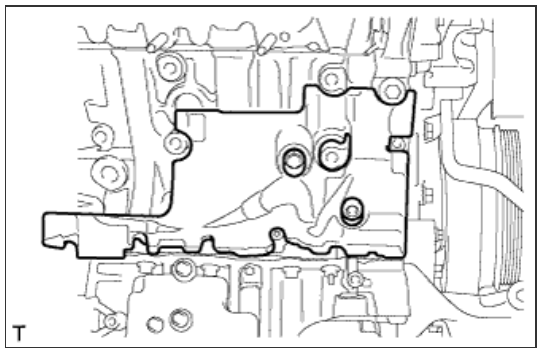


b. Attach the 3 wire harness clamps.



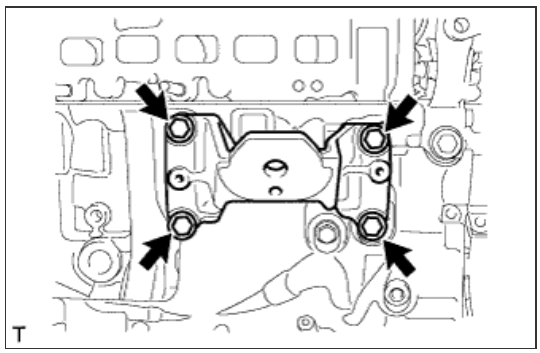
12. INSTALL NO. 2 INTAKE AIR CONNECTOR BRACKET

a. Install the No. 2 intake air connector bracket with the bolt.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. Attach the 2 wire clamps.

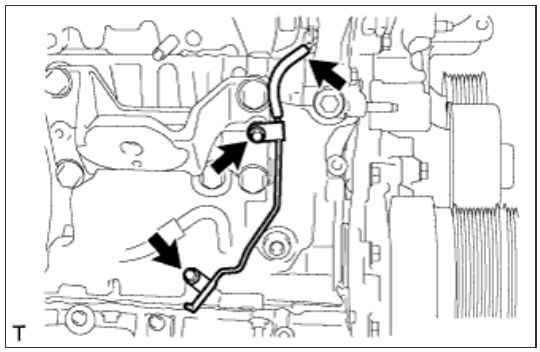


13. INSTALL NO. 1 CYLINDER BLOCK INSULATOR

14. INSTALL ENGINE MOUNTING BRACKET RH

a. Install the engine mounting bracket RH with the 4 bolts.

Torque:
80 N*m{ 816 kgf*cm , 59 ft.*lbf }



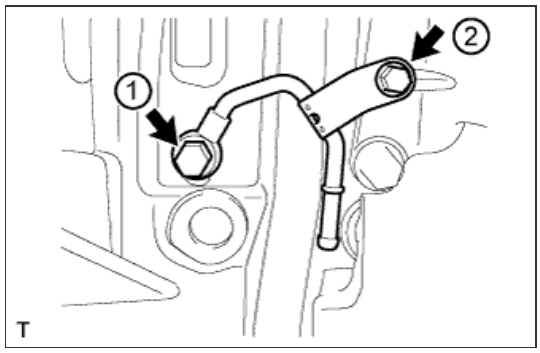
15. INSTALL NO. 4 VACUUM TRANSMITTING PIPE SUB-ASSEMBLY (w/ Intercooler)

a. Install the No. 4 vacuum transmitting pipe with the 2 bolts.

Torque:

6.0 N*m{ 61 kgf*cm , 53 in.*lbf }

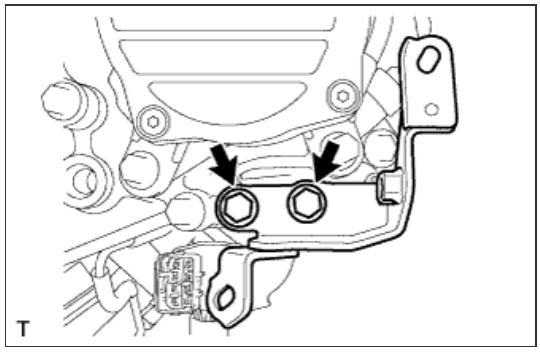
b. Connect the vacuum hose.



16. INSTALL NO. 1 WATER BY-PASS PIPE SUB-ASSEMBLY

a. Temporarily install a new gasket and the No. 1 water by-pass pipe with the union bolt and bolt.

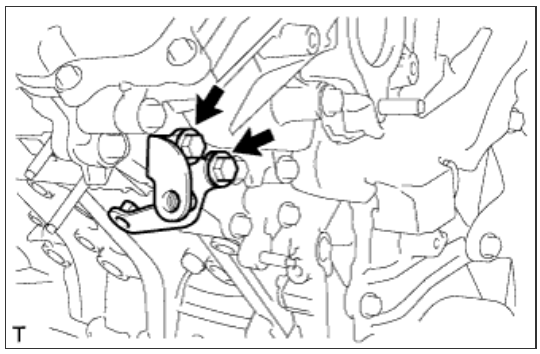
b. Tighten the union bolt and bolt of the No. 1 water by-pass pipe in the order shown in the illustration.



Torque:
for union bolt:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }
for bolt:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

17. INSTALL AIR TUBE SUPPORT

a. Install the air tube support with the 2 bolts.

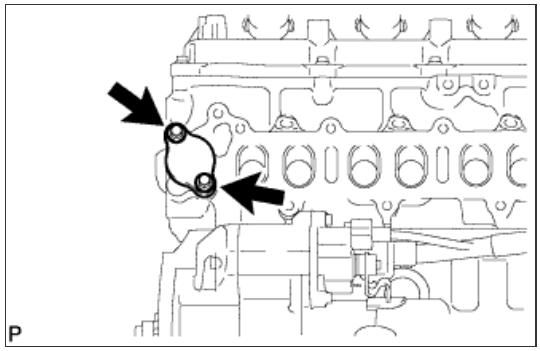


Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

18. INSTALL NO. 1 INTAKE AIR CONNECTOR BRACKET

a. Install the No. 1 intake air connector bracket with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



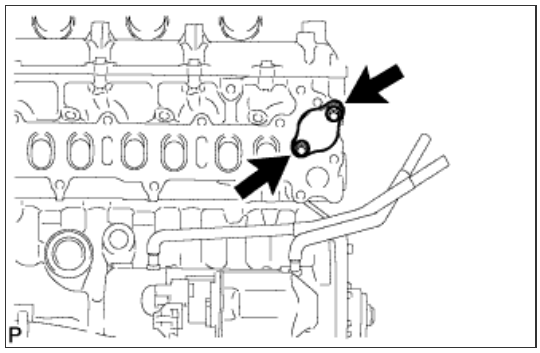
19. INSTALL REAR CYLINDER HEAD PLATE LH (w/o EGR S tem)

a. Install a new gasket and the rear cylinder head plate LH with the 2 bolts.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

HINT:

he gasket claw should face toward the plate.

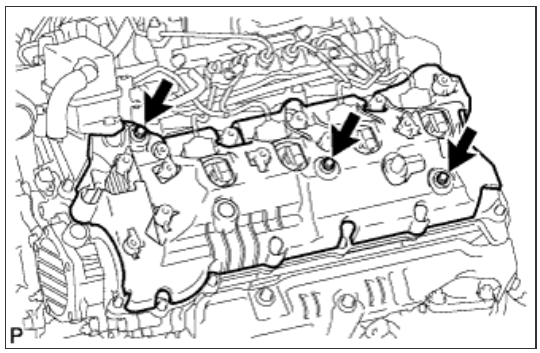


20. INSTALL REAR CYLINDER HEAD PLATE RH (w/o EGR S tem)

a. Install a new gasket and the rear cylinder head plate RH with the 2 bolts.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

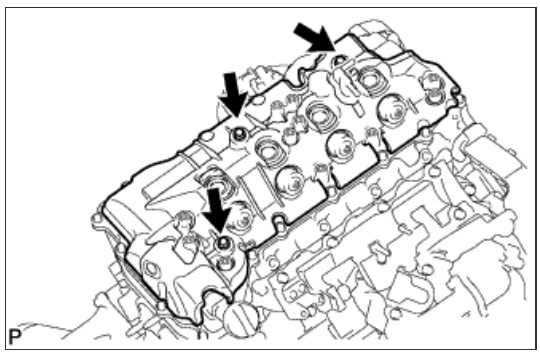
HINT:



The gasket claw should face toward the plate.

21. INSTALL CYLINDER HEAD COVER SILENCER LH (w/ Intercooler)

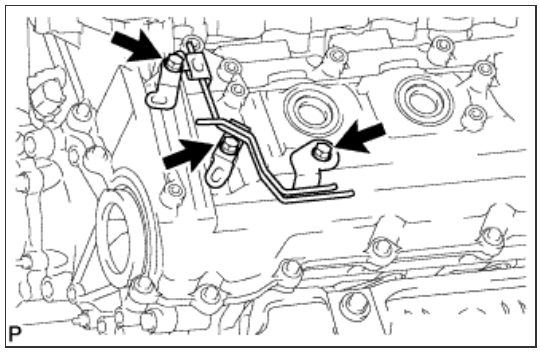
a. Install the cylinder head cover silencer with the 3 bolts.



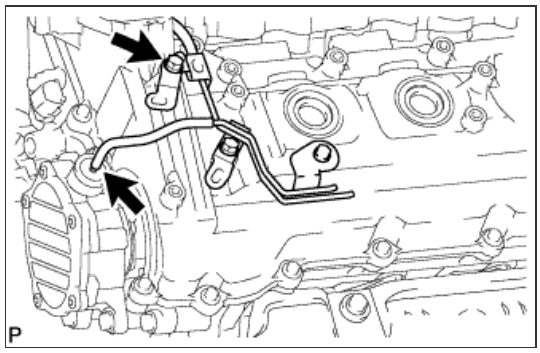
Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

22. INSTALL CYLINDER HEAD COVER SILENCER RH (w/ Intercooler)

a. Install the cylinder head cover silencer with the 3 bolts.



Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

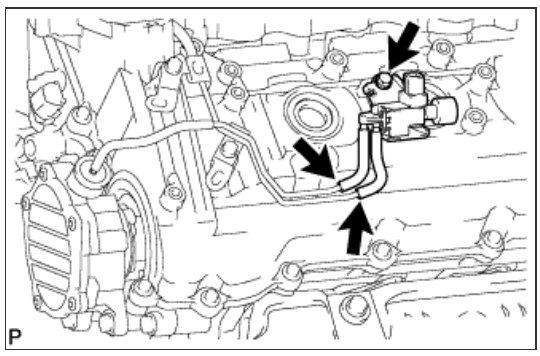


23. INSTALL NO. 1 VACUUM TRANSMITTING PIPE SUB-ASSEMBLY

a. Install the vacuum transmitting pipe with the 3 bolts.

Torque:
6.0 N*m{ 61 kgf*cm , 53 in.*lbf }

b. w/ Intercooler:
Connect the 2 vacuum hoses.

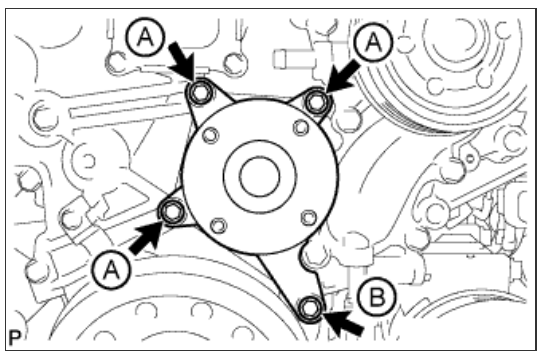


24. INSTALL NO. 1 VACUUM SWITCHING VALVE ASSEMBLY (w/ Intercooler)

a. Install vacuum switching valve with the bolt.

Torque:
6.0 N*m{ 61 kgf*cm , 53 in.*lbf }

b. Connect the 2 vacuum hoses.

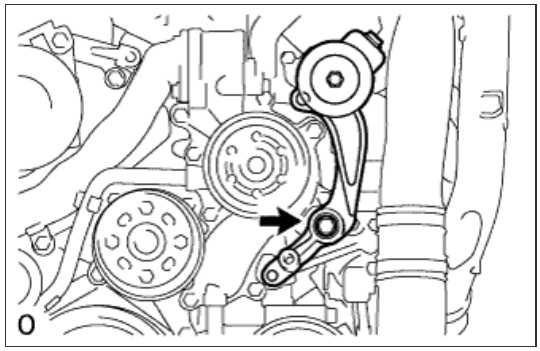


25. INSTALL FAN BRACKET SUB-ASSEMBLY

a. Install the fan bracket with the 4 bolts.

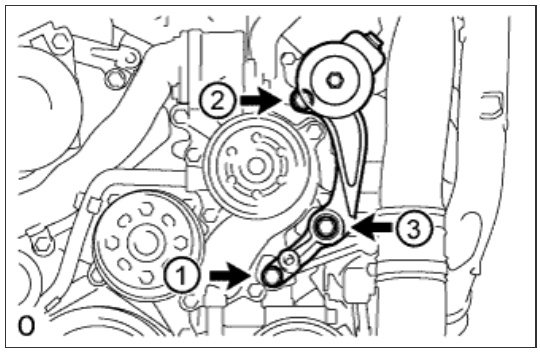
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

Bolt Length



Item	Length
Bolt A	30 mm (1.18 in.)
Bolt B	80 mm (3.15 in.)

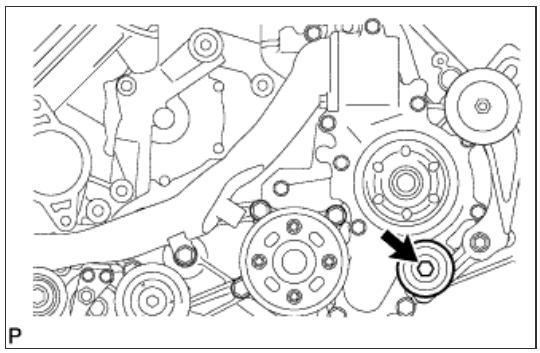
26. INSTALL NO. 2 IDLER PULLEY BRACKET (w/ Viscous Heater)



a. emporarily install the No. 2 idler pulley bracket with the bolt.

b. emporarily install the 2 bolts to the No. 2 idler pulley bracket bolt hole.

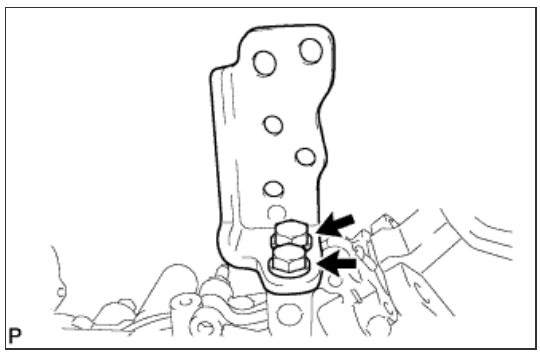
c. Uniformly tighten the 3 bolts of the No. 2 idler pulley bracket in the order shown in the illustration.



Torque:
49 N*m{ 495 kgf*cm , 36 ft.*lbf }

27. INSTALL NO. 2 IDLER PULLEY (w/ Viscous Heater)

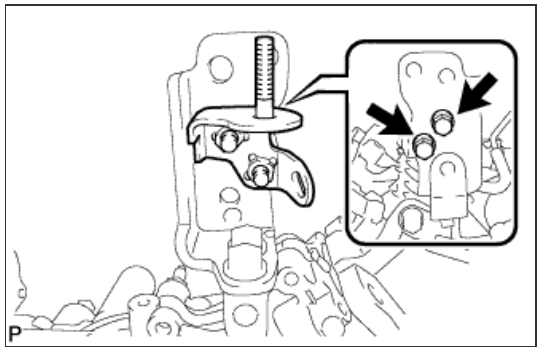
a. Install the collar, No. 2 idler pulley and cover with the bolt.



Torque:
49 N*m{ 495 kgf*cm , 36 ft.*lbf }

28. INSTALL NO. 3 ENGINE HANGER

a. Install the No. 3 engine hanger with the 2 bolts.

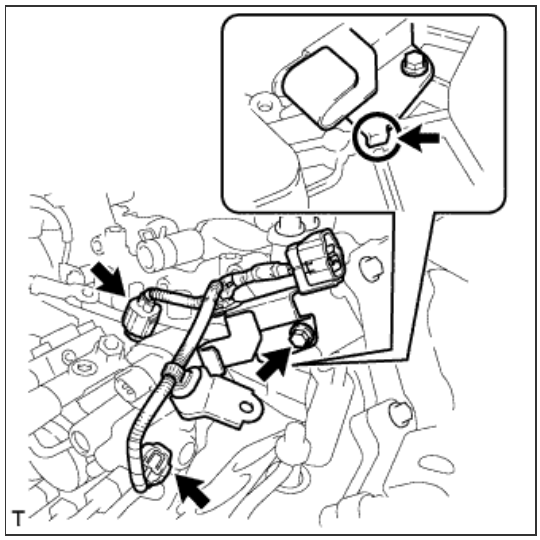


Torque:
43 N*m{ 438 kgf*cm , 32 ft.*lbf }

29. INSTALL NO. 1 INTERCOOLER SUPPORT BRACKET

a. Install the No. 1 intercooler support bracket with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

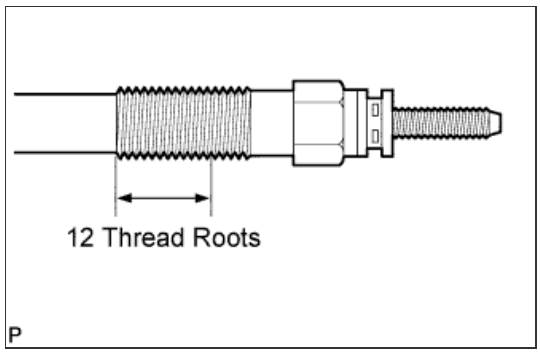


30. INSTALL FUEL PUMP MOTOR WIRE

a. Install the fuel pump wire with the bolt.

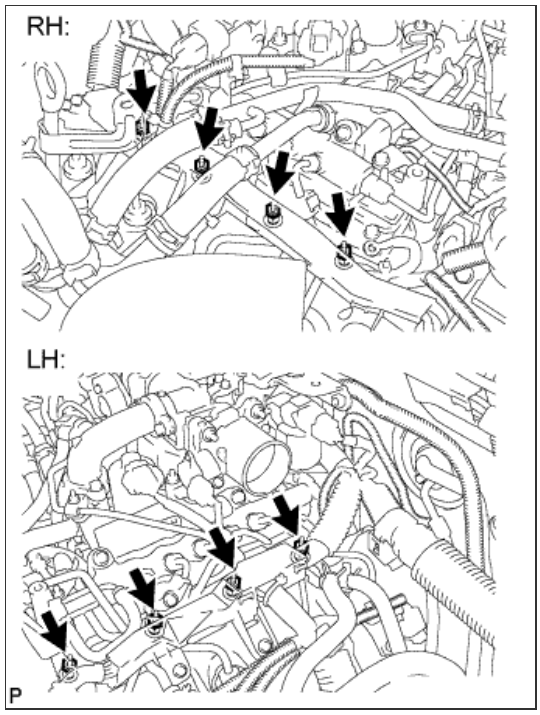
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

HINT:



Attach the claw of the bracket to the timing gear case when installing the bracket.

31. INSTALL GLOW PLUG ASSEMBLY



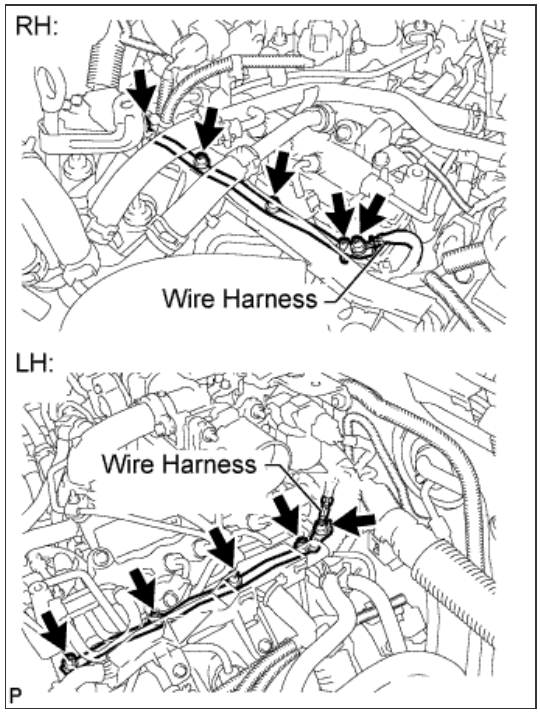
a. Apply adhesive to 3 or more thread roots in the area shown in the illustration.

Adhesi e:
To ota Genuine Adhesi e 1324, Three Bond 1324 or equi alent

b. Using a 10 mm deep socket wrench, install the 8 glow plugs.

Torque:
12 N*m{ 125 kgf*cm , 9 ft.*lbf }

32. INSTALL NO. 1 GLOW PLUG CONNECTOR

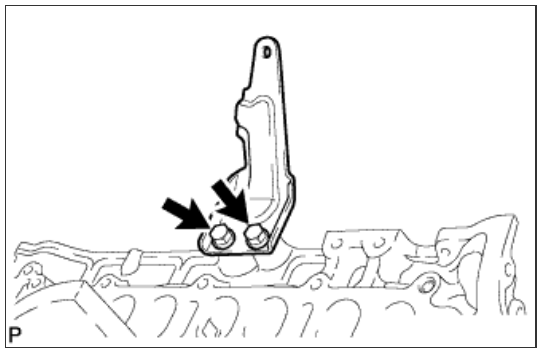


a. Install the 2 glow plug connectors by uniformly tightening the 8 nuts.

Torque:
2.2 N*m{ 22 kgf*cm , 19 in.*lbf }

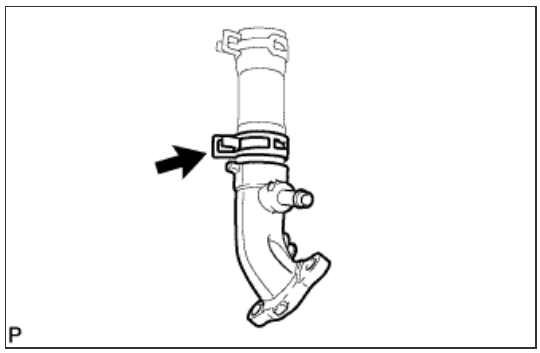
b. Install the 8 screw grommets.

c. Connect the 2 wire harnesses with the 2 nuts and 2 screw grommets.



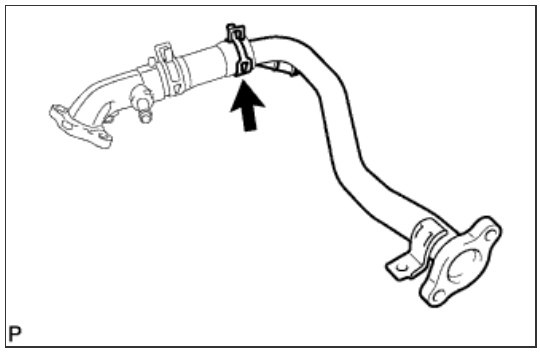
Torque:
4.0 N*m{ 41 kgf*cm , 35 in.*lbf }

33. INSTALL CLUTCH FLEXIBLE HOSE BRACKET (for Manual Transmission)



a. Install the clutch flexible hose bracket with the 2 bolts.

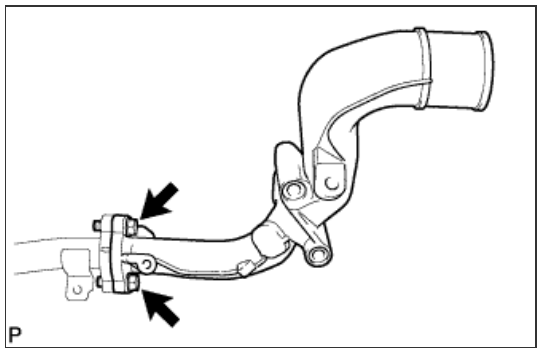
Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }



34. INSTALL NO. 1 AND NO. 2 WATER OUTLET PIPES AND WATER BY-PASS OUTLET

a. Align the painted mark of the No. 1 water hose joint with the protrusion of the water by-pass outlet and connect the water by-pass outlet to the No. 1 water hose joint.

b. Align the painted mark of the No. 1 water hose joint with the painted mark of the No. 2 water outlet pipe and connect the No. 2 water outlet pipe to the No. 1 water hose joint.

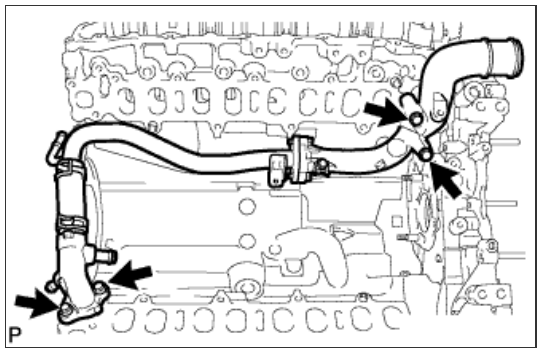


c. Connect a new gasket and the No. 1 and No. 2 water outlet pipes with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

HINT:

The gasket claws can face the No. 1 or No. 2 water outlet pipe.

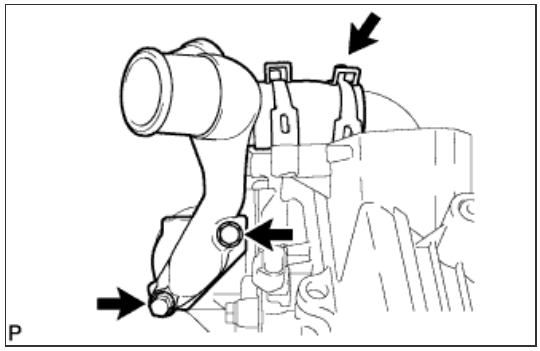


35. INSTALL WATER OUTLET PIPE

a. Install 2 new gaskets and the water outlet pipe with the 4 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

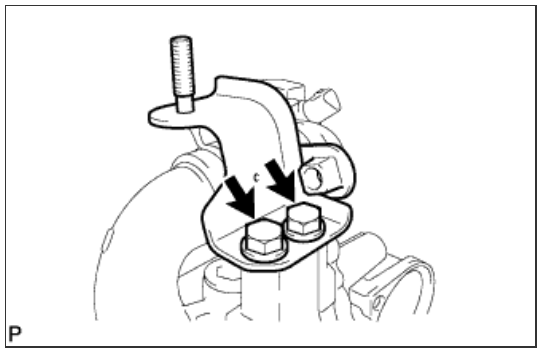
HINT:



he gasket claw should face toward the water outlet pipe.

36. INSTALL WATER OUTLET

a. Install a new gasket and the water outlet with the 2 bolts, and then connect the water outlet to the No. 2 water hose joint.

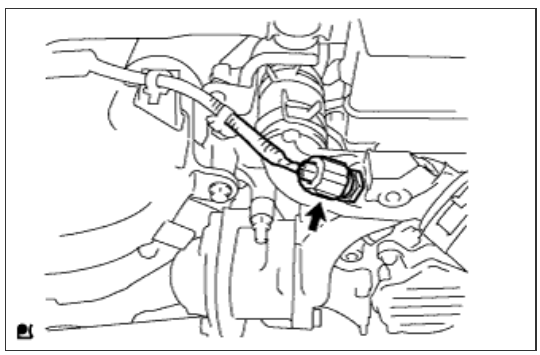


Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

37. INSTALL NO. 2 INTERCOOLER SUPPORT BRACKET

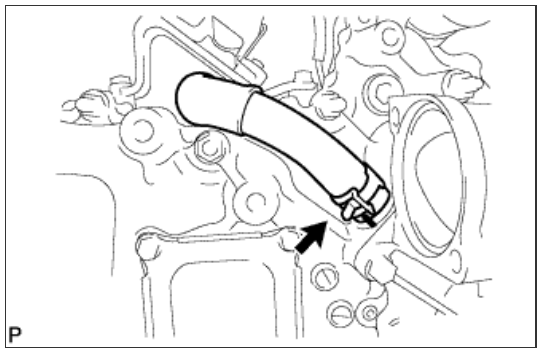
a. Install the No. 2 intercooler support bracket with the 2 bolts.

Torque:
43 N*m{ 438 kgf*cm , 32 ft.*lbf }



38. INSTALL DIESEL ENGINE COOLANT TEMPERATURE SENSOR

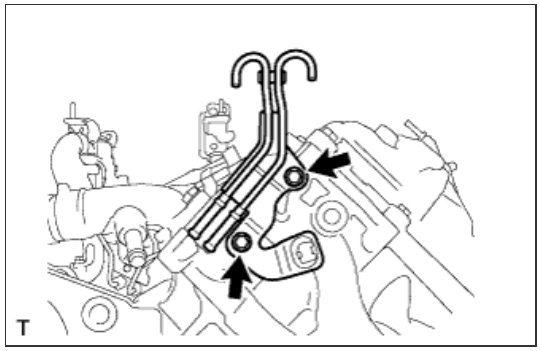
a. Install a new gasket to the sensor.



b. Using a 19 mm deep socket wrench, install the sensor.

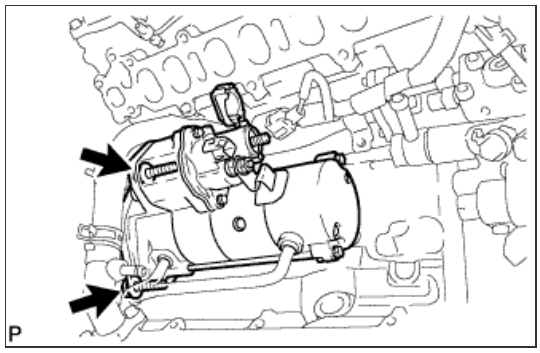
Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

c. Connect the sensor connector.



39. CONNECT INLET WATER HOSE

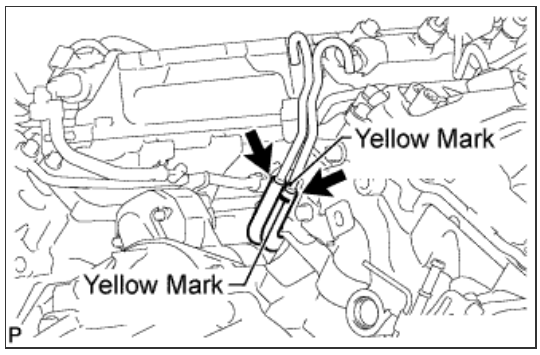
40. INSTALL STARTER HOSE BRACKET



a. Install the starter hose bracket with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

41. INSTALL STARTER ASSEMBLY

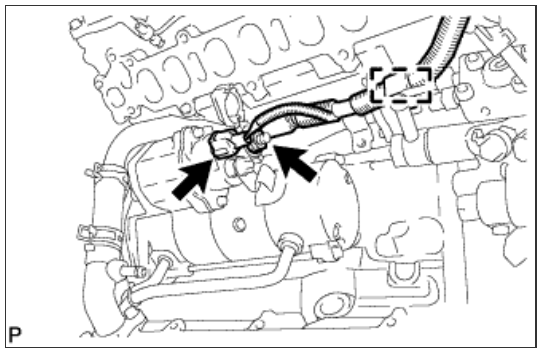


a. Install the starter with the 2 bolts.

b. Connect the 2 hoses to the starter hose bracket.

HINT:

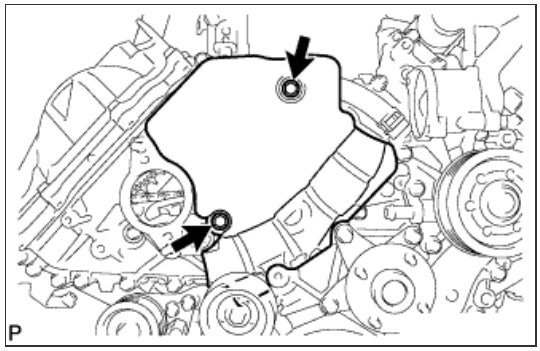
Align the paint marks of the hose and bracket.



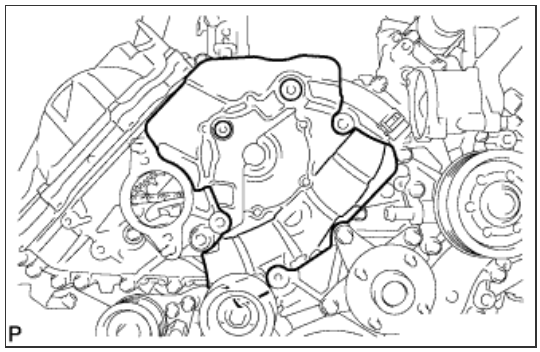
c. Install the No. 2 engine wire to the starter with the nut.

Torque:
80 N*m{ 816 kgf*cm , 59 ft.*lbf }

d. Connect the connector to the starter.



e. Attach the wire harness clamp.



42. INSTALL TIMING GEAR COVER INSULATOR (w/ Intercooler)

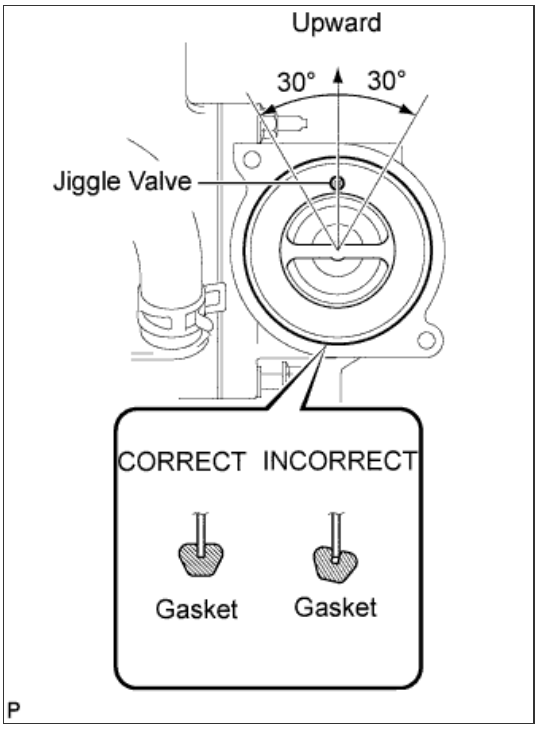
a. w/o Viscous Heater:
Install the timing gear cover insulator with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. w/ Viscous Heater:
Install the timing gear cover insulator.

43. INSTALL THERMOSTAT

a. Install a new gasket to the thermostat.

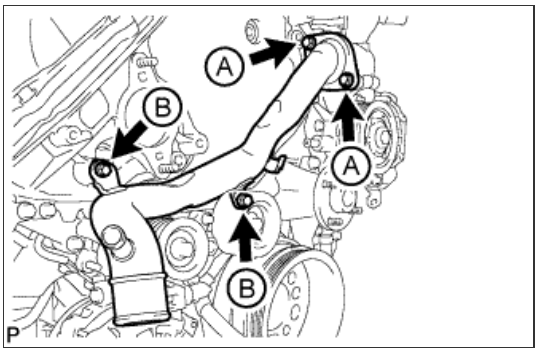


NOTICE:

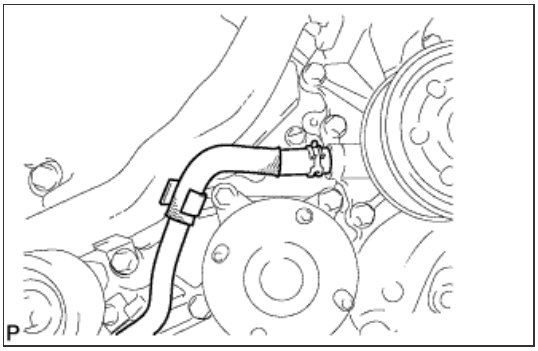
When installing the gasket to the thermostat, be careful not to deform the gasket. Make sure that the groove of the gasket is properly installed onto the thermostat, as shown in the illustration.

b. Insert the thermostat into the water pump with the jiggle valve facing straight upward.

HINT:



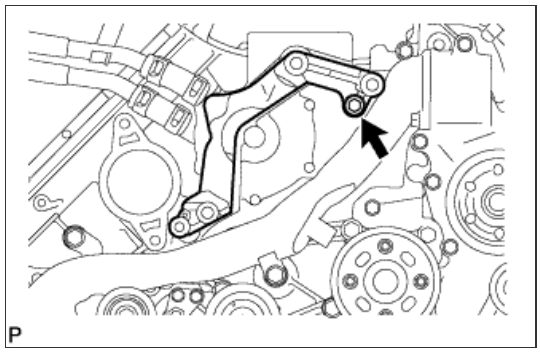
The jiggle valve may be set within 30° of either side of the prescribed position.



44. INSTALL WATER INLET

a. Install the water inlet with the 4 bolts.

Torque:
for bolt A:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
for bolt B:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }



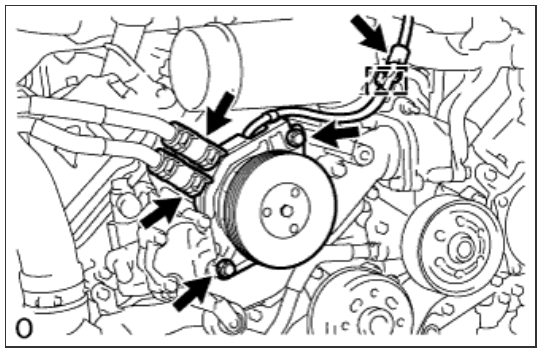
b. Connect the No. 2 oil cooler hose to the clamp and water pump.

45. INSTALL NO. 1 IDLER PULLEY BRACKET (w/ Viscous Heater)

a. Install the No. 1 idler pulley bracket with the bolt.

Torque:
49 N*m{ 495 kgf*cm , 36 ft.*lbf }

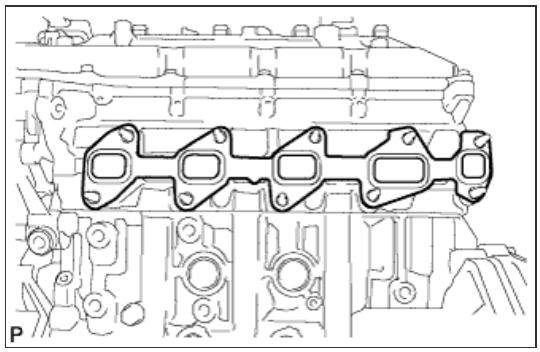
46. INSTALL VISCOUS HEATER ASSEMBLY WITH MAGNET CLUTCH (w/ Viscous Heater)



a. Install the heater assembly with the 2 bolts.

Torque:
48.5 N*m{ 495 kgf*cm , 36 ft.*lbf }

b. Connect the 2 heater hoses.

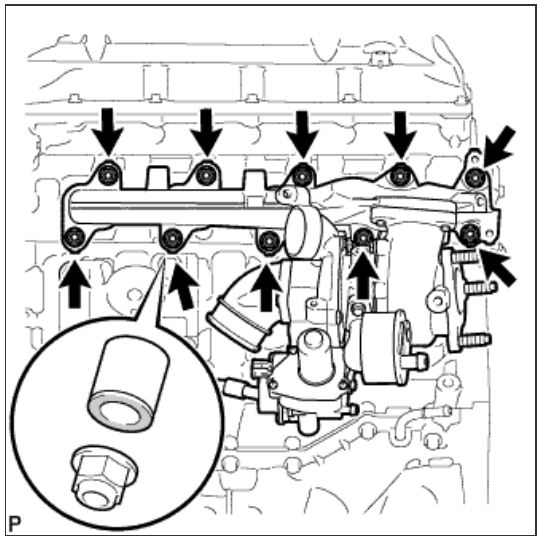


c. Using pliers, grip the claws of the clips and slide the 2 clips.

d. Connect the connector and attach the clamp.

47. INSTALL NO. 2 TURBOCHARGER SUB-ASSEMBLY WITH EXHAUST MANIFOLD LH

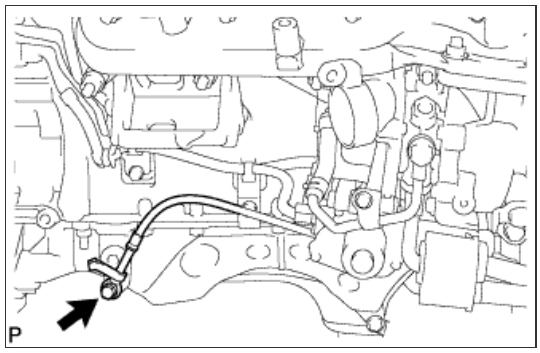
a. Set a new gasket to the cylinder head LH.



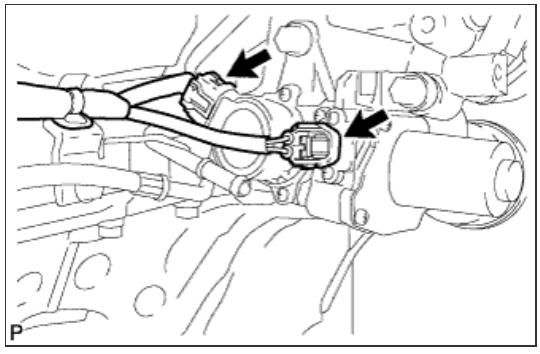
b. Install the No. 2 turbocharger with exhaust manifold LH and 10 collars to the cylinder head LH with 10 new nuts.

Torque:
36 N*m{ 367 kgf*cm , 27 ft.*lbf }

HINT:



Install the collars with the colored side facing the nuts.



c. Install a new gasket and the No. 2 inlet turbo oil pipe to the No. 1 oil pan with the

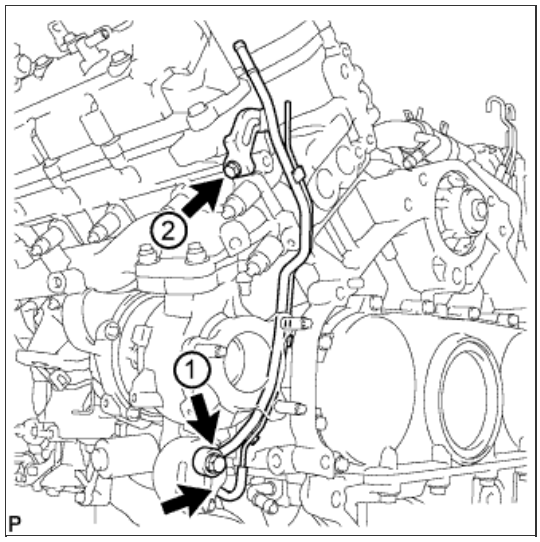
union bolt.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

d. Connect the 2 connectors to the turbocharger.

48. INSTALL NO. 2 VENTILATION TUBE SUB-ASSEMBLY

a. Temporarily install a new gasket and the No. 2 ventilation tube with the union bolt and bolt.

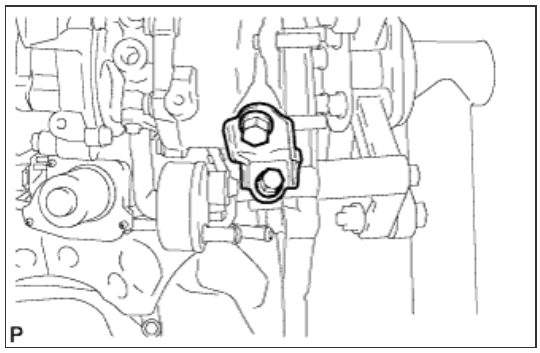


b. Tighten the union bolt and bolt in the order shown in the illustration.

Torque:
for union bolt:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }
for bolt:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

NOTICE:

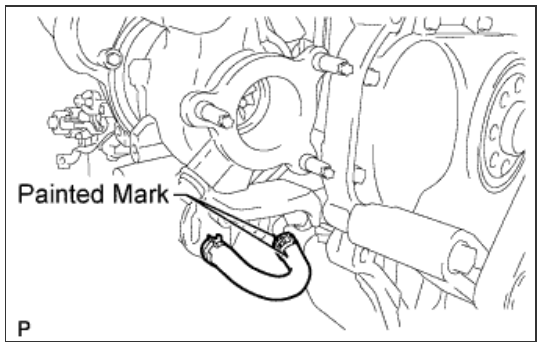
Clean and remove any oil labeled 1shown in the illustration.



c. Connect the No. 2 vacuum transmitting hose.

49. INSTALL NO. 2 TURBOCHARGER STAY

a. Install the No. 2 turbocharger stay with the 2 bolts.

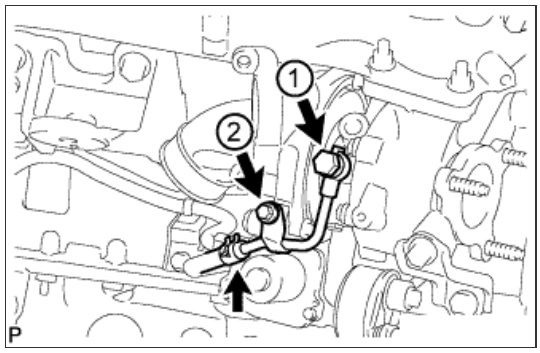


Torque:
49 N*m{ 495 kgf*cm , 36 ft.*lbf }

50. CONNECT NO. 2 OUTLET TURBO OIL HOSE

HINT:

Align the white paint marks on the oil hose and pipe, and connect the hose.

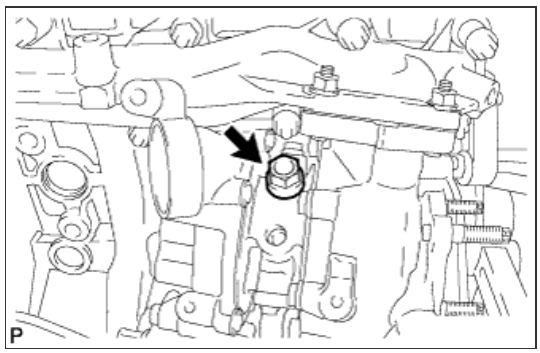


51. INSTALL NO. 2 TURBO WATER PIPE SUB-ASSEMBLY

a. Temporarily install a new gasket and the No. 2 turbo water pipe with the union bolt and bolt.

b. Tighten the union bolt and bolt in the order shown in the illustration.

Torque:
for union bolt:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }
for bolt:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

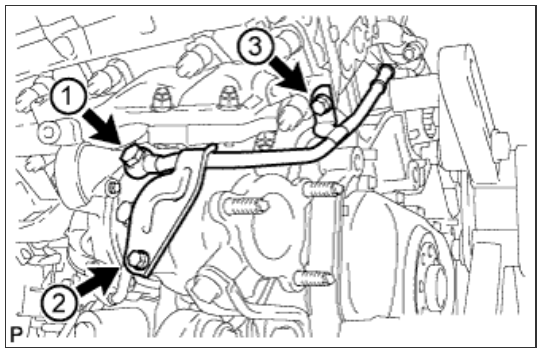


c. Connect the water hose to the pipe.

52. INSTALL FRONT WATER BY-PASS JOINT

a. Install a new gasket and the front water by-pass joint.

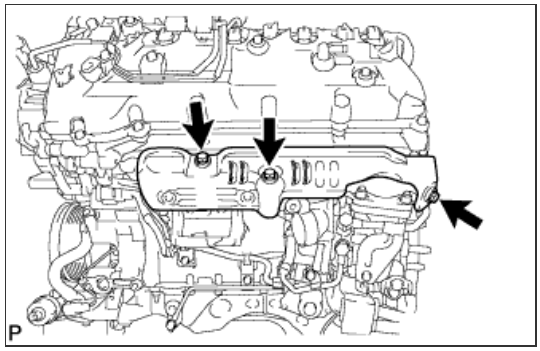
Torque:
50 N*m{ 510 kgf*cm , 37 ft.*lbf }



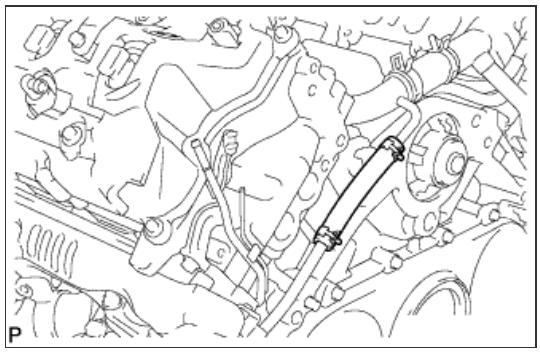
53. INSTALL NO. 3 TURBO WATER PIPE SUB-ASSEMBLY

a. Temporarily install a new gasket and the No. 3 turbo water pipe with the union bolt and 2 bolts.

b. Tighten the union bolt and 2 bolts in the order shown in the illustration.

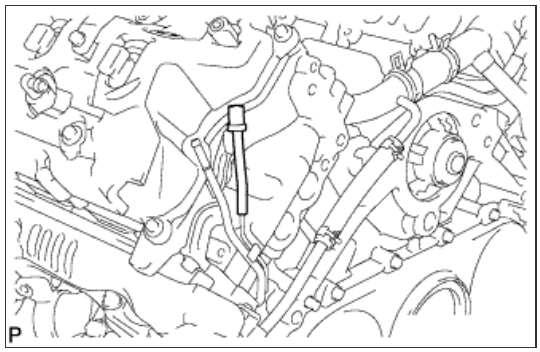


Torque:
for union bolt:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }
for bolt:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

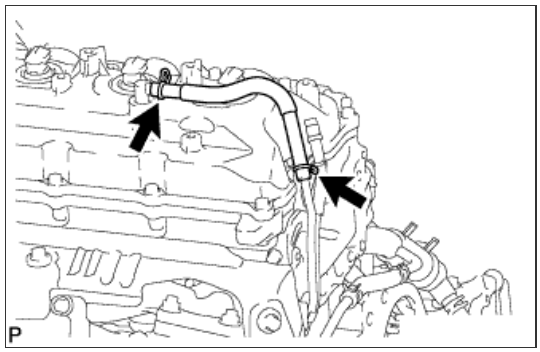


54. INSTALL NO. 2 EXHAUST MANIFOLD HEAT INSULATOR

a. Install the No. 2 exhaust manifold heat insulator with the 3 bolts.

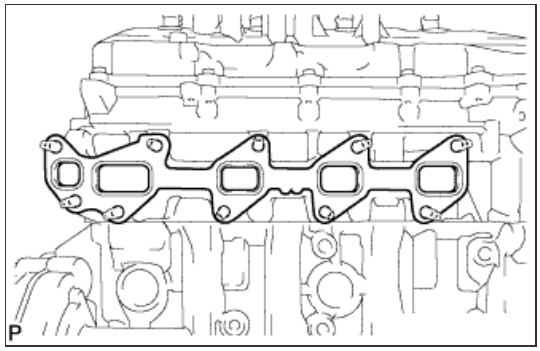


Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf }



55. CONNECT NO. 2 TURBO WATER HOSE

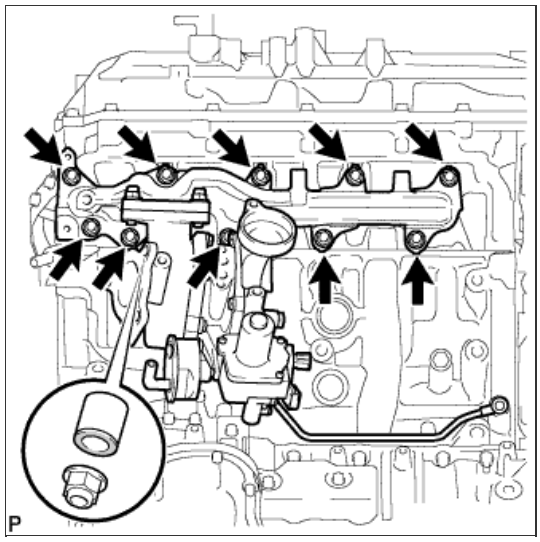
56. CONNECT BREATHER PLUG LH



57. CONNECT NO. 3 VENTILATION HOSE

58. INSTALL NO. 1 TURBOCHARGER SUB-ASSEMBLY WITH EXHAUST MANIFOLD RH

a. Set a new gasket to the cylinder head RH.

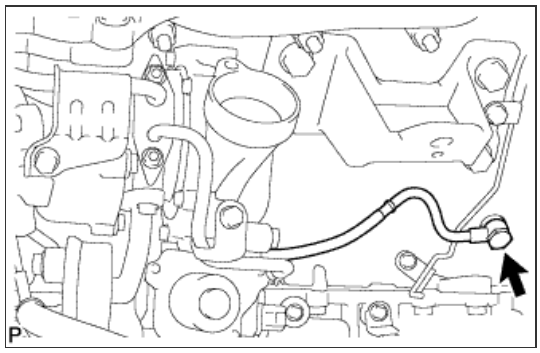


b. Install the No. 1 turbocharger with exhaust manifold RH and 10 collars to the cylinder head RH with 10 new nuts.

Torque:
36 N*m{ 367 kgf*cm , 27 ft.*lbf }

HINT:

Install the collars with the colored side facing the nuts.



c. Install a new gasket and the No. 1 inlet turbo oil pipe to the cylinder block with the union bolt.

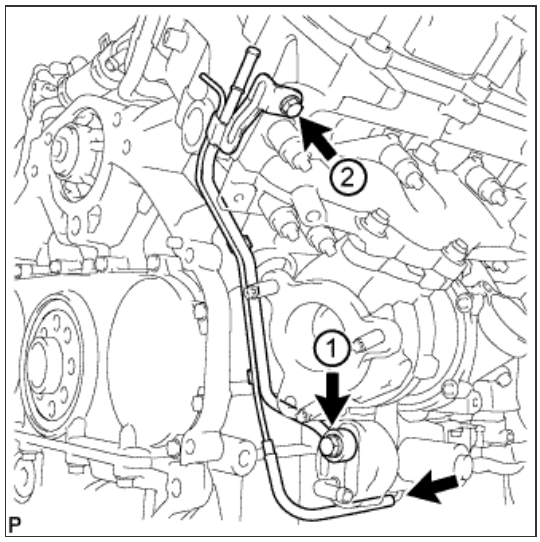
Torque:
Case is dr :
29 N*m{ 296 kgf*cm , 21 ft.*lbf }
Case is wet:
23 N*m{ 235 kgf*cm , 17 ft.*lbf }

NOTICE:

- **The case is dr when there is absolutel no engine oil on the union bolt and c linder block bolt hole.**
- **The case is wet when there is engine oil on the union bolt and c linder block bolt hole.**

59. INSTALL NO. 1 VENTILATION TUBE SUB-ASSEMBLY

a. emporarily install a new gasket and the No. 1 ventilation tube with the union bolt and bolt.



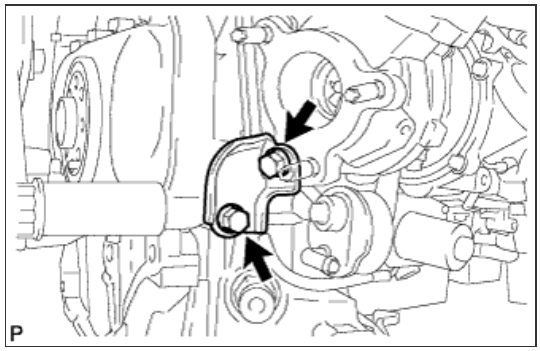
b. ighten the union bolt and bolt in the order shown in the illustration.

Torque:
for union bolt:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }
for bolt:
10 N*m{ 102 kgf*cm , 7 in.*lbf }

NOTICE:

Clean and remove any oil labeled 1 shown in the illustration.

c. Connect the vacuum hose.

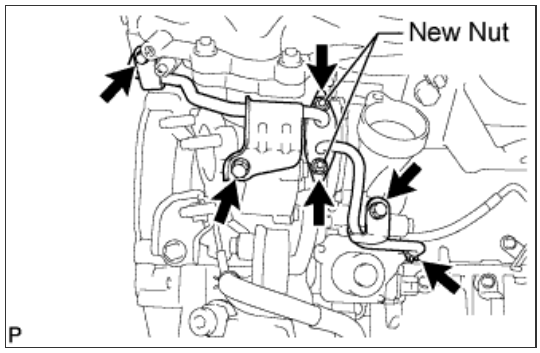


60. INSTALL NO. 1 TURBOCHARGER STAY

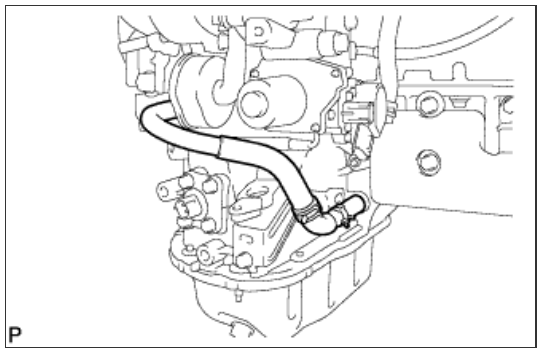
a. Temporarily install the No. 1 turbocharger stay with the 2 bolts.

b. Tighten the 2 bolts.

Torque:
49 N*m{ 495 kgf*cm , 36 ft.*lbf }



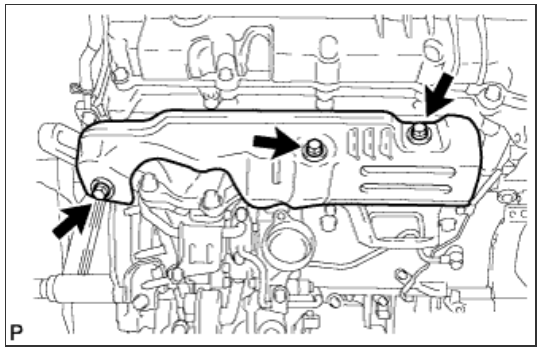
61. INSTALL NO. 1 TURBO WATER PIPE SUB-ASSEMBLY



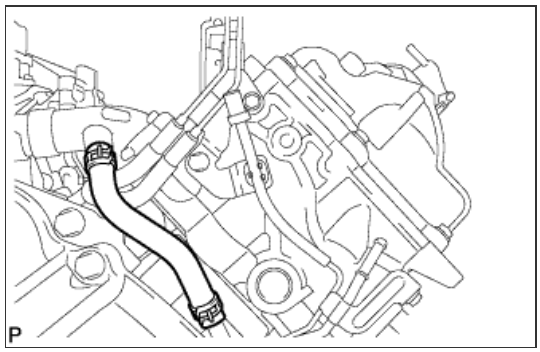
a. Install a new gasket and the No. 1 turbo water pipe with 2 new nuts and 3 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. Connect the water hose.

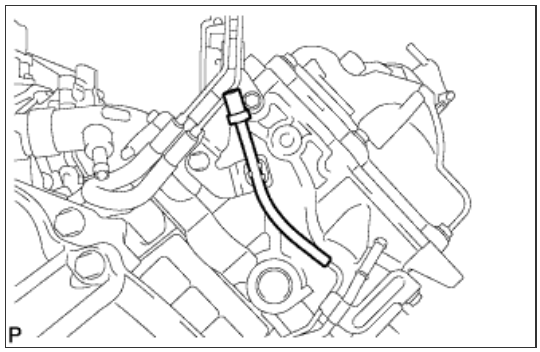


62. CONNECT NO. 1 OUTLET TURBO OIL HOSE

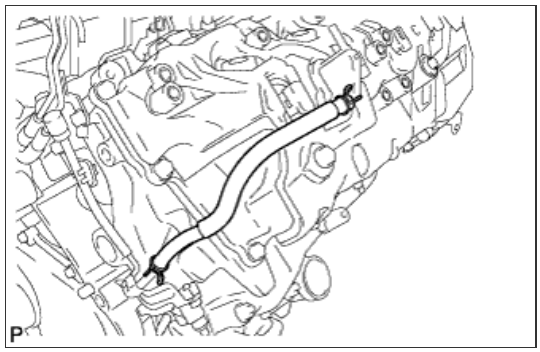


63. INSTALL NO. 1 EXHAUST MANIFOLD HEAT INSULATOR

a. Install the No. 1 exhaust manifold heat insulator with the 3 bolts.



Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf }

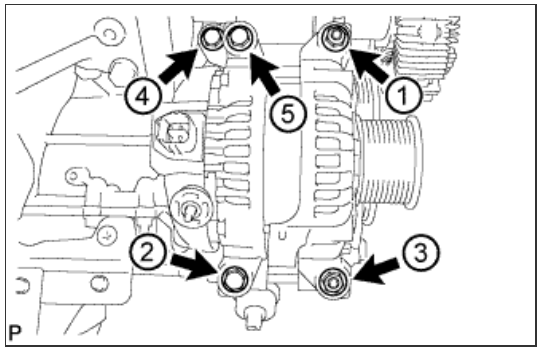


64. CONNECT NO. 2 TURBO WATER HOSE

65. CONNECT BREATHER PLUG RH

66. CONNECT NO. 2 VENTILATION HOSE

67. INSTALL GENERATOR ASSEMBLY

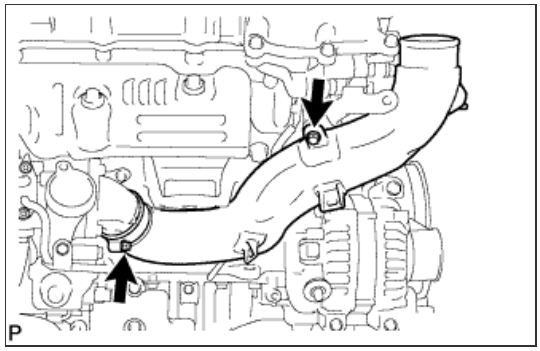


a. emporarily install the generator with the 3 bolts and 2 nuts.

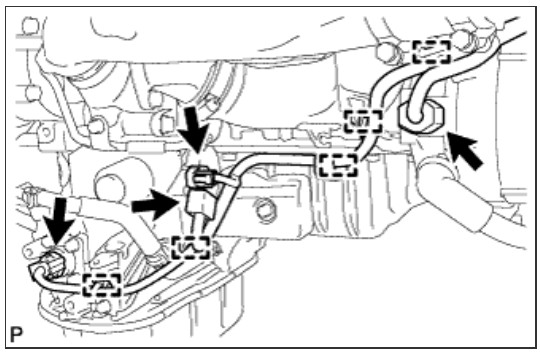
b. Uniformly tighten the 3 bolts and 2 nuts in the order shown in the illustration.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

c. Connect the generator cable and install the nut and bolt.



Torque:
for bolt:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }
for nut (130A Type and 150A Type:):
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }
for nut (180A Type:):
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

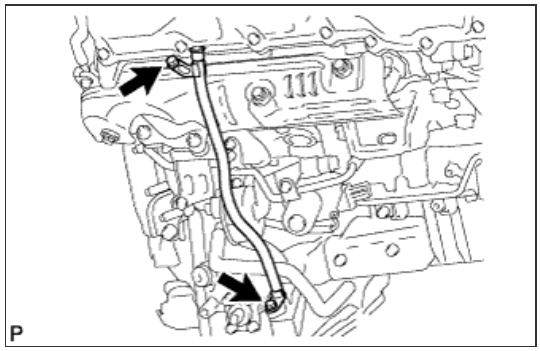


68. INSTALL NO. 1 INTAKE AIR CONNECTOR PIPE

a. Install the No. 1 intake air connector pipe with the bolt. Then tighten the hose clamp.

Torque:
for bolt:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
for clamp:
6.0 N*m{ 61 kgf*cm , 53 in.*lbf }

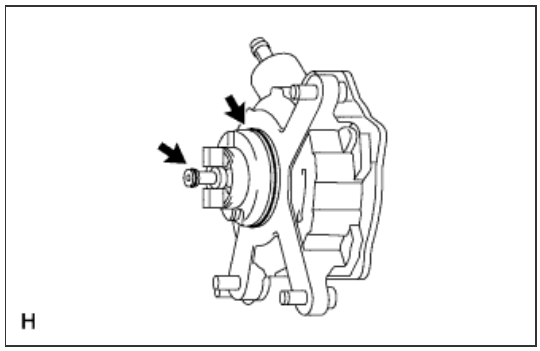
b. Connect the 4 connectors and attach the 5 wire harness clamps.



69. INSTALL NO. 1 ENGINE OIL LEVEL DIPSTICK GUIDE

a. Apply a light coat of engine oil to a new O-ring and install it to the No. 1 engine oil level dipstick guide.

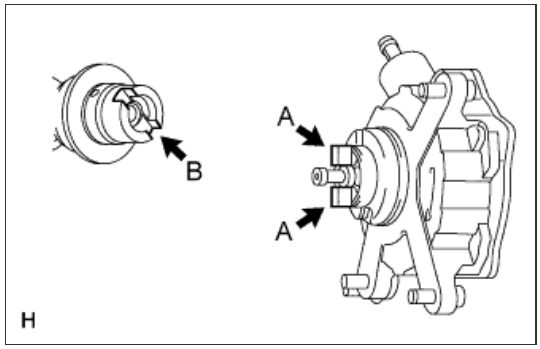
b. Install the No. 1 engine oil level dipstick guide with the 2 bolts.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

70. INSTALL VACUUM PUMP ASSEMBLY (w/ Intercooler)

a. Apply engine oil to 2 new O-rings.

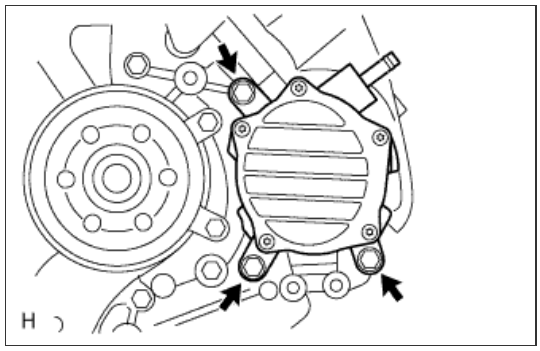


b. Install the 2 O-rings to the vacuum pump.

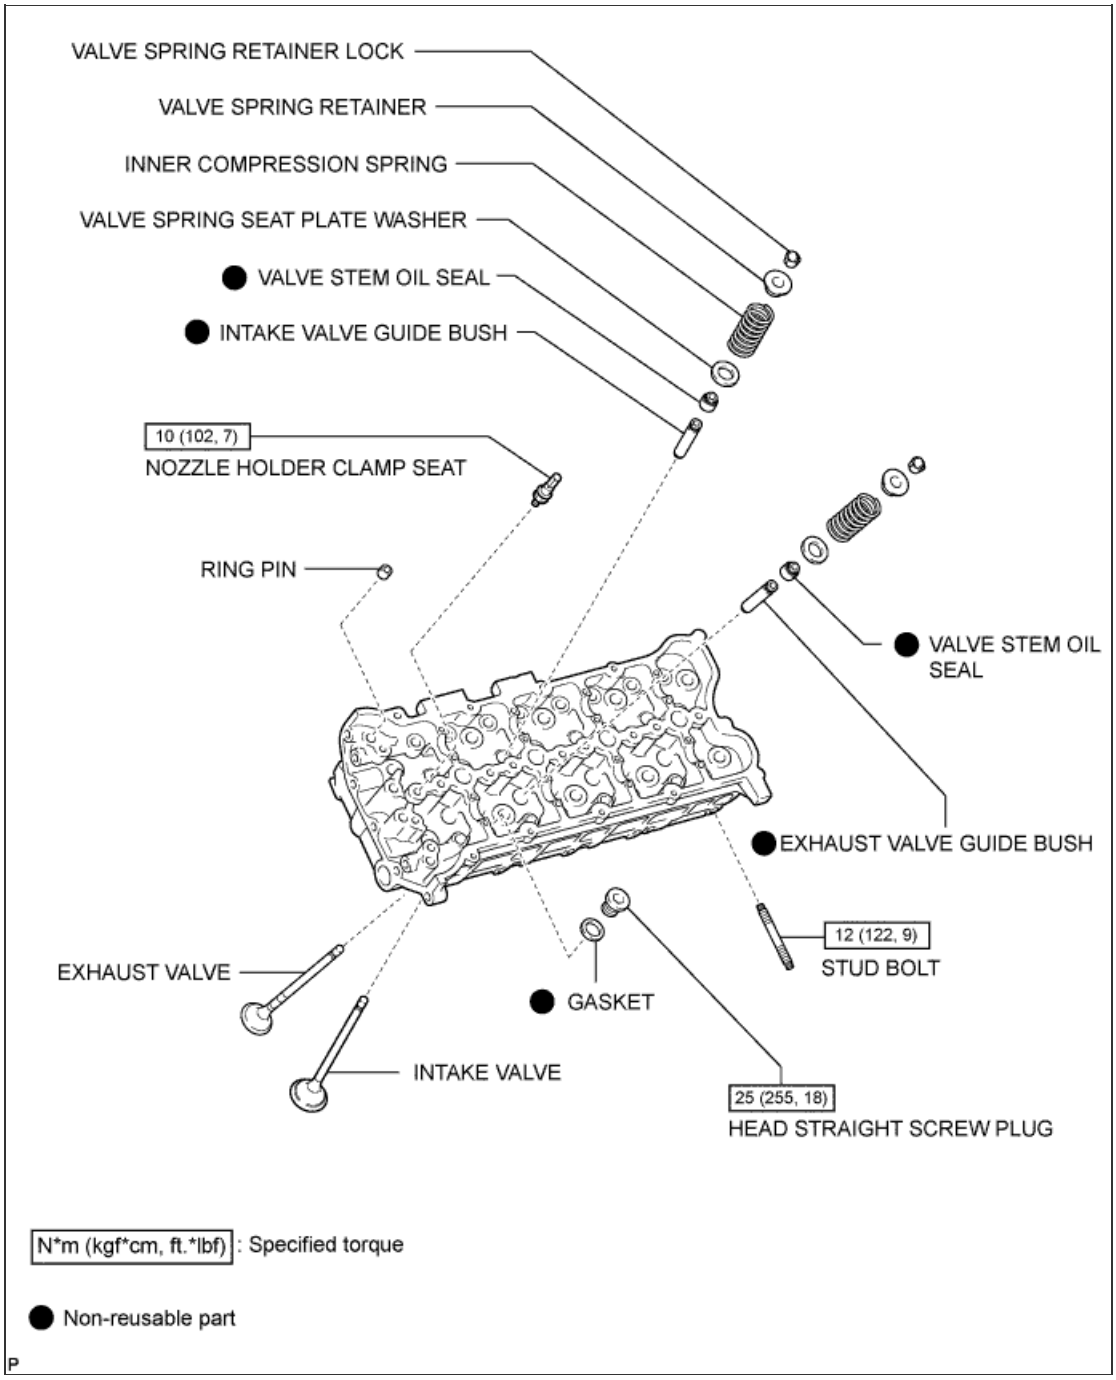
c. Install the vacuum pump so that the coupling teeth of the vacuum pump (labeled A) and the groove of the camshaft (labeled B) are aligned.

NOTICE:

Be careful not to damage the O-ring.



d. Install the vacuum pump with the 3 bolts.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

NOTICE:

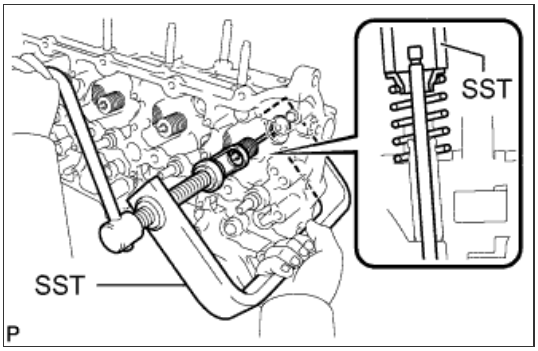
Confirm that the vacuum pump is not at an angle, and that there is no clearance between the fitting surfaces.

for Preparation Click here

for Preparation Click here

1. REMOVE VALVE

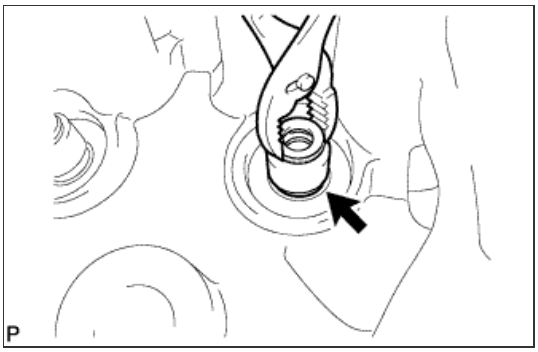
HINT:



Arrange the valves, inner compression springs, valve spring retainers and valve spring retainer locks in the correct order.

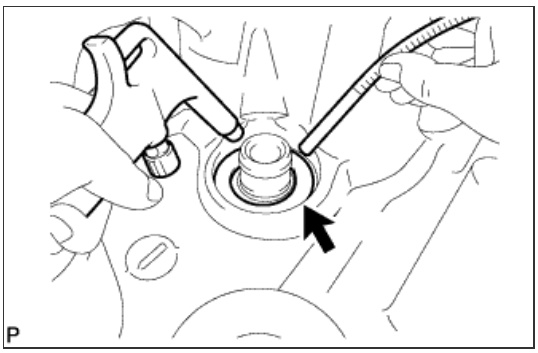
a. Place the cylinder head on a wooden block.

b. Using SST, compress the inner compression spring and remove the valve spring retainer lock.



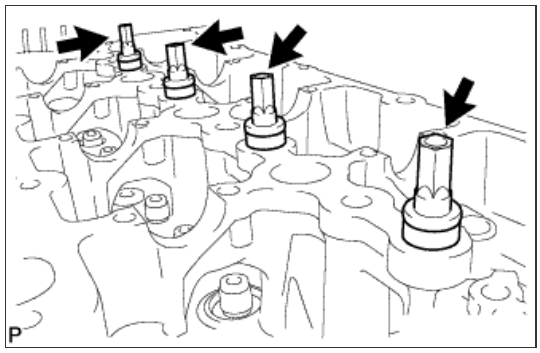
SST
09202-70020 (09202-00010)

c. Remove the inner compression spring, valve spring retainer and valve.



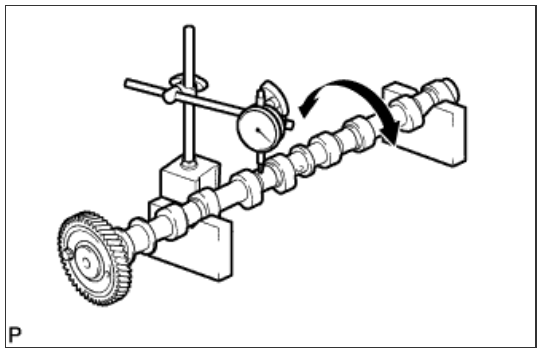
2. REMOVE VALVE STEM OIL SEAL

a. Using pliers, remove the valve stem oil seal.



REMOVE VALVE SPRING SEAT PLATE WASHER

a. Using compressed air and a magnetic finger, remove the valve spring seat plate washer by blowing air.



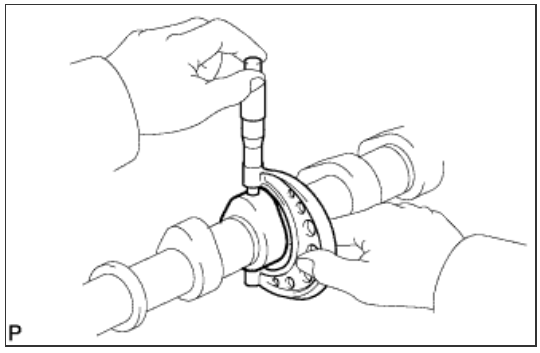
4. REMOVE NO ELHOLDER CLAMP SEAT

P

for Preparation Click here

1. INSPECT CAMSHAFT

a. Inspect the camshaft for runout.



i. Place the camshaft on V-blocks.

ii. Using a dial indicator, measure the runout at the center journal.

Maximum runout:
0.03 mm (0.00118 in.)

If the runout is more than the maximum, replace the camshaft.

b. Inspect the cam lobe height.

i. Using a micrometer, measure the cam lobe height.

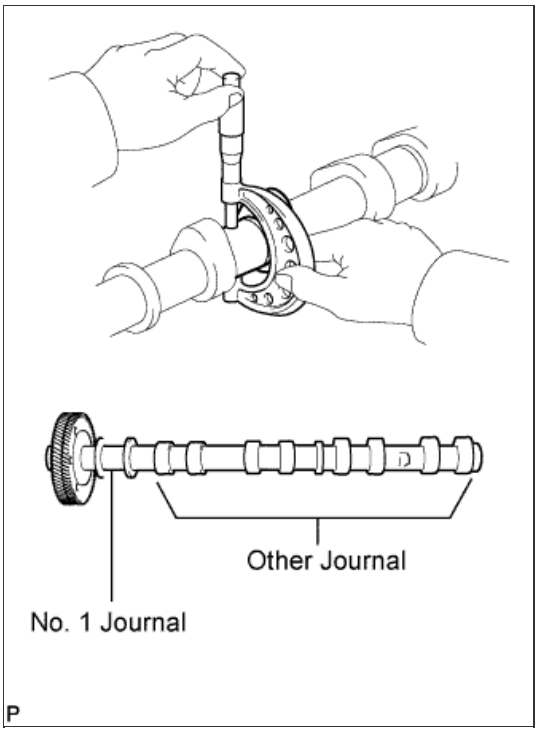
Standard Cam Lobe Height:

Item	Specified Condition
No. 2 and No. 3 camshaft (intake)	37.277 to 37.387 mm (1.468 to 1.472 in.)
No. 1 and No. 4 camshaft (exhaust)	38.324 to 38.434 mm (1.509 to 1.513 in.)

Minimum Cam Lobe Height:

Item	Specified Condition
No. 2 and No. 3 camshaft (intake)	37.277 mm (1.468 in.)
No. 1 and No. 4 camshaft (exhaust)	38.324 mm (1.509 in.)

If the cam lobe height is less than the minimum, replace the camshaft.



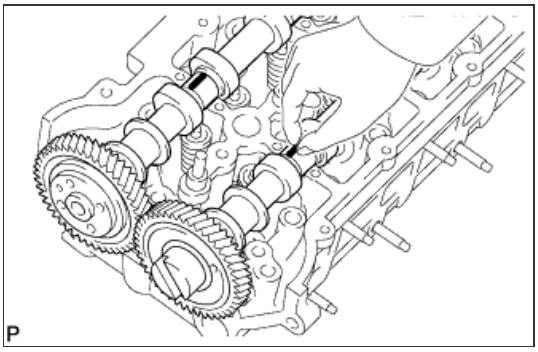
c. Inspect the camshaft journal diameter.

i. Using a micrometer, measure the journal diameter.

Standard Journal Diameter:

Item	Specified Condition
No. 1 journal	29.969 to 29.985 mm (1.180 to 1.181 in.)
Other journal	26.969 to 26.985 mm (1.0618 to 1.0624 in.)

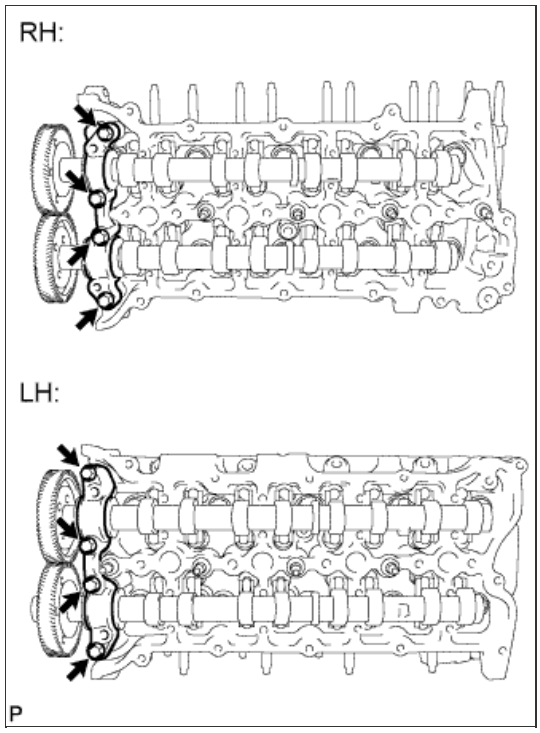
If the journal diameter is not as specified, check the oil clearance.



2. INSPECT CAMSHAFT OIL CLEARANCE

a. Clean the camshaft bearing caps and camshaft journals.

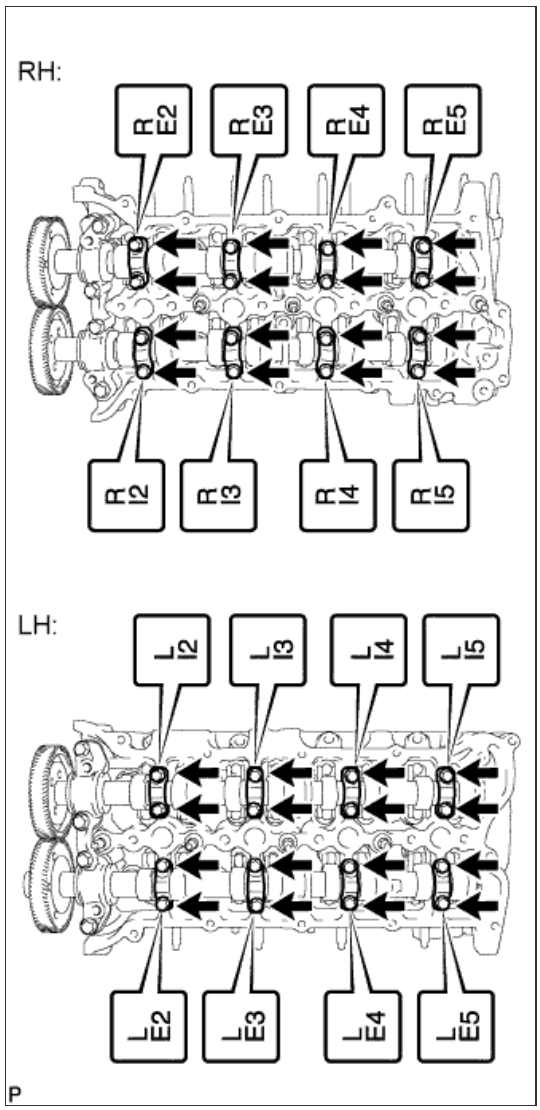
b. Place the camshafts on the cylinder head.



c. Lay a strip of Plastigage across each of the camshaft journals.

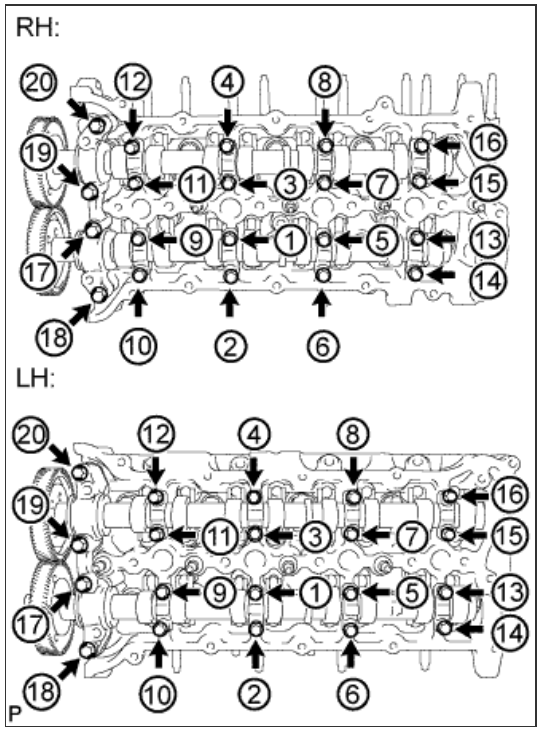
d. Temporarily install the camshaft bearing cap ith the 4 bolts by hand.

NOTICE:



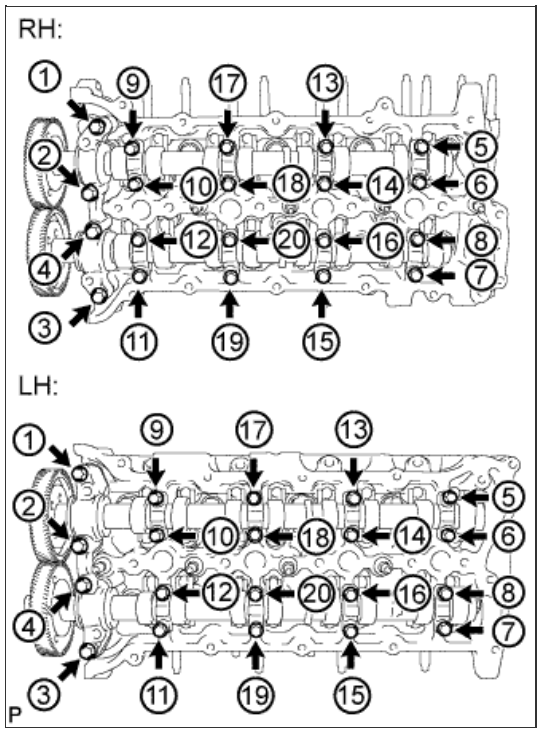
Do not turn the camshafts.

e. Install the No. 3 camshaft bearing caps ith the 16 bolts.



i. Confirm the marks and numbers on the camshaft bearing caps and place them in their proper position and direction.

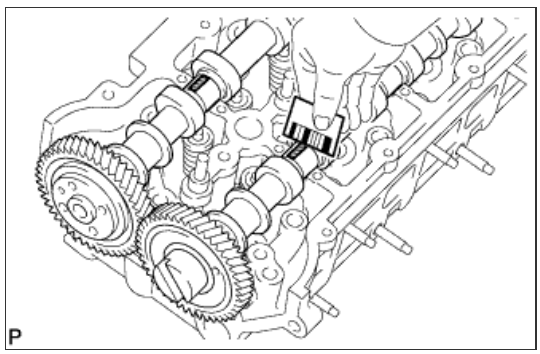
ii. Temporarily install the 16 bolts.



f. Uniformly tighten the 20 bolts in several steps in the order sho n in the illustration.

Torque:
for 12 mm head bolt of No. 1 and No. 4 camshaft bearing cap:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
for 10 mm head bolt of No. 3 camshaft bearing cap:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

g. Uniformly loosen and remove the 20 bolts in the sequence sho n in the illustration.



h. Measure the Plastigage at its idest point.

Standard oil clearance:
0.025 to 0.062 mm (0.000984 to 0.00244 in.)

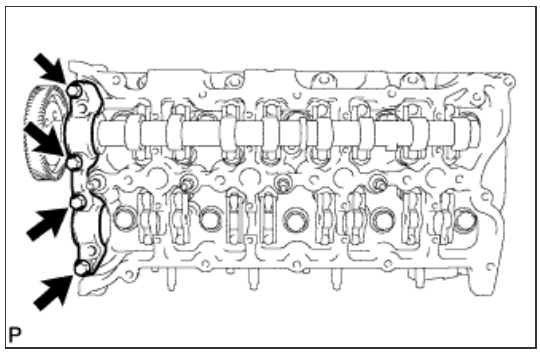
Maximum oil clearance:
0.072 mm (0.00283 in.)

If the oil clearance is more than the maximum, replace the camshaft.
If necessary, replace the cylinder head sub-assembly.

i. Remove the Plastigage completely.

j. Remove the camshafts.

3. INSPECT NO. 2 AND NO. 3 CAMSHAFT THRUST CLEARANCE (for Intake Camshaft)

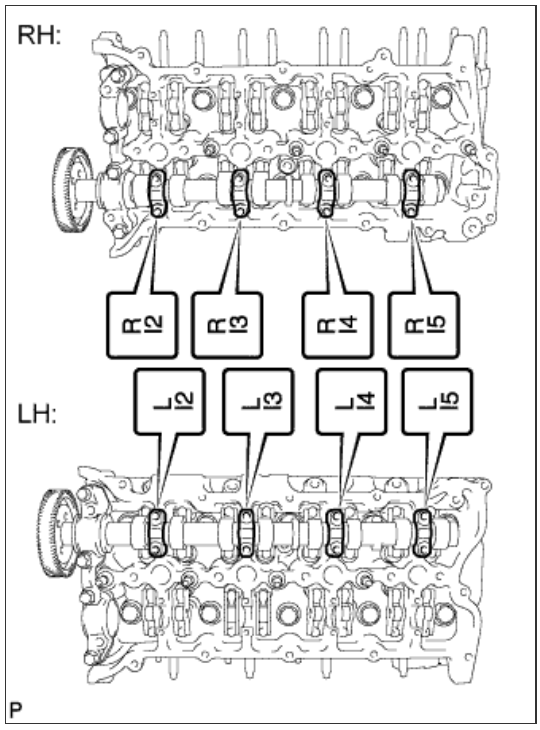


a. Install the No. 2 and No. 5 camshaft bearing caps to the cylinder head.

b. Place the camshafts on the cylinder head.

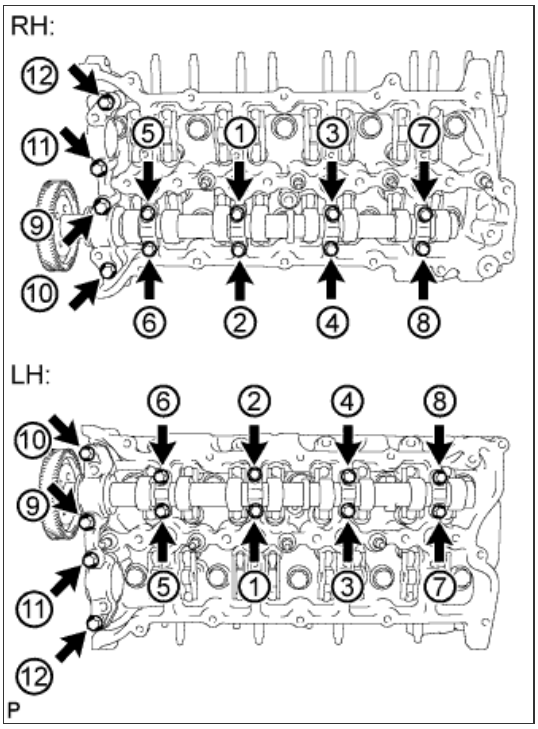
c. Temporarily install the No. 1 and No. 4 camshaft bearing caps ith the 4 bolts by hand.

NOTICE:



Do not turn the camshafts.

d. Install the No. 3 camshaft bearing caps.

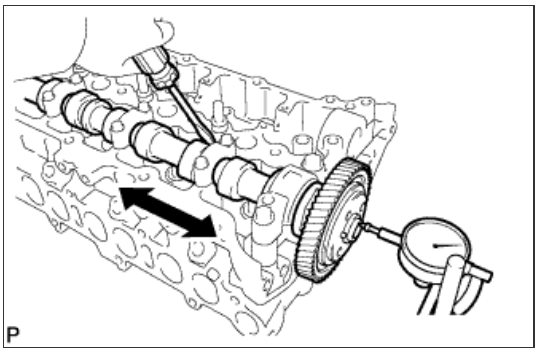


i. Confirm the marks and numbers on the camshaft bearing caps and place them in their proper position and direction.

ii. Temporarily install the 16 bolts.

e. Uniformly tighten the 24 bolts in several steps in the order sho n in the illustration.

Torque:
for 12 mm head bolt of No. 1 and No. 4 camshaft bearing cap:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
for 10 mm head bolt of No. 3 camshaft bearing cap:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



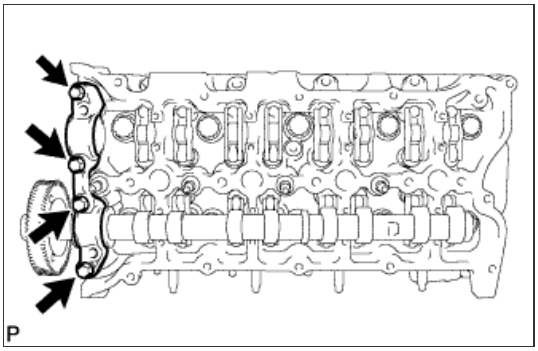
f. Using a dial indicator, measure the thrust clearance hile moving the camshaft back and forth.

Standard thrust clearance:
0.035 to 0.160 mm (0.00138 to 0.00630 in.)

Maximum thrust clearance:
0.180 mm (0.00709 in.)

If the thrust clearance is more than the maximum, replace the camshaft.
If necessary, replace the cylinder head sub-assembly.

4. INSPECT NO. 1 AND NO. 4 CAMSHAFT THRUST CLEARANCE (for Exhaust Camshaft)

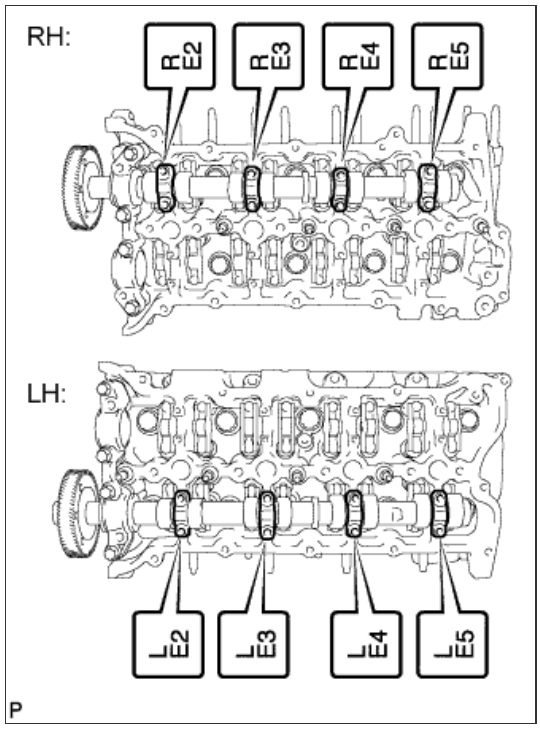


a. Install the No. 2 and No. 5 camshaft bearing caps to the cylinder head.

b. Place the camshafts on the cylinder head.

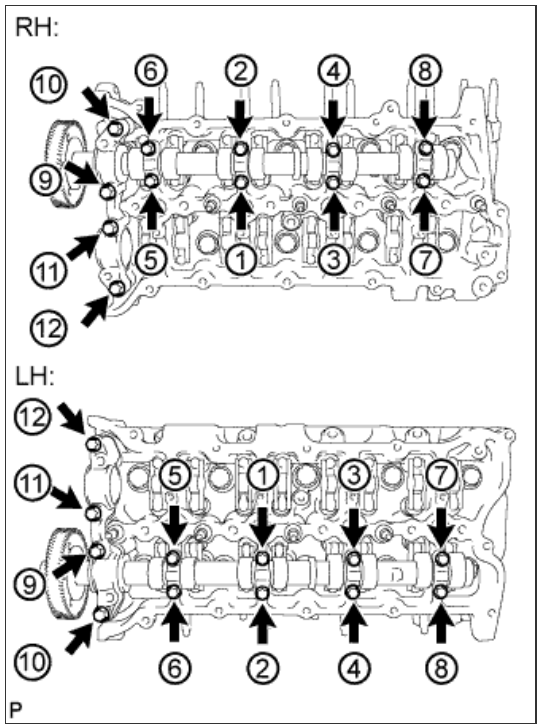
c. Temporarily install the No. 1 and No. 4 camshaft bearing caps ith the 4 bolts by hand.

NOTICE:



Do not turn the camshafts.

d. Install the No. 3 camshaft bearing caps.

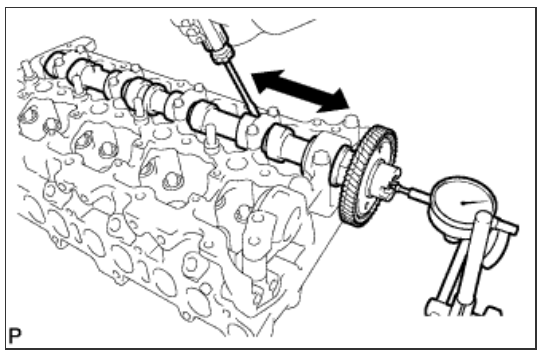


i. Confirm the marks and numbers on the camshaft bearing caps and place them in their proper position and direction.

ii. Temporarily install the 16 bolts.

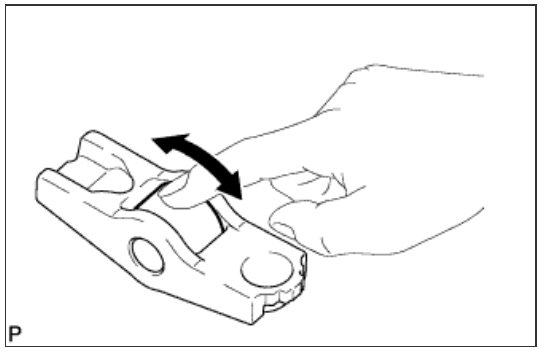
e. Uniformly tighten the 24 bolts in several steps in the order sho n in the illustration.

Torque:
for 12 mm head bolt of No. 1 and No. 4 camshaft bearing cap:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
for 10 mm head bolt of No. 3 camshaft bearing cap:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



f. Using a dial indicator, measure the thrust clearance hile moving the camshaft back and forth.

Standard thrust clearance:
0.035 to 0.160 mm (0.00138 to 0.00630 in.)



Maximum thrust clearance:
0.180 mm (0.00709 in.)

If the thrust clearance is more than the maximum, replace the camshafts.
If necessary, replace the cylinder head sub-assembly.

5. INSPECT VALVE ROCKER ARM SUB-ASSEMBLY

a. Turn the roller by hand to check that it turns smoothly.
If the roller does not turn smoothly, replace the valve rocker arm.

6. INSPECT VALVE LASH ADJUSTER ASSEMBLY

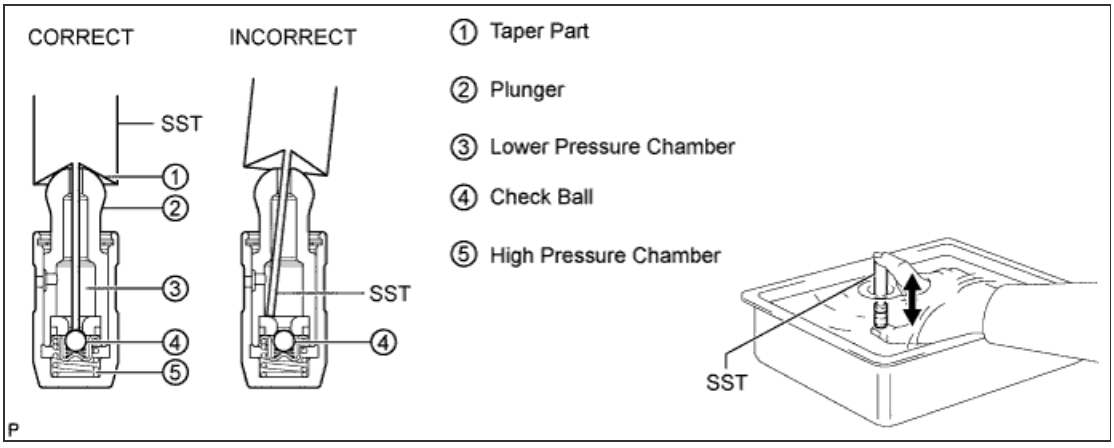
NOTICE:

- **Keep the adjuster free from dirt and foreign objects.**
- **Use onl lean engine oil.**

a. Place the lash adjuster into a container full of ne engine oil.

b. Insert SST tip into the lash adjuster plunger and use the tip to press do n on the check ball inside the plunger.

SST
09276-75010



c. Squeeze SST and the lash adjuster together to move the plunger up and do n 5 to 6 times.

d. Check the movement of the plunger and bleed air.

OK:
Plunger moves up and down.

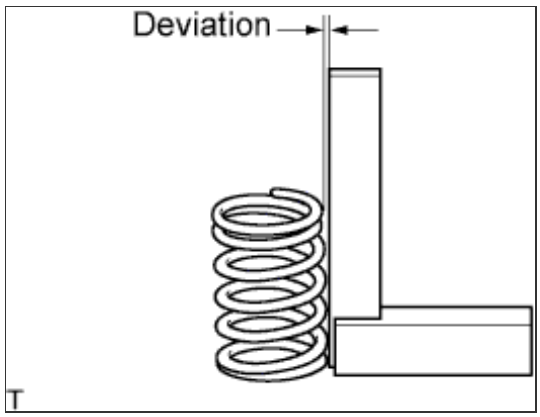
NOTICE:

When bleeding high-pressure air from the compression chamber, make sure that the tip of SST is actually pressing the check ball as sho n in the illustration. If the check ball is not pressed, air ill not bleed.

e. After bleeding the air, remove SST. Then try to quickly and firmly press the plunger ith your fingers.

OK:
Plunger can be pressed 3 times.

If the plunger can still be compressed after pressing it 3 times, replace the lash adjuster ith a ne one.



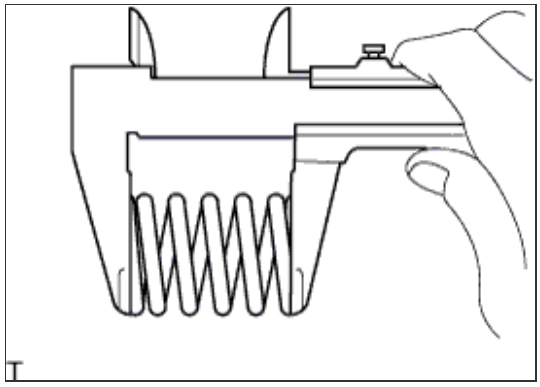
7. INSPECT INNER COMPRESSION SPRIN

a. Inspect the inner compression spring deviation.

i. Using a steel square, measure the deviation of the inner compression spring.

Maximum deviation:
1.5 mm (0.0591 in.)

If the deviation is more than the maximum, replace the inner compression spring.

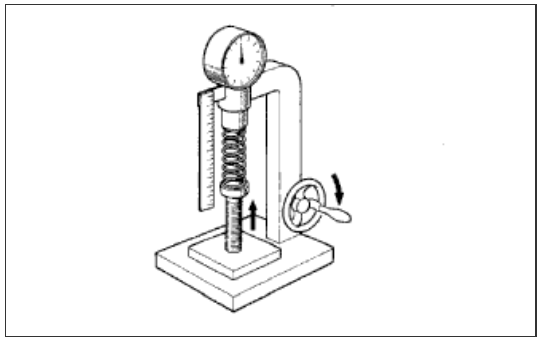


b. Inspect the inner compression spring free length.

i. Using a vernier caliper, measure the free length of the inner compression spring.

Standard free length:
45.9 mm (1.81 in.)

If the free length is not as specified, replace the inner compression spring.

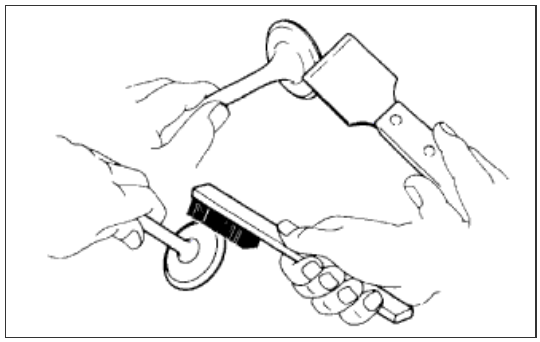


c. Inspect the inner compression spring tension.

i. Using a spring tester, measure the tension of the inner compression spring at the specified installed length.

Installed tension:
219 to 242 N (22 to 25 kgf, 49.2 to 54.4 lbf) at 31.0 mm (1.22 in.)

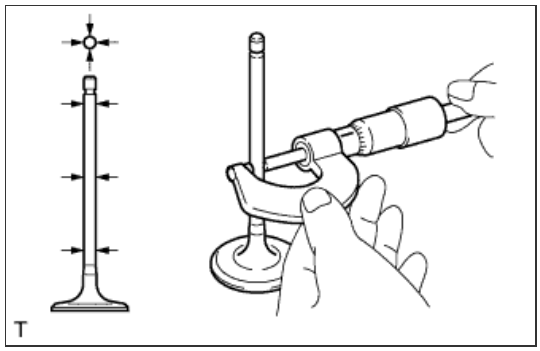
If the installed tension is not as specified, replace the inner compression spring.



8. CLEAN VALVE

a. Using a gasket scraper, chip off any carbon from the valve head.

NOTICE:

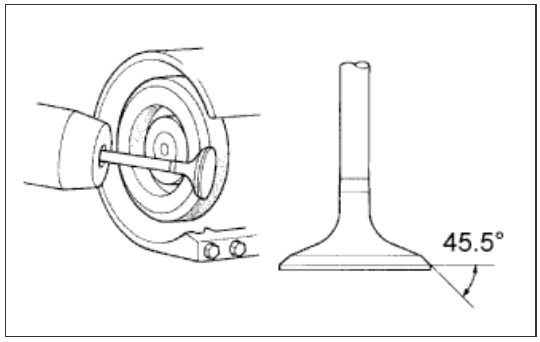


Be careful not to damage the valve face.

b. Using a ire brush, thoroughly clean the valve.

9. INSPECT VALVE

a. Inspect the valve stem diameter.

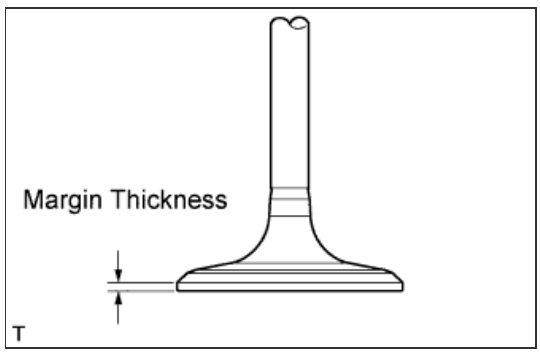


i. Using a micrometer, measure the diameter of the valve stem.

Standard Valve Stem Diameter:

Item	Specified Condition
Intake	5.970 to 5.985 mm (0.2350 to 0.2356 in.)
xhaust	5.960 to 5.975 mm (0.2346 to 0.2352 in.)

b. Inspect the valve face angle.



i. Grind the valve enough to remove pits and carbon.

ii. Check that the valve is ground to the correct valve face angle.

Standard valve face angle:
45.5°

c. Inspect the valve head margin thickness.

i. Using a vernier caliper, measure the valve head margin thickness.

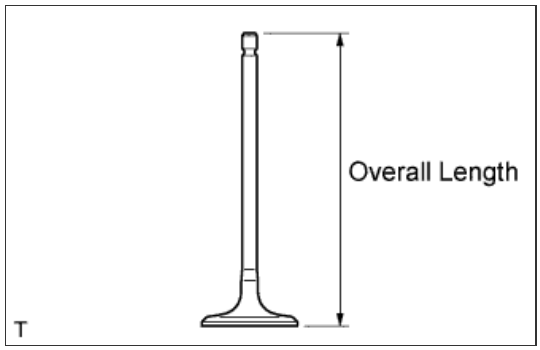
Standard margin thickness:
1.0 mm (0.0394 in.)

Minimum margin thickness:
0.5 mm (0.0197 in.)

If the margin thickness is less than the minimum, replace the valve.

d. Inspect the valve overall length.

i. Using a vernier caliper, measure the overall length.



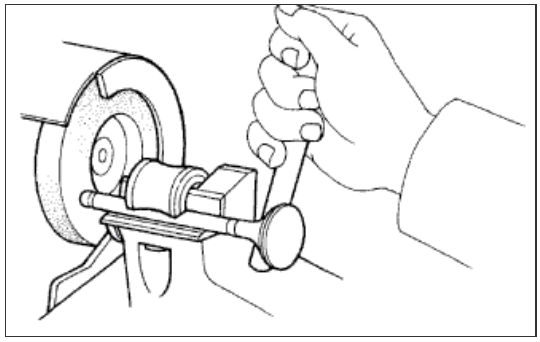
Standard Overall Length:

Item	Specified Condition
Intake	104.4 mm (4.11 in.)
xhaust	104.1 mm (4.10 in.)

Minimum Overall Length:

Item	Specified Condition
Intake	104.1 mm (4.10 in.)
xhaust	103.8 mm (4.09 in.)

If the overall length is less than the minimum, replace the valve.



e. Inspect the valve stem tip.

i. Check the surface of the valve stem tip for ear.

NOTICE:

Do not grind the valve so it becomes shorter than the minimum overall length.

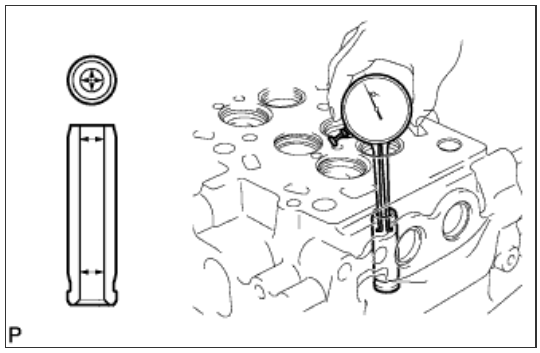
If the valve stem tip is orn, resurface the tip ith a grinder or replace the valve.

10. INSPECT VALVE UIDE BUSH OIL CLEARANCE

a. Using a caliper gauge, measure the inside diameter of the guide bush.

Standard bush inside diameter:
6.01 to 6.03 mm (0.2366 to 0.2374 in.)

b. Subtract the valve stem diameter measurement from the guide bush inside diameter measurement.



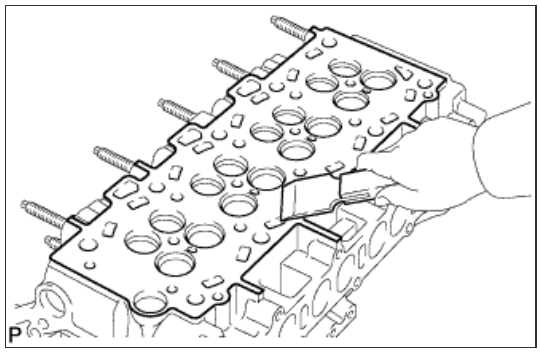
Standard Oil Clearance:

Item	Specified Condition
Intake	0.025 to 0.060 mm (0.000984 to 0.00236 in.)
xhaust	0.035 to 0.070 mm (0.00138 to 0.00276 in.)

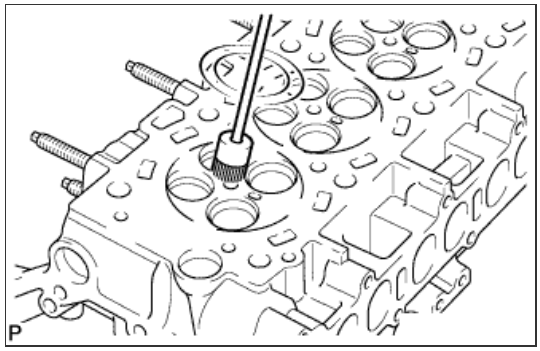
Maximum Oil Clearance:

Item	Specified Condition
Intake	0.120 mm (0.00472 in.)
xhaust	0.130 mm (0.00512 in.)

If the oil clearance is more than the maximum, replace the valve guide bush.



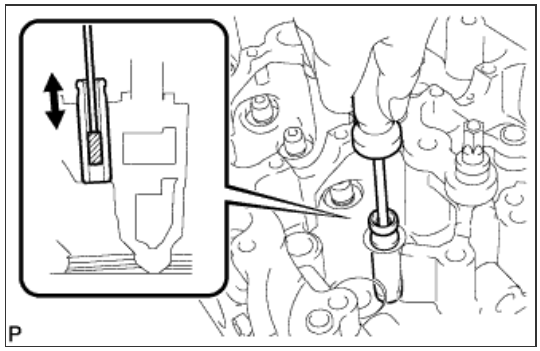
11. CLEAN CYLINDER HEAD SUB-ASSEMBLY



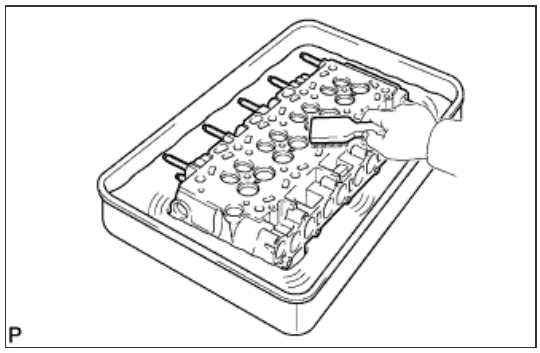
a. Using a gasket scraper, remove all the gasket material from the cylinder block contact surface.

NOTICE:

Be careful not to scratch the cylinder block contact surface.



b. Using a ire brush, remove all the carbon from the combustion chambers.



NOTICE:

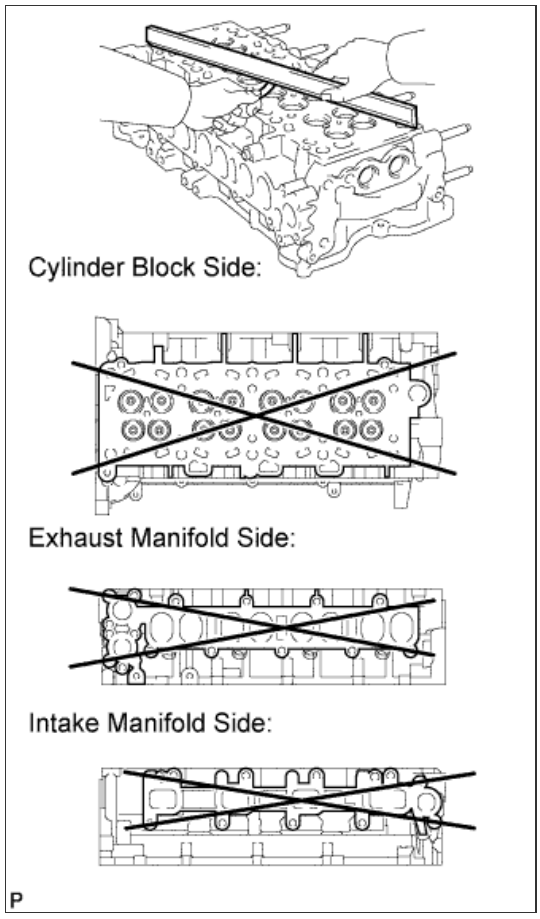
Be careful not to damage the combustion chambers and valve seats.

c. Using a valve guide bushing brush and solvent, clean all the valve guide bushes.

d. Using a soft brush and solvent, thoroughly clean the cylinder head.

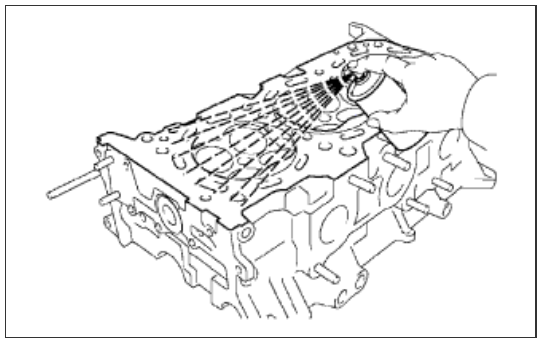
12. INSPECT CYLINDER HEAD SUB-ASSEMBLY

a. Using a precision straightedge and feeler gauge, measure the arpage of the contact surface bet een the cylinder head and cylinder block, and the cylinder head and manifolds.



Standard arpage:

Item	Specified Condition
Cylinder block side	0 to 0.05 mm (0 to 0.00197 in.)
Intake manifold side	0 to 0.08 mm (0 to 0.00315 in.)
xhaust manifold side	0 to 0.08 mm (0 to 0.00315 in.)

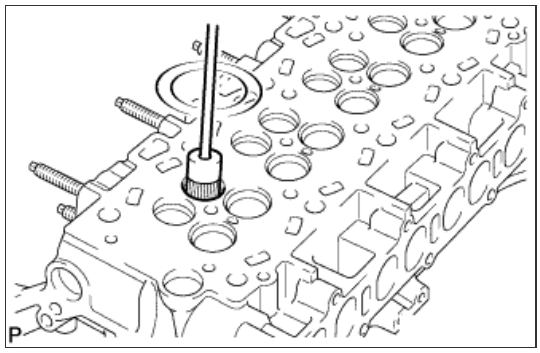


Maximum arpage:

Item	Specified Condition
Cylinder block side	0.05 mm (0.00197 in.)
Intake manifold side	0.08 mm (0.00315 in.)
xhaust manifold side	0.08 mm (0.00315 in.)

If the arpage is more than the maximum, replace the cylinder head sub-assembly.

b. Using a dye penetrant, check the intake ports, exhaust ports and cylinder surface for cracks.
If there are cracks, replace the cylinder head sub-assembly.



13. CLEAN VALVE SEAT

a. Using a 45° carbide cutter, resurface the valve seats.

NOTICE:

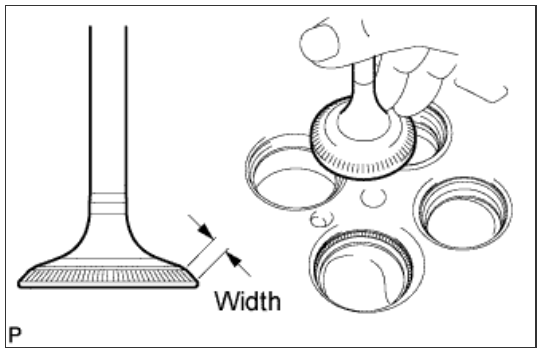
Be careful not to damage the combustion chambers and valve seats.

b. Clean the valve seats.

14. INSPECT INTAKE VALVE SEAT

a. Apply a light coat of Prussian blue to the valve face.

b. Lightly press the valve face against the valve seat.



NOTICE:

Do not rotate the valve hile pressing the valve.

c. Check the valve face and valve seat.

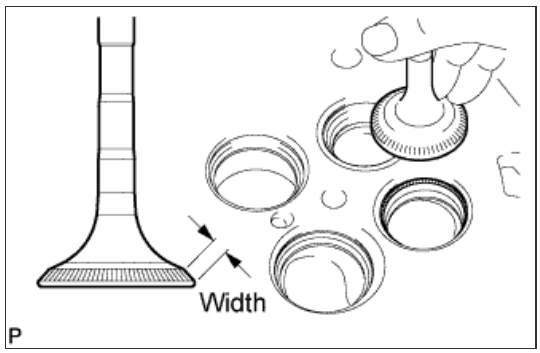
i. Check that the contact surfaces of the valve seat and valve face are in the middle area of their respective surfaces, ith the idth bet een 1.0 to 1.4 mm (0.0394 to 0.0551 in.).
If not, correct the valve seat.

ii. Check that the contact surfaces of the valve seat and valve face are even around the entire valve seat.
If not, correct the valve seat.

15. INSPECT E HAUST VALVE SEAT

a. Apply a light coat of Prussian blue to the valve face.

b. Lightly press the valve face against the valve seat.



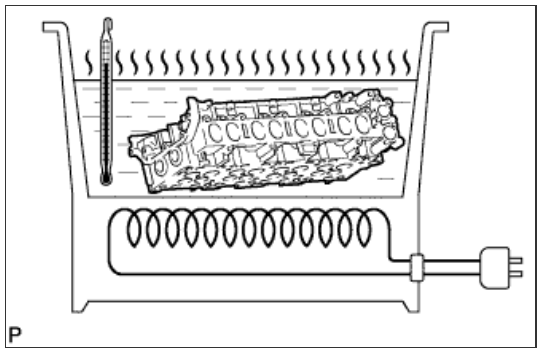
NOTICE:

Do not rotate the valve hile pressing the valve.

c. Check the valve face and valve seat.

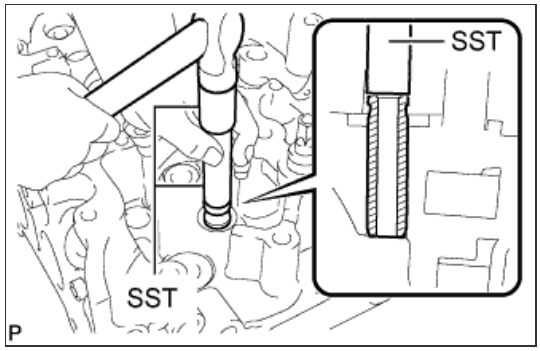
i. Check that the contact surfaces of the valve seat and valve face are in the middle area of their respective surfaces, ith the idth bet een 1.0 to 1.4 mm (0.0394 to 0.0551 in.).
If not, correct the valve seat.

ii. Check that the contact surfaces of the valve seat and valve face are even around the entire valve seat.
If not, correct the valve seat.



for Preparation Click here

1. REPLACE VALVE GUIDE BUSH

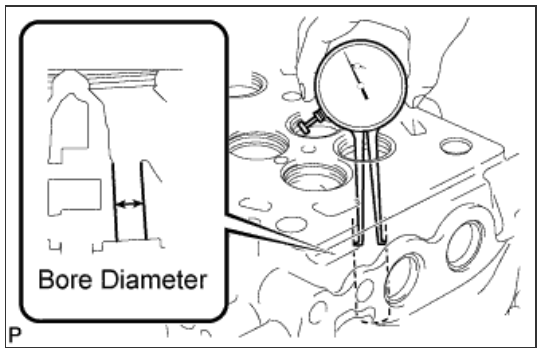


a. Gradually heat the cylinder head to 80 to 100°C (176 to 212°F).

b. Place the cylinder head on a wooden block.

c. Using SST, tap out the valve guide bush.

SST
09201-10000 (09201-01060)
09950-70010 (09951-07100)

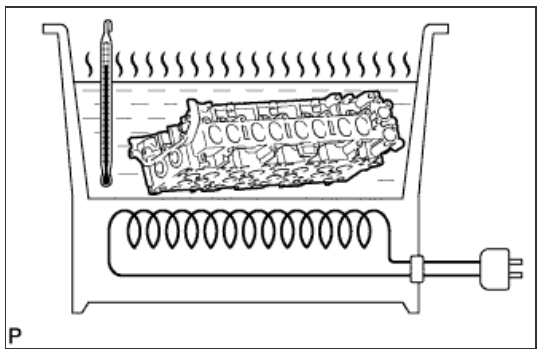


d. Using a caliper gauge, measure the bush bore diameter of the cylinder head.

Standard bush bore diameter:
10.985 to 11.006 mm (0.432 to 0.433 in.)

If the bush bore diameter of the cylinder head is more than 11.006 mm (0.433 in.), machine the bush bore to the dimension of 11.035 to 11.056 mm (0.434 to 0.435 in.).

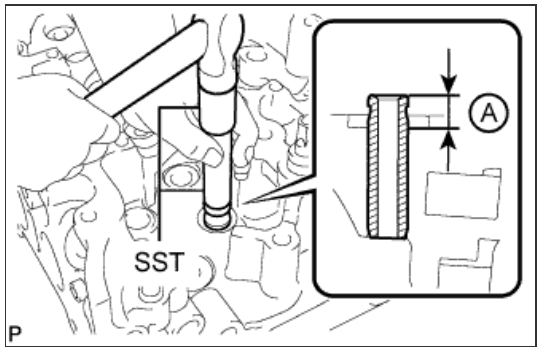
Standard Valve Guide Bush Diameter:



Item	Specified Condition
STD	11.033 to 11.044 mm (0.434 to 0.435 in.)
O/S 0.05	11.083 to 11.094 mm (0.436 to 0.437 in.)

If the bush bore diameter of the cylinder head is more than 11.056 mm (0.435 in.), replace the cylinder head sub-assembly.

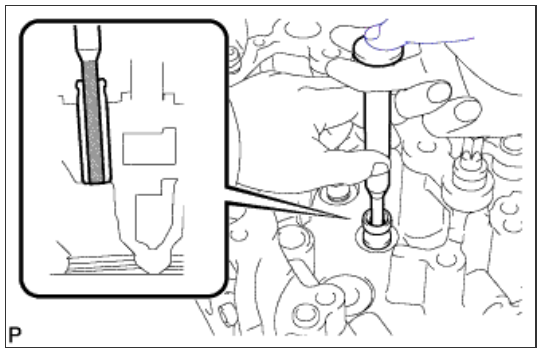
e. Gradually heat the cylinder head to 80 to 100°C (176 to 212°F).



f. Place the cylinder head on a wooden block.

g. Using SST, tap in a new valve guide bush to the specified protrusion height A shown in the illustration.

SST
09201-10000 (09201-01060)
09950-70010 (09951-07100)

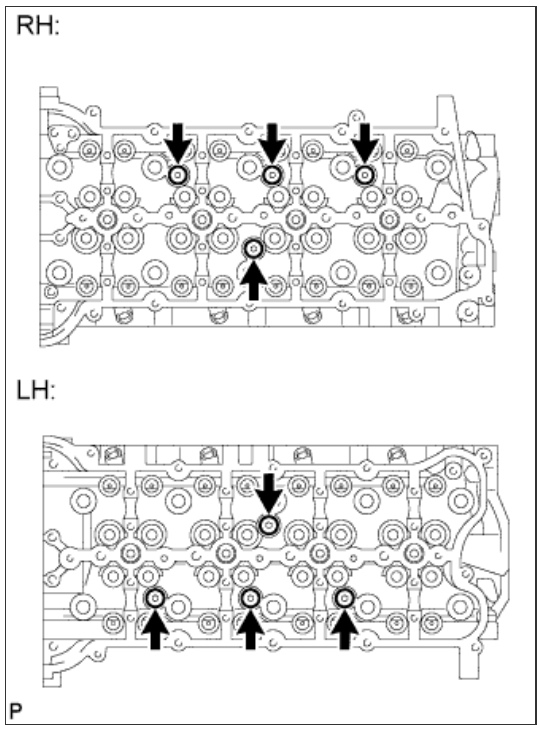


Standard protrusion height:
9.0 to 9.4 mm (0.354 to 0.370 in.)

h. Using a sharp 6.0 mm reamer, ream the valve guide bush to obtain the standard specified clearance between the valve guide bush and valve stem.

Standard Overall Length:

Item	Specified Condition
Intake	0.025 to 0.060 mm (0.000984 to 0.00236 in.)
Exhaust	0.035 to 0.070 mm (0.00138 to 0.00276 in.)



2. REPLACE HEAD STRAIGHT SCREW PLUG

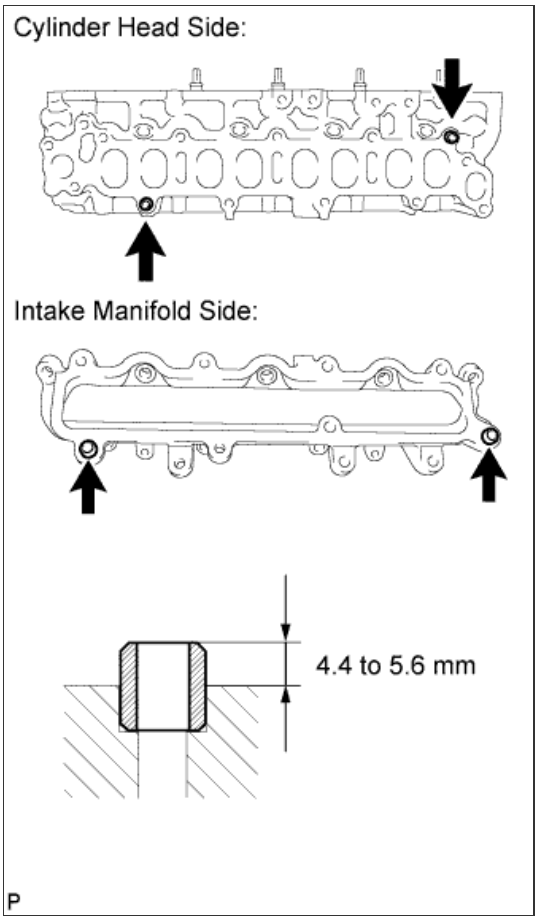
a. Using a 6 mm hexagon wrench, remove the straight screw plug and gasket.

b. Using a 6 mm hexagon wrench, install a new gasket and straight screw plug.

Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf

3. REPLACE RING PIN

HINT:



It is not necessary to remove the ring pin unless it is being replaced.

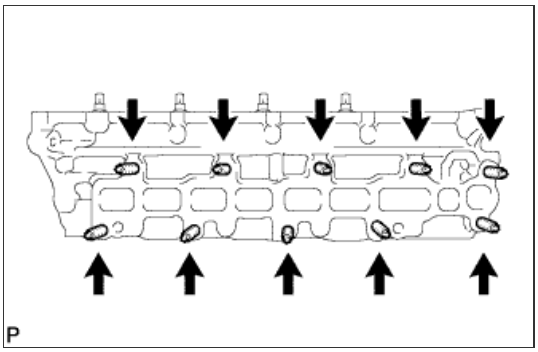
a. Remove the ring pins.

b. Using a plastic-faced hammer, tap in new ring pins.

Standard protrusion:

4.4 to 5.6 mm (0.173 to 0.220 in.)

4. REPLACE STUD BOLT



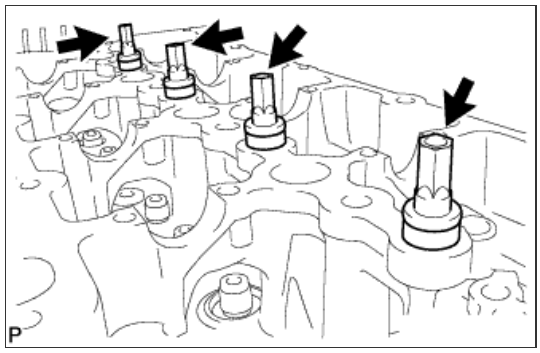
HINT:

If a stud bolt is deformed or the threads are damaged, replace it.

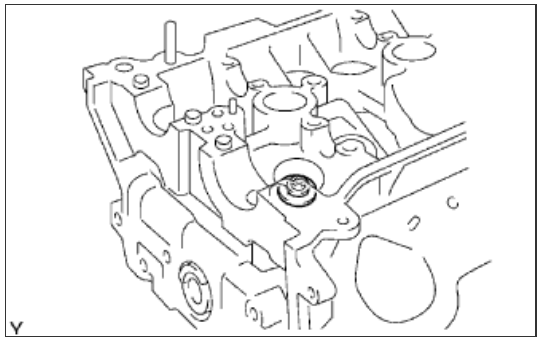
a. Using an E8 "TORX" wrench, remove the stud bolts.

b. Using an E8 "TORX" wrench, install new stud bolts.

Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf



for Preparation Click here



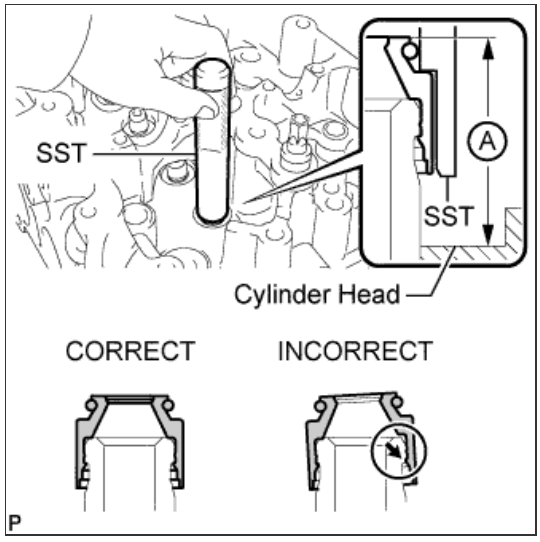
1. INSTALL NOZZLE HOLDER CLAMP SEAT

a. Install the nozzle holder clamp seat.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

2. INSTALL VALVE SPRING SEAT PLATE WASHER

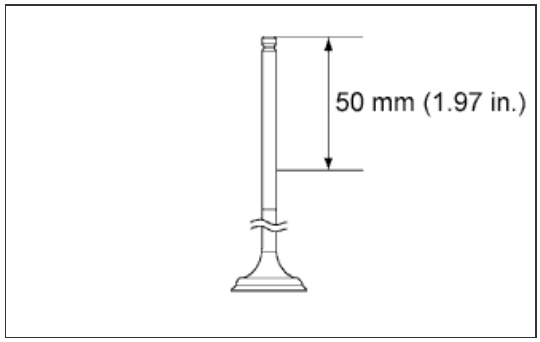
3. INSTALL VALVE STEM OIL SEAL



a. Apply a light coat of engine oil to the valve guide bush.

b. Using SST, push in a new valve stem oil seal.

SST
09201-41020



c. Check that the protrusion height of the valve stem oil seal labeled A in the illustration is as specified.

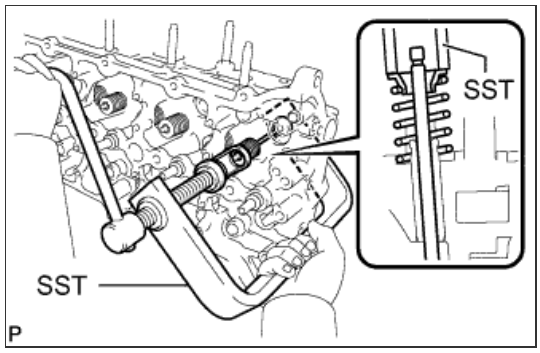
Standard protru ion height:
Below 14.7 mm (0. 79 in.)

4. INSTALL VALVE

a. Apply plenty of engine oil to the tip area of the valve as shown in the illustration.

b. Place the cylinder head on a wooden block.

c. Install the valve, inner compression spring and valve spring retainer to the cylinder head.

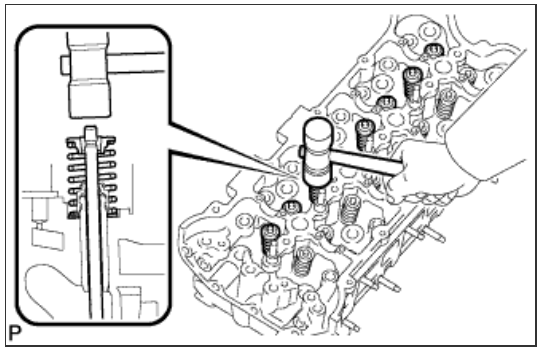


NOTICE:

Install the same parts in the same combination to their original locations.

d. Using SST, compress the inner compression spring and place the valve spring retainer lock around the valve stem.

SST

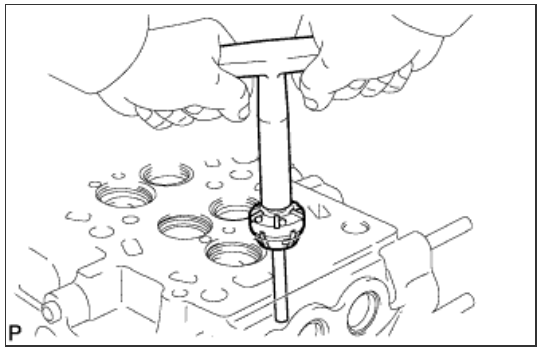


09202-70020 (09202-00010)

e. Using a plastic-faced hammer, lightly tap the valve stem tip to ensure a proper fit.

NOTICE:

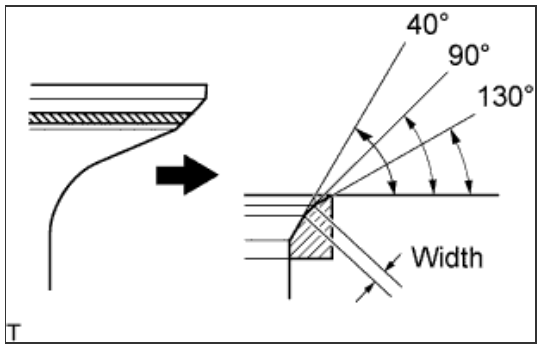
Be careful not to damage the valve stem tip.



for Preparation Click here

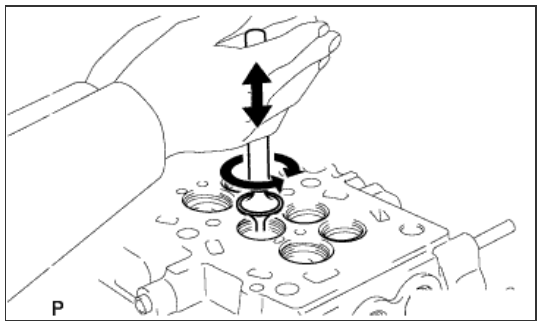
1. REPAIR INTAKE VALVE SEAT

NOTICE:



- **Repair the seat while checking the seating position.**
- **Keep the lip free of foreign matter.**

a. Using a 90° cutter, resurface the valve seat so that the valve seat width is more than the specification.

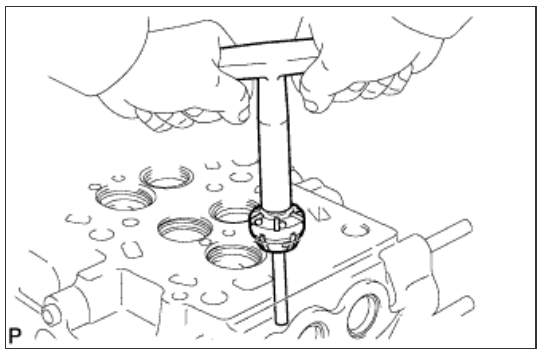


b. Using 40° and 130° cutters, correct the valve seat so that the valve contacts the entire circumference of the seat. The contact should be in the center of the valve seat, and the valve seat width should be maintained within the specified range around the entire circumference of the seat.

Standard width:
1.0 to 1.4 mm (0.0 4 to 0.0551 in.)

c. Hand-lap the valve and valve seat with an abrasive compound.

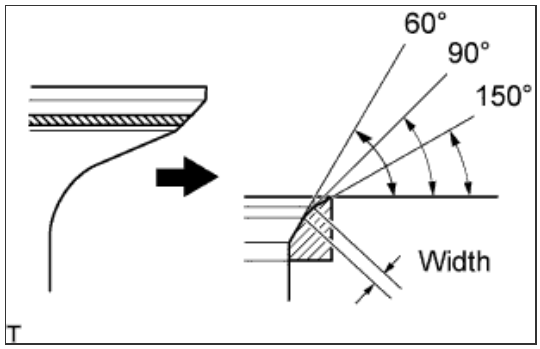
d. Check the valve seating position.



. REPAIR E HAUST VALVE SEAT

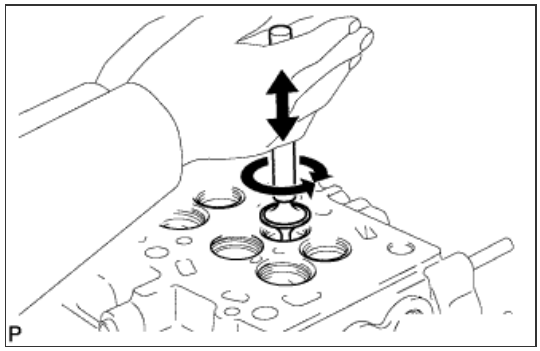
NOTICE:

- **Repair the seat while checking the seating position.**
- **Keep the lip free of foreign matter.**



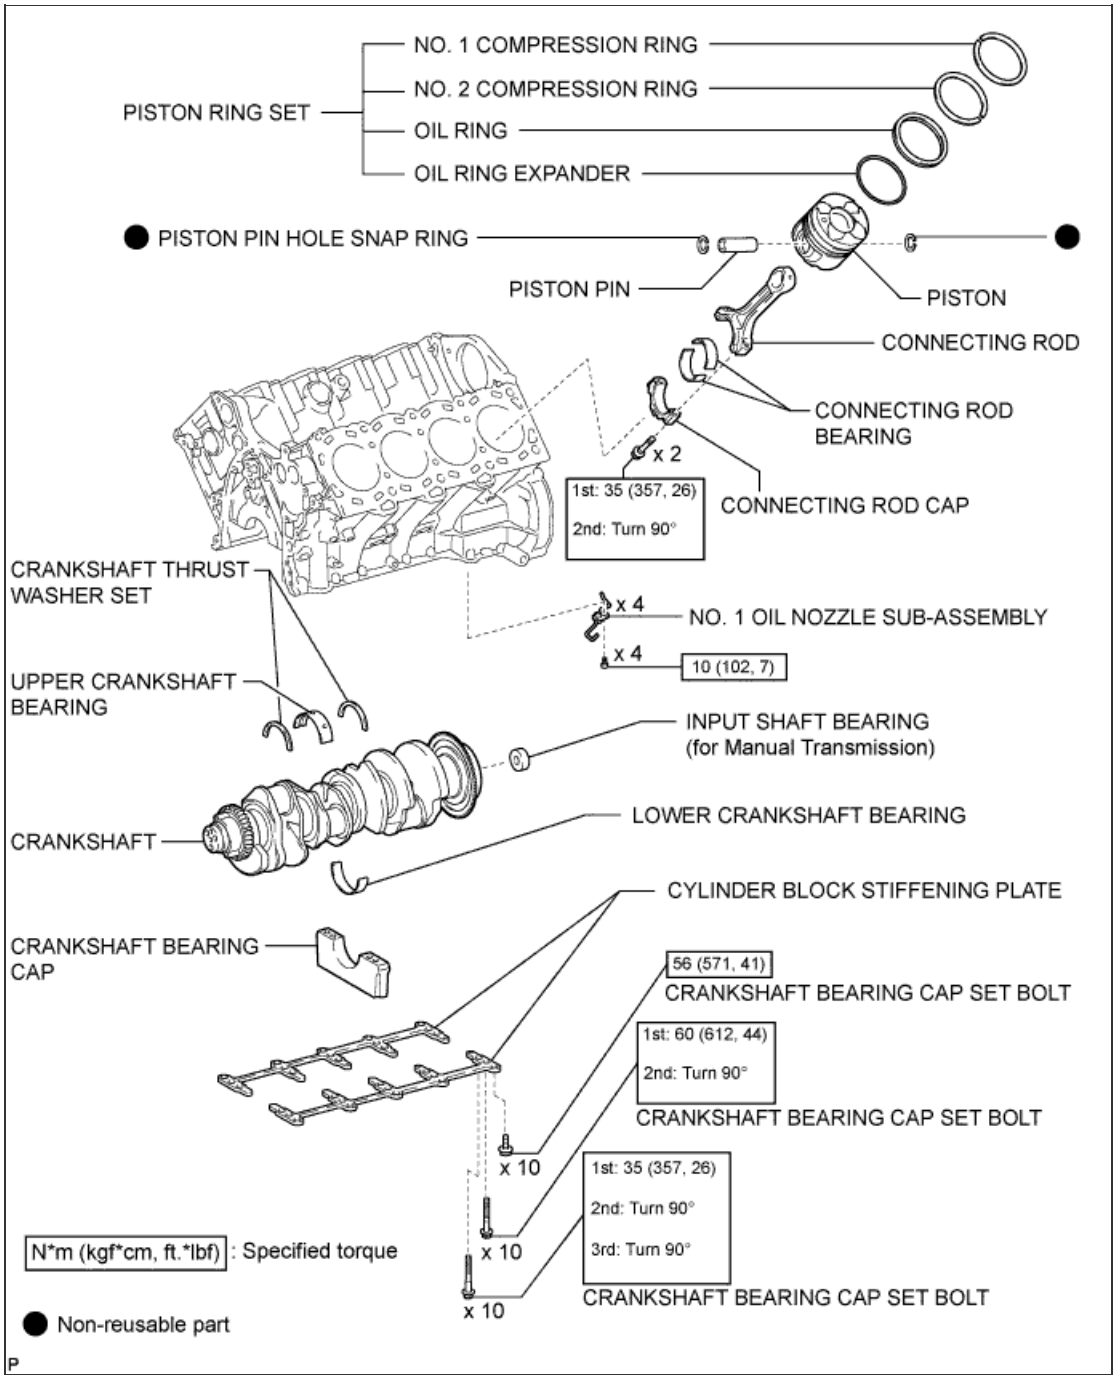
a. Using a 90° cutter, resurface the valve seat so that the valve seat width is more than the specification.

b. Using 60° and 150° cutters, correct the valve seat so that the valve contacts the



entire circumference of the seat. The contact should be in the center of the valve seat, and the valve seat width should be maintained within the specified range around the entire circumference of the seat.

Standard width:
1.0 to 1.4 mm (0.0 4 to 0.0551 in.)

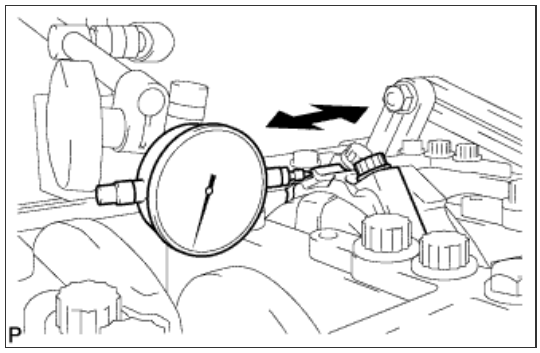


c. Hand-lap the valve and valve seat with an abrasive compound.

d. Check the valve seating position.

for Preparation Click here

for Preparation Click here



1. INSPECT CONNECTING ROD THRUST CLEARANCE

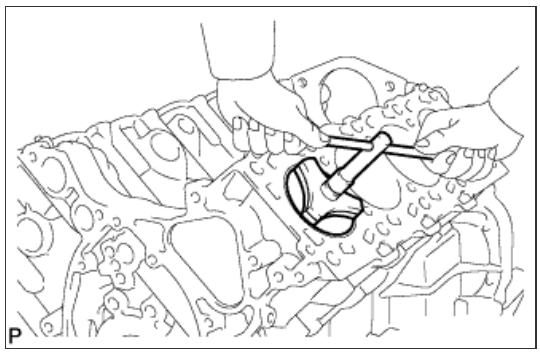
a. Using a dial indicator, measure the thrust clearance while moving the connecting rod back and forth.

Standard thrust clearance:
0.14 to 0.54 mm (0.00551 to 0.0213 in.)

Maximum thrust clearance:
0.60 mm (0.0236 in.)

If the thrust clearance is more than the maximum, replace one or more connecting rods as necessary.
If necessary, replace the crankshaft.

2. REMOVE PISTON SUB-ASSEMBLY WITH CONNECTING ROD



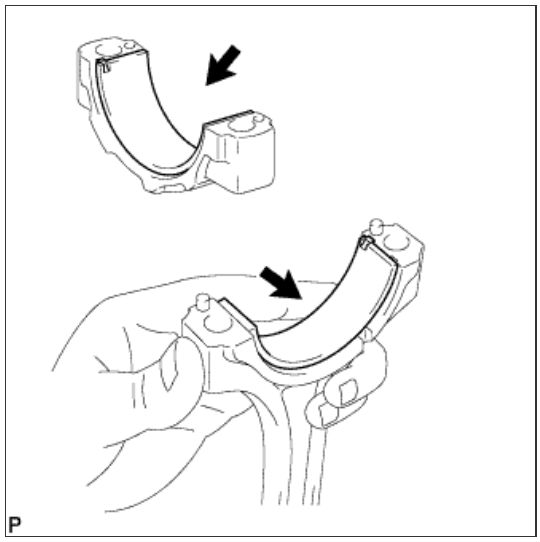
a. Using a ridge reamer, remove all the carbon from the top of the cylinder.

b. Uniformly loosen the connecting rod bolts, and remove the connecting rod cap with bearing.

c. Push out the piston and connecting rod with bearing through the top of the cylinder block.

HINT:

Arrange the piston and connecting rod assemblies in the correct order.



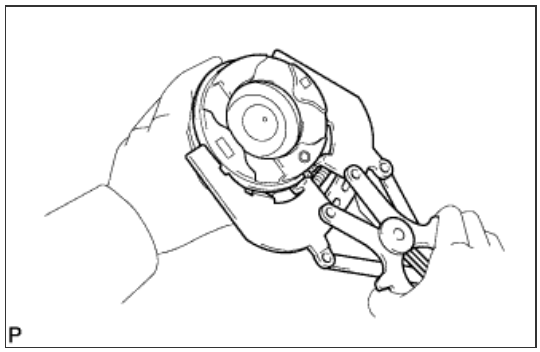
3. REMOVE CONNECTING ROD BEARING

a. Remove the connecting rod and connecting rod cap bearings.

HINT:

Arrange the removed parts in the correct order.

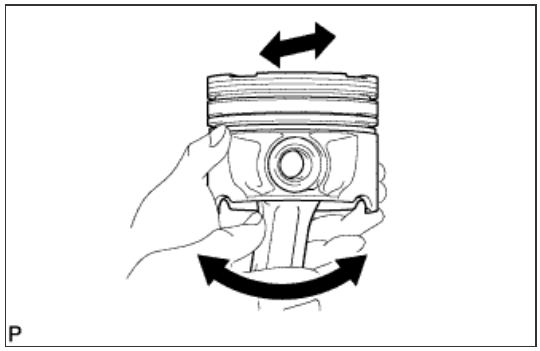
4. REMOVE PISTON RING SET



a. Using a piston ring expander, remove the No. 1 and No. 2 compression rings.

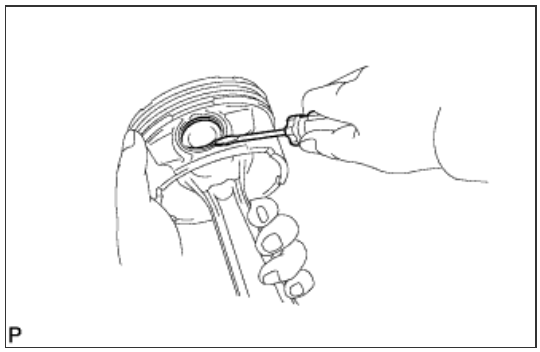
b. Using a piston ring expander, remove the oil ring.

c. Remove the oil ring expander by hand.

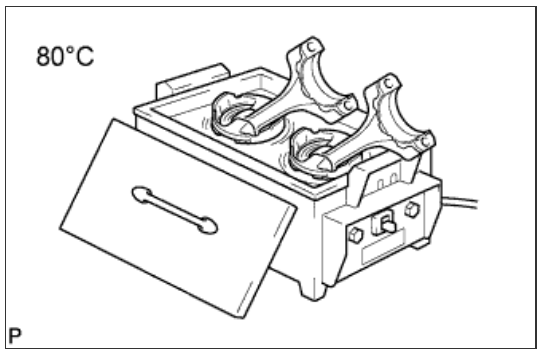


HINT:

Arrange the removed parts in the correct order.

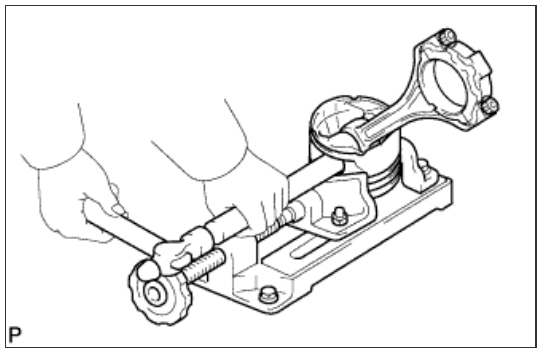


5. REMOVE PISTON WITH PIN SUB-ASSEMBLY



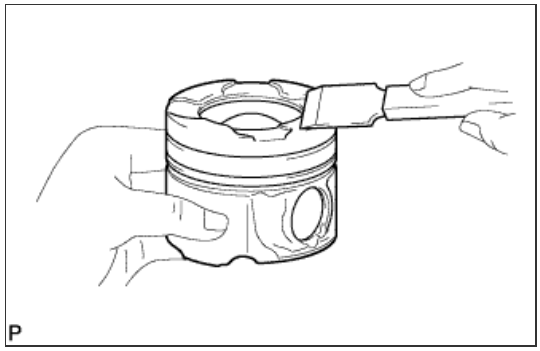
a. Check the fitting condition between the piston and piston pin by trying to move the piston back and forth on the piston pin.
If any movement is felt, replace the piston and pin as a set.

b. Using a screwdriver, pry out the 2 snap rings.



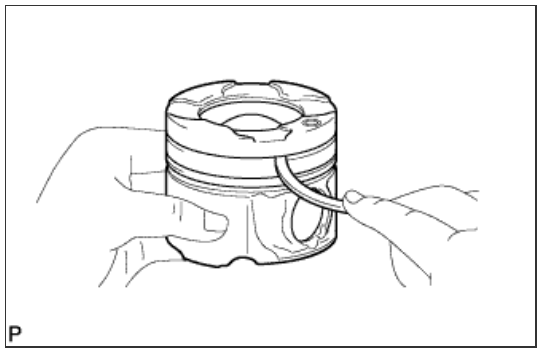
c. Gradually heat the piston to approximately 80°C (176°F).

d. Using a plastic-faced hammer and brass bar, lightly tap out the piston pin and remove the connecting rod.



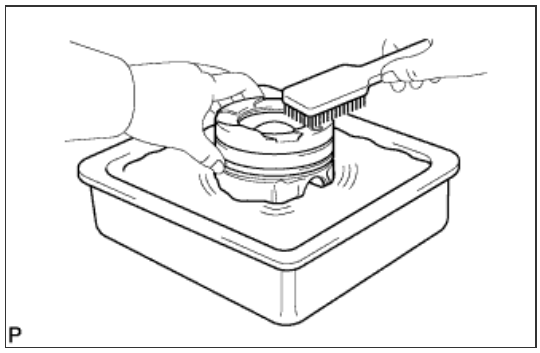
HINT:

- **The piston and pin are a matched set.**
- **Arrange the piston and connecting rod assemblies in the correct order.**



6. CLEAN PISTON

a. Using a gasket scraper, remove the carbon from the piston top.



b. Using a groove cleaning tool or broken ring, clean the piston ring grooves.

c. Using solvent and a brush, thoroughly clean the piston.

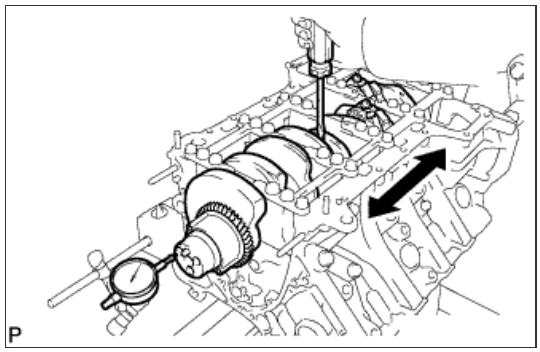
NOTICE:

Do not use a wire brush.

7. INSPECT CRANKSHAFT THRUST CLEARANCE

a. Using a dial indicator, measure the thrust clearance while prying the crankshaft back and forth with a screwdriver.

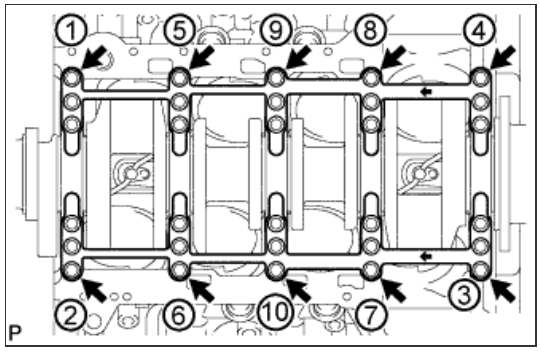
Standard thrust clearance:
0.02 to 0.22 mm (0.000787 to 0.00866 in.)



Maximum thrust clearance:

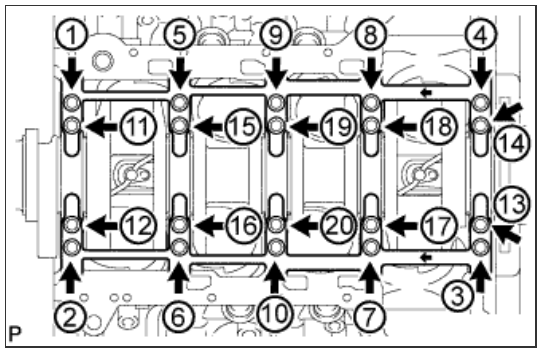
0.30 mm (0.0118 in.)

If the thrust clearance is more than the maximum, replace the thrust washers as a set.

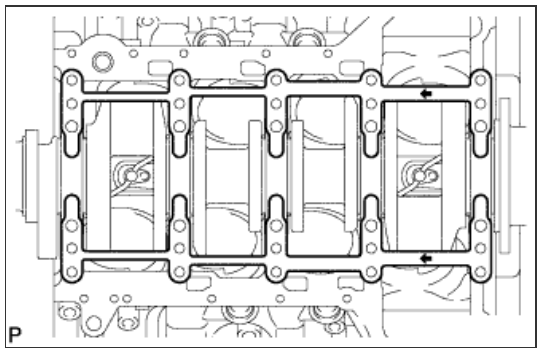


Standard thrust washer thickness:
2.44 to 2.49 mm (0.0961 to 0.0980 in.)

If necessary, replace the crankshaft.



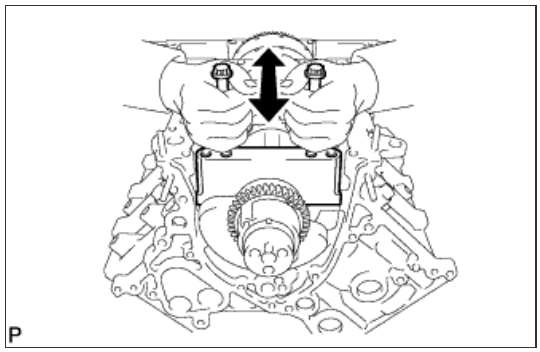
8. REMOVE CRANKSHAFT



a. Using several steps, loosen and remove the 10 crankshaft bearing cap set bolts uniformly in the sequence shown in the illustration.

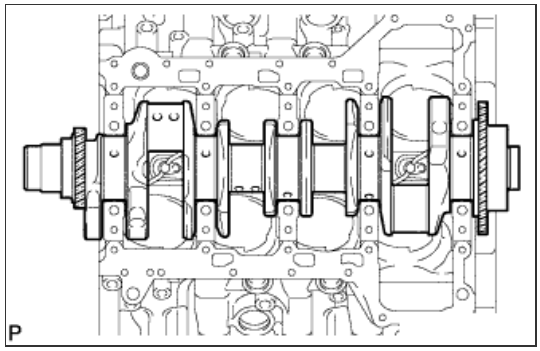
b. Using several steps, loosen and remove the 20 crankshaft bearing cap set bolts uniformly in the sequence shown in the illustration.

c. Remove the 2 cylinder block stiffening plates.



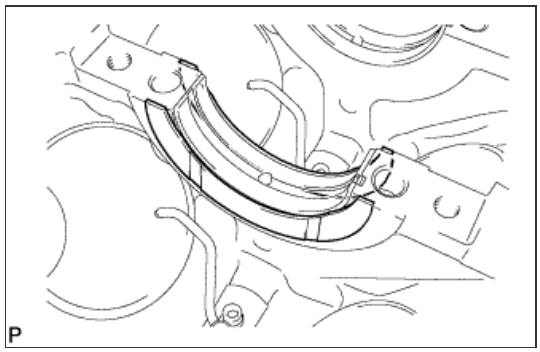
d. Using 2 crankshaft bearing cap set bolts, pull out the 5 bearing caps.

NOTICE:



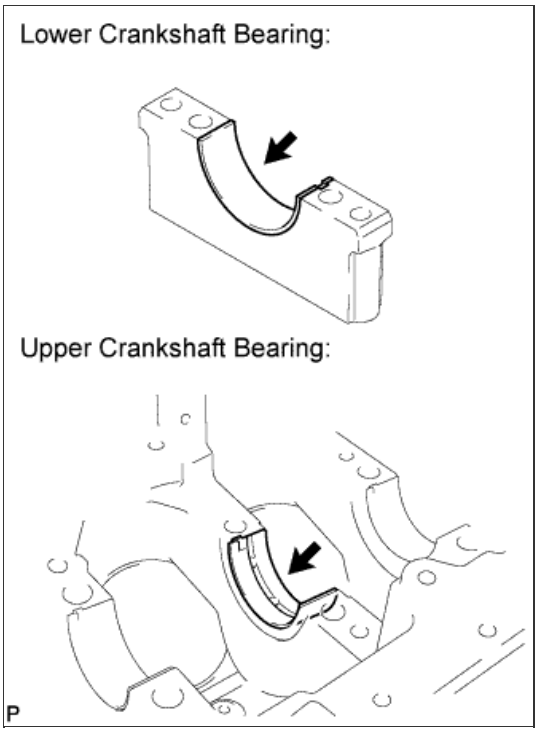
Take care not to damage the contact surfaces of the crankshaft bearing cap and cylinder block.

HINT:



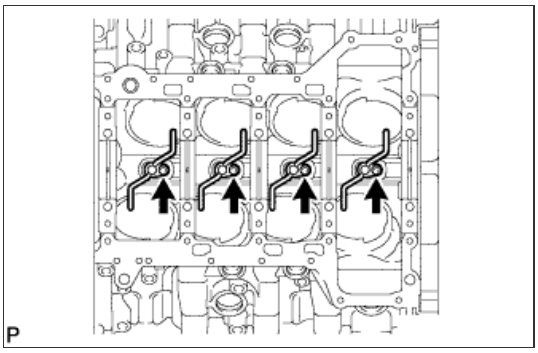
- **Keep the lower bearing and crankshaft bearing cap as a set.**
- **Arrange the crankshaft bearing caps in the correct order.**

e. Remove the crankshaft.



9. REMOVE CRANKSHAFT THRUST WASHER SET

10. REMOVE CRANKSHAFT BEARING



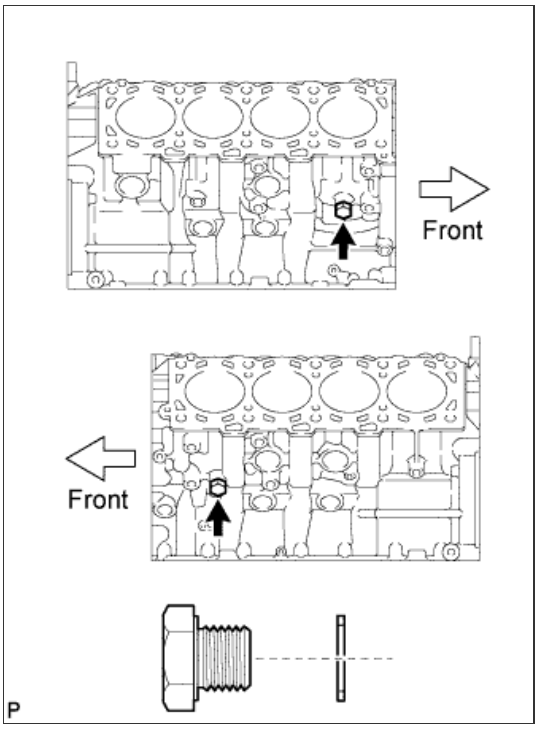
HINT:

- **Keep the upper and lower crankshaft bearings and crankshaft bearing cap as a set.**
- **Arrange the crankshaft bearing caps and bearings in the correct order.**

11. REMOVE NO. 1 OIL NOZZLE SUB-ASSEMBLY

a. Using a 5 mm hexagon wrench, remove the 4 bolts and 4 oil nozzles.

12. INSPECT INPUT SHAFT BEARING (for Manual Transmission)

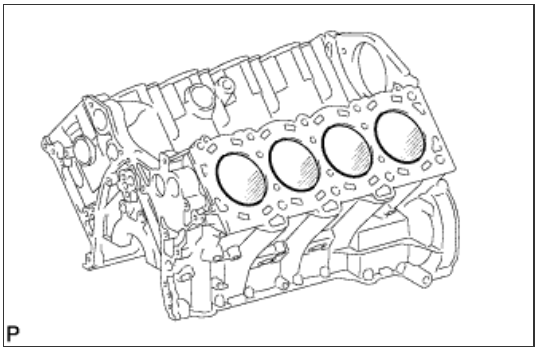


a. Turn the bearing by hand.
If the bearing is stuck or difficult to turn, replace the input shaft bearing. For removal procedures, refer to the following (Click here) and for installation procedures, refer to the following (Click here).

HINT:

The bearing is permanently lubricated and requires no cleaning or lubrication.

13. REMOVE CYLINDER BLOCK STRAIGHT SCREW PLUG



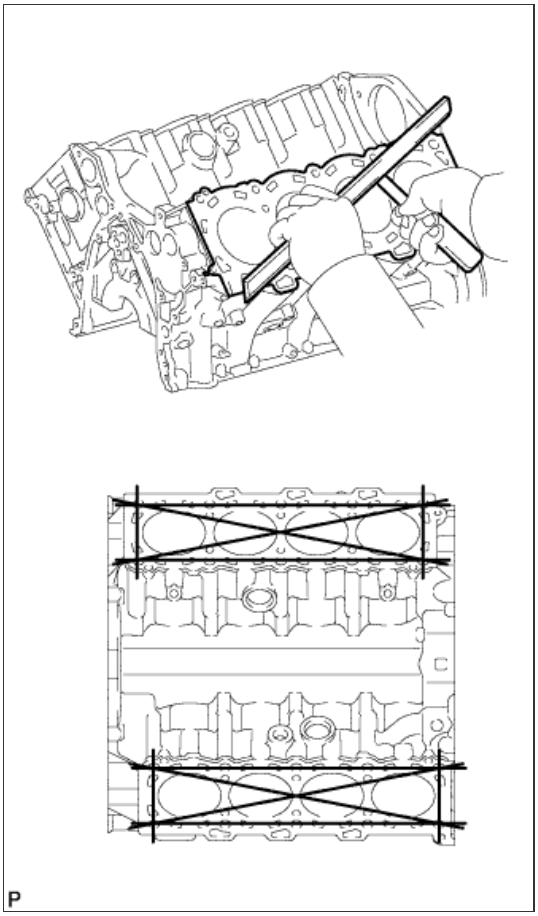
a. Remove the 2 straight screw plugs and 2 gaskets.

Front
Front
P

for Preparation Click here

1. VISUALLY CHECK CYLINDER BLOCK

a. Visually check the cylinder for vertical scratches.
If deep scratches are present, rebore all 8 cylinders. If necessary, replace the cylinder block sub-assembly.

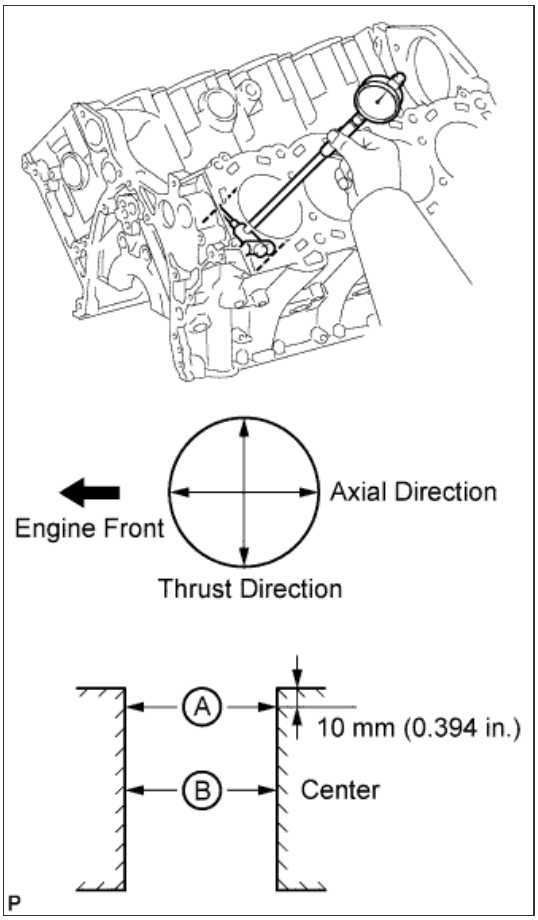


2. INSPECT CYLINDER BLOCK FOR FLATNESS

a. Using a precision straightedge and feeler gauge, measure the warpage of the contact surface between the cylinder head and cylinder head gaskets.

Maximum warpage:
0.05 mm (0.00197 in.)

If the warpage is more than the maximum, replace the cylinder block sub-assembly.



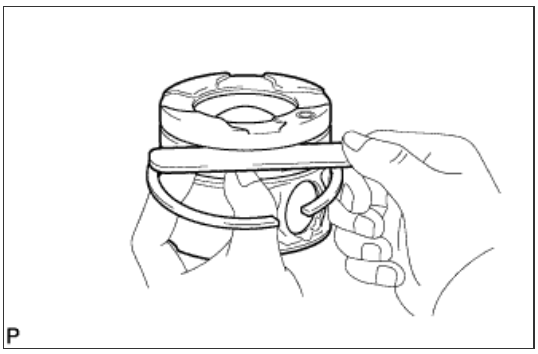
3. INSPECT CYLINDER BORE

a. Using a cylinder gauge, measure the cylinder bore diameter at positions A and B in the thrust and axial directions.

Stan ar aimeter:
86.000 to 86.013 mm (3.3858 to 3.3863 in.)

Maximum diameter:
86.03 mm (3.3870 in.)

If the diameter is more than the maximum, replace the cylinder block.

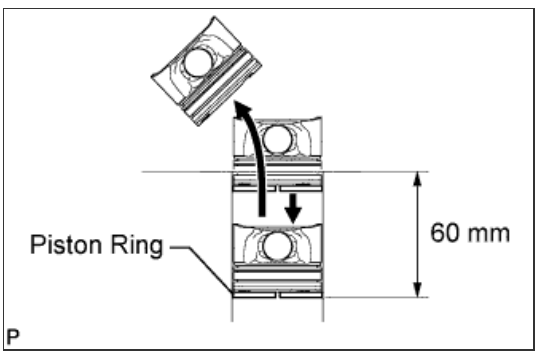


4. INSPECT RING GROOVE CLEARANCE

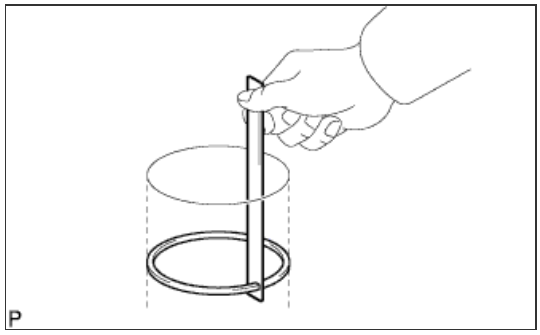
a. Using a feeler gauge, measure the clearance between a new piston ring and the wall of the ring groove.

Standard Ring Groove Clearance:

Item	Specified Condition
No. 1 compression ring	0.11 to 0.15 mm (0.00433 to 0.00591 in.)
No. 2 compression ring	0.08 to 0.12 mm (0.00315 to 0.00472 in.)
Oil ring	0.03 to 0.07 mm (0.00118 to 0.00276 in.)



If the clearance is not as specified, replace the piston.



5. INSPECT PISTON RING END GAP

a. Insert the piston ring into the cylinder bore.

b. Using a piston, push the piston ring a little beyond the bottom of the ring travel, 60 mm (2.36 in.) from the top of the cylinder block.

c. Using a feeler gauge, measure the end gap.

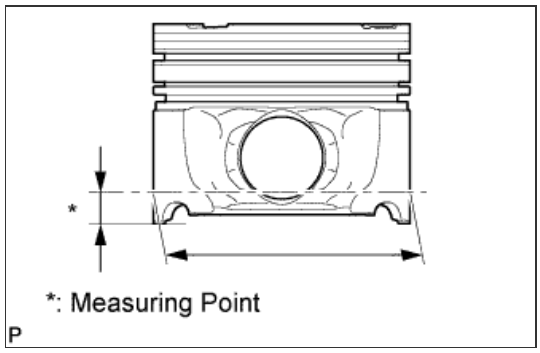
Standard End Gap:

Item	Type of Engine	Specified Condition
No. 1 compression ring	w/ EGR System	0.22 to 0.32 mm (0.00866 to 0.0126 in.)
	w/o EGR System	0.20 to 0.30 mm (0.00787 to 0.0118 in.)
No. 2 compression ring	-	0.47 to 0.62 mm (0.0185 to 0.0244 in.)
Oil ring	-	0.10 to 0.40 mm (0.00394 to 0.0157 in.)

Maximum End Gap:

Item	Specified Condition
No. 1 compression ring	0.40 mm (0.0157 in.)
No. 2 compression ring	0.75 mm (0.0295 in.)
Oil ring	0.50 mm (0.0197 in.)

If the end gap is more than the maximum, replace the piston ring. If the end gap is more than the maximum even with a new piston ring, replace the cylinder block.



6. INSPECT PISTON WITH PIN SUB-ASSEMBLY

a. Using a micrometer, measure the piston diameter at a right angle to the piston pin center line, 12 mm (0.472 in.) from the piston skirt.

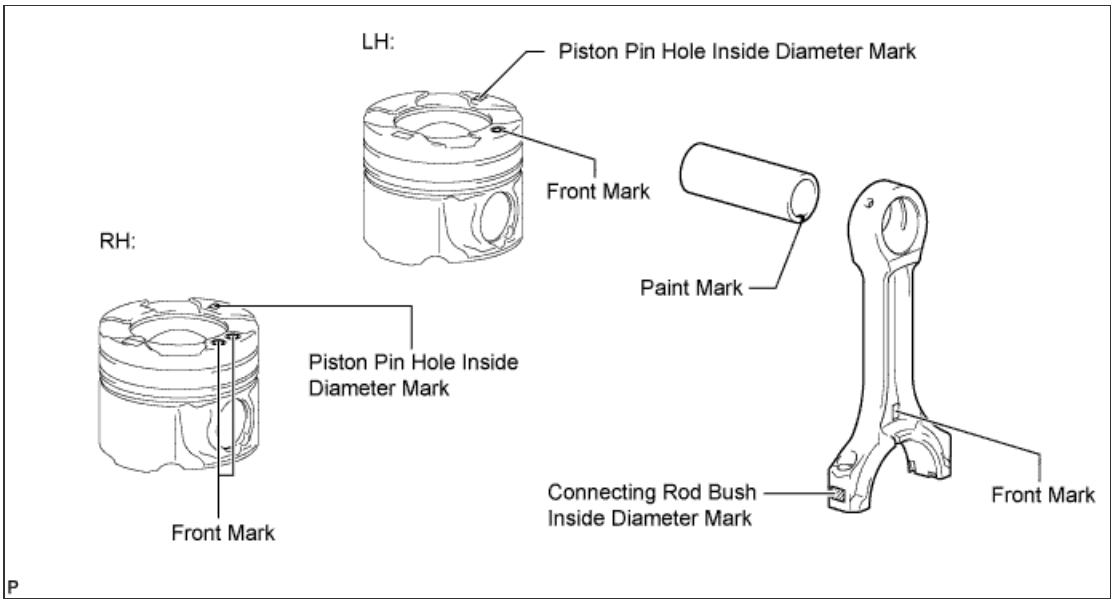
Standard piston diameter:
85.932 to 85.966 mm (3.383 to 3.384 in.)

Minimum piston diameter:
85.910 mm (3.382 in.)

If the diameter is less than the minimum, replace the piston with pin sub-assembly.

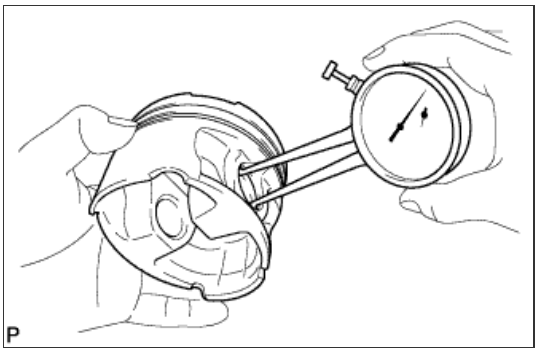
7. INSPECT PISTON OIL CLEARANCE

a. Subtract the piston diameter measurement from the cylinder bore diameter measurement.



Standard oil clearance:
0.034 to 0.081 mm (0.00134 to 0.00319 in.)

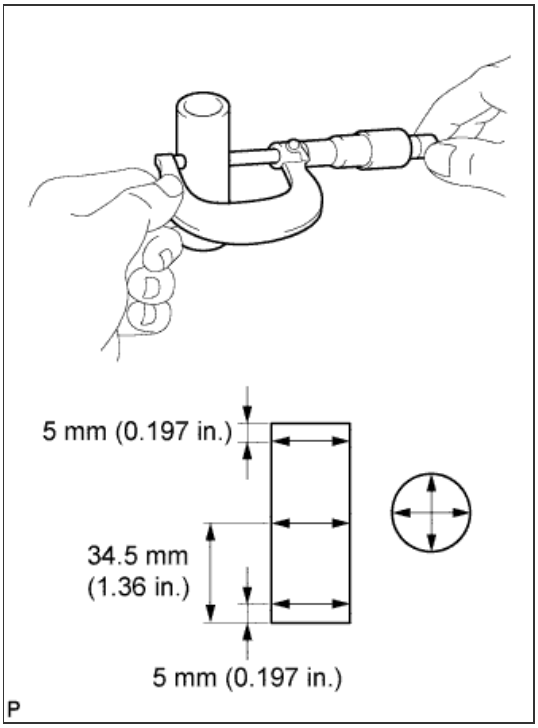
Maximum oil clearance:
0.091 mm (0.00358 in.)



If the oil clearance is more than the maximum, replace all 8 pistons. If necessary, replace the cylinder block.

8. INSPECT PISTON PIN OIL CLEARANCE

a. Check each mark on the piston, piston pin and connecting rod.



b. Using a caliper gauge, measure the inside diameter of the piston pin hole.

Standard Piston Pin Hole Inside Diameter:

ark	Specified Condition
A	29.009 to 29.013 mm (1.1421 to 1.1422 in.)
B	29.013 to 29.017 mm (1.1422 to 1.1424 in.)
C	29.017 to 29.021 mm (1.1424 to 1.1426 in.)

c. Using a micrometer, measure the piston pin diameter.

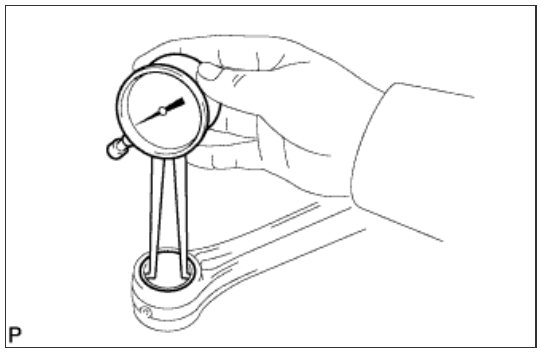
Standard Piston Pin Diameter:

ark	Paint Color	Specified Condition
A	White	29.000 to 29.004 mm (1.1417 to 1.1419 in.)
B	Pink	29.004 to 29.008 mm (1.1419 to 1.1420 in.)
C	Blue	29.008 to 29.012 mm (1.1420 to 1.1422 in.)

d. Subtract the piston pin diameter measurement from the piston pin hole diameter measurement.

Standard oil clearance:
0.005 to 0.013 mm (0.000197 to 0.000512 in.)

Maximum oil clearance:
0.018 mm (0.000709 in.)



If the oil clearance is more than the maximum, replace the piston and piston pin as a set.

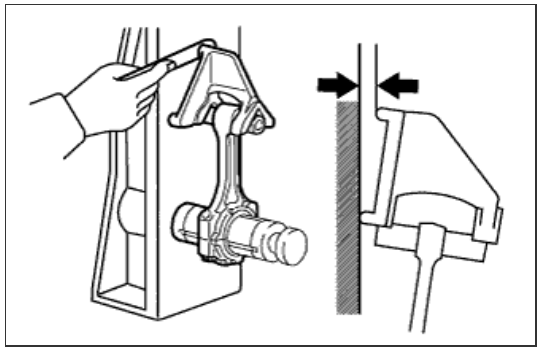
e. Using a caliper gauge, measure the inside diameter of the connecting rod bush.

Standard Bush Inside Diameter:

ark	Specified Condition
A	29.019 to 29.023 mm (1.1425 to 1.1426 in.)

B	29.023 to 29.027 mm (1.1426 to 1.1428 in.)
C	29.027 to 29.031 mm (1.1428 to 1.1430 in.)

f. Subtract the piston pin diameter measurement from the bush inside diameter measurement.



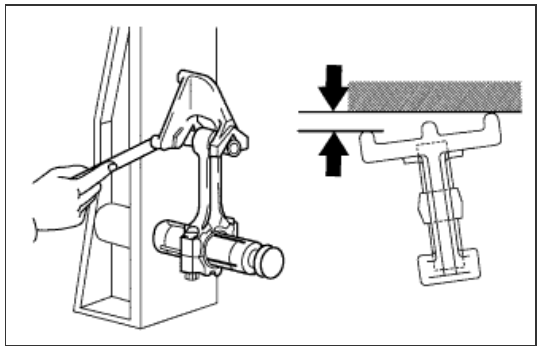
Standard oil clearance:
0.015 to 0.023 mm (0.000591 to 0.000906 in.)

Maximum oil clearance:
0.028 mm (0.00110 in.)

If the oil clearance is more than the maximum, replace the connecting rod and piston with pin as a set.

9. INSPECT CONNECTING ROD SUB-ASSEMBLY

a. Using a rod aligner and feeler gauge, check the connecting rod alignment.

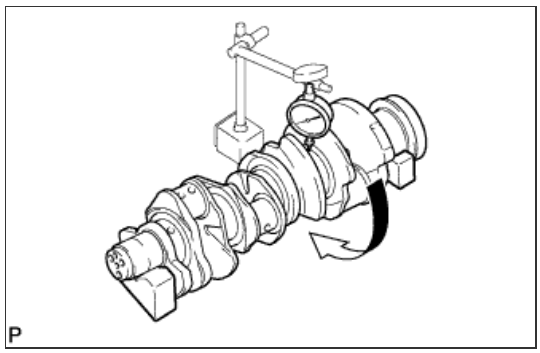


i. Check for bend.

Maximum bend:
0.07 mm (0.00276 in.) per 100 mm (3.94 in.)

If the bend is more than the maximum, replace the connecting rod sub-assembly.

ii. Check for twist.



Maximum twist:
0.15 mm (0.00591 in.) per 100 mm (3.94 in.)

If the twist is more than the maximum, replace the connecting rod sub-assembly.

10. INSPECT CRANKSHAFT

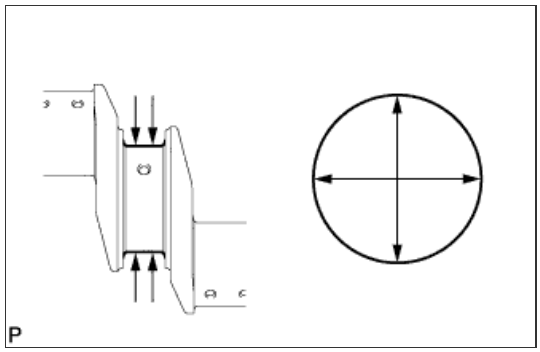
a. Using a dial indicator and V-blocks, measure the runout as shown in the illustration.

Maximum circle runout:
0.04 mm (0.00157 in.)

If the circle runout is more than the maximum, replace the crankshaft.

b. Using a micrometer, measure the diameter of each main journal.

Standard diameter:



74.982 to 75.000 mm (2.9520 to 2.9527 in.)

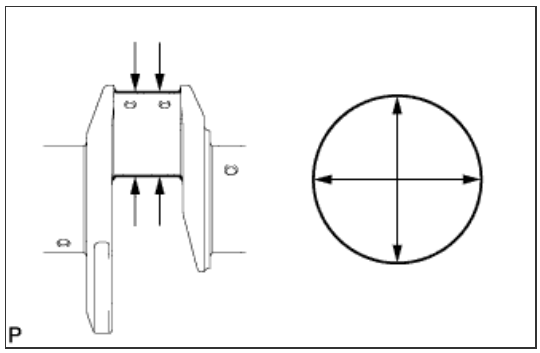
If the diameter is not as specified, check the oil clearance. If necessary, replace the crankshaft.

c. Check each main journal for taper and out-of-round as shown in the illustration.

Maximum taper and out-of-round:
0.01 mm (0.000394 in.)

If the taper and out-of-round is more than the maximum, replace the crankshaft.

d. Using a micrometer, measure the diameter of each crank pin.



Standard diameter:
54.982 to 55.000 mm (2.1646 to 2.1653 in.)

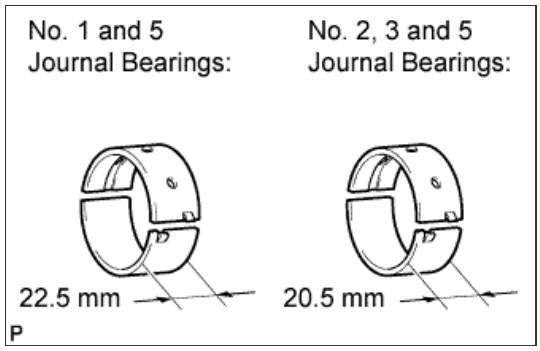
If the diameter is not as specified, check the oil clearance. If necessary, replace the crankshaft.

e. Check each crank pin for taper and out-of-round as shown in the illustration.

Maximum taper and out-of-round:
0.01 mm (0.000394 in.)

If the taper and out-of-round is more than the maximum, replace the crankshaft.

11. INSPECT CRANKSHAFT OIL CLEARANCE

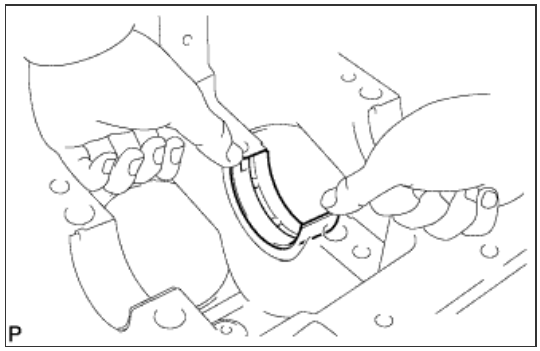


HINT:

ain bearings come in widths of 20.5 mm (0.807 in.) and 22.5 mm (0.886 in.).

Standard Bearing Width

Item	Specified Condition
No. 1 and 5 journal bearings	22.5 mm (0.886 in.)
No. 2, 3 and 4 journal bearings	20.5 mm (0.807 in.)



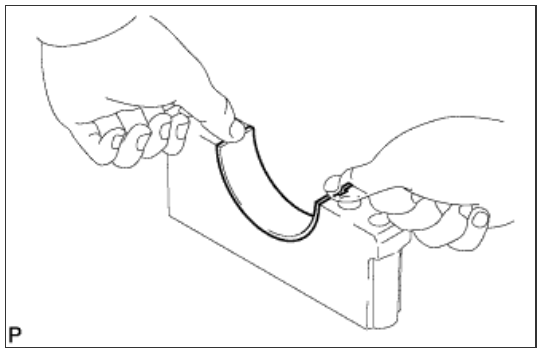
a. Clean each main journal and bearing.

b. Align the bearing claw with the claw groove of the cylinder block, and push in the 5 upper bearings.

NOTICE:

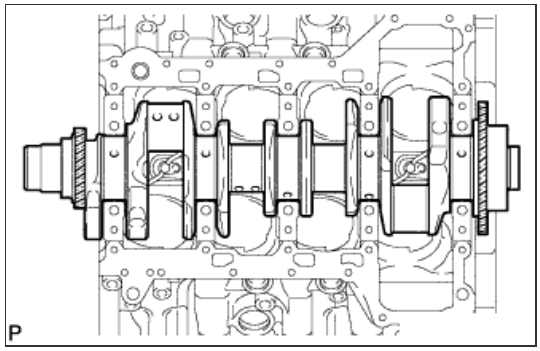
- **Do not apply engine oil to the bearings and the contact surfaces.**
- **Do not allow coolant to come into contact with the bearing inner surface. If any coolant comes into contact with the bearing inner surface, replace the bearing with a new one.**
- **Both sides of the oil groove in the cylinder block should be visible through the oil feed holes in the bearing. The amount visible on each side of the holes should be equal.**

c. Align the bearing claw with the claw groove of the main bearing cap, and push in the 5 lower bearings.



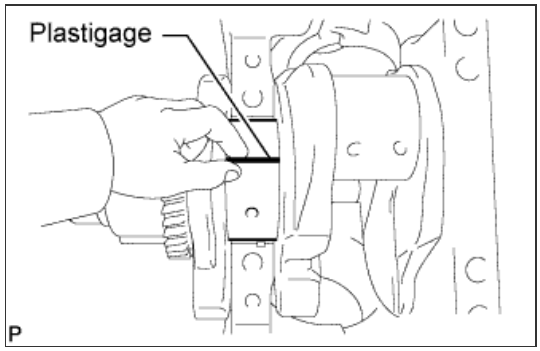
NOTICE:

- **Do not apply engine oil to the bearings and the contact surfaces.**
- **Do not allow coolant to come into contact with the bearing**



inner surface.
If any coolant comes into contact with the bearing inner surface, replace the bearing with a new one.

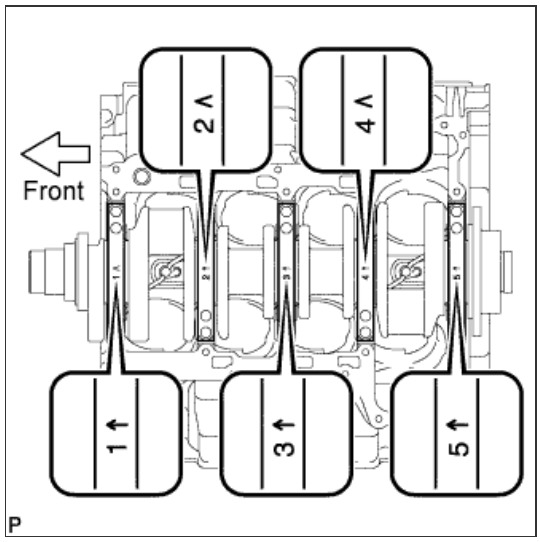
HINT:



A number marked on each main bearing cap indicates the installation position.

d. Place the crankshaft on the cylinder block.

e. ay a strip of Plastigage across each journal.



f. Examine the front marks and numbers and install the crankshaft bearing caps to the cylinder block.

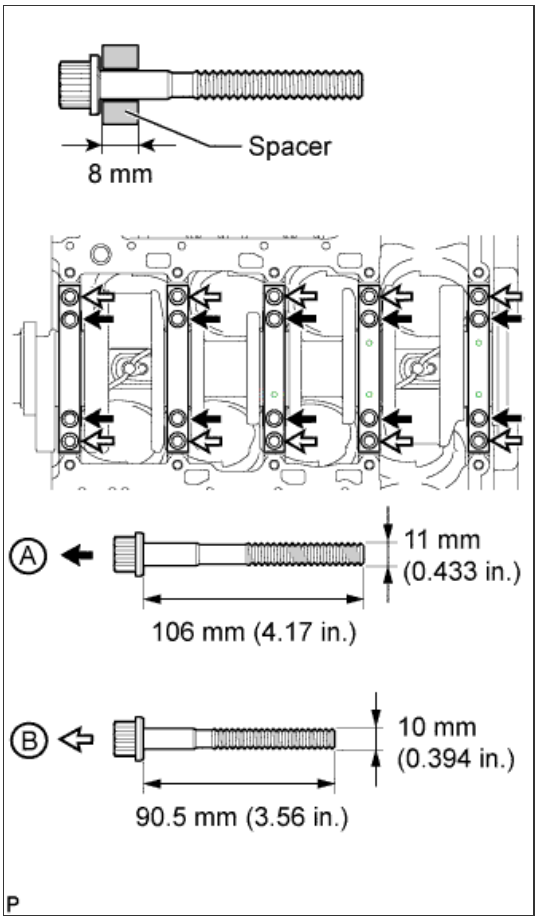
NOTICE:

Do not turn the crankshaft.

g. Apply a light coat of engine oil to the threads of the crankshaft bearing cap bolts.

h. Temporarily install the crankshaft bearing cap bolts labeled A or the bolts labeled B.

HINT:

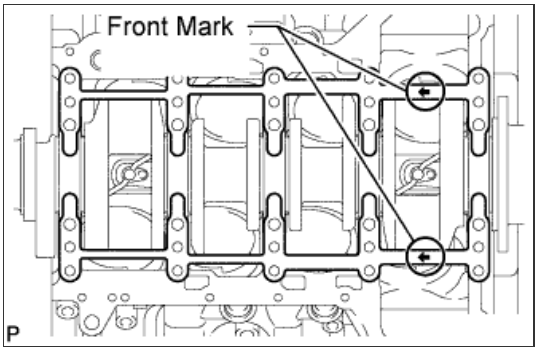


In place of cylinder block stiffening plates, install 8 mm (0.315 in.) thick spacers to the crankshaft bearing cap bolts.

i. Uniformly tighten the 2 crankshaft bearing cap bolts for each bearing cap in several passes to ensure a proper fit.

NOTICE:

Do not tap the bearing cap with a plastic-faced hammer.



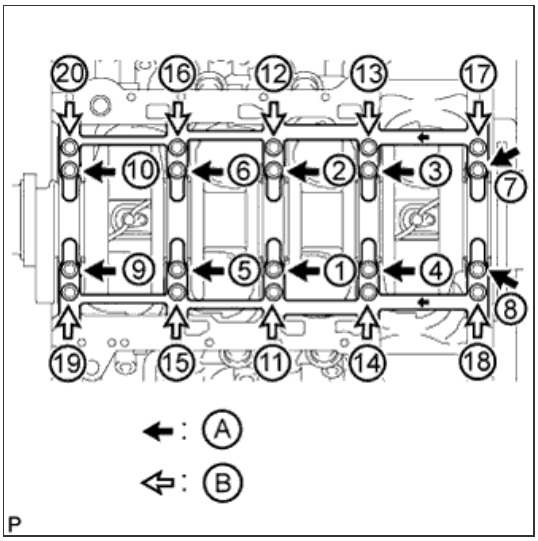
. Remove the crankshaft bearing cap bolts and spacers.

k. Set the 2 cylinder block stiffening plates on the cylinder block.

HINT:

ake sure the arrows on the stiffening plates face the engine front.

l. Step 1:

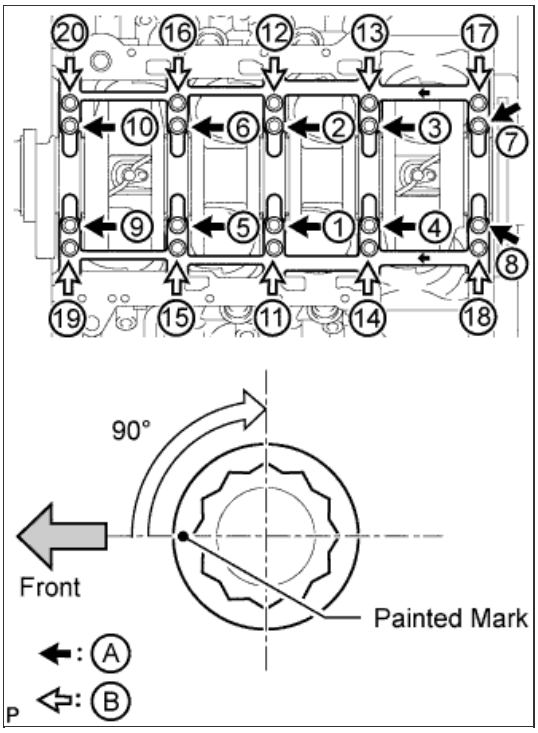


HINT:

- **The crankshaft bearing cap bolts are tightened in 3 progressive steps.**
- **If any crankshaft bearing cap bolt is broken or deformed, replace it.**

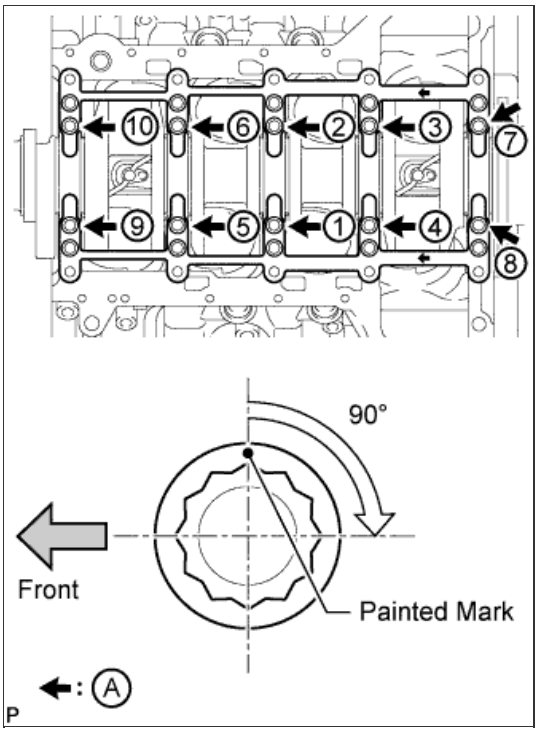
i. Apply a light coat of engine oil to the threads and under the heads of the 20 crankshaft bearing cap bolts.

ii. Install the 20 crankshaft bearing cap bolts. Using several steps, tighten the bolts uniformly in the sequence shown in the illustration.



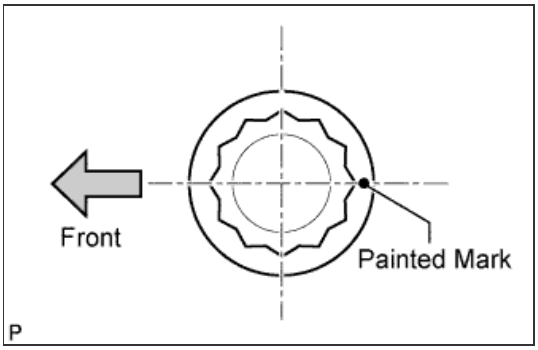
Torque:
for bolt A:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }
for bolt B:
60 N*m{ 612 kgf*cm , 44 ft.*lbf }

m. Step 2:



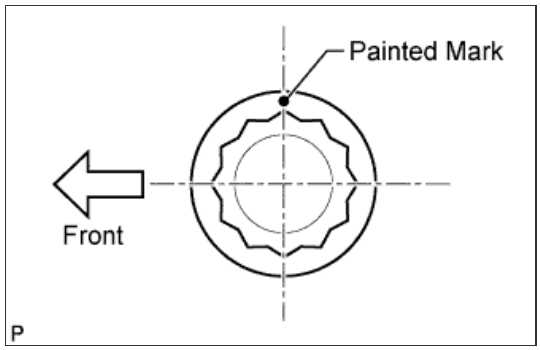
i. ark the front side of the crankshaft bearing cap bolts A and B with paint.

ii. Tighten the crankshaft bearing cap bolts A and B 90° in the sequence shown in the illustration.



n. Step 3:

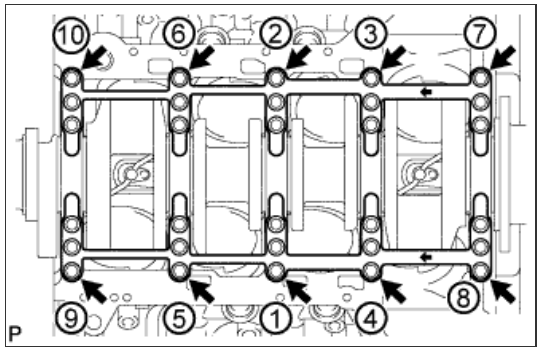
i. Tighten the crankshaft bearing cap bolts A another 90° in the sequence shown in the illustration.



ii. Check that the painted marks of bolts A are now at a 180° angle to the front.

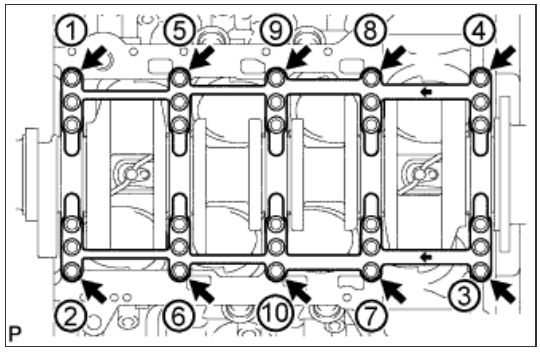
iii. Check that the painted marks of bolts B are now at a 90° angle to the front.

NOTICE:



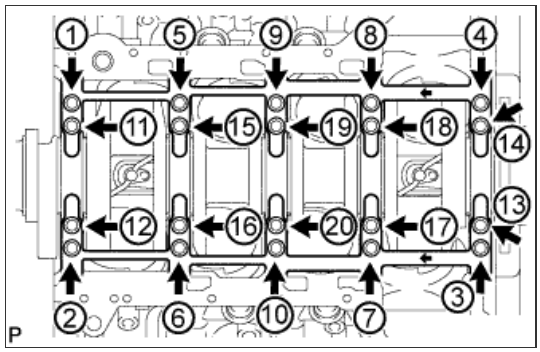
Do not turn the crankshaft.

o. Step 4:

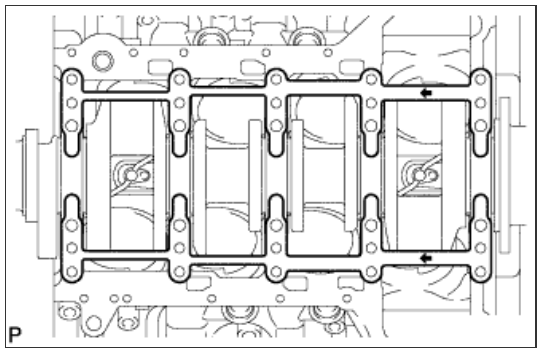


i. Using several steps, install the 10 crankshaft bearing cap bolts uniformly in the sequence shown in the illustration.

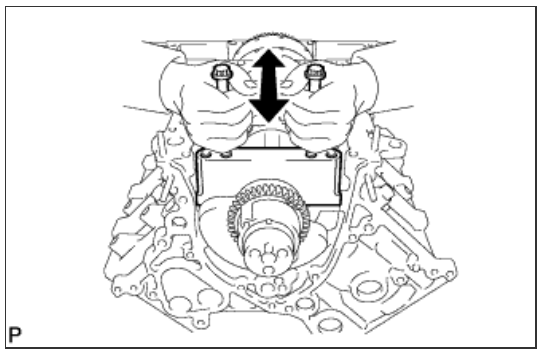
Torque:
56 N*m{ 571 kgf*cm , 41 ft.*lbf }



p. Remove the crankshaft bearing caps.

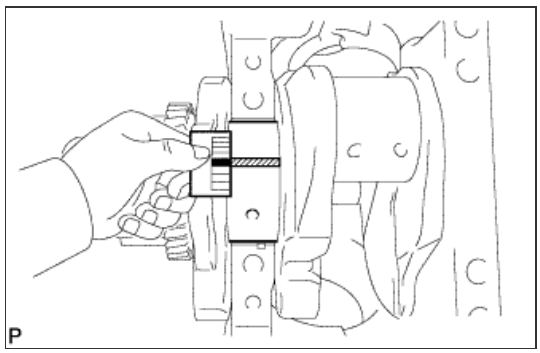


i. Step 1:
Using several steps, loosen and remove the 10 crankshaft bearing cap set bolts uniformly in the sequence shown in the illustration.



ii. Step 2:
Using several steps, loosen and remove the 20 crankshaft bearing cap set bolts uniformly in the sequence shown in the illustration.

q. Remove the 2 cylinder block stiffening plates.



r. Using 2 crankshaft bearing cap set bolts, pull out the 5 bearing caps.

NOTICE:

Take care not to damage the contact surface of the crankshaft bearing cap and cylinder block.

s. easure the Plastigage at its widest point.

Standard Oil Clearance:

Item	Specified Condition
No. 1 and 3 journals	0.020 to 0.038 mm (0.000787 to 0.00150 in.)
No. 2, 4 and 5 journals	0.032 to 0.050 mm (0.00126 to 0.00197 in.)

Maximum Clearance:

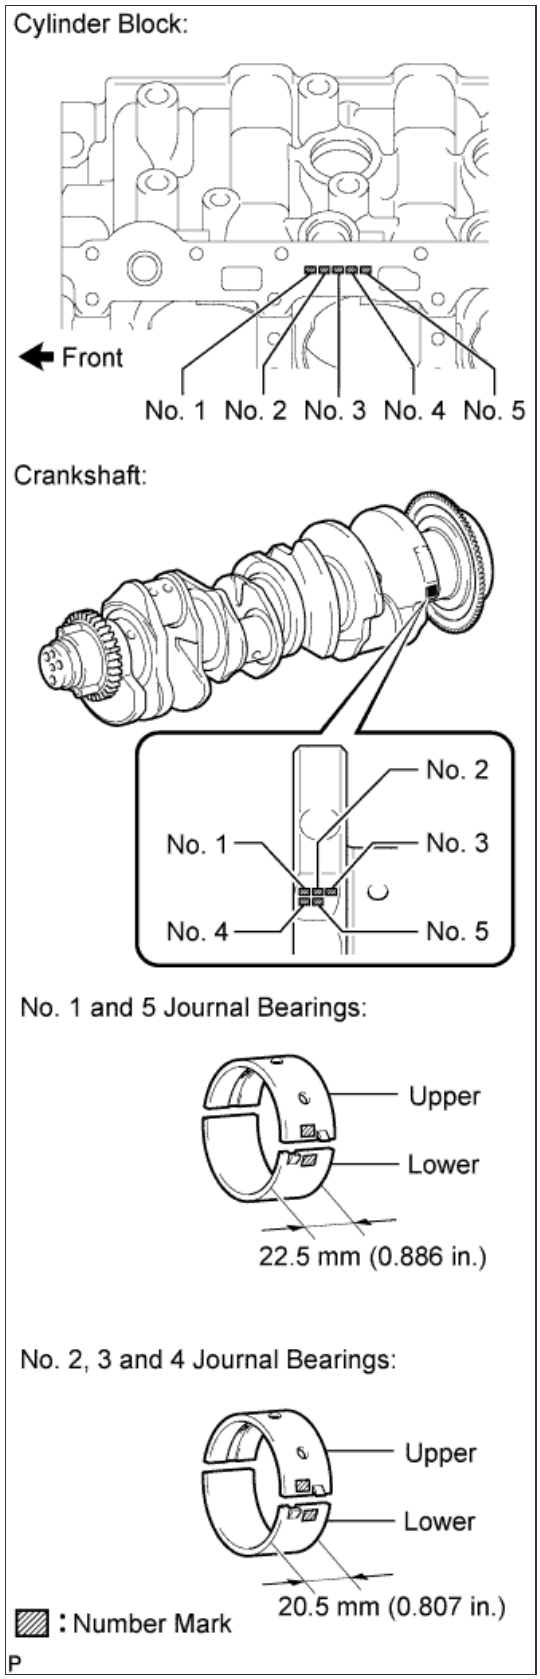
Item	Specified Condition
No. 1 and 3 journals	0.048 mm (0.00189 in.)
No. 2, 4 and 5 journals	0.060 mm (0.00236 in.)

If the oil clearance is more than the maximum, use an over size bearing and correct or regrind the crankshaft so that the oil clearance is as shown in the table below.

Oil Clearance (Use for Over Size Bearing):

Item	Specified Condition
No. 1 and 3 journals	0.021 to 0.061 mm (0.000827 to 0.00240 in.)
No. 2, 4 and 5 journals	0.033 to 0.073 mm (0.00130 to 0.00287 in.)

HINT:



ake sure to replace the upper and lower main bearings as one set.

t. Completely remove the Plastigage.

u. If replacing a bearing, replace it with one that has the same number. If the number of the bearing cannot be determined, select the correct bearing by adding together the numbers imprinted on the cylinder block and crankshaft, then refer to the appropriate bearing number. There are 7 sizes of standard bearings, marked "1", "2", "3", "4", "5", "6" and "7" accordingly.
E A E
Cylinder block main journal bore diameter "1" (A) + Crankshaft main journal diameter "2" (B) = Total number 3 (use bearing "3" (C))

No. 1 to No. 5 on Cylinder Block:

Cylinder Block (A)	Crankshaft (B)	Use Bearing (C)
"1"	"0"	"1"
	"1"	"2"
	"2"	"3"
	"3"	"4"
	"4"	"5"
"2"	"0"	"2"
	"1"	"3"
	"2"	"4"
	"3"	"5"
	"4"	"6"
"3"	"0"	"3"
	"1"	"4"
	"2"	"5"
	"3"	"6"
	"4"	"7"

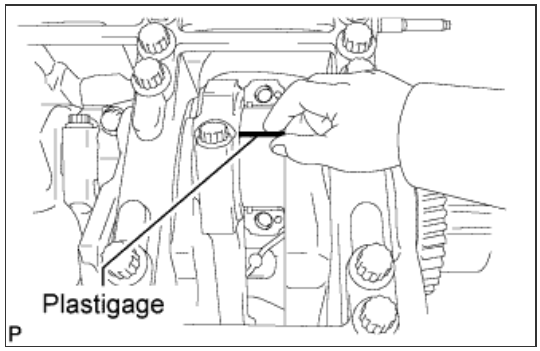
Standard Cylinder Block Main Journal Bore Diameter (A):

Item	ark	Specified Condition
No. 1 and 3 journals	"1"	79.000 to 79.006 mm (3.11023 to 3.11047 in.)
	"2"	ore than 79.006 to 79.012 mm (more than 3.11047 to 3.11070 in.)
	"3"	ore than 79.012 to 79.018 mm (more than 3.11070 to 3.11094 in.)
No. 2, 4 and 5 journals	"1"	79.000 to 79.006 mm (3.11023 to 3.11047 in.)
	"2"	ore than 79.006 to 79.012 mm (more than 3.11047 to 3.11070 in.)
	"3"	ore than 79.012 to 79.018 mm (more than 3.11070 to 3.11094 in.)

Standard Crankshaft Main Journal Diameter (B):

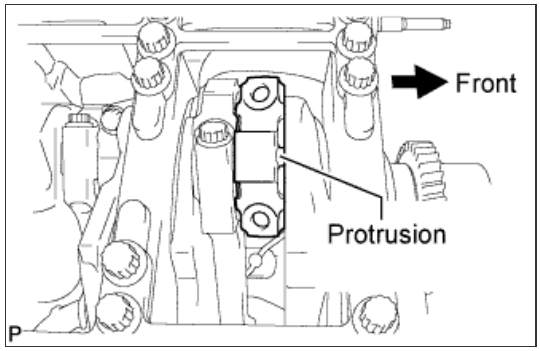
Item	ark	Specified Condition
No. 1 and 3 journals	"2"	ore than 74.994 to 75.000 mm (more than 2.95251 to 2.95275 in.)
	"3"	ore than 74.988 to 74.994 mm (more than 2.95228 to 2.95251 in.)
	"4"	74.982 to 74.988 mm (2.95204 to 2.95228 in.)
No. 2, 4 and 5 journals	"0"	ore than 74.994 to 75.000 mm (more than 2.95251 to 2.95275 in.)
	"1"	ore than 74.988 to 74.994 mm (more than 2.95288 to 2.95251 in.)
	"2"	74.982 to 74.988 mm (2.95204 to 2.95228 in.)

Standard Crankshaft Bearing Center Wall Thickness (C):



Item	ark	Specified Condition (for Upper Bearing)	Specified Condition (for ower Bearing)
No. 1 and 5 journal bearings	"1"	ore than 1.987 to 1.990 mm (more than 0.07823 to 0.07835 in.)	ore than 1.975 to 1.978 mm (more than 0.07776 to 0.07787 in.)
	"2"	ore than 1.990 to 1.993 mm (more than 0.07835 to 0.07846 in.)	ore than 1.978 to 1.981 mm (more than 0.07787 to 0.07799 in.)
	"3"	ore than 1.993 to 1.996 mm (more than 0.07846 to 0.07858 in.)	ore than 1.981 to 1.984 mm (more than 0.07799 to 0.07811 in.)
	"4"	ore than 1.996 to 1.999 mm (more than 0.07858 to 0.07870 in.)	ore than 1.984 to 1.987 mm (more than 0.07811 to 0.07823 in.)
	"5"	ore than 1.999 to 2.002 mm (more than 0.07870 to 0.07882 in.)	ore than 1.987 to 1.990 mm (more than 0.07823 to 0.07835 in.)
	"6"	ore than 2.002 to 2.005 mm (more than 0.07882 to 0.07894 in.)	ore than 1.990 to 1.993 mm (more than 0.07835 to 0.07846 in.)
	"7"	ore than 2.005 to 2.008 mm (more than 0.07894 to 0.07905 in.)	ore than 1.993 to 1.996 mm (more than 0.07846 to 0.07858 in.)
No. 2, 3 and 4 journal bearings	"1"	ore than 1.975 to 1.978 mm (more than 0.07776 to 0.07787 in.)	ore than 1.987 to 1.990 mm (more than 0.07823 to 0.07835 in.)
	"2"	ore than 1.978 to 1.981 mm (more than 0.07787 to 0.07799 in.)	ore than 1.990 to 1.993 mm (more than 0.07835 to 0.07846 in.)
	"3"	ore than 1.981 to 1.984 mm (more than 0.07799 to 0.07811 in.)	ore than 1.993 to 1.996 mm (more than 0.07846 to 0.07858 in.)
	"4"	ore than 1.984 to 1.987 mm (more than 0.07811 to 0.07823 in.)	ore than 1.996 to 1.999 mm (more than 0.07858 to 0.07870 in.)
	"5"	ore than 1.987 to 1.990 mm (more than 0.07823 to 0.07835 in.)	ore than 1.999 to 2.002 mm (more than 0.07870 to 0.07882 in.)
	"6"	ore than 1.990 to 1.993 mm (more than 0.07835 to 0.07846 in.)	ore than 2.002 to 2.005 mm (more than 0.07882 to 0.07894 in.)
	"7"	ore than 1.993 to 1.996 mm (more than 0.07846 to 0.07858 in.)	ore than 2.005 to 2.008 mm (more than 0.07894 to 0.07905 in.)

12. INSPECT CONNECTING ROD OIL CLEARANCE



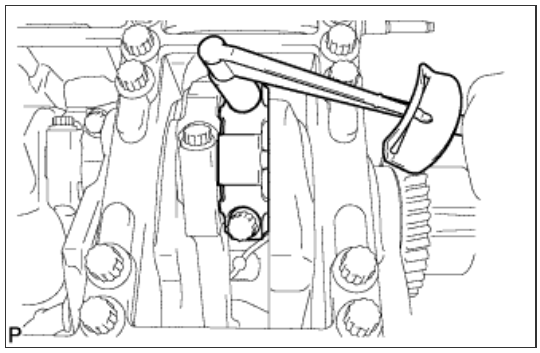
a. Install the crankshaft bearing (Click here).

b. Install the crankshaft (Click here).

c. ay a strip of Plastigage across the crank pin.

d. Install the connecting rod cap so that its protrusion is facing the correct direction.

NOTICE:



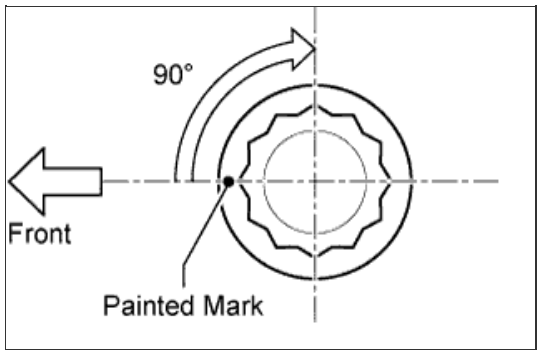
atch the numbered connecting rod cap with the connecting rod.

e. Apply a light coat of engine oil to the threads of the connecting rod cap bolts.

f. Step 1:

HINT:

- **The connecting rod bearing cap bolts are tightened in 2 progressive steps.**
- **If any connecting rod bearing cap bolt is broken or deformed, replace it.**



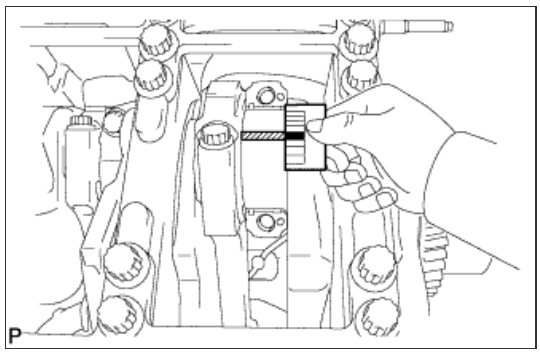
i. Install and alternately tighten the bolts of the connecting rod cap in several steps.

Torque:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }

g. Step 2:

i. ark the front side of each connecting rod cap bolt with paint.

ii. Tighten the bearing cap bolts in step 1 90°.



h. Remove the 2 bolts, connecting rod cap and lower bearing.

i. easure the Plastigage at its widest point.

Standard oil clearance:
0.024 to 0.042 mm (0.000945 to 0.00165 in.)

Maximum oil clearance:
0.052 mm (0.00205 in.)

If the oil clearance is more than the maximum, replace the bearings. If necessary, replace the crankshaft.

j. Completely remove the Plastigage.

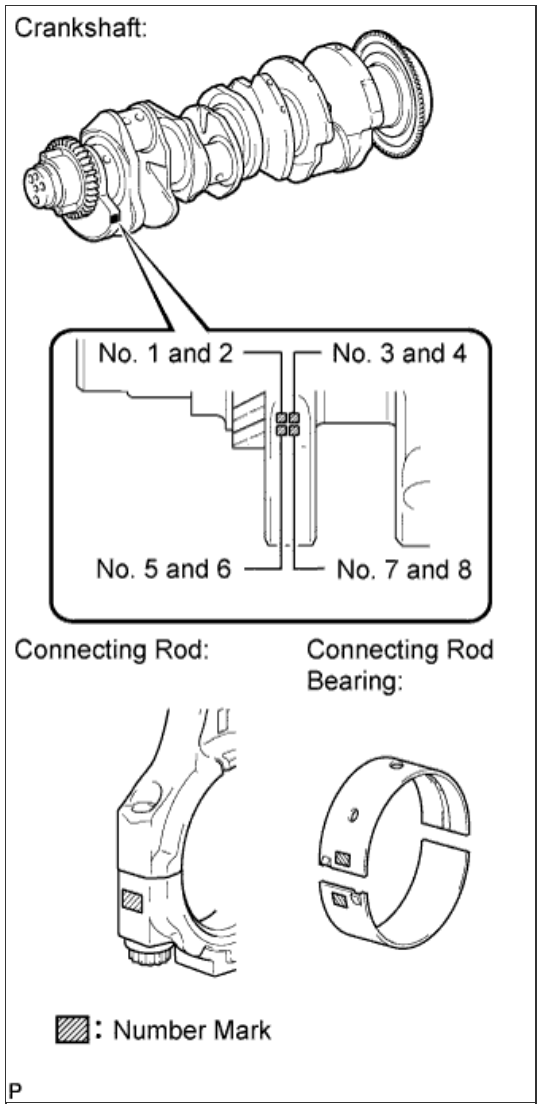
k. If replacing a bearing, replace it with one that has the same number marked on the connecting rod. There are 5 sizes of standard bearings, marked "1 ", "2", "3", "4" and "5" accordingly.
Select the correct bearing by adding together the number marks imprinted on the connecting rod and crankshaft.
E A E
Connecting rod "1" (A) + Crank pin "2" (B) = Total number 3 (use bearing "3" (C))

Standard Connecting Rod Big End Inside Diameter (A):

ark	Specified Condition

"1"	58.000 to 58.006 mm (2.28346 to 2.28370 in.)
"2"	ore than 58.006 to 58.012 mm (more than 2.28370 to 2.28393 in.)
"3"	ore than 58.012 to 58.018 mm (more than 2.28393 to 2.28417 in.)

Standard Crankshaft Pin Diameter (B):



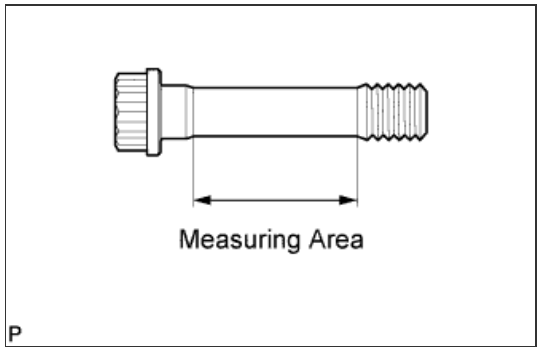
ark	Specified Condition
"0"	ore than 54.994 to 55.000 mm (more than 2.16511 to 2.16535 in.)
"1"	ore than 54.988 to 54.994 mm (more than 2.16488 to 2.16511 in.)
"2"	54.982 to 54.988 mm (2.16464 to 2.16488 in.)

Standard Bearing Center Wall Thickness (C):

ark	Specified Condition
"1"	ore than 1.485 to 1.488 mm (more than 0.05846 to 0.05858 in.)
"2"	ore than 1.488 to 1.491 mm (more than 0.05858 to 0.05870 in.)
"3"	ore than 1.491 to 1.494 mm (more than 0.05870 to 0.05882 in.)
"4"	ore than 1.494 to 1.497 mm (more than 0.05882 to 0.05894 in.)
"5"	ore than 1.497 to 1.500 mm (more than 0.05894 to 0.05910 in.)

l. Remove the crankshaft (Click here).

m. Remove the crankshaft bearing.



13. INSPECT CONNECTING ROD BOLT

a. Using a vernier caliper, measure the tension portion diameter of the bolt.

Standard diameter:
8.7 to 8.8 mm (0.343 to 0.346 in.)

Minimum diameter:
8.5 mm (0.335 in.)

If the diameter is less than the minimum, replace the connecting rod bolt.

14. INSPECT CRANKSHAFT BEARING CAP BOLT

a. Using a vernier caliper, measure the outside thread diameter of bolt A and B.

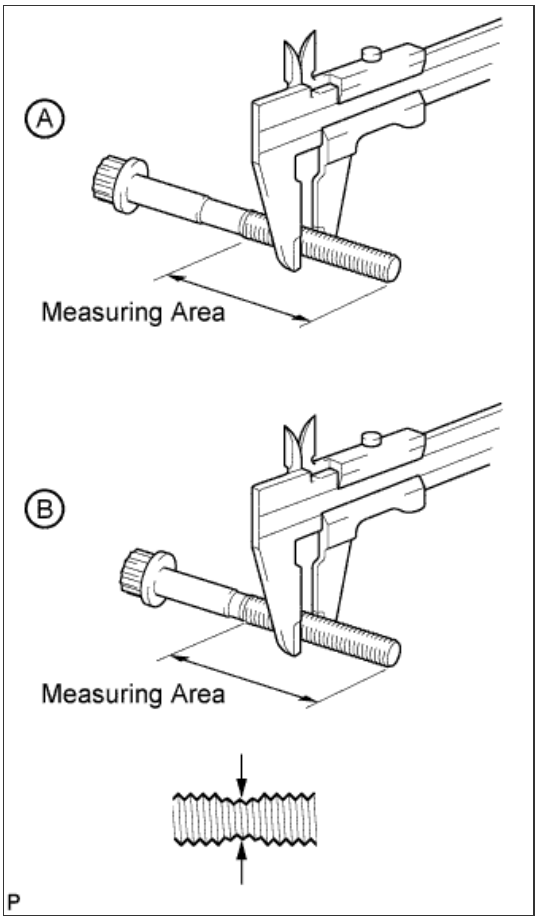
Bolt Length

Item	Specified Condition
Bolt A	106 mm (4.17 in.)
Bolt B	90.5 mm (3.56 in.)

Measuring Area:

Item	Specified Condition

Bolt A	73 mm (2.87 in.)
Bolt B	63 mm (2.48 in.)



Standard diameter:
for bolt A:
10.8 to 11.0 mm (0.425 to 0.433 in.)
for bolt B:
9.8 to 10.0 mm (0.386 to 0.394 in.)

Minimum diameter:
for bolt A:
10.5 mm (0.413 in.)
for bolt B:
9.5 mm (0.374 in.)

HINT:

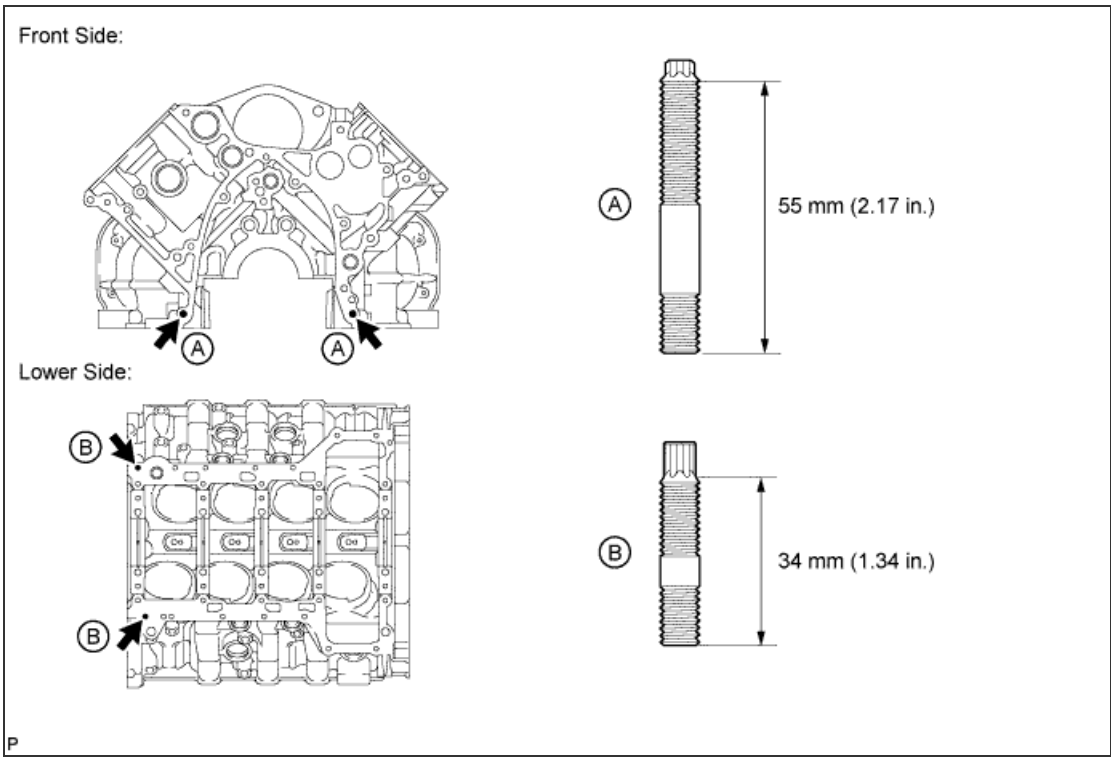
If a visual check reveals no excessively thin areas, check the center of the bolt (see illustration) and find the area that has the lowest diameter.

If the diameter is less than the minimum, replace the crankshaft bearing cap bolt.

for Preparation Click here

1. REPLACE STUD BOLT

HINT:



If a stud bolt is deformed or the threads are damaged, replace it.

a. Using an E7 "TORX" wrench, replace the stud bolts labeled A shown in the illustration below.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

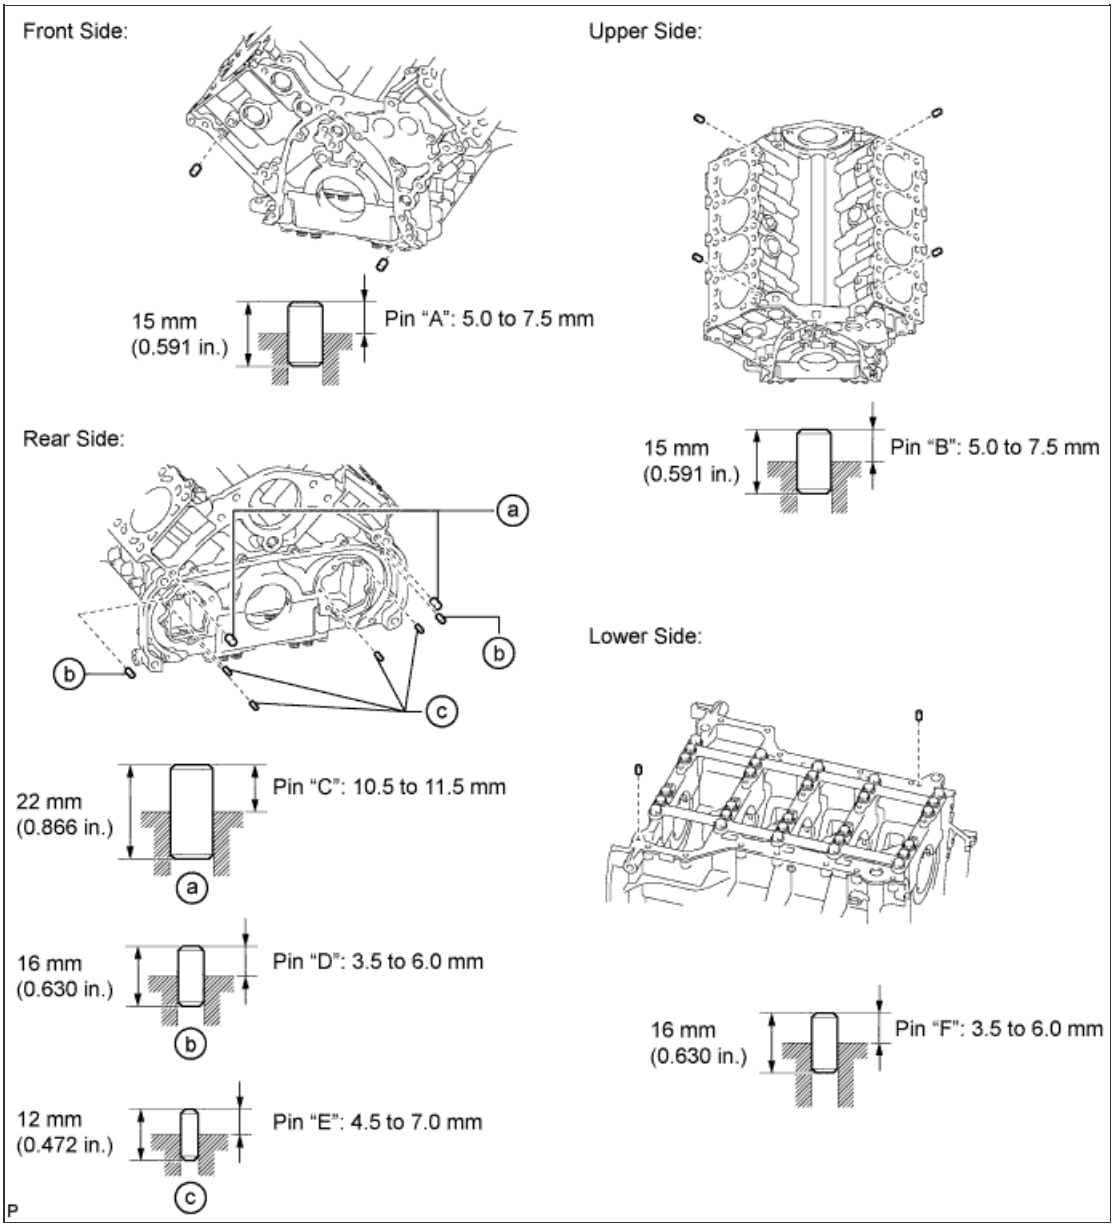
b. Using an E8 "TORX" wrench, replace the stud bolts labeled B shown in the illustration below.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

2. REPLACE STRAIGHT PIN

NOTICE:

It is not necessary to remove the straight pin unless it is being replaced.



a. Remove the straight pins.

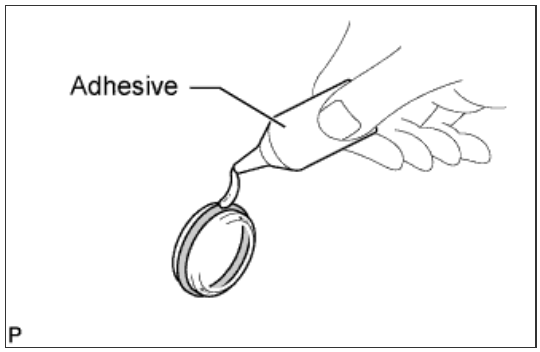
b. Using a plastic-faced hammer, tap in new straight pins to the cylinder block.

Standard Protrusion:

Item	Specified Condition
Pin "A" and "B"	5.0 to 7.5 mm (0.197 to 0.295 in.)

Pin "C"	10.5 to 11.5 mm (0.413 to 0.453 in.)
Pin "D" and "F"	3.5 to 6.0 mm (0.138 to 0.236 in.)
Pin "E"	4.5 to 7.0 mm (0.177 to 0.276 in.)

3. REPLACE CYLINDER BLOCK TIGHT PLUG



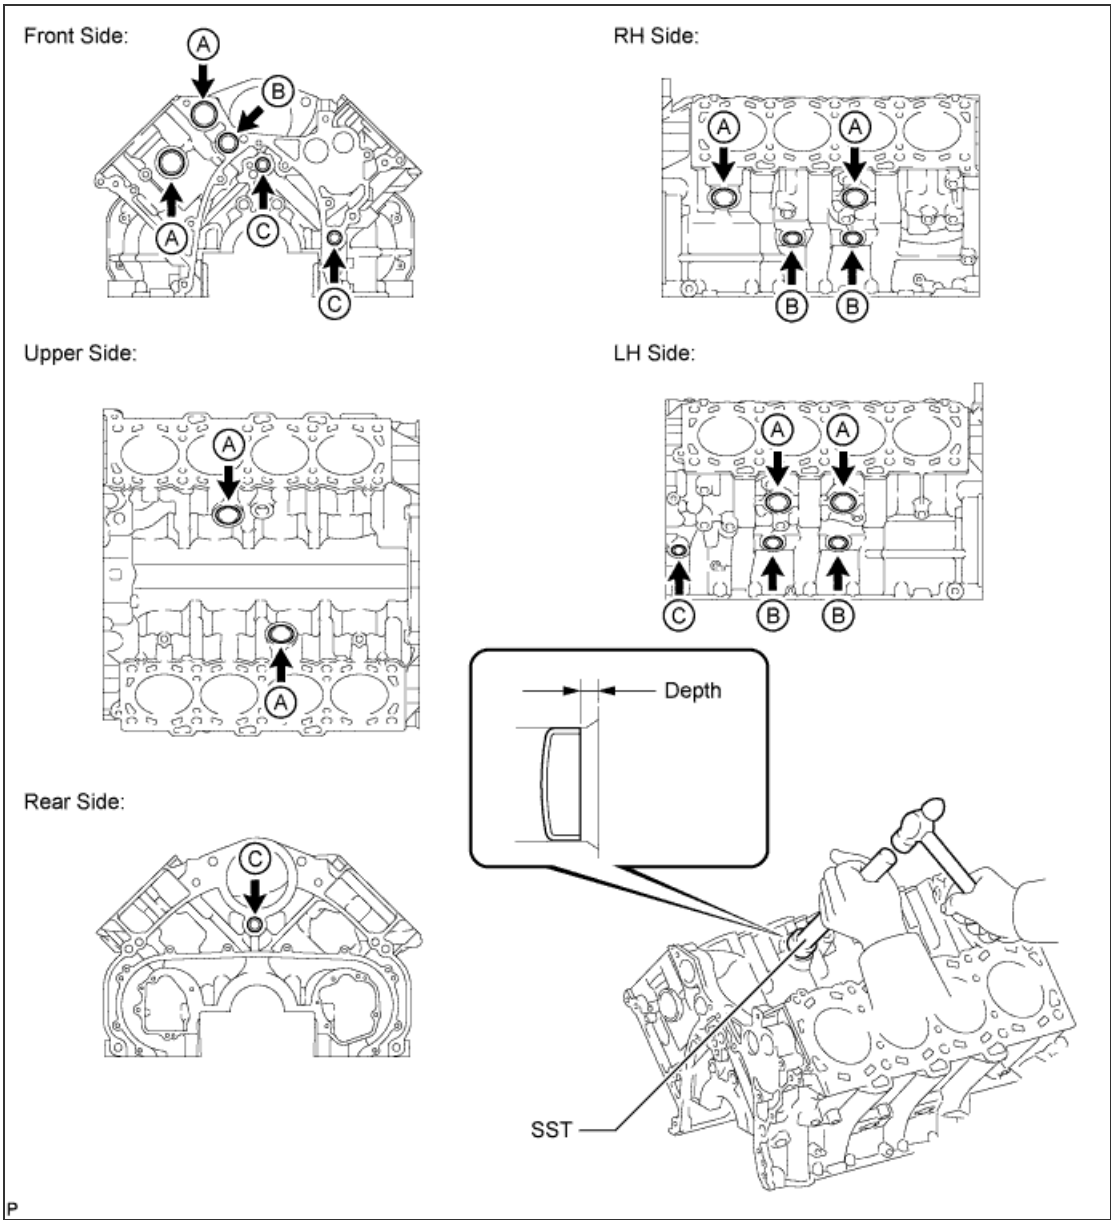
NOTICE:

If water leaks from the tight plug or the plug corrodes, replace it.

a. Remove the tight plugs.

b. Apply adhesive around new tight plugs.

Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent



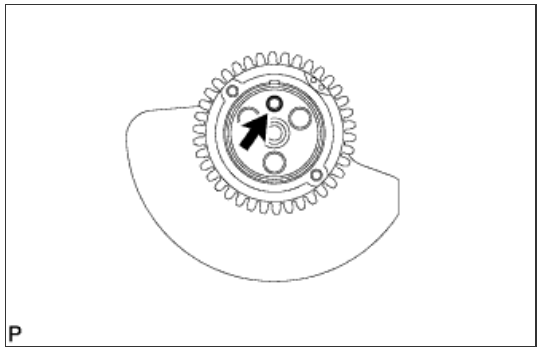
c. Using SST and a hammer, tap in the tight plugs to the specified depth.

SST

09950-60010 (09951-00180, 09951-00250, 09951-00350)
09950-70010 (09951-07150)

Standard depth:

1.7 to 2.7 mm (0.0669 to 0.106 in.)



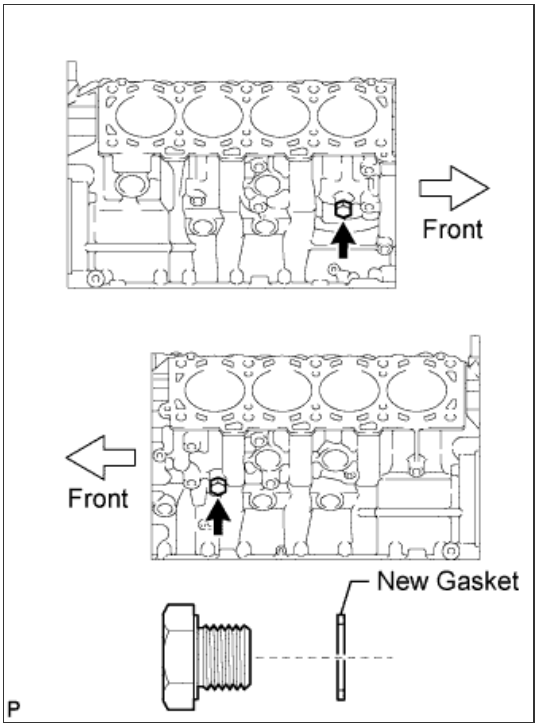
4. REPLACE CRANKSHAFT STRAIGHT PIN

NOTICE:

It is not necessary to remove the crankshaft straight pin unless it is being replaced.

a. Replace the pin.

for Preparation Click here

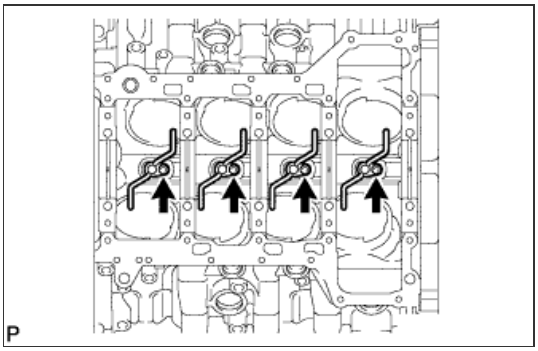


NOTICE:

Before performing these installation procedures, sufficiently clean and remove any foreign matter from the cylinder block, connecting rod and other parts.

1. INSTALL CYLINDER BLOCK STRAIGHT SCREW PLUG

a. Install 2 new gaskets and the 2 straight screw plugs.

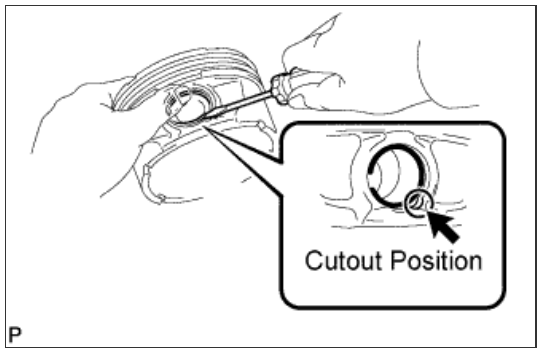


Torque:
38 N*m{ 387 kgf*cm , 28 ft.*lbf }

2. INSTALL NO. 1 OIL NOZZLE SUB-ASSEMBLY

a. Using a 5 mm hexagon wrench, install the 4 oil nozzles with the 4 bolts.

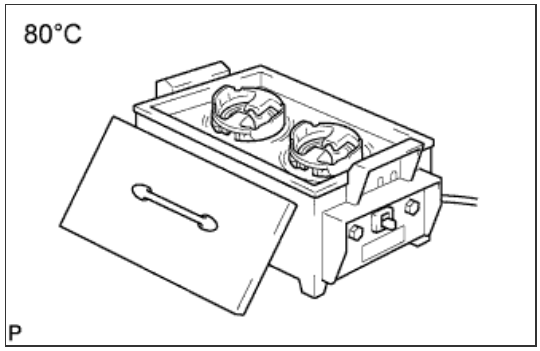
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



3. INSTALL PISTON PIN HOLE SNAP RING

a. Using a screwdriver, install a new snap ring on one side of the piston pin hole.

HINT:

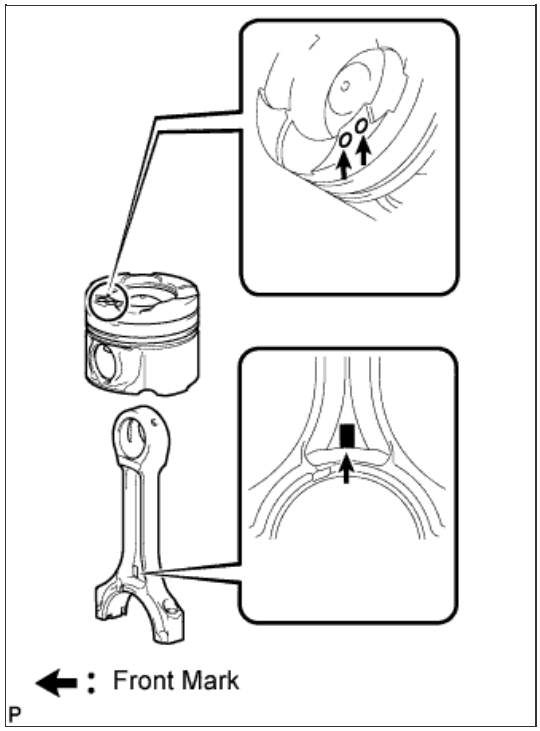


Be sure that the end gap of the snap ring is not aligned with the pin hole cutout portion of the piston.

4. INSTALL PISTON WITH PIN SUB-ASSEMBLY

a. Gradually heat the piston to approximately 80°C (176°F).

b. Coat the piston pin with engine oil.

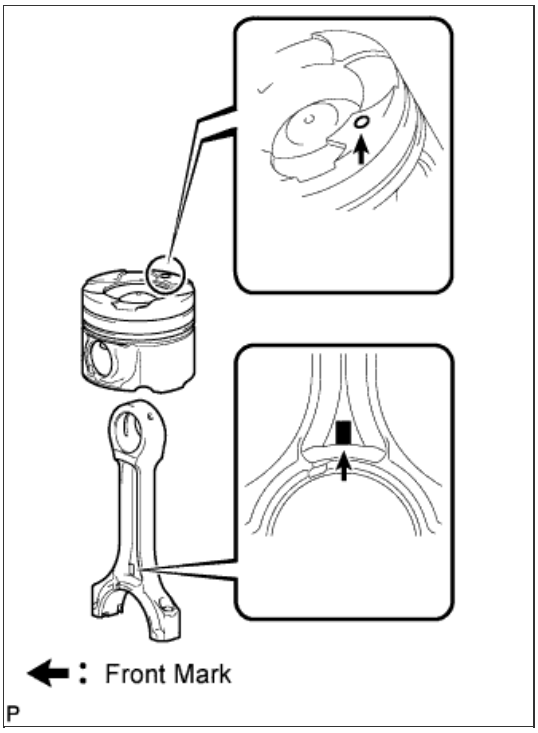


c. RH:

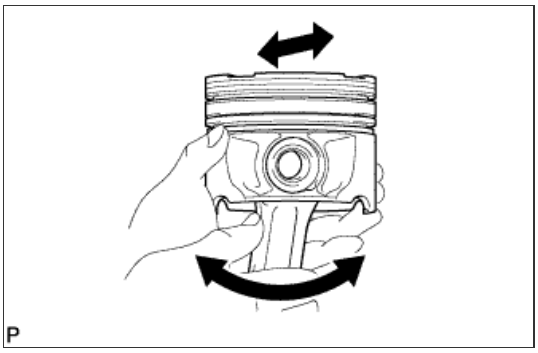
i. Align the front marks of the piston and connecting rod, and push in the piston pin with your thumb.

HINT:

- **The piston and pin are a matched set.**
- **The piston has 2 front marks.**



d. LH:

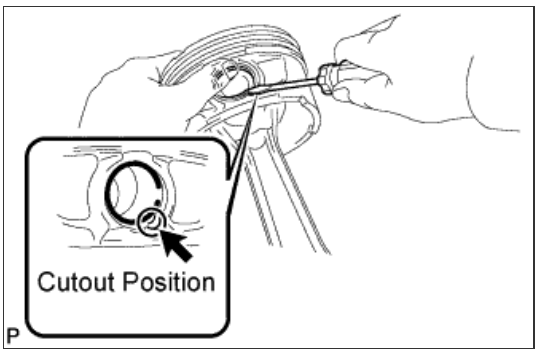


i. Face the front marks of the piston and connecting rod in opposite directions, and push in the piston pin with your thumb.

HINT:

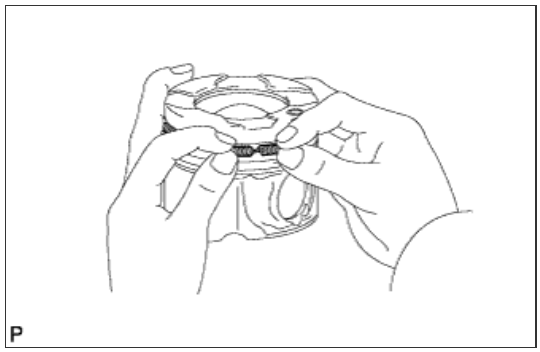
- **The piston and pin are a matched set.**
- **The piston has 1 front mark.**

e. Check the fitting condition between the piston and piston pin by trying to move the piston back and forth on the piston pin.



5. INSTALL PISTON PIN HOLE SNAP RING

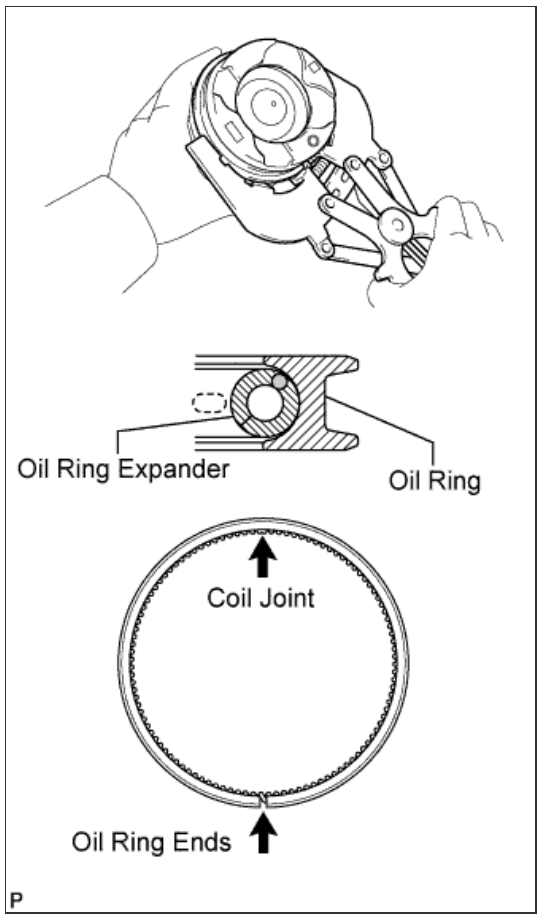
a. Using a screwdriver, install a new snap ring at the other end of the piston pin hole.



HINT:

Be sure that the end gap of the snap ring is not aligned with the pin hole cutout portion of the piston.

6. INSTALL PISTON RING SET

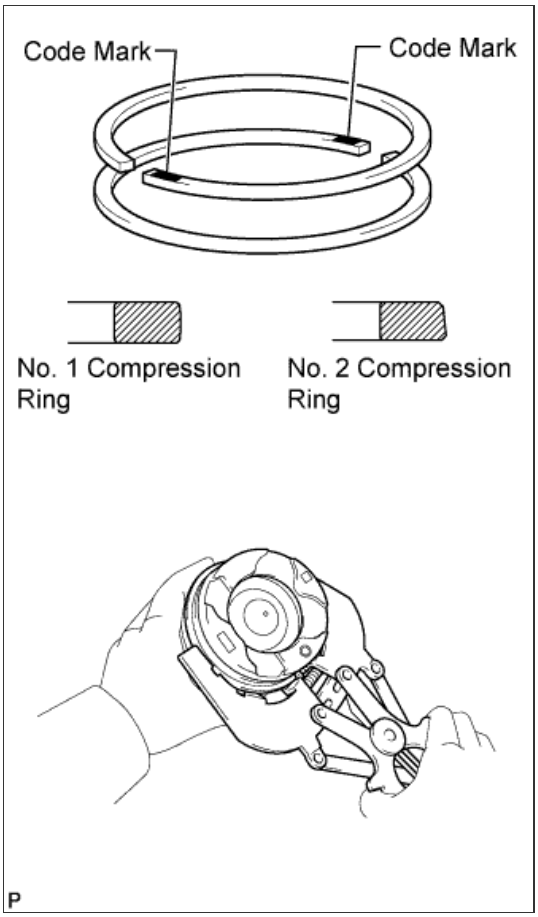


a. Install the oil ring expander by hand.

b. Using a piston ring expander, install the oil ring.

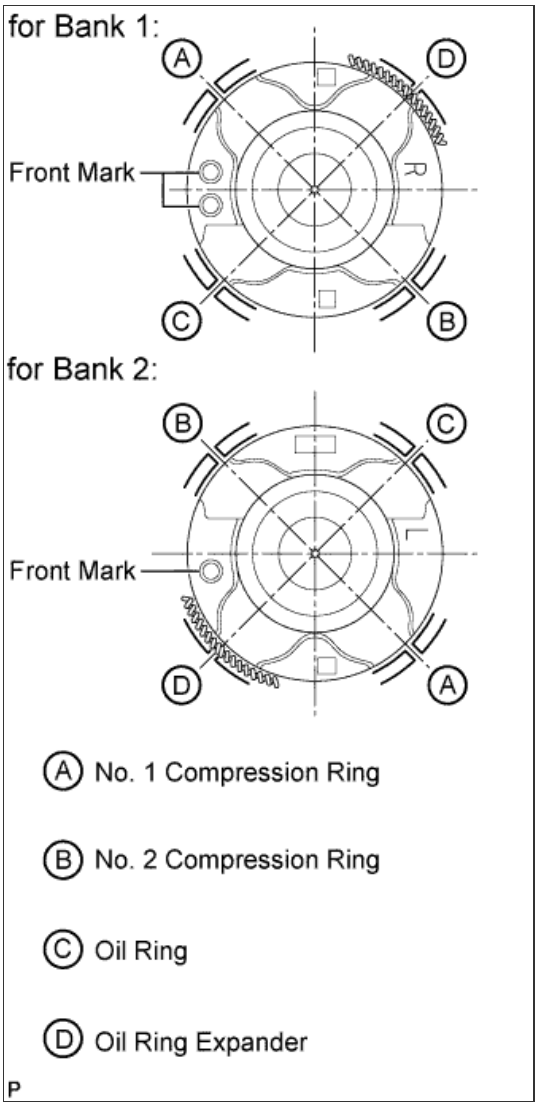
HINT:

Align the oil ring ends and coil joint as shown in the illustration.



c. Using a piston ring expander, install the No. 1 and No. 2 compression rings so that the code marks are positioned as shown in the illustration.

HINT:



- **w/ EGR System:**
  Install the No. 1 compression ring with the code mark shown in the table below facing upward.
- **w/o EGR System:**
  Install the No. 1 compression ring with no code mark. The compression ring can be installed with either side facing upward.
- **Install the No. 2 compression ring with the code mark shown in the table below facing upward.**

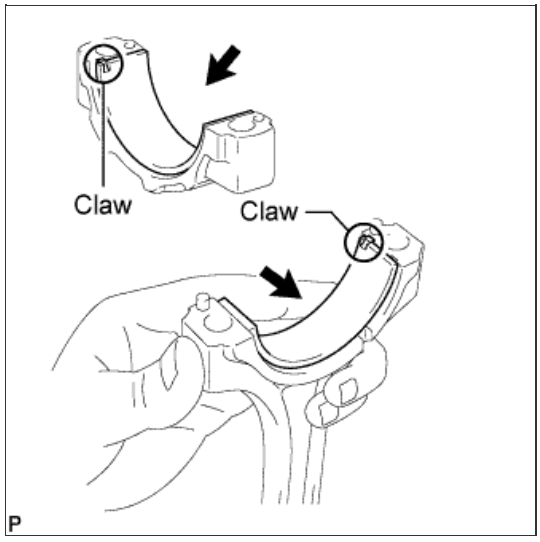
Standard Code Mark:

Item	Code Mark (w/ GR System)	Code Mark (w/o GR System)
No. 1 compression ring	1	o mark
No. 2 compression ring	2	2

d. Position the piston rings so that the ring ends are as shown in the illustration.

7. INSTALL CONNECTING ROD BEARING

a. Align the bearing claw with the claw groove of the connecting rod cap.



NOTICE:

- **Clean the contact surface of the bearing and connecting rod cap.**
- **Do not apply engine oil to the bearing and its contact surface.**

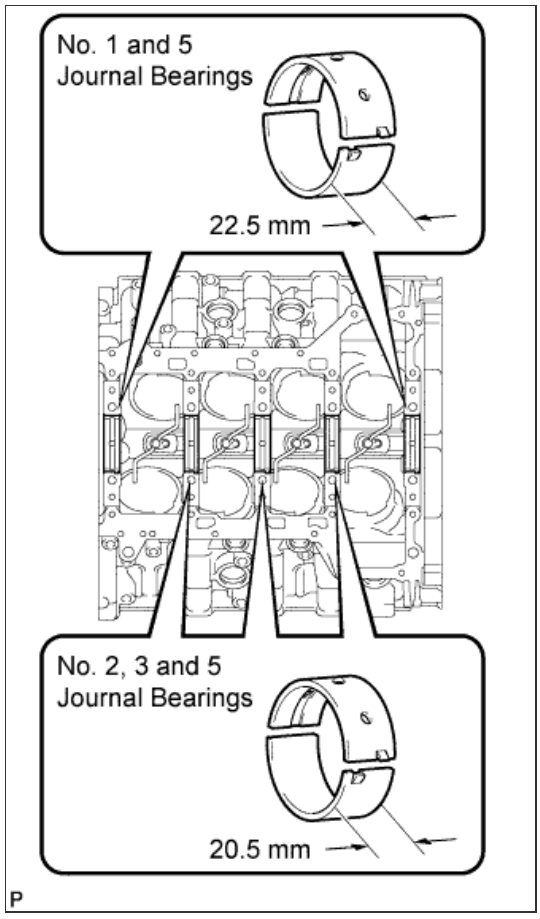
b. Align the bearing claw with the claw groove of the connecting rod.

NOTICE:

- **Clean the contact surface of the bearing and connecting rod.**
- **Do not apply engine oil to the bearing and its contact surface.**

8. INSTALL CRANKSHAFT BEARING

NOTICE:



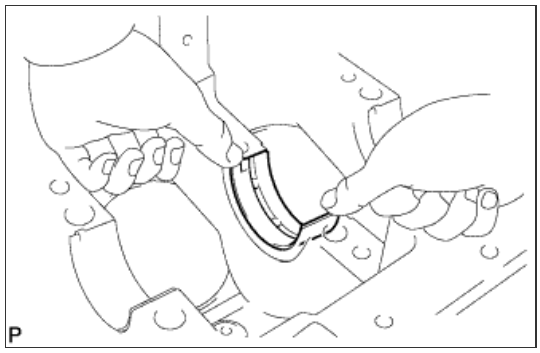
Be sure to install the selected bearing.

HINT:

Main bearings come in widths of 20.5 mm (0.807 in.) and 22.5 mm (0.886 in.).

Bearing Width

Item	Standard Width
No. 1 and 5 journal bearings	22.5 mm (0.886 in.)
No. 2, 3 and 4 journal bearings	20.5 mm (0.807 in.)

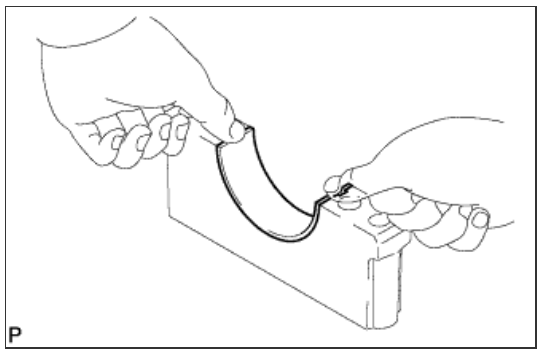


a. Clean each main journal and bearing.

b. Align the bearing claw with the claw groove of the cylinder block, and push in the 5 upper crankshaft bearings.

NOTICE:

- **Clean the contact surface of the bearing and cylinder block.**
- **Do not apply engine oil to the bearing and its contact surface.**
- **Both sides of the oil groove in the cylinder block should be visible through the oil feed holes in the bearing. The amount visible on each side of the holes should be equal.**



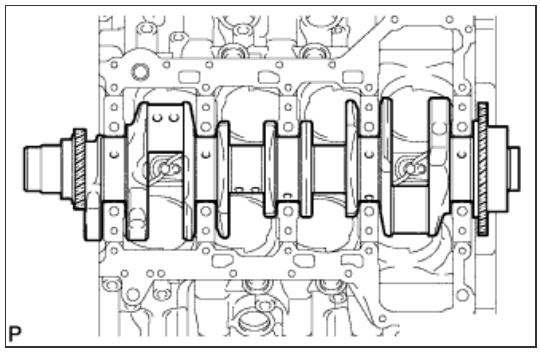
c. Align the bearing claw with the claw groove of the bearing cap, and push in the 5 lower crankshaft bearings.

NOTICE:

- **Clean the contact surface of the bearing and crankshaft bearing cap.**
- **Do not apply engine oil to the bearing and its contact surface.**

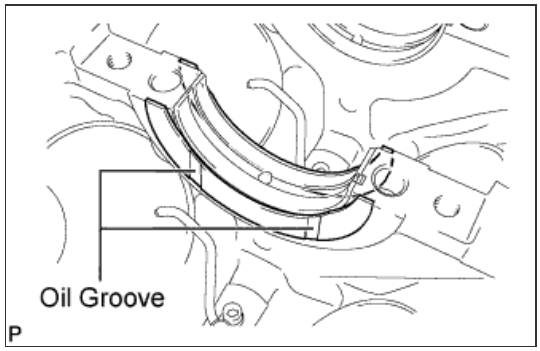
HINT:

he number marked on each bearing cap indicates the installation position.



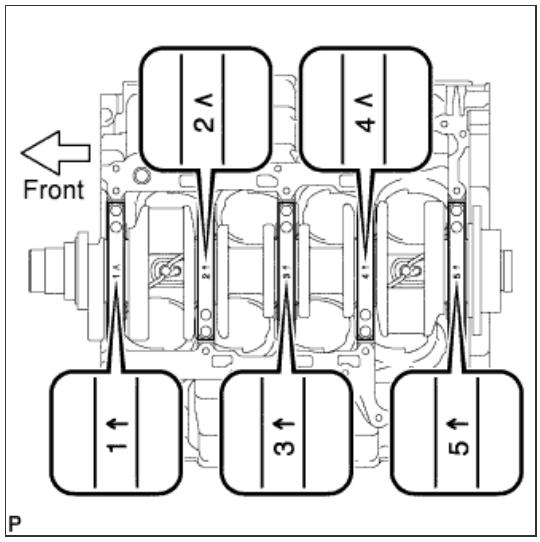
9. INSTALL CRANKSHAFT

NOTICE:



Clean the contact surface of each main journal and crank pin.

a. Apply new engine oil to the upper crankshaft bearing and install the crankshaft to the cylinder block.



b. Push the crankshaft toward the rear thrust direction to create clearance, and install a thrust washer to the No. journal position with the oil groove facing the front of the engine.

c. Push the crankshaft toward the forward thrust direction to create clearance, and install a thrust washer to the No. journal position with the oil groove facing the rear of the engine.

d. xamine the front marks and numbers and install the bearing caps to the cylinder block.

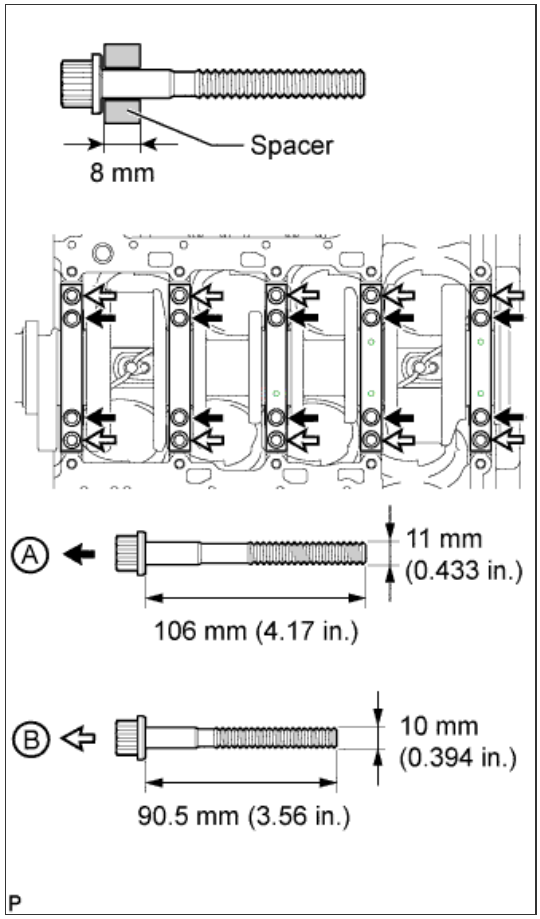
e. Apply a light coat of engine oil to the threads of the crankshaft bearing cap bolts.

f. emporarily install the crankshaft bearing cap bolts labeled A or the bolts labeled B.

HINT:

In place of the cylinder block stiffening plates, install 8 mm (0.315 in.) thick spacers to the crankshaft bearing cap bolts.

Standard Length

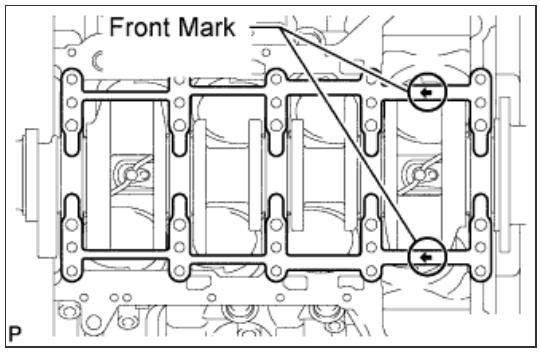


Item	Diameter	Length
A	11 mm (0.433 in.)	106 mm (4.17 in.)
B	10 mm (0.394 in.)	90.5 mm (3.56 in.)

g. Uniformly tighten the 2 crankshaft bearing cap bolts for each bearing cap in several passes to ensure a proper fit.

NOTICE:

Do not tap the bearing cap with a plastic-faced hammer.



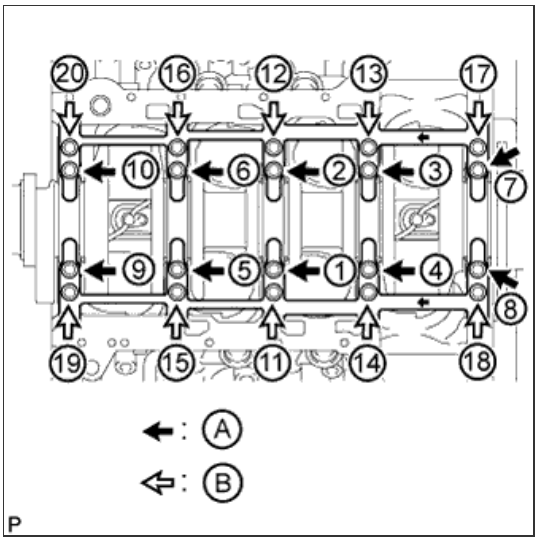
h. Remove the crankshaft bearing cap bolts and spacers.

i. Set the 2 cylinder block stiffening plates on the cylinder block.

HINT:

Make sure the arrows on the stiffening plates face the engine front.

j. Step 1:

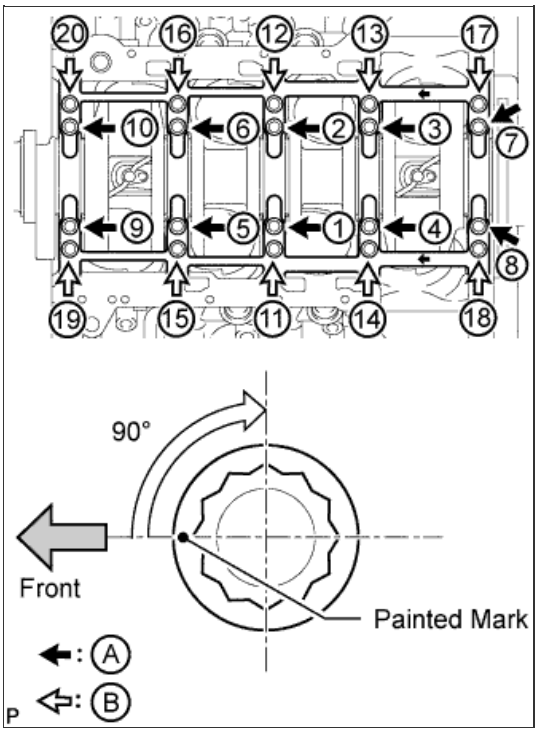


HINT:

- **The crankshaft bearing cap bolts are tightened in 4 progressive steps.**
- **If any crankshaft bearing cap bolt is broken or deformed, replace it.**

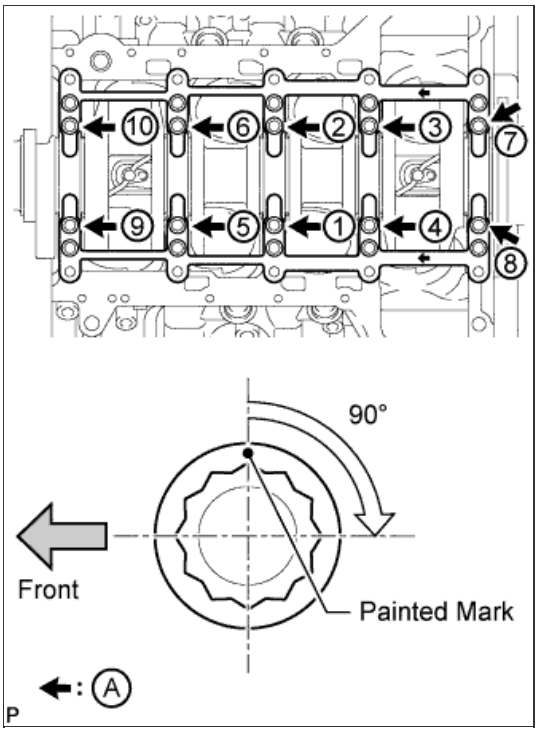
i. Apply a light coat of engine oil to the threads and under the heads of the 20 crankshaft bearing cap bolts A and B.

ii. Install the 20 crankshaft bearing cap bolts. Using several steps, tighten the bolts uniformly in the sequence shown in the illustration.



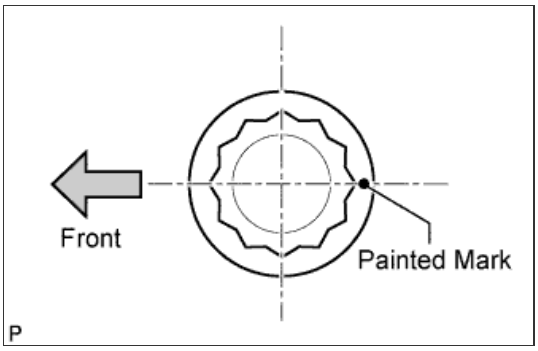
Torque:
for bolt A:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }
for bolt B:
60 N*m{ 612 kgf*cm , 44 ft.*lbf }

k. Step 2:



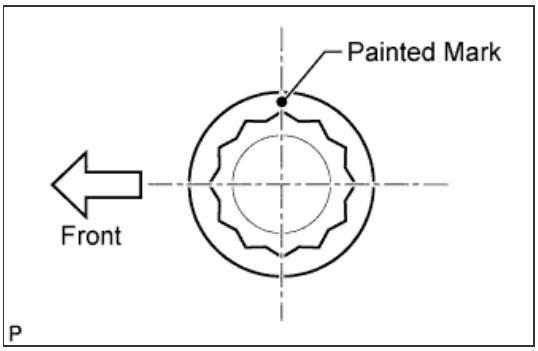
i. Mark the front side of the crankshaft bearing cap bolts A and B with paint.

ii. Tighten the crankshaft bearing cap bolts A and B 90° in the sequence shown in the illustration.



l. Step 3:

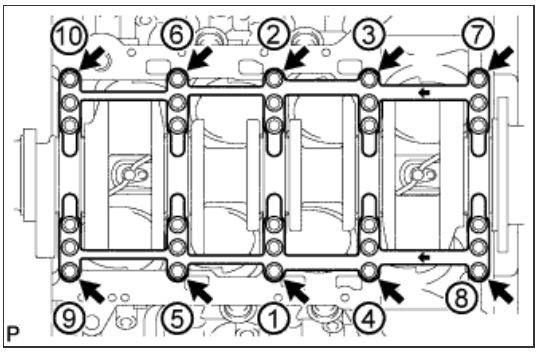
i. Tighten the crankshaft bearing cap bolts A another 90° in the sequence shown in the illustration.



m. Check that the painted marks of bolt A are now at a 180° angle to the front.

n. Check that the painted marks of bolt B are now at a 90° angle to the front.

o. Check that the crankshaft turns smoothly.



p. Step 4:

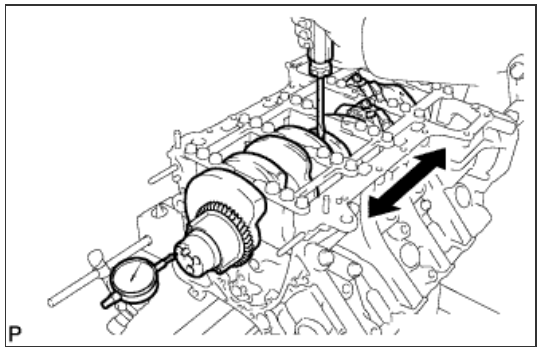
i. Using several steps, install the 10 crankshaft bearing cap bolts uniformly in the sequence shown in the illustration.

Torque:
56 N*m{ 571 kgf*cm , 41 ft.*lbf }

ii. Check that the crankshaft turns smoothly.

10. INSPECT CRANKSHAFT THRUST CLEARANCE

a. Using a dial indicator, measure the thrust clearance while prying the crankshaft back and forth with a screwdriver.

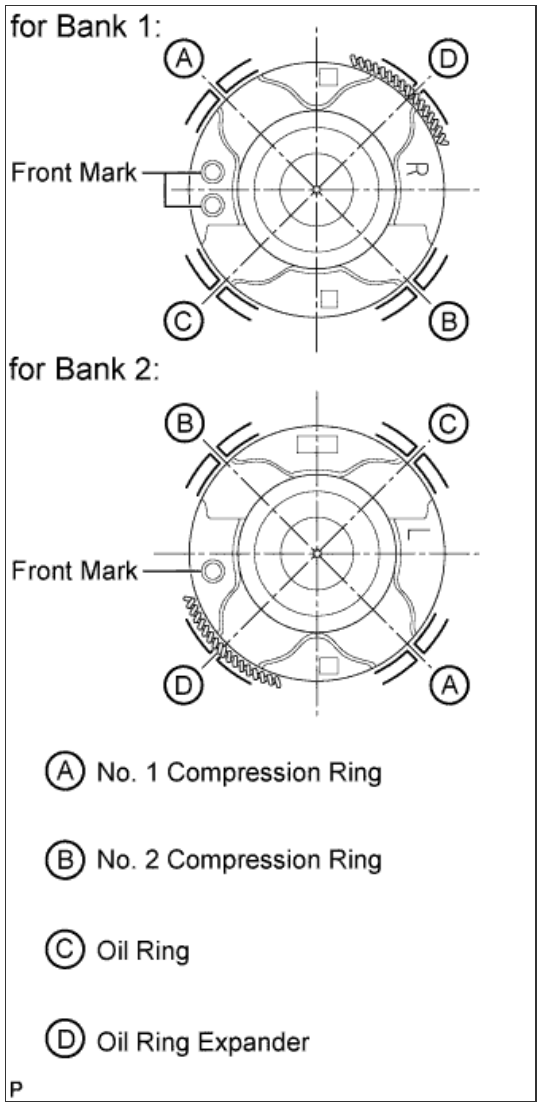


Standard thrust clearance:
0.02 to 0.22 mm (0.000787 to 0.00866 in.)

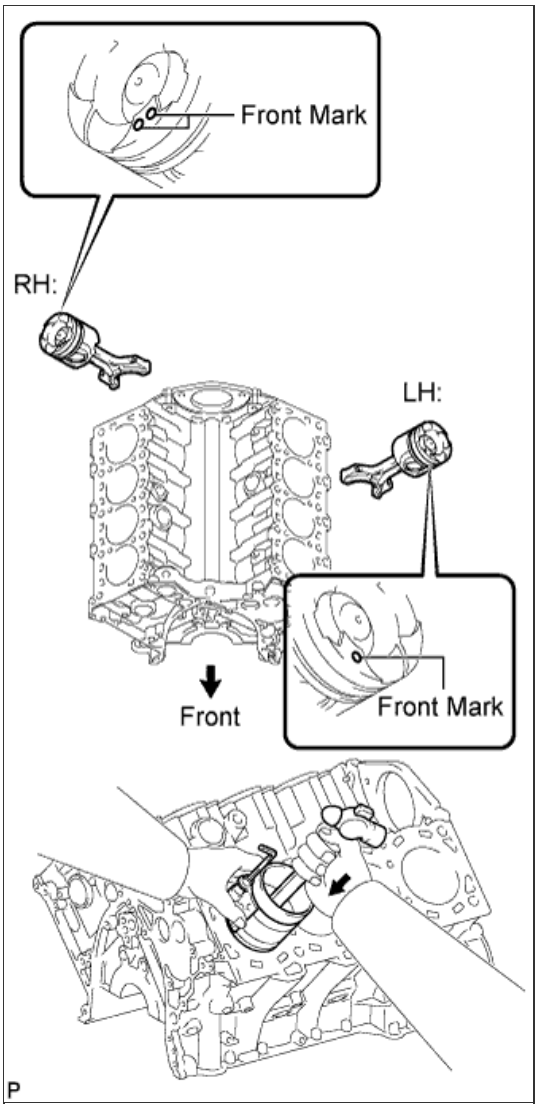
Maximum thrust clearance:
0.30 mm (0.0118 in.)

If the thrust clearance is more than the maximum, replace the thrust washers as a set.

Standard thrust washer thickness:
2.44 to 2.49 mm (0.0961 to 0.0980 in.)



If necessary, replace the crankshaft.

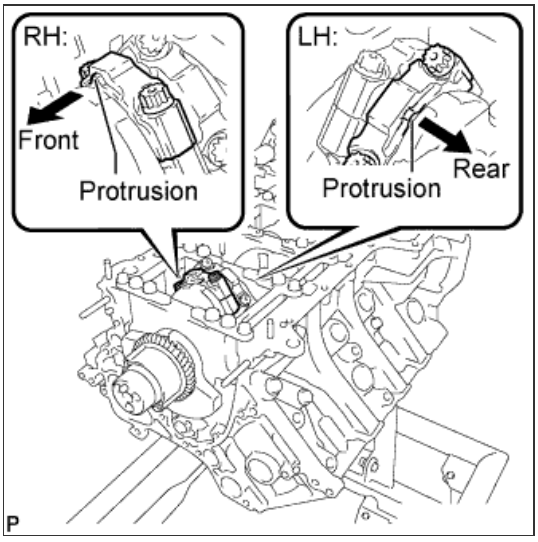


11. INSTALL PISTON SUB-ASSEMBLY WITH CONNECTING ROD

a. Apply engine oil to the cylinder walls, pistons, and the surfaces of the connecting rod bearings.

b. Check the positions of the piston ring ends.

c. Using a hammer handle and piston ring compressor, press a piston and connecting rod assembly into each cylinder with the front mark of the piston facing forward.

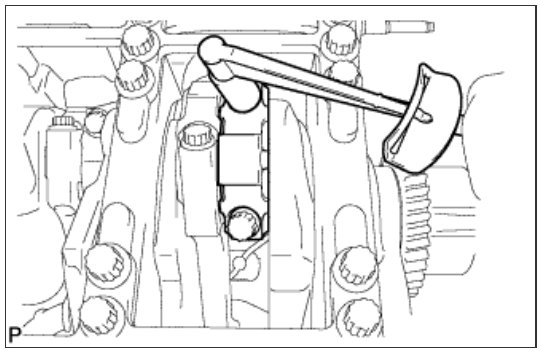


d. Install the connecting rod cap so that its protrusion is facing the correct direction.

NOTICE:

Match the numbered connecting rod cap with the connecting rod.

e. Apply a light coat of engine oil to the threads and under the heads of the connecting rod cap bolts.

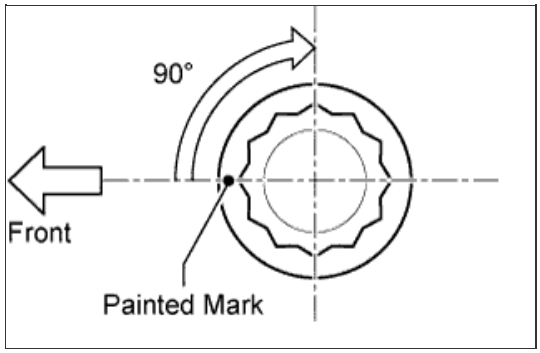


f. Step 1:

i. Install and alternately tighten the bolts of the connecting rod cap in several steps.

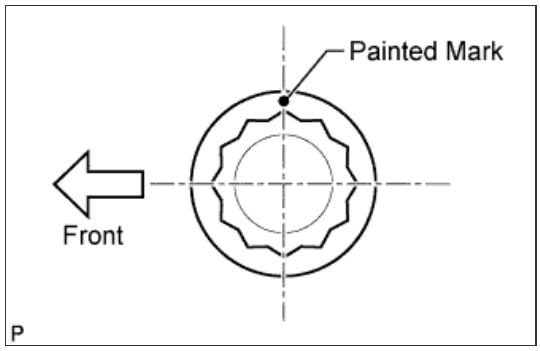
Torque:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }

HINT:



- **The connecting rod cap bolts are tightened in 2 progressive steps.**
- **If any connecting rod cap bolt is broken or deformed, replace it.**

g. Step 2:

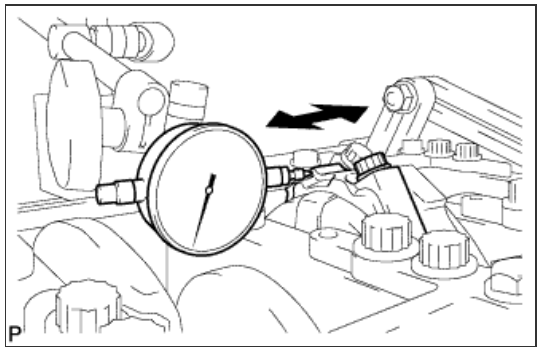


i. Mark the front side of each connecting rod cap bolt with paint.

ii. ighten the cap bolts 90°.

h. Check that the painted marks are now at a 90° angle to the front.

i. Check that the crankshaft turns smoothly.



12. INSPECT CONNECTING ROD THRUST CLEARANCE

a. Using a dial indicator, measure the thrust clearance while moving the connecting rod back and forth.

Standard thrust clearance:
0.14 to 0.54 mm (0.00551 to 0.0213 in.)

Maximum thrust clearance:
0.60 mm (0.0236 in.)

If the thrust clearance is more than the maximum, replace one or more connecting rods as necessary.
If necessary, replace the crankshaft.

for Preparation Click here

CAUTION:

- **Before working on the fuel system, disconnect the cable from the negative (-) battery terminal.**
- **Do not smoke or be near an open flame when working on the fuel system.**
- **Keep gasoline away from rubber and leather parts.**

1.IGNITION SWITC EXPRESSION

INT:

The type of ignition switch used on this model differs depending on the specifications of the vehicle. The expressions listed in the table below are used in this section.

Expression	Ignition Switch (Position)	Engine Switch (Condition)
Ignition Switch off	LOCK	Off
Ignition Switch ACC	ACC	On (ACC)
Ignition Switch ON	ON	On (IG)
Engine Start	START	Start

2.DISC ARGE FUEL SYSTEM PRESSURE

CAUTION:

- **Do not disconnect any part of the fuel system until you have discharged the fuel system pressure.**
- **After discharging the fuel pressure, place a cloth or equivalent over fittings as you separate them to reduce the risk of fuel spray on yourself or in the engine compartment.**

a. Remove the engine room relay block cover.

b. Remove the circuit opening relay (C/OPN).

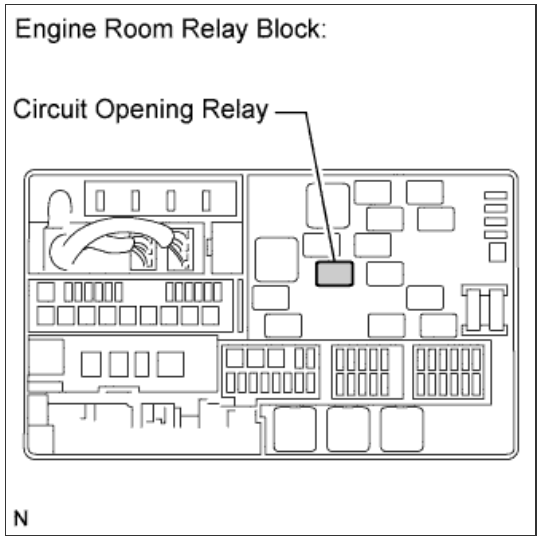
c. Start the engine. After the engine has stopped on its own, turn the engine switch off.

INT:

If DTC P0230 is output, clear the DTC (Click here).

d. Crank the engine, then check that the engine does not start.

e. Loosen the fuel tank cap, then discharge the pressure in the fuel tank completely.



f. Disconnect the cable from the negative (-) battery terminal.

NOTICE:

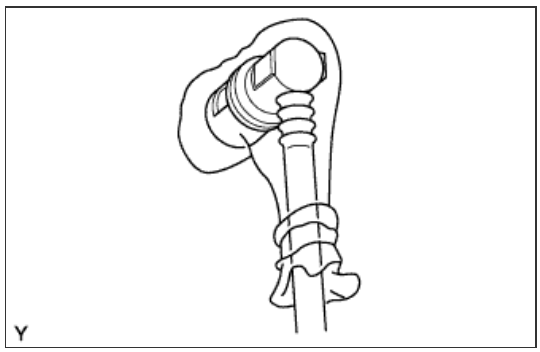
When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

g. Install the circuit opening relay (C/OPN).

h. Install the engine room relay block cover.

3.FUEL SYSTEM

a. When disconnecting the high fuel pressure line, a large amount of gasoline will spill out. Follow these procedures.

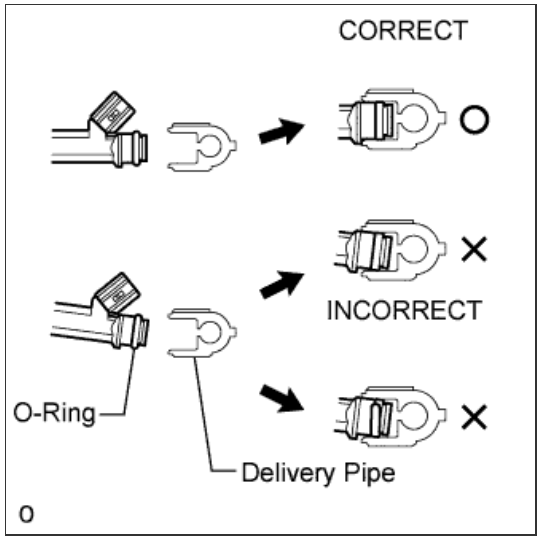


i. Discharge the fuel system pressure.

ii. Put a container under the connecting part of the pressure line.

iii. Slowly loosen the connection.

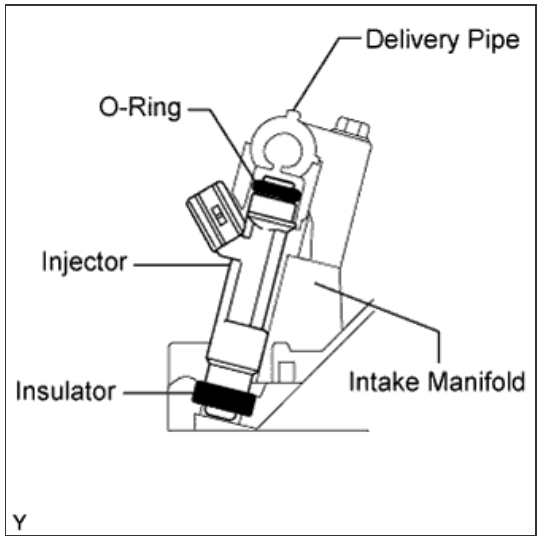
iv. Disconnect the connection.



v. Plug the connection with a rubber plug.

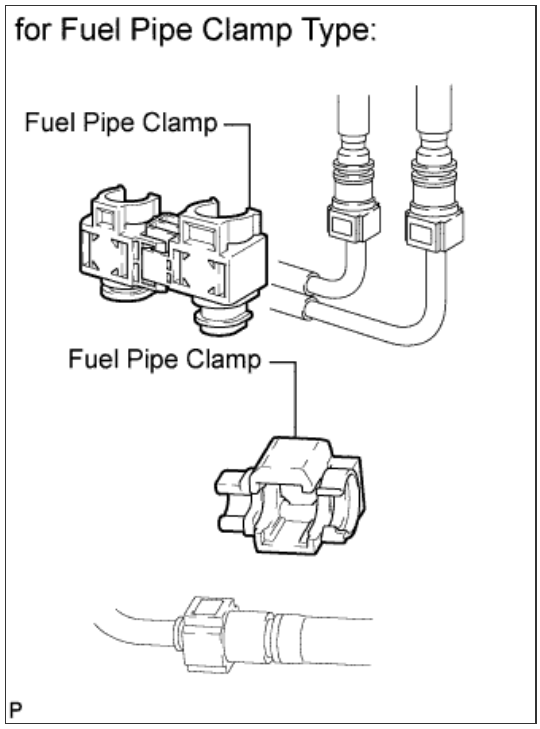
b. Observe these precautions when removing and installing the injectors:

NOTICE:



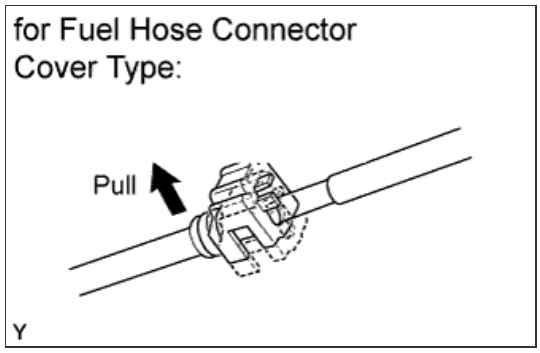
- **Never reuse the O-ring.**
- **When placing a new O-ring on the injector, do not damage it.**
- **Coat a new O-ring with spindle oil or gasoline before installing it. Do not use engine oil, gear oil or brake oil.**

c. Install the injector to the delivery pipe and cylinder head as shown in the illustration.



NOTICE:

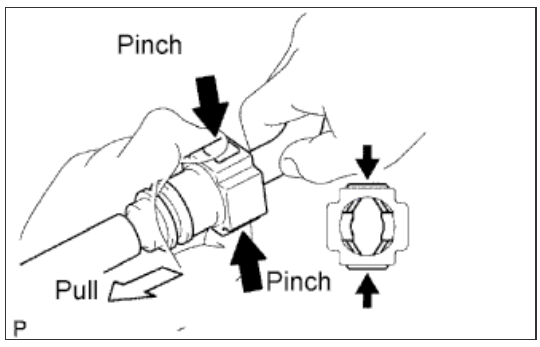
Before installing the injector, apply spindle oil or gasoline on the place where the delivery pipe contacts the O-ring of the injector.



d. Observe these precautions when disconnecting the fuel tube connector (for quick type A).

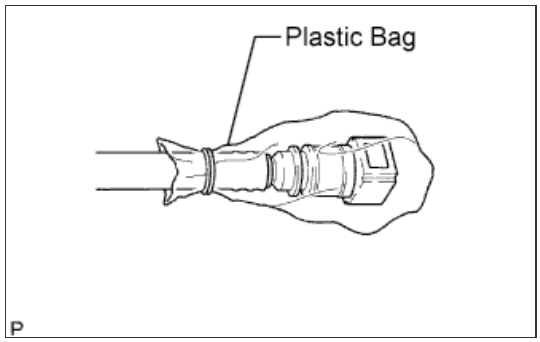
i. for Fuel Pipe Clamp Type:
Remove the fuel pipe clamp from the fuel tube connector.

ii. for Fuel ose Connector Cover Type:
Detach the lock claw by lifting up the cover, as shown in the illustration.



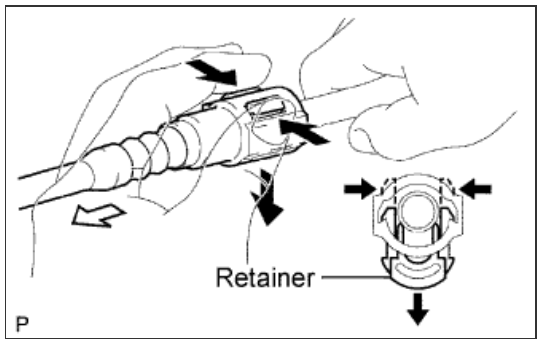
iii. Check for dirt or mud on the pipe and around the connector before disconnection. Clean if necessary.

iv. Pinch the connector and disconnect the connector and pipe.
If the connector and the pipe are stuck together, pinch the connector, then push and pull the pipe to disconnect the pipe and pull it out.



NOTICE:

Do not use any tools in this procedure.

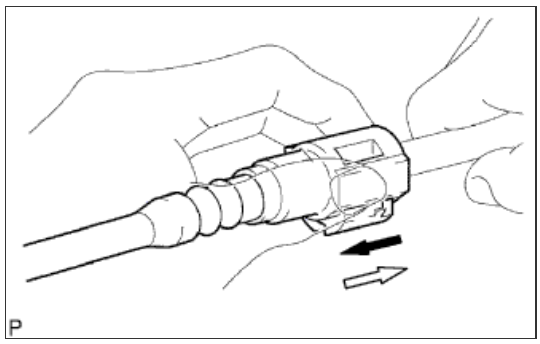


v. Check for dirt or mud on the seal surface of the disconnected pipe.
Clean if necessary.

vi. To protect the disconnected pipe and connector from damage and contamination, cover it with a plastic bag.

e. Observe these precautions when disconnecting the fuel tube connector (for quick type B).

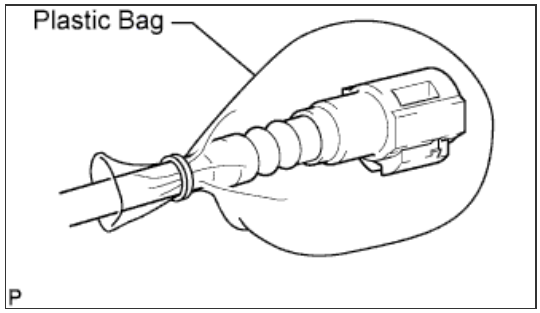
i. Check that there is no damage or foreign matter on the part of the pipe that contacts the connector.



ii. Detach the 2 claws of the connector retainer. Push down on the connector and disconnect it from the pipe.

INT:

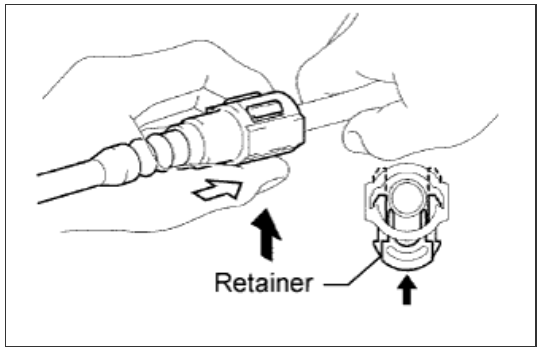
If the connector and pipe are stuck, pinch the fuel pipe by hand, and push and pull the connector to disconnect it.



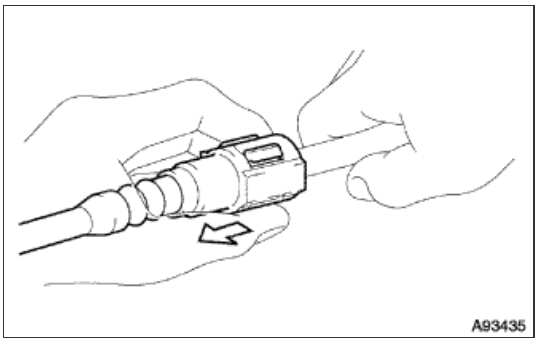
NOTICE:

Do not use any tools in this procedure.

iii. Check for foreign matter on the seal surface of the disconnected pipe. Clean it if necessary.

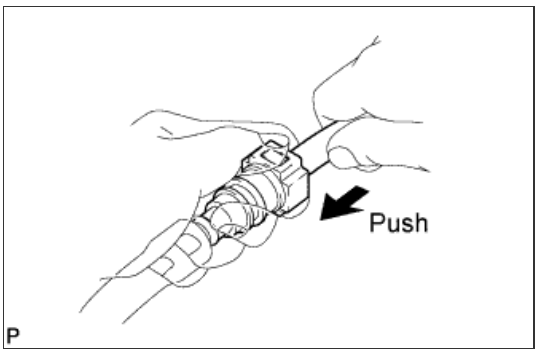


iv. To protect the disconnected pipe and connector from damage and foreign matter, cover it with a plastic bag.



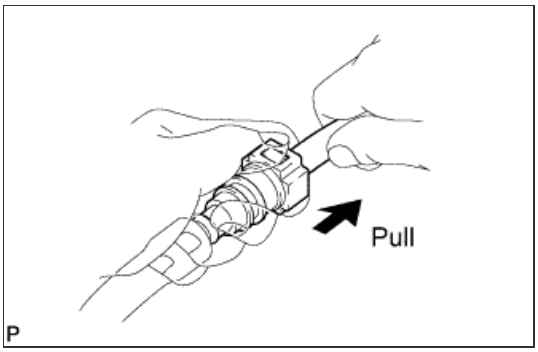
f. Observe these precautions when connecting the fuel tube connector (for quick type B).

i. Check for foreign matter on the pipe and around the connector before connecting it. Clean it if necessary.

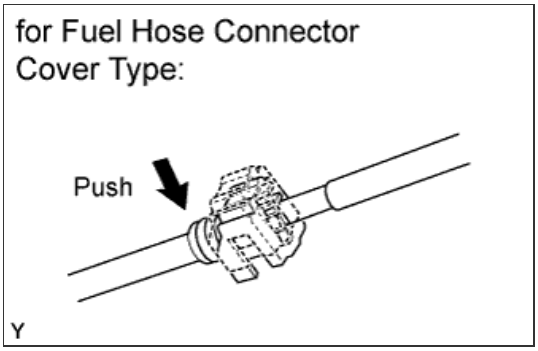


ii. Align the axis of the connector with the axis of the pipe. Push the pipe into the connector, and push up on the retainer.

iii. After connecting the pipe and connector, try to pull them apart to confirm that they are securely connected.

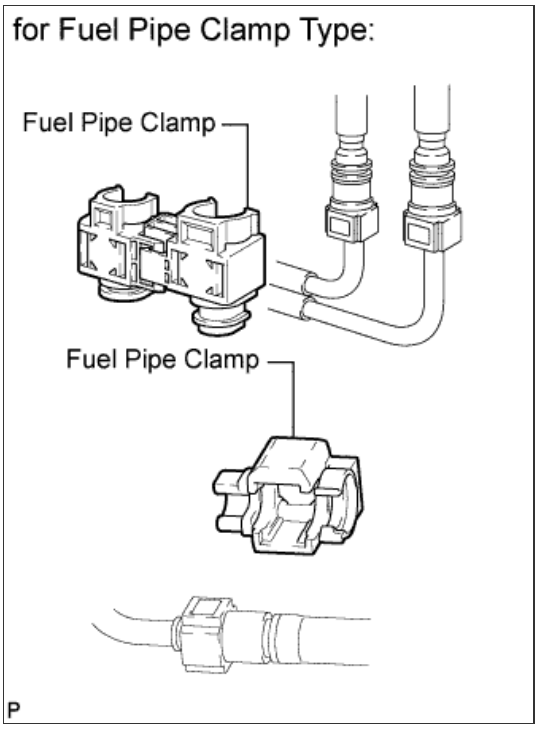


g. Observe these precautions when connecting the fuel tube connector (for quick type A).



i. Check that there is no damage or contamination in the connected part of the pipe.

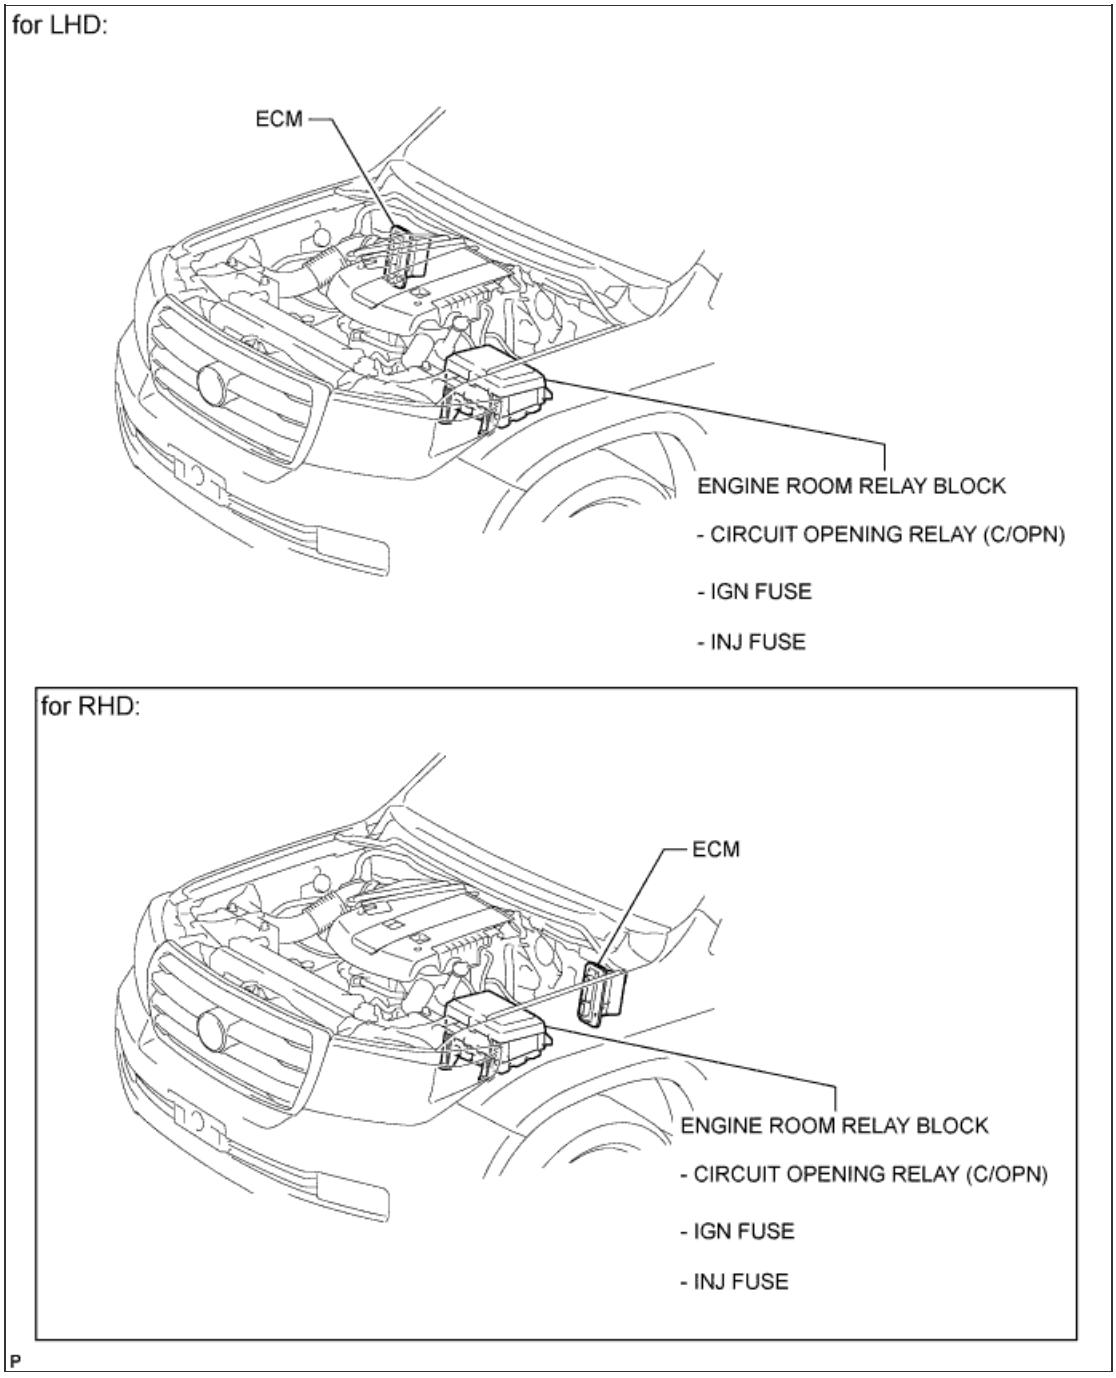
ii. Align the axis of the connector with the axis of the pipe. Push the pipe into the connector until the connector makes a "click" sound. If the connection is tight, apply a small amount of fresh spindle oil or gasoline on the tip of the pipe.



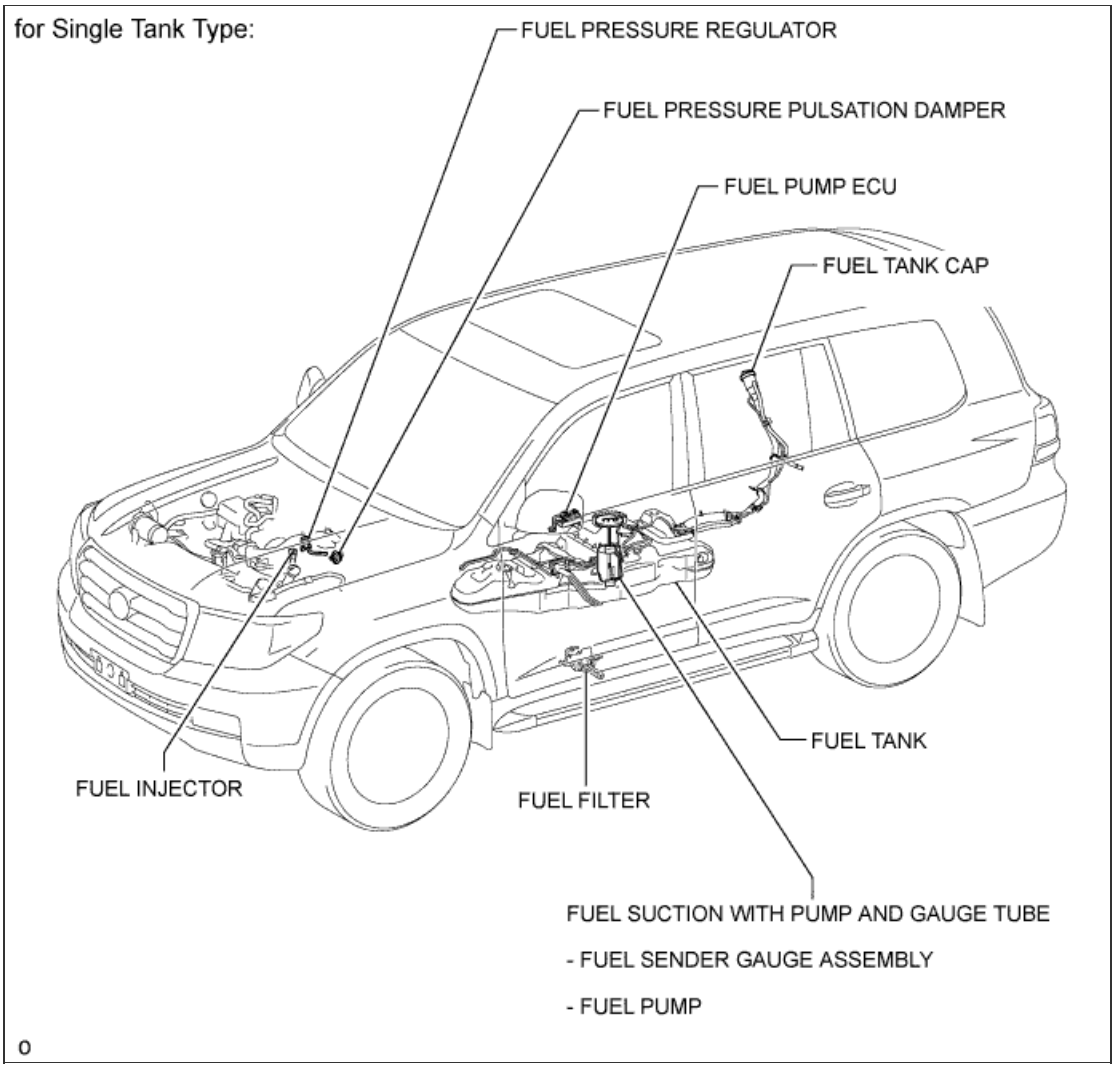
iii. After having finished the connection, try to pull apart the pipe and the connector to confirm that they are securely connected.

iv. for Fuel ose Connector Cover Type:
Attach the lock claw to the connector by pushing down on the cover, as shown in the illustration.

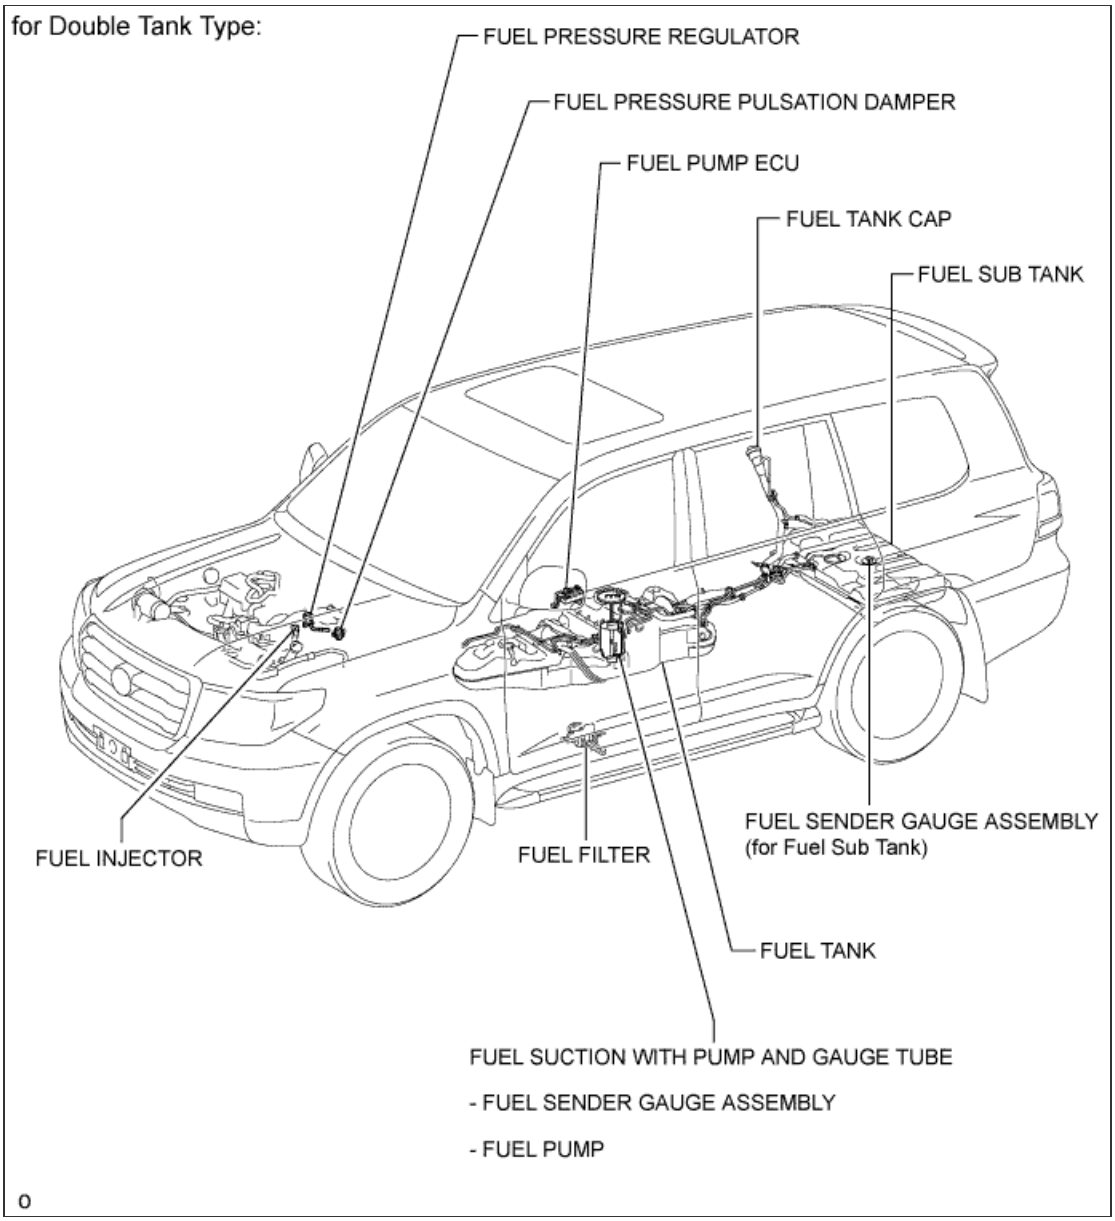
v. for Fuel Pipe Clamp Type:
Install the fuel pipe clamp to the connector.



vi. Check that there is no fuel leakage.



4.C ECK FOR FUEL LEAK



a. Check that there are no fuel leaks after performing maintenance anywhere on the fuel system (Click here).

for Preparation Click here

1. CHECK FOR FUEL PUMP OPERATION AND FUEL LEAK

a. Connect the intelligent tester to the DLC3.

b. Turn the ignition switch to ON.

NOTICE:

Do not start the engine.

c. Turn the intelligent tester on.

d. Enter the following menus: Powertrain / Engine and ECT / Active Test / Activate the Fuel Pump Speed Control.

e. Check fuel pump operation.

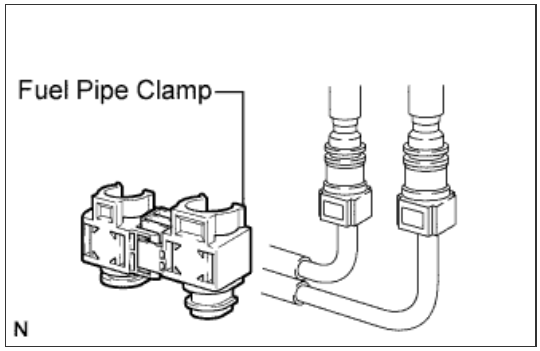
i. Check for pressure in the fuel inlet tube from the fuel line. Check that the sound of fuel flowing in the fuel tank can be heard.
If there is no sound, check the integration relay, fuel pump, ECM and wiring connector.

f. Check for fuel leak.

i. Check that there are no fuel leaks after performing maintenance anywhere on the system.
If there are fuel leaks, repair or replace parts as necessary.

2. CHECK FUEL PRESSURE

a. Check that the battery voltage is 11 to 14 V.

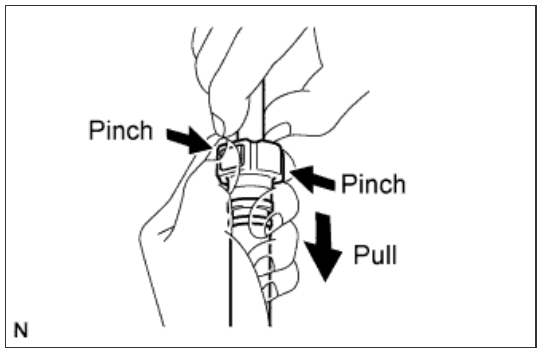


b. Discharge the fuel system pressure (Click here).

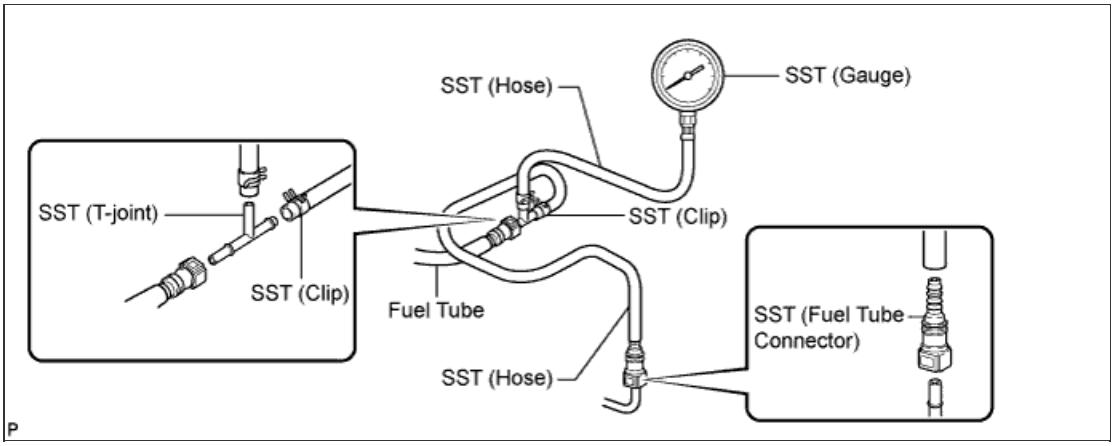
c. Disconnect the cable from the negative (-) battery terminal.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).



d. Remove the fuel pipe clamp from the fuel tube connector.



e. Pinch and pull the No. 1 fuel hose (fuel tube connector) to disconnect it.

CAUTION:

- **Always read the precautions (Click here) before disconnecting the fuel tube connector (quick type).**
- **The fuel tube may spray fuel as a result of pressure that remains in it. Do not allow fuel to be sprayed in the engine compartment.**

f. Install SST (pressure gauge) as shown in the illustration.

SST
09268-31012 (09268-41120, 09268-41500, 90467-13001, 95336-08070)
09268-45014 (09268-41200, 09268-41220)

g. Wipe off any gasoline.

h. Reconnect the cable to the negative (-) battery terminal.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

i. Operate the fuel pump.

i. Connect the intelligent tester to the DLC3.

ii. Turn the ignition switch to ON.

NOTICE:

Do not start the engine.

iii. Turn the intelligent tester on.

iv. Enter the following menus: Powertrain / Engine and ECT / Active Test / Activate the Fuel Pump Speed Control / ON.

j. Measure the fuel pressure.

Standard fuel pressure:
281 to 287 kPa (2.87 to 2.93 kgf/cm ^{2}, 41 to 42 psi)

If the pressure is higher than the specification, replace the fuel pressure regulator.
If the pressure is below the specification, check the fuel hoses and connections, fuel pump, fuel filter and fuel pressure regulator.

k. Start the engine.

l. Measure the fuel pressure.

Standard fuel pressure:
281 to 287 kPa (2.87 to 2.93 kgf/cm ^{2}, 41 to 42 psi)

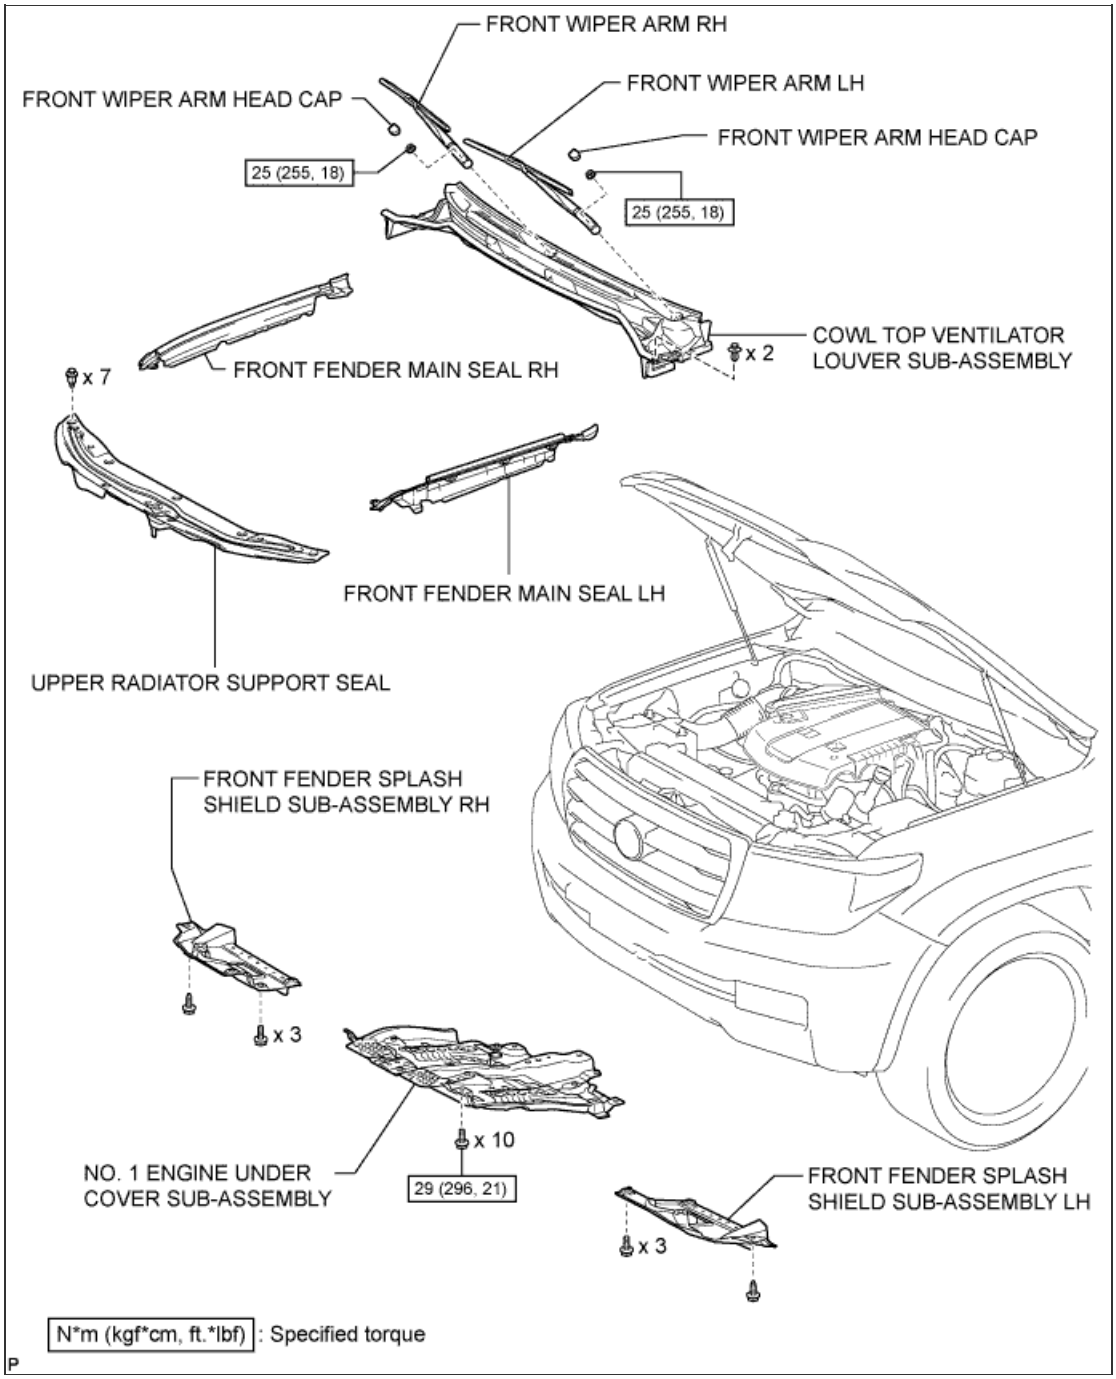
If the pressure is not as specified, check the fuel pump, pressure regulator and/or injectors.

m. Stop the engine.

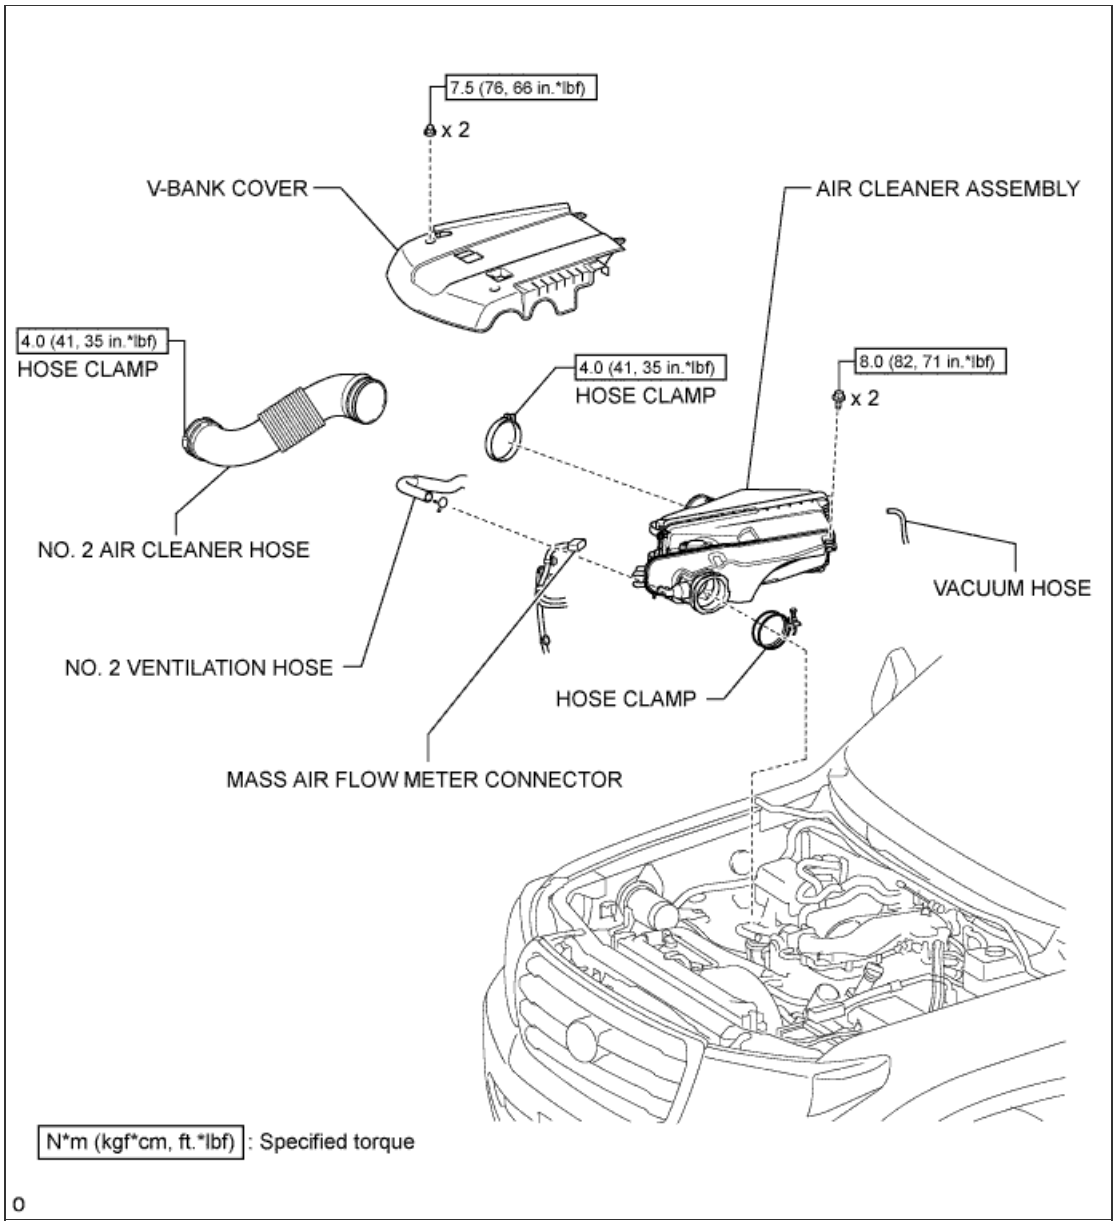
n. Check that the fuel pressure remains as specified for 5 minutes after the engine has stopped.

Standard fuel pressure:
147 kPa (1.5 kgf/cm^2, 21 psi) or more

If the pressure is not as specified, check the fuel pump, pressure regulator and/or injectors.

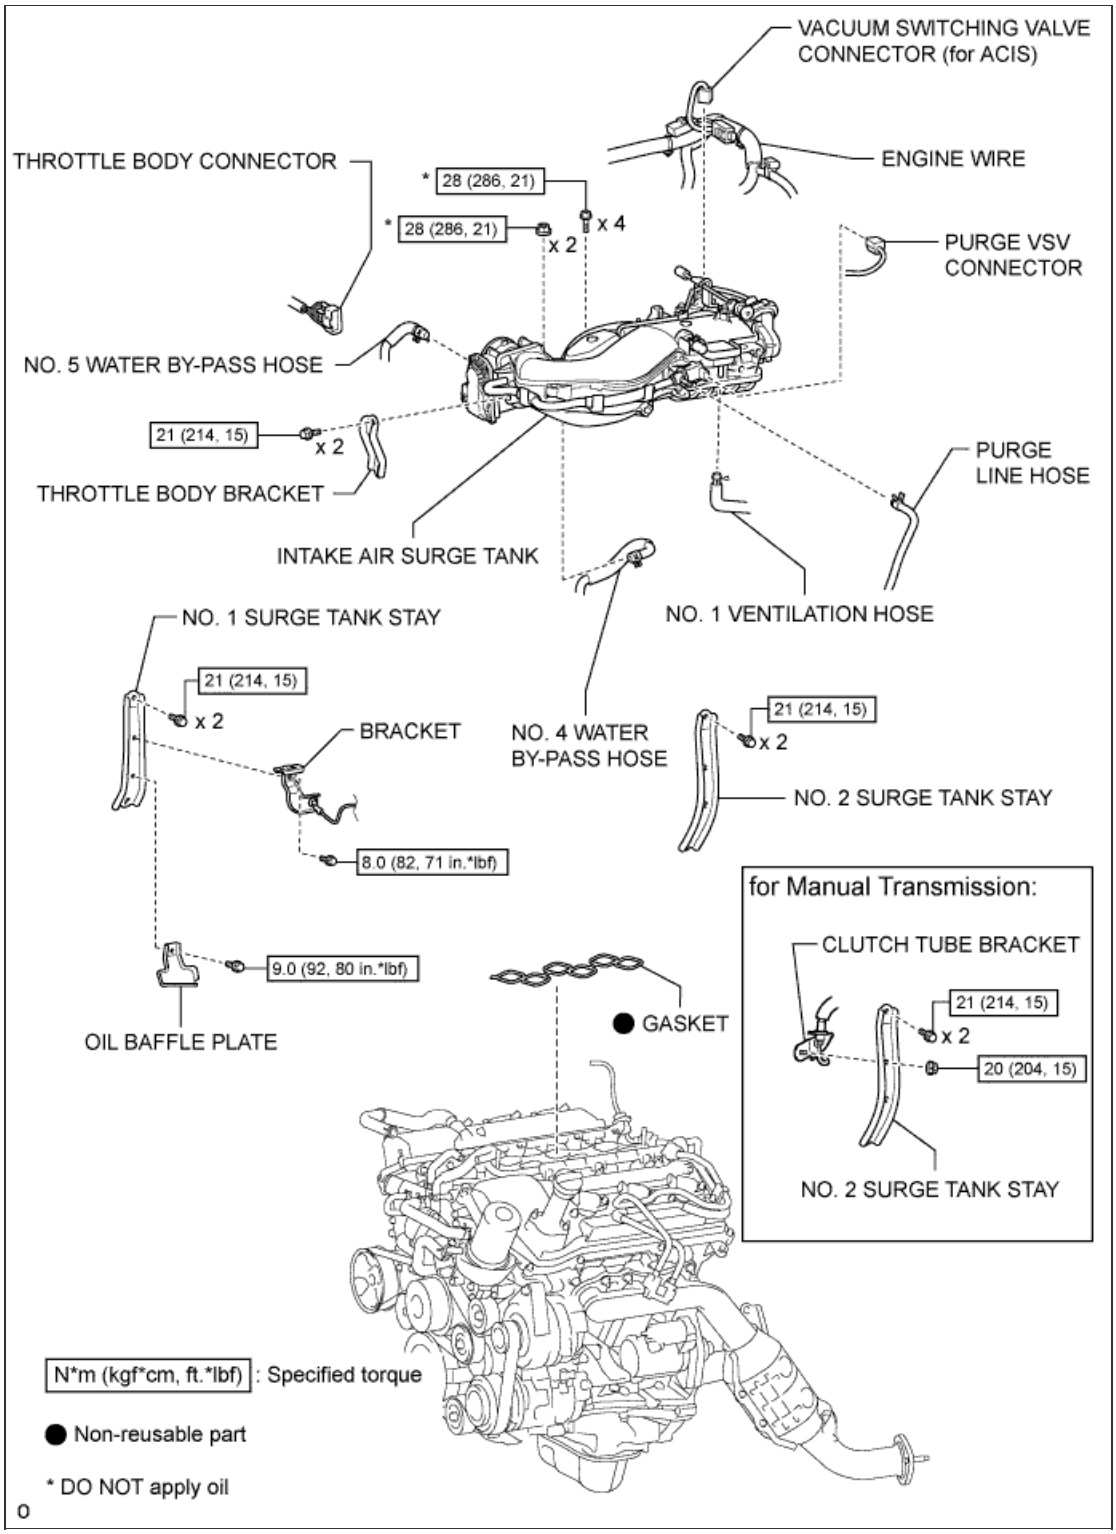


o. Disconnect the cable from the negative (-) battery terminal (Click here) and carefully remove SST and the fuel tube connector to prevent gasoline from spraying.

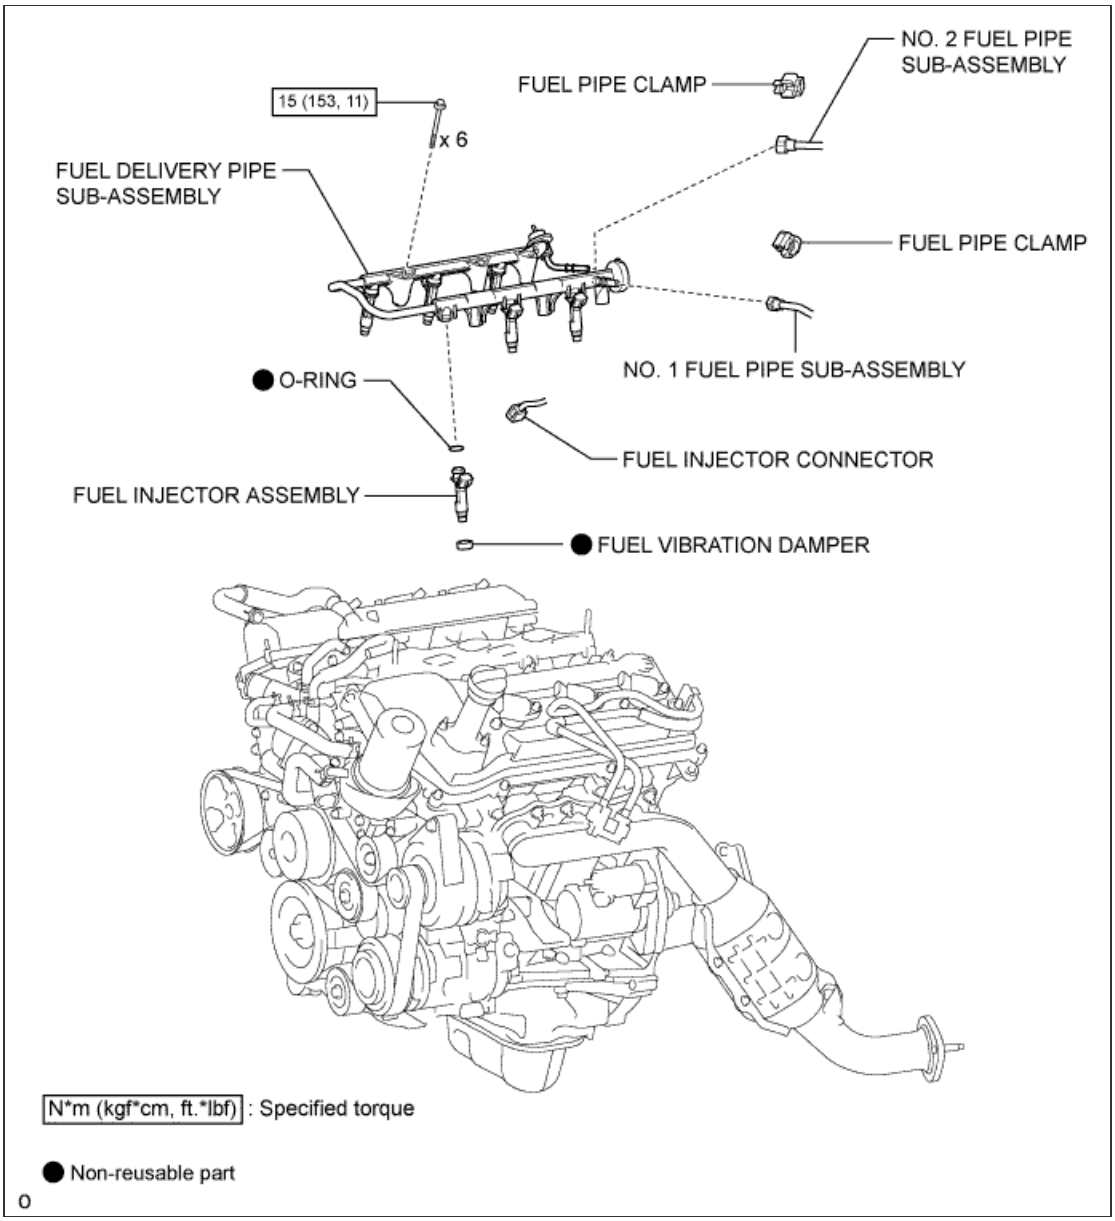


p. Reconnect the No. 1 fuel hose (fuel tube connector).

q. Check for fuel leaks.



i. Check that there are no fuel leaks after performing maintenance anywhere on the system.
If there are fuel leaks, repair or replace parts as necessary.



for Preparation Click here

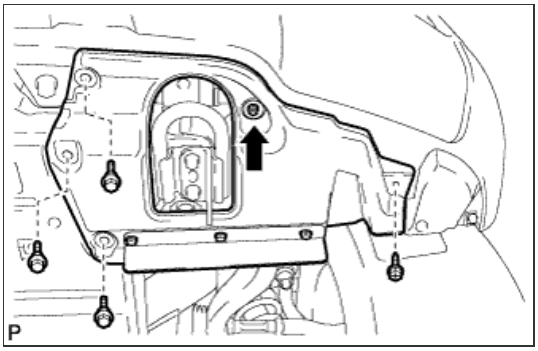
1. DISCHARGE FUEL SYSTEM PRESSURE

a. Discharge the fuel system pressure (Click here).

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL



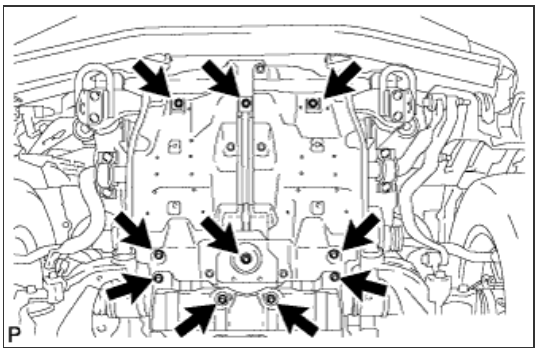
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

3. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and screw.

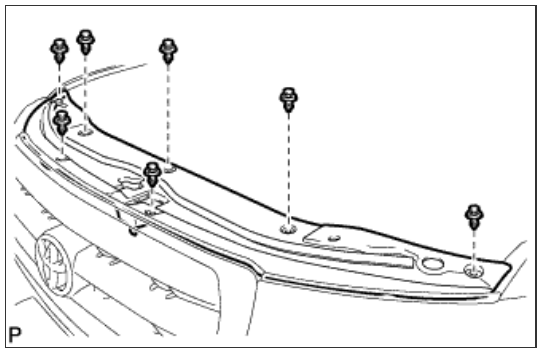
b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



4. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.



5. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and under cover.

6. REMOVE UPPER RADIATOR SUPPORT SEAL

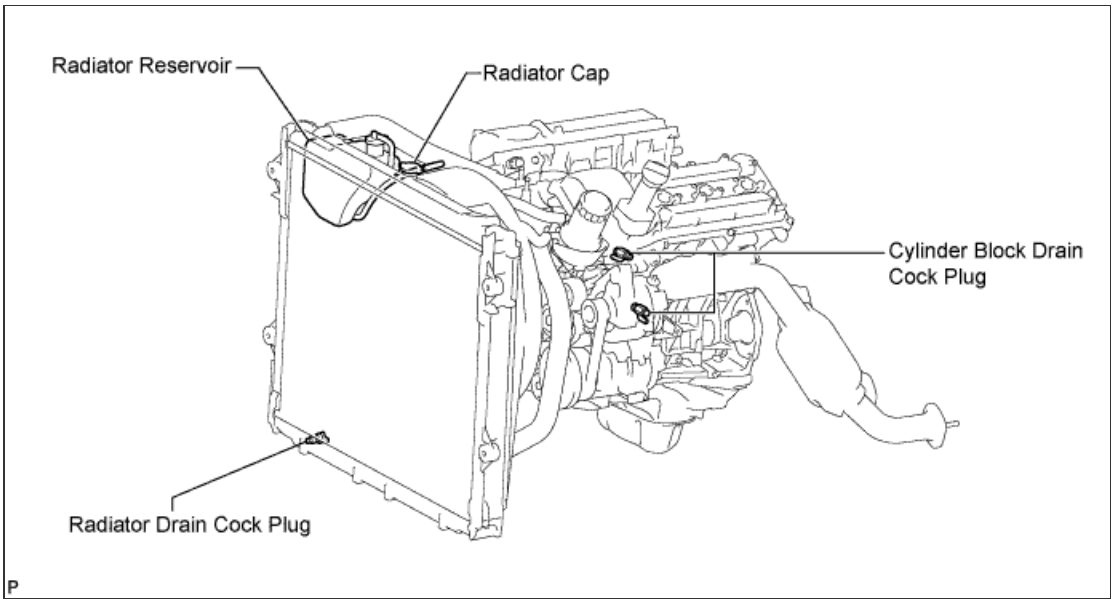
a. Remove the 7 clips and radiator support seal.

7. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Loosen the radiator drain cock plug and 2 cylinder block drain cock plugs.



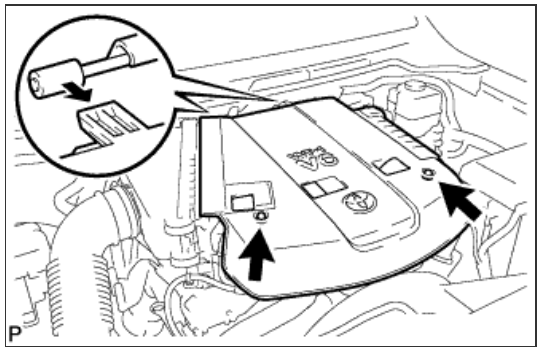
b. Remove the radiator cap. Then drain the coolant.

HINT:

Collect the coolant in a container and dispose of it according to the regulations in your area.

c. Tighten the 2 cylinder block drain cock plugs.

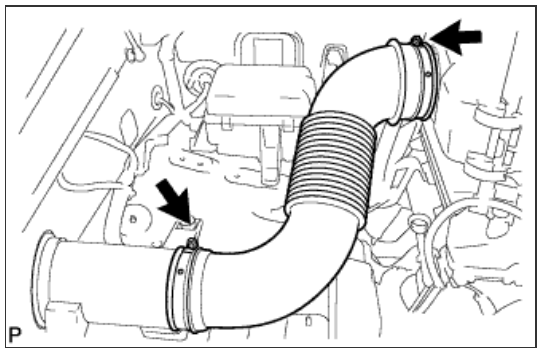
Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }



d. Tighten the radiator drain cock plug by hand.

8. REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

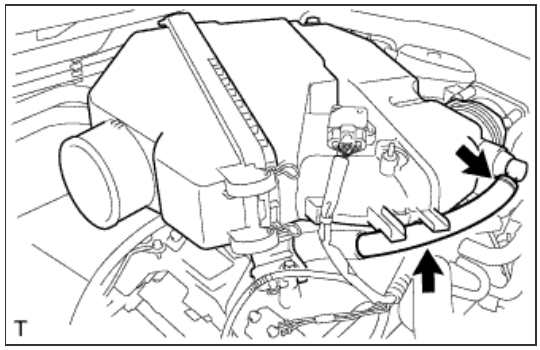
a. Remove the cowl top ventilator louver (Click here).



9. REMOVE V-BANK COVER

a. Remove the 2 nuts and V-bank cover.

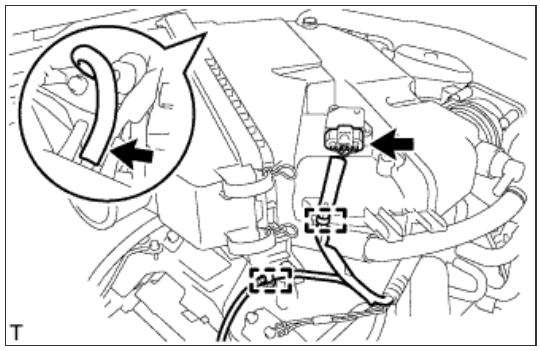
10. REMOVE NO. 2 AIR CLEANER HOSE



a. Loosen the 2 hose clamps and remove the air cleaner hose.

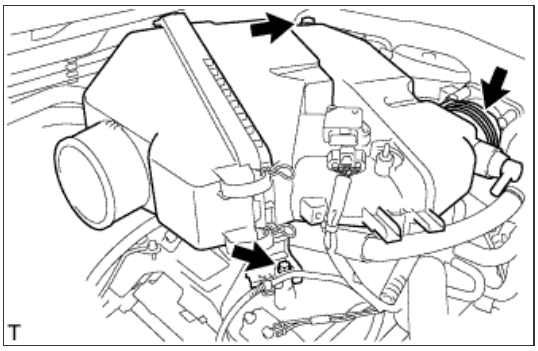
11. REMOVE AIR CLEANER ASSEMBLY

a. Disconnect the No. 2 ventilation hose.



b. Detach the hose clamp.

c. Disconnect the vacuum hose.

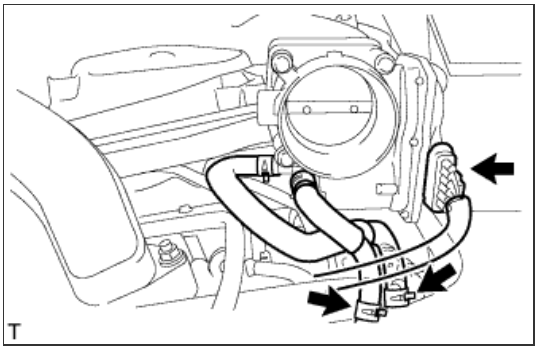


d. Disconnect the MAF meter connector.

e. Using a clip remover, detach the 2 wire harness clamps.

f. Loosen the hose clamp.

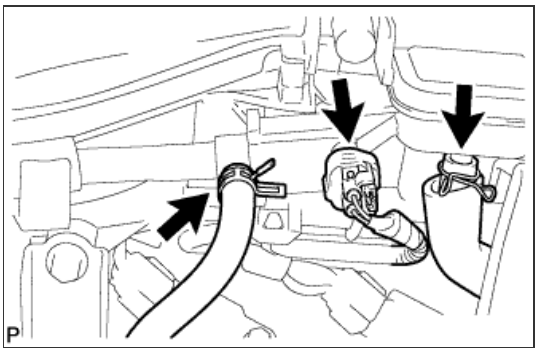
g. Remove the 2 bolts and air cleaner assembly.



12. REMOVE INTAKE AIR SURGE TANK

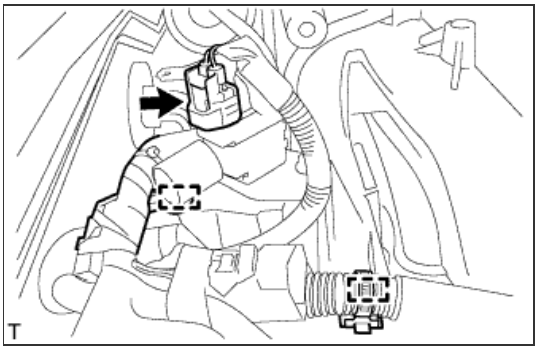
a. Disconnect the throttle body connector.

b. Disconnect the No. 4 water by-pass hose.



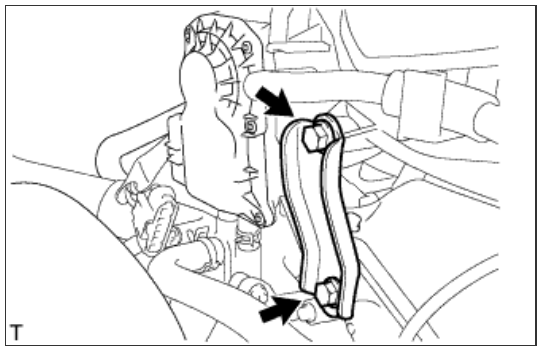
c. Disconnect the No. 5 water by-pass hose.

d. Disconnect the purge line hose.

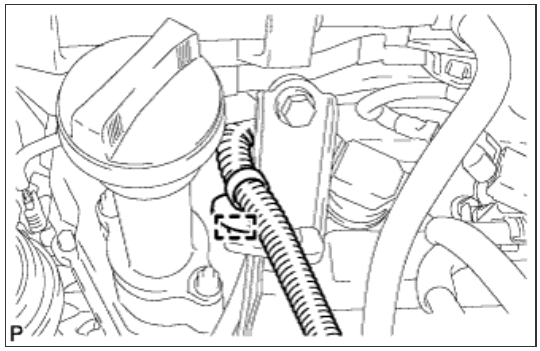


e. Disconnect the purge VSV connector.

f. Disconnect the No. 1 ventilation hose.

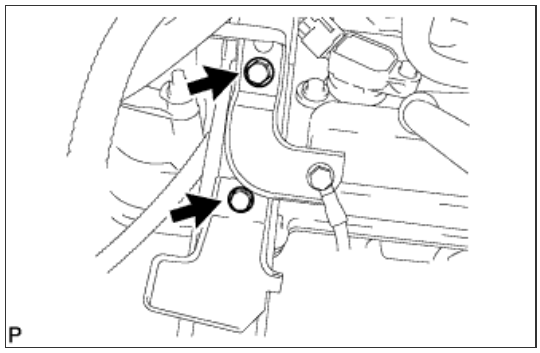


g. Disconnect the vacuum switching valve (for AC) connector.

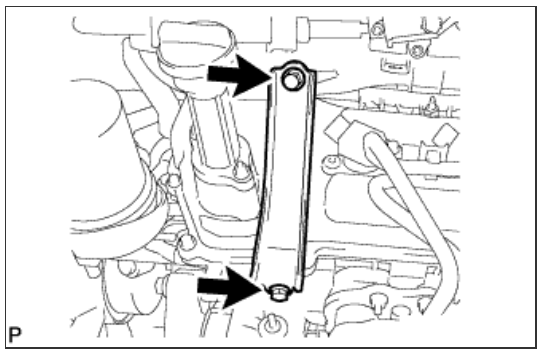


h. Using a clip remover, detach the 2 wire harness clamps.

i. Remove the 2 bolts and throttle body bracket.

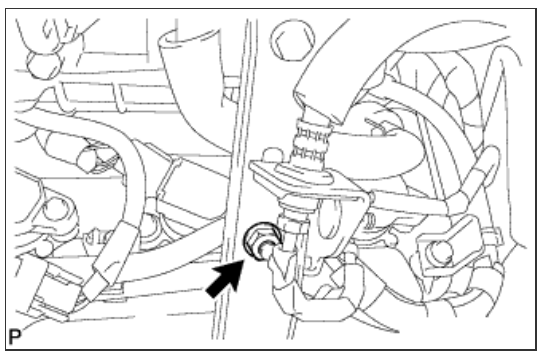


j. Using a clip remover, detach the wire harness clamp.

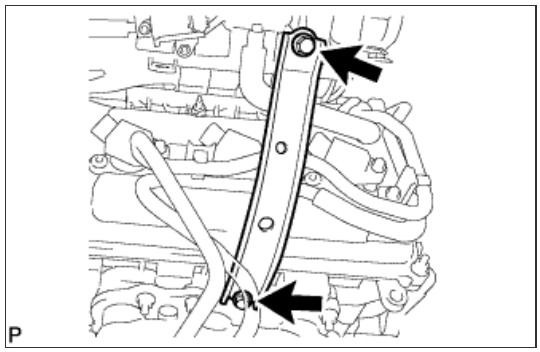


k. Remove the bolt and bracket from the No. 1 surge tank stay.

l. Remove the bolt and oil baffle plate.

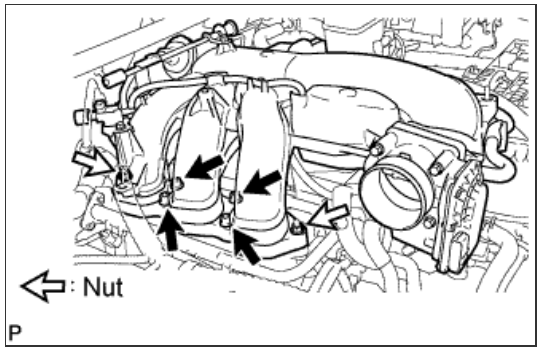


m. Remove the 2 bolts and No. 1 surge tank stay.



n. for Manual Transmission:

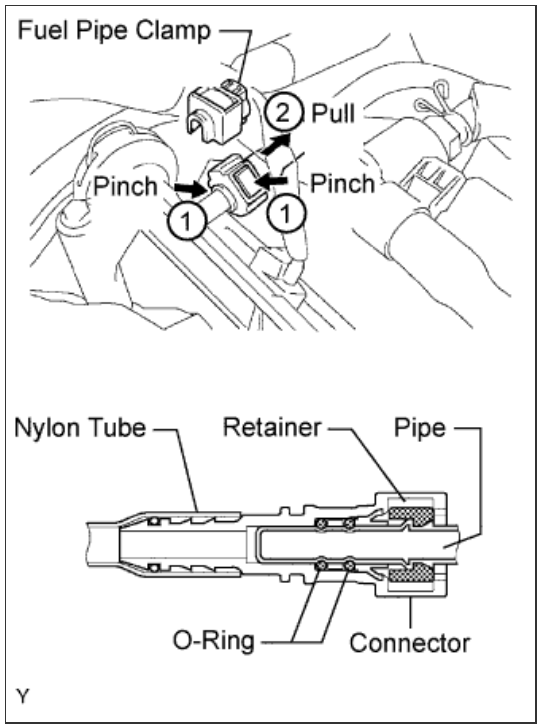
i. Remove the nut.



o. Remove the 2 bolts and No. 2 surge tank stay.

p. Remove the 2 nuts.

q. Using an 8 mm hexagon wrench, remove the 4 bolts. Then remove the intake air surge tank and gasket.



13. DISCONNECT NO. 1 FUEL PIPE SUB-ASSEMBLY

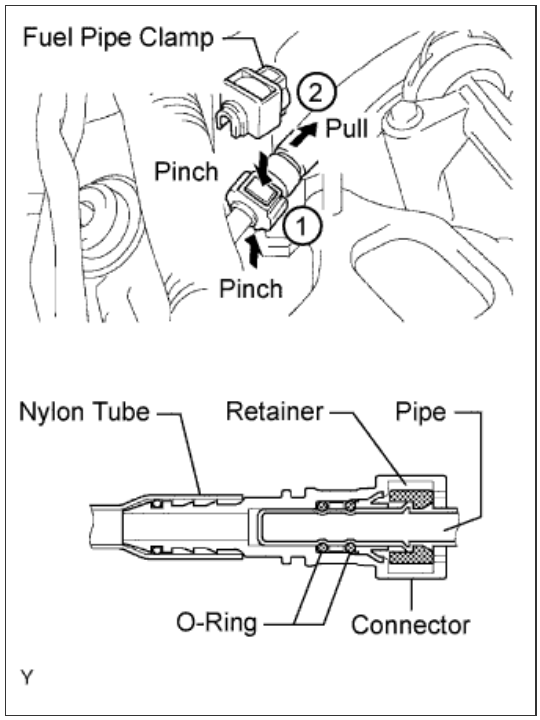
a. Remove the fuel pipe clamp.

b. Pinch the tube connector, and then pull the fuel pipe out of the delivery pipe as shown in the illustration.

NOTICE:

- **Remove an dirt and foreign objects from the fuel tube connector before performing this ork.**
- **Do not allo an cratches or foreign objects on the parts hen disconnecting, as the fuel tube connector has the O-ring that seals the pipe.**
- **Perform this ork b hand. Do not use an tools.**
- **Do not forcibl bend, t ist or turn the n lon tube.**
- **Keep the plug free from foreign objects.**
- **Protect the disconnected part b covering it ith a plastic bag after disconnecting the fuel tube.**
- **If the fuel tube connector and pipe are stuck, push and pull to release them.**

14. DISCONNECT NO. 2 FUEL PIPE SUB-ASSEMBLY



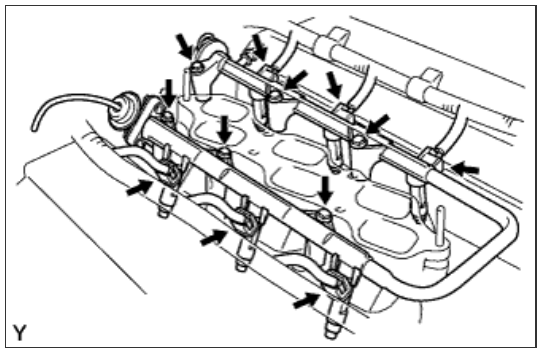
a. Remove the fuel pipe clamp.

b. Pinch the tube connector, and then pull the fuel pipe out of the pipe as shown in the illustration.

NOTICE:

- **Remove an dirt and foreign objects from the fuel tube connector before performing this ork.**

- **Do not allo an cratches or foreign objects on the parts hen disconnecting, as the fuel tube connector has the O-ring that seals the pipe.**
- **Perform this ork b hand. Do not use an tools.**
- **Do not forcibl bend, t ist or turn the n lon tube.**
- **Keep the plug free from foreign objects.**
- **Protect the disconnected part b covering it ith a plastic bag after disconnecting the fuel tube.**
- **If the fuel tube connector and pipe are stuck, push and pull to release them.**

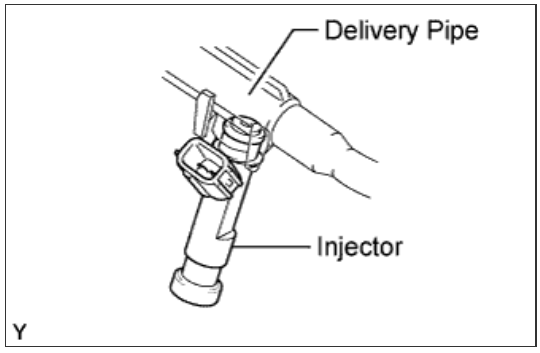


15. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY

a. Disconnect the 6 fuel injector connectors.

b. Remove the 6 bolts and fuel delivery pipe together with the 6 fuel injectors.

NOTICE:



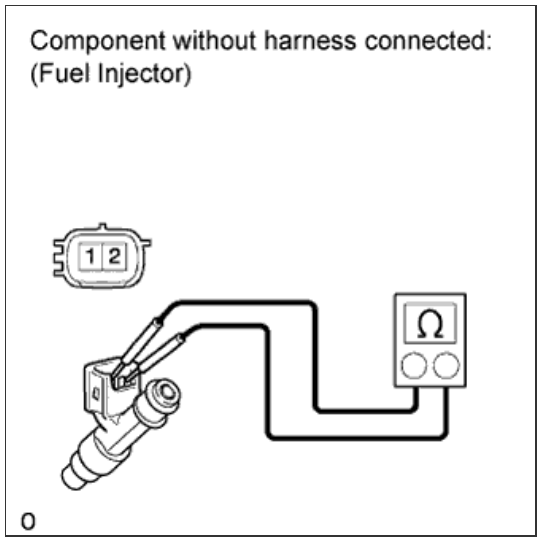
Be careful not to drop the injectors when removing the fuel delivery pipe.

16. REMOVE FUEL INJECTOR ASSEMBLY

a. Pull the 6 fuel injectors from the fuel delivery pipe.

b. Remove the O-ring and injector vibration insulator from each fuel injector.

for Preparation Click here



1. INSPECT INJECTOR ASSEMBLY

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	11.6 to 12.4 Ω

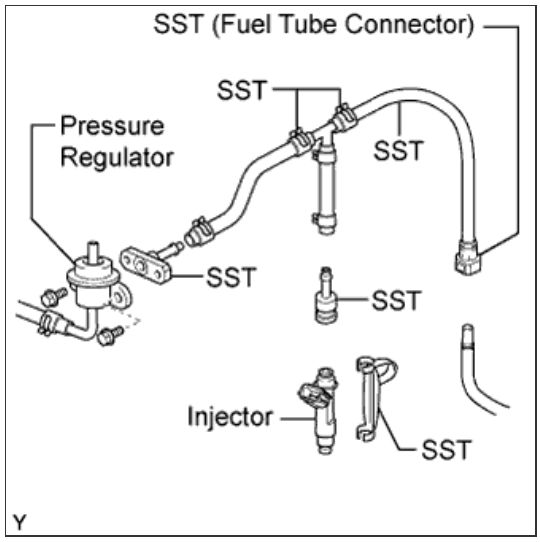
If the result is not as specified, replace the injector assembly.

2. INSPECT INJECTION VOLUME AND LEAKAGE

a. Check the injector injection.

CAUTION:

- **This test involves high-pressure fuel and electricity.**
- **Take every precaution regarding safe handling of both the fuel and the electrical parts.**
- **Perform this test in a safe area, and avoid any sparks or flame.**
- **Do not smoke.**



i. Assemble SST as shown in the illustration.

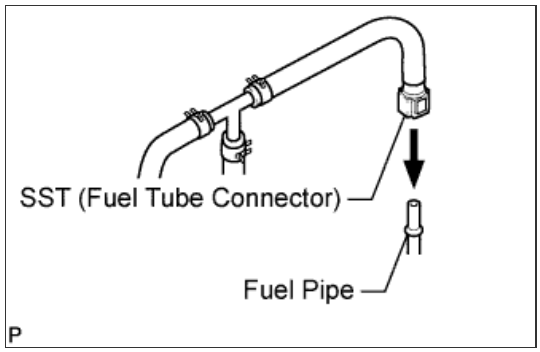
SST

09268-31012 (09268-41091, 09268-41120, 09268-41140, 09268-41400, 09268-41500, 90467-13001, 95333-06030, 95336-08070)

ii. Discharge the fuel system pressure (Click here).

iii. Disconnect the fuel inlet hose (fuel tube connector) from the fuel pipe.

iv. Remove the bolt and disconnect the fuel pressure regulator from the fuel delivery pipe.



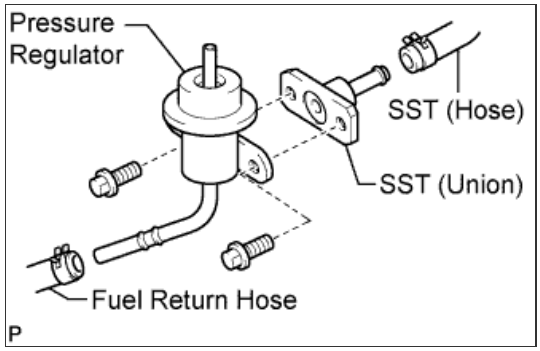
NOTICE:

Do not disconnect the No. 2 fuel pipe from the fuel pressure regulator.

v. Connect SST to the fuel pipe.

CAUTION:

Always read the precautions before connecting the fuel tube connector.



vi. Connect SST (hose) to the fuel inlet of the pressure regulator with another SST (union) and the 2 bolts.

SST
09268-31012 (09268-41091, 95336-08070)

Tor ue:
9.0 N m 2 kgf cm , 80 in. lbf }

vii. Connect the fuel return hose to the fuel outlet of the pressure regulator.

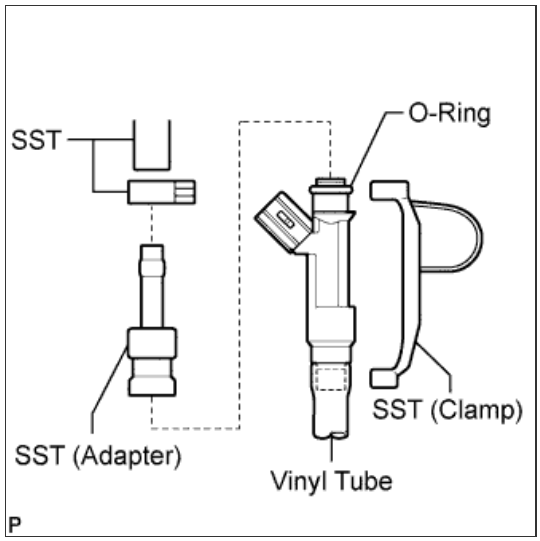
viii. Install a new O-ring to the injector.

ix. Connect SST (adapter and hose) to the injector, and hold the injector and adapter with SST (clamp).

SST
09268-31012 (09268-41140, 09268-41400, 95336-08070)

x. Put the injector into a graduated cylinder.

CAUTION:



Install a suitable vinyl tube onto the injector to contain any gasoline spray.

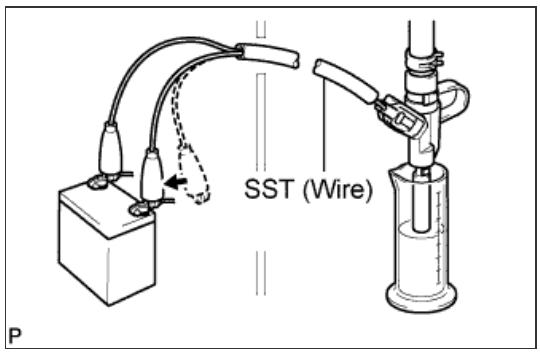
xi. Connect the intelligent tester to the DLC3.

xii. Turn the ignition switch to ON.

NOTICE:

Do not start the engine.

xiii. Turn the intelligent tester ON.



xiv. nter the following menus: Powertrain / ngine and CT / Active Test / Activate the Fuel Pump Speed Control.

xv. Connect SST (wire) to the injector and the battery for 15 seconds, and measure the injection volume with a graduated cylinder. Test each injector 2 or 3 times.

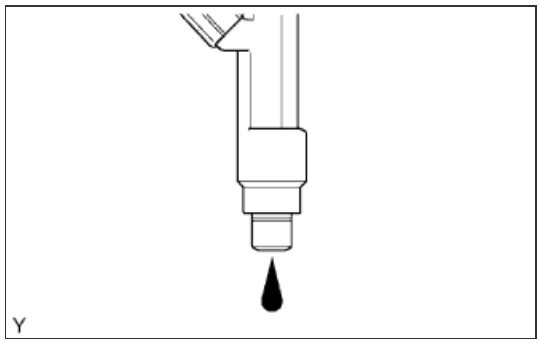
SST
09842-30080

Standard injection volume:
71 to 86 cm^3 (4.3 to 5.2 cu. in.) per 15 seconds

Difference between each injector:
15 cm^3 (0.9 cu. in.) or less

NOTICE:

Always turn the voltage on and off on the battery side, not the fuel pump side.



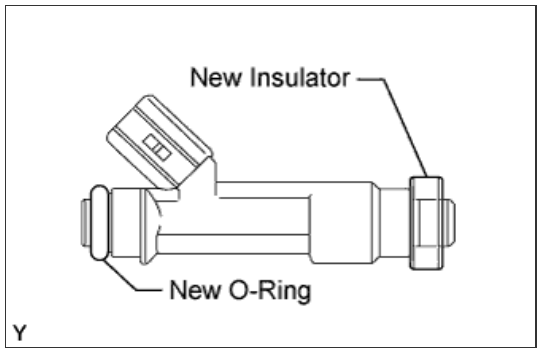
If the result is not as specified, replace the injector assembly.

b. Check for fuel drop.

i. In the condition above, disconnect the tester probes of SST (wire) from the battery and check for fuel drop from the injector.

Standard fuel drop:
1 drop or less per 12 minutes

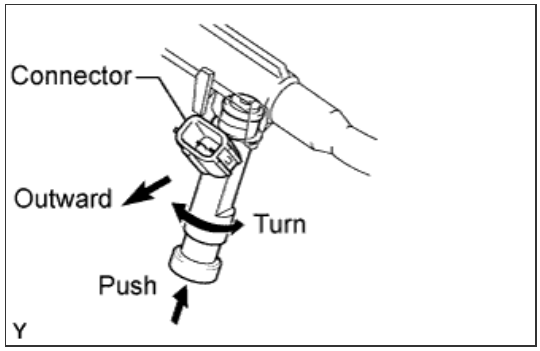
If the fuel drop is not as specified, replace the injector assembly.



for Preparation Click here

1. INSTALL FUEL INJECTOR ASSEMBLY

a. Install a new insulator onto each fuel injector.



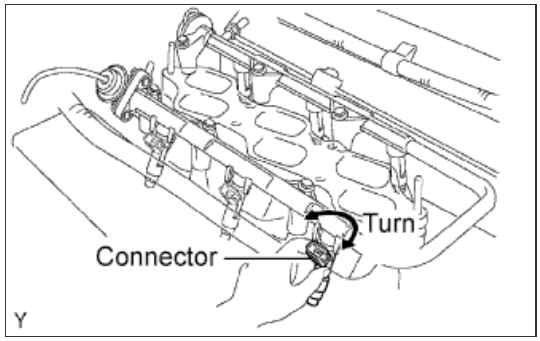
b. Apply a light coat of spindle oil or gasoline to each new O-ring and install one onto each fuel injector.

c. Install the 6 injectors.

i. While turning each fuel injector left and right, install it onto the fuel delivery pipe.

ii. Position the fuel injector connectors facing outward.

2. INSTALL FUEL DELIVERY PIPE SUB-ASSEMBLY



a. Place the fuel delivery pipe together with the 6 fuel injectors on the intake manifold.

b. Temporarily install the 6 bolts, which are used to hold the fuel delivery pipe, to the intake manifold.

c. Check that the fuel injectors rotate smoothly.

HINT:

If the fuel injectors do not rotate smoothly, replace the O-ring of any injector that does not rotate smoothly.

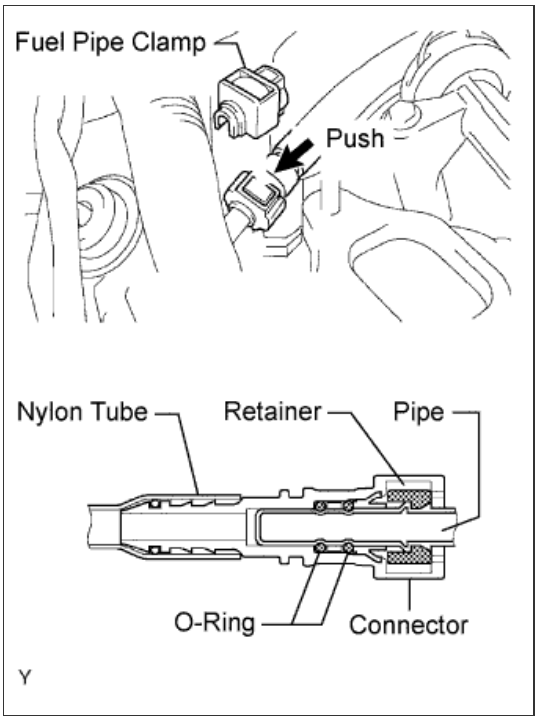
d. Position the fuel injector connectors facing outward.

e. Tighten the 6 bolts, which are used to hold the fuel delivery pipe, to the intake manifold.

Torque:
15 N*m{ 153 kgf*cm , 11 ft.*lbf }

f. Connect the 6 fuel injector connectors.

3. CONNECT NO. 2 FUEL PIPE SUB-ASSEMBLY



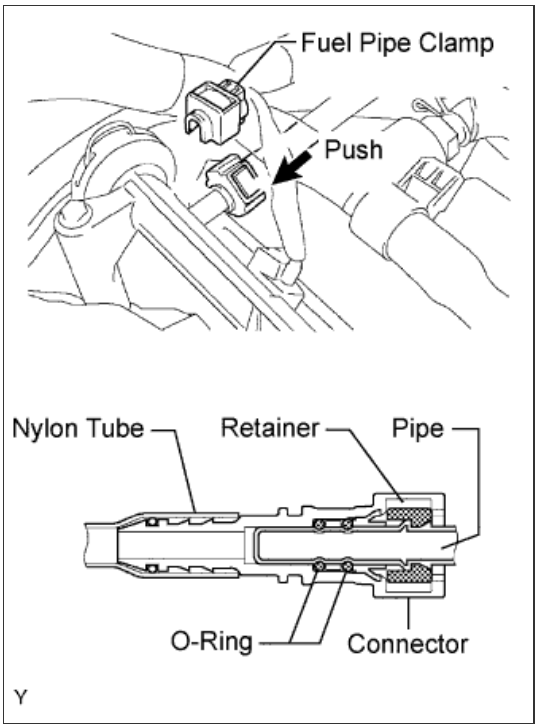
a. Push the tube connector into the pipe until the tube connector makes a "click"

sound.

NOTICE:

- **Check if there is any damage or foreign objects on the connected part of the fuel pipe.**
- **After connecting, check that the pipe and connector are securely connected by pulling them.**

b. Install the fuel pipe clamp.



4. CONNECT NO. 1 FUEL PIPE SUB-ASSEMBLY

a. Push the tube connector into the pipe until the tube connector makes a "click" sound.

NOTICE:

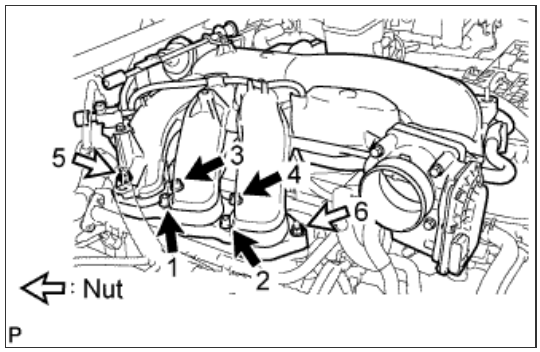
- **Check if there is any damage or foreign objects on the connected part of the fuel pipe.**
- **After connecting, check that the pipe and connector are securely connected by pulling them.**

b. Install the fuel pipe clamp.

5. INSTALL INTAKE AIR SURGE TANK

NOTICE:

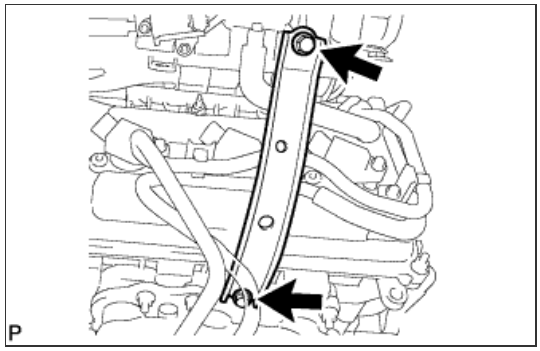
Do not apply oil to the bolts and nuts listed below: :



Oil Application Prohibited Bolt/Nut
Bolt for surge tank and intake manifold
Nut for surge tank and intake manifold

a. Install a new gasket to the intake air surge tank.

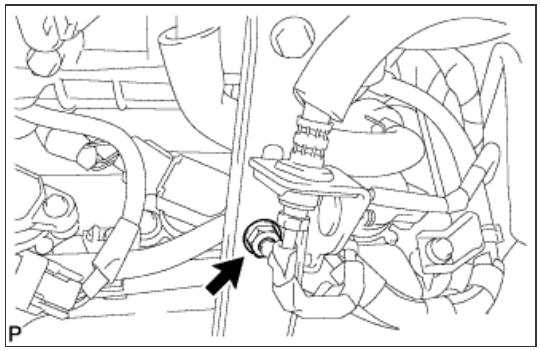
b. Using an 8 mm hexagon wrench, install the intake air surge tank with the 4 bolts



and 2 nuts in the order shown in the illustration.

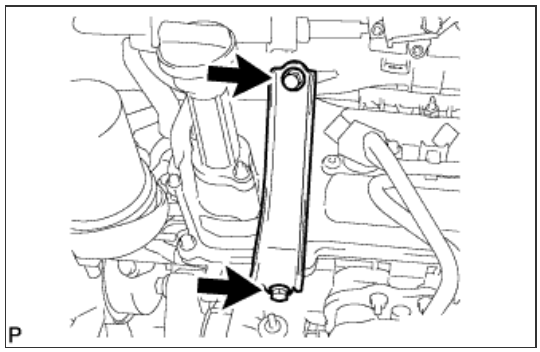
Torque:
28 N*m{ 286 kgf*cm , 21 ft.*lbf }

c. Install the No. 2 surge tank stay with the 2 bolts.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

d. for Manual Transmission:

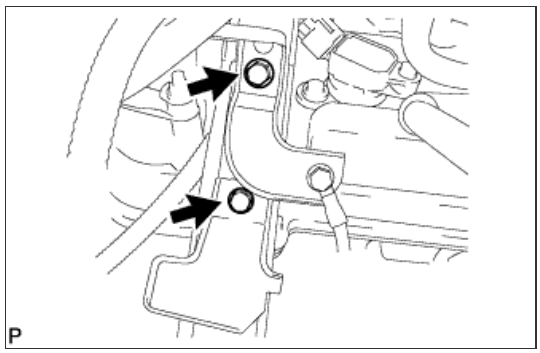


i. Install the bracket to the No. 2 surge tank stay with the nut.

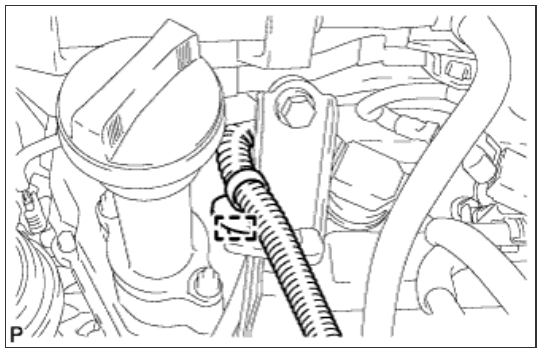
Torque:
2 N*m{ 2 4 kgf*cm , 15 ft.*lbf }

e. Install the No. 1 surge tank stay with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



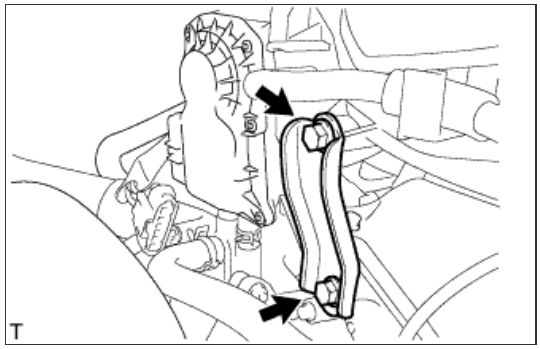
f. Install the oil baffle plate with the bolt.



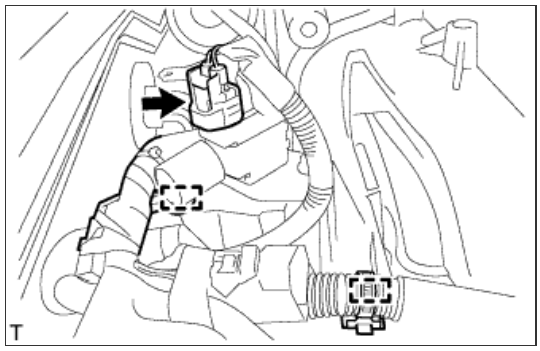
Torque:
9. N*m{ 92 kgf*cm , 8 in.*lbf }

g. Install the bracket to the No. 1 surge tank stay with the bolt.

Torque:
8. N*m{ 82 kgf*cm , 1 in.*lbf }



h. Attach the wire harness clamp.

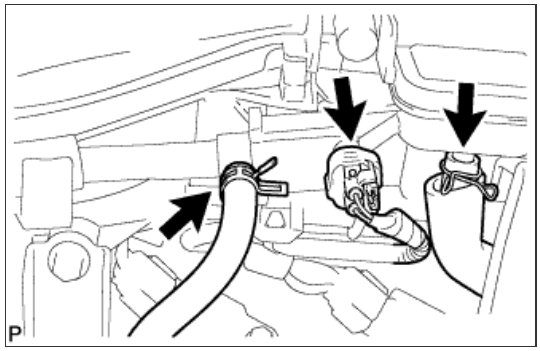


i. Install the throttle body bracket with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

j. Connect the vacuum switching valve (for ACIS) connector.

k. Attach the 2 wire harness clamps.



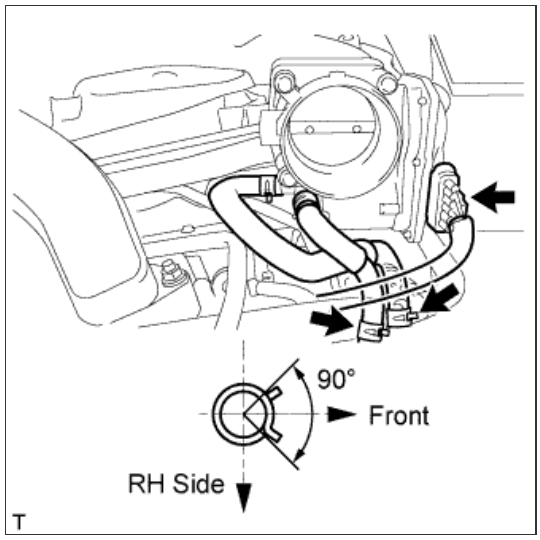
l. Connect the No. 1 ventilation hose.

m. Connect the purge VSV connector.

n. Connect the purge line hose.

HINT:

Connect the hose so that the direction of the hose clamp is as indicated in the illustration.



o. Connect the No. 4 and No. 5 water by-pass hose.

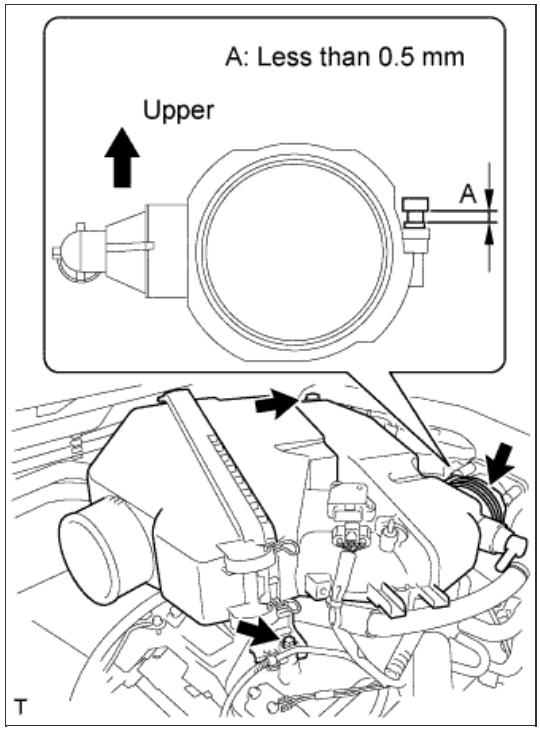
HINT:

Connect the hoses so that the direction of the hose clamps is as shown in the illustration.

p. Connect the throttle body connector.

6. INSTALL AIR CLEANER ASSEMBLY

a. Install the air cleaner assembly with the 2 bolts.

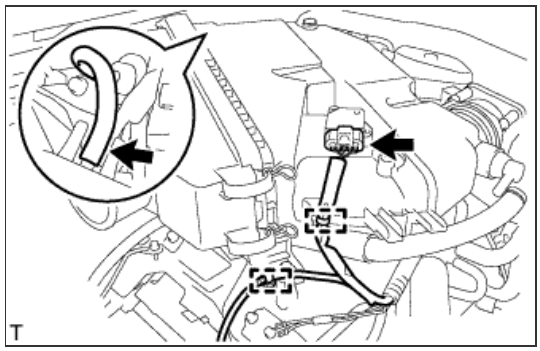


Torque:
8. N*m{ 82 kgf*cm , 1 in.*lbf }

b. Tighten the hose clamp.

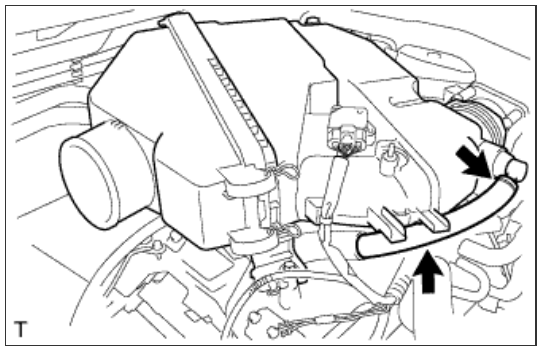
HINT:

Tighten the hose clamp until it reaches the specified protrusion height labeled A shown in the illustration.



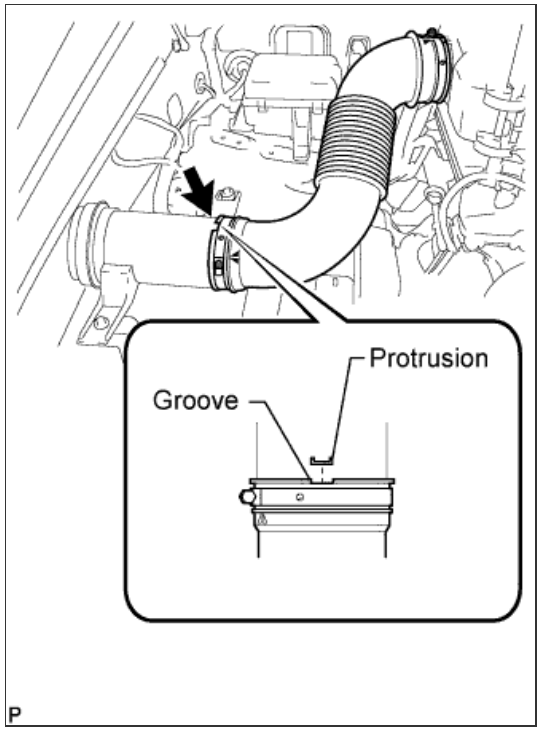
Standard protrusion height:
Less than 5 mm (. 1 in.)

c. Connect the MAF meter connector.



d. Attach the 2 wire harness clamps.

e. Connect the vacuum hose.

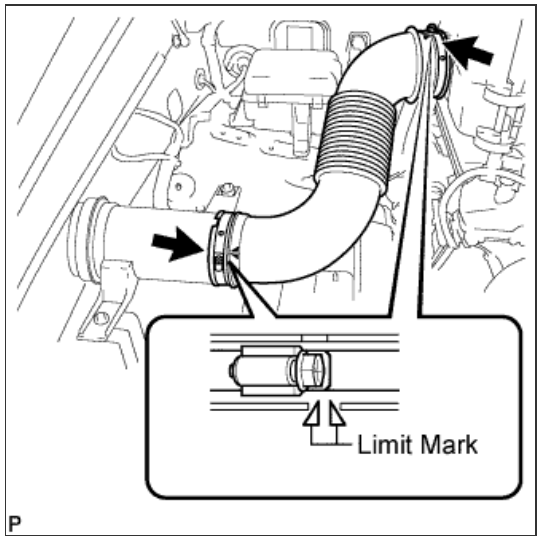


f. Attach the hose clamp.

g. Connect the No. 2 ventilation hose.

7. INSTALL NO. 2 AIR CLEANER HOSE

a. Align the protrusion of the pre-cleaner with the groove of the No. 2 air cleaner hose as shown in the illustration.



b. Tighten the 2 hose clamps.

Torque:

4. N*m{ 41 kgf*cm , 35 in.*lbf }

HINT:

Tighten the clamp until the end of the clamp band is within both limit marks.

8. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

9. ADD ENGINE COOLANT

a. Add engine coolant.

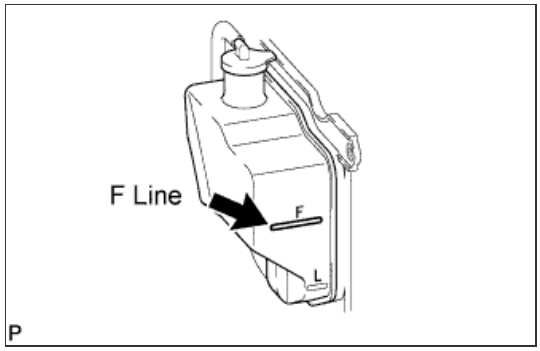
Standard Capacity:

Item		Specified condition
for Automatic transmission	w/o Rear Heater	11.2 liters (11.8 US qts, 9.9 Imp. qts)
	w/ Rear Heater	14.4 liters (15.2 US qts, 12. Imp. qts)
for Manual transmission	w/o Rear Heater	12. liters (12. US qts, 1 .6 Imp. qts)
	w/ Rear Heater	14.6 liters (15.4 US qts, 12.8 Imp. qts)

NOTICE:

Do not substitute plain water for engine coolant.

HINT:



TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the reservoir cap.

d. Press the No. 1 and No. 2 radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Set the air conditioning as follows while warming up the engine.

Item	Condition
Fan speed	Any setting except off
Temperature	Toward WARM
Air conditioning switch	Off

g. Start the engine and warm it up until the thermostat opens.

HINT:

The thermostat opening timing can be confirmed by pressing the No. 2 radiator hose by hand, and checking when the engine coolant starts to flow inside the hose.

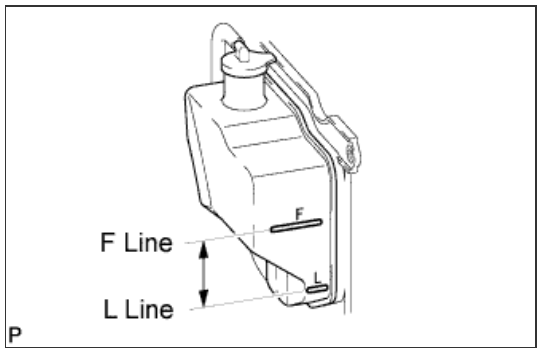
h. Maintain the engine speed at 2 to 25 rpm.

NOTICE:

- **Make sure that the radiator reser oir still has some coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or o erheat.**
- **Immediately after starting the engine, if the radiator reser oir does not ha e any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the F line.**
- **Run the engine at 2 rpm until the coolant le el has stabilized.**

i. Press the No. 1 and No. 2 radiator hoses several times by hand to bleed air.

CAUTION:



- **Wear protecti e glo es. Heat areas on the parts may injure your hands.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the fan.**

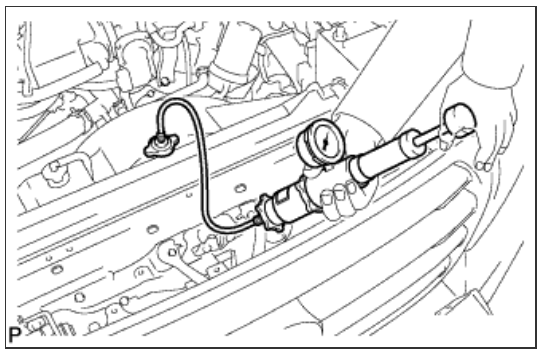
j. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

k. Check that the coolant level is between the F and L lines.
If the coolant level is below the L line, repeat all of the procedures above.
If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.

1 INSPECT FOR COOLANT LEAK



CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Fill the radiator with coolant and attach a radiator cap tester.

b. Warm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.

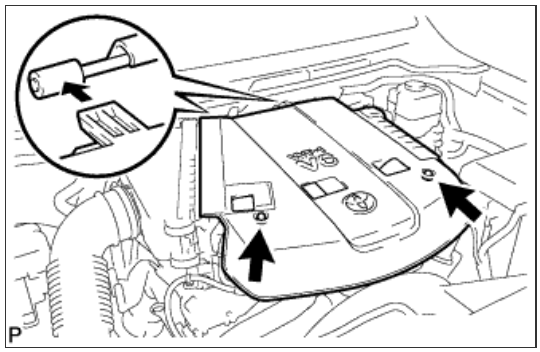
11. INSPECT FOR FUEL LEAK

a. Connect the intelligent tester to the DLC3.

b. Turn the ignition switch to ON and intelligent tester on.

NOTICE:

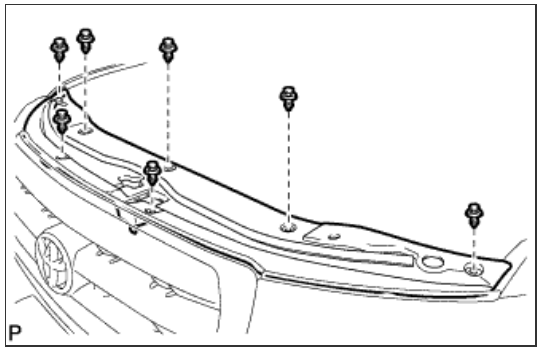
Do not start the engine.



c. Enter the following menus: Powertrain / Engine and ECT / Active Test / Activate the Fuel Pump Speed Control.

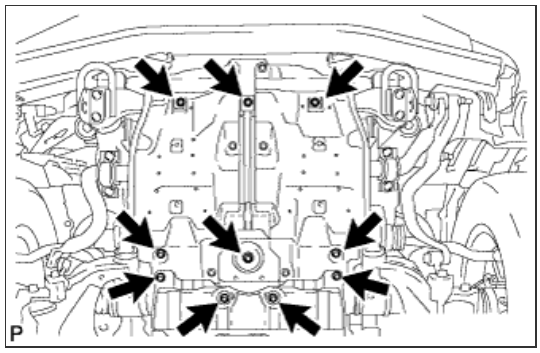
d. Check that there are no fuel leaks after doing maintenance anywhere on the fuel system.

12. INSTALL V-BANK COVER



a. Install the V-bank cover with the 2 nuts.

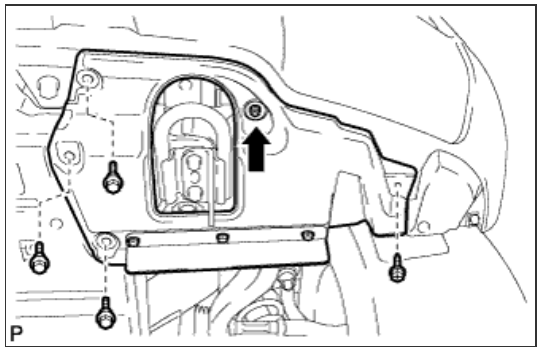
Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }



13. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the radiator support seal with the clips.

14. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY



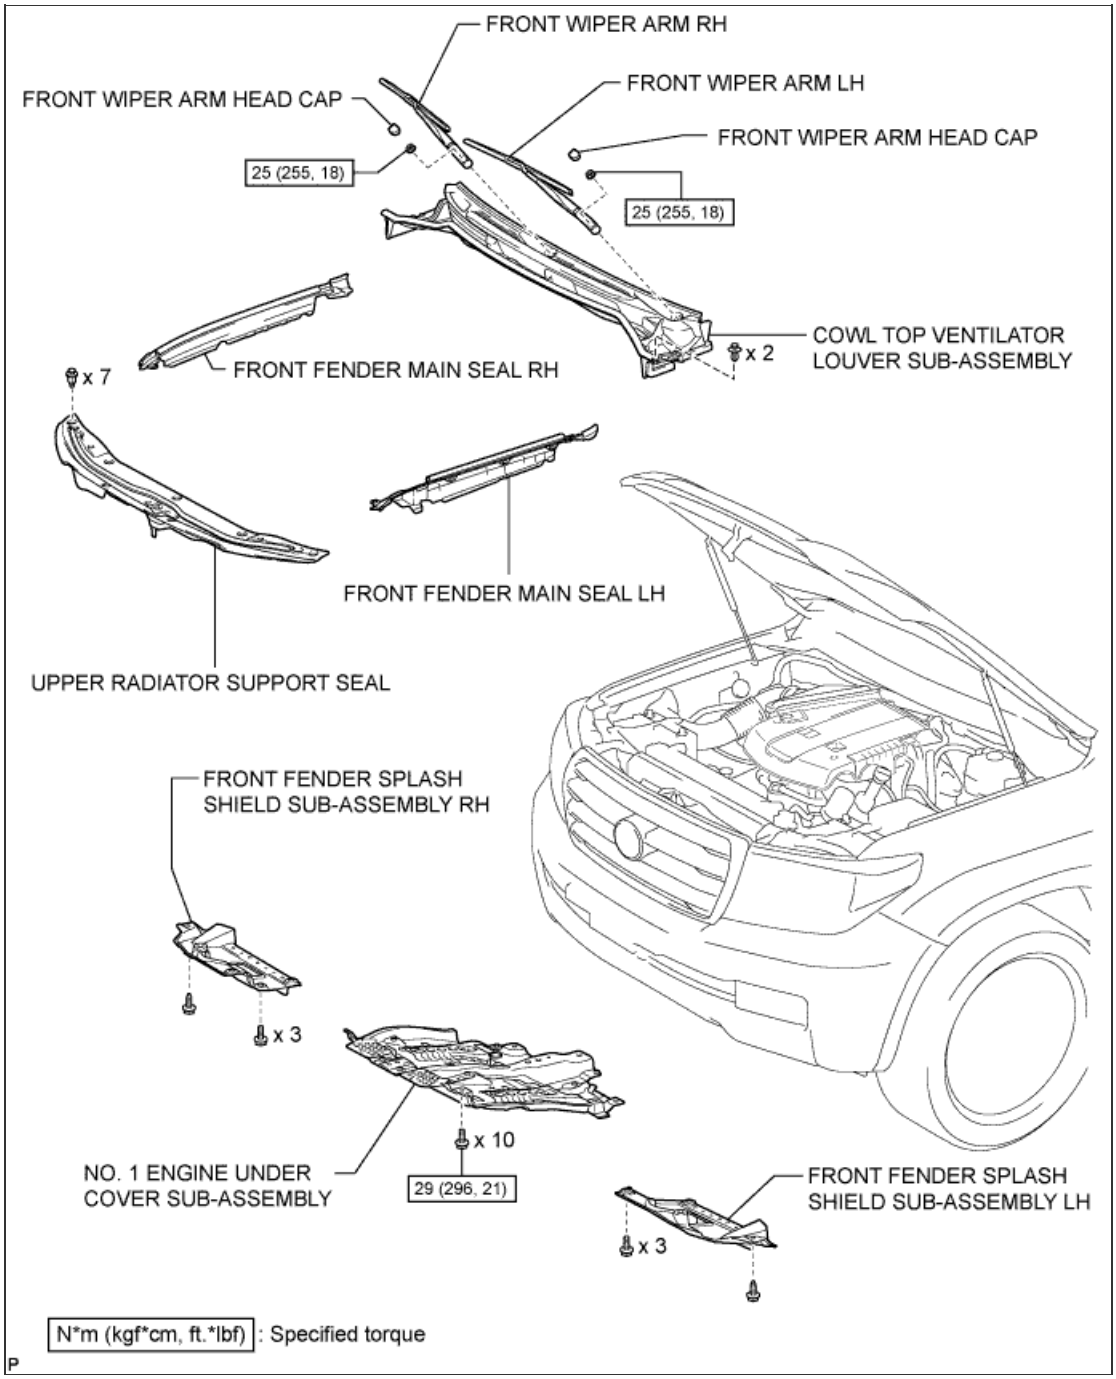
a. Install the under cover with the 1 bolts.

15. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

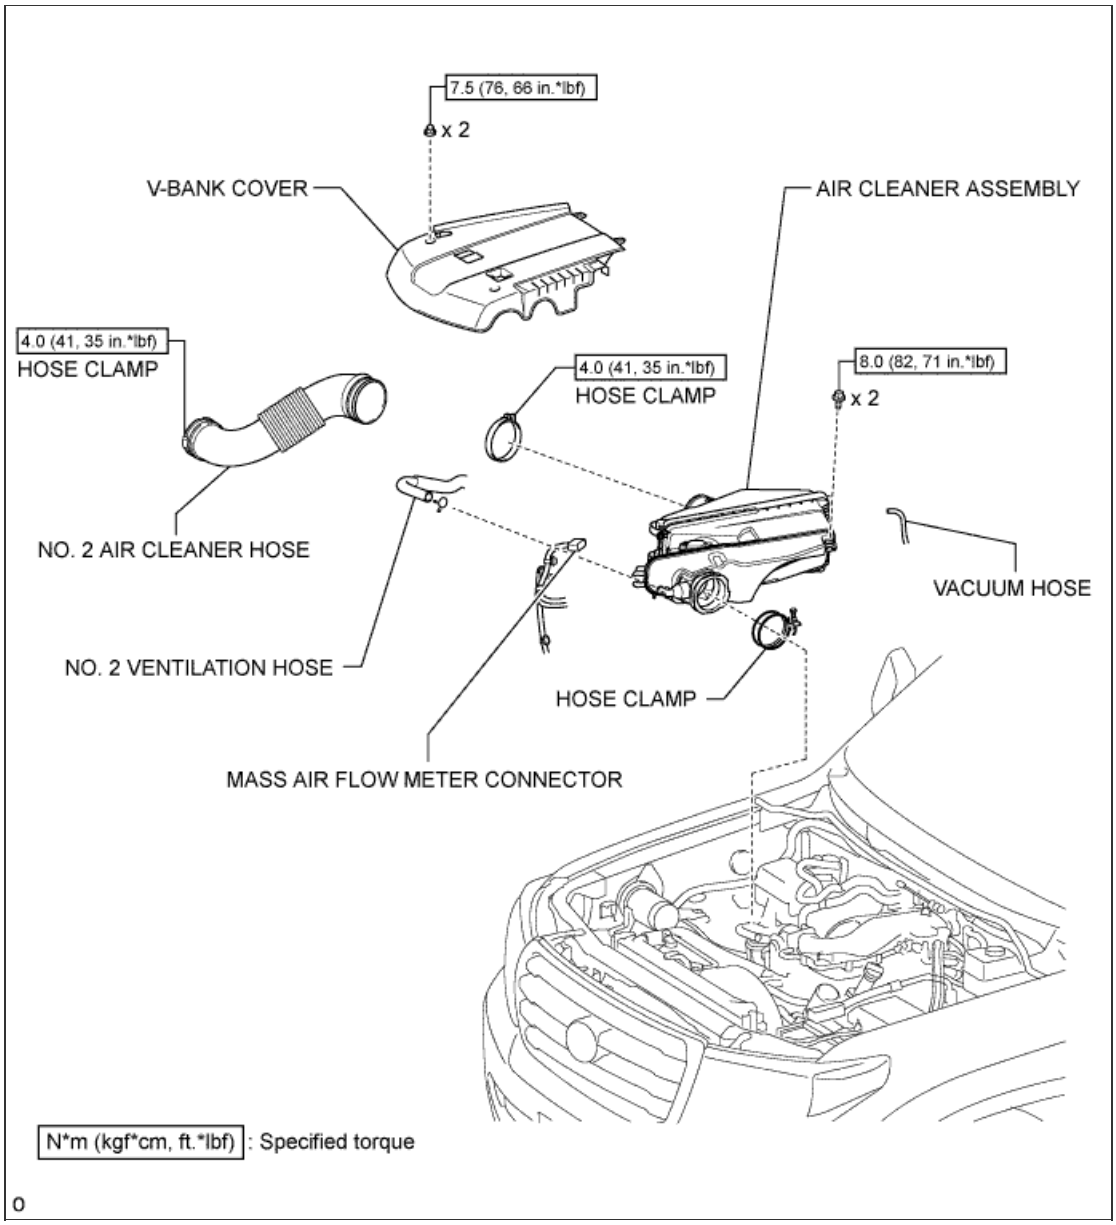
a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the 3 bolts and screw.

16. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

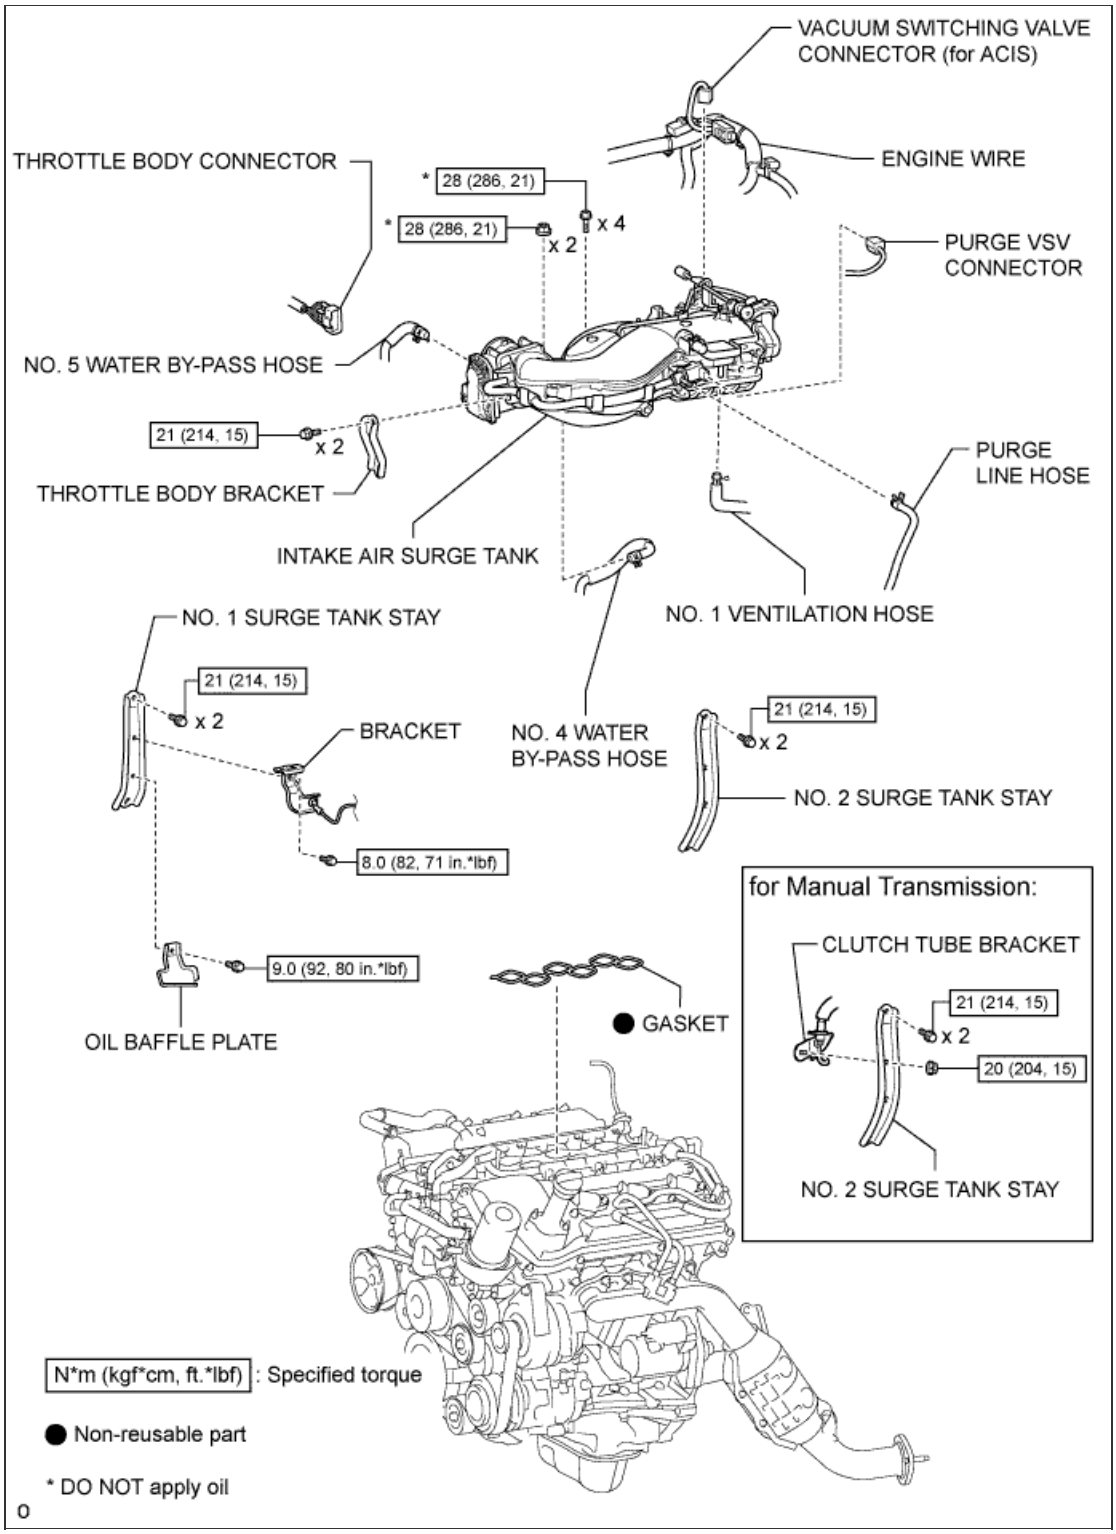


HINT:



Use the same procedures described for the LH side.

17. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY



a. Install the cowl top ventilator louver (Click here).

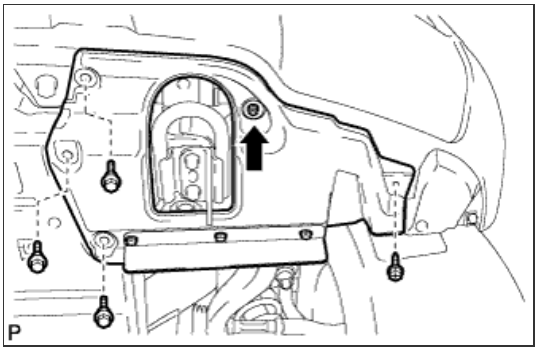
for Preparation Click here

1. DISCHARGE FUEL SYSTEM PRESSURE

a. Discharge the fuel system pressure (Click here).

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL



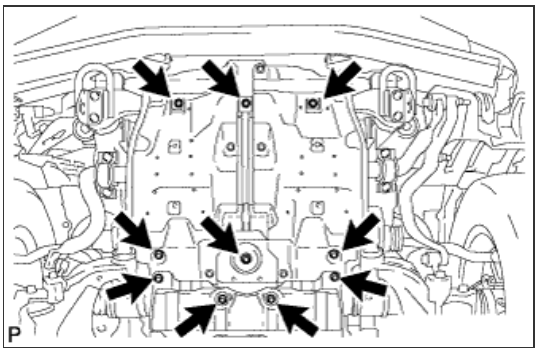
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

3. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and screw.

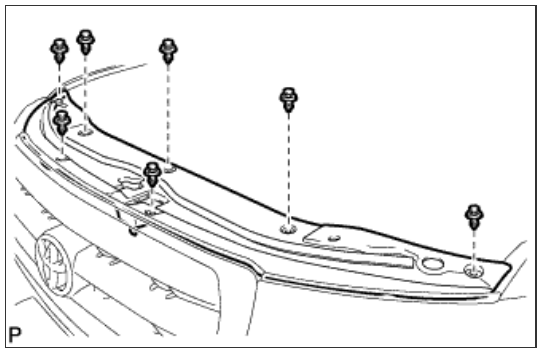
b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



4. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.



5. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and under cover.

6. REMOVE UPPER RADIATOR SUPPORT SEAL

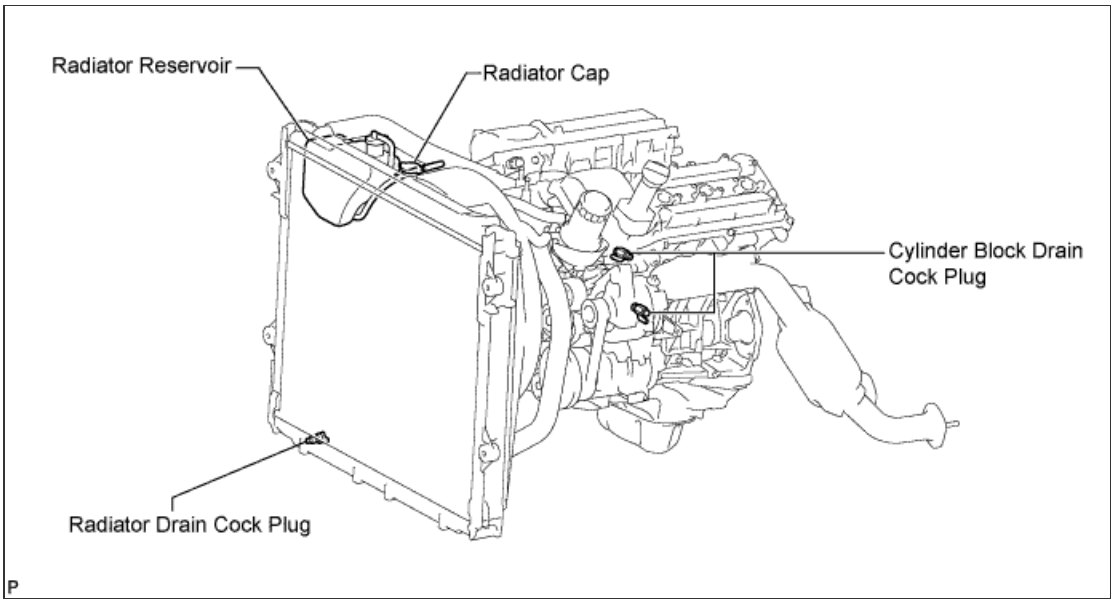
a. Remove the 7 clips and radiator support seal.

7. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Loosen the radiator drain cock plug and 2 cylinder block drain cock plugs.



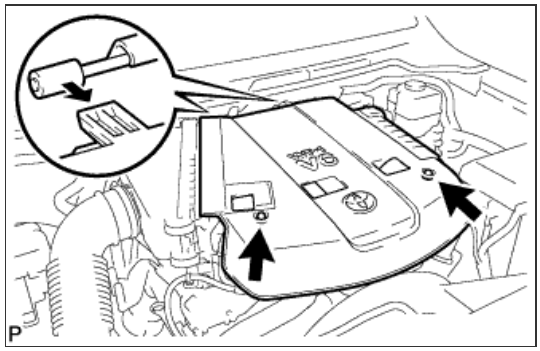
b. Remove the radiator cap. Then drain the coolant.

HINT:

Collect the coolant in a container and dispose of it according to the regulations in your area.

c. Tighten the 2 cylinder block drain cock plugs.

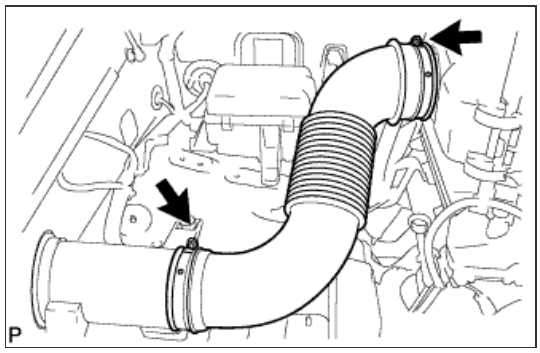
Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }



d. Tighten the radiator drain cock plug by hand.

8. REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

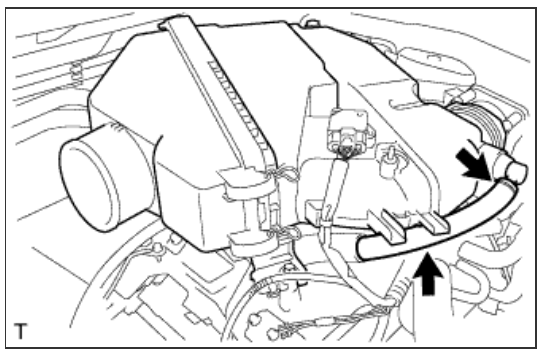
a. Remove the cowl top ventilator louver (Click here).



9. REMOVE V-BANK COVER

a. Remove the 2 nuts and V-bank cover.

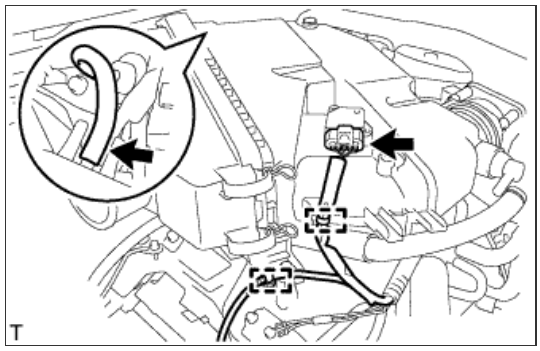
10. REMOVE NO. 2 AIR CLEANER HOSE



a. Loosen the 2 hose clamps and remove the air cleaner hose.

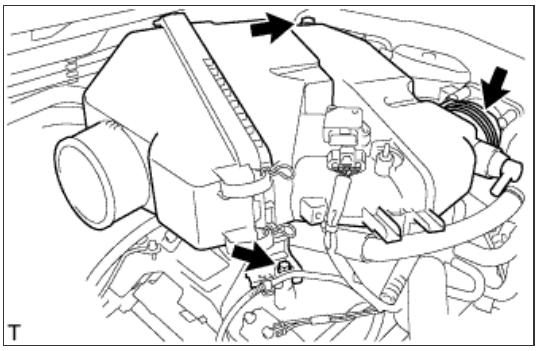
11. REMOVE AIR CLEANER ASSEMBLY

a. Disconnect the No. 2 ventilation hose.



b. Detach the hose clamp.

c. Disconnect the vacuum hose.

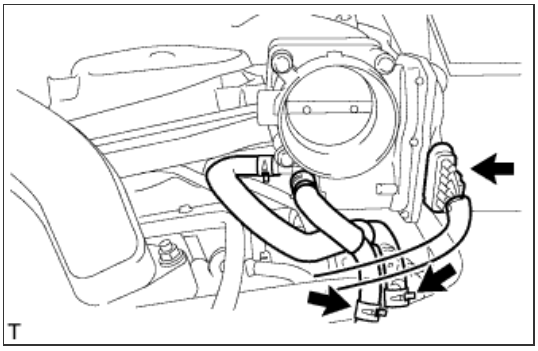


d. Disconnect the MAF meter connector.

e. Using a clip remover, detach the 2 wire harness clamps.

f. Loosen the hose clamp.

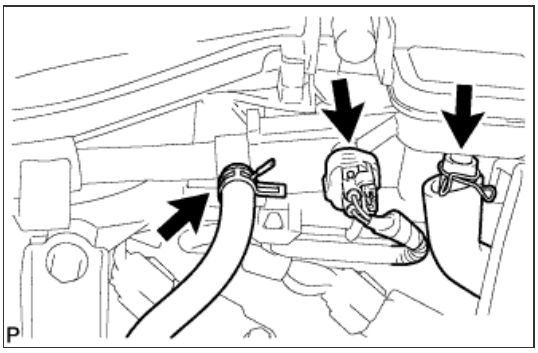
g. Remove the 2 bolts and air cleaner assembly.



12. REMOVE INTAKE AIR SURGE TANK

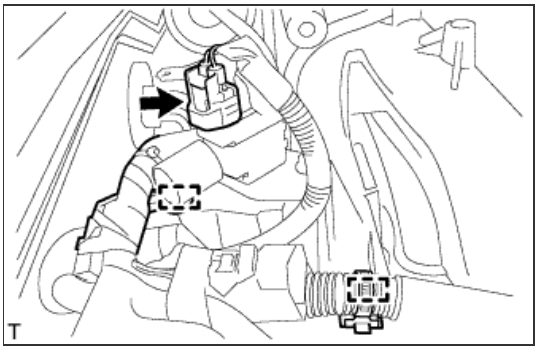
a. Disconnect the throttle body connector.

b. Disconnect the No. 4 water by-pass hose.



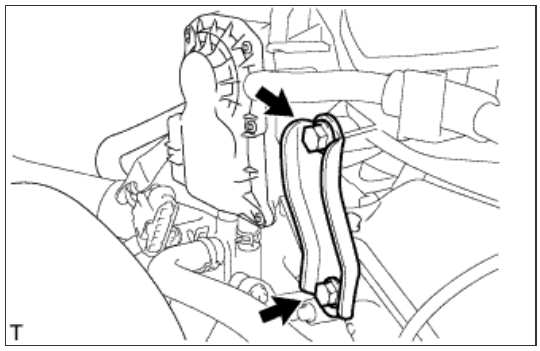
c. Disconnect the No. 5 water by-pass hose.

d. Disconnect the purge line hose.

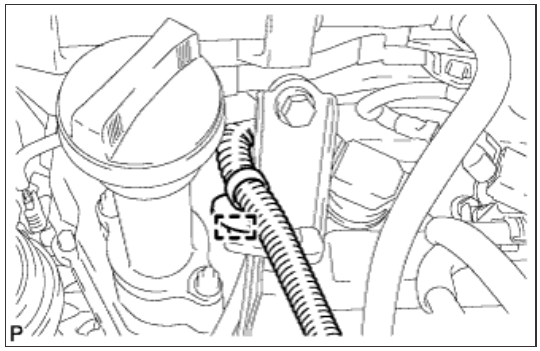


e. Disconnect the purge VSV connector.

f. Disconnect the No. 1 ventilation hose.

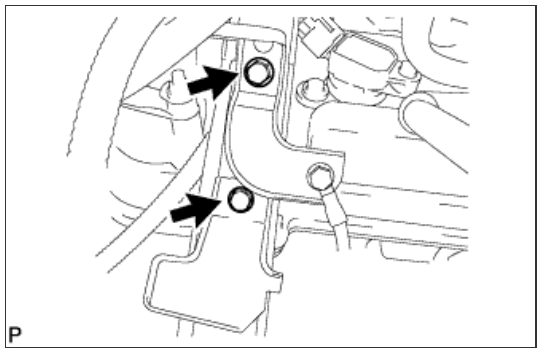


g. Disconnect the vacuum switching valve (for AC) connector.

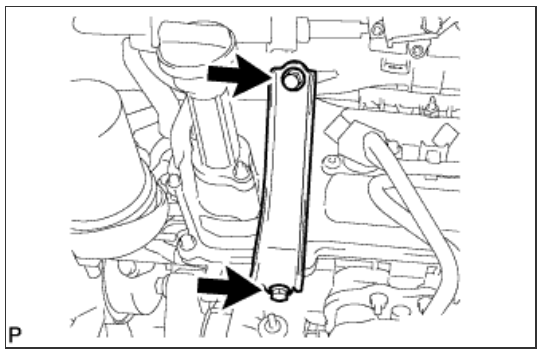


h. Using a clip remover, detach the 2 wire harness clamps.

i. Remove the 2 bolts and throttle body bracket.

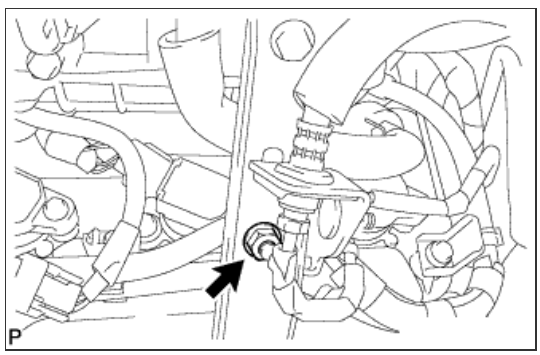


j. Using a clip remover, detach the wire harness clamp.

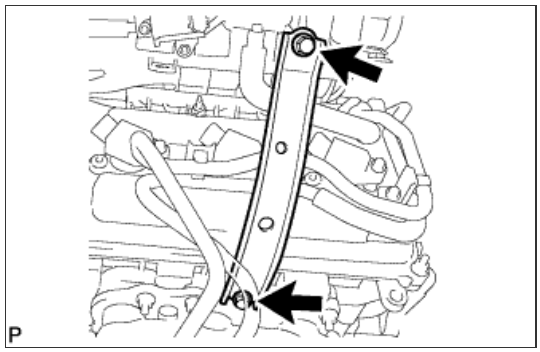


k. Remove the bolt and bracket from the No. 1 surge tank stay.

l. Remove the bolt and oil baffle plate.

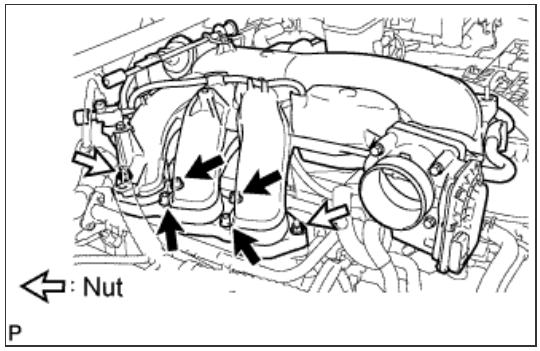


m. Remove the 2 bolts and No. 1 surge tank stay.



n. for Manual Transmission:

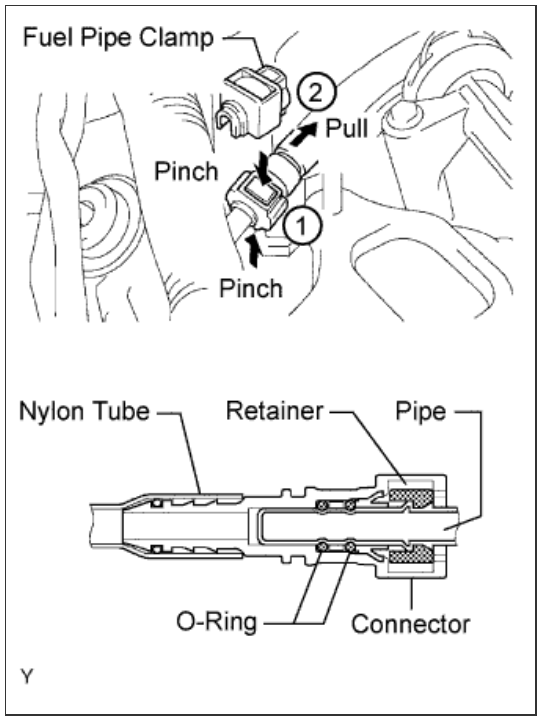
i. Remove the nut.



o. Remove the 2 bolts and No. 2 surge tank stay.

p. Remove the 2 nuts.

q. Using an 8 mm hexagon wrench, remove the 4 bolts. Then remove the intake air surge tank and gasket.



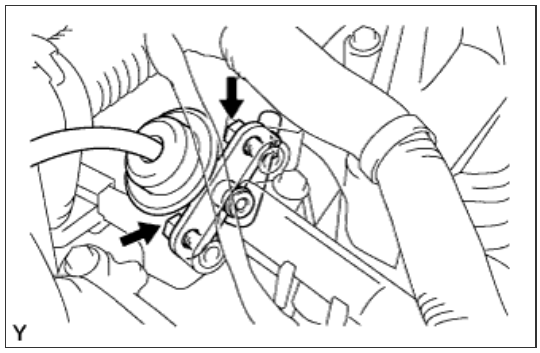
13. DISCONNECT NO. 2 FUEL PIPE SUB-ASSEMBLY

a. Remove the fuel pipe clamp.

b. Pinch the tube connector, and then pull the fuel pipe out of the pipe as shown in the illustration.

NOTICE:

- **Remove any dirt and foreign objects from the fuel tube connector before performing this work.**
- **Do not allow any scratches or foreign objects on the parts when disconnecting, as the fuel tube connector has the O-ring that seals the pipe.**
- **Perform this work by hand. Do not use any tools.**
- **Do not forcibly bend, twist or turn the nylon tube.**
- **Keep the plug free from foreign objects.**
- **Protect the disconnected part by covering it with a plastic bag after disconnecting the fuel tube.**
- **If the fuel tube connector and pipe are stuck, push and pull to release them.**



14. REMOVE FUEL PRESSURE REGULATOR ASSEMBLY

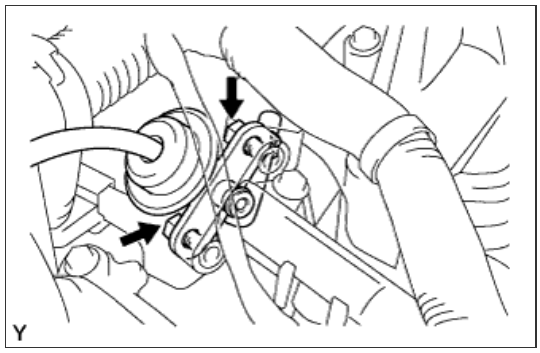
a. Disconnect the vacuum hose.

b. Remove the 2 bolts and fuel pressure regulator.

c. Remove the O-ring from the fuel pressure regulator.

Y

for Preparation Click here



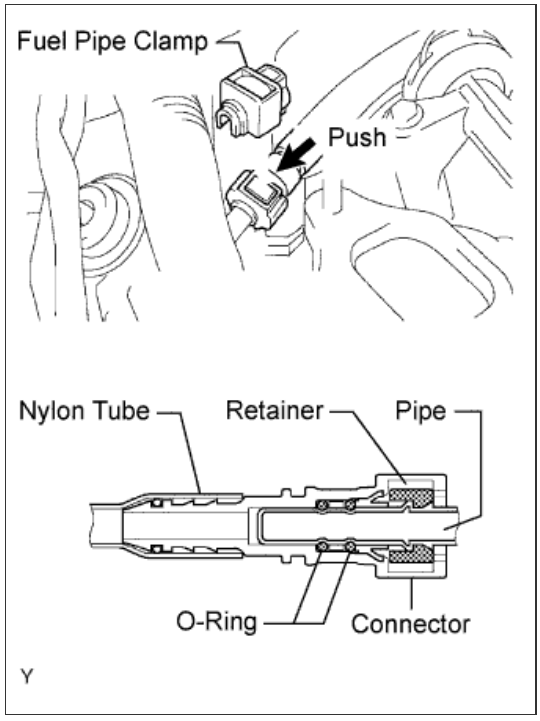
1. INSTALL FUEL PRESSURE REGULATOR ASSEMBLY

a. Apply a light coat of spindle oil or gasoline to a new O-ring and install it onto the fuel pressure regulator.

b. Install the fuel pressure regulator with the 2 bolts.

Torque:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

c. Connect the vacuum hose.



2. CONNECT NO. 2 FUEL PIPE SUB-ASSEMBLY

a. Push the tube connector into the pipe until the tube connector makes a "click" sound.

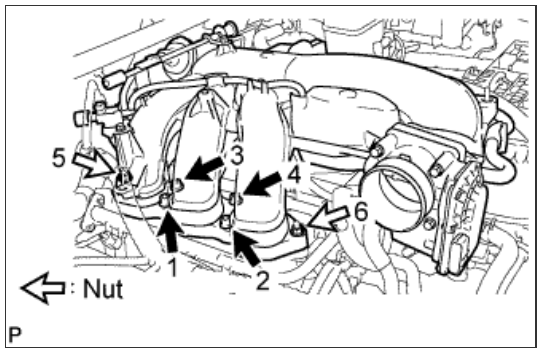
NOTICE:

- **Check if there is any damage or foreign objects on the connected part of the fuel pipe.**
- **After connecting, check that the pipe and connector are securely connected by pulling them.**

b. Install the fuel pipe clamp.

3. INSTALL INTAKE AIR SURGE TANK

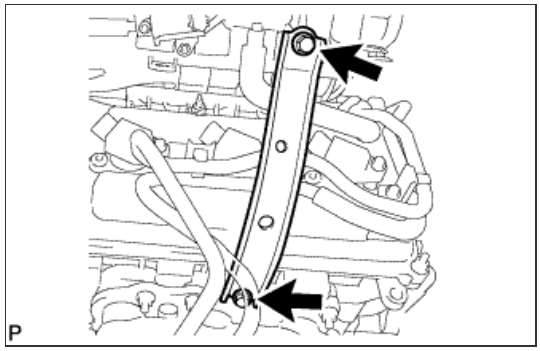
NOTICE:
Do not apply oil to the bolts and nuts listed below: :



Oil Application Prohibited Bolt/Nut
Bolt for surge tank and intake manifold
Nut for surge tank and intake manifold

a. Install a new gasket to the intake air surge tank.

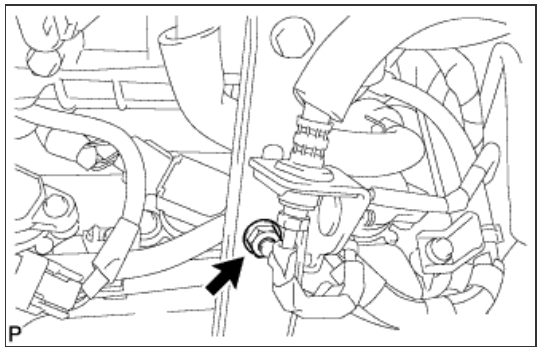
b. Using an 8 mm hexagon wrench, install the intake air surge tank with the 4 bolts



and 2 nuts in the order shown in the illustration.

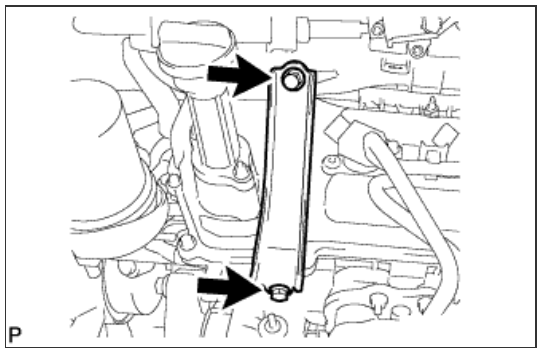
Torque:
28 N*m{ 286 kgf*cm , 21 ft.*lbf }

c. Install the No. 2 surge tank stay with the 2 bolts.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

d. for Manual Transmission:

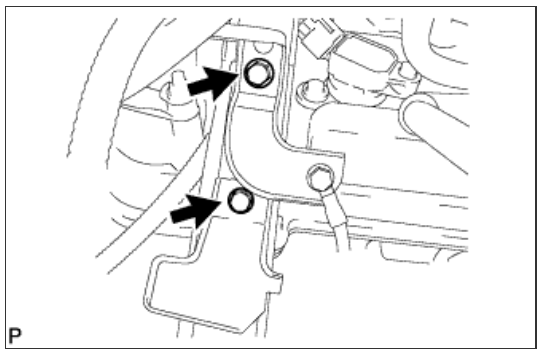


i. Install the bracket to the No. 2 surge tank stay with the nut.

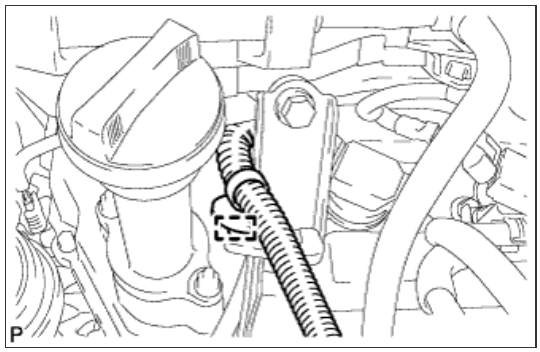
Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

e. Install the No. 1 surge tank stay with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



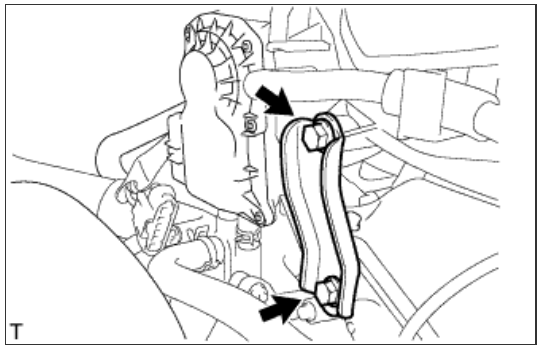
f. Install the oil baffle plate with the bolt.



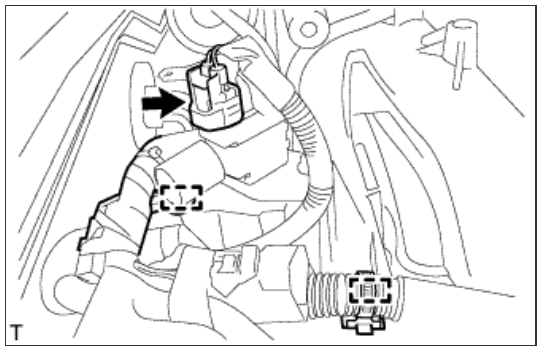
Torque:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

g. Install the bracket to the No. 1 surge tank stay with the bolt.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



h. Attach the wire harness clamp.

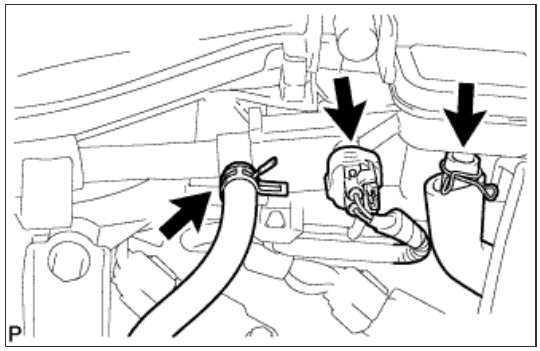


i. Install the throttle body bracket with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

j. Connect the vacuum switching valve (for ACIS) connector.

k. Attach the 2 wire harness clamps.



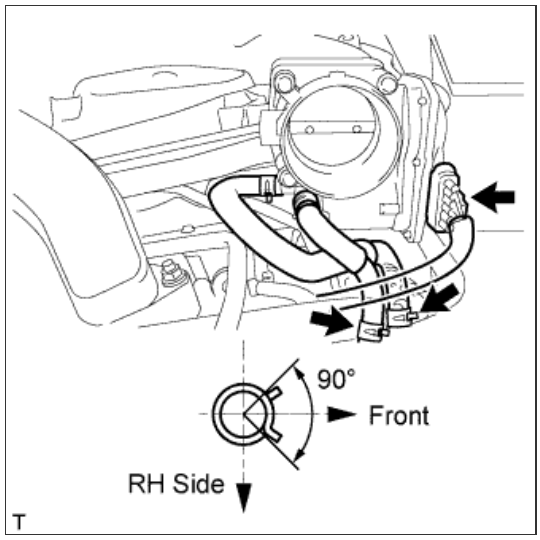
l. Connect the No. 1 ventilation hose.

m. Connect the purge VSV connector.

n. Connect the purge line hose.

HINT:

Connect the hose so that the direction of the hose clamp is as indicated in the illustration.



o. Connect the No. 4 and No. 5 water by-pass hose.

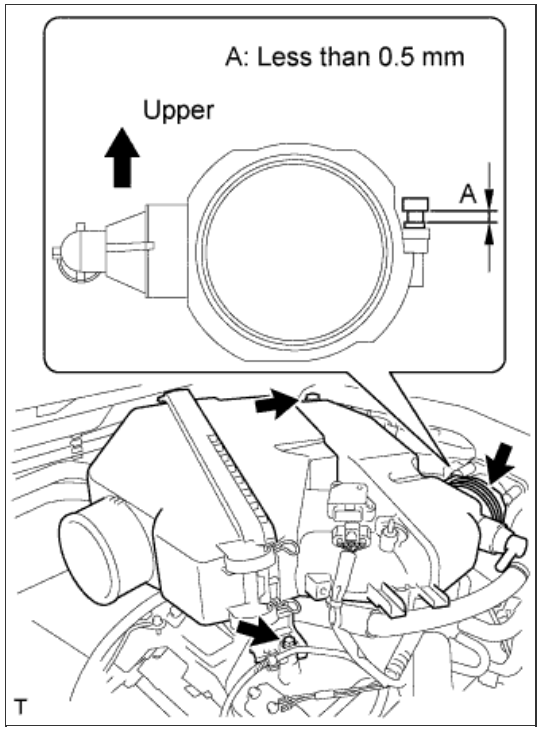
HINT:

Connect the hoses so that the direction of the hose clamps is as shown in the illustration.

p. Connect the throttle body connector.

4. INSTALL AIR CLEANER ASSEMBLY

a. Install the air cleaner assembly with the 2 bolts.

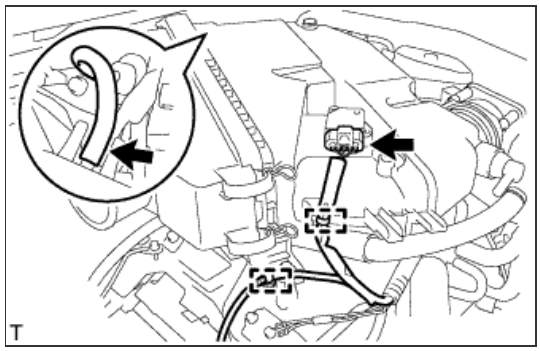


Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

b. Tighten the hose clamp.

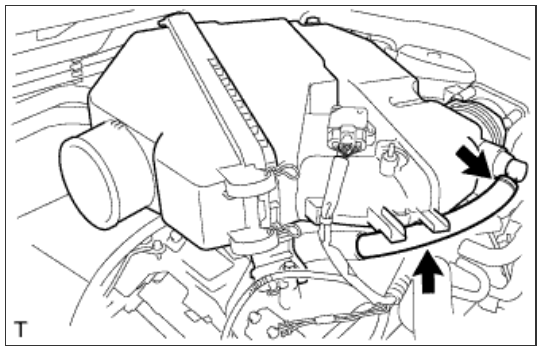
HINT:

Tighten the hose clamp until it reaches the specified protrusion height labeled A shown in the illustration.



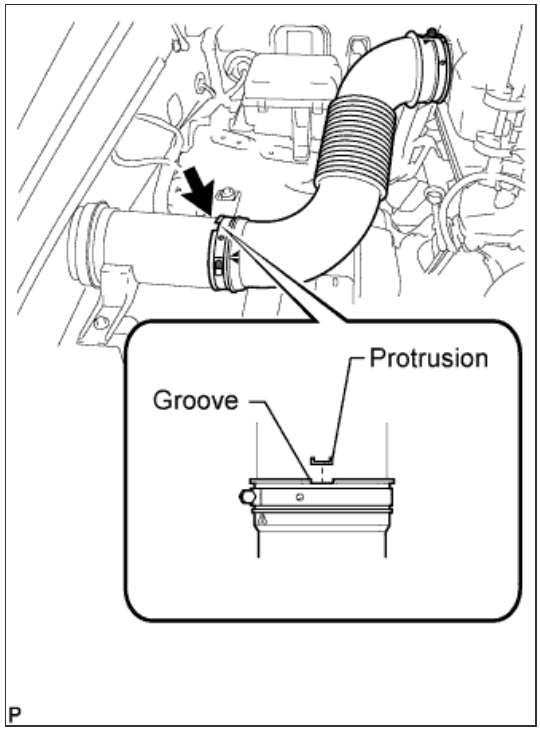
Standard protrusion height:
Less than 0.5 mm (0.0197 in.)

c. Connect the MAF meter connector.



d. Attach the 2 wire harness clamps.

e. Connect the vacuum hose.

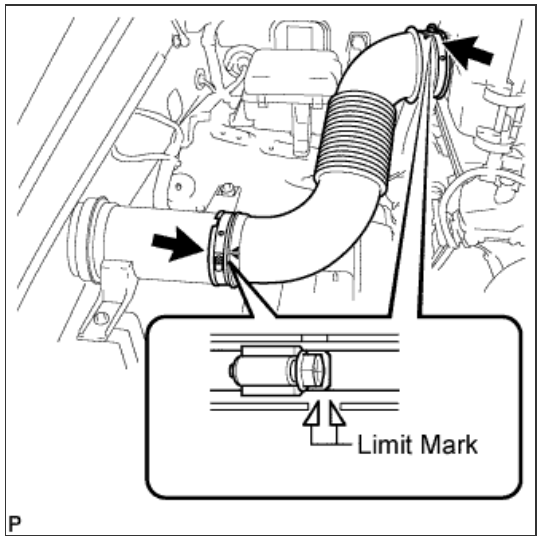


f. Attach the hose clamp.

g. Connect the No. 2 ventilation hose.

5. INSTALL NO. 2 AIR CLEANER HOSE

a. Align the protrusion of the pre-cleaner with the groove of the No. 2 air cleaner hose as shown in the illustration.



b. Tighten the 2 hose clamps.

Torque:
4.0 N*m{ 41 kgf*cm , 35 in.*lbf }

HINT:

Tighten the clamp until the end of the clamp band is within both limit marks.

6. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

7. ADD ENGINE COOLANT

a. Add engine coolant.

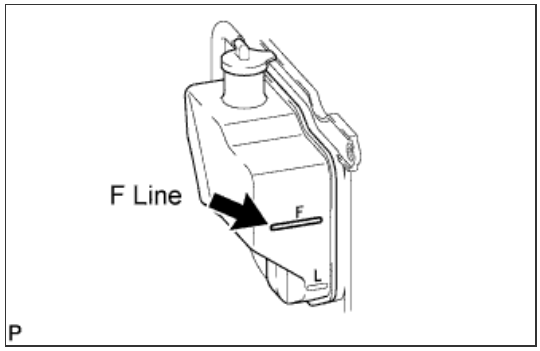
Standard Capacity:

Item		Specified condition
for Automatic transmission	w/o Rear Heater	11.2 liters (11.8 US qts, 9.9 Imp. qts)
	w/ Rear Heater	14.4 liters (15.2 US qts, 12.7 Imp. qts)
for Manual transmission	w/o Rear Heater	12. liters (12.7 US qts, 1 .6 Imp. qts)
	w/ Rear Heater	14.6 liters (15.4 US qts, 12.8 Imp. qts)

NOTICE:

Do not substitute plain water for engine coolant.

HINT:



TO OTA vehicles are filled with TO OTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TO OTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the reservoir cap.

d. Press the No. 1 and No. 2 radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Set the air conditioning as follows while warming up the engine.

Item	Condition
Fan speed	Any setting except off
Temperature	Toward WARM
Air conditioning switch	Off

g. Start the engine and warm it up until the thermostat opens.

HINT:

The thermostat opening timing can be confirmed by pressing the No. 2 radiator hose by hand, and checking when the engine coolant starts to flow inside the hose.

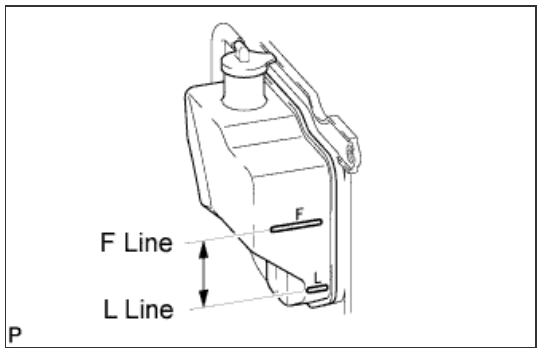
h. Maintain the engine speed at 2 to 25 rpm.

NOTICE:

- **Make sure that the radiator reservoir still has some coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**
- **Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the F line.**
- **Run the engine at 2000 rpm until the coolant level has stabilized.**

i. Press the No. 1 and No. 2 radiator hoses several times by hand to bleed air.

CAUTION:



- **Wear protective gloves. Heat areas on the parts may injure your hands.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the fan.**

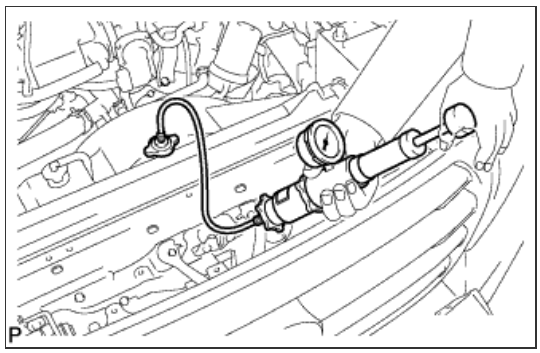
j. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

k. Check that the coolant level is between the F and L lines.
If the coolant level is below the L line, repeat all of the procedures above.
If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.

8. INSPECT FOR COOLANT LEAK



CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Fill the radiator with coolant and attach a radiator cap tester.

b. Warm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to 12 kPa (1. kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.

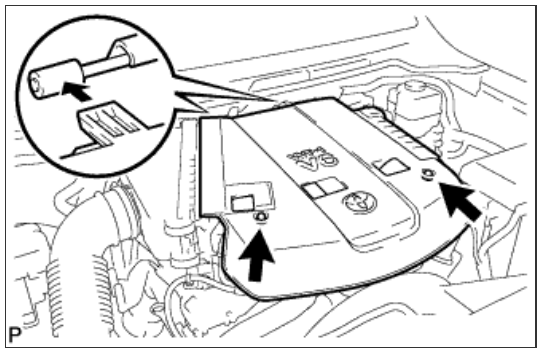
9. INSPECT FOR FUEL LEAK

a. Connect the intelligent tester to the DLC .

b. Turn the ignition switch to ON and intelligent tester on.

NOTICE:

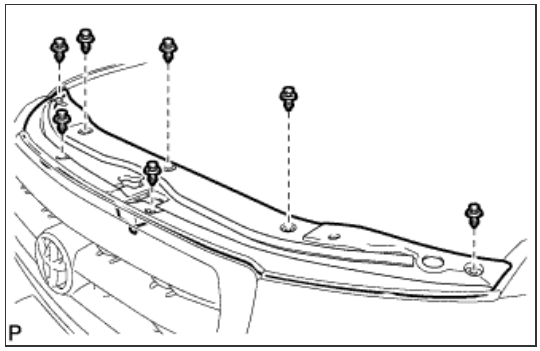
Do not start the engine.



c. Enter the following menus: Powertrain / Engine and ECT / Active Test / Activate the Fuel Pump Speed Control.

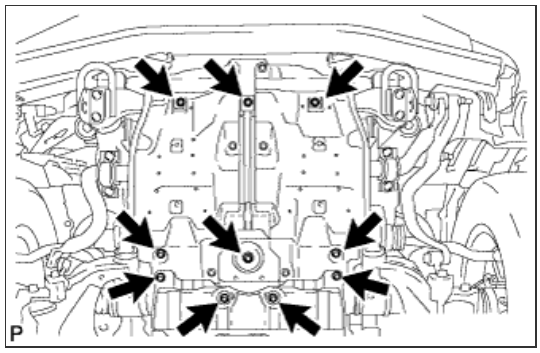
d. Check that there are no fuel leaks after doing maintenance anywhere on the fuel system.

10. INSTALL -BANK COVER



a. Install the V-bank cover with the 2 nuts.

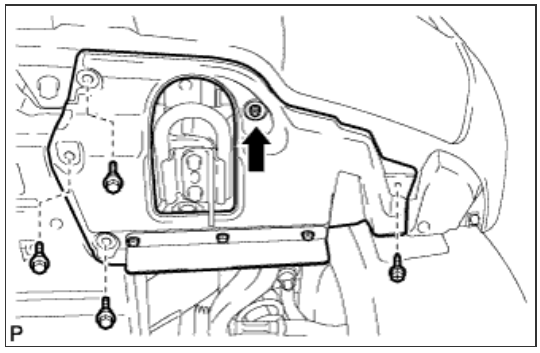
Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }



11. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the radiator support seal with the 7 clips.

12. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY



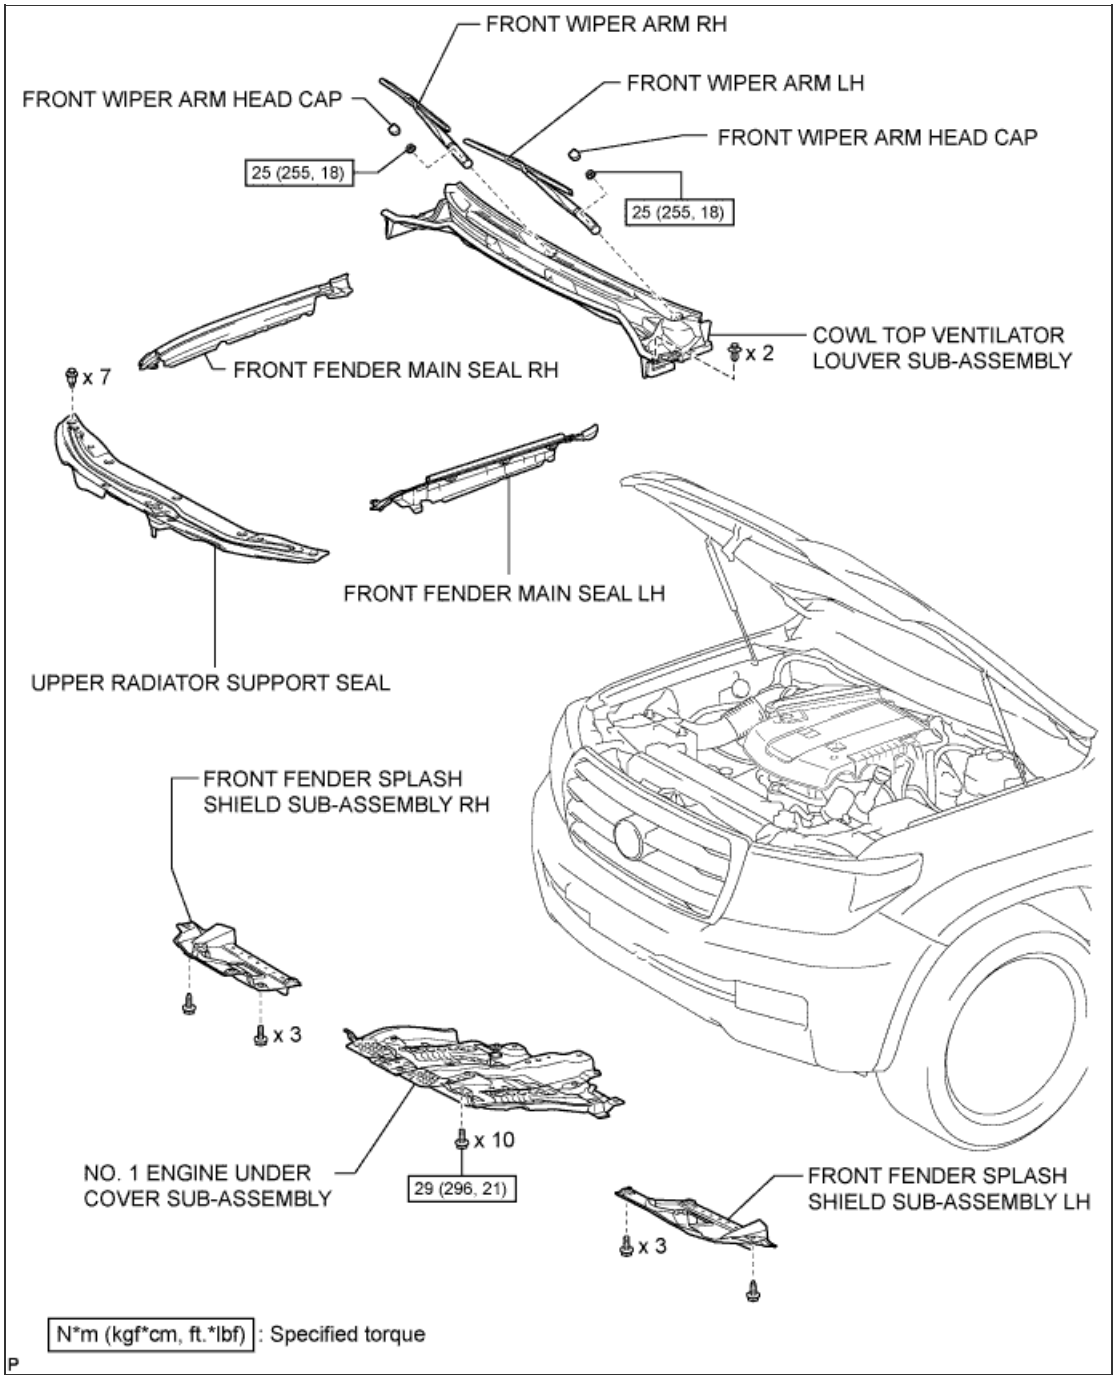
a. Install the under cover with the 1 bolts.

13. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

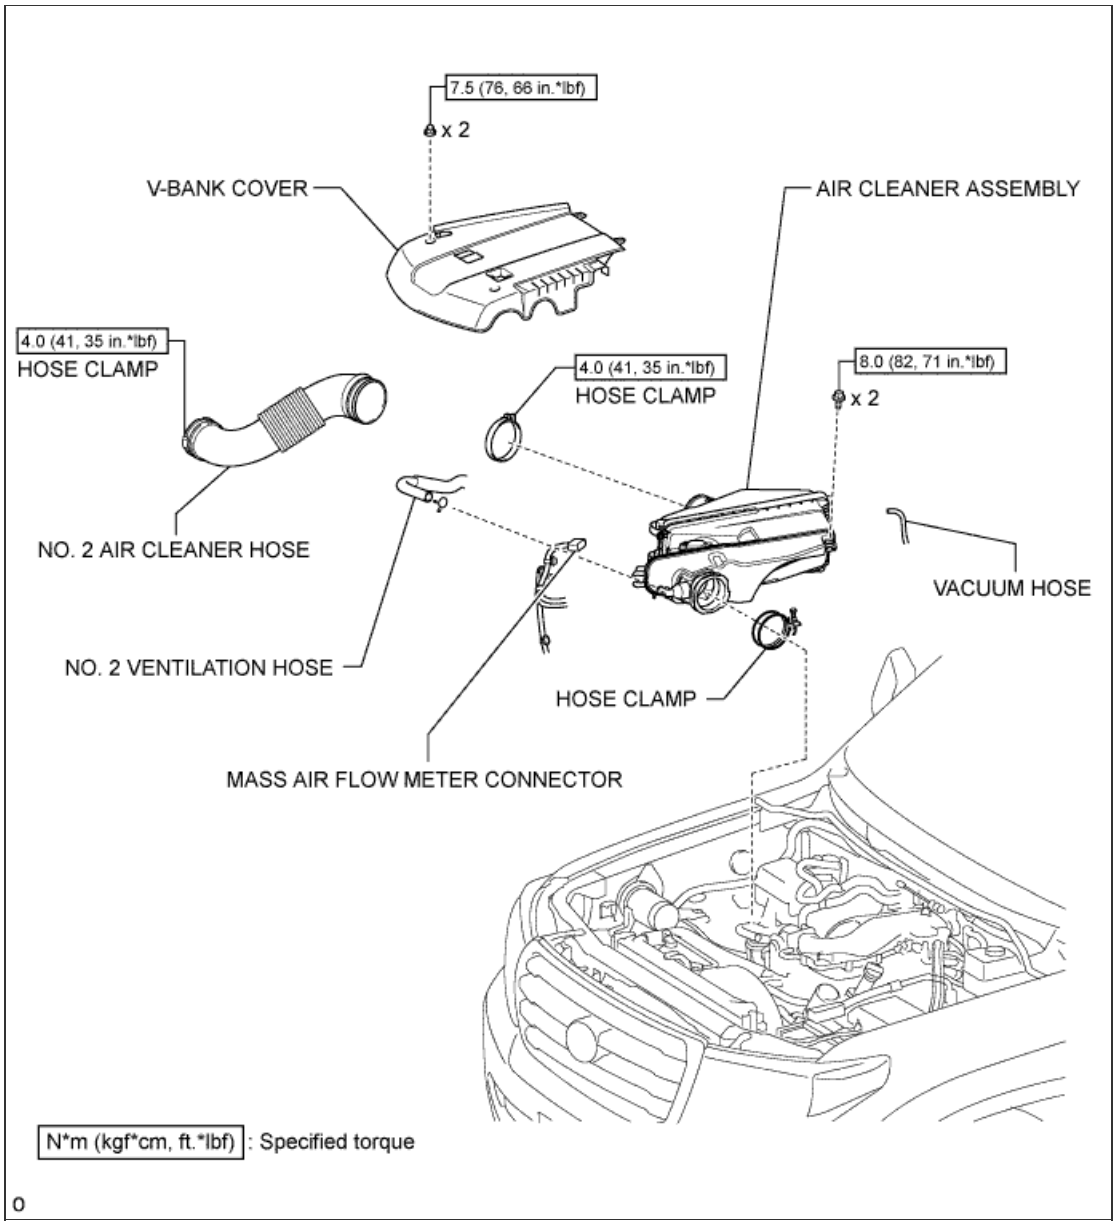
a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the bolts and screw.

14. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

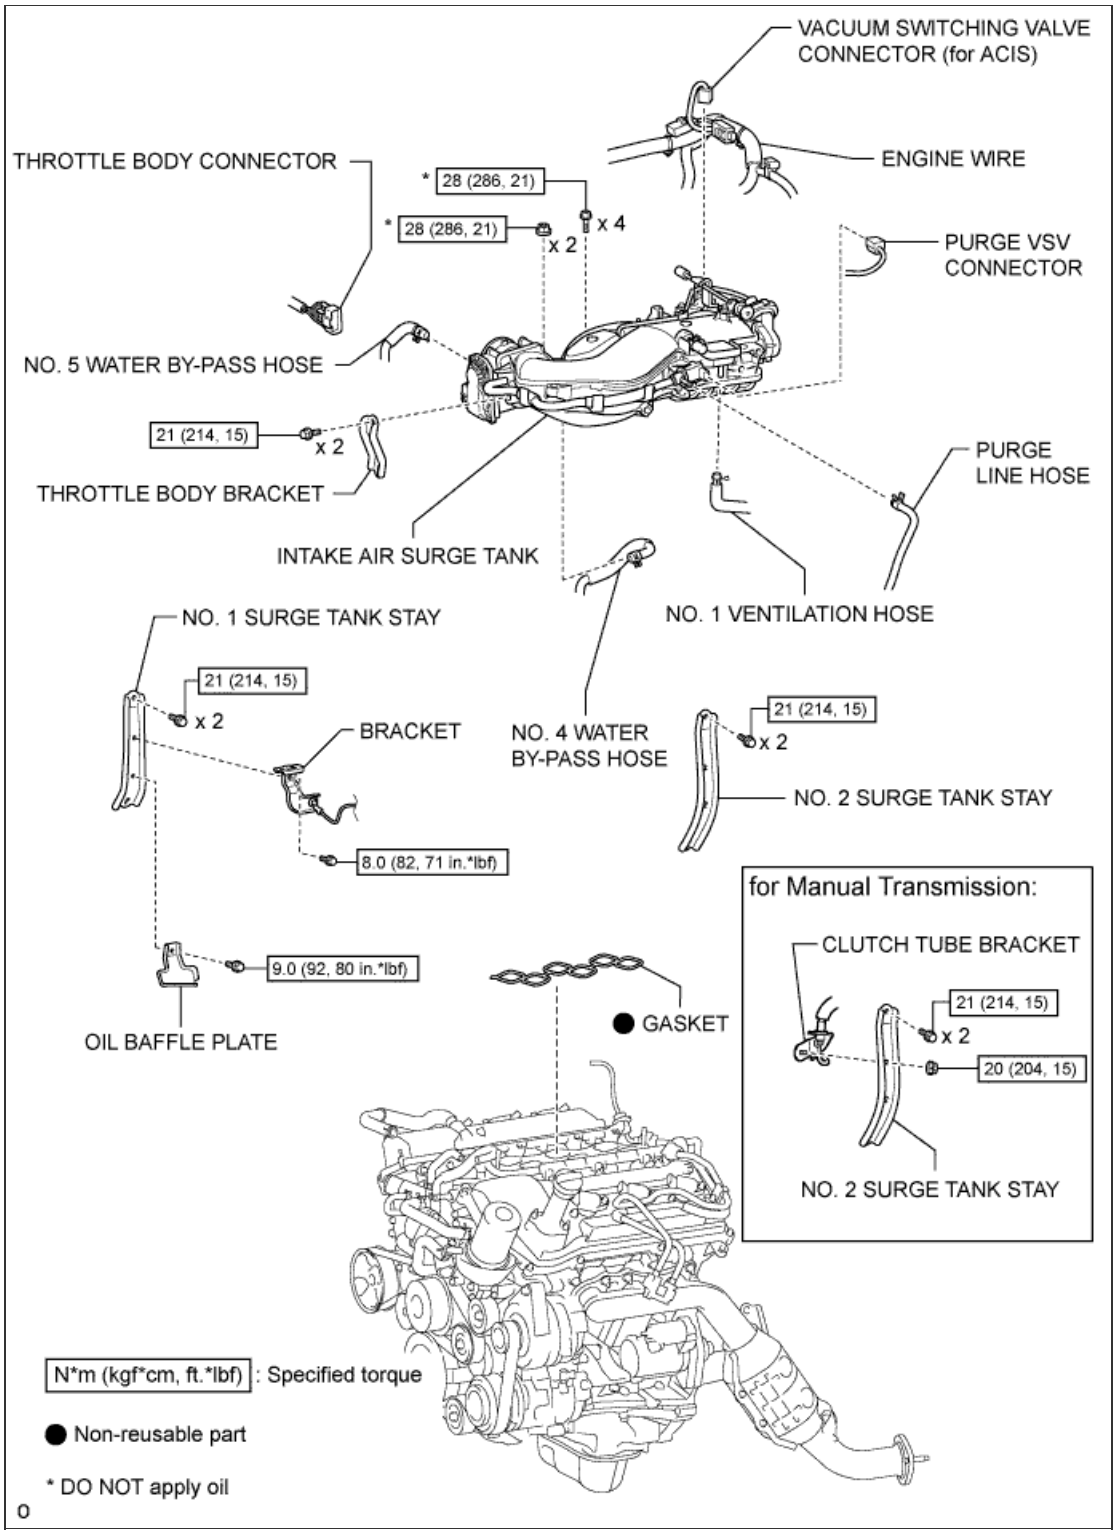


HINT:



Use the same procedures described for the LH side.

15. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY



a. Install the cowl top ventilator louver (Click here).

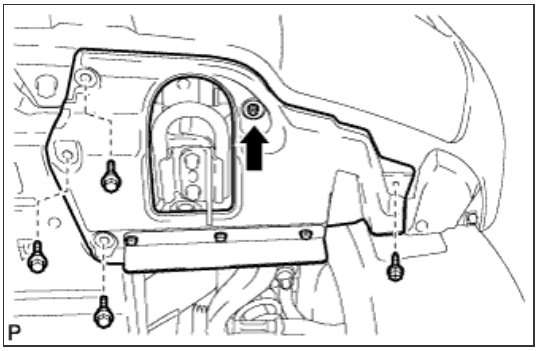
FUEL PRESSURE PULSATION DAMPER > REMOVAL

for Preparation Click here

1. DISCHARGE FUEL SYSTEM PRESSURE

a. Discharge the fuel system pressure (Click here).

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL



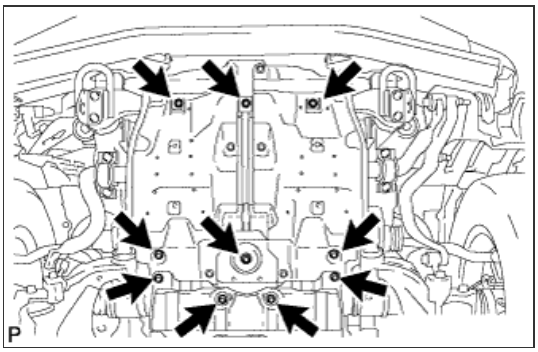
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

3. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and screw.

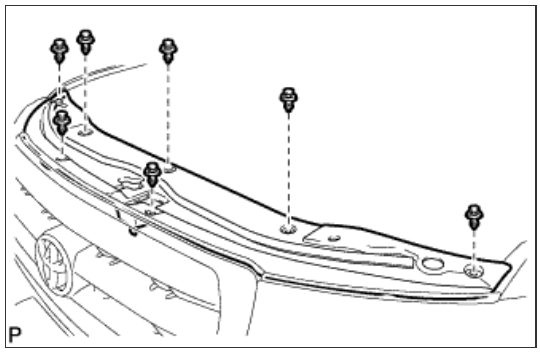
b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



4. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.



5. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and under cover.

6. REMOVE UPPER RADIATOR SUPPORT SEAL

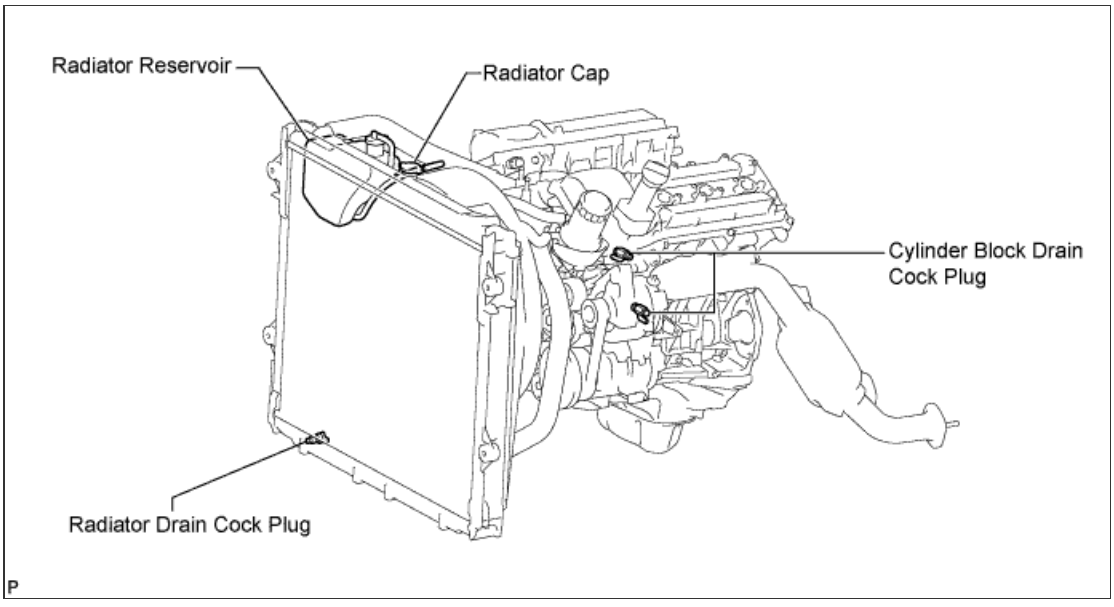
a. Remove the 7 clips and radiator support seal.

7. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Loosen the radiator drain cock plug and 2 cylinder block drain cock plugs.



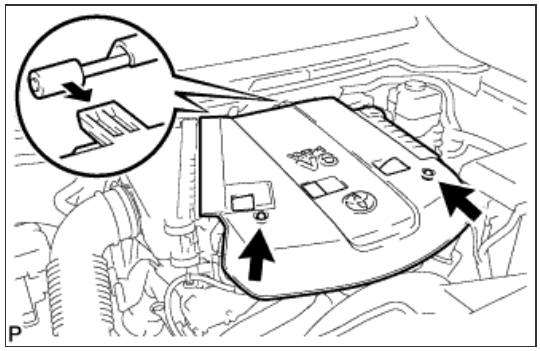
b. Remove the radiator cap. Then drain the coolant.

HINT:

Collect the coolant in a container and dispose of it according to the regulations in your area.

c. Tighten the 2 cylinder block drain cock plugs.

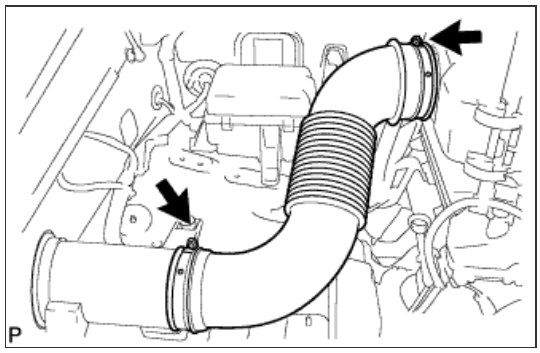
Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }



d. Tighten the radiator drain cock plug by hand.

8. REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

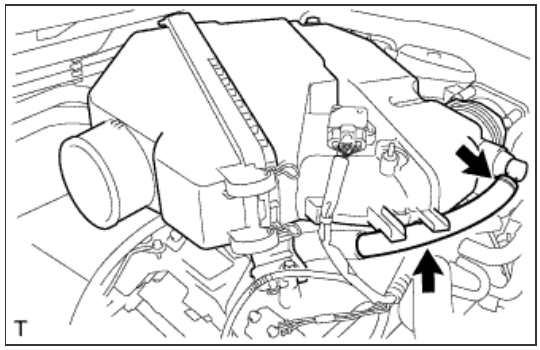
a. Remove the cowl top ventilator louver (Click here).



9. REMOVE V-BANK COVER

a. Remove the 2 nuts and V-bank cover.

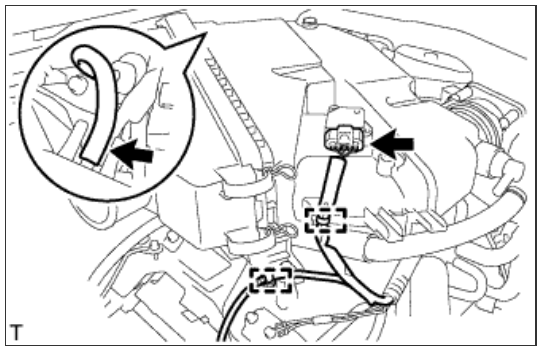
10. REMOVE NO. 2 AIR CLEANER HOSE



a. Loosen the 2 hose clamps and remove the air cleaner hose.

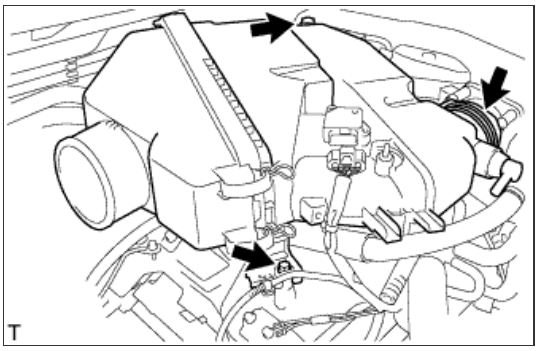
11. REMOVE AIR CLEANER ASSEMBLY

a. Disconnect the No. 2 ventilation hose.



b. Detach the hose clamp.

c. Disconnect the vacuum hose.

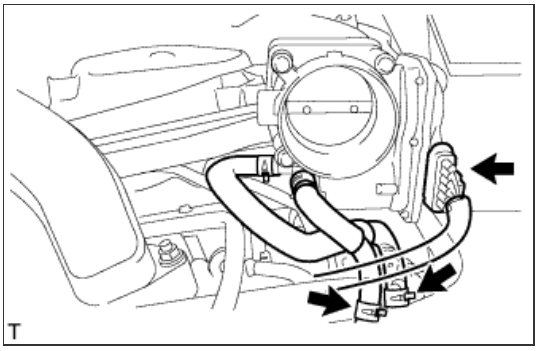


d. Disconnect the MAF meter connector.

e. Using a clip remover, detach the 2 wire harness clamps.

f. Loosen the hose clamp.

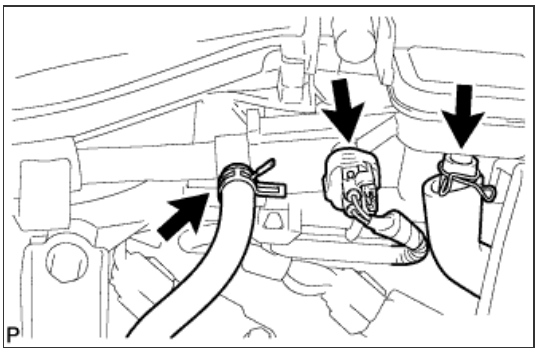
g. Remove the 2 bolts and air cleaner assembly.



12. REMOVE INTAKE AIR SURGE TANK

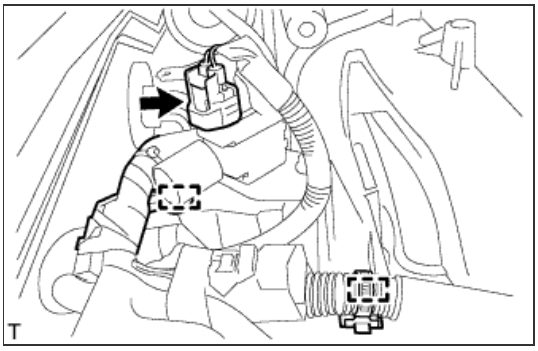
a. Disconnect the throttle body connector.

b. Disconnect the No. 4 water by-pass hose.



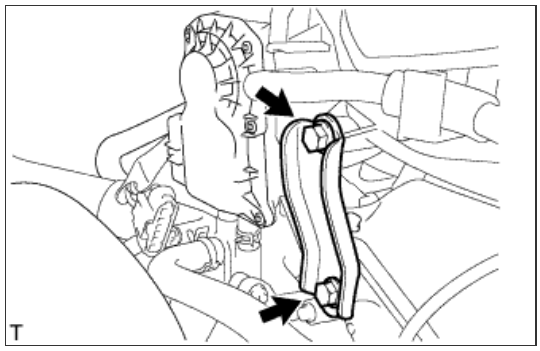
c. Disconnect the No. 5 water by-pass hose.

d. Disconnect the purge line hose.

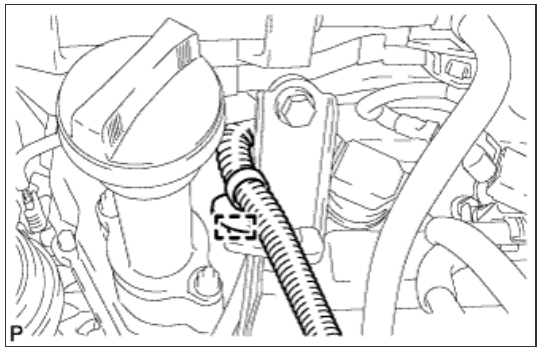


e. Disconnect the purge VSV connector.

f. Disconnect the No. 1 ventilation hose.

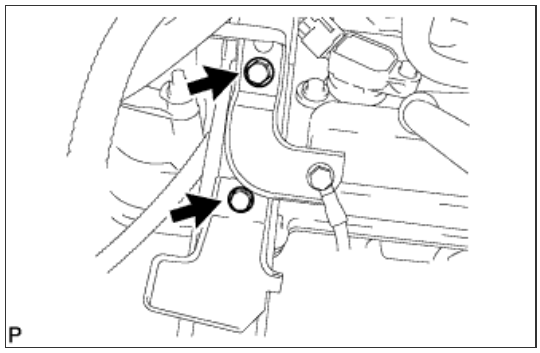


g. Disconnect the vacuum switching valve (for AC) connector.

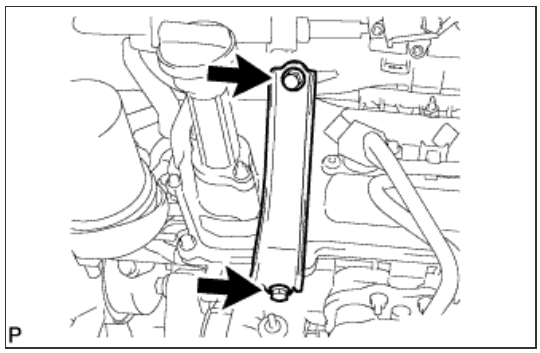


h. Using a clip remover, detach the 2 wire harness clamps.

i. Remove the 2 bolts and throttle body bracket.

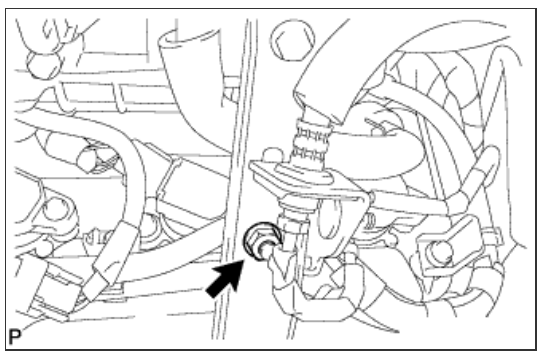


j. Using a clip remover, detach the wire harness clamp.

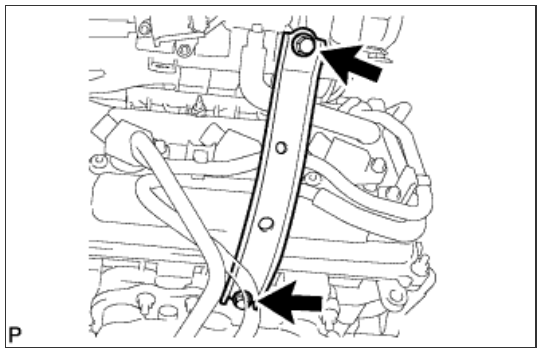


k. Remove the bolt and bracket from the No. 1 surge tank stay.

l. Remove the bolt and oil baffle plate.

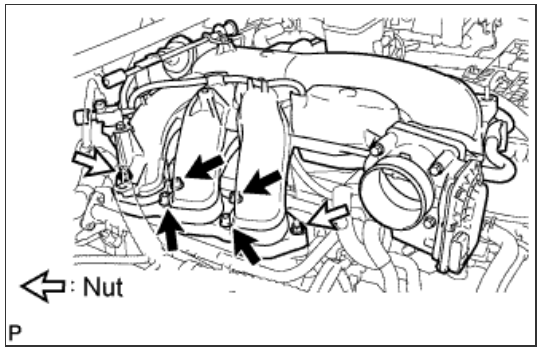


m. Remove the 2 bolts and No. 1 surge tank stay.



n. for Manual Transmission:

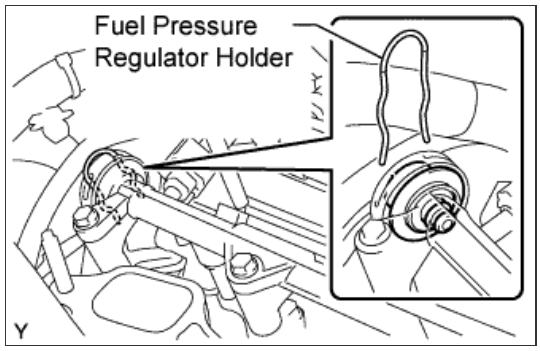
i. Remove the nut.



o. Remove the 2 bolts and No. 2 surge tank stay.

p. Remove the 2 nuts.

q. Using an 8 mm hexagon wrench, remove the 4 bolts. Then remove the intake air surge tank and gasket.

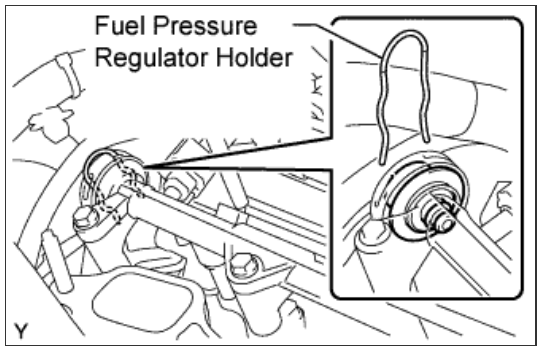


13. REMOVE FUEL PRESSURE PULSATION DAMPER ASSEMBLY

a. Remove the fuel pressure regulator holder.

b. Pull the fuel pressure pulsation damper out of the fuel delivery pipe.

c. Remove the O-ring from the fuel pressure pulsation damper.



for Preparation Click here

1. INSTALL FUEL PRESSURE PULSATION DAMPER ASSEMBLY

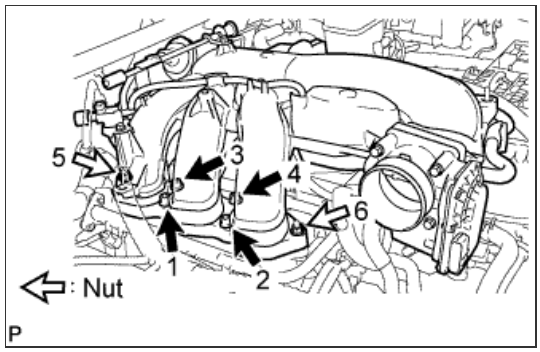
a. Apply a light coat of spindle oil or gasoline to a new O-ring and install it onto the fuel pressure pulsation damper.

b. Install the fuel pressure pulsation damper into the fuel delivery pipe.

c. Install the fuel pressure regulator holder.

2. INSTALL INTAKE AIR SURGE TANK

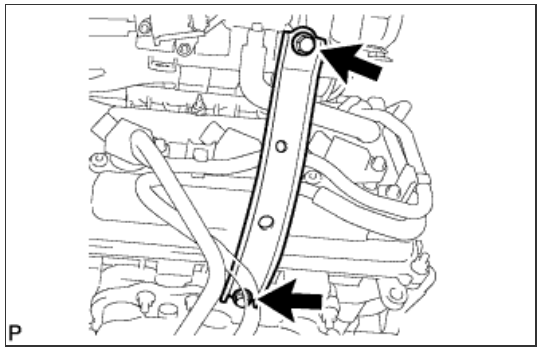
NOTICE:



Do not apply oil to the bolts and nuts listed below: :

Oil Application Prohibited Bolt/Nut
Bolt for surge tank and intake manifold
Nut for surge tank and intake manifold

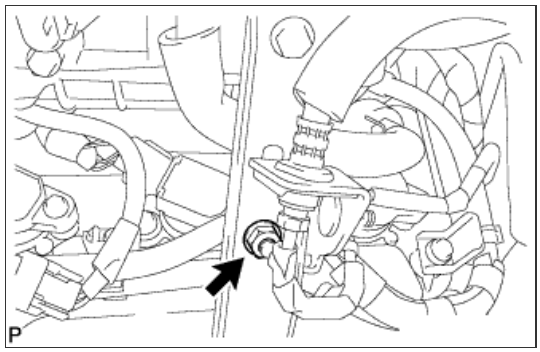
a. Install a new gasket to the intake air surge tank.



b. Using an 8 mm hexagon wrench, install the intake air surge tank with the 4 bolts and 2 nuts in the order shown in the illustration.

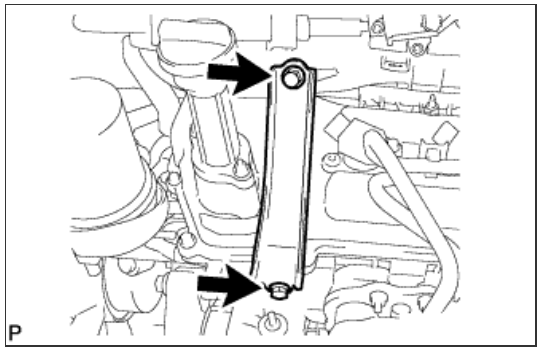
Torque:
28 N*m{ 286 kgf*cm , 21 ft.*lbf }

c. Install the No. 2 surge tank stay with the 2 bolts.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

d. for Manual Transmission:

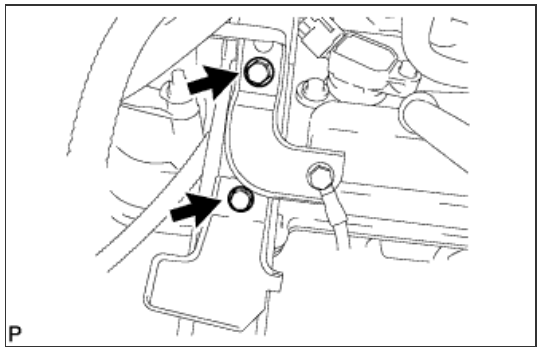


i. Install the bracket to the No. 2 surge tank stay with the nut.

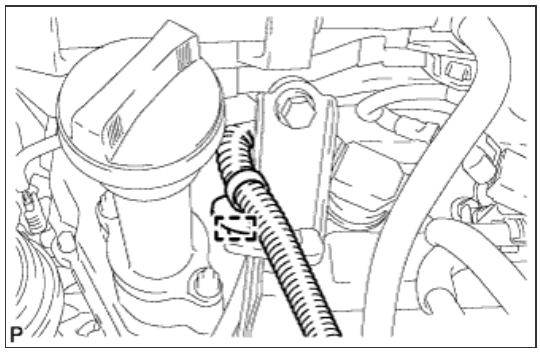
Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

e. Install the No. 1 surge tank stay with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



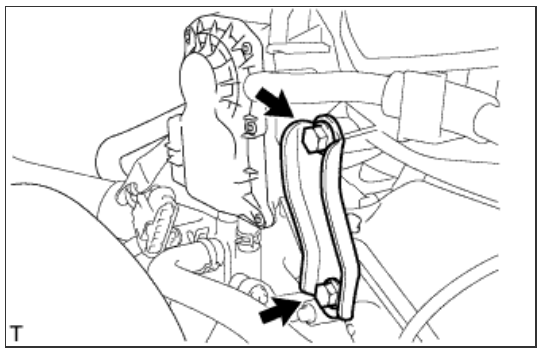
f. Install the oil baffle plate with the bolt.



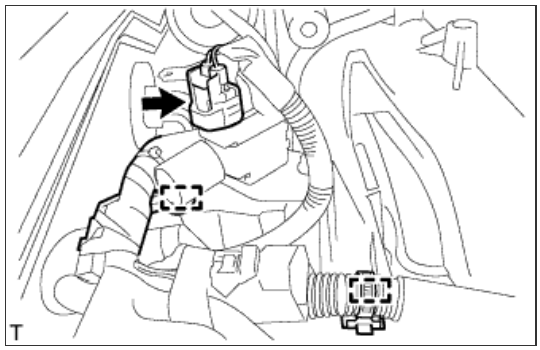
Torque:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

g. Install the bracket to the No. 1 surge tank stay with the bolt.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



h. Attach the wire harness clamp.

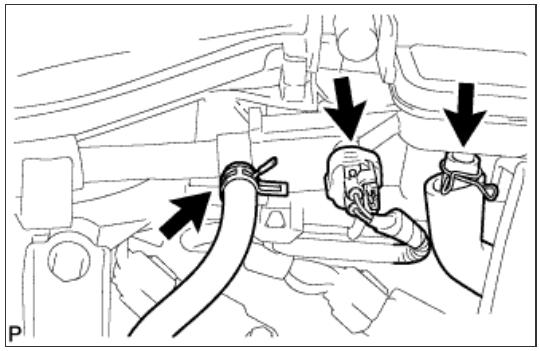


i. Install the throttle body bracket with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

j. Connect the vacuum switching valve (for ACIS) connector.

k. Attach the 2 wire harness clamps.



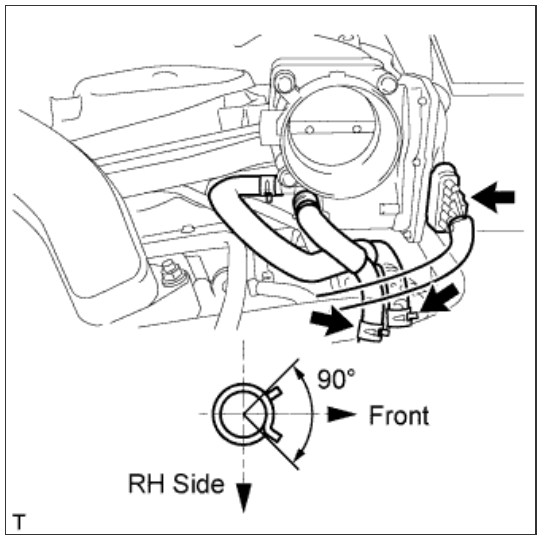
l. Connect the No. 1 ventilation hose.

m. Connect the purge VSV connector.

n. Connect the purge line hose.

HINT:

Connect the hose so that the direction of the hose clamp is as indicated in the illustration.



o. Connect the No. 4 and No. 5 water by-pass hose.

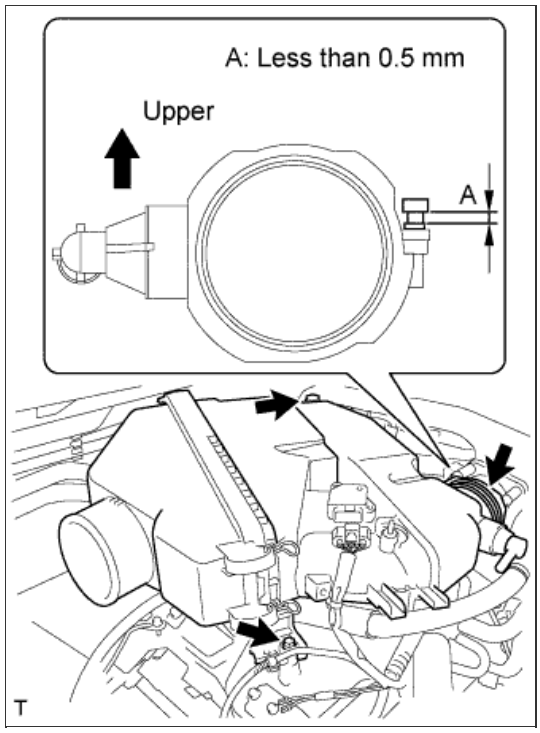
HINT:

Connect the hoses so that the direction of the hose clamps is as shown in the illustration.

p. Connect the throttle body connector.

3. INSTALL AIR CLEANER ASSEMBLY

a. Install the air cleaner assembly with the 2 bolts.

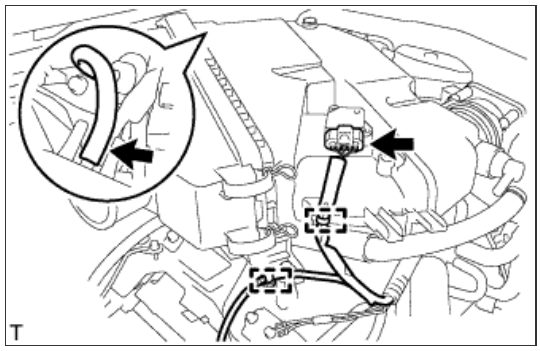


Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

b. Tighten the hose clamp.

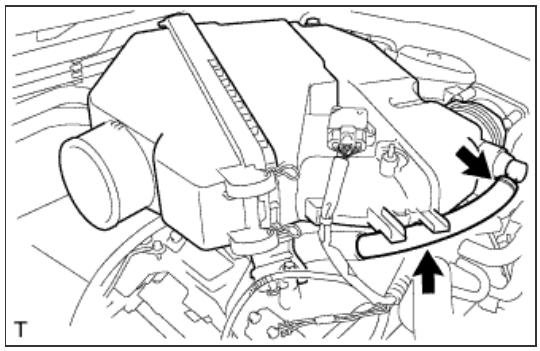
HINT:

Tighten the hose clamp until it reaches the specified protrusion height labeled A shown in the illustration.



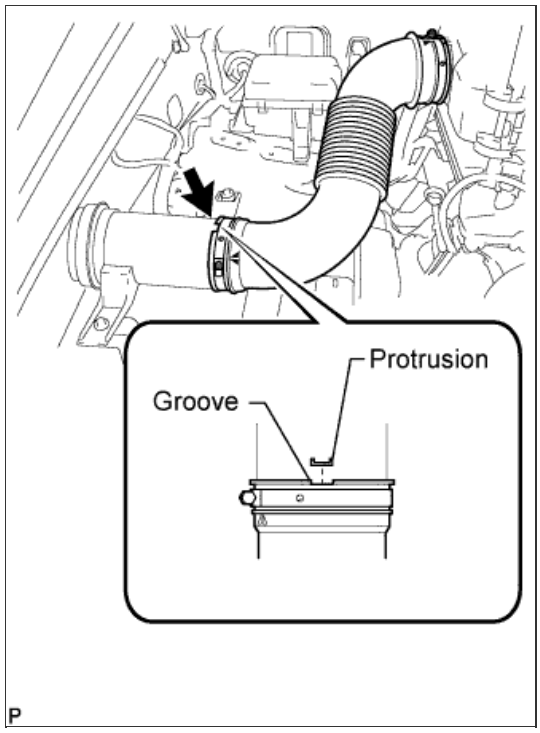
Standard protrusion height:
Less than 0.5 mm 0.0197 in.

c. Connect the MAF meter connector.



d. Attach the 2 wire harness clamps.

e. Connect the vacuum hose.

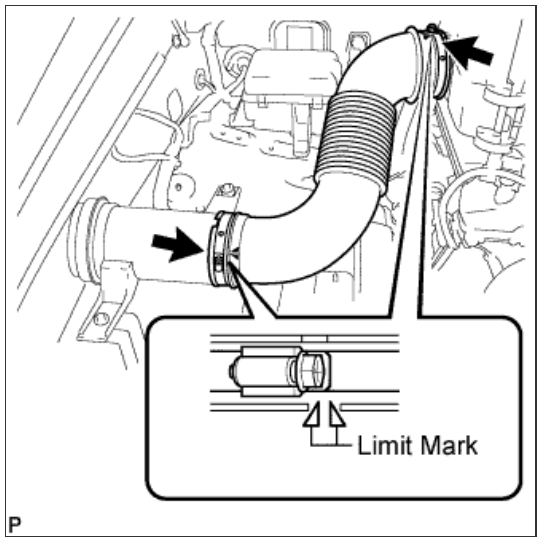


f. Attach the hose clamp.

g. Connect the No. 2 ventilation hose.

4. INSTALL NO. 2 AIR CLEANER HOSE

a. Align the protrusion of the pre-cleaner with the groove of the No. 2 air cleaner hose as shown in the illustration.



b. Tighten the 2 hose clamps.

Torque:
4.0 N*m{ 41 kgf*cm , 35 in.*lbf }

INT:

Tighten the clamp until the end of the clamp band is within both limit marks.

5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

6. ADD ENGINE COOLANT

a. Add engine coolant.

Standard Capacity:

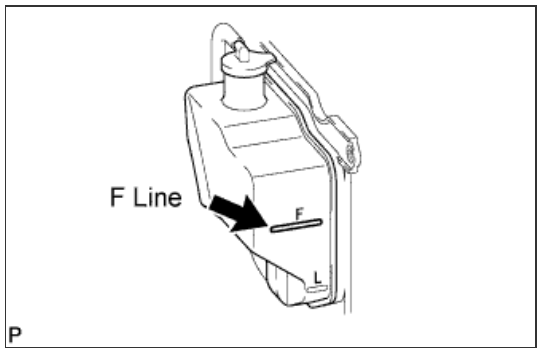
Item		Specified condition
for Automatic transmission	w/o Rear Heater	11.2 liters (11.8 US qts, 9.9 Imp. qts)
	w/ Rear Heater	14.4 liters (15.2 US qts, 12.7 Imp. qts)
for Manual transmission	w/o Rear Heater	12.0 liters (12.7 US qts, 10.6 Imp. qts)
		14.6 liters (15.4

	w/ Rear Heater	US qts, 12.8 Imp. qts)

NOTICE:

Do not substitute plain water for engine coolant.

HINT:



TO OTA vehicles are filled with TO OTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TO OTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the reservoir cap.

d. Press the No. 1 and No. 2 radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Set the air conditioning as follows while warming up the engine.

Item	Condition
Fan speed	Any setting except off
Temperature	Toward WARM
Air conditioning switch	Off

g. Start the engine and warm it up until the thermostat opens.

HINT:

The thermostat opening timing can be confirmed by pressing the No. 2 radiator hose by hand, and checking when the engine coolant starts to flow inside the hose.

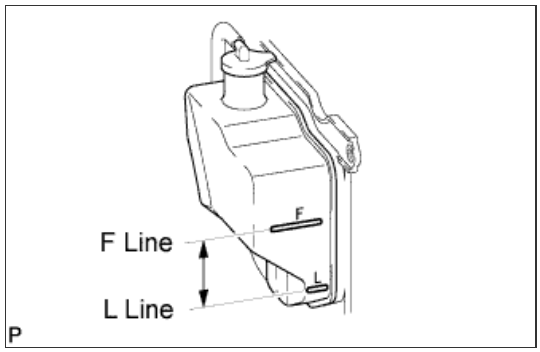
h. Maintain the engine speed at 2000 to 2500 rpm.

NOTICE:

- **Make sure that the radiator reser oir still has some coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or o erheat.**
- **Immediately after starting the engine, if the radiator reser oir does not ha e any coolant, perform the following: 1 stop the engine, 2 wait until the coolant has cooled down, and 3 add coolant until the coolant is filled to the F line.**
- **Run the engine at 2000 rpm until the coolant le el has stabilized.**

i. Press the No. 1 and No. 2 radiator hoses several times by hand to bleed air.

CAUTION:



- **Wear protecti e glo es. Heat areas on the parts may injure your hands.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the fan.**

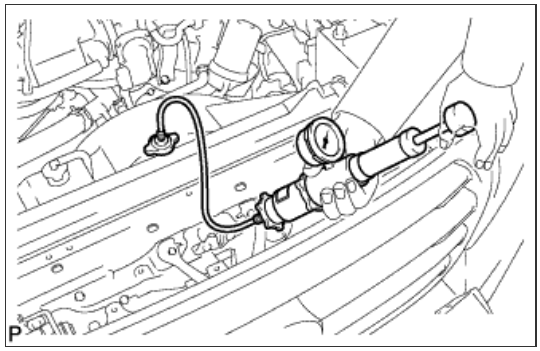
j. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

k. Check that the coolant level is between the F and L lines.
If the coolant level is below the L line, repeat all of the procedures above.
If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.

7. INSPECT FOR COOLANT LEAK



CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Fill the radiator with coolant and attach a radiator cap tester.

b. Warm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to 12 kPa (1. kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.

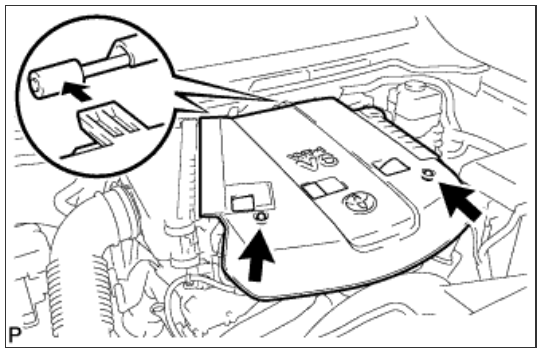
8. INSPECT FOR FUEL LEAK

a. Connect the intelligent tester to the DLC .

b. Turn the engine switch on (IG) and intelligent tester ON.

NOTICE:

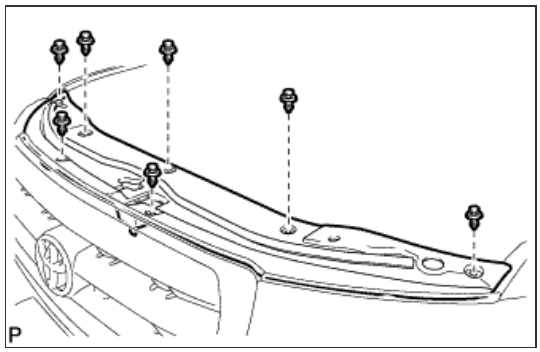
Do not start the engine.



c. Enter the following menus: Powertrain / Engine and ECT / Active Test / Activate the Fuel Pump Speed Control.

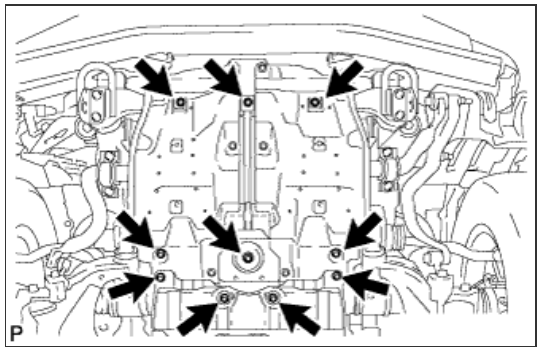
d. Check that there are no fuel leaks after doing maintenance anywhere on the fuel system.

9. INSTALL V BANK COVER



a. Install the V-bank cover with the 2 nuts.

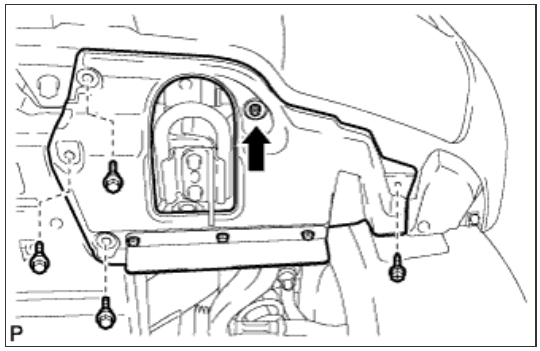
Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }



10. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the radiator support seal with the 7 clips.

11. INSTALL NO. 1 ENGINE UNDER COVER SUB ASSEMBLY



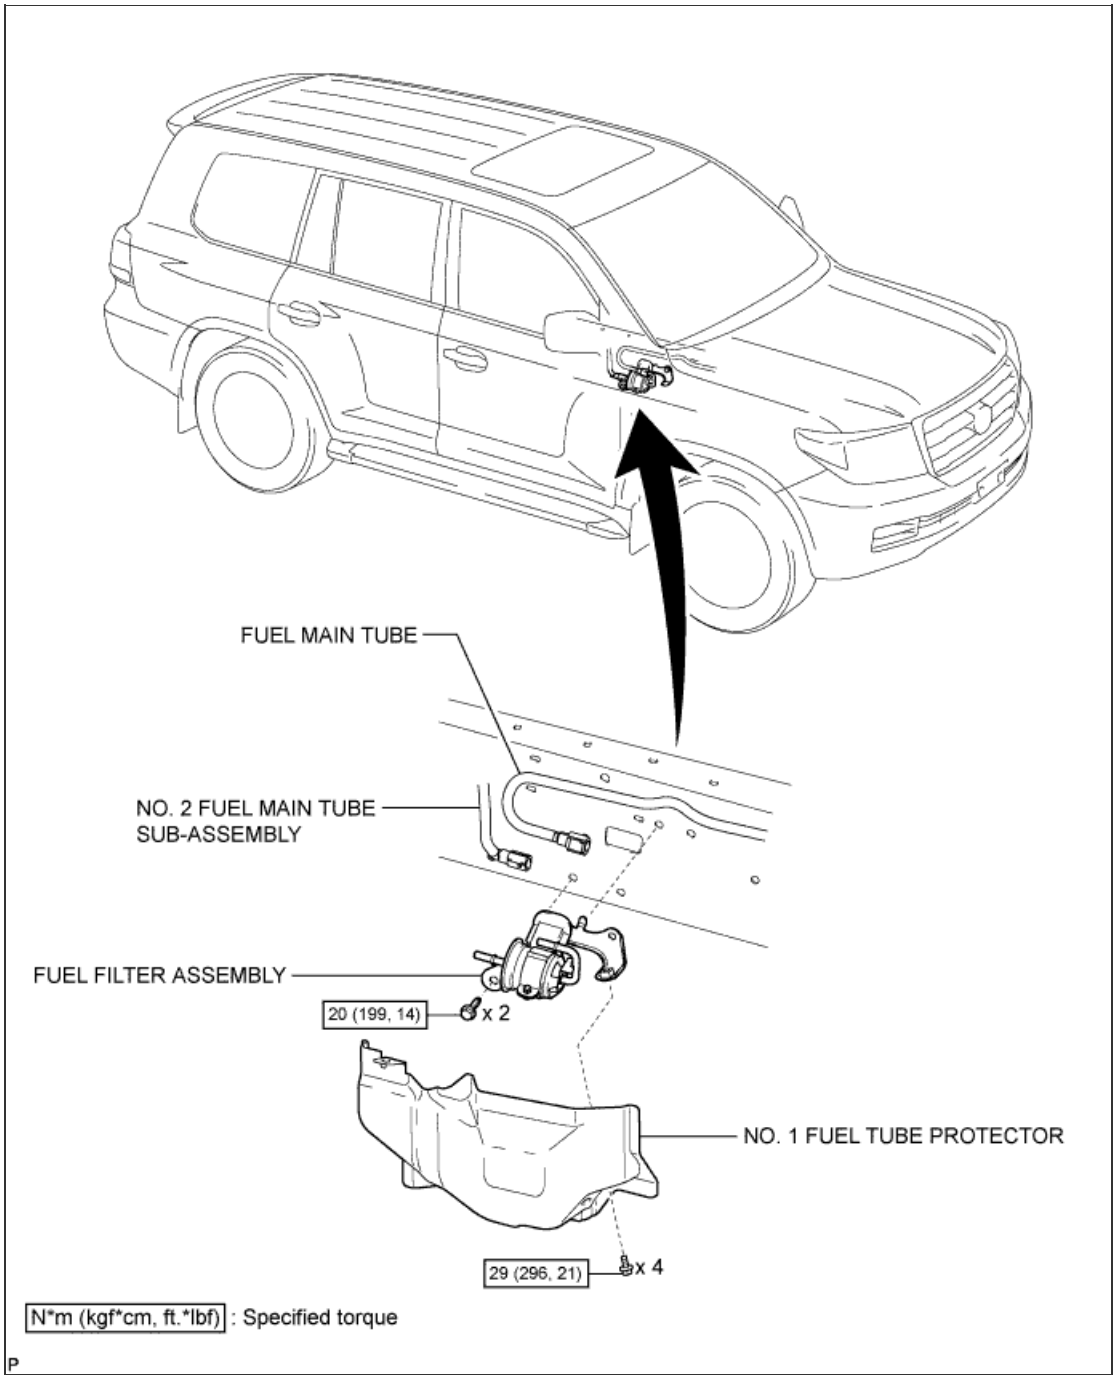
a. Install the under cover with the 10 bolts.

12. INSTALL FRONT FENDER SPLASH SHIELD SUB ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the bolts and screw.

13. INSTALL FRONT FENDER SPLASH SHIELD SUB ASSEMBLY RH



HINT:

Use the same procedures described for the LH side.

14. INSTALL COWL TOP VENTILATOR LOUVER SUB ASSEMBLY

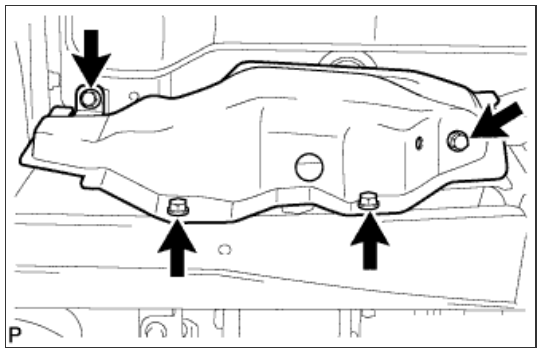
a. Install the cowl top ventilator louver (Click here).

for Preparation Click here

for Preparation Click here

1. DISCHARGE FUEL SYSTEM PRESSURE

a. Discharge the fuel system pressure (Click here).



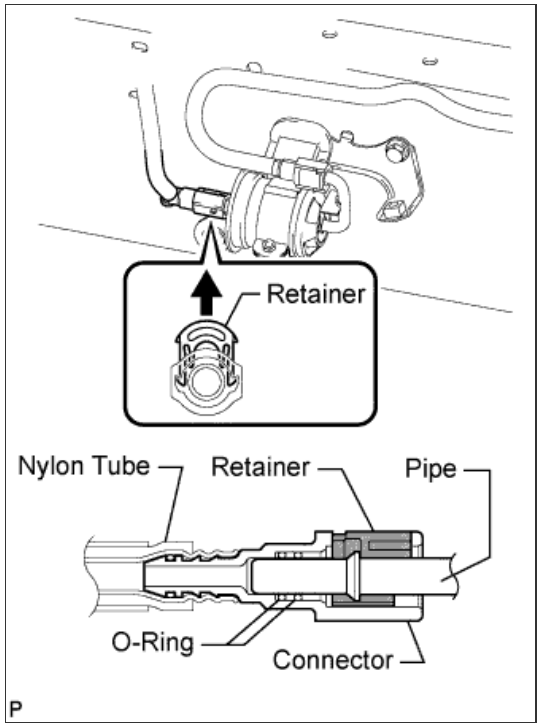
2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

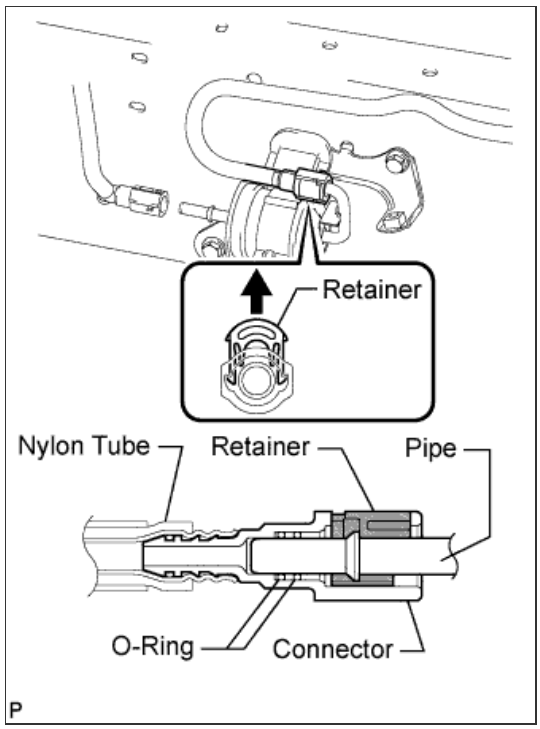
3. REMOVE NO. 1 FUEL TUBE PROTECTOR

a. Remove the 4 bolts and No. 1 fuel tube protector.



4. DISCONNECT NO. 2 FUEL MAIN TUBE SUB-ASSEMBLY

a. Pull up the retainer and disconnect the No. 2 fuel main tube.

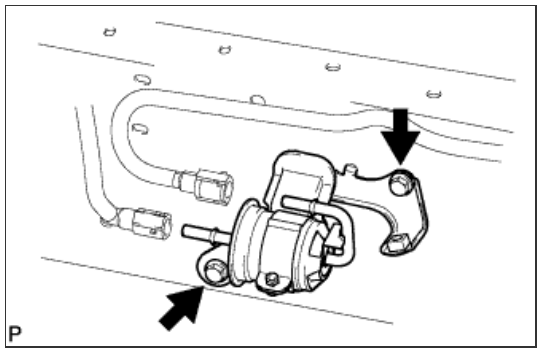


NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**

5. DISCONNECT FUEL MAIN TUBE

a. Pull up the retainer and disconnect the fuel main tube.



NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**

6. REMOVE FUEL FILTER ASSEMBLY

a. Remove the 2 bolts and fuel filter.

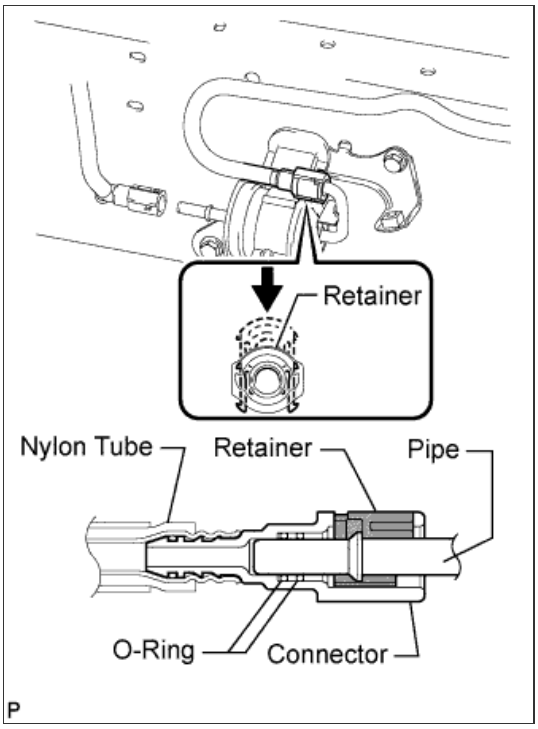
7. INSTALL FUEL FILTER ASSEMBLY

a. nstall the fuel filter with the 2 bolts.

Torque:
20 N*m{ 199 kgf*cm , 14 ft.*lbf }

8. CONNECT FUEL MAIN TUBE

a. Connect the fuel main tube and push the retainer.



HINT:

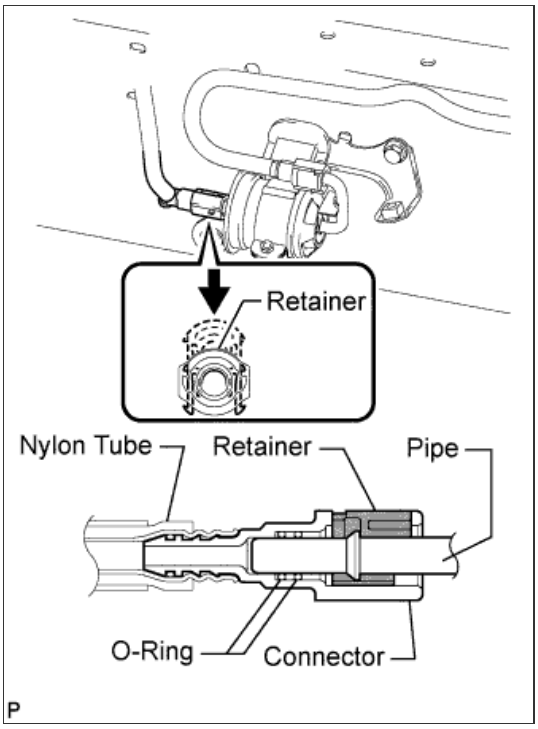
Push the parts together firmly until a click sound is heard.

NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**

- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

9. CONNECT NO. 2 FUEL MAIN TUBE SUB-ASSEMBLY



a. Connect the No. 2 fuel main tube and push the retainer.

HINT:

Push the parts together firmly until a click sound is heard.

NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

10. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

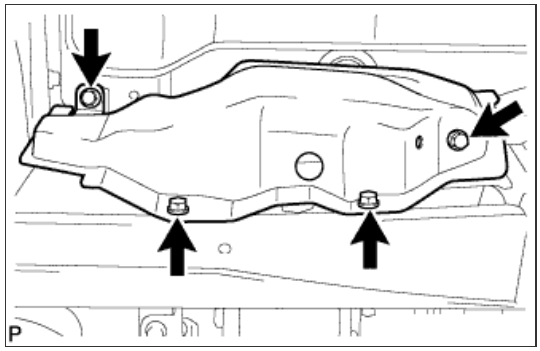
11. INSPECT FOR FUEL LEAK

a. Connect the intelligent tester to the DLC3.

b. urn the engine switch on ( ) and intelligent tester ON.

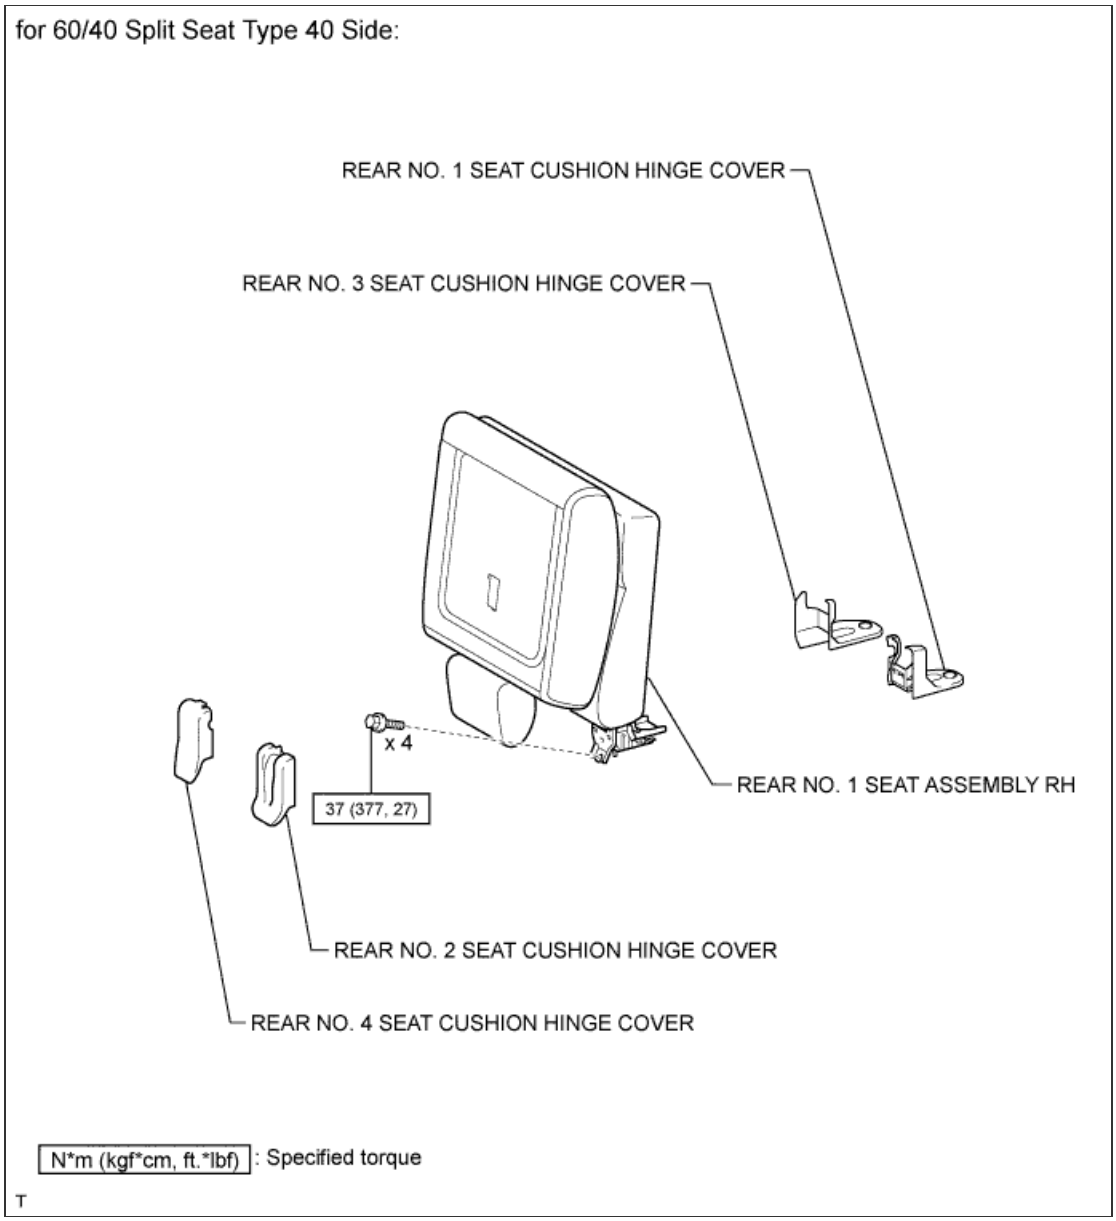
NOTICE:

Do not start the engine.



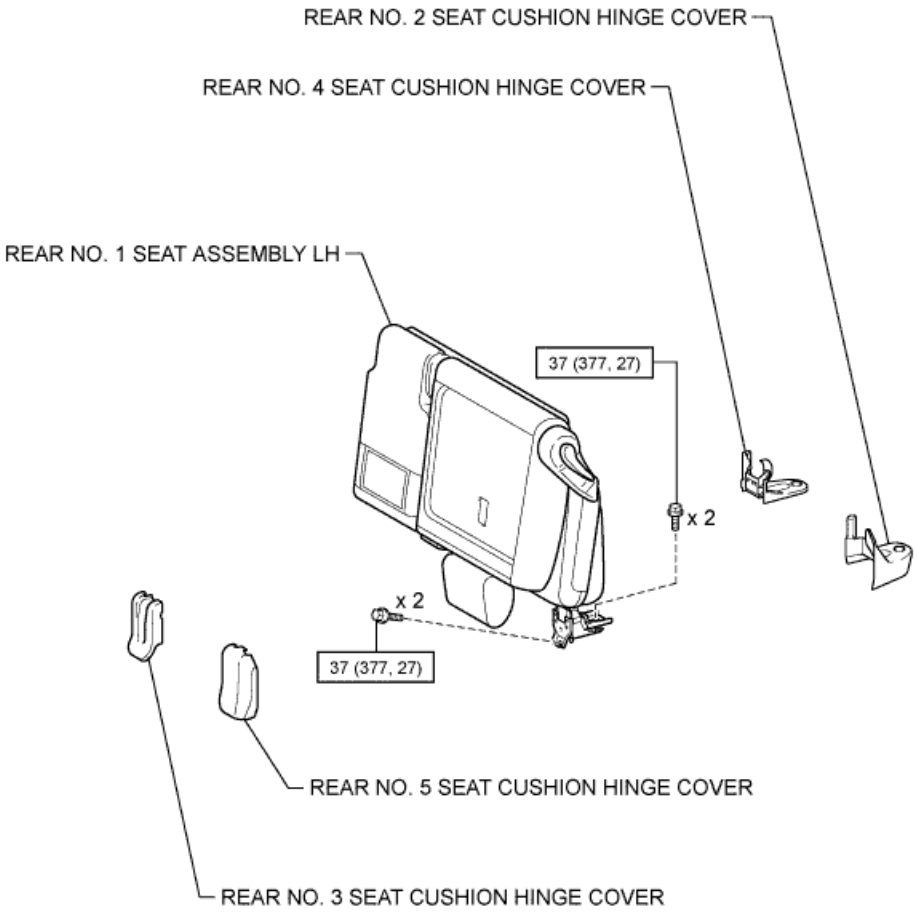
c. Enter the following menus: Powertrain / Engine and EC / Active st / Activate the Fuel Pump Speed Control.

d. Check that there are no fuel leaks after doing maintenance anywhere on the fuel system.



12. INSTALL NO. 1 FUEL TUBE PROTECTOR

a. nstall the No. 1 fuel tube protector and 4 bolts.



Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

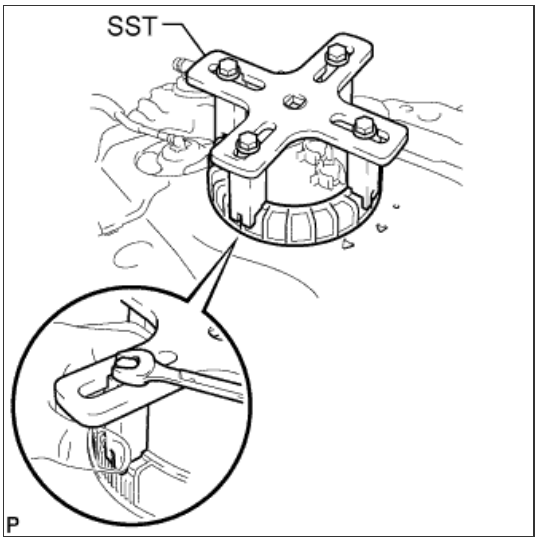
1. REMOVE FUEL TANK SUB-ASSEMBLY

a. Remove the fuel tank sub-assembly (Click here).



2. REMOVE FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY

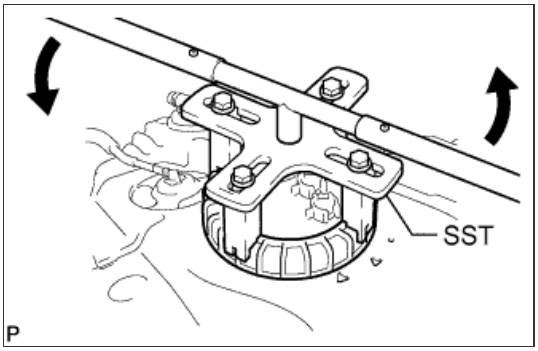
a. Set SST on the retainer.

SST
09808-14030

HINT:

- **Securely attach the claws of SST to the protrusion of the retainer and fix SST in place.**
- **Install SST while pressing the claws of SST against the retainer (towards the center of SST).**

b. Using SST, loosen the retainer.



SST
09808-14030

NOTICE:

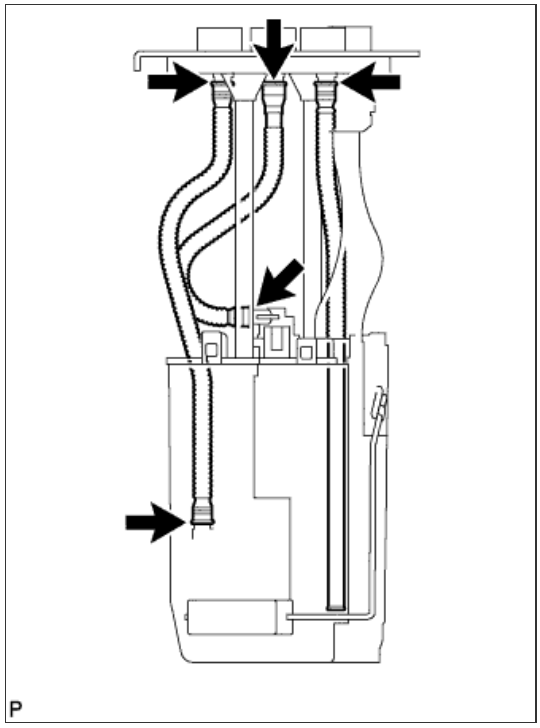
- **Do not use any tools other than those specified in this operation. Damage to the retainer or the fuel tank may result.**
- **While pressing down on SST so that the claws of SST do not slip off the protrusion of the retainer, turn the retainer counterclockwise to loosen it.**

HINT:

The protrusion of the retainer fit in the ends of SST.

Text in Illustration

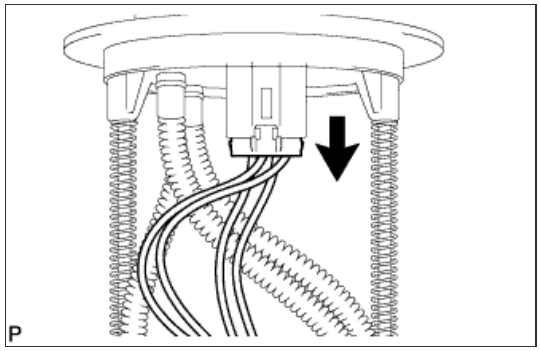
➡	Turn



c. Remove the retainer while holding the fuel suction tube assembly by hand.

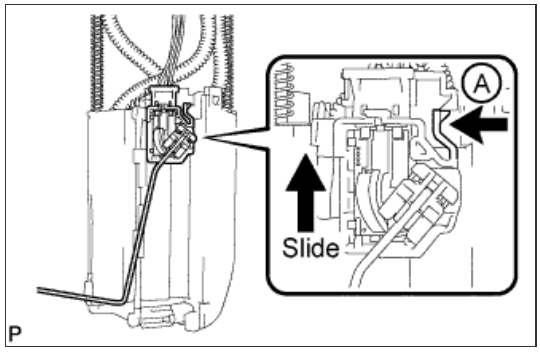
d. Remove the gasket from the fuel tank.

for Preparation Click here



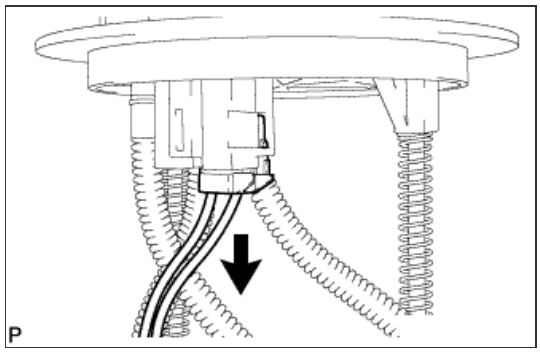
NOTICE:

Do not disconnect the hoses indicated in the illustration.



1. REMOVE FUEL SENDER GAUGE ASSEMBLY

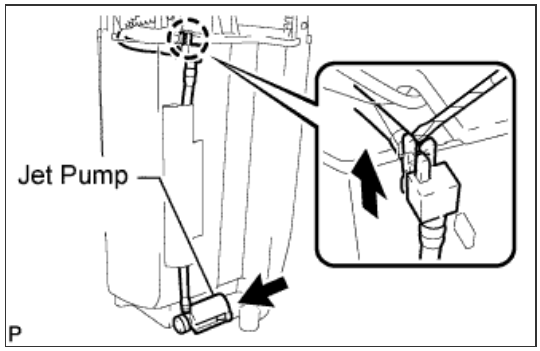
a. Disconnect the fuel sender gauge connector.



b. Press down on the sender gauge claw labeled A. Then slide the sender gauge upward to remove it.

2. REMOVE NO. 1 FUEL SUB-TANK

a. Disconnect the fuel pump connector.

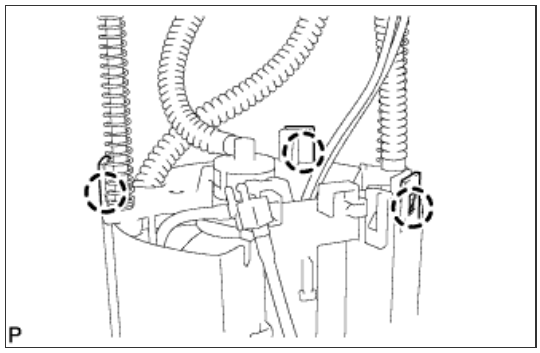


b. Disconnect the jet pump from the sub-tank.

c. Using a small screwdriver, detach the claw from the sub-tank.

HINT:

Tape the screwdriver tip before use.



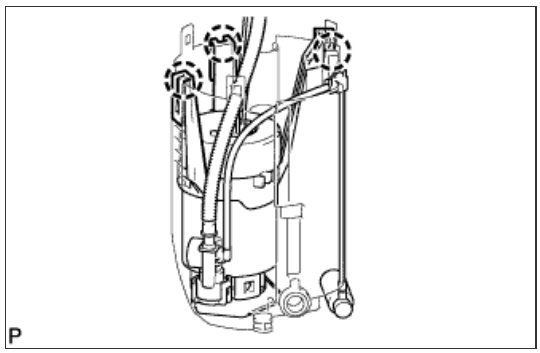
d. Using a screwdriver, detach the 3 claws from the claw holes.

NOTICE:

Do not damage the fuel sub-tank.

HINT:

Tape the screwdriver tip before use.



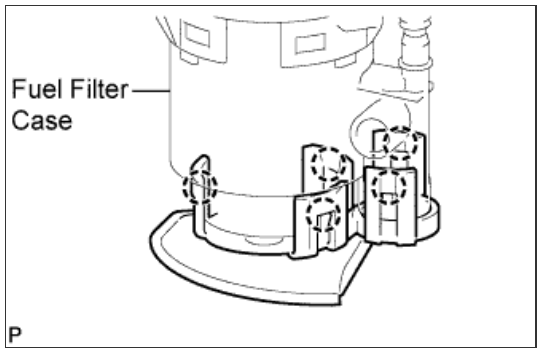
e. Using a screwdriver, detach the 3 claws from the claw holes.

NOTICE:

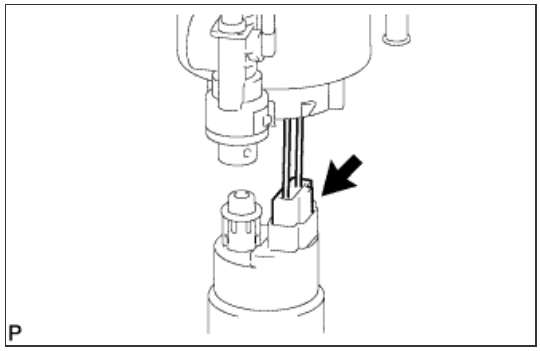
Do not damage the fuel sub-tank.

HINT:

Tape the screwdriver tip before use.

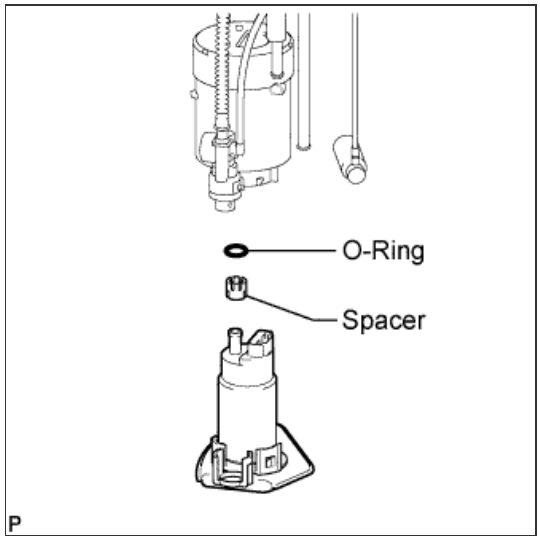


3. REMOVE FUEL PUMP



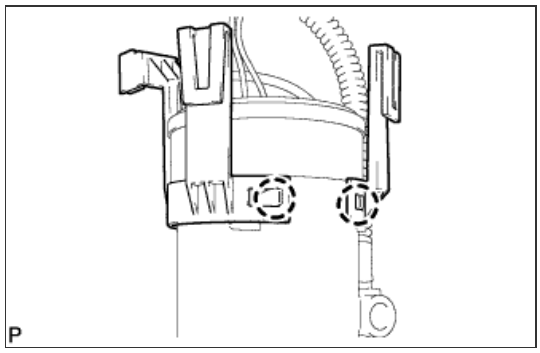
a. Using a screwdriver, detach the 5 claws from the claw holes and disconnect the fuel pump from the fuel filter case.

HINT:



Tape the screwdriver tip before use.

b. Disconnect the fuel pump wire harness connector from the fuel pump to remove it.



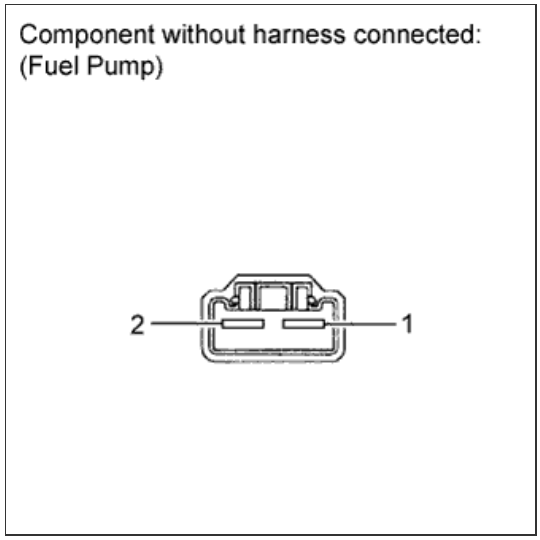
c. Remove the O-ring and spacer from the fuel pump.

4. REMOVE NO. 1 FUEL SUCTION SUPPORT

a. Detach the 2 claws from the claw holes to remove the fuel suction support.

for Preparation Click here

1. INSPECT FUEL PUMP



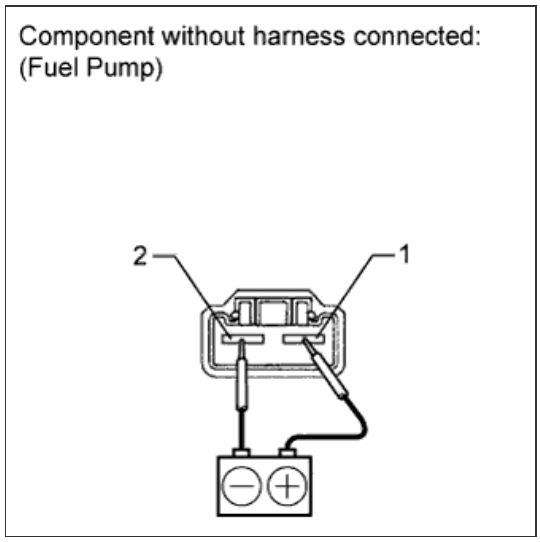
a. Inspect the resistance of the fuel pump.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	0.2 to 3.0 Ω

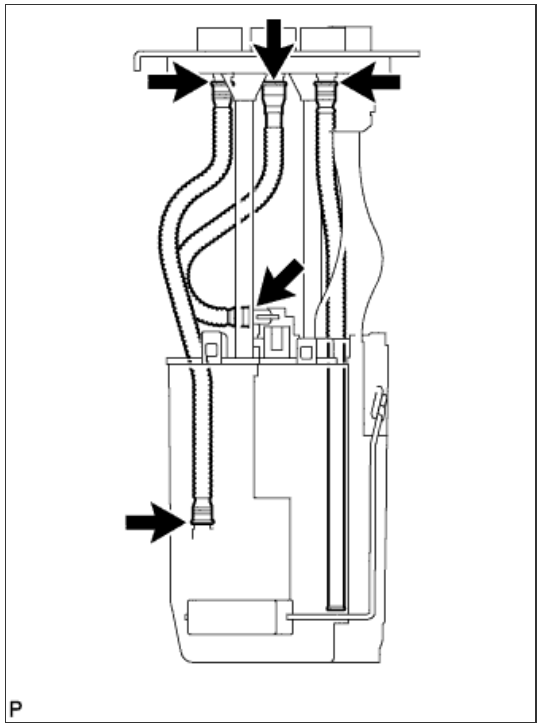
If the result is not as specified, replace the fuel pump.



b. Inspect the operation of the fuel pump.

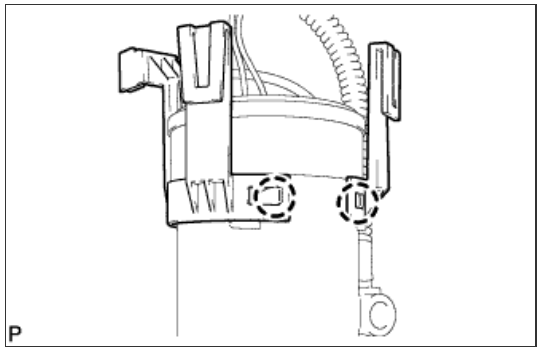
i. Connect the battery's positive (+) lead to terminal 1 of the connector, and the negative (-) lead to terminal 2. Check that the fuel pump operates.
If the result is not as specified, replace the fuel pump and fuel pump ECU.

NOTICE:



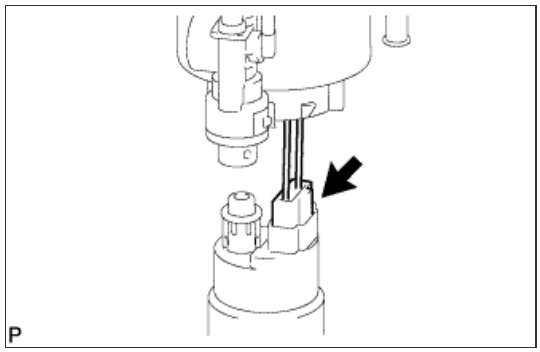
- **These tests must be performed thin 10 seconds to prevent the coil from burning out.**
- **eep the fuel pump as far a ay fro the battery as possible.**
- **I ay turn the voltage on and off on the battery side, not the fuel pump side.**
- **When the pump is locked and does not operate due to foreign matter being stuck, etc., replace the fuel pump ECU together th the fuel pump, as the fuel pump ECU may be damaged electrically.**

for Preparation Click here



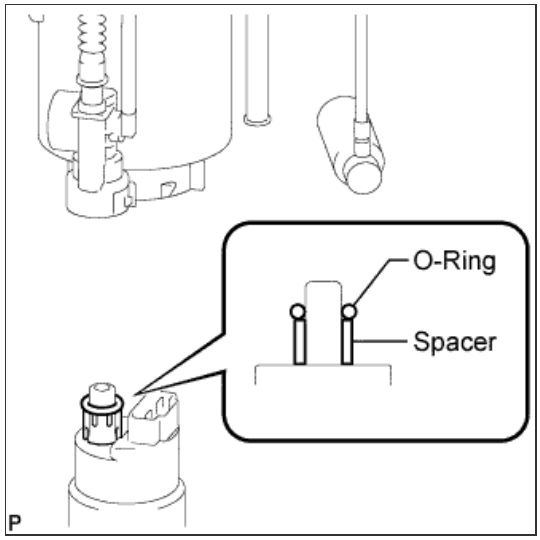
NOTICE:

Do not disconnect the hoses indicated in the illustration.

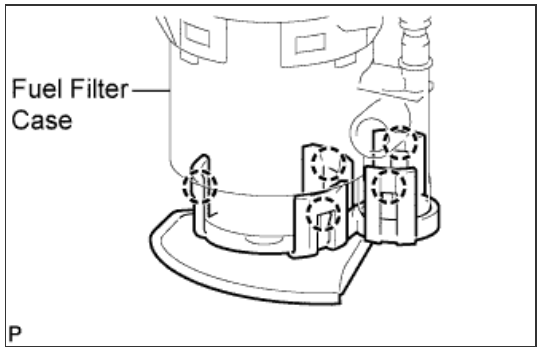


1. INSTALL NO. 1 FUEL SUCTION SUPPORT

a. Attach the 2 claws to the claw holes to install the fuel suction support.

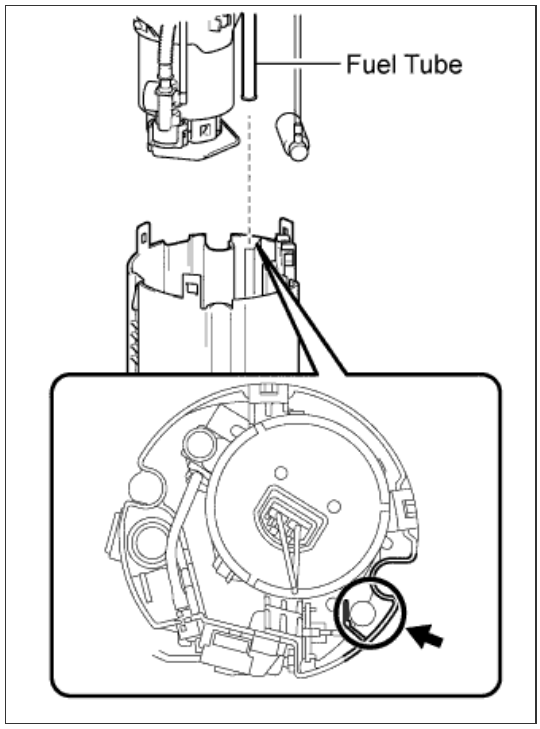


2. INSTALL FUEL PUMP

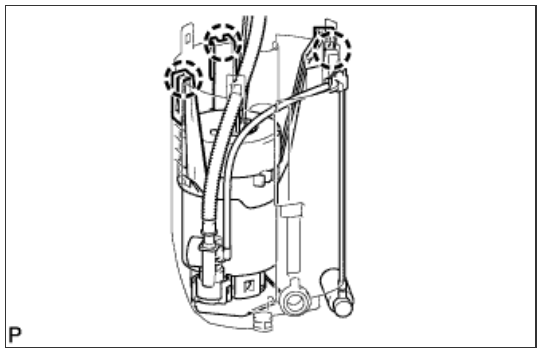


a. Connect the fuel pump wire harness connector to the fuel pump.

b. Apply a light coat of gasoline to a new ring. Then install the spacer and ring to the fuel pump.

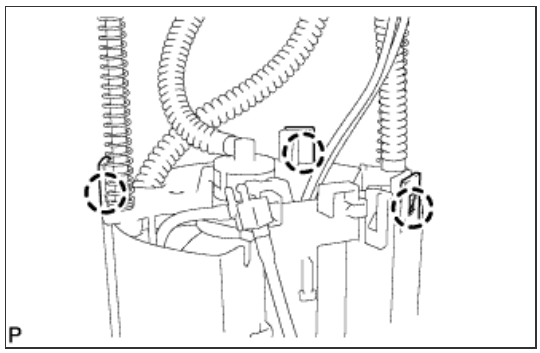


c. Attach the 5 claws to the claw holes and install the fuel pump to the fuel filter case.



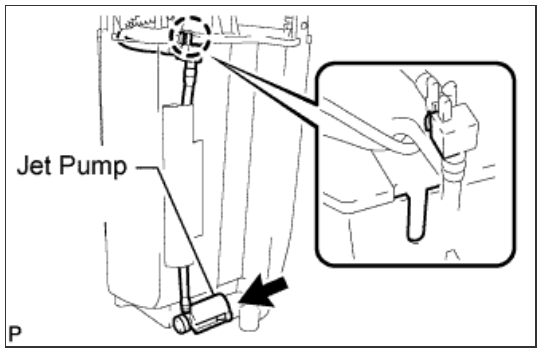
3. INSTALL NO. 1 FUEL SUB-TANK

NOTICE:

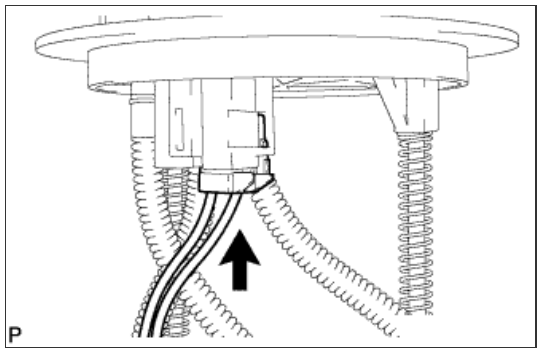


Make sure that the fuel tube passes into the section marked by the circle.

a. Attach the 3 claws to the claw holes and install the fuel sub-tank.



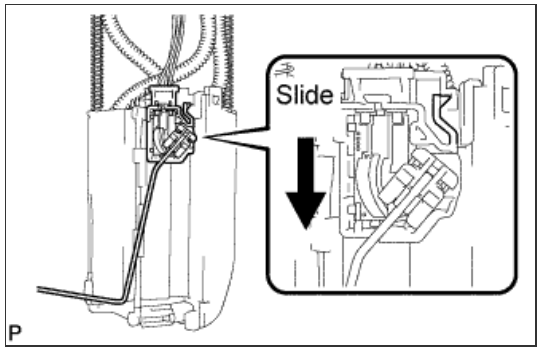
b. Attach the 3 claws to the claw holes.



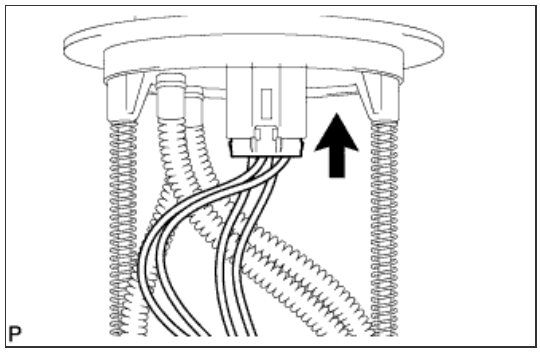
c. Install the tube part to the sub-tank.

i. Attach the claw on the end of the tube to the claw hole. Install the tube to the 2 clamps on the sub-tank.

d. Connect the jet pump to the sub-tank.



e. Connect the fuel pump connector.



4. INSTALL FUEL SENDER GAUGE ASSEMBLY

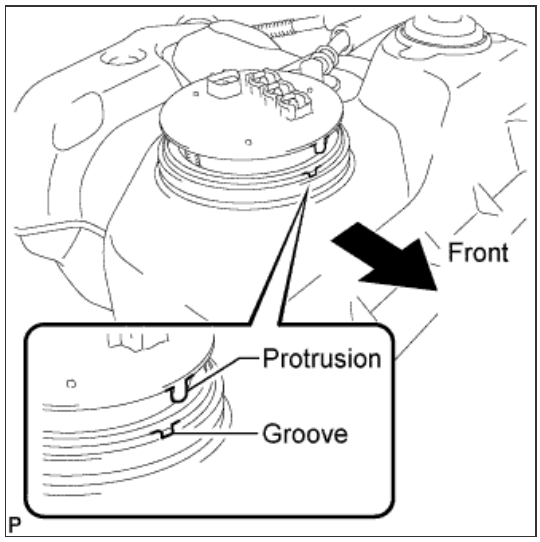
a. Set the sender gauge to the fuel sub-tank. Then slide the sender gauge downward to install it.

b. Connect the fuel sender gauge connector.

for Preparation Click here

1. INSTALL FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY

a. Apply a light coat of gasoline or grease to a new gasket, and install it to the fuel tank.



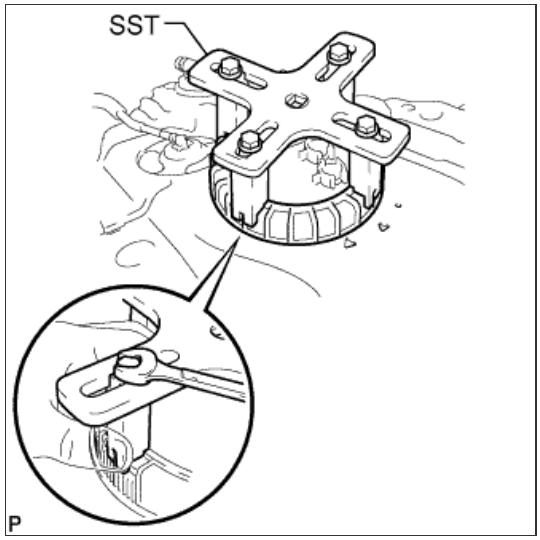
b. Install the fuel suction with pump and gauge tube into the fuel tank.

NOTICE:

Be careful not to bend the arm of the fuel sender gauge.

HINT:

Align the protrusion of the fuel suction with pump and gauge tube with the groove of the fuel tank.



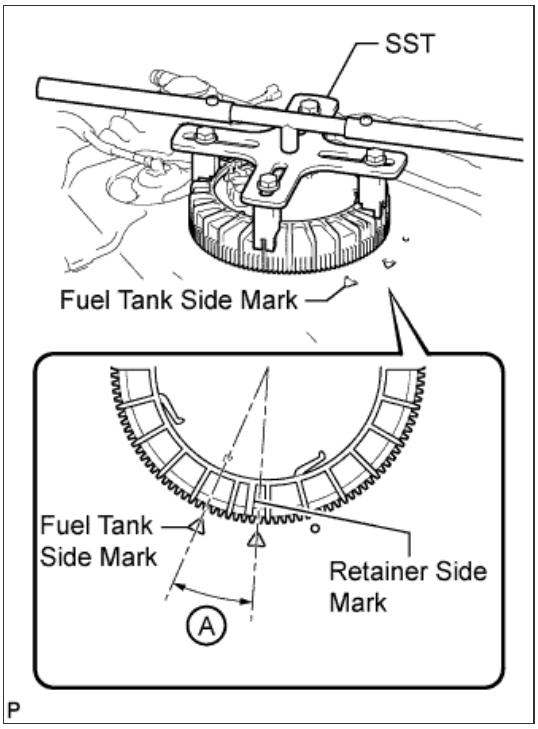
c. Put the retainer on the fuel tank. While holding the fuel suction with pump and gauge tube, tighten the retainer one complete turn by hand.

d. Set SST on the retainer.

SST
09808-14030

HINT:

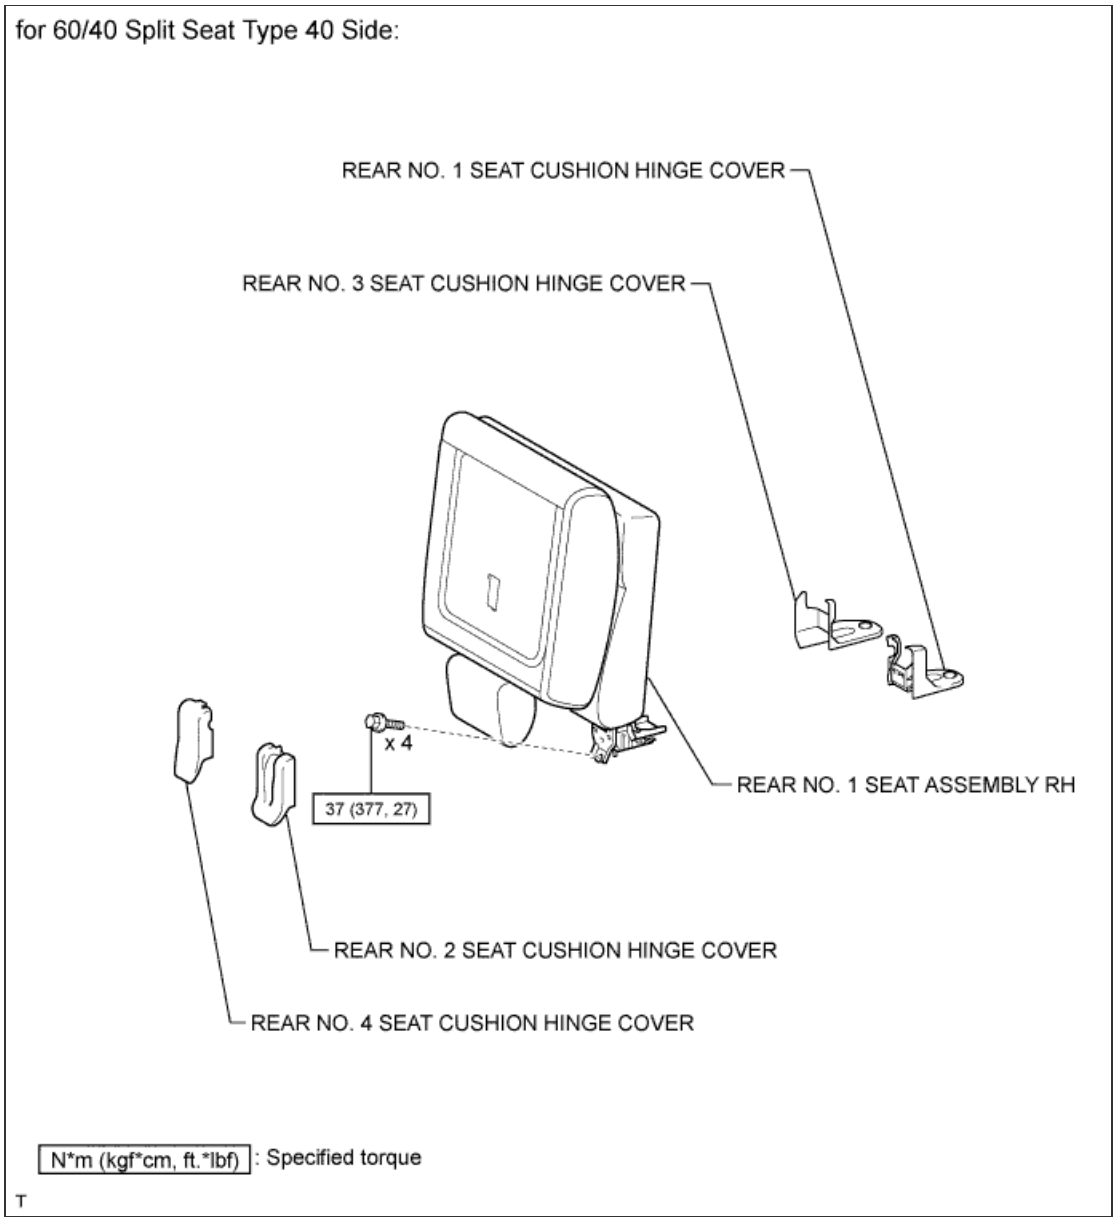
- **Hold the fuel suction tube assembly upright by hand to ensure that the fuel suction tube gasket is not moved out of position.**
- **Securely attach the claws of SST to the protrusions of the retainer and fix SST in place.**
- **Install SST while pressing the claws of SST against the retainer (toward the center of SST).**



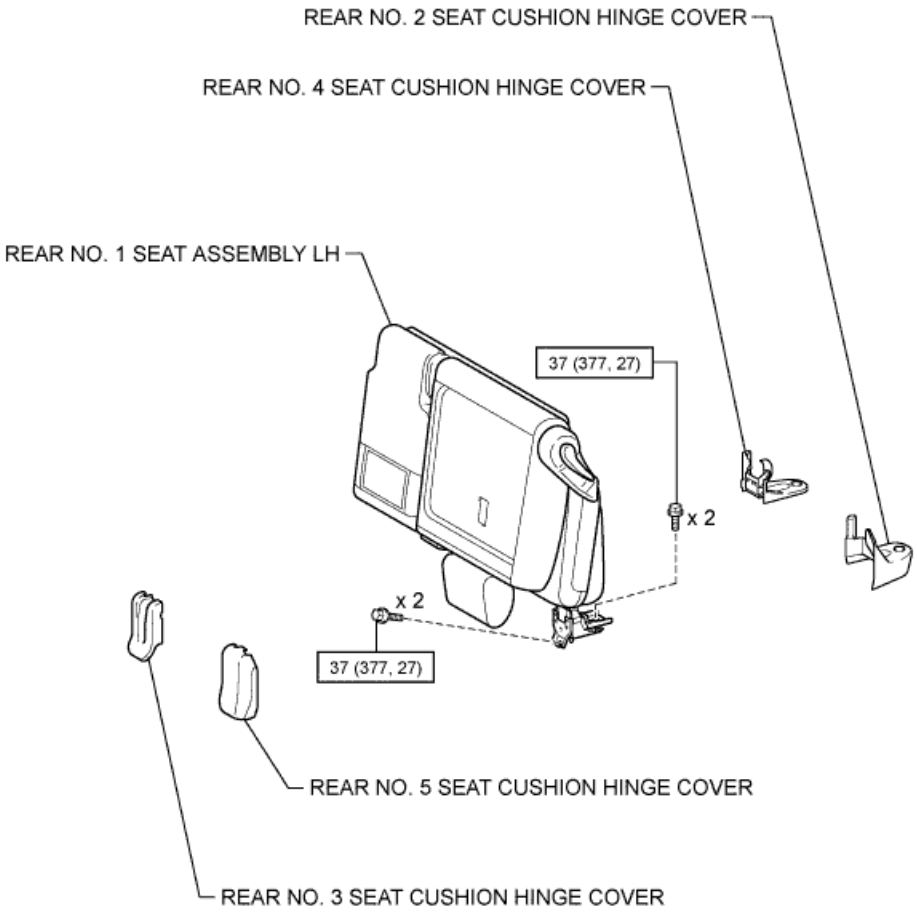
e. Using SST, tighten the retainer until the mark on the retainer is within range A on the fuel tank as shown in the illustration.

SST
09808-14030

HINT:



Fit the tips of SST onto the ribs of the retainer.



2. INSTALL FUEL TANK SUB-ASSEMBLY

a. Install the fuel tank sub-assembly (Click here).

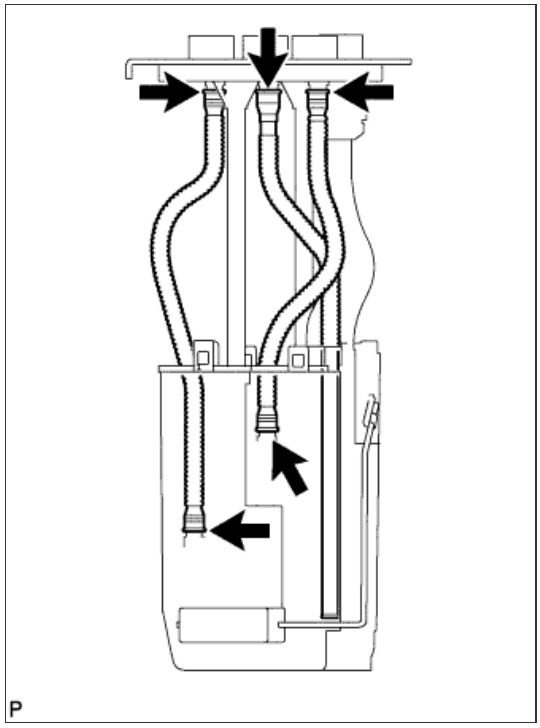
Text in Illustration

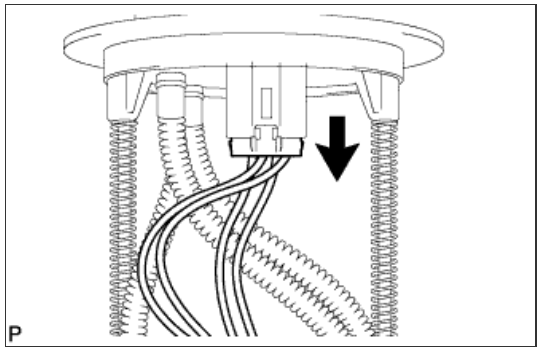
➡	Turn



c. Remove the retainer while holding the fuel suction tube assembly by hand.

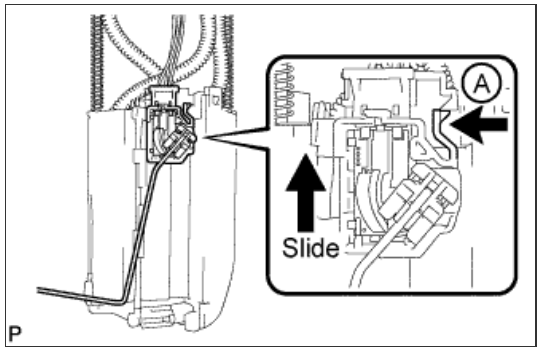
d. Remove the gasket from the fuel tank.

for Preparation Click here



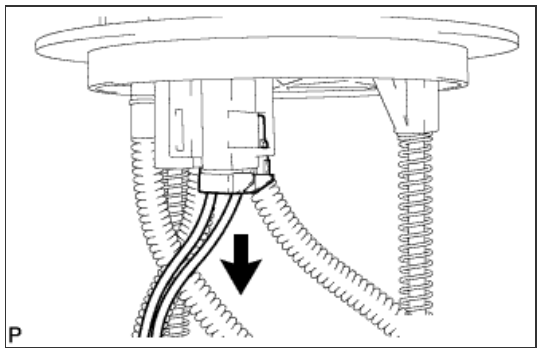
NOTICE:

Do not disconnect the hoses indicated in the illustration.



1. REMOVE FUEL SENDER GAUGE ASSEMBLY

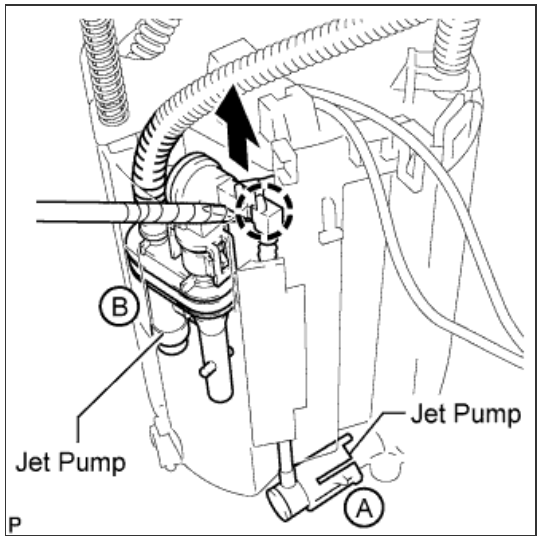
a. Disconnect the fuel sender gauge connector.



b. Press down on the sender gauge claw labeled A. Then slide the sender gauge upward to remove it.

2. REMOVE NO. 1 FUEL SUB-TANK

a. Disconnect the fuel pump connector.



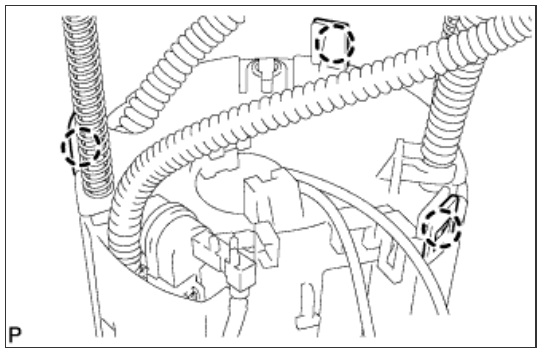
b. Disconnect the jet pump (labeled A) from the sub-tank.

c. Disconnect the jet pump (labeled B) from the sub-tank.

i. Using a small screwdriver, detach the claw from the sub-tank.

HINT:

Tape the screwdriver tip before use.



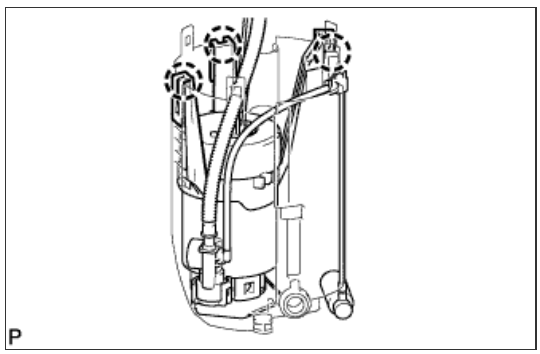
d. Using a screwdriver, detach the 3 claws from the claw holes.

NOTICE:

Do not damage the fuel sub-tank.

HINT:

Tape the screwdriver tip before use.



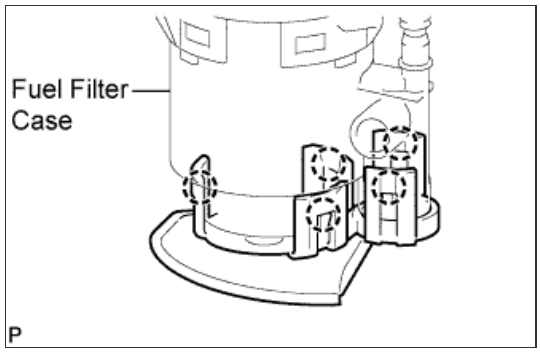
e. Using a screwdriver, detach the 3 claws from the claw holes.

NOTICE:

Do not damage the fuel sub-tank.

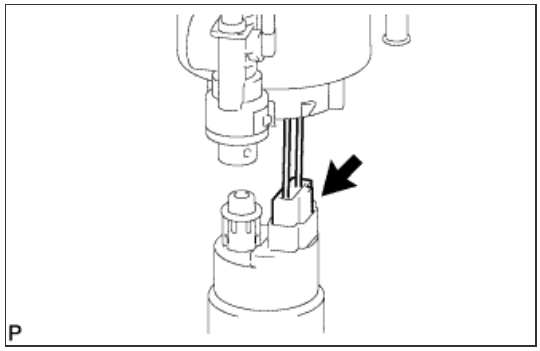
HINT:

Tape the screwdriver tip before use.



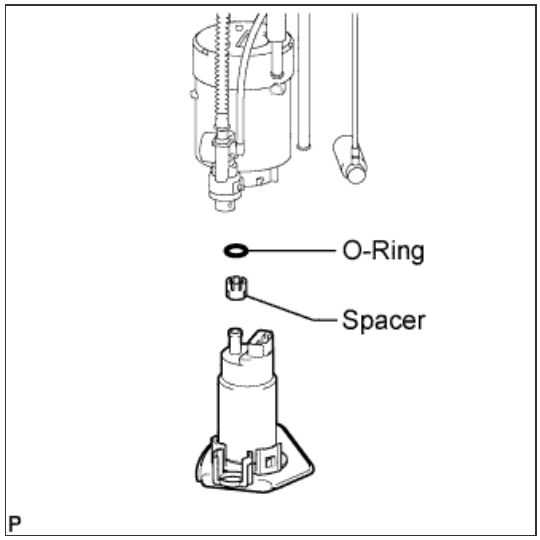
3. REMOVE FUEL PUMP

a. Using a screwdriver, detach the 5 claws from the claw holes and disconnect the



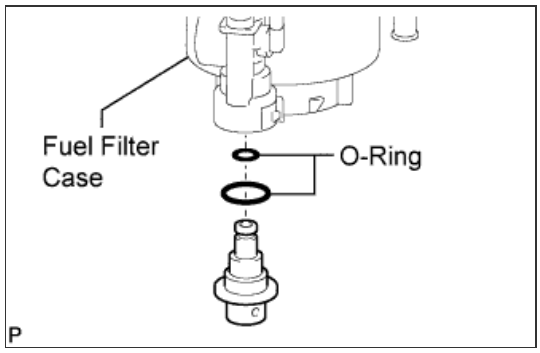
fuel pump from the fuel filter case.

HINT:



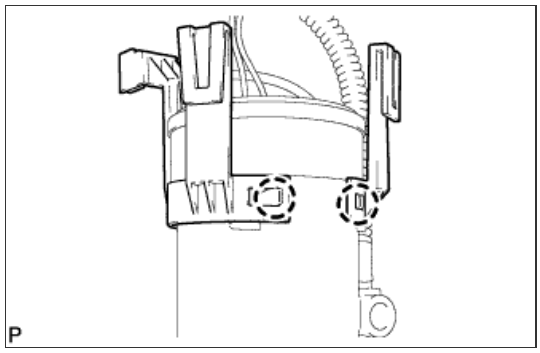
Tape the screwdriver tip before use.

b. Disconnect the fuel pump wire harness connector from the fuel pump to remove it.



c. Remove the O-ring and spacer from the fuel pump.

4. REMOVE FUEL MAIN VALVE ASSEMBLY



a. Remove the fuel main valve from the fuel filter case.

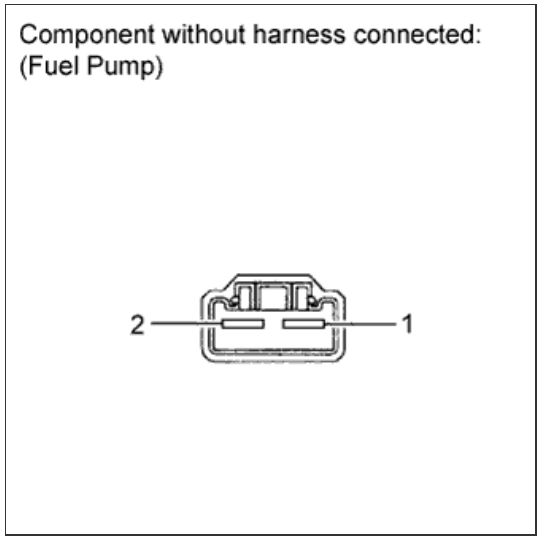
b. Remove the 2 O-rings from the fuel main valve.

5. REMOVE NO. 1 FUEL SUCTION SUPPORT

a. Detach the 2 claws from the claw holes to remove the fuel suction support.

for Preparation Click here

1. INSPECT FUEL PUMP



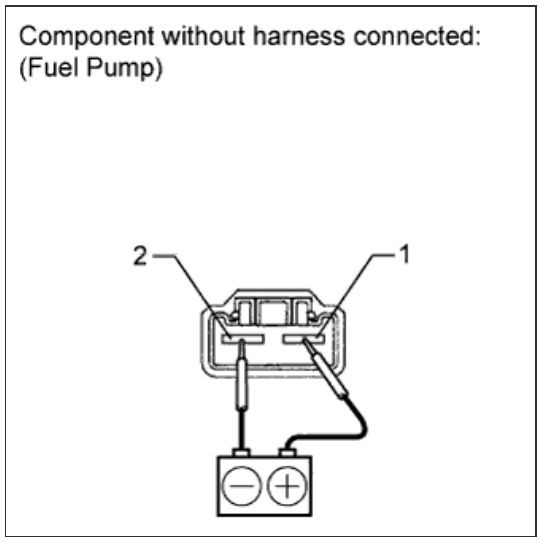
a. Inspect the resistance of the fuel pump.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	0.2 to 3.0 Ω

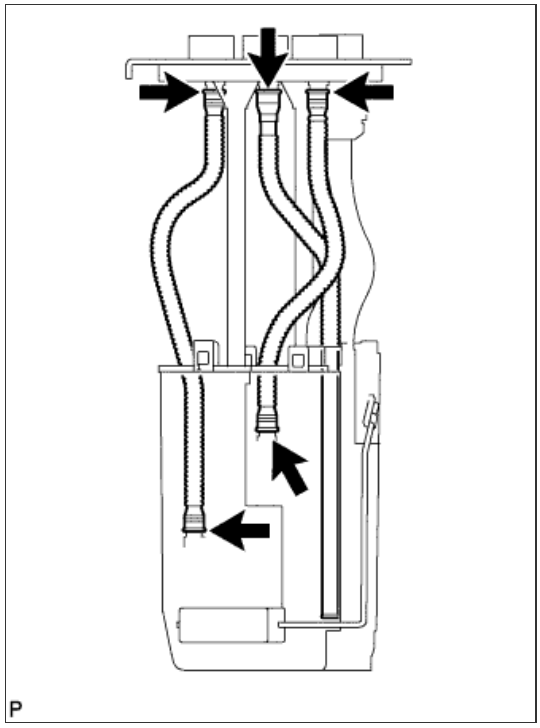
If the result is not as specified, replace the fuel pump.



b. Inspect the operation of the fuel pump.

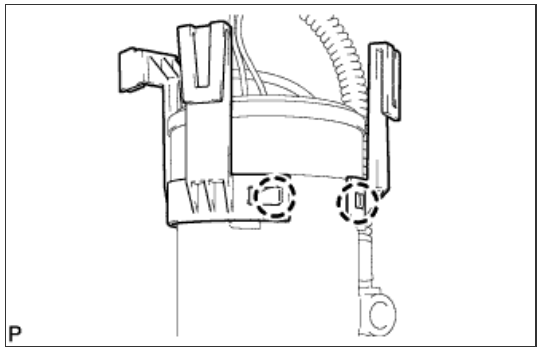
i. Connect the battery's positive (+) lead to terminal 1 of the connector, and the negative (-) lead to terminal 2. Check that the fuel pump operates.
If the result is not as specified, replace the fuel pump and fuel pump ECU.

NOTICE:



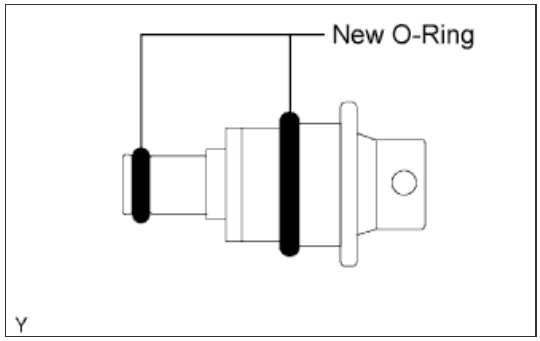
- **These tests must be performed thin 10 seconds to prevent the coil from burning out.**
- **eep the fuel pump as far a ay from the battery as possible.**
- **Al ays turn the voltage on and off on the battery side, not the fuel pump side.**
- **When the pump is locked and does not operate due to foreign matter being stuck, etc., replace the fuel pump ECU together th the fuel pump, as the fuel pump ECU may be damaged electrically.**

for Preparation Click here



NOTICE:

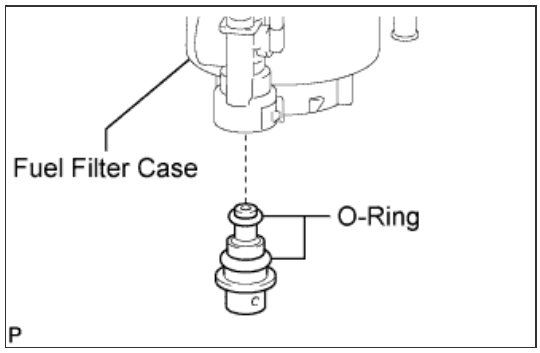
Do not disconnect the hoses indicated in the illustration.



1. INSTALL NO. 1 FUEL SUCTION SUPPORT

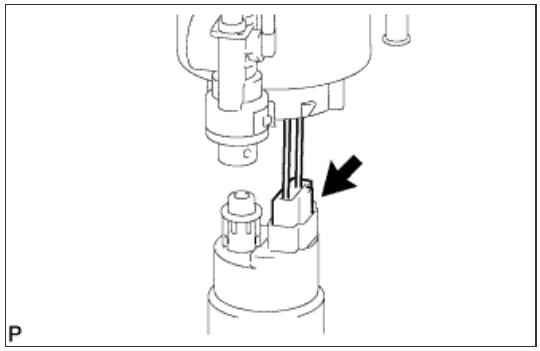
a. Attach the 2 claws to the claw holes to install the fuel suction support.

2. INSTALL FUEL MAIN VALVE ASSEMBLY



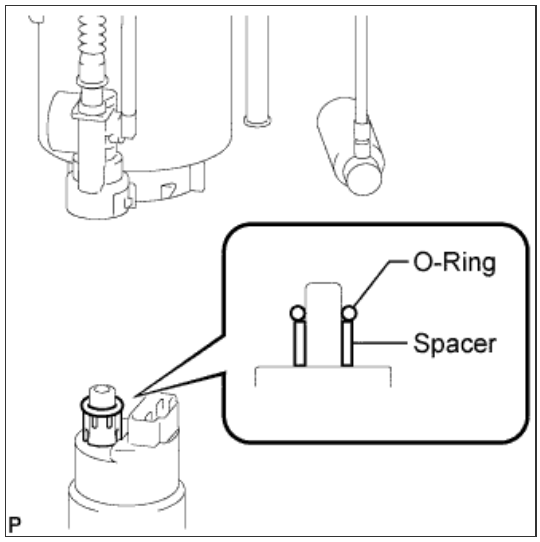
a. Apply a light coat of gasoline to 2 new O-rings, and install them onto the fuel main valve.

b. Install the fuel main valve to the fuel filter case.

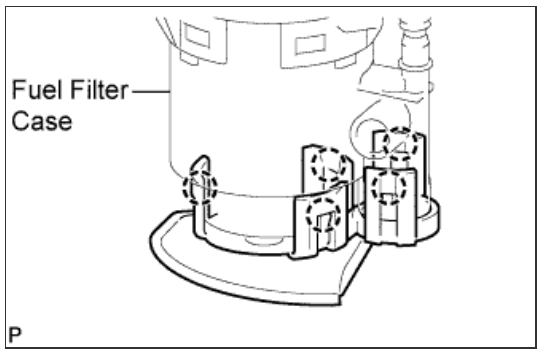


NOTICE:

Make sure the O-rings are not cut or pinched during the installation.

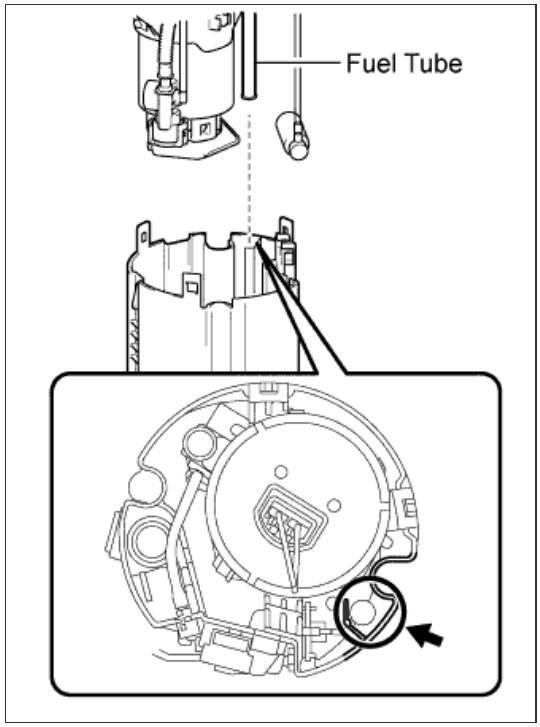


3. INSTALL FUEL PUMP

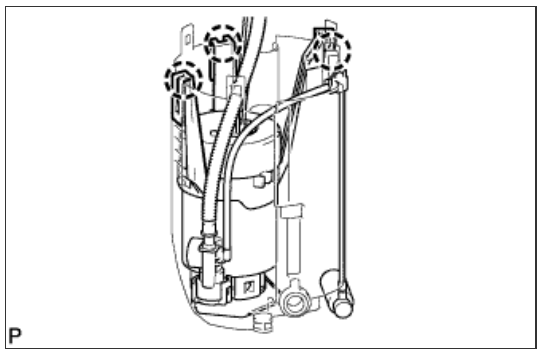


a. Connect the fuel pump wire harness connector to the fuel pump.

b. Apply a light coat of gasoline to a new O-ring. Then install the spacer and O-ring to the fuel pump.

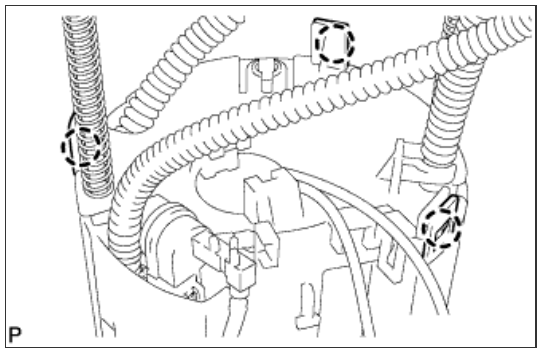


c. Attach the 5 claws to the claw holes and install the fuel pump to the fuel filter case.



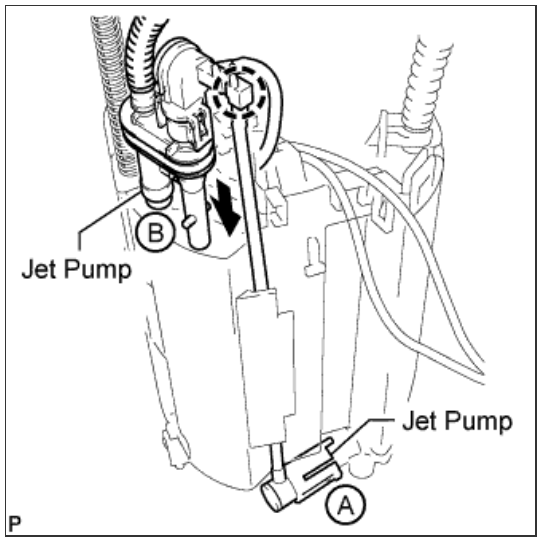
4. INSTALL NO. 1 FUEL SUB-TANK

NOTICE:

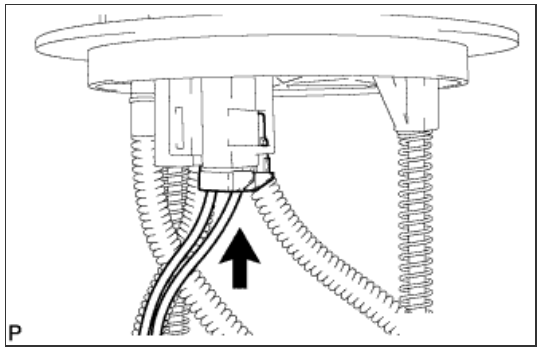


Make sure that the fuel tube passes into the section marked by the circle.

a. Attach the 3 claws to the claw holes and install the fuel sub-tank.



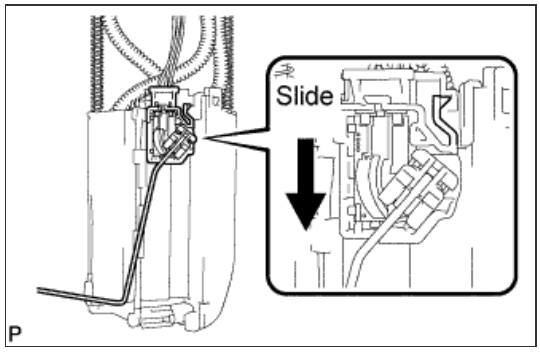
b. Attach the 3 claws to the claw holes.



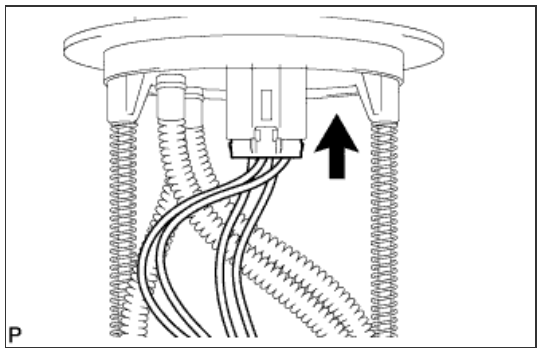
c. Connect the jet pump (labeled B) to the sub-tank.

i. Attach the claw on the end of the tube to the claw hole.

d. Connect the jet pump (labeled A) to the sub-tank.



e. Connect the fuel pump connector.



5. INSTALL FUEL SENDER GAUGE ASSEMBLY

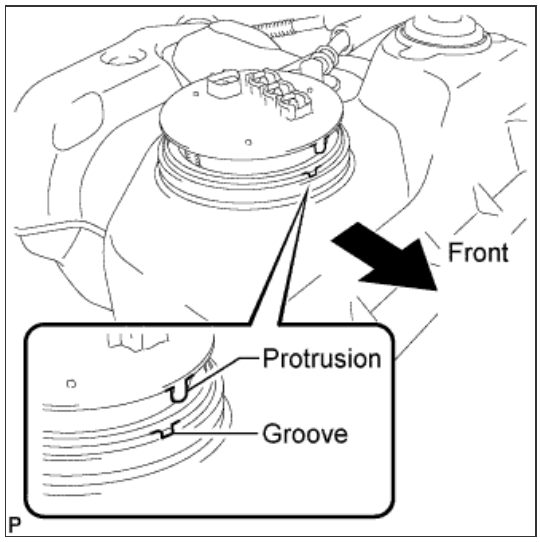
a. Set the sender gauge to the fuel sub-tank. Then slide the sender gauge downward to install it.

b. Connect the fuel sender gauge connector.

for Preparation Click here

1. INSTALL FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY

a. Apply a light coat of gasoline or grease to a new gasket, and install it to the fuel tank.



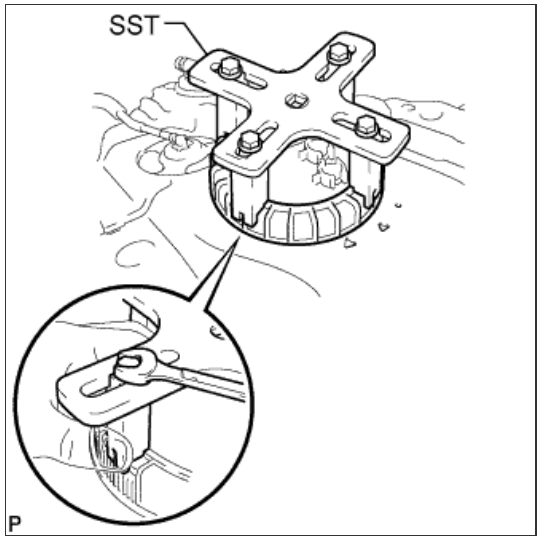
b. Install the fuel suction with pump and gauge tube into the fuel tank.

NOTICE:

Be careful not to bend the arm of the fuel sender gauge.

HINT:

Align the protrusion of the fuel suction with pump and gauge tube with the groove of the fuel tank.



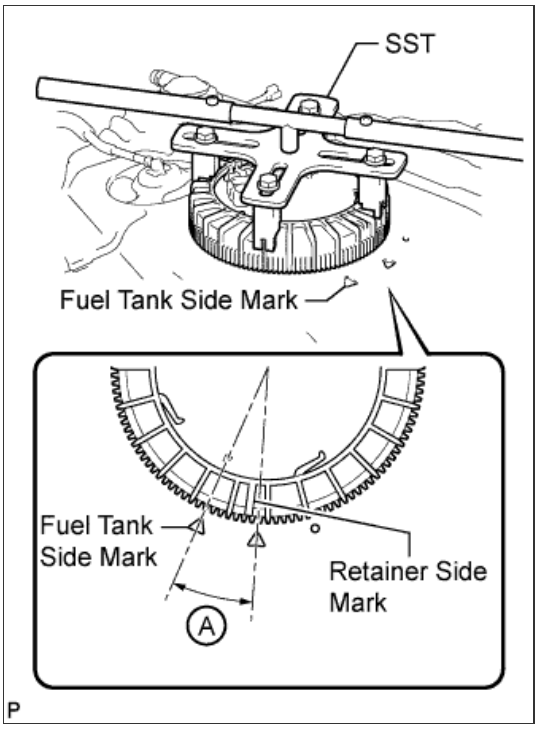
c. Put the retainer on the fuel tank. While holding the fuel suction with pump and gauge tube, tighten the retainer one complete turn by hand.

d. Set SST on the retainer.

SST
09808-14030

HINT:

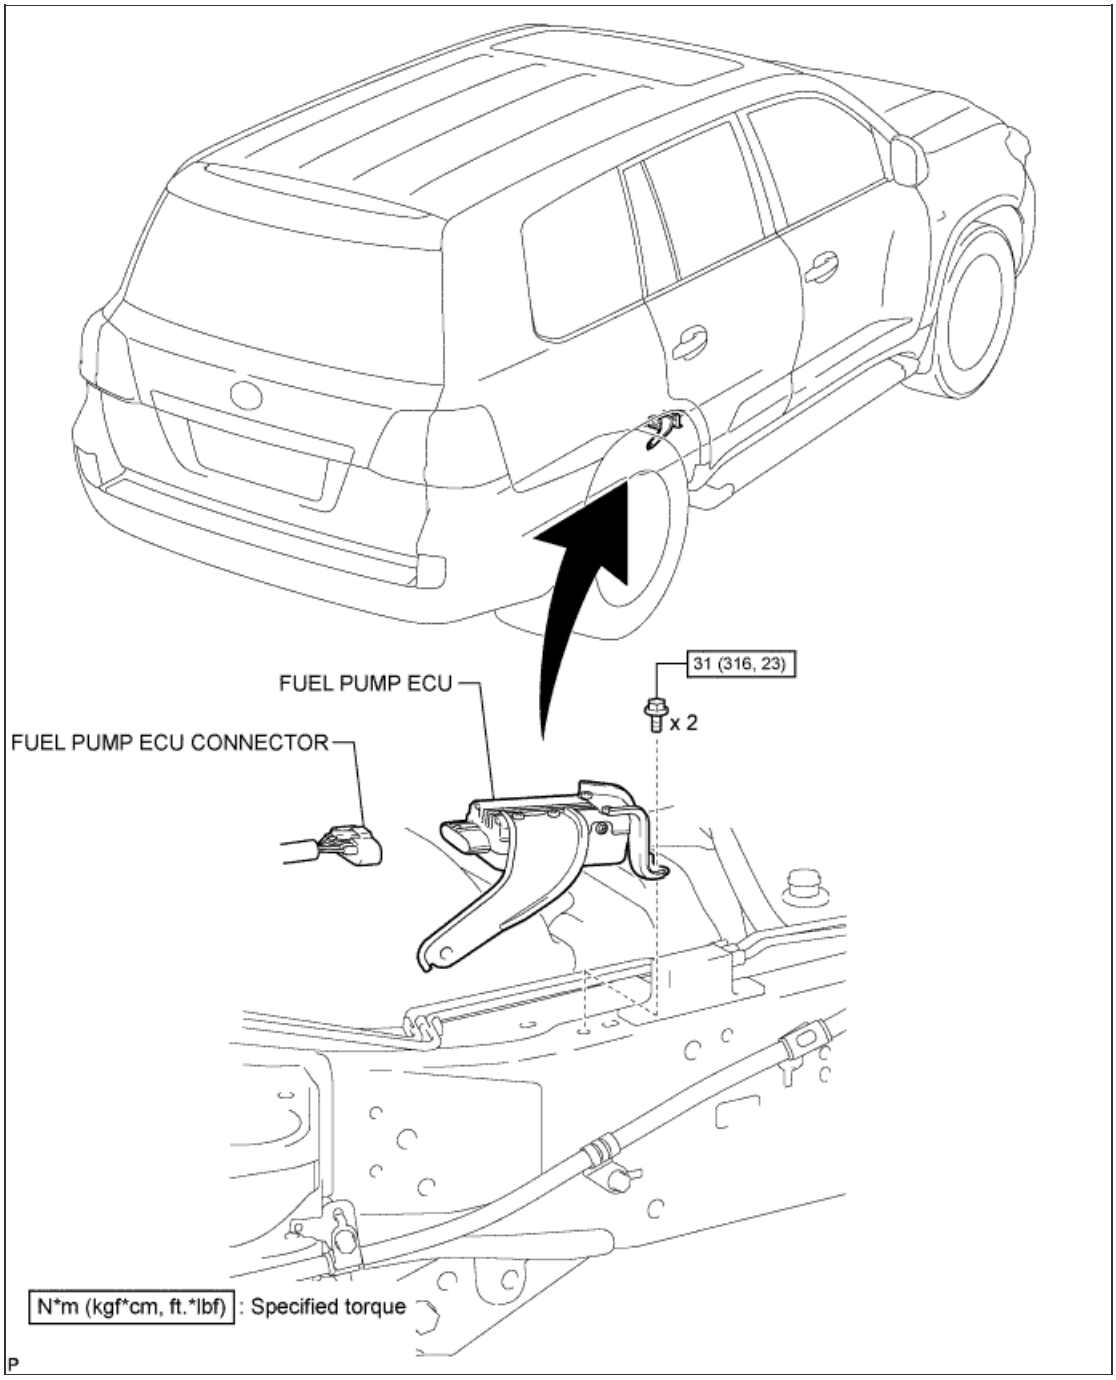
- **Hold the fuel suction tube assembly upright by hand to ensure that the fuel suction tube gasket is not moved out of position.**
- **Securely attach the claws of SST to the protrusions of the retainer and fix SST in place.**
- **Install SST while pressing the claws of SST against the retainer (toward the center of SST).**



e. Using SST, tighten the retainer until the mark on the retainer is within range A on the fuel tank as shown in the illustration.

SST
09808-14030

HINT:



Fit the tips of SST onto the ribs of the retainer.

2. INSTALL FUEL TANK SUB-ASSEMBLY

a. Install the fuel tank sub-assembly (Click here).

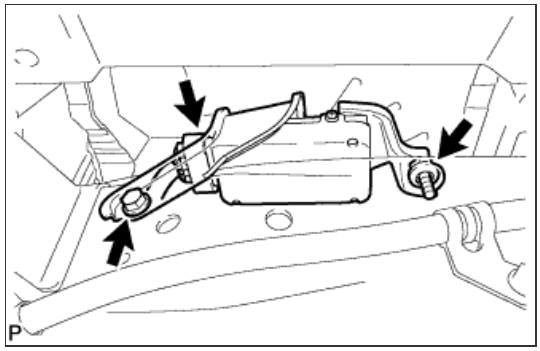
for Preparation Click here

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).



2. REMOVE FUEL PUMP ECU

a. Disconnect the fuel pump ECU connector.

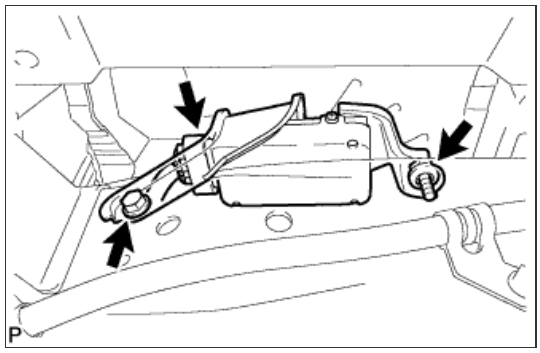
b. Remove the 2 bolts and fuel pump ECU.

NOTICE:

Make sure the fuel pump ECU is not sub ected to physical shocks such as being dropped, etc.

for Preparation Click here

1. INSTALL FUEL PUMP ECU



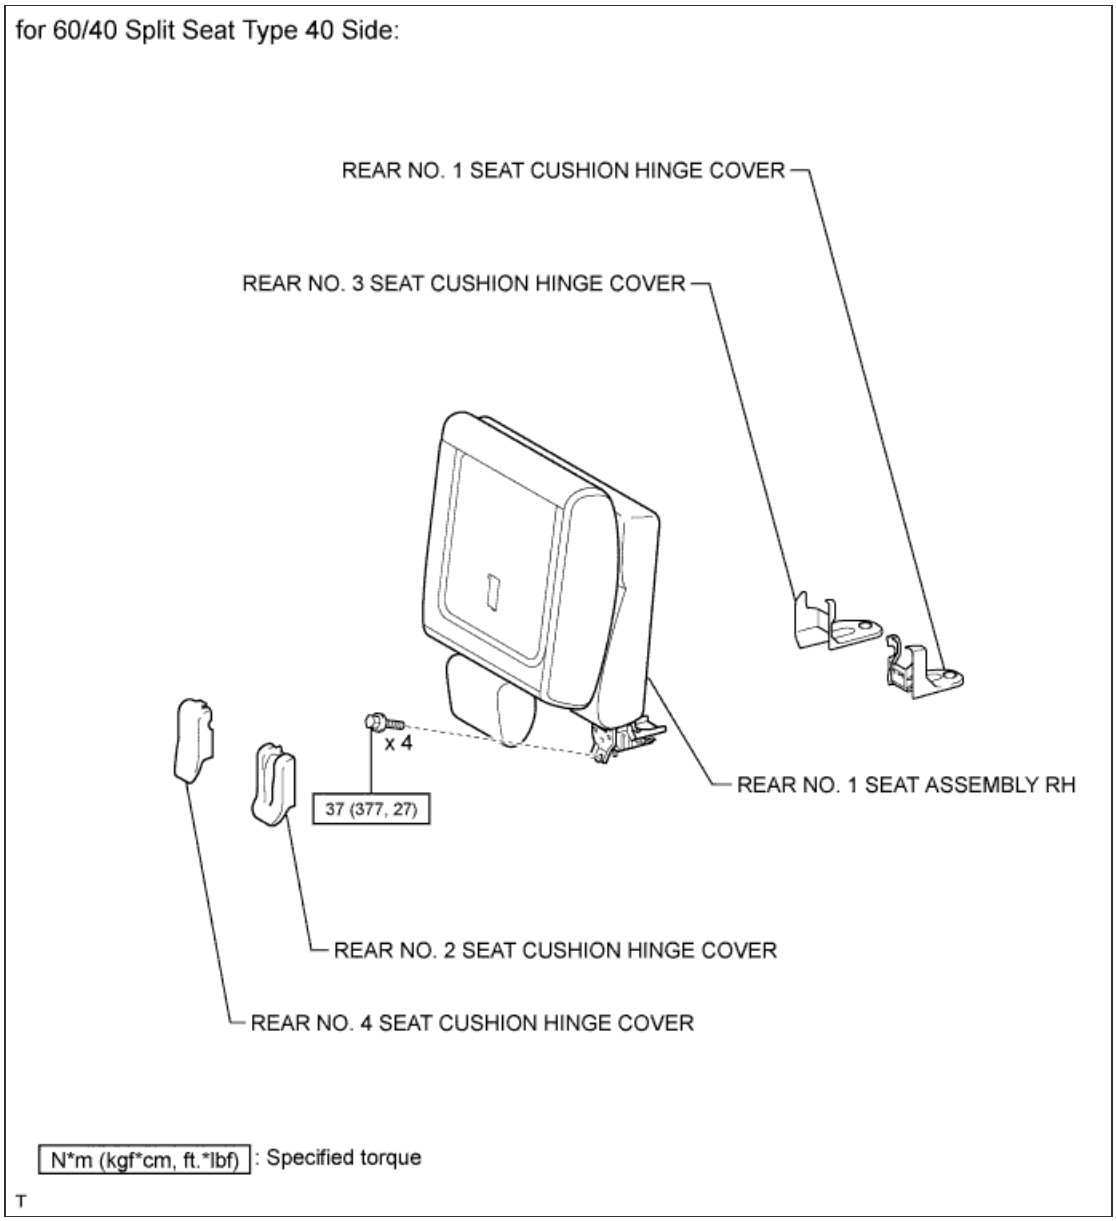
a. Install the fuel pump ECU with the 2 bolts.

Torque:
31 N*m{ 316 kgf*cm , 23 ft.*lbf }

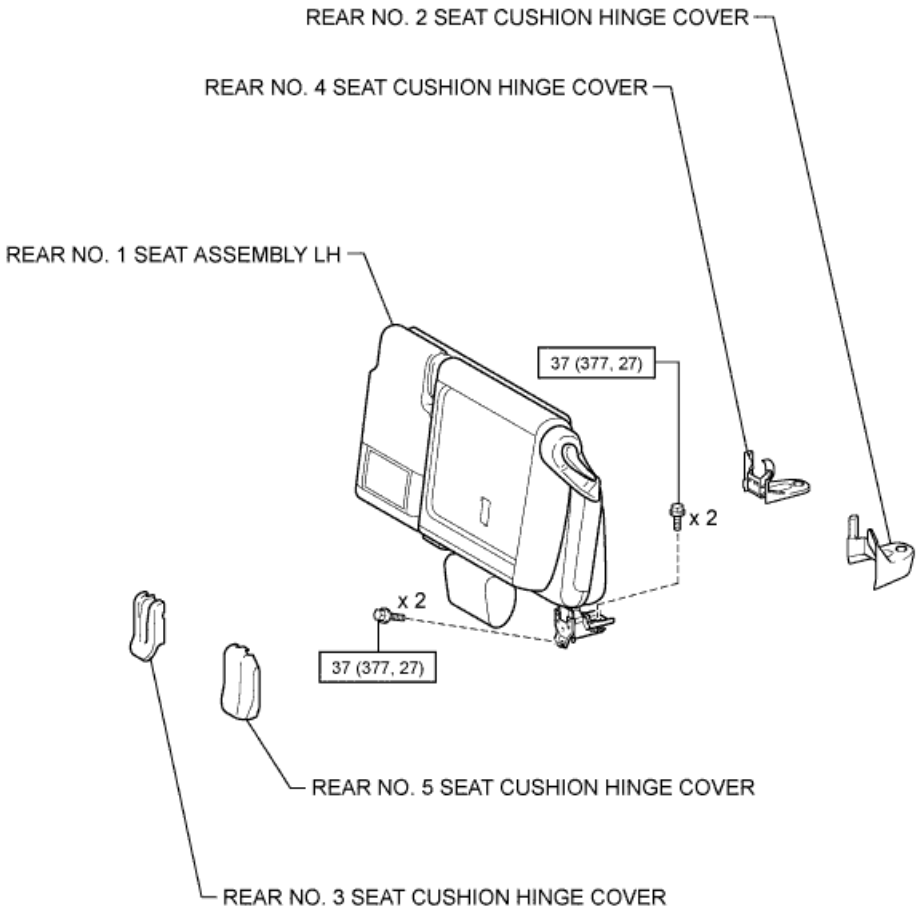
NOTICE:

Do not use the fuel pump ECU if it has been subjected to physical shocks such as being dropped, etc.

b. Connect the fuel pump ECU connector.



2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

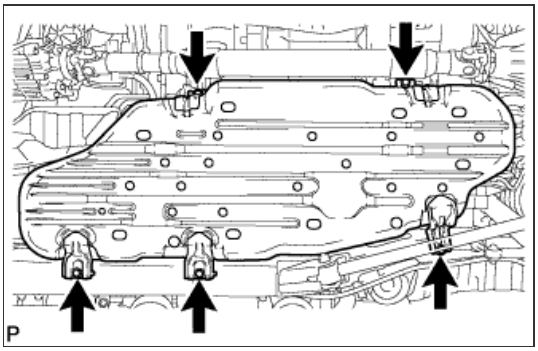
for Preparation Click here



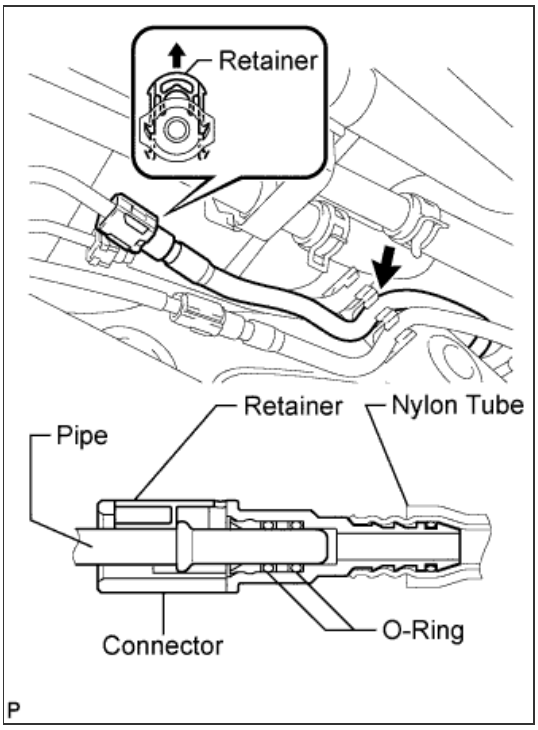
1. DISCHARGE FUEL SYSTEM PRESSURE

a. Discharge the fuel system pressure (Click here).

2. REMOVE FUEL TANK CAP ASSEMBLY

3. REMOVE NO. 1 FUEL TANK PROTECTOR SUB-ASSEMBLY

a. Remove the 5 bolts and fuel tank protector.



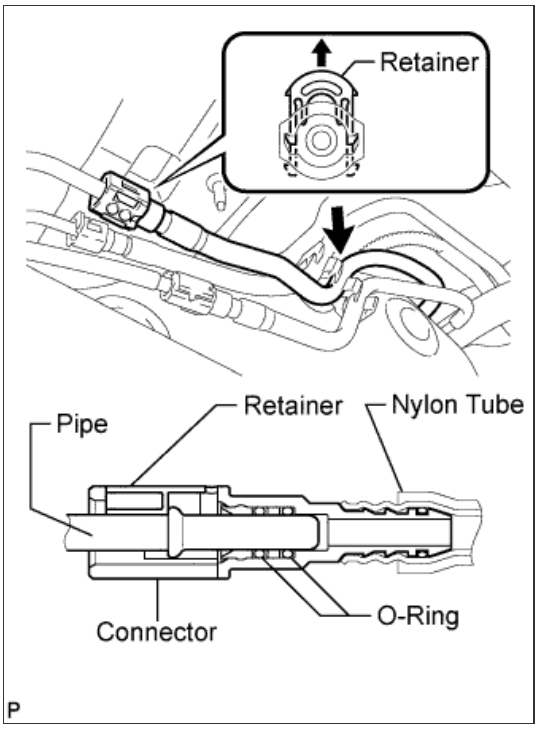
4. DISCONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY (for Single Tank Type)

a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank main tube.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**



5. DISCONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY (for Double Tank Type)

a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank main tube.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**

6. DRAIN FUEL

a. Connect the cable to the negative (-) battery terminal.

b. Connect the intelligent tester to the DLC3.

c. Turn the ignition switch to ON.

NOTICE:

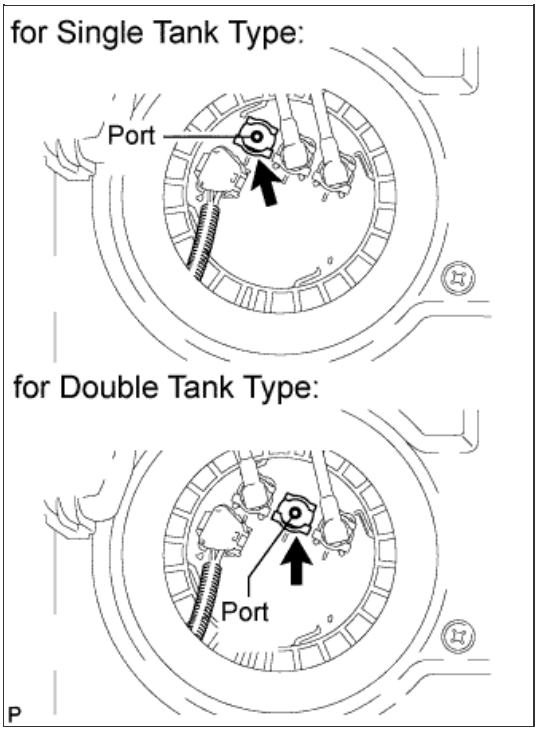
Do not start the engine.

d. Turn the intelligent tester ON.

e. Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Fuel Pump / Speed.

CAUTION:

- **Do not smoke or be near an open flame when working on the fuel system.**
- **Secure good ventilation.**
- **Keep gasoline away from rubber or leather parts.**



HINT:

for Single Tank Type:

If the fuel pump does not operate remove the fuel tube joint clip and No. 1 fuel tube joint and drain fuel from the port shown in the illustration.

for Double Tank Type:

If the fuel pump does not operate remove the fuel tube joint clip and disconnect the fuel tank return tube and drain fuel from the port shown in the illustration.

7. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

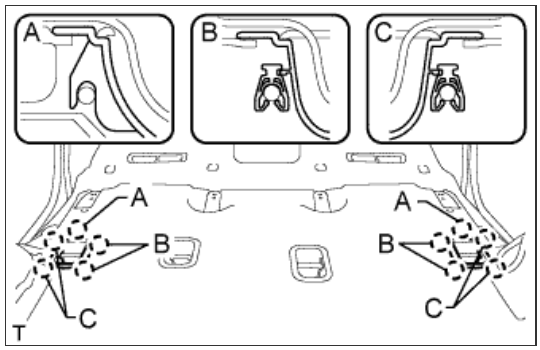
When disconnecting the cable some systems need to be initialized after the cable is reconnected (Click here).

8. REMOVE REAR NO. 1 SEAT ASSEMBLY RH (for 60/40 Split Seat Type 40 Side)

a. Remove the rear No. 1 seat assembly RH (Click here).

9. REMOVE REAR NO. 1 SEAT ASSEMBLY LH (for 60/40 Split Seat Type 60 Side)

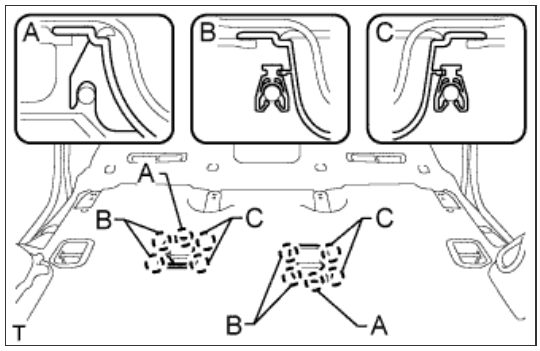
a. Remove the rear No. 1 seat assembly LH (Click here).



10. REMOVE REAR NO. 2 SEAT ASSEMBLY

a. for Face to Face Seat Type:
Remove the rear No. 2 seat assembly (Click here).

b. except Face to Face Seat Type:
Remove the rear No. 2 seat assembly (Click here).

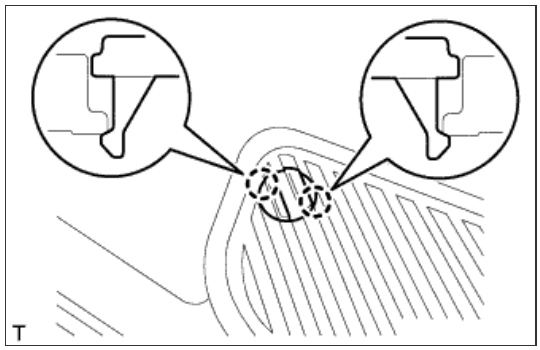


11. REMOVE REAR NO. 1 SEAT PROTECTOR

a. Detach the 10 claws and remove the 2 seat protectors.

12. REMOVE REAR NO. 2 SEAT PROTECTOR

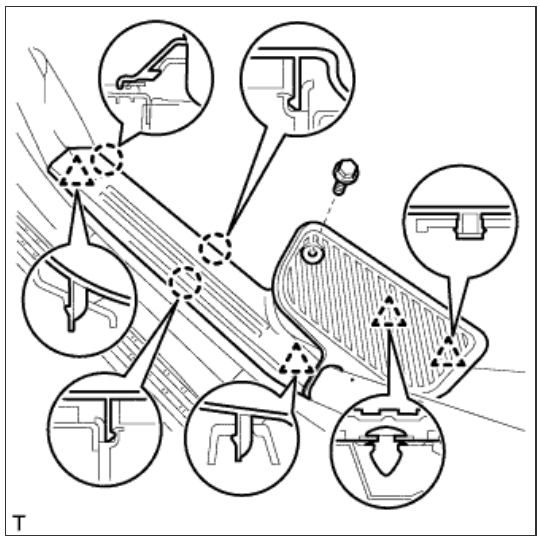
a. Detach the 10 claws and remove the 2 seat protectors.



13. REMOVE REAR STEP COVER

HINT:

Use the same procedure to remove the step cover on the other side.

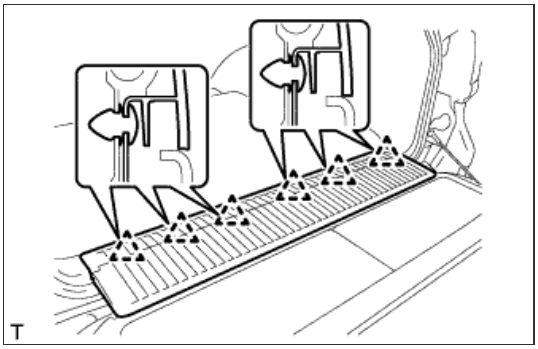


a. Detach the 2 claws and remove the step cover.

14. REMOVE REAR DOOR SCUFF PLATE LH

a. Remove the screw.

b. Detach the 3 claws and 4 clips and remove the scuff plate.



15. REMOVE REAR DOOR SCUFF PLATE RH

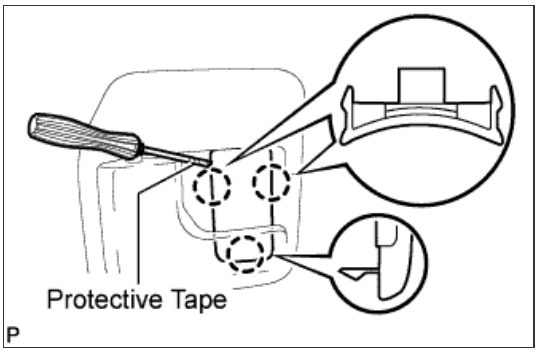
HINT:

Use the same procedures described for the LH side.

16. REMOVE REAR FLOOR MAT REAR SUPPORT PLATE

a. Detach the 6 clips and remove the support plate.

17. REMOVE REAR SEAT COVER CAP (w/ Rear No. 2 Seat, except Face to Face Seat Type)



HINT:

Use the same procedure to remove the rear seat cover cap on the other side.

a. Using a screwdriver detach the 3 claws and remove the rear seat cover cap.

HINT:

Tape the screwdriver tip before use.

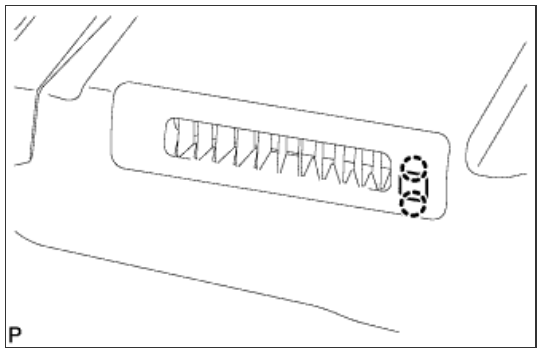
18. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY LH

a. w/ Sliding Roof:
Remove the front quarter trim panel assembly LH (Click here).

b. w/o Sliding Roof:
Remove the front quarter trim panel assembly LH (Click here).

19. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY RH

a. w/ Sliding Roof:
Remove the front quarter trim panel assembly RH (Click here).



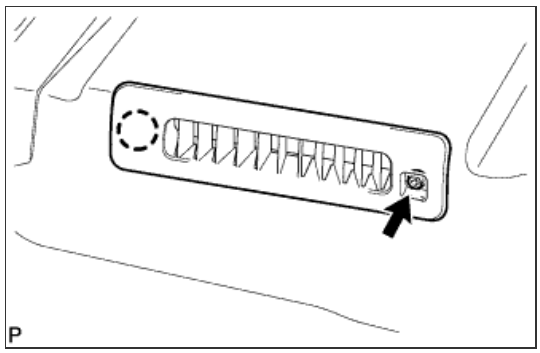
b. w/o Sliding Roof:
Remove the front quarter trim panel assembly RH (Click here).

20. REMOVE AIR DUCT PLUG (w/ Rear Air Conditioning System)

a. Detach the 2 claws and remove the plug.

HINT:

Use the same procedures for both sides.



21. REMOVE REAR AIR DUCT GUIDE (w/ Rear Air Conditioning System)

a. Remove the screw.

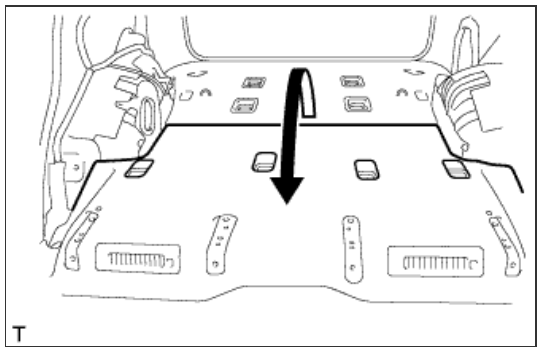
b. Detach the claw and remove the guide.

HINT:

Use the same procedures for both sides.

22. REMOVE FRONT FLOOR CARPET ASSEMBLY

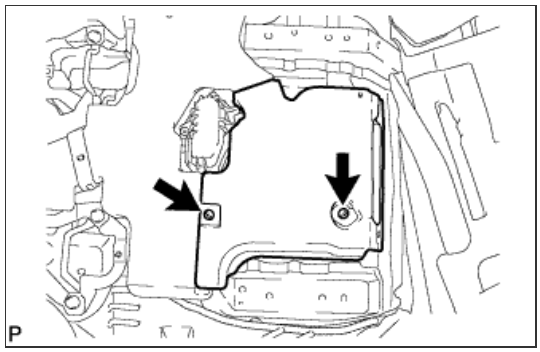
a. Turn over the floor carpet.
w/ Rear Air Conditioning System:



HINT:

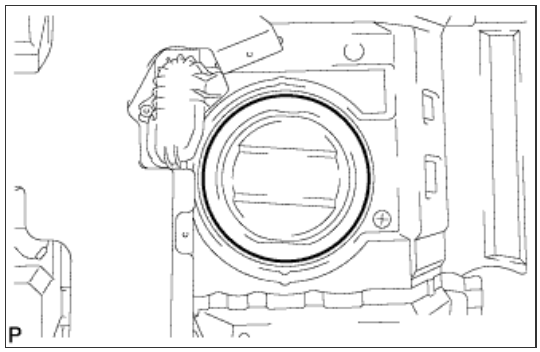
Fold back the floor carpet so that the air duct can be removed.

w/o Rear Air Conditioning System:

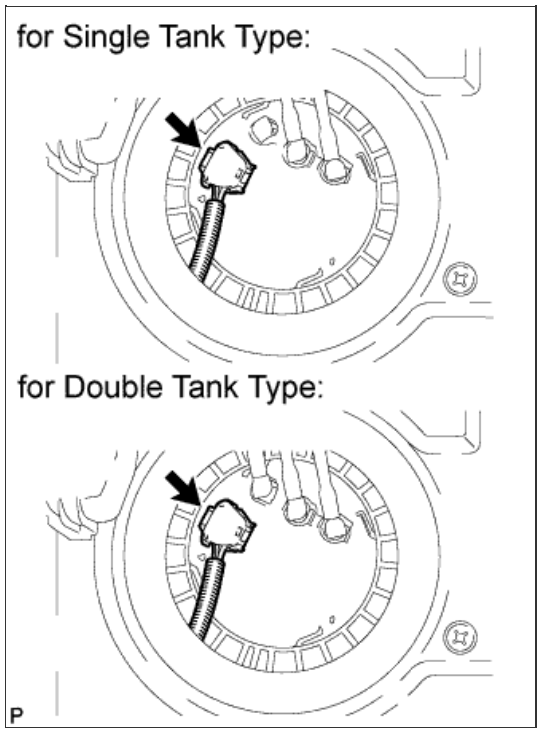


HINT:

Fold back the floor carpet so that the service hole cover can be removed.



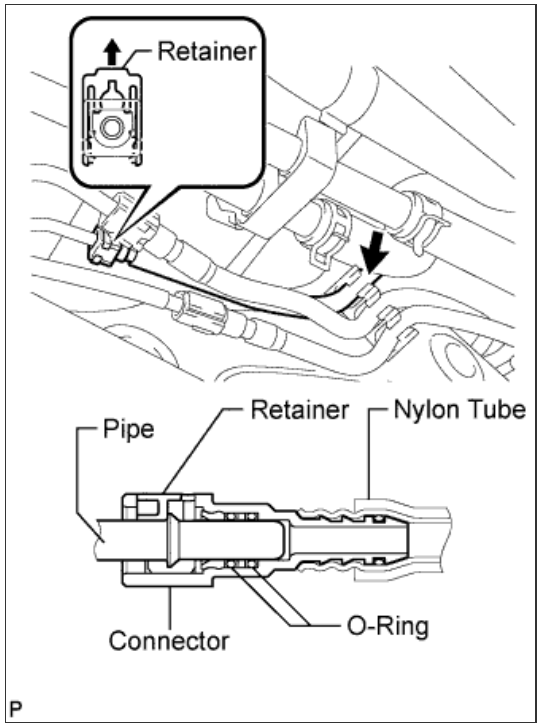
23. REMOVE REAR FLOOR NO. 2 SERVICE HOLE COVER



a. w/ Rear Air Conditioning System:
Remove the 2 screws and air duct.

b. Remove the service hole cover.

c. Disconnect the fuel pump and sender gauge connector.



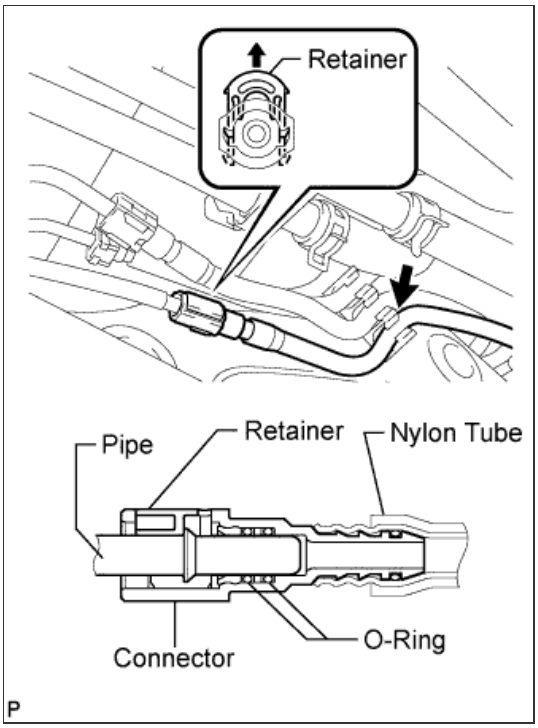
24. DISCONNECT NO. 2 FUEL TANK BREATHER TUBE (for Single Tank Type)

a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank breather tube.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**



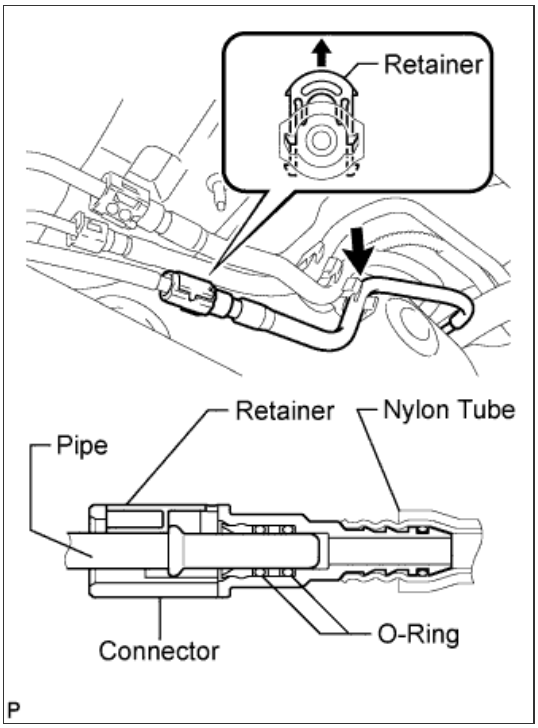
25. DISCONNECT FUEL TANK RETURN TUBE (for Single Tank Type)

a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank return tube.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**



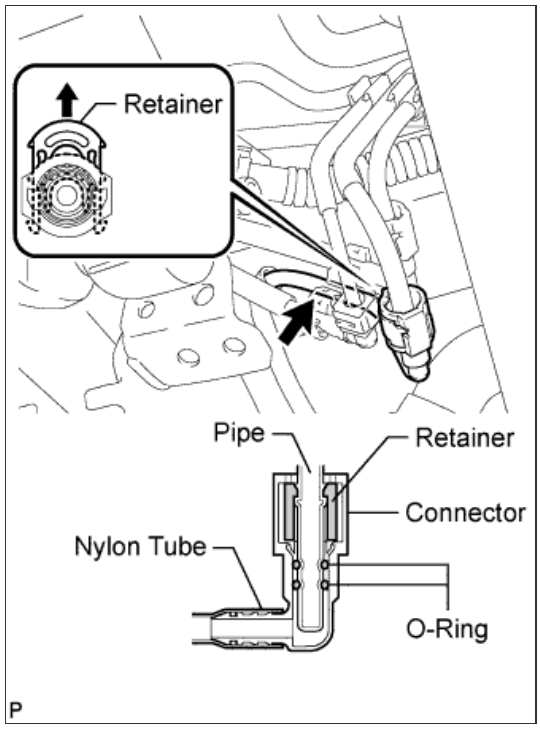
26. DISCONNECT FUEL TANK RETURN TUBE (for Double Tank Type)

a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank return tube.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**



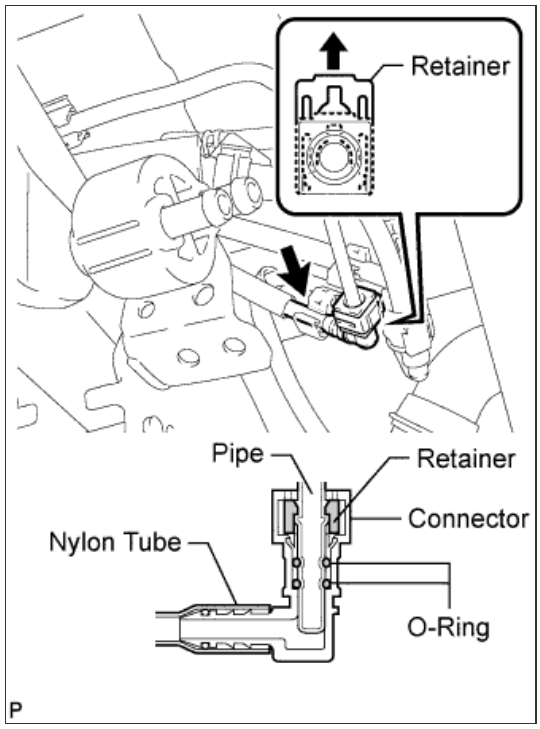
27. DISCONNECT NO. 2 FUEL MAIN TUBE SUB-ASSEMBLY (for Double Tank Type)

a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank main tube.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**



28. DISCONNECT NO. 2 FUEL TANK BREATHER TUBE (for Double Tank Type)

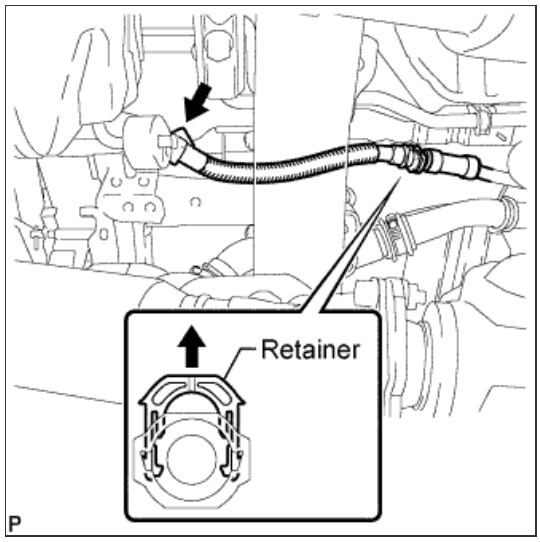
a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank breather tube.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**

29. DISCONNECT FUEL TANK BREATHER TUBE (for Single Tank Type)



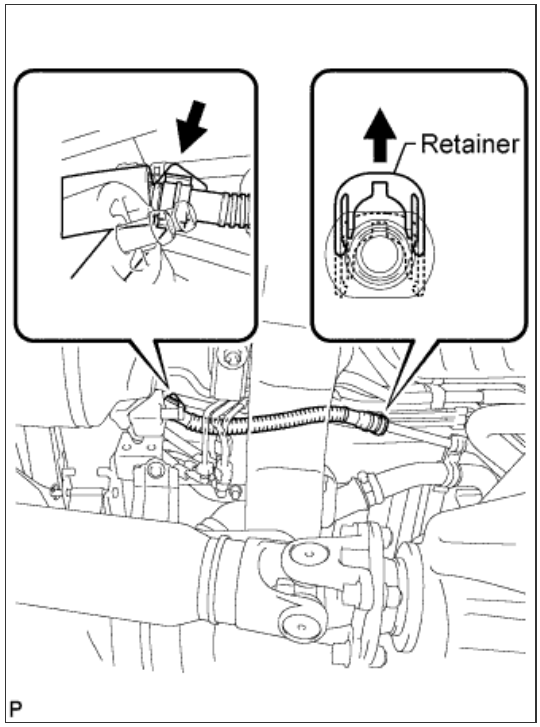
a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank breather tube from the filler pipe.

NOTICE:

- **Do not use any tools in this procedure.**
- **Check for any dirt and foreign matter contamination in the pipe and around the connector. Clean if necessary. Foreign matter**

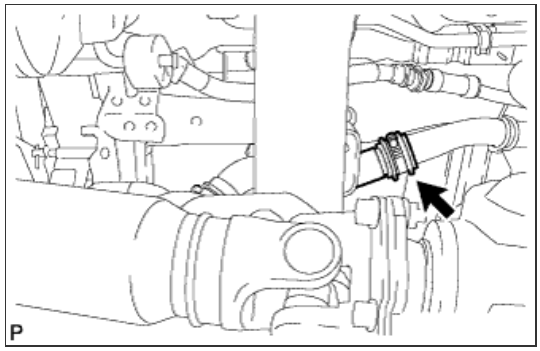
may damage the O-rings or cause leaks in the seal between the pipe and connector.



30. DISCONNECT FUEL TANK BREATHER TUBE (for Double Tank Type)

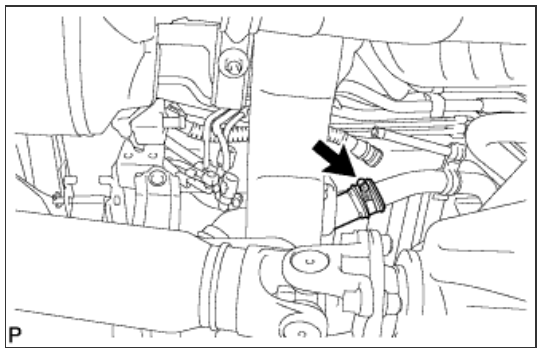
a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank breather tube from the filler pipe.



NOTICE:

- Do not use any tools in this procedure.
- Check for any dirt and foreign matter contamination in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-rings or cause leaks in the seal between the pipe and connector.

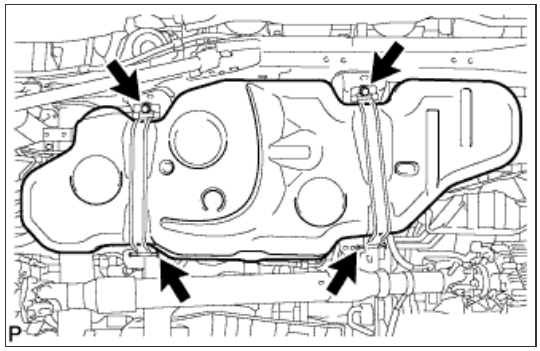


31. DISCONNECT FUEL TANK TO FILLER PIPE HOSE (for Single Tank Type)

a. Disconnect the hose from the filler pipe.

32. DISCONNECT FUEL TANK TO FILLER PIPE HOSE (for Double Tank Type)

a. Disconnect the hose from the filler pipe.

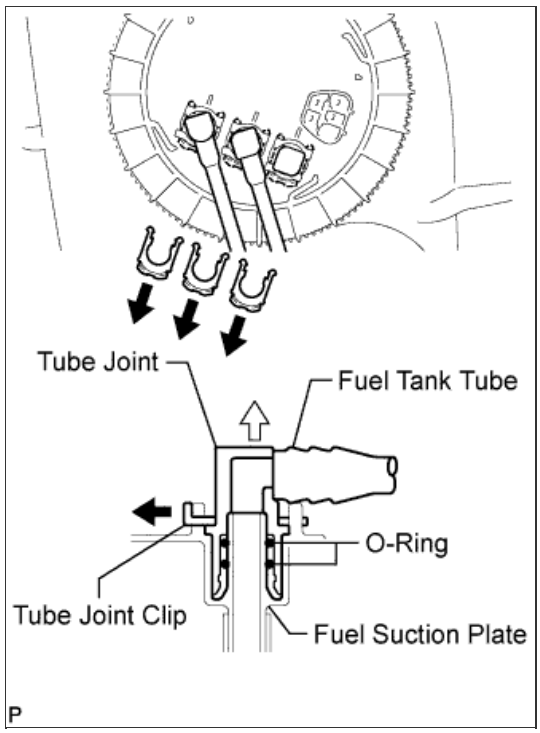


33. REMOVE FUEL TANK SUB-ASSEMBLY

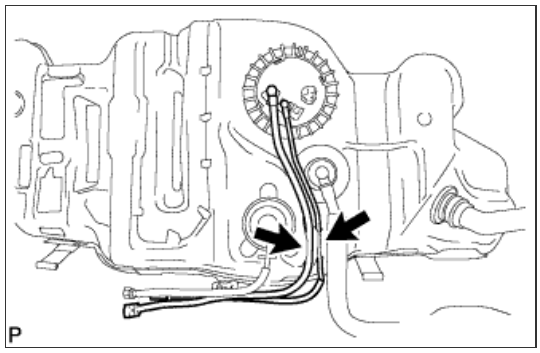
a. Place a transmission jack under the fuel tank.

b. Remove the 2 bolts 2 clips 2 pins and 2 fuel tank bands.

c. Slowly lower the transmission jack slightly.



34. REMOVE FUEL TANK MAIN TUBE SUB-ASSEMBLY AND FUEL TANK RETURN TUBE SUB-ASSEMBLY (for Single Tank Type)

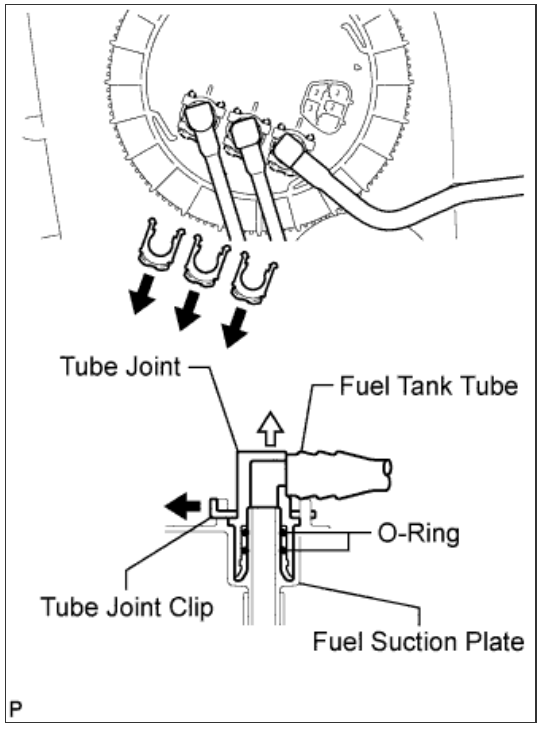


a. Remove the 3 fuel tube joint clips and pull out the 2 fuel tubes and No. 1 fuel tube joint.

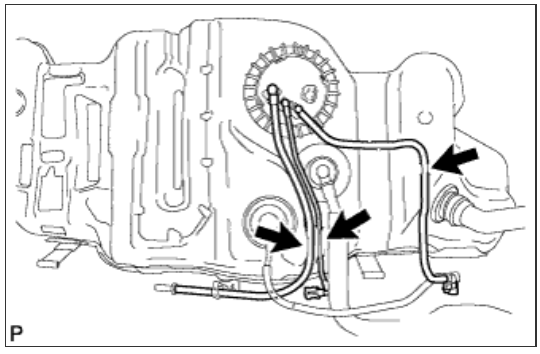
NOTICE:

- **Remove any dirt and foreign matter on the fuel tube oint before performing this work.**
- **Do not allow any scratches or foreign matter on the parts when disconnecting them, as the fuel tube oint contains the O-rings that seal the plug.**
- **Perform this work by hand. Do not use any tools.**
- **Do not forcibly bend, twist or turn the nylon tube.**
- **Protect the disconnected part by covering it with a plastic bag and tape after disconnecting the fuel tubes.**

b. Remove the 2 fuel tubes from the fuel tank.



35. REMOVE FUEL TANK MAIN TUBE, FUEL TANK RETURN TUBE AND NO. 2 FUEL TANK MAIN TUBE SUB-ASSEMBLY (for Double Tank Type)



a. Remove the 3 fuel tube joint clips and pull out the 3 fuel tubes.

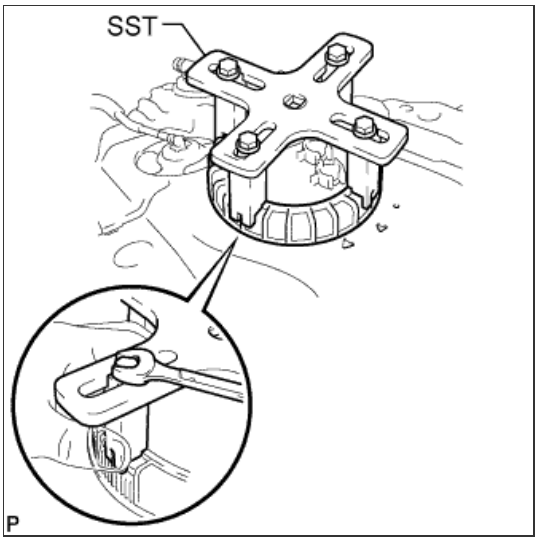
NOTICE:

- **Remove any dirt and foreign matter on the fuel tube oint before performing this work.**
- **Do not allow any scratches or foreign matter on the parts when disconnecting them, as the fuel tube oint contains the O-rings that seal the plug.**
- **Perform this work by hand. Do not use any tools.**
- **Do not forcibly bend, twist or turn the nylon tube.**
- **Protect the disconnected part by covering it with a plastic bag and tape after disconnecting the fuel tubes.**

b. Remove the 3 fuel tubes from the fuel tank.

36. REMOVE FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY

a. Set SST on the retainer.



SST
09808-14030

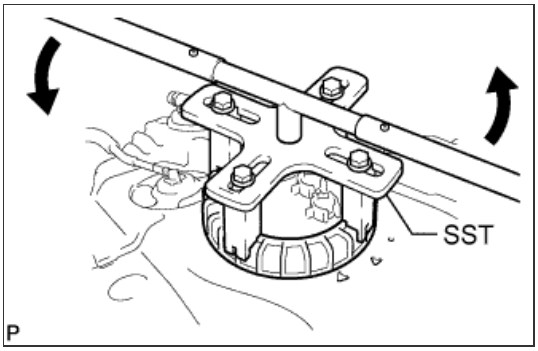
HINT:

- **Securely attach the claws of SST to the protrusion of the**

retainer and fix SST in place.

- Install SST while pressing the claws of SST against the retainer (towards the center of SST).

b. Using SST loosen the retainer.



SST
09808-14030

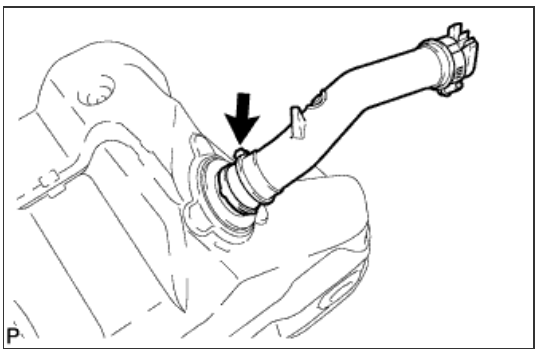
NOTICE:

- Do not use any tools other than those specified in this operation. Damage to the retainer or the fuel tank may result.
- While pressing down on SST so that the claws of SST do not slip off the protrusion of the retainer, turn the retainer counterclockwise to loosen it.

HINT:

The protrusion of the retainer fit in the ends of SST.

Text in Illustration

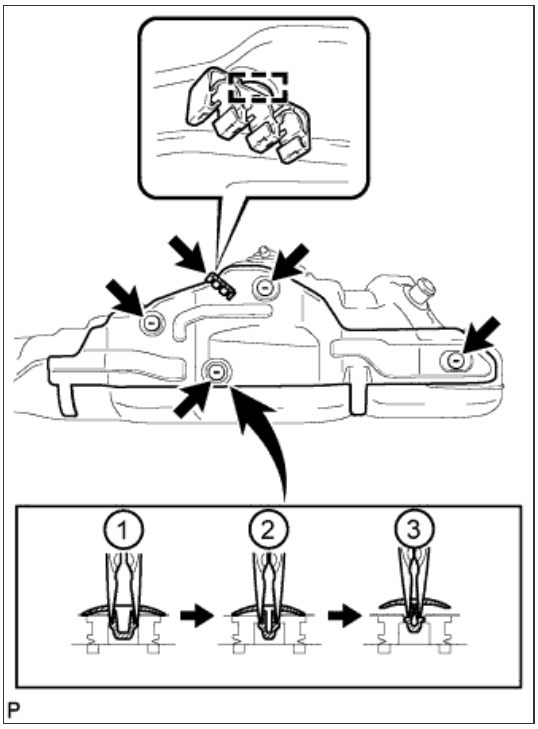


➡	Turn

c. Remove the retainer while holding the fuel suction tube assembly by hand.

d. Remove the gasket from the fuel tank.

37. REMOVE FUEL TANK TO FILLER PIPE HOSE

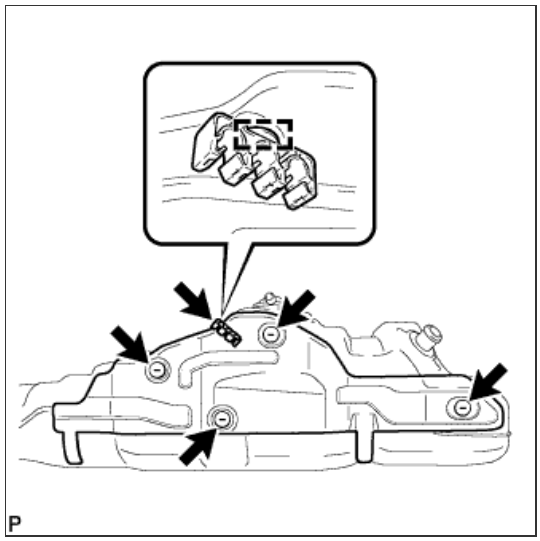


a. Remove the hose from the fuel tank.

38. REMOVE NO. 1 FUEL TANK HEAT INSULATOR

a. Remove the fuel tube clamp from the heat insulator.

b. Using needle-nose pliers remove the 4 clips shown in the illustration and then remove the heat insulator.

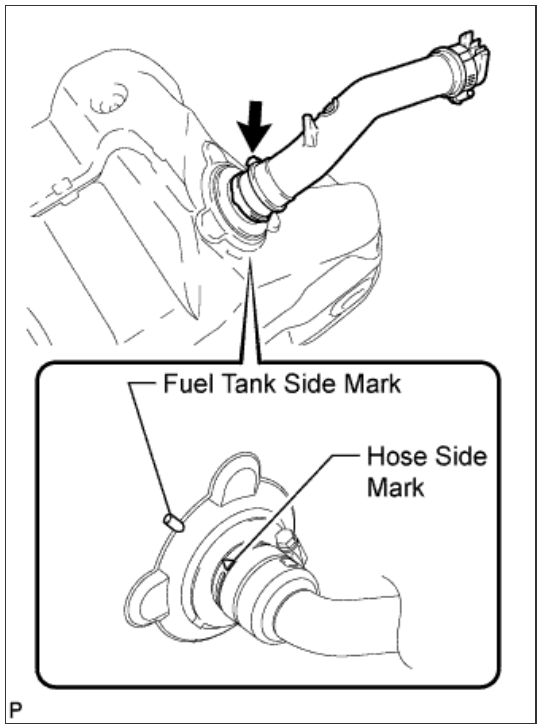


for Preparation Click here

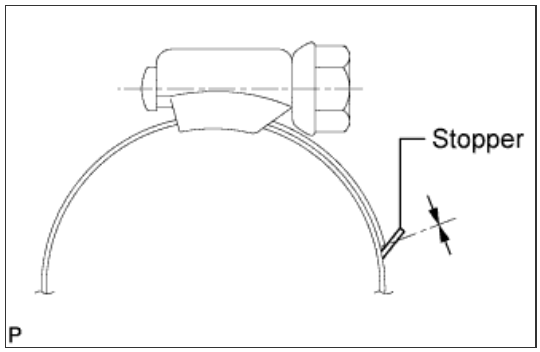
1. INSTALL NO. 1 FUEL TANK HEAT INSULATOR

a. Install the heat insulator with the 4 clips.

b. Install the fuel tube clamp to the heat insulator.



2. INSTALL FUEL TANK TO FILLER PIPE HOSE



a. Install the hose to the fuel tank as shown in the illustration.

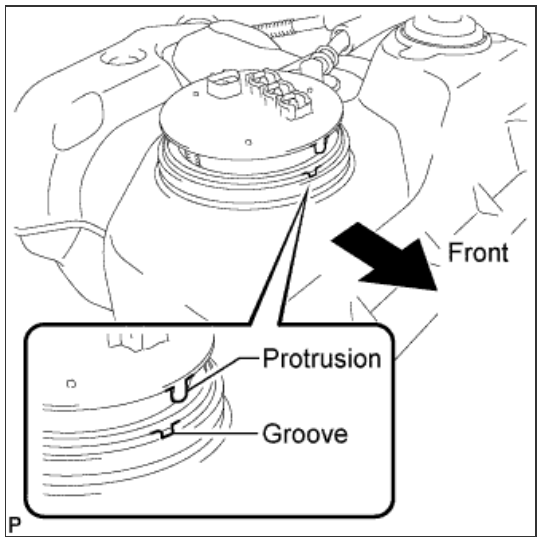
HINT:

- **Align the fuel tank side mark with the hose side mark when installing the hose.**

- **Tighten the hose clamp until the end of the hose clamp contacts the stopper as shown in the illustration.**

3. INSTALL FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY

a. Apply a light coat of gasoline or grease to a new gasket, and install it to the fuel tank.



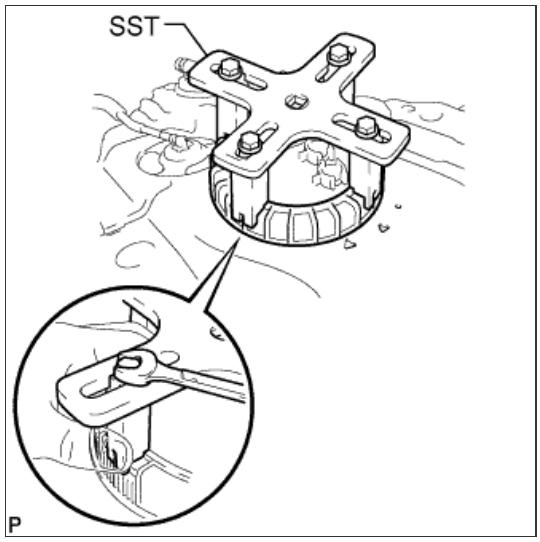
b. Install the fuel suction with pump and gauge tube into the fuel tank.

NOTICE:

Be careful not to bend the arm of the fuel sender gauge.

HINT:

Align the protrusion of the fuel suction with pump and gauge tube with the groove of the fuel tank.



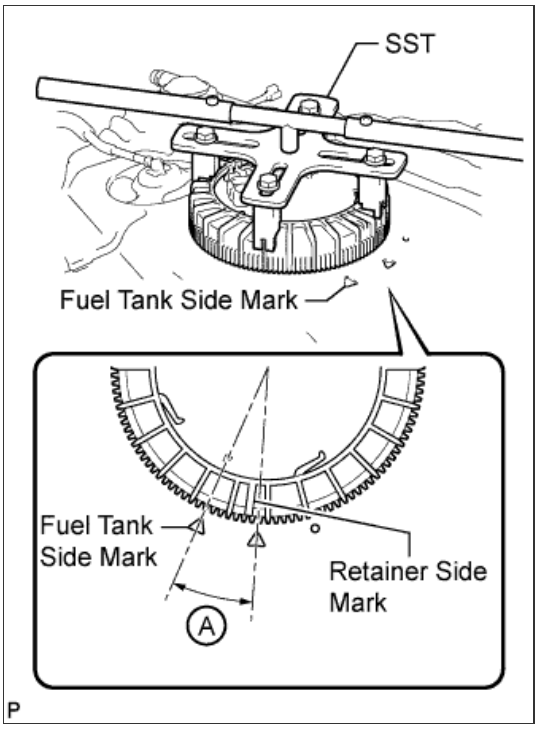
c. Put the retainer on the fuel tank. While holding the fuel suction with pump and gauge tube, tighten the retainer one complete turn by hand.

d. Set SST on the retainer.

SST
09808-14030

HINT:

- **Hold the fuel suction tube assembly upright by hand to ensure that the fuel suction tube gasket is not moved out of position.**
- **Securely attach the claws of SST to the protrusions of the retainer and fix SST in place.**
- **Install SST while pressing the claws of SST against the retainer (toward the center of SST).**

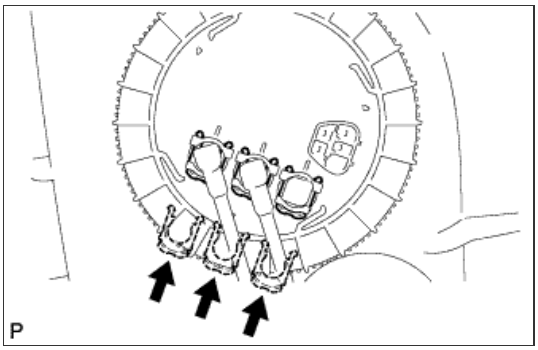


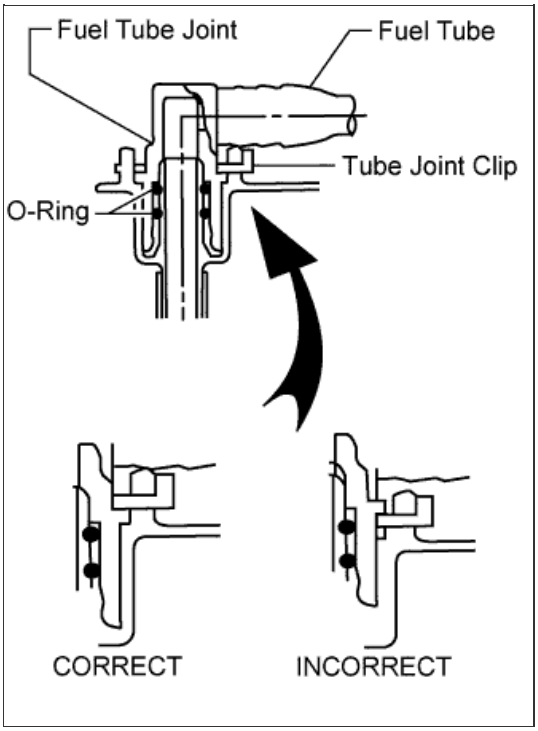
e. Using SST, tighten the retainer until the mark on the retainer is within range A on the fuel tank as shown in the illustration.

SST
09808-14030

HINT:

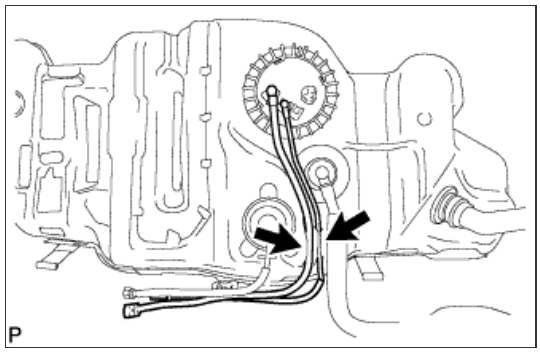
Fit the tips of SST onto the ribs of the retainer.





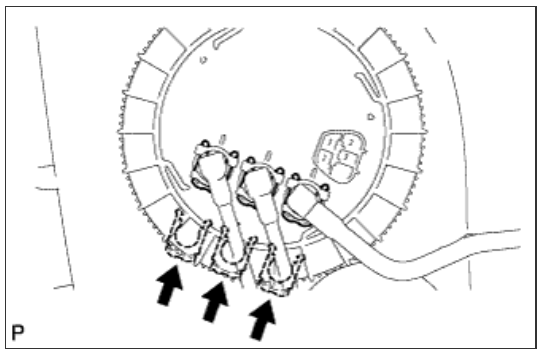
4. INSTALL FUEL TANK MAIN TUBE SUB-ASSEMBLY AND FUEL TANK RETURN TUBE SUB-ASSEMBLY (for Single Tank Type)

a. Install the 2 fuel tank tubes and No. 1 fuel tube joint with the 3 tube joint clips.

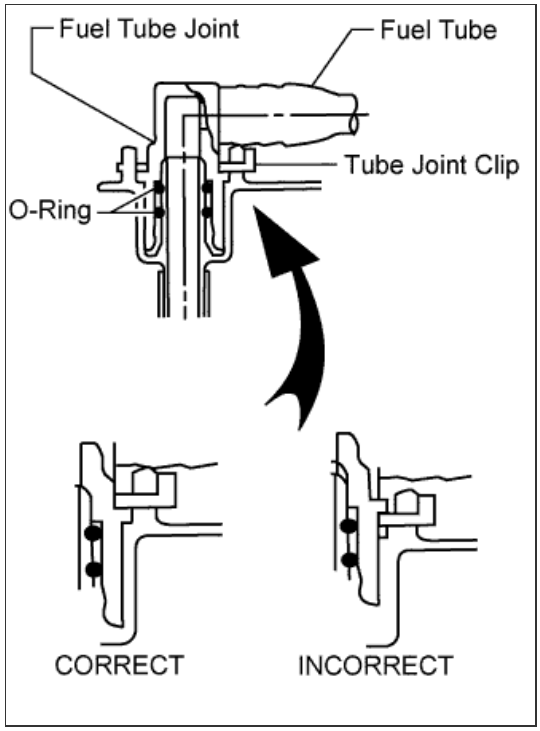


NOTICE:

- **Check that there are no scratches or foreign objects on the connecting parts.**
- **Check that the fuel tube joints are inserted securely.**
- **Check that the tube joint clips are on the collars of the fuel tube joints.**
- **After installing the tube joint clips, check that the fuel tube joints cannot be pulled off.**

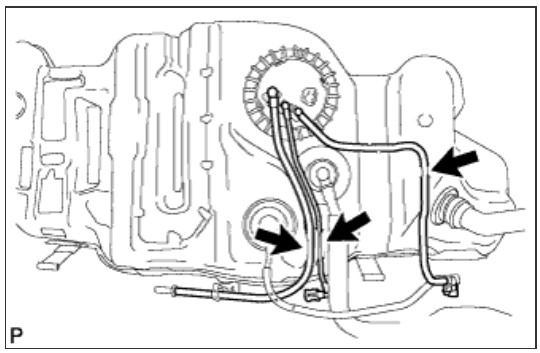


b. Install the 2 fuel tank tubes to the fuel tank.



5. INSTALL FUEL TANK MAIN TUBE, FUEL TANK RETURN TUBE AND NO. 2 FUEL TANK MAIN TUBE SUB-ASSEMBLY (for Double Tank Type)

a. Install the 3 fuel tank tubes with the 3 tube joint clips.



NOTICE:

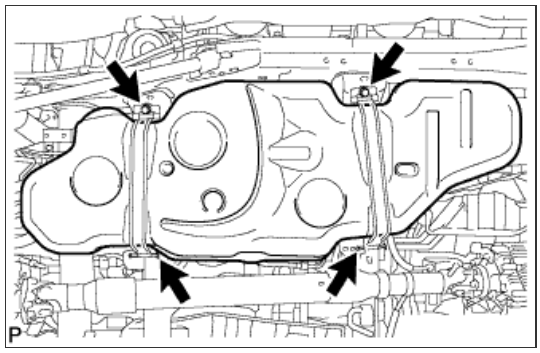
- **Check that there are no scratches or foreign objects on the connecting parts.**
- **Check that the fuel tube joints are inserted securely.**
- **Check that the tube joint clips are on the collars of the fuel tube joints.**
- **After installing the tube joint clips, check that the fuel tube joints cannot be pulled off.**

b. Install the 3 fuel tank tubes to the fuel tank.

6. INSTALL FUEL TANK SUB-ASSEMBLY

a. Set the fuel tank on a transmission jack and raise the fuel tank.

NOTICE:



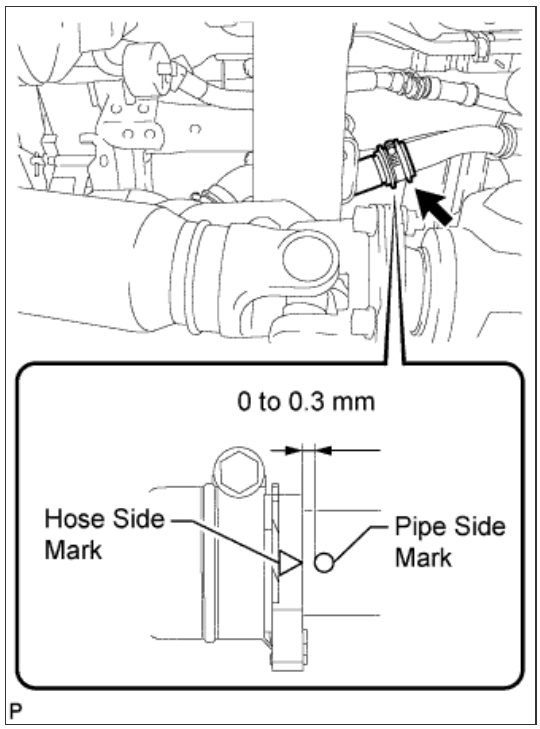
Do not allow the fuel tank to contact the vehicle, especially the differential.

b. Raise the transmission jack.

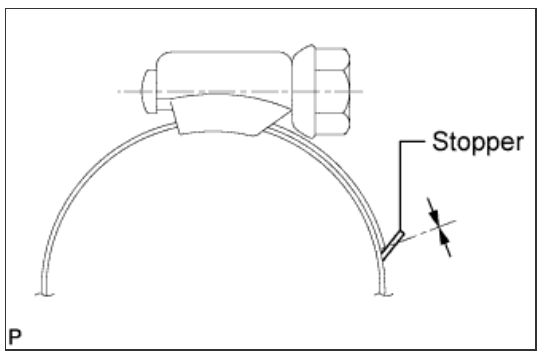
c. Install the 2 fuel tank bands with the 2 pins and 2 clips.

d. Connect the 2 fuel tank bands with the 2 bolts.

Tor ue:
40 N m 408 kgf cm , 30 ft. lbf



. CONNECT FUEL TANK TO FILLER PIPE HOSE (for Single Tank Type)

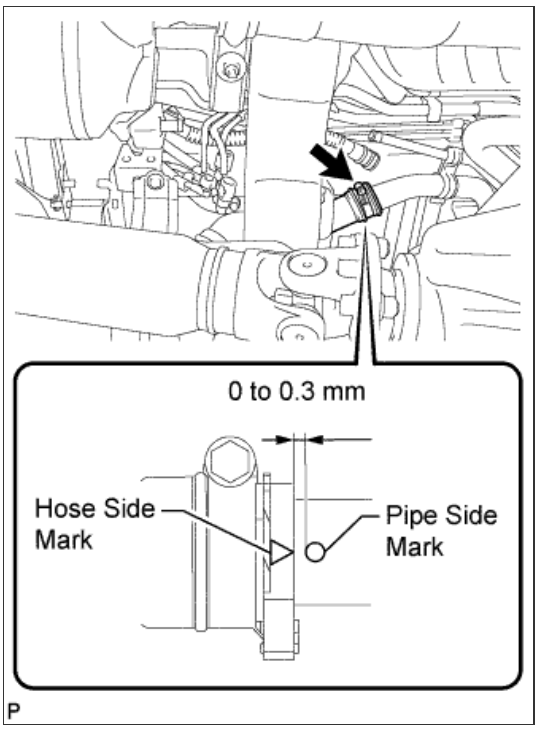


a. Connect the hose to the filler pipe as shown in the illustration.

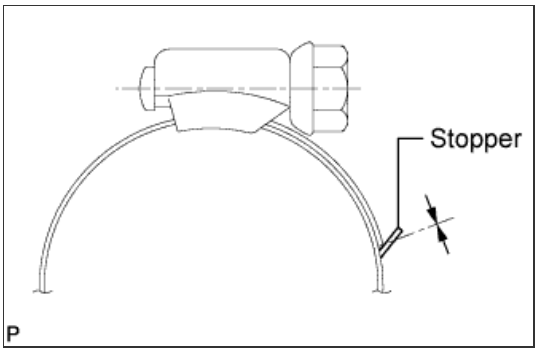
HINT:

- **Install the hose so that the distance between the fuel tank inlet pipe side mark and fuel tank to filler pipe hose side mark is 0 to 0.3 mm (0 to 0.0118 in.) as shown in the illustration.**

- **Tighten the hose clamp until the end of the hose clamp contacts the stopper as shown in the illustration.**



8. CONNECT FUEL TANK TO FILLER PIPE HOSE (for Double Tank Type)



a. Connect the hose to the filler pipe as shown in the illustration.

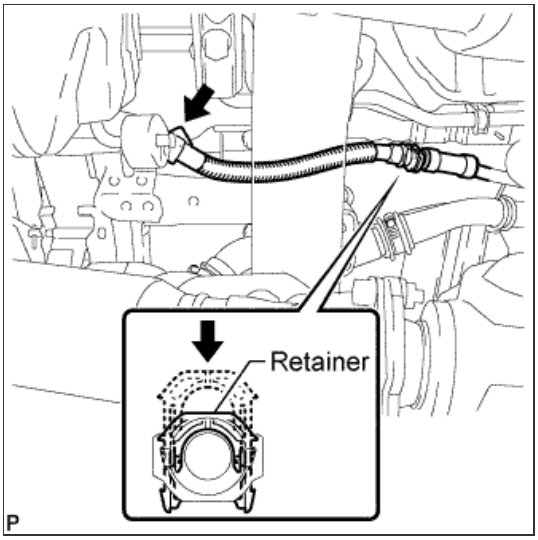
HINT:

- **Install the hose so that the distance between the fuel tank inlet pipe side mark and fuel tank to filler pipe hose side mark is 0 to 0.3 mm (0 to 0.0118 in.) as shown in the illustration.**

- **Tighten the hose clamp until the end of the hose clamp contacts the stopper as shown in the illustration.**

9. CONNECT FUEL TANK BREATHER TUBE (for Single Tank Type)

a. Connect the fuel tank breather tube to the filler pipe and push the retainer.



HINT:

Push the parts together firmly until a "click" sound is heard.

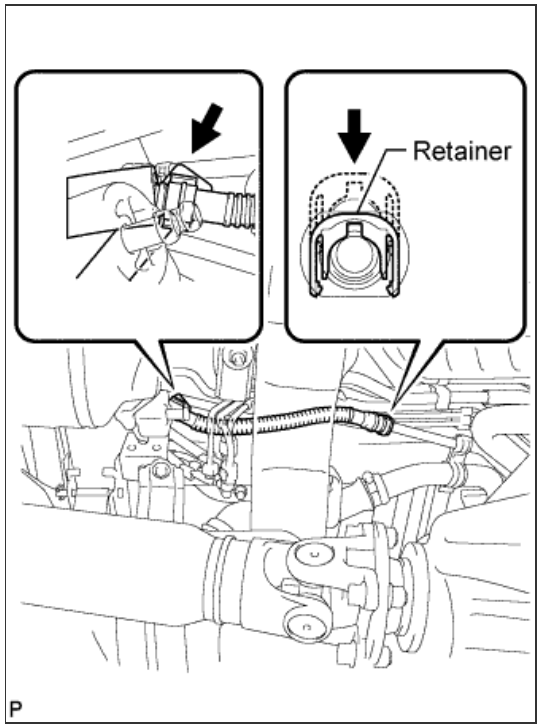
NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

10. CONNECT FUEL TANK BREATHER TUBE (for Double Tank Type)

a. Connect the fuel tank breather tube to the filler pipe and push the retainer.



HINT:

Push the parts together firmly until a "click" sound is heard.

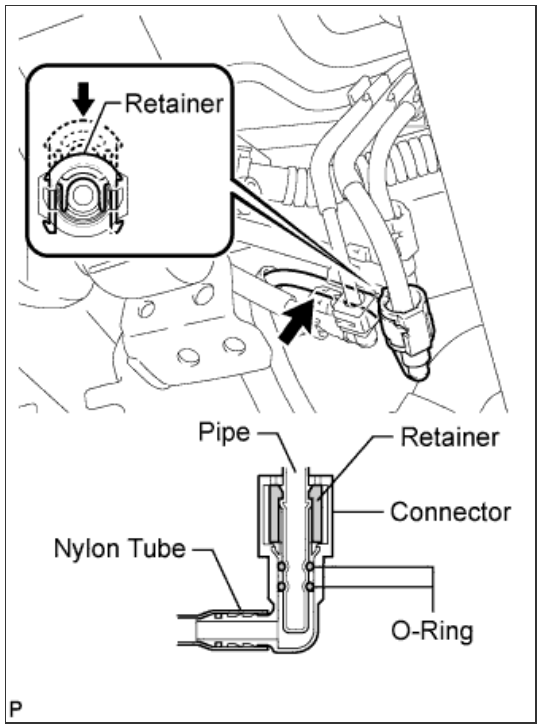
NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

11. CONNECT NO. 2 FUEL MAIN TUBE SUB-ASSEMBLY (for Double Tank Type)

a. Connect the fuel main tube and push the retainer.



HINT:

Push the parts together firmly until a "click" sound is heard.

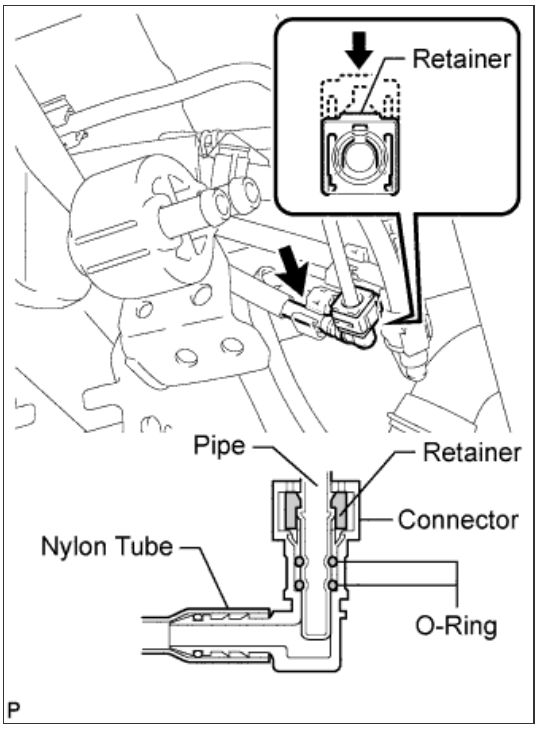
NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

12. CONNECT NO. 2 FUEL TANK BREATHER TUBE (for Double Tank Type)

a. Connect the fuel tank breather tube and push the retainer.



HINT:

Push the parts together firmly until a "click" sound is heard.

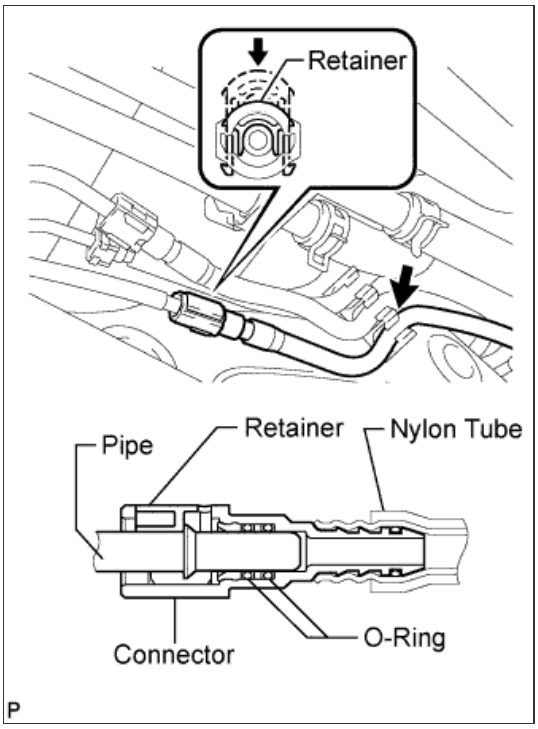
NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

13. CONNECT FUEL TANK RETURN TUBE (for Single Tank Type)

a. Connect the fuel tank return tube and push the retainer.



HINT:

Push the parts together firmly until a "click" sound is heard.

NOTICE:

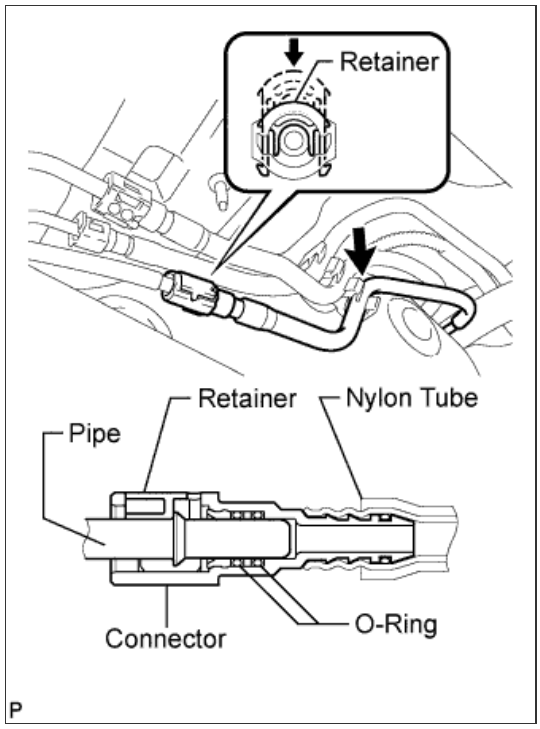
- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

14. CONNECT FUEL TANK RETURN TUBE (for Double Tank Type)

a. Connect the fuel tank return tube and push the retainer.

HINT:



Push the parts together firmly until a "click" sound is heard.

NOTICE:

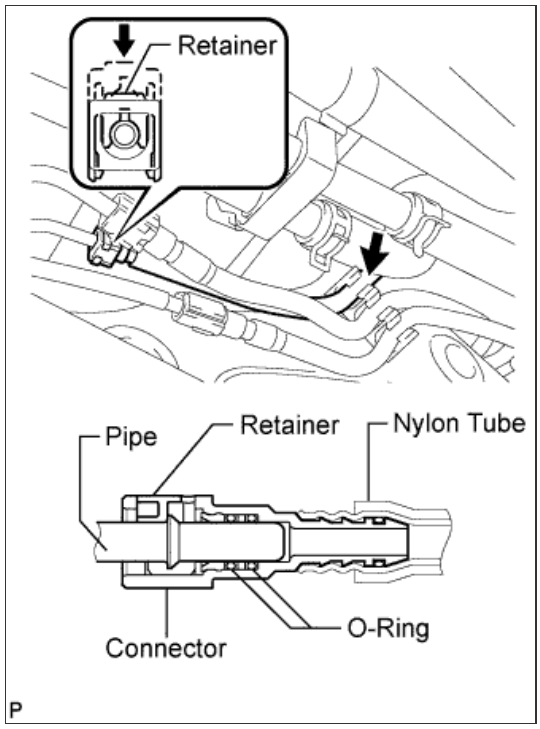
- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**

- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

15. CONNECT NO. 2 FUEL TANK BREATHER TUBE (for Single Tank Type)

a. Connect the fuel tank breather tube and push the retainer.



HINT:

Push the parts together firmly until a "click" sound is heard.

NOTICE:

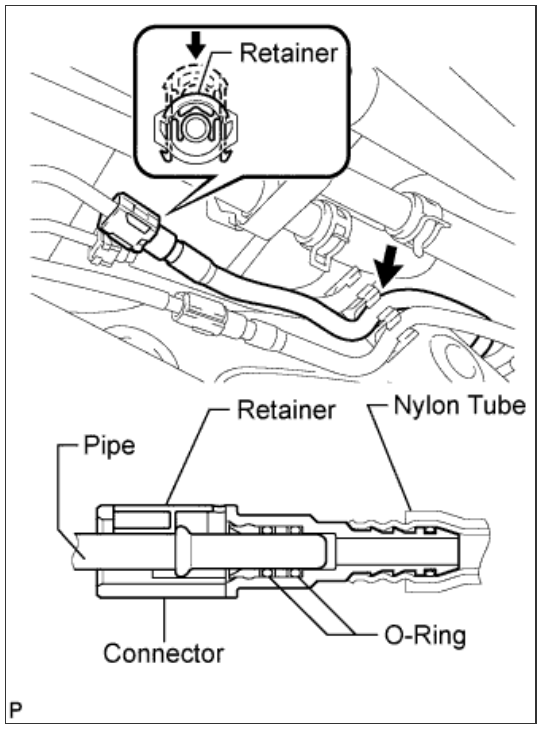
- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

16. CONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY (for Single Tank Type)

a. Connect the fuel tank main tube and push the retainer.

HINT:



Push the parts together firmly until a "click" sound is heard.

NOTICE:

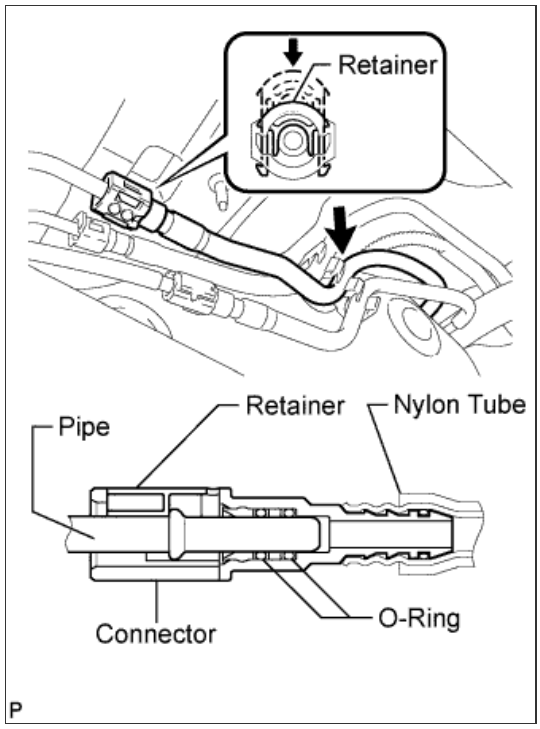
- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**

- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

17. CONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY (for Double Tank Type)

a. Connect the fuel tank main tube and push the retainer.

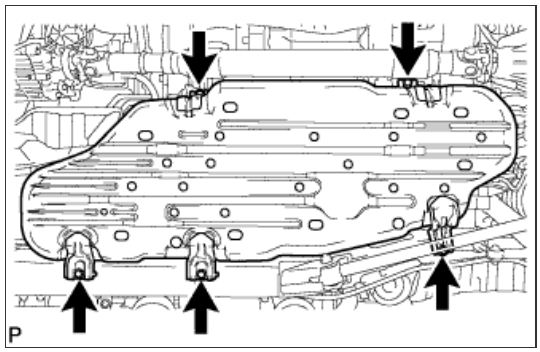


HINT:

Push the parts together firmly until a "click" sound is heard.

NOTICE:

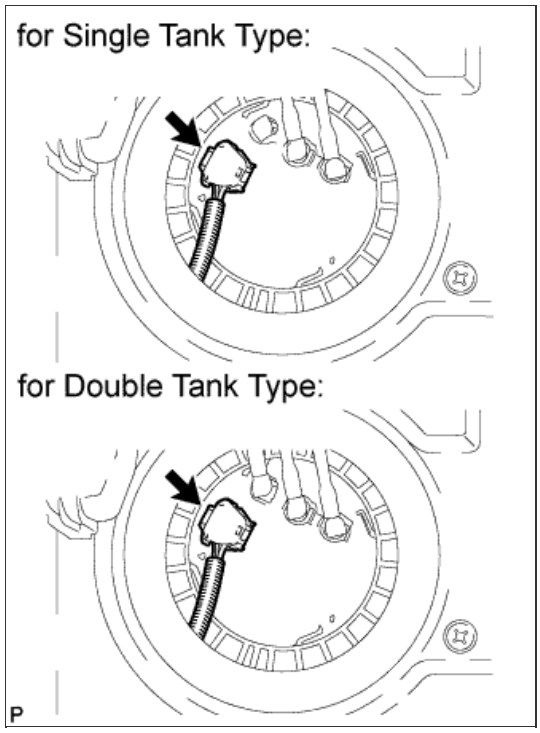
- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**



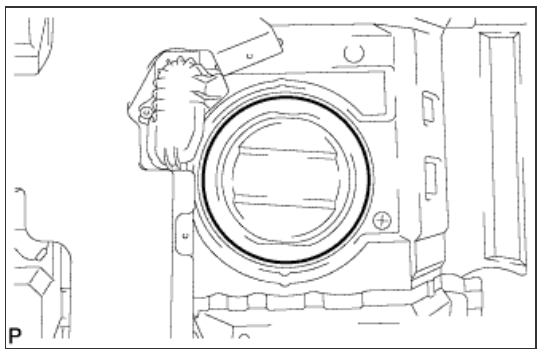
b. Attach the fuel tube clamp.

18. INSTALL NO. 1 FUEL TANK PROTECTOR SUB-ASSEMBLY

a. Install the tank protector with the 5 bolts.

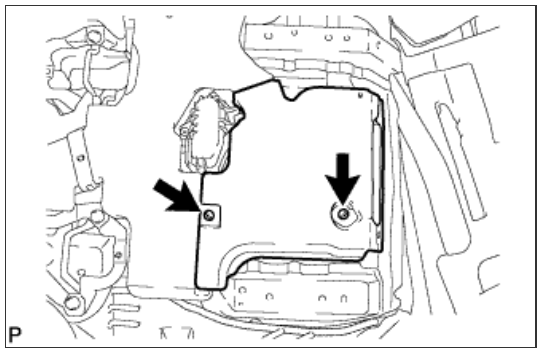


Tor ue:
20 N m 204 kgf cm , 15 ft. lbf



19. INSTALL FUEL TANK CAP ASSEMBLY

20. INSTALL REAR FLOOR NO. 2 SERVICE HOLE COVER

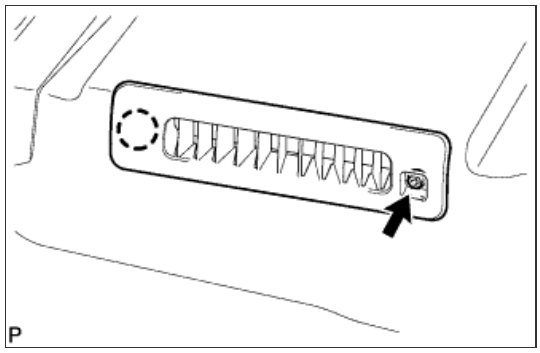


a. Connect the fuel pump and fuel sender gauge connector.

b. Install the service hole cover with new butyl tape.

c. w/ Rear Air Conditioning System:
Install the air duct and 2 screws.

21. INSTALL FRONT FLOOR CARPET ASSEMBLY



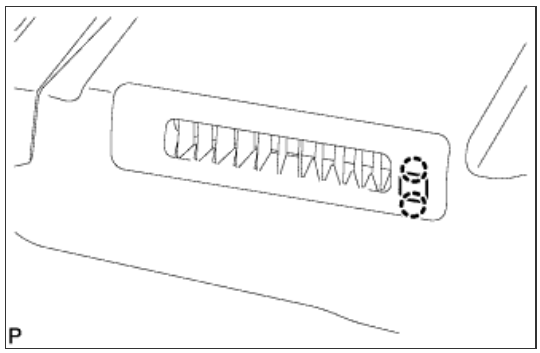
22. INSTALL REAR AIR DUCT GUIDE (w Rear Air Conditioning System)

a. Attach the claw to install the guide.

b. Install the screw.

HINT:

Use the same procedures for both sides.



23. INSTALL AIR DUCT PLUG (w Rear Air Conditioning System)

a. Attach the 2 claws to install the plug.

HINT:

Use the same procedures for both sides.

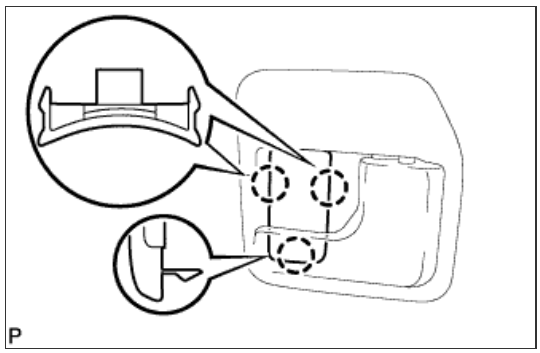
24. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY LH

a. w/ Sliding Roof:
Install the front quarter trim panel assembly LH (Click here).

b. w/o Sliding Roof:
Install the front quarter trim panel assembly LH (Click here).

25. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY RH

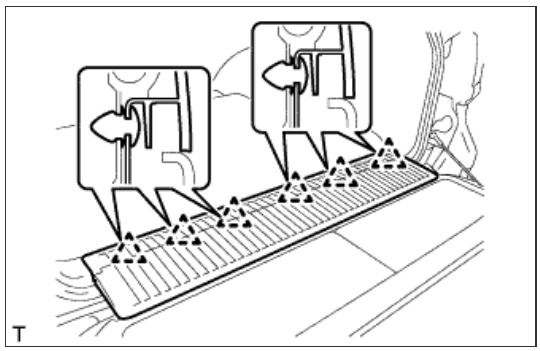
a. w/ Sliding Roof:
Install the front quarter trim panel assembly RH (Click here).



b. w/o Sliding Roof:
Install the front quarter trim panel assembly RH (Click here).

26. INSTALL REAR SEAT COVER CAP (w/ Rear No. 2 Seat, except Face to Face Seat Type)

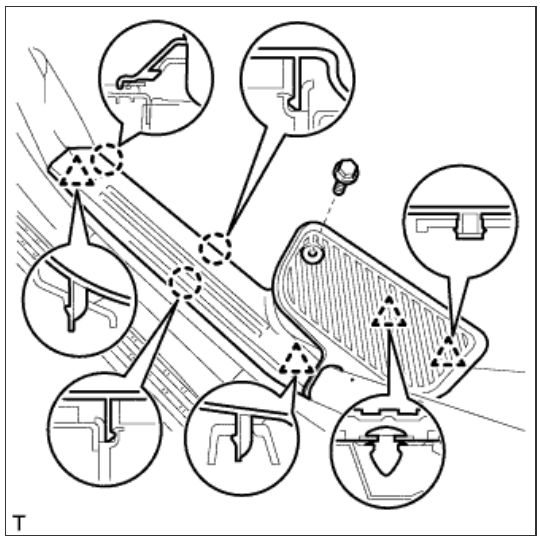
HINT:



Use the same procedure to install the rear seat cover cap on the other side.

a. Attach the 3 claws to install the rear seat cover cap.

27. INSTALL REAR FLOOR MAT REAR SUPPORT PLATE



a. Attach the 6 clips to install the support plate.

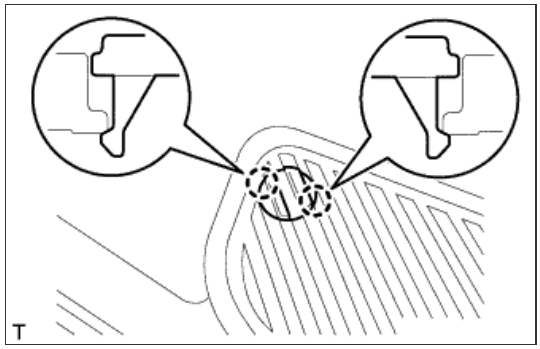
28. INSTALL REAR DOOR SCUFF PLATE LH

a. Attach the 3 claws and 4 clips to install the scuff plate.

b. Install the screw.

29. INSTALL REAR DOOR SCUFF PLATE RH

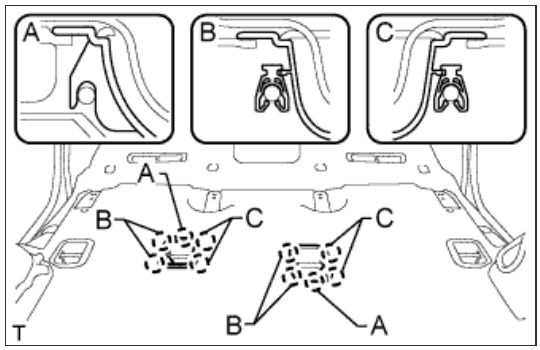
HINT:



Use the same procedures described for the LH side.

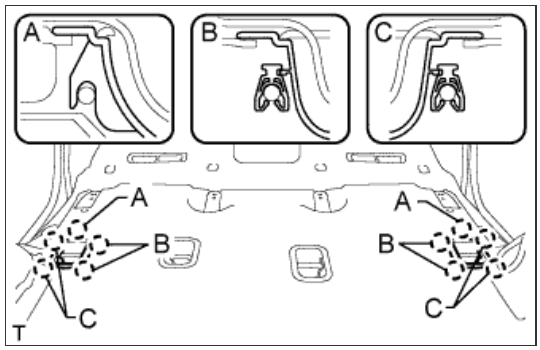
30. INSTALL REAR STEP COVER

HINT:



Use the same procedure to install the step cover on the other side.

a. Attach the 2 claws to install the step cover.



31. INSTALL REAR NO. 2 SEAT PROTECTOR

a. Attach the 10 claws to install the 2 seat protectors.

32. INSTALL REAR NO. 1 SEAT PROTECTOR

a. Attach the 10 claws to install the 2 seat protectors.

33. INSTALL REAR NO. 2 SEAT ASSEMBLY

a. for Face to Face Seat Type:
Install the rear No. 2 seat assembly (Click here).

b. except Face to Face Seat Type:
Install the rear No. 2 seat assembly (Click here).

34. INSTALL REAR NO. 1 SEAT ASSEMBLY RH (for 60 40 Split Seat Type 40 Side)

a. Install the rear No. 1 seat assembly RH (Click here).

35. INSTALL REAR NO. 1 SEAT ASSEMBLY LH (for 60 40 Split Seat Type 60 Side)

a. Install the rear No. 1 seat assembly LH (Click here).

36. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

37. CHECK SRS WARNING LIGHT

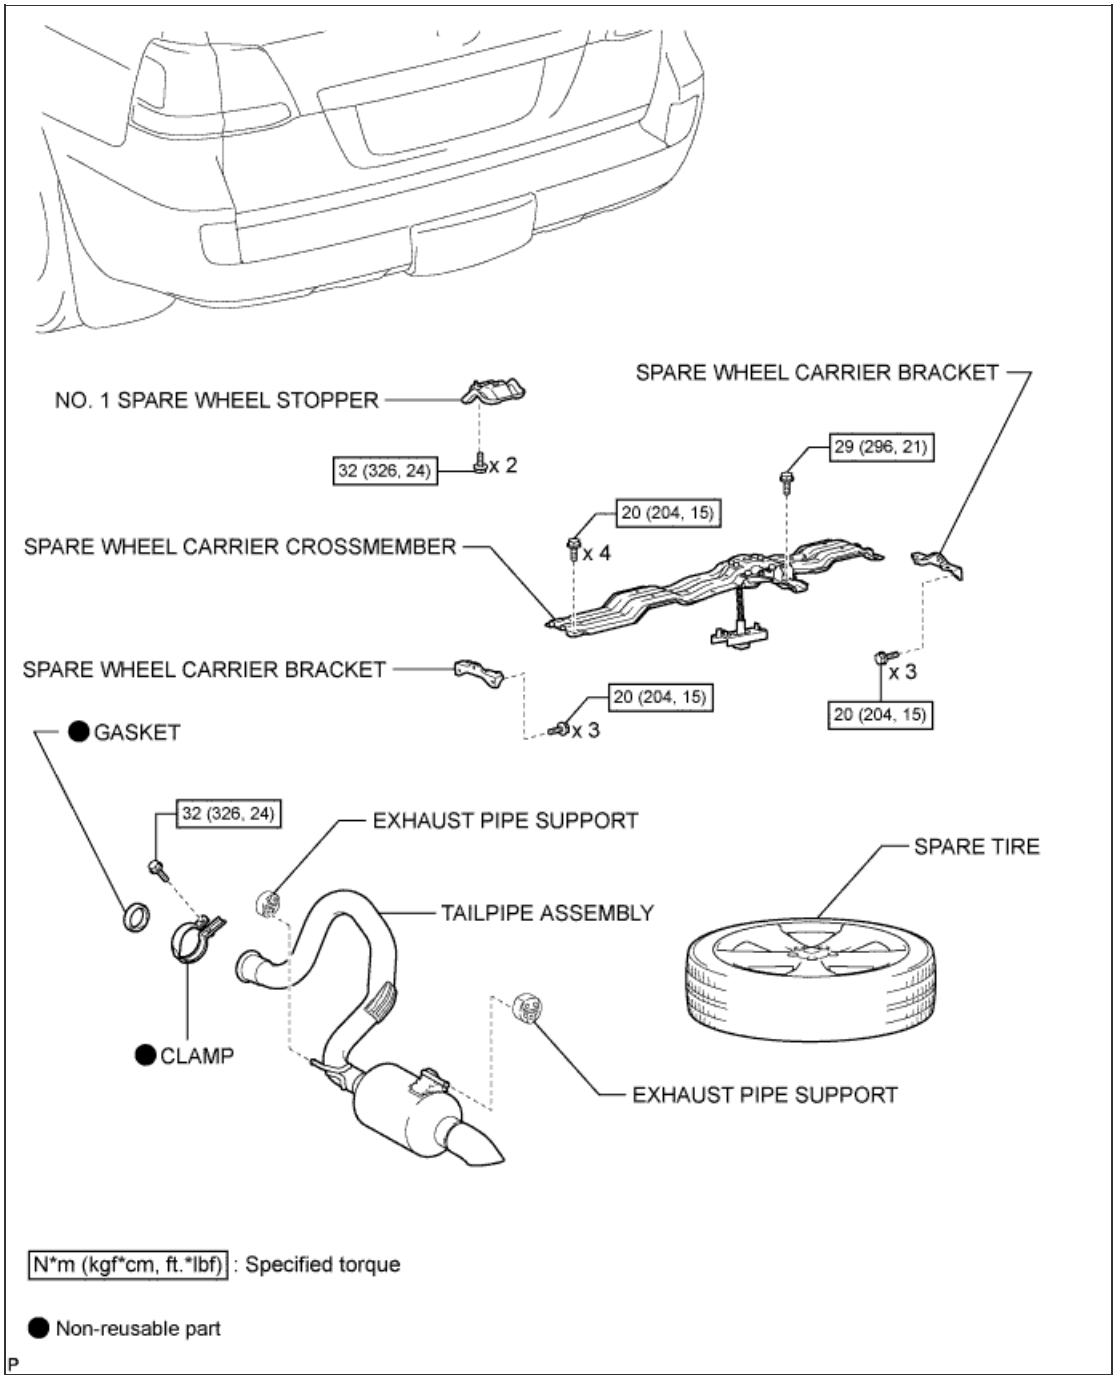
a. Check the SRS warning light (Click here).

38. ADD FUEL

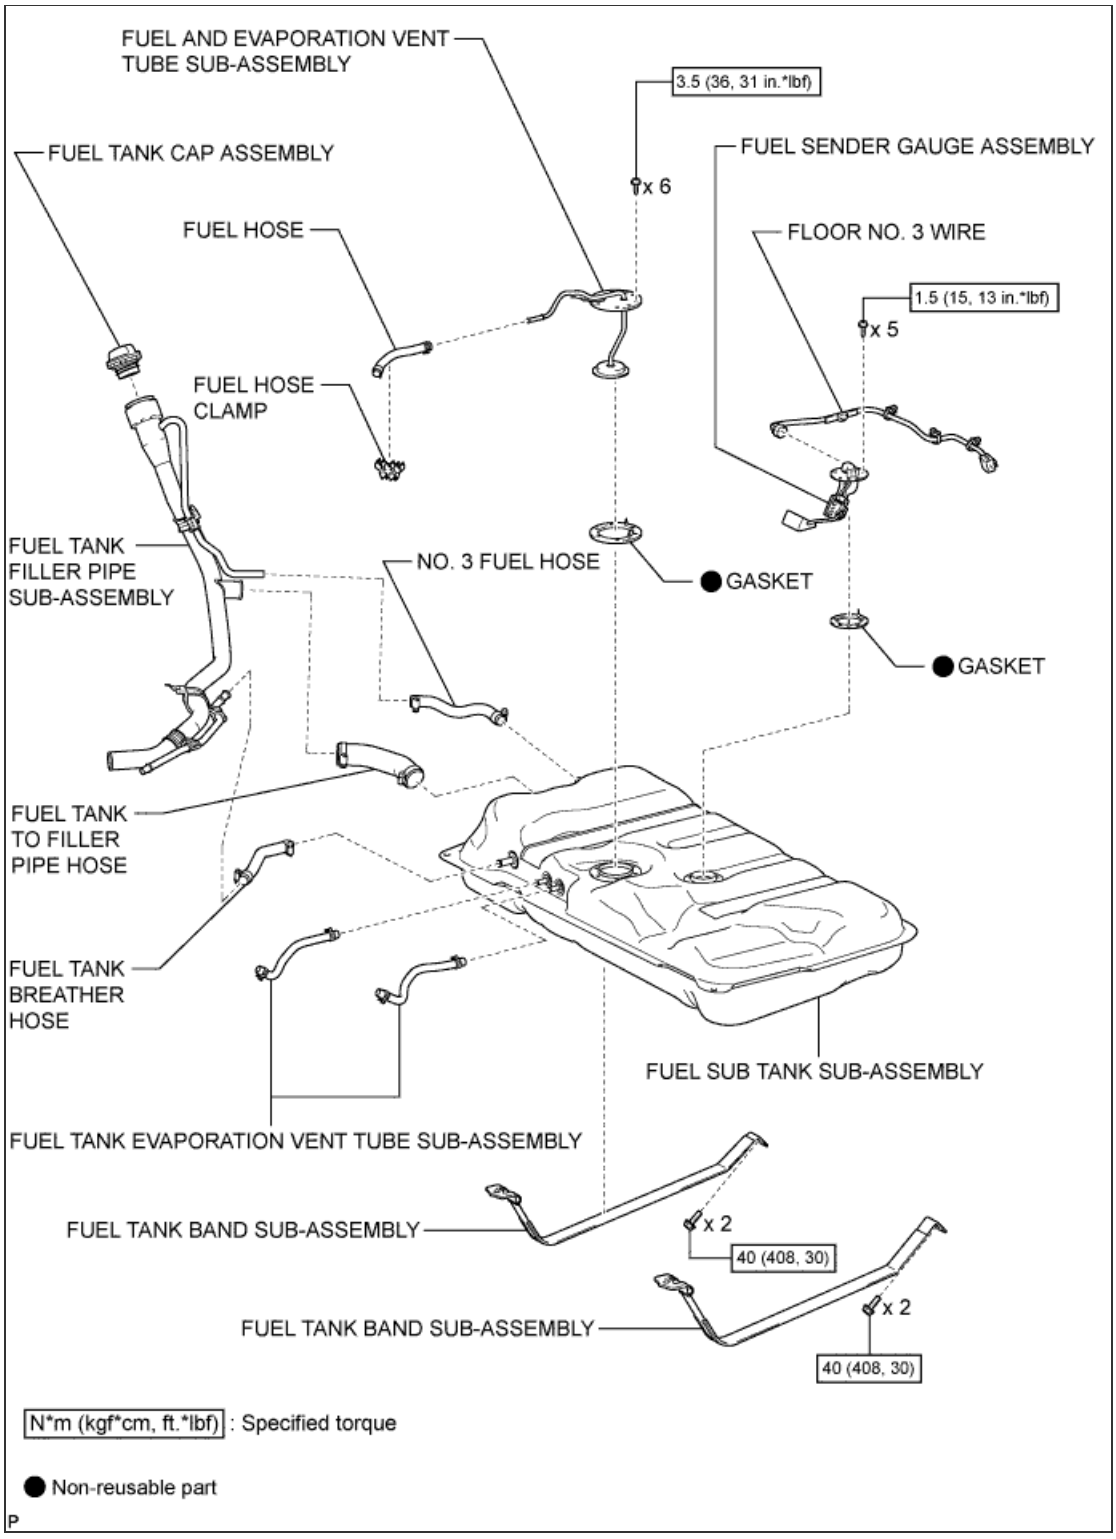
39. INSPECT FOR FUEL LEAK

a. Connect the intelligent tester to the DLC3.

b. Turn the ignition switch to ON and intelligent tester on.



NOTICE:



Do not start the engine.

c. Enter the following menus: Powertrain / Engine and ECT / Active Test / Activate the Fuel Pump Speed Control.

d. Check that there are no fuel leaks after doing maintenance anywhere on the fuel system.

for Preparation Click here

1. DISCHARGE FUEL SYSTEM PRESSURE

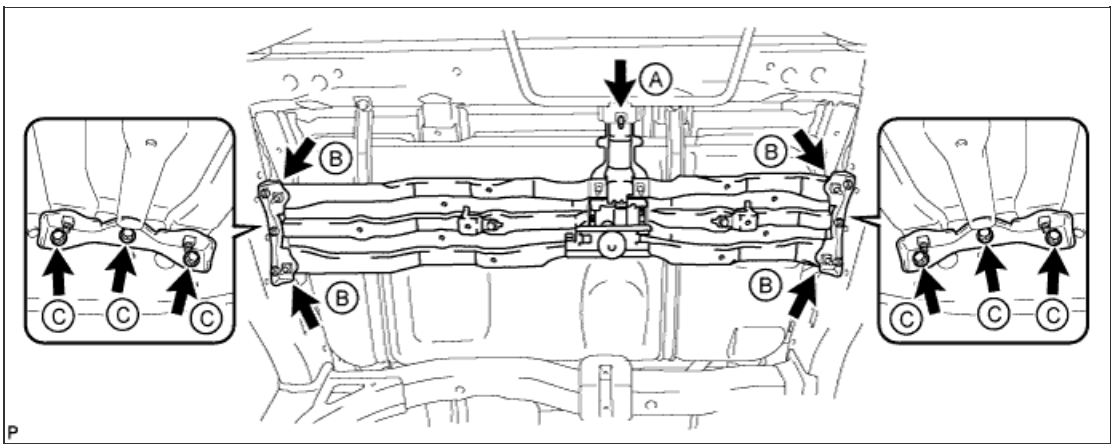
a. Discharge the fuel system pressure (Click here).

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

3. REMOVE SPARE TIRE

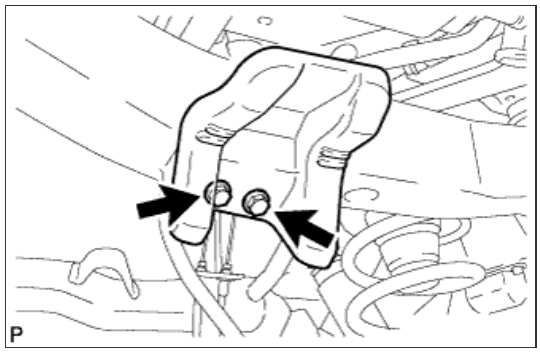


4. REMOVE TAILPIPE ASSEMBLY

a. Remove the bolt, clamp and gasket.

b. Remove the tailpipe from the 2 exhaust pipe supports.

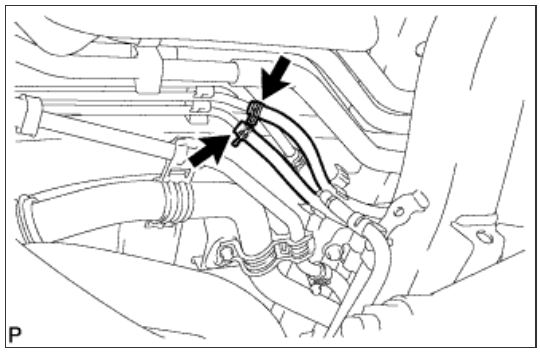
5. REMOVE SPARE WHEEL CARRIER CROSSMEMBER AND SPARE WHEEL CARRIER BRACKET



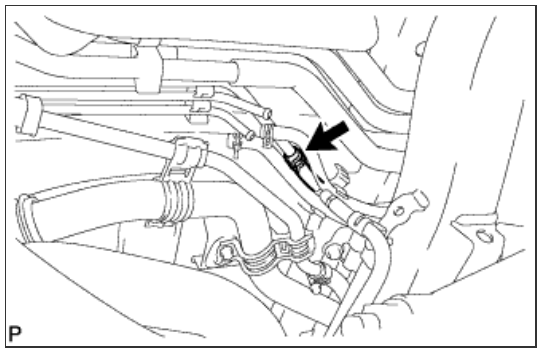
a. Remove the bolt labeled A, and then loosen the 4 bolts labeled B.

b. Slightly raise the spare wheel carrier crossmember, and then remove the 6 bolts labeled C, spare wheel carrier crossmember and 2 brackets.

6. REMOVE NO. 1 SPARE WHEEL STOPPER



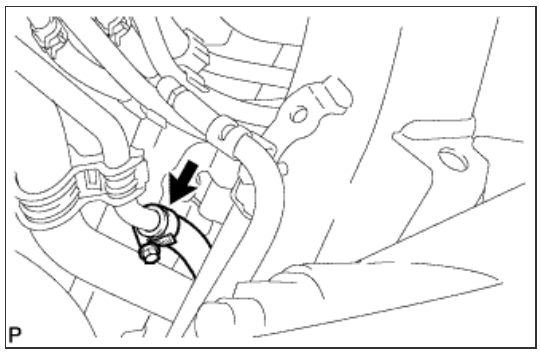
a. Remove the 2 bolts and spare wheel stopper.



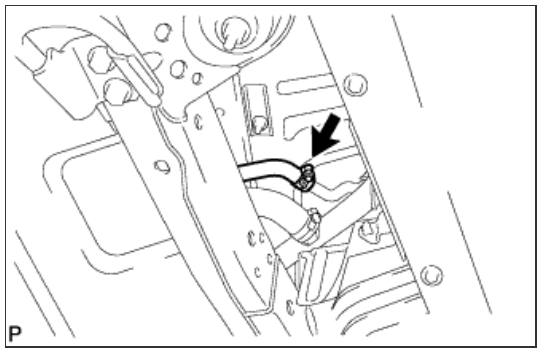
7. REMOVE FUEL TANK CAP ASSEMBLY

8. DISCONNECT FUEL TANK EVAPORATION VENT TUBE SUB-ASSEMBLY

a. Disconnect the 2 fuel tank evaporation vent tubes.

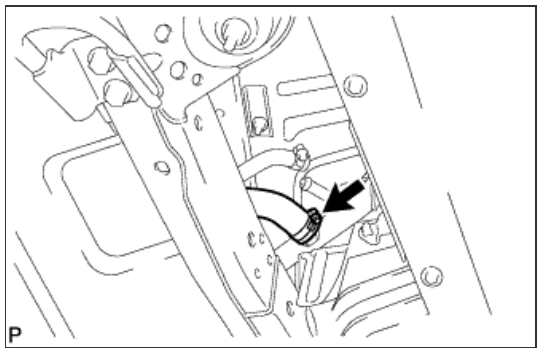


9. DISCONNECT FUEL HOSE



10. DISCONNECT FUEL TANK BREATHER HOSE

a. Disconnect the breather hose from the filler pipe.

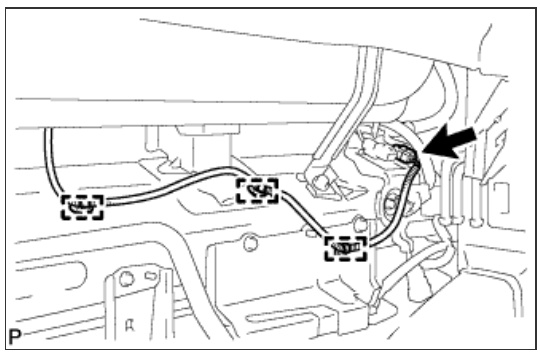


11. DISCONNECT NO. 3 FUEL HOSE

a. Disconnect the fuel hose from the filler pipe.

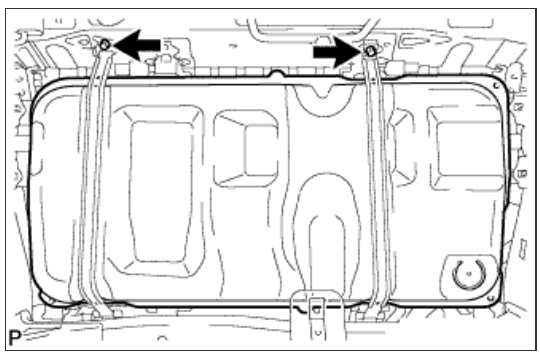
12. DISCONNECT FUEL TANK TO FILLER PIPE HOSE

a. Disconnect the hose from the filler pipe.



13. REMOVE FUEL SUB TANK SUB-ASSEMBLY

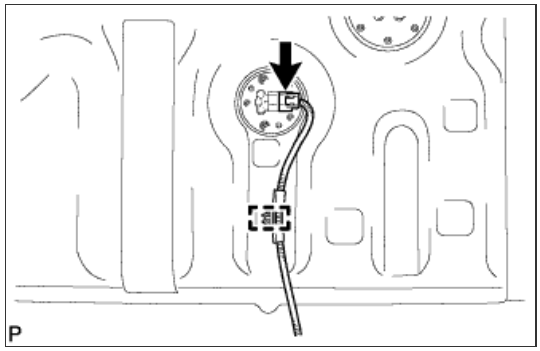
a. Disconnect the floor No. 3 wire connector.



b. Using a clip remover, detach the 3 wire harness clamps.

c. Set a transmission jack underneath the fuel sub tank.

d. Remove the 2 bolts and disconnect the 2 fuel tank bands.

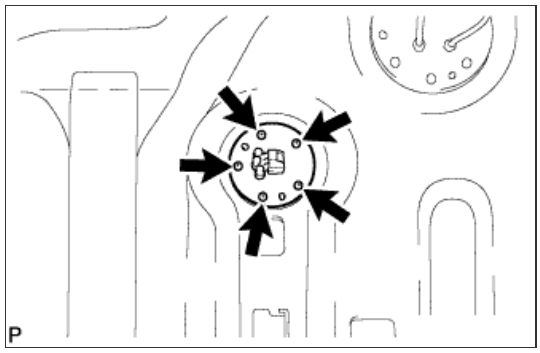


e. Remove the fuel sub tank.

14. REMOVE FLOOR NO. 3 WIRE

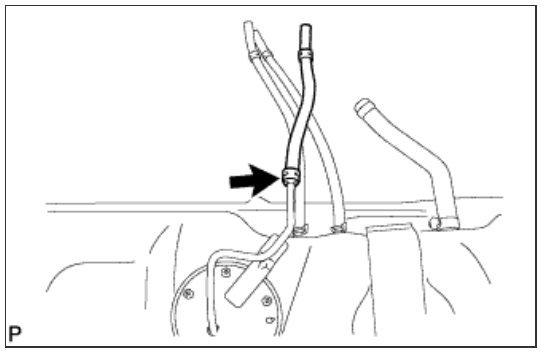
a. Disconnect the sender gauge connector.

b. Using a clip remover, detach the wire harness clamp.



15. REMOVE FUEL SENDER GAUGE ASSEMBLY

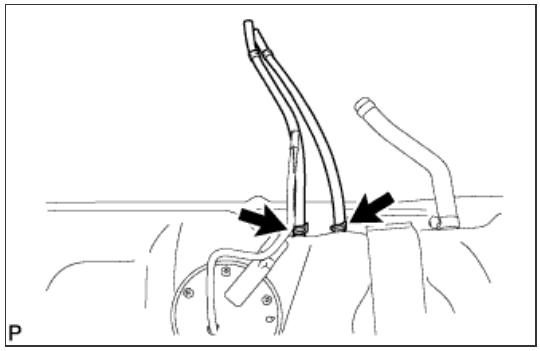
a. Remove the 5 screws and sender gauge.



NOTICE:

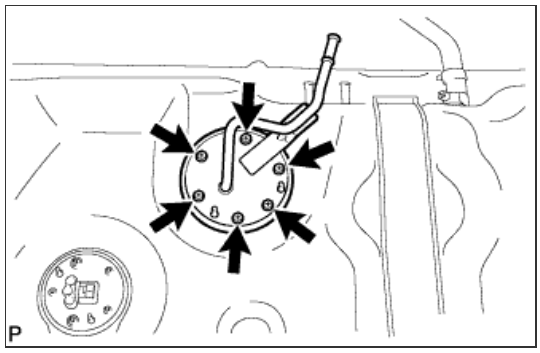
Be careful not to bend the arm of the fuel sender gauge.

b. Remove the gasket from the sender gauge.



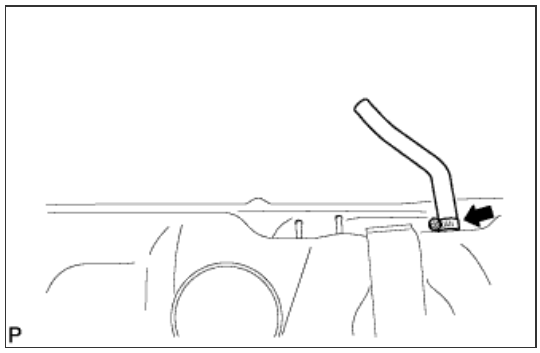
16. REMOVE FUEL HOSE

17. REMOVE FUEL TANK EVAPORATION VENT TUBE SUB-ASSEMBLY



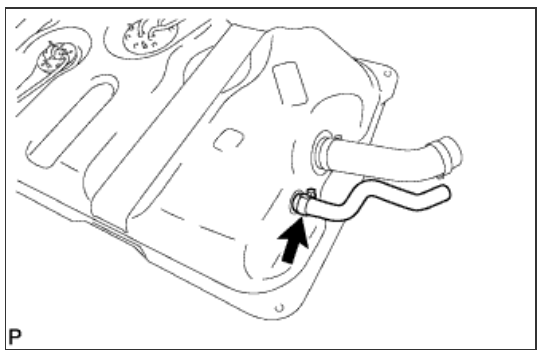
a. Remove the 2 fuel tank evaporation vent tubes.

18. REMOVE FUEL AND EVAPORATION VENT TUBE SUB-ASSEMBLY



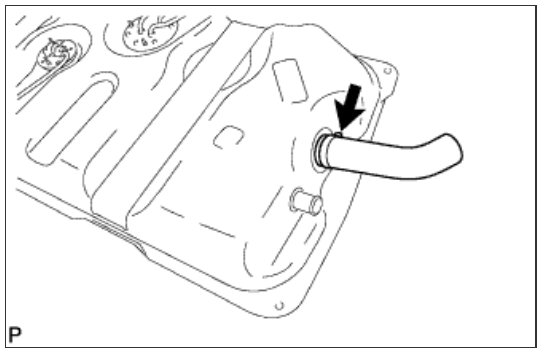
a. Remove the 6 bolts and fuel and evaporation vent tube.

b. Remove the gasket from the fuel and evaporation vent tube.



19. REMOVE FUEL TANK BREATHER HOSE

a. Remove the breather hose from the fuel sub tank.



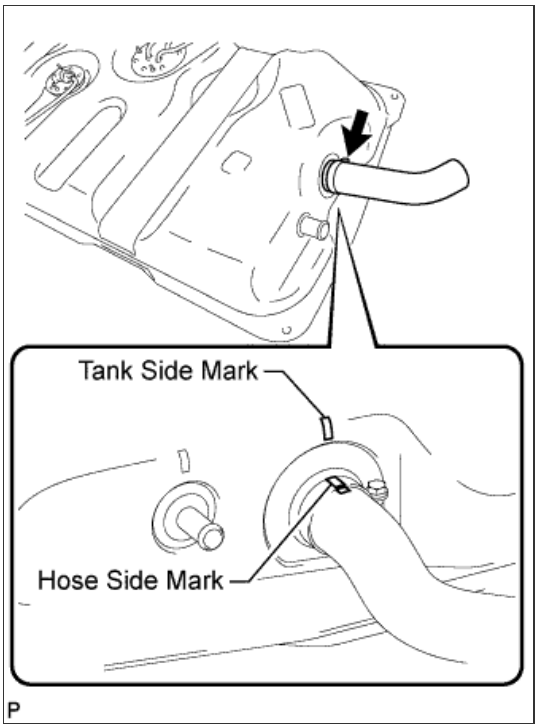
20. REMOVE NO. 3 FUEL HOSE

a. Remove the fuel hose from the fuel sub tank.

21. REMOVE FUEL TANK TO FILLER PIPE HOSE

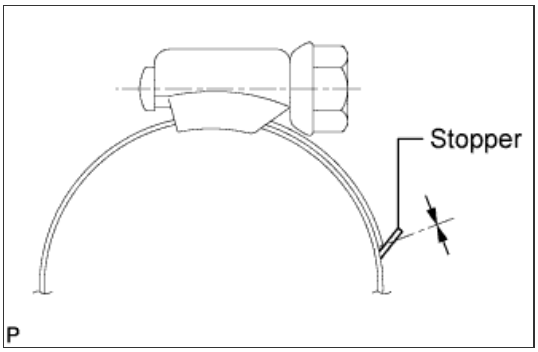
a. Remove the hose from the fuel sub tank.

P



for Preparation Click here

1. INSTALL FUEL TANK TO FILLER PIPE HOSE

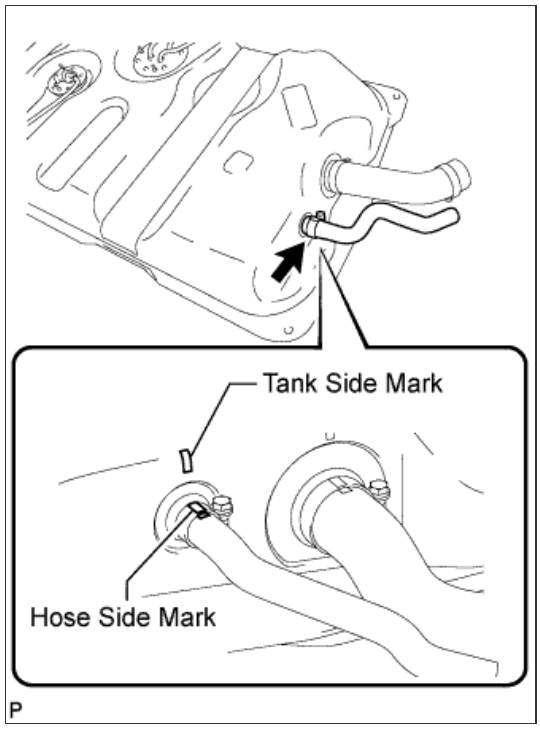


a. Install the hose to the fuel sub tank as shown in the illustration.

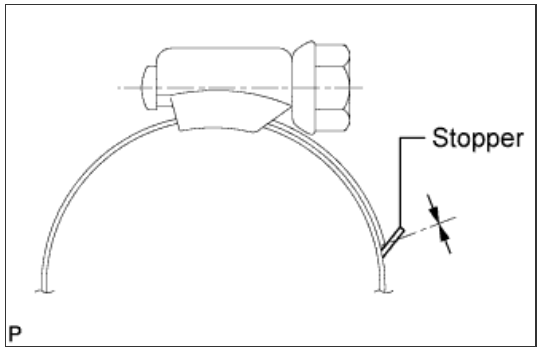
HINT:

- **Align the fuel sub tank side mark with the hose side mark when installing the hose.**

- **Tighten the hose clamp until the end of the hose clamp contacts the stopper as shown in the illustration.**



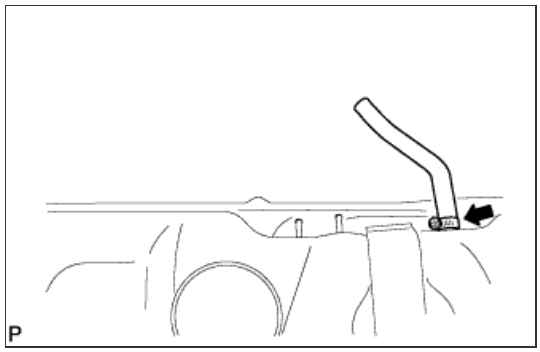
2. INSTALL NO. 3 FUEL HOSE



a. Install the fuel hose to the fuel sub tank as shown in the illustration.

HINT:

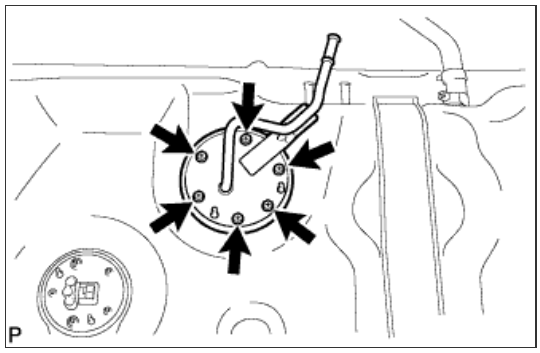
- **Align the fuel sub tank side mark with the hose side mark when installing the hose.**



- **Tighten the hose clamp until the end of the hose clamp contacts the stopper as shown in the illustration.**

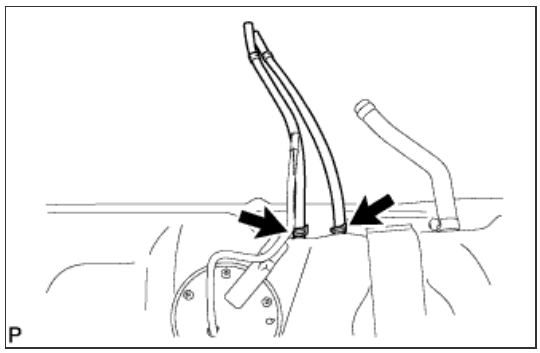
3. INSTALL FUEL TANK BREATHER HOSE

a. Install the breather hose to the fuel sub tank.



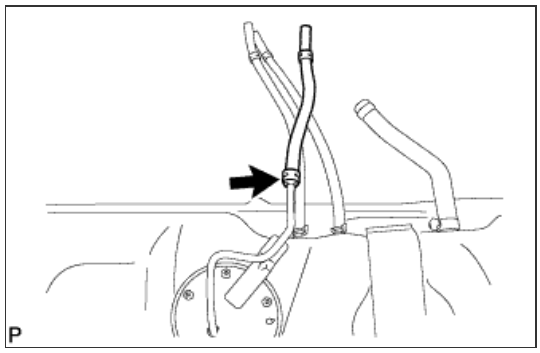
4. INSTALL FUEL AND EVAPORATION VENT TUBE SUB-ASSEMBLY

a. Install a new gasket to the fuel and evaporation vent tube.



b. Install the fuel and evaporation vent tube with the 6 bolts.

Torque:
3.5 N*m 36 kgf*cm , 31 in.*lbf }

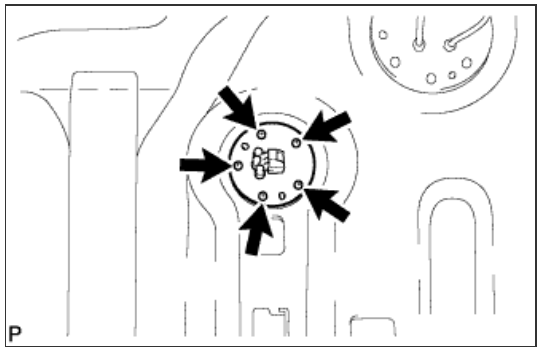


5. INSTALL FUEL TANK EVAPORATION VENT TUBE SUB-ASSEMBLY

a. Install the 2 fuel tank evaporation vent tubes.

6. INSTALL FUEL HOSE

7. INSTALL FUEL SENDER GAUGE ASSEMBLY

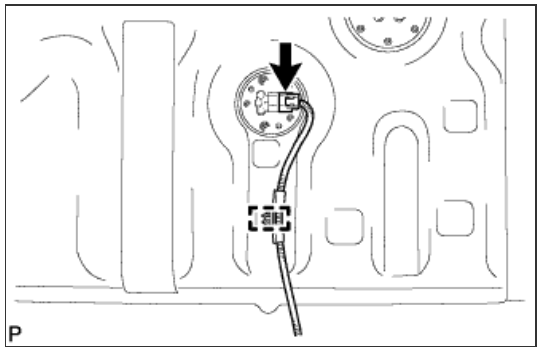


a. Install a new gasket to the sender gauge.

NOTICE:

Be careful not to bend the arm of the fuel sender gauge.

b. Install the sender gauge with the 5 screws.

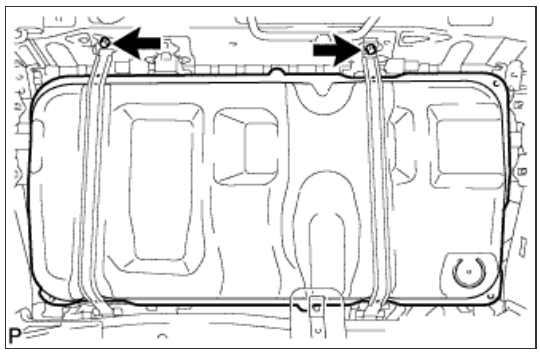


Torque:
1.5 N*m 15 kgf*cm , 13 in.*lbf }

. INSTALL FLOOR NO. 3 WIRE

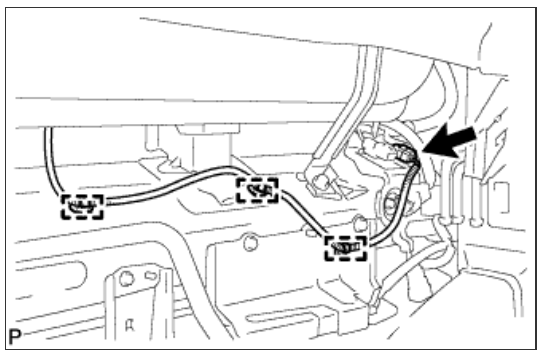
a. Attach the wire harness clamp to the fuel sub tank.

b. Connect the sender gauge connector.



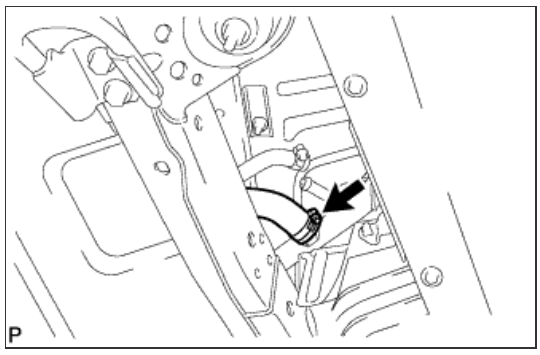
9. INSTALL FUEL SUB TANK SUB-ASSEMBLY

a. Set the fuel sub tank on a transmission jack and raise the fuel sub tank.



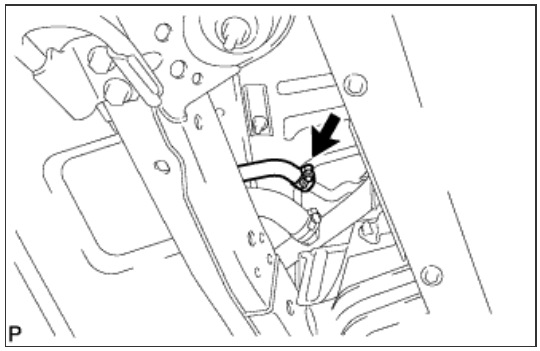
b. Connect the 2 fuel tank bands with the 2 bolts.

Torque:
4 N*m 4 kgf*cm , 3 ft.*lbf }



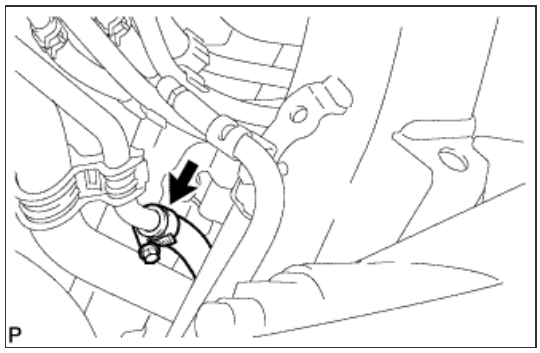
c. Connect the floor No. 3 wire connector.

d. Attach the 3 wire harness clamps.



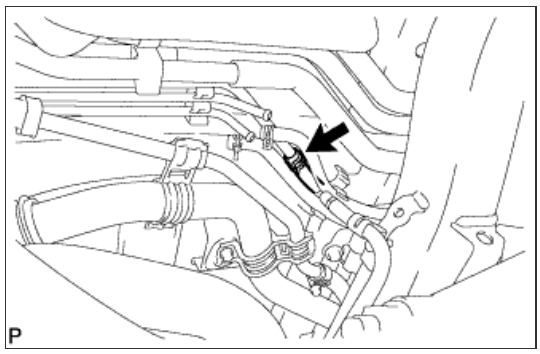
1 . CONNECT FUEL TANK TO FILLER PIPE HOSE

a. Connect the hose to the filler pipe.



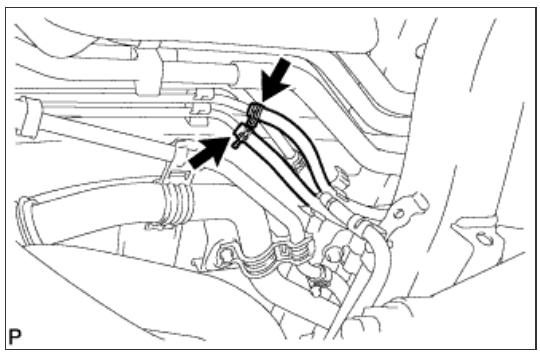
11. CONNECT NO. 3 FUEL HOSE

a. Connect the fuel hose to the filler pipe.



12. CONNECT FUEL TANK BREATHER HOSE

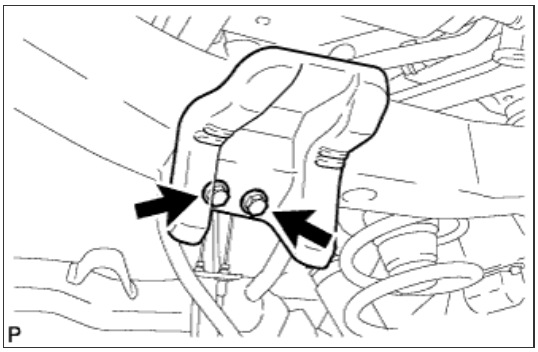
a. Connect the breather hose to the filler pipe.



13. CONNECT FUEL HOSE

14. CONNECT FUEL TANK EVAPORATION VENT TUBE SUB-ASSEMBLY

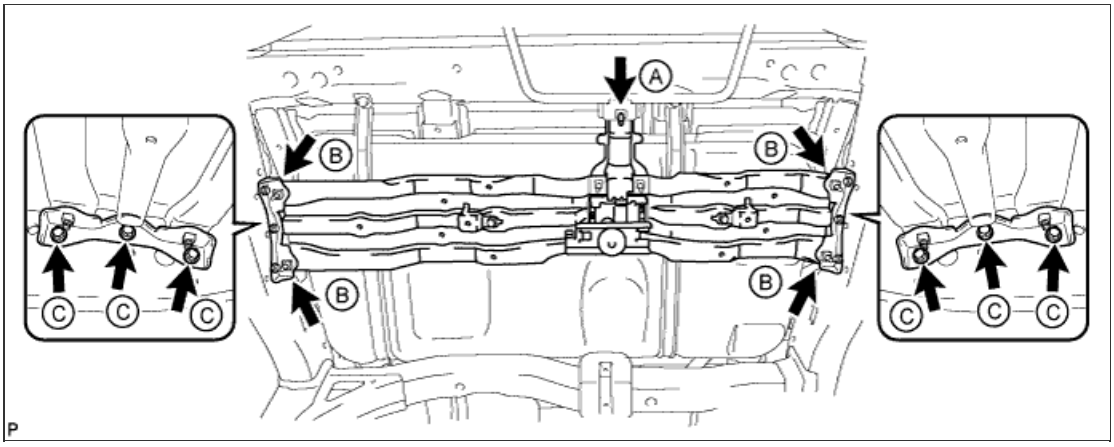
a. Connect the 2 fuel tank evaporation vent tubes.



15. INSTALL FUEL TANK CAP ASSEMBLY

16. INSTALL NO. 1 SPARE WHEEL STOPPER

a. Install the spare wheel stopper with the 2 bolts.



Torque:
32 N*m 326 kgf*cm , 24 ft.*lbf }

17. INSTALL SPARE WHEEL CARRIER CROSSMEMBER AND SPARE WHEEL CARRIER BRACKET

a. Install the spare wheel carrier crossmember and 2 brackets to the vehicle with the 6 bolts labeled C.

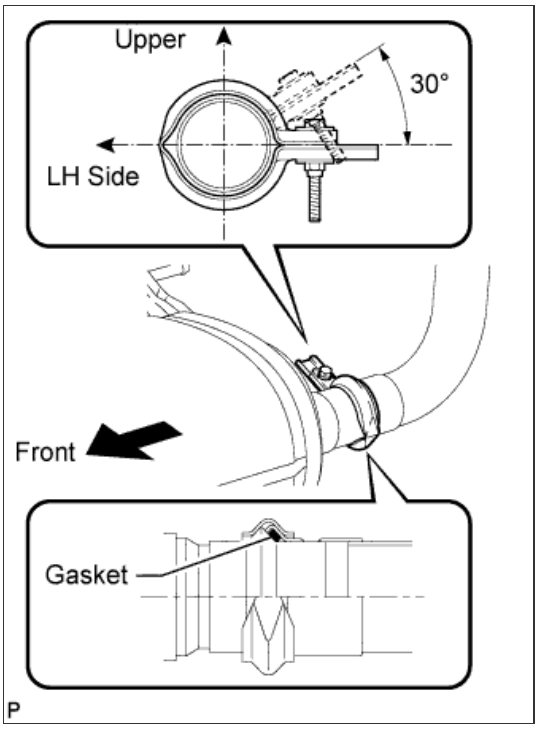
Torque:
for bolt C:
2 N*m 2 4 kgf*cm , 15 ft.*lbf }

b. Temporarily install the bolt labeled A, and then tighten the bolt labeled A and bolts labeled B.

Torque:
for bolt A:
29 N*m 296 kgf*cm , 21 ft.*lbf }
for bolt B:
2 N*m 2 4 kgf*cm , 15 ft.*lbf }

18. INSTALL TAILPIPE ASSEMBLY

a. Install the tailpipe to the 2 exhaust pipe supports.



b. Set a new gasket to the center exhaust pipe.

c. Connect the tailpipe to the center pipe with a new clamp.

Torque:
32 N*m 326 kgf*cm , 24 ft.*lbf }

HINT:

Install the clamp within the angle range shown in the illustration.

19. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2 . INSPECT FOR FUEL LEAK

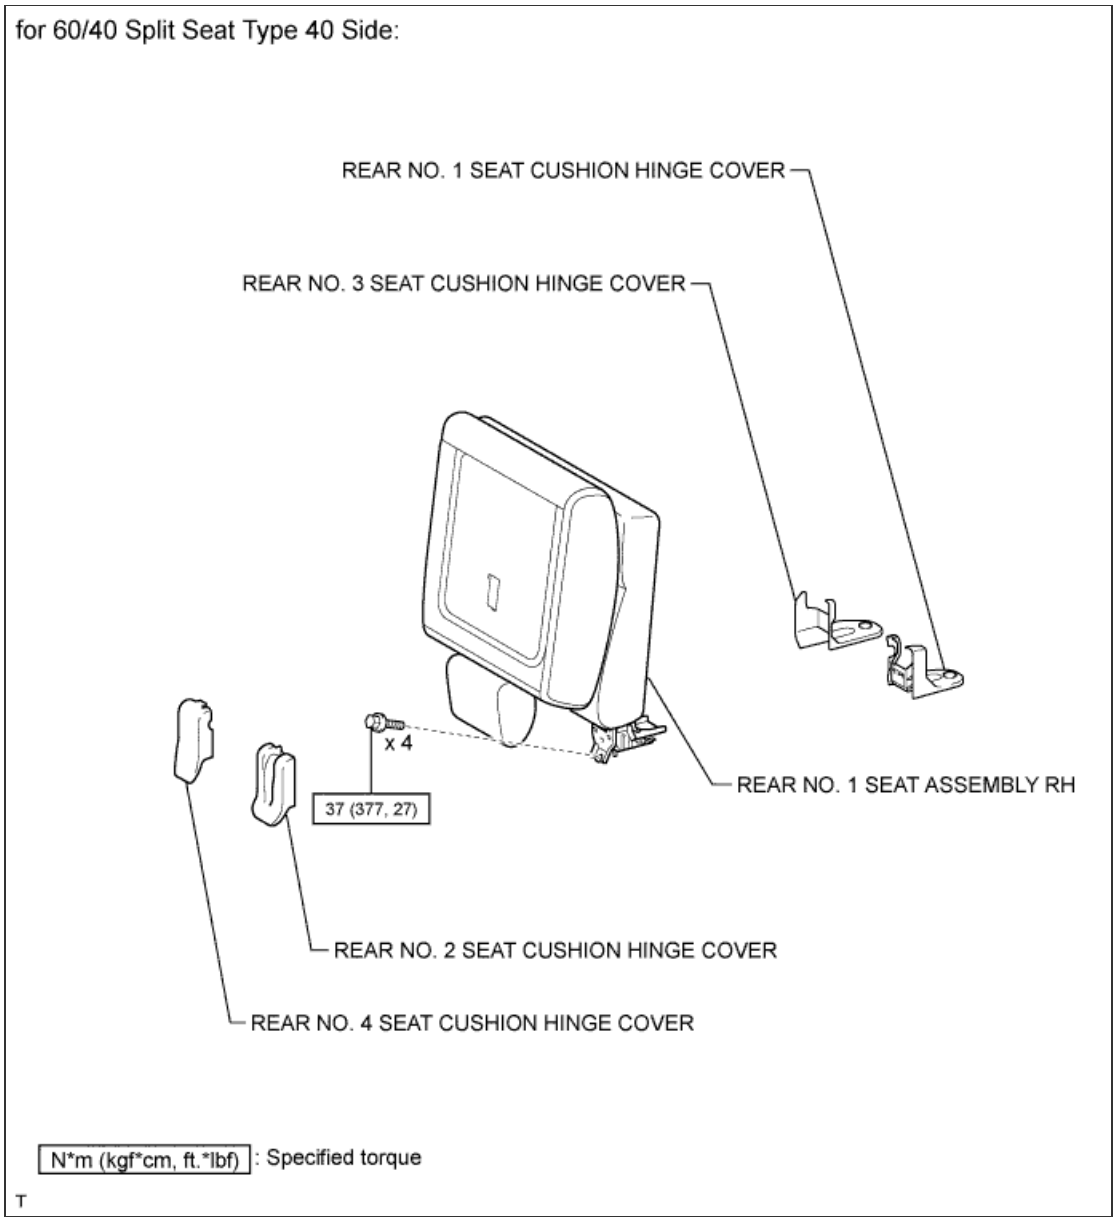
a. Connect the intelligent tester to the DLC3.

b. Turn the ignition switch to ON and intelligent tester on.

NOTICE:

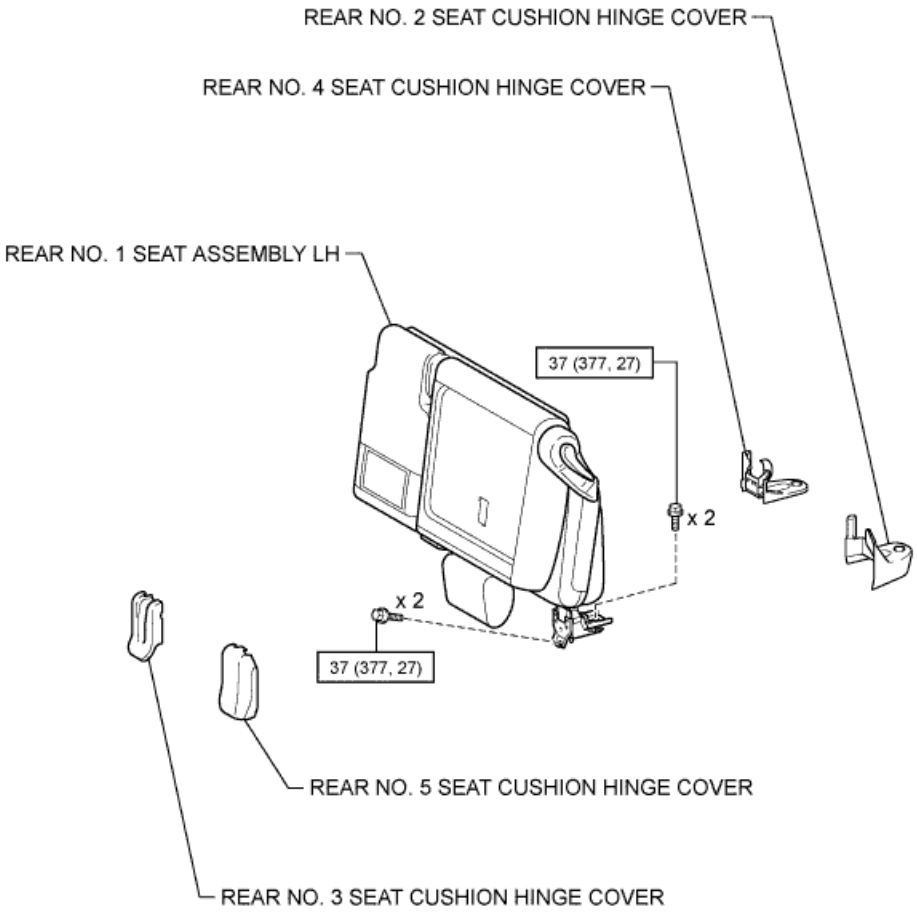
Do not start the engine.

c. Enter the following menus: Powertrain / Engine and ECT / Active Test / Activate the Fuel Pump Speed Control.



d. Check that there are no fuel leaks after doing maintenance anywhere on the fuel system.

21. INSPECT FOR EXHAUST GAS LEAK



If gas is leaking, tighten the areas necessary to stop the leak. Replace damaged parts as necessary.

22. INSTALL SPARE TIRE

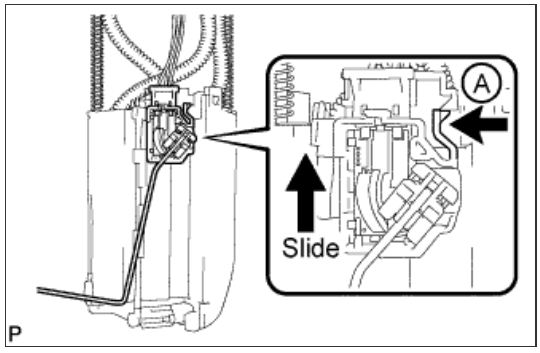
a. for Single Tank Type:
Remove the fuel suction with pump and gauge tube assembly (Click here).

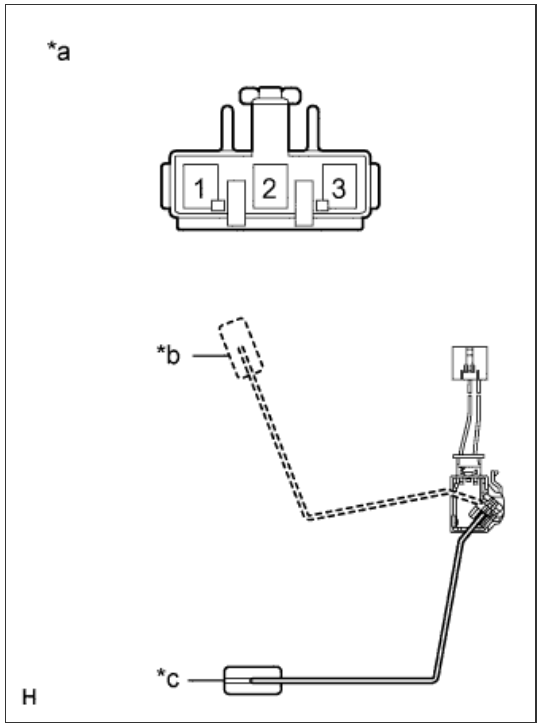


b. for Double Tank Type:
Remove the fuel suction with pump and gauge tube assembly (Click here).

2. REMOVE FUEL SENDER GAUGE ASSEMBLY

a. Disconnect the fuel sender gauge connector.

b. Press down on the sender gauge claw labeled A. Then slide the sender gauge upward to remove it.



for Preparation Click here

1. INSPECT FUEL SENDER GAUGE ASSEMBLY

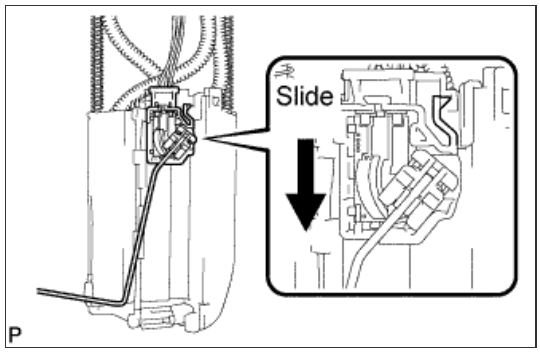
Text in Illustration

*a	Component without harness connected (Fuel Sender Gauge)
*b	F (Upper)
*c	E (Lower)

a. Check that the float moves smoothly between F and E.

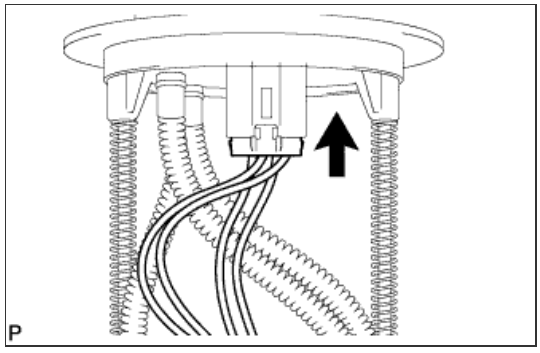
b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:



Tester Connection	Condition	Specified Condition
1 - 2	Float level is F (upper)	13.5 to 16.5 Ω
	Float level is E (lower)	405.5 to 414.5 Ω

If the result is not as specified, replace the fuel sender gauge assembly.

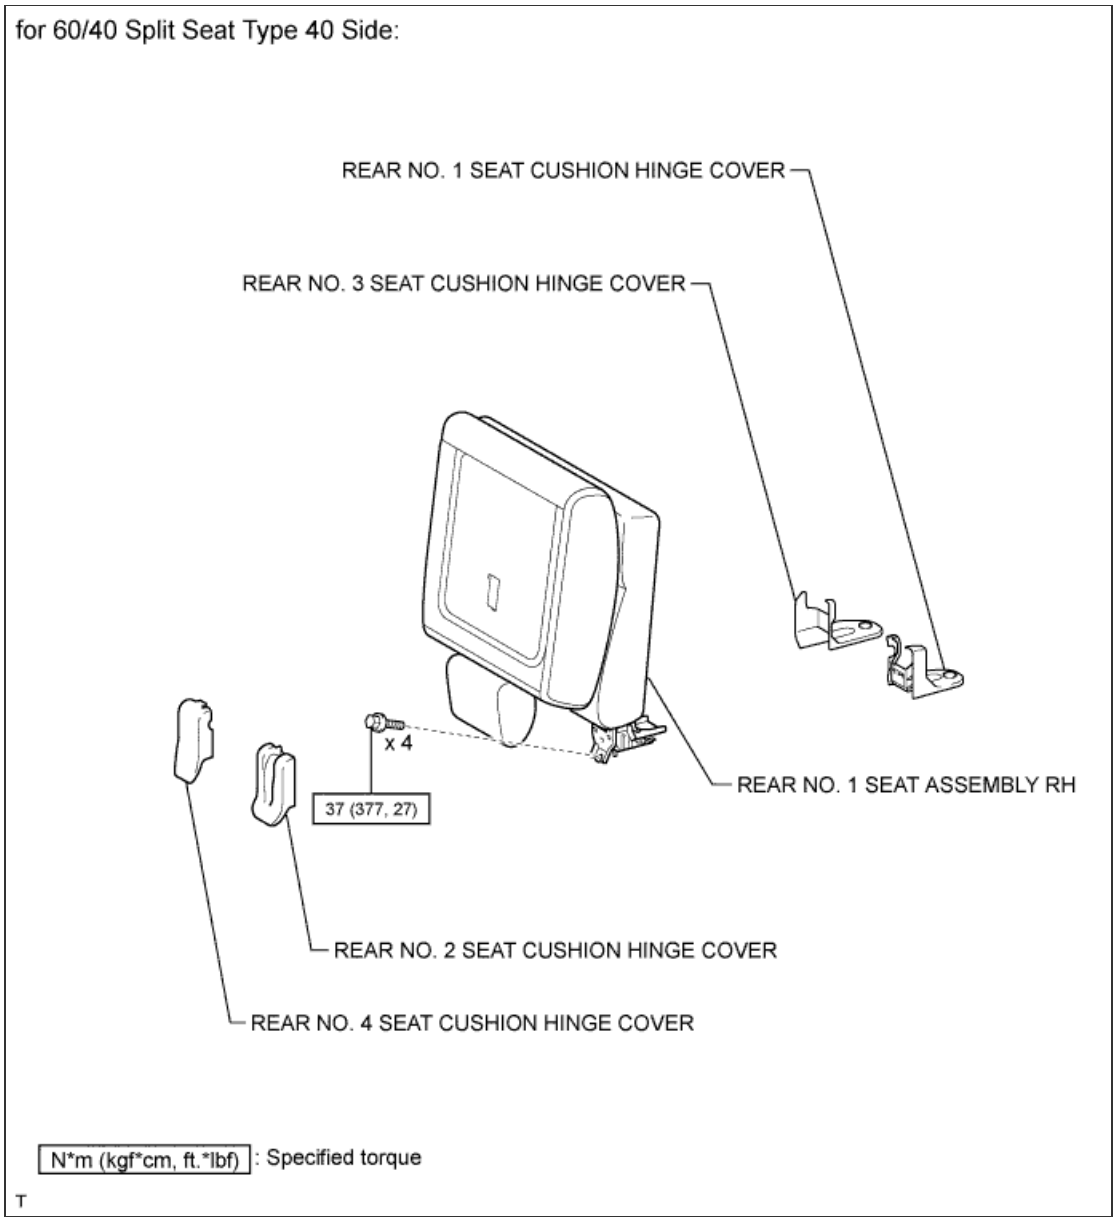


for Preparation Click here

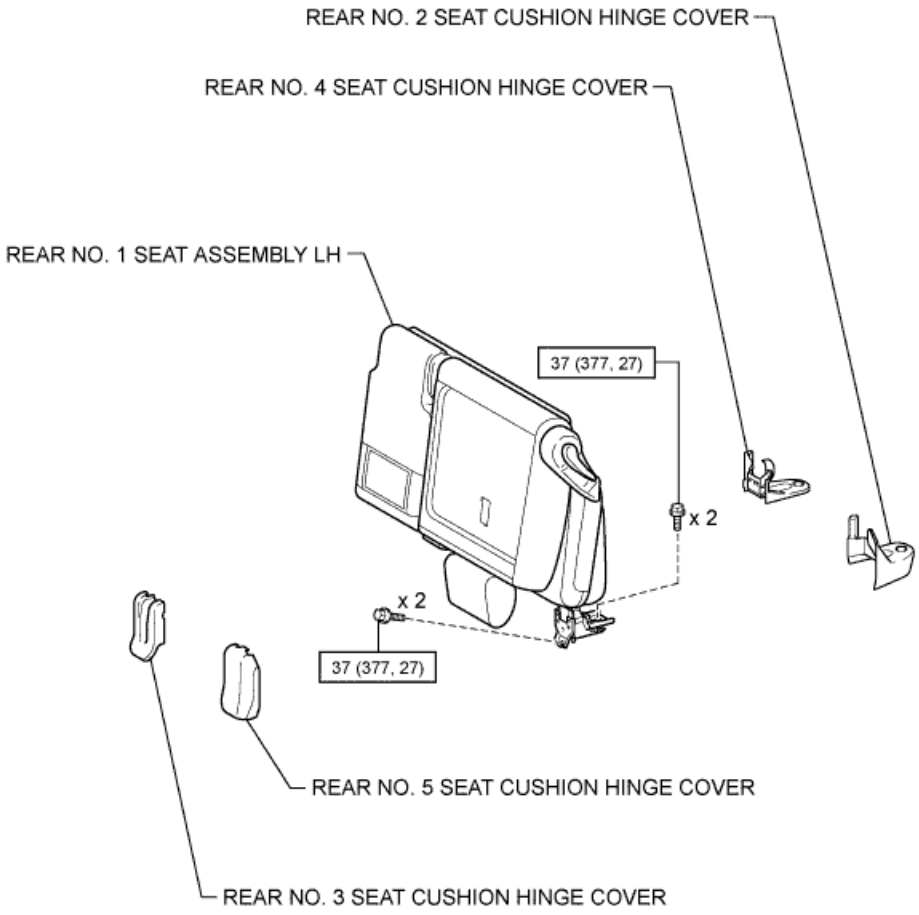
1. INSTALL FUEL SENDER GAUGE ASSEMBLY

a. Set the sender gauge to the fuel sub-tank. Then slide the sender gauge downward to install it.

b. Connect the fuel sender gauge connector.



2. INSTALL FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY



a. for Single Tank Type:
Install the fuel suction with pump and gauge tube assembly (Click here).

FUEL SENDER GAUGE ASSEMBLY (for Fuel Sub Tank) > REMOVAL

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE REAR NO. 1 SEAT ASSEMBLY RH (for 60/40 Split Seat Type 40 Side)

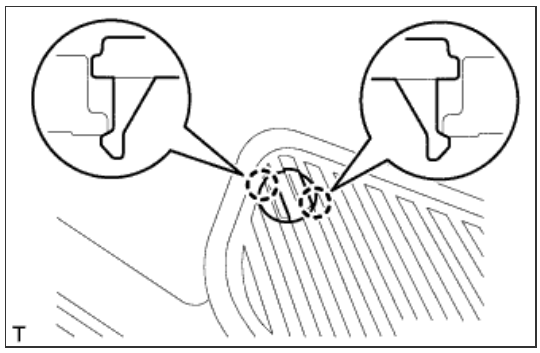
a. Remove the rear No. 1 seat assembly RH (Click here).

3. REMOVE REAR NO. 1 SEAT ASSEMBLY LH (for 60/40 Split Seat Type 60 Side)

a. Remove the rear No. 1 seat assembly LH (Click here).

4. REMOVE REAR NO. 2 SEAT ASSEMBLY

a. for Face to Face Seat Type:
Remove the rear No. 2 seat assembly (Click here).

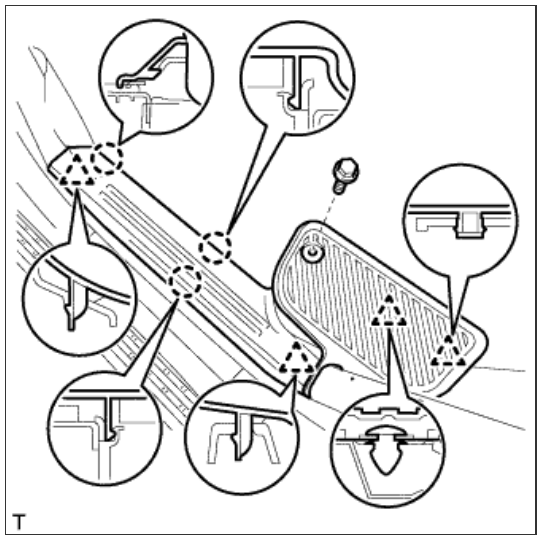


b. except Face to Face Seat Type:
Remove the rear No. 2 seat assembly (Click here).

5. REMOVE REAR STEP COVER

HINT:

Use the same procedure to remove the step cover on the other side.

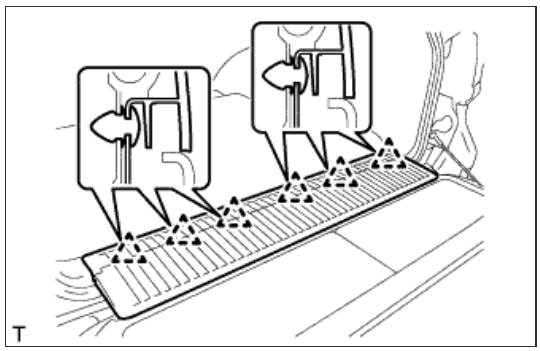


a. Detach the 2 claws and remove the step cover.

6. REMOVE REAR DOOR SCUFF PLATE LH

a. Remove the screw.

b. Detach the 3 claws and 4 clips, and remove the scuff plate.



7. REMOVE REAR DOOR SCUFF PLATE RH

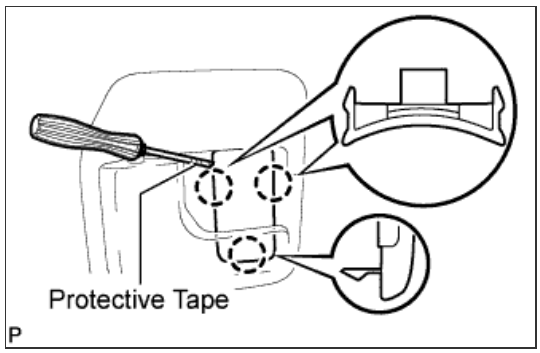
HINT:

Use the same procedures described for the LH side.

8. REMOVE REAR FLOOR MAT REAR SUPPORT PLATE

a. Detach the 6 clips and remove the support plate.

9. REMOVE REAR SEAT COVER CAP (w/ Rear No. 2 Seat, except Face to Face Seat Type)



HINT:

Use the same procedure to remove the rear seat cover cap on the other side.

a. Using a screwdriver, detach the 3 claws and remove the rear seat cover cap.

HINT:

Tape the screwdriver tip before use.

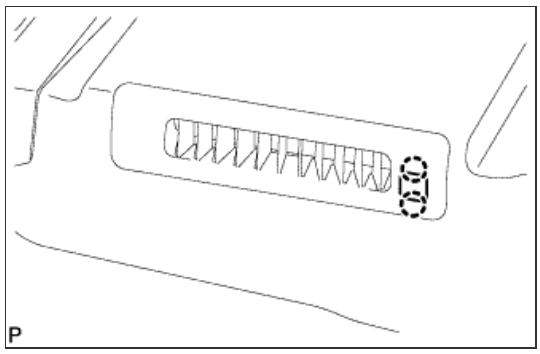
10. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY LH

a. w/ Sliding Roof:
Remove the front quarter trim panel assembly LH (Click here).

b. w/o Sliding Roof:
Remove the front quarter trim panel assembly LH (Click here).

11. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY RH

a. w/ Sliding Roof:
Remove the front quarter trim panel assembly RH (Click here).



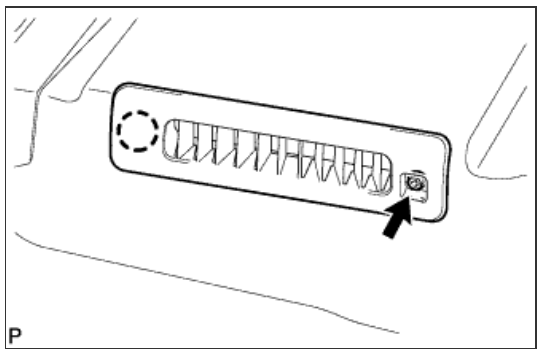
b. w/o Sliding Roof:
Remove the front quarter trim panel assembly RH (Click here).

12. REMOVE AIR DUCT PLUG (w/ Rear Air Conditioning System)

a. Detach the 2 claws and remove the plug.

HINT:

Use the same procedures for both sides.



13. REMOVE REAR AIR DUCT GUIDE (w/ Rear Air Conditioning System)

a. Remove the screw.

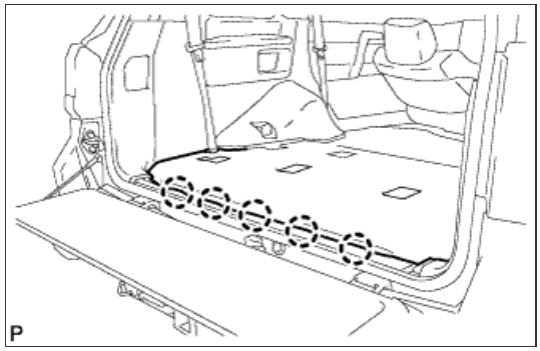
b. Detach the claw and remove the guide.

HINT:

Use the same procedures for both sides.

14. REMOVE REAR FLOOR MAT ASSEMBLY

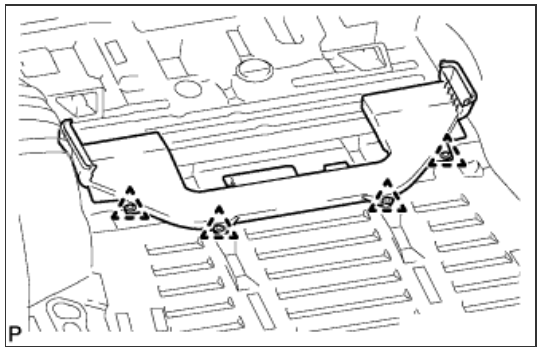
a. w/ Rear ir Conditioning System:
Detach the 5 clips and fold back the floor mat toward the front of the vehicle.



HINT:

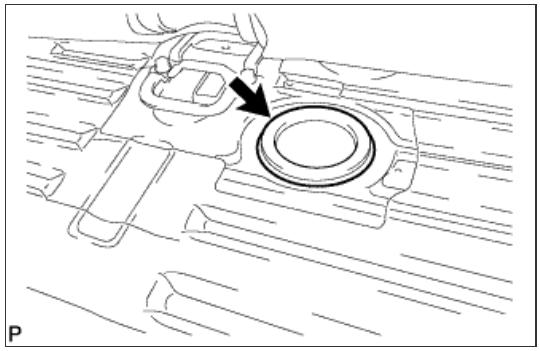
Fold back the floor mat so that the rear No. 7 air duct can be removed.

b. w/o Rear ir Conditioning System:
Detach the 5 clips and fold back the floor mat toward the front of the vehicle.



HINT:

Fold back the floor mat so that the service hole cover can be removed.

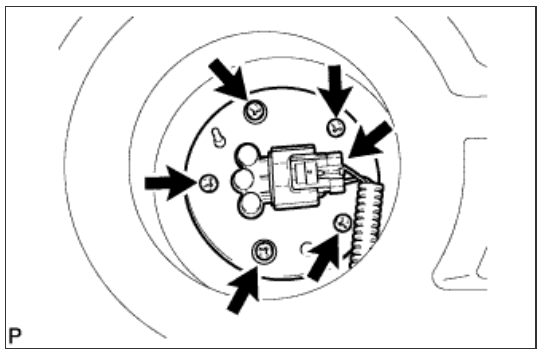


15. REMOVE REAR NO. 7 AIR DUCT (w/ Rear Air Conditioning System)

a. Detach the 4 clips and remove the air duct.

16. REMOVE REAR FLOOR SERVICE HOLE COVER

17. REMOVE FUEL SENDER GAUGE ASSEMBLY



a. Disconnect the sender gauge connector.

b. Remove the 5 screws and sender gauge.

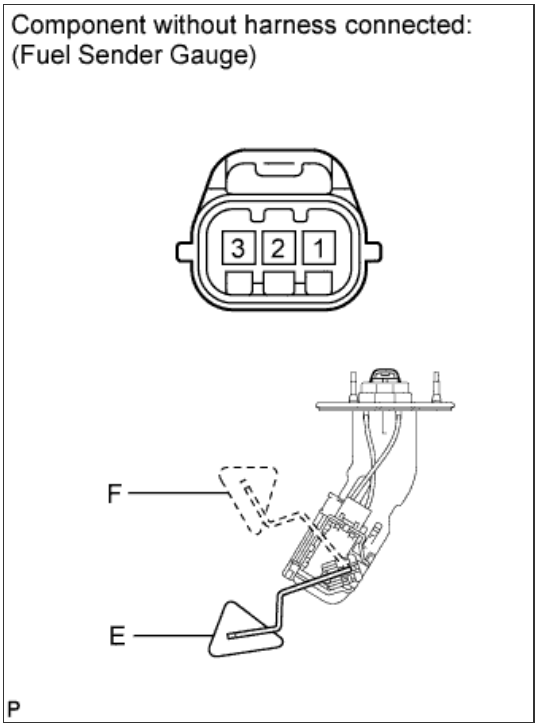
NOTICE:

Be careful not to bend the arm of the fuel sender gauge.

c. Remove the gasket from the sender gauge.

for Preparation Click here

1. INSPECT FUEL SENDER GAUGE ASSEMBLY



a. Check that the float moves smoothly between F and E.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

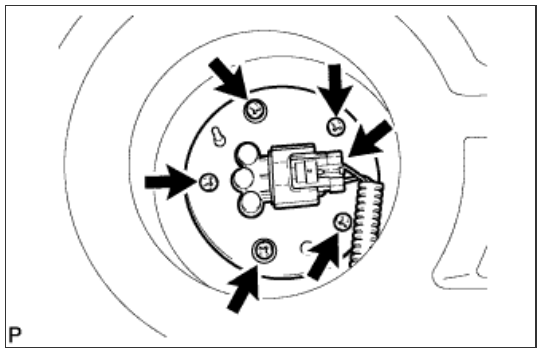
Tester Connection	Condition	Specified Condition
2 - 3	Float level is F (upper)	12 to 18 Ω
	Float level is E (lower)	405 to 415 Ω

If the result is not as specified, replace the fuel sender gauge assembly.

for Preparation Click here

1. INSTALL FUEL SENDER GAUGE ASSEMBLY

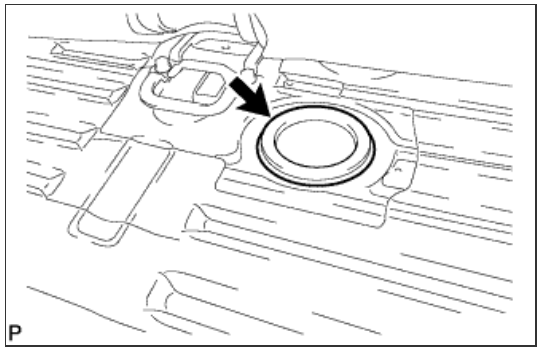
a. Install a new gasket to the sender gauge.



b. Install the sender gauge with the 5 screws.

Torque:
1.5 N*m{ 15 kgf*cm , 13 in.*lbf }

NOTICE:

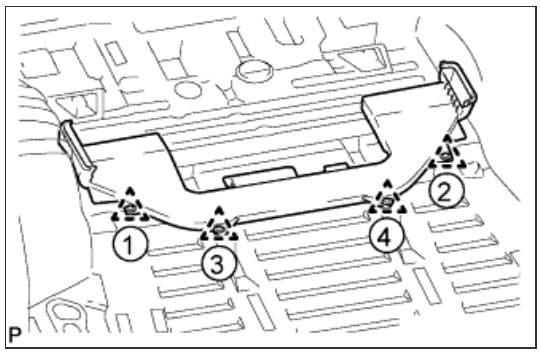


Be careful not to bend the arm of the fuel sender gauge.

c. Connect the sender gauge connector.

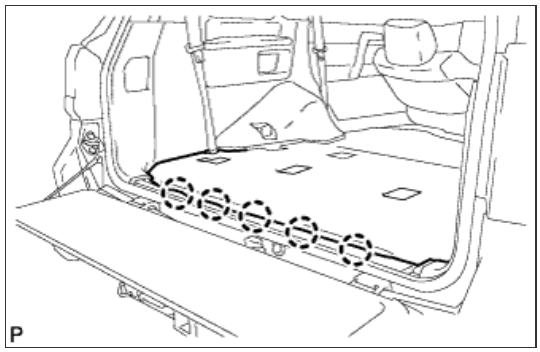
2. INSTALL REAR FLOOR SERVICE HOLE COVER

a. Install the service hole cover with new butyl tape.



3. INSTALL REAR NO. 7 AIR DUCT (w/ Rear Air Conditioning Sy tem)

a. Attach the 4 clips to install the air duct.

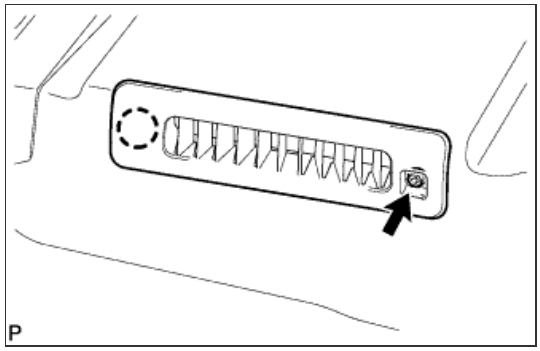


HINT:

Attach the clips in the order shown in the illustration.

4. INSTALL REAR FLOOR MAT ASSEMBLY

a. Attach the 5 clips to install the floor mat.



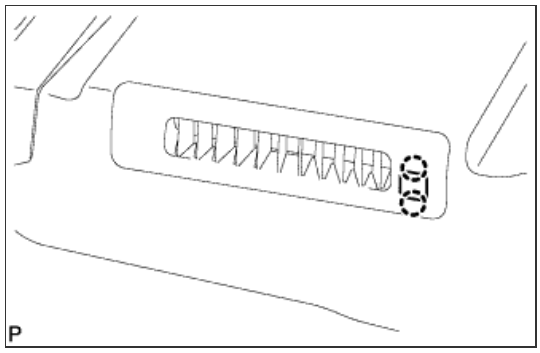
5. INSTALL REAR AIR DUCT GUIDE (w/ Rear Air Conditioning Sy tem)

a. Attach the claw to install the guide.

b. Install the screw.

HINT:

Use the same procedures for both sides.



6. INSTALL AIR DUCT PLUG (w/ Rear Air Conditioning Sy tem)

a. Attach the 2 claws to install the plug.

HINT:

Use the same procedures for both sides.

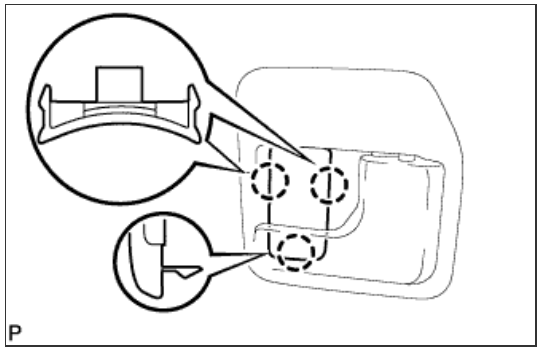
7. INSTALL FRONT ARTER TRIM PANEL ASSEMBLY LH

a. w/ Sliding Roof:
Install the front quarter trim panel assembly LH (Click here).

b. w/o Sliding Roof:
Install the front quarter trim panel assembly LH (Click here).

8. INSTALL FRONT ARTER TRIM PANEL ASSEMBLY RH

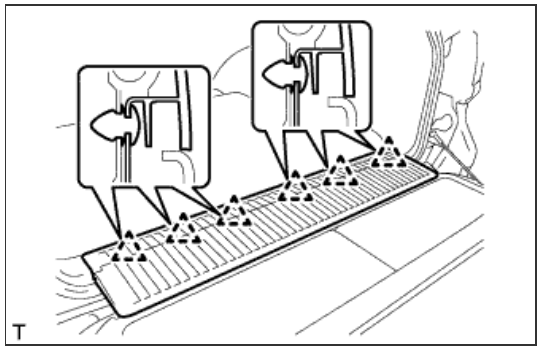
a. w/ Sliding Roof:
Install the front quarter trim panel assembly RH (Click here).



b. w/o Sliding Roof:
Install the front quarter trim panel assembly RH (Click here).

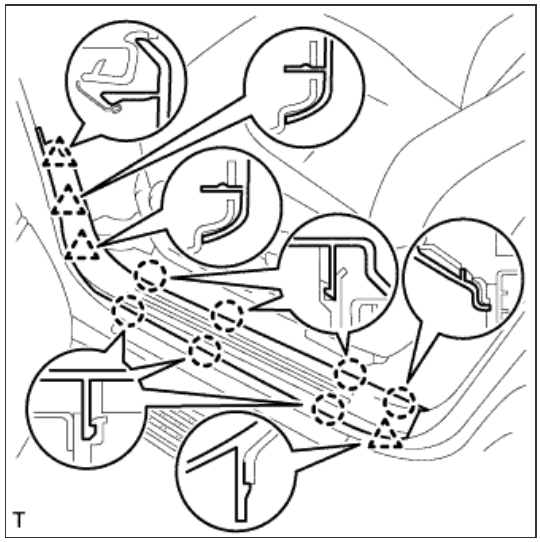
9. INSTALL REAR SEAT COVER CAP (w/ Reat No. 2 Seat, except Face to Face Seat Type)

HINT:



Use the same procedure to install the rear seat cover cap on the other side.

a. Attach the 3 claws to install the rear seat cover cap.



10. INSTALL REAR FLOOR MAT REAR SUPPORT PLATE

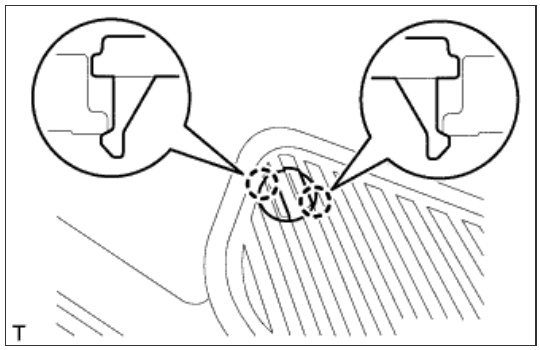
a. Attach the 6 clips to install the support plate.

11. INSTALL REAR DOOR SCUFF PLATE LH

a. Attach the 7 claws and 4 clips to install the scuff plate.

12. INSTALL REAR DOOR SCUFF PLATE RH

HINT:



Use the same procedures described for the LH side.

13. INSTALL REAR STEP COVER

HINT:

Use the same procedure to install the step cover on the other side.

a. Attach the 2 claws to install the step cover.

14. INSTALL REAR NO. 2 SEAT ASSEMBLY

a. for Face to Face Seat Type:
Install the rear No. 2 seat assembly (Click here).

b. except Face to Face Seat Type:
Install the rear No. 2 seat assembly (Click here).

15. INSTALL REAR NO. 1 SEAT ASSEMBLY RH (for 60/40 Split Seat Type 40 Side)

a. Install the rear No. 1 seat assembly RH (Click here).

16. INSTALL REAR NO. 1 SEAT ASSEMBLY LH (for 60/40 Split Seat Type 60 Side)

a. Install the rear No. 1 seat assembly LH (Click here).

17. INSTALL CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

18. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).

for Preparation Click here

CAUTION:

- **Before working on the fuel system, disconnect the cable from the negative (-) battery terminal.**
- **Do not smoke or be near an open flame when working on the fuel system.**
- **Keep gasoline away from rubber and leather parts.**

1.DISCHARGE FUEL SYSTEM PRESSURE

CAUTION:

- **Do not disconnect any part of the fuel system until you have discharged the fuel system pressure.**
- **After discharging the fuel pressure, place a cloth or equivalent over fittings as you separate them to reduce the risk of fuel spray on yourself or in the engine compartment.**

a. Remove the engine room relay block cover.

b. Remove the circuit opening relay (C/OPN).

c. Start the engine. After the engine has stopped on its own, turn the engine switch off.

HINT:

If DTC P0230 is output, clear the DTC (Click here).

d. Crank the engine, then check that the engine does not start.

e. Loosen the fuel tank cap, and then discharge the pressure in the fuel tank completely.

f. Disconnect the cable from the negative (-) battery terminal.

NOTICE:

hen disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

g. Install the circuit opening relay (C/OPN).

h. Install the engine room relay block cover.

.FUEL SYSTEM

a. hen disconnecting the high fuel pressure line, a large amount of gasoline will spill out. Follow these procedures.

i. Perform the Discharge Fuel System Pressure procedures above.

ii. Put a container under the connecting part of the pressure line.

iii. Slowly loosen the connection.

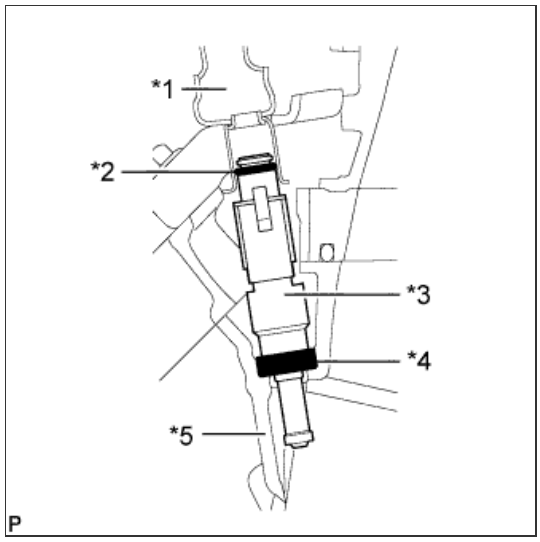
iv. Disconnect the connection.

v. Plug the connection with a rubber plug and cover it with a plastic bag.

b. Observe these precautions when installing the injectors:

- Never reuse the O-ring.
- hen placing a new O-ring on the injector, do not damage it.
- Coat a new O-ring with spindle oil or gasoline before installing it. Do not use engine oil, gear oil or brake oil.

c. Install the injector to the delivery pipe and cylinder head as shown in the illustration.

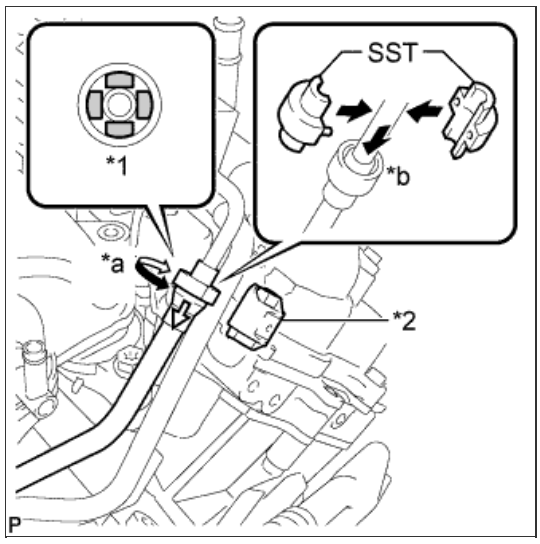


Text in Illustration

*1	Delivery Pipe
*2	O-Ring
*3	Injector
*4	Insulator

*5	Cylinder Head

NOTICE:



Before installing the injector, apply spindle oil or gasoline on the place where the delivery pipe contacts the O-ring of the injector.

d. Observe these precautions when disconnecting the fuel tube connector (for metallic type):

Text in Illustration

*1	Retainer
*2	No. 2 Fuel Pipe Clamp
*a	Turn
*b	Push

NOTICE:

Do not forcibly bend or twist the fuel main tube.

i. Remove the No. 2 fuel pipe clamp.

NOTICE:

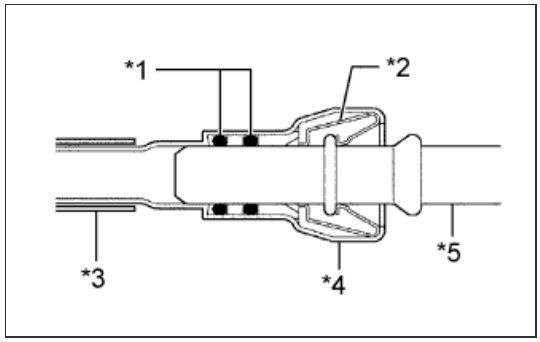
Do not reuse the No. 2 fuel pipe clamp.

ii. ipe off any dirt on the fuel tube connector.

iii. Hold the fuel tube connector and install SST.

SST
09 - 1 11

iv. Turn SST to align the retainer inside the fuel tube connector with the chamfered part of SST.



v. Insert SST into the fuel tube connector and hold it. Then push the fuel tube connector toward SST.

vi. Mount the retainer of the fuel tube connector onto the chamfered part of SST.

vii. Slide SST and the fuel tube connector together towards the fuel tube until they make a click sound, and then disconnect the fuel tube.

Text in Illustration

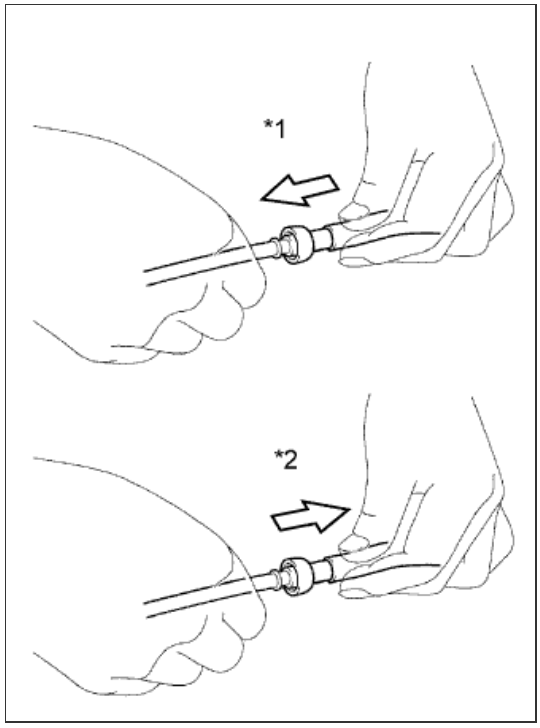
*1	O-Ring
*2	Retainer
*3	Nylon Tube
*4	Housing
*5	Pipe

HINT:

The structure of a fuel tube connector is as shown in the illustration.

viii. Drain the fuel remaining inside the fuel tube.

ix. Cover the fuel tube and fuel pipe with a plastic bag to protect the disconnected parts.



e. Observe these precautions when connecting the fuel tube connector (for metallic type):

i. Check if there is any damage or foreign objects on the pipe connection area.

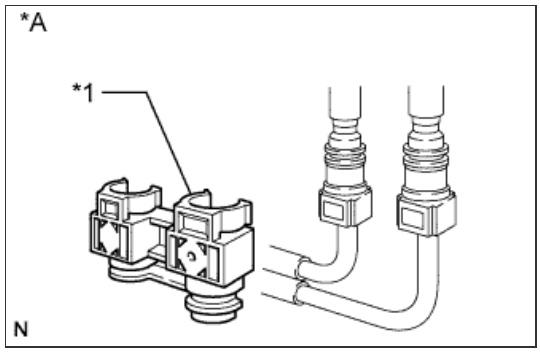
ii. Match the axis of the connector with the axis of the pipe, and push the pipe into the connector until the connector makes a click sound. If the pipe is difficult to push into the connector, apply a small amount of clean engine oil to the tip of the pipe.

Text in Illustration

*1	Push
*2	Pull

iii. After connecting, check if the pipe and the connector are securely connected by pulling on them.

iv. Install a new No. 2 fuel pipe clamp.

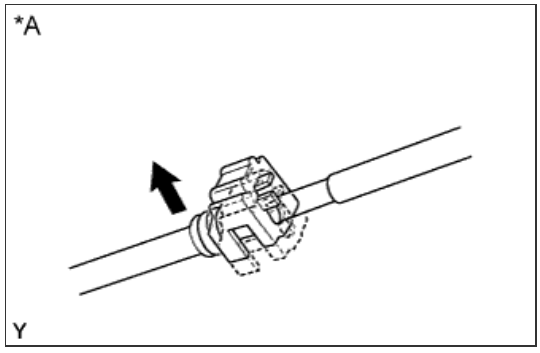


v. Check that there is no fuel leakage.

f. Observe these precautions when disconnecting the fuel tube connector (for quick type A).

i. for Fuel Pipe Clamp Type:
Remove the fuel pipe clamp from the fuel tube connector.

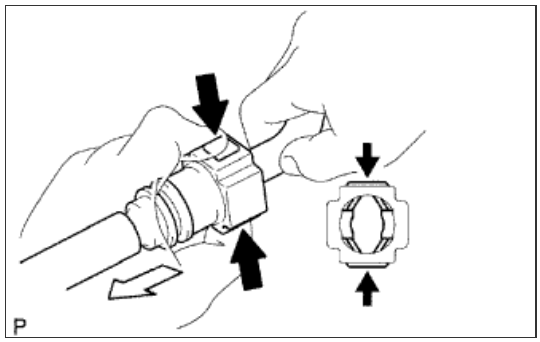
Text in Illustration



*A	for Fuel Pipe Clamp Type
*1	Fuel Pipe Clamp

ii. for Fuel Hose Connector Cover Type:
Detach the lock claw by lifting up the cover, as shown in the illustration.

Text in Illustration



*A	for Fuel Hose Connector Cover Type
➡	Pull

iii. Check for dirt or mud on the pipe and around the connector before disconnection. Clean if necessary.

iv. Pinch the connector and disconnect the connector and pipe.

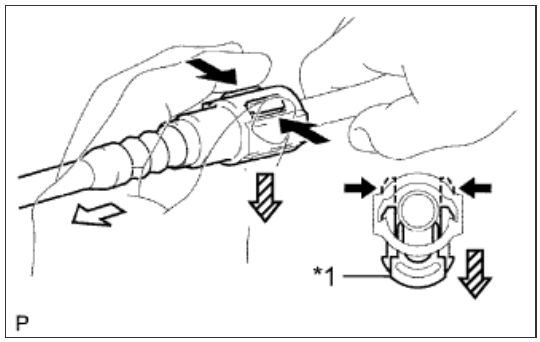
If the connector and the pipe are stuck together, pinch the connector, then push and pull the pipe to disconnect the pipe and pull it out.

Text in Illustration

➡	Pinch
⇨	Pull

NOTICE:

Do not use any tools in this procedure.



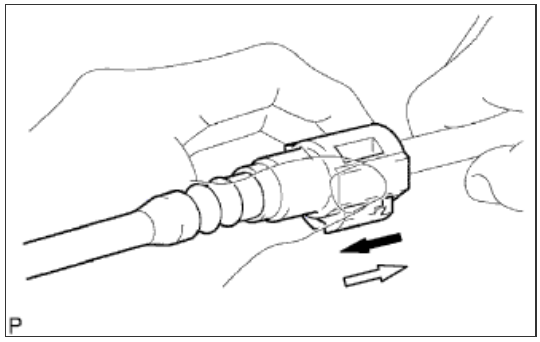
v. Check for dirt or mud on the seal surface of the disconnected pipe. Clean if necessary.

vi. To protect the disconnected pipe and connector from damage and contamination, cover it with a plastic bag.

g. Observe these precautions when disconnecting the fuel tube connector (for quick type B).

i. Check that there is no damage or foreign matter on the part of the pipe that contacts the connector.

ii. Detach the 2 claws of the connector retainer. Push down on the connector and disconnect it from the pipe.



Text in Illustration

*1	Retainer
➡	Push
⇨	Pull
⇩	Down

HINT:

If the connector and pipe are stuck, pinch the fuel pipe by hand, and push and pull the connector to disconnect it.

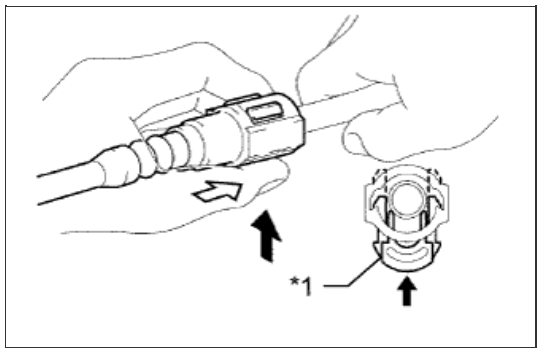
Text in Illustration

➡	Pull
⇨	Push

NOTICE:

Do not use any tools in this procedure.

iii. Check for foreign matter on the seal surface of the disconnected pipe. Clean it if necessary.

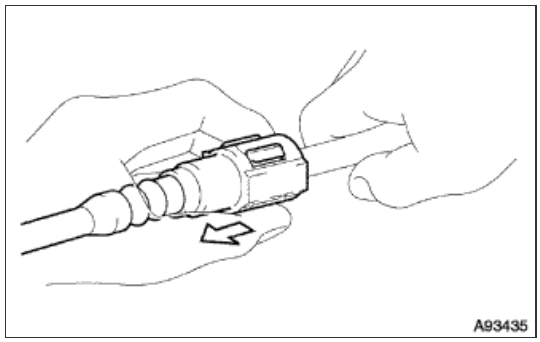


iv. To protect the disconnected pipe and connector from damage and foreign matter, cover it with a plastic bag.

h. Observe these precautions when connecting the fuel tube connector (for quick type B).

iii. Observe these precautions when connecting the fuel tube connector (for quick type B).

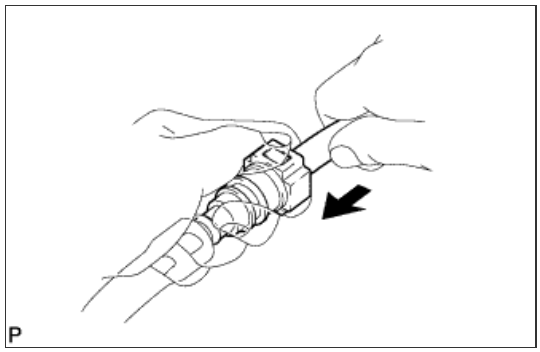
i. Check for foreign matter on the pipe and around the connector before connecting it. Clean it if necessary.



ii. Align the axis of the connector with the axis of the pipe. Push the pipe into the connector, and push up on the retainer.

Text in Illustration

*1	Retainer
➡	Push
⇨	Push

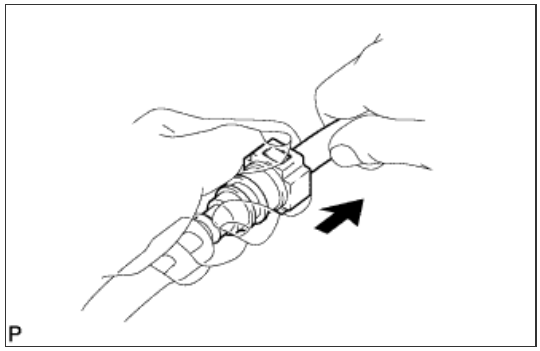


iii. After connecting the pipe and connector, try to pull them apart to confirm that they are securely connected.

Text in Illustration

⇨	Pull

i. Observe these precautions when connecting the fuel tube connector (for quick type A).



i. Check that there is no damage or contamination in the connection part of the pipe.

ii. Align the axis of the connector with the axis of the pipe. Push the pipe into the connector until the connector makes a click sound. If the connection is tight, apply a small amount of fresh spindle oil or gasoline on the tip of the pipe.

Text in Illustration

➡	Push

iii. After having finished the connection, try to pull apart the pipe and the connector to confirm that they are securely connected.

1. CHECK FUEL PUMP OPERATION AND FOR FUEL LEAK

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

NOTICE:

Do not start the engine.

c. Turn the intelligent tester main switch on.

d. Enter the following menus: Powertrain Engine and ECT tive Test Control the Fuel Pump / Speed.

e. Check the fuel pump operation.

i. Check for pressure in the fuel inlet tube from the fuel line. Check that the sound of fuel flowing in the fuel tank can be heard.
If there is no sound, check the integration relay, fuel pump, ECM and wiring connector.

f. Check for fuel leak.

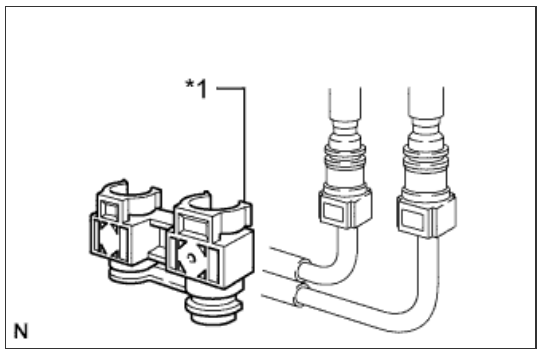
i. Check that there are no fuel leaks after performing maintenance anywhere on the system.
If there are fuel leaks, repair or replace parts as necessary.

2. CHECK FUEL PRESSURE

a. Check that the battery voltage is 11 to 14 V.

b. Perform the "Discharge Fuel System Pressure" procedures (Click here).

c. Disconnect the cable from the negative (-) battery terminal.



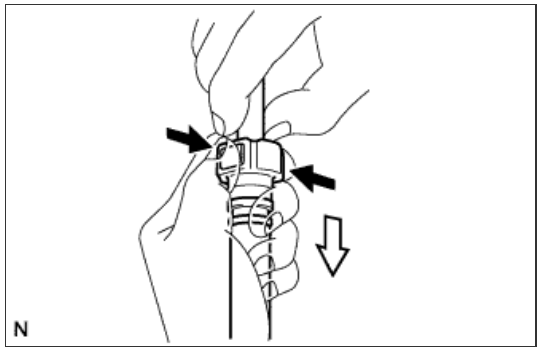
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

d. Remove the fuel pipe clamp from the fuel tube connector.

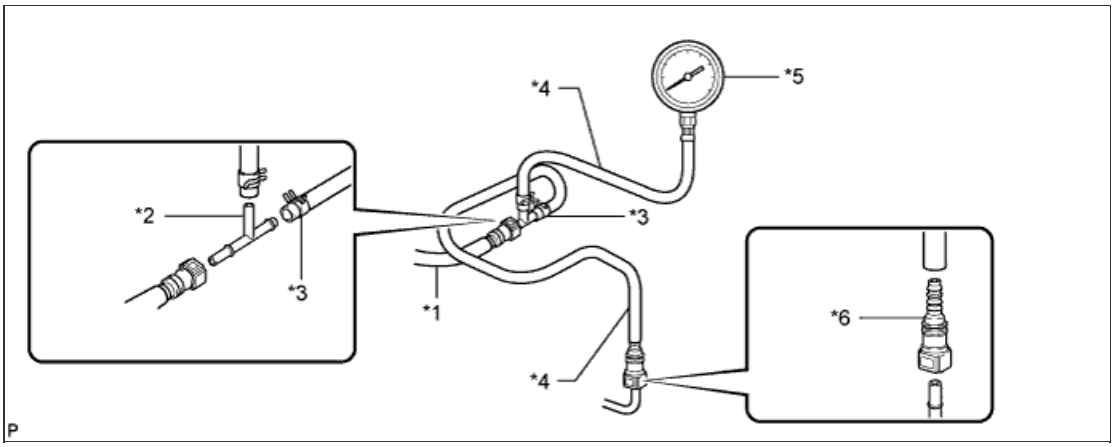
Text in Illustration

*1	Fuel Pipe Clamp



e. Pinch and pull the fuel tube (fuel tube connector) to disconnect it.

Text in Illustration



⇒	Pinch
⇨	Pull

CAUTION:

- **Always read the precautions (Click here) before disconnecting the fuel tube connector (quick type).**
- **The fuel tube may spray fuel as a result of pressure that remains in it. Do not allow fuel to be sprayed in the engine compartment.**

f. Install SST (pressure gauge) as shown in the illustration.

Text in Illustration

*1	Fuel Tube	*2	SST (T-joint)
*3	SST (Clip)	*4	SST (Hose)
*5	SST (Gauge)	*6	SST (Fuel Tube Connector)

SST

09268-31012 (09268-41120, 09268-41500, 90467-13001, 95336-08070)
09268-45014 (09268-41200, 09268-41220)

g. Wipe off any gasoline.

h. Reconnect the cable to the negative (-) battery terminal.

i. Operate the fuel pump.

i. Connect the intelligent tester to the DLC3.

ii. Turn the engine switch on (IG).

NOTICE:

Do not start the engine.

iii. Turn the intelligent tester main switch on.

iv. Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Fuel Pump / Speed.

j. Measure the fuel pressure.

Standard fuel pressure:
281 to 287 kPa (2.87 to 2.93 kgf/cm ^{2}, 41 to 42 psi)

If the pressure is higher than the specification, replace the fuel pressure regulator.
If the pressure is below the specification, check the fuel hoses and connections, fuel pump, fuel filter and fuel pressure regulator assembly.

k. Start the engine.

l. Measure the fuel pressure.

Standard fuel pressure:
281 to 287 kPa (2.87 to 2.93 kgf/cm ^{2}, 41 to 42 psi)

If the pressure is not as specified, check the fuel pump, pressure regulator and/or injectors.

m. Stop the engine.

n. Check that the fuel pressure remains as specified for 5 minutes after the engine has stopped.

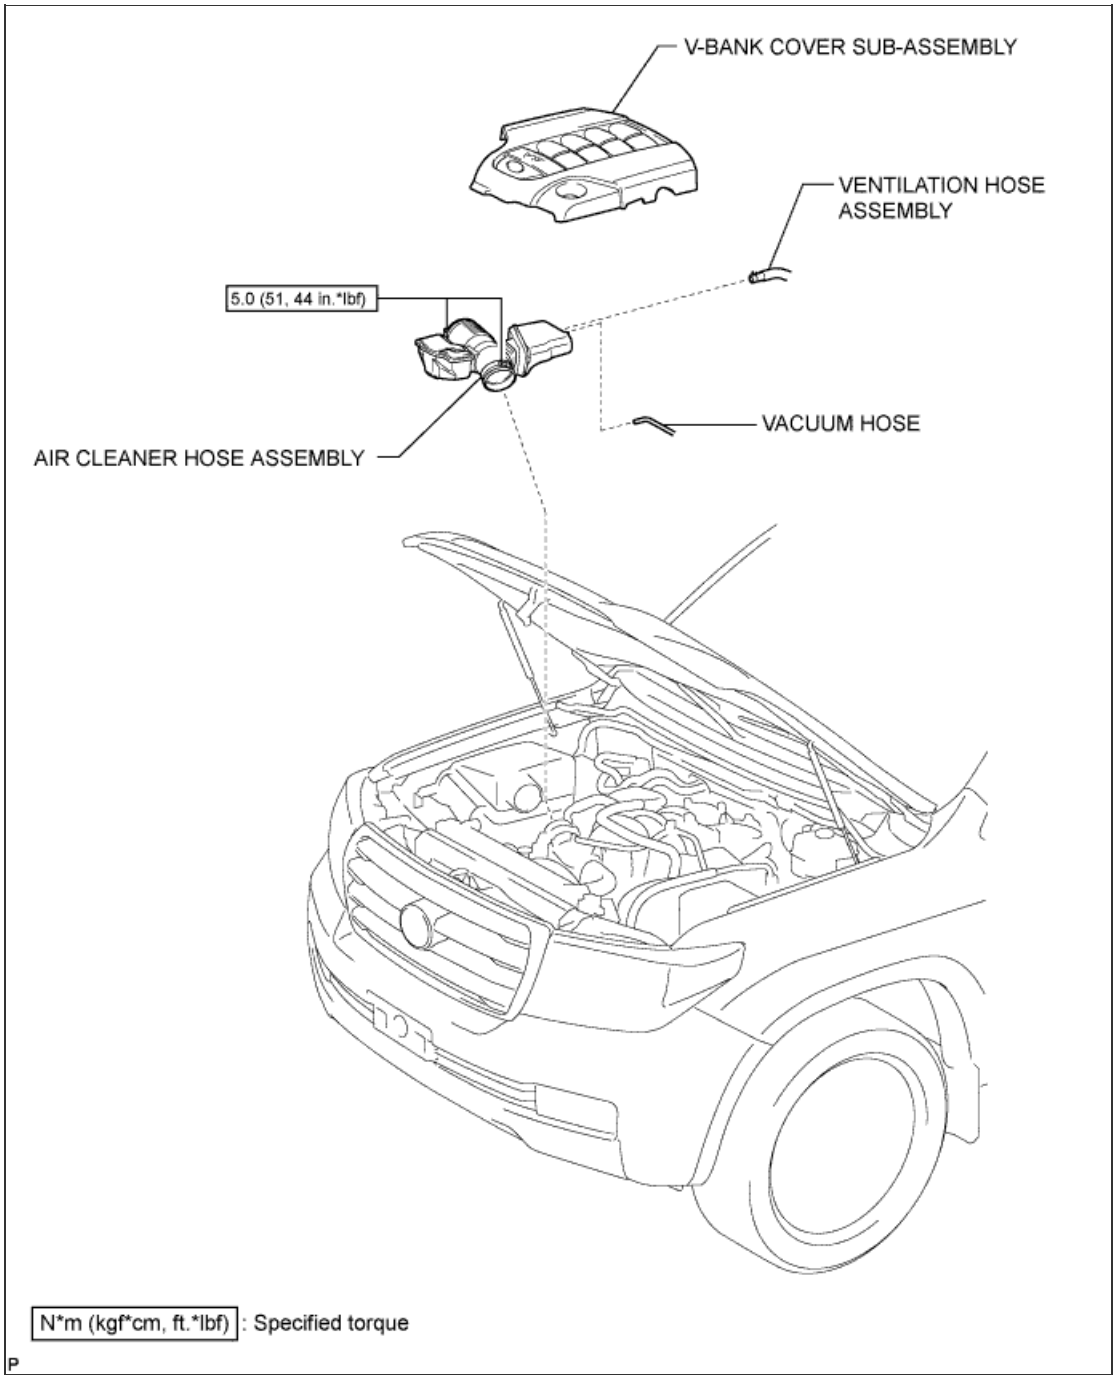
Standard fuel pressure:

147 kPa (1.5 kgf/cm^2, 21 psi) or more

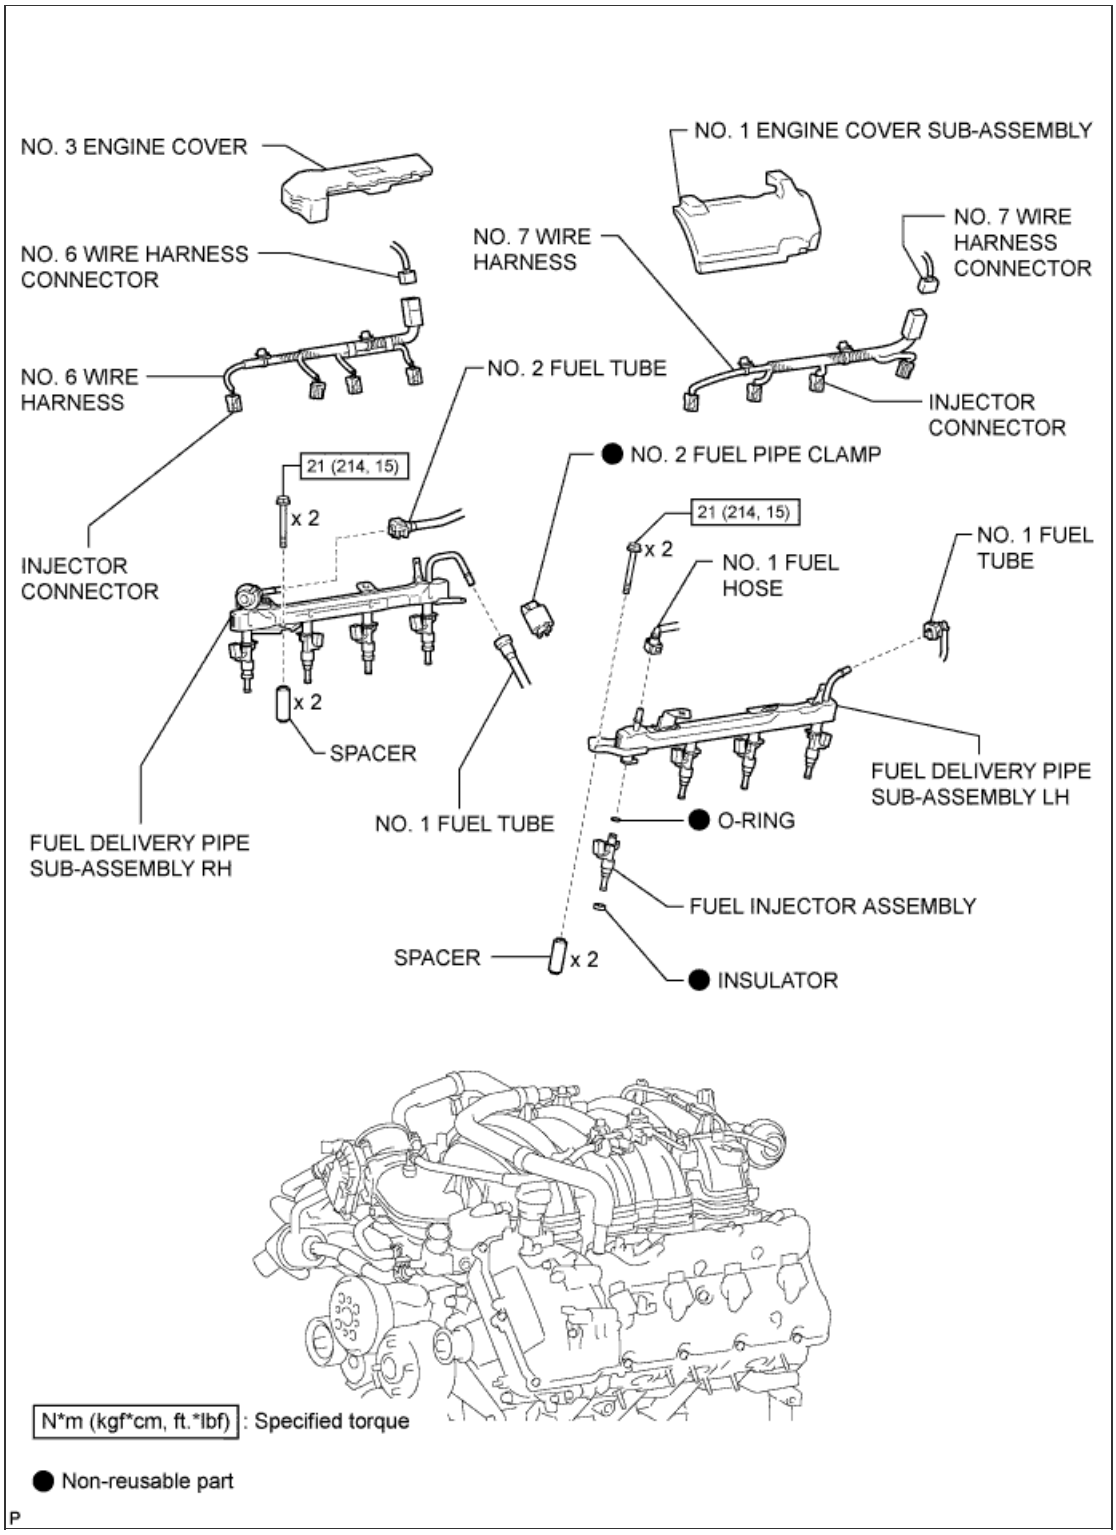
If the pressure is not as specified, check the fuel pump, pressure regulator and/or injectors.

o. Disconnect the cable from the negative (-) battery terminal and carefully remove SST and the fuel tube connector to prevent gasoline from spraying.

NOTICE:



When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).



p. Reconnect the fuel tube (fuel tube connector).

q. Check for fuel leaks.

i. Check that there are no fuel leaks after performing maintenance anywhere on the system.
If there are fuel leaks, repair or replace parts as necessary.

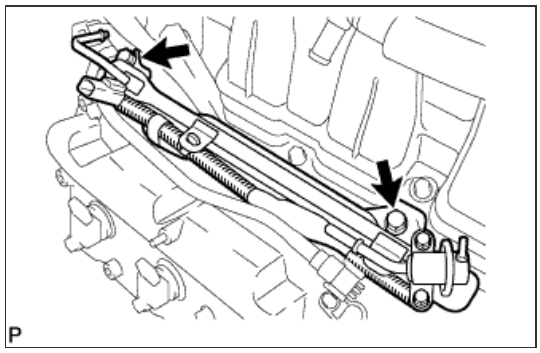
a. Disconnect the No. 1 f el hose from the f el delivery pipe LH (Click here).

10. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY RH

a. Disconnect the ventilation hose and No. 6 ire harness connector.



b. Remove the 2 bolts and f el delivery pipe RH.

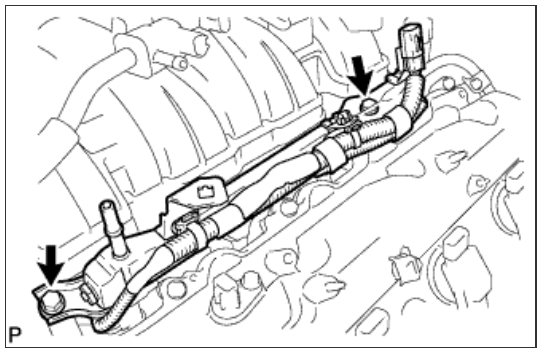
NOTICE:

When removing the delivery pipe, hold the pipe by both ends and p ll it straight p ard.

c. Remove the 2 delivery pipe spacers and 4 ins lators from the cylinder head RH.

11. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY LH

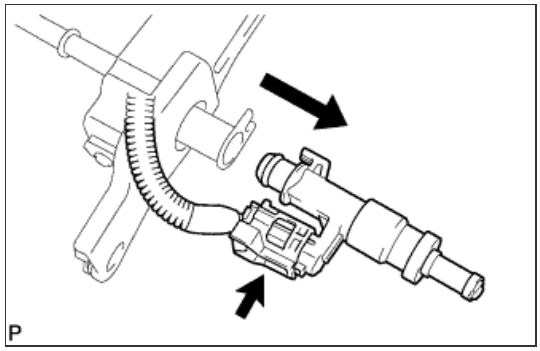
a. Disconnect the No. 7 ire harness connector.



b. Remove the 2 bolts and f el delivery pipe LH

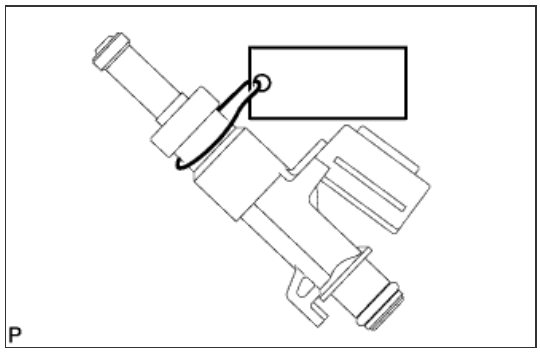
b. Remove the 2 bolts and Fuel delivery pipe LH.

NOTICE:



When removing the delivery pipe, hold the pipe by both ends and pull it straight upward.

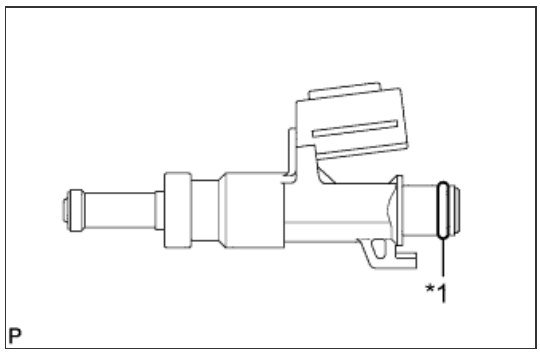
c. Remove the 2 delivery pipe spacers and 4 insulators from the cylinder head LH.



12. REMOVE FUEL INJECTOR ASSEMBLY

a. Remove the fuel injector from the fuel delivery pipe, and then disconnect the injector connector.

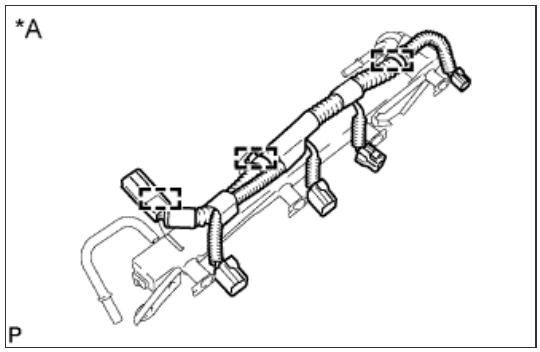
NOTICE:



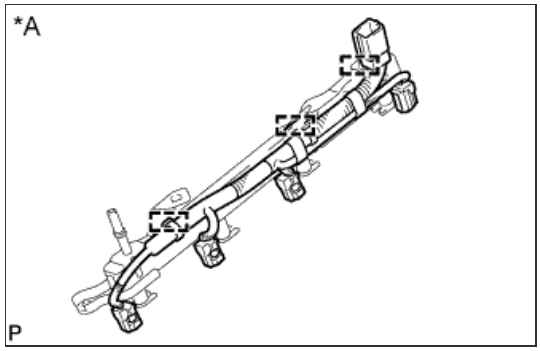
For reinstallation, attach a tag or label to the injector shaft.

b. Remove the O-ring from the fuel injector.

Text in Illustration



*1	O-Ring



c. Detach the 3 clamps and then remove the No. 6 fuel tube assembly from the delivery pipe RH.

Text in Illustration

for Preparation Click here

1. INSPECT FUEL INJECTOR ASSEMBLY

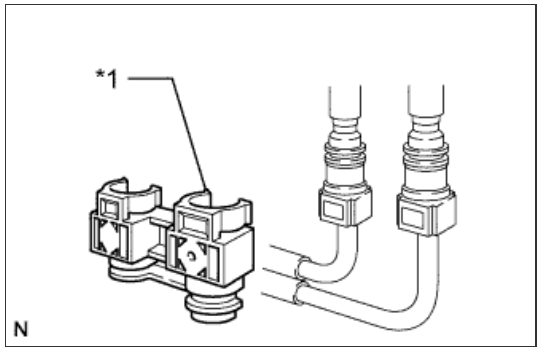
a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	11.6 to 12.4 Ω

If the result is not as specified, replace the injector assembly.

b. Inspect the injection volume.

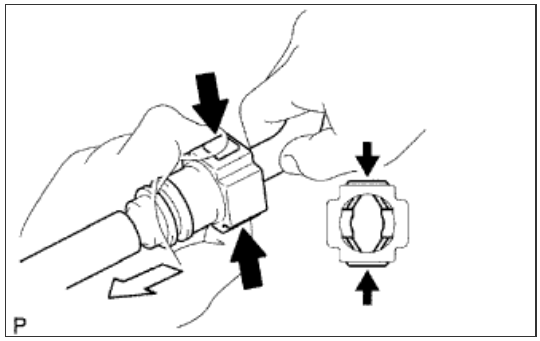


CAUTION:

This test involves high-pressure fuel and electricity. Take all precautions regarding safe handling of both the fuel and the electricity. Perform this test in a safe area, and avoid any sparks or flames. Do not smoke.

i. Remove the fuel pipe clamp.

Text in Illustration

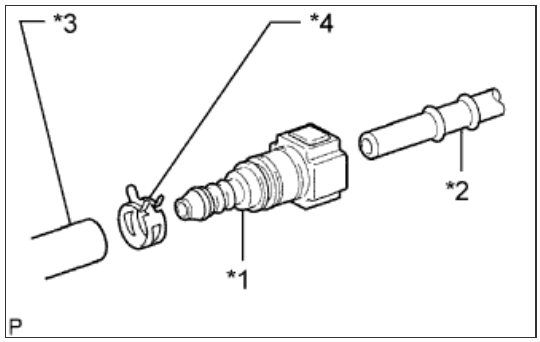


1	Fuel Pipe Clamp

ii. Disconnect the fuel tube.

Text in Illustration

➡	Pinch
⇨	Pull



iii. Connect SST to the fuel pipe (the vehicle side).

SST

09268-31012 (09268-41500, 90467-13001, 95336-08070)

2	Tube
	SST (Clip)
4	SST (Adapter)

vi. Put the injector into a graduated cylinder.

Text in Illustration

1	SST (Wire)

CAUTION:

Install a strong rubber tube onto the injector to prevent gasoline from splashing.

vii. Operate the fuel pump (turn the engine switch on (IG)).

viii. Connect SST (wire) to the injector and the battery for 15 seconds, and measure the injection volume with the graduated cylinder. Test each injector 2 or 3 times.

SST
09842-30090

Standard injection volume:
87 to 105 cm^3 (5.3 to 6.4 cu in.) per 15 seconds

Difference between each injector:
18 cm^3 (1.1 cu in.) or less

If the injection volume is not as specified, replace the injector assembly.

c. Check for fuel drop.

i. In the condition above, disconnect the tester probes of SST (wire) from the battery and check for fuel drop from the injector.

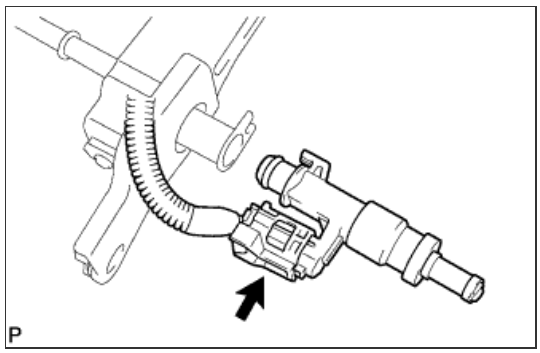
Standard fuel drop:
1 drop or less in 12 minutes

If the fuel drop is not as specified, replace the injector assembly.

for Preparation Click here

1. INSTALL FUEL INJECTOR ASSEMBLY

a. Attach the 3 clamps to install the No. 6 wire harness to the delivery pipe RH.



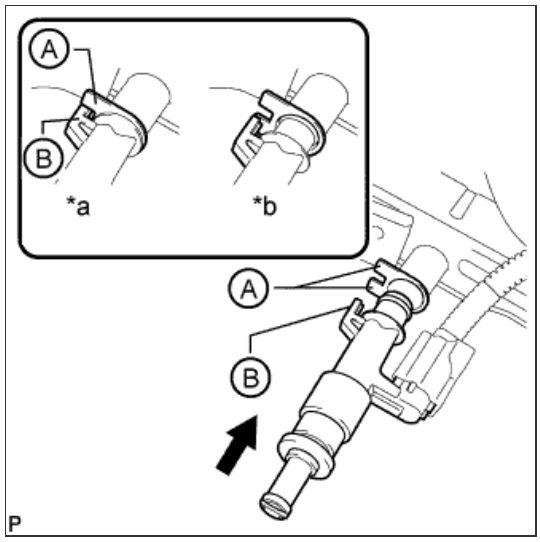
b. Attach the 3 clamps to install the No. 7 wire harness to the delivery pipe LH.

c. Apply gasoline or spindle oil to a new O-ring and install it to the injector.

NOTICE:

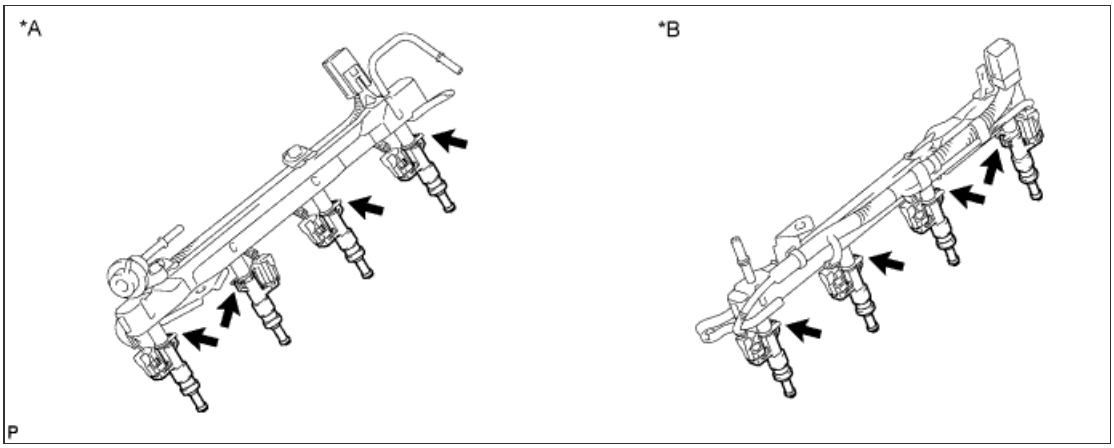
Make sure that there is no damage or foreign material in the groove of the injector when installing the O-ring.

d. Connect the injector connector.



e. Install the injector to the delivery pipe as shown in the illustration.

Text in Illustration



*a	CORRECT
*b	INCORRECT

NOTICE:

- **Make sure that there are no scratches or foreign matter in or around the insertion hole of the delivery pipe.**
- **When inserting the injector, be careful not to damage the O-ring.**
- **Attach the part of the injector labeled B between the parts of the delivery pipe labeled A.**

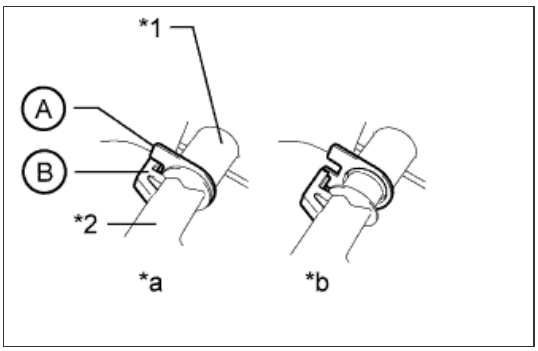
f. Check that each injector is installed to the delivery pipe facing the direction shown in the illustration.

Text in Illustration

*A	Fuel Delivery Pipe RH	*B	Fuel Delivery Pipe LH

2. INSTALL FUEL DELIVERY PIPE SUB-ASSEMBLY LH

a. Install the 2 delivery pipe spacers and 4 insulators to the cylinder head LH.



b. Install the delivery pipe (with injectors) to the cylinder head LH.

c. Install the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

NOTICE:

Make sure that the part of the injector labeled B is between the parts of the delivery pipe labeled A.

5. REMOVE NO. 1 FUEL SUCTION SUPPORT

a. Detach the 2 claws from the claw holes to remove the fuel suction support.

for Preparation Click here

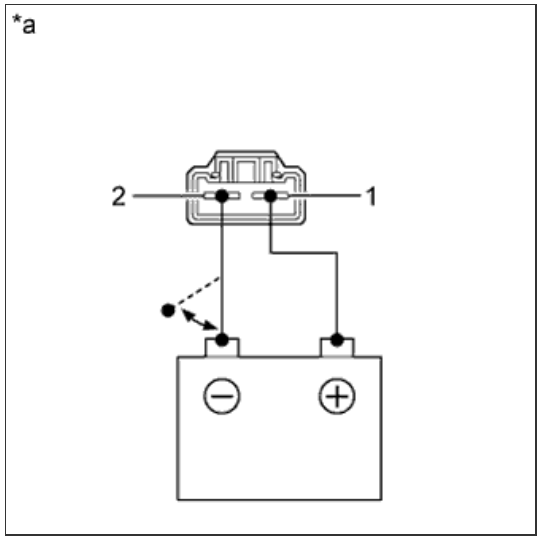
1. INSPECT FUEL PUMP

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	0.2 to 3.0 Ω

If the result is not as specified, replace the fuel pump assembly.



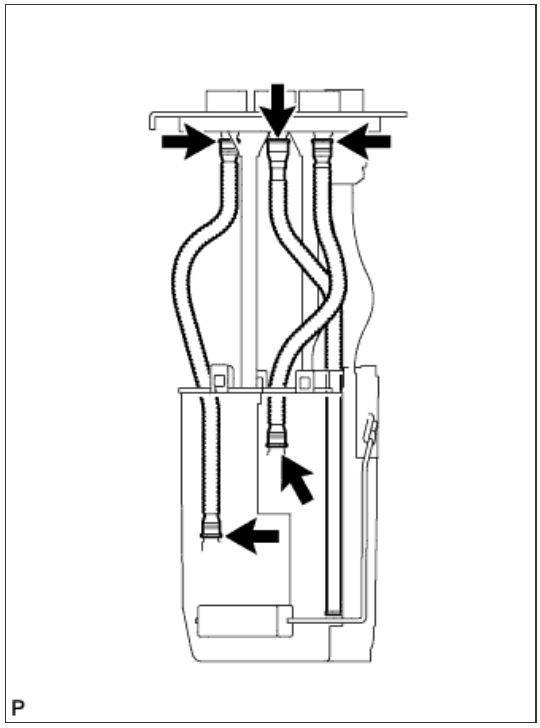
b. Inspect the operation of the fuel pump.

i. Connect the positive (+) lead of the battery to terminal 1 of the connector, and the negative (-) lead to terminal 2. Check that the fuel pump operates.

Text in Illustration

a	Component without harness connected (Fuel Pump)

If the result is not as specified, replace the fuel pump and fuel pump EC .



NOTICE:

- **These tests must be performed within 10 seconds to prevent the coil from burning out.**
- **Keep the fuel pump as far away from the battery as possible.**
- **Always turn the voltage on and off on the battery side, not the fuel pump side.**
- **When the pump is locked and does not operate due to foreign matter being stuck, etc., replace the fuel pump ECU together with the fuel pump, as the fuel pump ECU may be damaged electrically.**

for Preparation Click here

NOTICE:

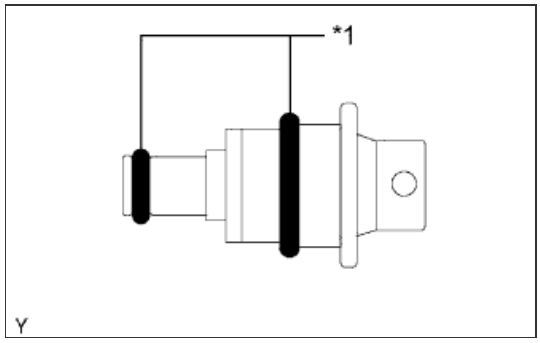
Do not disconnect the hoses indicated in the illustration.

1. INSTALL NO. 1 FUEL SUCTION SUPPORT

a. Attach the 2 claws to the claw holes to install the fuel suction support.

2. INSTALL FUEL MAIN VALVE ASSEMBLY

a. Apply a light coat of gasoline to 2 new O-rings, and install them onto the fuel main valve.



Text in Illustration

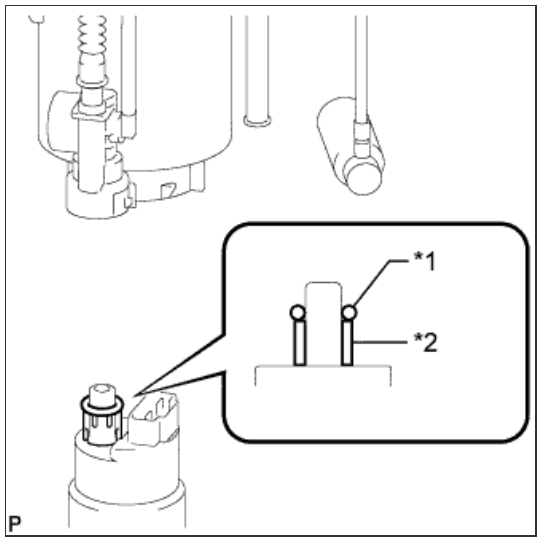
*1	New O-Ring

b. Install the fuel main valve to the fuel filter case.

NOTICE:

Make sure the O-rings are not cut or pinched during the installation.

3. INSTALL FUEL PUMP



a. Connect the fuel pump wire harness connector to the fuel pump.

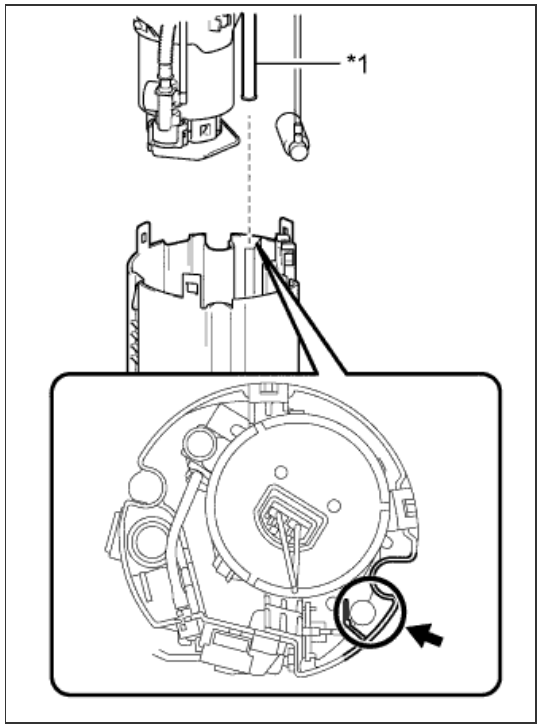
b. Apply a light coat of gasoline to a new O-ring. Then install the O-ring and spacer to the fuel pump.

Text in Illustration

*1	O-Ring
*2	Spacer

c. Attach the 5 claws to the claw holes and install the fuel pump to the fuel filter case.

4. INSTALL NO. 1 FUEL SUB-TANK



NOTICE:

Make sure that the fuel tube passes into the section marked by the circle.

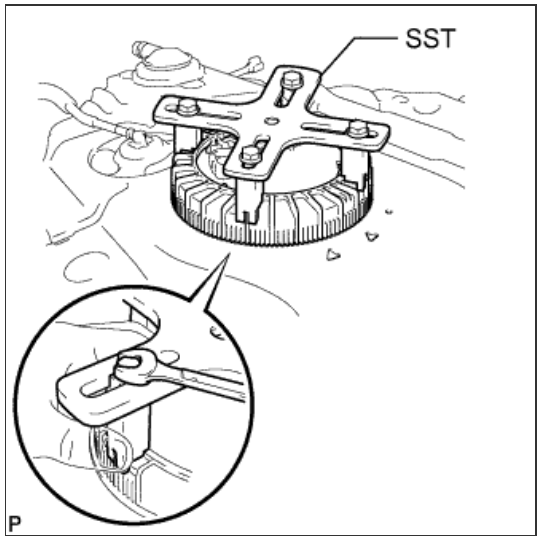
*1	Protrusion
*2	Groove
➡	Front

NOTICE:



Be careful not to bend the arm of the fuel sender gauge.

HINT:

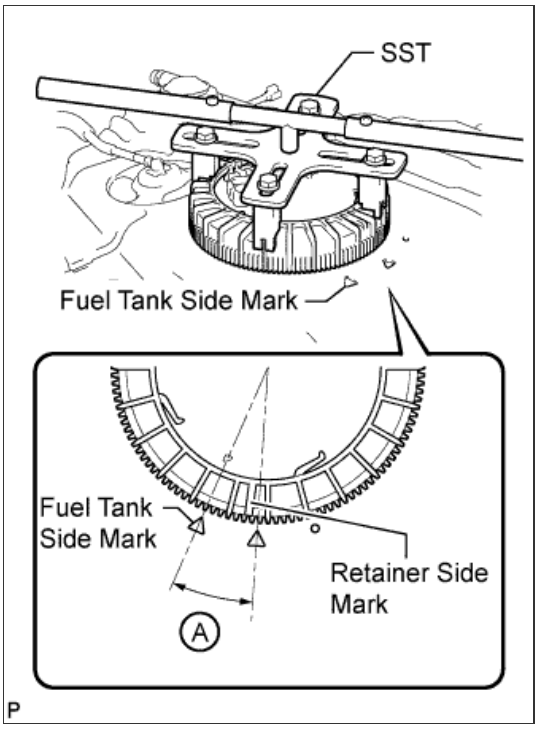
Align the protrusion of the fuel suction with pump and gauge tube with the groove of the fuel tank.

c. Put the retainer on the fuel tank. While holding the fuel suction with pump and gauge tube, tighten the retainer 1 complete turn by hand.

d. Set SST on the retainer.

SST
09808-14030

HINT:

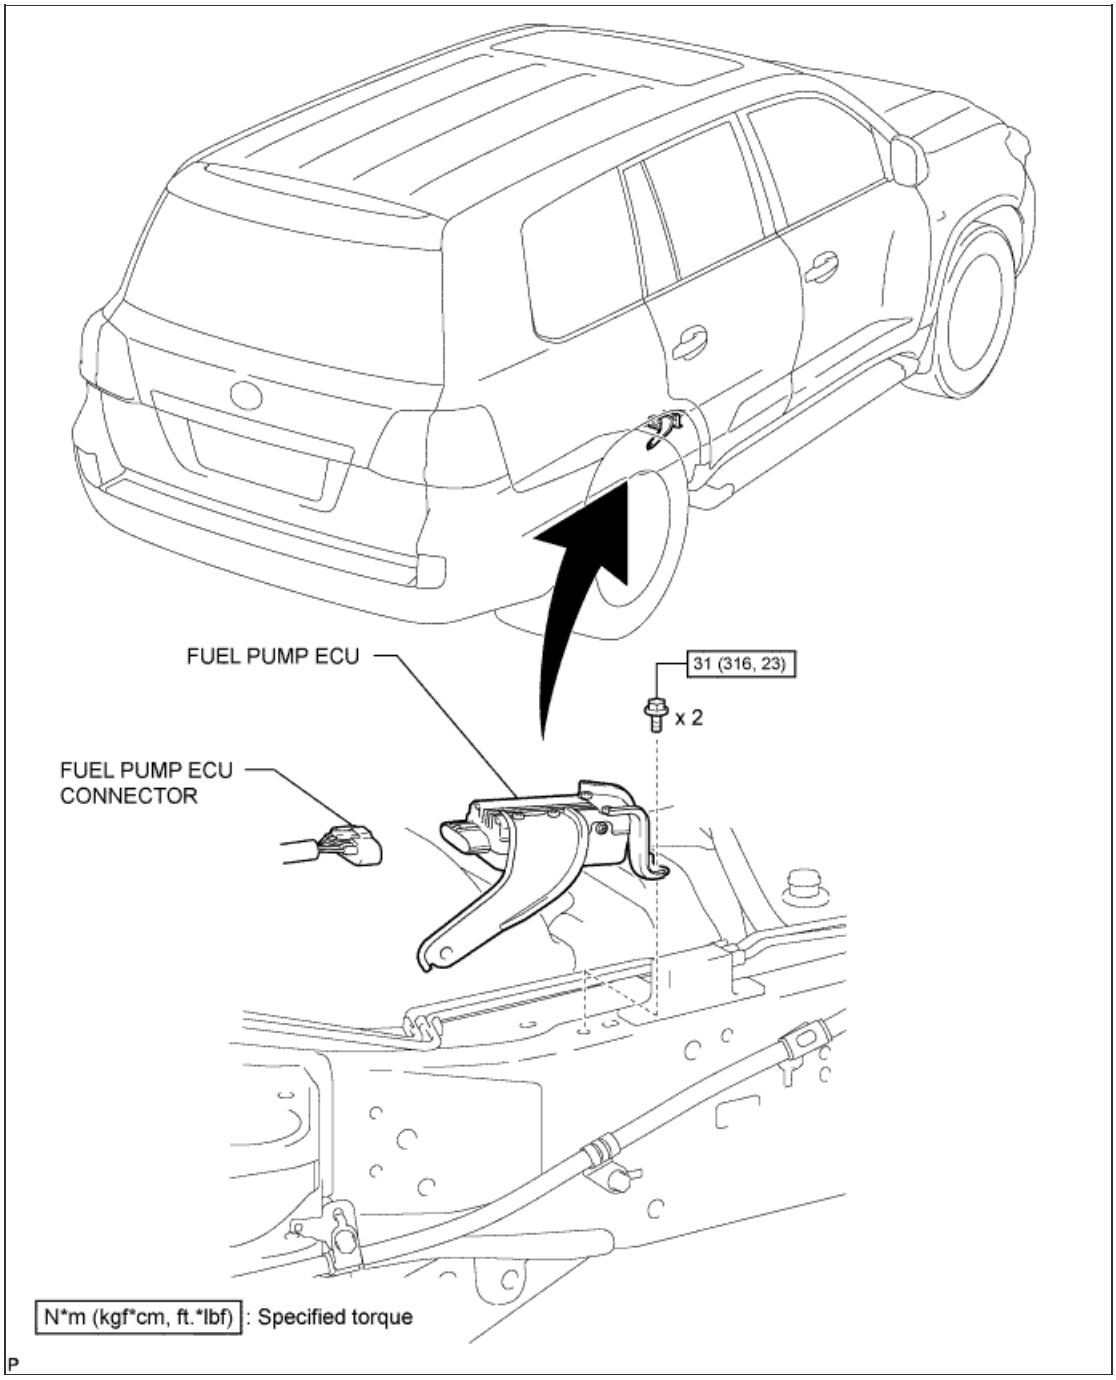


- **Hold the fuel suction tube assembl upright b hand to ensure that the fuel suction tube gasket is not moved out of position.**
- **Securel attach the claws of SST to the protrusions of the retainer and fix SST in place.**
- **Install SST while pressing the claws of SST against the retainer (toward the center of SST).**

e. Using SST, tighten the retainer until the mark on the retainer is within range A on the fuel tank as shown in the illustration.

SST
09808-14030

HINT:



Fit the tips of SST onto the ribs of the retainer.

2. INSTALL FUEL TANK SUB-ASSEMBLY

(Click here)

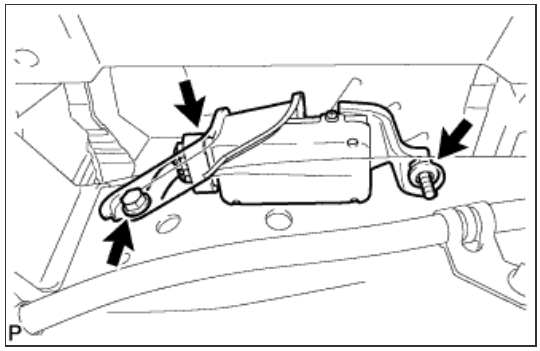
for Preparation Click here

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).



2. REMOVE FUEL PUMP ECU

a. Disconnect the fuel pump ECU connector.

b. Remove the 2 bolts and fuel pump ECU.

NOTICE:

Make sure the fuel pump ECU is not sub ected to physical shocks such as being dropped, etc.

for Preparation Click here

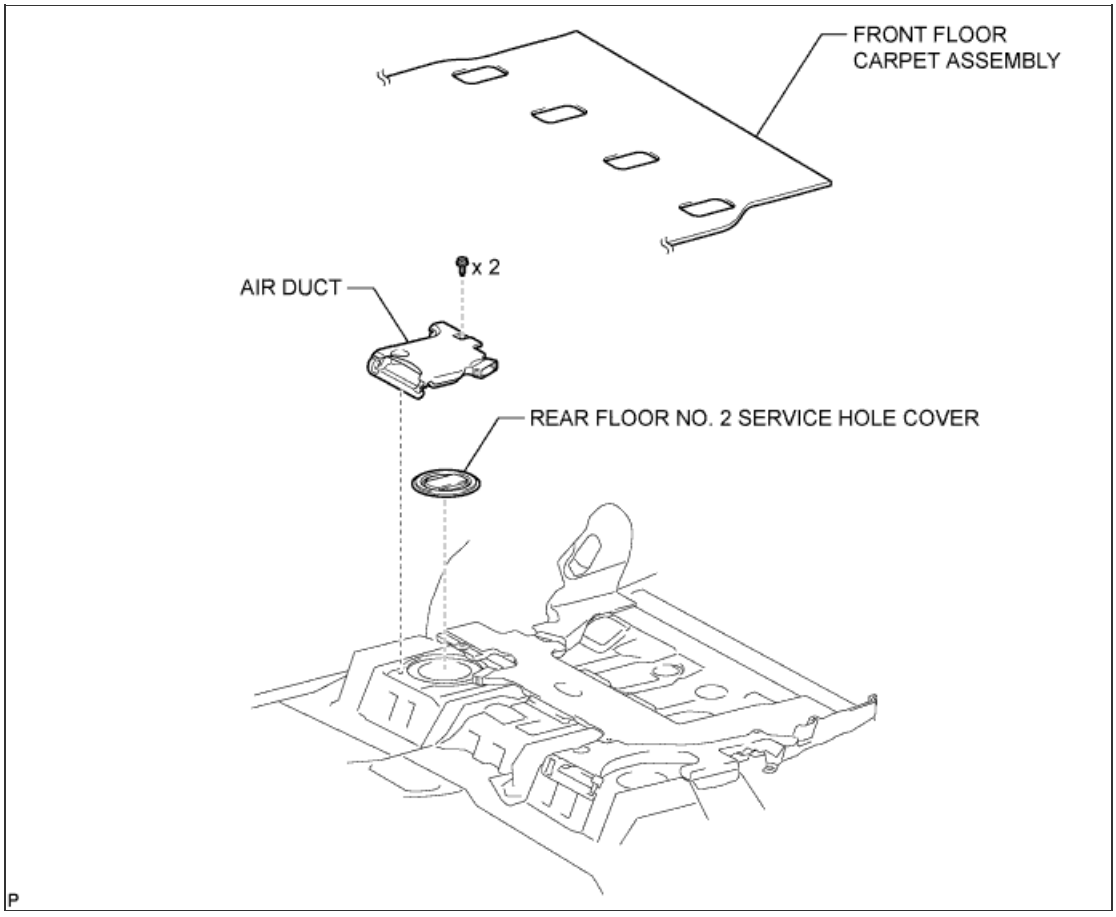
1. INSTALL FUEL PUMP ECU

a. Install the fuel pump ECU with the 2 bolts.

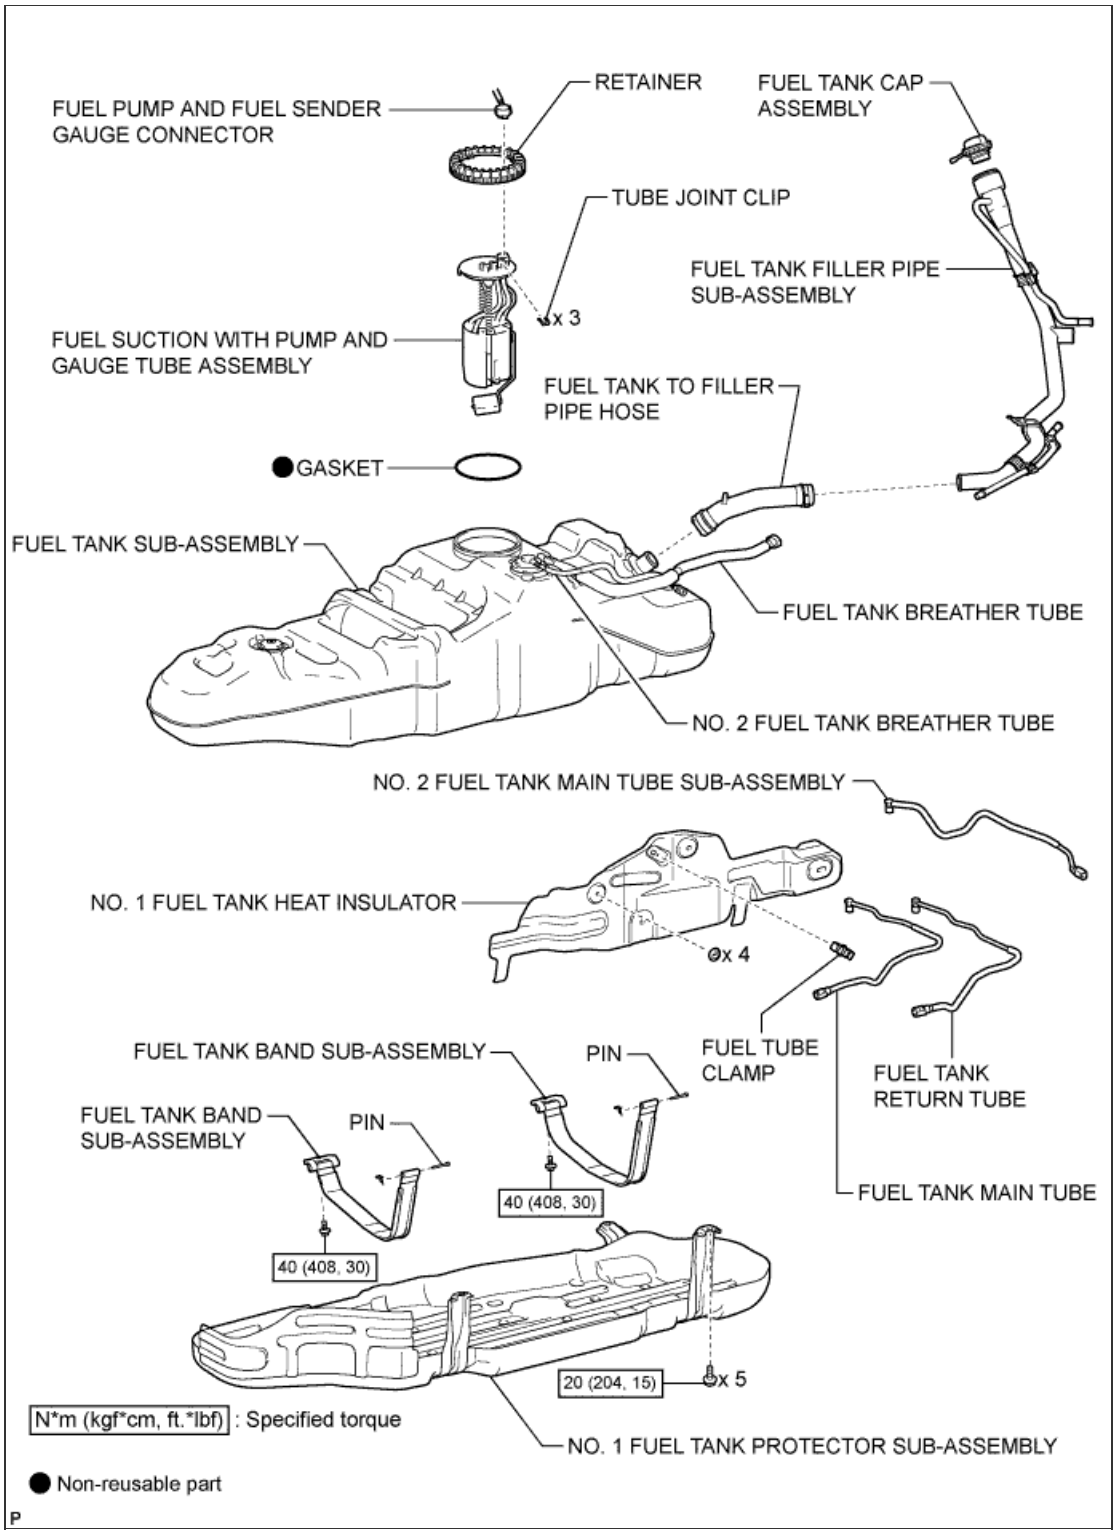
Torque:
31 N*m{ 316 kgf*cm , 23 ft.*lbf }

NOTICE:

Do not use the fuel pump ECU if it has been subjected to physical shocks such as being dropped, etc.



b. Connect the fuel pump ECU connector.



2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

*5	O-Ring

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**

11. DRAIN FUEL

a. Connect the cable to the negative (-) battery terminal.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

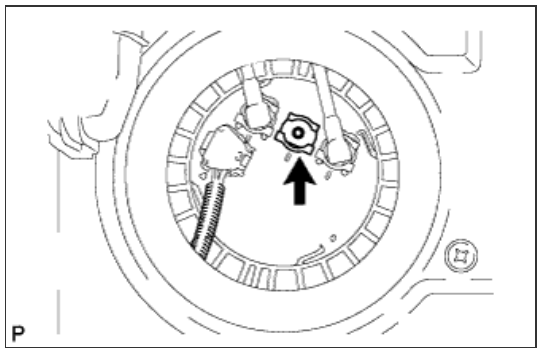
b. Connect the intelligent tester to the DLC3.

c. Turn the engine switch on (IG).

NOTICE:

Do not start the engine.

d. Turn the intelligent tester on.



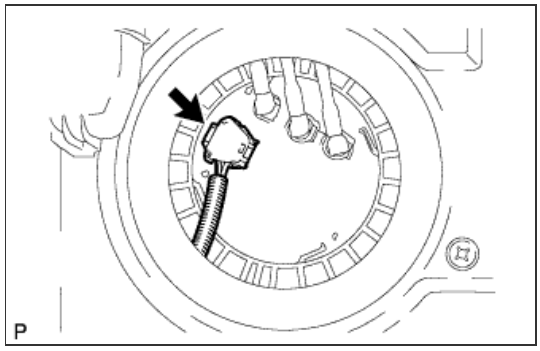
e. nter the following menus owertrain / ngine and CT / Active Test / Control the Fuel Pump / Speed.

CAUTION:

- **Do not smoke or be near an open flame when working on the fuel system.**
- **Secure good ventilation.**
- **Keep gasoline away from rubber or leather parts.**

HINT:

If the fuel pump does not operate, remove the fuel tube joint clip and disconnect the fuel tank return tube, and drain fuel from the port shown in the illustration.



f. Disconnect the cable from the negative (-) battery terminal.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

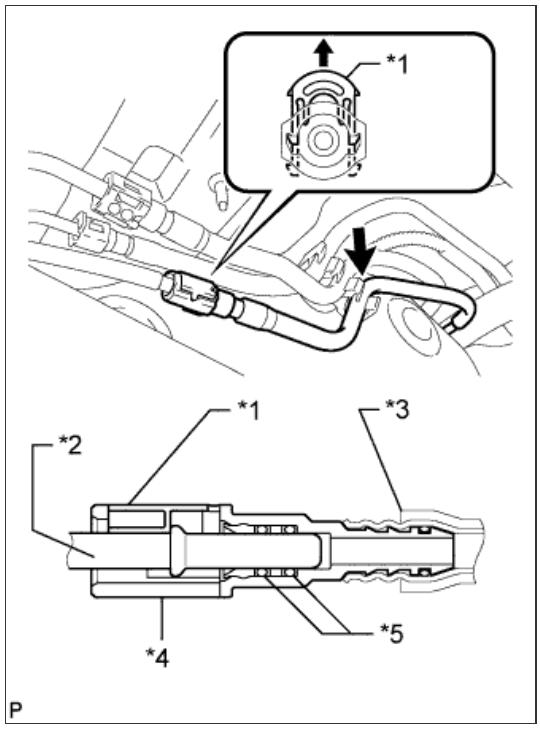
g. Disconnect the fuel pump and fuel sender gauge connector.

12. DISCONNECT FUEL TANK RETURN TUBE

a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank return tube.

Text in Illustration



*1	Retainer
*2	Pipe
*3	Nylon Tube

NOTICE:

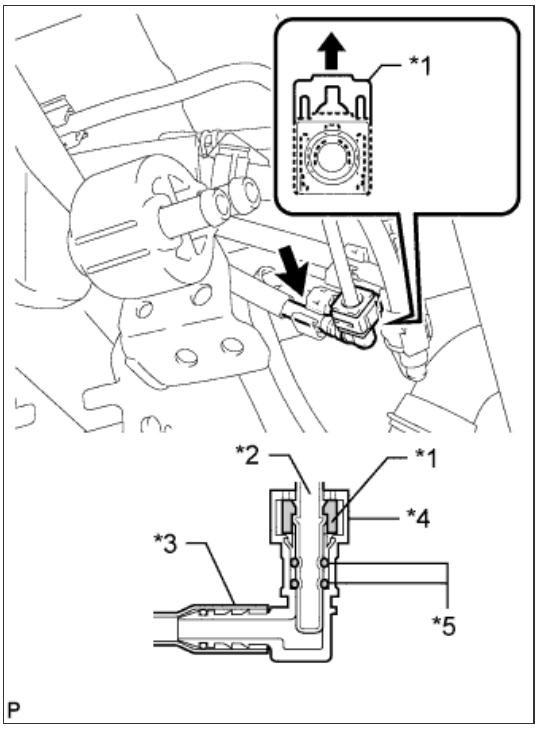
- Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.
- Do not use any tools to separate the pipe and connector.
- Do not forcefully bend or twist the nylon tube.
- Check for foreign matter on the pipe seal surface. Clean if necessary.
- Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.
- If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.

14. DISCONNECT NO. 2 FUEL TANK BREATHER TUBE

a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank breather tube.



Text in Illustration

*1	Retainer
*2	Pipe
*3	Nylon Tube

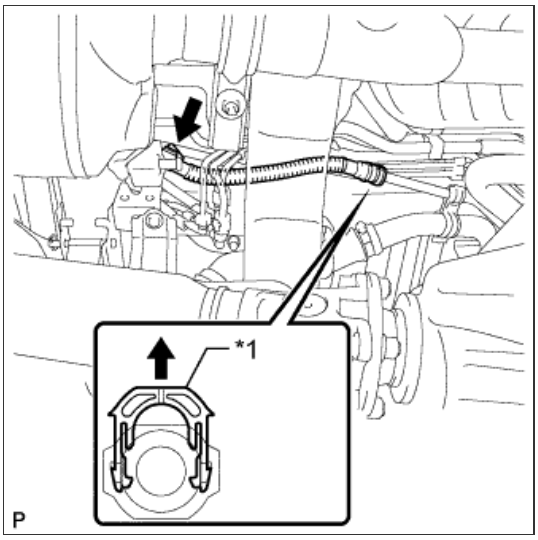
*4	Connector
*5	O-Ring

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**

15. DISCONNECT FUEL TANK BREATHER TUBE

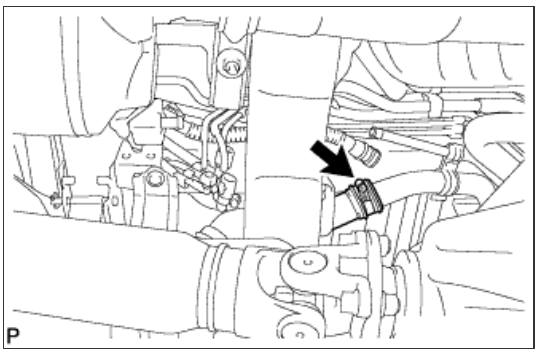
a. Detach the fuel tube clamp.



b. Pull up the retainer and disconnect the fuel tank breather tube from the filler pipe.

Text in Illustration

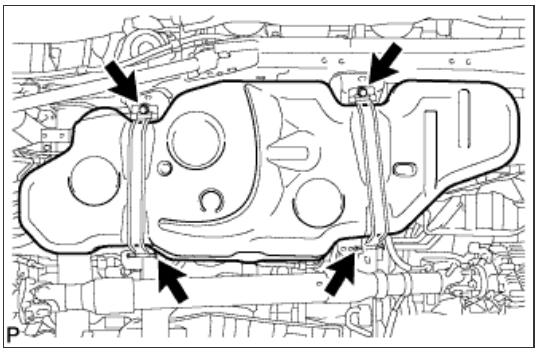
*1	Retainer



NOTICE:

- **Do not use any tools in this procedure.**
- **Check for any dirt and foreign matter contamination in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**

16. DISCONNECT FUEL TANK TO FILLER PIPE HOSE



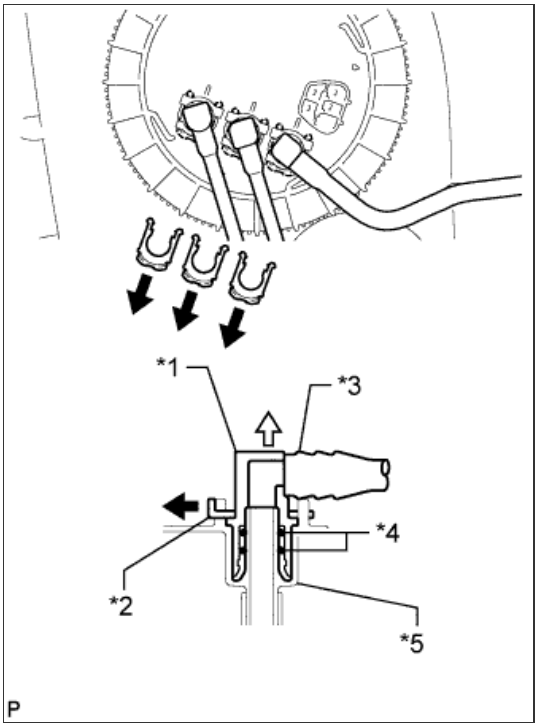
a. Disconnect the hose from the filler pipe.

17. REMOVE FUEL TANK SUB-ASSEMBLY

a. Place a transmission jack under the fuel tank.

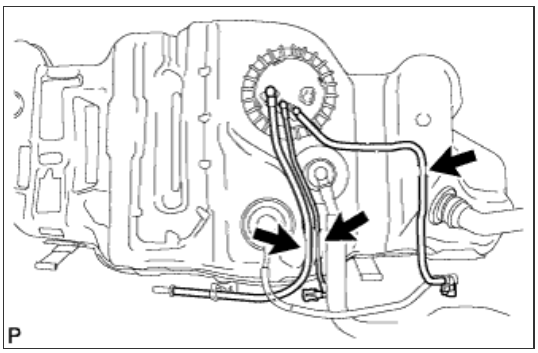
b. Remove the 2 bolts, 2 clips, 2 pins and 2 fuel tank bands.

18. REMOVE FUEL TANK MAIN TUBE, FUEL TANK RETURN TUBE AND NO. 2 FUEL TANK MAIN TUBE SUB-ASSEMBLY



a. Remove the 3 fuel tube joint clips and pull out the 3 fuel tubes.

Text in Illustration



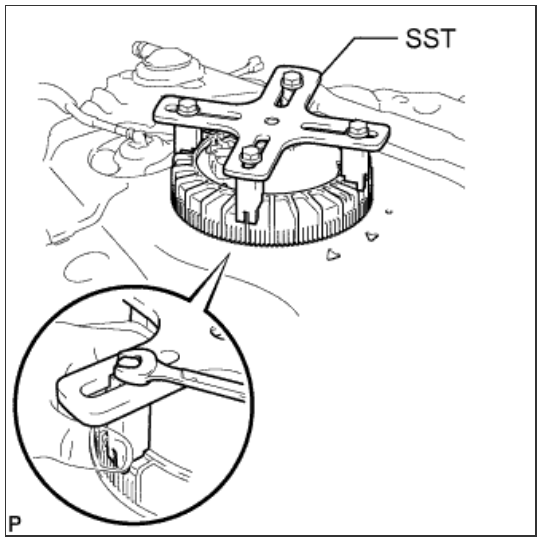
*1	Tube oint
*2	Tube oint Clip
*3	Fuel Tank Tube
*4	O-Ring
*5	Fuel Suction Plate

NOTICE:

- **Remove any dirt and foreign matter on the fuel tube joint before performing this work.**
- **Do not allow any scratches or foreign matter on the parts when disconnecting them, as the fuel tube joint contains the O-rings that seal the plug.**
- **Perform this work by hand. Do not use any tools.**
- **Do not forcibly bend, twist or turn the nylon tube.**
- **Protect the disconnected part by covering it with a plastic bag and tape after disconnecting the fuel tubes.**

b. Remove the 3 fuel tubes from the fuel tank.

19. REMOVE FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY



a. Set SST on the retainer.

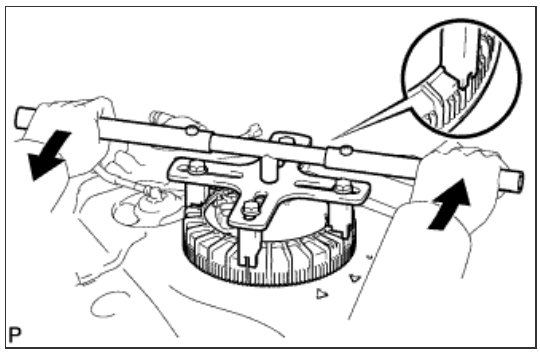
SST

09808-14030

HINT:

- **Securely attach the claws of SST to the protrusion of the retainer and fix SST in place.**
- **Install SST while pressing the claws of SST against the retainer (towards the center of SST).**

b. Using SST, loosen the retainer.



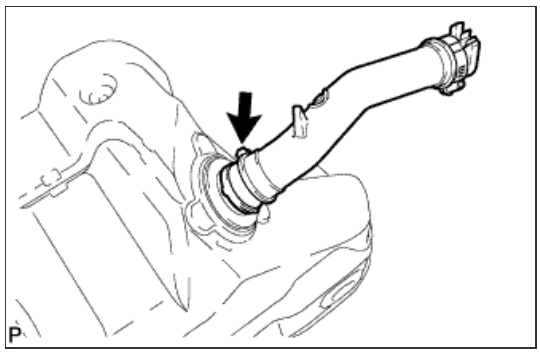
SST
09808-14030

NOTICE:

- **Do not use any tools other than those specified in this operation. Damage to the retainer or the fuel tank may result.**
- **While pressing down on SST so that the claws of SST do not slip off the protrusion of the retainer, turn the retainer counterclockwise to loosen it.**

HINT:

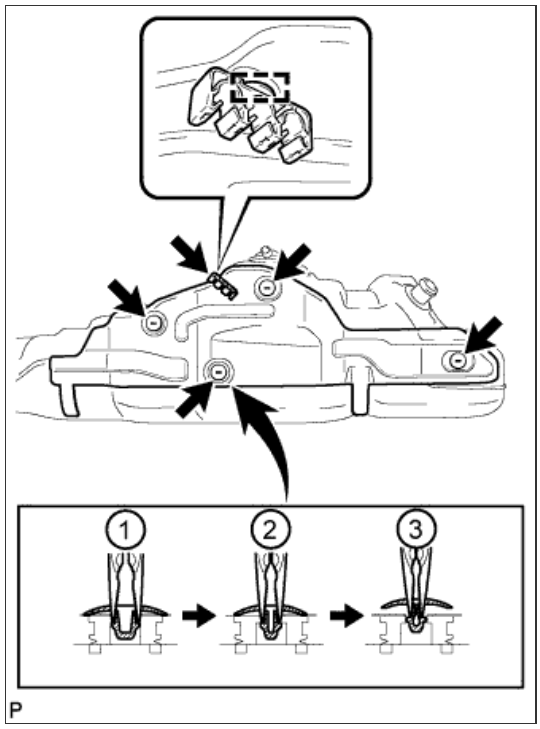
The protrusion of the retainer fit in the ends of SST.



c. Remove the retainer while holding the fuel suction tube assembly by hand.

d. Remove the gasket from the fuel tank.

20. REMOVE FUEL TANK TO FILLER PIPE HOSE

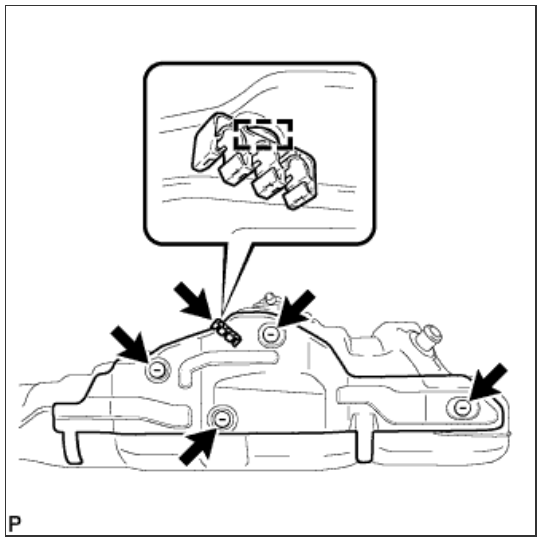


a. Remove the hose from the fuel tank.

21. REMOVE NO. 1 FUEL TANK HEAT INSULATOR

a. Remove the fuel tube clamp from the heat insulator.

b. Using needle-nose pliers, remove the 4 clips shown in the illustration and then remove the heat insulator.



1
2
3
P

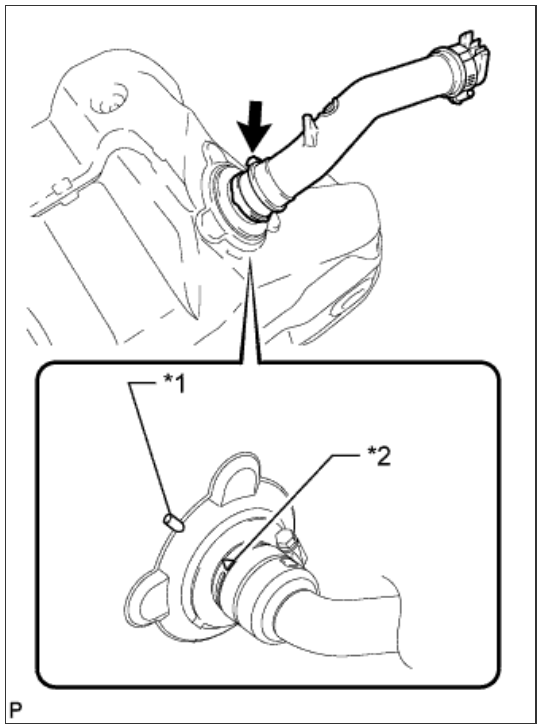
for Preparation Click here

1. INSTALL NO. 1 FUEL TANK HEAT INSULATOR

a. Install the heat insulator with the 4 clips.

b. Install the fuel tube clamp to the heat insulator.

2. INSTALL FUEL TANK TO FILLER PIPE HOSE

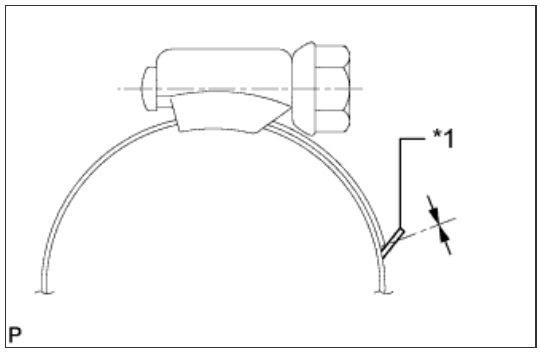


a. Install the hose to the fuel tank as shown in the illustration.

Text in Illustration

*1	Fuel Tank Side Mark
*2	Hose Side Mark

HINT:

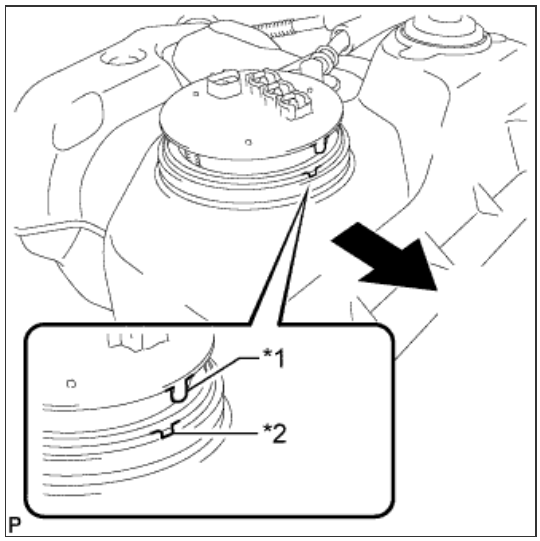


- **Align the fuel tank side mark with the hose side mark when installing the hose.**

- **Tighten the hose clamp until the end of the hose clamp contacts the stopper as shown in the illustration.**

Text in Illustration

*1	Stopper



3. INSTALL FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY

a. Apply a light coat of gasoline or grease to a new gasket, and install it to the fuel tank.

b. Install the fuel suction with pump and gauge tube into the fuel tank.

Text in Illustration

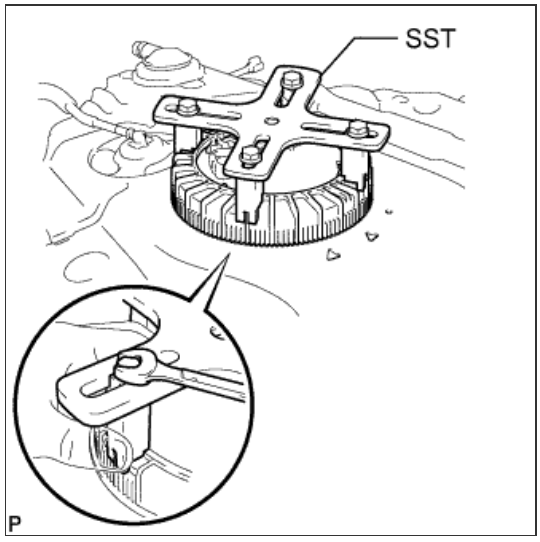
*1	Protrusion
*2	Groove
➡	Front

NOTICE:

Be careful not to bend the arm of the fuel sender gauge.

HINT:

Align the protrusion of the fuel suction with pump and gauge tube with the groove of the fuel tank.



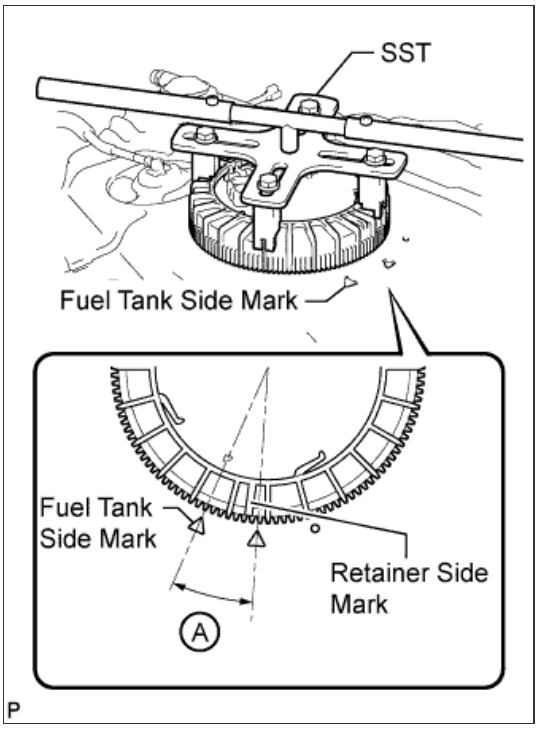
c. Put the retainer on the fuel tank. While holding the fuel suction with pump and gauge tube, tighten the retainer 1 complete turn by hand.

d. Set SST on the retainer.

SST
09808-14030

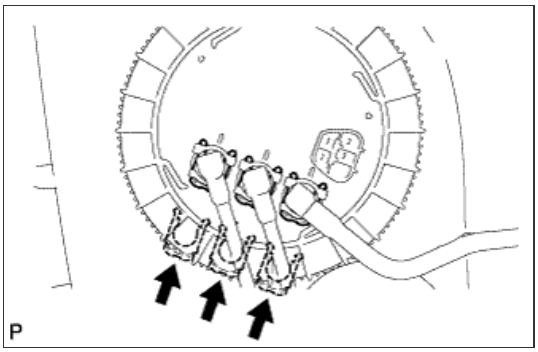
HINT:

- **Hold the fuel suction tube assembly upright by hand to ensure that the fuel suction tube gasket is not moved out of position.**
- **Securely attach the claws of SST to the protrusions of the retainer and fix SST in place.**
- **Install SST while pressing the claws of SST against the retainer (toward the center of SST).**



e. Using SST, tighten the retainer until the mark on the retainer is within range A on the fuel tank as shown in the illustration.

SST
09808-14030

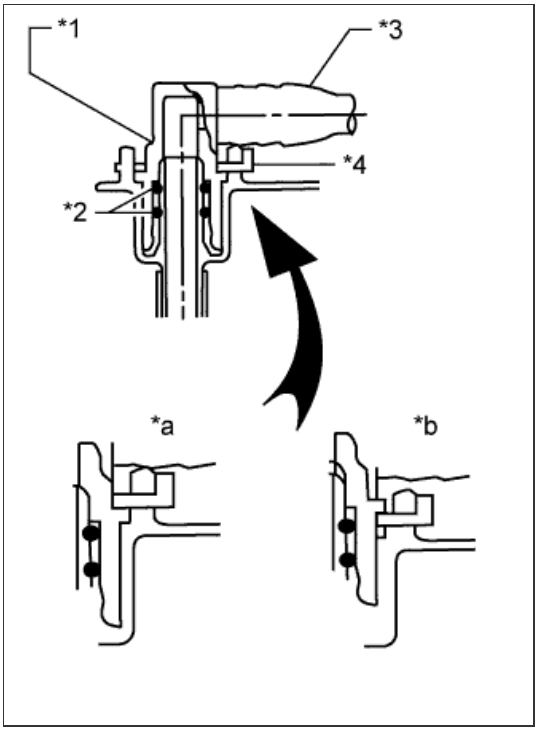


HINT:

Fit the tips of SST onto the ribs of the retainer.

4. INSTALL FUEL TANK MAIN TUBE, FUEL TANK RETURN TUBE AND NO. 2 FUEL TANK MAIN TUBE SUB-ASSEMBLY

a. Install the 3 fuel tank tubes with the 3 tube joint clips.



NOTICE:

- **Check that there are no scratches or foreign ob ects on the connecting parts.**
- **Check that the fuel tube oints are inserted securely.**
- **Check that the tube oint clips are on the collars of the fuel tube oints.**
- **After installing the tube oint clips, check that the fuel tube oints cannot be pulled off.**

Text in Illustration

*2	O-Ring
*3	Fuel Tube
*4	Tube oint lip
*a	T
*b	IN T

b. Install the 3 fuel tank tubes to the fuel tank.

5. INSTALL FUEL TANK SUB-ASSEMBLY

a. Set the fuel tank on a transmission jack and raise the fuel tank.

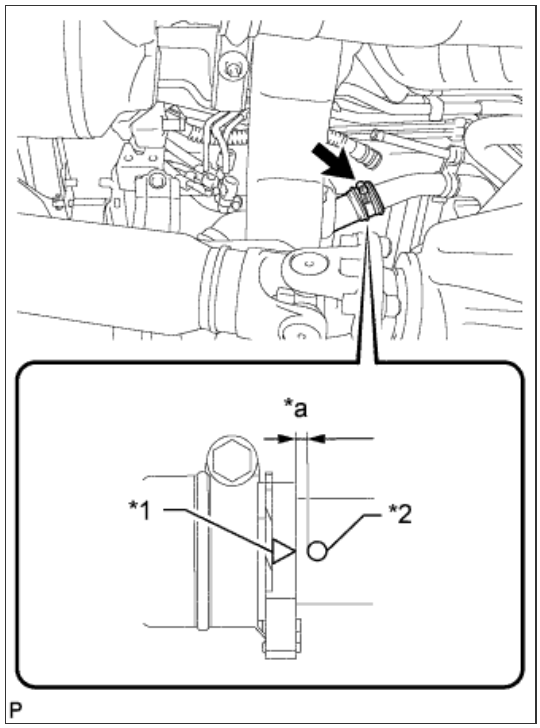
NOTICE:

Do not allow the fuel tank to contact the vehicle, especially the differential.

b. Raise the transmission jack.

c. Install the 2 fuel tank bands with the 2 pins and 2 clips.

d. onnect the 2 fuel tank bands with the 2 bolts.



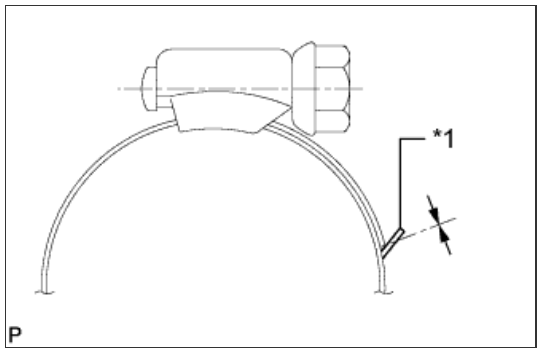
Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

6. CONNECT FUEL TANK TO FILLER PIPE HOSE

a. onnect the hose to the filler pipe as shown in the illustration.

Text in Illustration

*1	Hose Side Mark
*2	Pipe Side Mark
*a	d 3 mm



HINT:

- **Install the hose so that the distance between the fuel tank inlet pipe side mark and fuel tank to filler pipe hose side mark is 0 to 0.3 mm (0 to 0.0118 in.) as shown in the illustration.**

- **Tighten the hose clamp until the end of the hose clamp contacts the stopper as shown in the illustration.**

Text in Illustration

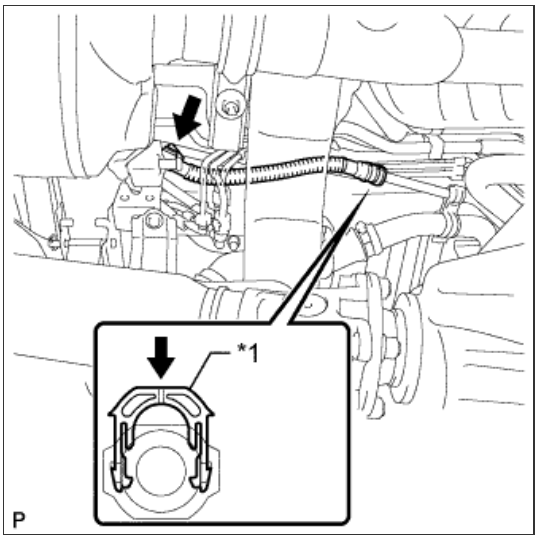
*1	Stopper

7. CONNECT FUEL TANK BREATHER TUBE

a. onnect the fuel tank breather tube to the filler pipe and push the retainer.

Text in Illustration

*1	Retainer



HINT:

Push the parts together firmly until a "click" sound is heard.

NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

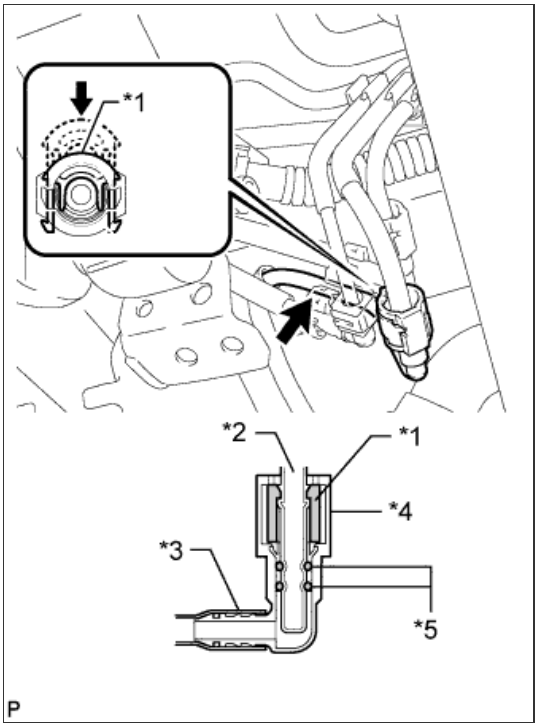
b. Attach the fuel tube clamp.

8. CONNECT NO. 2 FUEL MAIN TUBE SUB-ASSEMBLY

a. onnect the fuel main tube and push the retainer.

Text in Illustration

*1	Retainer
*2	Pipe
*3	Nylon Tube
*4	onnector
*5	O-Ring



HINT:

Push the parts together firmly until a "click" sound is heard.

NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

9. CONNECT NO. 2 FUEL TANK BREATHER TUBE

a. onnect the fuel tank breather tube and push the retainer.

Text in Illustration

*1	Retainer
*2	Pipe
*3	Nylon Tube

NOTICE:

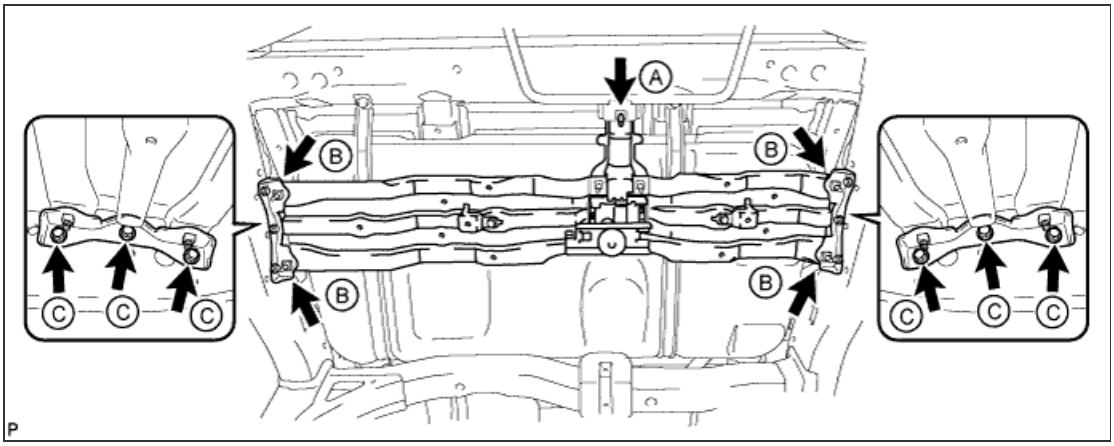
When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

3. REMOVE SPARE TIRE

4. REMOVE TAILPIPE ASSEMBLY

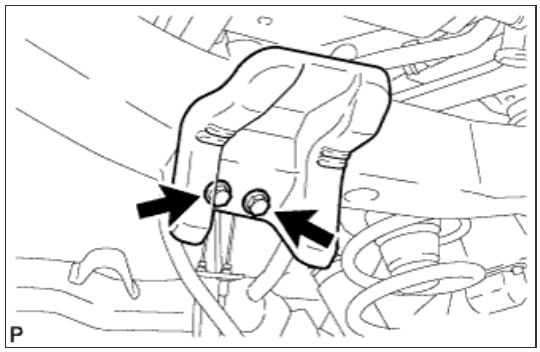


a. Remove the bolt, clamp and gasket.

b. Remove the tailpipe from the 2 exhaust pipe supports.

c. Remove the bolt and clamp, and then disconnect the tailpipe from the center exhaust pipe.

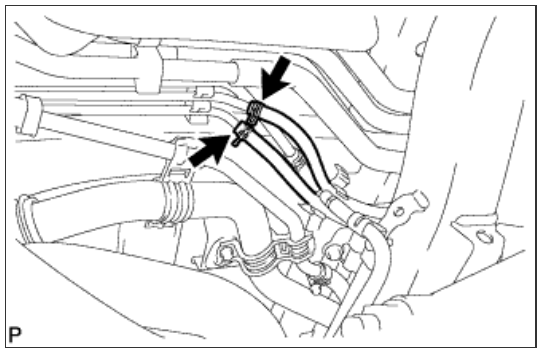
5. REMOVE SPARE WHEEL CARRIER CROSSMEMBER AND SPARE WHEEL CARRIER BRACKET



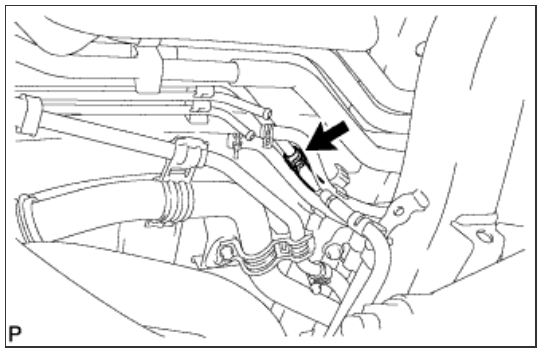
a. Remove the bolt labeled A, and then loosen the 4 bolts labeled B.

b. Slightly raise the spare wheel carrier crossmember, and then remove the 6 bolts labeled C, spare wheel carrier crossmember and 2 brackets.

6. REMOVE NO. 1 SPARE WHEEL STOPPER



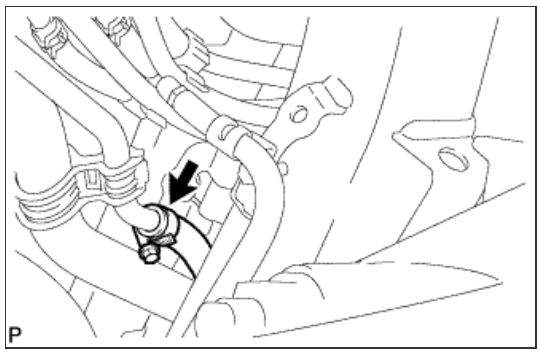
a. Remove the 2 bolts and spare wheel stopper.



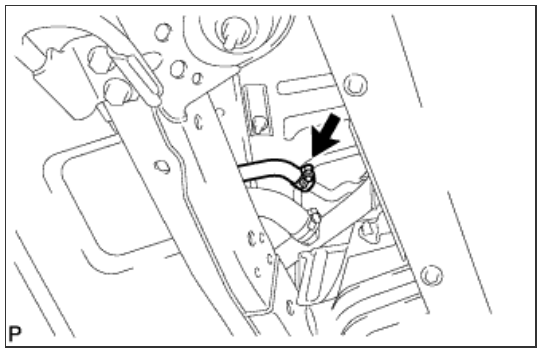
7. REMOVE FUEL TANK CAP ASSEMBLY

8. DISCONNECT FUEL TANK EVAPORATION VENT TUBE SUB-ASSEMBLY

a. Disconnect the 2 fuel tank evaporation vent tubes.

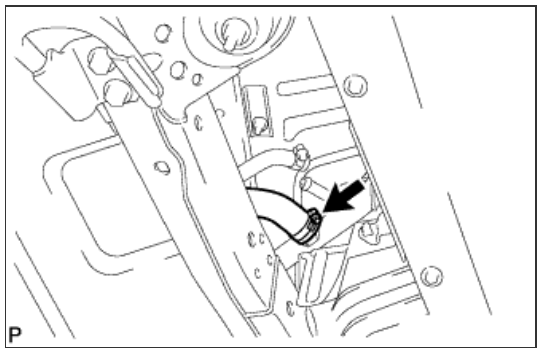


9. DISCONNECT FUEL HOSE



10. DISCONNECT FUEL TANK BREATHER HOSE

a. Disconnect the breather hose from the filler pipe.

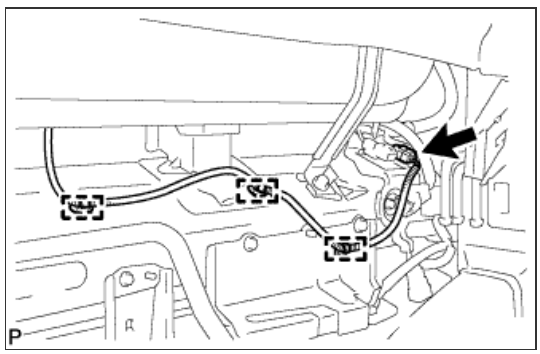


11. DISCONNECT NO. 3 FUEL HOSE

a. Disconnect the fuel hose from the filler pipe.

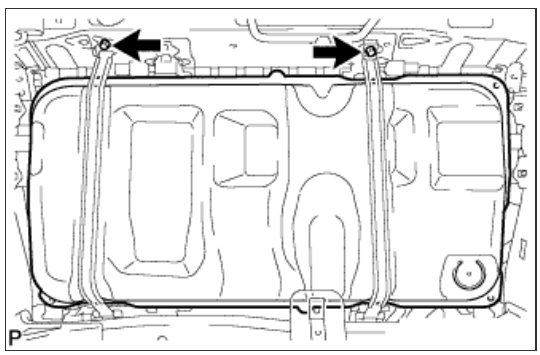
12. DISCONNECT FUEL TANK TO FILLER PIPE HOSE

a. Disconnect the hose from the filler pipe.



13. REMOVE FUEL SUB TANK SUB-ASSEMBLY

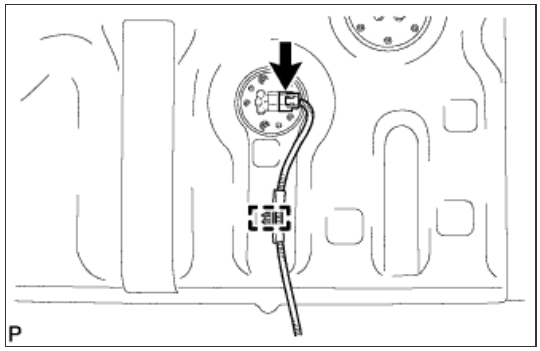
a. Disconnect the floor No. 3 wire connector.



b. Using a clip remover, detach the 3 wire harness clamps.

c. Set a transmission jack underneath the fuel sub tank.

d. Remove the 2 bolts and disconnect the 2 fuel tank bands.

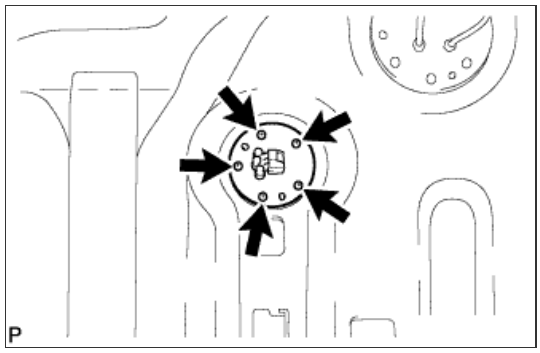


e. Remove the fuel sub tank.

14. REMOVE FLOOR NO. 3 WIRE

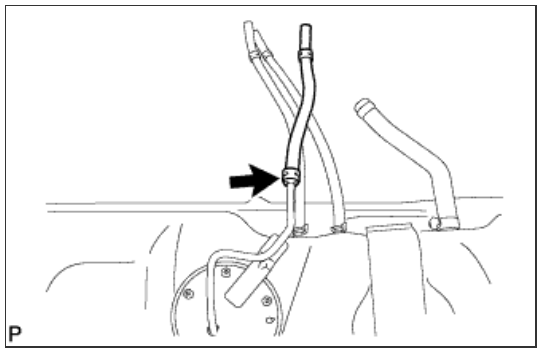
a. Disconnect the sender gauge connector.

b. Using a clip remover, detach the wire harness clamp.



15. REMOVE FUEL SENDER GAUGE ASSEMBLY

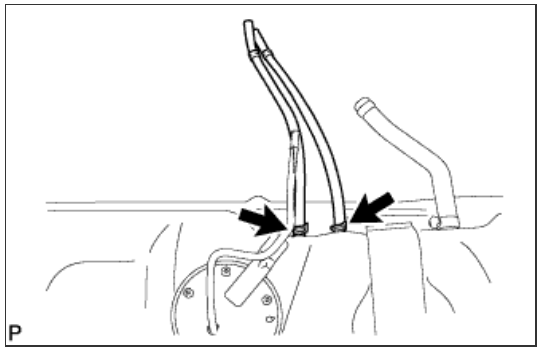
a. Remove the 5 screws and sender gauge.



NOTICE:

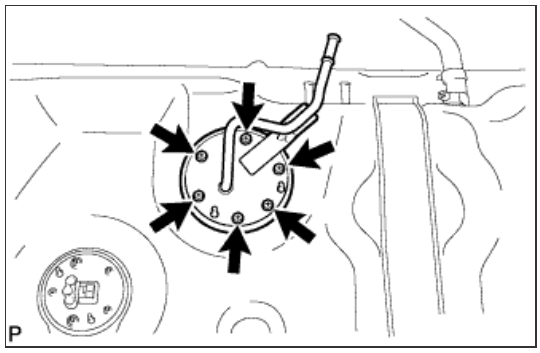
Be careful not to bend the arm of the fuel sender gauge.

b. Remove the gasket from the sender gauge.



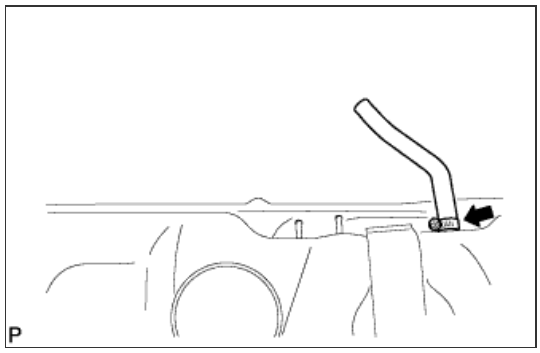
16. REMOVE FUEL HOSE

17. REMOVE FUEL TANK EVAPORATION VENT TUBE SUB-ASSEMBLY



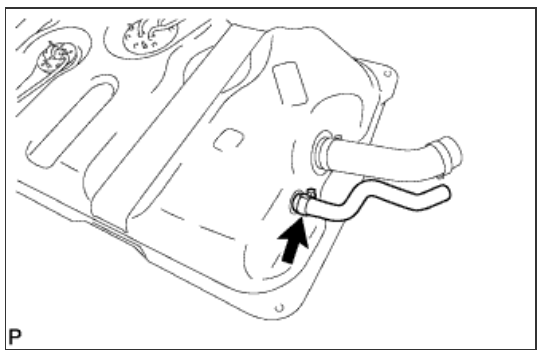
a. Remove the 2 fuel tank evaporation vent tubes.

18. REMOVE FUEL AND EVAPORATION VENT TUBE SUB-ASSEMBLY



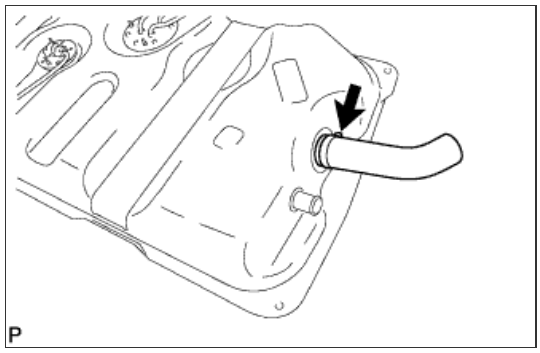
a. Remove the 6 bolts and fuel and evaporation vent tube.

b. Remove the gasket from the fuel and evaporation vent tube.



19. REMOVE FUEL TANK BREATHER HOSE

a. Remove the breather hose from the fuel sub tank.



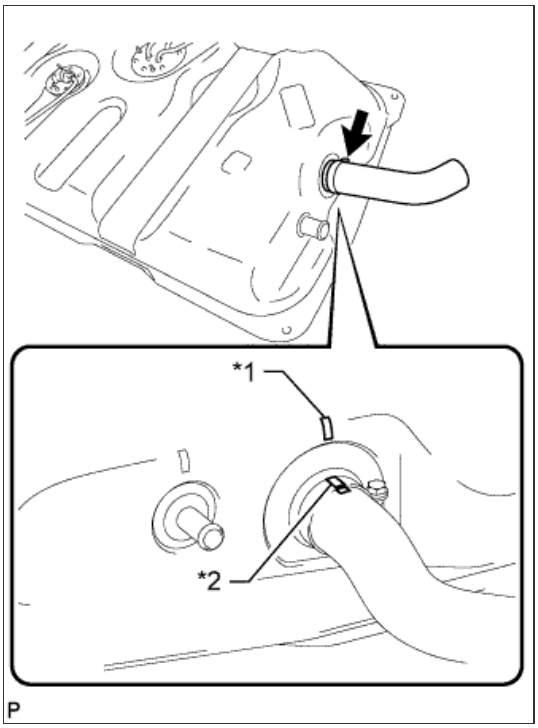
20. REMOVE NO. 3 FUEL HOSE

a. Remove the fuel hose from the fuel sub tank.

21. REMOVE FUEL TANK TO FILLER PIPE HOSE

a. Remove the hose from the fuel sub tank.

P



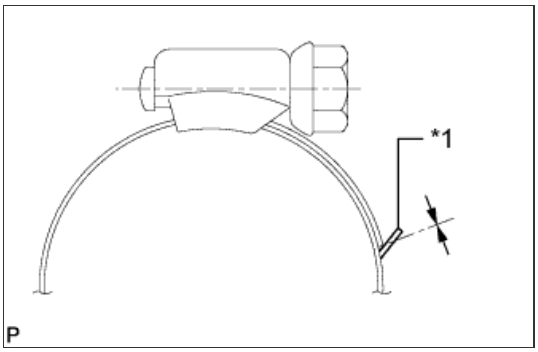
for Preparation [Click here]

1. INSTALL FUEL TANK TO FILLER PIPE HOSE

a. Install the hose to the fuel sub tank as shown in the illustration.

Text in Illustration

*1	Tank Side Mark
*2	Hose Side Mark



HINT:

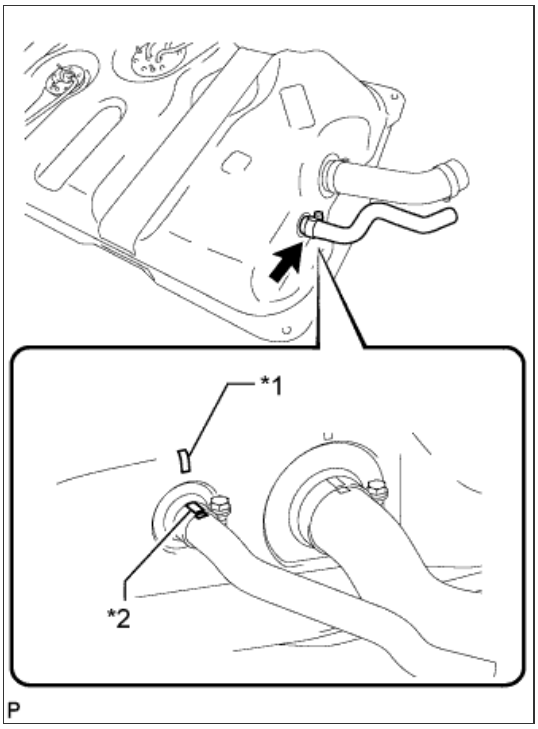
- **Align the fuel sub tank side mark with the hose side mark when installing the hose.**

- **Tighten the hose clamp until the end of the hose clamp contacts the stopper as shown in the illustration.**

Text in Illustration

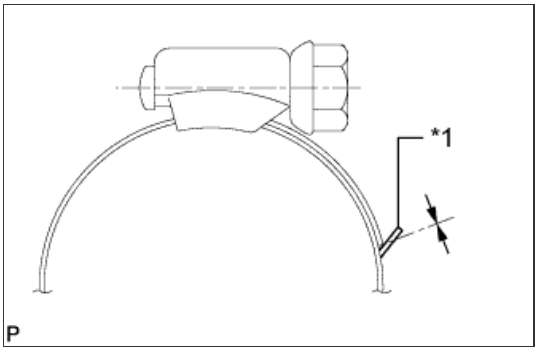
*1	Stopper

2. INSTALL NO. 3 FUEL HOSE



a. Install the fuel hose to the fuel sub tank as shown in the illustration.

Text in Illustration



*1	Tank Side Mark

3. INSTALL FUEL TANK BREATHER HOSE

a. Install the breather hose to the fuel sub tank.

4. INSTALL FUEL AND EVAPORATION VENT TUBE SUB-ASSEMBLY

a. Install a new gasket to the fuel and evaporation vent tube.

b. Install the fuel and evaporation vent tube with the 6 bolts.

Tor ue:
3.5 N m{ 36 kgf , 31 in. bf }

5. INSTALL FUEL TANK EVAPORATION VENT TUBE SUB-ASSEMBLY

a. Install the 2 fuel tank evaporation vent tubes.

6. INSTALL FUEL HOSE

7. INSTALL FUEL SENDER GAUGE ASSEMBLY

a. Install a new gasket to the sender gauge.

NOTICE:

Be careful not to bend the arm of the fuel sender gauge.

b. Install the sender gauge with the 5 screws.

Tor ue:
1.5 N m{ 15 kgf cm , 13 in. lbf }

8. INSTALL FLOOR NO. 3 WIRE

a. Attach the wire harness clamp to the fuel sub tank.

b. Connect the sender gauge connector.

9. INSTALL FUEL SUB TANK SUB-ASSEMBLY

a. Set the fuel sub tank on a transmission jack and raise the fuel sub tank.

b. Connect the 2 fuel tank bands with the 2 bolts.

Tor ue:
40 N m{ 408 kgf cm , 3 ft. lbf }

c. Connect the floor No. 3 wire connector.

d. Attach the 3 wire harness clamps.

10. CONNECT FUEL TANK TO FILLER PIPE HOSE

a. Connect the hose to the filler pipe.

11. CONNECT NO. 3 FUEL HOSE

a. Connect the fuel hose to the filler pipe.

12. CONNECT FUEL TANK BREATHER HOSE

a. Connect the breather hose to the filler pipe.

13. CONNECT FUEL HOSE

14. CONNECT FUEL TANK EVAPORATION VENT TUBE SUB-ASSEMBLY

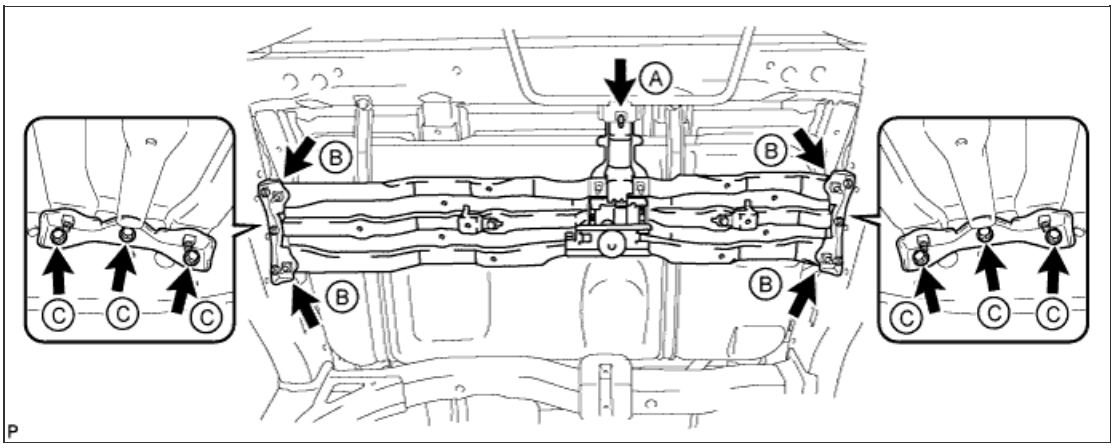
a. Connect the 2 fuel tubes.

15. INSTALL FUEL TANK CAP ASSEMBLY

16. INSTALL NO. 1 SPARE WHEEL STOPPER

a. Install the spare wheel stopper with the 2 bolts.

Tor ue:
32 N m{ 326 kgf cm , 24 ft. lbf }



17. INSTALL SPARE WHEEL CARRIER CROSSMEMBER AND SPARE WHEEL CARRIER BRACKET

a. Install the spare wheel carrier crossmember and 2 brackets to the vehicle with the 6 bolts labeled C.

Tor ue:
for bolt C:
20 N m{ 204 kgf cm , 15 ft. lbf }

b. Temporarily install the bolt labeled A, and then tighten the bolt labeled A and bolts labeled B.

Tor ue:
for bolt A:
29 N m{ 296 kgf cm , 21 ft. lbf }
for bolt B:
20 N m{ 204 kgf cm , 15 ft. lbf }

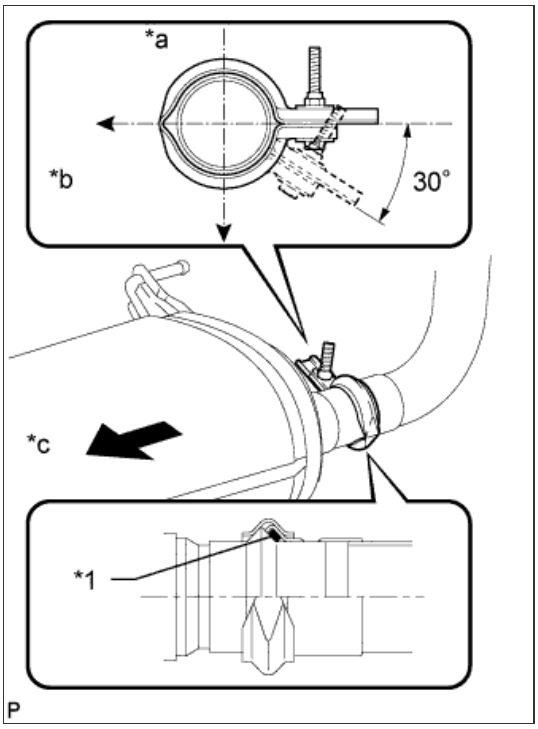
18. INSTALL TAILPIPE ASSEMBLY

a. Install the tailpipe to the 2 exhaust pipe supports.

b. Install a new gasket to the center exhaust pipe.

c. Connect the tailpipe to the center exhaust pipe.

d. Attach a new clamp to the tailpipe and center exhaust pipe. Then install the bolt to the clamp.



Tor ue:
32 N m{ 326 kgf cm , 24 ft. lbf }

Text in Illustration

(Click here)

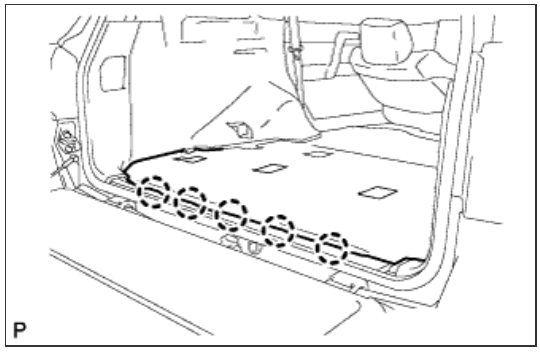
4. REMOVE REAR NO. 2 SEAT ASSEMBLY

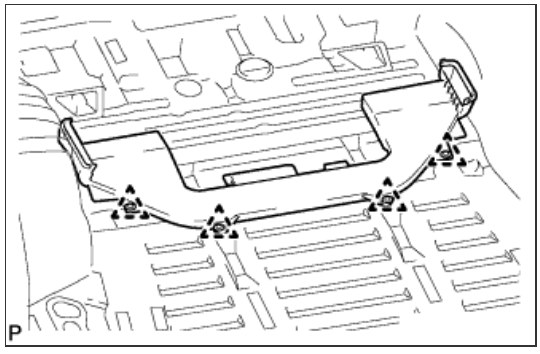
a. for Face to Face Seat Type:
Remove the rear No. 2 seat assembly (Click here).



b. except Face to Face Seat Type:
Remove the rear No. 2 seat assembly (Click here).

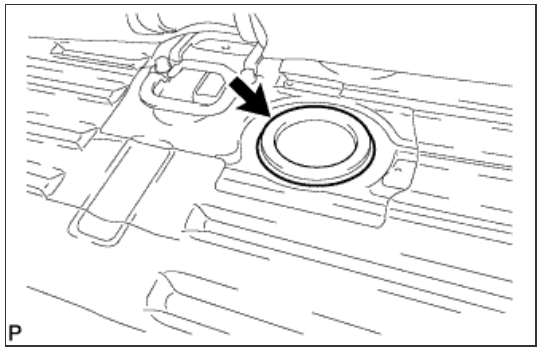
5. REMOVE REAR FLOOR MAT ASSEMBLY

a. Detach the 5 clips and fold back the floor mat toward the front of the vehicle.



HINT:

Fold back the floor mat so that the rear No. 7 air duct can be removed.

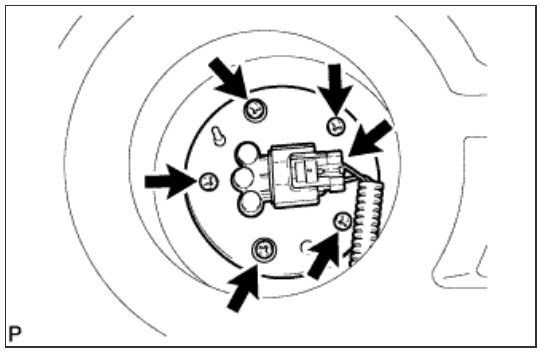


6. REMOVE REAR NO. 7 AIR DUCT

a. Detach the 4 clips and remove the air duct.

7. REMOVE REAR FLOOR SERVICE HOLE COVER

8. REMOVE FUEL SENDER GAUGE ASSEMBLY



a. Disconnect the sender gauge connector.

b. Remove the 5 screws and sender gauge.

NOTICE:

Be careful not to bend the arm of the fuel sender gauge.

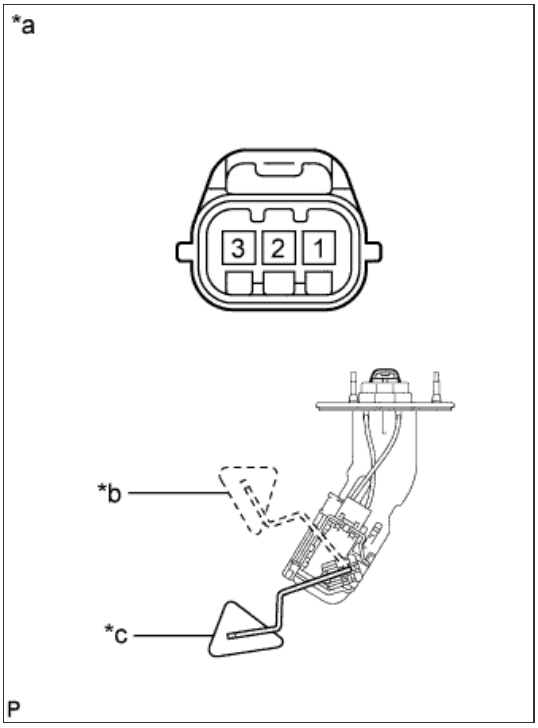
c. Remove the gasket from the sender gauge.

for Preparation Click here

1. INSPECT FUEL SENDER GAUGE ASSEMBLY

a. Check that the float moves smoothly between F and E.

b. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 3	Float level is F (upper)	12 to 18 Ω
	Float level is E (lower)	405 to 415 Ω

Text in Illustration

*a	Component without harness connected (Fuel Sender Gauge)
*b	F (pper)
*c	E (Lower)

f the result is not as specified replace the fuel sender gauge assembly.

for Preparation Click here

1. INSTALL FUEL SENDER GAUGE ASSEMBLY

a. Install a new gasket to the sender gauge.

b. Install the sender gauge with the 5 screws.

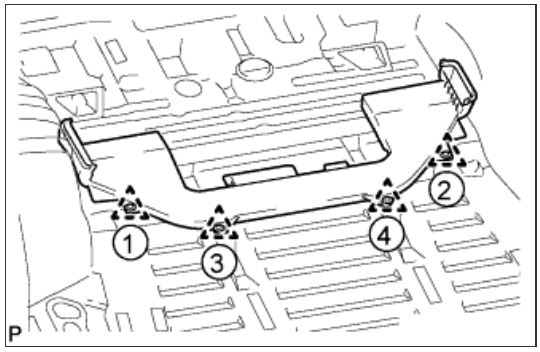
Torque:
1.5 N*m{ 15 kgf*cm , 13 in.*lbf }

NOTICE:

Be careful not to bend the arm of the fuel sender gauge.

c. Connect the sender gauge connector.

2. INSTALL REAR FLOOR SERVICE HOLE COVER



a. Install the service hole cover with new butyl tape.

3. INSTALL REAR NO. 7 AIR DUCT

a. Attach the 4 clips to install the air duct.

HINT:

Attach the clips in the order shown in the illustration.

4. INSTALL REAR FLOOR MAT ASSEMBLY

a. Attach the 5 clips to install the floor mat.

5. INSTALL REAR NO. 2 SEAT ASSEMBLY

a. for Face to Face Seat Type:
Install the rear No. 2 seat assembly (Click here).

b. except Face to Face Seat Type:
Install the rear No. 2 seat assembly (Click here).

6. INSTALL REAR NO. 1 SEAT ASSEMBLY LH (for 60/40 Split Seat T pe 60 Si e)

(Click here)

7. INSTALL REAR NO. 1 SEAT ASSEMBLY RH (for 60/40 Split Seat T pe 40 Si e)

(Click here)

8. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

for Preparation Click here

CAUTION:

- **Before working on the fuel system, disconnect the cable from the negative (-) battery terminal.**
- **Do not smoke or be near an open flame when working on the fuel system.**
- **Keep gasoline away from rubber and leather parts.**

1.DISCHARGE FUEL SYSTEM PRESSURE

CAUTION:

- **Do not disconnect any part of the fuel system until you have discharged the fuel system pressure.**
- **After discharging the fuel pressure, place a cloth or equivalent over fittings as you separate them to reduce the risk of fuel spray on yourself or in the engine compartment.**

a. Remove the engine room relay block cover.

b. Remove the circuit opening relay (C/OPN).

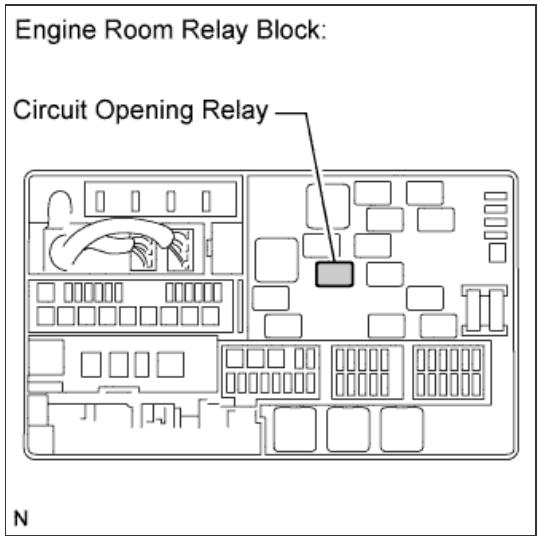
c. Start the engine. After the engine has stopped on its own, turn the engine switch off.

HINT:

If DTC P0230 is output, clear the DTC (Click here).

d. Crank the engine, then check that the engine does not start.

e. Loosen the fuel tank cap, then discharge the pressure in the fuel tank completely.



f. Disconnect the cable from negative (-) battery terminal.

NOTICE:

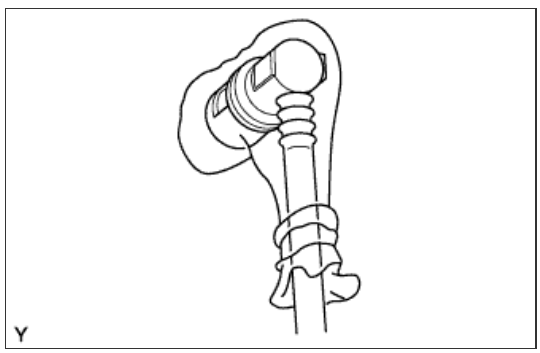
hen disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

g. Install the circuit opening relay (C/OPN).

h. Install the engine room relay block cover.

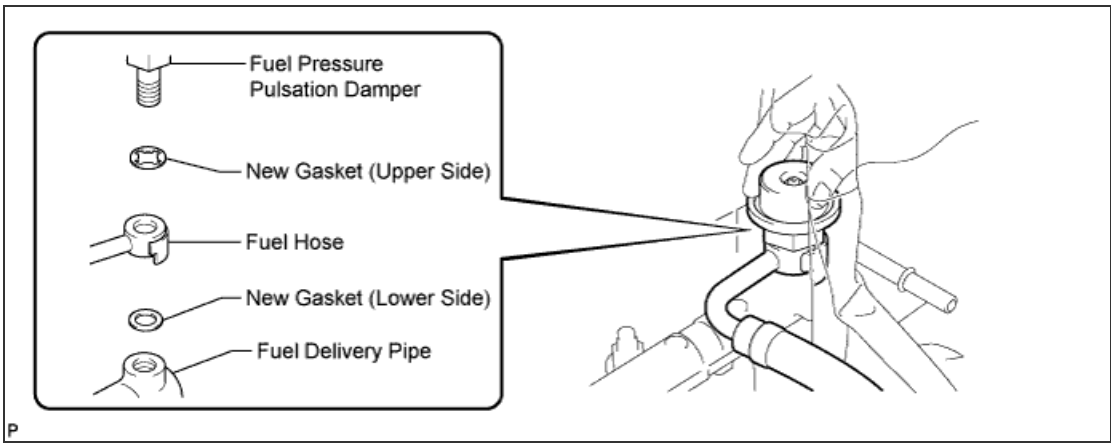
.FUEL SYSTEM

a. hen disconnecting the high fuel pressure line, a large amount of gasoline will spill out. Follow these procedures.



i. Discharge the fuel system pressure.

ii. Put a container under the connecting part of the pressure line.

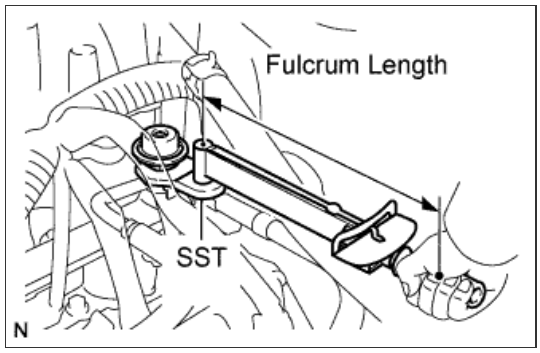


iii. Slowly loosen the connection.

iv. Disconnect the connection.

v. Plug the connection with a rubber plug.

b. hen connecting the union bolt (fuel pressure pulsation damper) on the high pressure pipe union, observe the following procedures.



NOTICE:

ake sure to install the gaskets in the order shown in the illustration, as the shape of the upper side and lower side gaskets is different.

i. Always use 2 new gaskets.

ii. Tighten the union bolt by hand.

iii. Using SST, tighten the union bolt to the specified torque.

SST

0961 - (09617-) 11

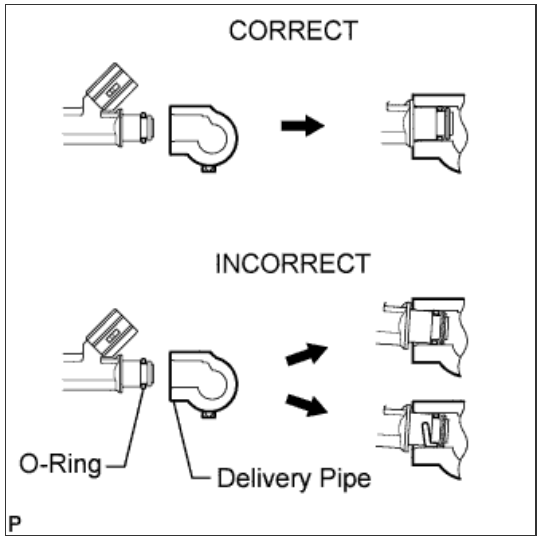
Torque:

with SST:

33 N m{ 340 kgf*cm , ft.*lbf

without SST:

39 N m{ 398 kgf*cm , ft.*lbf



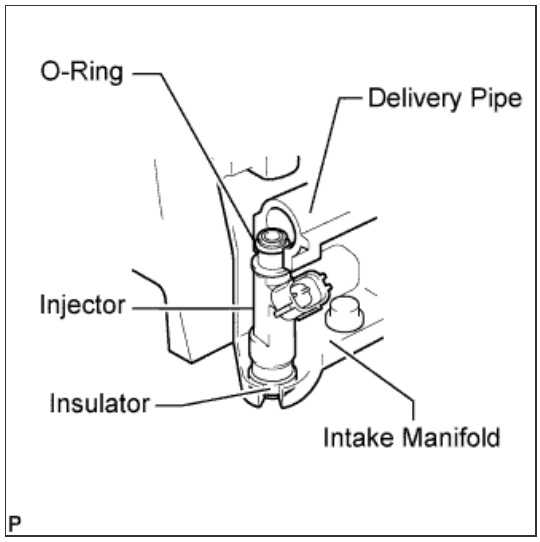
HINT:

- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.).**
- **Make sure SST and the wrench are connected in a straight line.**

c. Observe the following precautions when removing or installing the injectors:

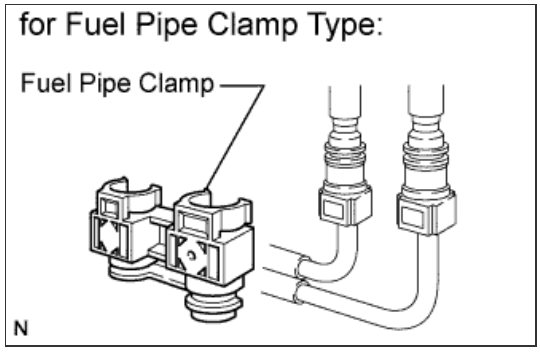
NOTICE:

- **Never reuse the O-ring.**
- **When placing a new O-ring on the in ector, do not damage the O-ring.**
- **Coat the new O-ring with spindle oil or gasoline before installing. Do not use engine oil, gear oil or brake fluid.**



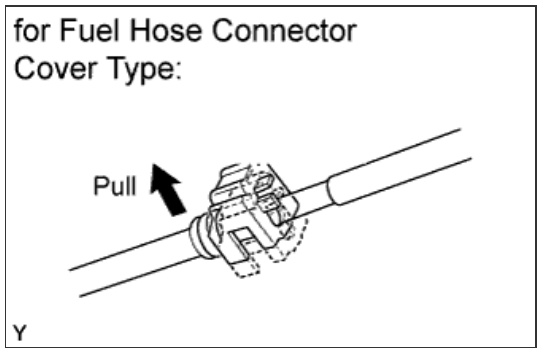
d. Install the injector to the delivery pipe and intake manifold, as shown in the

illustration.



NOTICE:

efore installing the injector, apply spindle oil or gasoline where the delivery pipe or intake manifold contacts the O-ring of the injector.

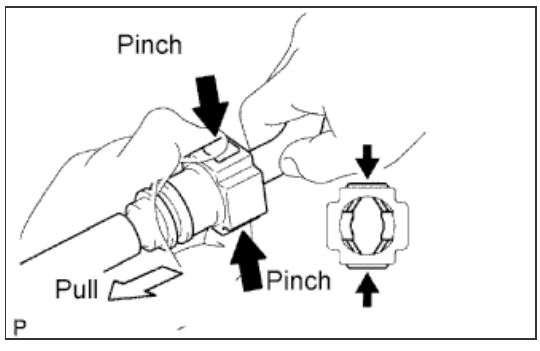


e. Observe these precautions when disconnecting the fuel tube connector (for quick type A).

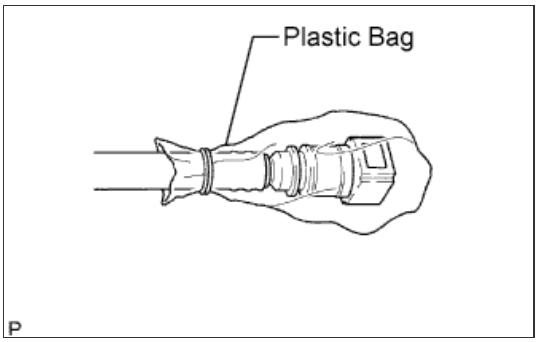
i. for Fuel Pipe Clamp Type:
Remove the fuel pipe clamp from the fuel tube connector.

ii. for Fuel ose Connector Cover Type:
Detach the lock claw by lifting up the cover, as shown in the illustration.

iii. Check for dirt or mud on the pipe and around the connector before disconnection. Clean if necessary.



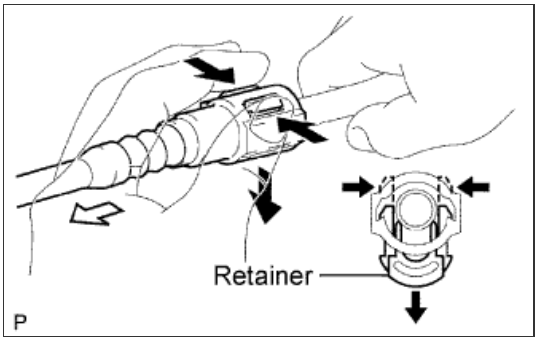
iv. Pinch the connector and disconnect the connector and pipe.
If the connector and the pipe are stuck together, pinch the connector, then push and pull the pipe to disconnect the pipe and pull it out.



NOTICE:

Do not use any tools in this procedure.

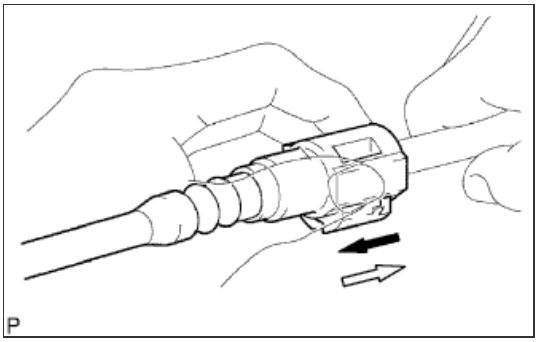
v. Check for dirt or mud on the seal surface of the disconnected pipe.
Clean if necessary.



vi. To protect the disconnected pipe and connector from damage and contamination, cover it with a plastic bag.

f. Observe these precautions when disconnecting the fuel tube connector (for quick type).

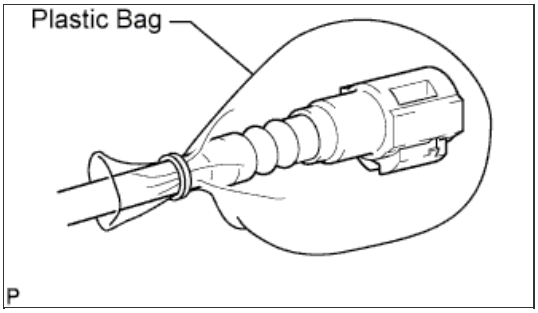
i. Check that there is no damage or foreign matter on the part of the pipe that contacts the connector.



ii. Detach the 2 claws of the connector retainer. Push down on the connector and disconnect it from the pipe.

HINT:

If the connector and pipe are stuck, pinch the fuel pipe by hand, and push and pull the connector to disconnect it.

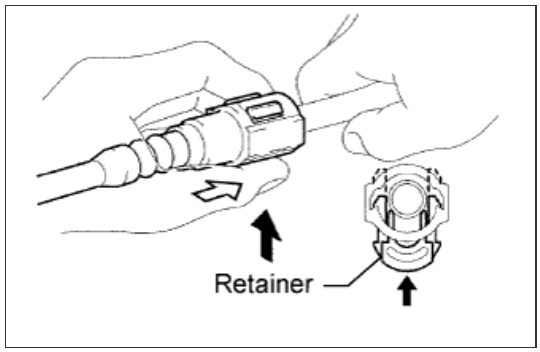


NOTICE:

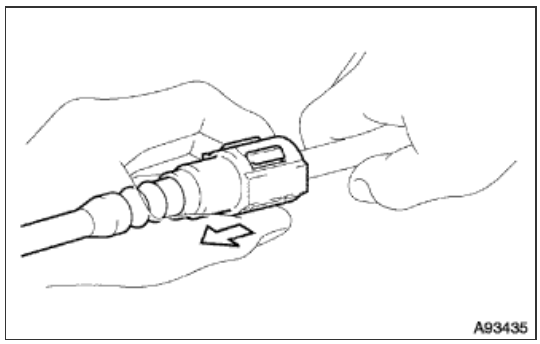
Do not use any tools in this procedure.

iii. Check for foreign matter on the seal surface of the disconnected pipe. Clean it if necessary.

iv. To protect the disconnected pipe and connector from damage and foreign matter, cover it with a plastic bag.



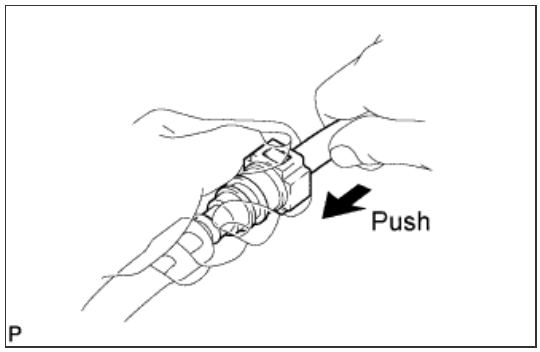
g. Observe these precautions when connecting the fuel tube connector (for quick type).



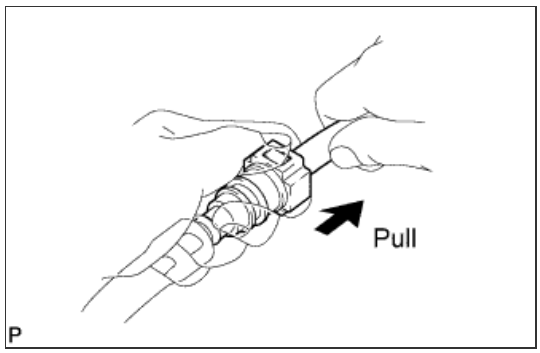
i. Check for foreign matter on the pipe and around the connector before connecting it. Clean it if necessary.

ii. Align the axis of the connector with the axis of the pipe. Push the pipe

into the connector, and push up on the retainer.

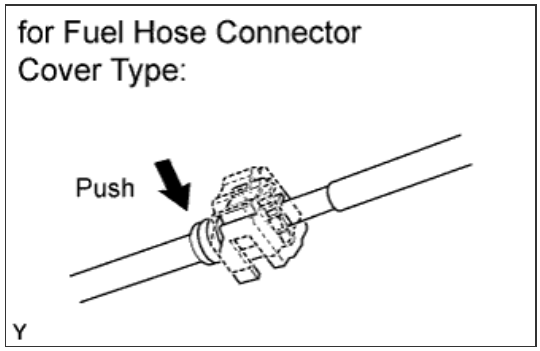


iii. After connecting the pipe and connector, try to pull them apart to confirm that they are securely connected.



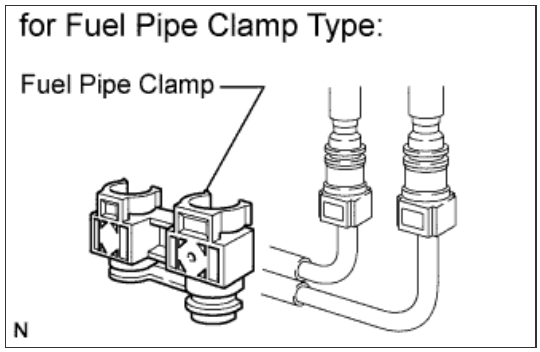
h. Observe these precautions when connecting the fuel tube connector (for quick type A).

i. Check that there is no damage or contamination in the connected part of the pipe.



ii. Align the axis of the connector with the axis of the pipe. Push the pipe into the connector until the connector makes a "click" sound. If the connection is tight, apply a small amount of fresh spindle oil or gasoline on the tip of the pipe.

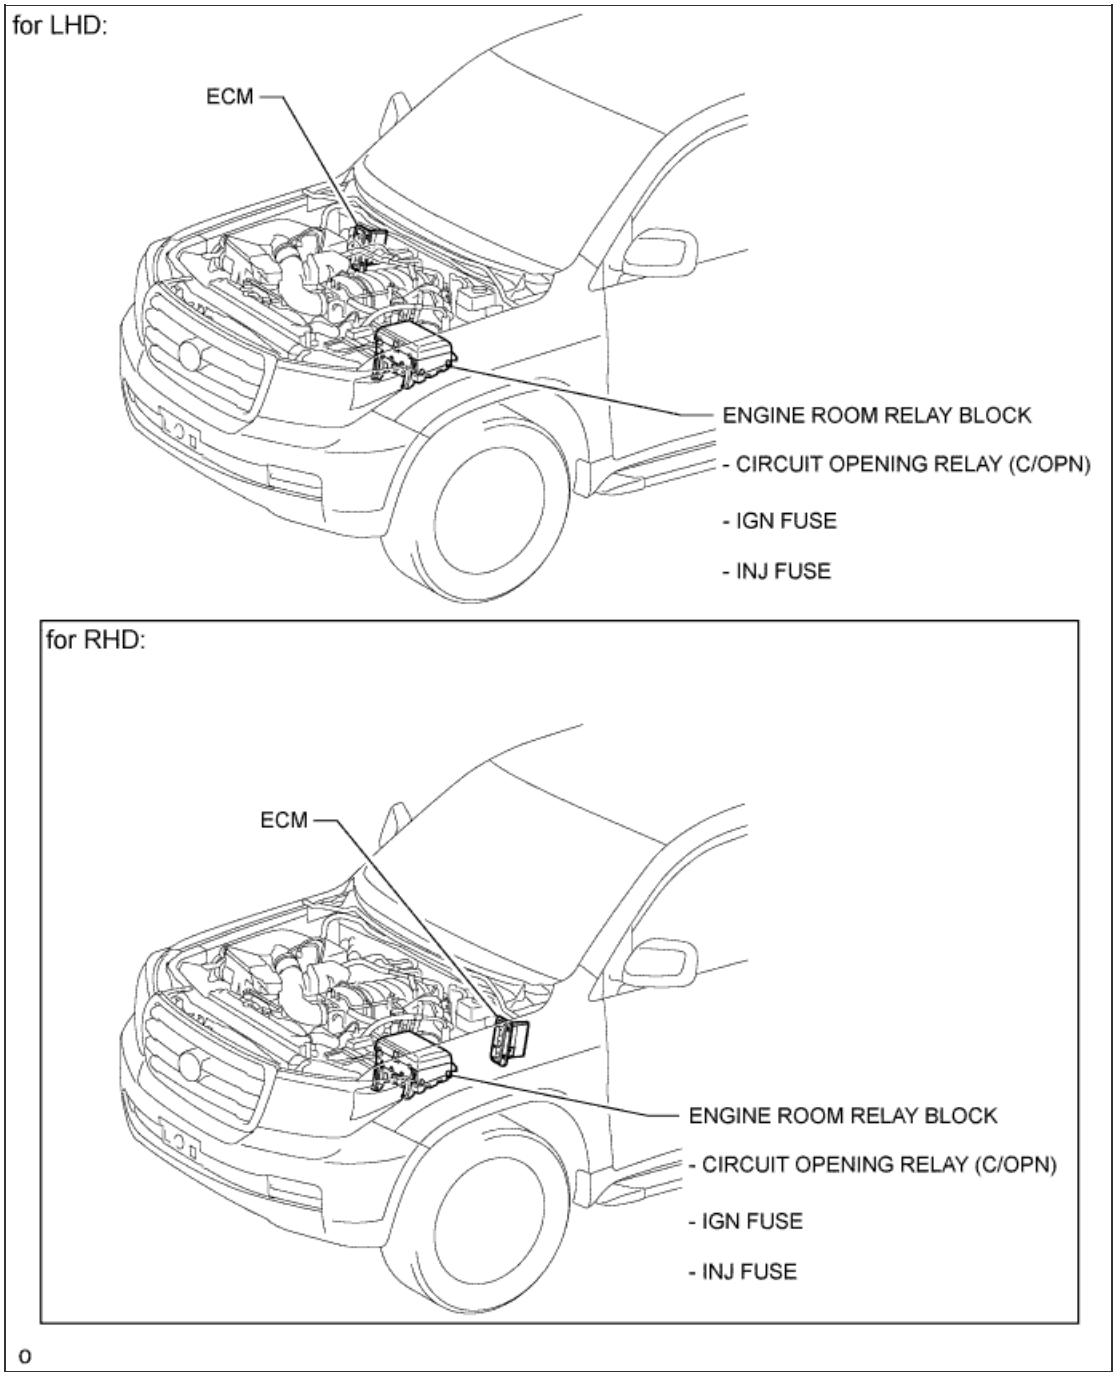
iii. After having finished the connection, try to pull apart the pipe and the connector to confirm that they are securely connected.



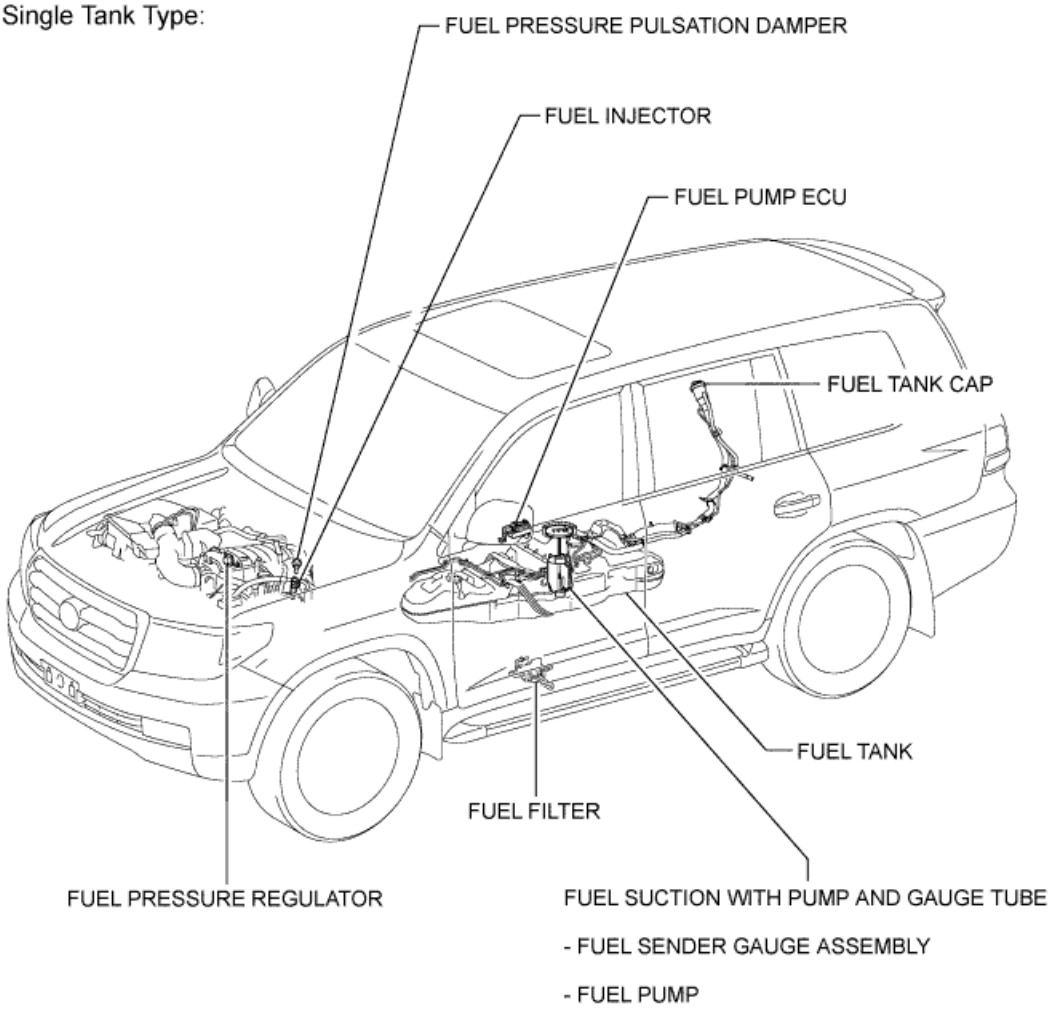
iv. for Fuel ose Connector Cover Type:
Attach the lock claw to the connector by pushing down on the cover, as shown in the illustration.

v. for Fuel Pipe Clamp Type:

Install the fuel pipe clamp to the connector.

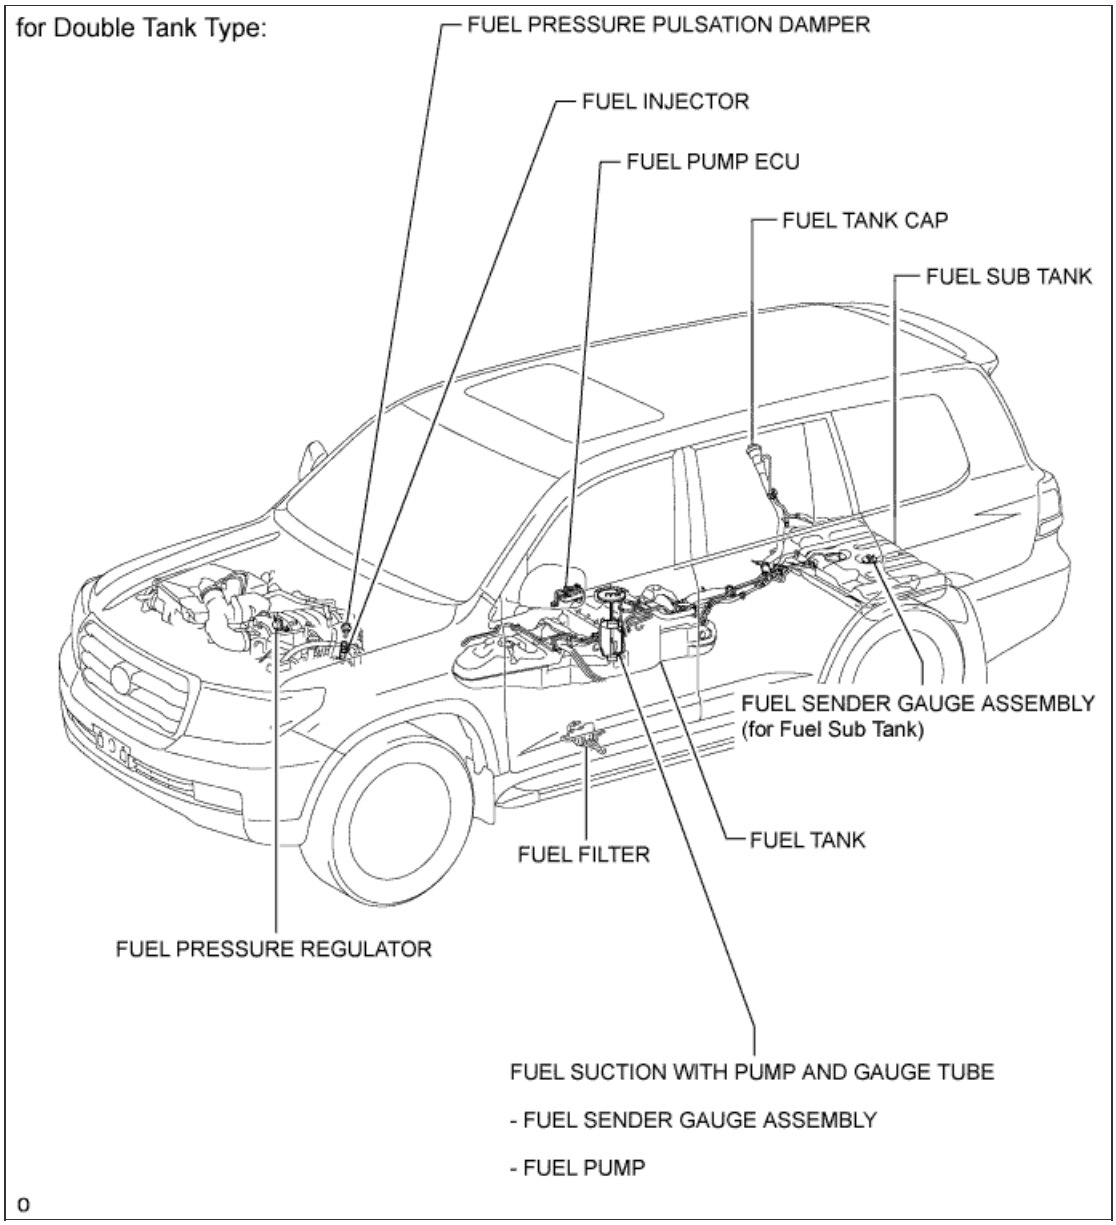


vi. Check that there is no fuel leakage.



3.CHECK FOR FUEL LEAK

a. Check that there are no fuel leaks after performing maintenance anywhere on the fuel system (Click here).



for Preparation Click here

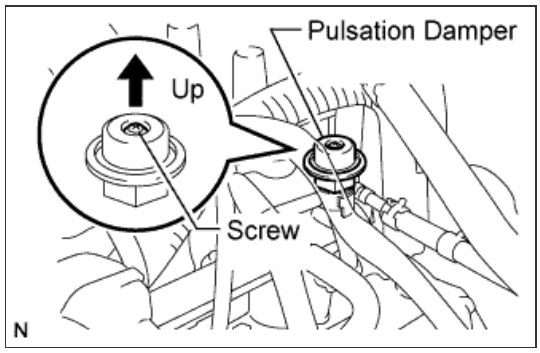
1. CHECK FUEL PUMP OPERATION AND FUEL LEAK

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG) and intelligent tester .

NOTICE:



Do not start the engine.

c. Enter the following menus: Powertrain / Engine and ECT / Active Test / Activate the Fuel Pump Speed Control.

d. Check that there are no fuel leaks after doing maintenance anywhere on the fuel system.

e. Check that the pulsation damper screw rises up when the fuel pump operates. If the operation is not as specified, check the following parts:

- Fusible link
- Fuses
- Circuit opening relay (C/)
- Fuel pump
- ECM
- iring connections

f. Turn the engine switch off.

g. Disconnect the intelligent tester from the DLC3.

2. CHECK FUEL PRESSURE

a. Check that the battery voltage is 11 to 14 V.

b. Discharge the fuel system pressure (Click here).

c. Disconnect the cable from the negative (-) battery terminal.

NOTICE:

hen disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

d. Remove the No. 1 fuel pipe from the LH delivery pipe (Click here).

e. Install the No. 1 fuel pipe and SST (union) to the delivery pipe with the 3 gaskets and another SST (adapter).

SST

09268-45014 (09268-41190, 09268-41200, 90405-06167, 09268-41210, 90467-11009)

Tor e:

39 N*m 398 kgf*cm , 29 ft.*lbf }

f. ipe off any splattered gasoline.

g. Reconnect the cable to the negative (-) battery terminal.

NOTICE:

hen disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

h. Connect the intelligent tester to the DLC3.

i. Turn the engine switch on (IG) and intelligent tester .

NOTICE:

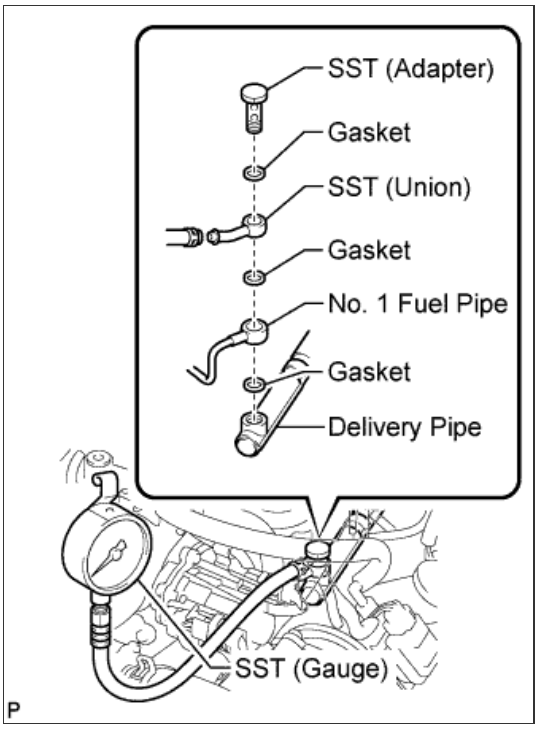
Do not start the engine.

. Enter the following menus: Powertrain / Engine and ECT / Active Test / Activate the Fuel Pump Speed Control.

k. Measure the fuel pressure.

Fuel pressure:
265 to 304 kPa (2.7 to 3.1 kgf/cm ^{2}, 38 to 44 psi)

If the pressure is high, replace the fuel pressure regulator.
If the pressure is low, check the following parts:



- Fuel hoses and connections
- Fuel pump
- Fuel filter
- Fuel pressure regulator

l. Disconnect the intelligent tester from the DLC3.

m. Start the engine.

n. Measure the fuel pressure at idle.

Fuel pressure:
265 to 304 kPa (2.7 to 3.1 kgf/cm ^{2}, 38 to 44 psi)

o. Stop the engine.

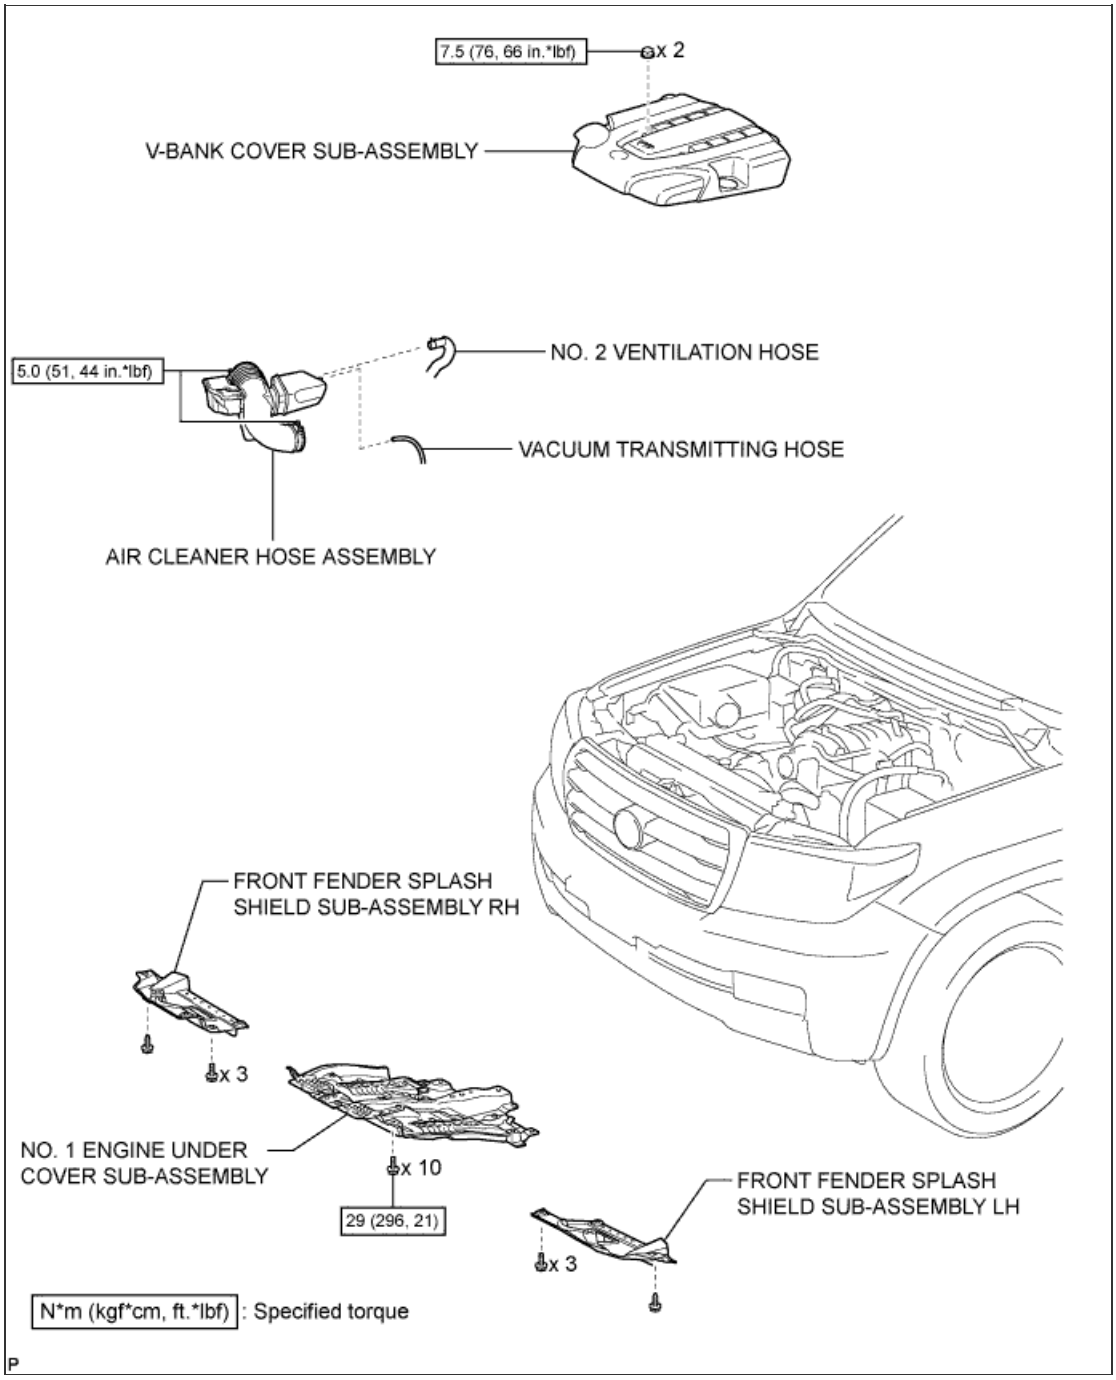
p. Check that the fuel pressure remains as specified for 5 minutes after the engine has stopped.

Fuel pressure:
147 kPa (1.5 kgf/cm^2, 21 psi) or more

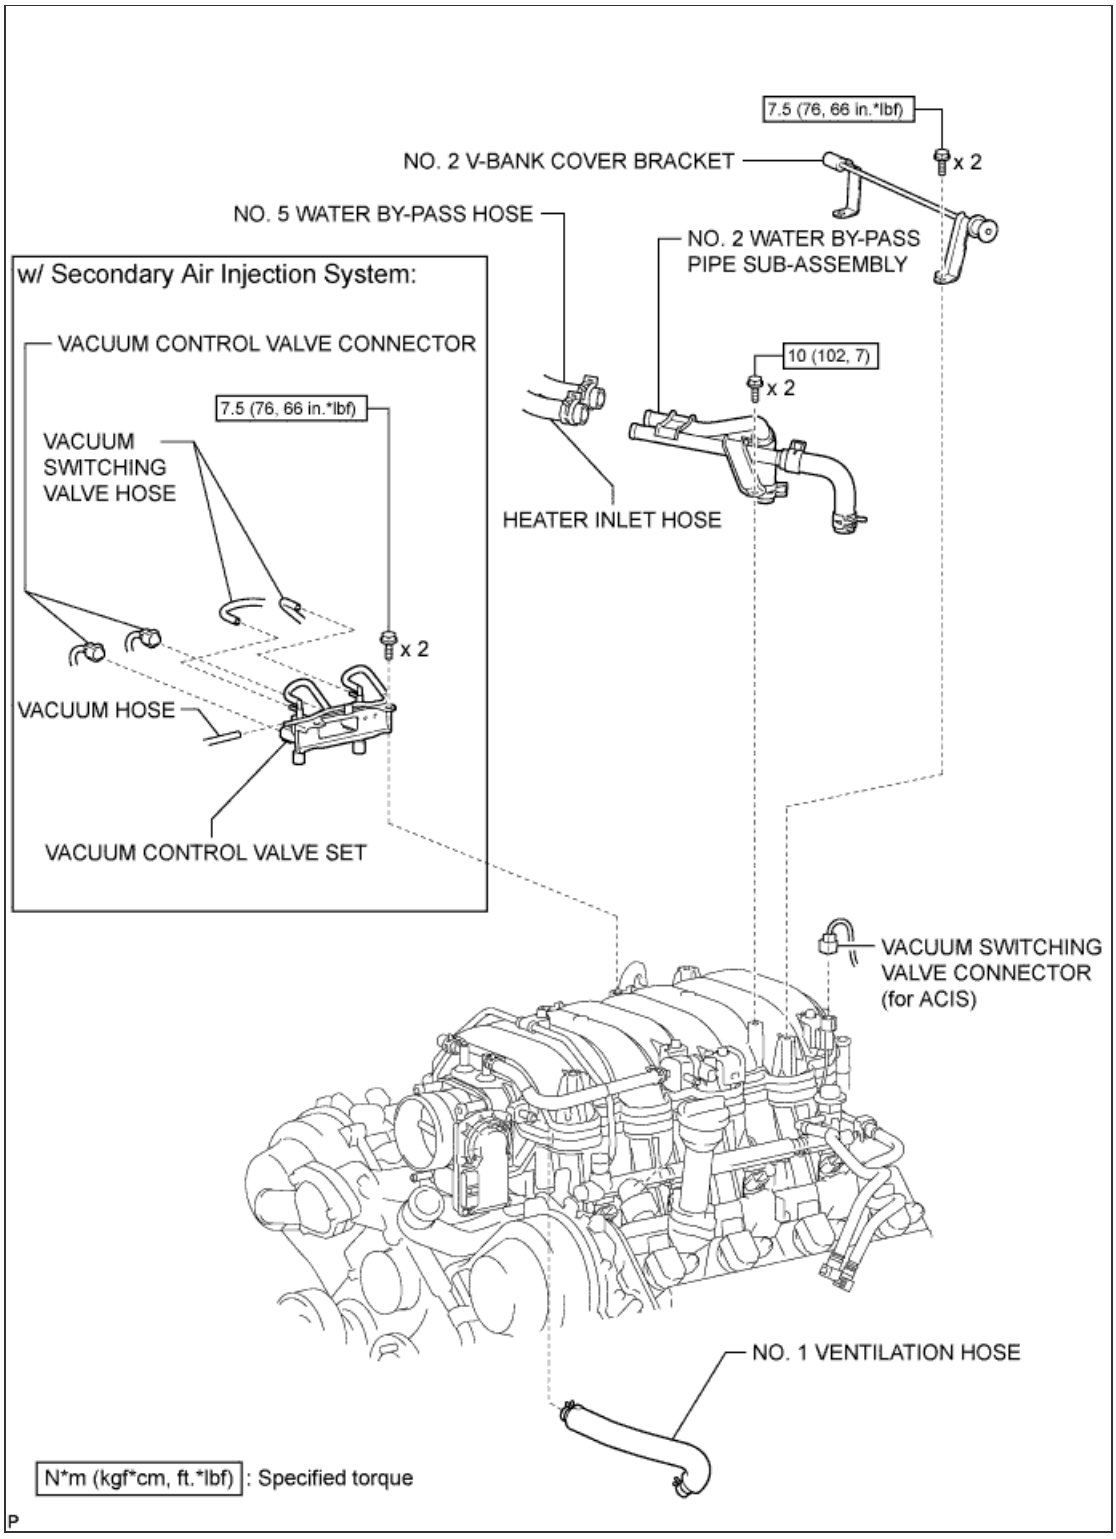
If the pressure is not as specified, check the fuel pump, pressure regulator and/or injectors.

. After checking the fuel pressure, disconnect the cable from the negative (-) battery terminal and carefully remove SST to prevent gasoline from splashing.

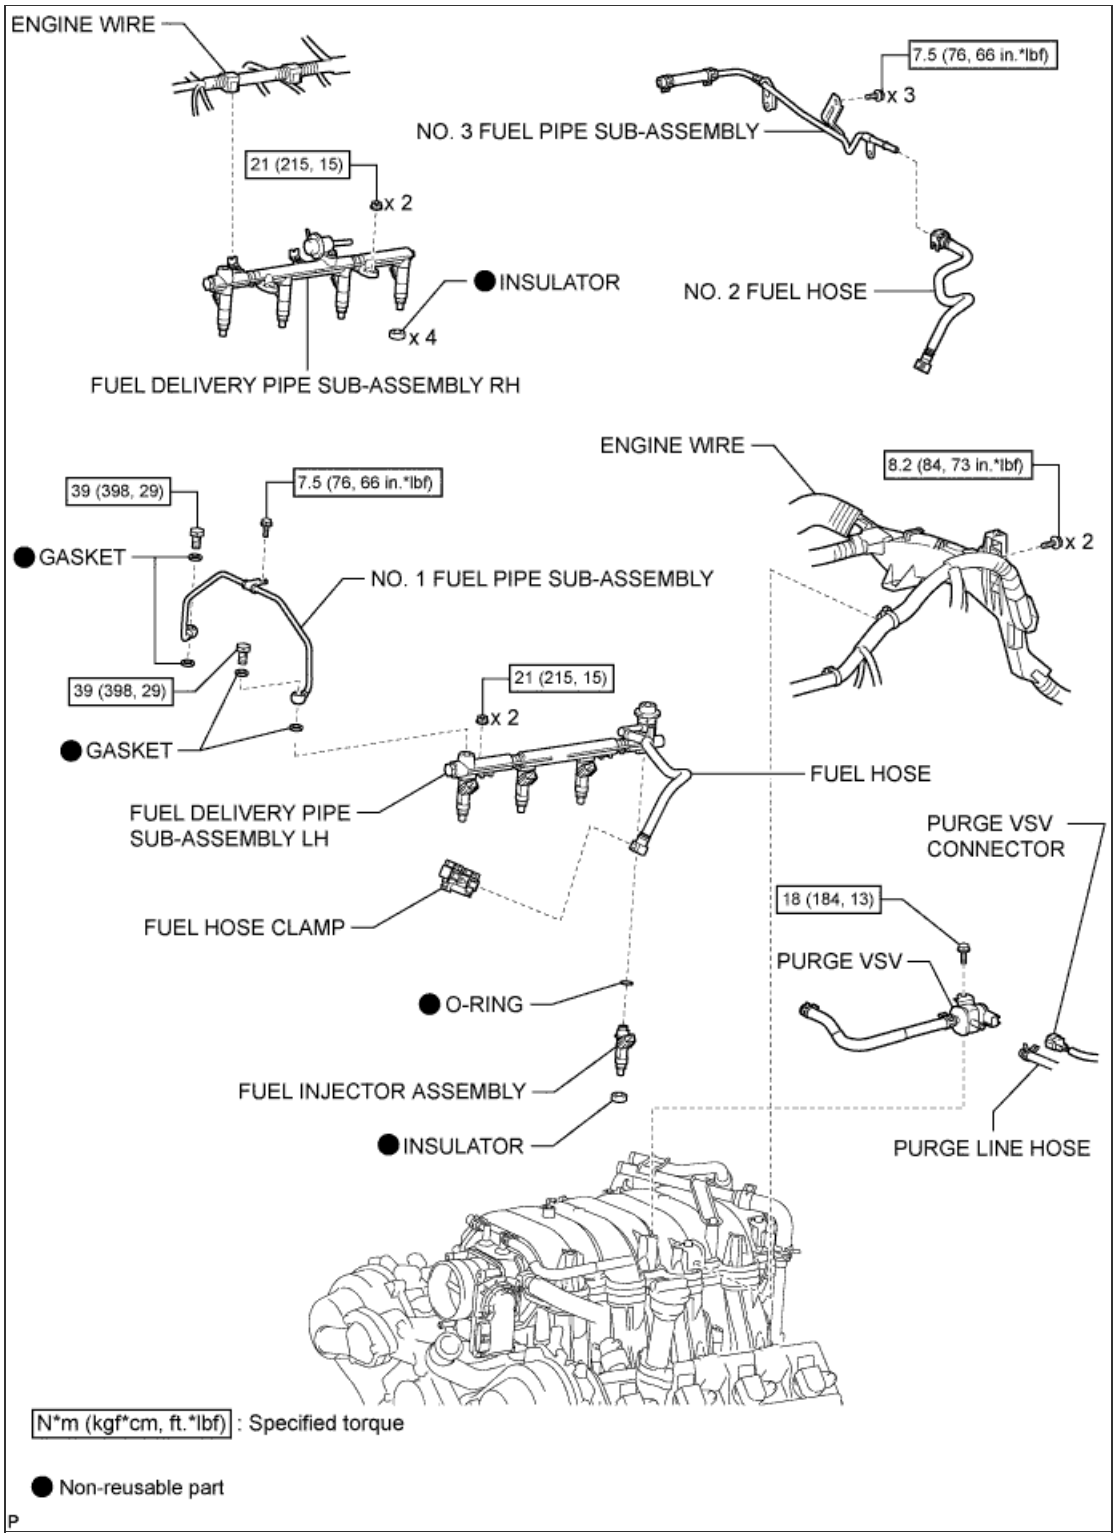
r. Reinstall the No. 1 fuel pipe to the LH delivery pipe (Click here).



s. Reconnect the cable to the negative (-) battery terminal.



NOTICE:



hen disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

t. Check for fuel leaks (refer to the "Check Fuel Pump eration And Fuel Leak" procedure).

for Preparation Click here

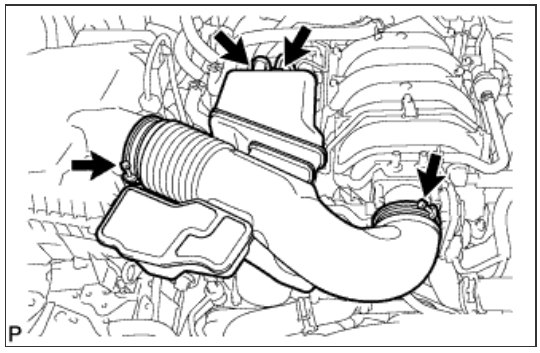
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Remove the 2 nuts and V-bank cover.



3. REMOVE AIR CLEANER HOSE ASSEMBLY

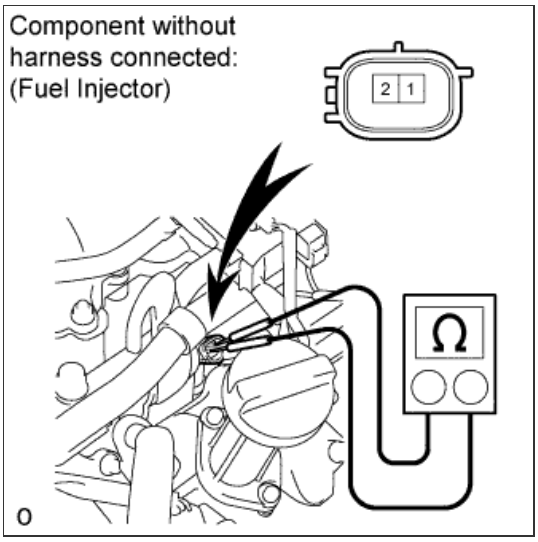
a. Disconnect the vacuum transmitting hose and No. 2 ventilation hose.

b. Loloosen the 2 hose clamps.

c. Remove the air cleaner hose.

4. INSPECT FUEL INJECTOR ASSEMBLY

a. Disconnect the 8 injector connectors.



b. Measure the resistance according to the value(s) in the table below.

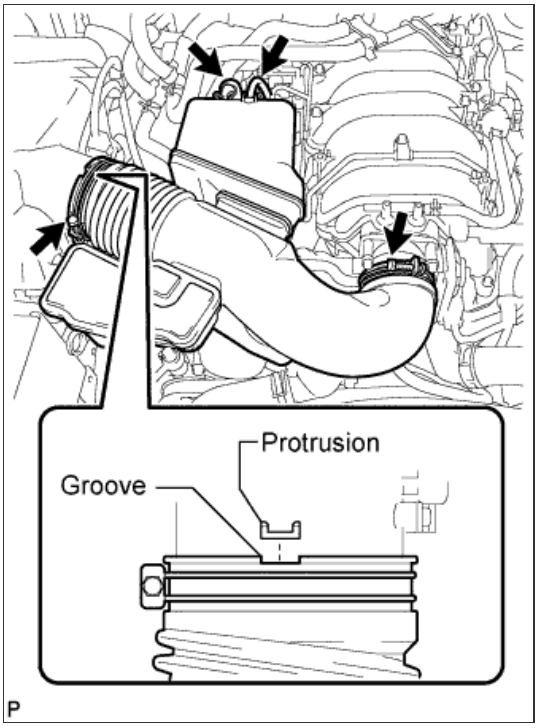
Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	11.6 to 12.4 Ω

If the resistance is not as specified, replace the injector.

c. Reconnect the 8 injector connectors.

5. INSTALL AIR CLEANER HOSE ASSEMBLY



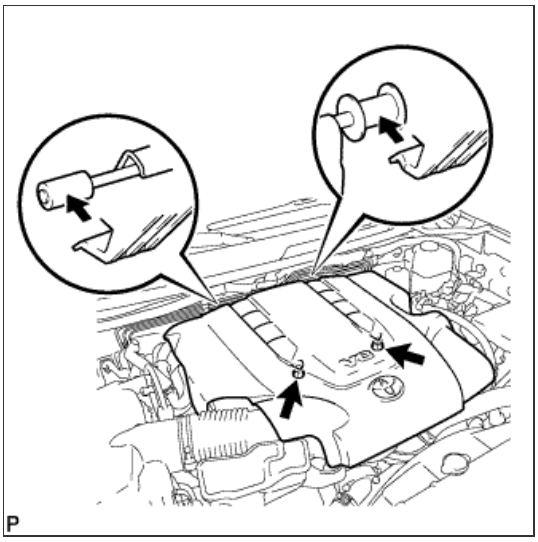
a. Install the air cleaner hose so that the protrusion of the air cleaner cap aligns with the groove of the hose as shown in the illustration.

b. Tighten the 2 clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

c. Connect the vacuum transmitting hose.

d. Connect the No. 2 ventilation hose.



6. INSTALL V-BANK COVER SUB-ASSEMBLY

a. Attach the 2 V-bank cover hooks to the bracket.

b. Install the V-bank cover with the 2 nuts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

7. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

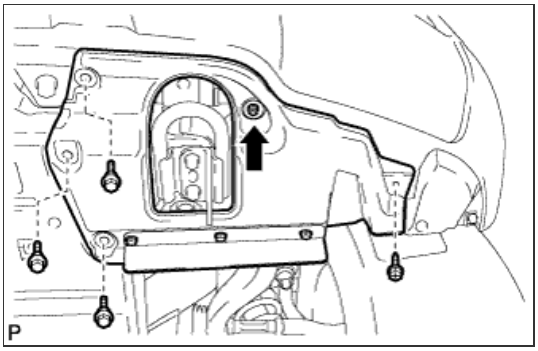
When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

for Preparation Click here

1. DISCHARGE FUEL SYSTEM PRESSURE

a. Discharge the fuel system pressure (Click here).

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL



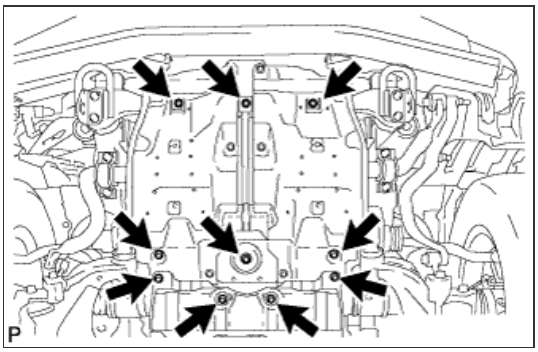
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

3. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and screw.

b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.

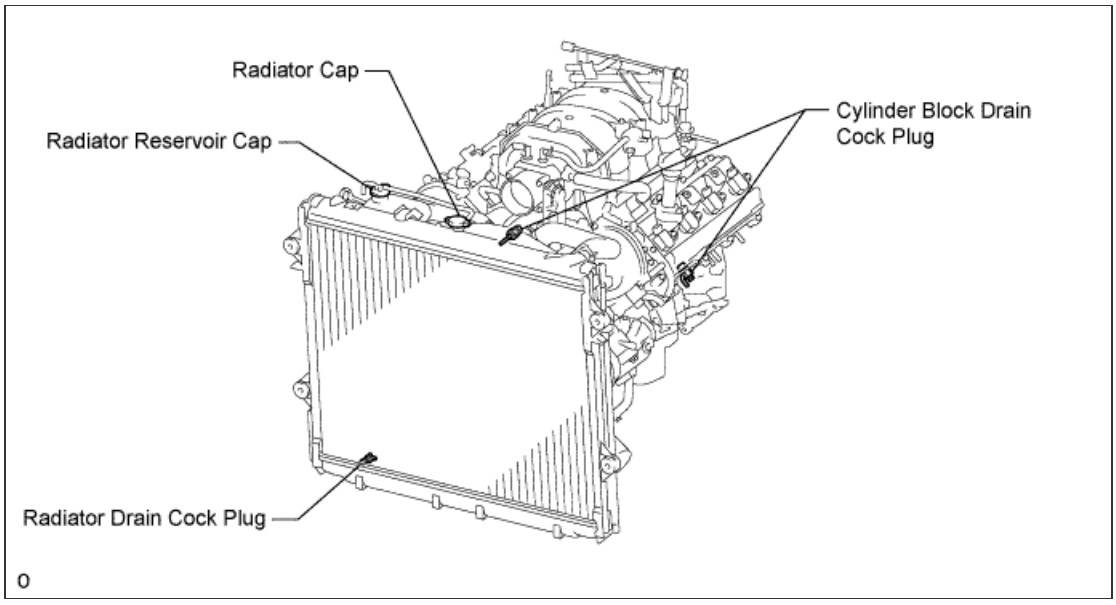


4. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

5. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY



a. Remove the 10 bolts and No. 1 engine under cover.

6. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

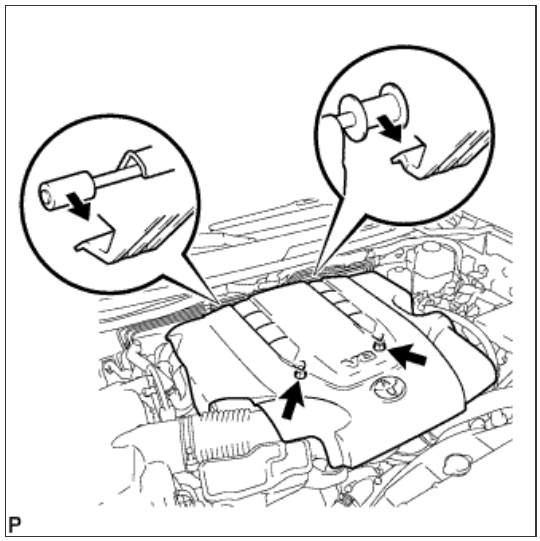
a. Loosen the radiator drain cock plug.

b. Remove the radiator cap. Then drain the coolant.

HINT:

Collect the coolant in a container and dispose of it according to the regulations in your area.

c. Loosen the 2 cylinder block drain cock plugs. Then drain the coolant from the engine.



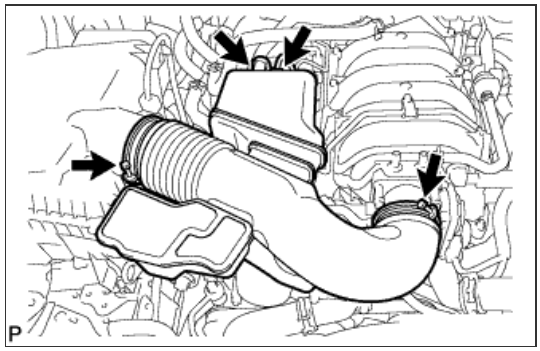
d. Tighten the 2 cylinder block drain cock plugs.

Torque:
13 N*m{ 130 kgf*cm , 9 ft.*lbf }

e. Tighten the radiator drain cock plug by hand.

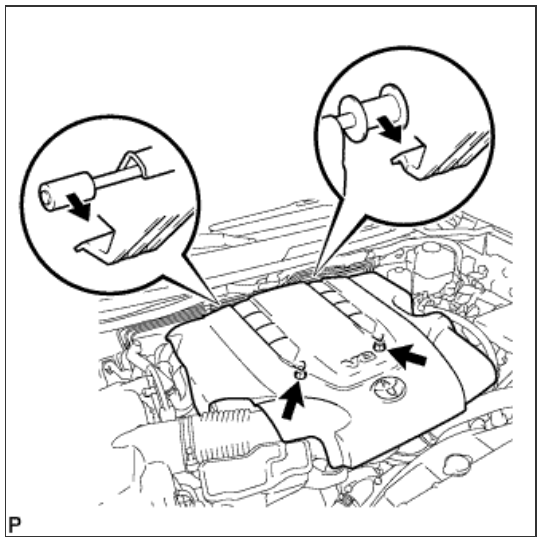
7. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Remove the 2 nuts and V-bank cover.



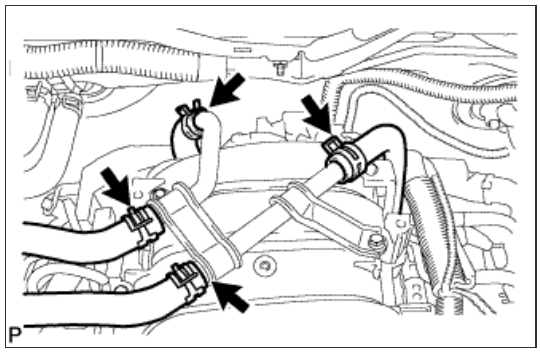
8. REMOVE AIR CLEANER HOSE ASSEMBLY

a. Disconnect the vacuum transmitting hose and No. 2 ventilation hose.



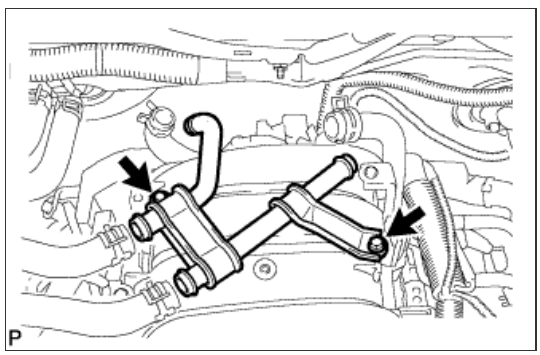
b. Loosen the 2 hose clamps.

c. Remove the air cleaner hose.



9. REMOVE NO. 2 V-BANK COVER BRACKET

a. Remove the 2 nuts and V-bank cover.

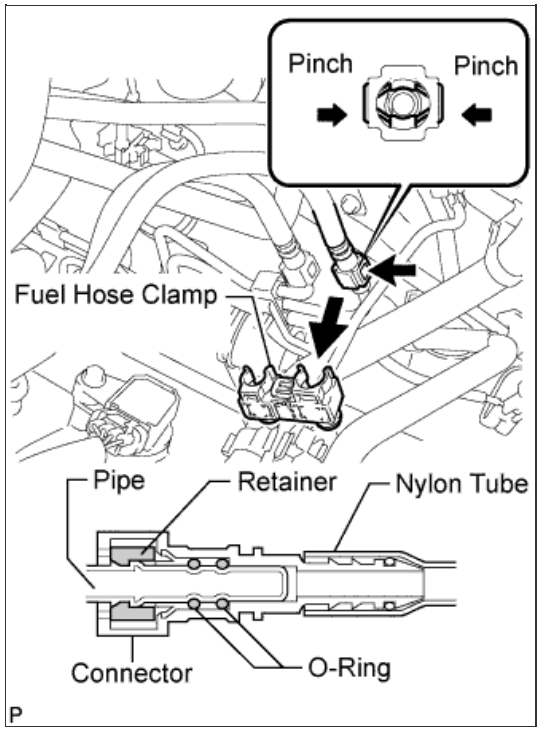


10. REMOVE NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY

a. Disconnect the 4 water hoses from the No. 2 water by-pass pipe.

b. Remove the 2 bolts.

c. Remove the No. 2 water by-pass pipe.



11. DISCONNECT FUEL HOSE

a. Remove the fuel hose clamp.

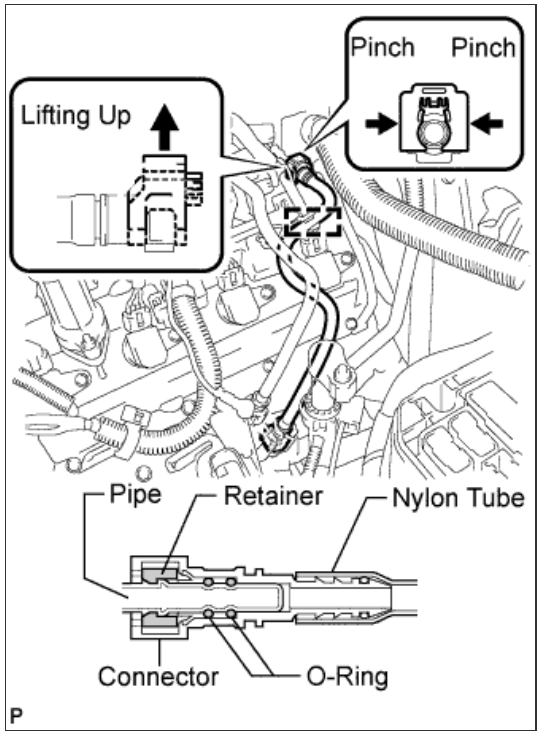
b. Pinch and pull the fuel hose connector to disconnect the connector from the fuel pipe.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to pre ent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**

12. REMOVE NO. 2 FUEL HOSE

a. for engine side:



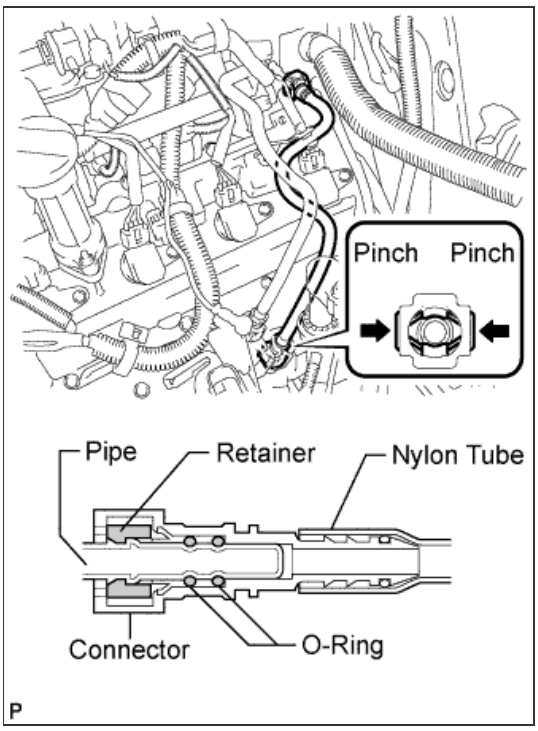
i. Detach the fuel hose clamp.

ii. Detach the lock claw by lifting up the cover, as shown in the illustration.

iii. Pinch and pull the No. 2 fuel hose connector to disconnect the connector from the No. 3 fuel pipe.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to pre ent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**

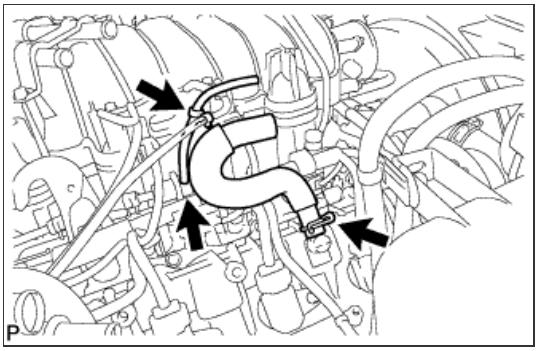


b. for body side:

i. Pinch and pull the No. 2 fuel hose connector to disconnect the connector from the fuel pipe.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to pre ent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**

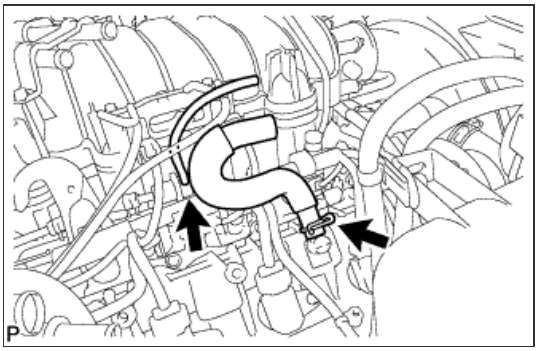


13. REMOVE NO. 2 VENTILATION HOSE

a. w/ Secondary Air Injection System:

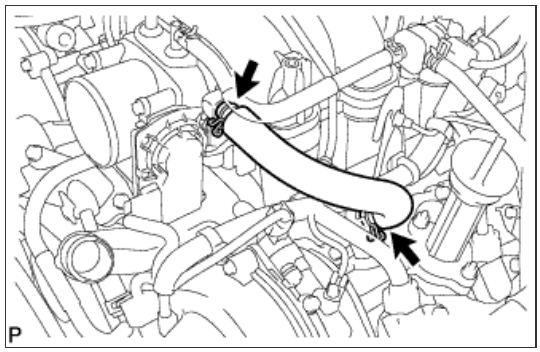
i. Remove the No. 2 ventilation hose from the cylinder head cover.

ii. Remove the clamp.



iii. Remove the vacuum transmitting hose from the fuel pressure regulator.

b. w/o Secondary Air Injection System:

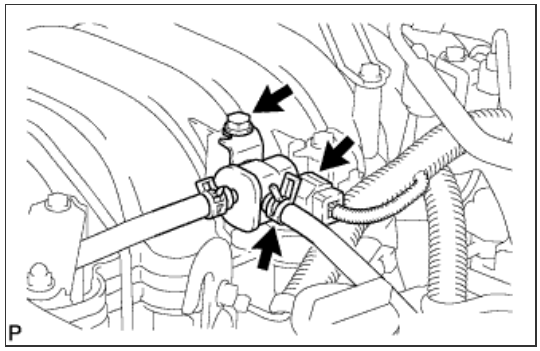


i. Remove the No. 2 ventilation hose from the cylinder head cover.

ii. Remove the vacuum transmitting hose from the fuel pressure regulator.

14. REMOVE NO. 1 VENTILATION HOSE

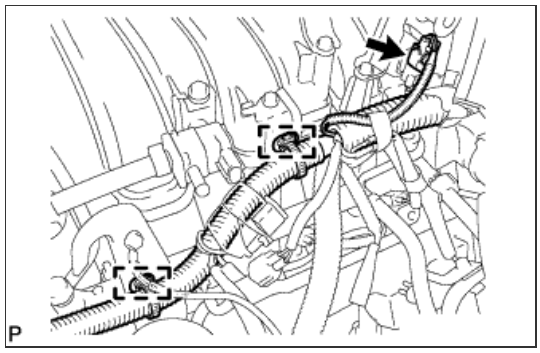
a. Remove the No. 1 ventilation hose from the intake manifold and ventilation valve.



15. DISCONNECT PURGE VSV

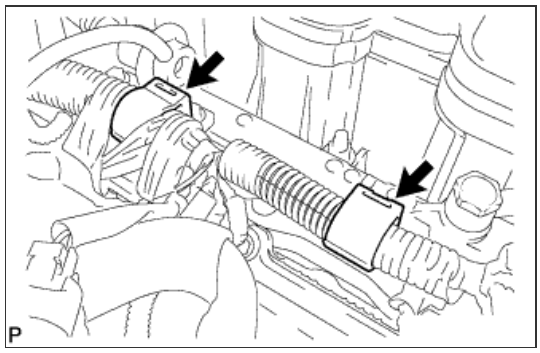
a. Disconnect the purge VSV connector.

b. Disconnect the purge line hose from the purge VSV.



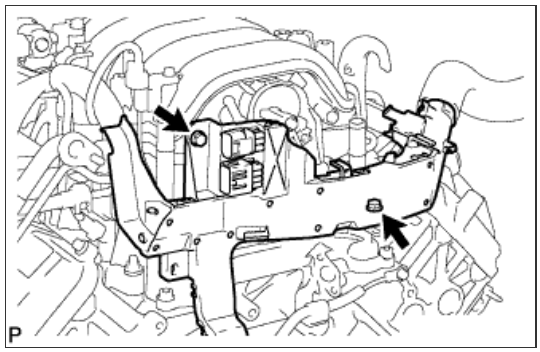
c. Remove the bolt and disconnect the purge VSV from the intake manifold.

16. DISCONNECT ENGINE WIRE



a. Disconnect the VSV connector (for ACIS).

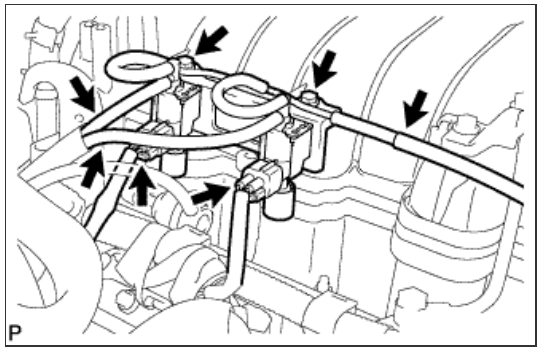
b. Disconnect the 2 wire clamps from the wire bracket and engine hanger.



c. Disconnect the 2 wire clamps from the wire clamp bracket on the RH delivery pipe.

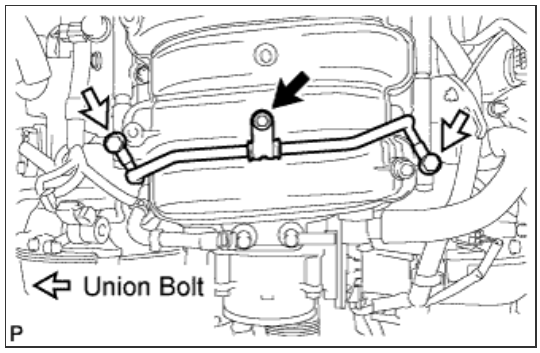
d. Disconnect the 8 injector connectors.

e. Remove the 2 bolts and disconnect the engine wire protector.



17. REMOVE VACUUM CONTROL VALVE SET

a. Disconnect the 2 VSV connectors.

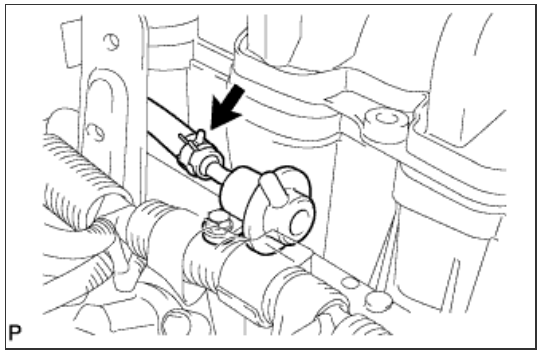


b. Disconnect the 3 vacuum hoses.

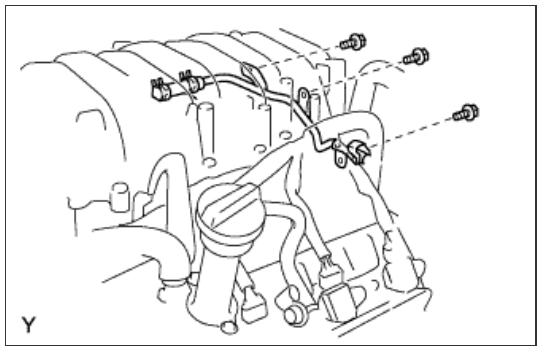
c. Remove the 2 bolts and vacuum control valve set.

18. REMOVE NO. 1 FUEL PIPE SUB-ASSEMBLY

a. Remove the bolt, 2 union bolts, 4 gaskets and No. 1 fuel pipe.



19. DISCONNECT NO. 3 FUEL PIPE SUB-ASSEMBLY

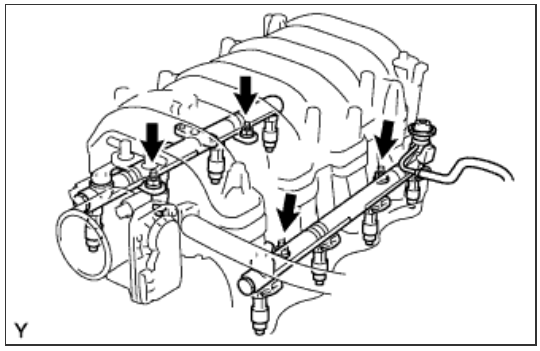


a. Disconnect the fuel return hose from the pressure regulator.

NOTICE:

Put a cloth or e uivalent under the pressure regulator.

b. Remove the 3 bolts and disconnect the No. 3 fuel pipe from the intake manifold and fuel delivery pipe LH.



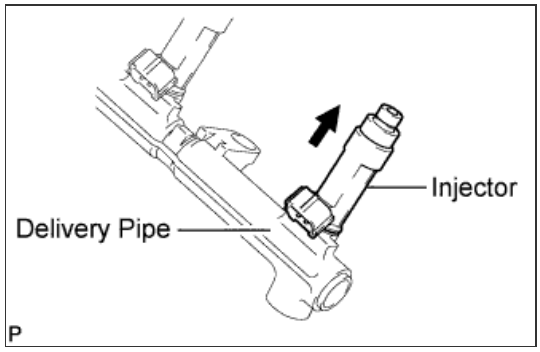
20. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY

a. Remove the 4 nuts holding the delivery pipes to the intake manifold.

b. Remove the 2 delivery pipes from the intake manifold.

NOTICE:

Be careful not to drop the injectors when removing the delivery pipes.



21. REMOVE FUEL INJECTOR ASSEMBLY

a. Remove the 8 injectors from the delivery pipe LH and RH.

NOTICE:

Do not apply any load to the injector in the horizontal direction.

b. Remove the -ring and insulator from each injector.

for Preparation Click here

1. INSPECT INJECTION VOLUME AND LEAKAGE

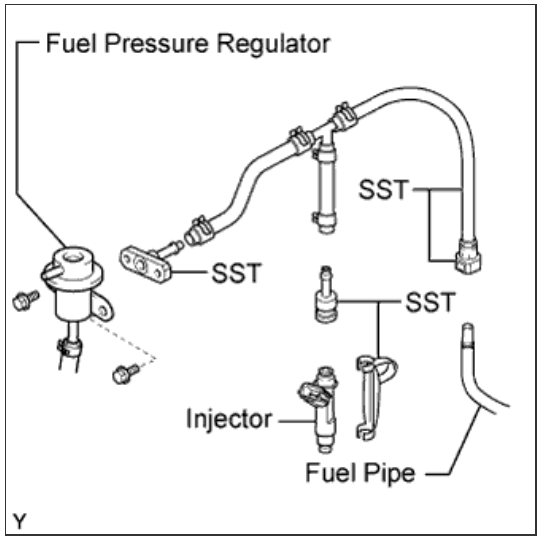
a. Check the injector injection.

CAUTION:

- **This test involves high-pressure fuel and electricity.**
- **Take every precaution regarding safe handling of both the fuel and the electrical parts.**
- **Perform this test in a safe area, and avoid any sparks or flame.**
- **Do not smoke.**

i. Assemble SST as shown in the illustration.

SST
09268-31012 (09268-41091, 09268-41110, 09268-41300, 09268-41500, 95336-08070)



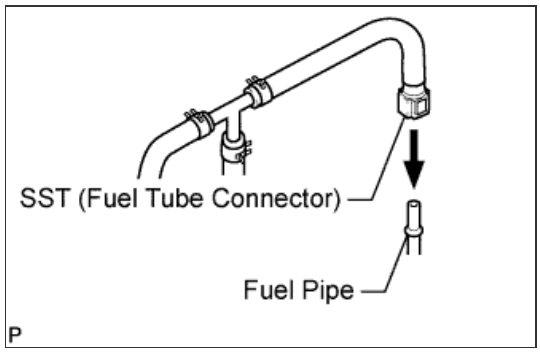
ii. Discharge the fuel system pressure (Click here).

iii. Disconnect the fuel inlet hose (fuel tube connector) from the fuel pipe.

iv. Remove the bolt and disconnect the fuel pressure regulator from the fuel delivery pipe.

NOTICE:

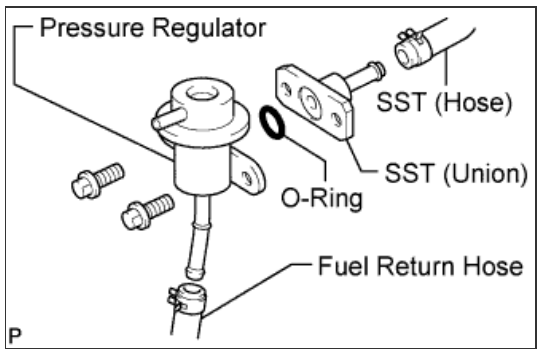
Do not disconnect the No. 2 fuel hose from the fuel pressure regulator.



v. Connect SST to the fuel pipe.

SST
09268-31012 (09268-41091, 09268-41110, 09268-41300, 09268-41500, 95336-08070)

CAUTION:



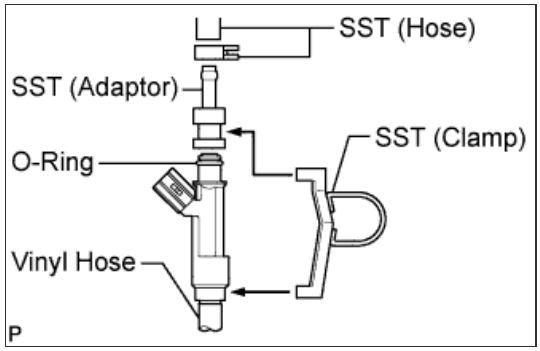
Always read the precautions before connecting the fuel tube connector.

vi. Connect SST (hose) to the fuel inlet of the pressure regulator with another SST (union), a new O-ring and the 2 bolts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf

vii. Connect the fuel return hose to the fuel outlet of the pressure regulator.

viii. Install the O-ring to the injector.



ix. Connect SST (adaptor and hose) to the injector, and hold the injector and union with another SST (clamp).

SST
09268-31012 (95336-08070, 09268-41110, 09268-41300)

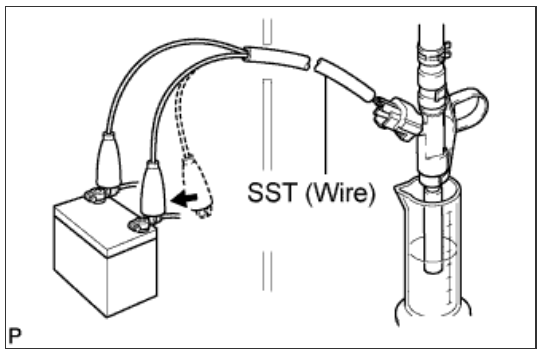
x. Put the injector into a graduated cylinder.

CAUTION:

Install a suitable vinyl hose onto the injector to prevent gasoline from splashing out.

xi. Connect the intelligent tester to the DLC3.

xii. Operate the fuel pump (Click here).



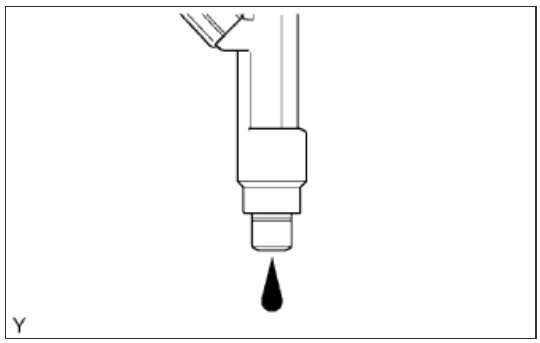
xiii. Connect SST (wire) to the injector and battery for 15 seconds, and measure the injection volume with the graduated cylinder. Test each injector 2 or 3 times.

SST
09842-30070

Standard injection volume:
56 to 69 cm^3 (3.4 to 4.2 cu. in.) per 15 seconds

Difference between each injector:
13 cm^3 (0.8 cu. in.) or less

If the injection volume is not as specified, replace the injector.



b. Check for fuel drop.

i. In the condition above, disconnect the tester probes of SST (wire) from the battery and check for fuel drop from the injector.

SST
09842-30070

Standard fuel drop:
1 drop or less per 12 minutes

If the fuel drop is not as specified, replace the injector assembly.

ii. Turn the engine switch off.

iii. Disconnect the cable from the negative (-) battery terminal.

NOTICE:

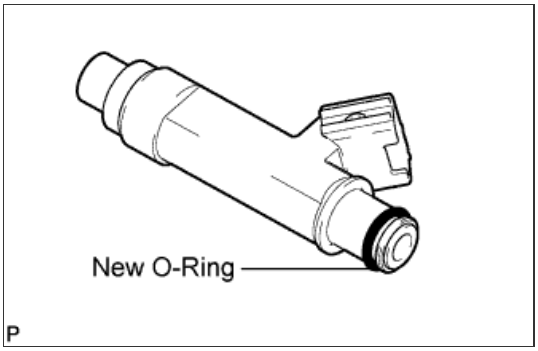
When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

iv. Remove SST and fuel tube connector.

SST
09842-30070

v. Disconnect the intelligent tester from the DLC3.

vi. Reconnect the fuel inlet pipe to the fuel tube.



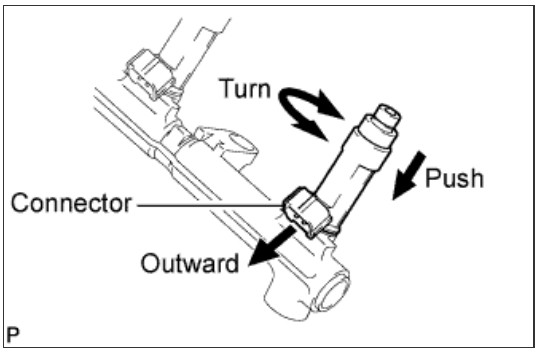
for Preparation Click here

1. INSTALL FUEL INJECTOR ASSEMBLY

NOTICE:

- **Be careful not to drop the injectors when installing the delivery pipes.**
- **Do not apply any load to the injector in the horizontal direction.**

a. Apply a light coat of gasoline to each new O-ring and install one to each injector.



b. Install the 8 injectors.

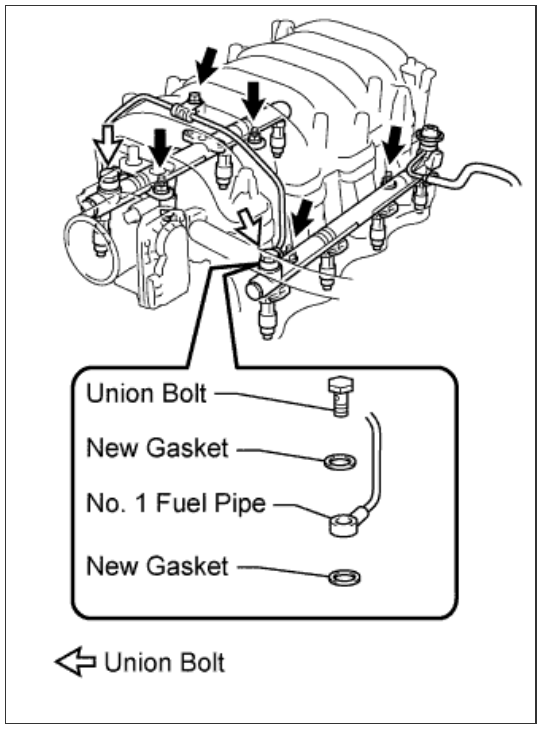
i. While turning each injector clockwise and counterclockwise, push it onto the delivery pipes.

ii. Position the injector connectors outward.

c. Place 8 new insulators on the intake manifold.

2. INSTALL FUEL DELIVERY PIPE SUB-ASSEMBLY

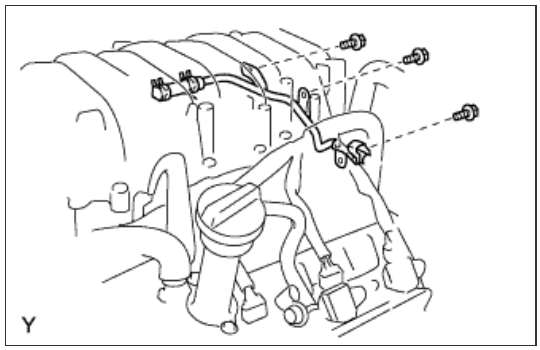
NOTICE:



Be careful not to drop the injectors when installing the delivery pipes.

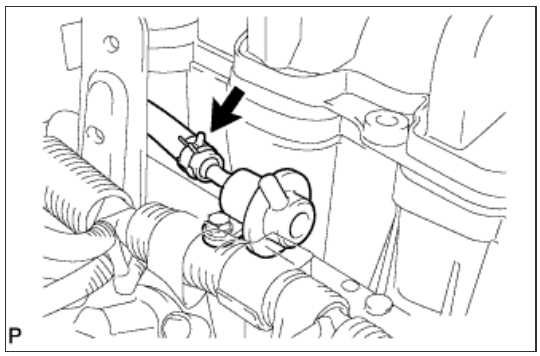
a. Place the 2 delivery pipes and injector assemblies on the lower intake manifold.

b. Temporarily install the 4 nuts.



c. Install the No. 1 fuel pipe and 4 new gaskets with the bolt and 2 union bolts.

Torque:
for union bolt:
39 N*m{ 398 kgf*cm , 29 ft.*lbf }
for bolt:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

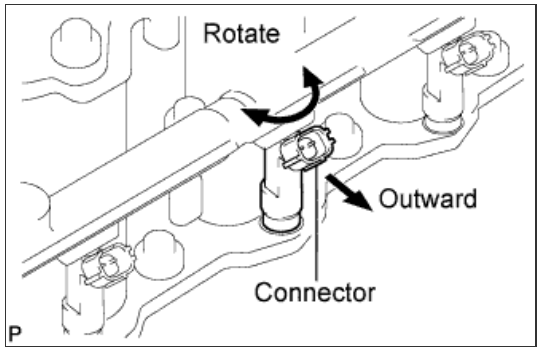


d. Connect the No. 3 fuel pipe with the 3 bolts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

e. Connect the fuel return hose to the fuel pressure regulator.

f. Check that the injectors rotate smoothly.



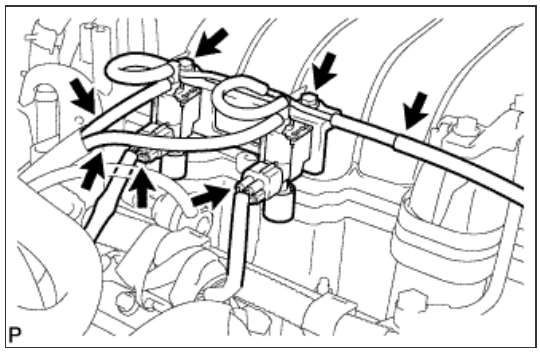
HINT:

If the injectors do not rotate smoothly, a probable cause is incorrect installation of the O-rings. Replace the O-ring of any injector that does not rotate smoothly.

g. Position the injector connectors outward.

h. Tighten the 4 nuts holding the delivery pipes to the lower intake manifold.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



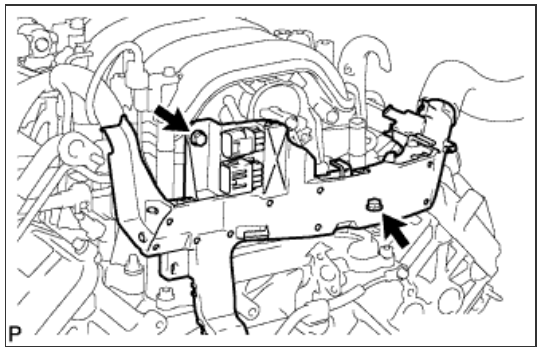
3. INSTALL VACUUM CONTROL VALVE SET (w/ Secondary Air Injection System)

a. Install the vacuum control valve set with the 2 bolts.

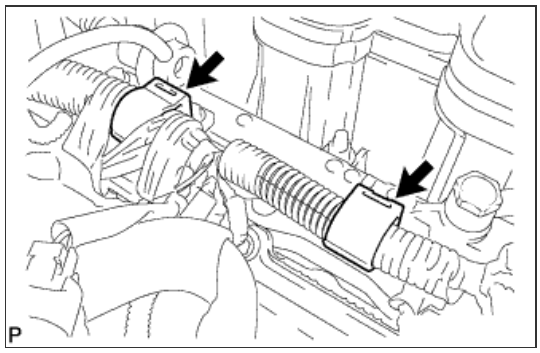
Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

b. Connect the 3 vacuum hoses.

c. Connect the 2 VSV connectors.



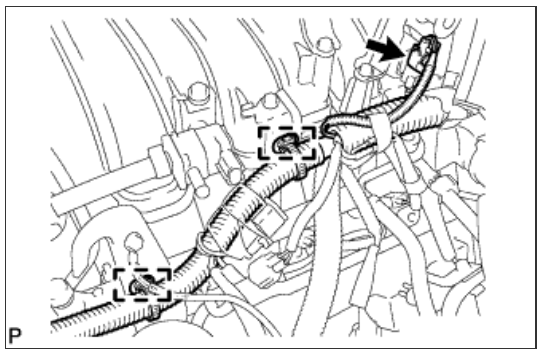
4. CONNECT ENGINE WIRE



a. Install the engine wire protector with the 2 bolts.

Torque:
8.2 N*m{ 84 kgf*cm , 73 in.*lbf }

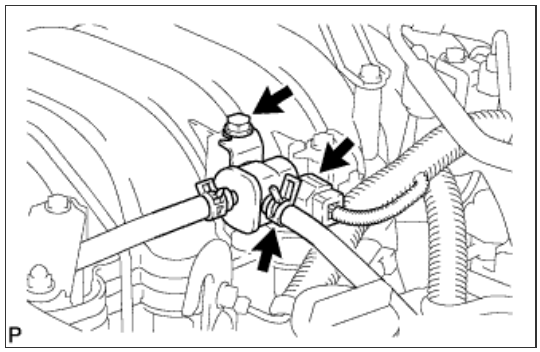
b. Connect the 8 injector connectors.



c. Connect the 2 wire clamps to the wire clamp brackets on the delivery pipe.

d. Connect the engine wire to the wire bracket and engine hanger.

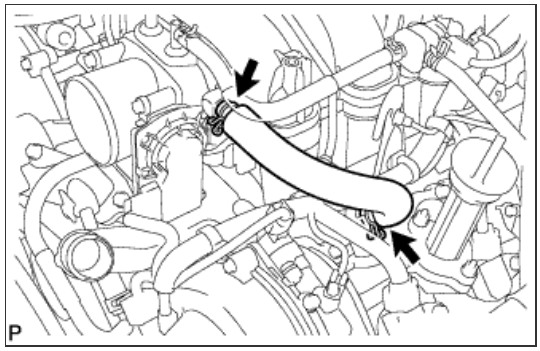
e. Connect the VSV connector (for ACIS).



5. INSTALL PURGE VSV

a. Install the purge VSV to the intake manifold with the bolt.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

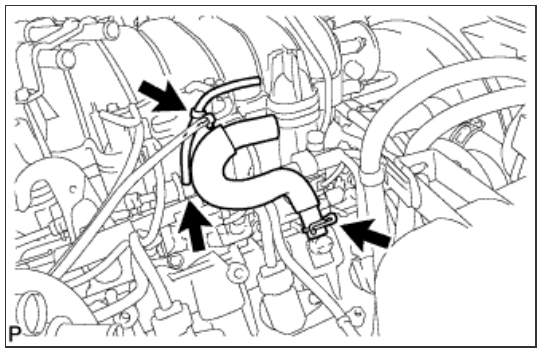


b. Connect the purge line hose.

c. Connect the purge VSV connector.

6. INSTALL NO. 1 VENTILATION HOSE

a. Install the No. 1 ventilation hose to the intake manifold and ventilation valve.

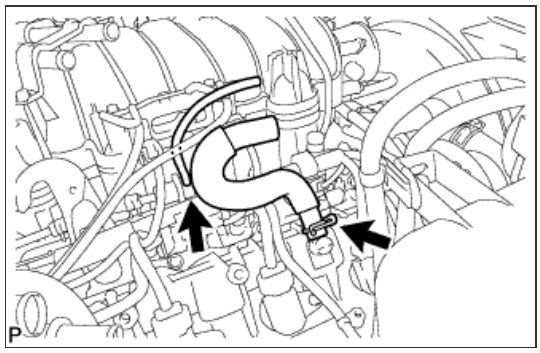


7. INSTALL NO. 2 VENTILATION HOSE

a. w/ Secondary Air Injection System:

i. Install the vacuum transmitting hose to the fuel pressure regulator.

ii. Install the clamp.



iii. Install the No. 2 ventilation hose to the cylinder head cover.

b. w/o Secondary Air Injection System:

i. Install the vacuum transmitting hose to the fuel pressure regulator.

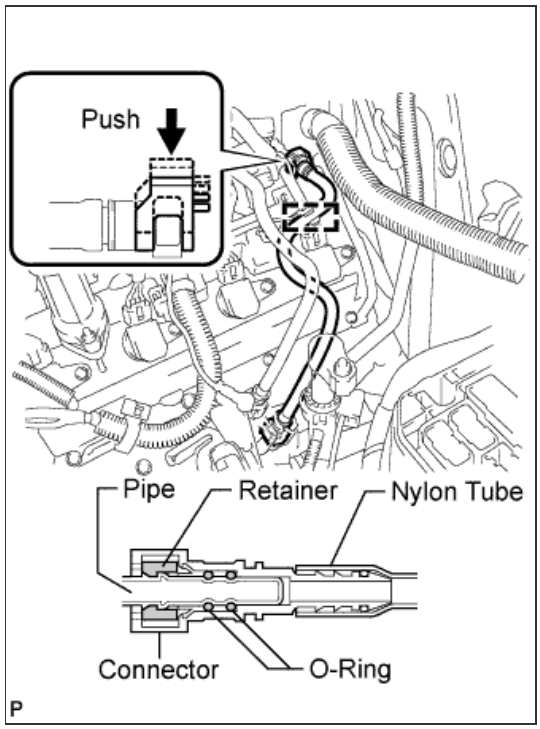
ii. Install the No. 2 ventilation hose to the cylinder head cover.

8. INSTALL NO. 2 FUEL HOSE

a. for engine side:

i. Connect the fuel hose to the No. 3 fuel pipe.

HINT:



Push the parts together firmly until a "click" sound is heard.

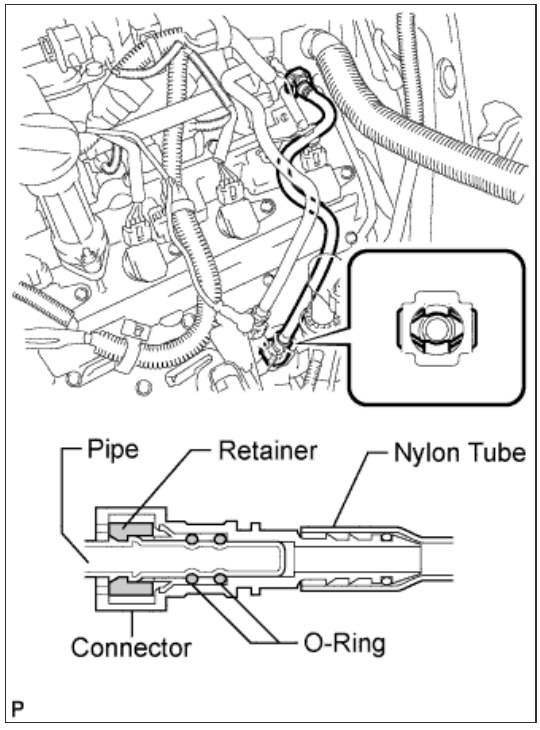
NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

ii. Attach the lock claws to the connector by pushing down on the cover, as shown in the illustration.

iii. Attach the fuel hose clamp.

b. for body side:



i. Connect the fuel hose to the fuel pipe.

HINT:

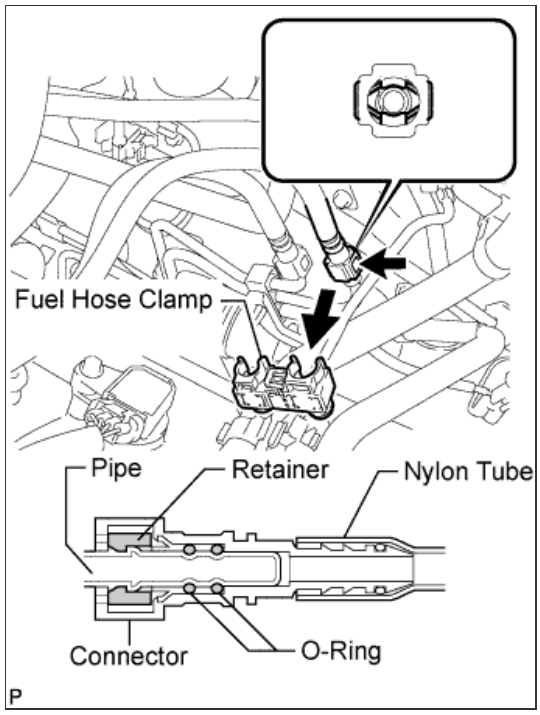
Push the parts together firmly until a "click" sound is heard.

NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

9. CONNECT FUEL HOSE

a. Connect the fuel hose.

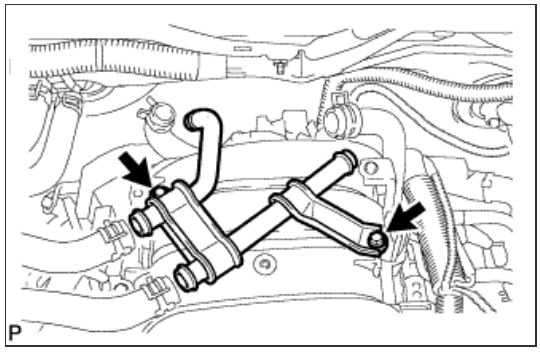


HINT:

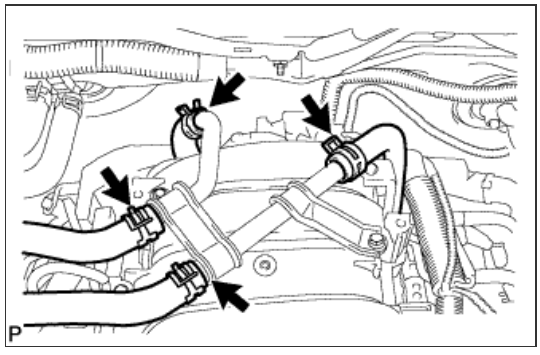
Push the parts together firmly until a "click" sound is heard.

NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**



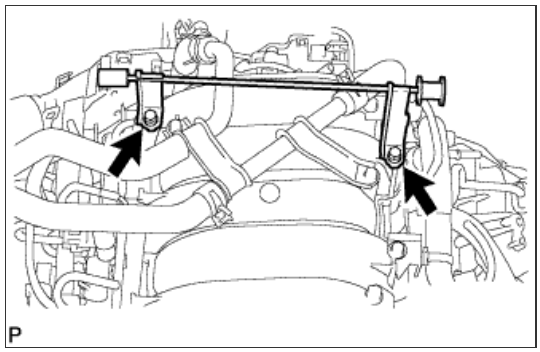
b. Install the fuel hose clamp.



10. INSTALL NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY

a. Install the No. 2 water by-pass pipe with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



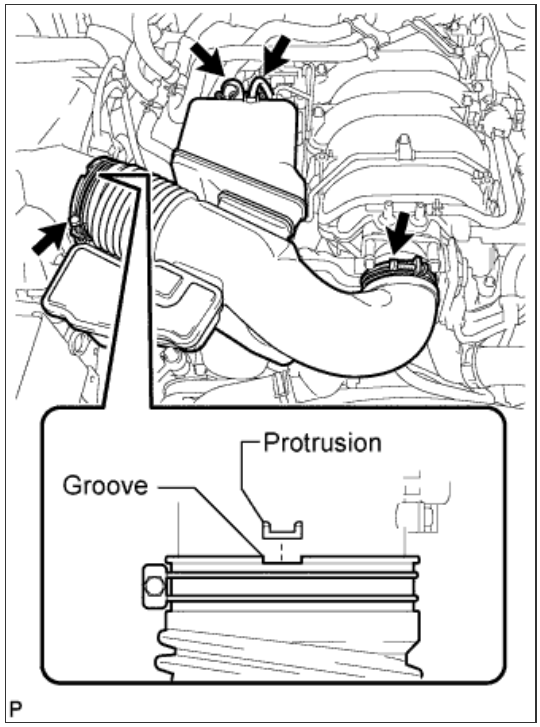
b. Connect the 4 water hoses.

11. INSTALL NO. 2 V-BANK COVER BRACKET

a. Install the bracket with the 2 bolts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

12. INSTALL AIR CLEANER HOSE ASSEMBLY



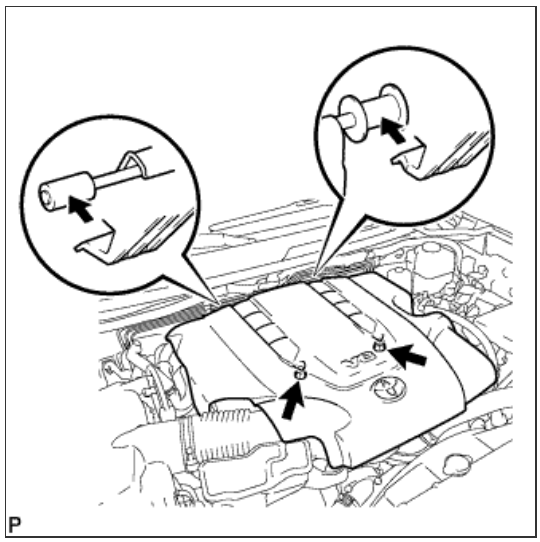
a. Install the air cleaner hose so that the protrusion of the air cleaner cap aligns with the groove of the hose as shown in the illustration.

b. Tighten the 2 clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

c. Connect the vacuum transmitting hose.

d. Connect the No. 2 ventilation hose.



13. INSTALL V-BANK COVER SUB-ASSEMBLY

a. Attach the 2 V-bank cover hooks to the bracket.

b. Install the V-bank cover with the 2 nuts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

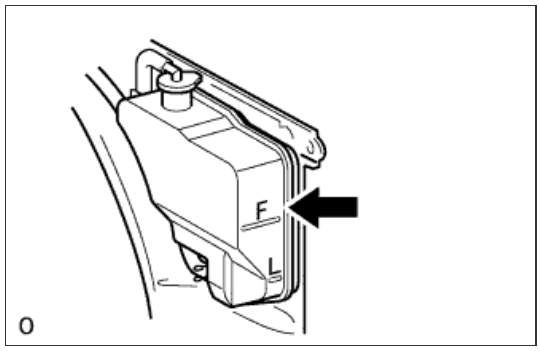
14. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

15. ADD ENGINE COOLANT

a. Add engine coolant.



Standard Capacity:

Item		Specified Condition
w/o Transmission oil cooler	w/o Rear Heater	13.4 liters (14.2 US ts, 11.8 Imp. ts)
	w/ Rear Heater	16.3 liters (17.2 US ts, 14.3 Imp. ts)
w/ Transmission oil cooler	w/o Rear Heater	14.1 liters (14.9 US ts, 12.4 Imp. ts)
	w/ Rear Heater	16.9 liters (17.9 US ts, 14.9 Imp. ts)

HINT:

TOYOTA vehicles are filled with TOYOTA S C at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA S C or similar high uality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the radiator reservoir cap.

d. Press the inlet and outlet radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Start the engine and warm it up until the thermostat opens.

NOTICE:

Switch off the A/C.

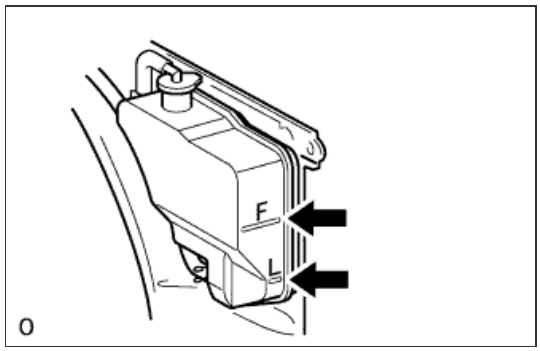
g. aintain the engine speed at 2000 to 2 00rpm.

NOTICE:

- **Make sure that the radiator reservoir still has some coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**
- **Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the F line.**
- **Run the engine at 2000 rpm until the coolant level has stabilized.**

h. Press the inlet and outlet radiator hoses several times by hand to bleed air.

CAUTION:



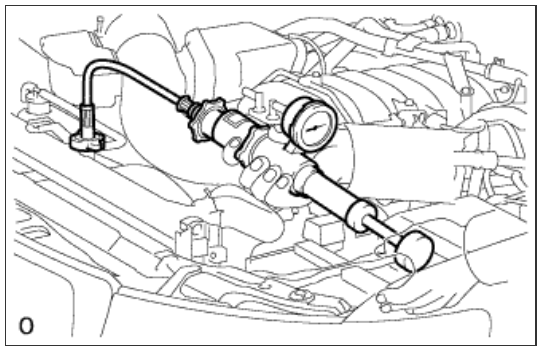
- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the cooling fan.**

i. Stop the engine, and wait until the engine coolant cools down to the ambient temperature.

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

j. Check that the coolant level is between the F and lines. If the coolant level is below the line, repeat all of the procedures above. If the coolant level is above the F line, drain coolant so that the coolant level is between the F and lines.



16. INSPECT FOR COOLANT LEAKS

a. Fill the radiator with coolant and attach a radiator cap tester.

b. Warm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no e ternal leaks are found, check the heater core, cylinder block and head.

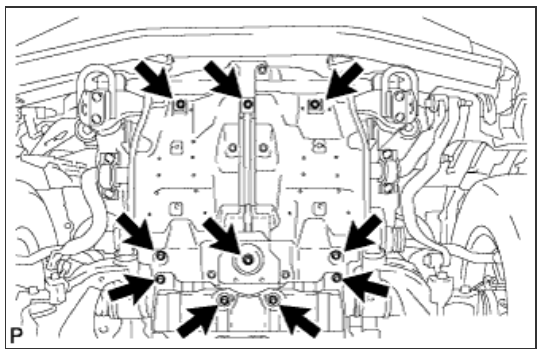
17. INSPECT FOR FUEL LEAK

a. Connect the intelligent tester to the D C3.

b. Turn the engine switch on (IG) and intelligent tester ON.

NOTICE:

Do not start the engine.

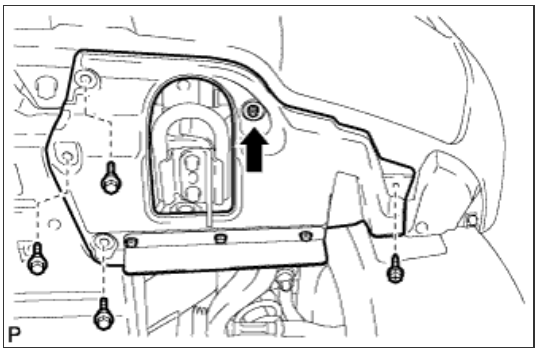


c. nter the following menus: Powertrain / ngine and CT / Active Test / Activate the Fuel Pump Speed Control.

d. Check that there are no fuel leaks after doing maintenance anywhere on the fuel system.

18. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.

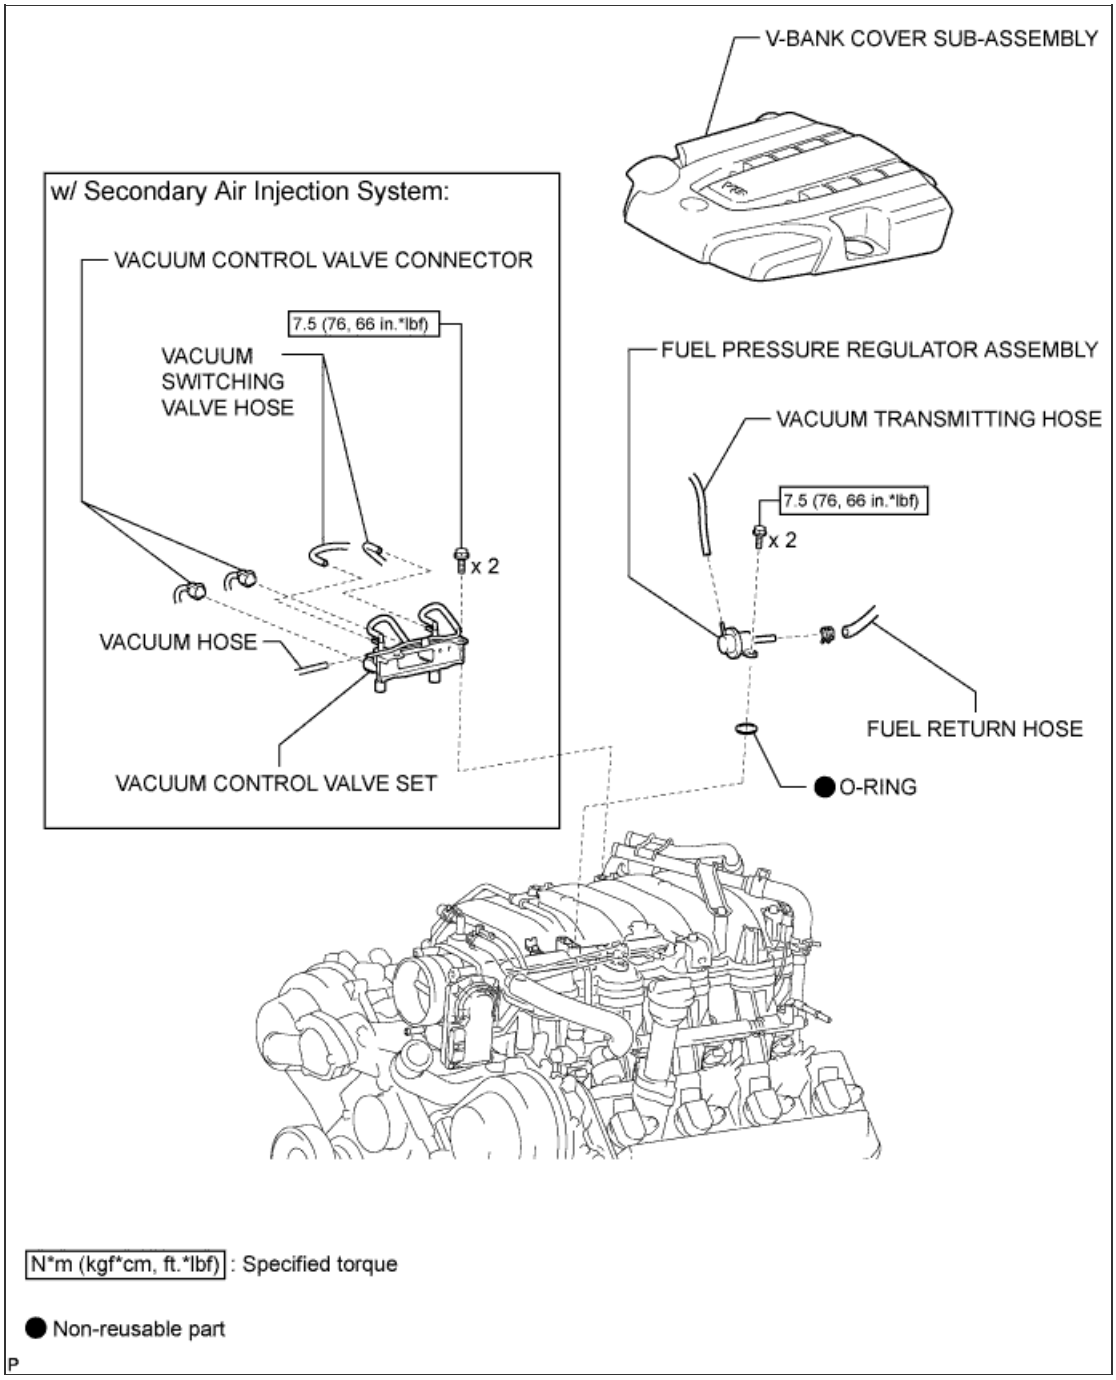


Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

19. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the 3 bolts and screw.



20. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

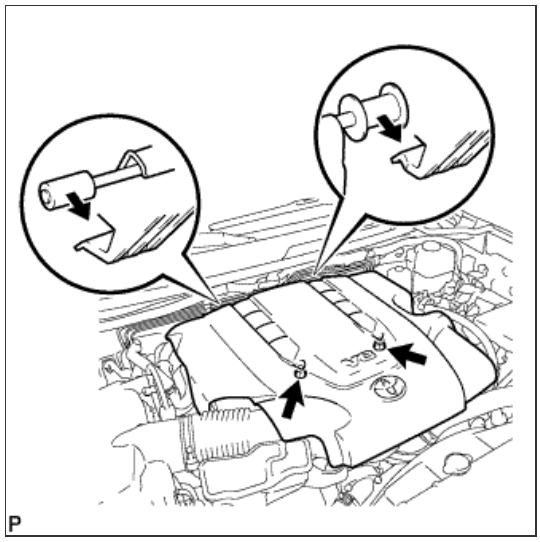
Use the same procedures described for the side.

for Preparation [Click here]

for Preparation Click here

1. DISCHARGE FUEL SYSTEM PRESSURE

a. Discharge the fuel system pressure (Click here).



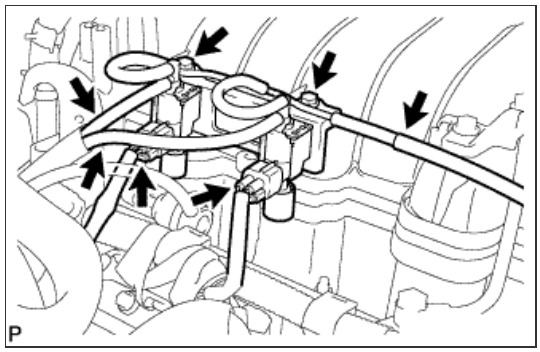
2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

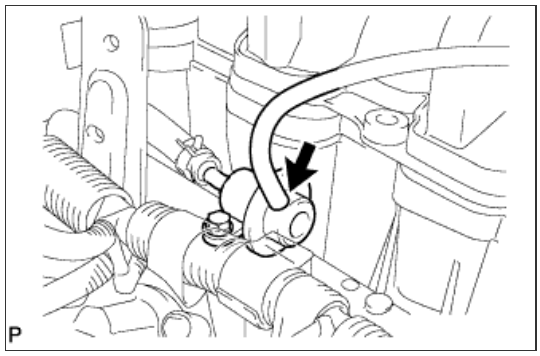
3. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Remove the 2 nuts and V-bank cover.



4. REMOVE VACUUM CONTROL VALVE SET (w/ Secondary Air Injection System)

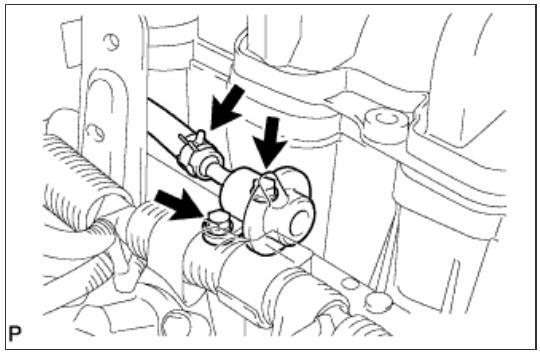
a. Disconnect the 2 VSV connectors.



b. Disconnect the 3 vacuum hoses.

c. Remove the 2 bolts and vacuum control valve set.

5. REMOVE FUEL PRESSURE REGULATOR ASSEMBLY

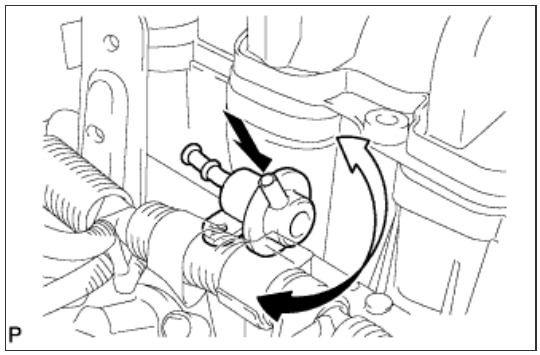


a. Disconnect the vacuum transmitting hose from the pressure regulator.

b. Disconnect the fuel return hose from the pressure regulator.

c. Remove the 2 bolts, and pull out the pressure regulator.

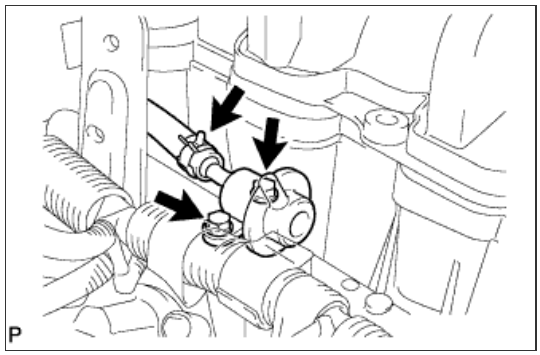
d. Remove the O-ring from the pressure regulator.



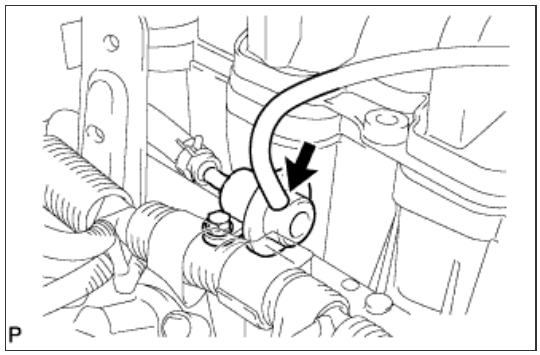
for Preparation Click here

1. INSTALL FUEL PRESSURE REGULATOR ASSEMBLY

a. Apply a light coat of gasoline to a new O-ring, and install it to the pressure regulator.



b. hile turning the pressure regulator to the left and right, install it to the delivery pipe.

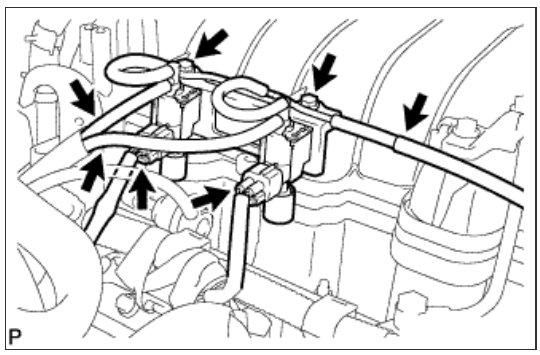


c. Install the 2 bolts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

d. Connect the fuel return hose to the pressure regulator.

e. Connect the vacuum transmitting hose to the pressure regulator.



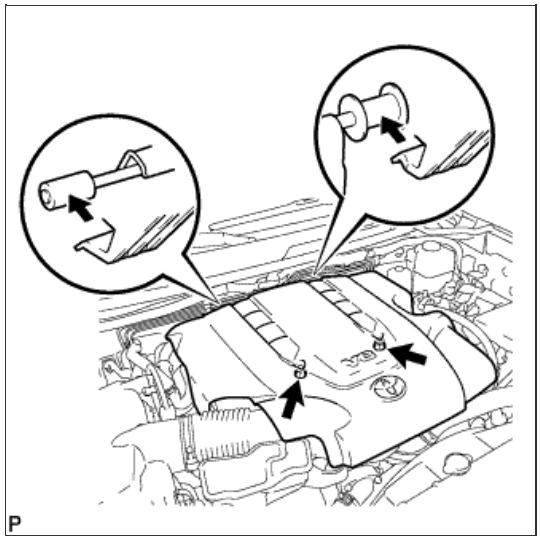
2. INSTALL VACUUM CONTROL VALVE SET (w/ Secondary Air Injection System)

a. Install the vacuum control valve set with the 2 bolts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

b. Connect the 3 vacuum hoses.

c. Connect the 2 VSV connectors.



3. INSTALL V-BANK COVER SUB-ASSEMBLY

a. Attach the 2 V-bank cover hooks to the bracket.

b. Install the V-bank cover with the 2 nuts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

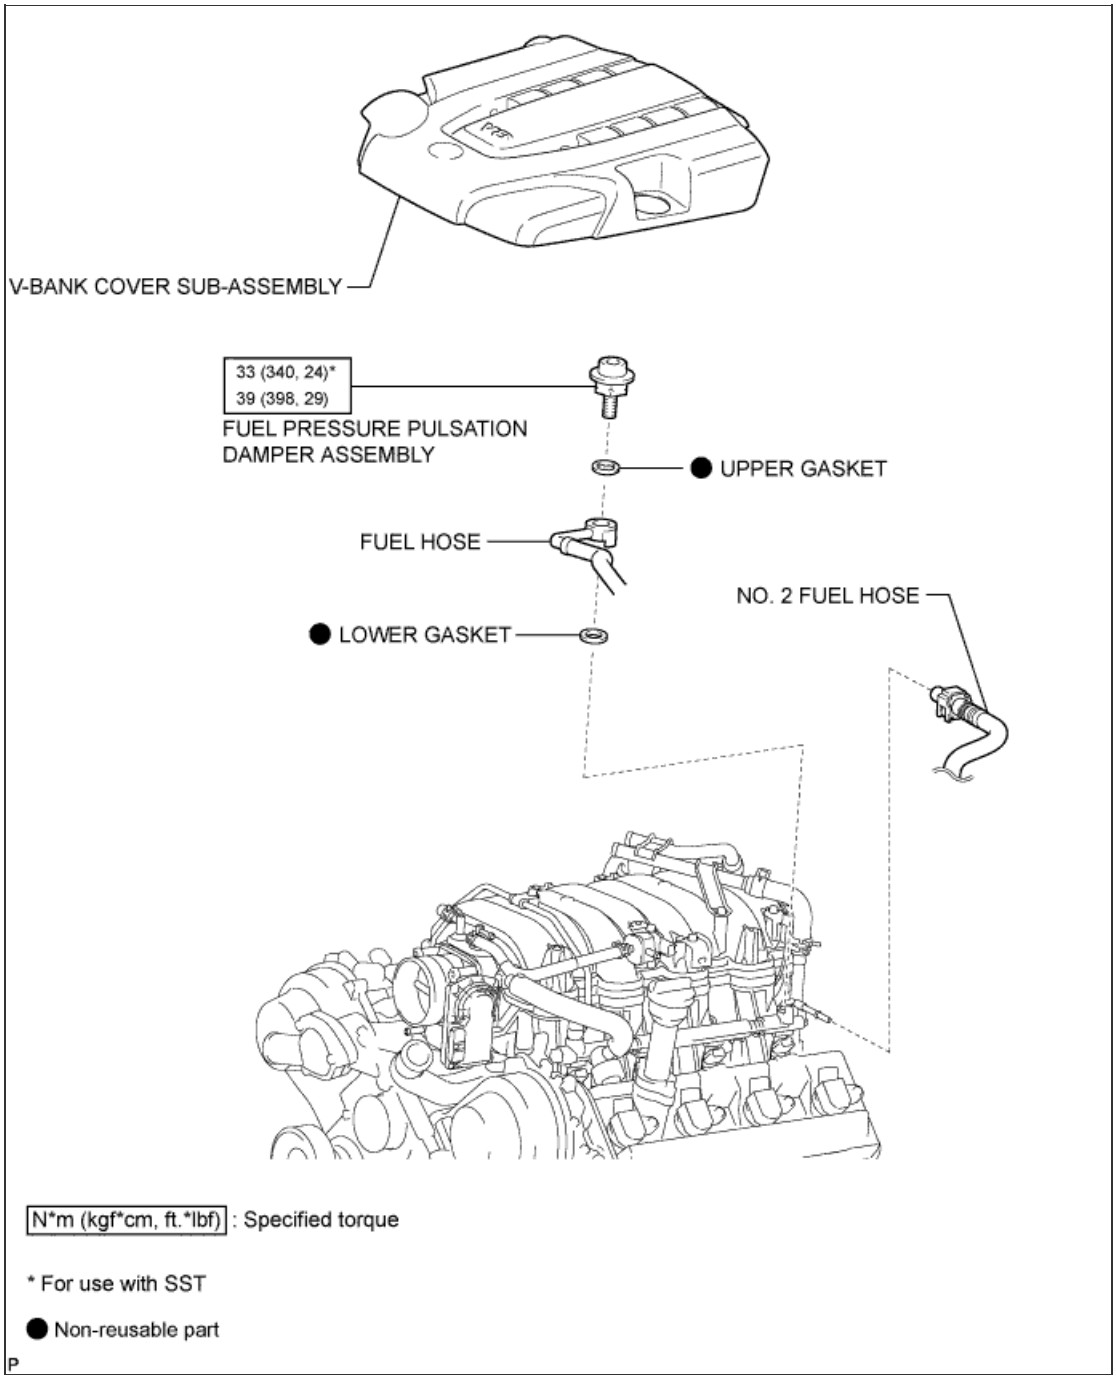
NOTICE:

hen disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

5. INSPECT FOR FUEL LEAK

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG) and intelligent tester ON.



NOTICE:

Do not start the engine.

c. Enter the following menus: Powertrain / Engine and ECT / Active Test / Activate the Fuel Pump Speed Control.

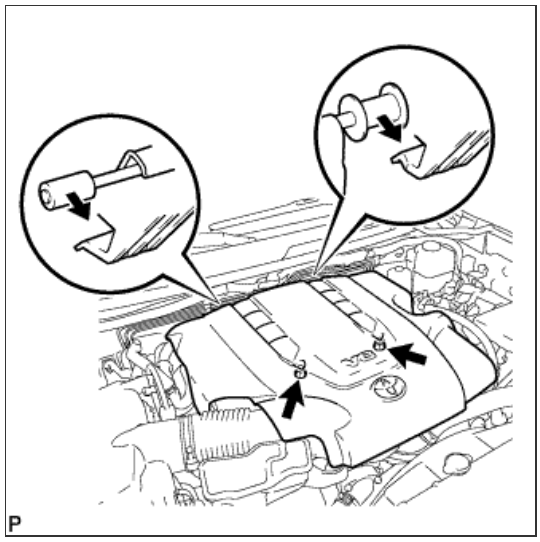
d. Check that there are no fuel leaks after doing maintenance anywhere on the fuel system.

for Preparation Click here

for Preparation Click here

1. DISCHARGE FUEL SYSTEM PRESSURE

a. Discharge the fuel system pressure (Click here).



2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

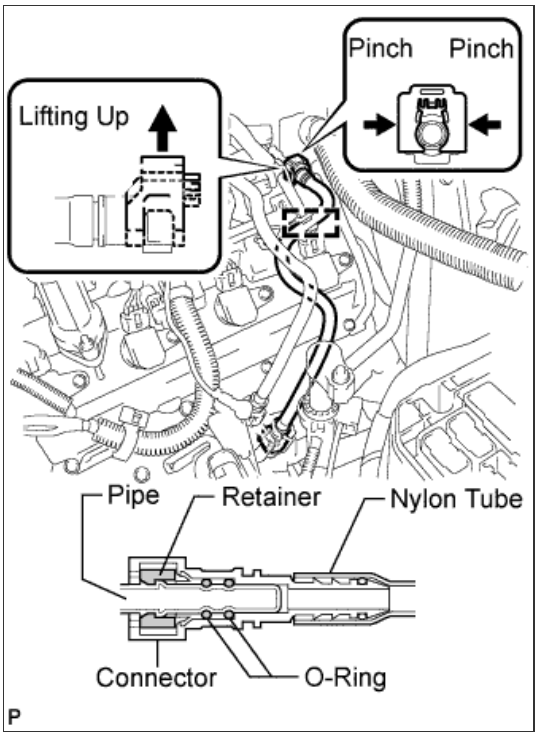
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

3. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Remove the 2 nuts and V-bank cover.

4. DISCONNECT NO. 2 FUEL HOSE



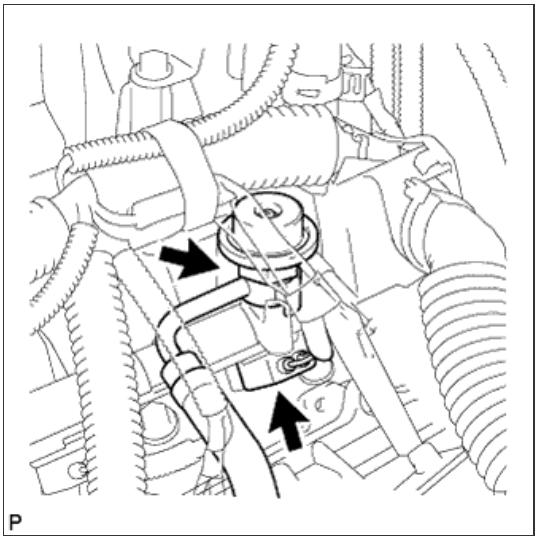
a. Detach the fuel hose clamp.

b. Detach the lock claw by lifting up the cover, as shown in the illustration.

c. Pinch and pull the No. 2 fuel hose connector to disconnect the connector from the No. 3 fuel pipe.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**

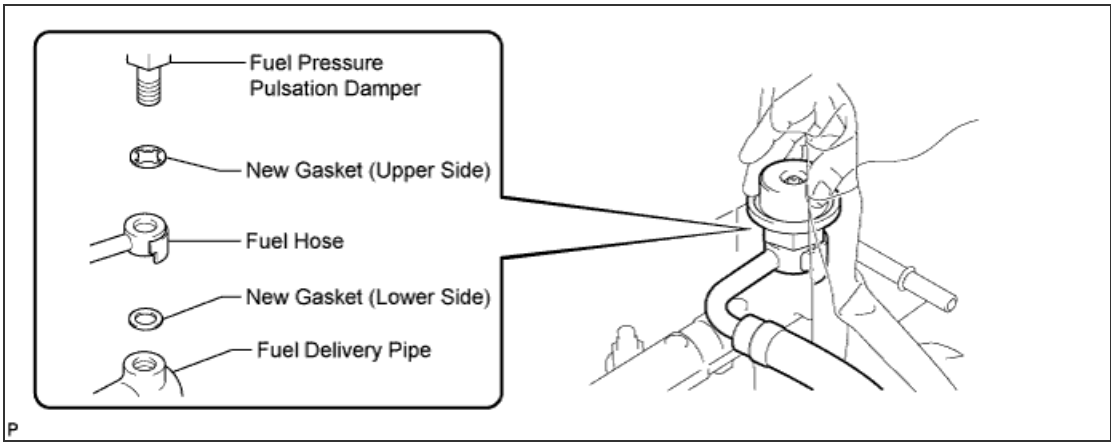


5. REMOVE FUEL PRESSURE PULSATION DAMPER ASSEMBLY

a. Disconnect the fuel injector connector.

b. Remove the pulsation damper, upper gasket, fuel hose and lower gasket.

NOTICE:



- **Put a cloth or e uivalent under the delivery pipe.**
- **Slowly loosen the pulsation damper.**

for Preparation Click here

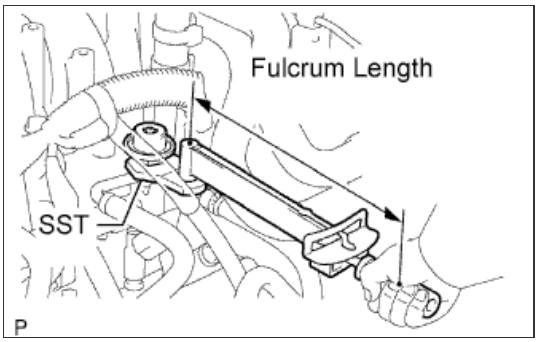
1. INSTALL FUEL PRESSURE PULSATION DAMPER ASSEMBLY

a. Install 2 new gaskets and the fuel hose with the fuel pressure pulsation damper.

NOTICE:

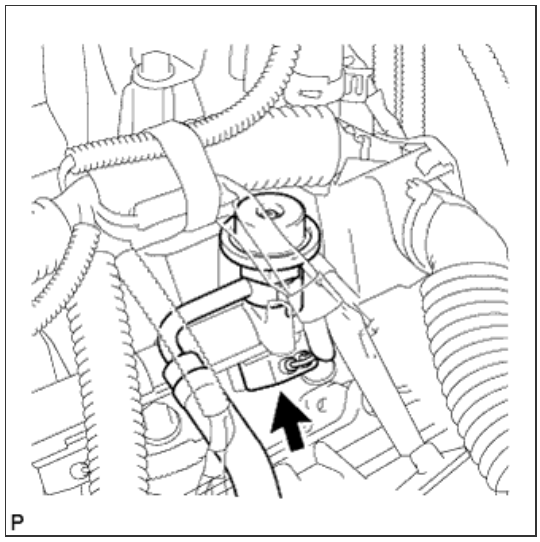
Make sure to install the gaskets in the order shown in the illustration, as the shape of the upper side and lower side gaskets is different.

b. Tighten the fuel pressure pulsation damper by hand.



c. Using SST, tighten the union bolt.

SST
09612-24014 (09617-24011)



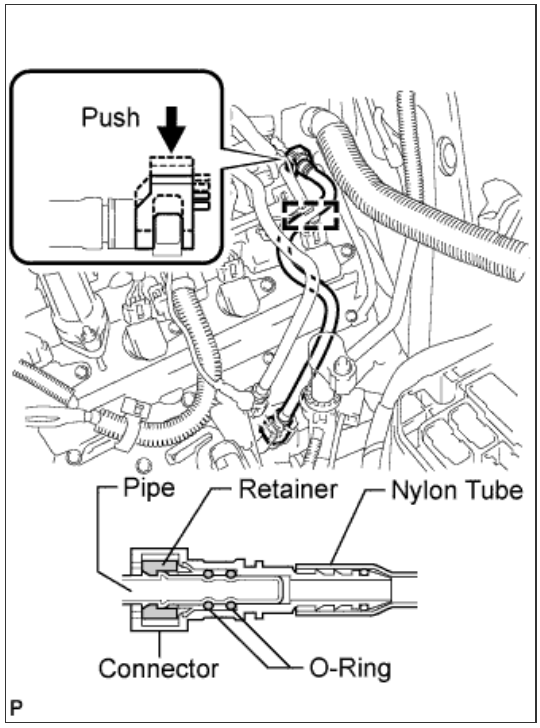
Torque:
with SST:
33 N*m{ 340 kgf*cm , 24 ft.*lbf }
without SST:
39 N*m{ 398 kgf*cm , 29 ft.*lbf }

HINT:

- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.).**
- **Make sure SST an the wrench are connecte ri a straight line.**

d. Conne t the fuel inje tor onne tor.

2. CONNECT NO. 2 FUEL HOSE



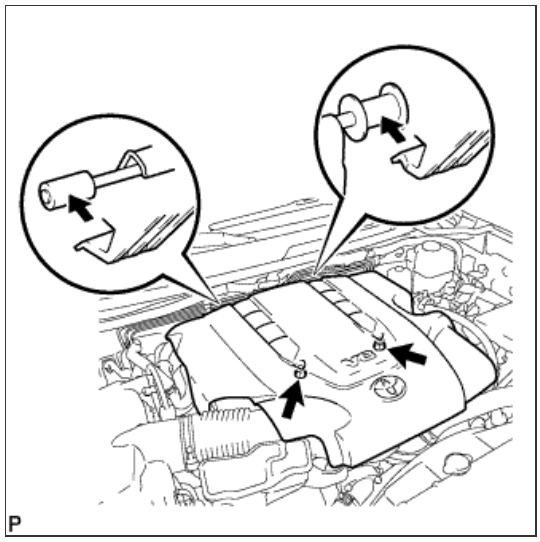
a. Conne t the No. 2 fuel hose to the No. 3 fuel pipe.

HINT:

Push the parts together firmly until a li k sound is heard.

NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**



3. INSTALL V-BANK COVER SUB-ASSEMBLY

a. tta h the 2 V-bank over hooks to the bra ket.

b. Install the V-bank over with the 2 nuts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

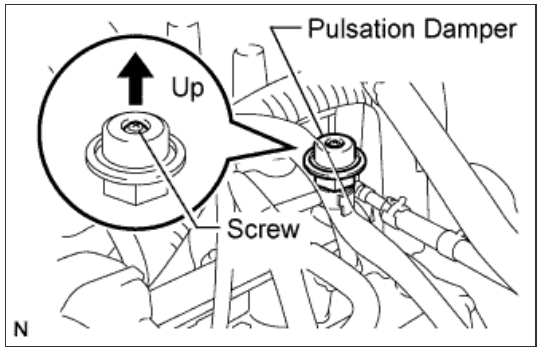
When dis onne ting the able, some systems need to be initialized after the able is re onne ted (Cli k here).

5. INSPECT FOR FUEL LEAK

a. Conne t the intelligent tester to the DLC3.

b. Turn the engine swit h on (IG) and intelligent tester ON.

NOTICE:

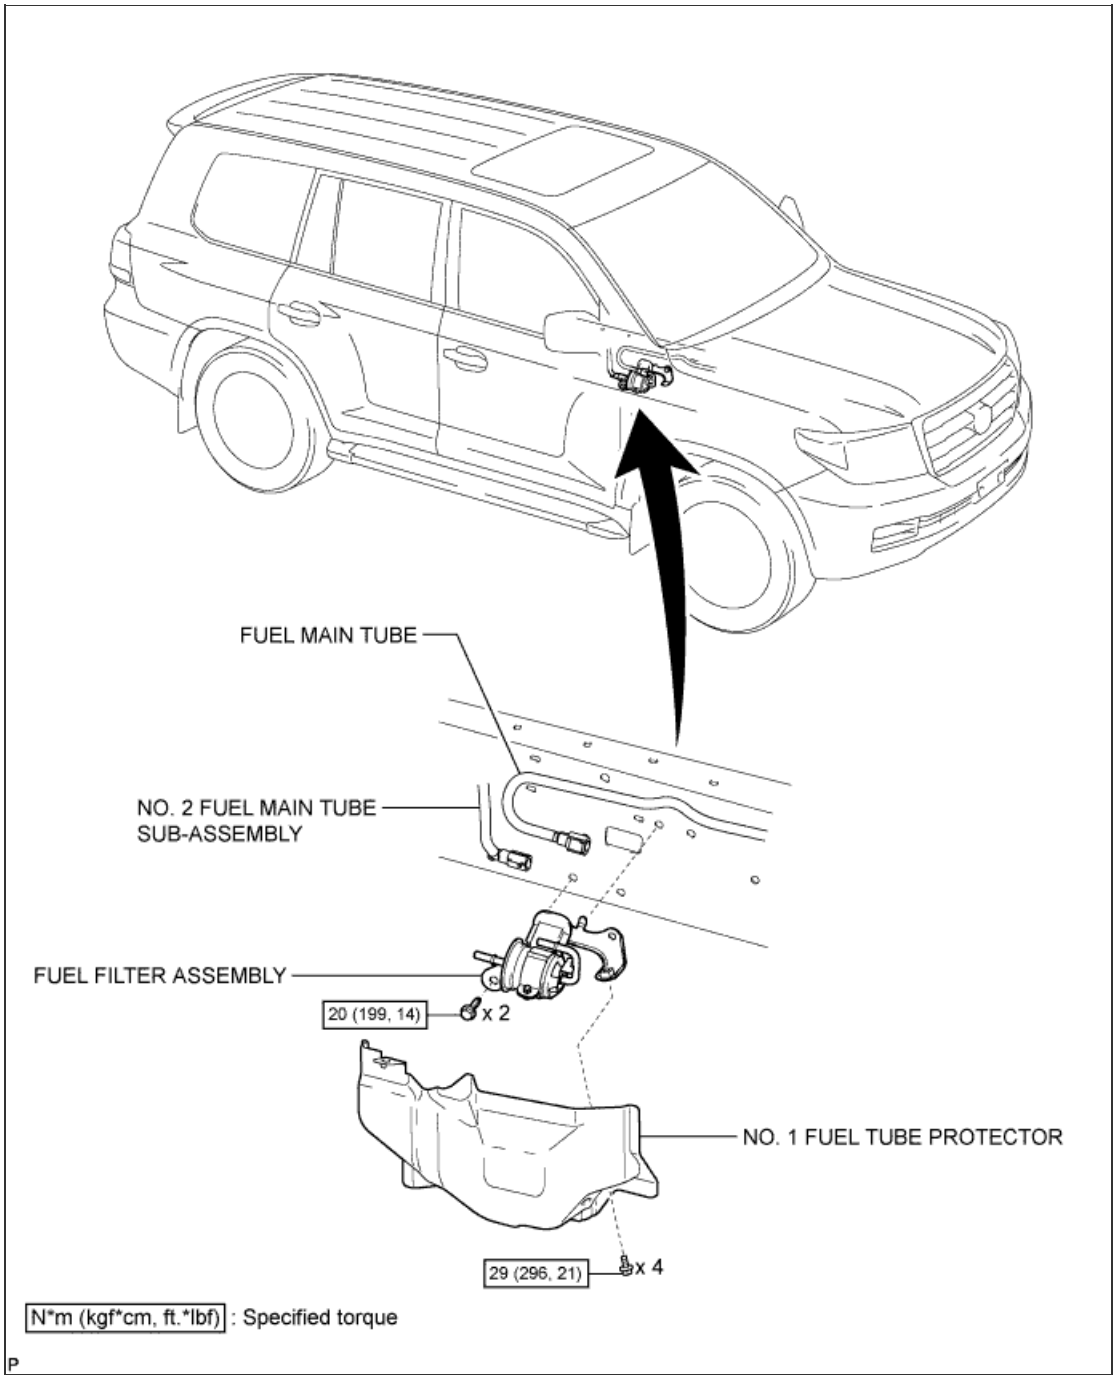


Do not start the engine.

c. nter the following menus: Powertrain / ngine and CT / tive Test / tivate the Fuel Pump Speed Control.

d. Che k that there are no fuel leaks after doing maintenan eanywhere on the fuel system.

e. Che k that the pulsation damper s rew rises up when the fuel pump operates.
If the operation is not as spe ified, he k the following parts:



- Fusible link
- Fuses
- Cir uit opening relay (C/OPN)
- Fuel pump
- CM
- Wiring onne tions

f. Turn the engine swit h off.

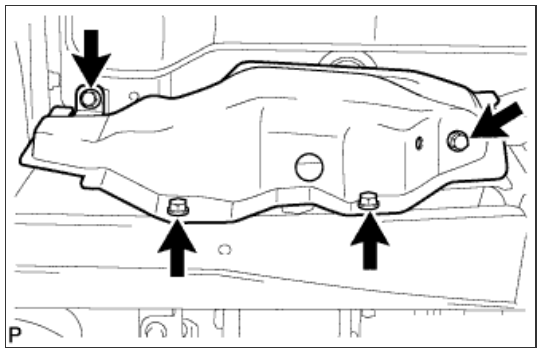
g. Dis onne t the intelligent tester from the DLC3.

for Preparation [Click here]

for Preparation Click here

1. DISCHARGE FUEL SYSTEM PRESSURE

a. Discharge the fuel system pressure (Click here).



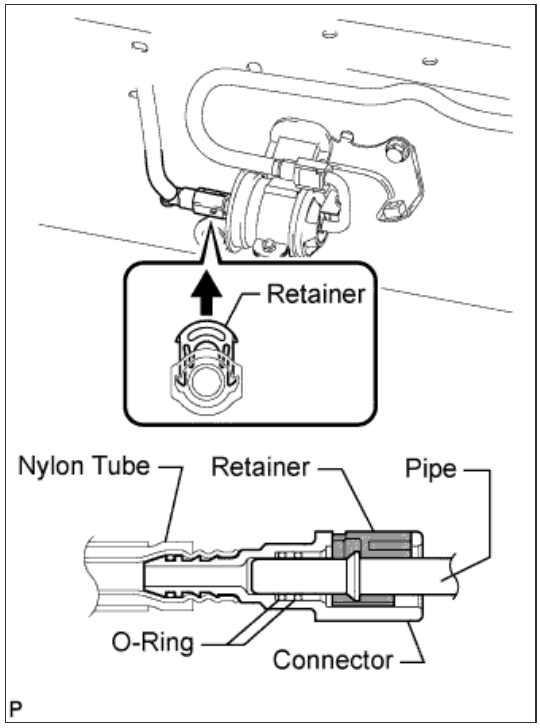
2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

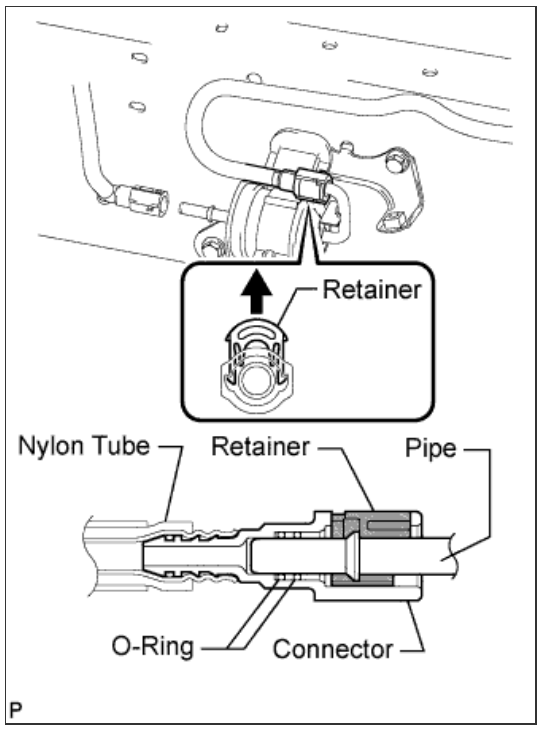
3. REMOVE NO. 1 FUEL TUBE PROTECTOR

a. Remove the 4 bolts and No. 1 fuel tube protector.



4. DISCONNECT NO. 2 FUEL MAIN TUBE SUB-ASSEMBLY

a. Pull up the retainer and disconnect the No. 2 fuel main tube.

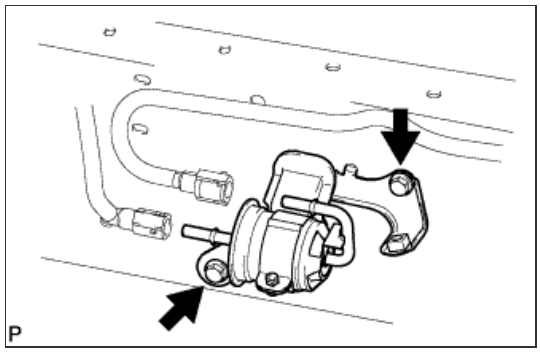


NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**

5. DISCONNECT FUEL MAIN TUBE

a. Pull up the retainer and disconnect the fuel main tube.



NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**

6. REMOVE FUEL FILTER ASSEMBLY

a. Remove the 2 bolts and fuel filter.

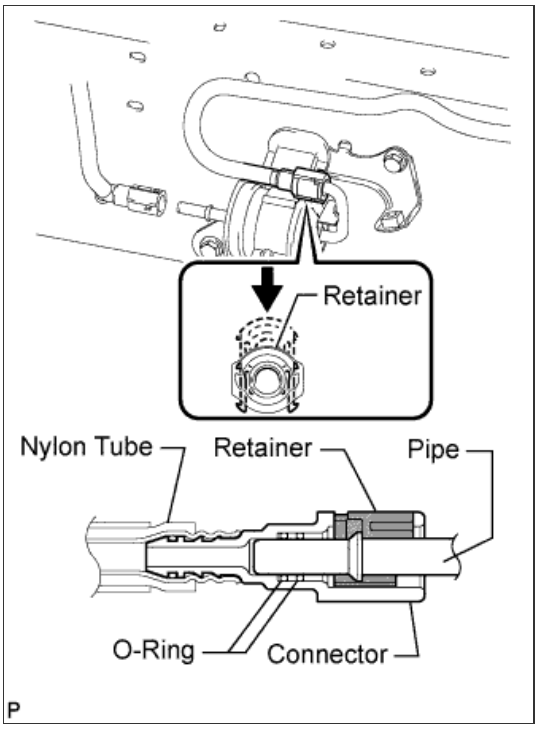
7. INSTALL FUEL FILTER ASSEMBLY

a. Install the fuel filter with the 2 bolts.

Torque:
20 N*m{ 199 kgf*cm , 14 ft.*lbf }

8. CONNECT FUEL MAIN TUBE

a. Connect the fuel main tube and push the retainer.



HINT:

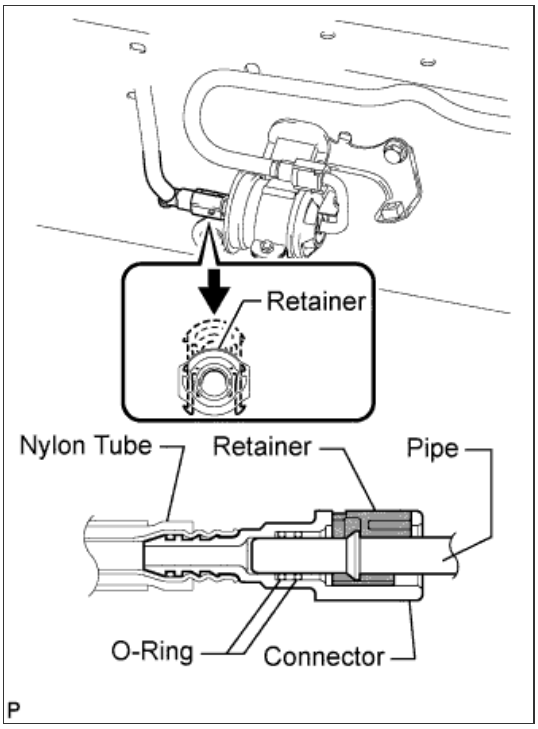
Push the parts together firmly until a click sound is heard.

NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**

- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

9. CONNECT NO. 2 FUEL MAIN TUBE SUB-ASSEMBLY



a. Connect the No. 2 fuel main tube and push the retainer.

HINT:

Push the parts together firmly until a click sound is heard.

NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

10. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

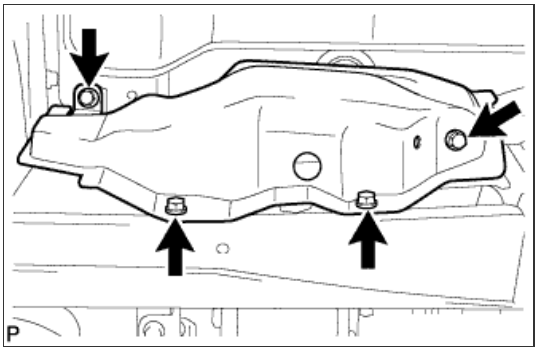
11. INSPECT FOR FUEL LEAK

a. Connect the intelligent tester to the DLC3.

b. urn the engine switch on (IG) and intelligent tester ON.

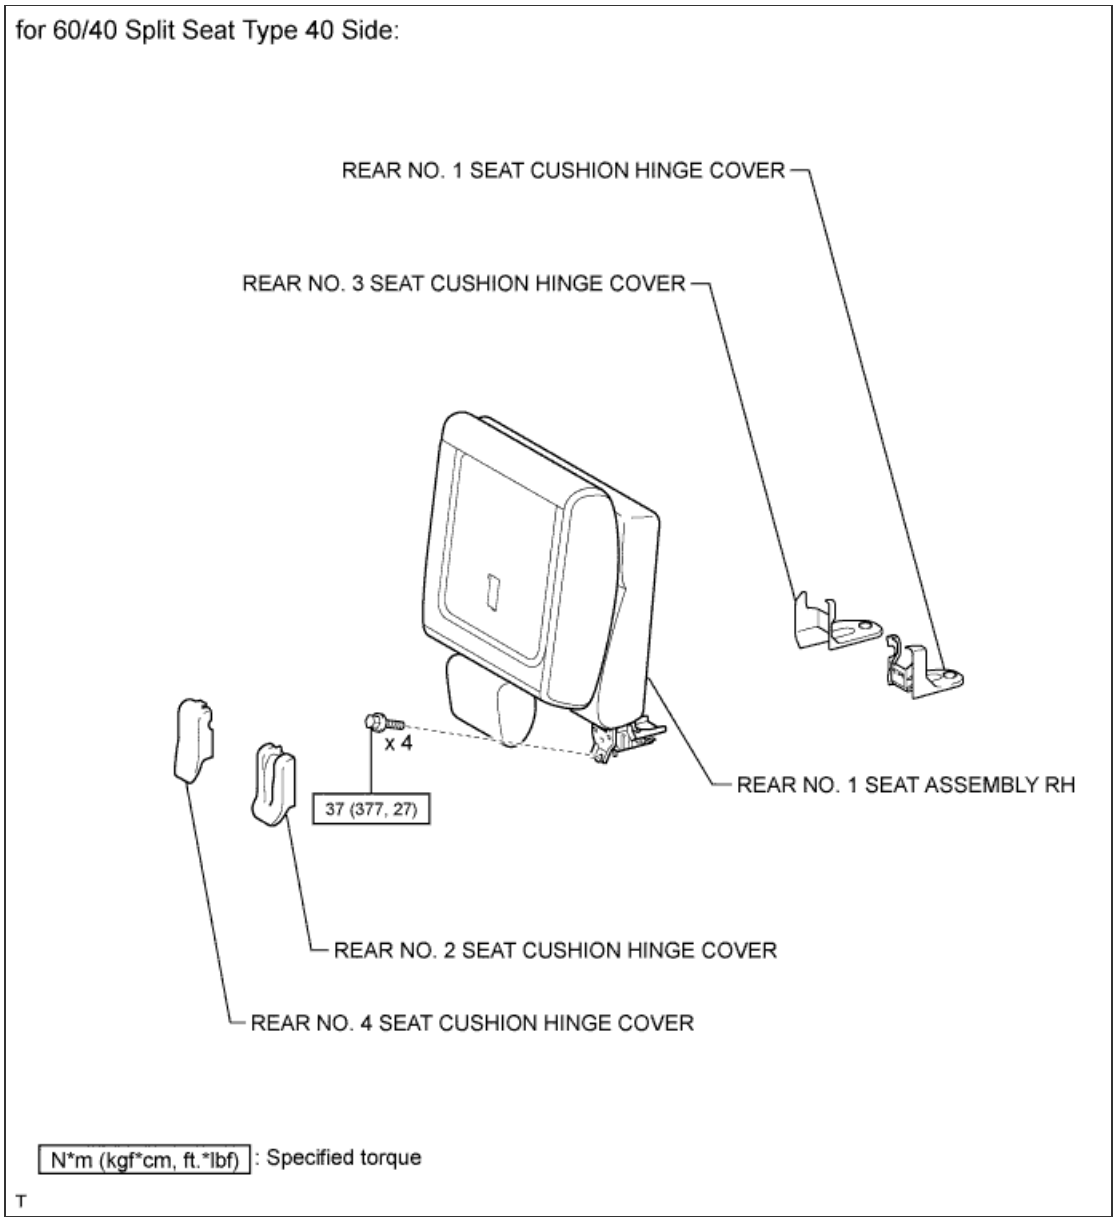
NOTICE:

Do not start the engine.



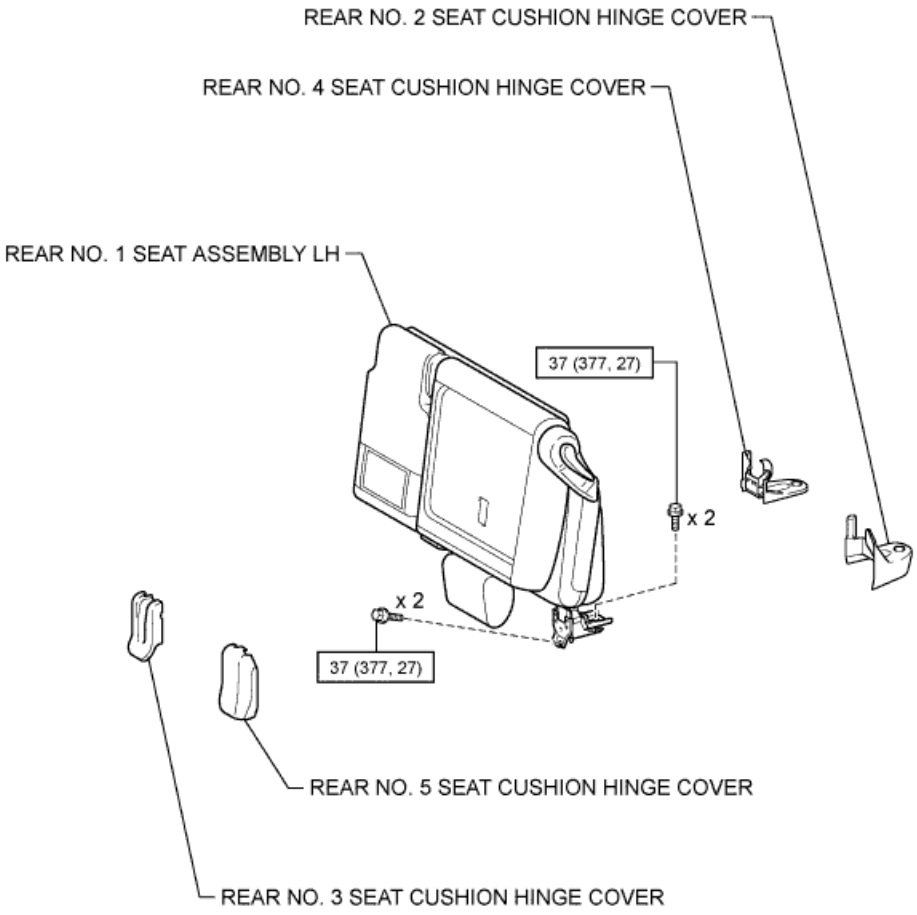
c. Enter the following menus: Powertrain / Engine and EC / Active st / Activate the Fuel Pump Speed Control.

d. Check that there are no fuel leaks after doing maintenance anywhere on the fuel system.



12. INSTALL NO. 1 FUEL TUBE PROTECTOR

a. Install the No. 1 fuel tube protector with the 4 bolts.



Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

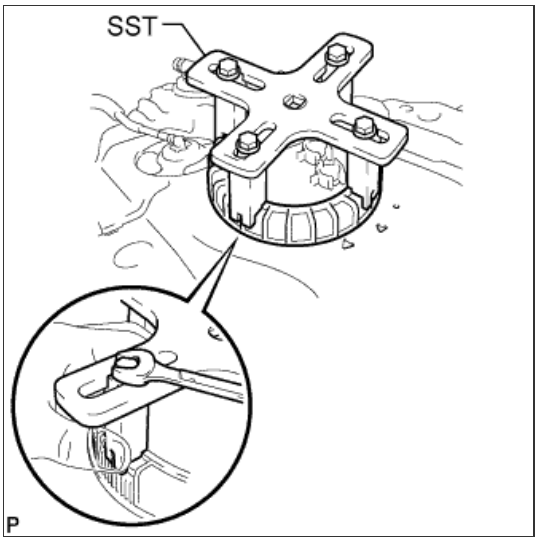
1. REMOVE FUEL TANK SUB-ASSEMBLY

a. Remove the fuel tank sub-assembly (Click here).



2. REMOVE FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY

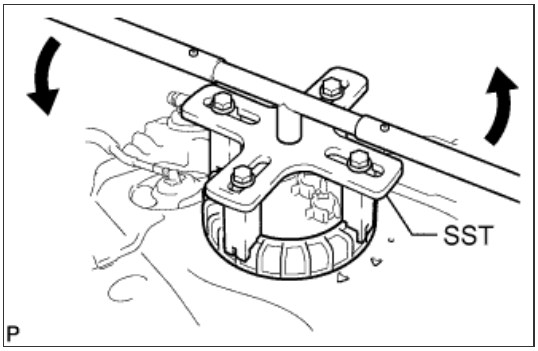
a. Set SST on the retainer.

SST
09808-14030

HINT:

- **Securely attach the claws of SST to the protrusion of the retainer and fix SST in place.**
- **Install SST while pressing the claws of SST against the retainer (towards the center of SST).**

b. Using SST, loosen the retainer.



SST
09808-14030

NOTICE:

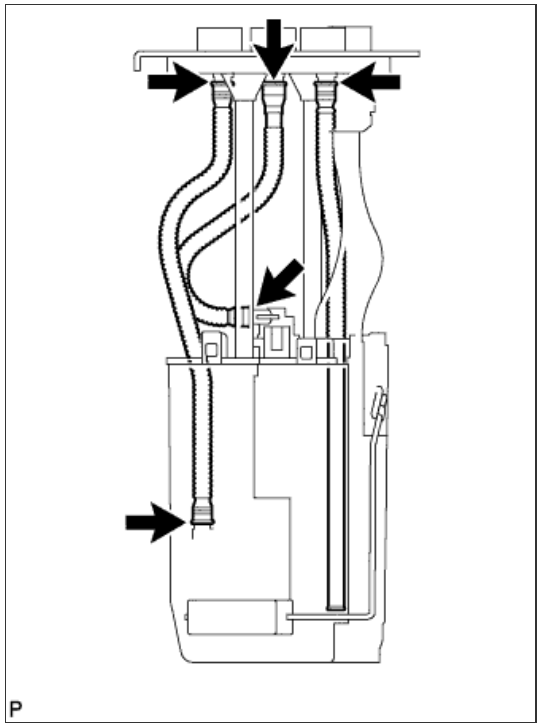
- **Do not use any tools other than those specified in this operation. Damage to the retainer or the fuel tank may result.**
- **While pressing down on SST so that the claws of SST do not slip off the protrusion of the retainer, turn the retainer counterclockwise to loosen it.**

HINT:

The protrusion of the retainer fit in the ends of SST.

Text in Illustration

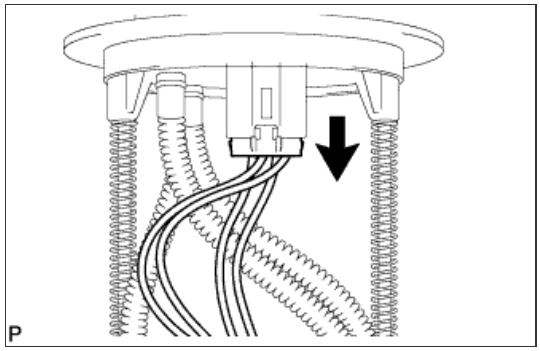
➡	Turn



c. Remove the retainer while holding the fuel suction tube assembly by hand.

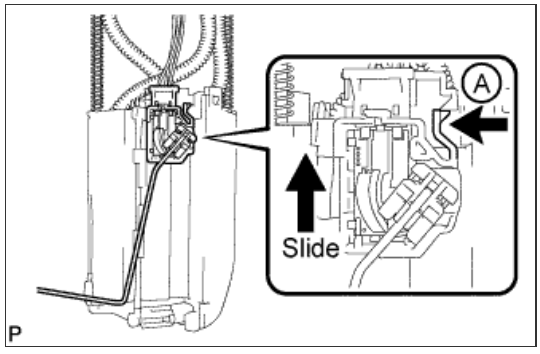
d. Remove the gasket from the fuel tank.

for Preparation Click here



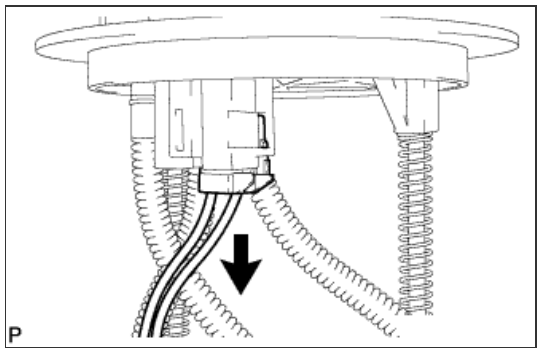
NOTICE:

Do not disconnect the hoses indicated in the illustration.



1. REMOVE FUEL SENDER GAUGE ASSEMBLY

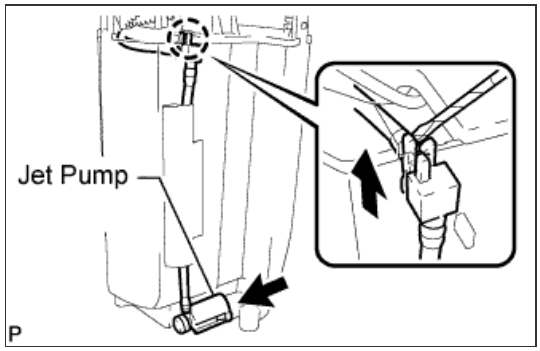
a. Disconnect the fuel sender gauge connector.



b. Press down on the sender gauge claw labeled A. Then slide the sender gauge upward to remove it.

2. REMOVE NO. 1 FUEL SUB-TANK

a. Disconnect the fuel pump connector.

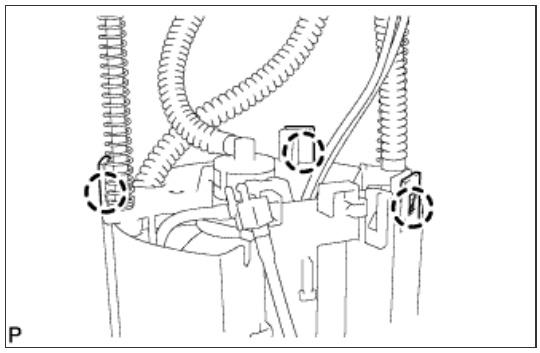


b. Disconnect the jet pump from the sub-tank.

c. Using a small screwdriver, detach the claw from the sub-tank.

HINT:

Tape the screwdriver tip before use.



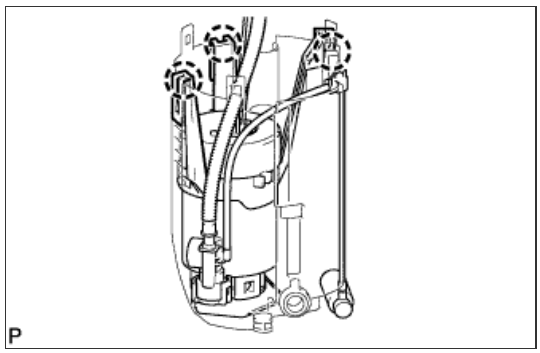
d. Using a screwdriver, detach the 3 claws from the claw holes.

NOTICE:

Do not damage the fuel sub-tank.

HINT:

Tape the screwdriver tip before use.



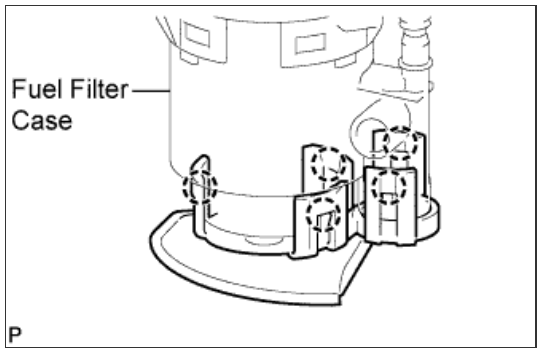
e. Using a screwdriver, detach the 3 claws from the claw holes.

NOTICE:

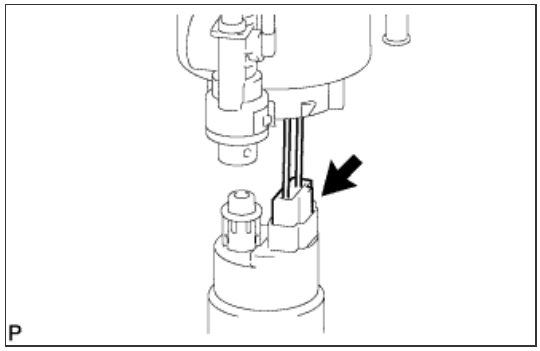
Do not damage the fuel sub-tank.

HINT:

Tape the screwdriver tip before use.

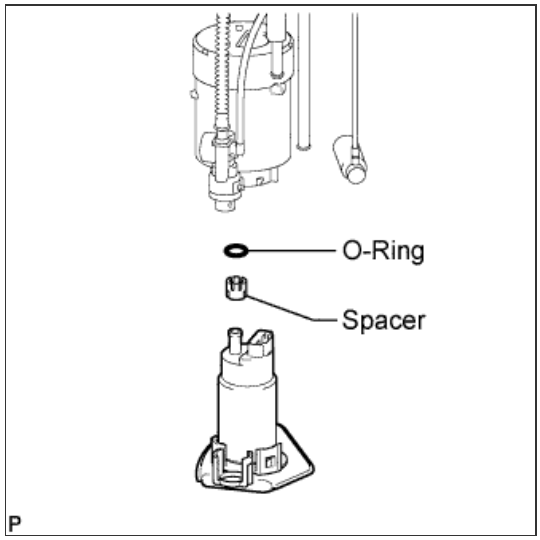


3. REMOVE FUEL PUMP



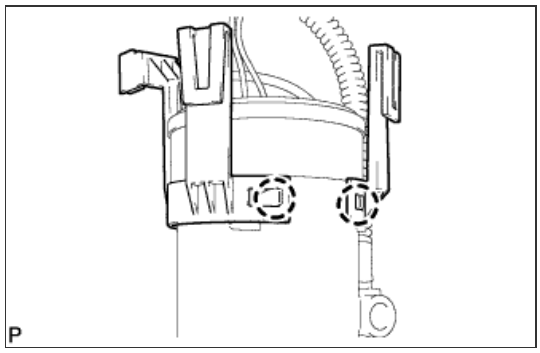
a. Using a screwdriver, detach the 5 claws from the claw holes and disconnect the fuel pump from the fuel filter case.

HINT:



Tape the screwdriver tip before use.

b. Disconnect the fuel pump wire harness connector from the fuel pump to remove it.



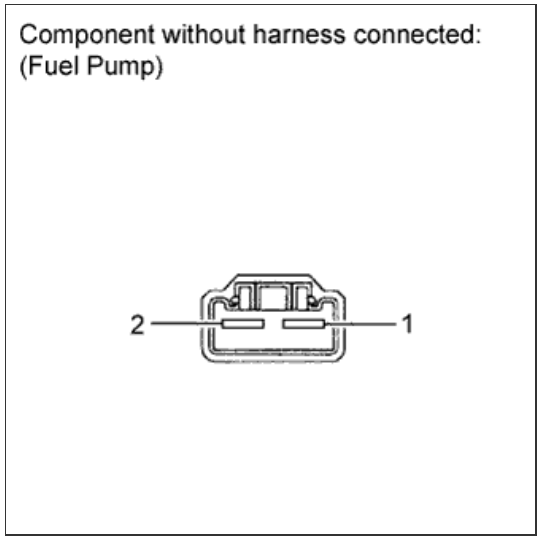
c. Remove the O-ring and spacer from the fuel pump.

4. REMOVE NO. 1 FUEL SUCTION SUPPORT

a. Detach the 2 claws from the claw holes to remove the fuel suction support.

for Preparation Click here

1. INSPECT FUEL PUMP



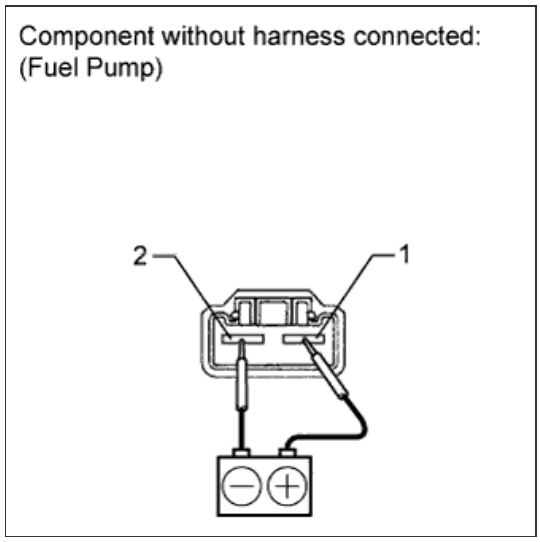
a. Inspect the resistance of the fuel pump.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	0.2 to 3.0 Ω

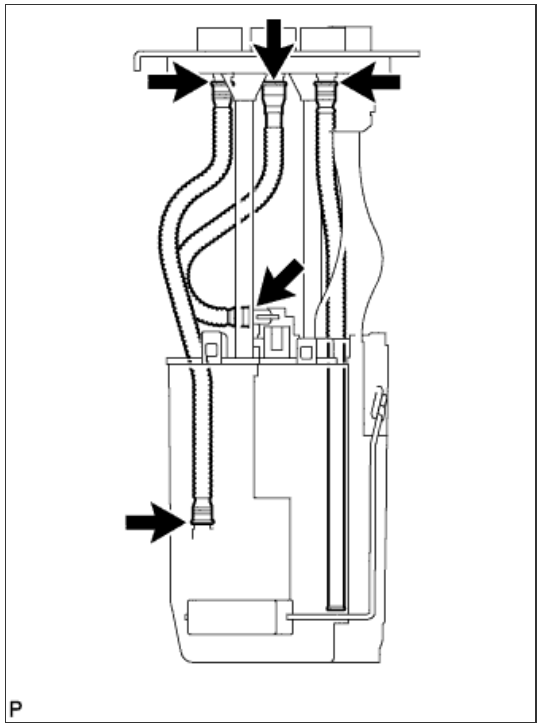
If the result is not as specified, replace the fuel pump.



b. Inspect the operation of the fuel pump.

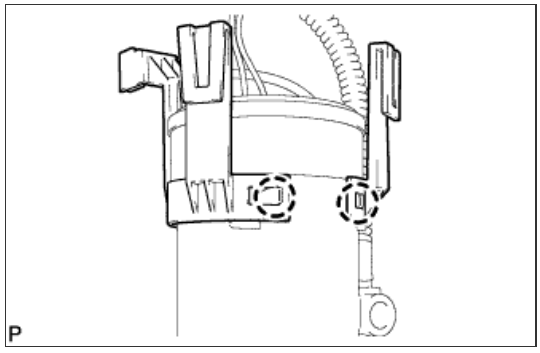
i. Connect the battery's positive (+) lead to terminal 1 of the connector, and the negative (-) lead to terminal 2. Check that the fuel pump operates.
If the result is not as specified, replace the fuel pump and fuel pump ECU.

NOTICE:



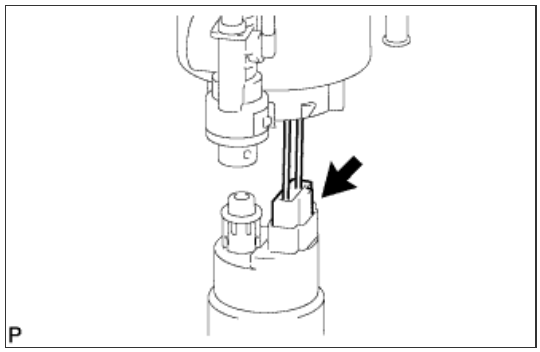
- **These tests must be performed thin 10 seconds to prevent the coil from burning out.**
- **eep the fuel pump as far a ay fro the battery as possible.**
- **I ay turn the voltage on and off on the battery side, not the fuel pump side.**
- **When the pump is locked and does not operate due to foreign matter being stuck, etc., replace the fuel pump ECU together th the fuel pump, as the fuel pump ECU may be damaged electrically.**

for Preparation Click here



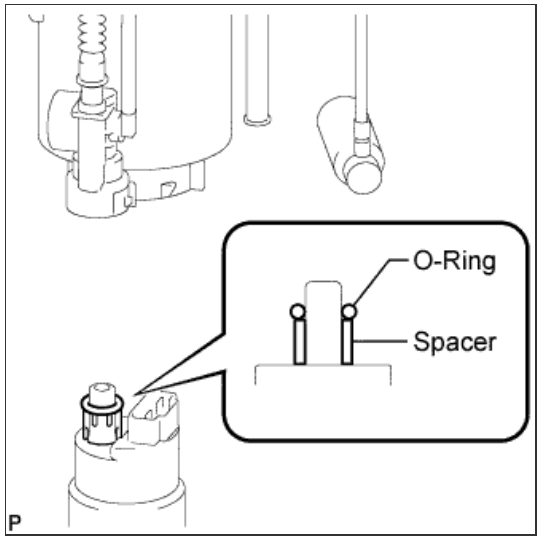
NOTICE:

Do not disconnect the hoses indicated in the illustration.

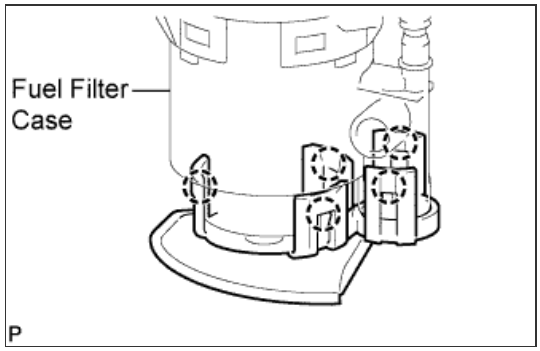


1. INSTALL NO. 1 FUEL SUCTION SUPPORT

a. Attach the 2 claws to the claw holes to install the fuel suction support.

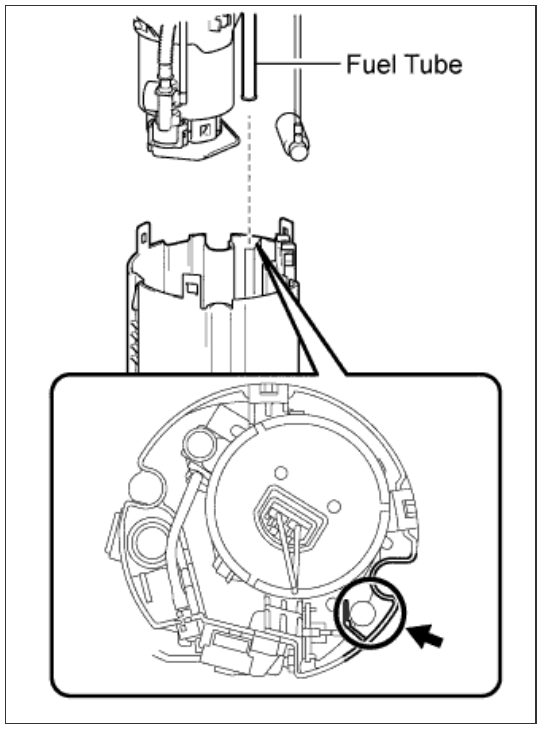


2. INSTALL FUEL PUMP

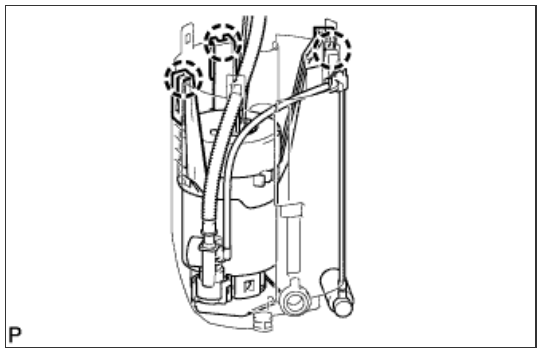


a. Connect the fuel pump wire harness connector to the fuel pump.

b. Apply a light coat of gasoline to a new ring. Then install the spacer and ring to the fuel pump.

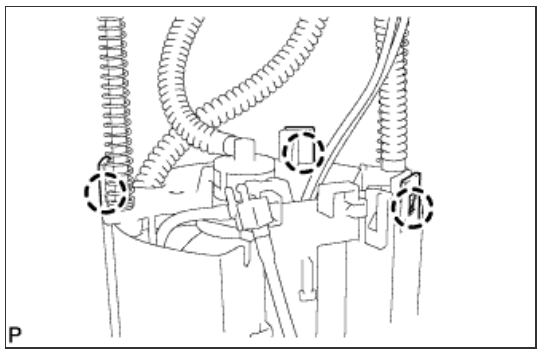


c. Attach the 5 claws to the claw holes and install the fuel pump to the fuel filter case.



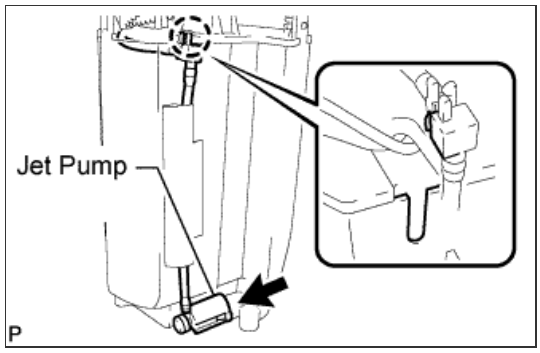
3. INSTALL NO. 1 FUEL SUB-TANK

NOTICE:

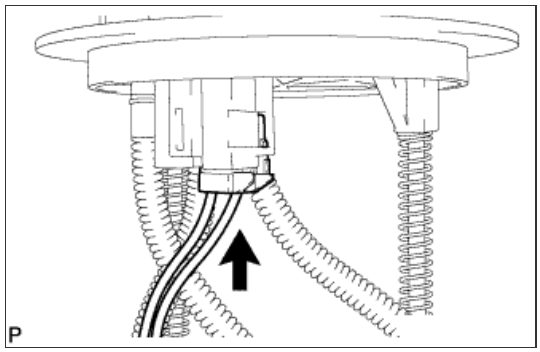


Make sure that the fuel tube passes into the section marked by the circle.

a. Attach the 3 claws to the claw holes and install the fuel sub-tank.



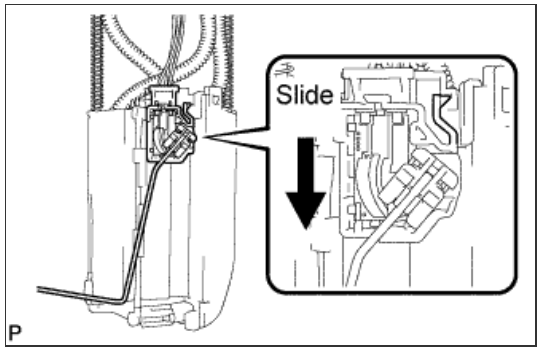
b. Attach the 3 claws to the claw holes.



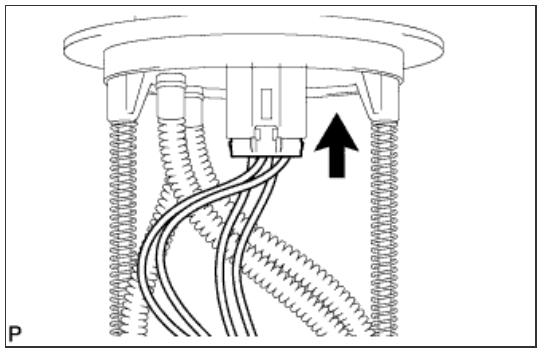
c. Install the tube part to the sub-tank.

i. Attach the claw on the end of the tube to the claw hole. Install the tube to the 2 clamps on the sub-tank.

d. Connect the jet pump to the sub-tank.



e. Connect the fuel pump connector.



4. INSTALL FUEL SENDER GAUGE ASSEMBLY

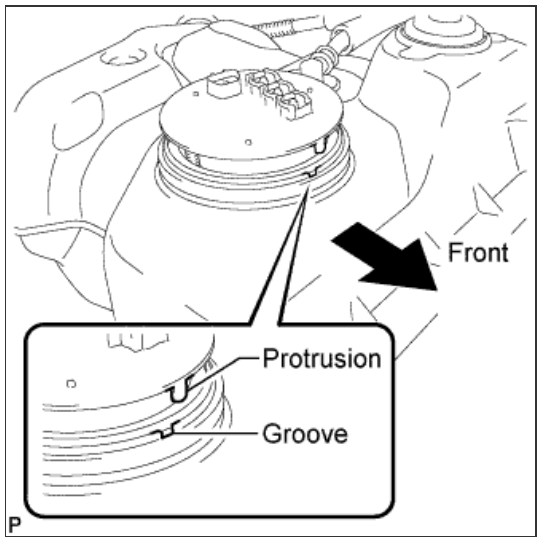
a. Set the sender gauge to the fuel sub-tank. Then slide the sender gauge downward to install it.

b. Connect the fuel sender gauge connector.

for Preparation Click here

1. INSTALL FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY

a. Apply a light coat of gasoline or grease to a new gasket, and install it to the fuel tank.



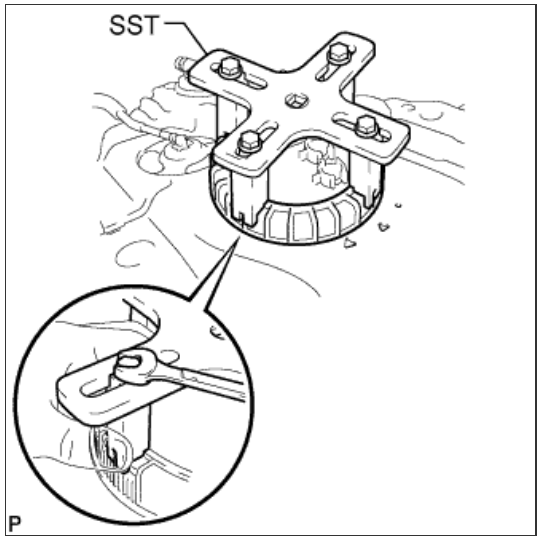
b. Install the fuel suction with pump and gauge tube into the fuel tank.

NOTICE:

Be careful not to bend the arm of the fuel sender gauge.

HINT:

Align the protrusion of the fuel suction with pump and gauge tube with the groove of the fuel tank.



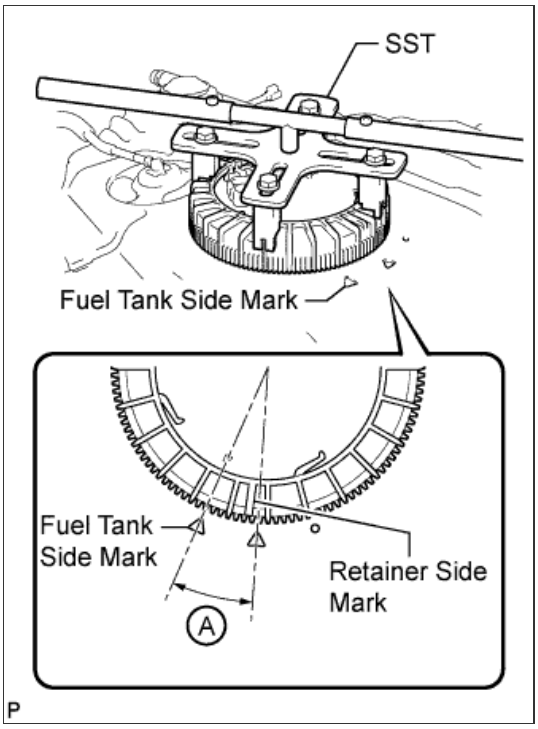
c. Put the retainer on the fuel tank. While holding the fuel suction with pump and gauge tube, tighten the retainer one complete turn by hand.

d. Set SST on the retainer.

SST
09808-14030

HINT:

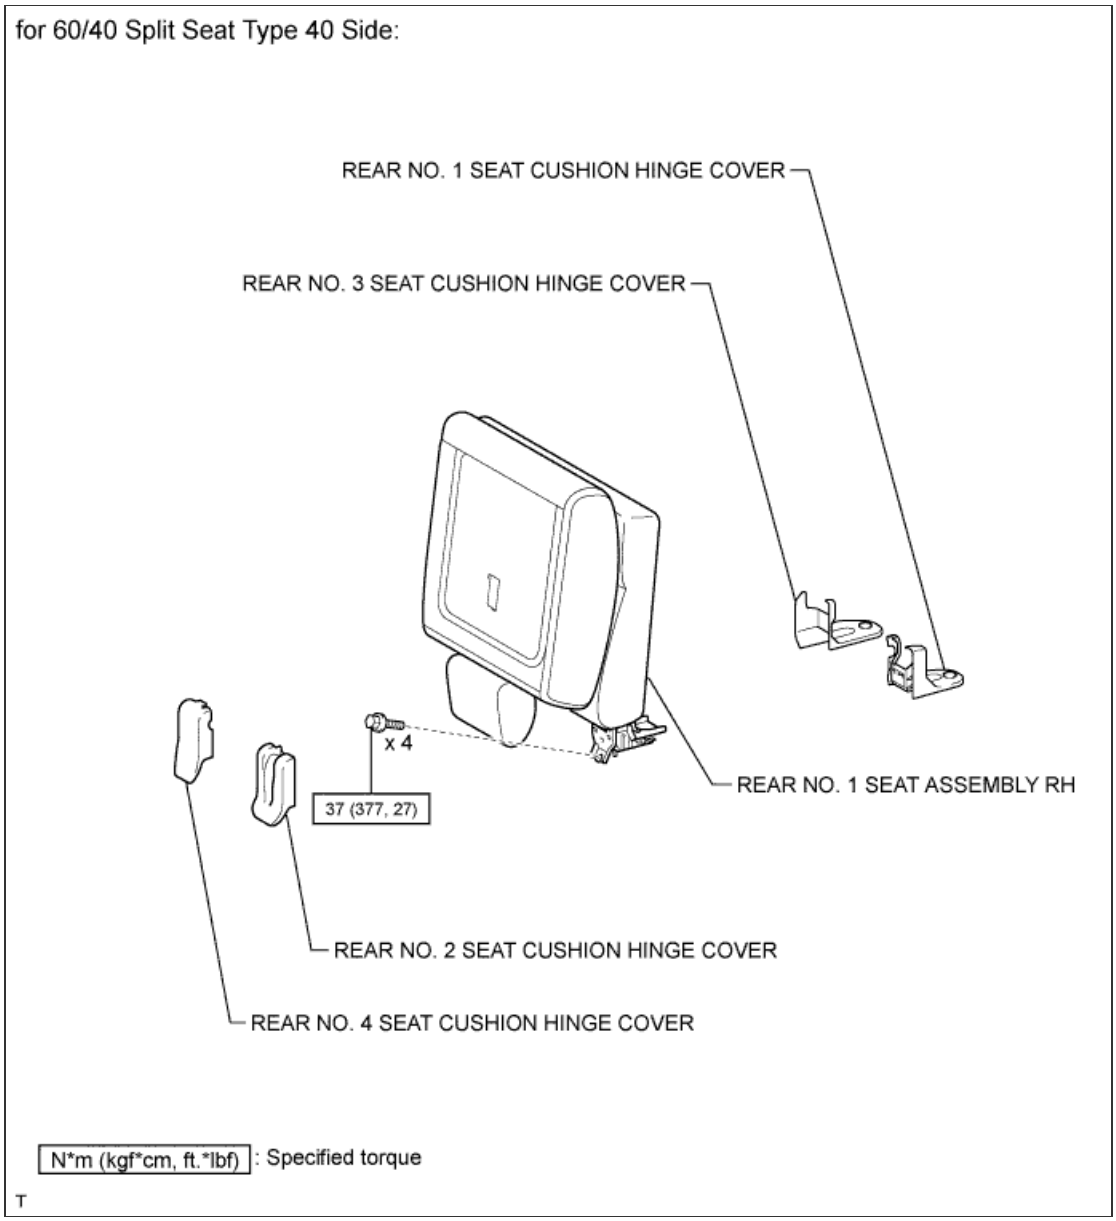
- **Hold the fuel suction tube assembly upright by hand to ensure that the fuel suction tube gasket is not moved out of position.**
- **Securely attach the claws of SST to the protrusions of the retainer and fix SST in place.**
- **Install SST while pressing the claws of SST against the retainer (toward the center of SST).**



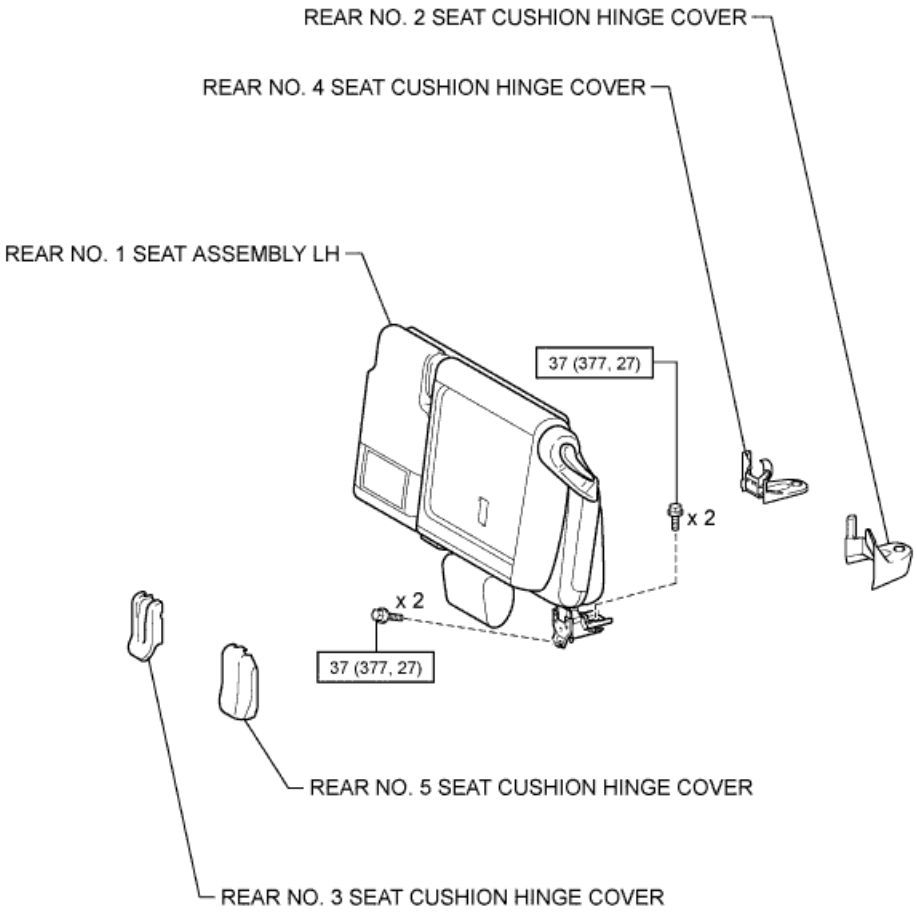
e. Using SST, tighten the retainer until the mark on the retainer is within range A on the fuel tank as shown in the illustration.

SST
09808-14030

HINT:



Fit the tips of SST onto the ribs of the retainer.



2. INSTALL FUEL TANK SUB-ASSEMBLY

a. Install the fuel tank sub-assembly (Click here).

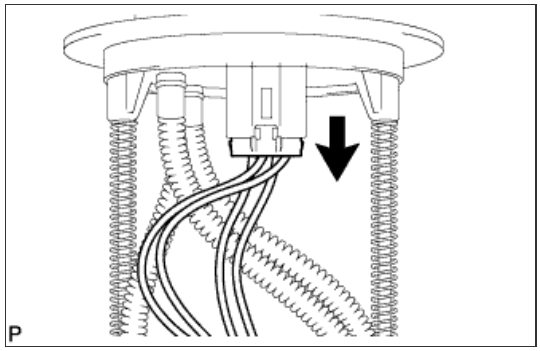
c. Remove the retainer while holding the fuel suction tube assembly by hand.

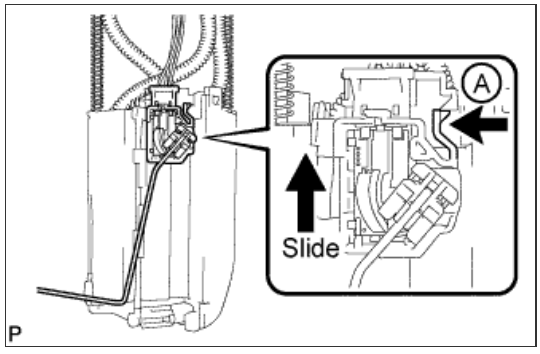
d. Remove the gasket from the fuel tank.

for Preparation Click here



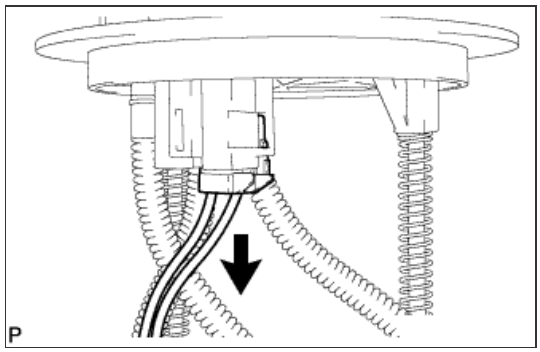
NOTICE:

Do not disconnect the hoses indicated in the illustration.



1. REMOVE FUEL SENDER GAUGE ASSEMBLY

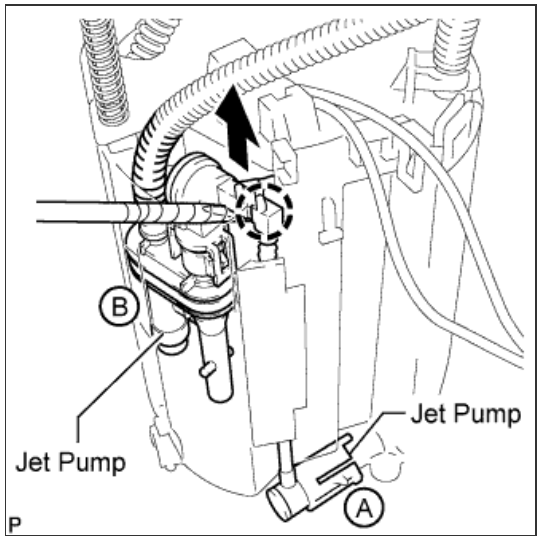
a. Disconnect the fuel sender gauge connector.



b. Press down on the sender gauge claw labeled A. Then slide the sender gauge upward to remove it.

2. REMOVE NO. 1 FUEL SUB-TANK

a. Disconnect the fuel pump connector.



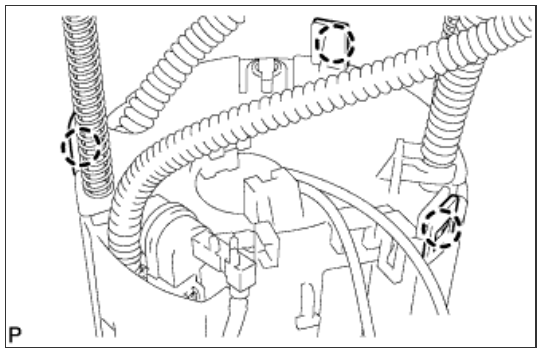
b. Disconnect the jet pump (labeled A) from the sub-tank.

c. Disconnect the jet pump (labeled B) from the sub-tank.

i. Using a small screwdriver, detach the claw from the sub-tank.

HINT:

Tape the screwdriver tip before use.



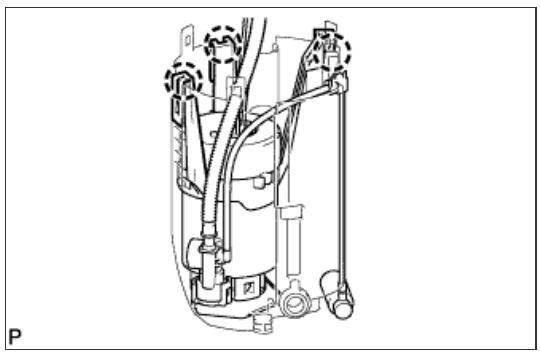
d. Using a screwdriver, detach the 3 claws from the claw holes.

NOTICE:

Do not damage the fuel sub-tank.

HINT:

Tape the screwdriver tip before use.



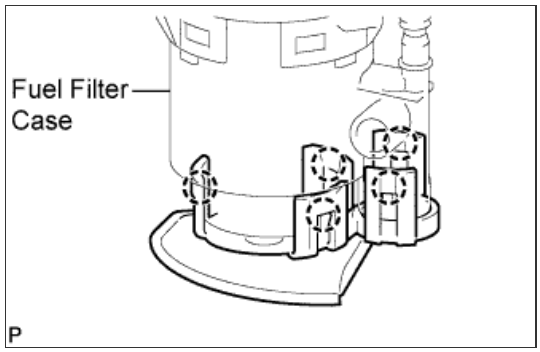
e. Using a screwdriver, detach the 3 claws from the claw holes.

NOTICE:

Do not damage the fuel sub-tank.

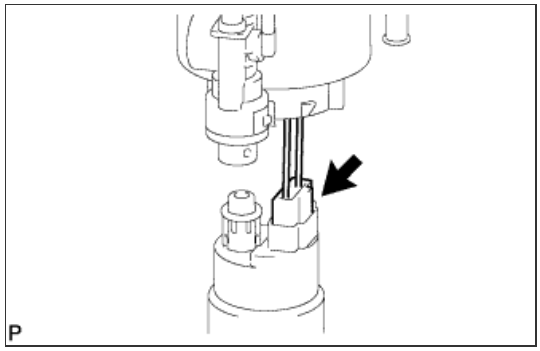
HINT:

Tape the screwdriver tip before use.



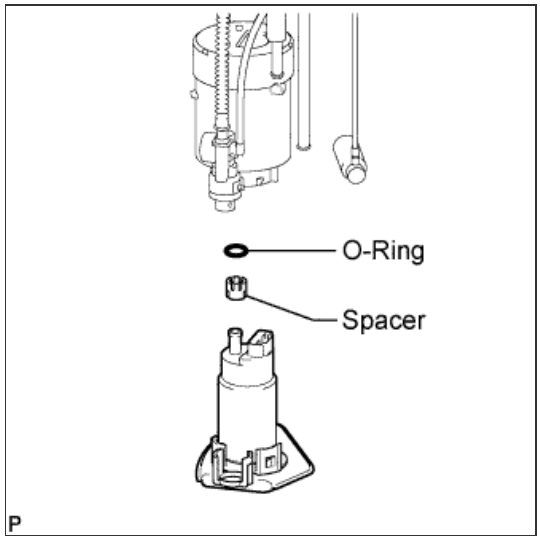
3. REMOVE FUEL PUMP

a. Using a screwdriver, detach the 5 claws from the claw holes and disconnect the



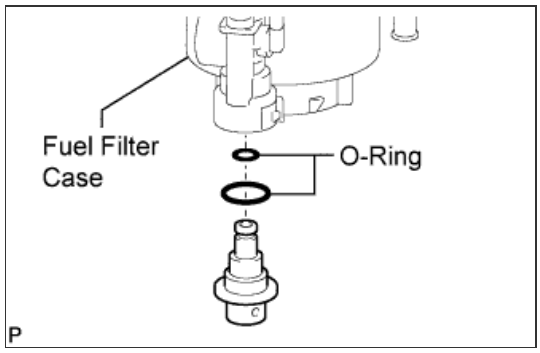
fuel pump from the fuel filter case.

HINT:



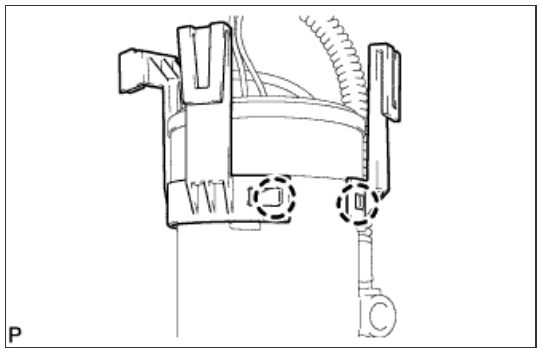
Tape the screwdriver tip before use.

b. Disconnect the fuel pump wire harness connector from the fuel pump to remove it.



c. Remove the O-ring and spacer from the fuel pump.

4. REMOVE FUEL MAIN VALVE ASSEMBLY



a. Remove the fuel main valve from the fuel filter case.

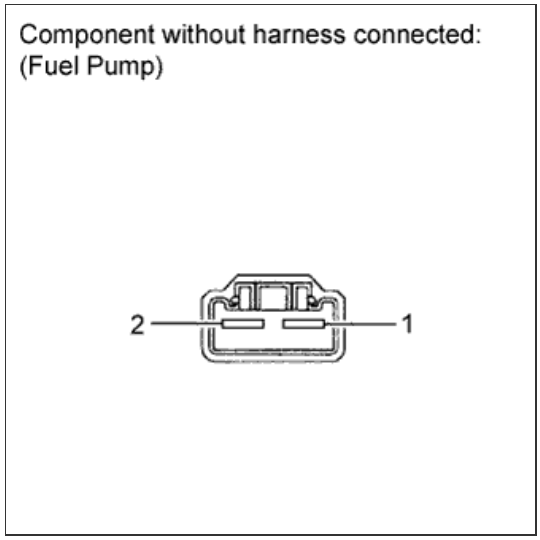
b. Remove the 2 O-rings from the fuel main valve.

5. REMOVE NO. 1 FUEL SUCTION SUPPORT

a. Detach the 2 claws from the claw holes to remove the fuel suction support.

for Preparation Click here

1. INSPECT FUEL PUMP



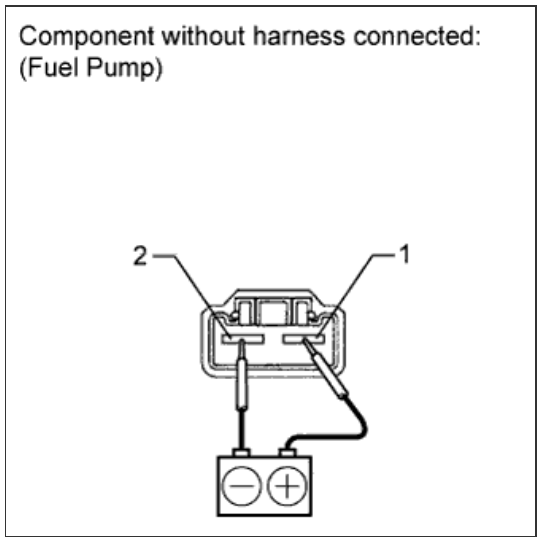
a. Inspect the resistance of the fuel pump.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	0.2 to 3.0 Ω

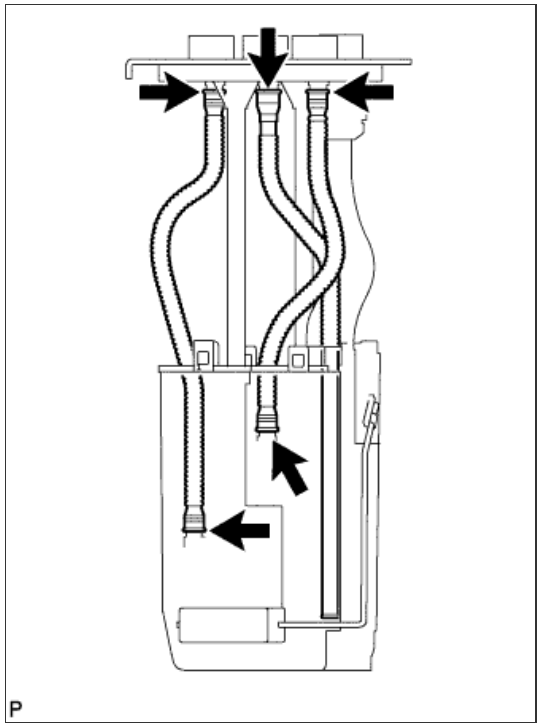
If the result is not as specified, replace the fuel suction with pump and gauge tube.



b. Inspect the operation of the fuel pump.

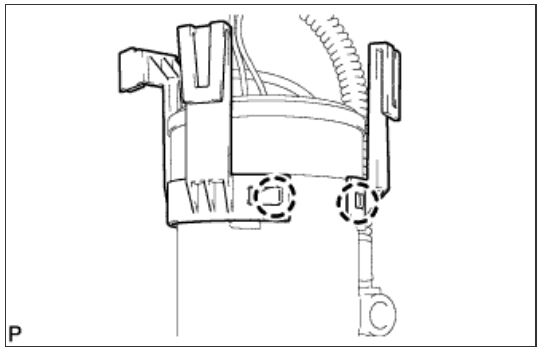
i. Connect the battery's positive (+) lead to terminal 1 of the connector, and the negative (-) lead to terminal 2. Check that the fuel pump operates.
If the result is not as specified, replace the fuel pump and fuel pump ECU.

NOTICE:



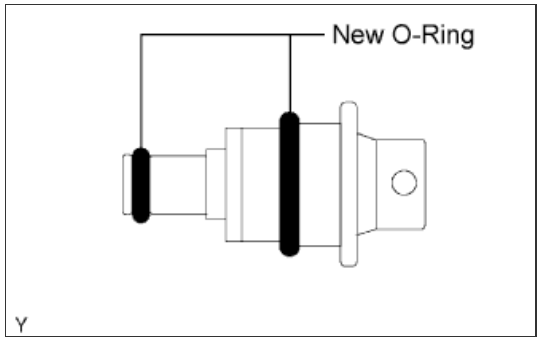
- **These tests must be performed thin 10 seconds to prevent the coil from burning out.**
- **eep the fuel pump as far a ay from the battery as possible.**
- **Al ays turn the voltage on and off on the battery side, not the fuel pump side.**
- **When the pump is locked and does not operate due to foreign matter being stuck, etc., replace the fuel pump ECU together th the fuel pump, as the fuel pump ECU may be damaged electrically.**

for Preparation Click here



NOTICE:

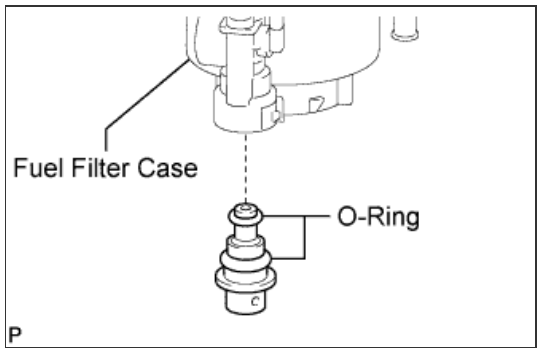
Do not disconnect the hoses indicated in the illustration.



1. INSTALL NO. 1 FUEL SUCTION SUPPORT

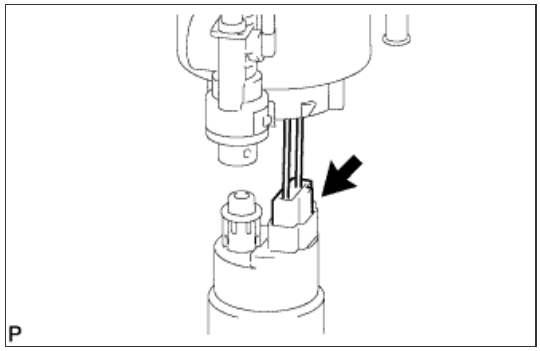
a. Attach the 2 claws to the claw holes to install the fuel suction support.

2. INSTALL FUEL MAIN VALVE ASSEMBLY



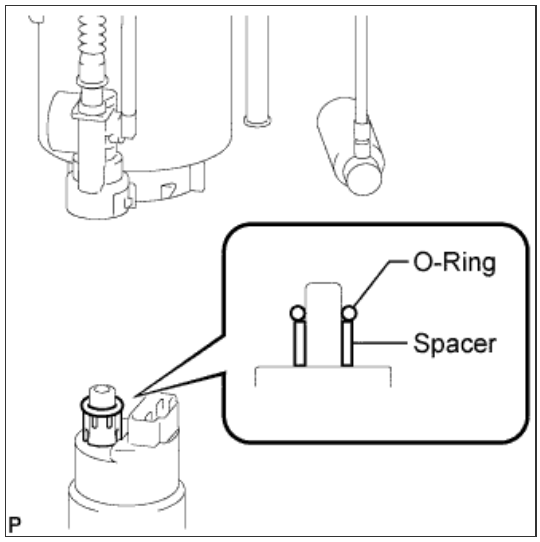
a. Apply a light coat of gasoline to 2 new O-rings, and install them onto the fuel main valve.

b. Install the fuel main valve to the fuel filter case.

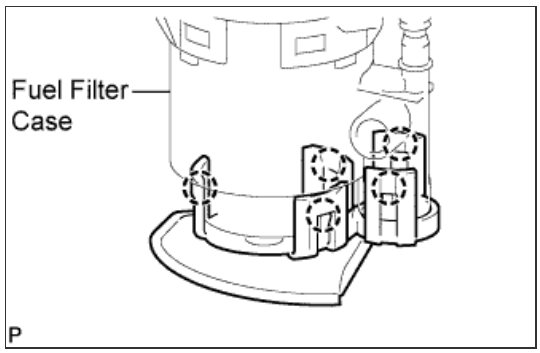


NOTICE:

Make sure the O-rings are not cut or pinched during the installation.

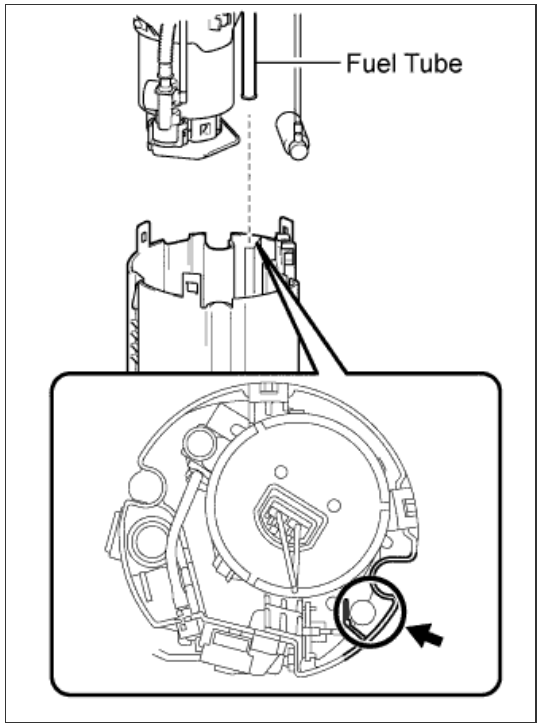


3. INSTALL FUEL PUMP

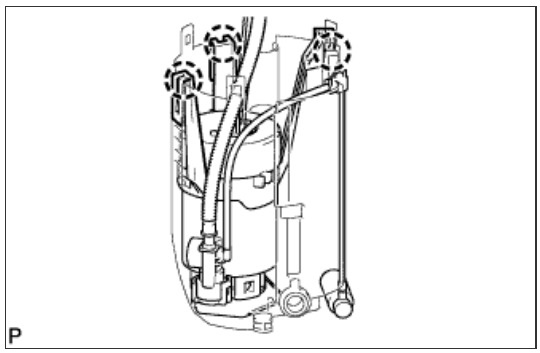


a. Connect the fuel pump wire harness connector to the fuel pump.

b. Apply a light coat of gasoline to a new O-ring. Then install the spacer and O-ring to the fuel pump.

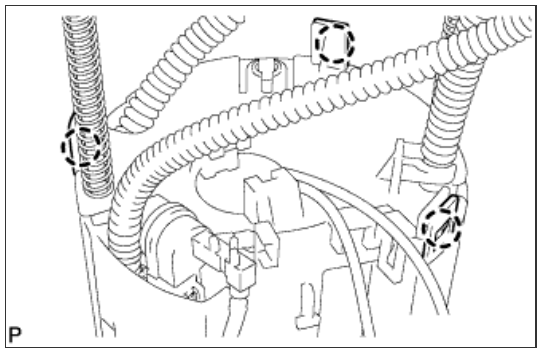


c. Attach the 5 claws to the claw holes and install the fuel pump to the fuel filter case.



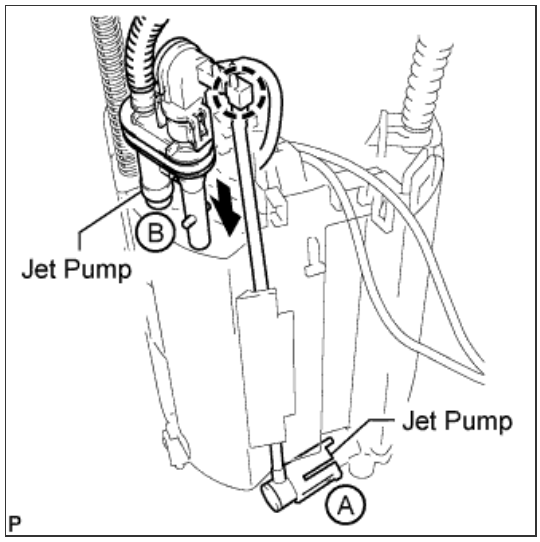
4. INSTALL NO. 1 FUEL SUB-TANK

NOTICE:

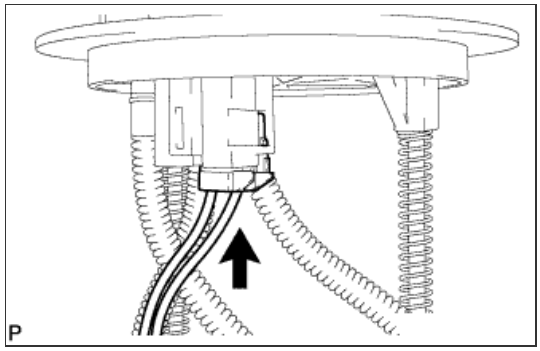


Make sure that the fuel tube passes into the section marked by the circle.

a. Attach the 3 claws to the claw holes and install the fuel sub-tank.



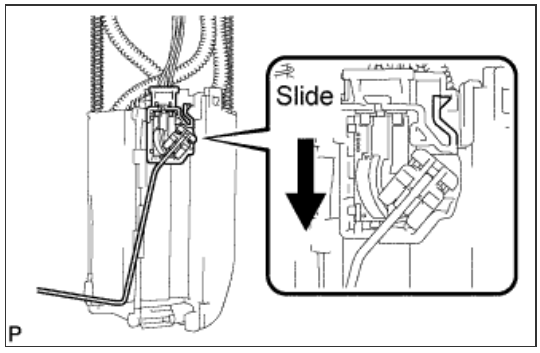
b. Attach the 3 claws to the claw holes.



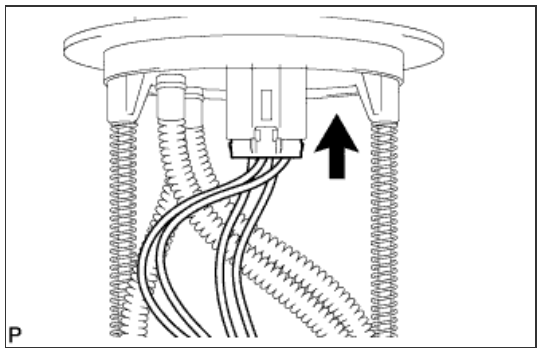
c. Connect the jet pump (labeled B) to the sub-tank.

i. Attach the claw on the end of the tube to the claw hole.

d. Connect the jet pump (labeled A) to the sub-tank.



e. Connect the fuel pump connector.



5. INSTALL FUEL SENDER GAUGE ASSEMBLY

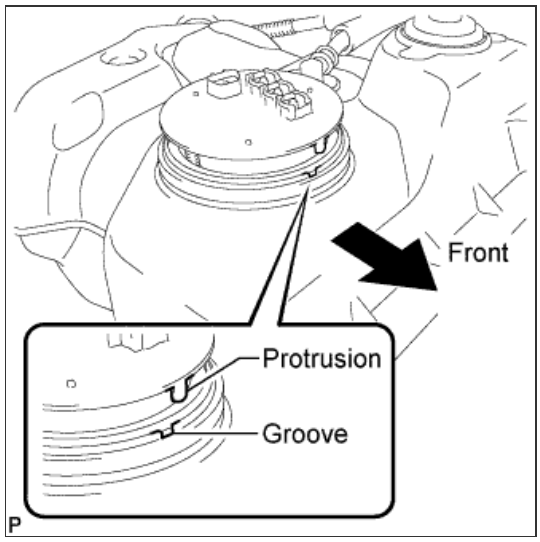
a. Set the sender gauge to the fuel sub-tank. Then slide the sender gauge downward to install it.

b. Connect the fuel sender gauge connector.

for Preparation Click here

1. INSTALL FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY

a. Apply a light coat of gasoline or grease to a new gasket, and install it to the fuel tank.



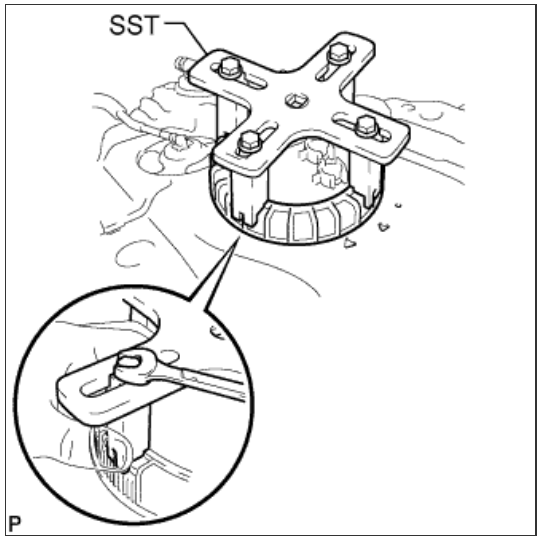
b. Install the fuel suction with pump and gauge tube into the fuel tank.

NOTICE:

Be careful not to bend the arm of the fuel sender gauge.

HINT:

Align the protrusion of the fuel suction with pump and gauge tube with the groove of the fuel tank.



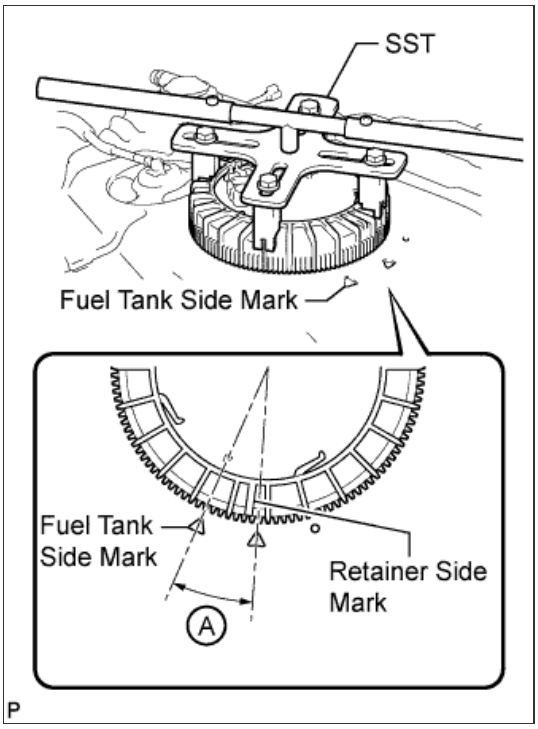
c. Put the retainer on the fuel tank. While holding the fuel suction with pump and gauge tube, tighten the retainer one complete turn by hand.

d. Set SST on the retainer.

SST
09808-14030

HINT:

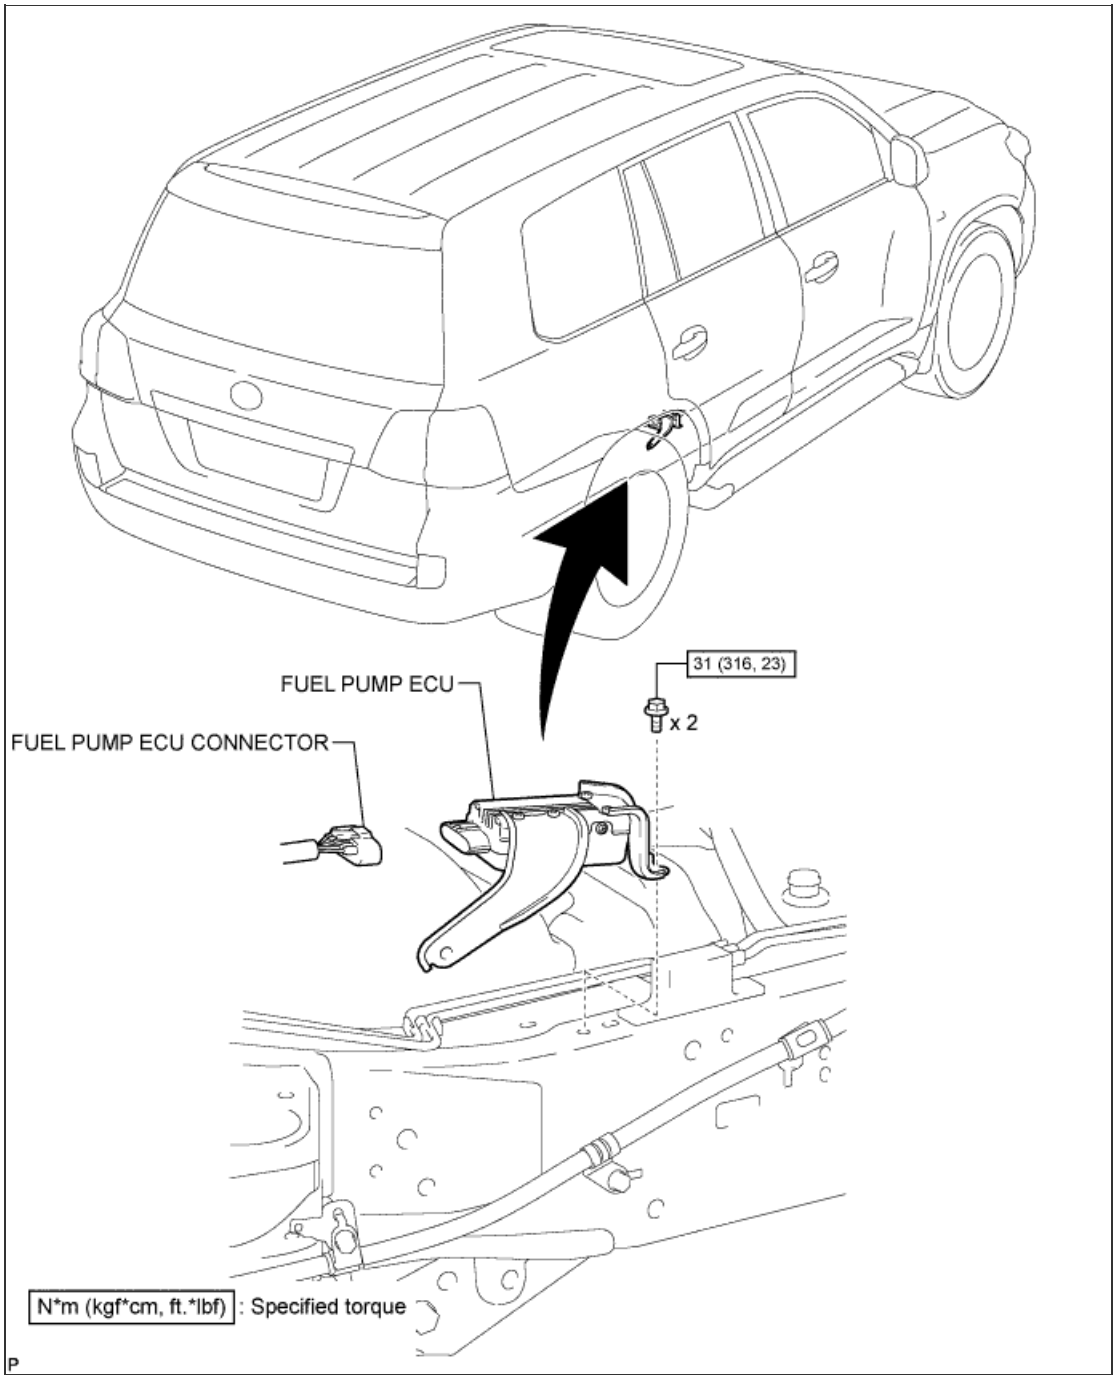
- **Hold the fuel suction tube assembly upright by hand to ensure that the fuel suction tube gasket is not moved out of position.**
- **Securely attach the claws of SST to the protrusions of the retainer and fix SST in place.**
- **Install SST while pressing the claws of SST against the retainer (toward the center of SST).**



e. Using SST, tighten the retainer until the mark on the retainer is within range A on the fuel tank as shown in the illustration.

SST
09808-14030

HINT:



Fit the tips of SST onto the ribs of the retainer.

2. INSTALL FUEL TANK SUB-ASSEMBLY

a. Install the fuel tank sub-assembly (Click here).

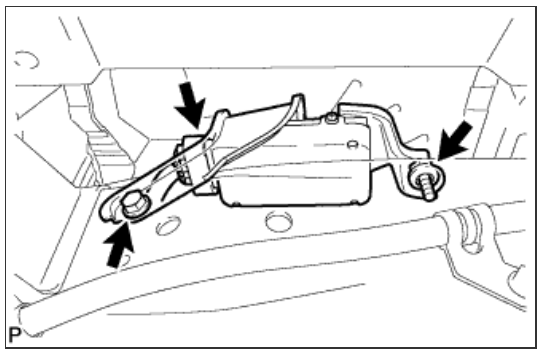
for Preparation [Click here]

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).



2. REMOVE FUEL PUMP ECU

a. Disconnect the ECU connector.

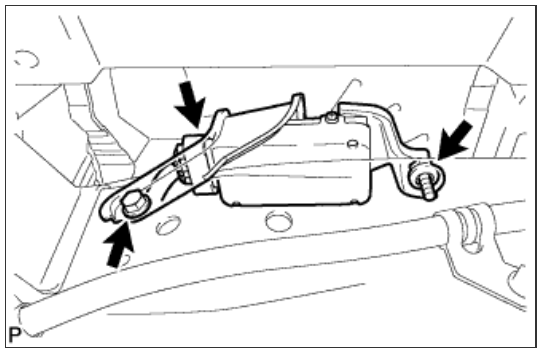
b. Remove the 2 bolts and ECU.

NOTICE:

Make sure the ECU is not subjected to physical shocks such as being dropped, etc.

for Preparation Click here

1. INSTALL FUEL PUMP ECU



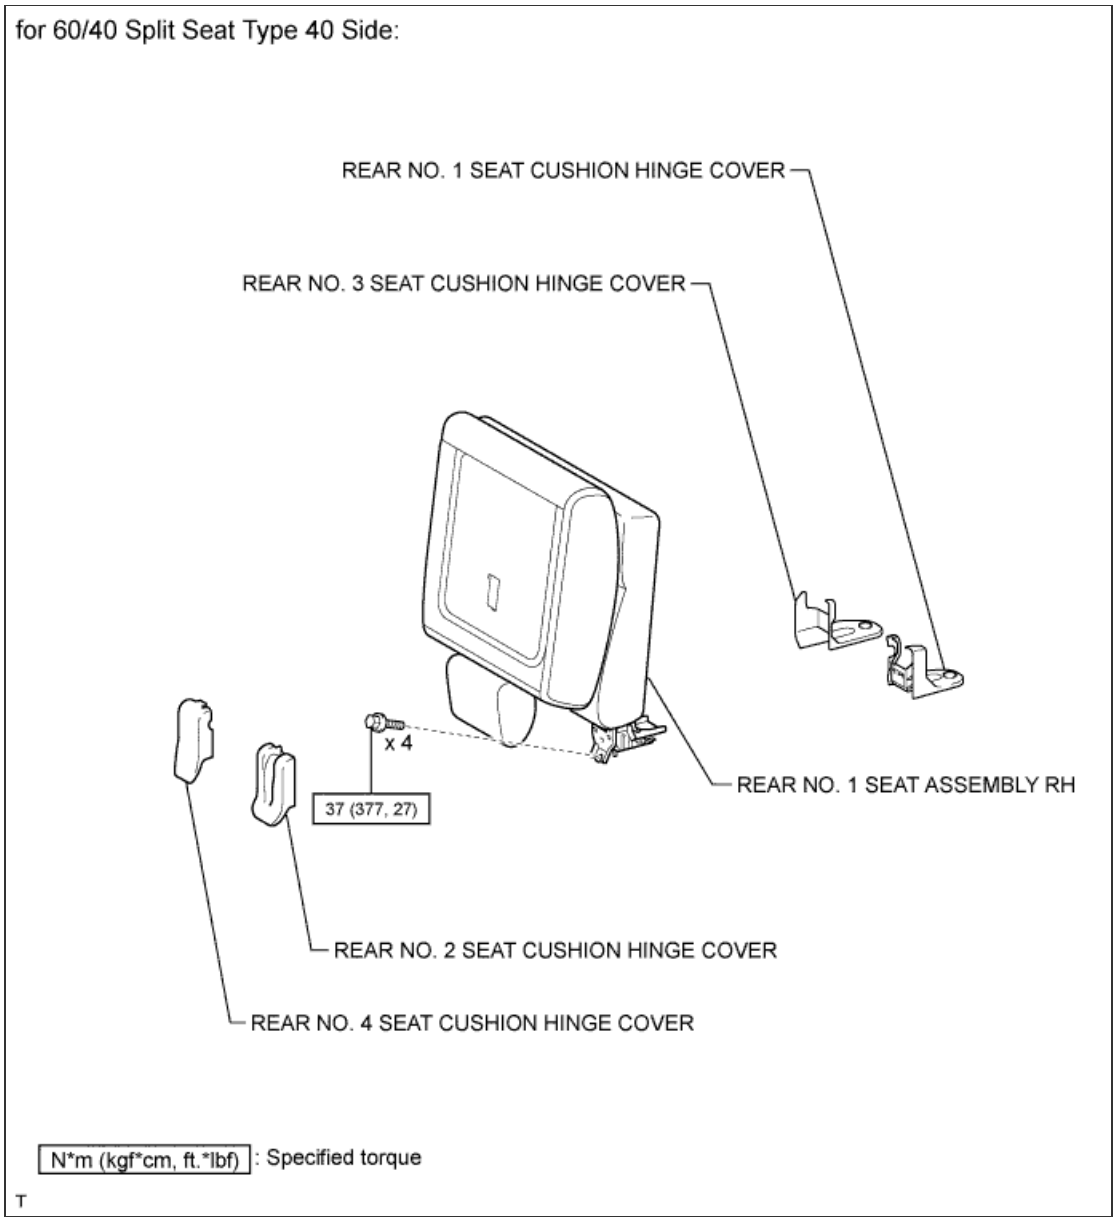
a. Install the ECU with the 2 bolts.

Torque:
31 N*m{ 316 kgf*cm , 23 ft.*lbf }

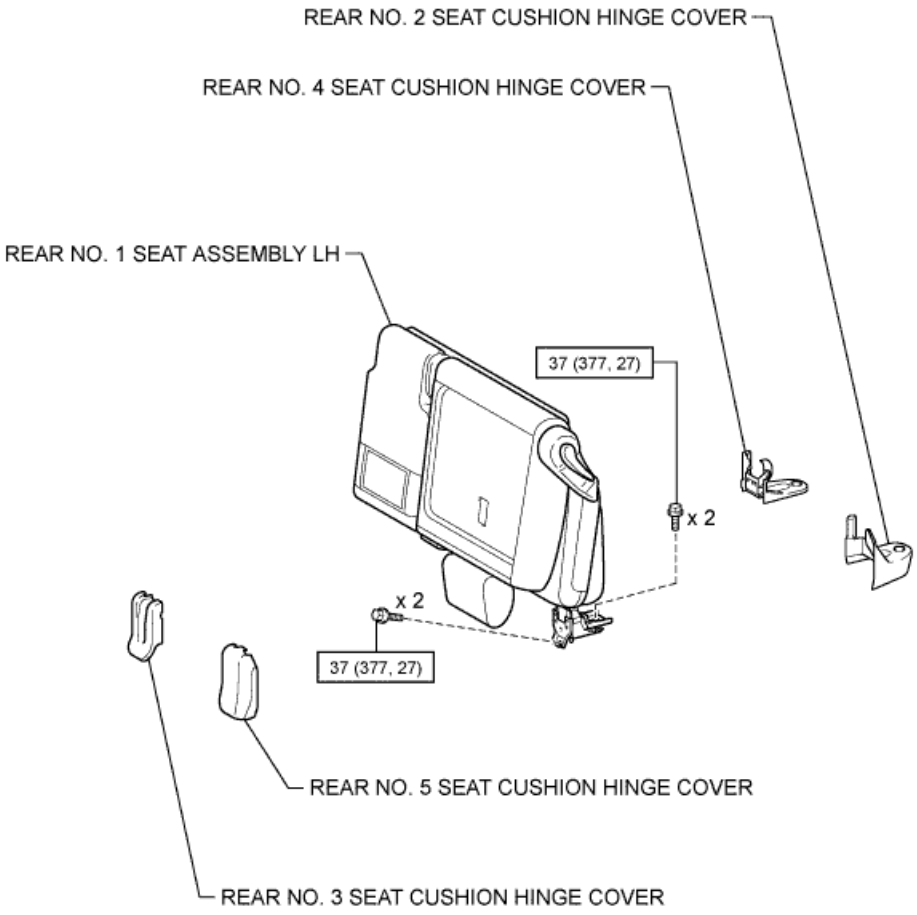
NOTICE:

Do not use the ECU if it has been subjected to physical shocks such as being dropped, etc.

b. Connect the ECU connector.



2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

P

for Preparation Click here

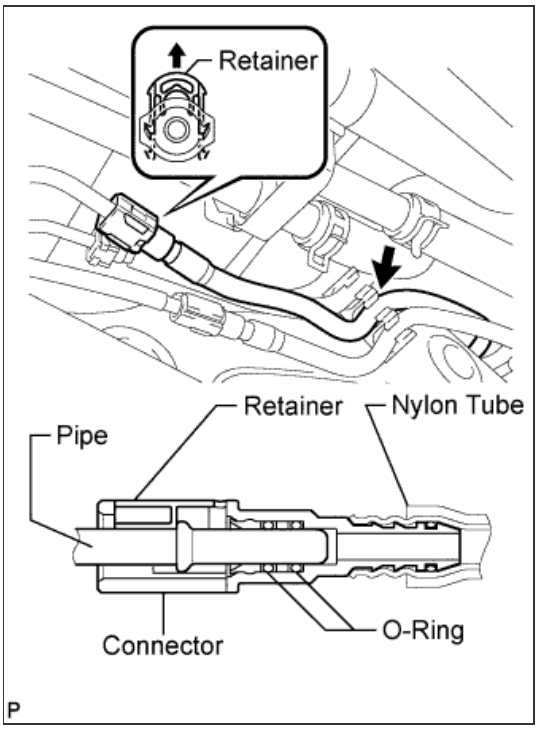
1. DISCHARGE FUEL SYSTEM PRESSURE

a. Discharge the fuel system pressure (Click here).

2. REMOVE FUEL TANK CAP ASSEMBLY

3. REMOVE NO. 1 FUEL TANK PROTECTOR SUB-ASSEMBLY

a. Remove the 5 bolts and fuel tank protector.



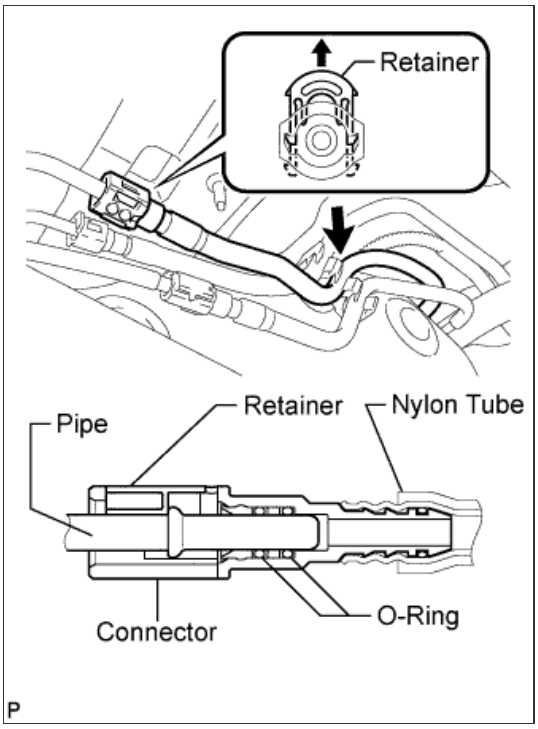
4. DISCONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY (for Single Tank Type)

a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank main tube.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**



5. DISCONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY (for Double Tank Type)

a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank main tube.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**

6. DRAIN FUEL

a. Connect the cable to the negative (-) battery terminal.

b. Connect the intelligent tester to the DLC3.

c. Turn the engine switch on (IG).

NOTICE:

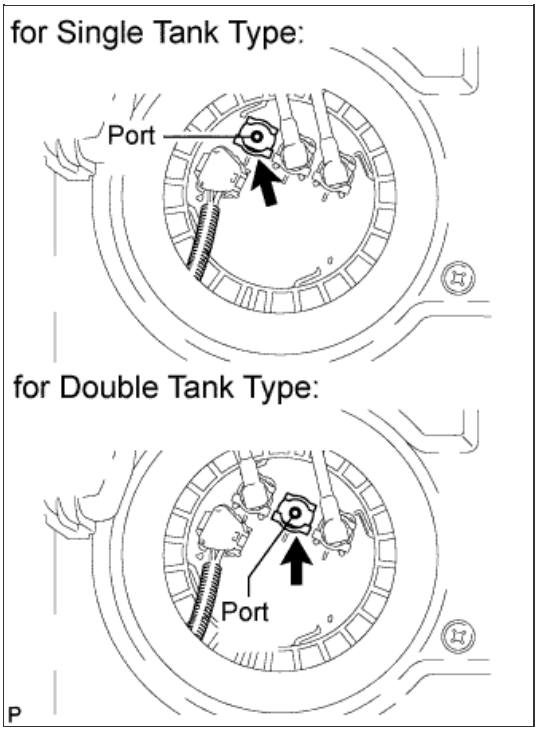
Do not start the engine.

d. Turn the intelligent tester ON.

e. Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Fuel Pump / Speed.

CAUTION:

- **Do not smoke or be near an open flame when working on the fuel system.**
- **Secure good ventilation.**
- **Keep gasoline away from rubber or leather parts.**



HINT:

for Single Tank Type:

If the fuel pump does not operate, remove the fuel tube joint clip and No. 1 fuel tube joint, and drain fuel from the port shown in the illustration.

for Double Tank Type:

If the fuel pump does not operate, remove the fuel tube joint clip and disconnect the fuel tank return tube, and drain fuel from the port shown in the illustration.

7. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

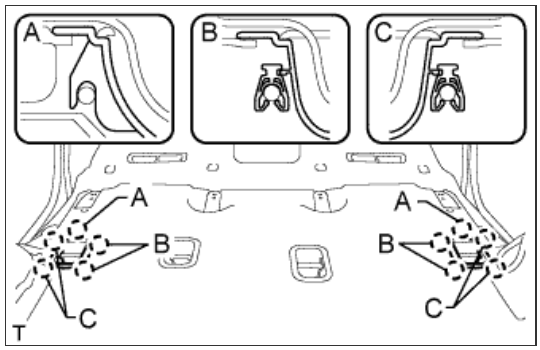
When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

8. REMOVE REAR NO. 1 SEAT ASSEMBLY RH (for 60/40 Split Seat Type 40 Side)

a. Remove the rear No. 1 seat assembly RH (Click here).

9. REMOVE REAR NO. 1 SEAT ASSEMBLY LH (for 60/40 Split Seat Type 60 Side)

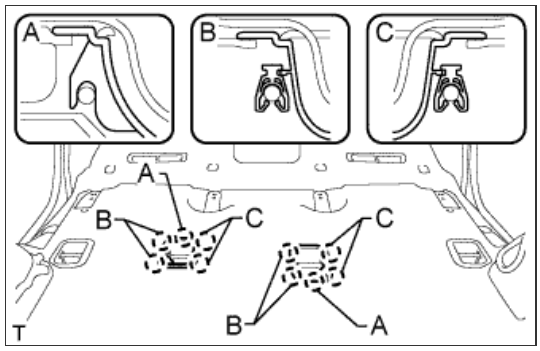
a. Remove the rear No. 1 seat assembly LH (Click here).



10. REMOVE REAR NO. 2 SEAT ASSEMBLY

a. for Face to Face Seat Type:
Remove the rear No. 2 seat assembly (Click here).

b. except Face to Face Seat Type:
Remove the rear No. 2 seat assembly (Click here).

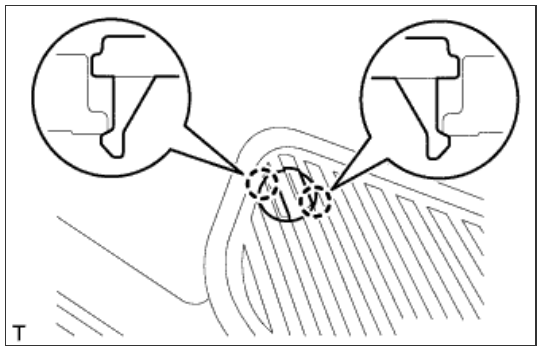


11. REMOVE REAR NO. 1 SEAT PROTECTOR

a. Detach the 10 claws and remove the 2 seat protectors.

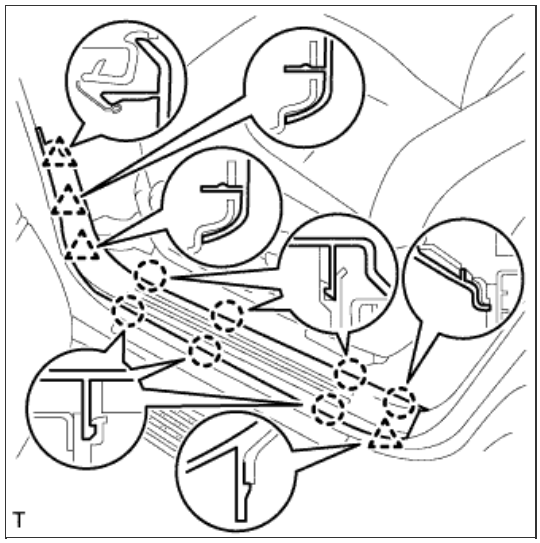
12. REMOVE REAR NO. 2 SEAT PROTECTOR

a. Detach the 10 claws and remove the 2 seat protectors.



13. REMOVE REAR STEP COVER

HINT:

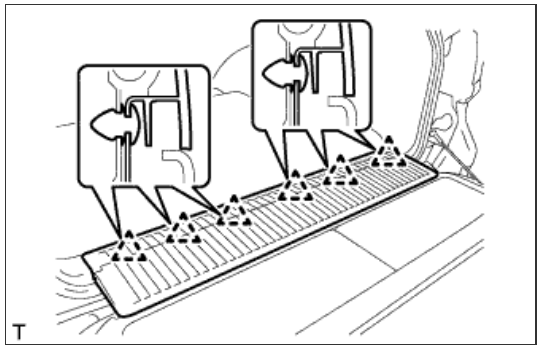


Use the same procedure to remove the step cover on the other side.

a. Detach the 2 claws and remove the step cover.

14. REMOVE REAR DOOR SCUFF PLATE LH

a. Detach the 7 claws and 4 clips, and remove the scuff plate.



15. REMOVE REAR DOOR SCUFF PLATE RH

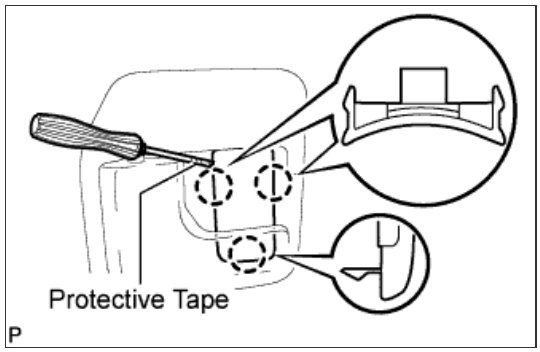
HINT:

Use the same procedures described for the LH side.

16. REMOVE REAR FLOOR MAT REAR SUPPORT PLATE

a. Detach the 6 clips and remove the support plate.

17. REMOVE REAR SEAT COVER CAP (w/ Rear No. 2 Seat, except Face to Face Seat Type)



HINT:

Use the same procedure to remove the rear seat cover cap on the other side.

a. Using a screwdriver, detach the 3 claws and remove the rear seat cover cap.

HINT:

Tape the screwdriver tip before use.

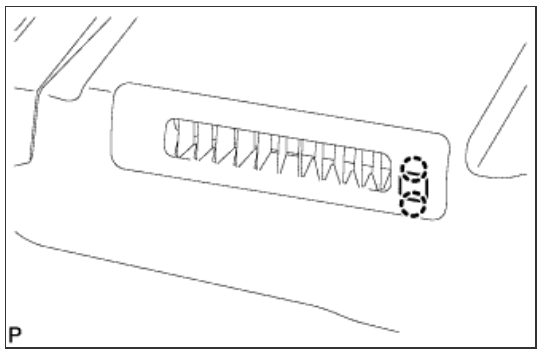
18. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY LH

a. w/ Sliding Roof:
Remove the front quarter trim panel assembly LH (Click here).

b. w/o Sliding Roof:
Remove the front quarter trim panel assembly LH (Click here).

19. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY RH

a. w/ Sliding Roof:
Remove the front quarter trim panel assembly RH (Click here).



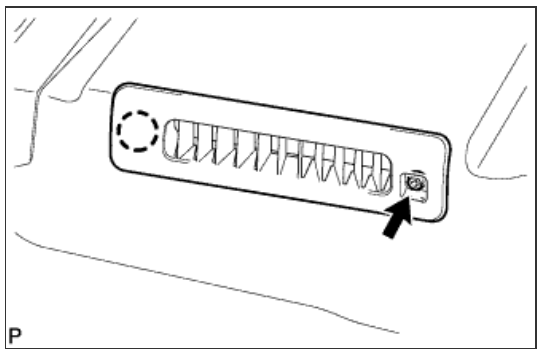
b. w/o Sliding Roof:
Remove the front quarter trim panel assembly RH (Click here).

20. REMOVE AIR DUCT PLUG (w/ Rear Air Conditioning System)

a. Detach the 2 claws and remove the plug.

HINT:

Use the same procedures for both sides.



21. REMOVE REAR AIR DUCT GUIDE (w/ Rear Air Conditioning System)

a. Remove the screw.

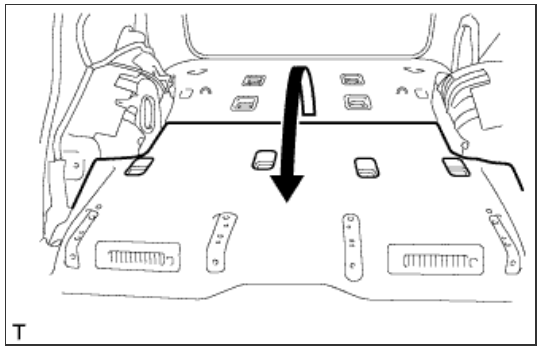
b. Detach the claw and remove the guide.

HINT:

Use the same procedures for both sides.

22. REMOVE FRONT FLOOR CARPET ASSEMBLY

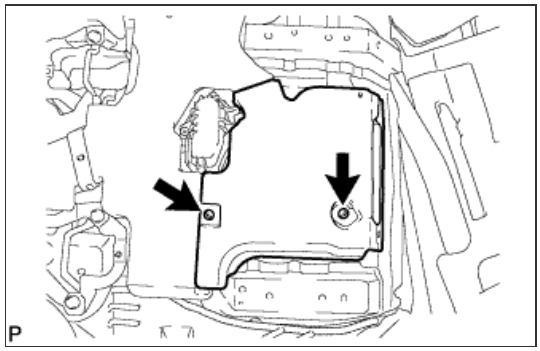
a. w/ Rear Air Conditioning System:
Turn over the floor carpet.



HINT:

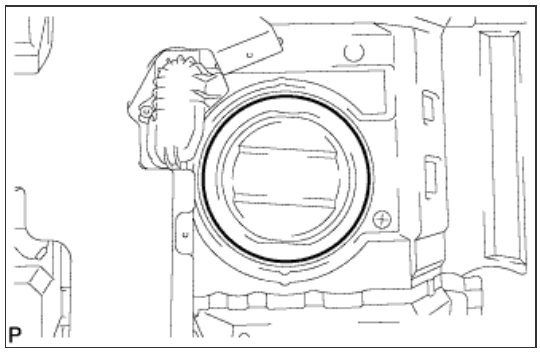
Fold back the floor carpet so that the air duct can be removed.

b. w/o Rear Air Conditioning System:
Turn over the floor carpet.

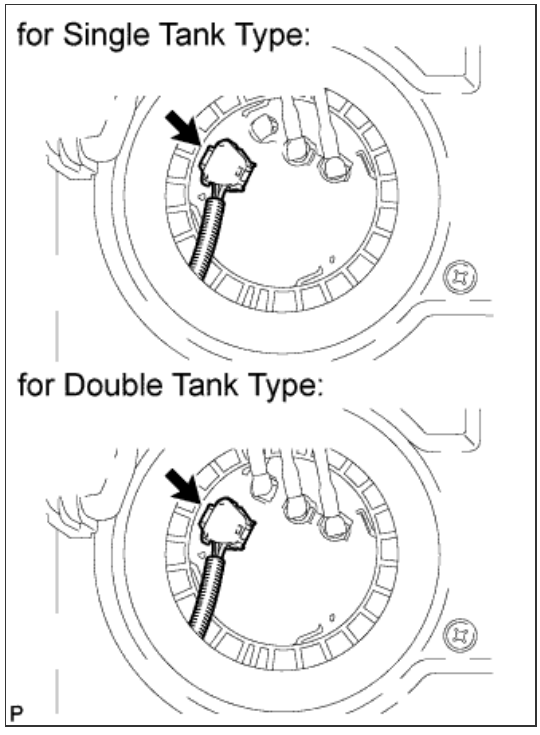


HINT:

Fold back the floor carpet so that the service hole cover can be removed.



23. REMOVE REAR FLOOR NO. 2 SERVICE HOLE COVER

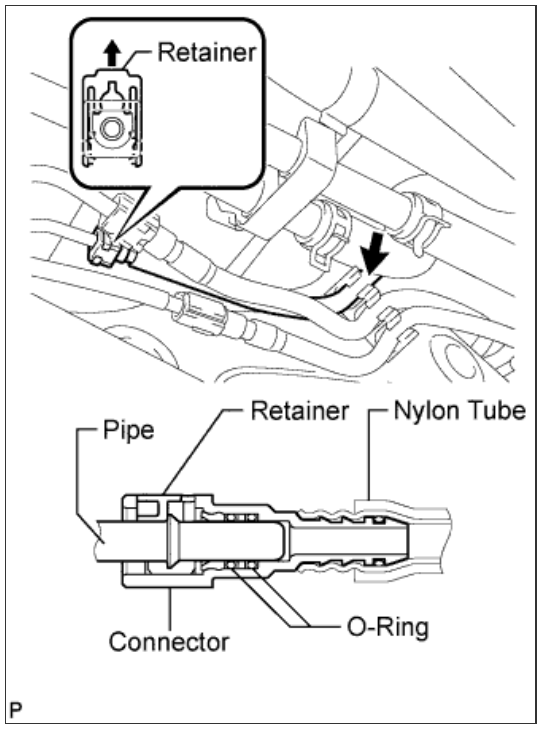


a. w/ Rear Air Conditioning System:
Remove the 2 screws and air duct.

b. Remove the service hole cover.

c. Disconnect the fuel pump and fuel sender gauge connector.

24. DISCONNECT NO. 2 FUEL TANK BREATHER TUBE (for Single Tank Type)



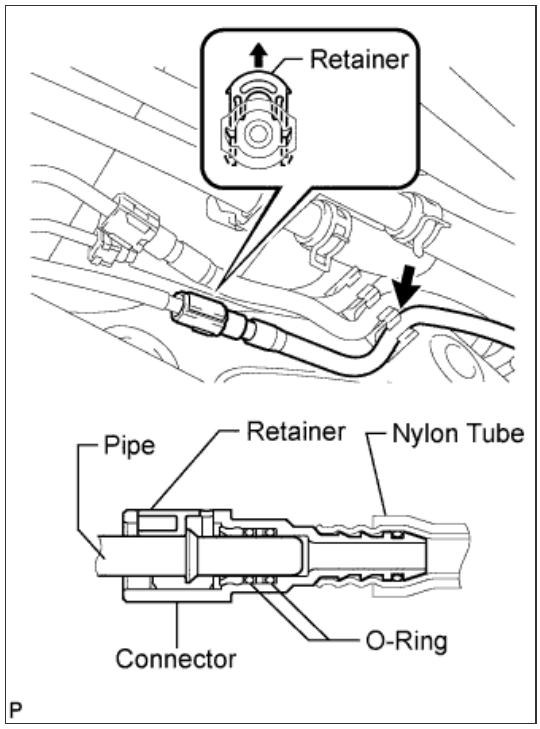
a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank breather tube.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**

- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**



25. DISCONNECT FUEL TANK RETURN TUBE (for Single Tank Type)

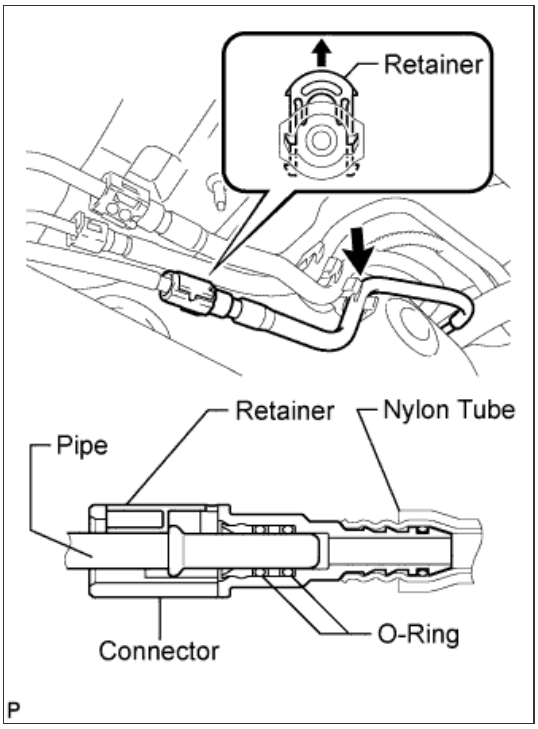
a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank return tube.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**

26. DISCONNECT FUEL TANK RETURN TUBE (for Double Tank Type)



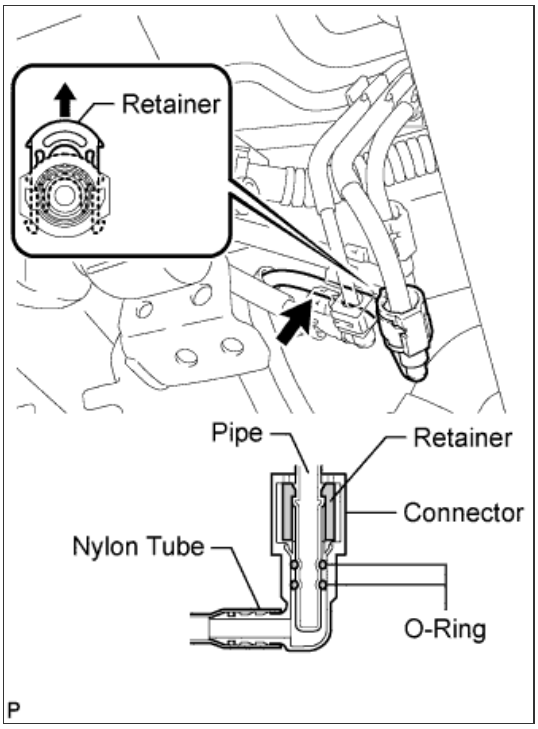
a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank return tube.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**

- Do not forcefully bend or twist the nylon tube.
- Check for foreign matter on the pipe seal surface. Clean if necessary.
- Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.
- If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.



27. DISCONNECT NO. 2 FUEL MAIN TUBE SUB-ASSEMBLY (for Double Tank Type)

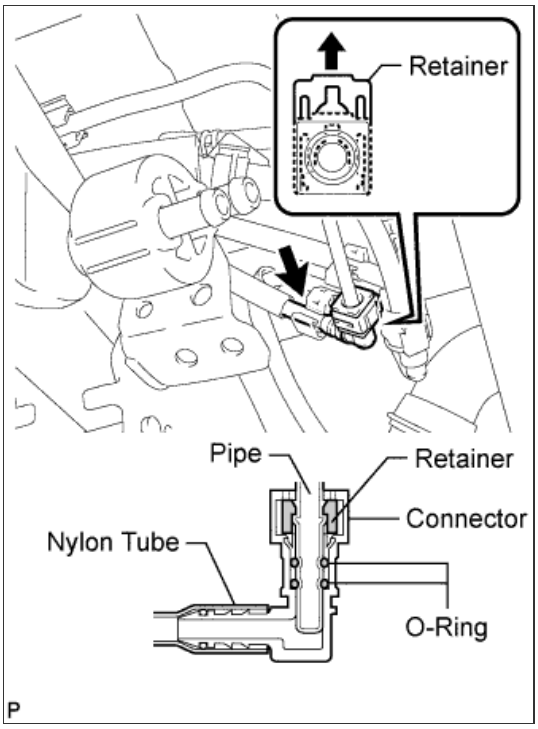
a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank main tube.

NOTICE:

- Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.
- Do not use any tools to separate the pipe and connector.
- Do not forcefully bend or twist the nylon tube.
- Check for foreign matter on the pipe seal surface. Clean if necessary.
- Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.
- If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.

28. DISCONNECT NO. 2 FUEL TANK BREATHER TUBE (for Double Tank Type)



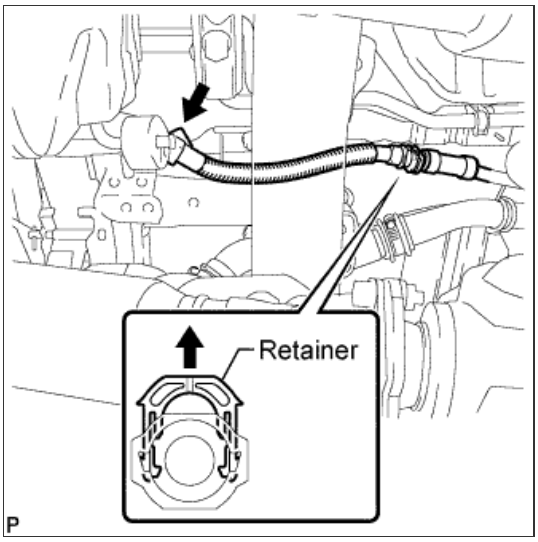
a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank breather tube.

NOTICE:

- Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.
- Do not use any tools to separate the pipe and connector.

- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**



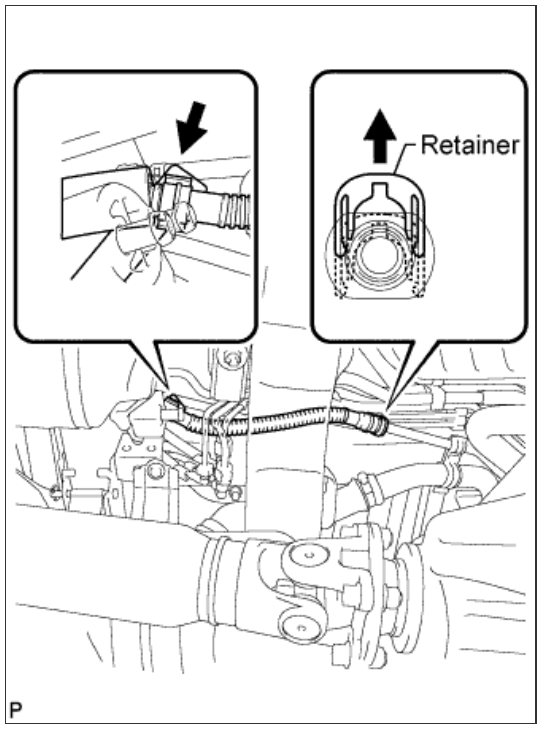
29. DISCONNECT FUEL TANK BREATHER TUBE (for Single Tank Type)

a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank breather tube from the filler pipe.

NOTICE:

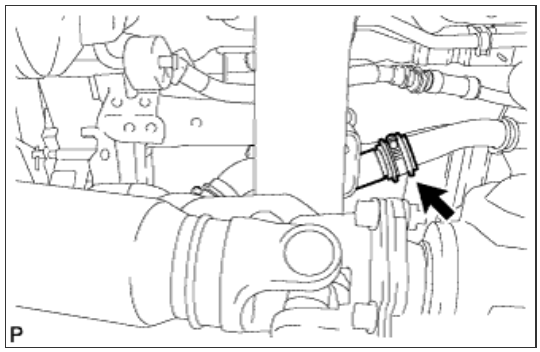
- **Do not use any tools in this procedure.**
- **Check for any dirt and foreign matter contamination in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**



30. DISCONNECT FUEL TANK BREATHER TUBE (for Double Tank Type)

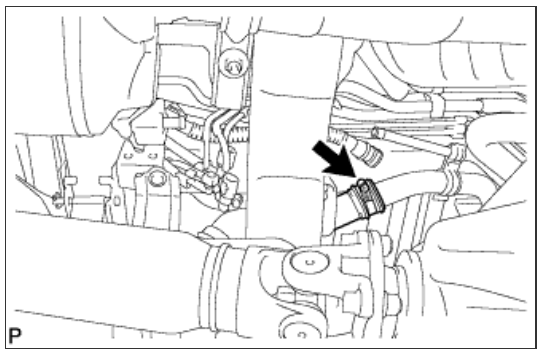
a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank breather tube from the filler pipe.



NOTICE:

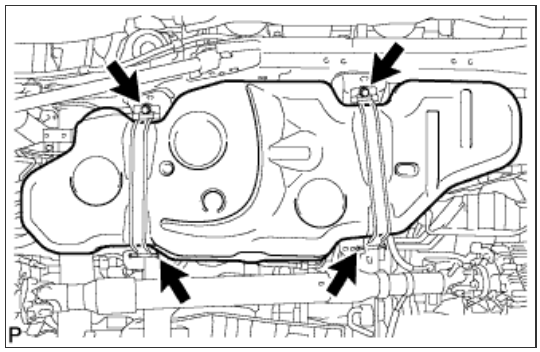
- **Do not use any tools in this procedure.**
- **Check for any dirt and foreign matter contamination in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**



31. DISCONNECT FUEL TANK TO FILLER PIPE HOSE (for Single Tank Type)

a. Disconnect the hose from the filler pipe.

32. DISCONNECT FUEL TANK TO FILLER PIPE HOSE (for Double Tank Type)

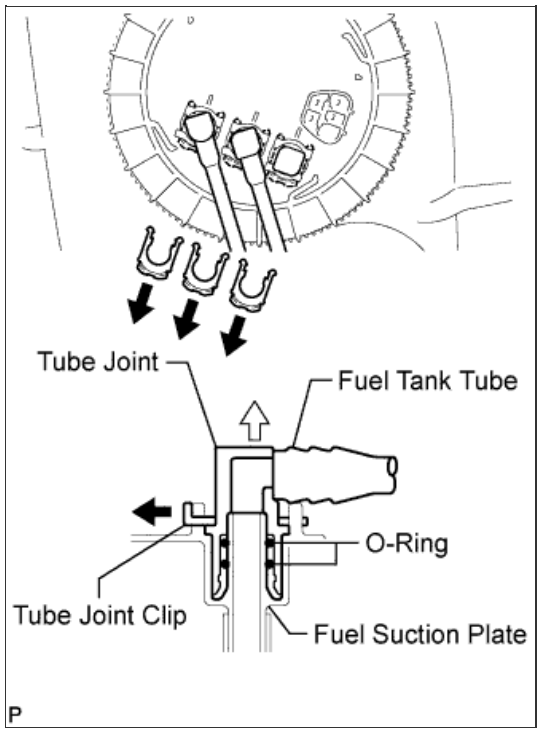


a. Disconnect the hose from the filler pipe.

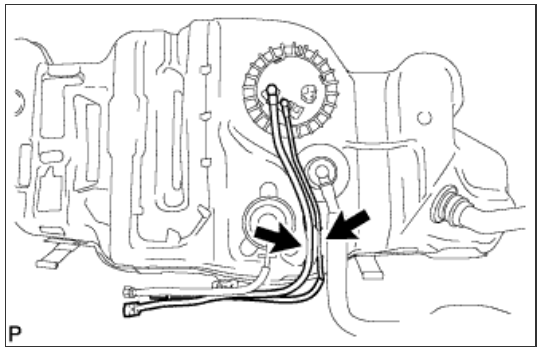
33. REMOVE FUEL TANK SUB-ASSEMBLY

a. Place a transmission jack under the fuel tank.

b. Remove the 2 bolts, 2 clips, 2 pins and 2 fuel tank bands.



34. REMOVE FUEL TANK MAIN TUBE SUB-ASSEMBLY AND FUEL TANK RETURN TUBE SUB-ASSEMBLY (for Single Tank Type)



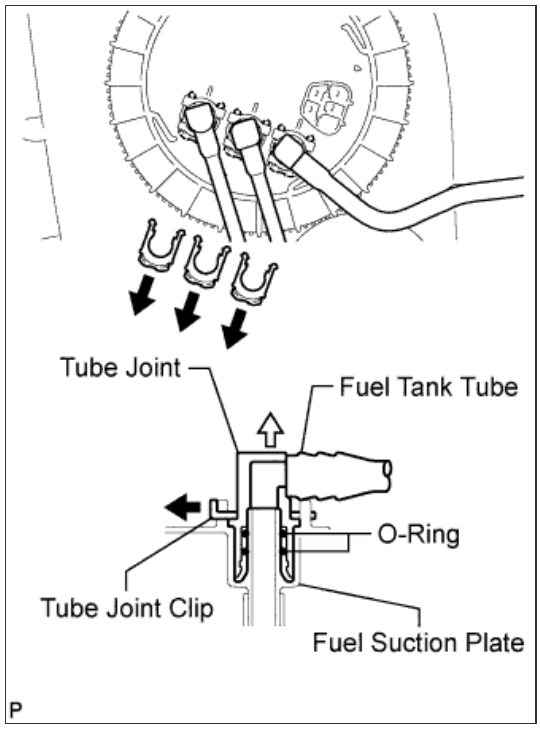
a. Remove the 3 fuel tube joint clips and pull out the 2 fuel tubes and No. 1 fuel tube joint.

NOTICE:

- **Remove any dirt and foreign matter on the fuel tube oint before performing this work.**
- **Do not allow any scratches or foreign matter on the parts when disconnecting them, as the fuel tube oint contains the O-rings that seal the plug.**
- **Perform this work by hand. Do not use any tools.**
- **Do not forcibly bend, twist or turn the nylon tube.**
- **Protect the disconnected part by covering it with a plastic bag and tape after disconnecting the fuel tubes.**

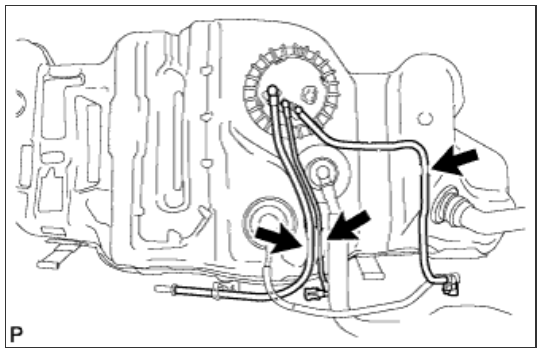
b. Remove the 2 fuel tubes from the fuel tank.

35. REMOVE FUEL TANK MAIN TUBE, FUEL TANK RETURN TUBE AND NO. 2 FUEL TANK MAIN TUBE SUB-ASSEMBLY (for Double Tank Type)



a. Remove the 3 fuel tube joint clips and pull out the 3 fuel tubes.

NOTICE:

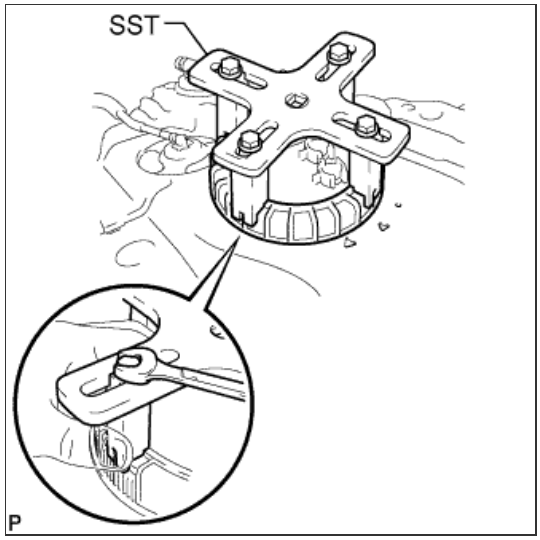


- **Remove any dirt and foreign matter on the fuel tube oint before performing this work.**
- **Do not allow any scratches or foreign matter on the parts when**

disconnecting them, as the fuel tube oint contains the O-rings that seal the plug.

- Perform this work by hand. Do not use any tools.
- Do not forcibly bend, twist or turn the nylon tube.
- Protect the disconnected part by covering it with a plastic bag and tape after disconnecting the fuel tubes.

b. Remove the 3 fuel tubes from the fuel tank.



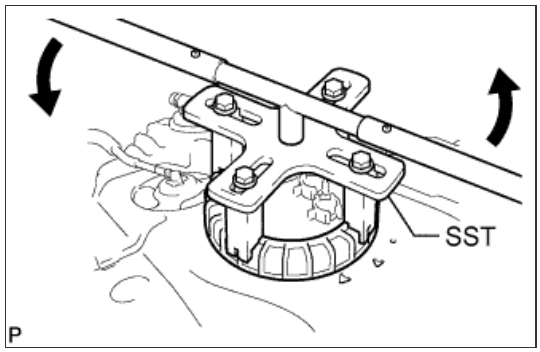
36. REMOVE FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY

a. Set SST on the retainer.

SST
09808-14030

HINT:

- **Securely attach the claws of SST to the protrusion of the retainer and fix SST in place.**
- **Install SST while pressing the claws of SST against the retainer (towards the center of SST).**



b. Using SST, loosen the retainer.

SST
09808-14030

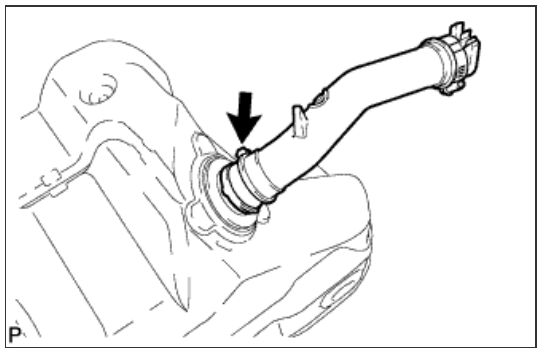
NOTICE:

- **Do not use any tools other than those specified in this operation. Damage to the retainer or the fuel tank may result.**
- **While pressing down on SST so that the claws of SST do not slip off the protrusion of the retainer, turn the retainer counterclockwise to loosen it.**

HINT:

The protrusion of the retainer fit in the ends of SST.

Text in Illustration

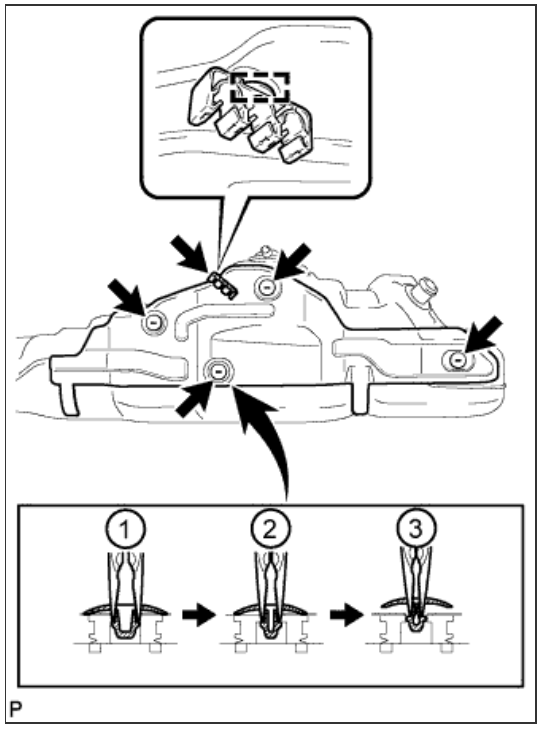


➡	Turn

c. Remove the retainer while holding the fuel suction tube assembly by hand.

d. Remove the gasket from the fuel tank.

37. REMOVE FUEL TANK TO FILLER PIPE HOSE

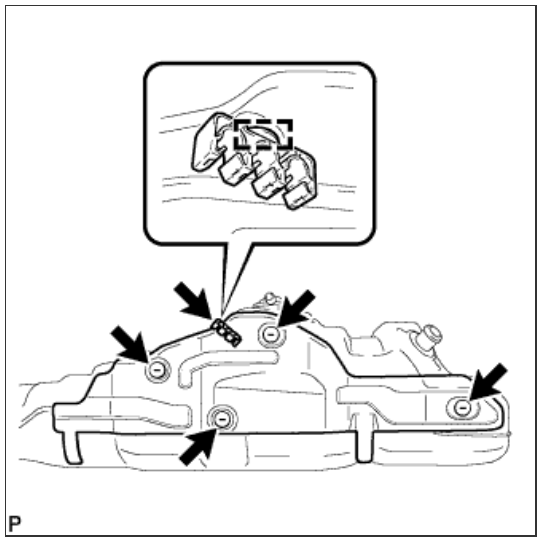


a. Remove the hose from the fuel tank.

38. REMOVE NO. 1 FUEL TANK HEAT INSULATOR

a. Remove the fuel tube clamp from the heat insulator.

b. Using needle-nose pliers, remove the 4 clips shown in the illustration and then remove the heat insulator.

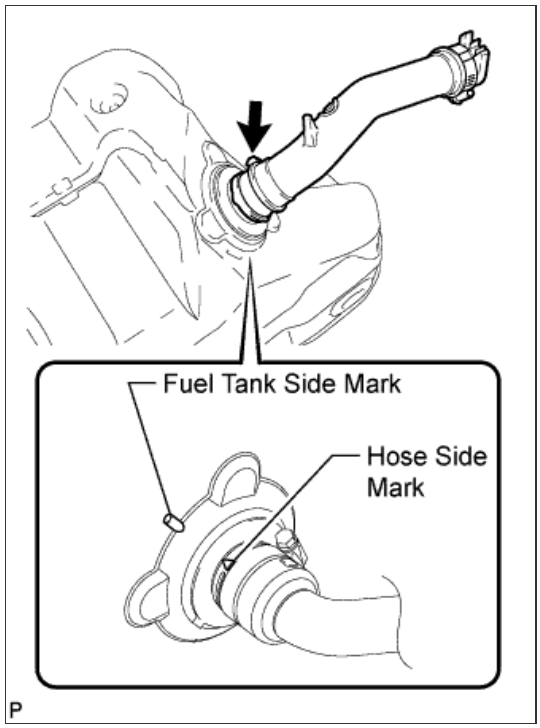


for Preparation Click here

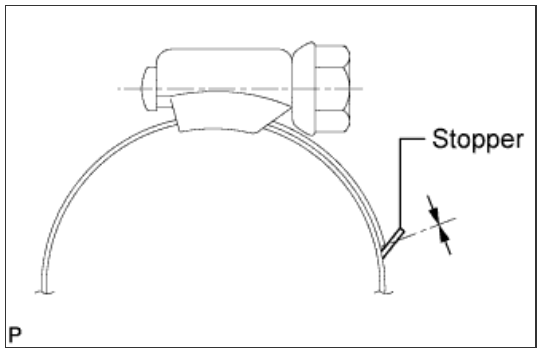
1. INSTALL NO. 1 FUEL TANK HEAT INSULATOR

a. Install the heat insulator with the 4 clips.

b. Install the fuel tube clamp to the heat insulator.



2. INSTALL FUEL TANK TO FILLER PIPE HOSE



a. Install the hose to the fuel tank as shown in the illustration.

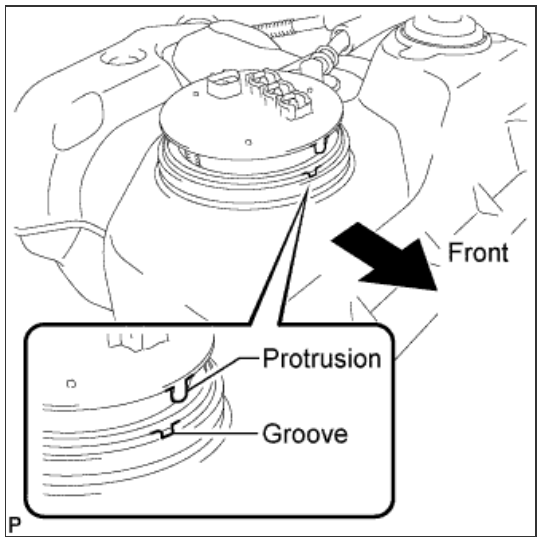
HINT:

- **Align the fuel tank side mark with the hose side mark when installing the hose.**

- **Tighten the hose clamp until the end of the hose clamp contacts the stopper as shown in the illustration.**

3. INSTALL FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY

a. Apply a light coat of gasoline or grease to a new gasket, and install it to the fuel tank.



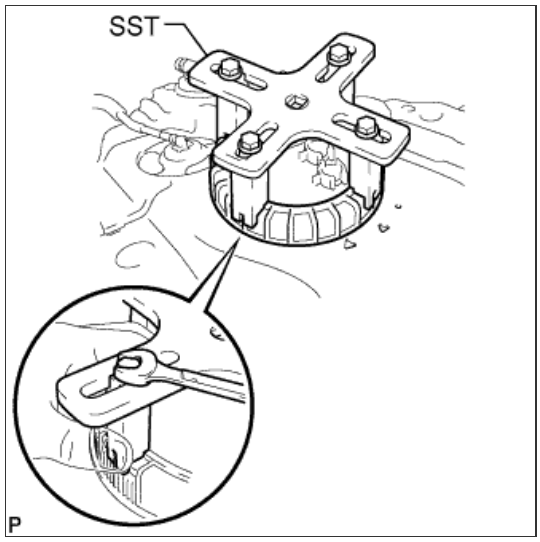
b. Install the fuel suction with pump and gauge tube into the fuel tank.

NOTICE:

Be careful not to bend the arm of the fuel sender gauge.

HINT:

Align the protrusion of the fuel suction with pump and gauge tube with the groove of the fuel tank.



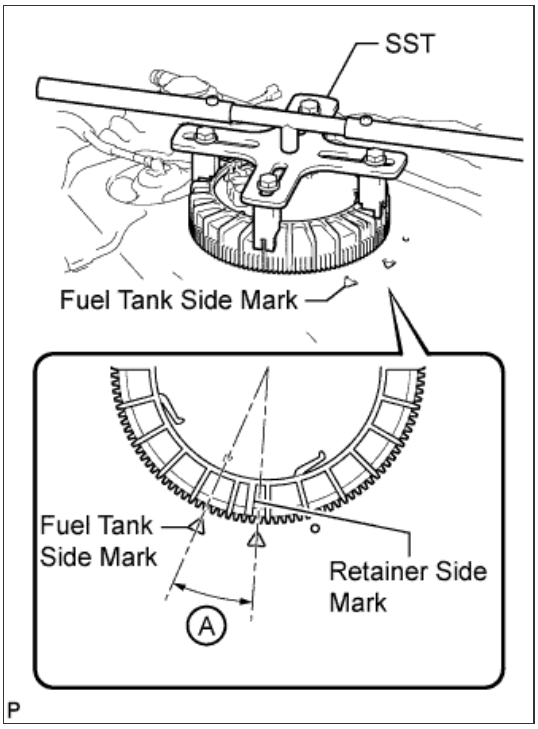
c. Put the retainer on the fuel tank. While holding the fuel suction with pump and gauge tube, tighten the retainer one complete turn by hand.

d. Set SST on the retainer.

SST
09808-14030

HINT:

- **Hold the fuel suction tube assembly upright by hand to ensure that the fuel suction tube gasket is not moved out of position.**
- **Securely attach the claws of SST to the protrusions of the retainer and fix SST in place.**
- **Install SST while pressing the claws of SST against the retainer (toward the center of SST).**

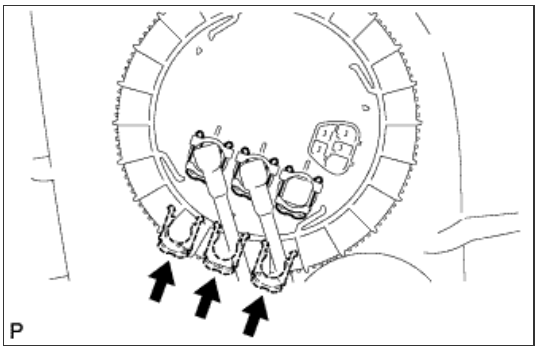


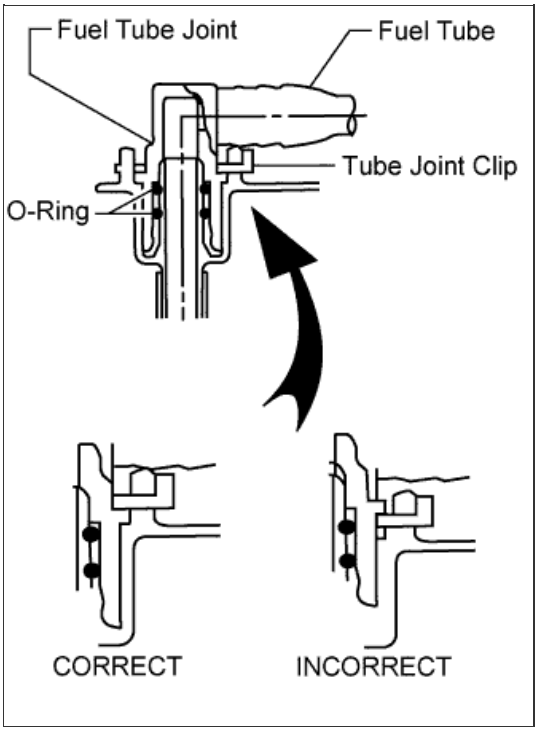
e. Using SST, tighten the retainer until the mark on the retainer is within range A on the fuel tank as shown in the illustration.

SST
09808-14030

HINT:

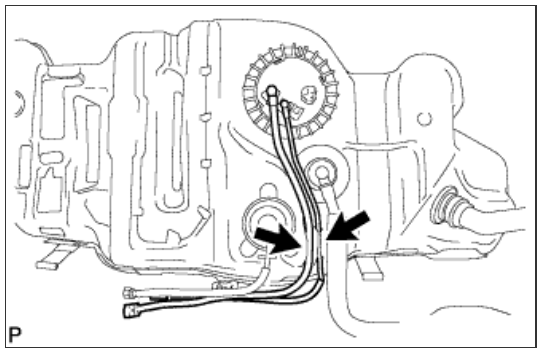
Fit the tips of SST onto the ribs of the retainer.





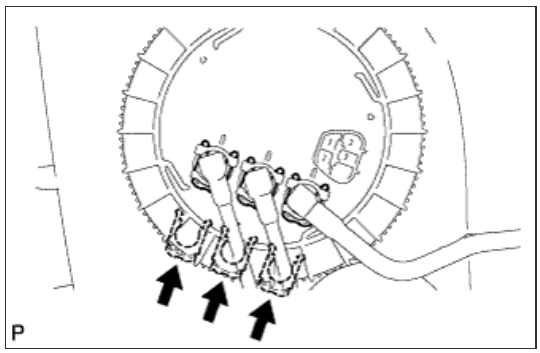
4. INSTALL FUEL TANK MAIN TUBE SUB-ASSEMBLY AND FUEL TANK RETURN TUBE SUB-ASSEMBLY (for Single Tank Type)

a. Install the 2 fuel tank tubes and No. 1 fuel tube joint with the 3 tube joint clips.

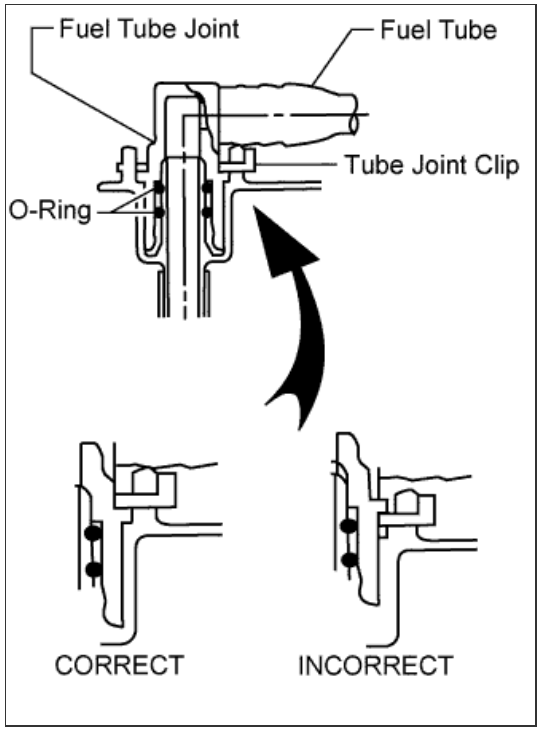


NOTICE:

- **Check that there are no scratches or foreign objects on the connecting parts.**
- **Check that the fuel tube joints are inserted securely.**
- **Check that the tube joint clips are on the collars of the fuel tube joints.**
- **After installing the tube joint clips, check that the fuel tube joints cannot be pulled off.**

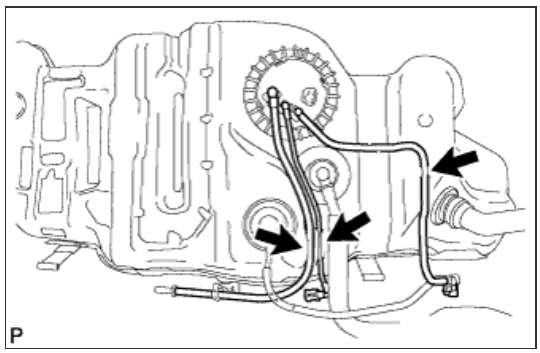


b. Install the 2 fuel tank tubes to the fuel tank.



5. INSTALL FUEL TANK MAIN TUBE, FUEL TANK RETURN TUBE AND NO. 2 FUEL TANK MAIN TUBE SUB-ASSEMBLY (for Double Tank Type)

a. Install the 3 fuel tank tubes with the 3 tube joint clips.



NOTICE:

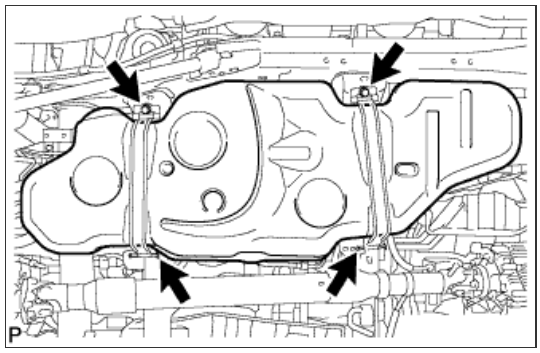
- **Check that there are no scratches or foreign objects on the connecting parts.**
- **Check that the fuel tube joints are inserted securely.**
- **Check that the tube joint clips are on the collars of the fuel tube joints.**
- **After installing the tube joint clips, check that the fuel tube joints cannot be pulled off.**

b. Install the 3 fuel tank tubes to the fuel tank.

6. INSTALL FUEL TANK SUB-ASSEMBLY

a. Set the fuel tank on a transmission jack and raise the fuel tank.

NOTICE:



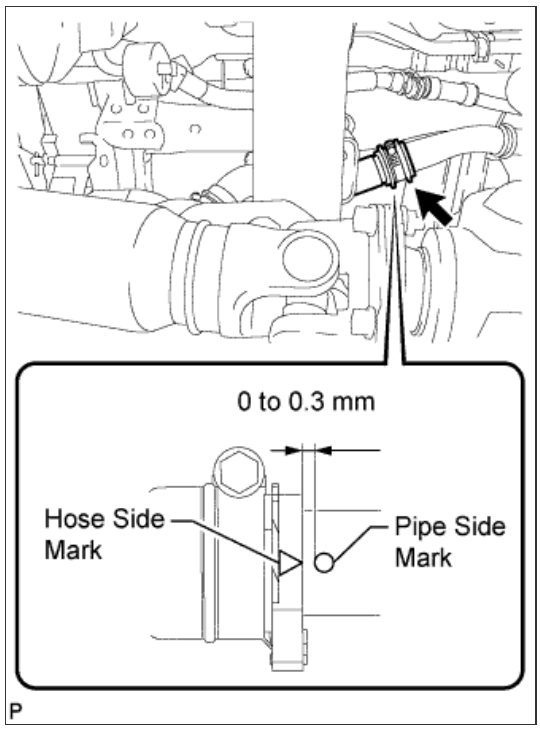
Do not allow the fuel tank to contact the vehicle, especially the differential.

b. Raise the transmission jack.

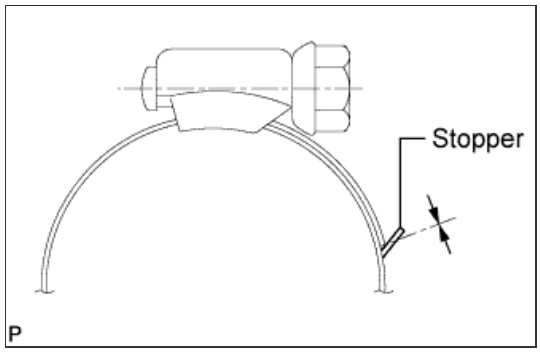
c. Install the 2 fuel tank bands with the 2 pins and 2 clips.

d. Connect the 2 fuel tank bands with the 2 bolts.

Torque:
40 N m 408 kgf cm , 30 ft. lbf



. CONNECT FUEL TANK TO FILLER PIPE HOSE (for Single Tank Type)

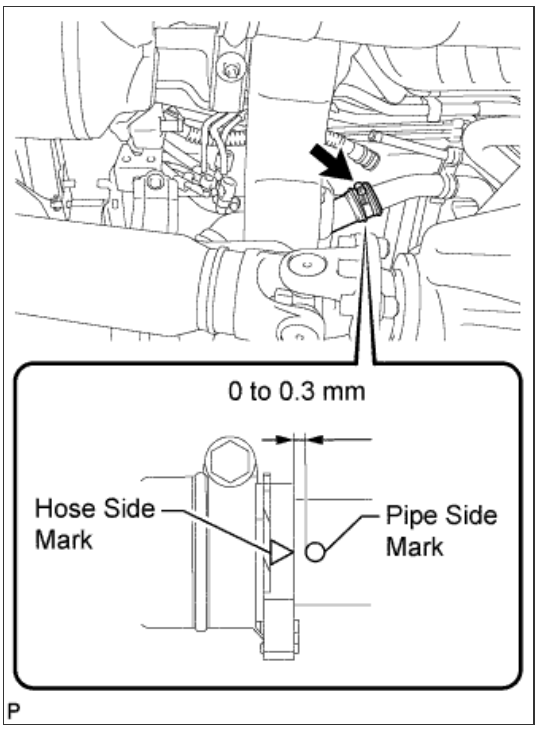


a. Connect the hose to the filler pipe as shown in the illustration.

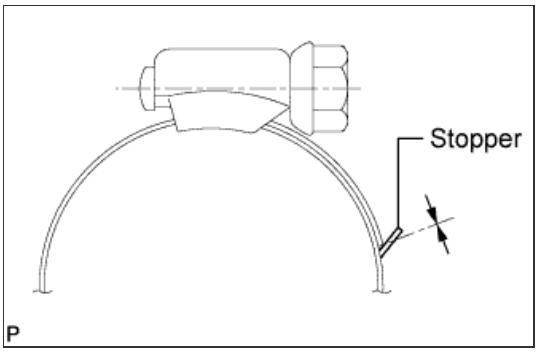
HINT:

- **Install the hose so that the distance between the fuel tank inlet pipe side mark and fuel tank to filler pipe hose side mark is 0 to 0.3 mm (0 to 0.0118 in.) as shown in the illustration.**

- **Tighten the hose clamp until the end of the hose clamp contacts the stopper as shown in the illustration.**



8. CONNECT FUEL TANK TO FILLER PIPE HOSE (for Double Tank Type)



a. Connect the hose to the filler pipe as shown in the illustration.

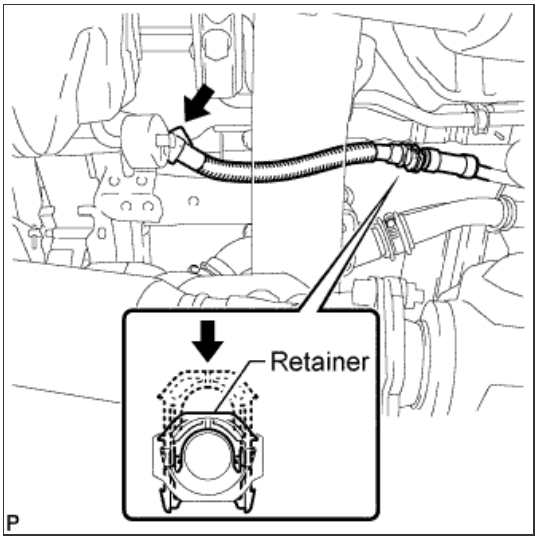
HINT:

- **Install the hose so that the distance between the fuel tank inlet pipe side mark and fuel tank to filler pipe hose side mark is 0 to 0.3 mm (0 to 0.0118 in.) as shown in the illustration.**

- **Tighten the hose clamp until the end of the hose clamp contacts the stopper as shown in the illustration.**

9. CONNECT FUEL TANK BREATHER TUBE (for Single Tank Type)

a. Connect the fuel tank breather tube to the filler pipe and push the retainer.



HINT:

Push the parts together firmly until a "click" sound is heard.

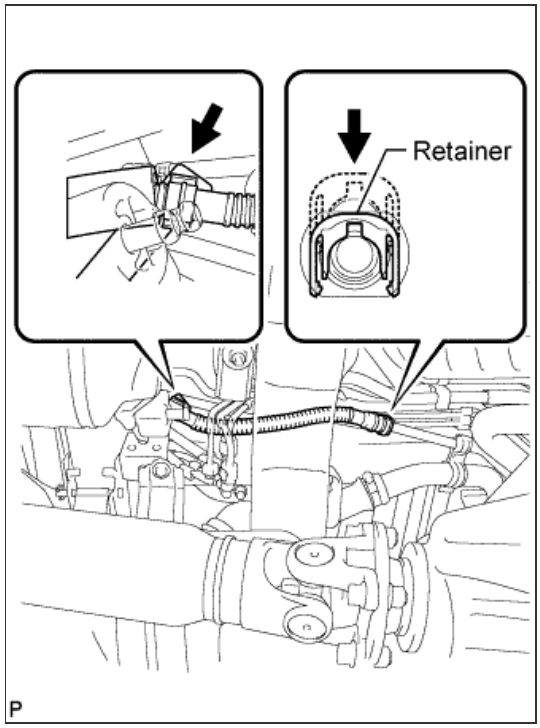
NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

10. CONNECT FUEL TANK BREATHER TUBE (for Double Tank Type)

a. Connect the fuel tank breather tube to the filler pipe and push the retainer.



HINT:

Push the parts together firmly until a "click" sound is heard.

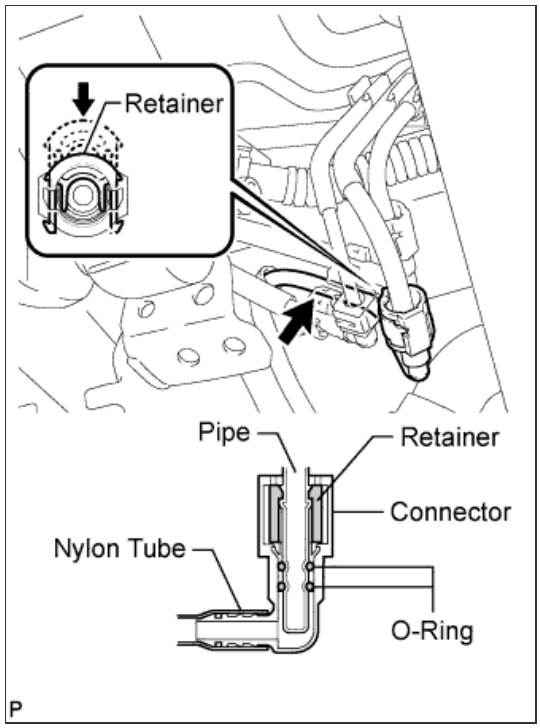
NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

11. CONNECT NO. 2 FUEL MAIN TUBE SUB-ASSEMBLY (for Double Tank Type)

a. Connect the fuel main tube and push the retainer.



HINT:

Push the parts together firmly until a "click" sound is heard.

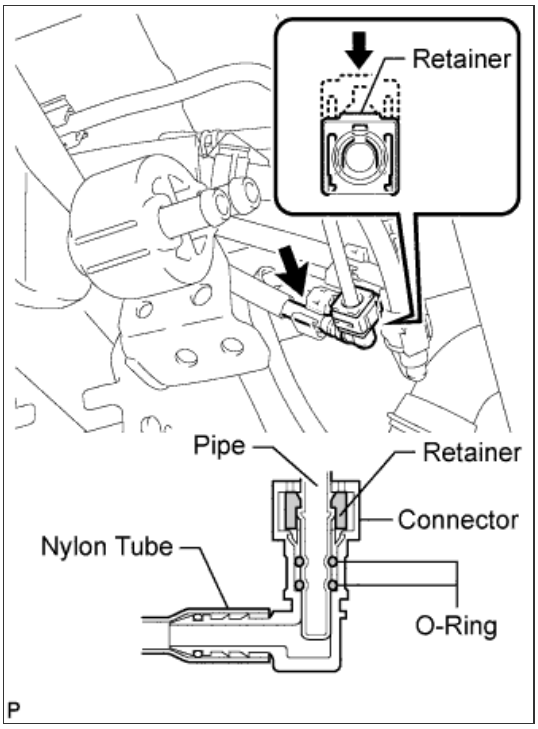
NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

12. CONNECT NO. 2 FUEL TANK BREATHER TUBE (for Double Tank Type)

a. Connect the fuel tank breather tube and push the retainer.



HINT:

Push the parts together firmly until a "click" sound is heard.

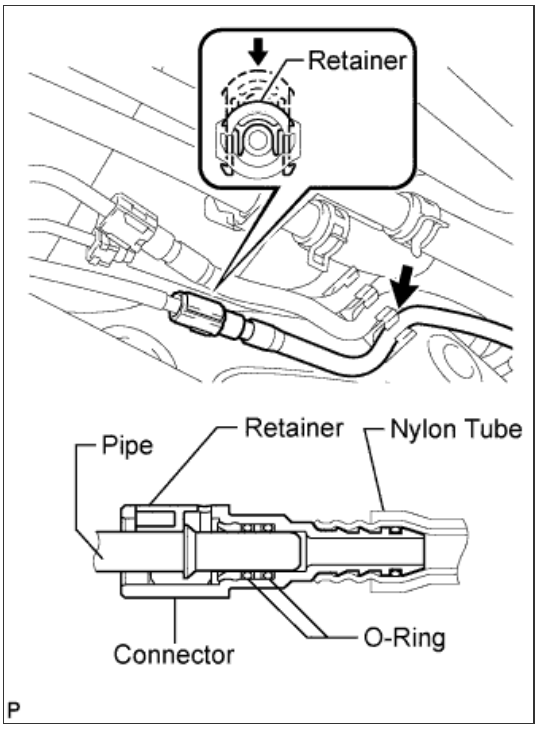
NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

13. CONNECT FUEL TANK RETURN TUBE (for Single Tank Type)

a. Connect the fuel tank return tube and push the retainer.



HINT:

Push the parts together firmly until a "click" sound is heard.

NOTICE:

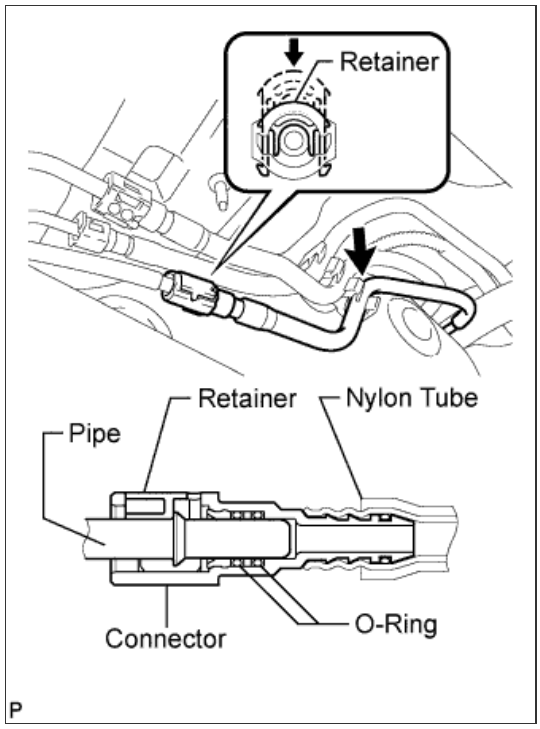
- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

14. CONNECT FUEL TANK RETURN TUBE (for Double Tank Type)

a. Connect the fuel tank return tube and push the retainer.

HINT:



Push the parts together firmly until a "click" sound is heard.

NOTICE:

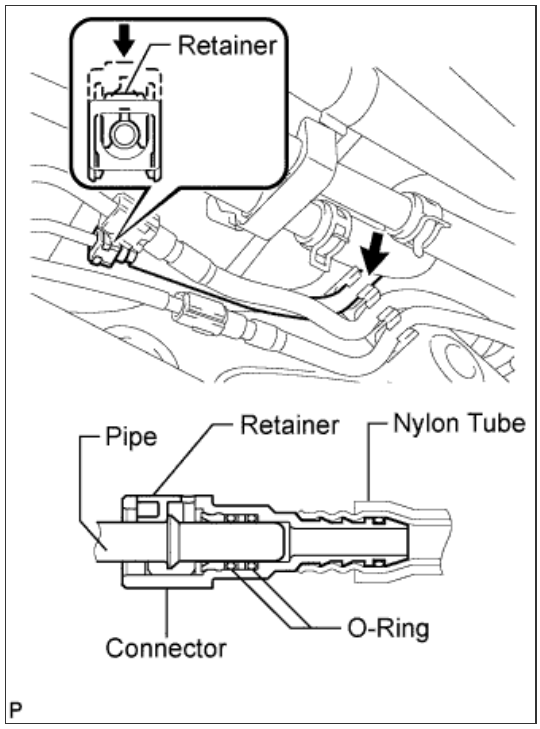
- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**

- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

15. CONNECT NO. 2 FUEL TANK BREATHER TUBE (for Single Tank Type)

a. Connect the fuel tank breather tube and push the retainer.



HINT:

Push the parts together firmly until a "click" sound is heard.

NOTICE:

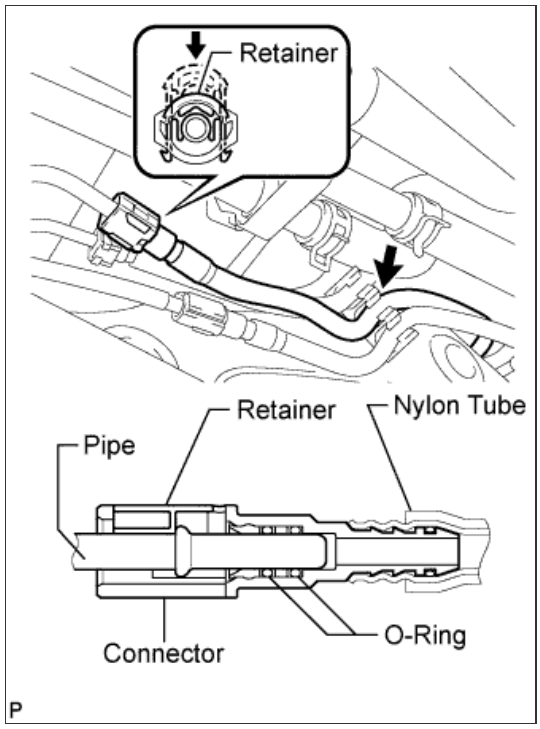
- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

16. CONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY (for Single Tank Type)

a. Connect the fuel tank main tube and push the retainer.

HINT:



Push the parts together firmly until a "click" sound is heard.

NOTICE:

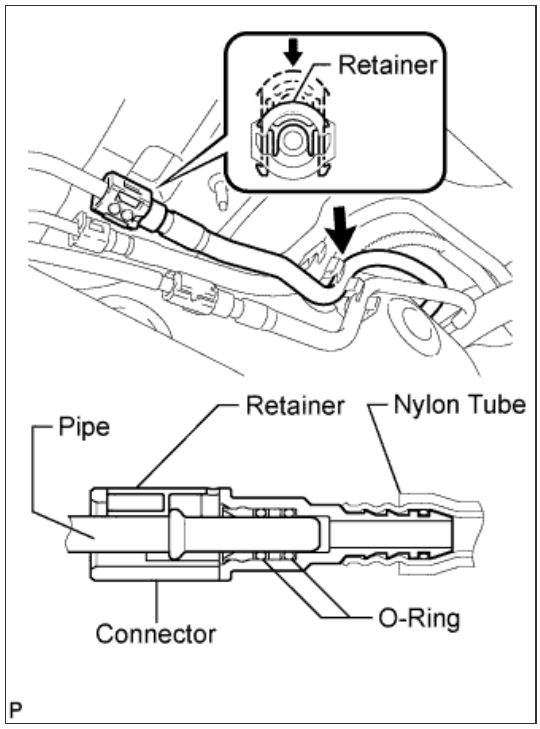
- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**

- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

17. CONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY (for Double Tank Type)

a. Connect the fuel tank main tube and push the retainer.

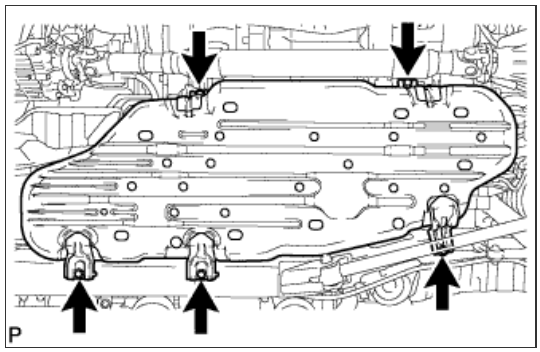


HINT:

Push the parts together firmly until a "click" sound is heard.

NOTICE:

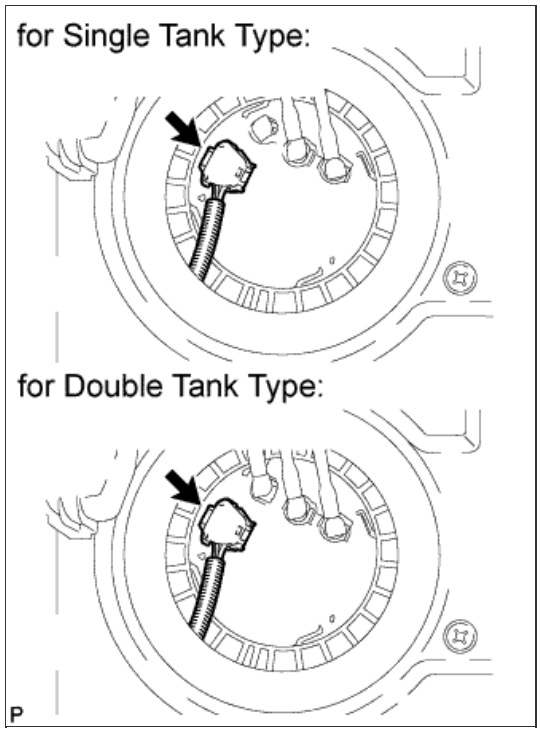
- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**



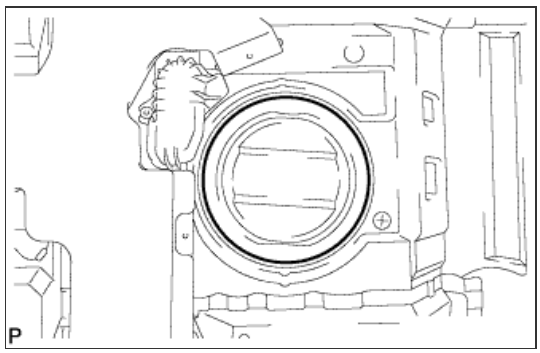
b. Attach the fuel tube clamp.

18. INSTALL NO. 1 FUEL TANK PROTECTOR SUB-ASSEMBLY

a. Install the tank protector with the 5 bolts.

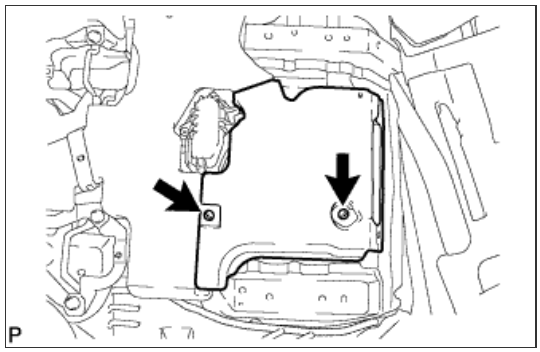


Torque:
20 N m 204 kgf cm , 15 ft. lbf



19. INSTALL FUEL TANK CAP ASSEMBLY

20. INSTALL REAR FLOOR NO. 2 SERVICE HOLE COVER

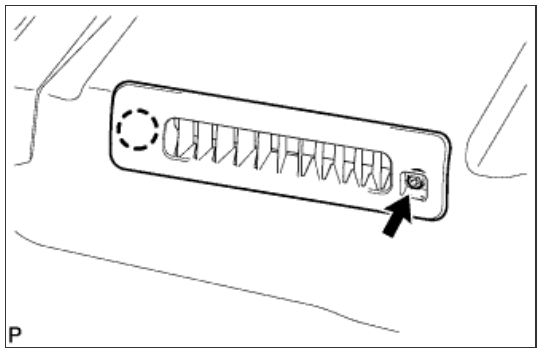


a. Connect the fuel pump and fuel sender gauge connector.

b. Install the service hole cover with new butyl tape.

c. w/ Rear Air Conditioning System:
Install the air duct and 2 screws.

21. INSTALL FRONT FLOOR CARPET ASSEMBLY



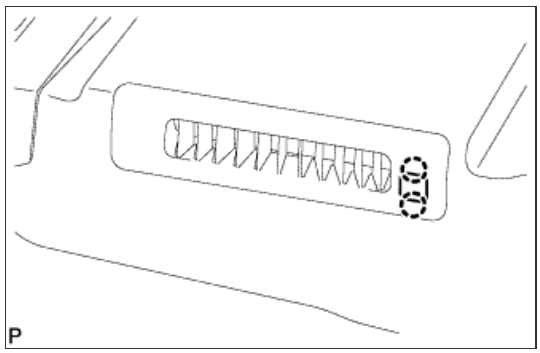
22. INSTALL REAR AIR DUCT GUIDE (w Rear Air Conditioning System)

a. Attach the claw to install the guide.

b. Install the screw.

HINT:

Use the same procedures for both sides.



23. INSTALL AIR DUCT PLUG (w Rear Air Conditioning System)

a. Attach the 2 claws to install the plug.

HINT:

Use the same procedures for both sides.

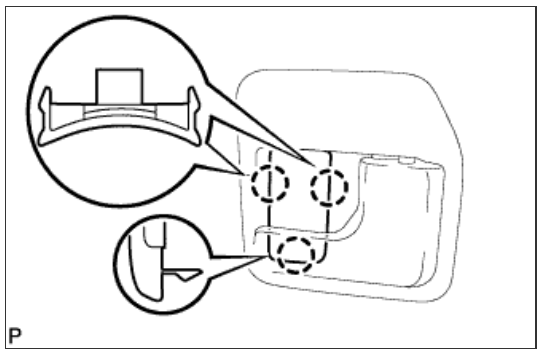
24. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY LH

a. w/ Sliding Roof:
Install the front quarter trim panel assembly LH (Click here).

b. w/o Sliding Roof:
Install the front quarter trim panel assembly LH (Click here).

25. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY RH

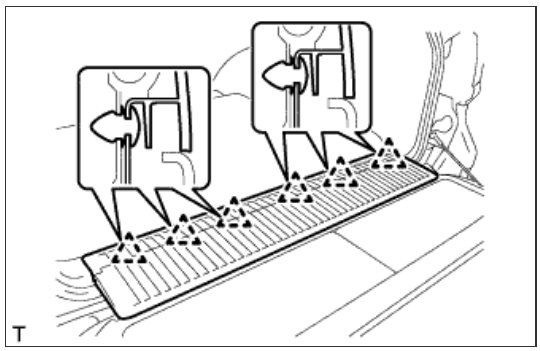
a. w/ Sliding Roof:
Install the front quarter trim panel assembly RH (Click here).



b. w/o Sliding Roof:
Install the front quarter trim panel assembly RH (Click here).

26. INSTALL REAR SEAT COVER CAP (w/ Rear No. 2 Seat, except Face to Face Seat Type)

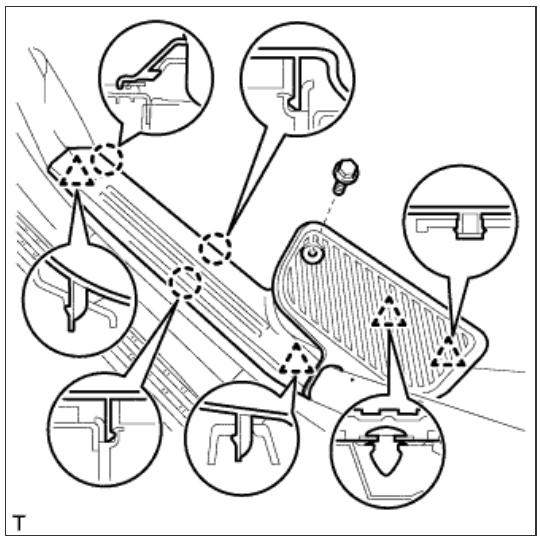
HINT:



Use the same procedure to install the rear seat cover cap on the other side.

a. Attach the 3 claws to install the rear seat cover cap.

27. INSTALL REAR FLOOR MAT REAR SUPPORT PLATE



a. Attach the 6 clips to install the support plate.

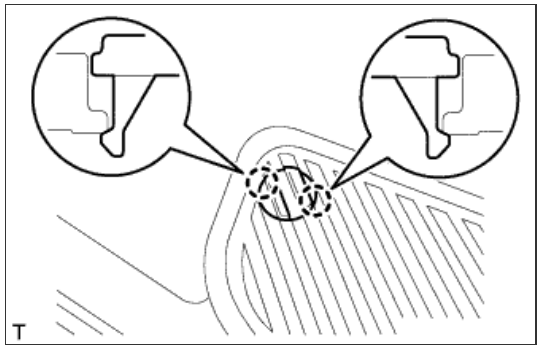
28. INSTALL REAR DOOR SCUFF PLATE LH

a. Attach the 3 claws and 4 clips to install the scuff plate.

b. Install the screw.

29. INSTALL REAR DOOR SCUFF PLATE RH

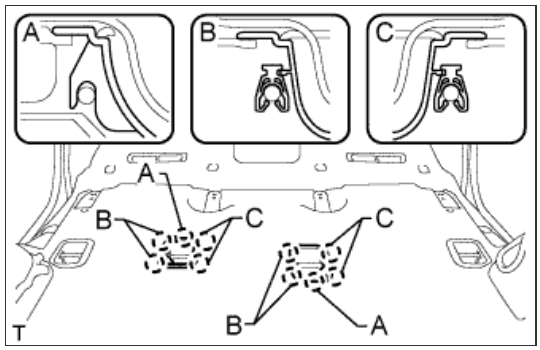
HINT:



Use the same procedures described for the LH side.

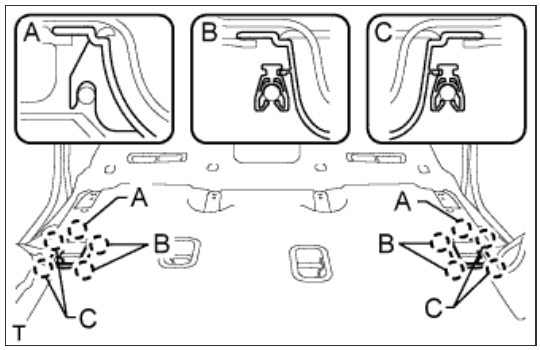
30. INSTALL REAR STEP COVER

HINT:



Use the same procedure to install the step cover on the other side.

a. Attach the 2 claws to install the step cover.



31. INSTALL REAR NO. 2 SEAT PROTECTOR

a. Attach the 10 claws to install the 2 seat protectors.

32. INSTALL REAR NO. 1 SEAT PROTECTOR

a. Attach the 10 claws to install the 2 seat protectors.

33. INSTALL REAR NO. 2 SEAT ASSEMBLY

a. for Face to Face Seat Type:
Install the rear No. 2 seat assembly (Click here).

b. except Face to Face Seat Type:
Install the rear No. 2 seat assembly (Click here).

34. INSTALL REAR NO. 1 SEAT ASSEMBLY RH (for 60 40 Split Seat Type 40 Side)

a. Install the rear No. 1 seat assembly RH (Click here).

35. INSTALL REAR NO. 1 SEAT ASSEMBLY LH (for 60 40 Split Seat Type 60 Side)

a. Install the rear No. 1 seat assembly LH (Click here).

36. CONNECT CABLE TO NEGATI BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

37. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).

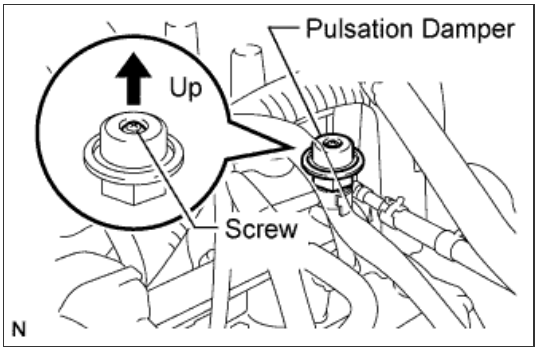
38. ADD FUEL

39. INSPECT FOR FUEL LEAK

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG) and intelligent tester N.

NOTICE:

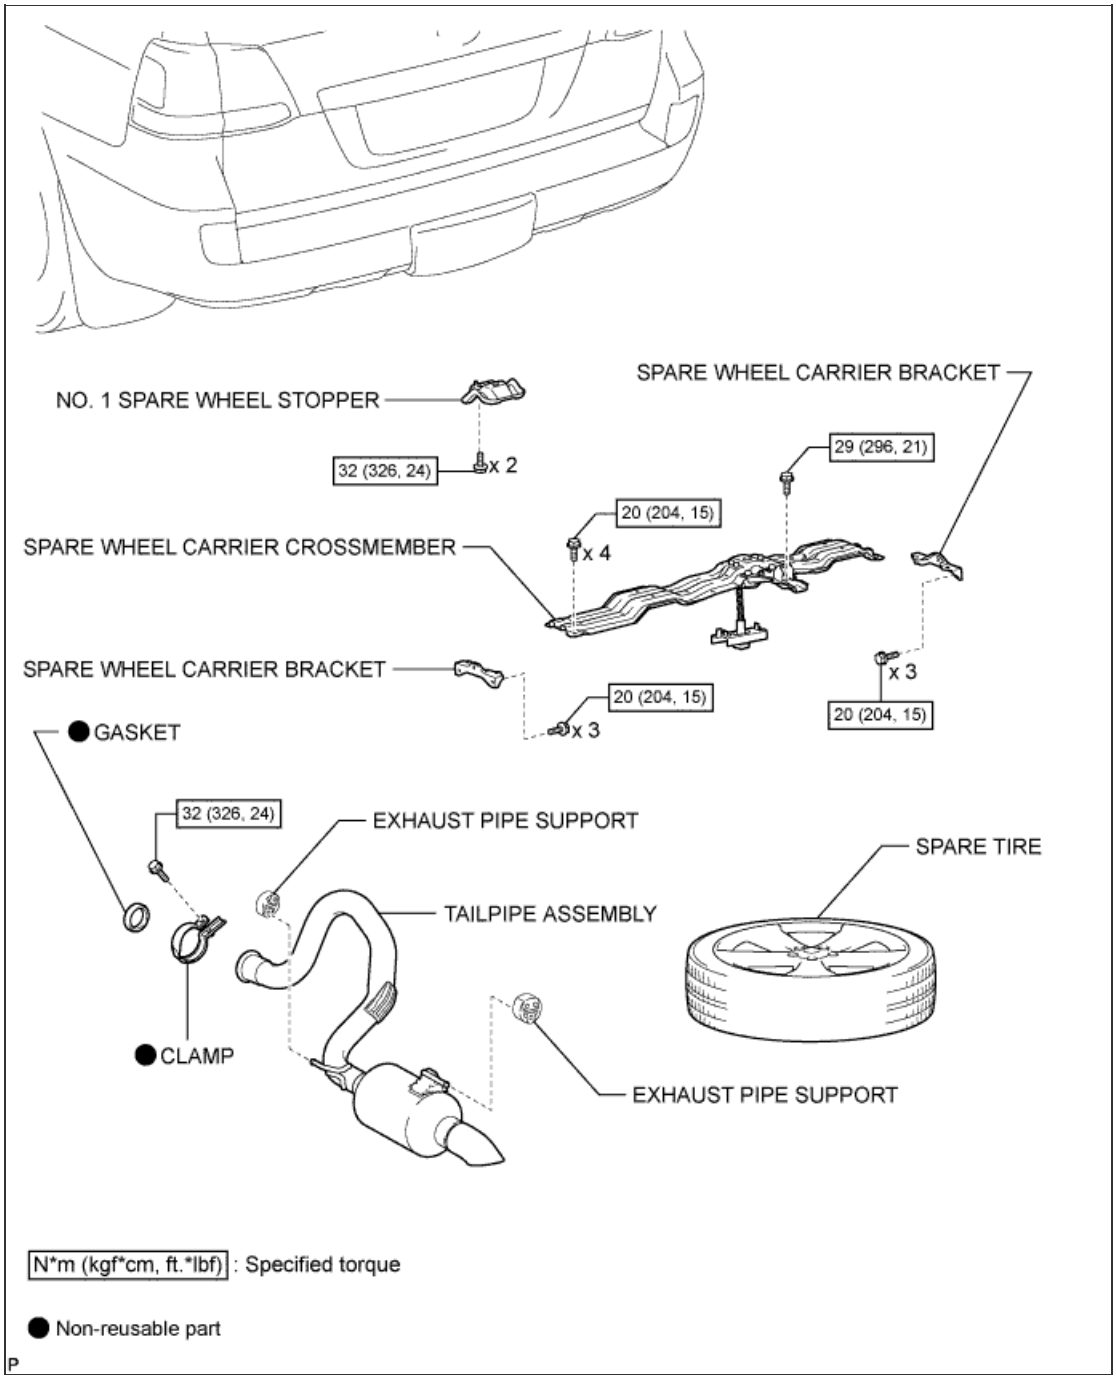


Do not start the engine.

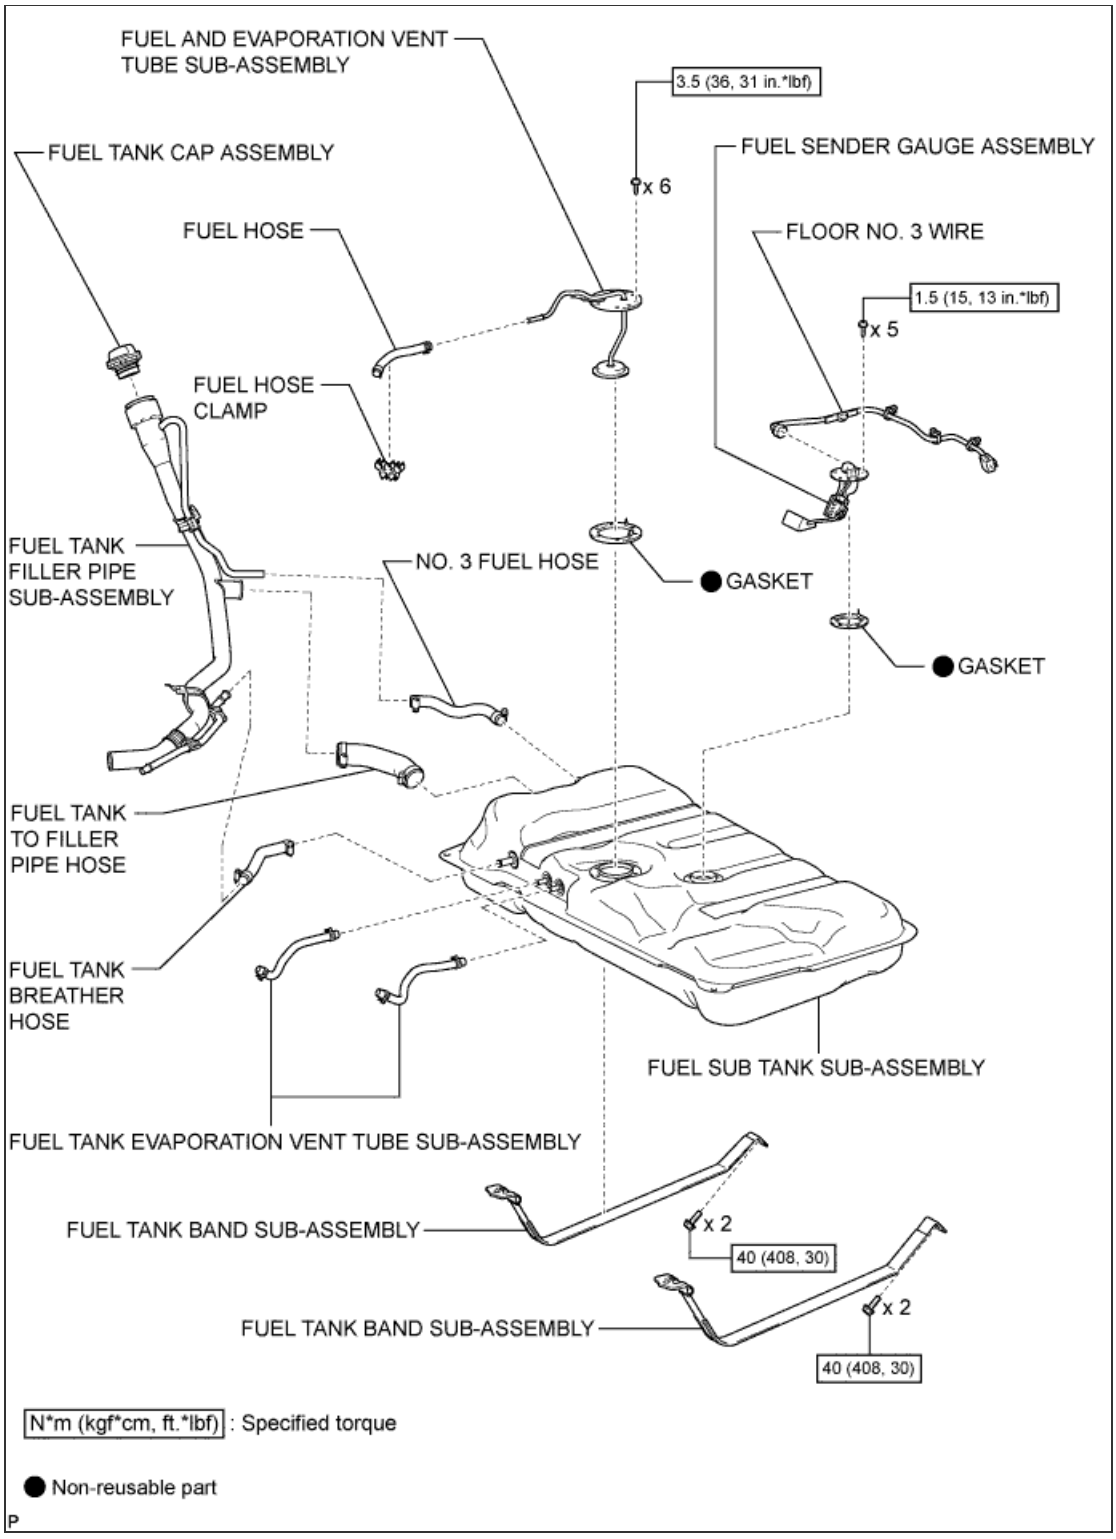
c. Enter the following menus: Powertrain / Engine and ECT / Active Test / Activate the Fuel Pump Speed Control.

d. Check that there are no fuel leaks after doing maintenance anywhere on the fuel system.

e. Check that the pulsation damper screw rises up when the fuel pump operates.
If the operation is not as specified, check the following parts:



- Fusible link
- Fuses
- Circuit opening relay (C PN)
- Fuel pump
- EC
- Wiring connections



f. Turn the engine switch off.

g. Disconnect the intelligent tester from the DLC3.

for Preparation Click here

1. DISCHARGE FUEL SYSTEM PRESSURE

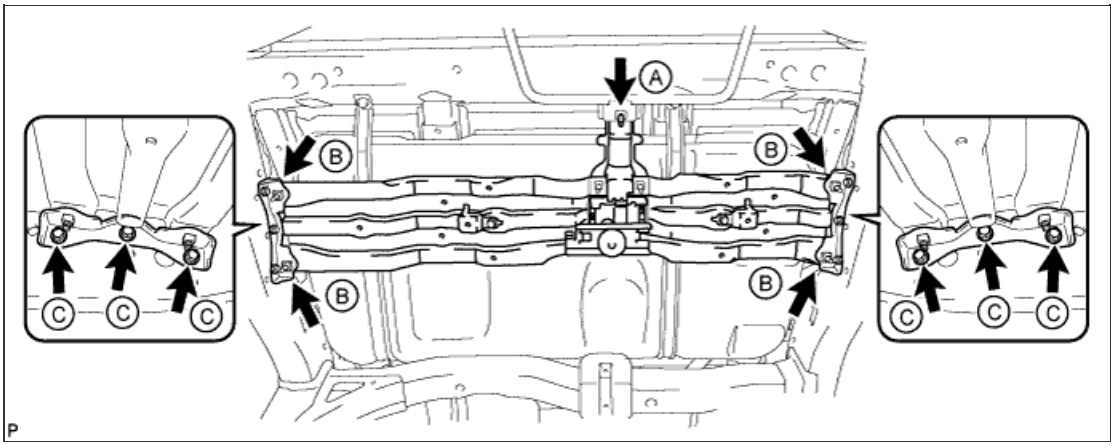
a. Discharge the fuel system pressure (Click here).

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

3. REMOVE SPARE TIRE

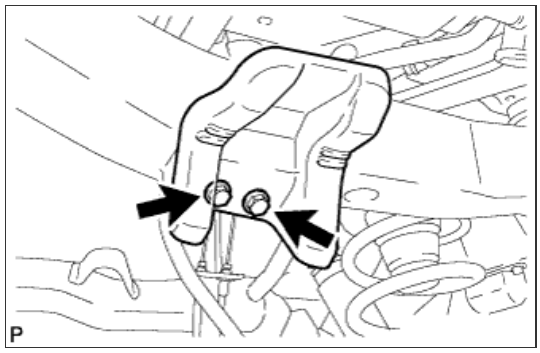


4. REMOVE TAILPIPE ASSEMBLY

a. Remove the bolt, clamp and gasket.

b. Remove the tailpipe from the 2 exhaust pipe supports.

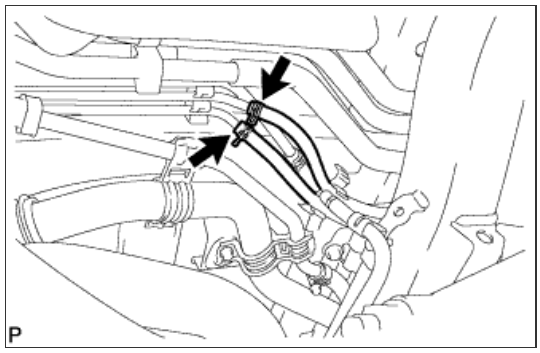
5. REMOVE SPARE WHEEL CARRIER CROSSMEMBER AND SPARE WHEEL CARRIER BRACKET



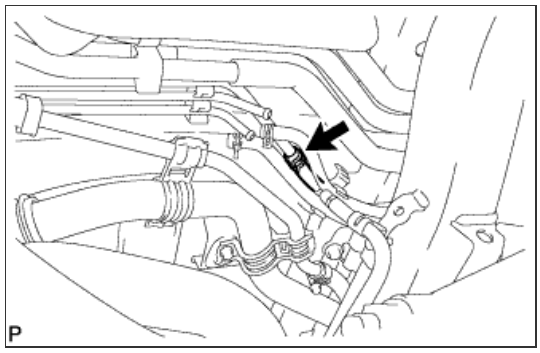
a. Remove the bolt labeled A, and then loosen the 4 bolts labeled B.

b. Slightly raise the spare wheel carrier crossmember, and then remove the 6 bolts labeled C, spare wheel carrier crossmember and 2 brackets.

6. REMOVE NO. 1 SPARE WHEEL STOPPER



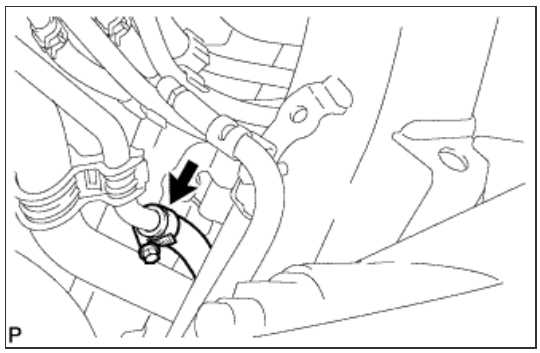
a. Remove the 2 bolts and spare wheel stopper.



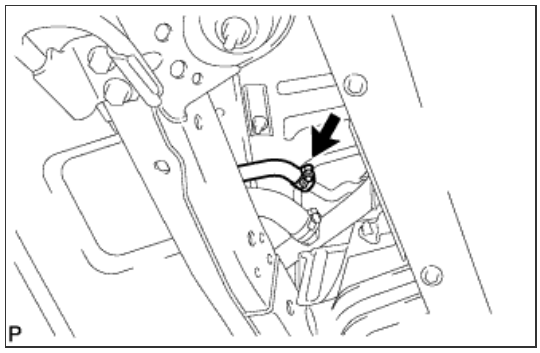
7. REMOVE FUEL TANK CAP ASSEMBLY

8. DISCONNECT FUEL TANK EVAPORATION VENT TUBE SUB-ASSEMBLY

a. Disconnect the 2 fuel tank evaporation vent tubes.

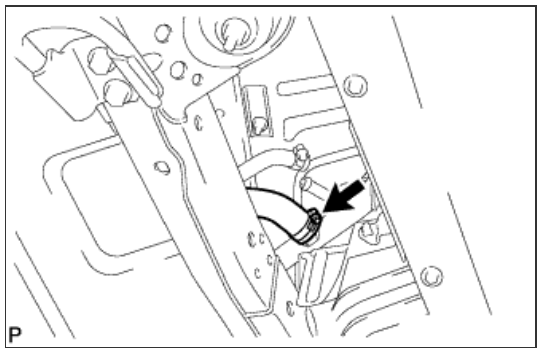


9. DISCONNECT FUEL HOSE



10. DISCONNECT FUEL TANK BREATHER HOSE

a. Disconnect the breather hose from the filler pipe.

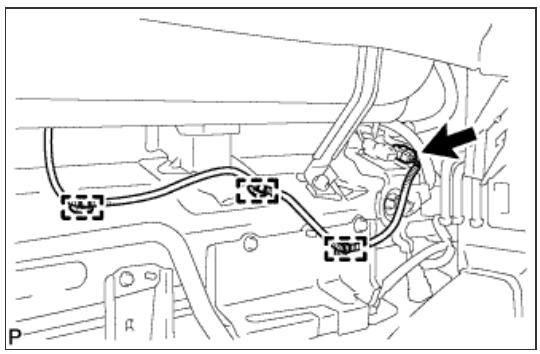


11. DISCONNECT NO. 3 FUEL HOSE

a. Disconnect the fuel hose from the filler pipe.

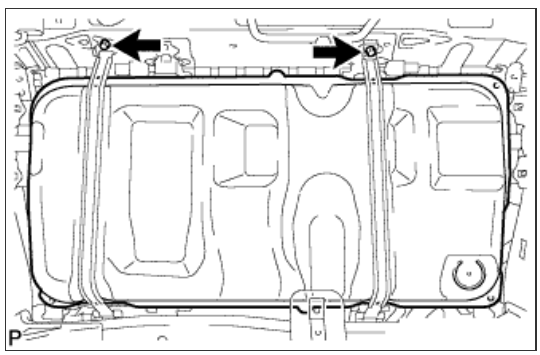
12. DISCONNECT FUEL TANK TO FILLER PIPE HOSE

a. Disconnect the hose from the filler pipe.



13. REMOVE FUEL SUB TANK SUB-ASSEMBLY

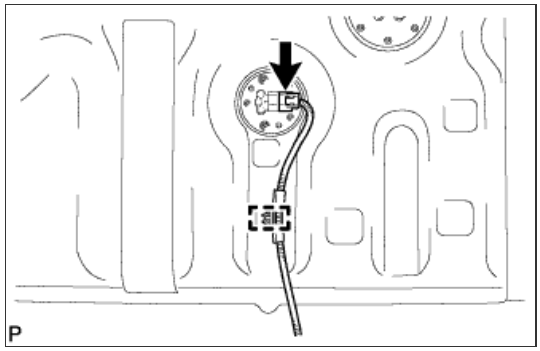
a. Disconnect the floor No. 3 wire connector.



b. Using a clip remover, detach the 3 wire harness clamps.

c. Set a transmission jack underneath the fuel sub tank.

d. Remove the 2 bolts and disconnect the 2 fuel tank bands.

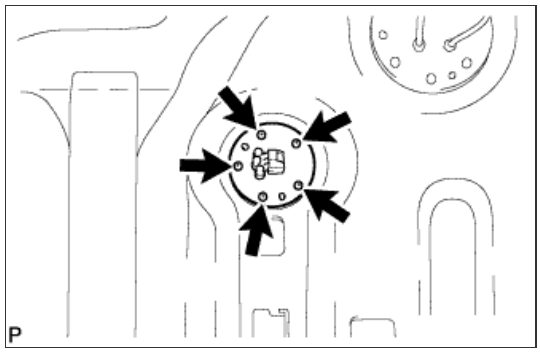


e. Remove the fuel sub tank.

14. REMOVE FLOOR NO. 3 WIRE

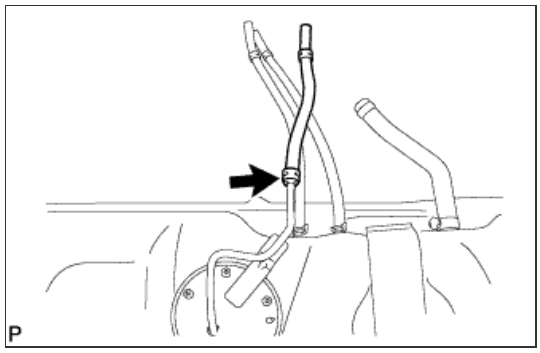
a. Disconnect the sender gauge connector.

b. Using a clip remover, detach the wire harness clamp.



15. REMOVE FUEL SENDER GAUGE ASSEMBLY

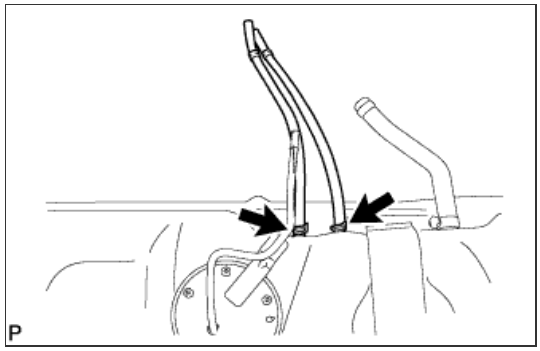
a. Remove the 5 screws and sender gauge.



NOTICE:

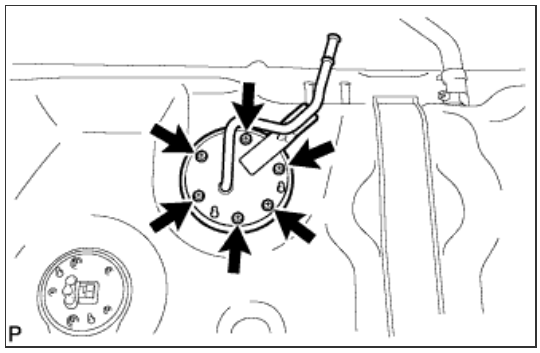
Be careful not to bend the arm of the fuel sender gauge.

b. Remove the gasket from the sender gauge.



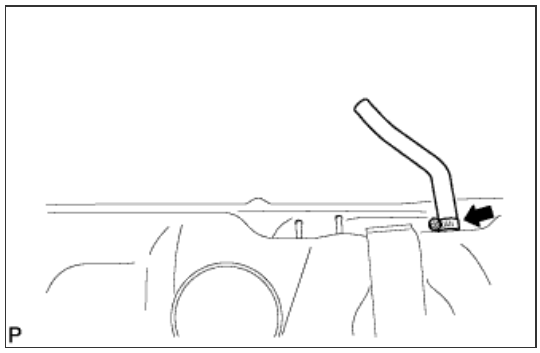
16. REMOVE FUEL HOSE

17. REMOVE FUEL TANK EVAPORATION VENT TUBE SUB-ASSEMBLY



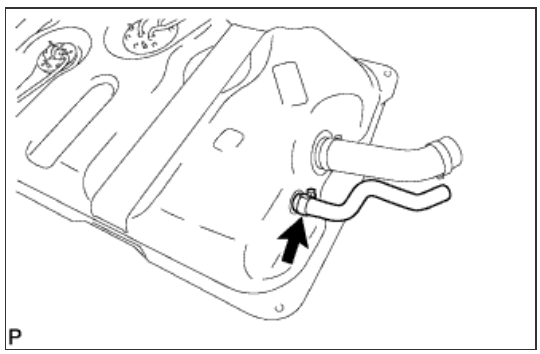
a. Remove the 2 fuel tank evaporation vent tubes.

18. REMOVE FUEL AND EVAPORATION VENT TUBE SUB-ASSEMBLY



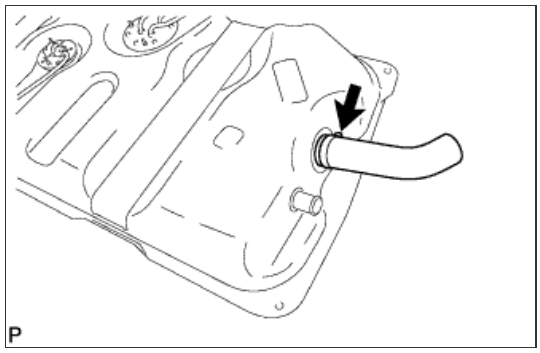
a. Remove the 6 bolts and fuel and evaporation vent tube.

b. Remove the gasket from the fuel and evaporation vent tube.



19. REMOVE FUEL TANK BREATHER HOSE

a. Remove the breather hose from the fuel sub tank.



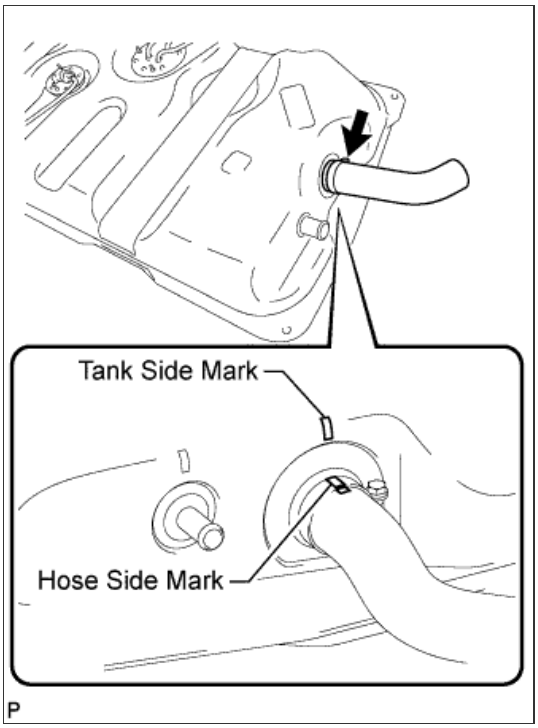
20. REMOVE NO. 3 FUEL HOSE

a. Remove the fuel hose from the fuel sub tank.

21. REMOVE FUEL TANK TO FILLER PIPE HOSE

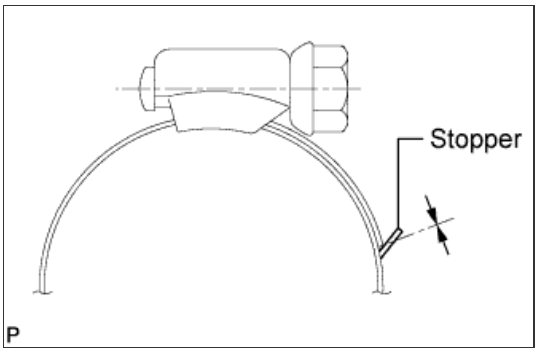
a. Remove the hose from the fuel sub tank.

P



for Preparation Click here

1. INSTALL FUEL TANK TO FILLER PIPE HOSE

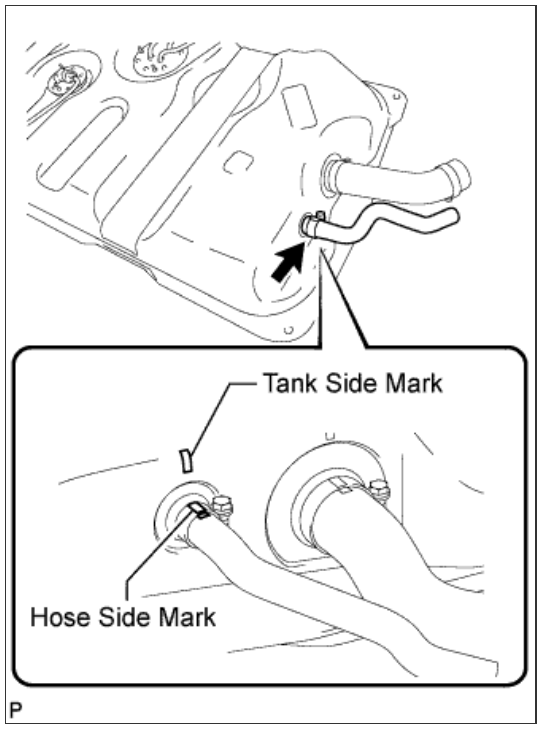


a. Install the hose to the fuel sub tank as shown in the illustration.

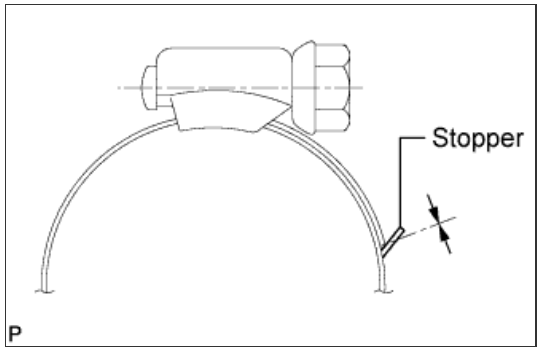
HINT:

- **Align the fuel sub tank side mark with the hose side mark when installing the hose.**

- **Tighten the hose clamp until the end of the hose clamp contacts the stopper as shown in the illustration.**



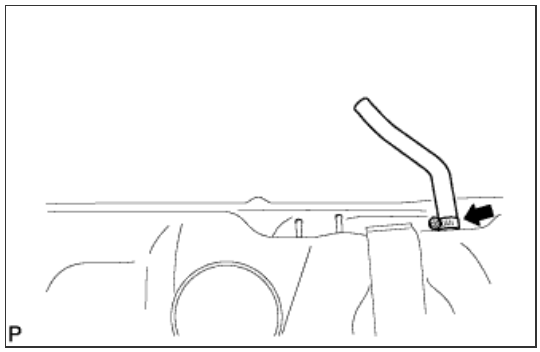
2. INSTALL NO. 3 FUEL HOSE



a. Install the fuel hose to the fuel sub tank as shown in the illustration.

HINT:

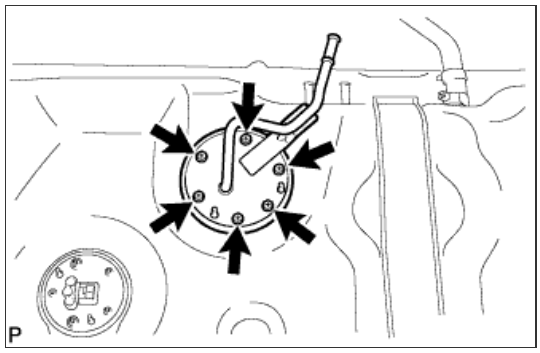
- **Align the fuel sub tank side mark with the hose side mark when installing the hose.**



- **Tighten the hose clamp until the end of the hose clamp contacts the stopper as shown in the illustration.**

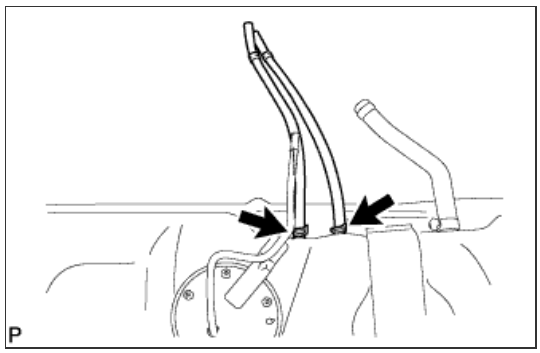
3. INSTALL FUEL TANK BREATHER HOSE

a. Install the breather hose to the fuel sub tank.



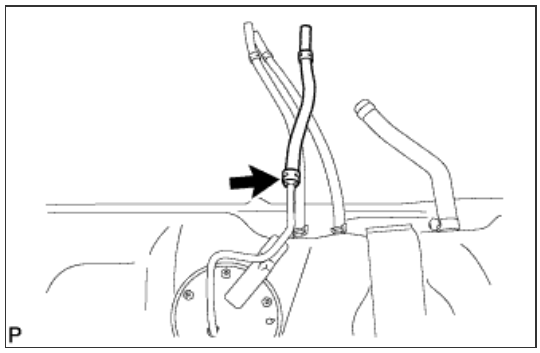
4. INSTALL FUEL AND EVAPORATION VENT TUBE SUB-ASSEMBLY

a. Install a new gasket to the fuel and evaporation vent tube.



b. Install the fuel and evaporation vent tube with the 6 bolts.

Torque:
3.5 N*m 36 kgf*cm , 31 in.*lbf }

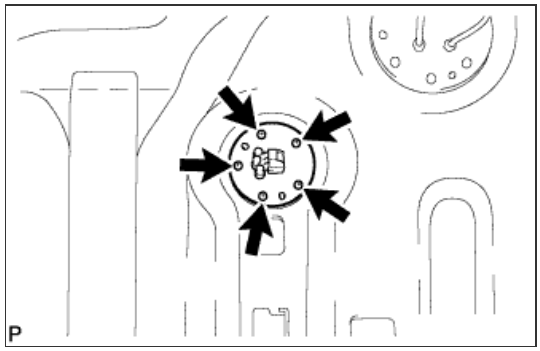


5. INSTALL FUEL TANK EVAPORATION VENT TUBE SUB-ASSEMBLY

a. Install the 2 fuel tank evaporation vent tubes.

6. INSTALL FUEL HOSE

7. INSTALL FUEL SENDER GAUGE ASSEMBLY

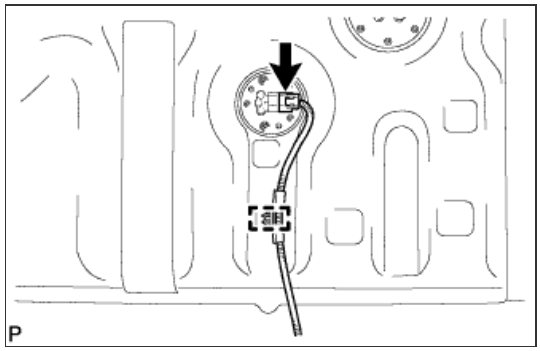


a. Install a new gasket to the sender gauge.

NOTICE:

Be careful not to bend the arm of the fuel sender gauge.

b. Install the sender gauge with the 5 screws.

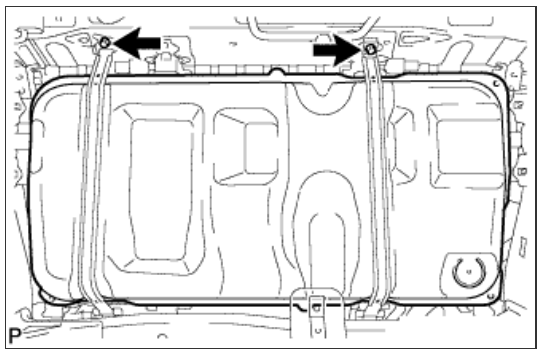


Torque:
1.5 N*m 15 kgf*cm , 13 in.*lbf }

8. INSTALL FLOOR NO. 3 WIRE

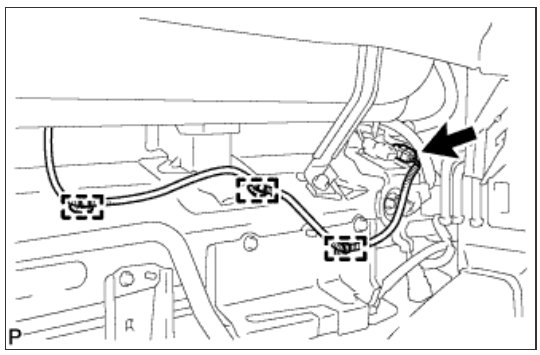
a. Attach the wire harness clamp to the fuel sub tank.

b. Connect the sender gauge connector.



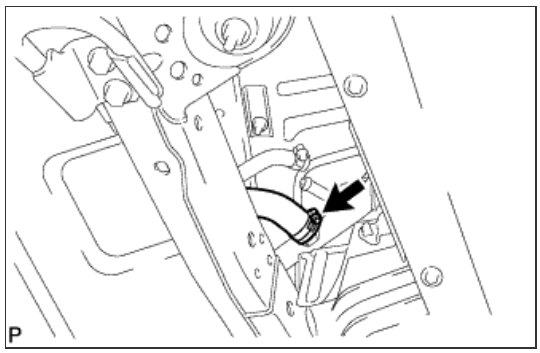
9. INSTALL FUEL SUB TANK SUB-ASSEMBLY

a. Set the fuel sub tank on a transmission jack and raise the fuel sub tank.



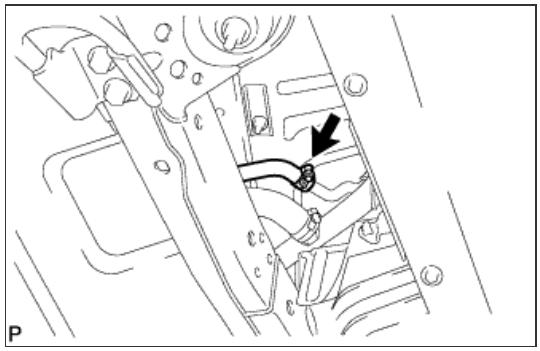
b. Connect the 2 fuel tank bands with the 2 bolts.

Torque:
40 N*m 408 kgf*cm , 30 ft.*lbf }



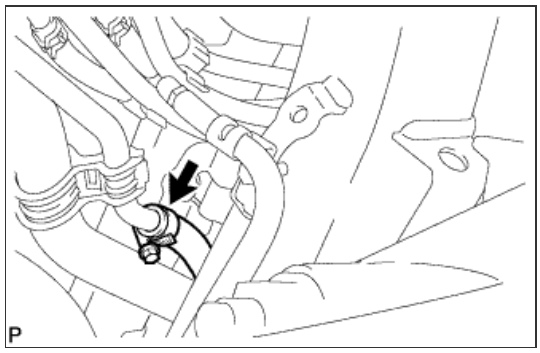
c. Connect the floor No. 3 wire connector.

d. Attach the 3 wire harness clamps.



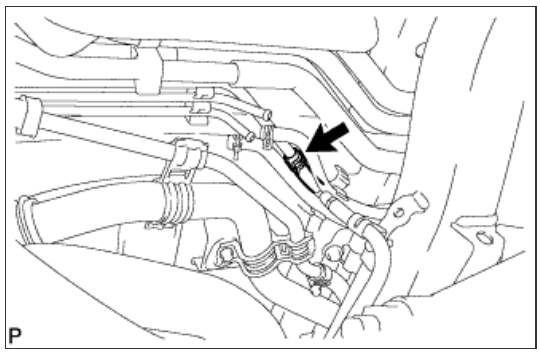
10. CONNECT FUEL TANK TO FILLER PIPE HOSE

a. Connect the hose to the filler pipe.



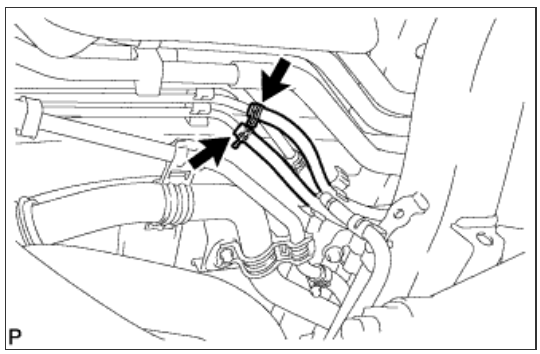
11. CONNECT NO. 3 FUEL HOSE

a. Connect the fuel hose to the filler pipe.



12. CONNECT FUEL TANK BREATHER HOSE

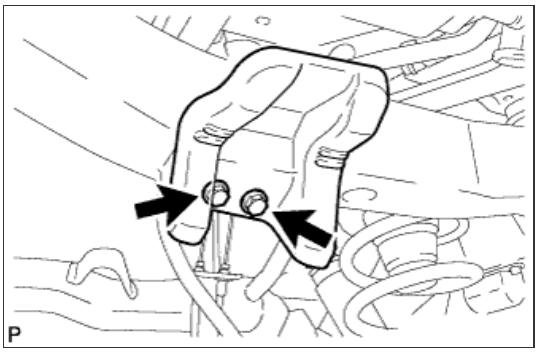
a. Connect the breather hose to the filler pipe.



13. CONNECT FUEL HOSE

14. CONNECT FUEL TANK EVAPORATION VENT TUBE SUB-ASSEMBLY

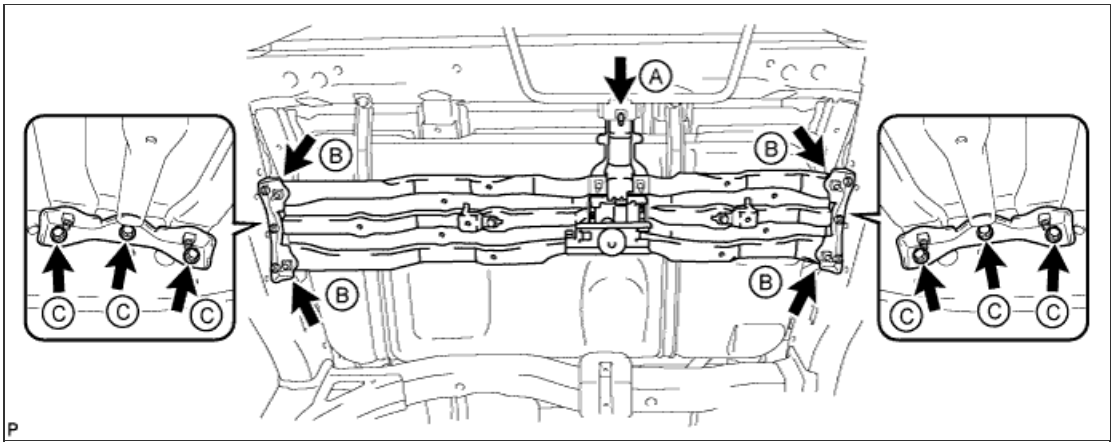
a. Connect the 2 fuel tubes.



15. INSTALL FUEL TANK CAP ASSEMBLY

16. INSTALL NO. 1 SPARE WHEEL STOPPER

a. Install the spare wheel stopper with the 2 bolts.



Torque:
32 N*m 326 kgf*cm , 24 ft.*lbf }

17. INSTALL SPARE WHEEL CARRIER CROSSMEMBER AND SPARE WHEEL CARRIER BRACKET

a. Install the spare wheel carrier crossmember and 2 brackets to the vehicle with the 6 bolts labeled C.

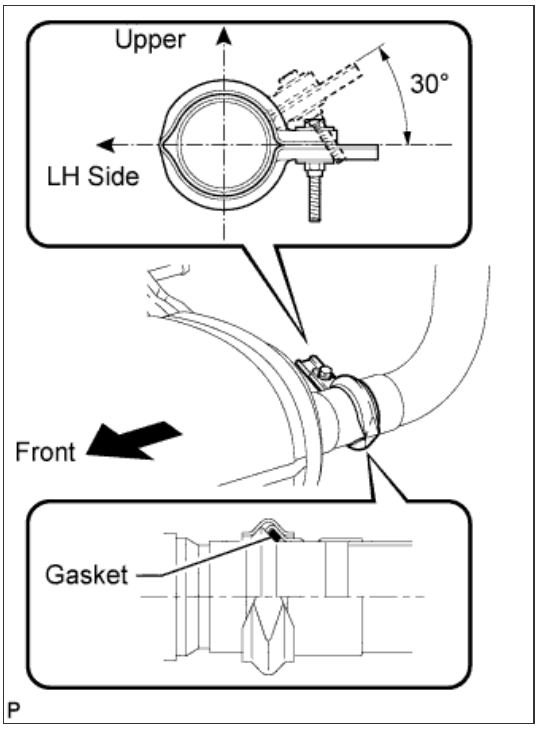
Torque:
for bolt C:
20 N*m 204 kgf*cm , 15 ft.*lbf }

b. Temporarily install the bolt labeled A, and then tighten the bolt labeled A and bolts labeled B.

Torque:
for bolt A:
29 N*m 296 kgf*cm , 21 ft.*lbf }
for bolt B:
20 N*m 204 kgf*cm , 15 ft.*lbf }

18. INSTALL TAILPIPE ASSEMBLY

a. Install the tailpipe to the 2 exhaust pipe supports.



b. Install a new gasket to the center exhaust pipe.

c. Connect the tailpipe and center exhaust pipe with a new clamp.

Torque:
32 N*m 326 kgf*cm , 24 ft.*lbf }

HINT:

Install the clamp within the angle range shown in the illustration.

19. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

20. INSPECT FOR FUEL LEAK

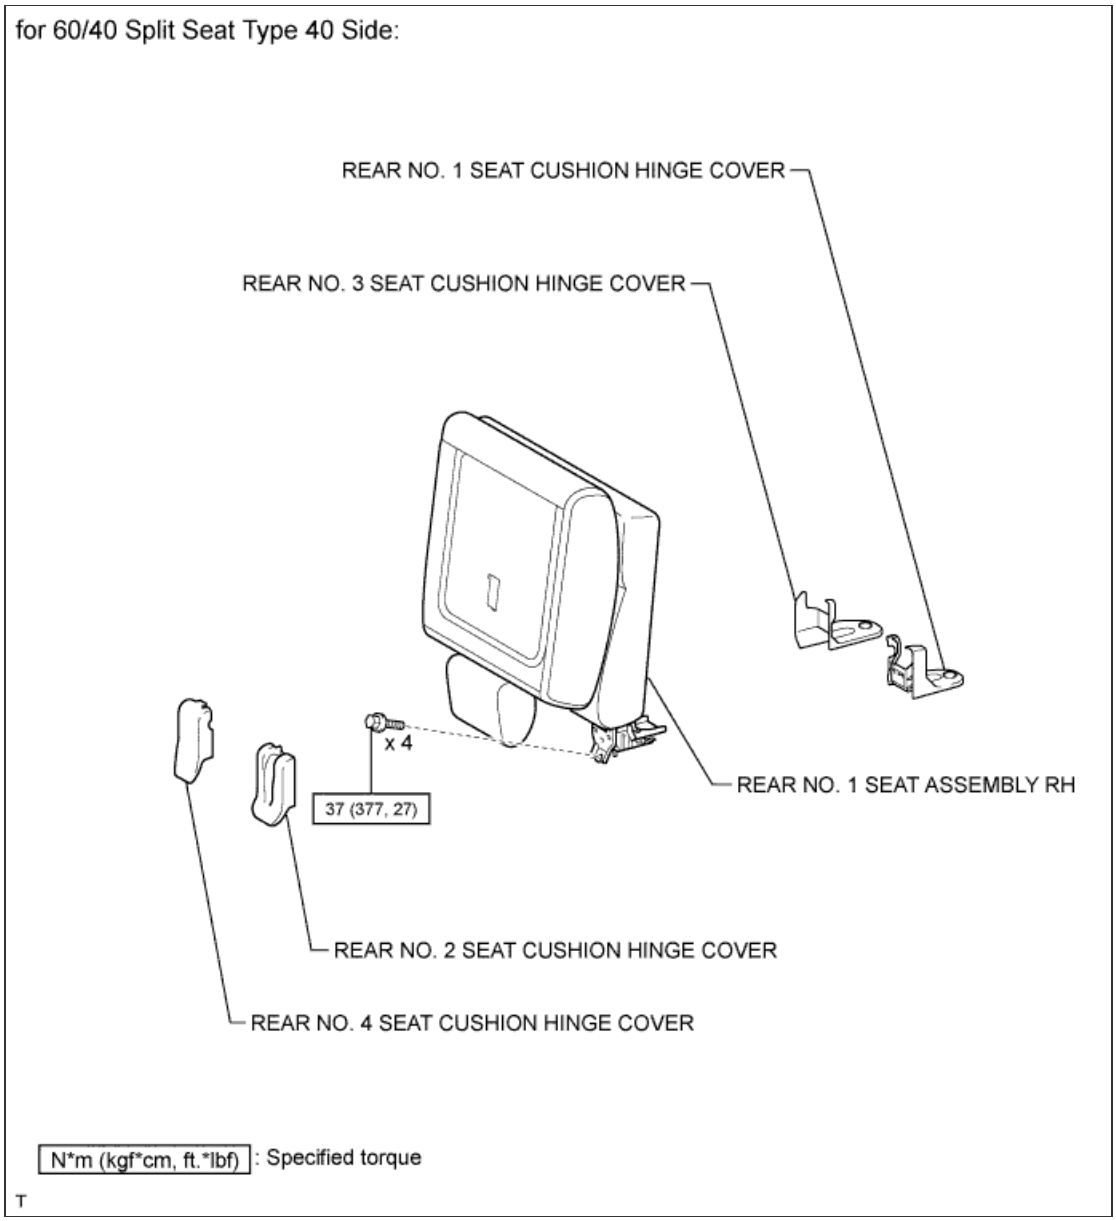
a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG) and intelligent tester ON.

NOTICE:

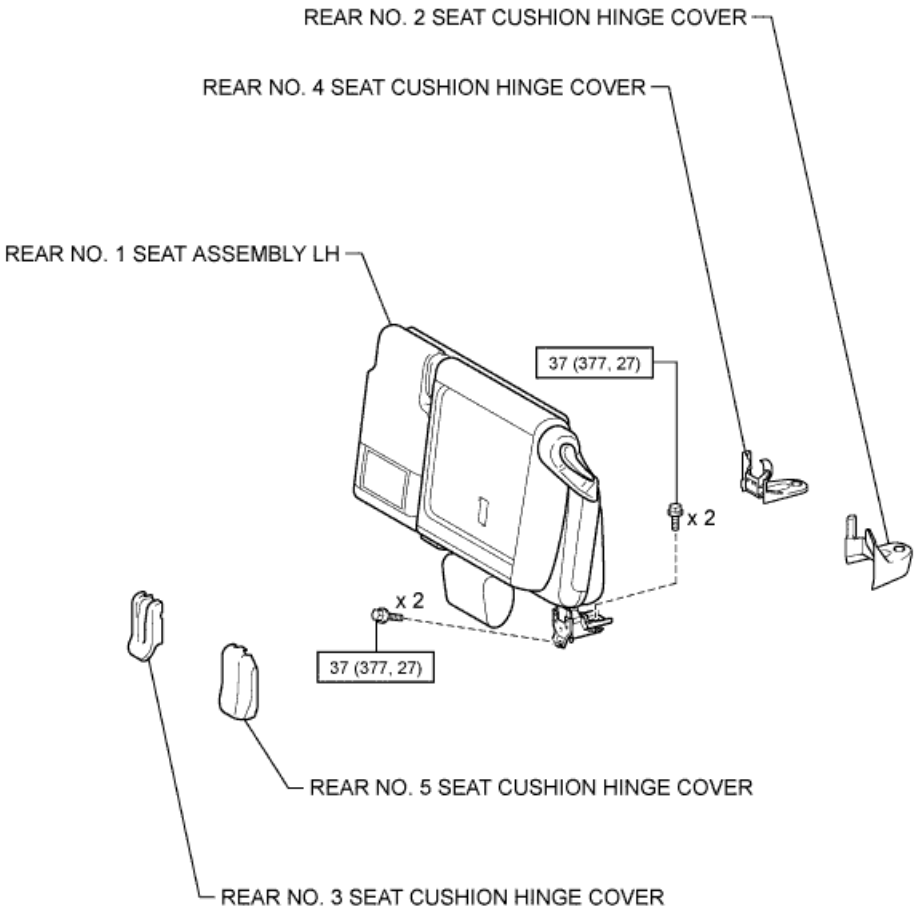
Do not start the engine.

c. Enter the following menus: Powertrain / Engine and ECT / Active Test / Activate the Fuel Pump Speed Control.



d. Check that there are no fuel leaks after doing maintenance anywhere on the fuel system.

21. INSPECT FOR EXHAUST GAS LEAK



If gas is leaking, tighten the areas necessary to stop the leak. Replace damaged parts as necessary.

22. INSTALL SPARE TIRE

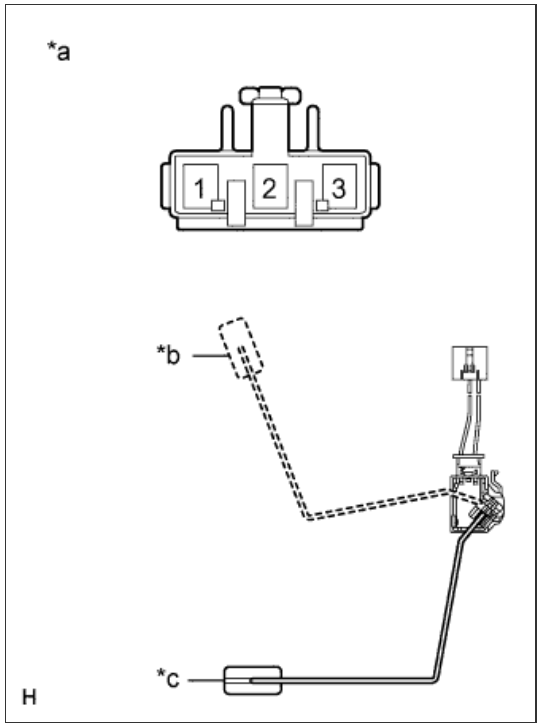
b. for Double Tank Type:
Remove the fuel suction with pump and gauge tube assembly (Click here).

2. REMOVE FUEL SENDER GAUGE ASSEMBLY

a. Disconnect the fuel sender gauge connector.

b. Press down on the sender gauge claw labeled A. Then slide the sender gauge upward to remove it.



for Preparation Click here

1. INSPECT FUEL SENDER GAUGE ASSEMBLY

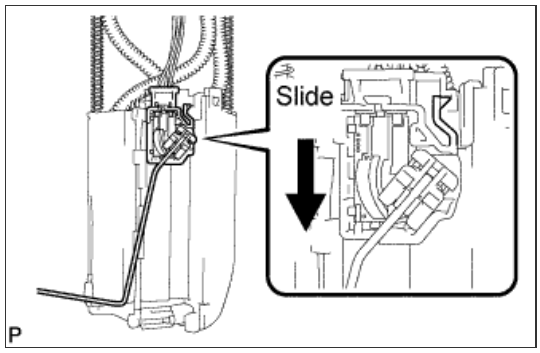
Text in Illustration

*a	Component without harness connected (Fuel Sender Gauge)
*b	F (Upper)
*c	E (Lower)

a. Check that the float moves smoothly between F and E.

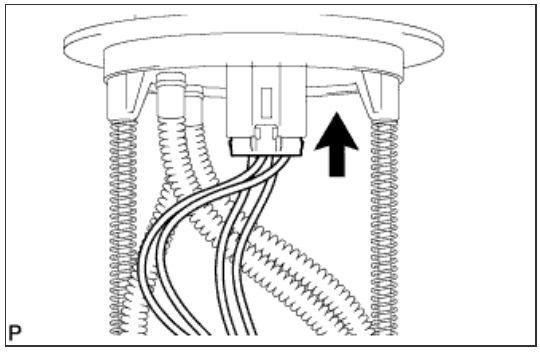
b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:



Tester Connection	Condition	Specified Condition
1 - 2	Float level is F (upper)	13.5 to 16.5 Ω
	Float level is E (lower)	405.5 to 414.5 Ω

If the result is not as specified, replace the fuel sender gauge assembly.



for Preparation Click here

1. INSTALL FUEL SENDER GAUGE ASSEMBLY

a. Set the sender gauge to the fuel sub-tank. Then slide the sender gauge downward to install it.

b. Connect the fuel sender gauge connector.

FUEL SENDER GAUGE ASSEMBLY (for Fuel Sub Tank) > REMOVAL

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE REAR NO. 1 SEAT ASSEMBLY RH (for 60/40 Split Seat Type 40 Side)

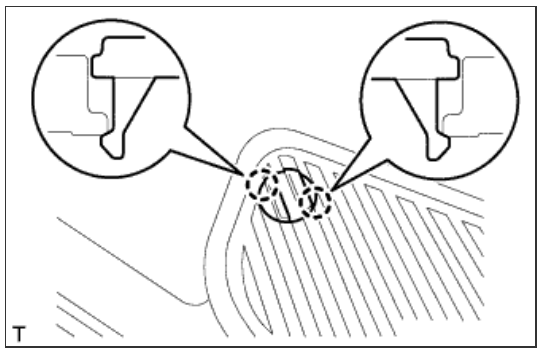
a. Remove the rear No. 1 seat assembly RH (Click here).

3. REMOVE REAR NO. 1 SEAT ASSEMBLY LH (for 60/40 Split Seat Type 60 Side)

a. Remove the rear No. 1 seat assembly LH (Click here).

4. REMOVE REAR NO. 2 SEAT ASSEMBLY

a. for Face to Face Seat Type:
Remove the rear No. 2 seat assembly (Click here).

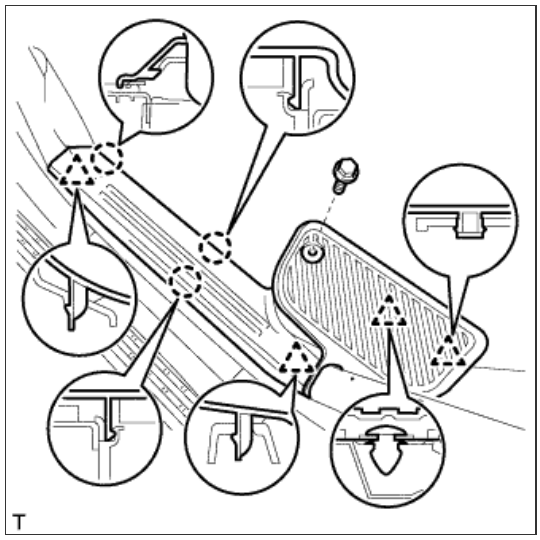


b. except Face to Face Seat Type:
Remove the rear No. 2 seat assembly (Click here).

5. REMOVE REAR STEP COVER

HINT:

Use the same proced e to remove the step cover on the other side.

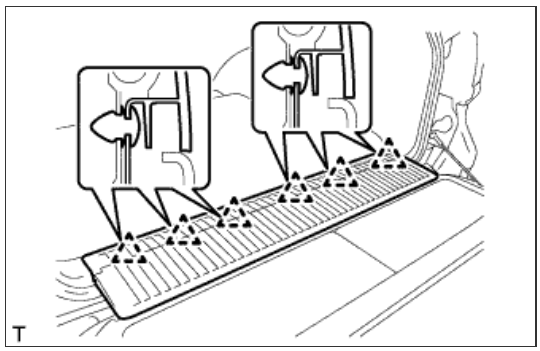


a. Detach the 2 claws and remove the step cover.

6. REMOVE REAR DOOR SCUFF PLATE LH

a. Remove the screw.

b. Detach the 3 claws and 4 clips, and remove the sc ff plate.



7. REMOVE REAR DOOR SCUFF PLATE RH

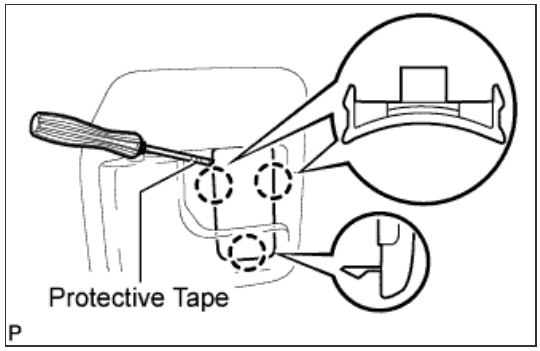
HINT:

Use the same procedures as described for the LH side.

8. REMOVE REAR FLOOR MAT REAR SUPPORT PLATE

a. Detach the 6 clips and remove the support plate.

9. REMOVE REAR SEAT COVER CAP (w/ Rear No. 2 Seat, except Face to Face Seat Type)



HINT:

Use the same procedure to remove the rear seat cover cap on the other side.

a. Using a screwdriver, detach the 3 claws and remove the rear seat cover cap.

HINT:

Tape the screwdriver tip before use.

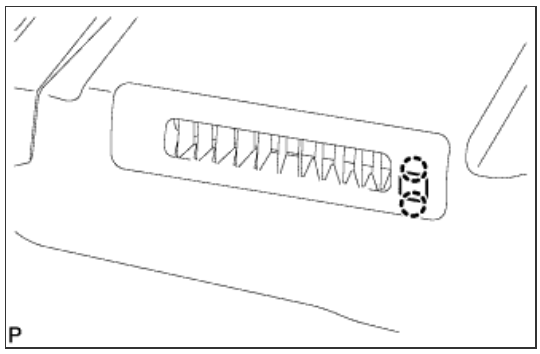
10. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY LH

a. w/ Sliding Roof:
Remove the front quarter trim panel assembly LH (Click here).

b. w/o Sliding Roof:
Remove the front quarter trim panel assembly LH (Click here).

11. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY RH

a. w/ Sliding Roof:
Remove the front arter trim panel assembly RH (Click here).



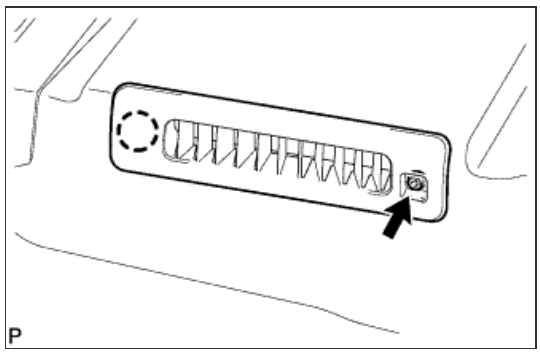
b. w/o Sliding Roof:
Remove the front arter trim panel assembly RH (Click here).

12. REMOVE AIR DUCT PLUG (w/ Rear Air Conditioning System)

a. Detach the 2 claws and remove the pl g.

HINT:

Use the same proced es for both sides.



13. REMOVE REAR AIR DUCT GUIDE (w/ Rear Air Conditioning System)

a. Remove the screw.

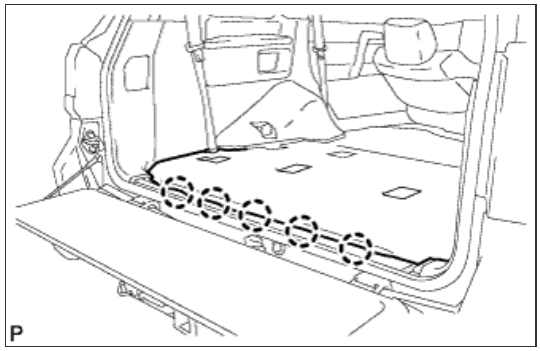
b. Detach the claw and remove the g ide.

HINT:

Use the same proced es for both sides.

14. REMOVE REAR FLOOR MAT ASSEMBLY

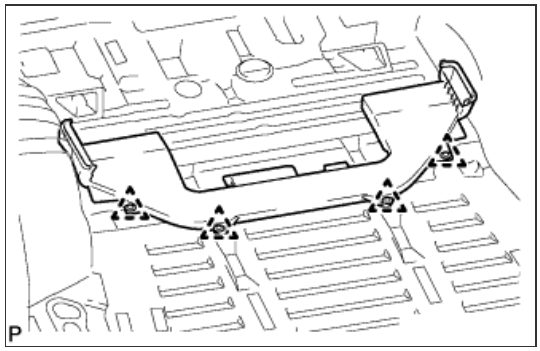
a. w/ Rear Air Conditioning System:
Detach the 5 clips and fold back the floor mat toward the front of the vehicle.



HINT:

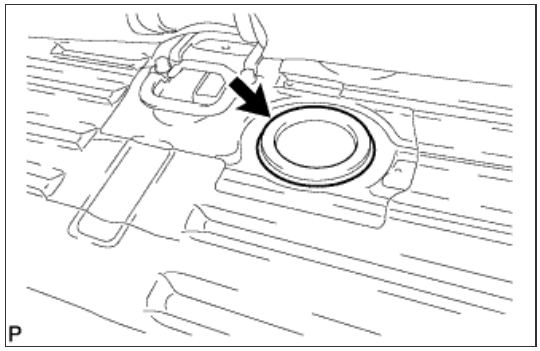
Fold back the floor mat so that the rear No. 7 air d ct can be removed.

b. w/o Rear Air Conditioning System:
Detach the 5 clips and fold back the floor mat toward the front of the vehicle.



HINT:

Fold back the floor mat so that the service hole cover can be removed.

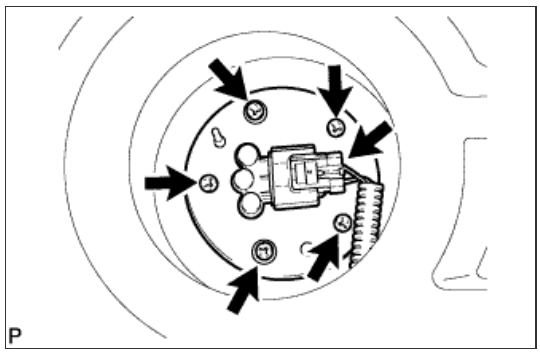


15. REMOVE REAR NO. 7 AIR DUCT (w/ Rear Air Conditioning System)

a. Detach the 4 clips and remove the air d ct.

16. REMOVE REAR FLOOR SERVICE HOLE COVER

17. REMOVE FUEL SENDER GAUGE ASSEMBLY



a. Disconnect the sender ga ge connector.

b. Remove the 5 screws and sender ga ge.

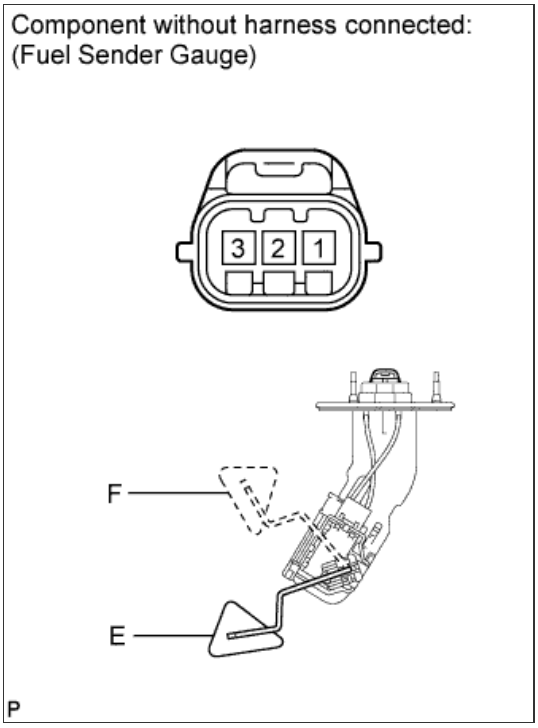
NOTICE:

Be caref l not to bend the arm of the f el sender ga ge.

c. Remove the gasket from the sender ga ge.

for Preparation Click here

1. INSPECT FUEL SENDER GAUGE ASSEMBLY



a. Check that the float moves smoothly between F and E.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

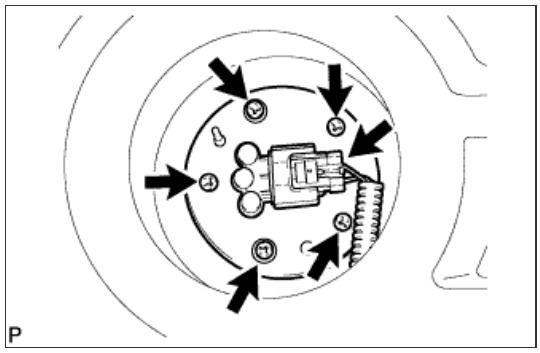
Tester Connection	Condition	Specified Condition
2 - 3	Float level is F (upper)	12 to 18 Ω
	Float level is E (lower)	405 to 415 Ω

If the result is not as specified, replace the fuel sender gauge assembly.

for Preparation Click here

1. INSTALL FUEL SENDER GAUGE ASSEMBLY

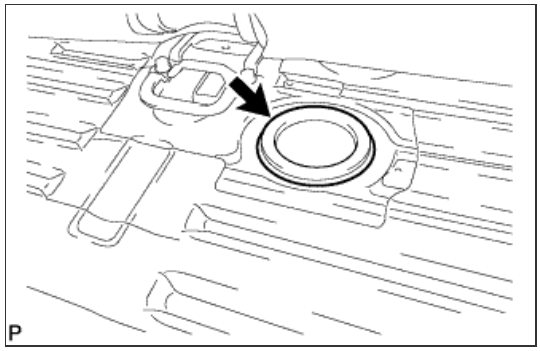
a. Install a new gasket to the sender gauge.



b. Install the sender gauge with the 5 screws.

Torque:
1.5 N*m{ 15 kgf*cm , 13 in.*lbf }

NOTICE:

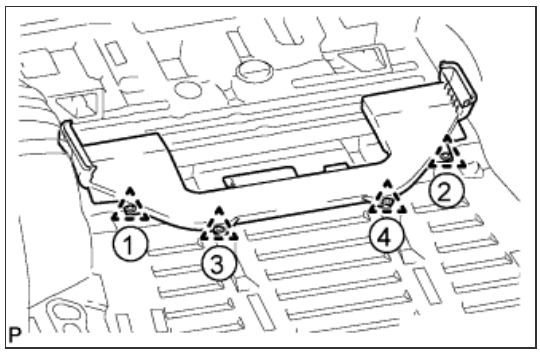


Be careful not to bend the arm of the fuel sender gauge.

c. Connect the sender gauge connector.

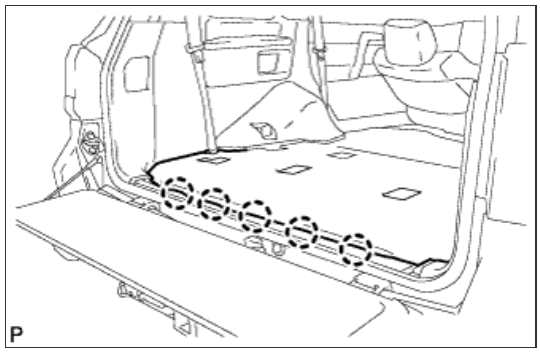
2. INSTALL REAR FLOOR SERVICE HOLE COVER

a. Install the service hole cover with new butyl tape.



3. INSTALL REAR NO. 7 AIR DUCT (w/ Rear Air Conditioning System)

a. Attach the 4 clips to install the air duct.

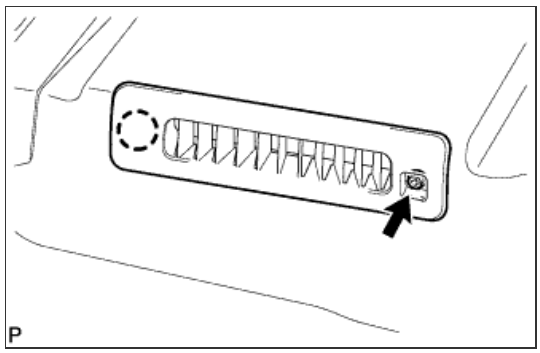


HINT:

Attach the clips in the order shown in the illustration.

4. INSTALL REAR FLOOR MAT ASSEMBLY

a. Attach the 5 clips to install the floor mat.



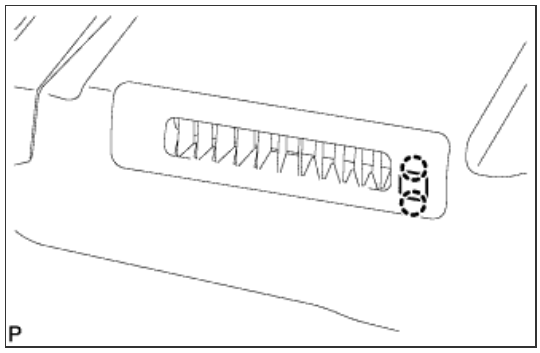
5. INSTALL REAR AIR DUCT GUIDE (w/ Rear Air Conditioning System)

a. Attach the claw to install the guide.

b. Install the screw.

HINT:

Use the same procedures for both sides.



6. INSTALL AIR DUCT PLUG (w/ Rear Air Conditioning System)

a. Attach the 2 claws to install the plug.

HINT:

Use the same procedures for both sides.

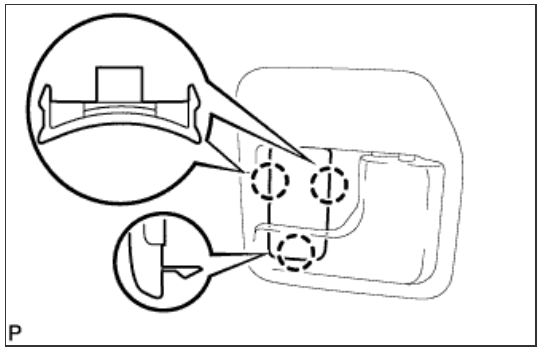
7. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY LH

a. w/ Sliding Roof:
Install the front quarter trim panel assembly LH (Click here).

b. w/o Sliding Roof:
Install the front quarter trim panel assembly LH (Click here).

8. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY RH

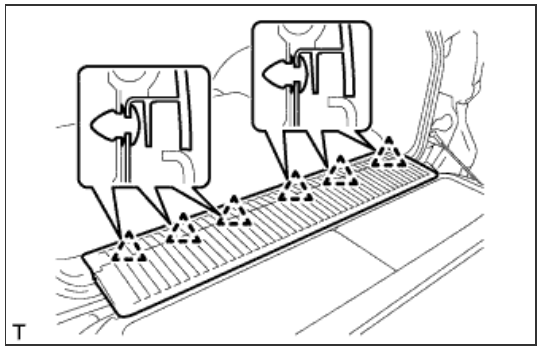
a. w/ Sliding Roof:
Install the front quarter trim panel assembly RH (Click here).



b. w/o Sliding Roof:
Install the front quarter trim panel assembly RH (Click here).

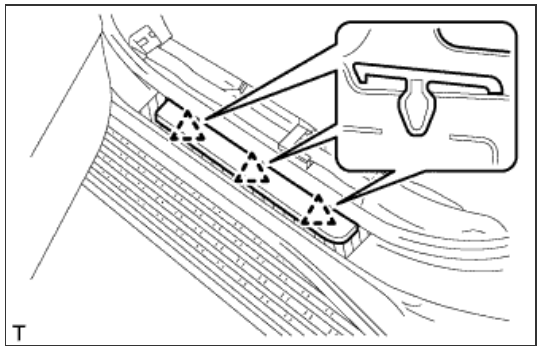
9. INSTALL REAR SEAT COVER CAP (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:



Use the same procedure to install the rear seat cover cap on the other side.

a. Attach the 3 claws to install the rear seat cover cap.



10. INSTALL REAR FLOOR MAT REAR SUPPORT PLATE

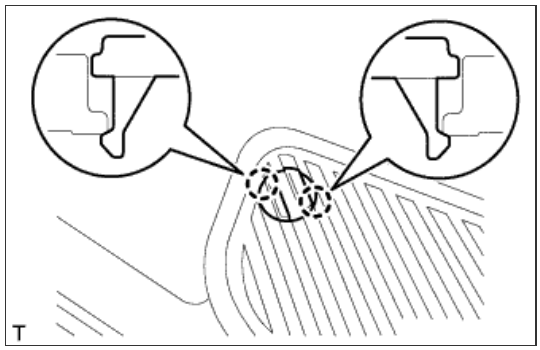
a. Attach the 6 clips to install the support plate.

11. INSTALL REAR DOOR SCUFF PLATE LH

a. Attach the 3 clips to install the rear door scuff plate outside.

12. INSTALL REAR DOOR SCUFF PLATE RH

HINT:



Use the same procedures described for the LH side.

13. INSTALL REAR STEP COVER

HINT:

Use the same procedure to install the step cover on the other side.

a. Attach the 2 claws to install the step cover.

14. INSTALL REAR NO. 2 SEAT ASSEMBLY

a. for Face to Face Seat Type:
Install the rear No. 2 seat assembly (Click here).

b. e cept Face to Face Seat Type:
Install the rear No. 2 seat assembly (Click here).

15. INSTALL REAR NO. 1 SEAT ASSEMBLY RH (for 60/40 Split Seat Type 40 Side)

a. Install the rear No. 1 seat assembly RH (Click here).

16. INSTALL REAR NO. 1 SEAT ASSEMBLY LH (for 60/40 Split Seat Type 60 Side)

a. Install the rear No. 1 seat assembly LH (Click here).

17. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable some systems need to be initialized after the cable is reconnected (Click here).

18. CHECK SRS WARNING LIGHT

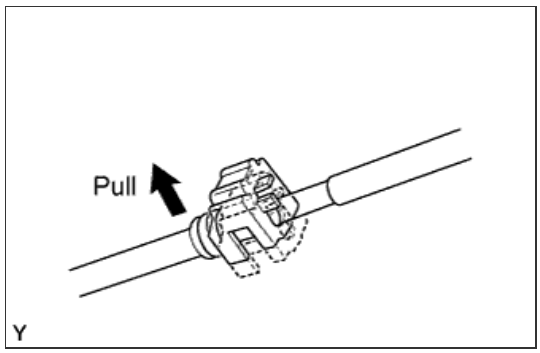
a. Check the SRS warning light (Click here).

for Preparation Click here

1.IGNITION S ITCH EXPRESSION

HINT:

The type of ignition switch used on this model differs depending on the specifications of the vehicle. The expressions listed in the table below are used in this section.



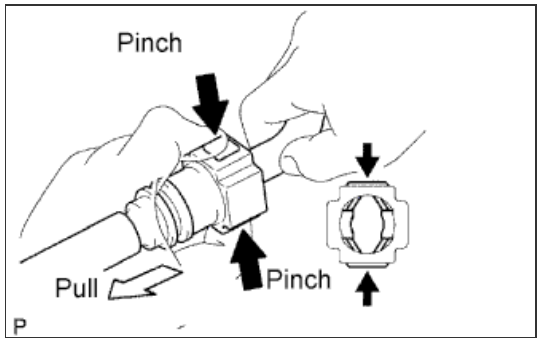
Expression	Ignition Switch (Position)	Engine Switch (Condition)
Ignition Switch off	LOCK	Off
Ignition Switch ACC	ACC	On (ACC)
Ignition Switch ON	ON	On (IG)
Engine Start	START	Start

2.FUEL SYSTEM

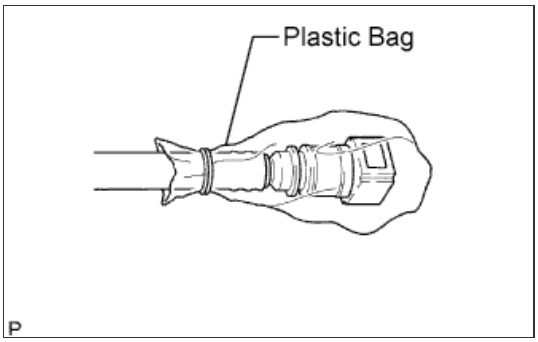
a. Observe these precautions when disconnecting the fuel tube connector (for quick type A).

i. Detach the lock claw by lifting up the cover, as shown in the illustration.

ii. Check for dirt or mud on the pipe and around the connector before disconnection. Clean if necessary.



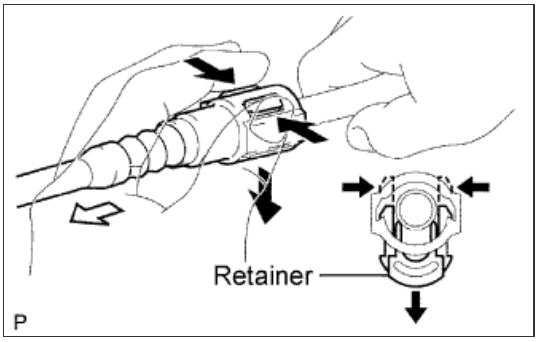
iii. Pinch the connector and disconnect the connector and pipe.
If the connector and the pipe are stuck together, pinch the connector, then push and pull the pipe to disconnect the pipe and pull it out.



NOTICE:

Do not use any tools in this procedure.

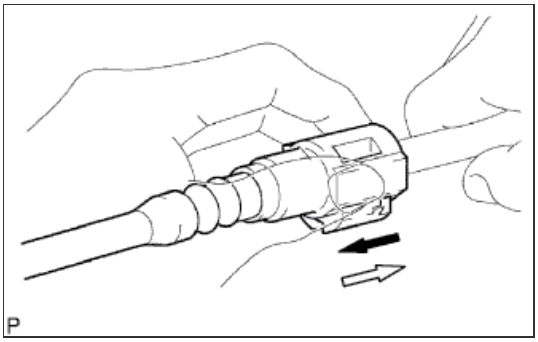
iv. Check for dirt or mud on the seal surface of the disconnected pipe. Clean if necessary.



v. To protect the disconnected pipe and connector from damage and contamination, cover it with a plastic bag.

b. Observe these precautions when disconnecting the fuel tube connector (for quick type B).

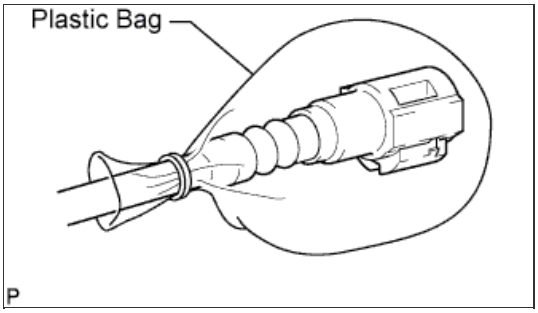
i. Check that there is no damage or foreign matter on the part of the pipe that contacts the connector.



ii. Detach the 2 claws of the connector retainer. Push down on the connector and disconnect it from the pipe.

HINT:

If the connector and pipe are stuck, pinch the fuel pipe by hand, and push and pull the connector to disconnect it.

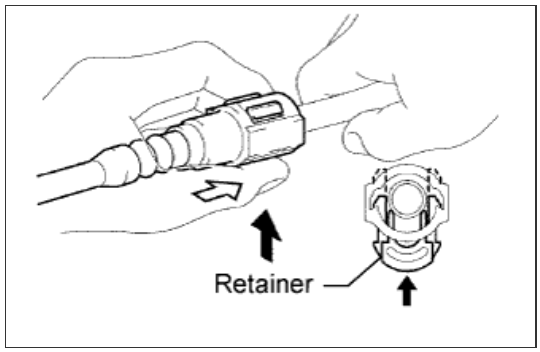


NOTICE:

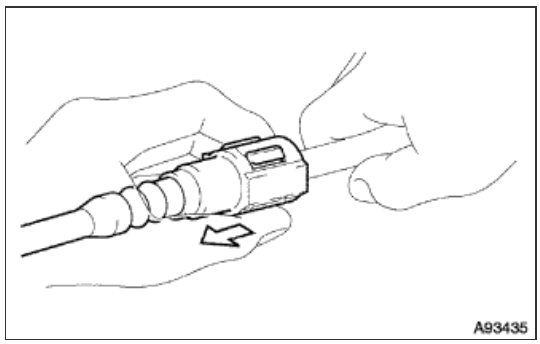
Do not use any tools in this procedure.

iii. Check for foreign matter on the seal surface of the disconnected pipe. Clean it if necessary.

iv. To protect the disconnected pipe and connector from damage and foreign matter, cover it with a plastic bag.



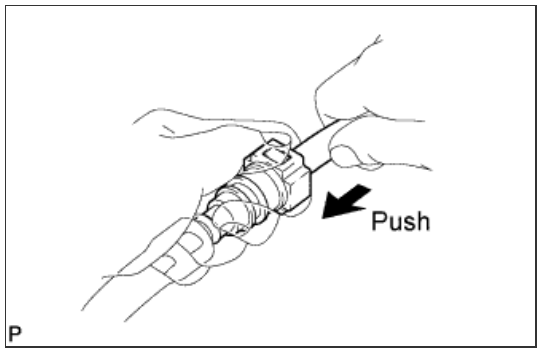
c. Observe these precautions when connecting the fuel tube connector (for quick type B).



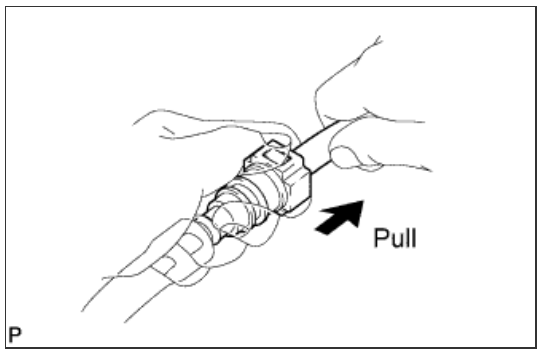
i. Check for foreign matter on the pipe and around the connector before connecting it. Clean it if necessary.

ii. Align the axis of the connector with the axis of the pipe. Push the pipe

into the connector, and push up on the retainer.



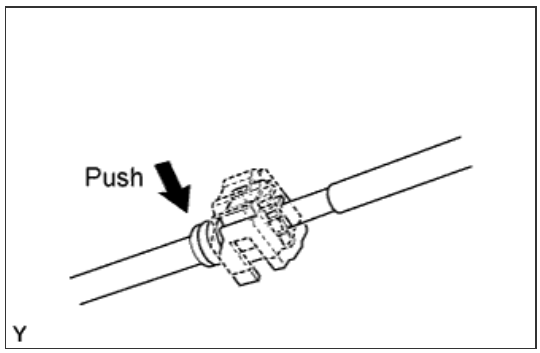
iii. After connecting the pipe and connector, try to pull them apart to confirm that they are securely connected.



d. Observe these precautions when connecting the fuel tube connector (for quick type A).

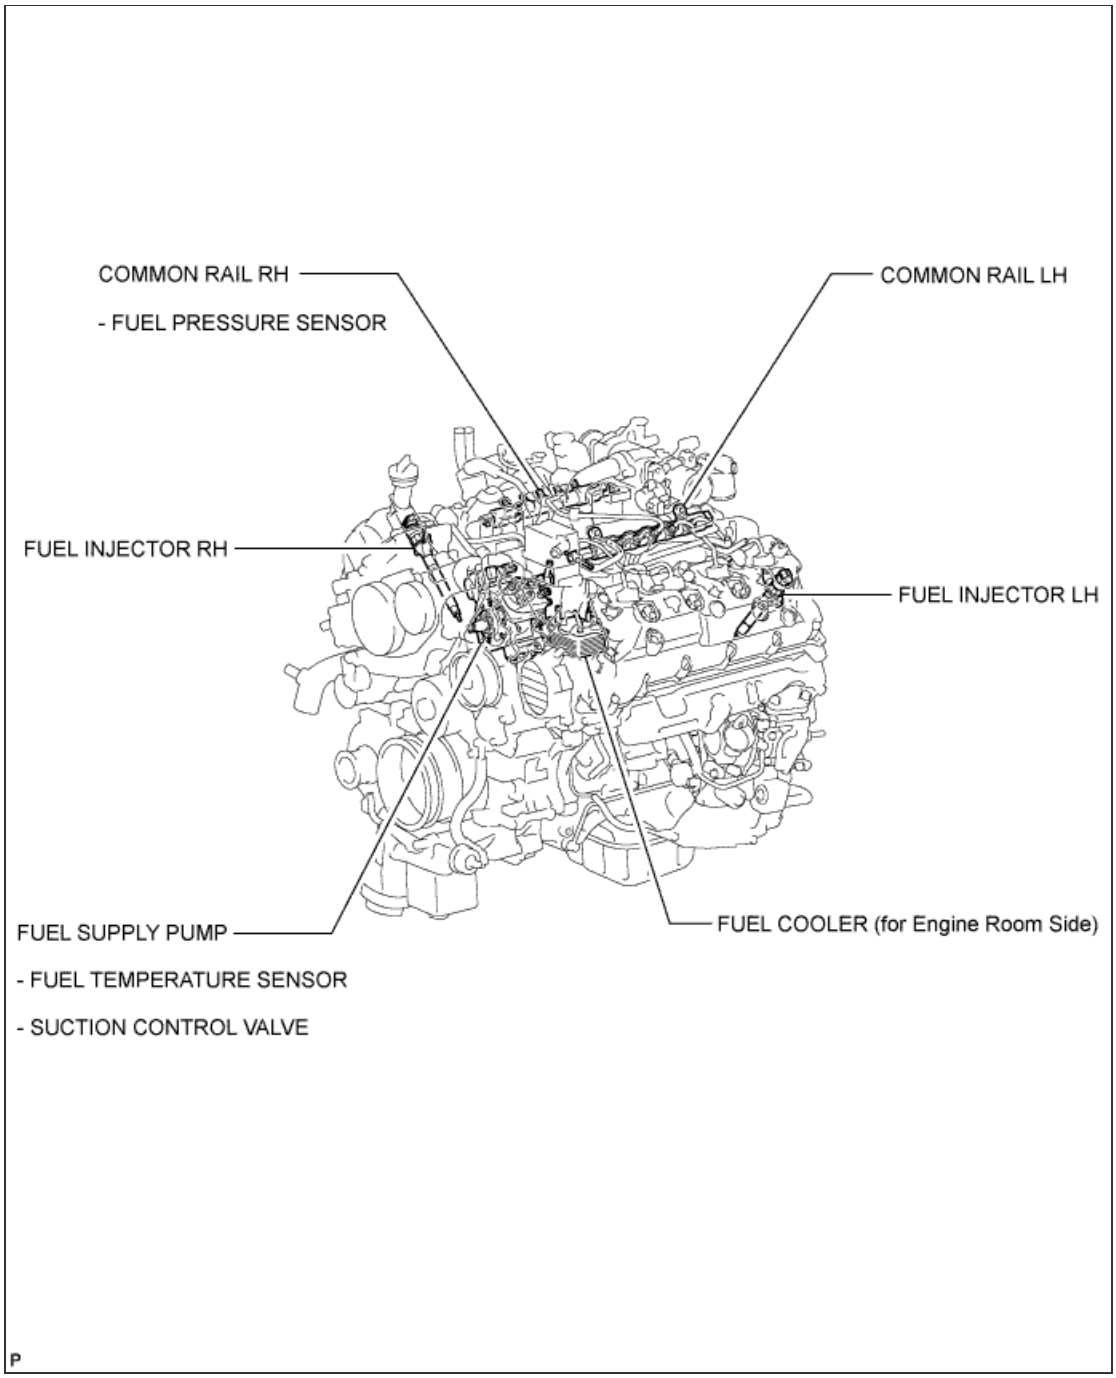
i. Check that there is no damage or contamination in the connected part of the pipe.

ii. Align the axis of the connector with the axis of the pipe. Push the pipe into the connector until the connector makes a "click" sound. If the connection is tight, apply a small amount of fresh spindle oil or gasoline on the tip of the pipe.

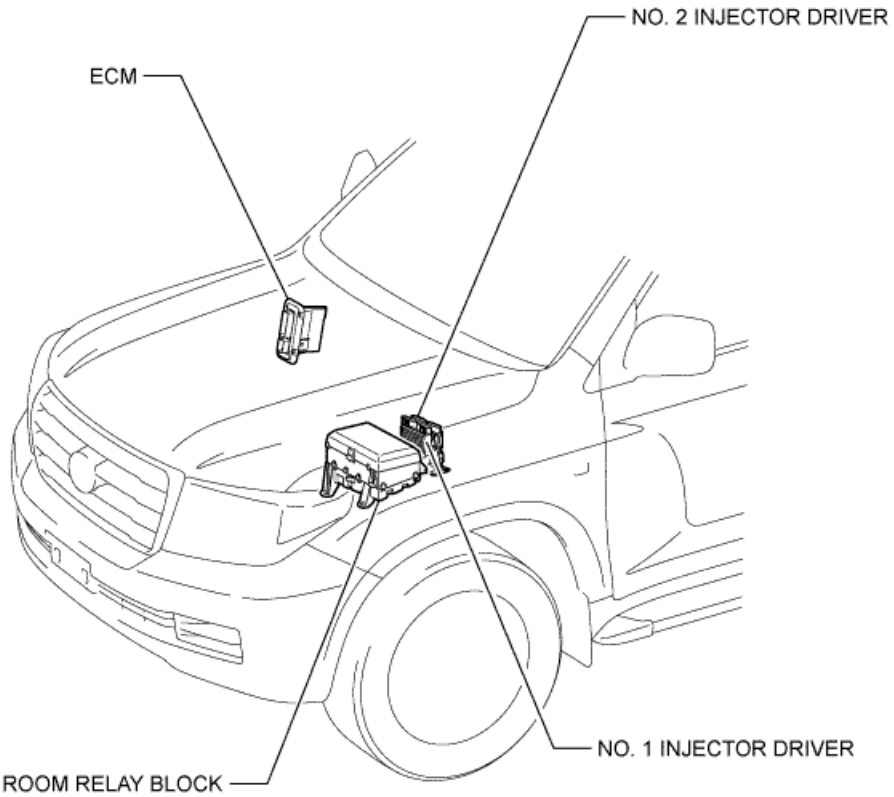


iii. After having finished the connection, try to pull apart the pipe and the connector to confirm that they are securely connected.

iv. Attach the lock claw to the connector by pushing down on the cover, as shown in the illustration.



v. Check that there is no fuel leakage.



3.CHECK FOR FUEL LEAK

a. Check that there are no fuel leaks after performing maintenance anywhere on the fuel system (Click here).

for Preparation Click here

1. INSPECT FUEL PRESSURE

a. Read Data List.

i. Warm up the engine.

ii. Turn the ignition switch off.

iii. Connect the intelligent tester to the DLC3.

iv. Turn the ignition switch to ON.

v. Turn the intelligent tester ON.

vi. Enter the following menus: Powertrain / Engine / Data List.

vii. Read the Data List.

Tester Display	Measurement Item/Range (Display)	Normal Condition
Fuel Press	Fuel pressure / Min.: 0 kPa, Max.: 250000 kPa	27000 to 37000 kPa: Idling
Target Common Rail Pressure	Target common rail pressure / Min.: 0 kPa, Max.: 250000 kPa	25000 to 180000 kPa

2. INSPECT FOR FUEL LEAK

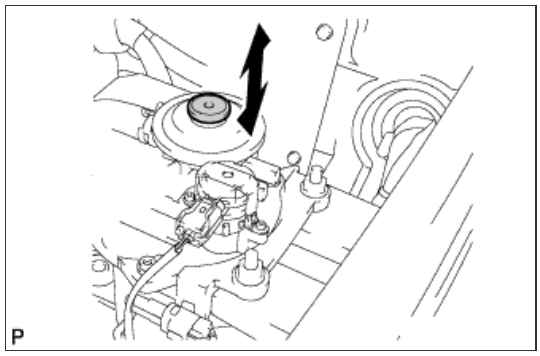
a. Perform Active Test.

i. Connect the intelligent tester to the DLC3.

ii. Turn the ignition switch to ON.

iii. Start the engine.

iv. Turn the intelligent tester ON.



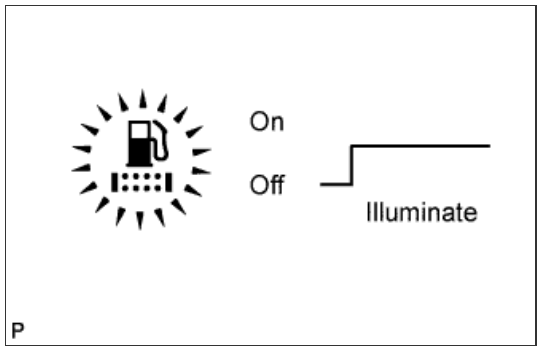
v. Enter the following menus: Powertrain / Engine / Active Test.

vi. Perform the Active Test.

Tester Display	Test Detail	Control Range	Diagnostic Note
Test the Fuel Leak	Pressurizes fuel inside common rail and checks for fuel leaks	Stop/Start	• The fuel inside the common rail is pressurized to the specified value and the engine speed increases to 2000 rpm when Start is selected. • The above conditions are preserved while Start is selected.

3. BLEED AIR FROM FUEL SYSTEM

a. Using the hand pump indicated by the arrow in the illustration, bleed the fuel system. Continue pumping until pumping becomes difficult.



4. CHECK FUEL FILTER WARNING LIGHT AND DRAIN WATER

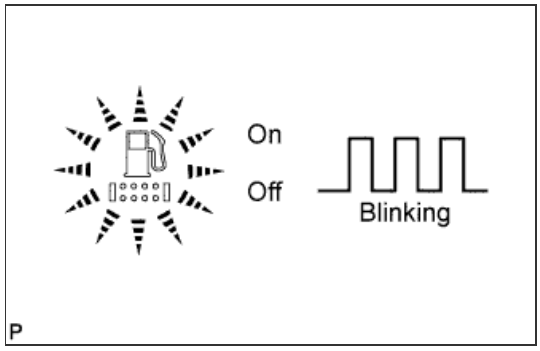
a. w/o Multi-information Display:

i. Check if the fuel filter warning light is illuminated.

NOTICE:

When the fuel filter warning light illuminates, the fuel filter is clogged. Replace the filter (Click here).

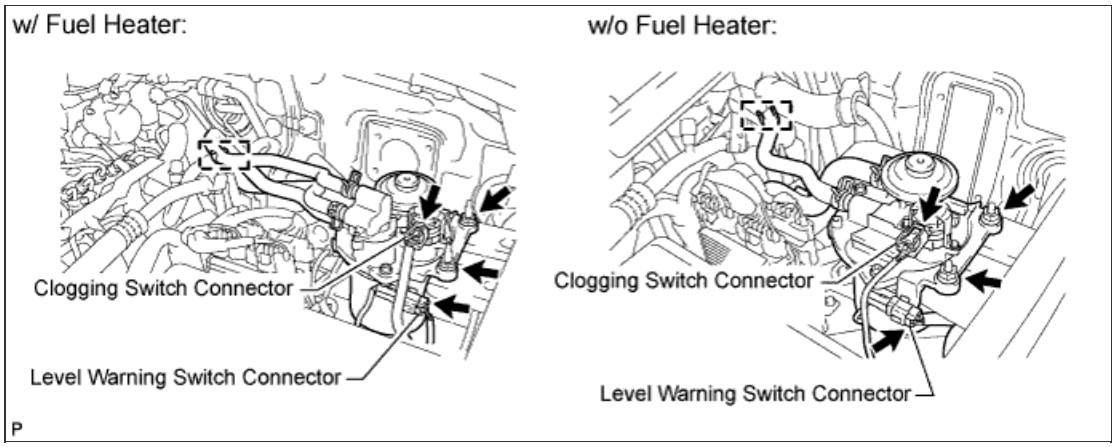
ii. Check if the fuel filter warning light is blinking.



NOTICE:

When the fuel filter warning light is blinking and the buzzer sounds, immediately drain the water in the fuel filter.

b. w/ Multi-information Display:
Check the fuel filter multi-information display.



NOTICE:

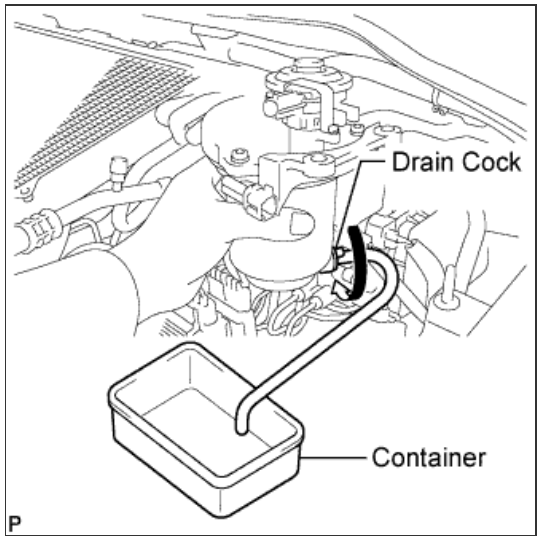
When the fuel system warning is displayed on the multi-information display and the buzzer sounds, replace the fuel filter (Click here) or drain the water in the fuel filter.

c. Drain water.

i. Detach the fuel hose clamp.

ii. Disconnect the clogging switch connector and level warning switch connector.

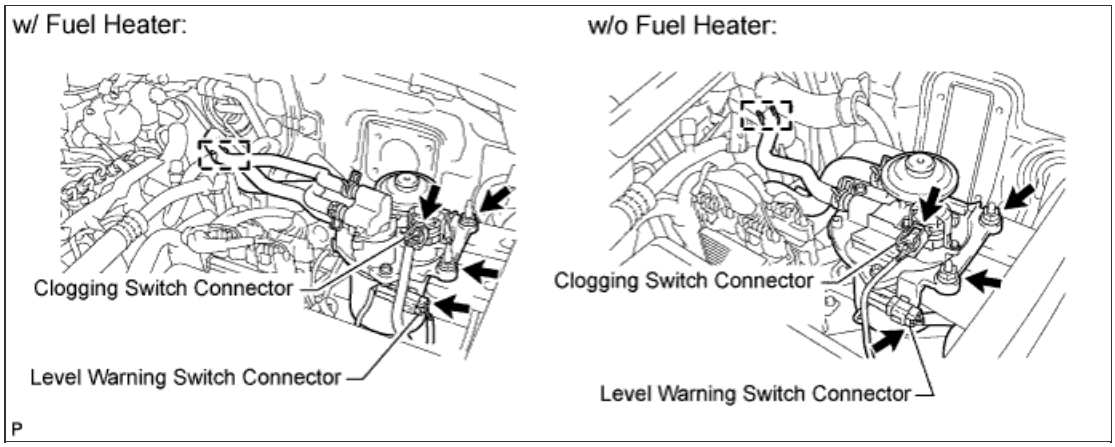
iii. Remove the 2 nuts and lift up the fuel filter assembly.



iv. Connect a hose to the drain cock. Place the other end of the hose into a container under the drain cock.

v. Loosen the drain cock to drain water.

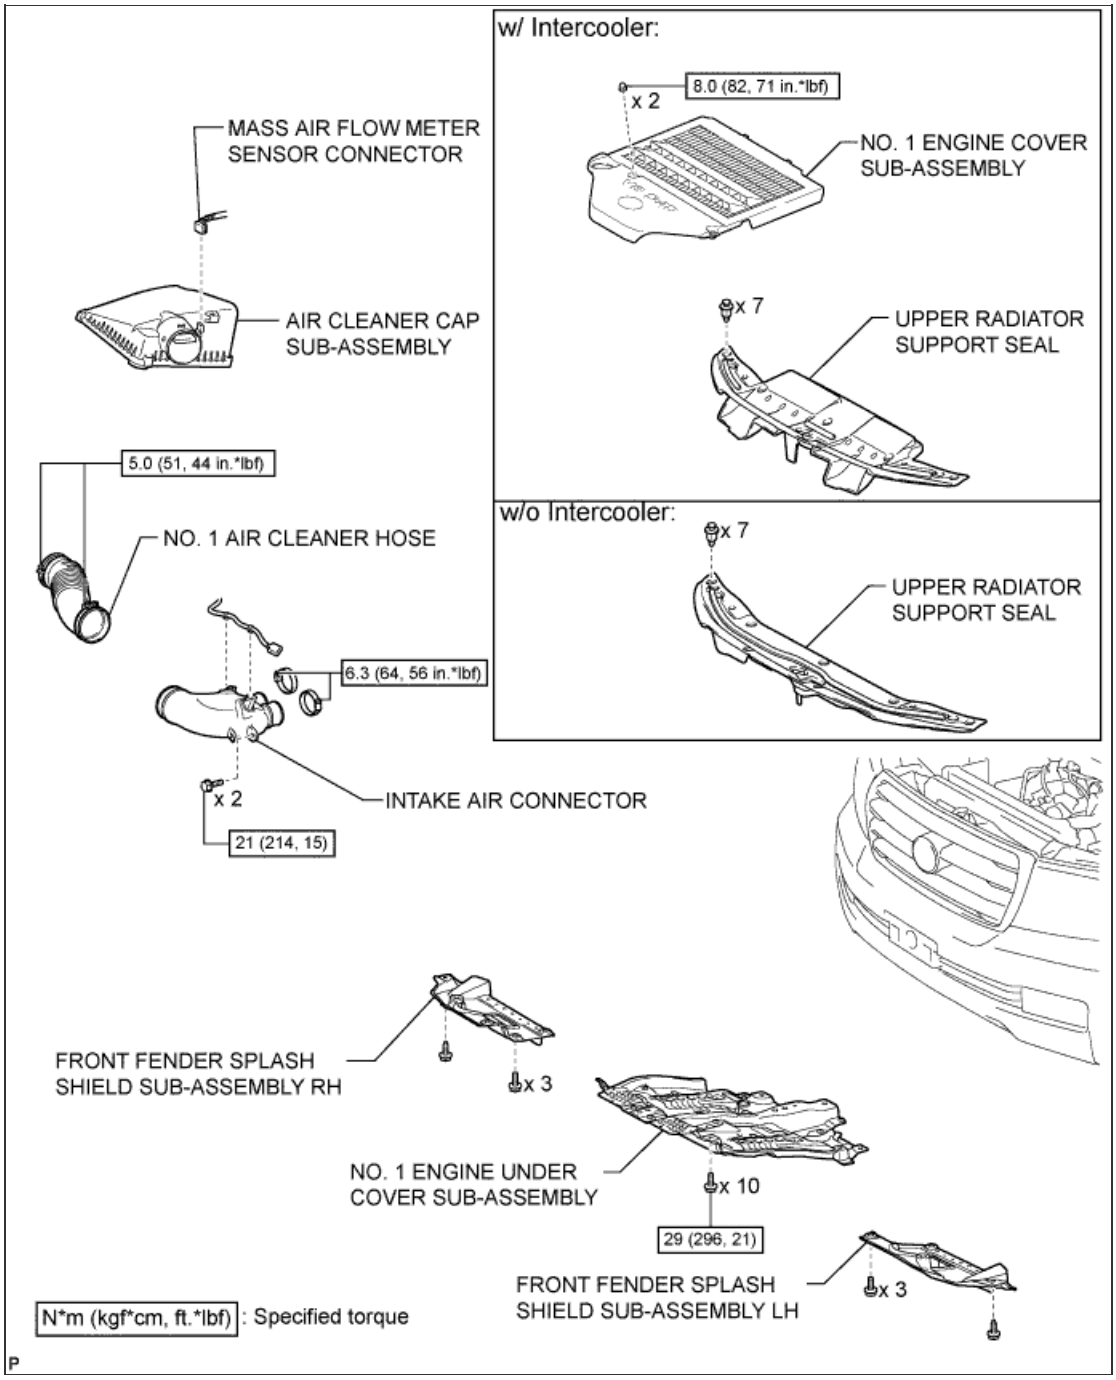
vi. Tighten the drain cock by hand.



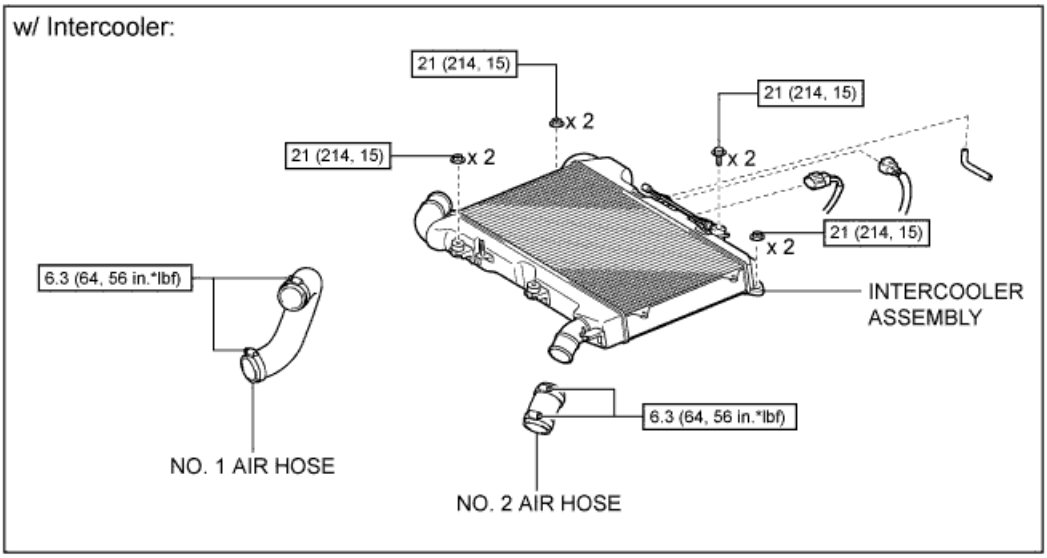
NOTICE:

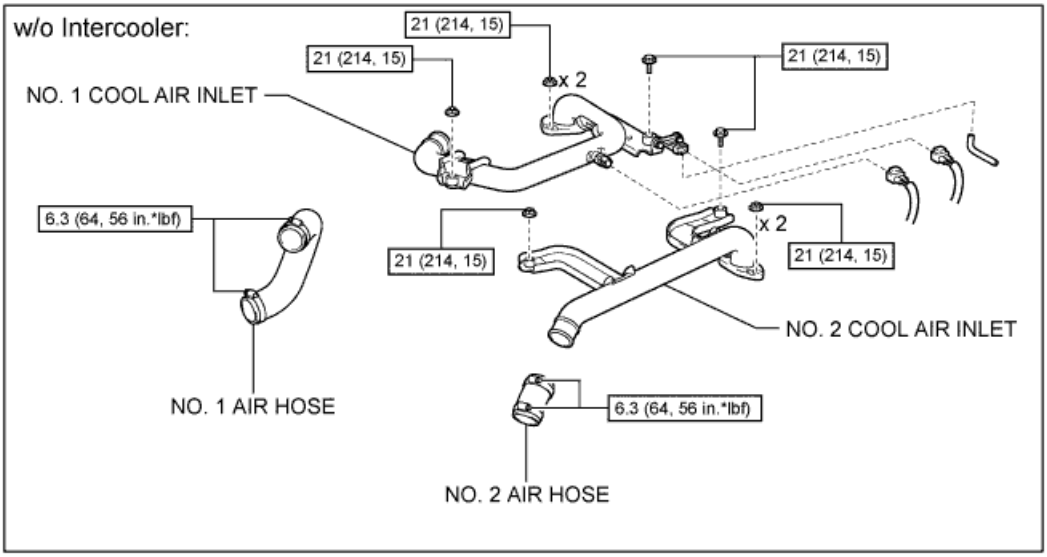
Do not use any tools in this procedure.

vii. Install the fuel filter assembly with the 2 nuts.



Torque:
20 N*m{ 199 kgf*cm , 14 ft.*lbf }





viii. Connect the clogging switch connector and level warning switch connector.

ix. Attach the fuel hose clamp.

P

for Preparation Click here

NOTICE:

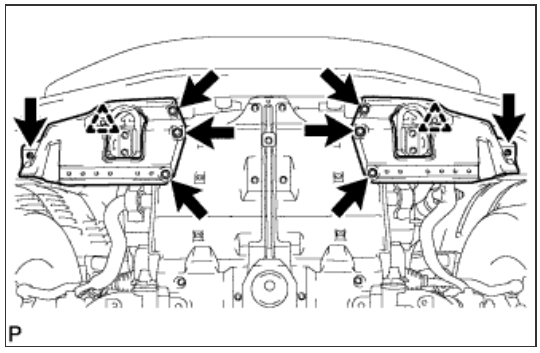
When replacing an injector (including interchanging injectors between cylinders), common rail, replace the corresponding injection pipes with a new one.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:



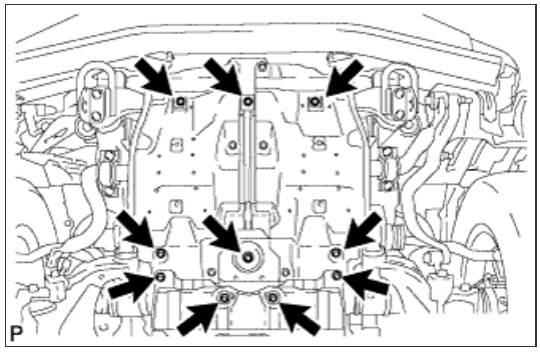
When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

a. Disconnect the cables from the negative (-) main battery and sub-battery terminals.

2. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and screw.

b. Loosen the clip and remove the splash shield.



3. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

a. Remove the 3 bolts and screw.

b. Loosen the clip and remove the splash shield.

4. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and under cover.

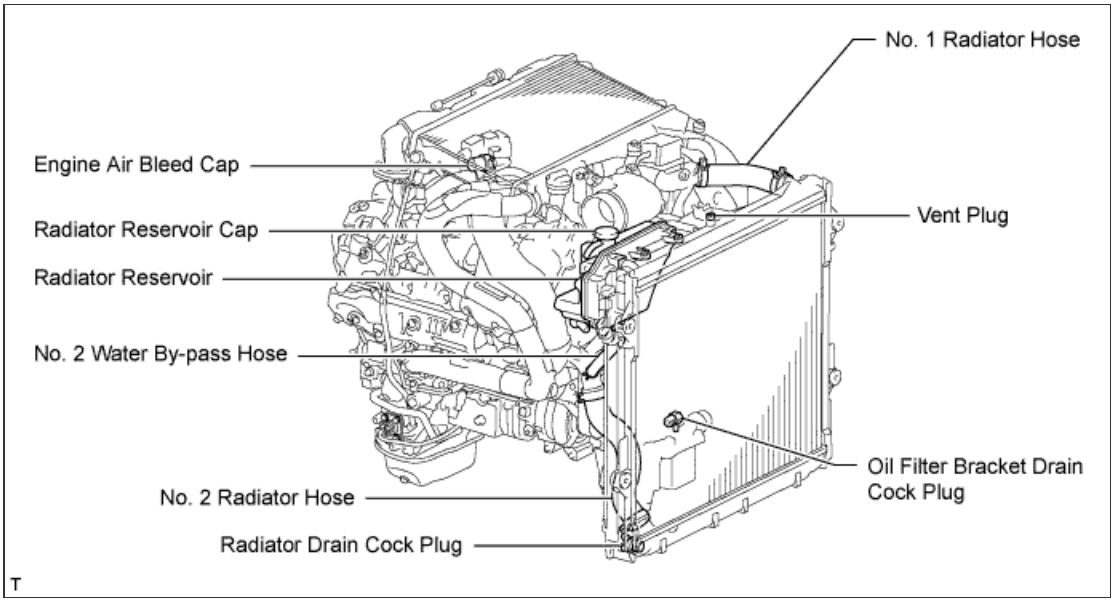
5. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 7 clips and upper radiator support seal.

6. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator reservoir cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

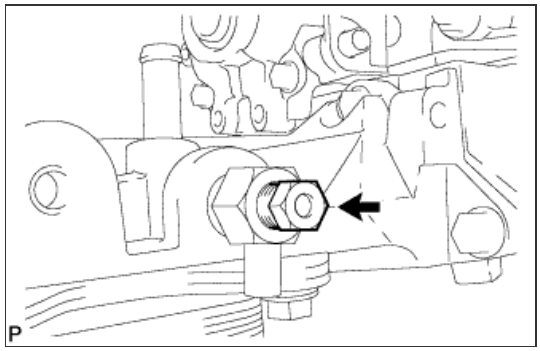


HINT:

Collect the coolant in a container and dispose of it according to the regulations in your area.

a. Loosen the radiator drain cock plug.

b. Remove the radiator reservoir cap to drain the coolant in the radiator.

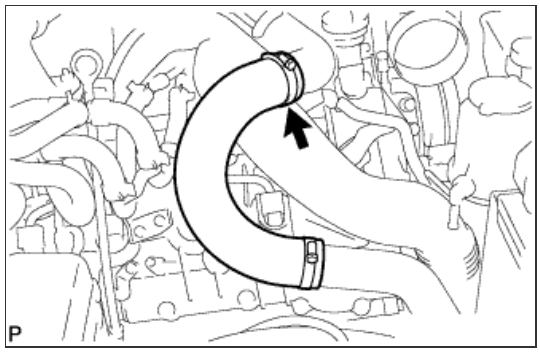


c. Loosen the oil filter bracket drain cock plug to drain the coolant in the engine.

d. ighten the radiator drain cock plug by hand.

e. ighten the oil filter bracket drain cock plug.

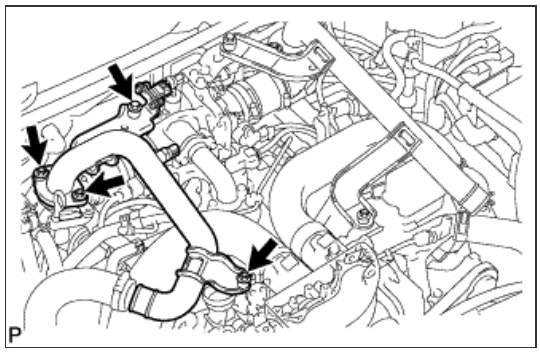
Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }



7. REMOVE INTERCOOLER ASSEMBLY (w/ Intercooler)

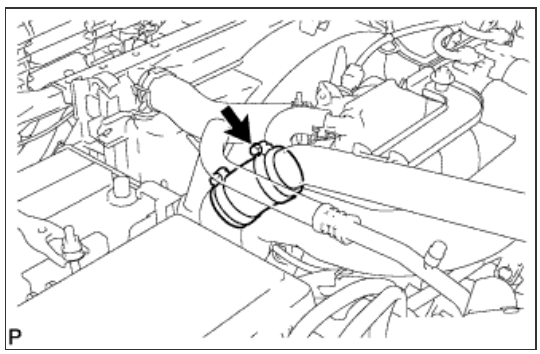
a. Remove the intercooler assembly (Click here).

8. REMOVE NO. 1 COOL AIR INLET (w/o Intercooler)



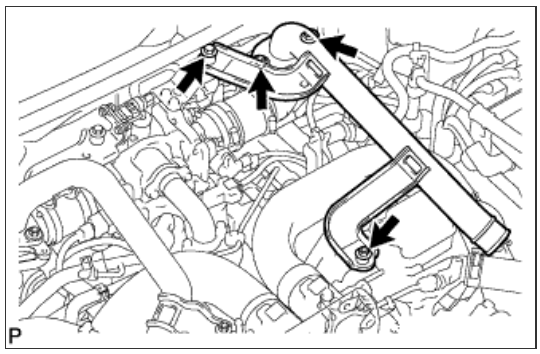
a. Loosen the No. 1 air hose clamp.

b. Disconnect the turbo pressure sensor connector, intake air temperature sensor connector and vacuum hose.



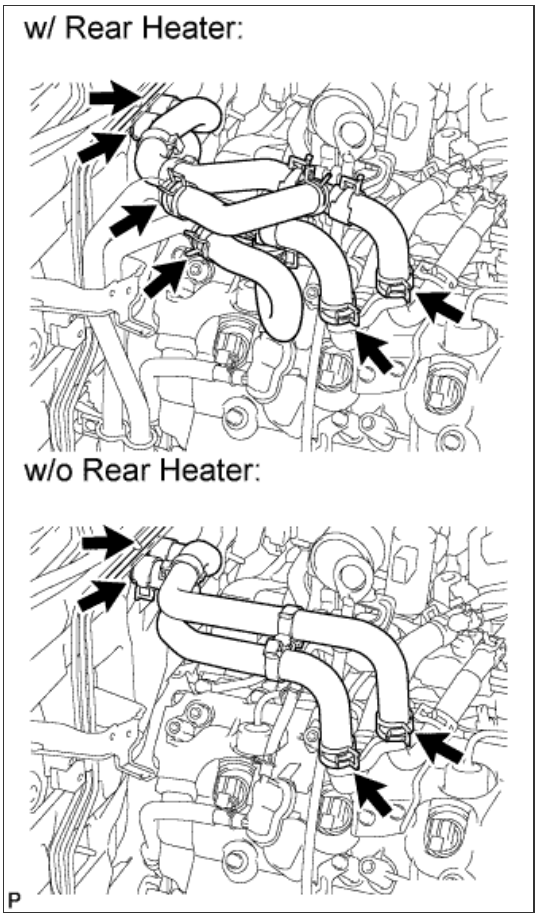
c. Remove the 3 nuts, bolt and No. 1 cool air inlet.

d. Remove the gasket from the air tube RH.



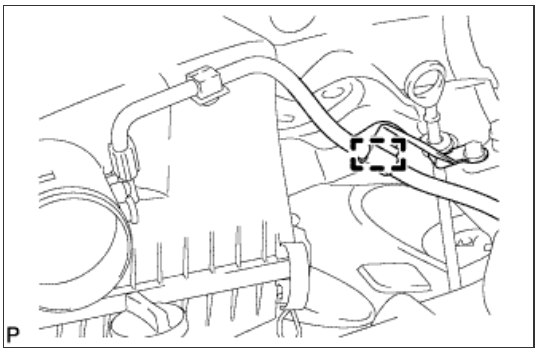
9. REMOVE NO. 2 COOL AIR INLET (w/o Intercooler)

a. Loosen the No. 2 air hose clamp.



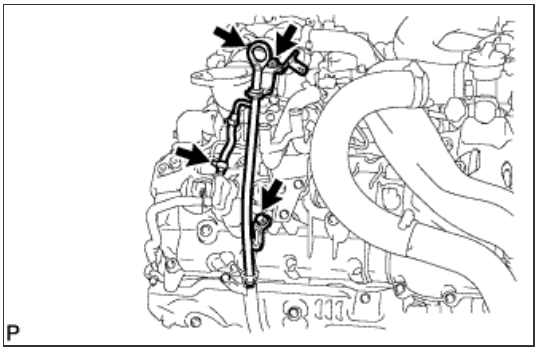
b. Remove the 3 nuts, bolt and No. 2 cool air inlet.

c. Remove the gasket from the air tube LH.



10. DISCONNECT WATER HOSE SUB-ASSEMBLY

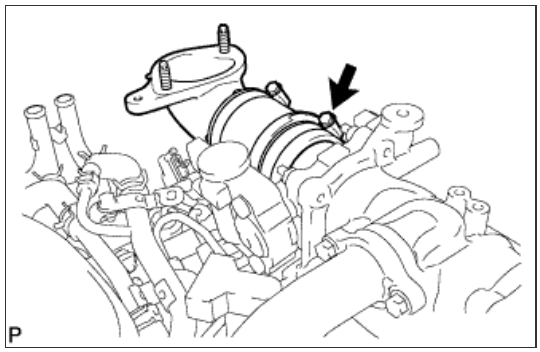
11. REMOVE NO. 2 ENGINE OIL LEVEL DIPSTICK GUIDE



a. Disconnect the wire harness clamp from the No. 2 engine oil level dipstick guide.

b. Disconnect the ventilation hose from the cylinder head cover RH.

c. Remove the 2 bolts and No. 2 engine oil level dipstick guide.

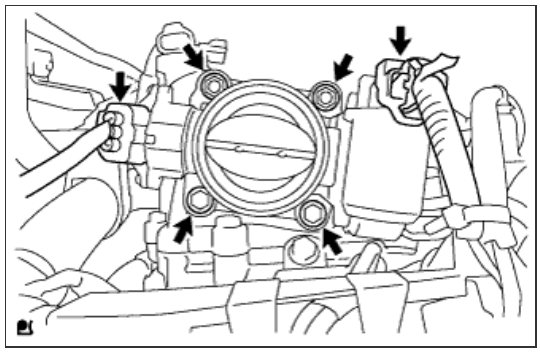


d. Remove the O-ring from the No. 2 engine oil level dipstick guide.

12. REMOVE AIR TUBE SUB-ASSEMBLY RH

a. Loosen the hose clamp.

b. Remove the air tube from the throttle body.



13. REMOVE DIESEL THROTTLE BODY ASSEMBLY RH

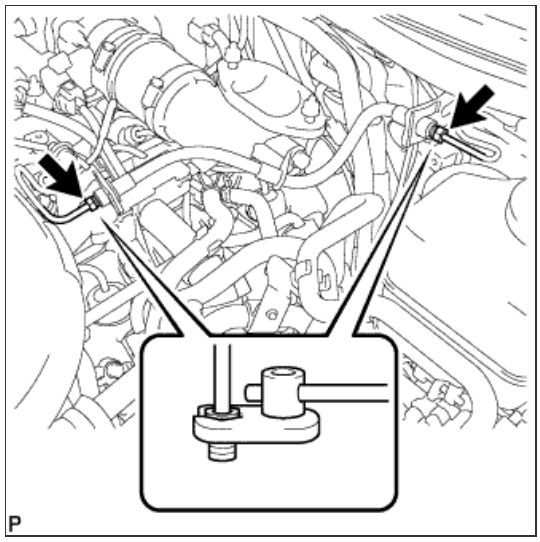
a. Disconnect the throttle position sensor connector.

b. Disconnect the throttle motor connector.

c. Remove the 2 bolts, 2 nuts and throttle body.

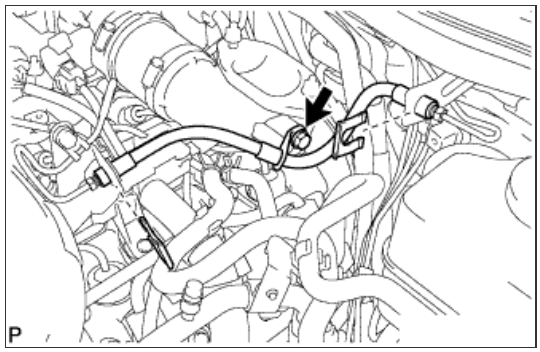
d. Remove the gasket from the intake pipe.

14. DRAIN CLUTCH FLUID (for Manual Tran m ion)



15. REMOVE CLUTCH HOSE (for Manual Tran m ion)

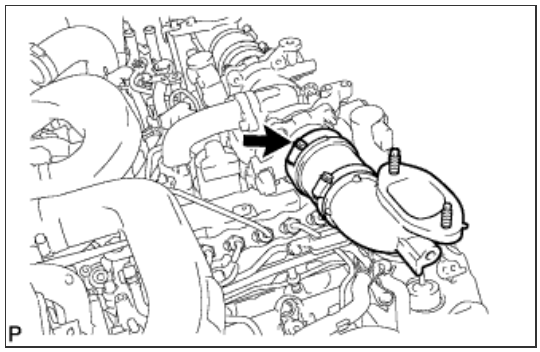
a. Disconnect the 2 flexible hose tubes from the clutch hose with a 10 mm union nut wrench while holding the flexible hose with a wrench.



NOTICE:

- **Do not bend or damage the fle ible ho e tube .**
- **Do not allow any foreign matter uch a dirt and du t to enter the fle ible ho e tube from the connecting point.**

b. Remove the 2 clips.

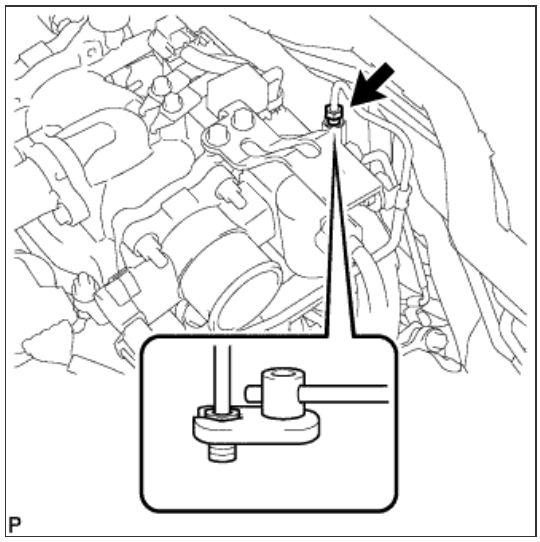


c. Remove the bolt and clutch hose.

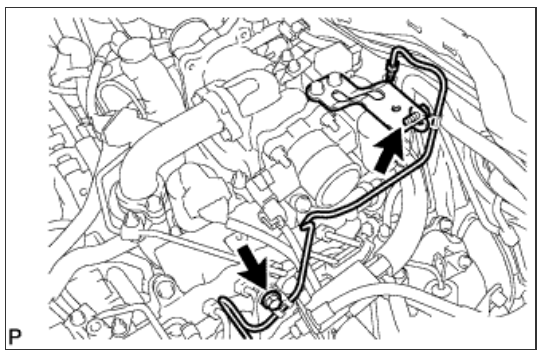
16. REMOVE AIR TUBE SUB-ASSEMBLY LH

a. Loosen the hose clamp.

b. Remove the air tube from the throttle body.



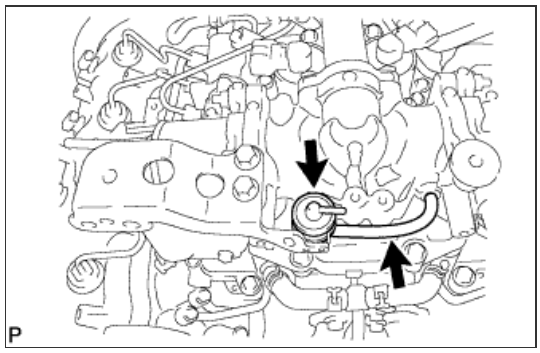
17. REMOVE TUBE CONNECTOR TO FLE IBLE HOSE TUBE (for Manual Tran m ion)



a. Using a 10 mm union nut wrench, disconnect the tube connector to flexible hose tube from the clutch tube to release cylinder 2 way.

NOTICE:

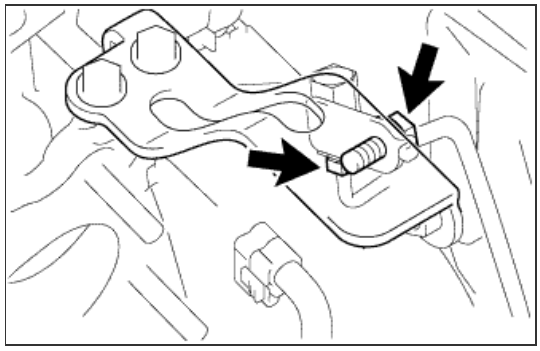
- **Do not bend or damage the fle ible ho e tube.**
- **Do not allow any foreign matter uch a dirt and du t to enter the fle ible ho e tube from the connecting point.**



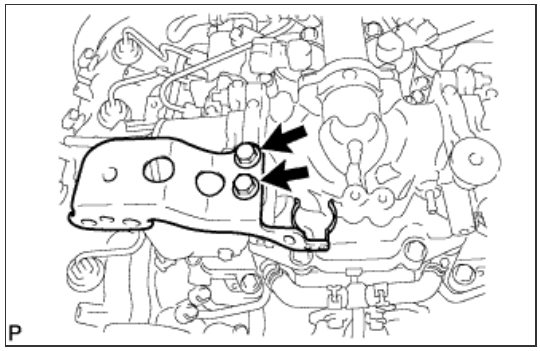
b. Remove the 2 bolts and tube connector to flexible hose tube.

18. REMOVE NO. 1 GAS FILTER

a. Disconnect the hose from the intake pipe.



b. Remove the gas filter.

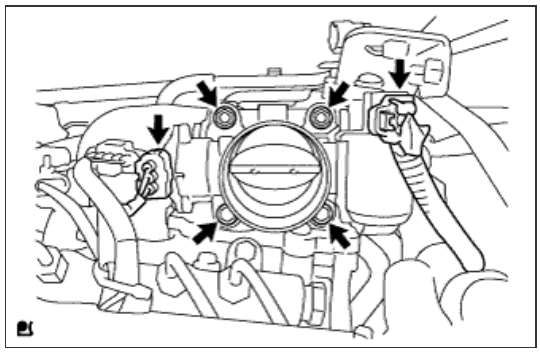


19. REMOVE NO. 3 INTERCOOLER SUPPORT BRACKET

a. for Manual ransmission:

i. Remove the bolt and disconnect the clutch tube to release cylinder 2 way from the bracket.

b. Remove the 2 bolts and bracket.



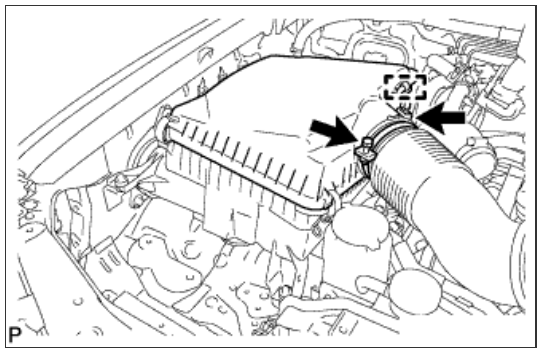
20. REMOVE DIESEL THROTTLE BODY ASSEMBLY LH

a. Disconnect the throttle position sensor connector.

b. Disconnect the throttle motor connector.

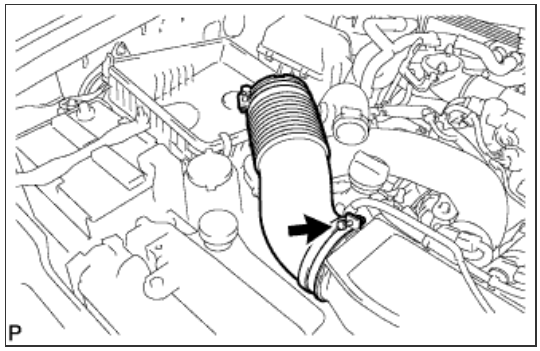
c. Remove the 2 bolts, 2 nuts and throttle body.

d. Remove the gasket from the intake pipe.



21. REMOVE AIR CLEANER CAP SUB-ASSEMBLY

a. Loosen the hose clamp.



b. Disconnect the mass air flow meter connector and using a clip remover, detach the wire harness clamp from the air cleaner cap.

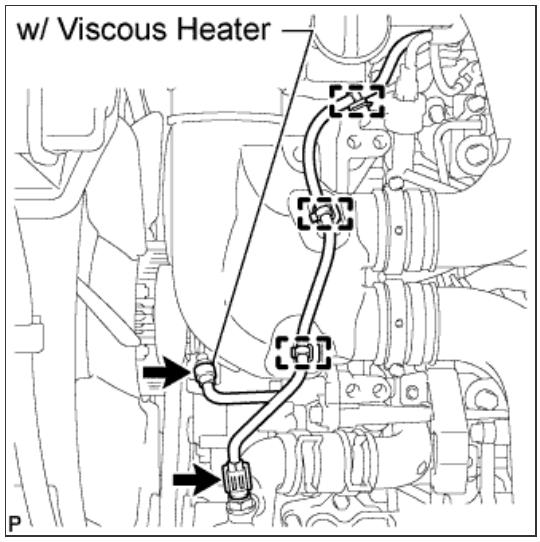
c. Detach the 4 clamps and remove the air cleaner cap.

22. REMOVE NO. 1 AIR CLEANER HOSE

a. Loosen the hose clamp and remove the No. 1 air cleaner hose.

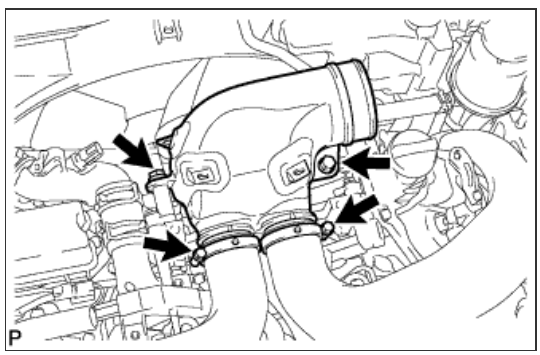
23. REMOVE INTAKE AIR CONNECTOR

a. w/o Viscous Heater:



i. Disconnect the connector from the water temperature sensor.

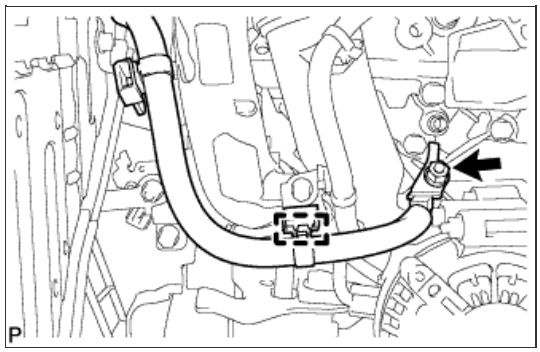
ii. Using a clip remover, detach the 3 wire harness clamps.



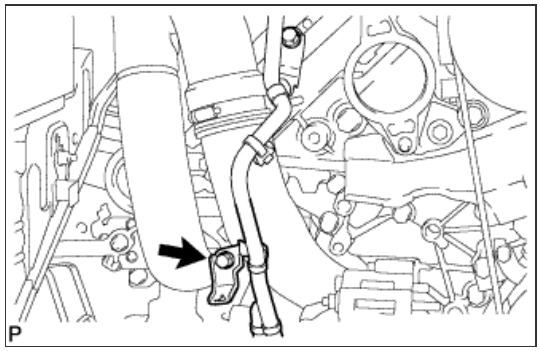
b. w/ Viscous Heater:

i. Disconnect the 2 connectors from the viscous with magnet clutch heater and water temperature sensor.

ii. Using a clip remover, detach the 3 wire harness clamps.

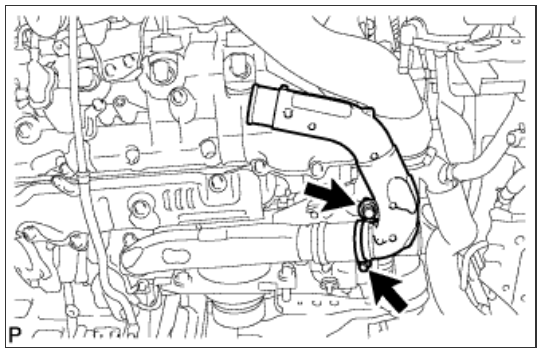


c. Loosen the 2 hose clamps and remove the 2 bolts and intake air connector.



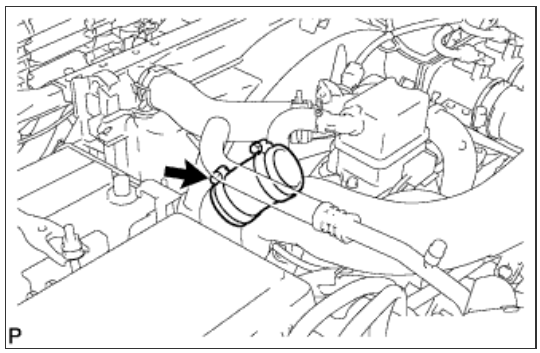
24. REMOVE NO. 3 AIR TUBE

a. Disconnect the wire harness from the clamp.

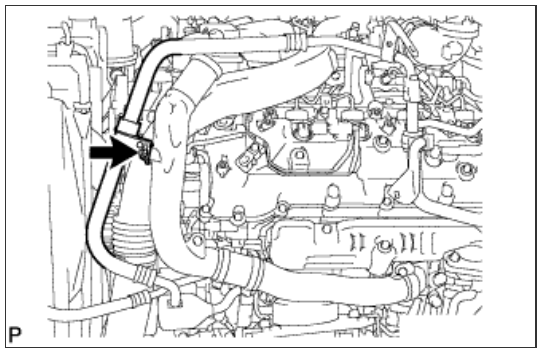


b. Remove the nut and ground wire.

c. Remove the bolt and disconnect the wire harness bracket.

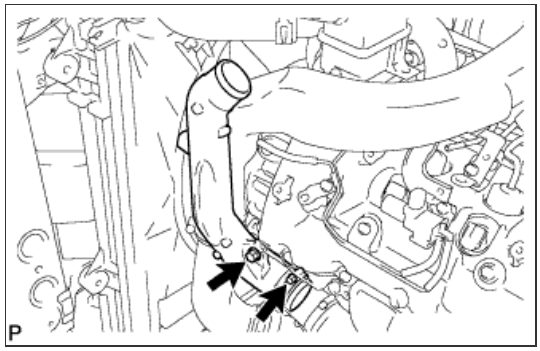


d. Loosen the hose clamp and remove the bolt and No. 3 air tube.



25. REMOVE NO. 2 AIR HOSE

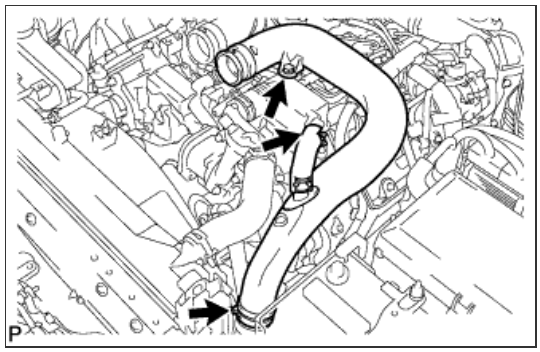
a. Loosen the hose clamp and remove the No. 2 air hose.



26. REMOVE NO. 4 AIR TUBE

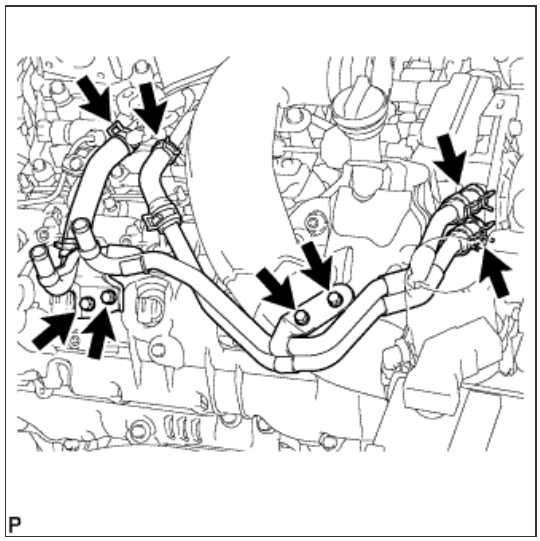
a. Remove the bolt and disconnect the suction hose.

b. Loosen the hose clamp and remove the bolt and No. 4 air tube.



27. REMOVE NO. 2 AIR CLEANER PIPE SUB-ASSEMBLY

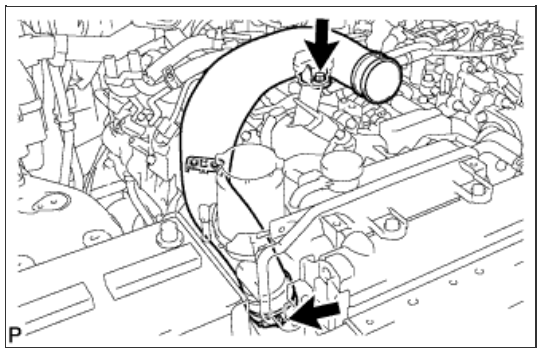
a. Disconnect the ventilation hose from the oil separator.



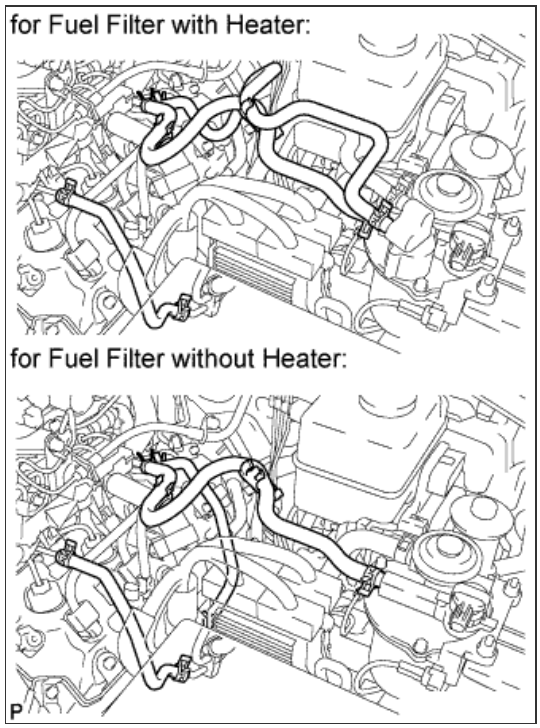
b. Loosen the hose clamp.

c. Remove the bolt and No. 2 air cleaner pipe.

28. REMOVE HEATER WATER PIPE SUB-ASSEMBLY (w/ Vi cou Heater)



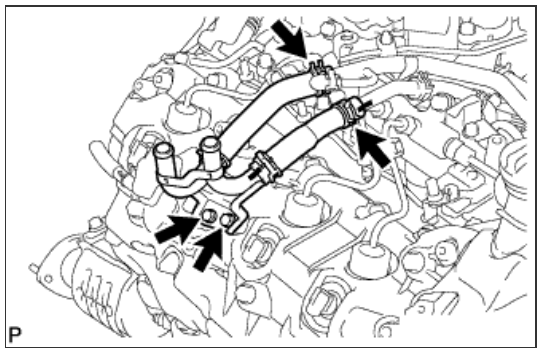
a. Remove the 4 bolts and disconnect the 4 water hose ends, and then remove the heater water pipe.



29. REMOVE NO. 1 AIR CLEANER PIPE SUB-ASSEMBLY

a. Loosen the hose clamp.

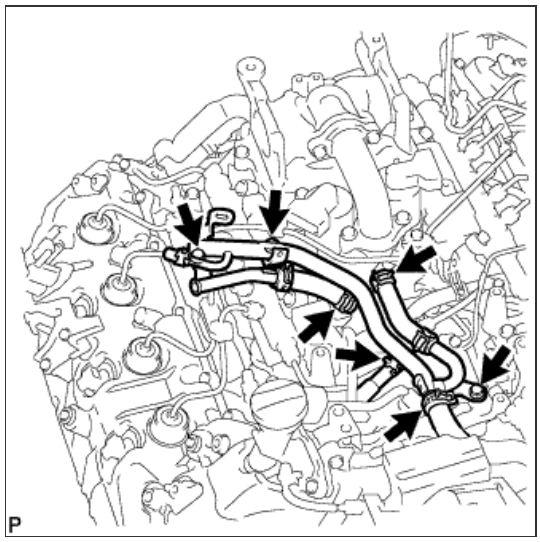
b. Remove the bolt and No. 1 air cleaner pipe.



30. DISCONNECT FUEL HOSE

31. REMOVE NO. 3 WATER BY-PASS PIPE (w/o Vi cou Heater)

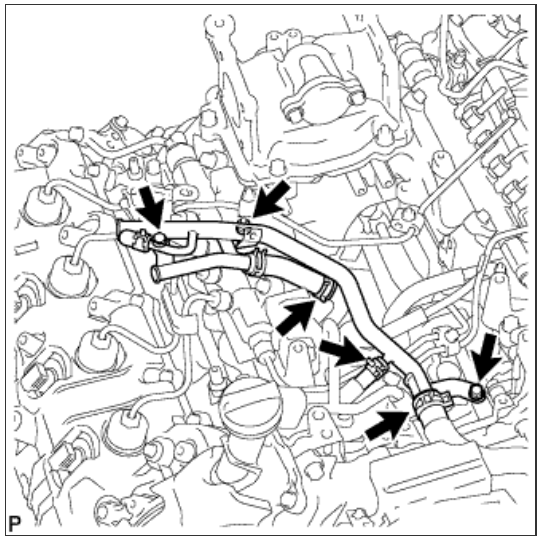
a. Remove the 2 bolts and disconnect the 2 water hose ends, and then remove the No. 3 water by-pass pipe.



32. REMOVE NO. 4 WATER BY-PASS PIPE

a. w/ R System:

i. Remove the 2 bolts and nut.

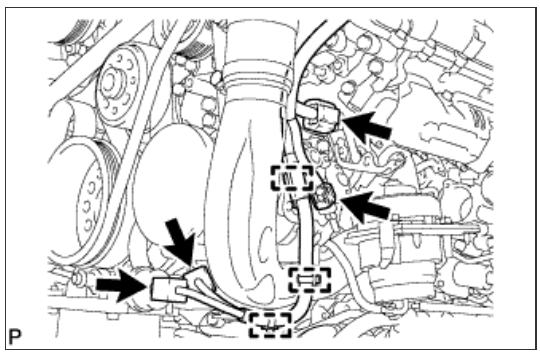


ii. Disconnect the 4 water hose ends, and then remove the No. 4 water by-pass pipe.

b. w/o R System:

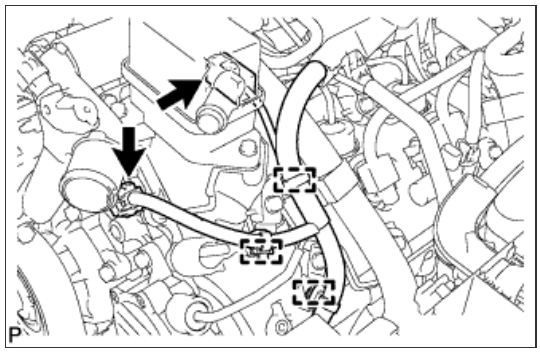
i. Remove the 2 bolts and nut.

ii. Disconnect the 3 water hose ends, and then remove the No. 4 water by-pass pipe.



33. DISCONNECT ENGINE WIRE

a. LH Side:

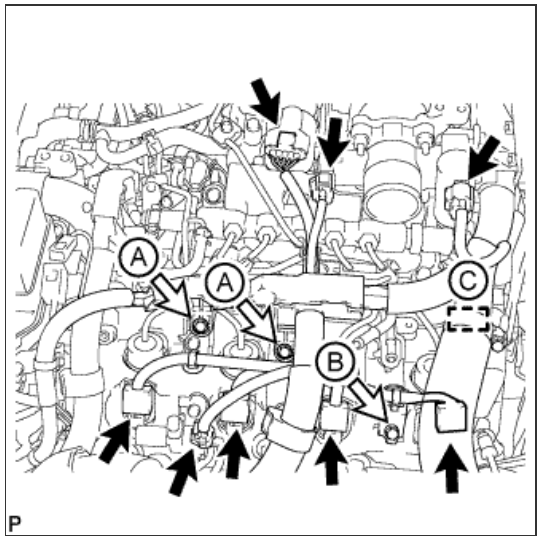


i. Disconnect the 4 connectors.

ii. Using a clip remover, detach the 3 wire harness clamps.

iii. Disconnect the 2 connectors.

iv. Using a clip remover, detach the 3 wire harness clamps.



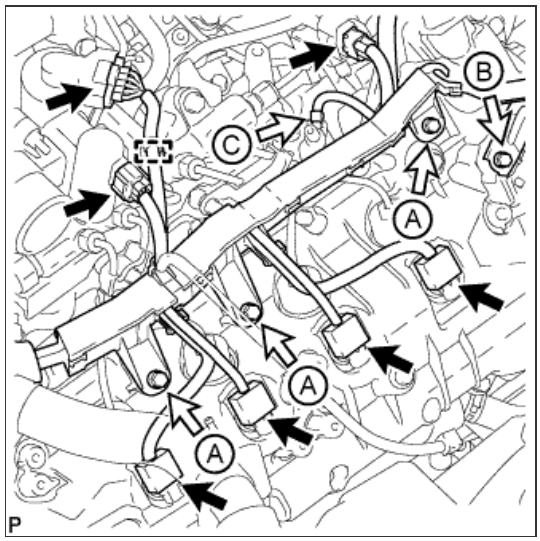
v. Disconnect the 8 connectors.

vi. Remove the bolt and engine wire harness bracket labeled B.

vii. Remove the 2 bolts and disconnect the engine wire protector labeled A.

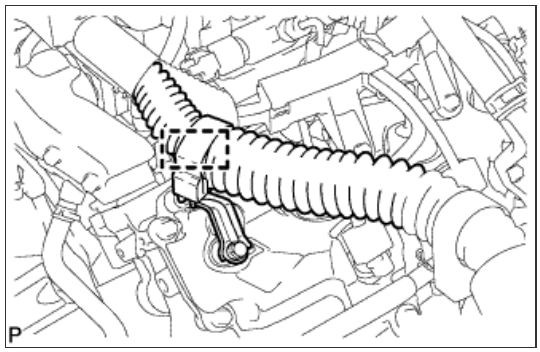
viii. for RHD:
Disconnect the wire harness from the wire harness clamp holder labeled C.

b. RH Side:



i. Disconnect the 7 connectors.

ii. Using a clip remover, detach the wire harness clamp.



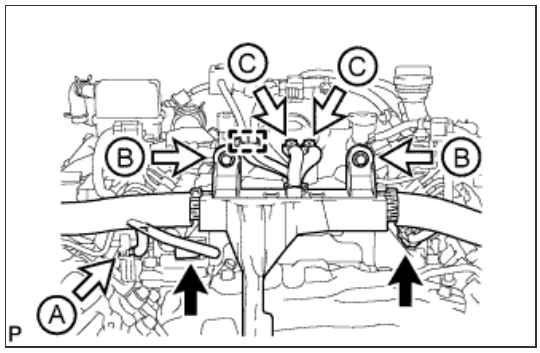
iii. Remove the 3 bolts and disconnect the wire harness protector labeled A.

iv. Remove the bolt and wire harness bracket labeled B.

v. Remove the nut and glow plug wire harness labeled C.

vi. for RHD:
Disconnect the wire harness from the wire harness clamp holder.

c. Rear Side:



i. Using a clip remover, detach the wire harness clamp.

ii. Remove the 2 bolts and 2 ground wires labeled C.

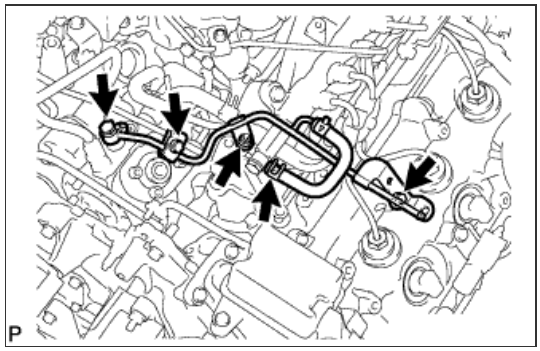
iii. Remove the 2 bolts and disconnect the engine wire harness protector labeled B.

iv. Disconnect the 2 common rail connectors.

v. Remove the nut and disconnect the glow plug wire harness labeled A.

34. REMOVE NO. 2 FUEL PIPE SUB-ASSEMBLY

NOTICE:



- **After removing a fuel pipe, to prevent dirt or foreign object from entering the fuel pipe end , cover the fuel pipe end with pla tic bag .**
- **After removing a fuel pipe, to prevent dirt or foreign object from entering the fuel upply pump hole, cover the hole with protective tape.**

a. Disconnect the fuel hose from the No. 5 nozzle leakage pipe.

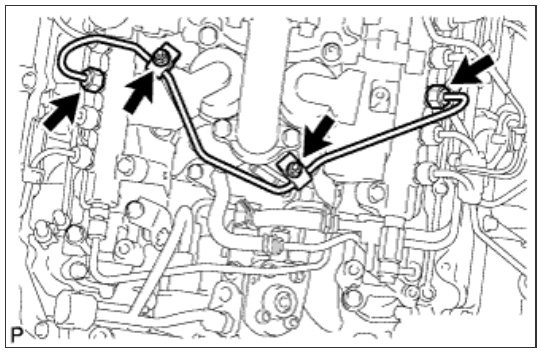
b. Remove the bolt and No. 2 injection pipe clamp.

c. Remove the union bolt and gasket.

d. Remove the bolt, nut and No. 2 fuel pipe.

35. REMOVE NO. 6 INJECTION PIPE SUB-ASSEMBLY

NOTICE:



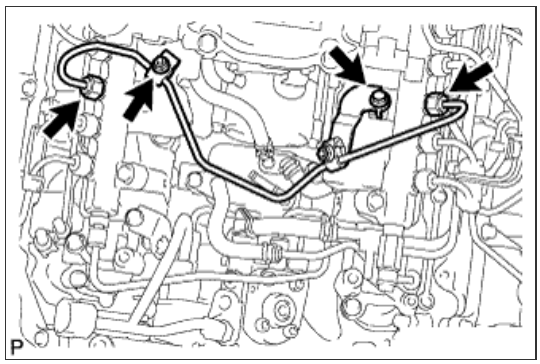
After removing an injection pipe, to prevent dirt or foreign objects from entering the common rail holes, cover the holes with protective tape.

a. w/ R System:

i. Using a union nut wrench, loosen the No. 6 injection pipe ends.

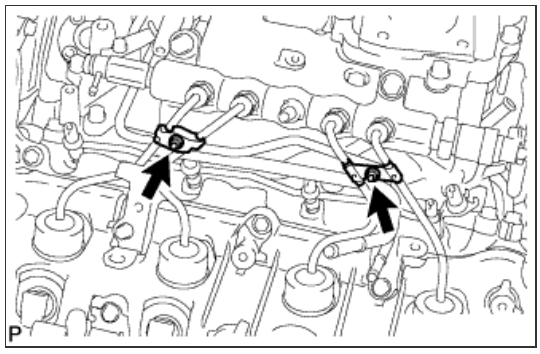
ii. Remove the 2 nuts and 2 No. 2 injection pipe clamps.

iii. Remove the No. 6 injection pipe.



b. w/o R System:

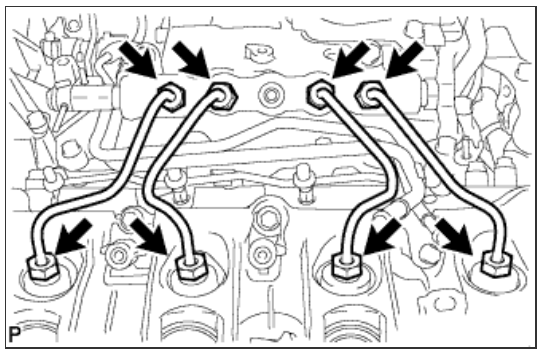
i. Using a union nut wrench, loosen the No. 6 injection pipe ends.



ii. Remove the nut and No. 2 injection pipe clamp.

iii. Remove the bolt and No. 6 injection pipe.

36. REMOVE INJECTION PIPE LH

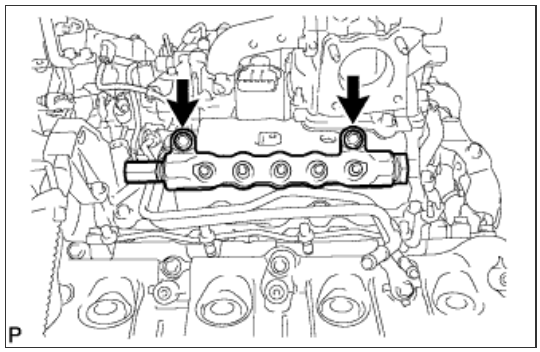


a. w/ ntercooler:
Remove the 2 nuts and 4 injection pipe clamps.

b. Using a union nut wrench, remove the 4 injection pipes.

NOTICE:

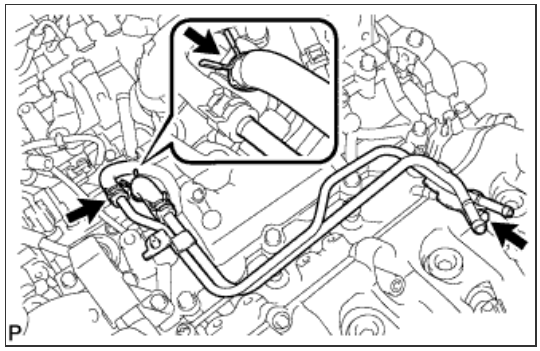
After removing an injection pipe, to prevent dirt or foreign objects from entering the common rail holes or injector holes, cover the holes with protective tape.



37. REMOVE COMMON RAIL ASSEMBLY LH

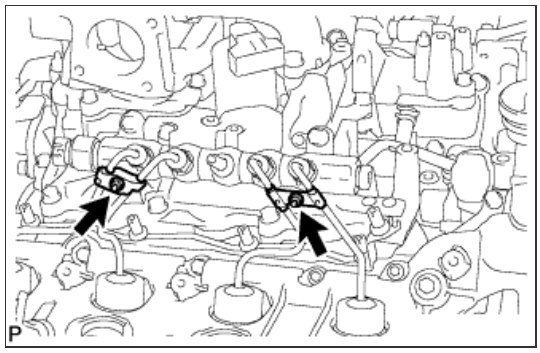
a. Remove the 2 bolts and common rail.

NOTICE:



Do not remove the fuel pressure limiter from the common rail. f it is removed, replace the common rail.

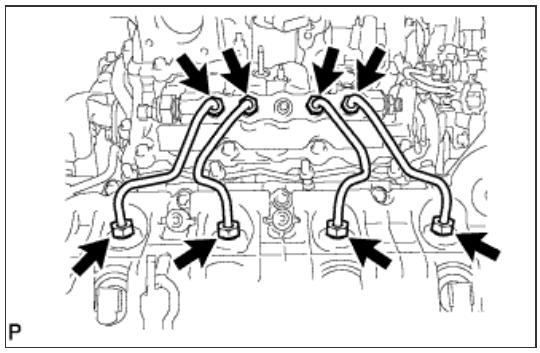
38. REMOVE FUEL FILTER TO INJECTION PUMP FUEL PIPE SUB-ASSEMBLY



a. Disconnect the 2 hoses from the fuel pipe.

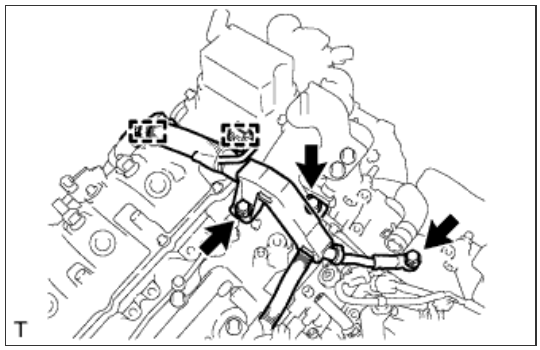
b. Remove the bolt and fuel filter to injection pump fuel pipe.

39. REMOVE INJECTION PIPE RH



a. w/ ntercooler:
Remove the 2 nuts and 4 injection pipe clamps.

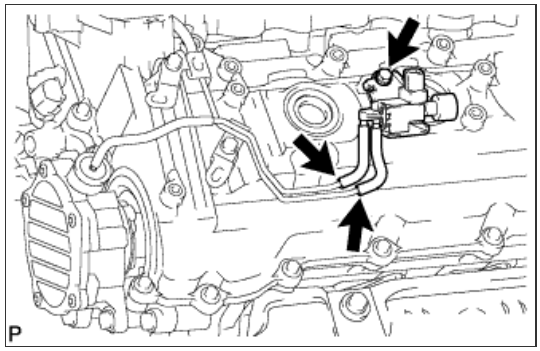
b. Using a union nut wrench, remove the 4 injection pipes.



NOTICE:

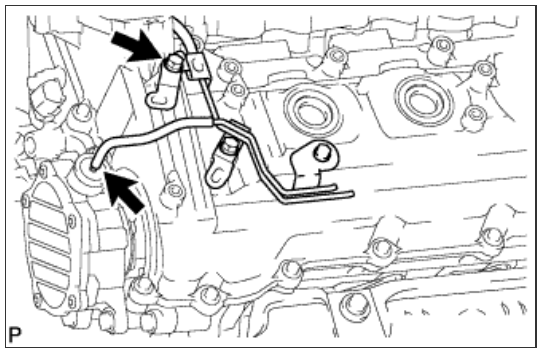
After removing an injection pipe, to prevent dirt or foreign objects from entering the common rail holes or injector holes, cover the holes with protective tape.

40. DISCONNECT NO. 2 ENGINE WIRE



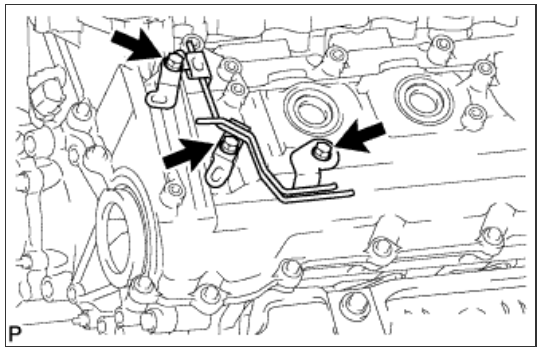
a. Remove the 3 bolts and using a clip remover, detach the 2 wire harness clamps, and then disconnect the No. 2 engine wire.

41. REMOVE NO. 1 VACUUM SWITCHING VALVE ASSEMBLY (for Engine Mounting)

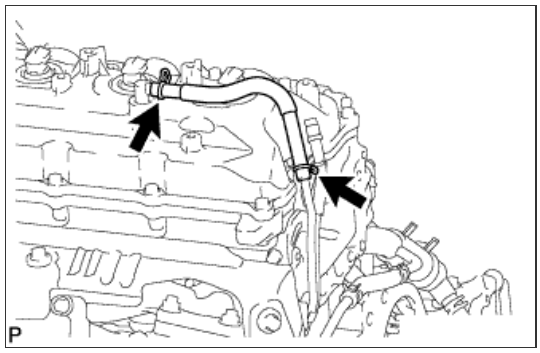


a. Disconnect the 2 vacuum hoses.

b. Remove the bolt and vacuum switching valve.

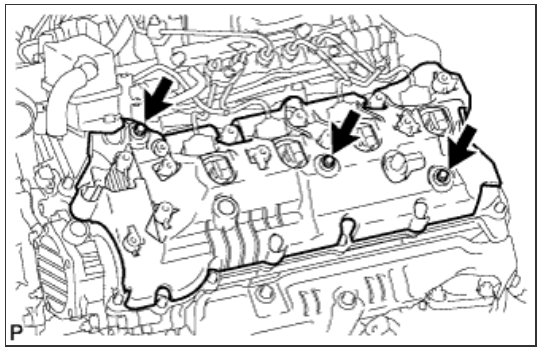


42. REMOVE NO. 1 VACUUM TRANSMITTING PIPE SUB-ASSEMBLY



a. w/ ntercooler:
Disconnect the 2 vacuum hoses.

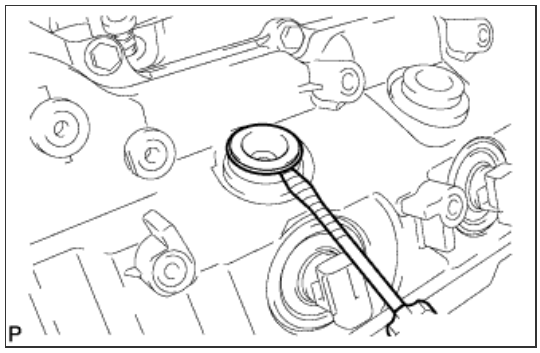
b. Remove the 3 bolts and vacuum transmitting pipe.



43. DISCONNECT NO. 3 VENTILATION HOSE

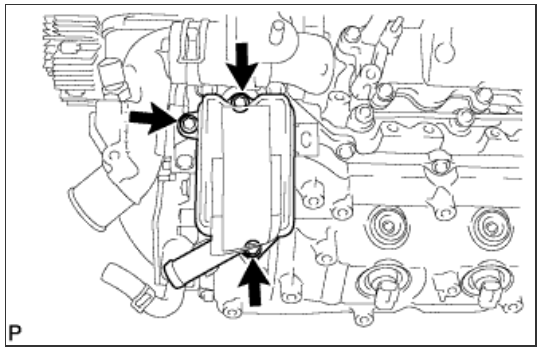
44. REMOVE CYLINDER HEAD COVER SILENCER LH (w/ Intercooler)

a. Remove the 3 bolts and cylinder head cover silencer.



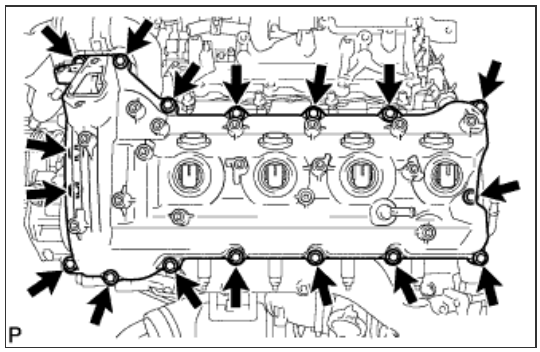
45. REMOVE NOZZLE HOLDER SEAL LH

a. Using a small screwdriver, remove the 4 holder seals by prying the portion between each holder seal and the cutout part of the cylinder head cover.



HINT:

ape the screwdriver tip before use.

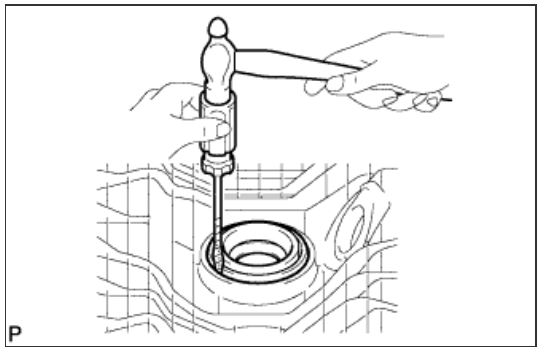


46. REMOVE OIL SEPARATOR ASSEMBLY

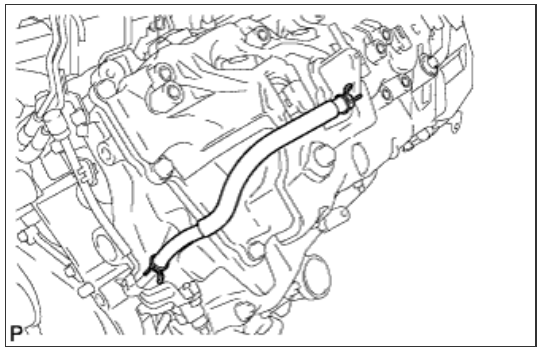
a. Remove the 3 bolts, oil separator and gasket.

47. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY LH

a. Remove the 17 bolts, cylinder head cover and gasket.



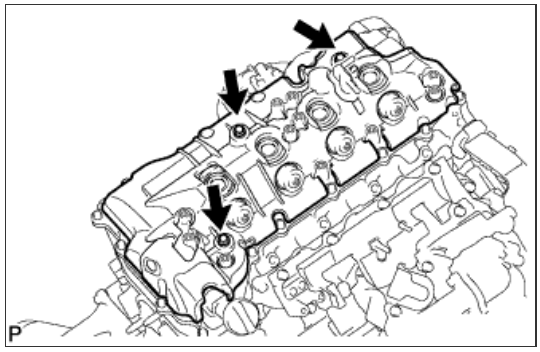
48. REMOVE NOZZLE HOLDER GASKET LH



a. Using a small screwdriver and hammer, remove the 4 nozzle holder gaskets.

HINT:

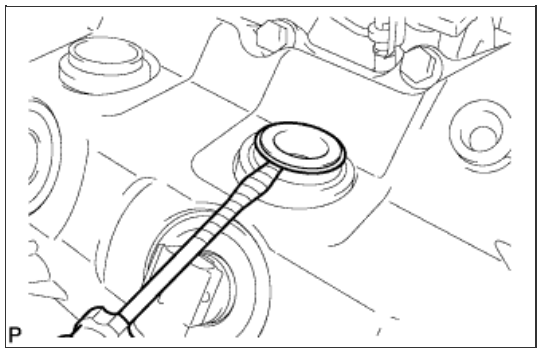
ape the screwdriver tip before use.



49. DISCONNECT NO. 2 VENTILATION HOSE

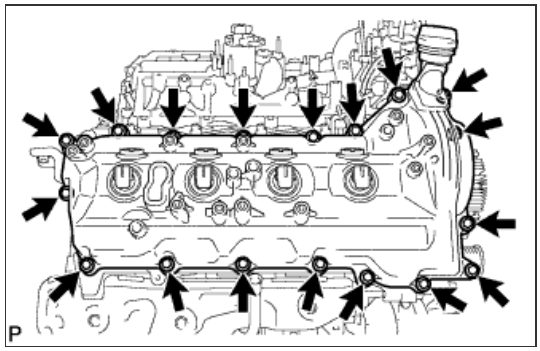
50. REMOVE CYLINDER HEAD COVER SILENCER RH (w/ Intercooler)

a. Remove the 3 bolts and cylinder head cover silencer.



51. REMOVE NOZZLE HOLDER SEAL RH

a. Using a small screwdriver, remove the 4 holder seals by prying the portion between each holder seal and the cutout part of the cylinder head cover.

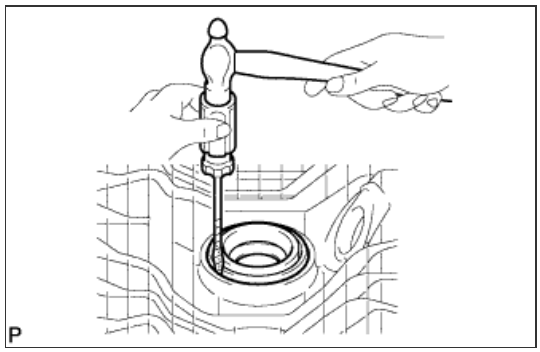


HINT:

ape the screwdriver tip before use.

52. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY RH

a. Remove the 18 bolts, cylinder head cover and gasket.

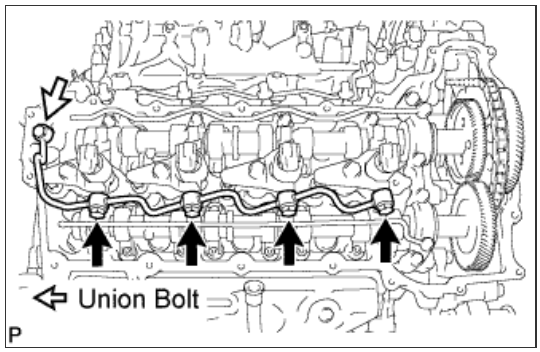


53. REMOVE NOZZLE HOLDER GASKET RH

a. Using a small screwdriver and hammer, remove the 4 nozzle holder gaskets.

HINT:

ape the screwdriver tip before use.

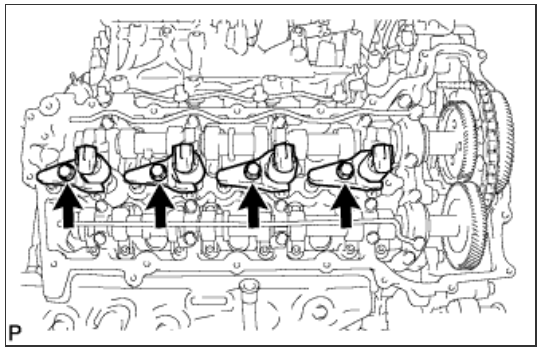


54. REMOVE FUEL INJECTOR RH

a. Remove the union bolt, 4 hollow screws, 5 gaskets and nozzle leakage pipe.

NOTICE:

- **When removing the no le leakage pipe, place a cu hion under the pipe.**
- **Be careful not to deform or cratch the union eal urface.**
- **After removing the no le leakage pipe, put it in a pla tic bag to prevent foreign matter from contaminating it injector inlet.**



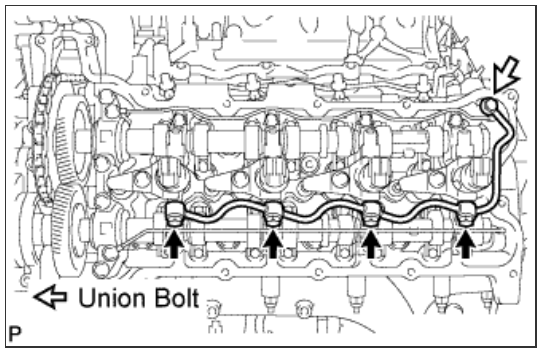
b. Remove the 4 bolts, 4 washers, 4 nozzle holder clamps and 4 injectors.

HINT:

Arrange the injectors, holder clamps, washers and bolts in the correct order.

c. Remove the O-ring from each injector.

d. Remove the 4 injection nozzle seats from the cylinder head.

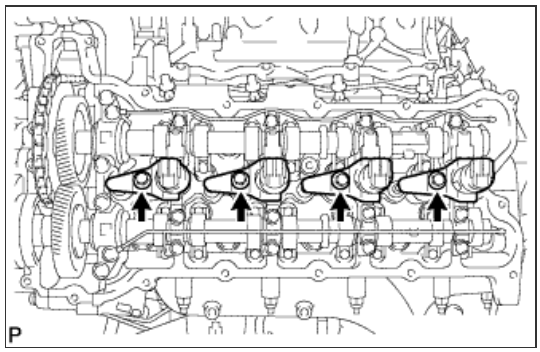


55. REMOVE FUEL INJECTOR LH

a. Remove the union bolt, 4 hollow screws, 5 gaskets and No. 2 nozzle leakage pipe.

NOTICE:

- **When removing the no le leakage pipe, place a cu hion under the pipe.**
- **Be careful not to deform or cratch the union eal urface.**
- **After removing the no le leakage pipe, put it in a pla tic bag to prevent foreign matter from contaminating it injector inlet.**



b. Remove the 4 bolts, 4 washers, 4 nozzle holder clamps and 4 injectors.

HINT:

Arrange the injectors, holder clamps, washers and bolts in the correct order.

c. Remove the O-ring from each injector.

d. Remove the 4 injection nozzle seats from the cylinder head.

for Preparation Click here

1. INSPECT FUEL INJECTOR

a. Measure the resistance according to the value(s) in the table below.

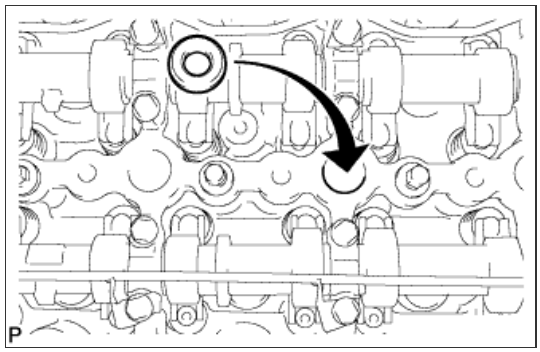
Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	0.85 to 1.05 Ω

If the result is not as specified, replace the fuel injector.

for Preparation Click here

NOTICE:



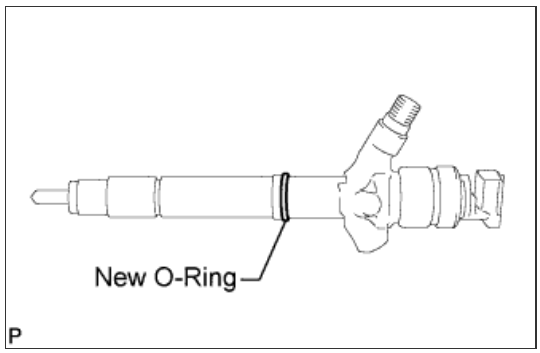
When replacing an injector (including interchanging injectors between cylinders), common rail, replace the corresponding injection pipes with a new one.

1. INSTALL FUEL INJECTOR LH

NOTICE:

Be sure to install the injector, holder clamp and bolt in their original positions.

a. Install 4 new injection nozzle seats to the cylinder head.



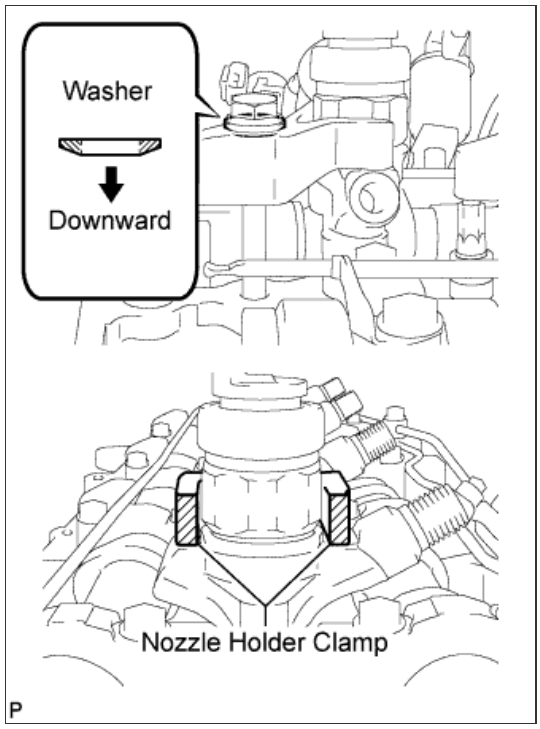
b. Apply a light amount of clean engine oil to 4 new O-rings.

c. Install the O-rings to each injector as shown in the illustration.

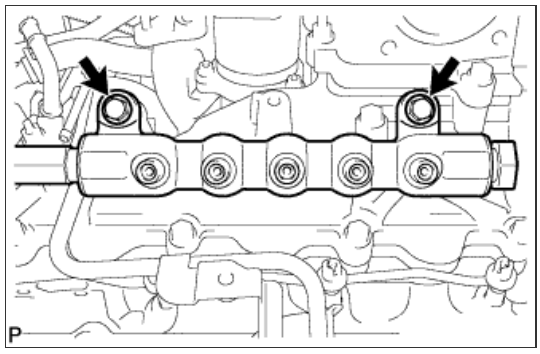
d. Insert the 4 injectors into the cylinder head.

NOTICE:

- **Insert the injector until it touches the nozzle seat surface.**
- **After installing the injector to the cylinder head, the O-ring may prevent the injector from fully seating. If so, pull out the injector and reinstall it.**
- **Always return an injector to the same place it was removed from.**

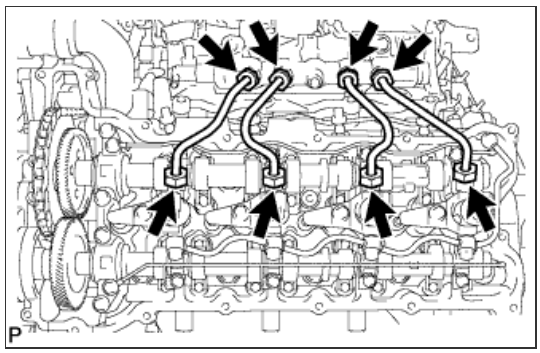


e. For an injector that has been replaced with a new injector, register the injector compensation code.



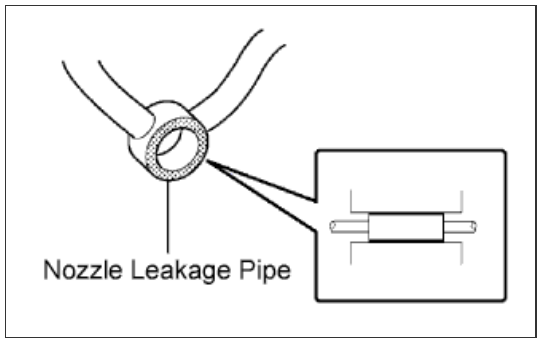
f. Temporarily install 4 new washers and the 4 nozzle clamps with the 4 clamp bolts.

NOTICE:



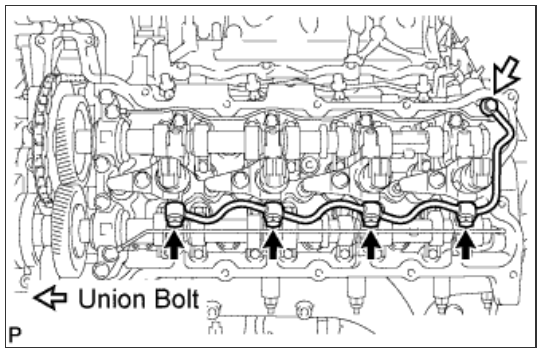
- **The fork portion of the nozzle holder clamp must be set to the injector.**
- **Before tightening the bolts, check that the nozzle holder clamp is set properly.**
- **To tighten the clamp bolts, first tighten them by hand until they cannot be turned further. Then, tighten the bolts to the specified torque in a later step.**
- **When tightening the bolts, be careful not to tilt the bolt and clamp.**
- **Do not reuse the washer.**

g. Temporarily install the common rail LH with the 2 bolts.



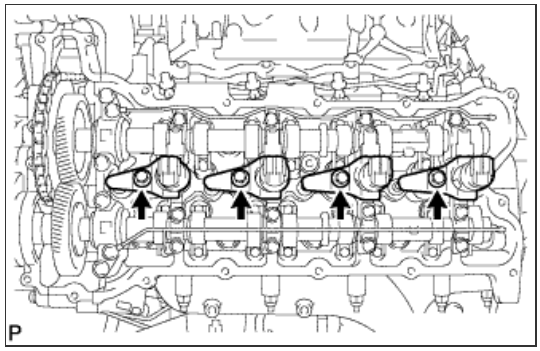
h. Temporarily install the 4 new injection pipes to the common rail and injector.

i. Check the nozzle leakage pipe. Check that there are no scratches or dents on the 5 union seal surfaces. If scratches or dents are present, replace the nozzle leakage pipe.



j. Set the leakage pipe and 5 new gaskets in place.

k. Temporarily install the leakage pipe with the 4 hollow screws and union bolt.



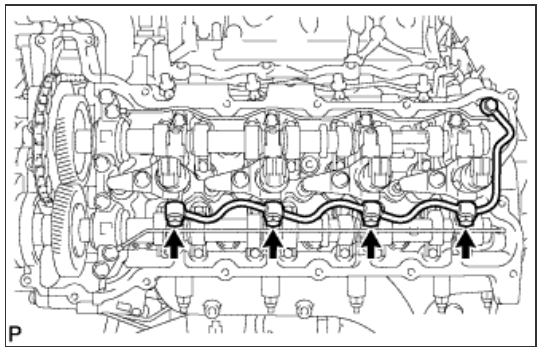
HINT:

To position the injectors, loosely tighten the 4 hollow screws and union bolt.

l. Tighten the 4 holder clamp bolts.

Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf }

m. Remove the 4 injection pipes.



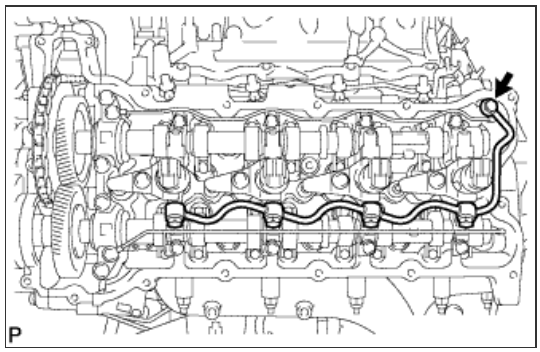
n. Remove the 2 bolts and common rail LH.

o. Tighten the 4 hollow screws.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

NOTICE:

If a hollow screw is accidentally tightened beyond the torque specification, it must be replaced together with the nozzle leakage pipe.

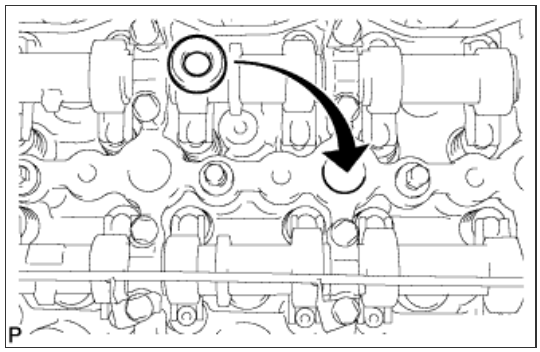


p. Tighten the union bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

NOTICE:

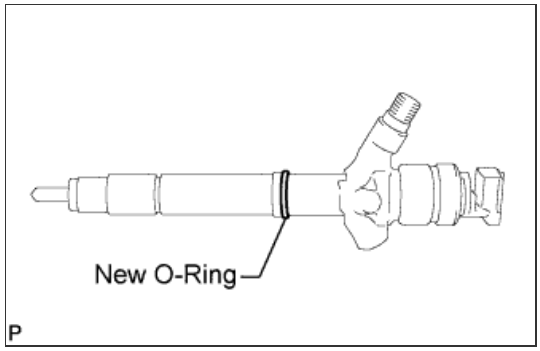
If a hollow screw is accidentally tightened beyond the torque specification, it must be replaced together with the nozzle leakage pipe.



2. INSTALL FUEL INJECTOR RH

NOTICE:

Be sure to install the injector, holder clamp and bolt in their original positions.

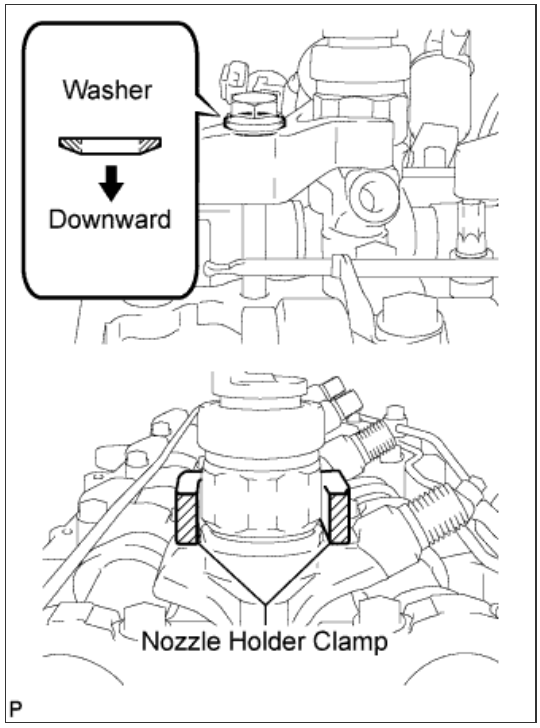


a. Install 4 new injection nozzle seats to the cylinder head.

b. Apply a light amount of clean engine oil to 4 new O-rings.

c. Install the O-rings to each injector as shown in the illustration.

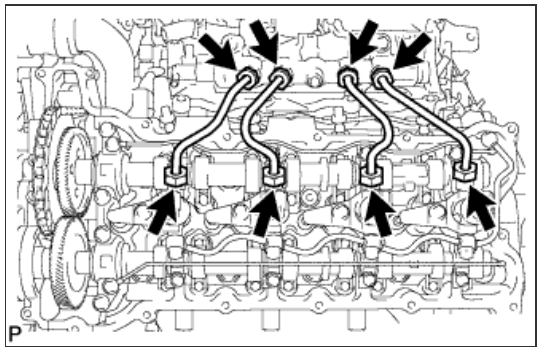
d. Insert the 4 injectors into the cylinder head.



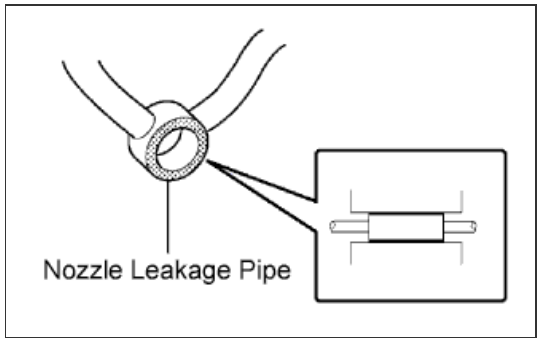
NOTICE:

- **Insert the injector until it touches the nozzle seat surface.**
- **After installing the injector to the cylinder head, the O-ring may prevent the injector from fully seating. If so, pull out the injector and reinstall it.**
- **Always return an injector to the same place it was removed from.**

e. For an injector that has been replaced with a new injector, register the injector compensation code.



f. Temporarily install 4 new washers and the 4 nozzle clamps with the 4 clamp bolts.

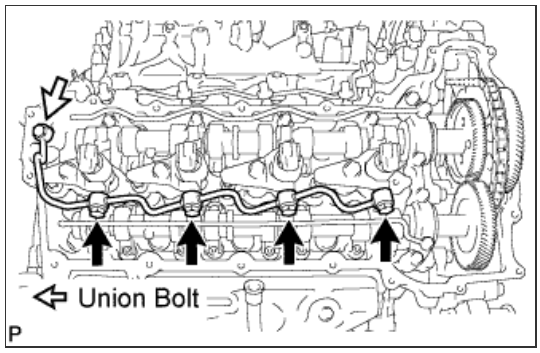


NOTICE:

- **The fork portion of the nozzle holder clamp must be set to the injector.**
- **Before tightening the bolts, check that the nozzle holder clamp is set properly.**
- **To tighten the clamp bolts, first tighten them by hand until they cannot be turned further. Then, tighten the bolts to the specified torque in a later step.**
- **When tightening the bolts, be careful not to tilt the bolt and clamp.**
- **Do not reuse the washer.**

g. Temporarily install the 4 new injection pipes to the common rail and injector.

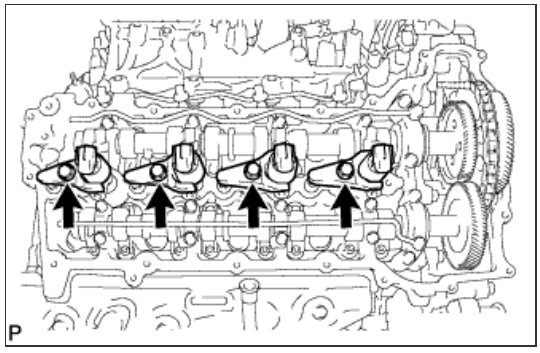
h. Check the nozzle leakage pipe. Check that there are no scratches or dents on the 5 union seal surfaces. If scratches or dents are present, replace the nozzle leakage pipe.



i. Set the leakage pipe and 5 new gaskets in place.

j. Temporarily install the leakage pipe with the 4 hollow screws and union bolt.

HINT:

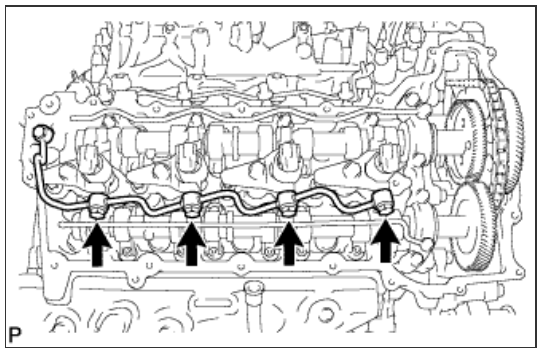


To position the injectors, loosely tighten the 4 hollow screws and union bolt.

k. Tighten the 4 holder clamp bolts.

Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf }

l. Remove the 4 injection pipes.

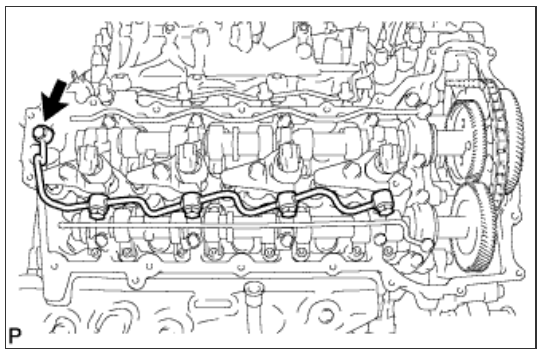


m. Tighten the 4 hollow screws.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

NOTICE:

If a hollow screw is accidentally tightened beyond the torque specification, it must be replaced together with the nozzle leakage pipe.

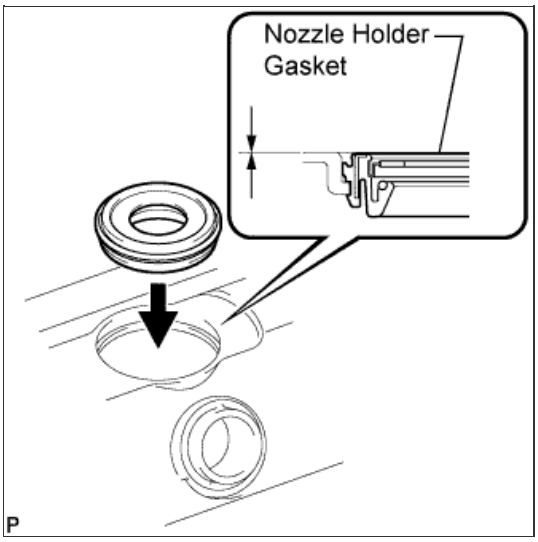


n. Tighten the union bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

NOTICE:

If a hollow screw is accidentally tightened beyond the torque specification, it must be replaced together with the nozzle leakage pipe.

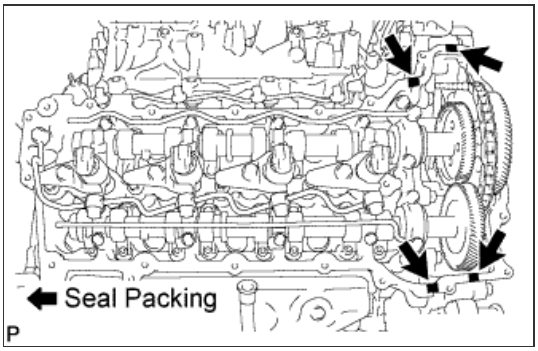


3. INSTALL NOZZLE HOLDER GASKET RH

a. Press 4 new nozzle holder gaskets into the cylinder head cover RH.

NOTICE:

After installing the nozzle holder gasket, check that it dose not protrude from the cylinder head cover.



4. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY RH

a. Apply seal packing as shown in the illustration.

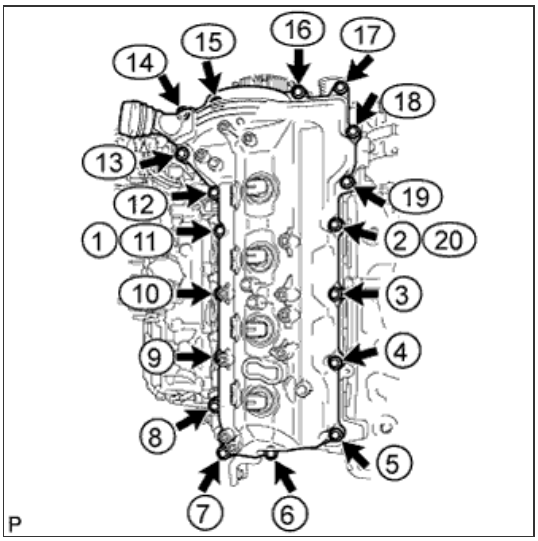
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**

b. Install a new gasket to the cylinder head cover.

NOTICE:



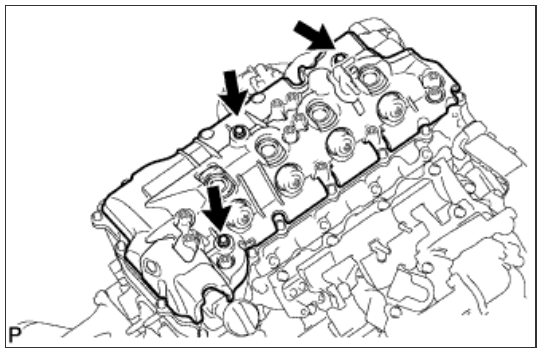
Remove any oil from the contact surface.

c. Temporarily install the cylinder head cover with the 18 bolts. Tighten the 18 bolts in the order shown in the illustration.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

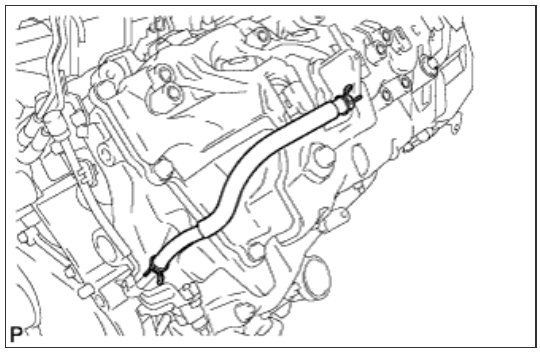
HINT:

After tightening the bolts, check that the bolts at step 11 and 20 are tightened to the specified torque.



5. INSTALL NOZZLE HOLDER SEAL RH

a. Press 4 new holder seals into the cylinder head cover RH.

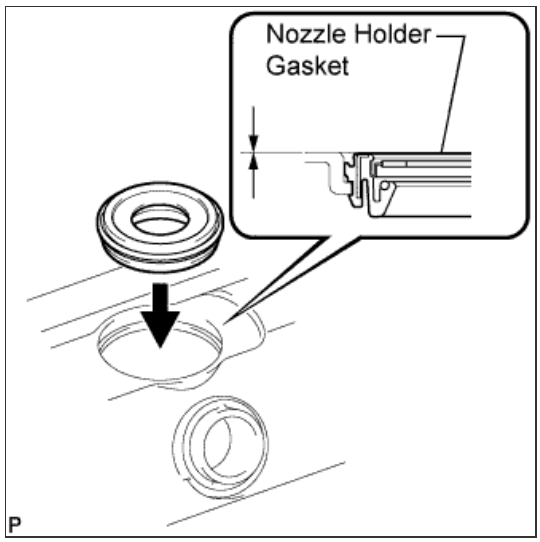


. INSTALL CYLINDER HEAD COVER SILENCER RH w Intercooler

a. Install the cylinder head cover silencer with the 3 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

7. CONNECT NO. 2 VENTILATION HOSE



8. INSTALL NOZZLE HOLDER GASKET LH

a. Press 4 new nozzle holder gaskets into the cylinder head cover LH.

NOTICE:

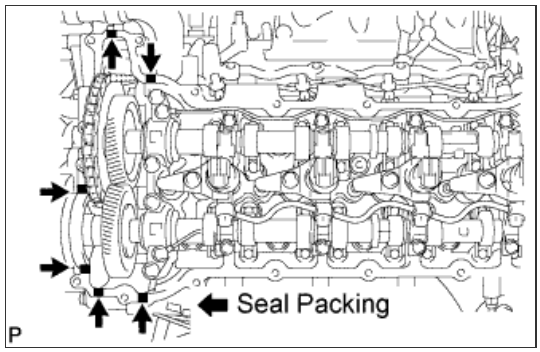
After installing the nozzle holder gasket, check that it dose not protrude from the cylinder head cover.

9. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY LH

a. Apply seal packing as shown in the illustration.

Seal packing:

Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent



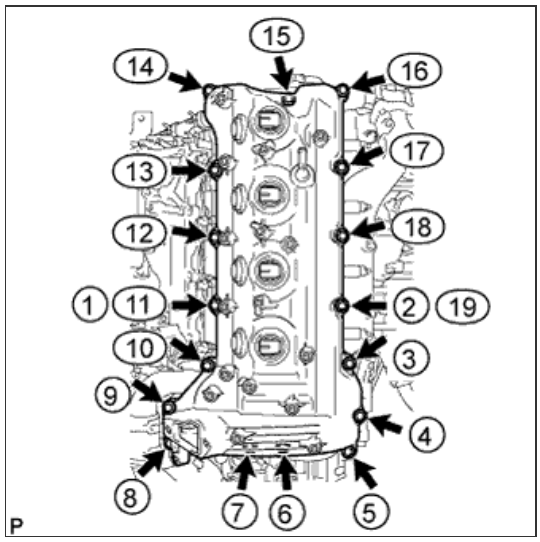
NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**

b. Install a new gasket to the cylinder head cover.

NOTICE:

Remove any oil from the contact surface.



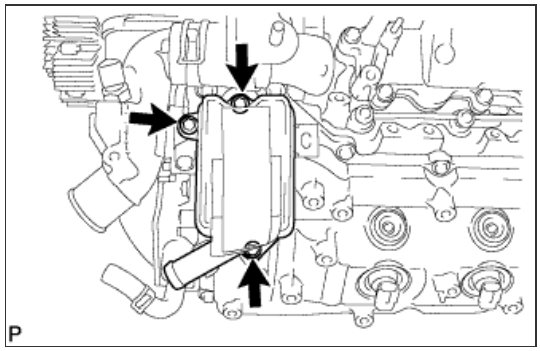
c. Temporarily install the cylinder head cover with the 17 bolts. Tighten the 17 bolts in the order shown in the illustration.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

HINT:

After tightening the bolts, check that the bolts at step 11 and 19 are tightened to the specified torque.

10. INSTALL OIL SEPARATOR ASSEMBLY



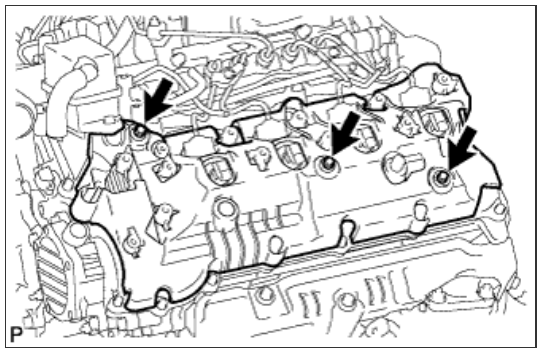
a. Install a new gasket to the oil separator.

NOTICE:

Remove any oil from the contact surface.

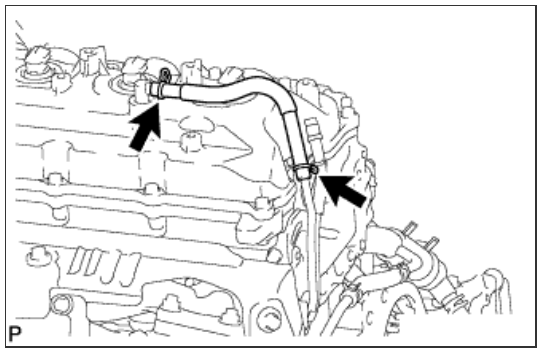
b. Install the oil separator with the 3 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



11. INSTALL NOZZLE HOLDER SEAL LH

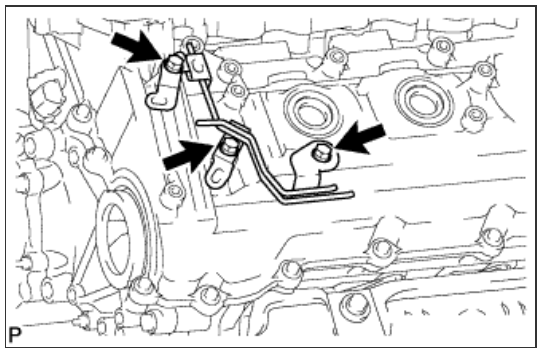
a. Press 4 new holder seals into the cylinder head cover LH.



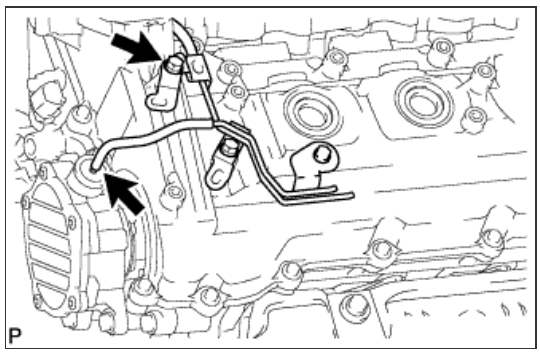
12. INSTALL CYLINDER HEAD COVER SILENCER LH (w/ Intercooler)

a. Install the cylinder head cover silencer with the 3 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }



13. CONNECT NO. 3 VENTILATION HOSE

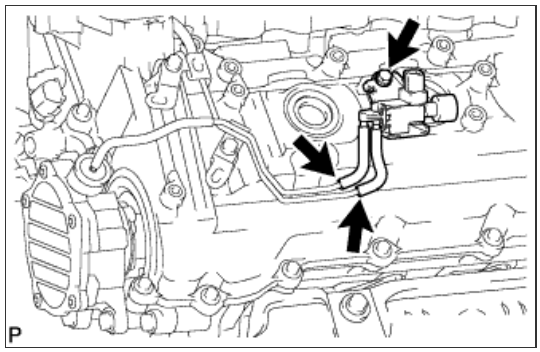


14. INSTALL NO. 1 VACUU TRANS ITTING PIPE SUB-ASSEMBLY

a. Install the vacuum transmitting pipe with the 3 bolts.

Torque:
6.0 N*m{ 61 kgf*cm , 53 in.*lbf }

b. w/ Intercooler:
Connect the 2 vacuum hoses.



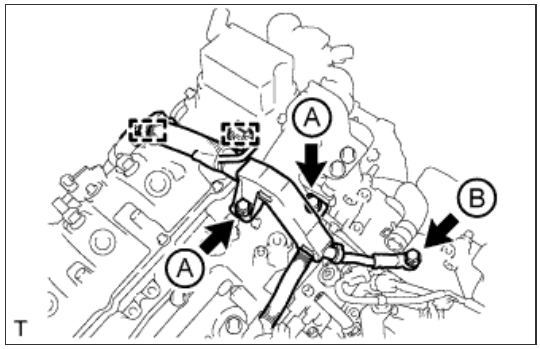
15. INSTALL NO. 1 VACUUM SWITCHING VALVE ASSEMBLY (for Engine Mounting)

a. Install vacuum switching valve with the bolt.

Torque:

.0 N*m{ 61 kgf*cm , 53 in.*lbf }

b. Connect the 2 vacuum hoses.

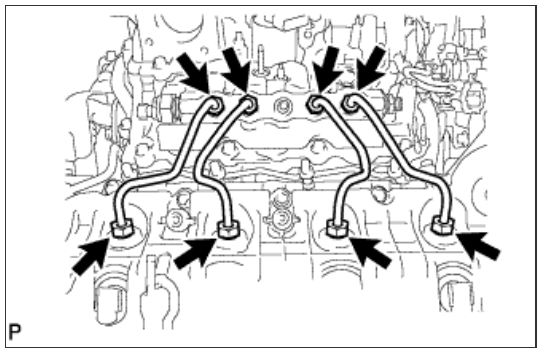


16. INSTALL NO. 2 ENGINE WIRE

a. Connect the No. 2 engine wire with the 3 bolts.

Torque:
for bolt A:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }
for bolt B:
32 N*m{ 326 kgf*cm , 24 ft.*lbf }

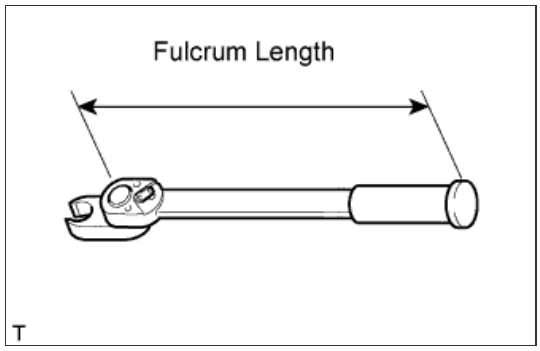
b. Attach the 2 wire harness clamps.



17. INSTALL INJECTION PIPE RH

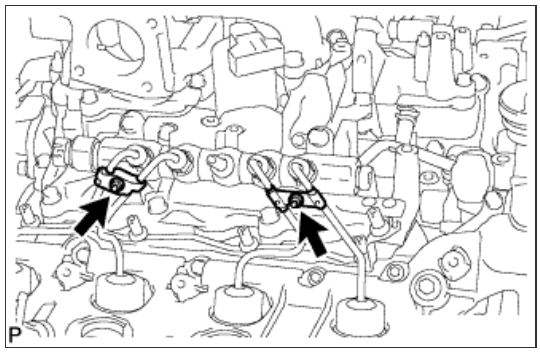
a. Using a union nut wrench, install the 4 new injection pipes.

Torque:
without union nut wrench:
34 N*m{ 347 kgf*cm , 25 ft.*lbf }
with union nut wrench:
31 N*m{ 316 kgf*cm , 23 ft.*lbf }



NOTICE:

Make sure there is no damage or foreign matter on the seal surfaces.

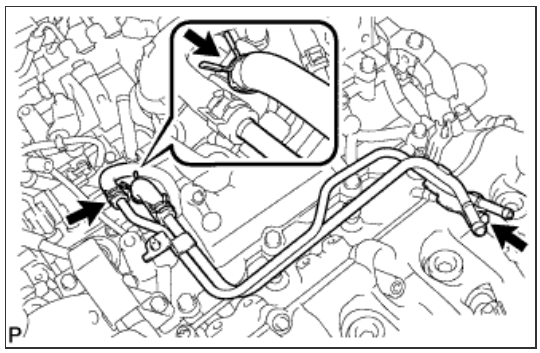


HINT:

- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.).**
- **Make sure the union nut wrench and the torque wrench are connected in a straight line.**

b. w/ Intercooler:
Install the 4 injection pipe clamps with the 2 nuts.

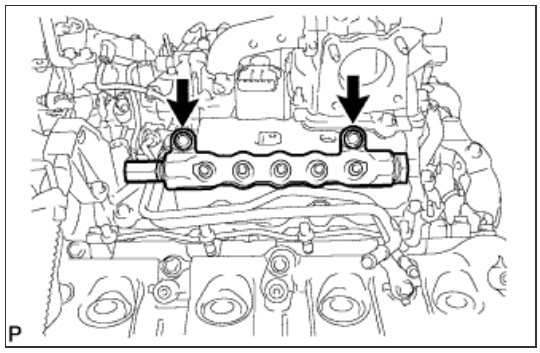
Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }



18. INSTALL FUEL FILTER TO INJECTION PUMP FUEL PIPE SUB-ASSEMBLY

a. Install the fuel filter to injection pump fuel pipe with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

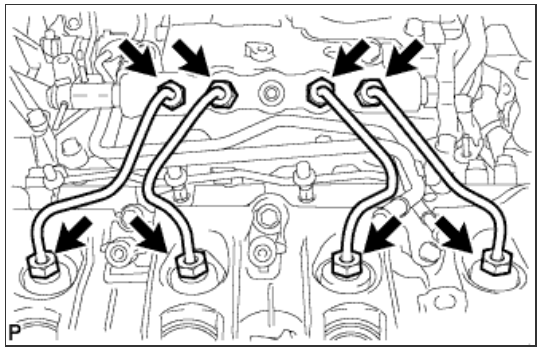


b. Connect the 2 hoses to the fuel pipe.

19. INSTALL COMMON RAIL ASSEMBLY LH

a. Install the common rail with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



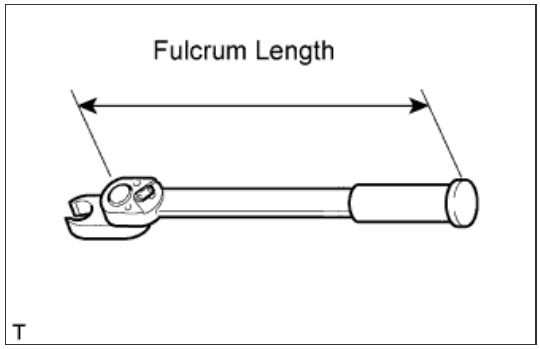
20. INSTALL INJECTION PIPE LH

a. Using a union nut wrench, install the 4 new injection pipes.

Torque:
without union nut wrench:
34 N*m{ 347 kgf*cm , 25 ft.*lbf }
with union nut wrench:
31 N*m{ 316 kgf*cm , 23 ft.*lbf }

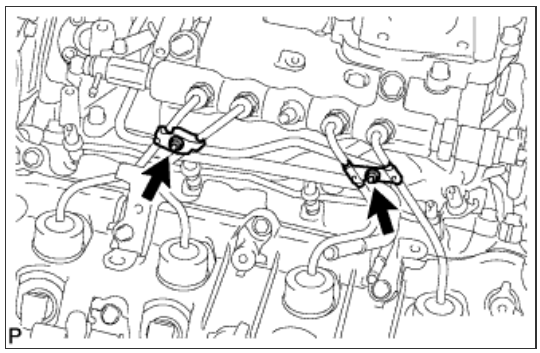
NOTICE:

Make sure there is no damage or foreign matter on the seal surfaces.



HINT:

- **Use a torque wrench with a fulcrum length of 30 cm (11.8**



in. .

- ake sure the union nut wrench and the torque wrench are connected in a straight line.

b. w/ Intercooler:
Install the 4 injection pipe clamps with the 2 nuts.

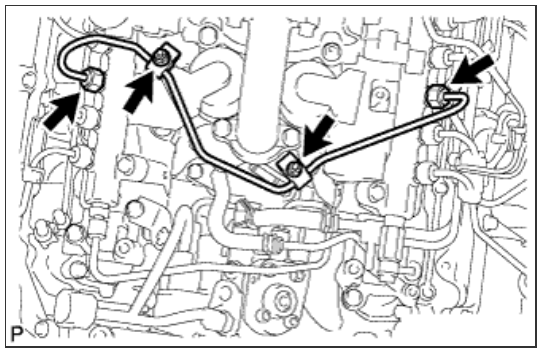
Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

21. INSTALL NO. 6 INJECTION PIPE SUB-ASSEMBLY

a. w/ EGR System:

i. Temporarily install a new No. 6 injection pipe to the common rail LH and RH.

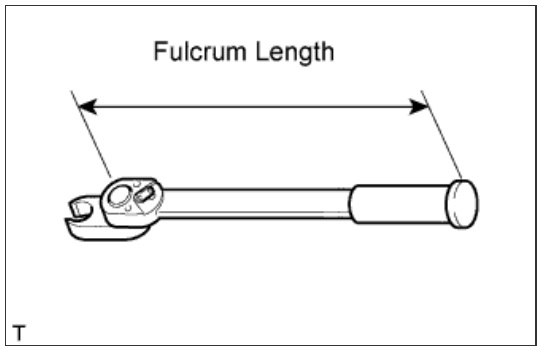
NOTICE:



Make sure there is no damage or foreign matter on the seal surfaces.

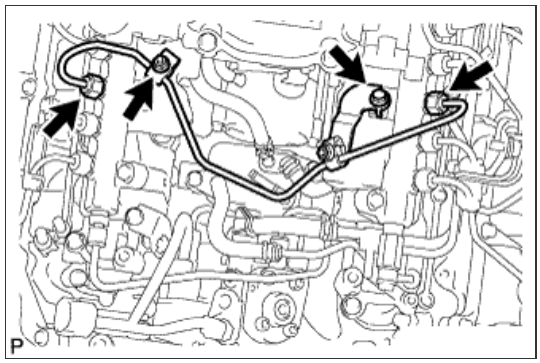
ii. Install the 2 No. 2 injection pipe clamps with the 2 nuts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }



iii. Using a union nut wrench, tighten the No. 6 injection pipe ends.

Torque:
without union nut wrench:
34 N*m{ 347 kgf*cm , 25 ft.*lbf }
with union nut wrench:
31 N*m{ 316 kgf*cm , 23 ft.*lbf }



HINT:

- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.).**
- **Make sure the union nut wrench and the torque wrench are connected in a straight line.**

b. w/o EGR System:

i. Temporarily install a new No. 6 injection pipe to the common rail LH and RH.

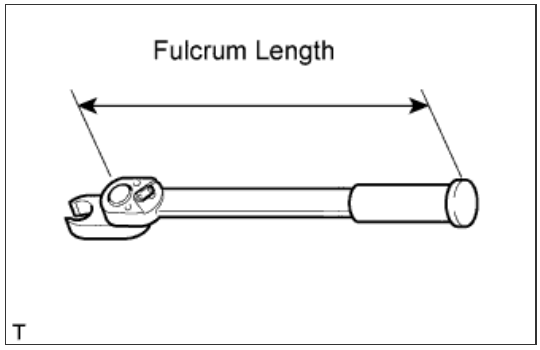
NOTICE:

Make sure there is no damage or foreign matter on the seal surfaces.

ii. Install the bracket to the No. 3 intake manifold with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

iii. Install the No. 2 injection pipe clamp with the nut.



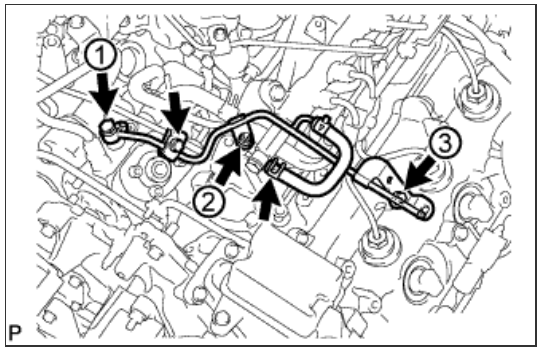
Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

iv. Using a union nut wrench, tighten the No. 6 injection pipe ends.

Torque:
without union nut wrench:
34 N*m{ 347 kgf*cm , 25 ft.*lbf }
with union nut wrench:
31 N*m{ 316 kgf*cm , 23 ft.*lbf }

HINT:

- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.).**
- **Make sure the union nut wrench and the torque wrench are connected in a straight line.**



22. INSTALL NO. 2 FUEL PIPE SUB-ASSEMBLY

NOTICE:

Check for damage and foreign matter on the fuel pipe installation surface of the supply pump.

If there is foreign matter, remove it from the installation surface. If the installation surface is damaged, replace the fuel supply pump.

a. Temporarily install a new gasket and the No. 2 fuel pipe with the union bolt, nut and bolt.

b. Tighten the union bolt, nut and bolt in the order shown in the illustration.

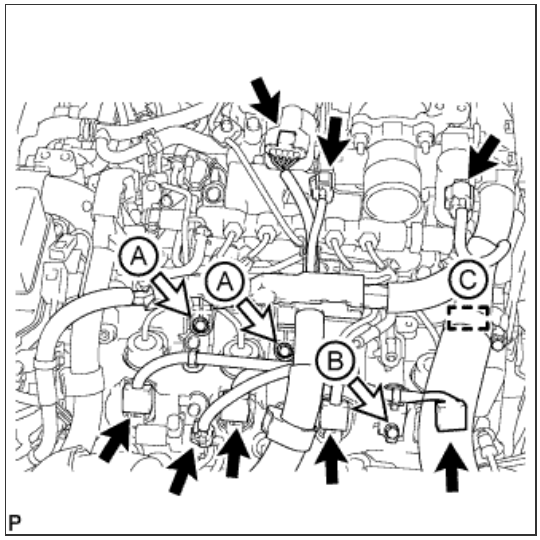
Torque:
for union bolt:
10 N*m{ 105 kgf*cm , 8 ft.*lbf }
for bolt and nut:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

c. Install the No. 2 injection pipe clamp with the bolt.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

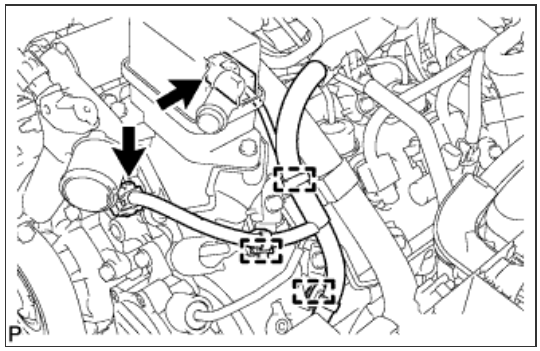
d. Connect the fuel hose to the No. 5 nozzle leakage pipe.

23. CONNECT ENGINE WIRE



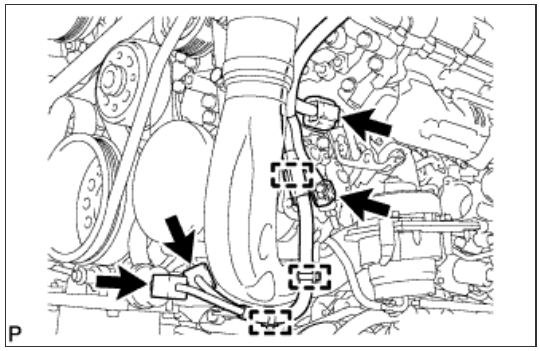
a. LH Side:

i. Install the engine wire protector with the 2 bolts labeled A.



ii. Connect the 8 connectors.

iii. Install the engine wire harness bracket with the bolt labeled B.



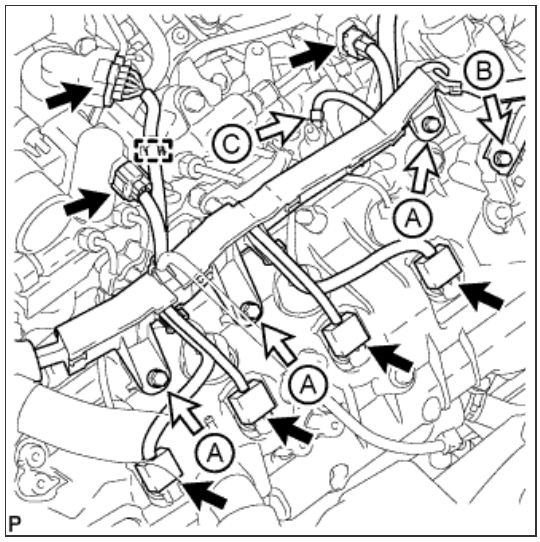
iv. for RHD:
Connect the wire harness with the wire harness clamp holder labeled C.

v. Attach the 3 wire harness clamps and connect the 2 connectors.

vi. Attach the 3 wire harness clamps and connect the 4 connectors.

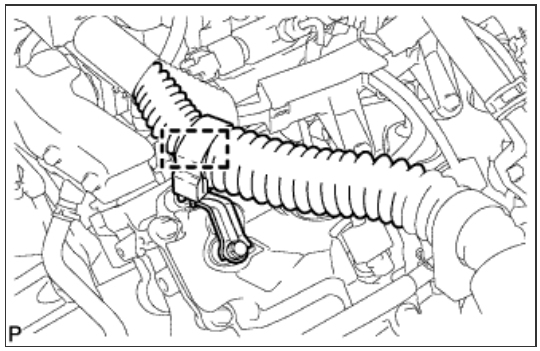
b. RH Side:

i. Install the engine wire harness protector with the 3 bolts labeled A.



ii. Connect the 7 connectors.

iii. Attach the wire harness clamp.



iv. Install the wire harness bracket with the bolt labeled B.

v. Install the glow plug wire harness labeled C with the nut.

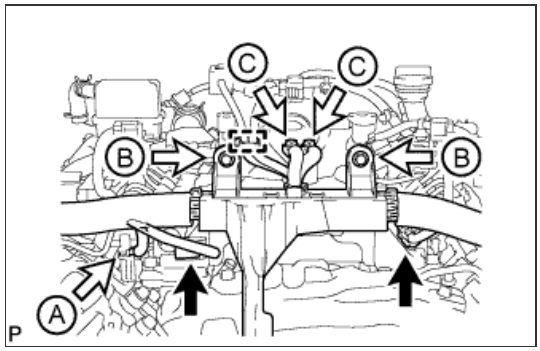
Torque:
4.0 N*m{ 41 kgf*cm , 35 in.*lbf }

vi. for RHD:
Connect the wire harness with the wire harness clamp holder.

c. Rear Side:

i. Install the glow plug wire harness with the nut labeled A.

Torque:
4.0 N*m{ 41 kgf*cm , 35 in.*lbf }



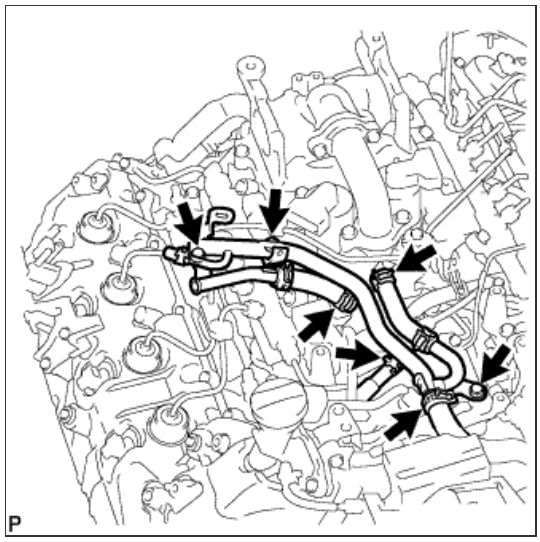
ii. Connect the 2 common rail connectors.

iii. Install the engine wire harness protector with the 2 bolts labeled B.

iv. Install the 2 ground wires with the 2 bolts labeled C.

Torque:
8.4 N*m{ 87 kgf*cm , 74 in.*lbf }

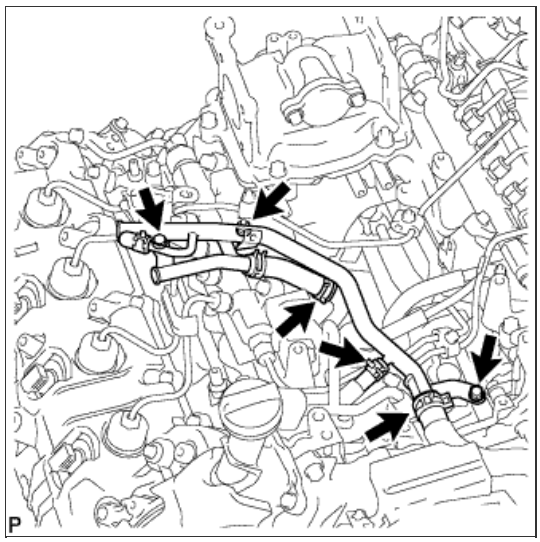
v. Attach the wire harness clamp.



24. INSTALL NO. 4 WATER BY-PASS PIPE

a. w/ EGR System:
Connect the 4 water hose ends, and temporarily install the No. 4 water by-pass pipe with the 2 bolts and nut.

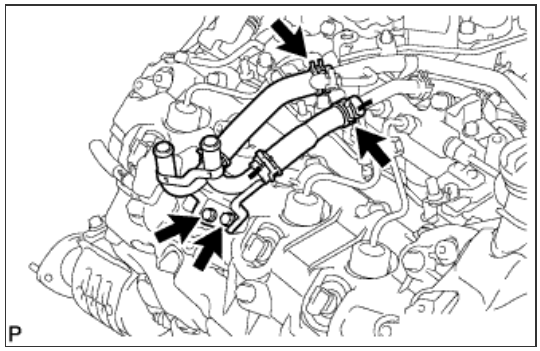
b. First tighten the 2 bolts and then tighten the nut.



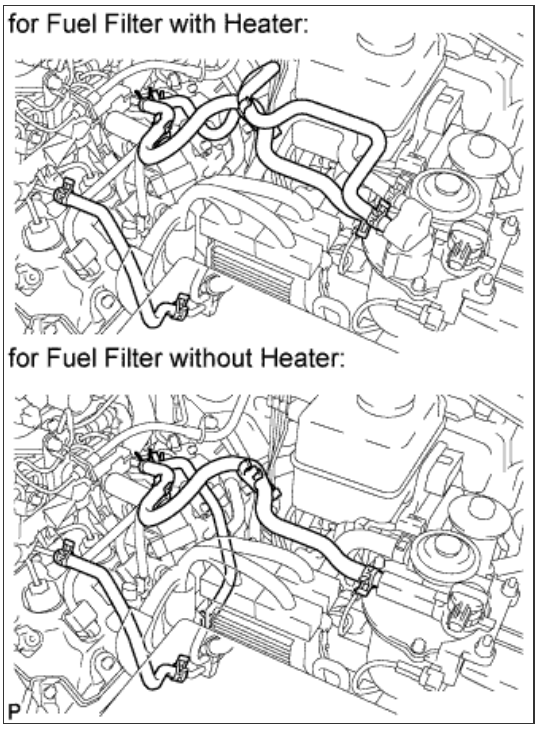
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

c. w/o EGR System:
Connect the 3 water hose ends, and temporarily install the No. 4 water by-pass pipe with the 2 bolts and nut.

d. First tighten the 2 bolts and then tighten the nut.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



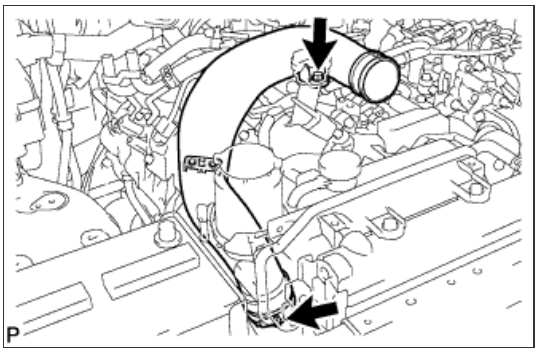
25. INSTALL NO. 3 WATER BY-PASS PIPE (w/o Viscous Heater)

a. Connect the 2 water hose ends, and install the No. 3 water by-pass pipe with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

26. CONNECT FUEL HOSE

27. INSTALL NO. 1 AIR CLEANER PIPE SUB-ASSEMBLY

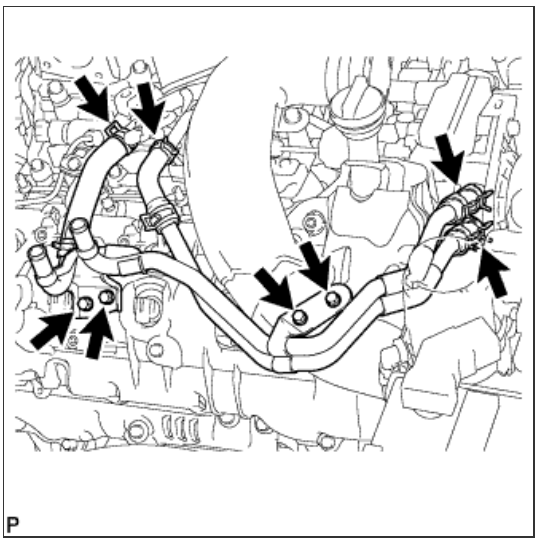


a. Connect the No. 1 air cleaner pipe to the No. 1 intake air connector pipe.

b. Install the pipe with the bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

c. Tighten the hose clamp.



Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

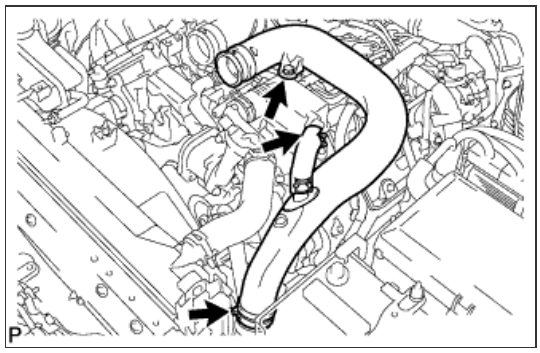
28. INSTALL HEATER WATER PIPE SUB-ASSEMBLY (w/ Viscous Heater)

a. Connect the 4 water hose ends, and install the water pipe with the 4 bolts.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

29. INSTALL NO. 2 AIR CLEANER PIPE SUB-ASSEMBLY

a. Connect the No. 2 air cleaner pipe to the No. 2 intake air connector pipe.



b. Connect the ventilation hose to the oil separator.

c. Install the pipe with the bolt.

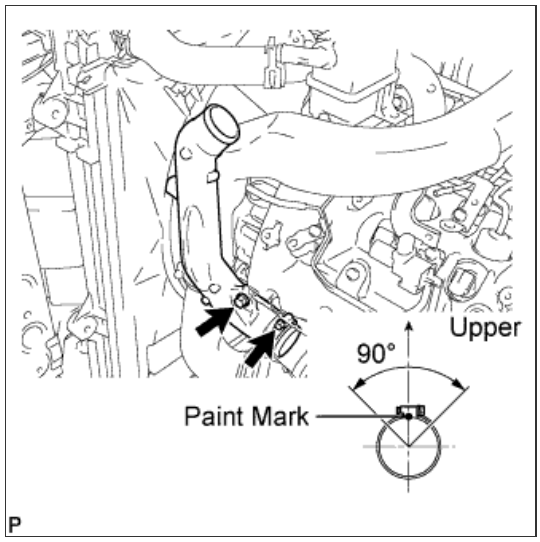
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

d. Tighten the hose clamp.

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

30. INSTALL NO. 4 AIR TUBE

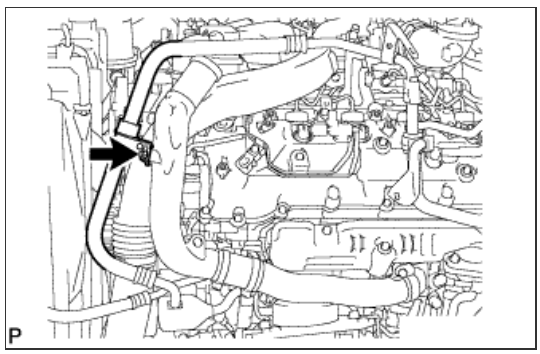
a. Install the No. 4 air tube with the bolt.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. Tighten the hose clamp.

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }



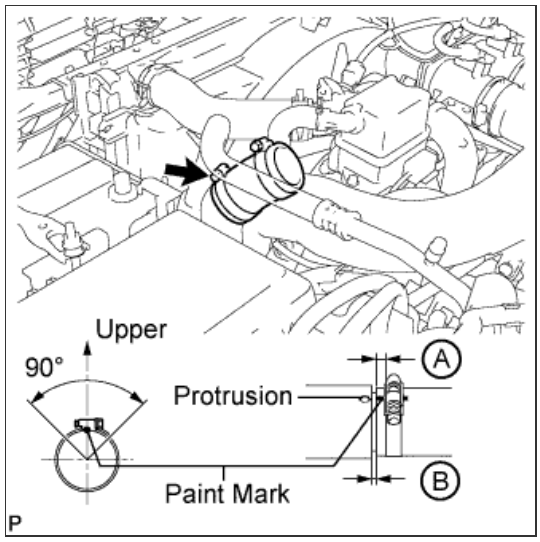
HINT:

Make sure the direction of the hose clamp is as shown in the illustration.

c. Install the suction hose with the bolt.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

31. INSTALL NO. 2 AIR HOSE



a. Connect the No. 2 air hose with the hose clamp.

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

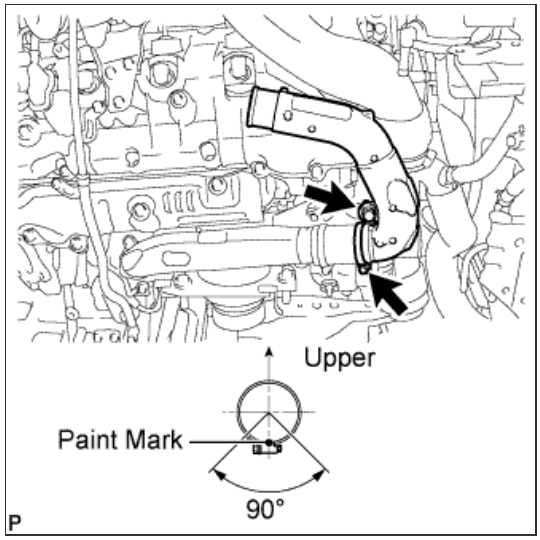
HINT:

- **Align the paint mark of the air hose with the protrusion and push in the air hose so that distance B is 0 to 3 mm (0 to 0.118 in.).**
- **Position the clamp so that distance A is 2 to 6 mm (0.0787 to 0.236 in.).**

- **ake sure the direction of the hose clamp is as shown in the illustration.**

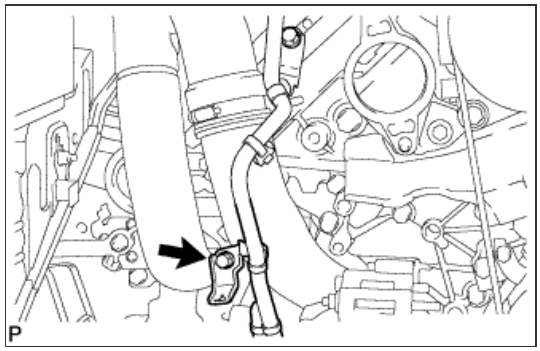
32. INSTALL NO. 3 AIR TUBE

a. Install the No. 3 air tube with the bolt.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

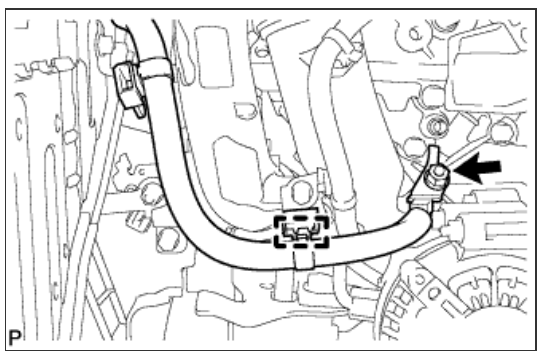
b. Tighten the hose clamp.



Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

HINT:

Make sure the direction of the hose clamp is as shown in the illustration.

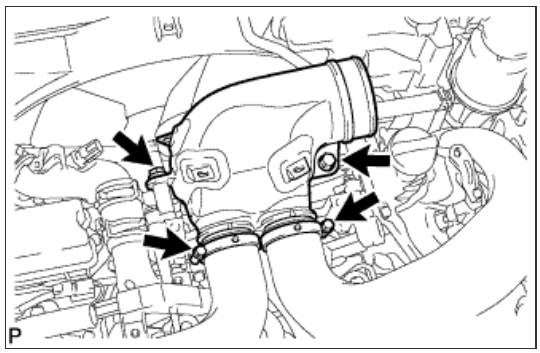


c. Install the wire harness bracket with the bolt.

d. Install the ground wire with the nut, and attach the wire harness clamp.

Torque:
8.4 N*m{ 87 kgf*cm , 74 in.*lbf }

33. INSTALL INTAKE AIR CONNECTOR

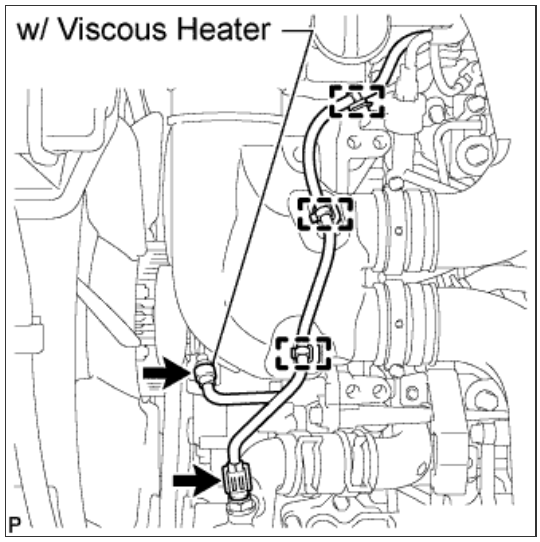


a. Connect the intake air connector to the No. 1 and No. 2 air cleaner pipes.

b. Install the connector with the 2 bolts.

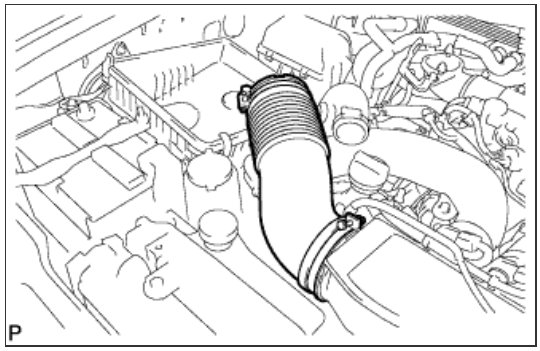
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

c. Tighten the 2 hose clamps.



Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

d. Attach the 3 wire harness clamps.

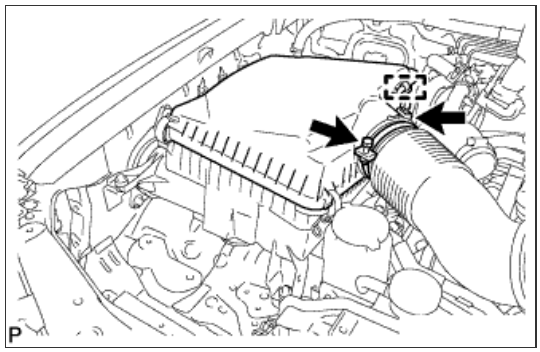


e. w/o Viscous Heater:
Connect the connector to the water temperature sensor.

f. w/ Viscous Heater:
Connect the 2 connectors to the water temperature sensor and viscous with magnet clutch heater.

34. TEMPORARILY INSTALL NO. 1 AIR CLEANER HOSE

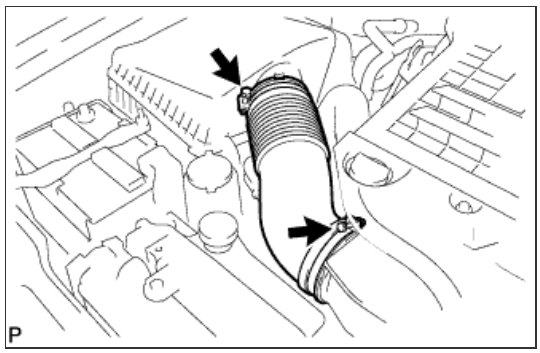
a. Temporarily install the air cleaner hose to the intake air connector.



35. INSTALL AIR CLEANER CAP SUB-ASSEMBLY

a. Connect the air cleaner cap to the air cleaner hose, and install the air cleaner cap with the 4 clamps.

b. Connect the mass air flow meter connector and attach the wire harness clamp to the air cleaner cap.



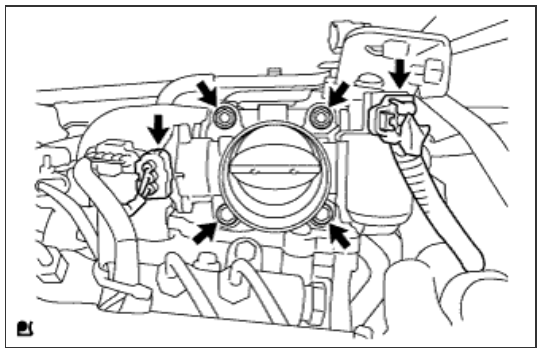
c. Attach the wire harness clamp.

d. Align the protrusion of air cleaner cap and concave portion of air cleaner hose.

e. Tighten the 2 hose clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

36. INSTALL DIESEL THROTTLE BODY ASSEMBLY LH

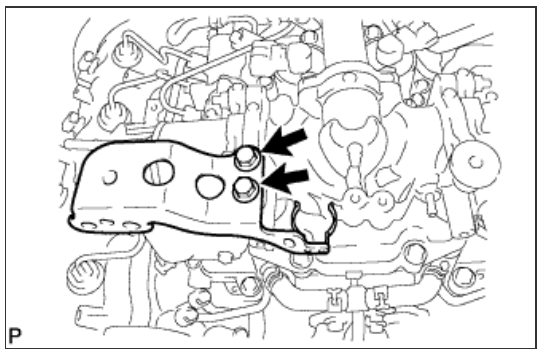


a. Install a new gasket to the intake pipe.

b. Install the throttle body with the 2 bolts and 2 nuts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

c. Connect the throttle position sensor connector.

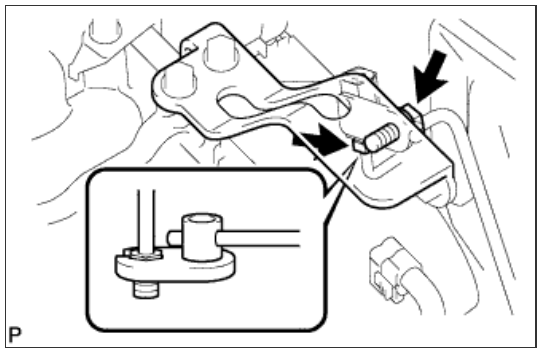


d. Connect the throttle motor connector.

37. INSTALL NO. 3 INTERCOOLER SUPPORT BRACKET

a. Install the bracket with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

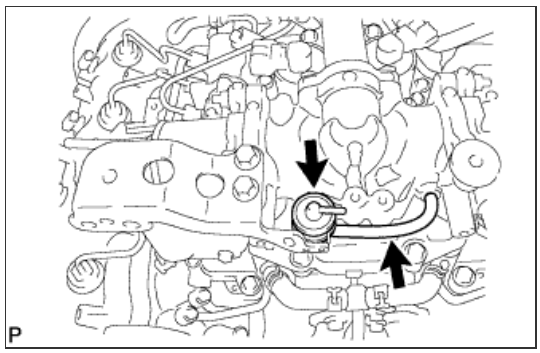


b. for Manual Transmission:

i. Connect the clutch tube to release cylinder 2 way with the bolt.

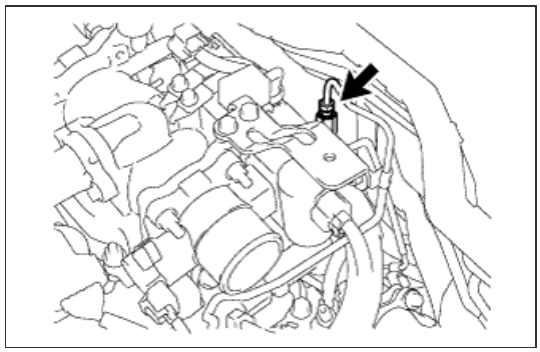
Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

ii. Check that the union nut is tightened to the specified torque.



Torque:
without union nut wrench:
15 N*m{ 154 kgf*cm , 11 ft.*lbf }
with union nut wrench:
14 N*m{ 141 kgf*cm , 10 ft.*lbf }

38. INSTALL NO. 1 GAS FILTER

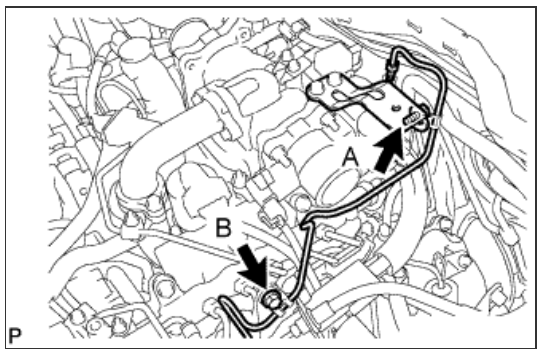


a. Install the gas filter.

b. Connect the hose to the intake pipe.

39. INSTALL TUBE CONNECTOR TO FLEXIBLE HOSE TUBE (for Manual Transmission)

a. Temporarily install the flare nut of the tube connector to fle ible hose tube to the clutch tube to release cylinder 2 way by hand.

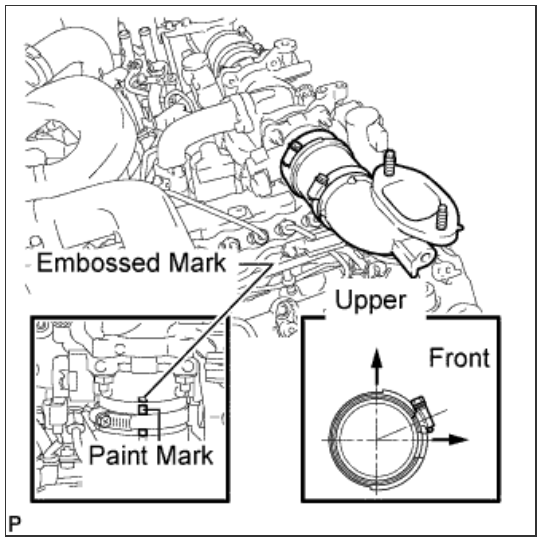


b. Temporarily install the tube connector to fle ible hose tube with the 2 bolts.

c. Tighten the bolt labeled A.

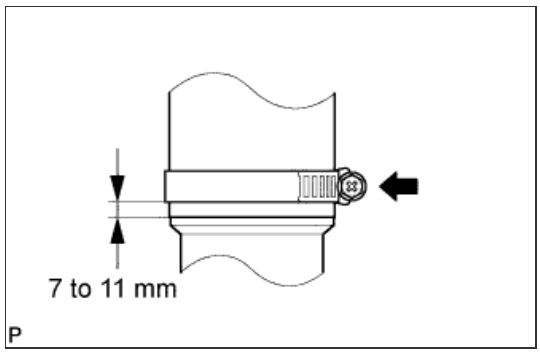
Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

NOTICE:



Tighten the bolt labeled B after installing the clutch hose.

40. INSTALL AIR TUBE SUB-ASSEMBLY LH



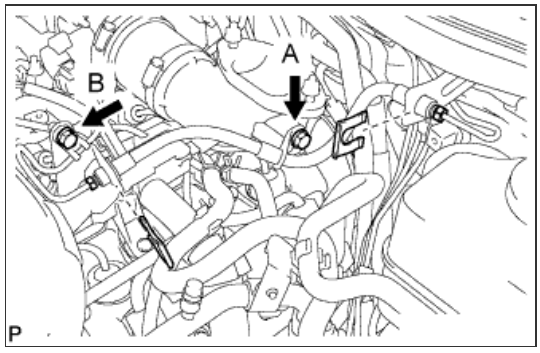
a. Install the air tube to the throttle body.

b. Align the embossed mark of the throttle body with the paint mark of the No. 4 air hose.

c. Tighten the hose clamp so that it is 7 to 11 mm (0.276 to 0.433 in.) from the end of the hose as shown in the illustration.

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

41. INSTALL CLUTCH HOSE (for Manual Transmission)



a. Connect the clutch hose to the air tube with the bolt labeled A.

b. Temporarily install the clutch hose to the clutch master cylinder tube to fle ible hose tube and tube connector to fle ible hose tube, and fi it in place with the 2 clips.

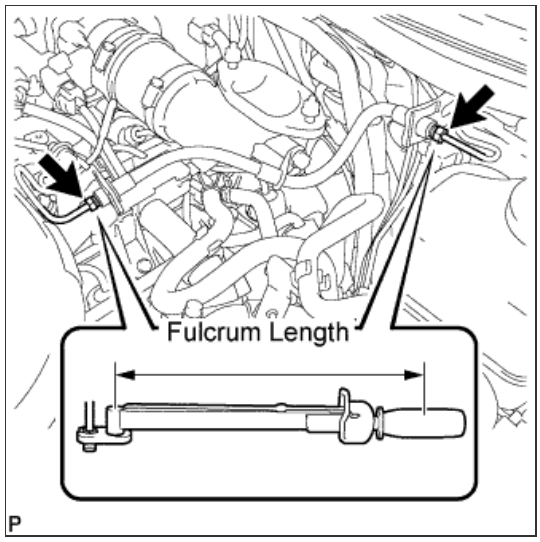
Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

c. Tighten the bolt labeled B.

Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

d. Tighten the fle ible hose tube.

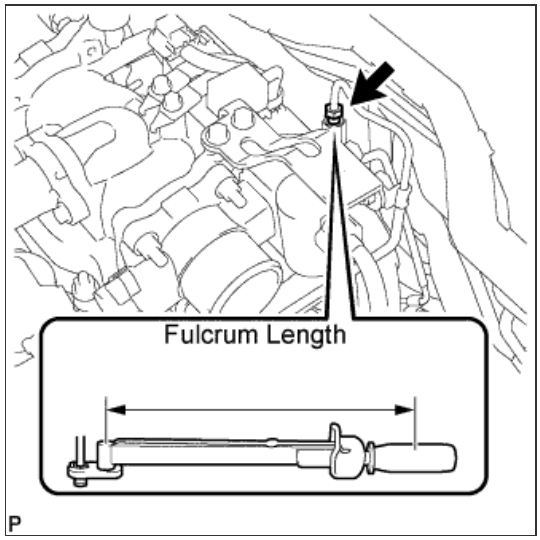
NOTICE:



- **Do not bend or damage the flexible hose tube.**
- **Do not allow any foreign matter such as dirt and dust to enter the flexible hose tube from the connecting points.**

HINT:

- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.). If using a torque wrench with a length that is not 30 cm (11.8 in.), calculate the torque specification for the torque wrench and SST based on the "without SST" torque specification (Click here).**
- **Make sure union nut wrench and the wrench are connected in a straight line.**



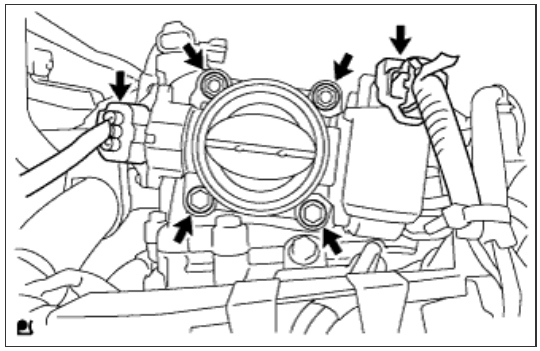
i. Using a 10 mm union nut wrench, tighten the 2 flare nuts of the fle ible hose tube.

Torque:
without union nut wrench:
15 N*m{ 154 kgf*cm , 11 ft.*lbf }
with union nut wrench:
14 N*m{ 141 kgf*cm , 10 ft.*lbf }

ii. Using a 10 mm union nut wrench, tighten the flare nut of the fle ible hose tube.

Torque:
without union nut wrench:
15 N*m{ 154 kgf*cm , 11 ft.*lbf }
with union nut wrench:
14 N*m{ 141 kgf*cm , 10 ft.*lbf }

42. INSTALL DIESEL THROTTLE BODY ASSEMBLY RH

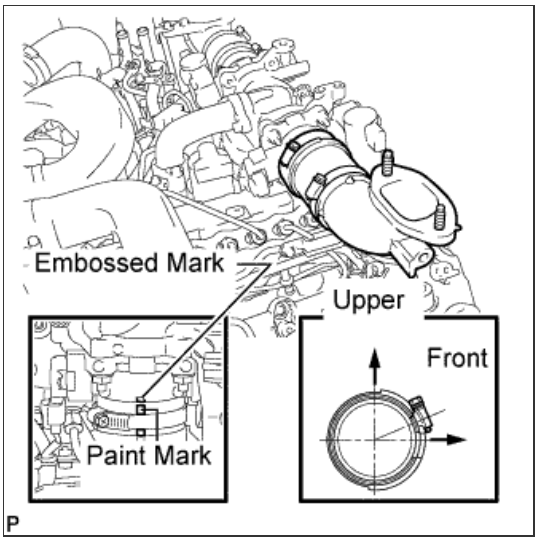


a. Install a new gasket to the intake pipe.

b. Install the throttle body with the 2 bolts and 2 nuts.

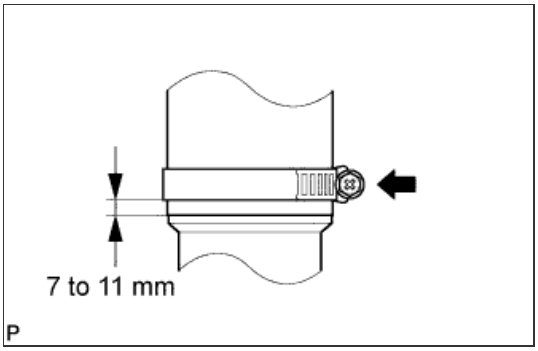
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

c. Connect the throttle position sensor connector.



d. Connect the throttle motor connector.

43. INSTALL AIR TUBE SUB-ASSEMBLY RH



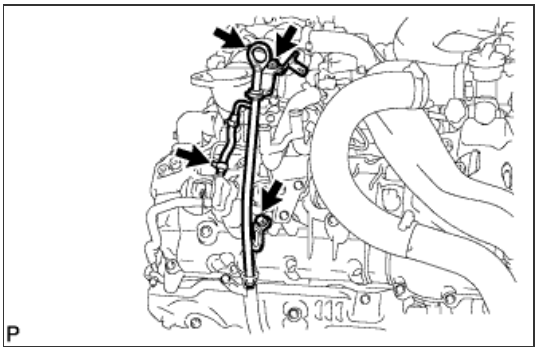
a. Install the air tube to the throttle body.

b. Align the embossed mark of the throttle body with the paint mark of the No. 4 air hose.

c. Tighten the hose clamp so that it is 7 to 11 mm (0.276 to 0.433 in.) from the end of the hose as shown in the illustration.

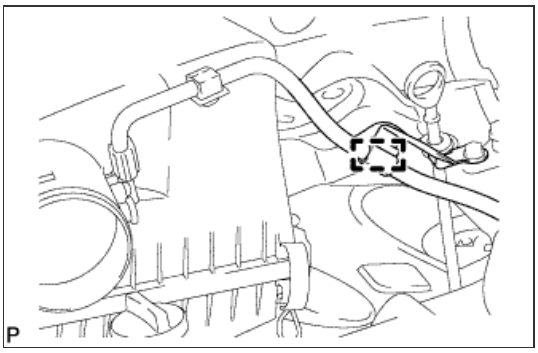
Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

44. INSTALL NO. 2 ENGINE OIL LEVEL DIPSTICK GUIDE



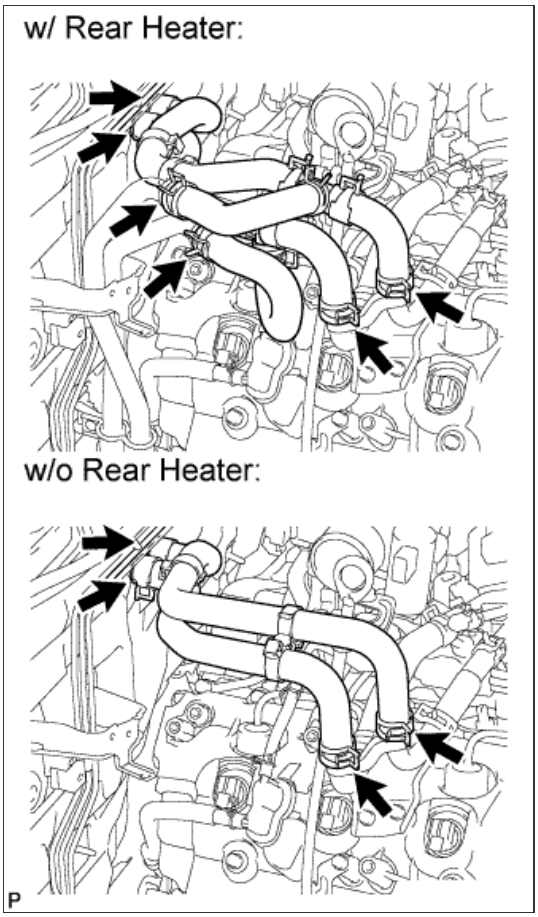
a. Apply a light coat of engine oil to a new O-ring.

b. Install the O-ring to the No. 2 engine oil level dipstick guide.



c. Install the No. 2 engine oil level dipstick guide with the 2 bolts.

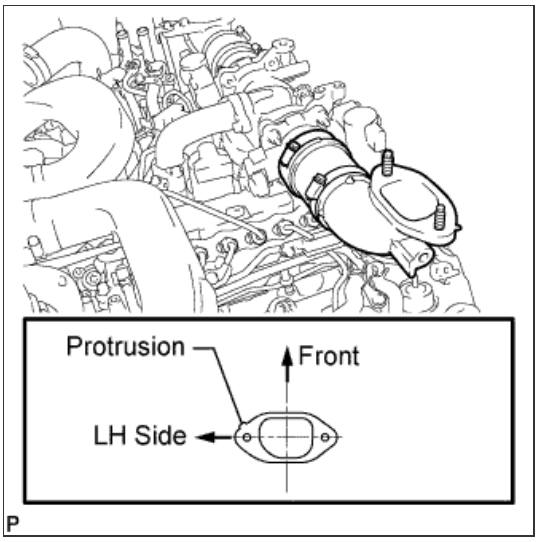
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



d. Connect the ventilation hose to the cylinder head cover RH.

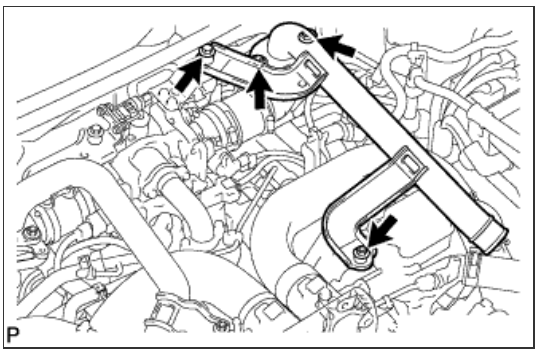
e. Connect the wire harness clamp to the No. 2 engine oil level dipstick guide bracket.

45. CONNECT WATER HOSE SUB-ASSEMBLY



4 . INSTALL NO. 2 COOL AIR INLET (w/o Intercooler)

a. Install a new gasket to the air tube LH.

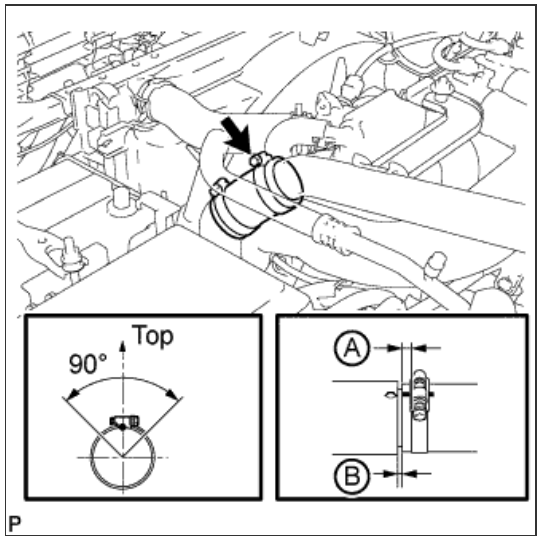


HINT:

Install the gasket with the protrusion facing as shown in the illustration.

b. Install the No. 2 cool air inlet with the 3 nuts and bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



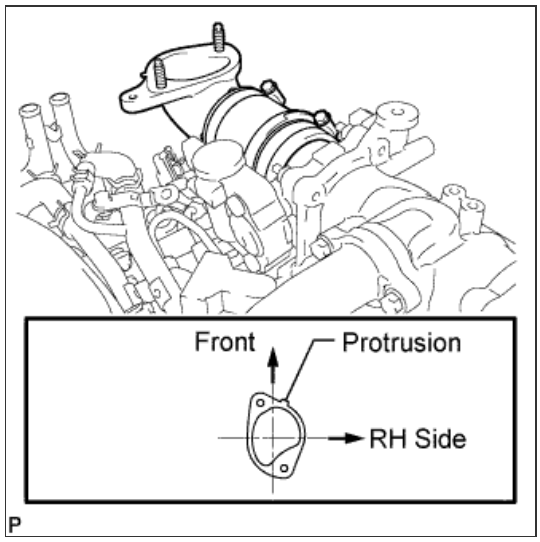
c. Connect the No. 2 air hose to the No. 2 cool air inlet.

d. Tighten the No. 2 air hose clamp.

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

HINT:

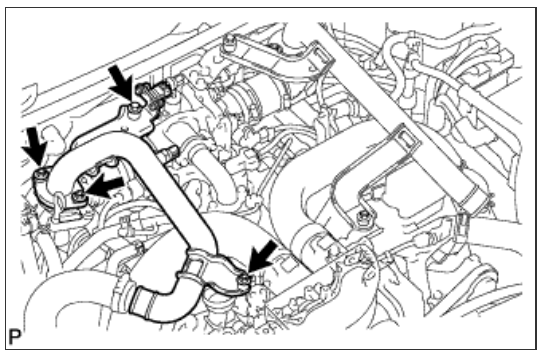
- **Align the paint mark of the air hose with the protrusion and push on the air hose so that distance B is 0 to 3 mm (0 to 0.118 in.).**
- **Position the clamp so that distance A is 2 to 6 mm (0.0787 to 0.236 in.).**
- **Make sure the direction of the hose clamp is as shown in the illustration.**



47. INSTALL NO. 1 COOL AIR INLET (w/o Intercooler)

a. Install a new gasket to the air tube RH.

HINT:



Install the gasket with the protrusion facing as shown in the illustration.

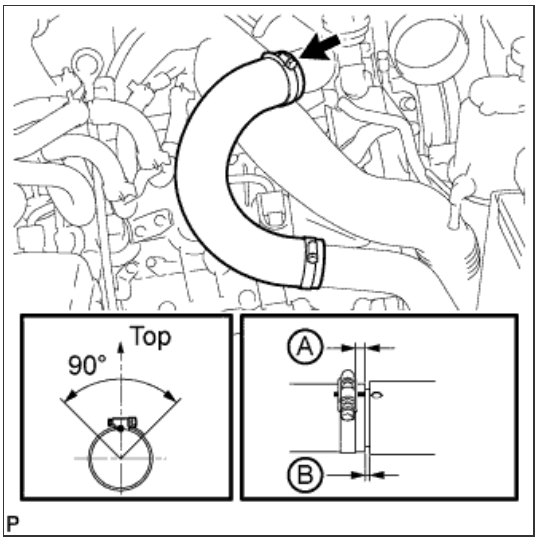
b. Install the No. 1 cool air inlet with the 3 nuts and bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

c. Connect the vacuum hose, intake air temperature sensor connector and turbo pressure sensor connector.

d. Connect the No. 1 air hose to the No. 1 cool air inlet.

e. Tighten the No. 1 air hose clamp.

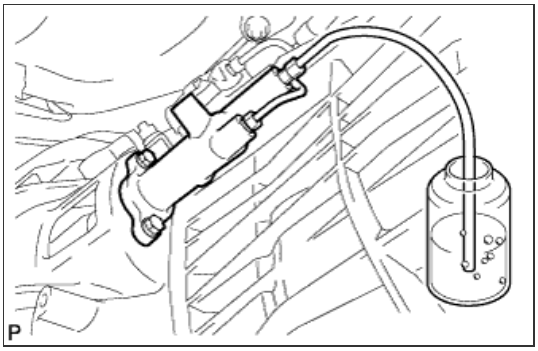


Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

HINT:

- **Align the paint mark of the air hose with the protrusion and push on the air hose so that distance B is 0 to 3 mm (0 to 0.118 in.).**
- **Position the clamp so that distance A is 2 to 6 mm (0.0787 to**

0.236 in.).



- **Make sure the direction of the hose clamp is as shown in the illustration.**

48. INSTALL INTERCOOLER ASSEMBLY (w/ Intercooler)

a. Install the intercooler assembly (Click here).

49. BLEED CLUTCH LINE (for Manual Transmission)

a. Remove the release cylinder bleeder plug cap.

b. Connect a vinyl tube to the bleeder plug.

c. Depress the clutch pedal several times, and then loosen the bleeder plug while the pedal is depressed.

d. When fluid no longer comes out, tighten the bleeder plug, and then release the clutch pedal.

e. Repeat the previous 2 steps until all the air in the fluid is completely bled.

f. Tighten the bleeder plug.

Torque:
11 N*m{ 110 kgf*cm , 8 ft.*lbf }

g. Install the bleeder plug cap.

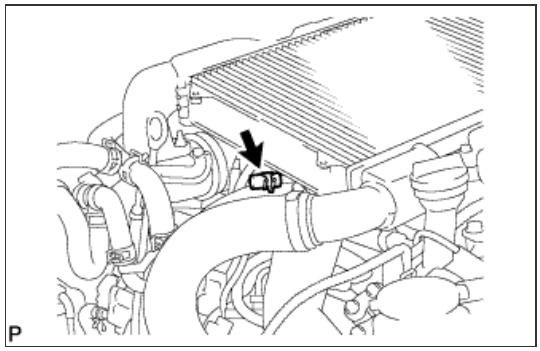
h. Check that all the air has been bled from the clutch line.

50. INSPECT FOR CLUTCH FLUID LEAK (for Manual Transmission)

51. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

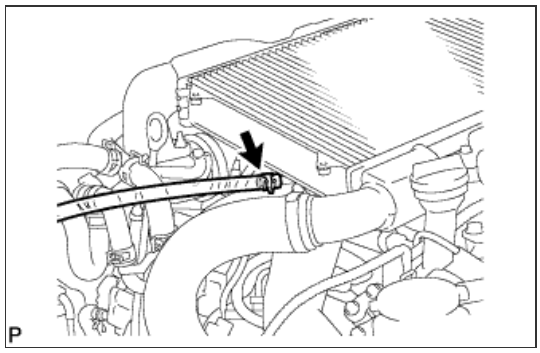
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).



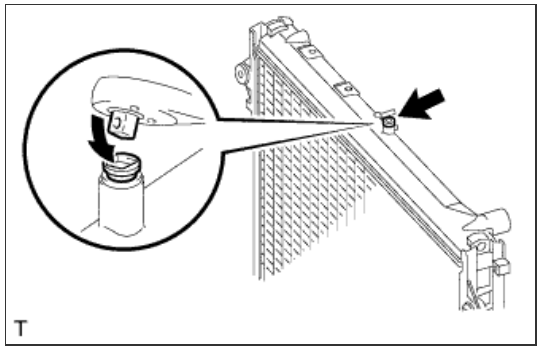
a. Connect the cables to the negative (-) main battery and sub-battery terminals.

52. REGISTER INJECTOR COMPENSATION CODE



a. Register the injector compensation code (Click here).

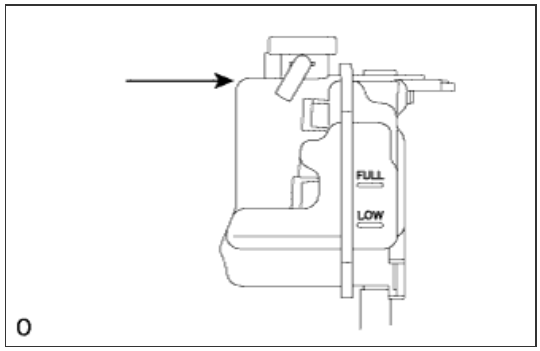
53. ADD ENGINE COOLANT



a. Remove the engine air bleed cap.

b. Connect a clear hose to the engine air bleed pipe.

c. Using a wrench, remove the vent plug.



d. Fill the radiator with TOYOTA SLLC to the radiator reservoir filler neck.

HINT:

Pour TOYOTA SLLC until it spills out of the engine air bleed pipe.

Standard Capacity (for Automatic Transmission):

Item	Specified Condition
Front heater only	14.8 liters (15.6 US qts, 13.0 Imp. qts)
Front heater and rear heater	17.6 liters (18.6 US qts, 15.5 Imp. qts)
Front heater with viscous heater	15.2 liters (16.1 US qts, 13.4 Imp. qts)
Front heater and rear heater with viscous heater	18.0 liters (19.0 US qts, 15.4 Imp. qts)

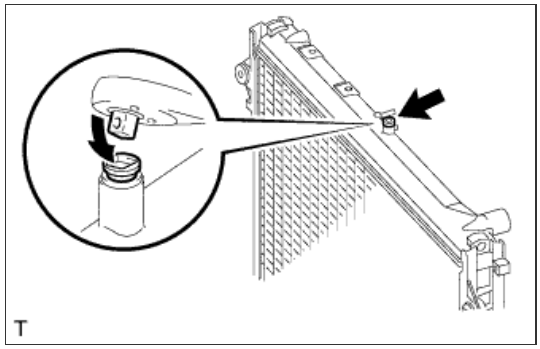
Standard capacity (for Manual Transmission):
15.4 liters (16.3 US qts, 13.6 Imp. qts)

NOTICE:

Do not substitute plain water for engine coolant.

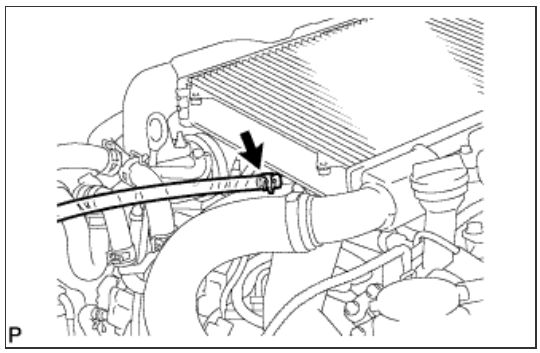
HINT:

TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical



problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

e. Install the vent plug.

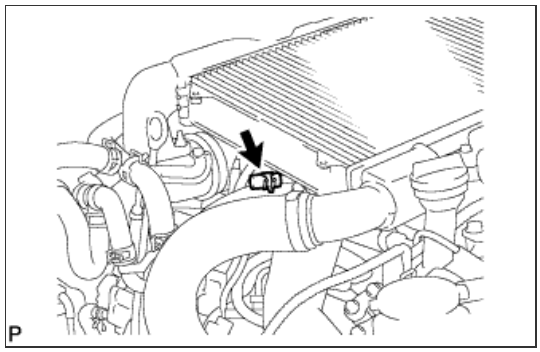


Torque:
2.0 N*m{ 20 kgf*cm , 18 in.*lbf }

NOTICE:

Do not tighten the plug to 5.0 N*m (51 kgf*cm, 44 in.*lbf) or more, as the plug will be damaged.

f. Disconnect the clear hose from the engine air bleed pipe.



g. Install the engine air bleed cap when coolant comes out.

h. Install the radiator reservoir cap.

i. Start the engine.

NOTICE:

Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the FULL line.

j. Maintain an engine speed of 3000 rpm for appro imately 10 minutes so that the thermostat opens and air bleeding is performed.

CAUTION:

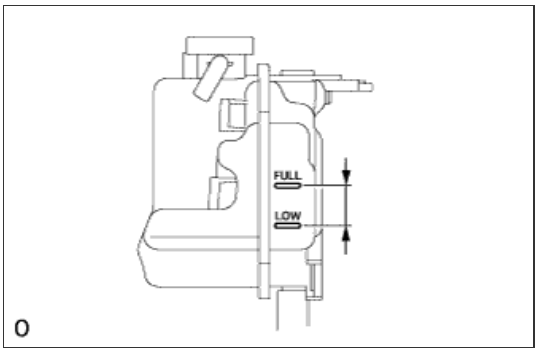
When pressing the radiator hoses:

- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the radiator fan**

NOTICE:

- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**

HINT:



The thermostat opening timing can be confirmed by pressing the No. 2 radiator hose by hand, and checking when the engine coolant starts to flow inside the hose.

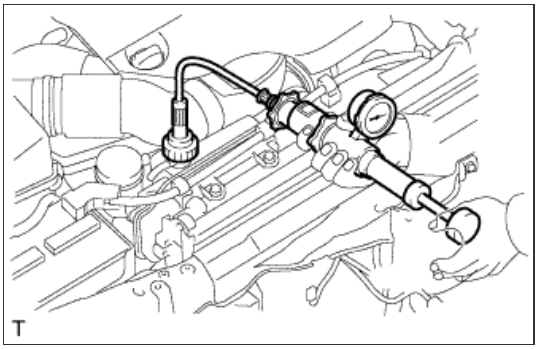
k. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

Do not remove the radiator reservoir cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

l. Check that the coolant level is between the FULL and LOW lines.
If the coolant level is above the FULL line, drain coolant so that the coolant level is between the FULL and LOW lines.

54. INSPECT FOR ENGINE COOLANT LEAKS



CAUTION:

Do not remove the radiator reservoir cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Fill the radiator with coolant and attach a radiator cap tester to the radiator reservoir.

b. Warm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 17.8 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks.
If no e ternal leaks are found, check the cylinder block and cylinder head.

55. INSPECT FOR FUEL LEAK

a. Perform Active Test.

i. Connect the intelligent tester to the DLC3.

ii. Turn the ignition switch to ON.

iii. Start the engine.

iv. Turn the intelligent tester ON.

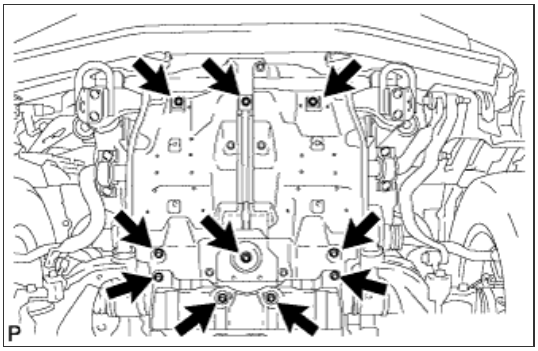
v. Enter the following menus: Powertrain / Engine / Active Test.

vi. Perform the Active Test.

Tester Display	Test Detail	Control Range	Diagnostic Note
Test the Fuel Leak	Pressurizes fuel inside common rail and checks for fuel leaks	Stop/Start	• The fuel inside the common rail is pressurized to the specified value and the engine speed increases to 2000 rpm when Start is selected. • The above conditions are preserved while Start is selected.

5 . INSPECT FOR OIL LEAK

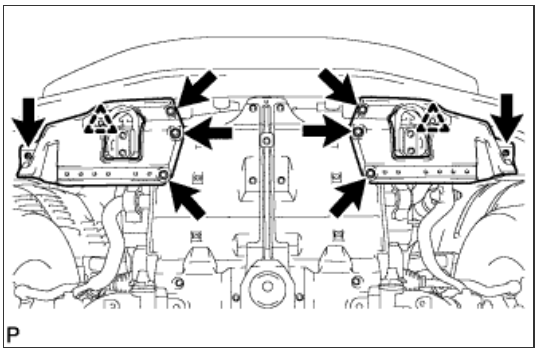
a. Warm up the engine and check for an engine oil leak.



57. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the upper radiator support seal with the 7 clips.

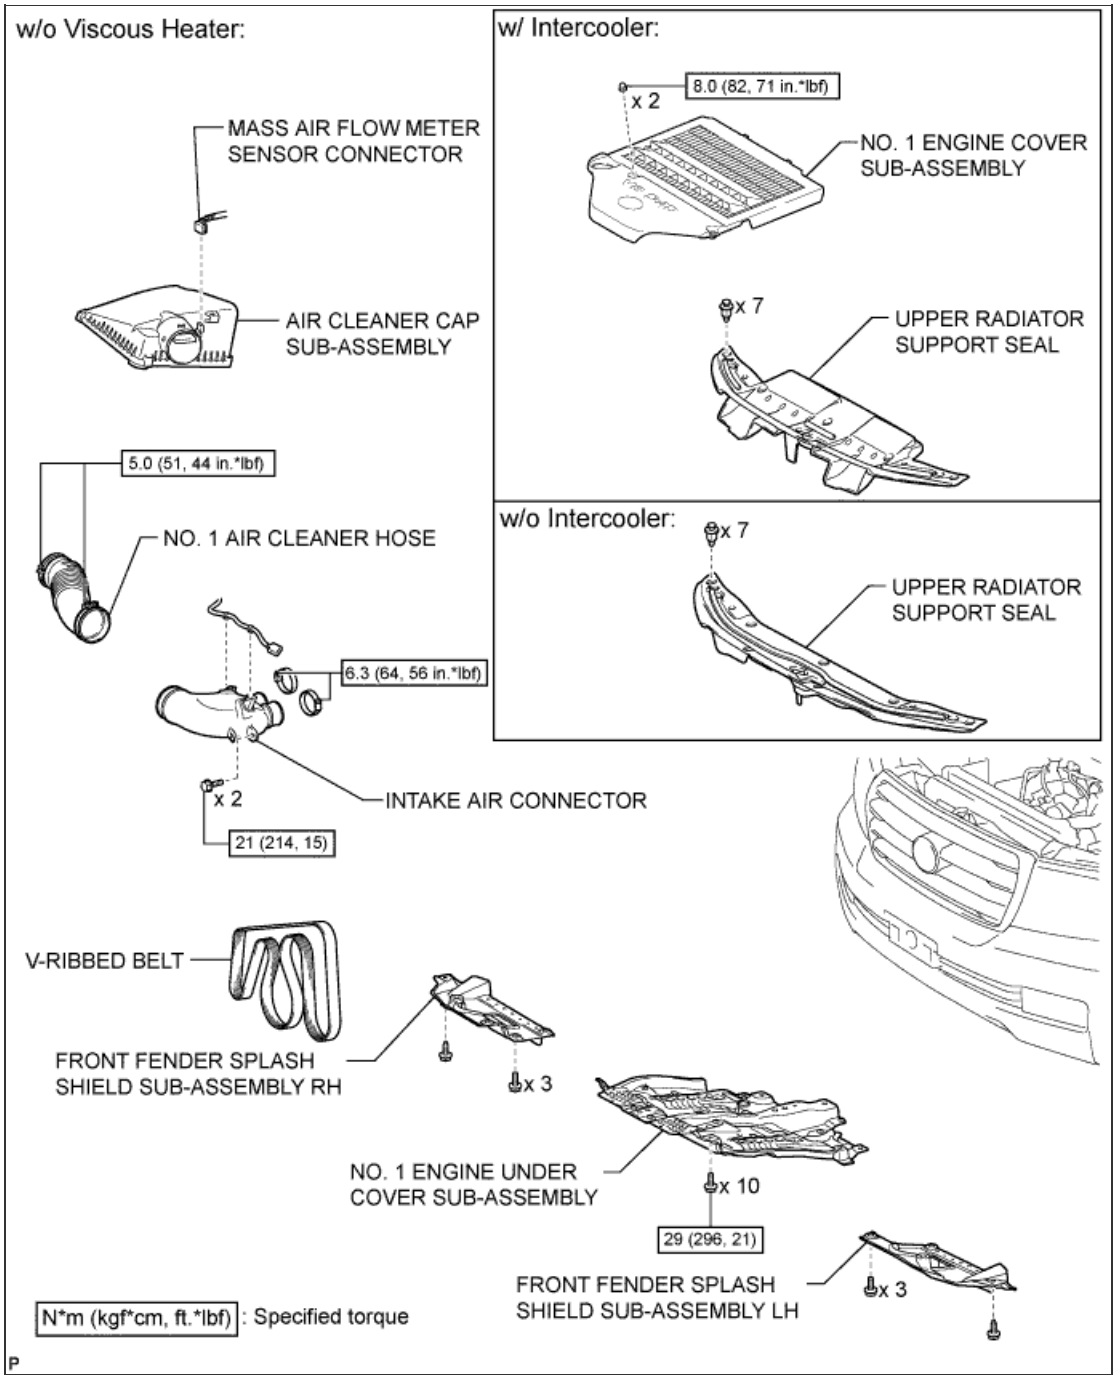
58. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY



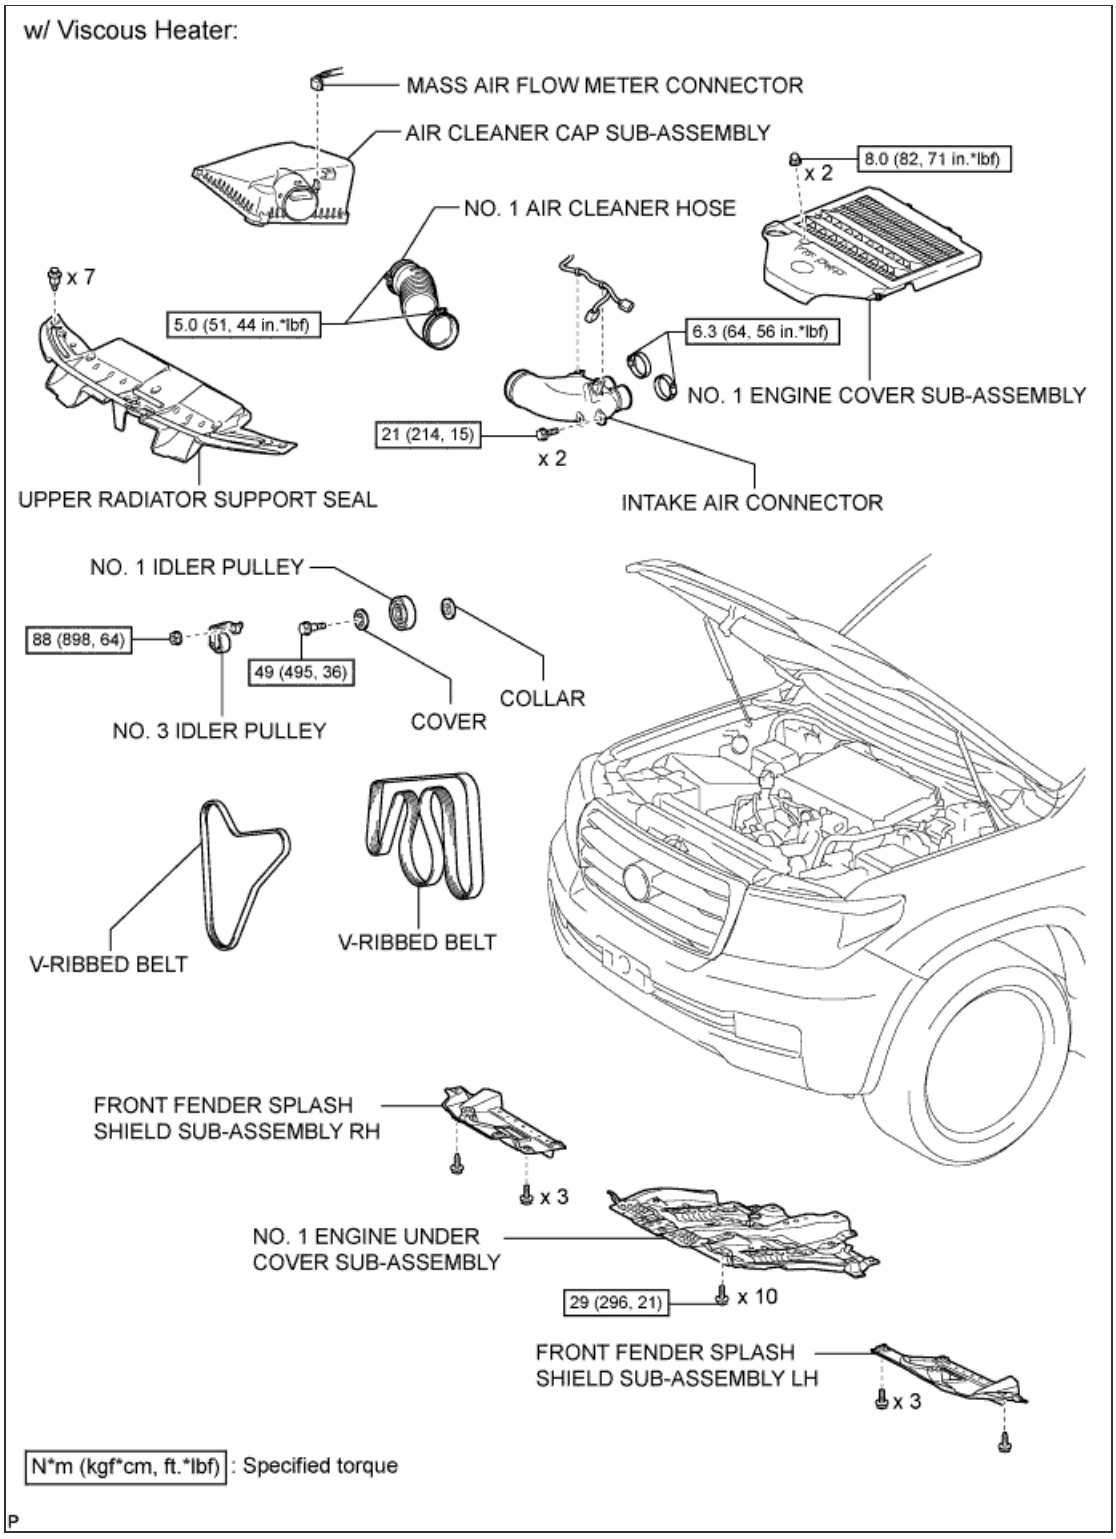
a. Install the engine under cover with the 10 bolts.

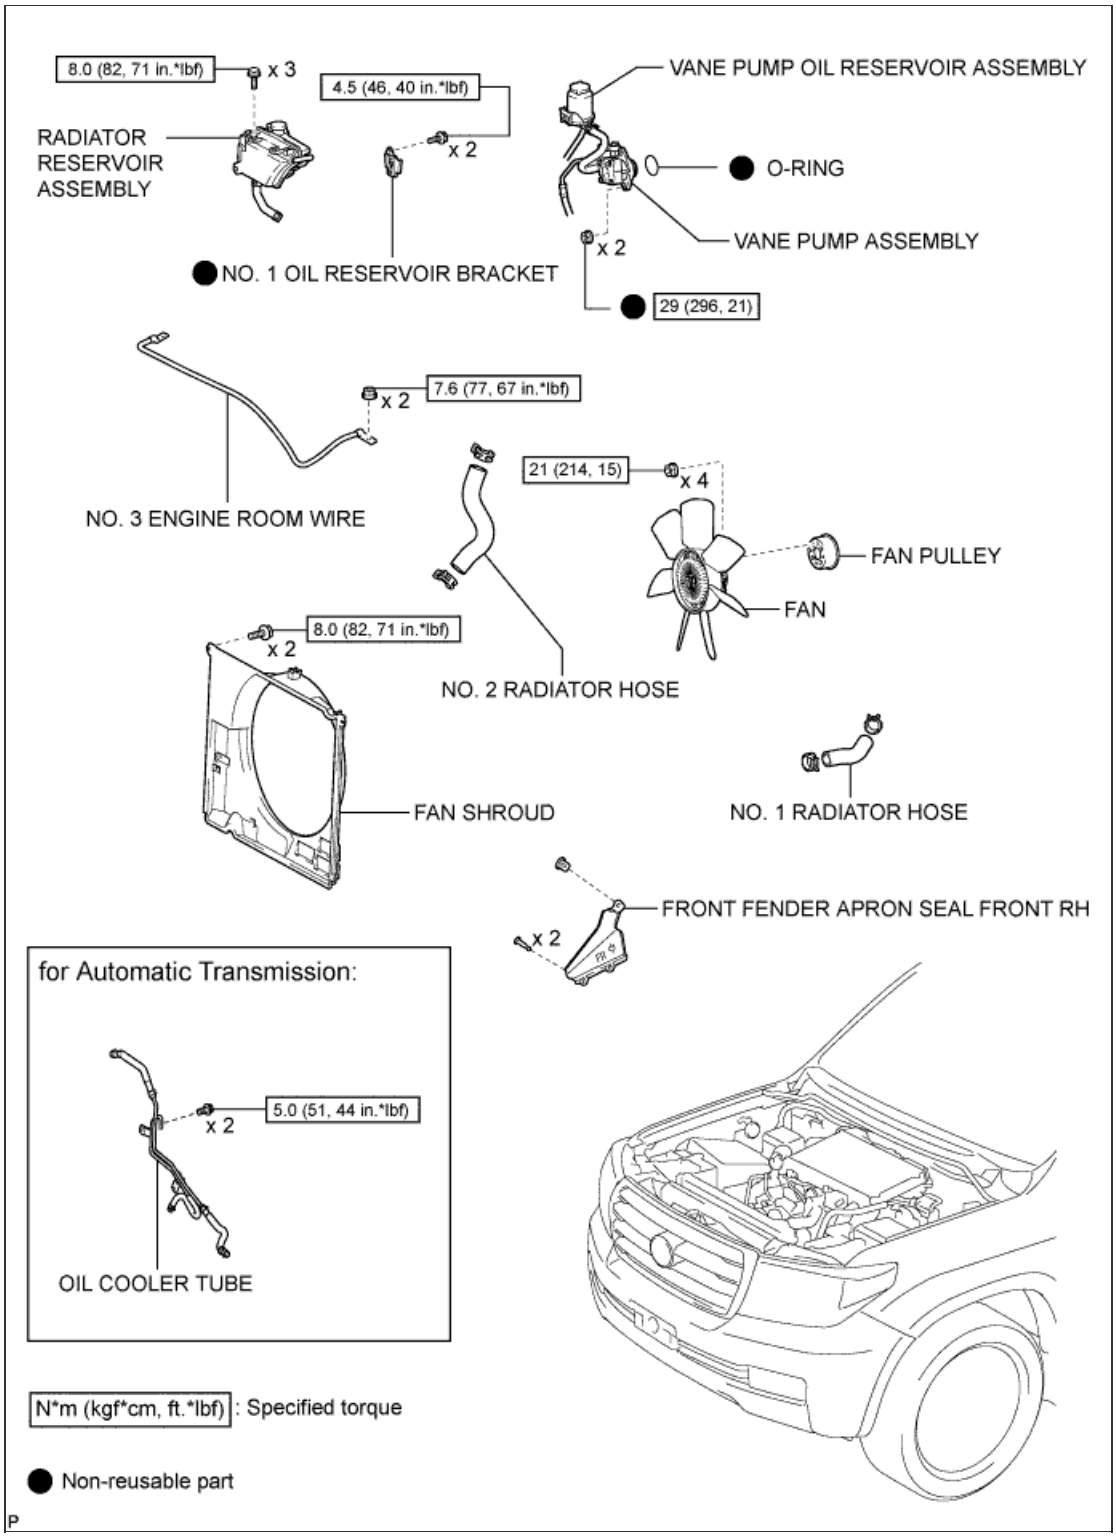
Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

59. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH



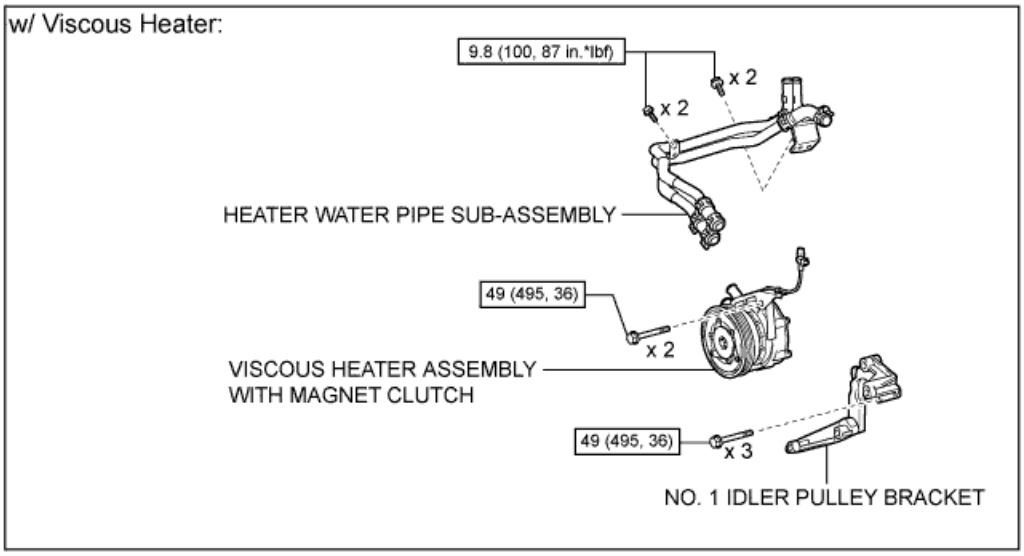
a. Install the splash shield with the clip, and then install the 3 bolts and screw.





60. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Install the splash shield with the clip, and then install the 3 bolts and screw.



for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

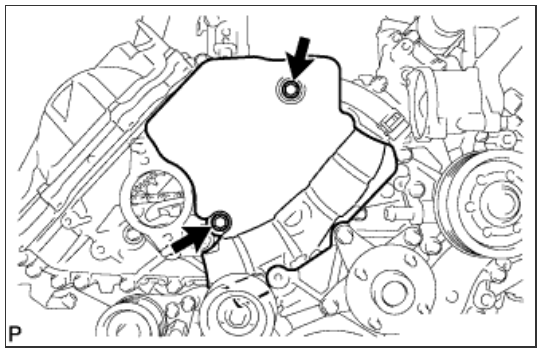
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

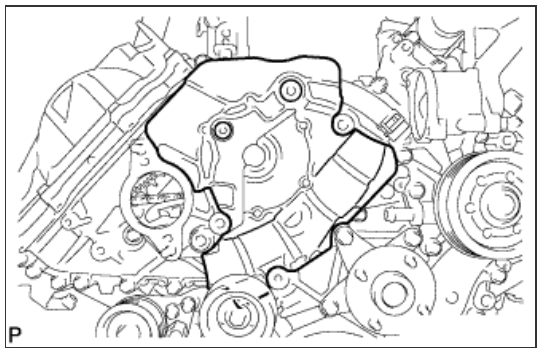
a. Disconnect the cables from the negative (-) main battery and sub-battery terminals.

2. REMOVE THERMOSTAT



a. Remove the thermostat (Click here).

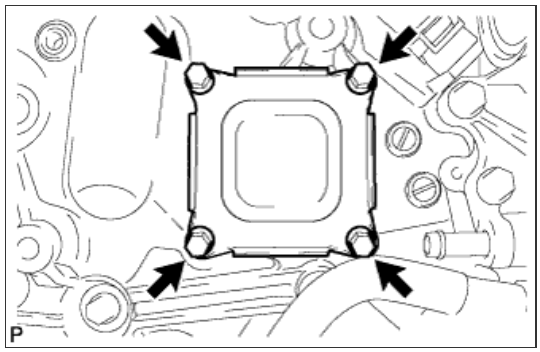
3. REMOVE FUEL COOLER ASSEMBLY



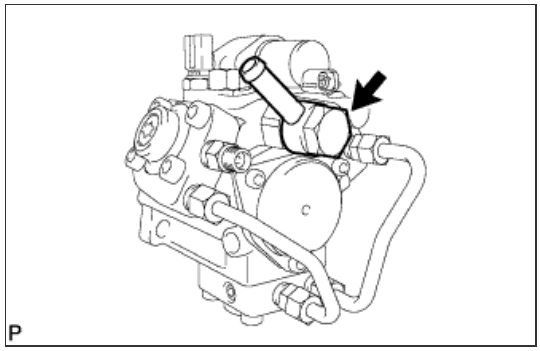
a. Remove the fuel cooler assembly (Click here).

4. REMOVE TIMING GEAR COVER INSULATOR (w/ Intercooler)

a. w/o Viscous eater:
Remove the 2 bolts and timing gear cover insulator.



b. w/ Viscous eater:
Remove the timing gear cover insulator.



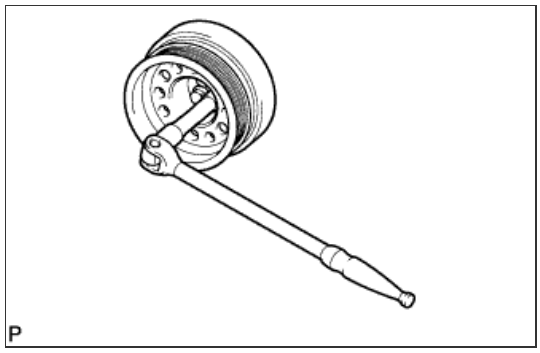
5. REMOVE TIMING CHAIN COVER PLATE

a. Remove the 4 bolts, cover plate and gasket.

6. REMOVE NO. 1 FUEL PIPE

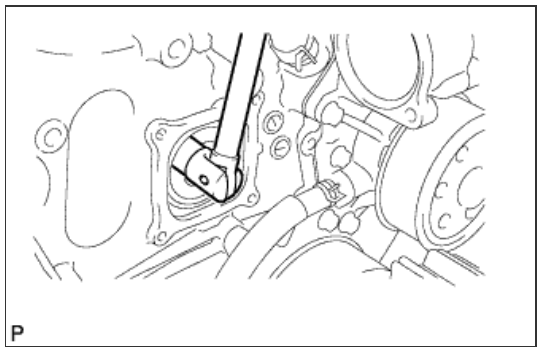
a. Remove the union bolt, fuel pipe and 2 gaskets.

7. REMOVE FUEL SUPPLY PUMP



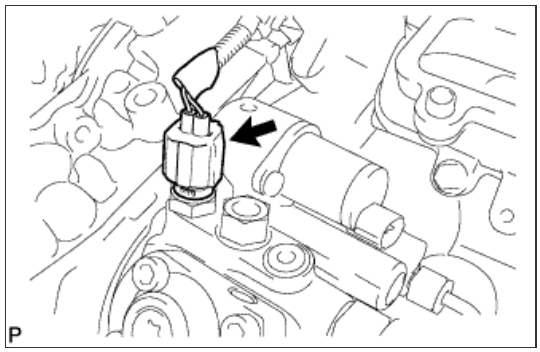
a. Using a wrench, hold the crankshaft.

NOTICE:



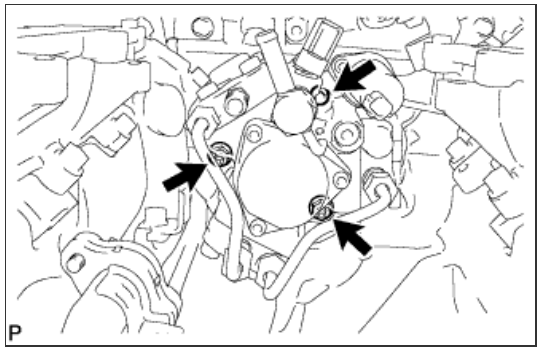
Do not turn the crankshaft counterclockwise.

If it is turned counterclockwise, check that the crankshaft pulley set bolt is not loose. If loose, tighten the bolt (Click here).



Torque:
108 N*m{ 1101 kgf*cm , 80 ft.*lbf } or more

b. Remove the set nut.



c. Disconnect the fuel temperature sensor connector.

d. Using a 6 mm hexagon wrench, remove the bolt.

e. Loosen the 2 nuts.

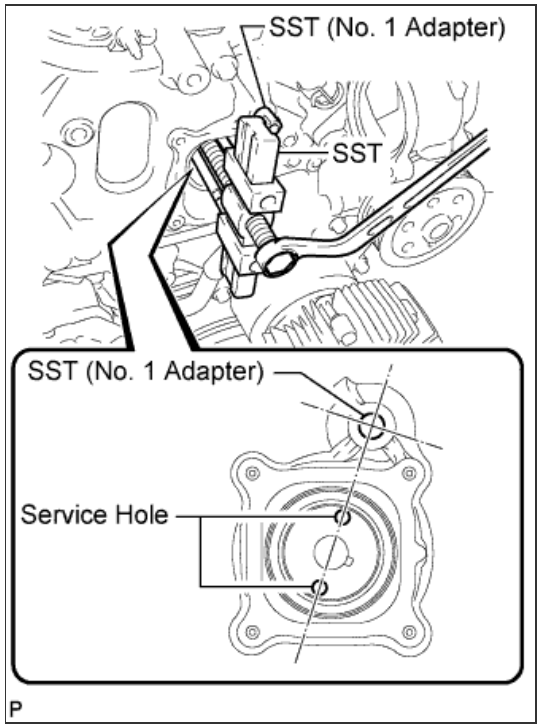
f. Disconnect the pump from the supply pump drive gear.

i. Install SST (No. 1 adapter) to the timing chain cover.

SST

09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05031, 09955-05010)

NOTICE:

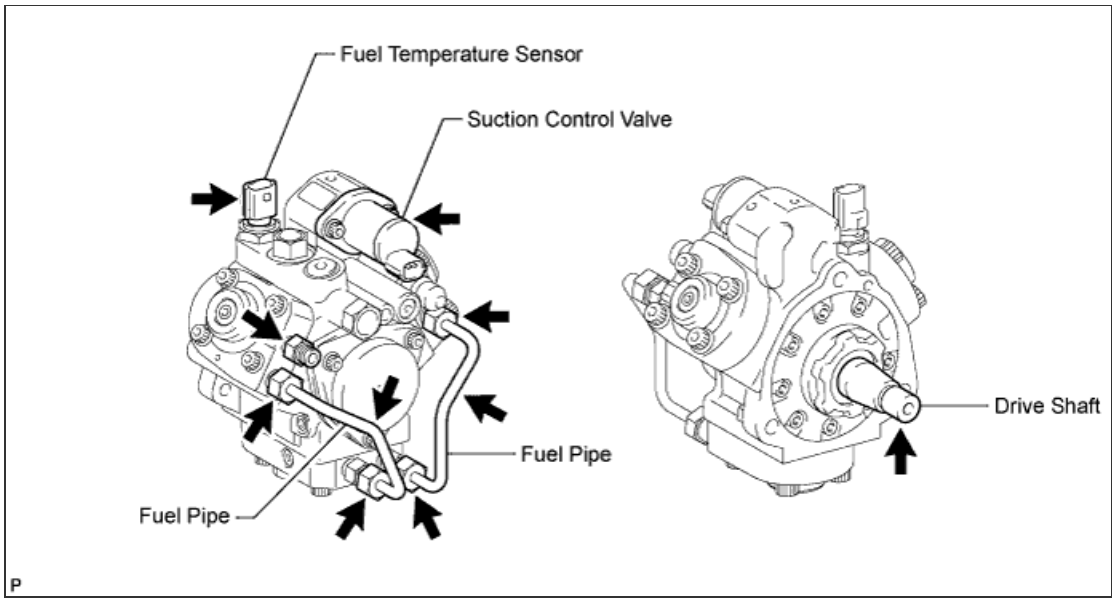


Do not use any tools in this procedure.

ii. Rotate the supply pump gear so that the service holes are aligned with SST (No. 1 adapter) as shown in the illustration.

iii. Using SST, disconnect the pump from the supply pump drive gear.

NOTICE:



- **When removing or installing SST, do not push the supply pump gear.**
- **Apply lubricant to the threads and tip of SST (center bolt) before using it.**

g. Remove the 2 nuts.

NOTICE:

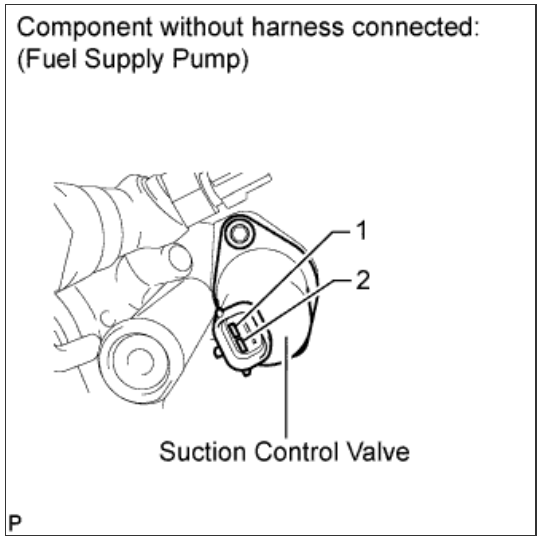
- **Do not hold the supply pump by the parts indicated by the arrows in the illustration, as this may result in deformation, damage, and fuel leakage.**

- **The pump must be kept horizontal.**

h. Remove the O-ring from the supply pump.

for Preparation Click here

1. INSPECT FUEL SUPPLY PUMP



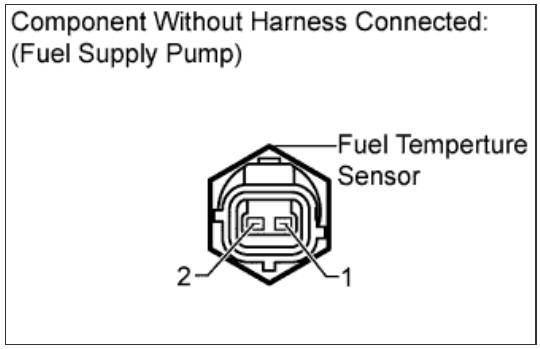
a. Inspect the suction control valve.

i. esure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	1.9 to 2.3 Ω

If the result is not as specified, replace the fuel supply pump.



2. INSPECT FUEL TEMPERATURE SENSOR

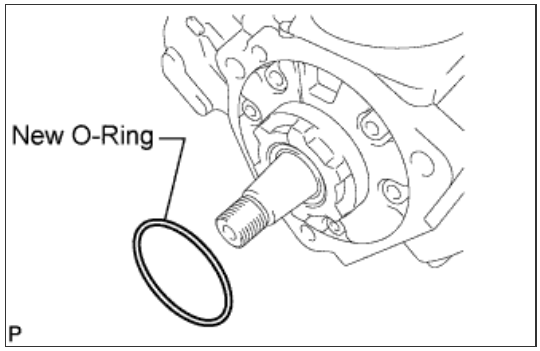
a. esure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	2.32 to 2.59 Ω

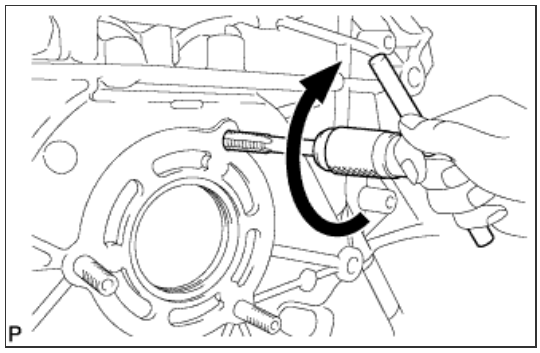
If the result is not as specified, replace the supply pump.

for Preparation Click here



1. INSTALL FUEL SUPPLY PUMP

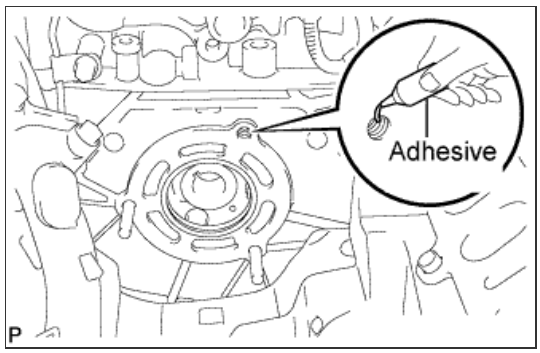
NOTICE:



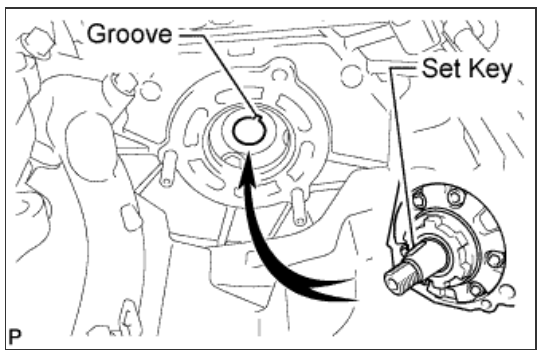
Do not push the supply pump drive gear.

a. Install a new O-ring to the supply pump.

b. Apply a light coat of engine oil to the O-ring.

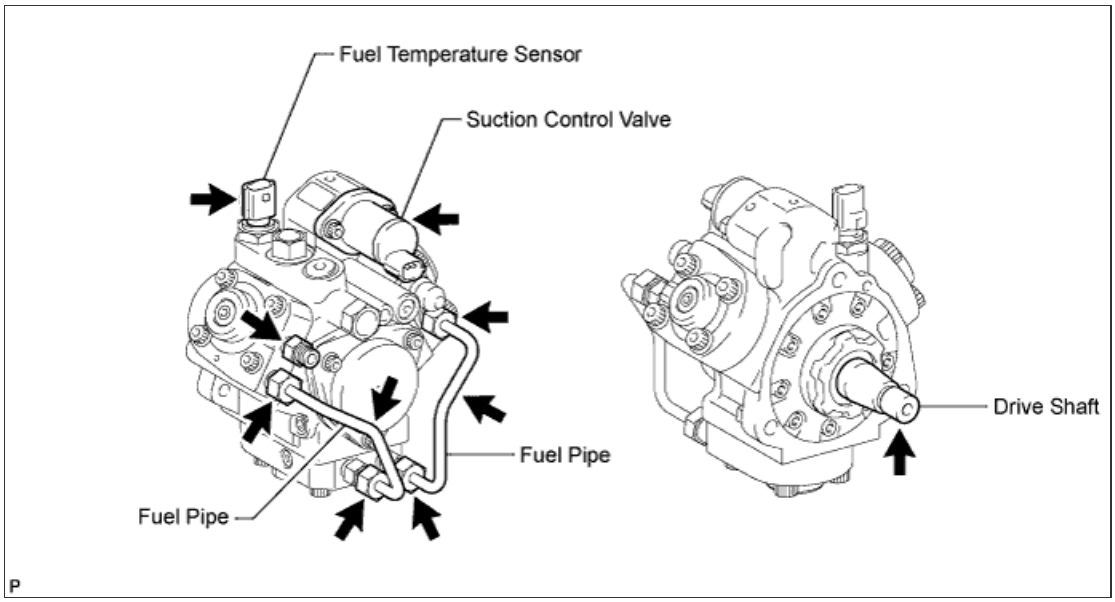


c. Using an mm x 1.25 pitch tap, remove the adhesive from the timing gear case side bolt hole.

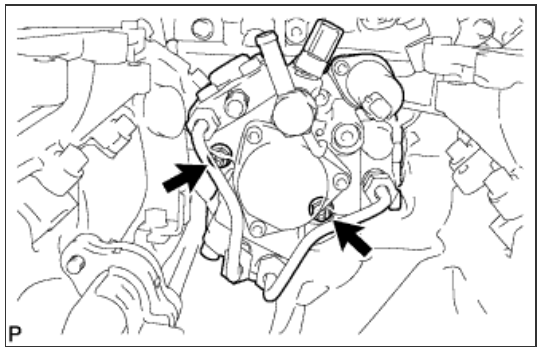


d. Apply adhesive to 2 or more threads as shown in the illustration.

Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent



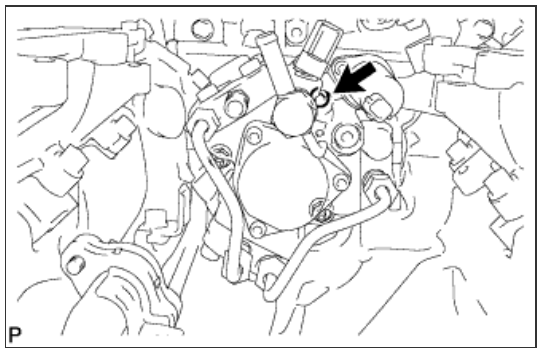
e. Align the set key on the drive shaft with the groove of the supply pump drive gear.



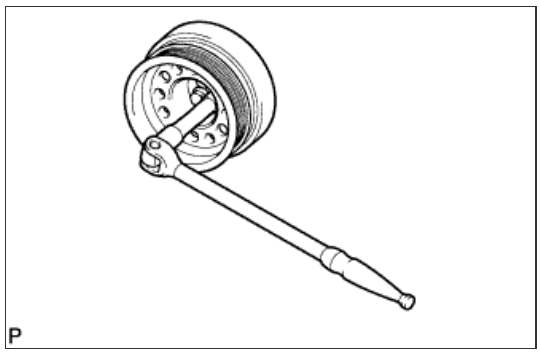
NOTICE:

Do not hold the supply pump by the parts indicated by the arrows in the illustration, as this may result in deformation, damage, and fuel leakage.

f. emporarily install the fuel supply pump with the 2 nuts.



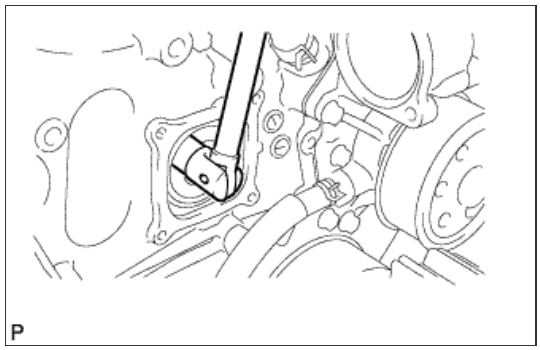
g. Using a 6 mm hexagon wrench, install the bolt.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

h. hten the 2 nuts.

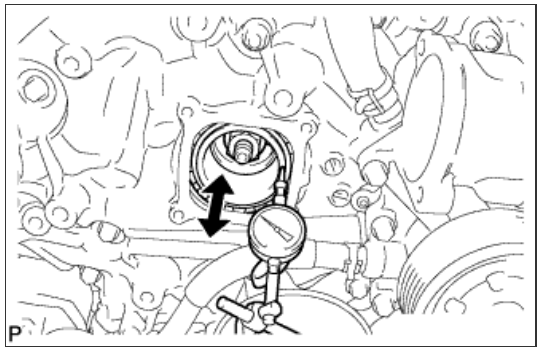
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



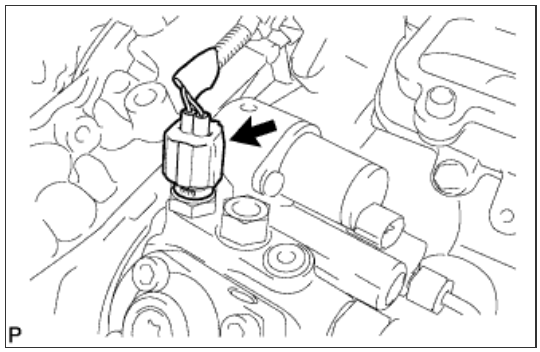
i. Using a wrench, hold the crankshaft.

. Install the set nut.

Torque:
68 N*m{ 693 kgf*cm , 50 ft.*lbf }



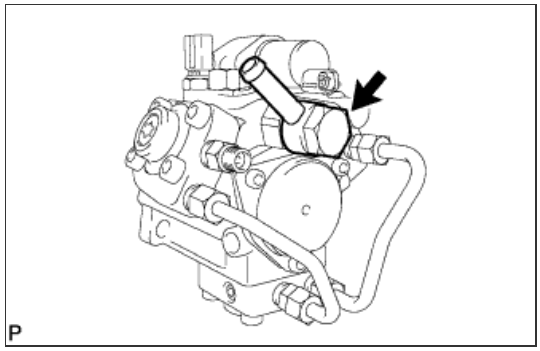
k. urn the crankshaft 2 times, and check that there are no problems.



l. Using a dial indicator, check the thrust clearance of the supply pump drive shaft while moving the pump drive shaft gear back and forth.

Standard thrust clearance:
0.05 to 0.30 mm (0.00197 to 0.0118 in.)

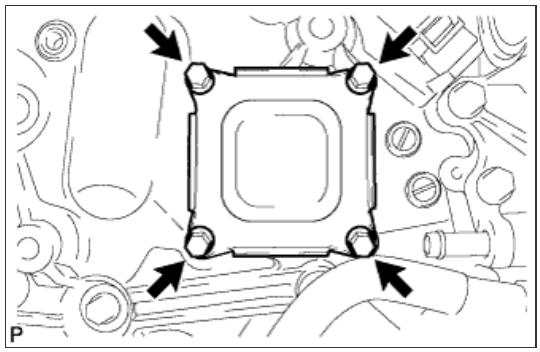
If the clearance is not within the specified range, disassemble and reassemble the supply pump and pump drive shaft gear. hen repeat the step above.



m. Connect the fuel temperature sensor connector.

2. INSTALL NO. 1 FUEL PIPE

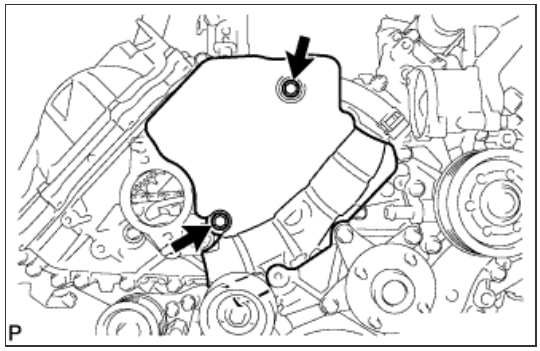
a. Install 2 new gaskets and the No. 1 fuel pipe with the union bolt.



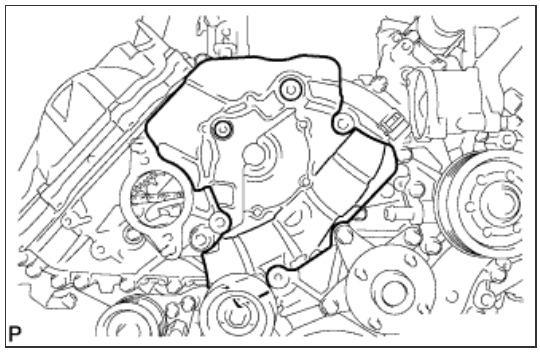
Torque:
17 N*m{ 175 kgf*cm , 13 ft.*lbf }

3. INSTALL TIMING CHAIN COVER PLATE

a. Install a new gasket and the cover plate with the 4 bolts.



Torque:
9.1 N*m{ 93 kgf*cm , 81 in.*lbf }



4. INSTALL TIMING GEAR COVER INSULATOR (w/ Intercooler)

a. w/o Viscous Heater:
Install the timing gear cover insulator with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. w/ Viscous Heater:
Install the timing gear cover insulator.

5. INSTALL FUEL COOLER ASSEMBLY

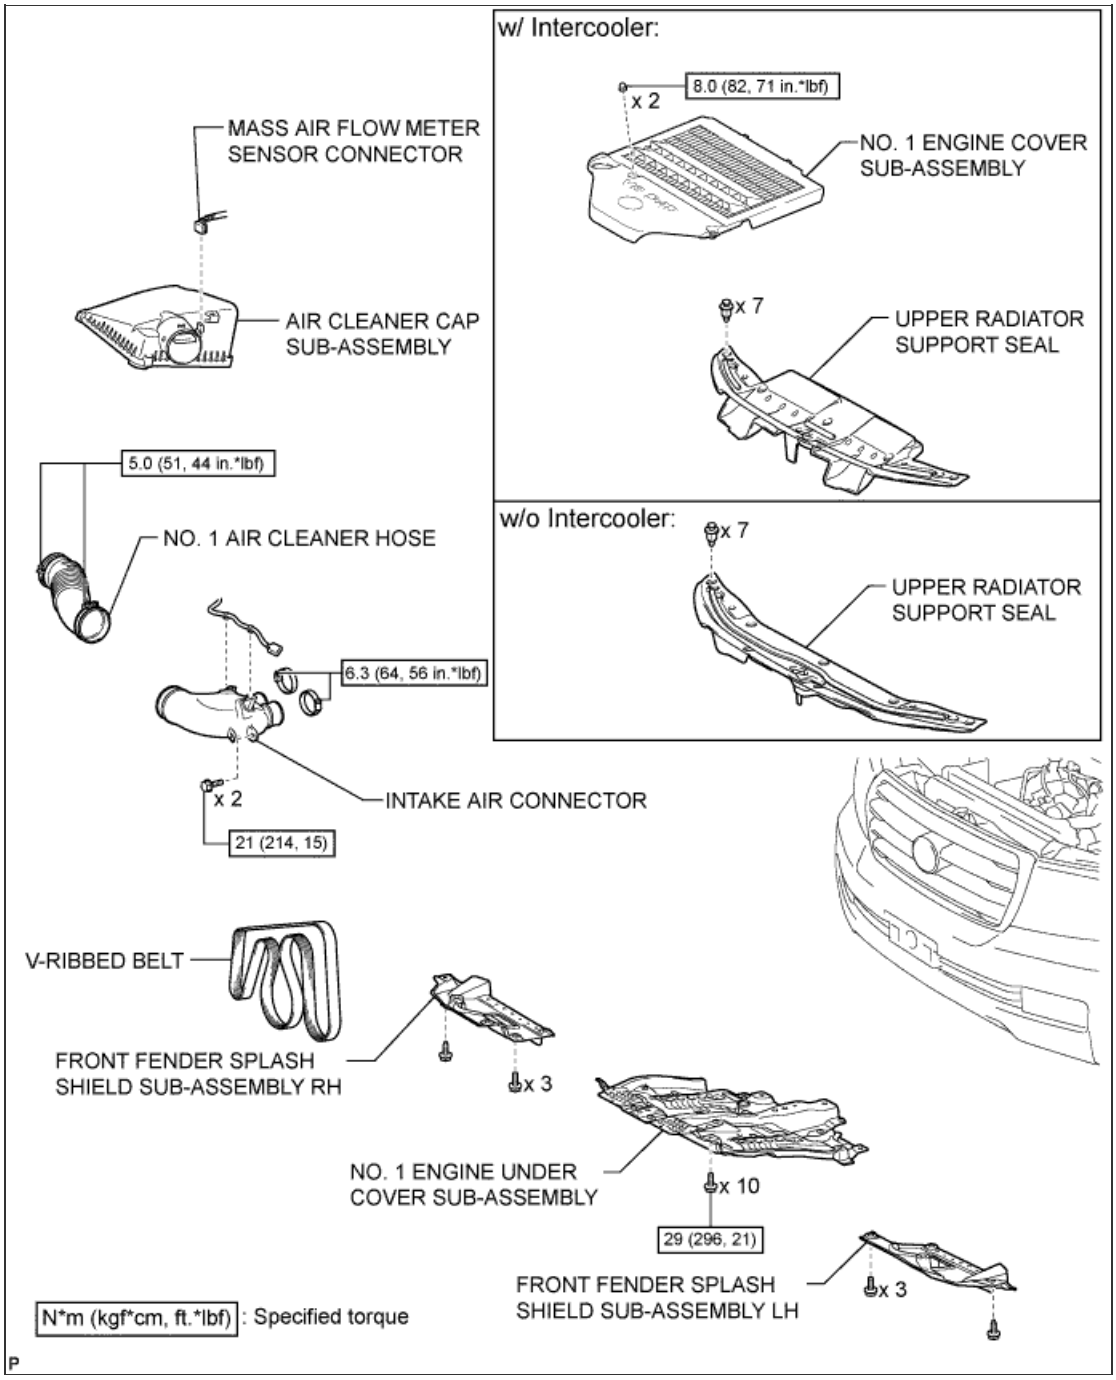
a. Install the fuel cooler assembly (Click here).

6. INSTALL THERMOSTAT

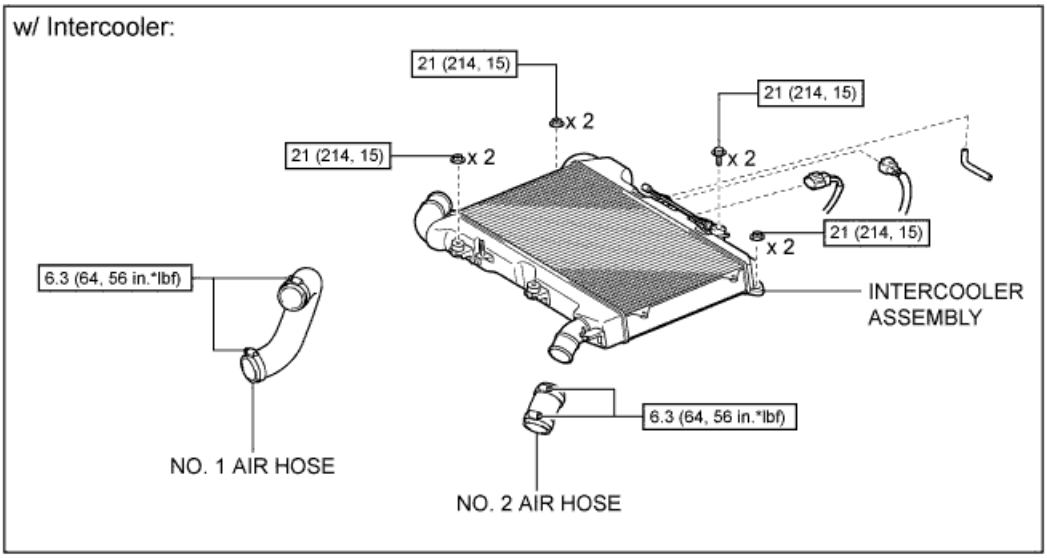
a. Install the thermostat (Click here).

7. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

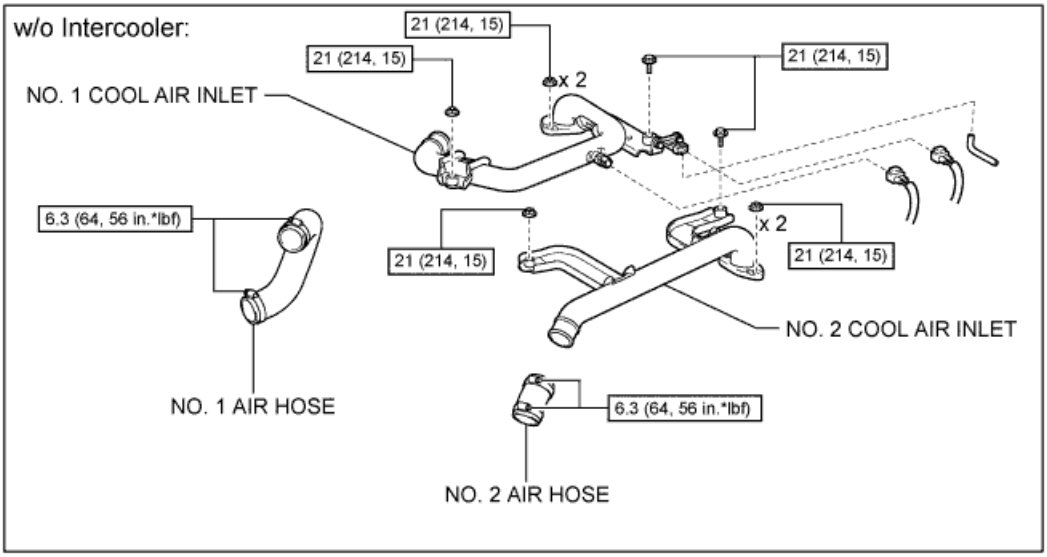
NOTICE:



When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).



a. Connect the cables to the negative (-) main battery and sub-battery terminals.



8. FUEL SUPPLY PUMP INITIALIZATION

a. Initialize the fuel supply pump (Click here).

for Preparation Click here

NOTICE:

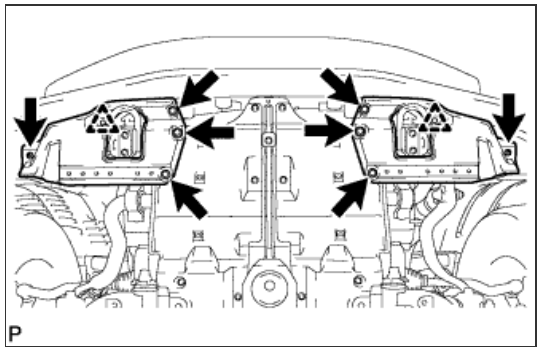
When replacing an injector (including interchanging injectors between cylinders), common rail, replace the corresponding injection pipes with a new one.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 9 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:



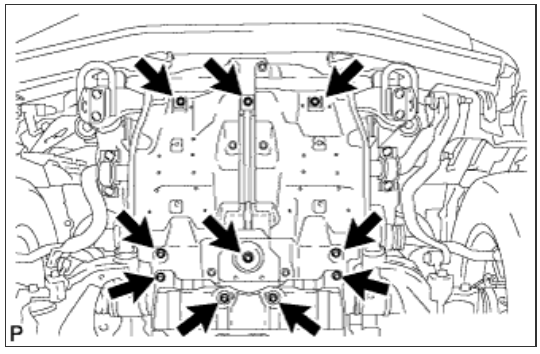
When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

a. Disconnect the cables from the negative (-) main battery and sub-battery terminals.

2. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and screw.

b. Loosen the clip and remove the splash shield.



3. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

a. Remove the 3 bolts and screw.

b. Loosen the clip and remove the splash shield.

4. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 1 bolts and under cover.

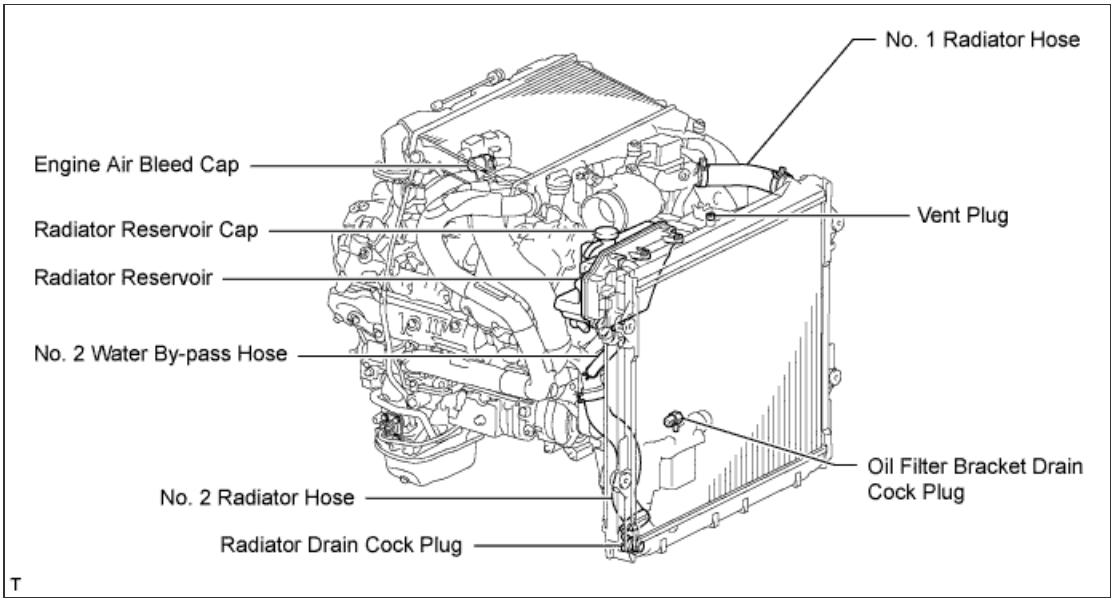
5. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 7 clips and upper radiator support seal.

6. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator reservoir cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

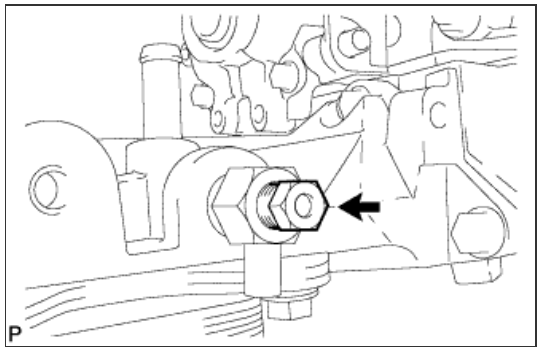


HINT:

Collect the coolant in a container and dispose of it according to the regulations in your area.

a. Loosen the radiator drain cock plug.

b. Remove the radiator reservoir cap to drain the coolant in the radiator.

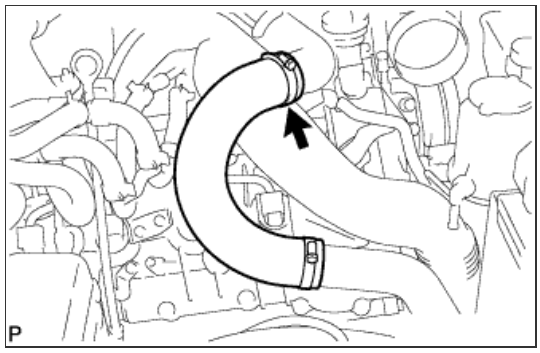


c. Loosen the oil filter bracket drain cock plug to drain the coolant in the engine.

d. ighten the radiator drain cock plug by hand.

e. ighten the oil filter bracket drain cock plug.

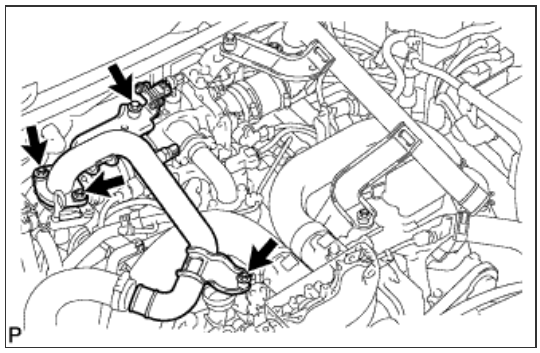
Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }



7. REMOVE INTERCOOLER ASSEMBLY (w/ Intercooler)

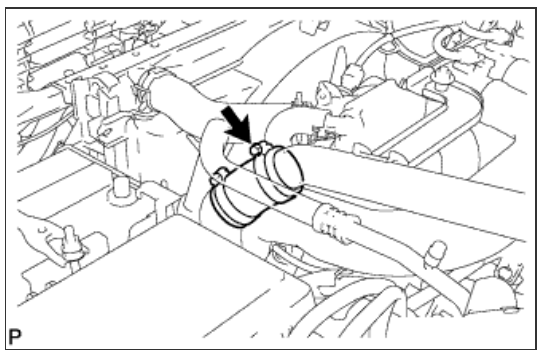
a. Remove the intercooler assembly (Click here).

8. REMOVE NO. 1 COOL AIR INLET (w/o Intercooler)



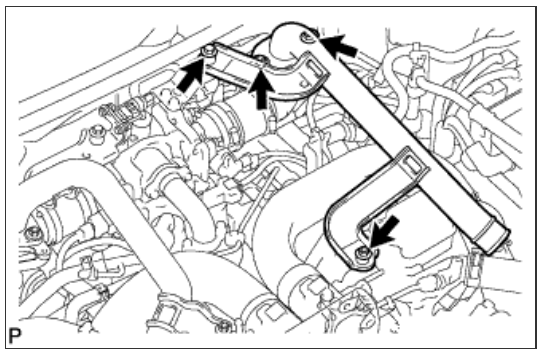
a. Loosen the No. 1 air hose clamp.

b. Disconnect the turbo pressure sensor connector, intake air temperature sensor connector and vacuum hose.



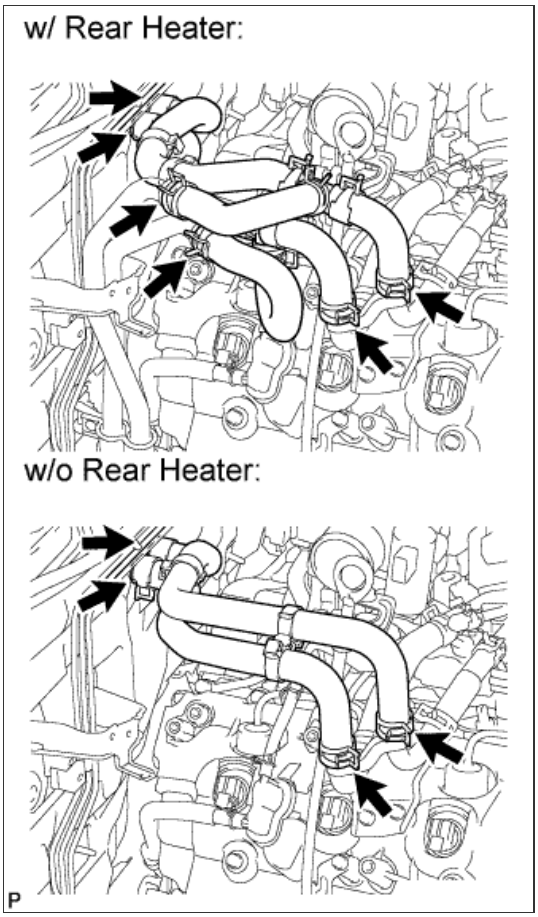
c. Remove the 3 nuts, bolt and No. 1 cool air inlet.

d. Remove the gasket from the air tube RH.



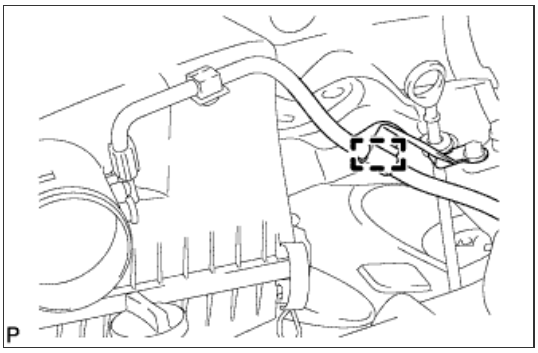
9. REMOVE NO. 2 COOL AIR INLET (w/o Intercooler)

a. Loosen the No. 2 air hose clamp.



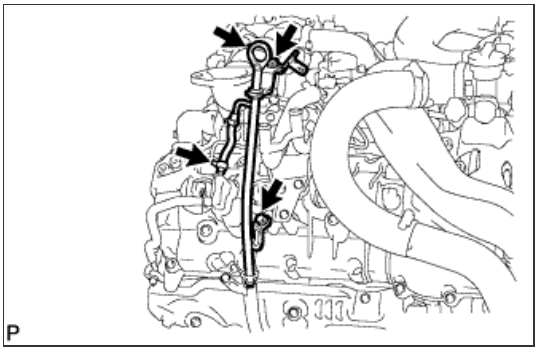
b. Remove the 3 nuts, bolt and No. 2 cool air inlet.

c. Remove the gasket from the air tube LH.



10. DISCONNECT WATER HOSE SUB-ASSEMBLY

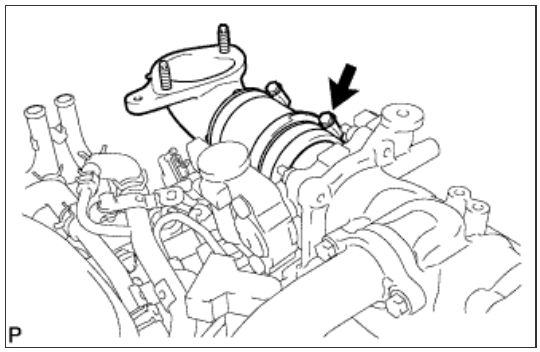
11. REMOVE NO. 2 ENGINE OIL LEVEL DIPSTICK GUIDE



a. Disconnect the wire harness clamp from the No. 2 engine oil level dipstick guide.

b. Disconnect the ventilation hose from the cylinder head cover RH.

c. Remove the 2 bolts and No. 2 engine oil level dipstick guide.

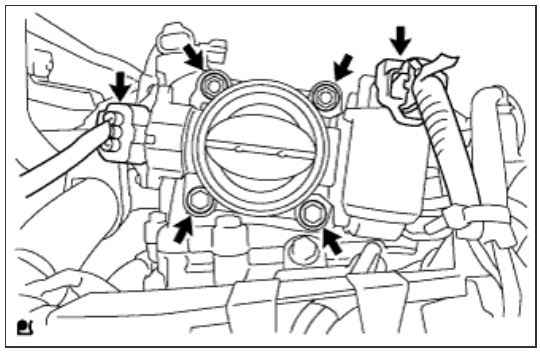


d. Remove the O-ring from the No. 2 engine oil level dipstick guide.

12. REMOVE AIR TUBE SUB-ASSEMBLY RH

a. Loosen the hose clamp.

b. Remove the air tube from the throttle body.



13. REMOVE DIESEL THROTTLE BODY ASSEMBLY RH

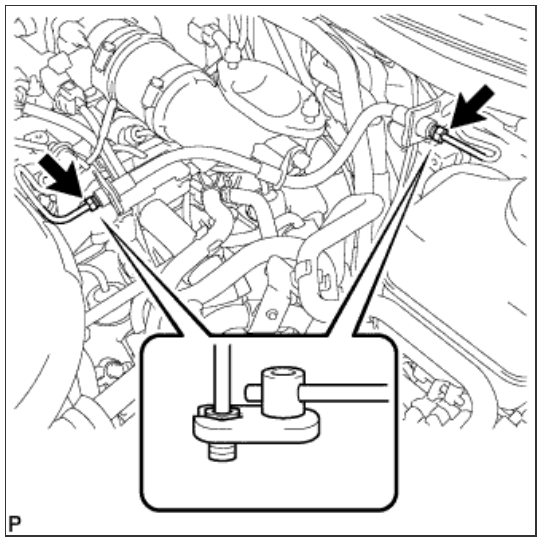
a. Disconnect the throttle position sensor connector.

b. Disconnect the throttle motor connector.

c. Remove the 2 bolts, 2 nuts and throttle body.

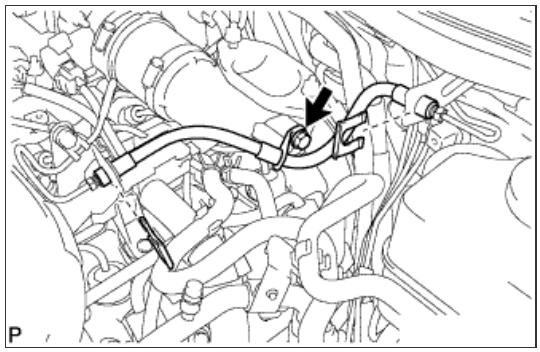
d. Remove the gasket from the intake pipe.

14. DRAIN CLUTCH FLUID (for Manual Transmission)



15. REMOVE CLUTCH HOSE (for Manual Transmission)

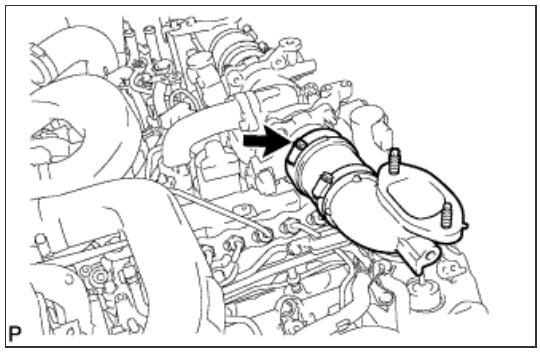
a. Disconnect the 2 flexible hose tubes from the clutch hose with a 1 mm union nut wrench while holding the flexible hose with a wrench.



NOTICE:

- **Do not bend or damage the flexible hose tubes.**
- **Do not allow any foreign matter such as dirt and dust to enter the flexible hose tubes from the connecting point.**

b. Remove the 2 clips.

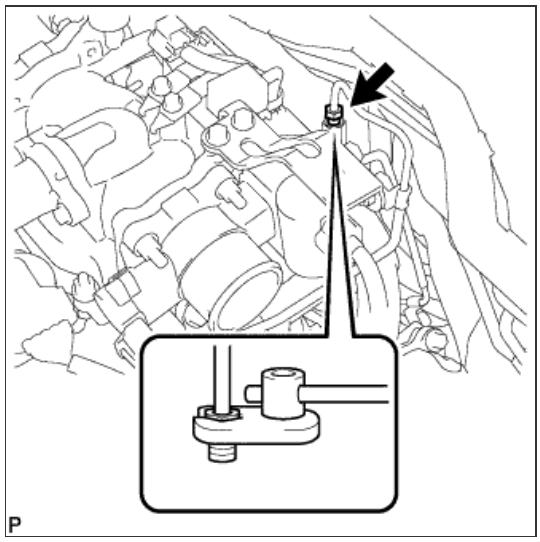


c. Remove the bolt and clutch hose.

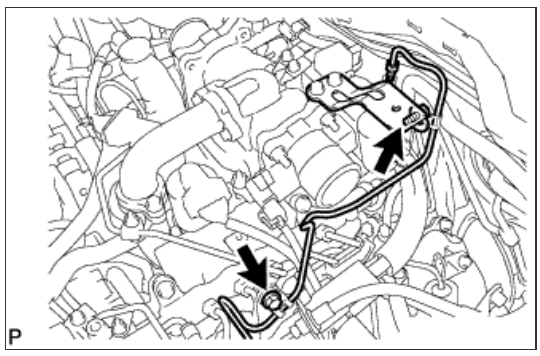
16. REMOVE AIR TUBE SUB-ASSEMBLY LH

a. Loosen the hose clamp.

b. Remove the air tube from the throttle body.



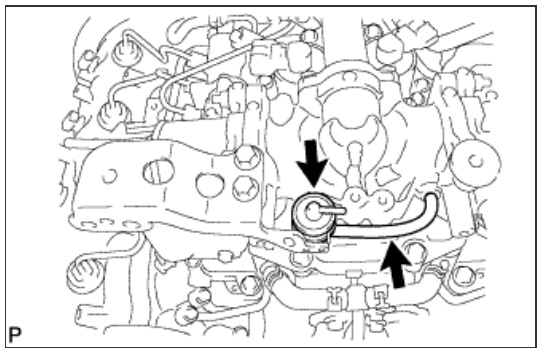
17. REMOVE TUBE CONNECTOR TO FLEXIBLE HOSE TUBE (for Manual Transmission)



a. Using a 1 mm union nut wrench, disconnect the tube connector to flexible hose tube from the clutch tube to release cylinder 2 way.

NOTICE:

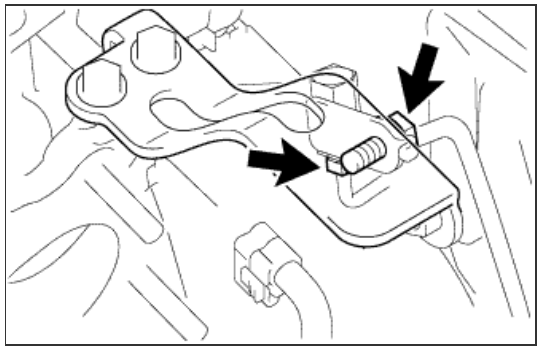
- **Do not bend or damage the flexible hose tube.**
- **Do not allow any foreign matter such as dirt and dust to enter the flexible hose tube from the connecting point.**



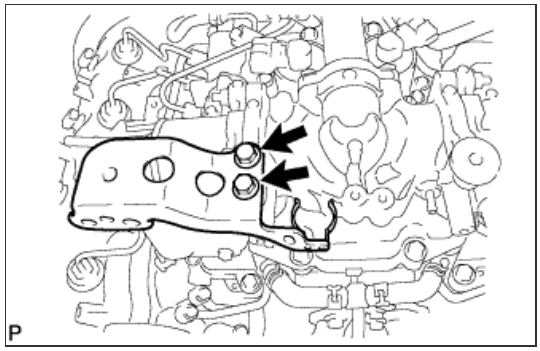
b. Remove the 2 bolts and tube connector to flexible hose tube.

18. REMOVE NO. 1 GAS FILTER

a. Disconnect the hose from the intake pipe.



b. Remove the gas filter.

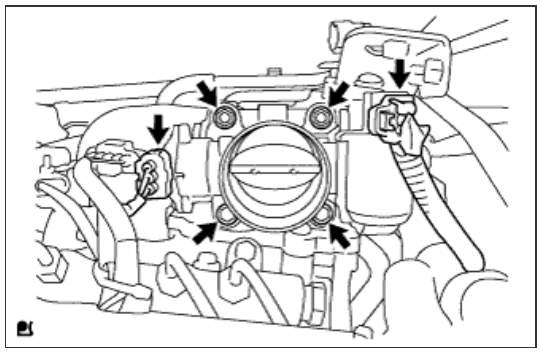


19. REMOVE NO. 3 INTERCOOLER SUPPORT BRACKET

a. for Manual ransmission:

i. Remove the bolt and disconnect the clutch tube to release cylinder 2 way from the bracket.

b. Remove the 2 bolts and bracket.



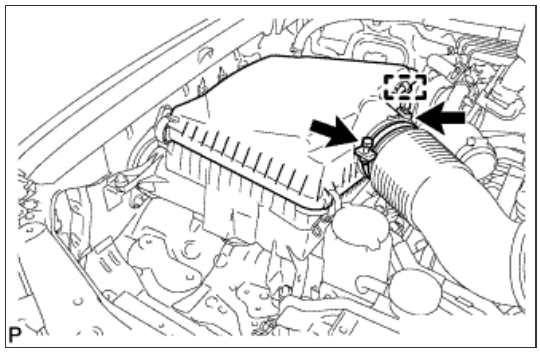
20. REMOVE DIESEL THROTTLE BODY ASSEMBLY LH

a. Disconnect the throttle position sensor connector.

b. Disconnect the throttle motor connector.

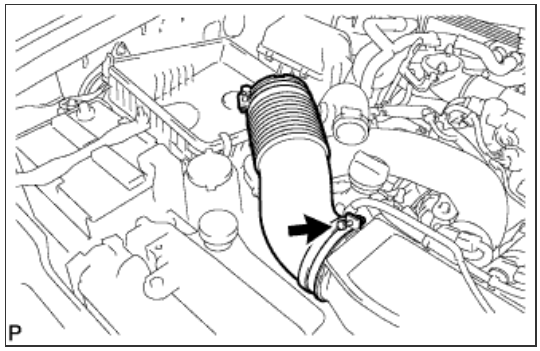
c. Remove the 2 bolts, 2 nuts and throttle body.

d. Remove the gasket from the intake pipe.



21. REMOVE AIR CLEANER CAP SUB-ASSEMBLY

a. Loosen the hose clamp.



b. Disconnect the mass air flow meter connector and using a clip remover, detach the wire harness clamp from the air cleaner cap.

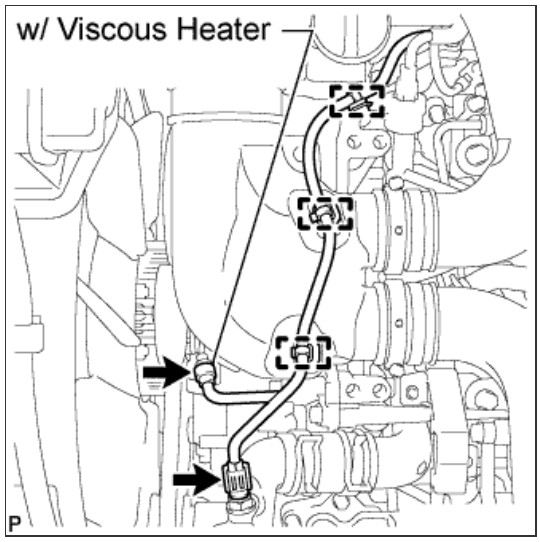
c. Detach the 4 clamps and remove the air cleaner cap.

22. REMOVE NO. 1 AIR CLEANER HOSE

a. Loosen the hose clamp and remove the No. 1 air cleaner hose.

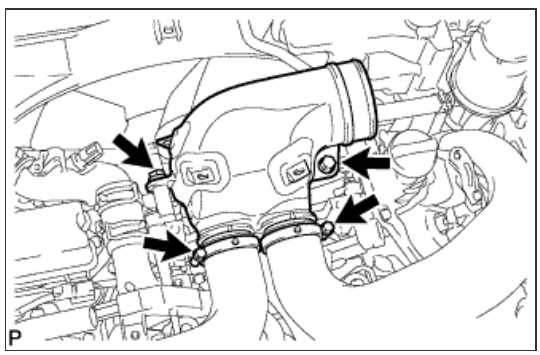
23. REMOVE INTAKE AIR CONNECTOR

a. w/o Viscous Heater:



i. Disconnect the connector from the water temperature sensor.

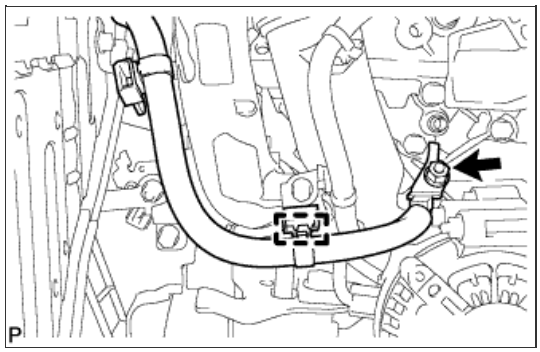
ii. Using a clip remover, detach the 3 wire harness clamps.



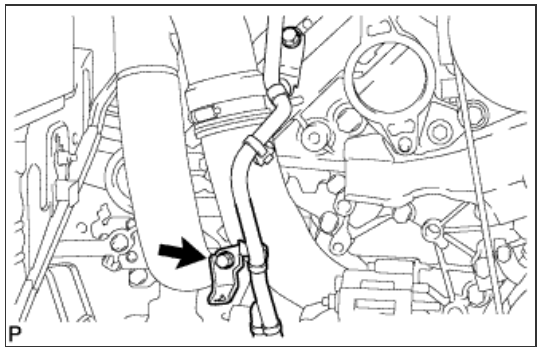
b. w/ Viscous Heater:

i. Disconnect the 2 connectors from the viscous with magnet clutch heater and water temperature sensor.

ii. Using a clip remover, detach the 3 wire harness clamps.

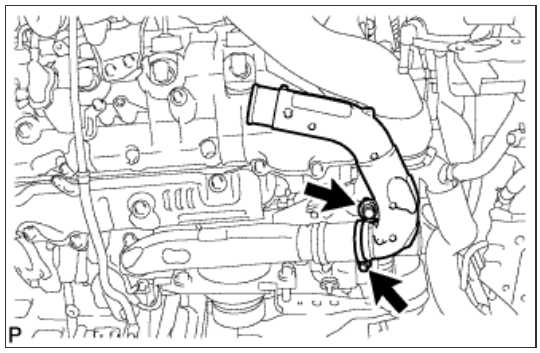


c. Loosen the 2 hose clamps and remove the 2 bolts and intake air connector.



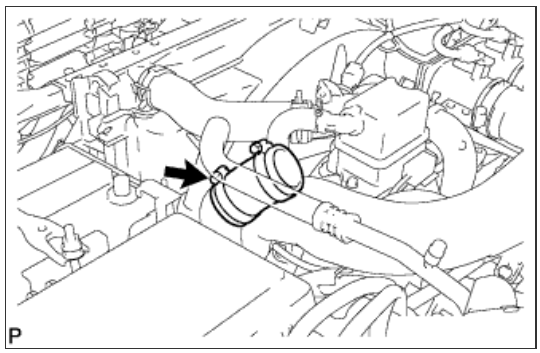
24. REMOVE NO. 3 AIR TUBE

a. Disconnect the wire harness from the clamp.

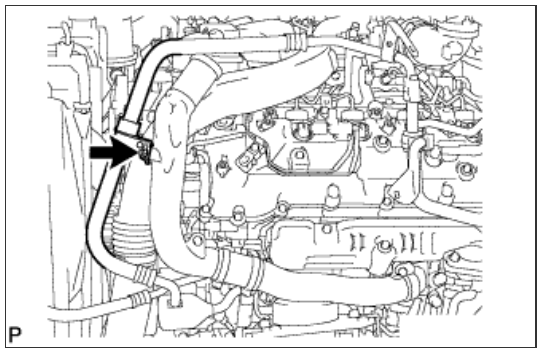


b. Remove the nut and ground wire.

c. Remove the bolt and disconnect the wire harness bracket.

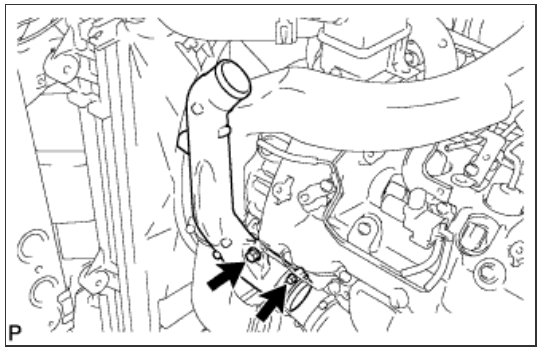


d. Loosen the hose clamp and remove the bolt and No. 3 air tube.



25. REMOVE NO. 2 AIR HOSE

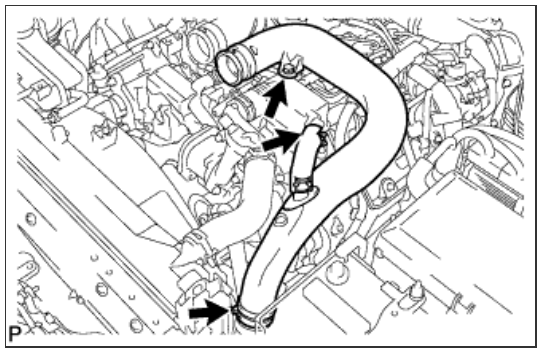
a. Loosen the hose clamp and remove the No. 2 air hose.



26. REMOVE NO. 4 AIR TUBE

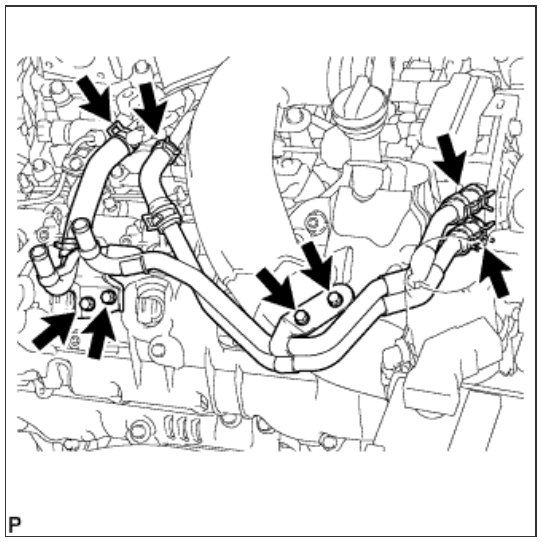
a. Remove the bolt and disconnect the suction hose.

b. Loosen the hose clamp and remove the bolt and No. 4 air tube.



27. REMOVE NO. 2 AIR CLEANER PIPE SUB-ASSEMBLY

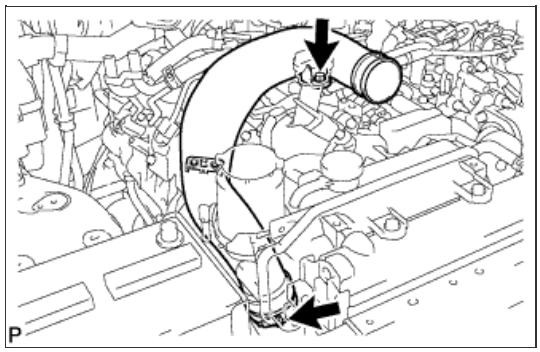
a. Disconnect the ventilation hose from the oil separator.



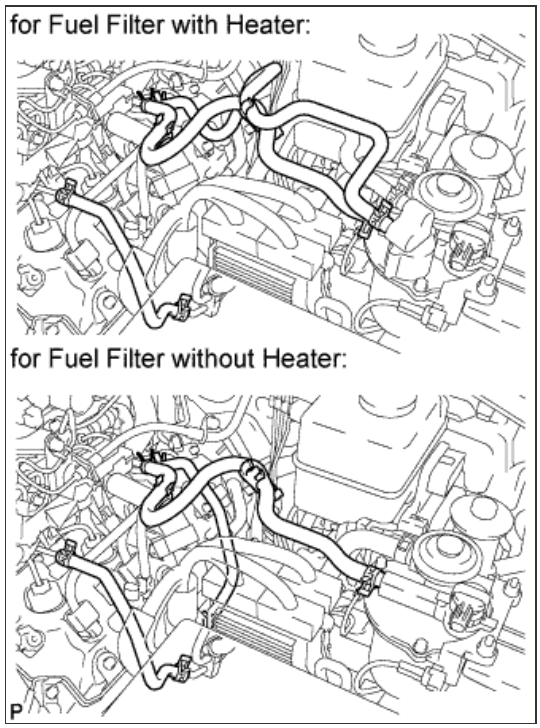
b. Loosen the hose clamp.

c. Remove the bolt and No. 2 air cleaner pipe.

28. REMOVE HEATER WATER PIPE SUB-ASSEMBLY (w/ Viscous Heater)



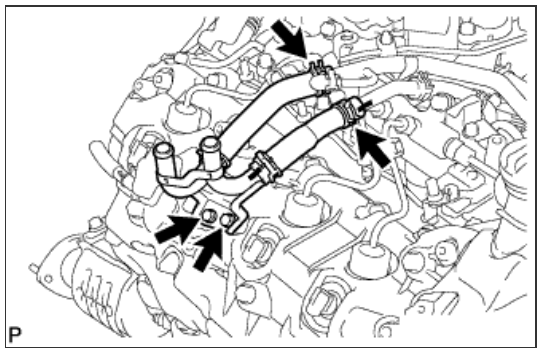
a. Remove the 4 bolts and disconnect the 4 water hose ends, and then remove the heater water pipe.



29. REMOVE NO. 1 AIR CLEANER PIPE SUB-ASSEMBLY

a. Loosen the hose clamp.

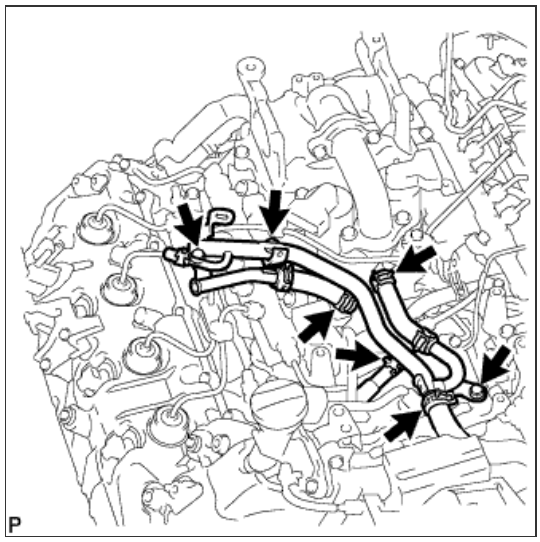
b. Remove the bolt and No. 1 air cleaner pipe.



30. DISCONNECT FUEL HOSE

31. REMOVE NO. 3 WATER BY-PASS PIPE (w/o Viscous Heater)

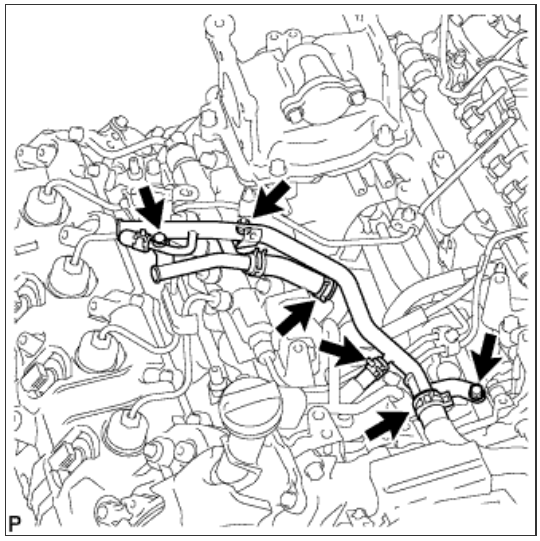
a. Remove the 2 bolts and disconnect the 2 water hose ends, and then remove the No. 3 water by-pass pipe.



32. REMOVE NO. 4 WATER BY-PASS PIPE

a. w/ System:

i. Remove the 2 bolts and nut.

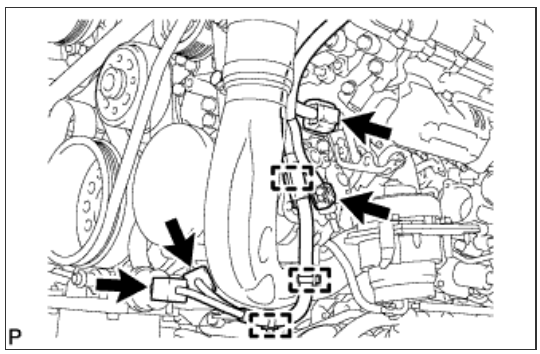


ii. Disconnect the 4 water hose ends, and then remove the No. 4 water by-pass pipe.

b. w/o System:

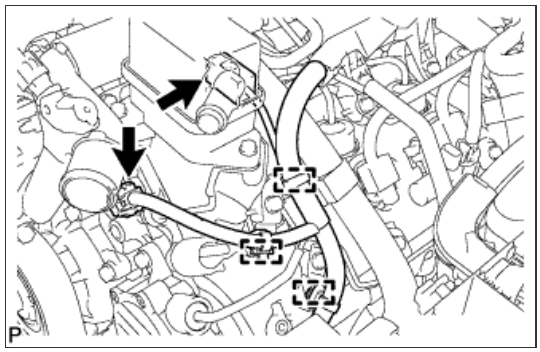
i. Remove the 2 bolts and nut.

ii. Disconnect the 3 water hose ends, and then remove the No. 4 water by-pass pipe.



33. DISCONNECT ENGINE WIRE

a. LH Side:

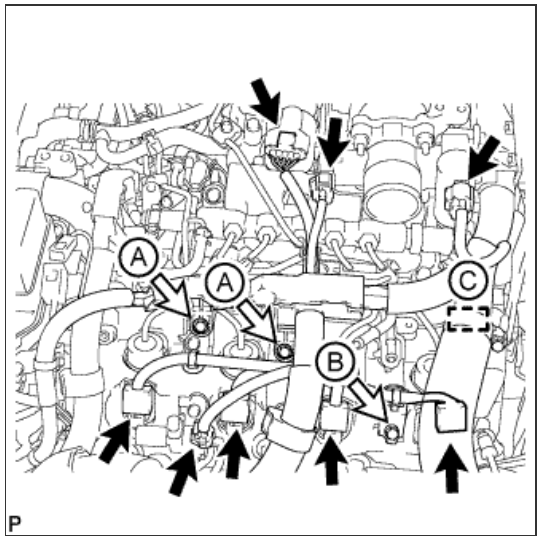


i. Disconnect the 4 connectors.

ii. Using a clip remover, detach the 3 wire harness clamps.

iii. Disconnect the 2 connectors.

iv. Using a clip remover, detach the 3 wire harness clamps.



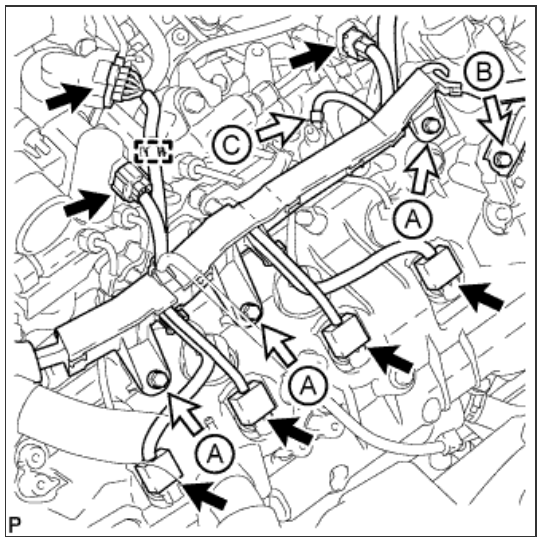
. Disconnect the 8 connectors.

i. Remove the bolt and engine wire harness bracket labeled B.

ii. Remove the 2 bolts and disconnect the engine wire protector labeled A.

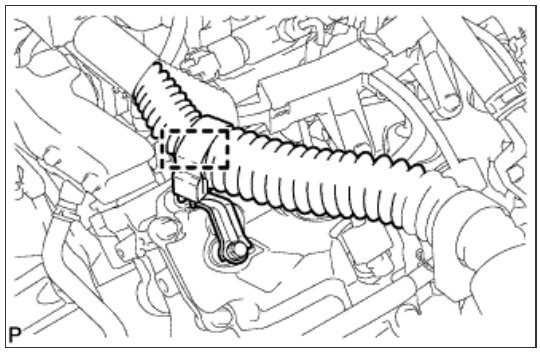
iii. for RHD:
Disconnect the wire harness from the wire harness clamp holder labeled C.

b. RH Side:



i. Disconnect the 7 connectors.

ii. Using a clip remover, detach the wire harness clamp.



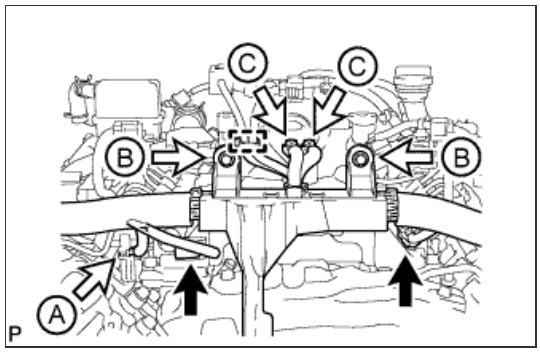
iii. Remove the 3 bolts and disconnect the wire harness protector labeled A.

i . Remove the bolt and wire harness bracket labeled B.

. Remove the nut and glow plug wire harness labeled C.

i. for RHD:
Disconnect the wire harness from the wire harness clamp holder.

c. Rear Side:



i. Using a clip remover, detach the wire harness clamp.

ii. Remove the 2 bolts and 2 ground wires labeled C.

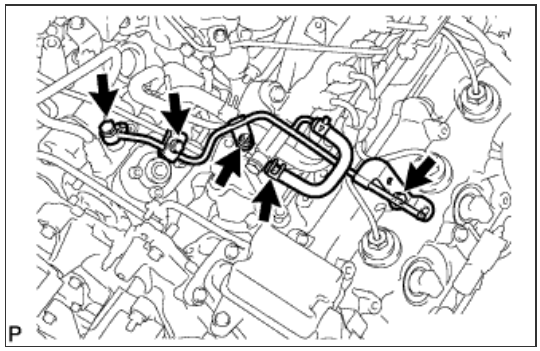
iii. Remove the 2 bolts and disconnect the engine wire harness protector labeled B.

i . Disconnect the 2 common rail connectors.

. Remove the nut and disconnect the glow plug wire harness labeled A.

34. REMOVE NO. 2 FUEL PIPE SUB-ASSEMBLY

NOTICE:



- **After removing a fuel pipe, to prevent dirt or foreign objects from entering the fuel pipe ends, cover the fuel pipe ends with plastic bags.**
- **After removing a fuel pipe, to prevent dirt or foreign objects from entering the fuel supply pump hole, cover the hole with protective tape.**

a. Disconnect the fuel hose from the No. 5 nozzle leakage pipe.

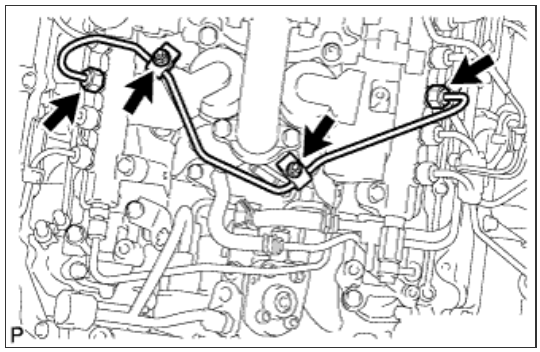
b. Remove the bolt and No. 2 injection pipe clamp.

c. Remove the union bolt and gasket.

d. Remove the bolt, nut and No. 2 fuel pipe.

35. REMOVE NO. 6 INJECTION PIPE SUB-ASSEMBLY

NOTICE:



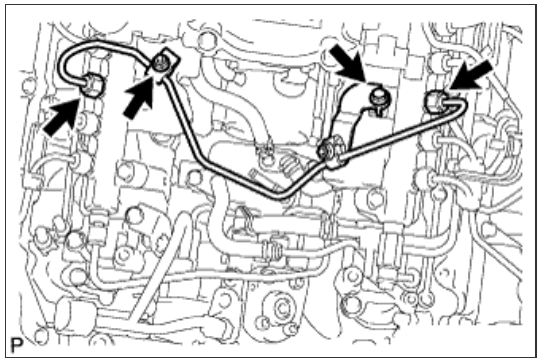
After removing an injection pipe, to prevent dirt or foreign objects from entering the common rail holes, cover the holes with protective tape.

a. w/ System:

i. Using a union nut wrench, loosen the No. 6 injection pipe ends.

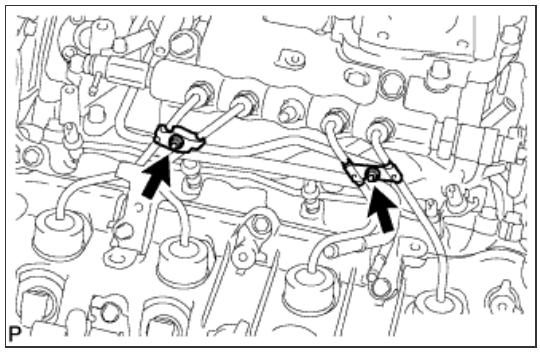
ii. Remove the 2 nuts and 2 No. 2 injection pipe clamps.

iii. Remove the No. 6 injection pipe.



b. w/o System:

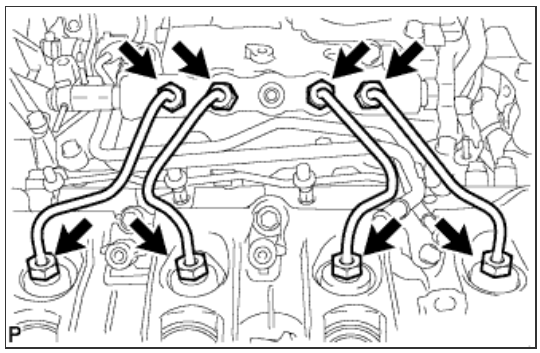
i. Using a union nut wrench, loosen the No. 6 injection pipe ends.



ii. Remove the nut and No. 2 injection pipe clamp.

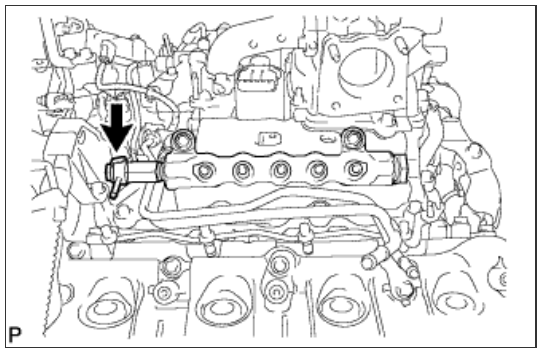
iii. Remove the bolt and No. 6 injection pipe.

36. REMOVE INJECTION PIPE LH



a. w/ ntercooler:
Remove the 2 nuts and 4 injection pipe clamps.

b. Using a union nut wrench, remove the 4 injection pipes.

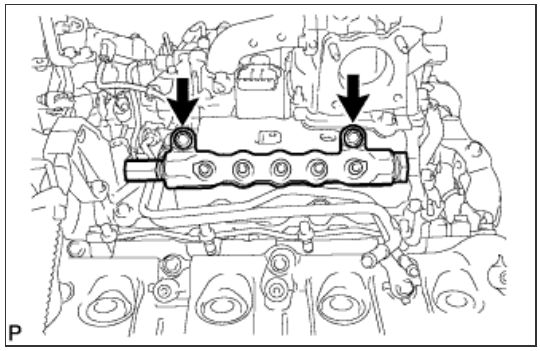


NOTICE:

After removing an injection pipe, to prevent dirt or foreign objects from entering the common rail holes or injector holes, cover the holes with protective tape.

37. REMOVE NO. 5 NOZZLE LEAKAGE PIPE

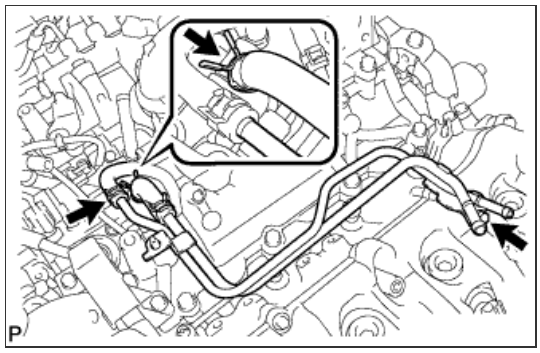
a. Remove the union bolt, gasket and No. 5 nozzle leakage pipe.



38. REMOVE COMMON RAIL ASSEMBLY LH

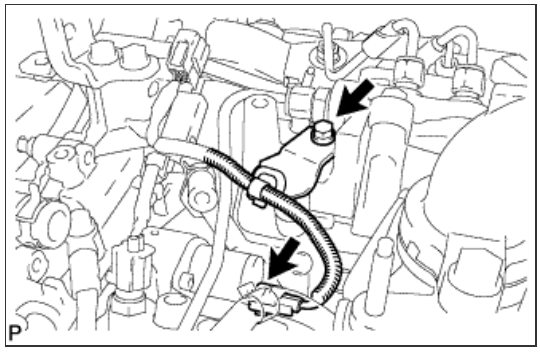
a. Remove the 2 bolts and common rail.

NOTICE:



Do not remove the fuel pressure limiter from the common rail. it is removed, replace the common rail.

39. REMOVE FUEL FILTER TO INJECTION PUMP FUEL PIPE SUB-ASSEMBLY

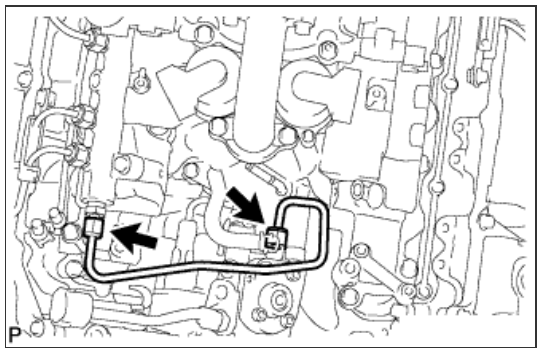


a. Disconnect the 2 hoses from the fuel pipe.

b. Remove the bolt and fuel filter to injection pump fuel pipe.

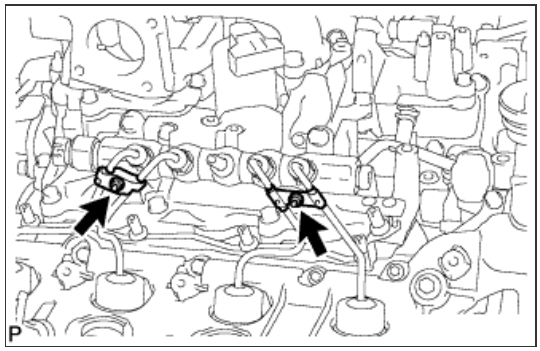
40. DISCONNECT FUEL PUMP MOTOR WIRE

a. Remove the bolt and disconnect the connector from the fuel supply pump.



41. REMOVE NO. 5 INJECTION PIPE SUB-ASSEMBLY

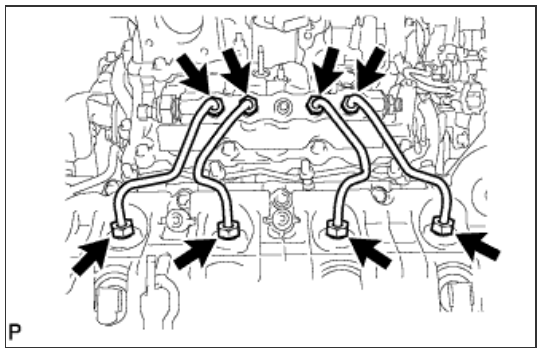
a. Using a union nut wrench, remove the No. 5 injection pipe.



NOTICE:

After removing an injection pipe, to prevent dirt or foreign objects from entering the common rail hole or injection pump hole, cover the holes with protective tape.

42. REMOVE INJECTION PIPE RH

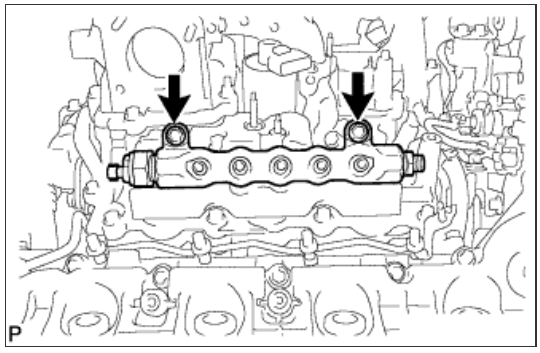


a. w/ ntercooler:
Remove the 2 nuts and 4 injection pipe clamps.

b. Using a union nut wrench, remove the 4 injection pipes.

NOTICE:

After removing an injection pipe, to prevent dirt or foreign objects from entering the common rail holes or injector holes, cover the holes with protective tape.



43. REMOVE COMMON RAIL ASSEMBLY RH

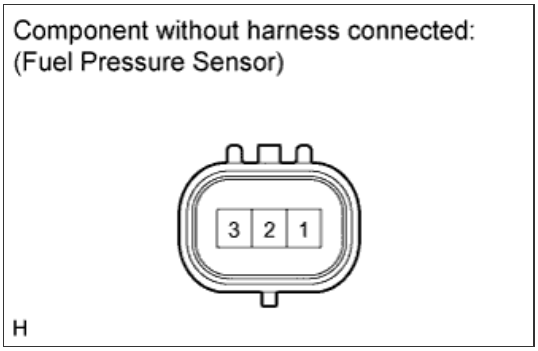
a. Remove the 2 bolts and common rail.

NOTICE:

Do not remove the fuel pressure sensor from the common rail. it is removed, replace the common rail.

for Preparation Click here

1. INSPECT COMMON RAIL ASSEMBLY RH



a. Inspect the fuel pressure sensor.

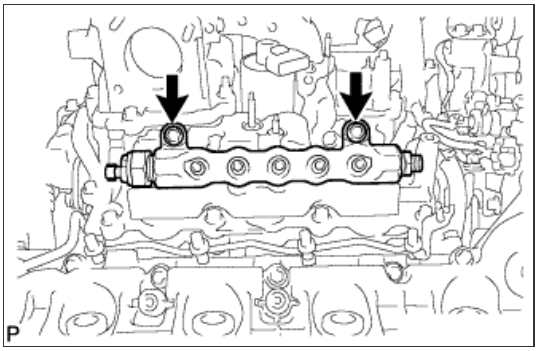
i. esure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	25°C (77°F)	16.4 kΩ or less
2 - 3	25°C (77°F)	3 kΩ or less

If the result is not as specified, replace the common rail assembly RH.

for Preparation Click here



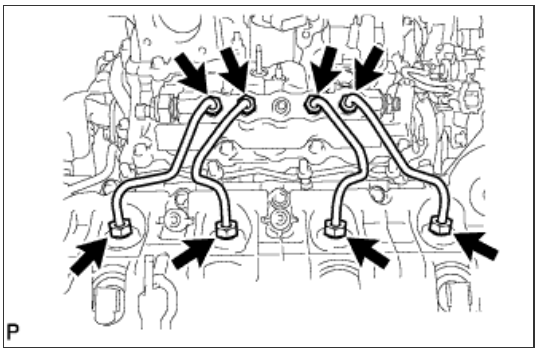
NOTICE:

When replacing an injector (including interchanging injectors between cylinders), common rail, replace the corresponding injection pipes with a new one.

1. INSTALL COMMON RAIL ASSEMBLY RH

a. Install the common rail with the 2 bolts.

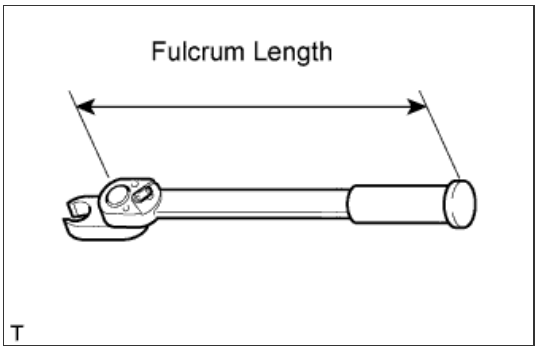
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



2. INSTALL INJECTION PIPE RH

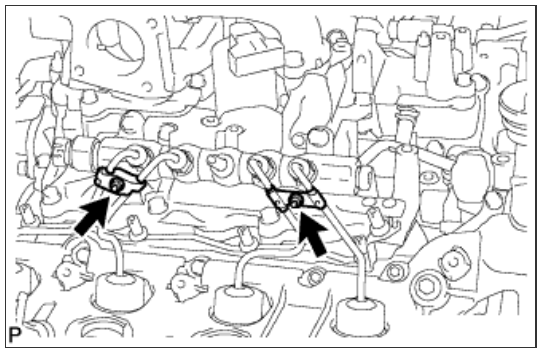
a. Using a union nut wrench, install the 4 new injection pipes.

Torque:
without union nut wrench:
34 N*m{ 347 kgf*cm , 25 ft.*lbf }
with union nut wrench:
31 N*m{ 316 kgf*cm , 23 ft.*lbf }



NOTICE:

Make sure there is no damage or foreign matter on the seal surfaces.

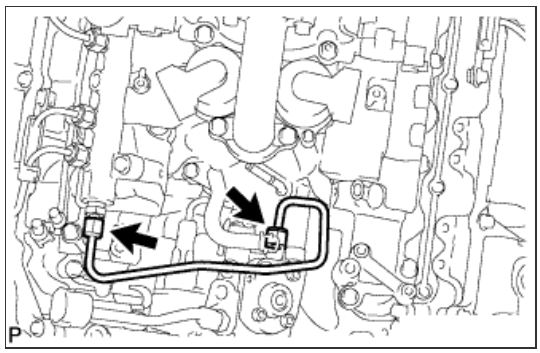


HINT:

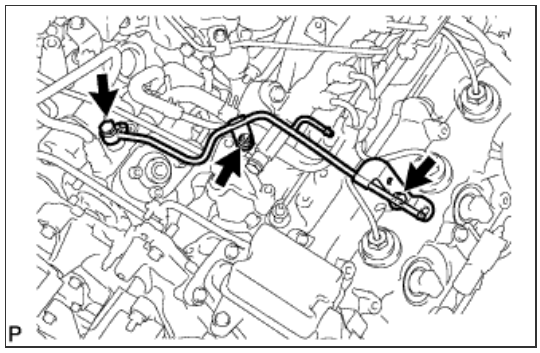
- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.).**
- **Make sure the union nut wrench and the torque wrench are connected in a straight line.**

b. w/ Intercooler:
Install the 4 injection pipe clamps with the 2 nuts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }



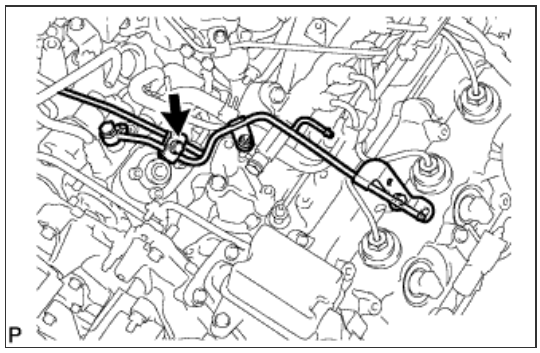
3. INSTALL NO. 5 INJECTION PIPE SUB-ASSEMBLY



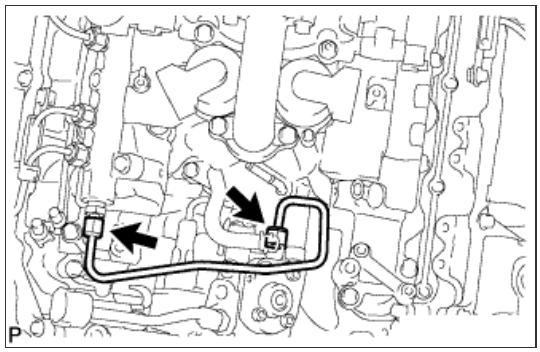
a. Temporarily install a new No. 5 injection pipe by hand.

NOTICE:

Make sure there is no damage or foreign matter on the seal surfaces.

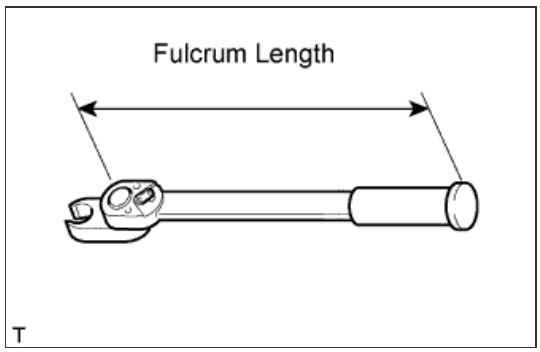


b. Temporarily install the used gasket and No. 2 fuel pipe with the nut, bolt and union bolt.



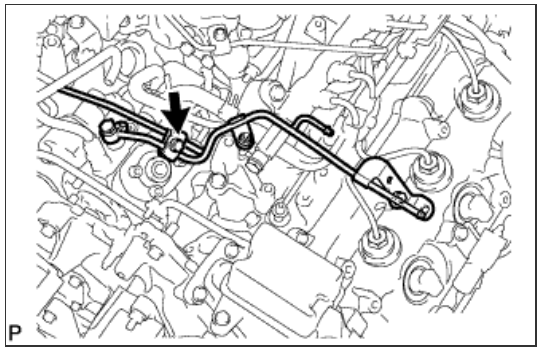
c. Temporarily install the No. 2 injection pipe clamp with the bolt.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }



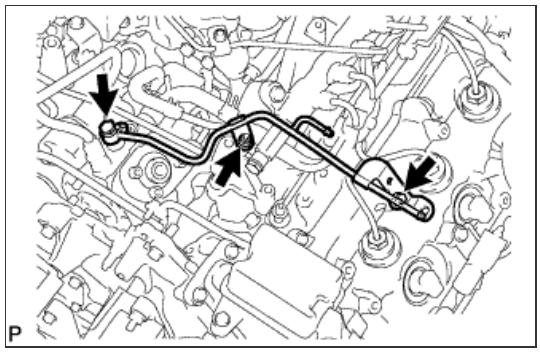
d. Using a union nut wrench, tighten the No. 5 injection pipe ends.

Torque:
without union nut wrench:
34 N*m{ 347 kgf*cm , 25 ft.*lbf }
with union nut wrench:
31 N*m{ 316 kgf*cm , 23 ft.*lbf }



HINT:

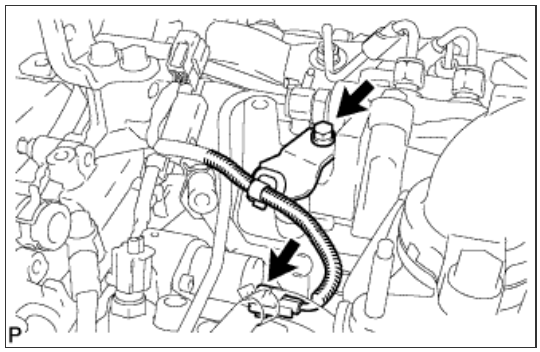
- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.).**
- **Make sure the union nut wrench and the torque wrench are connected in a straight line.**



e. Remove the bolt and No. 2 injection pipe clamp.

f. Remove the union bolt and gasket.

g. Remove the bolt, nut and No. 2 fuel pipe.

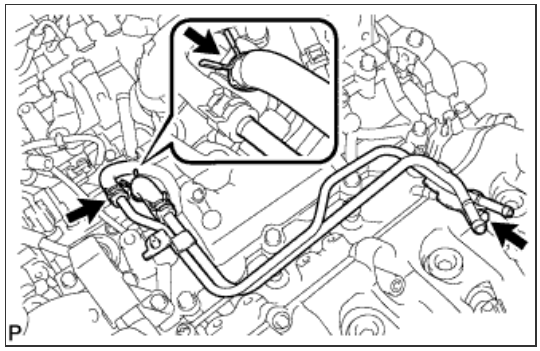


4. CONNECT FUEL PUMP MOTOR WIRE

a. Install the fuel pump motor wire bracket to the No. 3 intake manifold with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

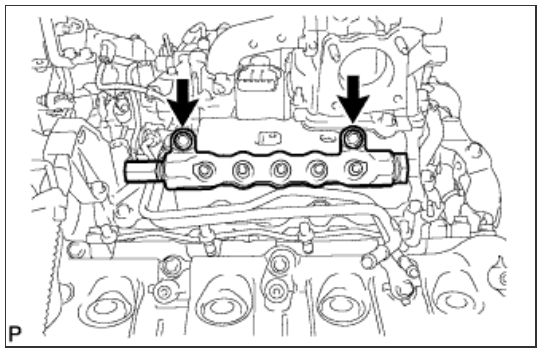
b. Connect the connector to the fuel supply pump.



5. INSTALL FUEL FILTER TO INJECTION PUMP FUEL PIPE SUB-ASSEMBLY

a. Install the fuel filter to injection pump fuel pipe with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

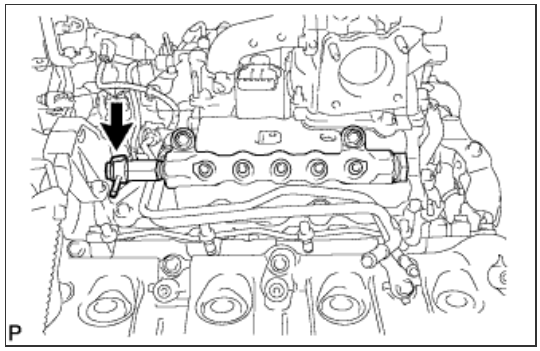


b. Connect the 2 hoses to the fuel pipe.

6. INSTALL COMMON RAIL ASSEMBLY LH

a. Install the common rail with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



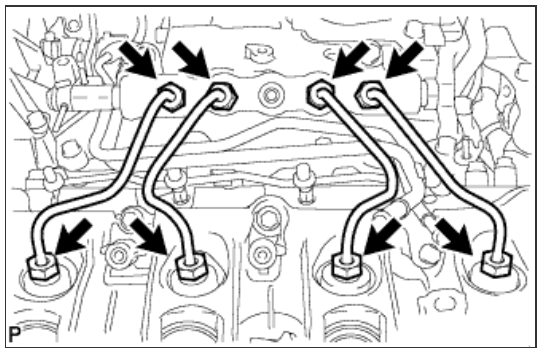
7. INSTALL NO. 5 NOZZLE LEAKAGE PIPE

a. Install a new gasket and the leakage pipe with the union bolt.

Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

NOTICE:

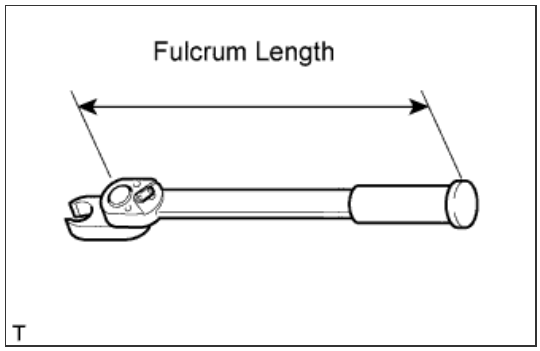
Make sure there is no foreign matter or damage on the seal surface.



8. INSTALL INJECTION PIPE LH

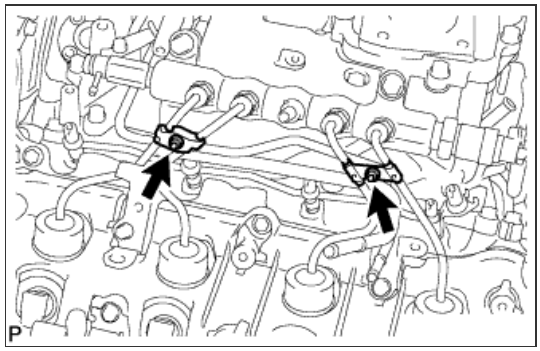
a. Using a union nut wrench, install the 4 new injection pipes.

Torque:
without union nut wrench:
34 N*m{ 347 kgf*cm , 25 ft.*lbf }
with union nut wrench:
31 N*m{ 316 kgf*cm , 23 ft.*lbf }



NOTICE:

Make sure there is no damage or foreign matter on the seal surfaces.



HINT:

- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.).**
- **Make sure the union nut wrench and the torque wrench are connected in a straight line.**

b. w/ Intercooler:
Install the 4 injection pipe clamps with the 2 nuts.

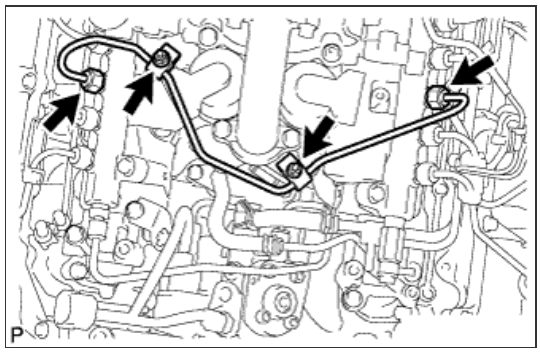
Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

. INSTALL NO. 6 INJECTION PIPE SUB-ASSEMBLY

a. w/ EGR System:

i. Temporarily install a new No. 6 injection pipe to the common rail LH and RH.

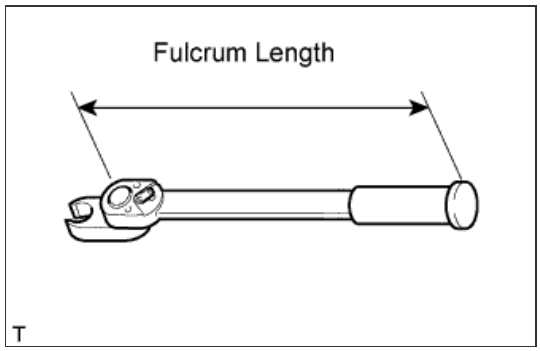
NOTICE:



Make sure there is no damage or foreign matter on the seal surfaces.

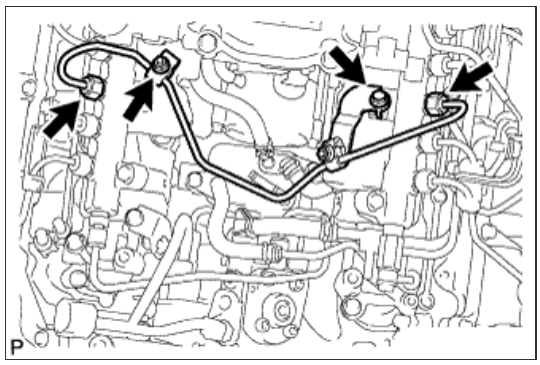
ii. Install the 2 No. 2 injection pipe clamps with the 2 nuts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }



iii. Using a union nut wrench, tighten the No. 6 injection pipe ends.

Torque:
without union nut wrench:
34 N*m{ 347 kgf*cm , 25 ft.*lbf }
with union nut wrench:
31 N*m{ 316 kgf*cm , 23 ft.*lbf }



HINT:

- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.).**
- **Make sure the union nut wrench and the torque wrench are connected in a straight line.**

b. w/o EGR System:

i. Temporarily install a new No. 6 injection pipe to the common rail LH and RH.

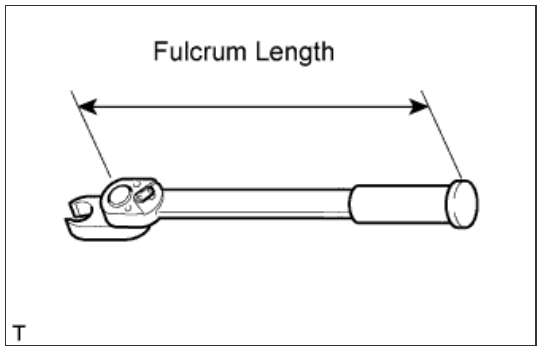
NOTICE:

Make sure there is no damage or foreign matter on the seal surfaces.

ii. Install the bracket to the No. 3 intake manifold with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

iii. Install the No. 2 injection pipe clamp with the nut.



Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

i . Using a union nut wrench, tighten the No. 6 injection pipe ends.

Torque:
without union nut wrench:
34 N*m{ 347 kgf*cm , 25 ft.*lbf }
with union nut wrench:
31 N*m{ 316 kgf*cm , 23 ft.*lbf }

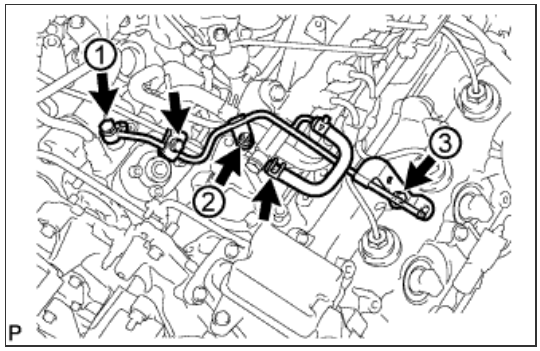
HINT:

- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.).**
- **Make sure the union nut wrench and the torque wrench are connected in a straight line.**

10. INSTALL NO. 2 FUEL PIPE SUB-ASSEMBLY

NOTICE:

Check for damage and foreign matter on the fuel pipe installation surface of the supply pump.



If there is foreign matter, remove it from the installation surface. If the installation surface is damaged, replace the fuel supply pump.

a. Temporarily install a new gasket and the No. 2 fuel pipe with the union

bolt, nut and bolt.

b. Tighten the union bolt, nut and bolt in the order shown in the illustration.

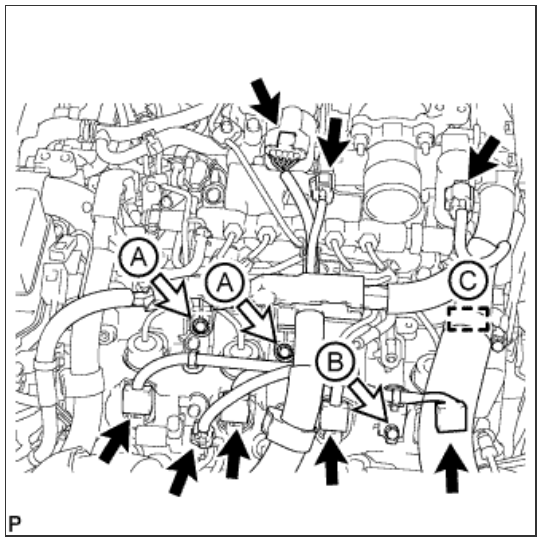
Torque:
for union bolt:
10 N*m{ 105 kgf*cm , 8 ft.*lbf }
for bolt and nut:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

c. Install the No. 2 injection pipe clamp with the bolt.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

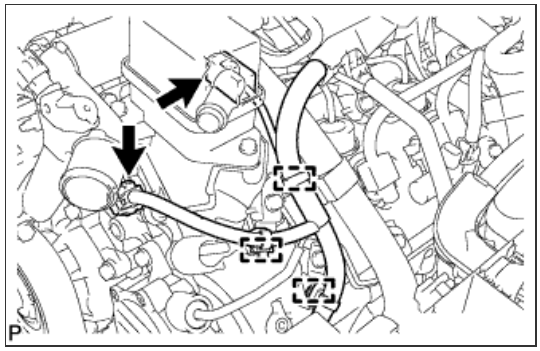
d. Connect the fuel hose to the No. 5 nozzle leakage pipe.

11. CONNECT ENGINE WIRE



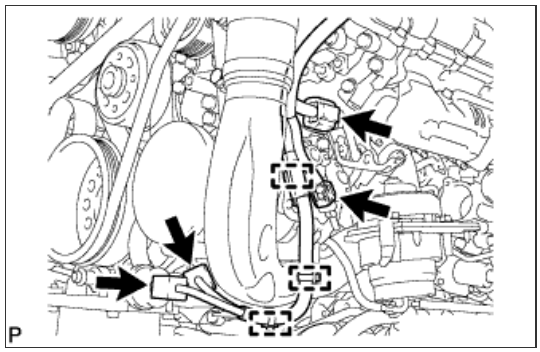
a. LH Side:

i. Install the engine wire protector with the 2 bolts labeled A.



ii. Connect the 8 connectors.

iii. Install the engine wire harness bracket with the bolt labeled



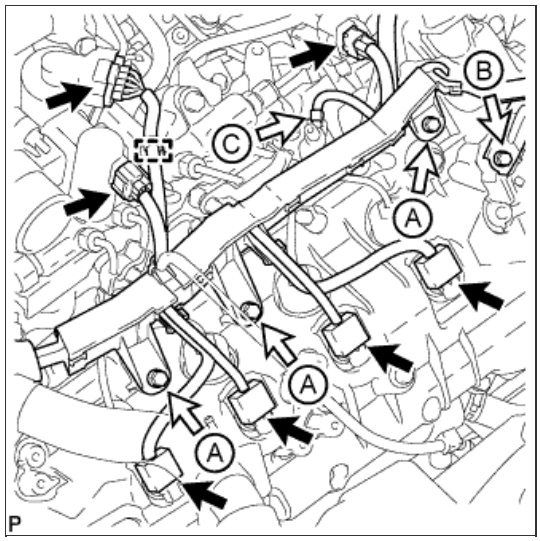
i . r RHD:
Connect the wire harness with the wire harness clamp holder labeled C.

. Attach the 3 wire harness clamps and connect the 2 connectors.

i. Attach the 3 wire harness clamps and connect the 4 connectors.

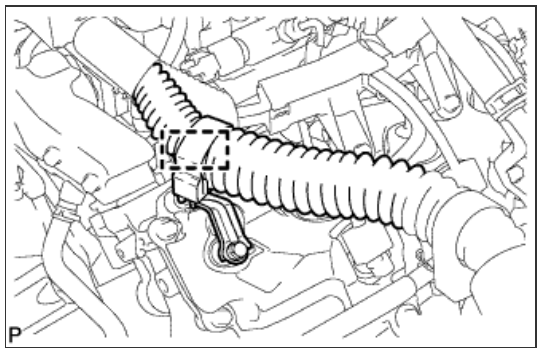
b. RH Side:

i. Install the engine wire harness protector with the 3 bolts labeled A.



ii. Connect the 7 connectors.

iii. Attach the wire harness clamp.



i . Install the wire harness bracket with the bolt labeled

. nstall the glow plug wire harness labeled C with the nut.

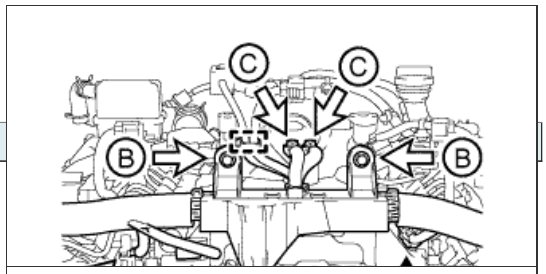
Torque:
4.0 N*m{ 41 kgf*cm , 35 in.*lbf }

i. for RHD:
Connect the wire harness with the wire harness clamp holder.

c. Rear Side:

i. Install the glow plug wire harness with the nut labeled A.

Torque:
4.0 N*m{ 41 kgf*cm , 35 in.*lbf }



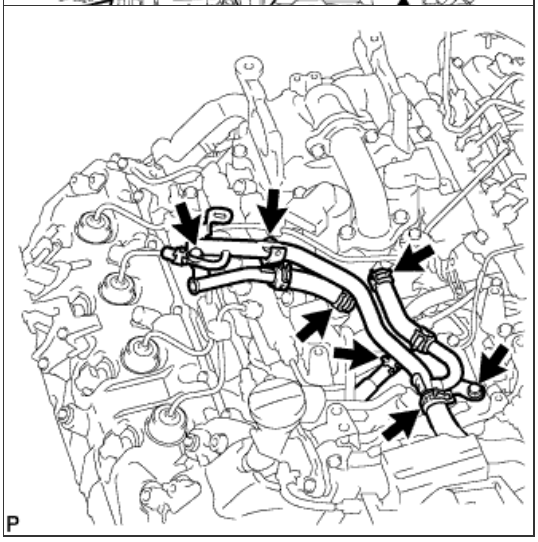
ii. Connect the 2 common rail connectors.

iii. Install the engine wire harness protector with the 2 bolts labeled

i . nstall the 2 ground wires with the 2 bolts labeled C.

Torque:
8.4 N*m{ 87 kgf*cm , 74 in.*lbf }

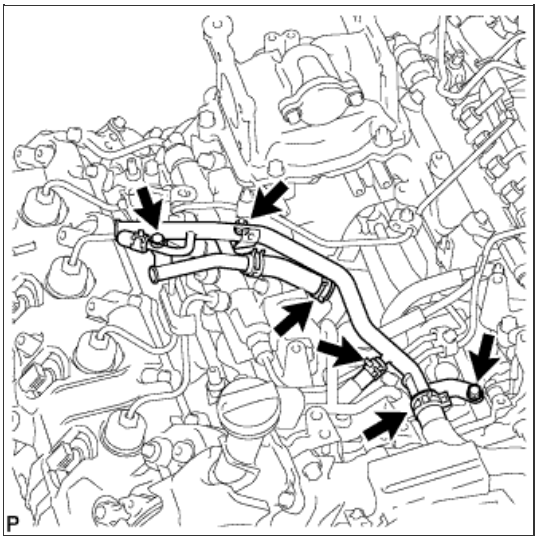
. Attach the wire harness clamp.



12. INSTALL NO. 4 WATER BY-PASS PIPE

a. w/ EGR System:
Connect the 4 water hose ends, and temporarily install the No. 4 water by-pass pipe with the 2 bolts and nut.

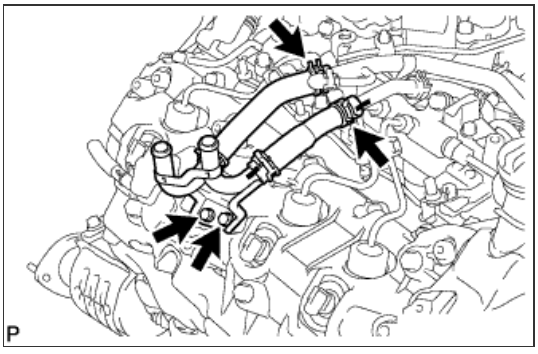
b. First tighten the 2 bolts and then tighten the nut.



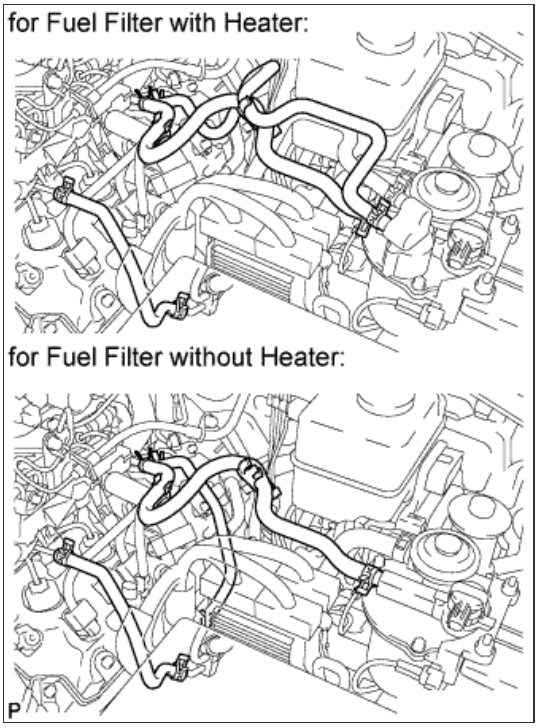
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

c. w/o EGR System:
Connect the 3 water hose ends, and temporarily install the No. 4 water by-pass pipe with the 2 bolts and nut.

d. First tighten the 2 bolts and then tighten the nut.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



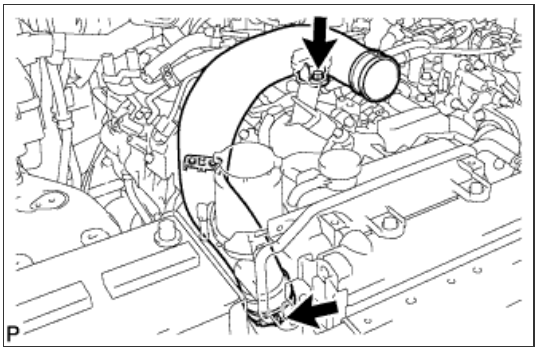
13. INSTALL NO. 3 WATER BY-PASS PIPE (w/o Viscous Heater)

a. Connect the 2 water hose ends, and install the No. 3 water by-pass pipe with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

14. CONNECT FUEL HOSE

15. INSTALL NO. 1 AIR CLEANER PIPE SUB-ASSEMBLY



a. Connect the No. air cleaner pipe to the No. intake air connector pipe.

b. Install the pipe with the bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

c. Tighten the hose clamp.

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

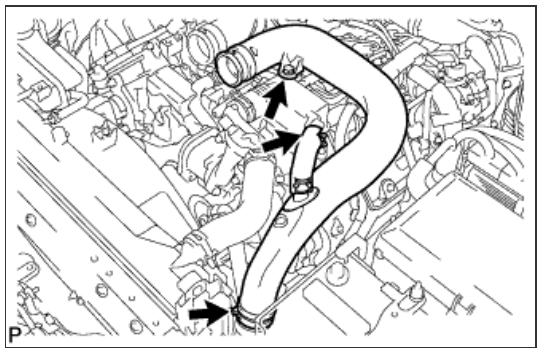
16. INSTALL HEATER WATER PIPE SUB-ASSEMBLY (w/ Viscous Heater)

a. Connect the 4 water hose ends, and install the water pipe with the 4 bolts.

Torque:
.8 N*m{ 100 kgf*cm , 87 in.*lbf }

17. INSTALL NO. 2 AIR CLEANER PIPE SUB-ASSEMBLY

a. Connect the No. 2 air cleaner pipe to the No. 2 intake air connector pipe.



b. Connect the ventilation hose to the oil separator.

c. Install the pipe with the bolt.

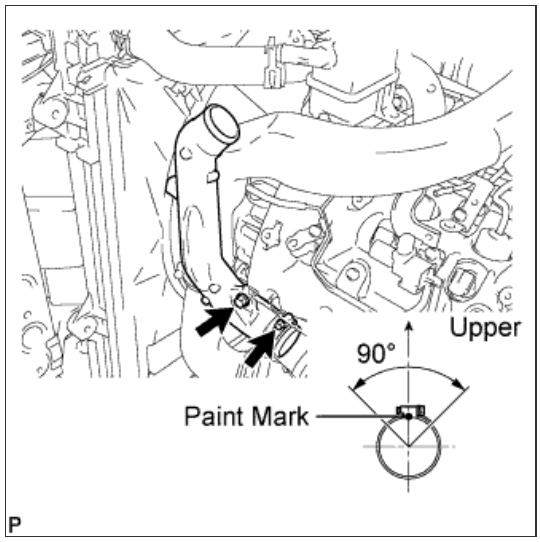
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

d. Tighten the hose clamp.

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

18. INSTALL NO. 4 AIR TUBE

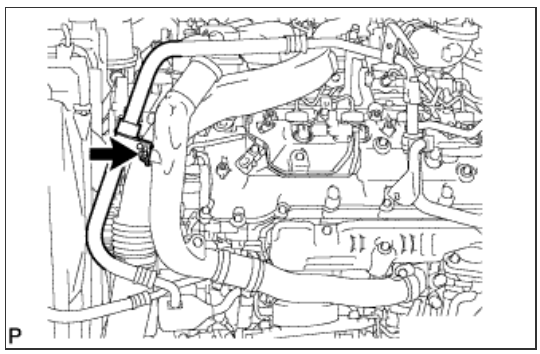
a. Install the No. 4 air tube with the bolt.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. Tighten the hose clamp.

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }



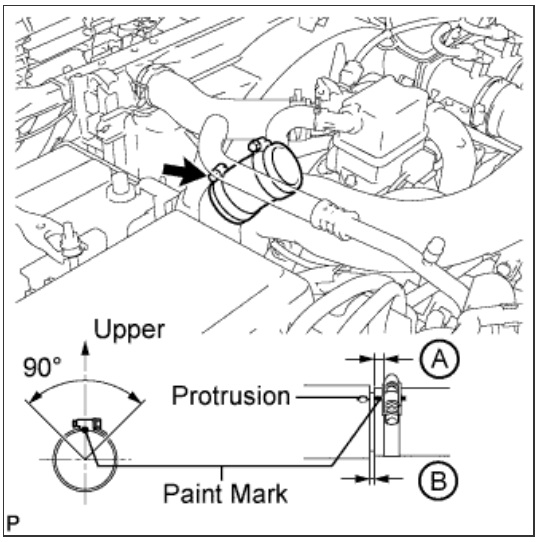
HINT:

Make sure the direction of the hose clamp is as shown in the illustration.

c. Install the suction hose with the bolt.

Torque:
.8 N*m{ 100 kgf*cm , 87 in.*lbf }

1 . INSTALL NO. 2 AIR HOSE



a. Connect the No. 2 air hose with the hose clamp.

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

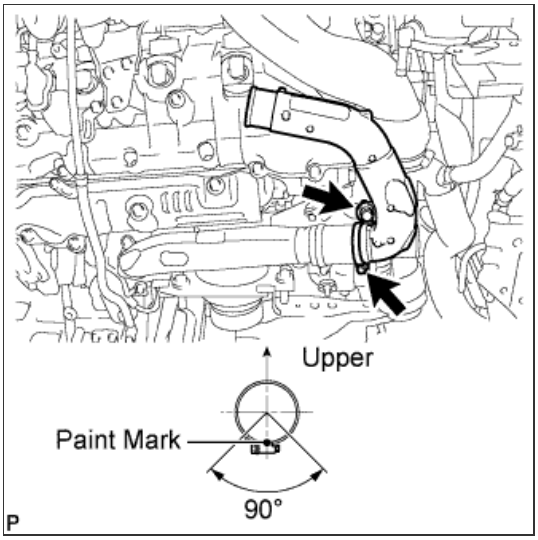
HINT:

- **Align the paint mark of the air hose with the protrusion and push in the air hose so that distance B is 0 to 3 mm (0 to 0.118 in.).**
- **Position the clamp so that distance A is 2 to 6 mm (0.0787 to 0.236 in.).**

- **Make sure the direction of the hose clamp is as shown in the illustration.**

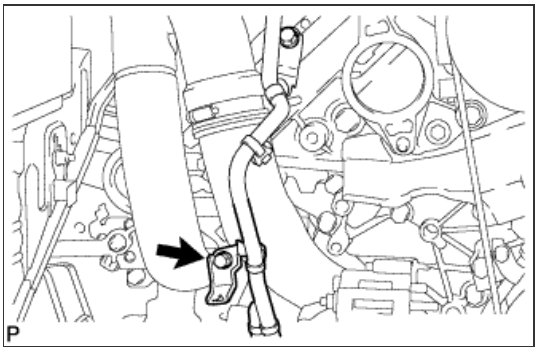
20. INSTALL NO. 3 AIR TUBE

a. Install the No. 3 air tube with the bolt.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

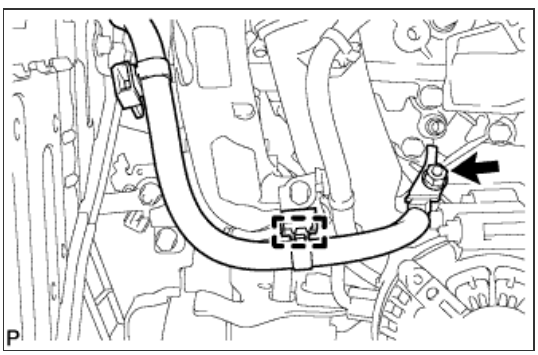
b. Tighten the hose clamp.



Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

HINT:

Make sure the direction of the hose clamp is as shown in the illustration.

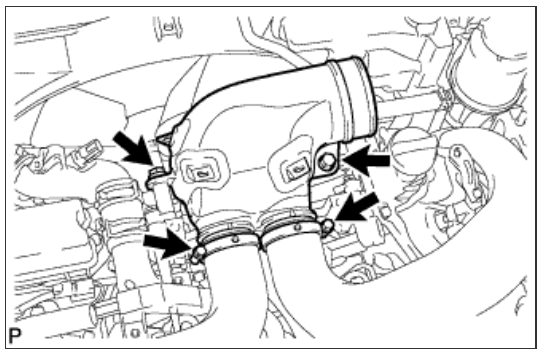


c. Install the wire harness bracket with the bolt.

d. Install the ground wire with the nut, and attach the wire harness clamp.

Torque:
8.4 N*m{ 87 kgf*cm , 74 in.*lbf }

21. INSTALL INTAKE AIR CONNECTOR

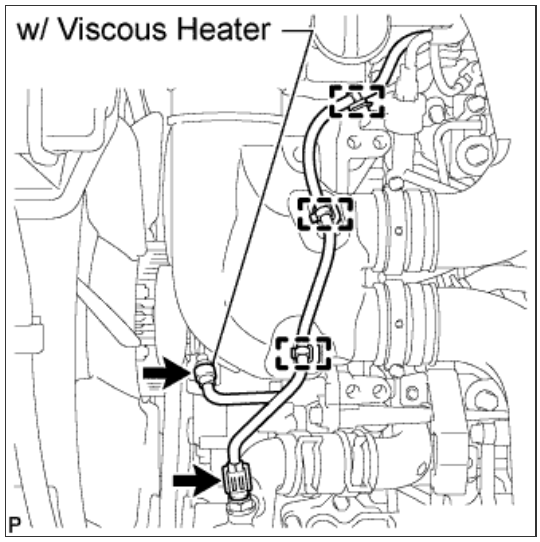


a. Connect the intake air connector to the No. and No. 2 air cleaner pipes.

b. Install the connector with the 2 bolts.

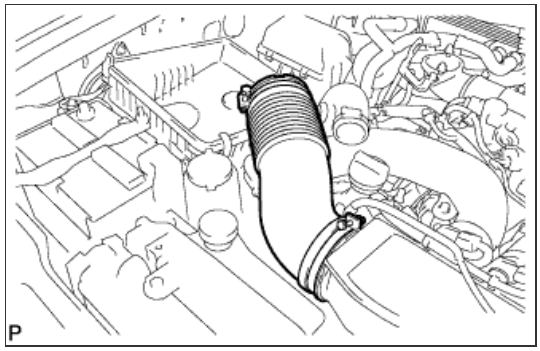
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

c. Tighten the 2 hose clamps.



Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

d. Attach the 3 wire harness clamps.

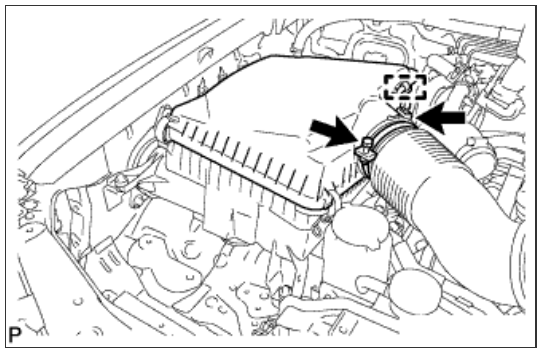


e. w/o Viscous Heater:
Connect the connector to the water temperature sensor.

f. w/ Viscous Heater:
Connect the 2 connectors to the water temperature sensor and viscous with magnet clutch heater.

22. TEMPORARILY INSTALL NO. 1 AIR CLEANER HOSE

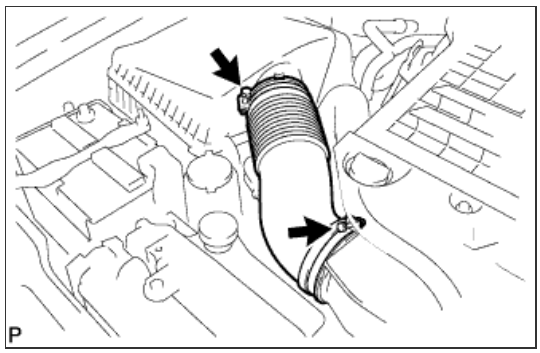
a. Temporarily install the air cleaner hose to the intake air connector.



23. INSTALL AIR CLEANER CAP SUB-ASSEMBLY

a. Connect the air cleaner cap to the air cleaner hose, and install the air cleaner cap with the 4 clamps.

b. Connect the mass air flow meter connector and attach the wire harness clamp to the air cleaner cap.



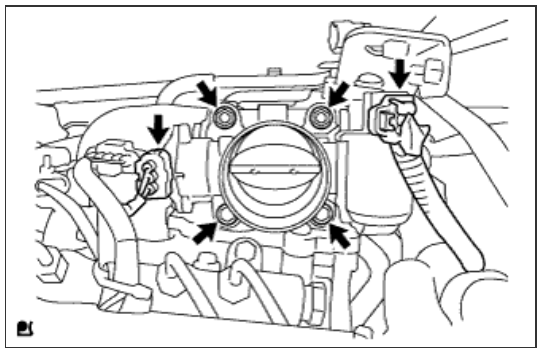
c. Attach the wire harness clamp.

d. Align the protrusion of air cleaner cap and concave portion of air cleaner hose.

e. Tighten the 2 hose clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

24. INSTALL IESEL THROTTLE BO Y ASSEMBLY LH

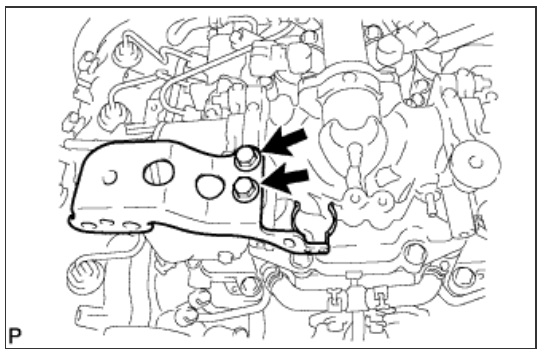


a. Install a new gasket to the intake pipe.

b. Install the throttle body with the 2 bolts and 2 nuts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

c. Connect the throttle position sensor connector.

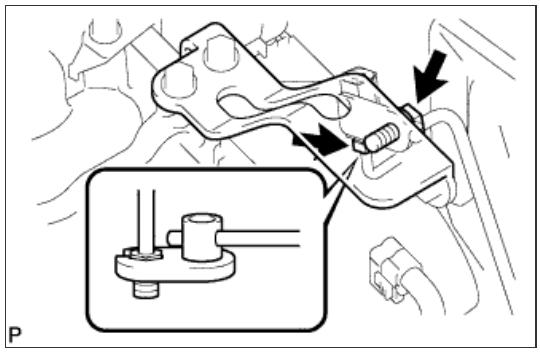


d. Connect the throttle motor connector.

25. INSTALL NO. 3 INTERCOOLER SUPPORT BRACKET

a. Install the bracket with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

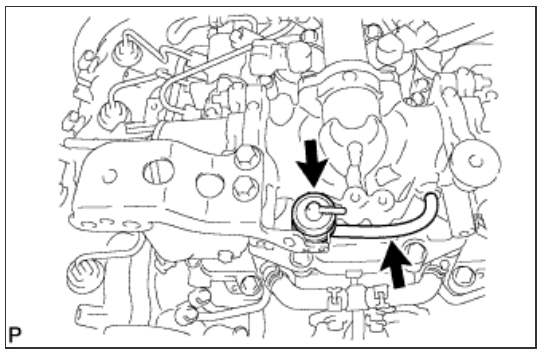


b. for Manual Transmission:

i. Connect the clutch tube to release cylinder 2 way with the bolt.

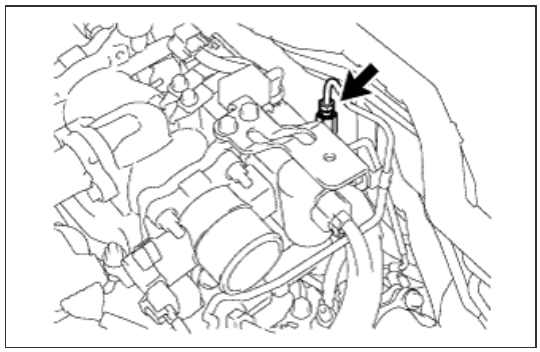
Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

ii. Check that the union nut is tightened to the specified torque.



Torque:
without union nut wrench:
15 N*m{ 154 kgf*cm , 11 ft.*lbf }
with union nut wrench:
14 N*m{ 141 kgf*cm , 10 ft.*lbf }

26. INSTALL NO. 1 GAS FILTER

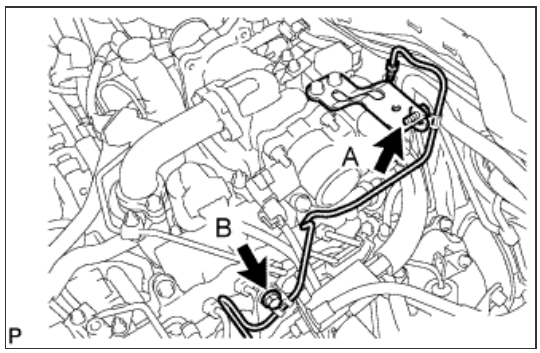


a. Install the gas filter.

b. Connect the hose to the intake pipe.

27. INSTALL TUBE CONNECTOR TO FLE IBLE HOSE TUBE (for Manual Transmission)

a. Temporarily install the flare nut of the tube connector to flexible hose tube to the clutch tube to release cylinder 2 way by hand.

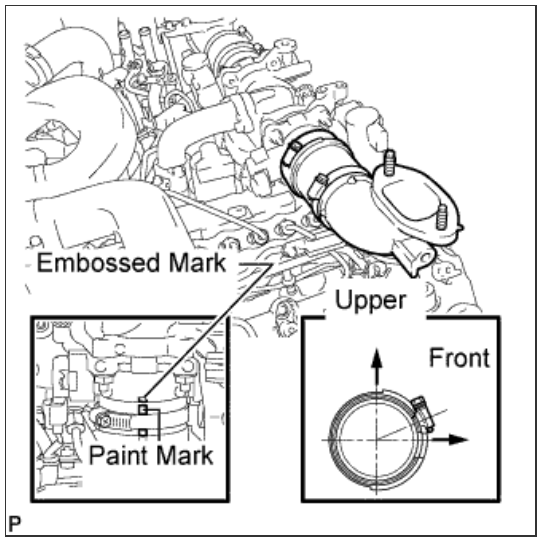


b. Temporarily install the tube connector to flexible hose tube with the 2 bolts.

c. Tighten the bolt labeled A.

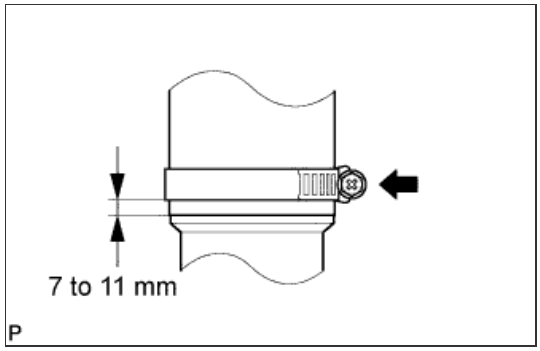
Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

NOTICE:



Tighten the bolt labeled after installing the clutch hose.

28. INSTALL AIR TUBE SUB-ASSEMBLY LH



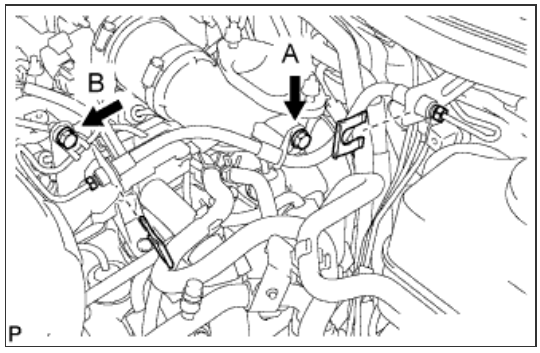
a. Install the air tube to the throttle body.

b. Align the embossed mark of the throttle body with the paint mark of the No. 4 air hose.

c. Tighten the hose clamp so that it is 7 to mm (0.276 to 0.433 in.) from the end of the hose as shown in the illustration.

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

2 . INSTALL CLUTCH HOSE (for Manual Transmission)



a. Connect the clutch hose to the air tube with the bolt labeled A.

b. Temporarily install the clutch hose to the clutch master cylinder tube to flexible hose tube and tube connector to flexible hose tube, and fix it in place with the 2 clips.

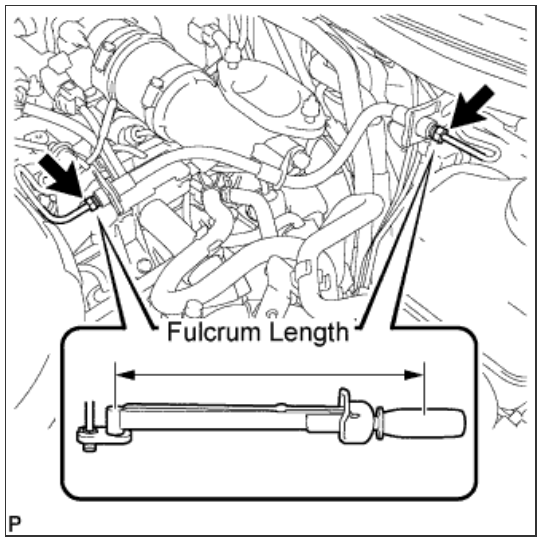
Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

c. Tighten the bolt labeled

Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

d. ighten the flexible hose tube.

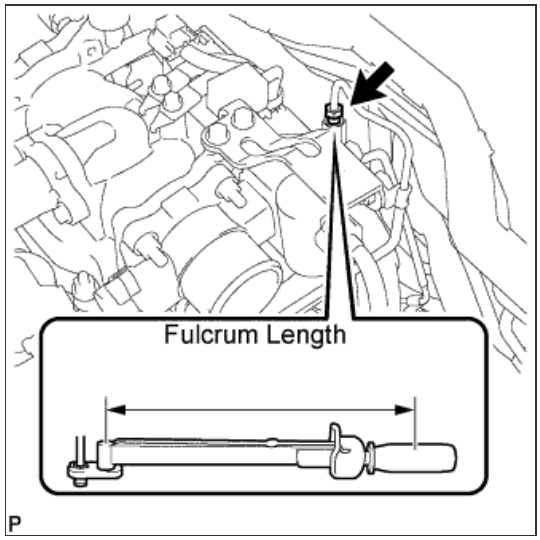
NOTICE:



- **o not bend or damage the fle ible hose tube.**
- **o not allow an foreign matter such as dirt and dust to enter the fle ible hose tube from the connecting points.**

HINT:

- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.). If using a torque wrench with a length that is not 30 cm (11.8 in.), calculate the torque specification for the torque wrench and SST based on the without SST torque specification (Click here).**
- **Make sure union nut wrench and the wrench are connected in a straight line.**



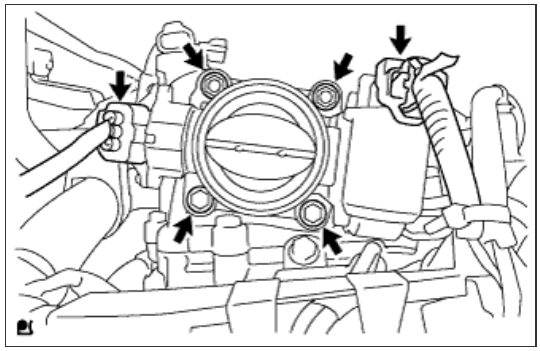
i. Using a mm union nut wrench, tighten the 2 flare nuts of the flexible hose tube.

Torque:
without union nut wrench:
15 N*m{ 154 kgf*cm , 11 ft.*lbf }
with union nut wrench:
14 N*m{ 141 kgf*cm , 10 ft.*lbf }

ii. Using a mm union nut wrench, tighten the flare nut of the flexible hose tube.

Torque:
without union nut wrench:
15 N*m{ 154 kgf*cm , 11 ft.*lbf }
with union nut wrench:
14 N*m{ 141 kgf*cm , 10 ft.*lbf }

30. INSTALL IESEL THROTTLE BO Y ASSEMBLY RH

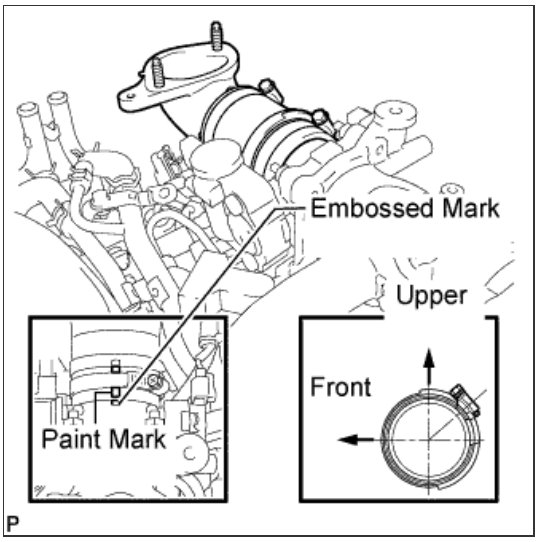


a. Install a new gasket to the intake pipe.

b. Install the throttle body with the 2 bolts and 2 nuts.

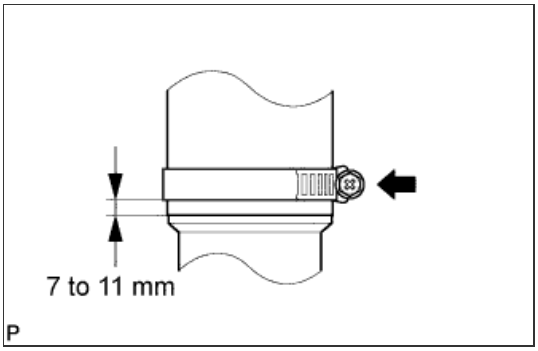
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

c. Connect the throttle position sensor connector.



d. Connect the throttle motor connector.

31. INSTALL AIR TUBE SUB-ASSEMBLY RH



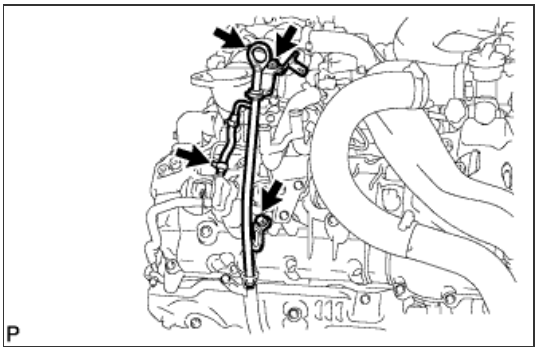
a. Install the air tube to the throttle body.

b. Align the embossed mark of the throttle body with the paint mark of the No. 4 air hose.

c. Tighten the hose clamp so that it is 7 to mm (0.276 to 0.433 in.) from the end of the hose as shown in the illustration.

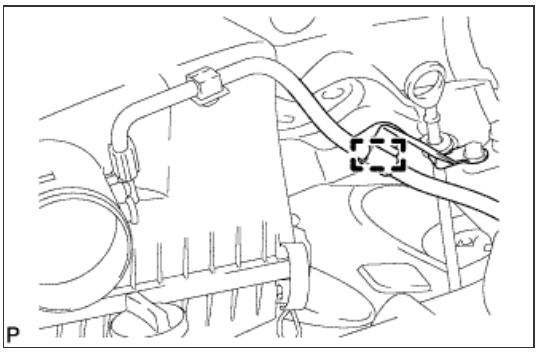
Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

32. INSTALL NO. 2 ENGINE OIL LEVEL IPSTICK GUI E



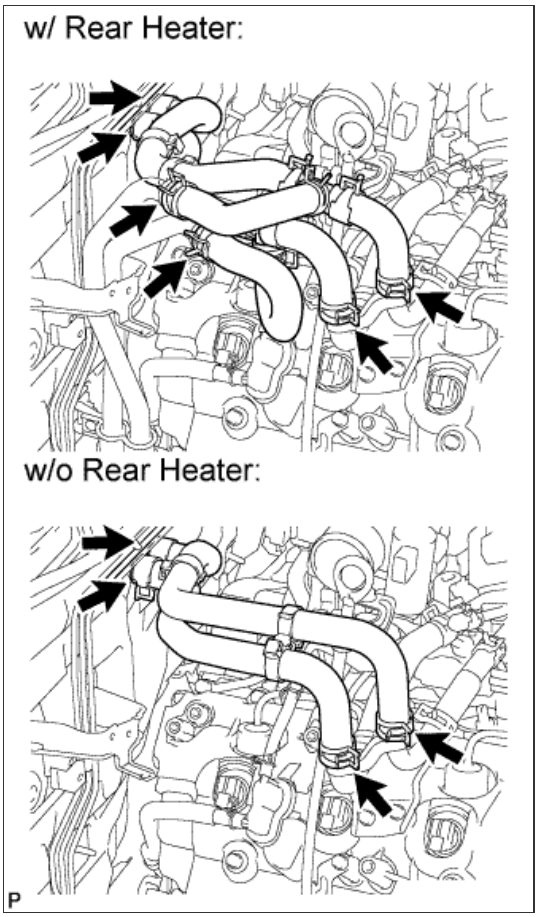
a. Apply a light coat of engine oil to a new O-ring.

b. Install the O-ring to the No. 2 engine oil level dipstick guide.



c. Install the No. 2 engine oil level dipstick guide with the 2 bolts.

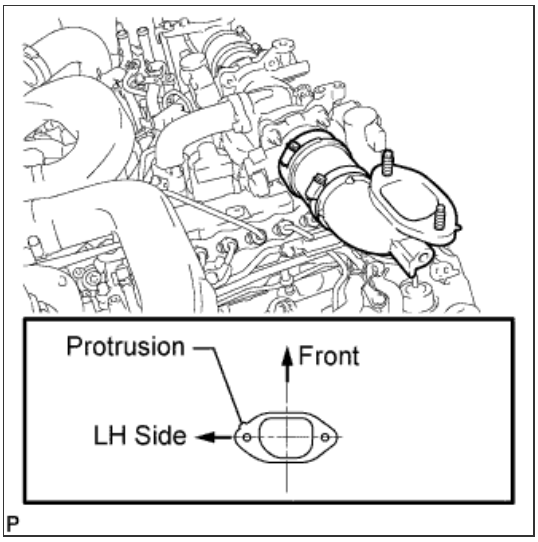
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



d. Connect the ventilation hose to the cylinder head cover RH.

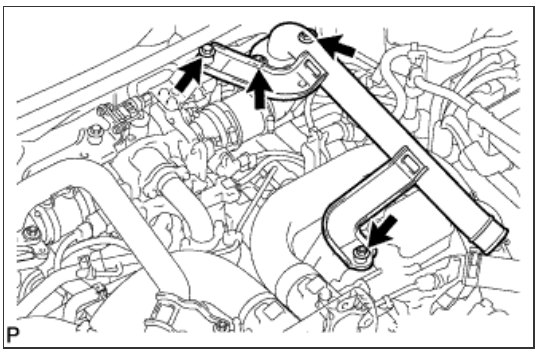
e. Connect the wire harness clamp to the No. 2 engine oil level dipstick guide bracket.

33. CONNECT WATER HOSE SUB-ASSEMBLY



34. INSTALL NO. 2 COOL AIR INLET (w/o Intercooler)

a. Install a new gasket to the air tube LH.

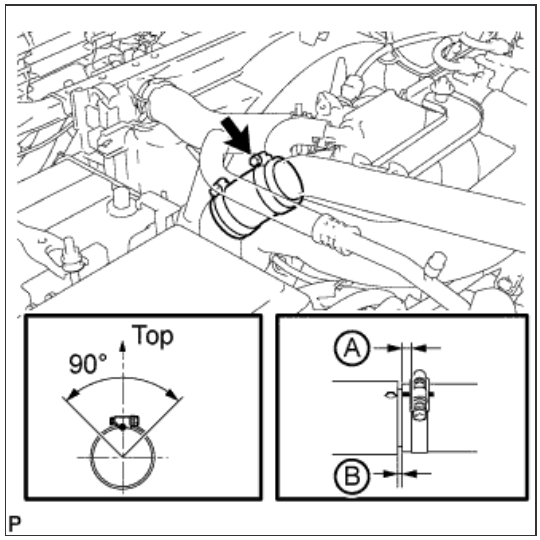


HINT:

Install the gasket with the protrusion facing as shown in the illustration.

b. Install the No. 2 cool air inlet with the 3 nuts and bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



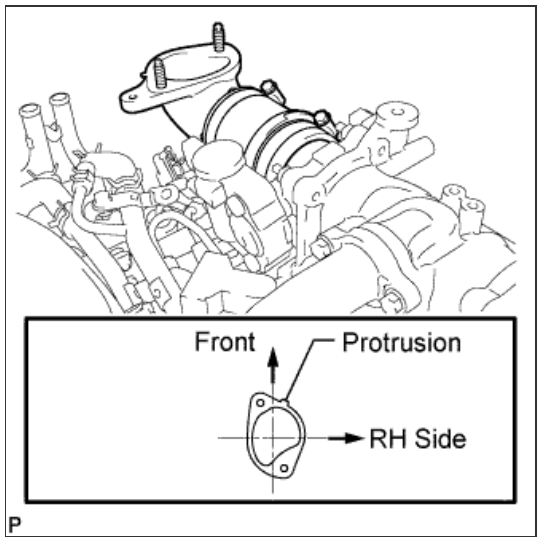
c. Connect the No. 2 air hose to the No. 2 cool air inlet.

d. Tighten the No. 2 air hose clamp.

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

HINT:

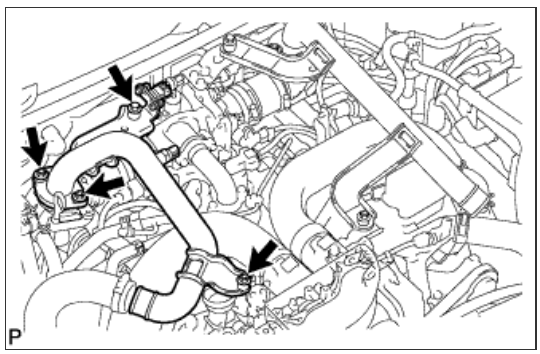
- **Align the paint mark of the air hose with the protrusion and push on the air hose so that distance B is 0 to 3 mm (0 to 0.118 in.).**
- **Position the clamp so that distance A is 2 to 6 mm (0.0787 to 0.236 in.).**
- **Make sure the direction of the hose clamp is as shown in the illustration.**



35. INSTALL NO. 1 COOL AIR INLET (w/o Intercooler)

a. Install a new gasket to the air tube RH.

HINT:



Install the gasket with the protrusion facing as shown in the illustration.

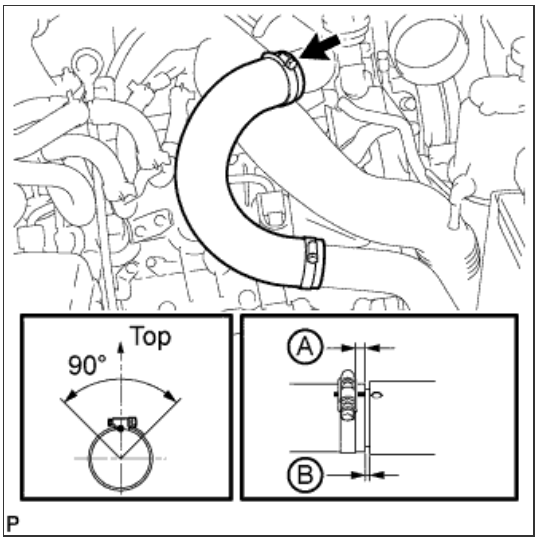
b. Install the No. cool air inlet with the 3 nuts and bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

c. Connect the vacuum hose, intake air temperature sensor connector and turbo pressure sensor connector.

d. Connect the No. air hose to the No. cool air inlet.

e. Tighten the No. air hose clamp.



Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

HINT:

- **Align the paint mark of the air hose with the protrusion and push on the air hose so that distance B is 0 to 3 mm (0 to 0.118 in.).**
- **Position the clamp so that distance A is 2 to 6 mm (0.0787 to**

0.236 in.).

- **Make sure the direction of the hose clamp is as shown in the illustration.**

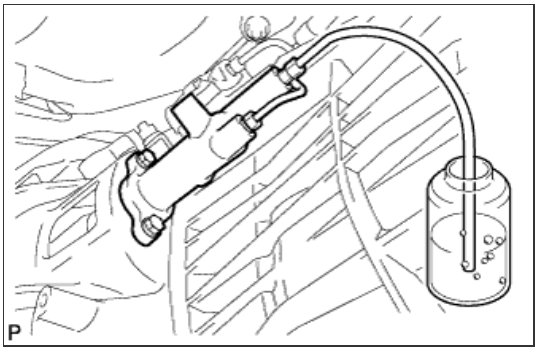
36. INSTALL INTERCOOLER ASSEMBLY (w/ Intercooler)

a. Install the intercooler assembly (Click here).

37. BLEE CLUTCH LINE (for Manual Transmission)

a. Remove the release cylinder bleeder plug cap.

b. Connect a vinyl tube to the bleeder plug.



c. Depress the clutch pedal several times, and then loosen the bleeder plug while the pedal is depressed.

d. When fluid no longer comes out, tighten the bleeder plug, and then release the clutch pedal.

e. Repeat the previous 2 steps until all the air in the fluid is completely bled.

f. Tighten the bleeder plug.

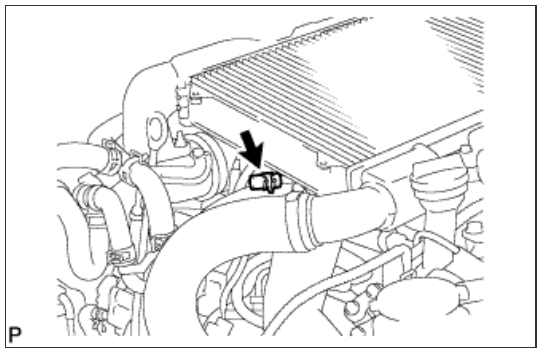
Torque:
11 N*m{ 110 kgf*cm , 8 ft.*lbf }

g. Install the bleeder plug cap.

h. Check that all the air has been bled from the clutch line.

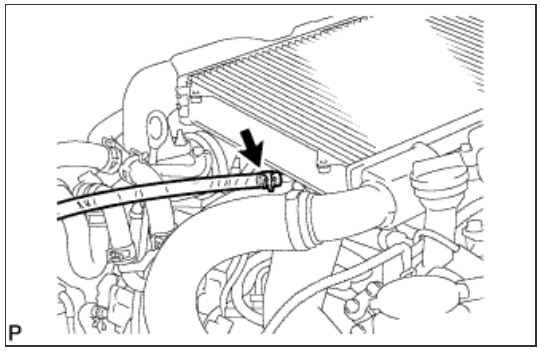
38. INSPECT FOR CLUTCH FLUI LEAK (for Manual Transmission)

39. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



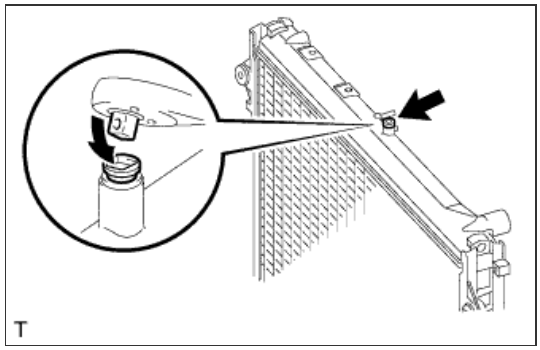
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

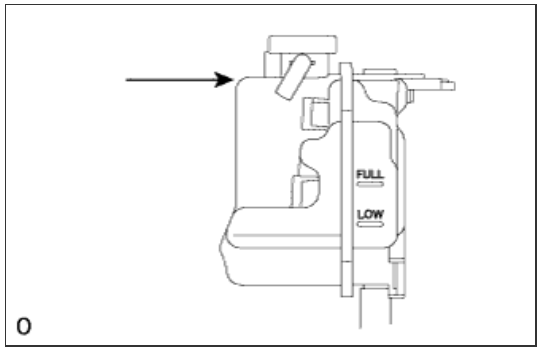


a. Connect the cables to the negative (-) main battery and sub-battery terminals.

40. A ENGINE COOLANT



a. Remove the engine air bleed cap.



b. Connect a clear hose to the engine air bleed pipe.

c. Using a wrench, remove the vent plug.

d. Fill the radiator with TOYOTA SLLC to the radiator reservoir filler neck.

HINT:

r TOYOTA SLLC until it spills out of the engine air bleed pipe.

Standard Capacit (for Automatic Transmission):

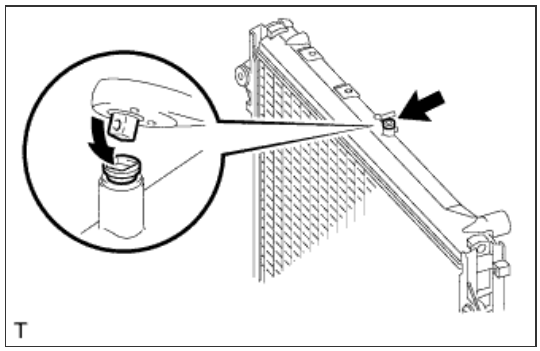
Item	Specified Condition
Front heater only	liters (US qts, p. qts)
Front heater and rear heater	liters (US qts, p. qts)
Front heater with viscous heater	liters (US qts, p. qts)
Front heater and rear heater with viscous heater	liters (US qts, p. qts)

Standard capacit (for Manual Transmission):
15.4 liters (16.3 US qts, 13.6 Imp. qts)

NOTICE:

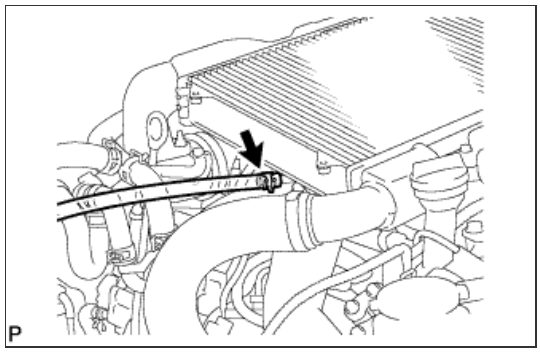
Do not substitute plain water for engine coolant.

HINT:



TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

e. Install the vent plug.

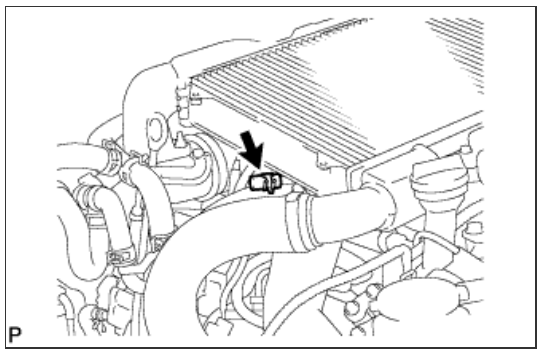


Torque:
2.0 N*m{ 20 kgf*cm , 18 in.*lbf }

NOTICE:

Do not tighten the plug to 5.0 N*m (5 kgf*cm, 44 in.*lbf) or more, as the plug will be damaged.

f. Disconnect the clear hose from the engine air bleed pipe.



g. Install the engine air bleed cap when coolant comes out.

h. Install the radiator reservoir cap.

i. Start the engine.

NOTICE:

Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the FULL line.

. Maintain an engine speed of 3000 rpm for approximately minutes so that the thermostat opens and air bleeding is performed.

CAUTION:

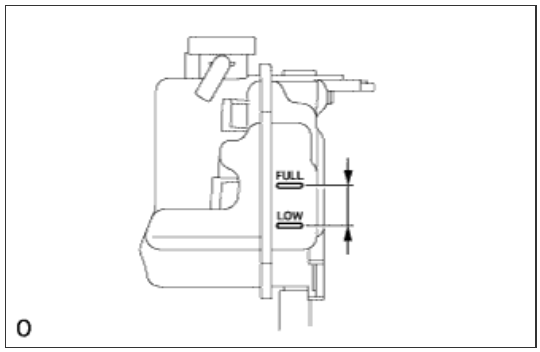
When pressing the radiator hoses:

- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep our hands awa from the radiator fan**

NOTICE:

- **Pa attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormall high temperature.**
- **If there is not enough coolant, the engine ma burn out or overheat.**

HINT:



The thermostat opening timing can be confirmed by pressing the No. 2 radiator hose by hand, and checking when the engine coolant starts to flow inside the hose.

k. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

Do not remove the radiator reservoir cap while the engine and radiator are still hot. ressurized, hot engine coolant and steam may be released and cause serious burns.

l. Check that the coolant level is between the FULL and LOW lines.
If the coolant level is above the FULL line, drain coolant so that the coolant level is between the FULL and LOW lines.

41. INSPECT FOR FUEL LEAK

a. erform Active Test.

i. Connect the intelligent tester to the DLC3.

ii. Turn the ignition switch to ON.

iii. Start the engine.

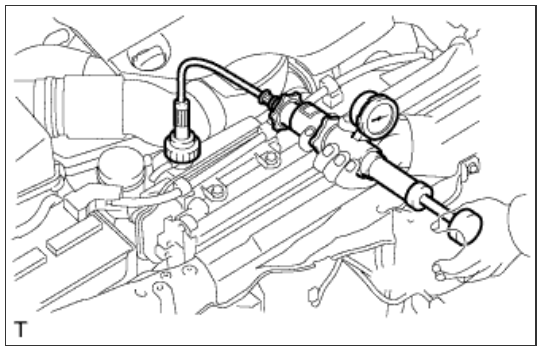
iv. Turn the intelligent tester ON.

v. Enter the following menus: ertrain / Engine / Active Test.

vi. erform the Active Test.

Tester Display	Test Detail	Control Range	Diagnostic Note
Test the Fuel Leak	ressurizes fuel inside common rail and checks for fuel leaks	Stop/Start	• The fuel inside the common rail is pressurized to the specified value and the engine speed increases to 2000 rpm when Start is selected. • The above conditions are preserved while Start is selected.

42. CHECK FOR ENGINE COOLANT LEAKS



CAUTION:

Do not remove the radiator reservoir cap while the engine and radiator are still hot. ressurized, hot engine coolant and steam may be released and cause serious burns.

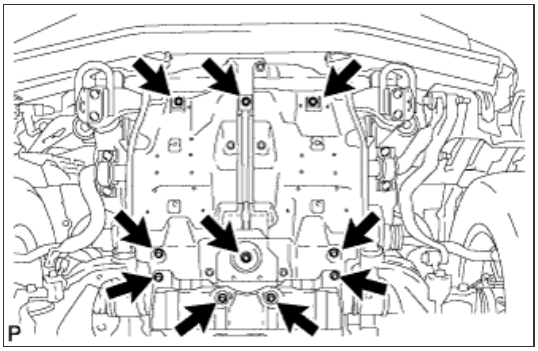
a. Fill the radiator with coolant and attach a radiator cap tester to the radiator reservoir.

b. Warm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to a (kgf/cm^2, psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks.
If no external leaks are found, check the cylinder block and cylinder head.

43. INSPECT FOR OIL LEAK

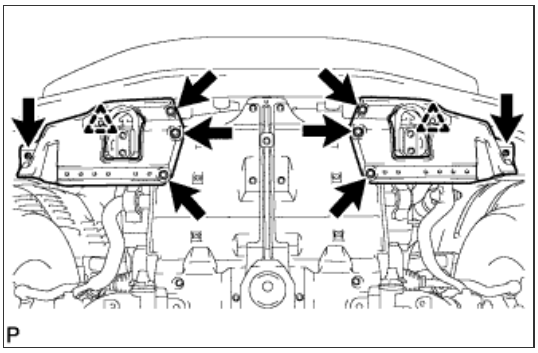
a. Warm up the engine and check for an engine oil leak.



44. INSTALL UPPER RA IATOR SUPPORT SEAL

a. Install the upper radiator support seal with the 7 clips.

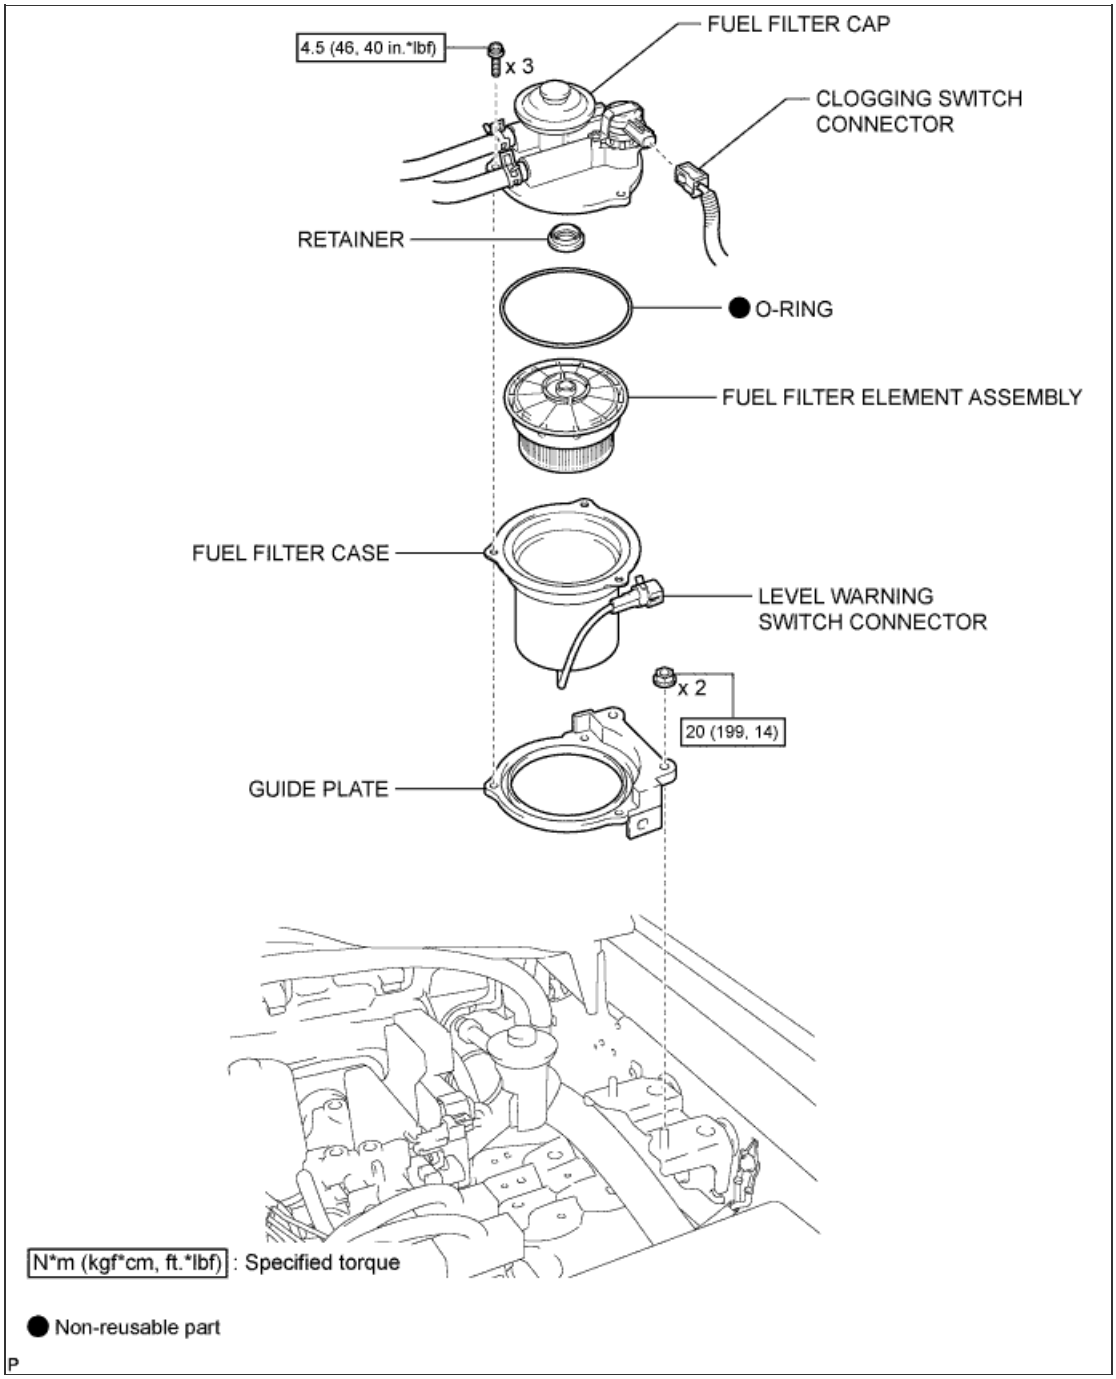
45. INSTALL NO. 1 ENGINE UN ER COVER SUB-ASSEMBLY



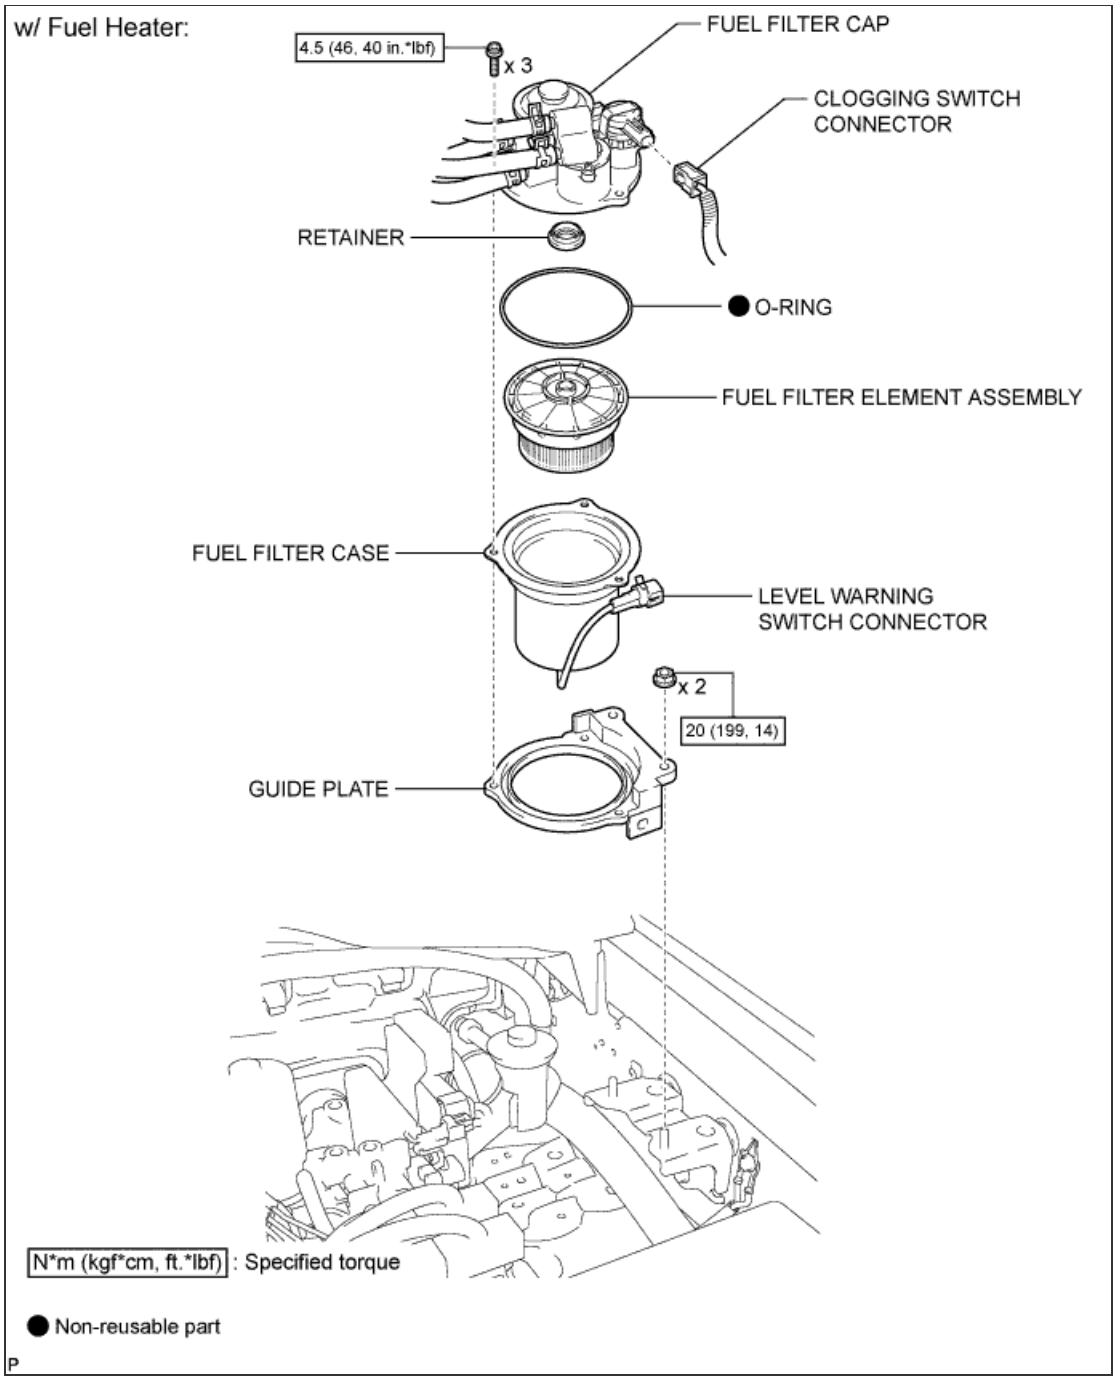
a. Install the engine under cover with the bolts.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

46. INSTALL FRONT FEN ER SPLASH SHIEL SUB-ASSEMBLY RH



a. Install the splash shield with the clip, and then install the 3 bolts and screw.



47. INSTALL FRONT FEN ER SPLASH SHIEL SUB-ASSEMBLY LH

a. Install the splash shield with the clip, and then install the 3 bolts and screw.

for Preparation Click here

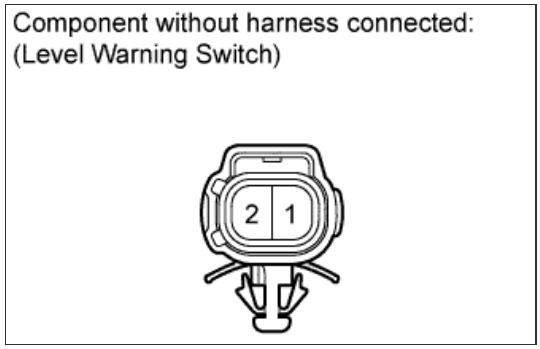
1. INSPECT FUEL FILTER ASSEMBLY



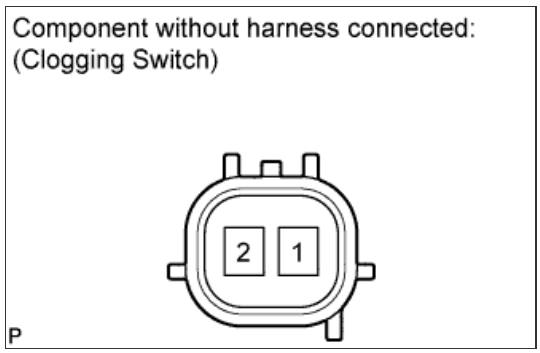
a. Inspect the level warning switch.

i. esure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	Float upper end position	Below 1 Ω
1 - 2	Float lower end position	1 Ω higher

If the result is not as specified, replace the fuel filter asse ly.



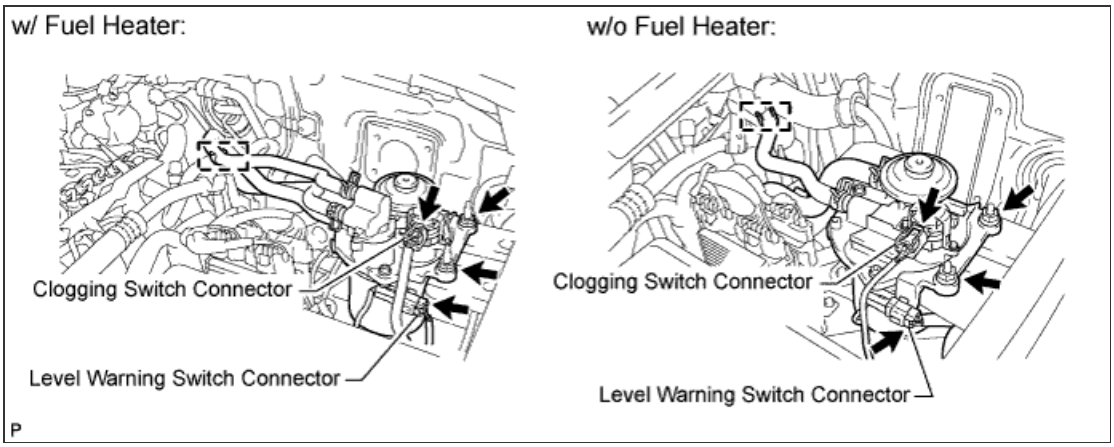
b. Inspect the clogging switch.

i. esure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	20	low 1 Ω e

If the result is not as specified, replace the fuel filter asse ly.



for Preparation Click here

HINT:

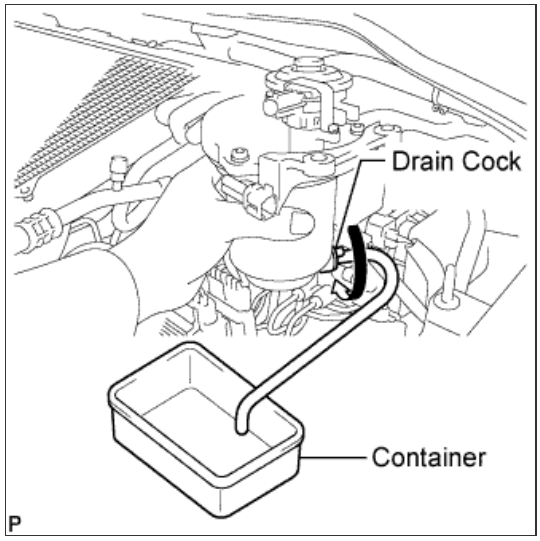
When replacing the filter, use T genuine parts or equivalent parts.

1. DRAIN FUEL FROM FUEL FILTER

a. Detach the fuel hose clamp.

b. Disconnect the clogging switch connector and level warning switch connector.

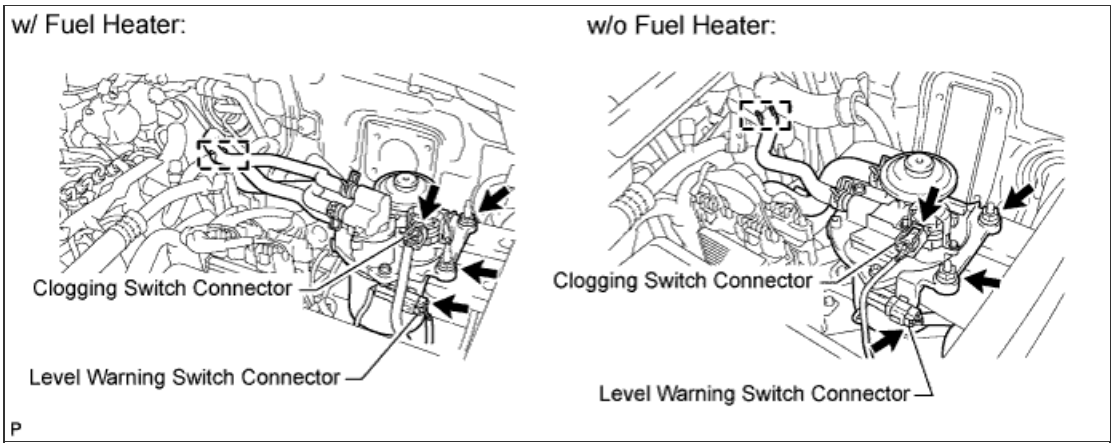
c. Remove the 2 nuts and lift up the fuel filter assembly.



d. Connect a hose to the drain cock. Place the other end of the hose into a container under the drain cock.

e. Loosen the drain cock to drain fuel.

f. Tighten the drain cock by hand.

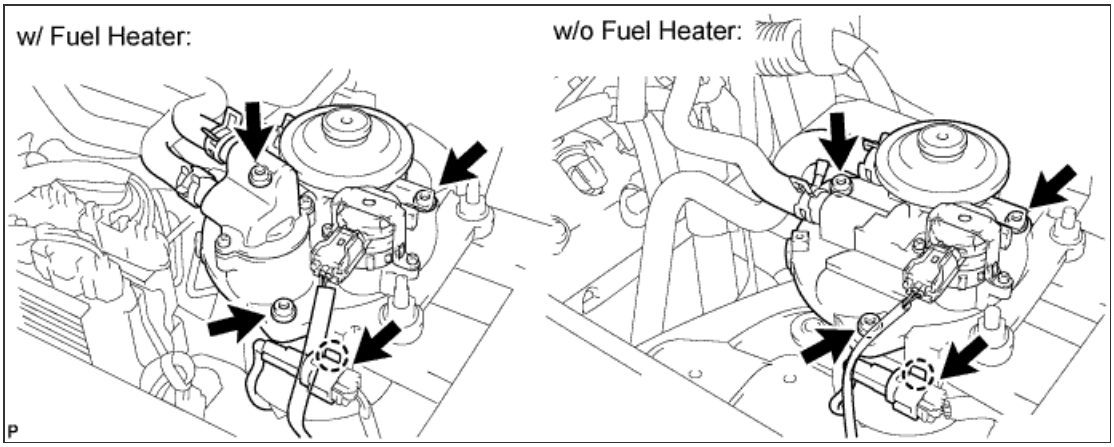


NOTICE:

Do not use any tools in this procedure.

g. Install the fuel filter assembly with the 2 nuts.

Torque:
20 N*m{ 199 kgf*cm , 14 ft.*lbf }



h. Connect the clogging switch connector and level warning switch connector.

i. Attach the fuel hose clamp.

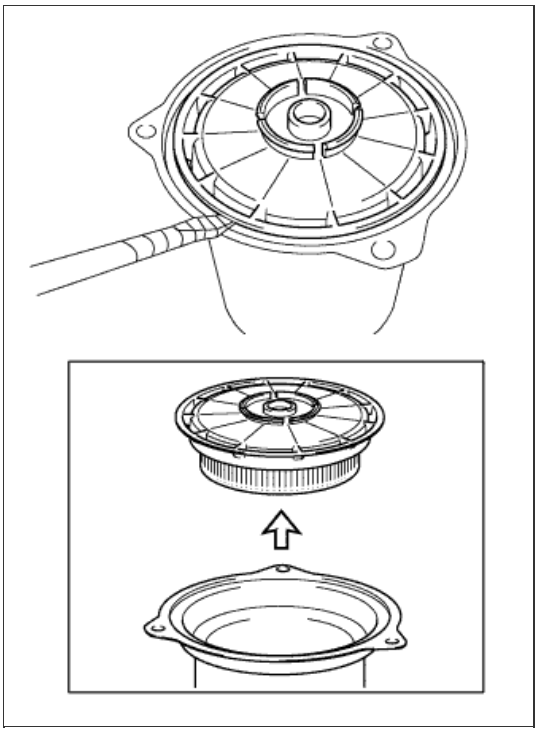
2. REMOVE FUEL FILTER ELEMENT A EMBLY

a. Disconnect the level warning switch connector, and detach the level warning switch connector clamp.

b. Using a 5 mm hexagon socket wrench, remove the 3 bolts and disconnect the fuel filter cap.

c. Remove the fuel filter case and element assembly.

d. Remove the ring and retainer.



e. Using a screwdriver, remove the fuel filter element from the case.

NOTICE:

Do not damage the fuel filter element and case.

HINT:

Tape the screwdriver tip before use.

3. IN TALL FUEL FILTER ELEMENT A EMBLY

a. Clean the fuel filter case.

NOTICE:

When replacing the fuel filter, clean the fuel filter case and remove dirt completely.

b. Install the fuel filter element to the case.

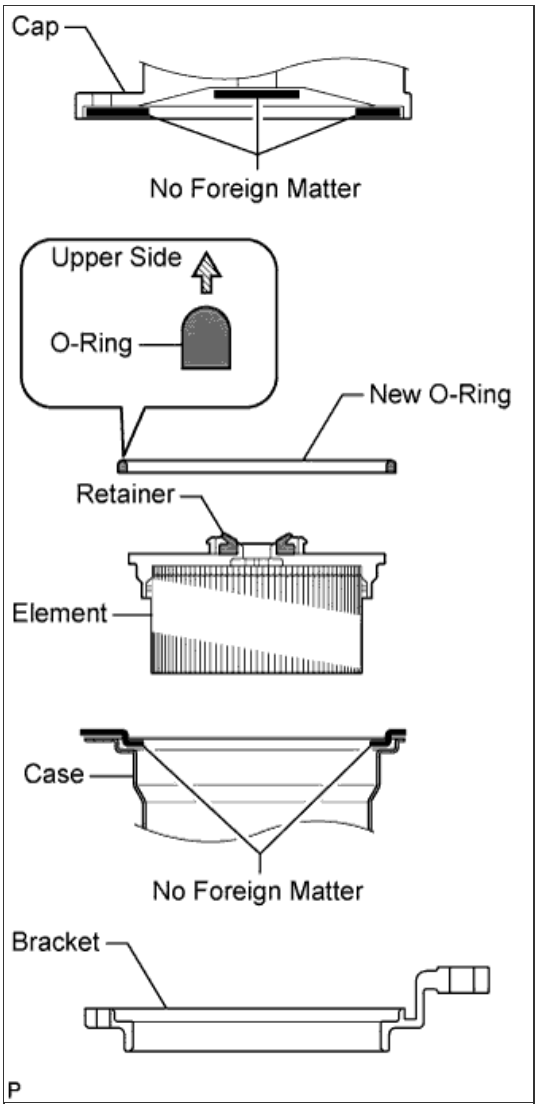
NOTICE:

Make sure that there is no foreign matter on the areas of the case shown in the illustration.

c. Install the retainer.

d. Install a new ring.

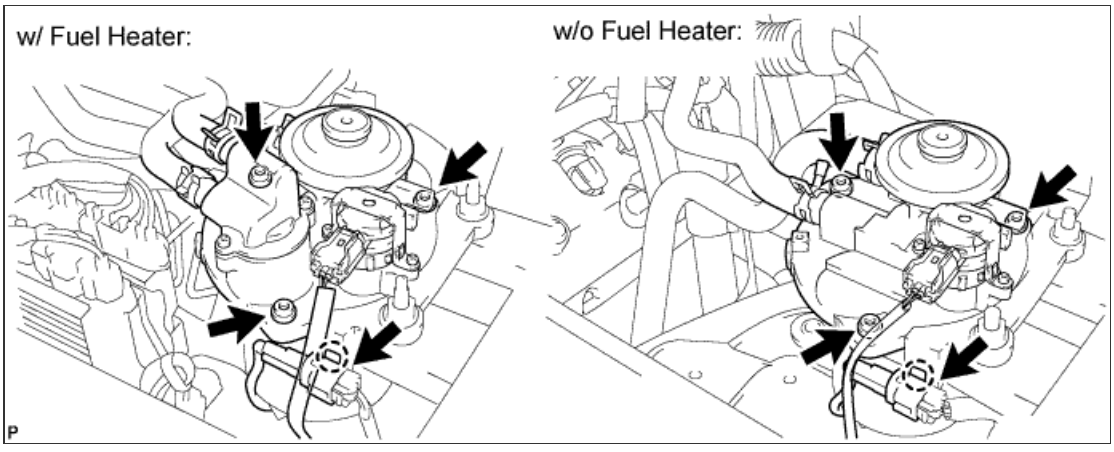
NOTICE:



Make sure the rounded side of the ring faces upward as shown in the illustration.

e. Install the fuel filter case and element assembly to the bracket.

f. Set the fuel filter cap on the case.



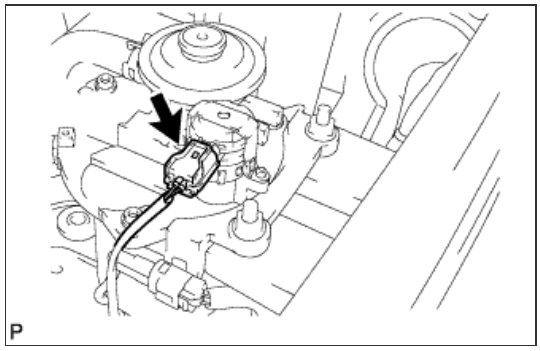
NOTICE:

- **Make sure that there is no foreign matter on the areas of the cap shown in the illustration.**
- **Do not turn the cap as the O-ring will be damaged.**

g. Using a 5 mm hexagon socket wrench, install the fuel filter cap with the 3 bolts.

Torque:
4.5 N*m{ 46 kgf*cm , 40 in.*lbf }

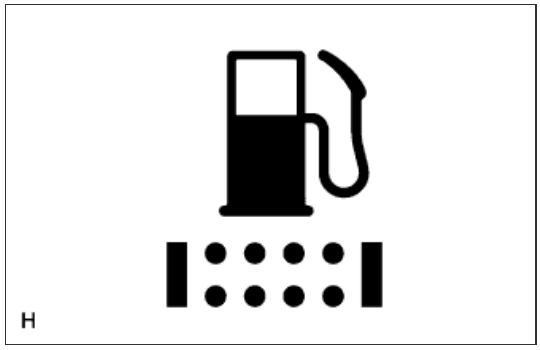
h. Further tighten the first bolt tightened above so that its torque value is slightly more than the torque specification.



i. Attach the level warning switch connector clamp and connect the level warning switch connector.

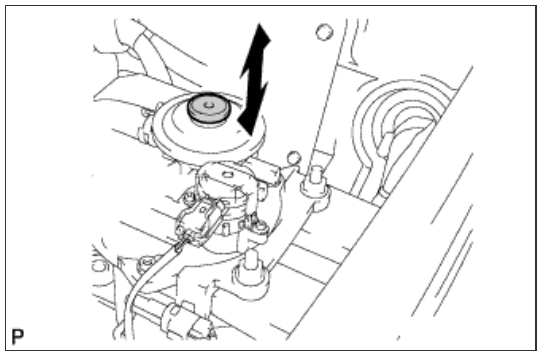
4. RE ET FUEL TEM WARNING LIGHT

a. Disconnect the clogging switch connector.



b. Turn the ignition switch to

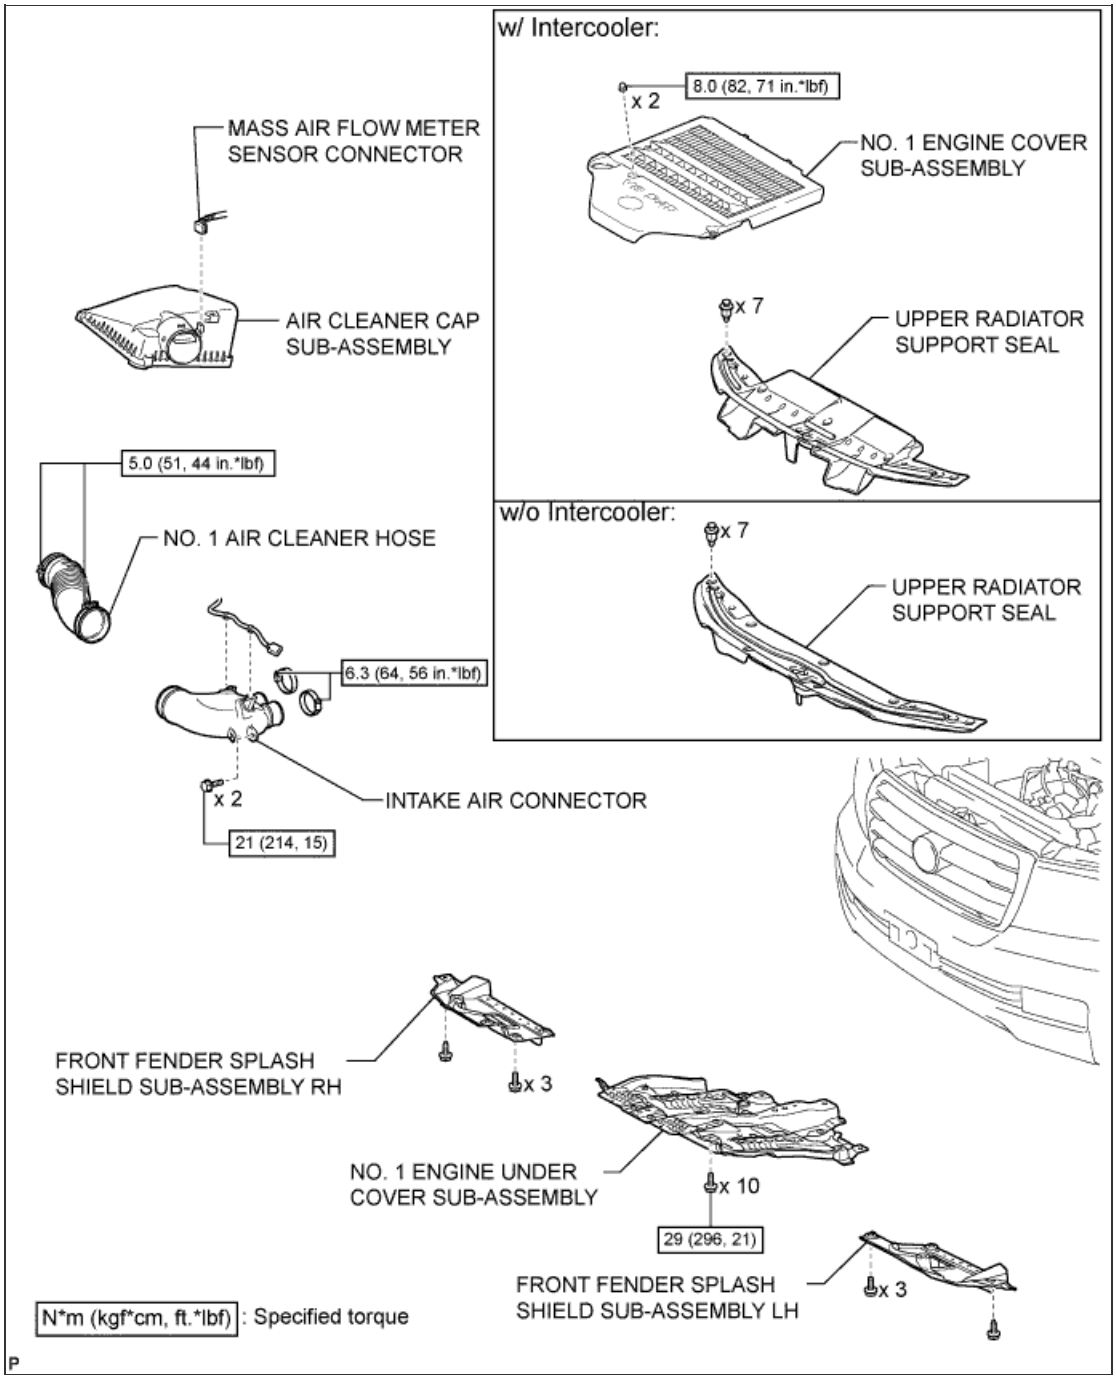
c. er turning the ignition switch to connect the clogging switch connector within 3 to 60 seconds.



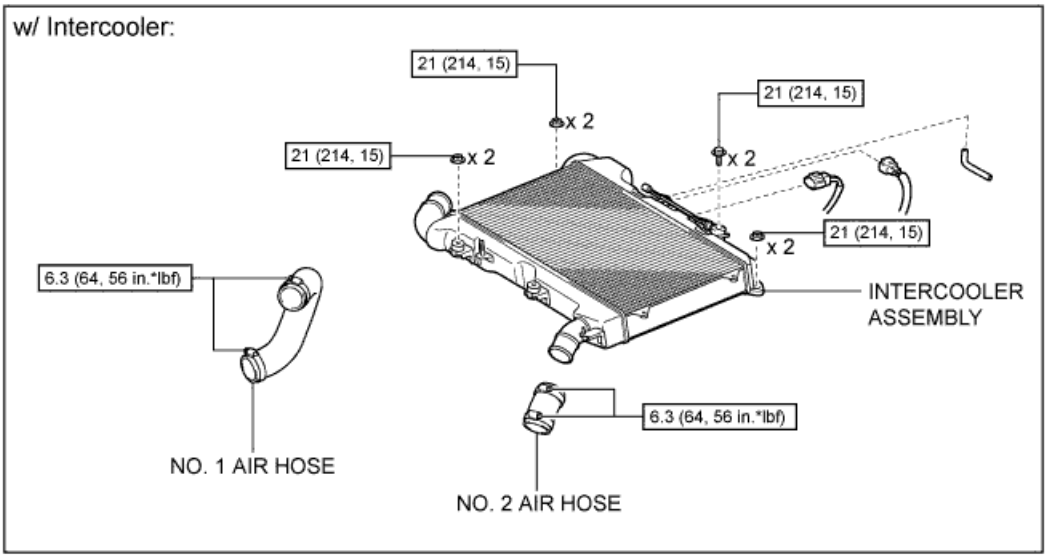
d. w/o Multi-information Display:
Check that the fuel system warning light on the combination meter turns off.

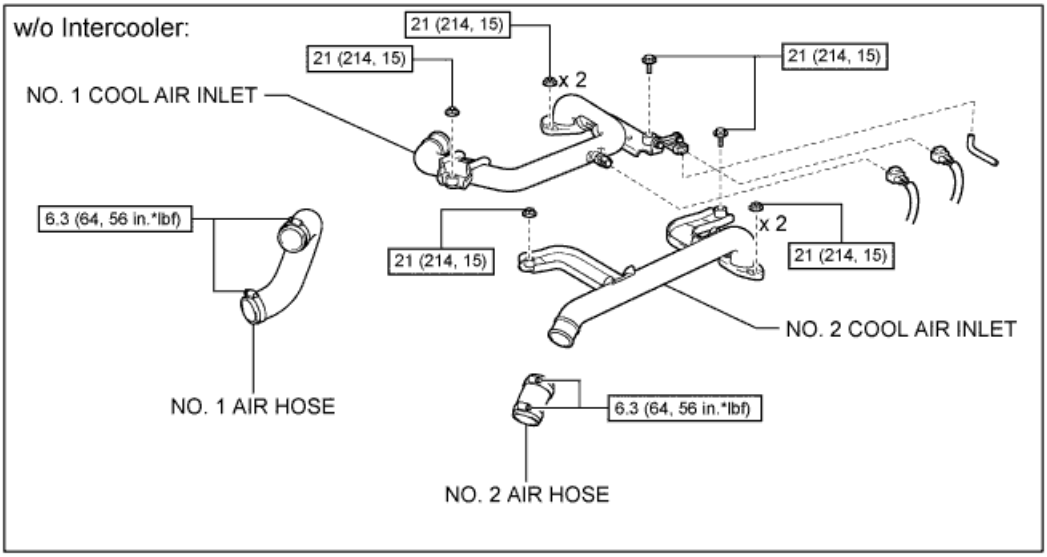
e. w/ Multi-information Display:
Check that the fuel system warning on the multi-information display turns off.

5. BLEED AIR FROM FUEL TEM



a. Using the hand pump, bleed air from the fuel system until pumping becomes difficult.





6. IN PECT FOR FUEL LEAK

a. Start the engine. Check that leaking sounds, sucking sounds or other unusual sounds cannot be heard.

P

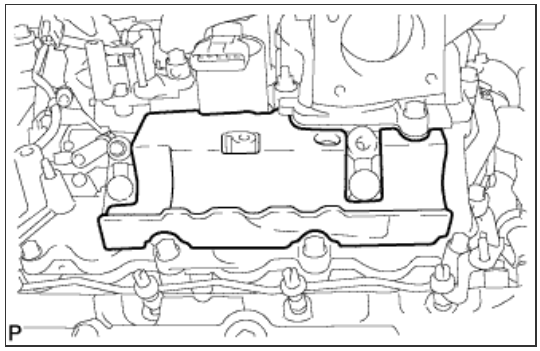
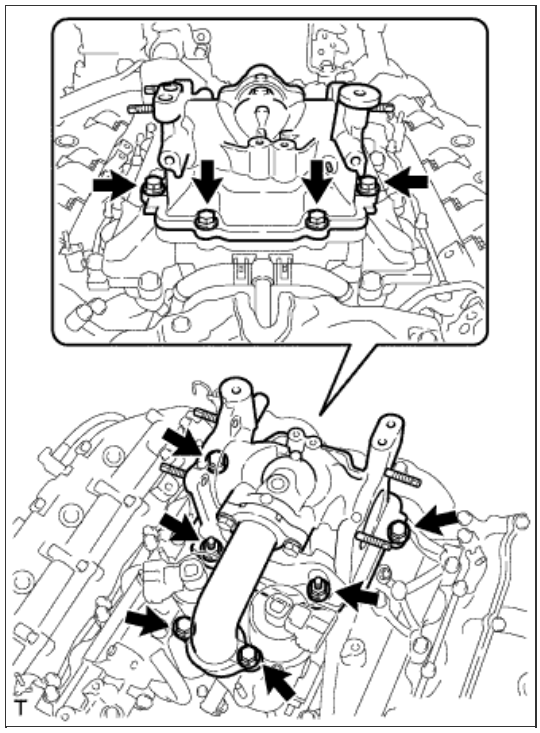
for Preparation Click here



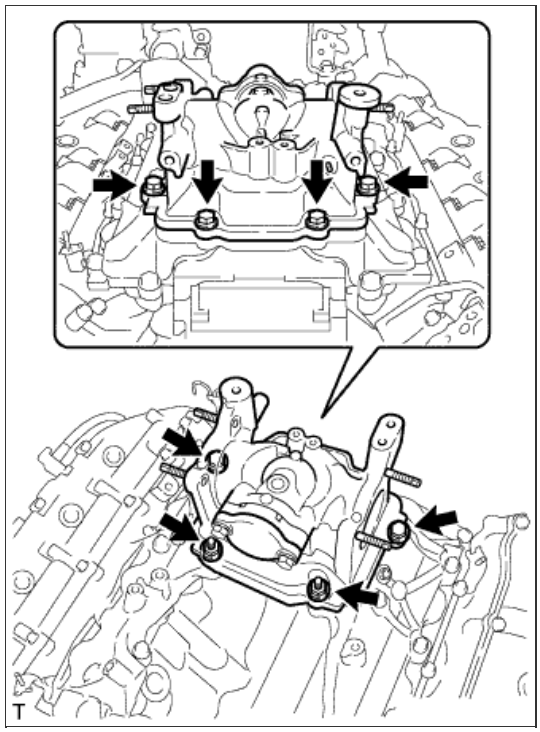
1. REMOVE COMMON RAIL ASSEMBLY LH AND RH

a. Remove the common rail assembly LH and RH (Click here).

2. REMOVE NO. 1 INTAKE MANIFOLD INSULATOR (w/ Intercooler)

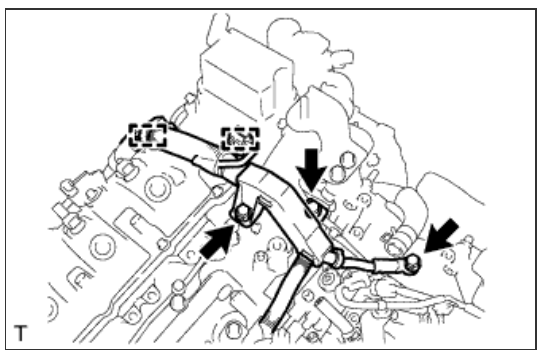


3. REMOVE NO. 2 INTAKE MANIFOLD INSULATOR (w/ Intercooler)

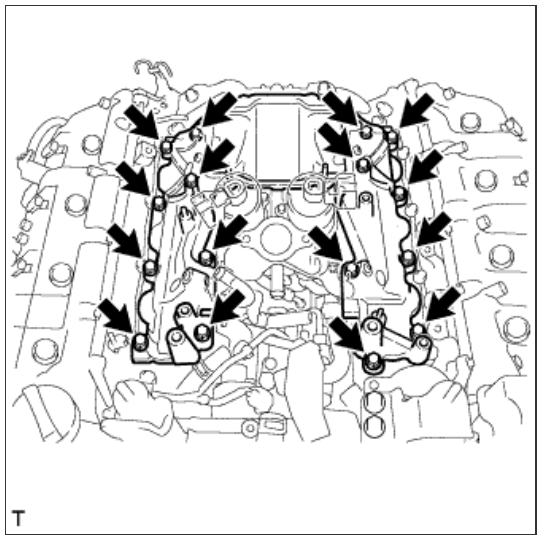


4. REMOVE INTAKE PIPE

a. w E R System
Remove the 2 nuts, 6 bolts, intake pipe and 2 gaskets.

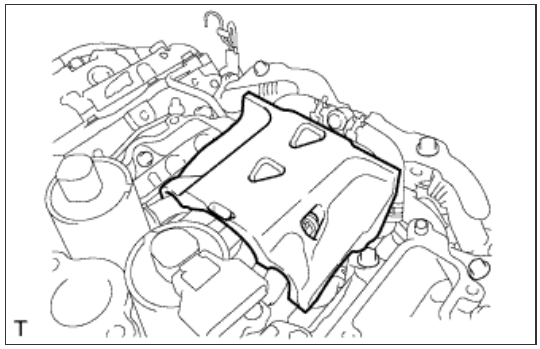


b. w o E R System
Remove the 2 nuts, 4 bolts, intake pipe and gasket.



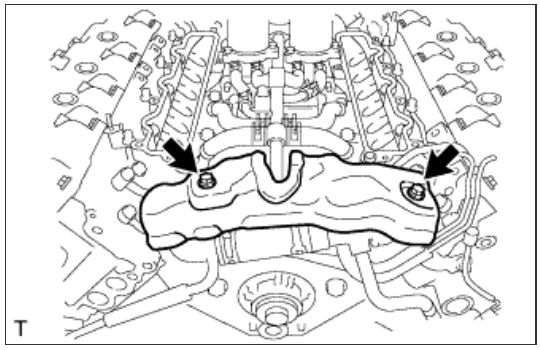
5. DISCONNECT NO. 2 ENGINE WIRE

a. Remove the 3 bolts and using a clip remover, detach the 2 wire harness clamps, and then disconnect the No. 2 engine wire.

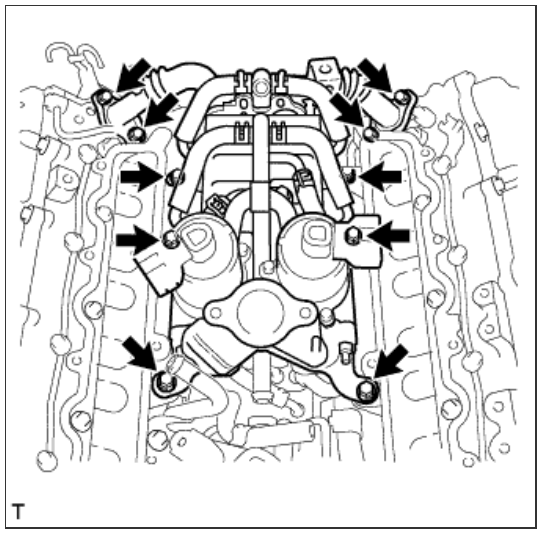


6. REMOVE NO. 3 INTAKE MANIFOLD

a. Remove the 16 bolts, No. 3 intake manifold and 2 gaskets.

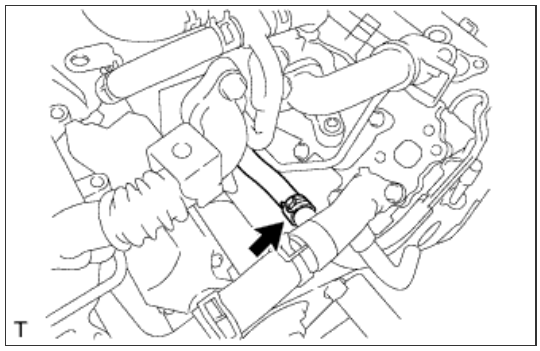


7. REMOVE INTAKE MANIFOLD INSULATOR (w/ EGR System)

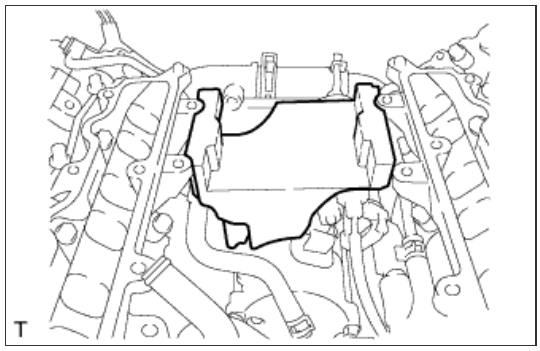


8. REMOVE EGR PIPE INSULATOR (w/ EGR System)

a. Remove the 2 bolts and E R pipe insulator.



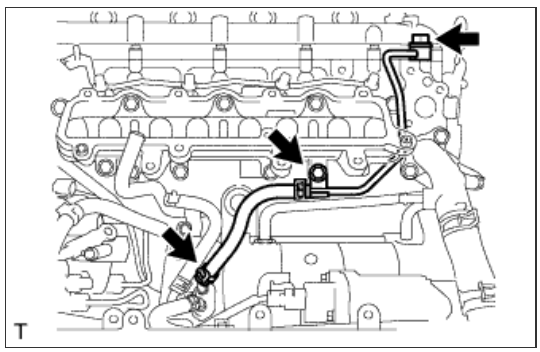
9. REMOVE EGR VALVE ASSEMBLY WITH EGR COOLER (w/ EGR System)



a. Remove the 10 bolts, E R valve with E R cooler and 2 gaskets.

b. Disconnect the No. 5 water by-pass hose from the water by-pass outlet.

10. REMOVE EGR COOLER INSULATOR (w/ EGR System)



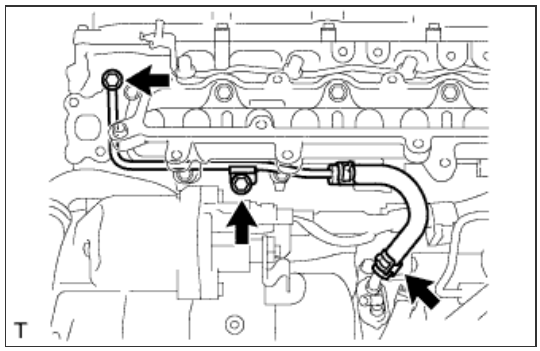
11. REMOVE NO. 3 NOZZLE LEAKAGE PIPE

a. Disconnect the No. 1 fuel hose from the fuel cooler.

b. Remove the union bolt, bolt, No. 3 nozzle leakage pipe and gasket.

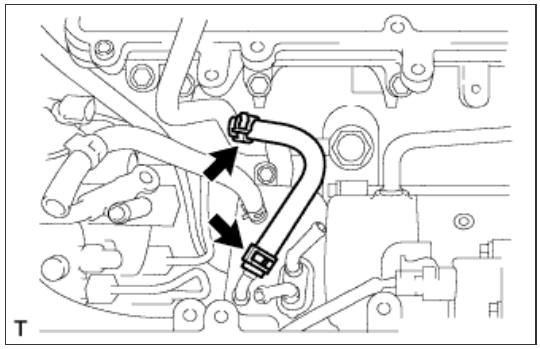
NOTICE:

After removing the nozzle leakage pipe, to prevent dirt or foreign objects from entering the nozzle leakage pipe, cover the nozzle leakage pipe ends with plastic bags.



12. REMOVE NO. 4 NOZZLE LEAKAGE PIPE

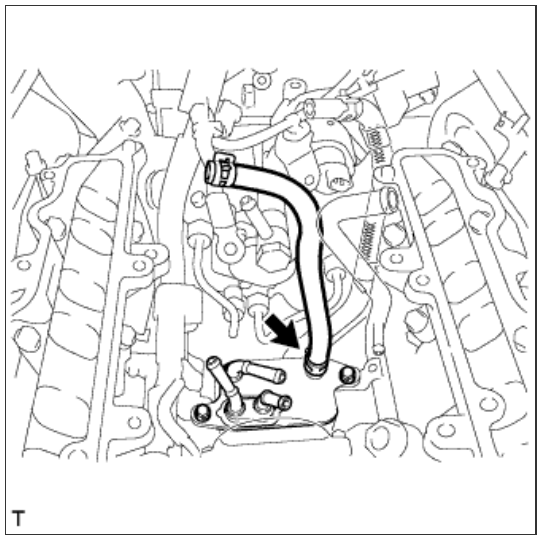
a. Disconnect the No. 2 fuel hose from the fuel cooler.



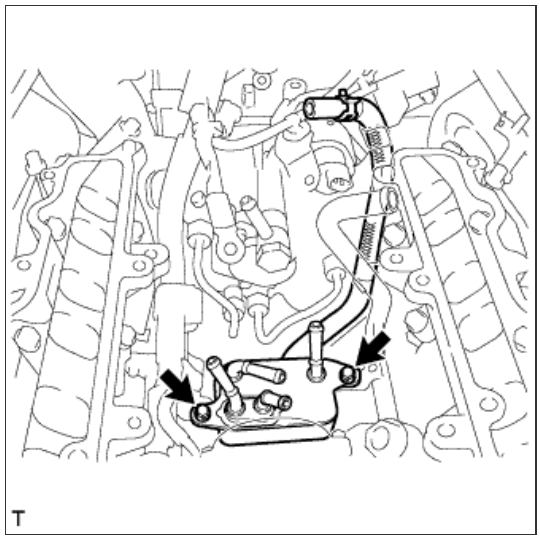
b. Remove the union bolt, bolt, No. 4 nozzle leakage pipe and gasket.

NOTICE:

After removing the nozzle leakage pipe, to prevent dirt or foreign objects from entering the nozzle leakage pipe, cover the nozzle leakage pipe ends with plastic bags.

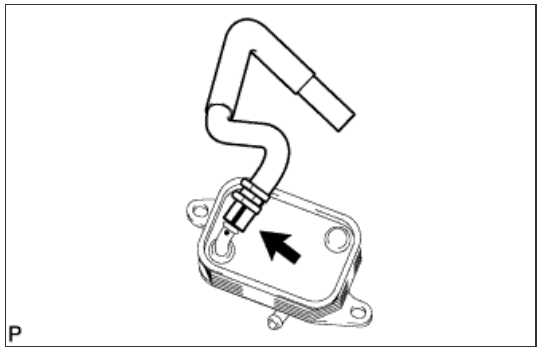


13. DISCONNECT NO. 6 WATER BY-PASS HOSE



14. DISCONNECT NO. 3 FUEL HOSE

a. Disconnect the fuel hose from the fuel cooler.

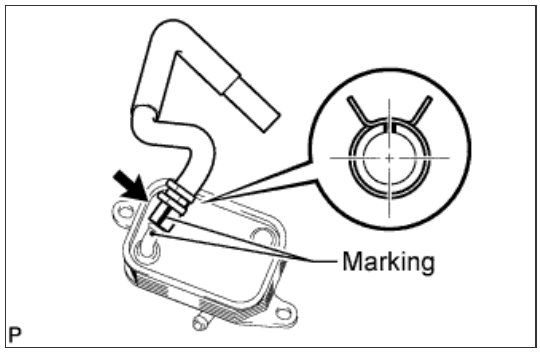


15. REMOVE FUEL COOLER ASSEMBLY

a. Remove the 2 bolts and fuel cooler.

16. DISCONNECT NO. 7 WATER BY-PASS HOSE

a. Disconnect the water by-pass hose from the fuel cooler.

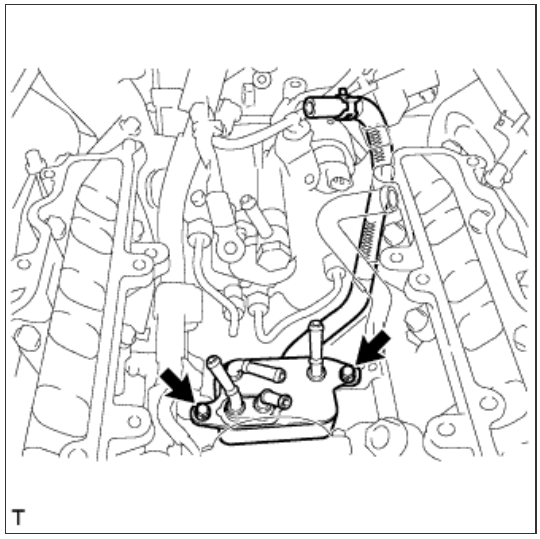


for Preparation Click here

1. CONNECT NO. 7 WATER BY-PASS HOSE

a. Connect the water by-pass hose to the fuel cooler.

HINT:

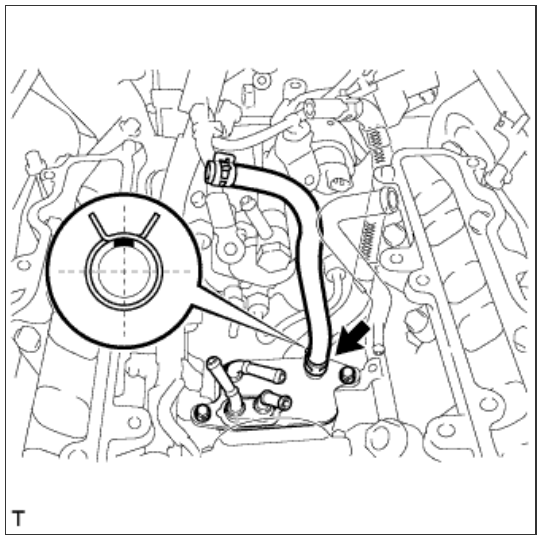


- **Align the alignment marks and connect the hose.**
- **Align the pinching portion of the clamp with the hose alignment mark and connect the hose.**

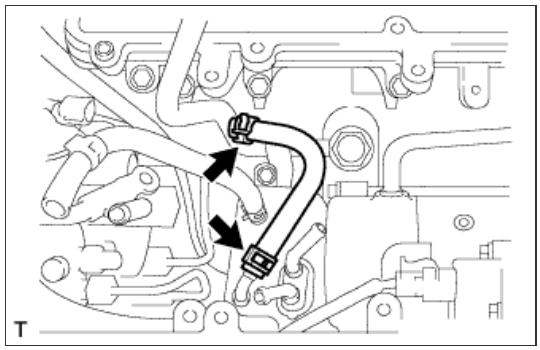
2. INSTALL FUEL COOLER ASSEMBLY

a. Install the fuel cooler with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



3. CONNECT NO. 3 FUEL HOSE

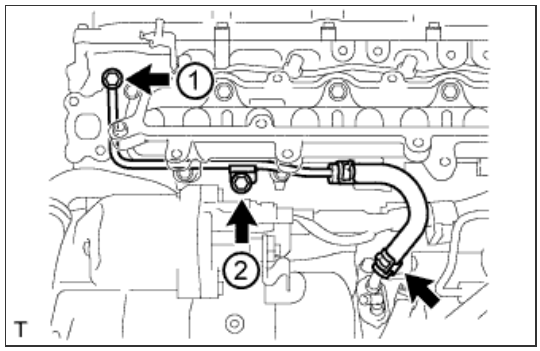


a. Connect the fuel hose to the fuel cooler.

HINT:

- **Align the alignment marks and connect the hose.**
- **Align the pinching portion of the clamp with the hose alignment mark and connect the hose.**

4. CONNECT NO. 6 WATER BY-PASS HOSE



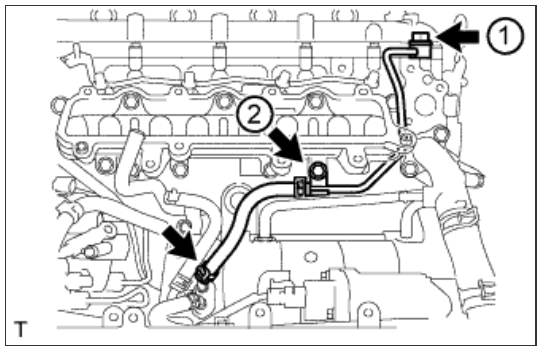
5. INSTALL NO. 4 NOZZLE LEAKAGE PIPE

a. Temporarily install a new gasket and the No. 4 nozzle leakage pipe with the union bolt and bolt.

b. Tighten the union bolt and bolt in the order shown in the illustration.

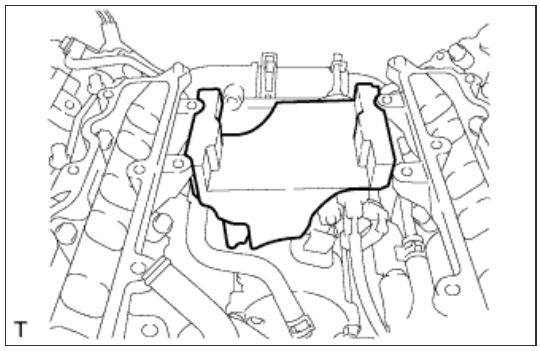
Torque:
for union bolt:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
for bolt:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

c. Connect the No. 2 fuel hose to the fuel cooler.



6. INSTALL NO. 3 NOZZLE LEAKAGE PIPE

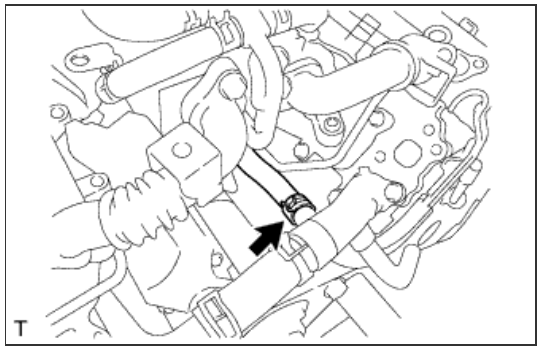
a. Temporarily install a new gasket and the No. 3 nozzle leakage pipe with the union bolt and bolt.



b. Tighten the union bolt and bolt in the order shown in the illustration.

Torque:
for union bolt:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
for bolt:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

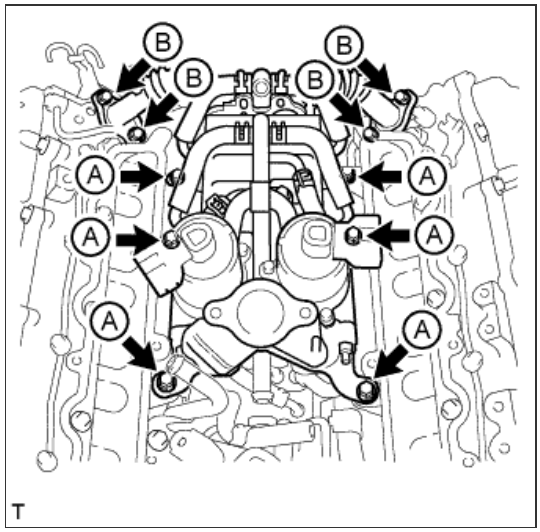
c. Connect the No. 1 fuel hose to the fuel cooler.



7. INSTALL EGR COOLER INSULATOR (w/ EGR System)

8. INSTALL EGR VALVE ASSEMBLY WITH EGR COOLER (w/ EGR System)

a. Connect the No. 5 water by-pass hose to the water by-pass outlet.

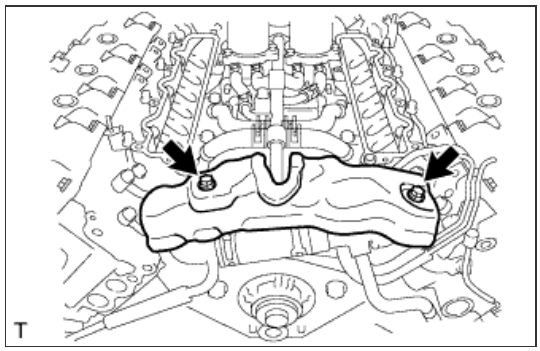


b. Install 2 new gaskets and the E valve with E cooler with the 6 bolts labeled A and 4 bolts labeled B shown in the illustration.

Torque:
for bolt A:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
for bolt B:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

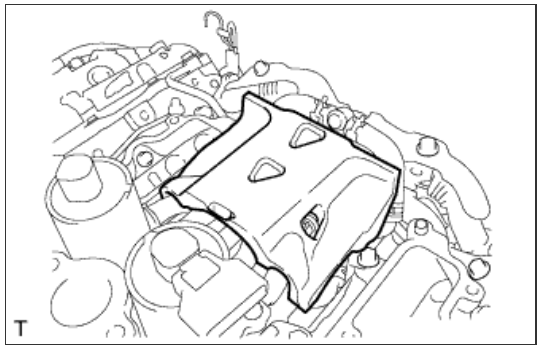
HINT:

The gasket claws should face toward the No. 1 and No. 2 E pipes.



9. INSTALL EGR PIPE INSULATOR (w/ EGR System)

a. Install the E pipe insulator with the 2 bolts.



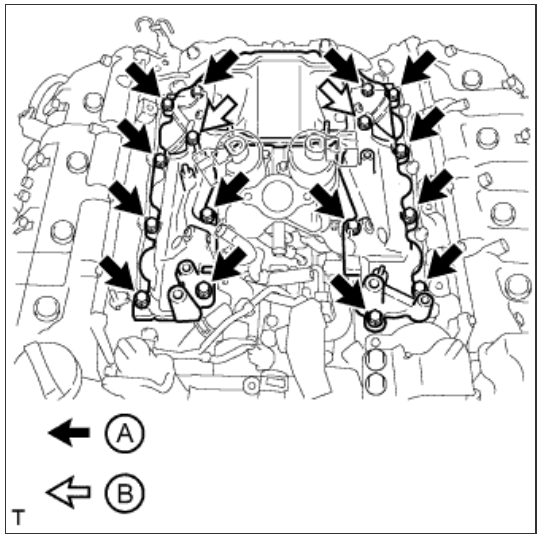
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

NOTICE:

If the No. 1 and No. 2 E pipe insulator installation stay is deformed or the bolt holes of the E pipe insulator do not align replace the No. 1 and No. 2 E pipes as a set.

10. INSTALL INTAKE MANIFOLD INSULATOR (w/ EGR System)

11. INSTALL NO. 3 INTAKE MANIFOLD



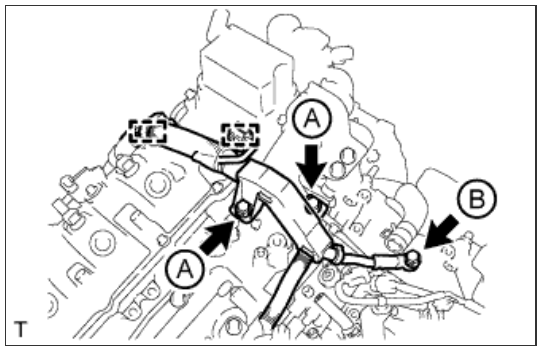
a. Set 2 new gaskets to the No. 1 and No. 2 intake manifolds.

b. Install the No. 3 intake manifold with the 16 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

Bolt Length

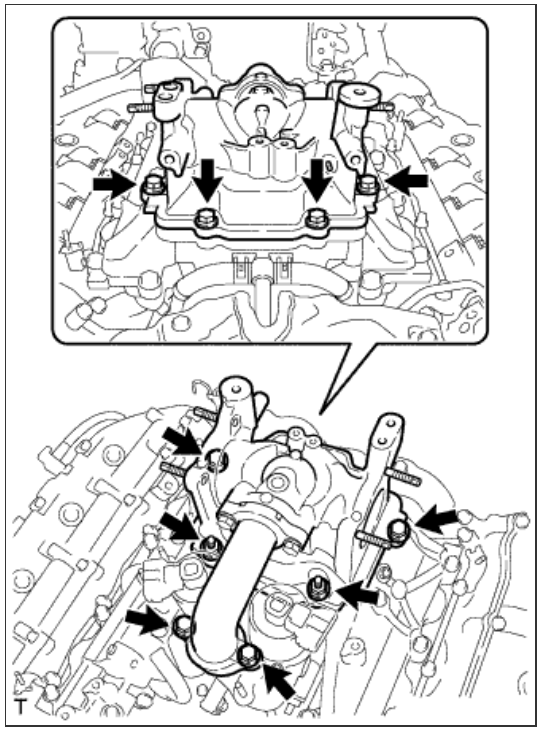
Item	Length
Bolt A	25 mm (0.984 in.)
Bolt B	70 mm (2.76 in.)



12. CONNECT NO. 2 ENGINE WIRE

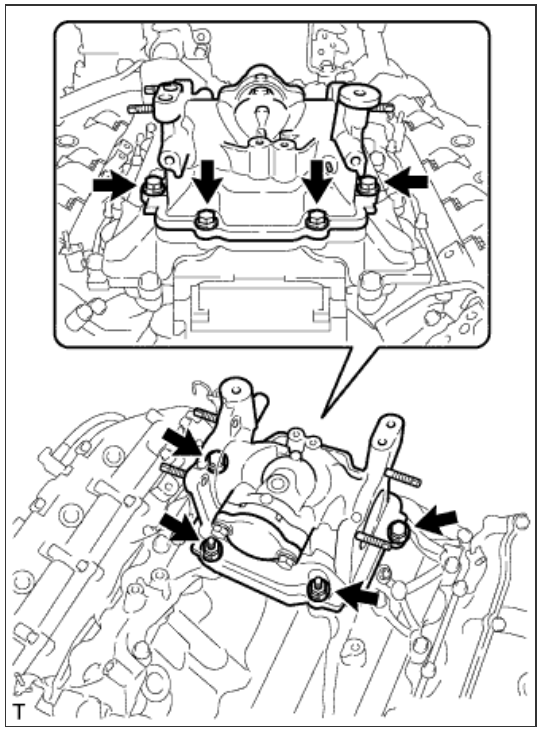
a. Connect the No. 2 engine wire with the 3 bolts.

Torque:
for bolt A:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }
for bolt B:
32 N*m{ 326 kgf*cm , 24 ft.*lbf }



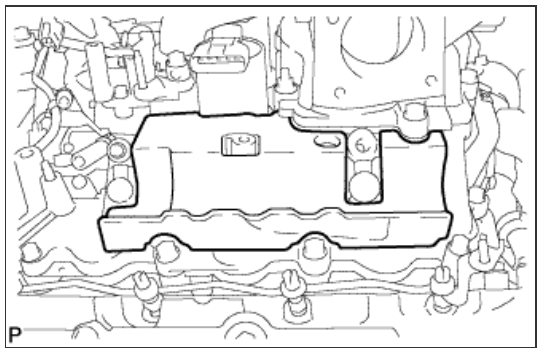
b. Attach the 2 wire harness clamps.

13. INSTALL INTAKE PIPE

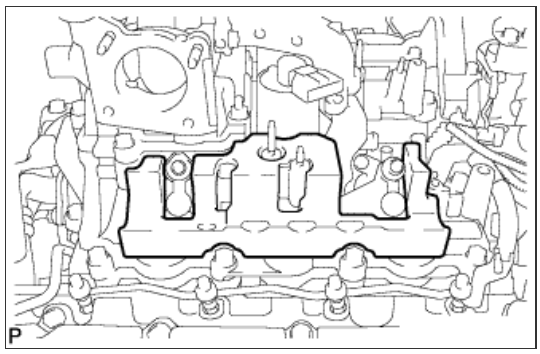


a. w/ E System:
Install 2 new gaskets and the intake pipe with the 6 bolts and 2 nuts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

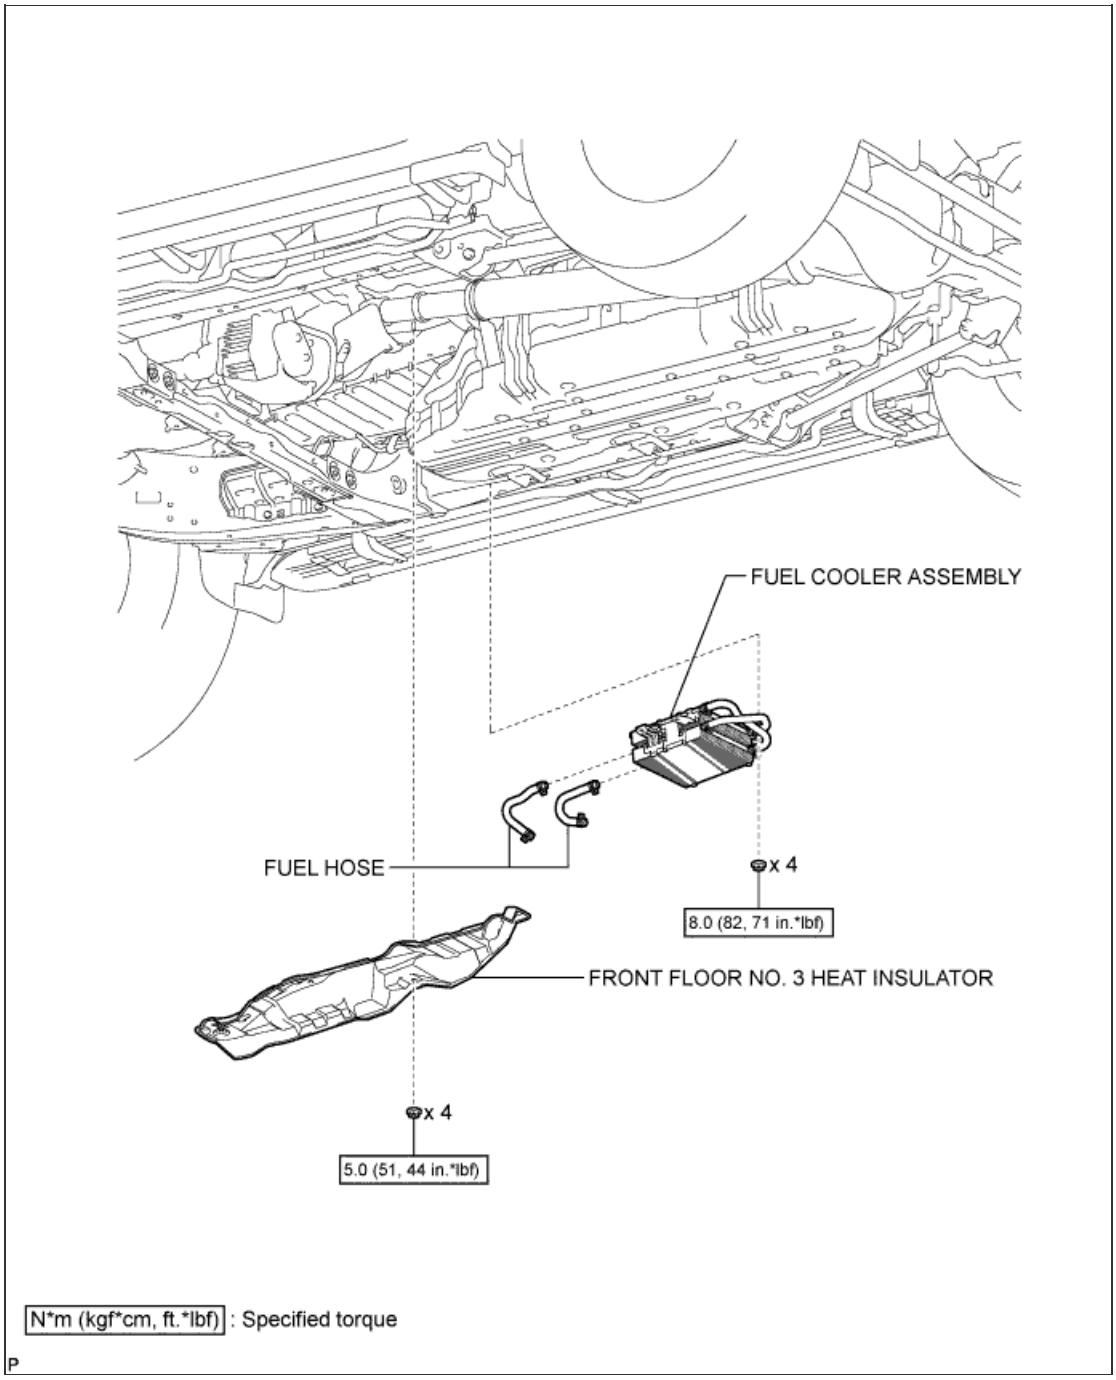


b. w/o E System:
Install a new gasket and the intake pipe with the 4 bolts and 2 nuts.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

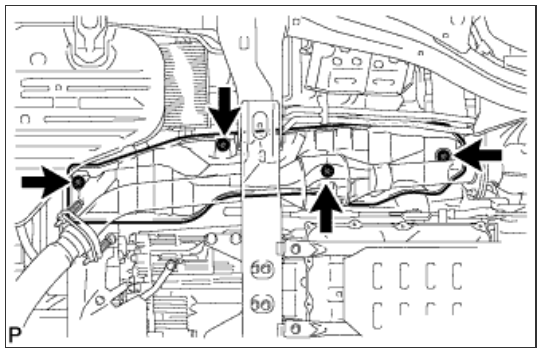
14. INSTALL NO. 2 INTAKE MANIFOLD INSULATOR (w/ Intercooler)



15. INSTALL NO. 1 INTAKE MANIFOLD INSULATOR (w/ Intercooler)

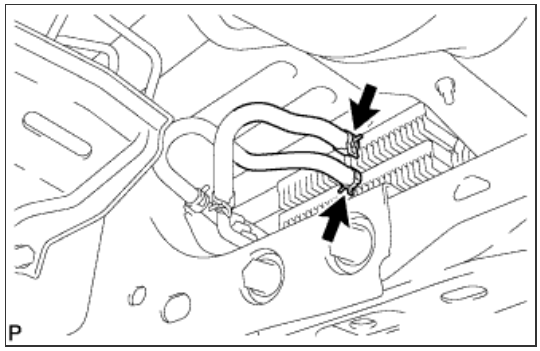
16. INSTALL COMMON RAIL ASSEMBLY LH AND RH

a. Install the common rail assembly LH and RH (Click here).



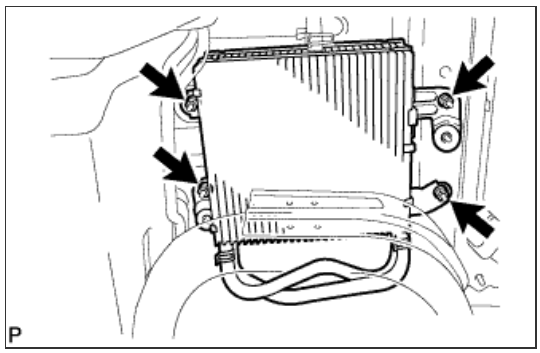
for Preparation Click here

for Preparation Click here



1. REMOVE FRONT FLOOR NO. 3 HEAT INSULATOR

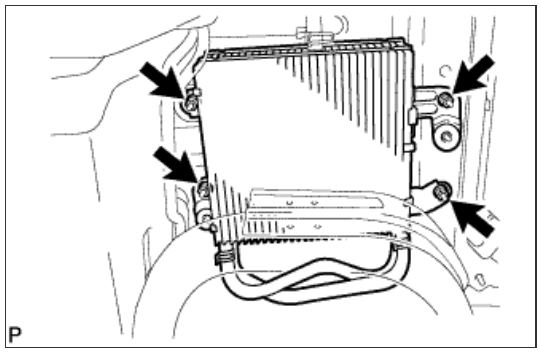
a. Remove the 4 nuts and floor heat insulator.



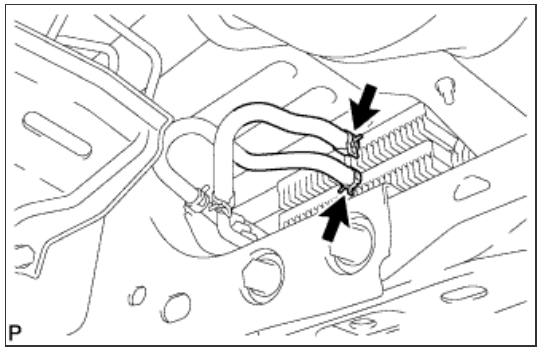
2. REMOVE FUEL COOLER ASSEMBLY

a. Disconnect the fuel hoses from the fuel cooler.

b. Remove the 4 nuts and fuel cooler.



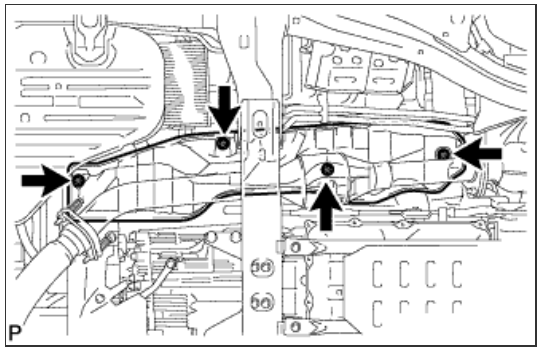
for Preparation Click here



1. INSTALL FUEL COOLER ASSEMBLY

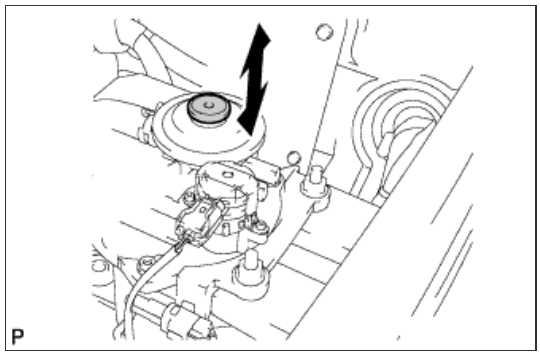
a. Install the fuel cooler with the 4 nuts.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



b. Connect the fuel hoses to the fuel cooler.

2. INSTALL FRONT FLOOR NO. 3 HEAT INSULATOR



a. Install the floor heat insulator with the 4 nuts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

3. BLEED AIR FROM FUEL SYSTEM

a. Using the hand pump indicated by the arrow in the illustration, bleed the fuel system. Continue pumping until pumping becomes difficult.

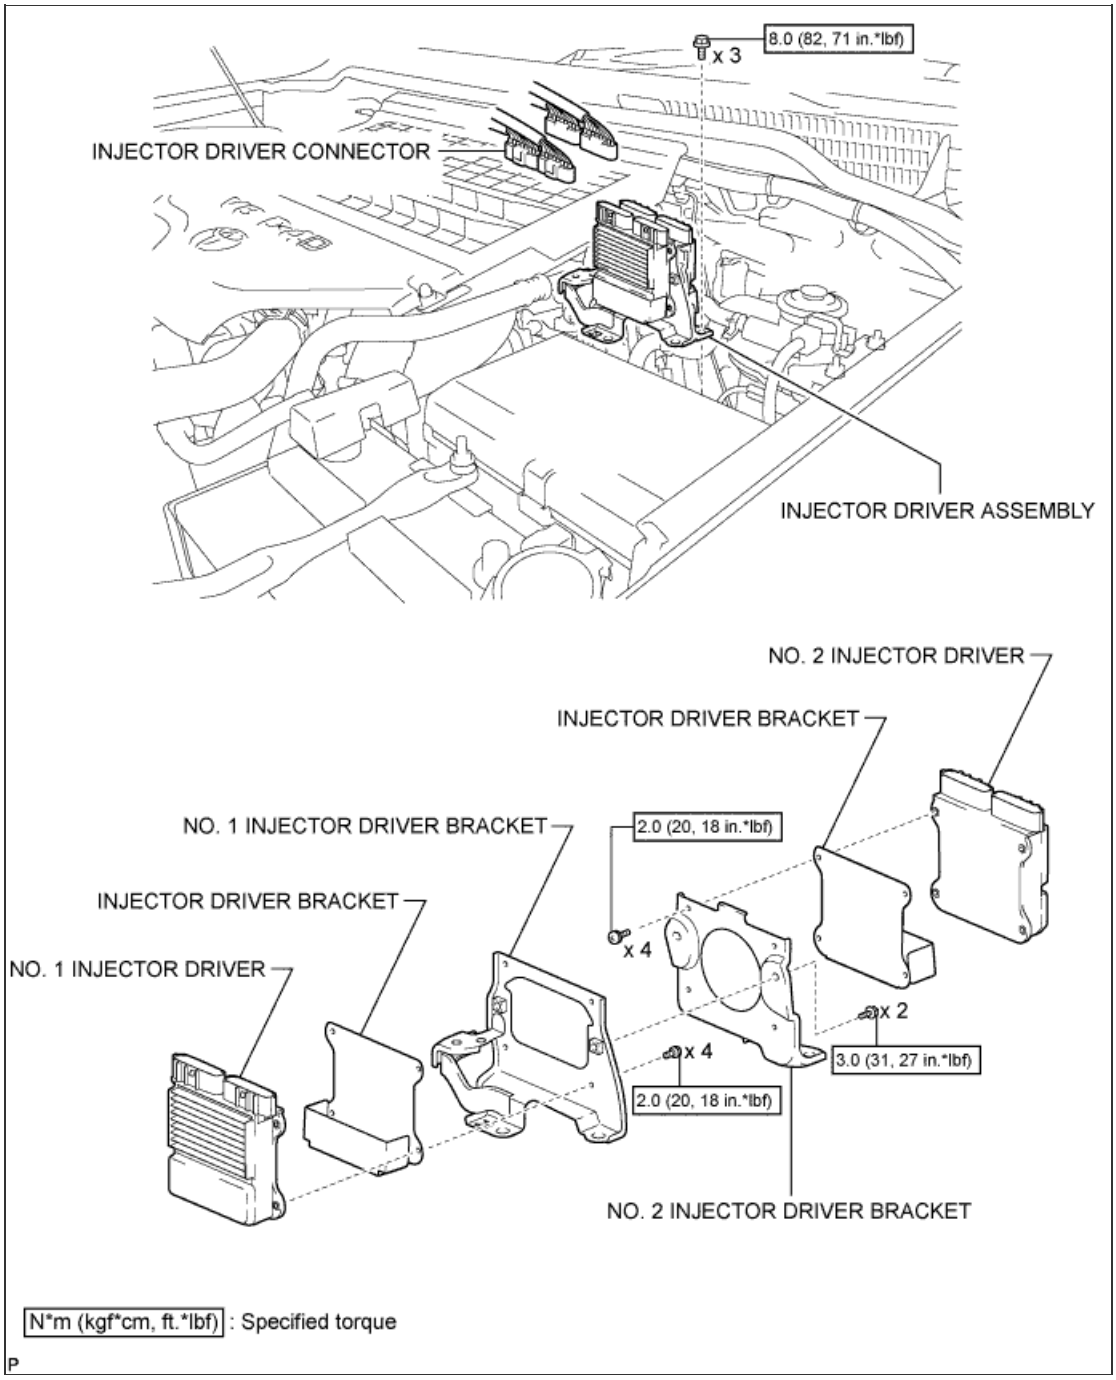
4. INSPECT FOR FUEL LEAK

a. Perform Active Test.

i. Connect the intelligent tester to the DLC3.

ii. Turn the ignition switch to ON.

iii. Start the engine.



iv. Turn the intelligent tester ON.

v. Enter the following menus: Powertrain / Engine / Active Test.

vi. Perform the Active Test.

Tester Display	Test Detail	Control Range	Diagnostic Note
Test the Fuel Leak	Pressurizes fuel inside common rail and checks for fuel leaks	Stop/Start	• The fuel inside the common rail is pressurized to the specified value and the engine speed increases to rpm when Start is selected. • The above conditions are preserved while Start is selected.

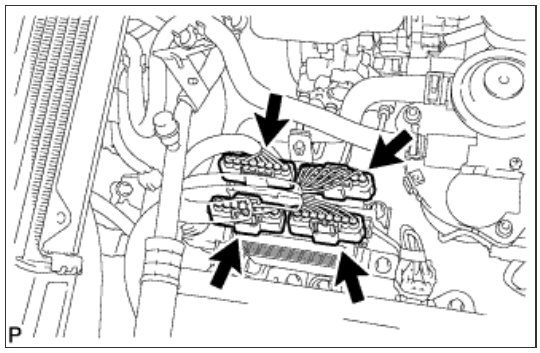
for Preparation [Click here]

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

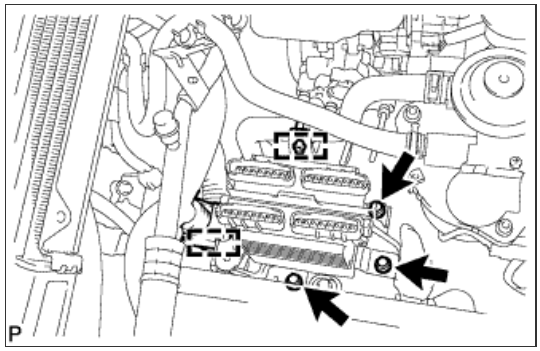
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.



NOTICE:

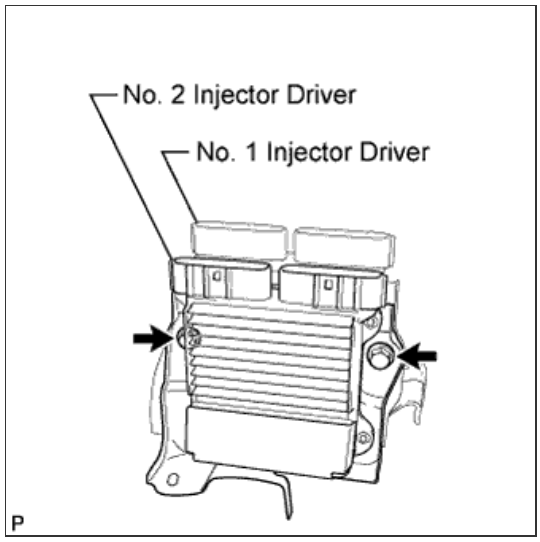
When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

a. Disconnect the cables from the negative (-) main battery and sub-battery terminals.

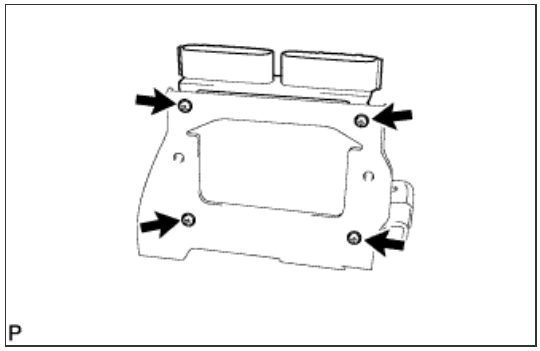


2. REMOVE INJECTOR DRIVER

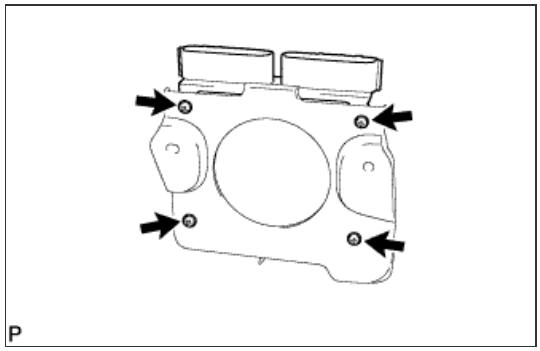
a. Disconnect the 4 in ector driver connectors.



b. Detach the fuel hose clamp and wire harness clamp.



c. Remove the 3 bolts and in ector driver assembly.

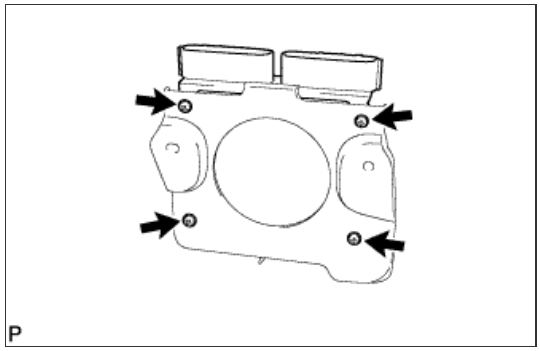


d. Remove the 2 bolts, No. 2 in ector driver and No. 2 in ector driver bracket from the No. 1 in ector driver bracket.

e. Remove the 4 screws, No. 1 in ector driver bracket, No. 1 in ector driver and in ector driver bracket.

f. Remove the 4 screws, No. 2 in ector driver bracket, No. 2 in ector driver and in ector driver bracket.

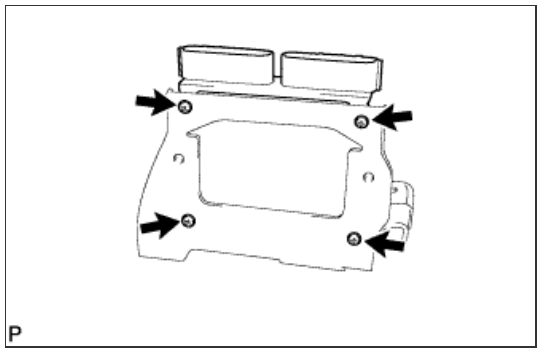
for Preparation Click here



1. INSTALL INJECTOR DRIVER

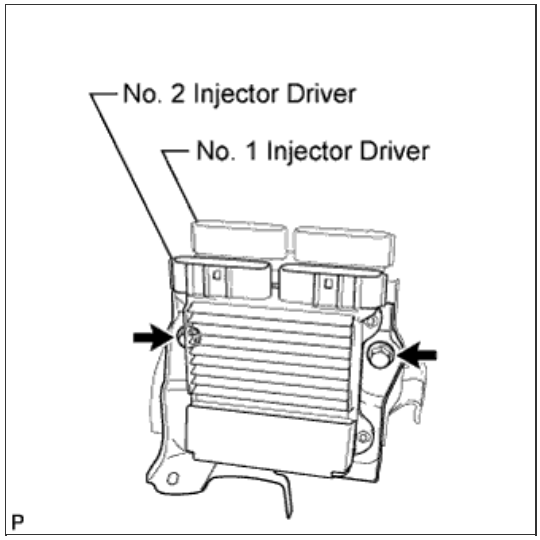
NOTICE:

Be careful not to drop or strike the in ector driver.



a. nstall the No. 2 in ector driver and in ector driver bracket to the No. 2 in ector driver bracket with the screws.

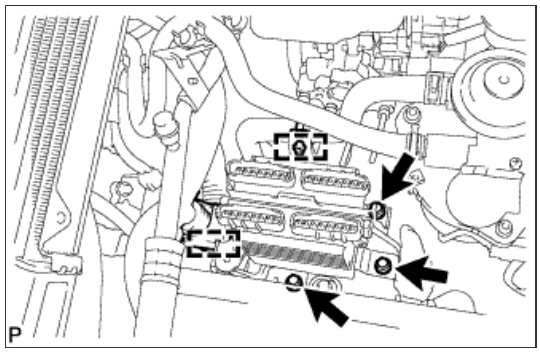
Torque:
2.0 N*m{ 20 kgf*cm , 18 in.*lbf }



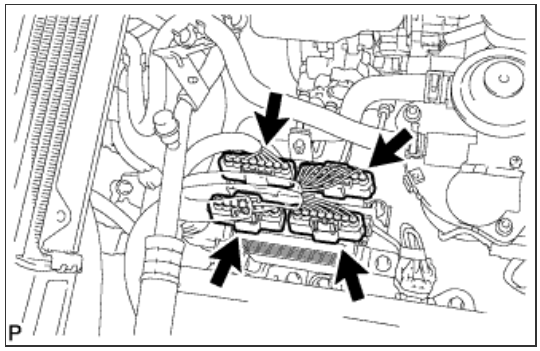
b. nstall the No. 1 in ector driver and in ector driver bracket to the No. 1 in ector driver bracket with the screws.

Torque:
2.0 N*m{ 20 kgf*cm , 18 in.*lbf }

c. nstall the No. 2 in ector driver bracket to the No. 1 in ector driver bracket with the 2 bolts.



Torque:
3.0 N*m{ 31 kgf*cm , 27 in.*lbf }

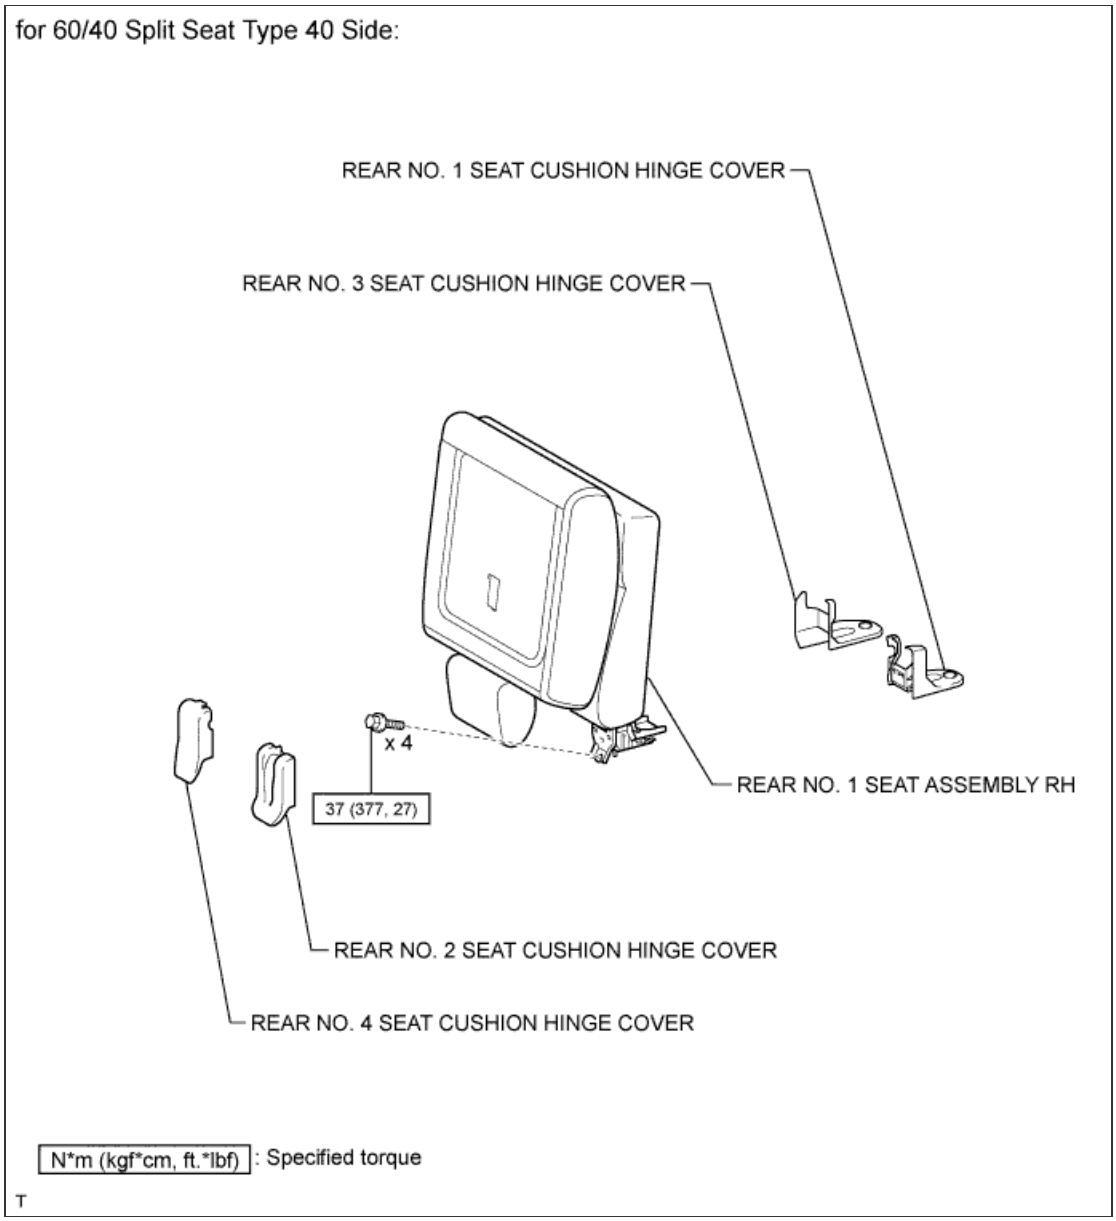


d. nstall the in ector driver assembly with the 3 bolts.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

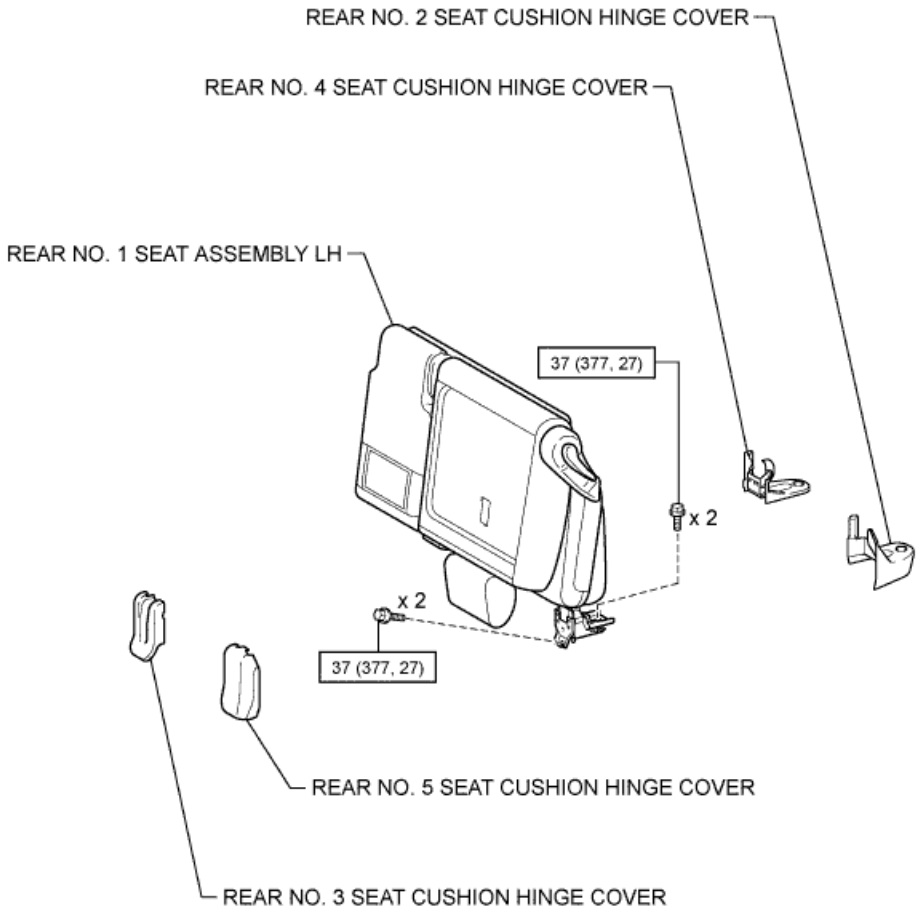
e. Attach the fuel hose clamp and wire harness clamp.

f. Connect the in ector driver connectors.



2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:



en disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

a. Connect the cables to the negative (-) main battery and sub-battery terminals.

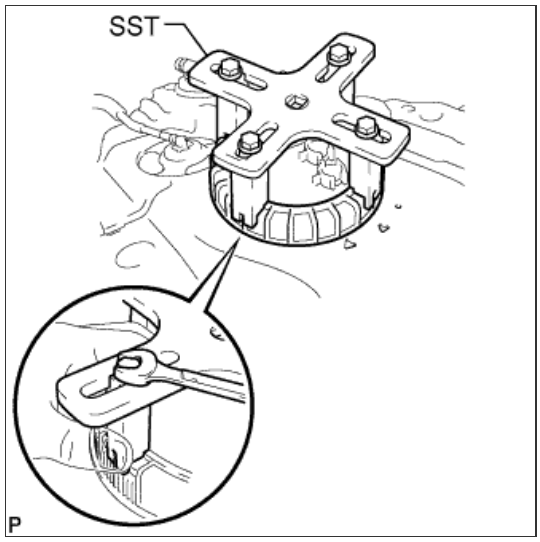
for Preparation Click here

1. REMOVE FUEL TANK SUB-ASSEMBLY

a. Remove the fuel tank sub-assembly (Cl he e).



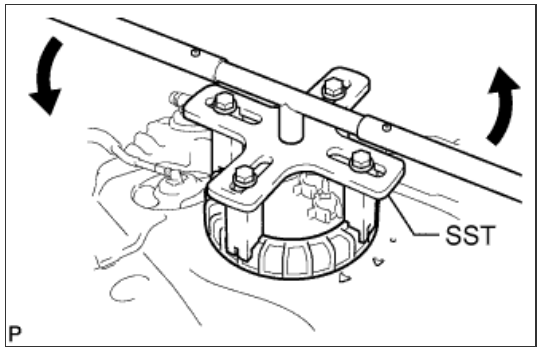
2. REMOVE FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY

a. Set SST on the eta e

SST
09808-14030

HINT:

- **Securely attach the claws of SST to the protrusion of the retainer and fix SST in place.**
- **Install SST while pressing the claws of SST against the retainer (towards the center of SST).**



b. SST, loosen the eta e

SST
09808-14030

Text in Illustration

➡	u

NOTICE:

- **Do not use any tools other than those specified in this operation. Damage to the retainer or the fuel tank may result.**
- **While pressing down on SST so that the claws of SST do not slip off the protrusion of the retainer, turn the retainer counterclockwise to loosen it.**

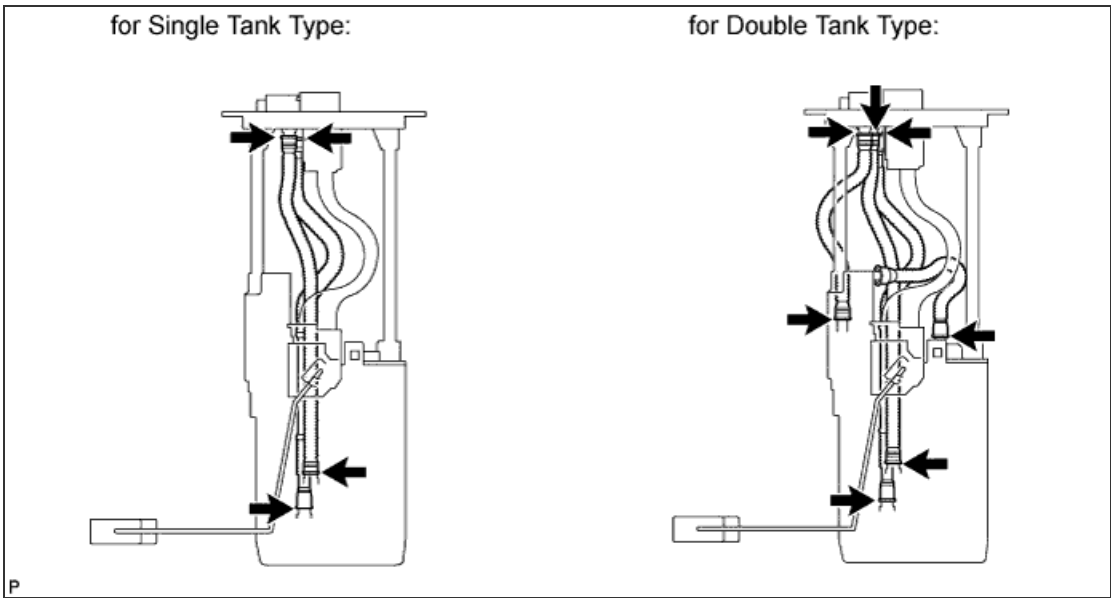
HINT:

he p ot us on of the eta e f t the ends of SST.

c. Remove the eta e

d. Remove the eta e wh le hold the fuel suct on tube assembly by hand.

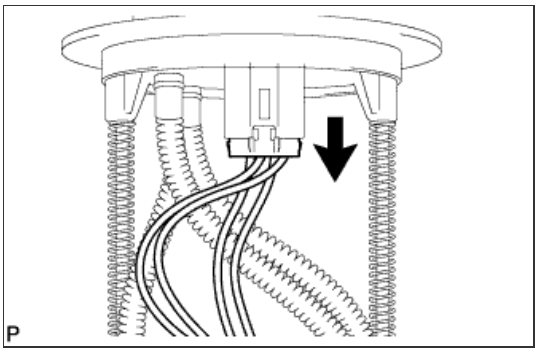
NOTICE:



Be ca eful not to bend the a m of the fuel sende gauge.

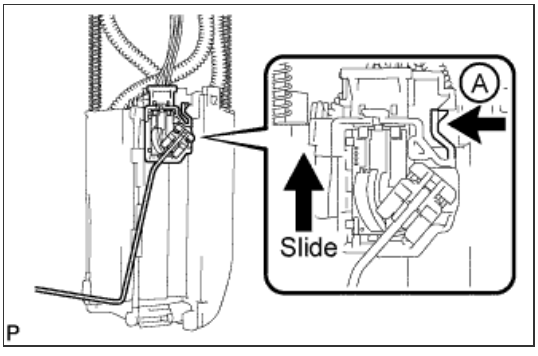
e. Remove the gasket f om the fuel tank.

for Preparation Click here



NOTICE:

Do not disconnect the hoses indicated in the illustration.

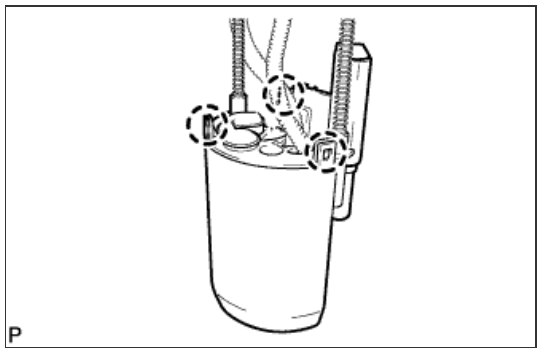


1. REMOVE FUEL SENDER GAUGE ASSEMBLY

a. Disconnect the fuel sender gauge connector.

b. Press down on the sender gauge claw labeled Then slide the sender gauge upward to remove it.

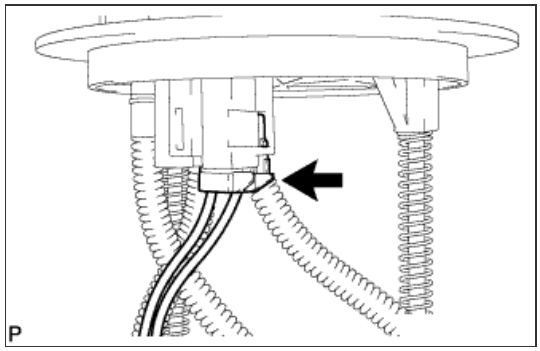
2. REMOVE NO. 1 FUEL SUB-TANK (for Single Tank Type)



a. Using a screwdriver, detach the 3 claws from the claw holes to remove the fuel sub-tank.

NOTICE:

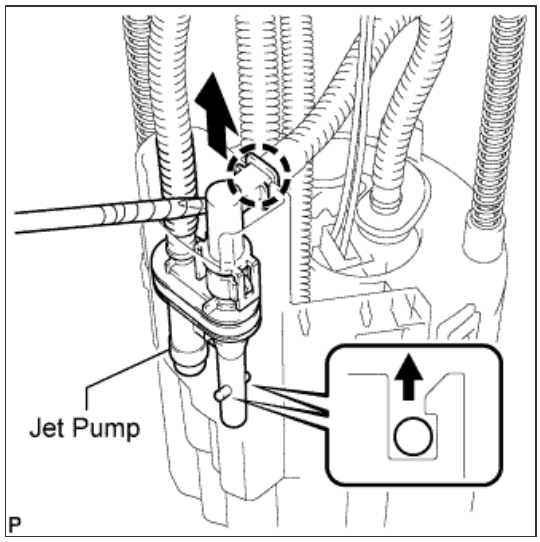
Do not damage the fuel sub-tank.



HINT:

Tape the screwdriver tip before use.

3. REMOVE NO. 1 FUEL SUB-TANK (for Double Tank Type)

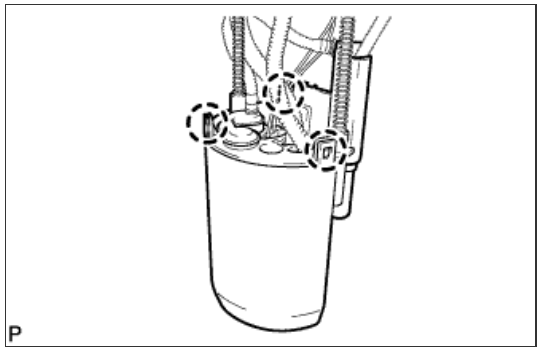


a. Disconnect the fuel pump connector.

b. Using a small screwdriver, detach the claw from the sub-tank.

HINT:

Tape the screwdriver tip before use.



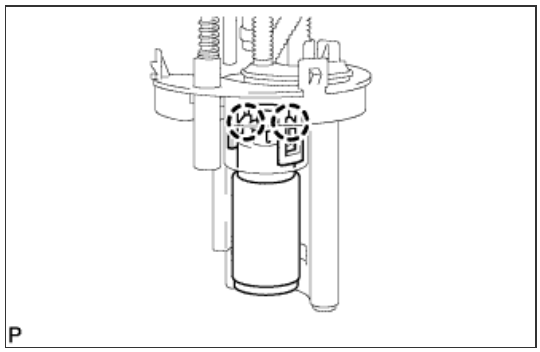
c. Using a screwdriver, detach the 3 claws from the claw holes to remove the fuel sub-tank.

NOTICE:

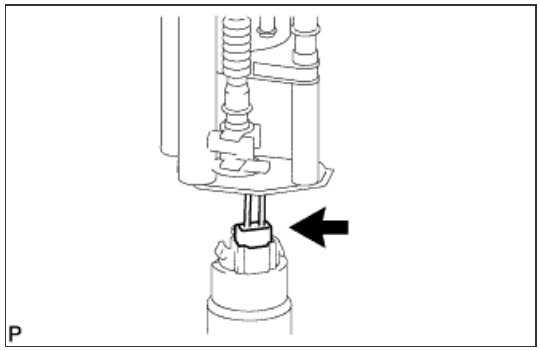
Do not damage the fuel sub-tank.

HINT:

Tape the screwdriver tip before use.

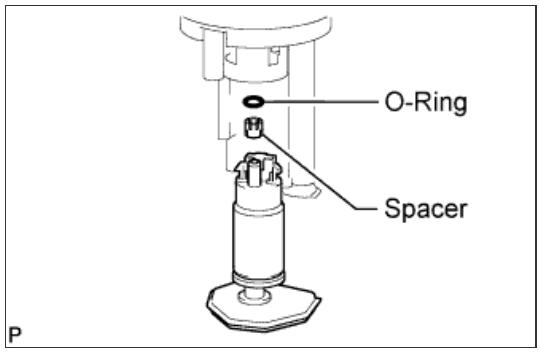


4. REMOVE FUEL PUMP (for Double Tank Type)



a. Using a screwdriver, detach the 2 claws from the claw holes and remove the fuel pump.

HINT:



Tape the screwdriver tip before use.

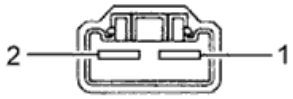
b. Disconnect the fuel pump wire harness connector from the fuel pump.

c. Remove the O-ring and spacer from the fuel pump.

for Preparation Click here

1. INSPECT FUEL PUMP

a. Inspect the resistance of the fuel pump.



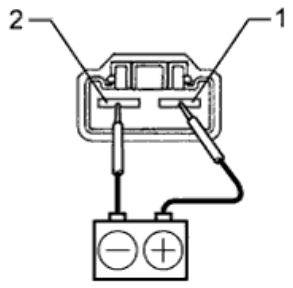
i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	20	to 3.0 Ω

If the result is not as specified, replace the fuel pump.

Component without harness connected:
(Fuel Pump)

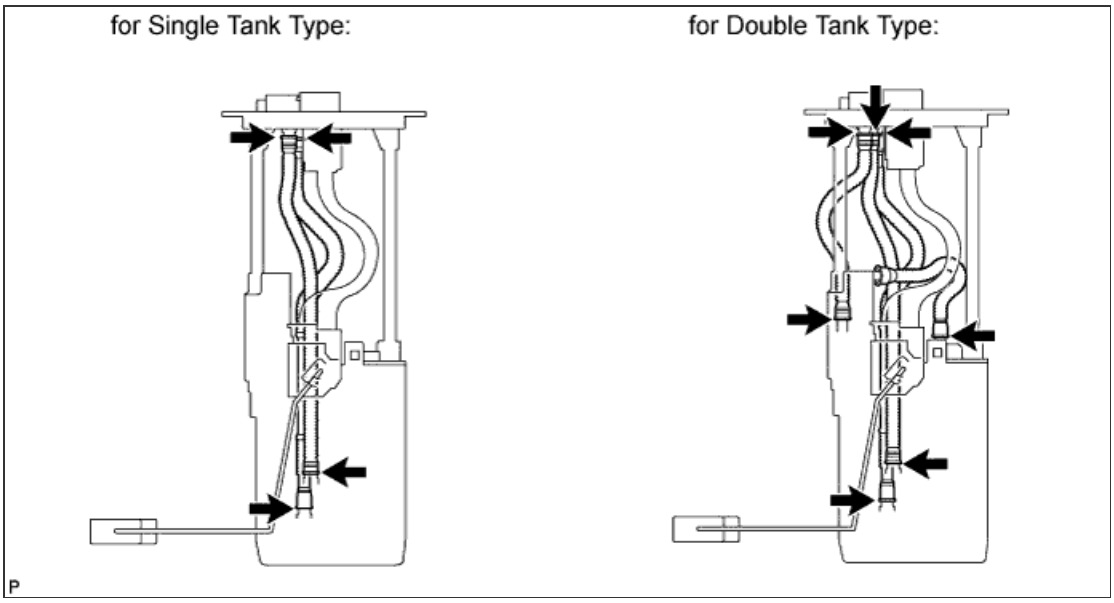


b. Inspect the operation of the fuel pump.

i. Connect the battery s positive (+) lead to terminal 1 of the connector, and the negative (-) lead to terminal 2. Check that the fuel pump operates.
If the result is not as specified, replace the fuel pump and fuel pump ECU.

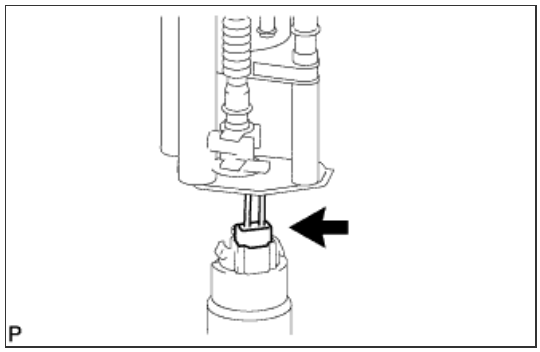
NOTICE:

- **These tests st be perfor ed within 1 seconds to prevent the coil fro burning out.**
- **Keep the fuel pu p as far away fro the battery as possible.**
- **l ays turn the voltage on and off on the battery side, not the fuel pu p side.**



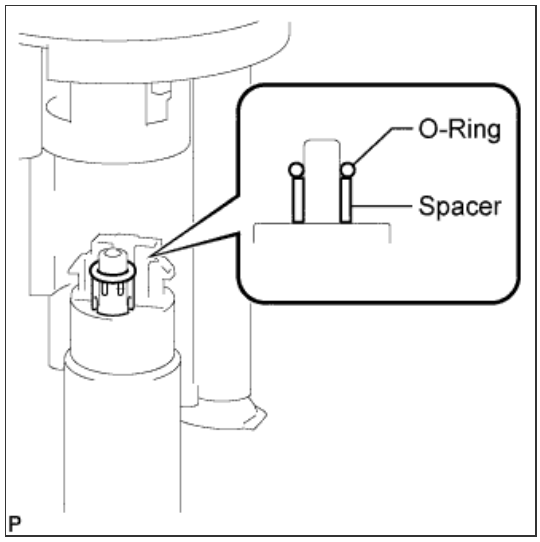
Component without harness connected:
(Fuel Pump)

for Preparation Click here

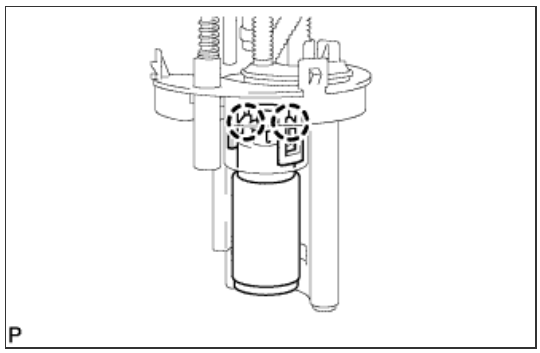


NOTICE:

Do not disconnect the hoses indicated in the illustration.

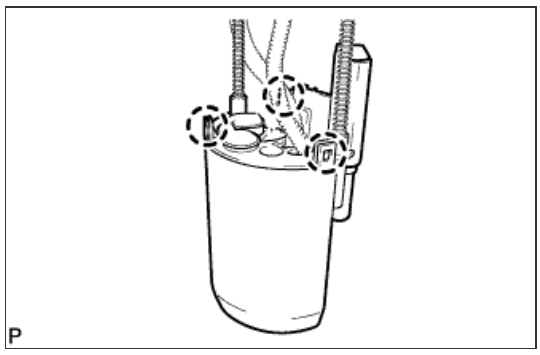


1. INSTALL FUEL PUMP (for Double Tank Type)

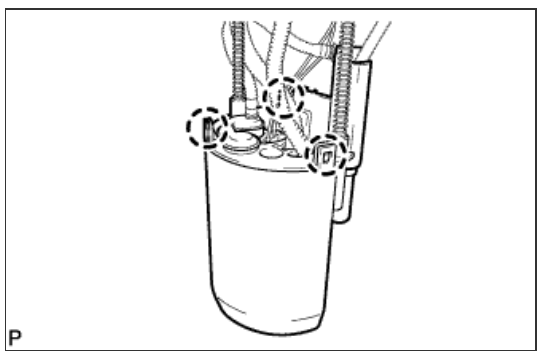


a. Connect the fuel pump wire harness connector to the fuel pump.

b. a light coat of gasoline to a new O-ring. Then install the spacer and O-ring to the fuel pump.



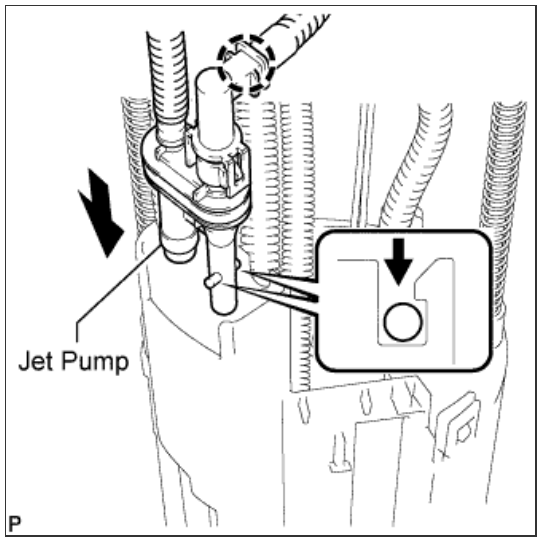
c. ttach the 2 claws to the claw holes to install the fuel pump.



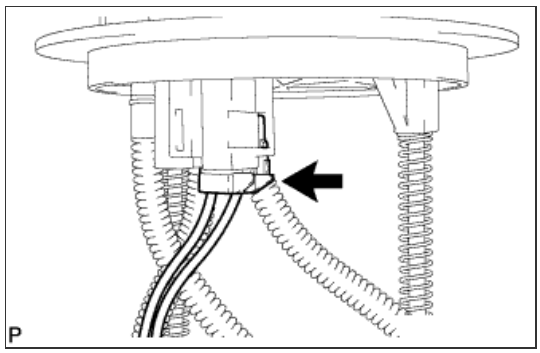
2. INSTALL NO. 1 FUEL SUB-TANK (for Single Tank Type)

a. ttach the 3 claws to the claw holes to install the fuel sub-tank.

3. INSTALL NO. 1 FUEL SUB-TANK (for Double Tank Type)



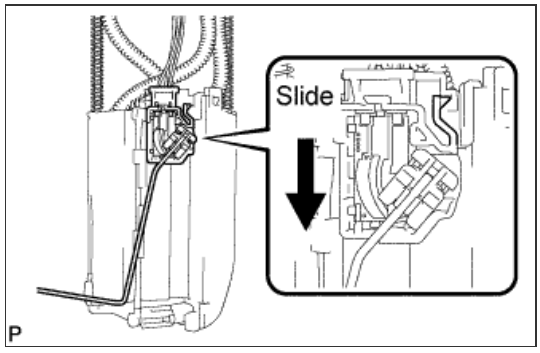
a. ttach the 3 claws to the claw holes to install the fuel sub-tank.



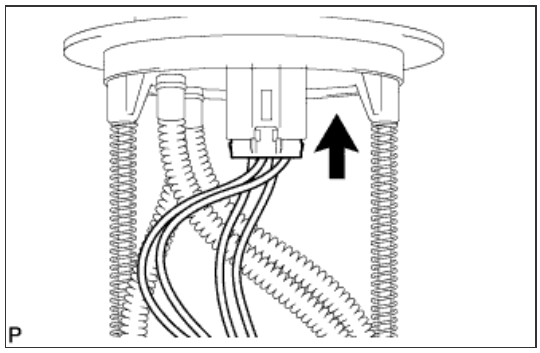
b. ttach the jet pump to the sub-tank.

HINT:

Make sure the 2 protrusions of the jet pump are properly installed into the sub-tank.



c. Connect the fuel pump connector.



4. INSTALL FUEL SENDER GAUGE ASSEMBLY

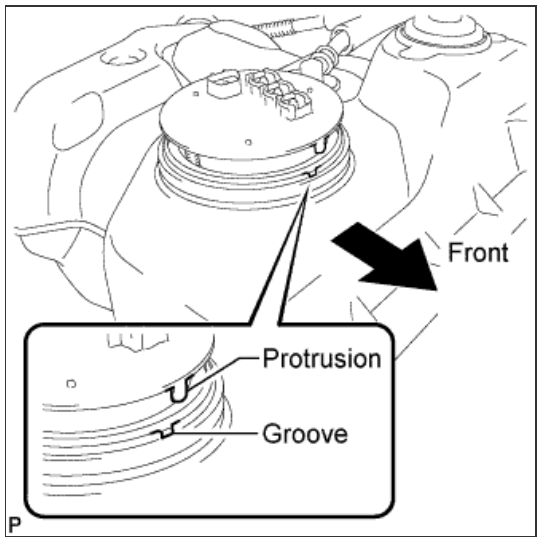
a. Set the sender gauge to the fuel sub-tank. Then slide the sender gauge downward to install it.

b. Connect the fuel sender gauge connector.

for Preparation Click here

1. INSTALL FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY

a. Apply a light coat of gasoline or grease to a new gasket, and install it to the fuel tank.



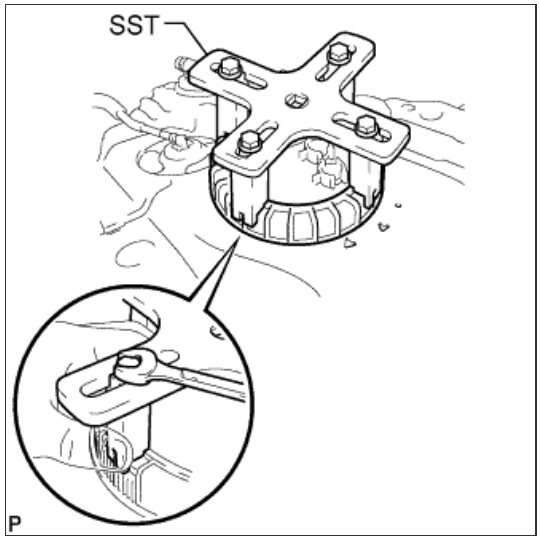
b. Install the fuel suction with pump and gauge tube into the fuel tank.

NOTICE:

Be careful not to bend the arm of the fuel sender gauge.

HINT:

Align the protrusion of the fuel suction with pump and gauge tube with the groove of the fuel tank.



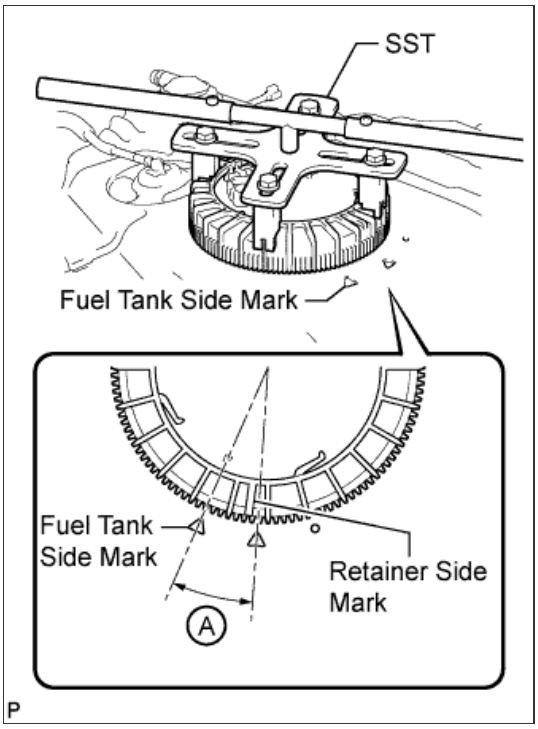
c. Put the retainer on the fuel tank. While holding the fuel suction with pump and gauge tube, tighten the retainer one complete turn by hand.

d. Set SST on the retainer.

SST
09808-14030

HINT:

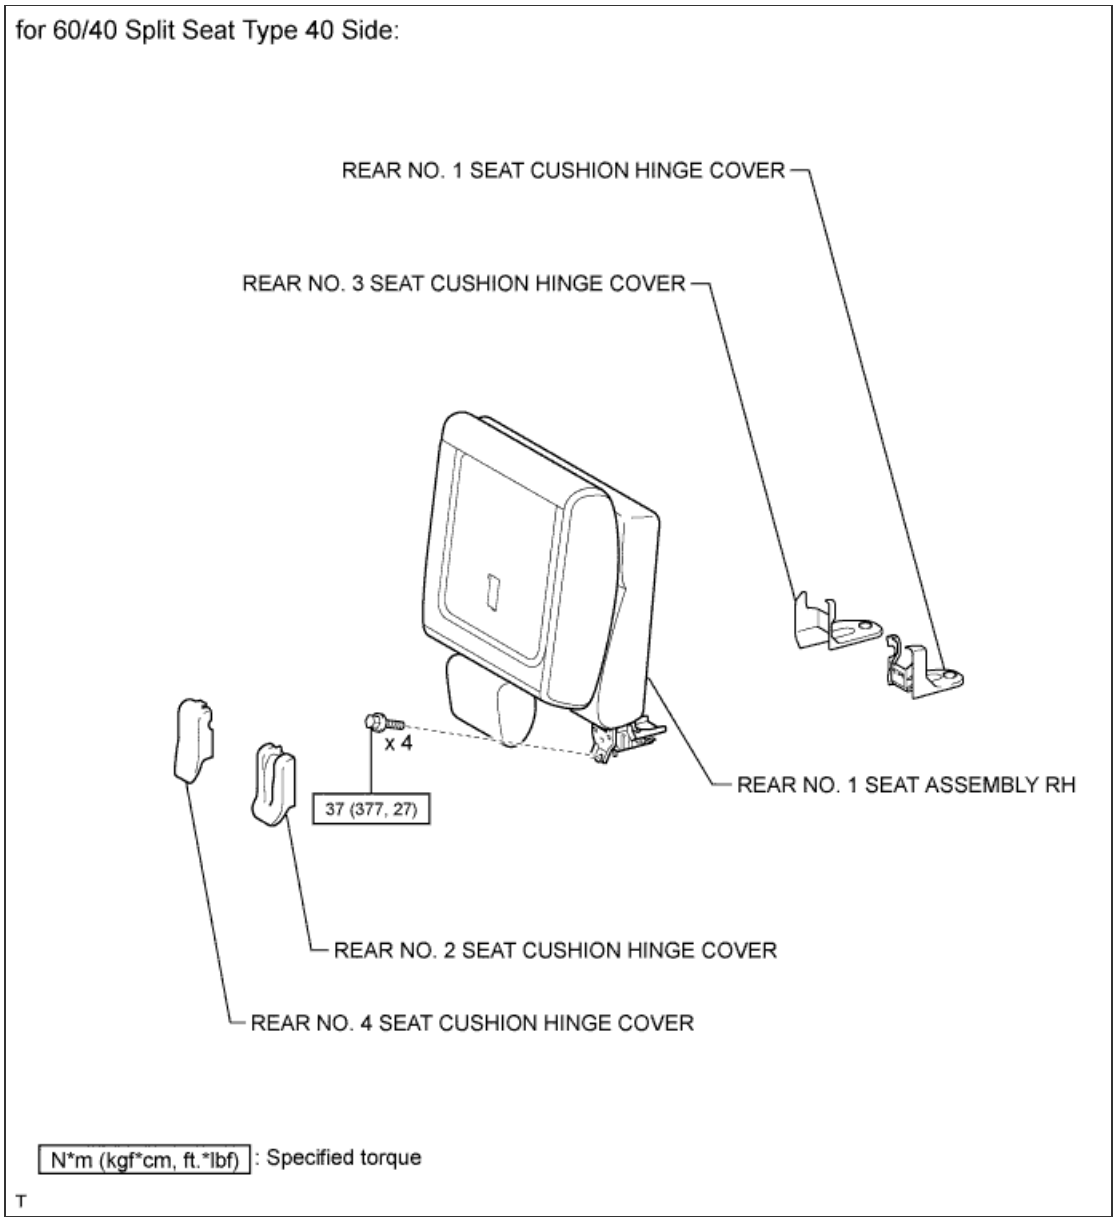
- **Hold the fuel suction tube assembly upright by hand to ensure that the fuel suction tube gasket is not moved out of position.**
- **Securely attach the claws of SST to the protrusions of the retainer and fix SST in place.**
- **Install SST while pressing the claws of SST against the retainer (toward the center of SST).**



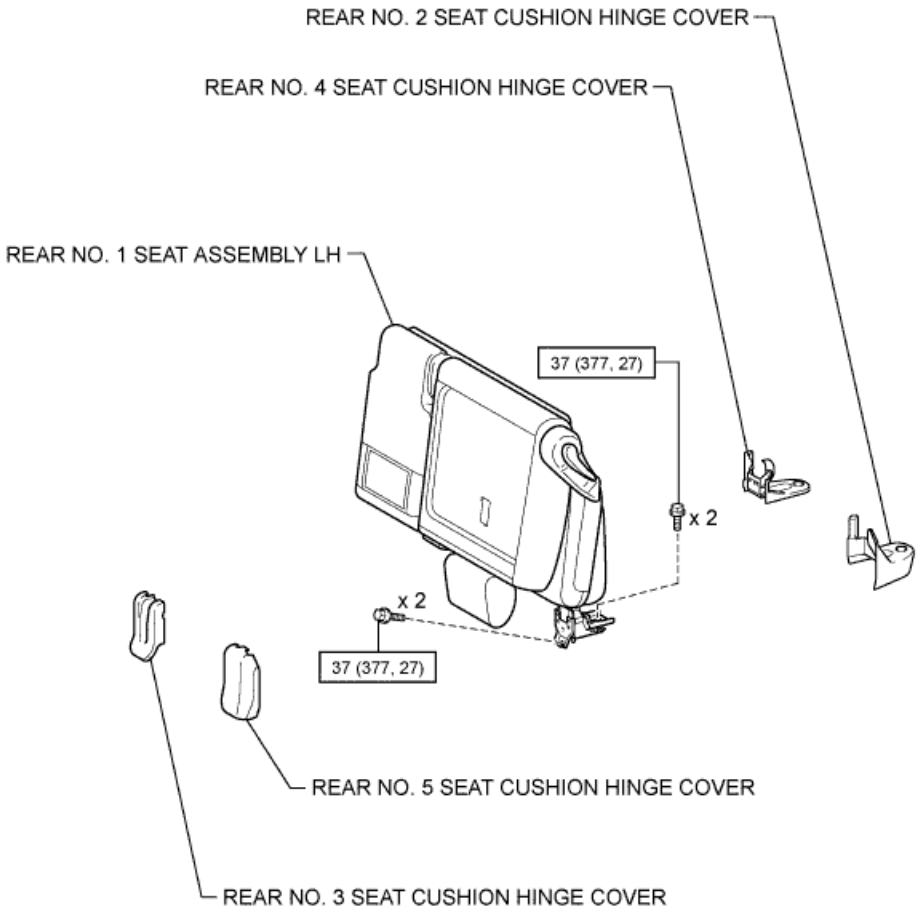
e. Using SST, tighten the retainer until the mark on the retainer is within range A on the fuel tank as shown in the illustration.

SST
09808-14030

HINT:



Fit the tips of SST onto the ribs of the retainer.



2. INSTALL FUEL TANK SUB-ASSEMBLY

a. Install the fuel tank sub-assembly (Click here).

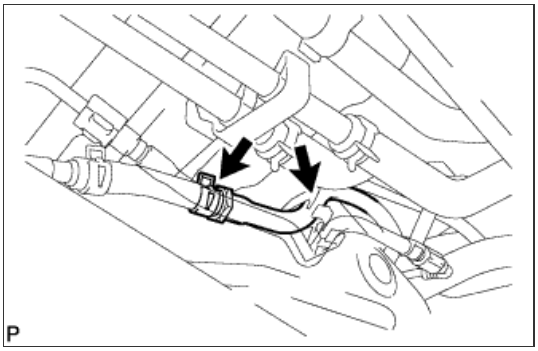
for Preparation Click here

1. REMOVE FUEL TANK CAP ASSEMBLY

2. REMOVE NO. 1 FUEL TANK PROTECTOR SUB-ASSEMBLY



a. Remove the 5 bolts and fuel tank protector.

3. DISCONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY

a. Detach the fuel tube clamp.

b. Disconnect the fuel tank main tube.

4. DRAIN FUEL

a. for Double Tank Type:

i. Connect the intelligent tester to the DLC3.

ii. Turn the ignition switch to ON.

NOTICE:

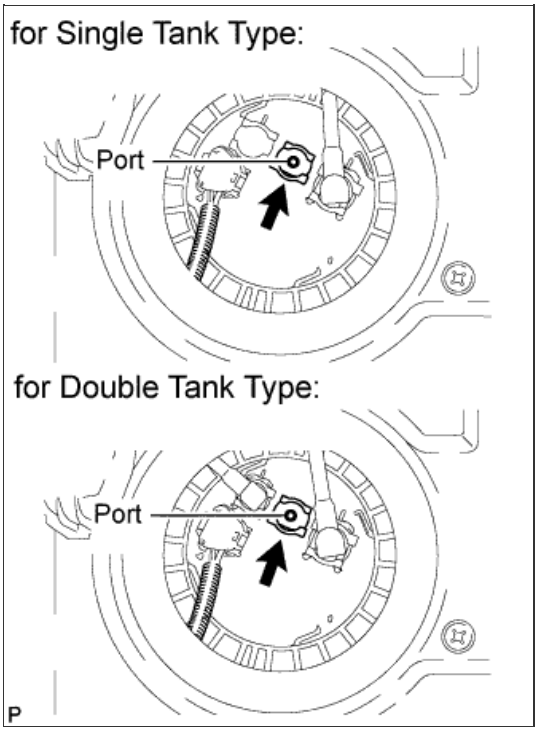
Do not start the engine.

iii. Turn the intelligent tester ON.

iv. Enter the following menus: Powertrain / Engine / Active Test / Activate the Intank Fuel Pump Relay.

CAUTION:

- **Do not smoke or be near an open flame when working on the fuel system.**
- **Secure good ventilation.**



HINT:

for Single Tank Type:

Remove the fuel tube joint clip and disconnect the fuel tank return tube, and drain fuel from the port shown in the illustration.

for Double Tank Type:

If the fuel pump does not operate, remove the fuel tube joint clip and disconnect the fuel tank return tube, and drain fuel from the port shown in the illustration.

5. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

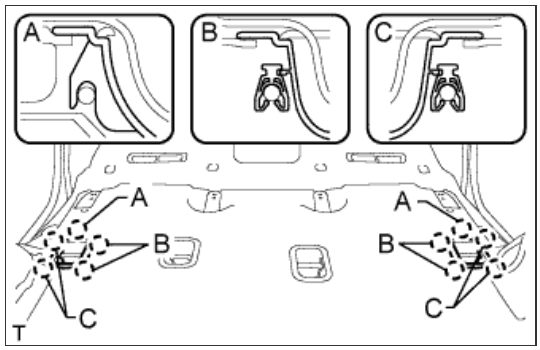
a. Disconnect the cables from the negative (-) main battery and sub-battery terminals.

6. REMOVE REAR NO. 1 SEAT ASSEMBLY RH (for 60/40 Split Seat Type 40 Side)

a. Remove the rear No. 1 seat assembly RH (Click here).

7. REMOVE REAR NO. 1 SEAT ASSEMBLY LH (for 60/40 Split Seat Type 60 Side)

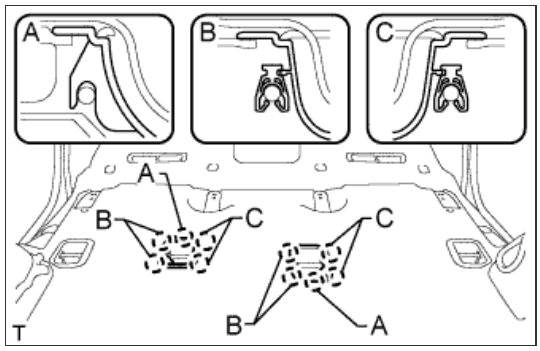
a. Remove the rear No. 1 seat assembly LH (Click here).



8. REMOVE REAR NO. 2 SEAT ASSEMBLY

a. for Face to Face Seat Type:
Remove the rear No. 2 seat assembly (Click here).

b. except Face to Face Seat Type:
Remove the rear No. 2 seat assembly (Click here).

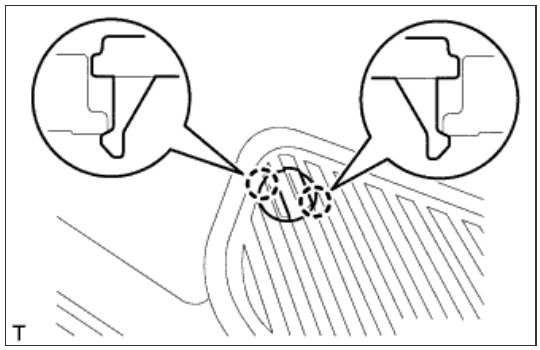


9. REMOVE REAR NO. 1 SEAT PROTECTOR

a. Detach the 10 claws and remove the 2 seat protectors.

10. REMOVE REAR NO. 2 SEAT PROTECTOR

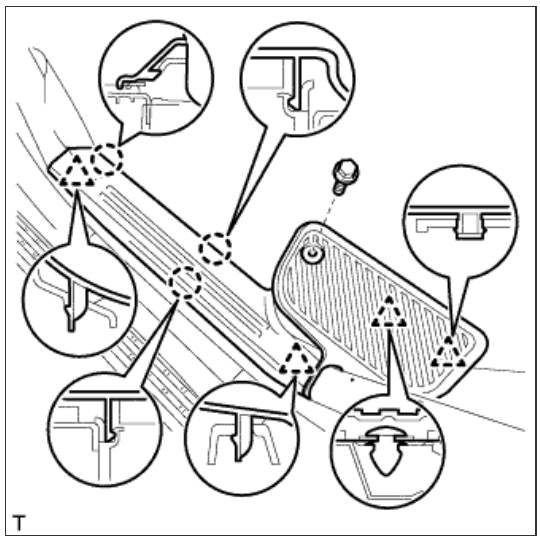
a. Detach the 10 claws and remove the 2 seat protectors.



11. REMOVE REAR STEP COVER

HINT:

Use the same procedure to remove the step cover on the other side.

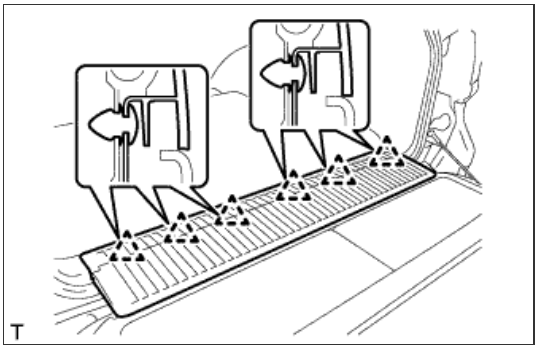


a. Detach the 2 claws and remove the step cover.

12. REMOVE REAR DOOR SCUFF PLATE LH

a. Remove the screw.

b. Detach the 3 claws and 4 clips, and remove the scuff plate.



13. REMOVE REAR DOOR SCUFF PLATE RH

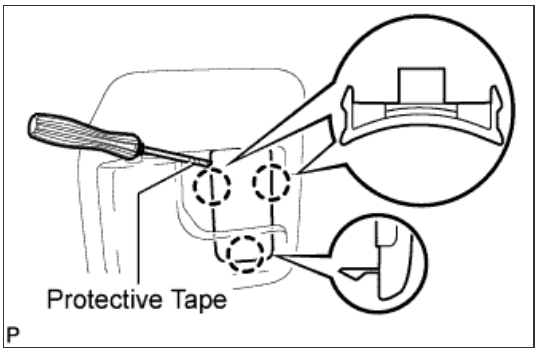
HINT:

Use the same procedures described for the LH side.

14. REMOVE REAR FLOOR MAT REAR SUPPORT PLATE

a. Detach the 6 clips and remove the support plate.

15. REMOVE REAR SEAT COVER CAP (w/ Rear No. 2 Seat, except Face to Face Seat Type)



HINT:

Use the same procedure to remove the rear seat cover cap on the other side.

a. Using a screwdriver, detach the 3 claws and remove the rear seat cover cap.

HINT:

Tape the screwdriver tip before use.

16. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY LH

a. w/ Sliding Roof:
Remove the front quarter trim panel assembly LH (Click here).

b. w/o Sliding Roof:
Remove the front quarter trim panel assembly LH (Click here).

17. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY RH

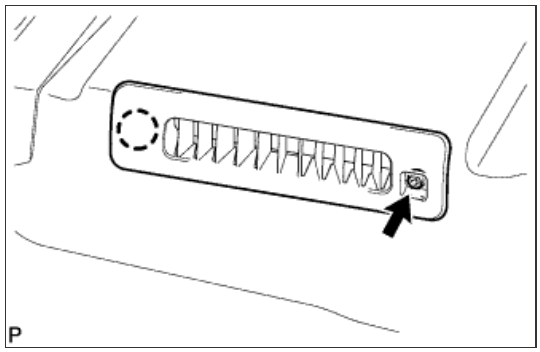
a. w/ Sliding Roof:
Remove the front quarter trim panel assembly RH (Click here).

b. w/o Sliding Roof:
Remove the front quarter trim panel assembly RH (Click here).

18. REMOVE AIR DUCT PLUG (w/ Rear Air Conditioning System)

a. for Standard:
Remove the front fender splash shield (Click here).

b. w/ Winch:
Remove the front fender splash shield (Click here).



19. REMOVE REAR AIR DUCT GUIDE (w/ Rear Air Conditioning System)

a. Remove the screw.

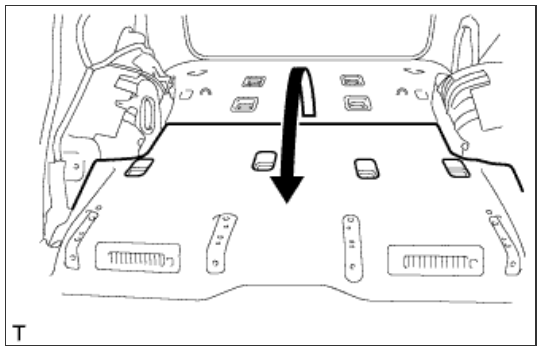
b. Detach the claw and remove the guide.

HINT:

Use the same procedures for both sides.

20. REMOVE FRONT FLOOR CARPET ASSEMBLY

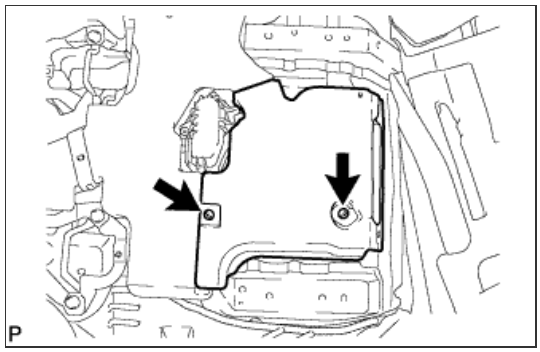
a. w/ Rear Air Conditioning System:
Fold back the floor carpet.



HINT:

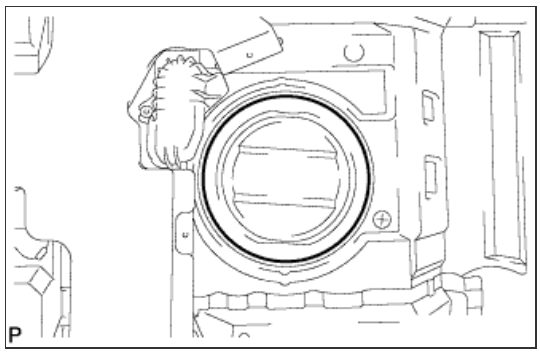
Fold back the floor carpet so that the air duct can be removed.

b. w/o Rear Air Conditioning System:
Fold back the floor carpet.

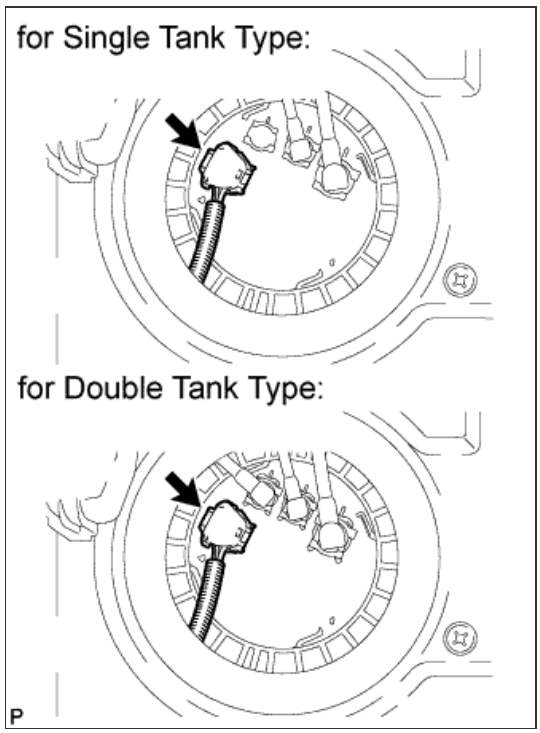


HINT:

Fold back the floor carpet so that the service hole cover can be removed.



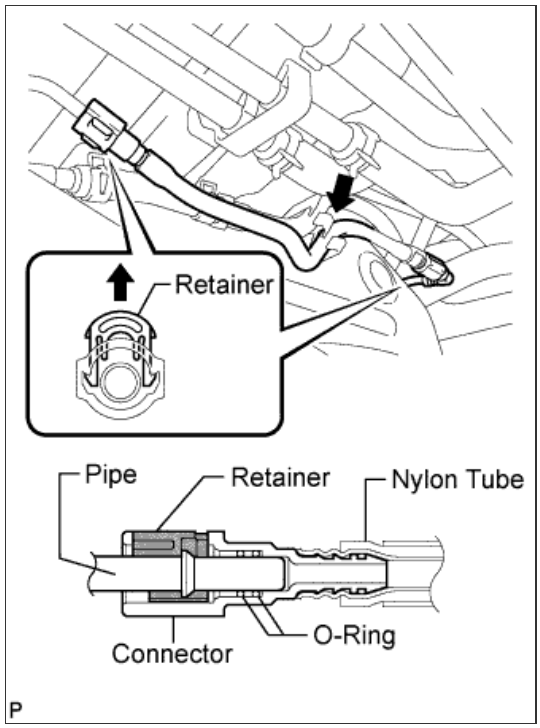
21. REMOVE REAR FLOOR NO. 2 SERVICE HOLE COVER



a. w/ Rear Air Conditioning System:
Remove the 2 screws and air duct.

b. Remove the service hole cover.

c. Disconnect the fuel pump and fuel sender gauge connector.

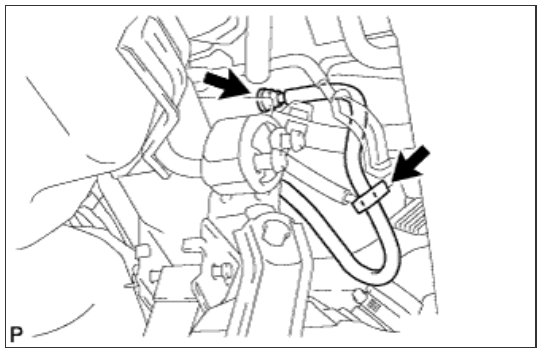


22. DISCONNECT FUEL TANK RETURN TUBE

a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect both ends of the fuel tank return tube.

NOTICE:

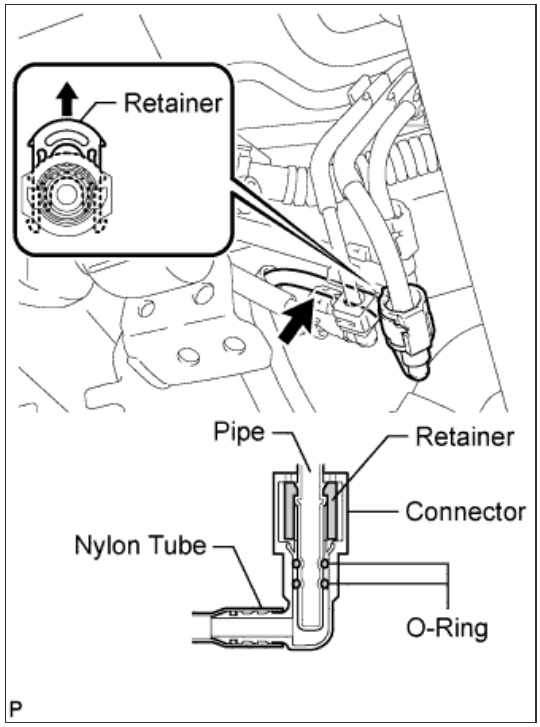


- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**

23. DISCONNECT NO. 2 FUEL TANK BREATHER TUBE (for Single Tank Type)

a. Detach the fuel tube clamp.

b. Disconnect the No. 2 fuel tank breather tube from the body.



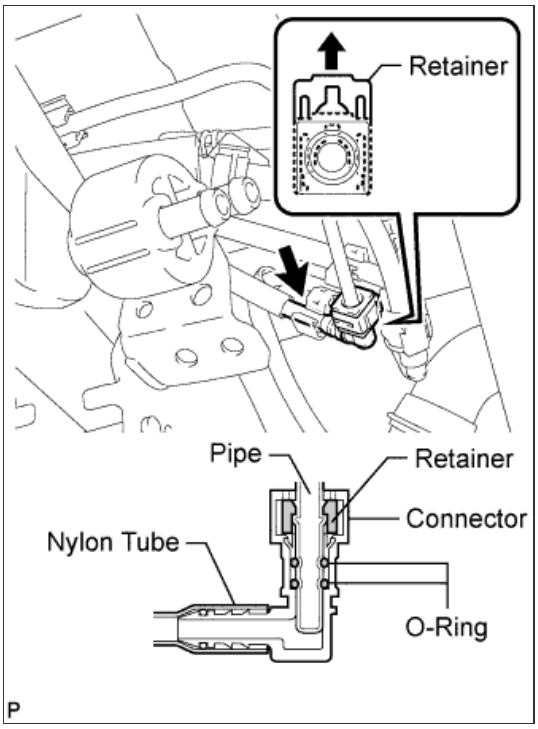
24. DISCONNECT NO. 2 FUEL MAIN TUBE SUB-ASSEMBLY (for Double Tank Type)

a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel main tube.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**



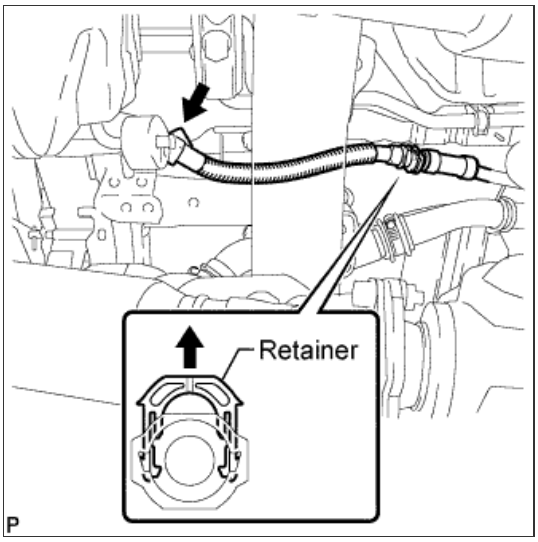
25. DISCONNECT NO. 2 FUEL TANK BREATHER TUBE (for Double Tank Type)

a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank breather tube.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**



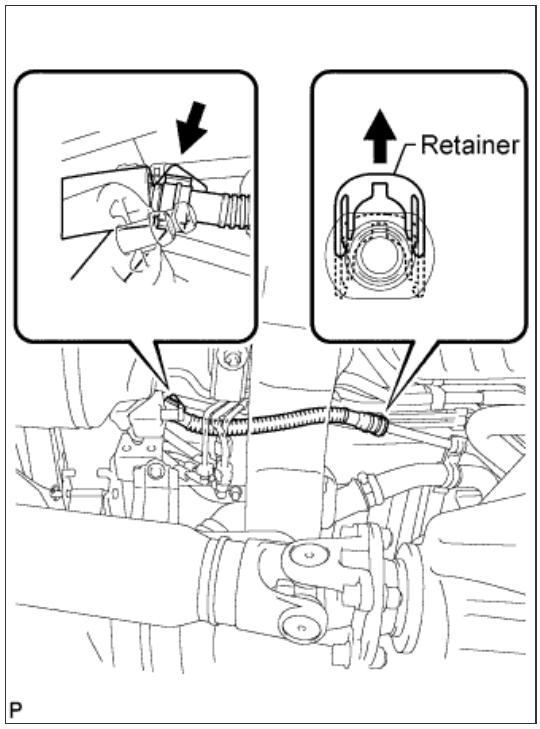
26. DISCONNECT FUEL TANK BREATHER TUBE (for Single Tank Type)

a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank breather tube.

NOTICE:

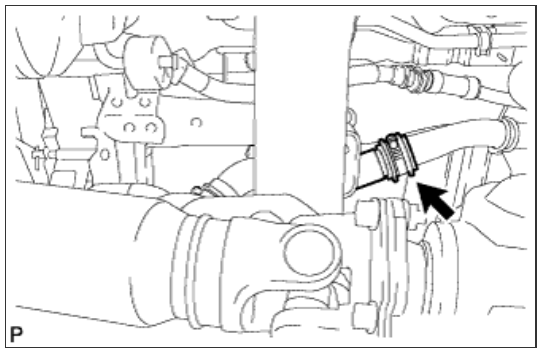
- **Do not use any tools in this procedure.**
- **Check for any dirt and foreign matter contamination in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-rings or cause leaks in the seal between the pipe and connector.**



27. DISCONNECT FUEL TANK BREATHER TUBE (for Double Tank Type)

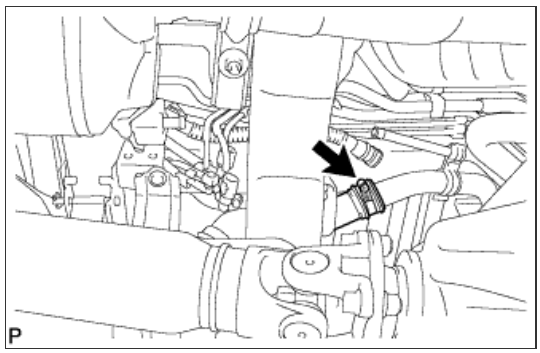
a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank breather tube.



NOTICE:

- **Do not use any tools in this procedure.**
- **Check for any dirt and foreign matter contamination in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-rings or cause leaks in the seal between the pipe and connector.**

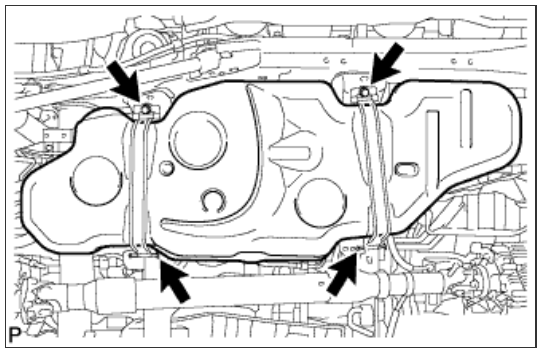


28. DISCONNECT FUEL TANK TO FILLER PIPE HOSE (for Single Tank Type)

a. Disconnect the hose from the filler pipe.

29. DISCONNECT FUEL TANK TO FILLER PIPE HOSE (for Double Tank Type)

a. Disconnect the hose from the filler pipe.



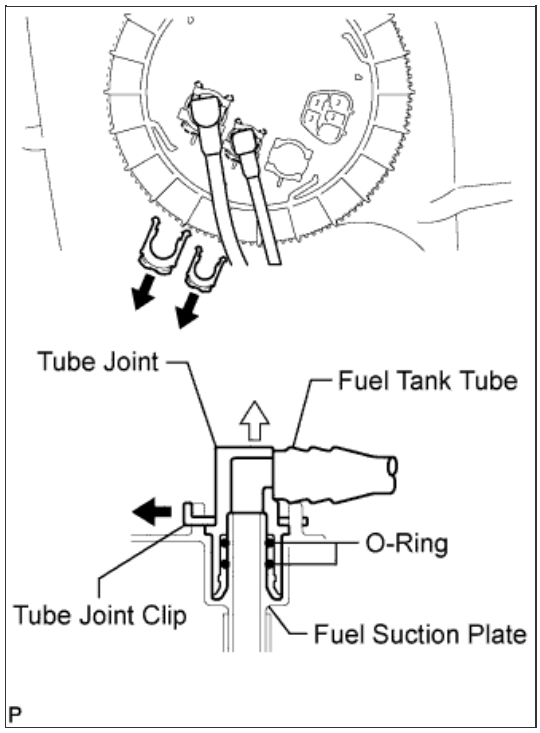
30. REMOVE FUEL TANK SUB-ASSEMBLY

a. Place a transmission jack under the fuel tank.

b. Remove the 2 bolts, 2 clips, 2 pins and 2 fuel tank bands.

c. Lower the transmission jack to remove the fuel tank from the vehicle.

NOTICE:

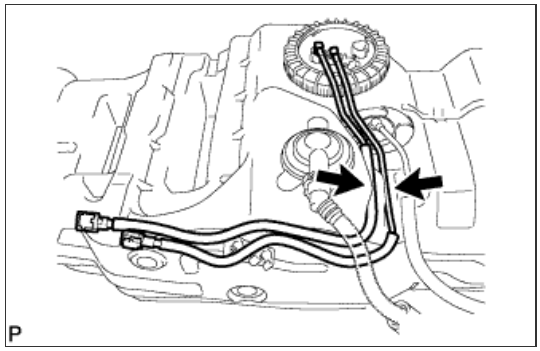


Do not allow the fuel tank to contact the vehicle, especially the differential.

HINT:

Lower the transmission jack slowly.

31. REMOVE FUEL TANK MAIN TUBE SUB-ASSEMBLY AND FUEL TANK RETURN TUBE (for Single Tank Type)



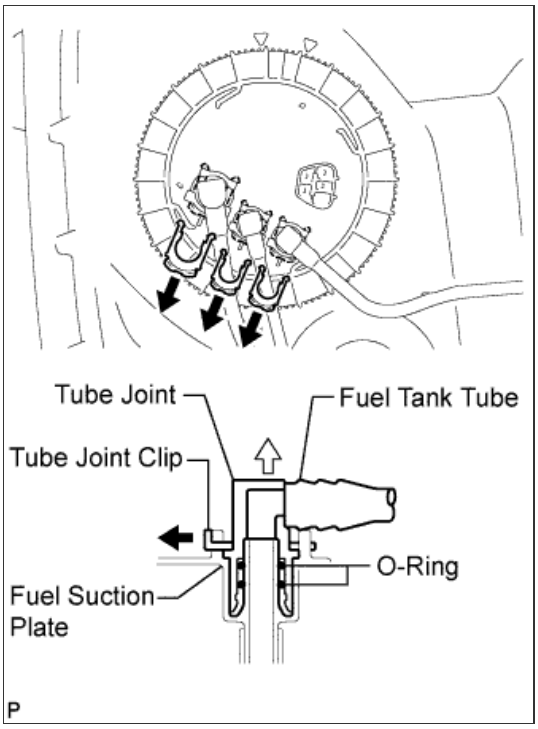
a. Remove the 2 fuel tube joint clips and pull out the 2 fuel tubes.

NOTICE:

- **Remove any dirt and foreign matter on the fuel tube joint before performing this work.**
- **Do not allow any scratches or foreign matter on the parts when disconnecting them, as the fuel tube joint contains the O-rings that seal the plug.**
- **Perform this work by hand. Do not use any tools.**
- **Do not forcibly bend, twist or turn the nylon tube.**
- **Protect the disconnected part by covering it with a plastic bag and tape after disconnecting the fuel tubes.**

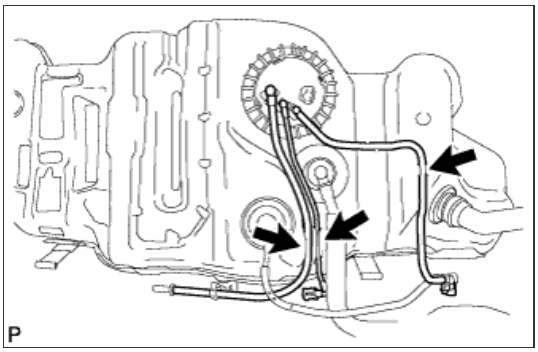
b. Remove the 2 fuel tubes from the fuel tank.

32. REMOVE FUEL TANK MAIN TUBE SUB-ASSEMBLY, FUEL TANK RETURN TUBE AND NO. 2 FUEL MAIN TUBE SUB-ASSEMBLY (for Double Tank Type)



a. Remove the 3 fuel tube joint clips and pull out the 3 fuel tubes.

NOTICE:

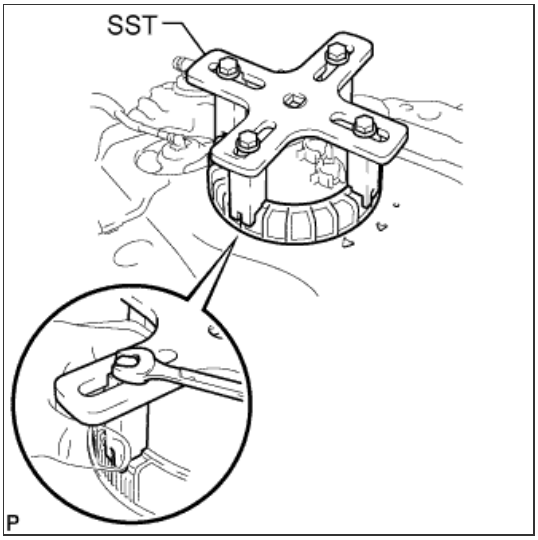


- **Remove any dirt and foreign matter on the fuel tube joint before performing this work.**
- **Do not allow any scratches or foreign matter on the parts when**

disconnecting them, as the fuel tube joint contains the O-rings that seal the plug.

- Perform this work by hand. Do not use any tools.
- Do not forcibly bend, twist or turn the nylon tube.
- Protect the disconnected part by covering it with a plastic bag and tape after disconnecting the fuel tubes.

b. Remove the 3 fuel tubes from the fuel tank.



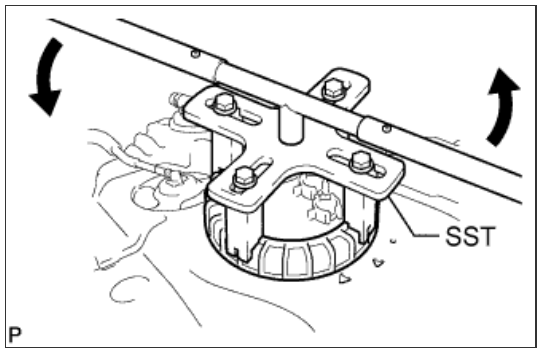
33. REMOVE FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY

a. Set SST on the retainer.

SST
09808-14030

HINT:

- **Securely attach the claws of SST to the protrusion of the retainer and fix SST in place.**
- **Install SST while pressing the claws of SST against the retainer (towards the center of SST).**



b. Using SST, loosen the retainer.

SST
09808-14030

Text in Illustration

➡	Turn

NOTICE:

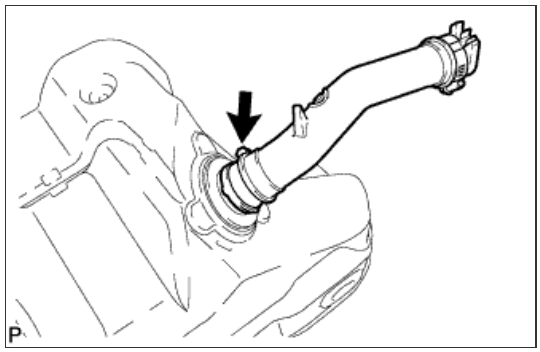
- **Do not use any tools other than those specified in this operation. Damage to the retainer or the fuel tank may result.**
- **While pressing down on SST so that the claws of SST do not slip off the protrusion of the retainer, turn the retainer counterclockwise to loosen it.**

HINT:

The protrusion of the retainer fit in the ends of SST.

c. Remove the retainer.

d. Remove the retainer while holding the fuel suction tube assembly by hand.

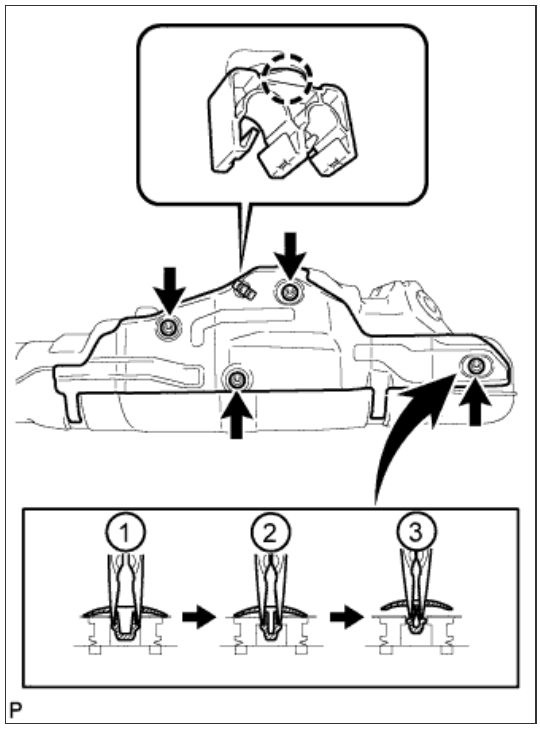


NOTICE:

Be careful not to bend the arm of the fuel sender gauge.

e. Remove the gasket from the fuel tank.

34. REMOVE FUEL TANK TO FILLER PIPE HOSE

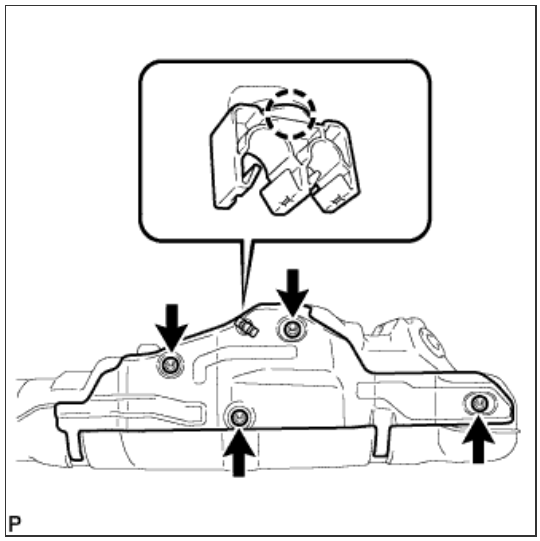


a. Remove the hose from the fuel tank.

35. REMOVE NO. 1 FUEL TANK HEAT INSULATOR

a. Remove the fuel tube clamp from the heat insulator.

b. Using needle-nose pliers, remove the 4 clips shown in the illustration and then remove the heat insulator.



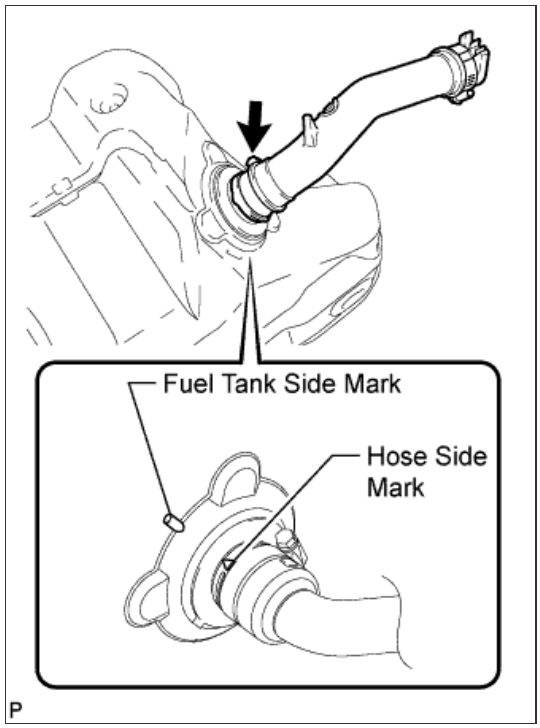
1
2
3
P

for Preparation Click here

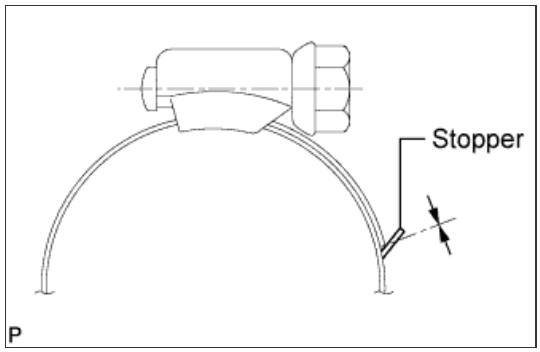
1. INSTALL NO. 1 FUEL TANK HEAT INSULATOR

a. Install the heat insulator with the 4 clips.

b. Install the fuel tube clamp to the heat insulator.



2. INSTALL FUEL TANK TO FILLER PIPE HOSE



a. Install the fuel tank to filler pipe hose to the fuel tank as shown in the illustration.

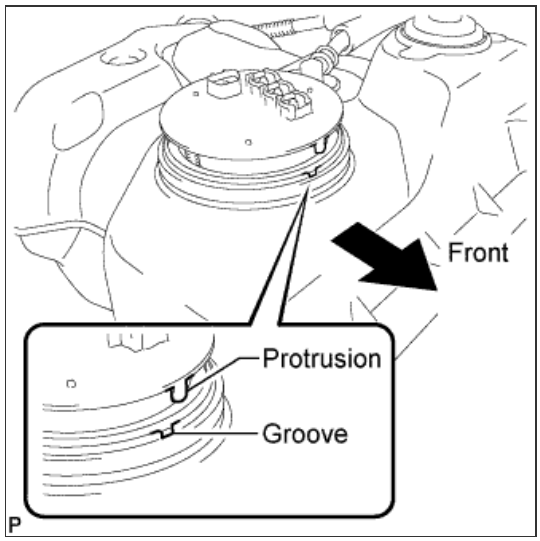
HINT:

- **Align the fuel tank side mark with the hose side mark when installing the hose.**

- **Tighten the hose clamp until the end of the hose clamp contacts the stopper as shown in the illustration.**

3. INSTALL FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY

a. Apply a light coat of gasoline or grease to a new gasket, and install it to the fuel tank.



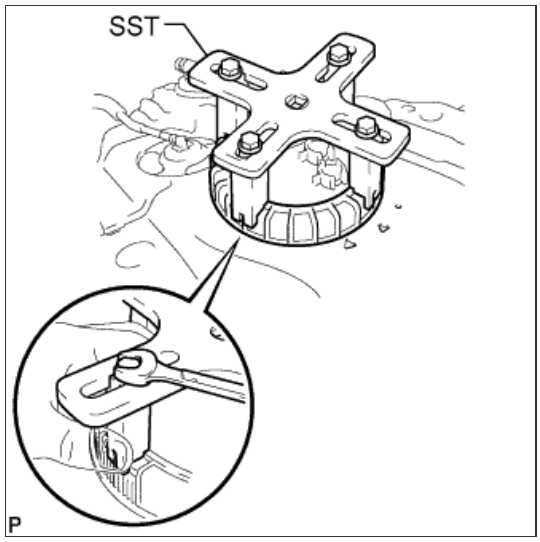
b. Install the fuel suction with pump and gauge tube into the fuel tank.

NOTICE:

Be careful not to bend the arm of the fuel sender gauge.

HINT:

Align the protrusion of the fuel suction with pump and gauge tube with the groove of the fuel tank.



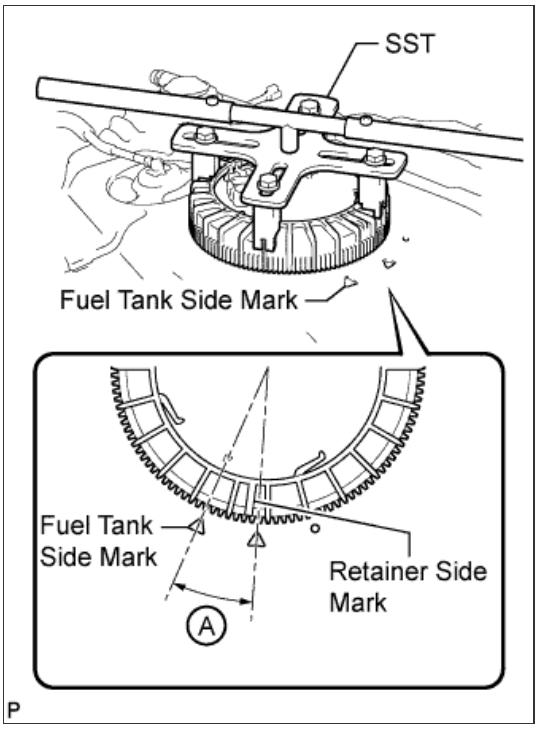
c. Put the retainer on the fuel tank. While holding the fuel suction with pump and gauge tube, tighten the retainer one complete turn by hand.

d. Set SST on the retainer.

SST
09808-14030

HINT:

- **Hold the fuel suction tube assembly upright by hand to ensure that the fuel suction tube gasket is not moved out of position.**
- **Securely attach the claws of SST to the protrusions of the retainer and fix SST in place.**
- **Install SST while pressing the claws of SST against the retainer (toward the center of SST).**

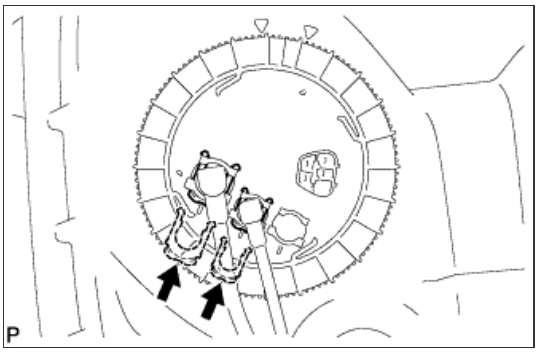


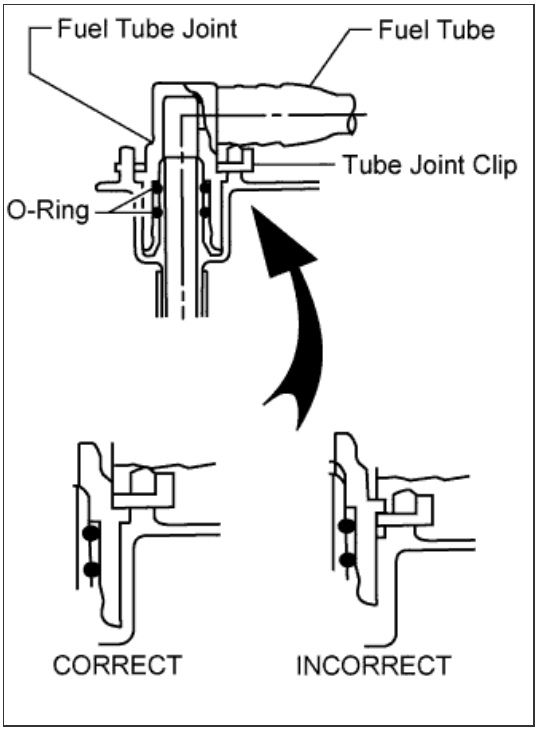
e. Using SST, tighten the retainer until the mark on the retainer is within range A on the fuel tank as shown in the illustration.

SST
09808-14030

HINT:

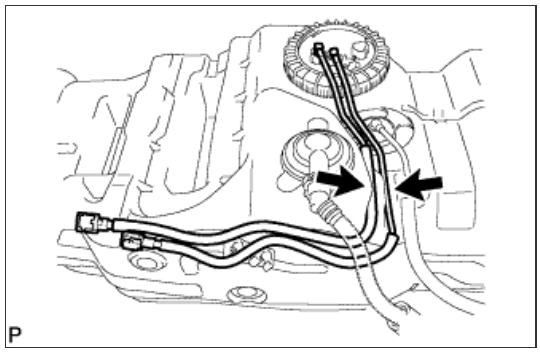
Fit the tips of SST onto the ribs of the retainer.





4. INSTALL FUEL TANK MAIN TUBE SUB-ASSEMBLY AND FUEL TANK RETURN TUBE (for Single Tank Type)

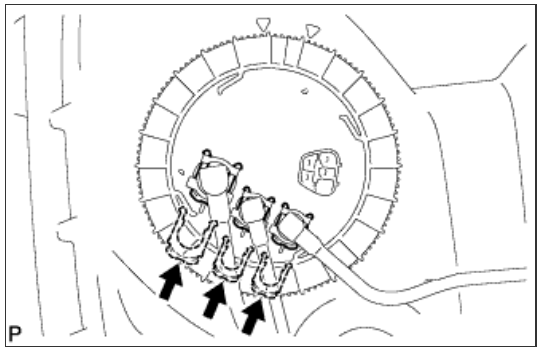
a. Install the 2 fuel tank tubes with the 2 tube joint clips.

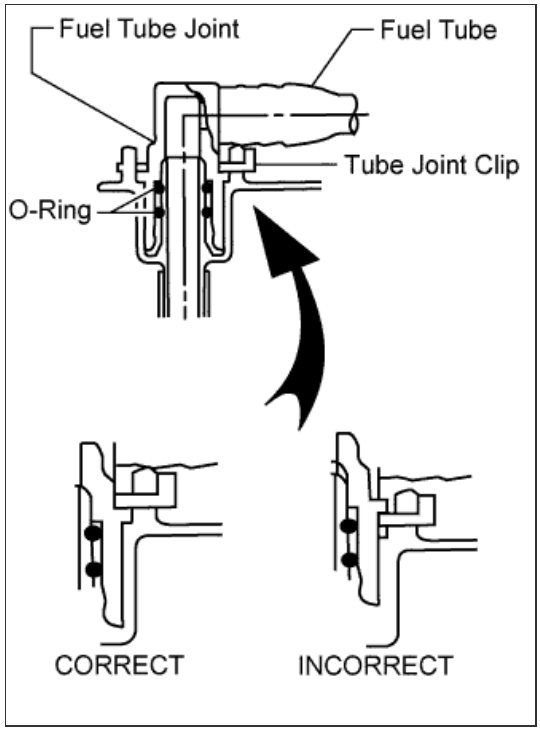


NOTICE:

- **Check that there are no scratches or foreign objects on the connecting parts.**
- **Check that the fuel tube joints are inserted securely.**
- **Check that the tube joint clips are on the collars of the fuel tube joints.**
- **After installing the tube joint clips, check that the fuel tube joints cannot be pulled off.**

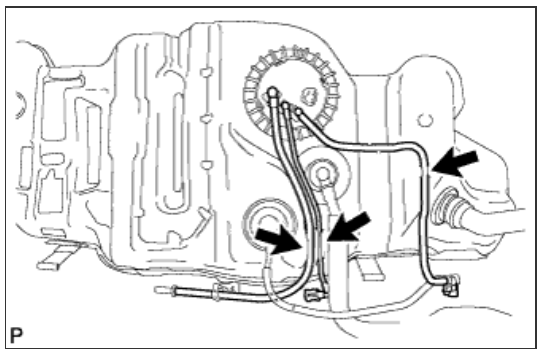
b. Install the 2 fuel tubes to the fuel tank.





5. INSTALL FUEL TANK MAIN TUBE SUB-ASSEMBLY, FUEL TANK RETURN TUBE AND NO. 2 FUEL MAIN TUBE SUB-ASSEMBLY (for Double Tank Type)

a. Install the 3 fuel tank tubes with the 3 tube joint clips.

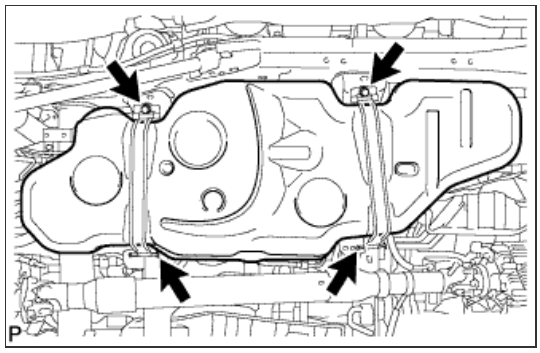


NOTICE:

- **Check that there are no scratches or foreign objects on the connecting parts.**
- **Check that the fuel tube joints are inserted securely.**
- **Check that the tube joint clips are on the collars of the fuel tube joints.**
- **After installing the tube joint clips, check that the fuel tube joints cannot be pulled off.**

b. Install the 3 fuel tubes to the fuel tank.

6. INSTALL FUEL TANK SUB-ASSEMBLY



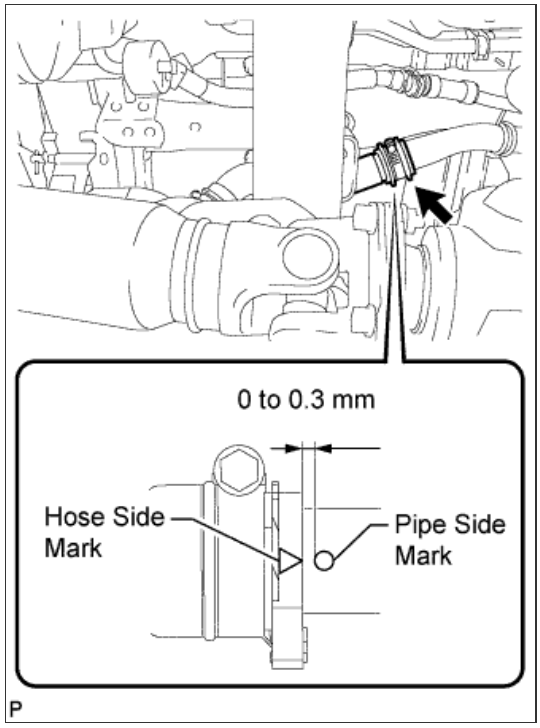
a. Set the fuel tank on a transmission jack.

b. Raise the transmission jack.

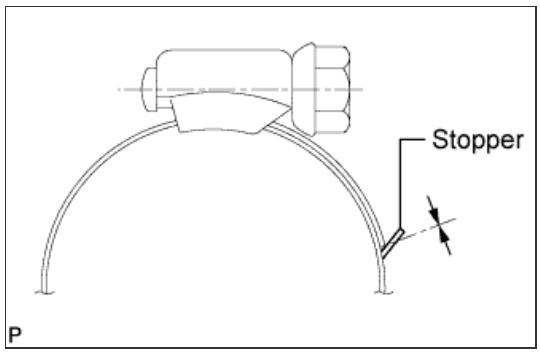
c. Install the 2 fuel tank bands with the 2 pins and 2 clips.

d. onect the 2 fuel tank bands with the 2 bolts.

Tor ue:
40 N m 408 kgf cm , 30 ft. lbf



. CONNECT FUEL TANK TO FILLER PIPE HOSE (for Single Tank Type)

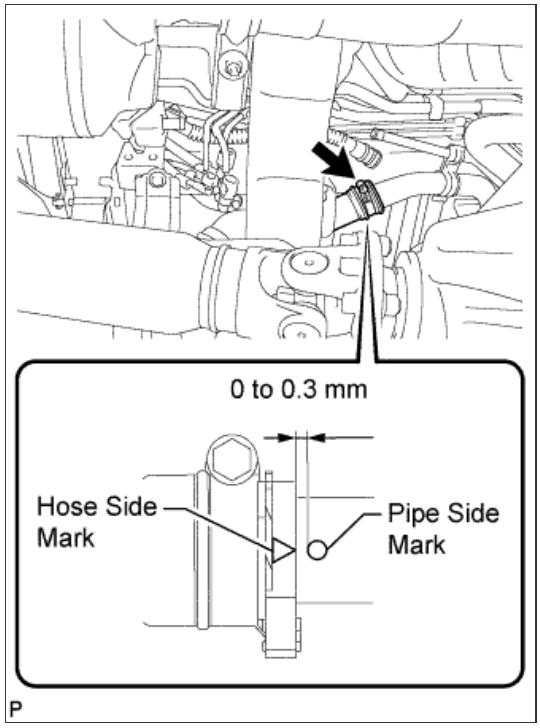


a. Connect the hose to the fuel tank filler pipe as shown in the illustration.

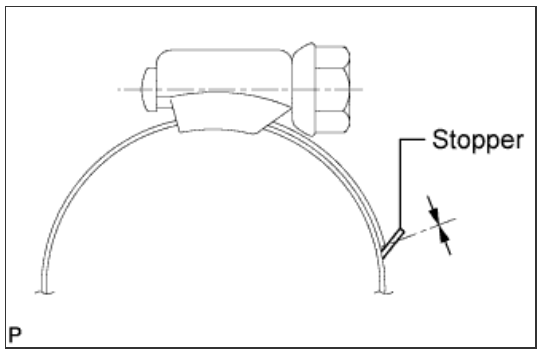
HINT:

- **Install the hose so that the distance between the fuel tank inlet pipe side mark and fuel tank to filler pipe hose side mark is 0 to 0.3 mm (0 to 0.0118 in.) as shown in the illustration.**

- **Tighten the hose clamp until the end of the hose clamp contacts the stopper as shown in the illustration.**



8. CONNECT FUEL TANK TO FILLER PIPE HOSE (for Double Tank Type)



a. Connect the hose to the fuel tank filler pipe as shown in the illustration.

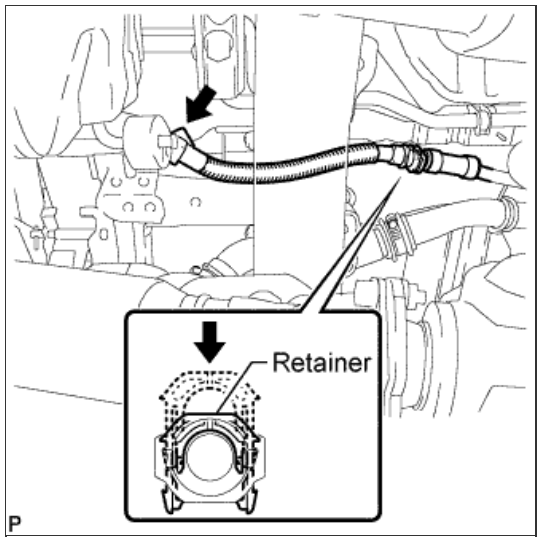
HINT:

- **Install the hose so that the distance between the fuel tank inlet pipe side mark and fuel tank to filler pipe hose side mark is 0 to 0.3 mm (0 to 0.0118 in.) as shown in the illustration.**

- **Tighten the hose clamp until the end of the hose clamp contacts the stopper as shown in the illustration.**

9. CONNECT FUEL TANK BREATHER TUBE (for Single Tank Type)

a. Connect the fuel tank breather tube to the filler pipe and push the retainer.



HINT:

Push the parts together firmly until a "click" sound is heard.

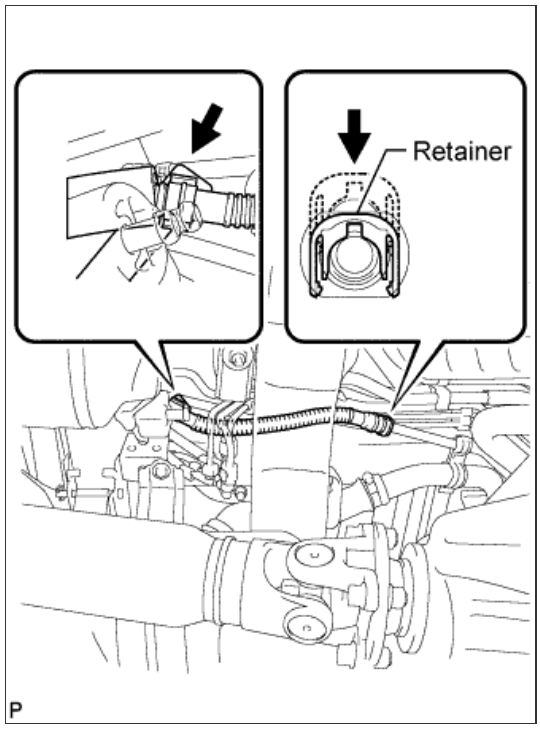
NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

10. CONNECT FUEL TANK BREATHER TUBE (for Double Tank Type)

a. Connect the fuel tank breather tube to the filler pipe and push the retainer.



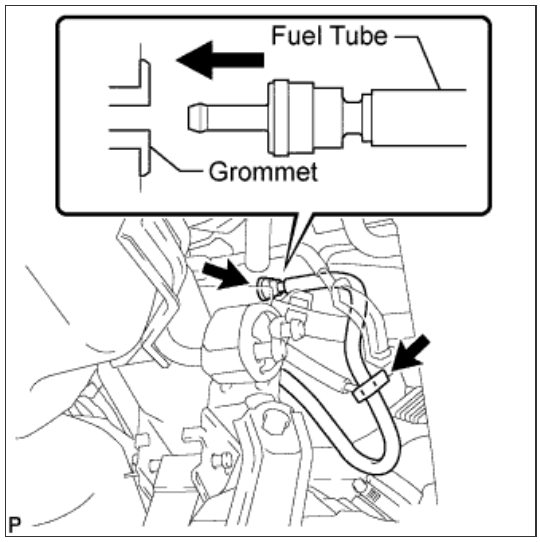
HINT:

Push the parts together firmly until a "click" sound is heard.

NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.



11. CONNECT NO. 2 FUEL TANK BREATHER TUBE (for Single Tank Type)

a. Connect the No. 2 fuel tank breather tube to the body.

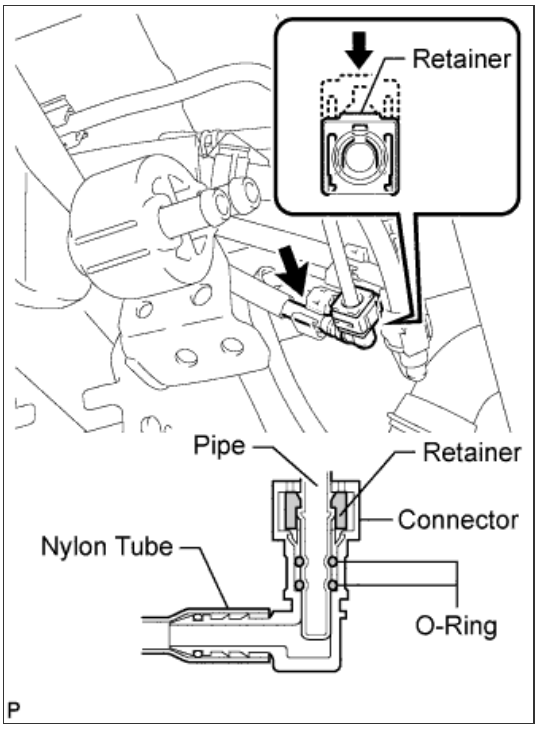
HINT:

Make sure the No. 2 fuel tank breather tube is securely inserted into the grommet.

b. Attach the fuel tube clamp.

12. CONNECT NO. 2 FUEL TANK BREATHER TUBE (for Double Tank Type)

a. Connect the fuel tank breather tube and push the retainer.



HINT:

Push the parts together firmly until a "click" sound is heard.

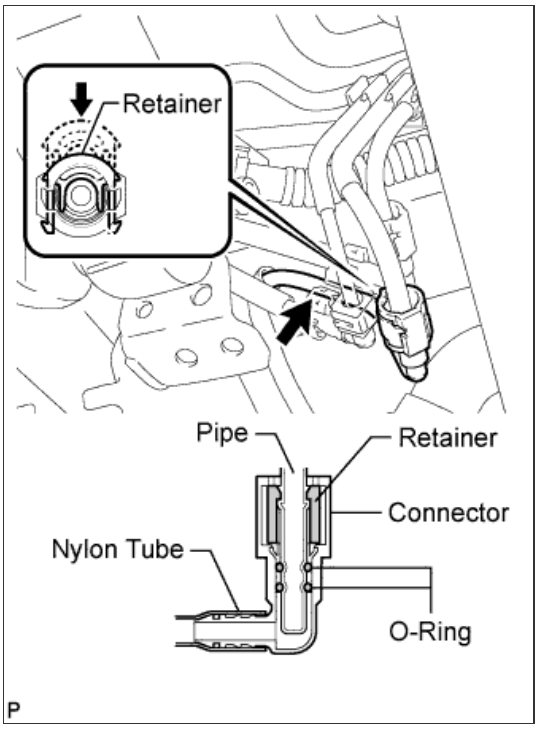
NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

13. CONNECT NO. 2 FUEL MAIN TUBE SUB-ASSEMBLY (for Double Tank Type)

a. Connect the No. 2 fuel main tube and push the retainer.

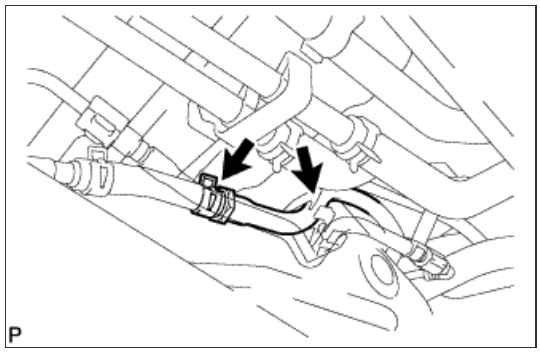


HINT:

Push the parts together firmly until a "click" sound is heard.

NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**



b. Attach the fuel tube clamp.

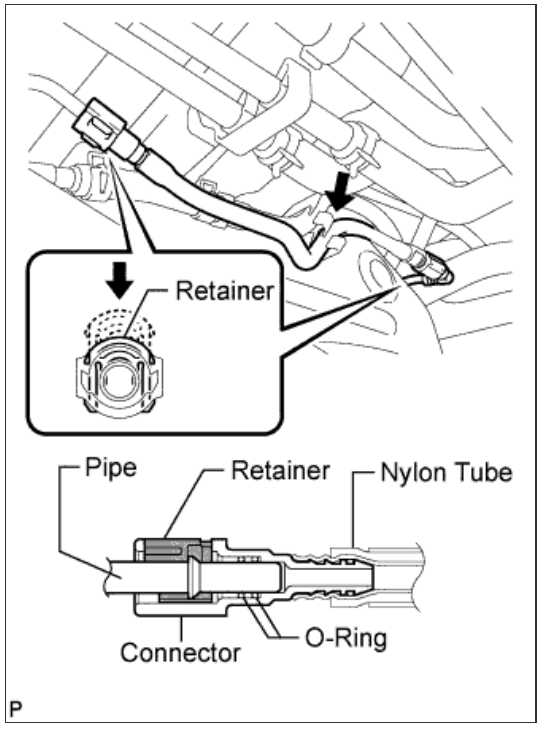
14. CONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY

a. Connect the fuel tank main tube.

b. Attach the fuel tube clamp.

15. CONNECT FUEL TANK RETURN TUBE

a. Connect both ends of the fuel tank return tube and push the retainer.

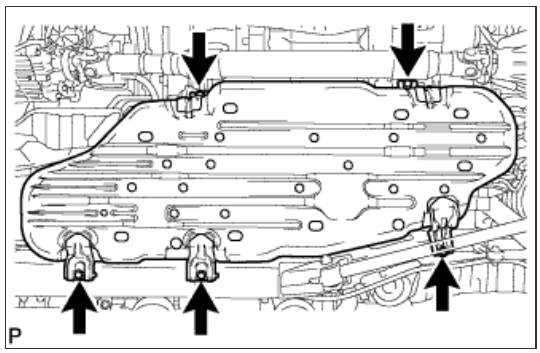


HINT:

Push the parts together firmly until a "click" sound is heard.

NOTICE:

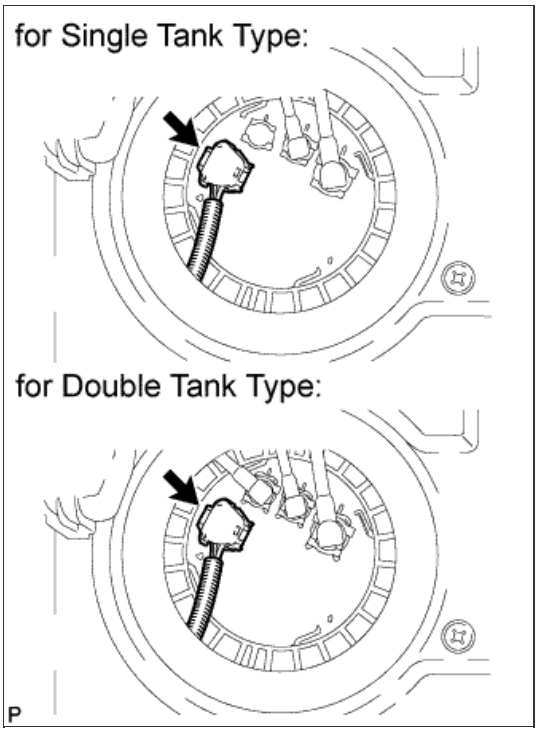
- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**



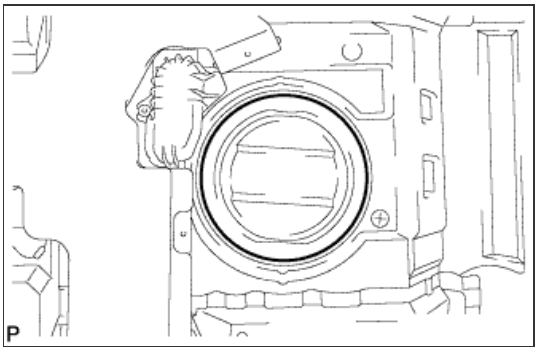
b. Attach the fuel tube clamp.

16. INSTALL NO. 1 FUEL TANK PROTECTOR SUB-ASSEMBLY

a. Install the tank protector with the 5 bolts.

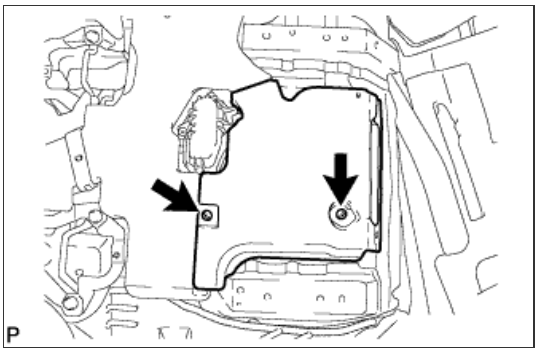


Tor ue:
20 N m 204 kgf cm , 15 ft. lbf



17. INSTALL FUEL TANK CAP ASSEMBLY

18. INSTALL REAR FLOOR NO. 2 SER ICE HOLE CO B

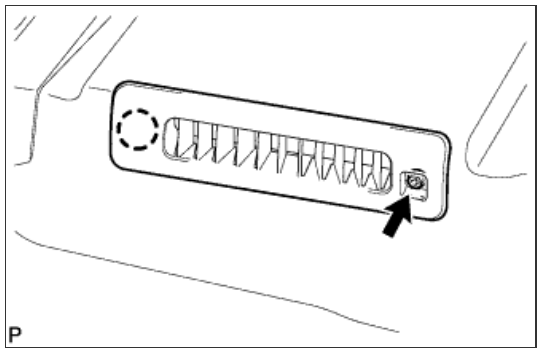


a. Connect the fuel pump and fuel sender gauge connector.

b. Install the service hole cover with new butyl tape.

c. w/ Rear Air Conditioning System:
Install the air duct and 2 screws.

19. INSTALL FRONT FLOOR CARPET ASSEMBLY



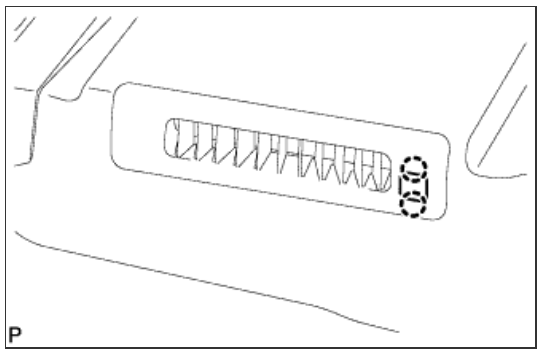
20. INSTALL REAR AIR DUCT GUIDE (w/ Rear Air Conditioning System)

a. Attach the claw to install the guide.

b. Install the screw.

HINT:

Use the same procedures for both sides.



21. INSTALL AIR DUCT PLUG (w/ Rear Air Conditioning System)

a. Attach the 2 claws to install the plug.

HINT:

Use the same procedures for both sides.

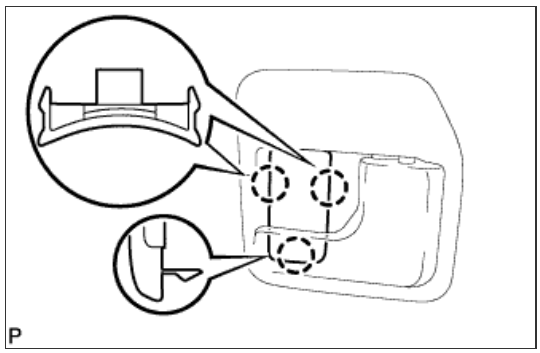
22. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY LH

a. w/ Sliding Roof:
Install the front quarter trim panel assembly LH (Click here).

b. w/o Sliding Roof:
Install the front quarter trim panel assembly LH (Click here).

23. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY RH

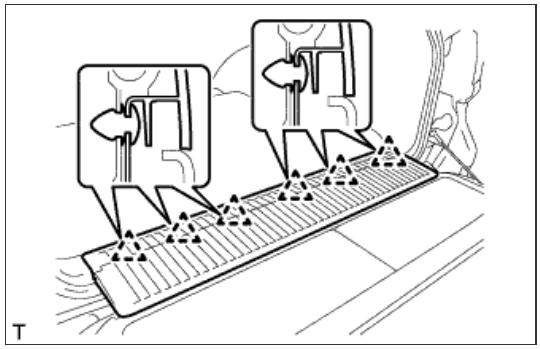
a. w/ Sliding Roof:
Install the front quarter trim panel assembly RH (Click here).



b. w/o Sliding Roof:
Install the front quarter trim panel assembly RH (Click here).

24. INSTALL REAR SEAT COVER CAP (w/ Rear No. 2 Seat, except Face to Face Seat Type)

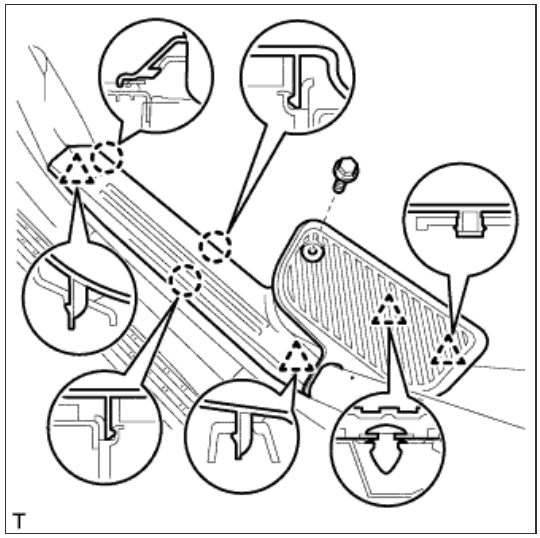
HINT:



Use the same procedure to install the rear seat cover cap on the other side.

a. Attach the 3 claws to install the rear seat cover cap.

25. INSTALL REAR FLOOR MAT REAR SUPPORT PLATE



a. Attach the 6 clips to install the support plate.

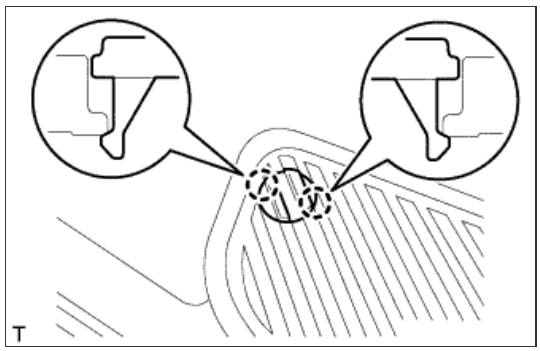
26. INSTALL REAR DOOR SCUFF PLATE LH

a. Attach the 3 claws and 4 clips to install the scuff plate.

b. Install the screw.

27. INSTALL REAR DOOR SCUFF PLATE RH

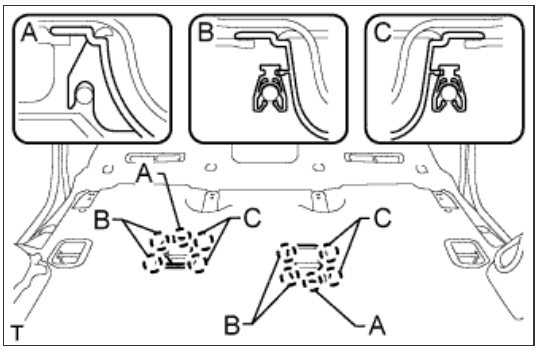
HINT:



Use the same procedures described for the LH side.

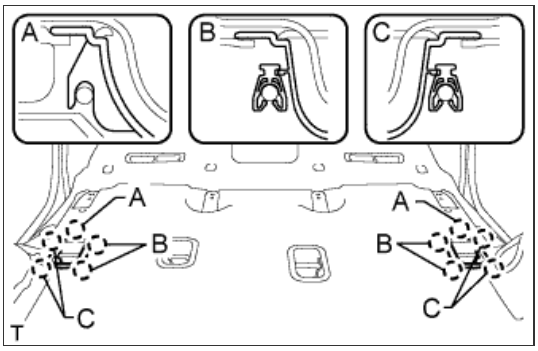
28. INSTALL REAR STEP CO ER

HINT:



Use the same procedure to install the step cover on the other side.

a. Attach the 2 claws to install the step cover.



29. INSTALL REAR NO. 2 SEAT PROTECTOR

a. Attach the 10 claws to install the 2 seat protectors.

30. INSTALL REAR NO. 1 SEAT PROTECTOR

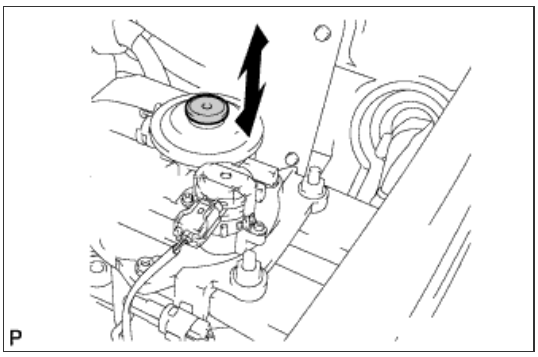
a. Attach the 10 claws to install the 2 seat protectors.

31. INSTALL REAR NO. 2 SEAT ASSEMBLY

a. for Face to Face Seat Type:
Install the rear No. 2 seat assembly (Click here).

b. except Face to Face Seat Type:
Install the rear No. 2 seat assembly (Click here).

32. INSTALL REAR NO. 1 SEAT ASSEMBLY RH (for 60/40 Split Seat Type 40 Side)



a. Install the rear No. 1 seat assembly RH (Click here).

33. INSTALL REAR NO. 1 SEAT ASSEMBLY LH (for 60/40 Split Seat Type 60 Side)

a. Install the rear No. 1 seat assembly LH (Click here).

34. BLEED AIR FROM FUEL SYSTEM

a. Using the hand pump indicated by the arrow in the illustration, bleed the fuel system. Continue pumping until pumping becomes difficult.

35. CONNECT CABLE TO NEGATI BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

a. Connect the cables to the negative (-) main battery and sub-battery terminals.

36. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).

37. ADD FUEL

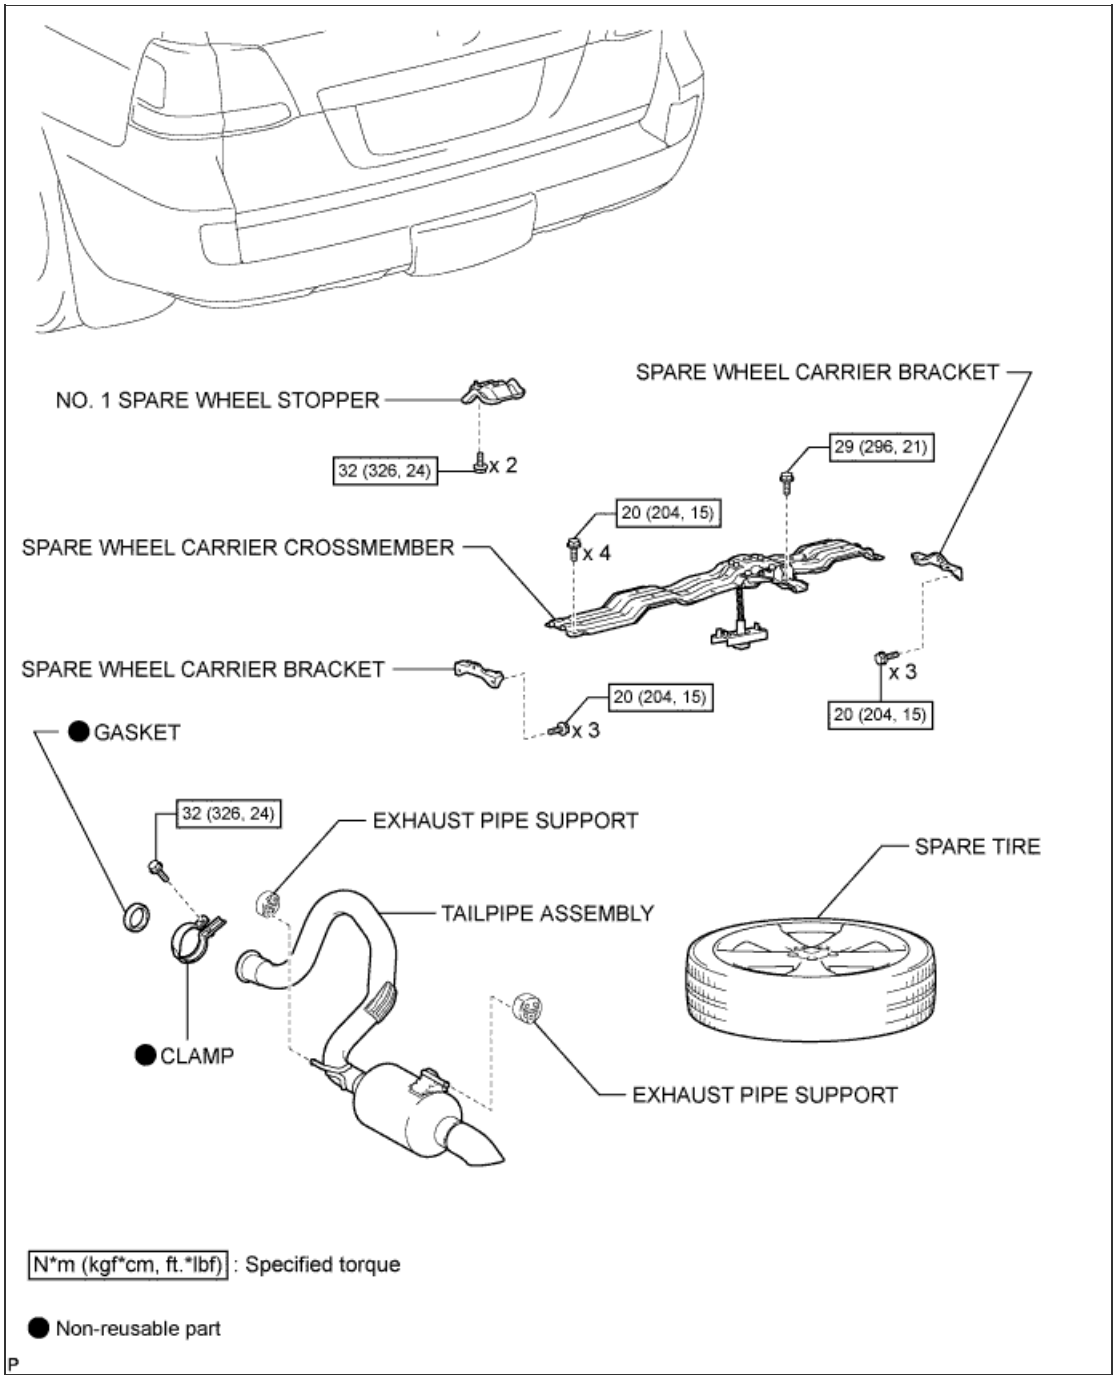
38. INSPECT FOR FUEL LEAK

a. Perform Active Test.

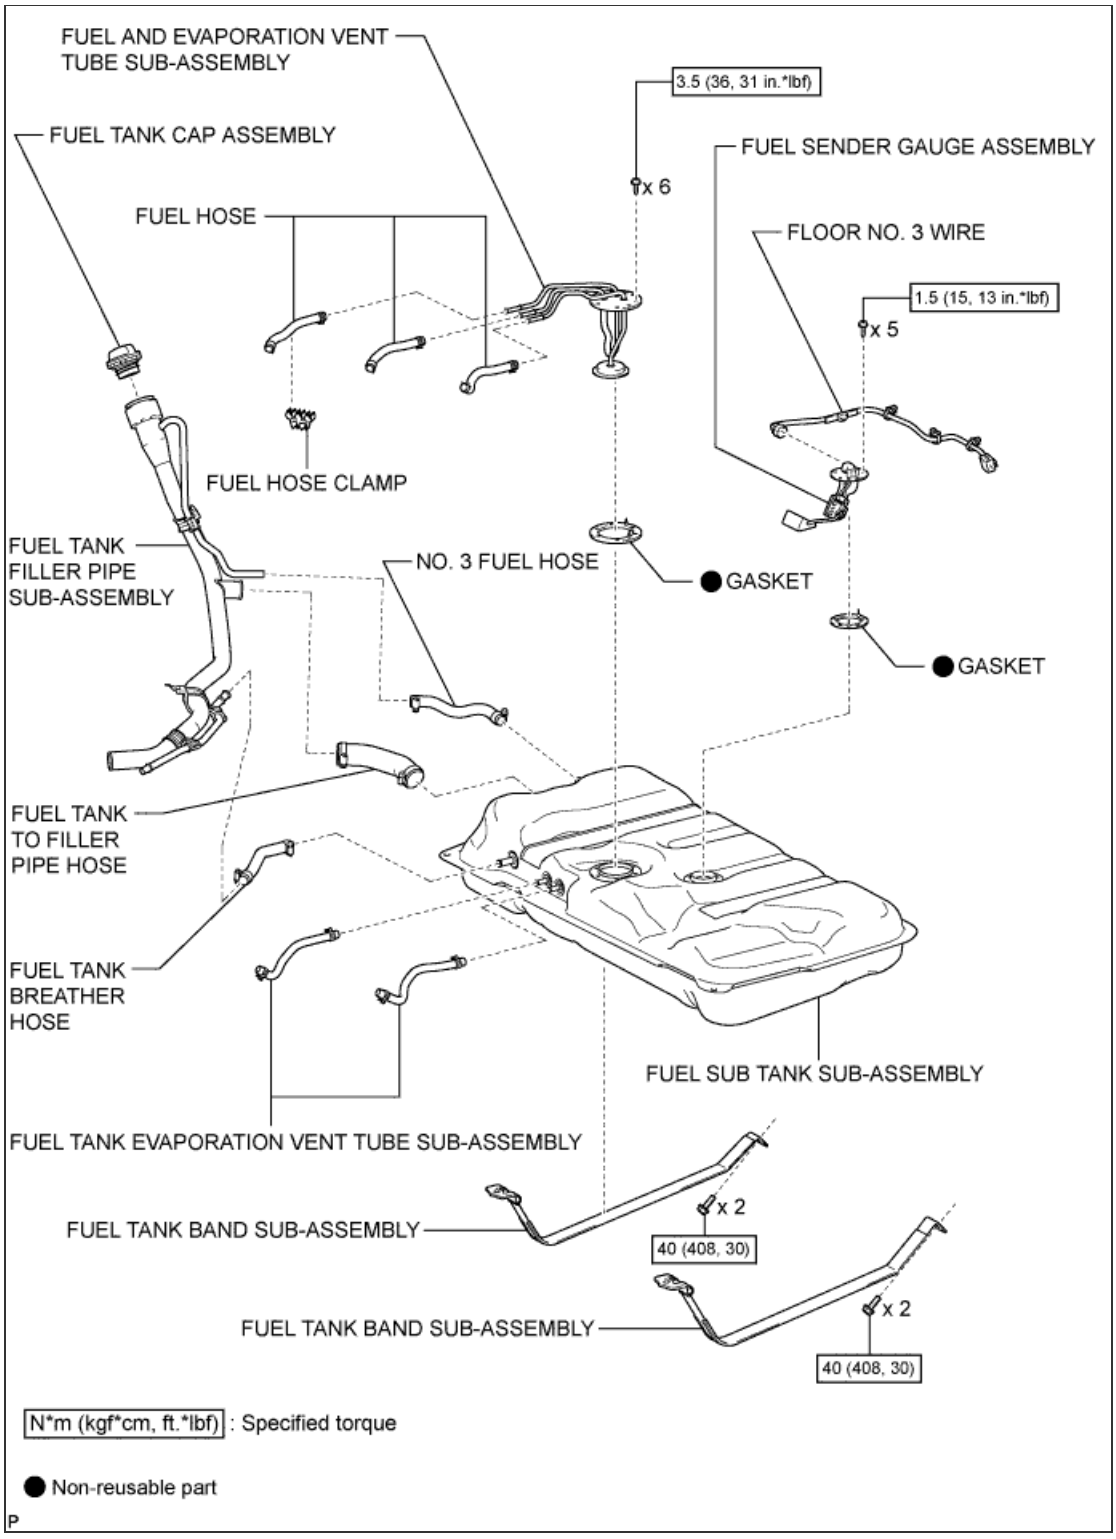
i. Connect the intelligent tester to the DLC3.

ii. Turn the ignition switch to ON.

iii. Start the engine.



iv. Turn the intelligent tester ON.



v. Enter the following menus: Powertrain / Engine / Active Test.

vi. Perform the Active Test.

Tester Display	Test Detail	Control Range	Diagnostic Note
Test the Fuel Leak	Pressurizes fuel inside common rail and checks for fuel leaks	Stop/Start	• The fuel inside the common rail is pressurized to the specified value and the engine speed increases to 2000 rpm when Start is selected. • The above conditions are preserved while Start is selected.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

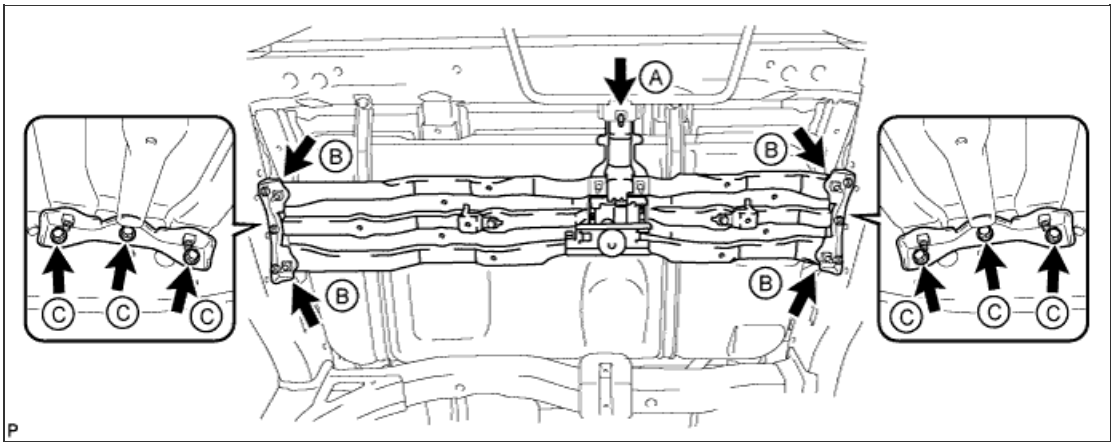
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

a. Disconnect the cables from the negative (-) main battery and sub-battery terminals.

2. REMOVE SPARE TIRE

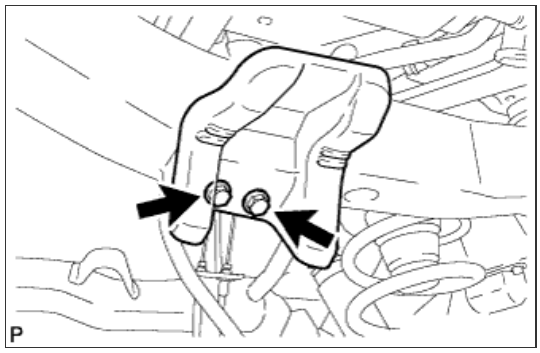


3. REMOVE TAILPIPE ASSEMBLY

a. Remove the bolt, clamp and gasket.

b. Disconnect the tailpipe from the 2 exhaust pipe supports.

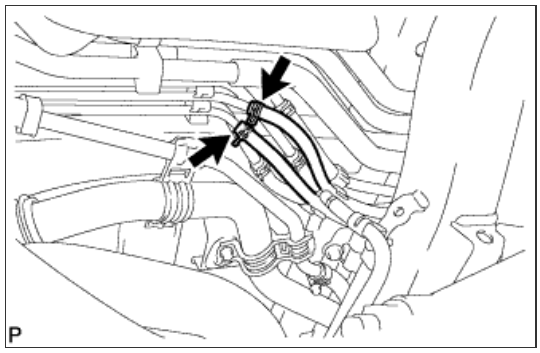
4. REMOVE SPARE WHEEL CARRIER CROSSMEMBER AND SPARE WHEEL CARRIER BRACKET



a. Remove the bolt labeled A, and then loosen the 4 bolts labeled B.

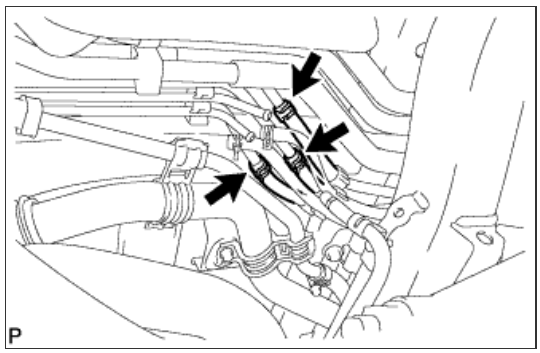
b. Slightly raise the spare wheel carrier crossmember, and then remove the 6 bolts labeled C, spare wheel carrier crossmember and 2 brackets.

5. REMOVE NO. 1 SPARE WHEEL STOPPER



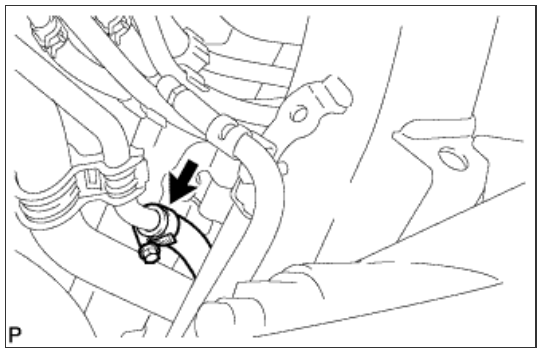
a. Remove the 2 bolts and spare wheel stopper.

6. REMOVE FUEL TANK CAP ASSEMBLY



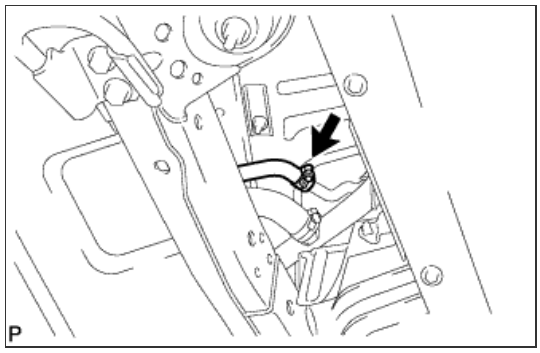
7. DISCONNECT FUEL TANK EVAPORATION VENT TUBE SUB-ASSEMBLY

a. Disconnect the 2 fuel tank evaporation vent tubes.



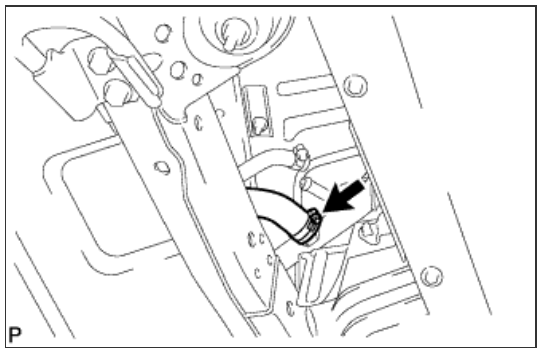
8. DISCONNECT FUEL HOSE

a. Disconnect the 3 fuel hoses.



9. DISCONNECT FUEL TANK BREATHER HOSE

a. Disconnect the breather hose from the filler pipe.



10. DISCONNECT NO. 3 FUEL HOSE

a. Disconnect the fuel hose from the filler pipe.

11. DISCONNECT FUEL TANK TO FILLER PIPE HOSE

a. Disconnect the hose from the filler pipe.

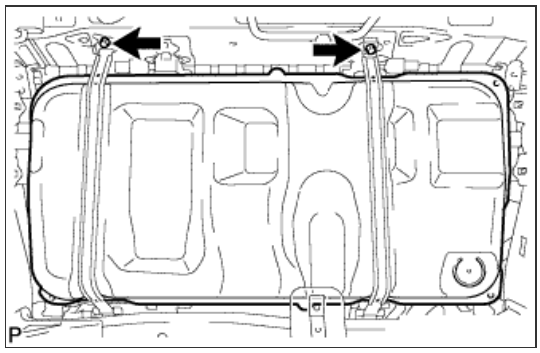
12. REMOVE FUEL SUB TANK SUB-ASSEMBLY

a. Disconnect the floor No. 3 wire connector.

b. Using a clip remover, detach the 3 wire harness clamps.

c. Place a transmission jack under the fuel sub tank.

. Remove the 2 bolts and disconnect the 2 fuel tank bands.

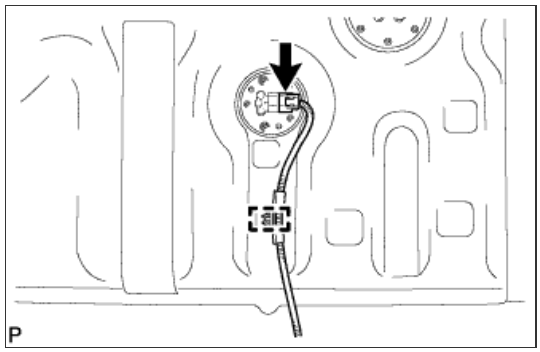


e. Lower the transmission jack to remove the fuel sub tank from the vehicle.

NOTICE:

Do not allow the fuel sub tank to contact the vehicle, especially the differential.

HINT:

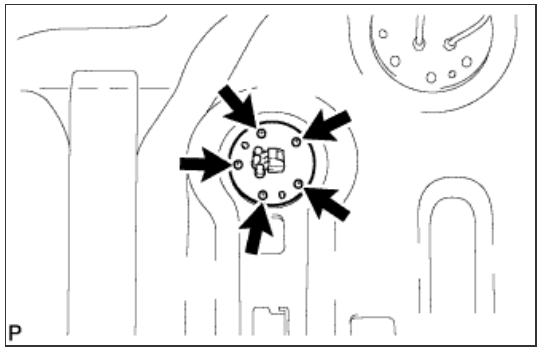


Lower the transmission jack slowly.

13. REMOVE FLOOR NO. 3 WIRE

a. Disconnect the sender gauge connector.

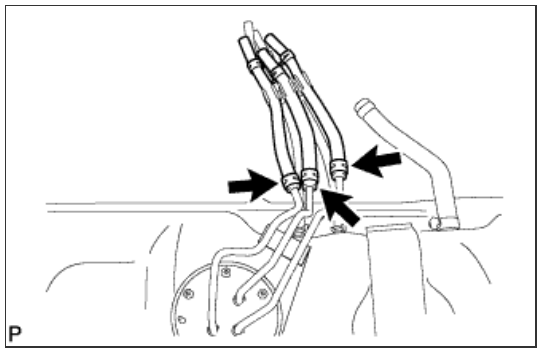
b. Using a clip remover, detach the wire harness clamp.



14. REMOVE FUEL SENDER GAUGE ASSEMBLY

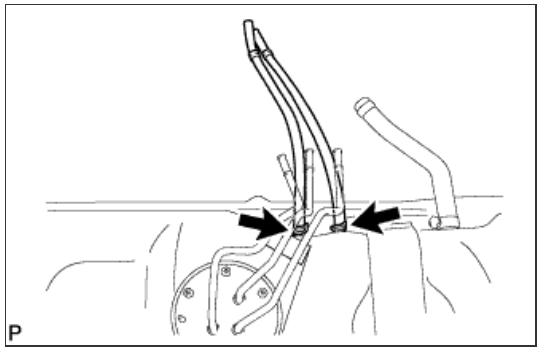
a. Remove the 5 screws and sender gauge.

NOTICE:



Be careful not to bend the arm of the fuel sender gauge.

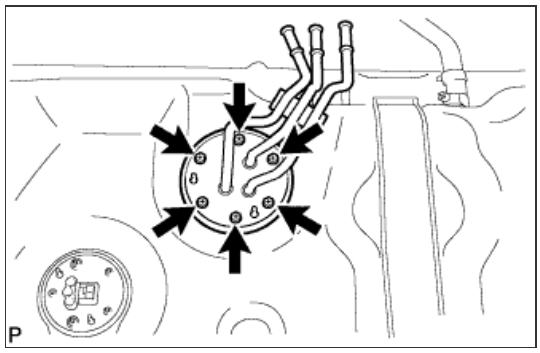
b. Remove the gasket from the sender gauge.



15. REMOVE FUEL HOSE

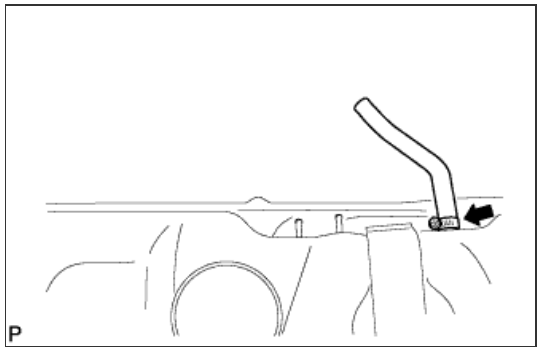
a. Remove the 3 fuel hoses.

16. REMOVE FUEL TANK EVAPORATION VENT TUBE SUB-ASSEMBLY



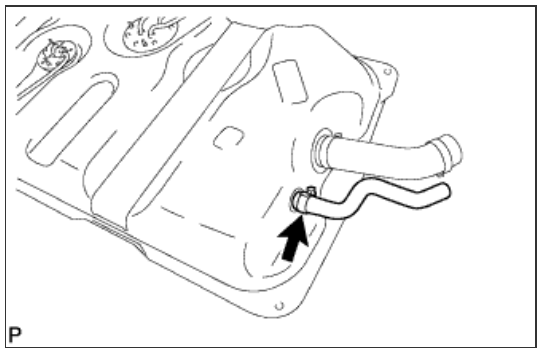
a. Remove the 2 fuel tank evaporation vent tubes.

17. REMOVE FUEL AND EVAPORATION VENT TUBE SUB-ASSEMBLY



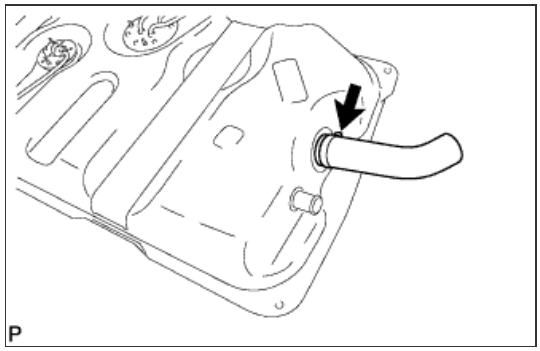
a. Remove the 6 bolts and fuel and evaporation vent tube.

b. Remove the gasket from the fuel and evaporation vent tube.



18. REMOVE FUEL TANK BREATHER HOSE

a. Remove the breather hose from the fuel sub tank.

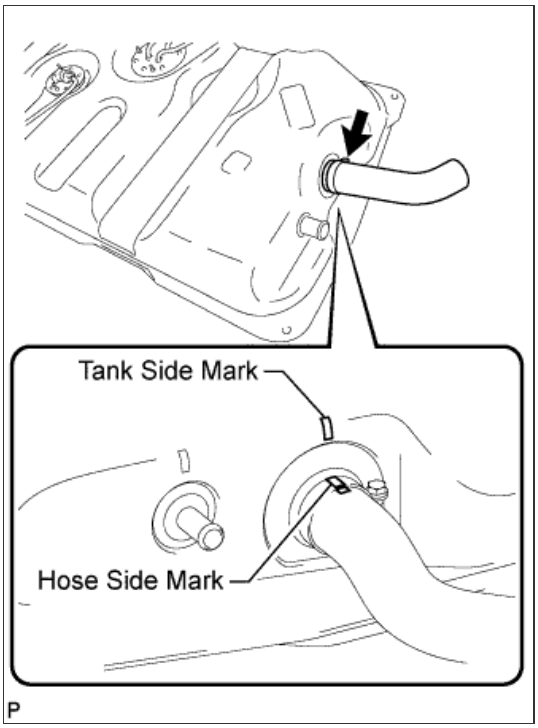


19. REMOVE NO. 3 FUEL HOSE

a. Remove the fuel hose from the fuel sub tank.

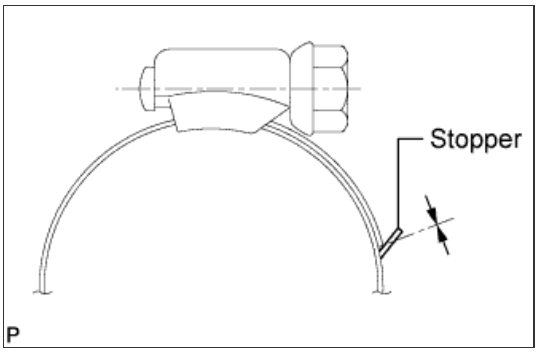
20. REMOVE FUEL TANK TO FILLER PIPE HOSE

a. Remove the hose from the fuel sub tank.



for Preparation Click here

1. INSTALL FUEL TANK TO FILLER PIPE HOSE

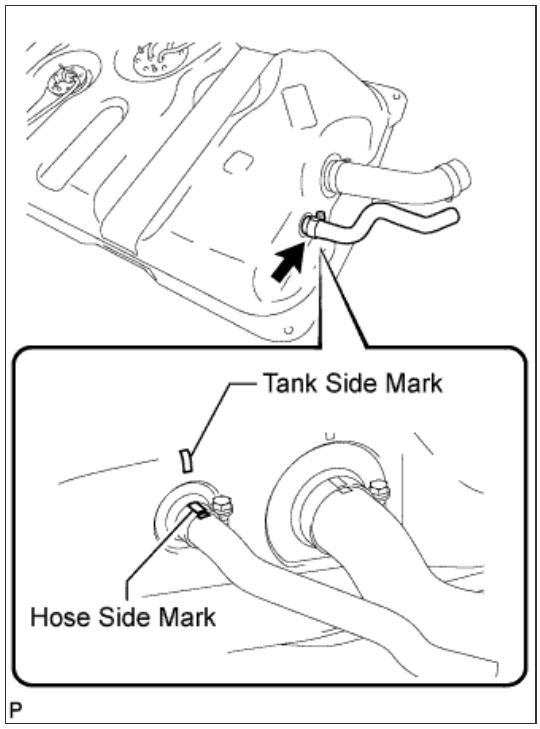


a. Install the hose to the fuel sub tank as shown in the illustration.

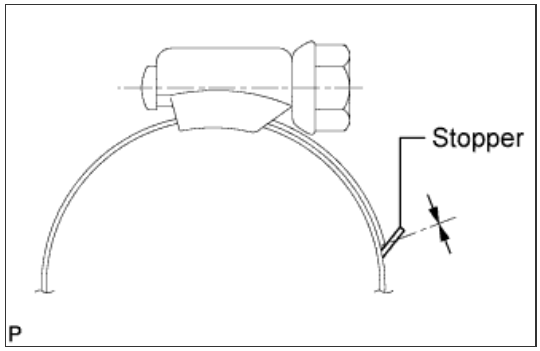
HINT:

- **Align the fuel sub tank side mark with the hose side mark when installing the hose.**

- **Tighten the hose clamp until the end of the hose clamp contacts the stopper as shown in the illustration.**



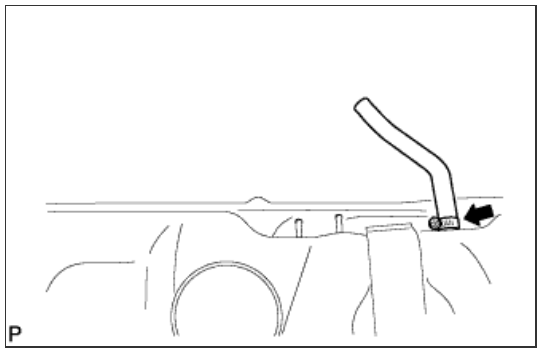
2. INSTALL NO. 3 FUEL HOSE



a. Install the fuel hose to the fuel sub tank as shown in the illustration.

HINT:

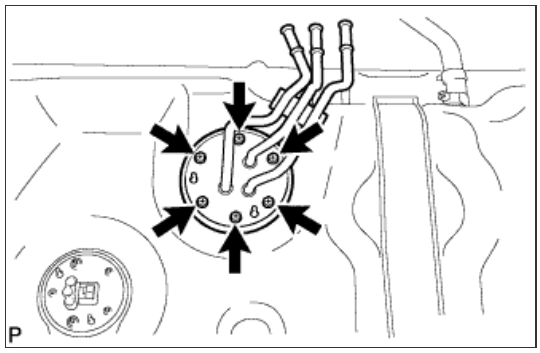
- **Align the fuel sub tank side mark with the hose side mark when installing the hose.**



- **Tighten the hose clamp until the end of the hose clamp contacts the stopper as shown in the illustration.**

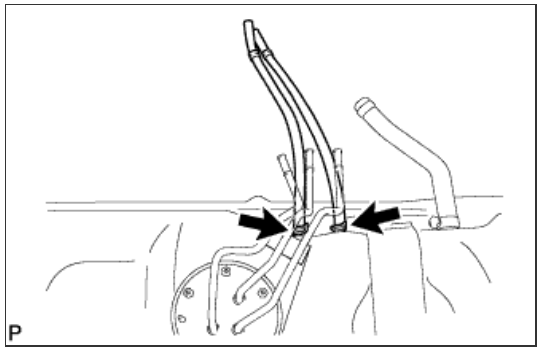
3. INSTALL FUEL TANK BREATHER HOSE

a. Install the breather hose to the fuel sub tank.



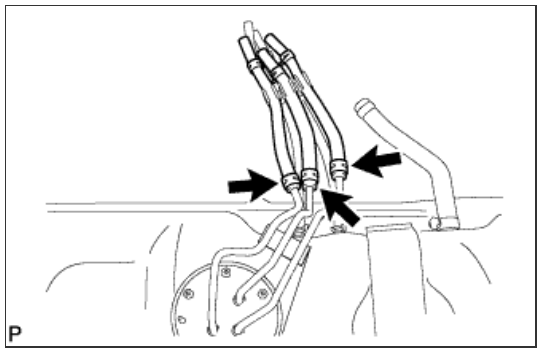
4. INSTALL FUEL AND EVAPORATION VENT TUBE SUB-ASSEMBLY

a. Install a new gasket to the fuel and evaporation vent tube.



b. Install the fuel and evaporation vent tube with the 6 bolts.

Torque:
3.5 N*m 36 kgf*cm , 31 in.*lbf }



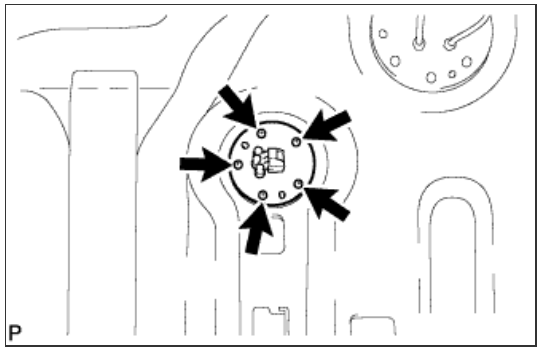
5. INSTALL FUEL TANK EVAPORATION VENT TUBE SUB-ASSEMBLY

a. Install the 2 fuel tank evaporation vent tubes.

6. INSTALL FUEL HOSE

a. Install the 3 fuel hoses.

7. INSTALL FUEL SENDER GAUGE ASSEMBLY

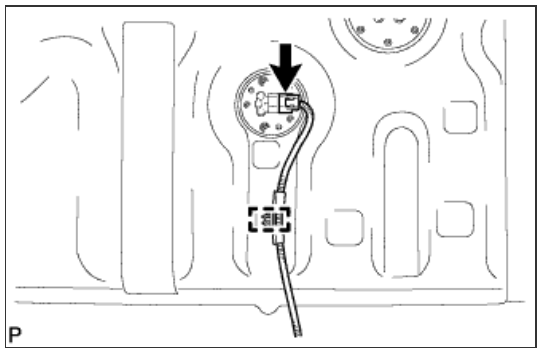


a. Install a new gasket to the sender gauge.

NOTICE:

Be careful not to bend the arm of the fuel sender gauge.

b. Install the sender gauge with the 5 screws.



Torque:
1.5 N*m 15 kgf*cm , 13 in.*lbf }

8. INSTALL FLOOR NO. 3 WIRE

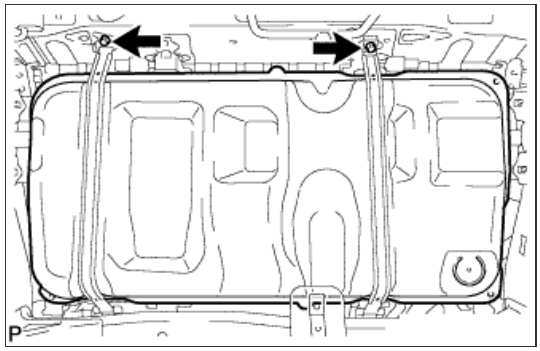
a. Attach the wire harness clamp to the fuel sub tank.

b. Connect the sender gauge connector.

9. INSTALL FUEL SUB TANK SUB-ASSEMBLY

a. Set the fuel sub tank on a transmission jack and raise the fuel sub tank.

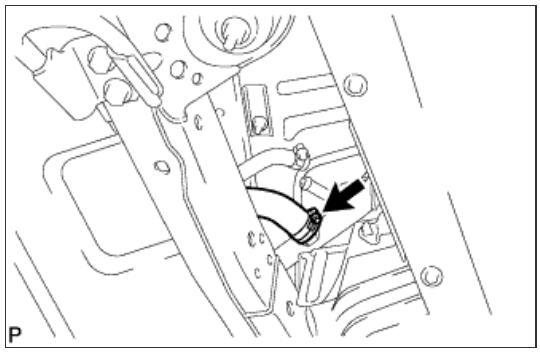
NOTICE:



Do not allow the fuel sub tank to contact the vehicle, especially the differential.

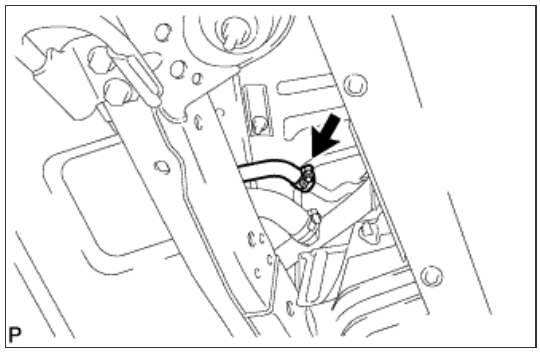
b. Connect the 2 fuel tank bands with the 2 bolts.

Torque:
4 N*m 4 8 kgf*cm , 3 ft.*lbf }



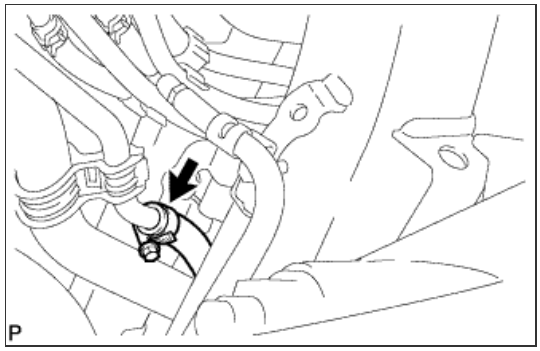
c. Connect the floor No. 3 wire connector.

d. Attach the 3 wire harness clamps.



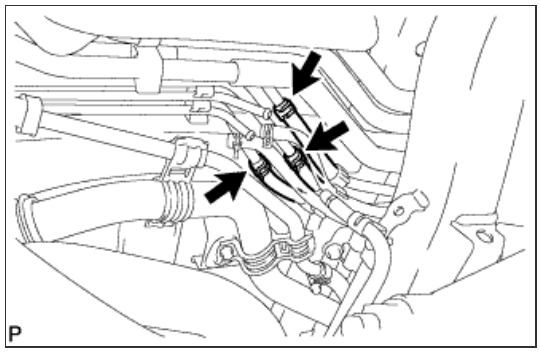
1 . CONNECT FUEL TANK TO FILLER PIPE HOSE

a. Connect the hose to the filler pipe.



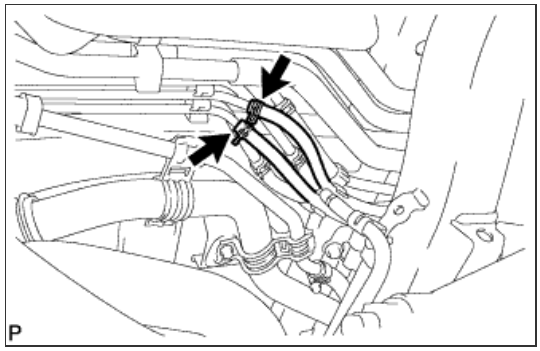
11. CONNECT NO. 3 FUEL HOSE

a. Connect the fuel hose to the filler pipe.



12. CONNECT FUEL TANK BREATHER HOSE

a. Connect the breather hose to the filler pipe.

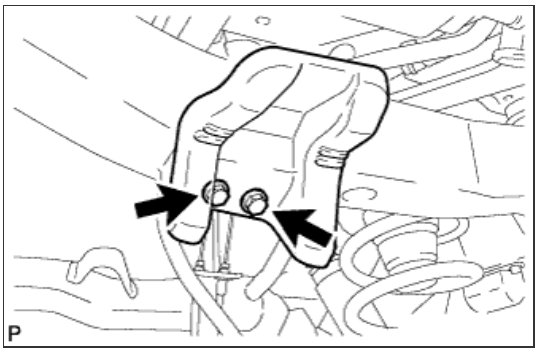


13. CONNECT FUEL HOSE

a. Connect the 3 fuel hoses.

14. CONNECT FUEL TANK EVAPORATION VENT TUBE

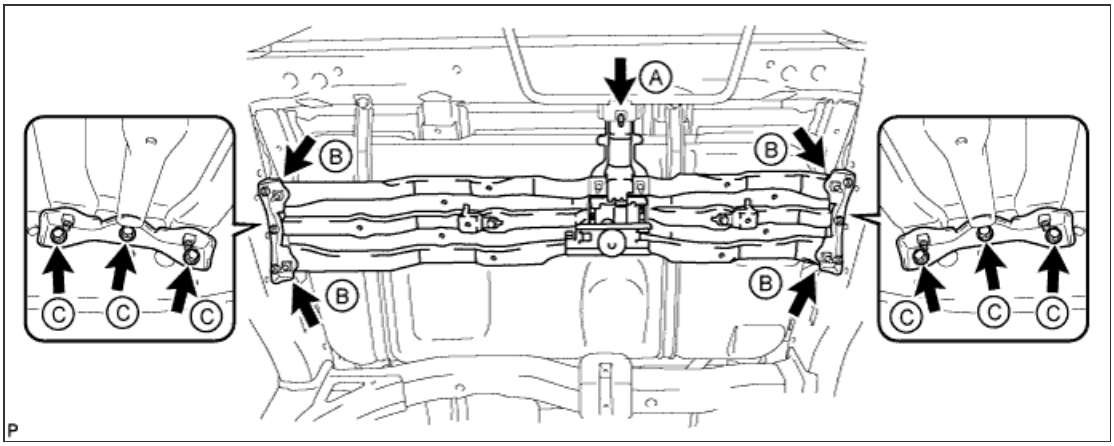
a. Connect the 2 fuel evaporation vent tubes.



15. INSTALL FUEL TANK CAP ASSEMBLY

16. INSTALL NO. 1 SPARE WHEEL STOPPER

a. Install the spare wheel stopper with the 2 bolts.



Torque:
32 N*m 326 kgf*cm , 24 ft.*lbf }

17. INSTALL SPARE WHEEL CARRIER CROSSMEMBER AND SPARE WHEEL CARRIER BRACKET

a. Install the spare wheel carrier crossmember and 2 brackets to the vehicle body with the 6 bolts labeled C.

Torque:
for bolt C:
2 N*m 2 4 kgf*cm , 15 ft.*lbf }

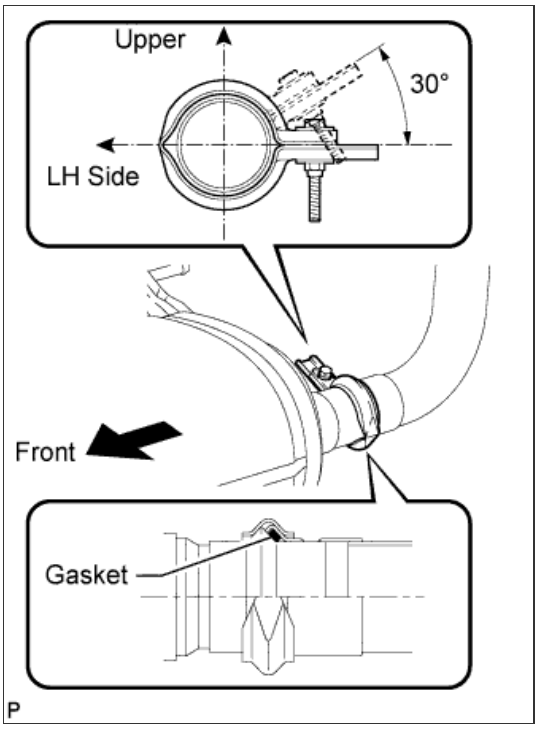
b. Temporarily install the bolt labeled A, and then tighten the bolt labeled A and bolts labeled B.

Torque:
for bolt A:
29 N*m 296 kgf*cm , 21 ft.*lbf }
for bolt B:
2 N*m 2 4 kgf*cm , 15 ft.*lbf }

18. INSTALL TAILPIPE ASSEMBLY

a. Connect the tailpipe to the 2 exhaust pipe supports.

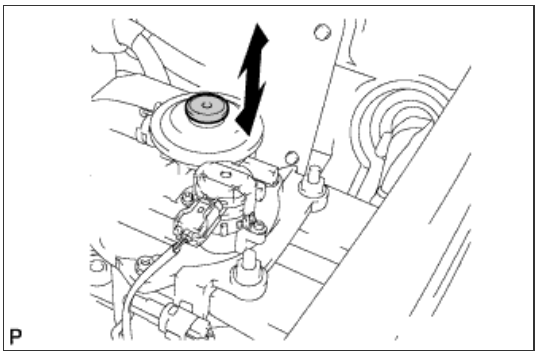
b. Set a new gasket to the center exhaust pipe.



c. Connect the tailpipe to the center exhaust pipe with a new clamp.

HINT:

Install the clamp within the angle range shown in the illustration.



d. Tighten the bolt.

Torque:
32 N*m 326 kgf*cm , 24 ft.*lbf }

19. BLEED AIR FROM FUEL SYSTEM

a. Using the hand pump indicated by the arrow in the illustration, bleed the fuel system. Continue pumping until pumping becomes difficult.

2 . CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

a. Connect the cables to the negative (-) main battery and sub-battery terminals.

21. INSPECT FOR FUEL LEAK

a. Perform Active Test.

i. Connect the intelligent tester to the DLC3.

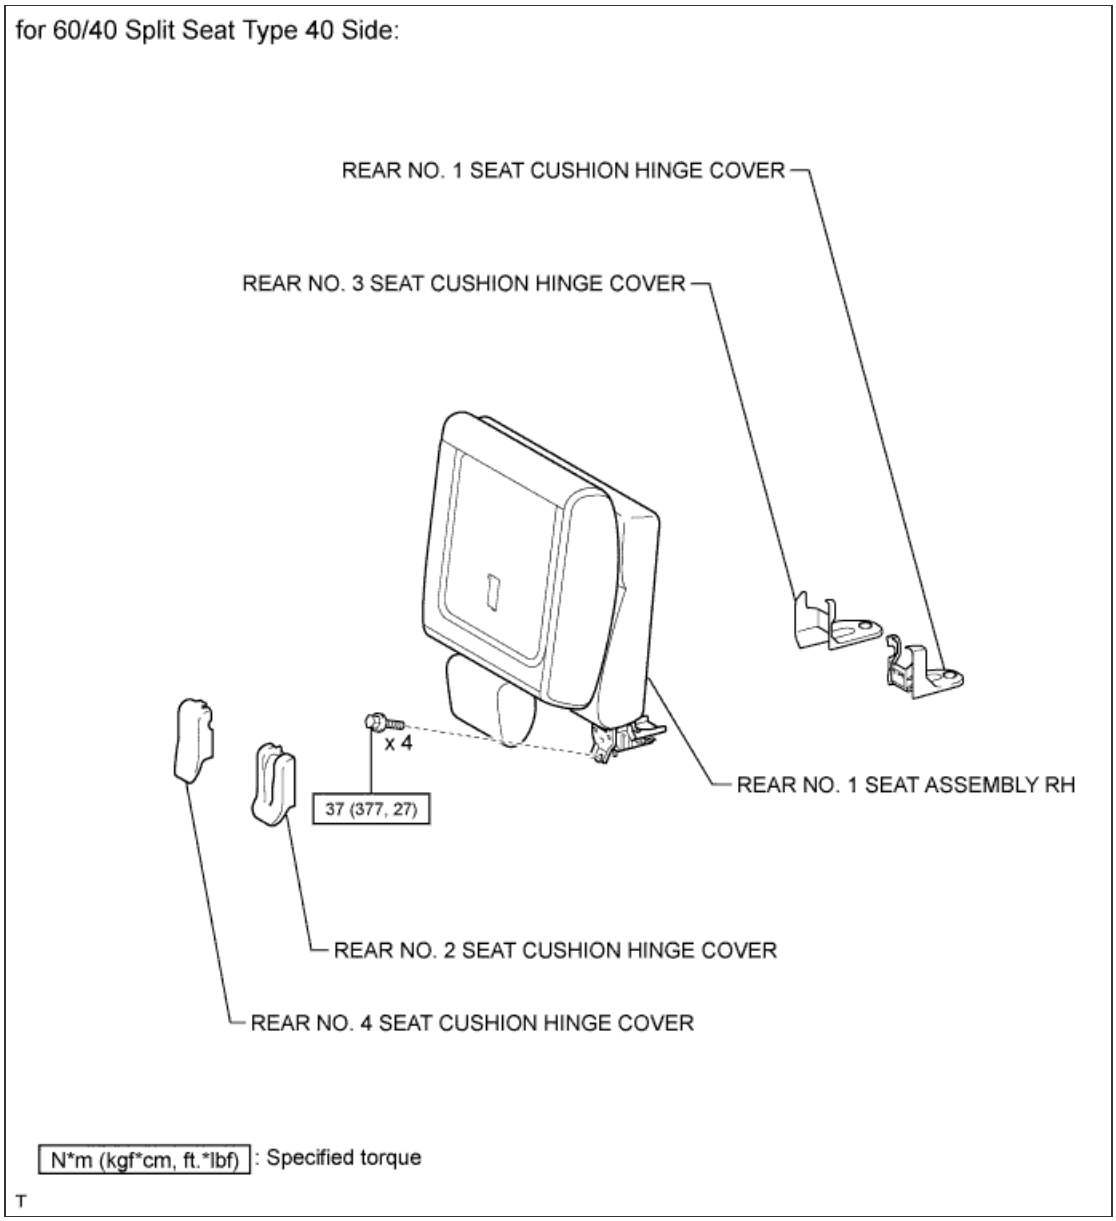
ii. Turn the ignition switch to ON.

iii. Start the engine.

iv. Turn the intelligent tester ON.

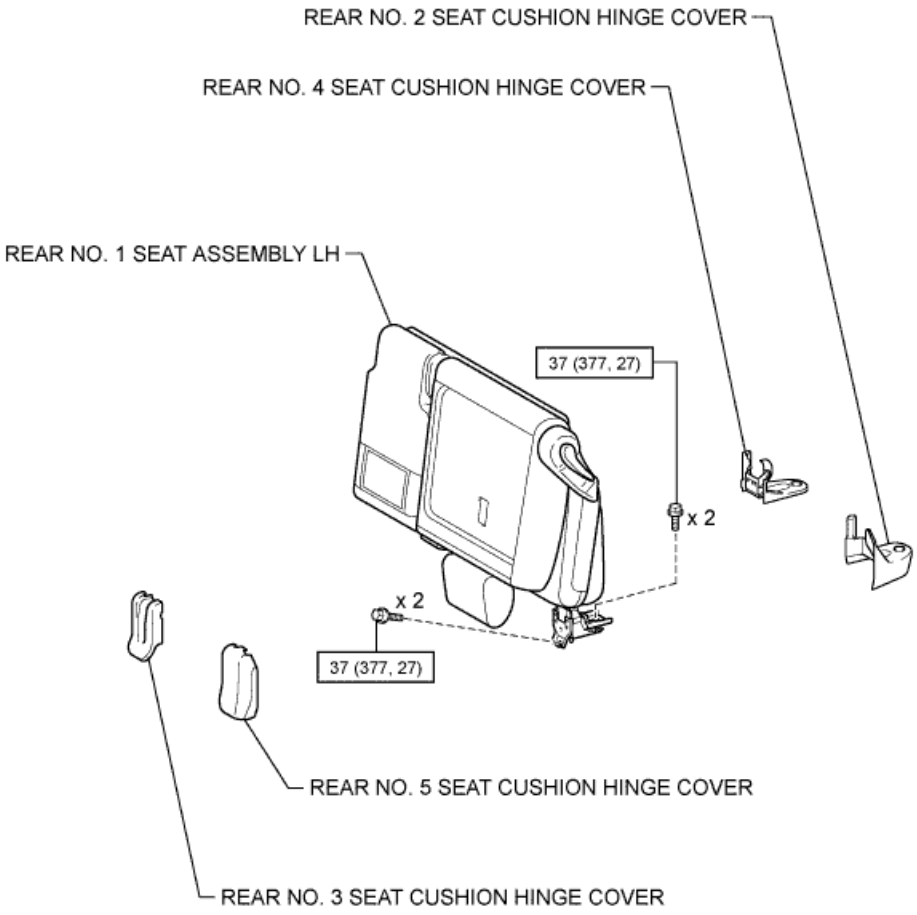
v. nter the following menus: Powertrain / ngine / Active Test.

vi. Perform the Active Test.



Tester Display	Test Detail	Control Range	Diagnostic Note

Test the Fuel Leak	Pressurizes fuel inside common rail and checks for fuel leaks	Stop/Start	• The fuel inside the common rail is pressurized to the specified value and the engine speed increases to 2000 rpm when Start is selected. • The above conditions are preserved while Start is selected.



22. INSPECT FOR EXHAUST GAS LEAK

23. INSTALL SPARE TIRE

1. INSPECT FUEL SENDER GAUGE ASSEMBLY

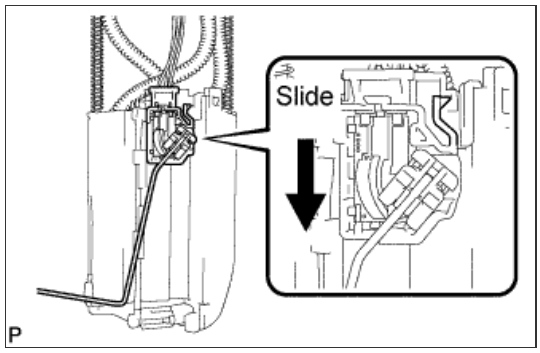
Text in Illustration

*a	Component without harness connected (Fuel Sender Gauge)
*b	F (Upper)
*c	E (Lower)

a. Check that the float moves smoothly between F and E.

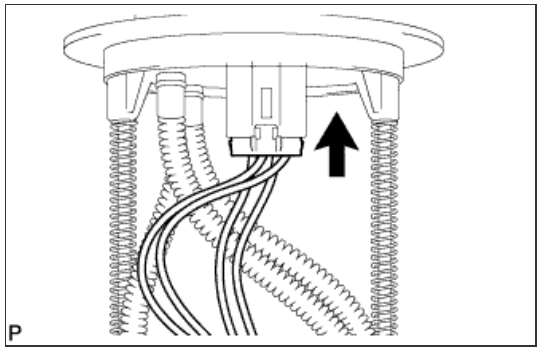
b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:



Tester Connection	Condition	Specified Condition
1 - 2	Float level is F (upper)	13.5 to 16.5 Ω
	Float level is E (lower)	405.5 to 414.5 Ω

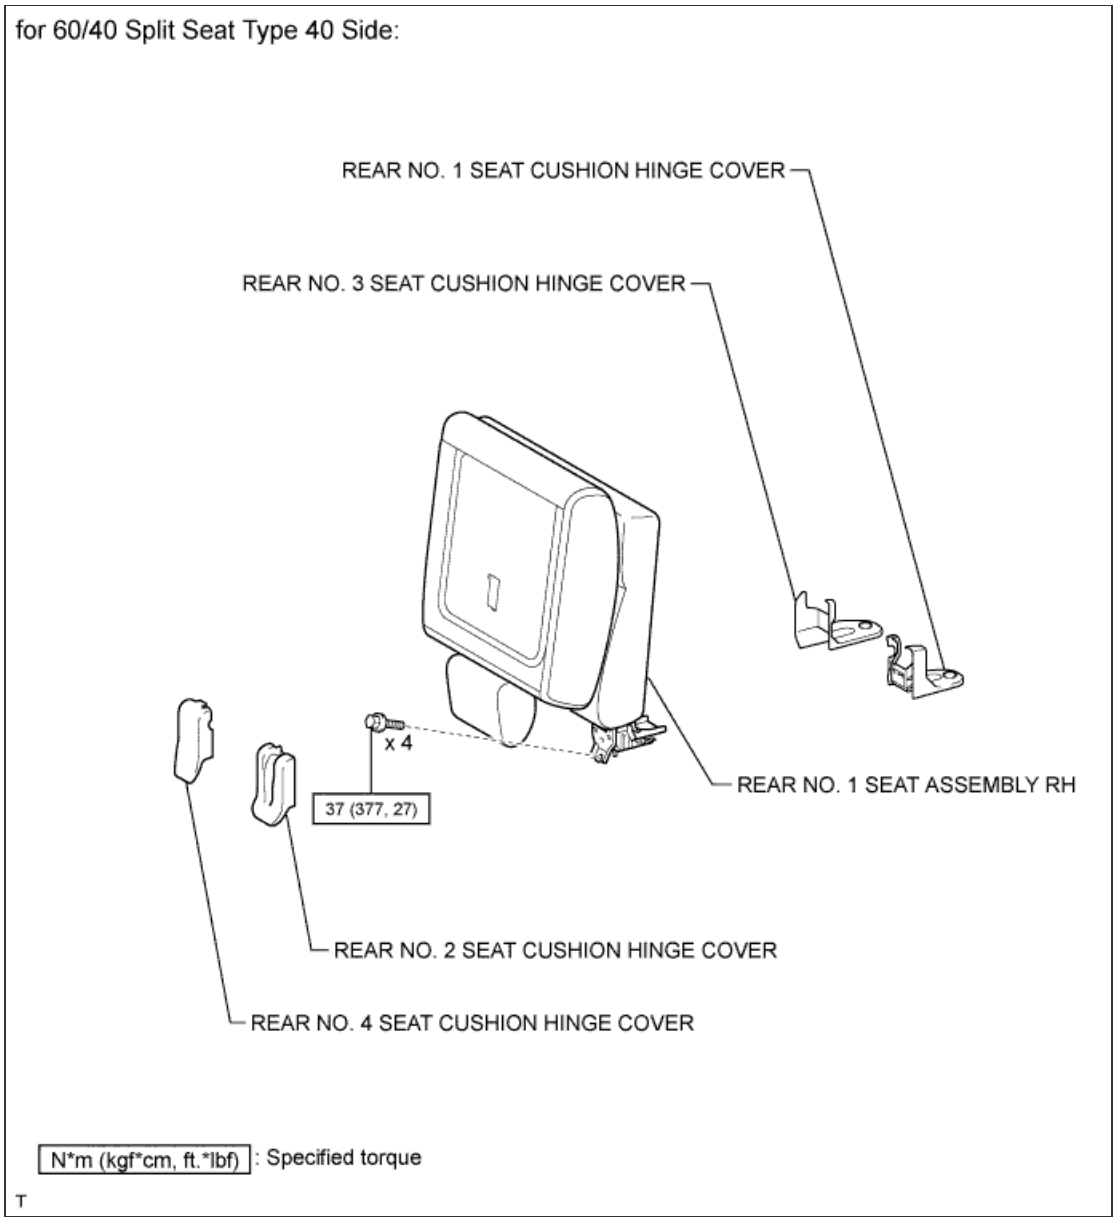
If the result is not as specified, replace the fuel sender gauge assembly.



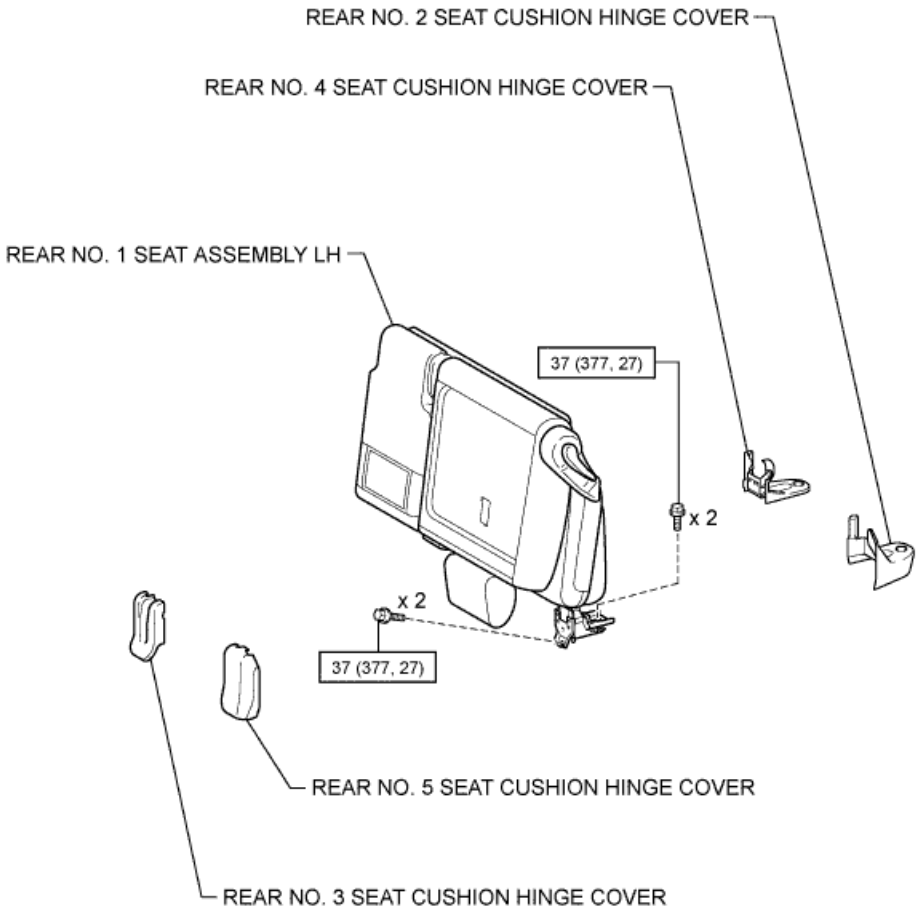
for Preparation Click here

1. INSTALL FUEL SENDER GAUGE ASSEMBLY

a. Set the sender gauge to the fuel sub-tank. Then slide the sender gauge downward to install it.



b. Connect the fuel sender gauge connector.



2. INSTALL FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY

a. Install the fuel suction with pump and gauge tube assembly (Click here).

FUEL SENDER GAUGE ASSEMBLY (for Fuel Sub Tank) > REMOVAL

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

a. Disconnect the cables from the negative (-) main battery and sub-battery terminals.

2. REMOVE REAR NO. 1 SEAT ASSEMBLY RH (for 60/40 Split Seat Type 40 Side)

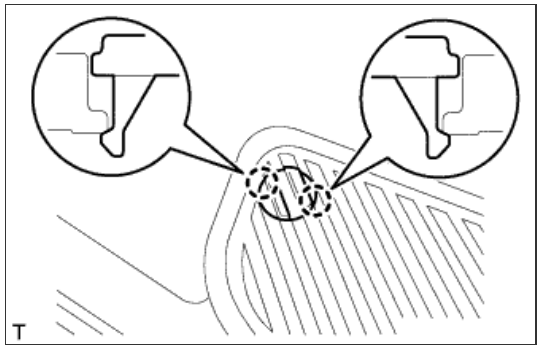
a. Remove the rear No. 1 seat assembly RH (Click here).

3. REMOVE REAR NO. 1 SEAT ASSEMBLY LH (for 60/40 Split Seat Type 60 Side)

a. Remove the rear No. 1 seat assembly LH (Click here).

4. REMOVE REAR NO. 2 SEAT ASSEMBLY

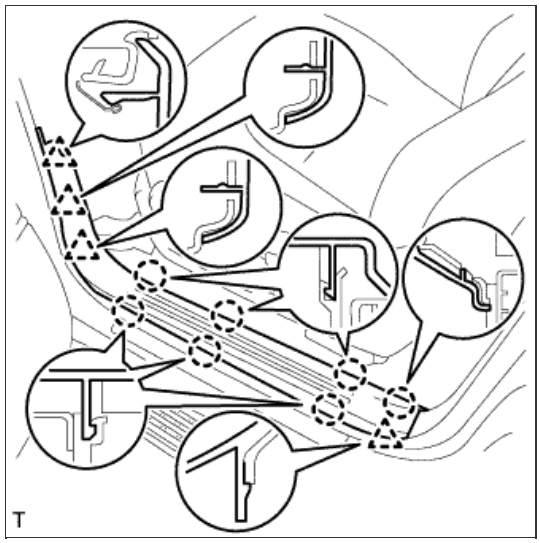
a. for Face to Face Seat Type:
Remove the rear No. 2 seat assembly (Click here).



b. except Face to Face Seat Type:
Remove the rear No. 2 seat assembly (Click here).

5. REMOVE REAR STEP COVER

HINT:

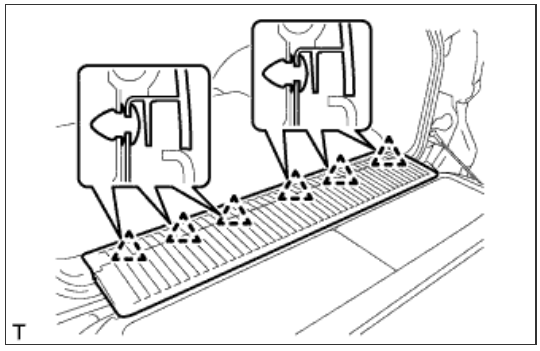


Use the same procedure to remove the step cover on the other side.

a. Detach the 2 claws and remove the step cover.

6. REMOVE REAR DOOR SCUFF PLATE LH

a. Detach the 7 claws and 4 clips, and remove the scuff plate.



7. REMOVE REAR DOOR SCUFF PLATE RH

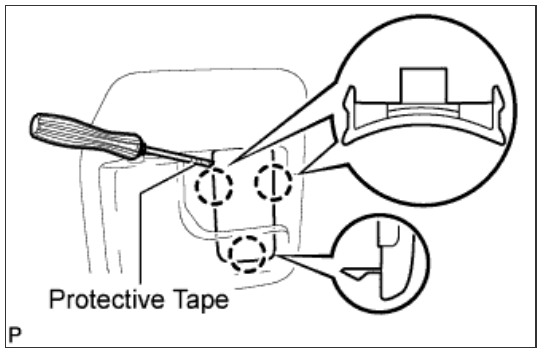
HINT:

Use the same procedures described for the LH side.

8. REMOVE REAR FLOOR MAT REAR SUPPORT PLATE

a. Detach the 6 clips and remove the support plate.

9. REMOVE REAR SEAT COVER CAP (w/ Rear No. 2 Seat, except Face to Face Seat Type)



HINT:

Use the same procedure to remove the rear seat cover cap on the other side.

a. Using a screwdriver, detach the 3 claws and remove the rear seat cover cap.

HINT:

Tape the screwdriver tip before use.

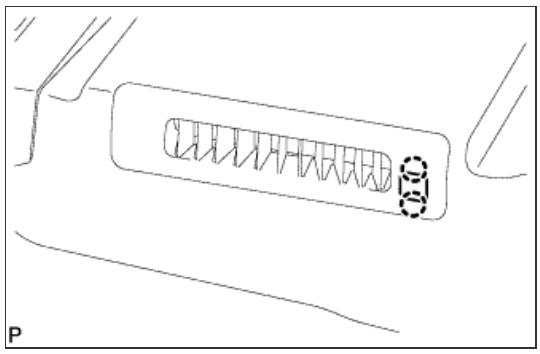
10. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY LH

a. w/ Sliding Roof:
Remove the front quarter trim panel assembly LH (Click here).

b. w/o Sliding Roof:
Remove the front quarter trim panel assembly LH (Click here).

11. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY RH

a. w/ Sliding Roof:
Remove the front quarter trim panel assembly RH (Click here).



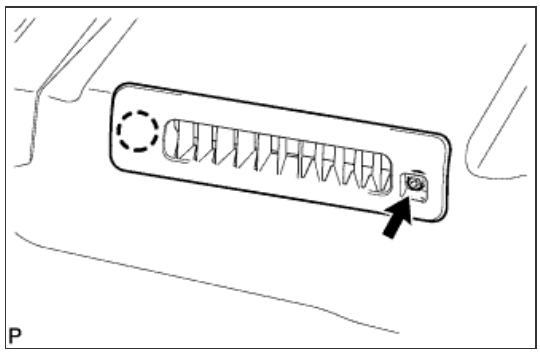
b. w/o Sliding Roof:
Remove the front quarter trim panel assembly RH (Click here).

12. REMOVE AIR DUCT PLUG (w/ Rear Air Conditioning System)

a. Detach the 2 claws and remove the plug.

HINT:

Use the same procedures for both sides.



13. REMOVE REAR AIR DUCT GUIDE (w/ Rear Air Conditioning System)

a. Remove the screw.

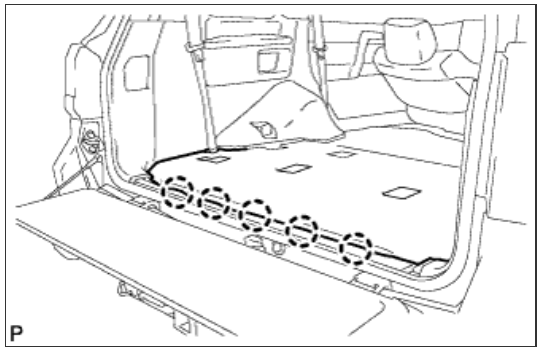
b. Detach the claw and remove the guide.

HINT:

Use the same procedures for both sides.

14. SEPARATE REAR FLOOR MAT ASSEMBLY

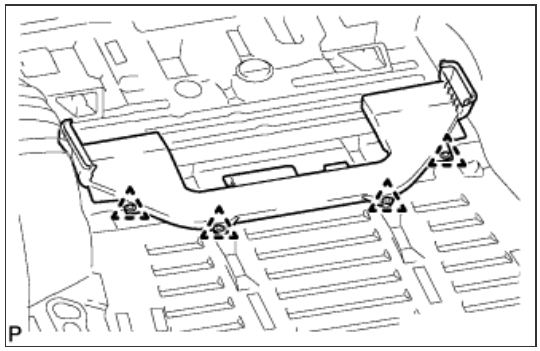
a. w/ Rear Air Conditioning System:
Detach the 5 clips and fold back the floor mat toward the front of the vehicle.



HINT:

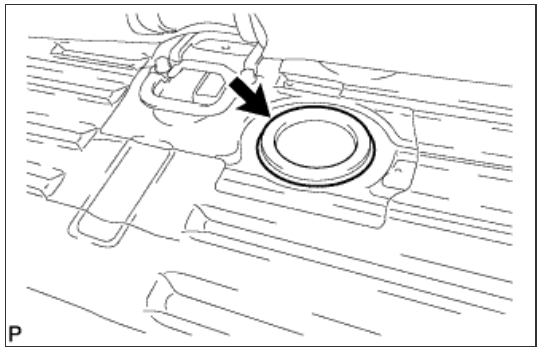
Fold back the floor mat so that the rear No. 7 air duct can be removed.

b. w/o Rear Air Conditioning System:
Detach the 5 clips and fold back the floor mat toward the front of the vehicle.



HINT:

Fold back the floor mat so that the service hole cover can be removed.

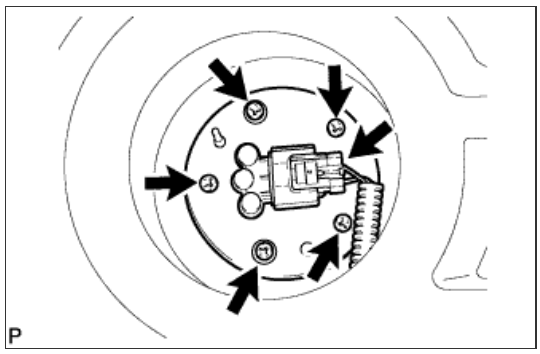


15. REMOVE REAR NO. 7 AIR DUCT (w/ Rear Air Conditioning System)

a. Detach the 4 clips and remove the air duct.

16. REMOVE REAR FLOOR SERVICE HOLE COVER

17. REMOVE FUEL SENDER GAUGE ASSEMBLY



a. Disconnect the sender gauge connector.

b. Remove the 5 screws and sender gauge.

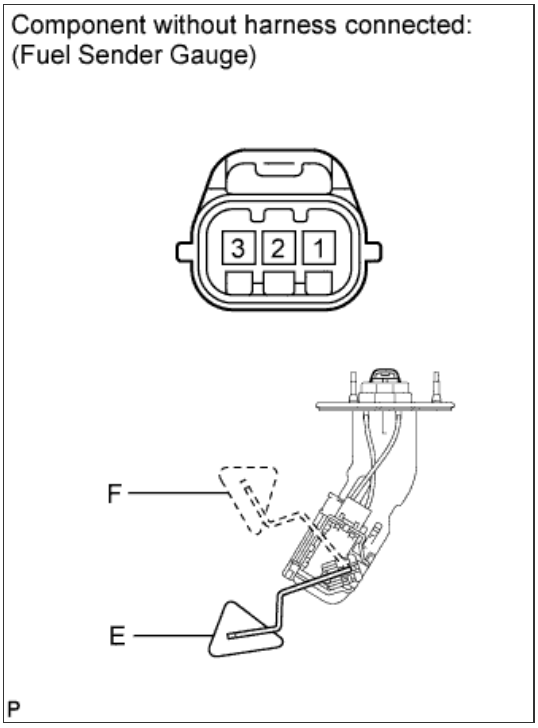
NOTICE:

Be careful not to bend the arm of the fuel sender gauge.

c. Remove the gasket from the sender gauge.

for Preparation Click here

1. INSPECT FUEL SENDER GAUGE ASSEMBLY



a. Check that the float moves smoothly between F and E.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

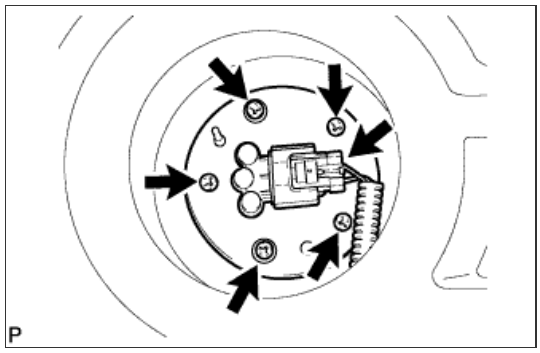
Tester Connection	Condition	Specified Condition
2 - 3	Float level is F (upper)	12 to 18 Ω
	Float level is E (lower)	405 to 415 Ω

If the result is not as specified, replace the fuel sender gauge assembly.

for Preparation Click here

1. INSTALL FUEL SENDER GAUGE ASSEMBLY

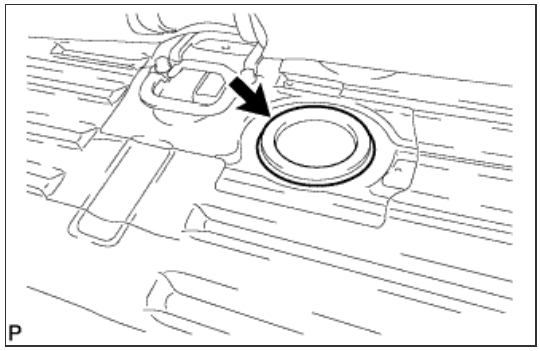
a. Install a new gasket to the sender gauge.



b. Install the sender gauge with the 5 screws.

Torque:
1.5 N*m{ 15 kgf*cm , 13 in.*lbf }

NOTICE:

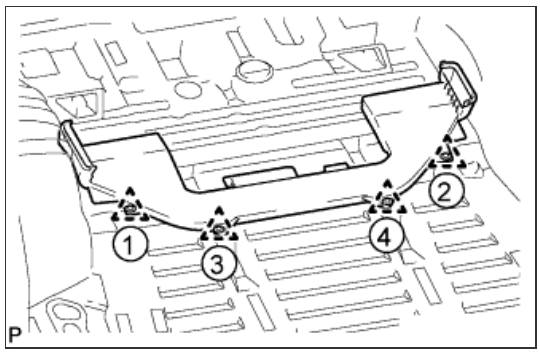


Be careful not to bend the arm of the fuel sender gauge.

c. Connect the sender gauge connector.

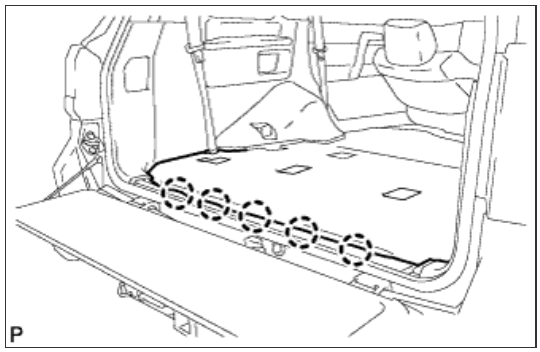
2. INSTALL REAR FLOOR SERVICE HOLE COVER

a. Install the service hole cover with new butyl tape.



3. INSTALL REAR NO. 7 AIR DUCT (w/ Rear Air Conditioning System)

a. Attach the 4 clips to install the air duct.

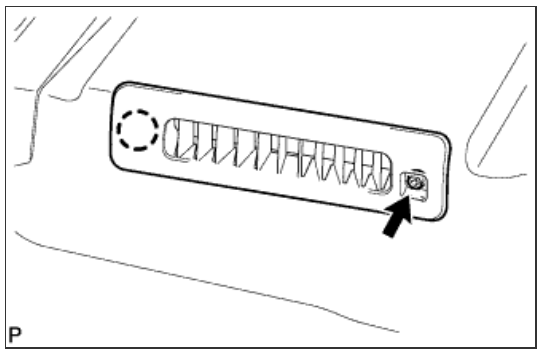


HINT:

Attach the clips in the order shown in the illustration.

4. INSTALL REAR FLOOR MAT ASSEMBLY

a. Attach the 5 clips to install the floor mat.



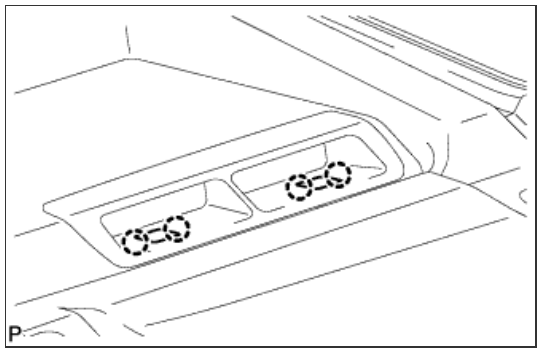
5. INSTALL REAR AIR DUCT GUIDE (w/ Rear Air Conditioning System)

a. Attach the claw to install the guide.

b. Install the screw.

HINT:

Use the same procedures for both sides.



6. INSTALL AIR DUCT PLUG (w/ Rear Air Conditioning System)

a. Attach the 4 claws to install the 2 plugs.

HINT:

Use the same procedures for both sides.

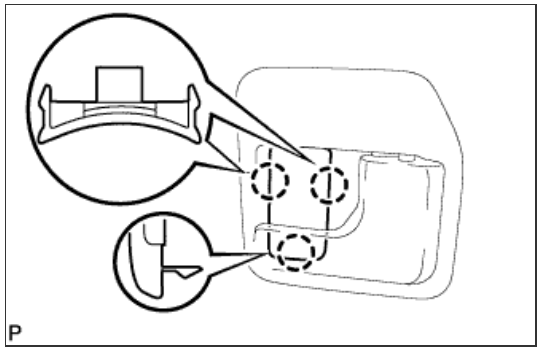
7. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY LH

a. w/ Sliding Roof:
Install the front quarter trim panel assembly LH (Click here).

b. w/o Sliding Roof:
Install the front quarter trim panel assembly LH (Click here).

8. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY RH

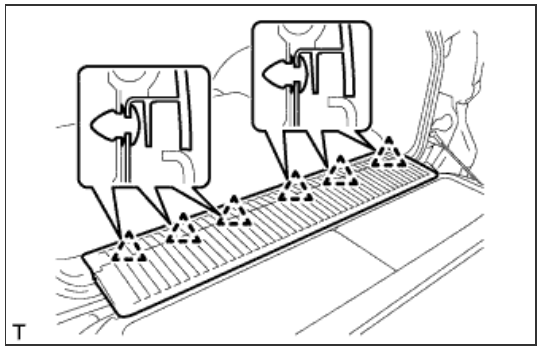
a. w/ Sliding Roof:
Install the front quarter trim panel assembly RH (Click here).



b. w/o Sliding Roof:
Install the front quarter trim panel assembly RH (Click here).

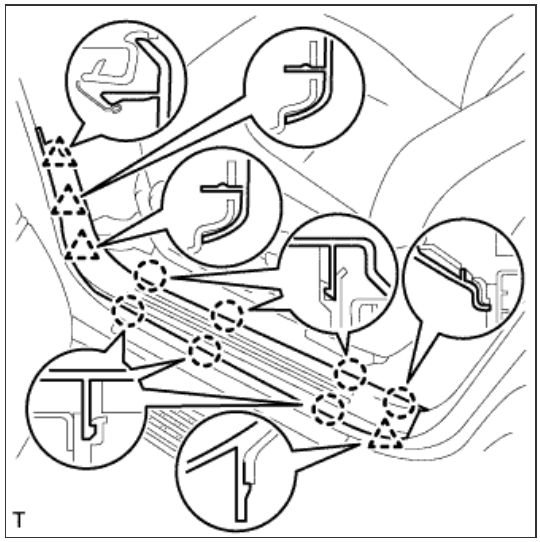
9. INSTALL REAR SEAT COVER CAP (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:



Use the same procedure to install the rear seat cover cap on the other side.

a. Attach the 3 claws to install the rear seat cover cap.



10. INSTALL REAR FLOOR MAT REAR SUPPORT PLATE

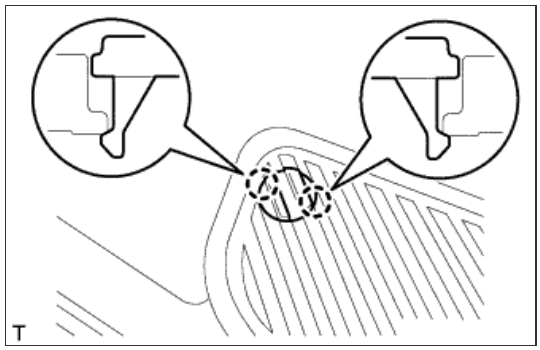
a. Attach the 6 clips to install the support plate.

11. INSTALL REAR DOOR SCUFF PLATE LH

a. Attach the 7 claws and 4 clips to install the scuff plate.

12. INSTALL REAR DOOR SCUFF PLATE RH

HINT:



Use the same procedures described for the LH side.

13. INSTALL REAR STEP COVER

HINT:

Use the same procedure to install the step cover on the other side.

a. Attach the 2 claws to install the step cover.

14. INSTALL REAR NO. 2 SEAT ASSEMBLY

a. for Face to Face Seat Type:
Install the rear No. 2 seat assembly (Click here).

b. except Face to Face Seat Type:
Install the rear No. 2 seat assembly (Click here).

15. INSTALL REAR NO. 1 SEAT ASSEMBLY RH (for 60/40 Split Seat Type 40 Side)

a. Install the rear No. 1 seat assembly RH (Click here).

16. INSTALL REAR NO. 1 SEAT ASSEMBLY LH (for 60/40 Split Seat Type 60 Side)

a. Install the rear No. 1 seat assembly LH (Click here).

17. INSTALL CABLE TO NEGATIVE BATTERY TERMINAL

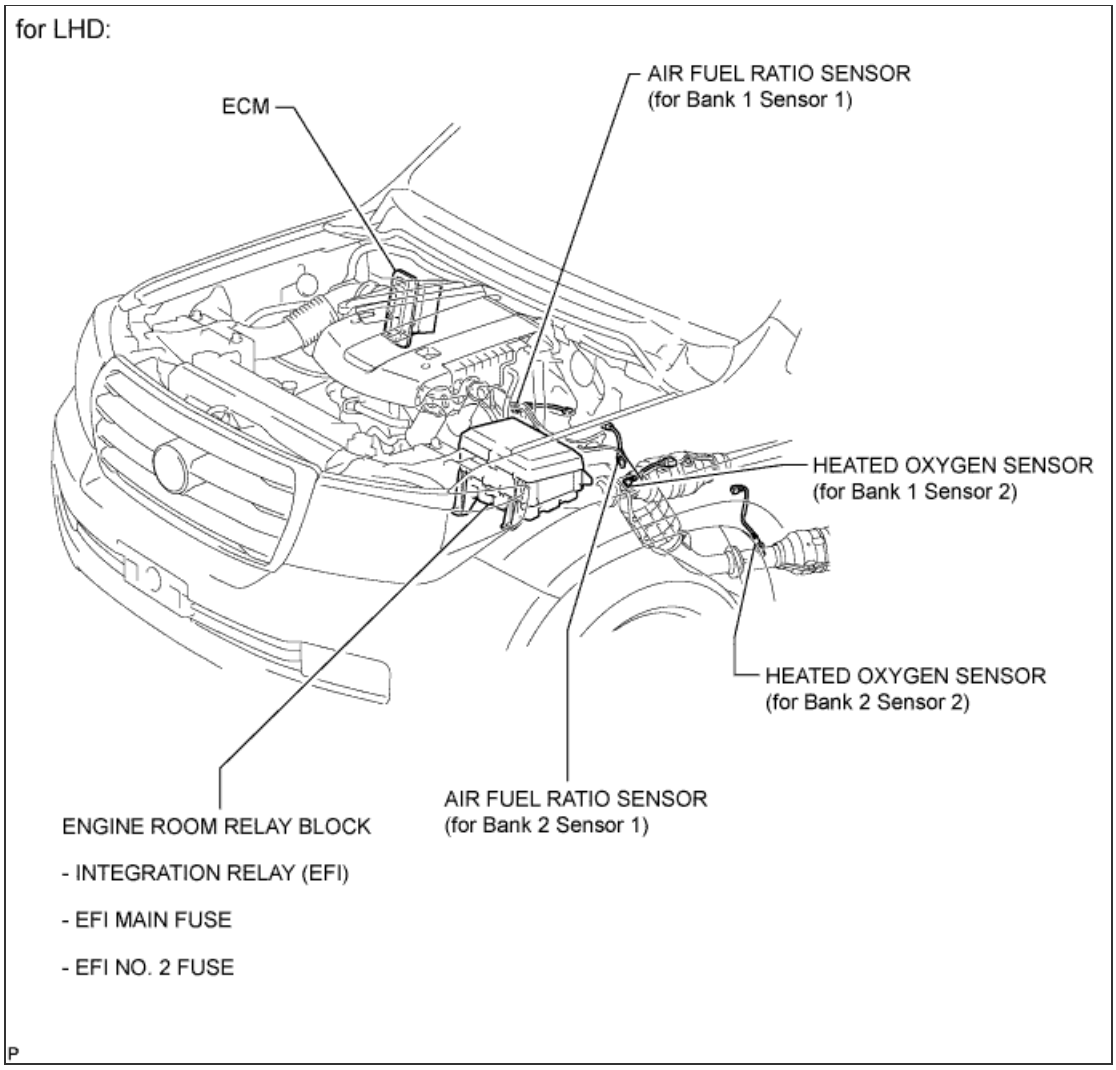
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

a. Connect the cables to the negative (-) main battery and sub-battery terminals.

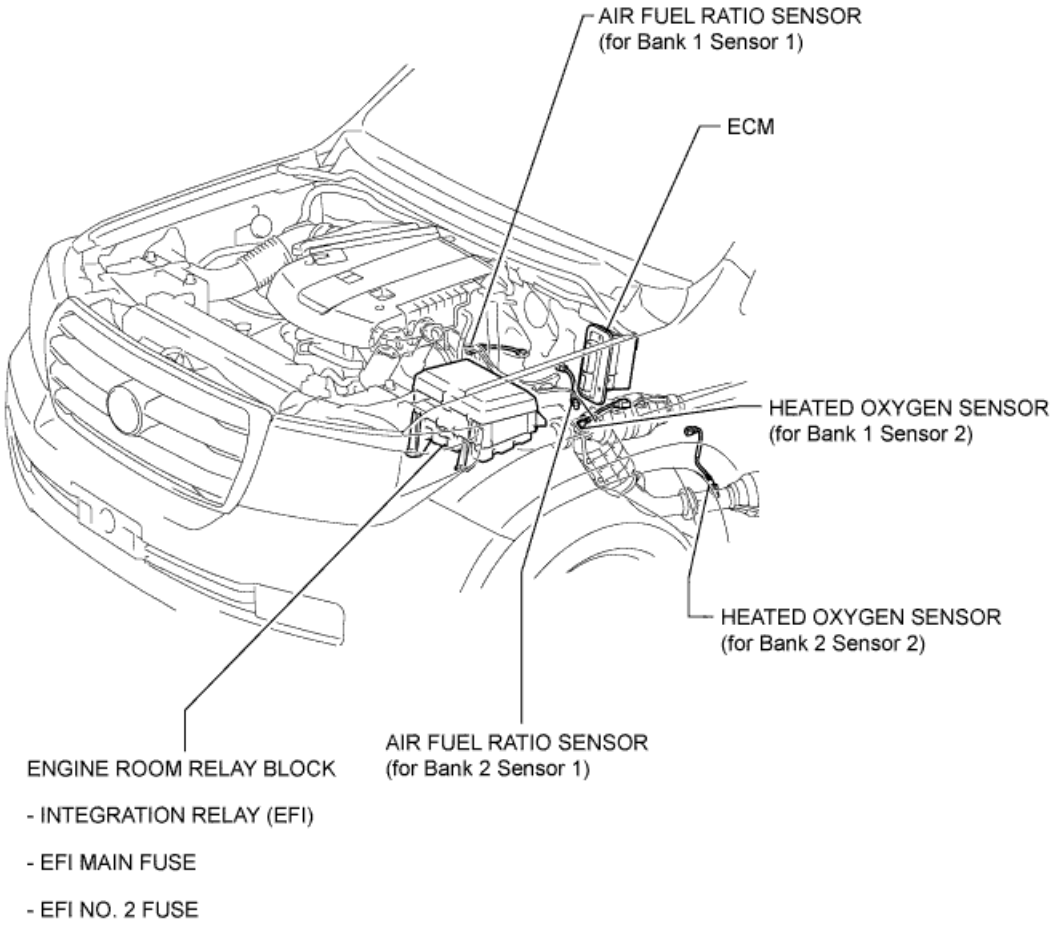
18. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).



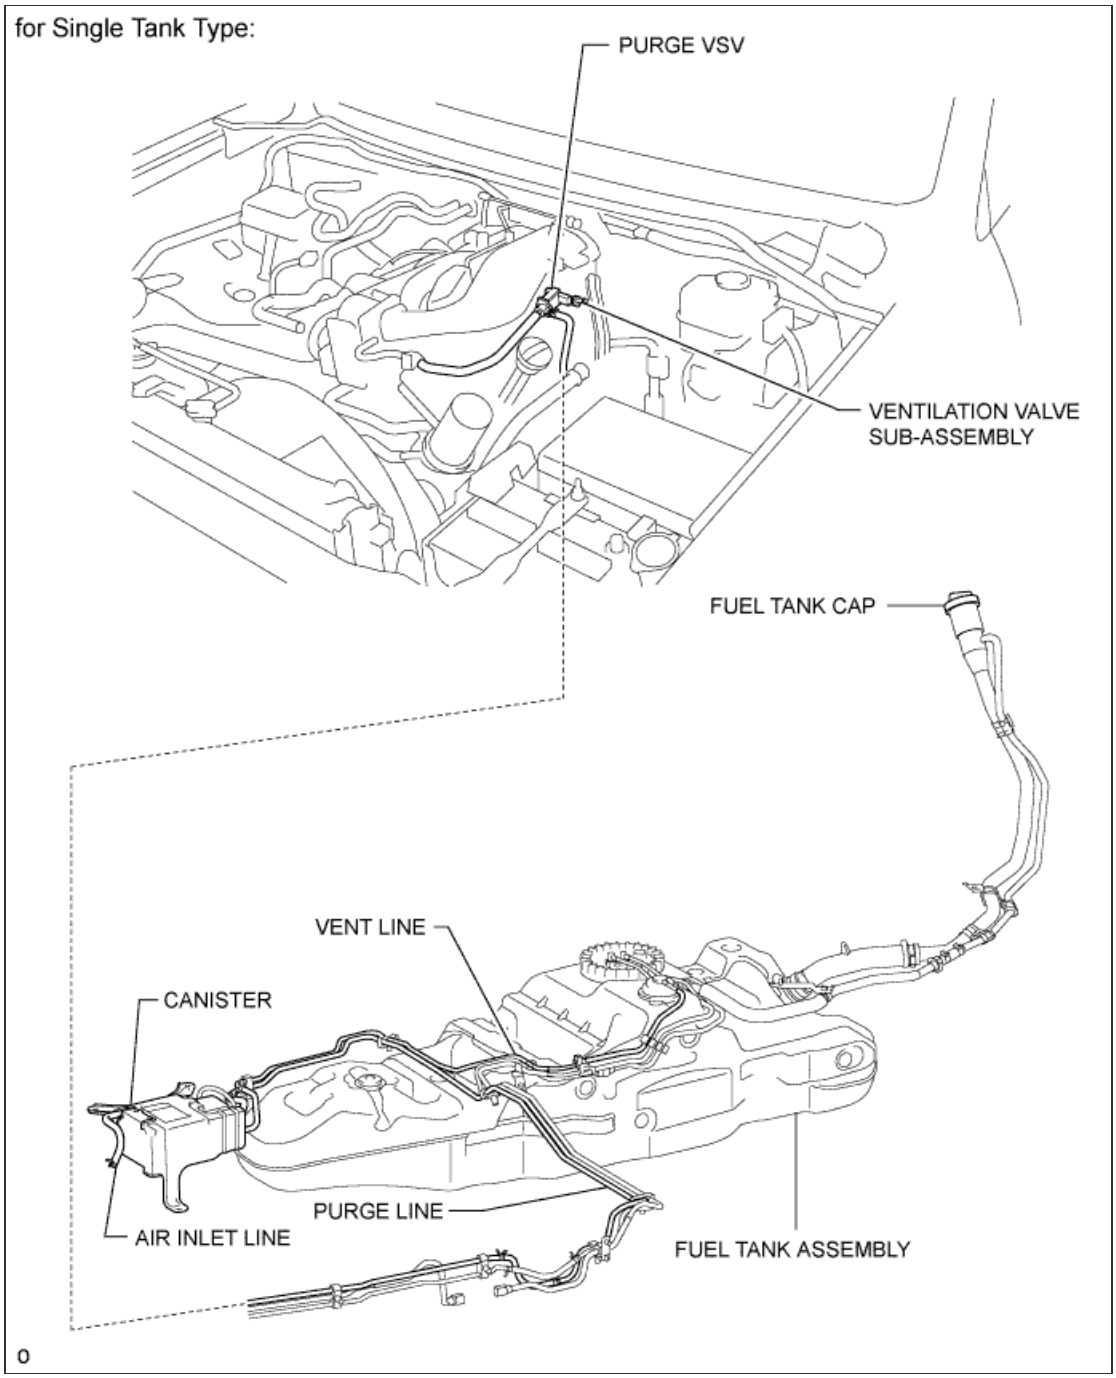
for Preparation Click here

1.AIR INDUCTION SYSTEM



a. Separation of the engine oil dipstick, oil filler cap, PCV hose, etc. may cause the engine to be out of tune.

b. Disconnection, looseness or cracks in the parts of the air induction system between the throttle body and cylinder head will result in air suction and cause the engine to be out of tune.



for Preparation Click here

1. CHECK PURGE VSV

a. Connect the intelligent tester to the DLC3.

b. Remove the V-bank cover (Click here).

c. Disconnect the hose (connected to the canister) from the purge VSV.

d. Start the engine and turn the tester main switch on.

e. Enter the following menus: Powertrain / Engine and ECT / Active Test / Activate the VSV for EVAP Control.

Standard:

Tester Operation	Specified Condition
EVAP VSV: OFF	Purge VSV has no suction
EVAP VSV: O	rge VSV has suction

f. Connect the hose (connected to the canister) to the purge VSV.

g. Install the V-bank cover (Click here).

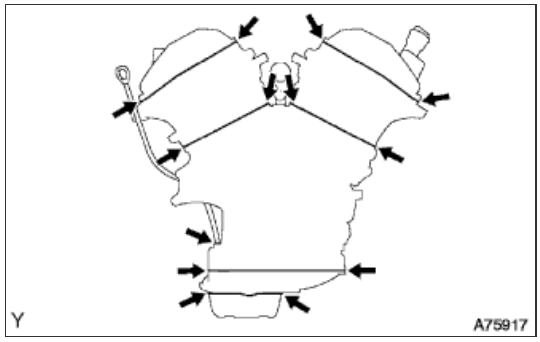
2. INSPECT FUEL CUT-OFF RPM

a. Start and warm up the engine.

b. Increase the engine speed to at least 3500 rpm.

c. Use a sound scope to check for injector operation noise.

d. Check that when the accelerator pedal is released, injector operation noise stops momentarily and then resumes.
If the result is not as specified, check the injector, wiring and ECM.



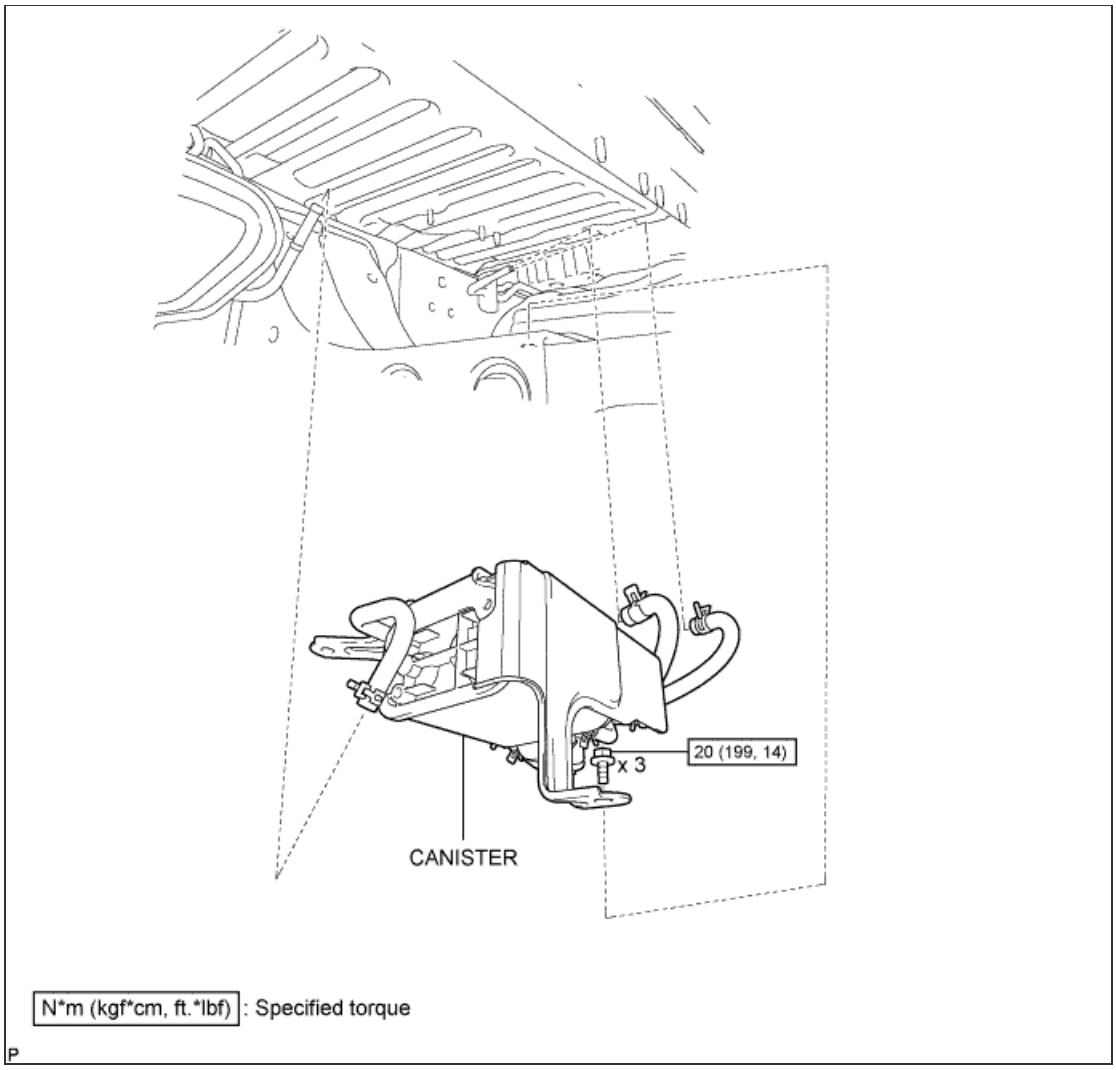
3. VISUALLY INSPECT HOSES, CONNECTIONS AND GASKETS

a. Check that there are no cracks, leaks or damage.

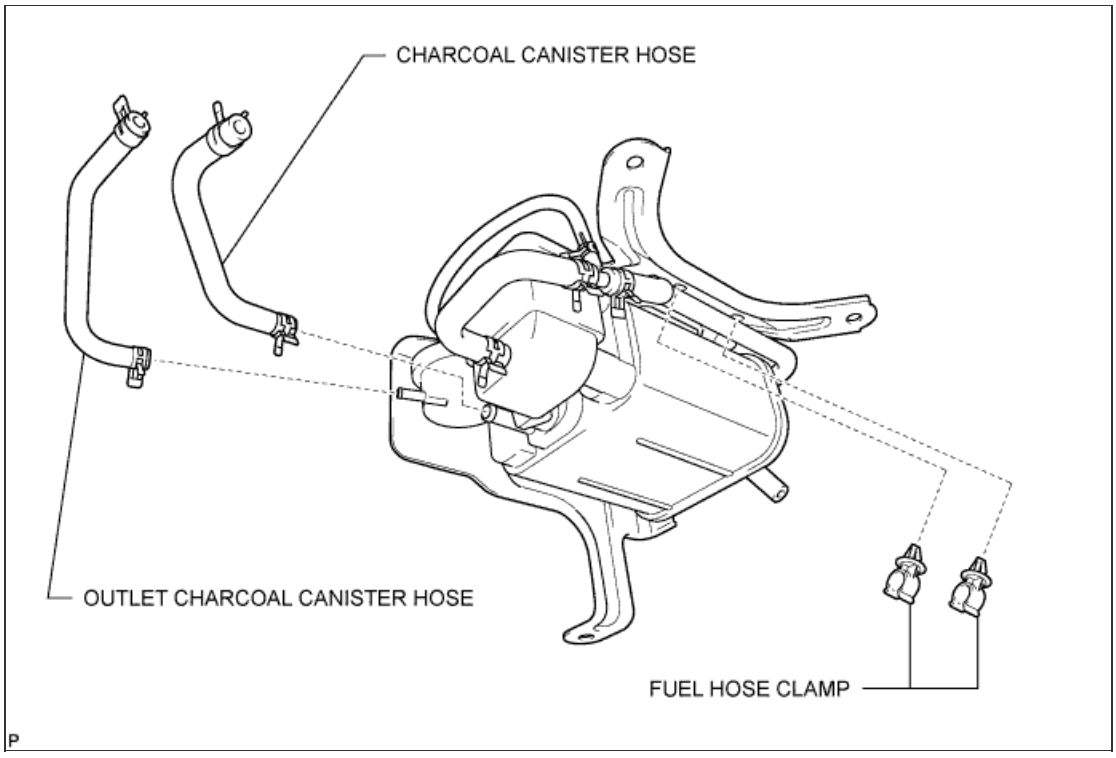
NOTICE:

- **Detachment or other problems with the engine oil dipstick, filler cap, ventilation hose and other components may cause the engine to run improperly.**
- **Air suction caused by disconnections, looseness or cracks in the parts of the air induction system between the throttle body and cylinder head will cause engine failure or engine malfunctions.**

If the result is not as specified, replace parts as necessary.



4. CHECK HOSES AND CONNECTORS

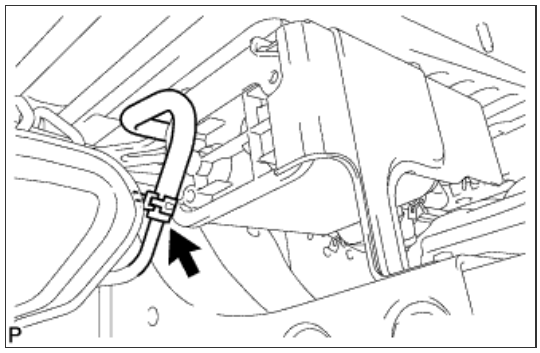


a. Visually check for loose connections, sharp bends or damage.

5. CHECK FUEL TANK ASSEMBLY

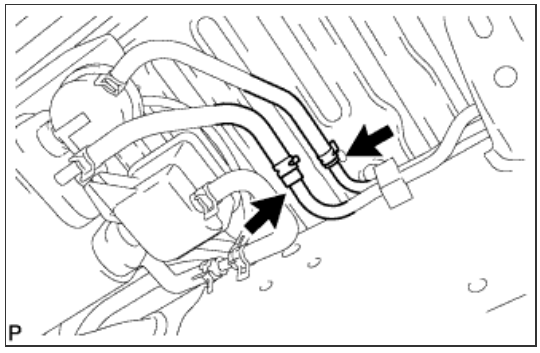
a. Visually check for deformation, cracks or fuel leakage.

for Preparation Click here



CHARCOAL CANISTER HOSE
OUTLET CHARCOAL CANISTER HOSE
FUEL HOSE CLAMP
P

for Preparation Click here

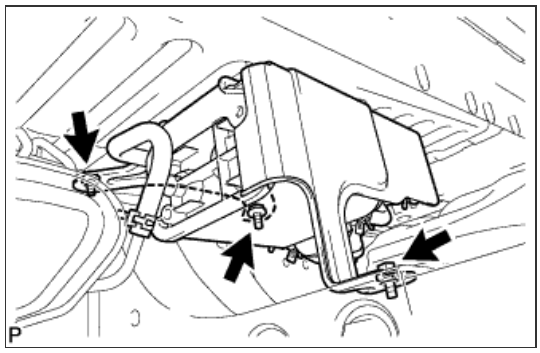


1. REMOVE CANISTER

a. Disconnect the hose.

b. Disconnect the charcoal canister hose.

c. Disconnect the outlet charcoal canister hose.

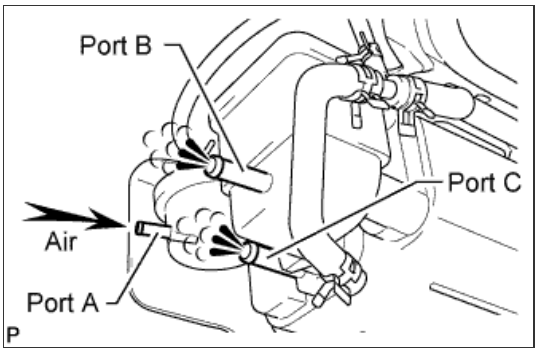


d. Remove the 3 bolts and canister.

e. Remove the 2 fuel hose clamps from the canister.

f. Remove the charcoal canister hose.

. Remove the outlet charcoal canister hose.



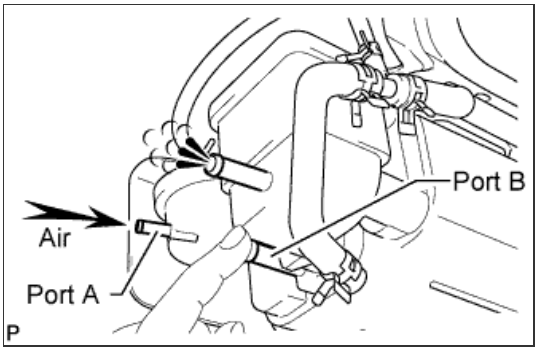
for Preparation Click here

1. INSPECT CHARCOAL CANISTER

a. Visually check the canister for cracks or damage.

Blow compressed air of 4.9 kPa (50 gf/cm ^{2}, 0.71 psi) into port A and check that air flows without resistance from port B and port C.
If the result is not as specified, replace the canister.

c. Apply a vacuum of 1.96 kPa (20 gf/cm^2, 0.28 psi) to port A. Check that the vacuum does not decrease when ports B and C are closed, and check that the vacuum does not decrease when port B is released.
If the result is not as specified, replace the canister.



2. CLEAN FILTER IN CANISTER

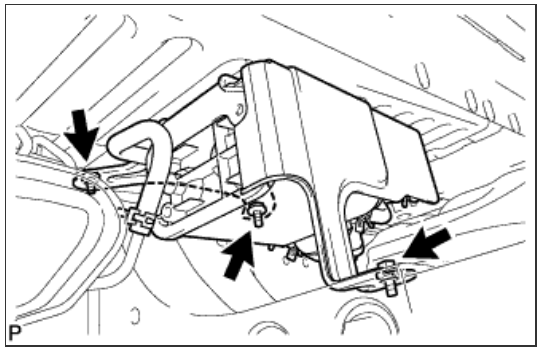
a. Clean the filter by blowing compressed air of 4.9 kPa (50 gf/cm ^{2}, 0.71 psi) into port A while holding port B closed.

NOTICE:

Do not attempt to wash the canister.

for Preparation Click here

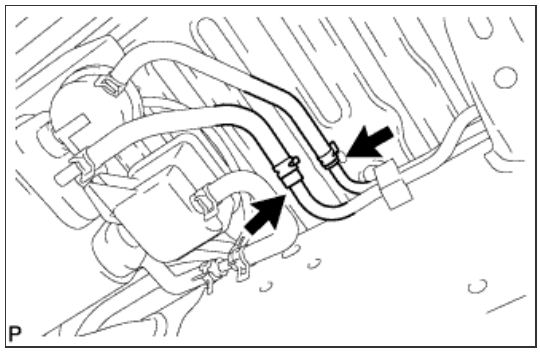
1. INSTALL CANISTER ASSEMBLY



a. Install the outlet charcoal canister hose to the canister.

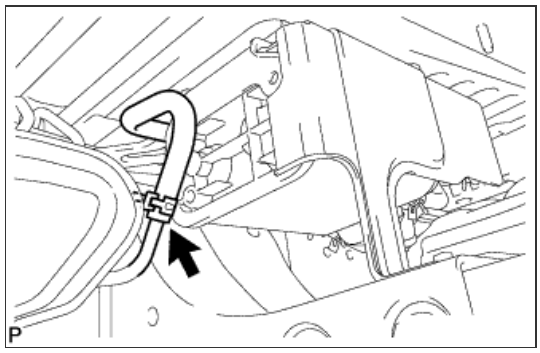
b. Install the charcoal canister hose to the canister.

c. Install the 2 fuel hose clamps to the canister.

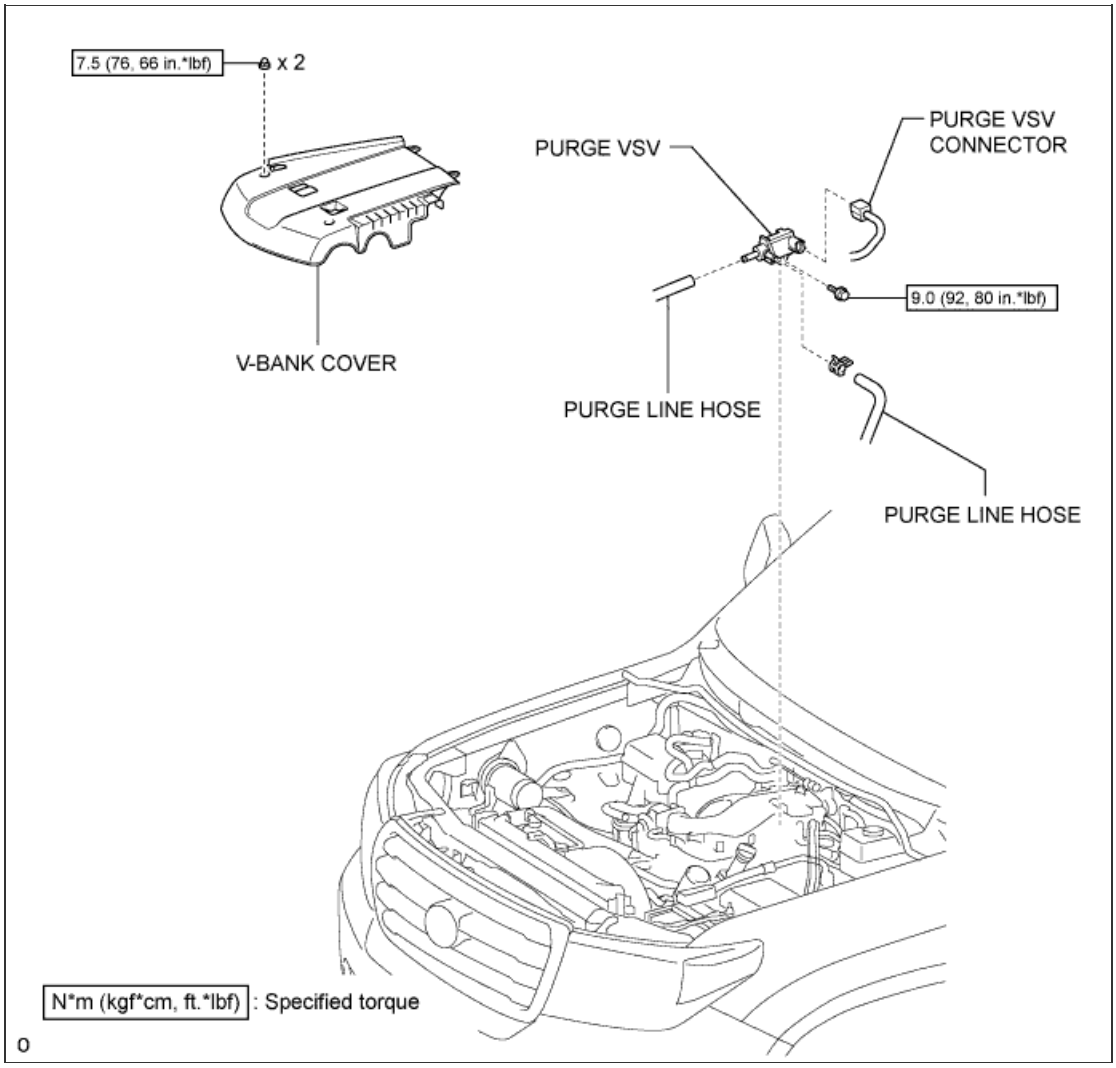


d. Install the canister with the 3 bolts.

Torque:
20 N*m{ 199 kgf*cm , 14 ft.*lbf }



e. Connect the outlet charcoal canister hose.



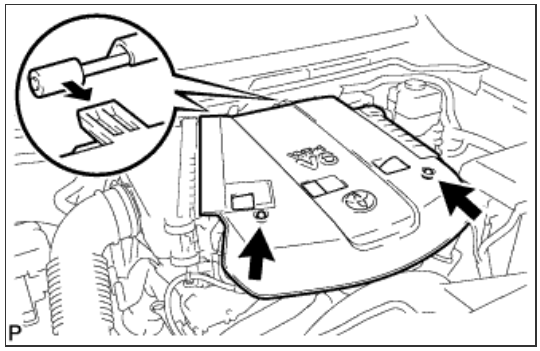
f. Connect the charcoal canister hose.

g. Connect the hose.

for Preparation Click here

PURGE VALVE > REMOVAL

for Preparation Click here

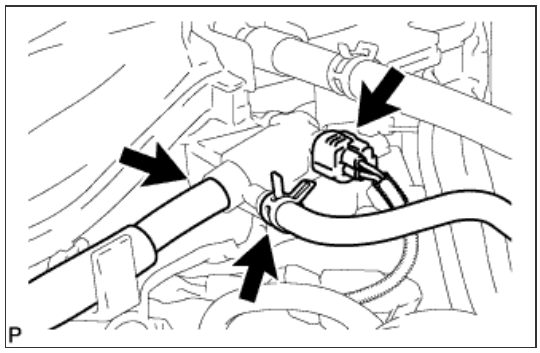


1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

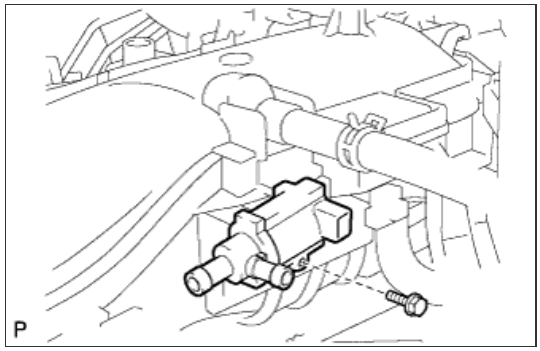
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE V-BANK COVER



a. Remove the 2 nuts and V-bank cover.



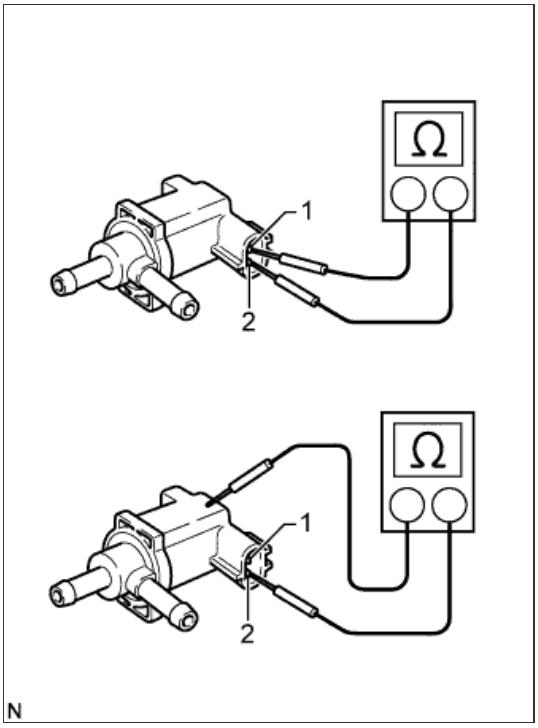
3. REMOVE PURGE VSV

a. Disconnect the purge VSV connector.

b. Disconnect the 2 purge line hoses.

c. Remove the bolt and purge VSV.

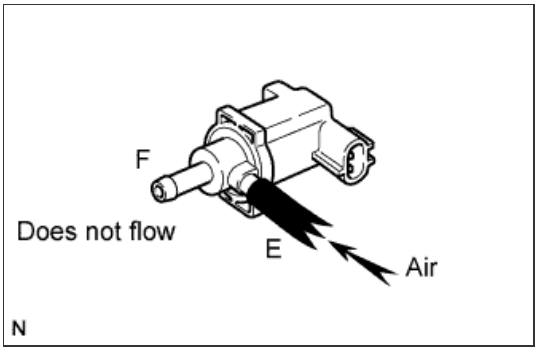
for Preparation Click here



1. INSPECT PURGE VSV

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

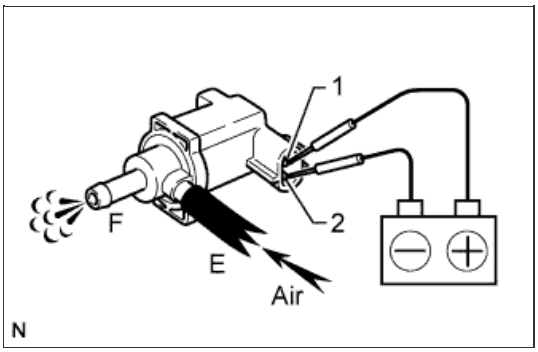


Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	26 to 30 Ω
1 - Body ground	Always	10 MΩ or higher
2 - Body ground		

If the result is not as specified, replace the purge VSV.

b. Check operation of purge VSV.

i. Check that air does not flow from port F when air is applied to port E.

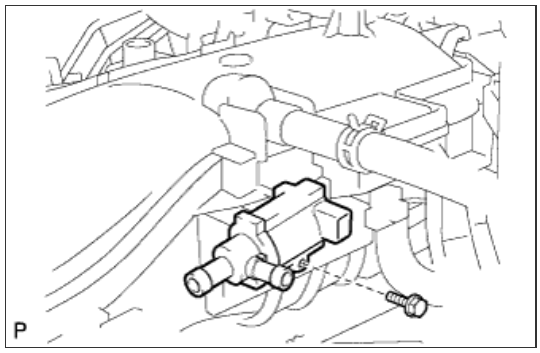


ii. Apply battery voltage to the connector, and check the VSV operation.

O :

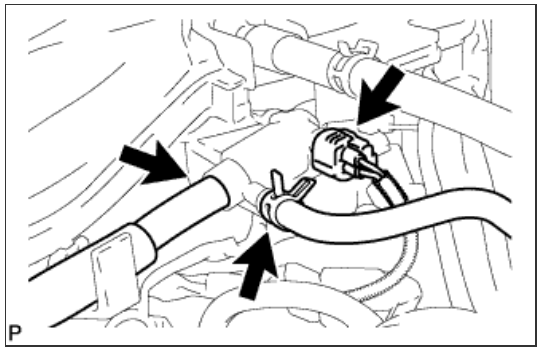
Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Air flows from port E to port F

If the result is not as specified, replace the purge VSV.



for Preparation Click here

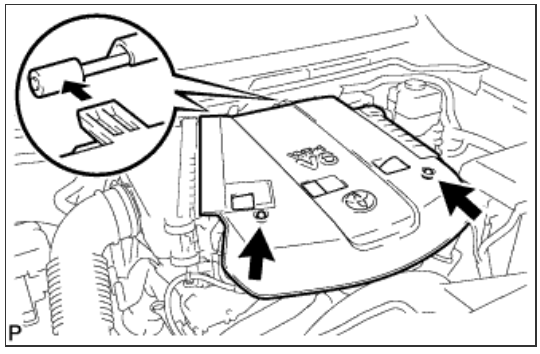
1. INSTALL PURGE VSV



a. Install the purge VSV with the bolt.

Torque:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

b. Connect the 2 purge line hoses.



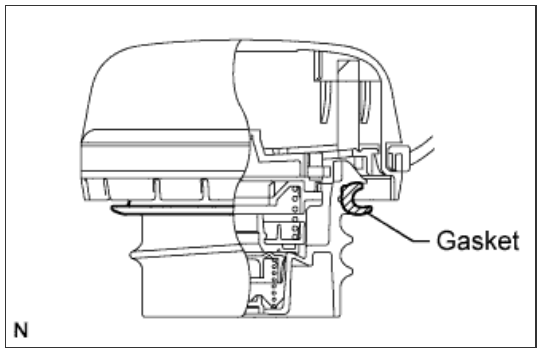
c. Connect the purge VSV connector.

2. INSTALL V-BANK COVER

a. Install the V-bank cover with the 2 nuts.

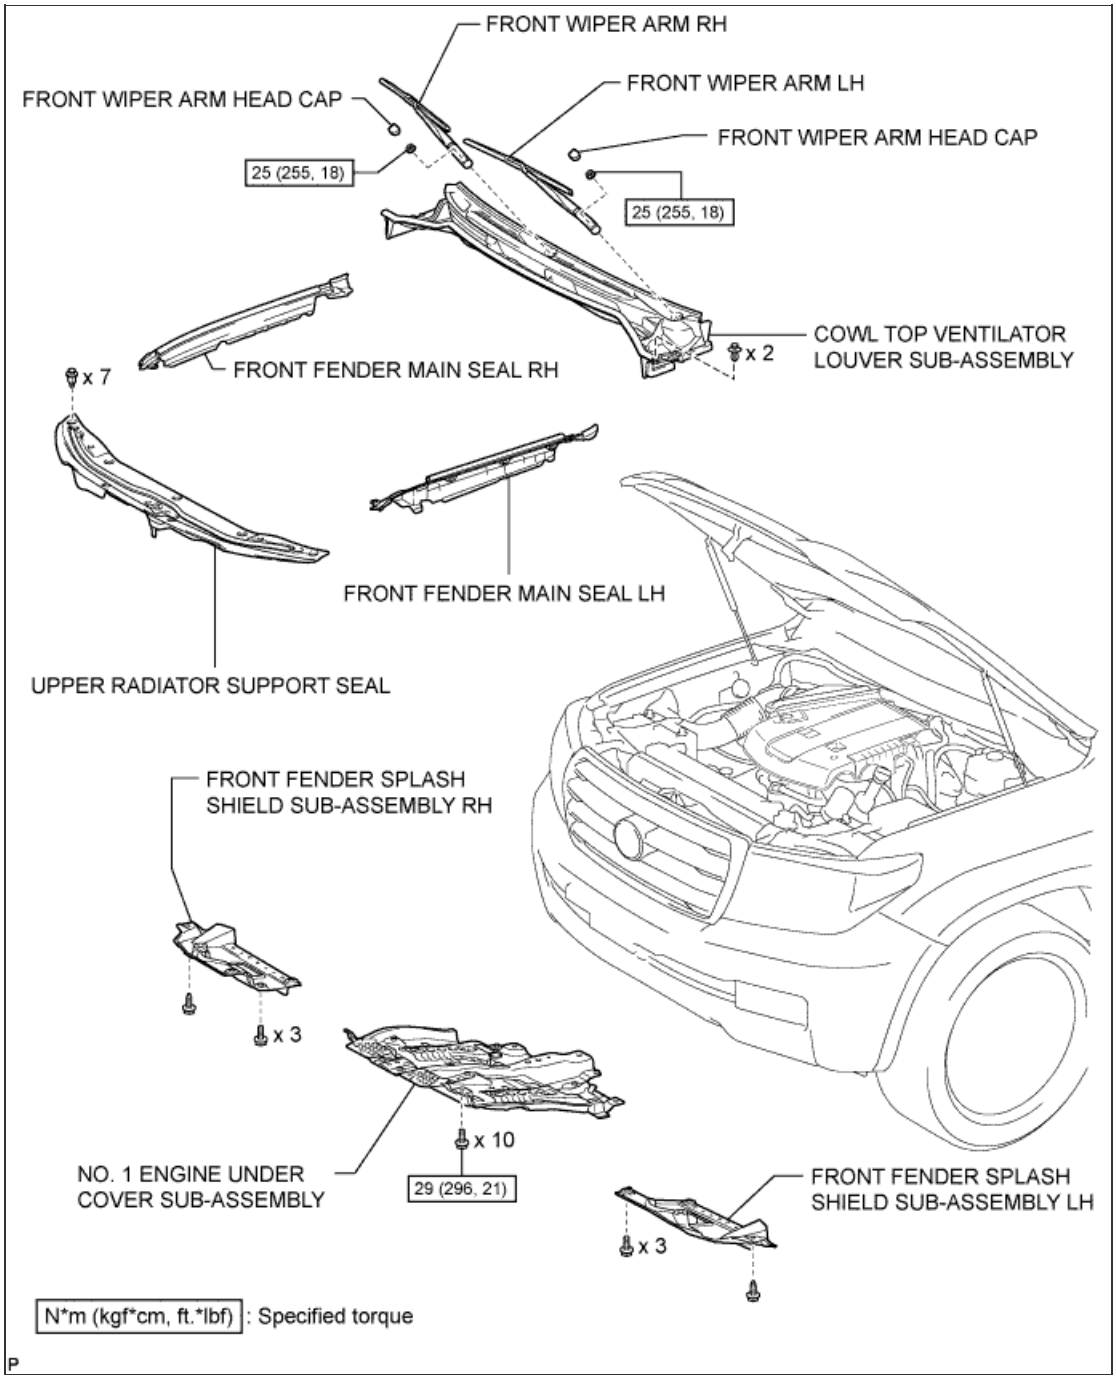
Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

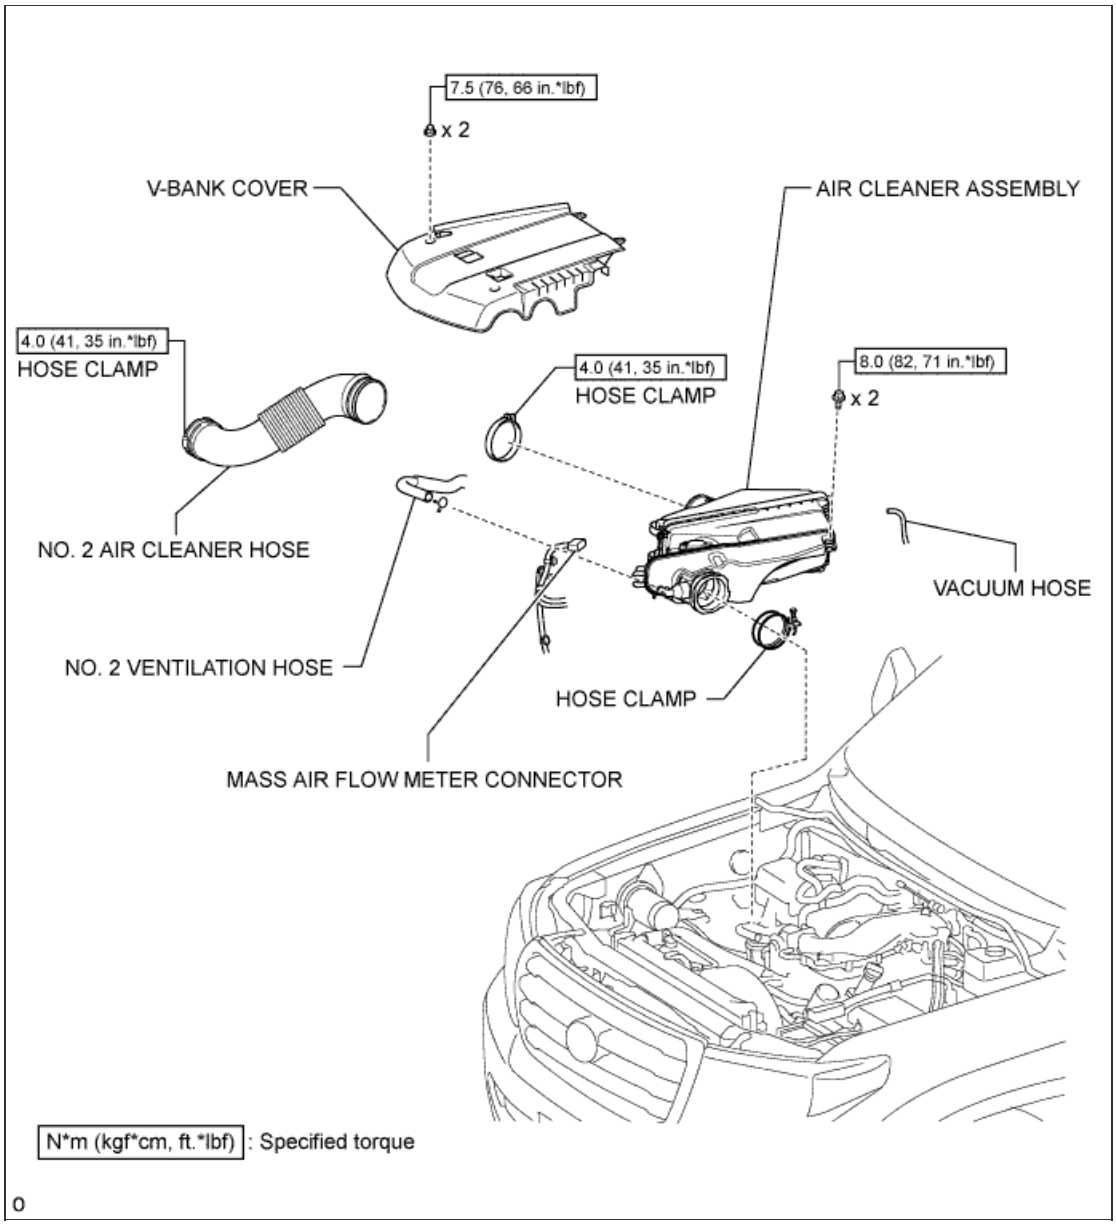


NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

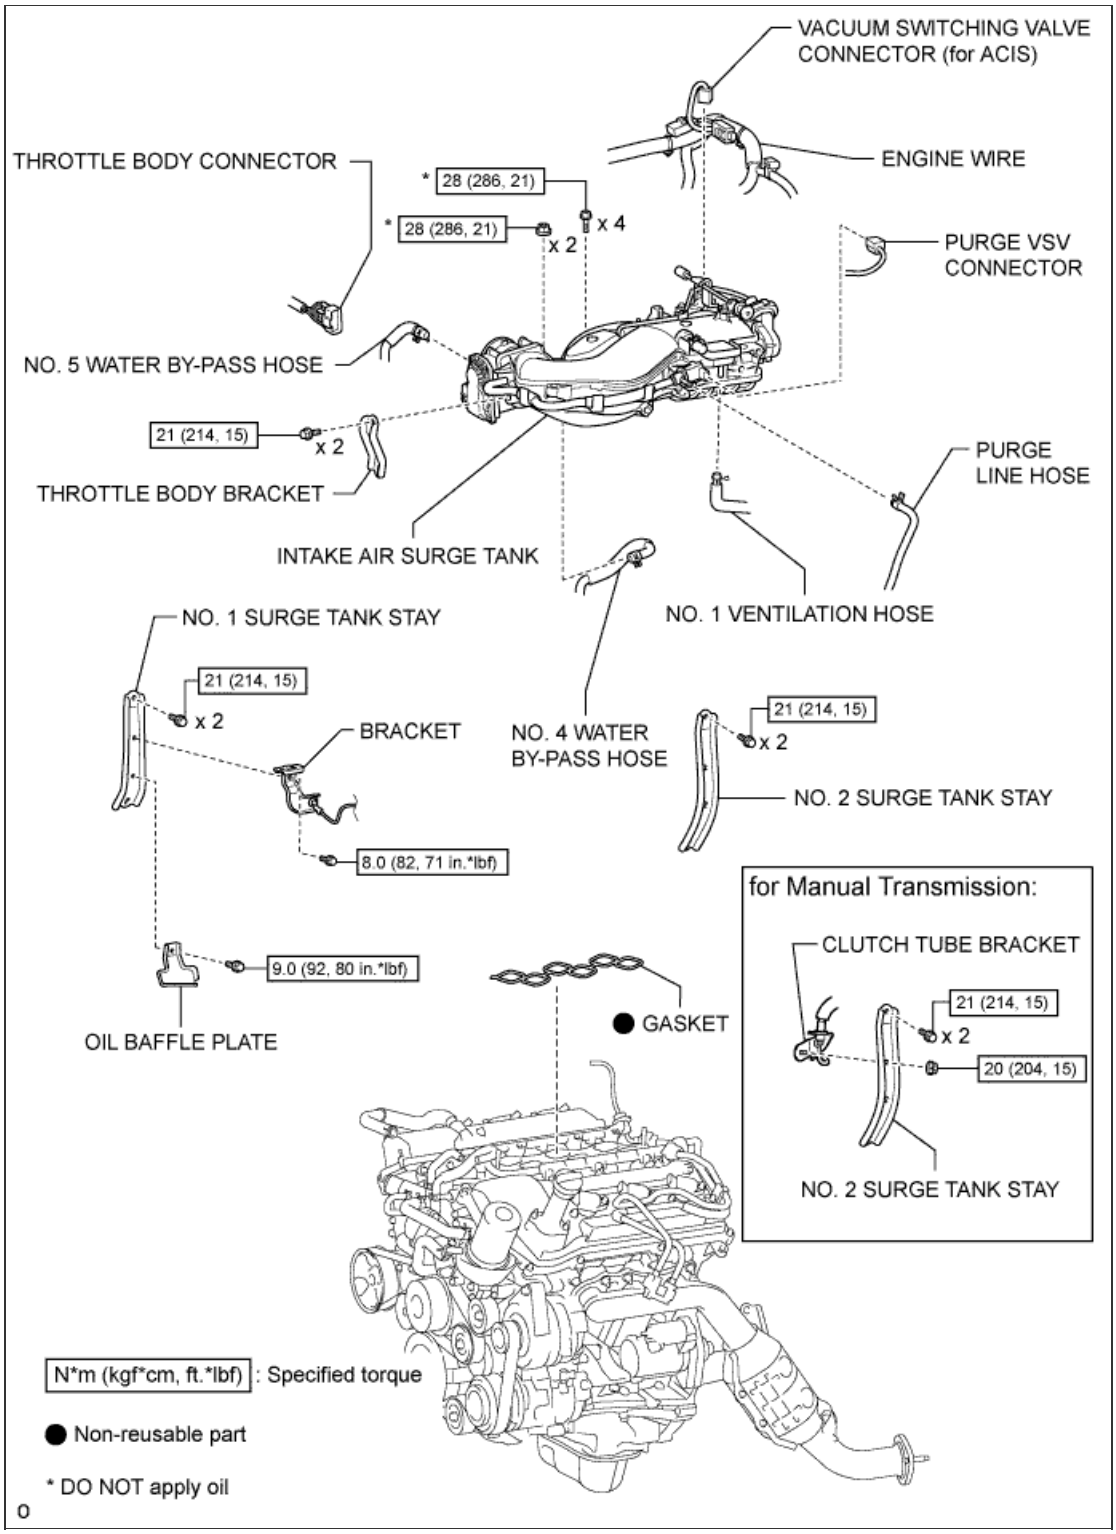


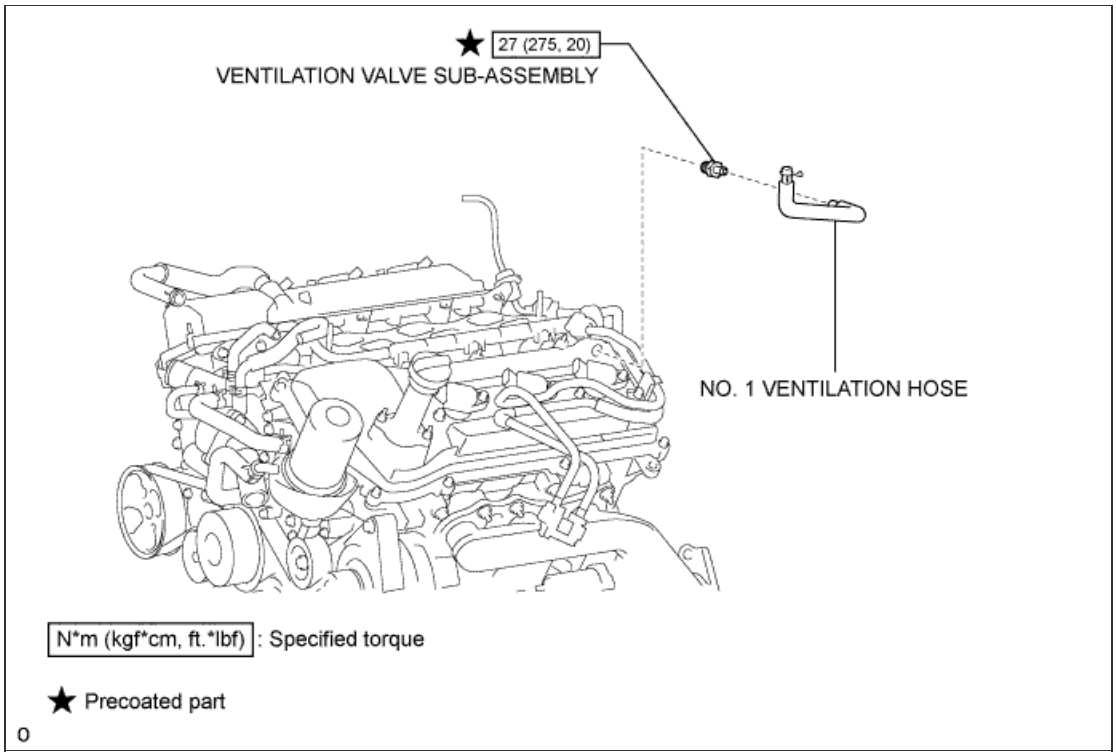
for Preparation Click here



1. INSPECT FUEL TANK CAP ASSEMBLY

a. Visually check if the cap and/or gasket are deformed or damaged.
If necessary, replace the cap assembly or gasket.





for Preparation Click here

1. REMOVE INTAKE AIR SURGE TANK

a. Remove the intake air surge tank (Click here).

2. REMOVE VENTILATION VALVE SUB-ASSEMBLY

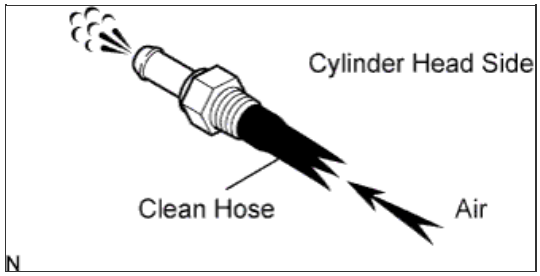
a. Loosen the hose clamp and disconnect the ventilation hose from the valve.

b. Remove the valve.

for Preparation Click here

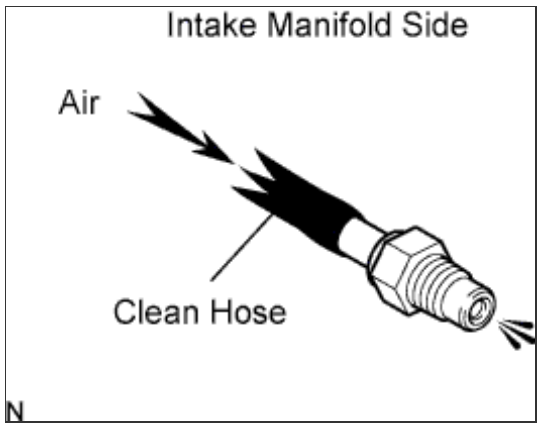
1. INSPECT VENTILATION VALVE SUB-ASSEMBLY

a. Install a clean hose to the ventilation valve.



b. Check the ventilation valve operation.

i. Blow air into the cylinder head side, and check that air passes through easily.



CAUTION:

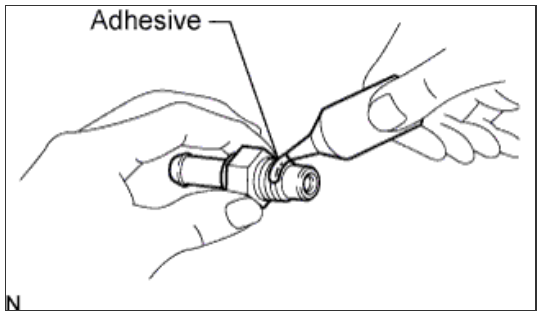
Do not suck air through the valve.

Petroleum substances inside the valve are hazardous to your health.

ii. Blow air into the intake manifold side, and check that air passes through with difficulty.
If the result is not as specified, replace the ventilation valve.

c. Remove the clean hose from the ventilation valve.

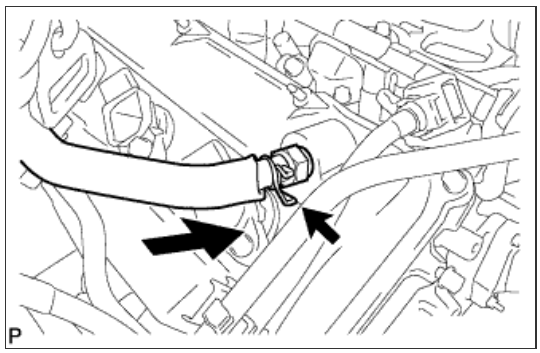
for Preparation Click here



1. INSTALL VENTILATION VALVE SUB-ASSEMBLY

a. Apply adhesive to 2 or 3 threads of the ventilation valve.

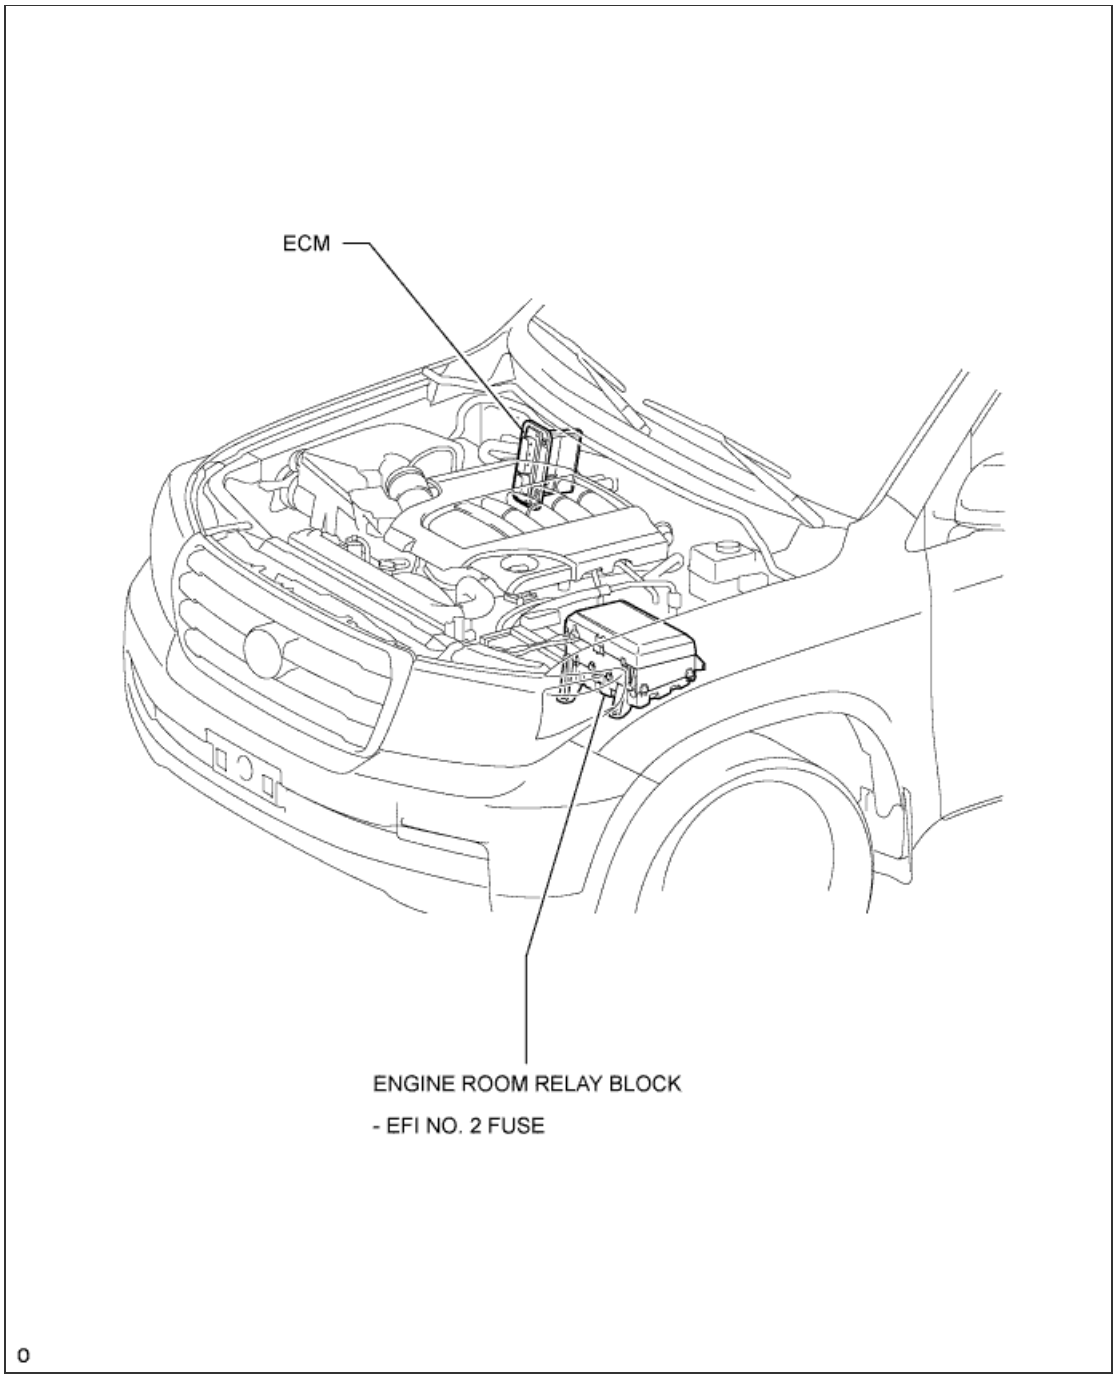
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent



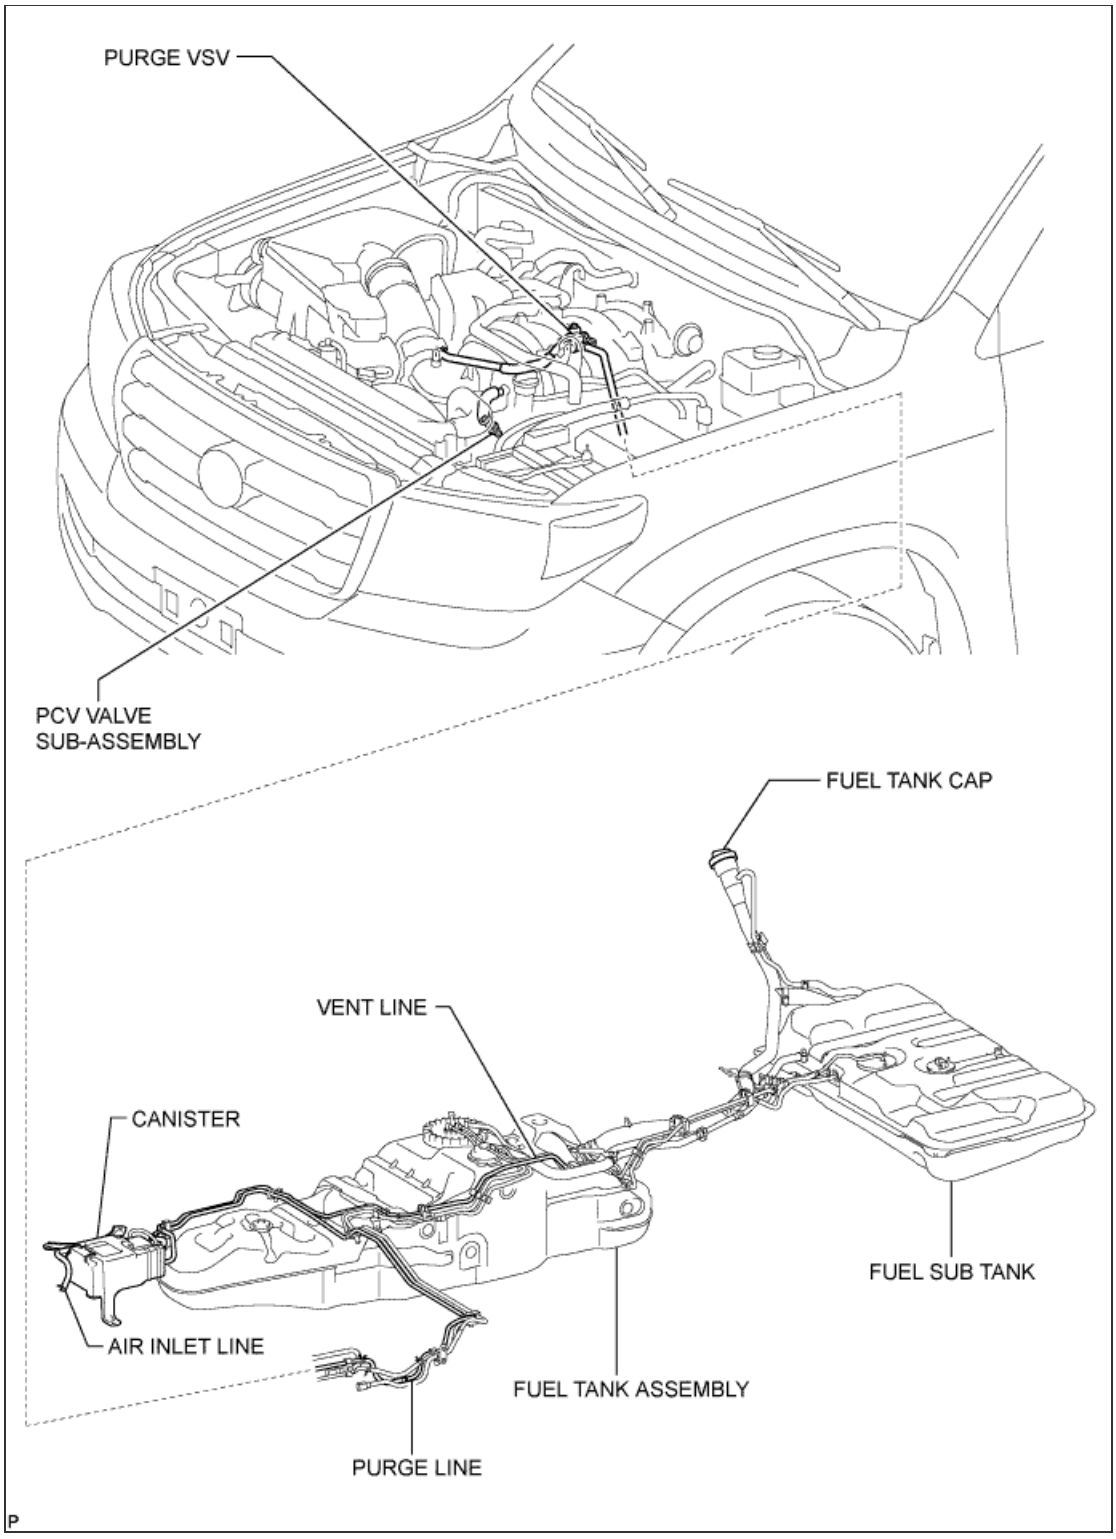
b. Install the ventilation valve.

Torque:
27 N*m{ 275 kgf*cm , 20 ft.*lbf }

c. Connect the ventilation hose to the valve.

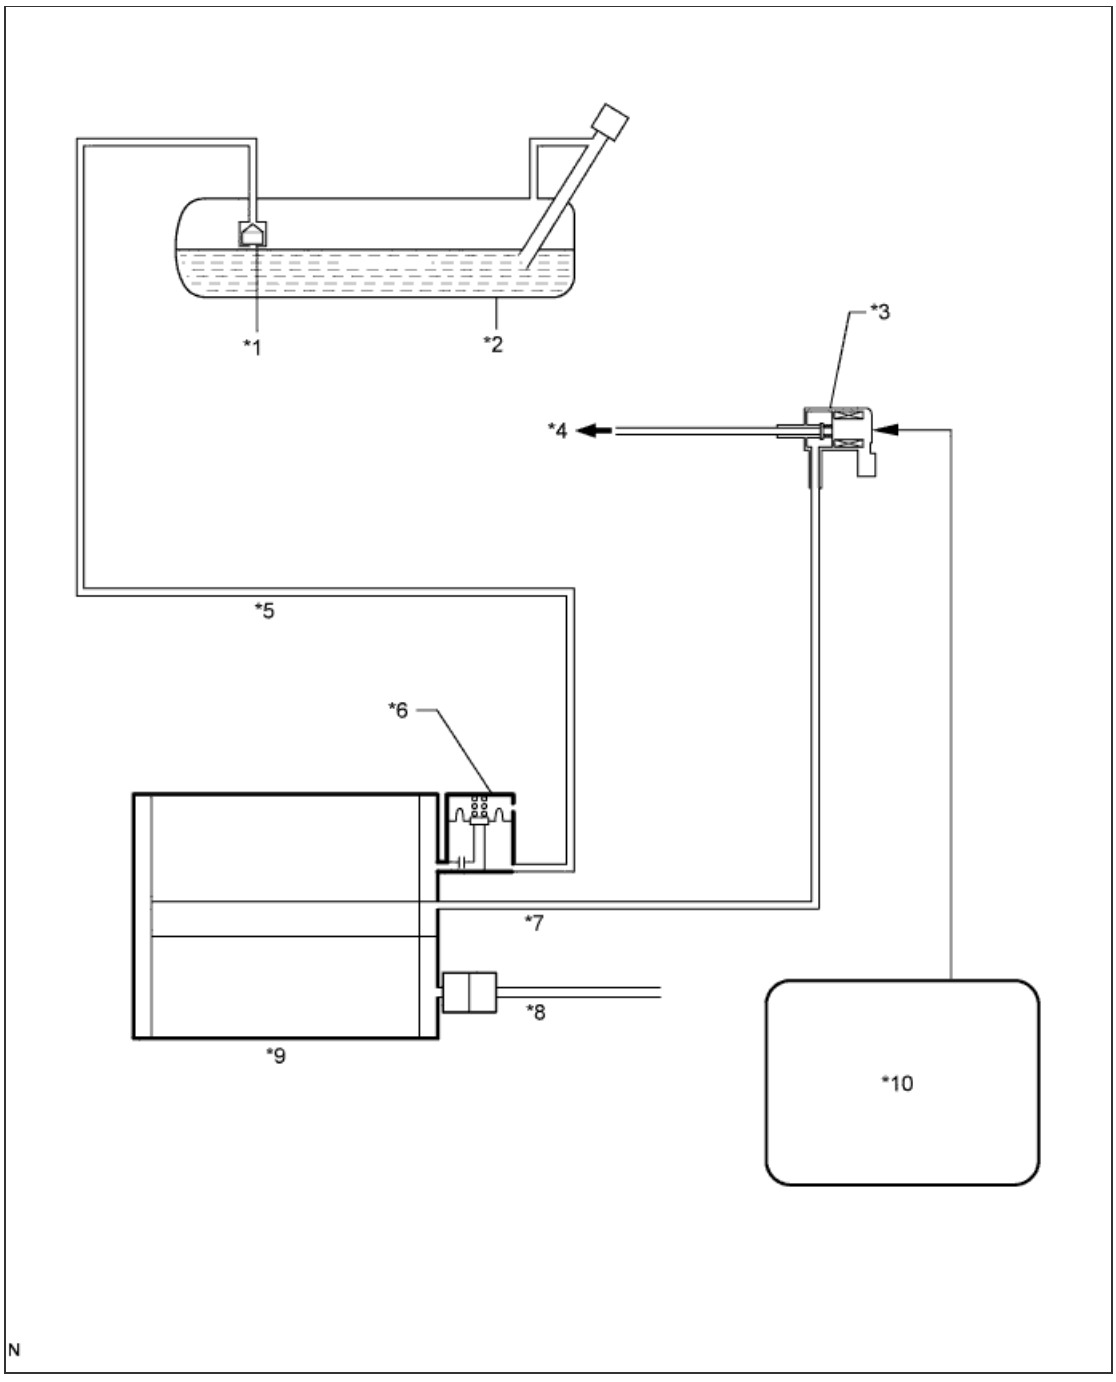


d. Secure the hose with the clamp.



2. INSTALL INTAKE AIR SURGE TANK

a. Install the intake air surge tank (Click here).



for Preparation Click here

1. CHECK PURGE VSV

a. Connect the intelligent tester to the DLC3.

b. Remove the V-bank cover (Click here).

c. Disconnect the hose (connected to the canister) from the purge VSV.

d. Start the engine and turn the intelligent tester main switch on.

e. Enter the following menus: Powertrain / Engine and ECT / Active Test / Activate the VSV for Evap Control.

OK:

Tester Operation	Specified Condition
Activate the VSV for Evap Control: OFF	Purge VSV has no suction
Activate the VSV for Evap Control: O	rge VSV has suction

f. Connect the hose (connected to the canister) to the purge VSV.

g. Install the V-bank cover (Click here).

2. INSPECT FUEL CUT-OFF RPM

a. Start and warm up the engine.

b. Open the throttle valve and keep the engine speed at 3000 rpm.

c. Use a sound scope to check for injector operating noise.

d. Check that when the accelerator pedal is released, the injector operation noise stops momentaril and then resumes.
If the result is as not specified, check the injector, wiring and ECM.

3. VISUALLY INSPECT HOSES, CONNECTIONS AND GASKETS

a. Check that there are no cracks, leaks or damage.

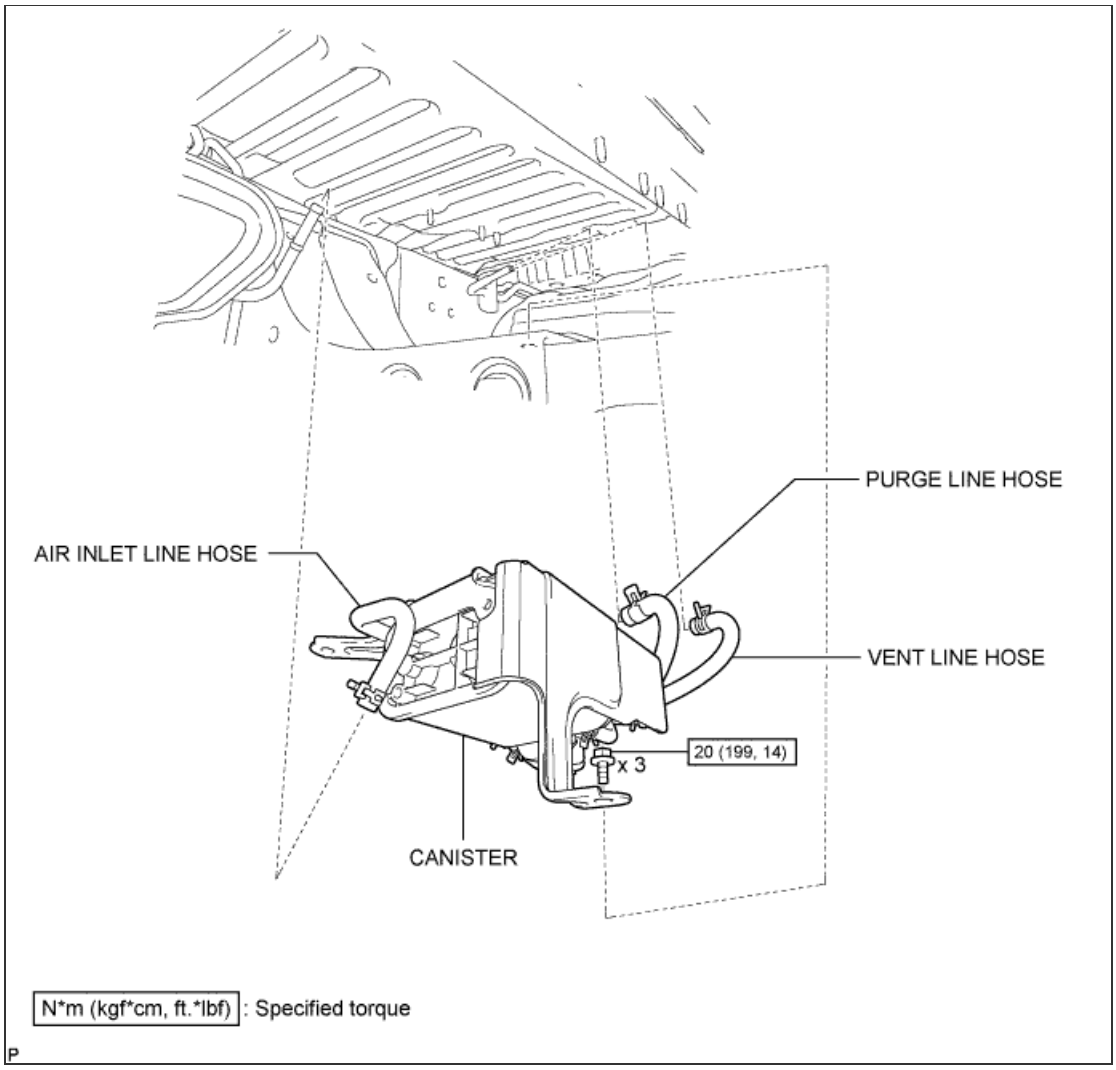
HINT:

Separation of the engine oil dipstick, oil filler cap, ventilation hose, etc. ma cause an engine failure or engine malfunctions.
Disconnection, looseness or cracks in the parts of the air induction s stem between the throttle bod and c linder head will allow air suction and cause an engine failure or engine malfunctions.

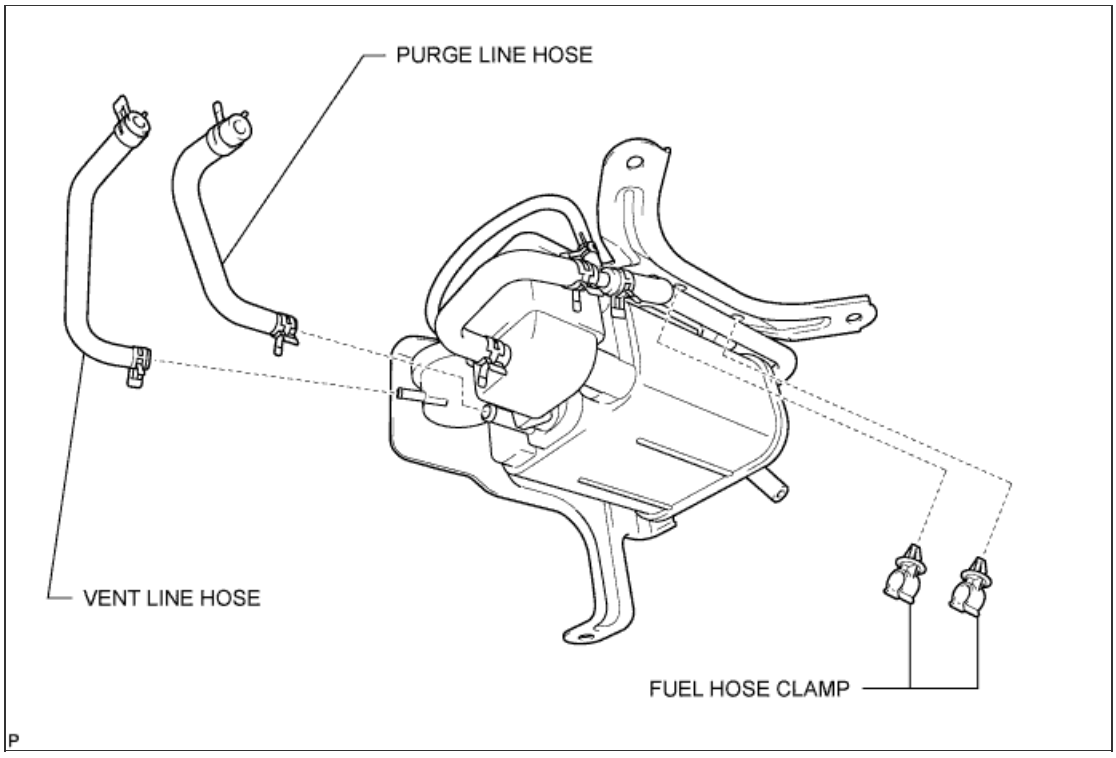
NOTICE:

- **Detachment or other problems with the engine oil dipstick, filler cap, ventilation hose and other components may cause the engine to run improperly.**
- **Disconnection, looseness or cracks in the parts of the air induction system between the throttle body and cylinder head will allow air suction and cause an engine failure or engine malfunctions.**

If the result is not as specified, replace parts as necessar .



4. CHECK HOSES AND CONNECTORS

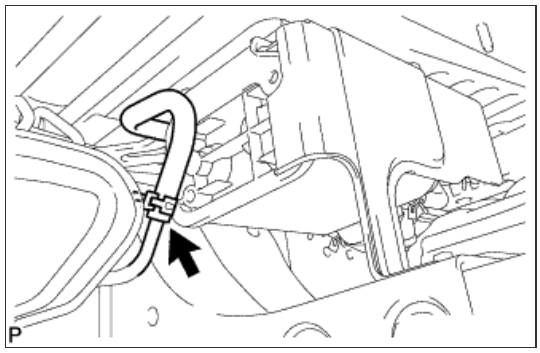


a. Visuall check for loose connections, sharp bends or damage.

5. CHECK FUEL TANK ASSEM LY

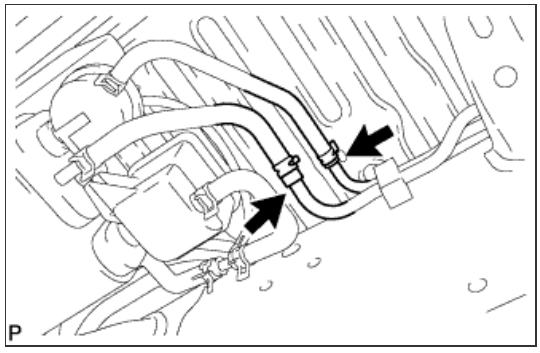
a. Visuall check for deformation, cracks or fuel leakage.

for Preparation Click here



PURGE LINE HOSE
VENT LINE HOSE
FUEL HOSE CLAMP
P

for Preparation Click here

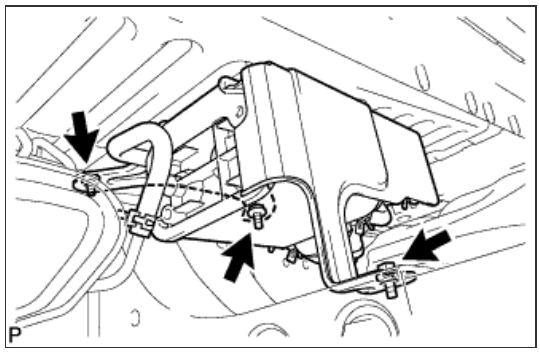


1. REMOVE CANISTER

a. Disconnect the air inlet line hose.

b. Disconnect the vent line hose.

c. Disconnect the purge line hose.

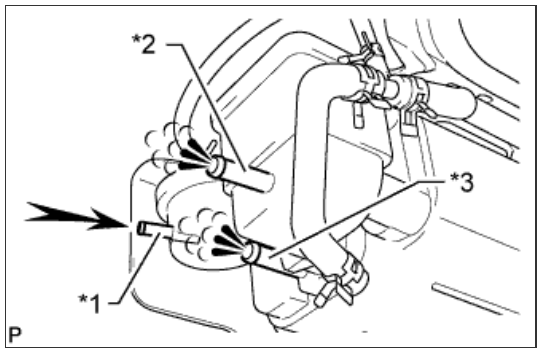


d. Remove the 3 bolts and canister.

e. Remove the 2 fuel hose clamps from the canister.

f. Remove the purge line hose.

. Remove the vent line hose.



for Preparation Click here

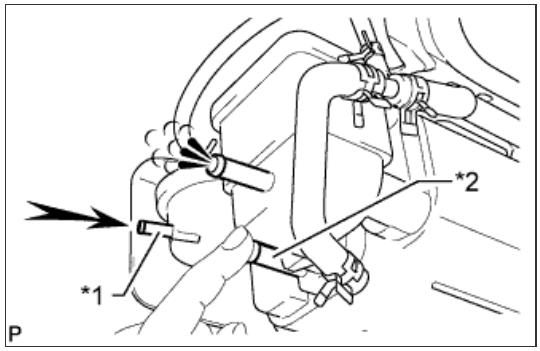
1. INSPECT CANISTER

a. Visually check the canister for cracks or damage.

Text in Illustration

*1	Port A
*2	Port B
*3	Port C
➡	Air

b. Blow compressed air of 4.9 kPa (50 gf/cm^2, 0.71 psi) into port A and check that air flows without resistance from port B and port C.
If the result is not as specified, replace the canister.



c. Apply a vacuum of 1.96 kPa (20 gf/cm^2, 0.28 psi) to port A. Check that the vacuum does not decrease when ports B and C are closed, and check that the vacuum does not decrease when port B is released.
If the result is not as specified, replace the canister.

2. CLEAN FILTER IN CANISTER

a. Clean the filter by blowing compressed air of 4.9 kPa (50 gf/cm^2, 0.71 psi) into port A while holding port B closed.

Text in Illustration

*1	Port A
*2	Port B
➡	Air

NOTICE:

Do not attempt to wash the canister.

for Preparation Click here

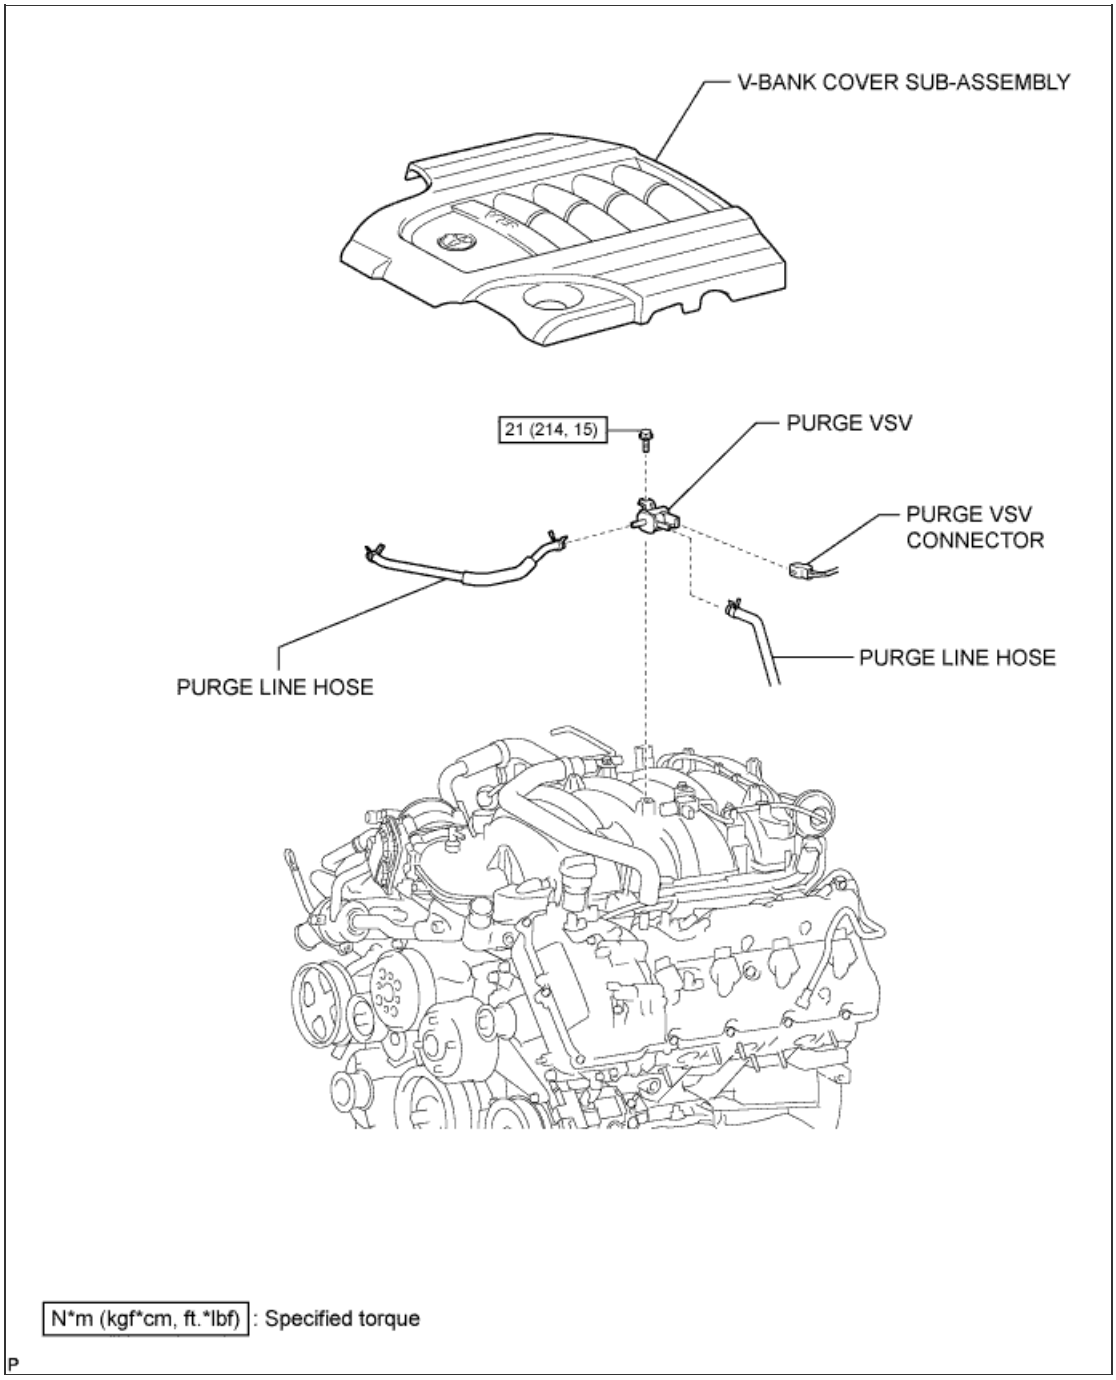
1. INSTALL CANISTER

a. Install the vent line hose to the canister.

b. Install the purge line hose to the canister.

c. Install the 2 fuel hose clamps to the canister.

d. Install the canister with the 3 bolts.

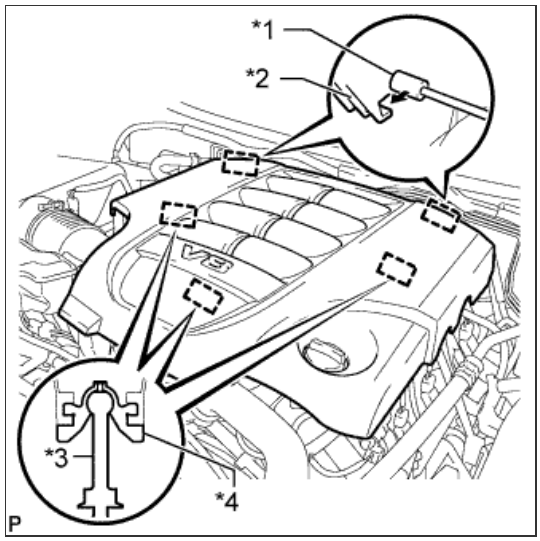


Torque:
20 N 1 kgf*cm , 14 ft.*lbf }

e. Connect the vent line hose.

f. Connect the purge line hose.

g. Connect the air inlet line hose.



for Preparation Click here

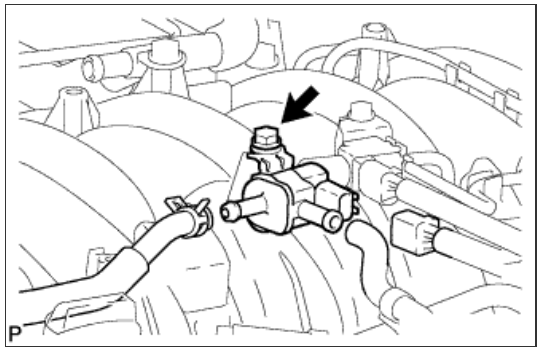
for Preparation Click here

1. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.

Text in Illustration

*1	Bracket
*2	Hook
*3	Pin
*4	Grommet



2. DISCONNECT PURGE LINE HOSE

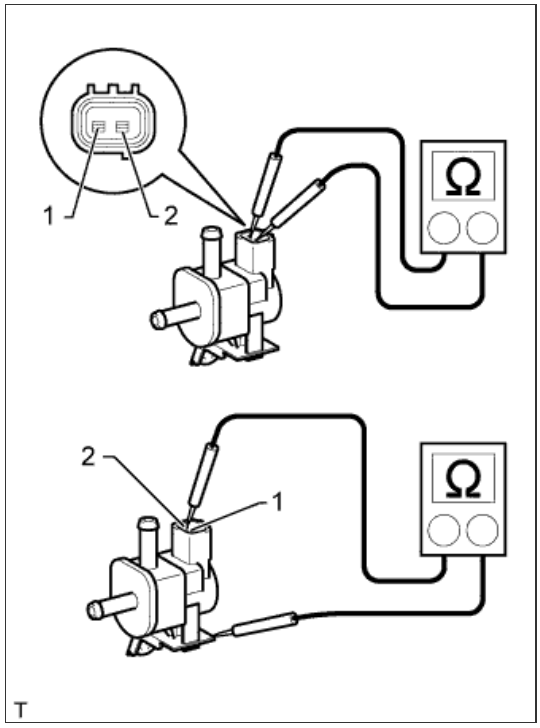
a. Disconnect the 2 purge line hoses.

3. REMOVE PURGE VSV

a. Disconnect the purge VSV connector.

b. Remove the bolt and purge VSV.

for Preparation Click here



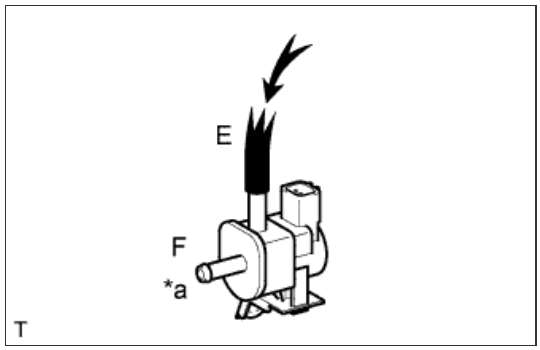
1. INSPECT PURGE VSV

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	23 to 26 Ω
1 - VSV body ground	Always	10 kΩ or higher
2 - VSV body ground		10 kΩ or higher

If the result is not as specified, replace the purge VSV.

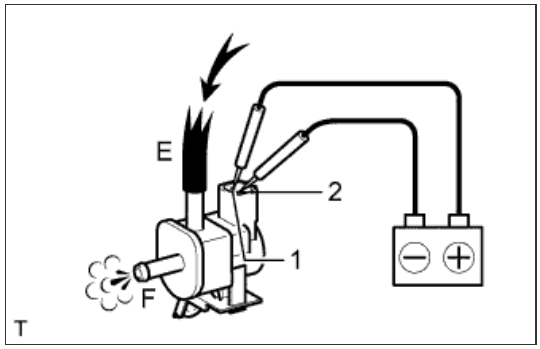


b. Check the operation of the purge VSV.

i. Check that air does not flow from port F when air is applied to port E.

Te t in Illustration

a	Does not flow
➡	Air



ii. Apply battery voltage to the connector, and check the VSV operation.

OK:

Measurement Condition	Specified Condition
Battery positive ( ) → Terminal 1 Battery negative (-) → Terminal 2	Air flows from port E to port F

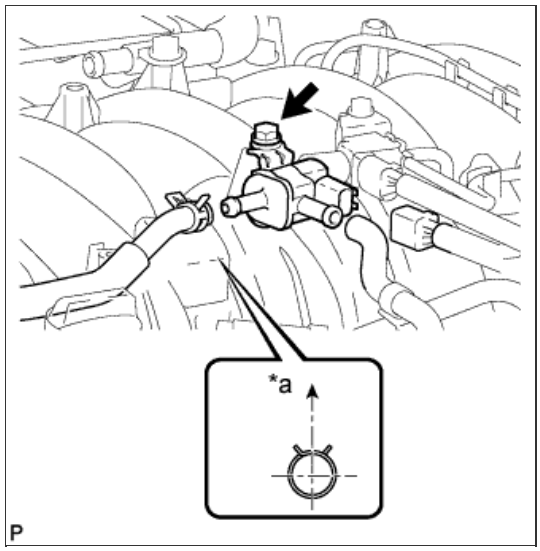
Te t in Illustration

➡	Air

If the result is not as specified, replace the purge VSV.

for Preparation Click here

1. INSTALL PURGE VSV



a. Install the purge VSV with the bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. Connect the purge VSV connector.

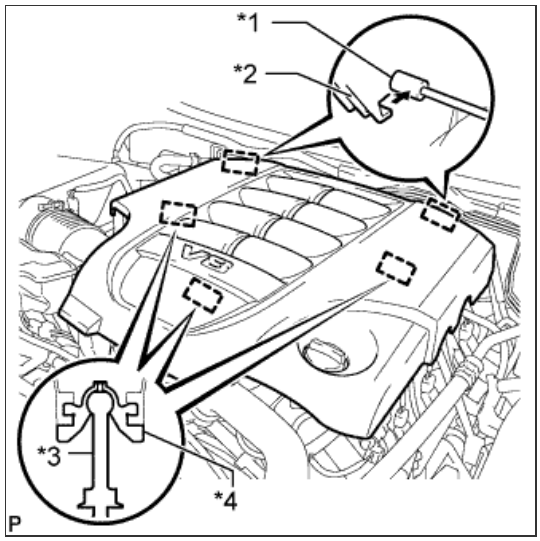
Text in Illustration

*a	Upper

2. CONNECT PURGE LINE HOSE

a. Connect the 2 purge line hoses.

HINT:



Turn the claw of the clip to the upper side.

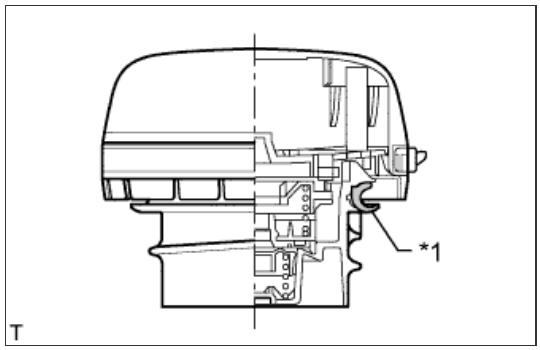
3. INSTALL V NK COVER SUB-ASSEMBLY

a. Attach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.

Text in Illustration

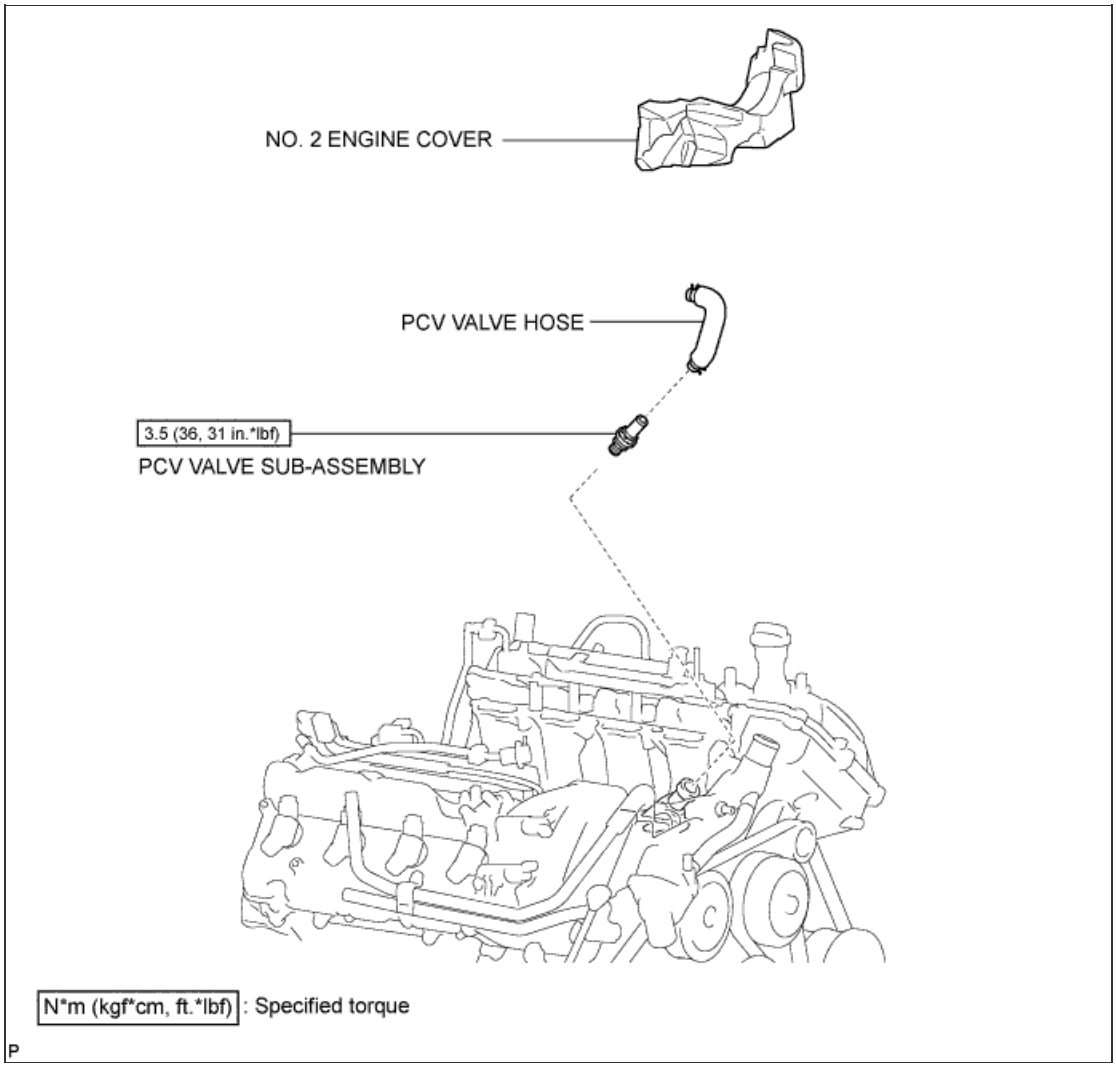
*1	Bracket
*2	Hook
*3	Pin
*4	Grommet

for Preparation Click here



1. INSPECT FUEL TANK CAP ASSEMBLY

a. Visually check if the cap and/or gasket are deformed or damaged.

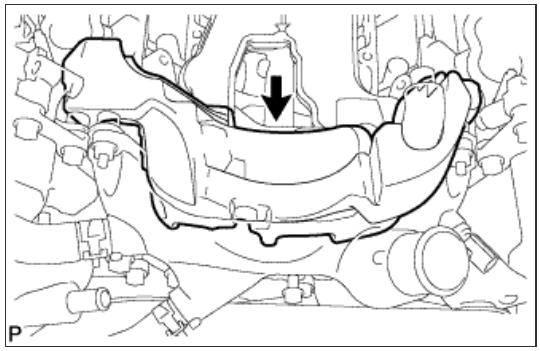


Text in Illustration

*1	Gasket

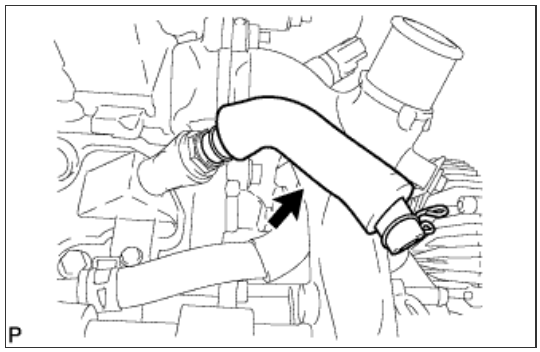
If the result is not as specified, replace the fuel tank cap assembly.

for Preparation Click here



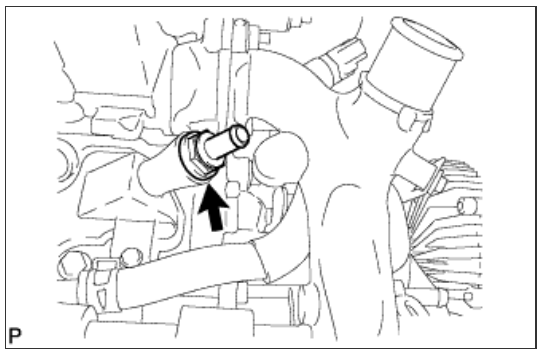
for Preparation Click here

1. REMOVE INTAKE MANIFOLD



(Click here)

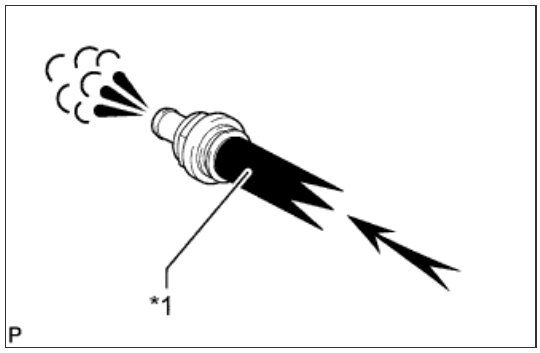
2. REMOVE NO. 2 ENGINE COVER



3. REMOVE PCV VALVE HOSE

a. Remove the hose from the PCV valve.

4. REMOVE PCV VALVE SUB-ASSEMBLY



a. Remove the PCV valve.

for Preparation Click here

1. INSPECT PCV VALVE SUB-ASSEMBLY

a. Install a clean hose to the PCV valve.

b. Check the PCV valve operation.

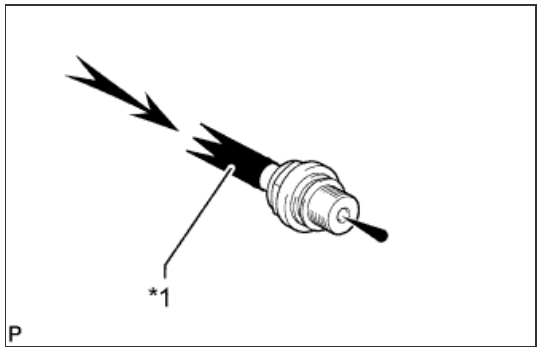
i. Blow air into the cylinder head side, and check that air passes through easily.

Text in Illustration

*1	Clean Hose
➡	Air

CAUTION:

Do not suck air through the valve.



Petroleum substances inside the valve are hazardous to your health.

ii. Blow air into the intake manifold side, and check that air passes through with difficulty.

Text in Illustration

*1	Clean Hose
➡	Air

If the result is not as specified, replace the PCV valve sub-assembly.

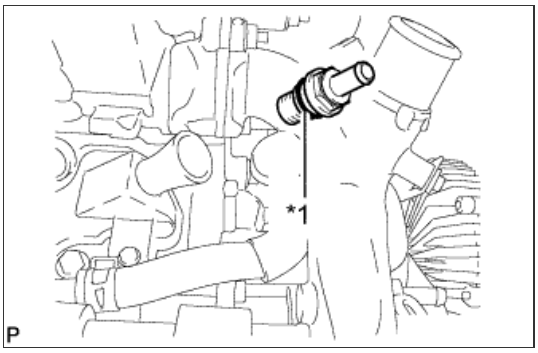
c. Remove the hose from the PCV valve.

for Preparation Click here

1. INSTALL PCV VALVE SUB-ASSEMBLY

a. Apply a light coat of engine oil to the O-ring of the valve.

Text in Illustration



*1	O-Ring

HINT:

When reusing the PCV valve, inspect the O-ring. If the O-ring has scratches or cuts, replace the PCV valve.

b. Install the PCV valve.

Torque:
3.5 N*m{ 36 kgf*cm , 31 in.*lbf }

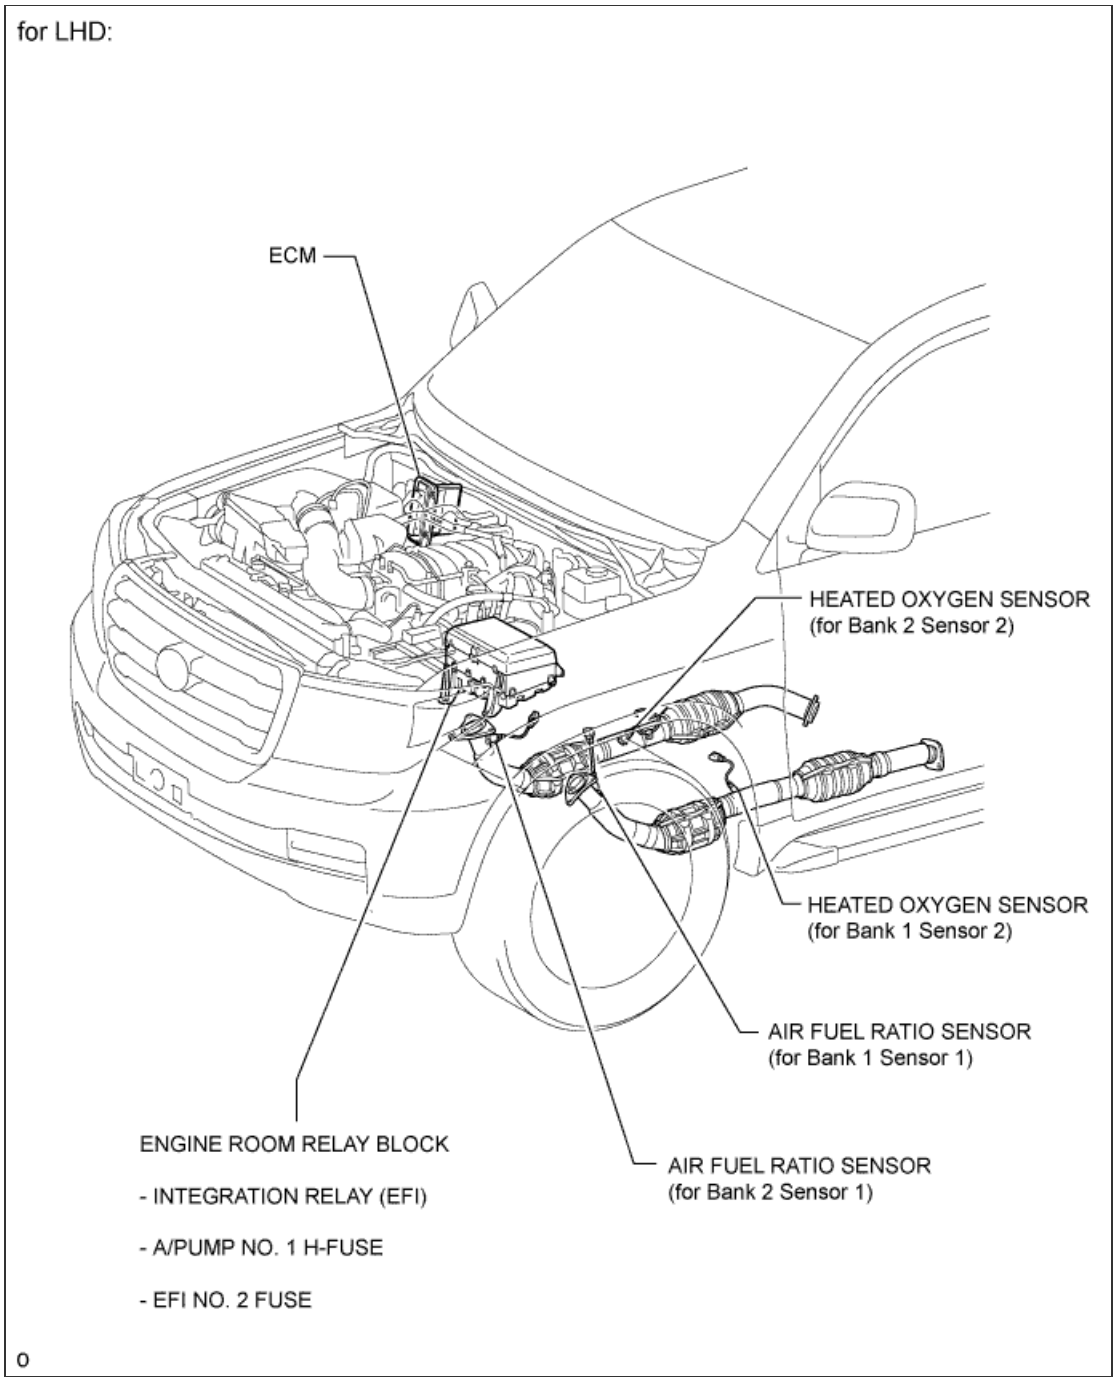
2. INSTALL PCV VALVE HOSE

a. Install the hose to the PCV valve.

3. INSTALL NO. 2 ENGINE COVER

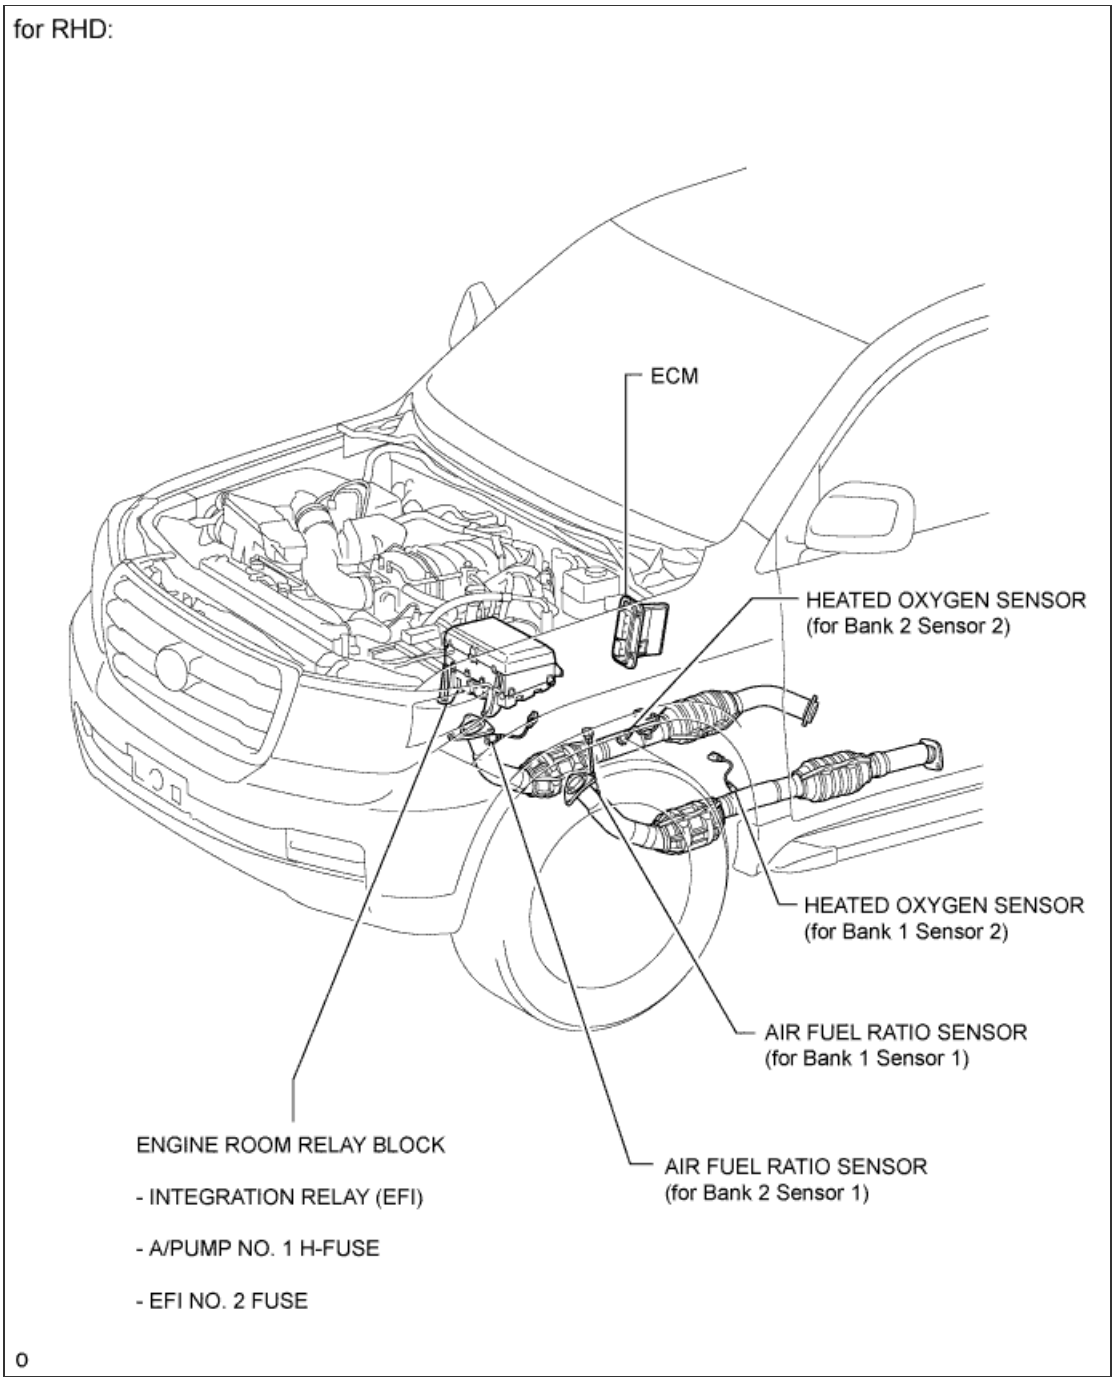
4. INSTALL INTAKE MANIFOLD

(Click here)



for reparation Click here

1.AIR INDUCTION SYSTEM



a. Removal of the engine oil dipstick, oil filler cap, PCV hose, etc. may damage the engine.

b. Disconnection, looseness or cracks in the parts of the air induction system between the throttle body and cylinder head may result in air suction and damage the engine.

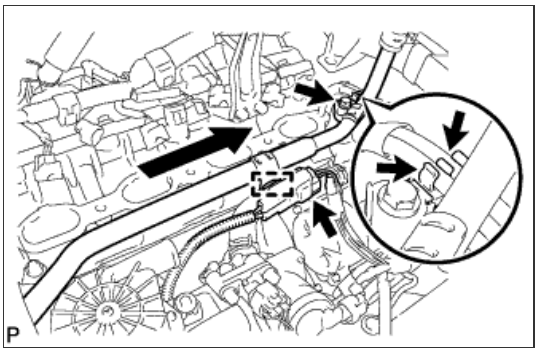
1. REMOVE INTAKE MANIFOLD

a. Remove the intake manifold (Click here).

2. REMOVE WATER BY-PASS PIPE SUB-ASSEMBLY

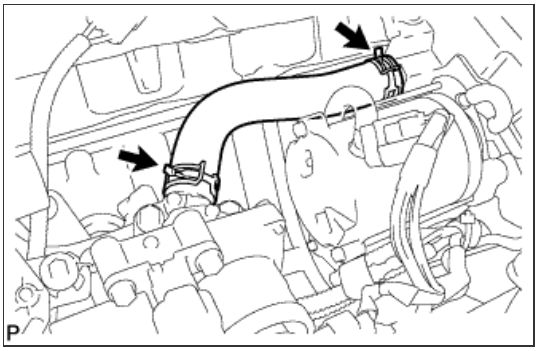
a. Disconnect the connector.



b. Disconnect the wire harness clamp from the water by-pass pipe.

c. Disconnect the 2 vacuum switching valve hoses from the water by-pass pipe clamp.

d. Remove the bolt.

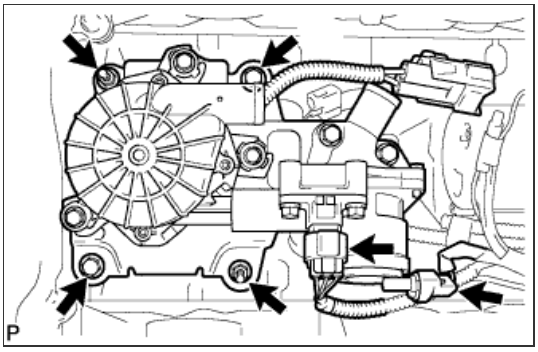


e. Pull out the water by-pass pipe.

f. Remove the O-ring from the water by-pass pipe.

3. REMOVE NO. 2 AIR INJECTION SYSTEM HOSE

a. Remove the No. 2 air injection system hose from the rear water by-pass joint and air switching valve.

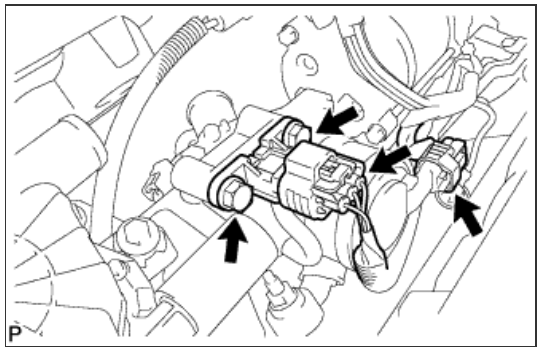


4. REMOVE AIR PUMP WITH BRACKET AND AIR SWITCHING VALVE

a. Disconnect the air switching valve connector.

b. Disconnect the air pressure sensor connector.

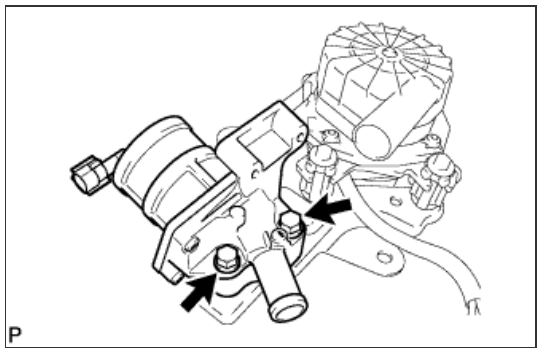
c. Remove the 2 bolts, 2 nuts and air pump with bracket.



5. REMOVE AIR SWITCHING VALVE ASSEMBLY

a. Disconnect the air pressure sensor connector.

b. Disconnect the air switching valve connector.

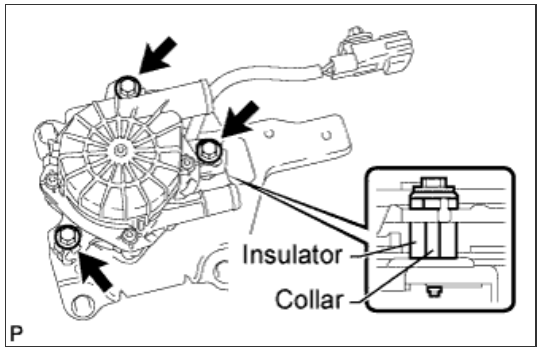


c. Remove the vacuum hose from the air pressure sensor and air switching valve.

d. Remove the 2 bolts and air pressure sensor from the air switching valve.

e. Remove the 2 bolts and air switching valve from the air pump bracket.

f. Remove the air switching valve from the No. 1 air injection system hose.



6. REMOVE NO. 1 AIR INJECTION SYSTEM HOSE

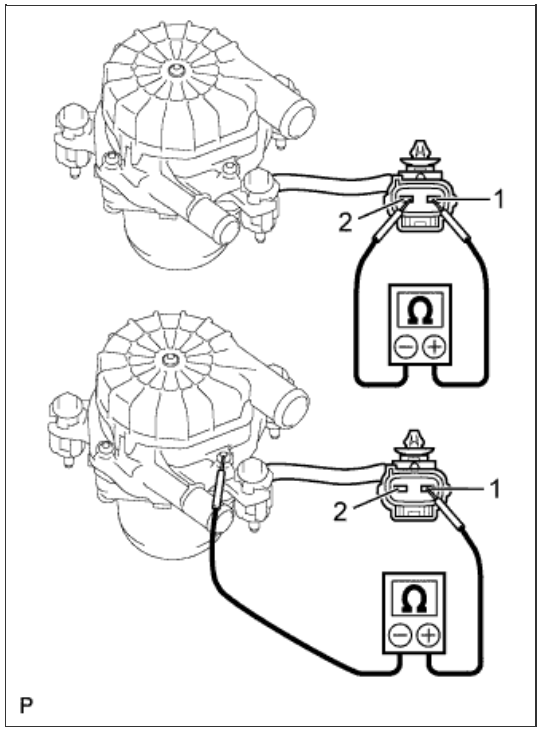
a. Remove the hose from the air pump assembly.

7. REMOVE AIR PUMP ASSEMBLY

a. Remove the air hose.

b. Remove the 3 bolts, 3 collars, 3 insulators and air pump.

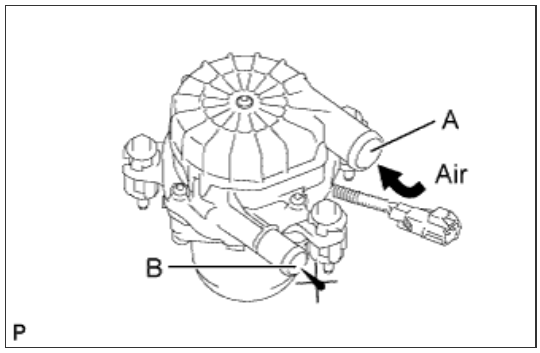
for Preparation Click here



1. INSPECT AIR PUMP

a. Measure the resistance according to the value(s) in the table below.

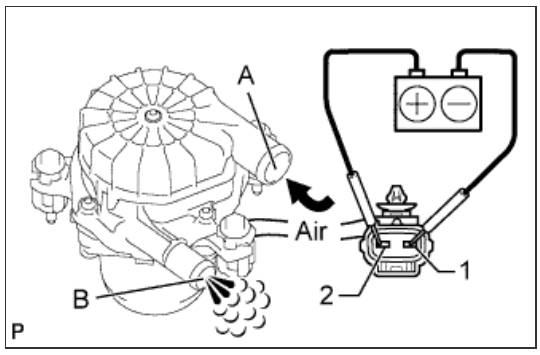
Standard Resistance:



Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	0.4 to 1.0 Ω
1 - Body ground	Always	10 kΩ or higher
2 - Body ground		

If the result is not as specified, replace the air pump.

b. Check operation of the air pump.



i. Check that air does not flow from port A to port B.
If the result is not as specified, replace the air pump.

ii. Apply battery voltage to the connector, and check the air pump operation.

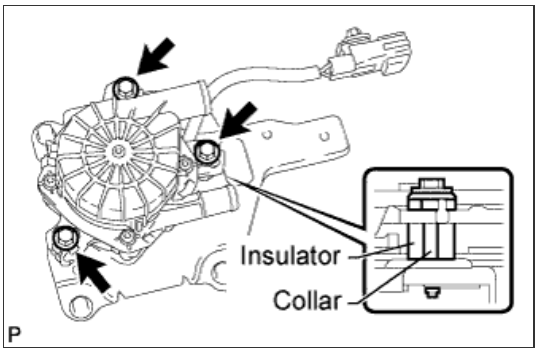
NOTICE:

- **Do not operate the air pump continuously for 2 minutes or more.**
- **When operating the air pump, wait 5 minutes until the pump has cooled down between each operation. If the pump has not cooled down sufficiently, the motor will burn out.**

OK:

Measurement Condition	Specified Condition
Battery positive ( ) → Terminal 1 Battery negative (-) → Terminal 5	Air flows from port A to port B

If the result is not as specified, replace the air pump.



for Preparation Click here

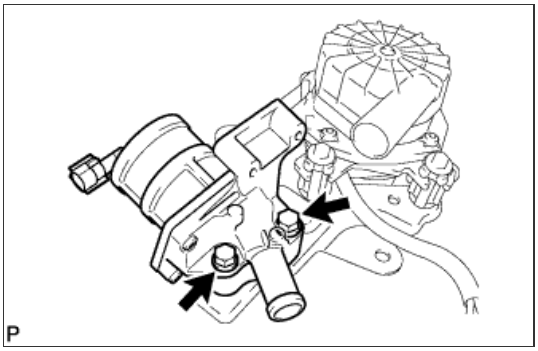
1. INSTALL AIR PUMP ASSEMBLY

a. Install the air pump, 3 insulators and 3 collars with the 3 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. Install the air hose.

2. INSTALL NO. 1 AIR INJECTION SYSTEM HOSE



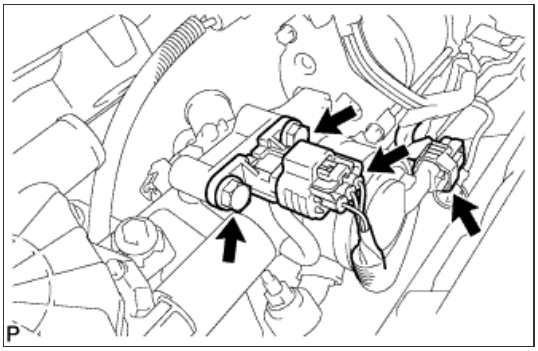
a. Install the hose to the air pump assembly.

3. INSTALL AIR SWITCHING VALVE ASSEMBLY

a. Install the air switching valve to the No. 1 air injection system hose.

b. Install the air switching valve to the air pump bracket with the 2 bolts.

Torque:
16 N*m{ 163 kgf*cm , 12 ft.*lbf }



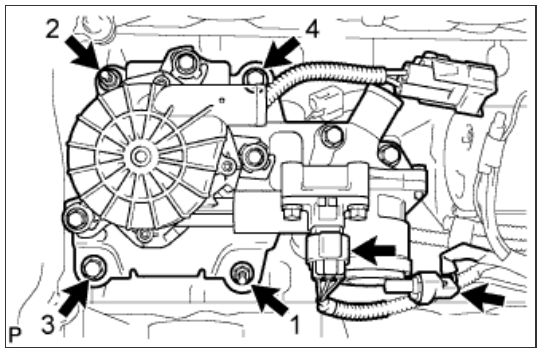
c. Install the air pressure sensor to the air switching valve with the 2 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

d. Install the vacuum hose to the air pressure sensor and air switching valve.

e. Connect the air pressure sensor connector.

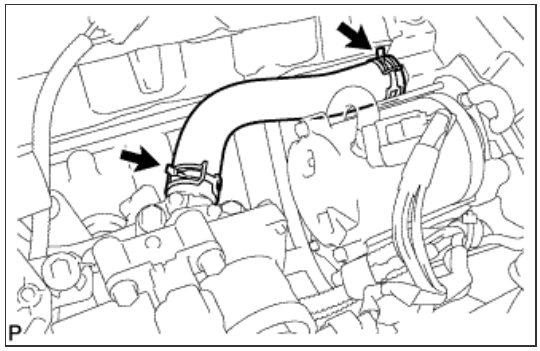
f. Connect the air switching valve connector.



4. INSTALL AIR PUMP WITH BRACKET AND AIR SWITCHING VALVE

a. Install the air pump with bracket with the 2 bolts and 2 nuts in the order shown in the illustration.

Torque:
16 N*m{ 163 kgf*cm , 12 ft.*lbf }



b. Connect the pressure sensor connector.

c. Connect the air switching valve connector.

5. INSTALL NO. 2 AIR INJECTION SYSTEM HOSE

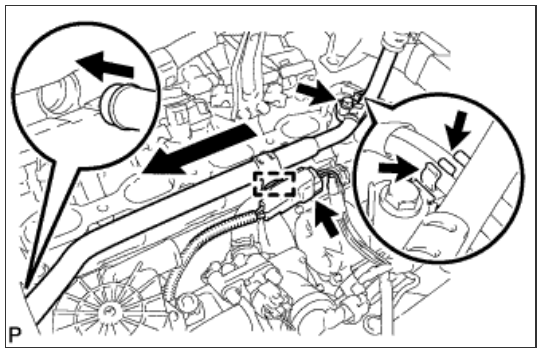
a. Install the hose.

6. INSTALL WATER BY-PASS PIPE SUB-ASSEMBLY

a. Apply soapy water to the O-ring.

b. Install a new O-ring to the water by-pass pipe.

c. Push in the water by-pass pipe.

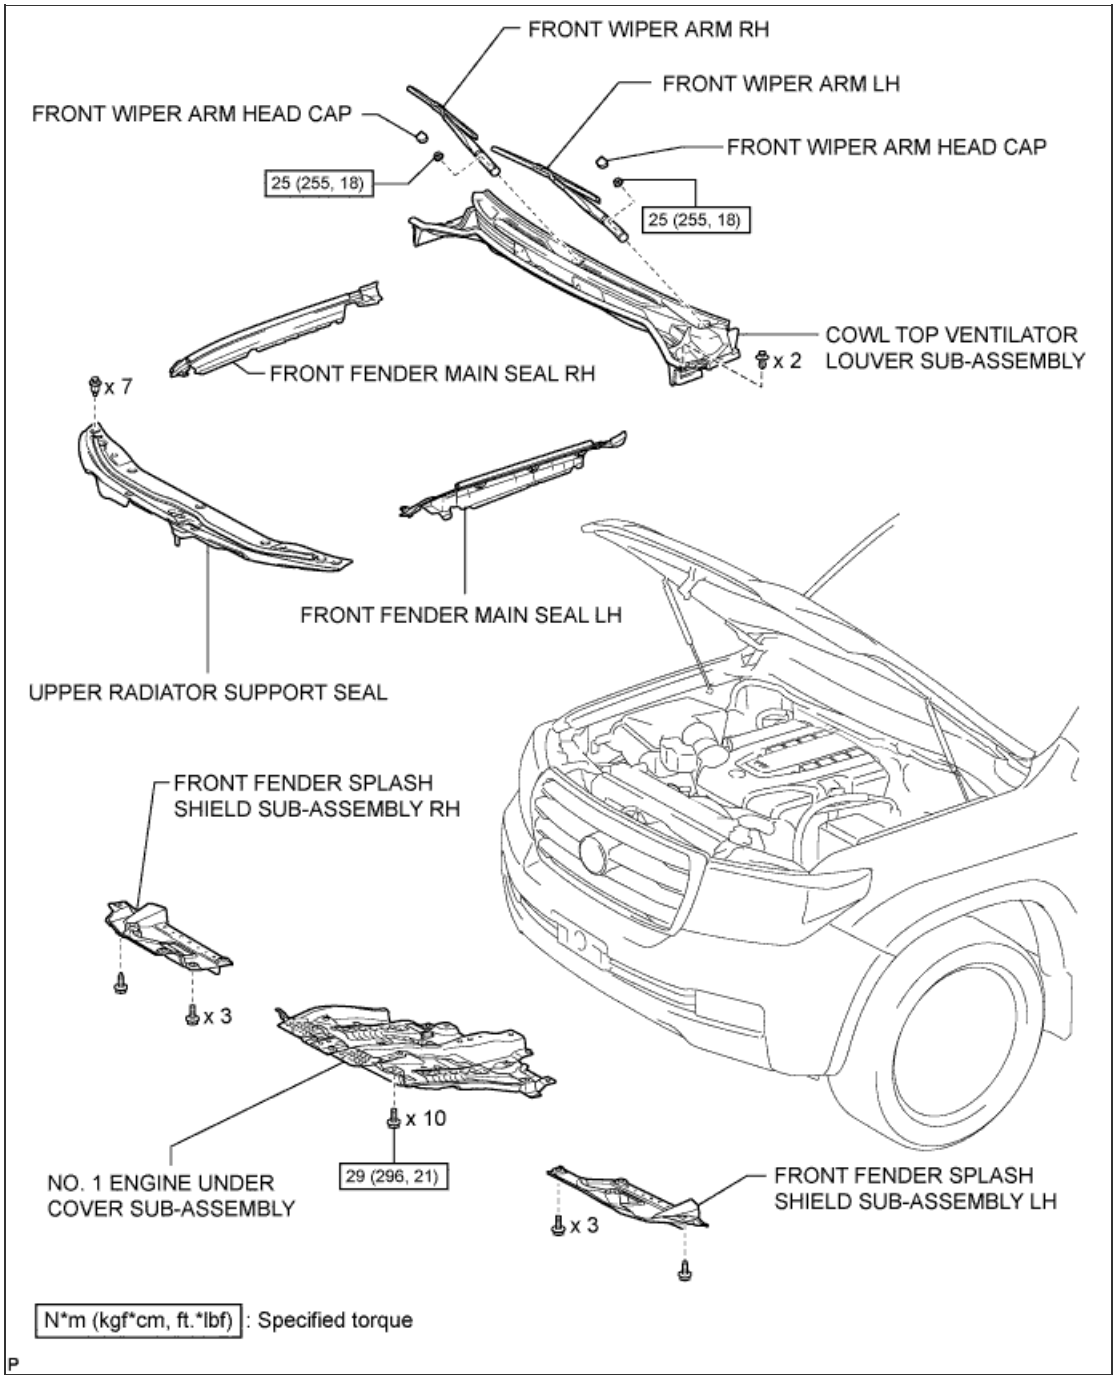


d. Install the water by-pass pipe with the bolt.

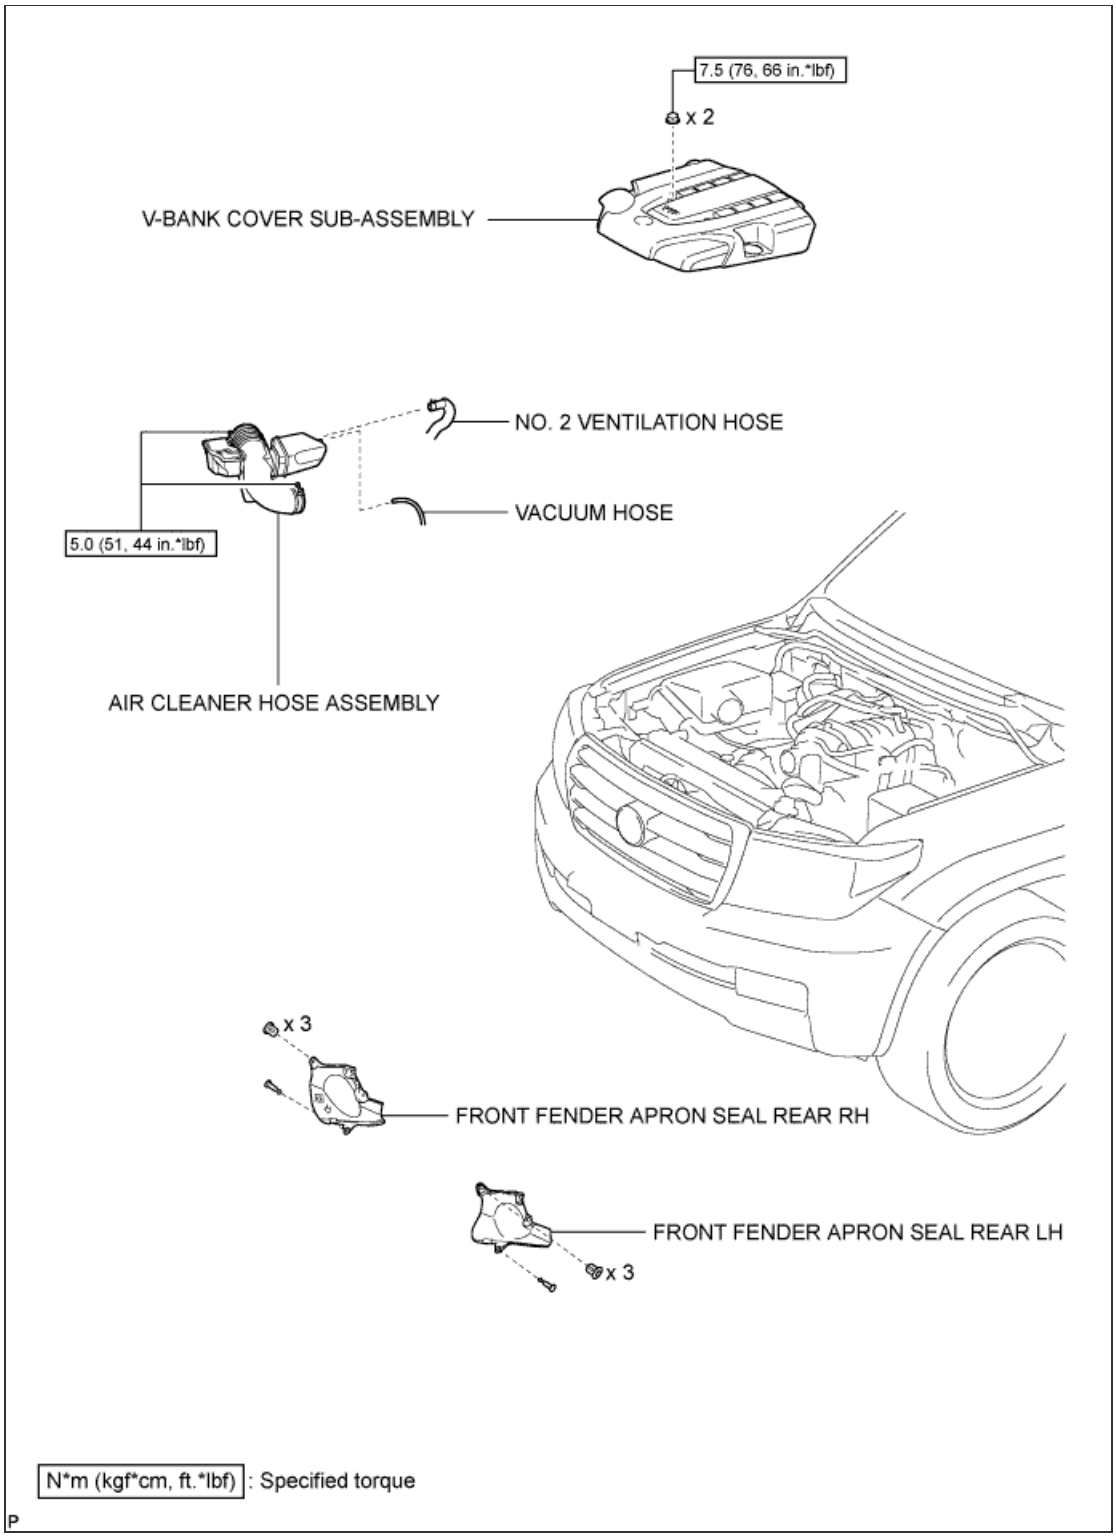
Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

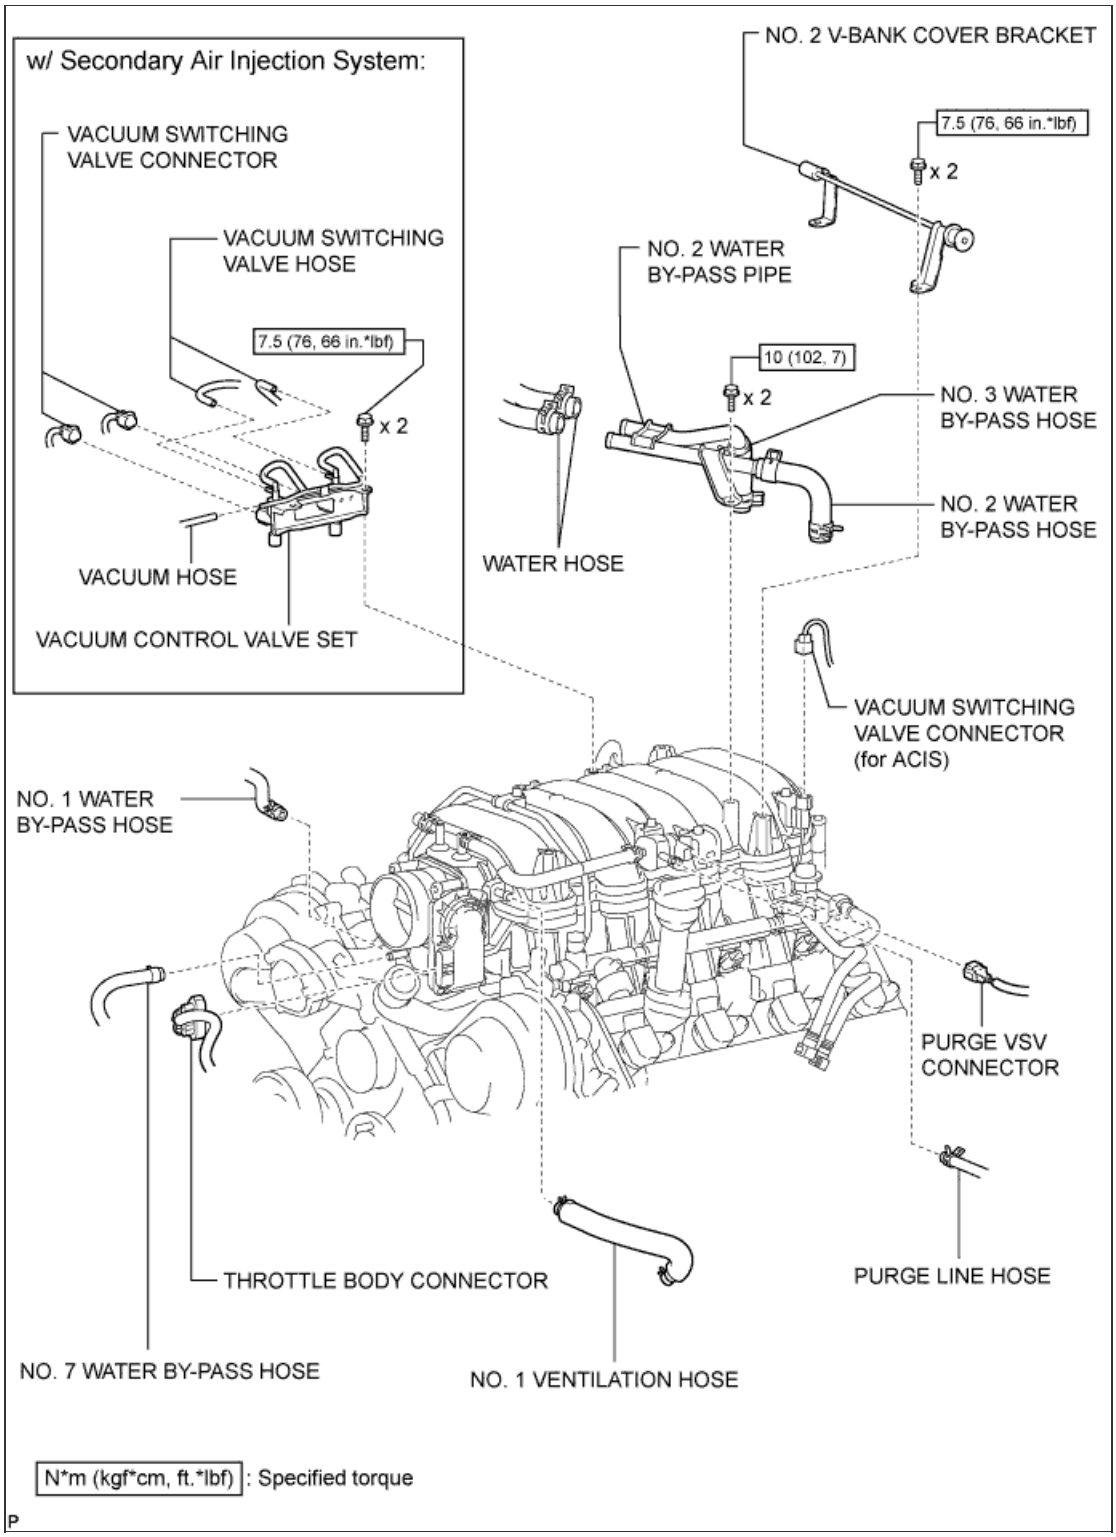
e. Connect the 2 vacuum switching valve hoses to the water by-pass pipe clamp.

f. Connect the wire harness clamp.

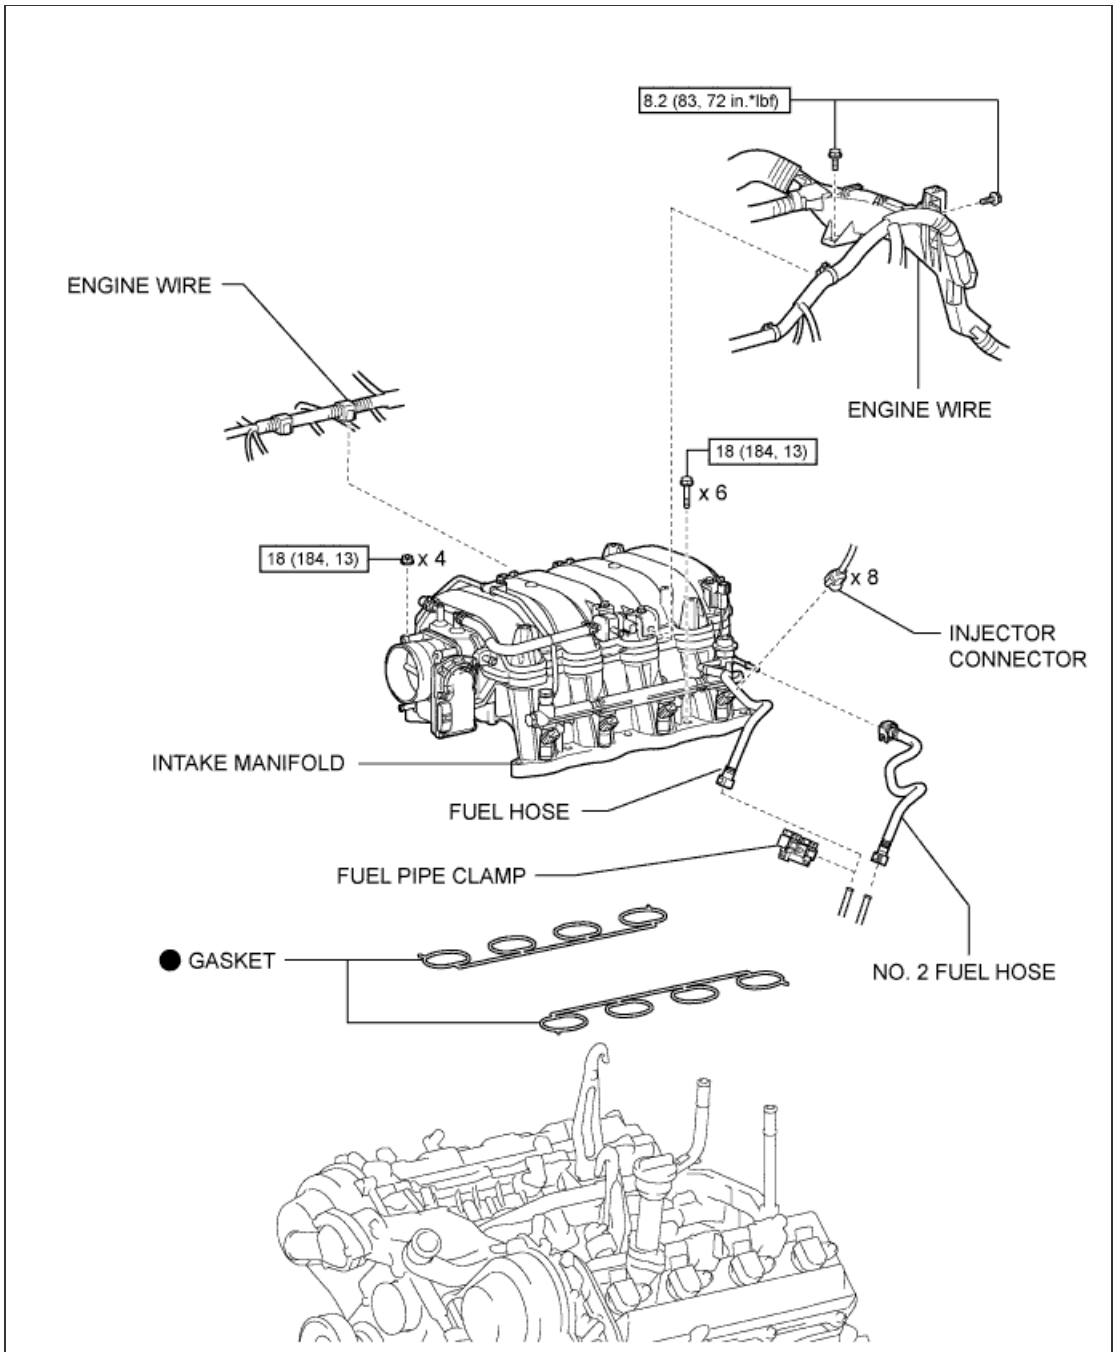


g. Connect the connector.





7. INSTALL INTAKE MANIFOLD



a. Install the intake mani old (Click here).

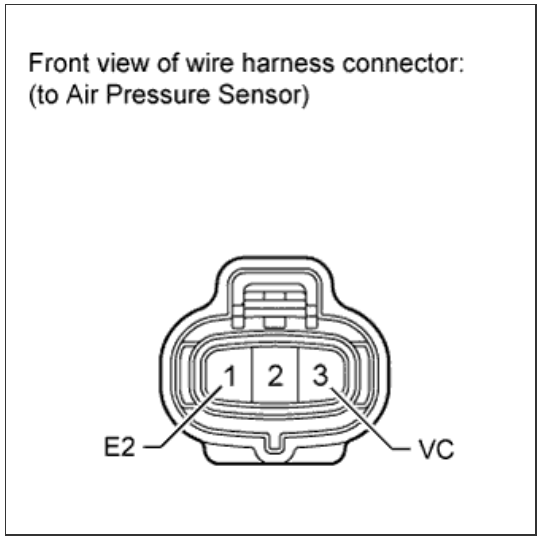
a. Remove the intake manifold (Click here).



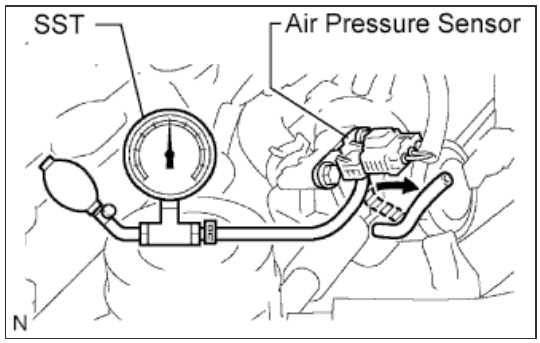
b. Disconnect the air pressure sensor connector.

c. Turn the engine switch on (IG).

d. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
3 (VC) - 1 (E2)	Engine switch on (IG)	4.5 to 5.5 V



e. Turn the engine switch off.

f. Connect the air pressure sensor connector.

g. Connect SST (turbocharger pressure gauge) to the air pressure sensor as shown in the illustration.

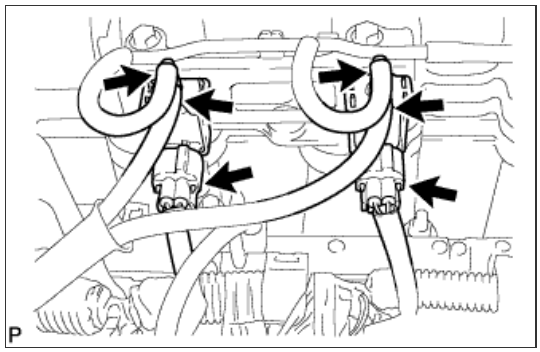
SST
09992-00242

h. Connect the intelligent tester to the DLC3.

i. Turn the engine switch on (IG).

j. Turn the tester main switch on.

k. Enter the following menus: Powertrain / Engine and ECT / Data List / Air pump pressure (absolute).



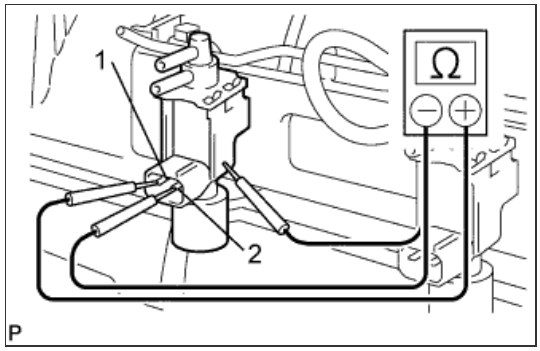
OK:
Pressure fluctuates in response to the pressure applied with pressure gauge.

l. Check that the pressure displayed on the intelligent tester fluctuates when applying pressure to the pressure sensor with the pressure gauge.

2. CHECK VACUUM CONTROL VALVE SET

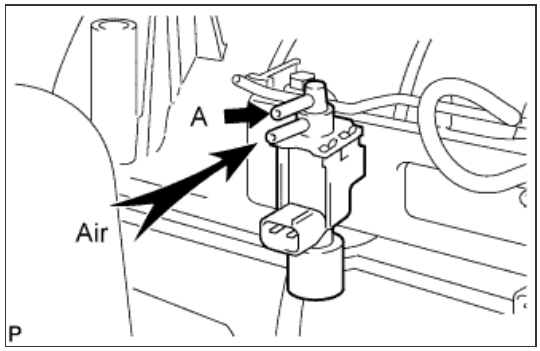
a. Disconnect the 2 connectors.

b. Disconnect the 2 vacuum switching valve hoses and 2 vacuum hoses from the VSV.



c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:



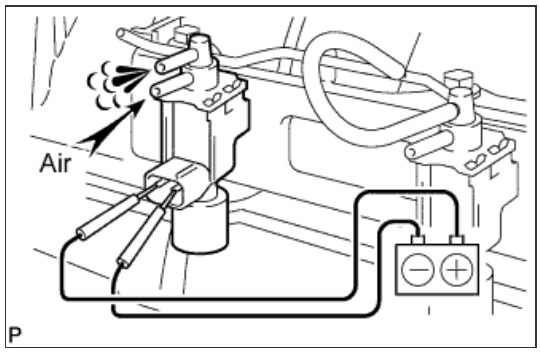
Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	33 to 39 Ω
1 - Body ground	Always	1 MΩ or higher
2 - Body ground		1 MΩ or higher

If the resistance is not as specified replace the VSV.

d. Apply air to the port as shown in the illustration.

e. Check that air does not flow from port A.
If the result is not as specified replace the VSV.

f. Apply positive battery voltage to the terminals apply air to the port and check that air flows from the port shown in the illustration.
If the result is not as specified replace the VSV.

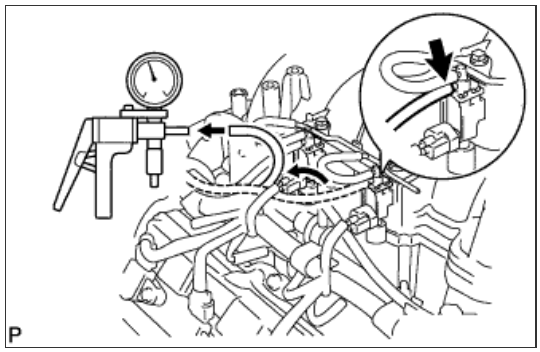


g. Connect the 2 vacuum switching valve hoses and 2 vacuum hoses to the VSV.

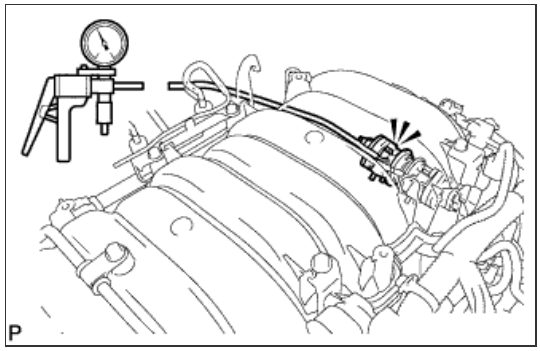
NOTICE:

Be sure to connect the vacuum hoses correctly.

h. Connect the 2 VSV connectors.



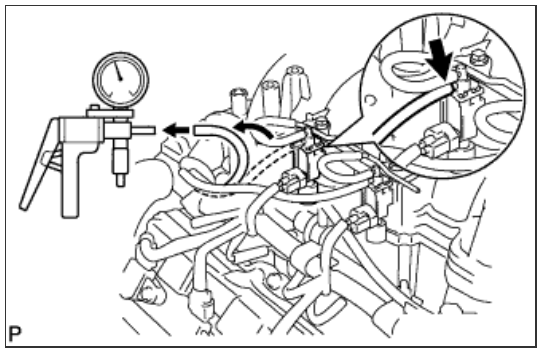
i. Perform the "Check Vacuum Switching Valve" procedures above on the other VSV.



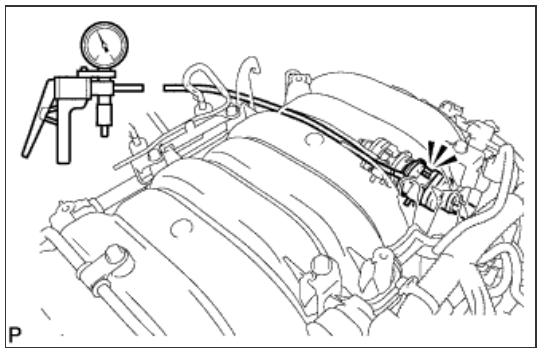
3. CHECK NO. 1 AIR SWITCHING VALVE ASSEMBLY

a. Disconnect the vacuum switching valve hose from the VSV for the air injection system.

b. Apply vacuum of 60 kPa (450 mmHg 1 . in.Hg) to the vacuum switching valve hose and check that the vacuum does not decrease.
If the operation is not as specified replace the No. 1 air switching valve assembly.



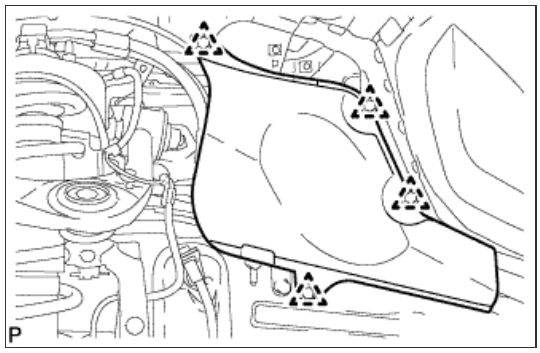
c. Release the vacuum and check that the operation sound is emitted from the No. 1 air switching valve assembly.
If the operation is not as specified replace the No. 1 air switching valve assembly.



4. CHECK NO. 2 AIR SWITCHING VALVE ASSEMBLY

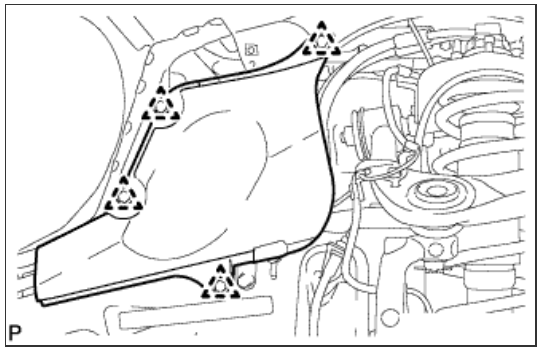
a. Disconnect the vacuum switching valve hose from the VSV for the air injection system.

b. Apply vacuum of 60 kPa (450 mmHg 1 . in.Hg) to the vacuum switching valve hose and check that the vacuum does not decrease.
If the operation is not as specified replace the No. 2 air switching valve assembly.



c. Release the vacuum and check that the operation sound is emitted from the No. 2 air switching valve assembly.
If the operation is not as specified replace the No. 2 air switching valve assembly.

for Preparation Click here



1. REMOVE FRONT FENDER APRON SEAL REAR LH

a. Using a clip remover, remove the 4 clips and fender apron seal.

2. REMOVE FRONT FENDER APRON SEAL REAR RH

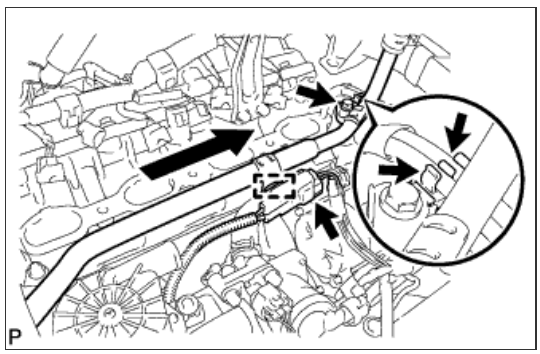
a. Using a clip remover, remove the 4 clips and fender apron seal.

3. REMOVE INTAKE MANIFOLD

a. Remove the intake manifold (Click here).

4. REMOVE WATER BY-PASS PIPE SUB-ASSEMBLY

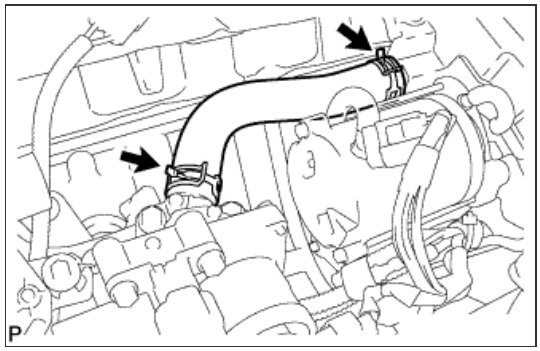
a. Disconnect the connector.



b. Disconnect the wire harness clamp from the water by-pass pipe.

c. Disconnect the 2 vacuum switching valve hoses from the water by-pass pipe clamp.

d. Remove the bolt.

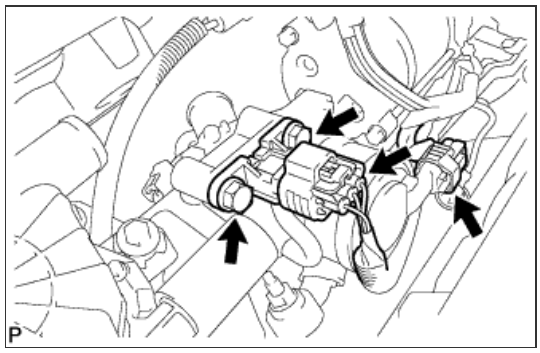


e. Pull out the water by-pass pipe.

f. Remove the O-ring from the water by-pass pipe.

5. REMOVE NO. 2 AIR INJECTION SYSTEM HOSE

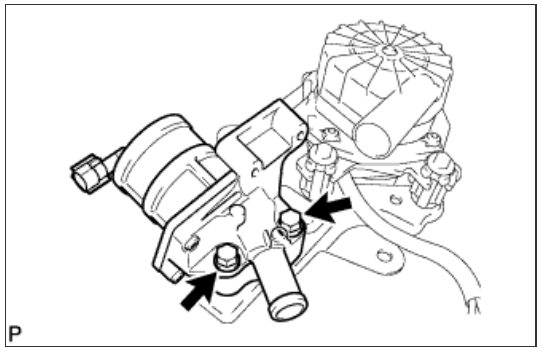
a. Remove the No. 2 air injection system hose from the rear water by-pass joint and air switching valve.



6. REMOVE AIR SWITCHING VALVE ASSEMBLY

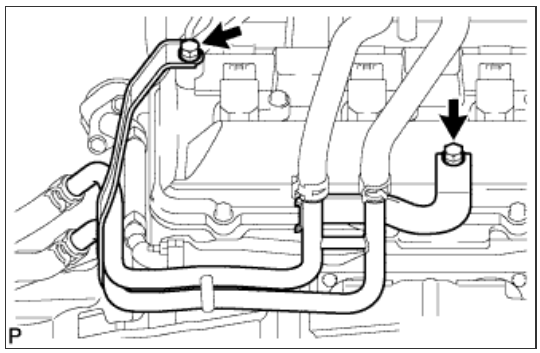
a. Disconnect the air pressure sensor connector.

b. Disconnect the air switching valve connector.



c. Remove the vacuum hose from the air pressure sensor and air switching valve.

d. Remove the 2 bolts and air pressure sensor from the air switching valve.

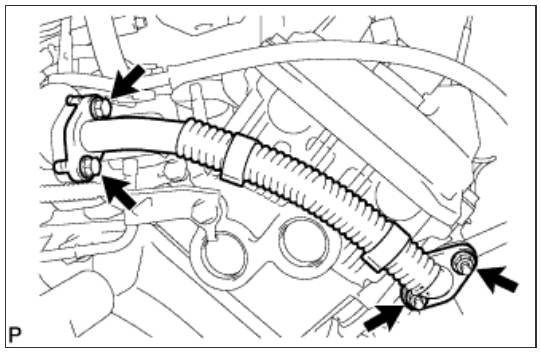


e. Remove the 2 bolts and air switching valve from the air pump bracket.

f. Remove the air switching valve from the No. 1 air injection system hose.

7. DISCONNECT NO. 1 WATER BY-PASS PIPE (w/o Air Cooled Transmission Oil Cooler)

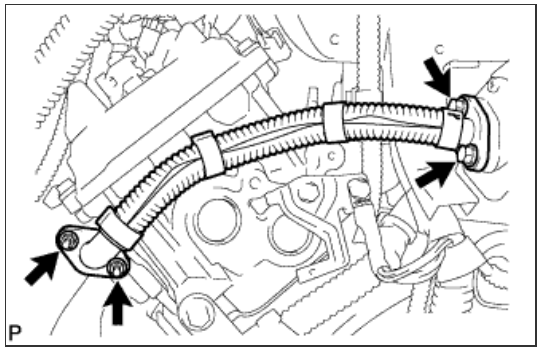
a. Remove the 2 bolts and disconnect the water by-pass pipe from the cylinder head cover RH.



8. REMOVE AIR TUBE SUB-ASSEMBLY RH

a. Remove the 2 bolts, 2 nuts and air tube sub-assembly.

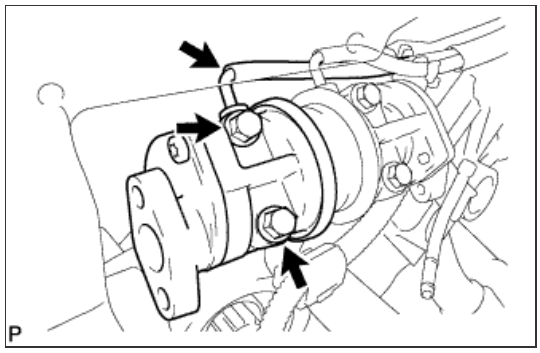
a. Remove the 2 bolts, 2 nuts and air tube sub-assembly.



b. Remove the 2 gaskets.

9. REMOVE NO. 3 AIR TUBE

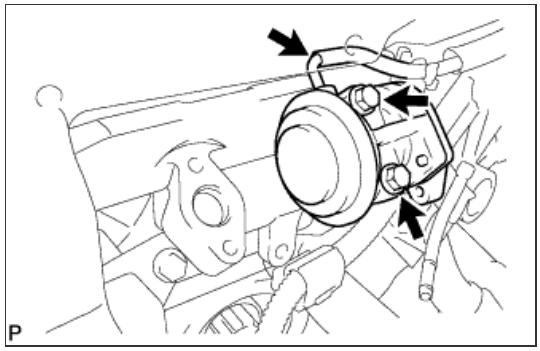
a. Remove the 2 bolts, 2 nuts and No. 3 air tube.



b. Remove the 2 gaskets.

10. REMOVE NO. 2 AIR SWITCHING VALVE ASSEMBLY

a. Remove the vacuum switching valve hose from the No. 2 air switching valve.



b. Remove the 2 bolts, gasket and No. 2 air switching valve from the rear water by-pass joint.

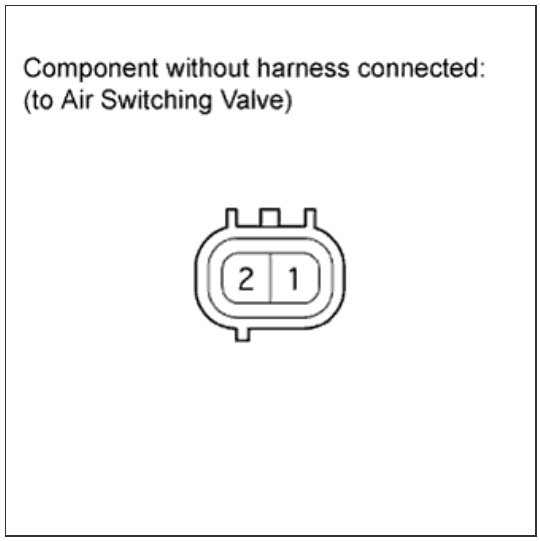
11. REMOVE NO. 1 AIR SWITCHING VALVE ASSEMBLY

a. Remove the vacuum switching valve hose from the No. 1 air switching valve.

b. Remove the 2 bolts, gasket and No. 1 air switching valve from the rear water by-pass joint.

for Preparation Click here

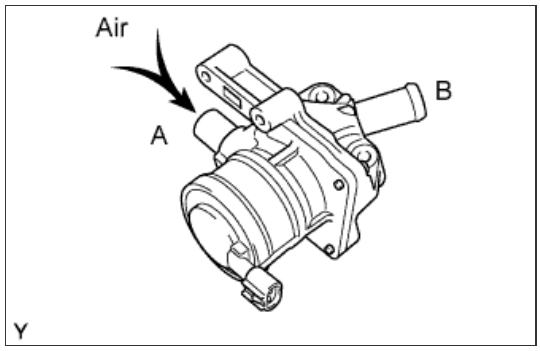
1. INSPECT AIR SWITCHING VALVE ASSEMBLY



a. Measure the resistance of the valve.

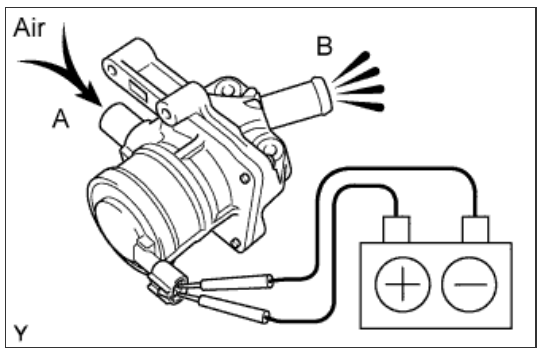
i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:



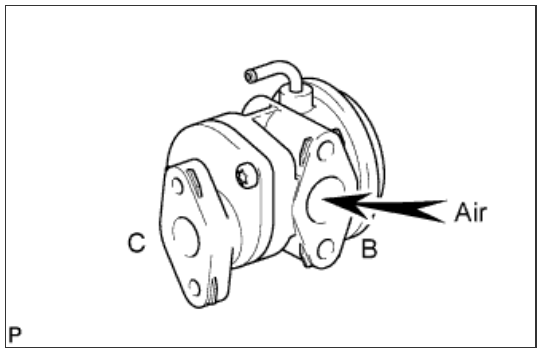
Tester Connection	Condition	Specified Condition
1- 2	20°C (68°F)	4.5 to 5.5 Ω
1 - Body ground	Always	1 MΩ or higher
2 - Body ground	Always	1 MΩ or higher

If the result is not as specified, replace the air switching valve assembly.



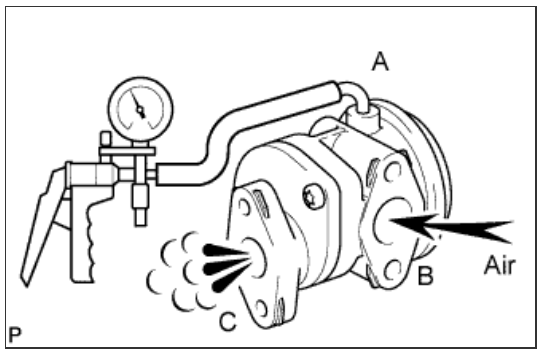
b. Check the valve operation.

i. Blow air into port A and check that air is not discharged from port B.



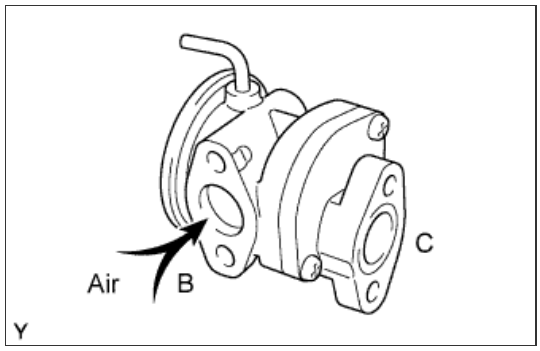
ii. Apply battery voltage across the terminals.

iii. Blow air into port A and check that air is discharged from port B.
If the result is not as specified, replace the air switching valve assembly.

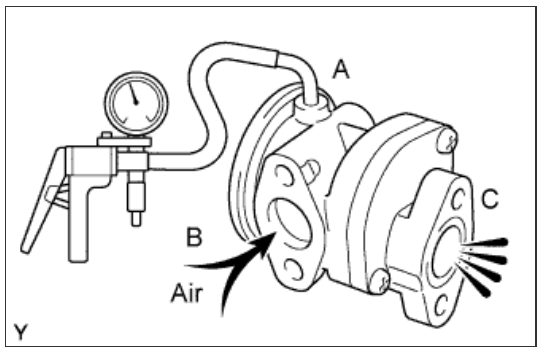


2. INSPECT NO. 1 AIR SWITCHING VALVE ASSEMBLY

a. Blow air into port B and check that air is not discharged from port C.



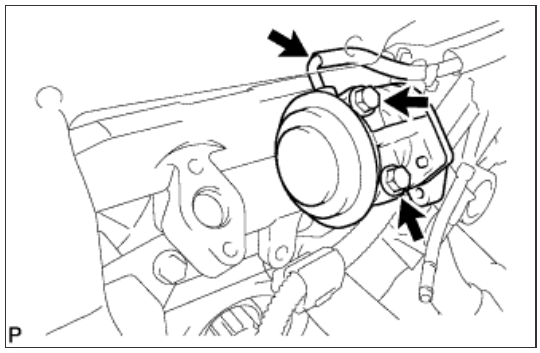
b. Apply vacuum of 33 kPa (250 mmHg, 9.83 in.Hg) to port A, blow air into port B and check that air is discharged from port C.
If the result is not as specified, replace the No. 1 air switching valve assembly.



3. INSPECT NO. 2 AIR SWITCHING VALVE ASSEMBLY

a. Blow air into port B and check that air is not discharged from port C.

b. Apply vacuum of 33 kPa (250 mmHg, 9.83 in.Hg) to port A, blow air into port B and check that air is discharged from port C.
If the result is not as specified, replace the No. 2 air switching valve assembly.



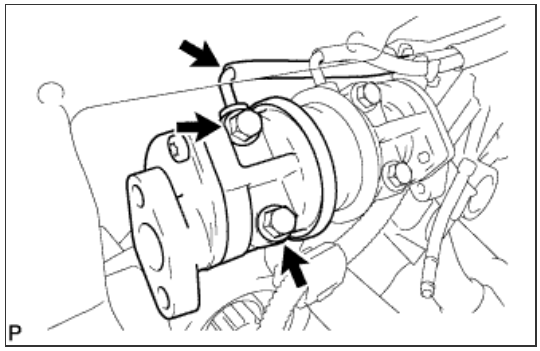
for Preparation Click here

1. INSTALL NO. 1 AIR SWITCHING VALVE ASSEMBLY

a. Install a new gasket and the No. 1 air switching valve to the rear water by-pass joint with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. Connect the vacuum switching valve hose to the No. 1 air switching valve.

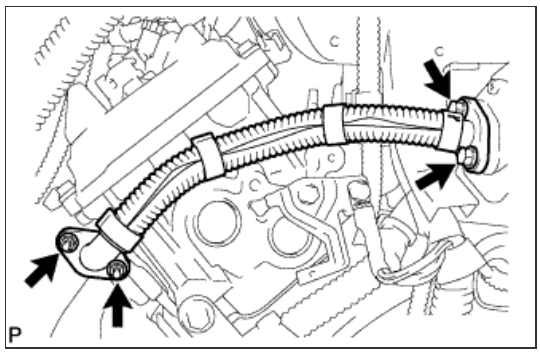


2. INSTALL NO. 2 AIR SWITCHING VALVE ASSEMBLY

a. Install a new gasket and the No. 2 air switching valve to the rear water by-pass joint with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. Connect the vacuum switching valve hose to the No. 2 air switching valve.



3. INSTALL NO. 3 AIR TUBE

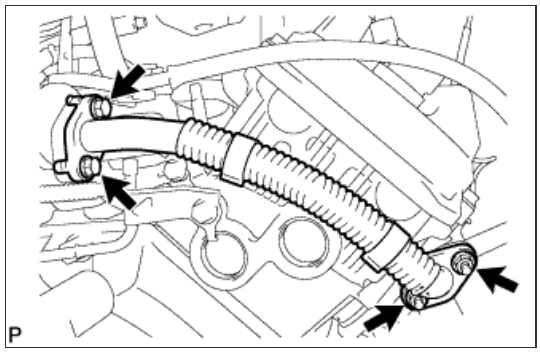
a. Install a new gasket and connect the No. 3 air tube to the exhaust manifold with the 2 nuts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. Install a new gasket and connect the No. 3 air tube to the No. 2 air switching valve with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

4. INSTALL AIR TUBE SUB-ASSEMBLY RH

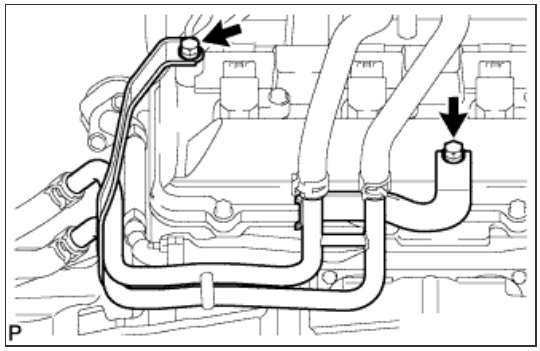


a. Install a new gasket and connect the air tube to the exhaust manifold with the 2 nuts.

Torque:

10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. Install a new gasket and connect the air tube to the No. 1 air switching valve with the 2 bolts.

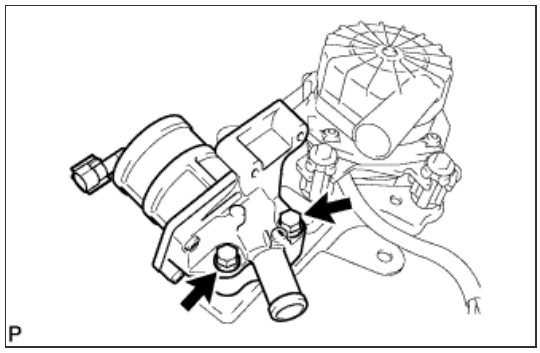


Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

5. CONNECT NO. 1 WATER BY-PASS PIPE (w/o Air Cooled Transmission Oil Cooler)

a. Connect the water by-pass pipe to the cylinder head cover RH with the 2 bolts.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

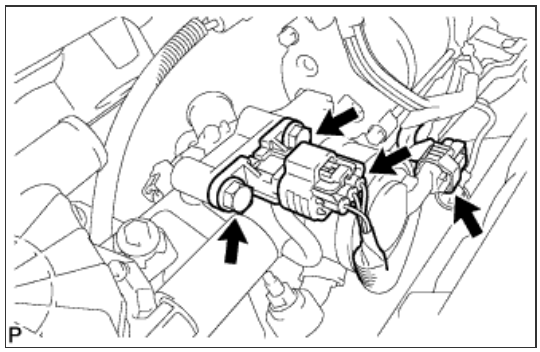


6. INSTALL AIR SWITCHING VALVE ASSEMBLY

a. Install the air switching valve to the No. 1 air injection system hose.

b. Install the air switching valve to the air pump bracket with the 2 bolts.

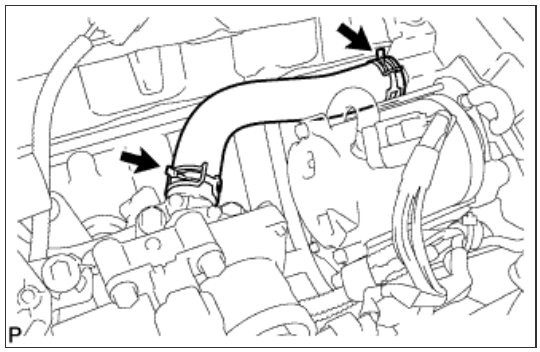
Torque:
16 N*m{ 163 kgf*cm , 12 ft.*lbf }



c. Install the air pressure sensor to the air switching valve with the 2 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

d. Install the vacuum hose to the air pressure sensor and air switching valve.



e. Connect the air pressure sensor connector.

f. Connect the air switching valve connector.

7. INSTALL NO. 2 AIR INJECTION SYSTEM HOSE

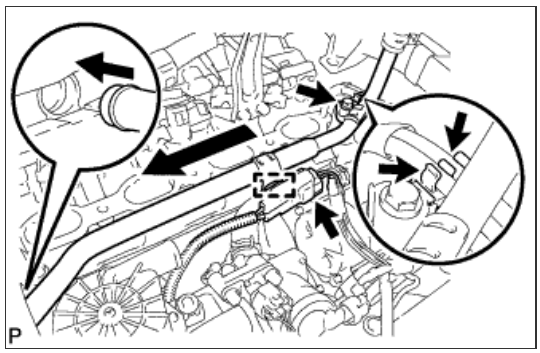
a. Install the hose.

8. INSTALL WATER BY-PASS PIPE SUB-ASSEMBLY

a. Apply soapy water to the O-ring.

b. Install a new O-ring to the water by-pass pipe.

c. Push in the water by-pass pipe.



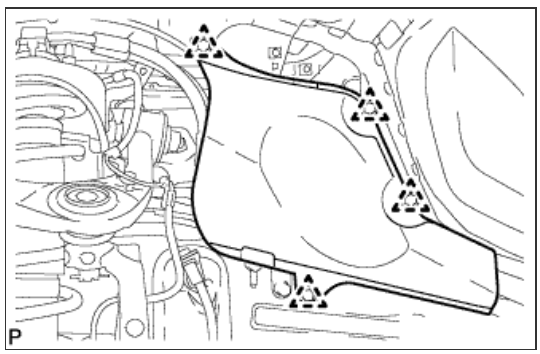
d. Install the water by-pass pipe with the bolt.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

e. Connect the 2 vacuum switching valve hoses to the water by-pass pipe clamp.

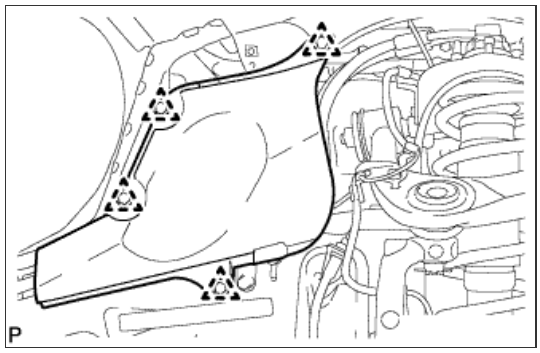
f. Connect the wire harness clamp.

g. Connect the connector.



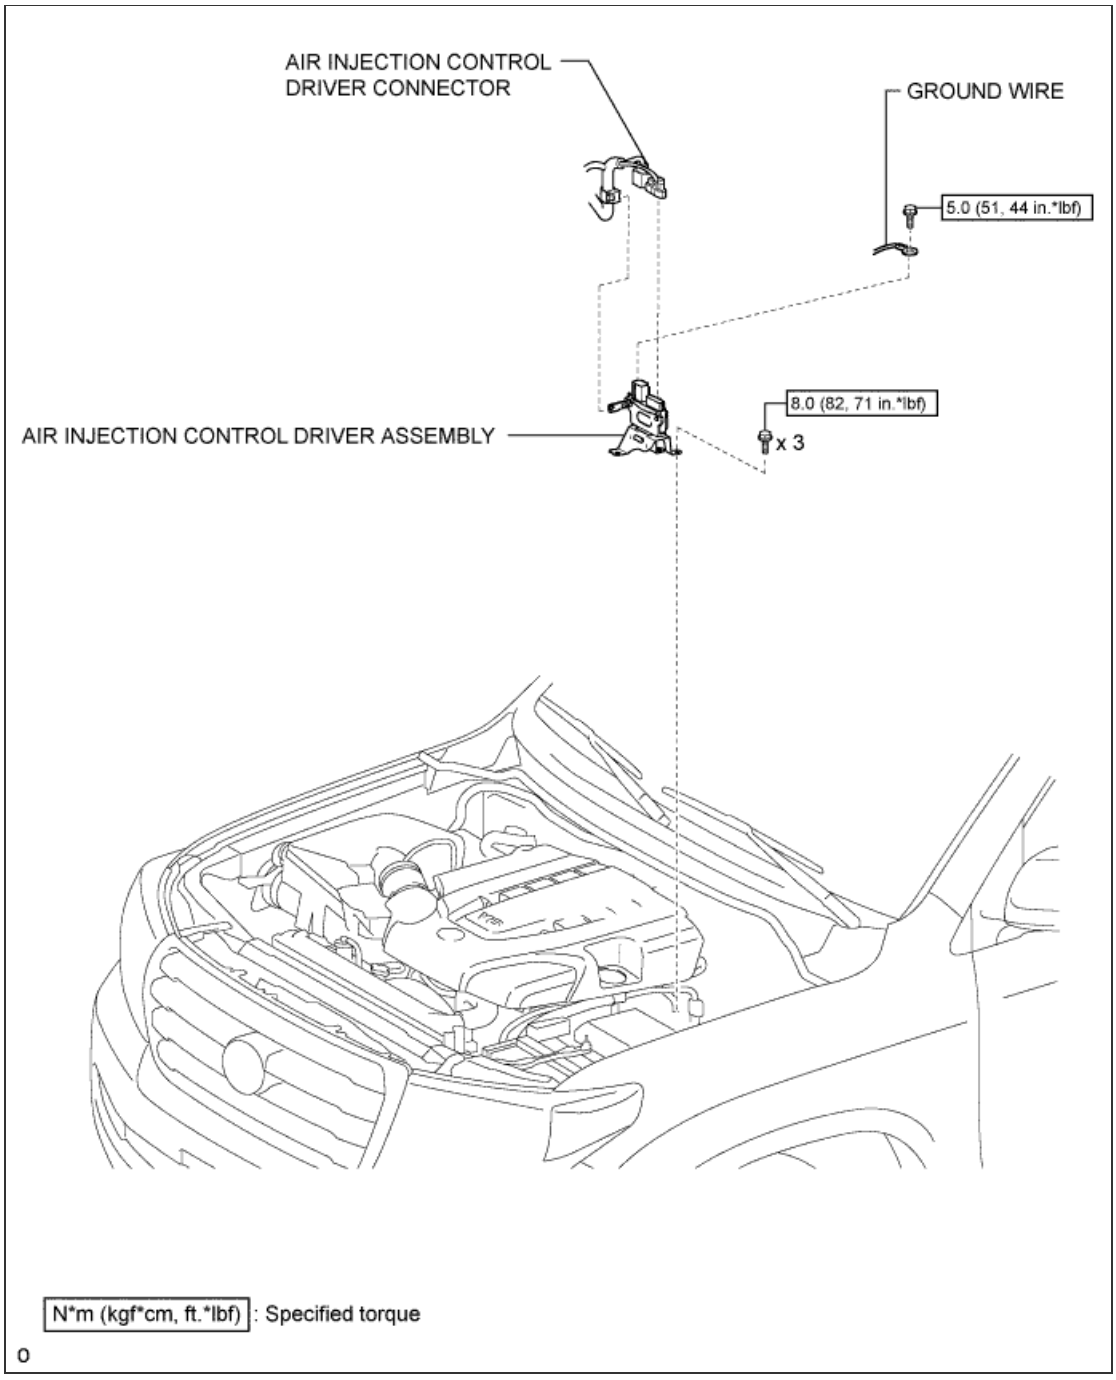
9. INSTALL INTAKE MANIFOLD

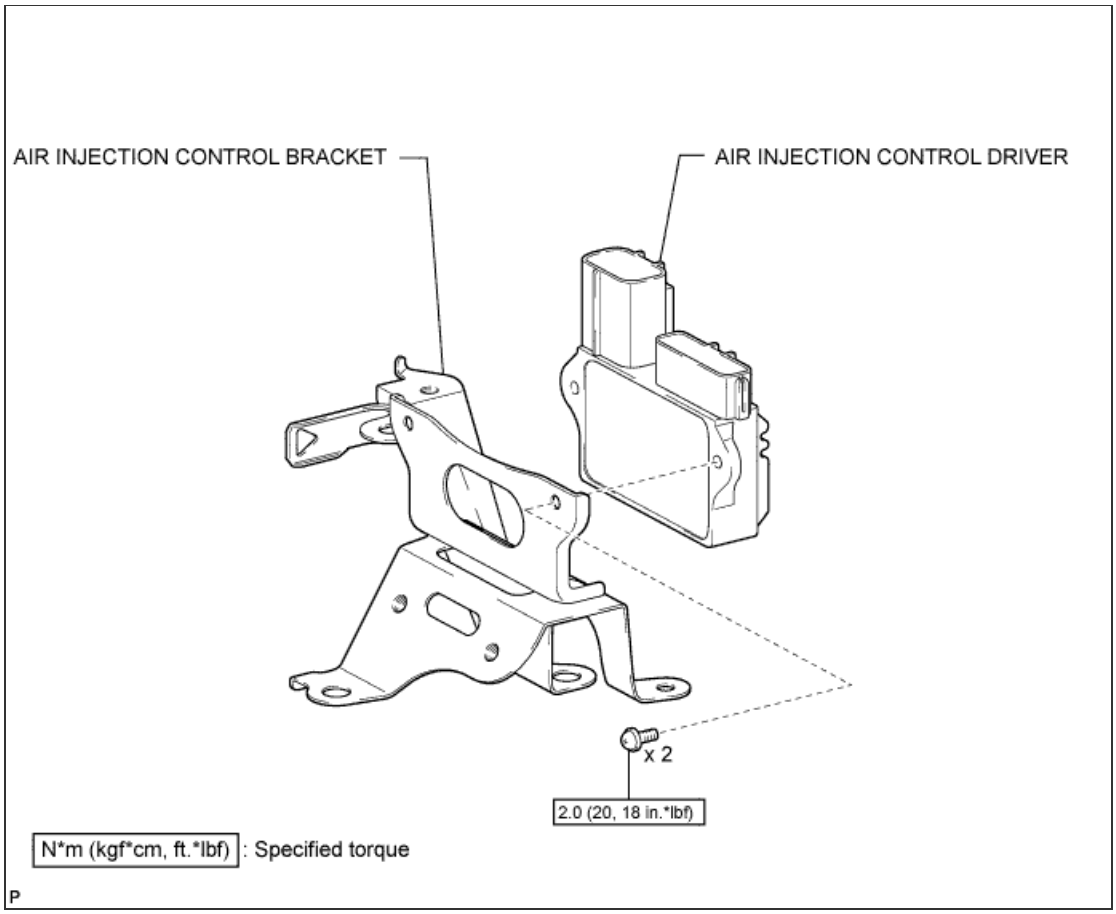
a. Install the intake manifold (Click here).



10. INSTALL FRONT FENDER APRON SEAL REAR LH

a. Install the fender apron seal with the 4 clips.





11. INSTALL FRONT FENDER APRON SEAL REAR RH

a. Install the fender apron seal with the 4 clips.

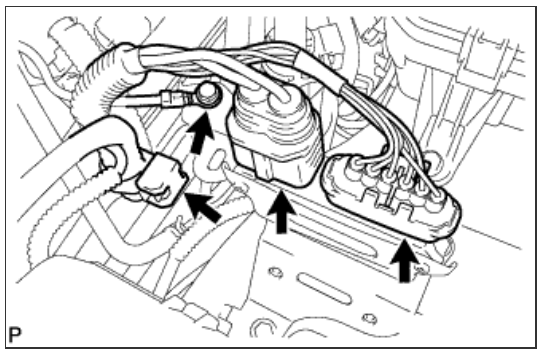
2.0 (20, 18 in.*lbf)
N*m (kgf*cm, ft.*lbf) : Specified torque
P

for Preparation Click here

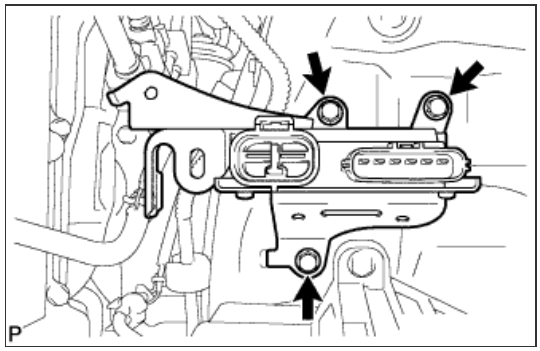
1. DISCONNECT CABLE ROM NEGATIVE BATTER TERMINAL

NOTICE:



When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

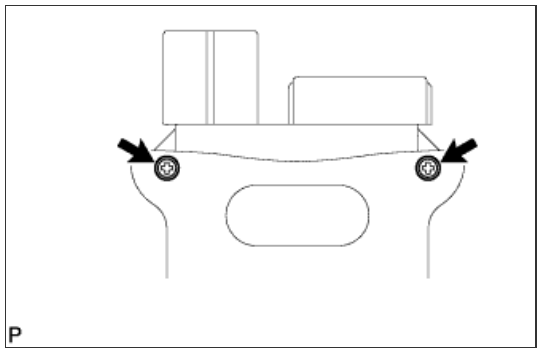
2. REMOVE AIR INJECTION CONTROL DRIVER ASSEMBL



a. Disconnect the 2 air injection control driver connectors.

b. Remove the bolt and disconnect the wire harness.

c. Disconnect the wire harness clamp.

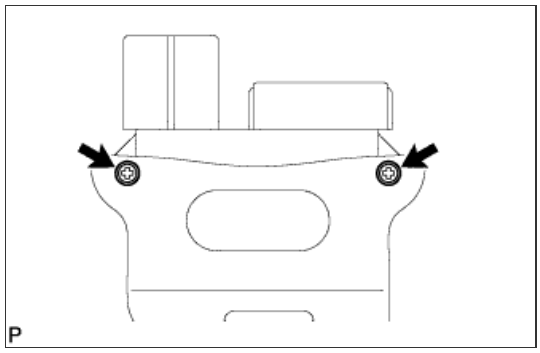


d. Remove the 3 bolts and air injection control driver assembly.

for reparation Clic ere

1. REMOVE AIR INJECTION CONTROL DRIVER

a. Remove the 2 screws and air injection control driver.

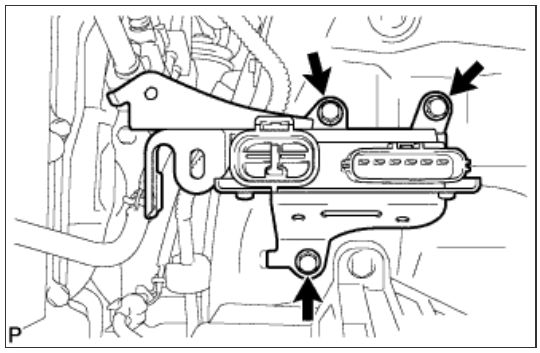


for Preparation Click here

1. INSTALL AIR INJECTION CONTROL DRIVER

a. Install the air injection control driver with the 2 screws.

Torque:
2.0 N*m{ 20 kgf*cm , 18 in.*lbf }

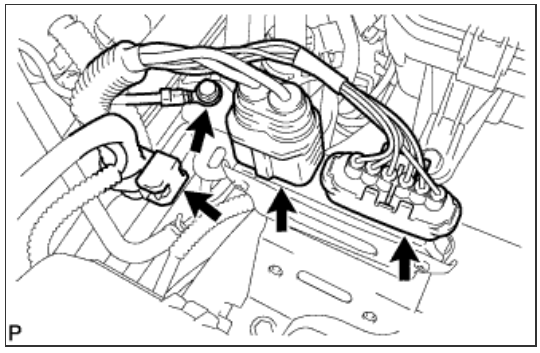


for Preparation Click here

1. INSTALL AIR INJECTION CONTROL DRIVER ASSEMBLY

a. Install the air injection control driver assembly with the 3 bolts.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

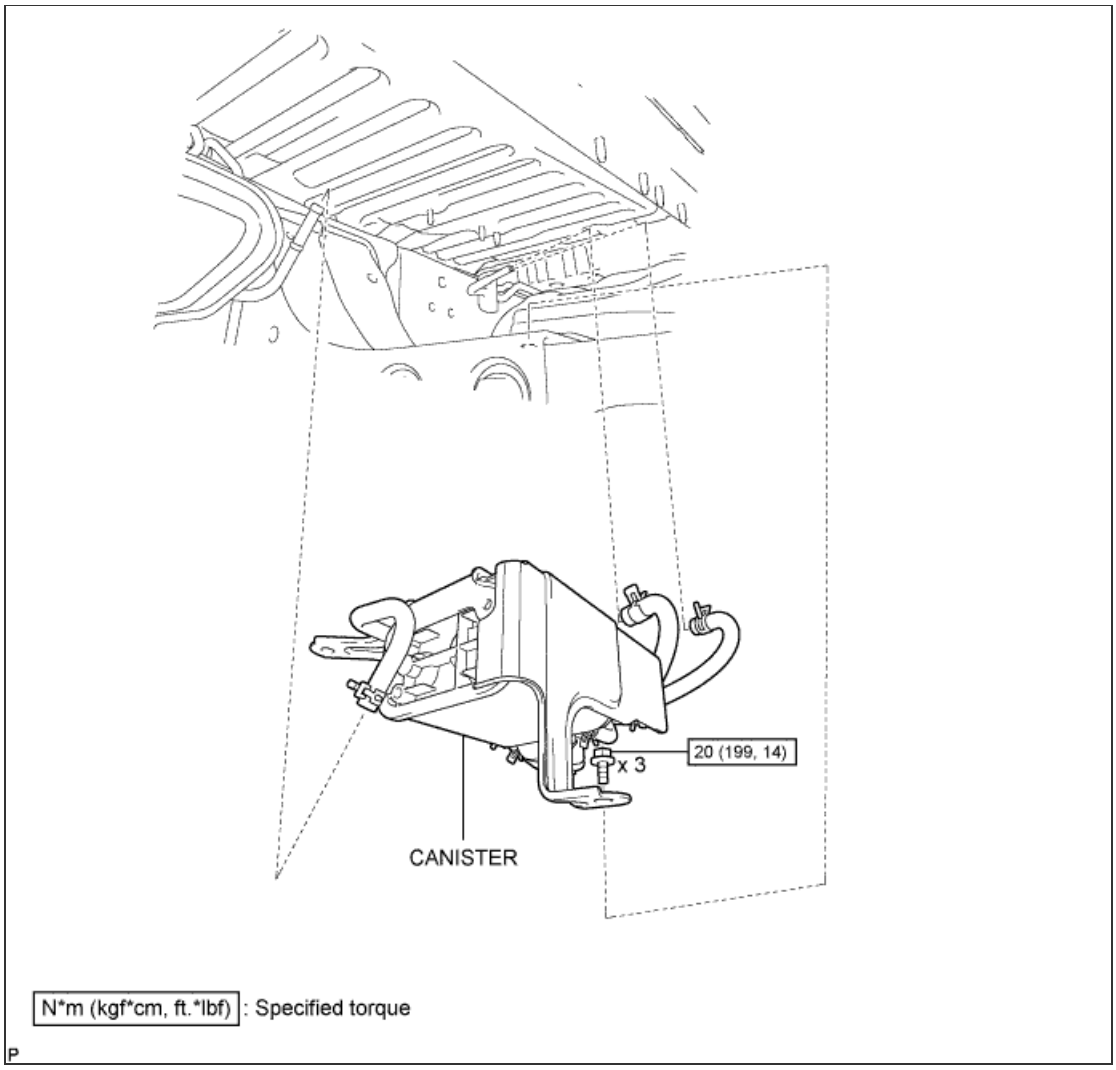


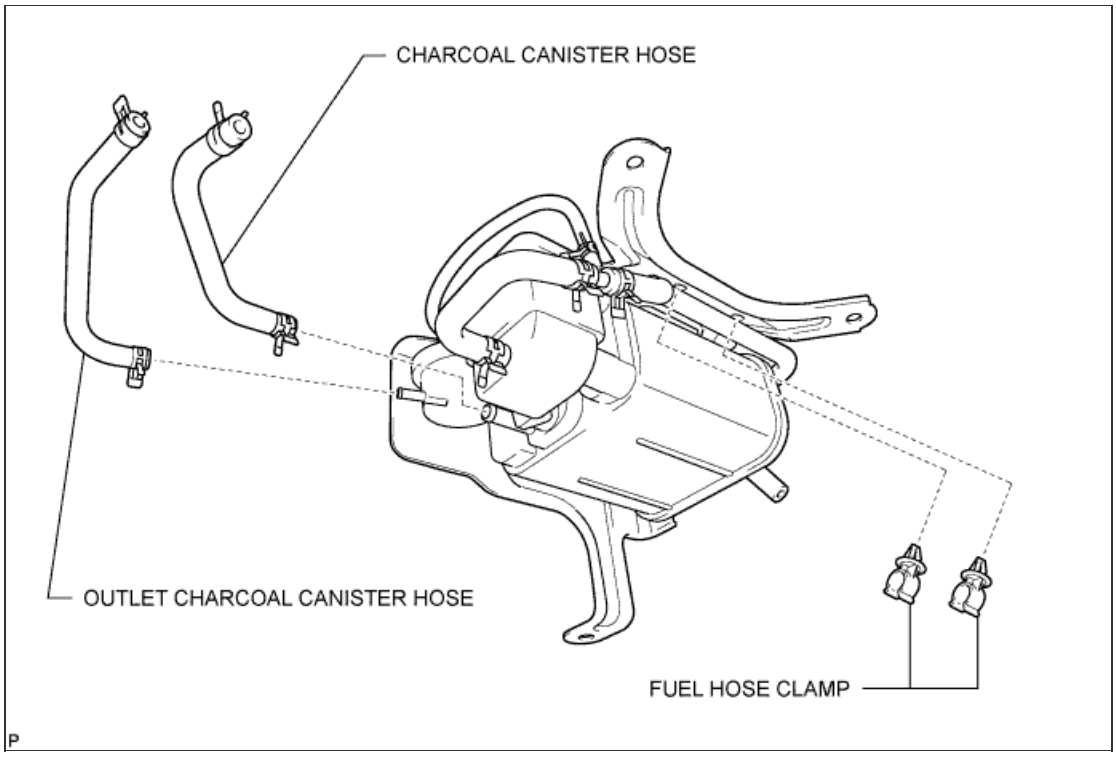
b. Connect the wire harness clamp.

c. Connect the wire harness with the bolt.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

d. Connect the 2 air injection control driver connectors



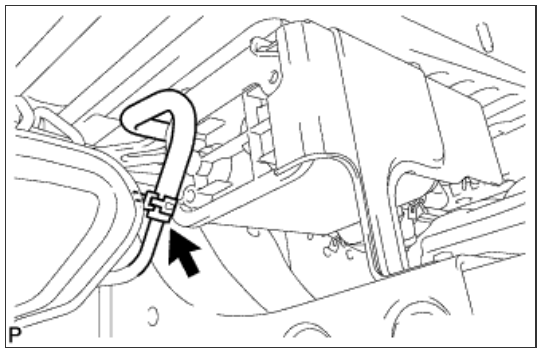


2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

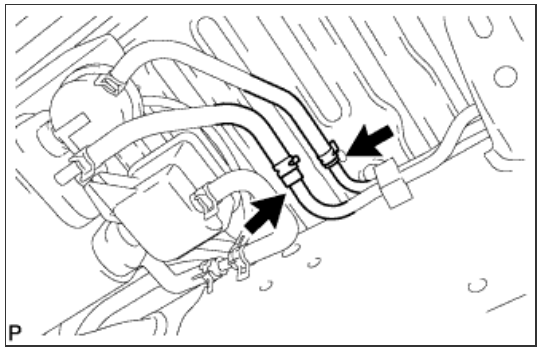
hen disconnectin the cable, some systems need to be initiali ed a ter the cable is reconnected (Click here).

for Preparation Click here



CHARCOAL CANISTER HOSE
OUTLET CHARCOAL CANISTER HOSE
FUEL HOSE CLAMP
P

for Preparation Click here

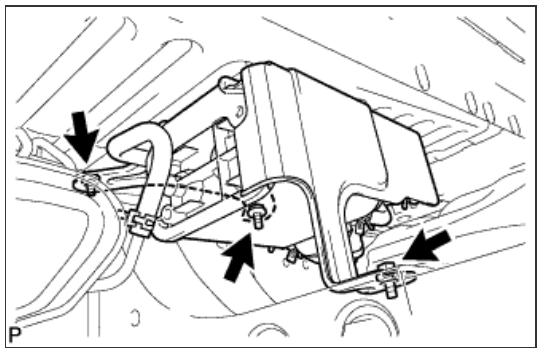


1. REMOVE CANISTER

a. Disconnect the hose.

b. Disconnect the charcoal canister hose.

c. Disconnect the outlet charcoal canister hose.

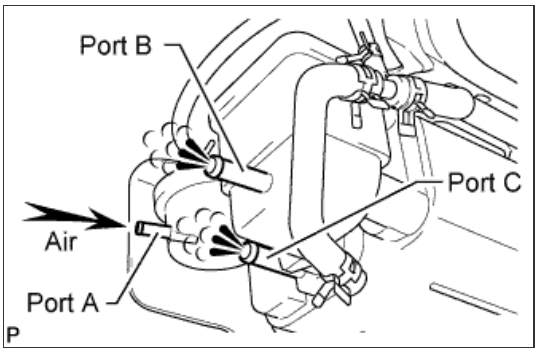


d. Remove the 3 bolts and canister.

e. Remove the 2 fuel hose clamps from the canister.

f. Remove the charcoal canister hose.

. Remove the outlet charcoal canister hose.



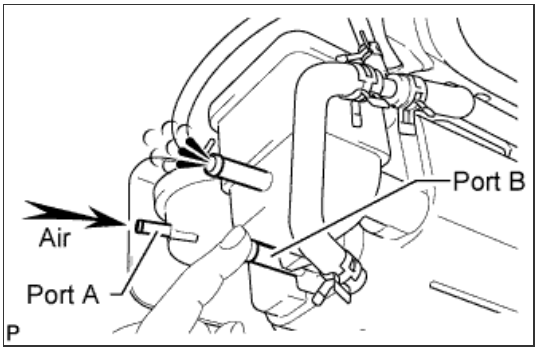
for Preparation Click here

1. INSPECT CANISTER

a. Visually check the canister for cracks or damage.

b. Blow compressed air of 4.9 kPa (50 gf/cm ^{2}, 0.71 psi) into port A and check that air flows without resistance from port B and port C.
If the result is not as specified, replace the canister.

c. Apply a vacuum of 1.96 kPa (20 gf/cm^2, 0.28 psi) to port A. Check that the vacuum does not decrease when ports B and C are closed, and check that the vacuum does not decrease when port B is released.
If the result is not as specified, replace the canister.



2. CLEAN FILTER IN CANISTER

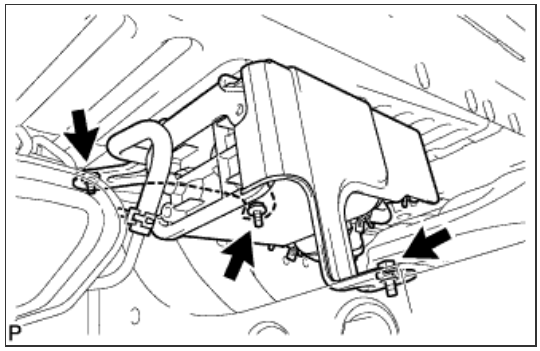
a. Clean the filter by blowing compressed air of 4.9 kPa (50 gf/cm ^{2}, 0.71 psi) into port A while holding port B closed.

NOTICE:

Do not attempt to wash the canister.

for Preparation Click here

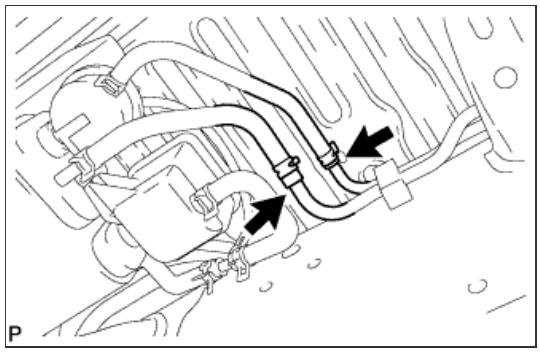
1. INSTALL CANISTER



a. Install the outlet charcoal canister hose to the canister.

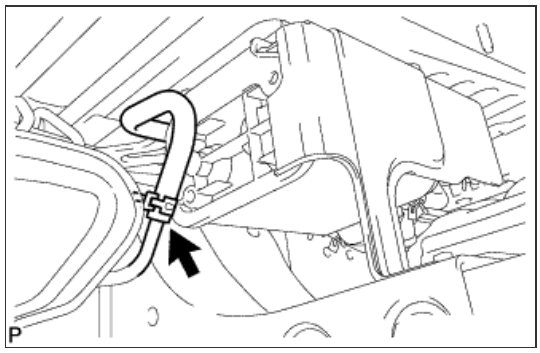
b. Install the charcoal canister hose to the canister.

c. Install the 2 fuel hose clamps to the canister.

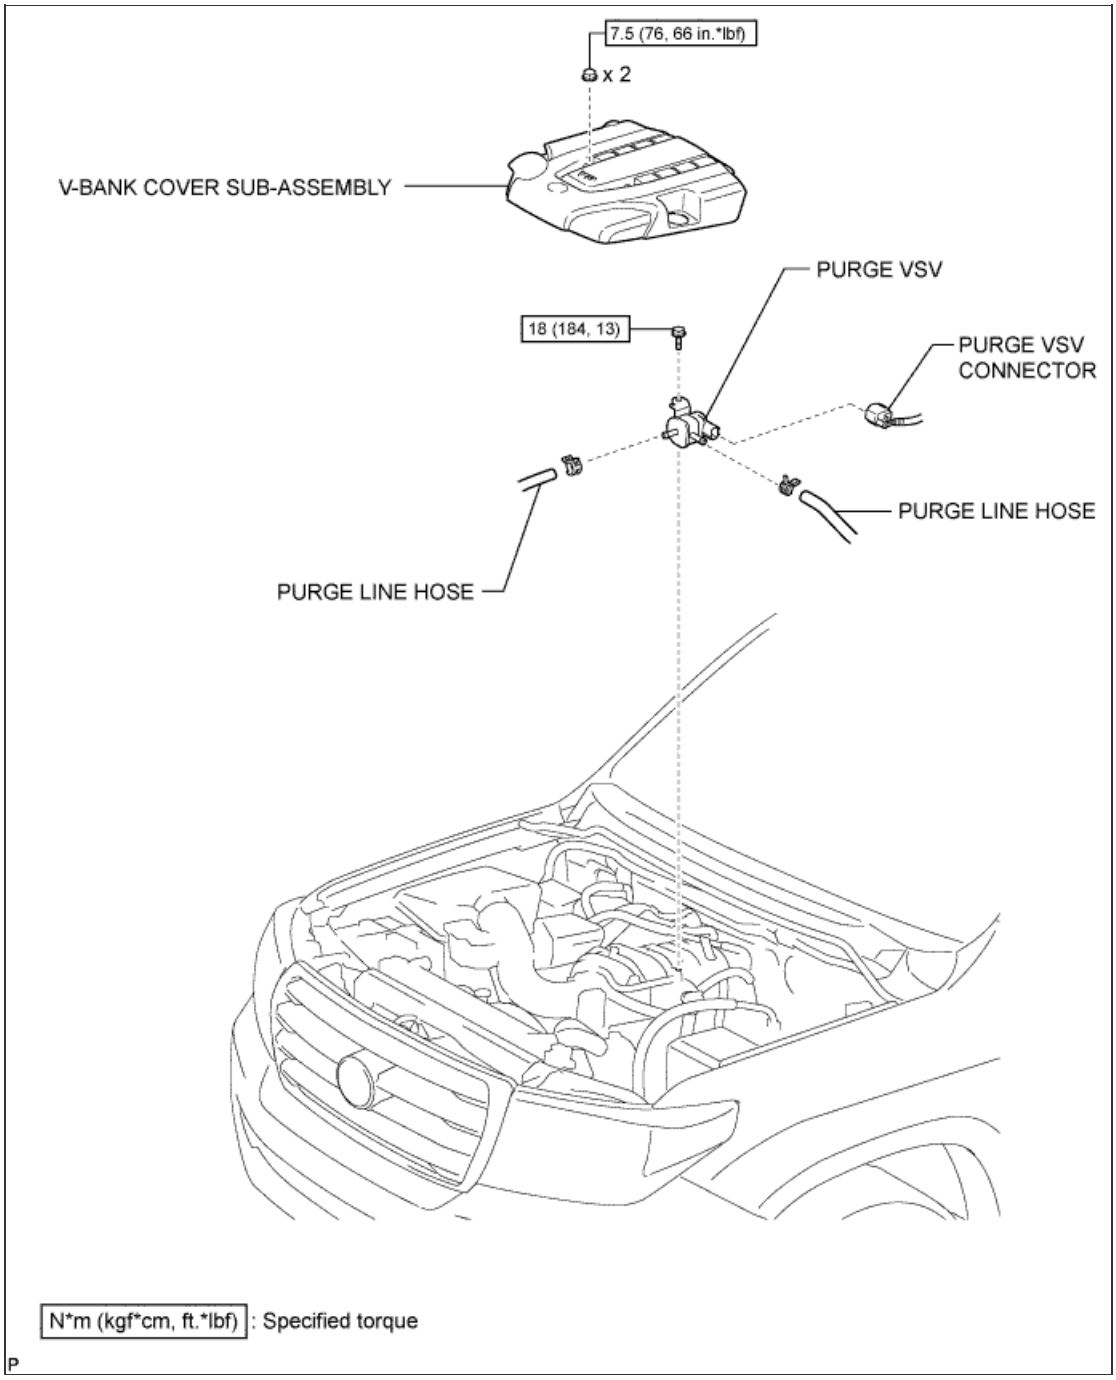


d. Install the canister with the 3 bolts.

Torque:
20 N*m{ 1 kgf*cm , 14 ft.*lbf }



e. Connect the outlet charcoal canister hose.

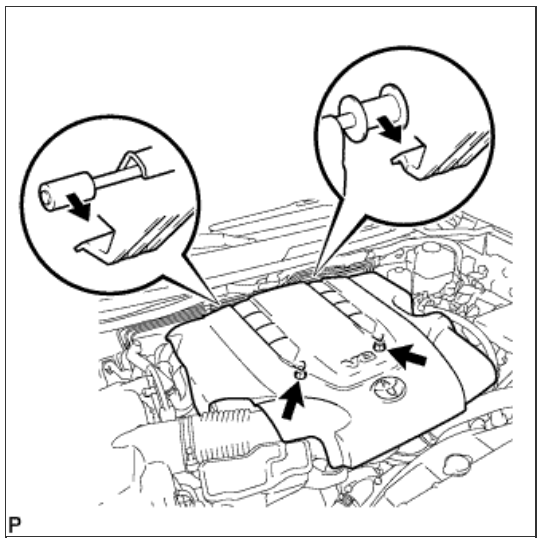


f. Connect the charcoal canister hose.

g. Connect the hose.

for Preparation Click here

for Preparation Click here



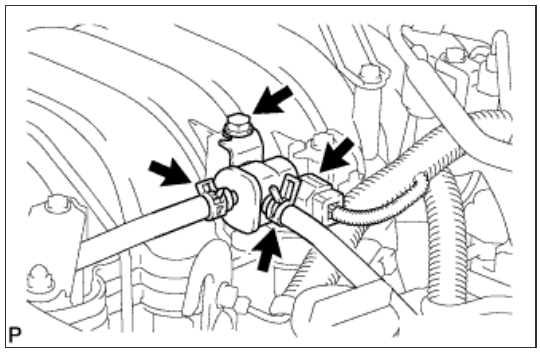
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Remove the 2 nuts and V-bank cove



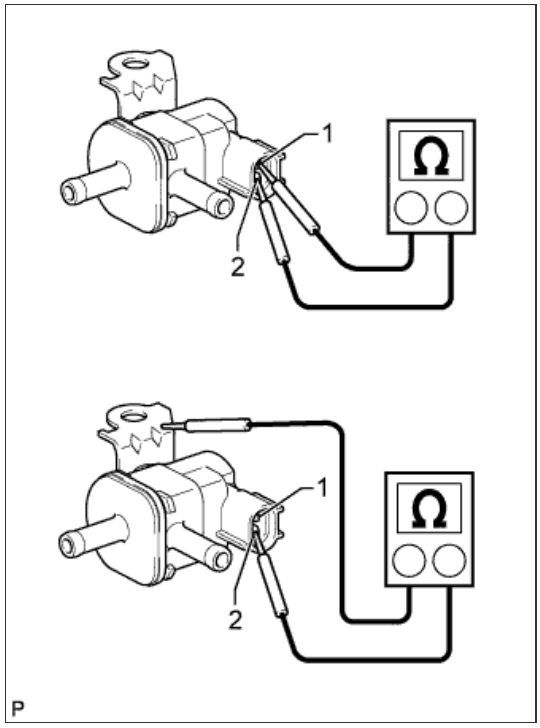
3. REMOVE PURGE VSV

a. isconnect the pu ge VSV connecto

b. isconnect the 2 pu ge line hoses.

c. emove the bolt and pu ge VSV.

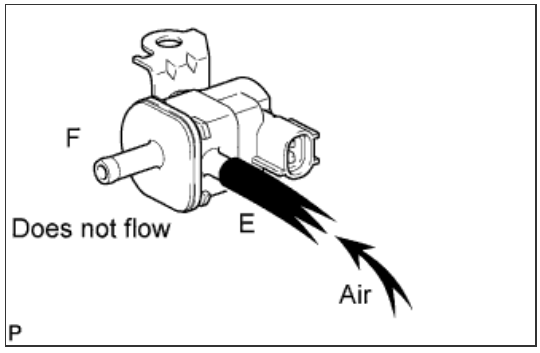
for Preparation Click here



1. INSPECT PURGE VSV

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

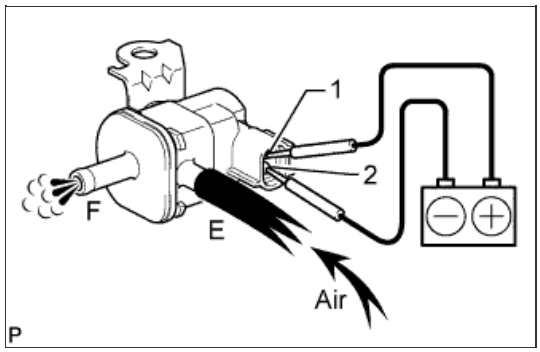


Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	23 to 26 Ω
1 - Body ground	Always	10 MΩ or higher
2 - Body ground		

If the result is not as specified, replace the purge VSV.

b. Check operation of purge VSV.

i. Check that air does not flow from port F when air is applied to port E.



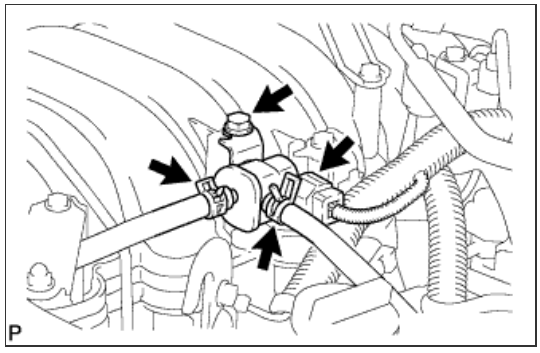
ii. Apply battery voltage to the connector, and check the VSV operation.

OK:

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Air flows from port E to port F

If the result is not as specified, replace the purge VSV.

for Preparation Click here



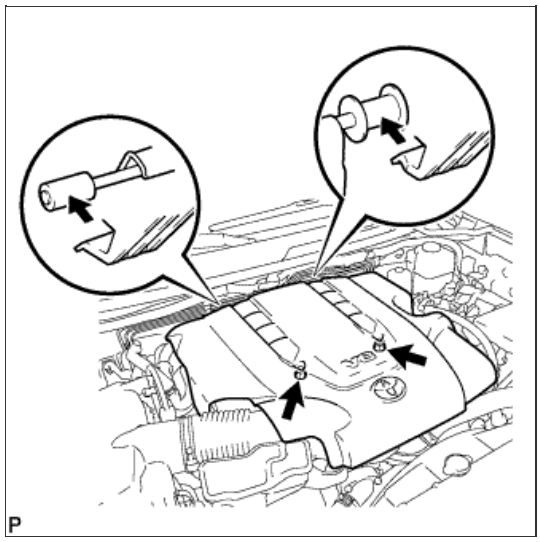
1. INSTALL PURGE VSV

a. Install the purge VSV with the bolt.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

b. Connect the purge line hoses.

c. Connect the purge VSV connector.



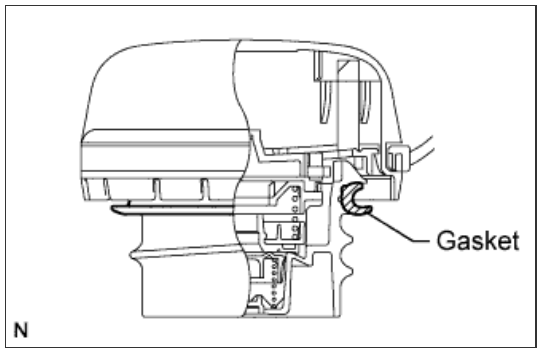
2. INSTALL V-BANK COVER SUB-ASSEMBLY

a. Attach the V-bank cover hook sub to the bracket.

b. Install the V-bank cover with the 2 nuts.

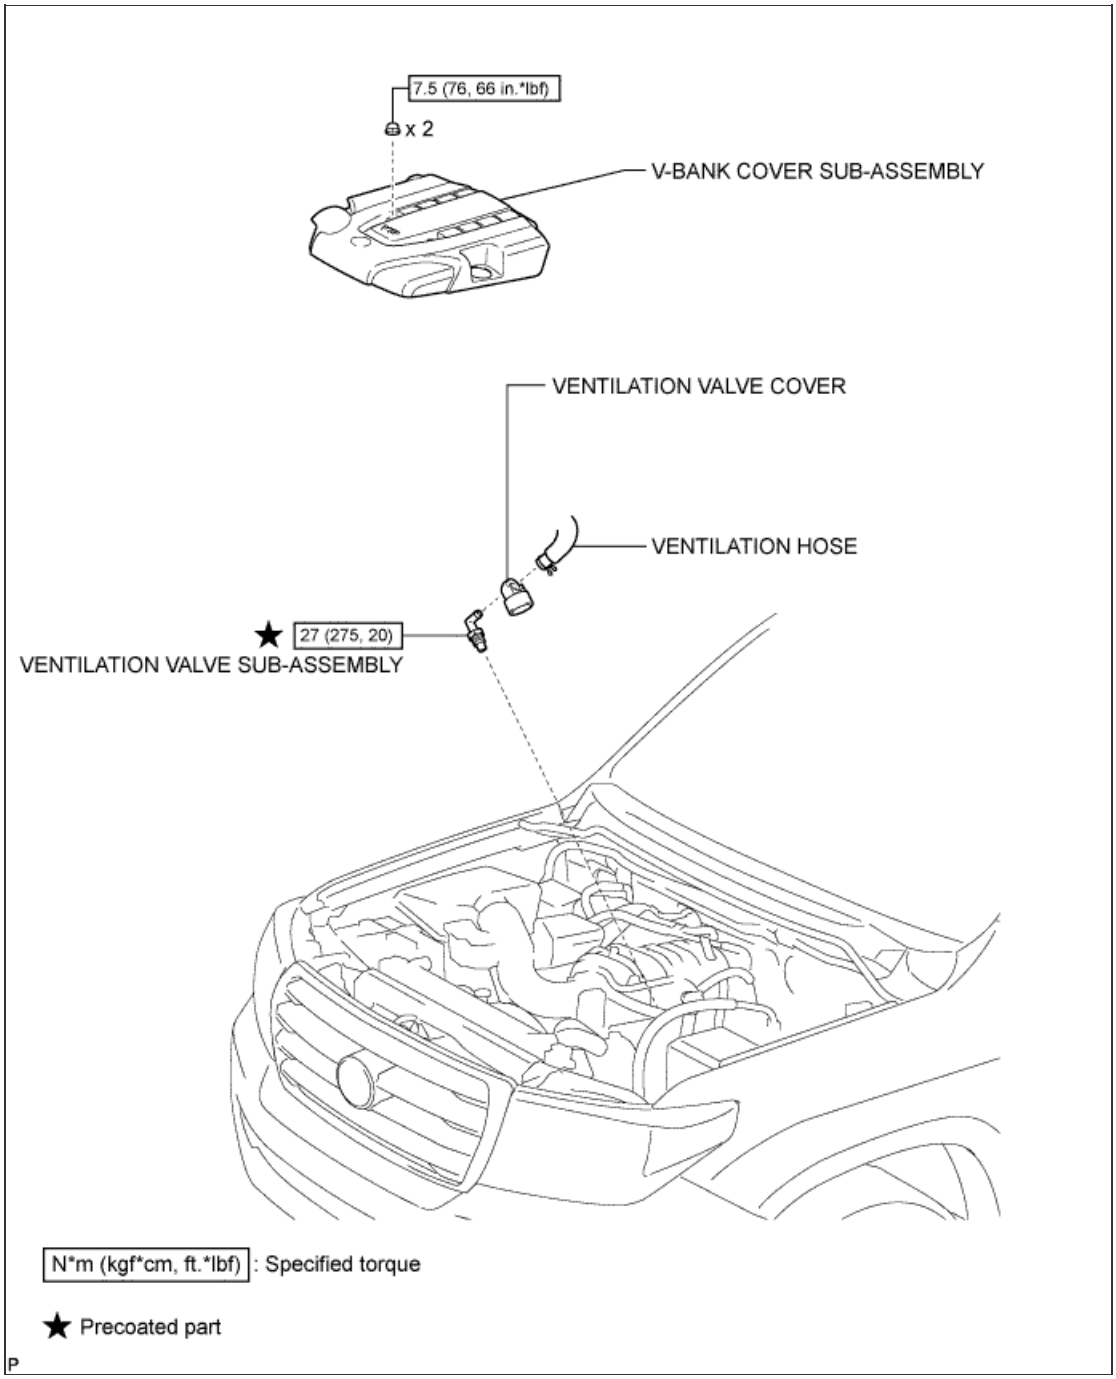
Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



NOTICE:

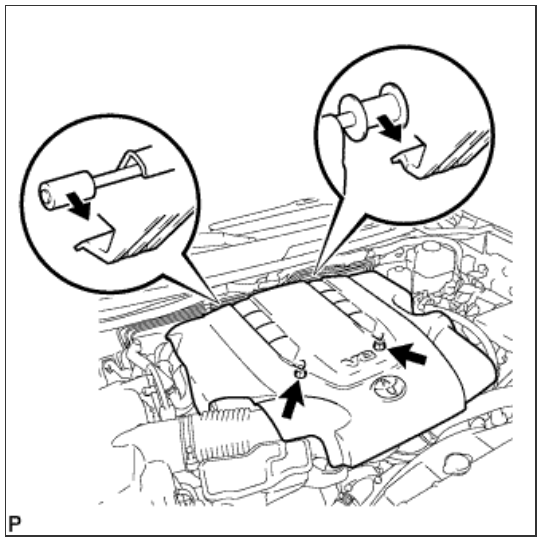
When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).



for Preparation Click here

1. INSPECT FUEL TANK CAP ASSEMBLY

a. Visually check if the cap and/or gasket are deformed or damaged.
If necessary, replace the cap assembly or gasket.



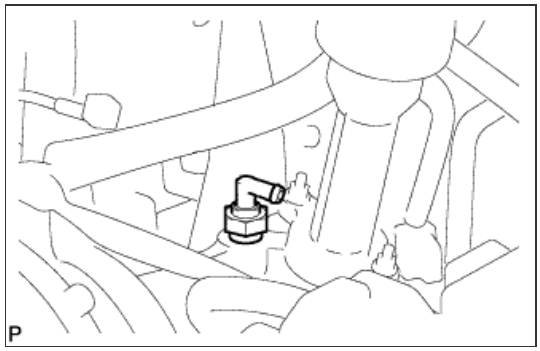
for Preparation [Click here]

for Preparation Click here

1. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Remove the 2 nuts and V-bank cover.

2. DISCONNECT VENTILATION HOSE

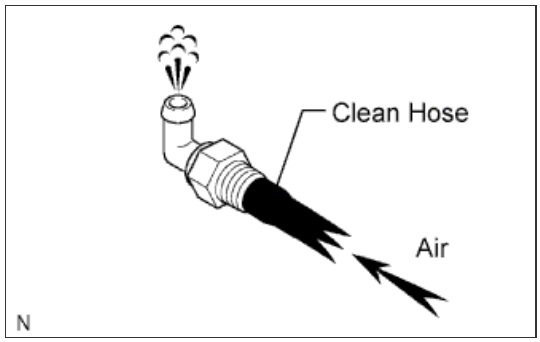


a. Disconnect the ventilation hose from the ventilation valve.

3. REMOVE VENTILATION VALVE COVER

a. Remove the ventilation valve cover from the ventilation valve.

4. REMOVE VENTILATION VALVE SUB-ASSEMBLY

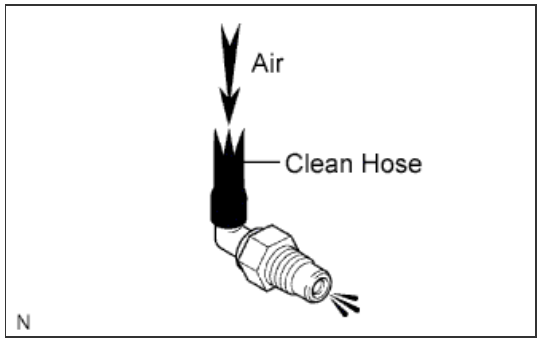


a. Remove the ventilation valve from the cylinder head cover sub-assembly LH.

for Preparation Click here

1. INSPECT VENTILATION VALVE SUB-ASSEMBLY

a. Install a clean hose to the ventilation valve.



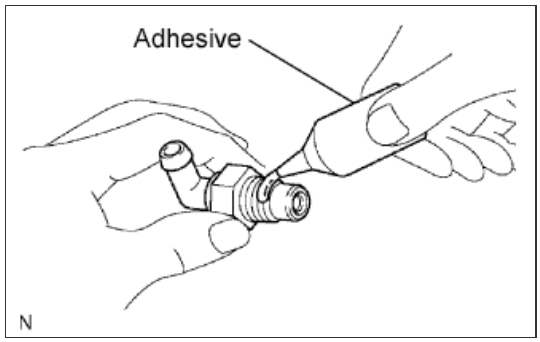
b. Inspect the ventilation valve operation.

i. Blow air into the cylinder head side, and check that air passes through smoothly.

CAUTION:

Do not suck air through the valve. Petroleum substances inside the valve are harmful.

ii. Blow air into the intake manifold side, and check that air does not pass through smoothly.
If the result is not as specified, replace the ventilation valve.



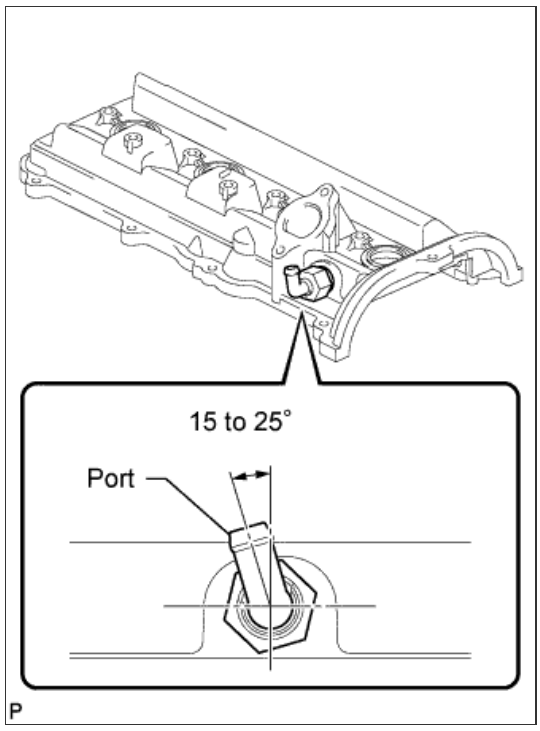
c. Remove the hose from the ventilation valve.

for Preparation Click here

1. INSTALL VENTILATION VALVE SUB-ASSEMBLY

a. Apply adhesive to 2 or 3 threads of the ventilation valve.

Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent



b. Install the ventilation valve to the cylinder head cover sub-assembly LH.

Torque:
27 N*m{ 275 kgf*cm , 20 ft.*lbf }

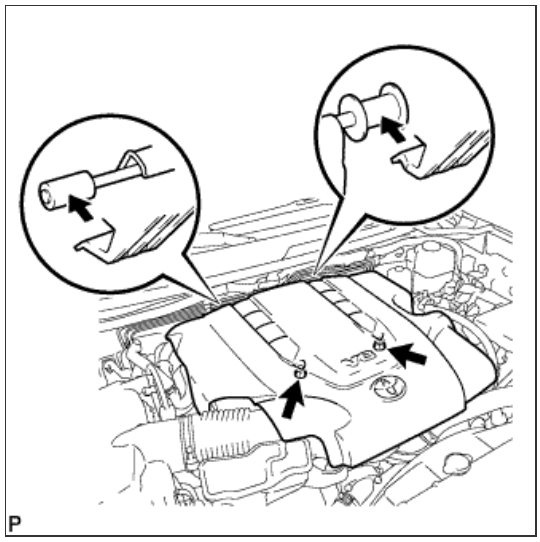
HINT:

After applying the specified torque, rotate the ventilation valve clockwise until the port facing in the direction indicated in the illustration.

2. INSTALL VENTILATION VALVE COVER

a. Install the ventilation valve cover to the ventilation valve.

3. CONNECT VENTILATION HOSE



a. Connect the ventilation hose to the ventilation valve.

4. INSTALL V-BANK COVER SUB-ASSEMBLY

a. Attach the 2 -bank cover hooks to the bracket.

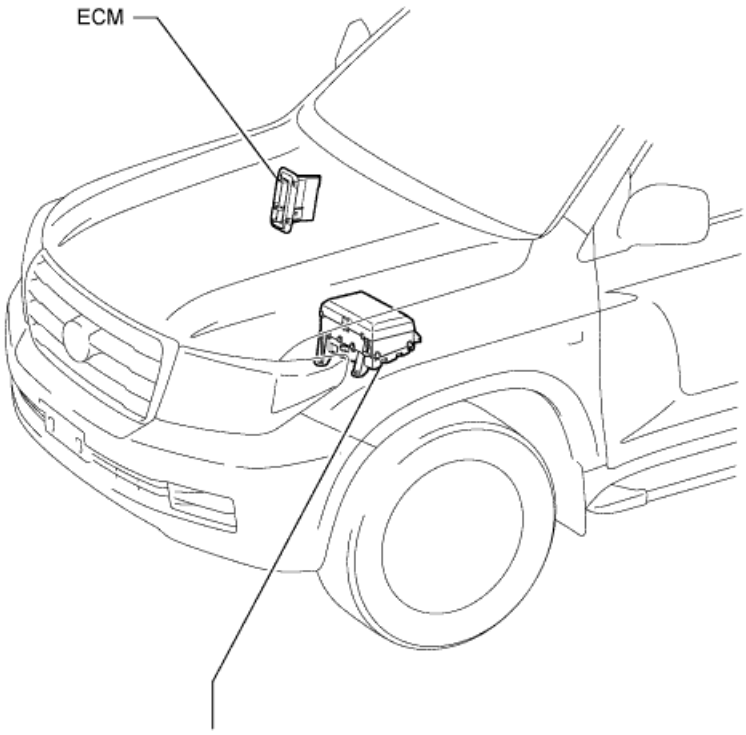
b. Install the -bank cover with the 2 nuts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

for Preparation Click here

1.IGNITION SWITCH EXPRESSION

HINT:



The type of ignition switch used on this model differs depending on the specifications of the vehicle. The e pressions listed in the table below are used in this section.

E pression	Ignition Switch (Position)	Engine Switch (ondition)
Ignition Switch off	LO	ff
Ignition Switch A		n (A
gnition Switch ON	ON	On (IG)
Engine Start	START	Start

HINT:

In a malfunction where the EGR system is always on, black or white smoke may be emitted from the exhaust pipe.

1. CHECK SEATING OF EGR VALVE (w/ EGR System)

a. Start the engine, and then check that the engine starts and runs at idle.

2. CHECK ENGINE CONDITION (w/ EGR System)

a. Connect the intelligent tester to the DLC3.

b. Start the engine, then run it at idle.

c. Turn the intelligent tester on.

d. Warm up the engine.

HINT:

The coolant temperature should be between 75°C (167°F) and 90°C (194°F).

e. Enter the following menus: Powertrain / Engine / Data List / Actual EGR Valve Pos. or Actual EGR Valve Pos. #2.

f. Check that the value of the EGR angle is within the specification.

Standard Percentage:

Engine Condition	EGR Valve Opening Angle Expressed as Percentage
During idling	0 to 80%

If the result is not as specified, refer to the EGR valve inspection procedures (Click here).

g. Turn the ignition switch off.

3. CHECK EGR VALVE OPERATION (w/ EGR System)

a. Turn the ignition switch to ON.

b. Turn the intelligent tester on.

c. Enter the following menus: Powertrain / Engine / Active Test / Control the EGR step position or Control the EGR step position #2.

d. Check the Data List / EGR Lift Sensor Output, Actual EGR Valve Pos. or Actual EGR Valve Pos. #2 reading.

HINT:

Make sure the EGR valve opening angle changes according to the Active Test operation.

Standard Percentage:

Control Range Condition	Specified Condition
Active Test performed (Set EGR position to 100%)	EGR Valve Angle: 73 to 100%
Active Test performed (Set EGR position to 0%)	EGR Valve Angle: 0 to 27%

If the result is not as specified, refer to DTC P0400 (Click here).

4. CHECK MAF AMOUNT (w/ EGR System)

a. Start the engine, then run it at idle.

b. Warm up the engine.

HINT:

The coolant temperature should be between 75°C (167°F) and 90°C (194°F).

c. Turn the intelligent tester on.

d. Enter the following menus: Powertrain / Engine / Data List / MAF.

e. Check the MAF reading.

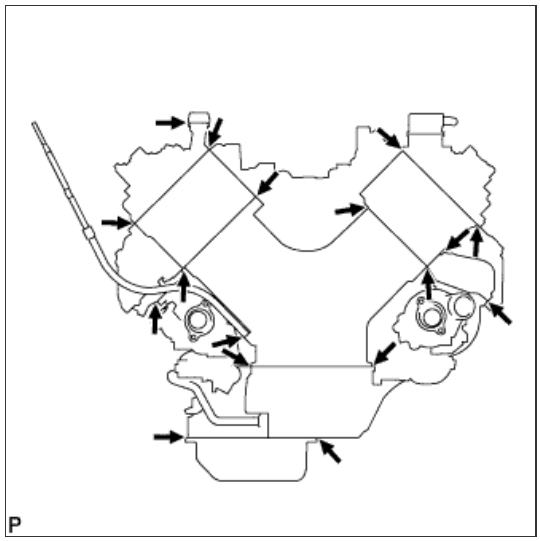
f. Enter the following menus: Powertrain / Engine / Active Test / Control the EGR step position or Control the EGR step position #2.

HINT:

- **In the Active Test, the EGR valve of bank 1 and bank 2 cannot be operated at the same time.**
- **In the Active Test, the change in the MAF amount is difficult to check because the EGR valve can only be operated one bank at a time. Therefore, use the value below as a reference and check that the MAF amount changes.**

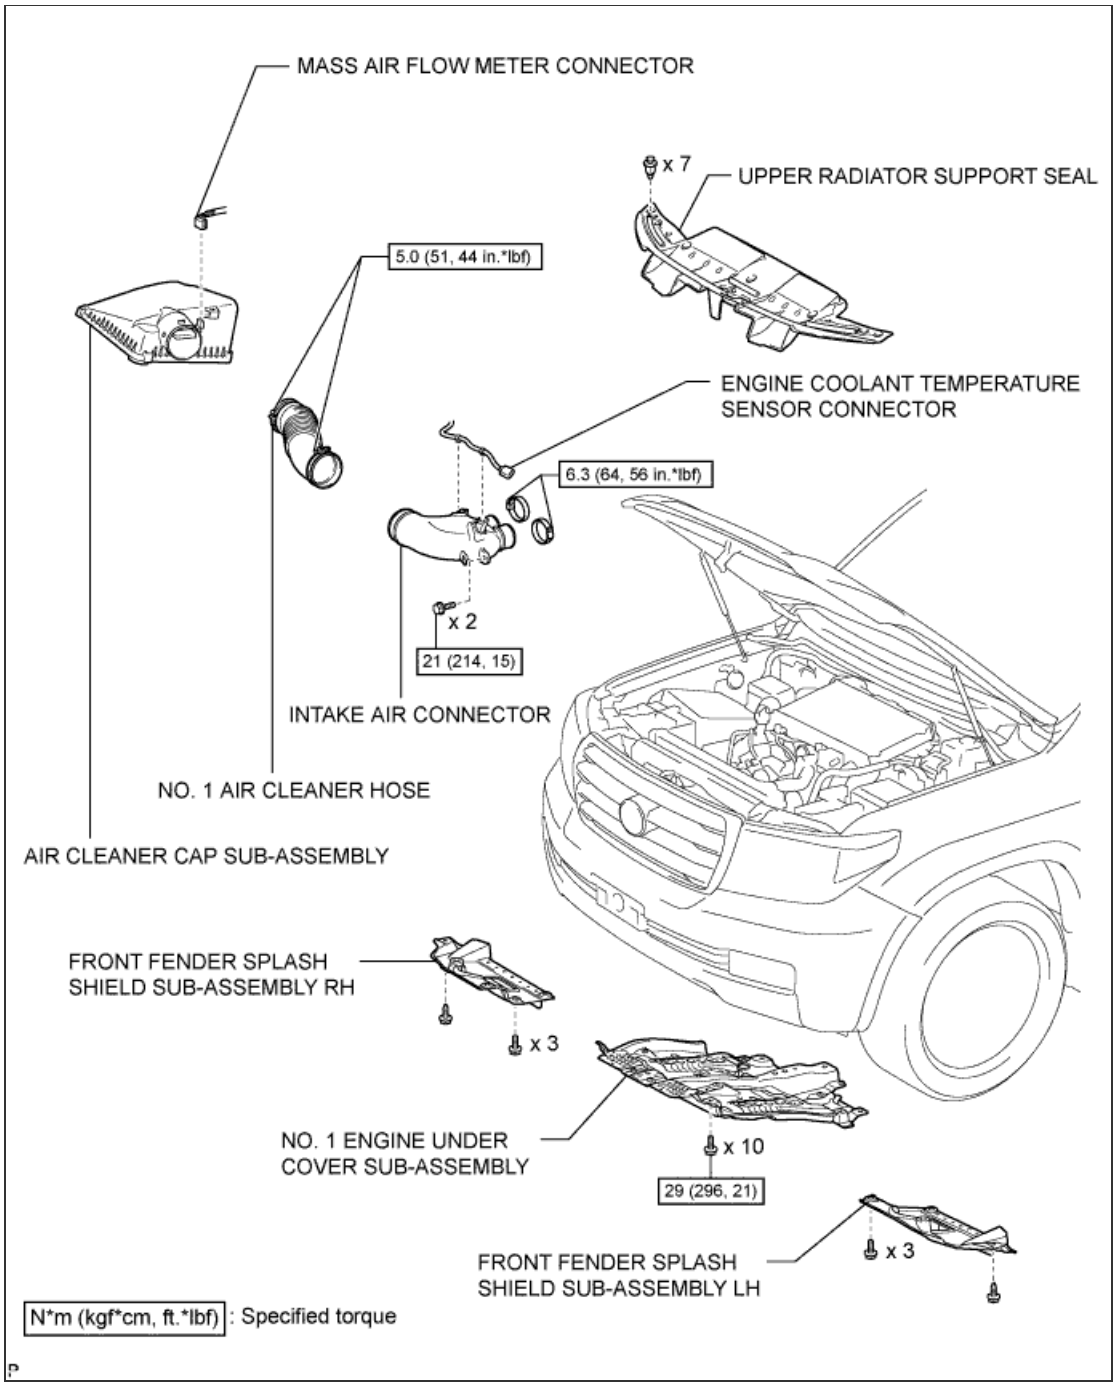
Standard (Reference):

Engine Condition	Active Test Condition	MAF Reading
Idling	Active Test performed (Set EGR position to 0%)	Air flow amount changes (Approximately 7.8 to 26.5 g/sec.)

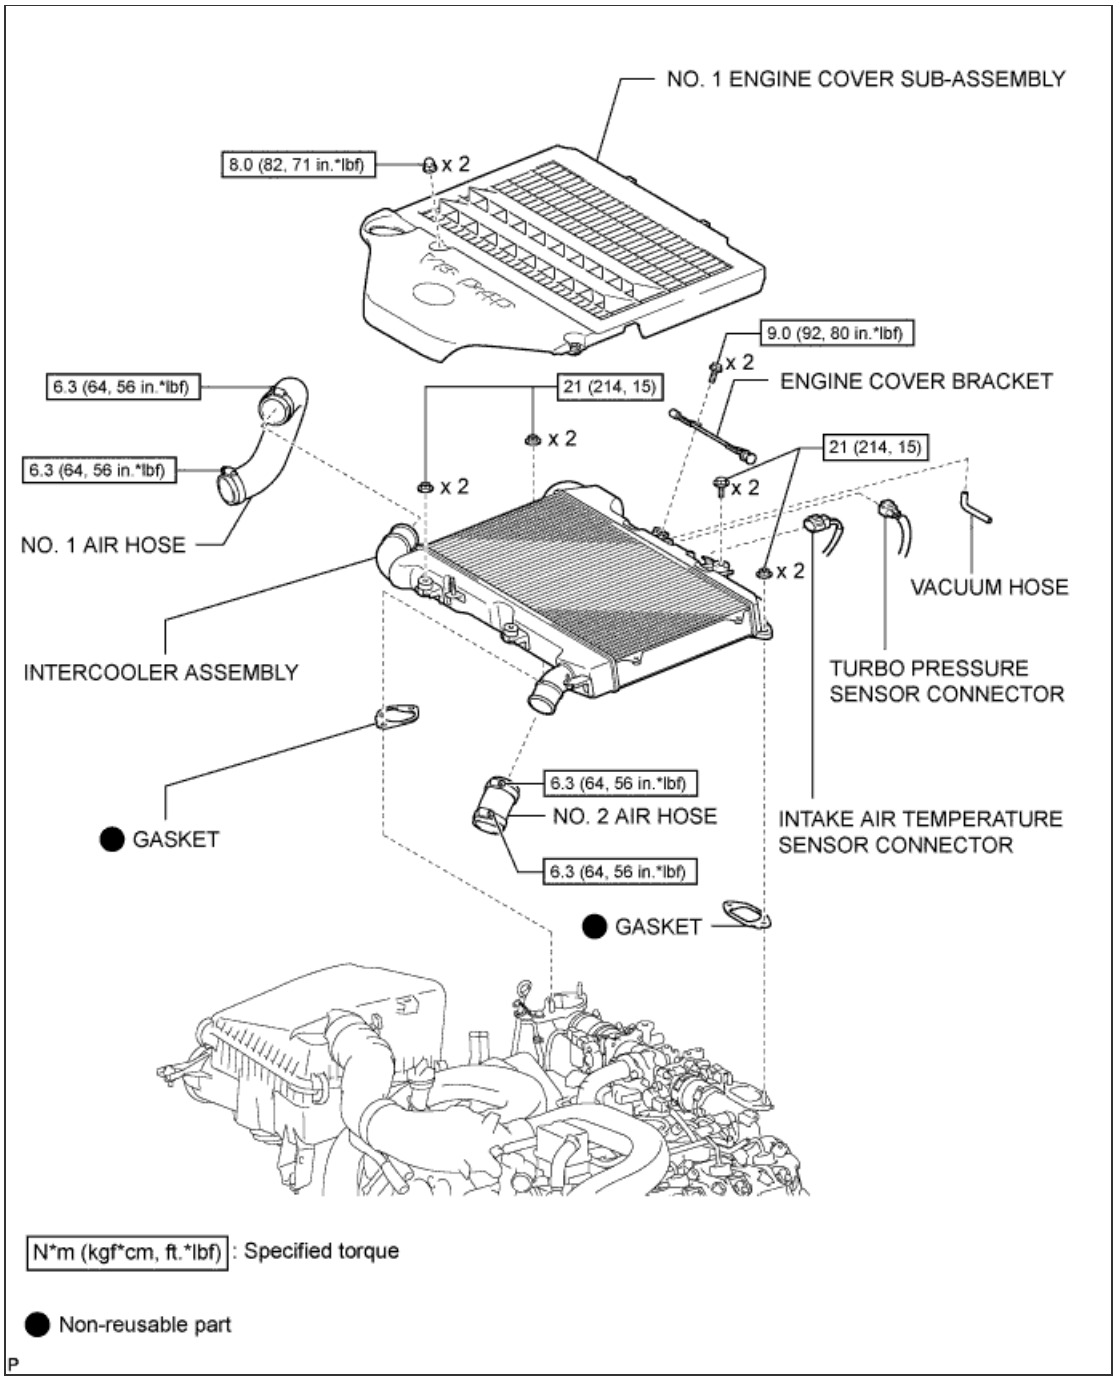


5. VISUALLY INSPECT HOSES, CONNECTIONS AND GASKETS

a. Visually check that the hoses, connections and gaskets have no cracks, leaks or damage.

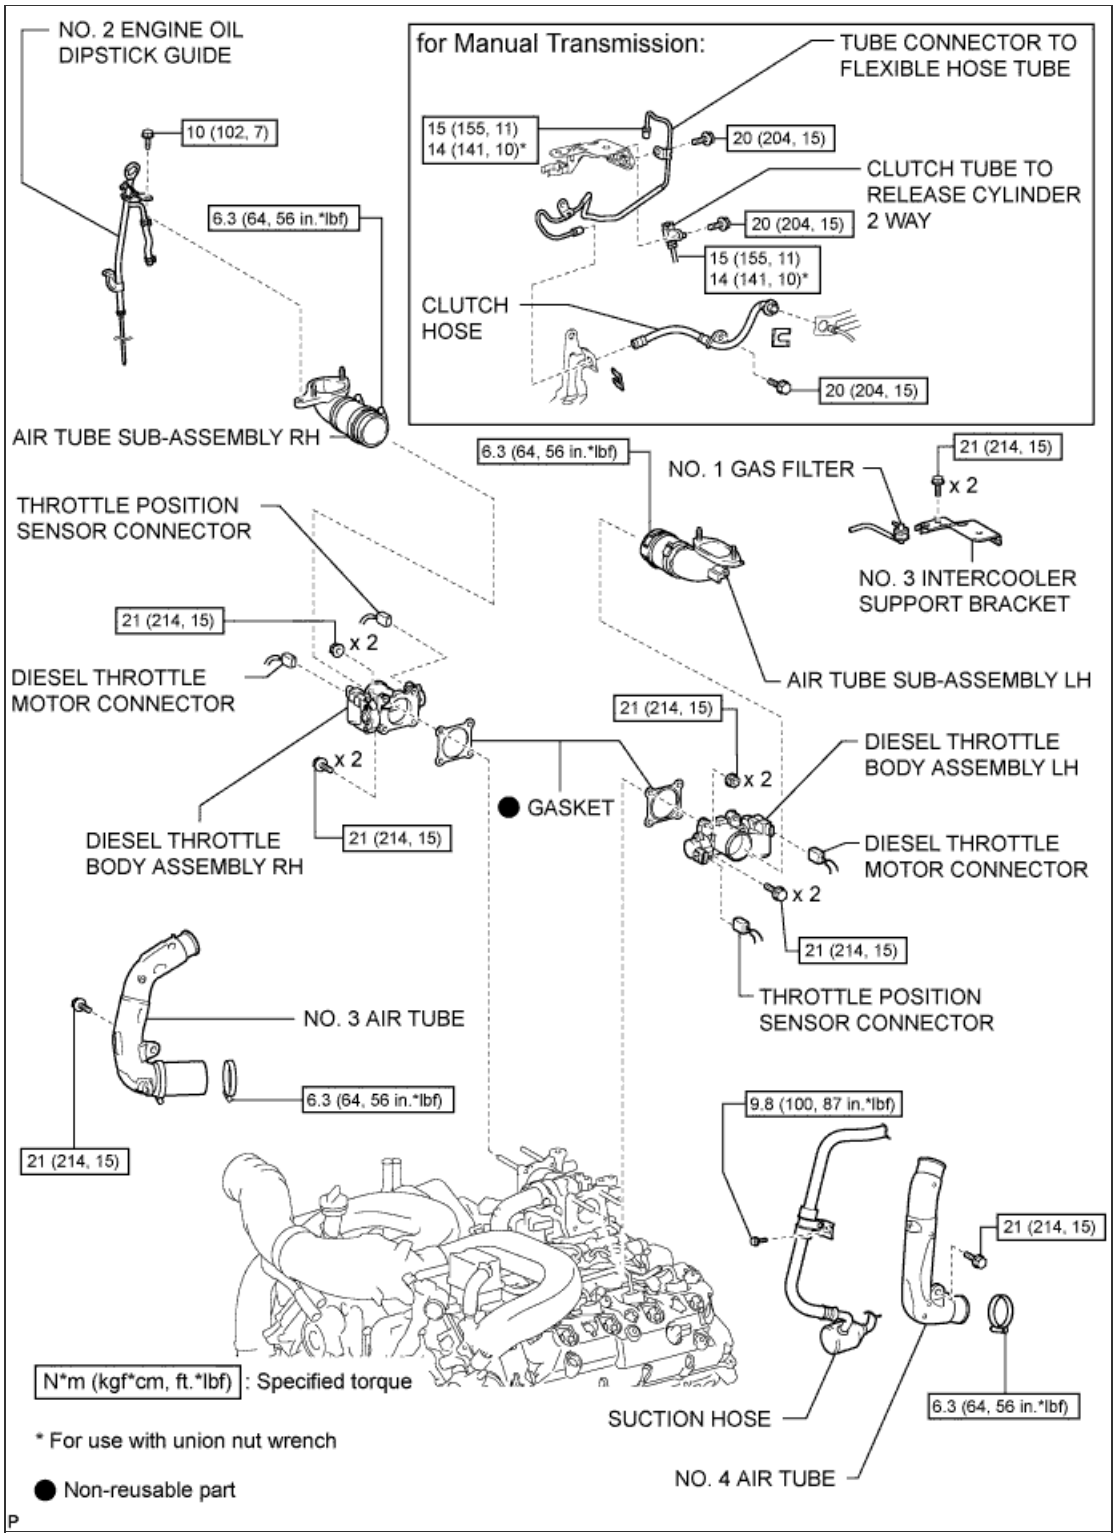


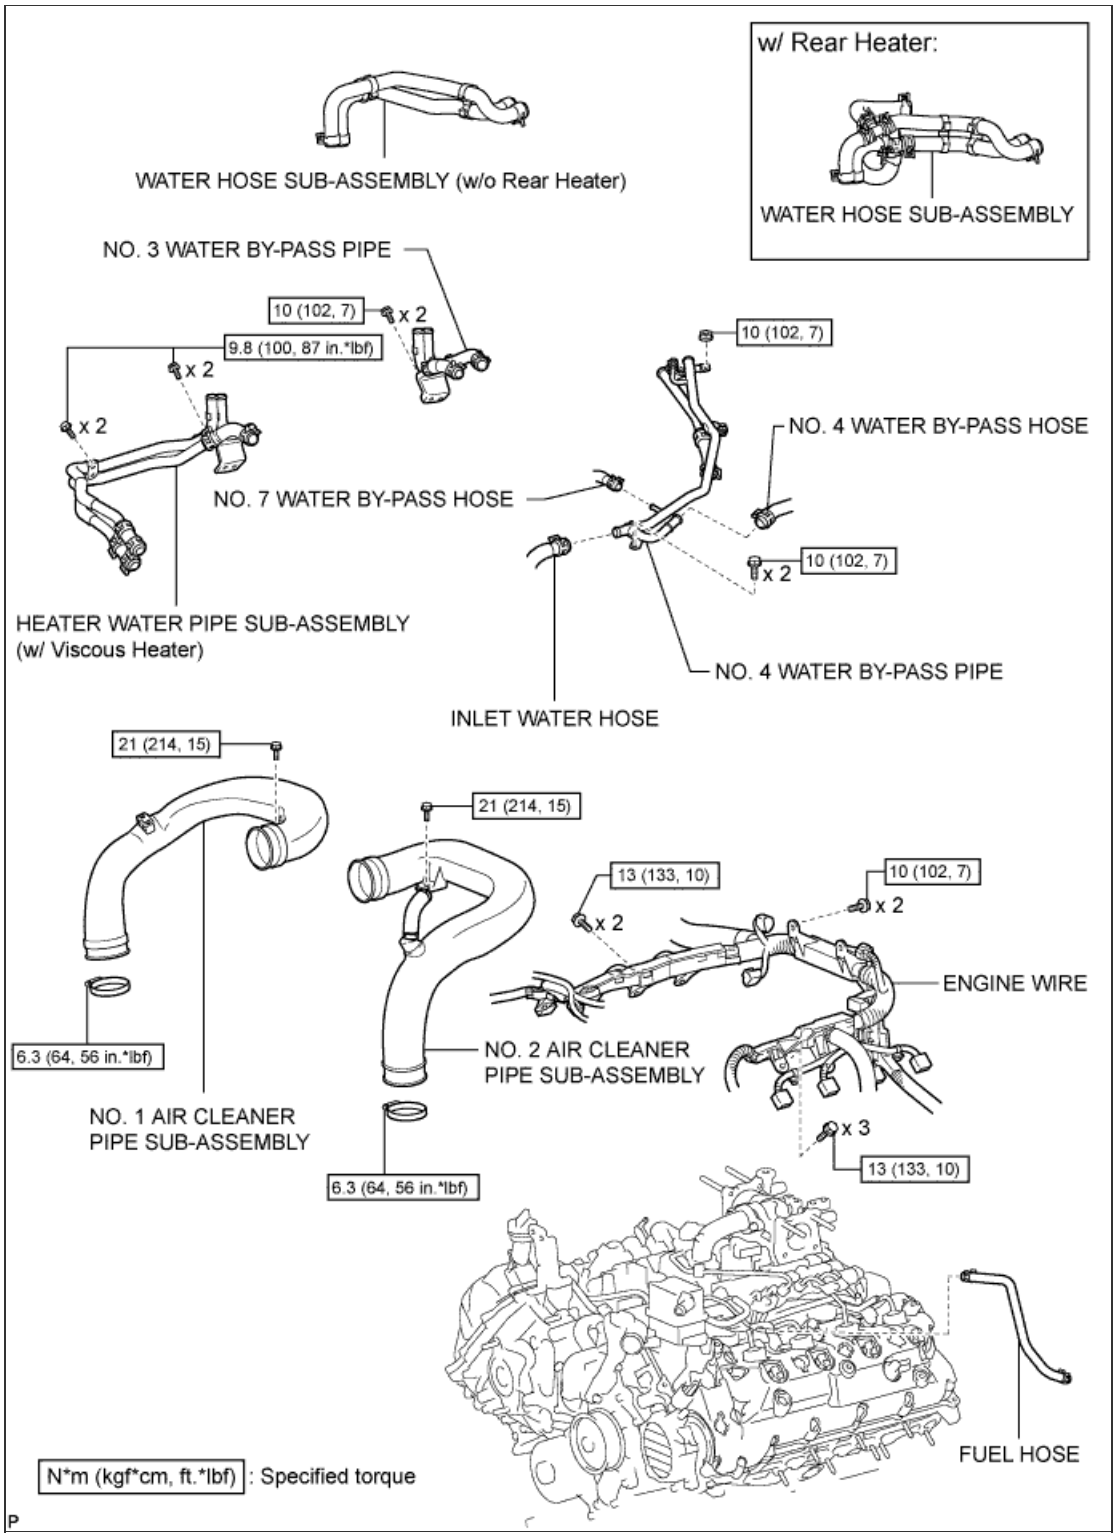
NOTICE:



- **Detachment or other problems with the engine oil dipstick, filler cap, PCV hose and other components may cause the engine to run improperly.**
- **Air suction caused by disconnections, looseness or cracks in the parts of the air induction system between the throttle body and cylinder head will cause engine failure or engine malfunctions.**

If the result is not as specified, replace parts as necessary.





for Preparation Click here

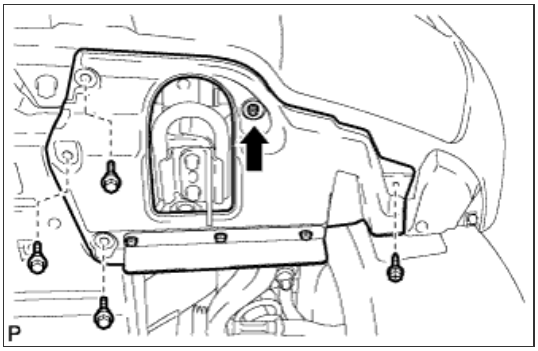
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:



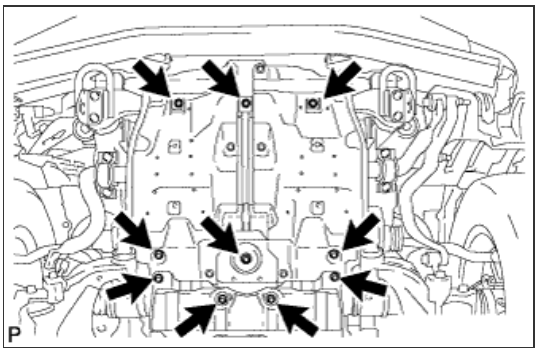
When disconnect the cable, some systems need to be initialized after the cable is reconnected (Click here).

a. Disconnect the cables from the negative (-) main battery and sub-battery terminals.

2. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and screw.

b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



3. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

4. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and under cover.

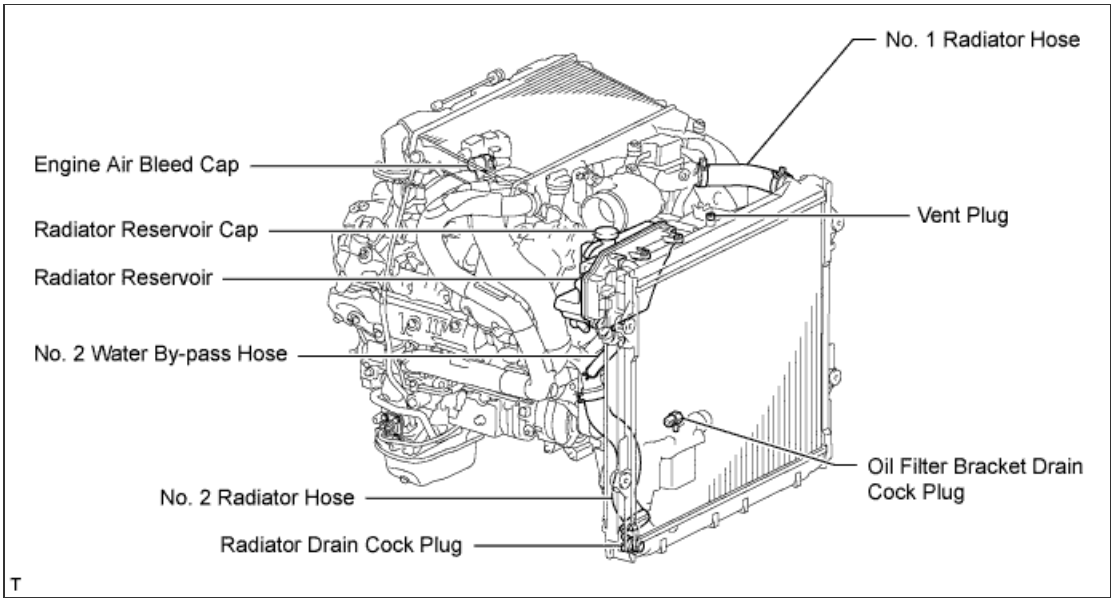
5. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 7 clips and upper radiator support seal.

6. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator reservoir cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

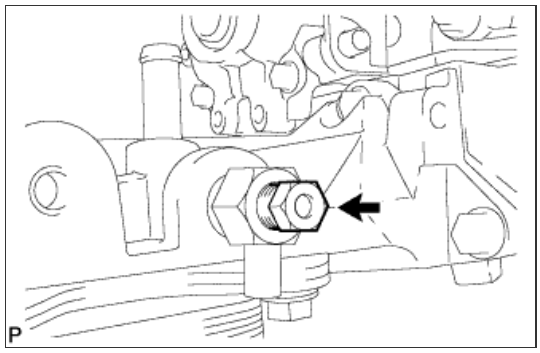


HINT:

Collect the coolant in a container and dispose of it according to the regulations in your area.

a. Loosen the radiator drain cock plug.

b. Remove the radiator reservoir cap to drain the coolant in the radiator.

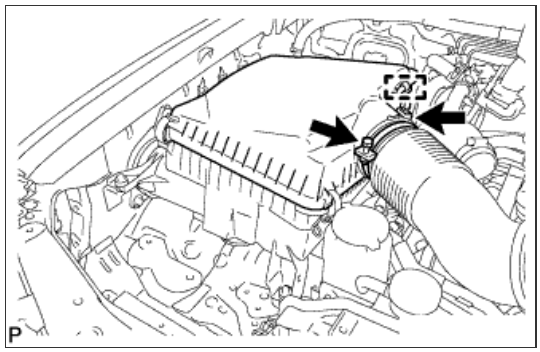


c. Loosen the oil filter bracket drain cock plug to drain the coolant in the engine.

d. Tighten the radiator drain cock plug by hand.

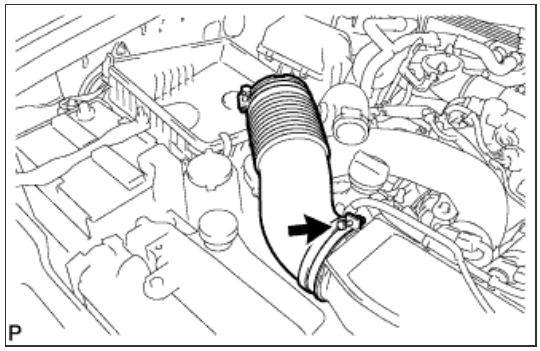
e. Tighten the oil filter bracket drain cock plug.

Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }



7. REMOVE AIR CLEANER CAP SUB-ASSEMBLY

a. Loosen the hose clamp.



b. Disconnect the mass air flow meter connector and using a clip remover, detach the wire harness clamp from the air cleaner cap.

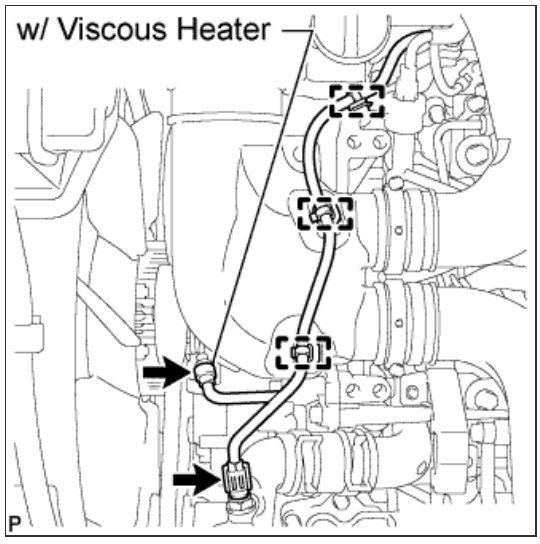
c. Detach the 4 clamps and remove the air cleaner cap.

8. REMOVE NO. 1 AIR CLEANER HOSE

a. Loosen the hose clamp and remove the No. 1 air cleaner hose.

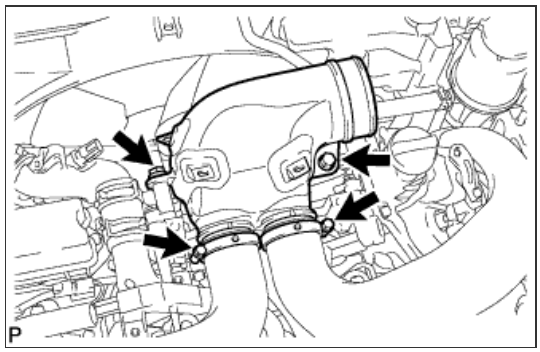
9. REMOVE INTAKE AIR CONNECTOR

a. w/o Viscous Heater:



i. Disconnect the connector from the water temperature sensor.

ii. Using a clip remover, detach the 3 wire harness clamps.

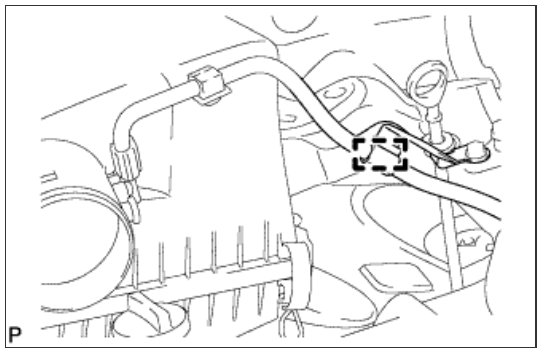


b. w/ Viscous Heater:

i. Disconnect the 2 connectors from the viscous with magnet clutch heater and water temperature sensor.

ii. Using a clip remover, detach the 3 wire harness clamps.

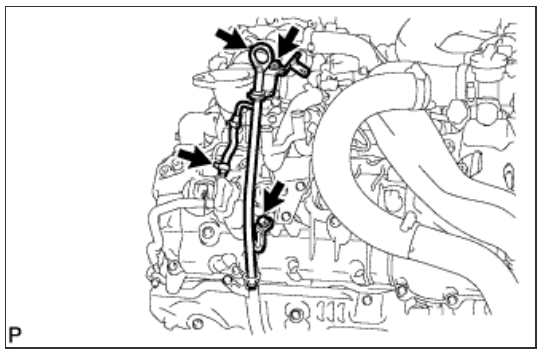
c. Loosen the 2 hose clamps and remove the 2 bolts and intake air connector.



10. REMOVE INTERCOOLER ASSEMBLY

a. Remove the intercooler assembly (Click here).

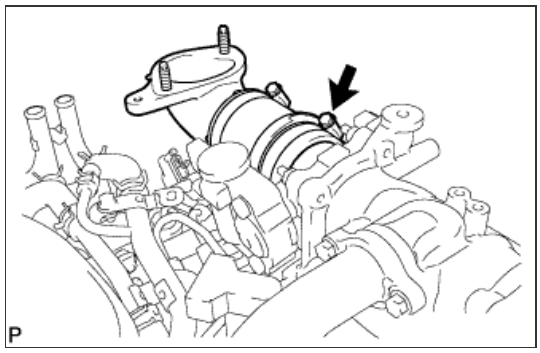
11. REMOVE NO. 2 ENGINE OIL DIPSTICK GUIDE



a. Disconnect the wire harness clamp from the No. 2 engine oil level dipstick guide.

b. Disconnect the ventilation hose from the cylinder head cover RH.

c. Remove the 2 bolts and No. 2 engine oil level dipstick guide.

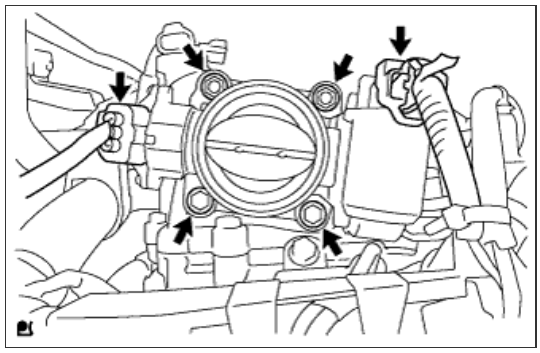


d. Remove the O-ring from the No. 2 engine oil level dipstick guide.

12. REMOVE AIR TUBE SUB-ASSEMBLY RH

a. Loosen the hose clamp.

b. Remove the air tube from the throttle body.



13. REMOVE DIESEL THROTTLE BODY ASSEMBLY RH

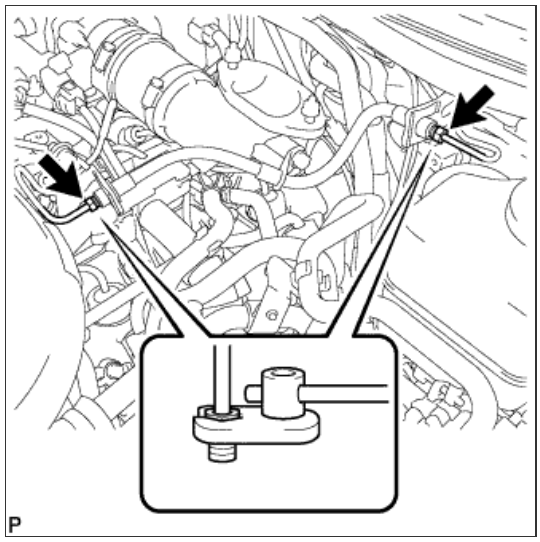
a. Disconnect the throttle position sensor connector.

b. Disconnect the throttle motor connector.

c. Remove the 2 bolts, 2 nuts and throttle body.

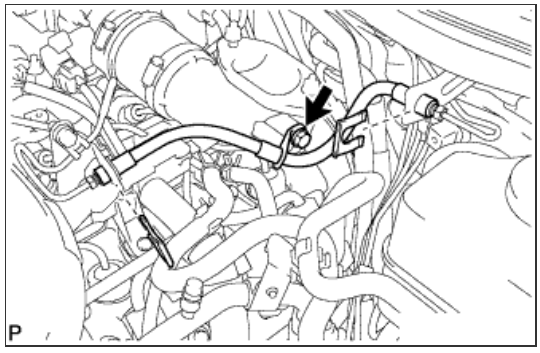
d. Remove the gasket from the intake pipe.

14. DRAIN CLUTCH FLUID (for Manual Transmission)



15. REMOVE CLUTCH HOSE (for Manual Transmission)

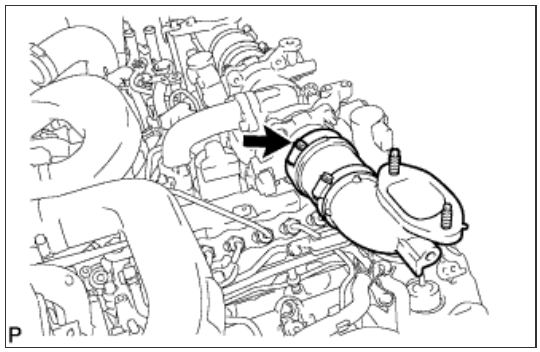
a. Disconnect the 2 flexible hose tubes from the clutch hose with a 10 mm union nut wrench while holding the flexible hose with a wrench.



NOTICE:

- **Do not bend or damage the flexible hose tubes.**
- **Do not allow any foreign matter such as dirt and dust to enter the flexible hose tubes from the connecting point.**

b. Remove the 2 clips.

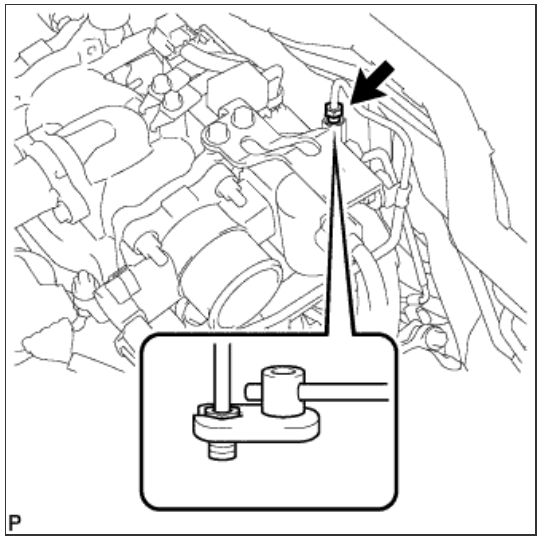


c. Remove the bolt and clutch hose.

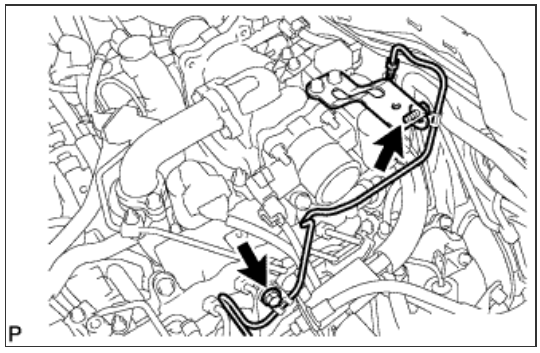
16. REMOVE AIR TUBE SUB-ASSEMBLY LH

a. Loosen the hose clamp.

b. Remove the air tube from the throttle body.



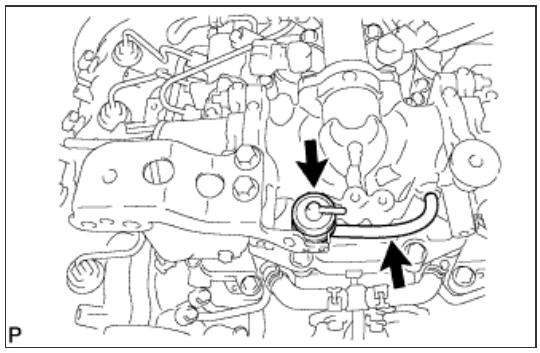
17. REMOVE TUBE CONNECTOR TO FLEXIBLE HOSE TUBE (for Manual Transaxle)



a. Using a 10 mm union nut wrench, disconnect the tube connector to flexible hose tube from the clutch tube to release cylinder 2 way.

NOTICE:

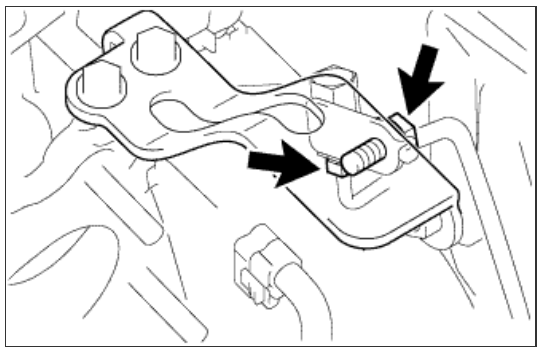
- **Do not bend or damage the flexible hose tube.**
- **Do not allow any foreign matter such as dirt and dust to enter the flexible hose tube from the connecting point.**



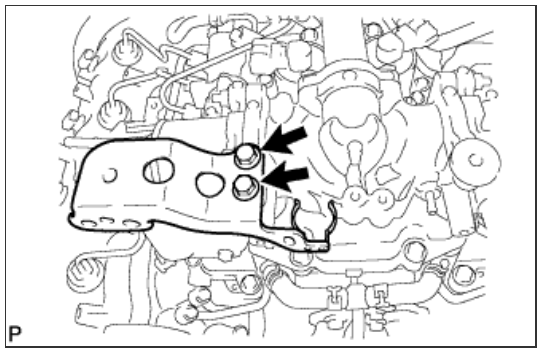
b. Remove the 2 bolts and tube connector to flexible hose tube.

18. REMOVE NO. 1 GAS FILTER

a. Disconnect the hose from the intake pipe.



b. Remove the gas filter.

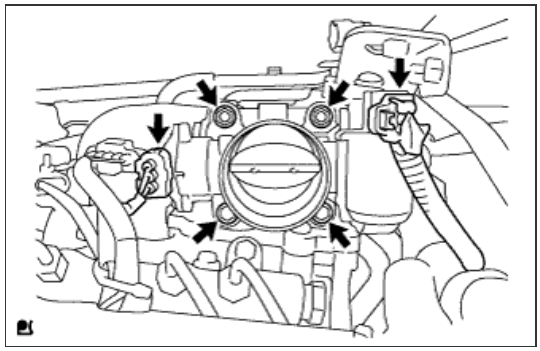


19. REMOVE NO. 3 INTERCOOLER SUPPORT BRACKET

a. for Manual Transmission:

i. Remove the bolt and disconnect the clutch tube to release cylinder 2 way from the bracket.

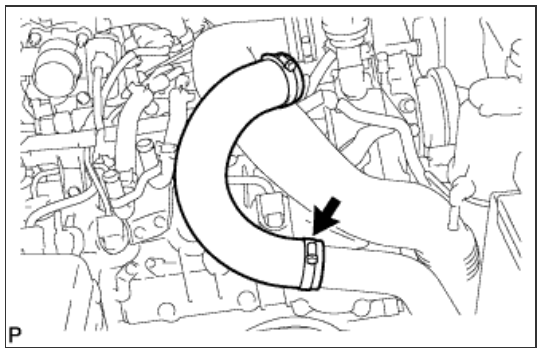
b. Remove the 2 bolts and bracket.



20. REMOVE DIESEL THROTTLE BODY ASSEMBLY LH

a. Disconnect the throttle position sensor connector.

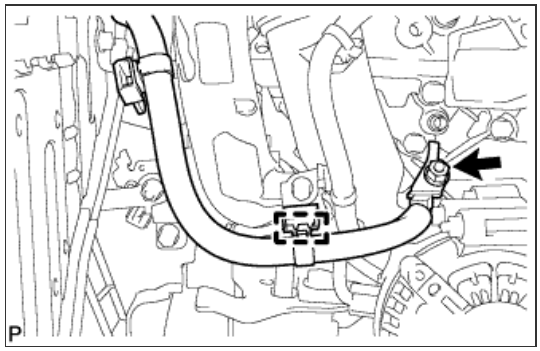
b. Disconnect the throttle motor connector.



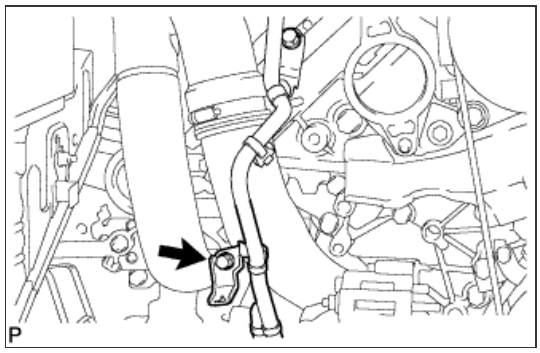
c. Remove the 2 bolts, 2 nuts and throttle body.

d. Remove the gasket from the intake pipe.

21. REMOVE NO. 1 AIR HOSE

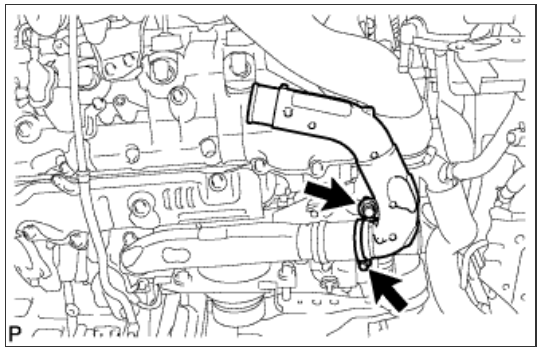


a. Loosen the hose clamp and remove the No. 1 air hose.



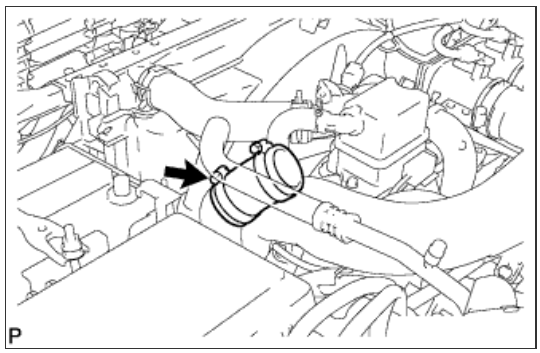
22. REMOVE NO. 3 AIR TUBE

a. Disconnect the wire harness from the clamp.

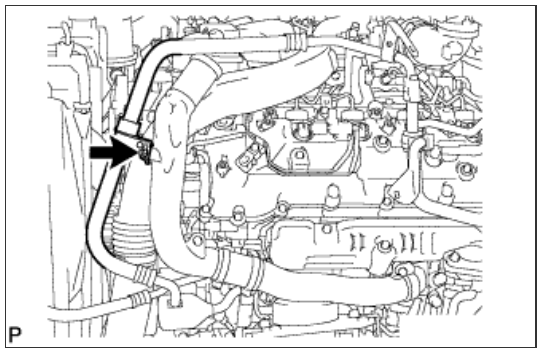


b. Remove the nut and ground wire.

c. Remove the bolt and disconnect the wire harness bracket.

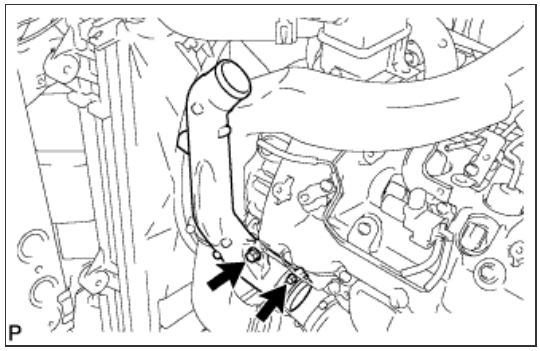


d. Loosen the hose clamp and remove the bolt and No. 3 air tube.



23. REMOVE NO. 2 AIR HOSE

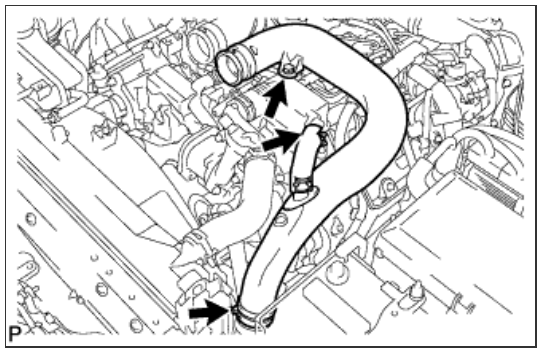
a. Loosen the hose clamp and remove the No. 2 air hose.



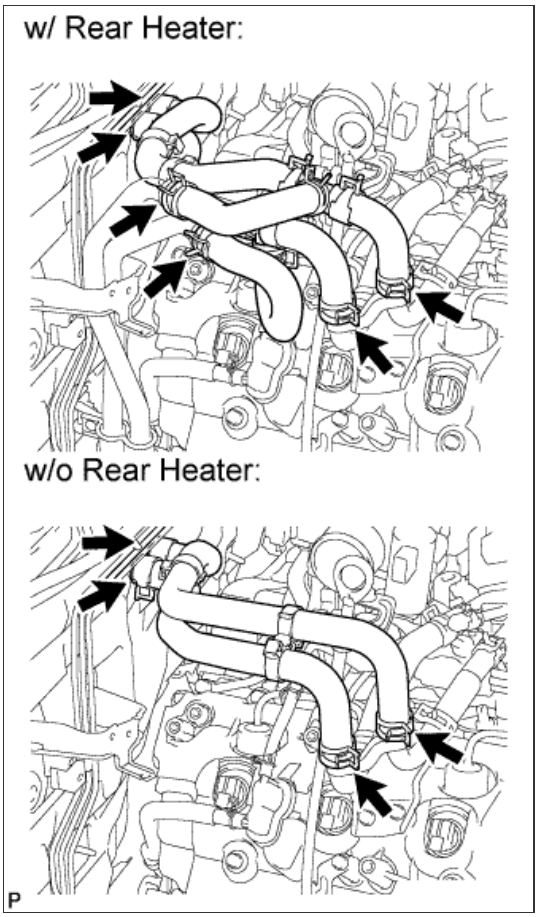
24. REMOVE NO. 4 AIR TUBE

a. Remove the bolt and disconnect the suction hose.

b. Loosen the hose clamp and remove the bolt and No. 4 air tube.



25. REMOVE NO. 2 AIR CLEANER PIPE SUB-ASSEMBLY



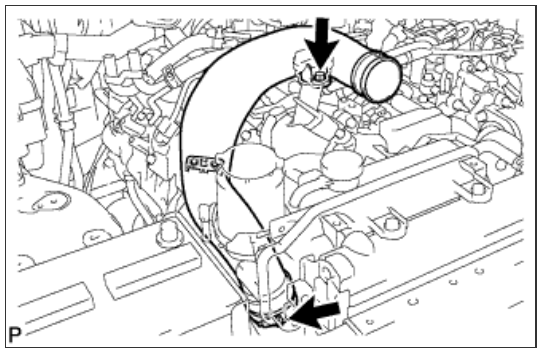
a. Disconnect the ventilation hose from the oil separator.

b. Loosen the hose clamp.

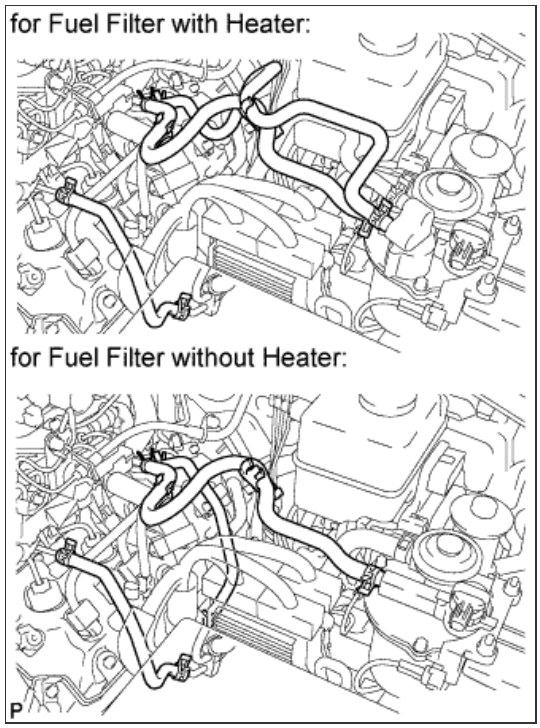
c. Remove the bolt and No. 2 air cleaner pipe.

26. DISCONNECT WATER HOSE SUB-ASSEMBLY

27. REMOVE HEATER WATER PIPE SUB-ASSEMBLY (w/ Viscous Heater)



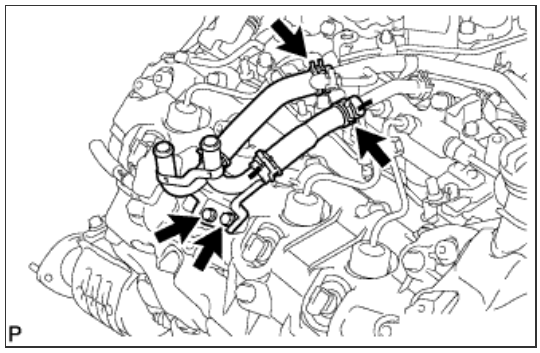
a. Remove the 4 bolts and disconnect the 4 water hose ends, and then remove the heater water pipe.



28. REMOVE NO. 1 AIR CLEANER PIPE SUB-ASSEMBLY

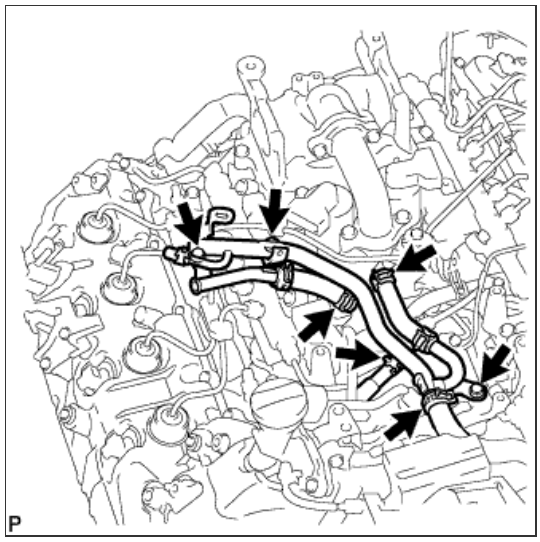
a. Loosen the hose clamp.

b. Remove the bolt and No. 1 air cleaner pipe.



29. REMOVE FUEL HOSE

30. REMOVE NO. 3 WATER BY-PASS PIPE (w/o Viscous Heater)

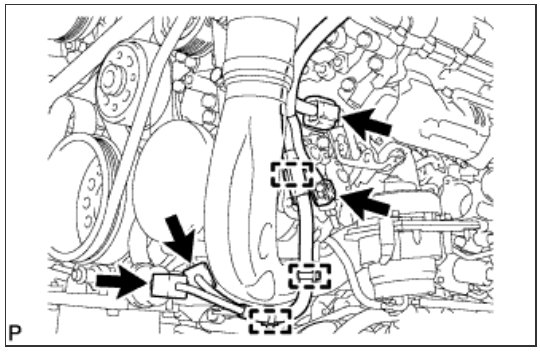


a. Remove the 2 bolts and disconnect the 2 water hose ends, and then remove the No. 3 water by-pass pipe.

31. REMOVE NO. 4 WATER BY-PASS PIPE

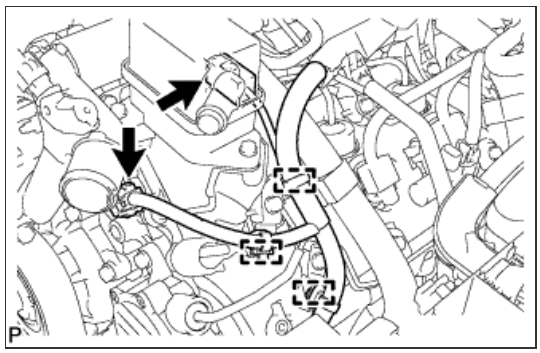
a. Remove the 2 bolts and nut.

b. Disconnect the 4 water hose ends, then remove the No. 4 water by-pass pipe.



32. DISCONNECT ENGINE WIRE

a. LH Side:

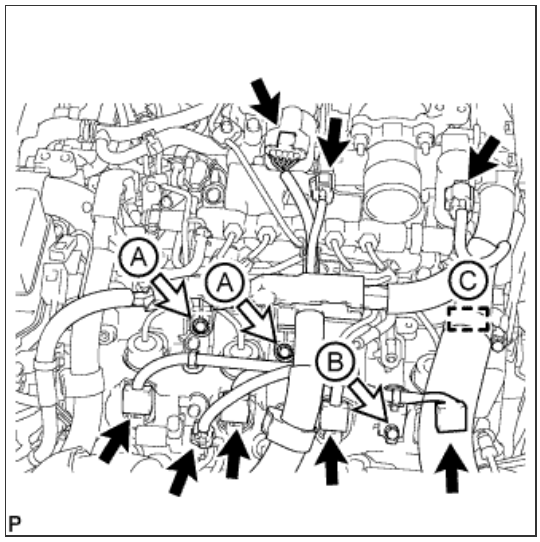


i. Disconnect the 4 connectors.

ii. Using a clip remover, detach the 3 wire harness clamps.

iii. Disconnect the 2 connectors.

iv. Using a clip remover, detach the 3 wire harness clamps.



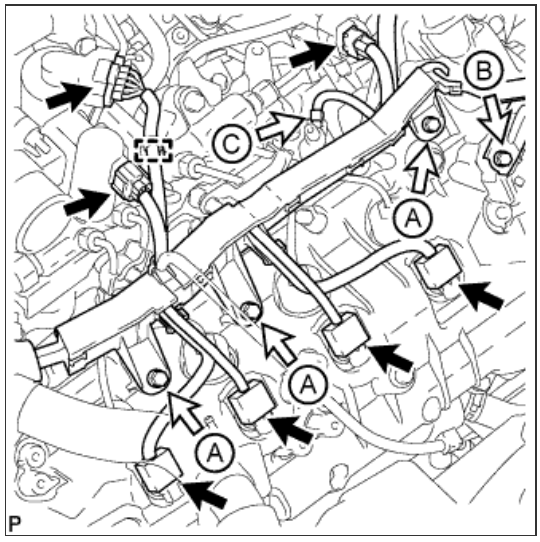
v. Disconnect the 8 connectors.

vi. Remove the bolt and engine wire harness bracket labeled B.

vii. Remove the 2 bolts and disconnect the engine wire protector labeled
.

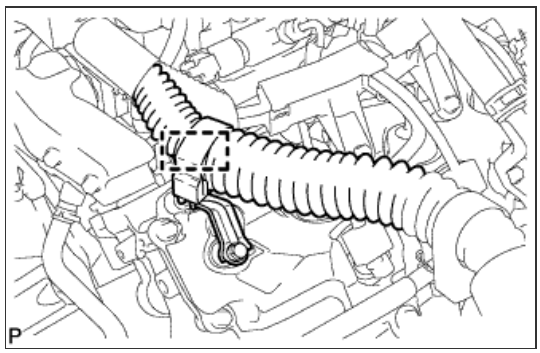
viii. for RHD:
Disconnect the wire harness from the wire harness clamp holder labeled C.

b. RH Side:



i. Disconnect the 7 connectors.

ii. Using a clip remover, detach the wire harness clamp.



iii. Remove the 3 bolts and disconnect the wire harness protector labeled .

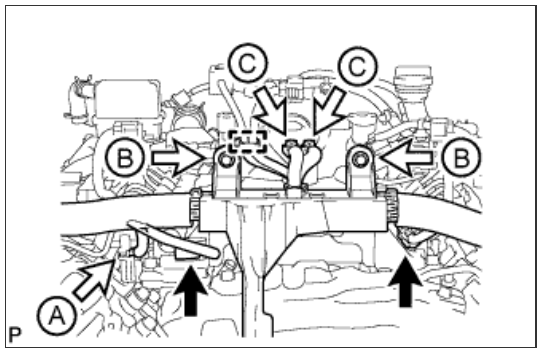
i . Remove the bolt and wire harness bracket labeled B.

. Remove the nut and glow plug wire harness labeled C.

i. for RHD:
Disconnect the wire harness from the wire harness clamp holder.

c. Rear Side:

i. Using a clip remover, detach the wire harness clamp.

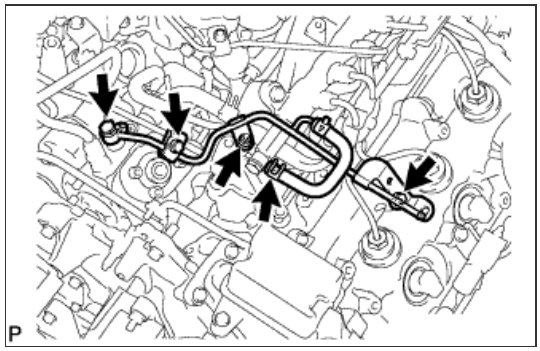


ii. Remove the 2 bolts and 2 ground wires labeled C.

iii. Remove the 2 bolts and disconnect the engine wire harness protector

labeled B.

i . Disconnect the 2 common rail connectors.



. Remove the nut and disconnect the glow plug wire harness labeled .

33. REMOVE NO. 2 FUEL PIPE SUB-ASSEMBLY

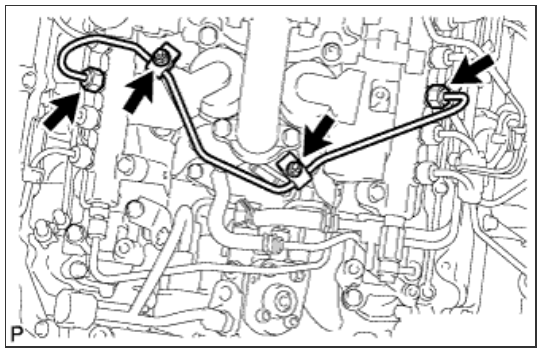
NOTICE:

- **After removing a fuel pipe, to prevent dirt or foreign objects from entering the fuel pipe ends, cover the fuel pipe ends with plastic bags.**
- **After removing a fuel pipe, to prevent dirt or foreign objects from entering the fuel supply pump hole, cover the hole with protective tape.**

a. Disconnect the fuel hose from the No. 5 nozzle leakage pipe.

b. Remove the bolt and No. 2 injection pipe clamp.

c. Remove the union bolt and gasket.



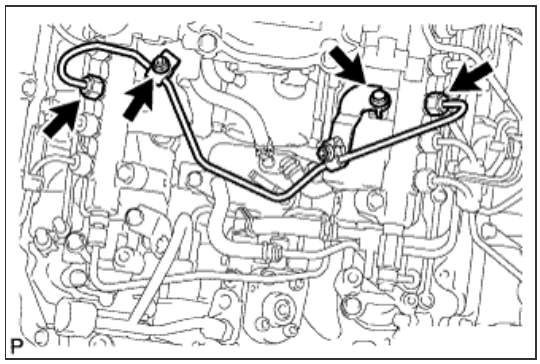
d. Remove the bolt, nut and No. 2 fuel pipe.

34. REMOVE NO. 6 INJECTION PIPE SUB-ASSEMBLY

NOTICE:

fter removing an injection pipe, to prevent dirt or foreign objects from entering the common rail holes, cover the holes with protective tape.

a. w/ EGR System:

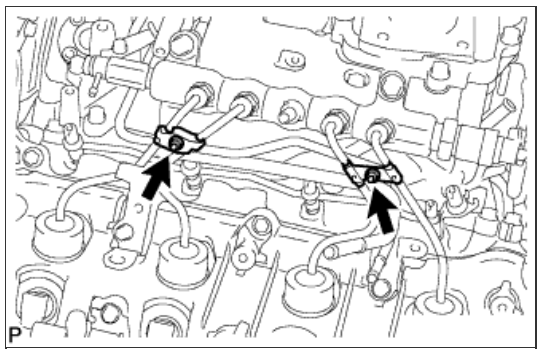


i. Using a union nut wrench, loosen the No. 6 injection pipe ends.

ii. Remove the 2 nuts and 2 No. 2 injection pipe clamps.

iii. Remove the No. 6 injection pipe.

b. w/o EGR System:

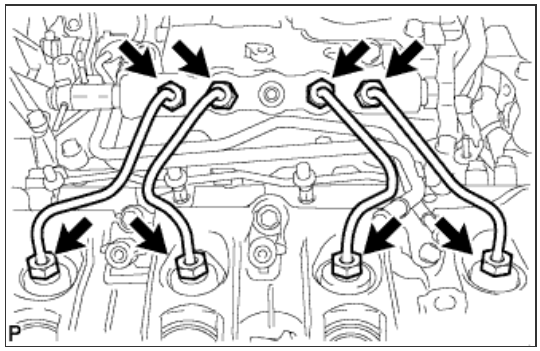


i. Using a union nut wrench, loosen the No. 6 injection pipe ends.

ii. Remove the nut and No. 2 injection pipe clamp.

iii. Remove the bolt and No. 6 injection pipe.

35. REMOVE INJECTION PIPE LH

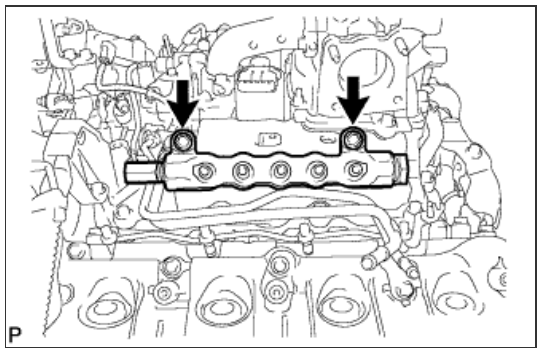


a. w/ ntercooler:
Remove the 2 nuts and 4 injection pipe clamps.

b. Using a union nut wrench, remove the 4 injection pipes.

NOTICE:

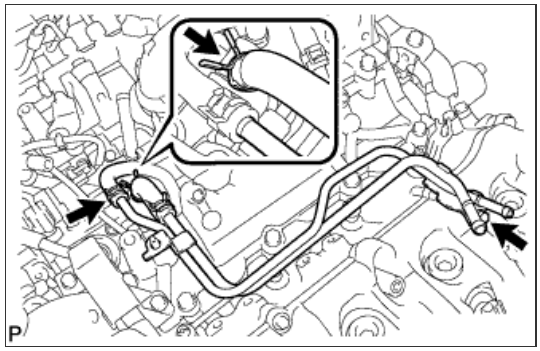
fter removing an injection pipe, to prevent dirt or foreign objects from entering the common rail holes or injector holes, cover the holes with protective tape.



36. REMOVE COMMON RAIL ASSEMBLY LH

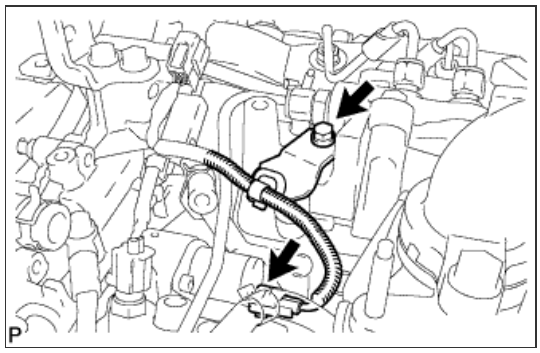
a. Remove the 2 bolts and common rail.

NOTICE:



Do not remove the fuel pressure limiter from the common rail. f it is removed, replace the common rail.

37. REMOVE FUEL FILTER TO INJECTION PUMP FUEL PIPE SUB-ASSEMBLY

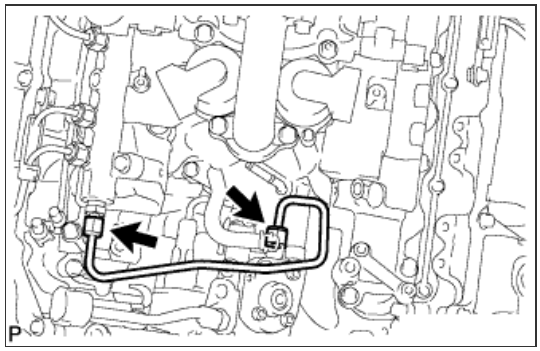


a. Disconnect the 2 hoses from the fuel pipe.

b. Remove the bolt and fuel filter to injection pump fuel pipe.

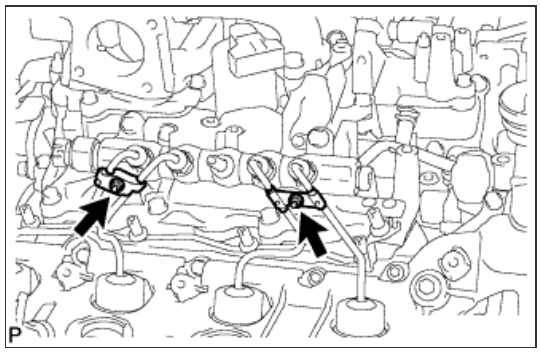
38. DISCONNECT FUEL PUMP MOTOR WIRE

a. Remove the bolt and disconnect the connector from the fuel supply pump.



39. REMOVE NO. 5 INJECTION PIPE SUB-ASSEMBLY

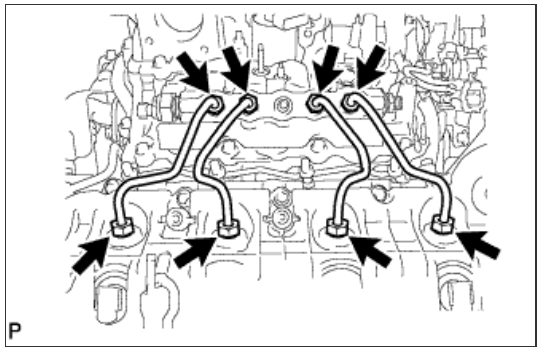
a. Using a union nut wrench, remove the No. 5 injection pipe.



NOTICE:

fter removing an injection pipe, to prevent dirt or foreign objects from entering the common rail hole or injection pump hole, cover the holes with protective tape.

40. REMOVE INJECTION PIPE RH

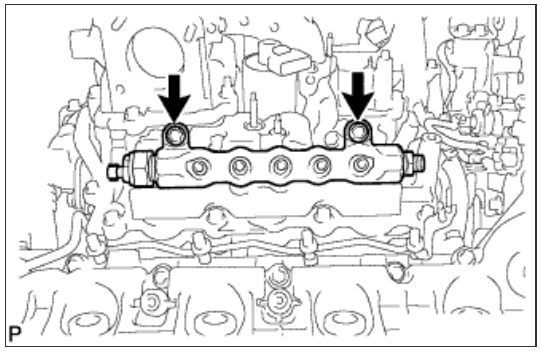


a. w/ ntercooler:
Remove the 2 nuts and 4 injection pipe clamps.

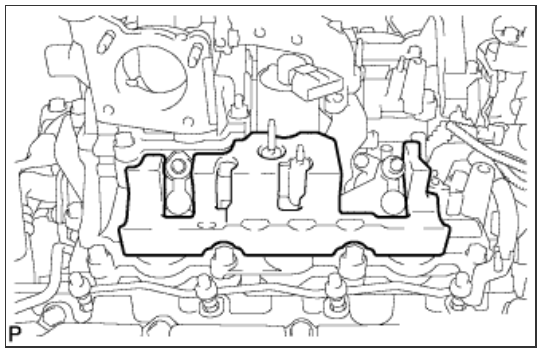
b. Using a union nut wrench, remove the 4 injection pipes.

NOTICE:

fter removing an injection pipe, to prevent dirt or foreign objects from entering the common rail holes or injector holes, cover the holes with protective tape.

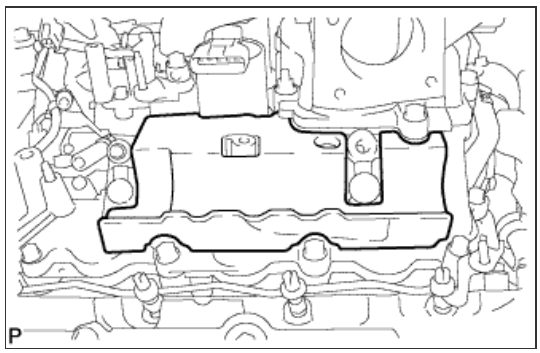


41. REMOVE COMMON RAIL ASSEMBLY RH



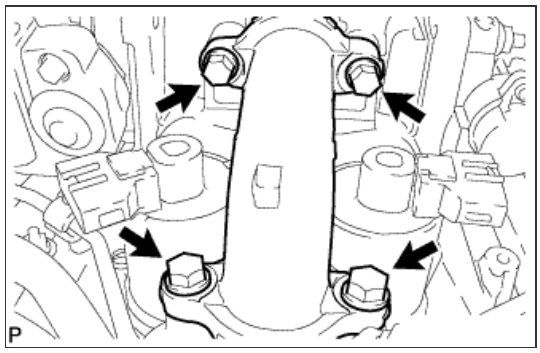
a. Remove the 2 bolts and common rail.

NOTICE:



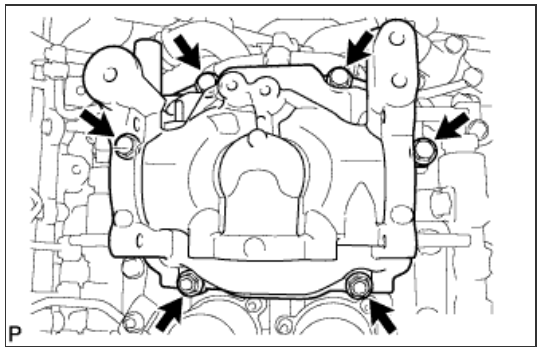
Do not remove the fuel pressure sensor from the common rail. f it is removed, replace the common rail.

42. REMOVE NO. 1 INTAKE MANIFOLD INSULATOR



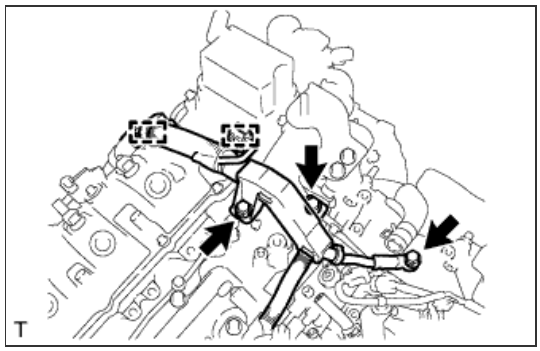
43. REMOVE NO. 2 INTAKE MANIFOLD INSULATOR

44. REMOVE NO. 4 EGR PIPE



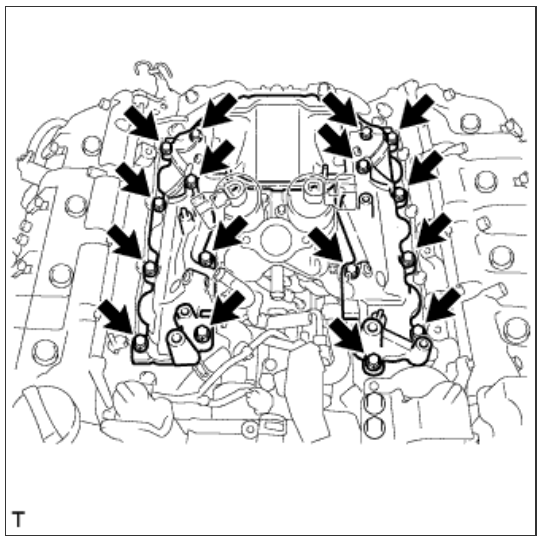
a. Remove the 4 bolts, EGR pipe and 2 gaskets.

45. REMOVE INTAKE PIPE



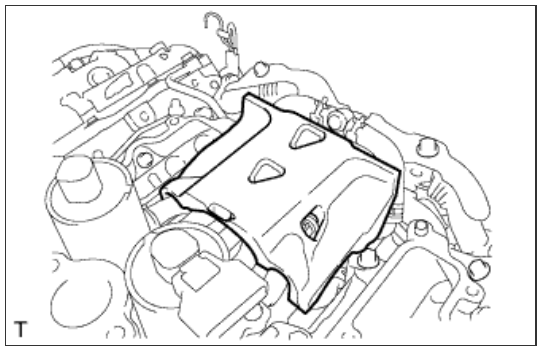
a. Remove the 4 bolts, 2 nuts and intake pipe.

b. Remove the gasket.



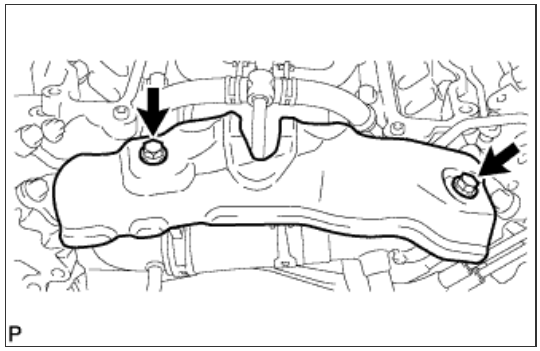
46. DISCONNECT NO. 2 ENGINE WIRE

a. Remove the 3 bolts and using a clip remover, detach the 2 wire harness clamps, and then disconnect the No. 2 engine wire.

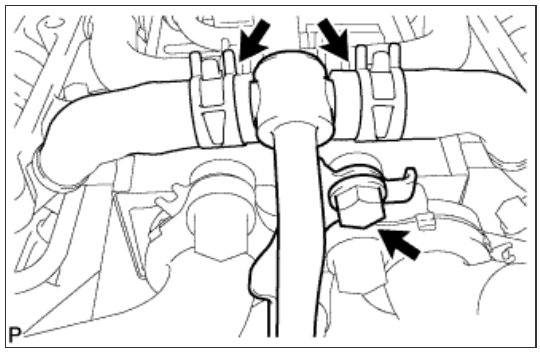


47. REMOVE NO. 3 INTAKE MANIFOLD

a. Remove the 16 bolts, No. 3 intake manifold and 2 gaskets.

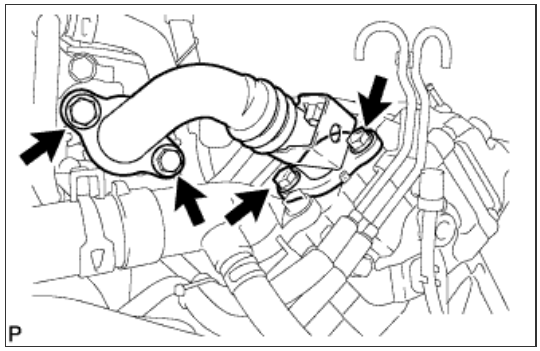


48. REMOVE INTAKE MANIFOLD INSULATOR



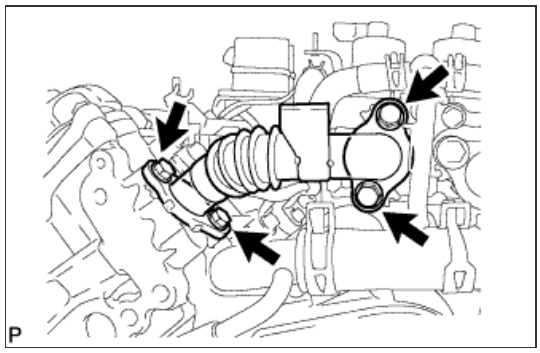
49. REMOVE EGR PIPE INSULATOR

a. Remove the 2 bolts and insulator.



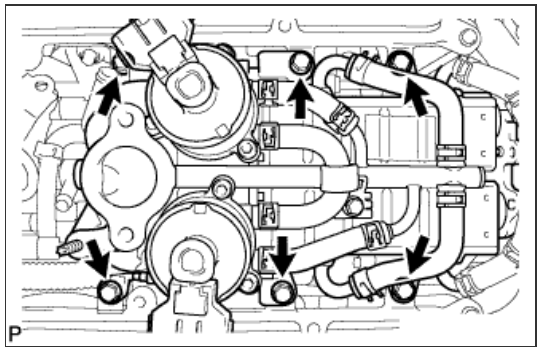
50. DISCONNECT NO. 5 WATER BY-PASS PIPE

a. Remove the bolt and disconnect the 2 hoses to disconnect the water by-pass pipe.



51. REMOVE NO. 1 EGR PIPE SUB-ASSEMBLY

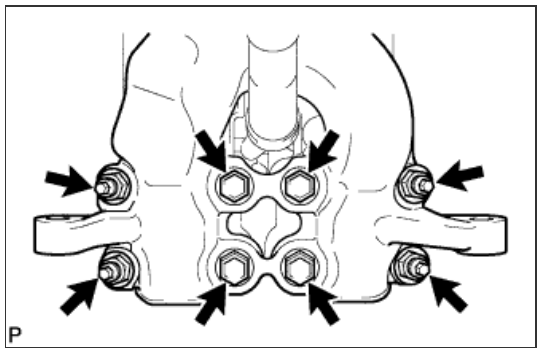
a. Remove the 4 bolts, EGR pipe and 2 gaskets.



52. REMOVE NO. 2 EGR PIPE SUB-ASSEMBLY

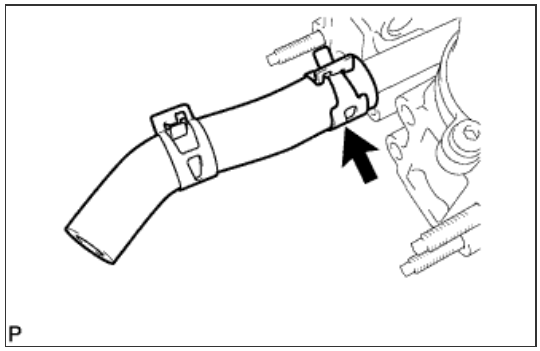
a. Remove the 4 bolts, EGR pipe and 2 gaskets.

53. REMOVE EGR VALVE ASSEMBLY WITH EGR COOLER



a. Remove the 6 bolts and EGR valve with EGR cooler.

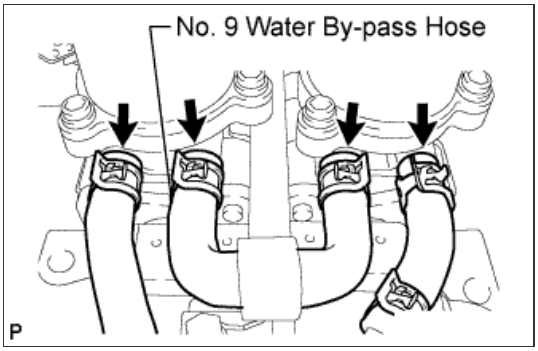
54. REMOVE NO. 3 EGR PIPE



a. Remove the 4 nuts, 4 bolts and pipe.

b. Remove the 2 gaskets.

55. REMOVE NO. 4 WATER BY-PASS HOSE



a. Remove the No. 4 water by-pass hose from the No. 3 water by-pass pipe.

56. REMOVE NO. 9 WATER BY-PASS HOSE AND WATER HOSE

a. Remove the No. 9 water by-pass hose.

b. Disconnect the 2 water hoses.

57. REMOVE NO. 1 EGR VALVE ASSEMBLY

58. REMOVE NO. 2 EGR VALVE ASSEMBLY

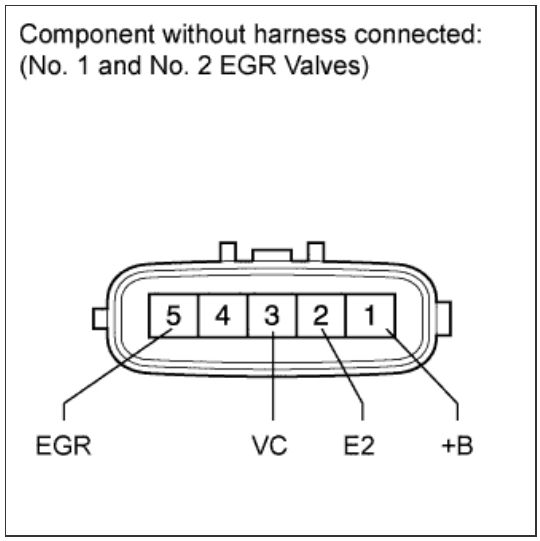
59. REMOVE EGR COOLER GASKET

for Preparation Click here

1. INSPECT EGR VALVE ASSEMBLY

a. Check the EGR valve position sensor.

i. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (+B) - 5 (EGR)	20°C (68°F)	6.5 to 7.5 Ω
3 (VC) - 2 (E2)	Always	2.45 to 4.55 kΩ

HINT:

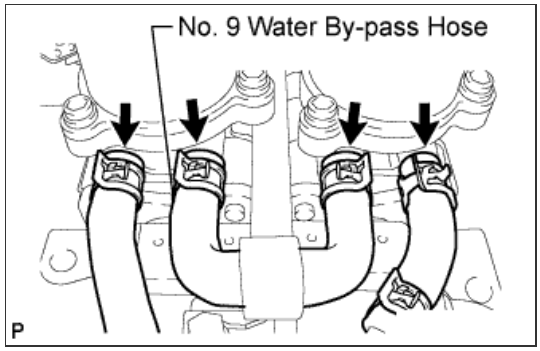
The temperature indicated under "Condition" is the temperature of the EGR valve assembly.

If the result is not as specified, replace the EGR valve assembly.

for Preparation Click here

1. INSTALL EGR COOLER GASKET

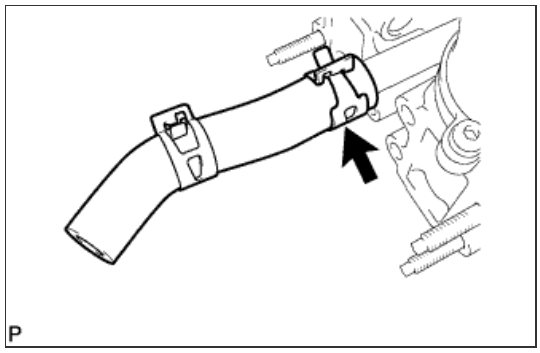
a. Install a new gasket.



2. INSTALL NO. 2 EGR VALVE ASSEMBLY

3. INSTALL NO. 1 EGR VALVE ASSEMBLY

4. INSTALL NO. 9 WATER BY-PASS HOSE AND WATER HOSE

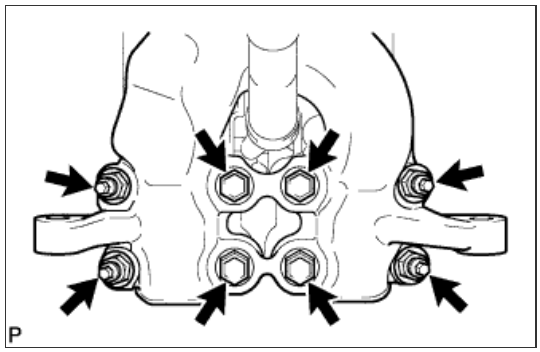


a. Connect the 2 water hoses.

b. Install the No. 9 water by-pass hose.

5. INSTALL NO. 4 WATER BY-PASS HOSE

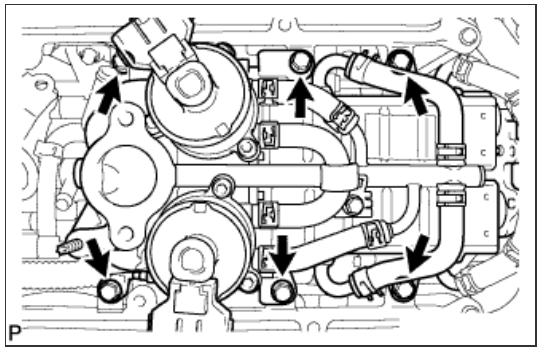
a. Install the No. 4 water by-pass hose to the No. 3 water by-pass pipe.



6. INSTALL NO. 3 EGR PIPE

a. Install 2 new gaskets.

b. Install the pipe with the 4 nuts and 4 bolts.



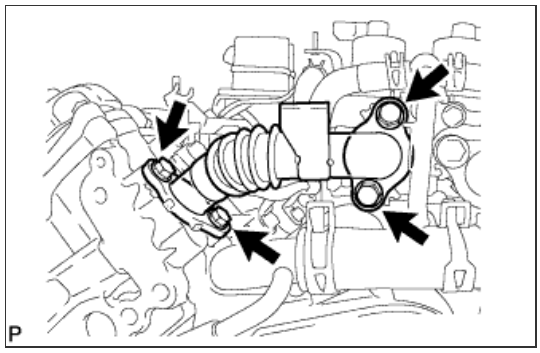
Tor e
21 N*m{ 214 kgf*cm , 15 ft.*lbf

7. INSTALL EGR VALVE ASSEMBLY WITH EGR COOLER

a. Install the EGR valve with EGR cooler with the 6 bolts.

Tor e
21 N*m{ 214 kgf*cm , 15 ft.*lbf

. INSTALL NO. 2 EGR PIPE S B-ASSEMBLY



a. Install 2 new gaskets to the pipe.

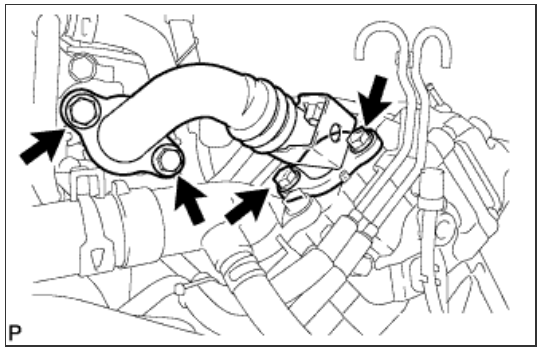
b. Install the pipe with the 4 bolts.

Tor e
29 N*m{ 296 kgf*cm , 21 ft.*lbf

NOTICE

- **Press own the cooler si by han while tightening the bolts on the cylin ehea is e**
- **If the ins lator installation stay is torme , replace the No. 2 EGR pipe.**
- **If the clearance between the hea an flange is 1 mm (0.0394 in.) or more, replace the No. 2 EGR pipe.**

9. INSTALL NO. 1 EGR PIPE S B-ASSEMBLY

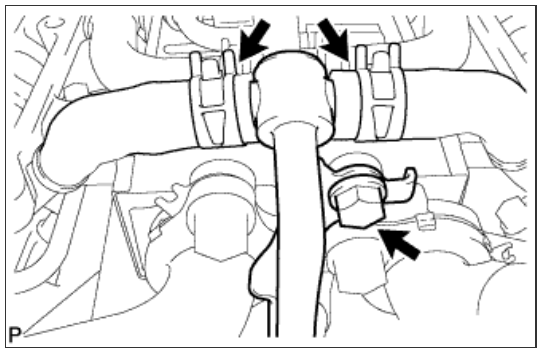


a. Install 2 new gaskets to the pipe.

b. Install the pipe with the 4 bolts.

Tor e
29 N*m{ 296 kgf*cm , 21 ft.*lbf

NOTICE

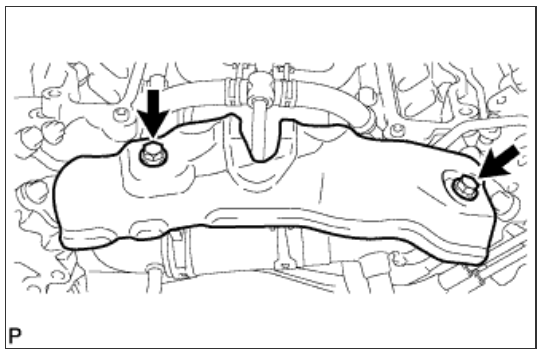


- **Press own the cooler si by han while tightening the bolts on the cylin ehea is e**
- **If the ins lator installation stay is torme , replace the No. 1 EGR pipe.**
- **If the clearance between the hea an flange is 1 mm (0.0394 in.) or more, replace the No. 1 EGR pipe.**

10. CONNECT NO. 5 WATER BY-PASS PIPE

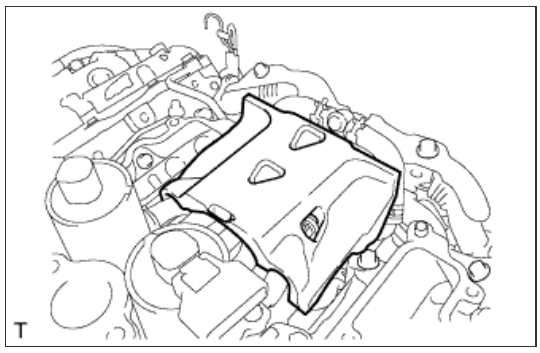
a. Connect the 2 hoses and install the bolt to connect the water by-pass pipe.

Tor e
10 N*m{ 102 kgf*cm , 7 ft.*lbf



11. INSTALL EGR PIPE INS LATOR

a. Install the insulator with the 2 bolts.



Tor e
21 N*m{ 214 kgf*cm , 15 ft.*lbf

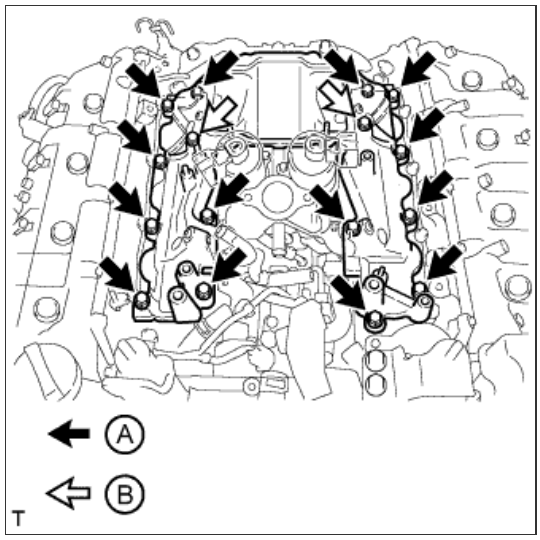
NOTICE

If the insulator installation stay for the No. 1 and No. 2 EGR pipe is deformed, or the bolt holes do not align, replace the No. 1 and No. 2 EGR pipe.

12. INSTALL INTAKE MANI OLD INS LATOR

13. INSTALL NO. 3 INTAKE MANI OLD

a. Set 2 new gaskets to the No. 1 and No. 2 intake manifolds.



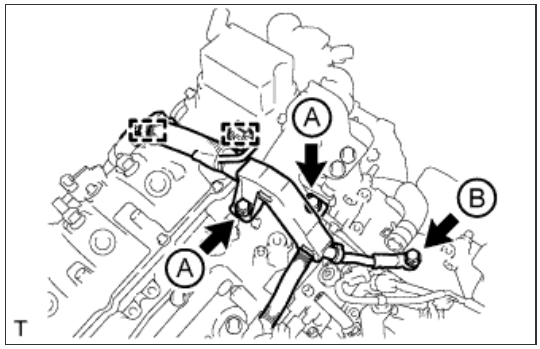
b. Install the No. 3 intake manifold with the 16 bolts.

Tor e
21 N*m{ 214 kgf*cm , 15 ft.*lbf

Bolt Length

Item	Length
Bolt A	25 mm (0.984 in.)

Bolt B	70 mm (2.76 in.)

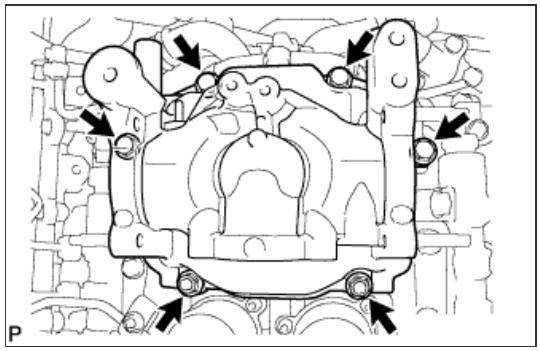


14. CONNECT NO. 2 ENGINE WIRE

a. Connect the No. 2 engine wire with the 3 bolts.

Tor e
for bolt A
13 N*m{ 133 kgf*cm , 10 ft.*lbf
for bolt B
32 N*m{ 326 kgf*cm , 24 ft.*lbf

b. Attach the 2 wire harness clamps.

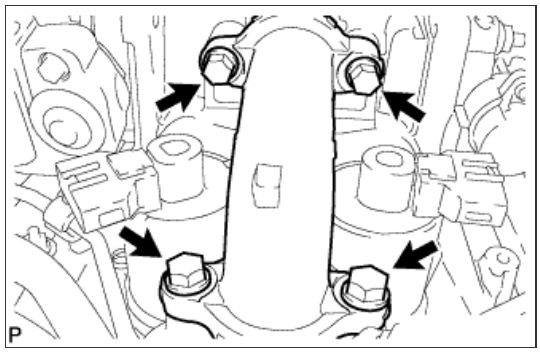


15. INSTALL INTAKE PIPE

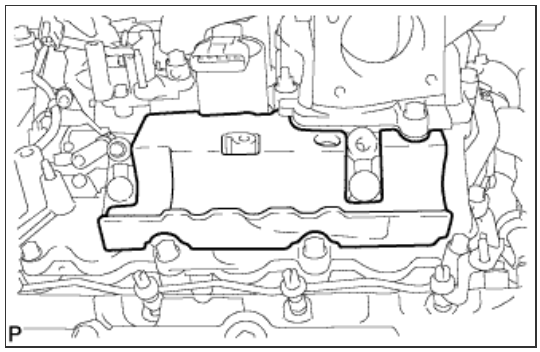
a. Install a new gasket.

b. Install the pipe with the 4 bolts and 2 nuts.

Tor e
21 N*m{ 214 kgf*cm , 15 ft.*lbf

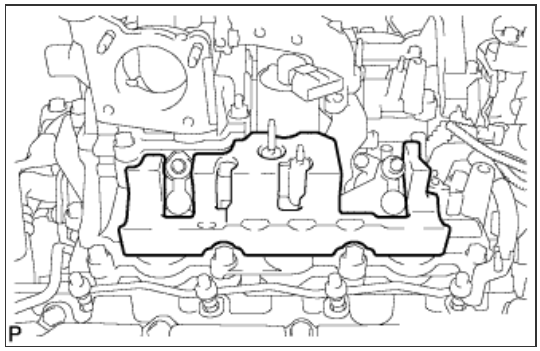


16. INSTALL NO. 4 EGR PIPE



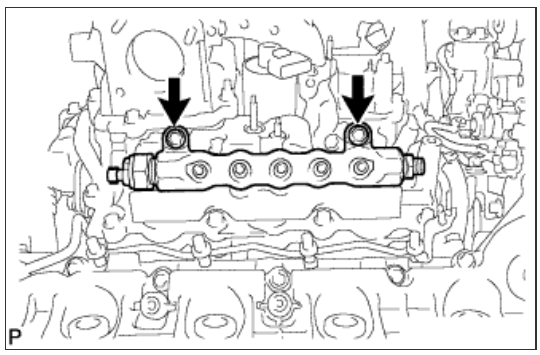
a. Install 2 new gaskets to the pipe.

b. Install the pipe with the 4 bolts.



Tor e
21 N*m{ 214 kgf*cm , 15 ft.*lbf

17. INSTALL NO. 2 INTAKE MANI OLD INS LATOR

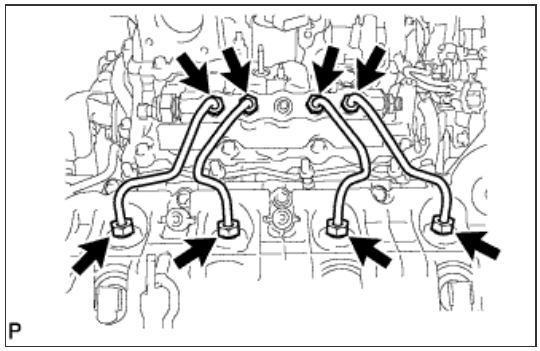


18. INSTALL NO. 1 INTAKE MANI OLD INS LATOR

19. INSTALL COMMON RAIL ASSEMBLY RH

a. Install the common rail with the 2 bolts.

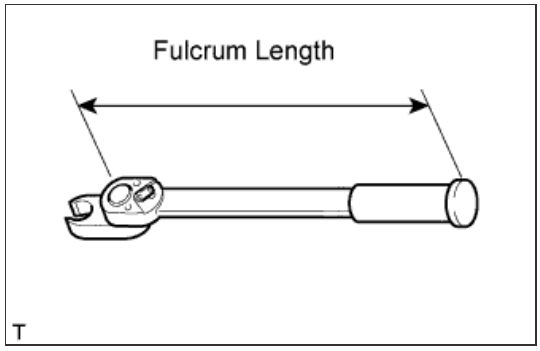
Tor e
21 N*m{ 214 kgf*cm , 15 ft.*lbf



20. INSTALL INJECTION PIPE RH

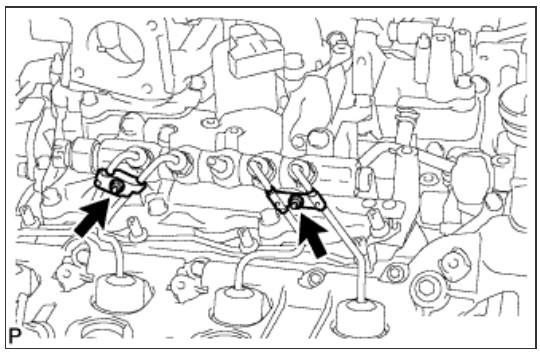
a. Using a union nut wrench, install the 4 new injection pipes.

Tor e
witho t nion n t wrench
34 N*m{ 347 kgf*cm , 25 ft.*lbf
with nion n t wrench
31 N*m{ 316 kgf*cm , 23 ft.*lbf



NOTICE

Make sure there is no damage or foreign matter on the seal surfaces.

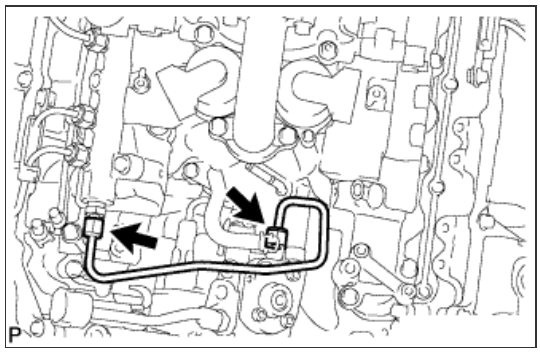


HINT

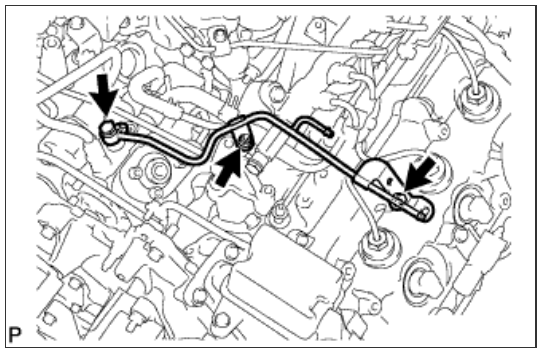
- **se a tor e wrench with a f lcr m length of 30 cm (11.8 in.).**
- **Make s re the nion n t wrench an he tor e wrench are connecte in a straight line.**

b. w/ Intercooler:
Install the 4 injection pipe clamps with the 2 nuts.

Tor e
5.0 N*m{ 51 kgf*cm , 44 in.*lbf



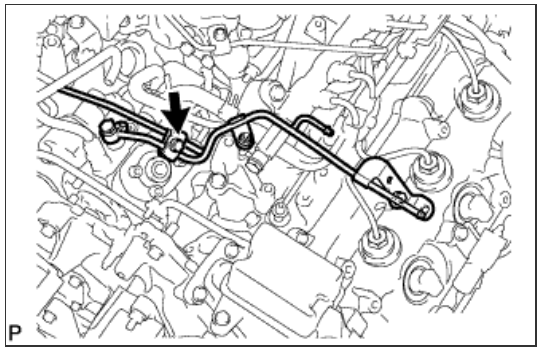
21. INSTALL NO. 5 INJECTION PIPE S B-ASSEMBLY



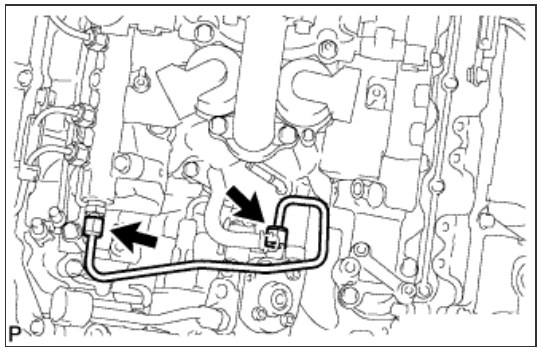
a. Temporarily install a new No. 5 injection pipe by hand.

NOTICE

Make sure there is no damage or foreign matter on the seal surfaces.

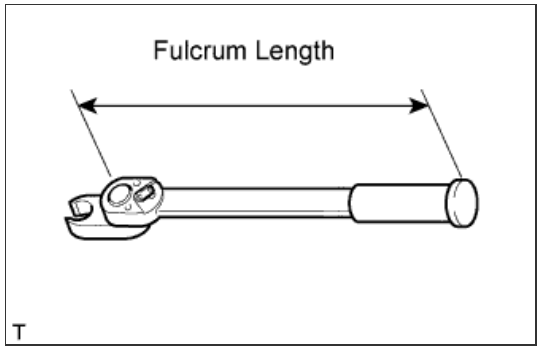


b. Temporarily install the used gasket and No. 2 fuel pipe with the nut, bolt and union bolt.



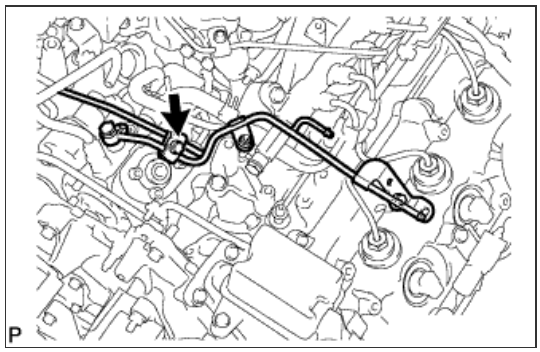
c. Temporarily install the No. 2 injection pipe clamp with the bolt.

Tor e
5.0 N*m{ 51 kgf*cm , 44 in.*lbf



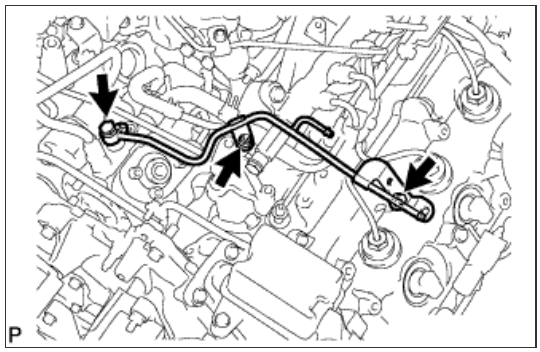
. Using a union nut wrench, tighten the No. 5 injection pipe ends.

Tor e
witho t nion n t wrench
34 N*m{ 347 kgf*cm , 25 ft.*lbf
with nion n t wrench
31 N*m{ 316 kgf*cm , 23 ft.*lbf



HINT

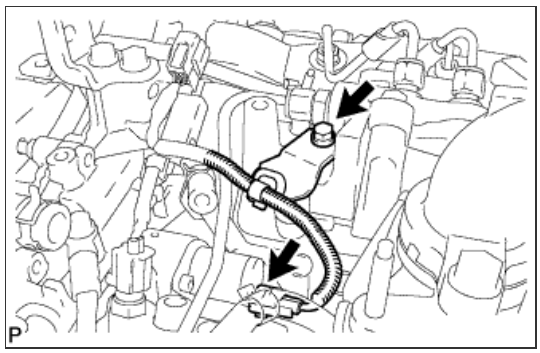
- **se a tor e wrench with a f lcr m length of 30 cm (11.8 in.).**
- **Make s re the nion n t wrench an he tor e wrench are connecte in a straight line.**



e. Remove the bolt and No. 2 injection pipe clamp.

f. Remove the union bolt and gasket.

g. Remove the bolt, nut and No. 2 fuel pipe.

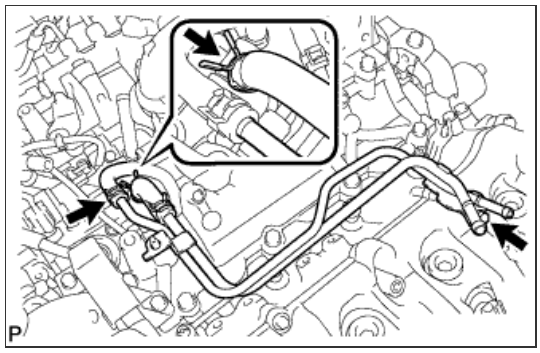


22. CONNECT EL P MP MOTOR WIRE

a. Install the fuel pump motor wire bracket to the No. 3 intake manifold with the bolt.

Tor e
10 N*m{ 102 kgf*cm , 7 ft.*lbf

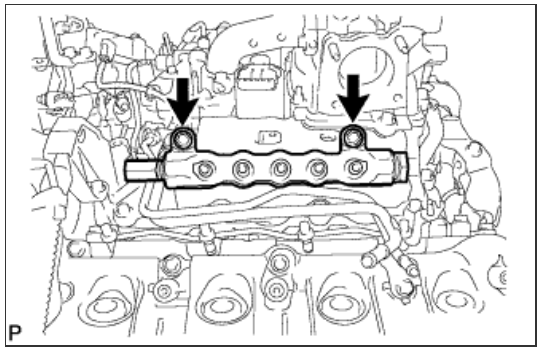
b. Connect the connector to the fuel supply pump.



23. INSTALL EL ILTER TO INJECTION P MP EL PIPE S B-ASSEMBLY

a. Install the fuel filter to injection pump fuel pipe with the bolt.

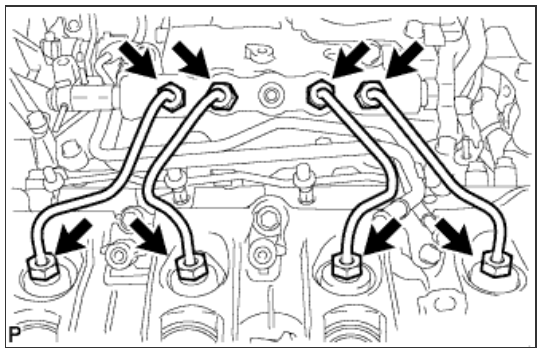
Tor e
10 N*m{ 102 kgf*cm , 7 ft.*lbf



b. Connect the 2 hoses to the fuel pipe.

24. INSTALL COMMON RAIL ASSEMBLY LH

a. Install the common rail with the 2 bolts.

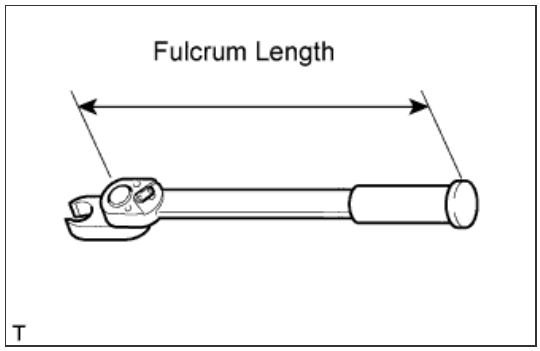


Tor e
21 N*m{ 214 kgf*cm , 15 ft.*lbf

25. INSTALL INJECTION PIPE LH

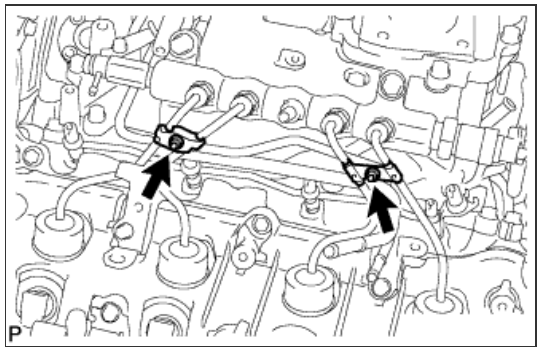
a. Using a union nut wrench, install the 4 new injection pipes.

Tor e
witho t nion n t wrench
34 N*m{ 347 kgf*cm , 25 ft.*lbf
with nion n t wrench
31 N*m{ 316 kgf*cm , 23 ft.*lbf



NOTICE

ake sure there is no damage or foreign matter on the seal surfaces.

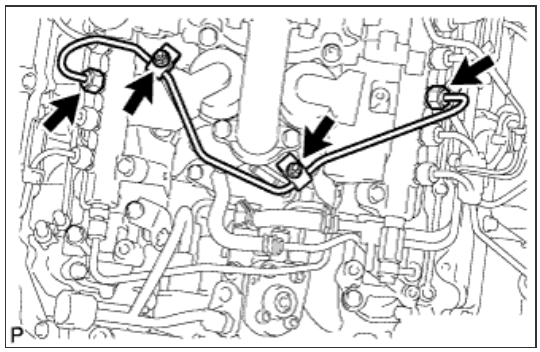


HINT

- **se a tor e wrench with a f lcr m length of 30 cm (11.8 in.).**
- **Make s re the nion n t wrench an lle tor e wrench are connecte in a straight line.**

b. w/ Intercooler:
Install the 4 injection pipe clamps with the 2 nuts.

Tor e
5.0 N*m{ 51 kgf*cm , 44 in.*lbf



26. INSTALL NO. 6 INJECTION PIPE S B-ASSEMBLY

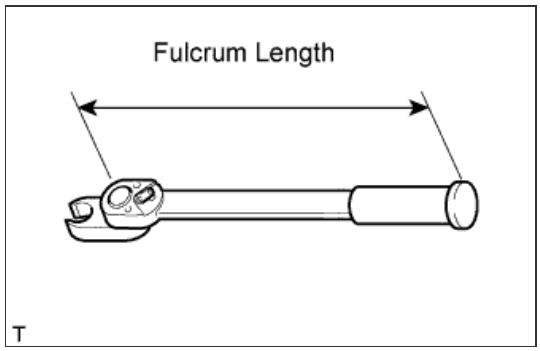
a. w/ EGR System:

i. Temporarily install a new No. 6 injection pipe to the common rail LH and RH.

NOTICE

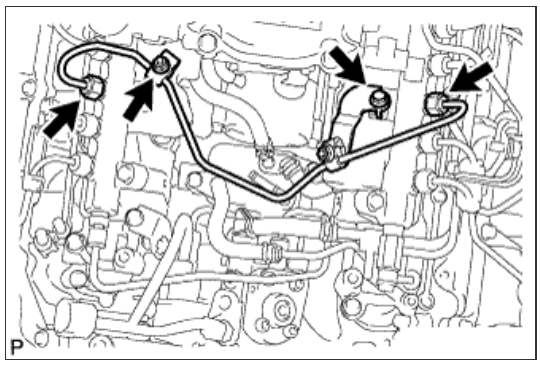
Make sure there is no damage or foreign matter on the seal surfaces.

ii. Install the 2 No. 2 injection pipe clamps with the 2 nuts.



Tor e
5.0 N*m{ 51 kgf*cm , 44 in.*lbf

iii. Using a union nut wrench, tighten the No. 6 injection pipe ends.



Tor e
witho t nion n t wrench
34 N*m{ 347 kgf*cm , 25 ft.*lbf
with nion n t wrench
31 N*m{ 316 kgf*cm , 23 ft.*lbf

HINT

- **se a tor e wrench with a f lcr m length of 30 cm (11.8 in.).**
- **Make s re the nion n t wrench an he tor e wrench are connecte in a straight line.**

b. w/o EGR System:

i. Temporarily install a new No. 6 injection pipe to the common rail LH and RH.

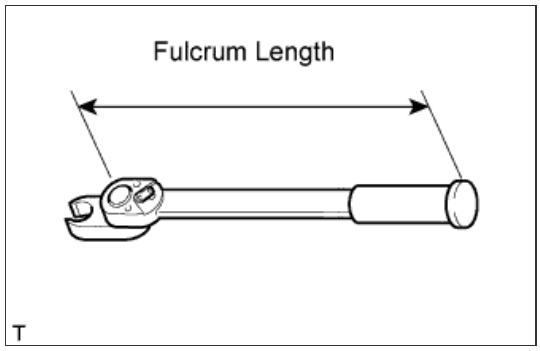
NOTICE

Make sure there is no damage or foreign matter on the seal surfaces.

ii. Install the bracket to the No. 3 intake manifold with the bolt.

Tor e
10 N*m{ 102 kgf*cm , 7 ft.*lbf

iii. Install the No. 2 injection pipe clamp with the nut.



Tor e
5.0 N*m{ 51 kgf*cm , 44 in.*lbf

iv. Using a union nut wrench, tighten the No. 6 injection pipe ends.

Tor e
witho t nion n t wrench
34 N*m{ 347 kgf*cm , 25 ft.*lbf
with nion n t wrench
31 N*m{ 316 kgf*cm , 23 ft.*lbf

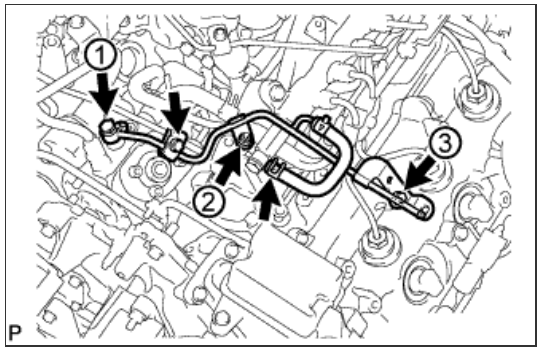
HINT

- **se a tor e wrench with a f lcr m length of 30 cm (11.8 in.).**
- **Make s re the nion n t wrench an he tor e wrench are connecte in a straight line.**

27. INSTALL NO. 2 EL PIPE S B-ASSEMBLY

NOTICE

Check for damage and foreign matter on the fuel pipe installation surface of the supply pump.



If there is foreign matter, remove it from the installation surface. If the installation surface is damaged, replace the fuel supply pump.

a. Temporarily install a new gasket and the No. 2 fuel pipe with the union

bolt, nut and bolt.

b. Tighten the union bolt, nut and bolt in the order shown in the illustration.

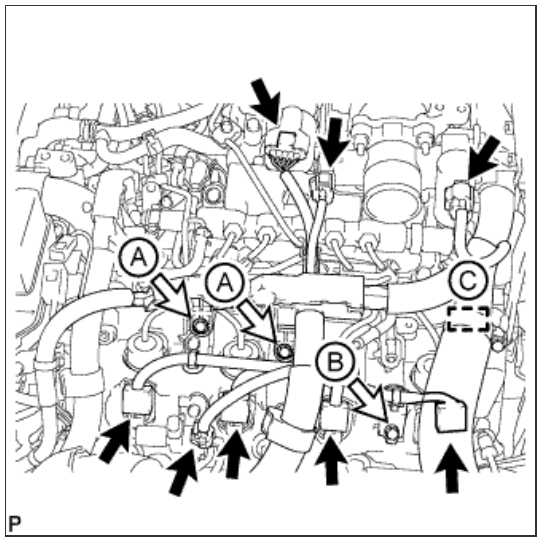
Tor e
for nion bolt
10 N*m{ 105 kgf*cm , 8 ft.*lbf
for bolt an n t
10 N*m{ 102 kgf*cm , 7 ft.*lbf

c. Install the No. 2 injection pipe clamp with the bolt.

Tor e
5.0 N*m{ 51 kgf*cm , 44 in.*lbf

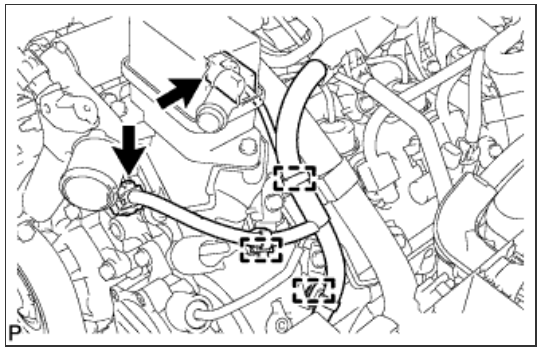
. Connect the fuel hose to the No. 5 nozzle leakage pipe.

28. CONNECT ENGINE WIRE



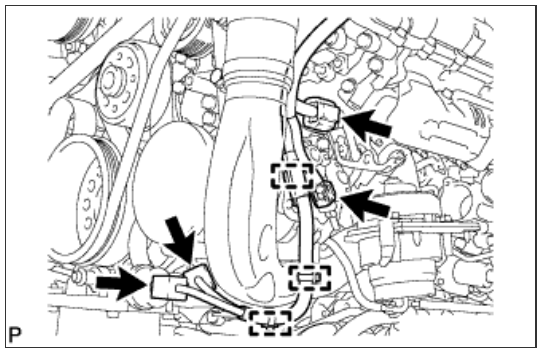
a. LH Side:

i. Install the engine wire protector with the 2 bolts labeled A.



ii. Connect the 8 connectors.

iii. Install the engine wire harness bracket with the bolt labeled B.



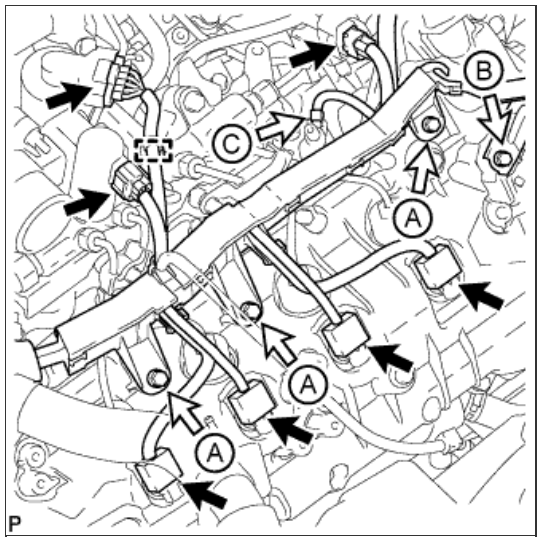
iv. for RHD:
Connect the wire harness with the wire harness clamp holder labeled C.

v. Attach the 3 wire harness clamps and connect the 2 connectors.

vi. Attach the 3 wire harness clamps and connect the 4 connectors.

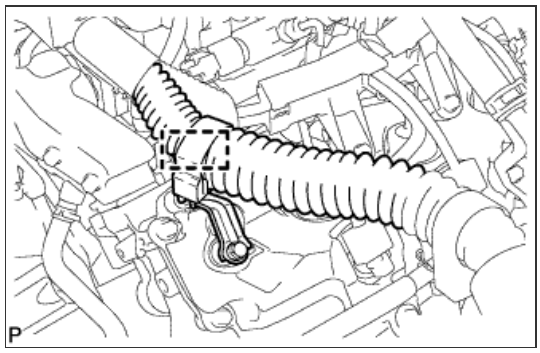
b. RH Side:

i. Install the engine wire harness protector with the 3 bolts labeled A.



ii. Connect the 7 connectors.

iii. Attach the wire harness clamp.



iv. Install the wire harness bracket with the bolt labeled B.

v. Install the glow plug wire harness labeled C with the nut.

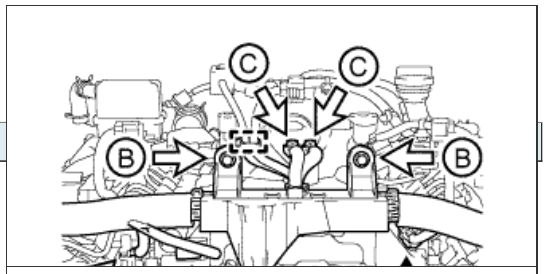
Tor e
4.0 N*m{ 41 kgf*cm , 35 in.*lbf

i. for RHD:
Connect the wire harness with the wire harness clamp holder.

c. Rear Side:

i. Install the glow plug wire harness with the nut labeled A.

Tor e
4.0 N*m{ 41 kgf*cm , 35 in.*lbf

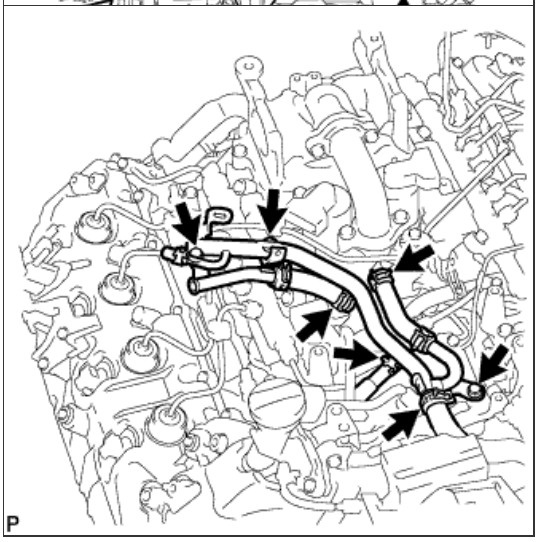


ii. Connect the 2 common rail connectors.

iii. Install the engine wire harness protector with the 2 bolts labeled B.

iv. Install the 2 ground wires with the 2 bolts labeled C.

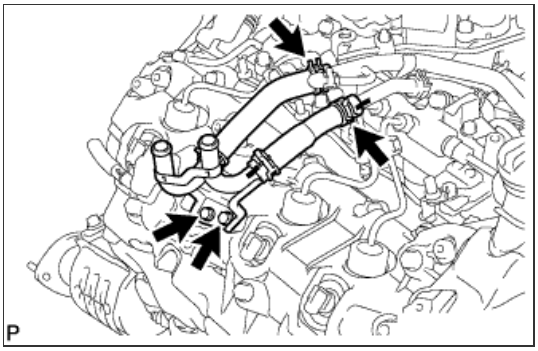
Tor e
.4 N*m{ 87 kgf*cm , 74 in.*lbf



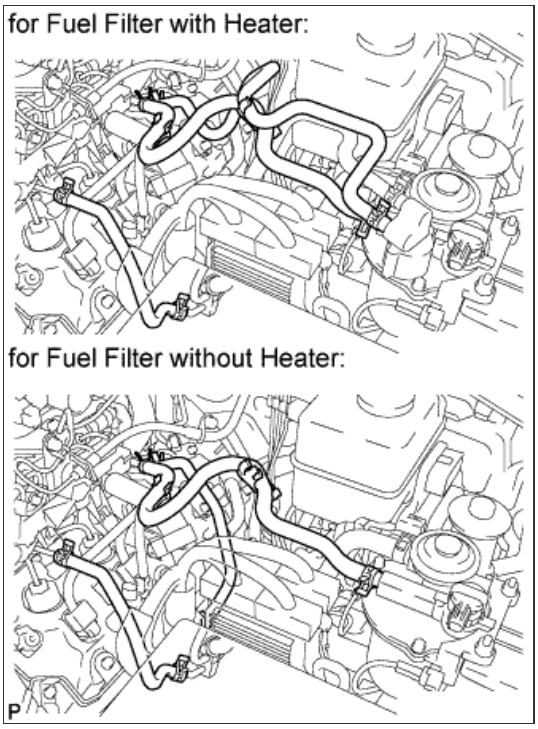
v. Attach the wire harness clamp.

29. INSTALL NO. 4 WATER BY-PASS PIPE

a. Connect the 4 water hose ends, and install the No. 4 water by-pass pipe with the 2 bolts and nut.



Tor e
10 N*m{ 102 kgf*cm , 7 ft.*lbf



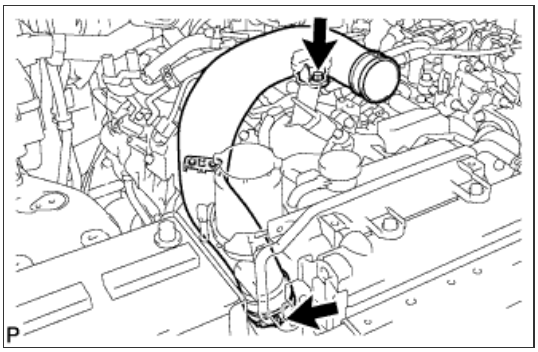
30. INSTALL NO. 3 WATER BY-PASS PIPE

a. Connect the 2 water hose ends, and install the No. 3 water by-pass pipe with the 2 bolts.

Tor e
10 N*m{ 102 kgf*cm , 7 ft.*lbf

31. CONNECT EL HOSE

32. INSTALL NO. 1 AIR CLEANER PIPE S B-ASSEMBLY

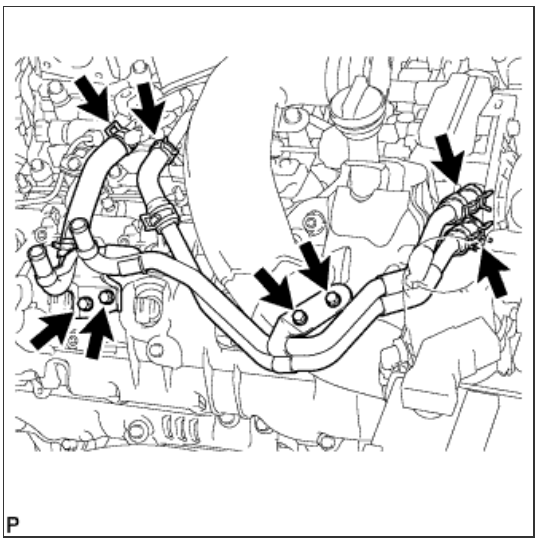


a. Connect the No. 1 air cleaner pipe to the No. 1 intake air connector pipe.

b. Install the pipe with the bolt.

Tor e
21 N*m{ 214 kgf*cm , 15 ft.*lbf

c. Tighten the hose clamp.



Tor e
.3 N*m{ 64 kgf*cm , 56 in.*lbf

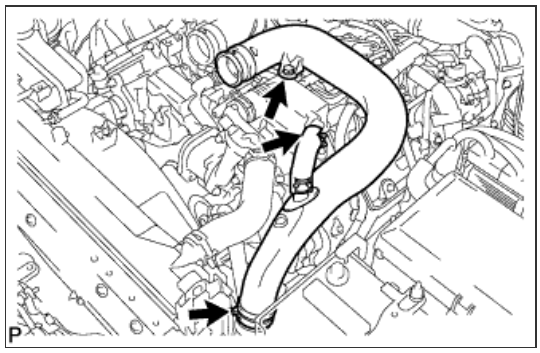
33. INSTALL HEATER WATER PIPE S B-ASSEMBLY (w/ Visco s Heater)

a. Connect the 4 water hose ends, and install the water pipe with the 4 bolts.

Tor e
9.8 N*m{ 100 kgf*cm , 87 in.*lbf

34. INSTALL NO. 2 AIR CLEANER PIPE

a. Connect the No. 2 air cleaner pipe to the No. 2 intake air connector pipe.



b. Connect the ventilation hose to the oil separator.

c. Install the pipe with the bolt.

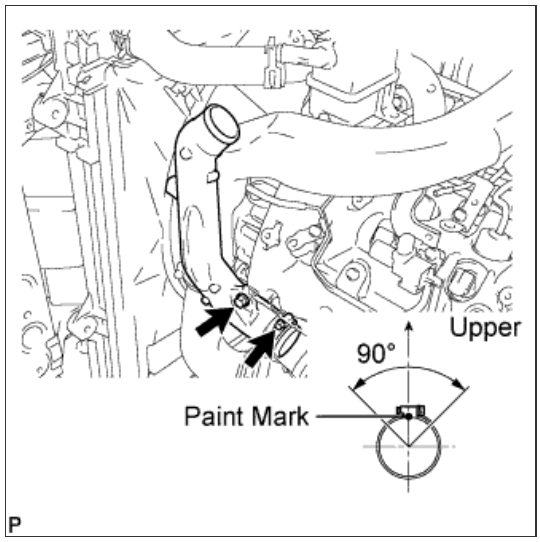
Tor e
21 N*m{ 214 kgf*cm , 15 ft.*lbf

. Tighten the hose clamp.

Tor e
.3 N*m{ 64 kgf*cm , 56 in.*lbf

35. INSTALL NO. 4 AIR T BE

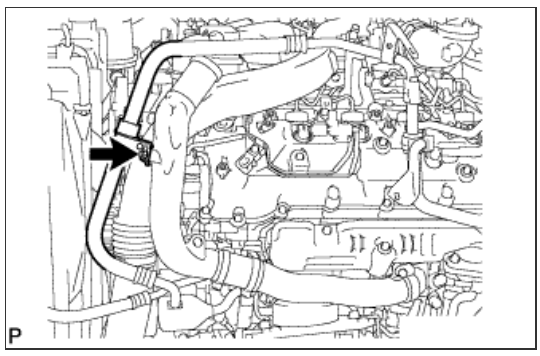
a. Install the No. 4 air tube with the bolt.



Tor e
21 N*m{ 214 kgf*cm , 15 ft.*lbf

b. Tighten the hose clamp.

Tor e
.3 N*m{ 64 kgf*cm , 56 in.*lbf



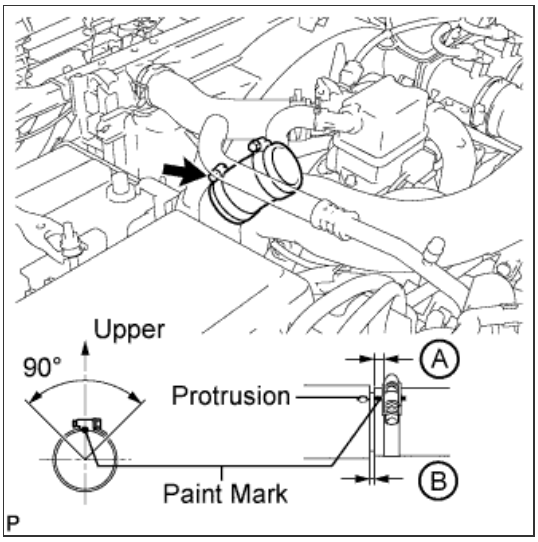
HINT

Make sure the direction of the hose clamp is as shown in the illustration.

c. Install the suction hose with the bolt.

Tor e
9.8 N*m{ 100 kgf*cm , 87 in.*lbf

36. INSTALL NO. 2 AIR HOSE



a. Connect the No. 2 air hose with the hose clamp.

Tor e
.3 N*m{ 64 kgf*cm , 56 in.*lbf

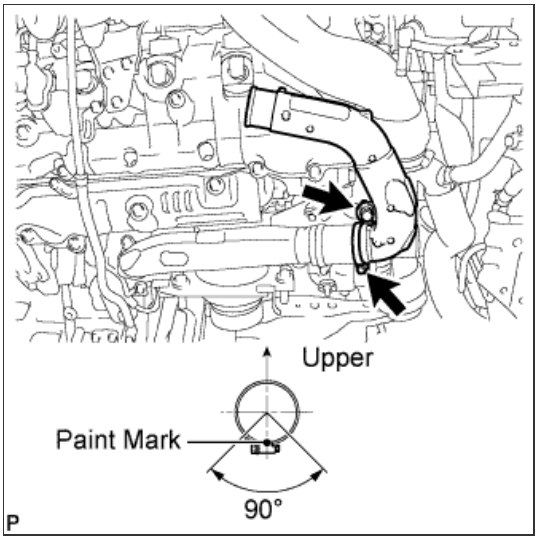
HINT

- **Align the paint mark of the air hose with the protr sion an p sh in the air hose so that istance B is 0 to 3 mm (0 to 0.118 in.).**
- **Position the clamp so that istance A is 2 to 6 mm (0.0787 to 0.236 in.).**

- **Make s re the irection of the hose clamp is as shown in the ill stration.**

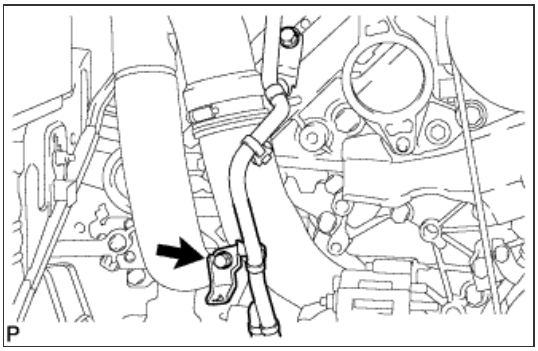
37. INSTALL NO. 3 AIR T BE

a. Install the No. 3 air tube with the bolt.



Tor e
21 N*m{ 214 kgf*cm , 15 ft.*lbf

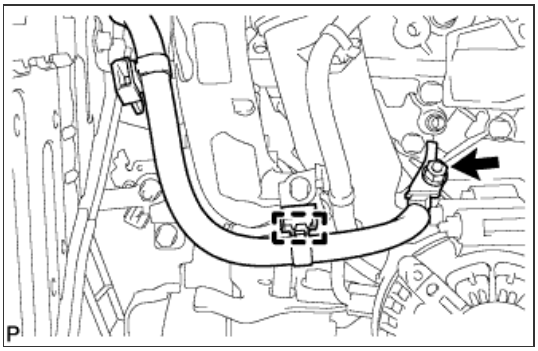
b. Tighten the hose clamp.



Tor e
.3 N*m{ 64 kgf*cm , 56 in.*lbf

HINT

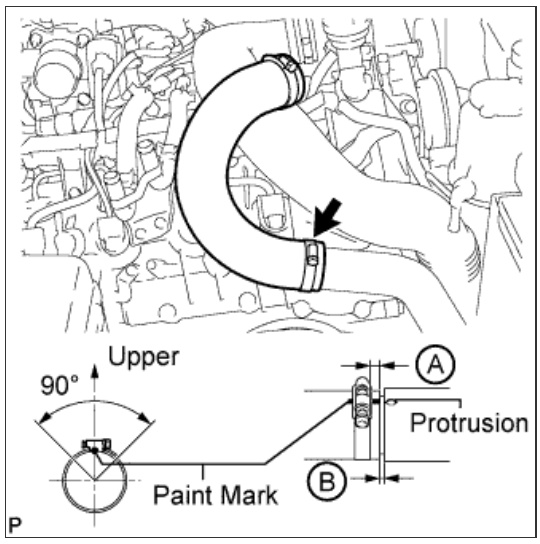
Make sure the direction of the hose clamp is as shown in the illustration.



c. Install the wire harness bracket with the bolt.

. Install the ground wire with the nut, and attach the wire harness clamp.

Tor e
.4 N*m{ 87 kgf*cm , 74 in.*lbf



38. INSTALL NO. 1 AIR HOSE

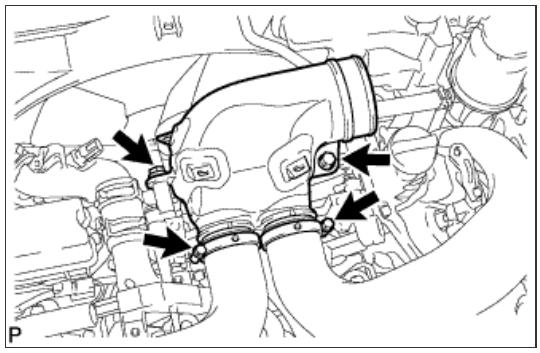
a. Connect the No. 1 air hose with the hose clamp.

Tor e
.3 N*m{ 64 kgf*cm , 56 in.*lbf

HINT

- **Align the paint mark of the air hose with the protr sion an p sh in the air hose so that istance B is 0 to 3 mm (0 to 0.118 in.).**
- **Position the clamp so that istance A is 2 to 6 mm (0.0787 to 0.236 in.).**
- **Make s re the irection of the hose clamp is as shown in the ill stration.**

39. INSTALL INTAKE AIR CONNECTOR

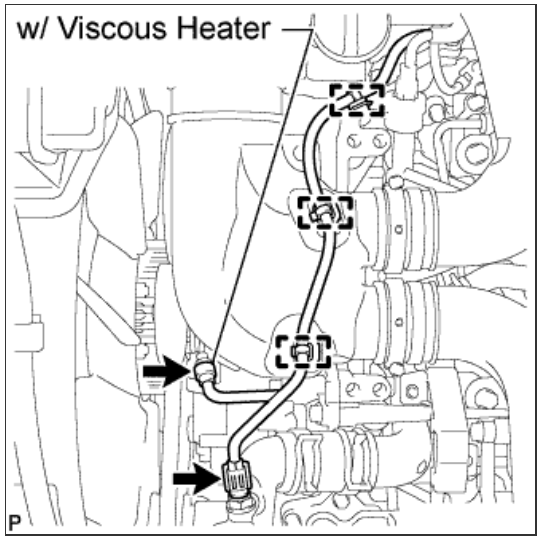


a. Connect the intake air connector to the No. 1 and No. 2 air cleaner pipes.

b. Install the connector with the 2 bolts.

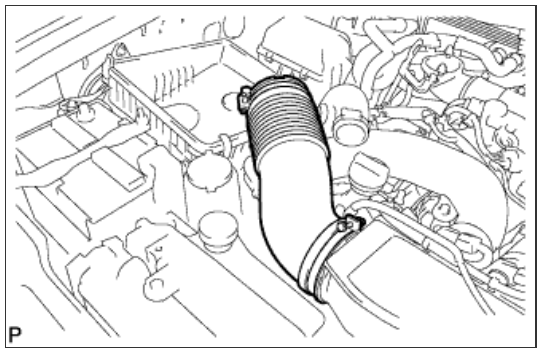
Tor e
21 N*m{ 214 kgf*cm , 15 ft.*lbf

c. Tighten the 2 hose clamps.



Tor e
.3 N*m{ 64 kgf*cm , 56 in.*lbf

. Attach the 3 wire harness clamps.

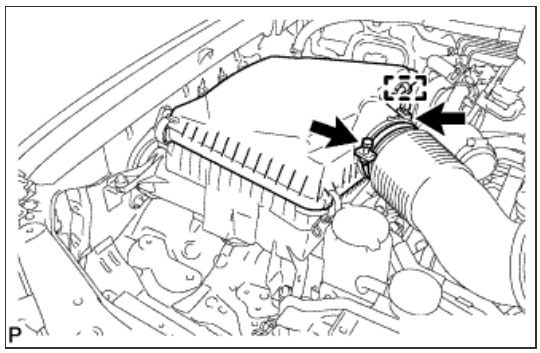


e. w/o Viscous Heater:
Connect the connector to the water temperature sensor.

f. w/ Viscous Heater:
Connect the 2 connectors to the water temperature sensor and viscous with magnet clutch heater.

40. TEMPORARILY INSTALL NO. 1 AIR CLEANER HOSE

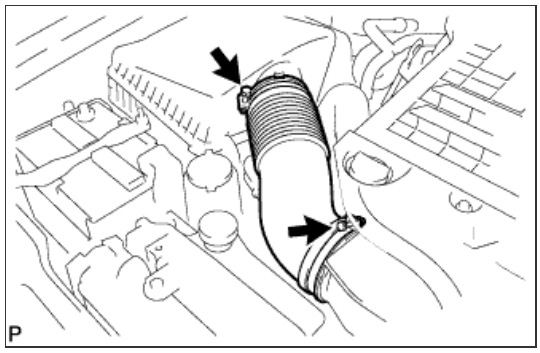
a. Temporarily install the air cleaner hose to the intake air connector.



41. INSTALL AIR CLEANER CAP S B-ASSEMBLY

a. Connect the air cleaner cap to the air cleaner hose, and install the air cleaner cap with the 4 clamps.

b. Connect the mass air flow meter connector and attach the wire harness clamp to the air cleaner cap.



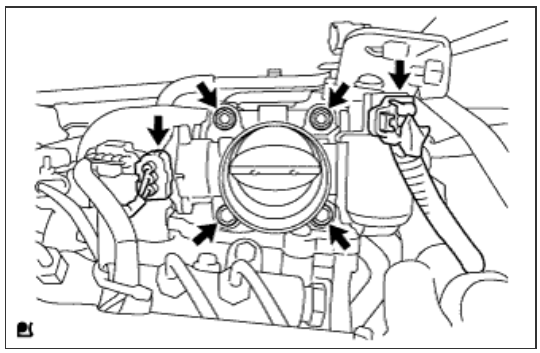
c. Attach the wire harness clamp.

. Align the protrusion of air cleaner cap and concave portion of air cleaner hose.

e. Tighten the 2 hose clamps.

Tor e
5.0 N*m{ 51 kgf*cm , 44 in.*lbf

42. INSTALL DIESEL THROTTLE BODY ASSEMBLY LH



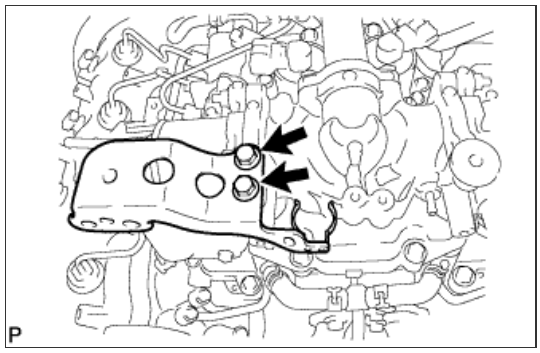
a. Install a new gasket to the intake pipe.

b. Install the throttle body with the 2 bolts and 2 nuts.

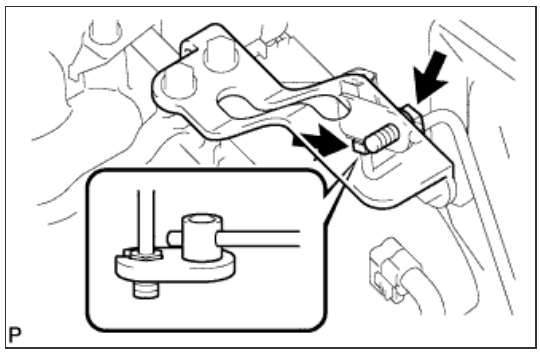
Tor e
21 N*m{ 214 kgf*cm , 15 ft.*lbf

c. Connect the throttle position sensor connector.

. Connect the throttle motor connector.



43. INSTALL NO. 3 INTERCOOLER S PIPE BRACKET



a. Install the bracket with the 2 bolts.

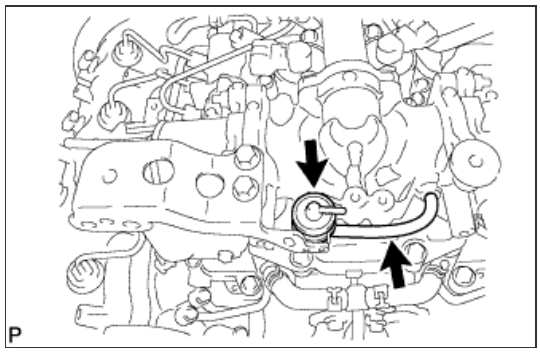
Tor e

21 N*m{ 214 kgf*cm , 15 ft.*lbf

b. for anual Transmission:

i. Connect the clutch tube to release cylinder 2 way with the bolt.

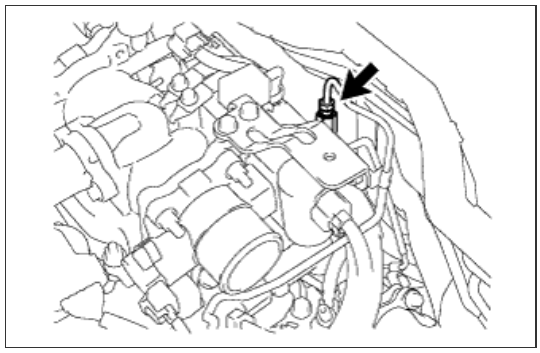
Tor e
20 N*m{ 204 kgf*cm , 15 ft.*lbf



ii. Check that the union nut is tightened to the specified torque.

Tor e
witho t nion n t wrench
15 N*m{ 154 kgf*cm , 11 ft.*lbf
with nion n t wrench
14 N*m{ 141 kgf*cm , 10 ft.*lbf

44. INSTALL NO. 1 GAS ILTER



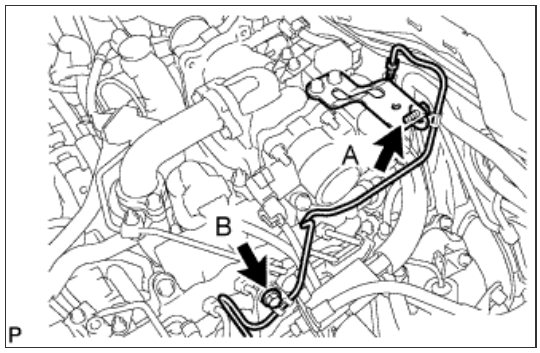
a. Install the gas filter.

b. Connect the hose to the intake pipe.

45. INSTALL T BE CONNECTOR TO LEXIBLE HOSE T BE (for Man al Transmission)

a. Temporarily install the flare nut of the tube connector to flexible hose tube to the clutch tube to release cylinder 2 way by hand.

b. Temporarily install the tube connector to flexible hose tube with the 2 bolts.

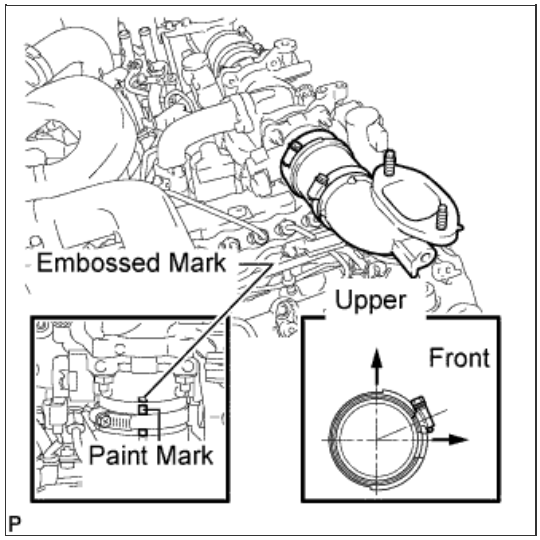


c. Tighten the bolt labeled A.

Tor e

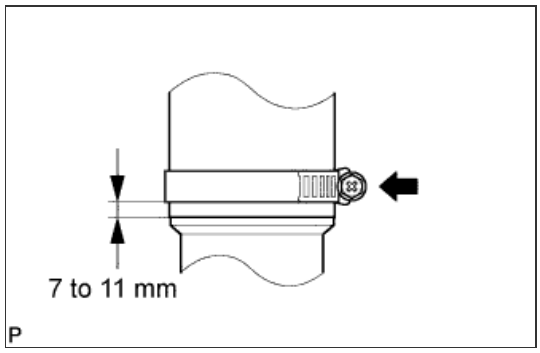
20 N*m{ 204 kgf*cm , 15 ft.*lbf

NOTICE



Tighten the bolt labeled B after installing the clutch hose.

46. INSTALL AIR T BE S B-ASSEMBLY LH



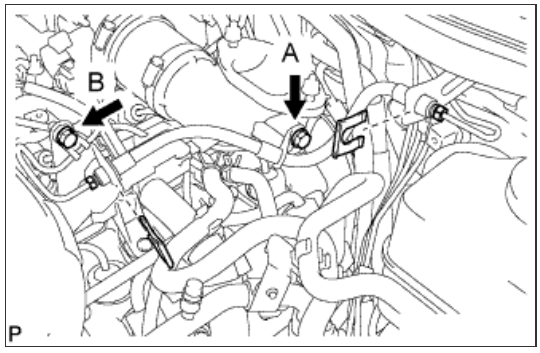
a. Install the air tube to the throttle body.

b. Align the embossed mark of the throttle body with the paint mark of the No. 4 air hose.

c. Tighten the hose clamp so that it is 7 to 11 mm (0.276 to 0.433 in.) from the end of the hose as shown in the illustration.

Tor e
.3 N*m{ 64 kgf*cm , 56 in.*lbf

47. INSTALL CL TCH HOSE (for Man al Transmission)



a. Connect the clutch hose to the air tube with the bolt labeled A.

b. Temporarily install the clutch hose to the clutch master cylinder tube to flexible hose tube and tube connector to flexible hose tube, and fix it in place with the 2 clips.

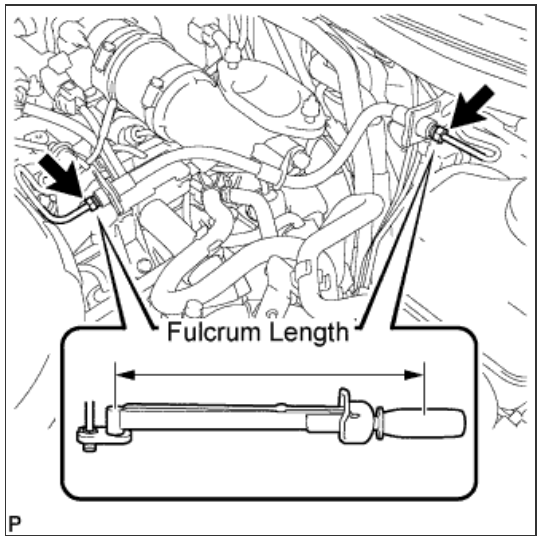
Tor e
20 N*m{ 204 kgf*cm , 15 ft.*lbf

c. Tighten the bolt labeled B.

Tor e
20 N*m{ 204 kgf*cm , 15 ft.*lbf

. Tighten the flexible hose tube.

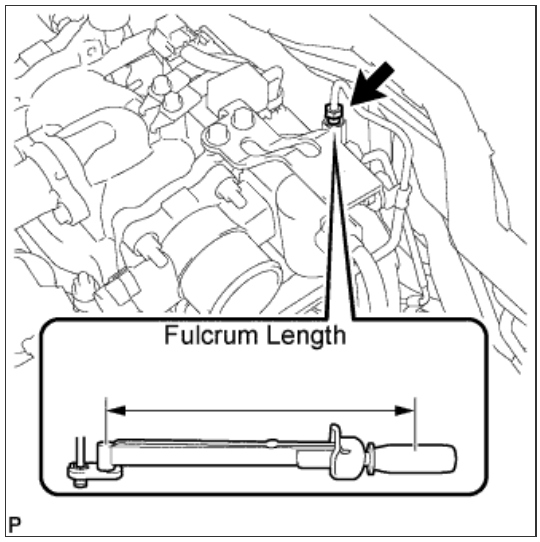
NOTICE



- **Do not ben or amage the fle ible hose tube.**
- **Do not allow any foreign matter such as irt an ust to enter the fle ible hose tube from the connecting points.**

HINT

- **se a tor e wrench with a fulcrum length of 30 cm (11.8 in.). If using a tor e wrench with a length that is not 30 cm (11.8 in.), calculate the tor e specification for the tor e wrench an SST base on the "without SST" tor e specification (Click here).**
- **Make sure union nut wrench an he wrench are connecte in a straight line.**



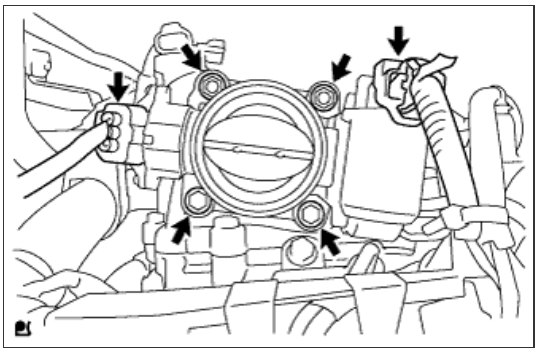
i. Using a 10 mm union nut wrench, tighten the 2 flare nuts of the flexible hose tube.

Tor e
without union nut wrench
15 N*m{ 154 kgf*cm , 11 ft.*lbf
with union nut wrench
14 N*m{ 141 kgf*cm , 10 ft.*lbf

ii. Using a 10 mm union nut wrench, tighten the flare nut of the flexible hose tube.

Tor e
without union nut wrench
15 N*m{ 154 kgf*cm , 11 ft.*lbf
with union nut wrench
14 N*m{ 141 kgf*cm , 10 ft.*lbf

48. INSTALL DIESEL THROTTLE BODY ASSEMBLY RH

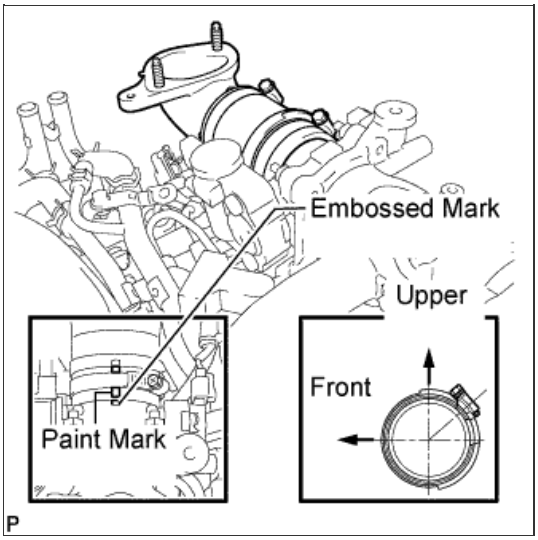


a. Install a new gasket to the intake pipe.

b. Install the throttle body with the 2 bolts and 2 nuts.

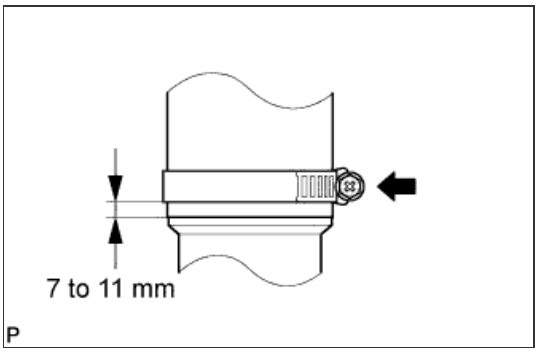
Tor e
21 N*m{ 214 kgf*cm , 15 ft.*lbf

c. Connect the throttle position sensor connector.



. Connect the throttle motor connector.

49. INSTALL AIR T BE S B-ASSEMBLY RH



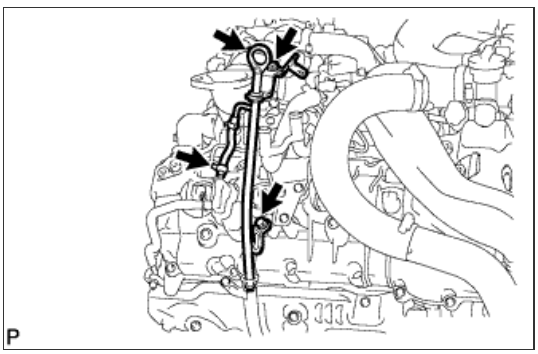
a. Install the air tube to the throttle body.

b. Align the embossed mark of the throttle body with the paint mark of the No. 4 air hose.

c. Tighten the hose clamp so that it is 7 to 11 mm (0.276 to 0.433 in.) from the end of the hose as shown in the illustration.

Tor e
.3 N*m{ 64 kgf*cm , 56 in.*lbf

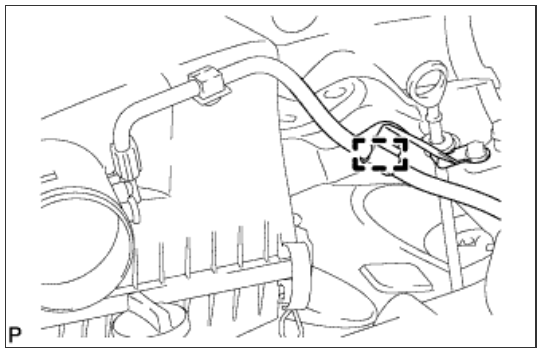
50. INSTALL NO. 2 ENGINE OIL LEVEL DIPSTICK G IDE



a. Apply a light coat of engine oil to a new O-ring.

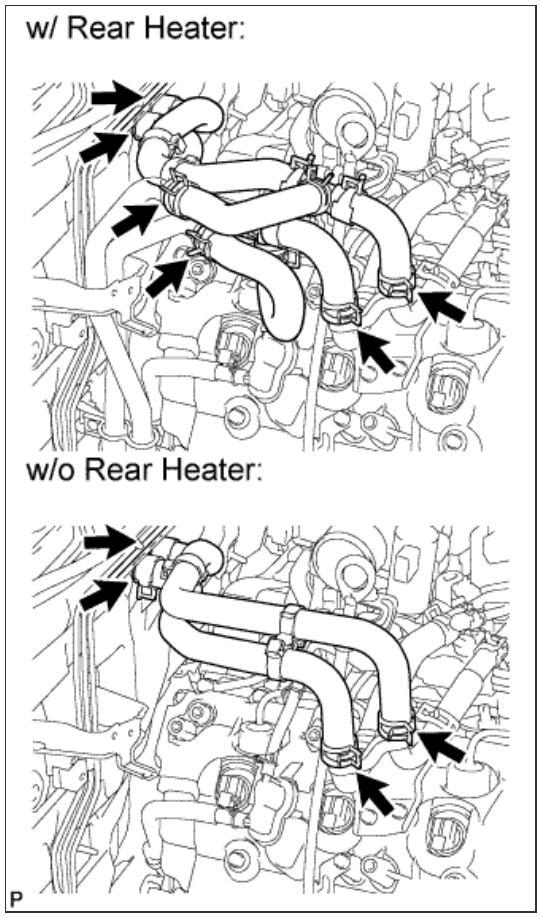
b. Install the O-ring to the No. 2 engine oil level dipstick guide.

c. Install the No. 2 engine oil level dipstick guide with the 2 bolts.



Tor e
10 N*m{ 102 kgf*cm , 7 ft.*lbf

. Connect the ventilation hose to the cylinder head cover RH.



e. Connect the wire harness clamp to the No. 2 engine oil level dipstick guide

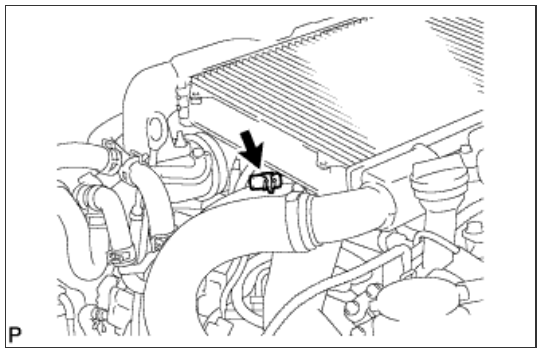
bracket.

51. CONNECT WATER HOSE S B-ASSEMBLY

52. INSTALL INTERCOOLER ASSEMBLY

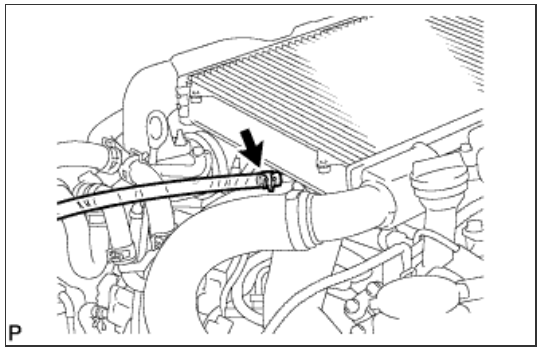
a. Install the intercooler assembly (Click here).

53. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



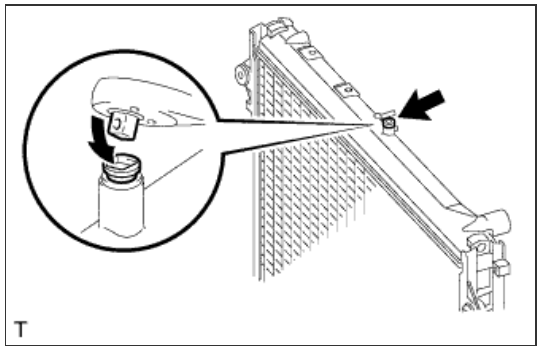
NOTICE

When disconnect the cable, some systems need to be initialized after the cable is reconnected (Click here).

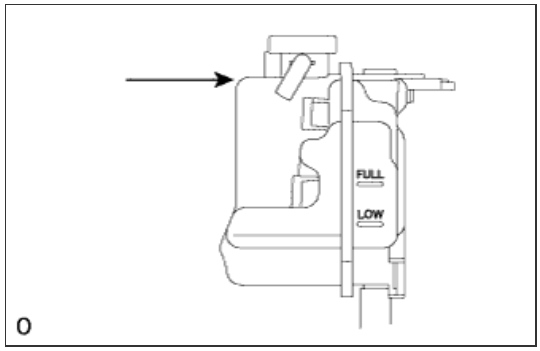


a. Connect the cables to the negative (-) main battery and sub-battery terminals.

54. ADD ENGINE COOLANT



a. Remove the engine air bleed cap.



b. Connect a clear hose to the engine air bleed pipe.

c. Using a wrench, remove the vent plug.

. ill the radiator with T A STLLC to the radiator reservoir filler neck.

HINT

Pour TOYOTA SLLC until it spills out of the engine air bleed pipe.

Stan ar Capacity (for Automatic Transmission)

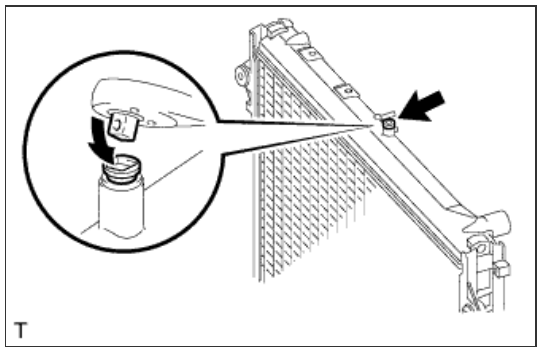
Item	Specified Condition
Front heater only	14.8 liters (15.6 US qts, 13.0 Imp. qts)
Front heater and rear heater	17.6 liters (18.6 US qts, 15.5 Imp. qts)
Front heater with viscous heater	15.2 liters (16.1 US qts, 13.4 Imp. qts)
Front heater and rear heater with viscous heater	18.0 liters (19.0 US qts, 15.4 Imp. qts)

Stan ar capacity (for Manual Transmission)
15.4 liters (16.3 S ts, 13.6 Imp. ts)

NOTICE

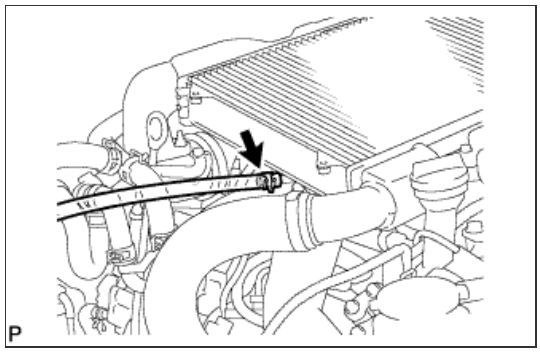
Do not substitute plain water for engine coolant.

HINT:



TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

e. Install the vent plug.

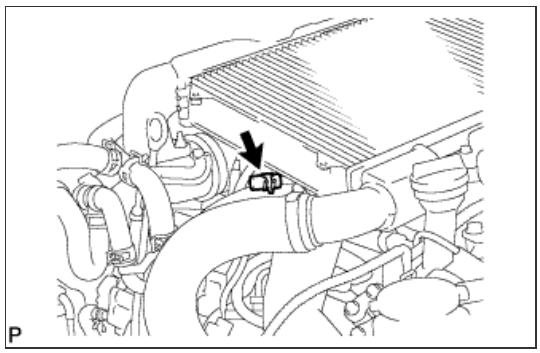


Torque:
2.0 N*m{ 20 kgf*cm , 18 in.*lbf }

NOTICE:

Do not tighten the plug to 5.0 N*m (51 kgf*cm, 44 in.*lbf) or more, as the plug will be damaged.

f. Disconnect the clear hose from the engine air bleed pipe.



g. Install the engine air bleed cap when coolant comes out.

h. Install the radiator reservoir cap.

i. Start the engine.

NOTICE:

Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the FULL line.

j. Maintain an engine speed of 3000 rpm for approximately 10 minutes so that the thermostat opens and air bleeding is performed.

CAUTION:

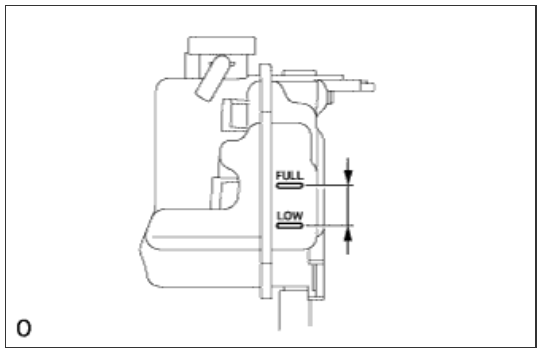
When pressing the radiator hoses:

- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the radiator fan**

NOTICE:

- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**

HINT:



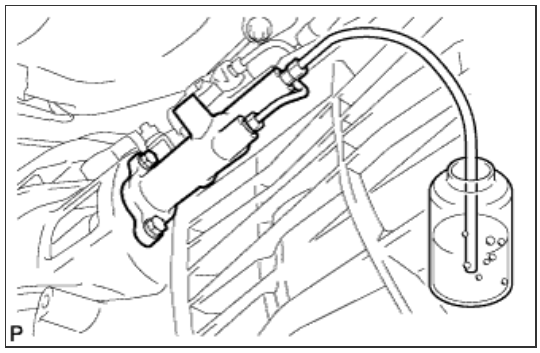
The thermostat opening timing can be confirmed by pressing the No. 2 radiator hose by hand, and checking when the engine coolant starts to flow inside the hose.

k. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

Do not remove the radiator reservoir cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

l. Check that the coolant level is between the FULL and LOW lines.
If the coolant level is above the FULL line, drain coolant so that the coolant level is between the FULL and LOW lines.



55. ADD CL TCH L ID

56. ILL BRAKE L ID RESERVOIR (for Manual Transmission)

a. Check the fluid level.
If the brake fluid level is low, check for leaks and inspect the disc brake pad. If necessary, refill the reservoir with brake fluid after repair or replacement.

Brake flui :
SAE J1703 or FMVSS No. 116 DOT 3

57. BLEED CLUTCH LINE (for Manual Transmission)

a. Remove the release cylinder bleeder plug cap.

b. Connect a vinyl tube to the bleeder plug.

c. Depress the clutch pedal several times, and then loosen the bleeder plug while the pedal is depressed.

d. When fluid no longer comes out, tighten the bleeder plug, and then release the clutch pedal.

e. Repeat the previous 2 steps until all the air in the fluid is completely bled.

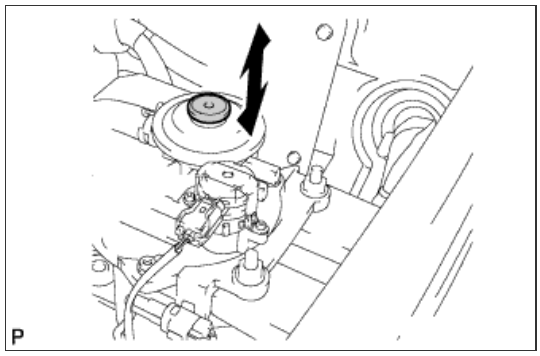
f. Tighten the bleeder plug.

Torque:
11 N*m{ 110 kgf*cm , 8 ft.*lbf }

g. Install the bleeder plug cap.

h. Check that all the air has been bled from the clutch line.

58. CHECK FLUID LEVEL IN RESERVOIR (for Manual Transmission)



a. Check the fluid level.
If the brake fluid level is low, check for leaks and inspect the disc brake pad. If necessary, refill the reservoir with brake fluid after repair or replacement.

Brake fluid:
SAE J1703 or FMVSS No. 116 DOT 3

59. INSPECT FOR CLUTCH FLUID LEAK (for Manual Transmission)

60. BLEED AIR FROM FUEL SYSTEM

a. Using the hand pump, bleed air from the fuel system until pumping becomes difficult.

61. INSPECT OR LEAK

a. Perform Active Test.

i. Connect the intelligent tester to the DLC3.

ii. Turn the ignition switch to ON.

iii. Start the engine.

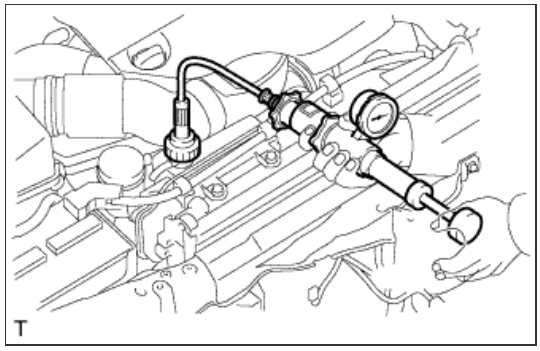
iv. Turn the intelligent tester ON.

v. Enter the following menus: Powertrain / Engine / Active Test.

vi. Perform the Active Test.

Tester Display	Test Detail	Control Range	Diagnostic Note
Test the Fuel Leak	Pressurizes fuel inside common rail and checks for fuel leaks	Stop/Start	• The fuel inside the common rail is pressurized to the specified value and the engine speed increases to 2000 rpm when Start is selected. • The above conditions are preserved while Start is selected.

62. INSPECT OR COOLANT LEAK



CA TION:

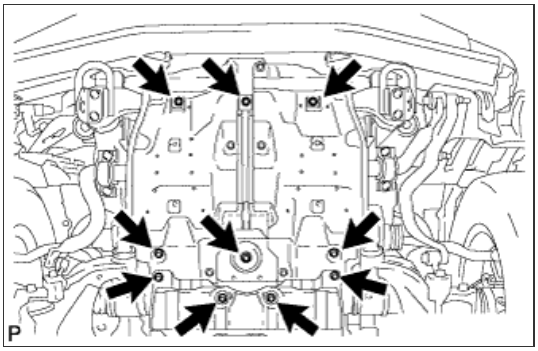
Do not remove the radiator reservoir cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Fill the radiator with coolant and attach a radiator cap tester to the radiator reservoir.

b. Warm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 17.8 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks.
If no external leaks are found, check the cylinder block and cylinder head.

63. INSPECT OR OIL LEAK

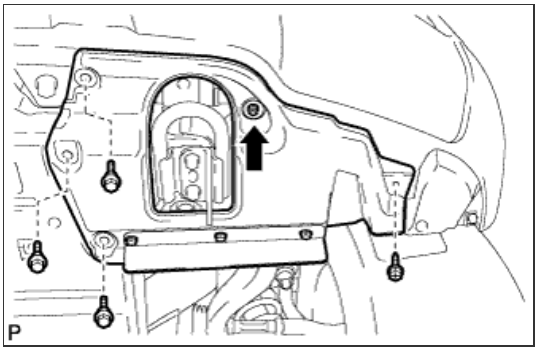


64. INSTALL PPER RADIATOR S PPORT SEAL

a. Install the upper radiator support seal with the 7 clips.

65. INSTALL NO. 1 ENGINE NDER COVER S B-ASSEMBLY

a. Install the engine under cover with the 10 bolts.

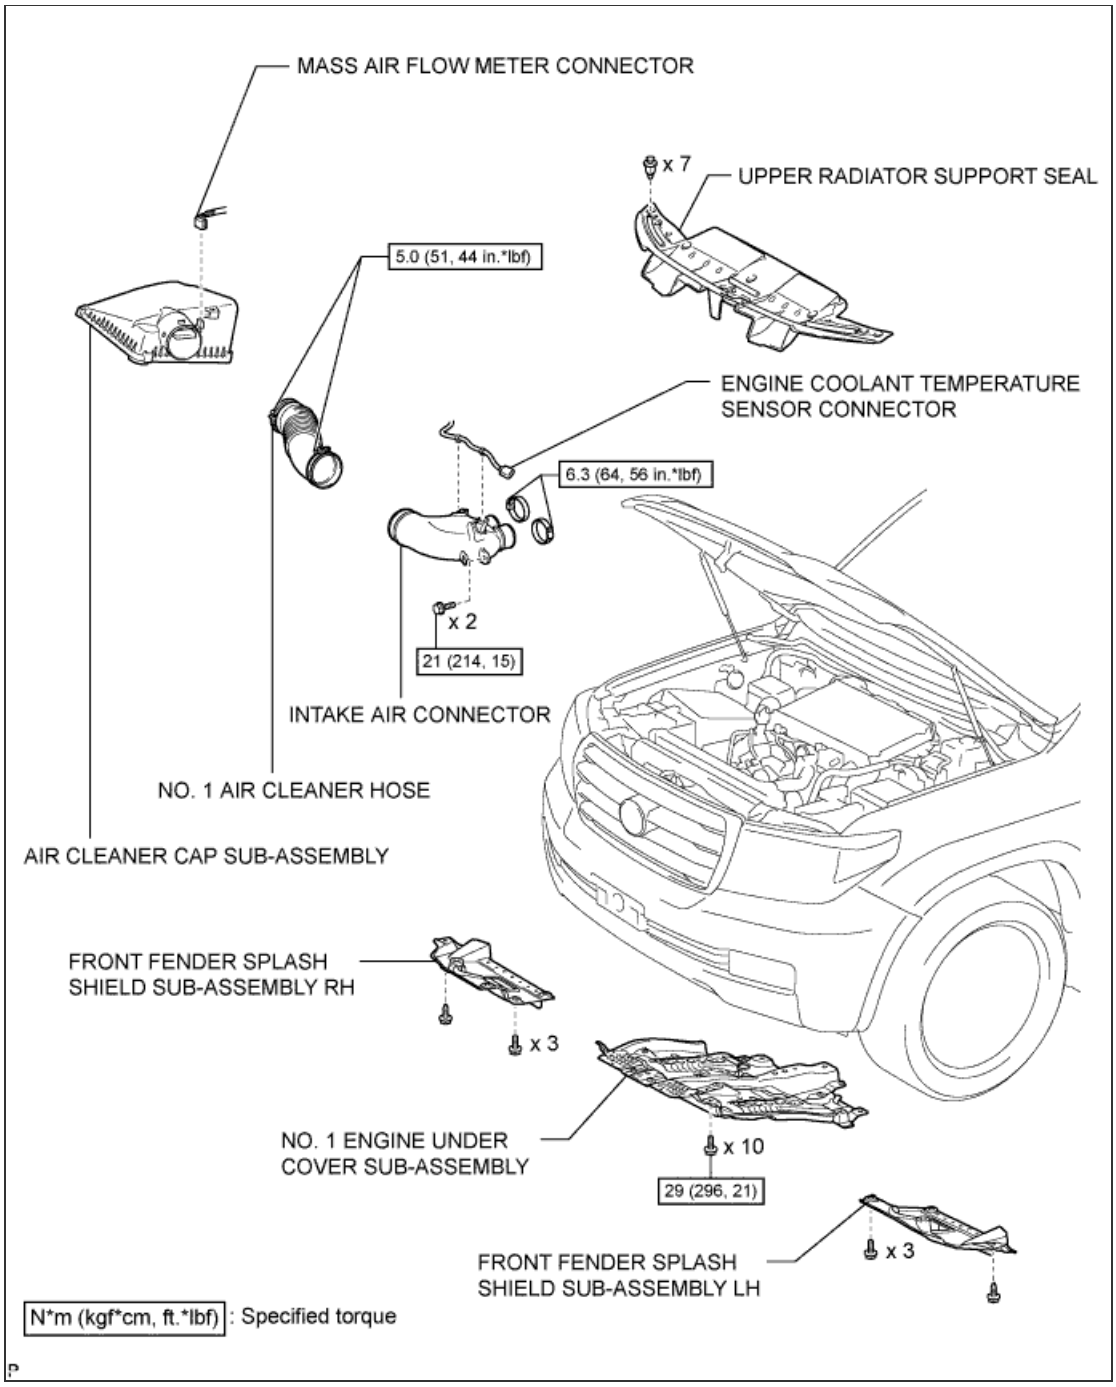


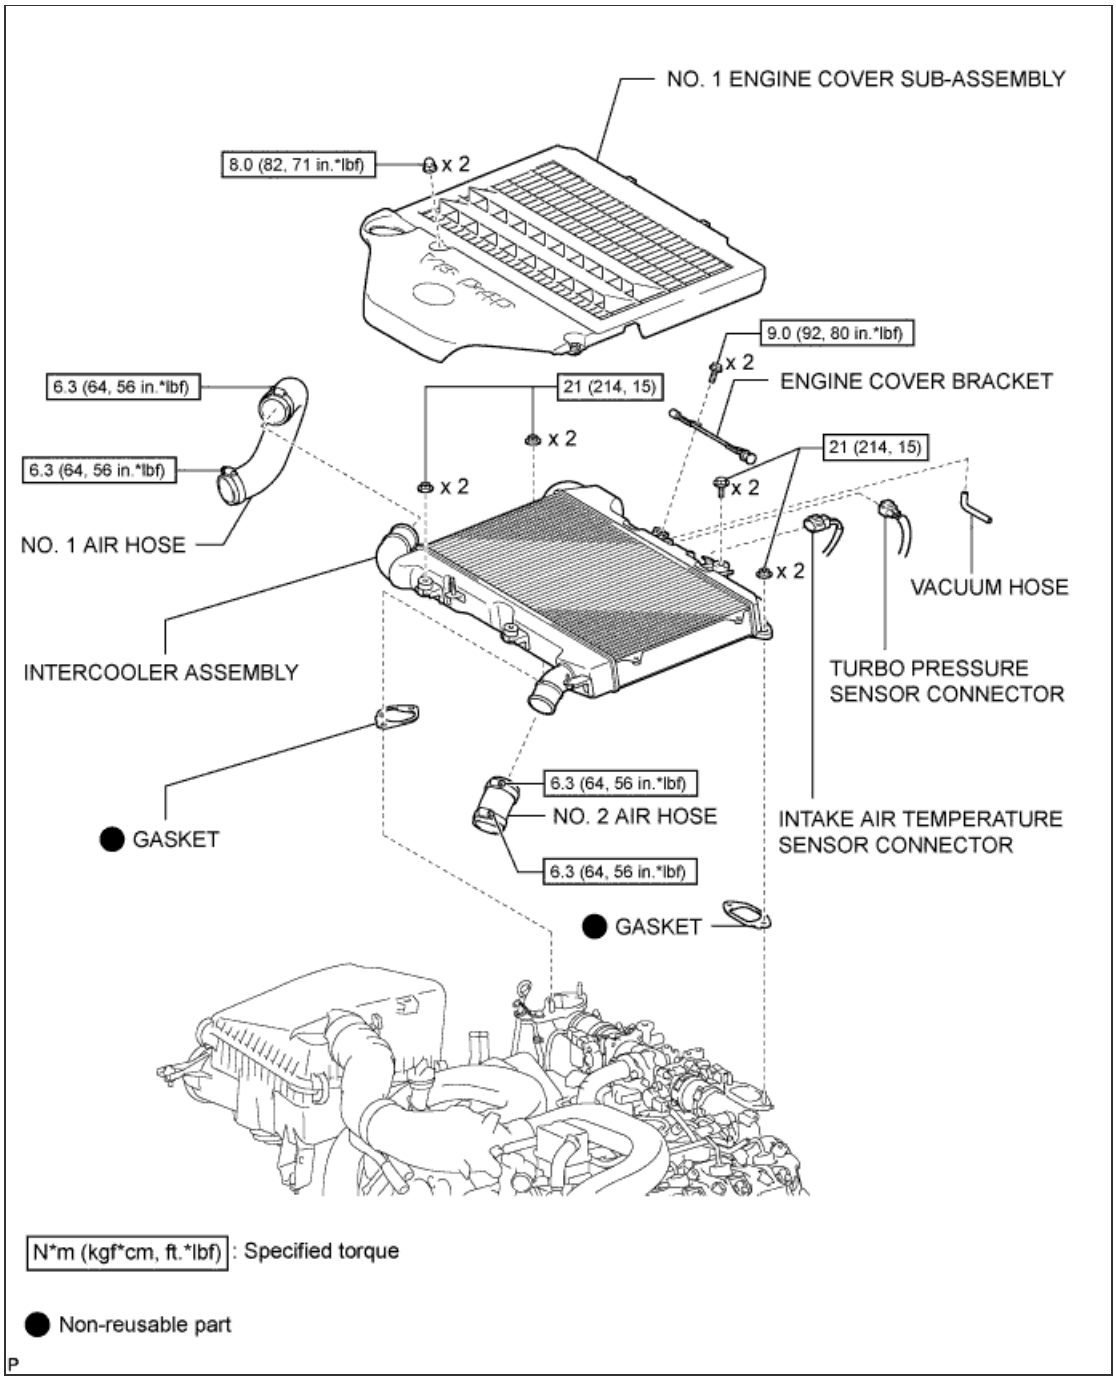
Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

66. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

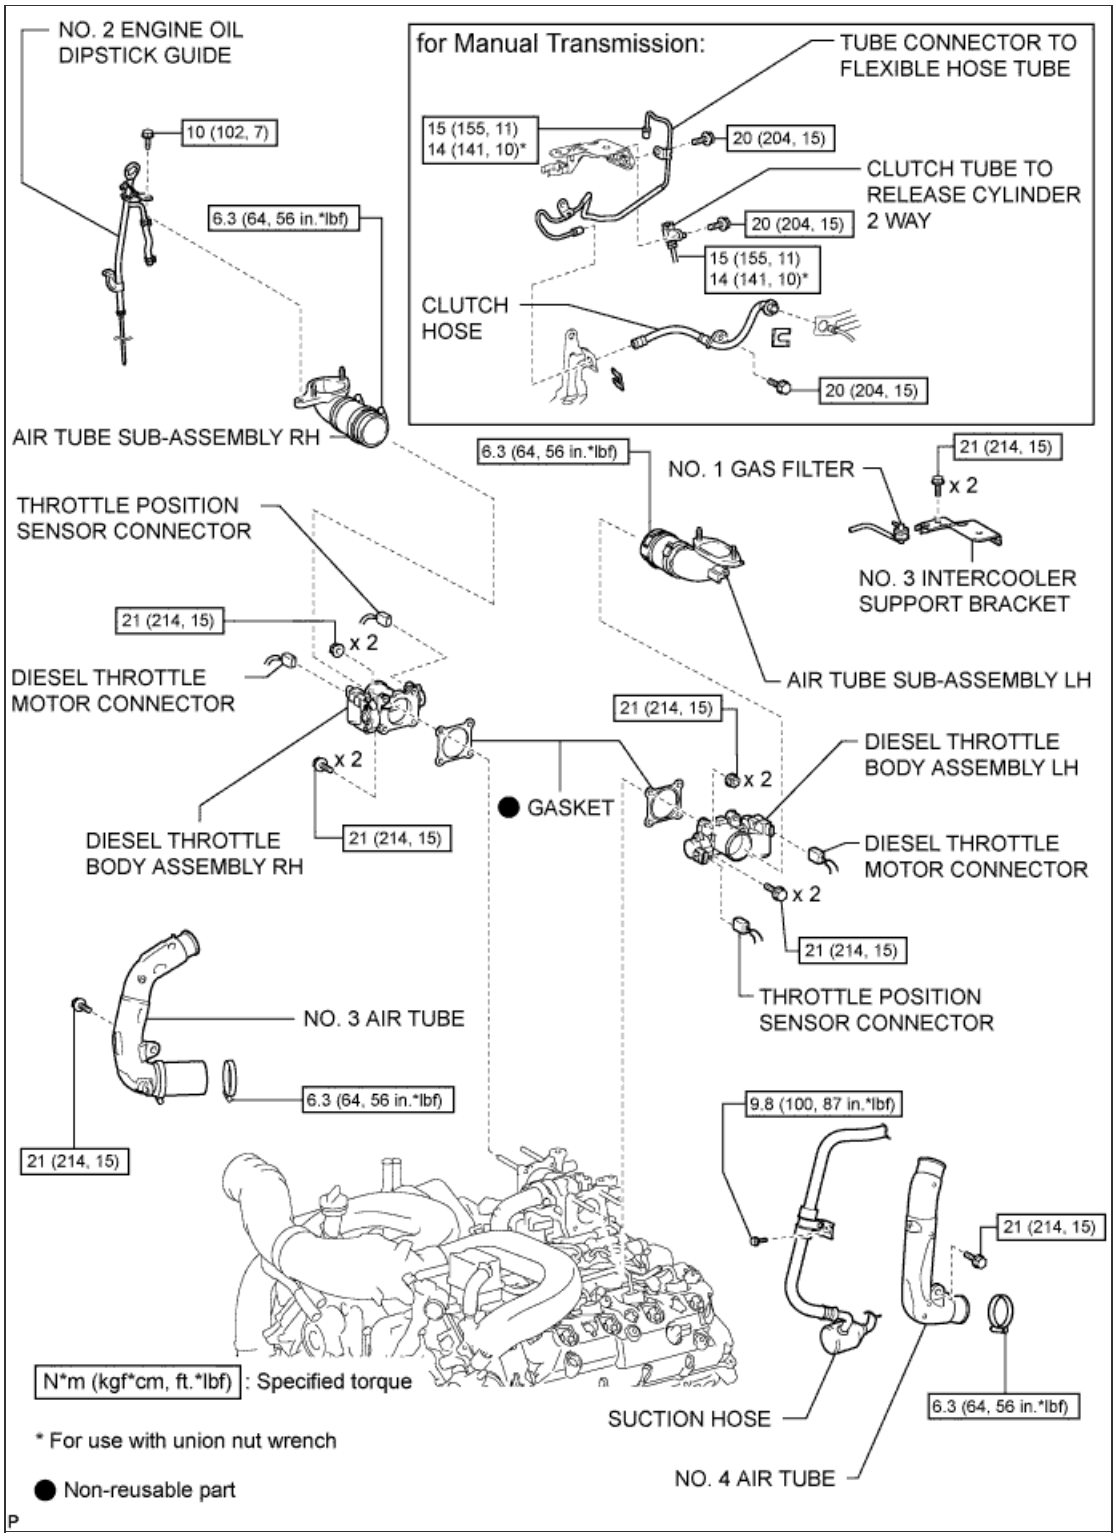
b. Install the 3 bolts and screw.





67. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:



Use the same procedures described for the LH side.

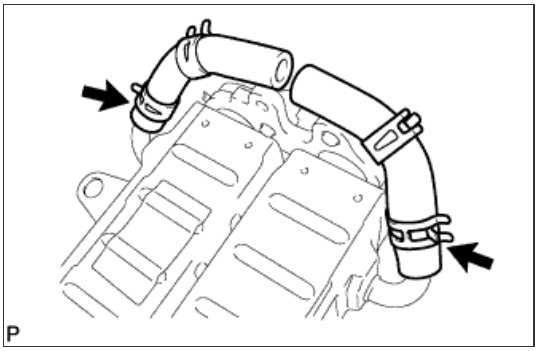
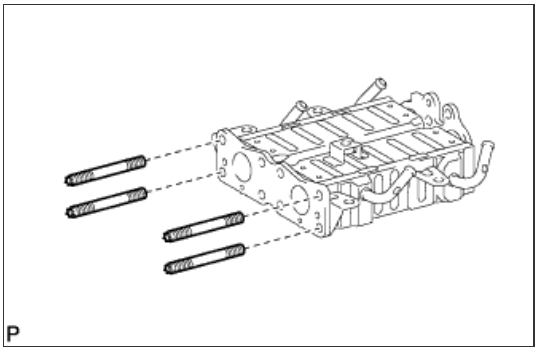
1. REMOVE NO. 1 AND NO. 2 EGR VALVE ASSEMBLIES

a. Remove the No. 1 and No. 2 EGR valve assemblies (Click here).



2. REMOVE NO. 3 WATER BY-PASS PIPE

a. Remove the bolt and disconnect the 2 hoses to remove the water by-pass pipe.

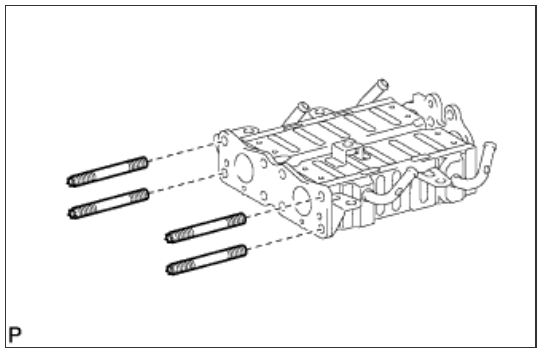


3. REMOVE NO. 8 WATER BY-PASS HOSE

a. Remove the 2 hoses.

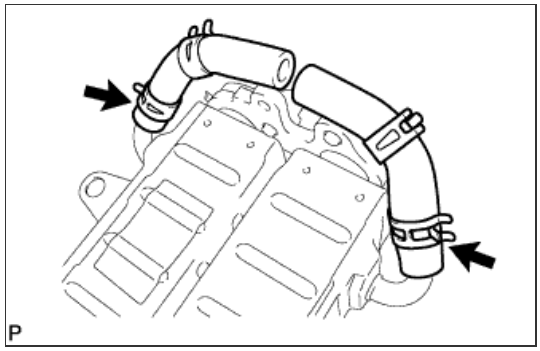
4. REMOVE STUD BOLT

a. Using an E6 "TORX" socket wrench, remove the 4 stud bolts from the EGR cooler.



for Preparation Click here

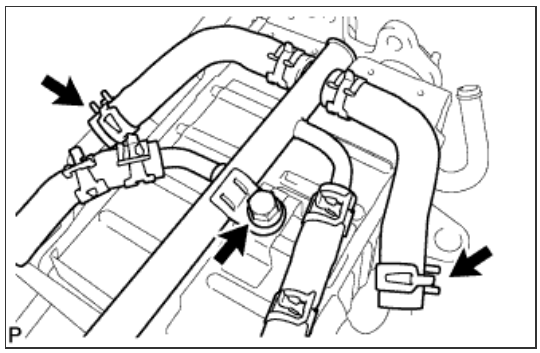
1. INSTALL STUD BOLT



a. Using an E6 "TORX" socket wrench, install the 4 stud bolts to the EGR cooler.

Torque:
6.0 N*m{ 61 kgf*cm , 53 in.*lbf }

2. INSTALL NO. 8 WATER BY-PASS HOSE

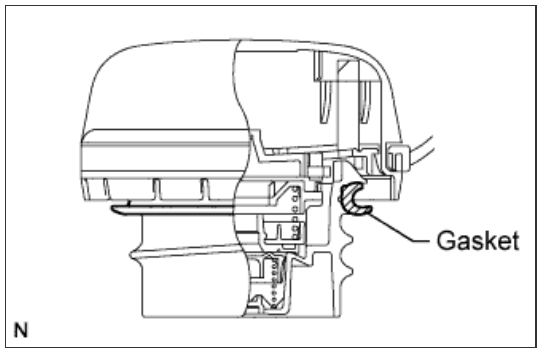


a. Install the 2 hoses.

3. INSTALL NO. 3 WATER BY-PASS PIPE

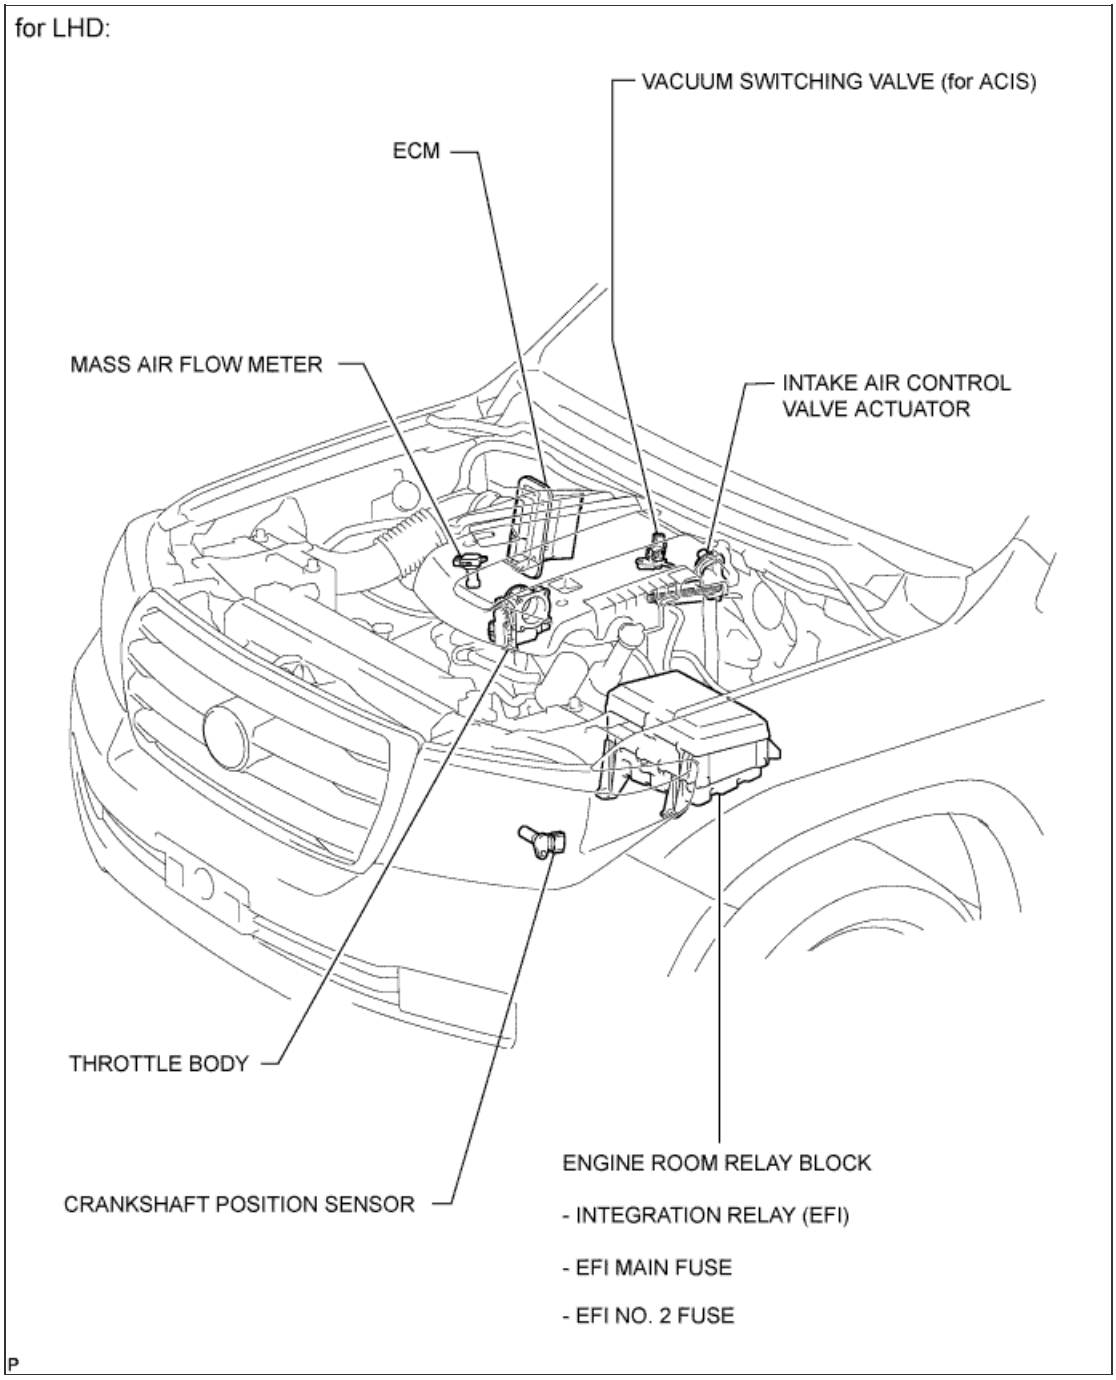
a. Connect the 2 hoses and install the water by-pass pipe with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



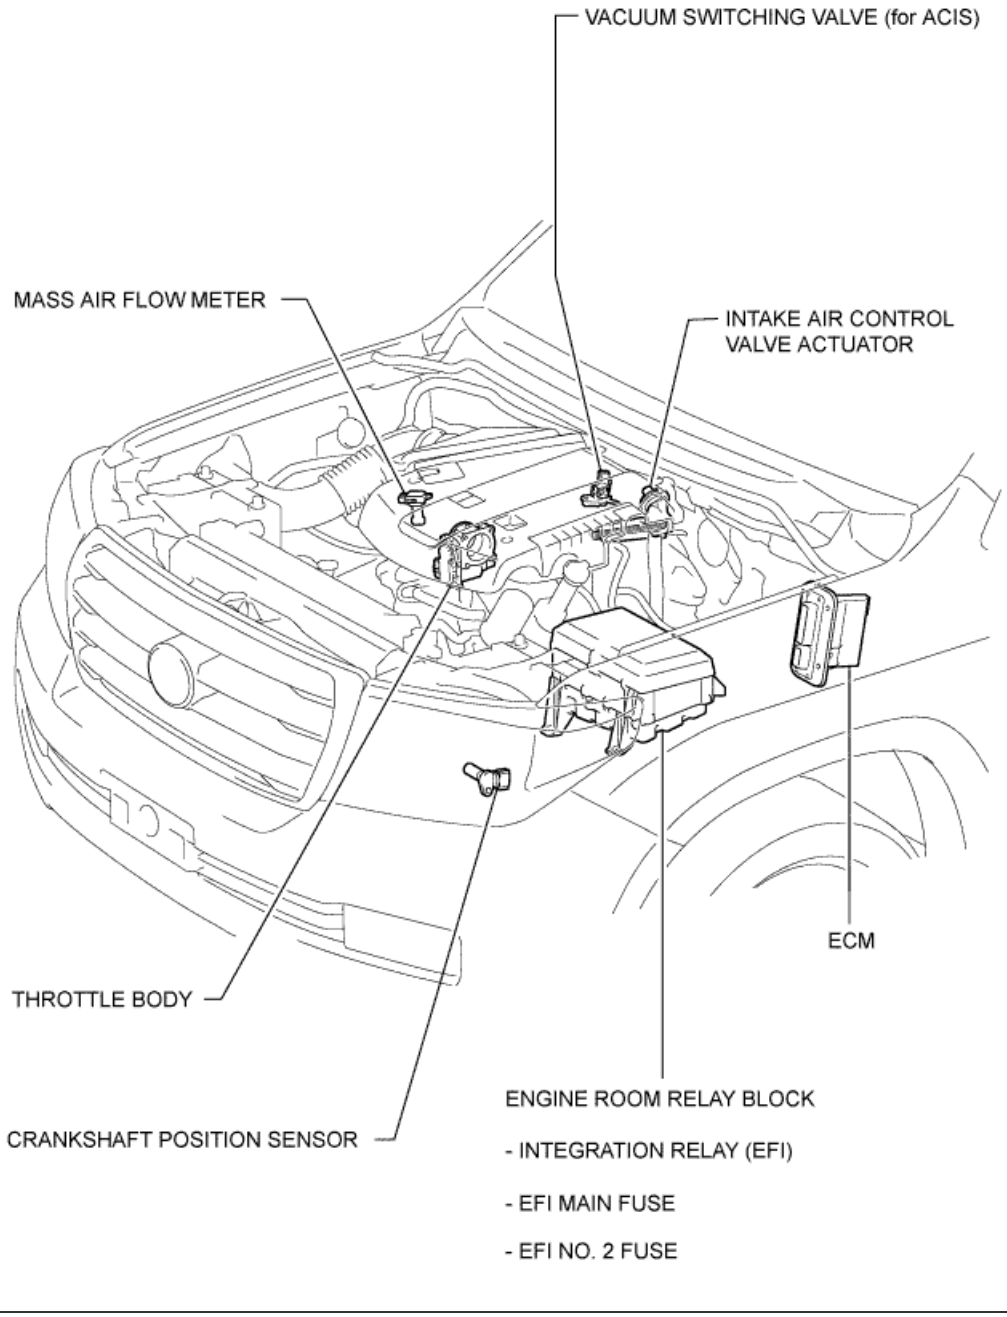
4. INSTALL NO. 1 AND NO. 2 EGR VALVE ASSEMBLIES

a. Install the No. 1 and No. 2 EGR valve assemblies (Click here).



for Preparation Click here

1. INSPECT FUEL TANK CAP ASSEMBLY



a. Visually check that the cap and gasket are not deformed or damaged.
If the result is not as specified, replace the fuel tank cap assembly or gasket.

1. CHECK INTAKE AIR CONTROL FUNCTION

a. Remove the V-bank cover.

b. Start the engine.

c. Check that the VSV (for ACIS) is ON (seal) under either of the following conditions below.

- Depressing the accelerator pedal to a throttle valve opening angle of 60°.
- Racing the engine above 4700 rpm.

NOTICE:

Do not increase the engine speed to 5400 rpm or more.

d. Check that the VSV (for ACIS) is OFF (vent) under either of the following conditions below.

- The engine is idling.
- Releasing the accelerator pedal while under the VSV (for ACIS) ON condition.

e. Connect the intelligent tester to the DLC3.

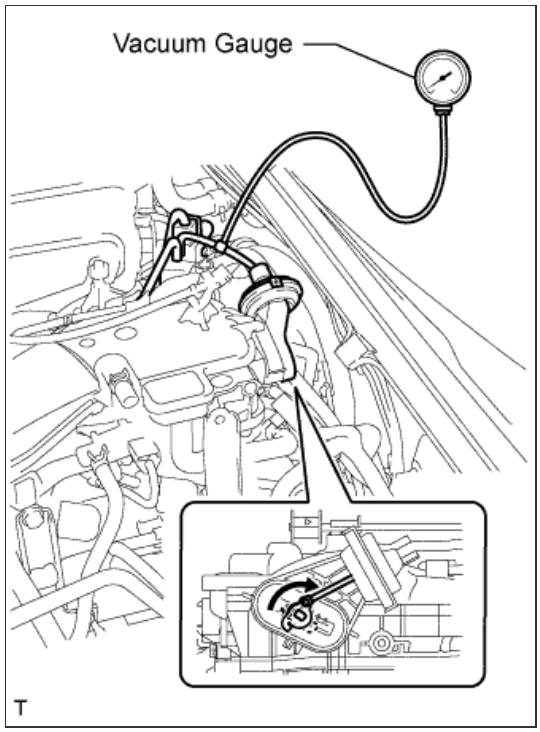
f. Perform the Active Test, and then check that the actuator rod operates.
If the result is not as specified, inspect the intake air control valve, vacuum tank and VSV (for ACIS) for normal operation. Replace malfunctioning parts as necessary.

g. Install the V-bank cover.

2. CHECK INTAKE AIR CONTROL VALVE OPERATION

a. Remove the V-bank cover.

b. Using a 3-way connector, connect a vacuum gauge to the actuator hose.

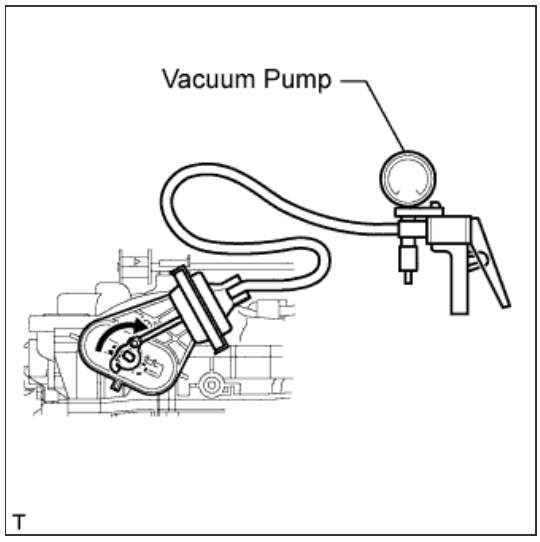


c. Start the engine.

d. While the engine is idling, check that the vacuum gauge needle momentarily fluctuates up to approximately 40 kPa (299 mmHg, 11.8 in.Hg) (the actuator rod is pulled out).

e. Fully depress the accelerator pedal, and check that the vacuum gauge needle points to 0 kPa (0 mmHg, 0 in.Hg) (the actuator rod is returned).

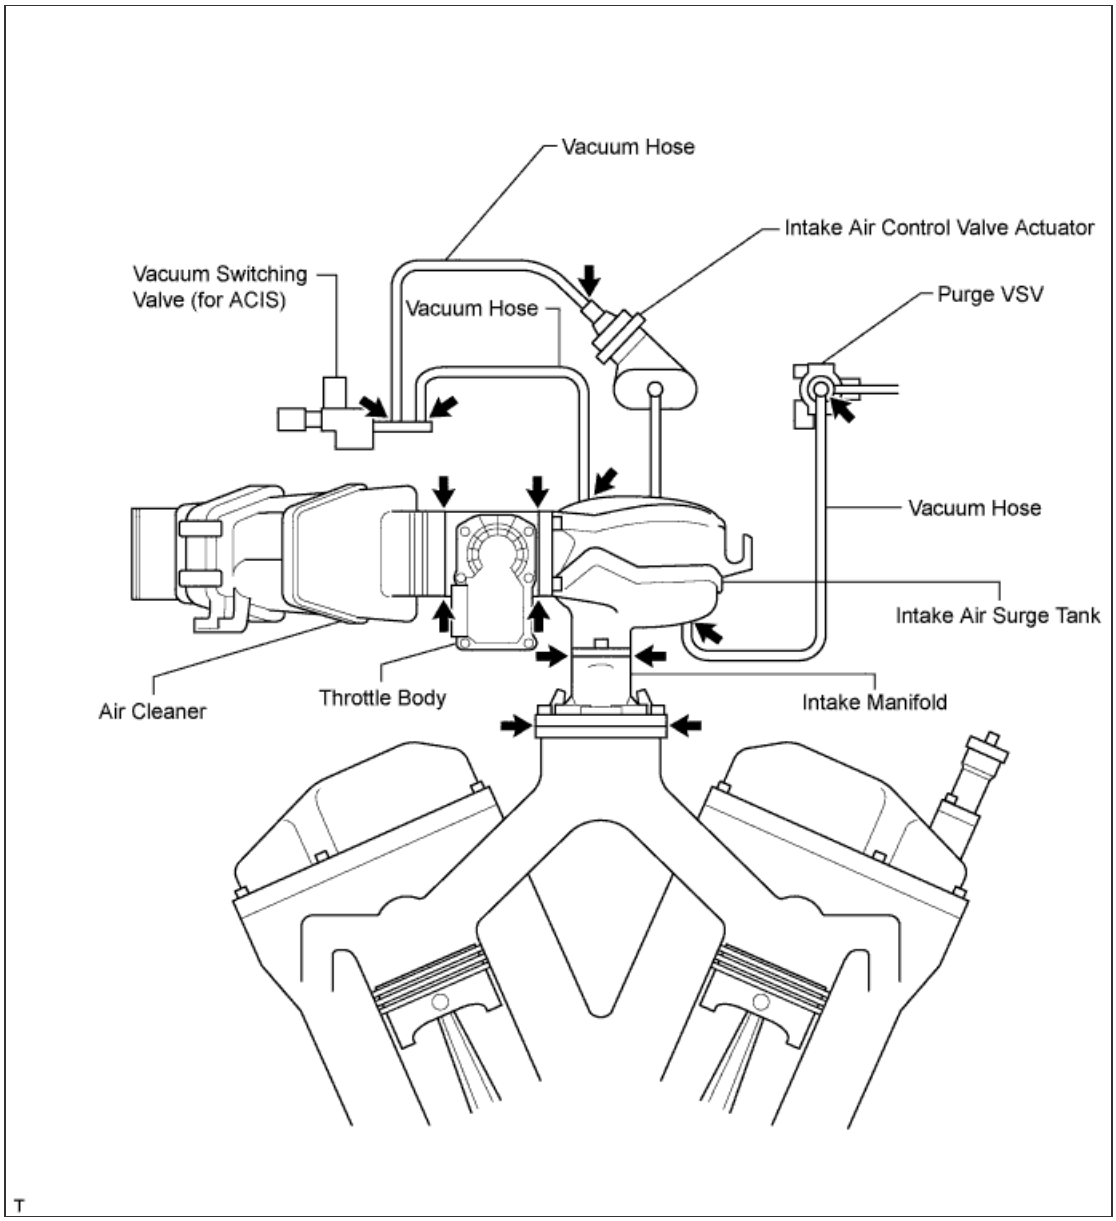
f. Remove the vacuum gauge, and connect the vacuum hose to the actuator.



g. Install the V-bank cover.

3. INSPECT INTAKE AIR CONTROL VALVE

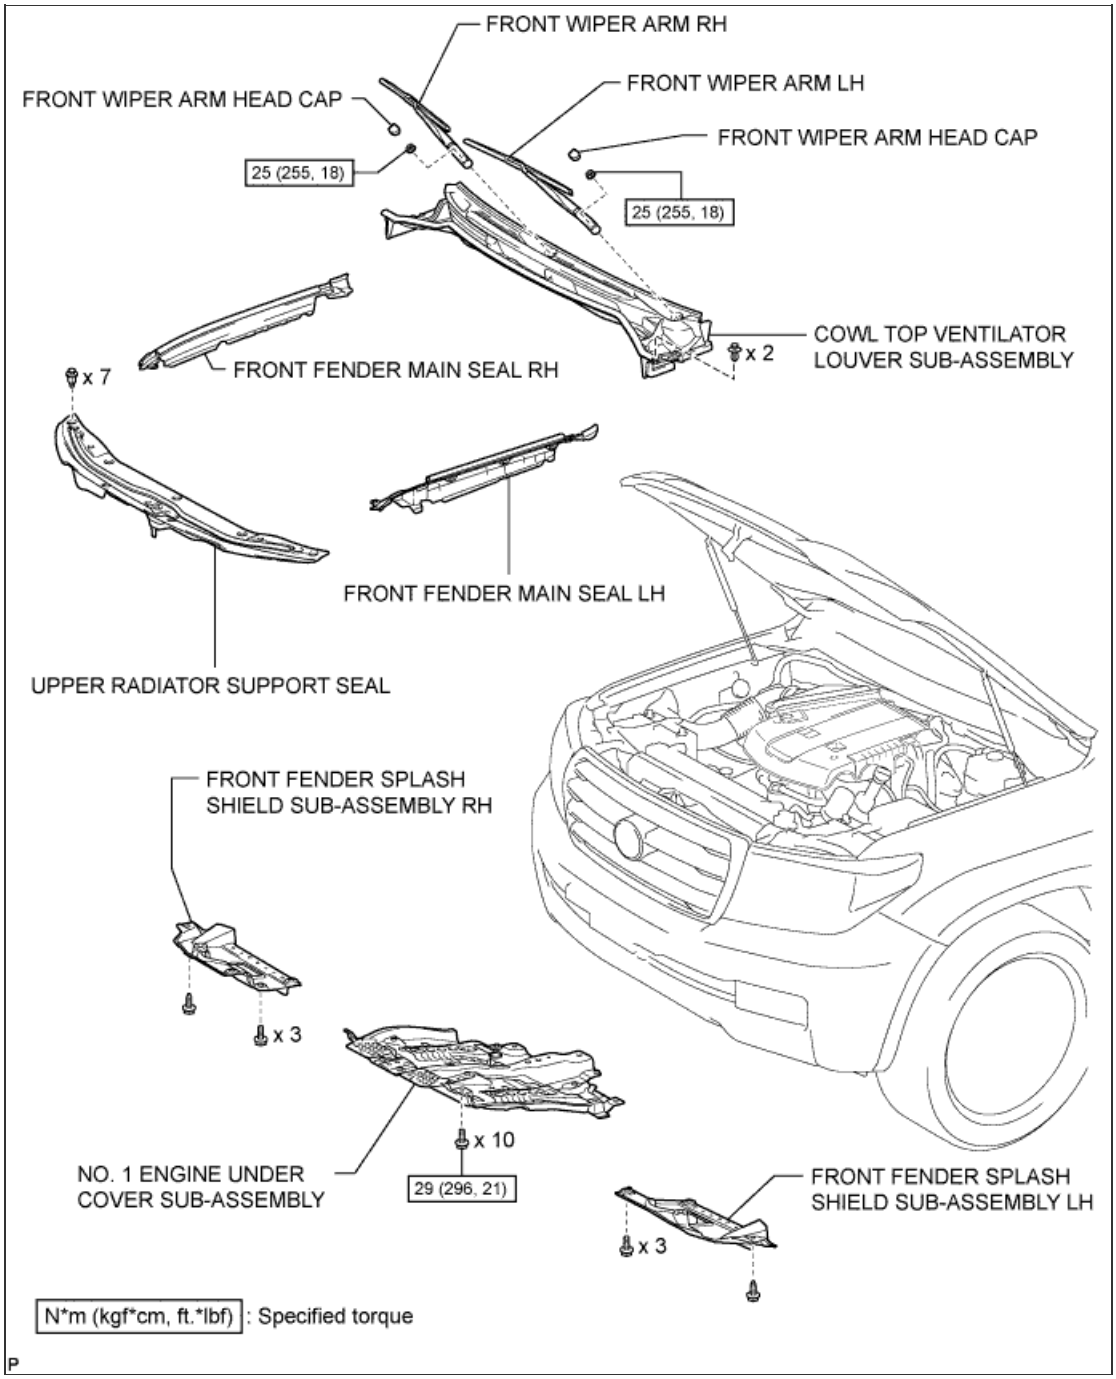
a. Inspect the diaphragm.



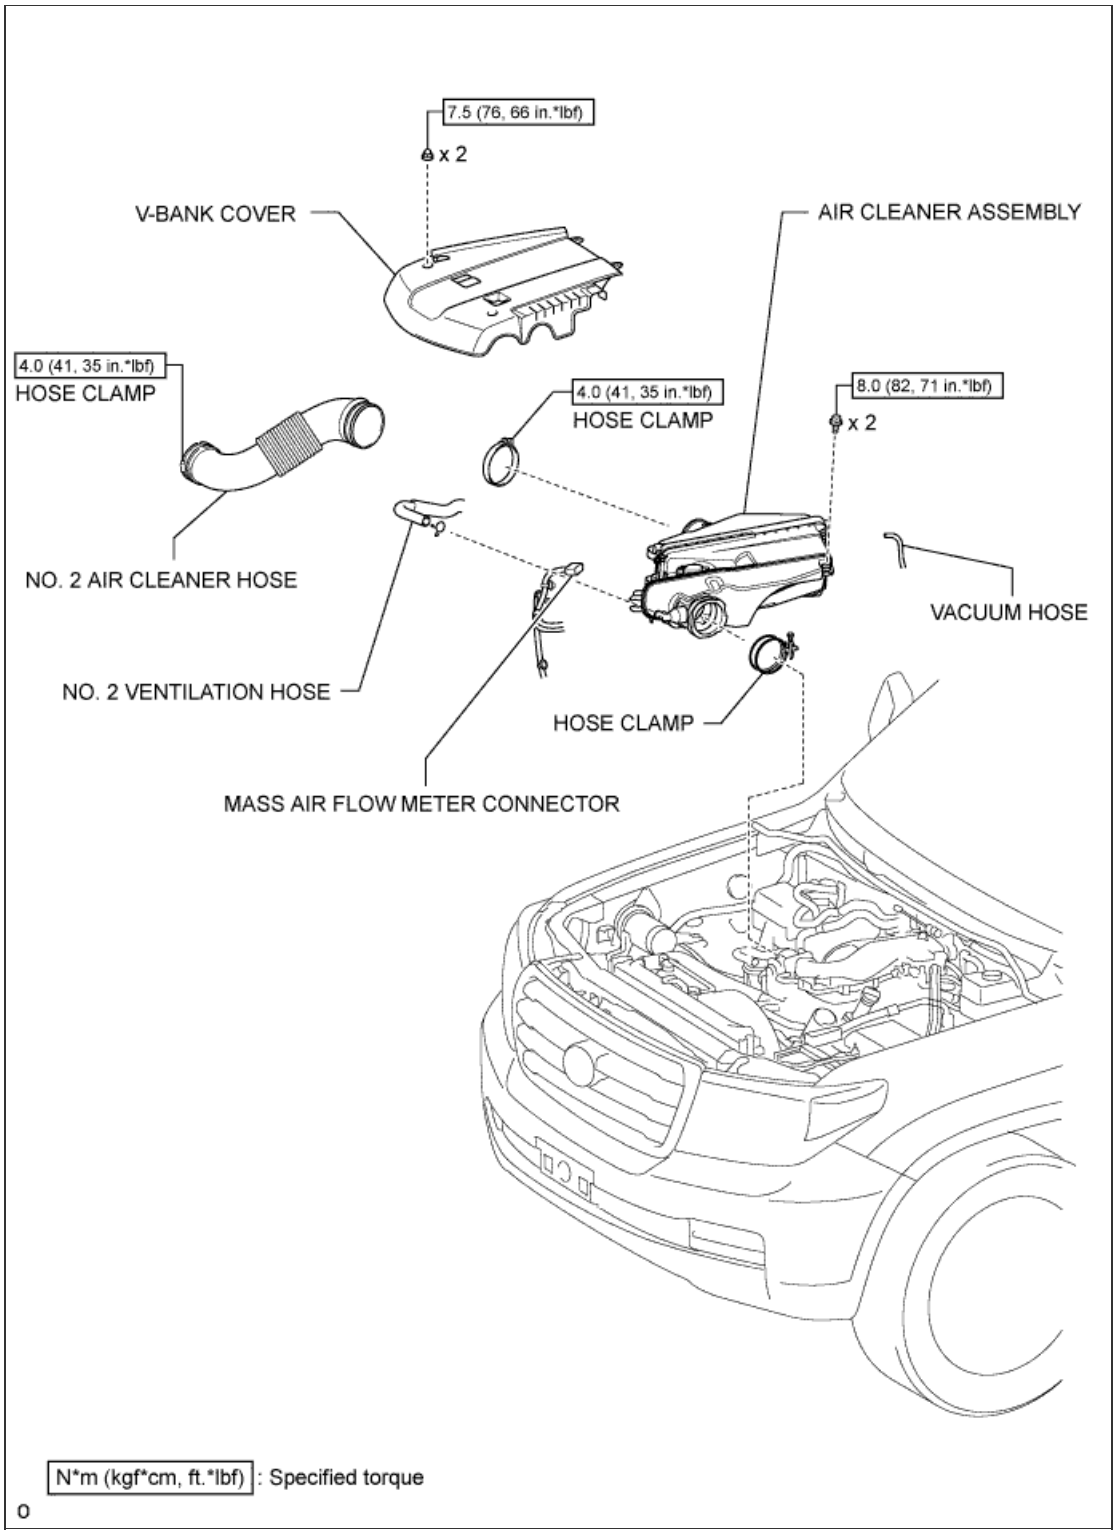
i. Using a vacuum pump, apply a vacuum of 27 kPa (200 mmHg, 7.85 in.Hg). Check that the lever moves.
If the result is not as specified, replace the intake air surge tank.

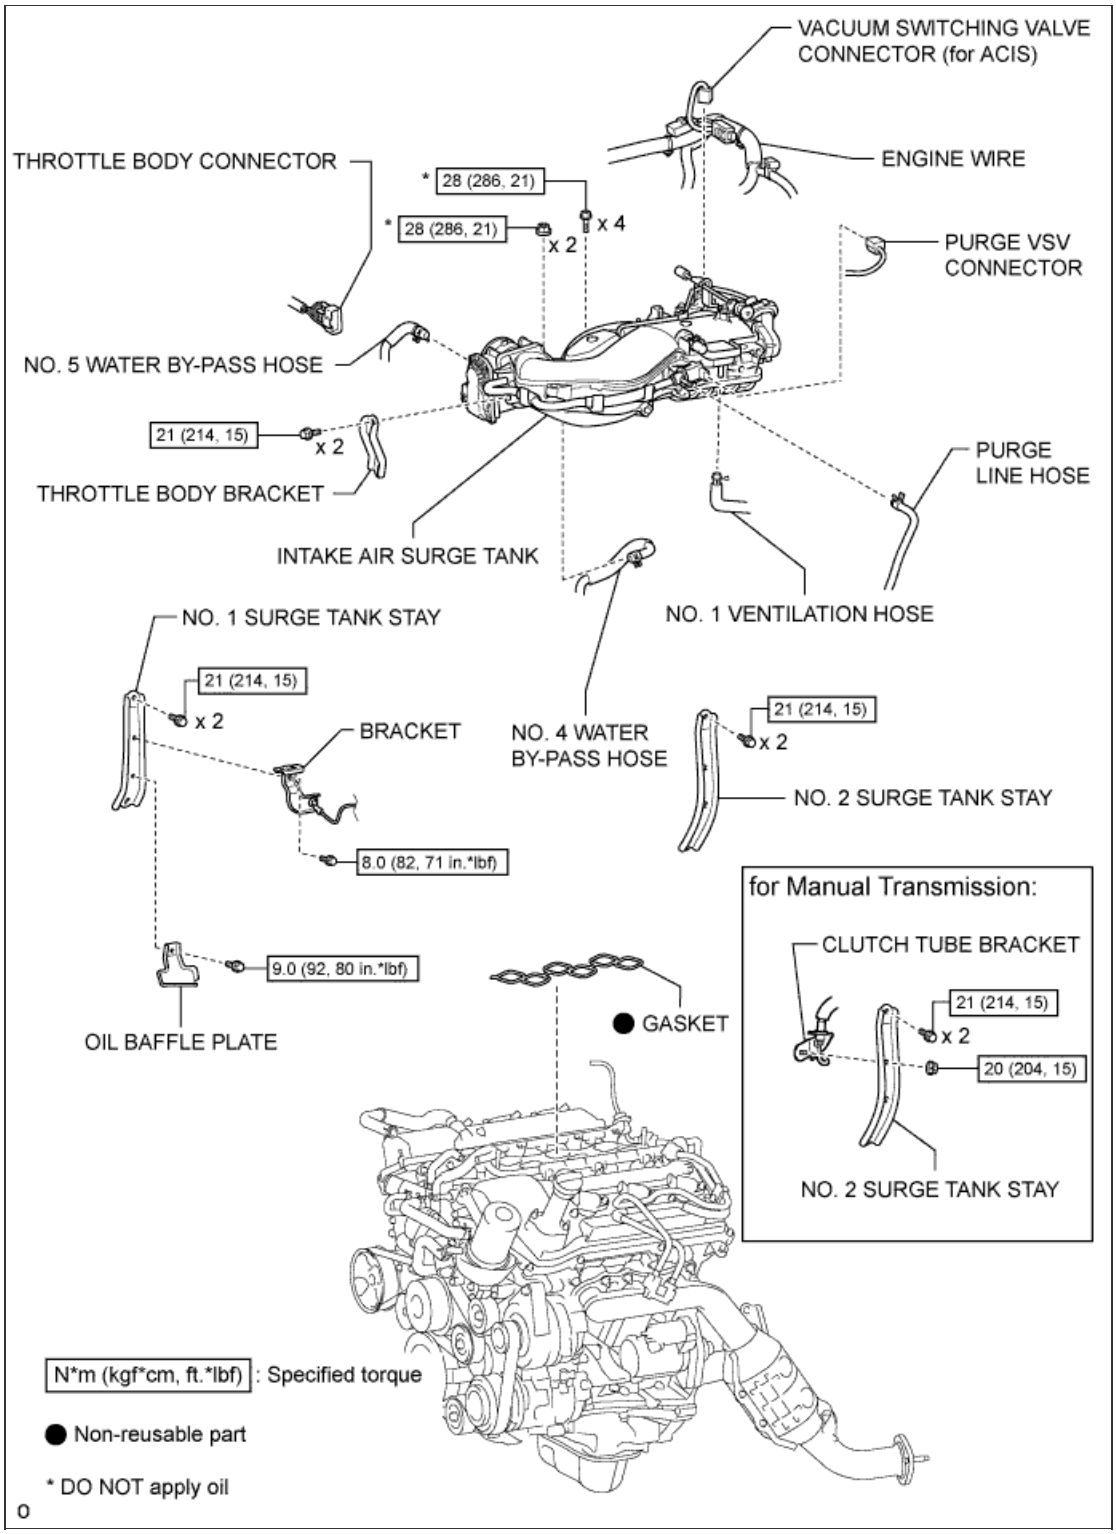
4. CHECK AIR INDUCTION SYSTEM

HINT:

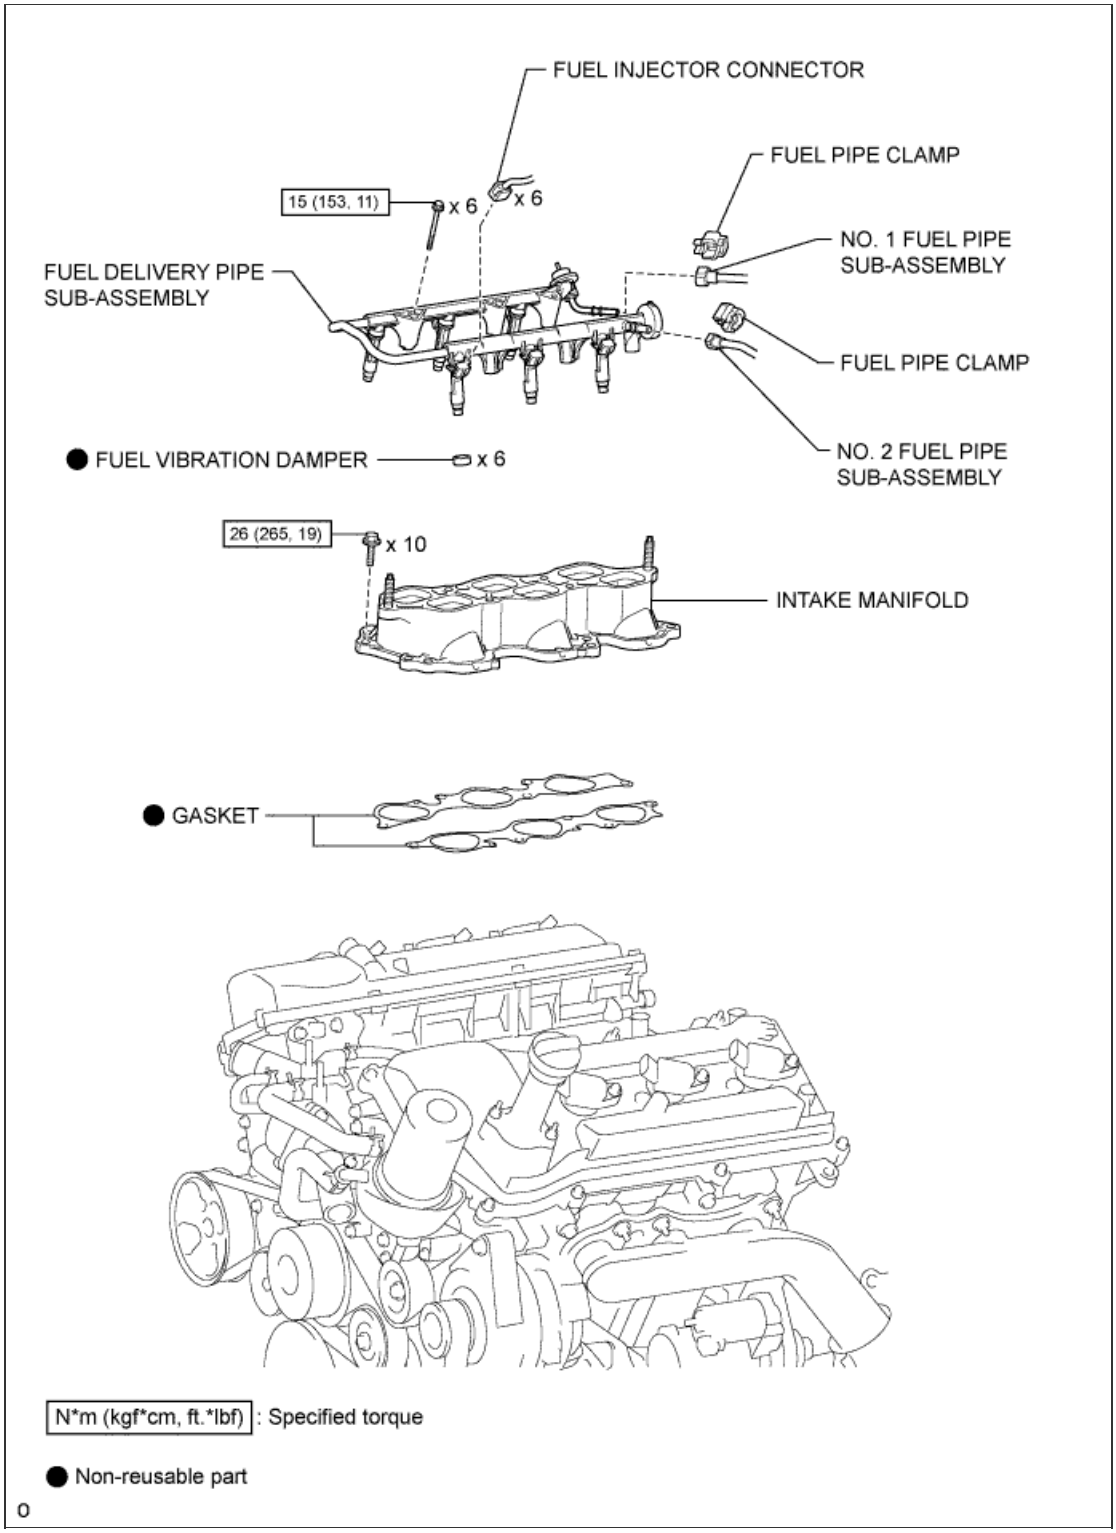


The illustration shows the areas that may draw in secondary air, which could lead to idling problems.





a. Check that the hoses are installed correctly.



b. Check for cracks, etc. in the hoses.

for Preparation Click here

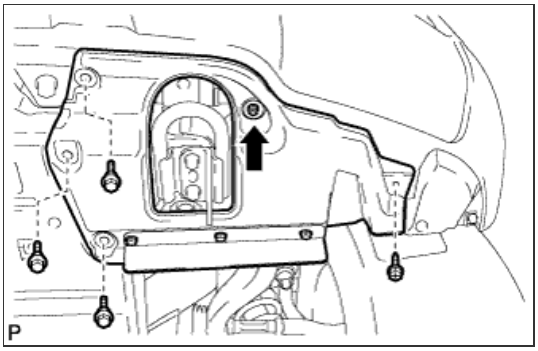
1. DISCHARGE FUEL SYSTEM PRESSURE

a. Discharge the fuel system pressure (Click here).

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL



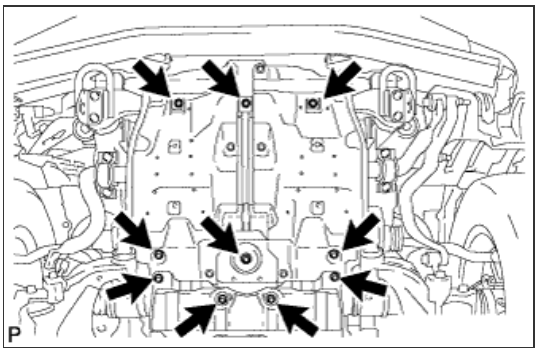
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

3. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and screw.

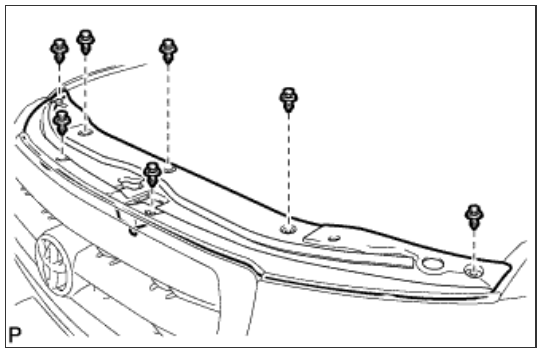
b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



4. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.



5. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and under cover.

6. REMOVE UPPER RADIATOR SUPPORT SEAL

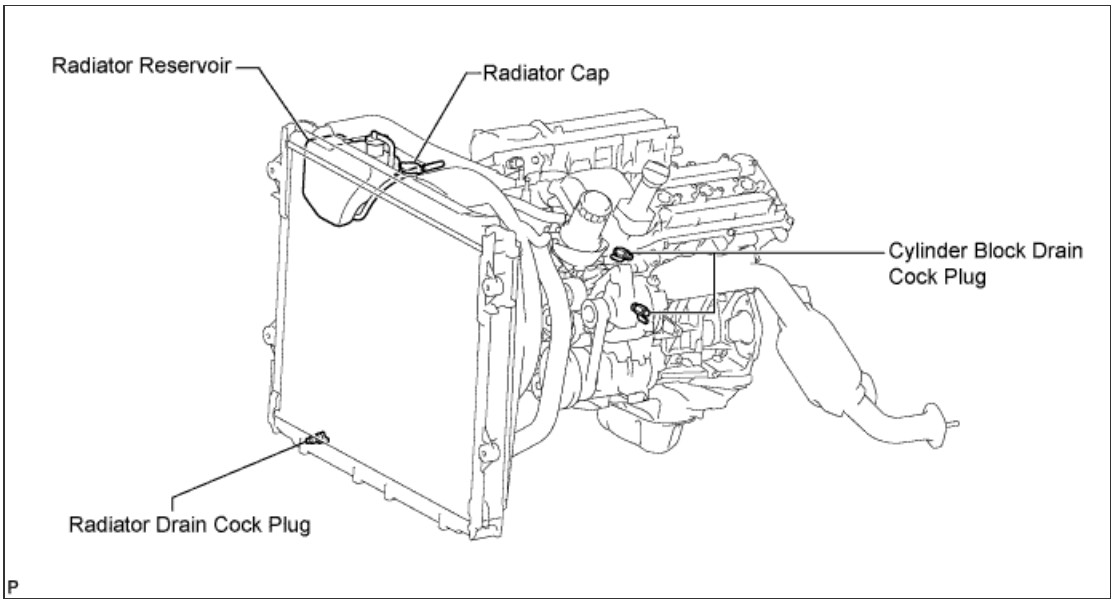
a. Remove the 7 clips and radiator support seal.

7. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Loosen the radiator drain cock plug and 2 cylinder block drain cock plugs.



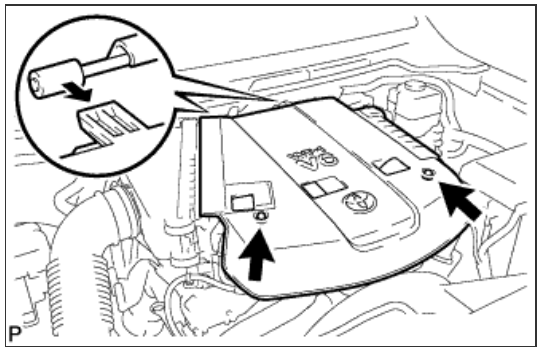
b. Remove the radiator cap. Then drain the coolant.

HINT:

Collect the coolant in a container and dispose of it according to the regulations in your area.

c. Tighten the 2 cylinder block drain cock plugs.

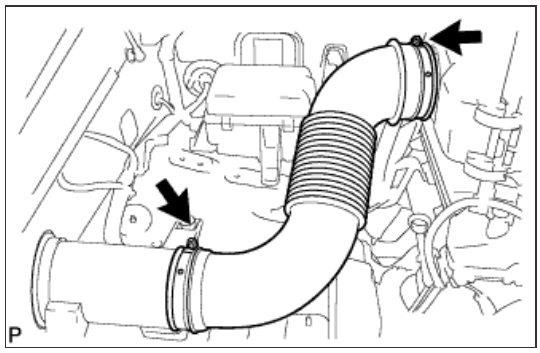
Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }



d. Tighten the radiator drain cock plug by hand.

8. REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

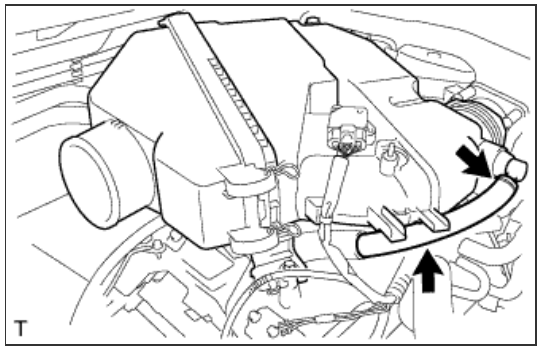
a. Remove the cowl top ventilator louver (Click here).



9. REMOVE V-BANK COVER

a. Remove the 2 nuts and V-bank cover.

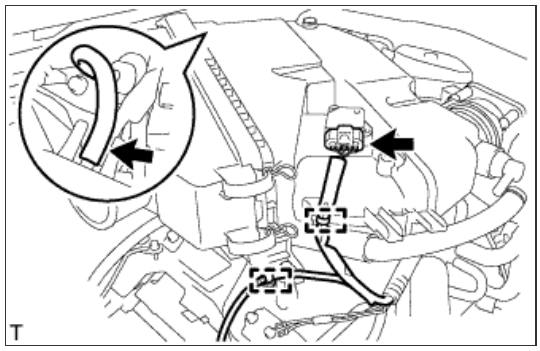
10. REMOVE NO. 2 AIR CLEANER HOSE



a. Loosen the 2 hose clamps and remove the air cleaner hose.

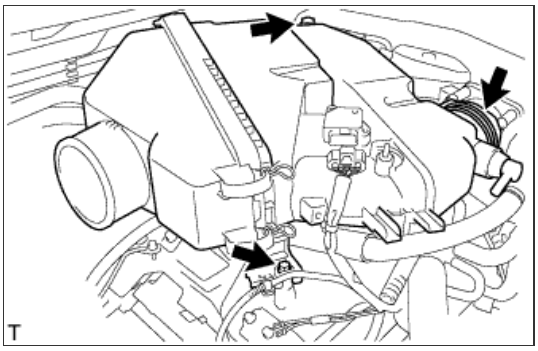
11. REMOVE AIR CLEANER ASSEMBLY

a. Disconnect the No. 2 ventilation hose.



b. Detach the hose clamp.

c. Disconnect the vacuum hose.

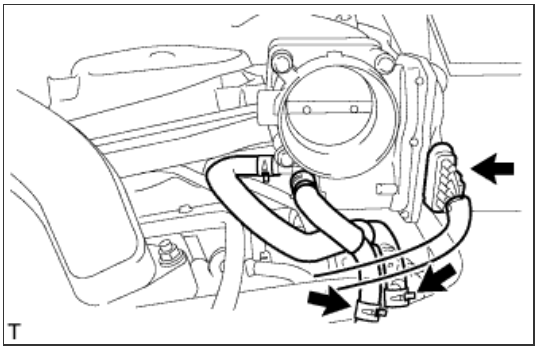


d. Disconnect the MAF meter connector.

e. Using a clip remover, detach the 2 wire harness clamps.

f. Loosen the hose clamp.

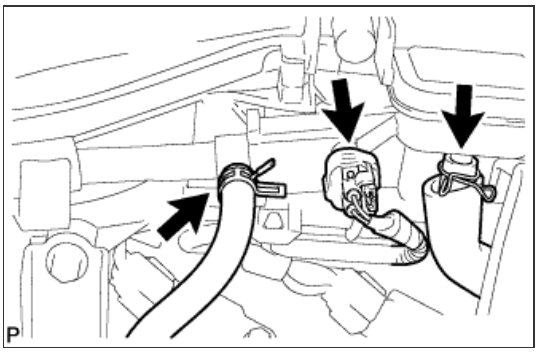
g. Remove the 2 bolts and air cleaner assembly.



12. REMOVE INTAKE AIR SURGE TANK

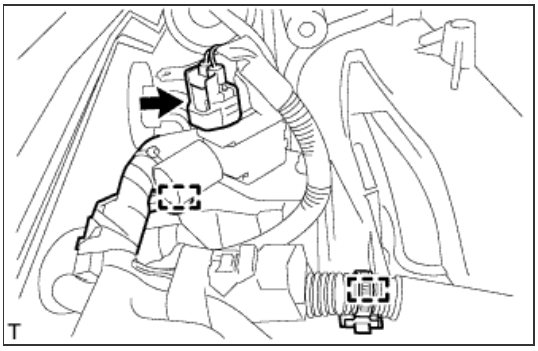
a. Disconnect the throttle body connector.

b. Disconnect the No. 4 water by-pass hose.



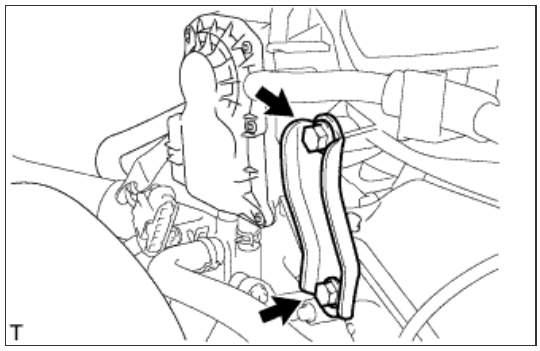
c. Disconnect the No. 5 water by-pass hose.

d. Disconnect the purge line hose.

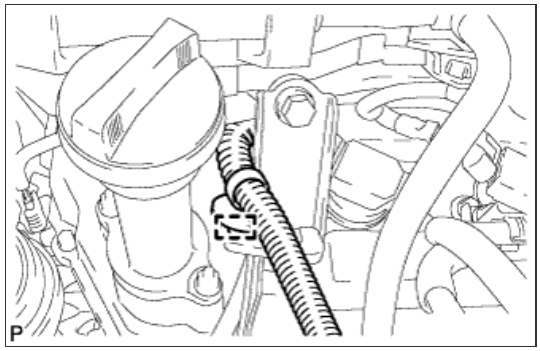


e. Disconnect the purge VSV connector.

f. Disconnect the No. 1 ventilation hose.

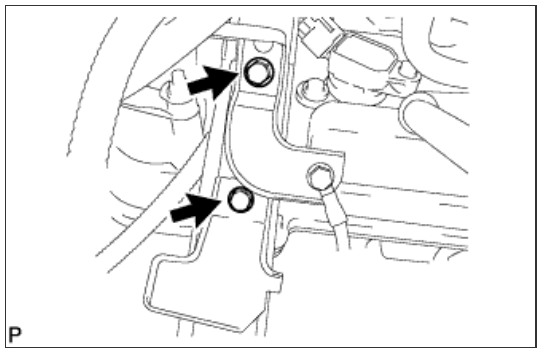


g. Disconnect the vacuum switching valve (for ACIS) connector.

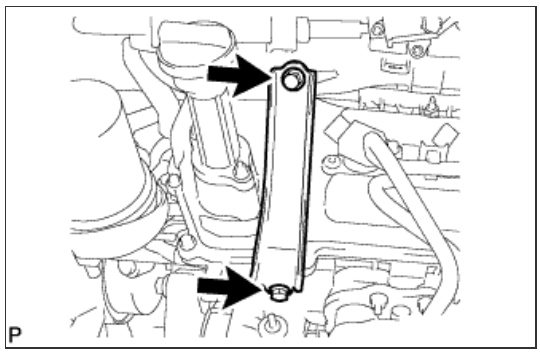


h. Using a clip remover, detach the 2 wire harness clamps.

i. Remove the 2 bolts and throttle body bracket.

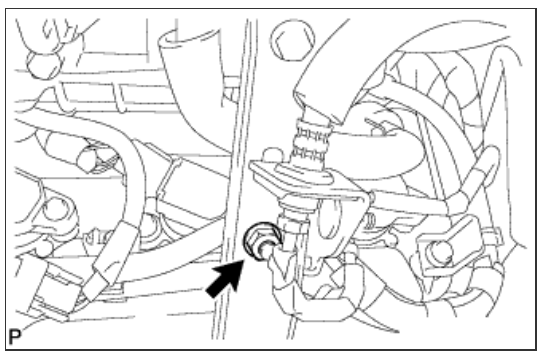


j. Using a clip remover, detach the wire harness clamp.

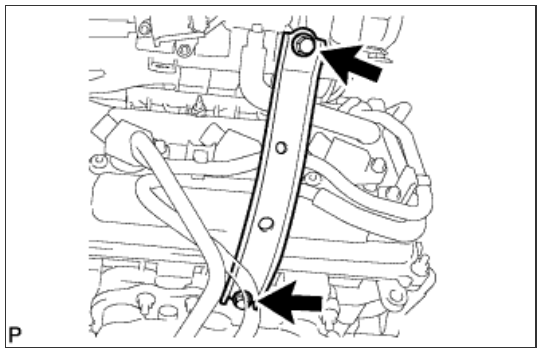


k. Remove the bolt and bracket from the No. 1 surge tank stay.

l. Remove the bolt and oil baffle plate.

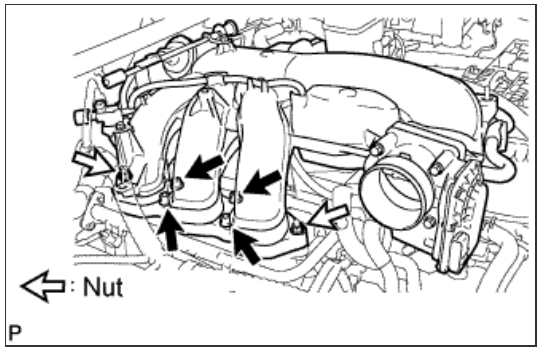


m. Remove the 2 bolts and No. 1 surge tank stay.



n. for Manual Transmission:

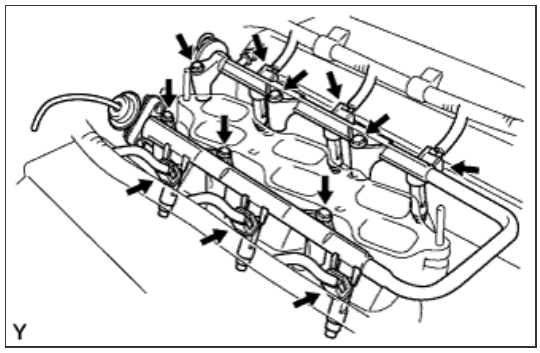
i. Remove the nut.



o. Remove the 2 bolts and No. 2 surge tank stay.

p. Remove the 2 nuts.

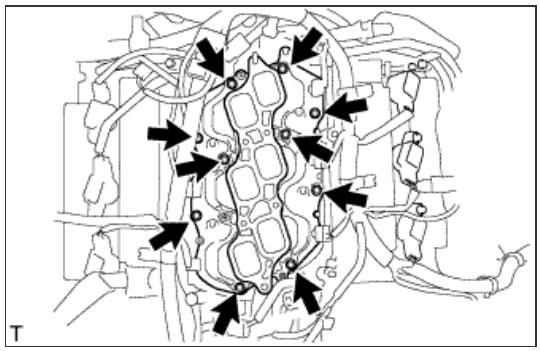
q. Using an 8 mm hexagon wrench, remove the 4 bolts. Then remove the intake air surge tank and gasket.



13. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY

a. Disconnect the 6 fuel injector connectors.

b. Remove the 6 bolts and fuel delivery pipe together with the 6 fuel injectors.



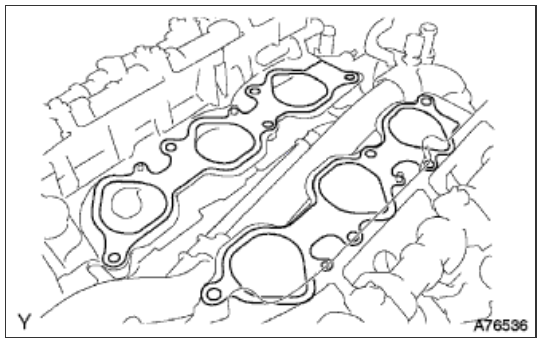
NOTICE:

Be careful not to drop the injectors when removing the fuel delivery pipe.

14. REMOVE INTAKE MANIFOLD

a. Remove the 10 bolts, intake manifold and 2 gaskets.

for Preparation Click here



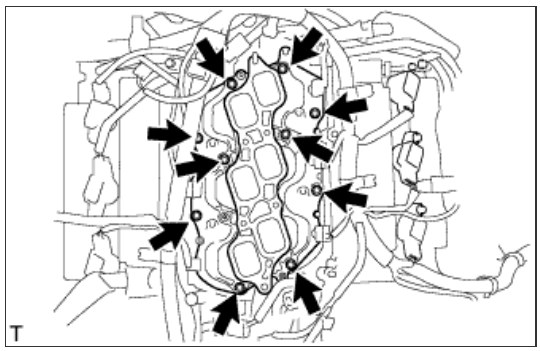
1. INSTALL INTAKE MANIFOLD

a. Set a new gasket on each cylinder head.

NOTICE:

- **Align the port holes of the gasket and cylinder head.**
- **Be careful of the installation direction.**

b. Set the intake manifold on the cylinder heads.



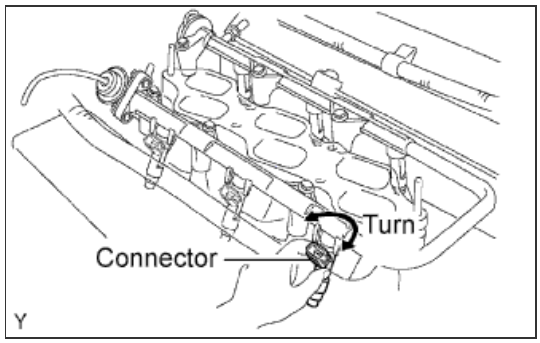
c. Install and uniformly tighten the 10 bolts in several passes.

Torque:
26 N*m{ 265 kgf*cm , 19 ft.*lbf }

HINT:

Tighten the inner installation bolts of the intake manifold before tightening the outer bolts.

2. INSTALL FUEL DELIVERY PIPE SUB-ASSEMBLY



a. Place the fuel delivery pipe together with the 6 fuel injectors on the intake manifold.

b. Temporarily install the 6 bolts, which are used to hold the fuel delivery pipe, to the intake manifold.

c. Check that the fuel injectors rotate smoothly.

HINT:

If the fuel injectors do not rotate smoothly, replace the O-ring of any injector that does not rotate smoothly.

d. Position the fuel injector connectors facing outward.

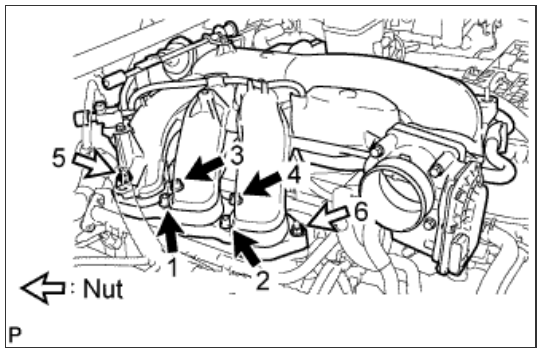
e. Tighten the 6 bolts, which are used to hold the fuel delivery pipe, to the intake manifold.

Torque:
15 N*m{ 153 kgf*cm , 11 ft.*lbf }

f. Connect the 6 fuel injector connectors.

3. INSTALL INTAKE AIR SURGE TANK

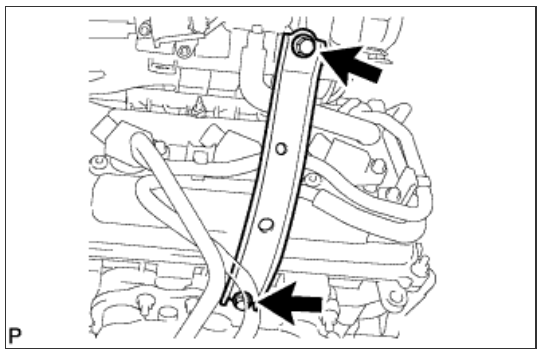
NOTICE:
Do not apply oil to the bolts and nuts listed below: :



Oil Application Prohibited Bolt/Nut

Bolt for surge tank and intake manifold
Nut for surge tank and intake manifold

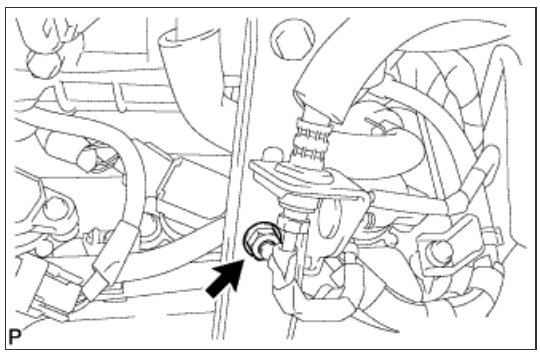
a. Install a new gasket to the intake air surge tank.



b. Using an 8 mm hexagon wrench, install the intake air surge tank with the 4 bolts and 2 nuts in the order shown in the illustration.

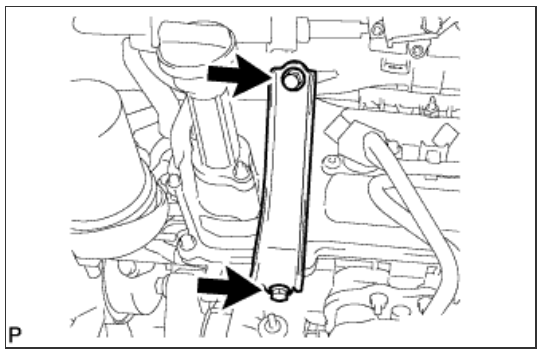
Torque:
28 N*m{ 286 kgf*cm , 21 ft.*lbf }

c. Install the No. 2 surge tank stay with the 2 bolts.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

d. for Manual Transmission:

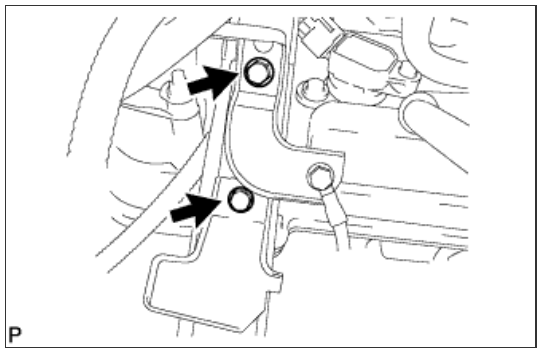


i. Install the bracket to the No. 2 surge tank stay with the nut.

Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

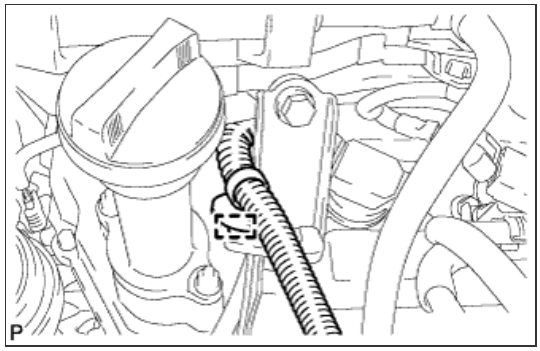
e. Install the No. 1 surge tank stay with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



f. Install the oil baffle plate with the bolt.

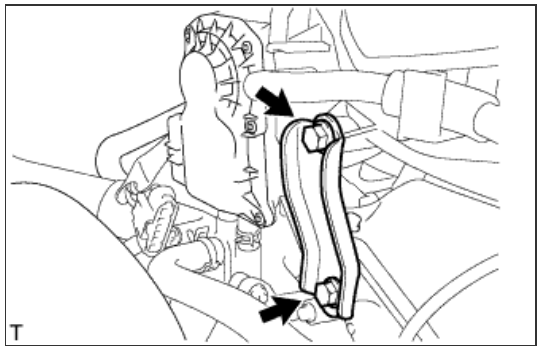
Torque:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }



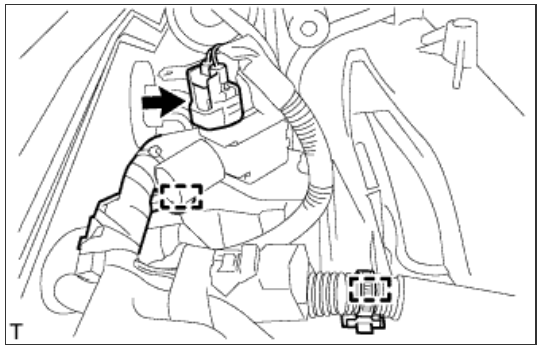
g. Install the bracket to the No. 1 surge tank stay with the bolt.

Torque:

8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



h. Attach the wire harness clamp.

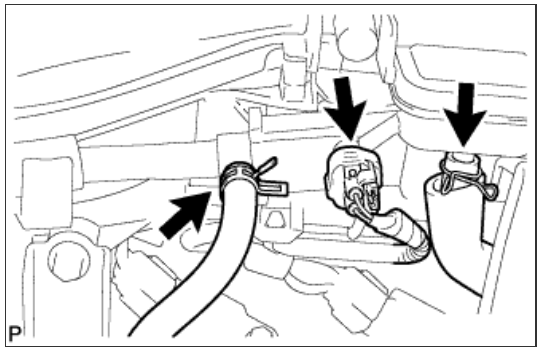


i. Install the throttle body bracket with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

j. Connect the vacuum switching valve (for ACIS) connector.

k. Attach the 2 wire harness clamps.



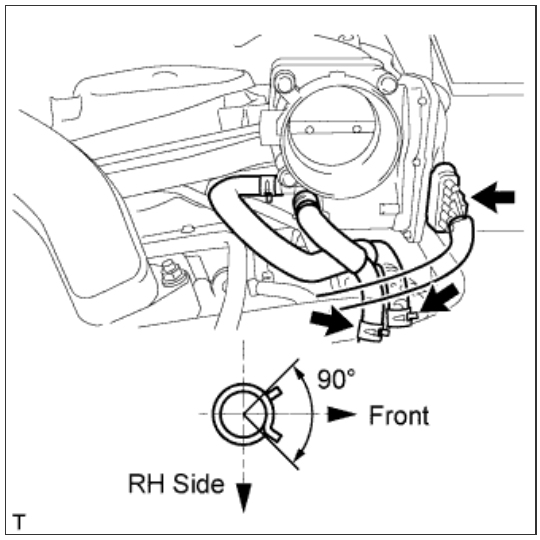
l. Connect the No. 1 ventilation hose.

m. Connect the purge VSV connector.

n. Connect the purge line hose.

HINT:

Connect the hose so that the direction of the hose clamp is as indicated in the illustration.



o. Connect the No. 4 and No. 5 water by-pass hose.

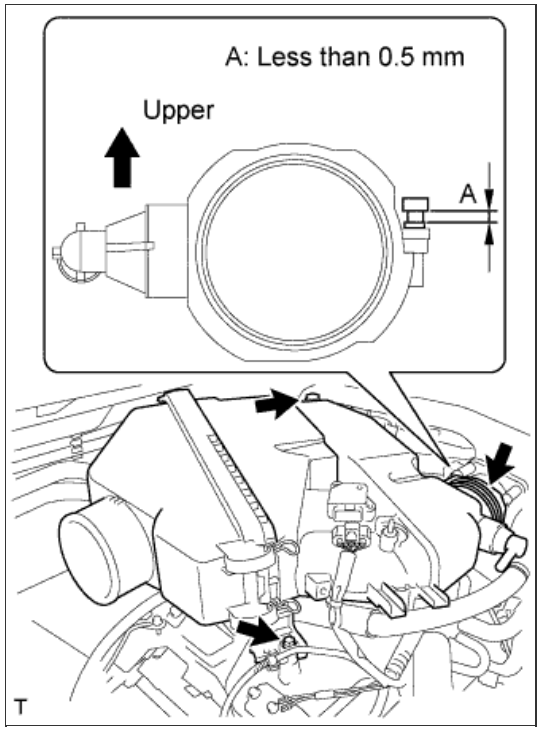
HINT:

Connect the hoses so that the direction of the hose clamps is as shown in the illustration.

p. Connect the throttle body connector.

4. INSTALL AIR CLEANER ASSEMBLY

a. Install the air cleaner assembly with the 2 bolts.

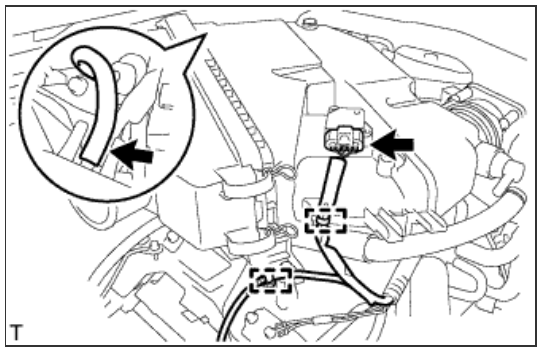


Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

b. Tighten the hose clamp.

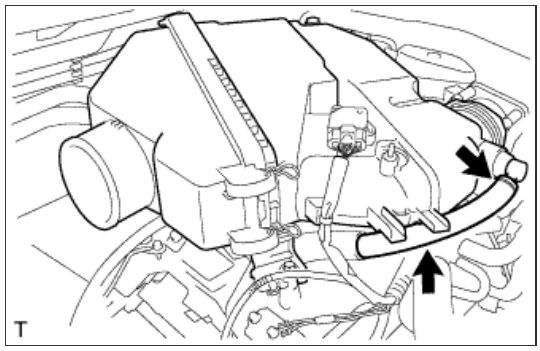
HINT:

Tighten the hose clamp until it reaches the specified protrusion height labeled A shown in the illustration.



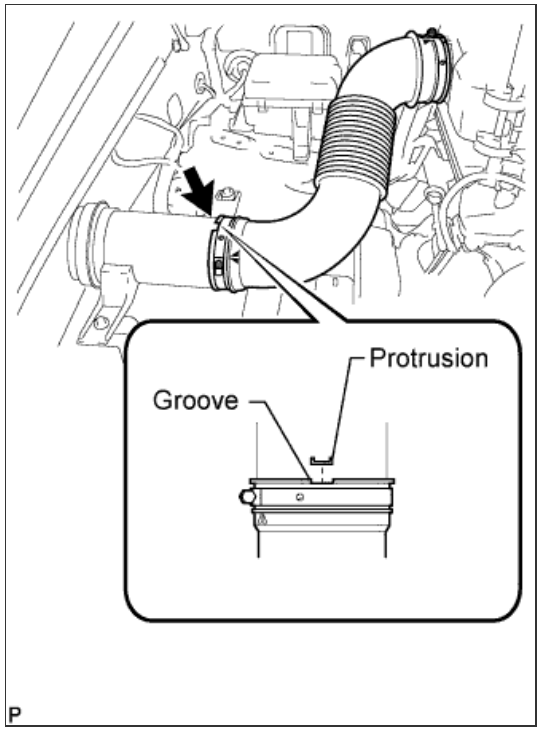
Standard protrusion height:
Less than 0.5 mm (0.0197 in.)

c. Connect the MAF meter connector.



d. Attach the 2 wire harness clamps.

e. Connect the vacuum hose.

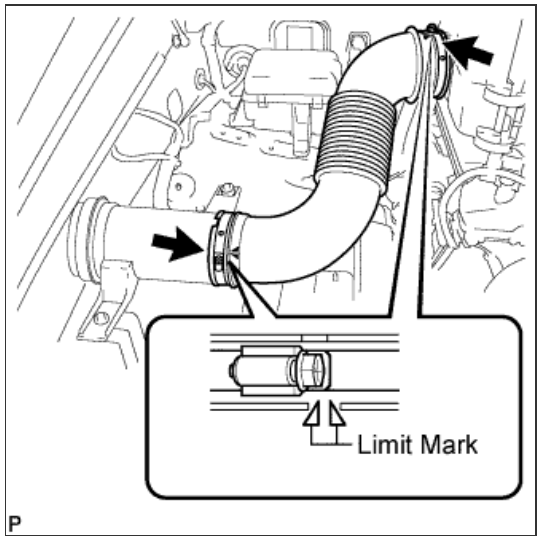


f. Attach the hose clamp.

g. Connect the No. 2 ventilation hose.

5. INSTALL NO. 2 AIR CLEANER HOSE

a. Align the protrusion of the pre-cleaner with the groove of the No. 2 air cleaner hose as shown in the illustration.



b. Tighten the 2 hose clamps.

Torque:
4.0 N*m{ 41 kgf*cm , 35 in.*lbf }

HINT:

Tighten the clamp until the end of the clamp band is within both limit marks.

6. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

7. ADD ENGINE COOLANT

a. Add engine coolant.

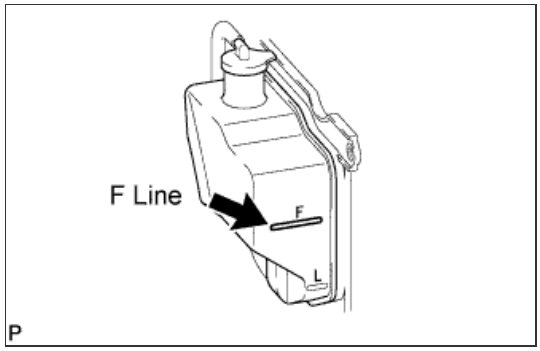
Standard Capacity:

Item		Specified condition
for Automatic transmission	w/o Rear Heater	11.2 liters (11.8 US qts, 9.9 Imp. qts)
	w/ Rear Heater	14.4 liters (15.2 US qts, 12.7 Imp. qts)
for Manual transmission	w/o Rear Heater	12.0 liters (12.7 US qts, 10.6 Imp. qts)
	w/ Rear Heater	14.6 liters (15.4 US qts, 12.8 Imp. qts)

NOTICE:

Do not substitute plain water for engine coolant.

HINT:



TO OTA vehicles are filled with TO OTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TO OTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the reservoir cap.

d. Press the No. 1 and No. 2 radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Set the air conditioning as follows while warming up the engine.

Item	Condition
Fan speed	Any setting except off
Temperature	Toward WARM
Air conditioning switch	Off

g. Start the engine and warm it up until the thermostat opens.

HINT:

The thermostat opening timing can be confirmed by pressing the No. 2 radiator hose by hand, and checking when the engine coolant starts to flow inside the hose.

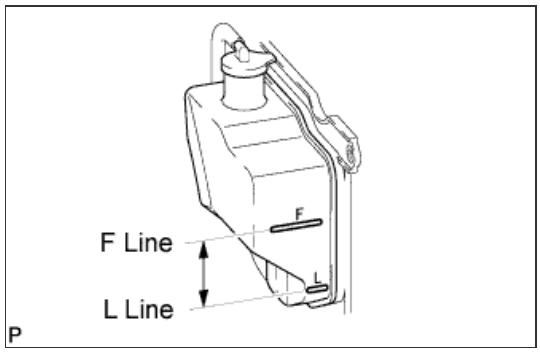
h. Maintain the engine speed at 2000 to 2500 rpm.

NOTICE:

- **Make sure that the radiator reservoir still has some coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**
- **Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the F line.**
- **Run the engine at 2000 rpm until the coolant level has stabilized.**

i. Press the No. 1 and No. 2 radiator hoses several times by hand to bleed air.

CAUTION:



- **Wear protective gloves. Heat areas on the parts may injure your hands.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the fan.**

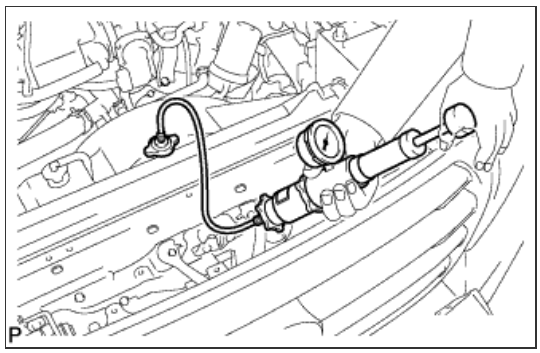
j. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

k. Check that the coolant level is between the F and L lines.
If the coolant level is below the L line, repeat all of the procedures above.
If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.

8. INSPECT FOR COOLANT LEAK



CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Fill the radiator with coolant and attach a radiator cap tester.

b. Warm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to 12 kPa (1. kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.

9. INSPECT FOR FUEL LEAK

a. Connect the intelligent tester to the DLC .

b. Turn the ignition switch to ON.

NOTICE:

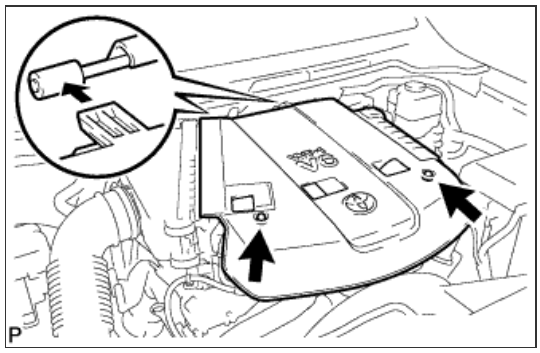
Do not start the engine.

c. Turn the intelligent tester on.

d. Enter the following menus: Powertrain / Engine and ECT / Active Test / Activate the Fuel Pump Speed Control.

e. Check fuel pump operation.

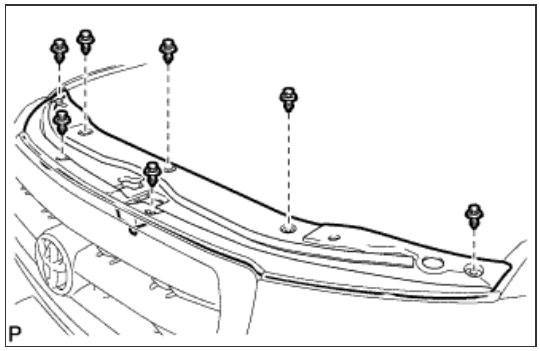
i. Check for pressure in the fuel inlet tube from the fuel line. Check that the sound of fuel flowing in the fuel tank can be heard.
If there is no sound, check the integration relay, fuel pump, ECM and wiring connector.



f. Check for fuel leak.

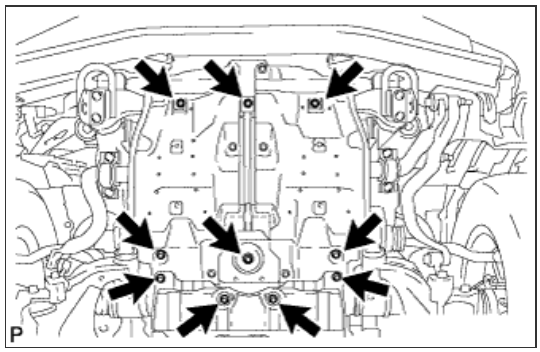
i. Check that there are no fuel leaks after performing maintenance anywhere on the system.
If there are fuel leaks, repair or replace parts as necessary.

10. INSTALL V-BANK COVER



a. Install the V-bank cover with the 2 nuts.

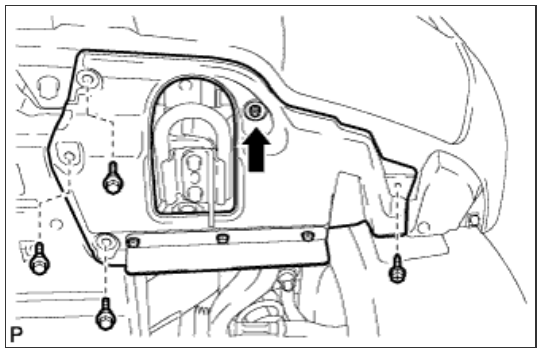
Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }



11. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the radiator support seal with the 7 clips.

12. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY



a. Install the under cover with the 10 bolts.

13. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

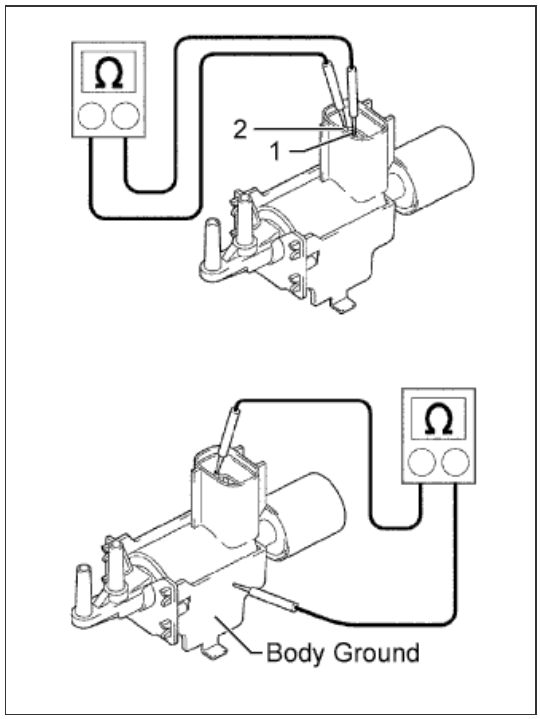
b. Install the bolts and screw.

14. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

15. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY



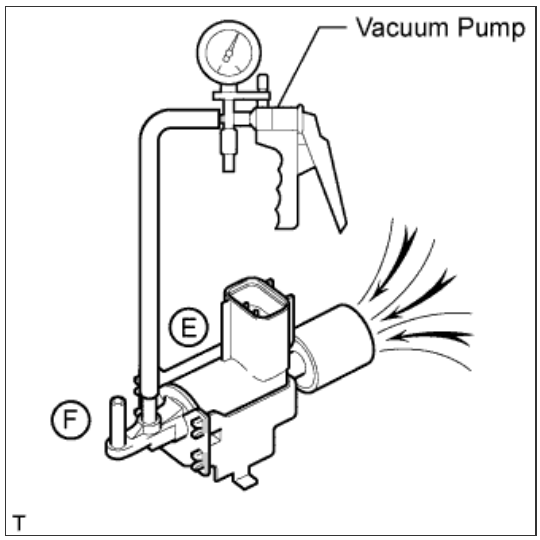
a. Install the cowl top ventilator louver (Click here).

for Preparation Click here

1. INSPECT VACUUM SWITCHING VALVE ASSEMBLY (for ACIS)

a. Disconnect the VSV connector.

b. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

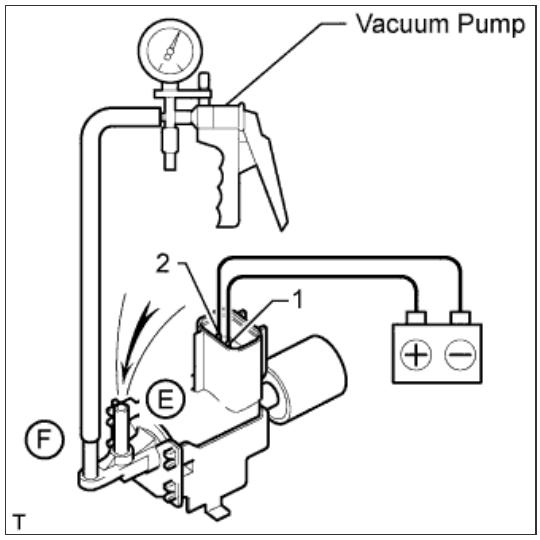
Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	37 to 44 Ω
1 - Body ground	Always	1 MΩ or higher
2 - Body ground		

If the result is not as specified, replace the vacuum switching valve assembly.

c. Check the VSV operation.

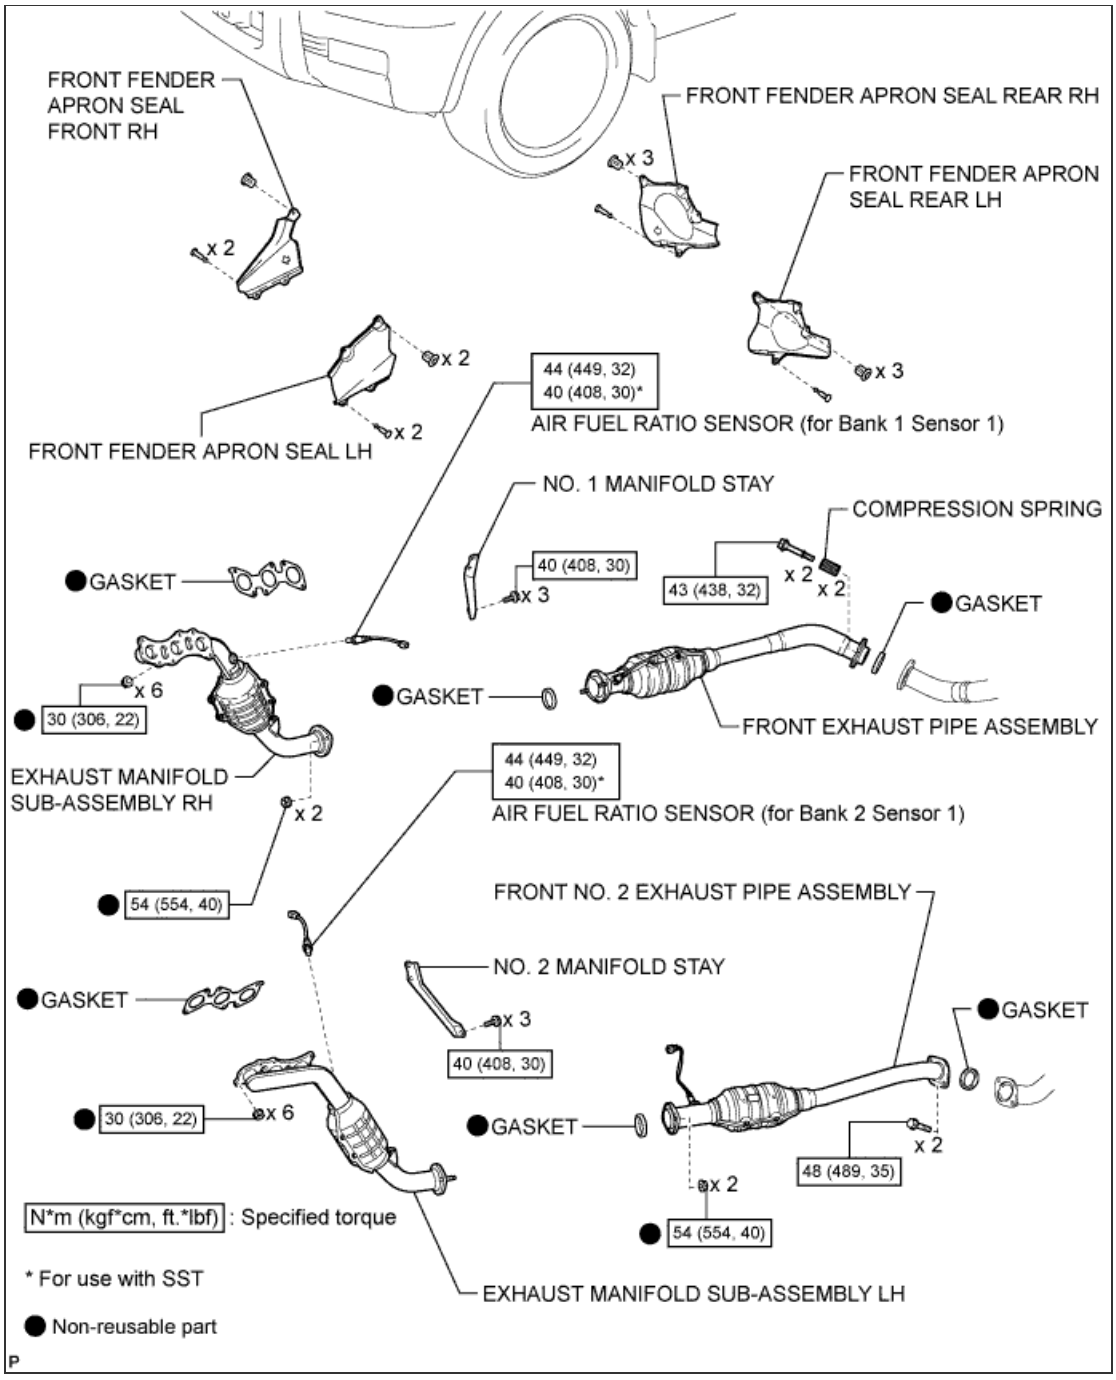
i. When applying vacuum to port E, check that air is sucked into the filter.

ii. Apply battery voltage to the connector, and check the VSV operation.



OK:

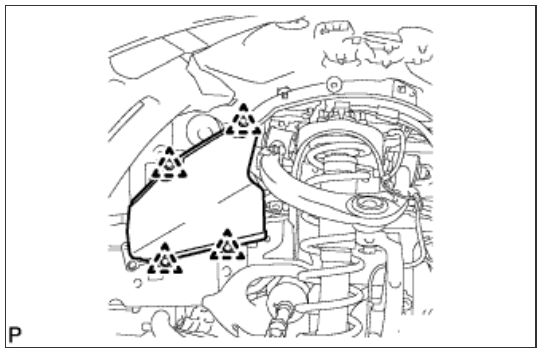
Measurement Condition	Specified Condition
Battery positive (+) →	When applying vacuum



Terminal 1 Battery negative (-) → Terminal 2	to port F, check that air is sucked into port E

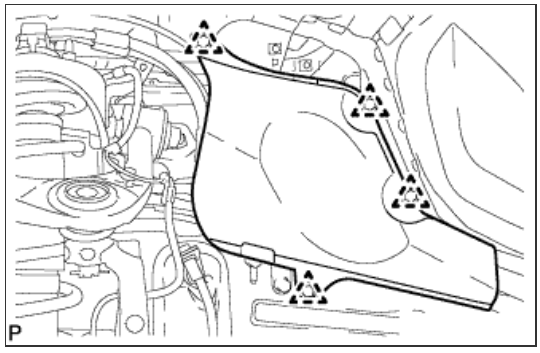
If the result is not as specified, replace the vacuum switching valve assembly.

d. Connect the VSV connector.



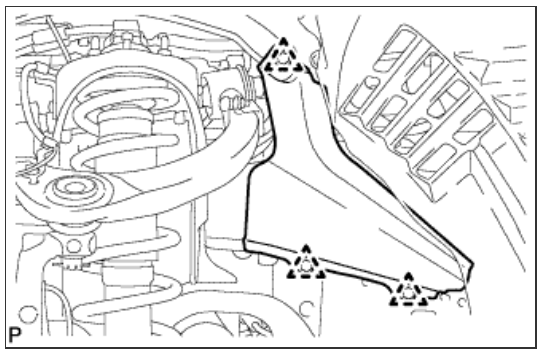
for Preparation Click here

for Preparation Click here



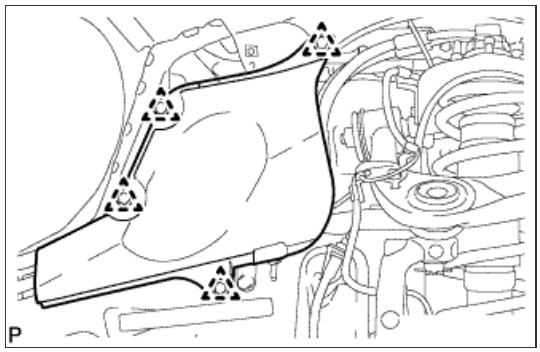
1. REMOVE FRONT FENDER APRON SEAL LH

a. Using a clip remover, remove the 4 clips and fender apron seal.



2. REMOVE FRONT FENDER APRON SEAL REAR LH

a. Using a clip remover, remove the 4 clips and fender apron seal.



3. REMOVE FRONT FENDER APRON SEAL FRONT RH

a. Using a clip remover, remove the 3 clips and fender apron seal.

4. REMOVE FRONT FENDER APRON SEAL REAR RH

a. Using a clip remover, remove the 4 clips and fender apron seal.

5. REMOVE FRONT NO. 2 EXHAUST PIPE ASSEMBLY

a. Disconnect the heated oxygen sensor connector.

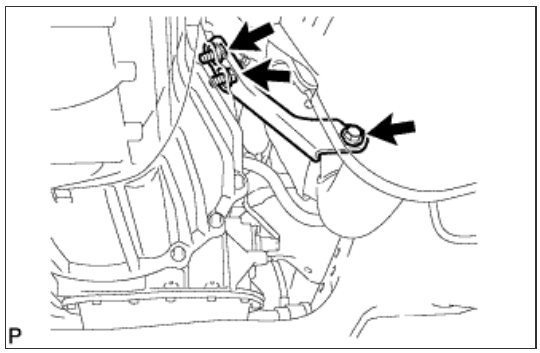
b. Remove the 2 bolts from the center exhaust pipe.

c. Remove the 2 bolts, 2 nuts and front No. 2 exhaust pipe.

d. Remove the 2 gaskets from the front No. 2 exhaust pipe.

6. REMOVE FRONT EXHAUST PIPE ASSEMBLY

a. Disconnect the heated oxygen sensor connector.

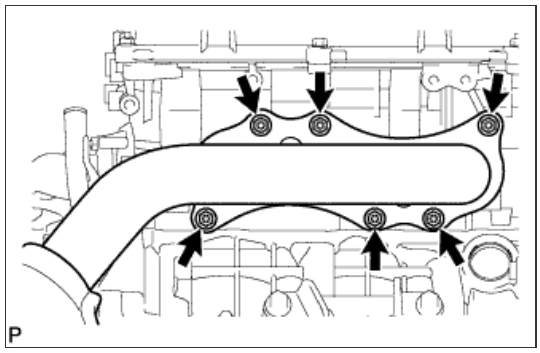


b. Remove the 2 bolts with the 2 compression springs from the center exhaust pipe.

c. Remove the 2 nuts and front exhaust pipe.

d. Remove the 2 gaskets from the front exhaust pipe.

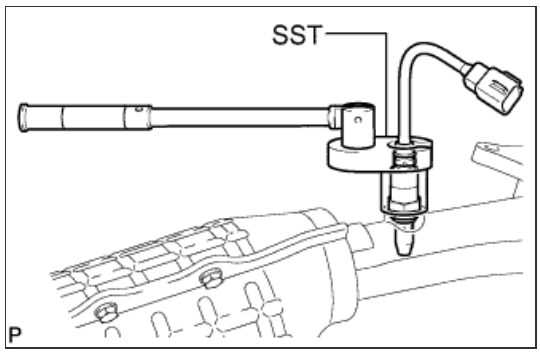
7. REMOVE NO. 1 MANIFOLD STAY



a. Remove the 3 bolts and No. 1 manifold stay.

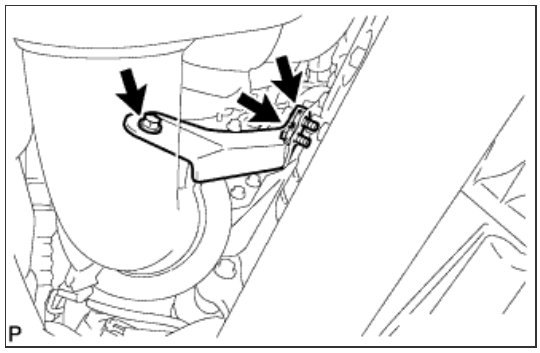
8. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY RH

a. Disconnect the air fuel ratio sensor connector.



b. Remove the 6 nuts, exhaust manifold and gasket from the cylinder head RH.

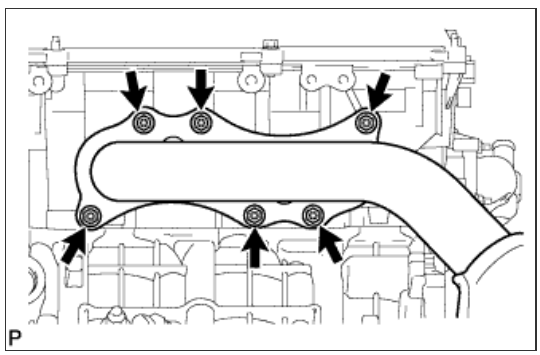
9. REMOVE AIR FUEL RATIO SENSOR (for Bank 1 Sensor 1)



a. Using SST, remove the sensor.

SST
09224-00010

10. REMOVE NO. 2 MANIFOLD STAY

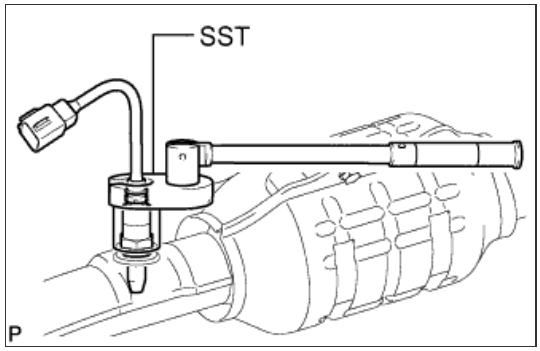


a. Remove the 3 bolts and No. 2 manifold stay.

11. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY LH

a. Disconnect the air fuel ratio sensor connector.

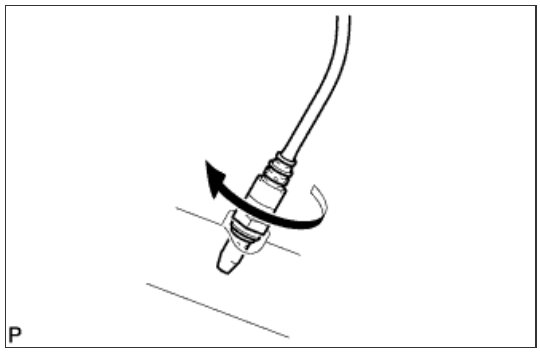
b. Remove the 6 nuts, exhaust manifold and gasket from the cylinder head LH.



12. REMOVE AIR FUEL RATIO SENSOR (for Bank 2 Sensor 1)

a. Using SST, remove the sensor.

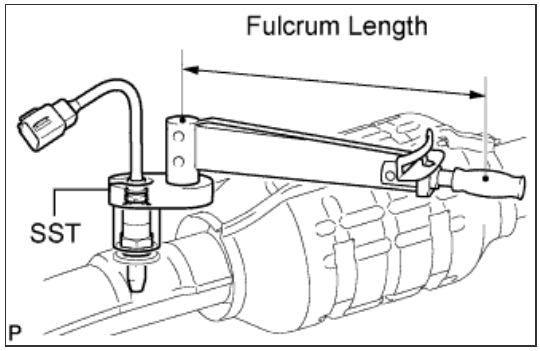
SST



09224-00010

for Preparation Click here

1. INSTALL AIR FUEL RATIO SENSOR (for Bank 2 Sensor 1)



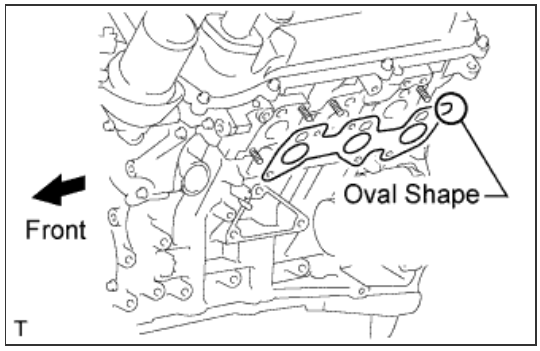
a. Temporarily install the sensor to the exhaust manifold by hand.

b. Using SST, tighten the sensor.

SST
09224-00010

Torque:
without SST:
44 N*m{ 449 kgf*cm , 32 ft.*lbf }
with SST:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

HINT:

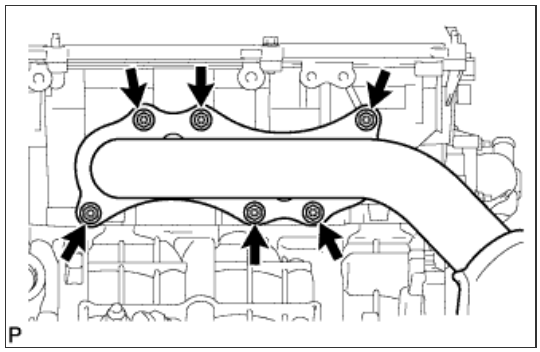


- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.). If using a torque wrench with a length that is not 30 cm (11.8 in.), calculate the torque specification for the torque wrench and SST based on the "without SST" torque specification (Click here).**
- **Make sure SST and the wrench are connected in a straight line.**

2. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY LH

a. Set a new gasket to the cylinder head LH with the oval shape facing rearward.

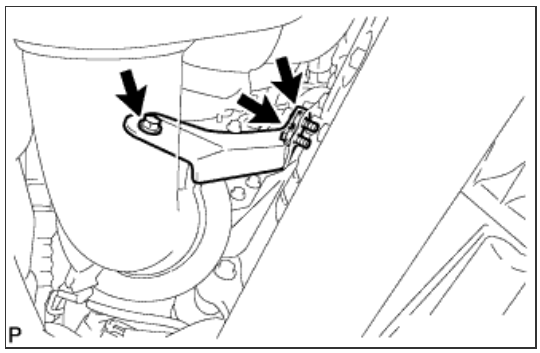
NOTICE:



Be careful of the installation direction.

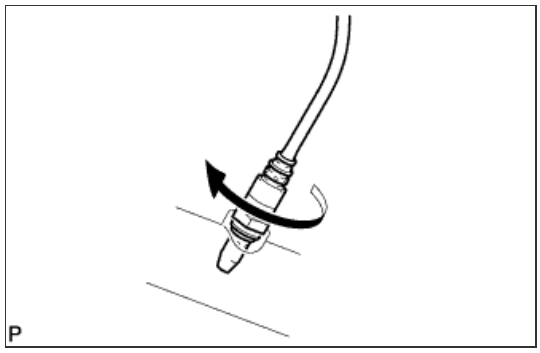
b. Install the exhaust manifold with 6 new nuts.

Torque:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }



c. Connect the air fuel ratio sensor connector.

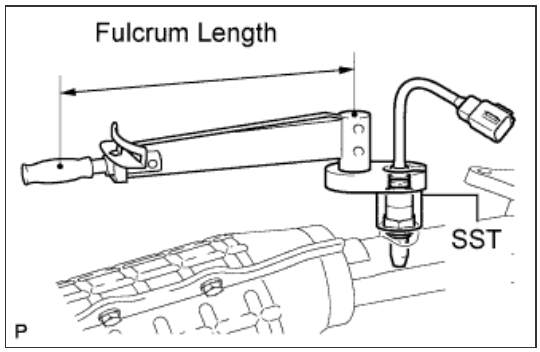
3. INSTALL NO. 2 MANIFOLD STAY



a. Install the No. 2 manifold stay with the 3 bolts.

Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

4. INSTALL AIR FUEL RATIO SENSOR (for Bank 1 Sensor 1)



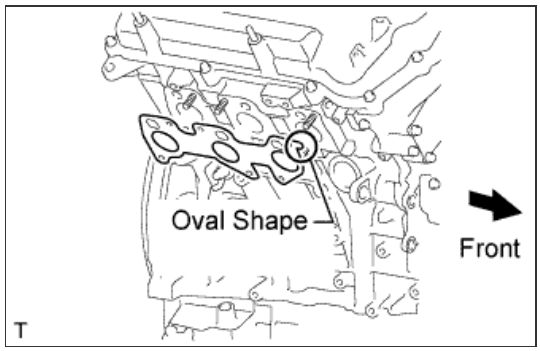
a. Temporarily install the sensor to the exhaust manifold by hand.

b. Using SST, tighten the sensor.

SST
09224-00010

Torque:
without SST:
44 N*m{ 449 kgf*cm , 32 ft.*lbf }
with SST:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

HINT:

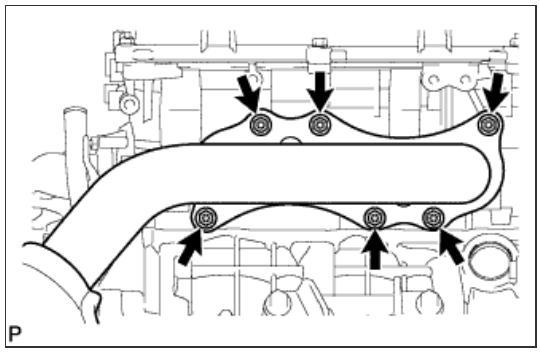


- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.). If using a torque wrench with a length that is not 30 cm (11.8 in.), calculate the torque specification for the torque wrench and SST based on the "without SST" torque specification (Click here).**
- **Make sure SST and the wrench are connected in a straight line.**

5. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY RH

a. Set a new gasket to the cylinder head RH with the oval shape facing forward.

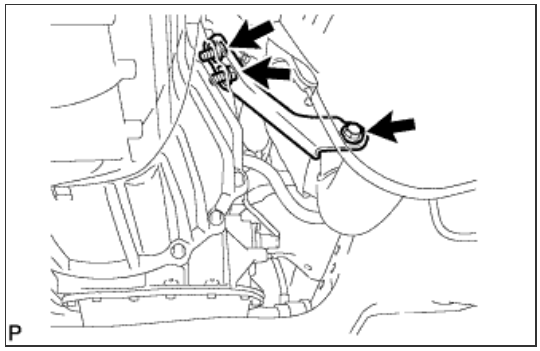
NOTICE:



Be careful of the installation direction.

b. Install the exhaust manifold with 6 new nuts.

Torque:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }



c. Connect the air fuel ratio sensor connector.

6. INSTALL NO. 1 MANIFOLD STAY

a. Install the No. 1 manifold stay with the 3 bolts.

Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

7. INSTALL FRONT EXHAUST PIPE ASSEMBLY

a. Install 2 new gaskets to the front exhaust pipe.

b. Install the front exhaust pipe to the exhaust manifold RH with 2 new nuts.

Torque:
54 N*m{ 554 kgf*cm , 40 ft.*lbf }

c. Install the 2 compression springs and 2 bolts to the center exhaust pipe.

Torque:
43 N*m{ 438 kgf*cm , 32 ft.*lbf }

d. Connect the heated oxygen sensor connector.

8. INSTALL FRONT NO. 2 EXHAUST PIPE ASSEMBLY

a. Install 2 new gaskets to the front No. 2 exhaust pipe.

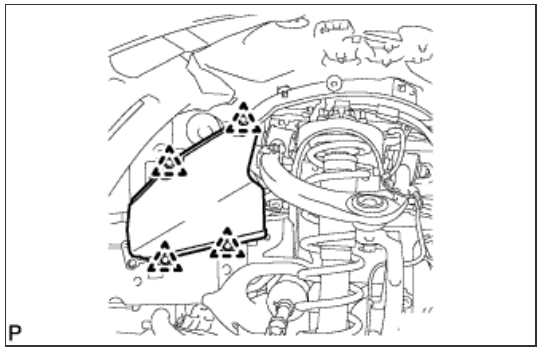
b. Install the front No. 2 exhaust pipe to the exhaust manifold LH with 2 new nuts.

Torque:

54 N*m{ 554 kgf*cm , 40 ft.*lbf }

c. Install the 2 bolts to the center exhaust pipe.

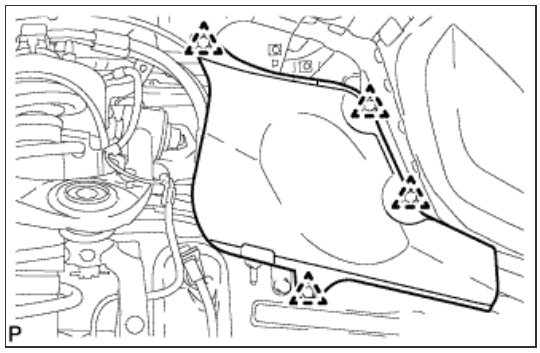
Torque:
48 N*m{ 489 kgf*cm , 35 ft.*lbf }



d. Connect the heated oxygen sensor connector.

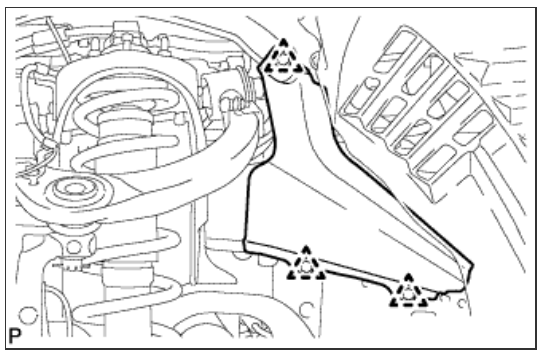
9. INSPECT FOR EXHAUST GAS LEAK

If gas is leaking, tighten the areas necessary to stop the leak. Replace damaged parts as necessary.



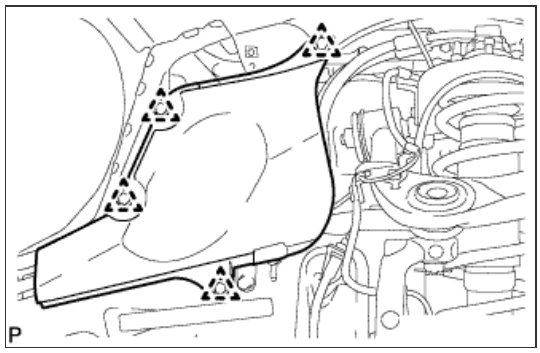
10. INSTALL FRONT FENDER APRON SEAL LH

a. Install the fender apron seal with the 4 clips.



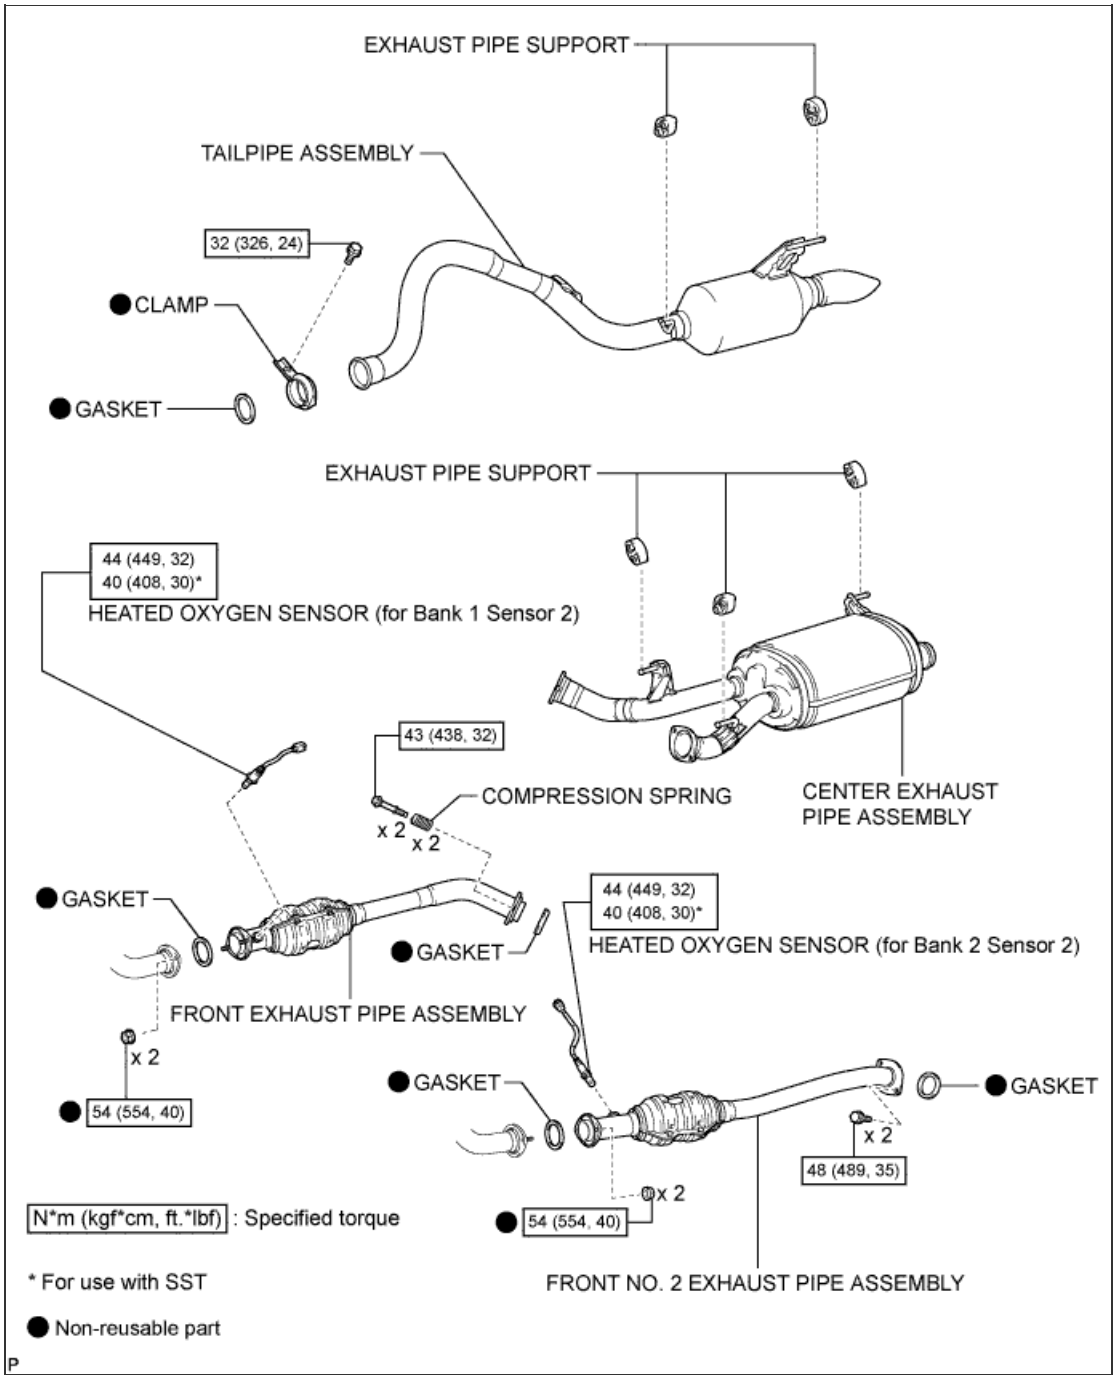
11. INSTALL FRONT FENDER APRON SEAL REAR LH

a. Install the fender apron seal with the 4 clips.



12. INSTALL FRONT FENDER APRON SEAL FRONT RH

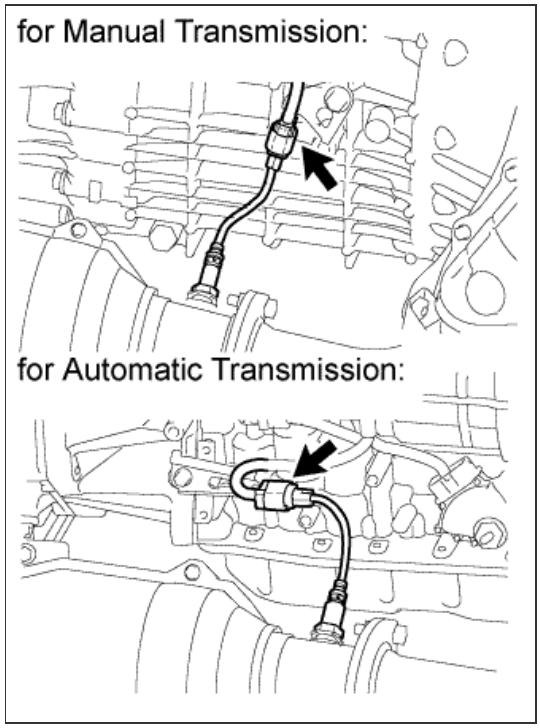
a. Install the fender apron seal with the 3 clips.



13. INSTALL FRONT FENDER APRON SEAL REAR RH

a. Install the fender apron seal with the 4 clips.

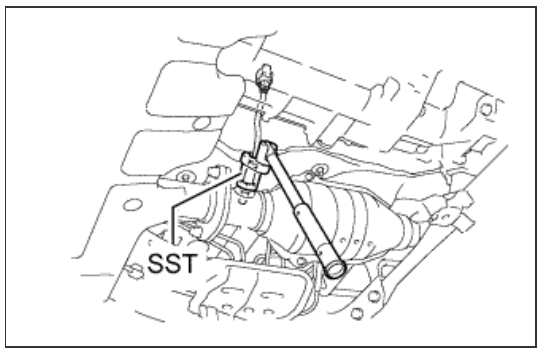
for Preparation Click here



for Preparation Click here

CAUTION:

- **Wear protective gloves when removing the exhaust pipe.**
- **The exhaust pipe is extremely hot immediately after the engine has stopped.**
- **Confirm that the exhaust pipe has cooled down before removing it.**



1. REMOVE HEATED OXYGEN SENSOR (for Bank 1 Sensor 2)

a. Disconnect the sensor connector.

b. Using SST, remove the sensor.

SST
09224-00010

2. REMOVE TAILPIPE ASSEMBLY

a. Remove the bolt, clamp and gasket.

b. Remove the tailpipe from the 2 exhaust pipe supports.

3. REMOVE CENTER EXHAUST PIPE ASSEMBLY

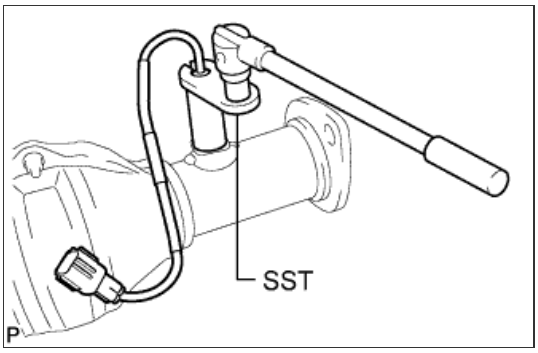
a. Remove the 4 bolts and 2 compression springs.

b. Remove the center exhaust pipe from the 3 exhaust pipe supports.

c. Remove the 2 gaskets from the front exhaust pipe and front No. 2 exhaust pipe.

4. REMOVE FRONT NO. 2 EXHAUST PIPE ASSEMBLY

a. Disconnect the heated oxygen sensor connector.



b. Remove the 2 nuts and front exhaust pipe.

c. Remove the gasket from the front exhaust pipe.

5. REMOVE HEATED OXYGEN SENSOR (for Bank 2 Sensor 2)

a. Using SST, remove the sensor.

SST
09224-00010

6. REMOVE FRONT EXHAUST PIPE ASSEMBLY

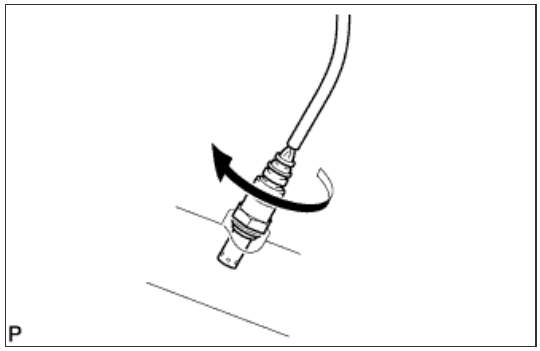
a. Disconnect the heated oxygen sensor connector.

b. Remove the 2 nuts and front exhaust pipe.

c. Remove the gasket from the front exhaust pipe.

for Preparation Click here

1. INSTALL FRONT EXHAUST PIPE ASSEMBLY

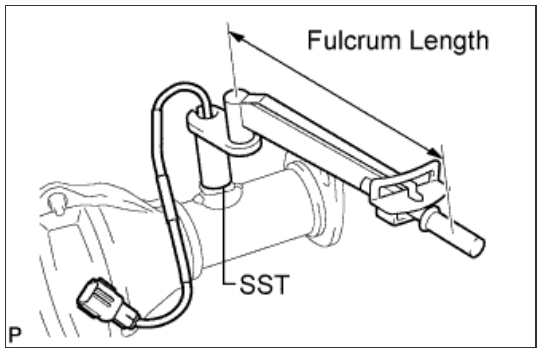


a. Install a new gasket and the front exhaust pipe to the exhaust manifold R with 2 new nuts.

Torque:
54 N*m{ 554 kgf*cm , 40 ft.*lbf }

b. Connect the heated oxygen sensor connector.

2. INSTALL HEATED OXYGEN SENSOR (for Bank 2 Sensor 2)



a. Temporarily install the sensor to the exhaust pipe by hand.

b. Using SST, tighten the sensor.

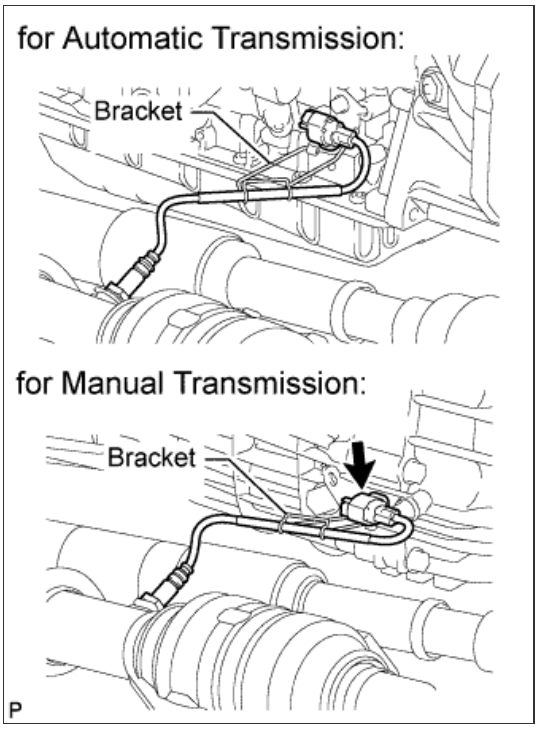
SST
09224-00010

Torque:
without SST:
44 N*m{ 449 kgf*cm , 32 ft.*lbf }
with SST:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

HINT:

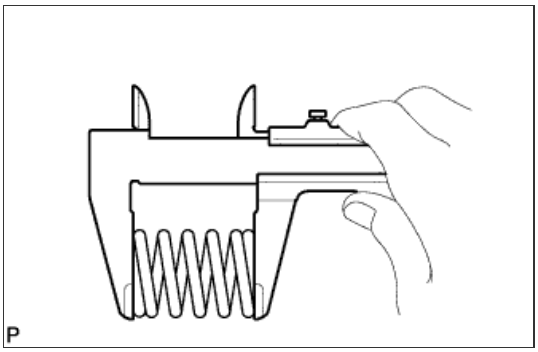
- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.). If using a torque wrench with a length that is not 30 cm (11.8 in.), calculate the torque specification for the torque wrench and SST based on the without SST torque specification (Click here).**
- **Make sure SST and the wrench are connected in a straight line.**

3. INSTALL FRONT NO. 2 EXHAUST PIPE ASSEMBLY



a. Install a new gasket and the front No. 2 exhaust pipe to the exhaust manifold L with 2 new nuts.

Torque:
54 N*m{ 554 kgf*cm , 40 ft.*lbf }



b. Connect the heated oxygen sensor connector.

HINT:

ook the wire harness to the bracket.

4. INSTALL CENTER EXHAUST PIPE ASSEMBLY

a. Check the free length.

i. Using a vernier caliper, measure the free length of the compression spring.

Minimum free length:
43 mm (1.693 in.)

If the free length is less than the minimum, replace the compression spring.

b. Connect the center exhaust pipe to the 3 exhaust pipe supports.

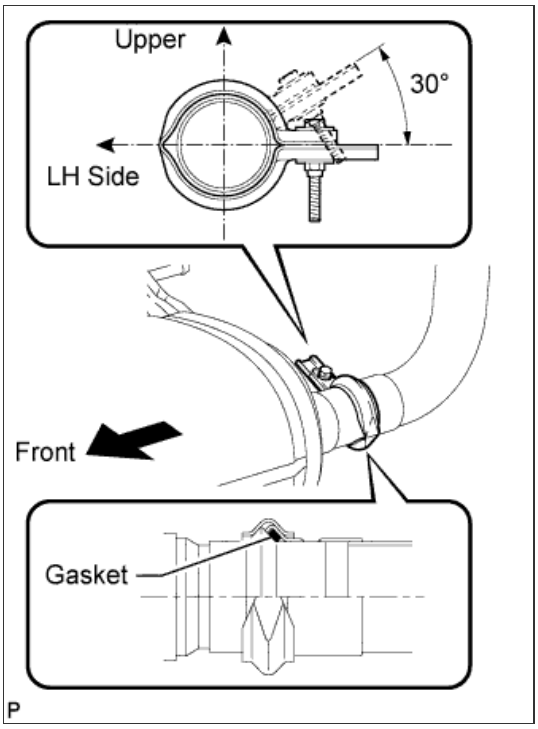
c. Install 2 new gaskets to the front exhaust pipe and front No. 2 exhaust pipe.

d. Install the center exhaust pipe with the 4 bolts and 2 compression springs.

Torque:
for center exhaust pipe and front exhaust pipe:
43 N*m{ 438 kgf*cm , 32 ft.*lbf }
for center exhaust pipe and front No. 2 exhaust pipe:
48 N*m{ 489 kgf*cm , 35 ft.*lbf }

5. INSTALL TAILPIPE ASSEMBLY

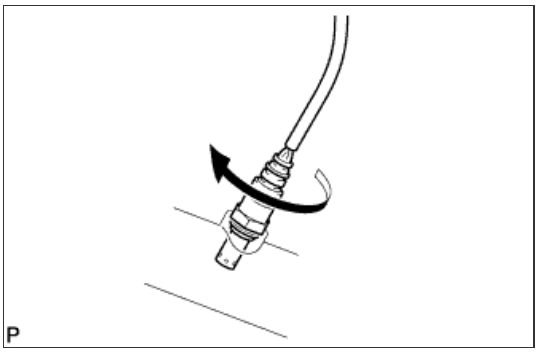
a. Install the tailpipe to the 2 exhaust pipe supports.



b. Set a new gasket to the center exhaust pipe.

c. Connect the tailpipe to the center pipe with a new clamp.

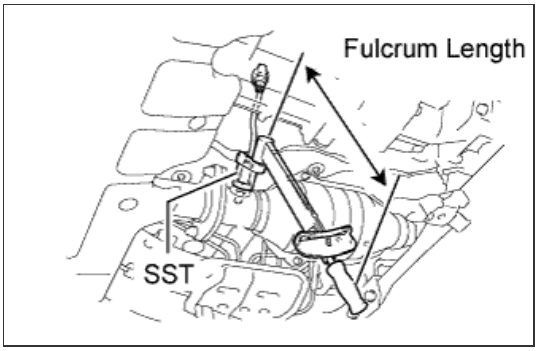
Torque:
32 N*m{ 326 kgf*cm , 24 ft.*lbf }



HINT:

Install the clamp within the angle range shown in the illustration.

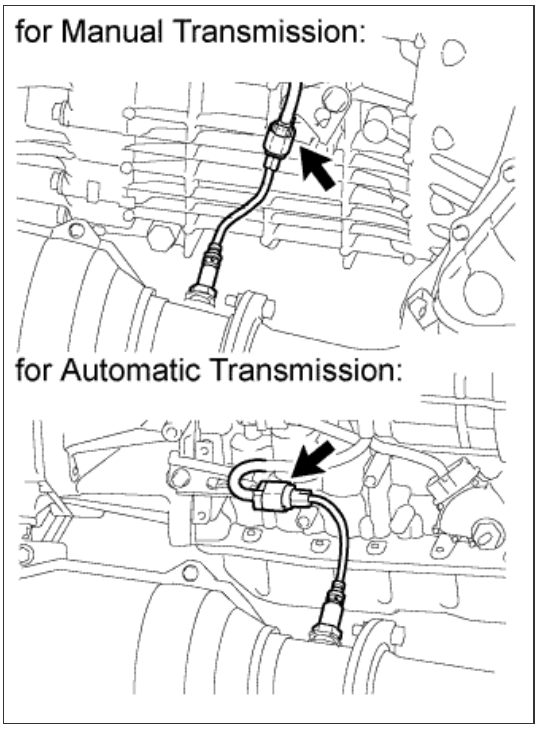
6. INSTALL HEATED OXYGEN SENSOR (for Bank 1 Sensor 2)



a. Temporarily install the sensor to the exhaust pipe by hand.

b. Using SST, tighten the sensor.

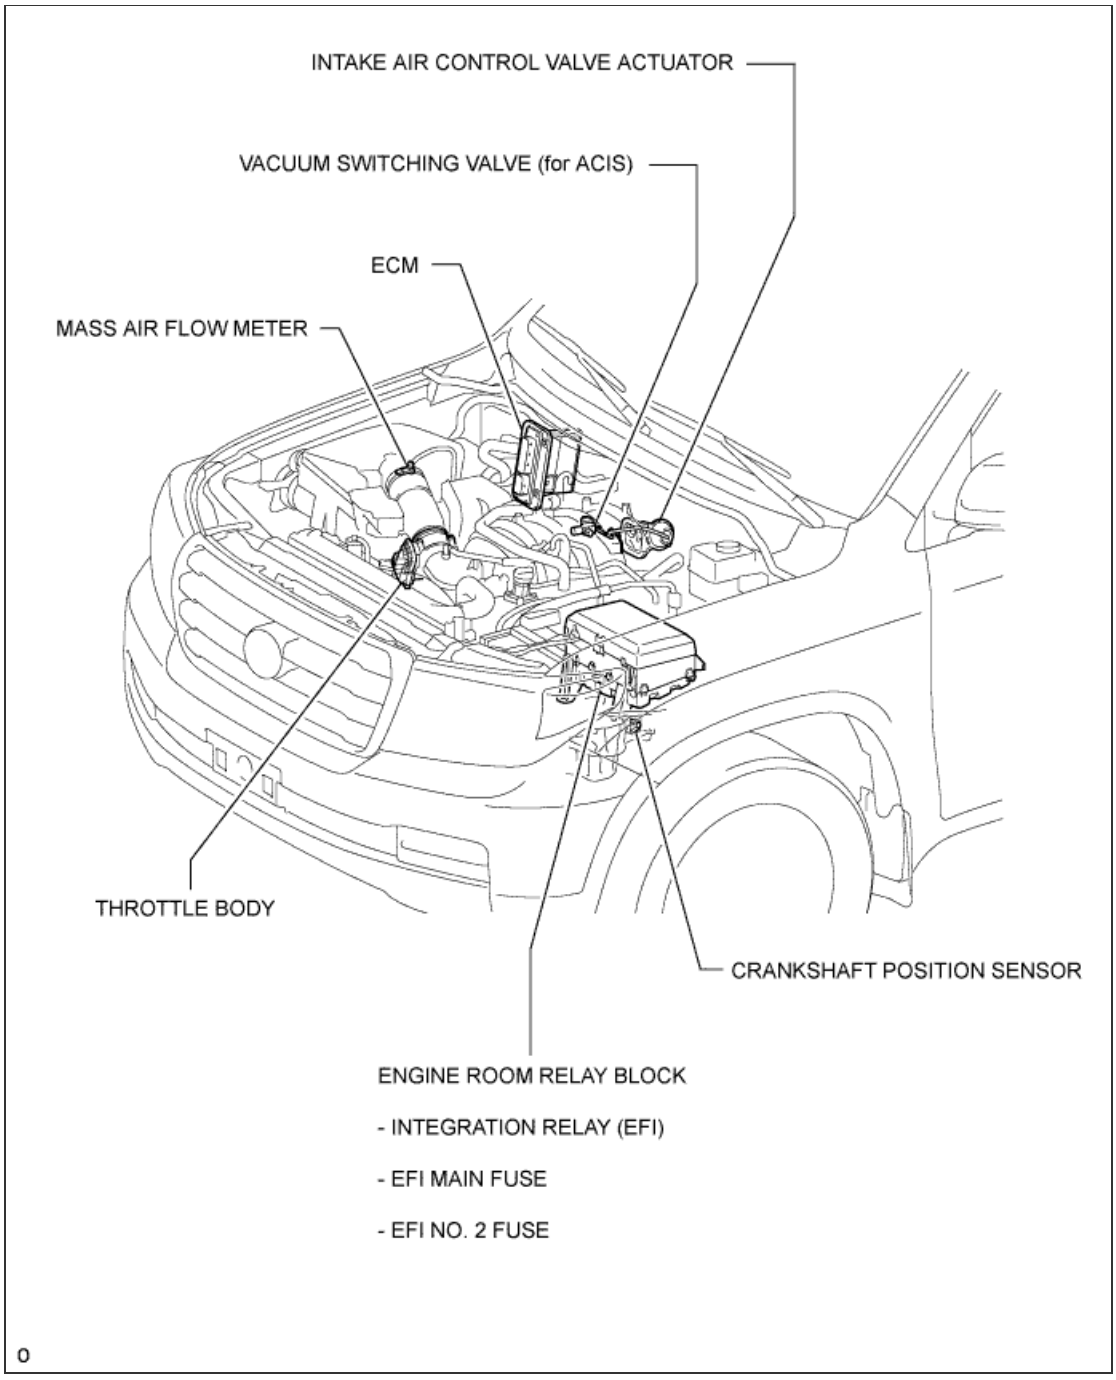
SST
09224-00010



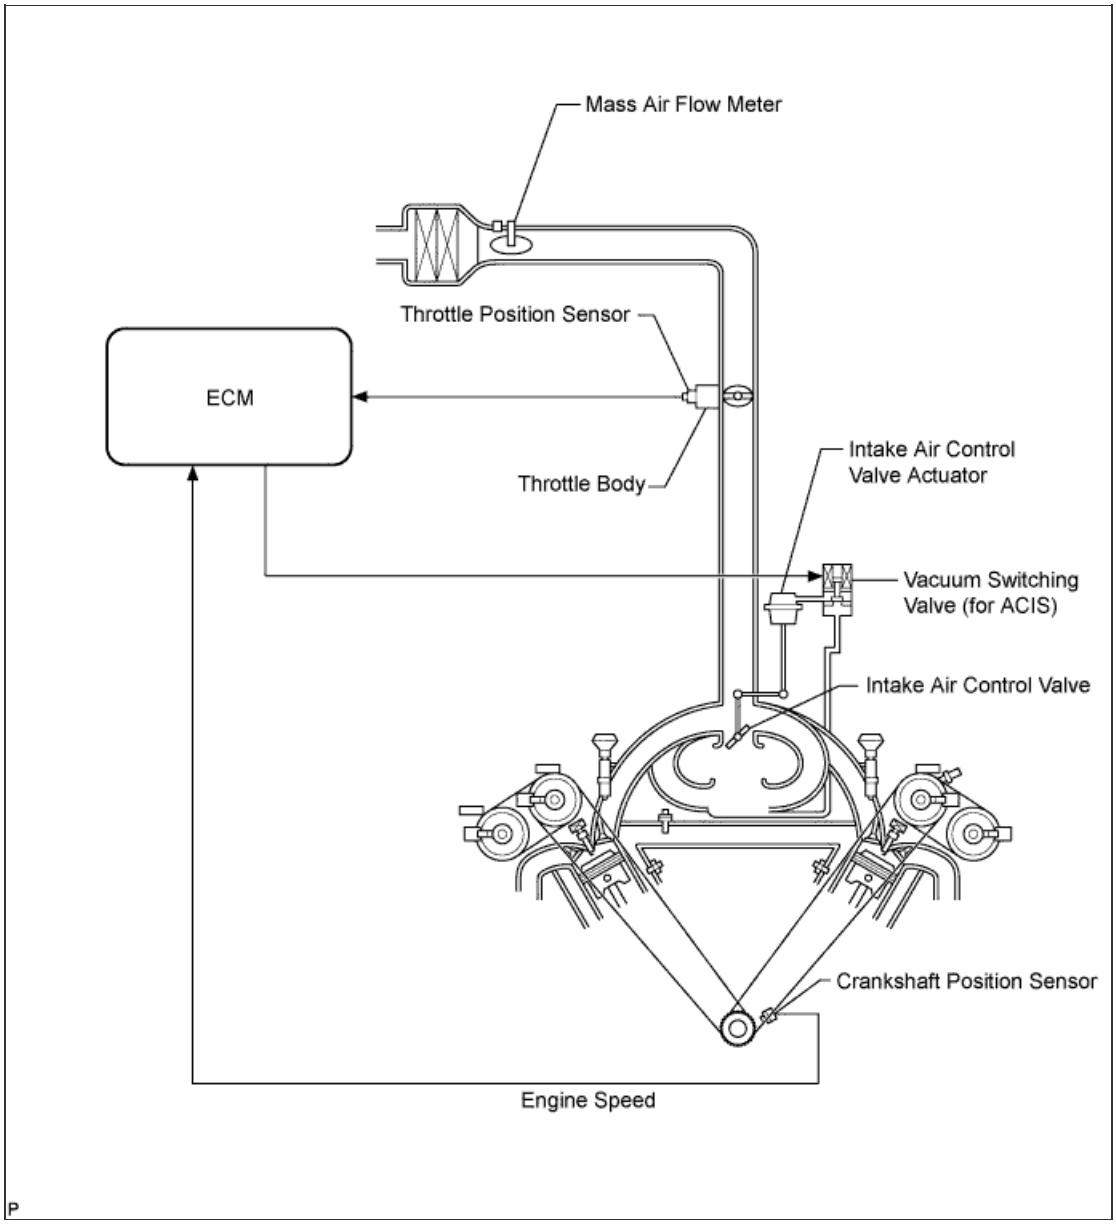
Torque:
without SST:
44 N*m{ 449 kgf*cm , 32 ft.*lbf }
with SST:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

HINT:

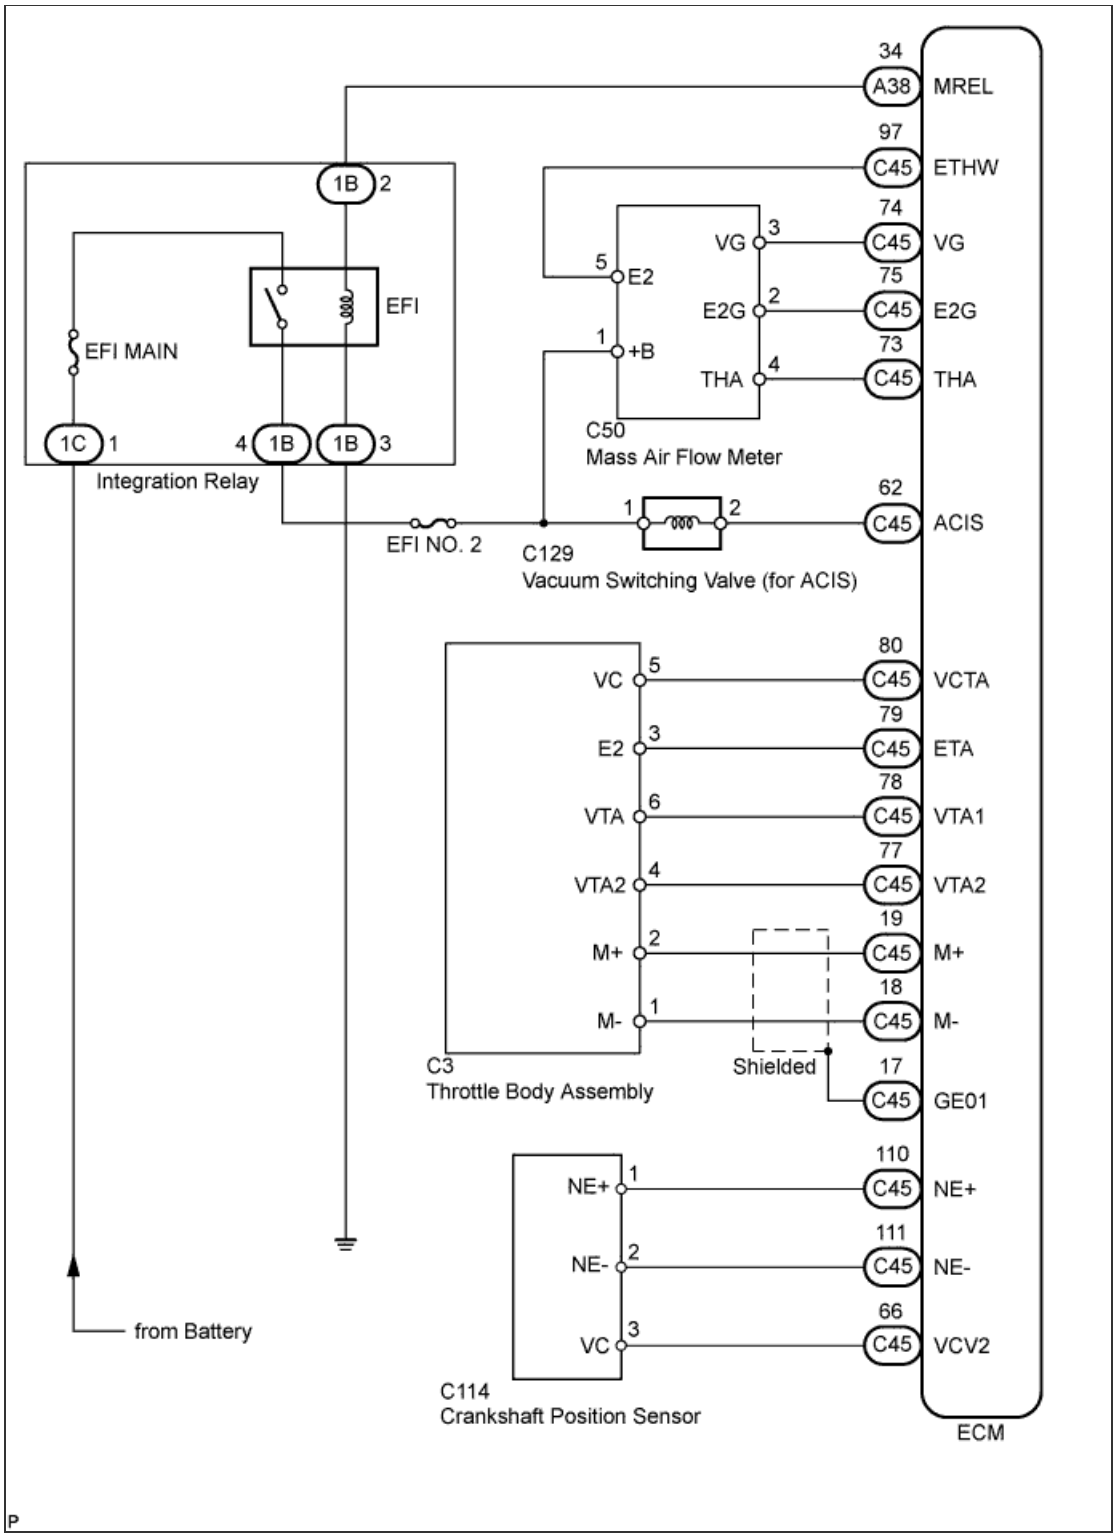
- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.). If using a torque wrench with a length that is not 30 cm (11.8 in.), calculate the torque specification for the torque wrench and SST based on the without SST torque specification (Click here).**
- **Make sure SST and the wrench are connected in a straight line.**



c. Connect the sensor connector.



7. INSPECT FOR EXHAUST GAS LEAK



If gas is leaking, tighten the areas necessary to stop the leak. Replace damaged parts as necessary.

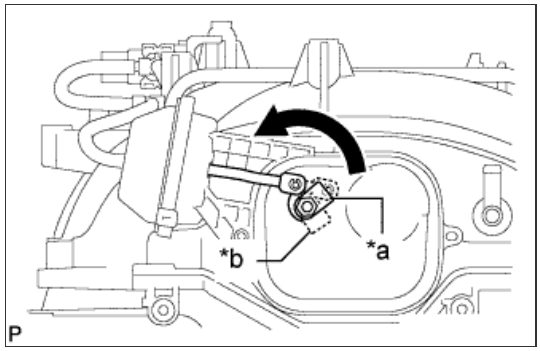
1. INSPECT INTAKE AIR CONTROL VALVE

a. Remove the V-bank cover.

b. Start the engine.

c. Check that the VSV (for ACIS) is ON (seal) under both of the following conditions:



- Depressing the accelerator pedal to a achieve throttle valve opening angle of 50° or more.
- Racing the engine to 4700 rpm or less.

NOTICE:

Do not increase the engine speed to 5400 rpm or more.

d. Check that the VSV (for ACIS) is OFF (vent) under the following conditions:

- After releasing the accelerator pedal while under the VSV (for ACIS) ON condition.
- The engine is idling.

Text in Illustration

*a	ON (Seal)
*b	OFF (Vent)

e. Connect the intelligent tester to the DLC3.

f. Perform the Active Test, and then check that the actuator rod operates.
If the result is not as specified, inspect the intake air control valve, vacuum tank and VSV (for ACIS) for normal operation. Replace malfunctioning parts as necessary.

g. Install the V-bank cover.

2. CHECK INTAKE AIR CONTROL VALVE OPERATION

a. Remove the V-bank cover.

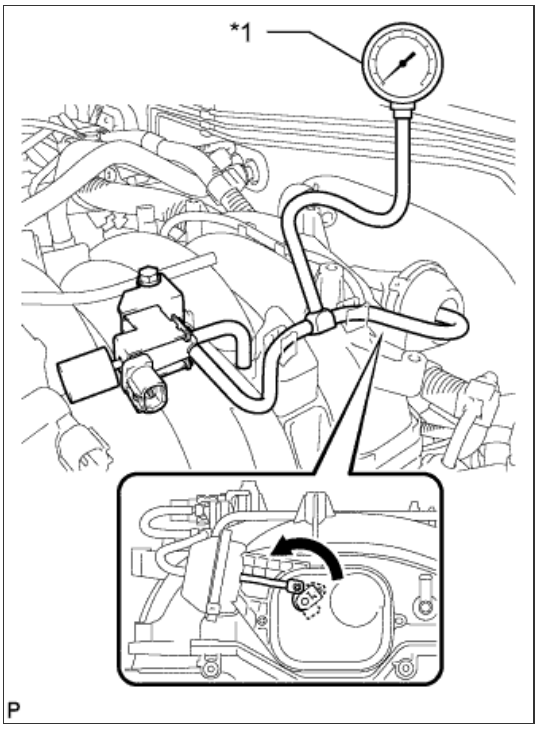
b. Using a 3-way connector, connect a vacuum gauge to the actuator hose.

Text in Illustration

*1	Vacuum Gauge

c. Start the engine.

d. While the engine is idling, check that the vacuum gauge indicates 0 kPa (0 mmHg, 0 in.Hg) and the rod is at the OFF position



e. Fully depress the accelerator pedal quickly. Check that the VSV (for ACIS) turns ON and the rod moves in the ON direction.

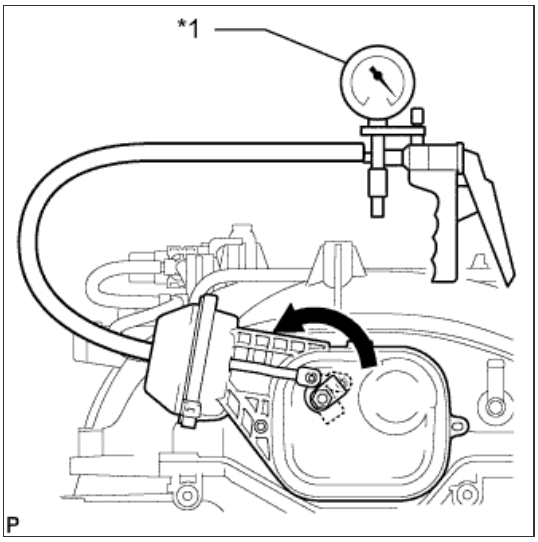
NOTICE:

Make sure to fully depress and release the accelerator pedal within 1 second.

f. Remove the vacuum gauge, and connect the vacuum hose to the actuator.

g. Install the V-bank cover.

3. INSPECT INTAKE AIR CONTROL VALVE



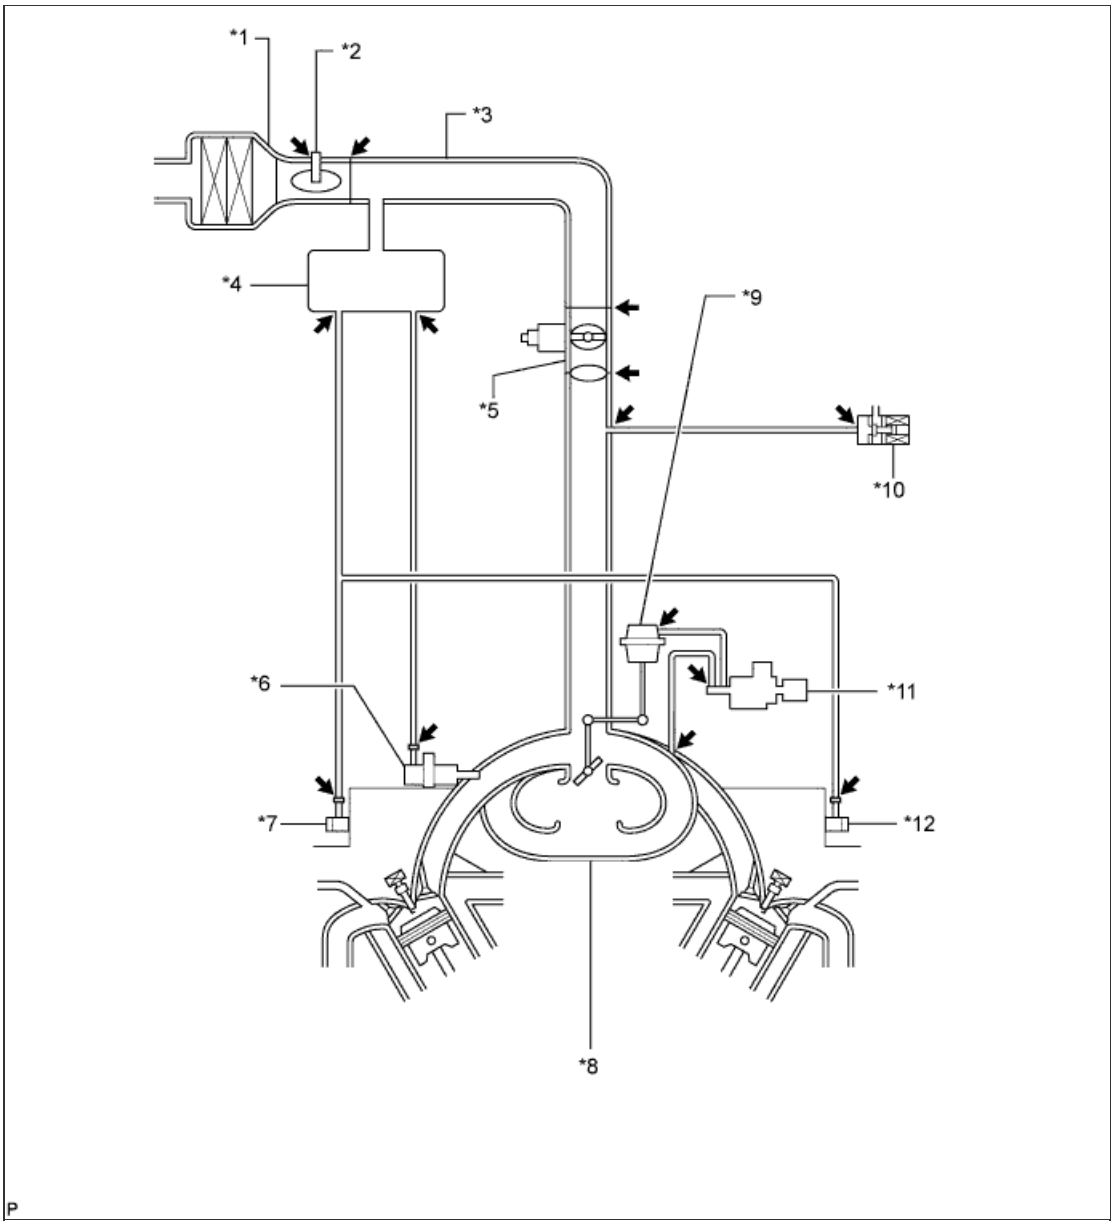
a. Inspect the diaphragm.

i. Using a vacuum pump, apply a vacuum of 7 kPa (00 mmHg, 7.85 in.Hg). Check that the lever moves.

Text in Illustration

*1	Vacuum Pump

If the result is not as specified, replace the intake air surge tank.

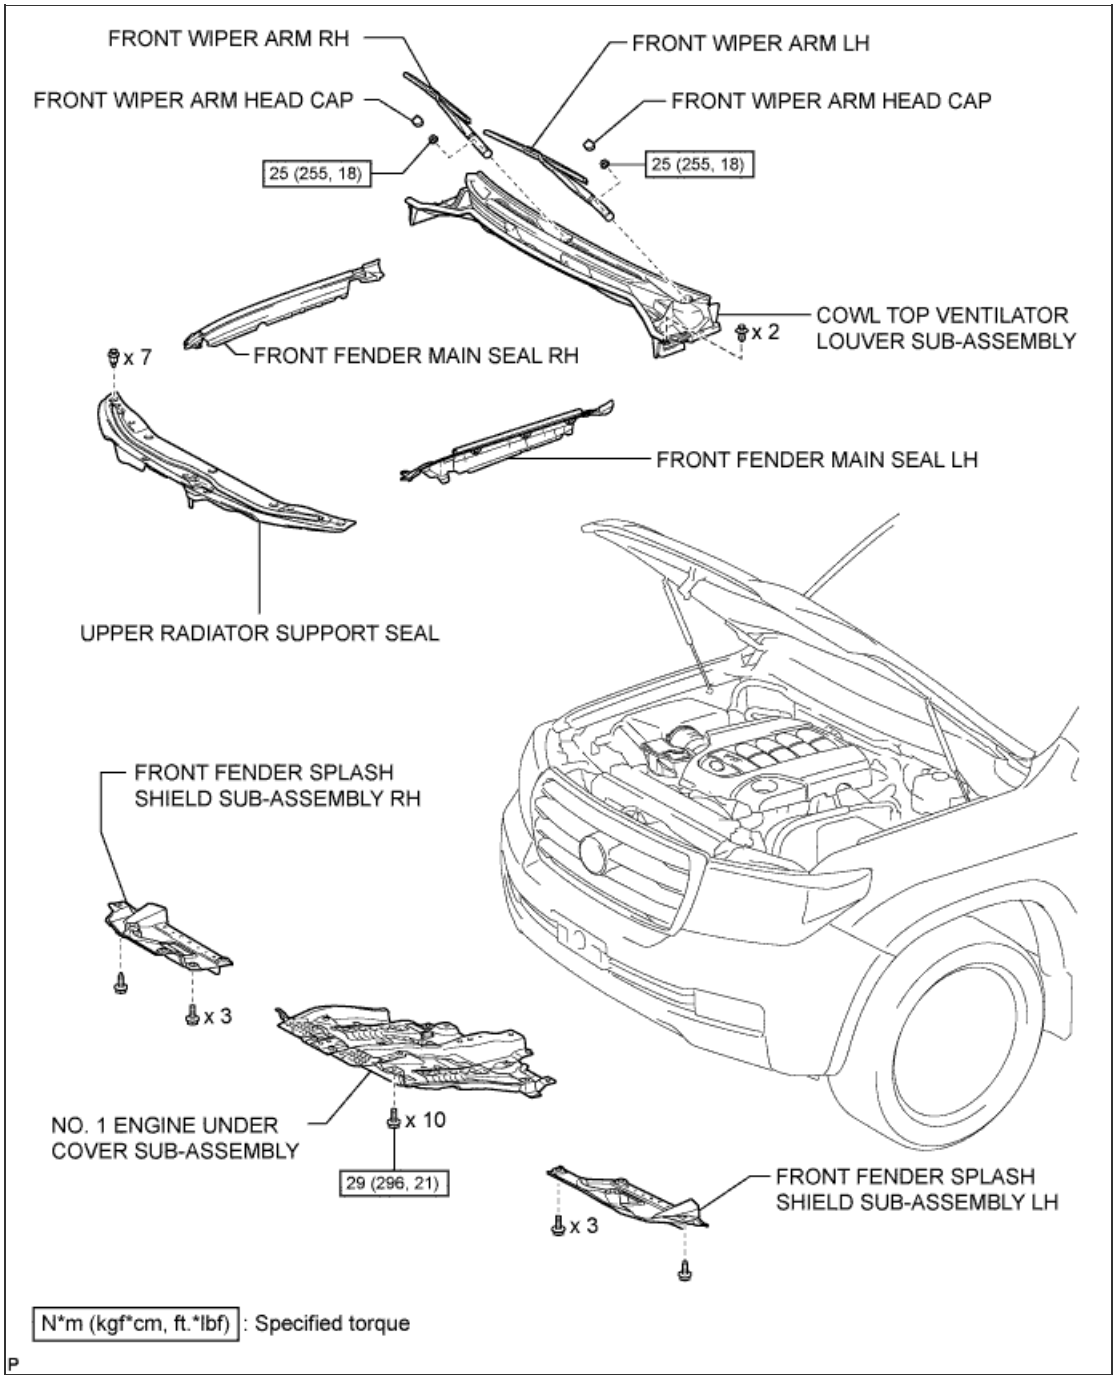


4. CHECK AIR INDUCTION SYSTEM

HINT:

The illustration shows the areas that may draw in secondary air, which could lead to idling problems.

a. Check that the hoses are installed correctly.



b. Check for cracks, etc. in the hoses.

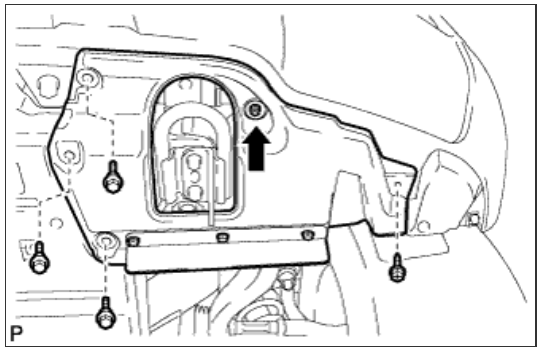
for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).



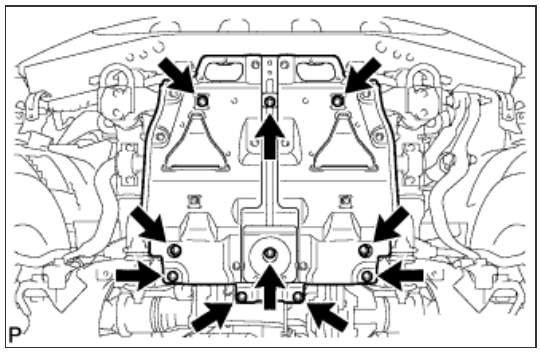
2. REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

(Click here)

3. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and screw.

b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



4. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

5. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and No. 1 engine under cover.

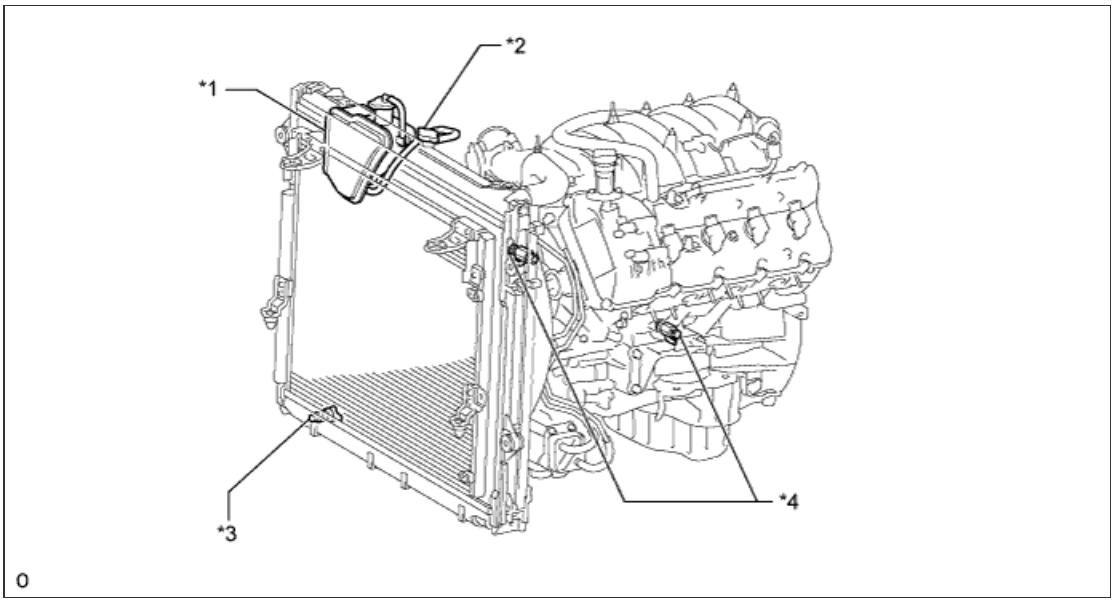
6. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Loosen the radiator drain cock plug.

HINT:



Collect the coolant in a container and dispose of it according to the regulations in your area.

b. Remove the radiator cap. Then drain the coolant from the radiator.

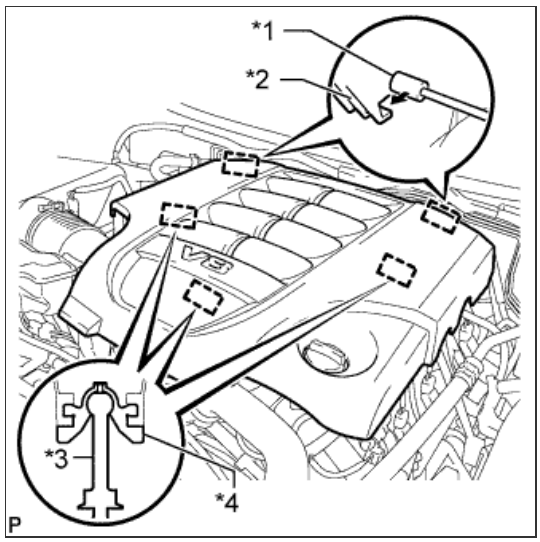
c. Loosen the 2 cylinder block drain cock plugs. Then drain the coolant from the engine.

d. Tighten the 2 cylinder block drain cock plugs.

Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }

Text in Illustration

*1	Radiator Reservoir	*2	Radiator Cap
*3	Radiator Drain Cock Plug	*4	Cylinder Block Drain Cock Plug



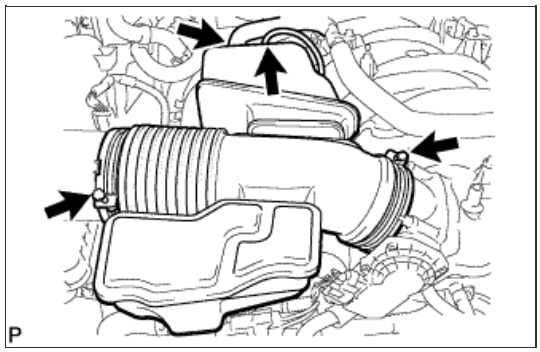
e. Tighten the radiator drain cock plug by hand.

7. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.

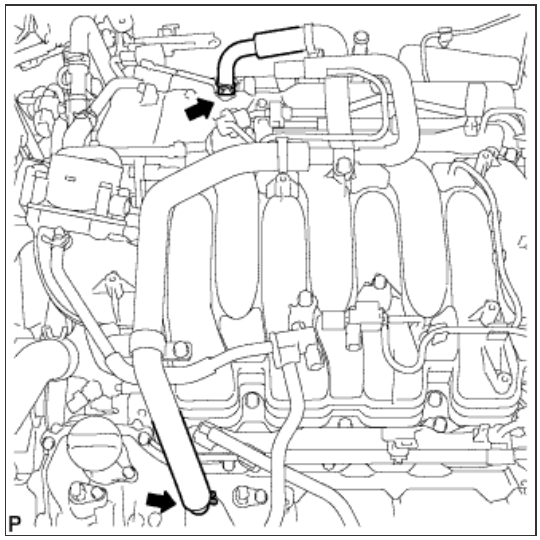
Text in Illustration

*1	Bracket
*2	Hook
*3	Pin
*4	Grommet



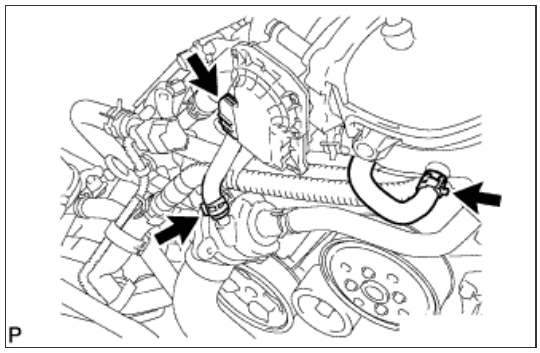
8. REMOVE AIR CLEANER HOSE ASSEMBLY

a. Disconnect the vacuum hose and No. 2 ventilation hose.



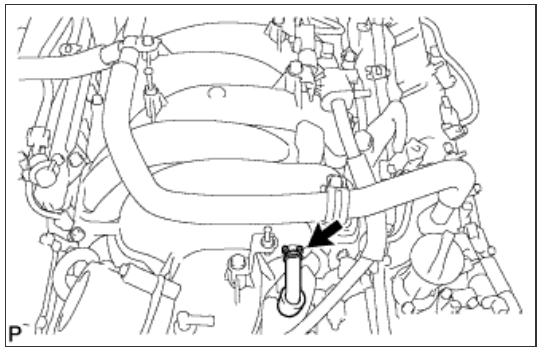
b. Loosen the 2 hose clamps.

c. Remove the air cleaner hose.



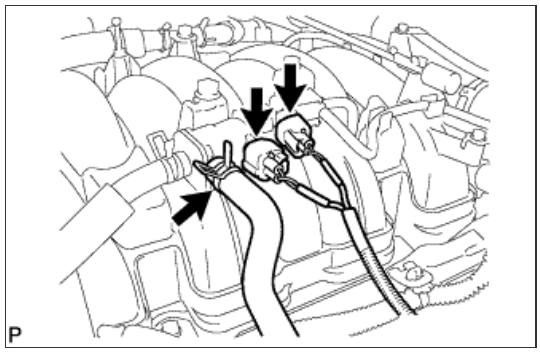
9. REMOVE INTAKE MANIFOLD

a. Disconnect the ventilation hose from the ventilation pipe of the cylinder head cover LH and RH.

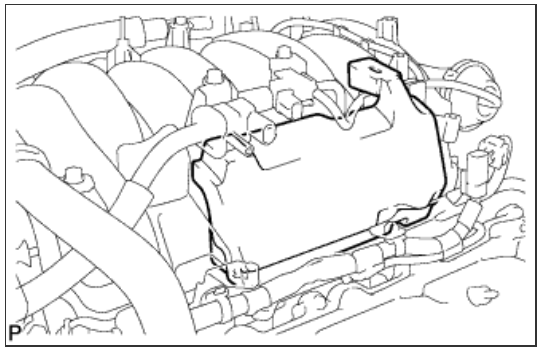


b. Disconnect the 2 water by-pass hoses.

c. Disconnect the throttle body connector.

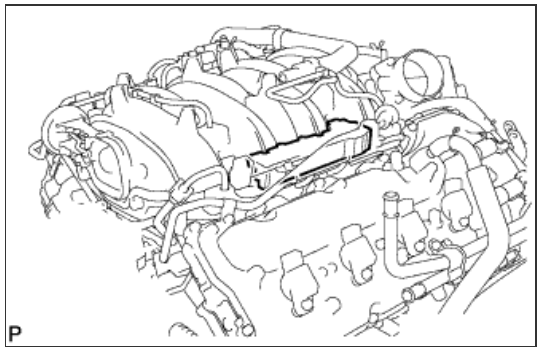


d. Disconnect the No. 1 ventilation hose.

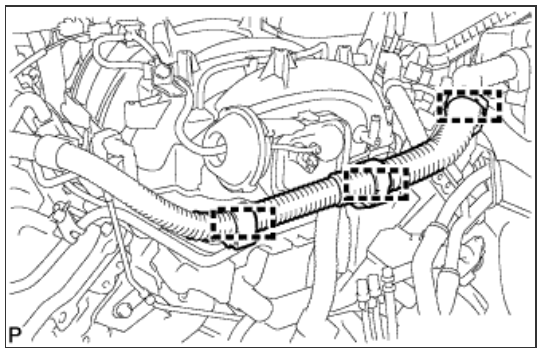


e. Disconnect the purge VSV connector.

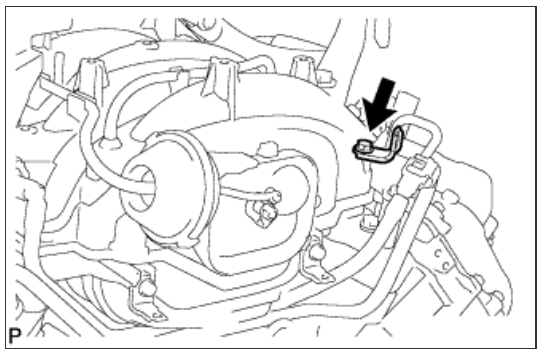
f. Disconnect the purge line hose from the purge VSV.



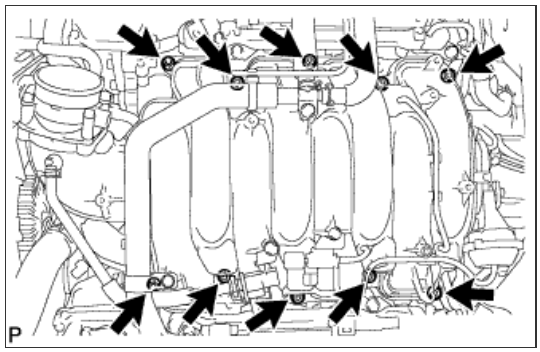
g. Disconnect the vacuum switching valve connector (for ACIS).



h. Remove the No. 1 engine cover sub-assembly.

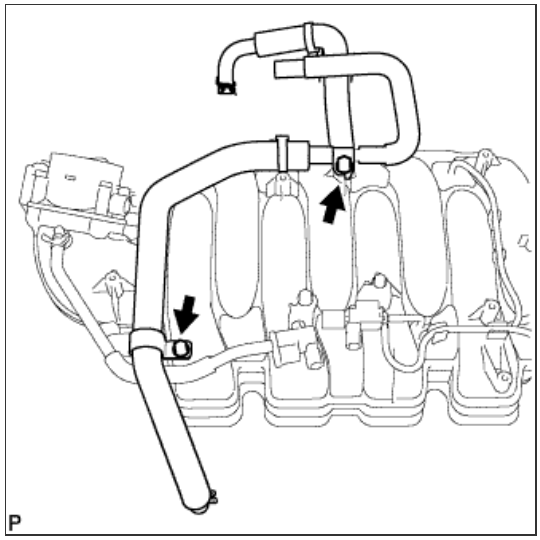


i. Remove the No. 3 engine cover.

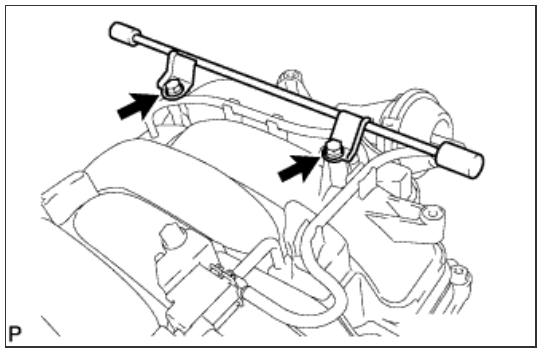


j. Disconnect the 3 wire clamps from the 3 wire brackets.

k. Remove the bolt and wire bracket from the intake manifold.

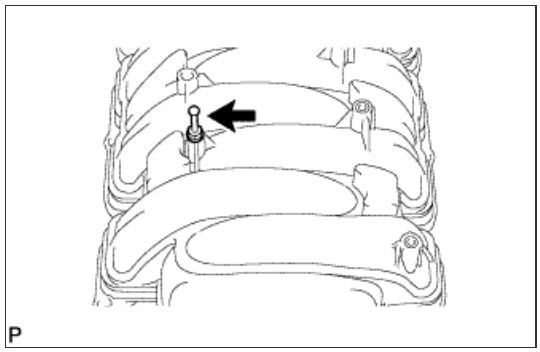


l. Remove the 2 nuts, 8 bolts, intake manifold and 2 gaskets.



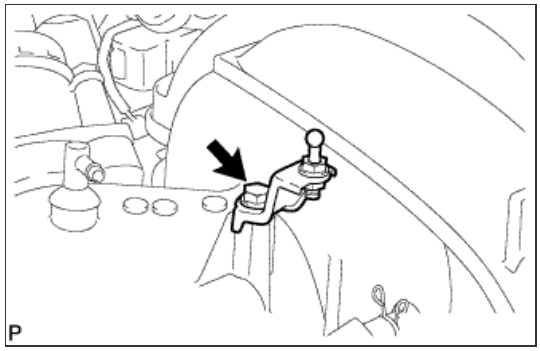
10. REMOVE VENTILATION HOSE ASSEMBLY

a. Remove the 2 bolts and ventilation hose from the intake manifold.



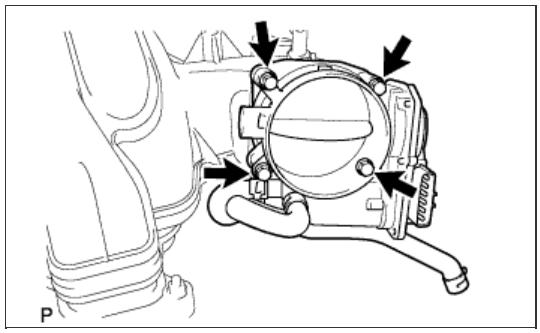
11. REMOVE NO. 1 V-BANK COVER BRACKET

a. Remove the 2 bolts and bracket.



12. REMOVE V-BANK COVER BOLT

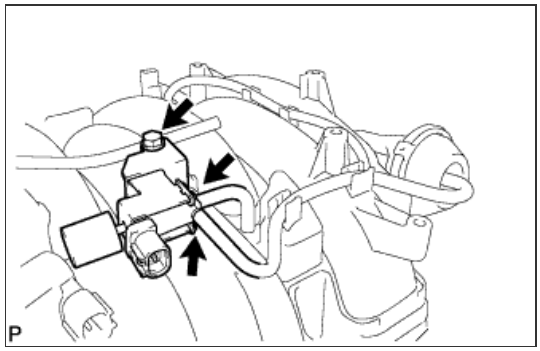
a. Remove the cover bolt from the intake manifold.



13. REMOVE NO. 2 V-BANK COVER BRACKET SUB-ASSEMBLY

a. Remove the bolt and bracket.

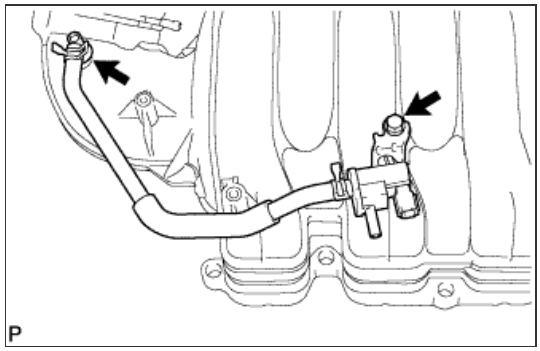
14. REMOVE THROTTLE BODY ASSEMBLY



a. Remove the 4 bolts, throttle body and gasket.

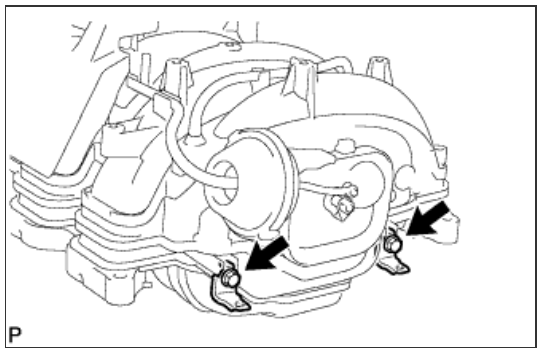
15. REMOVE VACUUM SWITCHING VALVE ASSEMBLY (for ACIS)

a. Disconnect the 2 vacuum hoses from the vacuum switching valve.



b. Remove the bolt and vacuum switching valve.

16. REMOVE PURGE VSV



a. Disconnect the purge line hose from the intake manifold.

b. Remove the bolt and purge VSV.

17. REMOVE WIRE HARNESS CLAMP BRACKET

a. Remove the 2 bolts and 2 wire harness clamp brackets.

for Preparation Click here

1. INSTALL WIRE HARNESS CLAMP BRACKET

a. Install the 2 wire harness clamp brackets with the 2 bolts.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

2. INSTALL PURGE VSV

a. Connect the purge line hose to the intake manifold.

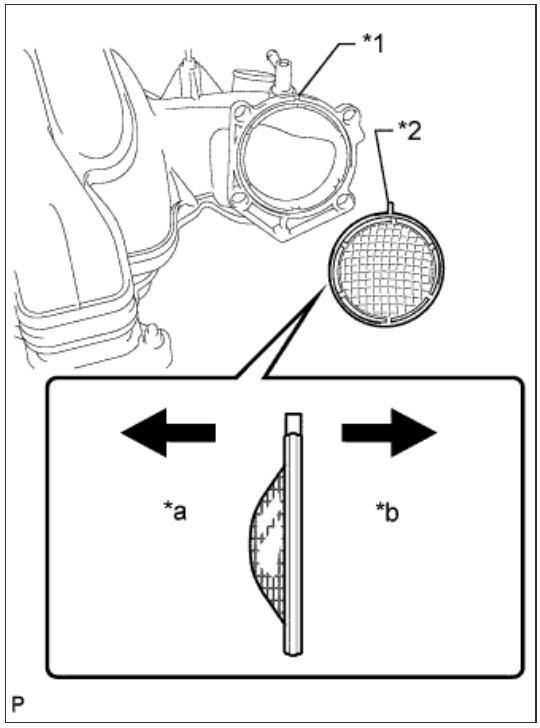
b. Install the purge VSV to the intake manifold with the bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

3. INSTALL VACUUM SWITCHING VALVE ASSEMBLY (for ACIS)

a. Install the vacuum switching valve to the intake manifold with the bolt.

Torque:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }



b. Connect the 2 vacuum hoses to the vacuum switching valve.

4. INSTALL THROTTLE BODY ASSEMBLY

a. Align the protrusion of a new gasket with the groove of the intake manifold, and install the gasket.

Text in Illustration

*1	Groove
*2	Protrusion
*a	Surge Tank Side
*b	Throttle Body Side

b. Install the throttle body with the 4 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

5. INSTALL NO. 2 V-BANK COVER BRACKET SUB-ASSEMBLY

a. Install the bracket with the bolt.

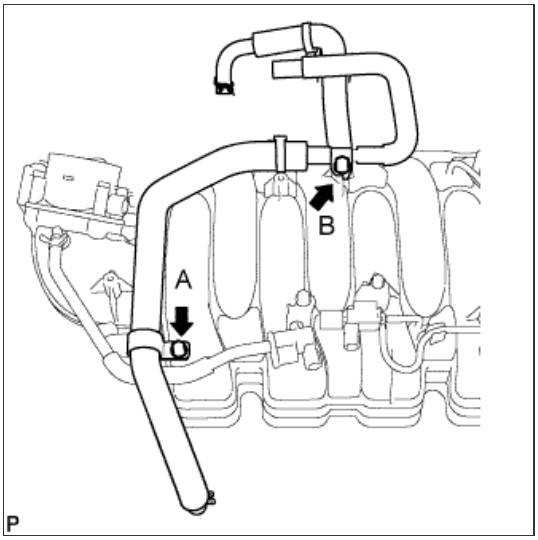
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

6. INSTALL V-BANK COVER BOLT

a. Install the cover bolt to the intake manifold.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

7. INSTALL NO. 1 V-BANK COVER BRACKET



a. Install the bracket with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

8. INSTALL VENTILATION HOSE ASSEMBLY

a. Install the ventilation hose to the intake manifold with the 2 bolts.

Torque:
for bolt A:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
for bolt B:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

9. INSTALL INTAKE MANIFOLD

a. Place 2 new gaskets on the intake manifold.

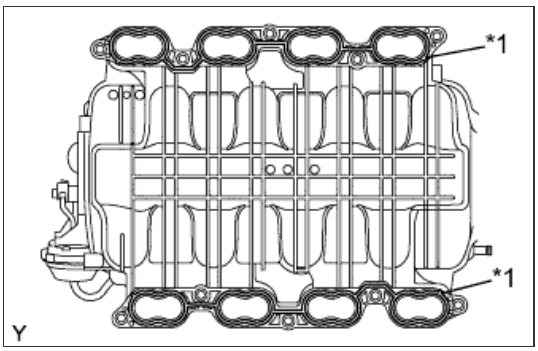
Text in Illustration

*1	Gasket

b. Place the intake manifold on the cylinder head.

c. Install and uniformly tighten the 8 bolts and 2 nuts in several steps.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



d. Install the wire bracket to the intake manifold with the bolt.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

e. Connect the 3 wire clamps to the 3 wire brackets.

f. Install the No. 3 engine cover.

g. Install the No. 1 engine cover sub-assembly.

h. Connect the purge VSV connector.

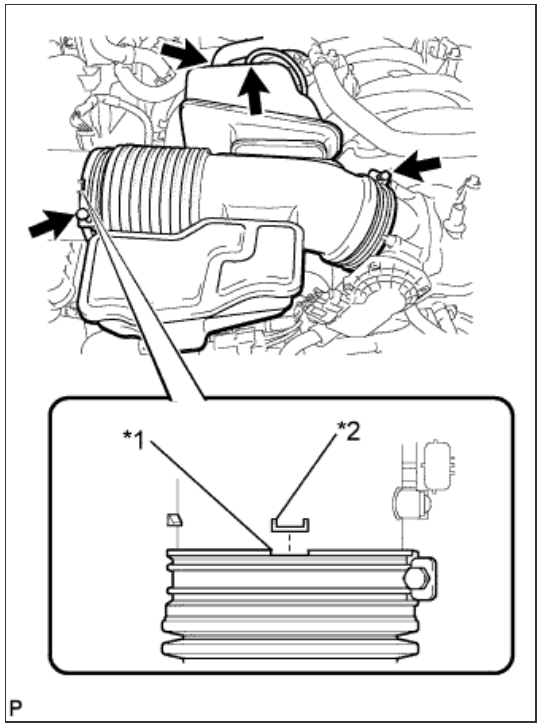
i. Connect the purge line hose to the purge VSV.

j. Connect the vacuum switching valve connector (for ACIS).

k. Connect the No. 1 ventilation hose.

l. Connect the 2 water by-pass hoses.

m. Connect the throttle body connector.



n. Connect the ventilation hose to the ventilation pipe of the cylinder head cover LH and RH.

10. INSTALL AIR CLEANER HOSE ASSEMBLY

a. Install the air cleaner hose so that the protrusion of the air cleaner cap aligns with the groove of the hose as shown in the illustration.

Text in Illustration

*1	Groove
*2	Protrusion

b. Tighten the 2 clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

c. Connect the vacuum hose.

d. Connect the No. 2 ventilation hose.

11. ADD ENGINE COOLANT

a. Add engine coolant.

Standard Capacity:

Item	Specified Condition
with rear heater	16.2 liters (17.1 US qts, 14.3 Imp. qts)
without rear heater	13.4 liters (14.2 US qts, 11.8 Imp. qts)

NOTICE:

Do not substitute plain water for engine coolant.

HINT:

TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the reservoir cap.

d. Press the No. 1 and No. 2 radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Start the engine and warm it up until the thermostat opens.

HINT:

The thermostat opening timing can be confirmed by pressing the radiator inlet hose by hand, and checking when the engine coolant starts to flow inside the hose.

g. Maintain the engine speed at 2000 to 2500 rpm.

NOTICE:

- **Make sure that the radiator reservoir still has some coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**
- **Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the F line.**
- **Run the engine at 2000 rpm until the coolant level has stabilized.**

h. Press the No. 1 and No. 2 radiator hoses several times by hand to bleed air.

CAUTION:

- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the fan.**

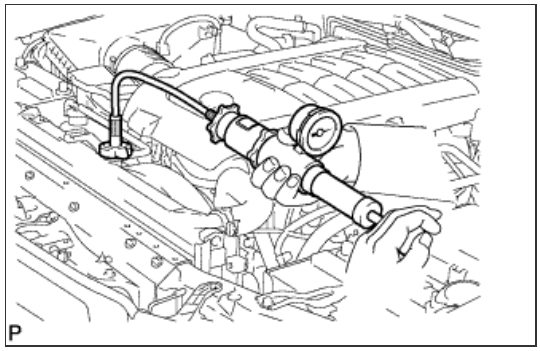
i. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

j. Check that the coolant level is between the F and L lines.
If the coolant level is below the L line, repeat all of the procedures above.
If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.

12. INSPECT FOR COOLANT LEAK



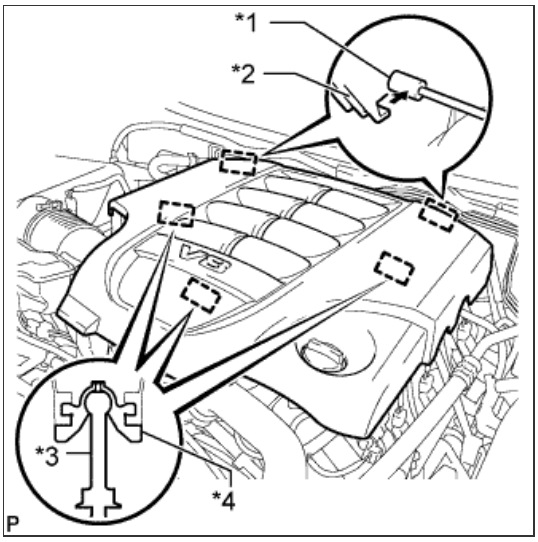
CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Fill the radiator with coolant and attach a radiator cap tester.

b. Warm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.



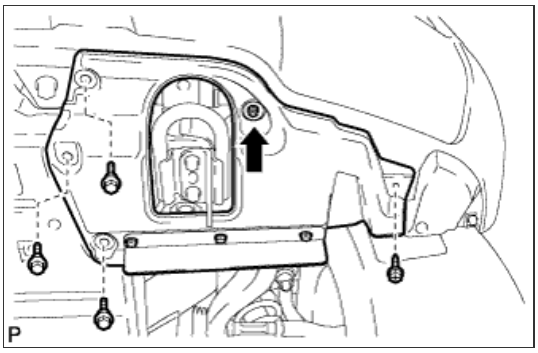
13. INSTALL V-BANK COVER SUB-ASSEMBLY

a. Attach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.

Text in Illustration

*1	Bracket
*2	Hook
*3	Pin
*4	Grommet

14. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY



a. Install the No. 1 engine under cover with the 10 bolts.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

15. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the 3 bolts and screw.

16. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

17. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

a. Install the cowl top ventilator louver (Click here).

18. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

19. CHECK THROTTLE BODY ASSEMBLY

a. Check the throttle control motor operating sounds.

i. Turn the engine switch on (IG).

ii. When depressing the accelerator pedal, check the operating sound of the running motor. Make sure that no friction noises are emitted from the motor. If friction noise exists, replace the throttle body.

b. Check the throttle position sensor.

i. Connect the intelligent tester to the DLC3.

ii. Turn the engine switch on (IG).

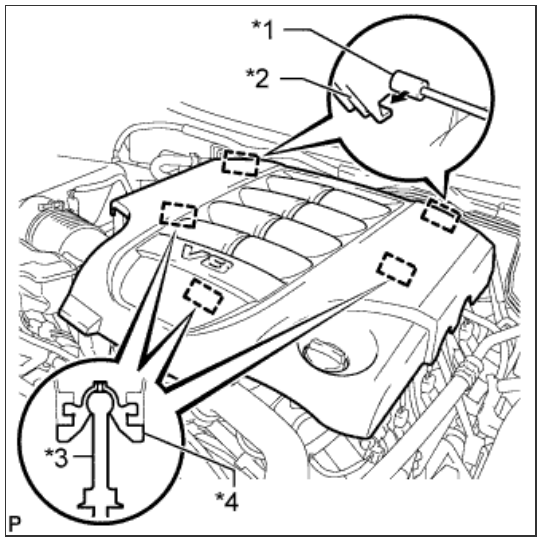
iii. Turn the intelligent tester main switch on.

iv. Enter the following menus: Powertrain / Engine and ECT / Data List / All Data / Throttle Sensor Volt %.

v. Depress the accelerator pedal. When the throttle valve is fully opened, check that the value of "Throttle Sensor Volt %" is within the specification.

Standard throttle valve opening percentage:
60% or more

HINT:



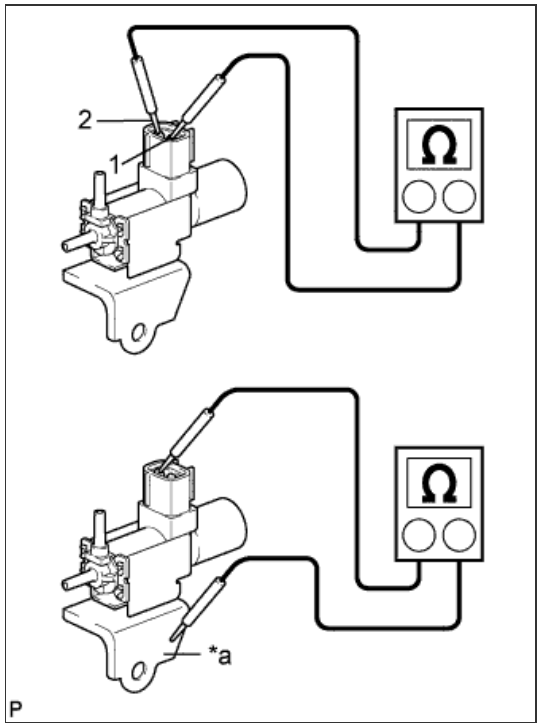
When checking the standard throttle valve opening percentage, the shift lever should be in N.

If the percentage is less than 60%, replace the throttle body.

for Preparation Click here

1. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.



Text in Illustration

*1	Bracket
*2	Hook
*3	Pin
*4	Grommet

2. INSPECT VACUUM SWITCHING VALVE ASSEMBLY (for ACIS)

a. Disconnect the vacuum switching valve connector.

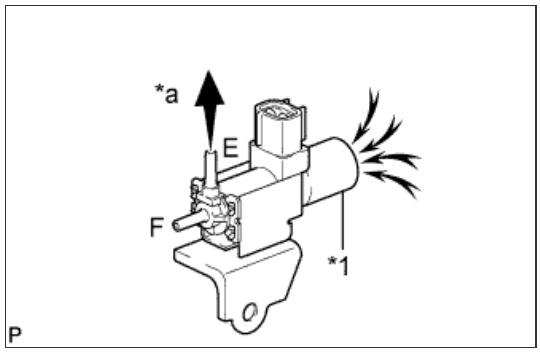
b. Measure the resistance according to the value(s) in the table below.

Text in Illustration

*a	Body Ground

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	37 to 44 Ω
1 - Body ground	lways	1 MΩ or higher
2 - Body ground		

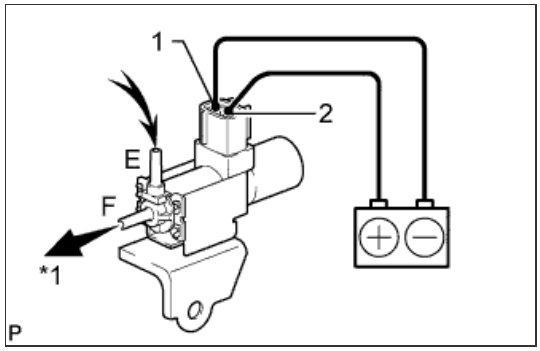


f the result is not as specified, replace the vacuum switching valve assembly.

c. When applying vacuum to port , check that air is sucked into the filter.

Text in Illustration

*1	Filter
*a	Vacuum



f the result is not as specified, replace the vacuum switching valve assembly.

d. pply battery voltage to the connector, and check the VSV operation.

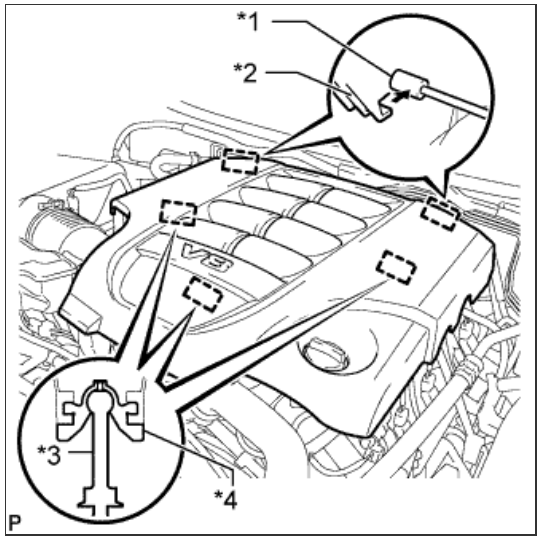
OK:

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	ir is sucked into port when a vacuum is applied to port F

Text in Illustration

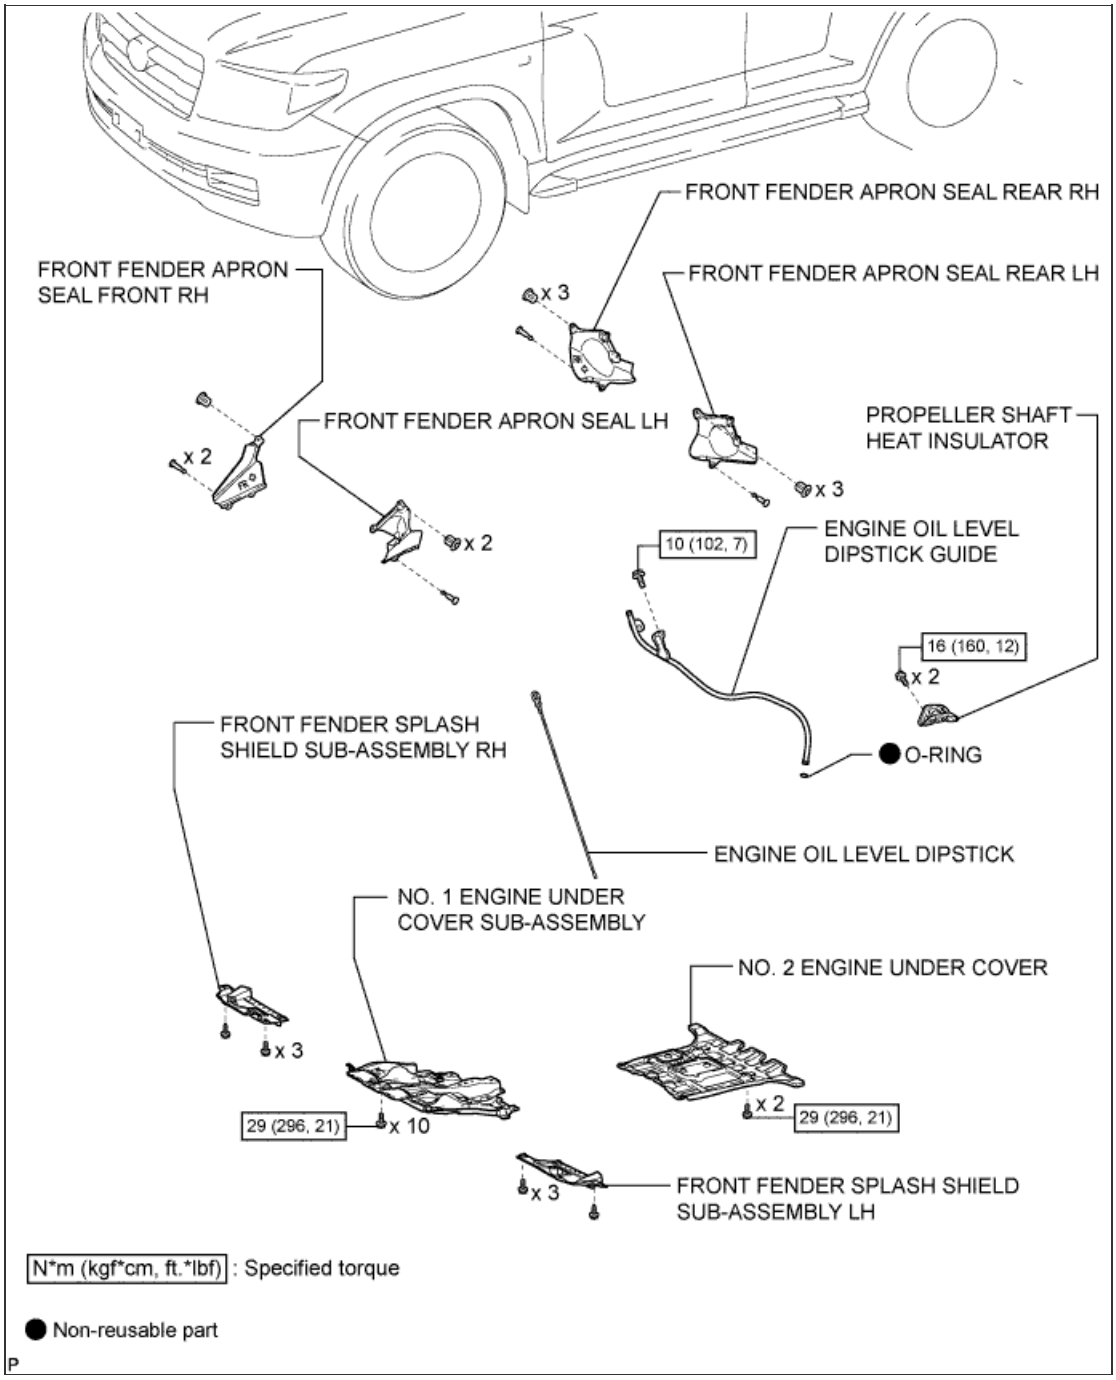
*a	Vacuum

f the result is not as specified, replace the vacuum switching valve assembly.

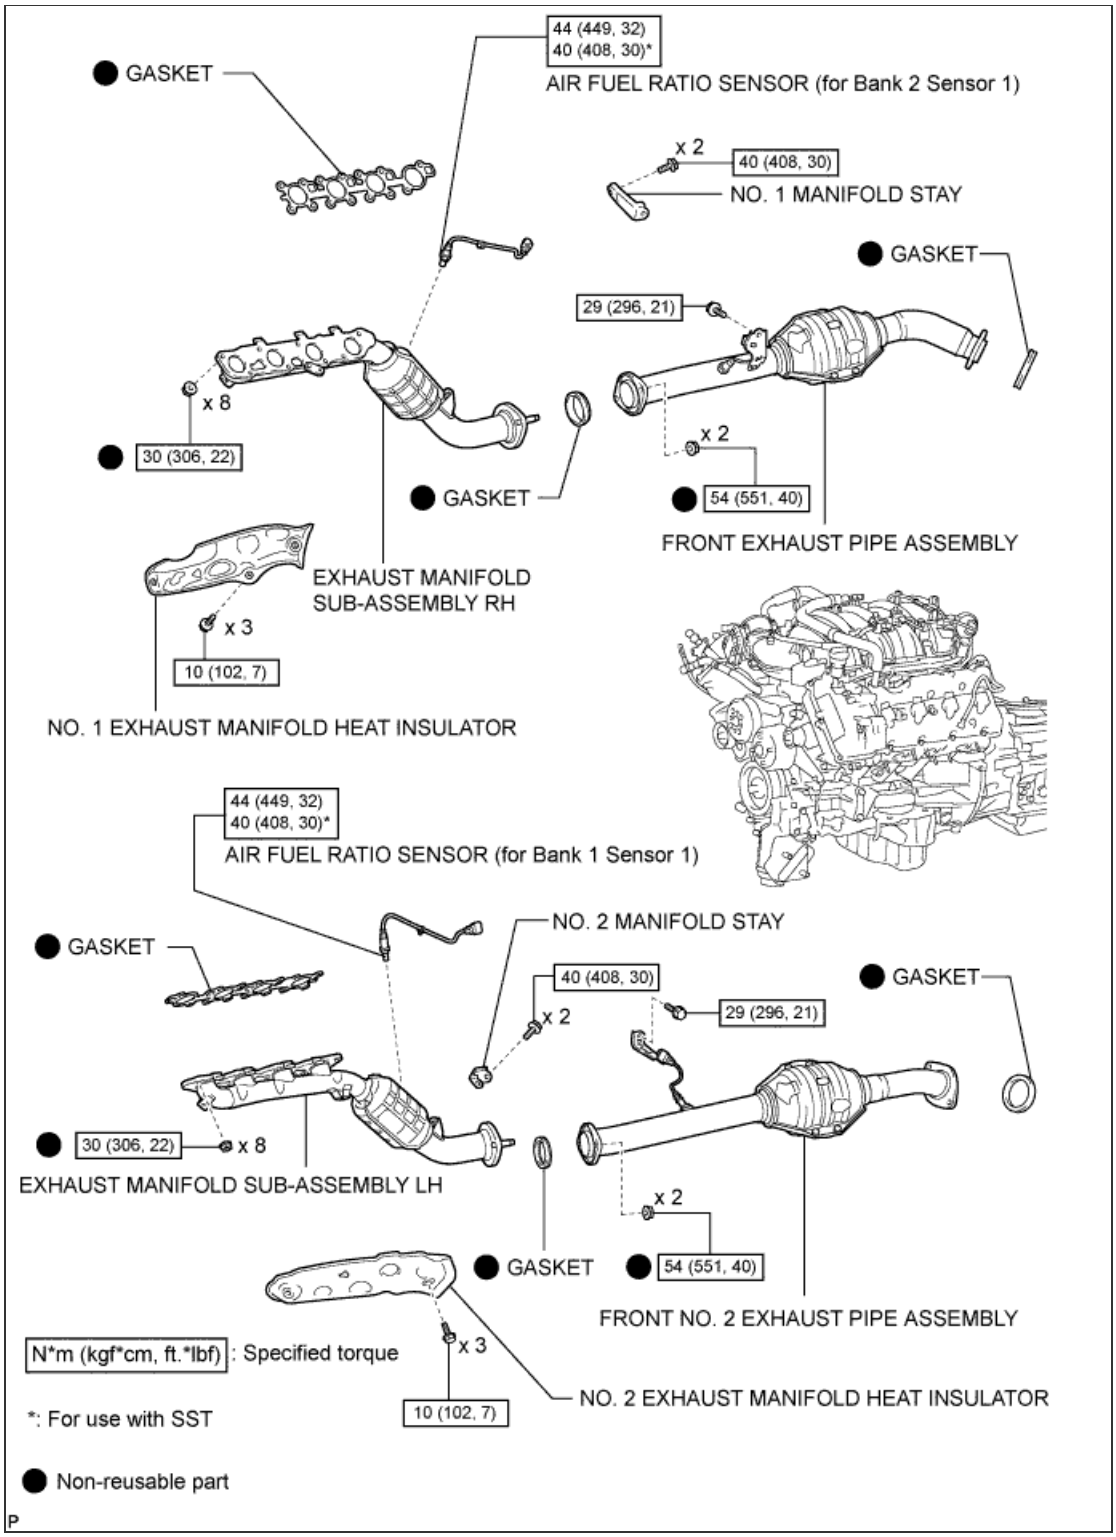


e. Connect the vacuum switching valve connector.

3. INSTALL V-BANK COVER SUB-ASSEMBLY



a. ttach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.



Text in Illustration

*1	Bracket
*2	Hook
*3	Pin
*4	Grommet

for Preparation Click here

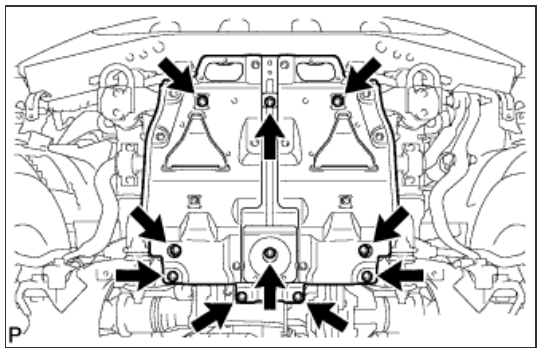
1. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and screw.

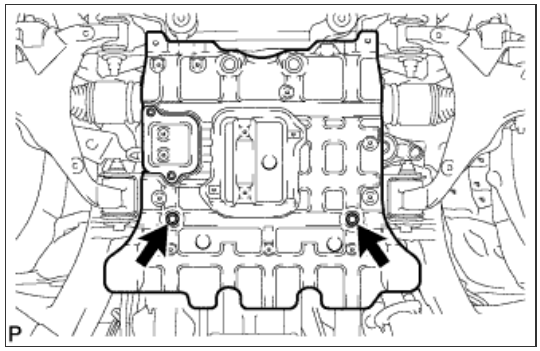
b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



2. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

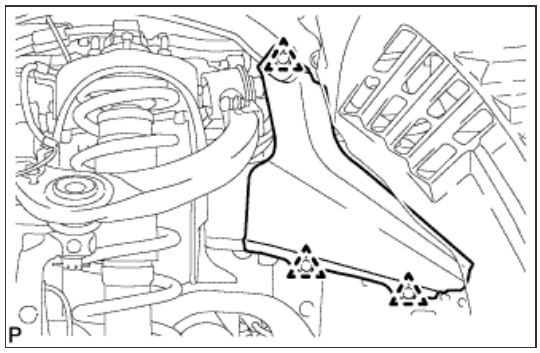
HINT:

Use the same procedures described for the LH side.



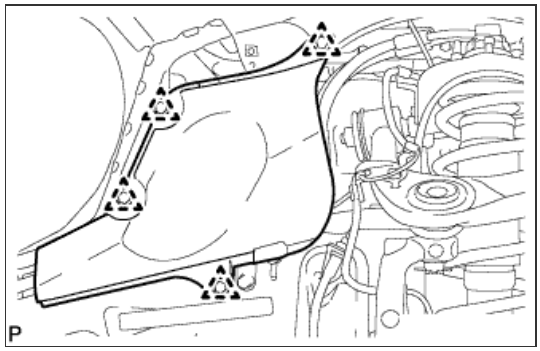
3. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and No. 1 engine under cover.



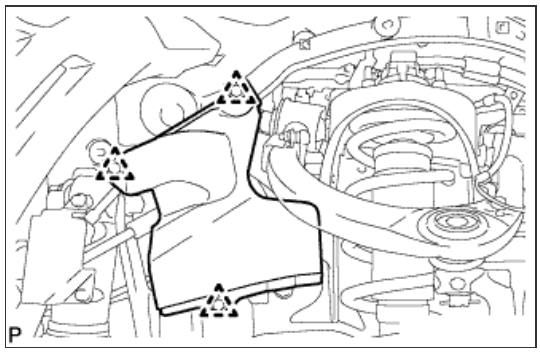
4. REMOVE NO. 2 ENGINE UNDER COVER

a. Remove the 2 bolts and No. 2 engine under cover.



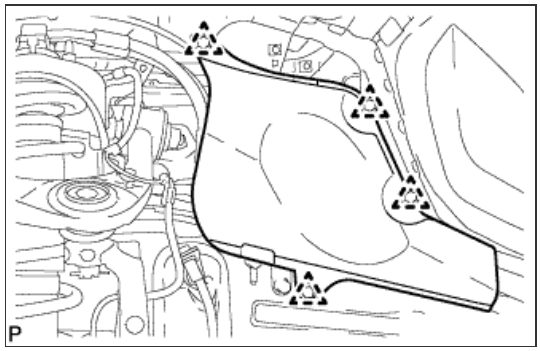
5. REMOVE FRONT FENDER APRON SEAL FRONT RH

a. Using a clip remover, remove the 3 clips and fender apron seal.



6. REMOVE FRONT FENDER APRON SEAL REAR RH

a. Using a clip remover, remove the 4 clips and fender apron seal.



7. REMOVE FRONT FENDER APRON SEAL LH

a. Using a clip remover, remove the 3 clips and fender apron seal.

8. REMOVE FRONT FENDER APRON SEAL REAR LH

a. Using a clip remover, remove the 4 clips and fender apron seal.

9. REMOVE ENGINE OIL LEVEL DIPSTICK GUIDE

a. Apply a light coat of engine oil to a new O-ring.

b. Install the O-ring to the guide.

c. Install the dipstick guide with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

d. Install the dipstick.

e. Connect the wire harness clamp.

10. REMOVE TAILPIPE ASSEMBLY

a. Remove the bolt, clamp and gasket.

b. Remove the tailpipe from the 2 exhaust pipe supports.

c. Remove the bolt and clamp, and then disconnect the tailpipe from the center exhaust pipe.

11. REMOVE CENTER EXHAUST PIPE ASSEMBLY

a. Remove the 4 bolts.

b. Remove the center exhaust pipe from the 3 exhaust pipe supports.

c. Remove the 2 gaskets from the front exhaust pipe and front No. 2 exhaust pipe.

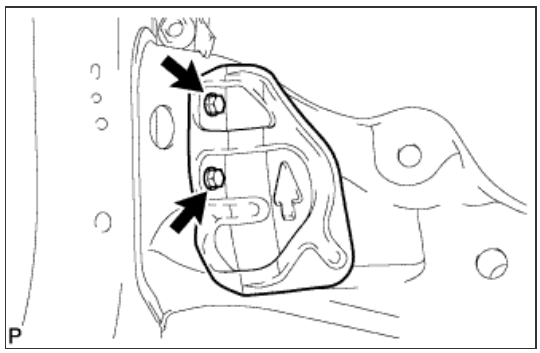
12. REMOVE FRONT NO. 2 EXHAUST PIPE ASSEMBLY

a. Disconnect the heated oxygen sensor connector.

b. Remove the bolt and disconnect the wire harness clamp bracket of the oxygen sensor from the transmission.

c. Remove the 2 nuts, front No. 2 exhaust pipe and gasket from the exhaust manifold LH.

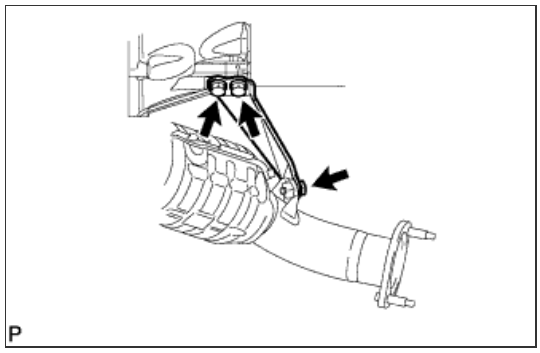
13. REMOVE FRONT EXHAUST PIPE ASSEMBLY



a. Disconnect the heated oxygen sensor connector.

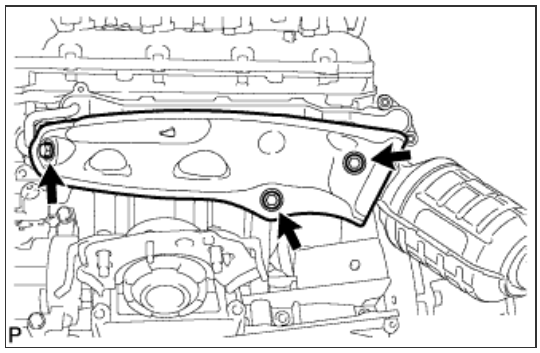
b. Remove the bolt and disconnect the wire harness clamp bracket of the oxygen sensor from the transmission.

c. Remove the 2 nuts, front exhaust pipe and gasket from the exhaust manifold RH.



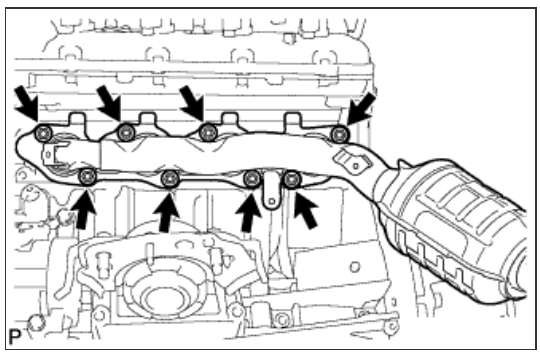
14. REMOVE PROPELLER SHAFT HEAT INSULATOR

a. Remove the 2 bolts and heat insulator.



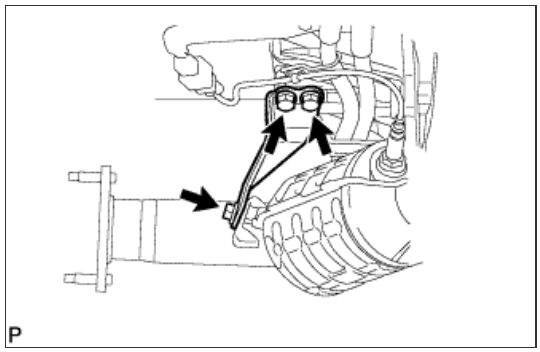
15. REMOVE NO. 2 MANIFOLD STAY

a. Remove the 3 bolts and manifold stay.



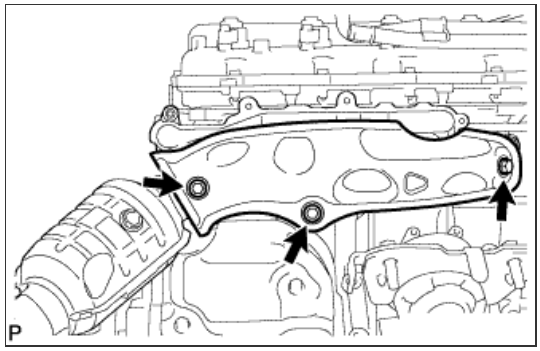
16. REMOVE NO. 2 EXHAUST MANIFOLD HEAT INSULATOR

a. Remove the 3 bolts and heat insulator.



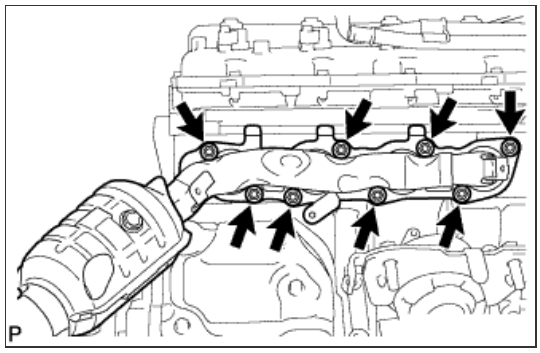
17. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY LH

a. Remove the 8 nuts, exhaust manifold and gasket.



18. REMOVE NO. 1 MANIFOLD STAY

a. Remove the 3 bolts and manifold stay.



19. REMOVE NO. 1 EXHAUST MANIFOLD HEAT INSULATOR

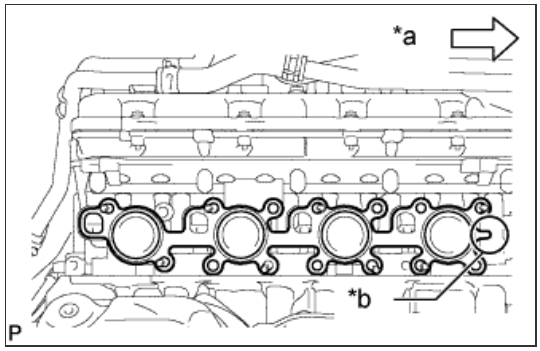
a. Remove the 3 bolts and heat insulator.

20. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY RH

a. Remove the 8 nuts, exhaust manifold and gasket.

for Preparation Click here

1. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY RH



a. Install a new gasket to the cylinder head.

HINT:

Install the exhaust manifold gasket with the gasket tab facing toward the front of the engine.

Text in Illustration

*a	Front
*b	Tab

b. Install the exhaust manifold with 8 new nuts.

Torque:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }

2. INSTALL NO. 1 EXHAUST MANIFOLD HEAT INSULATOR

a. Install the heat insulator with the 3 bolts.

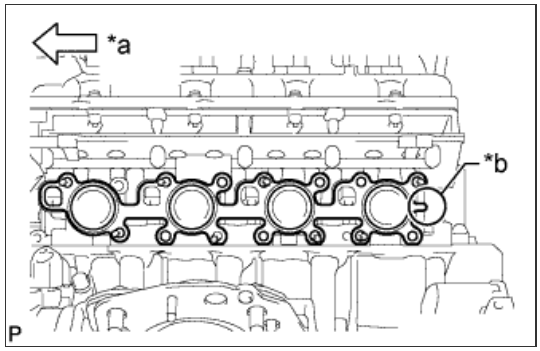
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

3. INSTALL NO. 1 MANIFOLD STAY

a. Install the manifold stay with the 3 bolts.

Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

4. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY LH



a. Install a new gasket to the cylinder head.

HINT:

Install the exhaust manifold gasket with the gasket tab facing toward the rear of the engine.

Text in Illustration

*a	Front
*b	Tab

b. Install the exhaust manifold with 8 new nuts.

Torque:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }

5. INSTALL NO. 2 EXHAUST MANIFOLD HEAT INSULATOR

a. Install the heat insulator with the 3 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

6. INSTALL NO. 2 MANIFOLD STAY

a. Install the manifold stay with the 3 bolts.

Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

7. INSTALL PROPELLER SHAFT HEAT INSULATOR

a. Install the heat insulator with the 2 bolts.

Torque:
16 N*m{ 160 kgf*cm , 12 ft.*lbf }

8. INSTALL FRONT EXHAUST PIPE ASSEMBLY

a. Install a new gasket and the front exhaust pipe to the exhaust manifold RH with 2 new nuts.

Torque:
54 N*m{ 551 kgf*cm , 40 ft.*lbf }

b. Install the wire harness clamp bracket of the oxygen sensor to the transmission with the bolt.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

c. Connect the heated oxygen sensor connector.

9. INSTALL FRONT NO. 2 EXHAUST PIPE ASSEMBLY

a. Install a new gasket and the front No. 2 exhaust pipe to the exhaust manifold LH with 2 new nuts.

Torque:
54 N*m{ 551 kgf*cm , 40 ft.*lbf }

b. Install the wire harness clamp bracket of the oxygen sensor to the transmission with the bolt.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

c. Connect the heated oxygen sensor connector.

10. INSTALL CENTER EXHAUST PIPE ASSEMBLY

a. Install 2 new gaskets to the front exhaust pipe and front No. 2 exhaust pipe.

b. Install the center exhaust pipe to the 3 exhaust pipe supports, and then install the 4 bolts.

Torque:
48 N*m{ 489 kgf*cm , 35 ft.*lbf }

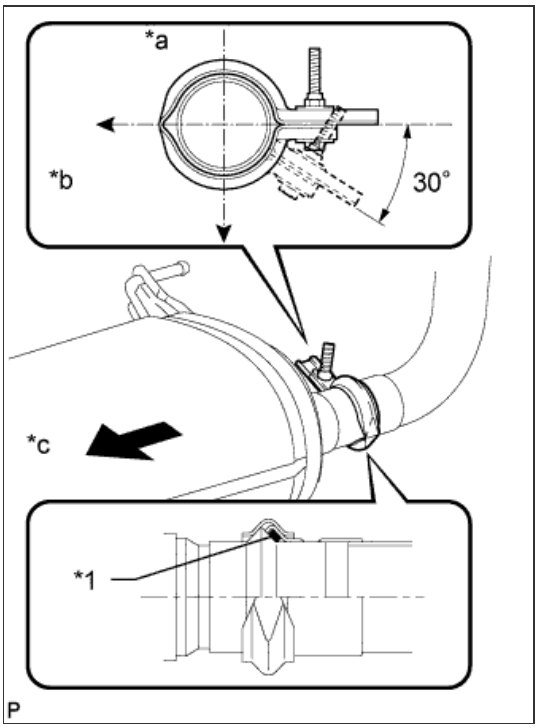
11. INSTALL TAILPIPE ASSEMBLY

a. Install the tailpipe to the 2 exhaust pipe supports.

b. Install a new gasket to the center exhaust pipe.

c. Connect the tailpipe to the center exhaust pipe.

d. Attach a new clamp to the tailpipe and center exhaust pipe. Then install the bolt to the clamp.



Torque:
32 N*m{ 326 kgf*cm , 24 ft.*lbf }

Text in Illustration

*1	Gasket
*a	Top
*b	LH Side
*c	Front

HINT:

Install the clamp within the angle range shown in the illustration.

12. INSTALL ENGINE OIL LEVEL DIPSTICK GUIDE

a. Apply a light coat of engine oil to a new O-ring.

b. Install the O-ring to the guide.

c. Install the dipstick guide with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

d. Install the dipstick.

e. Connect the wire harness clamp.

13. INSPECT FOR EXHAUST GAS LEAK

If gas is leaking, tighten the areas necessary to stop the leak. Replace damaged parts as necessary.

14. INSTALL FRONT FENDER APRON SEAL LH

a. Install the fender apron seal with the 3 clips.

15. INSTALL FRONT FENDER APRON SEAL REAR LH

a. Install the fender apron seal with the 4 clips.

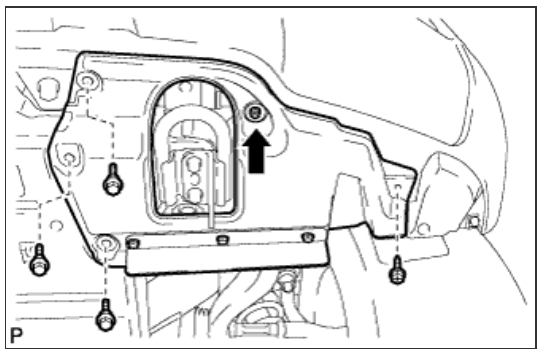
16. INSTALL FRONT FENDER APRON SEAL FRONT RH

a. Install the fender apron seal with the 3 clips.

17. INSTALL FRONT FENDER APRON SEAL REAR RH

a. Install the fender apron seal with the 4 clips.

18. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY



a. Install the No. 1 engine under cover with the 10 bolts.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

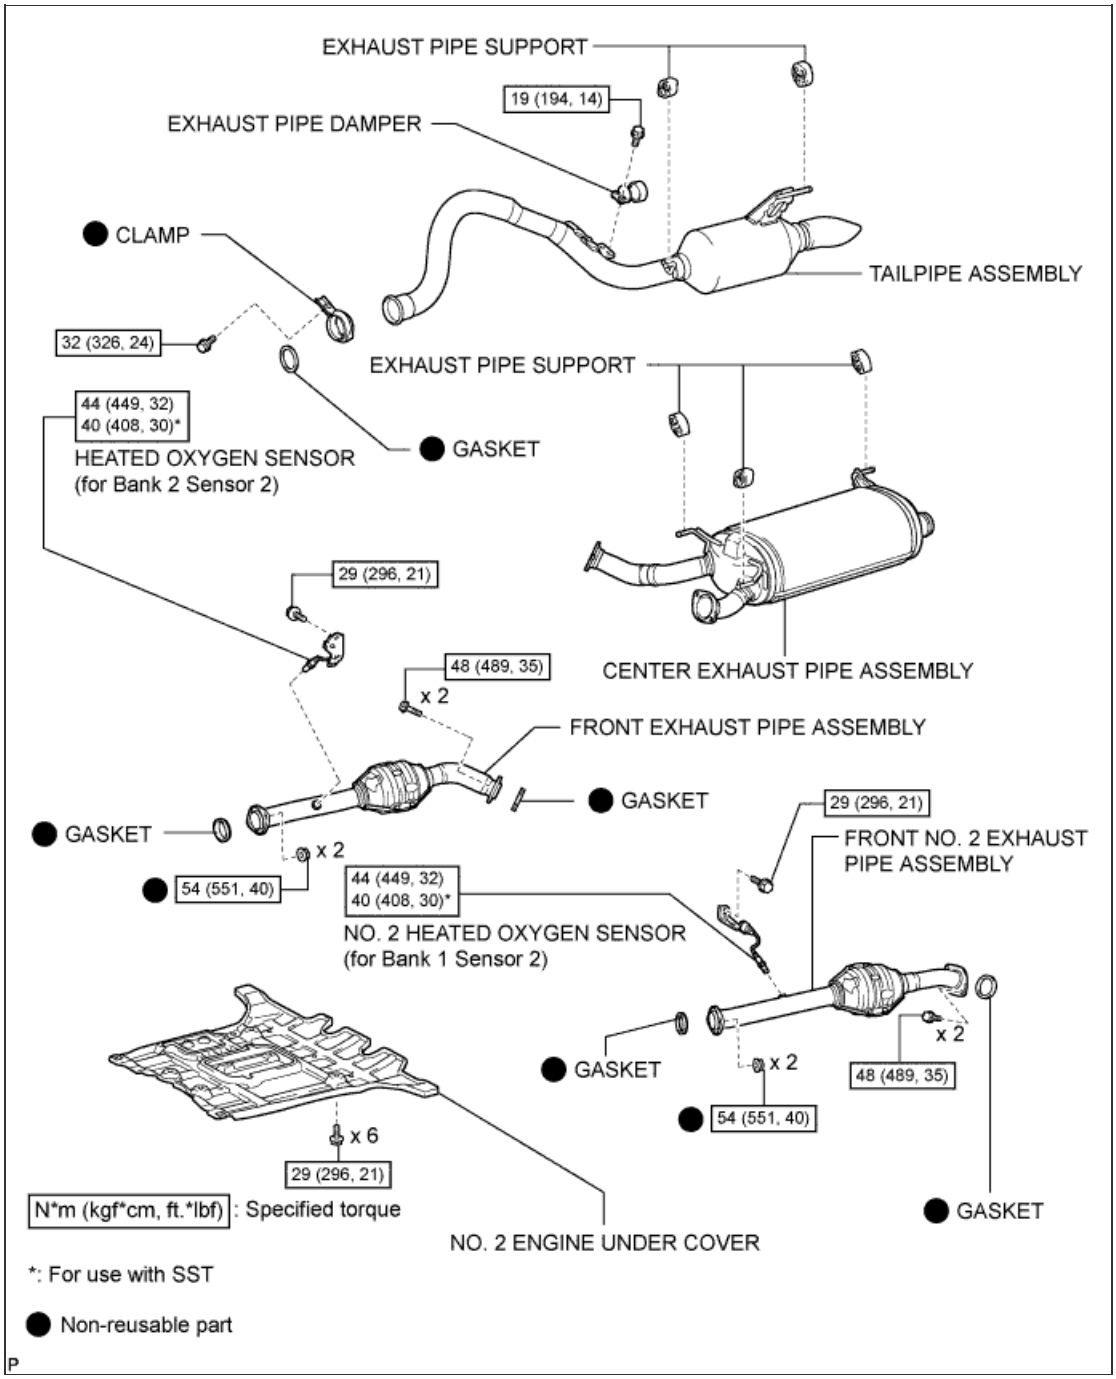
19. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the 3 bolts and screw.

20. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:



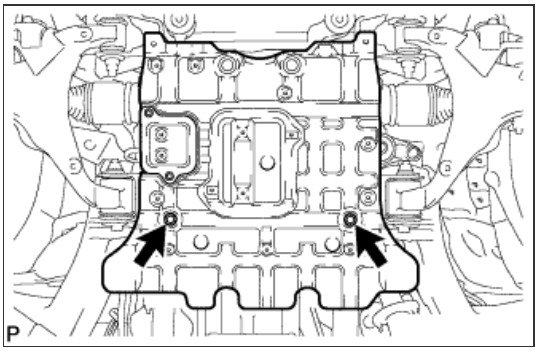
Use the same procedures described for the LH side.

21. INSTALL NO. 2 ENGINE UNDER COVER

a. Install the No. 2 engine under cover with the 2 bolts.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

for Preparation Click here



for Preparation Click here

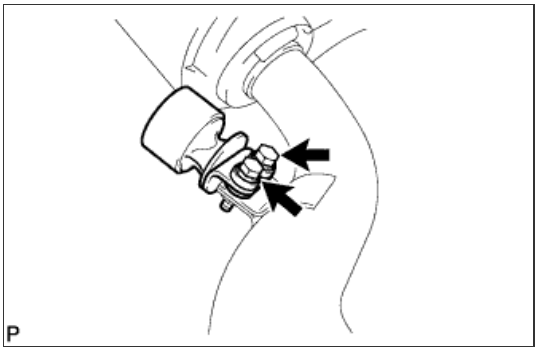
CAUTION:

- **Wear protective gloves when removing the exhaust pipe.**
- **The exhaust pipe is extremely hot immediately after the engine has stopped.**
- **Confirm that the exhaust pipe has cooled down before removing it.**

1. REMOVE NO. 2 ENGINE UNDER COVER

a. Remove the 2 bolts and No. 2 engine under cover.

2. REMOVE TAILPIPE ASSEMBLY



a. Remove the bolt, clamp and gasket.

b. Remove the tailpipe from the 2 exhaust pipe supports.

c. Remove the bolt and clamp, and then disconnect the tailpipe from the center exhaust pipe.

3. REMOVE EXHAUST PIPE DAMPER

a. Remove the 2 bolts and exhaust pipe damper from the tailpipe.

4. REMOVE CENTER EXHAUST PIPE ASSEMBLY

a. Remove the 4 bolts.

b. Remove the center exhaust pipe from the 3 exhaust pipe supports.

c. Remove the 2 gaskets from the front exhaust pipe and front No. 2 exhaust pipe.

5. REMOVE FRONT NO. 2 EXHAUST PIPE ASSEMBLY

a. Disconnect the heated oxygen sensor connector.

b. Remove the bolt and disconnect the wire harness clamp bracket of the oxygen sensor from the transmission.

c. Remove the 2 nuts, front No. 2 exhaust pipe and gasket from the exhaust manifold LH.

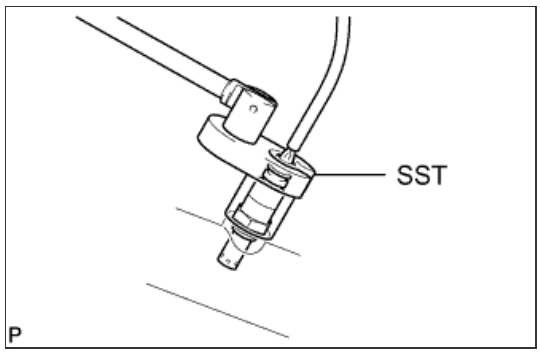
6. REMOVE FRONT EXHAUST PIPE ASSEMBLY

a. Disconnect the heated oxygen sensor connector.

b. Remove the bolt and disconnect the wire harness clamp bracket of the oxygen sensor from the transmission.

c. Remove the 2 nuts, front exhaust pipe and gasket from the exhaust manifold RH.

7. REMOVE NO. 2 HEATED OXYGEN SENSOR (for Bank 1 Sensor 2)

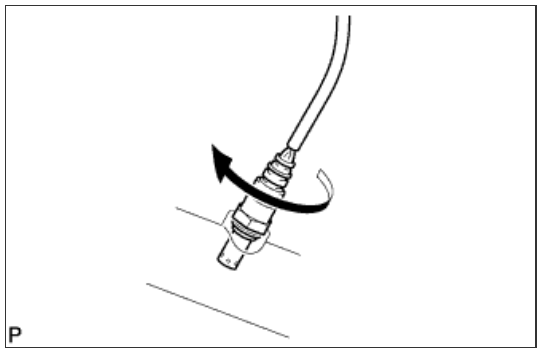


a. Using SST, remove the sensor.

SST
09224-00010

8. REMOVE HEATED OXYGEN SENSOR (for Bank 2 Sensor 2)

a. Using SST, remove the sensor.



SST
09224-00010

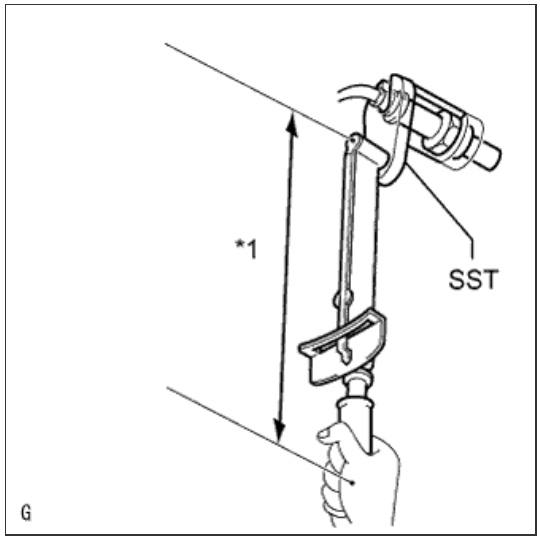
for Preparation Click here

1. INSTALL NO. 2 HEATED OXYGEN SENSOR (for Bank 1 Sensor 2)

a. Temporarily install the sensor to the exhaust pipe by hand.

b. Using SST, tighten the sensor.

SST
09224-00010



Torque:
without SST:
44 N*m{ 449 kgf*cm , 32 ft.*lbf }
with SST:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

Text in Illustration

*1	Fulcrum Length

HINT:

- **Use a torque wrench with a fulcrum length of 300 mm (11.8 in.). If using a torque wrench with a length that is not 300 mm (11.8 in.), calculate the torque specification for the torque wrench and SST based on the "without SST" torque specification (Click here).**
- **Make sure SST and the wrench are connected in a straight line.**

2. INSTALL HEATED OXYGEN SENSOR (for Bank 2 Sensor 2)

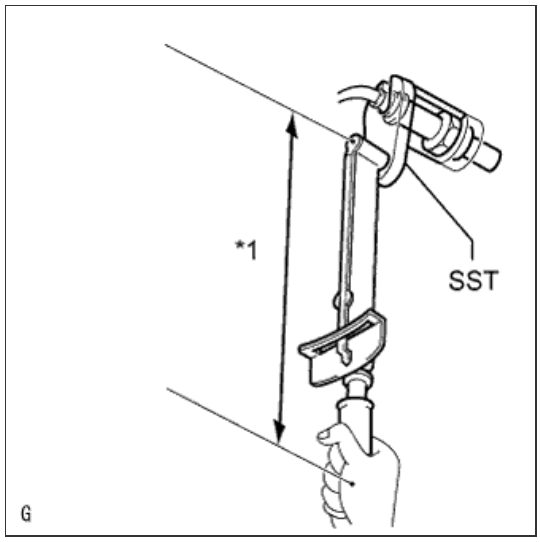
a. Temporarily install the sensor to the exhaust pipe by hand.

b. Using SST, tighten the sensor.

SST
09224-00010

Torque:
without SST:
44 N*m{ 449 kgf*cm , 32 ft.*lbf }
with SST:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

Text in Illustration



*1	Fulcrum Length

HINT:

- **Use a torque wrench with a fulcrum length of 300 mm (11.8 in.).**

If using a torque wrench with a length that is not 300 mm (11.8 in.), calculate the torque specification for the torque wrench and SST based on the "without SST" torque specification (Click here).

- **Make sure SST and the wrench are connected in a straight line.**

3. INSTALL FRONT EXHAUST PIPE ASSEMBLY

a. Install a new gasket and the front exhaust pipe to the exhaust manifold RH with 2 new nuts.

Torque:
54 N*m{ 551 kgf*cm , 40 ft.*lbf }

b. Install the wire harness clamp bracket of the oxygen sensor to the transmission with the bolt.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

c. Connect the heated oxygen sensor connector.

4. INSTALL FRONT NO. 2 EXHAUST PIPE ASSEMBLY

a. Install a new gasket and the front No. 2 exhaust pipe to the exhaust manifold LH with 2 new nuts.

Torque:
54 N*m{ 551 kgf*cm , 40 ft.*lbf }

b. Install the wire harness clamp bracket of the oxygen sensor to the transmission with the bolt.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

c. Connect the heated oxygen sensor connector.

5. INSTALL CENTER EXHAUST PIPE ASSEMBLY

a. Install 2 new gaskets to the front exhaust pipe and front No. 2 exhaust pipe.

b. Install the center exhaust pipe to the 3 exhaust pipe supports, and then install the 4 bolts.

Torque:
48 N*m{ 489 kgf*cm , 35 ft.*lbf }

6. INSTALL EXHAUST PIPE DAMPER

a. Install the exhaust pipe damper to the tailpipe with the 2 bolts.

Torque:
19 N*m{ 194 kgf*cm , 14 ft.*lbf }

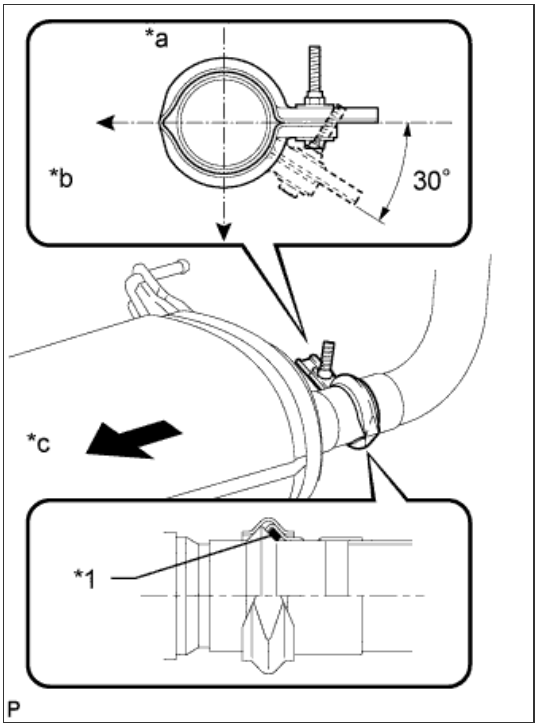
7. INSTALL TAILPIPE ASSEMBLY

a. Install the tailpipe to the 2 exhaust pipe supports.

b. Install a new gasket to the center exhaust pipe.

c. Connect the tailpipe to the center exhaust pipe.

d. Attach a new clamp to the tailpipe and center exhaust pipe. Then install the bolt to the clamp.



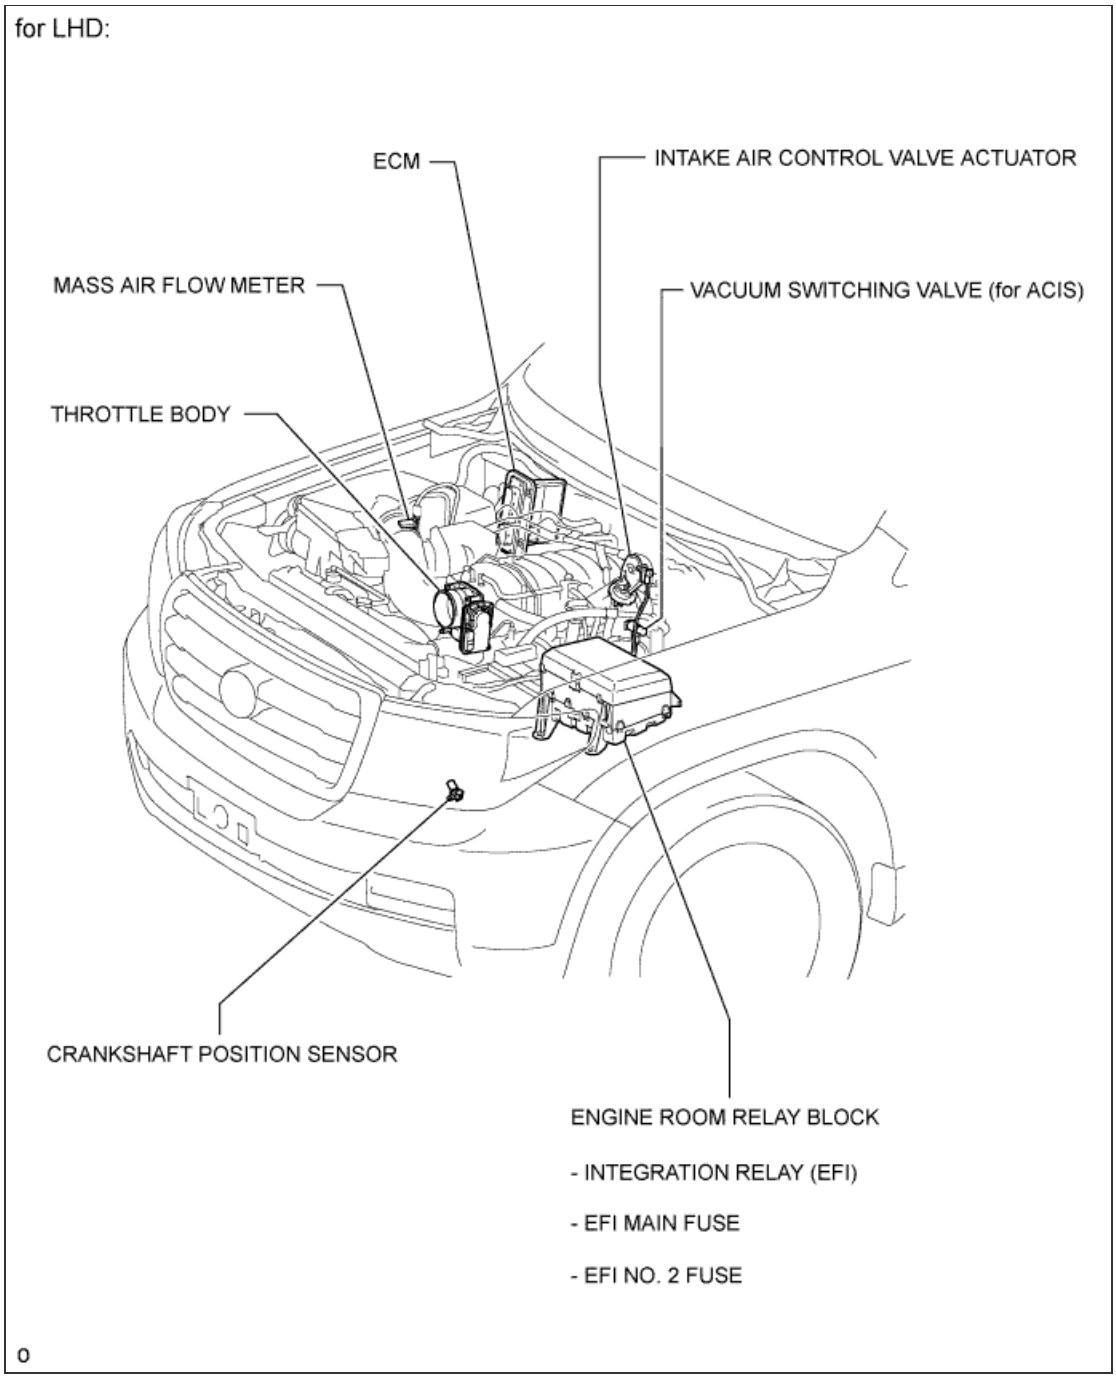
Torque:
32 N*m{ 326 kgf*cm , 24 ft.*lbf }

Text in Illustration

*1	aket
*a	Top
*b	LH Side
*c	Front

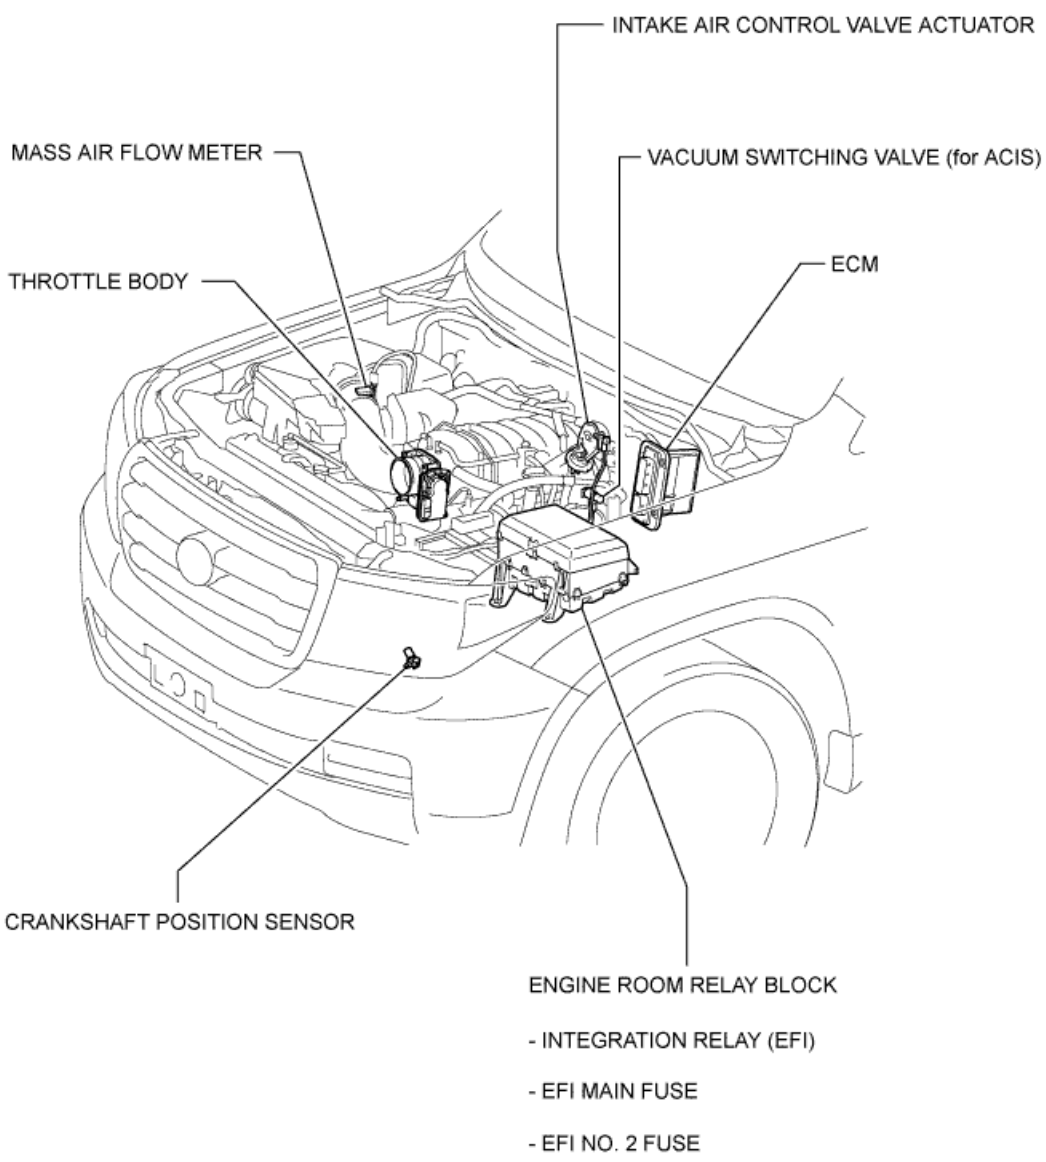
HINT:

Install the clamp within the angle range shown in the illustration.



8. INSPECT FOR EXHAUST GAS LEAK

9. INSTALL NO. 2 ENGINE UNDER COVER



a. Install the No. 2 engine under co er with the 2 bolts.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

for Preparation Click here

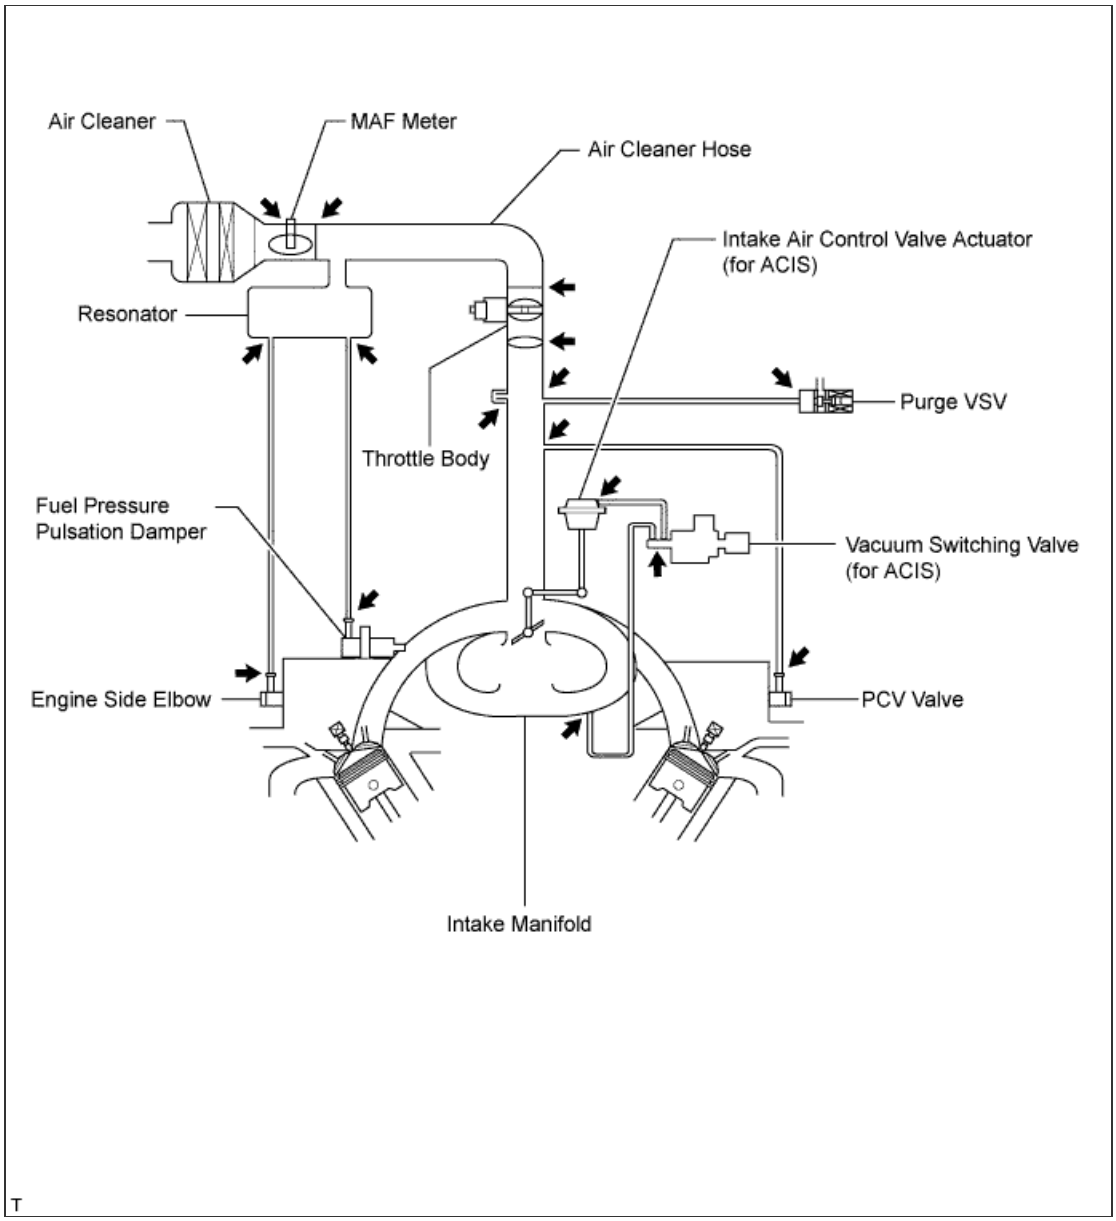
1. INSPECT INTAKE AIR CONTROL VALVE OPERATION

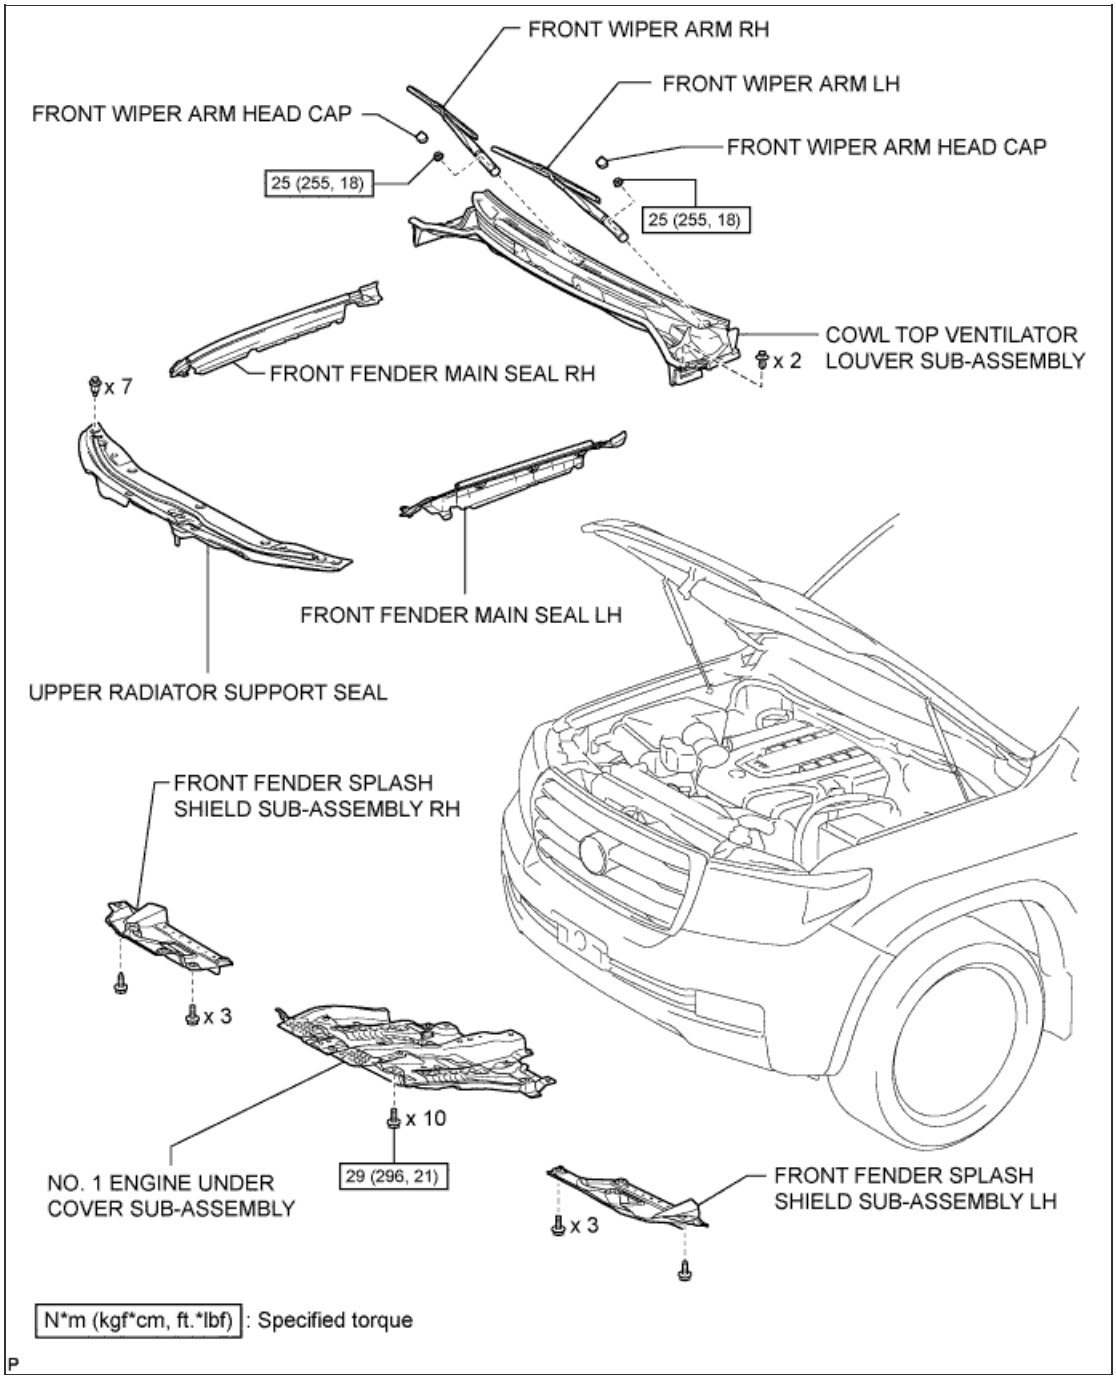
a. Start the engine.



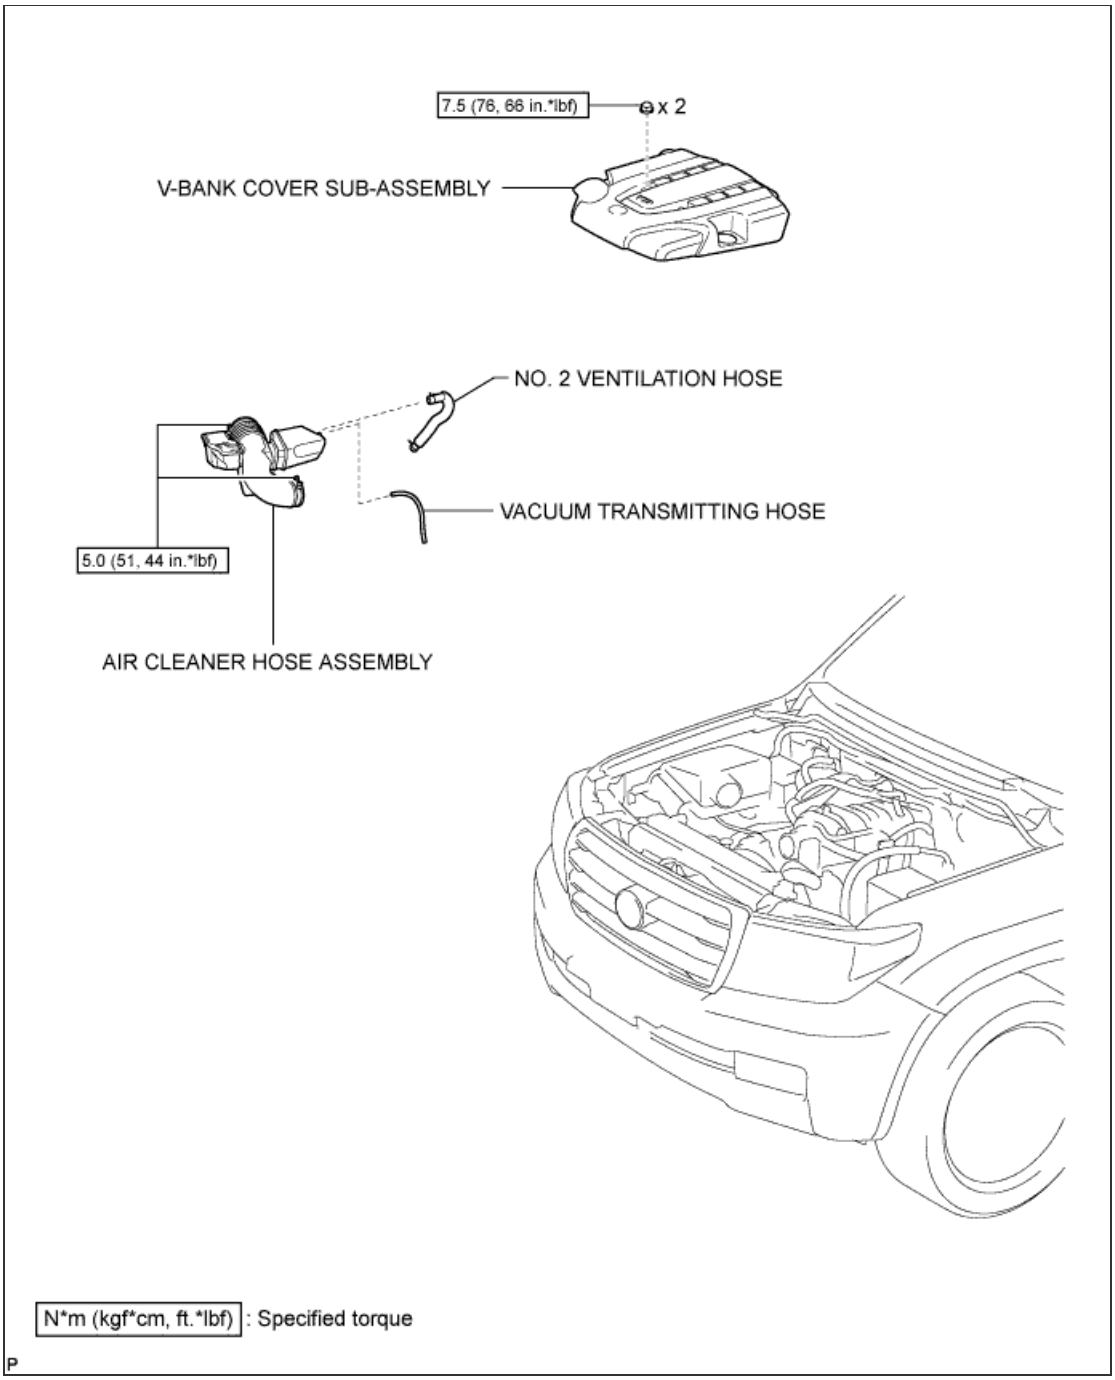
b. While the engine is idling, check that the actuator rod moves as shown in the illustration.

c. Disconnect the VSV connector, and check that the actuator rod returns.
If the result is not as specified, inspect the intake air control valve, VSV and ECM.

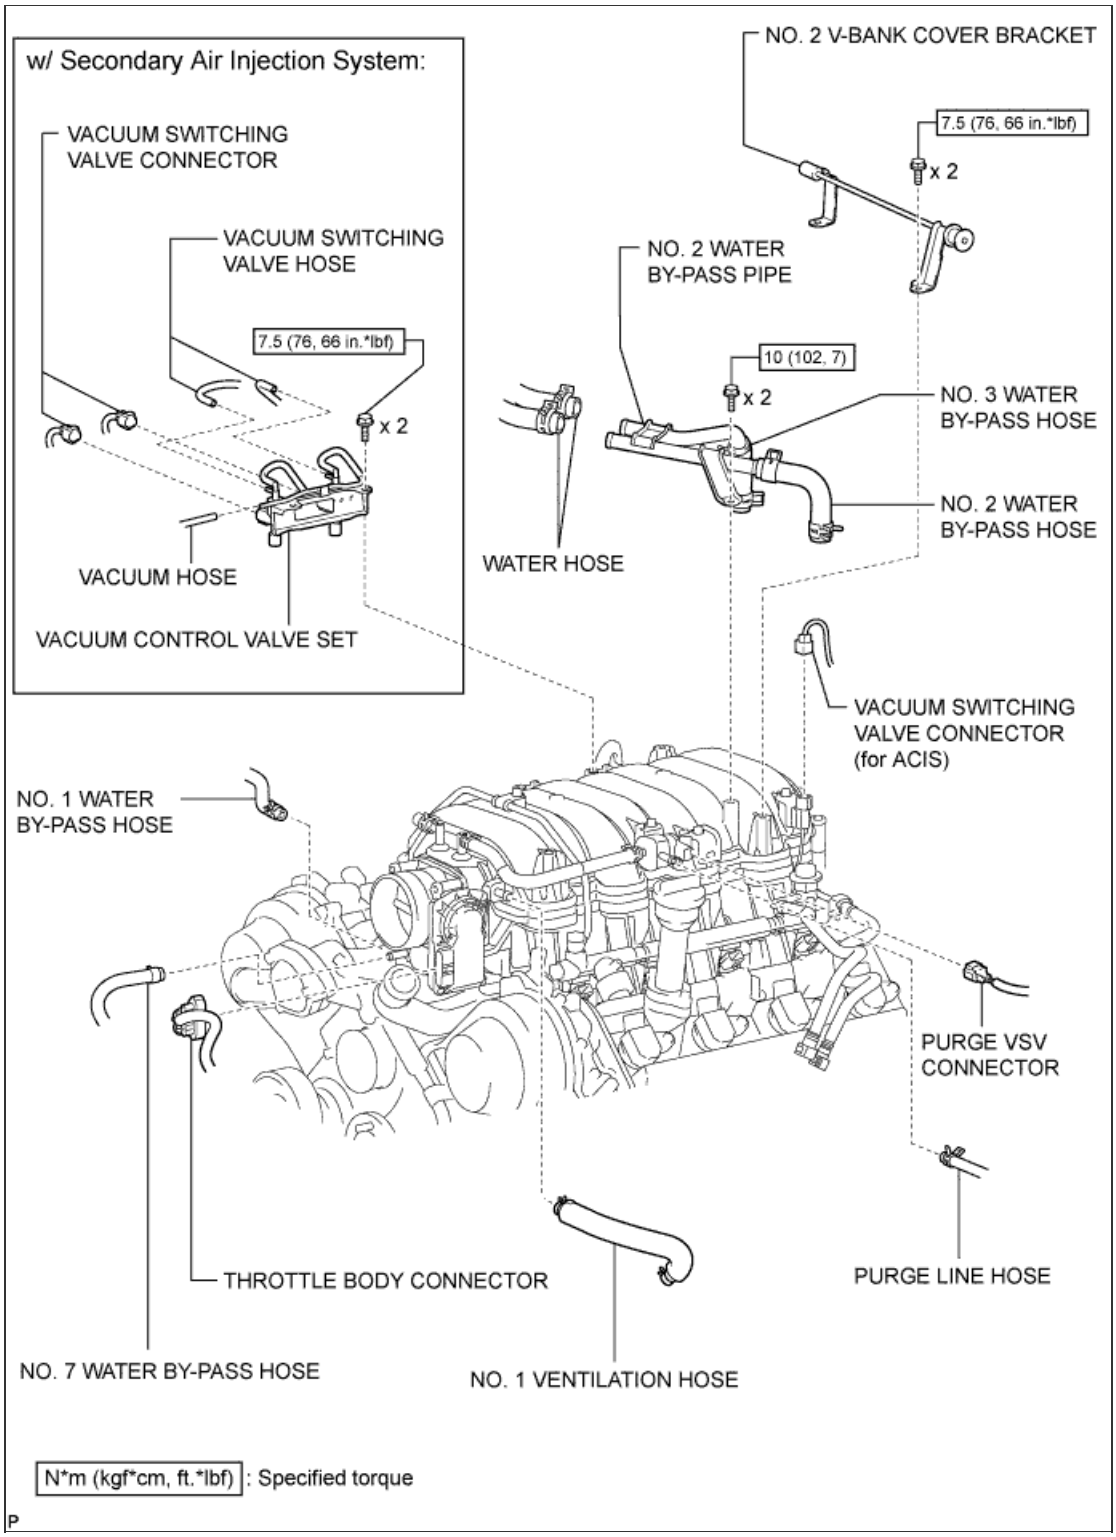
2. CHECK AIR INDUCTION SYSTEM



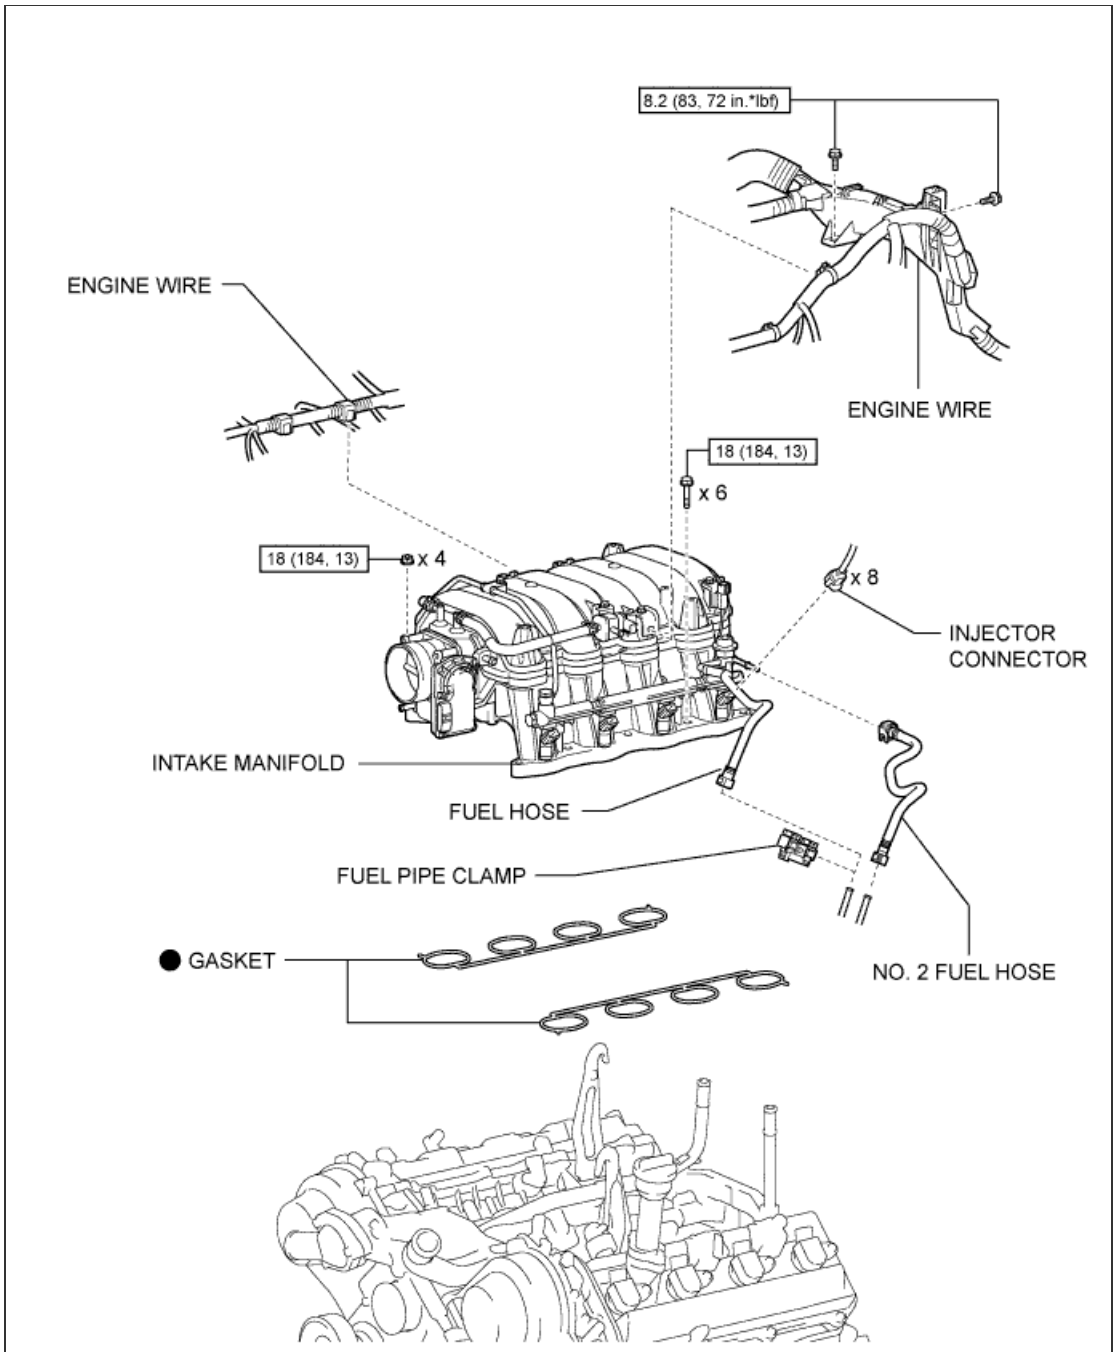
HINT:



The illustration shows the areas that may draw in secondary air, which could lead to idling problems.



a. Check that the hoses are installed correctly.



b. Check for cracks, etc. in the hoses.

for Preparation Click here

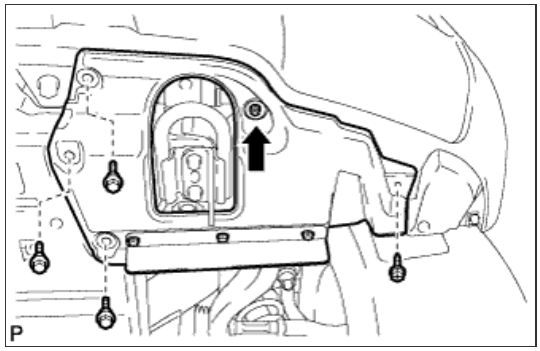
1. DISCHARGE FUEL SYSTEM PRESSURE

a. Discharge the fuel system pressure (Click here).

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnect the cable, some systems need to be initialized after the cable is reconnected (Click here).



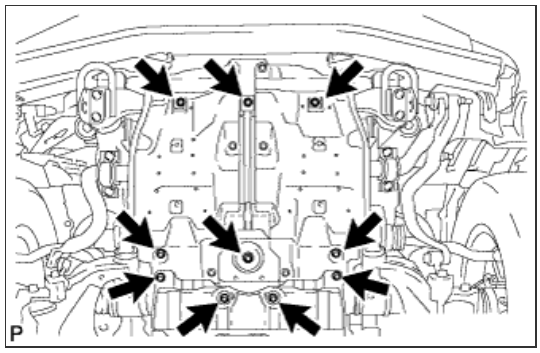
3. REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

a. Remove the cowl top ventilator louver sub-assembly (Click here).

4. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and screw.

b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.

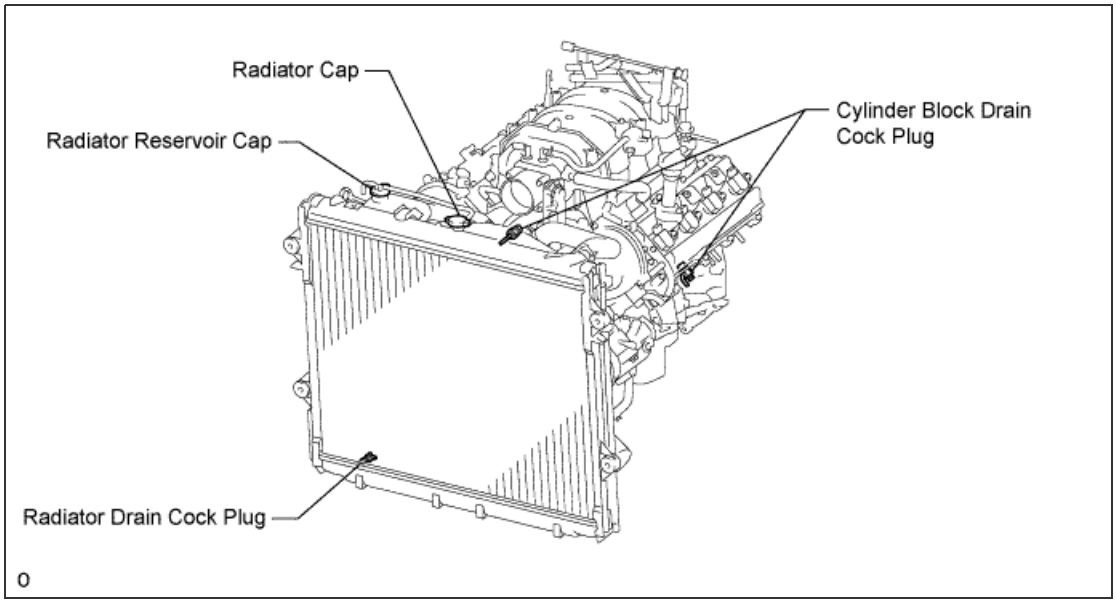


5. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

6. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY



a. Remove the 10 bolts and No. 1 engine under cover.

7. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

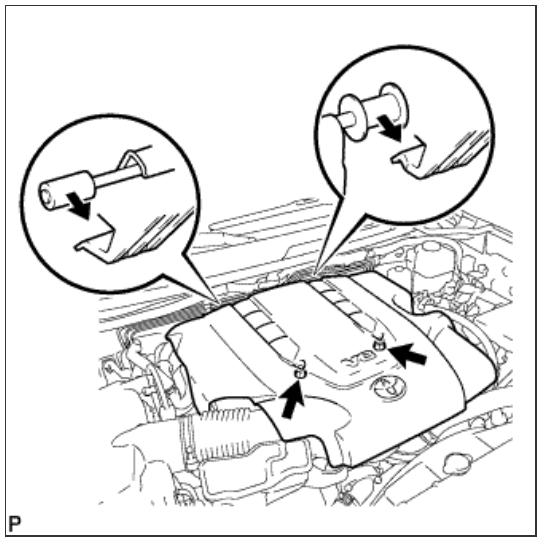
a. Loosen the radiator drain cock plug.

b. Remove the radiator cap. Then drain the coolant.

HINT:

Collect the coolant in a container and dispose of it according to the regulations in your area.

c. Loosen the 2 cylinder block drain cock plugs. Then drain the coolant from the engine.



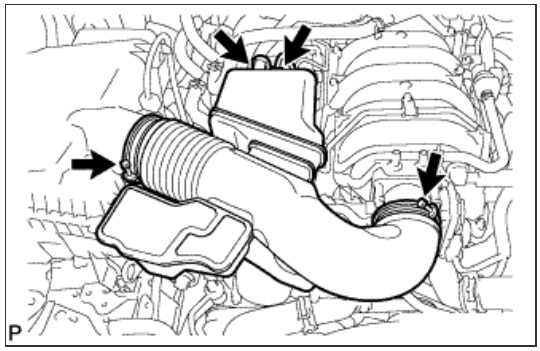
d. Tighten the 2 cylinder block drain cock plugs.

Torque:
13 N*m{ 130 kgf*cm , 9 ft.*lbf }

e. Tighten the radiator drain cock plug by hand.

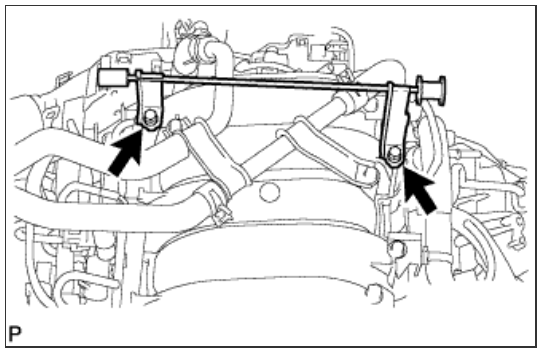
8. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Remove the 2 nuts and V-bank cover.



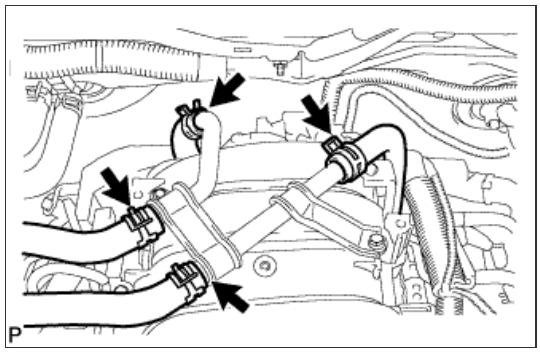
9. REMOVE AIR CLEANER HOSE ASSEMBLY

a. Disconnect the vacuum transmitting hose and No. 2 ventilation hose.



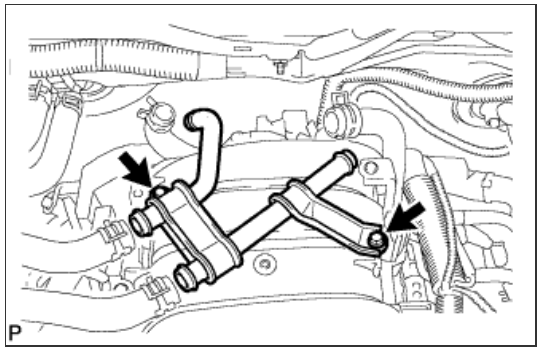
b. Loosen the 2 hose clamps.

c. Remove the air cleaner hose.



10. REMOVE NO. 2 V-BANK COVER BRACKET

a. Remove the 2 bolts and bracket.

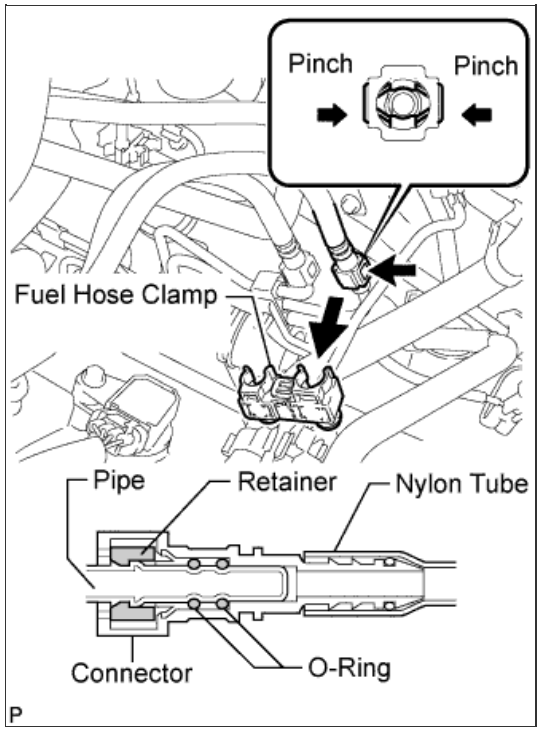


11. REMOVE NO. 2 WATER BY-PASS PIPE

a. Disconnect the 4 water hoses from the No. 2 water by-pass pipe.

b. Remove the 2 bolts.

c. Remove the No. 2 water by-pass pipe.



12. DISCONNECT FUEL HOSE

a. Remove the fuel hose clamp.

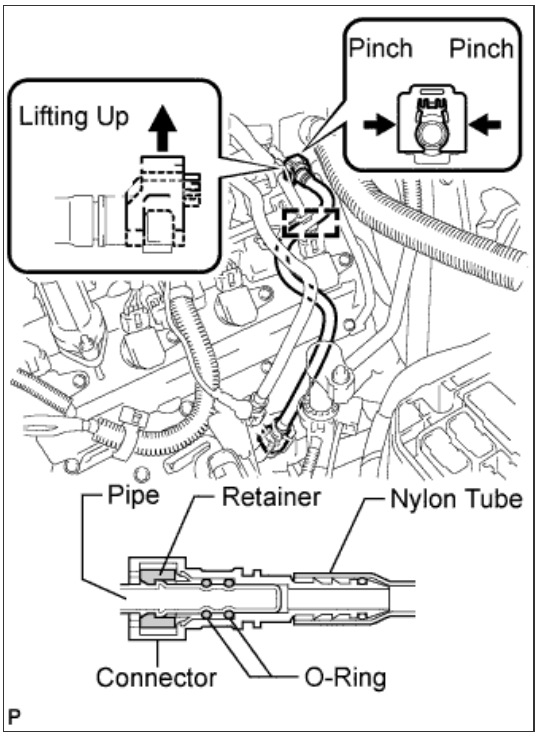
b. Pinch and pull the fuel hose connector to disconnect the connector from the fuel pipe.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**

13. REMOVE NO. 2 FUEL HOSE

a. for engine side:



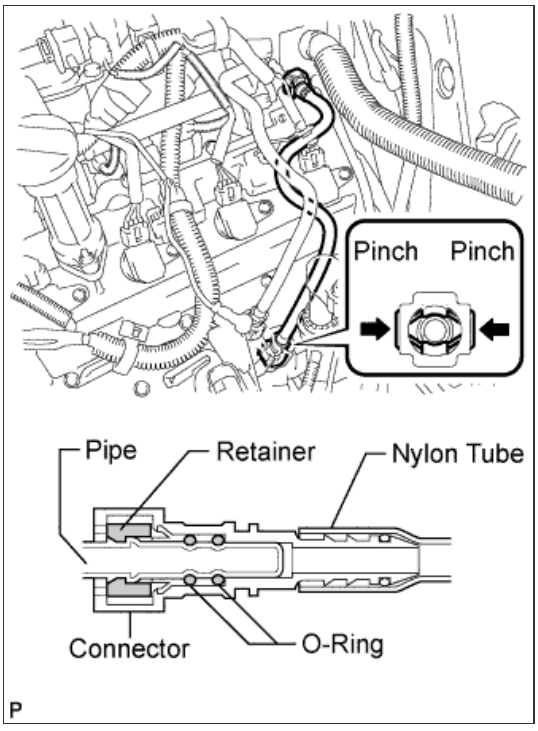
i. Detach the fuel hose clamp.

ii. Detach the lock claw by lifting up the cover, as shown in the illustration.

iii. Pinch and pull the No. 2 fuel hose connector to disconnect the connector from the No. 3 fuel pipe.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**



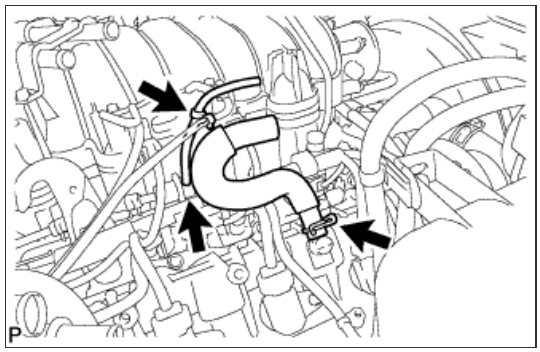
b. for body side:

i. Pinch and pull the No. 2 fuel hose connector to disconnect the connector from the fuel pipe.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**

14. REMOVE NO. 2 VENTILATION HOSE

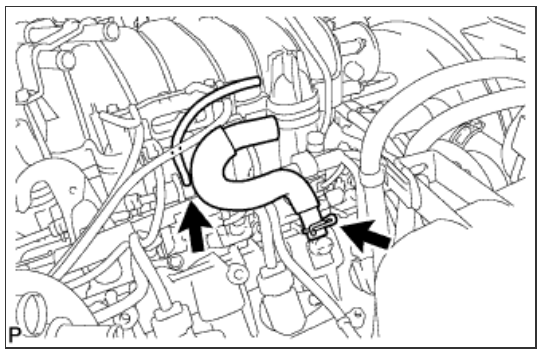


a. w/ Secondary Air Injection System:

i. Remove the No. 2 ventilation hose from the cylinder head cover.

ii. Remove the clamp.

iii. Remove the vacuum transmitting hose from the fuel pressure

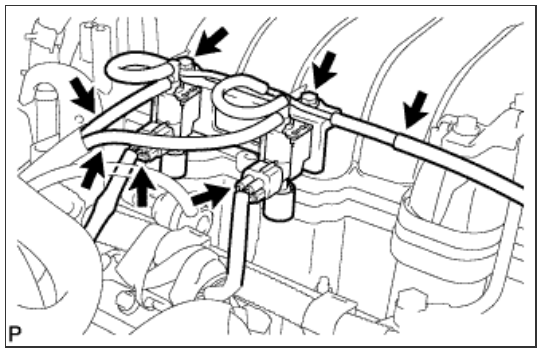


regulator.

b. w/o Secondary Air Injection System:

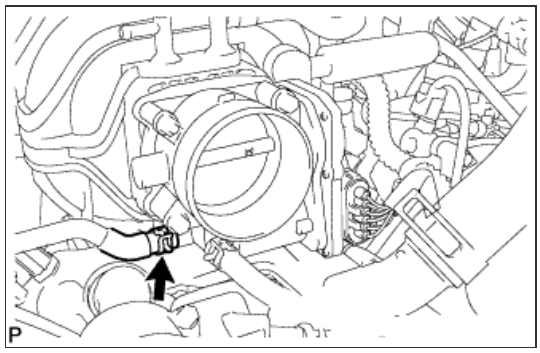
i. Remove the No. 2 ventilation hose from the cylinder head cover.

ii. Remove the vacuum transmitting hose from the fuel pressure regulator.



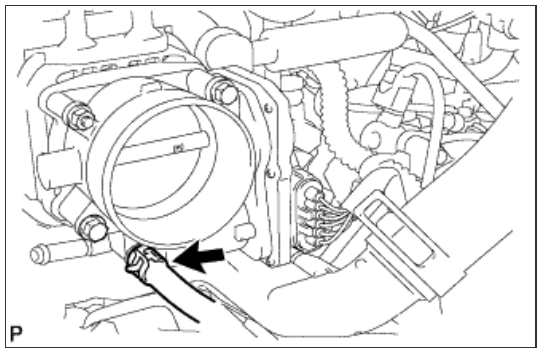
15. REMOVE VACUUM CONTROL VALVE SET (w/ Secondary Air Injection System

a. Disconnect the 2 VSV connectors.



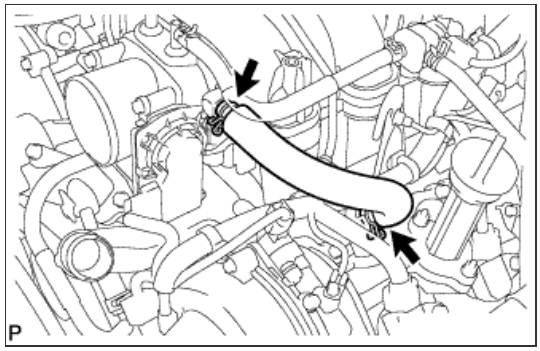
b. Disconnect the 3 vacuum hoses.

c. Remove the 2 bolts and vacuum control valve set.



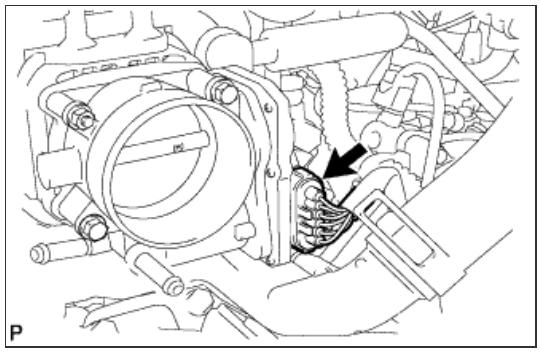
16. DISCONNECT NO. 1 WATER BY-PASS HOSE

a. Disconnect the No. 1 water by-pass hose from the throttle body.



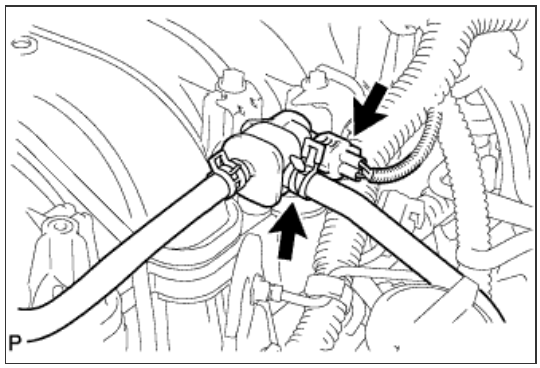
17. DISCONNECT NO. 7 WATER BY-PASS HOSE

a. Disconnect the No. 7 water by-pass hose from the throttle body.



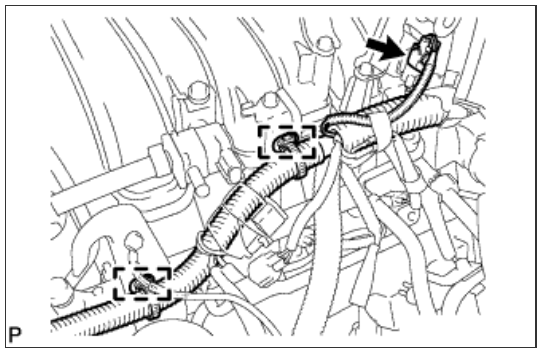
18. REMOVE NO. 1 VENTILATION HOSE

a. Remove the No. 1 ventilation hose from the intake manifold and ventilation valve.



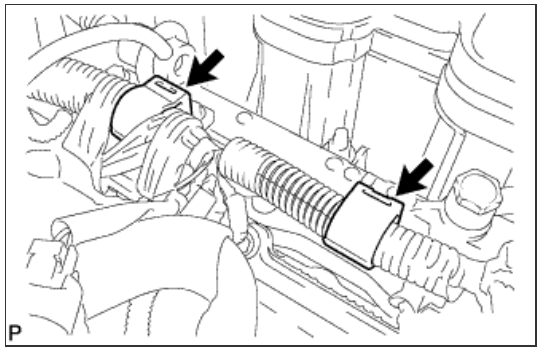
19. REMOVE INTAKE MANIFOLD

a. Disconnect the throttle position sensor and control motor connector.



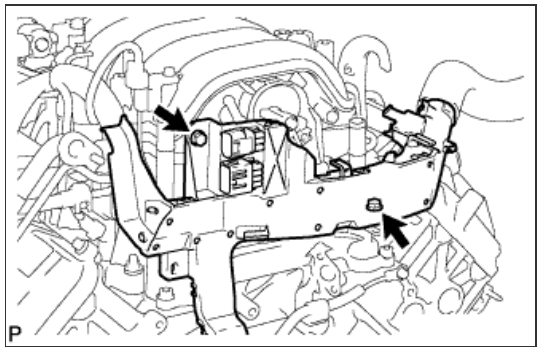
b. Disconnect the purge VSV connector.

c. Disconnect the purge line hose from the purge VSV.

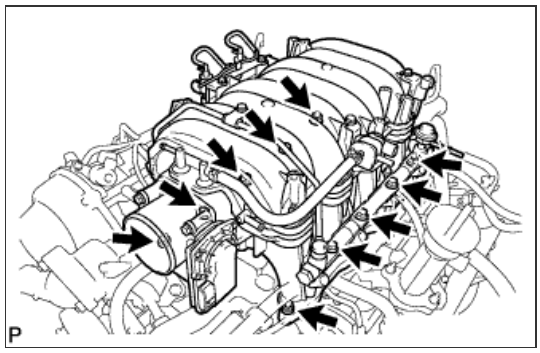


d. Disconnect the VSV connector (for ACIS).

e. Disconnect the 2 wire clamps from the wire bracket and engine hanger.

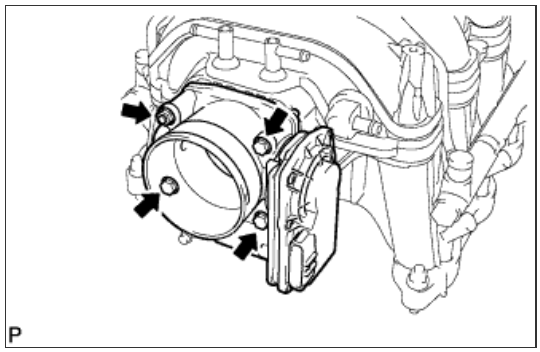


f. Disconnect the 2 wire clamps from the wire clamp brackets on the delivery pipe RH.



g. Disconnect the 8 injector connectors.

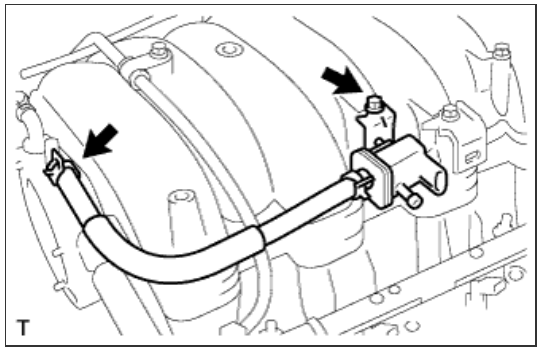
h. Remove the 2 bolts and disconnect the engine wire protector.



i. Remove the 6 bolts, 4 nuts, intake manifold and 2 gaskets.

20. REMOVE THROTTLE BODY ASSEMBLY

a. Remove the nut, 3 bolts, throttle body and gasket.

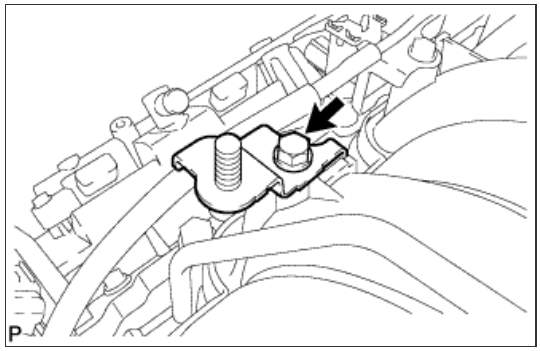


b. Remove the stud bolt.

21. REMOVE PURGE VSV

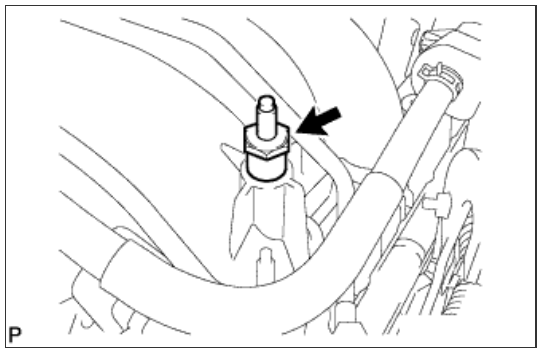
a. Disconnect the purge line hose from the intake manifold.

b. Remove the bolt and purge VSV.



22. REMOVE WIRE HARNESS CLAMP BRACKET

a. Remove the bolt and bracket.

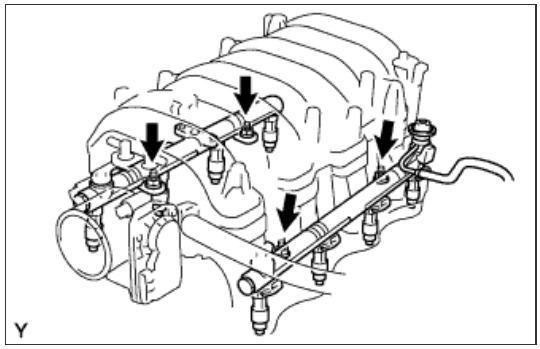


23. REMOVE NO. 4 V-BANK COVER BRACKET

a. Remove the bolt and bracket.

24. REMOVE ENGINE COVER OINT

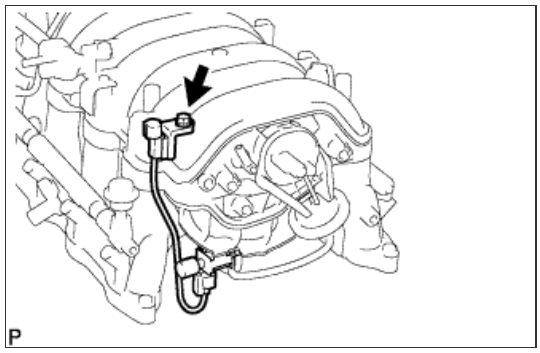
a. Remove the joint from the intake manifold.



25. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY

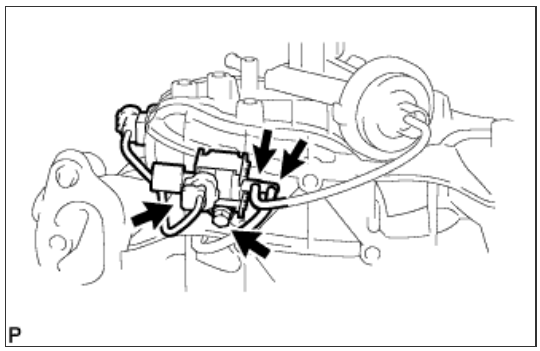
a. Remove the 4 nuts holding the delivery pipes to the intake manifold.

b. Remove the 2 delivery pipes from the intake manifold.



NOTICE:

Be careful not to drop the injectors when removing the delivery pipes.

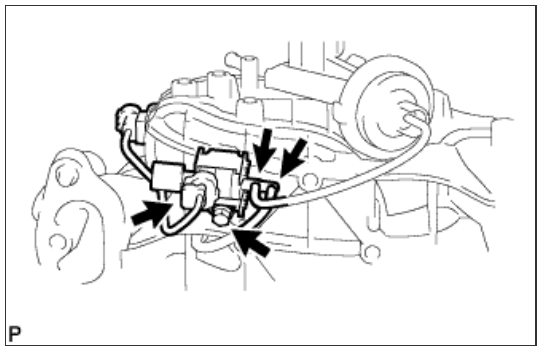


26. REMOVE VACUUM SWITCHING VALVE ASSEMBLY (for ACIS

a. Remove the bolt.

b. Disconnect the 2 vacuum hoses and VSV connector.

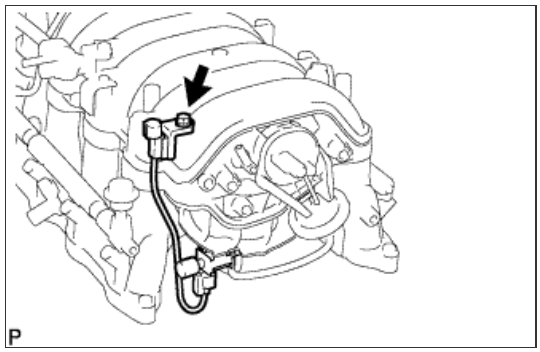
c. Remove the bolt and VSV.



for Preparation Click here

1. INSTALL VACUUM SWITCHING VALVE ASSEMBLY (for ACIS)

a. Install the VSV with the bolt.



Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

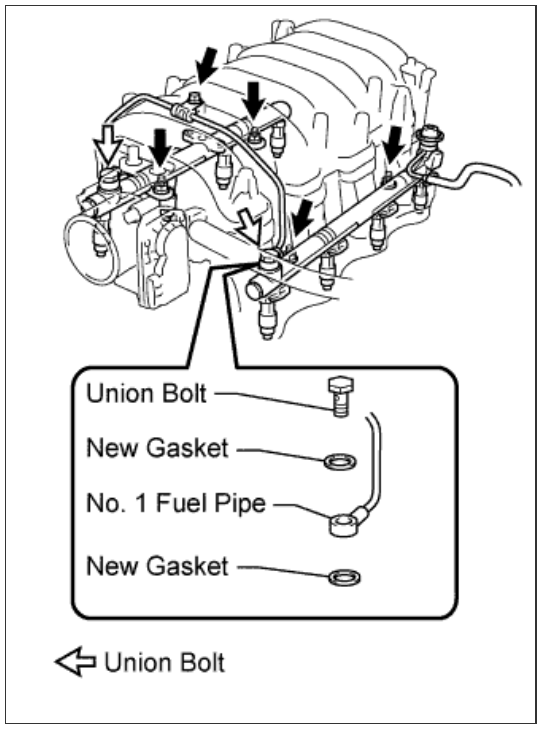
b. Connect the VSV connector and 2 vacuum hoses.

c. Connect the VSV connector with the bolt.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

2. INSTALL FUEL DELIVERY PIPE SUB-ASSEMBLY

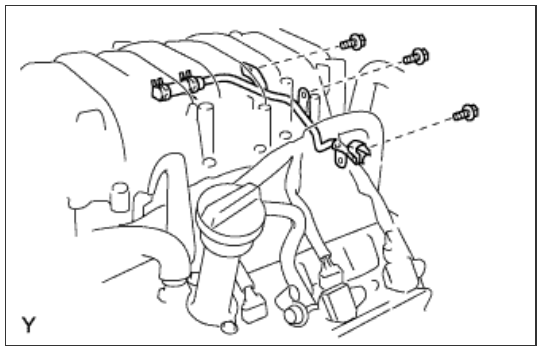
NOTICE:



Be careful not to drop the injectors when installing the delivery pipes.

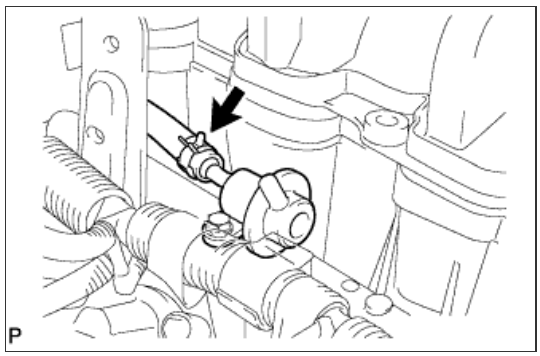
a. Place the 2 delivery pipes and injector assemblies on the lower intake manifold.

b. Temporarily install the 4 nuts.



c. Install the No. 1 fuel pipe and 4 new gaskets with the bolt and 2 union bolts.

Torque:
for union bolt:
39 N*m{ 398 kgf*cm , 29 ft.*lbf }
for bolt:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

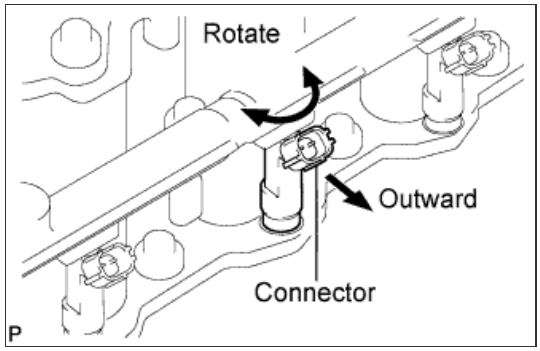


d. Connect the No. 3 fuel pipe with the 3 bolts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

e. Connect the fuel return hose to the fuel pressure regulator.

f. Check that the injectors rotate smoothly.

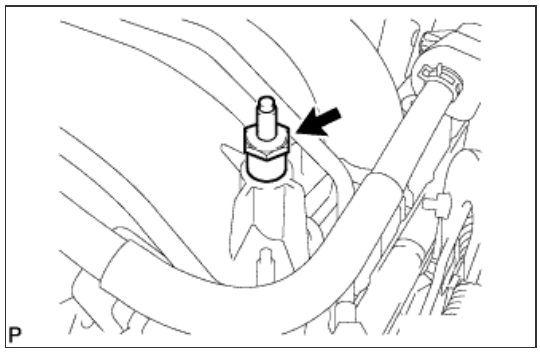


HINT:

If the injectors do not rotate smoothly, a probable cause is incorrect installation of the O-rings. Replace the O-ring of any injector that does not rotate smoothly.

g. Position the injector connectors outward.

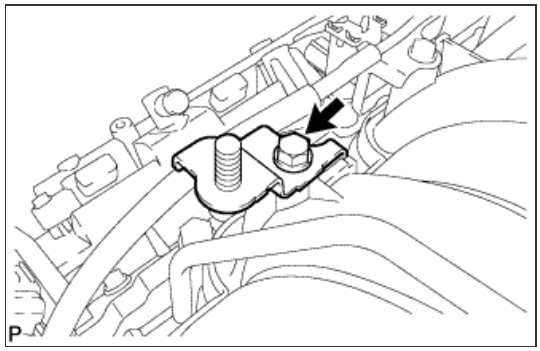
h. Tighten the 4 nuts holding the delivery pipes to the lower intake manifold.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

3. INSTALL ENGINE COVER JOINT

a. Install the joint to the intake manifold.



Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

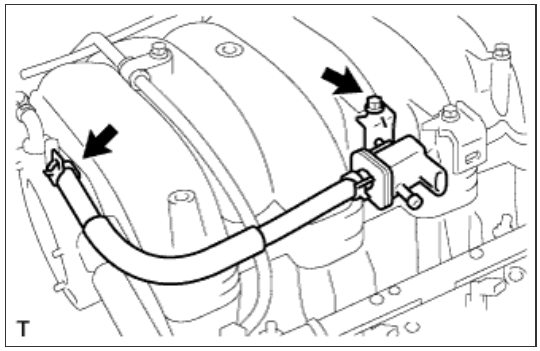
4. INSTALL NO. 4 V-BANK COVER BRACKET

a. Install the bracket with the bolt.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

5. INSTALL WIRE HARNESS CLAMP BRACKET

a. Install the bracket with the bolt.



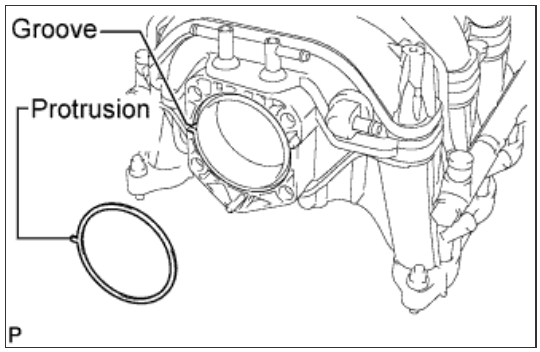
Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

6. INSTALL PURGE VSV

a. Install the VSV to the intake manifold with the bolt.

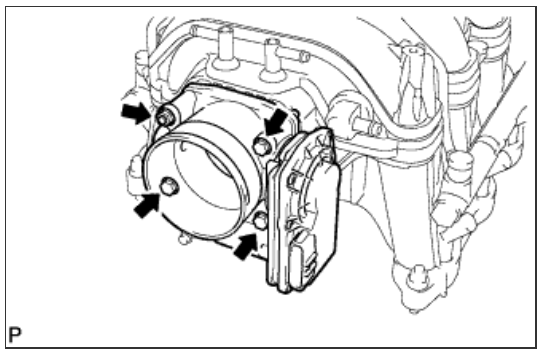
Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

b. Connect the purge line hose to the intake manifold.



7. INSTALL THROTTLE BODY ASSEMBLY

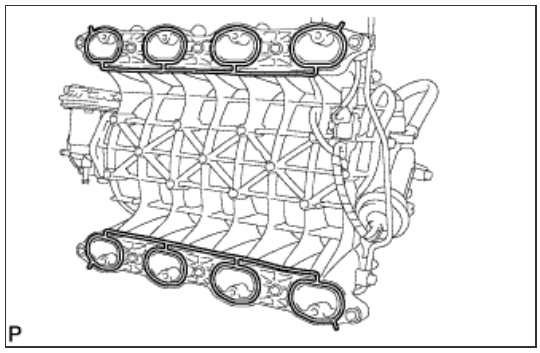
a. Align the protrusion of a new gasket with the groove of the intake manifold, and install the gasket.



b. Install the stud bolt.

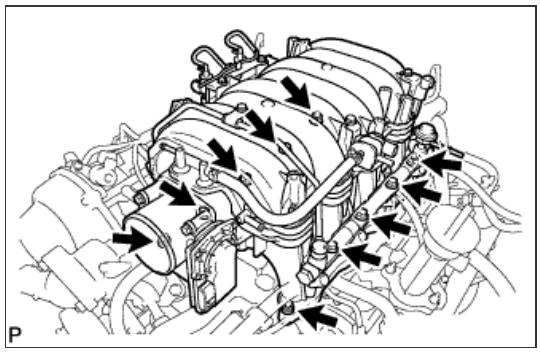
Torque:
7.0 N*m{ 71 kgf*cm , 62 in.*lbf }

c. Install the throttle body with the nut and 3 bolts.



Torque:
14 N*m{ 143 kgf*cm , 10 ft.*lbf }

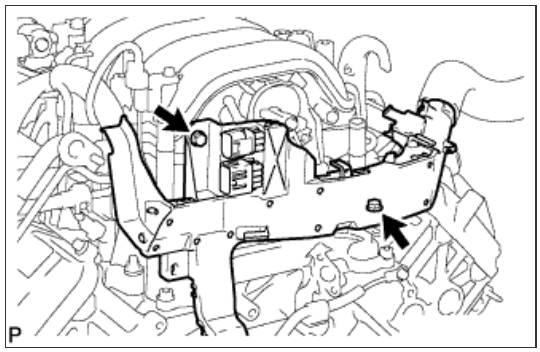
8. INSTALL INTAKE MANIFOLD



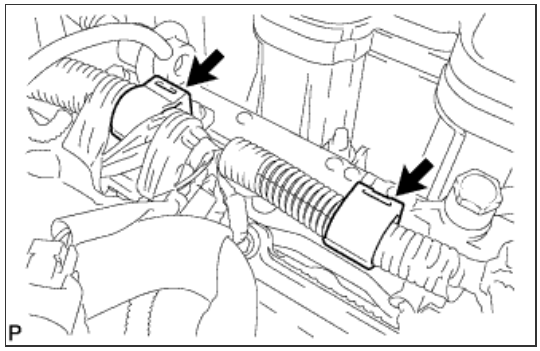
a. Place 2 new gaskets on the intake manifold.

b. Place the intake manifold on the cylinder heads.

c. Install and uniformly tighten the 6 bolts and 4 nuts in several steps.



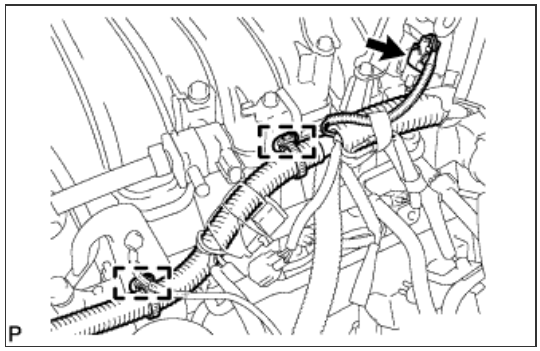
Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }



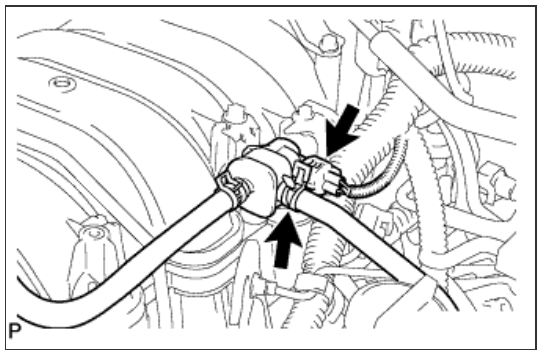
d. Install the engine wire protector with the 2 bolts.

Torque:
8.2 N*m{ 83 kgf*cm , 72 in.*lbf }

e. Connect the 8 injector connectors.

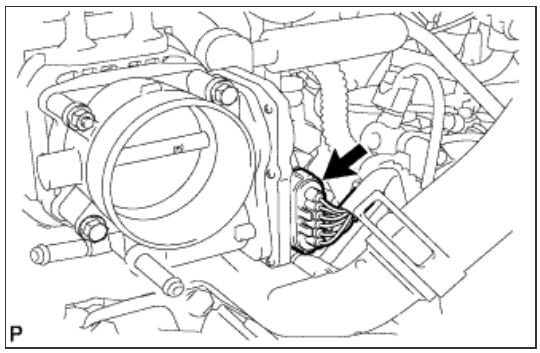


f. Connect the 2 wire clamps to the wire clamp brackets on the delivery pipe.



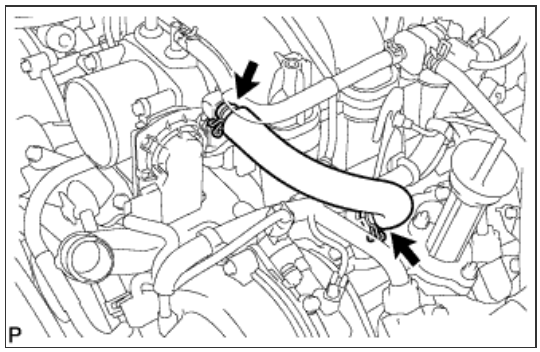
g. Attach the 2 clamps to connect the engine wire to the wire bracket and engine hanger.

h. Connect the VSV connector (for ACIS).

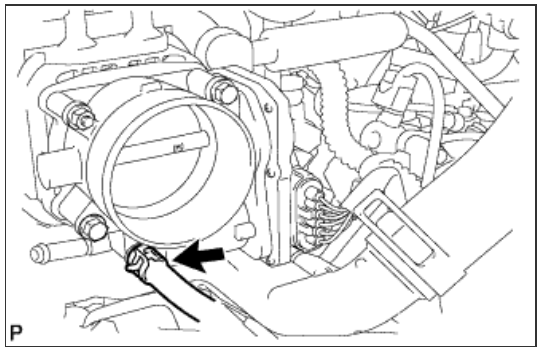


i. Connect the purge line hose to the purge VSV.

j. Connect the purge VSV connector.

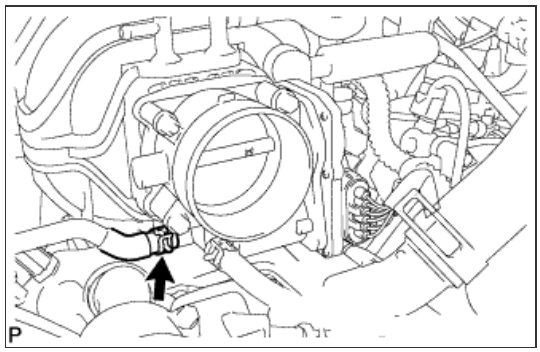


k. Connect the throttle position sensor and control motor connector.



9. INSTALL NO. 1 VENTILATION HOSE

a. Install the No. 1 ventilation hose to the intake manifold and ventilation valve.

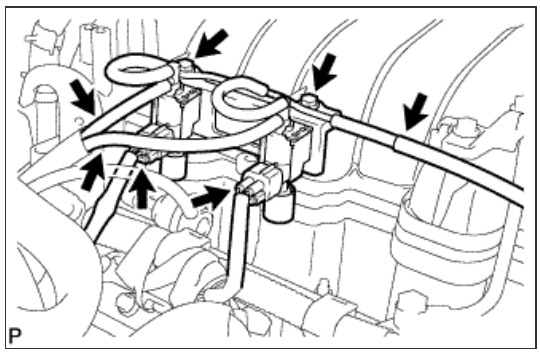


10. CONNECT NO. 7 WATER BY-PASS HOSE

a. Connect the No. 7 water by-pass hose to the throttle body.

11. CONNECT NO. 1 WATER BY-PASS HOSE

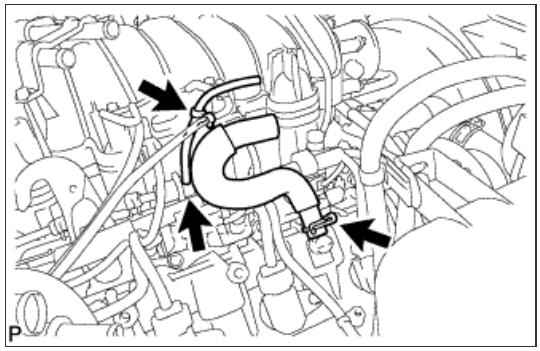
a. Connect the No. 1 water by-pass hose to the throttle body.



12. INSTALL VACUUM CONTROL VALVE SET (w/ Secondary Air Injection Sy tem)

a. Install the vacuum control valve set with the 2 bolts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

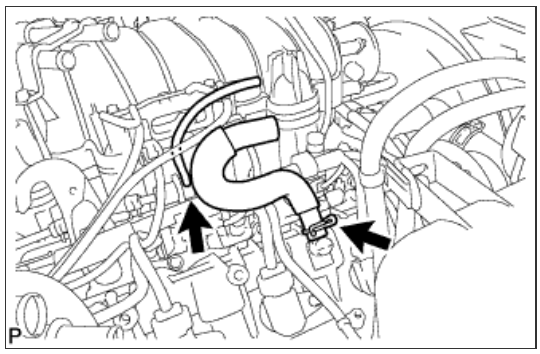


b. Connect the 3 vacuum hoses.

c. Connect the 2 VSV connectors.

13. INSTALL NO. 2 VENTILATION HOSE

a. w/ Secondary Air Injection System:



i. Install the vacuum transmitting hose to the fuel pressure regulator.

ii. Install the clamp.

iii. Install the No. 2 ventilation hose to the cylinder head cover.

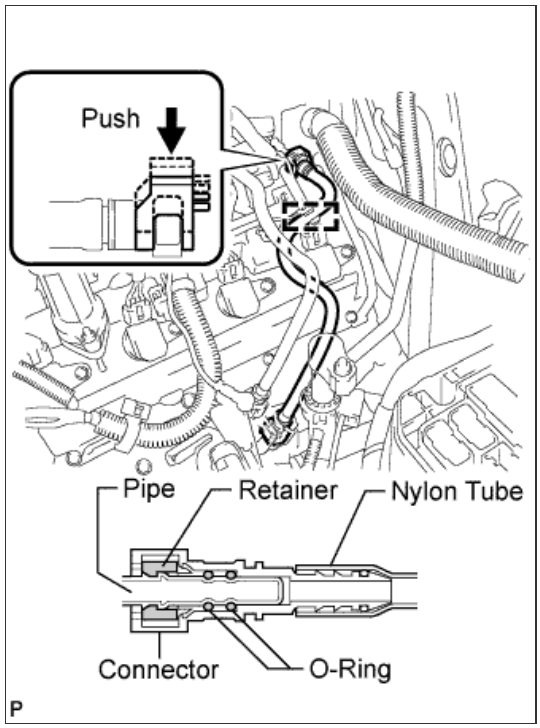
b. w/o Secondary Air Injection System:

i. Install the vacuum transmitting hose to the fuel pressure regulator.

ii. Install the No. 2 ventilation hose to the cylinder head cover.

14. INSTALL NO. 2 FUEL HOSE

a. for engine side:



i. Connect the fuel hose to the No. 3 fuel pipe.

HINT:

Push the parts together firmly until a "click" sound is heard.

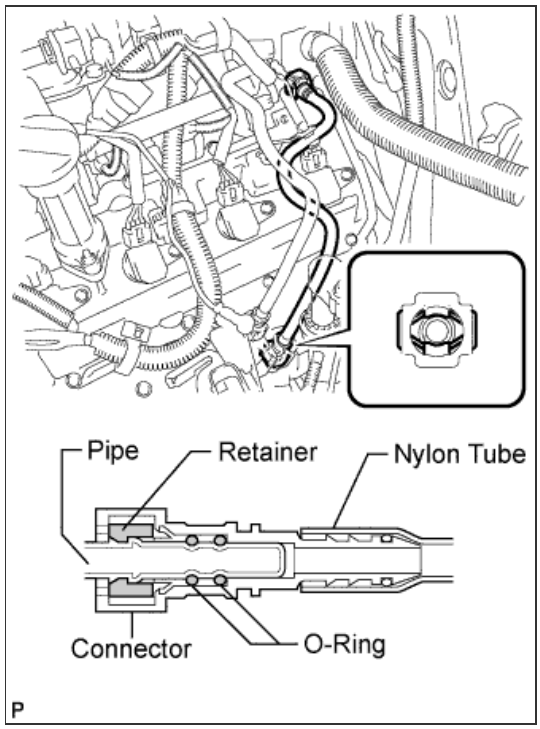
NOTICE:

- **Before in talling the tube connector to the pipe , check if there i any damage or foreign matter in the connector .**
- **After the connection, check if the connector and pipe are ecurely connected by trying to pull them apart.**

ii. Attach the lock claws to the connector by pushing down on the cover, as shown in the illustration.

iii. Attach the fuel hose clamp.

b. for body side:



i. Connect the fuel hose to the fuel pipe.

HINT:

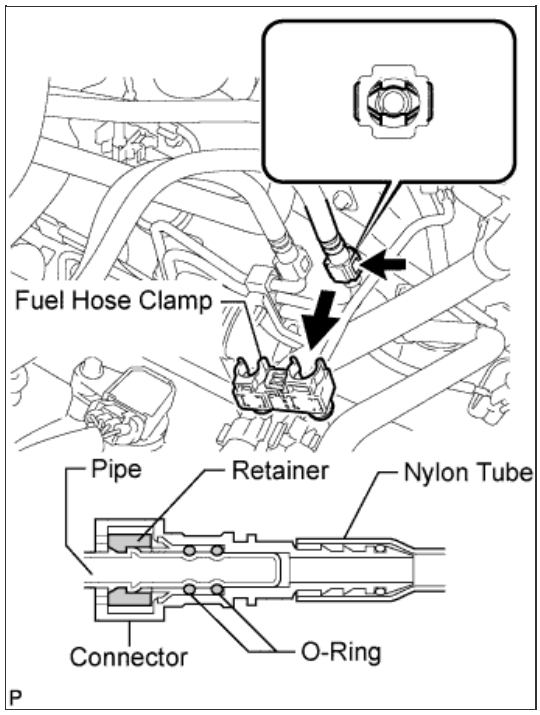
Push the parts together firmly until a "click" sound is heard.

NOTICE:

- **Before in talling the tube connector to the pipe , check if there i any damage or foreign matter in the connector .**
- **After the connection, check if the connector and pipe are ecurely connected by trying to pull them apart.**

15. CONNECT FUEL HOSE

a. Connect the fuel hose.

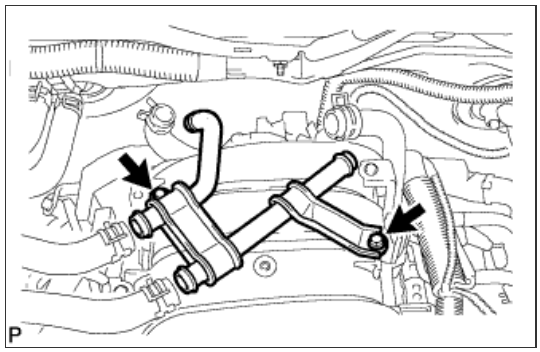


HINT:

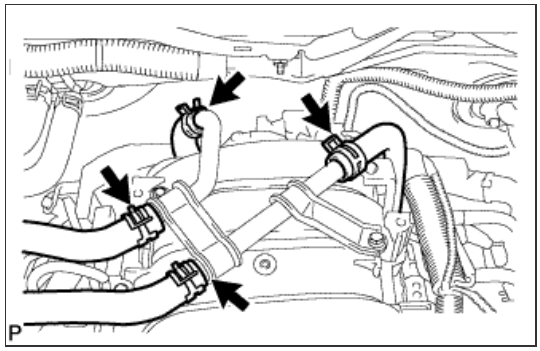
Push the parts together firmly until a "click" sound is heard.

NOTICE:

- **Before in talling the tube connector to the pipe , check if there i any damage or foreign matter in the connector .**
- **After the connection, check if the connector and pipe are ecurely connected by trying to pull them apart.**



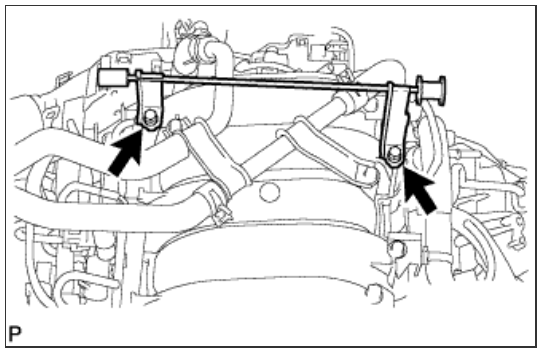
b. Install the fuel hose clamp.



16. INSTALL NO. 2 WATER BY-PASS PIPE

a. Install the No. 2 water by-pass pipe with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



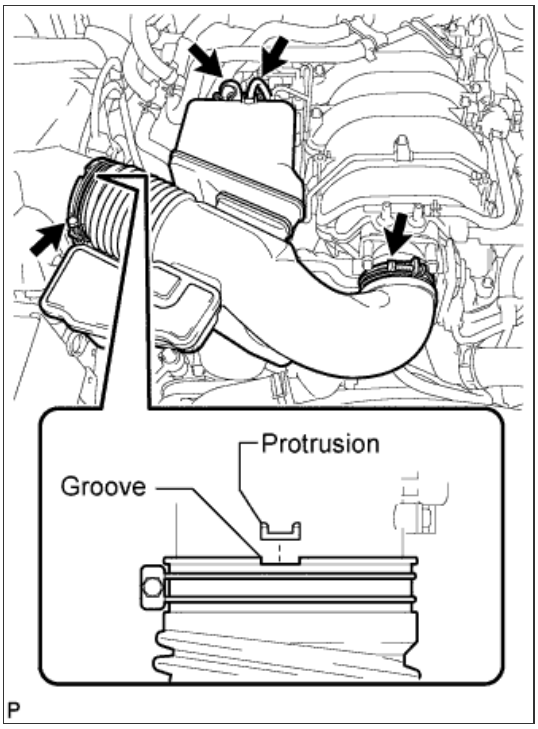
b. Connect the 4 water hoses.

17. INSTALL NO. 2 V-BANK COVER BRACKET

a. Install the bracket with the 2 bolts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

18. INSTALL AIR CLEANER HOSE ASSEMBLY



a. Install the air cleaner hose so that the protrusion of the air cleaner cap aligns with the groove of the hose as shown in the illustration.

b. Tighten the 2 clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

c. Connect the vacuum transmitting hose.

d. Connect the No. 2 ventilation hose.

19. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

20. ADD ENGINE COOLANT

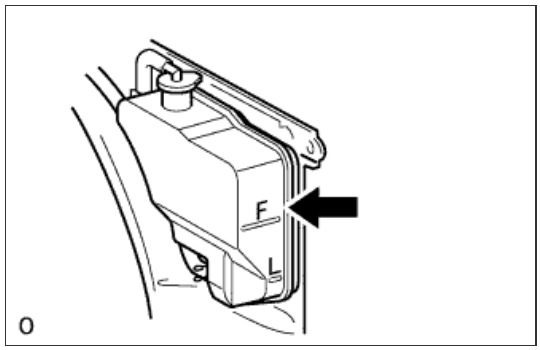
a. Add engine coolant.

Standard Capacity:

Item		Specified Condition
w/o Transmission oil cooler	w/o Rear Heater	13.4 liters (14.2 US qts, 11.8 Imp. qts)
	w/ Rear Heater	16.3 liters (17.2 US qts, 14.3 Imp. qts)
w/ Transmission oil cooler	w/o Rear Heater	14.1 liters (14.9 US qts, 12.4 Imp. qts)
	w/ Rear Heater	16.9 liters (17.9 US qts, 14.9 Imp. qts)

HINT:

TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).



b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the radiator reservoir cap.

d. Press the inlet and outlet radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Start the engine and warm it up until the thermostat opens.

NOTICE:

Switch off the A/C.

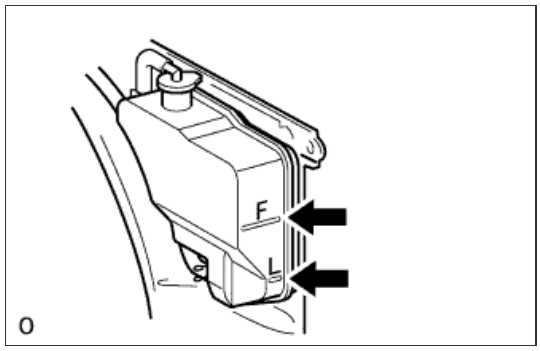
g. Maintain the engine speed at 2000 to 2500 rpm.

NOTICE:

- **Make ure that the radiator re er oir till ha ome coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make ure that the needle doe not how an abnormally high temperature.**
- **If there i not enough coolant, the engine may burn out or o erheat.**
- **Immediately after tarting the engine, if the radiator re er oir doe not ha e any coolant, perform the following: 1) top the engine, 2) wait until the coolant ha cooled down, and 3) add coolant until the coolant i filled to the F line.**
- **Run the engine at 2000 rpm until the coolant le el ha tabilized.**

h. Press the inlet and outlet radiator hoses several times by hand to bleed air.

CAUTION:



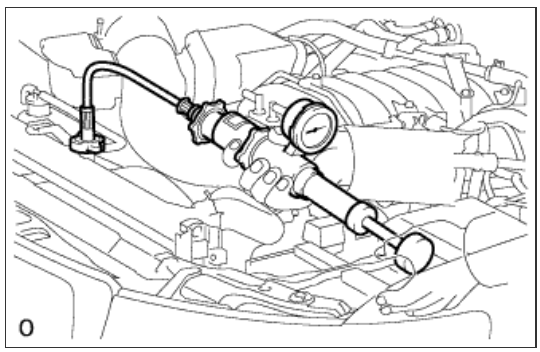
- **Wear protecti e glo e .**
- **Be careful a the radiator ho e are hot.**
- **Keep your hand away from the cooling fan.**

i. Stop the engine, and wait until the engine coolant cools down to the ambient temperature.

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

j. Check that the coolant level is between the F and L lines. If the coolant level is below the L line, repeat all of the procedures above. If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.



21. INSPECT FOR COOLANT LEAK

a. Fill the radiator with coolant and attach a radiator cap tester.

b. Warm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.

22. INSPECT FOR FUEL LEAK

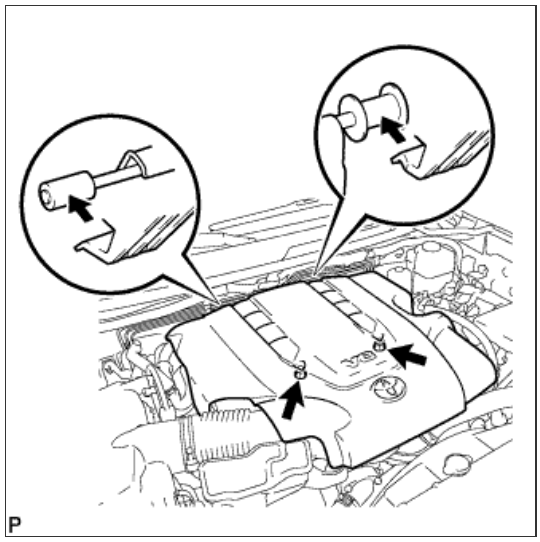
a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG) and intelligent tester ON.

NOTICE:

Do not start the engine.

c. nter the following menus: Powertrain / ngine and CT / Active Test / Activate the Fuel Pump Speed Control.

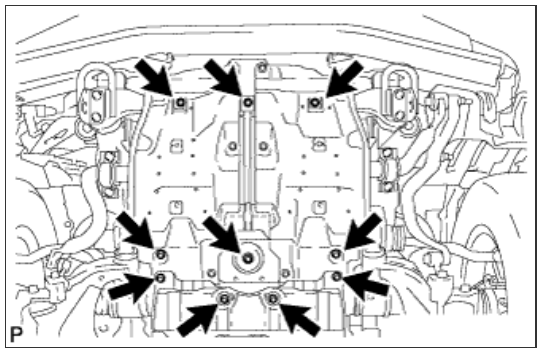


d. Check that there are no fuel leaks after doing maintenance anywhere on the fuel system.

23. INSTALL V-BANK COVER SUB-ASSEMBLY

a. Attach the 2 V-bank cover hooks to the bracket.

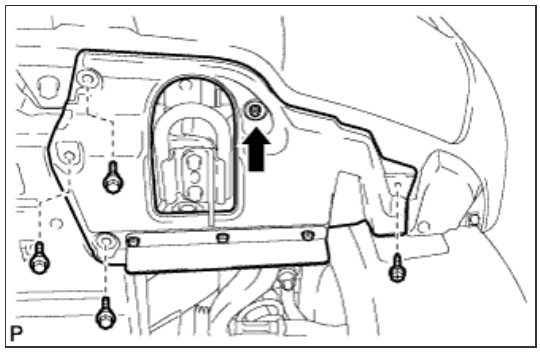
b. Install the V-bank cover with the 2 nuts.



Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

24. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.



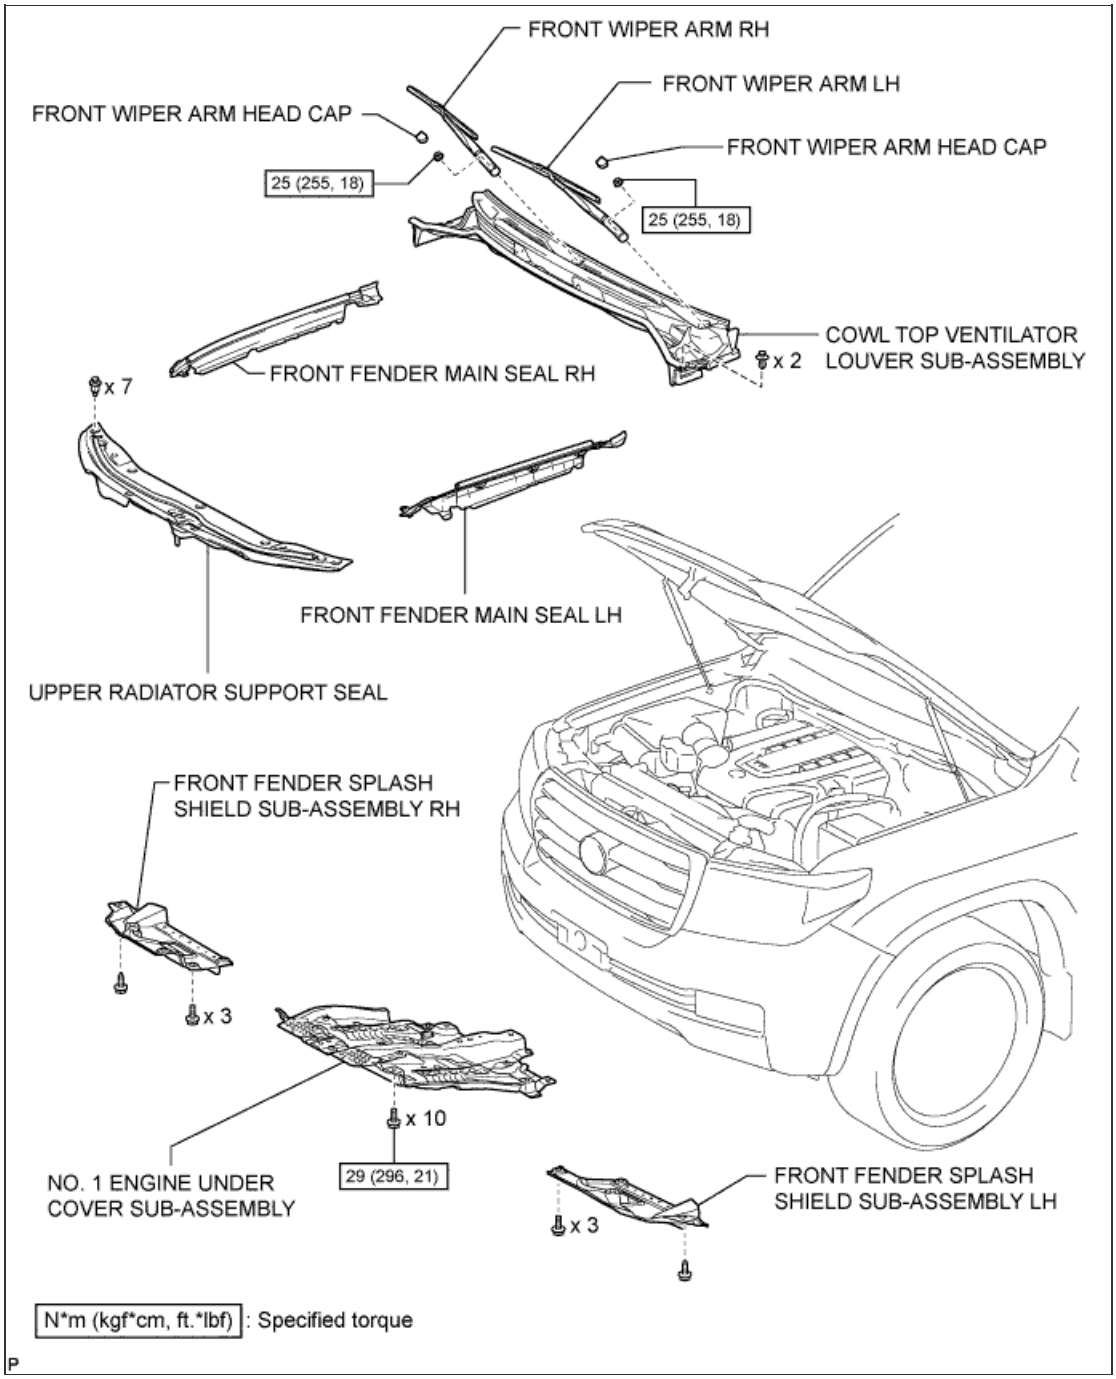
Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

25. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

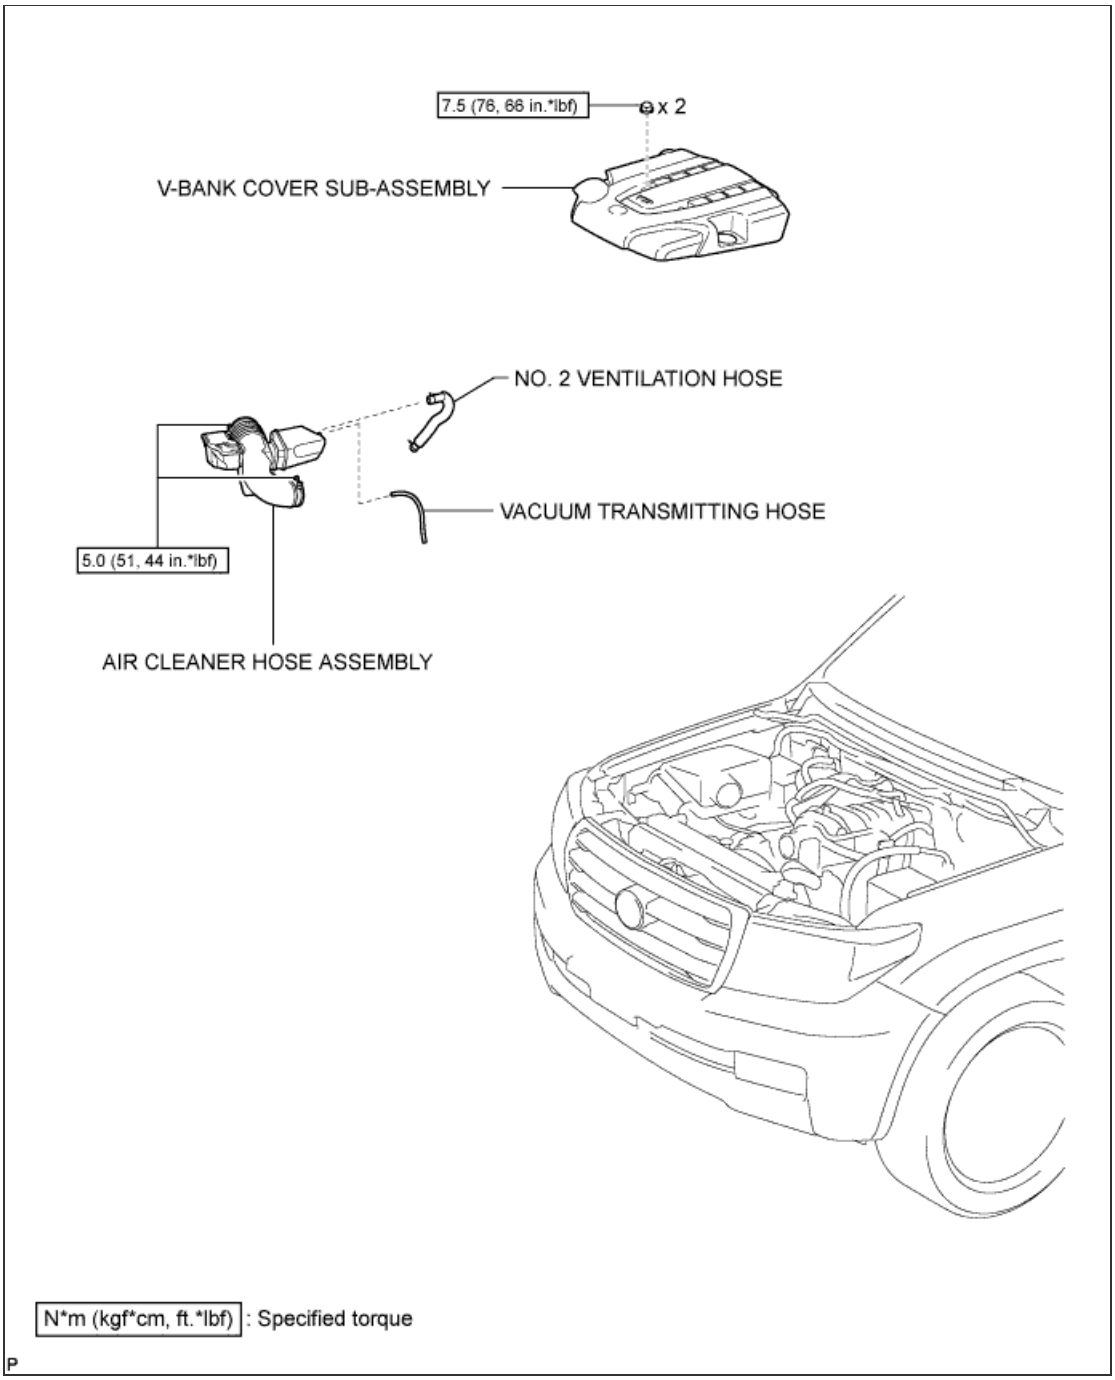
a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the 3 bolts and screw.

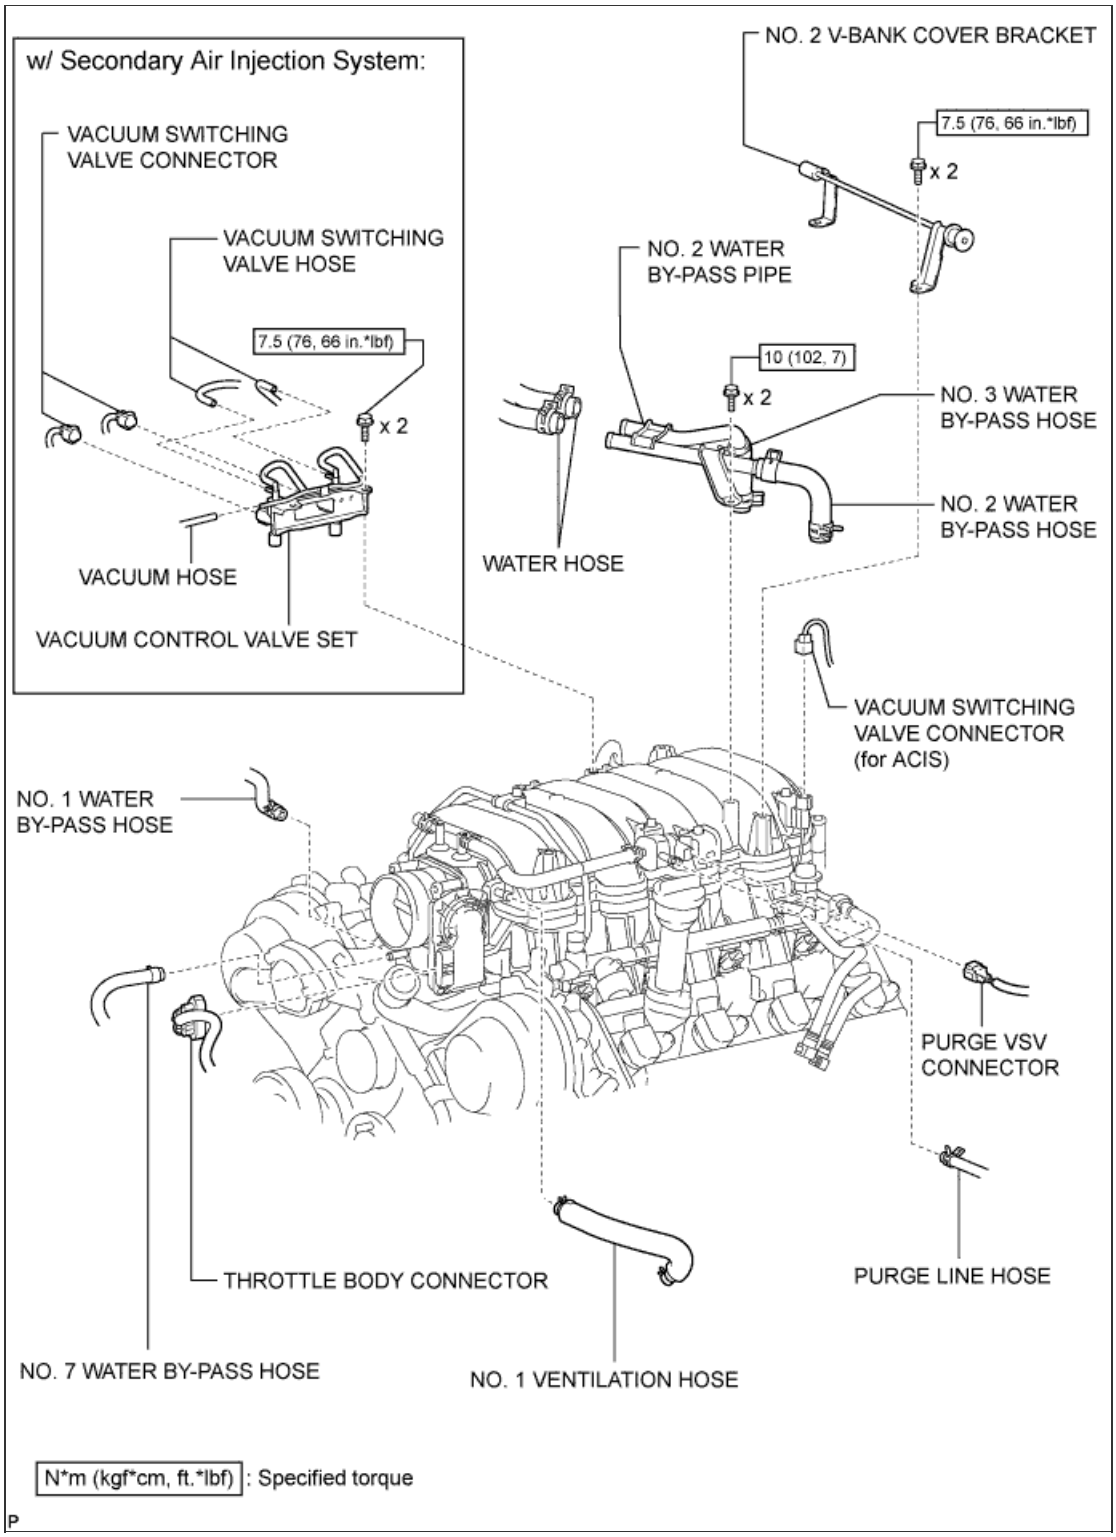
26. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH



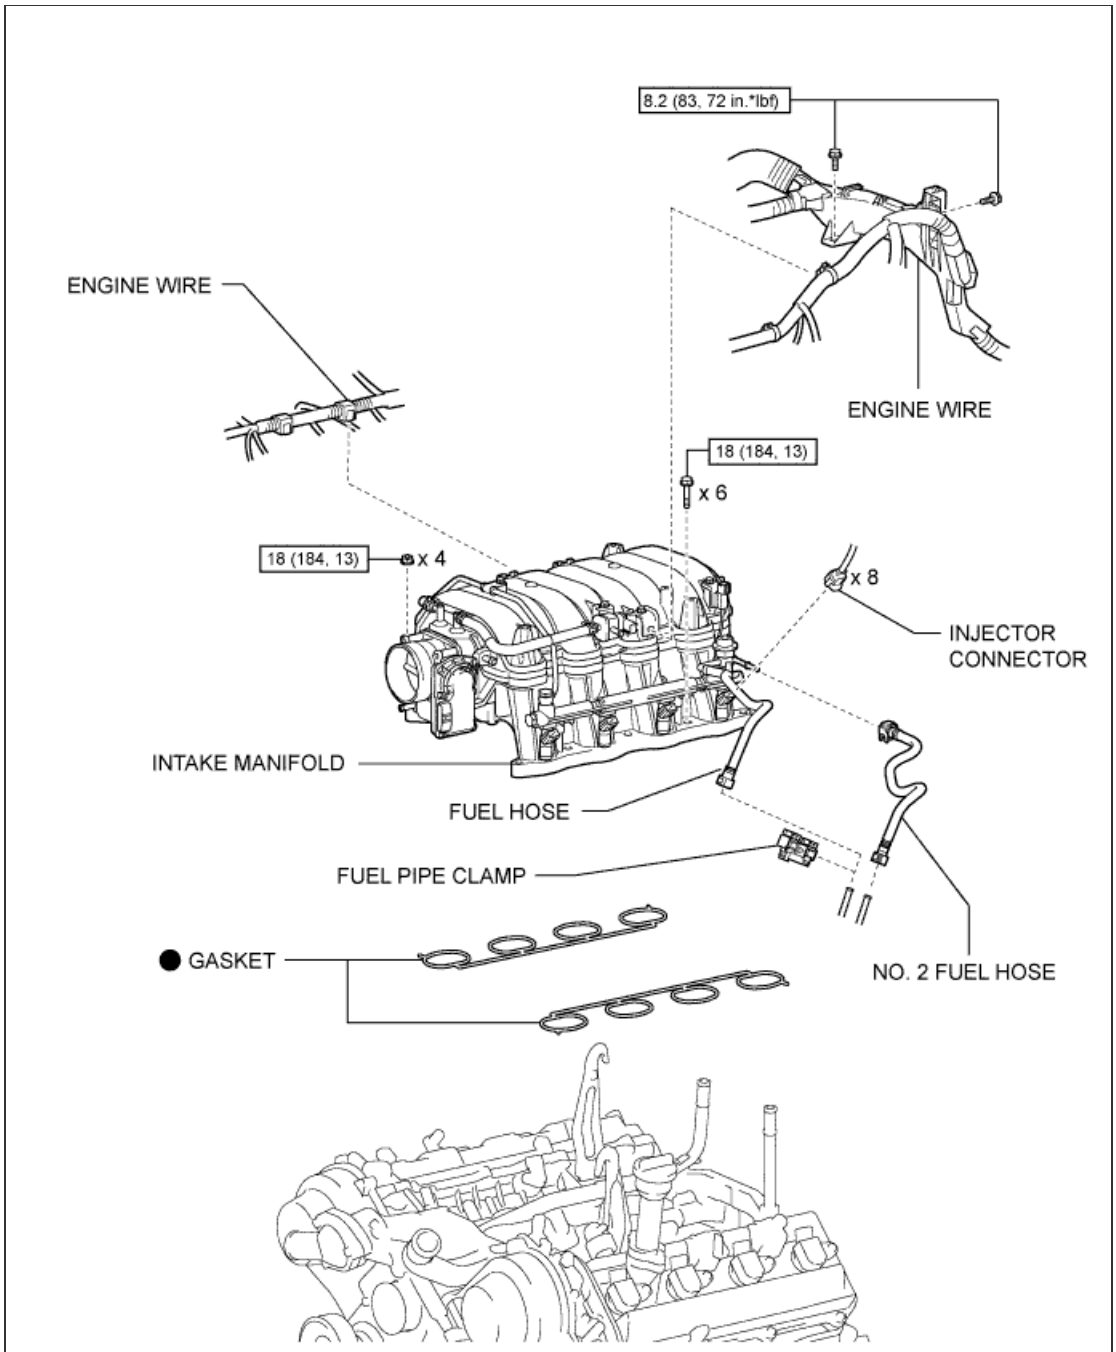
HINT:



se the same procedures described for the side.



27. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY



a. Install the cowl top ventilator louver (Click here).

for Preparation Click here

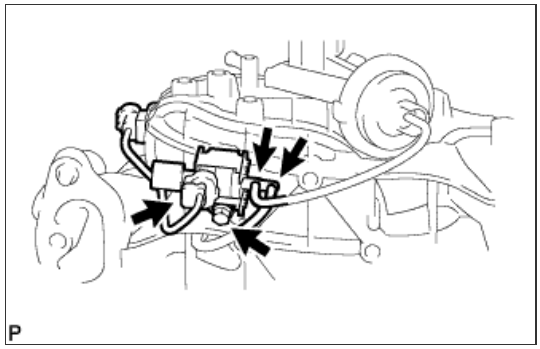
1. REMOVE INTAKE MANIFOL

a. Remove the intake manifold (Click here).

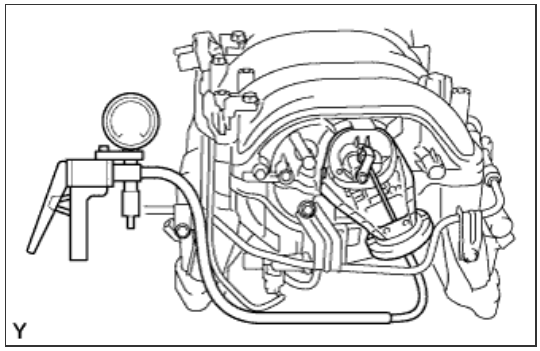


2. REMOVE VACUUM SWITCHING VALVE ASSEMBLY (for ACIS)

a. Remove the bolt.

b. Disconnect the 2 vacuum hoses and VSV connector.

c. Remove the bolt and VSV.

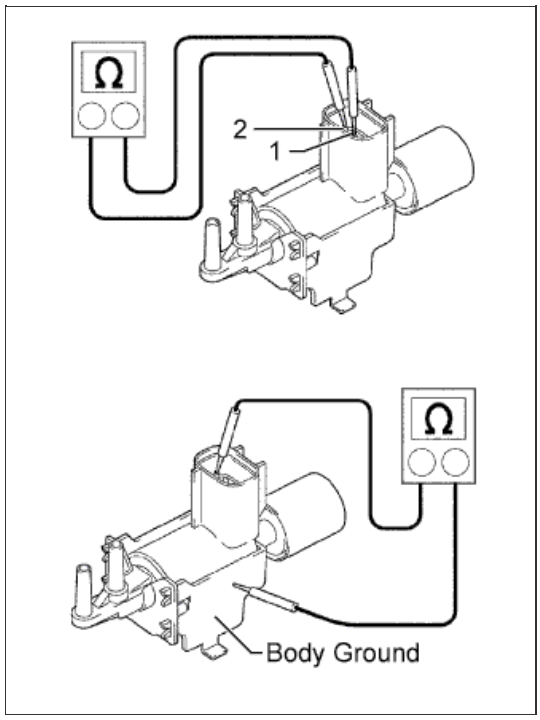


for Preparation Click here

1. INSPECT INTAKE AIR CONTROL VALVE

a. Apply 40 kPa (300 mmHg, 11.8 in.Hg) of vacuum to the actuator and check that the actuator rod moves.

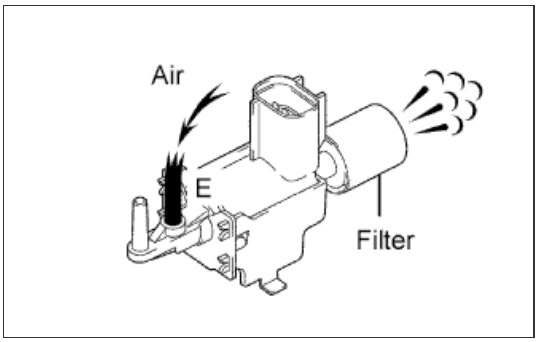
b. One minute after applying vacuum in the above step, check that the actuator rod does not return.
If the result is not as specified, replace the intake manifold.



2. INSPECT VACUUM SWITCHING VALVE ASSEMBLY (for ACIS)

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

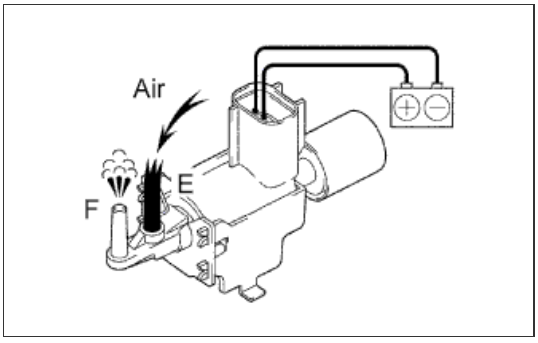


Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	33 to 39 Ω
1 - Body ground	Always	1 MΩ or higher
2 - Body ground		

If the result is not as specified, replace the vacuum switching valve assembly.

b. Check the VSV operation.

i. Check that air flows from port E to the filter.

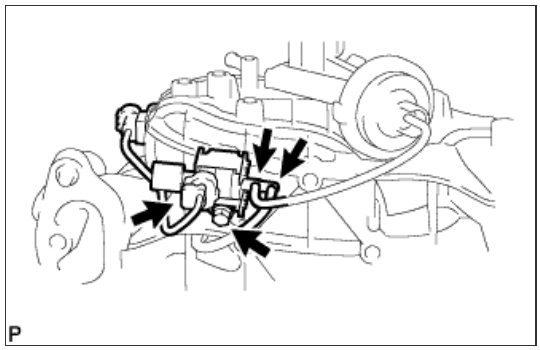


ii. Apply battery voltage to the connector, and check the VSV operation.

OK:

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Check that air flows from port E to F

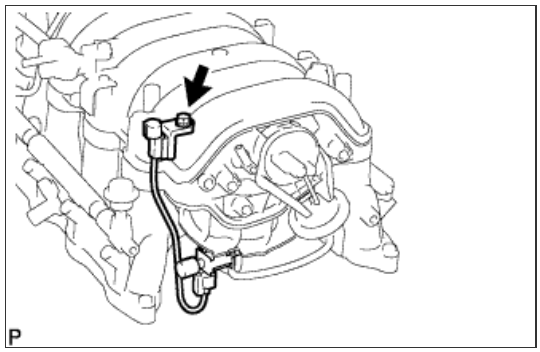
If the result is not as specified, replace the vacuum switching valve assembly.



for Preparation Click here

1. INSTALL VACUUM SWITCHING VALVE ASSEMBLY (for ACIS)

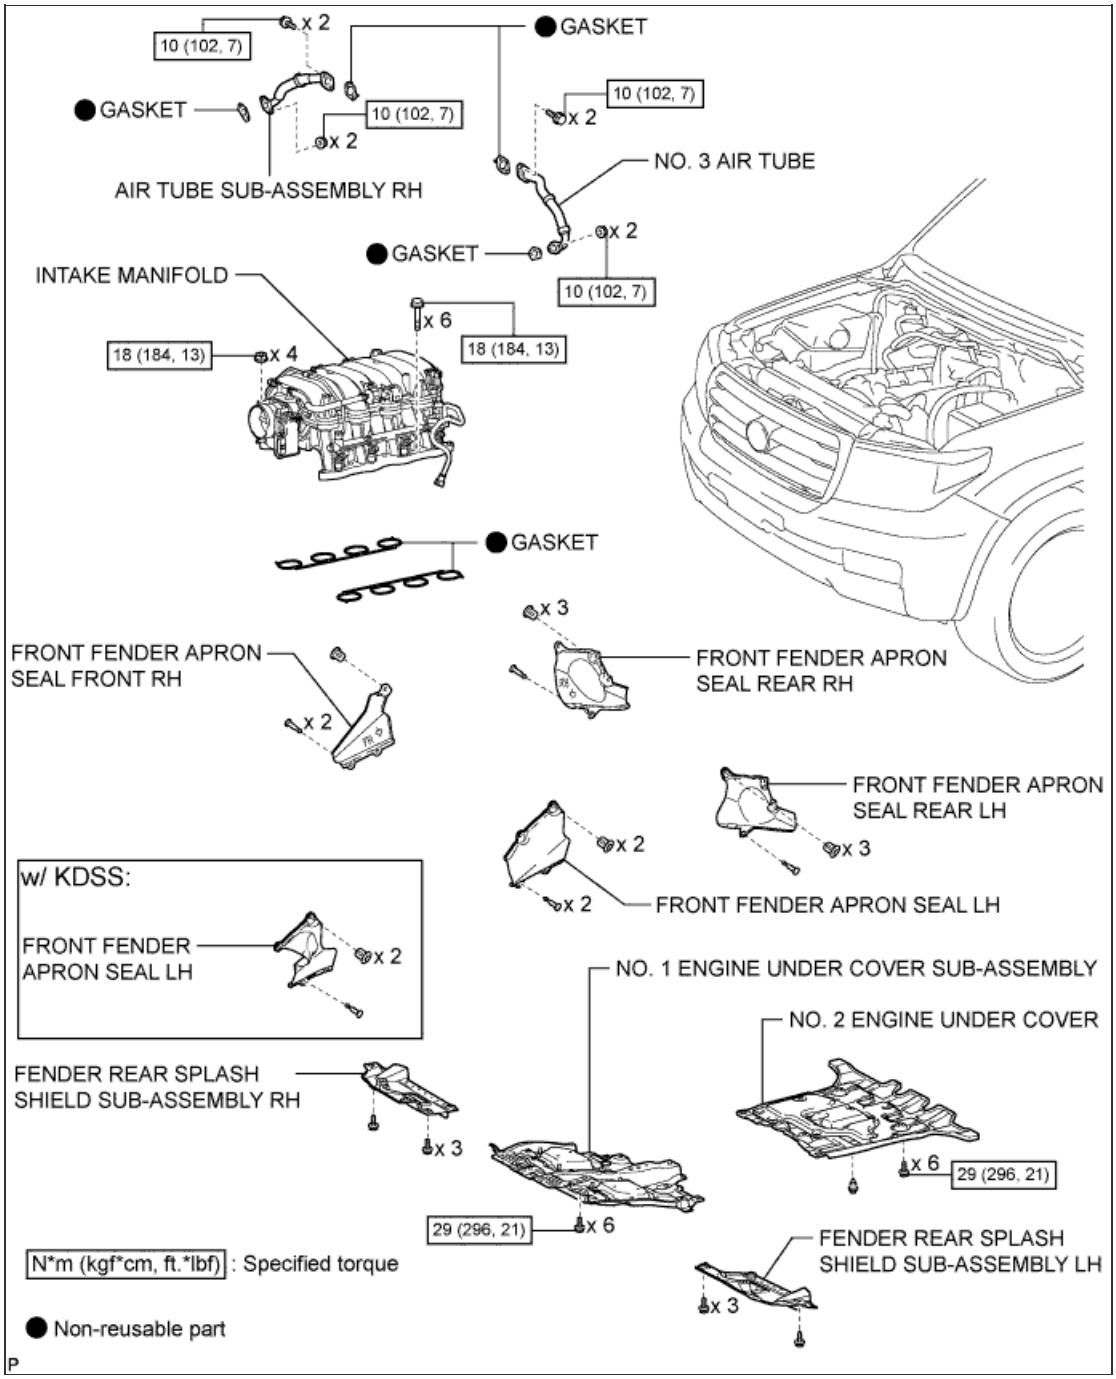
a. Install the VSV with the bolt.



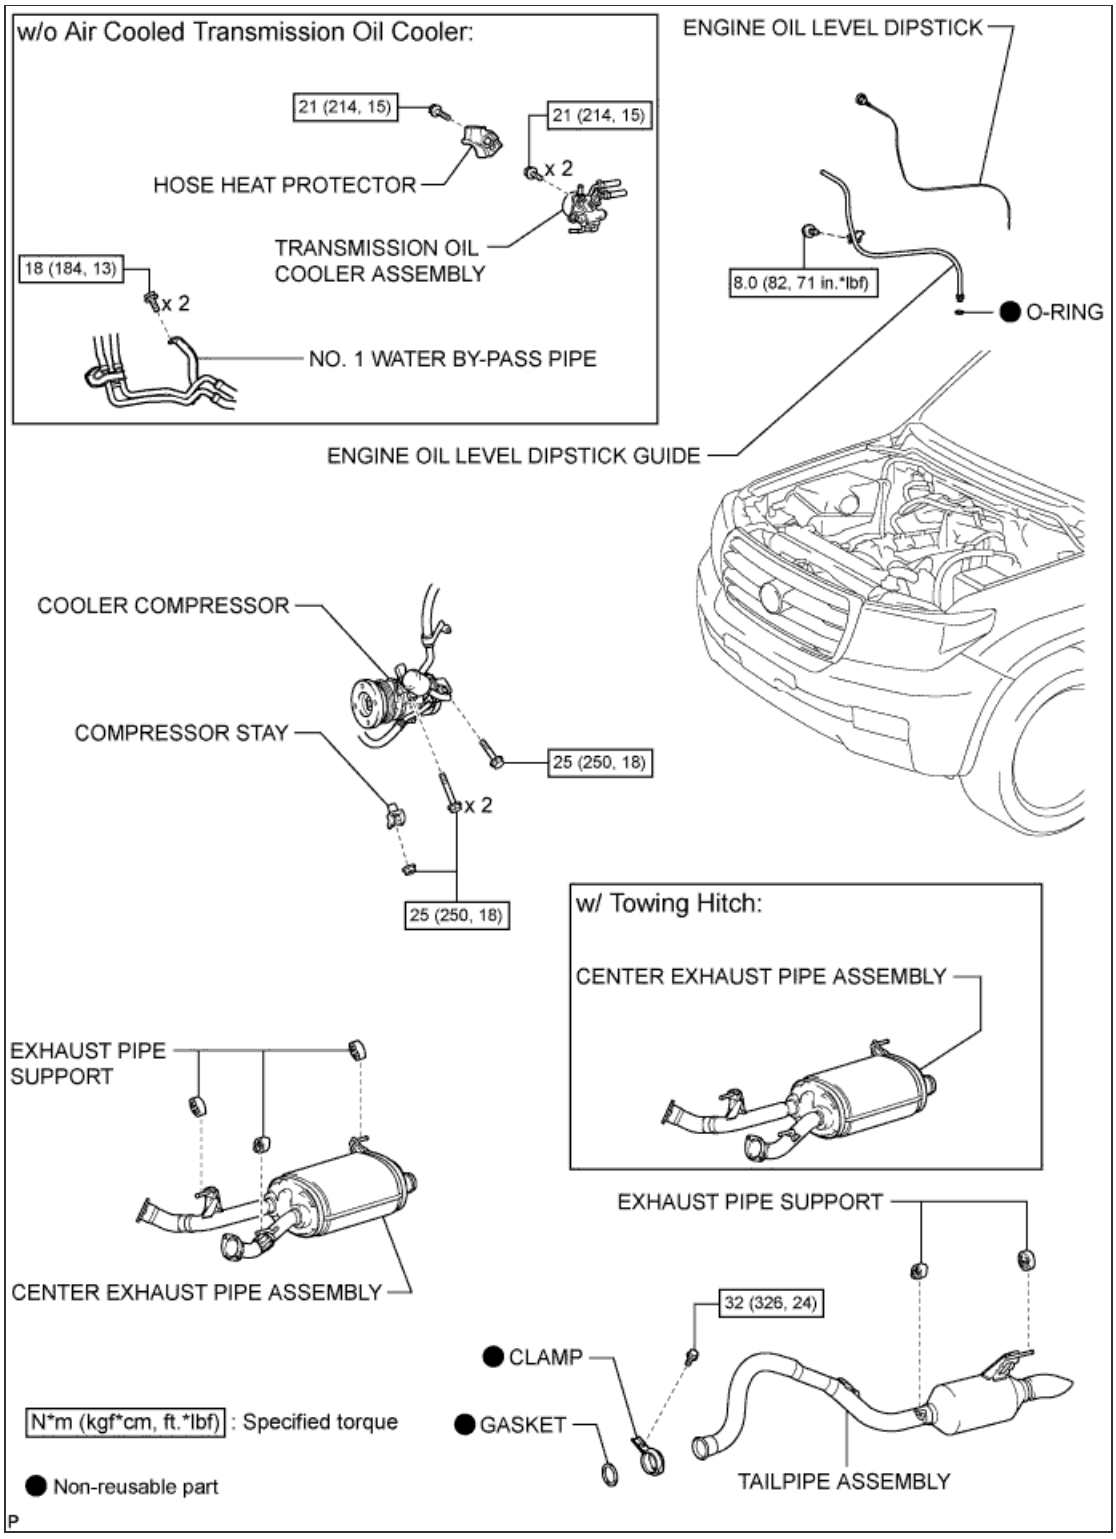
Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

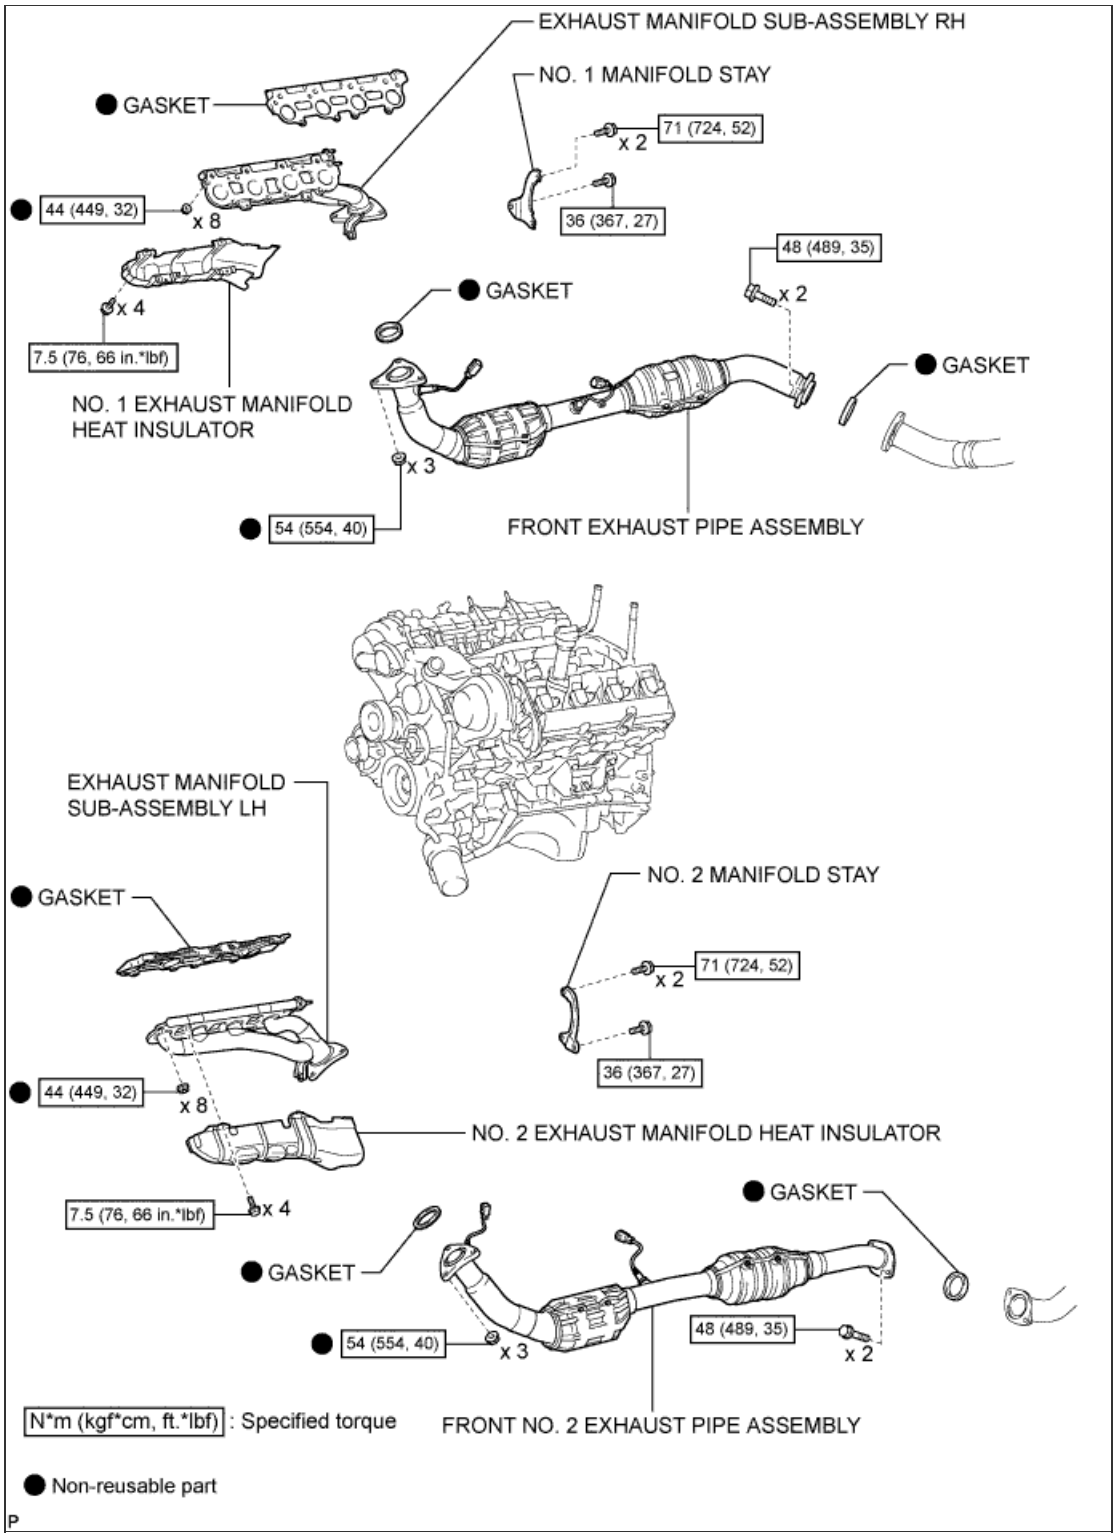
b. Connect the VSV connector and 2 vacuum hoses.

c. Connect the VSV connector with the bolt.



Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }





2. INSTALL INTAKE MANIFOLD

a. Install the intake manifold (Click here).

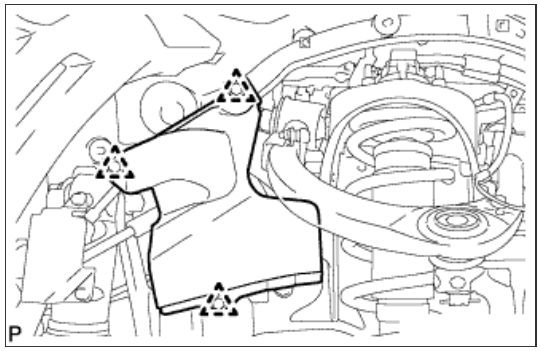
for Preparation Click here

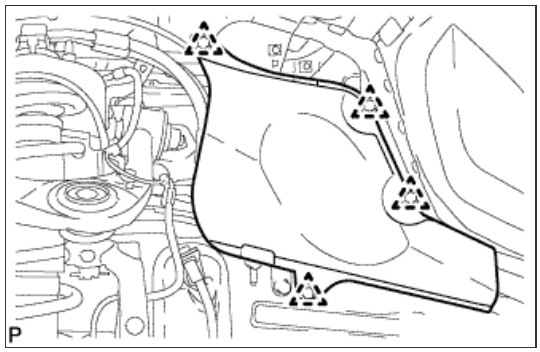
1. REMOVE INTAKE MANIFOLD

a. Remove the intake manifold (Click here).



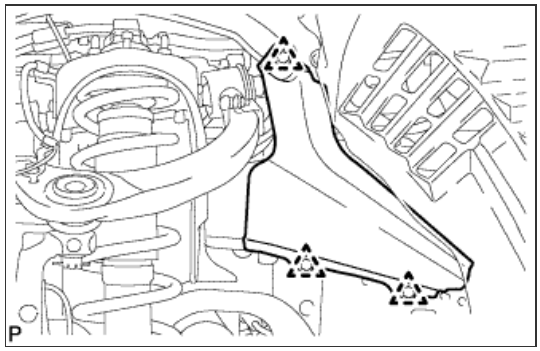
2. REMOVE FRONT FENDER APRON SEAL LH

a. Using a clip remover, remove the 4 clips and fender apron seal.



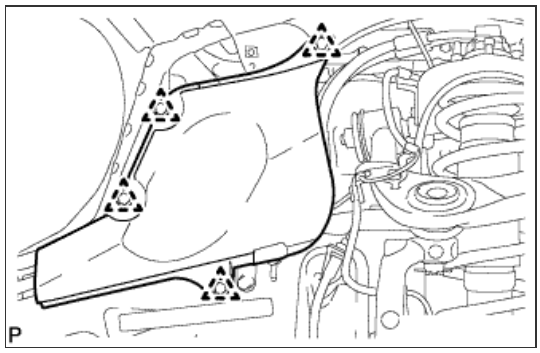
3. REMOVE FRONT FENDER APRON SEAL LH (w/ KDSS)

a. Using a clip remover, remove the 3 clips and fender apron seal.



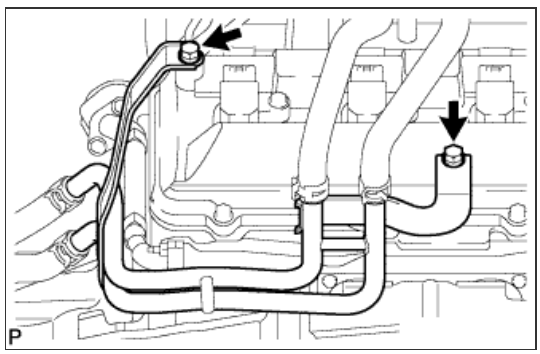
4. REMOVE FRONT FENDER APRON SEAL REAR LH

a. Using a clip remover, remove the 4 clips and fender apron seal.



5. REMOVE FRONT FENDER APRON SEAL FRONT RH

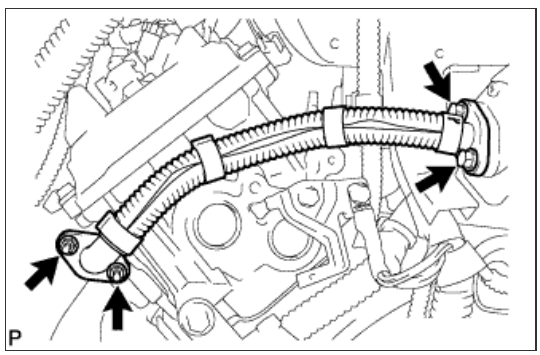
a. Using a clip remover, remove the 3 clips and fender apron seal.



6. REMOVE FRONT FENDER APRON SEAL REAR RH

a. Using a clip remover, remove the 4 clips and fender apron seal.

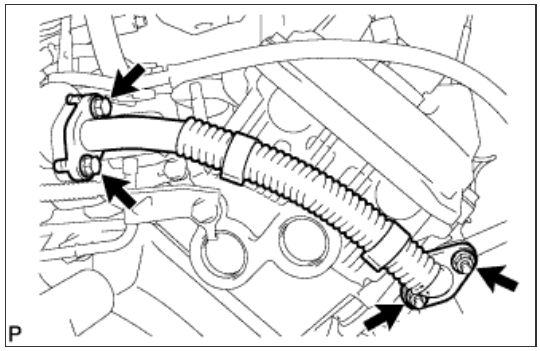
7. DISCONNECT NO. 1 WATER BY-PASS PIPE (w/o Air Cooled Transmission Oil Cooler)



a. Remove the 2 bolts and disconnect the water by-pass pipe from the cylinder head cover RH.

8. REMOVE NO. 3 AIR TUBE

a. Remove the 2 bolts, 2 nuts and No. 3 air tube.

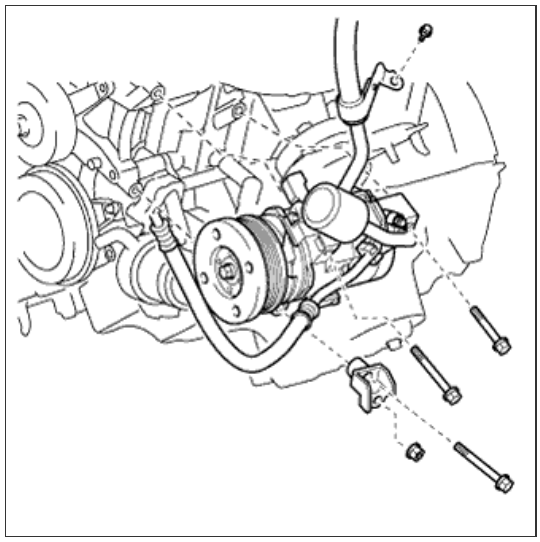


b. Remove the 2 gaskets.

9. REMOVE AIR TUBE SUB-ASSEMBLY RH

a. Remove the 2 bolts, 2 nuts and air tube sub-assembly.

b. Remove the 2 gaskets.

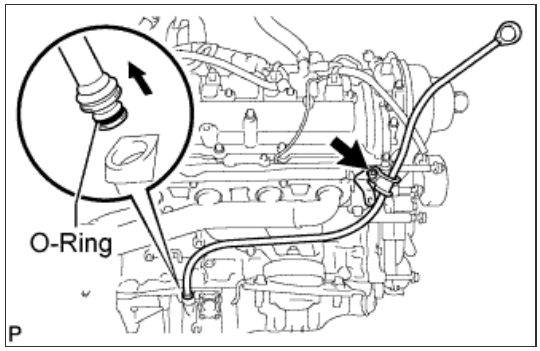


10. DISCONNECT COOLER COMPRESSOR

a. Disconnect the connector.

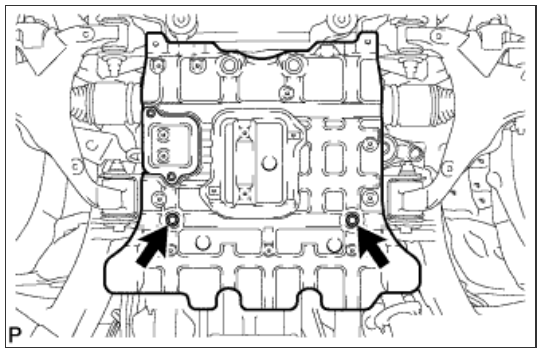
b. Remove the bolt. Then disconnect the cooler refrigerant suction hose from the cylinder head cover.

c. Remove the 3 bolts, nut and No. 1 compressor stay and disconnect the cooler compressor.



11. REMOVE ENGINE OIL LEVEL DIPSTICK GUIDE

a. Remove the dipstick.



b. Remove the bolt and dipstick guide.

c. Remove the O-ring from the dipstick guide.

12. REMOVE NO. 2 ENGINE UNDER COVER

a. Remove the 2 bolts and No. 2 engine under cover.

13. REMOVE TAILPIPE ASSEMBLY

a. Remove the bolt, clamp and gasket.

b. Remove the tailpipe from the 2 exhaust pipe supports.

14. REMOVE CENTER EXHAUST PIPE ASSEMBLY

a. Remove the 4 bolts.

b. Remove the center exhaust pipe from the 3 exhaust pipe supports.

c. Remove the 2 gaskets from the front exhaust pipe and front No. 2 exhaust pipe.

15. REMOVE FRONT EXHAUST PIPE ASSEMBLY

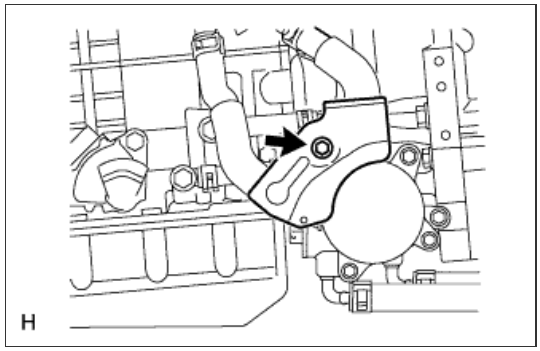
a. Disconnect the air fuel ratio sensor connector.

b. Disconnect the heated oxygen sensor connector.

c. Detach the heated oxygen sensor wire clamp.

d. Remove the 3 nuts, front exhaust pipe and gasket.

16. REMOVE FRONT NO. 2 EXHAUST PIPE ASSEMBLY

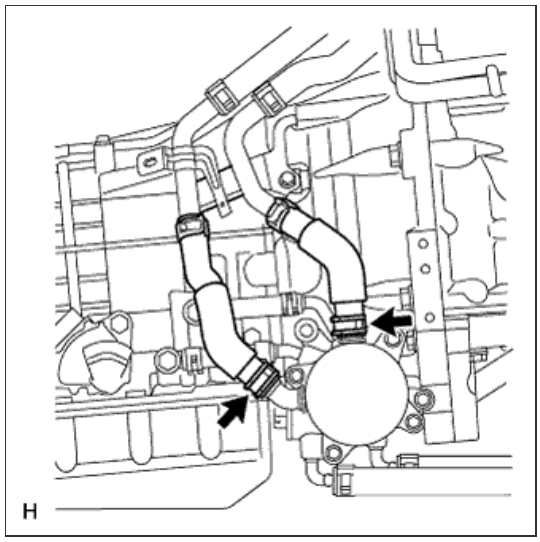


a. Disconnect the air fuel ratio sensor connector.

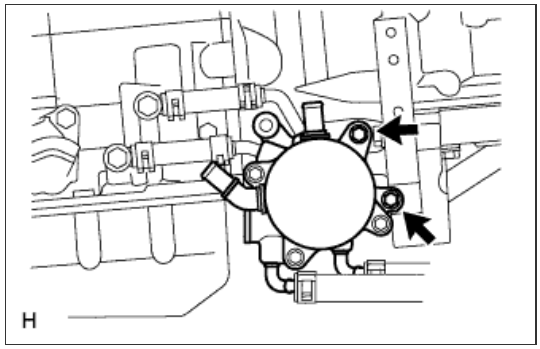
b. Disconnect the heated oxygen sensor connector.

c. Remove the 3 nuts, front No. 2 exhaust pipe and gasket.

17. DISCONNECT TRANSMISSION OIL COOLER ASSEMBLY (w/o Air Cooled Transmission Oil Cooler)



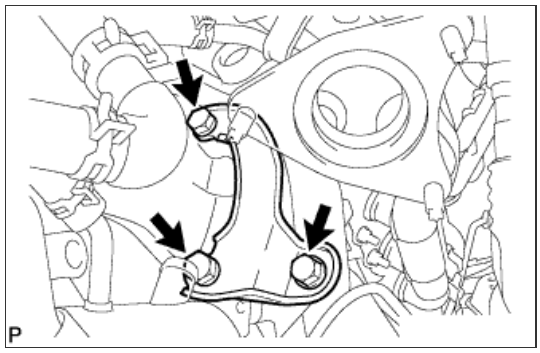
a. Remove the bolt and hose heat protector.



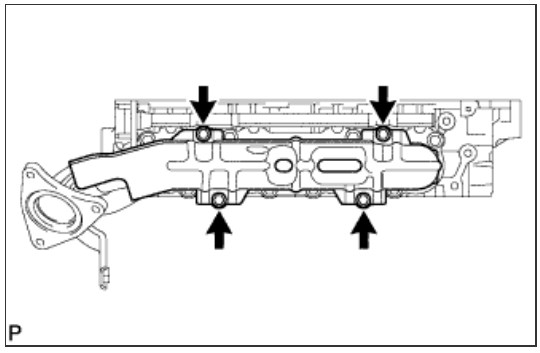
b. Disconnect the 2 water bypass hoses from the transmission oil cooler.

NOTICE:

Use a container to catch any coolant which flows out of the water by-pass hoses.

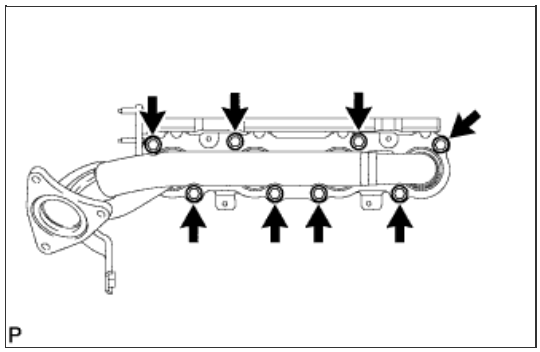


c. Remove the 2 bolts and disconnect the transmission oil cooler.



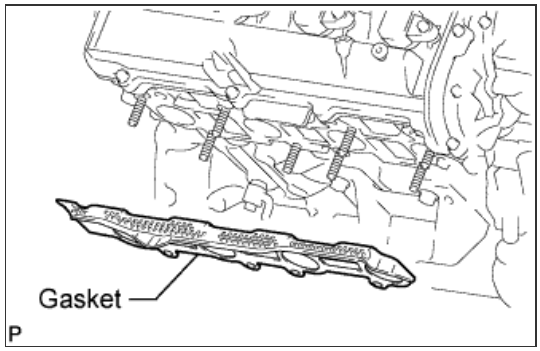
18. REMOVE NO. 1 MANIFOLD STAY

a. Remove the 3 bolts and manifold stay.



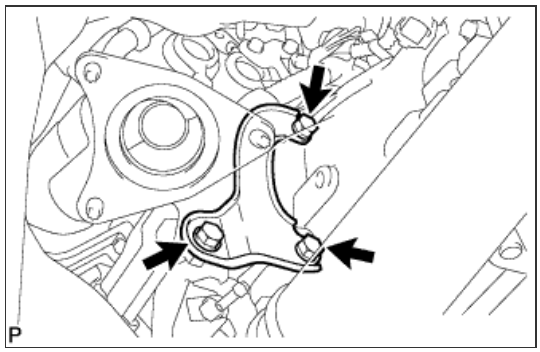
19. REMOVE NO. 1 EXHAUST MANIFOLD HEAT INSULATOR

a. Remove the 4 bolts and heat insulator.

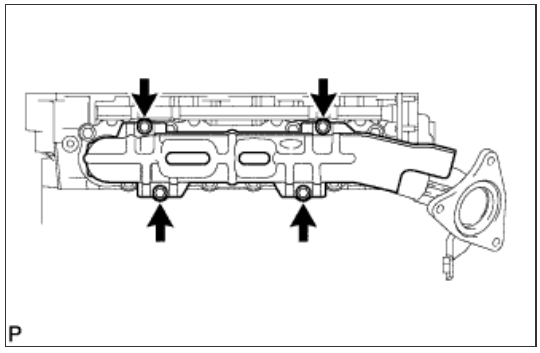


20. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY RH

a. Remove the 8 nuts and exhaust manifold.

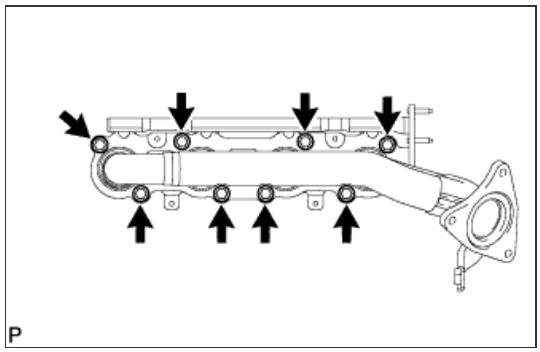


b. Remove the gasket from the cylinder head RH.



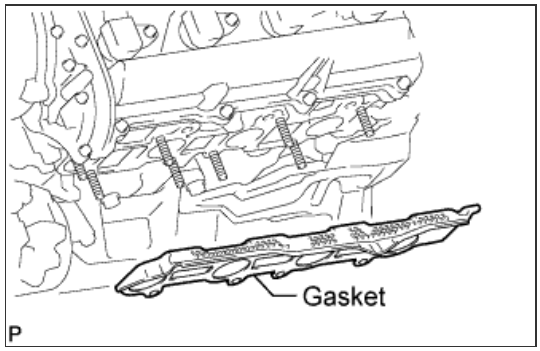
21. REMOVE NO. 2 MANIFOLD STAY

a. Remove the 3 bolts and manifold stay.



22. REMOVE NO. 2 EXHAUST MANIFOLD HEAT INSULATOR

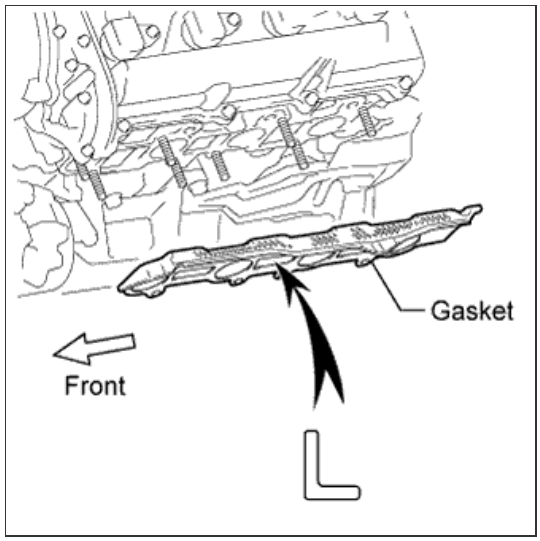
a. Remove the 4 bolts and heat insulator.



23. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY LH

a. Remove the 8 nuts and exhaust manifold.

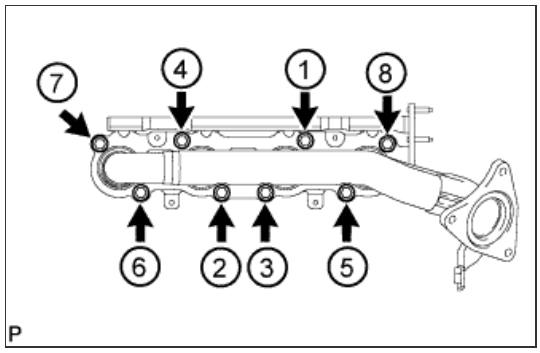
b. Remove the gasket from the cylinder head LH.



for Preparation Click here

1. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY LH

a. Place a new gasket on the cylinder head with the "L" mark facing the manifold side.

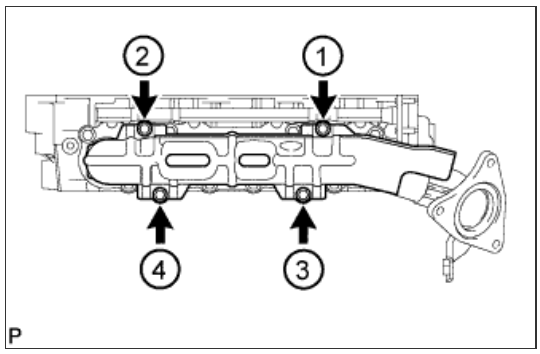


NOTICE:

Be careful of the installation direction.

b. Temporarily install the exhaust manifold with 8 new nuts, and then uniformly tighten the nuts in several steps, in the sequence shown in the illustration.

Torque:
44 N*m{ 449 kgf*cm , 32 ft.*lbf }

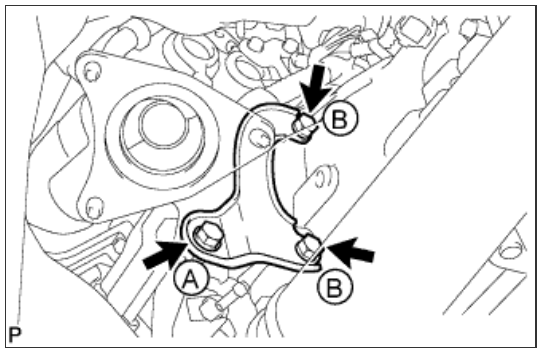


2. INSTALL NO. 2 EXHAUST MANIFOLD HEAT INSULATOR

a. Temporarily install the heat insulator with the 4 bolts.

b. Uniformly tighten the 4 bolts in several steps, in the sequence shown in the illustration.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

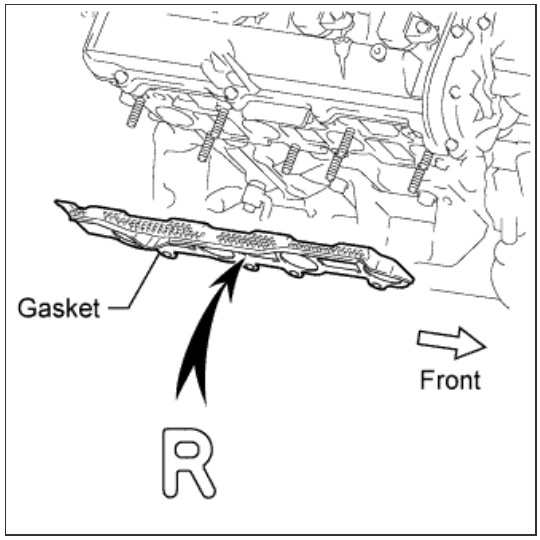


3. INSTALL NO. 2 MANIFOLD STAY

a. Install the manifold stay with the 3 bolts.

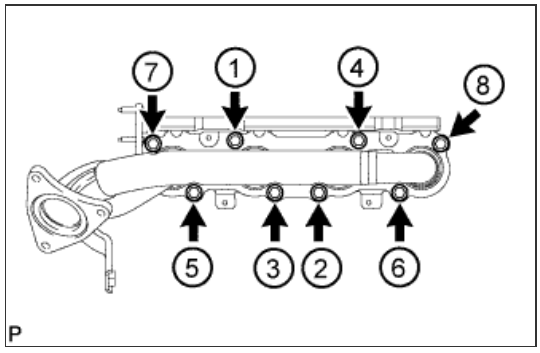
a. Install the manifold stay with the 3 bolts.

Torque:
for bolt A:
36 N*m{ 367 kgf*cm , 27 ft.*lbf }
for bolt B:
71 N*m{ 724 kgf*cm , 52 ft.*lbf }



4. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY RH

a. Place a new gasket on the cylinder head with the "R" mark facing the manifold side.

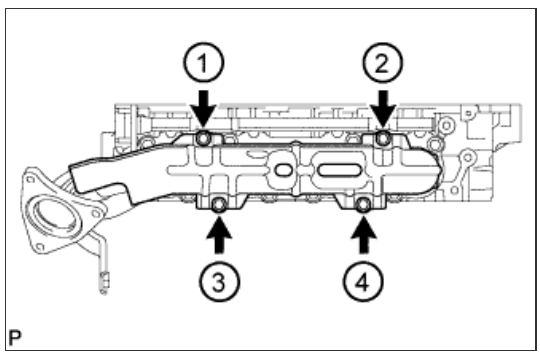


NOTICE:

Be careful of the installation direction.

b. Temporarily install the exhaust manifold with 8 new nuts, and then uniformly tighten the nuts in several steps, in the sequence shown in the illustration.

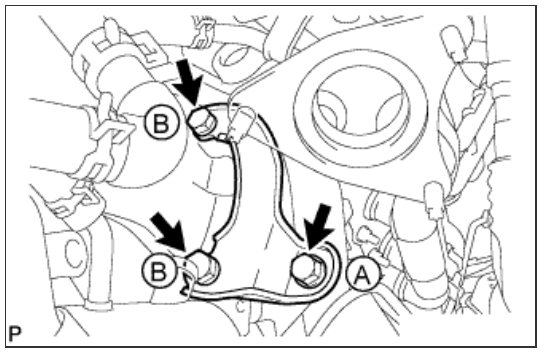
Torque:
44 N*m{ 429 kgf*cm , 32 ft.*lbf }



5. INSTALL NO. 1 EXHAUST MANIFOLD HEAT INSULATOR

a. Temporarily install the heat insulator with the 4 bolts.

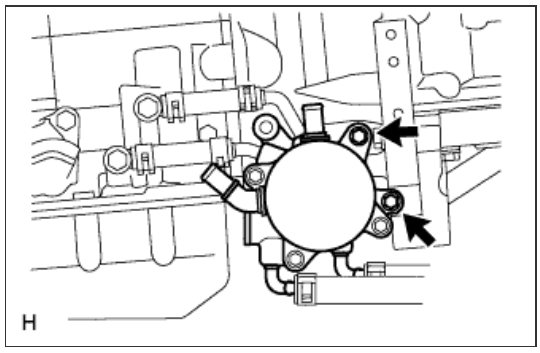
b. Uniformly tighten the 4 bolts in several steps, in the sequence shown in the illustration.



Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

6. INSTALL NO. 1 MANIFOLD STAY

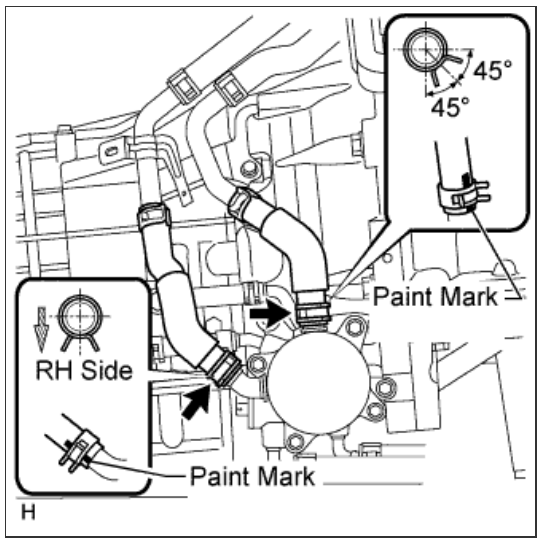
a. Install the manifold stay with the 3 bolts.



Torque:
for bolt A:
36 N*m{ 367 kgf*cm , 27 ft.*lbf }
for bolt B:
71 N*m{ 724 kgf*cm , 52 ft.*lbf }

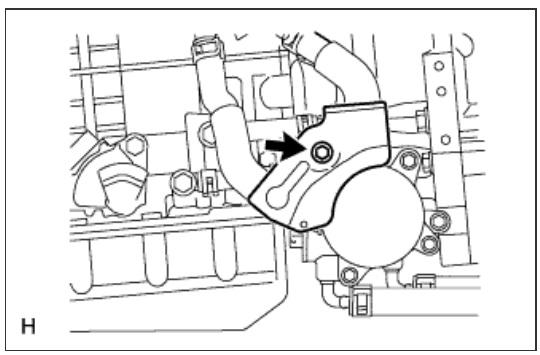
7. CONNECT TRANSMISSION OIL COOLER ASSEMBLY (w/o Air Cooled Transmission Oil Cooler)

a. Connect the transmission oil cooler with the 2 bolts.



Torque:
21 N*m{ 214 kgf*cm , 1 ft.*lbf }

b. Connect the 2 water bypass hoses to the transmission oil cooler.



NOTICE:

Make sure the pinching portion of each clip is facing the direction shown in the illustration.

c. Install the hose heat protector with the bolt.

Torque:
21 N*m{ 214 kgf*cm , 1 ft.*lbf }

8. INSTALL FRONT NO. 2 EXHAUST PIPE ASSEMBLY

a. Install a new gasket and the front No. 2 exhaust pipe to the exhaust manifold LH with 3 new nuts.

Torque:
54 N*m{ 554 kgf*cm , 40 ft.*lbf }

b. Connect the air fuel ratio sensor connector.

c. Connect the heated oxygen sensor connector.

9. INSTALL FRONT EXHAUST PIPE ASSEMBLY

a. Install a new gasket and the front exhaust pipe to the exhaust manifold with 3 new nuts.

Torque:
54 N*m{ 554 kgf*cm , 40 ft.*lbf }

b. Connect the air fuel ratio sensor connector.

c. Connect the heated oxygen sensor connector.

d. Attach the heated oxygen sensor wire clamp.

1 INSTALL CENTER EXHAUST PIPE ASSEMBLY

a. Install the center exhaust pipe to the 3 exhaust pipe supports.

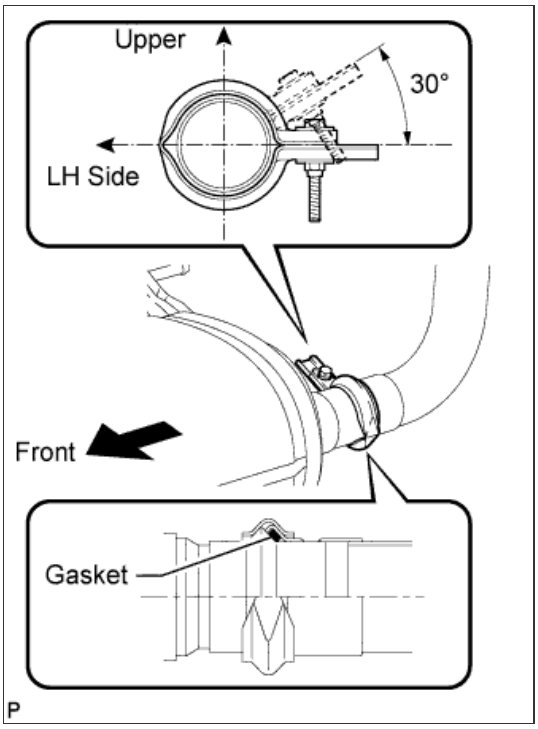
b. Install 2 new gaskets to the front exhaust pipe and front No. 2 exhaust pipe.

c. Install the 4 bolts.

Torque:
48 N*m{ 489 kgf*cm , 35 ft.*lbf }

11. INSTALL TAILPIPE ASSEMBLY

a. Install the tailpipe to the 2 exhaust pipe supports.

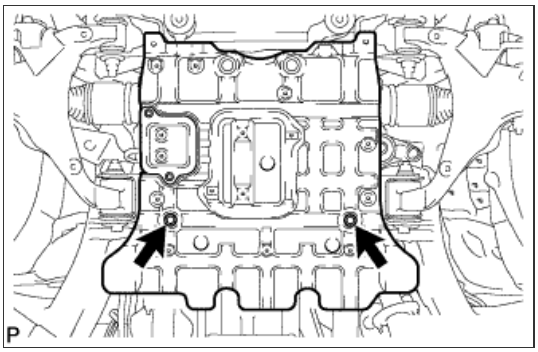


b. Install a new gasket to the center exhaust pipe.

c. Connect the tailpipe and center exhaust pipe with a new clamp.

Torque:
32 N*m{ 326 kgf*cm , 24 ft.*lbf }

HINT:



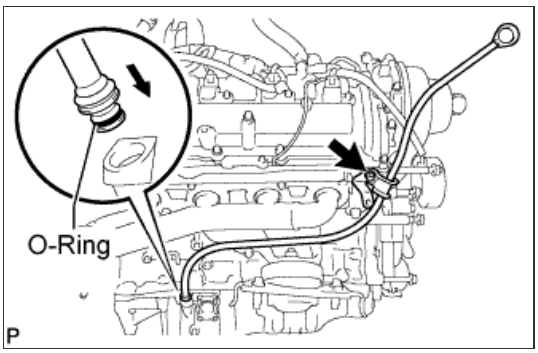
Install the clamp within the angle range shown in the illustration.

12. INSTALL NO. 2 EN INE UNDER CO ER

a. Install the No. 2 engine under cover with the 2 bolts.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

13. INSTALL EN INE OIL LEVEL DIPSTIC IDE



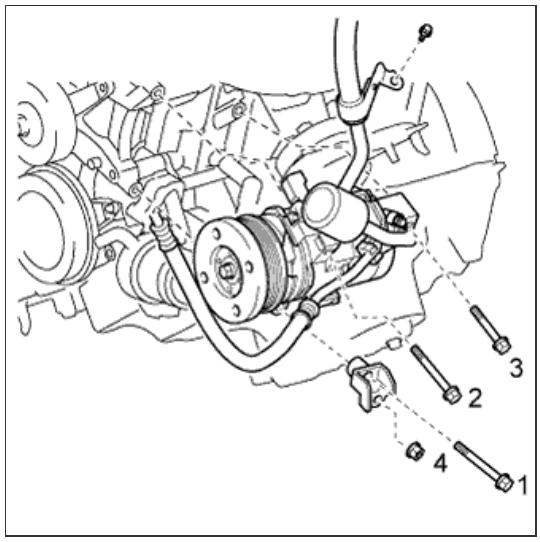
a. Apply a light coat of engine oil to a new O-ring.

b. Install a new O-ring to the guide.

c. Install the dipstick guide with the bolt.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

d. Install the dipstick.



14. CONNECT COOLER COMPRESSOR

a. Connect the compressor. Then install it and the No. 1 compressor stay with the nut and 3 bolts.

Torque:
for bolt:
45 N*m{ 459 kgf*cm , 33 ft.*lbf }
for nut:
25 N*m{ 250 kgf*cm , 1 ft.*lbf }

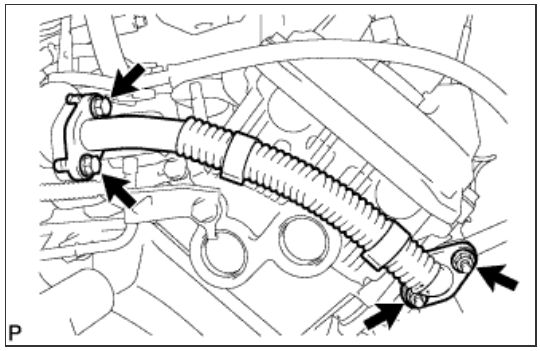
HINT:

Tighten the bolts in the order shown in the illustration to install the cooler compressor.

b. Install the cooler refrigerant suction hose with the bolt.

Torque:
9.8 N*m{ 1 kgf*cm , 87 in.*lbf }

c. Connect the connector.



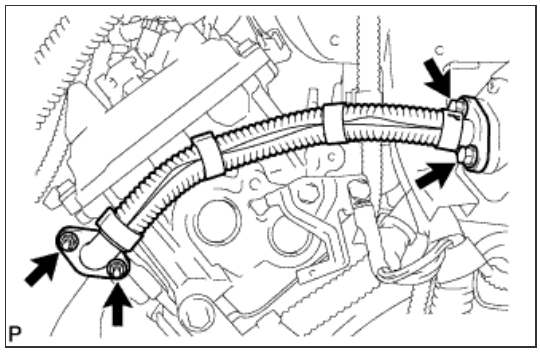
1 INSTALL AIR TUBE SUB-ASSEMBLY RH

a. Install a new gasket and connect the air tube to the exhaust manifold with the 2 nuts.

Torque:
1 N*m{ 1 2kgf*cm , 7 ft.*lbf }

b. Install a new gasket and connect the air tube to the No. 1 air switching valve with the 2 bolts.

Torque:
1 N*m{ 1 2kgf*cm , 7 ft.*lbf }

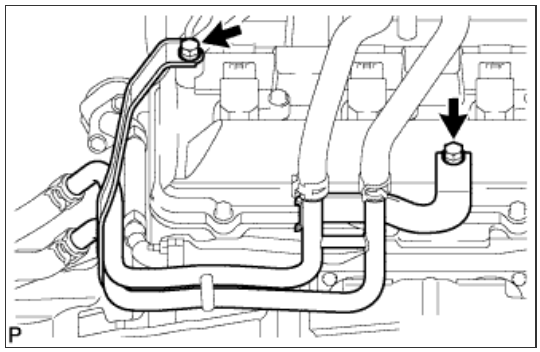


1 INSTALL NO. 3 AIR TUBE

a. Install a new gasket and connect the No. 3 air tube to the exhaust manifold with the 2 nuts.

Torque:
1 N*m{ 1 2kgf*cm , 7 ft.*lbf }

b. Install a new gasket and connect the No. 3 air tube to the No. 2 air switching valve with the 2 bolts.



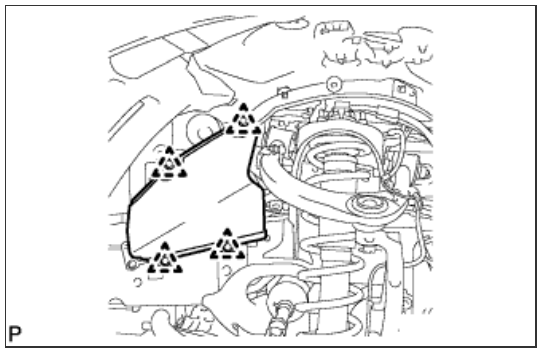
Torque:
1 N*m{ 1 2kgf*cm , 7 ft.*lbf }

17. CONNECT NO. 1 WATER BY-PASS PIPE (w/o Air Cooled Transmission Oil Cooler)

a. Connect the water by-pass pipe to the cylinder head cover RH with the 2 bolts.

Torque:
1 N*m{ 1 4 kgf*cm , 13 ft.*lbf }

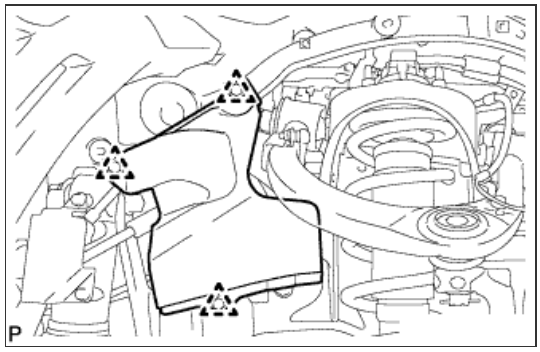
1 INSTALL INTAKE MANIFOLD



a. Install the intake manifold (Click here).

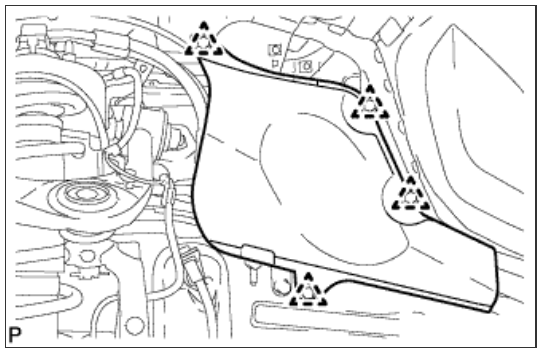
19. INSPECT FOR EXHAUST AS LEAK

If gas is leaking, tighten the areas necessary to stop the leak. Replace damaged parts as necessary.



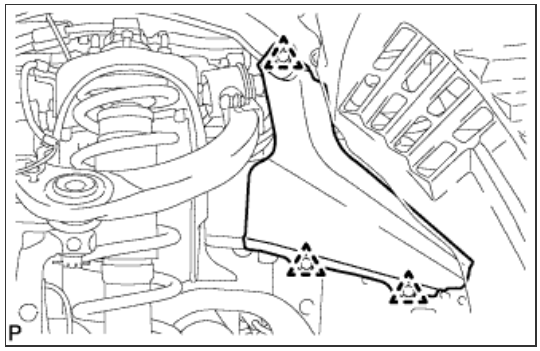
20. INSTALL FRONT FENDER APRON SEAL LH

a. Install the fender apron seal with the 4 clips.



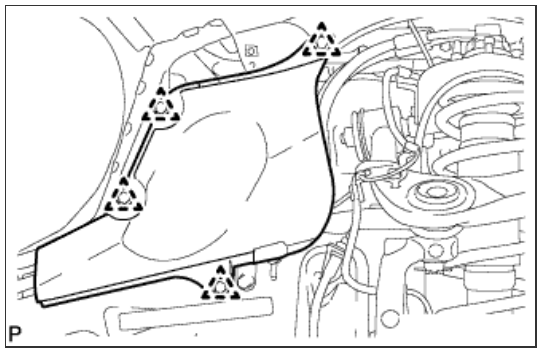
21. INSTALL FRONT FENDER APRON SEAL LH (w/ DSS)

a. Install the fender apron seal with the 3 clips.



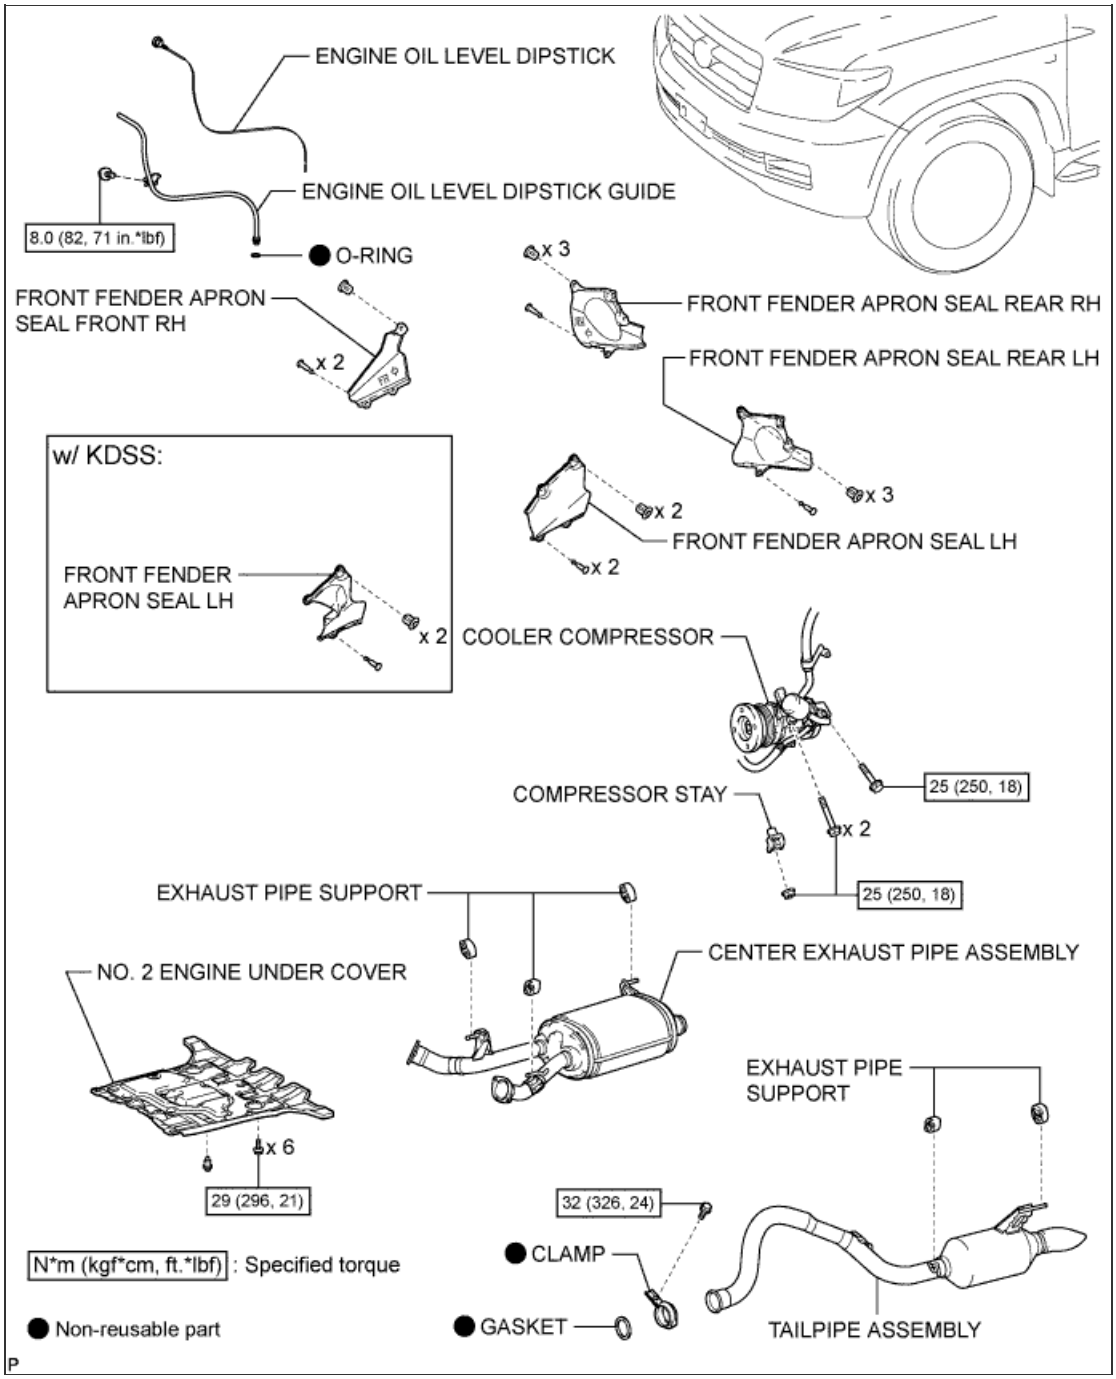
22. INSTALL FRONT FENDER APRON SEAL REAR LH

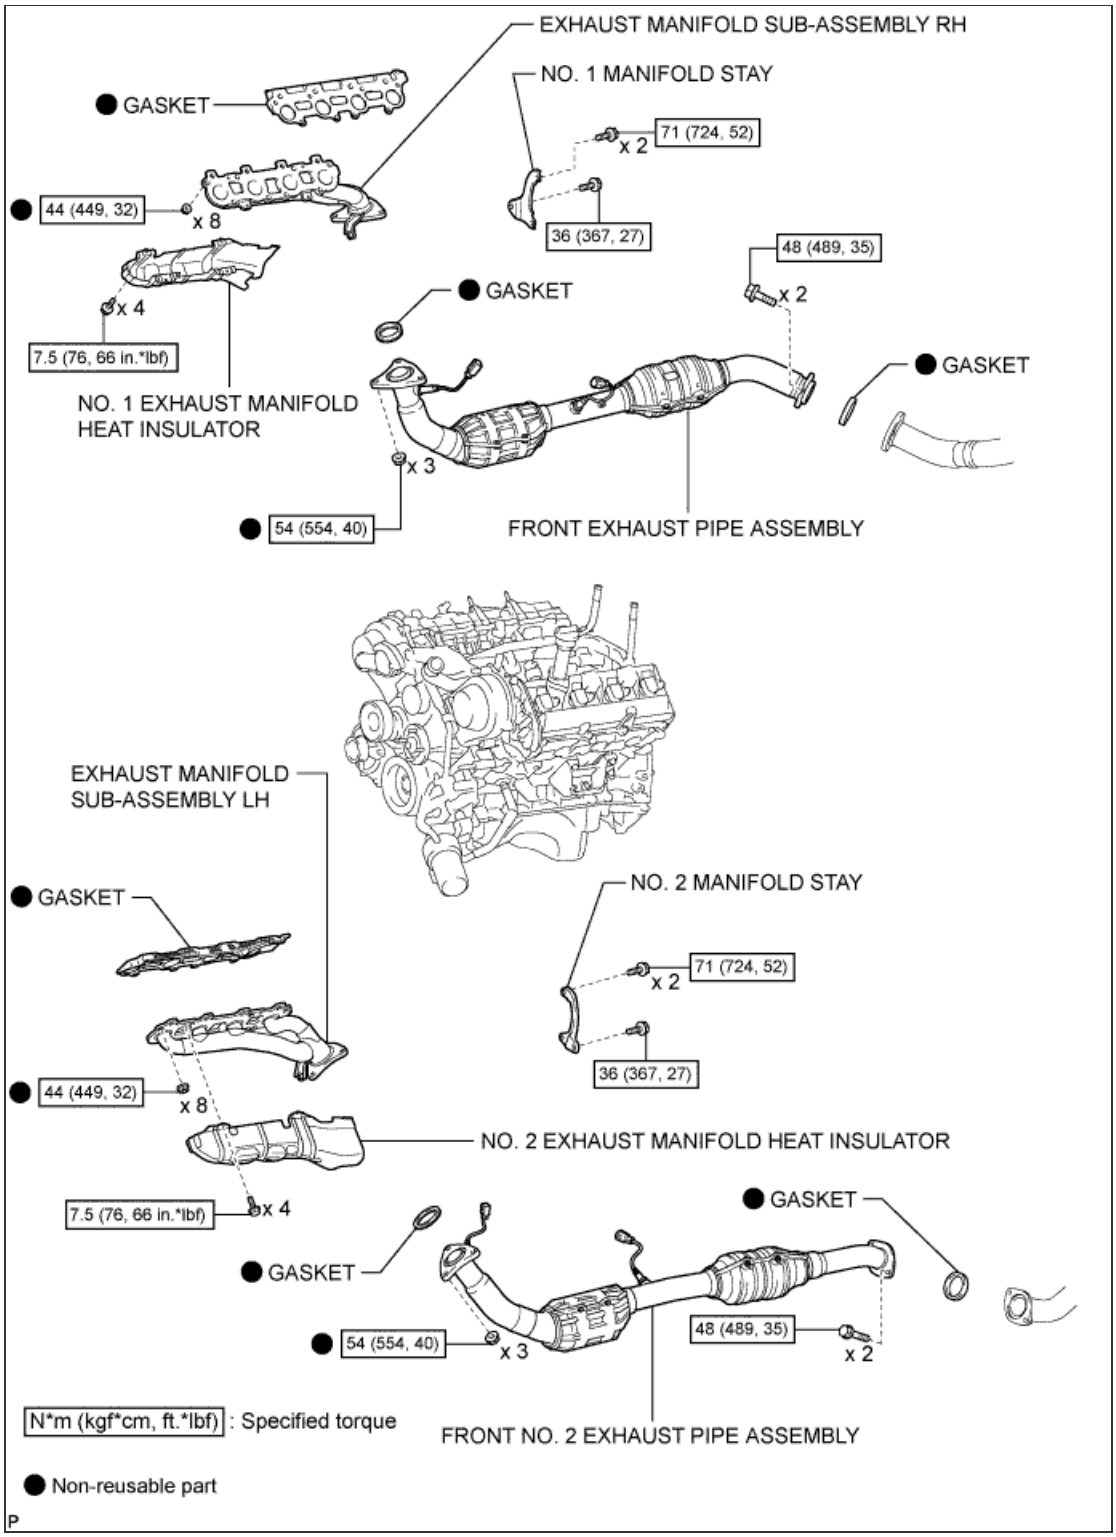
a. Install the fender apron seal with the 4 clips.



23. INSTALL FRONT FENDER APRON SEAL FRONT RH

a. Install the fender apron seal with the 3 clips.





24. INSTALL FRONT FENDER APRON SEAL REAR RH

a. Install the fender apron seal with the 4 clips.

a. Remove the 2 bolts and No. 2 engine under cover.

9. REMOVE TAILPIPE ASSEMBLY

a. Remove the bolt, clamp and gasket.

b. Remove the tailpipe from the 2 exhaust pipe supports.

10. REMOVE CENTER EXHAUST PIPE ASSEMBLY

a. Remove the 4 bolts.

b. Remove the center exhaust pipe from the 3 exhaust pipe supports.

c. Remove the 2 gaskets from the front exhaust pipe and front No. 2 exhaust pipe.

11. REMOVE FRONT EXHAUST PIPE ASSEMBLY

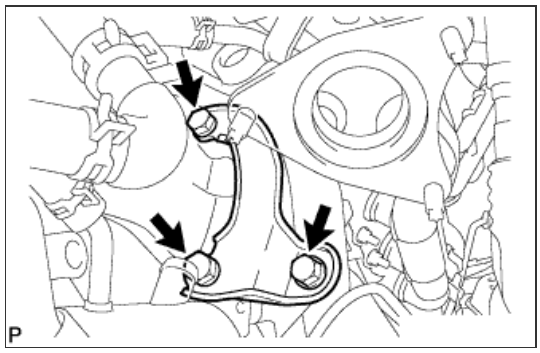
a. Disconnect the air fuel ratio sensor connector.

b. Disconnect the heated oxygen sensor connector.

c. Detach the heated oxygen sensor wire clamp.

d. Remove the 3 nuts, front exhaust pipe and gasket.

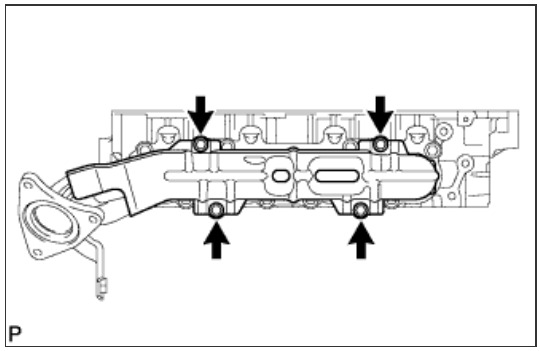
12. REMOVE FRONT NO. 2 EXHAUST PIPE ASSEMBLY



a. Disconnect the air fuel ratio sensor connector.

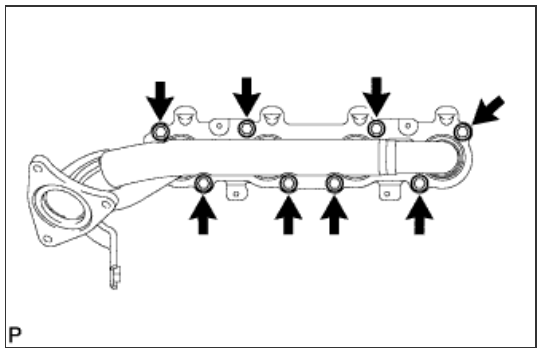
b. Disconnect the heated oxygen sensor connector.

c. Remove the 3 nuts, front No. 2 exhaust pipe and gasket.



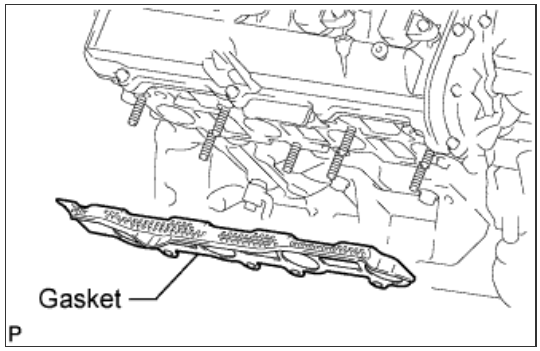
13. REMOVE NO. 1 MANIFOLD STAY

a. Remove the 3 bolts and manifold stay.



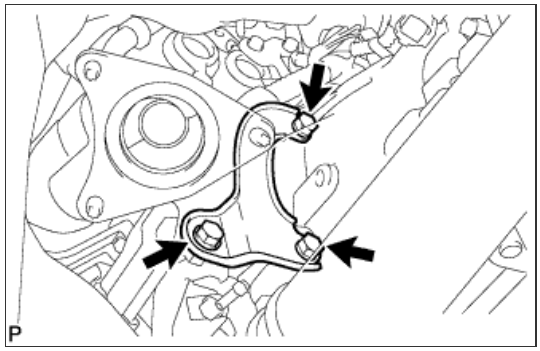
14. REMOVE NO. 1 EXHAUST MANIFOLD HEAT INSULATOR

a. Remove the 4 bolts and heat insulator.

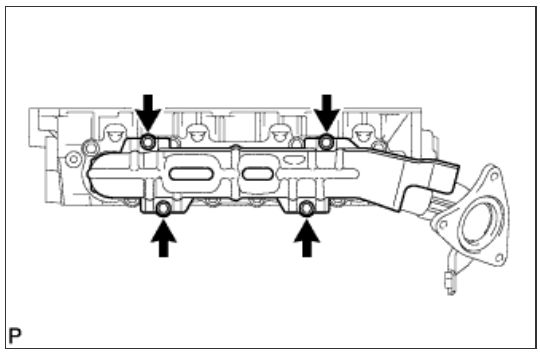


15. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY RH

a. Remove the 8 nuts and exhaust manifold.

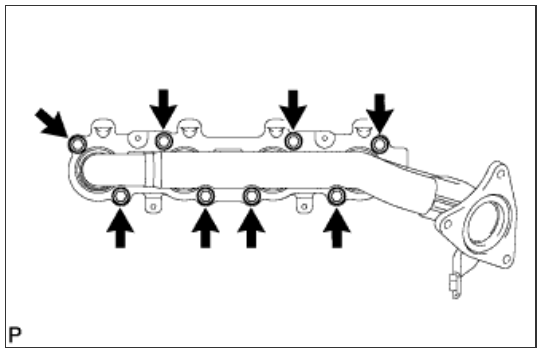


b. Remove the gasket from the cylinder head RH.



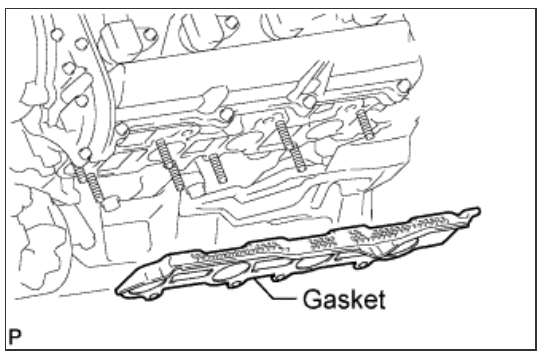
16. REMOVE NO. 2 MANIFOLD STAY

a. Remove the 3 bolts and manifold stay.



17. REMOVE NO. 2 EXHAUST MANIFOLD HEAT INSULATOR

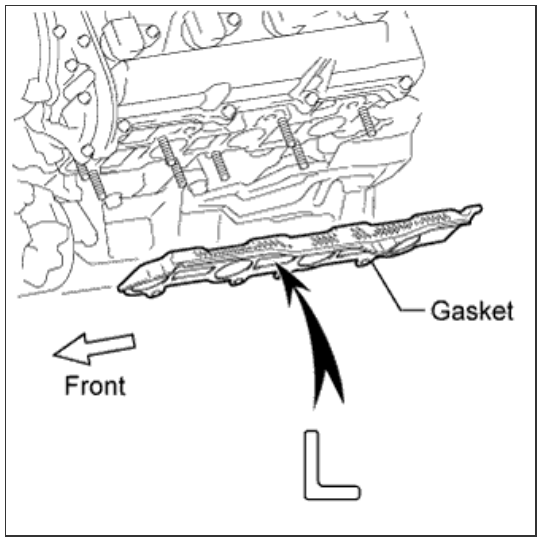
a. Remove the 4 bolts and heat insulator.



18. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY LH

a. Remove the 8 nuts and exhaust manifold.

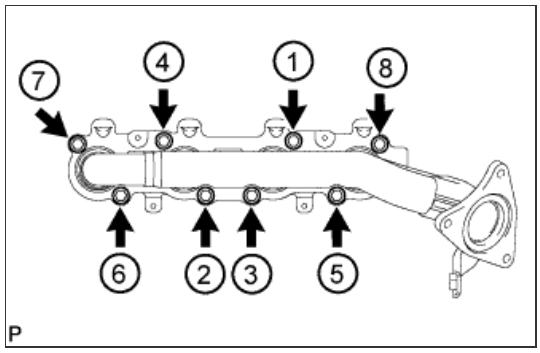
b. Remove the gasket from the cylinder head LH.



for Preparation Click here

1. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY LH

a. Place a new gasket on the cylinder head with the "L" mark facing the manifold side.

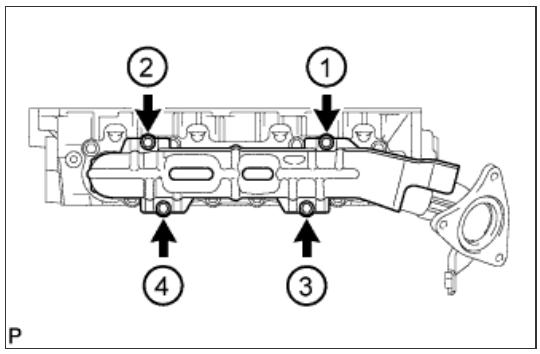


NOTICE:

Be careful of the installation direction.

b. Temporarily install the exhaust manifold with 8 new nuts, and then uniformly tighten the nuts in several steps, in the sequence shown in the illustration.

Torque:
44 N*m{ 449 kgf*cm , 32 ft.*lbf }

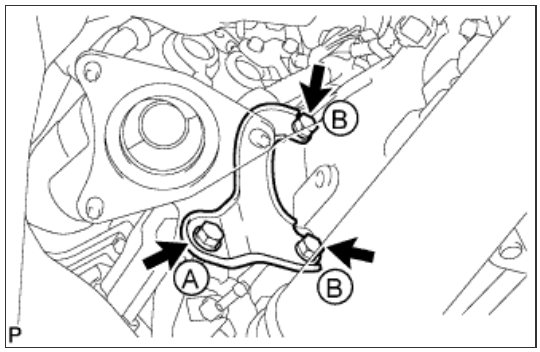


2. INSTALL NO. 2 EXHAUST MANIFOLD HEAT INSULATOR

a. Temporarily install the heat insulator with the 4 bolts.

b. Uniformly tighten the 4 bolts in several steps, in the sequence shown in the illustration.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

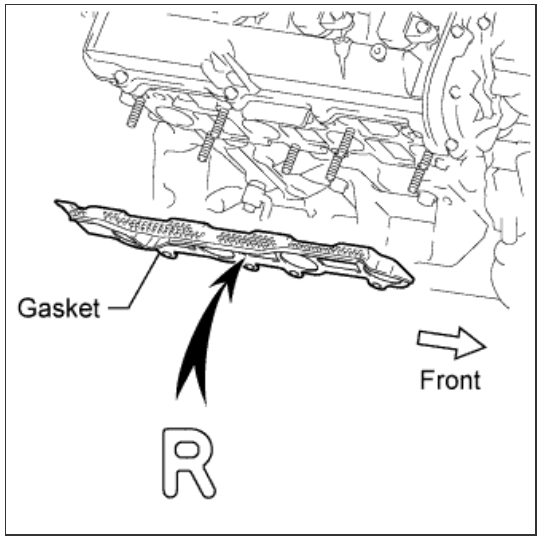


3. INSTALL NO. 2 MANIFOLD STAY

a. Install the manifold stay with the 3 bolts.

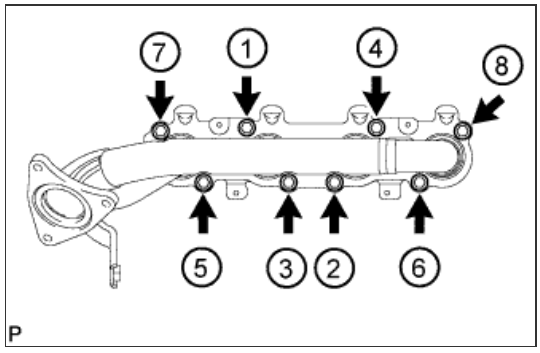
a. Install the manifold stay with the 3 bolts.

Torque:
for bolt A:
36 N*m{ 367 kgf*cm , 27 ft.*lbf }
for bolt B:
71 N*m{ 724 kgf*cm , 52 ft.*lbf }



4. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY RH

a. Place a new gasket on the cylinder head with the "R" mark facing the manifold side.

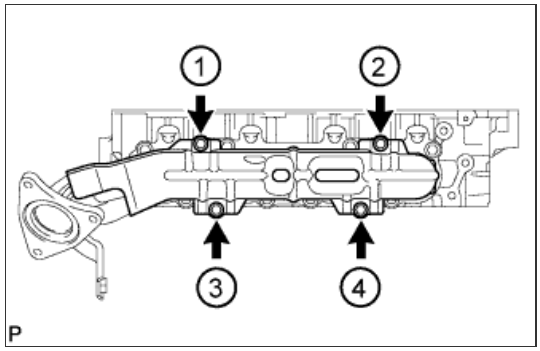


NOTICE:

Be careful of the installation direction.

b. Temporarily install the exhaust manifold with 8 new nuts, and then uniformly tighten the nuts in several steps, in the sequence shown in the illustration.

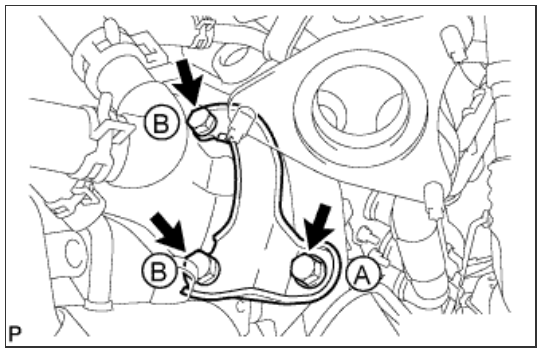
Torque:
44 N*m{ 429 kgf*cm , 32 ft.*lbf }



5. INSTALL NO. 1 EXHAUST MANIFOLD HEAT INSULATOR

a. Temporarily install the heat insulator with the 4 bolts.

b. Uniformly tighten the 4 bolts in several steps, in the sequence shown in the illustration.



Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

6. INSTALL NO. 1 MANIFOLD STAY

a. Install the manifold stay with the 3 bolts.

Torque:
for bolt A:
36 N*m{ 367 kgf*cm , 27 ft.*lbf }
for bolt B:
71 N*m{ 724 kgf*cm , 52 ft.*lbf }

7. INSTALL FRONT NO. 2 EXHAUST PIPE ASSEMBLY

a. Install a new gasket and the front No. 2 exhaust pipe to the exhaust manifold LH with 3 new nuts.

Torque:
54 N*m{ 554 kgf*cm , 40 ft.*lbf }

b. Connect the air fuel ratio sensor connector.

c. Connect the heated oxygen sensor connector.

8. INSTALL FRONT EXHAUST PIPE ASSEMBLY

a. Install a new gasket and the front exhaust pipe to the exhaust manifold with 3 new nuts.

Torque:
54 N*m{ 554 kgf*cm , 40 ft.*lbf }

b. Connect the air fuel ratio sensor connector.

c. Connect the heated oxygen sensor connector.

d. Attach the heated oxygen sensor wire clamp.

9. INSTALL CENTER EXHAUST PIPE ASSEMBLY

a. Install the center exhaust pipe to the 3 exhaust pipe supports.

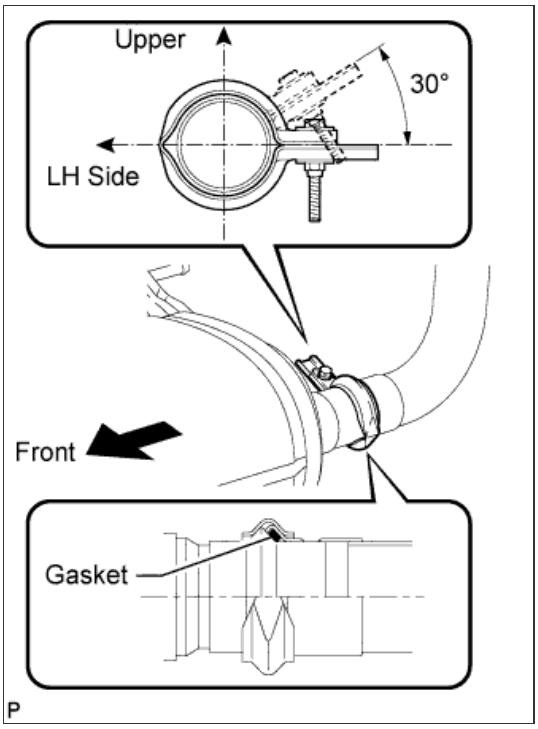
b. Install 2 new gaskets to the front exhaust pipe and front No. 2 exhaust pipe.

c. Install the 4 bolts.

Torque:
48 N*m{ 489 kgf*cm , 35 ft.*lbf }

1 INSTALL TAILPIPE ASSEMBLY

a. Install the tailpipe to the 2 exhaust pipe supports.

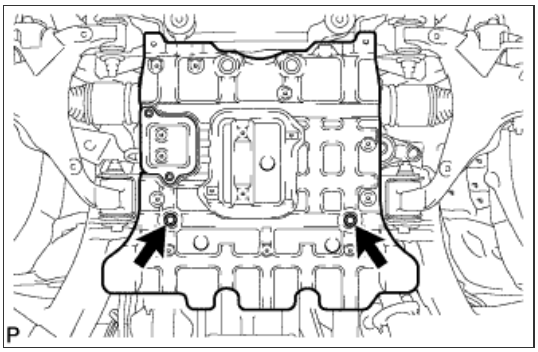


b. Install a new gasket to the center exhaust pipe.

c. Connect the tailpipe and center exhaust pipe with a new clamp.

Torque:
32 N*m{ 326 kgf*cm , 24 ft.*lbf }

HINT:



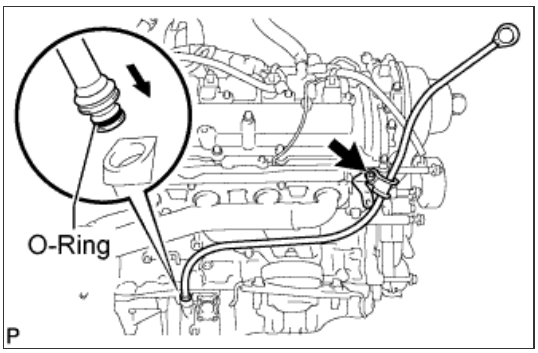
Install the clamp within the angle range shown in the illustration.

11. INSTALL NO. 2 ENGINE UNDER COVER

a. Install the No. 2 engine under cover with the 2 bolts.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

12. INSTALL ENGINE OIL LEVEL DIPSTICK GUIDE



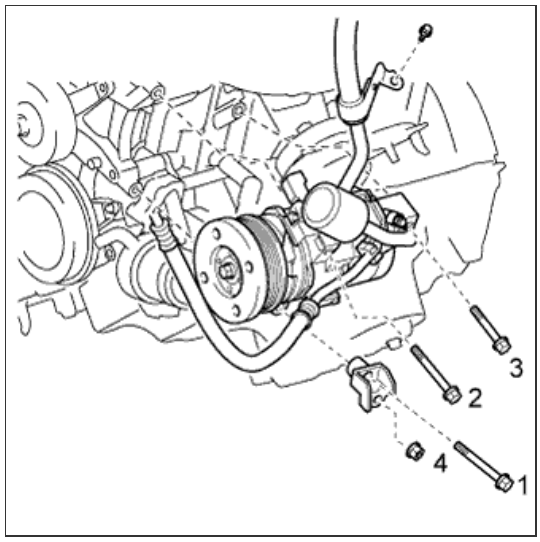
a. Apply a light coat of engine oil to a new O-ring.

b. Install a new O-ring to the guide.

c. Install the dipstick guide with the bolt.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

d. Install the dipstick.



13. CONNECT COOLER COMPRESSOR

a. Connect the compressor. Then install it and the No. 1 compressor stay with the nut and 3 bolts.

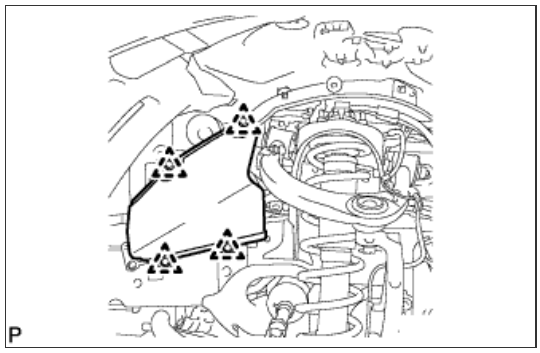
Torque:
for bolt:
45 N*m{ 459 kgf*cm , 33 ft.*lbf }
for nut:
25 N*m{ 250 kgf*cm , 1 ft.*lbf }

HINT:

Tighten the bolts in the order shown in the illustration to install the cooler compressor.

b. Install the cooler refrigerant suction hose with the bolt.

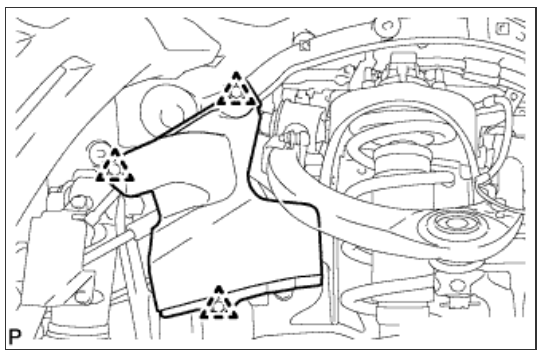
Torque:
9.8 N*m{ 1 kgf*cm , 87 in.*lbf }



c. Connect the connector.

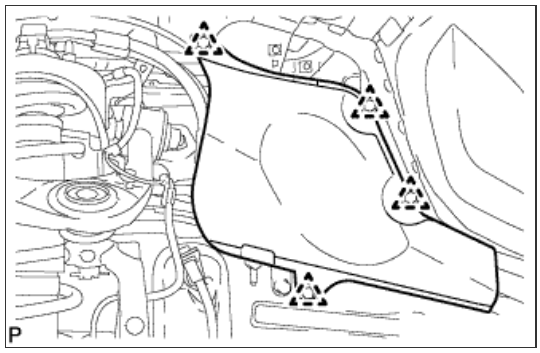
14. INSPECT FOR EXHAUST AS LEAK

If gas is leaking, tighten the areas necessary to stop the leak. Replace damaged parts as necessary.



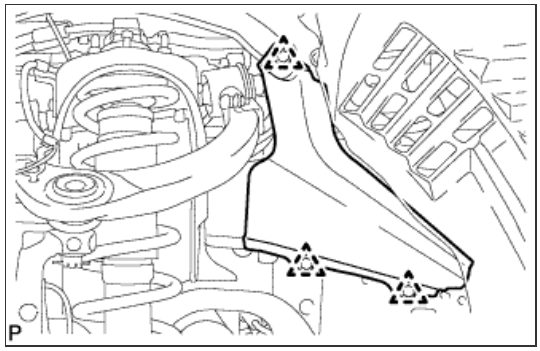
1 INSTALL FRONT FENDER APRON SEAL LH

a. Install the fender apron seal with the 4 clips.



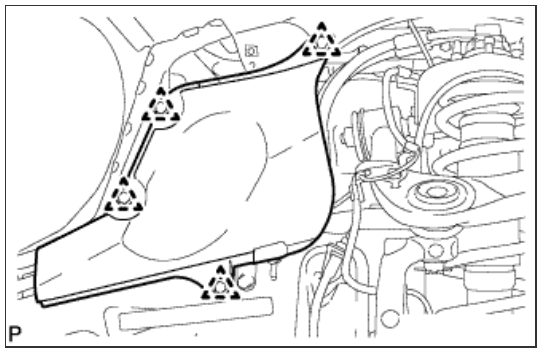
1 INSTALL FRONT FENDER APRON SEAL LH (w/ DSS)

a. Install the fender apron seal with the 3 clips.



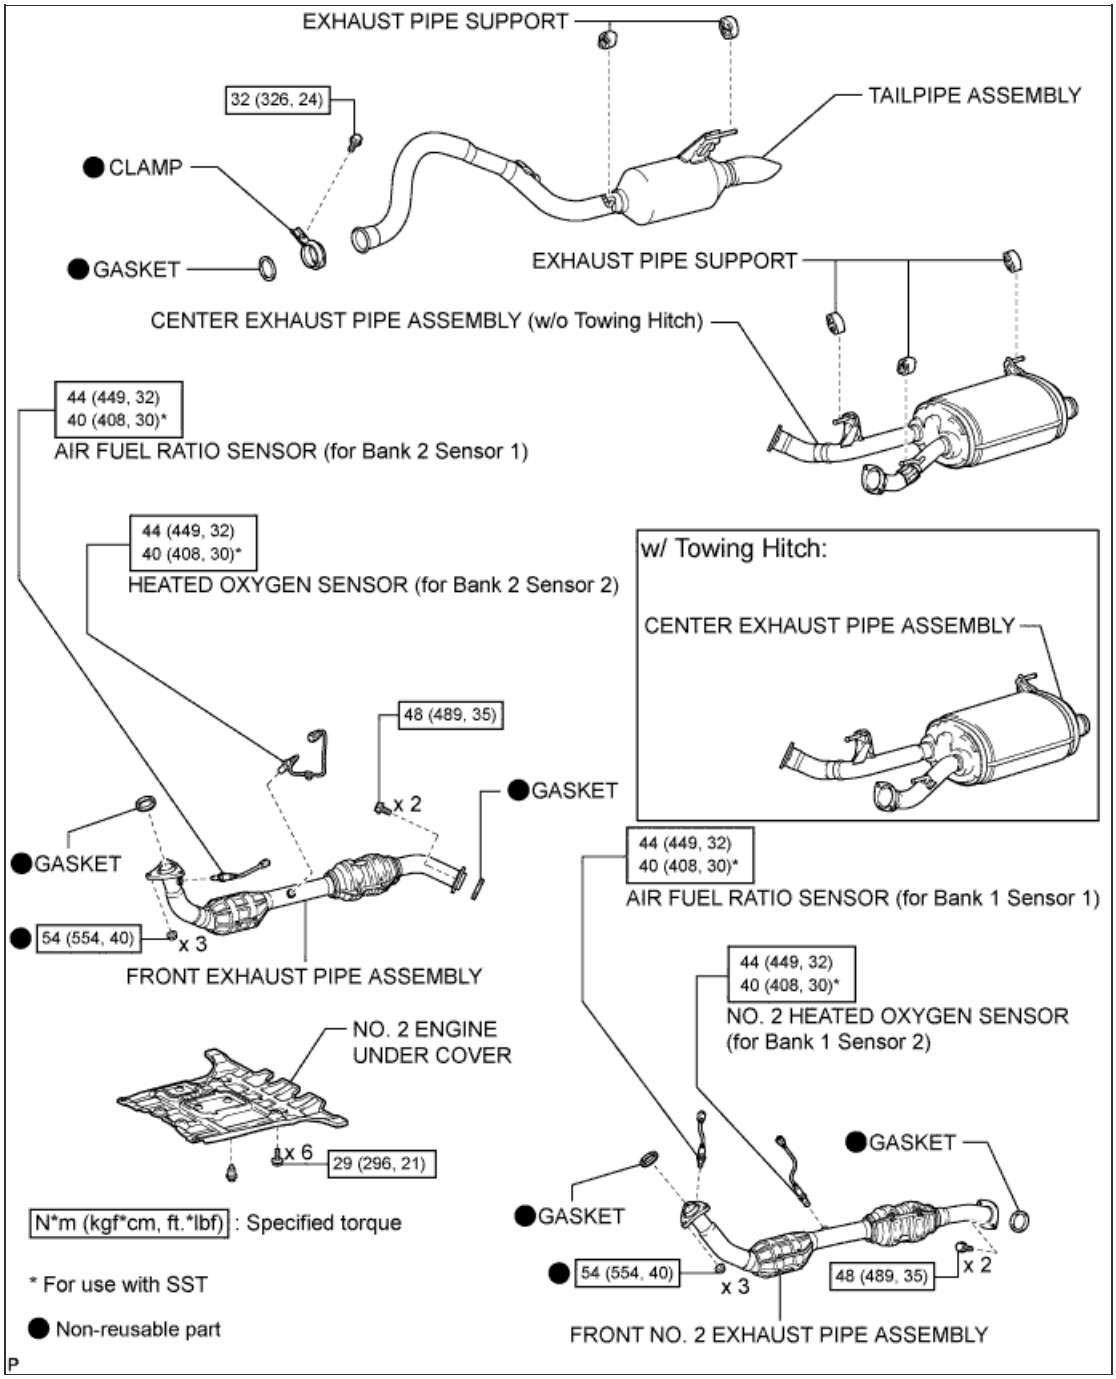
17. INSTALL FRONT FENDER APRON SEAL REAR LH

a. Install the fender apron seal with the 4 clips.



1 INSTALL FRONT FENDER APRON SEAL FRONT RH

a. Install the fender apron seal with the 3 clips.



19. INSTALL FRONT FENDER APRON SEAL REAR RH

a. Install the fender apron seal with the 4 clips.

for Preparation Click here

CAUTION:

- **Wear protective gloves when removing the exhaust pipe.**
- **The exhaust pipe is extremely hot immediately after the engine has stopped.**
- **Confirm that the exhaust pipe has cooled down before removing it.**

1. REMOVE NO. 2 ENGINE UNDER COVER

a. Remove the 2 bolts and No. 2 engine under cover.

2. REMOVE TAILPIPE ASSEMBLY

a. Remove the bolt, clamp and gasket.

b. Remove the tailpipe from the 2 exhaust pipe supports.

3. REMOVE CENTER EXHAUST PIPE ASSEMBLY

a. Remove the 4 bolts.

b. Remove the center exhaust pipe from the 3 exhaust pipe supports.

c. Remove the 2 gaskets from the front exhaust pipe and front No. 2 exhaust pipe.

4. REMOVE FRONT NO. 2 EXHAUST PIPE ASSEMBLY

a. Disconnect the air fuel ratio sensor connector.

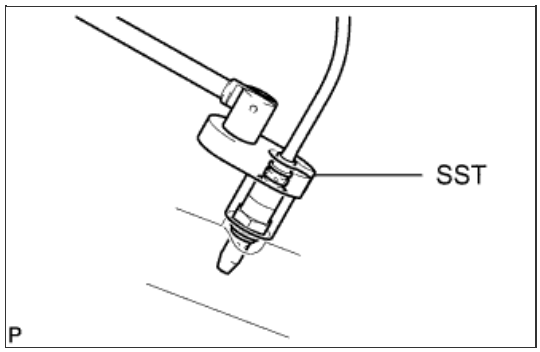
b. Disconnect the heated oxygen sensor connector.

c. Remove the 3 nuts, front No. 2 exhaust pipe and gasket.

5. REMOVE FRONT EXHAUST PIPE ASSEMBLY

a. Disconnect the air fuel ratio sensor connector.

b. Disconnect the heated oxygen sensor connector.

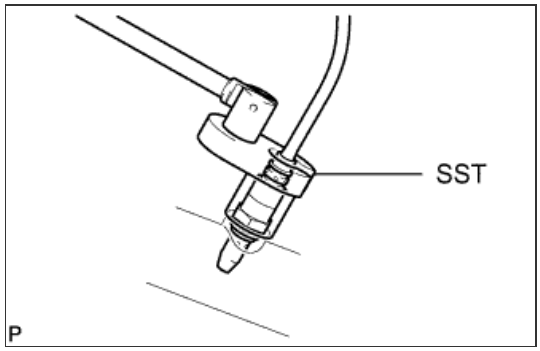


c. Detach the heated oxygen sensor wire clamp.

d. Remove the 3 nuts, front exhaust pipe and gasket.

6. REMOVE AIR FUEL RATIO SENSOR (for Bank 1 Sensor 1)

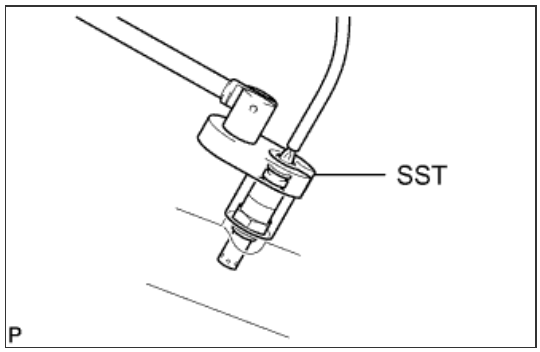
a. Using SST, remove the sensor.



SST
09224-00010

7. REMOVE AIR FUEL RATIO SENSOR (for Bank 2 Sensor 1)

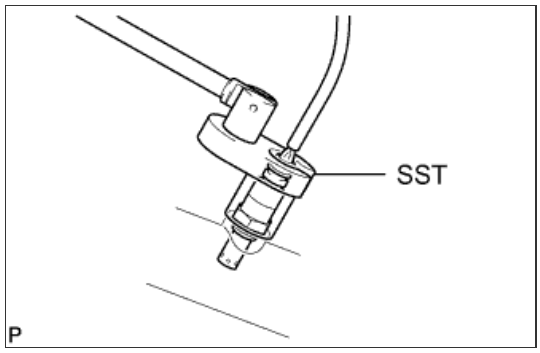
a. Using SST, remove the sensor.



SST
09224-00010

8. REMOVE NO. 2 HEATED OXYGEN SENSOR (for Bank 1 Sensor 2)

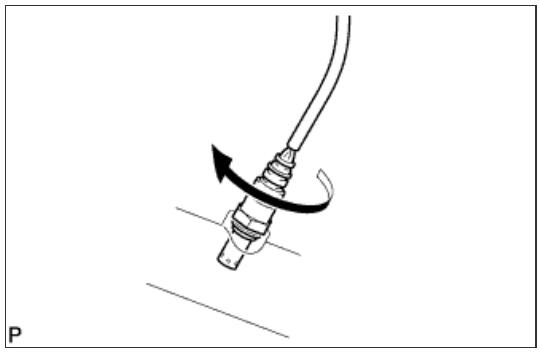
a. Using SST, remove the sensor.



SST
09224-00010

9. REMOVE HEATED OXYGEN SENSOR (for Bank 2 Sensor 2)

a. Using SST, remove the sensor.



SST
09224-00010

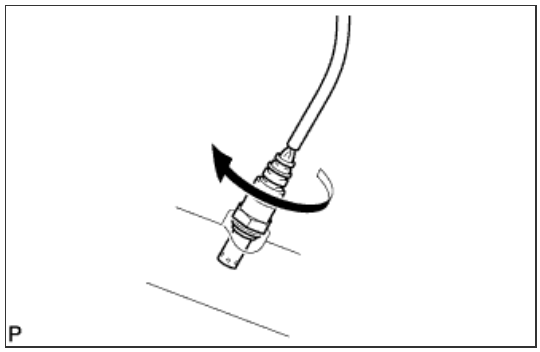
without SST:
44 N*m{ 449 kgf*cm , 32 ft.*lbf }
with SST:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }



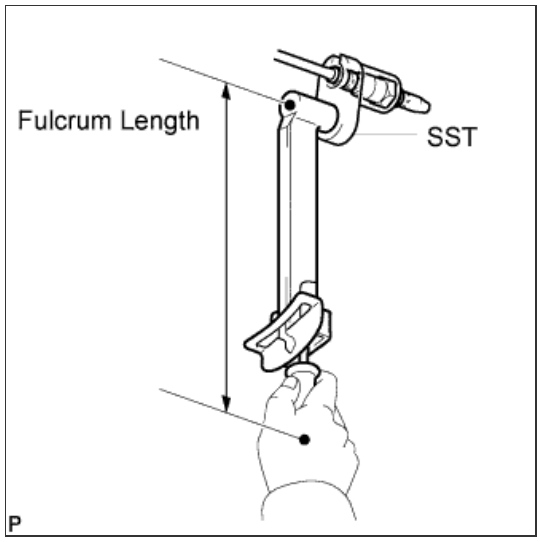
HINT:

- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.). If using a torque wrench with a length that is not 30 cm (11.8 in.), calculate the torque specification for the torque wrench and SST based on the "without SST" torque specification (Click here).**
- **Make sure SST and the wrench are connected in a straight line.**

2. INSTALL AIR FUEL RATIO SENSOR (for Bank 2 Sensor 1)

a. Temporarily install the sensor to the exhaust pipe by hand.

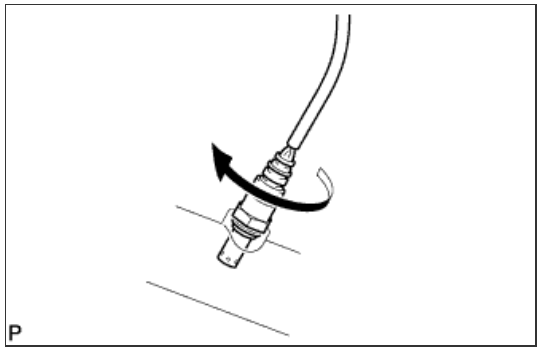
b. Using SST, tighten the sensor.



SST
09224-00010

Torque:
without SST:

44 N*m{ 449 kgf*cm , 32 ft.*lbf }
with SST:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

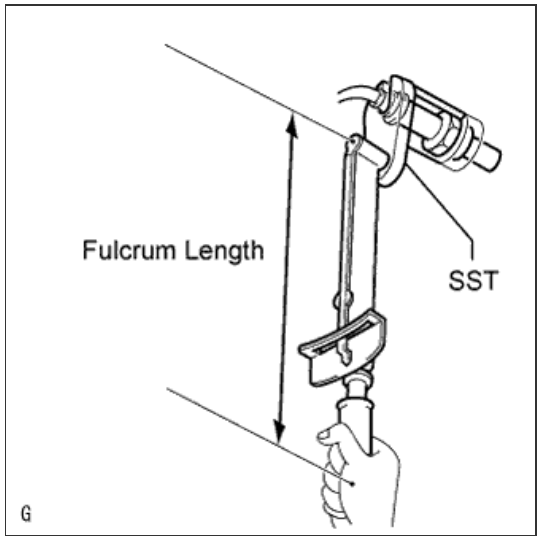


HINT:

- Use a torque wrench with a fulcrum length of 30 cm (11.8 in.). If using a torque wrench with a length that is not 30 cm (11.8 in.), calculate the torque specification for the torque wrench and SST based on the "without SST" torque specification (Click here).
- Make sure SST and the wrench are connected in a straight line.

3. INSTALL NO. 2 HEATED OXYGEN SENSOR (for Bank 1 Sensor 2)

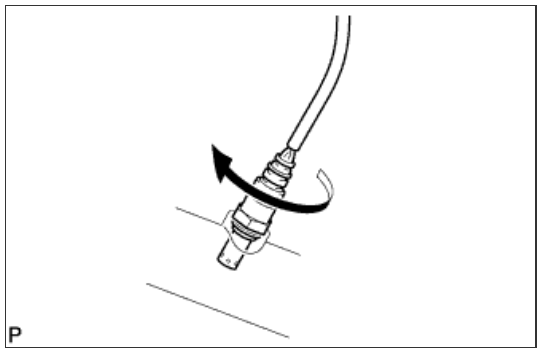
a. Temporarily install the sensor to the exhaust pipe by hand.



b. Using SST, tighten the sensor.

SST
09224-00010

Torque:
without SST:
44 N*m{ 449 kgf*cm , 32 ft.*lbf }
with SST:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

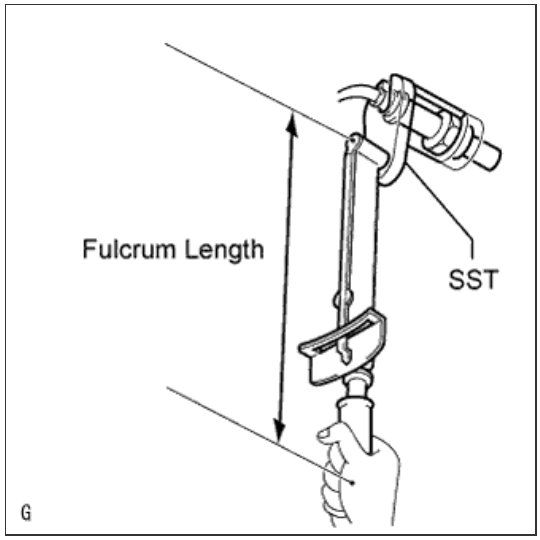


HINT:

- Use a torque wrench with a fulcrum length of 30 cm (11.8 in.). If using a torque wrench with a length that is not 30 cm (11.8 in.), calculate the torque specification for the torque wrench and SST based on the "without SST" torque specification (Click here).
- Make sure SST and the wrench are connected in a straight line.

4. INSTALL HEATED OXYGEN SENSOR (for Bank 2 Sensor 2)

a. Temporarily install the sensor to the exhaust pipe by hand.



b. Using SST, tighten the sensor.

SST
09224-00010

Torque:
without SST:
44 N*m{ 449 kgf*cm , 32 ft.*lbf }
with SST:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

HINT:

- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.). If using a torque wrench with a length that is not 30 cm (11.8 in.), calculate the torque specification for the torque wrench and SST based on the "without SST" torque specification (Click here).**
- **Make sure SST and the wrench are connected in a straight line.**

5. INSTALL FRONT EXHAUST PIPE ASSEMBLY

a. Install a new gasket and the front exhaust pipe to the exhaust manifold with 3 new nuts.

Torque:
54 N*m{ 554 kgf*cm , 40 ft.*lbf }

b. Conne the air fuel ratio sensor onne dr.

c. Conne the heated oxygen sensor onne dr.

d. Atta h the heated oxygen sensor wire lamp.

6. INSTALL FRONT NO. 2 EXHAUST PIPE ASSEMBLY

a. Install a new gasket and the front No. 2 exhaust pipe to the exhaust manifold LH with 3 new nuts.

Torque:
54 N*m{ 554 kgf*cm , 40 ft.*lbf }

b. Conne the air fuel ratio sensor onne dr.

c. Conne the heated oxygen sensor onne dr.

7. INSTALL CENTER EXHAUST PIPE ASSEMBLY

a. Install the enter exhaust pipe to the 3 exhaust pipe supports.

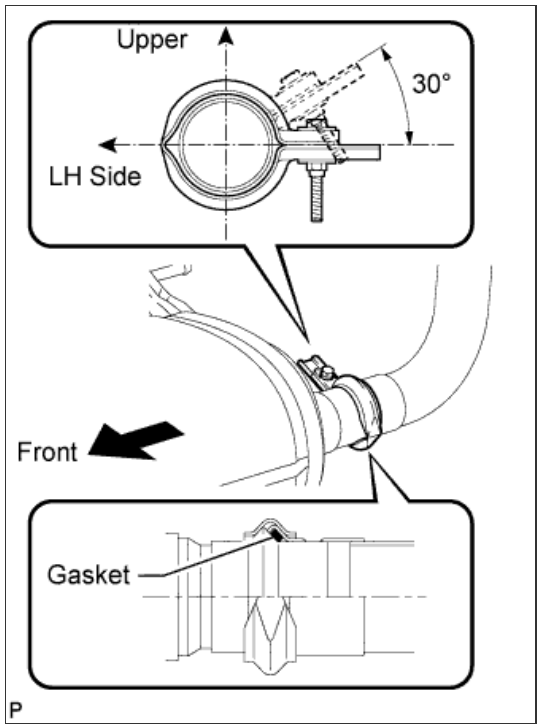
b. Install 2 new gaskets to the front exhaust pipe and front No. 2 exhaust pipe.

c. Install the 4 bolts.

Torque:
48 N*m{ 489 kgf*cm , 35 ft.*lbf }

8. INSTALL TAILPIPE ASSEMBLY

a. Install the tailpipe to the 2 exhaust pipe supports.



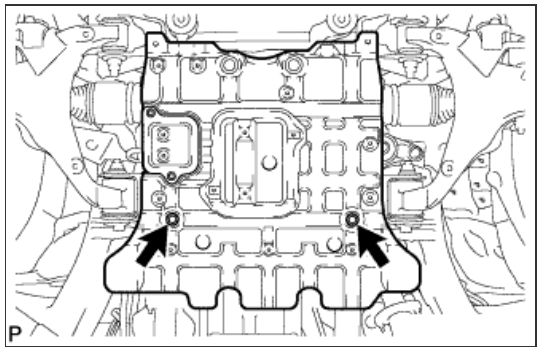
b. Install a new gasket to the enter exhaust pipe.

c. Conne the tailpipe and enter exhaust pipe with a new lamp.

Torque:
32 N*m{ 326 kgf*cm , 24 ft.*lbf }

HINT:

Install the lamp within the angle range shown in the illustration.



9. INSPECT FOR EXHAUST GAS LEAK

If gas is leaking, tighten the areas ne essary to stop the leak. Repla e damaged parts as ne essary.

10. INSTALL NO. 2 ENGINE UNDER COVER

a. Install the No. 2 engine under over with the 2 bolts.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

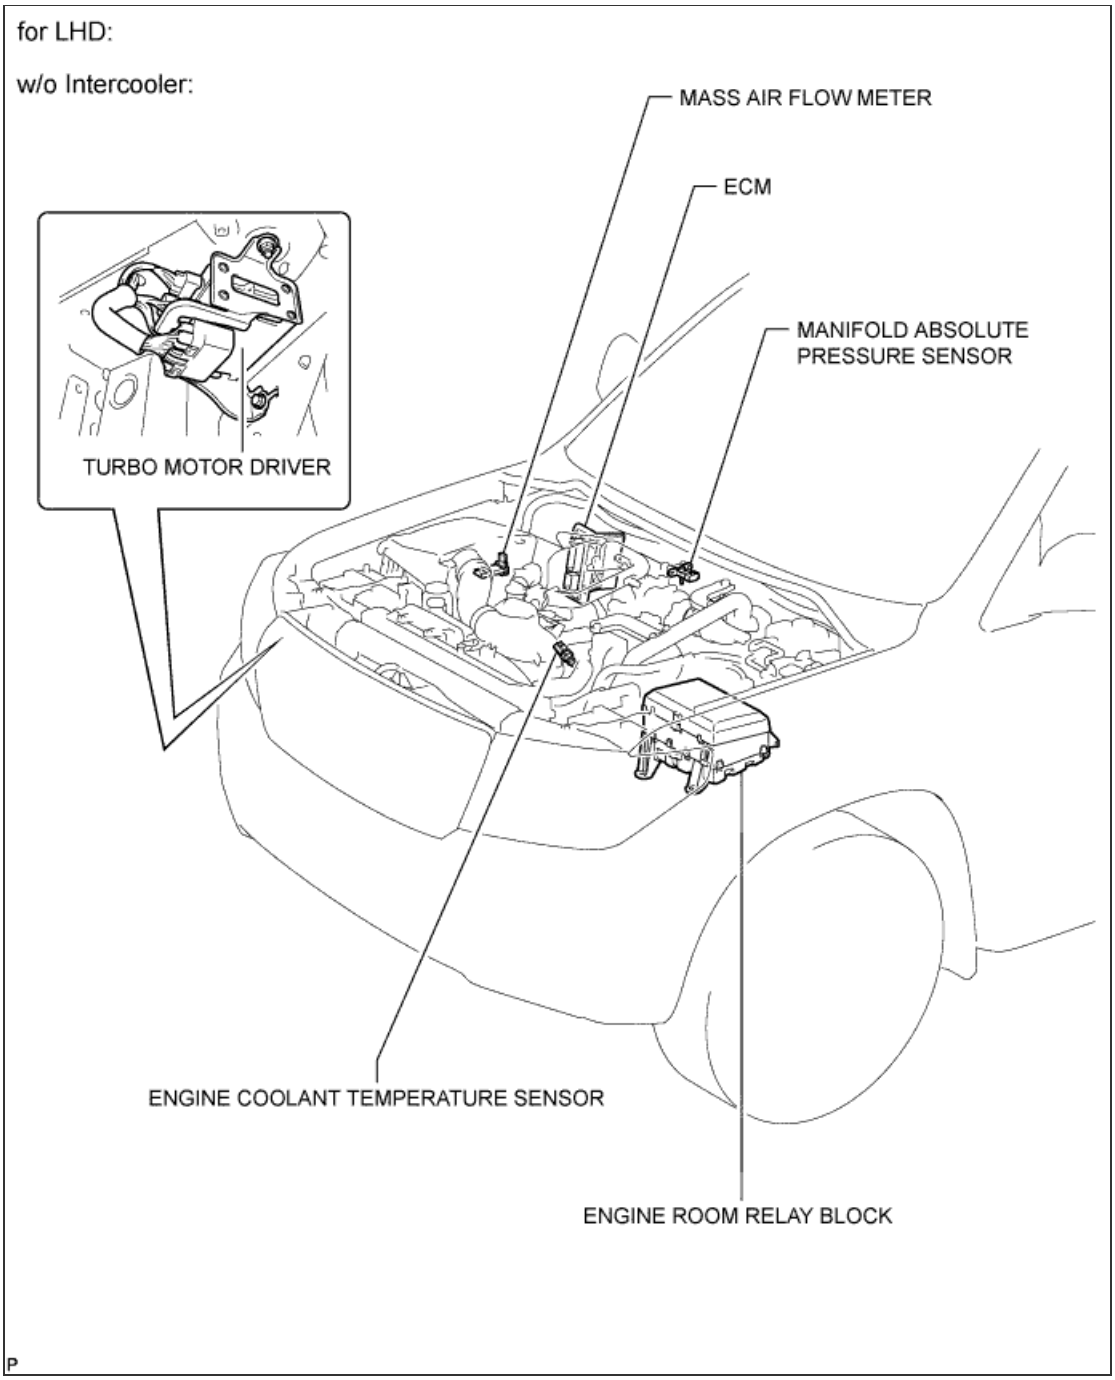
1.IGNITION SWITCH EXPRESSION



HINT:

The type of ignition switch used on this model differs depending on the specifications of the vehicle. The e pressions listed in the table below are used in this section.

E pression	Ignition Switch (Position)	Engine Switch (ondition)
Ignition Switch off	LO	ff
Ignition Switch A		n (A
gnition Switch ON	ON	On (IG)
Engine Start	START	Start

TURBOCHARGER SYSTEM ILLUSTRATION

- The turbocharger system is comprised of the Variable Nozzle (VN) type turbocharger, turbo motor driver and ECM.
- The turbocharger has a nozzle vane which opens and closes to control the volume of the exhaust gas flowing into the turbine. This, in turn, controls the boost pressure. When the nozzle vane moves towards the closing direction, the pressure increases. When the vane moves towards the opening direction, the pressure decreases.
- The turbocharger actuator on the compressor housing side activates the nozzle vane. The nozzle vane position sensor on the actuator detects the opening angle of the nozzle vane. The turbo motor driver receives an opening angle request from the ECM and a nozzle vane position sensor signal. Based on these signals, the turbo motor driver operates the DC motor and controls the turbocharger opening angle. The turbo motor driver sends the status as a turbo driver status signal to the ECM.

- The ECM sends a target nozzle vane position signal to the turbo motor driver to obtain the nozzle vane position for optimal pressure in accordance with the driving conditions.

for Preparation Click here

1. CHECK INTAKE AIR CONTROL SYSTEM

a. Check for leakage or clogging between the air cleaner housing and inlet turbocharger and between the outlet turbocharger and cylinder head.

Condition	Operation
Clogged air cleaner	Replace element
Hoses collapsed or deformed	Repair or replace
Leakage from connections	Check each connection and repair
Cracks in components	Check and replace

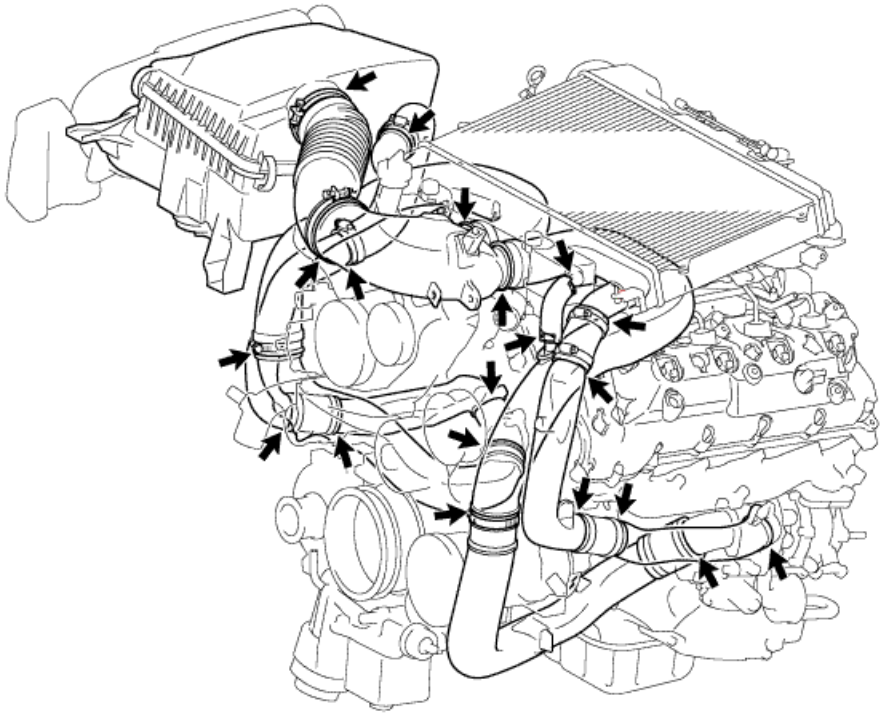
2. CHECK EXHAUST SYSTEM

a. Check for leakage or clogging between the cylinder head and turbocharger inlet and between the turbocharger outlet and exhaust pipe.

Condition	Operation
Deformed components	Repair or replace
Foreign material in passages	Remove
Leakage from components	Repair or replace
Cracks in components	Check and replace

3. CHECK AIR INDUCTION SYSTEM

HINT:



The illustration shows the areas that may draw in secondary air, which could lead to idling problems.

a. Check that the hoses, gaskets and O-rings are installed correctly.

b. Check for cracks, etc. in the hoses, gaskets and O-rings.

4. CHECK BOOST PRESSURE

a. Connect the intelligent tester to the DLC3.

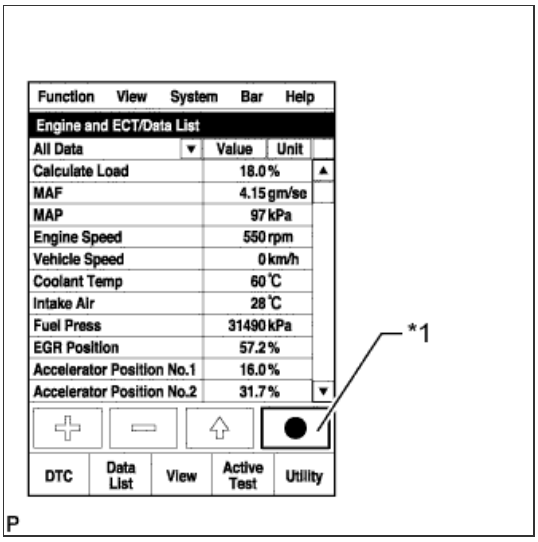
b. Start the engine and turn the tester on.

c. Warm up the engine.

HINT:

Be sure to perform the inspection when the engine coolant temperature is between 75 and 90°C (167 and 194°F).

d. Enter the following menus: Powertrain / Engine / Data List / All Data.



Text in Illustration

*1	Snapshot Record Button

Take a snapshot of the Data List items with the intelligent tester shown in the illustration.

e. **HINT:**
