b. Check whether the white smoke is emitted only just after engine start and disappears later, or not.

c. Identify the malfunctioning bank which emits the white smoke.

HINT:

- **If white smoke appears for only a short period of time immediately after the engine is started, the white smoke is not from the turbocharger.**
- **If the turbocharger is the cause of the problem, regardless of whether the engine is cold or warmed up, there will be a large amount of white smoke to the extent that visibility is obstructed for a few meters in the area of the smoke (as shown in the illustration).**
- **Depending on whether there is oil mixed with the fuel, or whether there is unburned fuel present, the smell of the exhaust gas differs. When oil is mixed in, the exhaust gas smells like burning oil.**
- **The engines equipped with the DC motor type turbochargers have a turbocharger on each bank. Identifying the malfunctioning bank is necessary to repair the engine.**

Result

Result	Proceed to
Yes (white smoke is emitted only just after engine start)	A
No (white smoke is always and continuously emitted)	B

B → Go to step 18

A

6.CHECK TEMPERATURE WHEN WHITE SMOKE IS EMITTED

a. Check whether the white smoke is emitted only in cold weather when the temperature is less than 0°C (32°F).

HINT:

- **If the white smoke is emitted only in cold conditions, the smoke is not from the turbocharger and may be the smoke of unburned fuel.**
- **If misfiring occurs, unburned fuel is emitted.**

Result

Result	Proceed to
Yes (white smoke is emitted in only cold conditions)	A
No (white smoke is emitted in both cold and warm conditions)	B

B → Go to step 8

A

7.INSPECT GLOW PLUG ASSEMBLY (RESISTANCE)

a. Inspect the glow plug assembly (Click here).

NG → REPLACE GLOW PLUG ASSEMBLY (Click here)

OK

8.CHECK INJECTOR COMPENSATION CODE

a. Read the injector compensation codes (Click here).

OK:
Compensation codes stored in the ECM match compensation codes of the installed fuel injectors.

HINT:

If those do not match, register correct compensation code.

NG → REGISTER INJECTOR COMPENSATION CODE (Click here)

OK

9.CHECK FUEL SYSTEM (DIESEL INJECTION SYSTEM)

a. Check the fuel system (Click here).

NG → REPAIR OR REPLACE FUEL SYSTEM

OK

10.CHECK EGR VALVE ASSEMBLY (NO. 1 AND NO. 2)

HINT:

- **If the amount of EGR is excessive due to a failure of the EGR valve, combustion when the coolant temperature is cold becomes unstable and leads to misfire.**
- **When the EGR valve cannot completely close, a lack of power is felt and the MAF sensor value deviates from the standard value.**

a. Connect the intelligent tester to the DLC3.

b. Turn the ignition switch to ON and turn the tester ON.

c. Enter the following menus: Powertrain / Engine / Data List / EGR Close Lrn. Status and EGR Close Lrn. Status #2.

d. Read the values.

OK:
EGR Close Lrn. Status and EGR Close Lrn. Status #2 are OK

e. Enter the following menus: Powertrain / Engine / Active Test / Control the EGR Step Position or Control the EGR Step Position #2.

f. When changing the Active Test value, check that Actual EGR Valve Pos. or Actual EGR Valve Pos. #2 smoothly changes to the set opening angle.

OK:
Values smoothly change to set opening angle.

g. Remove the EGR valves (Click here).

h. Visually check the EGR valves for deposits. If there are deposits, clean the EGR valve and EGR passage (intake/exhaust manifold, EGR cooler, EGR pipes, etc.).

NOTICE:

- **When cleaning the EGR valve, make sure the valve is completely closed.**
- **Do not forcibly open the valve, as it may be damaged or deformed.**

- **When cleaning the EGR valve, use a piece of cloth soaked with cleaning solvent. Spraying the solvent directly onto these parts or soaking the parts in the solvent may damage the parts.**

i. Hold the EGR valve up to a light, and visually check that there is no gap between the valve and body.

OK:
No light passes through (there is no gap between the valve and body).

HINT:

- **If light passes through (there is a gap between the valve and body), replace the EGR valve assembly.**
- **If any inspection result above is NG, check the EGR system, referring to the inspection procedure for DTC P0400 (P1248).**

NG → GO TO EGR SYSTEM INSPECTION PROCEDURE (DTC P0400/P1248) (Click here)

OK

11.CHECK CYLINDER COMPRESSION PRESSURE

a. Check the cylinder compression pressure (Click here).

HINT:

- **Active Test function "Check the Cylinder Compression" helps determine whether a cylinder has compression loss or not.**
  1. **Connect the intelligent tester to the DLC3.**
  2. **Turn the ignition switch to ON and turn the tester ON.**
  3. **Enter the following menus: Powertrain / Engine / Active Test / Check the Cylinder Compression / Data List / Compression / Engine Speed of Cyl #1 to #8.**
  4. **Press the RIGHT or LEFT button to change the Check the Cylinder Compression to ON.**
  5. **Crank the engine until the monitor item values Engine speed of Cyl #1 to #8 and Av Engine Speed of All Cyl change.**
  6. **Check the engine speed.**

     Standard:
     The values of Engine Speed Cyl #1 to #8 are within +/-10 rpm of each other.

  7. **When cranking, if the speed of a cylinder is approximately 100 rpm more than the other cylinders, there is probably a complete loss of compression in that cylinder.**

HINT:

- **If any of following malfunctions occurs, white smoke is emitted.**
  1. **Nozzle seat sealing failure**
  2. **Piston cracking**
  3. **Piston rings breakage**
- **To check whether the pistons and piston rings have a malfunction, remove the oil level dipstick. If oil sprays out, the pressure inside the crankcase has risen which indicates that there is a malfunction in a piston or piston ring.**

NG → CHECK ENGINE TO DETERMINE CAUSE OF LOW COMPRESSION

OK

12.REPLACE TURBOCHARGER SUB-ASSEMBLY (NO. 1 OR NO. 2)

a. Replace either No. 1 or No. 2 turbocharger sub-assembly which is on the malfunctioning bank confirmed in procedure 5 (Click here).

NEXT

13.CONFIRM WHETHER MALFUNCTION HAS BEEN SUCCESSFULLY REPAIRED

a. Check whether the white smoke problem has been successfully repaired by starting the engine.

NEXT

END

14.INSPECT COMPRESSOR INLET

a. Remove the air cleaner hose from the compressor inlet (remove the inlet compressor elbow if necessary).

b. Check whether an excessive amount of oil is present or not, and whether excessive oil deposits are attached to the compressor impeller or not.

HINT:

- **A certain amount of oil may be present as shown in fig. 2 in "Description", because a certain amount of oil mist is contained in the PCV gas and this oil accumulates just before the compressor inlet.**
- **If an excessive amount of oil is present at the compressor inlet, there may be a problem in the PCV system.**

c. Reinstall the air cleaner hose (inlet compressor elbow).

NEXT

15.INSPECT COMPRESSOR OUTLET

a. Remove the air hose from the compressor outlet.

b. Check whether or not an excessive amount of oil or excessive oil deposits are present at the compressor outlet.

HINT:

A certain amount of oil may be present as shown in fig. 3 in "Description", because a certain amount of oil mist is contained in the PCV gas.

Result

Result	Proceed to
Excessive amount of oil present at both compressor inlet and outlet	C
Excessive amount of oil present only at compressor outlet	B
Excessive amount of oil not present at compressor inlet and outlet	A

c. Reinstall the air hose.

B	Go to step 18
C	CHECK PCV SYSTEM

A

16.INSPECT TURBINE OUTLET

a. Check whether an excessive amount of wet oil or excessive oil deposits are present at the turbine outlet.

HINT:

Be sure not to mistake carbon soot for oil.

NEXT

17.INSPECT TURBINE INLET

a. Remove the turbocharger from the engine.

b. Check whether an excessive amount of wet oil or excessive oil deposits are present at the turbine inlet.

HINT:

- **Be sure not to mistake carbon soot for oil.**
- **If the turbocharger shaft is tilted, some amount of oil will flow out from the bearing housing. Therefore, be sure not to mistake oil that flowed out from the bearing housing during or after the removal of the turbocharger for oil that was present before the removal of the turbocharger.**
- **If an excessive amount of oil or excessive oil deposits are present at the turbine inlet, this oil is coming from the exhaust port of the cylinders, and may indicate a problem in 1 or more cylinders.**

Result

Result	Proceed to
Excessive amount of oil present at both turbine inlet and outlet	B
Excessive amount of oil present only at turbine outlet	A

B → CHECK ENGINE TO DETERMINE CAUSE OF OIL IN TURBOCHARGER

A

18.REPLACE TURBOCHARGER SUB-ASSEMBLY (NO. 1 OR NO. 2)

a. Replace either No. 1 or No. 2 turbocharger sub-assembly which is on the malfunctioning bank confirmed in procedure 5 / procedures 14 to 17 (Click here).

NEXT

19.CONFIRM WHETHER MALFUNCTION HAS BEEN SUCCESSFULLY REPAIRED

a. Check whether the oil leakage problem has been successfully repaired.

NEXT

END

for Preparation Click here

DESCRIPTION

HINT:

Turbocharger noise is classified into 2 types. One is whistling noise, and the other is whining noise. When troubleshooting, the type of noise should be determined first.

Description

Noise Type	Noise Description	Main Trouble Area
Whistling noise	The volume and pitch of this noise are proportional to turbocharger speed or engine speed. Therefore, the noise level will become more obvious when engine speed increases.	• Turbocharger (e.g. shaft imbalance) • Gears inside engine • Transmission gear • Intake air system leakage • Intake air system breakage
Whining noise	This noise has a lower pitch than whistling noise. It generally occurs in the engine speed range of 1500 to 2500 rpm, and has a relatively constant pitch, independent of engine speed and vehicle speed.	Turbocharger **HINT:** • **Example: Vibration of turbocharger is transferred to exhaust pipe which causes resonation and noise.** • **Example: Vibration of turbocharger is transferred through exhaust pipe to vehicle body (floor) which then vibrates causing noise.**

Faults and Symptoms of Diesel Engine Components

Turbocharger System

Main fault	Turbocharger turbine shaft imbalance
Symptoms	High-pitched whistling noise **HINT:** The pitch and volume change in proportion to the turbocharger speed.

Intake System

Main fault	Leakage
Symptoms	Leak flow noise

Gear inside Engine

Symptoms	Gear noise **HINT:** The pitch and volume change in proportion to the engine speed.

Transmission Gear

Symptoms	Gear noise **HINT:** The pitch and volume change in proportion to the transmission gear speed.

INSPECTION PROCEDURE

1.CONFIRM CONDITION IN WHICH NOISE OCCURRED

a. Confirm with the customer the conditions in which the noise occurred.

HINT:

To clearly understand the conditions in which the noise occurred, the items in the table below are useful.

Item	Note
Engine speed	Engine speed range
Vehicle speed	Vehicle speed range
Transmission gear	Which gear?
Accelerator pedal position	During acceleration or deceleration?
Temperature	• Ambient temperature • Engine temperature (cold, warmed up, etc.)
Road conditions	• City or highway driving • Uphill or downhill
Noise level	• Did the noise occur suddenly, or build gradually? • Has the noise gradually been getting louder?
Other symptoms	• Lack of power • High fuel consumption, etc.
Noise recognition	What made the customer determine the noise to be abnormal?

NEXT

2.CONFIRM NOISE CUSTOMER MENTIONED (PROCEDURE 2)

a. Check for the noise described by the customer.

HINT:

If a noise is heard, make sure that the noise matches the noise described by the customer.

Result

Result	Proceed to
Obvious abnormal noise matching noise described by customer is confirmed	A
Obvious abnormal noise matching noise described by customer is not confirmed	B

B → Go to step 12

A

3.CHECK INTAKE SYSTEM

a. Check for air leakage between the air cleaner and turbocharger, and between the turbocharger and intake manifold.

HINT:

- **Check for disconnected or improperly connected hoses, and gaps between hoses and parts.**
- **Check for foreign matter between the air cleaner and turbocharger.**

NG → REPAIR OR REPLACE MALFUNCTIONING PARTS

OK

4.CONFIRM NOISE SOURCE (FROM TURBOCHARGER OR NOT)

a. Connect the intelligent tester to the DLC3.

HINT:

The software version installed on the intelligent tester must be V2009.2 or later.

b. Start the engine and warm it up.

c. Turn the tester on.

d. Enter the following menus: Powertrain / Engine / Active Test / Activate the VN Turbo Open.

HINT:

This Active Test function operates both the turbocharger actuators (bank 1 and bank 2) at the same time.

e. Perform the Active Test and rev the engine up several times.

f. Check whether the noise is reduced or not compared with the noise under the condition that the Active Test is not performed.

Result

Result	Proceed to
The noise is reduced (or disappears)	A
The noise is the same as in Procedure 2 (The noise does not change)	B

HINT:

- **When the variable nozzle of the turbocharger opens fully regardless of the engine condition, the turbocharger speed slows down and the cause of noise can be confirmed that is from the turbocharger or not.**
- **If the turbocharger is the cause of the noise, the noise will be reduced when the variable nozzle opens because turbocharger speed does not increase.**

B → Go to step 9

A

5.CONFIRM THE NOISE TYPE (PROCEDURE 5)

a. Check whether the noise can be heard even when the engine speed is more than 3000 rpm, and whether the noise gradually gets louder as the engine speed increases.

HINT:

If so, the noise is likely to be whistling noise. If not, the noise is likely to be whining noise.

b. If whistling noise is confirmed on the above inspection, identify the malfunctioning turbocharger (No. 1 or No. 2) using a sound scope.

Result

Result	Proceed to
Yes (The noise is likely to be whistling noise)	A
No (The noise is likely to be whining noise)	B

B → Go to step 8

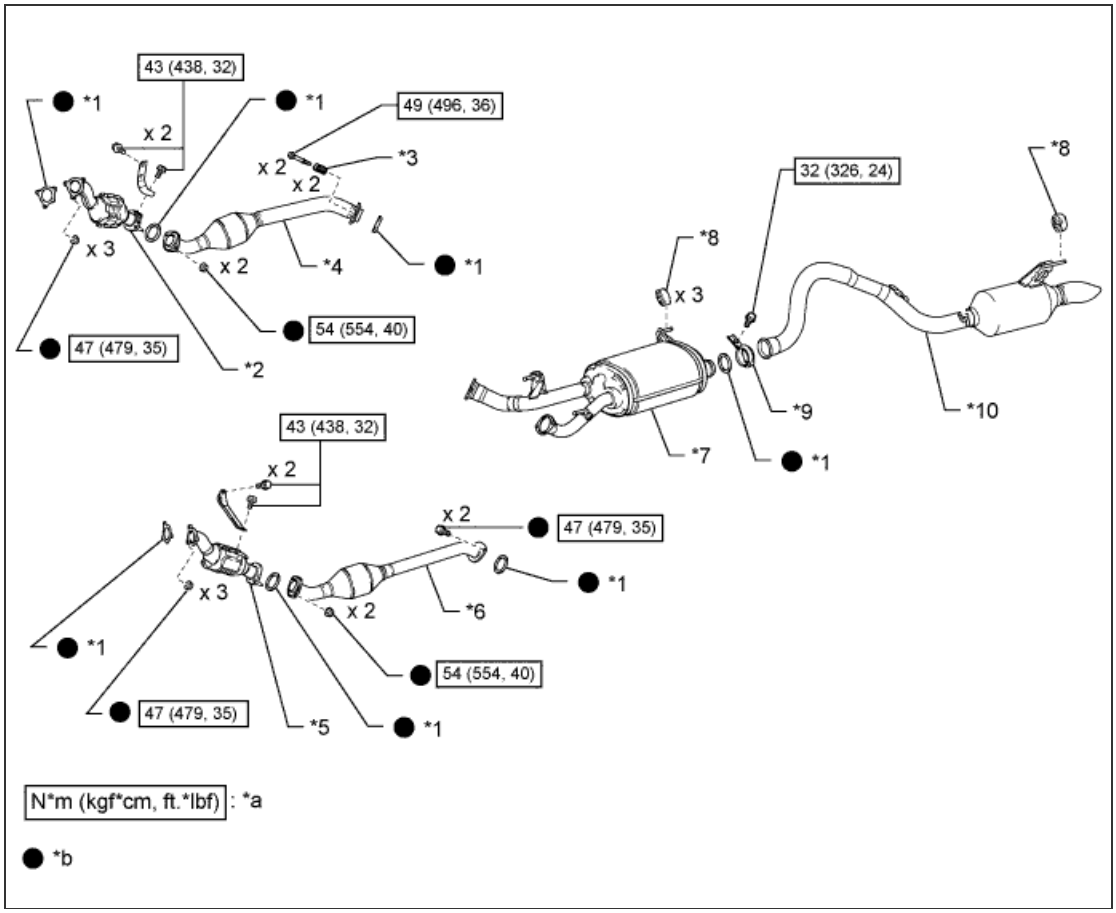
A

6.REPLACE TURBOCHARGER SUB-ASSEMBLY (NO. 1 OR NO. 2)

a. Replace either No. 1 or No. 2 turbocharger sub-assembly which is on the malfunctioning bank confirmed in procedure 5 (Click here).

NEXT

7.CONFIRM WHETHER THE NOISE PROBLEM HAS BEEN SUCCESSFULLY SOLVED



a. Check whether the noise problem has been successfully solved.

NEXT

END

8.PERFORM ALIGNMENT OF EXHAUST PIPE AND CONFIRM THE NOISE

a. Disconnect the exhaust pipe at the ball joint and from each exhaust pipe support, and then realign the exhaust pipe and reconnect it to each exhaust pipe support and at the ball joint (Click here).

Text in Illustration

*1	Gasket	*2	Monolithic Converter Assembly RH
*3	Compression Spring	*4	Front No. 1 Exhaust Pipe Assembly
*5	Monolithic Converter Assembly LH	*6	Front No. 2 Exhaust Pipe Assembly
*7	Center Exhaust Pipe Assembly	*8	Exhaust Pipe Support
*9	Clamp	*10	Tail Pipe Assembly
*a	Specified torque	*b	Non-reusable part

HINT:

Above illustration is an example.

b. Confirm whether the noise problem is solved or not.

HINT:

The alignment of the exhaust pipe affects whining noise.

Result

Result	Proceed to
The noise problem is solved	A
The noise problem remains	B*

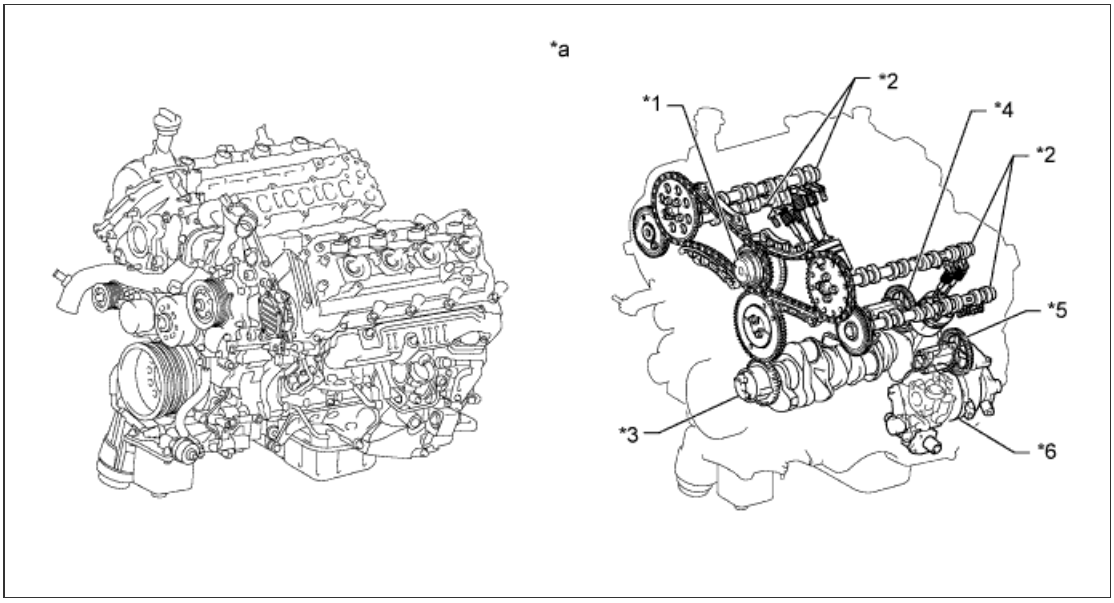
HINT:

*: If the noise problem still remains, replace both the No. 1 and No. 2 turbocharger sub-assembly.

B → REPLACE TURBOCHARGER SUB-ASSEMBLY (Click here)

A → END

9.CHECK FOR NOISE FROM SOURCE OTHER THAN TURBOCHARGER (PROCEDURE 9)



a. Check for the noise source with a sound scope.

NOTICE:

When performing this check, make sure that the sound scope, your body, etc., do not get caught on the V-belt.

HINT:

- **The source of the noise is not the turbocharger, but a part other than the turbocharger (e.g. a part inside the engine, transmission, or vacuum pump).**
- **Sometimes gear noise may be mistaken for turbocharger noise. For gear noise, pay attention to the gear inside the engine and transmission gear.**
- **Rev the engine up and check if the noise reduces at the same time the engine speed decreases. If the noise reduces at the same time the engine speed decreases, it is gear noise. If the noise reduces a short time after the engine speed decreases, it is turbocharger noise.**
- **The following illustration is a reference for checking whether the noise source is from the engine.**

Text in Illustration

*1	Supply Pump Drive Gear	*2	Camshafts
*3	Crankshaft	*4	Oil Pump
*5	Scavenging Pump	*6	Turbocharger
*a	Gear Location inside Engine	-	-

HINT:

- **Above illustration is an example.**
- **Gear noise can be confirmed with a sound scope. Put the sound scope on the cylinder block near the gear, and if the noise heard through the sound scope has the same timing as the noise heard without the sound scope, it is gear noise.**

NEXT

10.REPLACE THE PARTS DETECTED IN PROCEDURE 9

a. Replace the parts detected in Procedure 9 as the noise source.

NEXT

11.CONFIRM WHETHER THE NOISE PROBLEM HAS BEEN SUCCESSFULLY SOLVED

a. Check whether the noise problem has been successfully solved.

NEXT

END

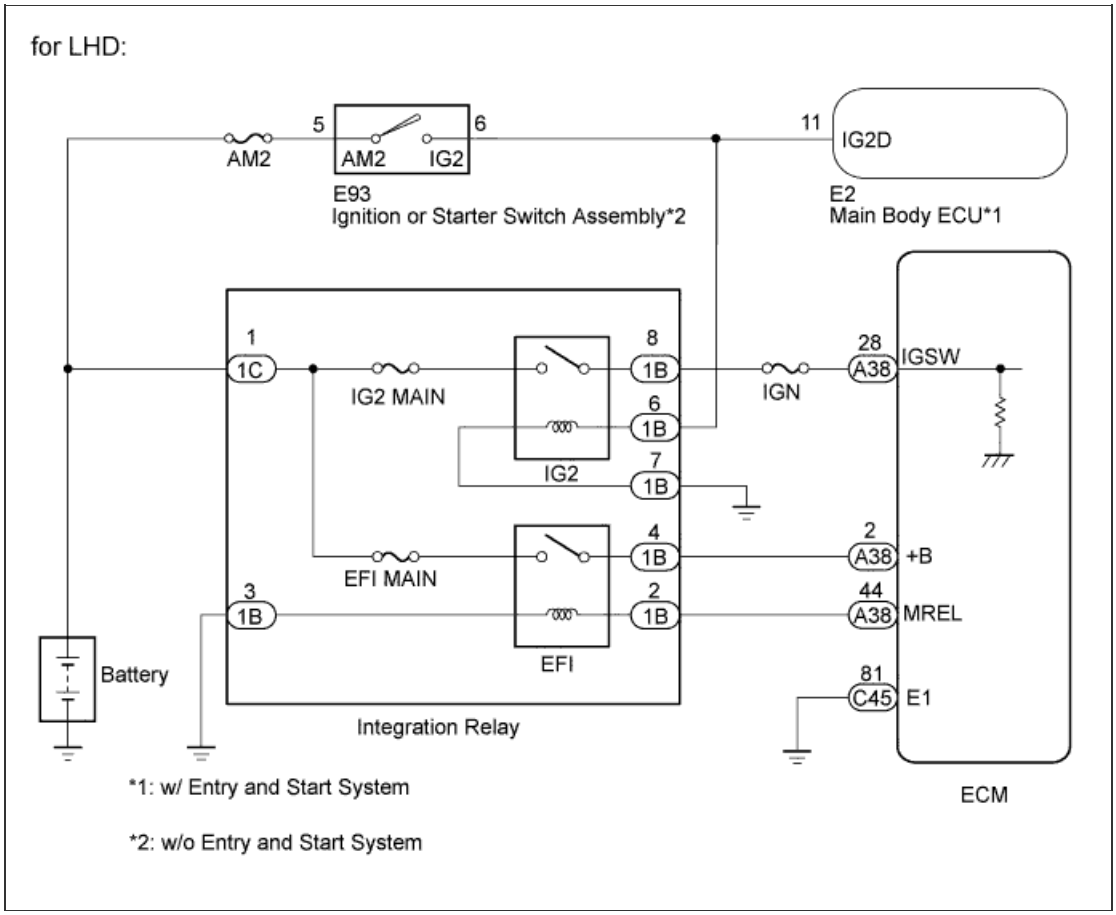
12.EXPLAIN TO THE CUSTOMER THAT THE NOISE IS NORMAL

a. Explain to the customer that the noise the customer mentioned is not abnormal.

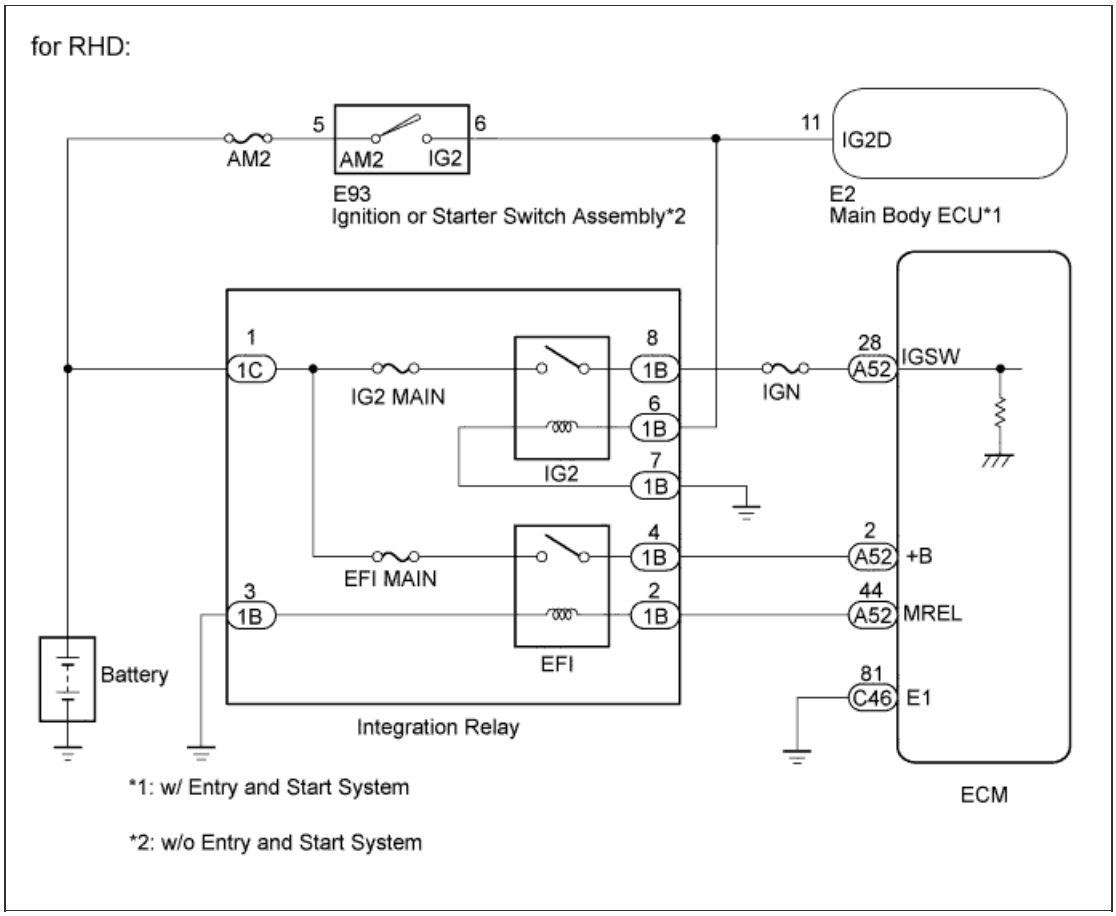
HINT:

To help the customer understand, test driving another car with the customer may be helpful.

NEXT



END



for Preparation Click here

DESCRIPTION

When the ignition switch is turned to ON, the battery voltage is applied to the IGSW terminal of the ECM. The output signal from the MREL terminal of the ECM causes current to flow to the coil, closing the contacts of the integration relay (EFI MAIN relay) and supplying power to terminal of the ECM.

WIRING DIAGRAM

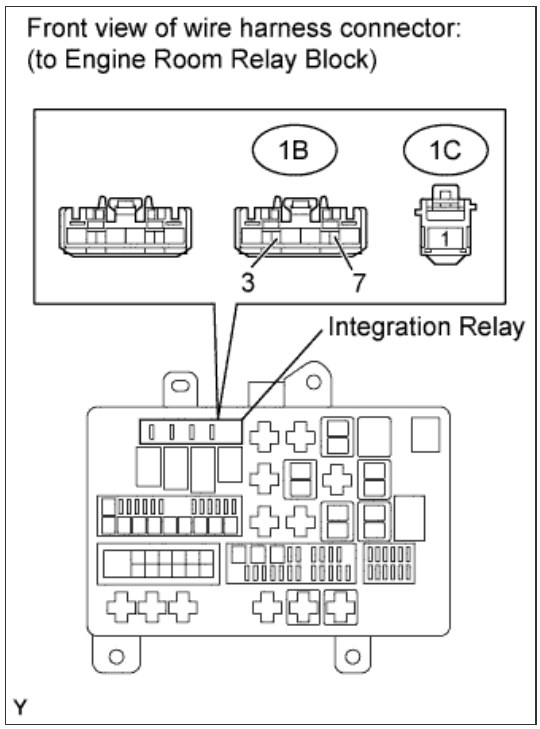
INSPECTION PROCEDURE

1.INSPECT INTEGRATION NO.1 RELAY (INTEGRATION RELAY - BODY GROUND)

a. Remove the integration relay from the engine room relay block.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:



Tester Connection	Condition	Specified Condition
1C-1 - Body ground	Always	11 to 14 V

c. Measure the voltage according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1B-3 - Body ground	Always	Below 1 Ω
1B-7 - Body ground	Always	Below 1 Ω

d. Reinstall the integration relay.

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

2.INSPECT INTEGRATION NO.1 RELAY (EFI RELAY AND IG2 RELAY)

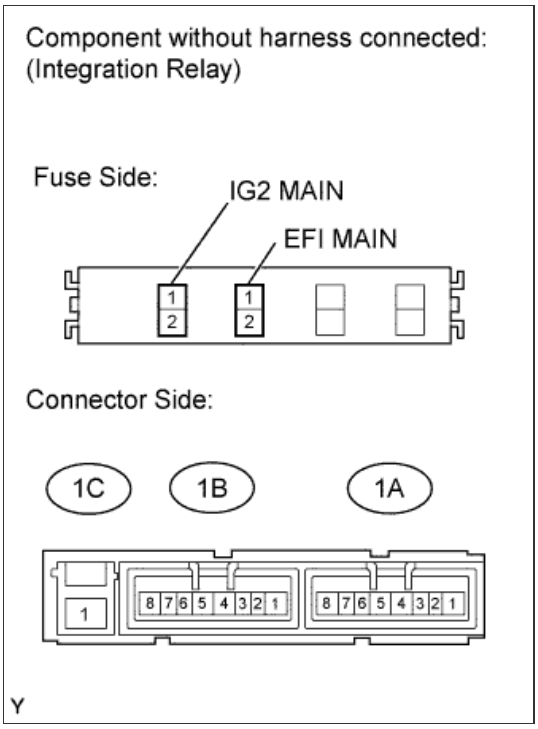
a. Remove the integration relay from the engine room relay block.

b. Inspect the EFI MAIN fuse and the IG2 MAIN fuse.

i. Remove the EFI MAIN fuse and IG2 MAIN fuse from the integration relay.

ii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:



Tester Connection	Condition	Specified Condition
EFI MAIN fuse	Always	Below 1 Ω
IG2 MAIN fuse	Always	Below 1 Ω

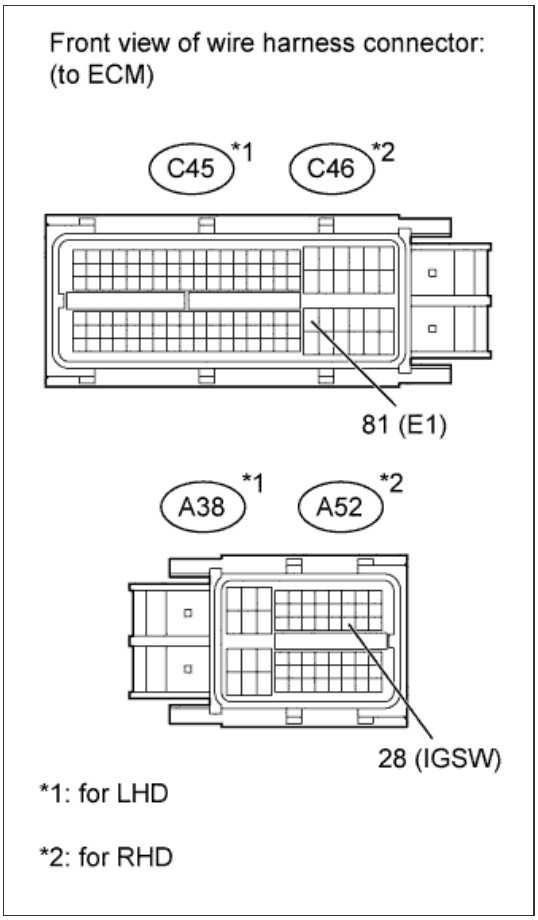
c. Inspect the EFI relay and the IG2 relay.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1C-1 - 1B-4	Battery voltage not applied to terminals 1B-2 and 1B-3	10 kΩ or higher
	Battery voltage applied to terminals 1B-2 and 1B-3	Below 1 Ω
1C-1 - 1B-8	Battery voltage not applied to terminals 1B-7 and 1B-6	10 kΩ or higher
	Battery voltage applied to terminals 1B-7 and 1B-6	Below 1 Ω

NG → REPLACE INTEGRATION RELAY



OK

3.INSPECT ECM (IGSW VOLTAGE)

a. Disconnect the ECM connectors.

b. Turn the ignition switch to ON.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

for LHD

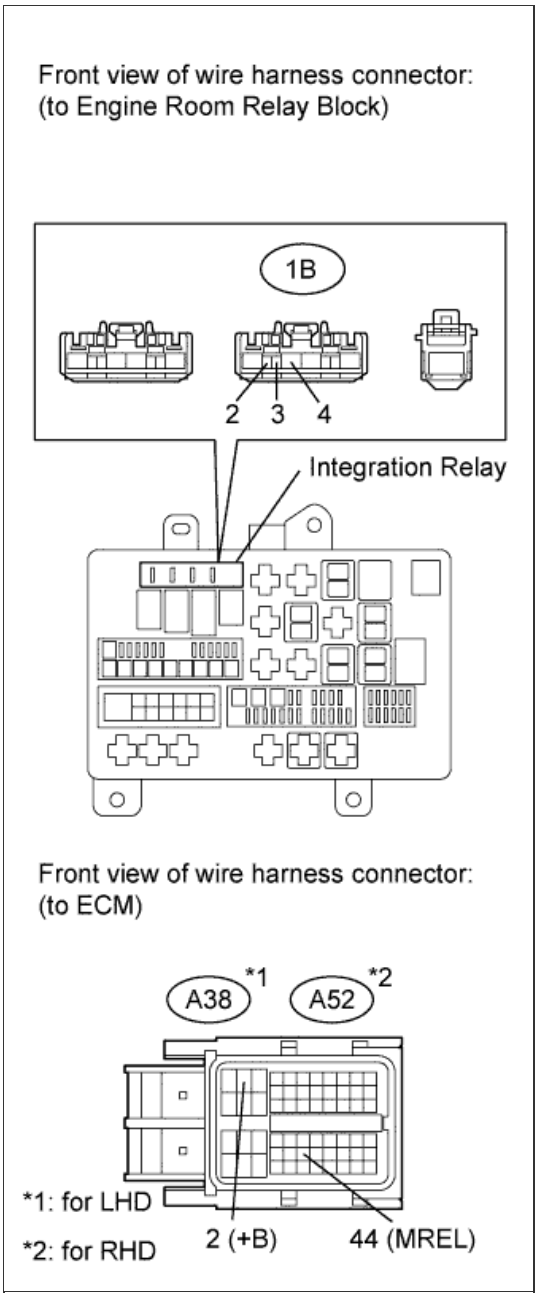
Tester Connection	Switch Condition	Specified Condition
A38-28 (IGSW) - C45-81 (E1)	Ignition switch ON	11 to 14 V

for RHD

Tester Connection	Switch Condition	Specified Condition
A52-28 (IGSW) - C46-81 (E1)	Ignition switch ON	11 to 14 V

NG → Go to step 5

OK



4.CHECK HARNESS AND CONNECTOR (INTEGRATION RELAY - ECM)

a. Check the harness and the connectors between the integration relay and the ECM.

b. Remove the integration relay from the engine room relay block.

c. Disconnect the ECM connector.

d. Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

for LHD

Tester Connection	Condition	Specified Condition
A38-44 (MREL) - 1B-2	Always	Below 1 Ω
A38-2 (- 1B-4	Always	Below 1 Ω

for RHD

Tester Connection	Condition	Specified Condition
A52-44 (MREL) - 1B-2	Always	Below 1 Ω
A52-2 (- 1B-4	Always	Below 1 Ω

Standard Resistance (Check for Short):

for LHD

Tester Connection	Condition	Specified Condition
A38-44 (MREL) or 1B-2 - Body ground	Always	10 kΩ or higher
A38-2 (or 1B-4 - Body ground	Always	10 kΩ or higher

for RHD

Tester Connection	Condition	Specified Condition

A52-44 (MREL) or 1B-2 - Body ground	Always	10 kΩ or higher
A52-2 (or 1B-4 - Body ground	Always	10 kΩ or higher

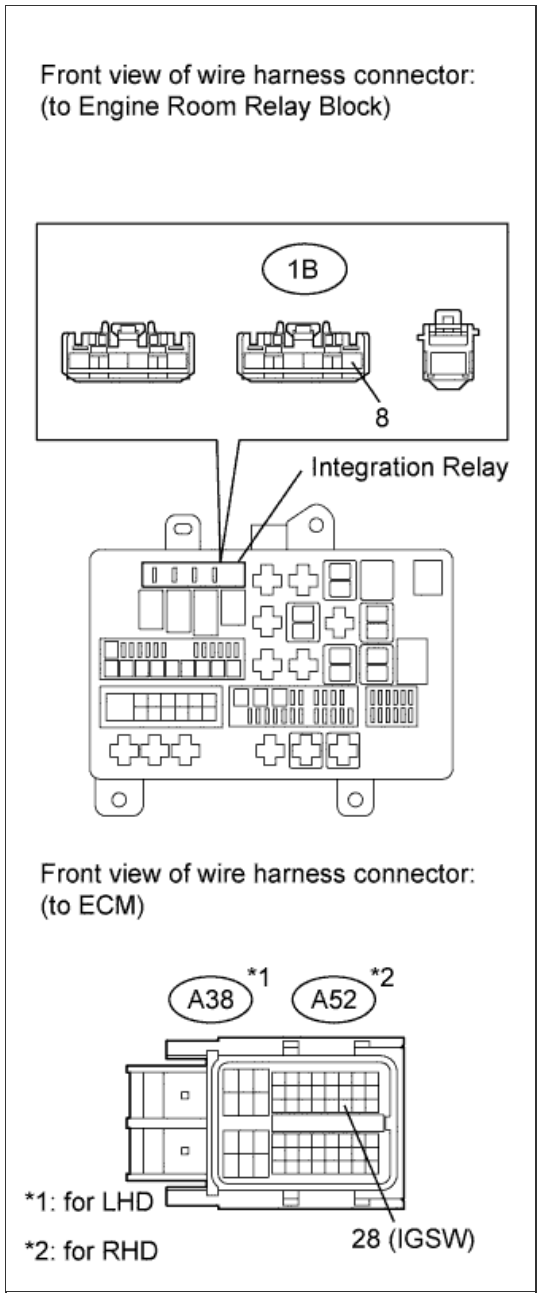
e. Reconnect the ECM connector.

f. Reinstall the integration relay.

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE ECM



5.CHECK HARNESS AND CONNECTOR (INTEGRATION RELAY - ECM)

a. Check the harness and the connectors between the integration relay and the ECM.

b. Remove the integration relay from the engine room relay block.

c. Disconnect the ECM connector.

d. Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

for LHD

Tester Connection	Condition	Specified Condition
A38-28 (IGSW) - 1B-8	Always	Below 1 Ω

for RHD

Tester Connection	Condition	Specified Condition

A52-28 (IGSW) - 1B-8	Always	Below 1 Ω

Standard Resistance (Check for Short):

for LHD

Tester Connection	Condition	Specified Condition
A38-28 (IGSW) or 1B-8 - Body ground	Always	10 kΩ or higher

for RHD

Tester Connection	Condition	Specified Condition
A52-28 (IGSW) or 1B-8 - Body ground	Always	10 kΩ or higher

e. Reconnect the ECM connector.

f. Reinstall the integration relay.

Result

Result	Proceed to
OK (w/ Entry and Start System)	A
OK (w/o Entry and Start System)	B
NG	C

B → Go to step 7

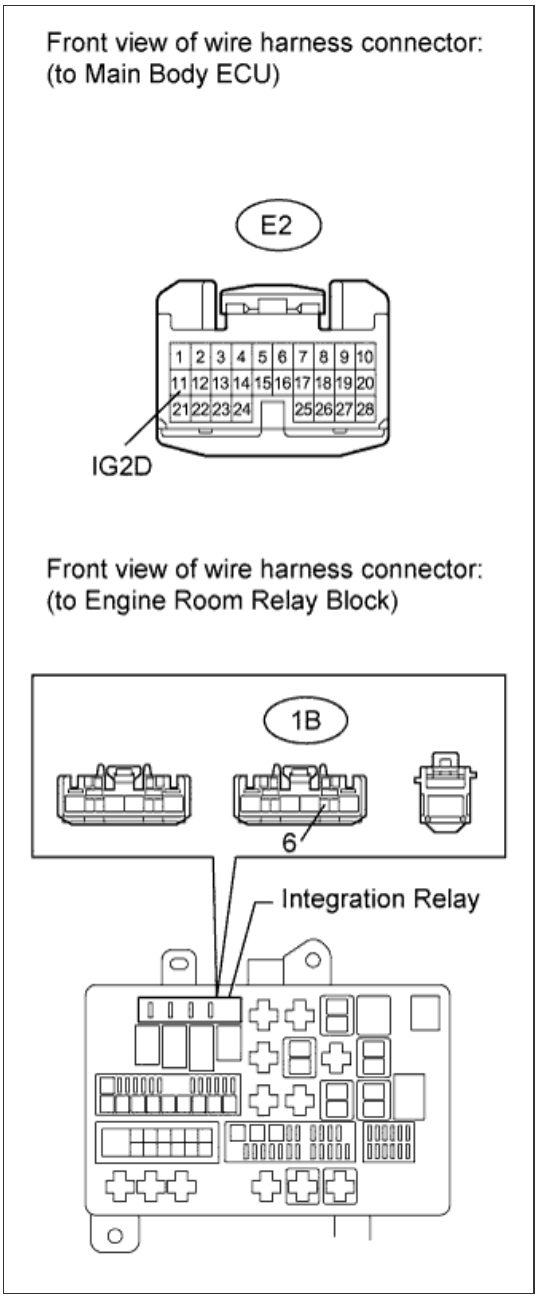
C → REPAIR OR REPLACE HARNESS OR CONNECTOR

A

6.CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - INTEGRATION RELAY)

a. Remove the integration relay from the engine room relay block.

b. Disconnect the IG2D main body ECU connector.



c. Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

Tester Connection	Condition	Specified Condition
E2-11 (IG2D) - 1B-6	Always	Below 1 Ω

Standard Resistance (Check for Short):

Tester Connection	Condition	Specified Condition
E2-11 (IG2D) or 1B-6 - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

CHECK ENTRY AND START SYSTEM

7.CHECK HARNESS AND CONNECTOR (IGNITION OR STARTER SWITCH ASSEMBLY - INTEGRATION RELAY)

a. Remove the integration relay from the engine room relay block.

b. Disconnect the Ignition or Starter Switch Assembly connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

Tester Connection	Condition	Specified Condition
E93-6 (IG2) - 1B-6	Always	Below 1 Ω

Standard Resistance (Check for Short):

Tester Connection	Condition	Specified Condition
E93-6 (IG2) or 1B-6 - Body ground	Always	10 kΩ or higher

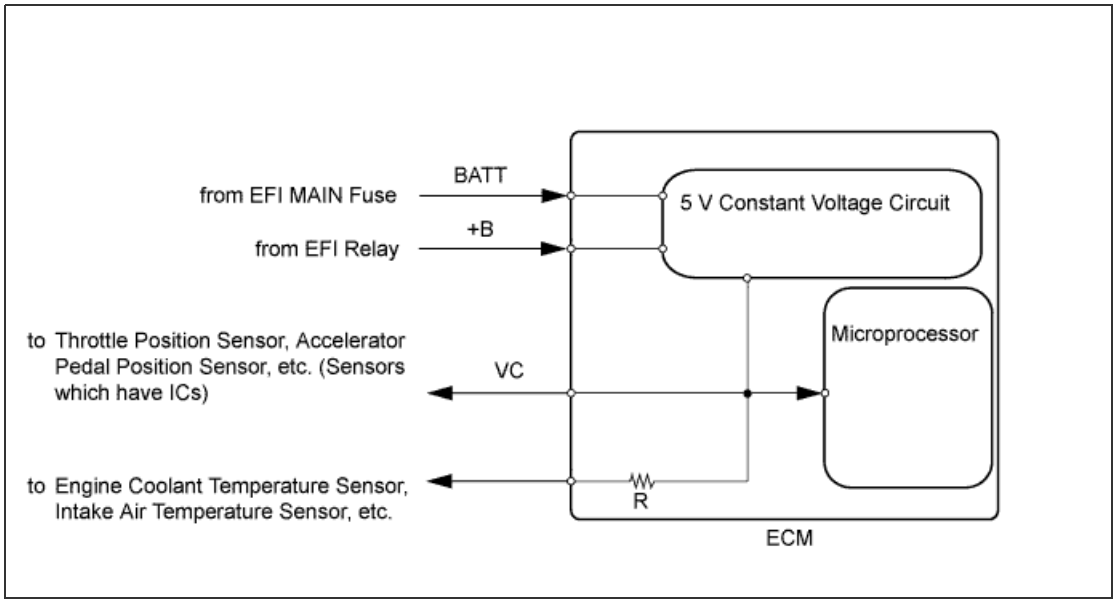
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

8.INSPECT IGNITION OR STARTER SWITCH ASSEMBLY

a. Inspect the Ignition or Starter Switch Assembly (Click here).

NG → REPLACE IGNITION OR STARTER SWITCH ASSEMBLY



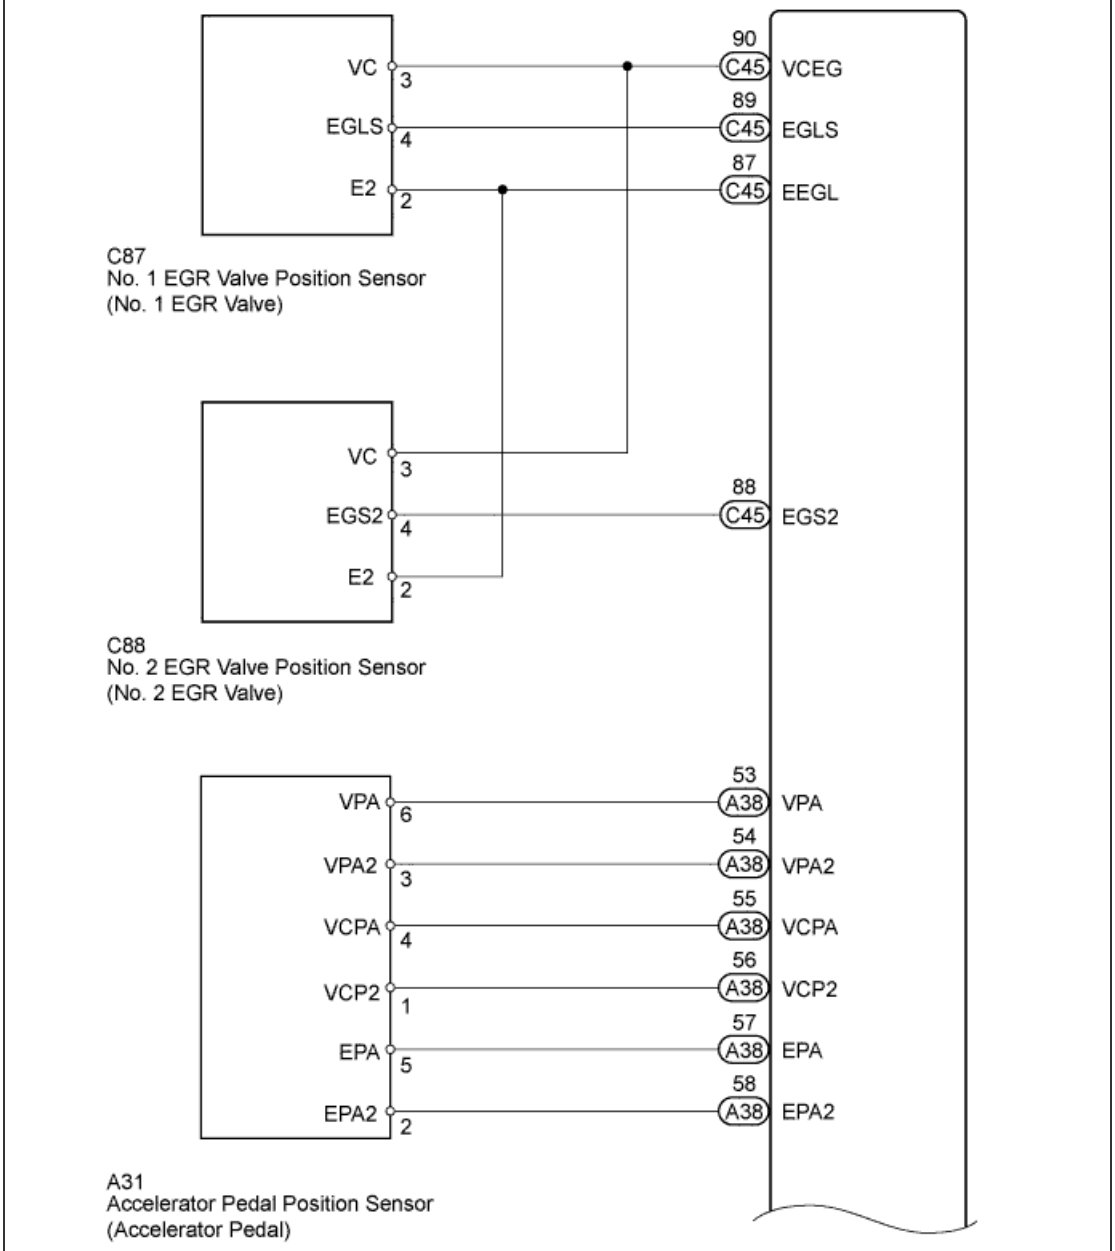
OK

REPAIR OR REPLACE HARNESS OR CONNECTOR (IGNITION SWITCH - BATTERY)

for Preparation Click here

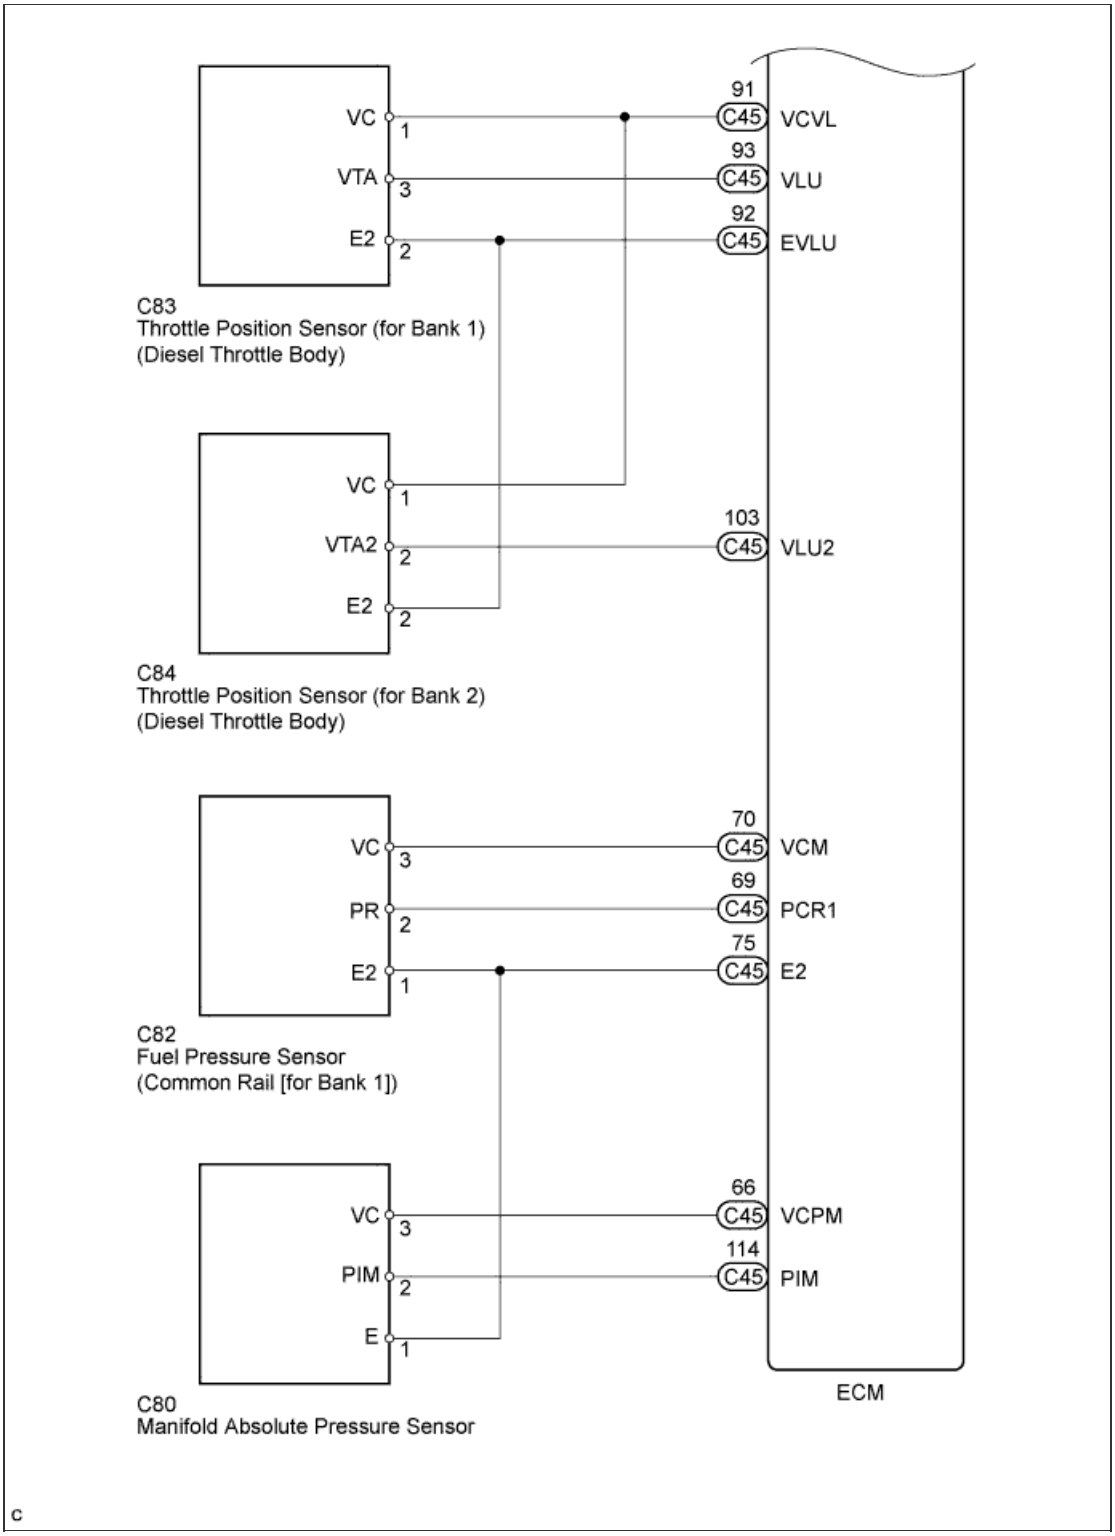
DESCRIPTION

The ECM constantly generates 5 V of power from the battery voltage supplied to the +B (BATT) terminal to operate the microprocessor. The ECM also provides this power to the sensors through the VC output circuit.



When the VC circuit is short-circuited, the microprocessor in the ECM and sensors that are supplied with power through the VC circuit are inactivated because the power is not supplied from the VC circuit. Under this condition, the system does not start up and the MIL does not illuminate even if the system malfunctions.

HINT:



Under normal conditions, the MIL is illuminated for several seconds when the ignition switch is first turned to ON. The MIL goes off when the engine is started.

INSPECTION PROCEDURE

NOTICE:

After replacing the ECM, the new ECM needs registration (Click here) and initialization (Click here).

1.CHECK MIL

a. Check that the Malfunction Indicator Lamp (MIL) lights up when turning the ignition switch to ON.

Result

Result	Proceed to
MIL illuminates	A
MIL does not illuminate	B

A → END

B

2.CHECK COMMUNICATION BETWEEN INTELLIGENT TESTER AND ECM

a. Connect the intelligent tester to the DLC3.

b. Turn the ignition switch to ON and tester on.

c. Check the communication between the tester and ECM.

Result

Result	Proceed to
Communication is possible	A
Communication is not possible	B

A → GO TO MIL CIRCUIT (Click here)

B

3.CHECK MIL (THROTTLE POSITION SENSOR (for Bank 1))

a. Disconnect the C83 throttle position sensor (for Bank 1) connector.

b. Turn the ignition switch to ON.

c. Check the MIL.

Result

Result	Proceed to
MIL illuminates	A
MIL does not illuminate	B

d. Reconnect the C83 throttle position sensor (for Bank 1) connector.

A → REPLACE DIESEL THROTTLE BODY ASSEMBLY (for Bank 1) (Click here)

B

4.CHECK MIL (THROTTLE POSITION SENSOR (for Bank 2))

a. Disconnect the C84 throttle position sensor (for Bank 2) connector.

b. Turn the ignition switch to ON.

c. Check the MIL.

Result

Result	Proceed to
MIL illuminates	A
MIL does not illuminate	B

d. Reconnect the C84 throttle position sensor (for Bank 2) connector.

A → REPLACE DIESEL THROTTLE BODY ASSEMBLY (for Bank 2) (Click here)

B

5.CHECK MIL (NO. 1 EGR VALVE POSITION SENSOR)

HINT:

For vehicles without EGR valve, perform troubleshooting from the next step.

a. Disconnect the C87 No. 1 EGR valve connector.

b. Turn the ignition switch to ON.

c. Check the MIL.

Result

Result	Proceed to
MIL illuminates	A
MIL does not illuminate	B

d. Reconnect the C87 No. 1 EGR valve connector.

A → REPLACE NO. 1 EGR VALVE ASSEMBLY (Click here)

B →

6.CHECK MIL (NO. 2 EGR VALVE POSITION SENSOR)

HINT:

For vehicles without EGR valve, perform troubleshooting from the next step.

a. Disconnect the C88 No. 2 EGR valve connector.

b. Turn the ignition switch to ON.

c. Check the MIL.

Result

Result	Proceed to
MIL illuminates	A
MIL does not illuminate	B

d. Reconnect the C88 No. 2 EGR valve connector.

A → REPLACE NO. 2 EGR VALVE ASSEMBLY (Click here)

B →

7.CHECK MIL (ACCELERATOR PEDAL POSITION SENSOR)

a. Disconnect the A31 accelerator pedal position sensor connector.

b. Turn the ignition switch to ON.

c. Check the MIL.

Result

Result	Proceed to
MIL illuminates	A
MIL does not illuminate	B

d. Reconnect the A31 accelerator pedal position sensor connector.

A → REPLACE ACCELERATOR PEDAL ROD ASSEMBLY (Click here)

B →

8.CHECK MIL (MANIFOLD ABSOLUTE PRESSURE SENSOR)

a. Disconnect the C80 manifold absolute pressure sensor connector.

b. Turn the ignition switch to ON.

c. Check the MIL.

Result

Result	Proceed to
MIL illuminates	A
MIL does not illuminate	B

d. Reconnect the C80 manifold absolute pressure sensor connector.

A → REPLACE MANIFOLD ABSOLUTE PRESSURE SENSOR (Click here)

B

9.CHECK MIL (FUEL PRESSURE SENSOR)

a. Disconnect the C82 fuel pressure sensor connector.

b. Turn the ignition switch to ON.

c. Check the MIL.

Result

Result	Proceed to
MIL illuminates	A
MIL does not illuminate	B

d. Reconnect the C82 fuel pressure sensor connector.

A → REPLACE COMMON RAIL (for Bank 1) (Click here)

B

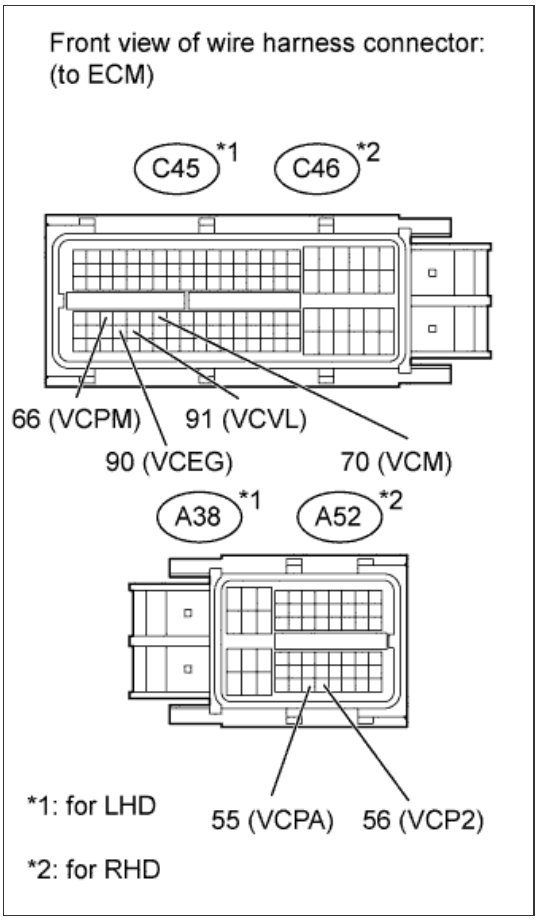
10.CHECK HARNESS AND CONNECTOR

a. Disconnect the throttle position sensor (for Bank 1) connector.

b. Disconnect the throttle position sensor (for Bank 2) connector.

c. Disconnect the No. 1 EGR valve connector.

d. Disconnect the No. 2 EGR valve connector.



e. Disconnect the accelerator pedal position sensor connector.

f. Disconnect the manifold absolute pressure sensor connector.

g. Disconnect the fuel pressure sensor connector.

h. Disconnect the ECM connectors.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Short):

for LHD

Tester Connection	Condition	Specified Condition
C45-90 (VCEG) - Body ground	Always	10 kΩ or higher
C45-91 (VCVL) - Body ground	Always	10 kΩ or higher
C45-70 (VCM) - Body ground	Always	10 kΩ or higher
C45-66 (VCPM) - Body ground	Always	10 kΩ or higher
A38-55 (VCPA) - Body ground	Always	10 kΩ or higher
A38-56 (VCP2) - Body ground	Always	10 kΩ or higher

for RHD

Tester Connection	Condition	Specified Condition
C46-90 (VCEG) - Body ground	Always	10 kΩ or higher
C46-91 (VCVL) - Body ground	Always	10 kΩ or higher
C46-70 (VCM) - Body ground	Always	10 kΩ or higher
C46-66 (VCPM) - Body ground	Always	10 kΩ or higher
A52-55 (VCPA) - Body ground	Always	10 kΩ or higher
A52-56 (VCP2) - Body ground	Always	10 kΩ or higher

j. Reconnect the throttle position sensor (for Bank 1) connector.

k. Reconnect the throttle position sensor (for Bank 2) connector.

l. Reconnect the No. 1 EGR valve connector.

m. Reconnect the No. 2 EGR valve connector.

n. Reconnect the accelerator pedal position sensor connector.

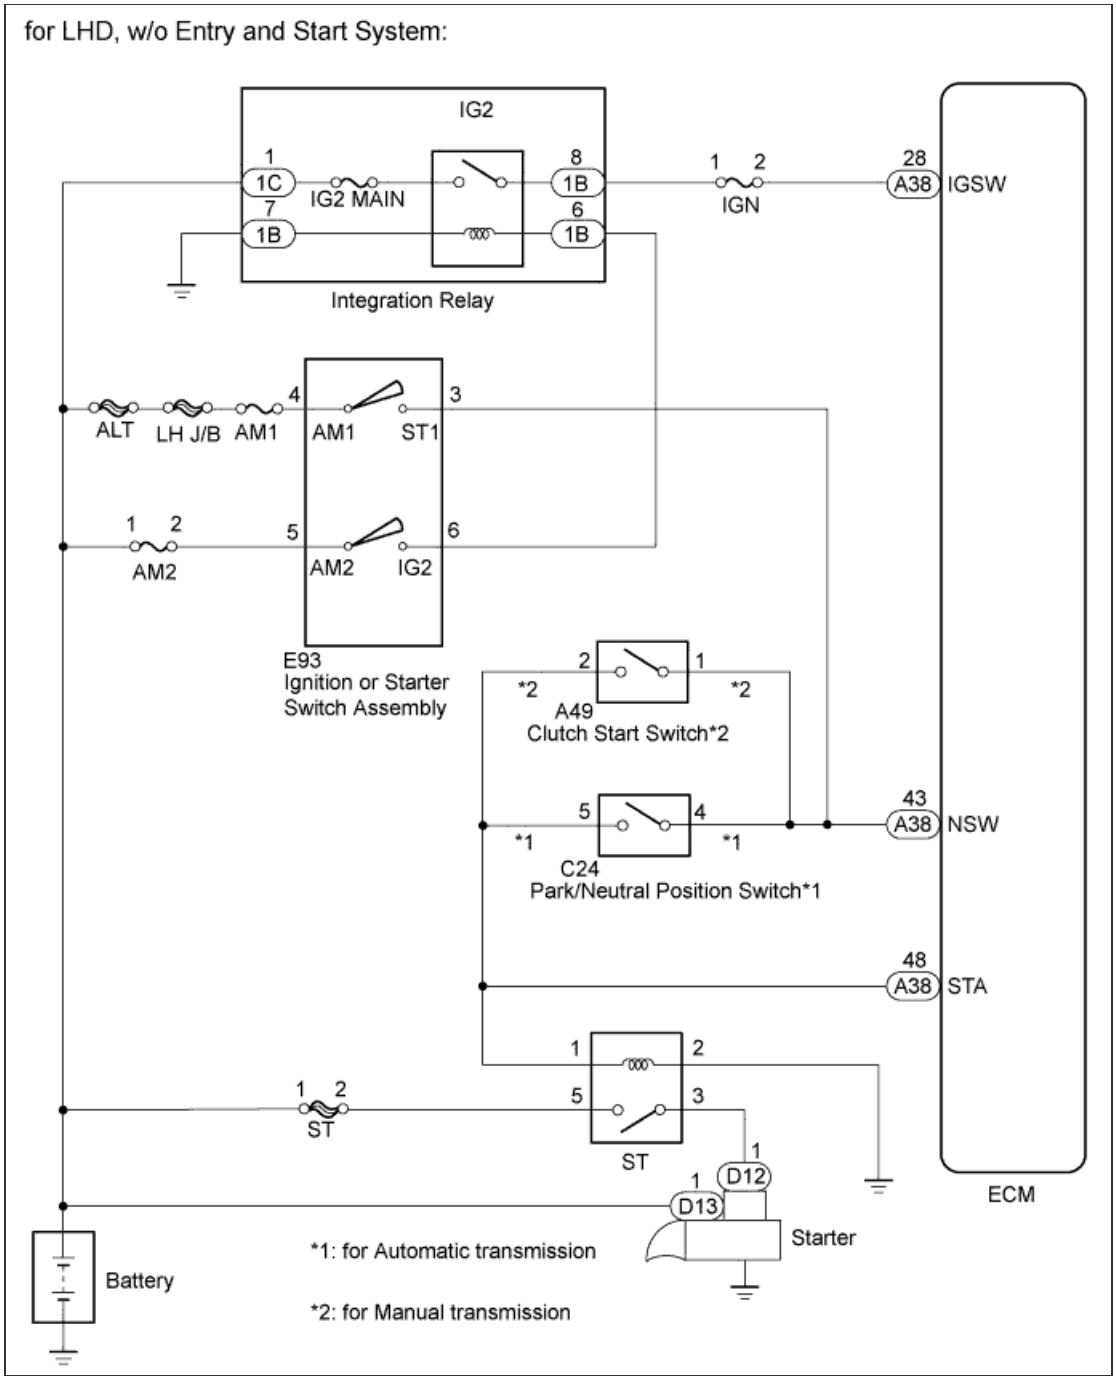
o. Reconnect the manifold absolute pressure sensor connector.

p. Reconnect the fuel pressure sensor connector.

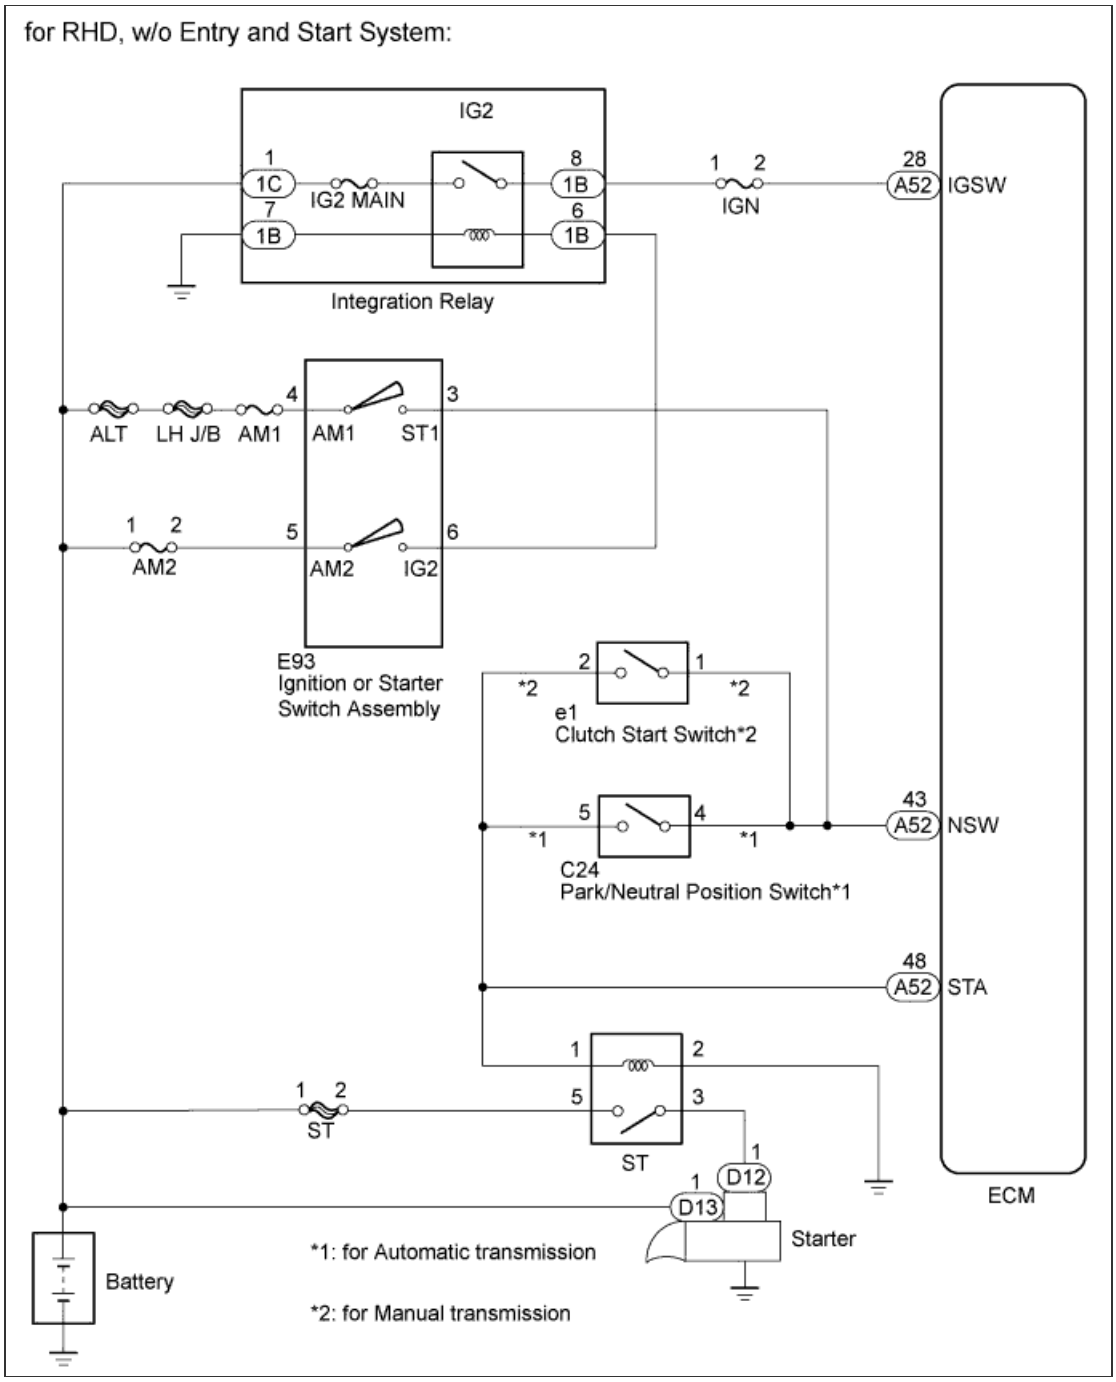
q. Reconnect the ECM connectors.

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



REPLACE ECM (Click here)



for Preparation Click here

DESCRIPTION

While the engine is being cranked, current flows from terminal ST2 of the ignition switch to the park/neutral position switch and also flows to terminal STA of the ECM (STA Signal).

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- **Inspect the fuses of circuits related to this system before performing the following inspection procedure.**
- **After replacing the ECM, the new ECM needs registration (Click here) and initialization (Click here).**

HINT:

This chart is based on the premise that the engine can crank normally. If the engine cannot crank normally, proceed to Problem Symptoms Table (Click here).

1.READ VALUE USING INTELLIGENT TESTER (STARTER SIGNAL)

a. Connect the intelligent tester to the DLC3.

b. Turn the ignition switch to ON.

c. Turn the tester on.

d. Enter the following menus: Powertrain / Engine / Data List / Starter Signal.

e. Read the value.

OK:

Ignition Switch Condition	Starter Signal
ON	OFF
START	ON

NG → Go to step 2

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

2.CHECK HARNESS AND CONNECTOR (STARTER RELAY ST] - ECM)

a. Remove the ST relay from the engine room relay block.

b. Disconnect the ECM connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

for LHD

Tester Connection	Condition	Specified Condition
ST relay terminal 1 - A38-48 (STA)	Always	Below 1 Ω

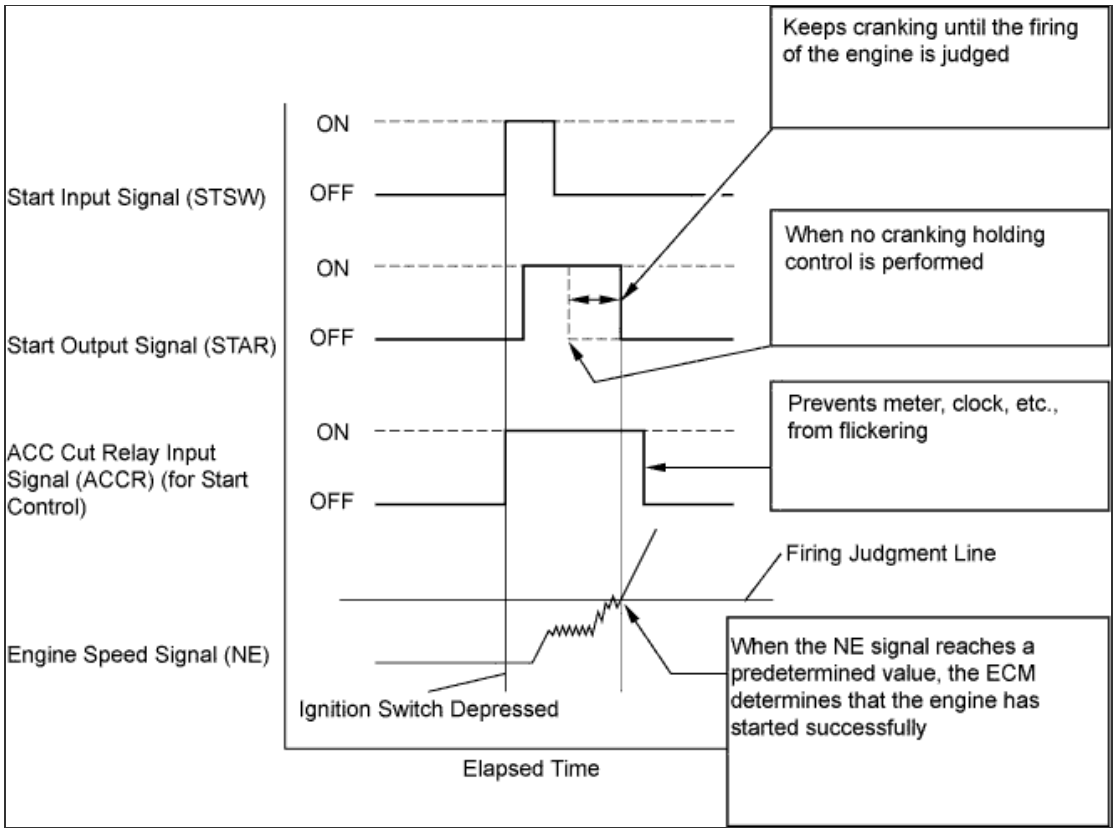
for RHD

Tester Connection	Switch Condition	Specified Condition
ST relay terminal 1 - A52-48 (STA)	Always	Below 1 Ω

d. Reinstall the starter relay (ST).

e. Reconnect the ECM connector.

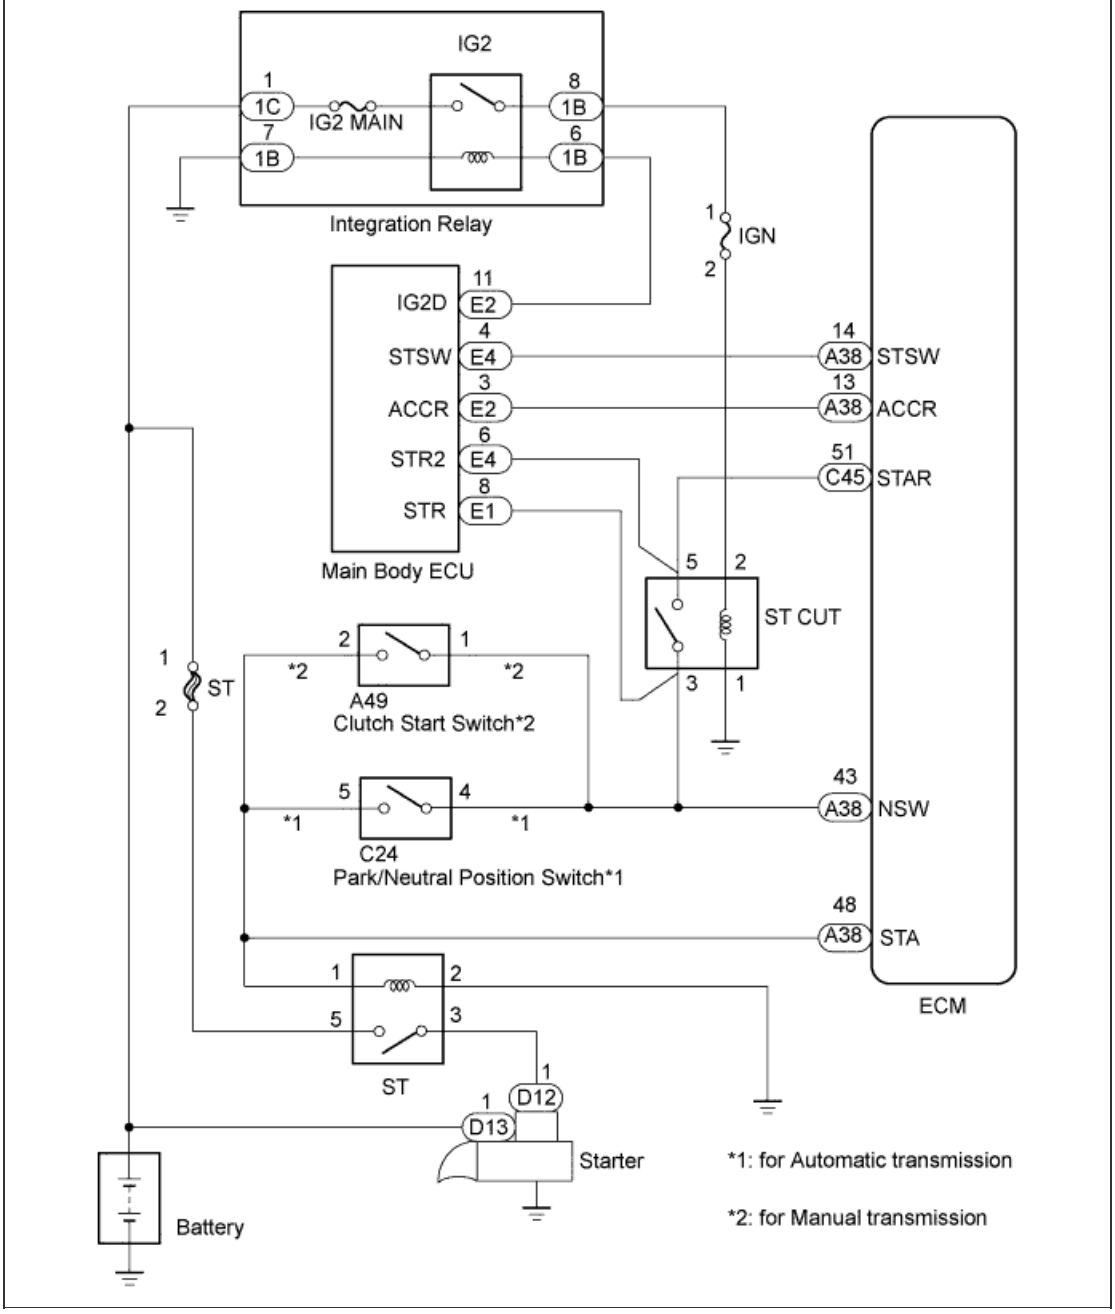
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR (STARTER RELAY ST] - ECM)



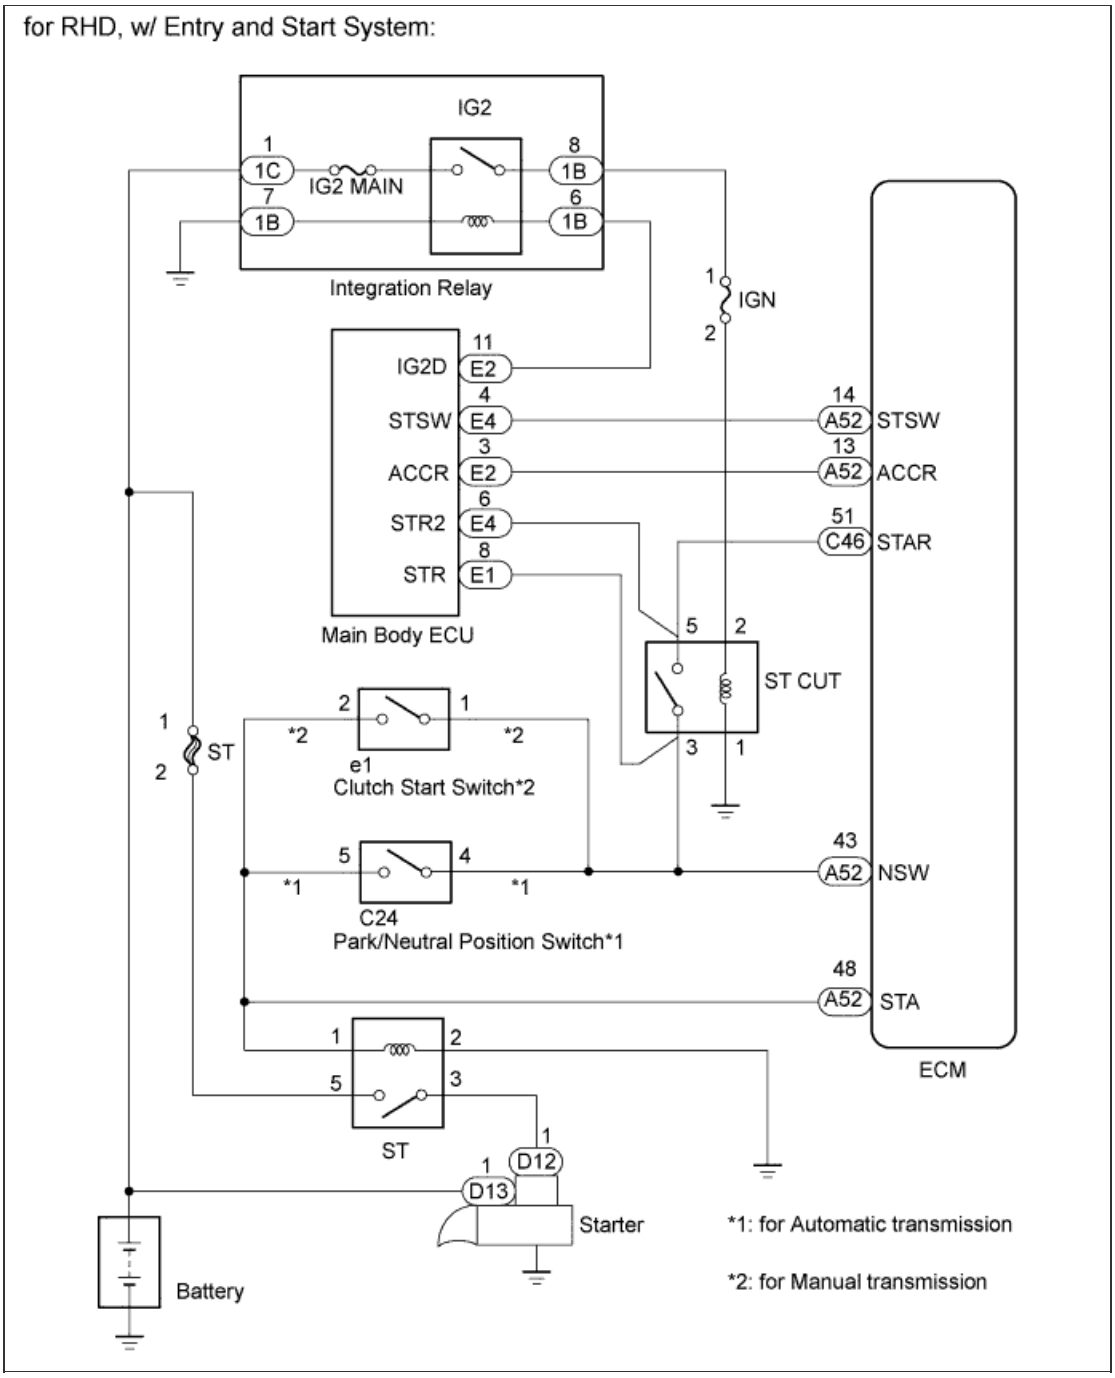
OK

REPLACE ECM (Click here)

for Preparation Click here



DESCRIPTION



The cranking holding control system provides current to the starter when the ECM detects the ignition switch start signal (STSW). When the ECM performs a firing judgment, the system cuts current to the starter. When an ECM receives the STSW signal, it turns on the ST CUT relay, which prevents flickering of the combination meter, clock, audio system, etc. Also, the ECM sends a signal to the ECM STAR terminal of the ECMI. Then the STAR output signal travels through the park/neutral position (PNP) switch to the ST relay, causing the starter to activate.
When the engine is cranking, the starter operation signal is sent to the ECM STA terminal of the ECM.

WIRING DIAGRAM

for LHD, w/ Entry and Start System:

INSPECTION PROCEDURE

1.CHECK CRANKING

a. Check the cranking of the engine.

Result:

Test Result	Proceed to
Cranking possible and holding control operates	A
Does not crank	B
Cranking possible but holding control does not operate	C

B → Go to step 2

C → Go to step 11

A

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

2.READ VALUE USING INTELLIGENT TESTER (STARTER SIGNAL)

a. Connect the intelligent tester to the DLC3.

b. Turn the ignition switch to ON.

c. Turn the intelligent tester on.

d. Enter the following menus: Powertrain / Engine / Data List / Starter Signal.

e. Read the values.

f. Check the result when the ignition switch is turned to ON and when the engine is started.

OK:

Ignition Switch Condition	Display (Starter Signal)
ON	OFF
Engine started	ON

NG → Go to step 7

OK

3.INSPECT STARTER RELAY (ST)

a. Inspect the starter relay (ST) (Click here).

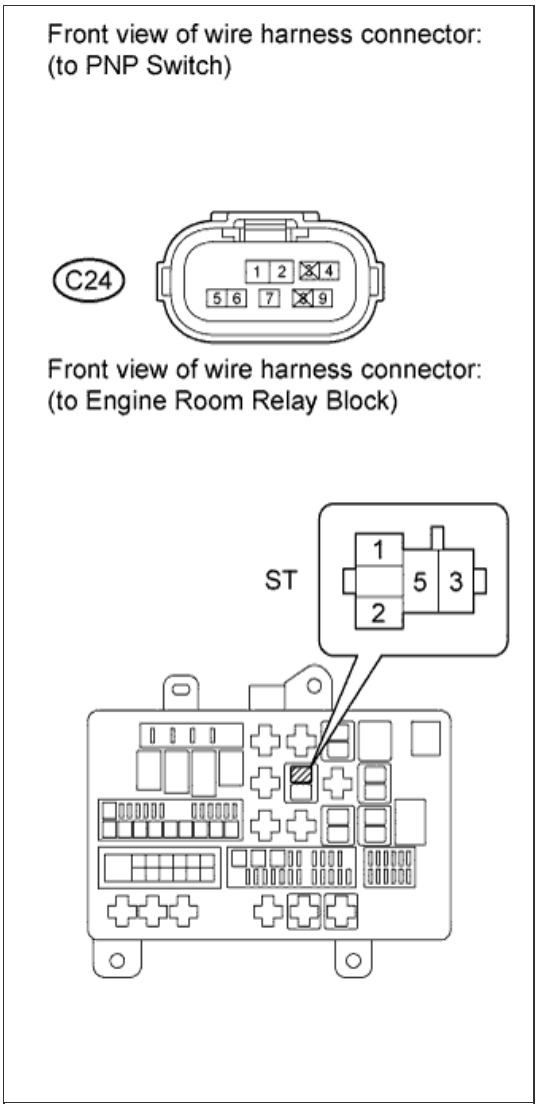
NG → REPLACE STARTER RELAY (ST)

OK

4.CHECK HARNESS AND CONNECTOR (PNP SWITCH - ST RELAY)

a. Disconnect the Park/Neutral Position (PNP) switch.

b. Remove the ST relay from the engine room relay block.



c. Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

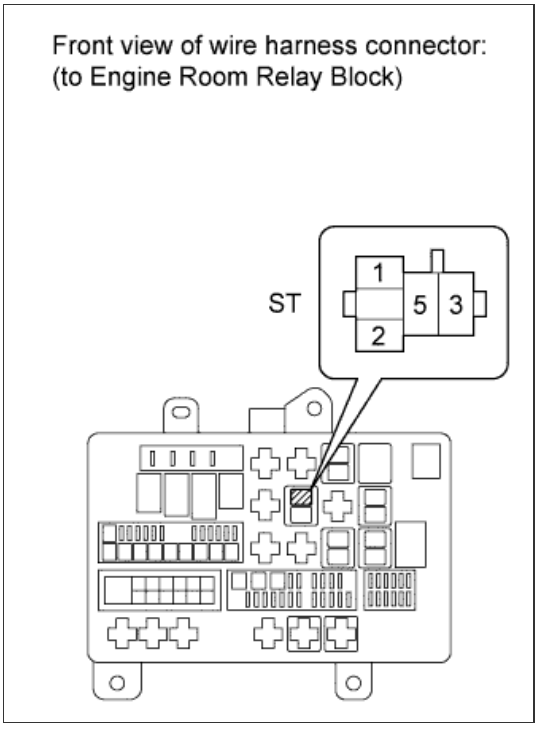
Tester Connection	Condition	Specified Condition
ST relay (1) - C24-5	Always	Below 1 Ω

Standard Resistance (Check for Short):

Tester Connection	Condition	Specified Condition
ST relay (1) or D24-5 - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



5.CHECK HARNESS AND CONNECTOR (POWER SOURCE)

a. Remove the ST relay from the engine room relay block.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
ST relay (2) - ST relay (5)	Always	11 to 14 V

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR (STARTER RELAY (ST) - BATTERY, BODY GROUND)

OK

6.INSPECT STARTER

a. Inspect the starter (Click here).

Result:

Test Result	Proceed to
O	A
N	B

B → REPLACE STARTER (**Click here**)

A

REPAIR OR REPLACE HARNESS OR CONNECTOR (STARTER - STARTER RELAY (ST), BATTERY)

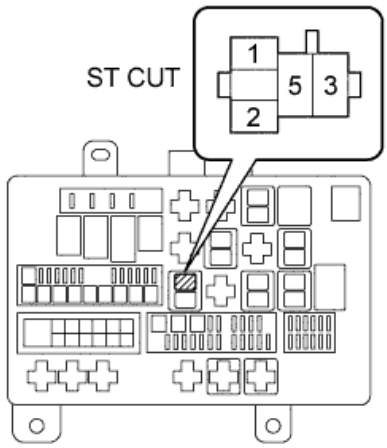
7.INSPECT STARTER CUT RELAY (ST CUT)

a. Inspect the starter cut relay (ST CUT) (Click here).

NG → REPLACE STARTER CUT RELAY (ST CUT)

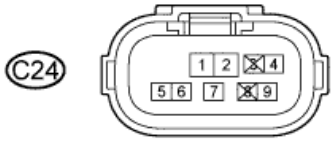
OK

8.CHECK HARNESS AND CONNECTOR (ST CUT RELAY - PNP SWITCH, ECM)



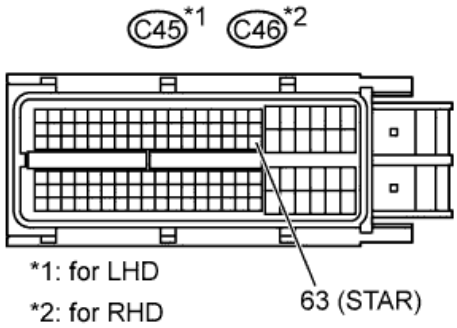
a. Remove the starter cut relay (ST CUT) from the engine room relay block.

b. Disconnect the PNP switch connector.



c. Disconnect the ECM connector.

d. Measure the resistance according to the value(s) in the table below.



Engine Room Relay Block

Front view of wire harness connector:
(to PNP Switch)

Front view of wire harness connector:
(to ECM)

Standard Resistance (Check for Open):

for LHD

Tester Connection	Condition	Specified Condition
ST CUT relay (5) - C45-63 (STAR)	Always	Below 1 Ω
ST CUT relay (3) - C24-4	Always	Below 1 Ω

for RHD

Tester Connection	Condition	Specified Condition
ST CUT relay (5) - C46-63 (STAR)	Always	Below 1 Ω
ST CUT relay (3) - C24-4	Always	Below 1 Ω

Standard Resistance (Check for Short):

for LHD

Tester Connection	Condition	Specified Condition
ST CUT relay (5) or C45-63 (STAR) - Body ground	Always	10 kΩ or higher
ST CUT relay (3) or C24-4 - Body ground	Always	10 kΩ or higher

for RHD

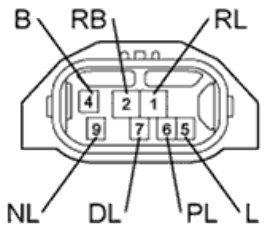
Tester Connection	Condition	Specified Condition
ST CUT relay (5) or C46-63 (STAR) - Body ground	Always	10 kΩ or higher
ST CUT relay (3) or C24-4 - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

9.INSPECT PARK/NEUTRAL POSITION SWITCH

a. Inspect the Park/Neutral Position (PNP) switch.



i. Disconnect the PNP switch connector.

ii. Measure the resistance according to the value(s) in the table below.

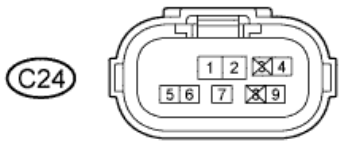
Standard Resistance:

Tester Connection	Condition	Specified Condition
4 (B) - 5 (L)	Shift lever in P	Below 1 Ω
	Shift lever in N	Below 1 Ω

Component without harness connected:
(Park/Neutral Position Switch)

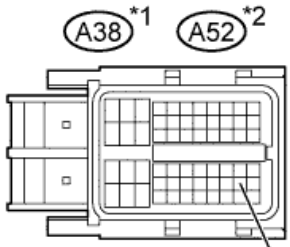
NG → REPLACE PARK/NEUTRAL POSITION SWITCH ASSEMBLY (Click here)

OK



10.CHECK HARNESS AND CONNECTOR (PNP SWITCH - ECM)

a. Disconnect the PNP switch connector.



b. Disconnect the ECM connector.

c. Measure the resistance according to the value(s) in the table below.

Front view of wire harness connector:
(to Park/Neutral Position Switch)

Front view of wire harness connector:

Tester Connection	Condition	Specified Condition
E4-4 (STSW) or A38-14 (STSW) - Body ground	Always	10 kΩ or higher

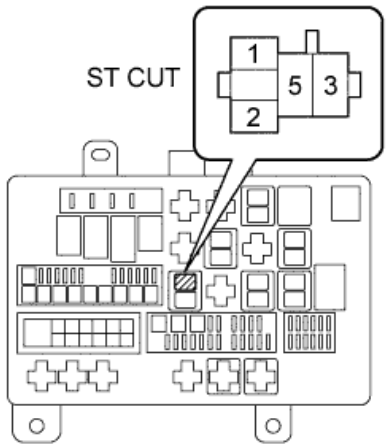
for RHD

Tester Connection	Condition	Specified Condition
E4-4 (STSW) or A52-14 (STSW) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

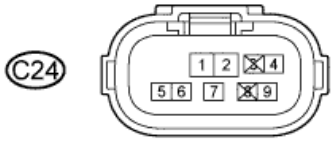
OK

12.CHECK HARNESS AND CONNECTOR (ST CUT RELAY - PNP SWITCH, ECM)



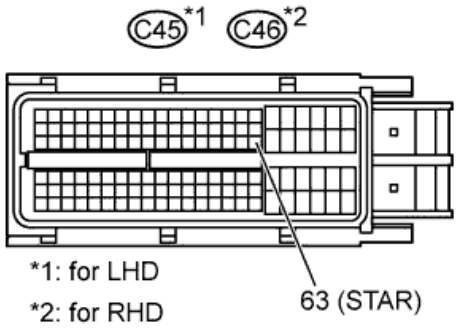
a. Remove the starter cut relay (ST CUT) from the engine room relay block.

b. Disconnect the PNP switch connector.



c. Disconnect the ECM connector.

d. Measure the resistance according to the value(s) in the table below.



Engine Room Relay Block

Front view of wire harness connector:
(to PNP Switch)

Front view of wire harness connector:
(to ECM)

Standard Resistance (Check for Open):

for LHD

Tester Connection	Condition	Specified Condition
ST CUT relay (5) - C45-63 (STAR)	Always	Below 1 Ω
ST CUT relay (3) - C24-4	Always	Below 1 Ω

for RHD

Tester Connection	Condition	Specified Condition
ST CUT relay (5) - C46-63 (STAR)	Always	Below 1 Ω
ST CUT relay (3) - C24-4	Always	Below 1 Ω

Standard Resistance (Check for Short):

for LHD

Tester Connection	Condition	Specified Condition
ST CUT relay (5) or C45-63 (STAR) - Body ground	Always	10 kΩ or higher
ST CUT relay (3) or C24-4 - Body ground	Always	10 kΩ or higher

for RHD

Tester Connection	Condition	Specified Condition
ST CUT relay (5) or C46-63 (STAR) - Body ground	Always	10 kΩ or higher
ST CUT relay (3) or C24-4 - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE ECM (**Click here**)

13.REPLACE ECM

a. Replace the ECM (Click here).

NEXT

14.CONFIRM WHETHER MALFUNCTION HAS BEEN SUCCESSFULLY REPAIRED

a. Check the starter operation.

OK:
Malfunction has been repaired successfully.

NG → GO TO ENTRY AND START SYSTEM (ENGINE DOES NOT START) (**Click here**)

OK

END

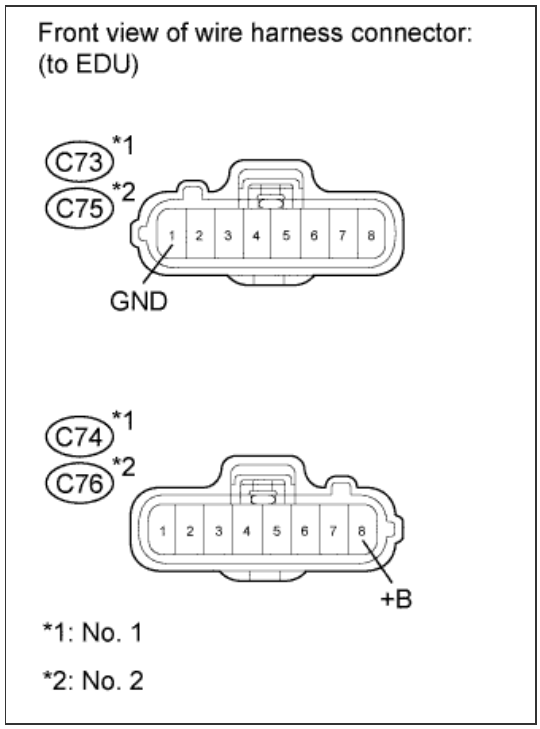
for Preparation Click here

DESCRIPTION

The injector driver drives the injectors at high speeds with a high-voltage DC/DC converter. The ECM constantly monitors the injector driver and stops the engine if an abnormal condition is detected.

WIRING DIAGRAM

Refer to DTC P062D (Click here).



INSPECTION PROCEDURE

1.CHECK EDU (POWER SOURCE)

a. Disconnect the No. 1 injector driver (EDU) connectors.

b. Disconnect the No. 2 injector driver (EDU) connectors.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

No. 1

Tester Connection	Switch Condition	Specified Condition
C74-8 (+B) - C73-1 (GND)	Ignition switch ON	11 to 14 V

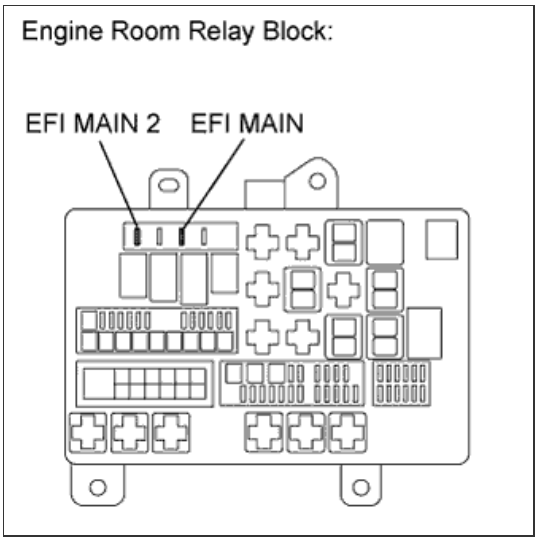
No. 2

Tester Connection	Switch Condition	Specified Condition
C76-8 (+B) - C75-1 (GND)	Ignition switch ON	11 to 14 V

NG → Go to step 2

OK

REPLACE INJECTOR DRIVER (No. 1 or No. 2) (Click here)



2.INSPECT FUSE (EFI)

a. Remove the EFI MAIN and EFI MAIN 2 fuse from the engine room relay block.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
EFI MAIN fuse	Always	Below 1 Ω
EFI MAIN 2 fuse	Always	Below 1 Ω

NG → CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE FUSE

OK

3.INSPECT EDU RELAY (EDU 1 OR EDU 2)

a. Inspect the EDU relay (EDU 1 or EDU 2) (Click here).

NG → REPLACE EDU RELAY (EDU 1 OR EDU 2)

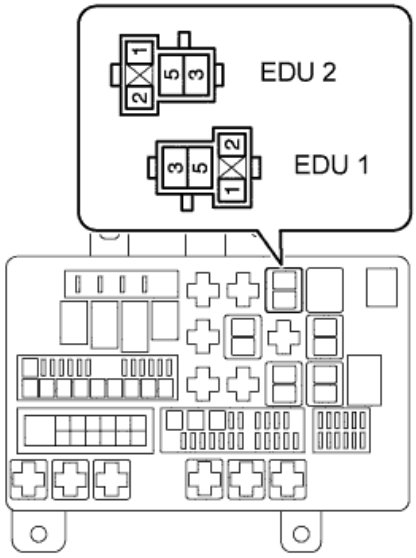
OK

4.INSPECT INTEGRATION NO.1 RELAY (EFI OR EFI MAIN 2)

a. Inspect the Integration relay (EFI or EFI MAIN 2) (Click here).

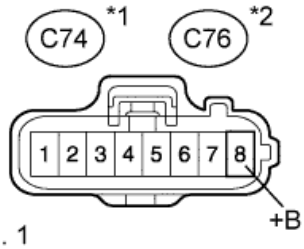
NG → REPLACE INTEGRATION NO.1 RELAY

OK



5.CHECK HARNESS AND CONNECTOR (EDU RELAY - EDU)

a. Remove the EDU relay (EDU 1 or EDU 2) from the engine room relay block.



b. Remove the EDU connector.

c. Measure the resistance according to the value(s) in the table below.

Front view of wire harness connector:
(to Engine Room Relay Block)

Front view of wire harness connector:
(to EDU)

*1: No. 1

*2: No. 2

Standard Resistance (Check for Open):

No. 1

Tester Connection	Condition	Specified Condition
EDU 1 relay (5) - C74-8 (+B)	lways	Below 1 Ω

No. 2

Tester Connection	Condition	Specified Condition
EDU 2 relay (5) - C76-8 (+B)	lways	Below 1 Ω

Standard Resistance (Check for Short):

No. 1

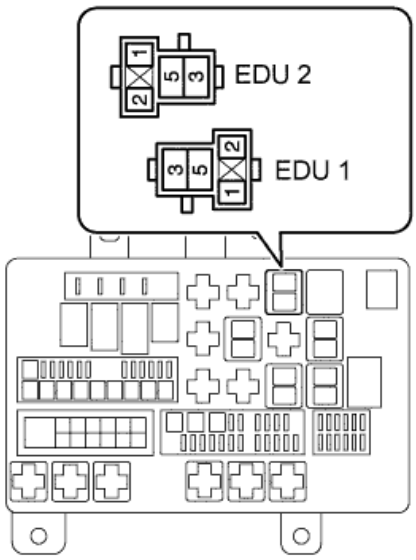
Tester Connection	Condition	Specified Condition
EDU 1 relay (5) or C74-8 (+B) - Body ground	Always	10 kΩ or higher

No. 2

Tester Connection	Condition	Specified Condition
EDU 2 relay (5) or C76-8 (+B) - Body ground	Always	10 kΩ or higher

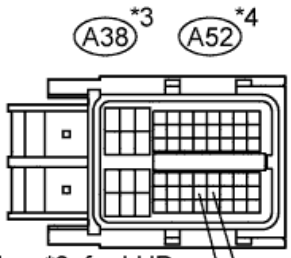
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



.CHECK HARNESS AND CONNECTOR (EDU RELAY - ECM)

a. Remove the EDU relay (EDU 1 or EDU 2) from the engine room relay block.



b. Disconnect the ECM connector.

c. Measure the resistance according to the value(s) in the table below.

Front view of wire harness connector:
(to Engine Room Relay Block)

Front view of wire harness connector:
(to ECM)

*1: No. 1 *3: for LHD 46 (IRL2)*2

*2: No. 2 *4: for RHD 45 (IREL)*1

Standard Resistance (Check for Open):

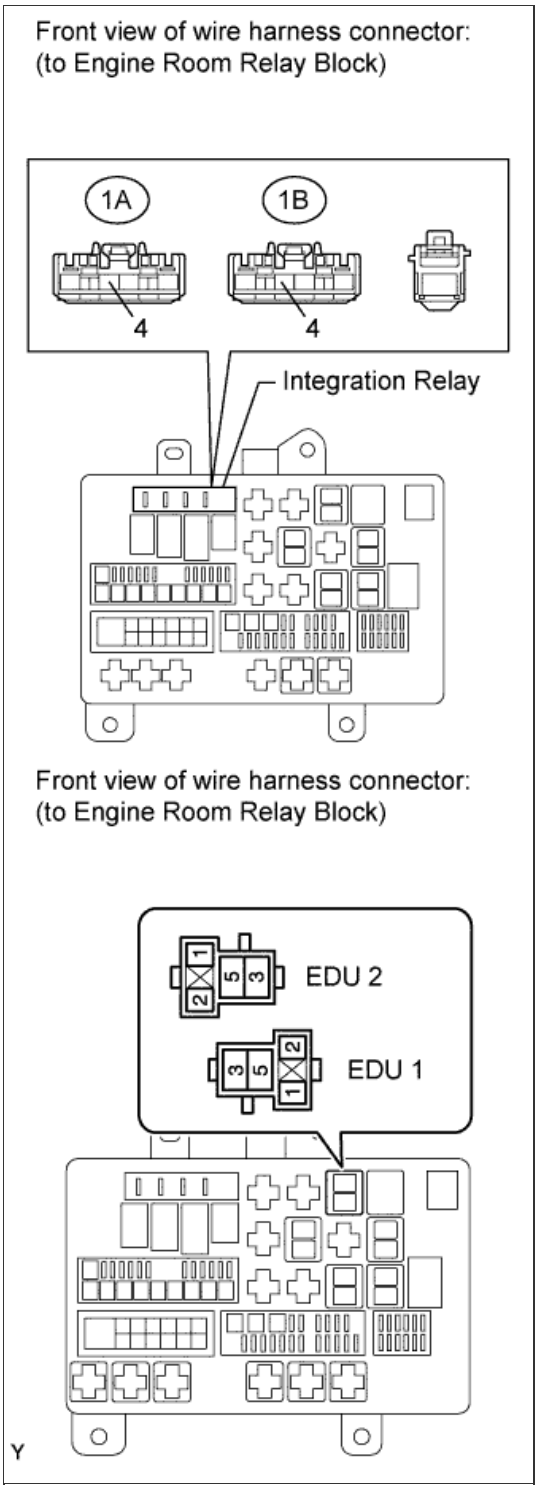
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR



OK

8.CHECK HARNESS AND CONNECTOR (EDU - ODY GROUND)

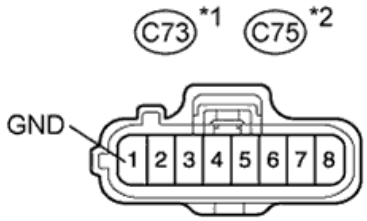
a. Disconnect the EDU connector.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

No. 1

Tester Connection	Condition	Specified Condition



C73-1 (GND) - Body ground	Always	Below 1 Ω

Standard Resistance:

No. 2

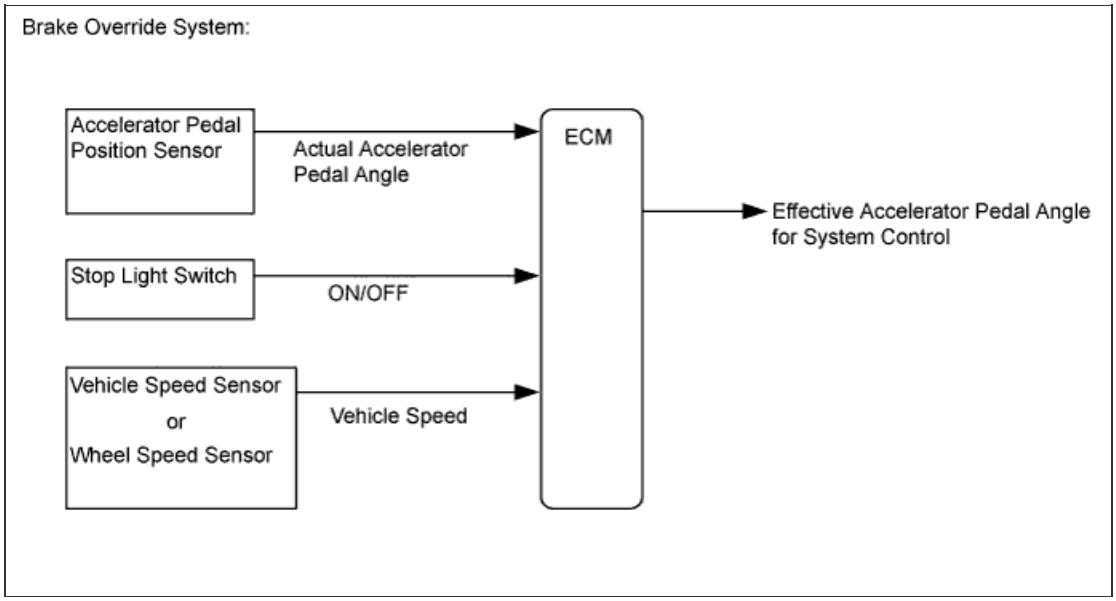
Tester Connection	Condition	Specified Condition
C75-1 (GND) - Body ground	Always	Below 1 Ω

Front view of wire harness connector:
(to EDU)

*1: No. 1

*2: No. 2

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR (EDU - ODY GROUND)



OK

CHECK ECM POWER SOURCE CIRCUIT (Click here)

for Preparation Click here

DESCRIPTION

When the vehicle is being driven with the accelerator pedal depressed, depressing the brake pedal without releasing the accelerator pedal will activate the brake override system to restrict driving torque. The conditions for activating the brake override system as well as the items that are controlled are explained below.

Activation Conditions:

- Vehicle is running at or above the specified speed.
- The accelerator pedal is depressed beyond a specified level, and then the brake pedal is depressed.

NOTICE:

The vehicle may not enter the brake override system control due to the relation of the accelerator pedal angle and the vehicle's speed.

Items Controlled:

- Driving torque is restricted.

HINT:

During brake override system control, the value for the accelerator pedal angle (which is used for engine control) is forcibly reduced to a specified value. For this reason, the Data List value for Accelerator Position will be replaced with a specified value regardless of the actual accelerator pedal angle (Accel Sens. No. 1 Volt %, Accel Sens. No. 2 Volt %)

Deactivation Conditions:

- When the Stop Light Switch turns OFF or the actual accelerator pedal angle increases or decreases beyond the specified range.

INSPECTION PROCEDURE

Inspection Method

Drive at 10 km/h (6.25 mph), depress the accelerator pedal by 1/2 to 3/4 and keep it in that position. Under these conditions, if the engine speed decreases to 1000 rpm when the brake pedal is depressed, then the brake override system has been activated.

CAUTION:

When carrying out the inspection, use a place where you are able to carry it out safely and also pay close attention to your surroundings.

Also, when driving, make absolutely sure that all road traffic laws, such as speed limits, are observed.

HINT:

- **Under normal conditions, the Accelerator Position value changes in response to the Accel Sens. No. 1 Volt % value. For more information on the numerical values, refer to the Data List (Click here).**
- **If the Data List values of Accelerator Position and Accel Sens. No. 1 Volt % do not match, and the value of Accelerator Position changes but the value of Accel Sens. No. 1 Volt % is constant, this confirms that brake override system has activated. (Data can be captured relatively easily by using the snapshot function in the Data List. Confirm the data after performing the drive test.)**

NOTICE:

The brake override system restricts driving torque if the brake pedal is depressed when driving with the accelerator pedal depressed. If a customer reports experiencing loss of torque after the accelerator and brake pedals have both been intentionally depressed, explain to the customer that this is not a malfunction, and that the customer should avoid depressing both the accelerator and brake pedals at the same time.

Example: While operating the accelerator pedal, the customer uses their left foot to operate the brake pedal.

1.CHECK DTC OUTPUT

a. Connect the intelligent tester to the DLC3.

b. Turn the ignition switch to ON and turn the tester on.

c. Enter the following menus: Utility / All Codes.

d. Check DTCs.

Result

Result	Proceed to
No DTC is output	A
DTC is output	B

B → **GO TO DTC CHART**

A

2.READ VALUE USING INTELLIGENT TESTER (STOP LIGHT SWITCH)

a. Connect the intelligent tester to the DLC3.

b. Turn the ignition switch to ON and turn the tester on.

c. Enter the following menus: Powertrain / Engine / Data List / Stop Light Switch.

d. Check the Data List indication when the brake pedal is depressed and released.

OK:

Tester Display	Condition	Specified Condition
Stop Light Switch	Brake pedal released	OFF
	Brake pedal depressed	ON

NG → **INSPECT STOP LIGHT SWITCH ASSEMBLY (Click here)**

OK

3.INSPECT BRAKE PEDAL

a. Inspect and adjust the brake pedal (for LHD) (Click here).

b. Inspect and adjust the brake pedal (for RHD) (Click here).

HINT:

If the stop light switch turns ON too late, the start of brake override system control may be delayed; if it turns ON too soon, brake override system control may begin too early, so conduct inspection of the brake pedal and stop light switch assembly.

Result:

Result	Proceed to
OK	A
NG (for LHD)	B
NG (for RHD)	C

B → REPAIR OR REPLACE BRAKE PEDAL (for LHD) (Click here)

C → REPAIR OR REPLACE BRAKE PEDAL (for RHD) (Click here)

A

4.READ VALUE USING INTELLIGENT TESTER (ACCELERATOR PEDAL POSITION SENSOR)

a. Connect the intelligent tester to the DLC3.

b. Turn the ignition switch to ON and turn the tester on.

c. Enter the following menus: Powertrain / Engine / Data List / Accel Sens. No. 1 Volt % and Accel Sens. No. 2 Volt %.

d. Read the value displayed on the tester.

OK:

Tester Display	Condition	Specified Condition
Accel Sens. No. 1 Volt %	Accelerator Pedal Released → Depressed → Released	Values smoothly change following accelerator pedal operation
Accel Sens. No. 2 Volt %		

HINT:

For numerical values of Accel Sens. No. 1 Volt % and Accel Sens. No. 2 Volt %, refer to the Data List (Click here).

NG → REPLACE ACCELERATOR PEDAL SENSOR ASSEMBLY (Click here)

OK

5.READ VALUE USING INTELLIGENT TESTER (VEHICLE SPEED)

a. Connect the intelligent tester to the DLC3.

b. Turn the ignition switch to ON and turn the tester on.

c. Start the engine.

d. Enter the following menus: Powertrain / Engine / Data List / Vehicle Speed.

e. Read the value displayed on the tester.

Standard:

Tester Display	Condition	Specified Condition
Vehicle Speed	Vehicle stopped, engine running	0 km/h (0 mph)
	Vehicle running at constant speed between 16.1 to 64.4 km/h (10 to 40 mph)	No large fluctuations when driving at a constant speed

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

HINT:

Data can be captured relatively easily by using the snapshot function in the Data List. Confirm the data after performing the drive test.

NG → GO TO GO TO VEHICLE SPEED SENSOR "A" (Click here)

OK

6.READ VALUE USING INTELLIGENT TESTER (FR, FL, RR, RL WHEEL SPEED)

a. Connect the intelligent tester to the DLC3.

b. Turn the ignition switch to ON and turn the tester on.

c. Start the engine.

d. Enter the following menus: Chassis / ABS/VSC/TRC / Data List / FR Wheel Speed, FL Wheel Speed, RR Wheel Speed and RL Wheel Speed.

e. Read the value displayed on the tester.

Standard:

Tester Display	Condition	Specified Condition
FR Wheel Speed FL Wheel Speed RR Wheel Speed RL Wheel Speed	Vehicle stopped, engine running	0 km/h (0 mph)
	Vehicle running at constant speed between 16.1 to 64.4 km/h (10 to 40 mph)	No large fluctuations when driving at a constant speed

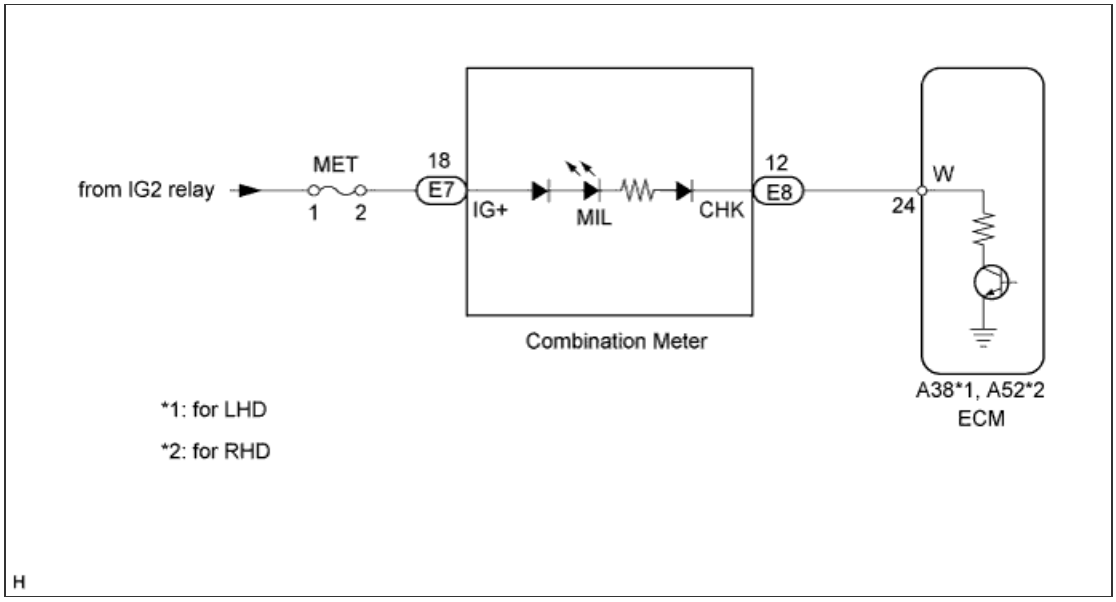
CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

HINT:

Data can be captured relatively easily by using the snapshot function in the Data List. Confirm the data after performing the drive test.

NG → INSPECT FRONT OR REAR SPEED SENSOR



OK → END

for Preparation Click here

DESCRIPTION

The MIL (Malfunction Indicator Lamp) is used to indicate vehicle malfunctions detected by the ECM. When the ignition switch is turned to ON, power is supplied to the MIL circuit, and the ECM provides the circuit ground which illuminates the MIL.
The MIL operation can be checked visually. When the ignition switch is first turned to ON, the MIL should be illuminated and should then turn off when the engine is started. If the MIL remains illuminated or is not illuminated, conduct the following troubleshooting procedure using the intelligent tester.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.CHECK THAT MIL IS ILLUMINATED

a. Perform troubleshooting in accordance with the table below.

Result

Condition	Proceed to
MIL remains on	A
MIL does not illuminate	B

B → Go to step 5

A

2.CHECK WHETHER MIL TURNS OFF

a. Connect the intelligent tester to the DLC3.

b. Turn the ignition switch to ON and turn the tester on.

c. Check if DTCs have been stored (Click here). If DTCs are present, write them down.

d. Clear DTCs (Click here).

e. Check that the MIL turns off.

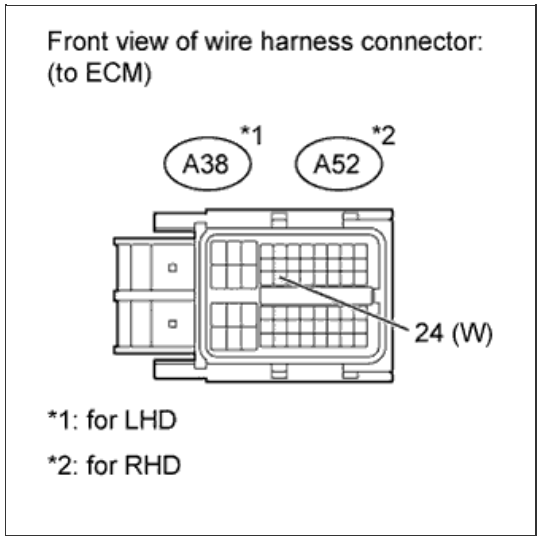
Standard:
MIL turns off.

NG → Go to step 3

OK

REPAIR CIRCUITS INDICATED BY OUTPUT DTCS (Click here)

3.CHECK HARNESS AND CONNECTOR (CHECK FOR SHORT IN WIRE HARNESS)



a. Disconnect the ECM connector.

b. Turn the ignition switch to ON.

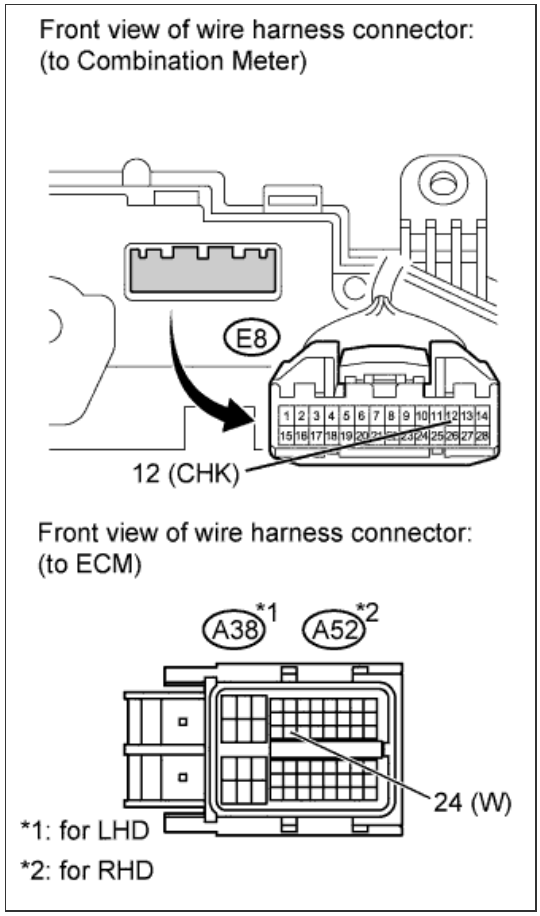
c. Check that the MIL is not illuminated.

OK:
MIL is not illuminated.

d. Reconnect the ECM connector.

NG → Go to step 4

OK



REPLACE ECM (Click here)

4.CHECK HARNESS AND CONNECTOR (COMBINATION METER - ECM)

a. Disconnect the ECM connector.

b. Disconnect the combination meter connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

for LHD

Tester Connection	Condition	Specified Condition
E8-5 (CHK) - A38-24 (W)	Always	Below 1 Ω

for RHD

Tester Connection	Condition	Specified Condition
E8-5 (CHK) - A52-24 (W)	Always	Below 1 Ω

Standard Resistance (Check for Short):

for LHD

Tester Connection	Condition	Specified Condition
E8-5 (CHK) or A38-24 (W) - Body ground	Always	10 kΩ or higher

for RHD

Tester Connection	Condition	Specified Condition
E8-5 (CHK) or A52-24 (W) - Body ground	Always	10 kΩ or higher

d. Reconnect the ECM connector.

e. Reconnect the combination meter connector.

Result

Result	Proceed to
OK (w/ Multi-information Display)	A
OK (w/o Multi-information Display)	B
NG	C

A → REPLACE COMBINATION METER ASSEMBLY (w/ Multi-information Display) (Click here)

B → REPLACE COMBINATION METER ASSEMBLY (w/o Multi-information Display) (Click here)

C → REPAIR OR REPLACE HARNESS OR CONNECTOR

5.CHECK THAT MIL IS ILLUMINATED

a. Check if the MIL is illuminated when the ignition switch is turned to ON.

OK:
MIL is illuminated.

NG → Go to step 6

OK → SYSTEM OK

6.CHECK THAT ENGINE STARTS

a. Turn the ignition switch to ON.

b. Start the engine.

Result

Result	Proceed to
Engine starts	A
Engine does not start*	B

HINT:

*: The intelligent tester cannot communicate with the ECM.

B → GO TO VC OUTPUT CIRCUIT (Click here)

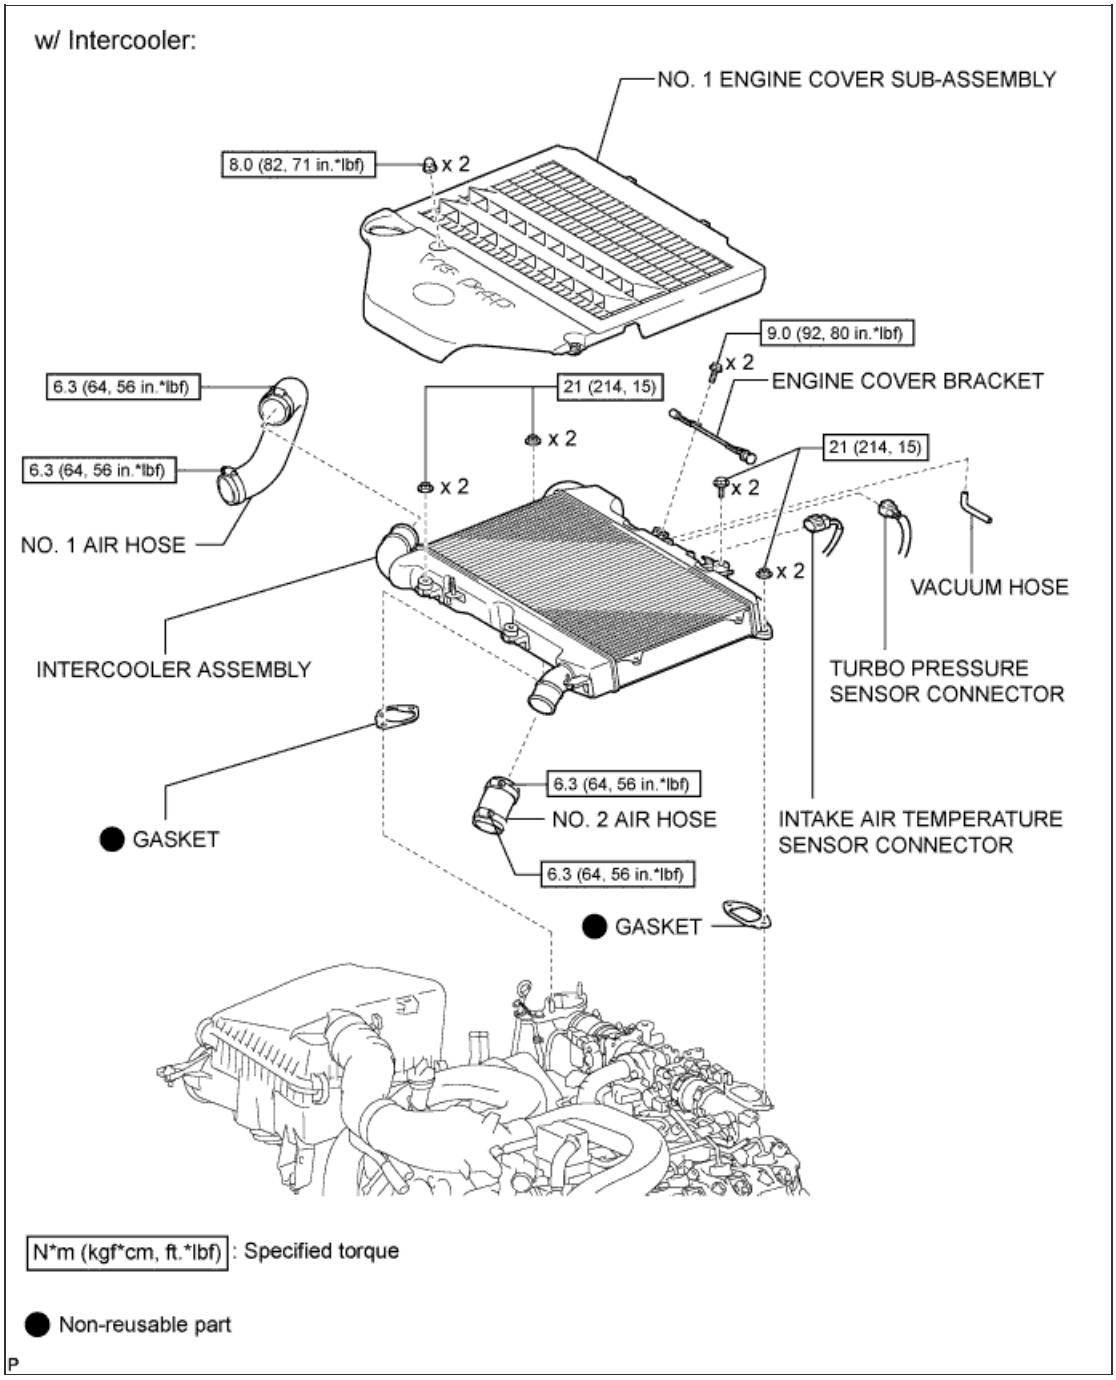
A

7.INSPECT COMBINATION METER ASSEMBLY (MIL CIRCUIT)

a. See the combination meter troubleshooting procedure (Click here).

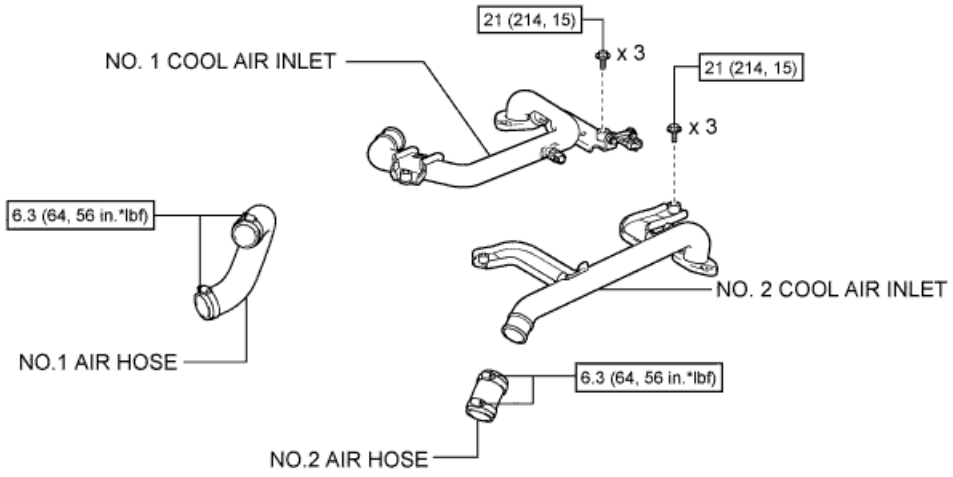
Result

Result	Proceed to
NG	A
OK (w/ Multi-information Display)	B
OK (w/o Multi-information Display)	C



B → REPLACE COMBINATION METER ASSEMBLY (w/ Multi-information Display) (Click here)

C → REPLACE COMBINATION METER ASSEMBLY (w/o Multi-information Display) (Click here)



A

REPAIR OR REPLACE HARNESS OR CONNECTOR (COMBINATION METER - ECM)

for Preparation Click here

1. INSPECT DIESEL THROTTLE BODY ASSEMBLY

a. Inspect the diesel throttle valve.

i. Turn the engine switch on (IG).

ii. Turn the engine switch off and wait 5 seconds.

HINT:

Be sure to turn off the engine switch before performing this inspection. The fully closed position of the diesel throttle valve is learned when the engine switch is turned off.

iii. Connect the intelligent tester to the DLC3.

iv. Turn the engine switch on (IG).

v. Turn the intelligent tester on.

vi. Enter the following menus: Powertrain / Engine / Data List / All Data / Diesel Throttle Angle.

vii. Check that the value of "Diesel Throttle Angle" is within the specification.

Standard Diesel Throttle Angle:

Tester Display	Specified Condition
Diesel Throttle Angle	Throttle Angle: -5 to 5%

If the result is not as specified, replace the throttle body.

viii. Enter the following menus: Powertrain / Engine / Data List / All Data / Throttle Close Learning Val.

ix. Check that the value of "Throttle Close Learning Val" is within the specification.

Standard Throttle Valve Fully Closed:

Tester Display	Specified Condition
Throttle Close Learning Val.	14.25 to 21.25 deg

If the result is not as specified, replace the throttle body.

for Preparation Click here

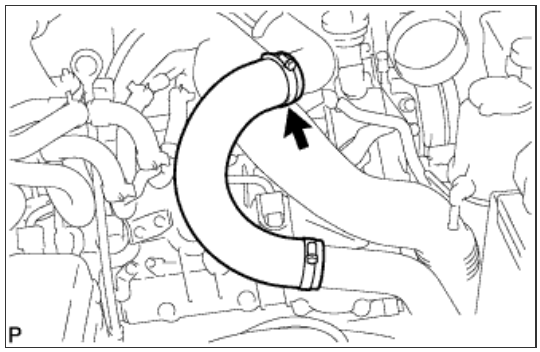
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

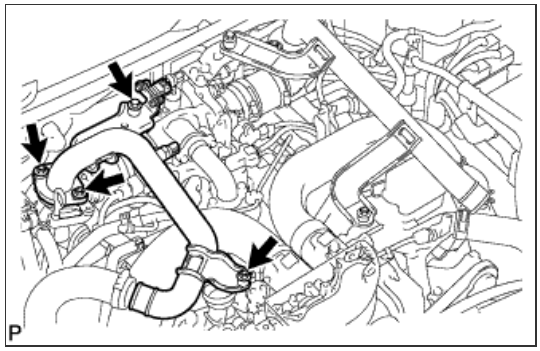
- **When disconnecting the cable some systems need to be initialized after the cable is reconnected (Click here).**
- **Disconnect the cable from the negative (-) battery terminal to clear the diesel throttle valve fully closed position learned value.**



2. REMOVE INTERCOOLER ASSEMBLY (w/ Intercooler)

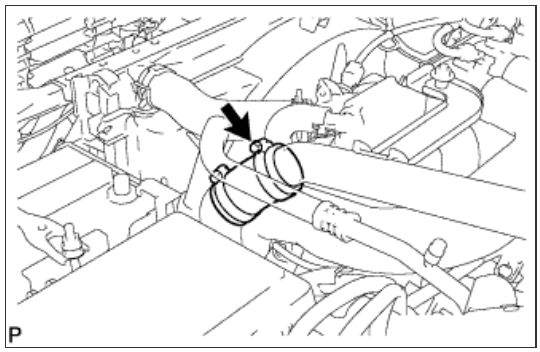
a. (Click here)

3. REMOVE NO. 1 COOL AIR INLET (w/o Intercooler)



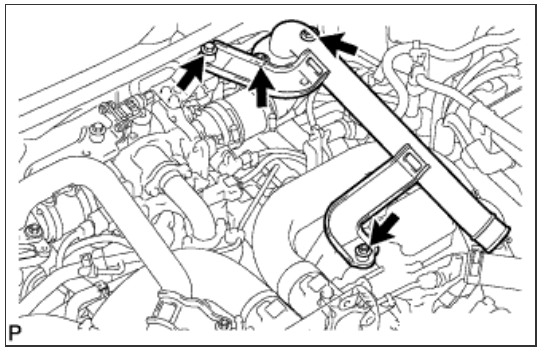
a. Loosen the No. 1 air hose clamp.

b. Disconnect the turbo pressure sensor connector, intake air temperature sensor connector and vacuum hose.



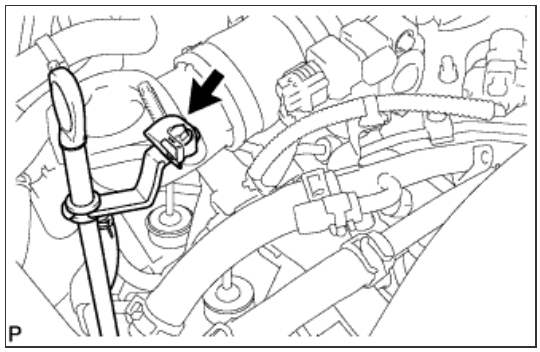
c. Remove the 3 nuts, bolt and No. 1 cool air inlet.

d. Remove the gasket from the air tube R



4. REMOVE NO. 2 COOL AIR INLET (w/o Intercooler)

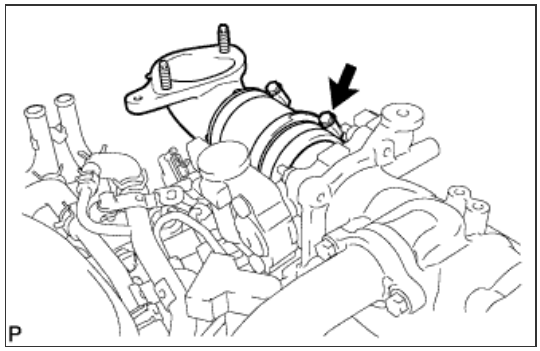
a. oosen the No. 2 air hose clamp.



b. Remove the 3 nuts, bolt and No. 2 cool air inlet.

c. Remove the gasket from the air tube L

5. DISCONNECT NO. 2 ENGINE OIL LEVEL DIPSTICK GUIDE



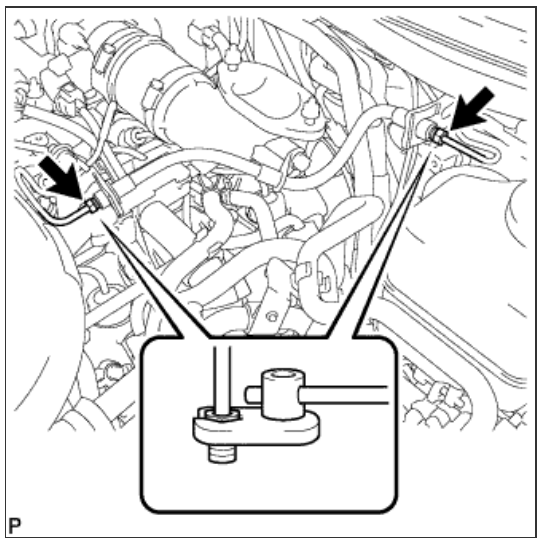
a. Remove the bolt and disconnect the oil level dipstick guide.

6. REMOVE AIR TUBE SUB-ASSEMBLY RH

a. Loosen the hose clamp.

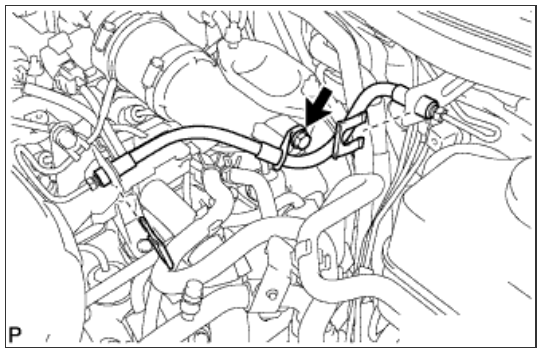
b. Remove the air tube from the throttle body.

7. DRAIN CLUTCH FLUID (for Manual Transmission)



8. REMOVE CLUTCH HOSE (for Manual Transmission)

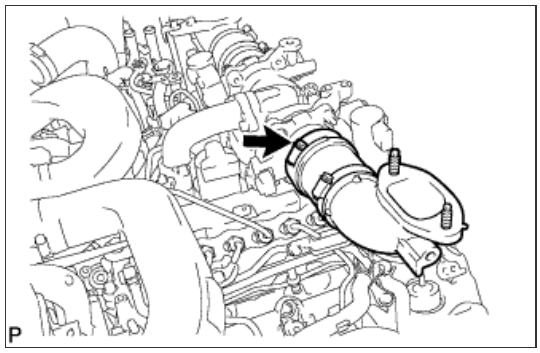
a. Disconnect the 2 flexible hose tubes from the clutch hose with a 10 mm union nut wrench while holding the flexible hose with a wrench.



NOTICE:

- **Do not bend or damage the flexible hose tubes.**
- **Do not allow any foreign matter such as dirt and dust to enter the flexible hose tubes from the connecting point.**

b. Remove the 2 clips.

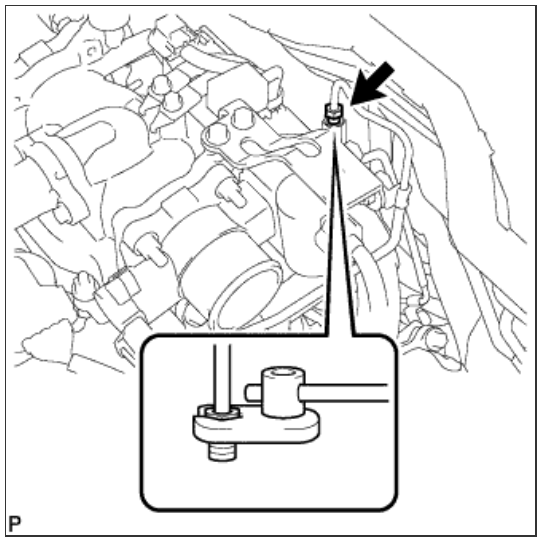


c. Remove the bolt and clutch hose.

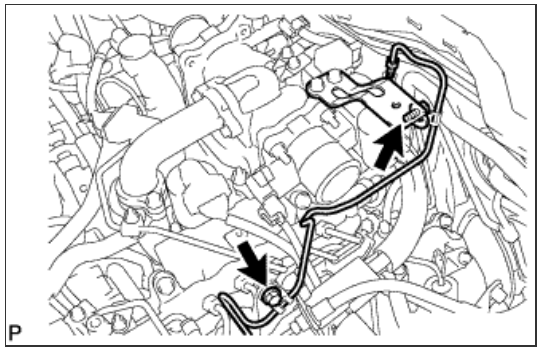
9. REMOVE AIR TUBE SUB-ASSEMBLY LH

a. Loosen the hose clamp.

b. Remove the air tube from the throttle body.



10. REMOVE TUBE CONNECTOR TO FLEXIBLE HOSE TUBE (for Manual Transmission)

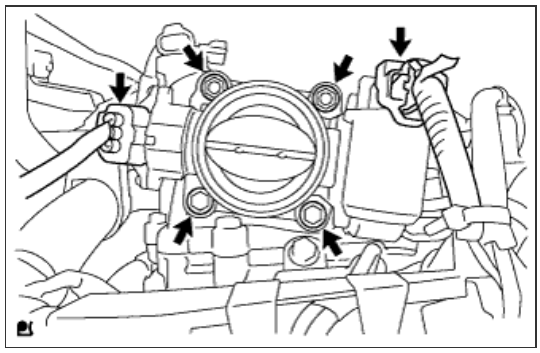


a. Using a 10 mm union nut wrench, disconnect the tube connector to flexible hose tube from the clutch tube to release cylinder 2 way.

NOTICE:

- **Do not bend or damage the flexible hose tube.**
- **Do not allow any foreign matter such as dirt and dust to enter the flexible hose tube from the connecting point.**

b. Remove the 2 bolts and tube connector to flexible hose tube.



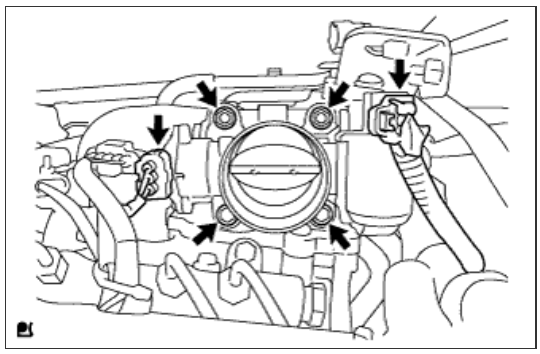
11. REMOVE DIESEL THROTTLE BODY ASSEMBLY RH

a. Disconnect the throttle position sensor connector.

b. Disconnect the throttle motor connector.

c. Remove the 2 bolts, 2 nuts and throttle body.

d. Remove the gasket from the intake pipe.



12. REMOVE DIESEL THROTTLE BODY ASSEMBLY LH

a. Disconnect the throttle position sensor connector.

b. Disconnect the throttle motor connector.

c. Remove the 2 bolts, 2 nuts and throttle body.

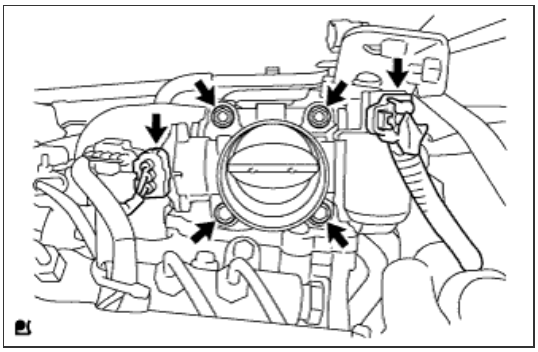
d. Remove the gasket from the intake pipe.

for Preparation Click here

NOTICE:

Disconnect the cable from the negative (-) battery terminal to clear the diesel throttle valve fully closed position learned value.

1. INSTALL DIESEL THROTTLE BODY ASSEMBLY LH



a. Install a new gasket to the intake pipe.

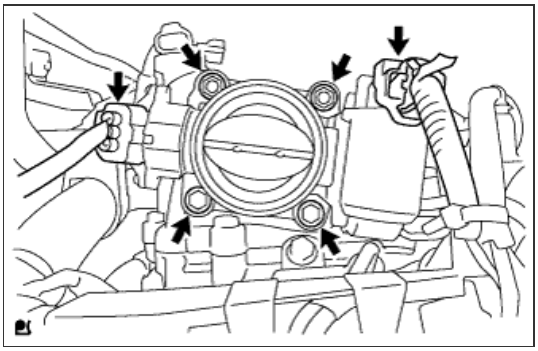
b. Install the throttle body with the 2 bolts and 2 nuts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

c. Connect the throttle position sensor connector.

d. Connect the throttle motor connector.

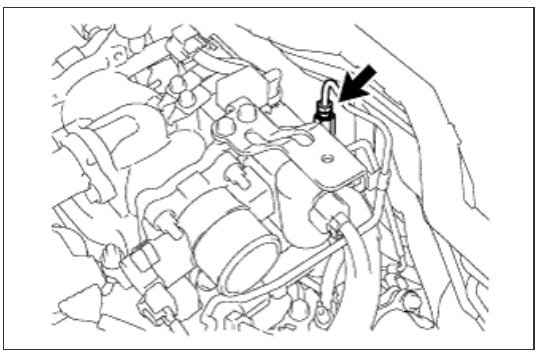
2. INSTALL DIESEL THROTTLE BODY ASSEMBLY RH



a. Install a new gasket to the intake pipe.

b. Install the throttle body with the 2 bolts and 2 nuts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

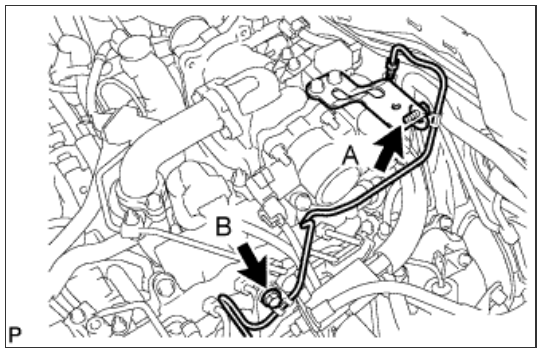


c. Connect the throttle position sensor connector.

d. Connect the throttle motor connector.

3. INSTALL TUBE CONNECTOR TO FLEXIBLE HOSE TUBE (for Manual Transmission)

a. Temporarily install the flare nut of the tube connector to flexible hose tube to the clutch tube to release cylinder 2 way by hand.

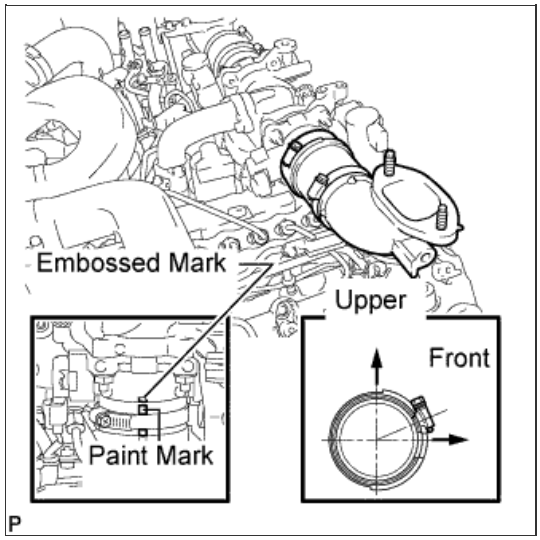


b. Temporarily install the tube connector to flexible hose tube with the 2 bolts.

c. Tighten the bolt labeled A.

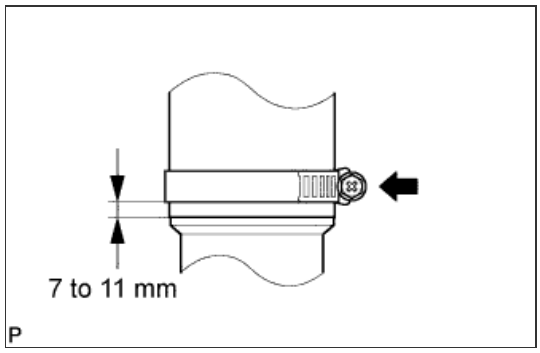
Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

NOTICE:



Tighten the bolt labeled B after installing the clutch hose.

4. INSTALL AIR TUBE SUB-ASSEMBLY LH



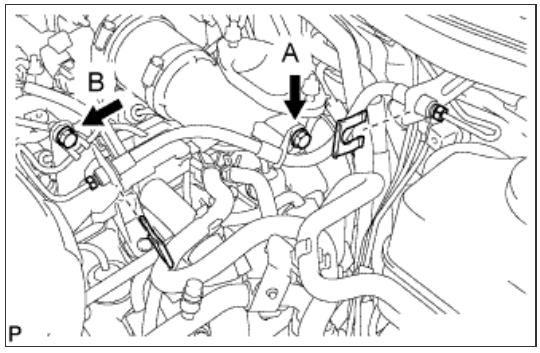
a. Install the air tube to the throttle body.

b. Align the embossed mark of the throttle body with the paint mark of the No. 4 air hose.

c. Tighten the hose clamp so that it is 7 to 11 mm (0.276 to 0.433 in.) from the end of the hose as shown in the illustration.

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

5. INSTALL CLUTCH HOSE (for Manual Transmission)



a. Connect the clutch hose to the air tube with the bolt labeled A.

b. Temporarily install the clutch hose to the clutch master cylinder tube to flexible hose tube and tube connector to flexible hose tube, and fix it in place with the 2 clips.

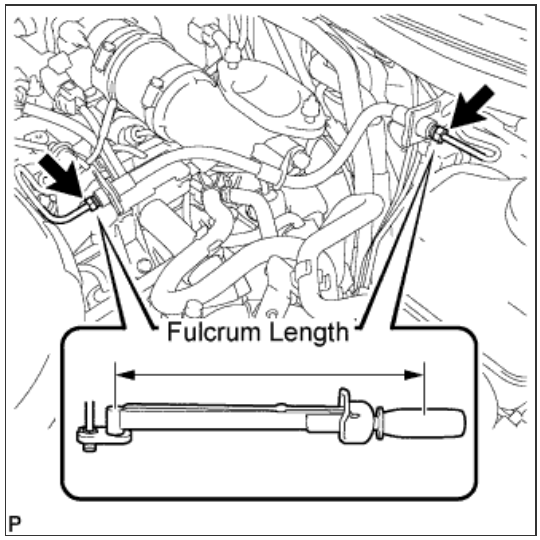
Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

c. Tighten the bolt labeled B.

Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

d. Tighten the flexible hose tube.

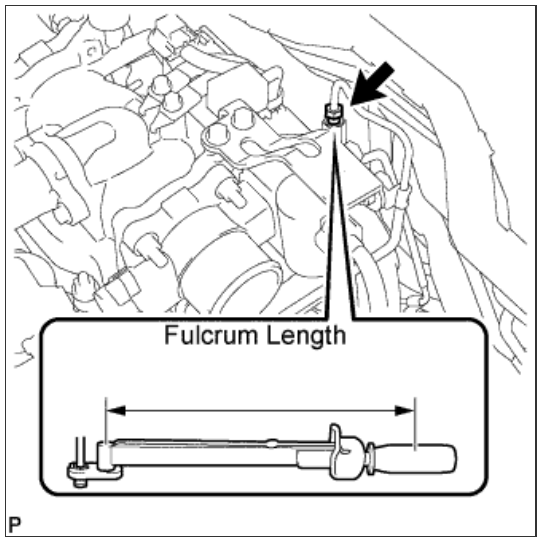
NOTICE:



- **Do not bend or damage the flexible hose tube.**
- **Do not allow any foreign matter such as dirt and dust to enter the flexible hose tube from the connecting points.**

HINT:

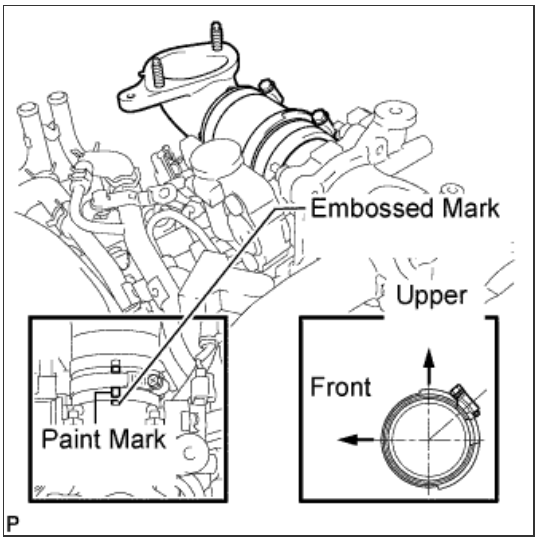
- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.). If using a torque wrench with a length that is not 30 cm (11.8 in.), calculate the torque specification for the torque wrench and SST based on the "without SST" torque specification (Click here).**
- **Make sure union nut wrench and the wrench are connected in a straight line.**



i. Using a 10 mm union nut wrench, tighten the 2 flare nuts of the flexible hose tube.

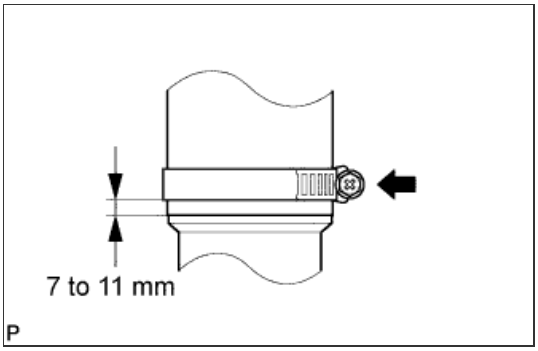
Torque:
without union nut wrench:
15 N*m{ 154 kgf*cm , 11 ft.*lbf }
with union nut wrench:
14 N*m{ 141 kgf*cm , 10 ft.*lbf }

ii. Using a 10 mm union nut wrench, tighten the flare nut of the flexible hose tube.



Torque:
without union nut wrench:
15 N*m{ 154 kgf*cm , 11 ft.*lbf }
with union nut wrench:
14 N*m{ 141 kgf*cm , 10 ft.*lbf }

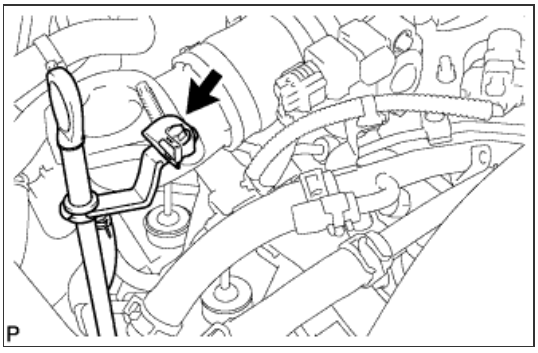
6. INSTALL AIR TUBE SUB-ASSEMBLY RH



a. Install the air tube to the throttle body.

b. Align the embossed mark of the throttle body with the paint mark of the No. 4 air hose.

c. Tighten the hose clamp so that it is 7 to 11 mm (0.276 to 0.433 in.) from the end of the hose as shown in the illustration.

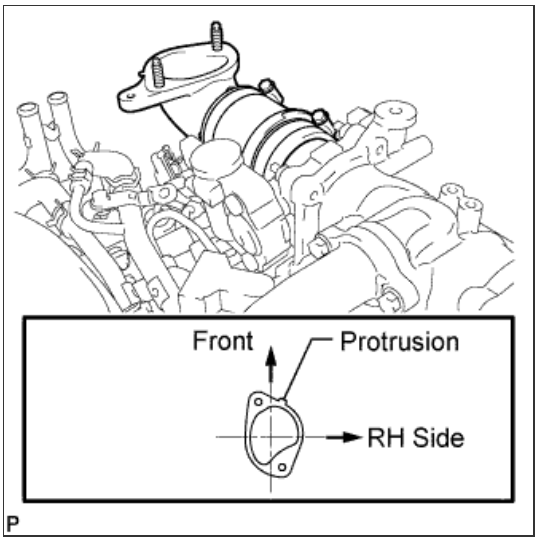


Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

7. CONNECT NO. 2 ENGINE OIL LEVEL DIPSTICK GUIDE

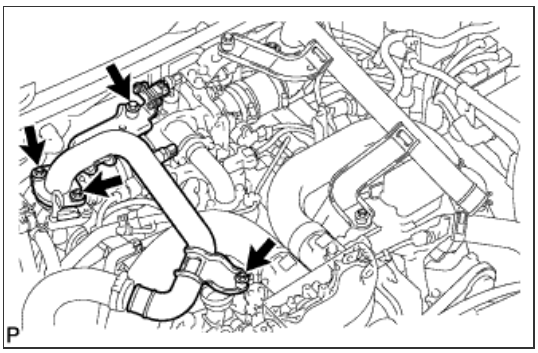
a. Connect the dipstick guide with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



8. INSTALL NO. 1 COOL AIR INLET (w/o Intercooler)

a. Install a new gasket to the air tube RH.



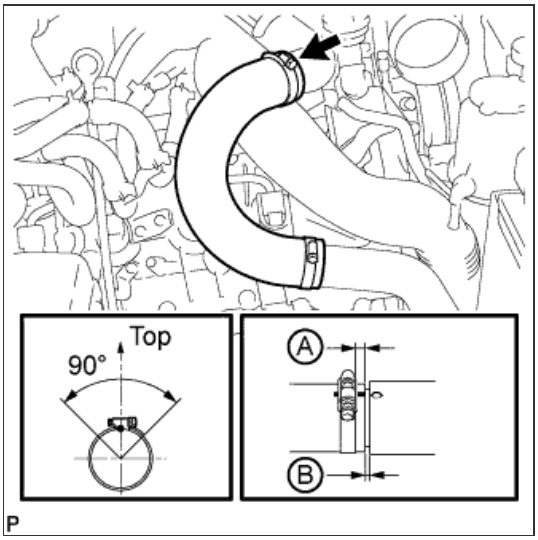
HINT:

Install the gasket with the protrusion facing as shown in the illustration.

b. Install the No. 1 cool air inlet with the 3 nuts and bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

c. Connect the vacuum hose, intake air temperature sensor connector and turbo pressure sensor connector.



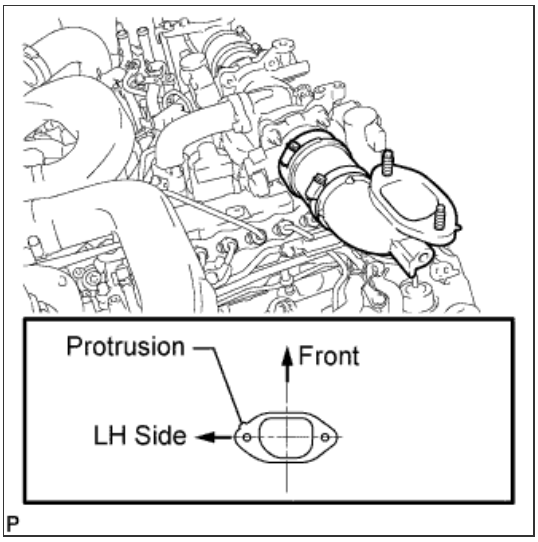
d. Connect the No. 1 air hose to the No. 1 cool air inlet.

e. Tighten the No. 1 air hose clamp.

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

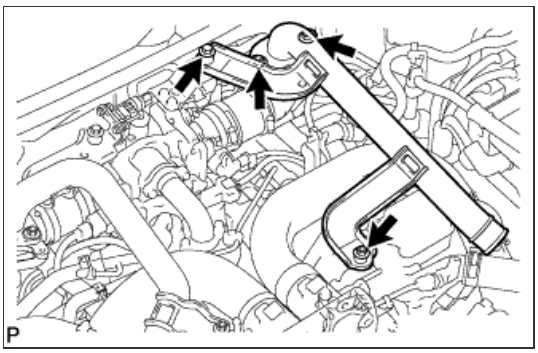
HINT:

- **Align the paint mark of the air hose with the protrusion and push on the air hose so that distance B is 0 to 3 mm (0 to 0.118 in.).**
- **Position the clamp so that distance A is 2 to 6 mm (0.0787 to 0.236 in.).**
- **Make sure the direction of the hose clamp is as shown in the illustration.**



9. INSTALL NO. 2 COOL AIR INLET (w/o Intercooler)

a. Install a new gasket to the air tube LH.

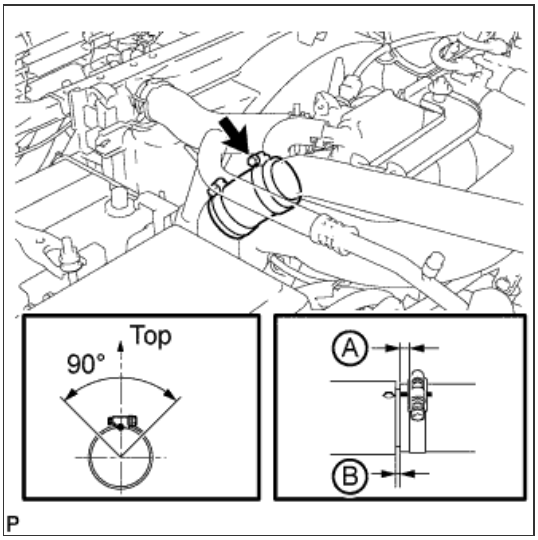


HINT:

Install the gasket with the protrusion facing as shown in the illustration.

b. Install the No. 2 cool air inlet with the 3 nuts and bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



c. Connect the No. 2 air hose to the No. 2 cool air inlet.

d. Tighten the No. 2 air hose clamp.

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

HINT:

- **Align the paint mark of the air hose with the protrusion and push on the air hose so that distance B is 0 to 3 mm (0 to 0.118 in.).**
- **Position the clamp so that distance A is 2 to 6 mm (0.0787 to 0.236 in.).**
- **Make sure the direction of the hose clamp is as shown in the illustration.**

10. INSTALL INTERCOOLER ASSEMBLY (w/ Intercooler)

a. (Click here)

11. FILL BRAKE FLUID RESERVOIR

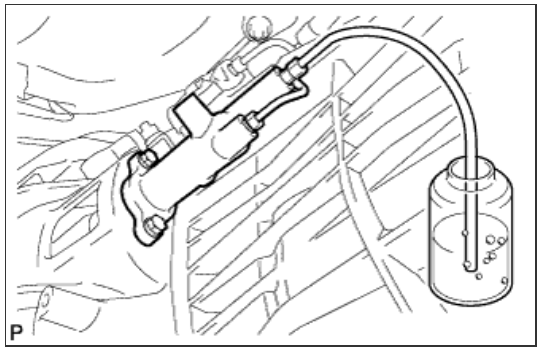
a. Fill the reservoir with brake fluid.

Brake Fluid:
SAE J1703 or FMVSS No. 116 DOT 3

12. BLEED CLUTCH LINE

a. Remove the release cylinder bleeder plug cap.

b. Connect a vinyl tube to the bleeder plug.



c. Depress the clutch pedal several times, and then loosen the bleeder plug while the pedal is depressed.

d. When fluid no longer comes out, tighten the bleeder plug, and then release the clutch pedal.

e. Repeat the previous 2 steps until all the air in the fluid is completely bled.

f. Tighten the bleeder plug.

Torque:
11 N*m{ 110 kgf*cm , 8 ft.*lbf }

g. Install the bleeder plug cap.

h. Check that all the air has been bled from the clutch line.

13. CHECK FLUID LEVEL IN RESERVOIR

a. Check the fluid level.
If the brake fluid level is low, check for leaks and inspect the disc brake pad. If necessary, refill the reservoir with brake fluid after repair or replacement.

Brake fluid:
SAE J1703 or FMVSS No. 116 DOT 3

14. INSPECT FOR CLUTCH FLUID LEAK

15. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

16. CHECK DIESEL THROTTLE BODY ASSEMBLY

a. Inspect the diesel throttle valve.

i. Turn the engine switch on (IG).

ii. Turn the engine switch off and wait 5 seconds.

HINT:

Be sure to turn off the engine switch before performing this inspection. The fully closed position of the diesel throttle valve is learned when the engine switch is turned off.

iii. Connect the intelligent tester to the DLC3.

iv. Turn the engine switch on (IG).

v. Turn the intelligent tester on.

vi. Enter the following menus: Powertrain / Engine / Data List / All Data / Diesel Throttle Angle.

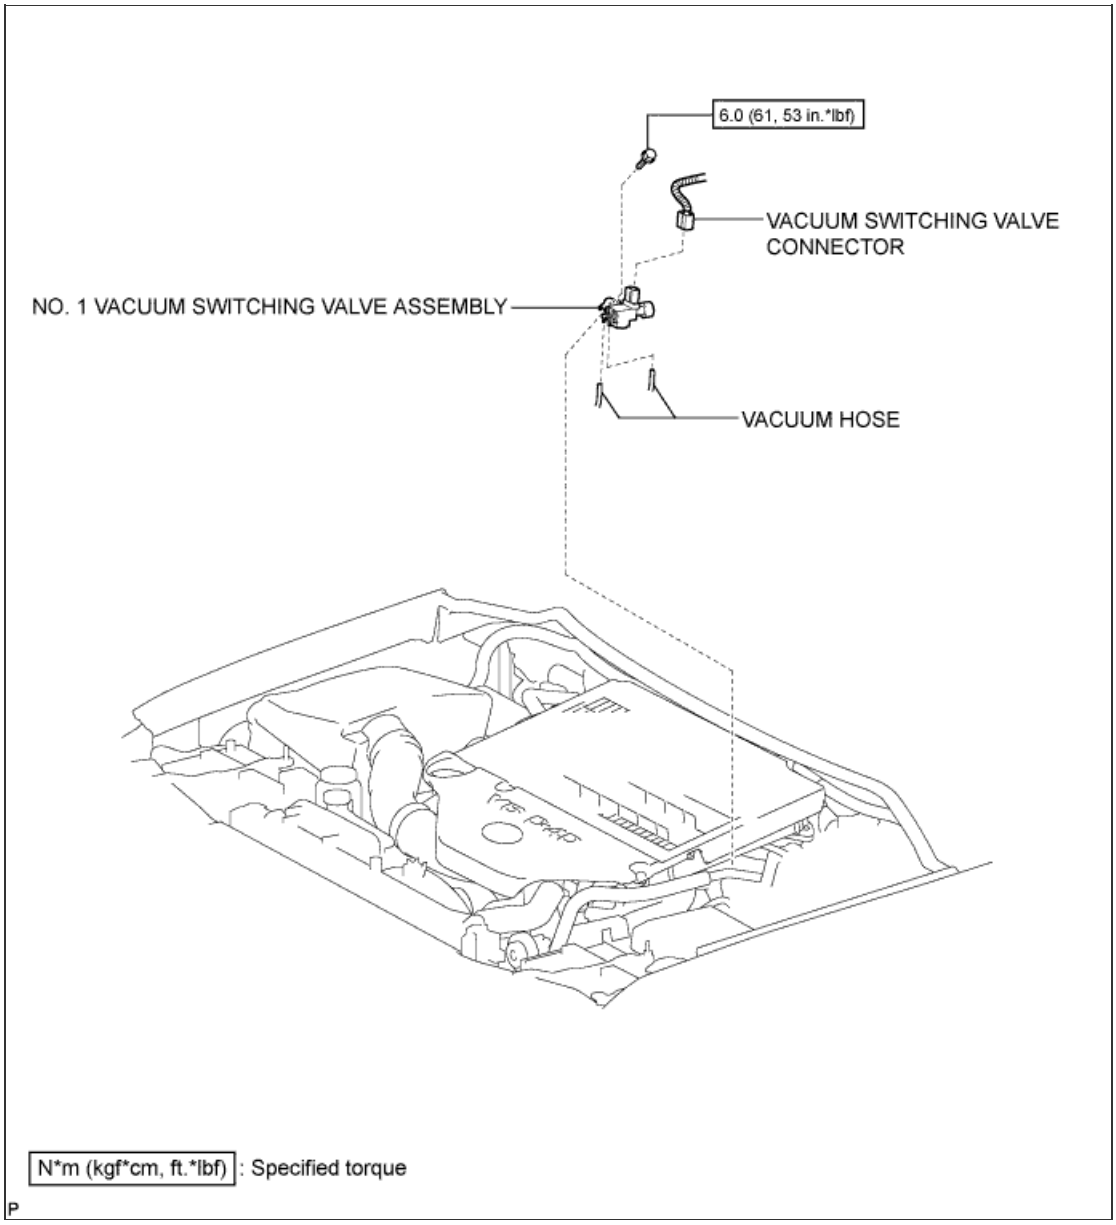
vii. Check that the value of "Diesel Throttle Angle" is within the specification.

Standard Diesel Throttle Angle:

Tester Display	Specified Condition
Diesel Throttle Angle	Throttle Angle: -5 to 5%

If the result is not as specified, replace the throttle body.

viii. Enter the following menus: Powertrain / Engine / Data List / All Data / Throttle Close Learning Val.



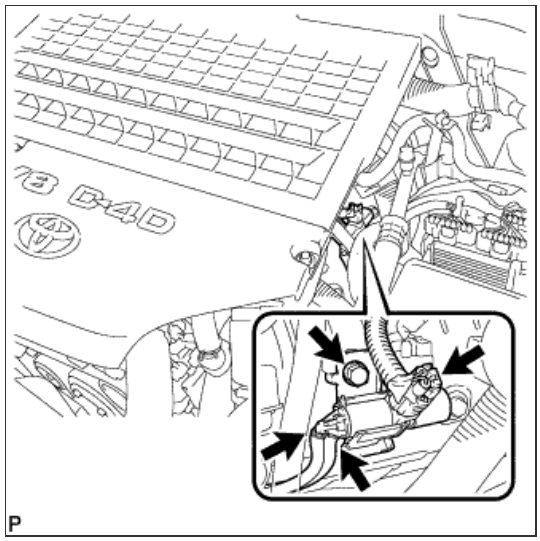
ix. Check that the value of "Throttle Close Learning Val" is within the specification.

Standard Throttle Valve Fully Closed:

Tester Display	Specified Condition
Throttle Close Learning Val.	14.25 to 21.25 deg

If the result is not as specified, replace the throttle body.

for Preparation Click here



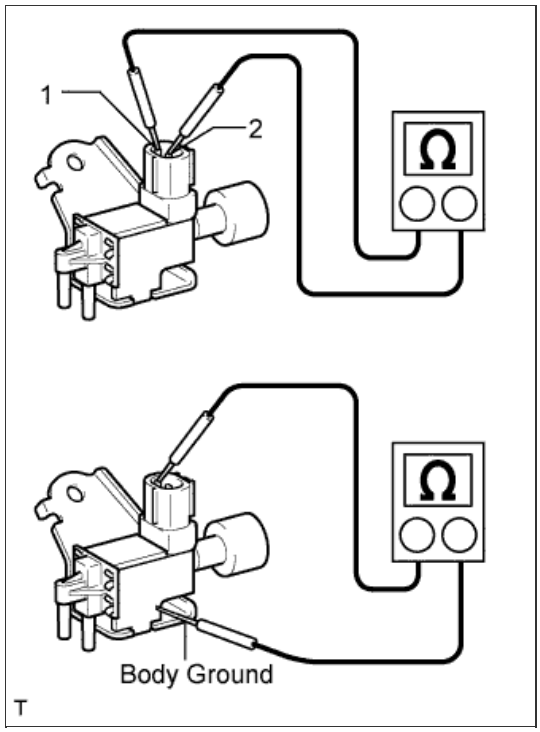
for Preparation Click here

1. REMOVE NO. 1 VACUUM SWITCHING VALVE ASSEMBLY

a. Disconnect the connector and 2 vacuum hoses.

b. Remove the bolt and VSV.

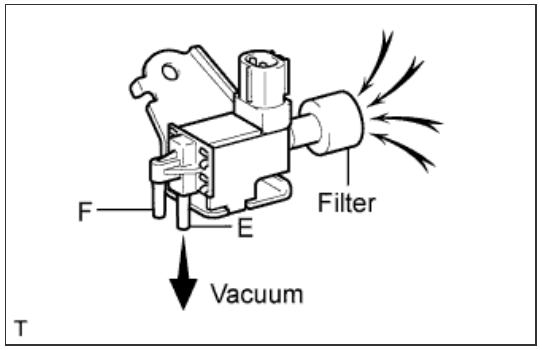
for Preparation Click here



1. INSPECT NO. 1 VACUUM SWITCHING VALVE ASSEMBLY

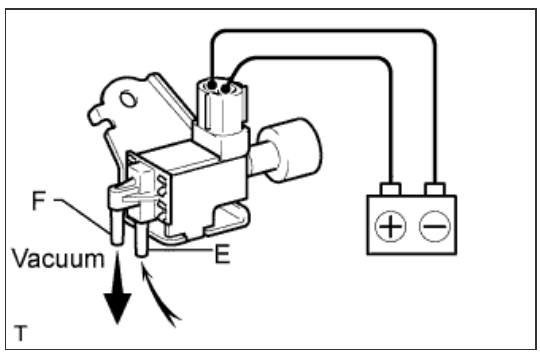
a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:



Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	37 to 44 Ω
1 - Body Ground 2 - Body Ground	Always	10 kΩ or higher

If result is not as specified, replace the vacuum switching valve assembly.

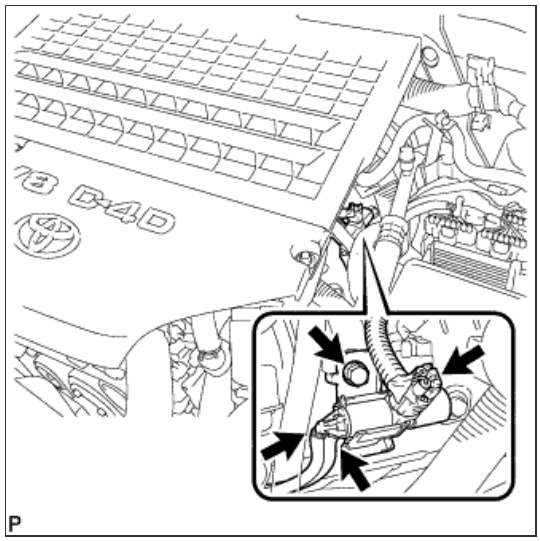


b. Check the VSV operation.

i. When applying vacuum to port E, check that air is sucked into the filter.
If the result is not as specified, replace the vacuum switching valve assembly.

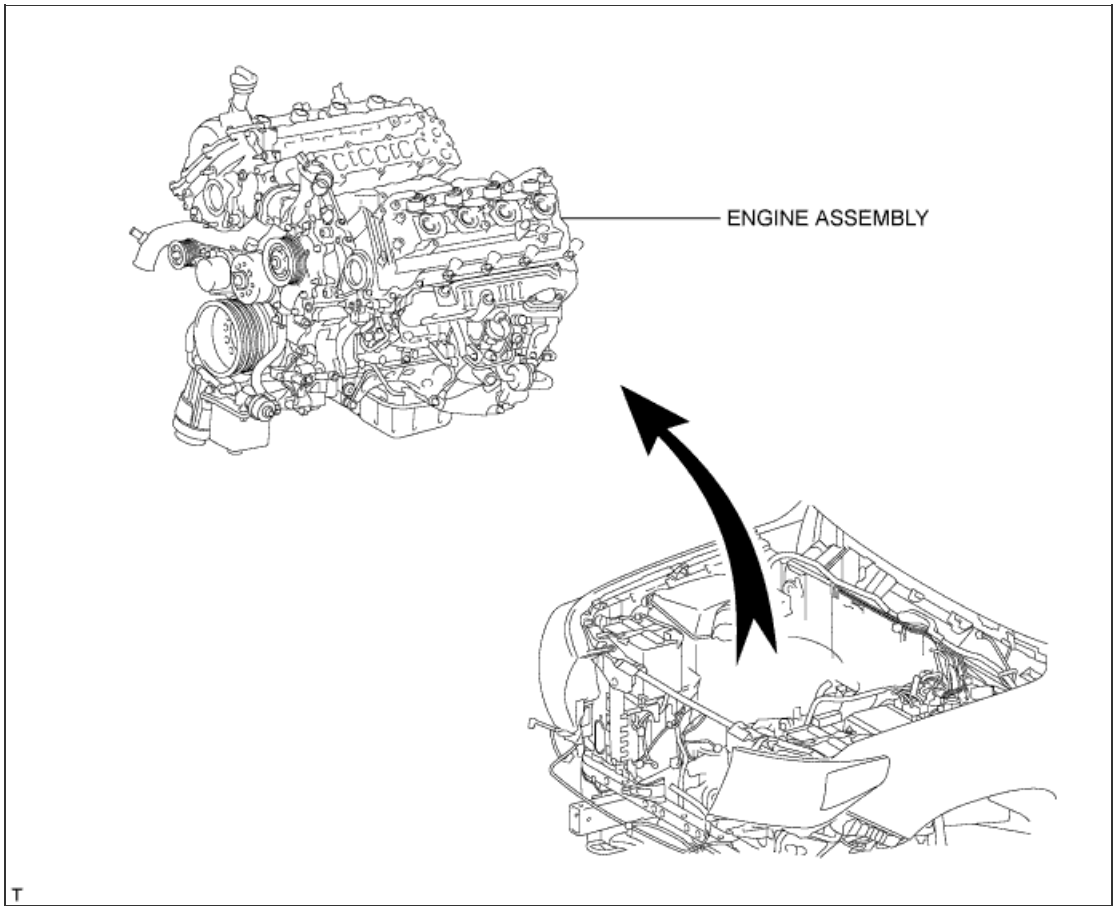
ii. Apply voltage across the terminals.

iii. When applying vacuum to port F, check that air is sucked into port E.
If the result is not as specified, replace the vacuum switching valve assembly.

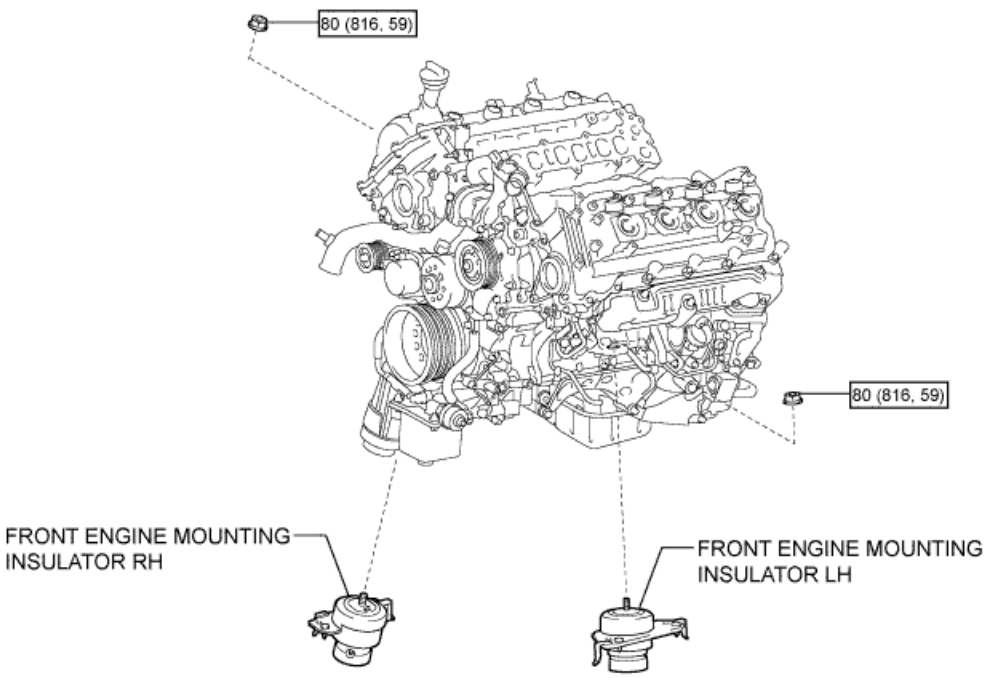


for Preparation Click here

1. INSTALL NO. 1 VACUUM SWITCHING VALVE ASSEMBLY



a. Install the VSV with the bolt.

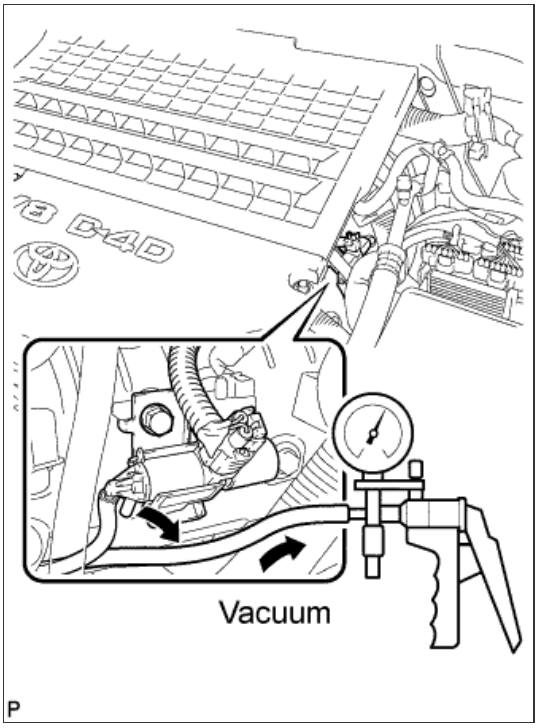


Torque:
6.0 N*m{ 61 kgf*cm , 53 in.*lbf }

b. Connect the 2 vacuum hoses and connector.

for Preparation [Click here]

N*m (kgf*cm, ft.*lbf) : Specified torque



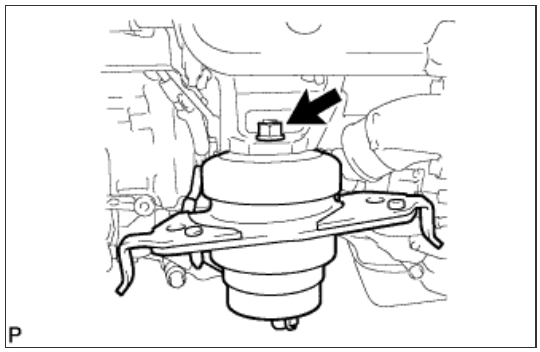
for Preparation Click here

1. CHECK VACUUM HOSE

a. Disconnect the vacuum hose shown in the illustration from the vacuum switching valve.

Using a vacuum pump, apply a vacuum of 80 kPa (600 mmHg, 25 in.Hg) and wait 1 minute.

c. Check that there is no change in the needle movement of the vacuum pump gauge.

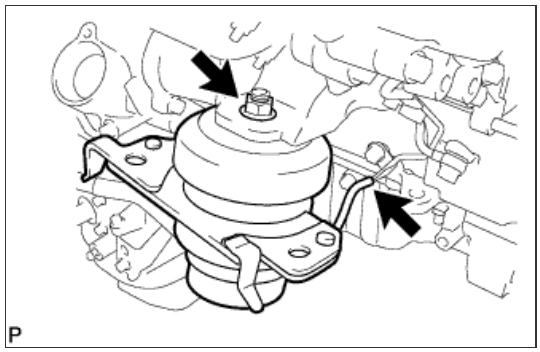


for Preparation Click here

1. REMOVE ENGINE ASSEMBLY

a. Remove the engine assembly (Click here).

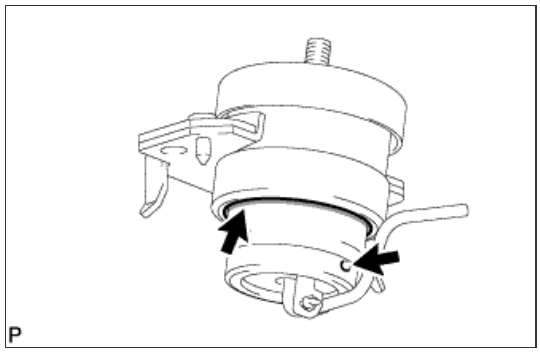
2. REMOVE FRONT ENGINE MOUNTING INSULATOR LH



a. Remove the nut and mounting insulator.

3. REMOVE FRONT ENGINE MOUNTING INSULATOR RH

a. Disconnect the vacuum hose.

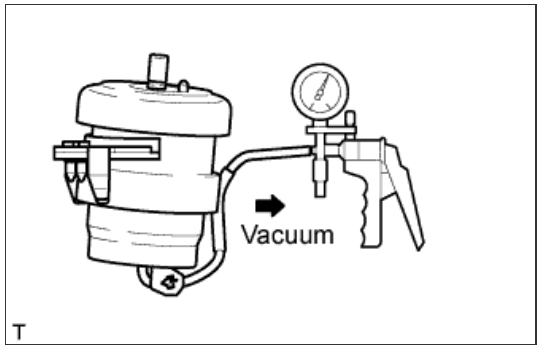


b. Remove the nut and mounting insulator.

for Preparation Click here

1. INSPECT RONT ENGINE MOUNTING INSULATOR

a. Visually check the front engine mounting insulator for leaks.
If the fluid leaks, replace the front engine mounting insulator.

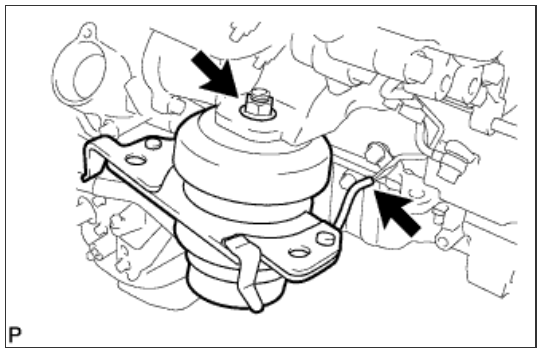


. INSPECT RONT ENGINE MOUNTING INSULATOR

a. Connect a vacuum pump to the engine mount insulator.

b. Using the vacuum pump, apply a vacuum of 80 kPa (600 mmHg. 25 in.Hg) and wait for 1 minute.

c. Check that there is no change in the needle movement of the vacuum pump gauge.
If the result is not as specified, replace the front engine mounting insulator.

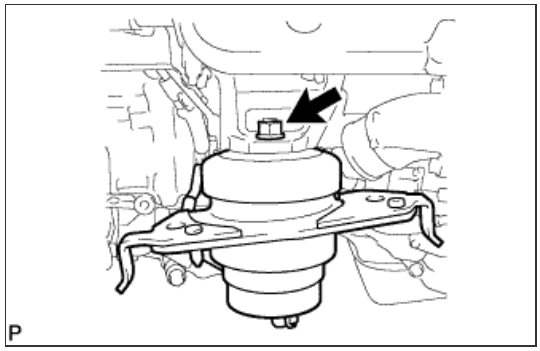


for Preparation Click here

1. INSTALL FRONT ENGINE MOUNTING INSULATOR RH

a. Install the mounting insulator with the nut.

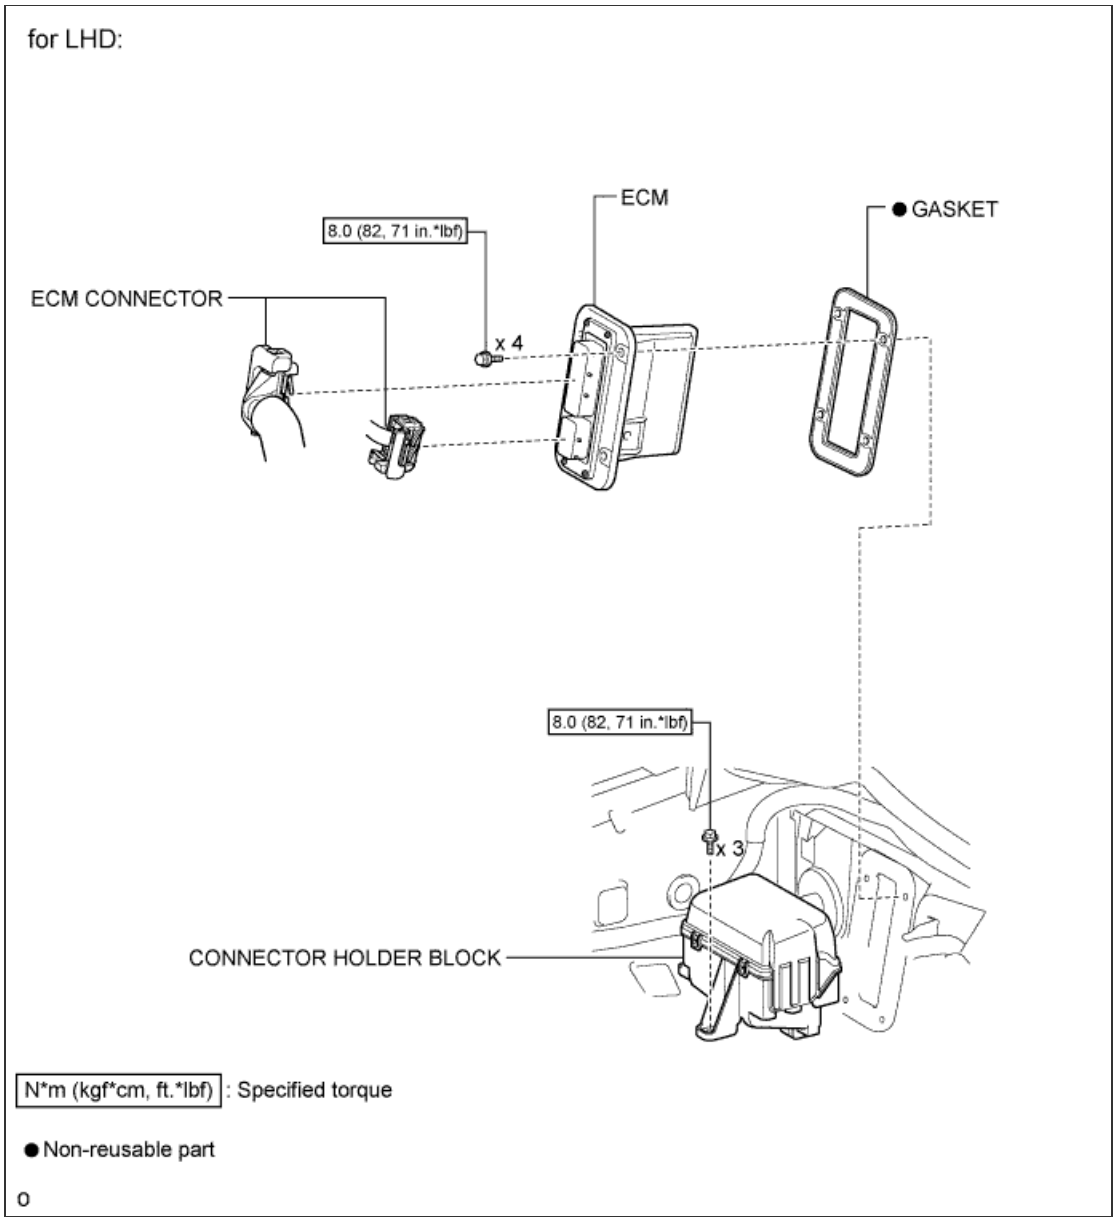
Torque:
80 N*m{ 816 kgf*cm , 59 ft.*lbf }



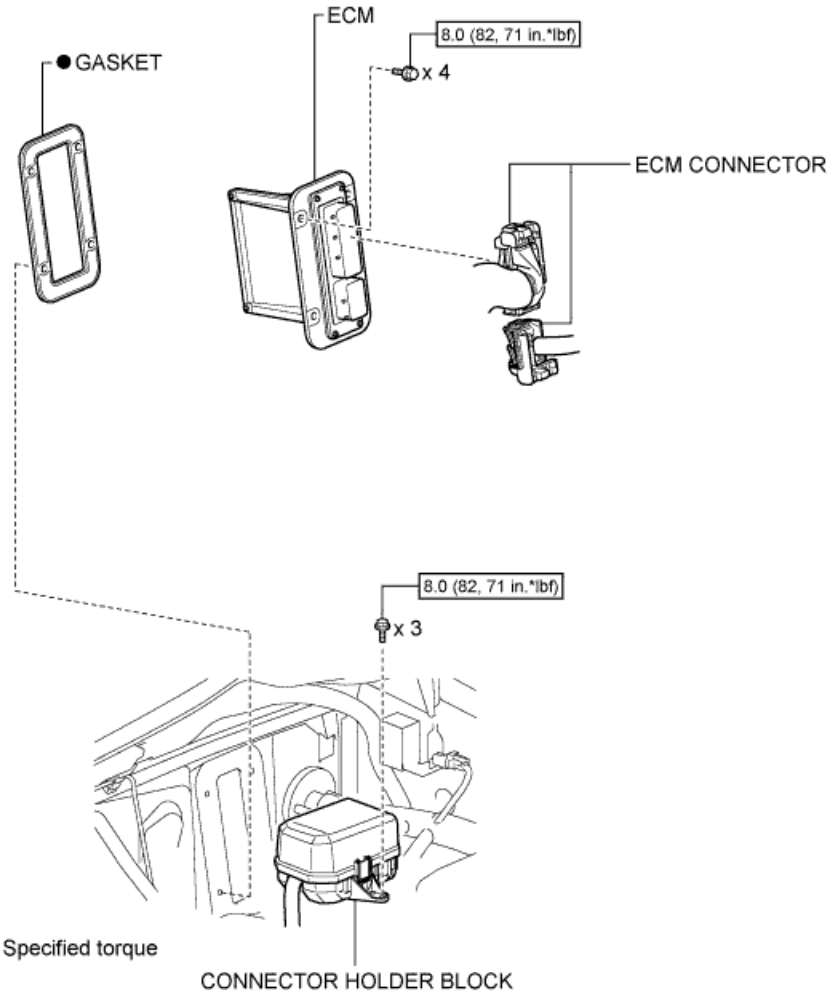
b. Connect the vacuum hose.

2. INSTALL FRONT ENGINE MOUNTING INSULATOR LH

a. Install the mounting insulator with the nut.



Torque:
80 N*m{ 816 kgf*cm , 59 ft.*lbf }



3. INSTALL ENGINE ASSEMBLY

a. Install the engine assembly (Click here).

for Preparation Click here

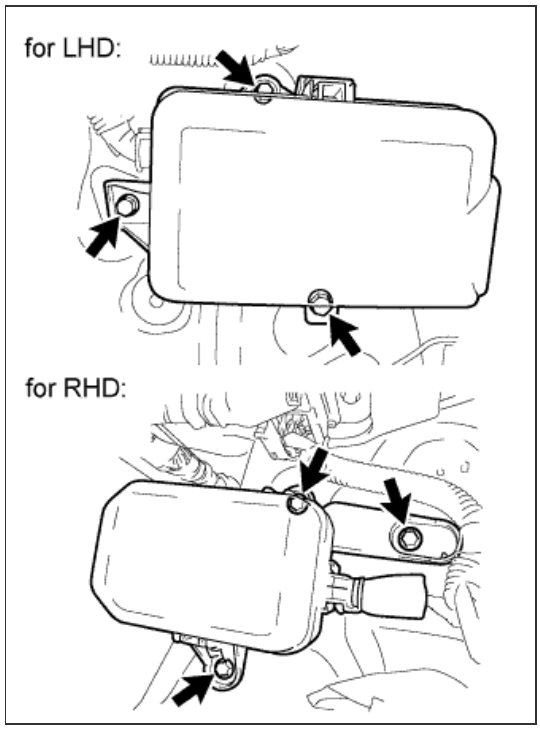
o

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:



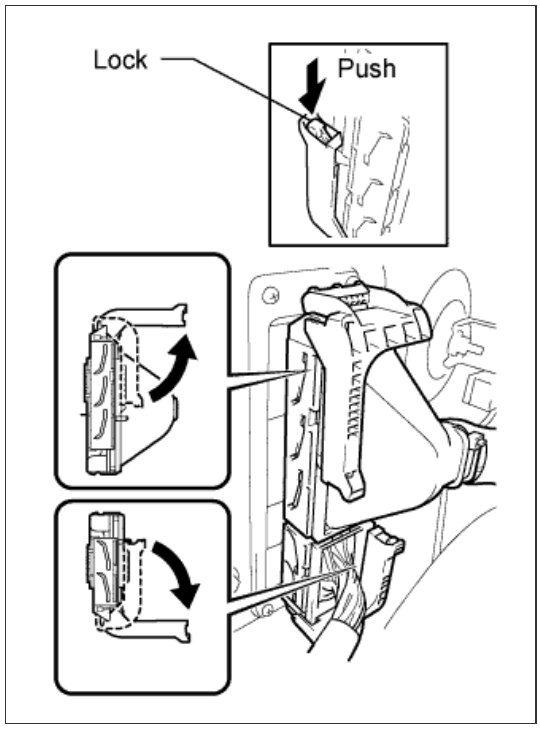
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable some systems need to be initialized after the cable is reconnected (Click here).

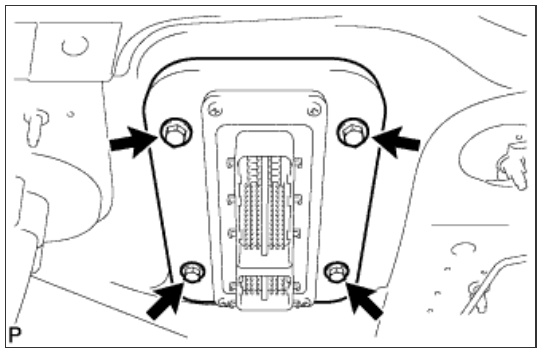
2. DISCONNECT CONNECTOR HOLDER BLOCK

a. Remove the 3 bolts and move the connector holder block so that the ECM can be removed in the next step.



3. REMOVE ECM

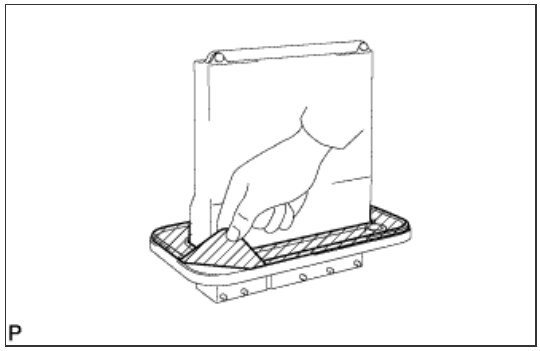
a. Raise the 2 levers while p shing the locks on the 2 levers.



NOTICE:

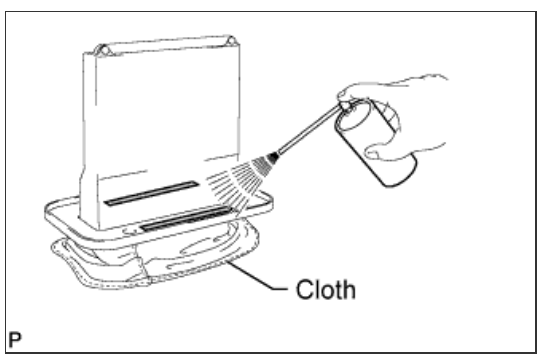
Make s re that the lock levers are raised 90° as shown in the ill stration before disconnecting the ECM connectors. Fail re to do this may ca se the ECM connectors to break.

b. Disconnect the 2 connectors.

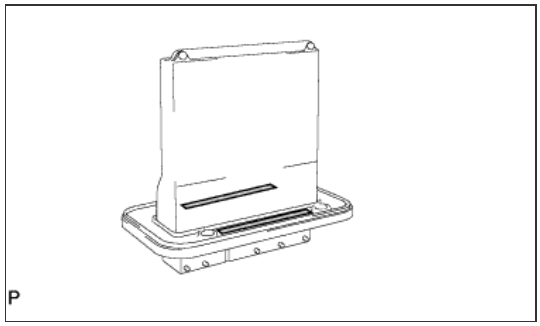


c. Remove the 4 bolts and ECM.

4. REMOVE GASKET



a. Peel off the gasket.



b. Spray gasket remover or eq ivalent on the remaining tape of the gasket.

NOTICE:

When sing gasket remover or eq ivalent, cover the ECM connector with a cloth.

c. Remove the tape of the gasket witho t sing bladed ob ects.

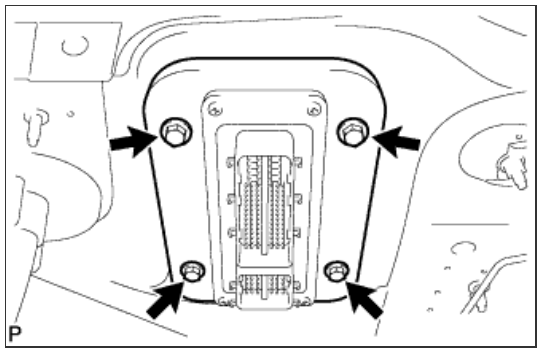
P

for Preparation Click here

1. INSTALL GASKET

a. Clean the ECM seal surface with non-residue solvent.

b. Install a new gasket to the ECM.

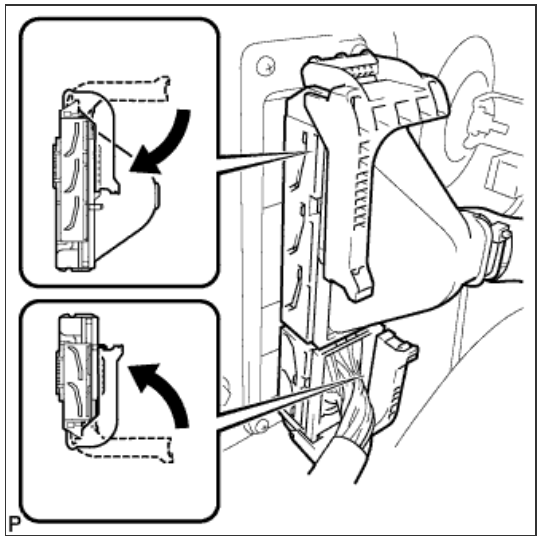


2. INSTALL ECM

a. Install the ECM with the bolts.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

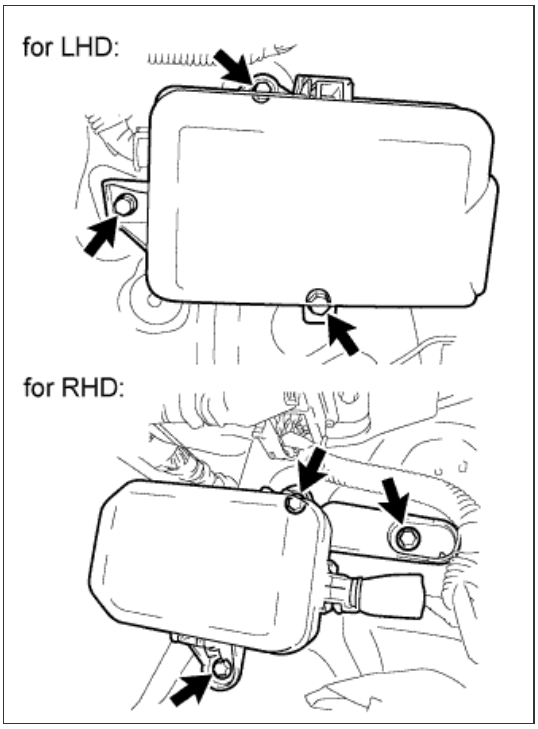
NOTICE:



- **Make sure the gasket is not folded or caught on any area on the surrounding part.**
- **Make sure there is no foreign matter caught between the gasket and surrounding part.**
- **Do not damage the gasket.**

b. Connect the 2 ECM connectors and push each lock lever down to lock the ECM connectors.

NOTICE:



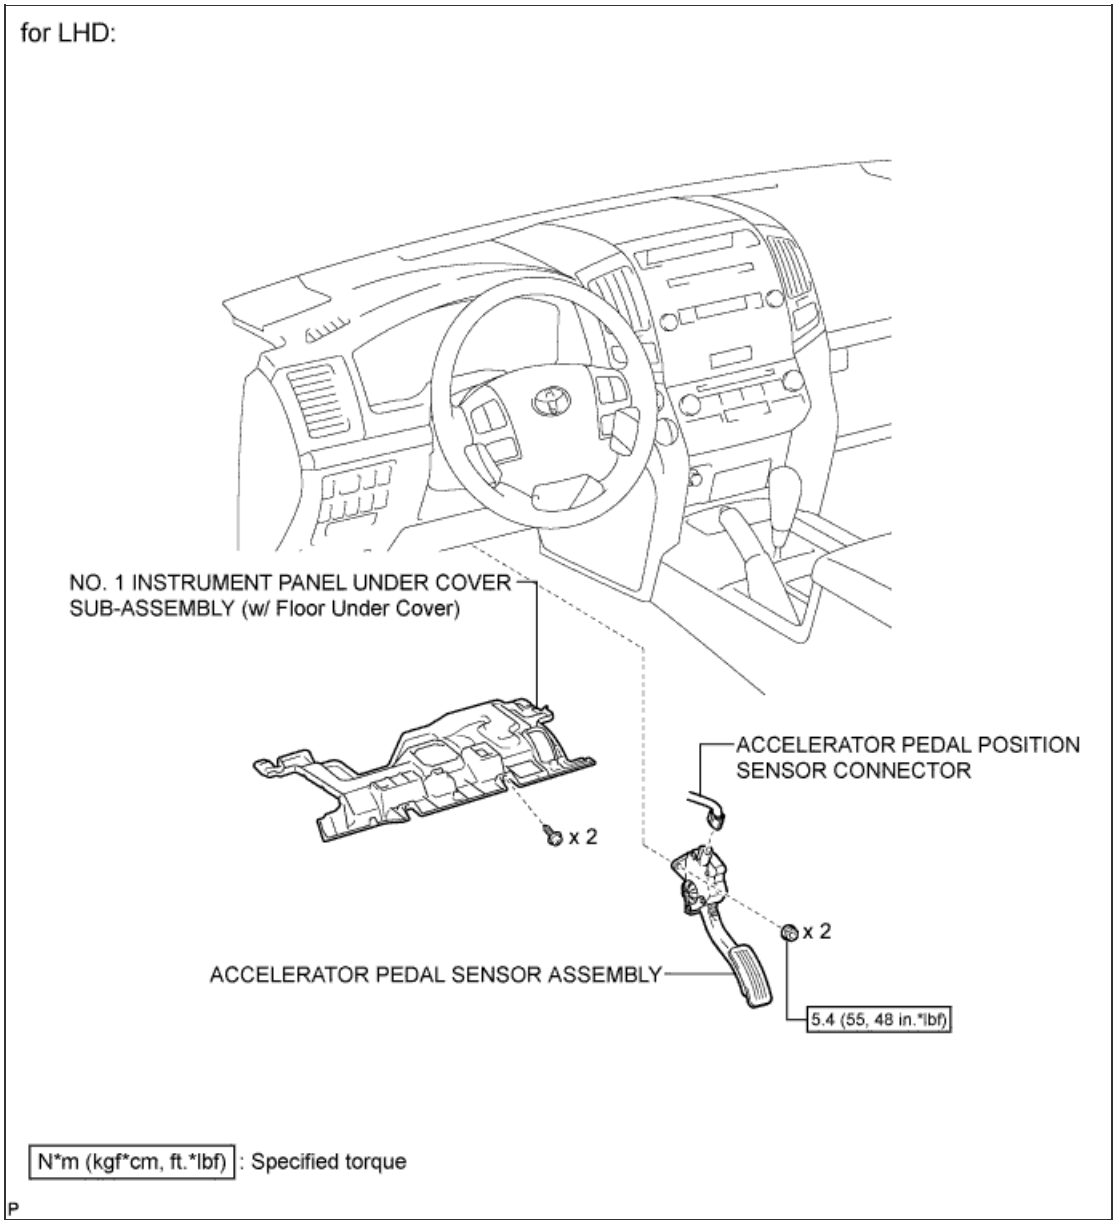
- **Be careful not to allow dirt, water, or other foreign matter to adhere to the connecting parts when connecting the connectors.**
- **Do not twist the wire harness when connecting the ECM connectors.**
- **Make sure that the lock lever is raised 90° before connecting the ECM connectors. Failure to do this may cause the lock lever and terminals to break.**
- **Make sure that the levers are securely locked.**

3. CONNECT CONNECTOR HOLDER BLOCK

a. Connect the connector holder block with the 3 bolts.

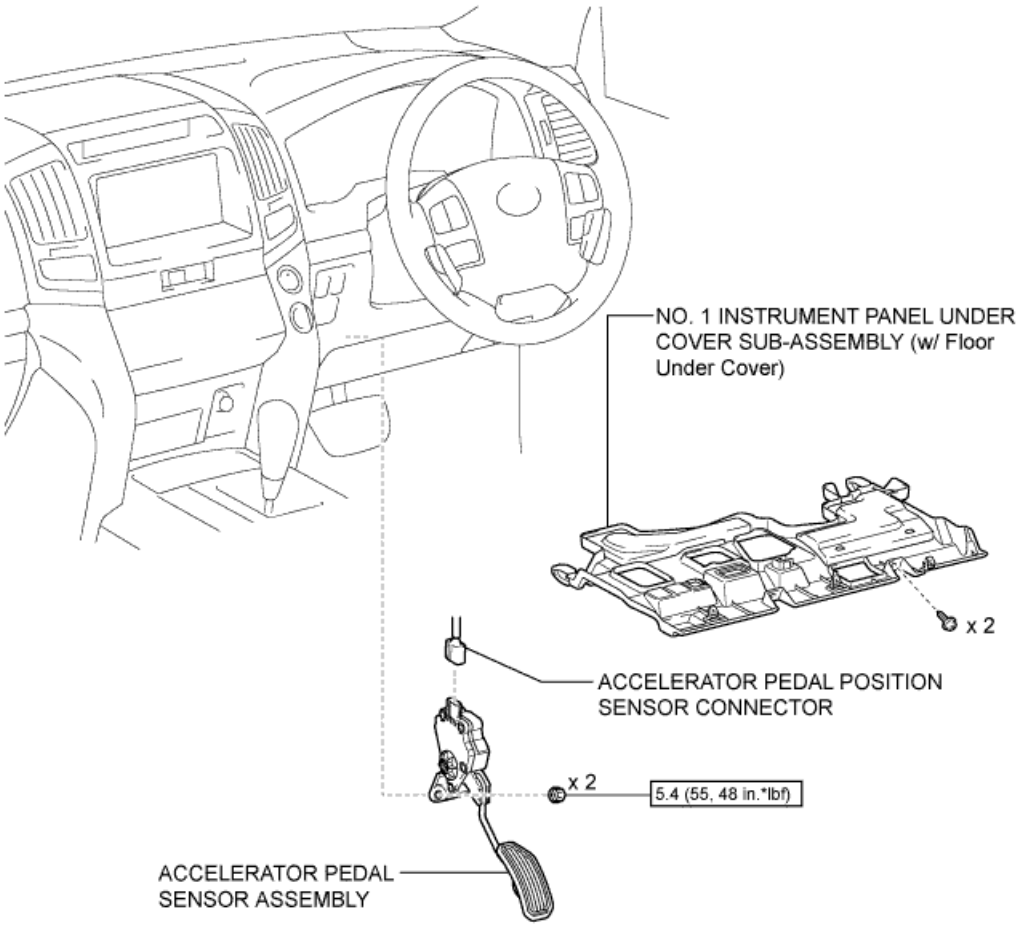
Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

4. REGISTER IN ECDR COMPENSATION CODE



a. Register the injector co ensation code (Click here).

5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



NOTICE:

bn disconnecting the cable, so e syste s need to be initiali ed after the cable is reconnected (Click here).

1. INSPECT ACCELERATOR PEDAL SENSOR ASSEMBLY

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

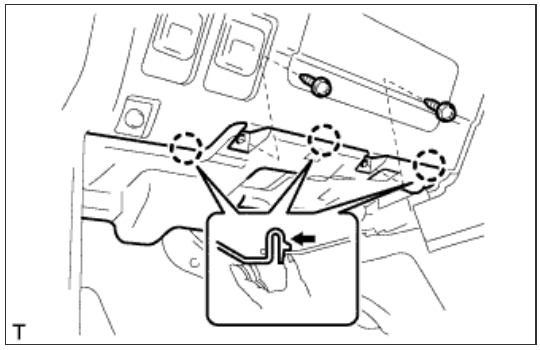
d. Enter the following menus: Powertrain / Engine / Data List / All Data / Acceler tor Position No. 1 nd Acceler tor Position No. 2.

e. Re the v lue displ ed on the tester.

Standard Voltage:

Acceler tor Ped l Oper tions	Acceler tor Position No. 1	Acceler tor Position No. 2
Rele sed	0.5 to 1.1 V	1.2 to 2.0 V
Depressed	2. to 4.5 V	3.4 to 5.0 V

If the result is not as specified, chec the cceler tor ped l, wire h rness or ECM.

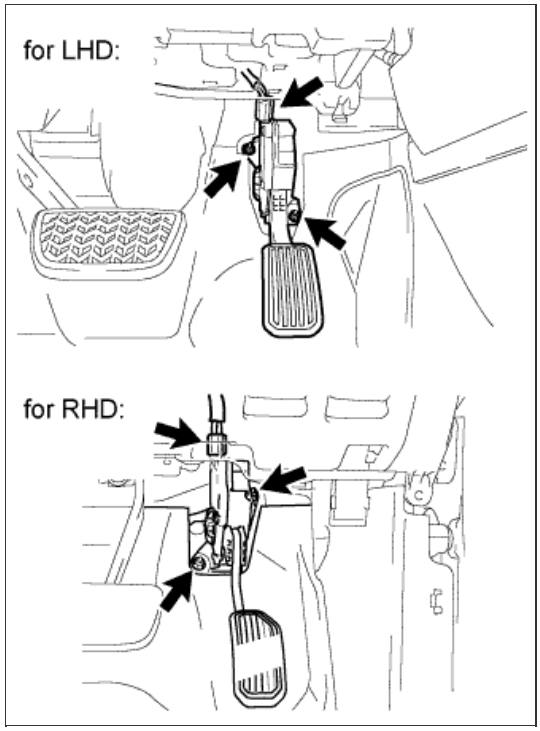


for Preparation Click here

1. REMOVE NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Floor Under Cover)

a. Remove the 2 screws.

b. Detach the 3 claws.



c. Disconnect the connectors and remove the No. 1 instrument panel under cover.

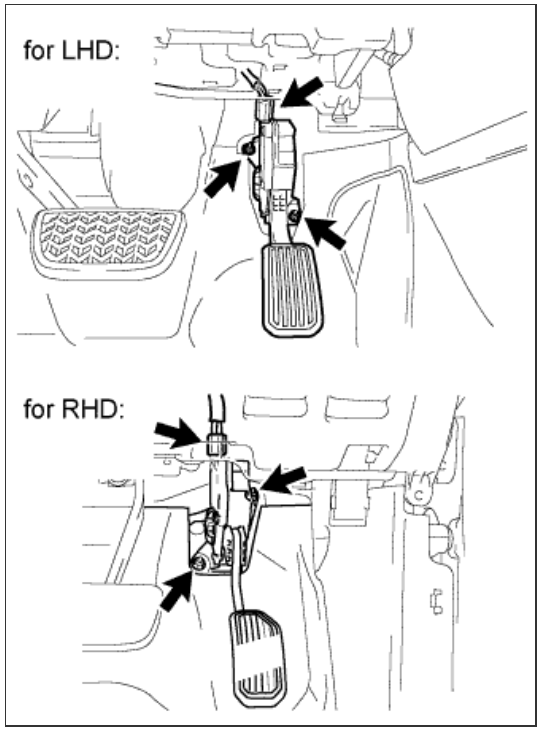
2. REMOVE ACCELERATOR PEDAL SENSOR ASSEMBLY

a. Disconnect the accelerator pedal position sensor connector.

b. Remove the 2 nuts and accelerator pedal.

for Preparation Click here

1. INSTALL ACCELERATOR PEDAL SENSOR ASSEMBLY



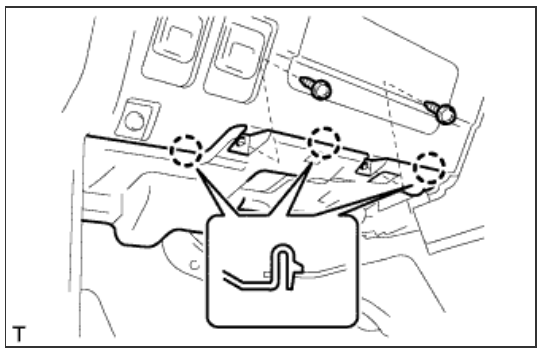
NOTICE:

- **Avoid physical shocks to the accelerator pedal assembly.**
- **Do not disassemble the accelerator pedal assembly.**

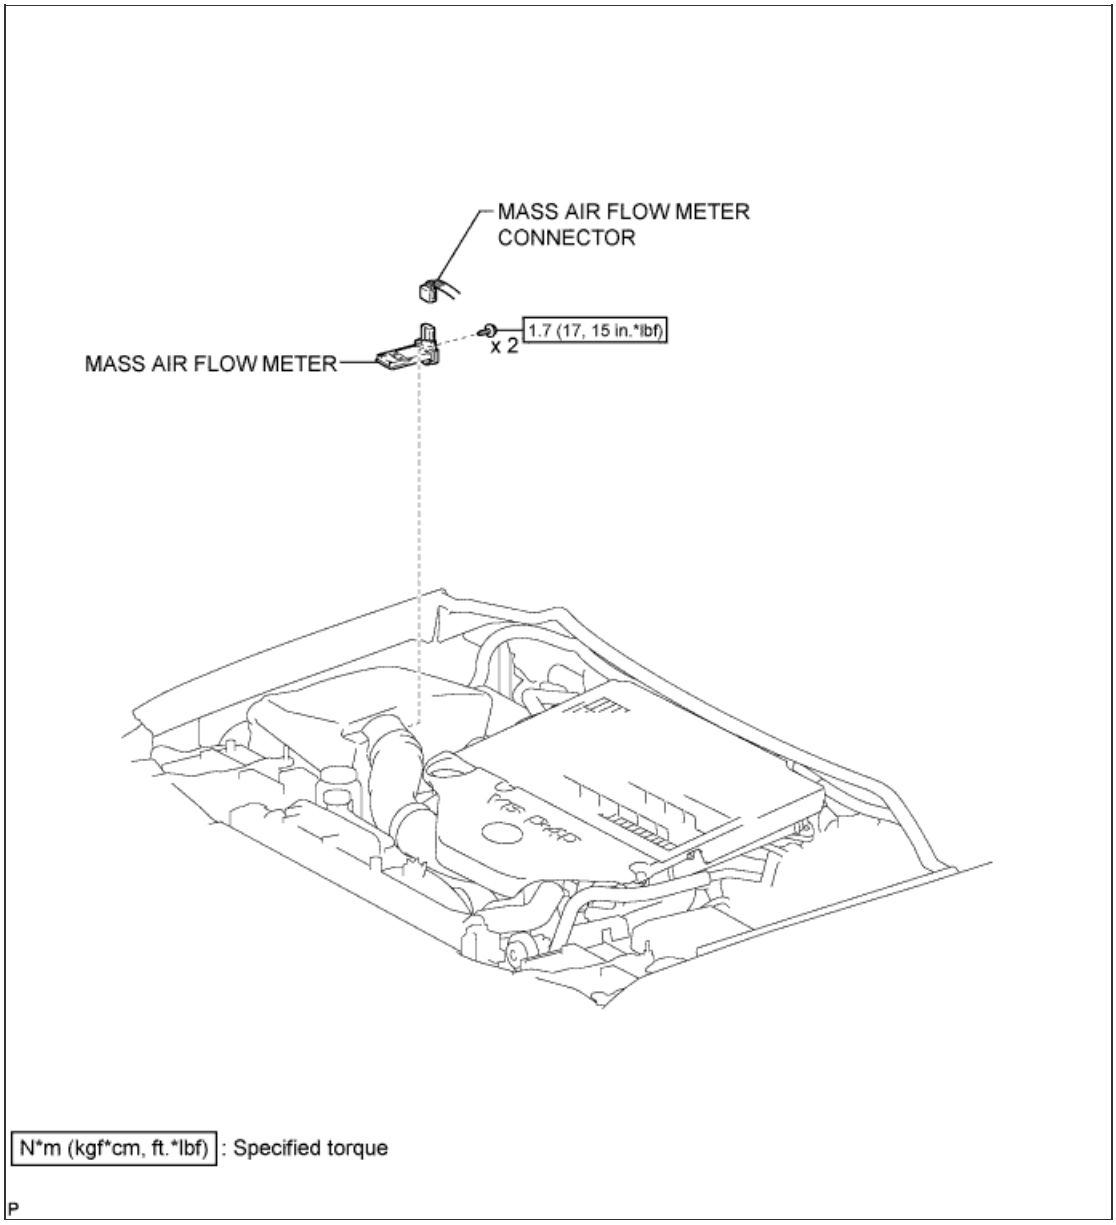
a. Install the accelerator pedal with the 2 nuts.

Torque:
5.4 N*m{ 55 kgf*cm , 48 in.*lbf }

b. Connect the accelerator pedal position sensor connector.



2. INSTALL NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Floor Under Cover)



a. Connect the connectors.

b. Attach the 3 claws to install the o. 1 instrument panel under cover.

c. Install the 2 screws.

for Preparation Click here

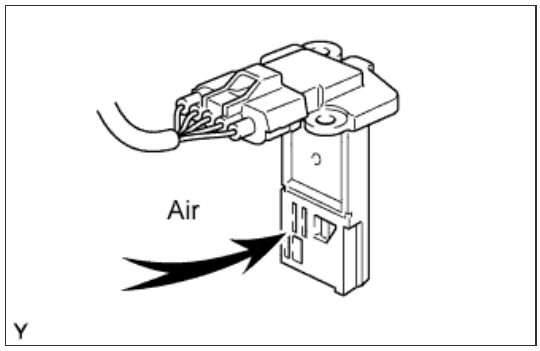
1. CHECK MASS AIR FLOW METER

a. Check the mass air flow value.



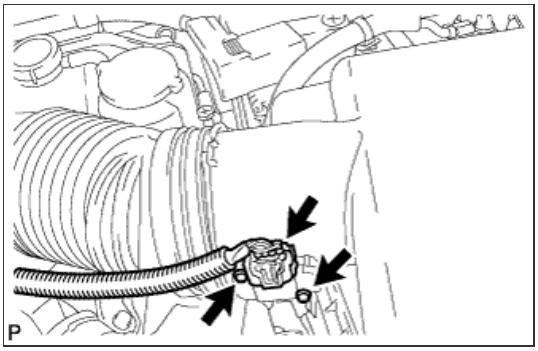
i. Connect the intelligent tester to the DLC3.

ii. Turn the engine switch on (IG).

iii. Turn the intelligent tester on.

i Enter the following menus: Powertrain / Engine / Data List / All Data / MAF.

Blow air into the MAF meter, and check that the MAF value fluctuates. If the result is not as specified, check the MAF meter (Click here), or wiring and ECM (Click here).



for Preparation Click here

1. REMOVE MASS AIR FLOW METER

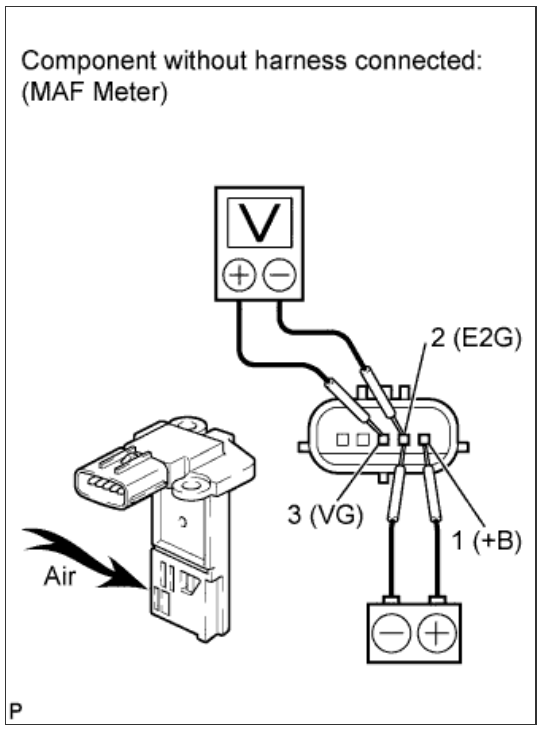
a. Disconnect the MAF meter connector.

b. Remove the 2 screws and MAF meter.

for Preparation Click here

1. INSPECT MASS AIR FLOW METER

a. Check the output voltage.

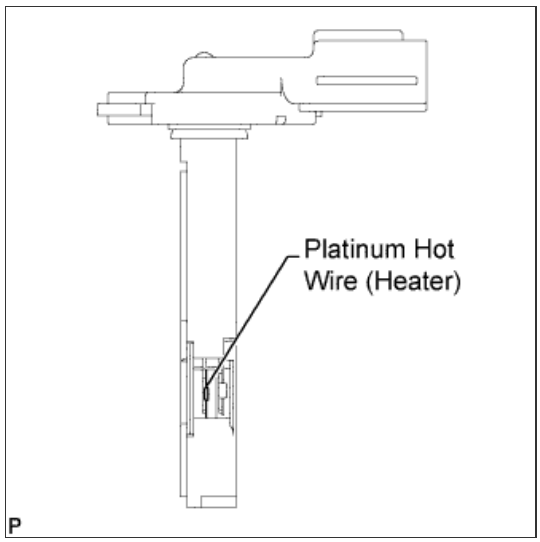


i. Apply battery voltage across terminals 1 (+B) and 2 (E2G).

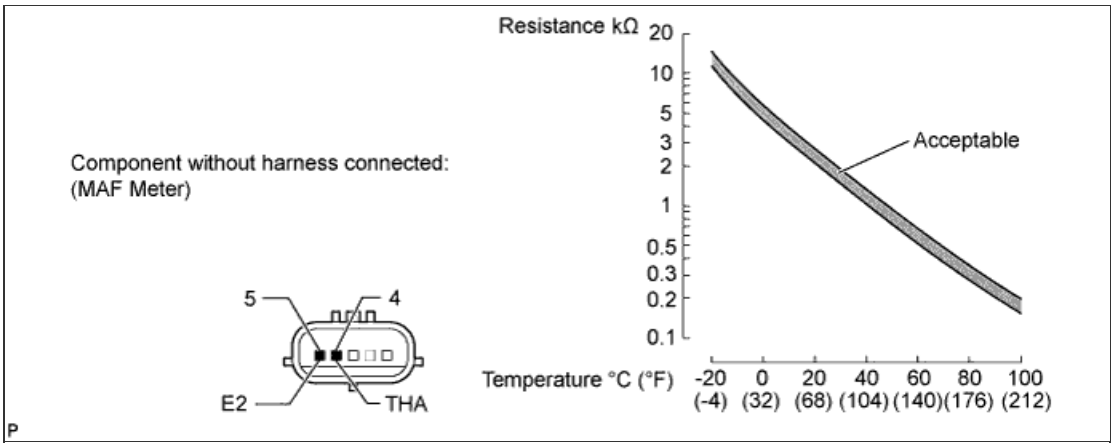
NOTICE:

While using the battery during inspection, do not bring the positive and negative tester probes too close to each other as a short circuit may occur.

ii. Using a voltmeter, connect the positive (+) tester probe to terminal 3 (VG), and negative (-) tester probe to terminal 2 (E2G).



iii. Blow air into the MAF meter, and check that the voltage fluctuates.
If the result is not as specified, replace the MAF meter.



b. Perform a visual check for any foreign matter on the platinum hot wire (heater) of the mass air flow meter shown in the illustration.

OK:
There is no foreign material.

If the result is not as specified, replace the mass air flow meter.

c. Check the IAT sensor.

i. Measure the resistance according to the value(s) in the table below.

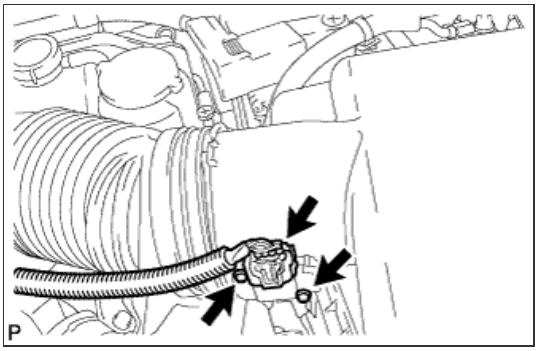
Standard Resistance:

Tester Connection	Condition	Specified Condition
4 (THA) - 5 (E2)	-20°C (-4°F)	12.5 to 16.9 kΩ
	20°C (68°F)	2.19 to 2.67 kΩ
	60°C (140°F)	0.5 to 0.68 kΩ

If the result is not as specified, replace the MAF meter.

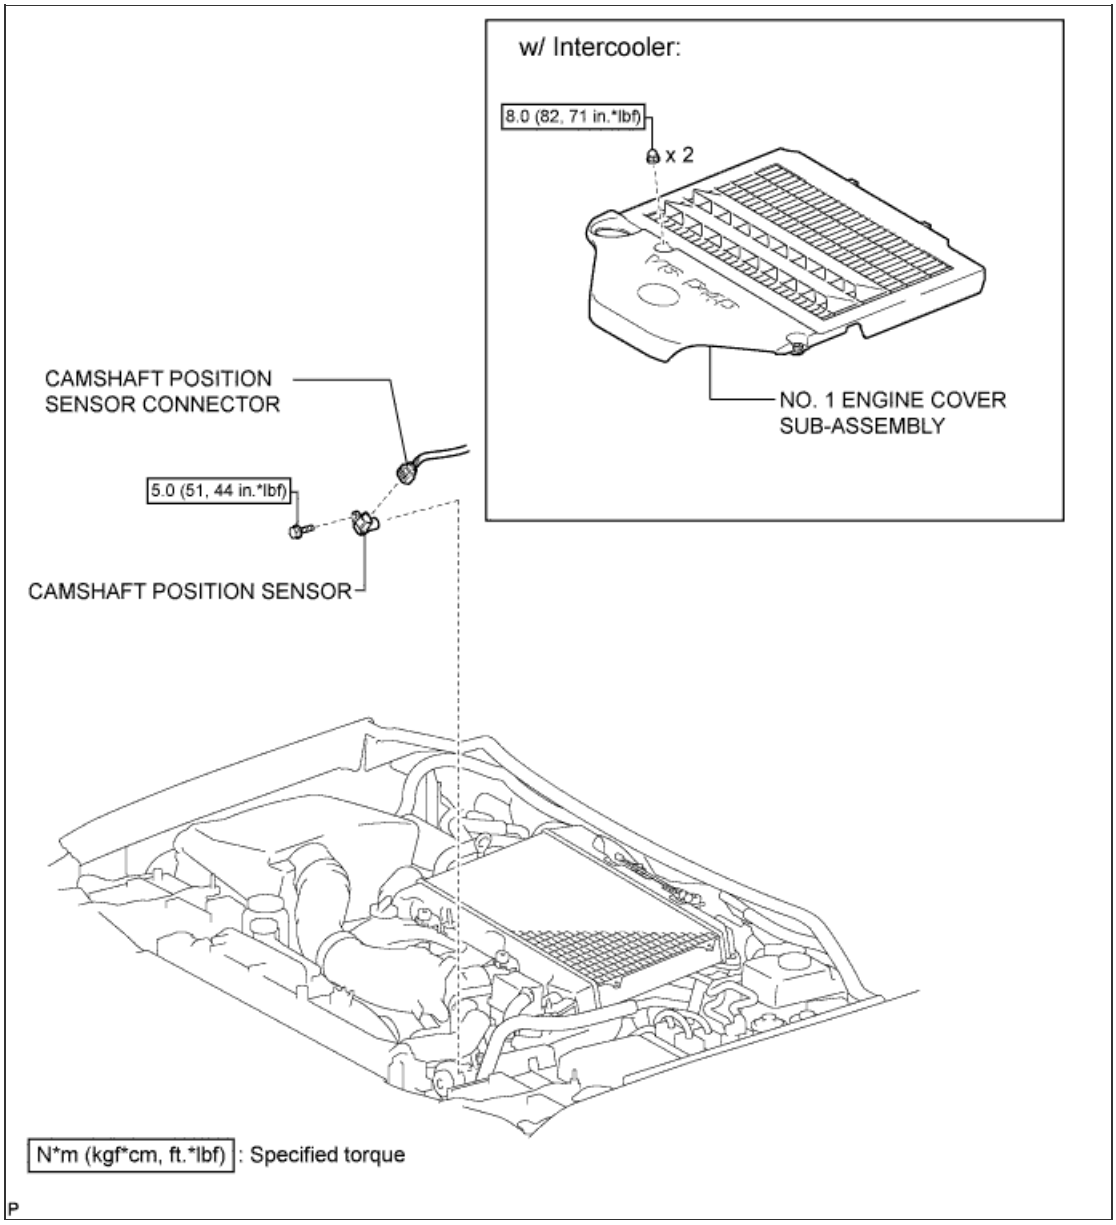
for Preparation Click here

1. INSTALL MASS AIR FLOW METER



a. Install the MAF meter with the 2 screws.

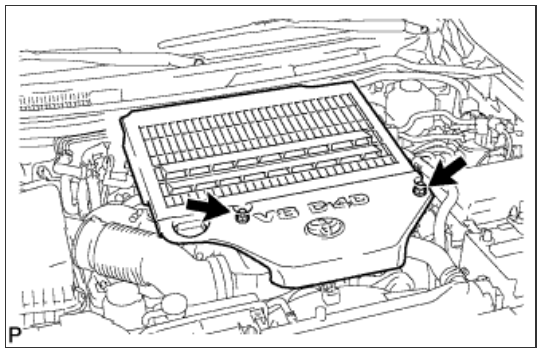
Torque:
1.7 N*m{ 17 kgf*cm , 15 in.*lbf }



NOTICE:

Make sure the gasket is not pinched.

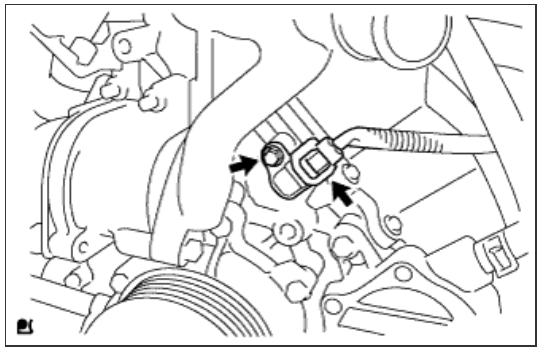
b. Connect the MAF meter connector.



for Preparation Click here

for Preparation Click here

1. REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY (w/ Intercooler)



a. Remove the 2 nuts and No. 1 engine cover.

2. REMOVE CAMSHAFT POSITION SENSOR

a. Disconnect the sensor connector.

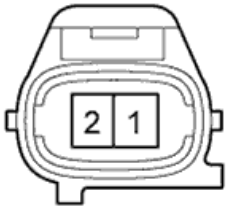
b. Remove the bolt and sensor.

for Preparation Click here

1. INSPECT CAMSHAFT POSITION SENSOR

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:



Tester Connection	Condition	Specified Condition
1 - 2	Hot	835 to 1 Ω
	Cold	1060 to 16 Ω

NOTICE:

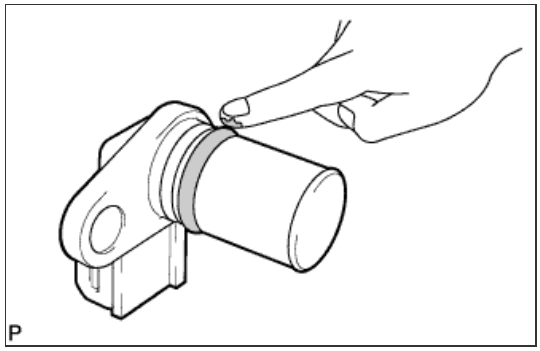
In the table above, the terms "cold" and "hot" refer to the temperature of the sensor. "Cold" means approximately -10 to 50°C (1 to 122°F). "Hot" means approximately 50 to 100°C (122 to 212°F).

If the result is not as specified, replace the sensor.

Component without harness connected:
(Camshaft Position Sensor)

N

for Preparation Click here

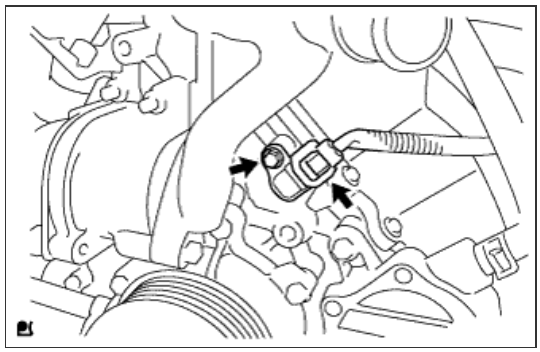


1. INSTALL CAMSHAFT POSITION SENSOR

a. Apply a light coat of engine oil to the O-ring.

NOTICE:

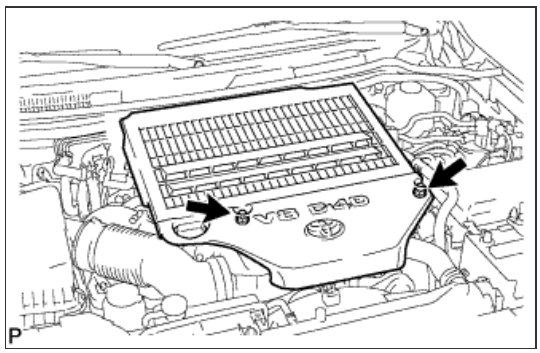
When reusing the sensor, inspect the O-ring.



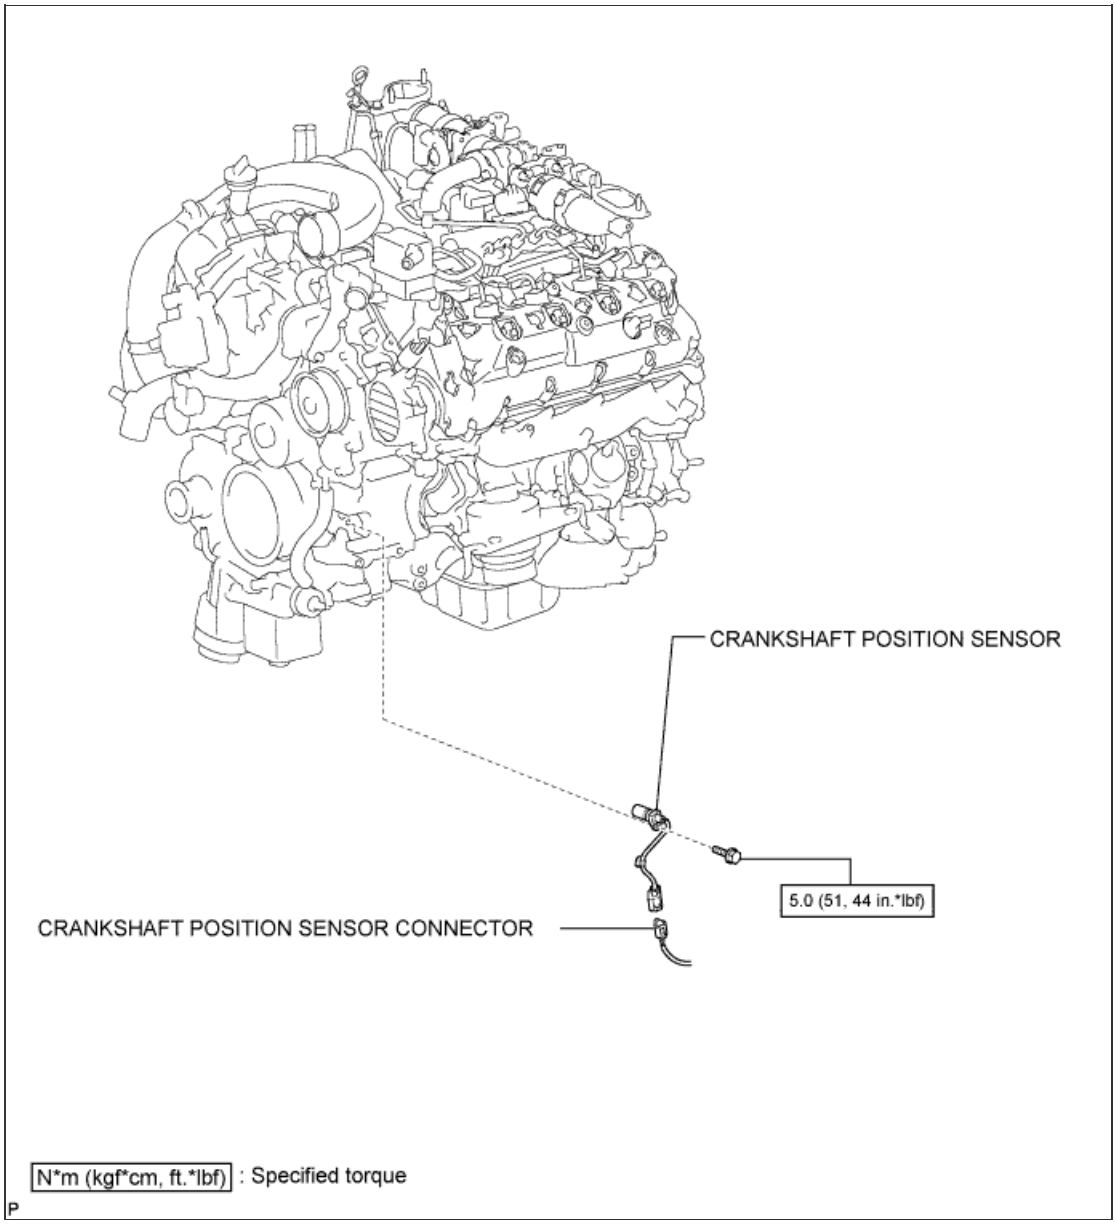
If the O-ring has scratches or cuts, replace the sensor.

b. Install the sensor with the bolt.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }



c. Connect the sensor connector.



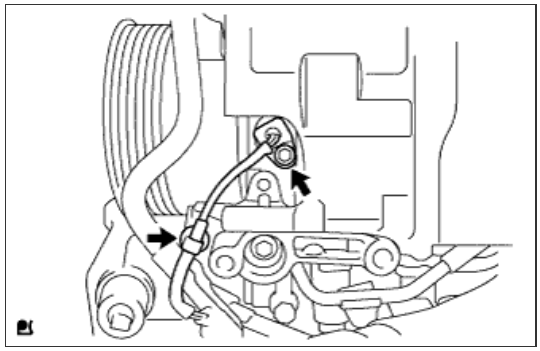
2. INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY (w/ Intercooler)

a. Install the engine cover with the 2 nuts.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

for Preparation Click here

for Preparation Click here



1. REMOVE COOLER COMPRESSOR ASSEMBLY

a. Remove the cooler compressor (Click here).

2. REMOVE CRANKSHAFT POSITION SENSOR

a. Disconnect the sensor wire harness clamp.

b. Remove the bolt and sensor.

for Preparation Click here

1. INSPECT CRANKSHAFT POSITION SENSOR

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (NE) - 2 (NE-)	Hot	1 to 2 Ω
	Cold	20 to 3225 Ω

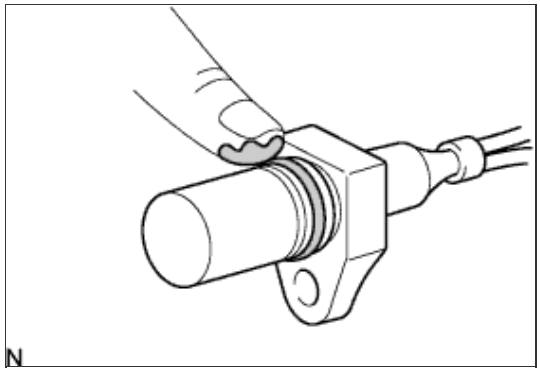
NOTICE:

In the table above the terms "cold" and "hot" refer to the temperature of the sensor. "Cold" means approximatel to 50 C (14 to 122). "Hot" means approximatel to 100 C (122 to 212).

If the result is not as specified replace the sensor.

Component without harness connected:
(Crankshaft Position Sensor)

for Preparation Click here

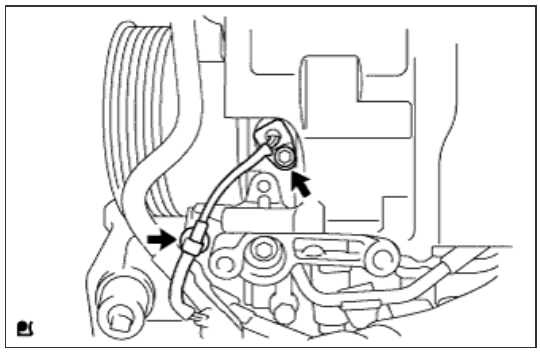


1. INSTALL CRANKSHAFT POSITION SENSOR

a. Apply a light coat of engine oil to the O-ring.

NOTICE:

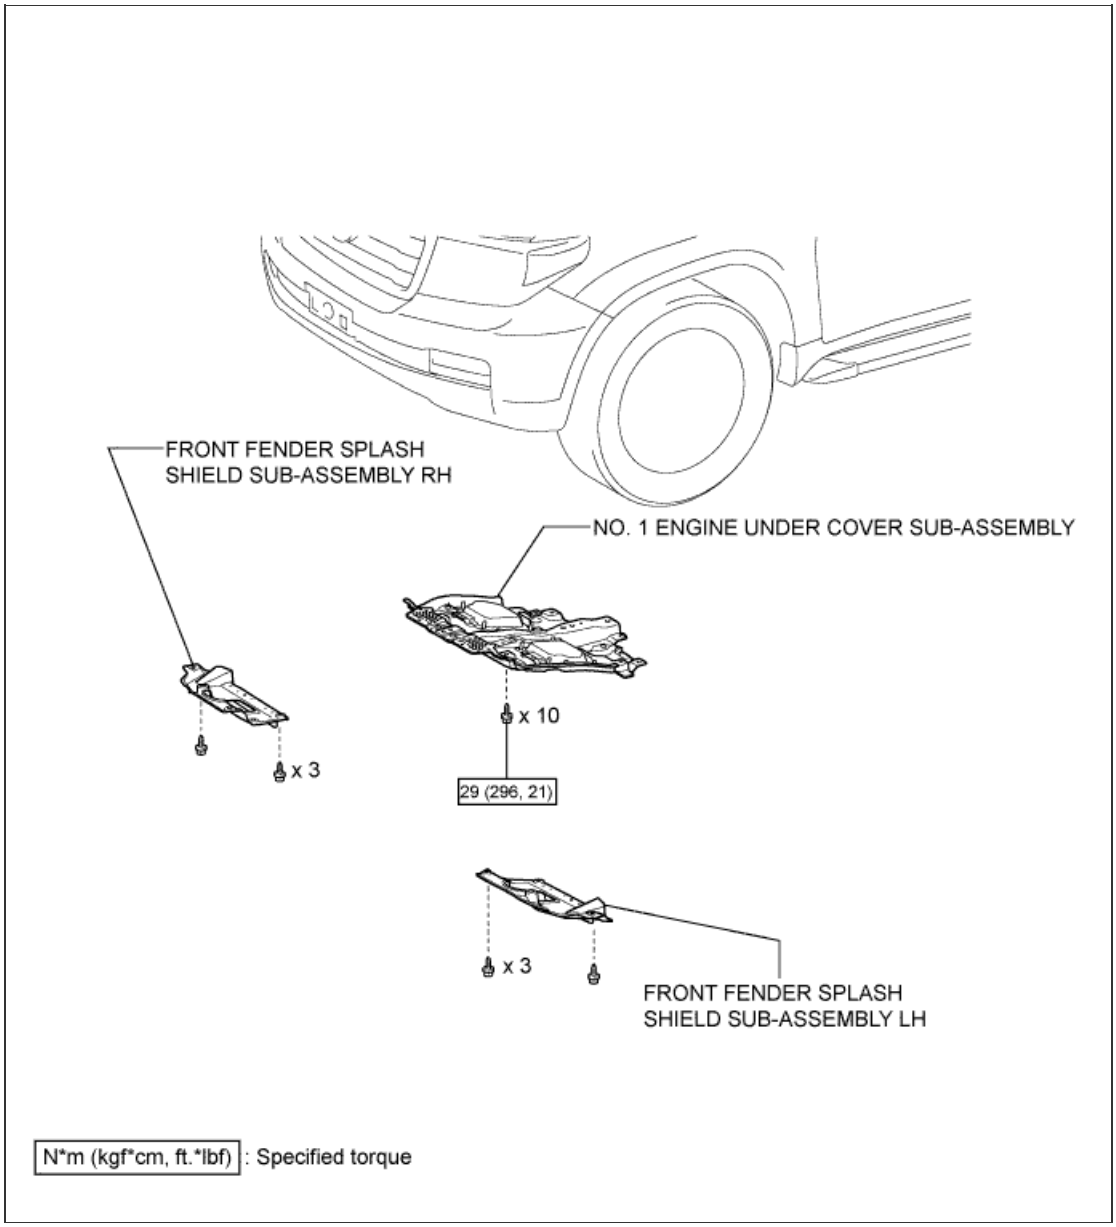
When reusing the sensor, inspect the O-ring.



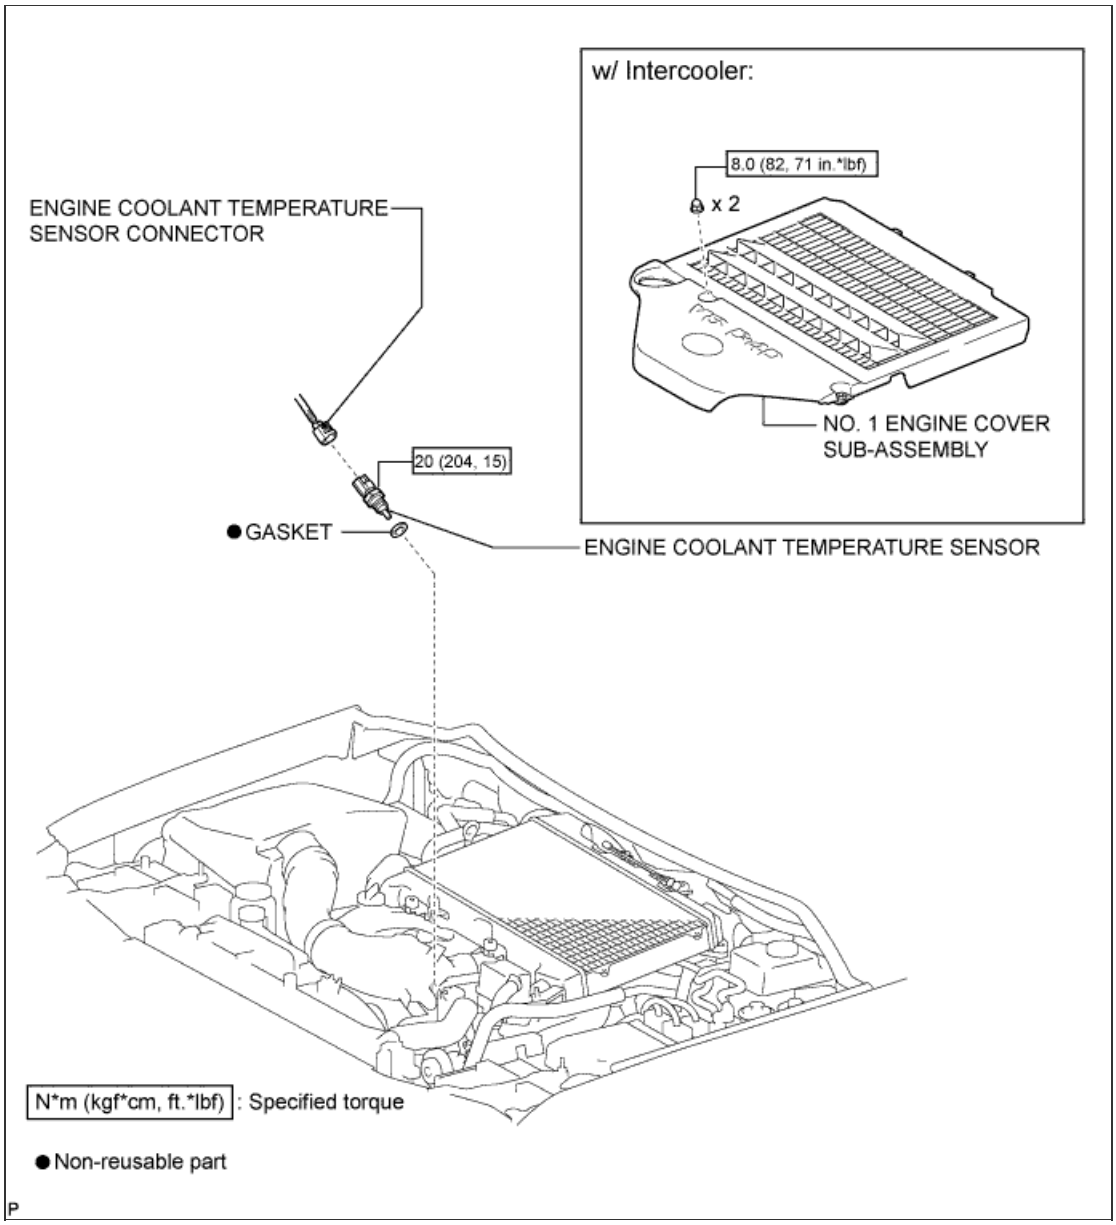
If the O-ring has scratches or cuts, replace the sensor.

b. Install the sensor with the bolt.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }



c. Connect the sensor wire harness clamp.



2. INSTALL COOLER CO PRESSOR ASSE L

a. Install the cooler compressor (Click here).

for Preparation [Click here]

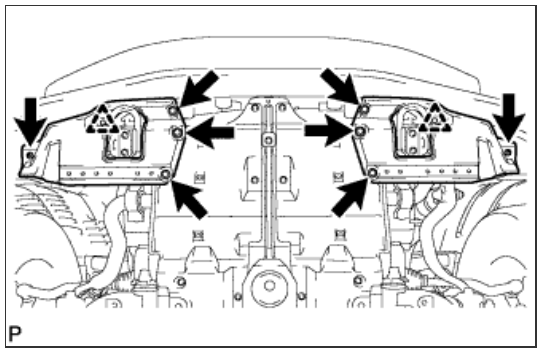
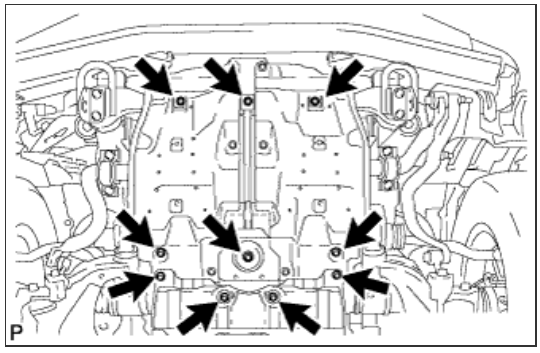
1. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH



a. Remove the 3 bolts and screw.

b. Loosen the clip and remove the splash shield.

2. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH



a. Remove the 3 bolts and screw.

b. Loosen the clip and remove the splash shield.

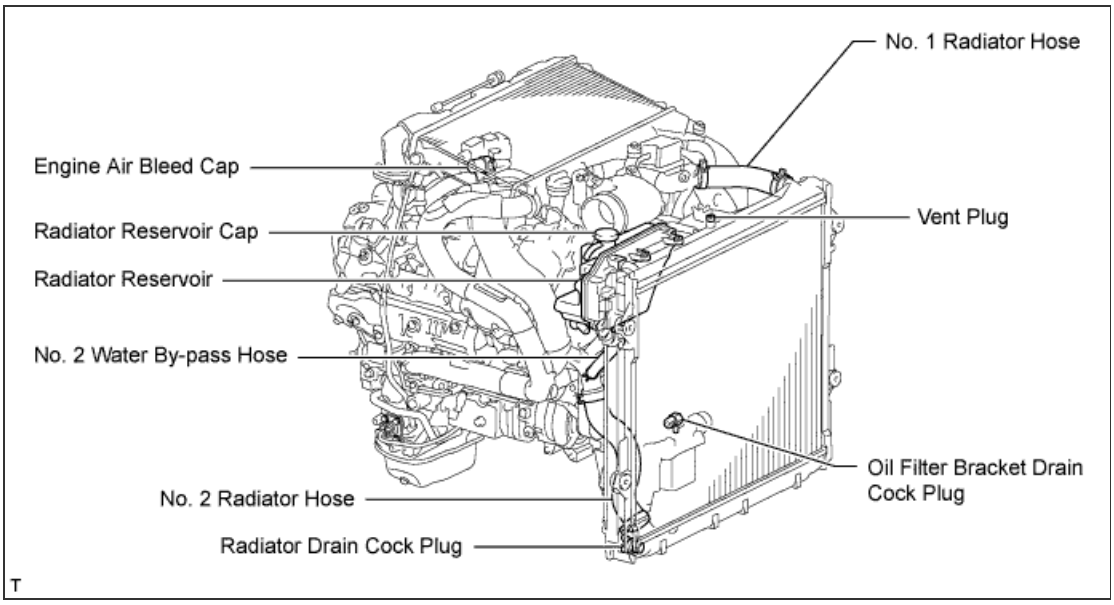
3. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and under cover.

4. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator reservoir cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

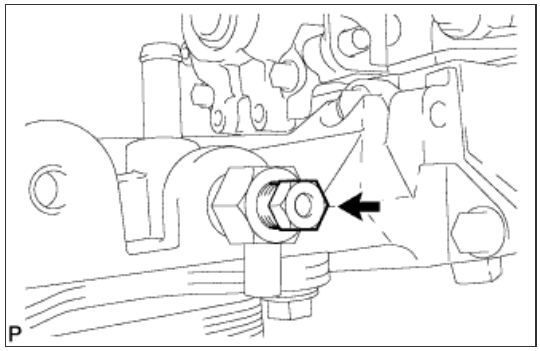


HINT:

Collect the coolant in a container and dispose of it according to the regulations in your area.

a. Loosen the radiator drain cock plug.

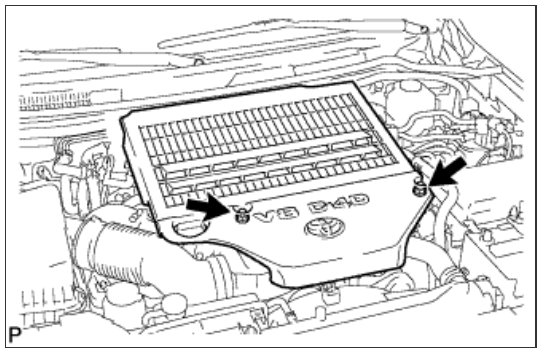
b. Remove the radiator reservoir cap to drain the coolant in the radiator.



c. Loosen the oil filter bracket drain cock plug to drain the coolant in the engine.

d. Tighten the radiator drain cock plug by hand.

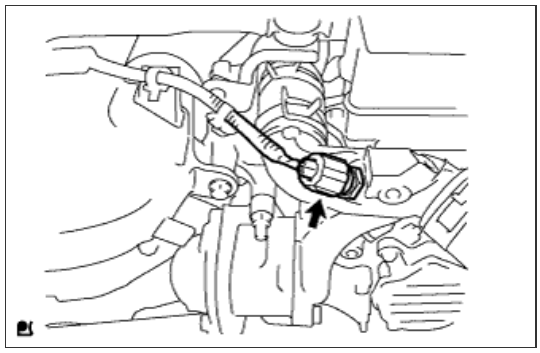
e. Tighten the oil filter bracket drain cock plug.



Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }

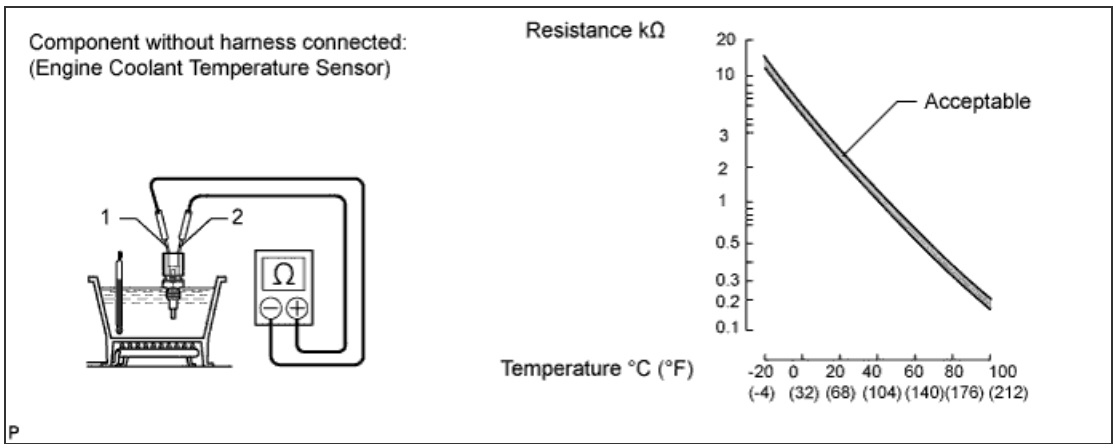
5. REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY (w/ Intercooler)

a. Install the engine cover with the 2 nuts.



Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

6. REMOVE ENGINE COOLANT TEMPERATURE SENSOR



a. Disconnect the sensor connector.

b. Using a 19 mm deep socket wrench, remove the sensor and gasket.

for Preparation Click here

1. INSPECT ENGINE COOLANT TEMPERATURE SENSOR

a. Partially immerse the sensor in water and warm up the water.

b. Measure the resistance according to the value(s) in the table below.

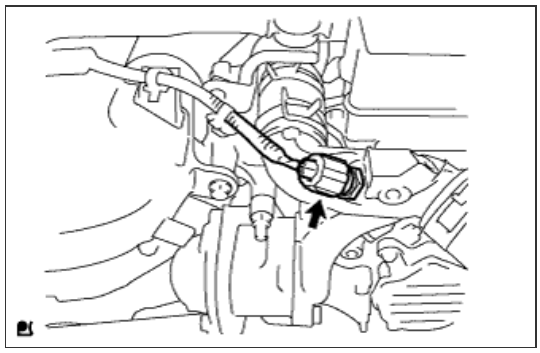
Standard Re i tance:

Tester Connection	Condition	Specified Condition
1 - 2	Approximately 20°C (68°F)	2.32 to 2.59 kΩ
1 - 2	Approximately 80°C (176°F)	0.310 to 0.326 kΩ

If the result is not as specified, replace the sensor.

NOTICE:

When checking the sensor in water, keep the terminals dry. After the check, wipe the sensor dry.

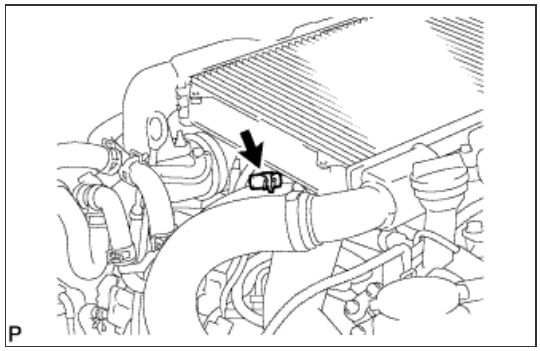


for Preparation Click here

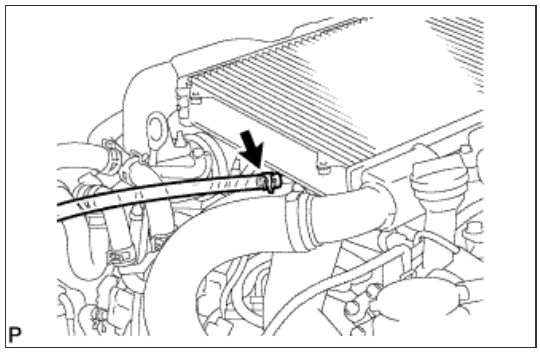
1. INSTALL ENGINE COOLANT TEMPERATURE SENSOR

a. Install a new gasket to the sensor.

b. Using a 19 mm deep socket wrench, install the sensor.

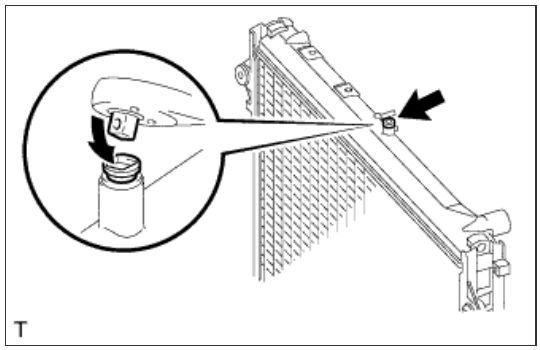


Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

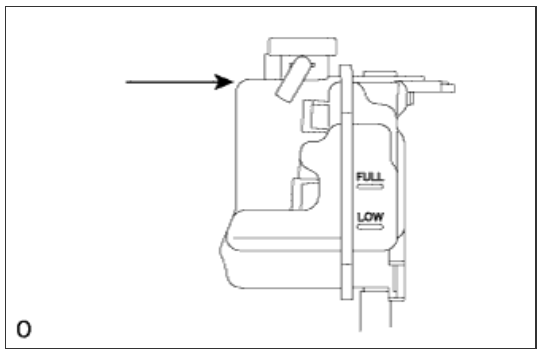


c. Connect the sensor connector.

2. ADD ENGINE COOLANT



a. Remove the engine air bleed cap.



b. Connect a clear hose to the engine air bleed pipe.

c. Using a wrench, remove the vent plug.

d. Fill the radiator with TOYOTA SLLC to the radiator reservoir filler neck.

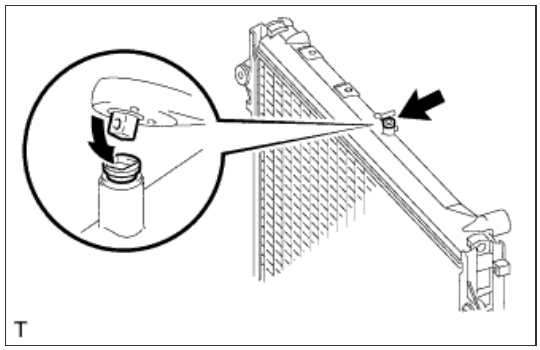
HINT:

Pour TOYOTA SLLC until it spills out of the engine air bleed pipe.

Standard Capacity (for Automatic Transmission):

Item	Specified Condition
Front heater only	14.8 liters (15.6 US qts, 13.0 Imp. qts)
Front heater and rear heater	17.6 liters (18.6 US qts, 15.5 Imp. qts)
Front heater with viscous heater	15.2 liters (16.1 US qts, 13.4 Imp. qts)
Front heater and rear heater with viscous heater	18.0 liters (19.0 US qts, 15.4 Imp. qts)

Standard capacity (for Manual Transmission):
15.4 liters (16.3 US qts, 13.6 Imp. qts)



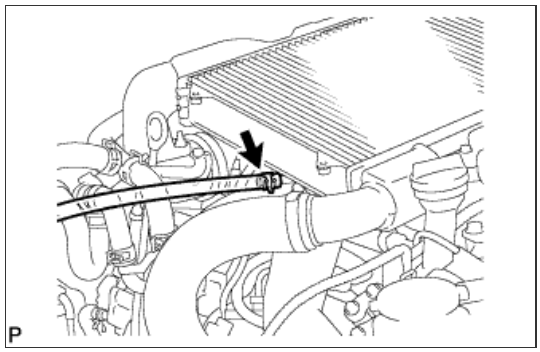
NOTICE:

Do not substitute plain water for engine coolant.

HINT:

TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

e. Install the vent plug.

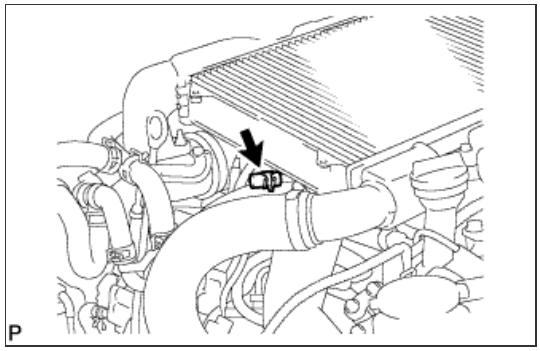


Torque:
2.0 N*m{ 20 kgf*cm , 18 in.*lbf }

NOTICE:

Do not tighten the plug to 5.0 N*m (51 kgf*cm, 44 in.*lbf) or more, as the plug will be damaged.

f. Disconnect the clear hose from the engine air bleed pipe.



g. Install the engine air bleed cap when coolant comes out.

h. Install the radiator reservoir cap.

i. Start the engine.

NOTICE:

Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the FULL line.

j. Maintain an engine speed of 3000 rpm for approximately 10 minutes so that the thermostat opens and air bleeding is performed.

CAUTION:

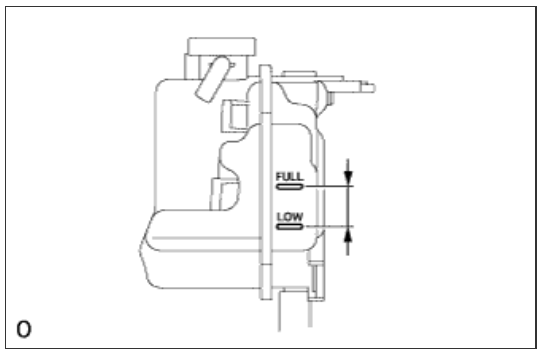
When pressing the radiator hoses:

- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the radiator fan**

NOTICE:

- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**

HINT:



The thermostat opening timing can be confirmed by pressing the No. 2 radiator hose by hand, and checking when the engine coolant starts to flow inside the hose.

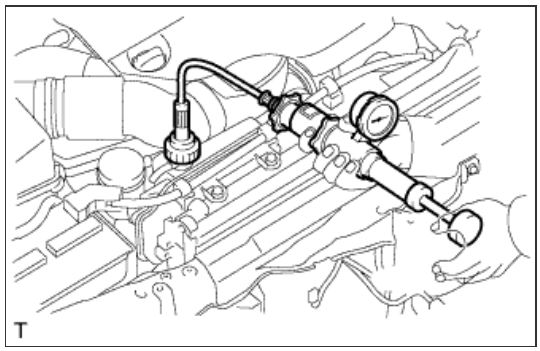
k. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

Do not remove the radiator reservoir cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

l. Check that the coolant level is between the FULL and LOW lines.
If the coolant level is above the FULL line, drain coolant so that the coolant level is between the FULL and LOW lines.

3. INSPECT FOR COOLANT LEAK

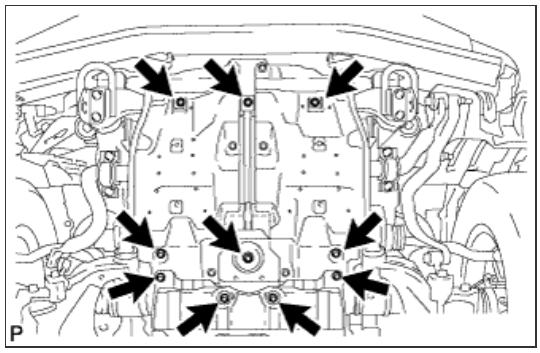


CAUTION:

Do not remove the radiator reservoir cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

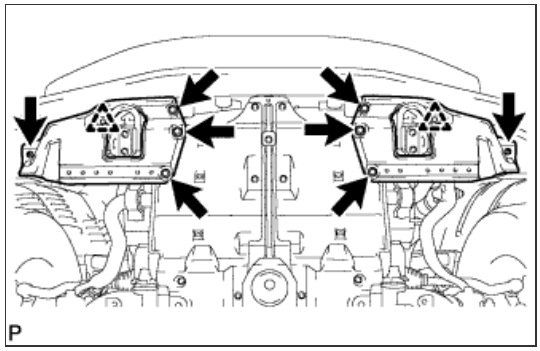
a. Fill the radiator with coolant and attach a radiator cap tester to the radiator reservoir.

b. Warm up the engine.



c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 17.8 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks.
If no external leaks are found, check the cylinder block and cylinder head.

4. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

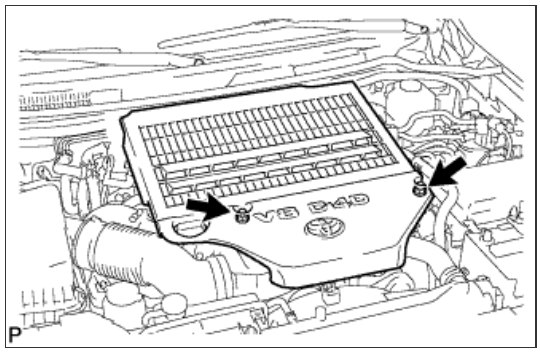


a. Install the engine under cover with the 10 bolts.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

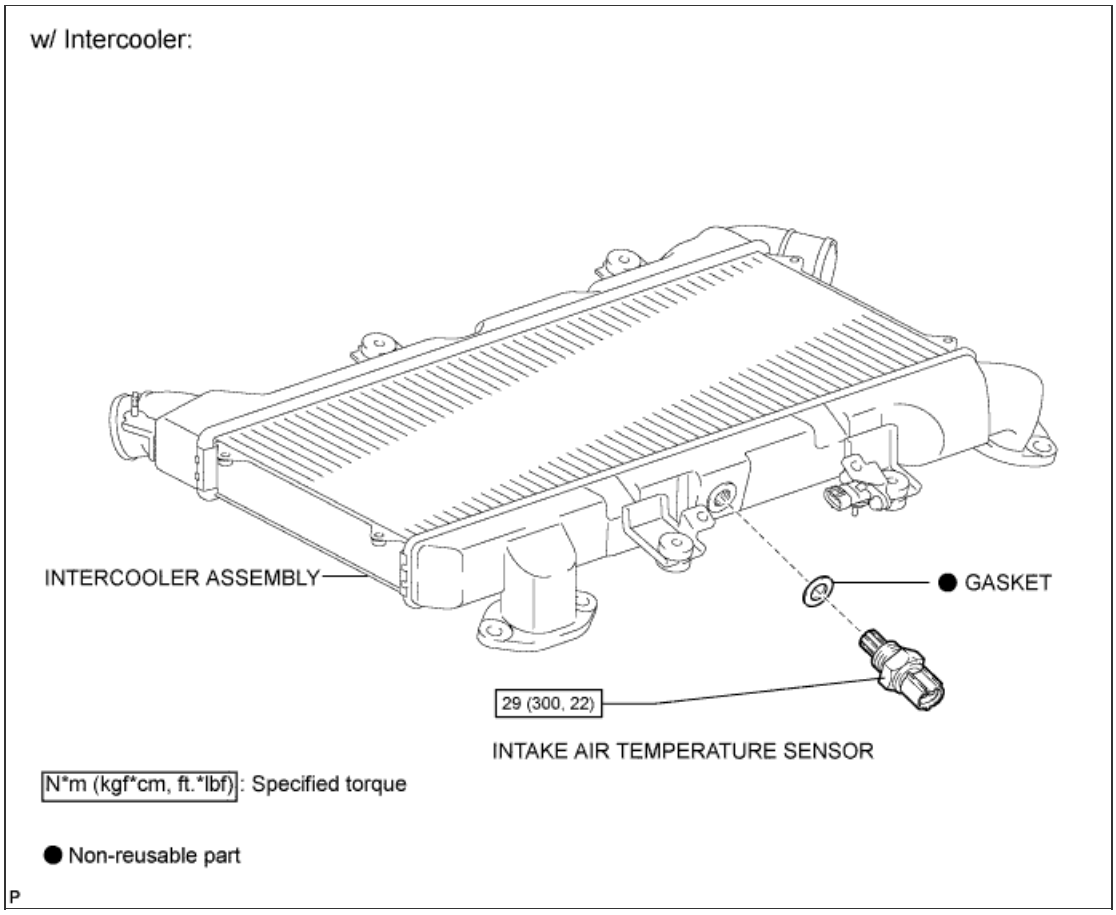
5. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

a. Install the splash shield with the clip, and then install the 3 bolts and screw.



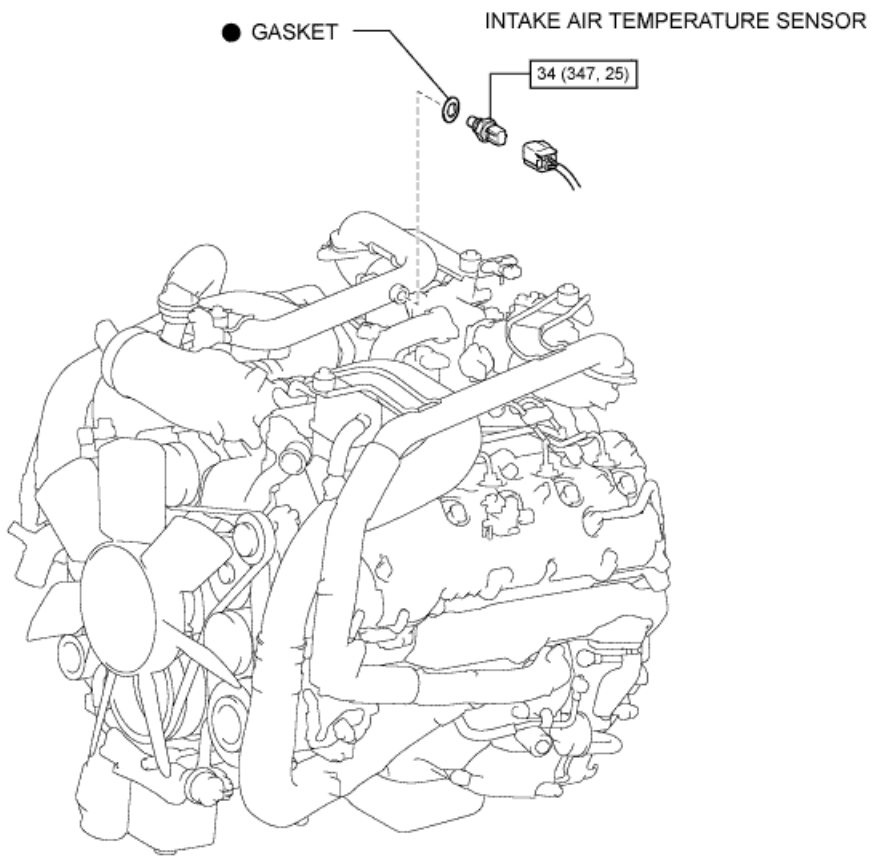
6. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Install the splash shield with the clip, and then install the 3 bolts and screw.



7. INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY (w/ Intercooler)

a. Install the engine cover with the 2 nuts.



Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

V8 D4D

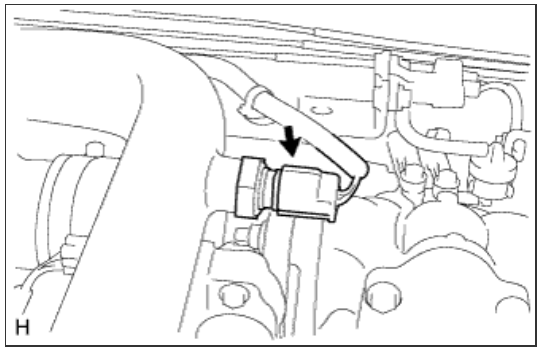
1. REMOVE INTERCOOLER ASSEMBLY (w/ Intercooler)

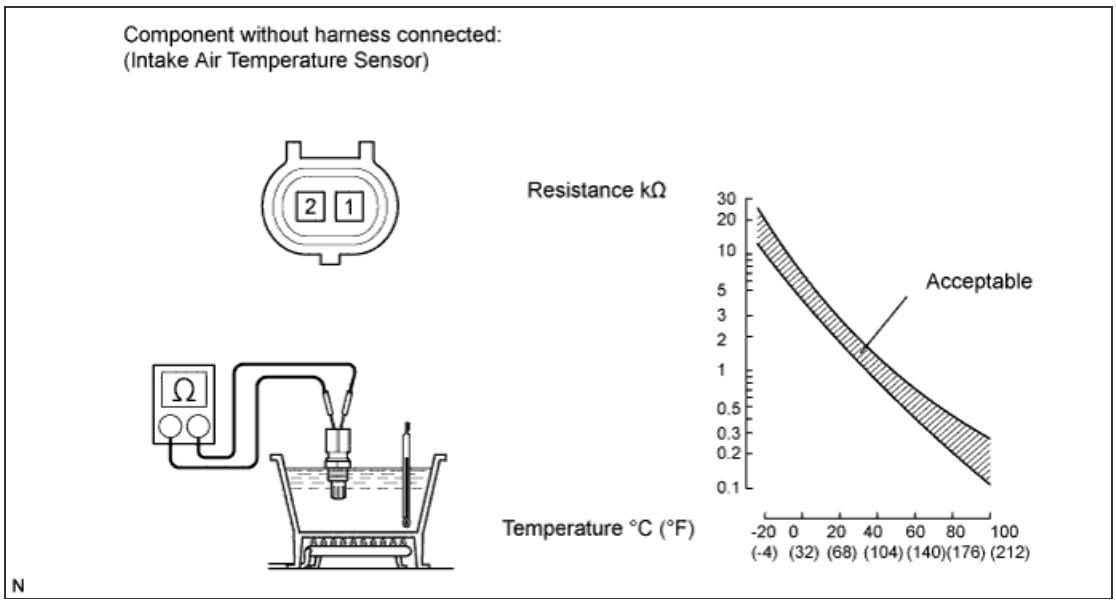
(Click here)

2. REMOVE INTAKE AIR TEMPERATURE SENSOR (w/ Intercooler)



a. Using a ball joint lock nut wrench, remove the sensor and gasket.

3. REMOVE INTAKE AIR TEMPERATURE SENSOR (w/o Intercooler)



a. Disconnect the connector.

b. Using a 22 mm deep socket wrench, remove the sensor and gasket.

for Preparation Click here

1. INSPECT INTAKE AIR TEMPERATURE SENSOR

a. Partially immerse the sensor in water and warm up the water.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	Approximately 20°C (68°F)	2.21 to 2.65 kΩ
1 - 2	Approximately 60°C (140°F)	0.55 to 0.61 kΩ

If the result is not as specified, replace the sensor.

NOTICE:

When checking the sensor in water, keep the terminals dry. After the check, wipe the sensor dry.

for Preparation Click here

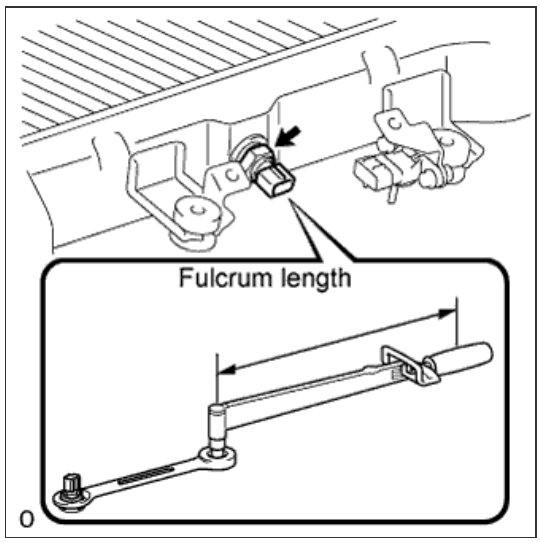
1. INSTALL INTAKE AIR TEMPERATURE SENSOR (w/o Intercooler)

a. Using a 22mm deep socket wrench, install the sensor and a new gasket.

Torque:
34 N*m{ 347 kgf*cm , 25 ft.*lbf }

2. INSTALL INTAKE AIR TEMPERATURE SENSOR (w/ Intercooler)

a. Using a ball oint lock nut wrench, install the sensor and a new gasket.

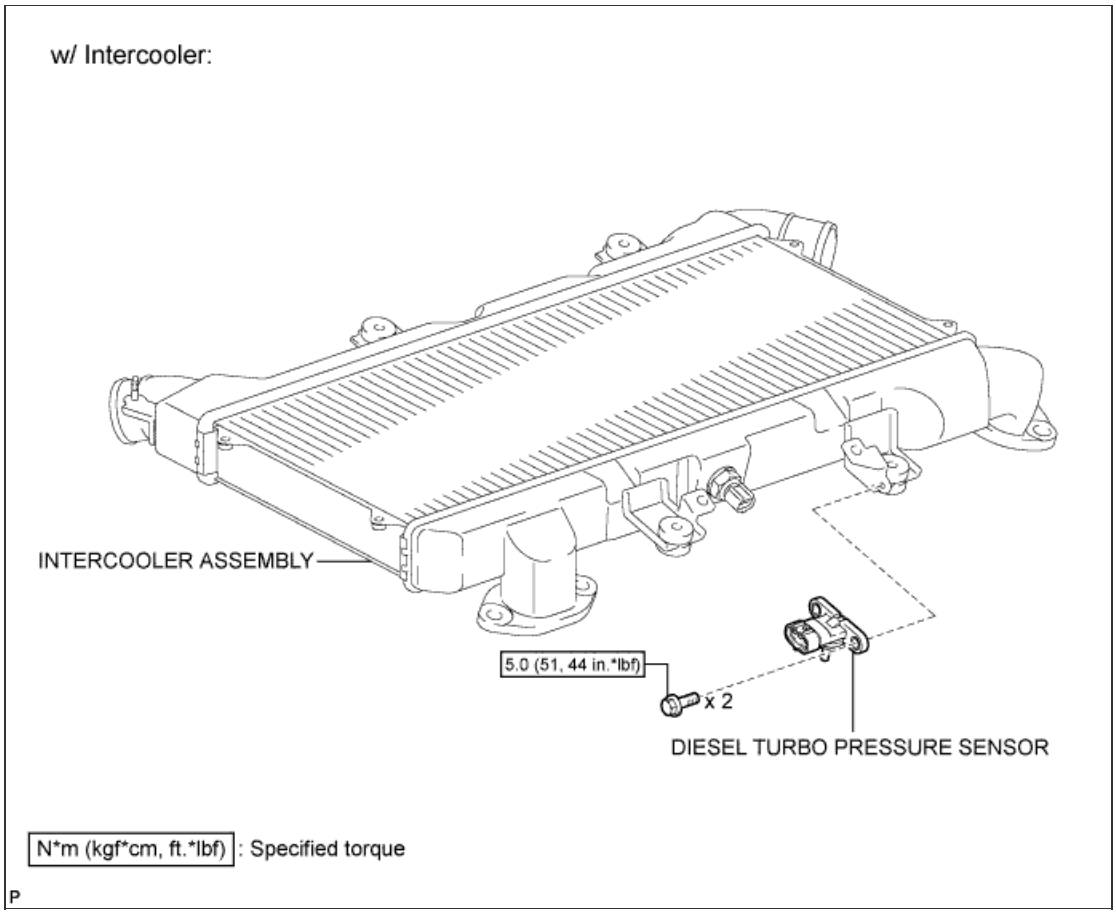


Torque:
29 N*m{ 300 kgf*cm , 22 ft.*lbf }

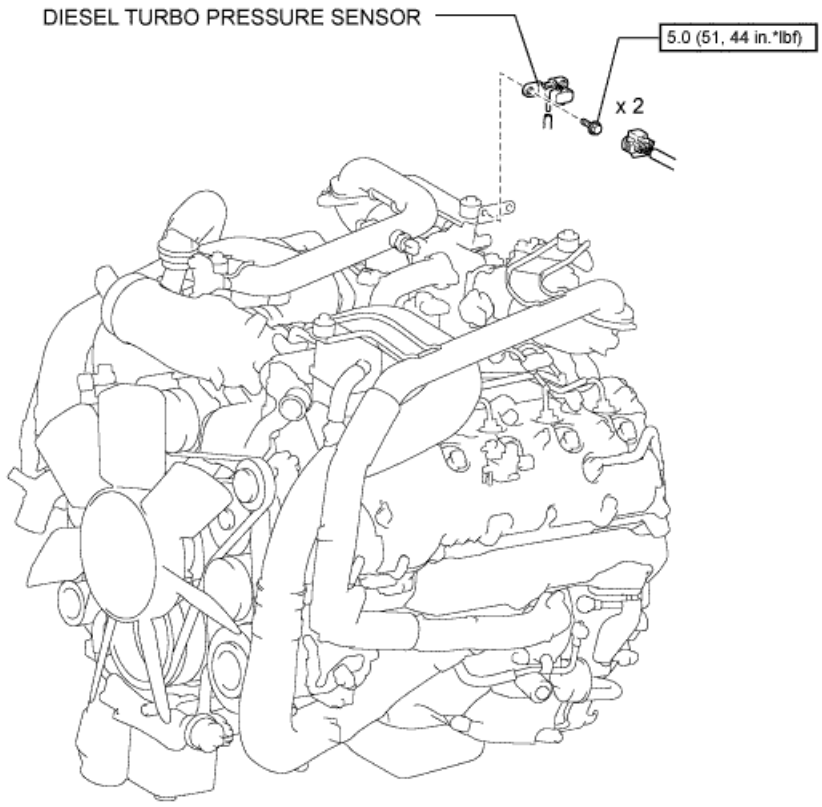
NOTICE:

Do not use a tool such as an impact wrench or equivalent.

HINT:



- **Use a torque wrench with a fulcrum length of 300 mm (11.8 in.). When using a torque wrench with a fulcrum length that is not 300 mm (11.8 in.), calculate the torque specification for the torque wrench and SST based on the "without SST" torque specification (Click here).**
- **Make sure SST and the wrench are connected in a straight line.**



3. INSTALL INTERCOOLER ASSEMBLY (w/ Intercooler)

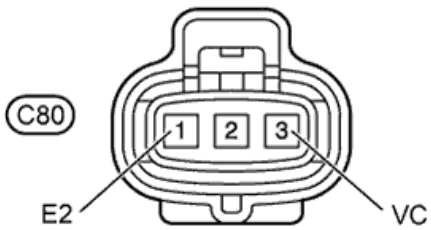
1. CHECK DIESEL TURBO PRESSURE SENSOR

a. Inspect the power source voltage.

i. Disconnect the sensor connector.

ii. Measure the voltage according to the value(s) in the table below.



Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
C80-3 (VC) - C80-1 (E2)	Engine switch on (IG)	4.5 to 5.5 V

iii. Turn the engine switch off.

iv. Connect the sensor connector.

Front view of wire harness connector:
(to Diesel Turbo Pressure Sensor)

b. Check the vacuum and pressure.

i. Connect the intelligent tester to the DLC3.

ii. Turn the engine switch on (IG) and turn the intelligent tester on.

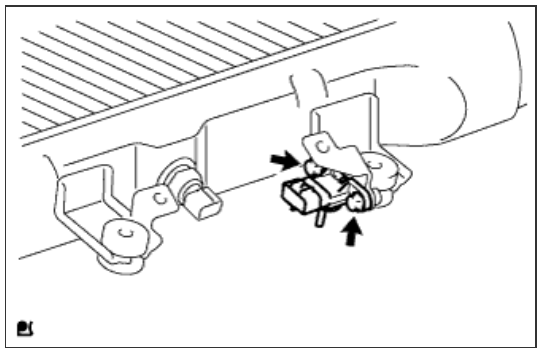
iii. Enter the following menus: Powertrain / Engine / Data List / Map and Atmosphere Pressure.

iv. Read the value.

OK:

Condition	Map and Atmosphere Pressure Value
No pressure applied	Same as atmospheric pressure
Vacuum applied	Becomes vacuum
Pressure applied	Becomes pressurized

If the result is not as specified, replace the sensor.

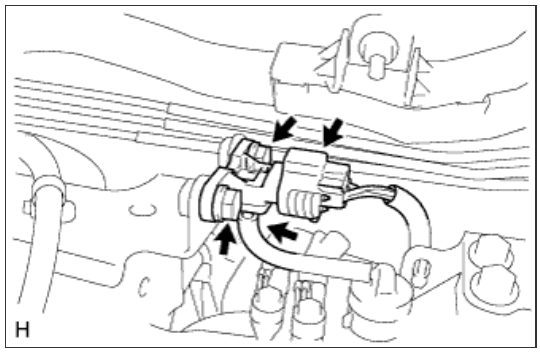


for Preparation Click here

1. REMOVE INTERCOOLER ASSEMBLY (w/ Intercooler)

(Click here)

2. REMOVE DIESEL TURBO PRESSURE SENSOR (w/ Intercooler)



a. Remove the 2 bolts and sensor.

3. REMOVE DIESEL TURBO PRESSURE SENSOR (w/o Intercooler)

a. Disconnect the connector and hose.

b. Remove the 2 bolts and sensor.

for Preparation Click here

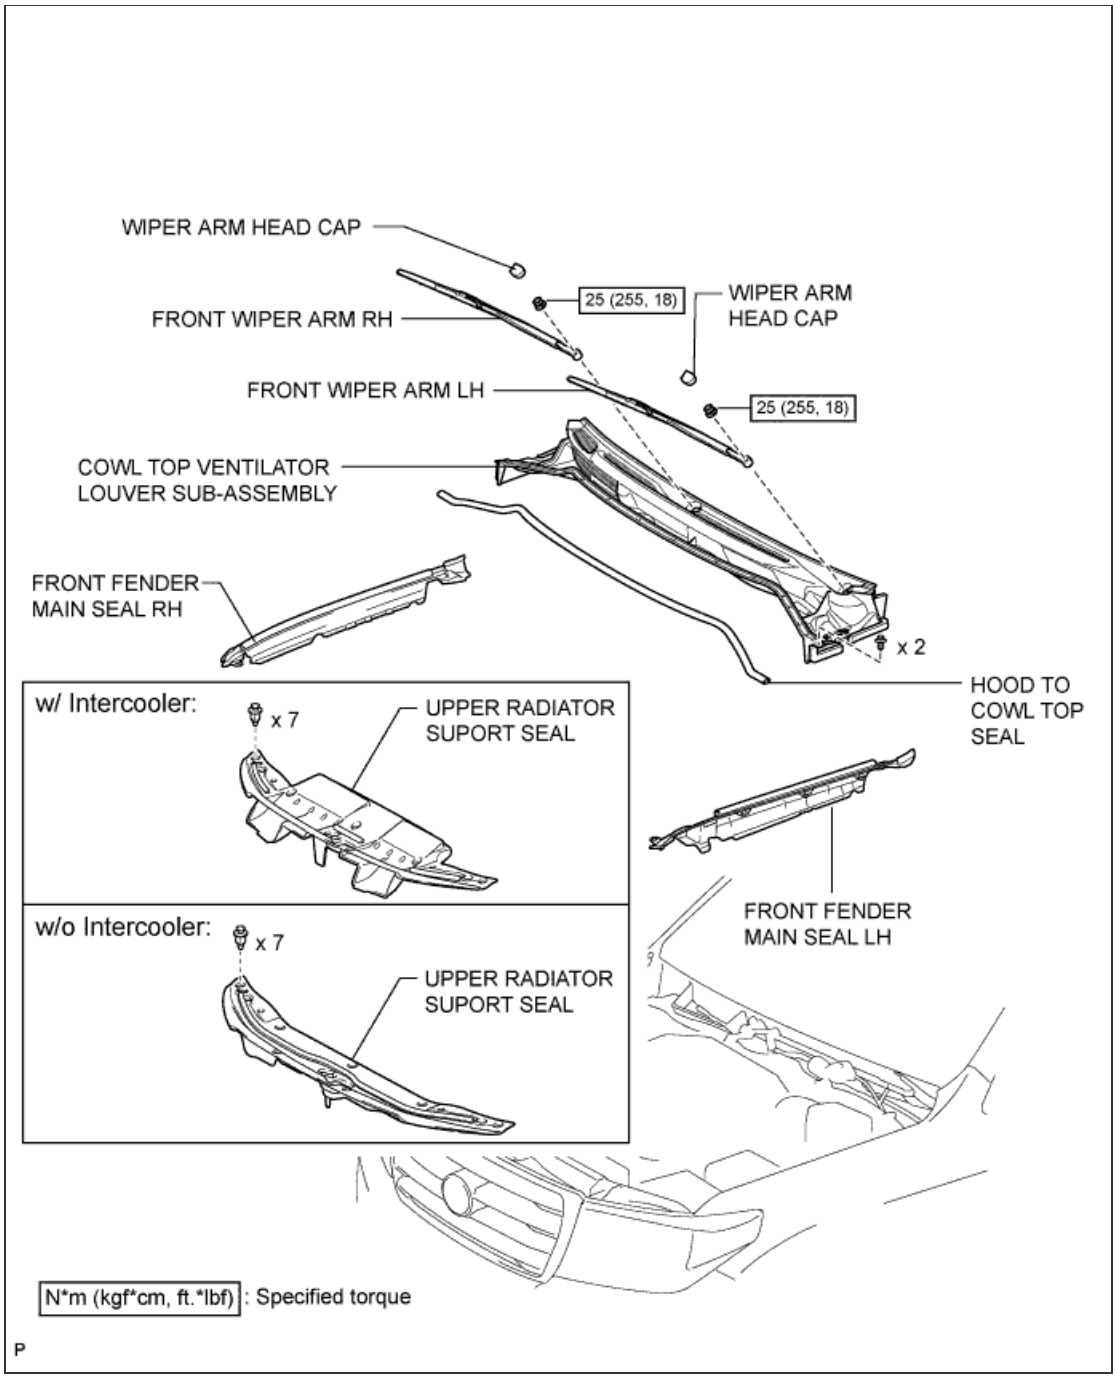
1. INSTALL DIESEL TURBO PRESSURE SENSOR (w/o Intercooler)

a. Install the sensor with the 2 bolts.

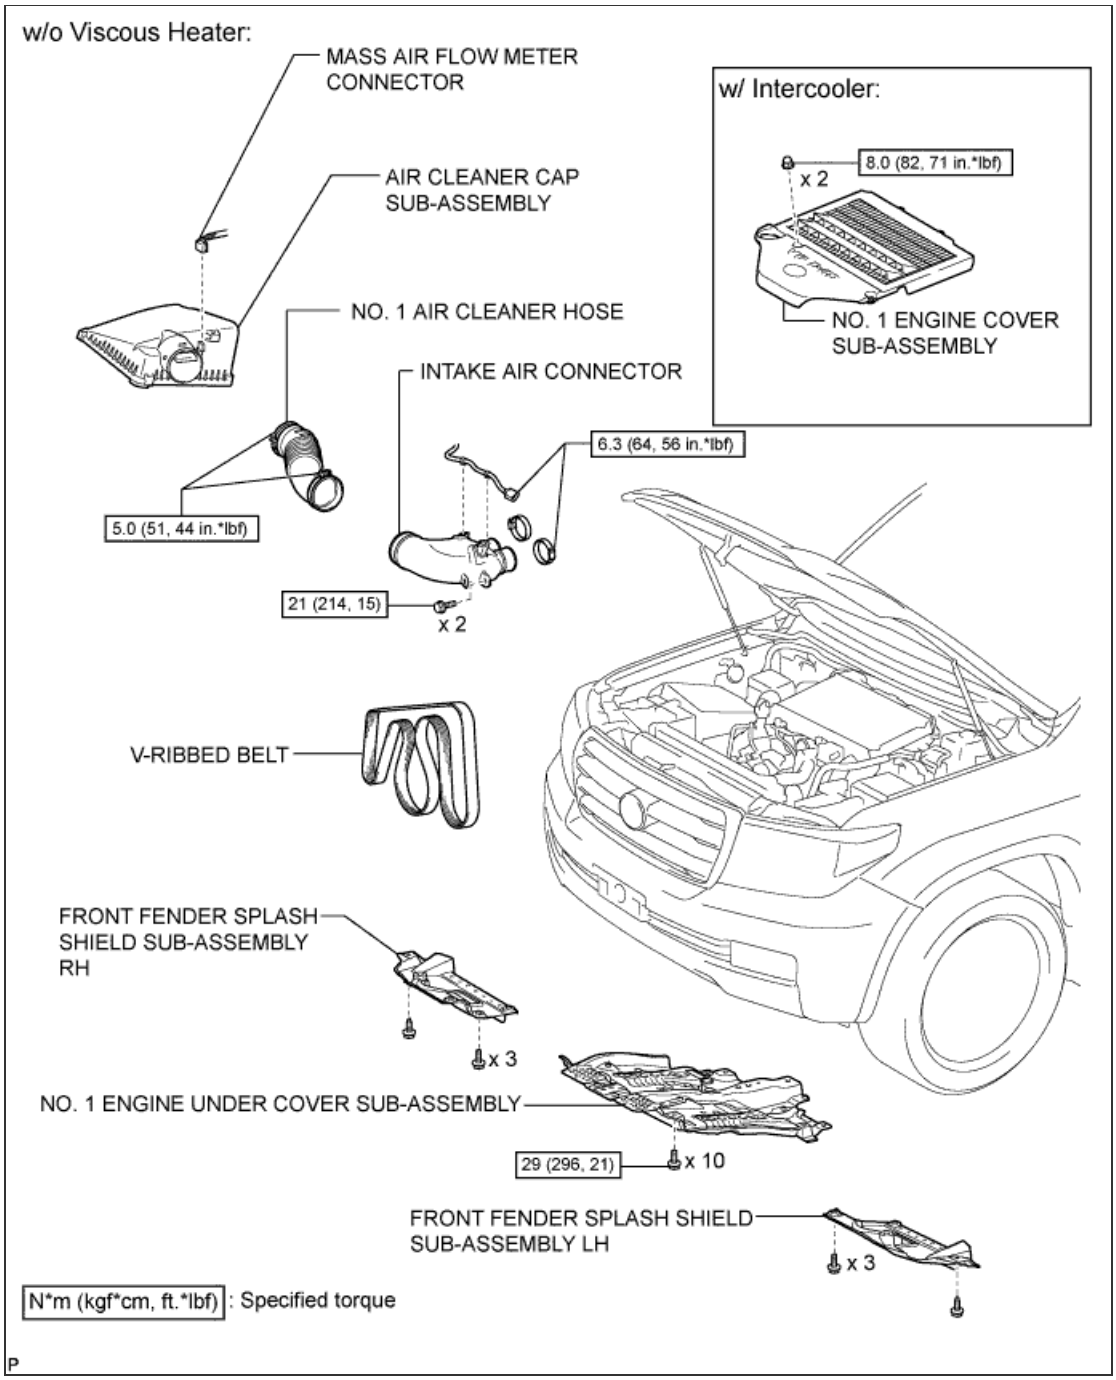
Torque:
5.0 N*m{ 51 k f*cm 44 in.*lbf

. Connect the hose and connector.

2. INSTALL DIESEL TURBO PRESSURE SENSOR (w/ Intercooler)



a. Install the sensor with the 2 bolts.



Torque:
5.0 N*m{ 51 k f*cm 44 in.*lbf

1. INSPECT POWER STEERING OIL PRESSURE SWITCH

a. Check the oil pressure switch.

i. Connect the intelligent tester to the DLC3.

ii. Turn the engine switch on (IG).

iii. Turn the intelligent tester on.

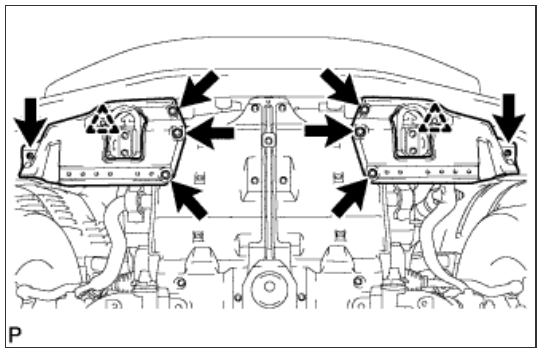
iv. Enter the following menus: Powertrain / Engine / Data List / All Data / Power Steering Switch.

v. Start the engine.

vi. Operate the steering wheel while idling, and read the lue on the intelligent tester.

OK:

Condition	Specified Condition
Power steering operation	ON
Power steering not operation	OFF

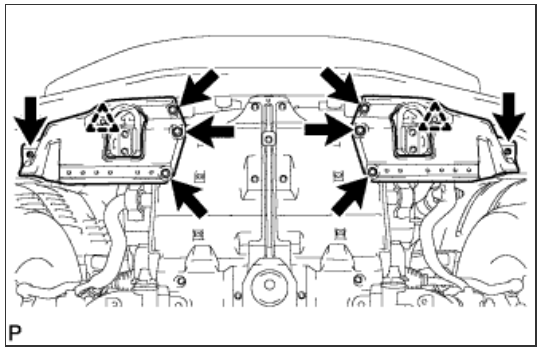


If not as specified, check for DTCs (Click here). If the power steering system inspection results are normal and a DTC is not output, replace the power steering oil pressure switch.
Inspect the power steering system (Click here). If the power steering system inspection results are normal and a DTC is not output, replace the power steering oil pressure switch.

for Preparation Click here

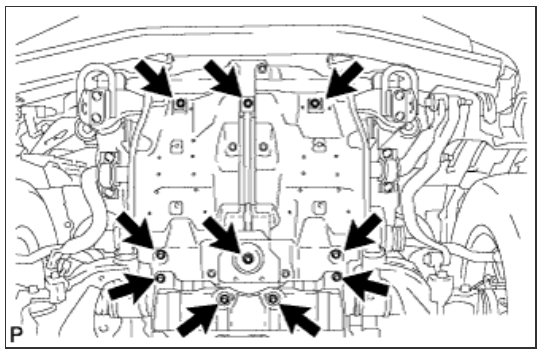
1. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and screw.



b. Loosen the clip and remove the splash shield.

2. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH



a. Remove the 3 bolts and screw.

b. Loosen the clip and remove the splash shield.

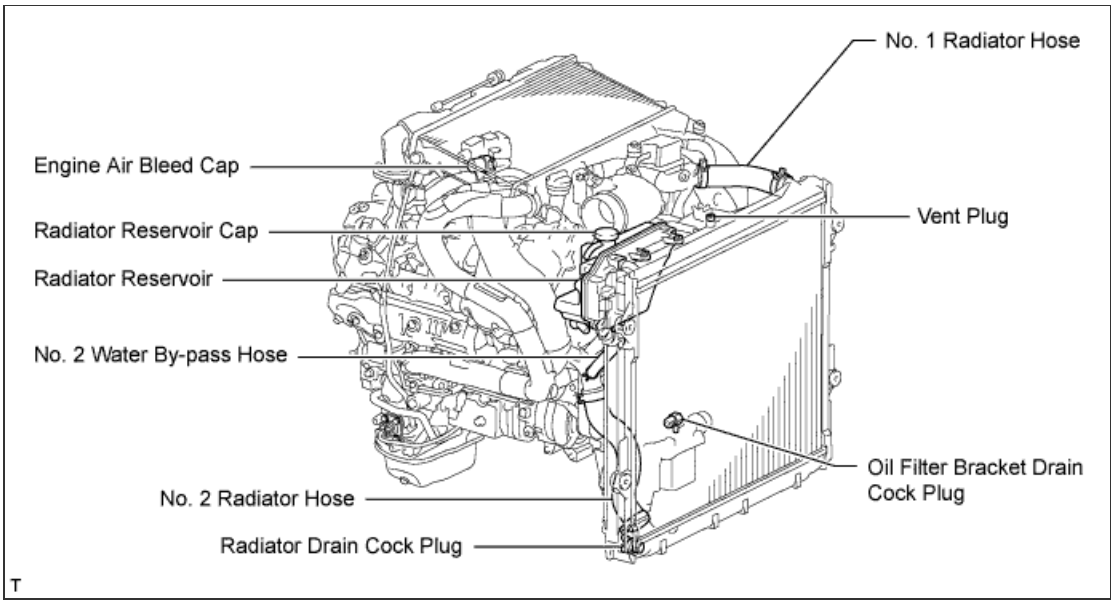
3. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and under cover.

4. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator reservoir cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

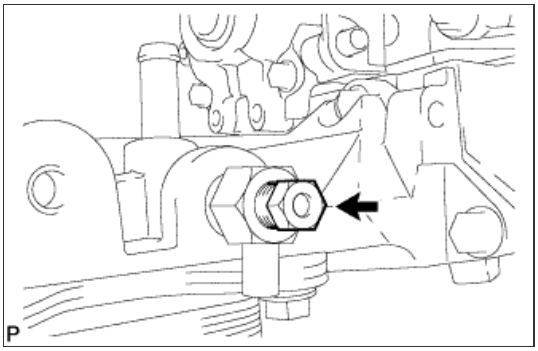


HINT:

Collect the coolant in a container and dispose of it according to the regulations in your area.

a. Loosen the radiator drain cock plug.

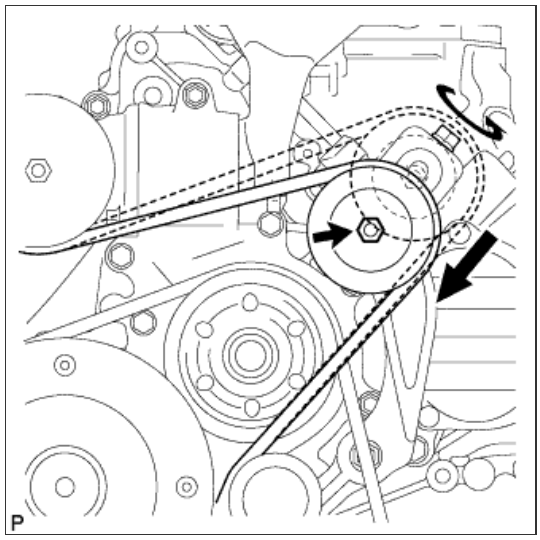
b. Remove the radiator reservoir cap to drain the coolant in the radiator.



c. Loosen the oil filter bracket drain cock plug to drain the coolant in the engine.

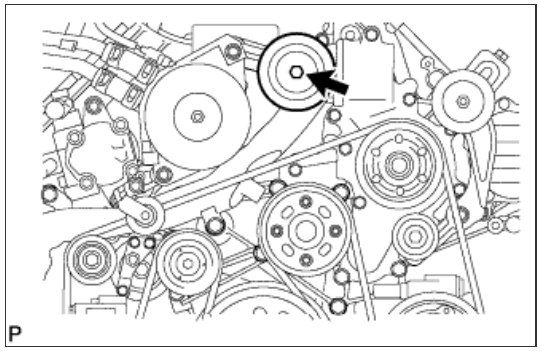
d. Tighten the radiator drain cock plug by hand.

e. Tighten the oil filter bracket drain cock plug.



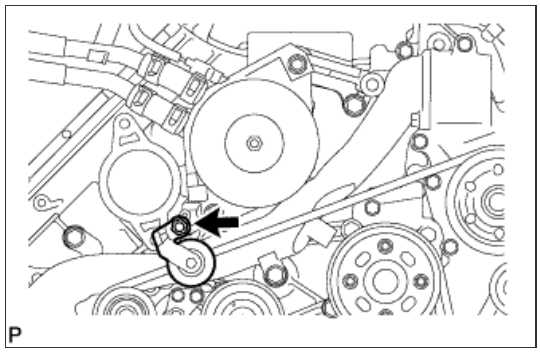
Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }

5. REMOVE V-RIBBED BELT i cou Heater



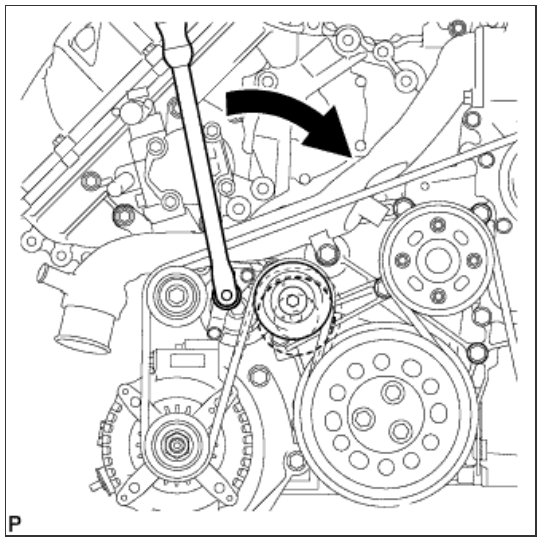
a. Loosen the lock nut and turn the bolt counterclockwise.

b. Remove the V-ribbed belt.



6. REMOVE NO. 1 IDLER PULLEY i cvu Heater

a. Remove the bolt, cover, No. 1 idler pulley and collar.

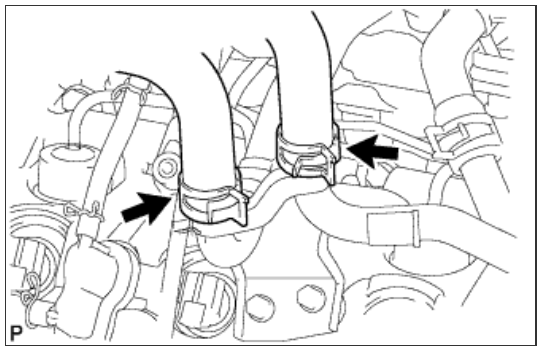


7. REMOVE NO. 3 IDLER PULLEY i cvu Heater

a. Remove the nut and No. 3 idler pulley.

8. REMOVE V-RIBBED BELT

a. Using a wrench to the V-ribbed belt tensioner bracket, turn the wrench clockwise and remove the V-ribbed belt.

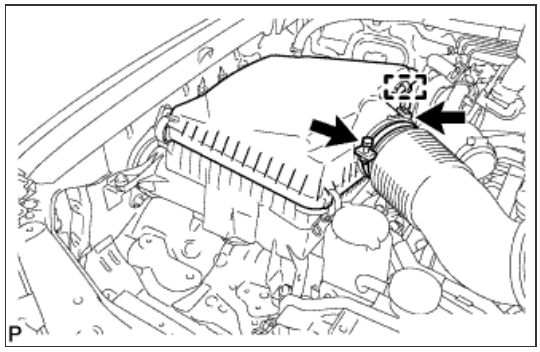


9. REMOVE INTERCOOLER ASSEMBLY nterc ooler

a. Remove the intercooler assembly (lick here).

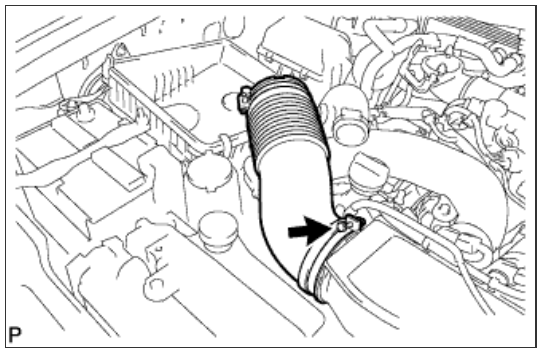
10. DISCONNECT WATER HOSE SUB-ASSEMBLY i c u Heater

a. Disconnect the 2 water hoses.



11. REMOVE AIR CLEANER CAP SUB-ASSEMBLY

a. Loosen the hose clamp.



b. Disconnect the mass air flow meter connector and using a clip remover, detach the wire harness clamp from the air cleaner cap.

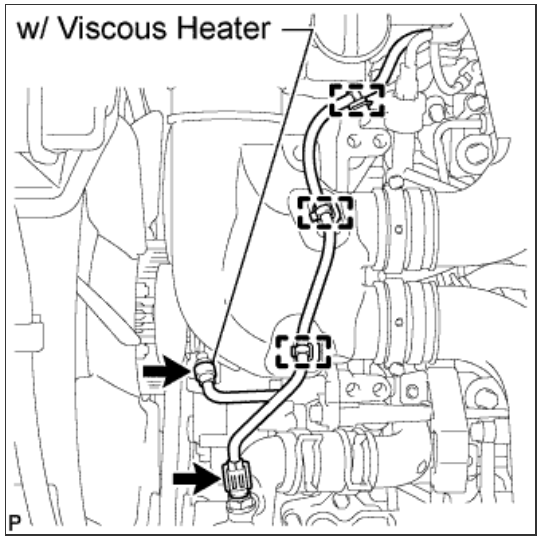
c. Detach the 4 clamps and remove the air cleaner cap.

12. REMOVE NO. 1 AIR CLEANER HOSE

a. Loosen the hose clamp and remove the No. 1 air cleaner hose.

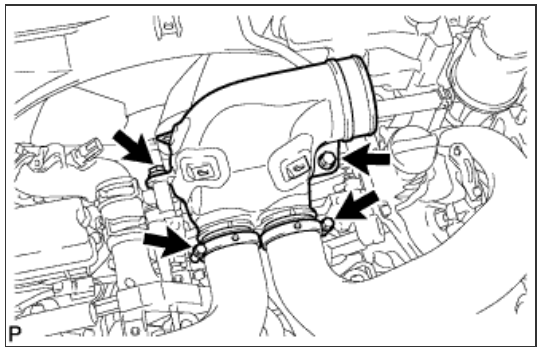
13. REMOVE INTA E AIR CONNECTOR

a. w/o Viscous Heater:



i. Disconnect the connector from the water temperature sensor.

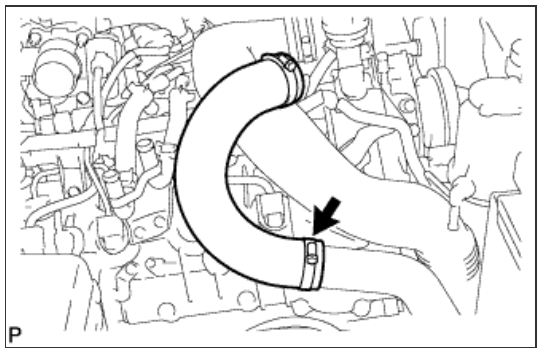
ii. Using a clip remover, detach the 3 wire harness clamps.



b. w/ Viscous Heater:

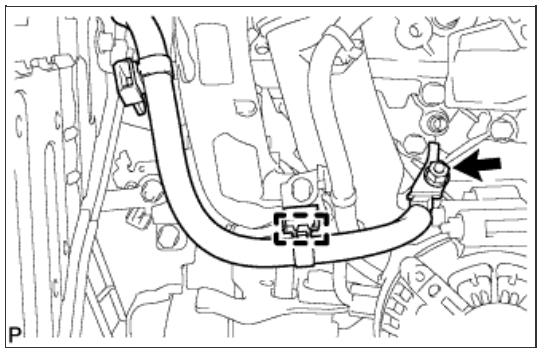
i. Disconnect the 2 connectors from the viscous with magnet clutch heater and water temperature sensor.

ii. Using a clip remover, detach the 3 wire harness clamps.

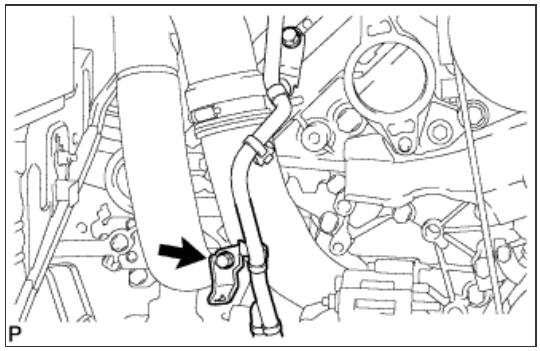


c. Loosen the 2 hose clamps and remove the 2 bolts and intake air connector.

14. REMOVE NO. 1 AIR HOSE

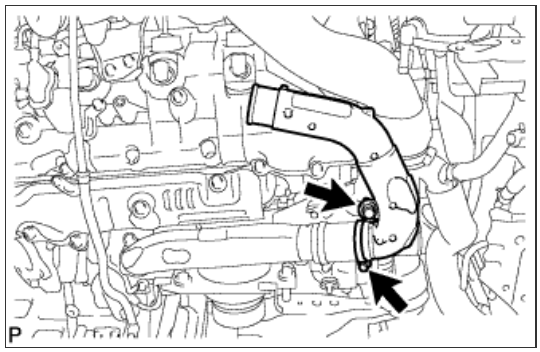


a. Loosen the hose clamp and remove the No. 1 air hose.



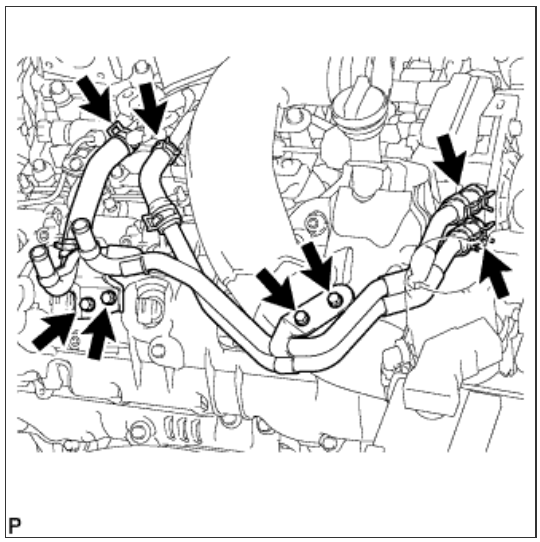
15. REMOVE NO. 3 AIR TUBE

a. Disconnect the wire harness from the clamp.



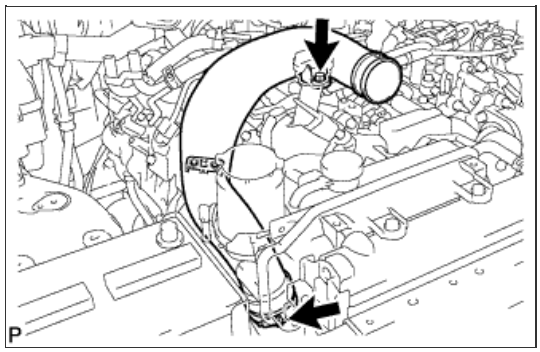
b. Remove the nut and ground wire.

c. Remove the bolt and disconnect the wire harness bracket.



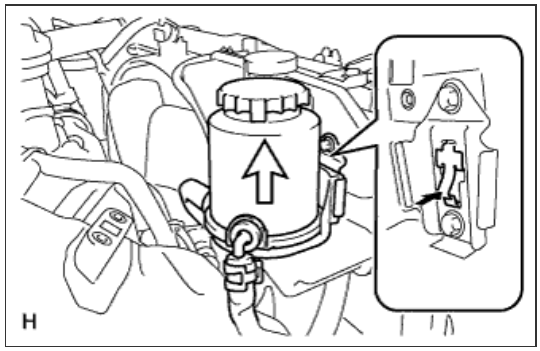
d. Loosen the hose clamp and remove the bolt and No. 3 air tube.

16. REMOVE HEATER WATER PIPE SUB-ASSEMBLY i cou Heater



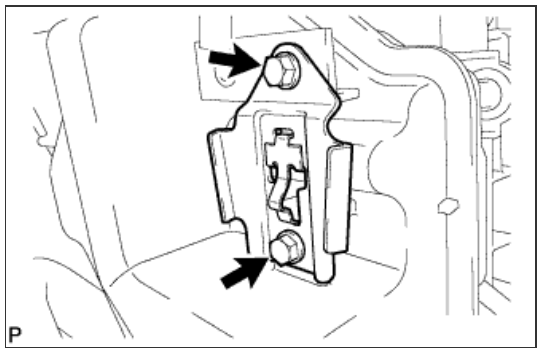
a. Remove the 4 bolts and disconnect the 4 water hose ends, and then remove the heater water pipe.

17. REMOVE NO. 1 AIR CLEANER PIPE SUB-ASSEMBLY



a. Loosen the hose clamp.

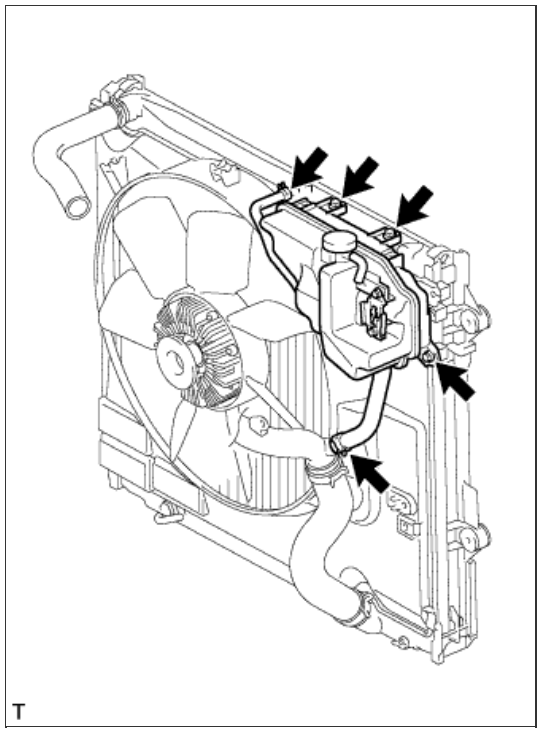
b. Remove the bolt and No. 1 air cleaner pipe.



1 . DISCONNECT VANE PUMP OIL RESERVOIR ASSEMBLY

a. Insert a screwdriver between the reservoir and oil reservoir bracket, push the claw, and then disconnect the reservoir by pulling it upwards.

1 . REMOVE NO. 1 OIL RESERVOIR BRAC ET

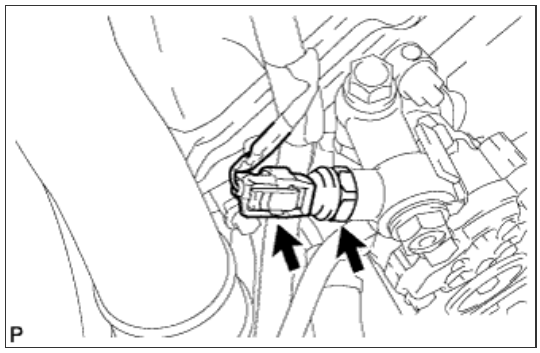


a. Remove the 2 bolts and bracket.

2 . REMOVE RADIATOR RESERVOIR ASSEMBLY

a. Disconnect the 2 hoses.

b. Remove the 3 bolts and radiator reservoir.



21. REMOVE POWER STEERING OIL PRESSURE SWITCH

a. Disconnect the oil pressure switch connector.

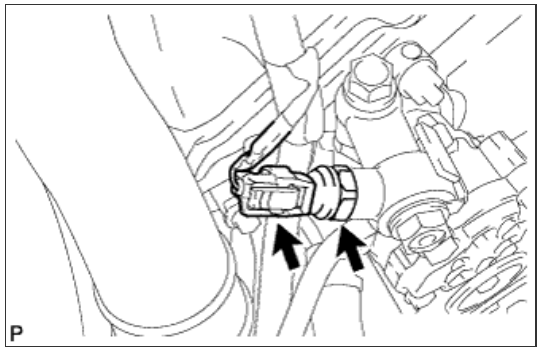
b. Using a 19 mm deep socket wrench, remove the oil pressure switch.

c. Remove the ring from the oil pressure switch.

for Preparation Click here

1. INSTALL POWER STEERING OIL PRESSURE SWITCH

a. Install a new O-ring to the oil pressure switch.



b. Apply a light coat of engine oil to the O-ring of the oil pressure switch.

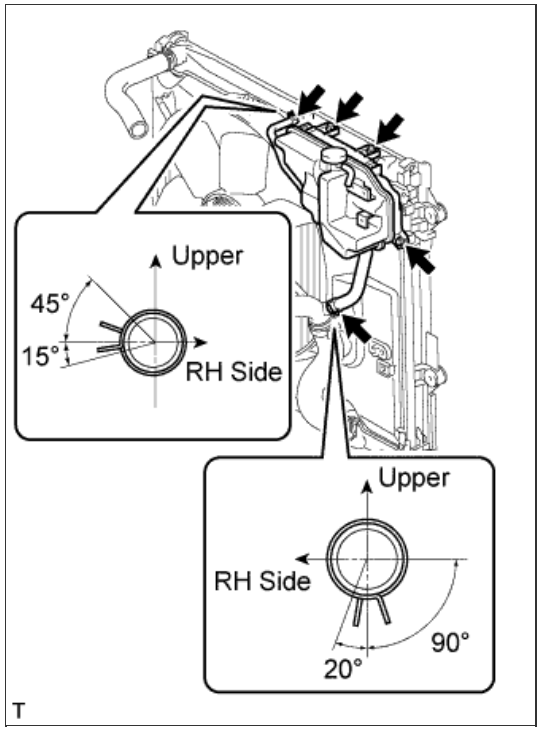
c. Using a 19 mm deep socket wrench, install the oil pressure switch.

NOTICE:

- **Do not allow foreign matter to contact the oil seal face of the power steering oil pressure switch (connecting surface with pressure feed tube).**
- **Be careful not to damage the O-ring when installing the power steering oil pressure switch.**

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

d. Connect the oil pressure switch connector.

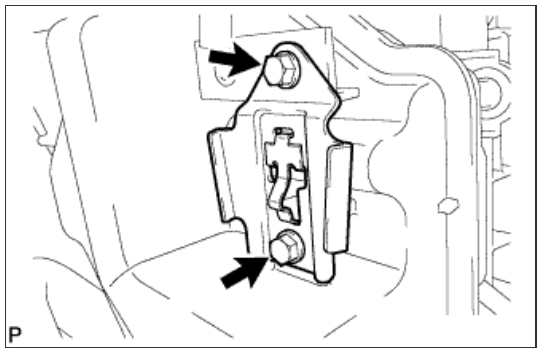


2. INSTALL RADIATOR RESERVOIR ASSEMBLY

a. Install the radiator reservoir with the 3 bolts.

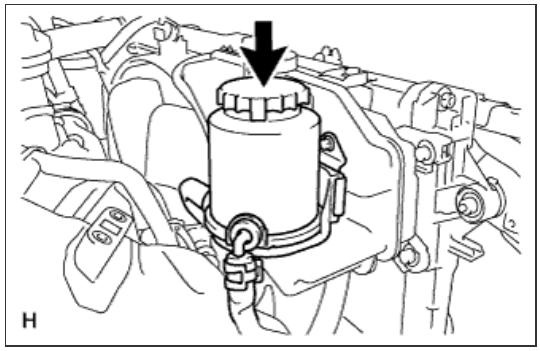
b. Connect the 2 hoses to the upper radiator tank and water inlet.

HINT:



Make sure the directions of the hose clamps are as shown in the illustration.

3. INSTALL NO. 1 OIL RESERVOIR BRACKET



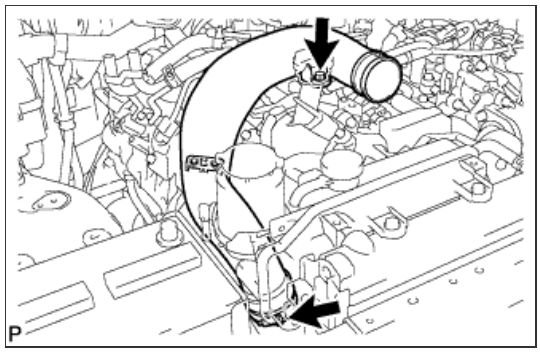
a. Install a new bracket with the 2 bolts.

Torque:
4.5 N*m{ 46 kgf*cm , 40 in.*lbf }

4. INSTALL VANE PUMP OIL RESERVOIR ASSEMBLY

a. Install the vane pump oil reservoir to the bracket.

5. INSTALL NO. 1 AIR CLEANER PIPE SUB-ASSEMBLY

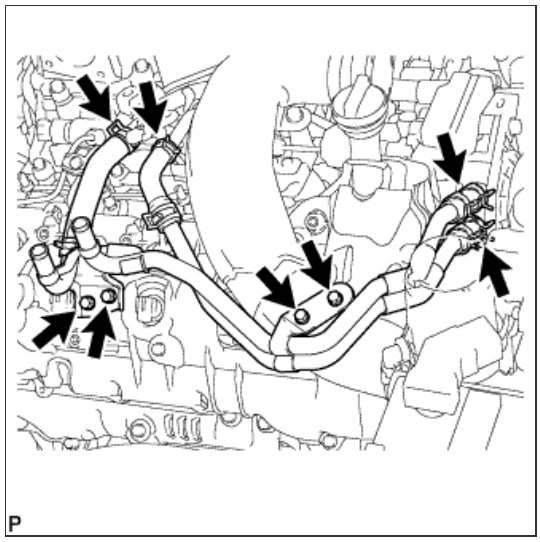


a. Connect the No. 1 air cleaner pipe to the No. 1 intake air connector pipe.

b. Install the pipe with the bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

c. Tighten the hose clamp.



Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

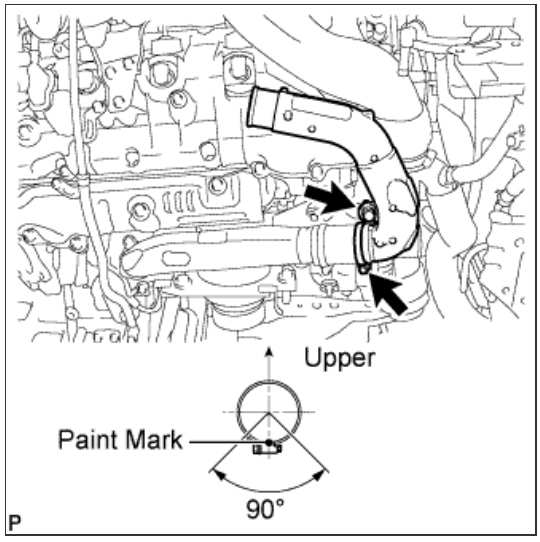
6. INSTALL HEATER WATER PIPE SUB-ASSEMBLY (w/ Viscous Heater)

a. Connect the 4 water hose ends, and install the water pipe with the 4 bolts.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

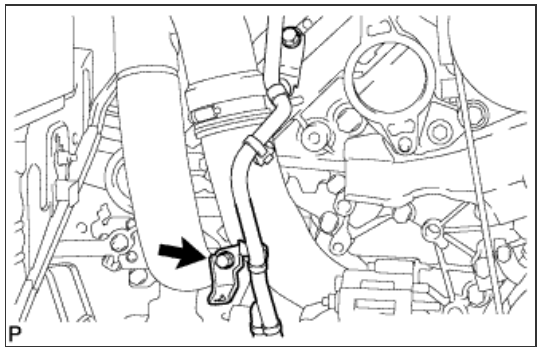
7. INSTALL NO. 3 AIR TUBE

a. Install the No. 3 air tube with the bolt.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

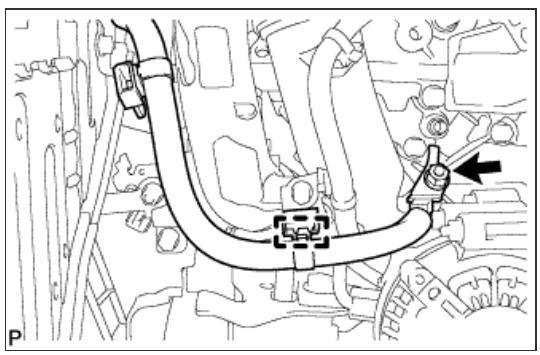
b. Tighten the hose clamp.



Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

HINT:

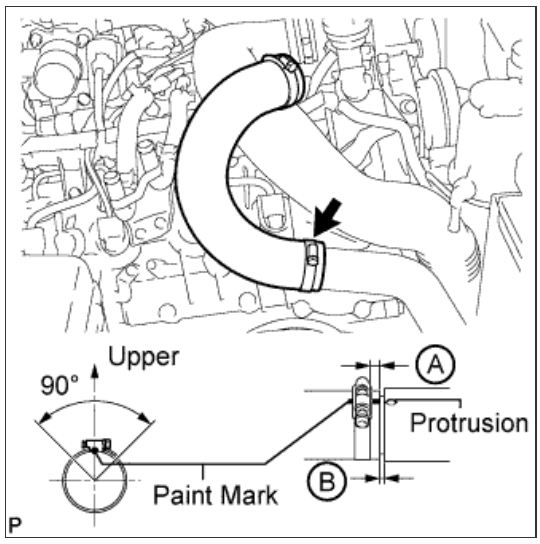
Make sure the direction of the hose clamp is as shown in the illustration.



c. Install the wire harness bracket with the bolt.

d. Install the ground wire with the nut, and attach the wire harness clamp.

Torque:
8.4 N*m{ 87 kgf*cm , 74 in.*lbf }



8. INSTALL NO. 1 AIR HOSE

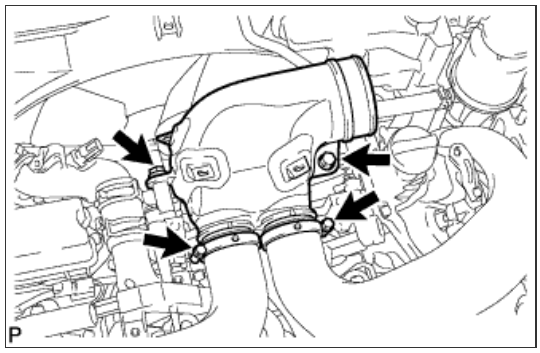
a. Connect the No. 1 air hose with the hose clamp.

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

HINT:

- **Align the paint mark of the air hose with the protrusion and push in the air hose so that distance B is 0 to 3 mm (0 to 0.118 in.).**
- **Position the clamp so that distance A is 2 to 6 mm (0.0787 to 0.236 in.).**
- **Make sure the direction of the hose clamp is as shown in the illustration.**

9. INSTALL INTAKE AIR CONNECTOR

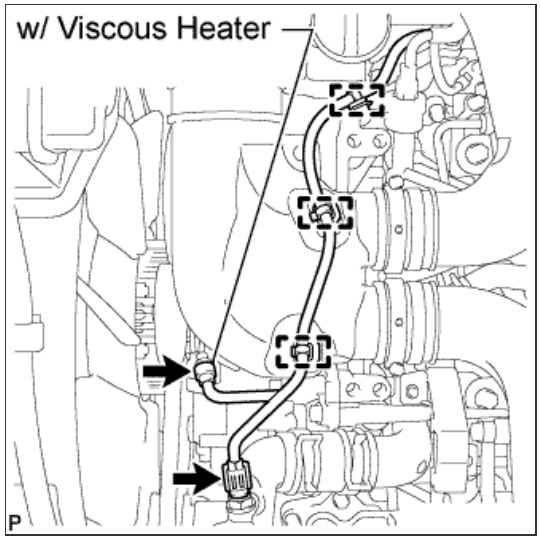


a. Connect the intake air connector to the No. 1 and No. 2 air cleaner pipes.

b. Install the connector with the 2 bolts.

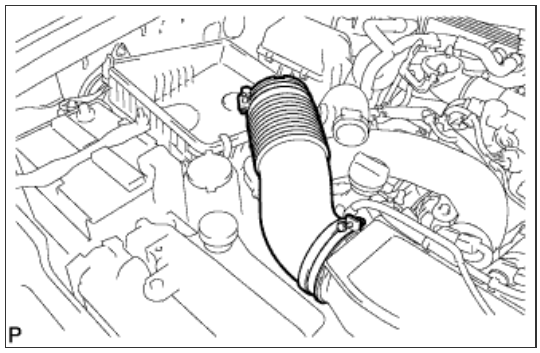
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

c. Tighten the 2 hose clamps.



Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

d. Attach the 3 wire harness clamps.

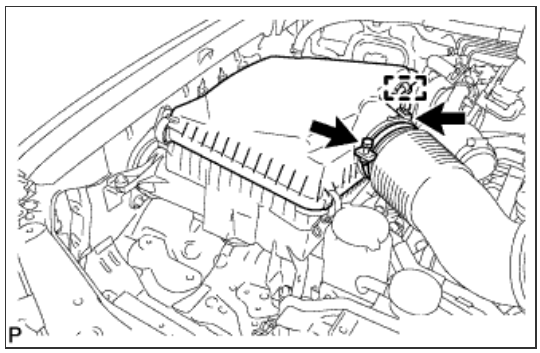


e. w/o Viscous Heater:
Connect the connector to the water temperature sensor.

f. w/ Viscous Heater:
Connect the 2 connectors to the water temperature sensor and viscous with magnet clutch heater.

10. TEMPORARILY INSTALL NO. 1 AIR CLEANER HOSE

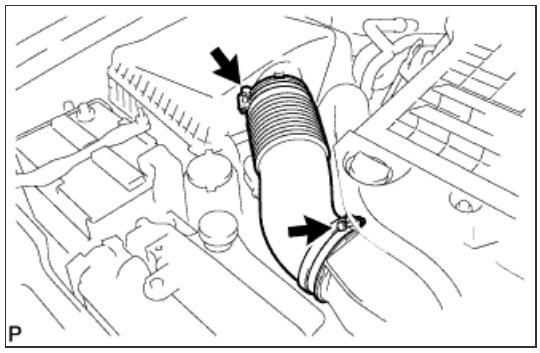
a. Temporarily install the air cleaner hose to the intake air connector.



11. INSTALL AIR CLEANER CAP SUB-ASSEMBLY

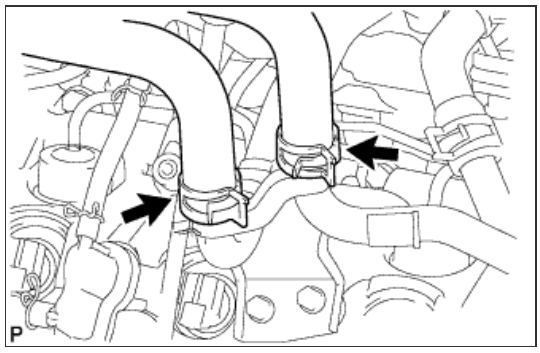
a. Connect the air cleaner cap to the air cleaner hose, and install the air cleaner cap with the 4 clamps.

b. Connect the mass air flow meter connector and attach the wire harness clamp to the air cleaner cap.



c. Attach the wire harness clamp.

d. Align the protrusion of air cleaner cap and concave portion of air cleaner hose.

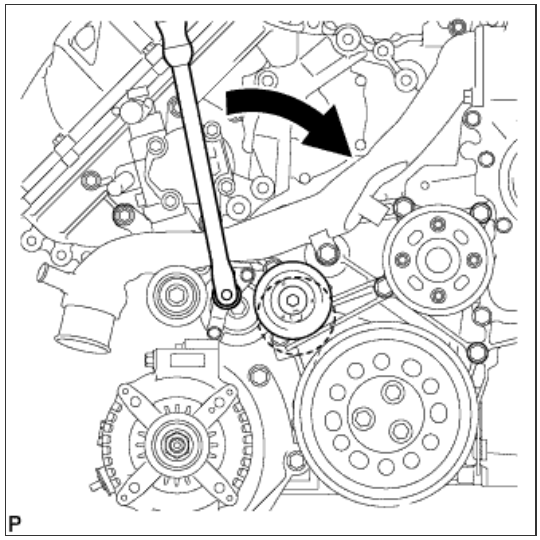


e. Tighten the 2 hose clamps.

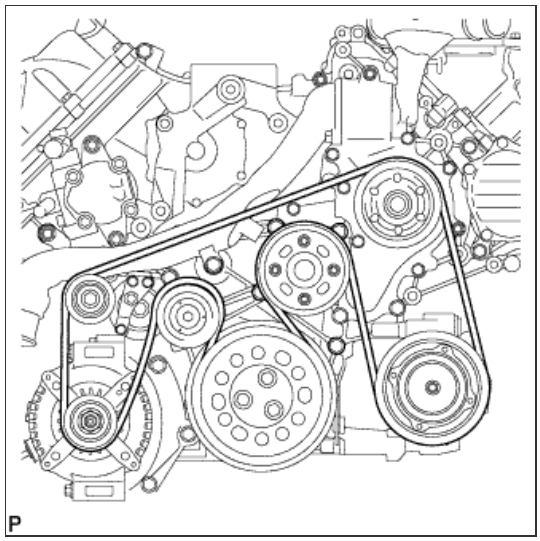
Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

12. CONNECT WATER HOSE SUB-ASSEMBLY (w/ Viscous Heater)

a. Connect the 2 water hoses.



13. INSTALL INTERCOOLER ASSEMBLY (w/ Intercooler)

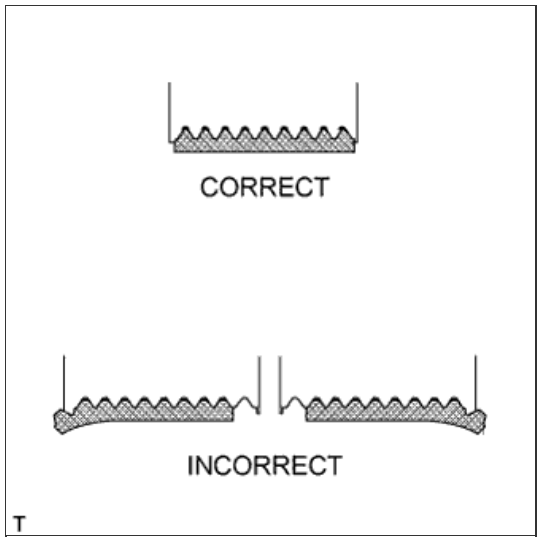


a. Install the intercooler assembly (Click here).

14. INSTALL V-RIBBED BELT

a. Attach a wrench to the V-ribbed belt tensioner bracket and turn the wrench clockwise.

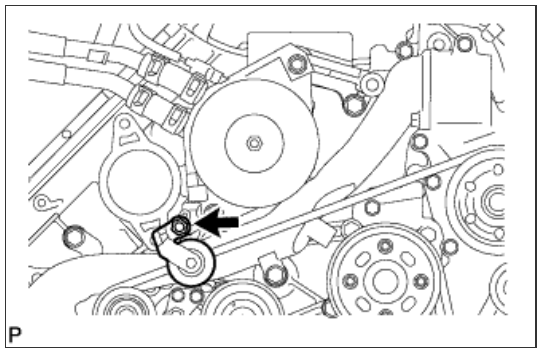
b. Install the V-ribbed belt as shown in the illustration.



c. Check that the belt fits properly in the ribbed grooves.

HINT:

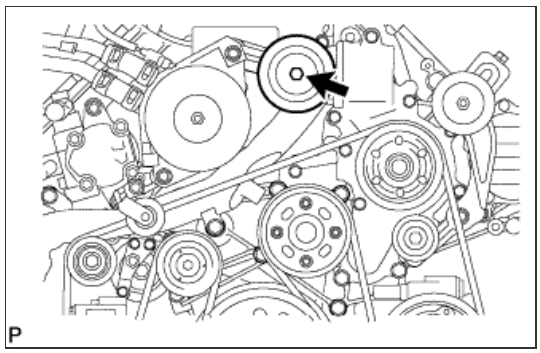
Check with your hand to confirm that the belt has not slipped out of the groove on the bottom of the pulley.



If it has slipped out, replace the V-ribbed belt. Install a new V-ribbed belt.

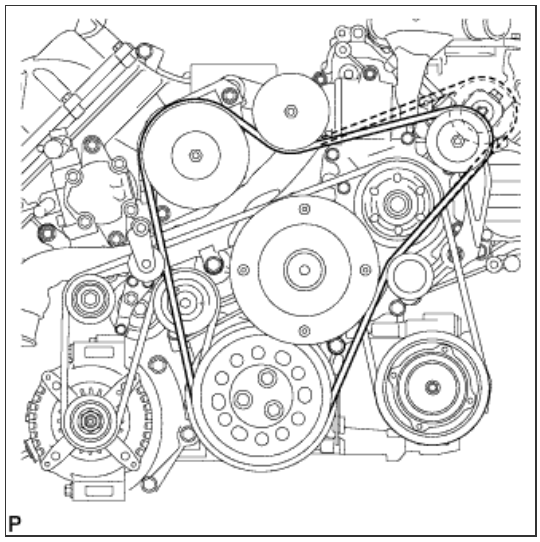
15. INSTALL NO. 3 IDLER PULLEY (w/ Viscous Heater)

a. Align the No. 3 idler pulley bracket knock pin and No. 1 idler pulley bracket knock pin hole and install the No. 3 idler pulley with the nut.



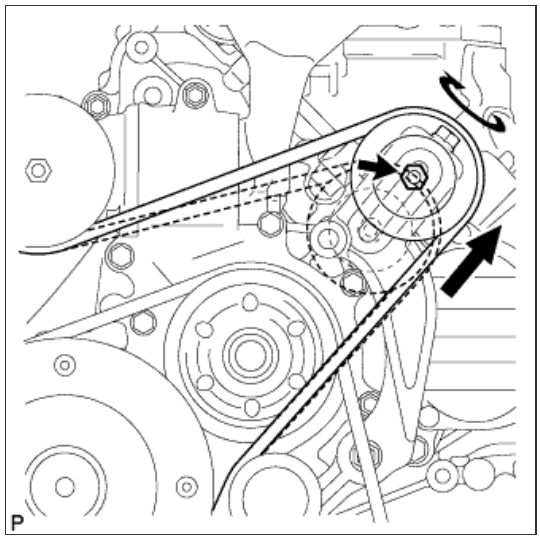
Torque:
88 N*m{ 898 kgf*cm , 64 ft.*lbf }

16. INSTALL NO. 1 IDLER PULLEY (w/ Viscous Heater)



a. Install the collar, No. 1 idler pulley and cover with the bolt.

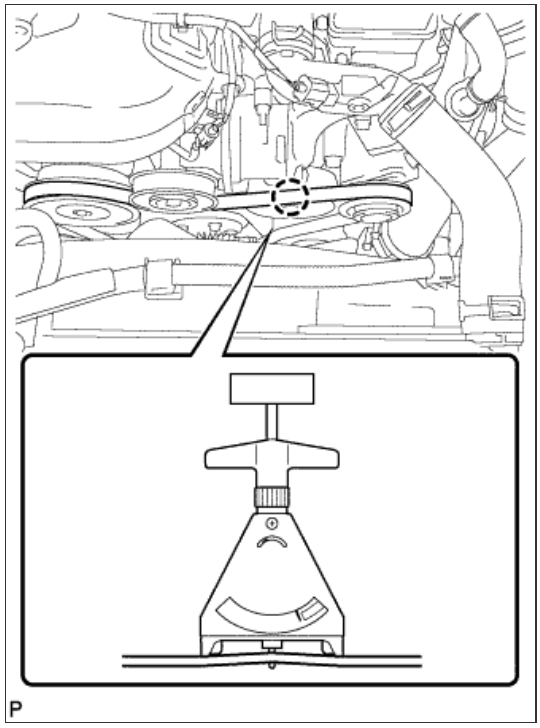
Torque:
49 N*m{ 495 kgf*cm , 36 ft.*lbf }



1 INSTALL V-RIBBED BELT (w/ Viscous Heater)

a. Install the V-ribbed belt as shown in the illustration.

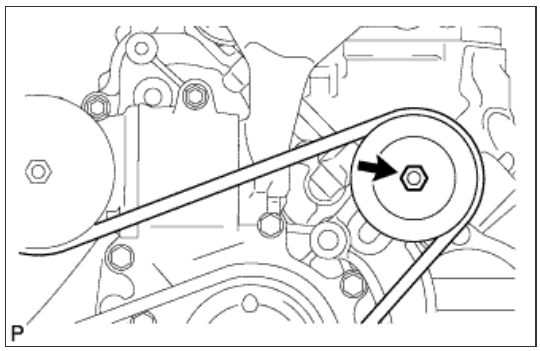
b. Temporarily install the lock nut, and turn the bolt clockwise.



c. Using a belt tension gauge, adjust belt tension.

Standard Belt Tension:

Item	Specified Condition
New belt	400 to 650 N (41 to 66 kgf, 89.9 to 146.1 lbf)
Used belt	300 to 500 N (31 to 51 kgf, 67.4 to 112.4 lbf)

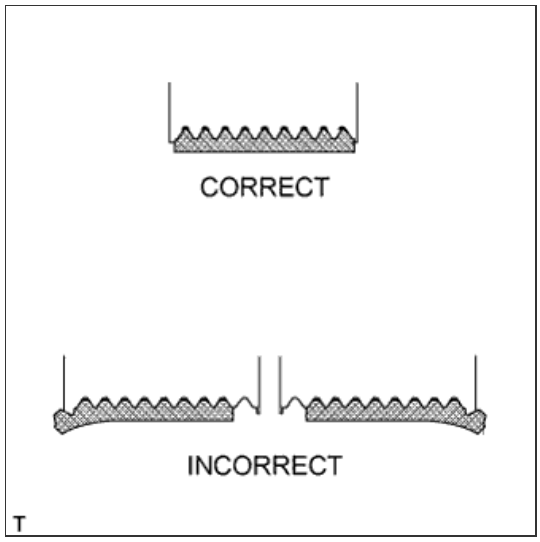


HINT:

- **A new belt is a belt which has been used for less than 5 minutes on a running engine.**
- **A used belt is a belt which has been used on a running engine for 5 minutes or more.**
- **After installing a new belt, run the engine for appro imatel 5 minutes and then recheck the tension.**

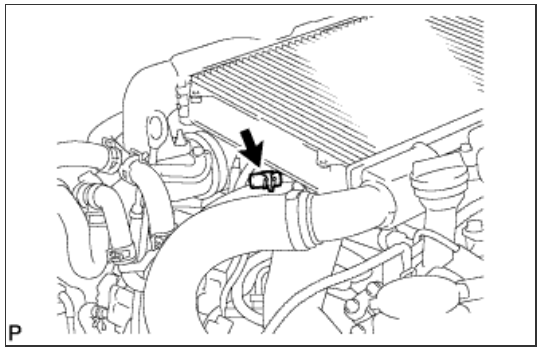
d. Tighten the nut.

Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }



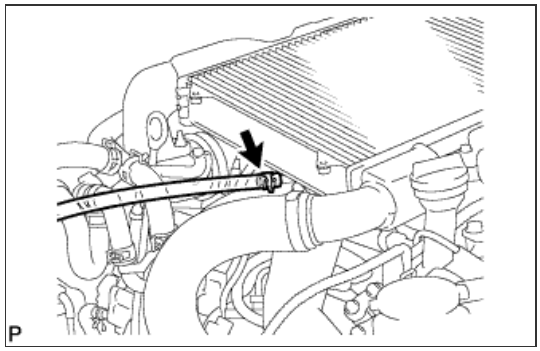
e. Check that the belt fits properly in the ribbed grooves.

HINT:

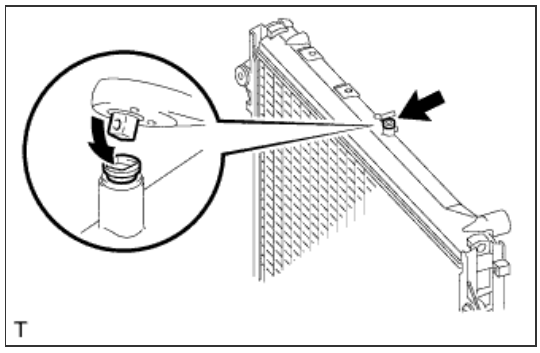


Check with your hand to confirm that the belt has not slipped out of the groove on the bottom of the pulley.

If it has slipped out, replace the V-ribbed belt. Install a new V-ribbed belt.



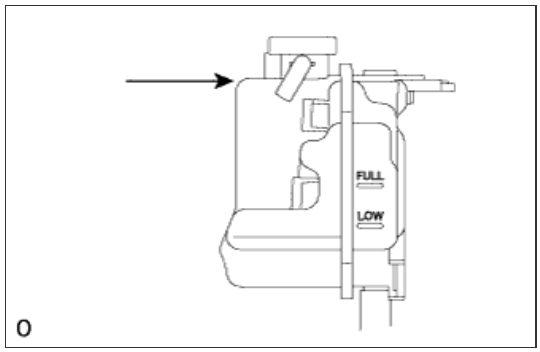
18. ADD ENGINE COOLANT



a. Remove the engine air bleed cap.

b. Connect a clear hose to the engine air bleed pipe.

c. Using a wrench, remove the vent plug.



d. Fill the radiator with TOYOTA SLLC to the radiator reservoir filler neck.

HINT:

Pour TOYOTA SLLC until it spills out of the engine air bleed pipe.

Standard Capacit (for Automatic Transmission):

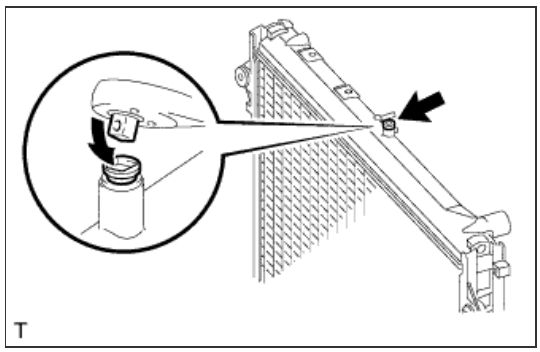
Item	Specified Condition
Front heater only	14.8 liters (15.6 US qts, 13.0 Imp. qts)
Front heater and rear heater	17.6 liters (18.6 US qts, 15.5 Imp. qts)
Front heater with viscous heater	15.2 liters (16.1 US qts, 13.4 Imp. qts)
Front heater and rear heater with viscous heater	18.0 liters (19.0 US qts, 15.4 Imp. qts)

Standard capacit (for Manual Transmission):
15.4 liters (16.3 US qts, 13.6 Imp. qts)

NOTICE:

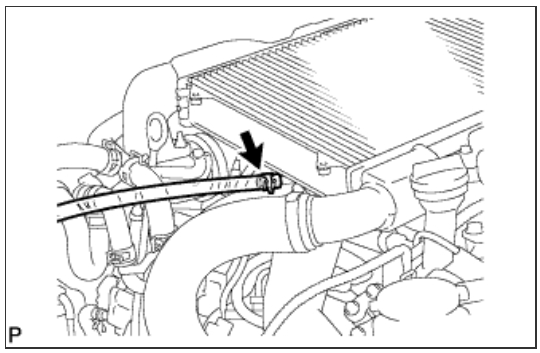
Do not substitute plain water for engine coolant.

HINT:



TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

e. Install the vent plug.

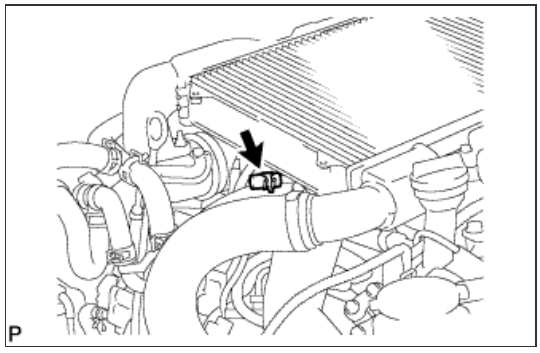


Torque:
2.0 N*m{ 20 kgf*cm , 18 in.*lbf }

NOTICE:

Do not tighten the plug to 5.0 N*m (51 kgf*cm, 44 in.*lbf) or more, as the plug will be damaged.

f. Disconnect the clear hose from the engine air bleed pipe.



g. Install the engine air bleed cap when coolant comes out.

h. Install the radiator reservoir cap.

i. Start the engine.

NOTICE:

Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the FULL line.

j. Maintain an engine speed of 3000 rpm for approximately 10 minutes so that the thermostat opens and air bleeding is performed.

CAUTION:

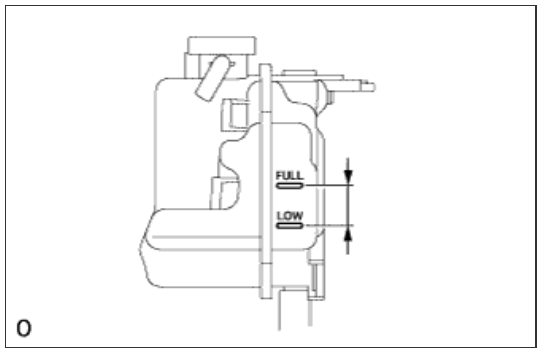
When pressing the radiator hoses:
- **Wear protecti e glo es.**

- **Be careful as the radiator hoses are hot.**
- **Keep our hands awa from the radiator fan**

NOTICE:

- **Pa attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormall high temperature.**
- **If there is not enough coolant, the engine ma burn out or o erheat.**

HINT:



The thermostat opening timing can be confirmed by pressing the No. 2 radiator hose by hand, and checking when the engine coolant starts to flow inside the hose.

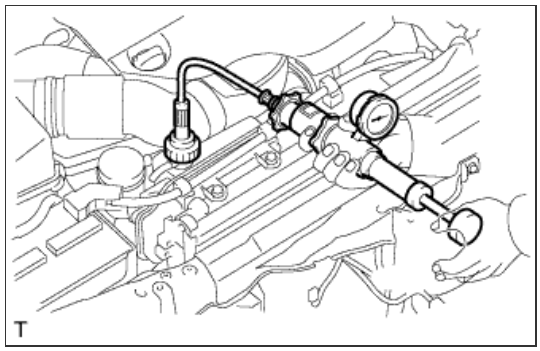
k. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

Do not remove the radiator reservoir cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

l. Check that the coolant level is between the FULL and LOW lines.
If the coolant level is above the FULL line, drain coolant so that the coolant level is between the FULL and LOW lines.

19. INSPECT OR COOLANT LEAK

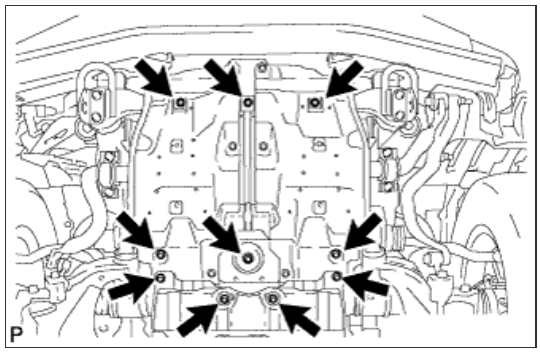


CAUTION:

Do not remove the radiator reservoir cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

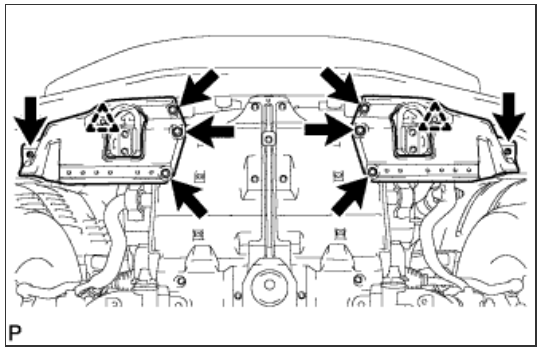
a. Fill the radiator with coolant and attach a radiator cap tester to the radiator reservoir.

b. Warm up the engine.



c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 17.8 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks.
If no external leaks are found, check the cylinder block and cylinder head.

20. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

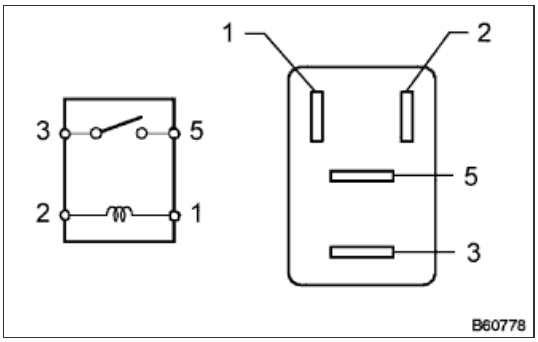


a. Install the engine under cover with the 10 bolts.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

21. INSTALL RONT ENDER SPLASH SHIELD SUB-ASSEMBLY RH

a. Install the splash shield with the clip, and then install the 3 bolts and screw.



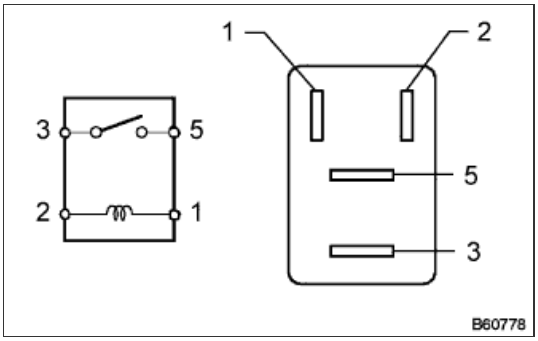
22. INSTALL RONT ENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Install the splash shield with the clip, and then install the 3 bolts and screw.

for Preparation Click here

1. INSPECT FUEL PUMP RELAY (SUB PUMP)

a. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 5	Battery voltage is not applied to terminals 1 and 2	10 kΩ or higher
	Battery voltage is applied to terminals 1 and 2	Below 1 Ω

If the result is not as specified, replace the relay.

2. INSPECT EDU RELAY (EDU 1, EDU 2)

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 5	Battery voltage is not applied between 1 and 2	10 kΩ or higher
3 - 5	Battery voltage is applied between 1 and 2	Below 1 Ω

If the result is not as specified, replace the relay.

3. INSPECT INTEGRATION RELAY (IG2)

a. Measure the resistance of the IG2 MAIN fuse.

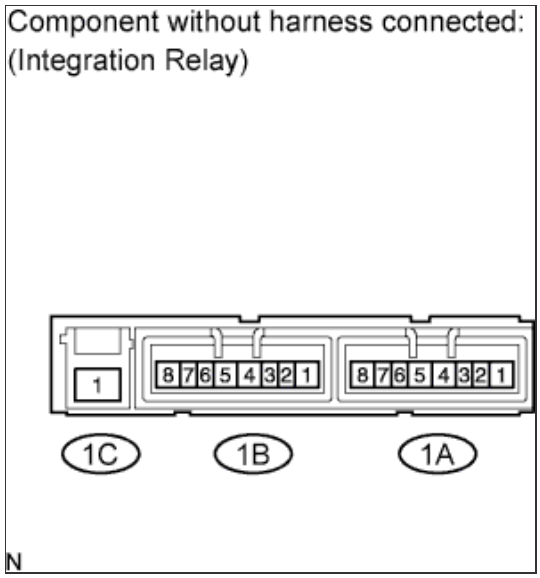
i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
IG2 MAIN fuse	Always	Below 1 Ω

If the result is not as specified, replace the IG2 MAIN fuse.

b. Measure the resistance of the ignition relay No. 2 (IG2) circuit.



i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

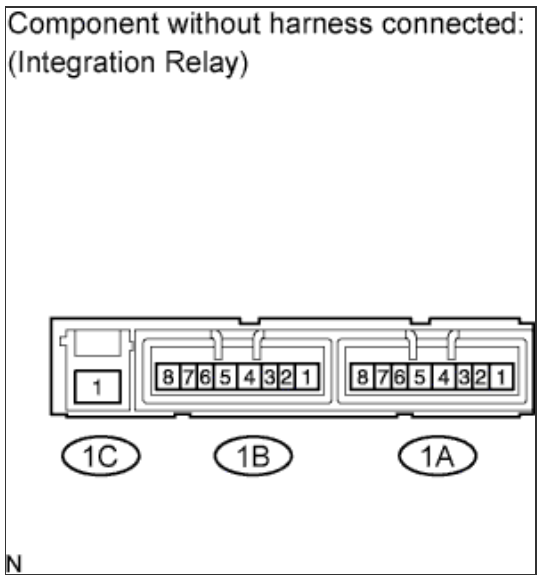
Tester Connection	Condition	Specified Condition

1C-1 - 1B-8	Battery voltage is not applied to terminals 1B-6 and 1B-7	10 kΩ or higher
	Battery voltage is applied to terminals 1B-6 and 1B-7	Below 1 Ω

If the result is not as specified, replace the integration relay.

4. REMOVE INTEGRATION RELAY (EFI MAIN)

a. Measure the resistance of the EFI MAIN fuse.



i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
EFI MAIN fuse	Always	Below 1 Ω

If the result is not as specified, replace the EFI MAIN fuse.

b. Measure the resistance of the EFI MAIN relay circuit.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1C-1 - 1B-4	Battery voltage is not applied to terminals 1B-2 and 1B-3	10 kΩ or higher
	Battery voltage is applied to terminals 1B-2 and 1B-3	Below 1 Ω

If the result is not as specified, replace the integration relay.

5. INSPECT INTEGRATION RELAY (EFI MAIN 2)

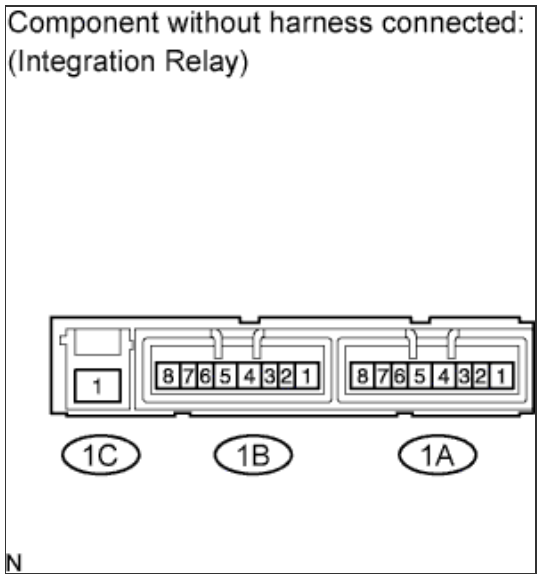
a. Measure the resistance of the EFI MAIN 2 fuse.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
EFI MAIN 2 fuse	Always	Below 1 Ω

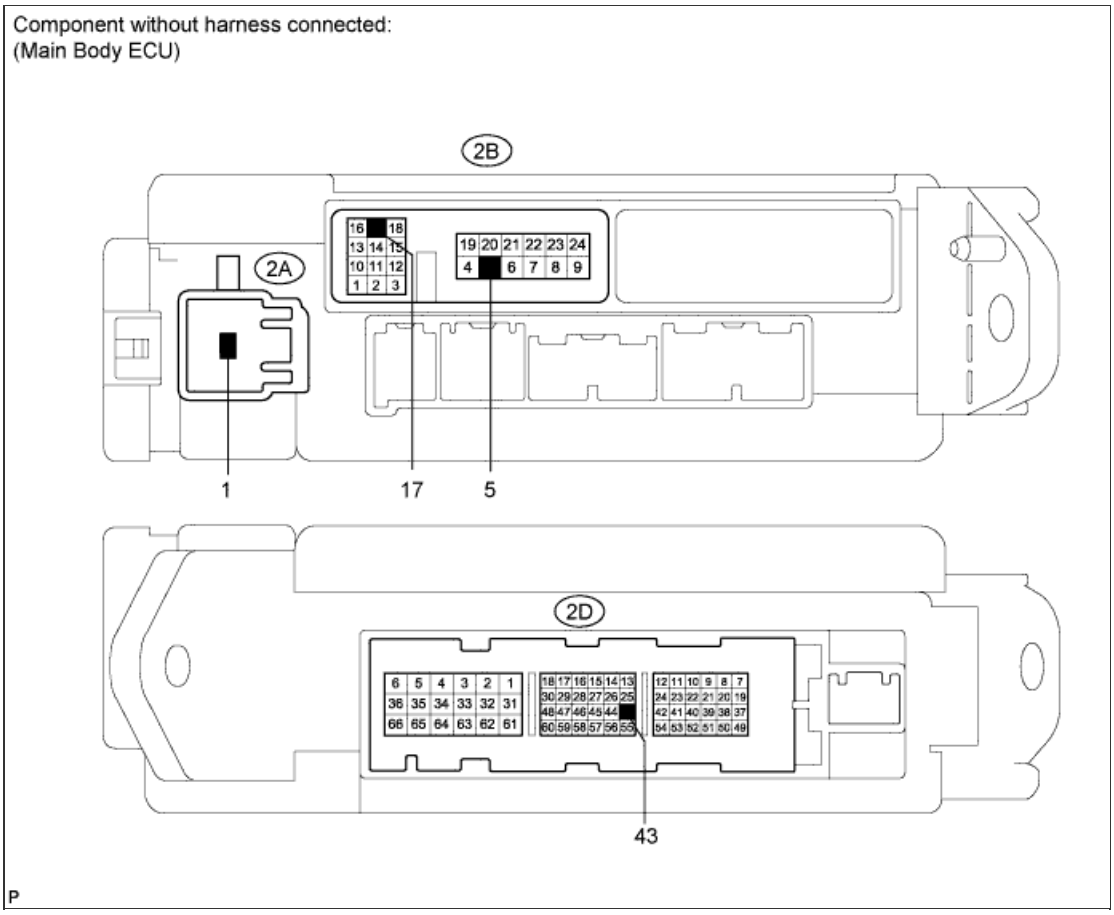
If the result is not as specified, replace the EFI MAIN 2 fuse.



b. Measure the resistance of the EFI MAIN 2 relay circuit.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:



Tester Connection	Condition	Specified Condition
1C-1 - 1A-4	Battery voltage is not applied to terminals 1A-2 and 1A-3	10 kΩ or higher
	Battery voltage is applied to terminals 1A-2 and 1A-3	Below 1 Ω

If the result is not as specified, replace the integration relay.

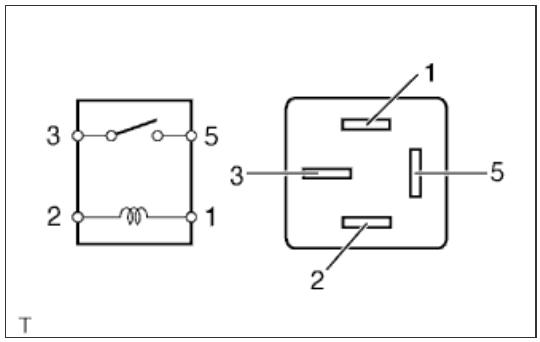
6. INSPECT MAIN BODY ECU (IG1 NO. 1)

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
	Battery voltage is not applied to terminals 2B-5 and	10 kΩ or higher

2A1 - 2B17	2D-43	
	Battery voltage is applied to terminals 2B-5 and 2D-43	Below 1 Ω



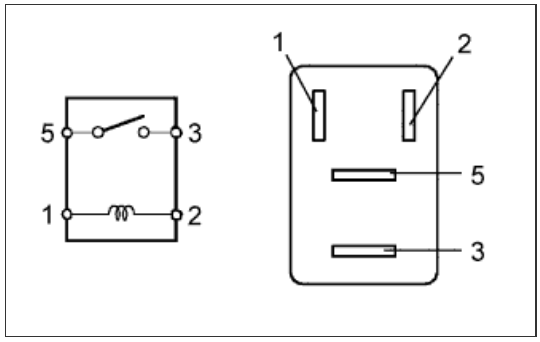
If the result is not as specified, replace the cowl side junction block LH.

7. INSPECT STARTER RELAY (ST)

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 5	Battery voltage not applied to terminals 1 and 2	10 kΩ or higher
	Battery voltage applied to terminals 1 and 2	Below 1 Ω



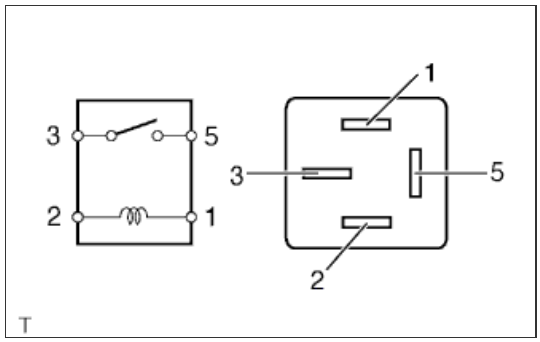
If the result is not as specified, replace the relay.

8. INSPECT STARTER CUT RELAY (ST CUT)

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 5	Battery voltage not applied to terminals 1 and 2	10 kΩ or higher
	Battery voltage applied to terminals 1 and 2	Below 1 Ω

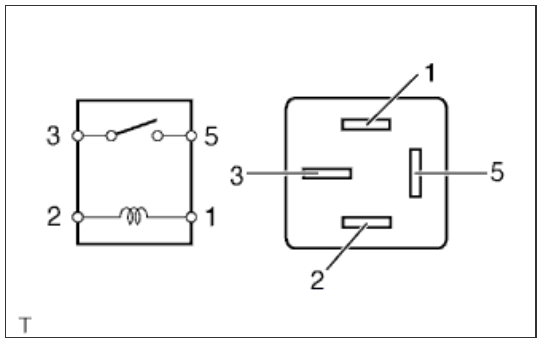


If the result is not as specified, replace the relay.

9. INSPECT NO. 1 GLOW RELAY (GLOW1)

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

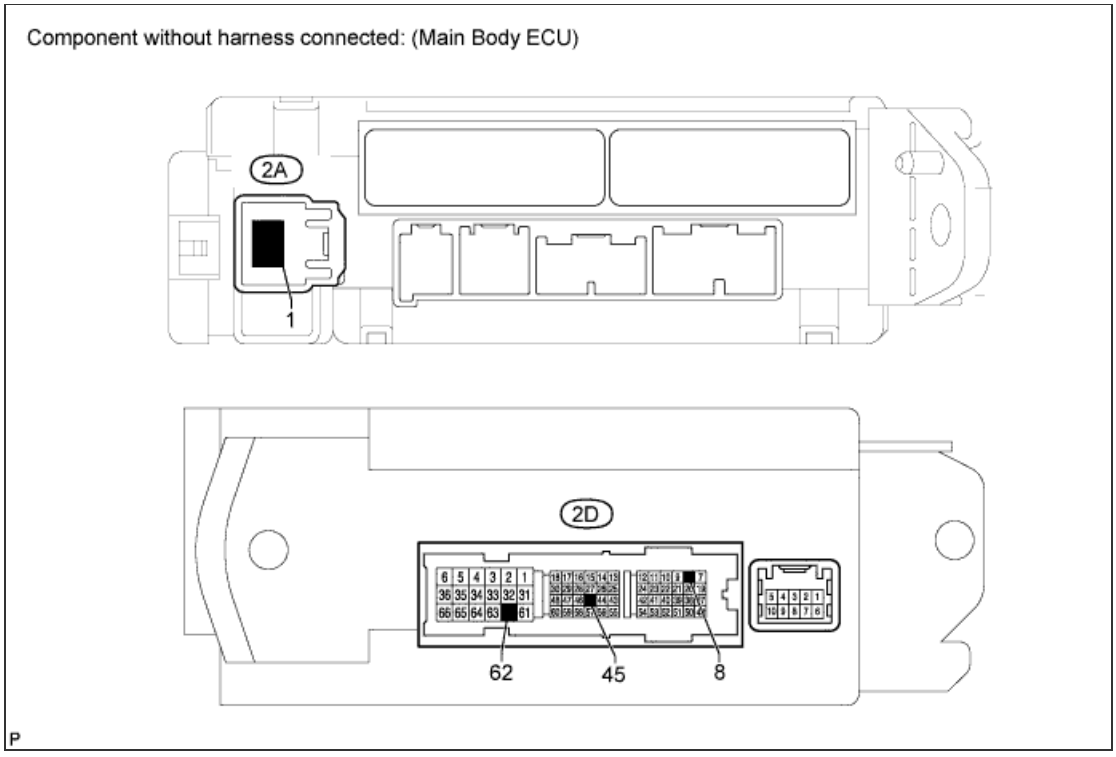


Tester Connection	Condition	Specified Condition
3 - 5	Battery voltage not applied to terminals 1 and 2	10 kΩ or higher
	Battery voltage applied to terminals 1 and 2	Below 1 Ω

If the result is not as specified, replace the relay.

10. INSPECT NO. 2 GLOW RELAY (GLOW2)

a. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 5	Battery voltage not applied to terminals 1 and 2	10 kΩ or higher
	Battery voltage applied to terminals 1 and 2	Below 1 Ω

If the result is not as specified, replace the relay.

11. INSPECT MAIN BODY ECU (ACC RELAY)

a. Measure the resistance of the ACC relay circuit.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
2A-1 - 2D-8	Battery voltage not applied between 2D-45 and 2D-62	10 kΩ or higher
	Battery voltage applied between 2D-45 and 2D-62	Below 1 Ω

If the result is not as specified, replace the main body ECU.

for Preparation Click here

1. INSPECT IGNITION TIMING

NOTICE:

- **Turn all electrical systems off.**
- **Perform the inspection when the cooling fan motor is turned off.**

a. Warm up the engine.

b. When using the intelligent tester:

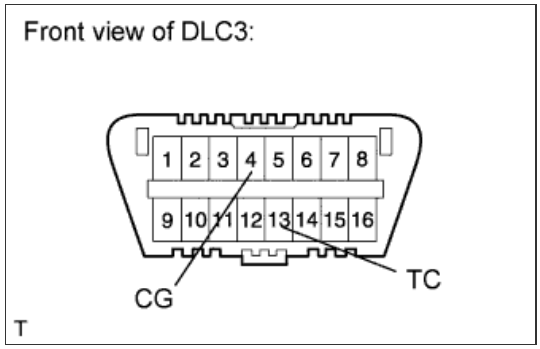
i. Connect the intelligent tester to the DLC3.

ii. Enter the following menus: Powertrain / Engine and ECT / Data List / All Data / IGN Advance.

iii. Inspect the ignition timing during idling.

Standard ignition timing:
8 to 12° BTDC @ idling (transmission in neutral position and A/C switch off)

iv. Check that the ignition timing advances immediately when the engine speed is increased.



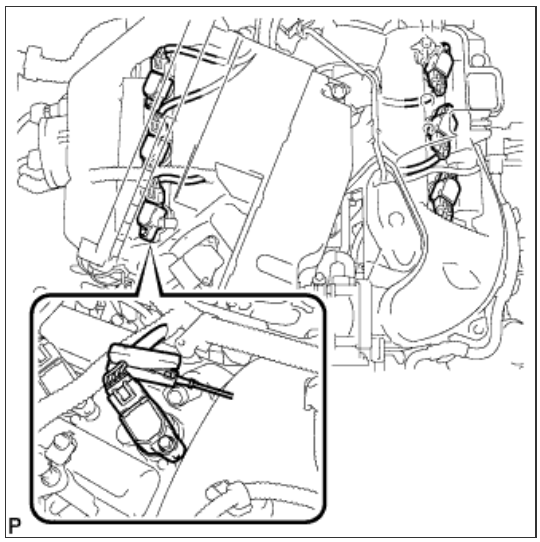
c. When not using the intelligent tester:

i. Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.

SST
09843-18040

NOTICE:

Be sure not to improperly connect the terminals. This may damage the engine.



ii. Remove the air cleaner cap.

iii. Pull out the wire harness shown in the illustration.

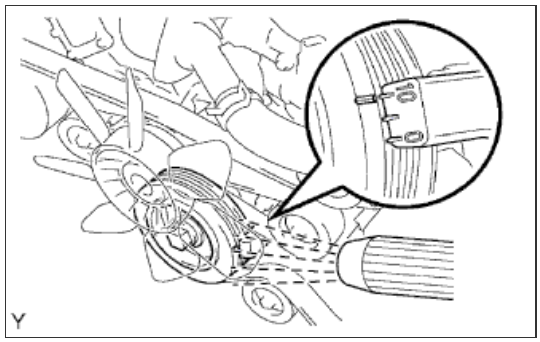
iv. Connect the tester probe of a timing light to the wire of the ignition coil connector for the No. 1 cylinder.

NOTICE:

- **Use a timing light that detects primary signals.**
- **After checking, be sure to wrap the wire harness with tape.**

v. Inspect the ignition timing during idling.

Standard ignition timing:
8 to 12° BTDC @ idling (transmission in neutral position and A/C switch off)



vi. Remove SST from the DLC3.

vii. Inspect the ignition timing during idling.

Standard ignition timing:
7 to 24° BTDC @ idling (transmission in neutral position and A/C switch off)

viii. Disconnect the timing light from the engine.

ix. Install the air cleaner cap.

2. INSPECT ENGINE IDLING SPEED

NOTICE:

- **Turn all the electrical systems off.**
- **Perform the inspection when the cooling fan motor is turned off.**

a. Warm up the engine.

b. When using the intelligent tester:

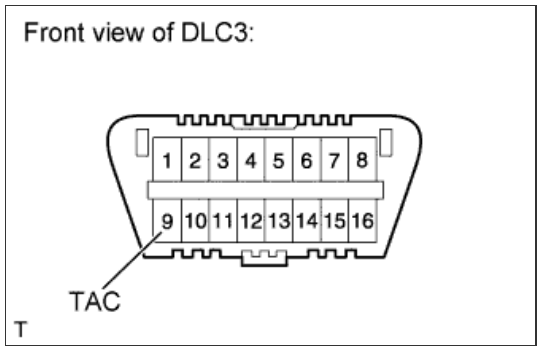
i. Connect the intelligent tester to the DLC3.

ii. Enter the following menus: Powertrain / Engine and ECT / Data List / All Data / Engine Speed.

iii. Inspect the engine idling speed.

Standard idling speed:
650 to 750 rpm (transmission in neutral position and A/C switch off)

c. When not using the intelligent tester:



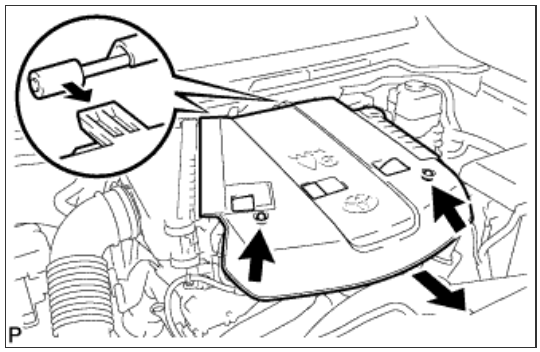
i. Connect SST to terminal 9 (TAC) of the DLC3.

SST
09843-18030

ii. Race the engine at 2500 rpm for approximately 90 seconds.

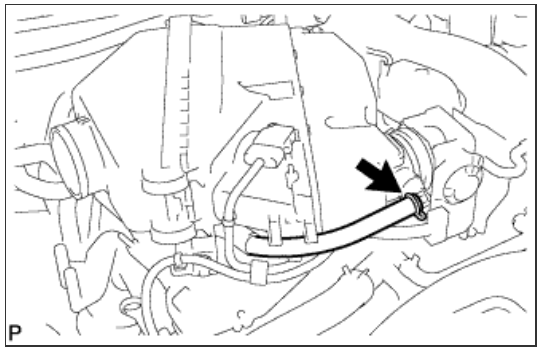
iii. Inspect the engine idling speed.

Standard idling speed:
650 to 750 rpm (transmission in neutral position and A/C switch off)



3. INSPECT COMPRESSION

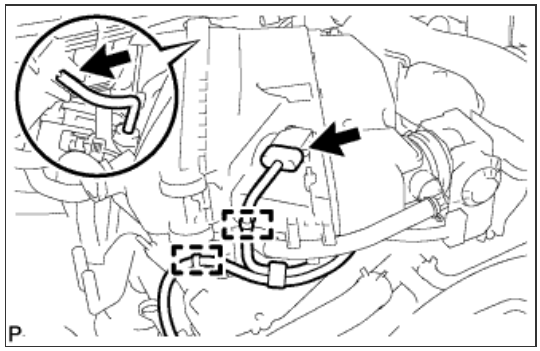
a. Warm up and stop the engine.



b. Drain the engine coolant (Click here).

c. Remove the 2 cap nuts and V-bank cover.

d. Loosen the clamp and remove the No. 2 air cleaner hose.

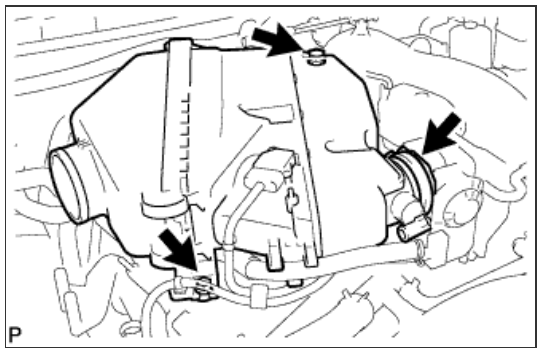


e. Disconnect the ventilation hose.

f. Disconnect the MAF connector.

g. Using a clip remover, detach the 2 wire harness clamps.

h. Disconnect the vacuum hose.



i. Loosen the hose clamp and remove the 2 bolts and air cleaner.

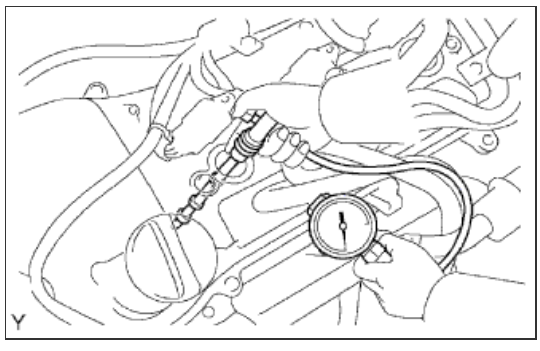
j. Remove the intake air surge tank (Click here).

k. Remove the 6 ignition coils.

l. Remove the 6 spark plugs.

m. Disconnect the 6 fuel injector connectors.

n. Inspect the cylinder compression pressure.



i. Insert a compression gauge into the spark plug hole (Procedure "A").

ii. While cranking the engine, measure the compression pressure (Procedure "B").

Compression pressure:
1300 kPa (13.3 kgf/cm^2, 189 psi)

Minimum pressure:
1000 kPa (10.2 kgf/cm^2, 145 psi)

Difference between each cylinder:
100 kPa (1.0 kgf/cm^2, 15 psi)

HINT:

- **Use a fully-charged battery so that the engine speed can be increased to 250 rpm or more.**
- **Measure the compression in as short a time as possible.**

iii. Repeat procedures "A" and "B" for each cylinder.

iv. If the cylinder compression is low, pour a small amount of engine oil into the cylinder through the spark plug hole and repeat procedures "A" and "B" for cylinders with low compression.

- If adding oil increases the compression, the piston rings and/or cylinder bore may be worn or damaged.
- If pressure stays low, a valve may be stuck or seated improperly, or there may be leakage from the gasket.

o. Connect the 6 injector connectors.

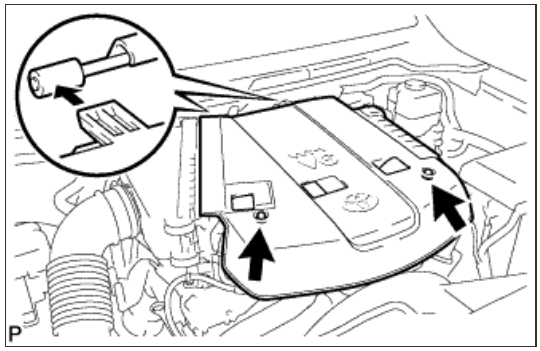
p. Install the 6 spark plugs.

Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

q. Install the 6 ignition coils.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

r. Install the intake air surge tank (Click here).



s. Install the air cleaner (Click here).

t. Install the No. 2 air cleaner hose (Click here).

u. Install the V-bank cover with the 2 cap nuts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

v. Add engine coolant (Click here).

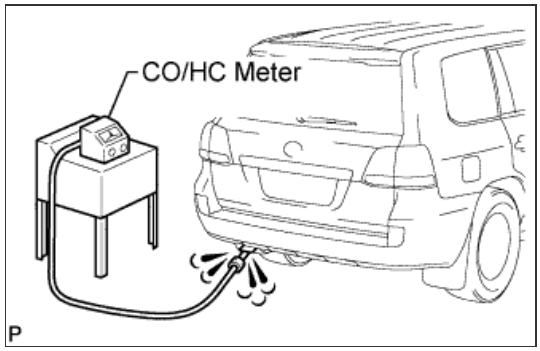
4. INSPECT CO/HC

HINT:

This check is to determine whether or not the idle CO/HC concentration complies with regulations.

a. Start the engine.

b. Run the engine at 2500 rpm for approximately 180 seconds.



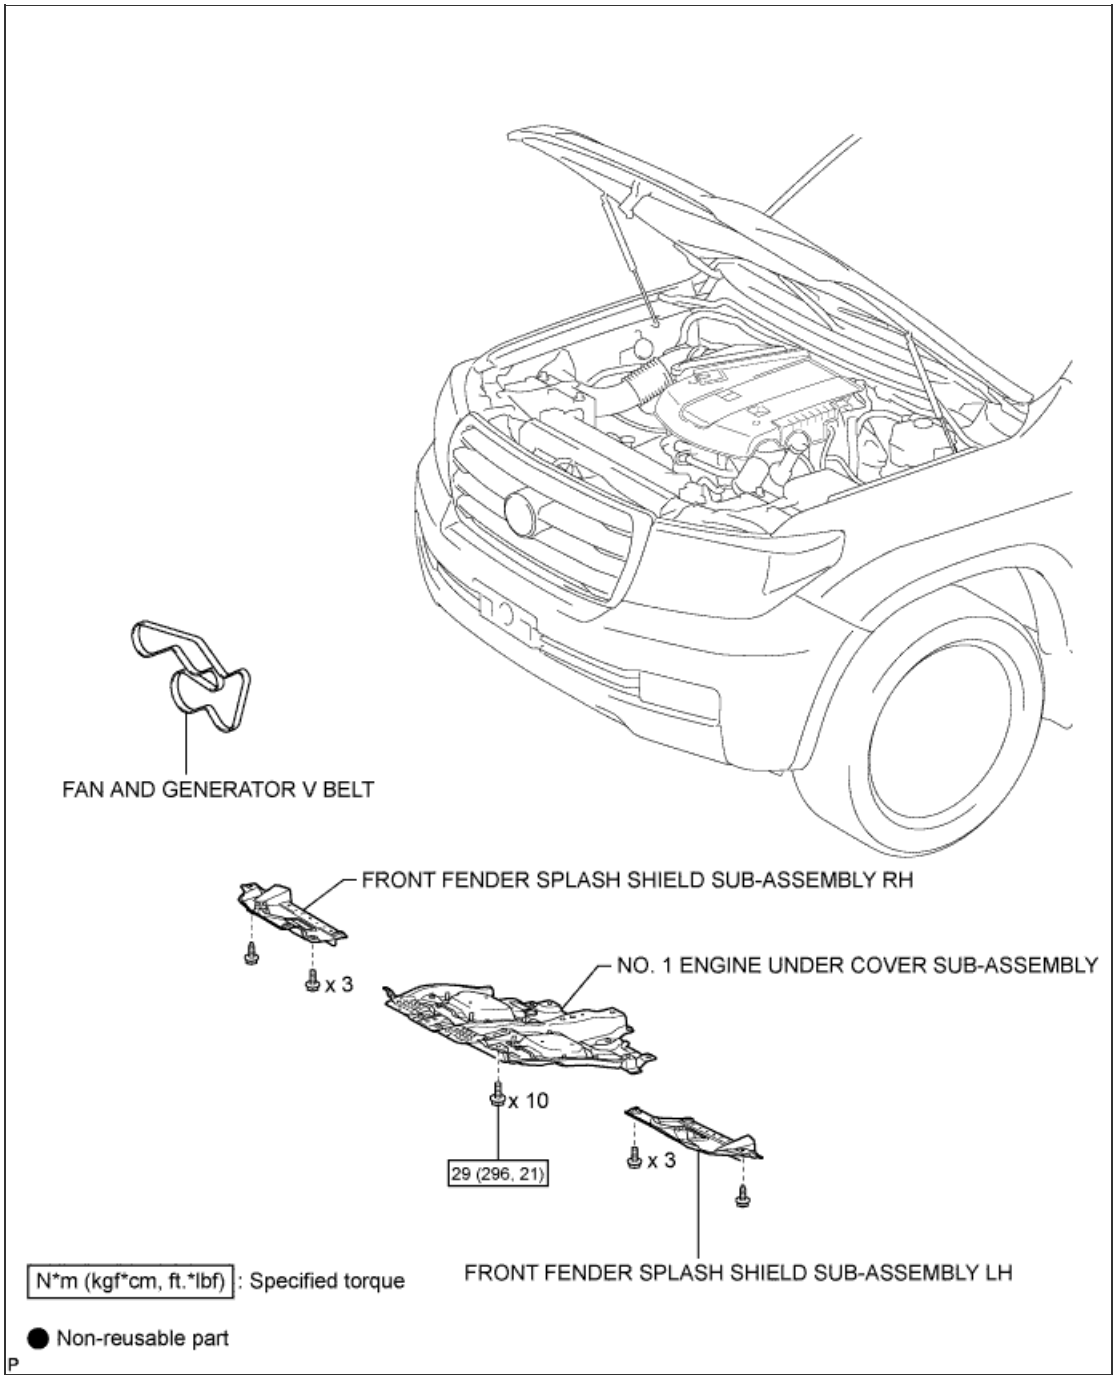
c. Insert the CO/HC meter testing probe at least 40 cm (1.31 ft) into the tailpipe during idling.

d. Immediately check the CO/HC concentration during idling and/or at 2500 rpm.

HINT:

When carrying out the 2 tests (idling and 2500 rpm), the measurement orders are prescribed by the applicable local regulations.

e. If the CO/HC concentration does not comply with regulations, perform troubleshooting in the order given below.

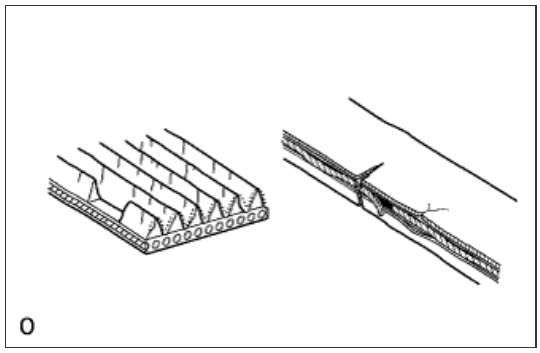


i. Check the A/F sensor operation (Click here) and heated oxygen sensor operation (Click here).

ii. See the table below for possible causes, and then inspect and correct the corresponding causes if necessary.

CO	HC	Symptom	Causes
Normal	High	Rough idling	1. Faulty ignition: • Incorrect timing • Plugs are contaminated or shorted, or plug gaps are defective 2. Incorrect valve clearance 3. Leaky intake and exhaust valves 4. Leaky cylinders
Low	High	Rough idling (Fluctuating HC reading)	1. Vacuum leaks: • Ventilation hoses • Intake manifold • Throttle body 2. Lean mixture causing misfire
High	High	Rough idle (Black smoke from exhaust)	1. Restricted air filter 2. Faulty SFI system: • Faulty pressure regulator • Defective engine coolant temperature sensor • Faulty mass air flow meter • Faulty ECM • Faulty injectors • Faulty throttle position sensor

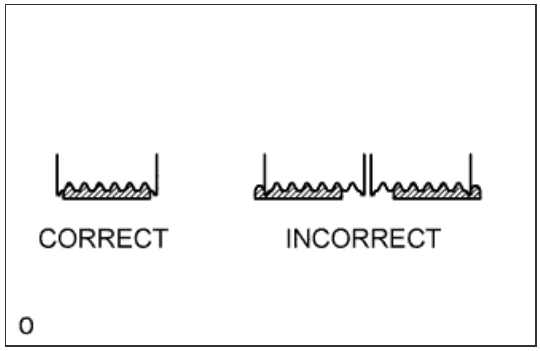
for Preparation Click here



for Preparation Click here

1. INSPECT FAN & GENERATOR V BELT

a. Check the belt for wear, cracks or other signs of damage.
If any of the following defects is found, replace the fan and generator belt.



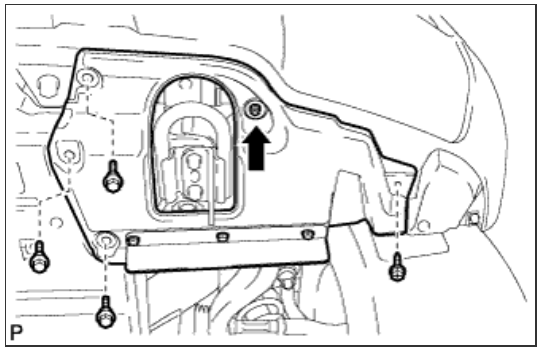
- The belt is cracked.
- The belt is worn out to the extent that the cords are exposed.
- The belt has chunks missing from the ribs.

b. Check that the belt fits properly in the ribbed grooves.

HINT:

Check with your hand to confirm that the belt has not slipped out of the groove on the bottom of the pulley. If it has slipped out, replace the fan and generator belt. Install a new fan and generator belt correctly.

2. INSPECT V-RIBBED BELT TENSIONER ASSEMBLY



a. Turn the tensioner clockwise and counterclockwise. Check that the tensioner moves smoothly.
If a malfunction exists, replace the tensioner.

for Preparation Click here

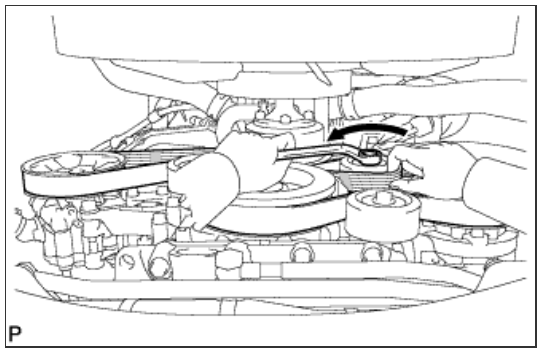
1. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and screw.

b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.

2. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

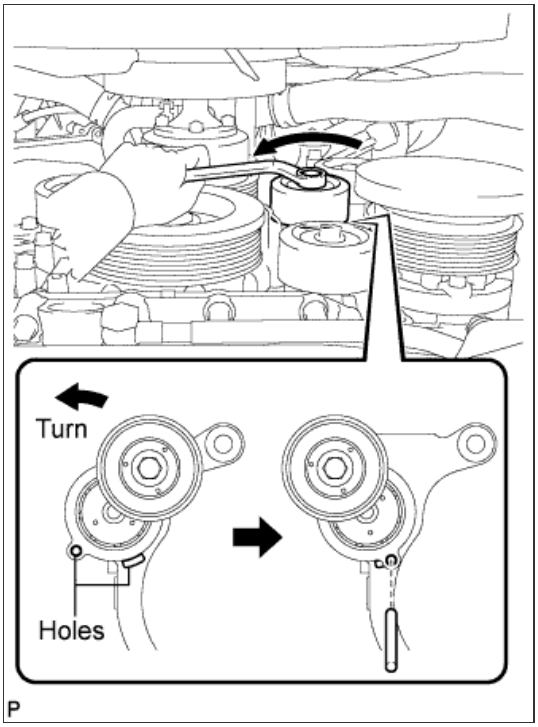


Use the same procedures described for the LH side.

3. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and engine under cover.

4. REMOVE FAN & GENERATOR V BELT

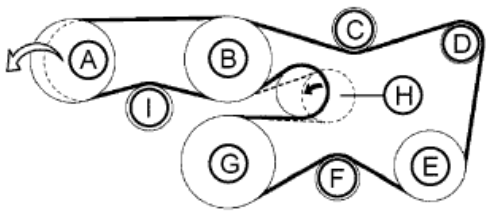


a. While releasing the belt tension by turning the belt tensioner counterclockwise, remove the fan and generator belt from the belt tensioner.

for Preparation Click here

1. INSTALL FAN & GENERATOR V BELT

a. While turning the belt tensioner counterclockwise, align the holes, and then insert a bar of φ mm (in.) into the holes to fi the belt tensioner in place.



b. Install the fan and generator V belt.

HINT:

If it is hard to install the fan and generator V belt, perform the following procedures.

1. **Put the fan and generator V belt on all parts except the vane pump, as shown in the illustration.**
2. **While releasing the belt tension by turning the belt tensioner counterclockwise, put the fan and generator V belt on the vane pump.**

c. While turning the belt tensioner counterclockwise, remove the bar.

A: Vane Pump

B: Water Pump

C: No. 2 Idler

D: Generator

E: Cooler Compressor

F: No. 1 Idler

G: Crankshaft

H: V-Ribbed Belt Tensioner

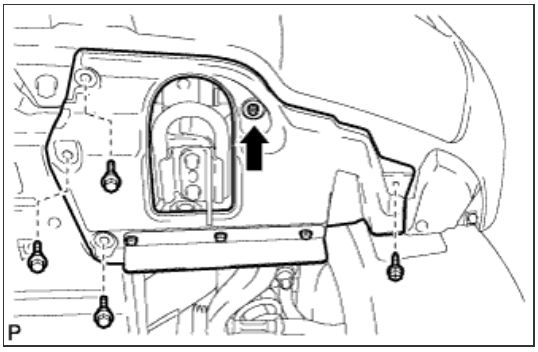
I: No. 2 Idler

2. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the engine under cover with the 1 bolts.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

3. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH



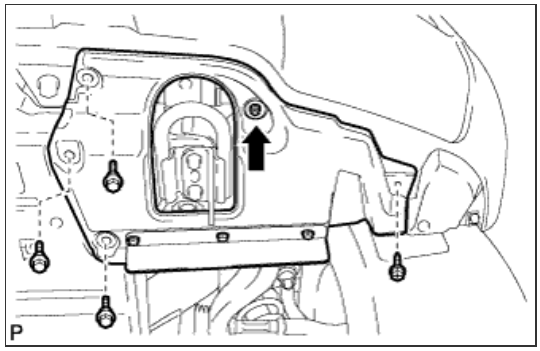
HINT:

Use the same procedures described for the L side.

4. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the bolts and screw.

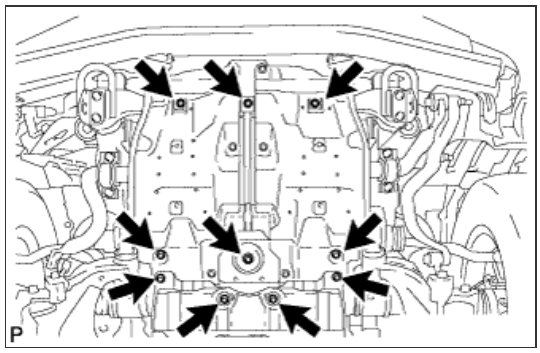


for Preparation Click here

1. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and screw.

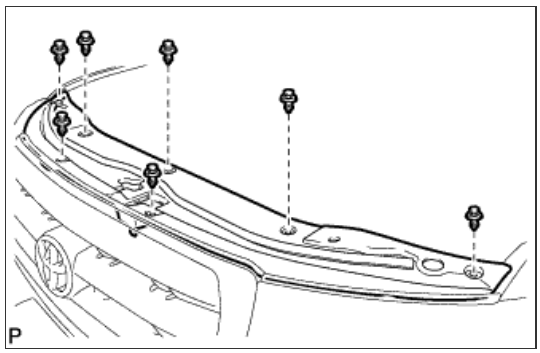
b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



2. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.



3. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and under cover.

4. REMOVE UPPER RADIATOR SUPPORT SEAL

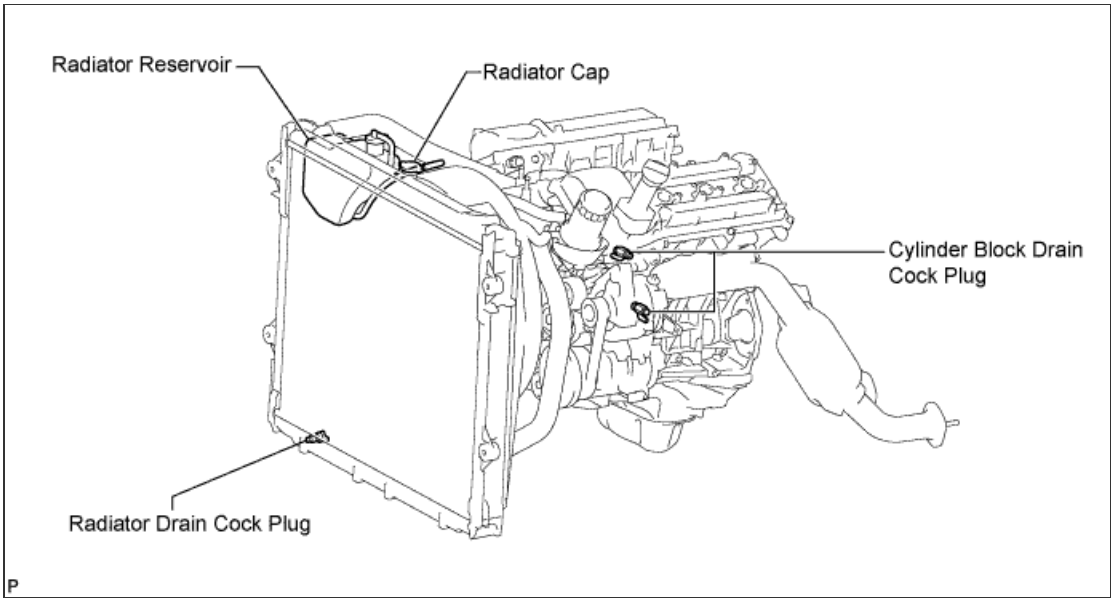
a. Remove the 7 clips and radiator support seal.

5. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Loosen the radiator drain cock plug and 2 cylinder block drain cock plugs.

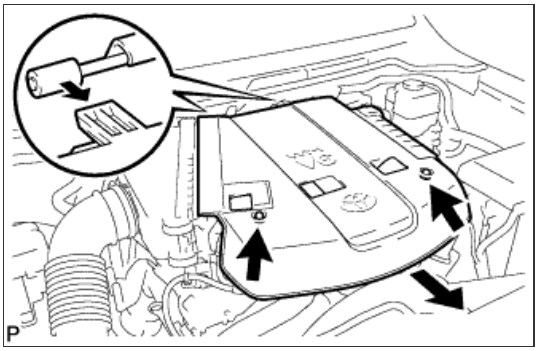


b. Remove the radiator cap. Then drain the coolant.

HINT:

Collect the coolant in a container and dispose of it according to the regulations in your area.

c. Tighten the 2 cylinder block drain cock plugs.

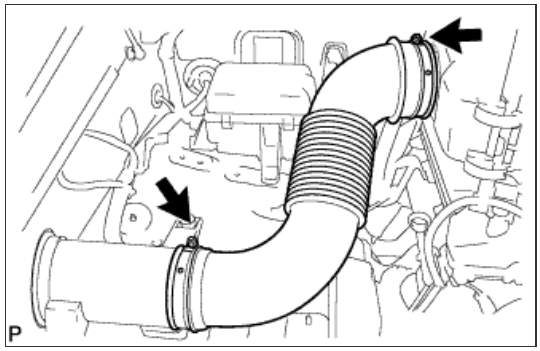


Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }

d. Tighten the radiator drain cock plug by hand.

6. REMOVE V-BANK COVER

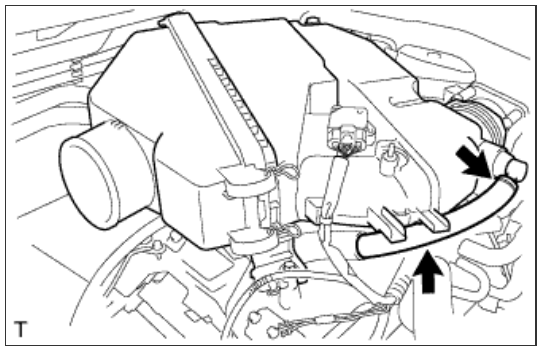
a. Remove the 2 cap nuts and V-bank cover.



7. REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

a. Remove the cowl top ventilator louver (lick here).

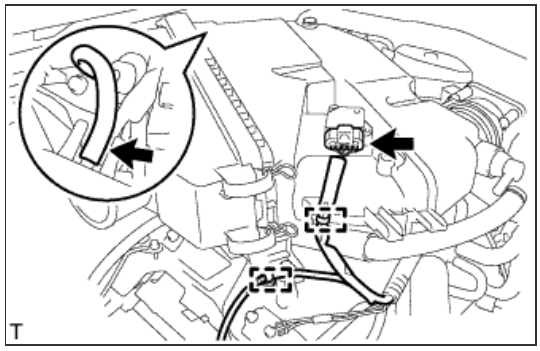
8. REMOVE NO. 2 AIR CLEANER HOSE



a. Loosen the 2 hose clamps and remove the air cleaner hose.

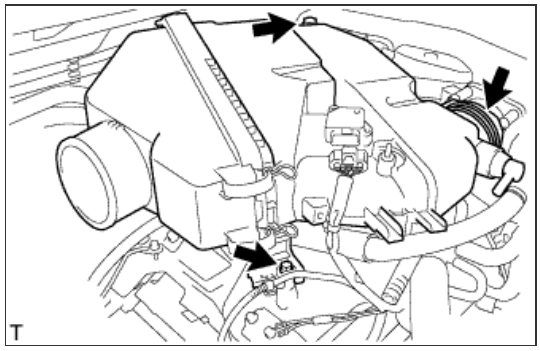
9. REMOVE AIR CLEANER ASSEMBLY

a. Disconnect the No. 2 ventilation hose.



b. Detach the hose clamp.

c. Disconnect the vacuum hose.

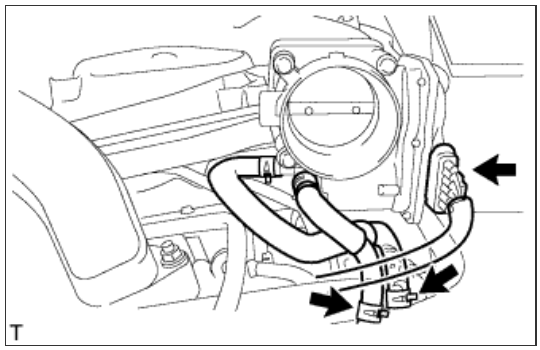


d. Disconnect the MAF meter connector.

e. Using a clip remover, detach the 2 wire harness clamps.

f. Loosen the hose clamp.

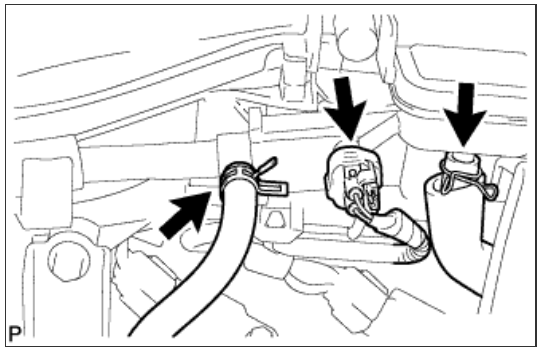
g. Remove the 2 bolts and air cleaner assembly.



10. REMOVE INTAKE AIR SURGE TANK

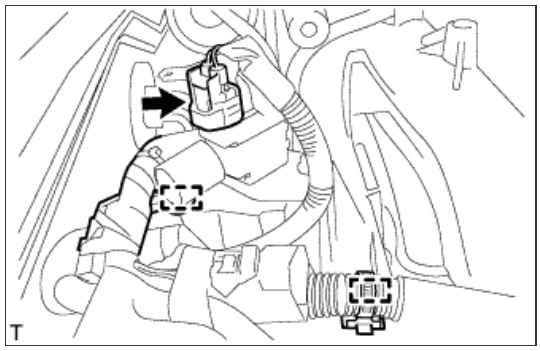
a. Disconnect the throttle body connector.

b. Disconnect the No. 4 water by-pass hose.



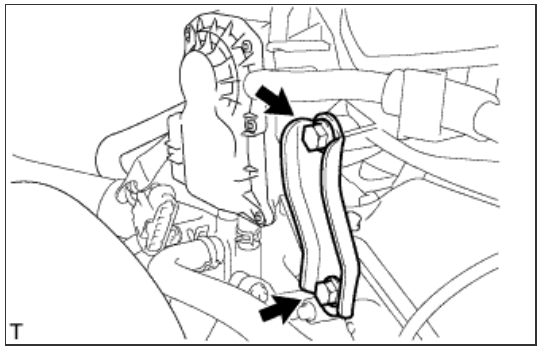
c. Disconnect the No. 5 water by-pass hose.

d. Disconnect the purge line hose.

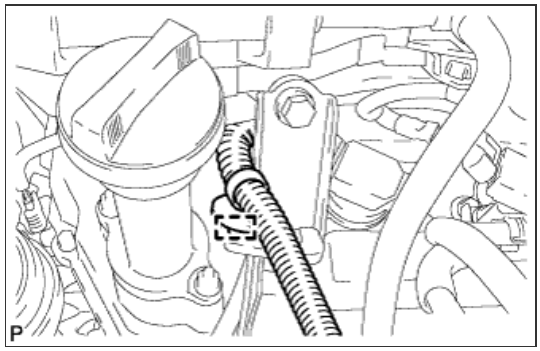


e. Disconnect the purge VSV connector.

f. Disconnect the No. 1 ventilation hose.

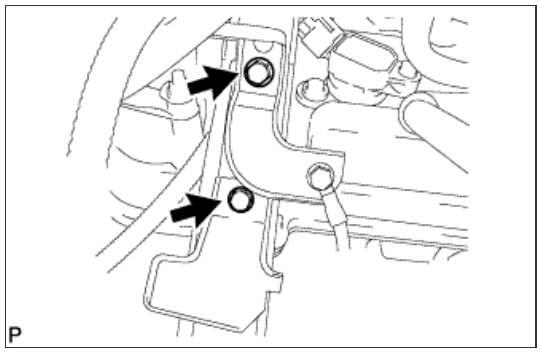


g. Disconnect the vacuum switching valve (for A nnector.

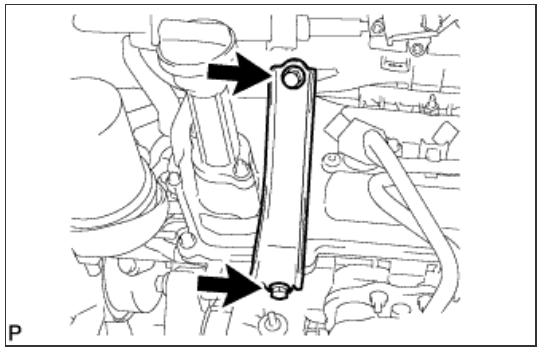


h. Using a clip remover, detach the 2 wire harness clamps.

i. Remove the 2 bolts and throttle body bracket.

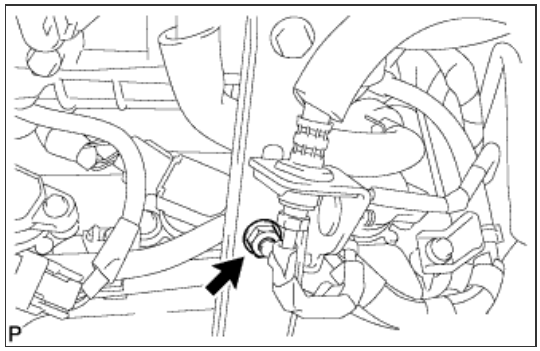


j. Using a clip remover, detach the wire harness clamp.

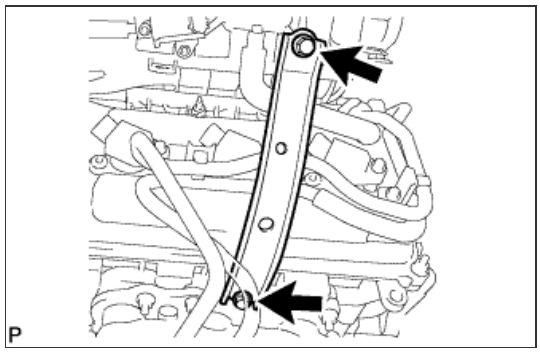


k. Remove the bolt and bracket from the No. 1 surge tank stay.

l. Remove the bolt and oil baffle plate.

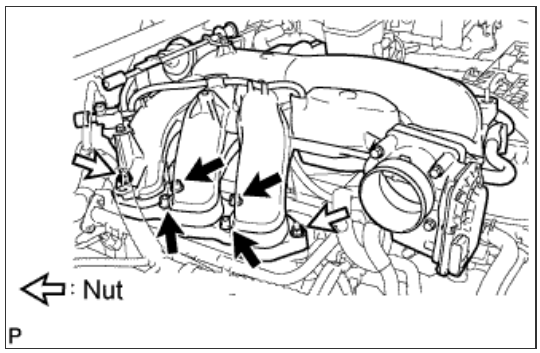


m. Remove the 2 bolts and No. 1 surge tank stay.



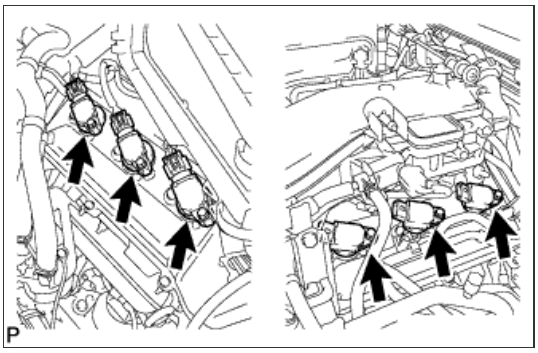
n. for Manual Transmission:

i. Remove the nut.



o. Remove the 2 bolts and No. 2 surge tank stay.

p. Remove the 2 nuts.

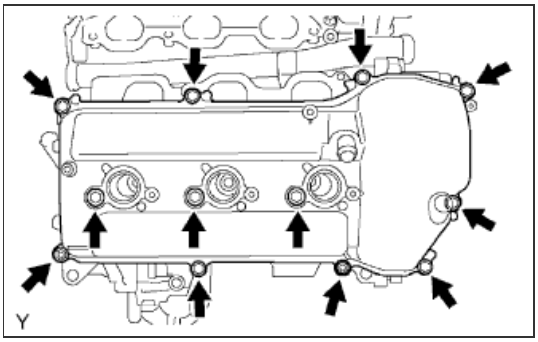


q. Using an 8 mm he agon wrench, remove the 4 bolts. Then remove the intake air surge tank and gasket.

11. REMOVE IGNITION COIL ASSEMBLY

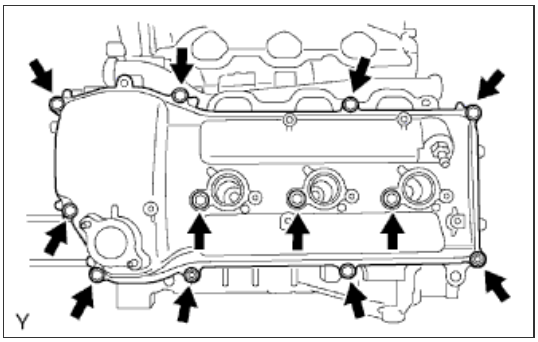
a. Disconnect the 6 ignition coil connectors.

b. Remove the 6 bolts and 6 ignition coils.



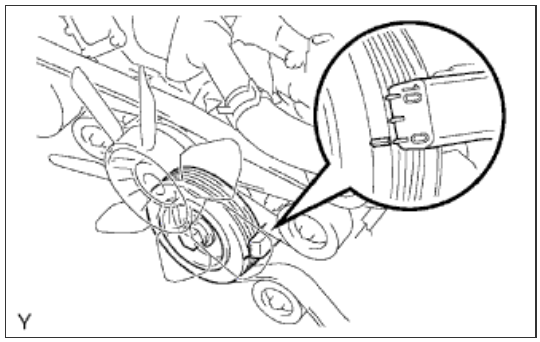
12. REMOVE SPARK PLUG

a. Remove the 6 spark plugs.



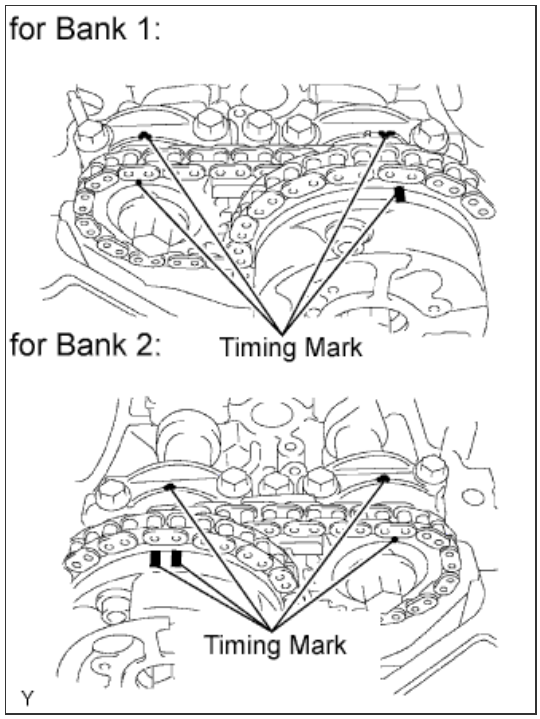
13. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY RH

a. Remove the 10 bolts, 3 seal washers, 2 nuts, cylinder head cover and gasket.



14. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY LH

a. Remove the 10 bolts, 3 seal washers, 2 nuts, cylinder head cover and gasket.



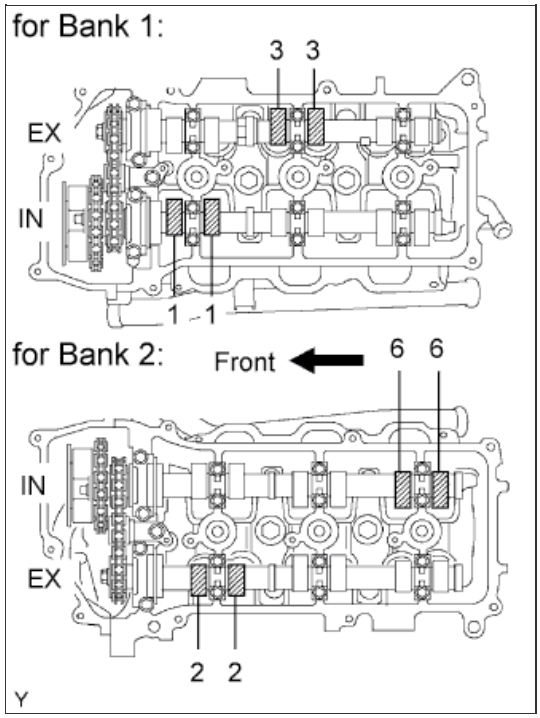
15. SET NO. 1 CYLINDER TO TDC/COMPRESSION

a. Turn the crankshaft pulley, and align its groove with the timing mark 0 of the timing chain cover.

b. Check that the timing marks of the camshaft timing gears and sprockets are aligned with the timing marks of the bearing caps as shown in the illustration. If not, turn the crankshaft 1 complete revolution (360°) and align the timing marks as above.

16. INSPECT VALVE CLEARANCE

a. Check the valves indicated in the illustration.



i. Using a feeler gauge, measure the clearance between the valve lifter and camshaft.

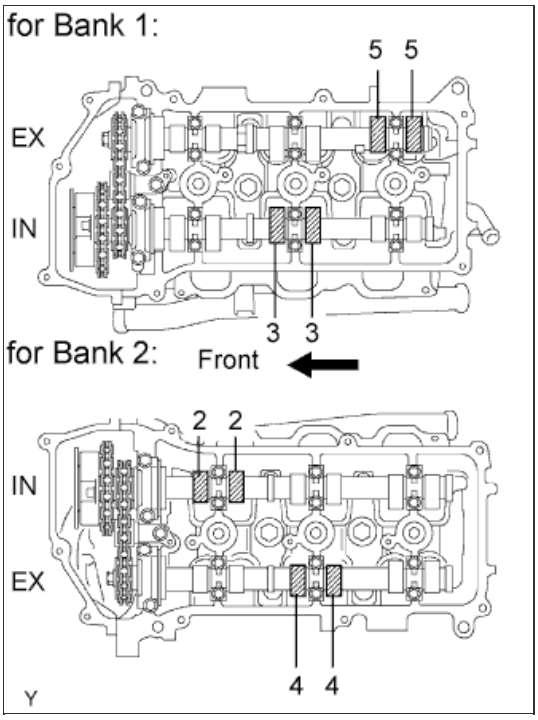
Standard Valve Clearance (Cold):

Item	Specified Condition
Intake	0.15 to 0.25 mm (0.00591 to 0.00984 in.)
Exhaust	0.29 to 0.39 mm (0.0114 to 0.0154 in.)

ii. Record the out-of-specification valve clearance measurements. They will be used later to determine the required replacement valve lifter.

b. Turn the crankshaft 2/3 of a revolution (240°).

c. Check the valves indicated in the illustration.



c. Check the valves indicated in the illustration.

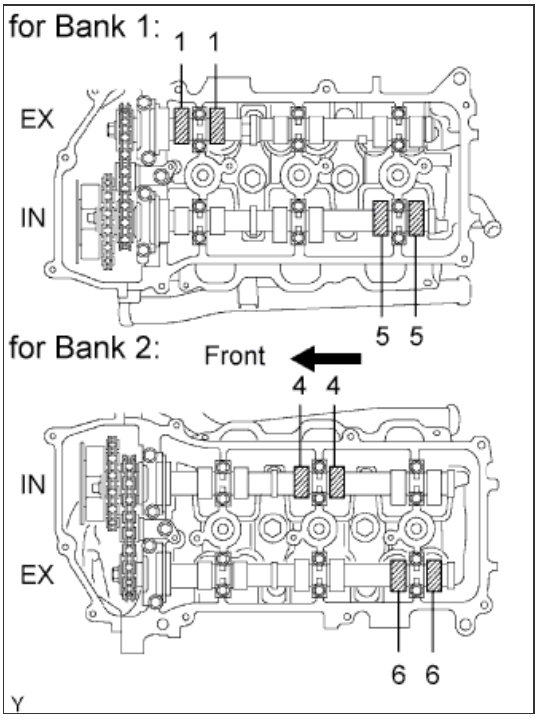
i. Using a feeler gauge, measure the clearance between the valve lifter and camshaft.

Standard Valve Clearance (Cold):

Item	Specified Condition
Intake	0.15 to 0.25 mm (0.00591 to 0.00984 in.)
Exhaust	0.29 to 0.39 mm (0.0114 to 0.0154 in.)

ii. Record the out-of-specification valve clearance measurements. They will be used later to determine the required replacement valve lifter.

d. Turn the crankshaft 2/3 of a revolution (240°).

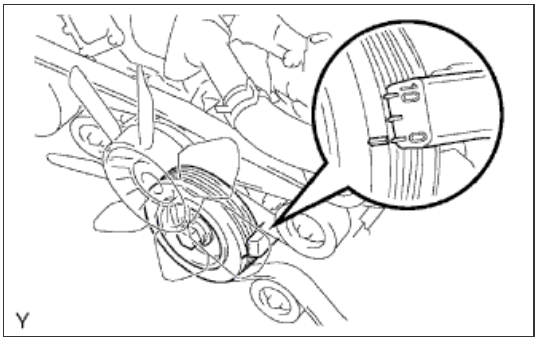


e. Check the valves indicated in the illustration.

i. Using a feeler gauge, measure the clearance between the valve lifter and camshaft.

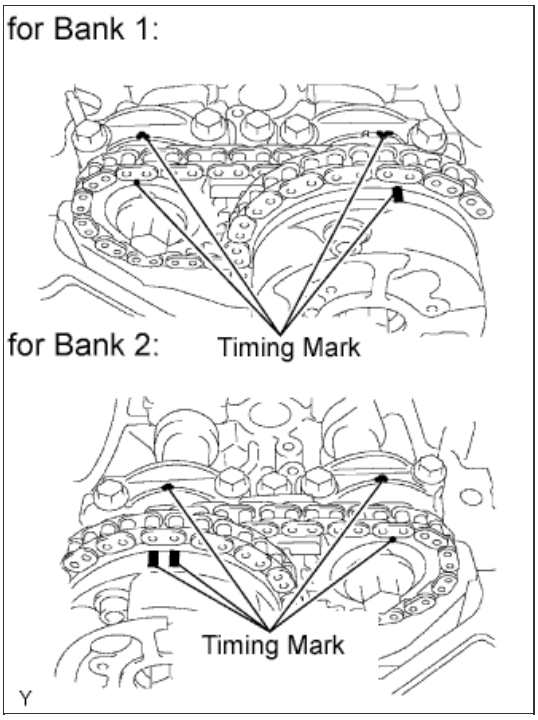
Standard Valve Clearance (Cold):

Item	Specified Condition
Intake	0.15 to 0.25 mm (0.00591 to 0.00984 in.)
Exhaust	0.29 to 0.39 mm (0.0114 to 0.0154 in.)



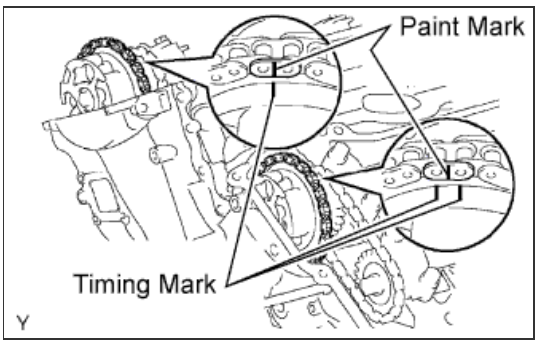
ii. Record the out-of-specification valve clearance measurements. They will be used later to determine the required replacement valve lifter.

17. ADJUST VALVE CLEARANCE



a. Set the No. 1 cylinder to TDC/compression.

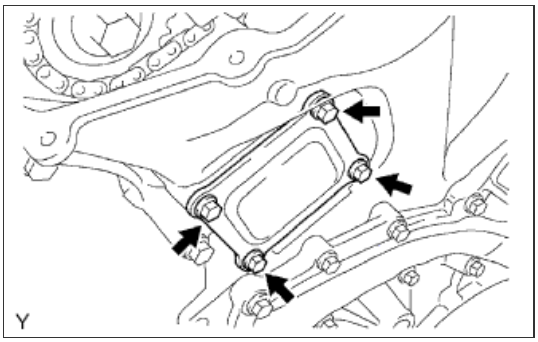
i. Turn the crankshaft pulley, and align the notch with the timing mark "0" of the timing chain cover.



ii. Check that the timing marks of the camshaft timing gears and

ii. Check that the timing marks of the camshaft timing gears and sprockets are aligned with the timing marks of the bearing caps as shown in the illustration.
If not, turn the crankshaft 1 complete revolution (360°) and align the timing marks as above.

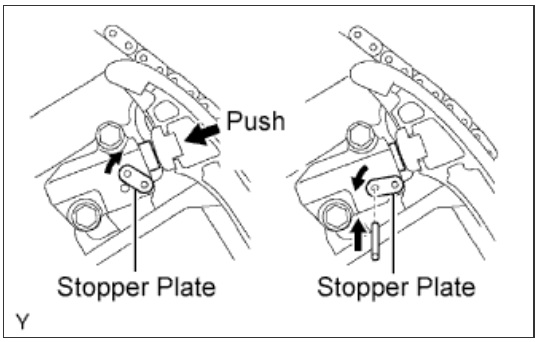
iii. Place paint marks on the chain links that correspond with the timing marks of the camshaft timing gears.



b. Remove the No. 1 chain tensioner.

NOTICE:

- **Never rotate the crankshaft with the No. 1 chain tensioner removed.**
- **When rotating the camshaft with the No. 1 chain removed, turn the crankshaft counterclockwise 40° from TDC first.**

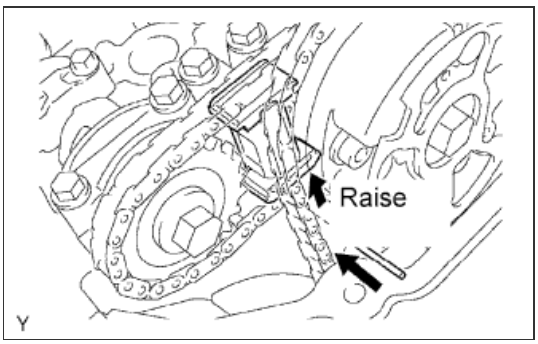


i. Remove the 4 bolts, timing chain cover plate and gasket.

ii. While rotating the stopper plate of the No. 1 chain tensioner clockwise, push in the plunger of the No. 1 chain tensioner as shown in the illustration.

iii. While rotating the stopper plate of the tensioner counterclockwise downward, insert a bar of φ3.5 mm (0.138 in.) into the holes in the stopper plate and tensioner to fix the stopper plate in place.

iv. Remove the 2 bolts and No. 1 chain tensioner.

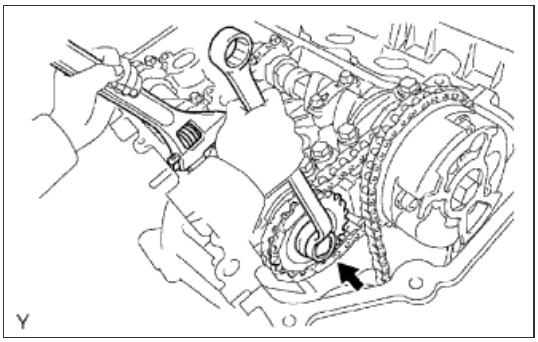


c. Remove the No. 2 camshaft.

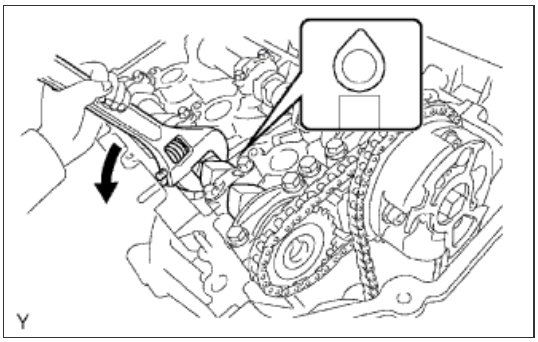
NOTICE:

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being removed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

i. While raising the No. 2 chain tensioner, insert a pin of φ1.0 mm (0.0394 in.) into the hole to fix the tensioner in place.



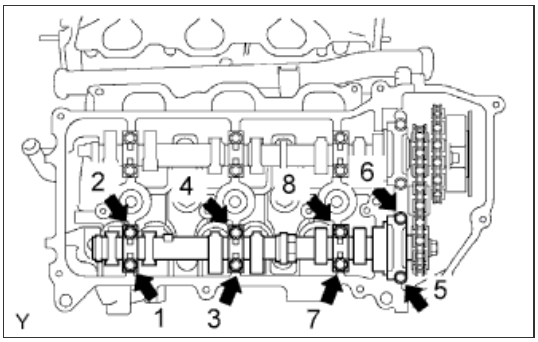
ii. Hold the hexagonal portion of the No. 2 camshaft with a wrench, and remove the camshaft timing sprocket set bolt.



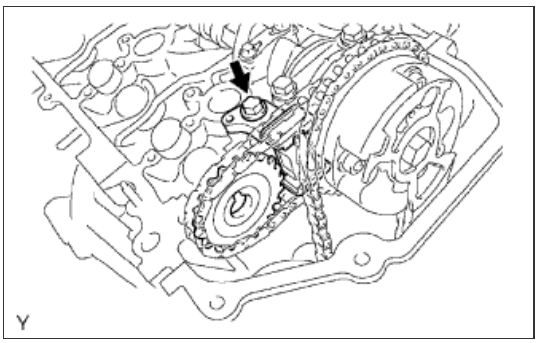
NOTICE:

Be careful not to damage the cylinder head and valve lifter with the wrench.

iii. Separate the camshaft timing sprocket from the No. 2 camshaft.



iv. Rotate the camshaft counterclockwise using the wrench so that the cam lobes of the No. 1 cylinder face upward as shown in the illustration.



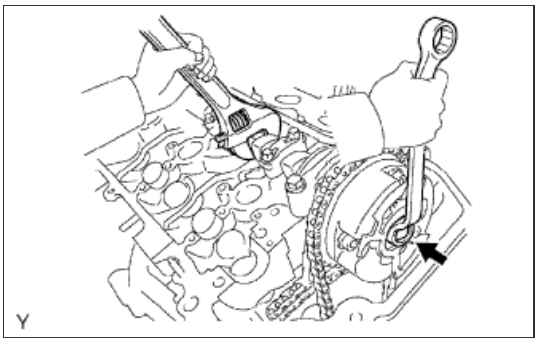
v. Uniformly loosen and remove the 8 bearing cap bolts in the sequence shown in the illustration.

vi. Remove the 4 bearing caps and No. 2 camshaft.

d. Remove the No. 2 chain tensioner.

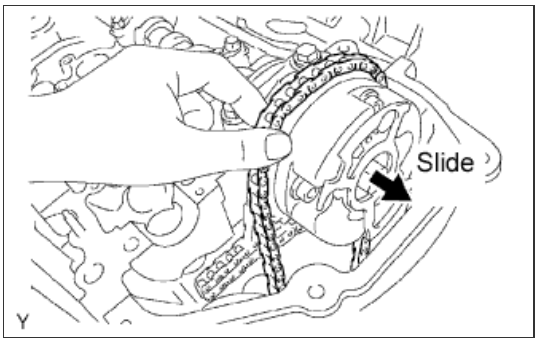
i. Remove the No. 2 chain tensioner bolt, No. 2 chain tensioner and camshaft timing sprocket.

e. Remove the No. 1 camshaft.



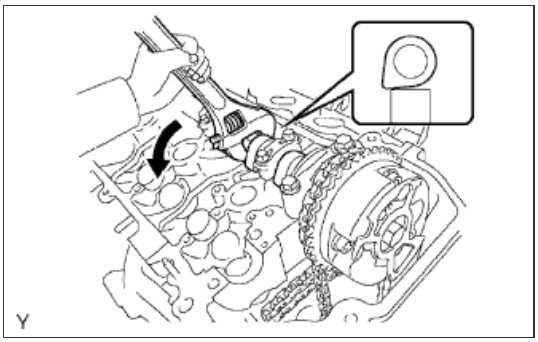
NOTICE:

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being removed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.



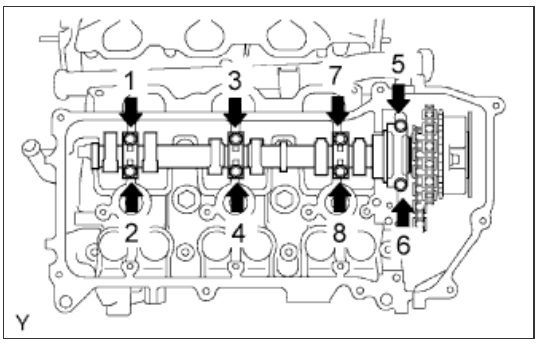
i. Hold the hexagonal portion of the No. 1 camshaft with a wrench, and loosen the camshaft timing gear set bolt.

NOTICE:

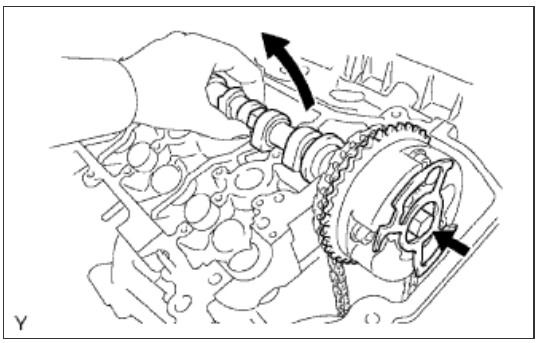


- **Be careful not to damage the cylinder head and valve lifter with the wrench.**
- **Do not disassemble the camshaft timing gear.**

ii. Slide the camshaft timing gear and separate the No. 1 chain from the camshaft timing gear.

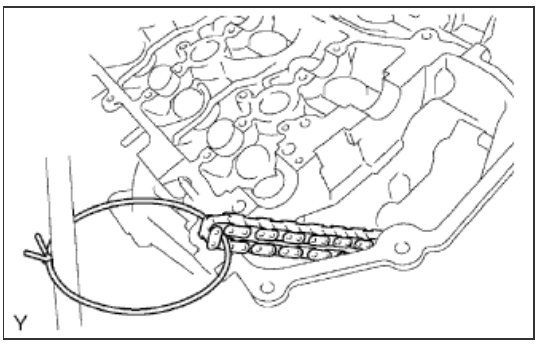


iii. Rotate the No. 1 camshaft counterclockwise using a wrench so that the cam lobes of the No. 1 cylinder face downward as shown in the illustration.



iv. Uniformly loosen and remove the 8 bearing cap bolts in the sequence shown in the illustration.

v. Remove the 4 bearing caps.

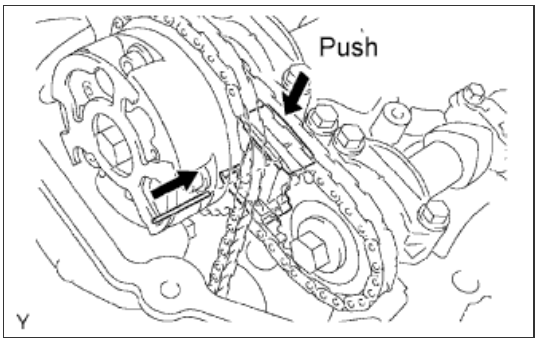


vi. Remove the camshaft timing gear set bolt with the No. 1 camshaft lifted up, and then remove the No. 1 camshaft and camshaft timing gear with the No. 2 chain.

vii. Tie the No. 1 chain with a string as shown in the illustration.

NOTICE:

Be careful not to drop anything inside the timing chain cover.

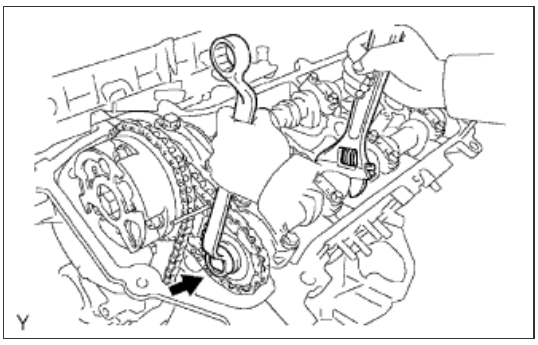


f. Remove the No. 4 camshaft.

NOTICE:

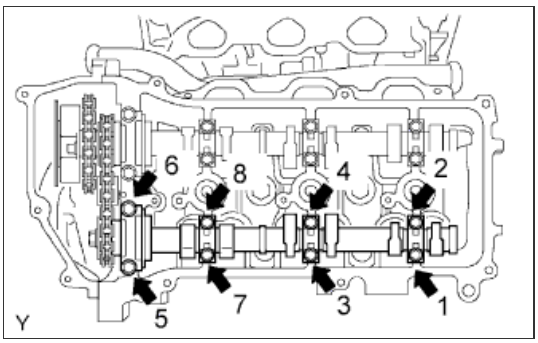
As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being removed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

i. While pushing down the No. 3 chain tensioner, insert a pin of φ1.0 mm (0.0394 in.) into the hole to fix the tensioner in place.



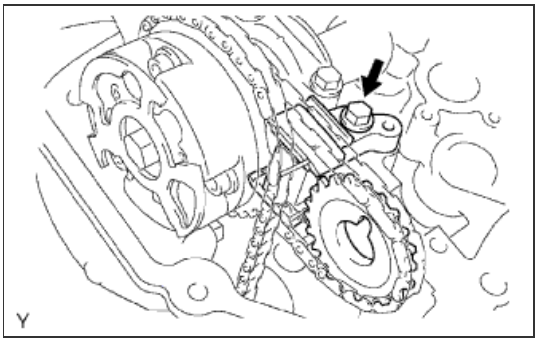
ii. Hold the hexagonal portion of the No. 4 camshaft with a wrench, and remove the camshaft timing sprocket set bolt.

NOTICE:



Be careful not to damage the cylinder head and valve lifter with the wrench.

iii. Separate the camshaft timing sprocket from the No. 4 camshaft.

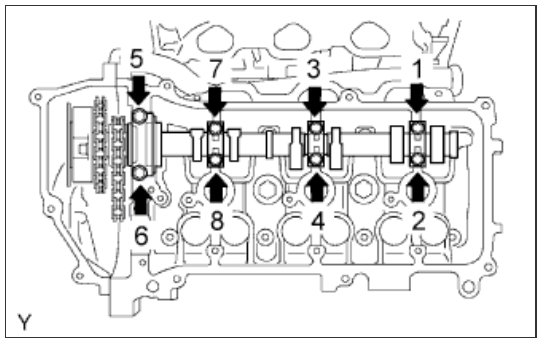


iv. Uniformly loosen and remove the 8 bearing cap bolts in the sequence shown in the illustration.

v. Remove the 4 bearing caps and No. 4 camshaft.

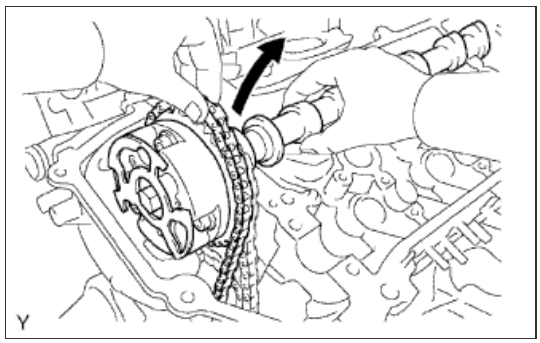
g. Remove the No. 3 chain tensioner.

i. Remove the No. 3 chain tensioner bolt, No. 3 chain tensioner and camshaft timing sprocket.



h. Remove the No. 3 camshaft.

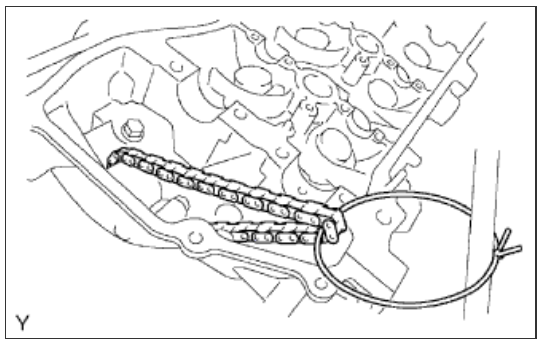
NOTICE:



As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being removed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

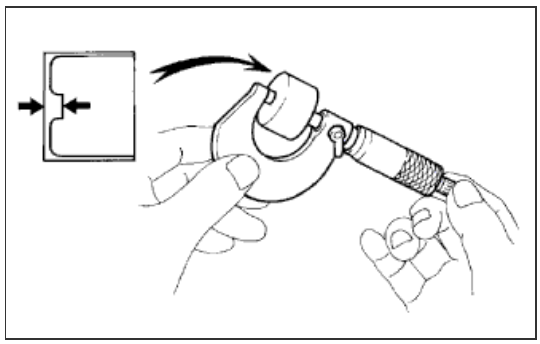
i. Using several steps, loosen and remove the 8 bearing cap bolts uniformly in the sequence shown in the illustration.

ii. Remove the 4 bearing caps.



iii. Hold the No. 1 chain, and remove the No. 3 camshaft with camshaft timing gear and No. 2 chain.

iv. Tie the No. 1 chain with a string as shown in the illustration.



NOTICE:

Be careful not to drop anything inside the timing chain cover.

i. Remove the 24 valve lifters from the cylinder head LH and RH.

j. Determine the size of the valve lifter to be installed according to the following formulas or charts.

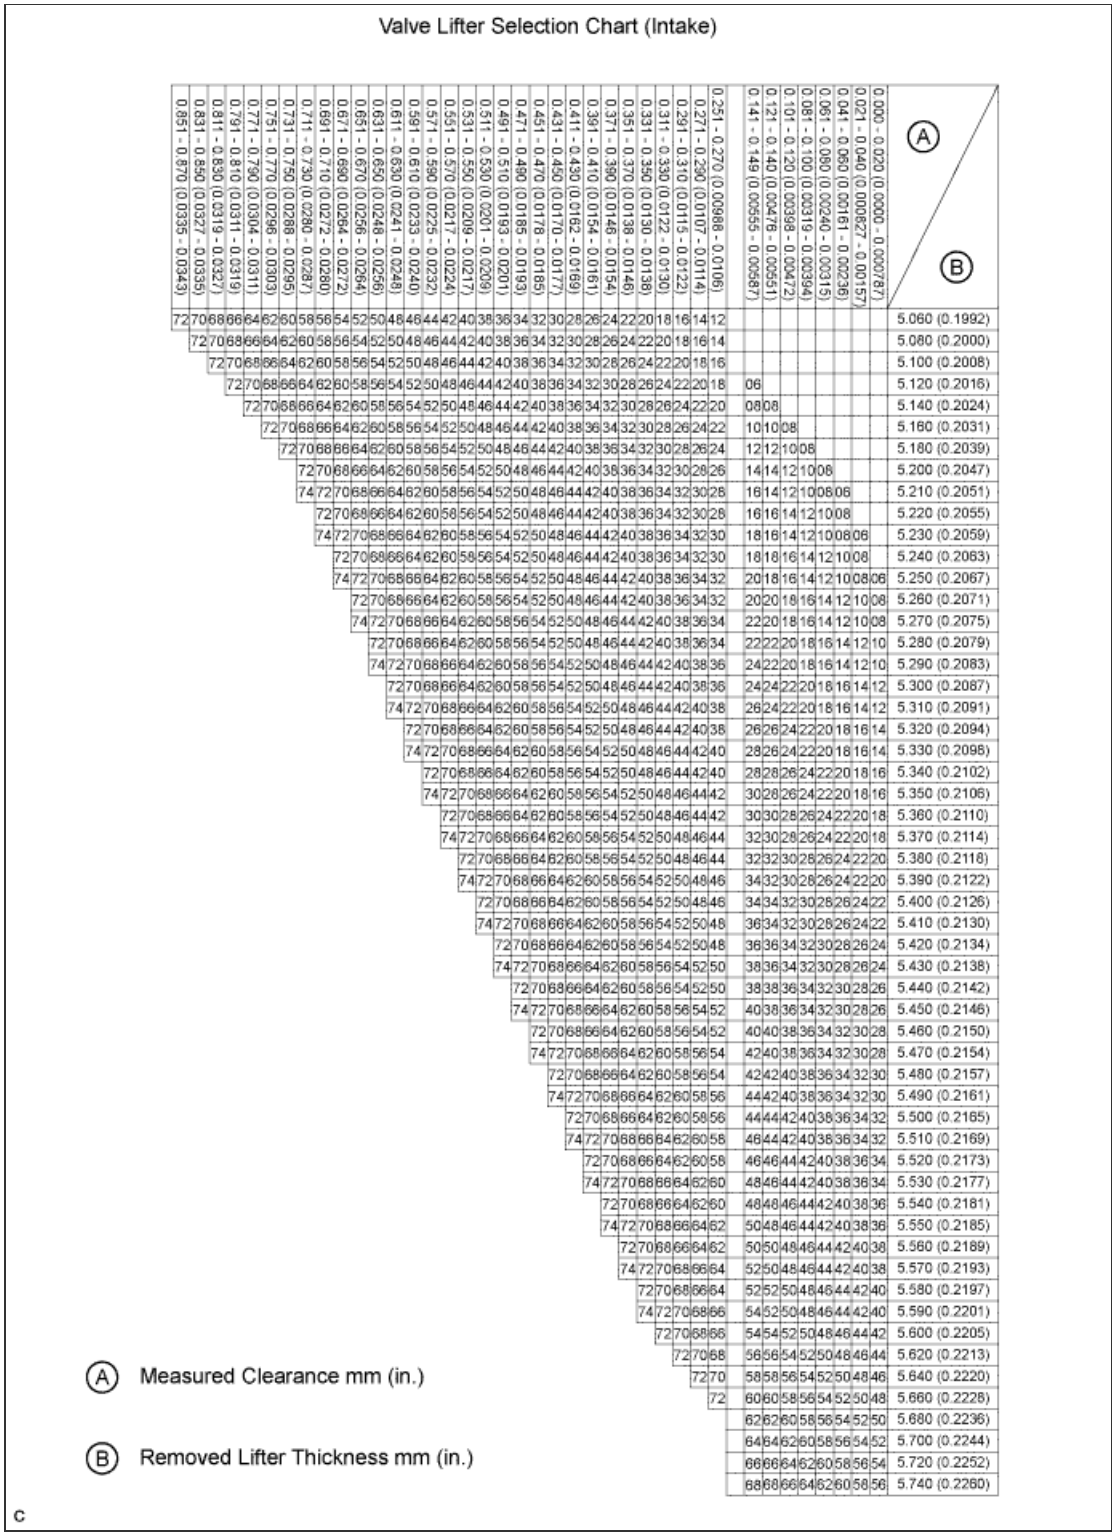
i. Using a micrometer, measure the thickness of the removed lifter.

ii. Calculate the thickness of a new lifter so that the valve clearance comes within the specified value.

T:
Thickness of removed lifter

A:
Measured valve clearance

N:
Thickness of new lifter



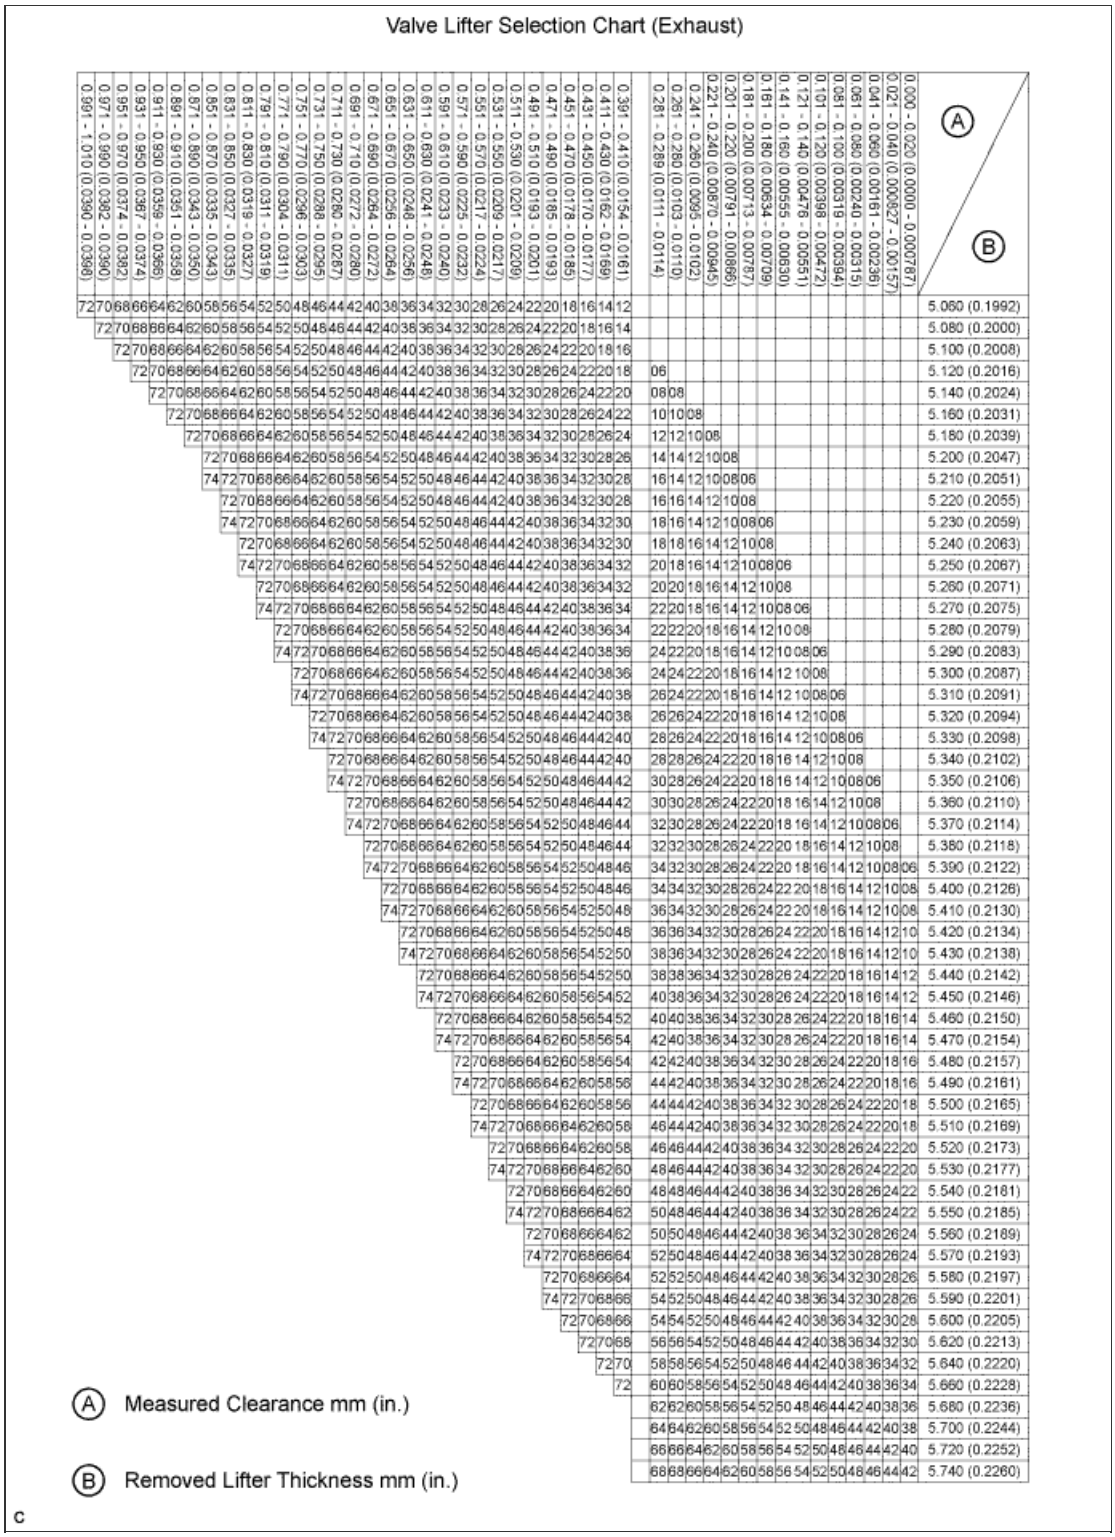
Intake:
N = T + (A - 0.20 mm (0.00787 in.))

Exhaust:
N = T + (A - 0.34 mm (0.0131 in.))

iii. Select a new lifter with a thickness as close as possible to the calculated value.

HINT:

Lifters are available in 35 sizes in increments of 0.020 mm (0.000787 in.), from 5.060 mm (0.1992 in.) to 5.740 mm (0.2260 in.).



Intake valve clearance (Cold):
0.15 to 0.25 mm (0.00591 to 0.00984 in.)
EXAMPLE:
The 5.250 mm (0.2067 in.) lifter is installed, and the measured clearance is 0.400 mm (0.0157 in.). Replace the 5.250 mm (0.2067 in.) lifter with a No. 46 lifter.

New Lifter Thickness:

Lifter No.	Thickness	Lifter No.	Thickness	Lifter No.	Thickness
06	5.060 mm (0.1992 in.)	30	5.300 mm (0.2087 in.)	54	5.540 mm (0.2181 in.)
08	5.080 mm (0.2000 in.)	32	5.320 mm (0.2094 in.)	56	5.560 mm (0.2189 in.)
10	5.100 mm (0.2008 in.)	34	5.340 mm (0.2102 in.)	58	5.580 mm (0.2197 in.)

12	5.120 mm (0.2016 in.)	36	5.360 mm (0.2110 in.)	60	5.600 mm (0.2205 in.)

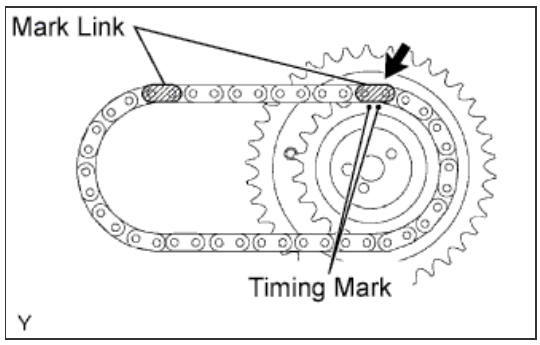
26	5.260 mm (0.2071 in.)	50	5.500 mm (0.2165 in.)	74	5.740 mm (0.2260 in.)
28	5.280 mm (0.2079 in.)	52	5.520 mm (0.2173 in.)	-	-

Exhaust valve clearance (Cold):
0.29 to 0.39 mm (0.0114 to 0.0154 in.)
EXAMPLE:
The 5.340 mm (0.210 in.) lifter is installed, and the measured clearance is 0.480 mm (0.0189 in.). Replace the 5.340 mm (0.210 in.) lifter with a No. 48 lifter.

New Lifter Thickness:

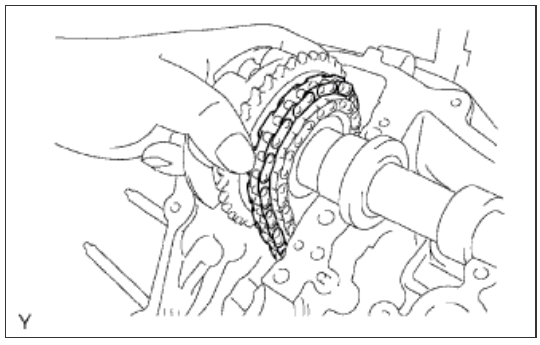
Lifter No.	Thickness	Lifter No.	Thickness	Lifter No.	Thickness
06	5.060 mm (0.1992 in.)	30	5.300 mm (0.2087 in.)	54	5.540 mm (0.2181 in.)
08	5.080 mm (0.2000 in.)	32	5.320 mm (0.2094 in.)	56	5.560 mm (0.2189 in.)
10	5.100 mm (0.2008 in.)	34	5.340 mm (0.2102 in.)	58	5.580 mm (0.2197 in.)
	5.120 mm		5.360 mm		5.600 mm



12	(0.2016 in.)	36	(0.2110 in.)	60	(0.2205 in.)
14	5.140 mm (0.2024 in.)	38	5.380 mm (0.2118 in.)	62	5.620 mm (0.2213 in.)
16	5.160 mm (0.2031 in.)	40	5.400 mm (0.2126 in.)	64	5.640 mm (0.2220 in.)
18	5.180 mm (0.2039 in.)	42	5.420 mm (0.2134 in.)	66	5.660 mm (0.2228 in.)
20	5.200 mm (0.2047 in.)	44	5.440 mm (0.2142 in.)	68	5.680 mm (0.2236 in.)
22	5.220 mm (0.2051 in.)	46	5.460 mm (0.2150 in.)	70	5.700 mm (0.2244 in.)
24	5.240 mm (0.2063 in.)	48	5.480 mm (0.2157 in.)	72	5.720 mm (0.2252 in.)
26	5.260 mm (0.2071 in.)	50	5.500 mm (0.2165 in.)	74	5.740 mm (0.2260 in.)
28	5.280 mm (0.2079 in.)	52	5.520 mm (0.2173 in.)	-	-

k. Install the No. 3 camshaft.

NOTICE:

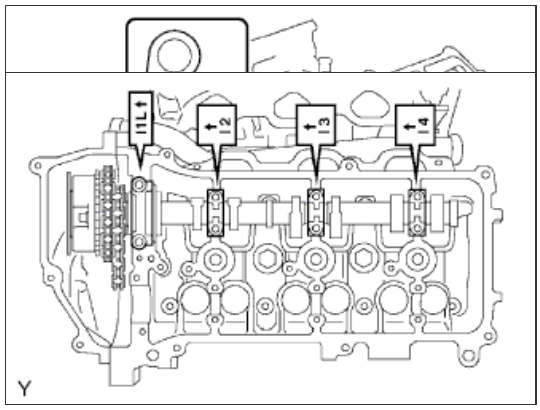


As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

i. Align the mark link (yellow) with the timing mark (2-dot mark) of the camshaft timing gear shown in the illustration.

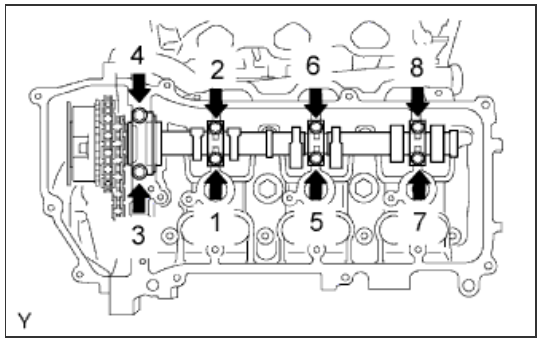
ii. Apply a light coat of engine oil to the thrust portions and journals of the No. 3 camshaft.

iii. Temporarily put the No. 1 chain on the No. 2 chain of the camshaft timing gear.



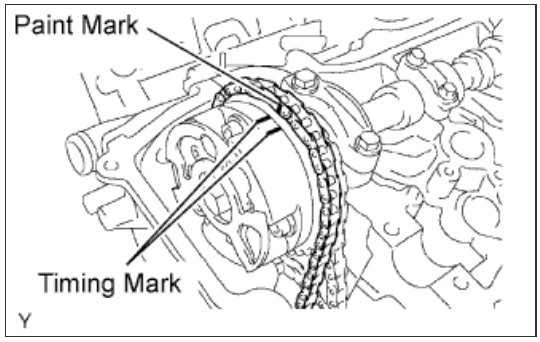
iv. Set the No. 3 camshaft onto the cylinder head LH with the cam lobes of the No. 2 cylinder facing downward as shown in the illustration.

v. Apply a light coat of engine oil to the 4 bearing caps.



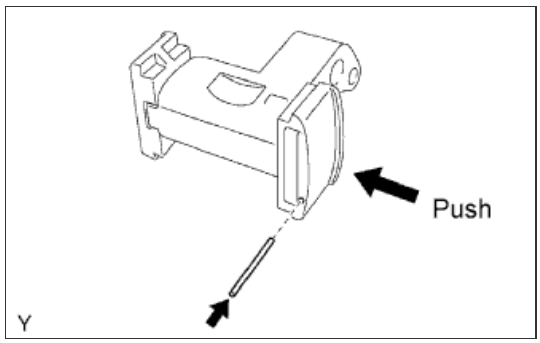
vi. Set the 4 bearing caps in their proper locations.

vii. Apply a light coat of engine oil to the threads of the 8 bearing cap bolts.



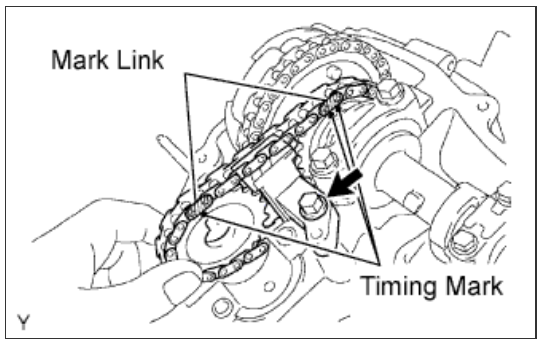
viii. Uniformly install the 8 bearing cap bolts in several steps in the order shown in the illustration.

Torque:
for 10 mm head bolt:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }
for 12 mm head bolt:
24 N*m{ 245 kgf*cm , 18 ft.*lbf }



ix. Set the paint mark of the No. 1 chain between the timing marks of the camshaft timing gear.

l. Install the No. 3 chain tensioner.



i. While pushing in the tensioner, insert a pin of φ1.0 mm (0.0394 in.) into the hole to fix the tensioner in place.

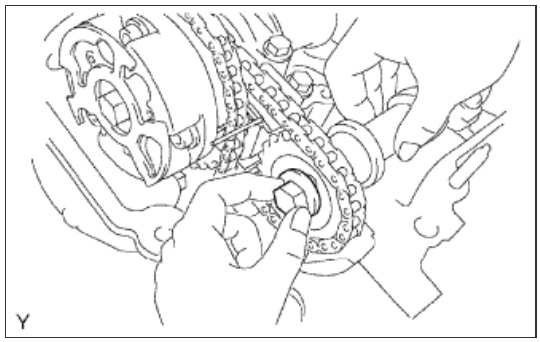
ii. Temporarily install the camshaft timing sprocket and No. 3 chain tensioner with the bolt and align the mark links (yellow) with the timing marks (1-dot mark and 2-dot mark) of the camshaft timing gear and sprocket.

iii. Tighten the No. 3 chain tensioner bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

m. Install the No. 4 camshaft.

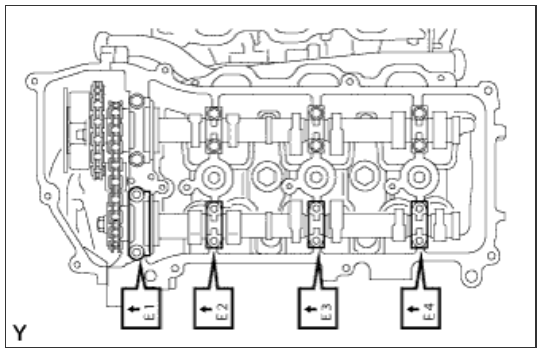
NOTICE:



As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

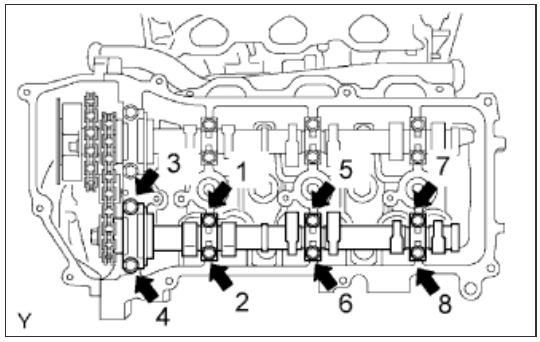
i. Apply a light coat of engine oil to the thrust portions and journals of the No. 4 camshaft.

ii. Apply a light coat of engine oil to the threads and under the head of the camshaft timing sprocket set bolt.



iii. Align the knock pin hole on the camshaft timing sprocket with the knock pin of the No. 4 camshaft, and insert the No. 4 camshaft into the camshaft timing sprocket.

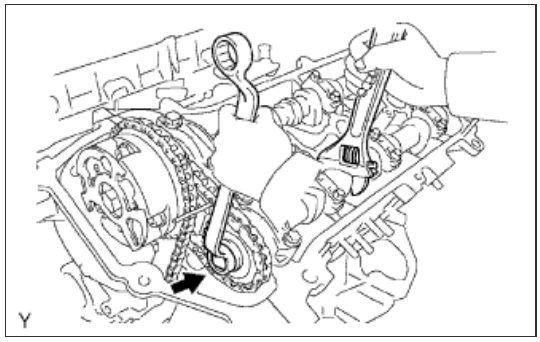
iv. Temporarily install the camshaft timing sprocket set bolt.



v. Set the 4 bearing caps in their proper locations.

vi. Apply a light coat of engine oil to the threads and under the heads of the 8 bearing cap bolts.

vii. Uniformly install the 8 bearing cap bolts in several steps in the order shown in the illustration.

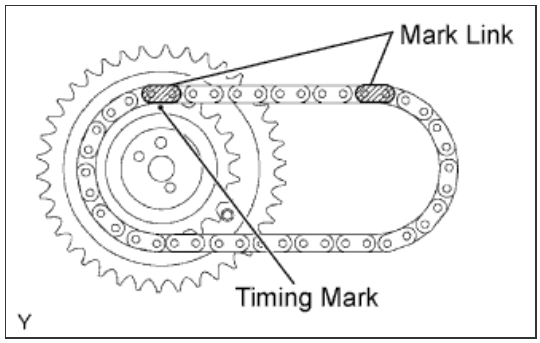


Torque:
for 10 mm head bolt:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }
for 12 mm head bolt:
24 N*m{ 245 kgf*cm , 18 ft.*lbf }

viii. Hold the hexagonal portion of the No. 4 camshaft with a wrench, and tighten the camshaft timing sprocket set bolt.

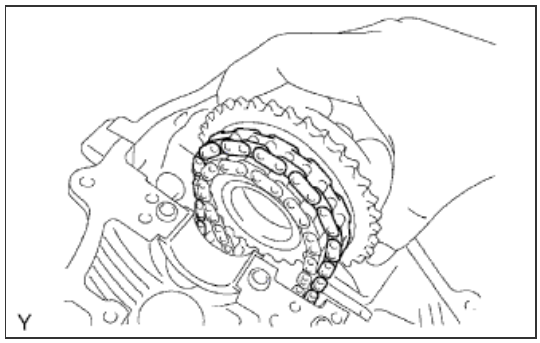
Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

ix. Remove the pin from the No. 3 chain tensioner.



n. Install the No. 1 camshaft.

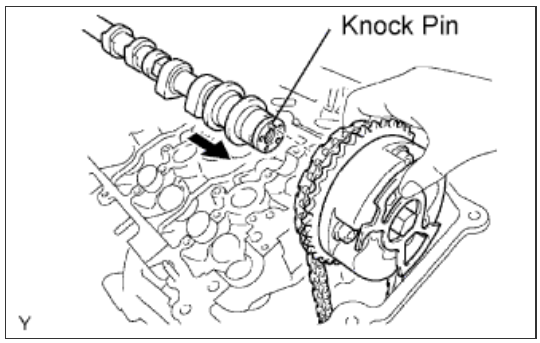
NOTICE:



As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

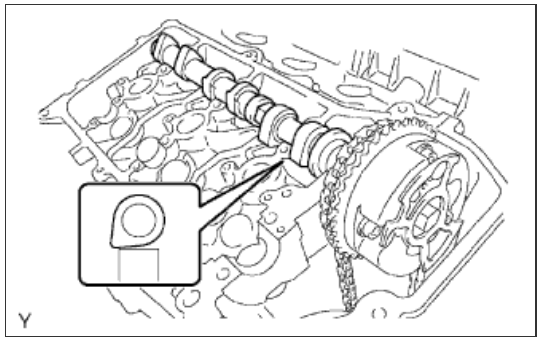
i. Align the mark link (yellow) with the timing mark (1-dot mark) of the camshaft timing gear as shown in the illustration.

ii. Apply a light amount of engine oil to the thrust portions and journals of the camshaft.



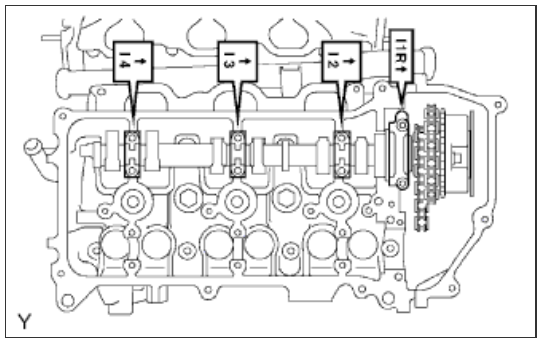
iii. Temporarily put the No. 1 chain on the No. 2 chain of the camshaft timing gear.

iv. Align the knock pin hole of the camshaft timing gear with the knock pin of the No. 1 camshaft, and insert the No. 1 camshaft into the camshaft timing gear.



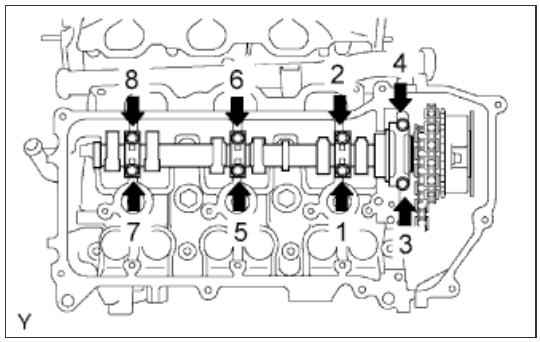
v. Apply a light coat of engine oil to the threads and under the head of the camshaft timing gear set bolt.

vi. Temporarily install the camshaft timing gear set bolt.



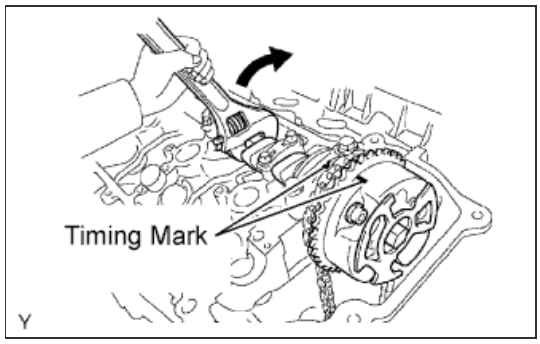
vii. Set the No. 1 camshaft onto the cylinder head RH with the cam lobes of the No. 1 cylinder facing downward as shown in the illustration.

viii. Apply a light coat of engine oil to the 4 bearing caps.

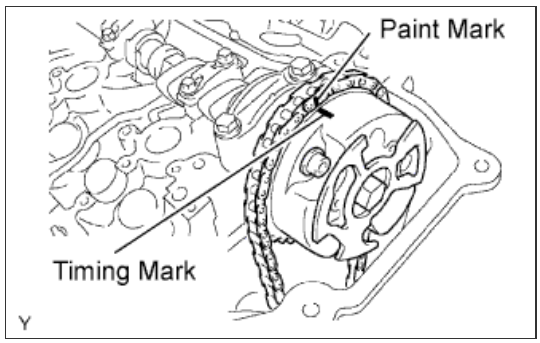


ix. Set the 4 bearing caps in their proper locations.

x. Apply a light coat of engine oil to the threads and under the heads of the 8 bearing cap bolts.

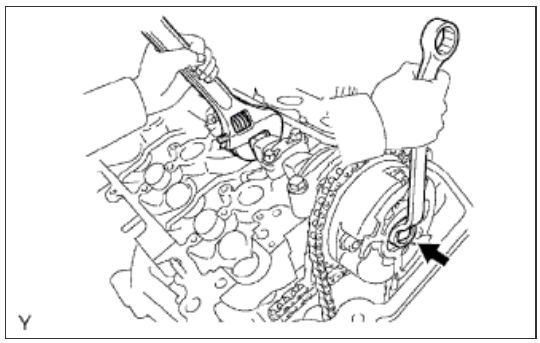


xi. Uniformly install the 8 bearing cap bolts in several steps in the order shown in the illustration.

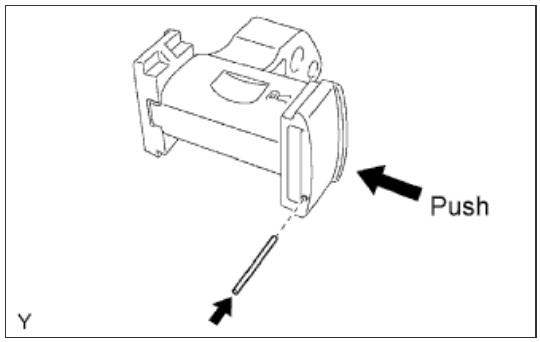


Torque:
for 10 mm head bolt:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }
for 12 mm head bolt:
24 N*m{ 245 kgf*cm , 18 ft.*lbf }

xii. Rotate the No. 1 camshaft clockwise using the hexagonal portion of the No. 1 camshaft so that the timing mark of the camshaft timing gear is aligned with the timing mark of the camshaft bearing cap.



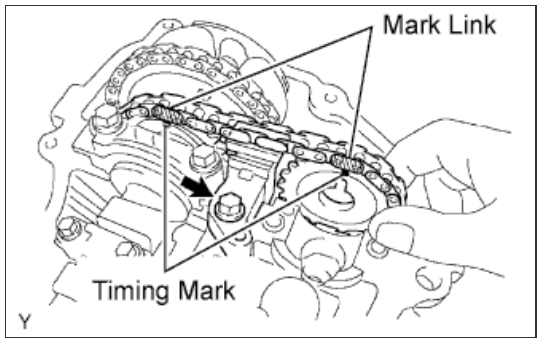
xiii. Align the paint mark of the No. 1 chain with the timing mark of the camshaft timing gear.



xiv. Hold the hexagonal portion of the No. 1 camshaft with a wrench, and tighten the camshaft timing gear set bolt.

Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

o. Install the No. 2 chain tensioner.



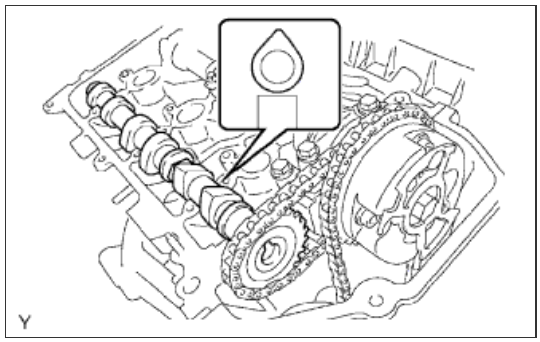
i. While pushing in the tensioner, insert a pin of φ1.0 mm (0.0394 in.) into the hole to fix the tensioner in place.

ii. Temporarily install the camshaft timing sprocket and No. 2 chain tensioner with the bolt and align the mark links (yellow) with the timing marks (1-dot mark and 2-dot mark) of the camshaft timing gear and sprocket.

iii. Tighten the No. 2 chain tensioner bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

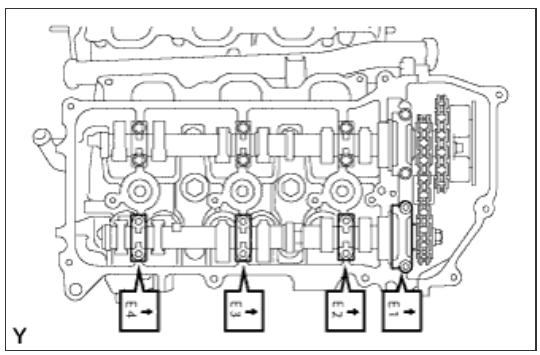
p. Install the No. 2 camshaft.



NOTICE:

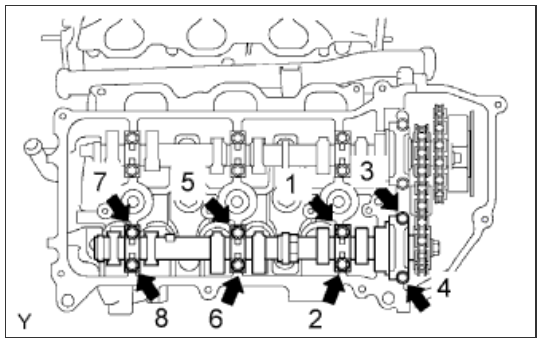
As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

i. Apply a light coat of engine oil to the thrust portions and journals of the No. 2 camshaft.



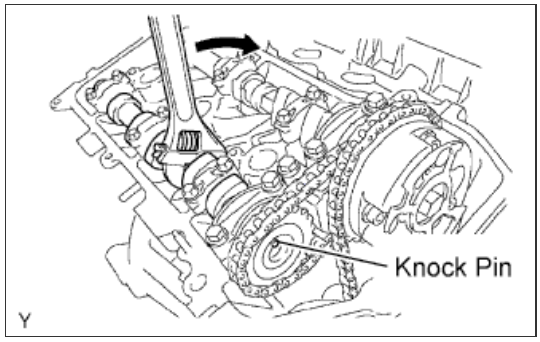
ii. Set the No. 2 camshaft onto the cylinder head RH with the cam lobes of the No. 1 cylinder facing upward as shown in the illustration.

iii. Apply a light coat of engine oil to the 4 bearing caps.



iv. Set the 4 bearing caps in their proper locations.

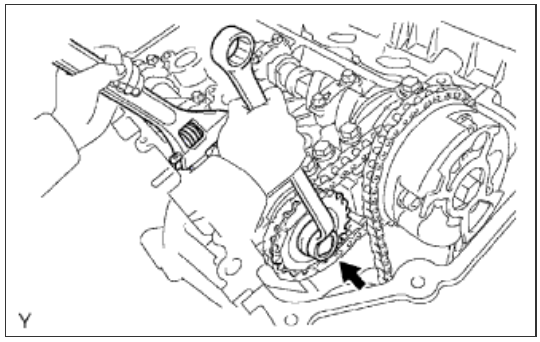
v. Apply a light coat of engine oil to the threads and under the heads of the 8 bearing cap bolts.



vi. Uniformly install the 8 bearing cap bolts in several steps in the order shown in the illustration.

Torque:
for 10 mm head bolt:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }
for 12 mm head bolt:
24 N*m{ 245 kgf*cm , 18 ft.*lbf }

vii. Rotate the No. 2 camshaft clockwise using a wrench so that the knock pin of the No. 2 camshaft is aligned with the knock pin hole of the camshaft timing sprocket.



viii. Apply a light coat of engine oil to the threads and under the head of the camshaft timing sprocket set bolt.

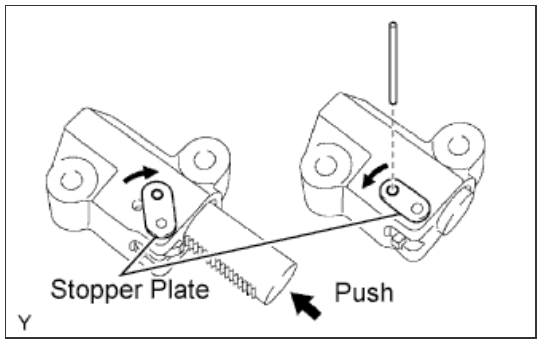
ix. Hold the hexagonal portion of the No. 2 camshaft with a wrench, and install the camshaft timing sprocket set bolt.

Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

x. Remove the pin from the No. 2 chain tensioner.

q. Install the No. 1 chain tensioner.

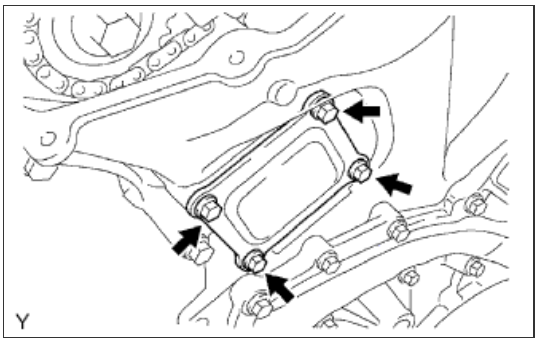
i. While turning the stopper plate of the tensioner clockwise, push in the plunger of the tensioner as shown in the illustration.



ii. While turning the stopper plate of the tensioner counterclockwise, insert a bar of φ3.5 mm (0.138 in.) into the holes on the stopper plate and tensioner to fix the stopper plate in place.

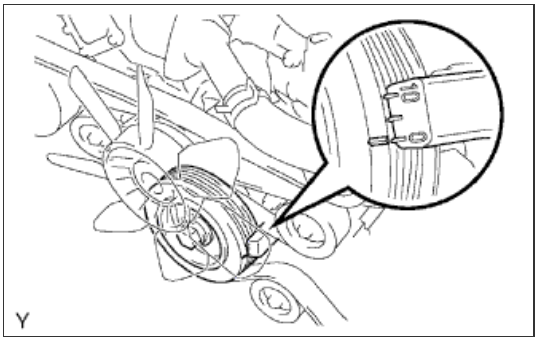
iii. Apply a light coat of engine oil to the threads and under the heads of the 2 No. 1 chain tensioner bolts.

iv. Install the No. 1 chain tensioner with the 2 bolts.

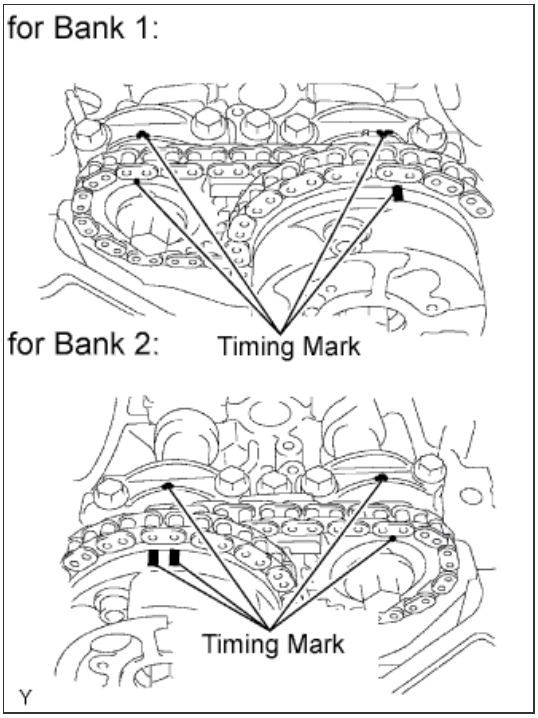


Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

v. Remove the bar from the chain tensioner.



vi. Install a new gasket and the timing chain cover plate with the 4 bolts.



Torque:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

vii. Turn the crankshaft pulley 2 complete revolutions slowly, and align the notch with the timing mark "0" of the timing chain cover.

viii. Check that the timing marks of the camshaft timing gears and sprockets are aligned with the timing marks of the bearing caps as shown in the illustration.

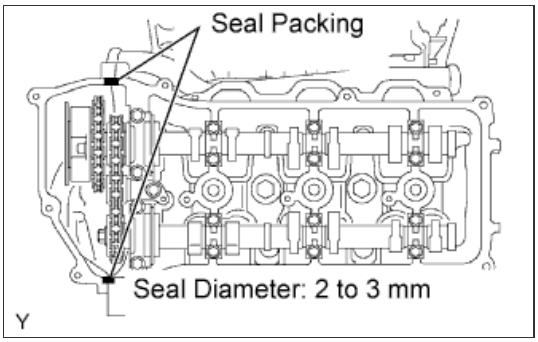
18. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY LH

a. Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the cylinder head, timing chain cover and cylinder head cover.

b. Apply seal packing as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

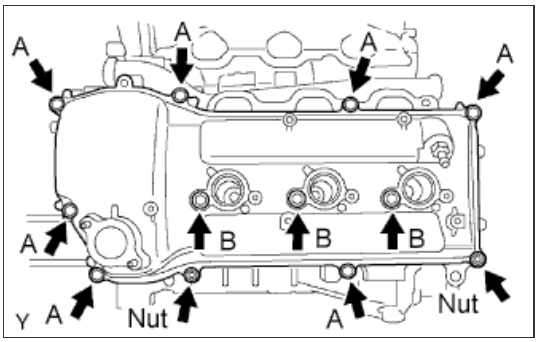
Standard seal diameter:
2 to 3 mm (0.0787 to 0.118 in.)



NOTICE:

- **Remove any oil from the contact surface.**

- **Install the head cover within 3 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**



c. Install a new gasket to the cylinder head cover.

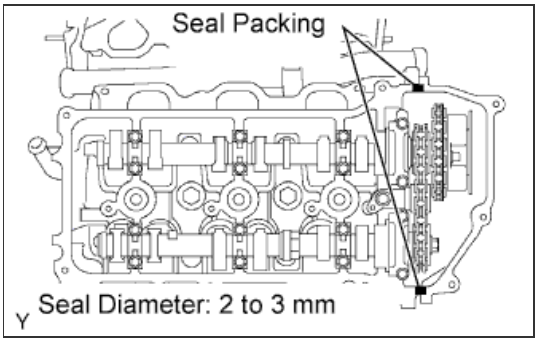
d. Install the seal washers to the bolts.

e. Temporarily install the cylinder head cover with the 10 bolts and 2 nuts. Tighten the bolts and nuts uniformly in several steps.

Torque:
for bolt A:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }
for bolt B and nut:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

19. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY RH

a. Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the cylinder head, timing chain cover and cylinder head cover.



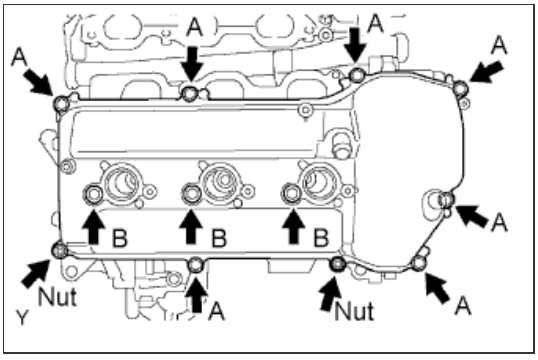
b. Apply seal packing as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
2 to 3 mm (0.0787 to 0.118 in.)

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the head cover within 3 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**



c. Install a new gasket to the cylinder head cover.

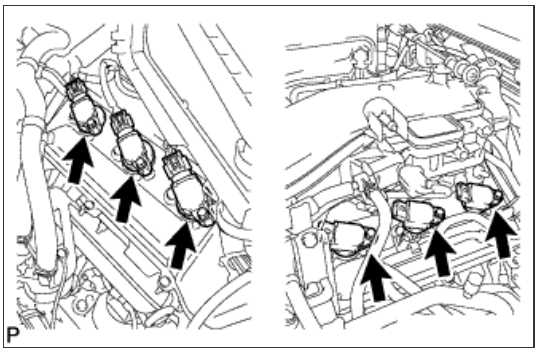
d. Install the seal washers to the bolts.

e. Temporarily install the cylinder head cover with the 10 bolts and 2 nuts. Tighten the bolts and nuts uniformly in several steps.

Torque:
for bolt A:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }
for bolt B and nut:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

20. INSTALL SPARK PLUG

a. Install the 6 spark plugs.



Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

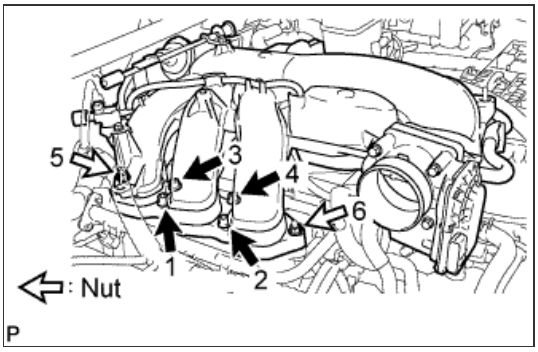
21. INSTALL IGNITION COIL ASSEMBLY

a. Install the 6 ignition coils with the 6 bolts.

Torque:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

b. Connect the 6 ignition coil connectors.

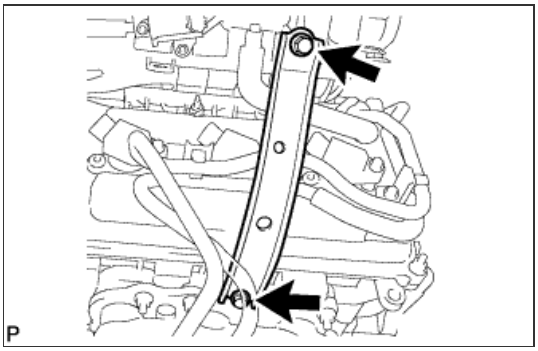
22. INSTALL INTAKE AIR SURGE TANK



NOTICE:
Do not apply oil to the bolts and nuts listed below: :

Oil Application Prohibited Bolt/Nut
Bolt for surge tank and intake manifold
Nut for surge tank and intake manifold

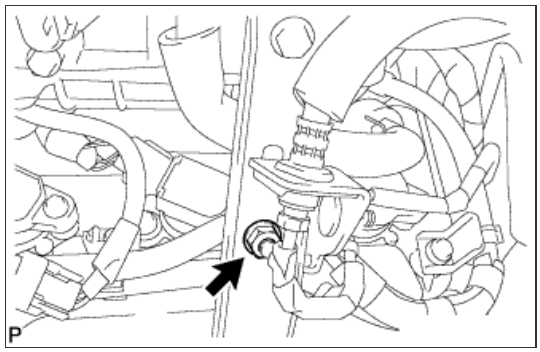
a. Install a new gasket to the intake air surge tank.



b. Using an 8 mm hexagon wrench, install the intake air surge tank with the 4 bolts and 2 nuts in the order shown in the illustration.

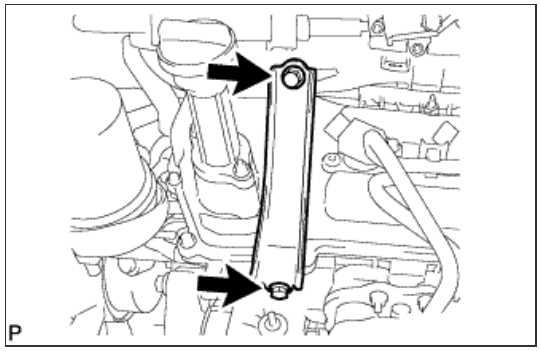
Torque:
28 N*m{ 286 kgf*cm , 21 ft.*lbf }

c. Install the No. 2 surge tank stay with the 2 bolts.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

d. for Manual Transmission:

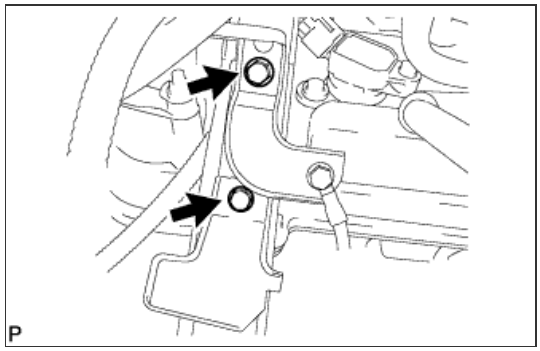


i. Install the bracket to the No. 2 surge tank stay with the nut.

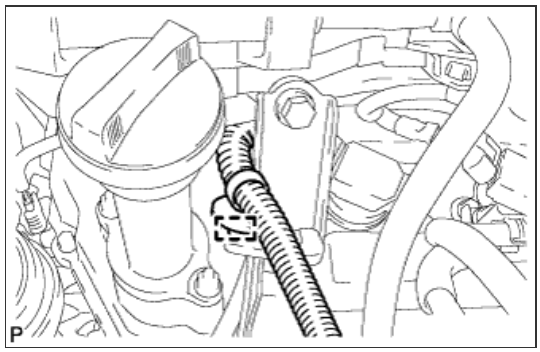
Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

e. Install the No. 1 surge tank stay with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



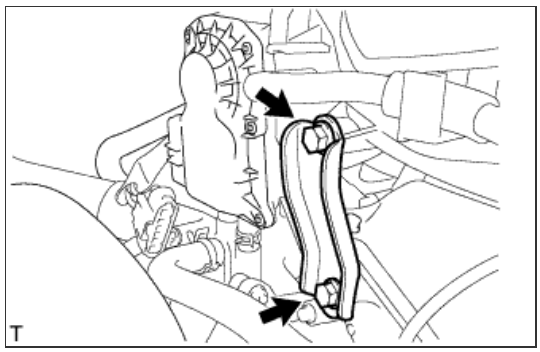
f. Install the oil baffle plate with the bolt.



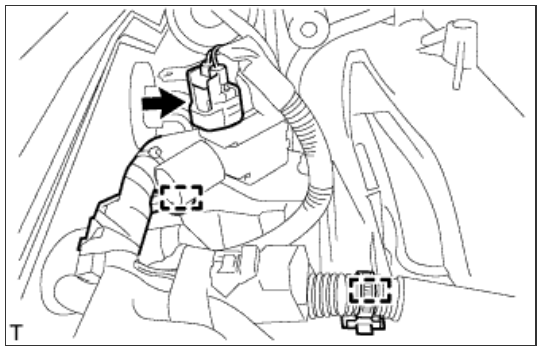
Torque:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

g. Install the bracket to the No. 1 surge tank stay with the bolt.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



h. Attach the wire harness clamp.

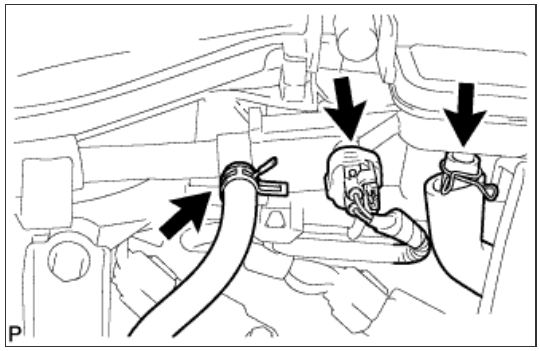


i. Install the throttle body bracket with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

j. Connect the vacuum switching valve (for ACIS) connector.

k. Attach the 2 wire harness clamps.



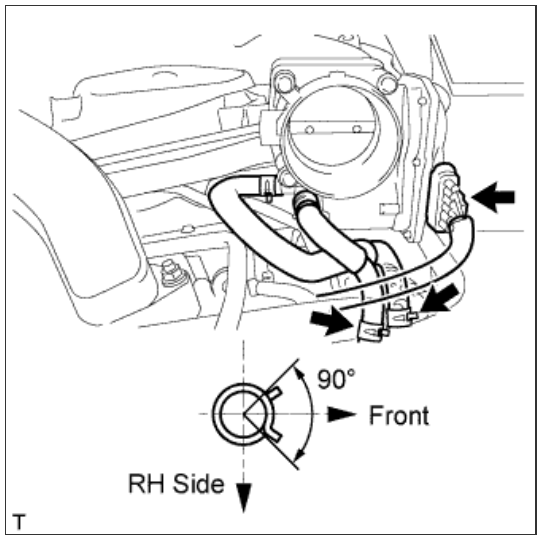
l. Connect the No. 1 ventilation hose.

m. Connect the purge VSV connector.

n. Connect the purge line hose.

HINT:

Connect the hose so that the direction of the hose clamp is as indicated in the illustration.



o. Connect the No. 4 and No. 5 water by-pass hose.

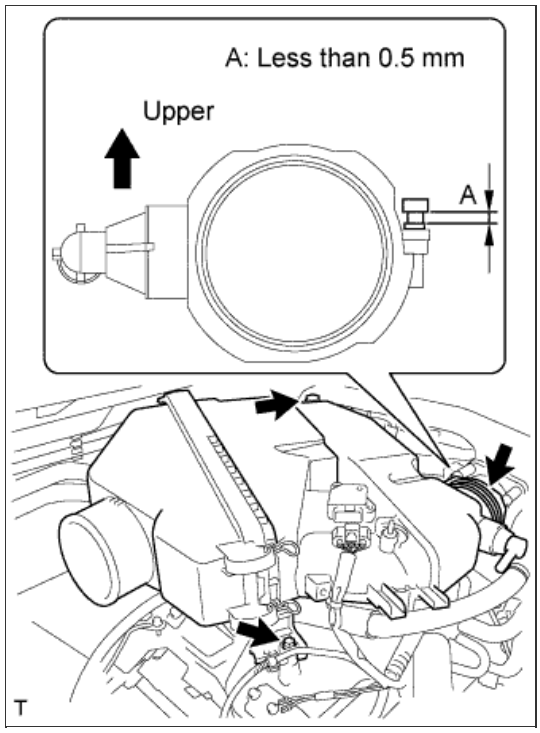
HINT:

Connect the hoses so that the direction of the hose clamps is as shown in the illustration.

p. Connect the throttle body connector.

23. INSTALL AIR CLEANER ASSEMBLY

a. Install the air cleaner assembly with the 2 bolts.

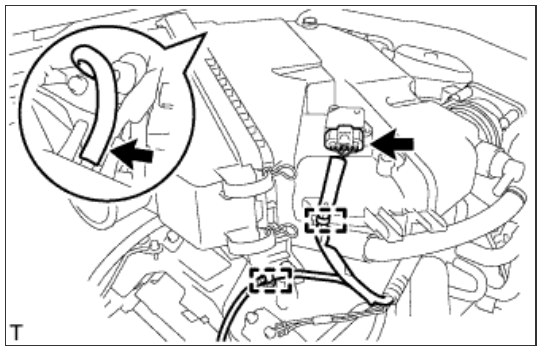


Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

b. Tighten the hose clamp.

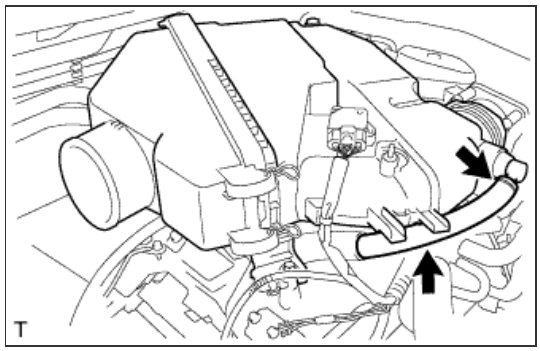
HINT:

Tighten the hose clamp until it reaches the specified protrusion height labeled A shown in the illustration.



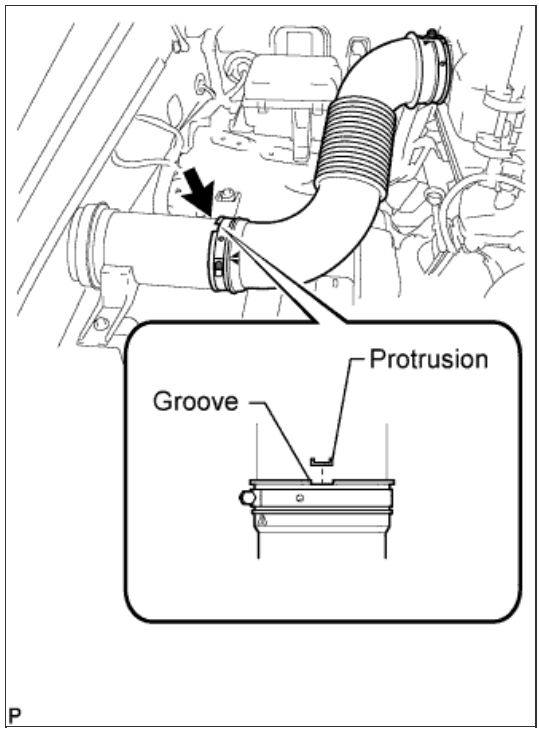
Standard protrusion height:
Less than 0.5 mm (0.0197 in.)

c. Connect the MAF meter connector.



d. Attach the 2 wire harness clamps.

e. Connect the vacuum hose.

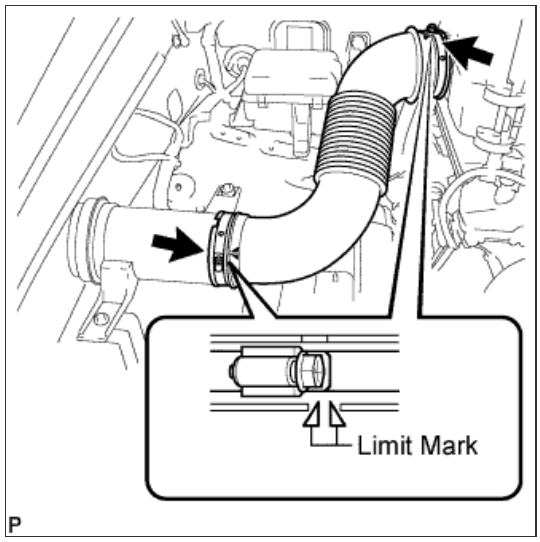


f. Attach the hose clamp.

g. Connect the No. 2 ventilation hose.

24. INSTALL NO. 2 AIR CLEANER HOSE

a. Align the protrusion of the pre-cleaner with the groove of the No. 2 air cleaner hose as shown in the illustration.



b. Tighten the 2 hose clamps.

Torque:
4.0 N*m{ 41 kgf*cm , 35 in.*lbf }

HINT:

Tighten the clamp until the end of the clamp band is within both limit marks.

25. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

a. Install the cowl top ventilator louver (Click here).

26. ADD ENGINE COOLANT

a. Add engine coolant.

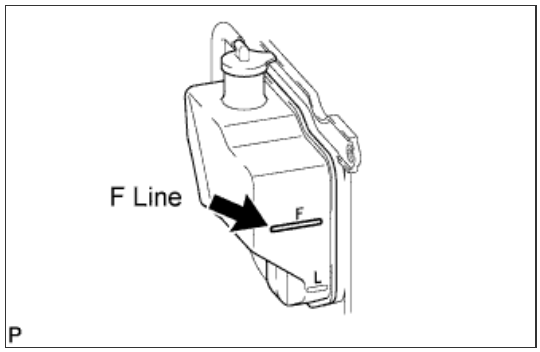
Standard Capacity:

Item		Specified condition
for Automatic transmission	w/o Rear Heater	11.2 liters (11.8 US qts, 9.9 Imp. qts)
	w/ Rear Heater	14.4 liters (15.2 US qts, 12.7 Imp. qts)
for Manual transmission	w/o Rear Heater	12.0 liters (12.7 US qts, 10.6 Imp. qts)
	w/ Rear Heater	14.6 liters (15.4 US qts, 12.8 Imp. qts)

NOTICE:

Do not substitute plain water for engine coolant.

HINT:



TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the reservoir cap.

d. Press the No. 1 and No. 2 radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Set the air conditioning as follows while warming up the engine.

Item	Condition
Fan speed	Any setting except off
Temperature	Toward WARM
Air conditioning switch	Off

g. Start the engine and warm it up until the thermostat opens.

HINT:

The thermostat opening timing can be confirmed by pressing the No. 2 radiator hose by hand, and checking when the engine coolant starts to flow inside the hose.

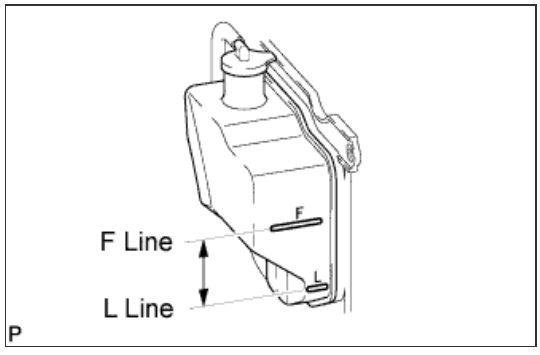
h. Maintain the engine speed at 2000 to 2500 rpm.

NOTICE:

- **Make sure that the radiator reservoir still has some coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**
- **Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the F line.**
- **Run the engine at 2000 rpm until the coolant level has stabilized.**

i. Press the No. 1 and No. 2 radiator hoses several times by hand to bleed air.

CAUTION:



- **Wear protective gloves. Heat areas on the parts may injure your hands.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the fan.**

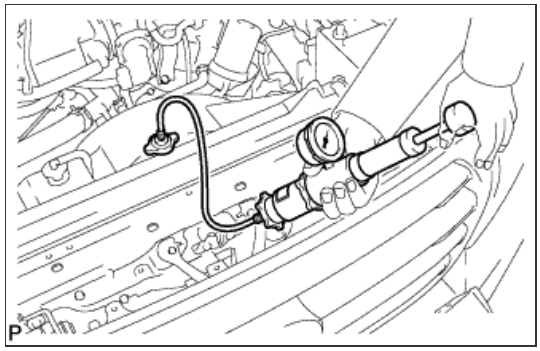
j. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

k. Check that the coolant level is between the F and L lines.
If the coolant level is below the L line, repeat all of the procedures above.
If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.

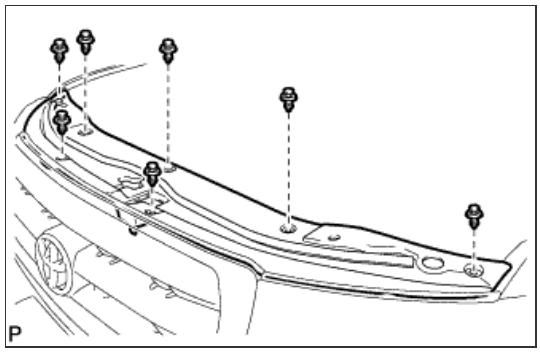
27. INSPECT FOR COOLANT LEAK



CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

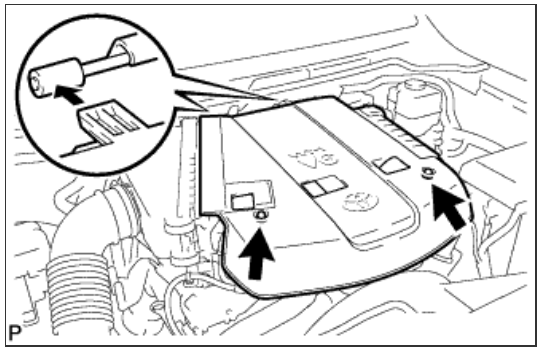
a. Fill the radiator with coolant and attach a radiator cap tester.



b. Warm up the engine.

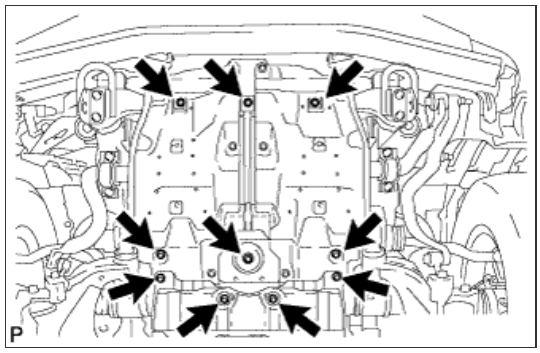
c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.

28. INSTALL UPPER RADIATOR SEAL



a. Install the radiator support seal with the 7 clips.

29. INSTALL V-BANK COVER



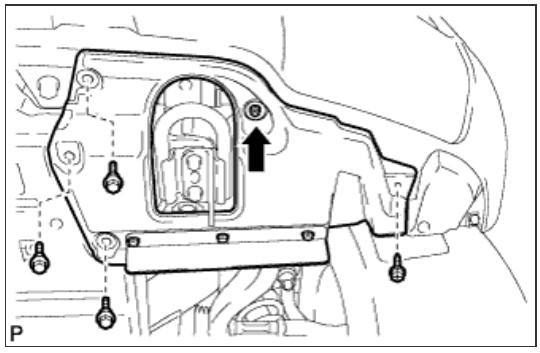
a. Install the V-bank cover with the 2 cap nuts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

30. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the under cover with the 10 bolts.

31. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH



HINT:

Use the same procedures described for the LH side.

32. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the 3 bolts and screw.

33. INSPECT IGNITION TIMING

NOTICE:

- **Turn all electrical systems off.**
- **Perform the inspection when the cooling fan motor is turned off.**

a. Warm up the engine.

b. When using the intelligent tester:

i. Connect the intelligent tester to the DLC3.

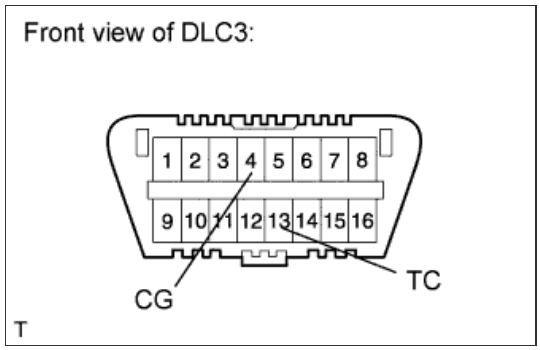
ii. Enter the following menus: Powertrain / Engine and ECT / Data List / All Data / IGN Advance.

iii. Inspect the ignition timing during idling.

Standard ignition timing:
8 to 12° BTDC @ idling (transmission in neutral position and A/C switch off)

iv. Check that the ignition timing advances immediately when the engine speed is increased.

c. When not using the intelligent tester:



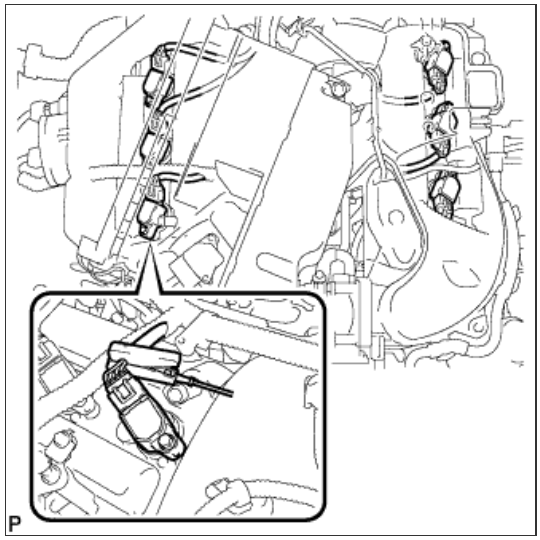
i. Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.

SST
09843-18040

NOTICE:

Be sure not to improperly connect the terminals. This may damage the engine.

ii. Remove the air cleaner cap.

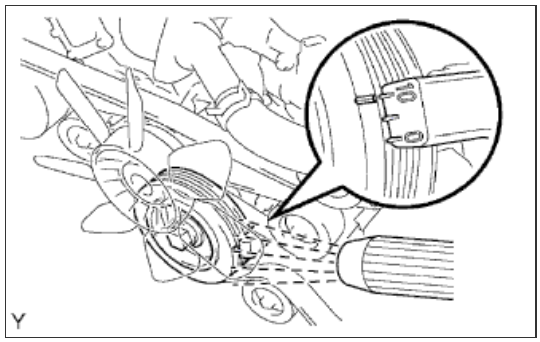


iii. Pull out the wire harness shown in the illustration.

iv. Connect the tester probe of a timing light to the wire of the ignition coil connector for the No. 1 cylinder.

NOTICE:

- **Use a timing light that detects primary signals.**
- **After checking, be sure to wrap the wire harness with tape.**

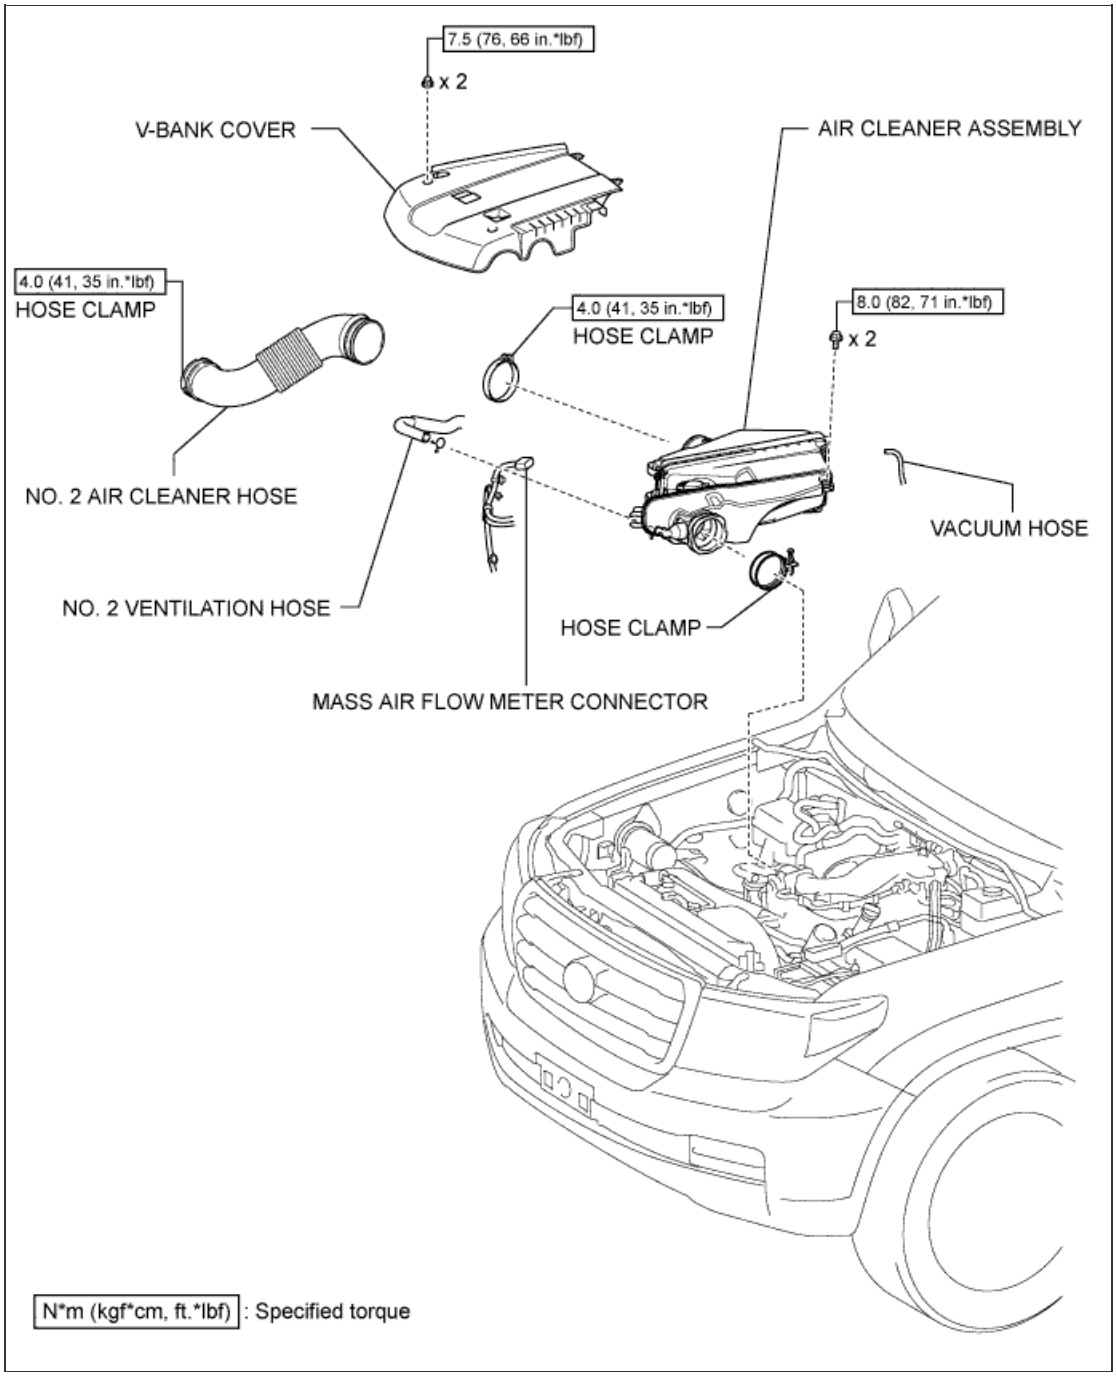


v. Inspect the ignition timing during idling.

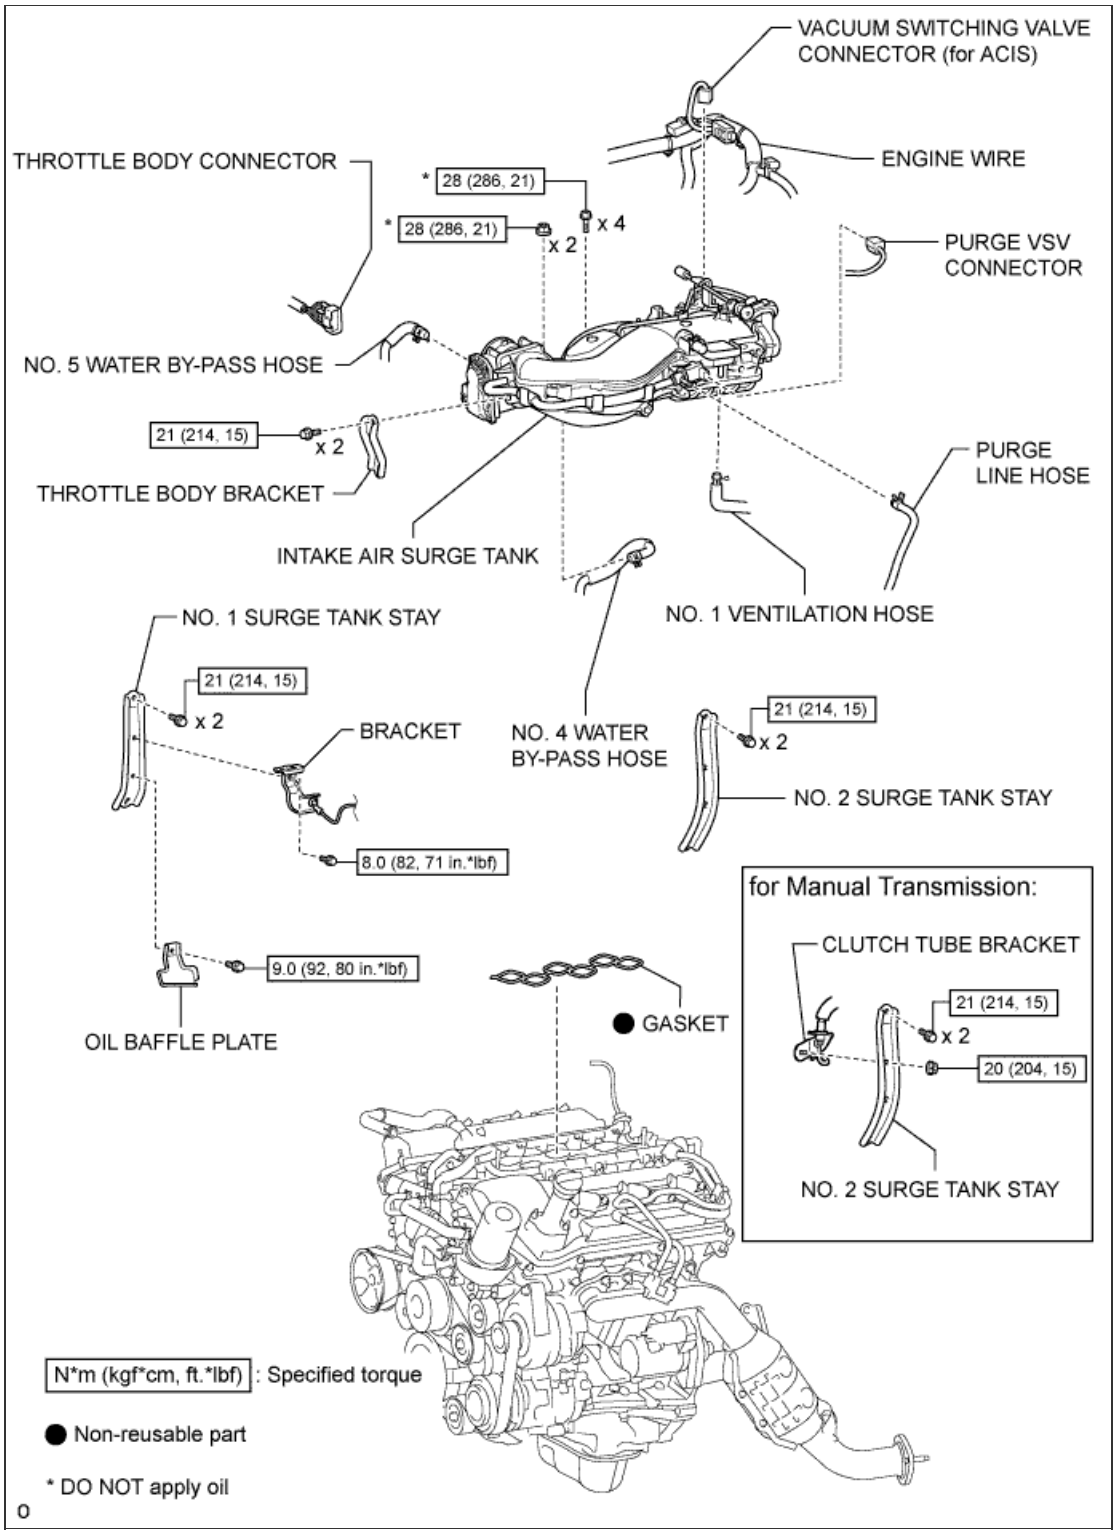
Standard ignition timing:
8 to 12° BTDC @ idling (transmission in neutral position and A/C switch off)

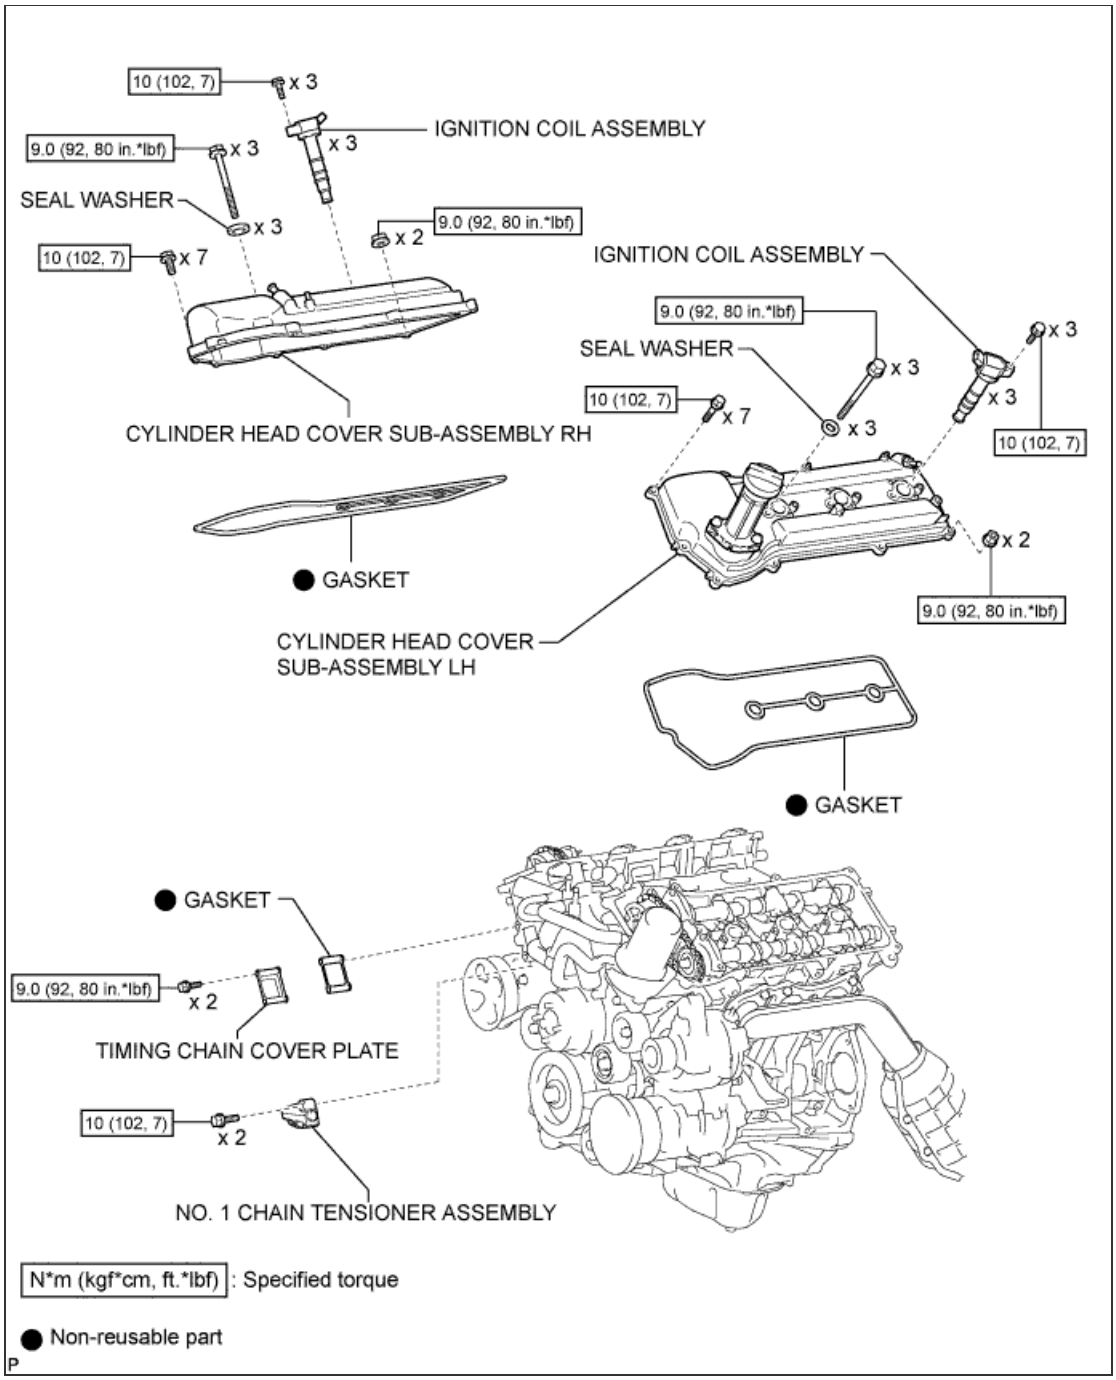
vi. Remove SST from the DLC3.

vii. Inspect the ignition timing during idling.

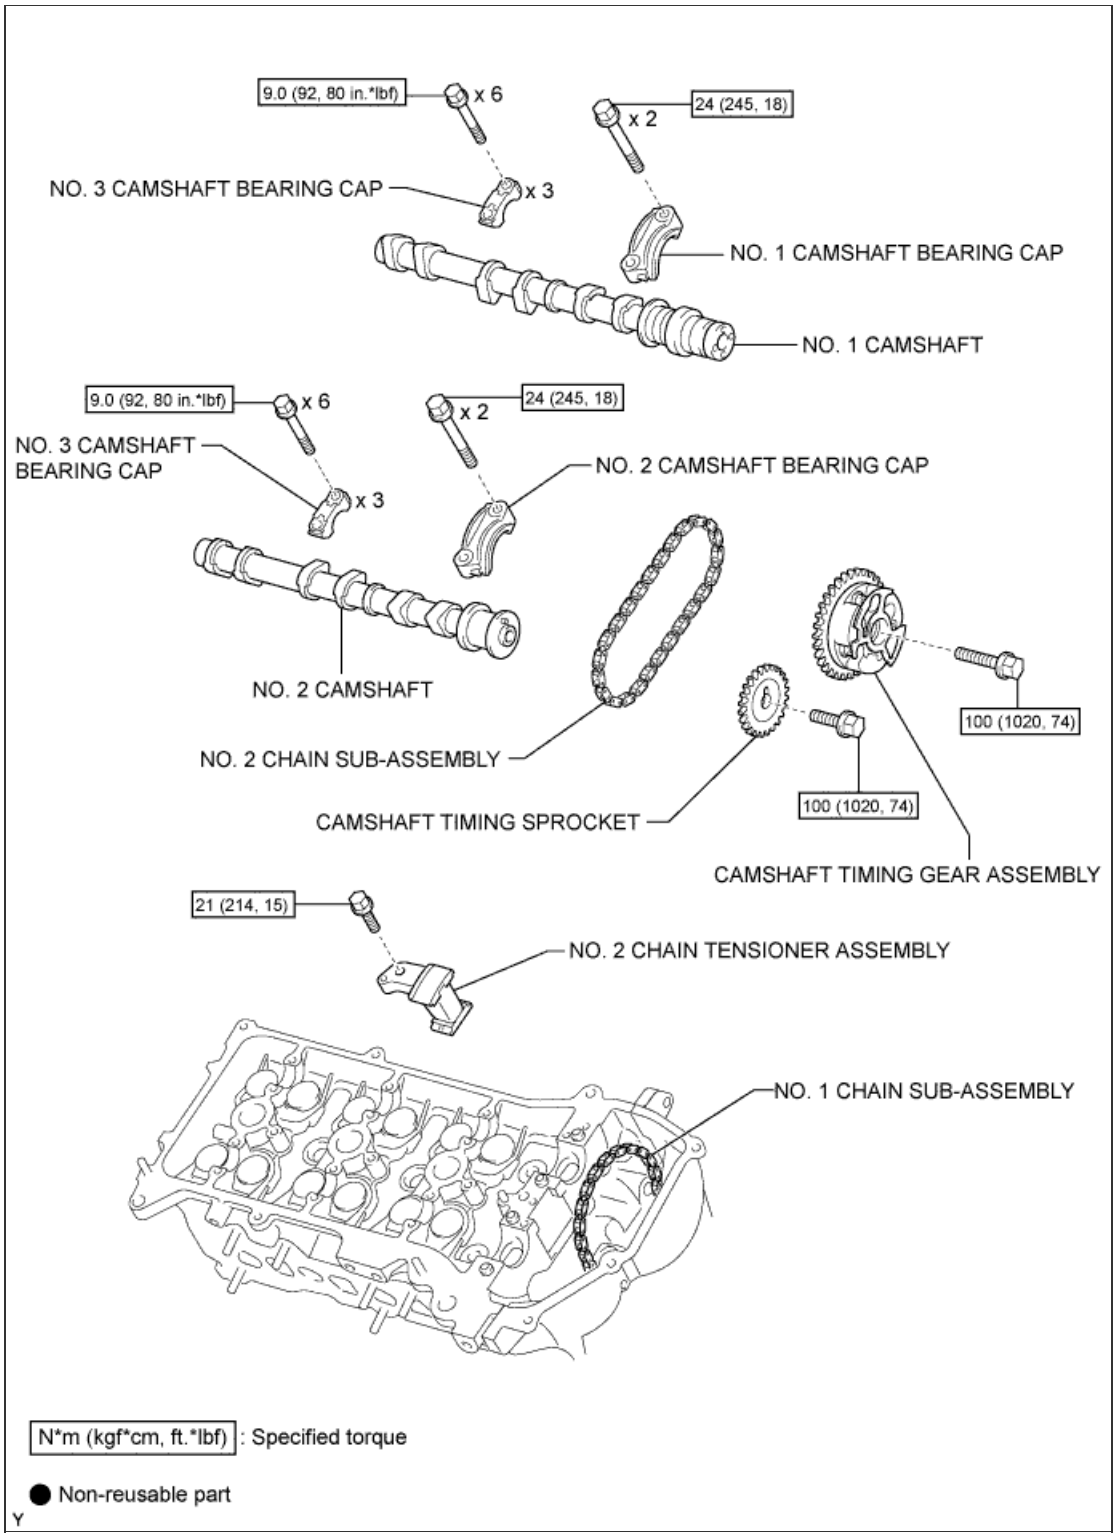


Standard ignition timing:
7 to 24° BTDC @ idling (transmission in neutral position and A/C switch off)

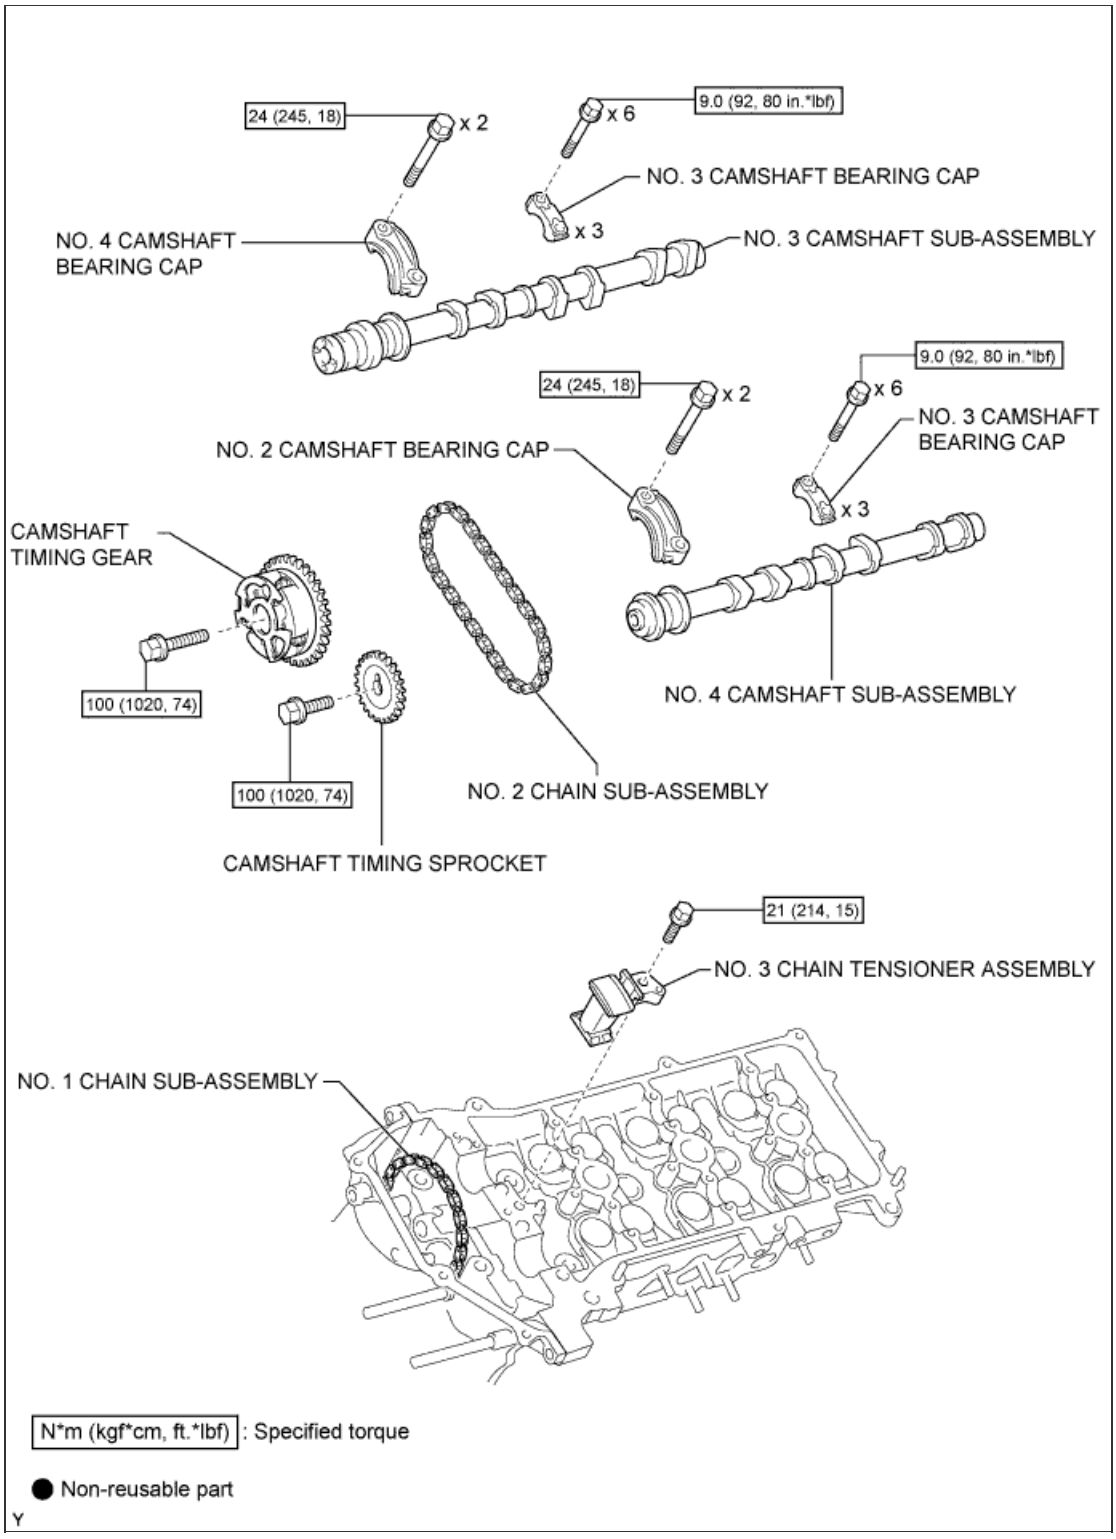




viii. Disconnect the timing light from the engine.



ix. Install the air cleaner cap.



for Preparation Click here

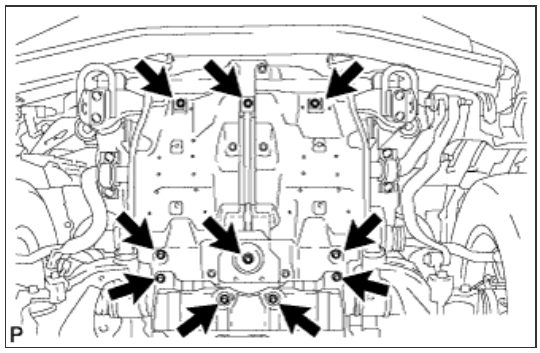
1. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and screw.

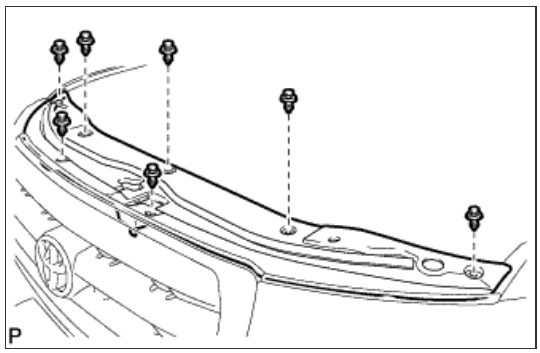
b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



2. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.



3. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and under cover.

4. REMOVE UPPER RADIATOR SUPPORT SEAL

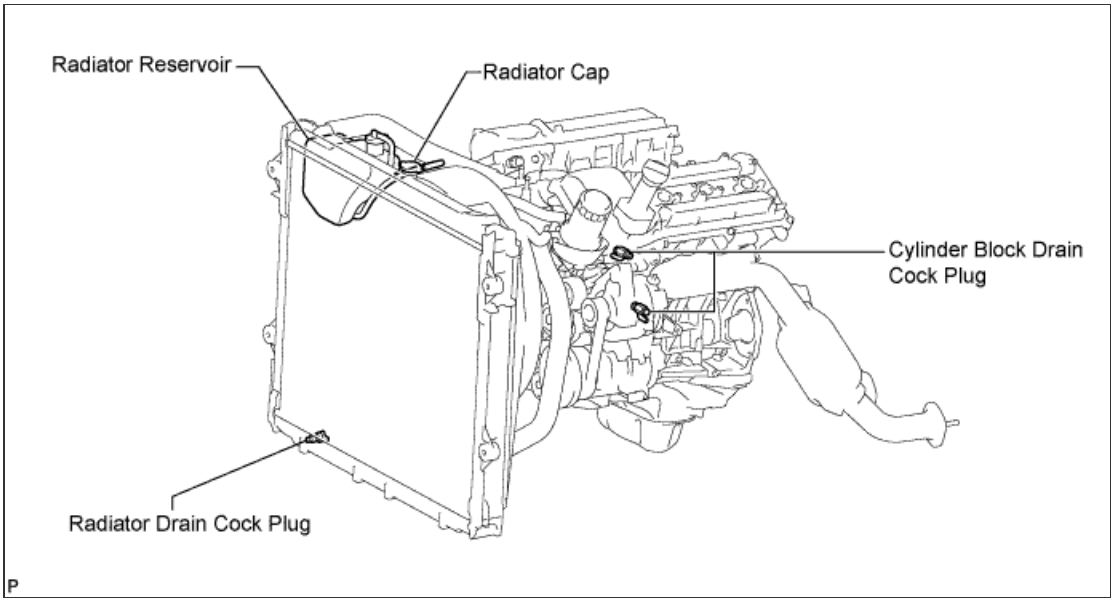
a. Remove the 7 clips and radiator support seal.

5. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Loosen the radiator drain cock plug and 2 cylinder block drain cock plugs.

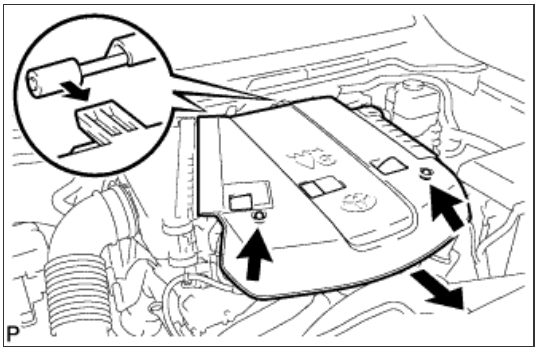


b. Remove the radiator cap. Then drain the coolant.

HINT:

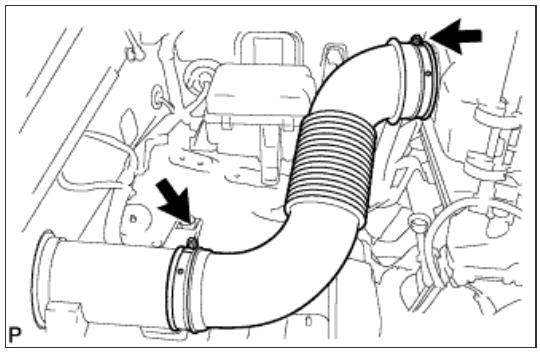
Collect the coolant in a container and dispose of it according to the regulations in your area.

c. Tighten the 2 cylinder block drain cock plugs.



Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }

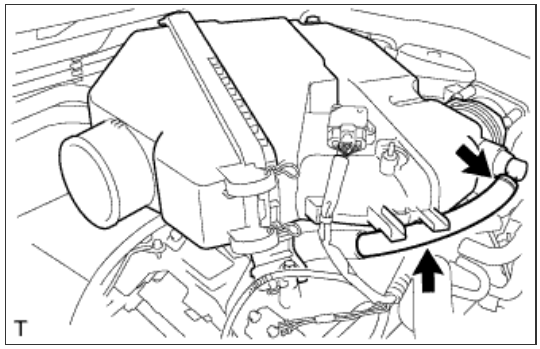
d. Tighten the radiator drain cock plug by hand.



6. REMOVE V-BANK COVER

a. Remove the 2 cap nuts and V-bank cover.

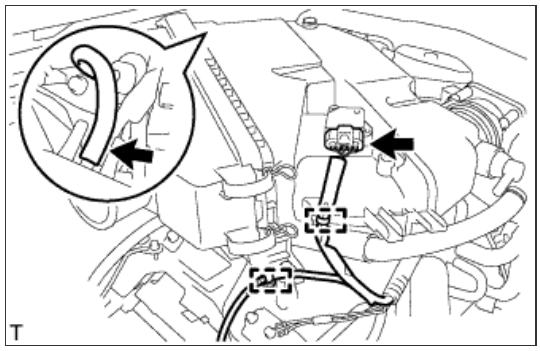
7. REMOVE NO. 2 AIR CLEANER HOSE



a. Loosen the 2 hose clamps and remove the air cleaner hose.

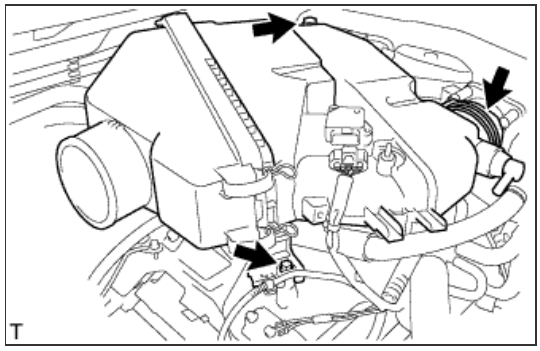
8. REMOVE AIR CLEANER ASSEMBLY

a. Disconnect the No. 2 ventilation hose.



b. Detach the hose clamp.

c. Disconnect the vacuum hose.

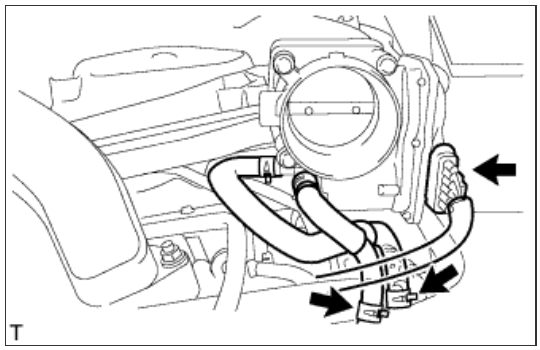


d. Disconnect the MAF meter connector.

e. Using a clip remover, detach the 2 wire harness clamps.

f. Loosen the hose clamp.

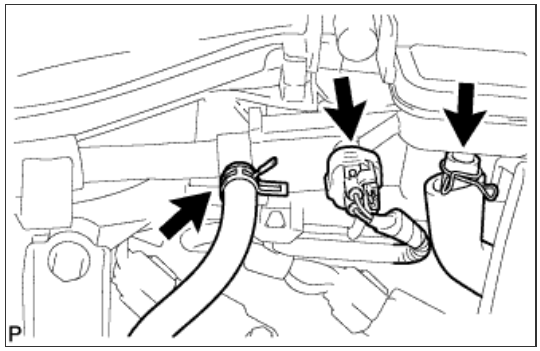
g. Remove the 2 bolts and air cleaner assembly.



9. REMOVE INTAKE AIR SURGE TANK

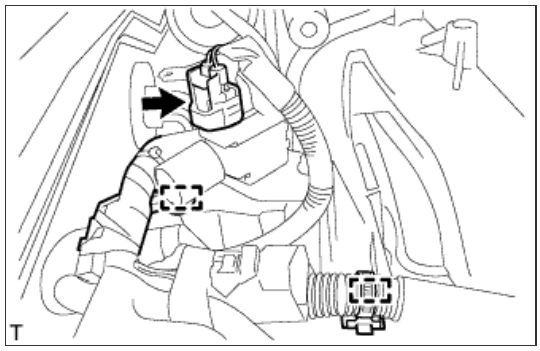
a. Disconnect the throttle body connector.

b. Disconnect the No. 4 water by-pass hose.



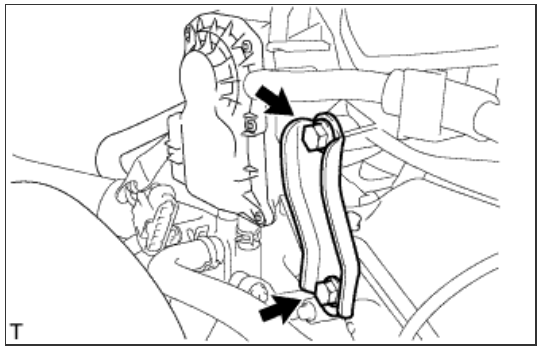
c. Disconnect the No. 5 water by-pass hose.

d. Disconnect the purge line hose.

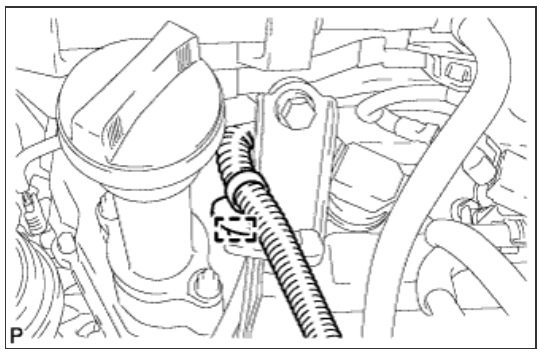


e. Disconnect the purge VSV connector.

f. Disconnect the No. 1 ventilation hose.

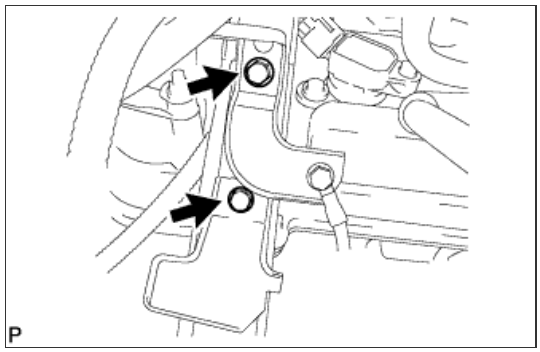


g. Disconnect the vacuum switching valve (for ACIS) connector.

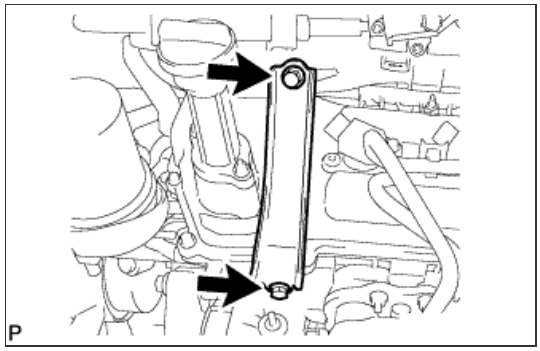


h. Using a clip remover, detach the 2 wire harness clamps.

i. Remove the 2 bolts and throttle body bracket.

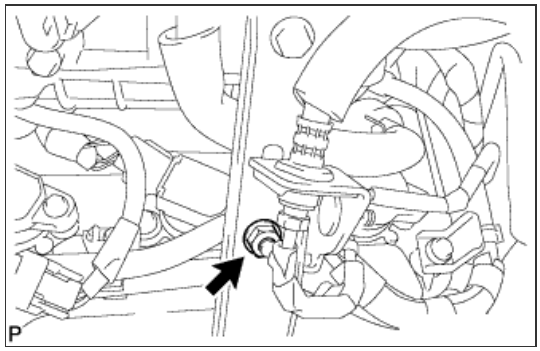


.Using a clip remover, detach the wire harness clamp.

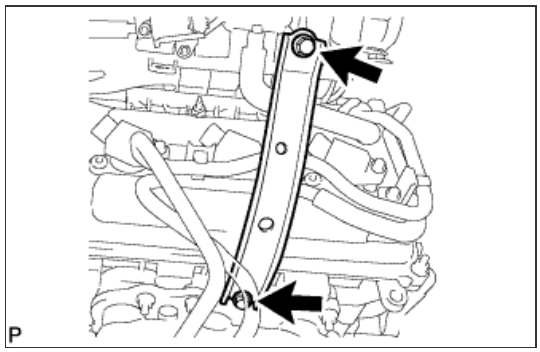


k. Remove the bolt and bracket from the No. 1 surge tank stay.

l. Remove the bolt and oil baffle plate.

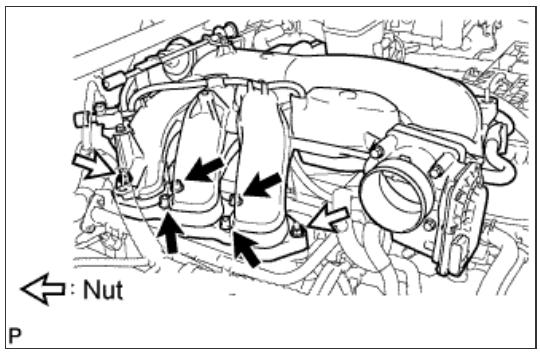


m. Remove the 2 bolts and No. 1 surge tank stay.



n. for Manual Transmission:

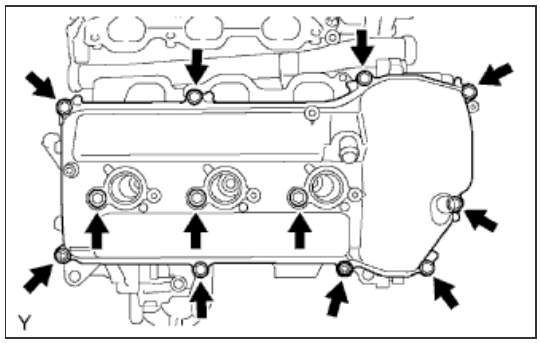
i. Remove the nut.



o. Remove the 2 bolts and No. 2 surge tank stay.

p. Remove the 2 nuts.

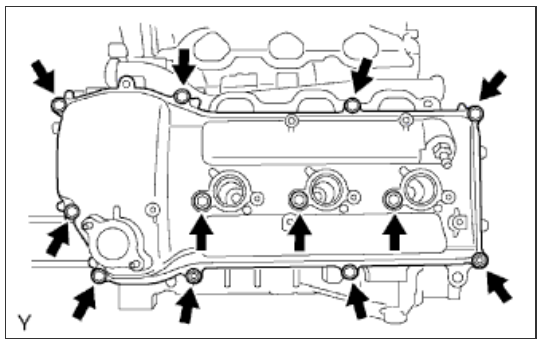
q. Using an 8 mm hexagon wrench, remove the 4 bolts. Then remove the intake air surge tank and gasket.



10. REMOVE IGNITION COIL ASSEMBLY

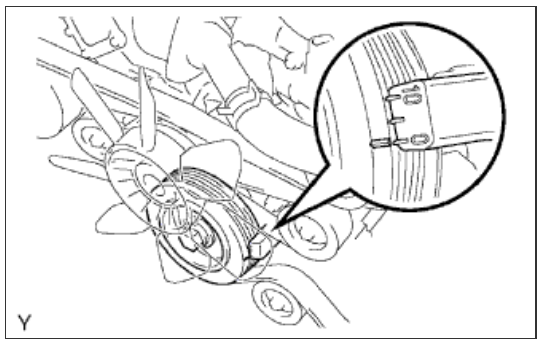
a. Disconnect the 6 connectors.

b. Remove the 6 bolts and ignition coils.



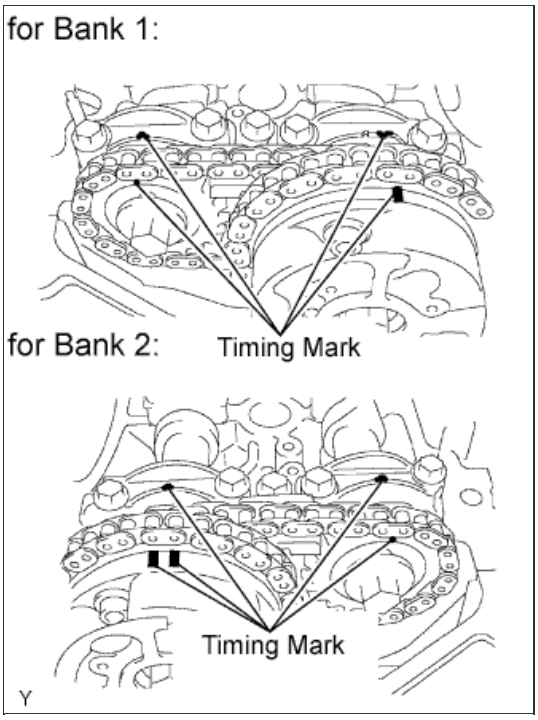
11. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY RH

a. Remove the 10 bolts, 3 seal washers, 2 nuts, cylinder head cover and gasket.



12. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY LH

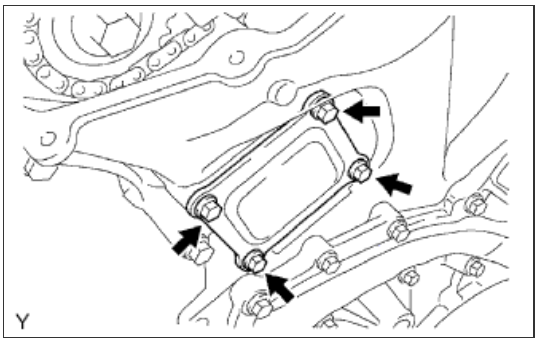
a. Remove the 10 bolts, 3 seal washers, 2 nuts, cylinder head cover and gasket.



13. SET NO. 1 CYLINDER TO TDC/COMPRESSION

a. Turn the crankshaft pulley, and align its groove with the timing mark "0" of the timing chain cover.

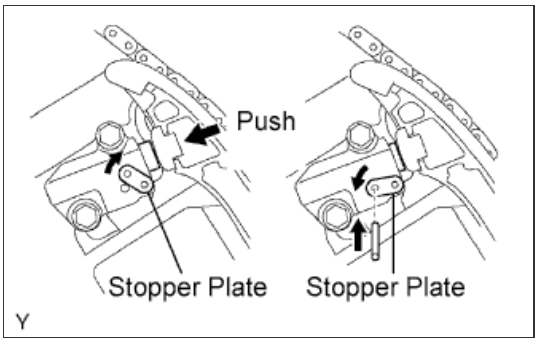
b. Check that the timing marks of the camshaft timing gears and sprockets are aligned with the timing marks of the bearing caps as shown in the illustration. If not, turn the crankshaft 1 complete revolution (360°) and align the timing marks as above.



14. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY

NOTICE:

- **Ne e rotate the crank haft with the chain ten ioner remo d.**
- **hen rotating the cam haft with the timing chain remo d, rotate the crank haft counterclockwi e 40 from TDC fir t.**

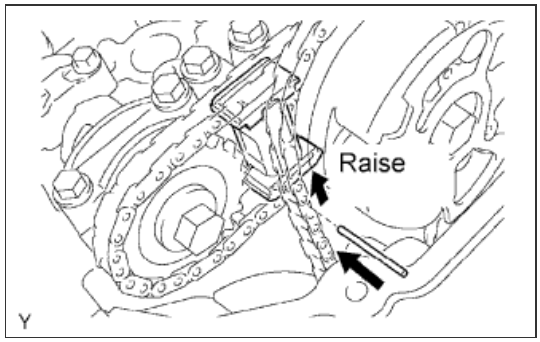


a. Remove the 4 bolts, timing chain cover plate and gasket.

b. While turning the stopper plate of the tensioner clockwise, push in the plunger of the chain tensioner as shown in the illustration.

c. While turning the stopper plate of the tensioner counterclockwise, insert a bar of φ3.5 mm (0.138 in.) into the holes on the stopper plate and tensioner to fix the stopper plate in place.

d. Remove the 2 bolts and chain tensioner.

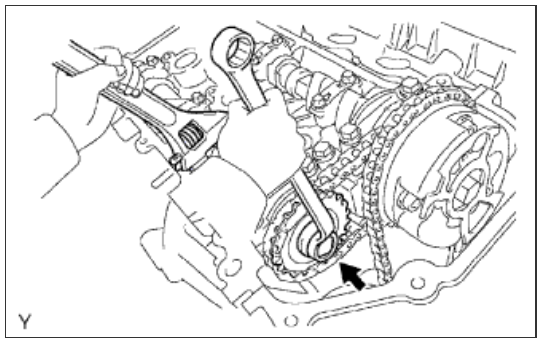


15. REMOVE NO. 2 CAMSHAFT

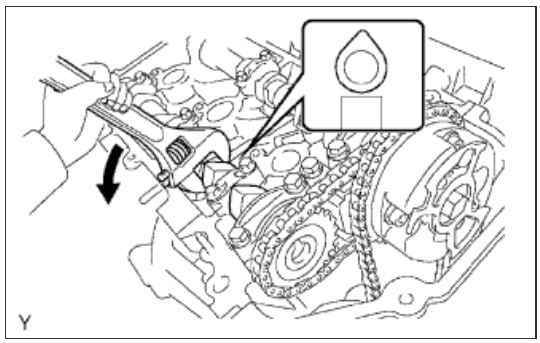
NOTICE:

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being removed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

a. While raising the No. 2 chain tensioner, insert a pin of φ1.0 mm (0.0394 in.) into the hole to fix the tensioner in place.



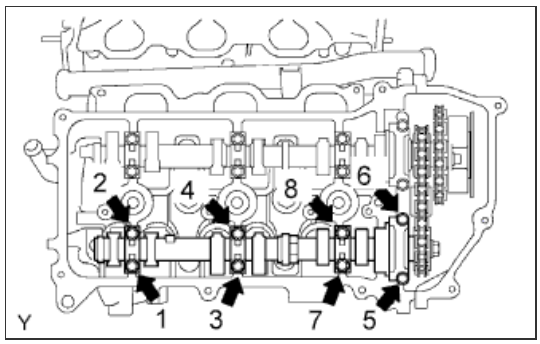
b. Hold the hexagonal portion of the No. 2 camshaft with a wrench, and remove the camshaft timing sprocket set bolt.



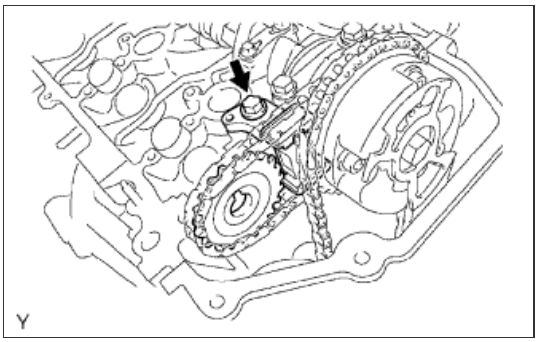
NOTICE:

Be careful not to damage the cylinder head and valve lifter with the wrench.

c. Separate the camshaft timing sprocket from the No. 2 camshaft.



d. Rotate the camshaft counterclockwise using a wrench so that the cam lobes of the No. 1 cylinder face upward as shown in the illustration.

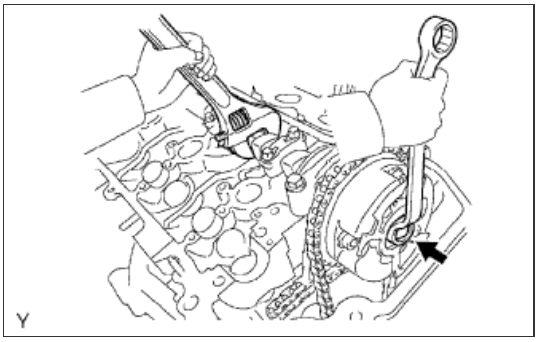


e. Using several steps, loosen and remove the 8 bearing cap bolts uniformly in the sequence shown in the illustration.

f. Remove the 4 bearing caps and No. 2 camshaft.

16. REMOVE NO. 2 CHAIN TENSIONER ASSEMBLY

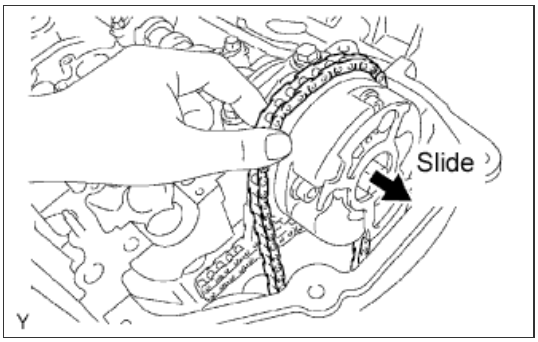
a. Remove the No. 2 chain tensioner bolt, and then remove the No. 2 chain tensioner and camshaft timing sprocket.



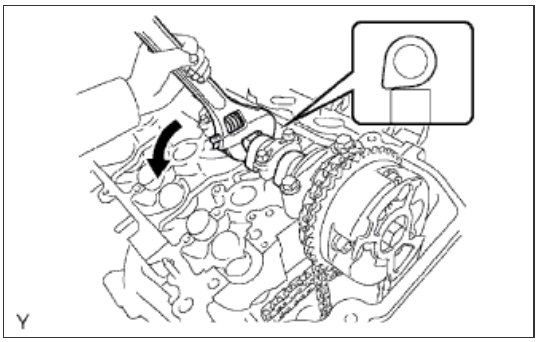
17. REMOVE NO. 1 CAMSHAFT

NOTICE:

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being removed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.



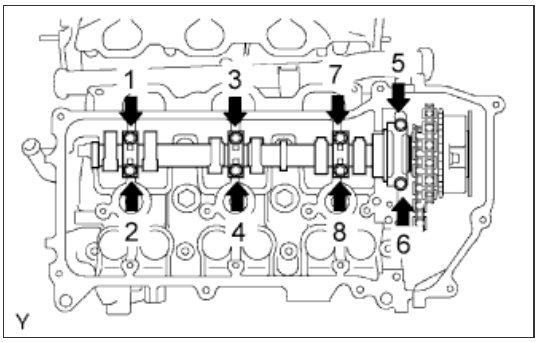
a. Hold the hexagonal portion of the No. 1 camshaft with a wrench, and loosen the camshaft timing gear set bolt.



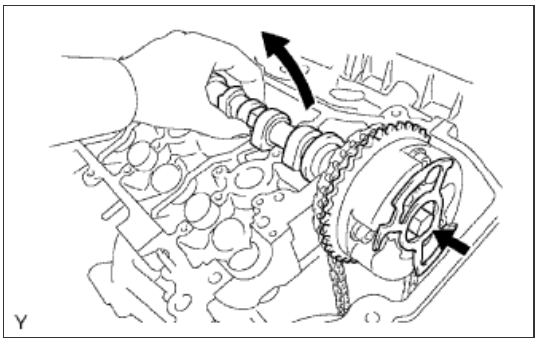
NOTICE:

- **Be careful not to damage the c linder head and al difter with the wrench.**
- **Do not di a dote the cam haft timing gear a doh .**

b. Slide the camshaft timing gear and separate the No. 1 chain from the camshaft timing gear.

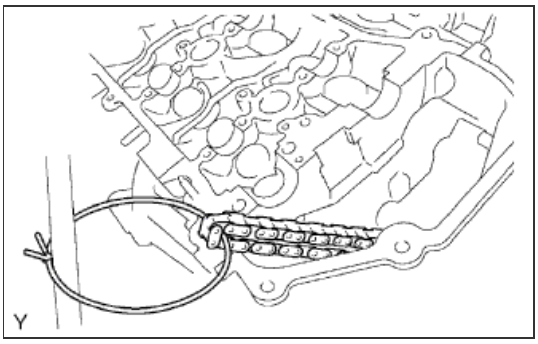


c. Rotate the No. 1 camshaft counterclockwise using a wrench so that the cam lobes of the No. 1 cylinder face downward as shown in the illustration.



d. Using several steps, loosen and remove the 8 bearing cap bolts in the sequence shown in the illustration.

e. Remove the 4 bearing caps.

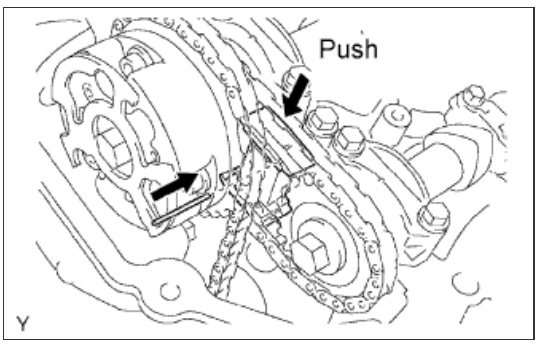


f. Remove the camshaft timing gear set bolt with the No. 1 camshaft lifted up, and then remove the No. 1 camshaft and camshaft timing gear with the No. 2 chain.

g. Tie the No. 1 chain with a string as shown in the illustration.

NOTICE:

Be careful not to drop anything inside the timing chain cover.

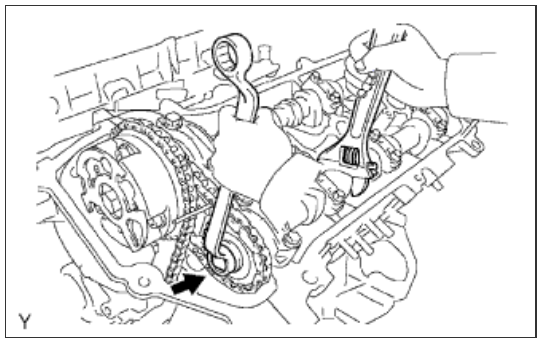


18. REMOVE NO. 4 CAMSHAFT SUB-ASSEMBLY

NOTICE:

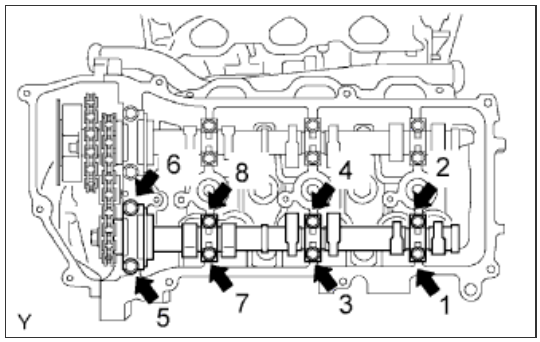
As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being removed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

a. While pushing down the No. 3 chain tensioner, insert a pin of φ1.0 mm (0.0394 in.) into the hole to fix the tensioner in place.



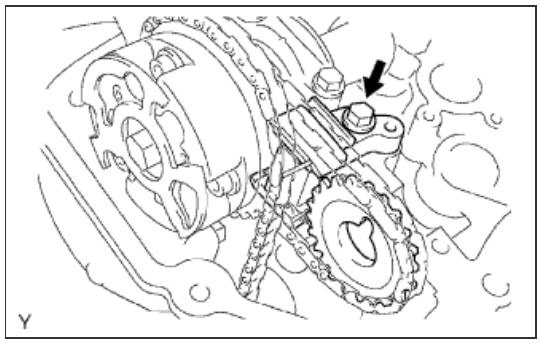
b. Hold the hexagonal portion of the No. 4 camshaft with a wrench, and remove the camshaft timing sprocket set bolt.

NOTICE:



Be careful not to damage the cylinder head and valve lifter with the wrench.

c. Separate the camshaft timing sprocket from the No. 4 camshaft.

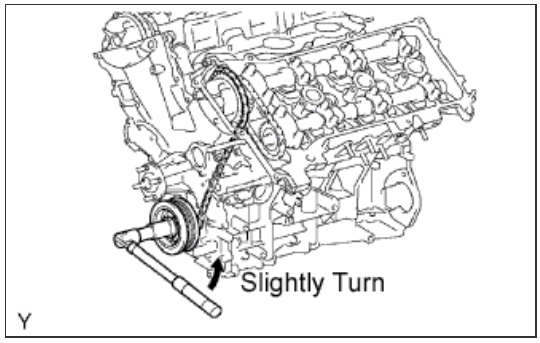


d. Using several steps, loosen and remove the 8 bearing cap bolts uniformly in the sequence shown in the illustration.

e. Remove the 4 bearing caps and No. 4 camshaft.

19. REMOVE NO. 3 CHAIN TENSIONER ASSEMBLY

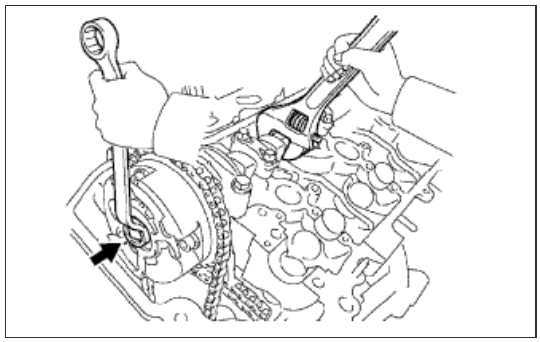
a. Remove the No. 3 chain tensioner bolt, and then remove the No. 3 chain tensioner and camshaft timing sprocket.



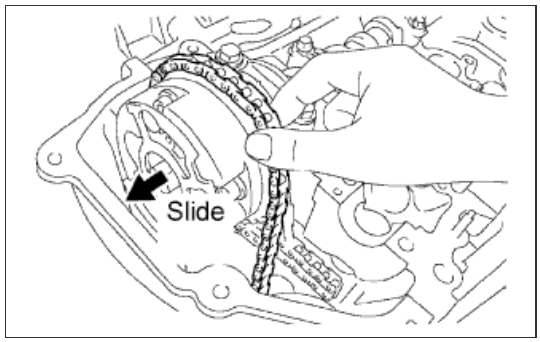
20. REMOVE NO. 3 CAMSHAFT SUB-ASSEMBLY

NOTICE:

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being removed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.



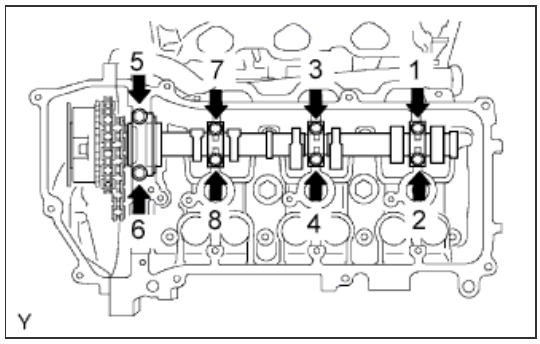
a. Release the chain tension between the camshaft timing gear (LH bank) and crankshaft timing gear by turning the crankshaft pulley counterclockwise slightly.



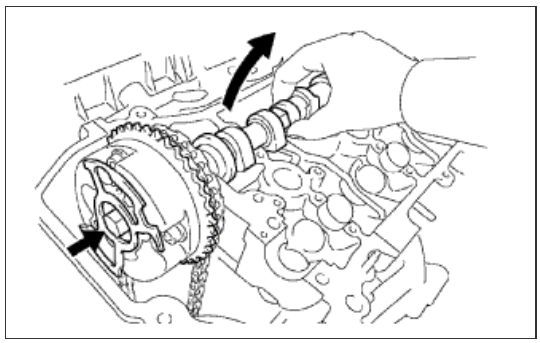
b. Hold the hexagonal portion of the No. 3 camshaft with a wrench, and loosen the camshaft timing gear set bolt.

NOTICE:

- **Be careful not to damage the c linder head and al difter with the wrench.**
- **Do not di a ete the cam haft timing gear a dh .**

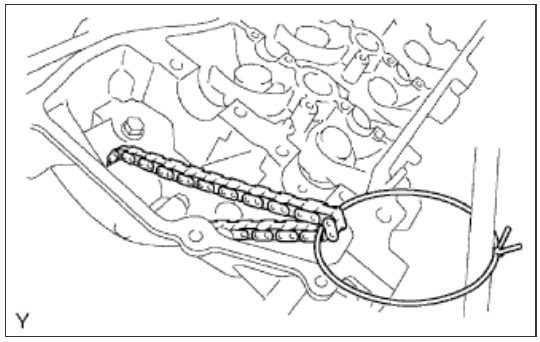


c. Slide the camshaft timing gear and separate the No. 1 chain from the camshaft timing gear.



d. Using several steps, loosen and remove the 8 bearing cap bolts uniformly in the sequence shown in the illustration.

e. Remove the 4 bearing caps.



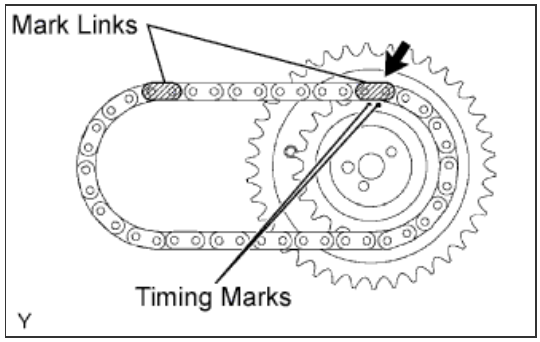
f. Remove the camshaft timing gear set bolt with the No. 3 camshaft lifted up, and then remove the No. 3 camshaft and camshaft timing gear with the No. 2 chain.

g. Tie the No. 1 chain with a string as shown in the illustration.

NOTICE:

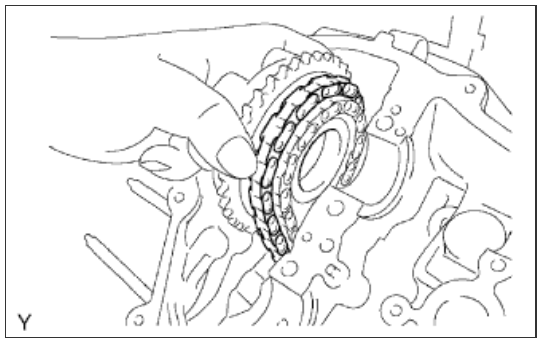
Be careful not to drop anything inside the timing chain cover.

for Preparation Click here



1. INSTALL NO. 3 CAMSHAFT SUB-ASSEMBLY

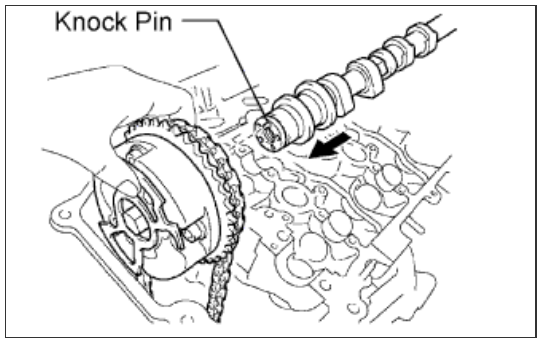
NOTICE:



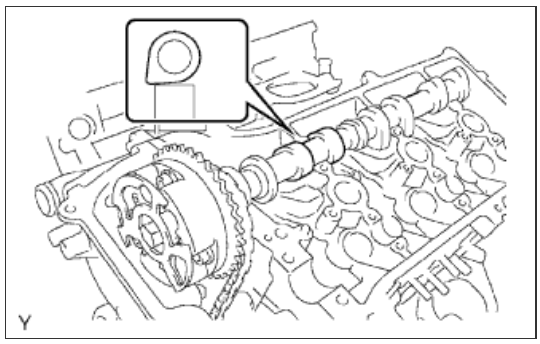
As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

a. Align the mark link (yellow) with the timing mark (2-dot mark) of the camshaft timing gear as shown in the illustration.

b. Apply new engine oil to the thrust portions and journals of the camshaft.

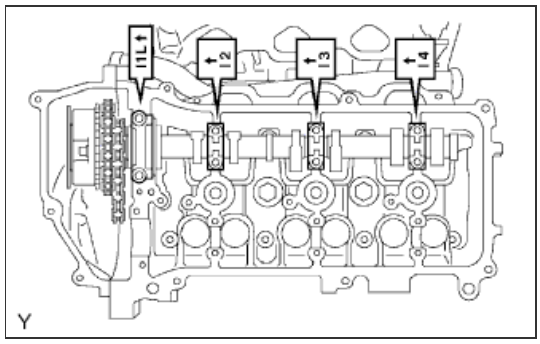


c. Temporarily put the No. 1 chain on the No. 2 chain of the camshaft timing gear.

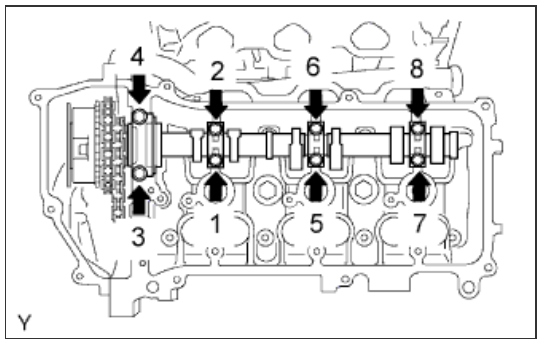


d. Align the knock pin hole of the camshaft timing gear with the knock pin of the No. 3 camshaft, and insert the No. 3 camshaft into the camshaft timing gear.

e. Temporarily install the camshaft timing gear set bolt.

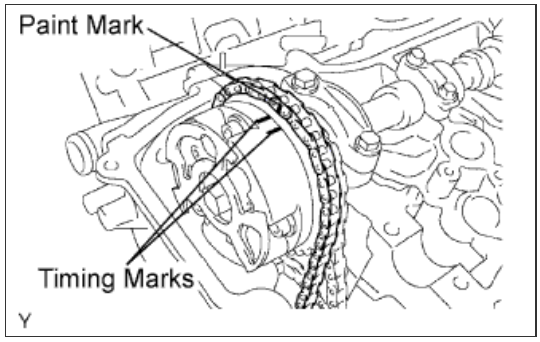


f. Set the No. 3 camshaft onto the cylinder head LH with the cam lobes of the No. 2 cylinder facing downward as shown in the illustration.



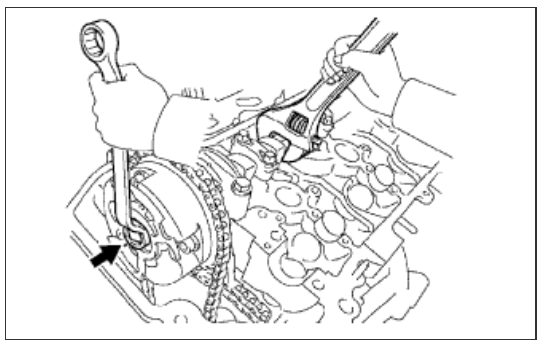
g. Set the 4 bearing caps in their proper locations.

h. Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.

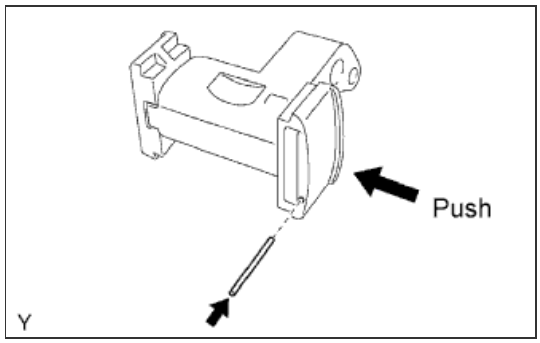


i. Using several steps, install the 8 bearing cap bolts uniformly in the sequence shown in the illustration.

Torque:
for 10 mm head bolt:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }
for 12 mm head bolt:
24 N*m{ 245 kgf*cm , 18 ft.*lbf }



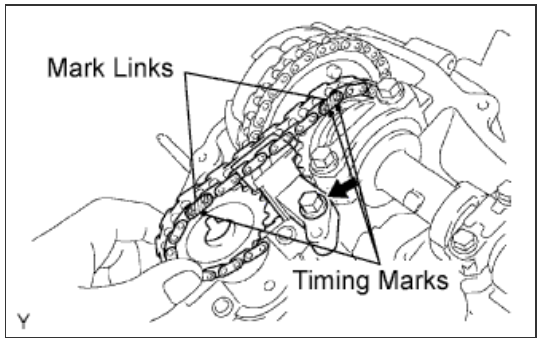
j. Set the paint mark of the No. 1 chain between the timing marks of the camshaft timing gear.



k. Hold the hexagonal portion of the No. 3 camshaft with a wrench, and tighten the camshaft timing gear set bolt.

Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

2. INSTALL NO. 3 CHAIN TENSIONER ASSEMBLY

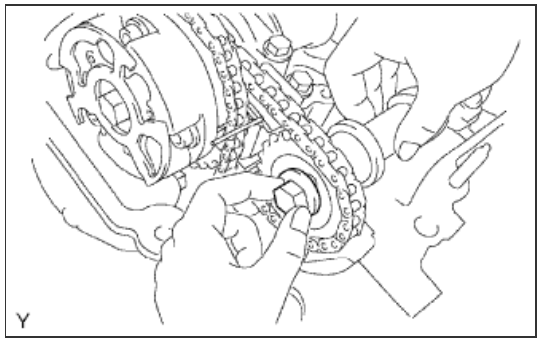


a. While pushing in the tensioner, insert a pin of φ1.0 mm (0.0394 in.) into the hole to fix the tensioner in place.

b. Temporarily install the camshaft timing sprocket and No. 3 chain tensioner with the bolt and align the mark links (yellow) with the timing marks (1-dot mark and 2-dot mark) of the camshaft timing gear and sprocket.

c. Tighten the No. 3 chain tensioner bolt.

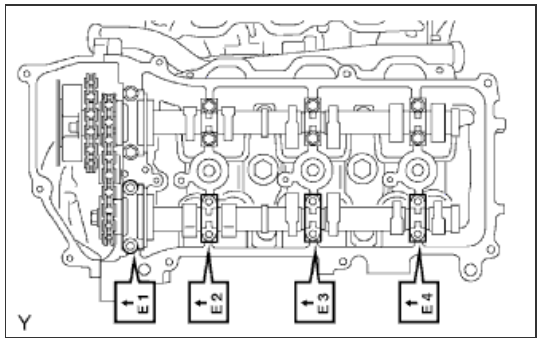
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



3. INSTALL NO. 4 CAMSHAFT SUB-ASSEMBLY

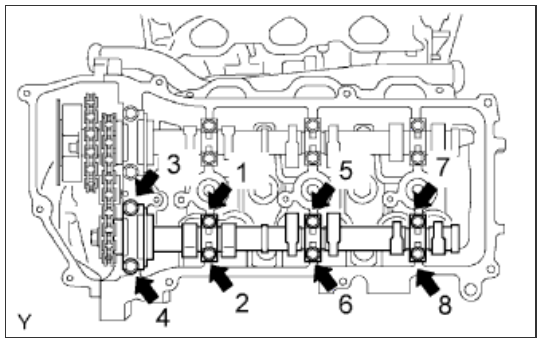
NOTICE:

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.



a. Align the knock pin hole of the camshaft timing sprocket with the knock pin of the No. 4 camshaft, and insert the No. 4 camshaft into the camshaft timing sprocket.

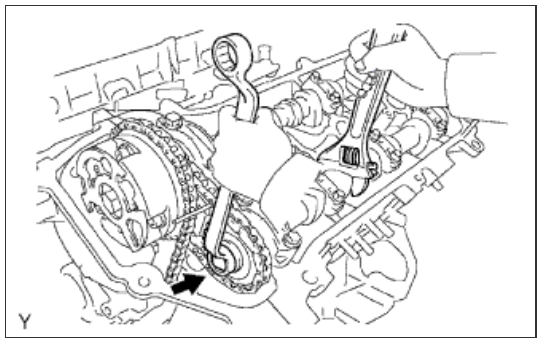
b. Temporarily install the camshaft timing sprocket set bolt.



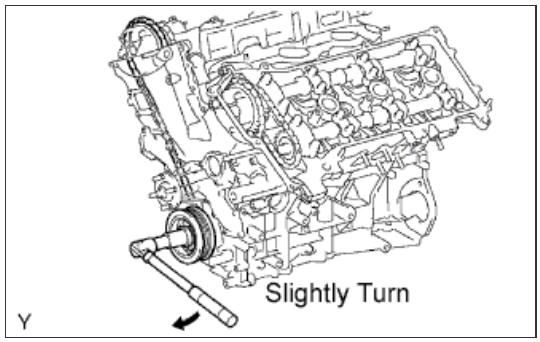
c. Set the 4 bearing caps in their proper locations.

d. Apply a light coat of engine oil to the threads of the bearing cap bolts.

e. Using several steps, install the 8 bearing cap bolts uniformly in the sequence shown in the illustration.



Torque:
for 10 mm head bolt:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }
for 12 mm head bolt:
24 N*m{ 245 kgf*cm , 18 ft.*lbf }

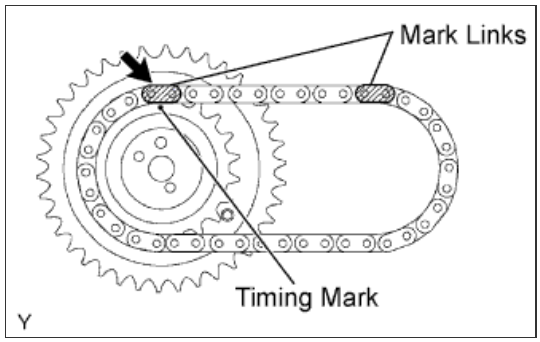


f. Hold the hexagonal portion of the No. 4 camshaft with a wrench, and tighten the camshaft timing sprocket set bolt.

Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

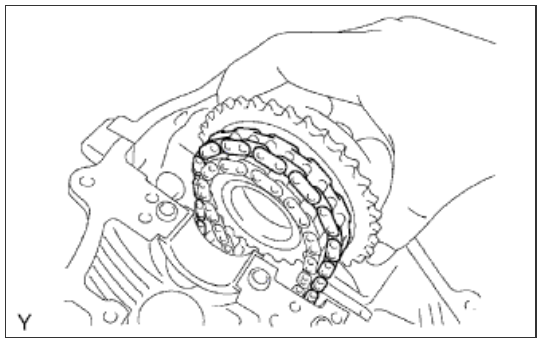
g. Remove the pin from the No. 3 chain tensioner

h. Release the chain tension between the camshaft timing gear (RH bank) and crankshaft timing gear by turning the crankshaft pulley clockwise slightly.



4. INSTALL NO. 1 CAMSHAFT

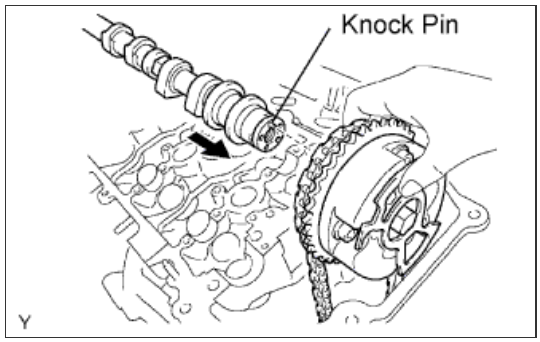
NOTICE:



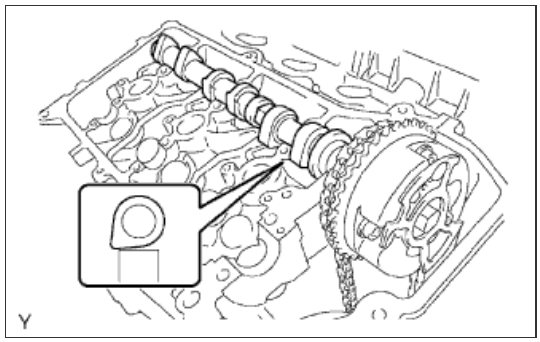
As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

a. Align the mark link (yellow) with the timing mark (1-dot mark) of the camshaft timing gear as shown in the illustration.

b. Apply new engine oil to the thrust portions and journals of the camshaft.

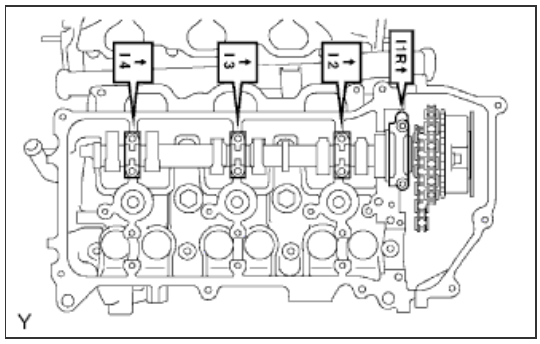


c. Temporarily put the No. 1 chain on the No. 2 chain of the camshaft timing gear.

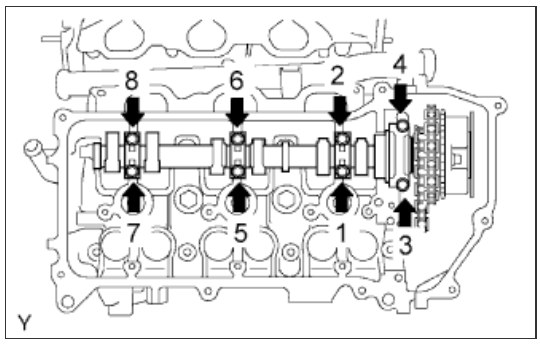


d. Align the knock pin hole of the camshaft timing gear with the knock pin of the No. 1 camshaft, and insert the No. 1 camshaft into the camshaft timing gear.

e. Temporarily install the camshaft timing gear set bolt.

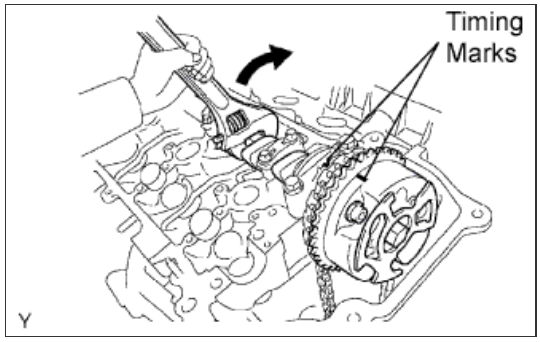


f. Set the No. 1 camshaft onto the cylinder head RH with the cam lobes of the No. 1 cylinder facing downward as shown in the illustration.

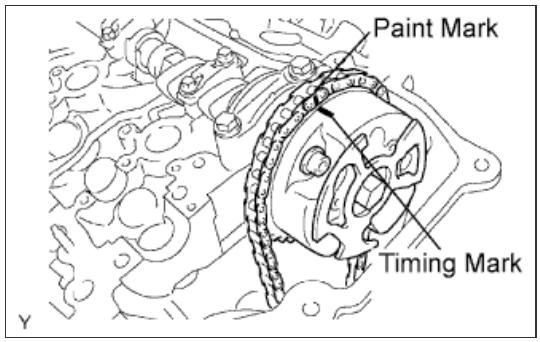


g. Set the 4 bearing caps in their proper locations.

h. Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.

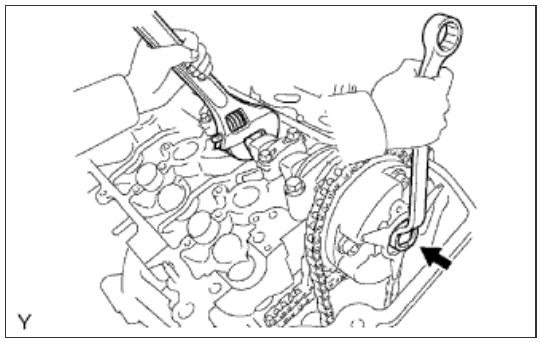


i. Using several steps, install the 8 bearing cap bolts uniformly in the sequence shown in the illustration.

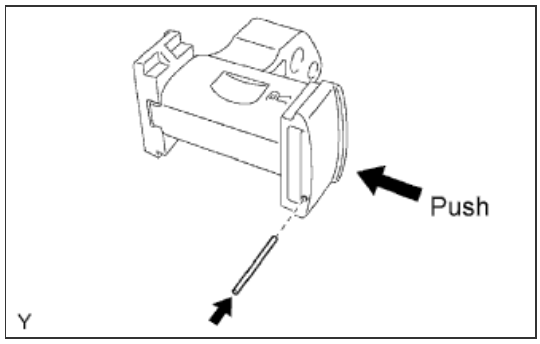


Torque:
for 10 mm head bolt:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }
for 12 mm head bolt:
24 N*m{ 245 kgf*cm , 18 ft.*lbf }

j. Rotate the No. 1 camshaft clockwise using a wrench so that the timing mark of the camshaft timing gear is aligned with the timing mark of the camshaft bearing cap.



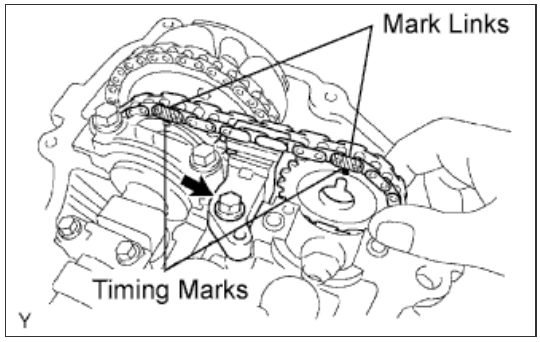
k. Align the paint mark of the No. 1 chain with the timing mark of the camshaft timing gear.



l. Hold the hexagonal portion of the No. 1 camshaft with a wrench, and tighten the camshaft timing gear set bolt.

Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

5. INSTALL NO. 2 CHAIN TENSIONER ASSEMBLY

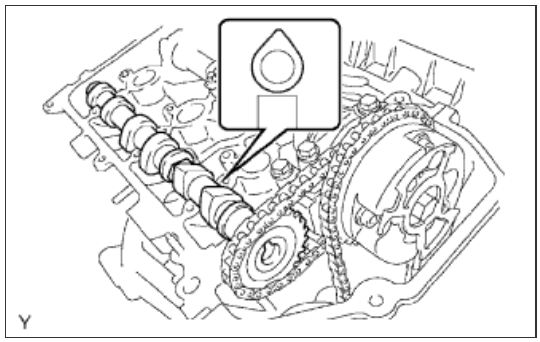


a. While pushing in the tensioner, insert a pin of φ1.0 mm (0.0394 in.) into the hole to fix the tensioner in place.

b. Temporarily install the camshaft timing sprocket and No. 2 chain tensioner with the bolt and align the mark links (yellow) with the timing marks (1-dot mark) of the camshaft timing gear and sprocket.

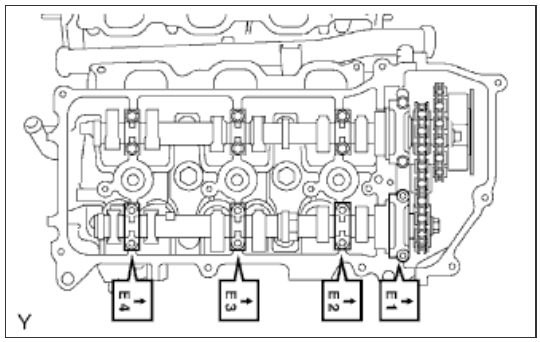
c. Tighten the No. 2 chain tensioner bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



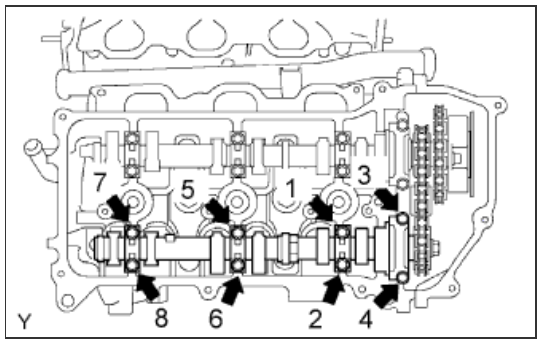
6. INSTALL NO. 2 CAMSHAFT

NOTICE:



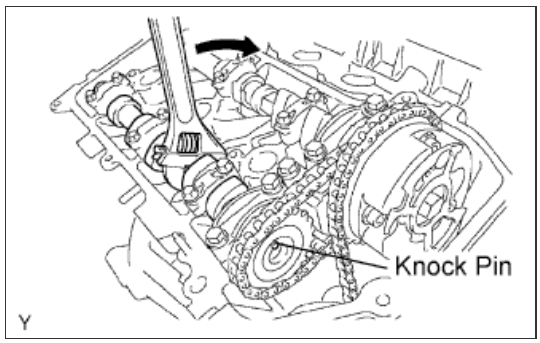
As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

a. Set the No. 2 camshaft onto the cylinder head RH with the cam lobes of the No. 1 cylinder facing upward as shown in the illustration.



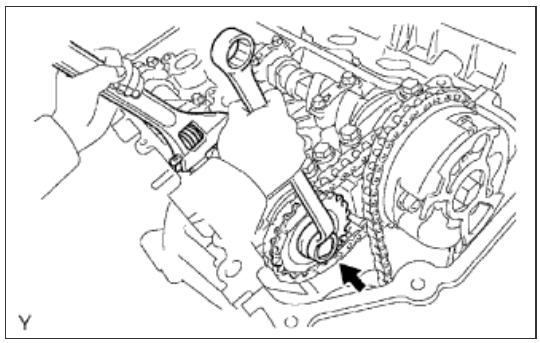
b. Set the 4 bearing caps in their proper locations.

c. Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.



d. Using several steps, install the 8 bearing cap bolts uniformly in the sequence shown in the illustration.

Torque:
for 10 mm head bolt:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }
for 12 mm head bolt:
24 N*m{ 245 kgf*cm , 18 ft.*lbf }



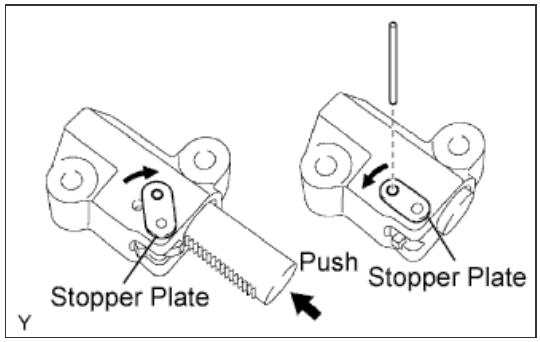
e. Rotate the No. 2 camshaft clockwise using a wrench so that the knock pin of the No. 2 camshaft is aligned with the knock pin hole of the camshaft timing sprocket.

f. Hold the hexagonal portion of the No. 2 camshaft with a wrench, and install the camshaft timing sprocket set bolt.

Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

g. Remove the pin from the No. 2 chain tensioner.

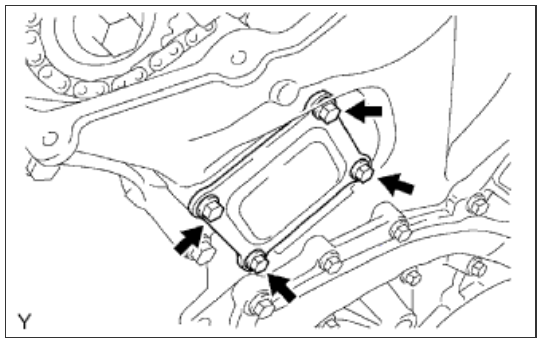
7. INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY



a. While turning the stopper plate of the tensioner clockwise, push in the plunger of the tensioner as shown in the illustration.

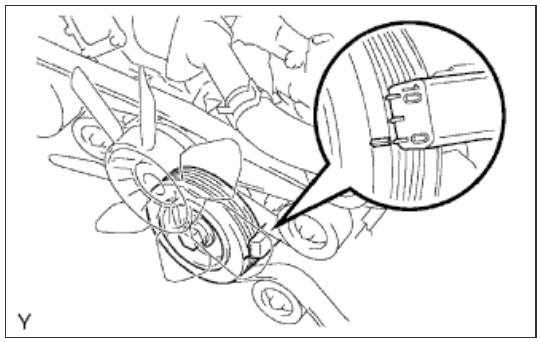
b. While turning the stopper plate of the tensioner counterclockwise, insert a bar of φ3.5 mm (0.138 in.) into the holes on the stopper plate and tensioner to fix the stopper plate in place.

c. Install the chain tensioner with the 2 bolts.

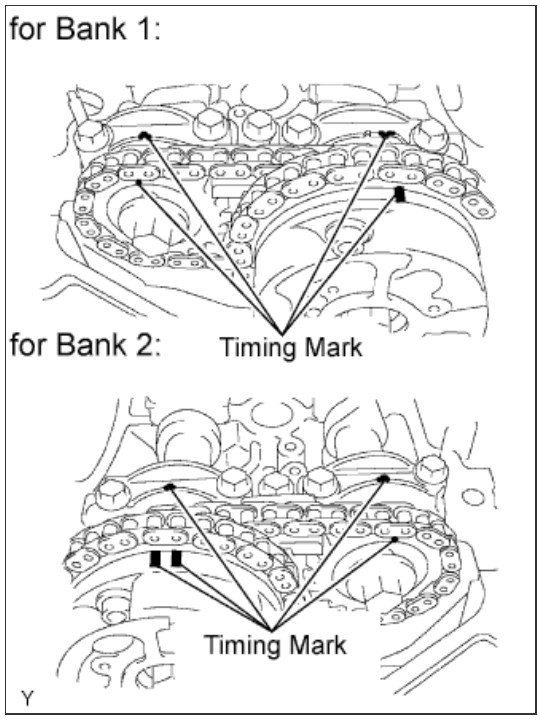


Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

d. Remove the bar from the chain tensioner.

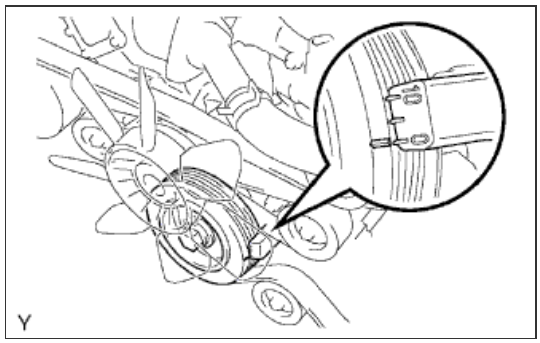


e. Install a new gasket and the timing chain cover plate with the 4 bolts.

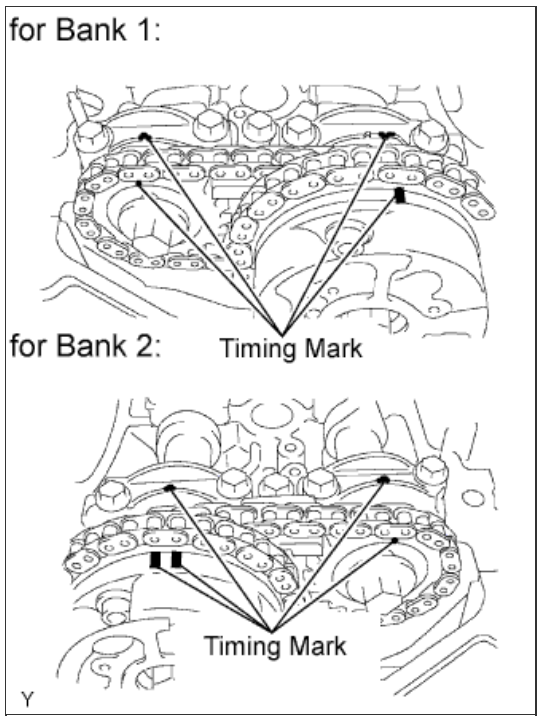


Torque:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

f. Turn the crankshaft pulley 2 complete revolutions slowly, and align the notch with the timing mark "0" of the timing chain cover.



g. Check that the timing marks of the camshaft timing gears are aligned with the timing marks of the bearing caps as shown in the illustration.



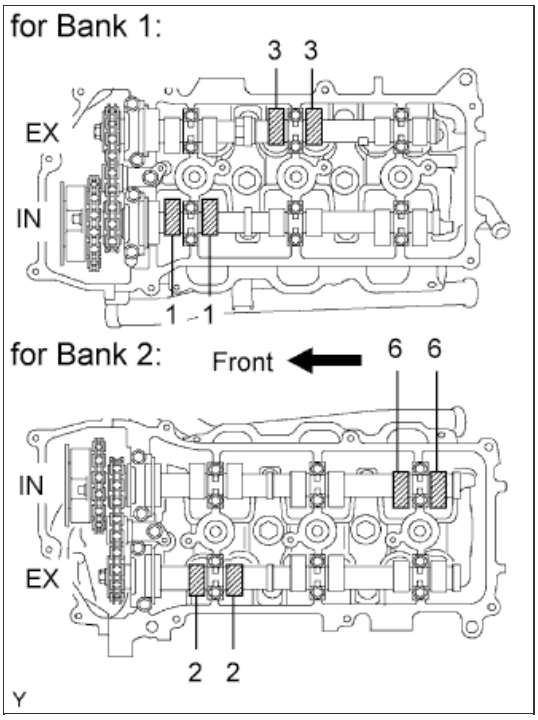
8. SET NO. 1 CYLINDER TO TDC/COMPRESSION

a. Turn the crankshaft pulley, and align its groove with the timing mark "0" of the timing chain cover.

b. Check that the timing marks of the camshaft timing gears and sprockets are aligned with the timing marks of the bearing caps as shown in the illustration. If not, turn the crankshaft 1 complete revolution (360°) and align the timing marks as above.

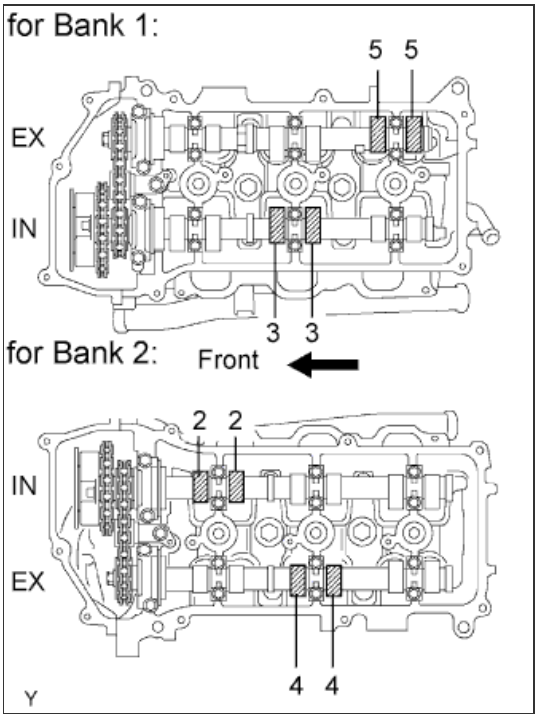
9. INSPECT VALVE CLEARANCE

a. Check the valves indicated in the illustration.



i. Using a feeler gauge, measure the clearance between the valve lifter and camshaft.

Standard Valve Clearance (Cold):



Item	Specified Condition
Intake	0.15 to 0.25 mm (0.00591 to 0.00984 in.)
xhaust	0.29 to 0.39 mm (0.0114 to 0.0154 in.)

ii. Record the out-of-specification valve clearance measurements. They will be used later to determine the required replacement valve lifter.

b. Turn the crankshaft 2/3 of a revolution (240°).

c. Check the valves indicated in the illustration.

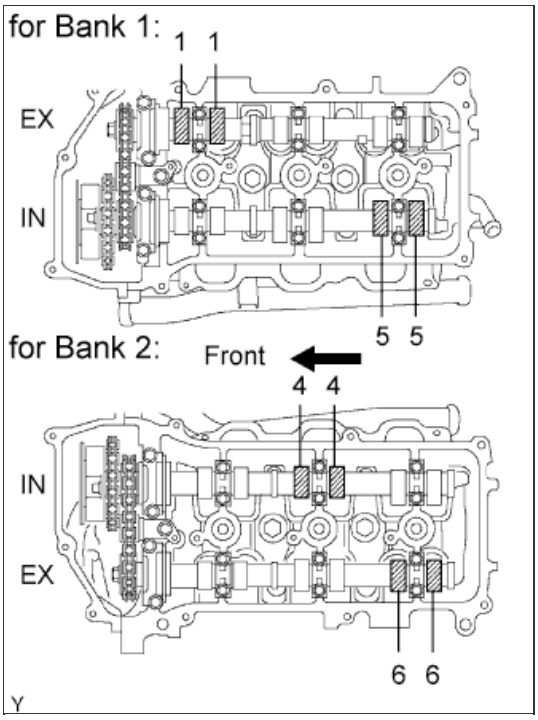
i. Using a feeler gauge, measure the clearance between the valve lifter and camshaft.

Standard Valve Clearance (Cold):

Item	Specified Condition
Intake	0.15 to 0.25 mm (0.00591 to 0.00984 in.)
xhaust	0.29 to 0.39 mm (0.0114 to 0.0154 in.)

ii. Record the out-of-specification valve clearance measurements. They will be used later to determine the required replacement valve lifter.

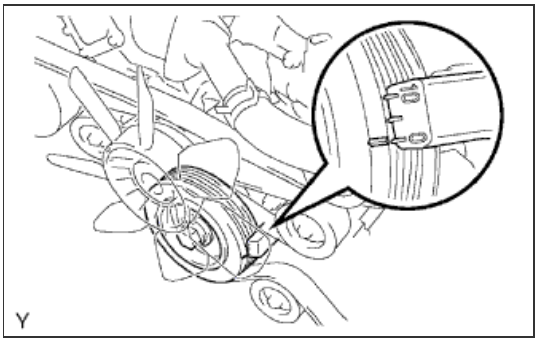
d. Turn the crankshaft 2/3 of a revolution (240°).



e. Check the valves indicated in the illustration.

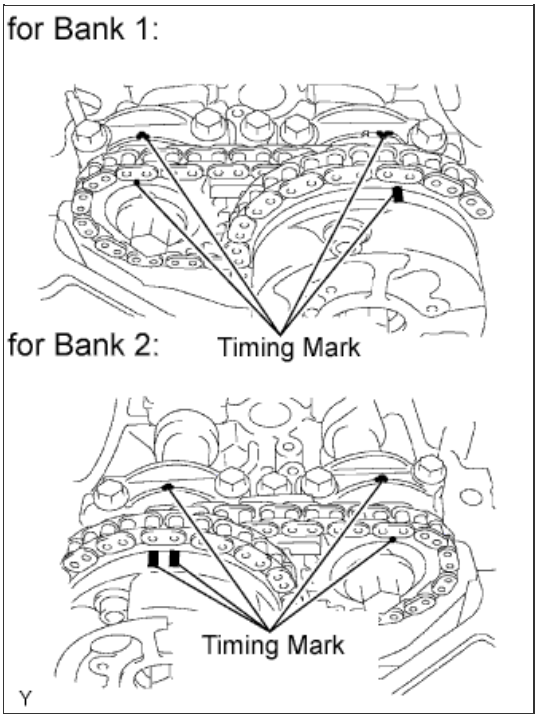
i. Using a feeler gauge, measure the clearance between the valve lifter and camshaft.

Standard Valve Clearance (Cold):



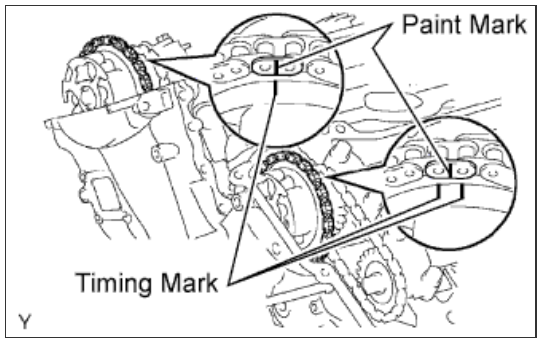
Item	Specified Condition
Intake	0.15 to 0.25 mm (0.00591 to 0.00984 in.)
xhaust	0.29 to 0.39 mm (0.0114 to 0.0154 in.)

ii. Record the out-of-specification valve clearance measurements. They will be used later to determine the required replacement valve lifter.



10. ADJUST VALVE CLEARANCE

a. Set the No. 1 cylinder to T Ccompression.

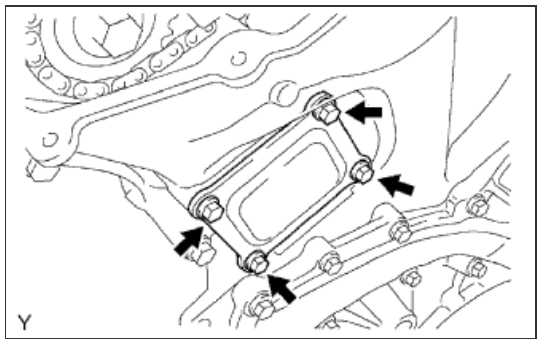


i. Turn the crankshaft pulley, and align the notch with the timing mark "0" of the timing chain cover.

ii. Check that the timing marks of the camshaft timing gears and sprockets are aligned with the timing marks of the bearing caps as shown in the illustration.
If not, turn the crankshaft 1 complete revolution (360°) and align the timing marks as above.

iii. Mark point marks on the chain links that correspond with the timing

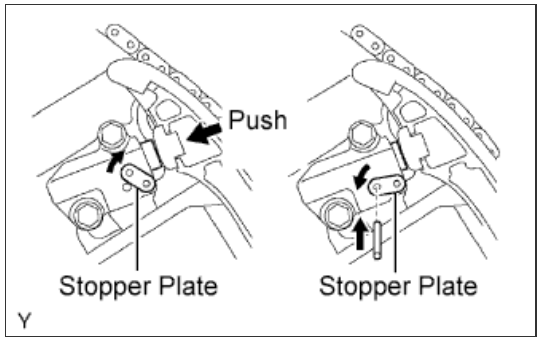
iii. Place paint marks on the chain links that correspond with the timing marks of the camshaft timing gears.



b. Remove the No. 1 chain tensioner.

NOTICE:

- **Never rotate the crankshaft with the No. 1 chain tensioner removed.**
- **When rotating the camshaft with the No. 1 chain removed, turn the crankshaft counterclockwise 40° from TDC first.**

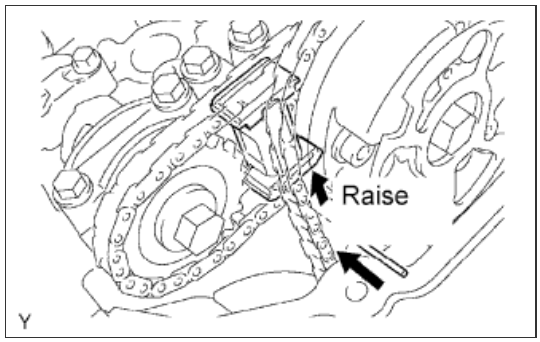


i. Remove the 4 bolts, timing chain cover plate and gasket.

ii. While rotating the stopper plate of the No. 1 chain tensioner clockwise, push in the plunger of the No. 1 chain tensioner as shown in the illustration.

iii. While rotating the stopper plate of the tensioner counterclockwise downward, insert a bar of φ3.5 mm (0.138 in.) into the holes in the stopper plate and tensioner to fix the stopper plate in place.

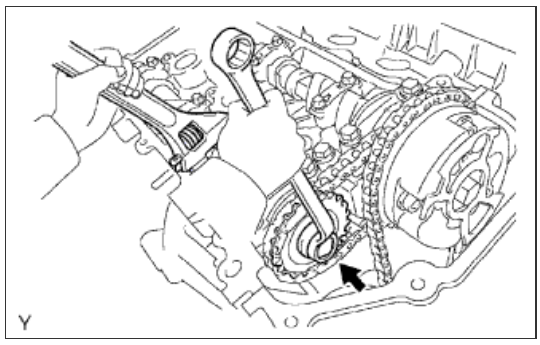
iv. Remove the 2 bolts and No. 1 chain tensioner.



c. Remove the No. 2 camshaft.

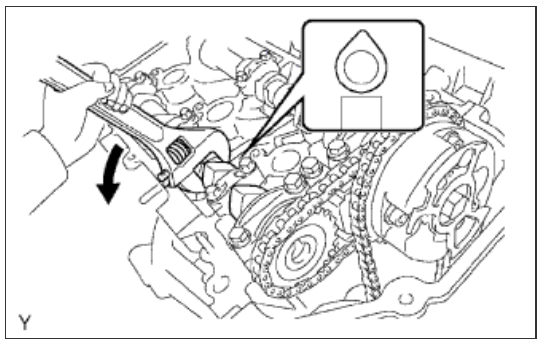
NOTICE:

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being removed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.



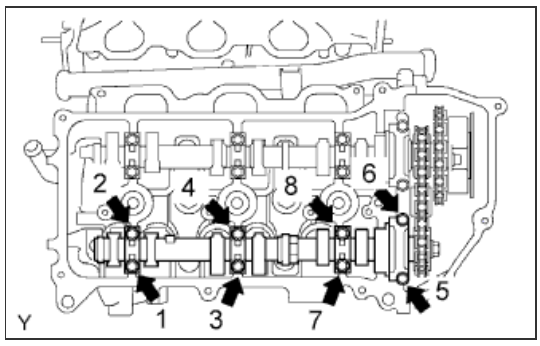
i. While raising the No. 2 chain tensioner, insert a pin of φ1.0 mm (0.0394 in.) into the hole to fix the tensioner in place.

ii. Hold the hexagonal portion of the No. 2 camshaft with a wrench, and remove the camshaft timing sprocket set bolt.



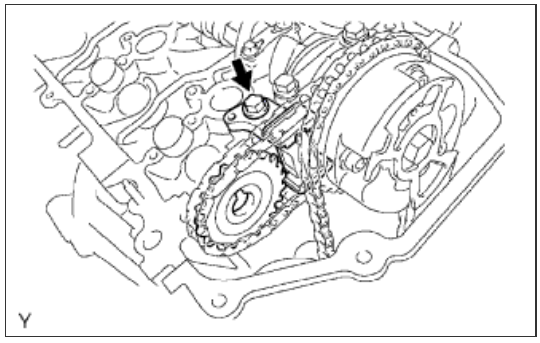
NOTICE:

Be careful not to damage the cylinder head and valve lifter with the wrench.



iii. Separate the camshaft timing sprocket from the No. 2 camshaft.

iv. Rotate the camshaft counterclockwise using the wrench so that the cam lobes of the No. 1 cylinder face upward as shown in the illustration.



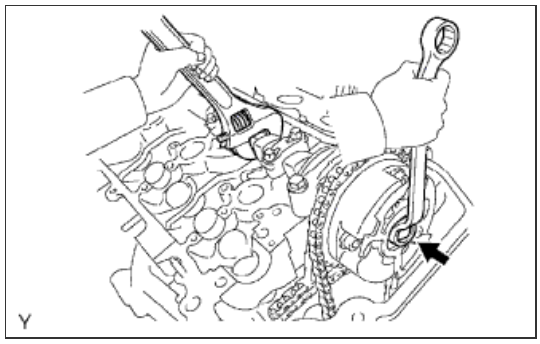
v. Uniformly loosen and remove the 8 bearing cap bolts in the sequence shown in the illustration.

vi. Remove the 4 bearing caps and No. 2 camshaft.

d. Remove the No. 2 chain tensioner.

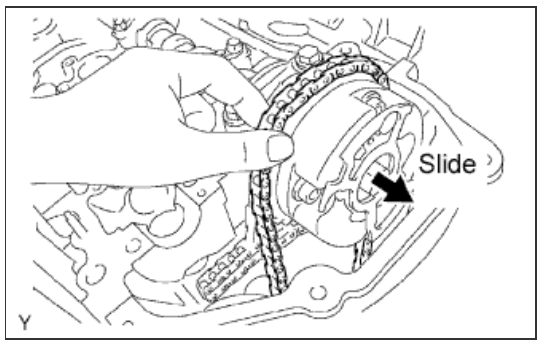
i. Remove the No. 2 chain tensioner bolt, No. 2 chain tensioner and camshaft timing sprocket.

e. Remove the No. 1 camshaft.



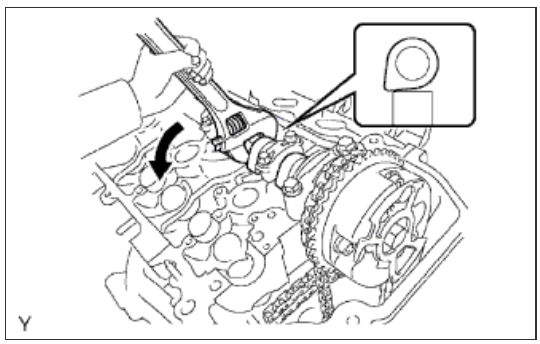
NOTICE:

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being removed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.



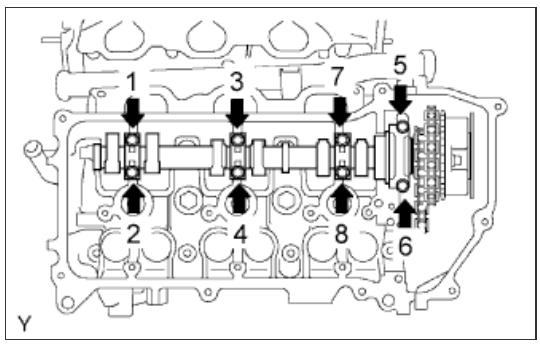
i. Hold the hexagonal portion of the No. 1 camshaft with a wrench, and loosen the camshaft timing gear set bolt.

NOTICE:

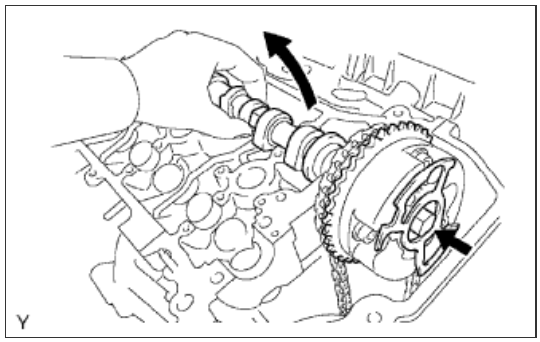


- **Be careful not to damage the cylinder head and valve lifter with the wrench.**
- **Do not disassemble the camshaft timing gear.**

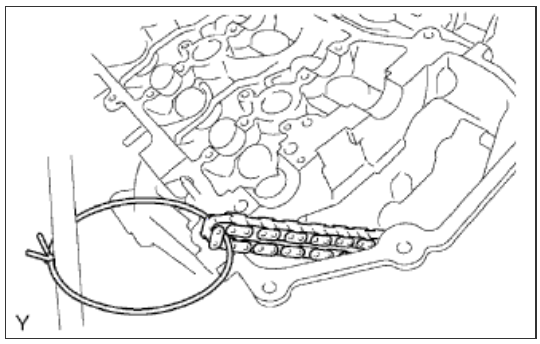
ii. Slide the camshaft timing gear and separate the No. 1 chain from the camshaft timing gear.



iii. Rotate the No. 1 camshaft counterclockwise using a wrench so that the cam lobes of the No. 1 cylinder face downward as shown in the illustration.



iv. Uniformly loosen and remove the 8 bearing cap bolts in the sequence shown in the illustration.

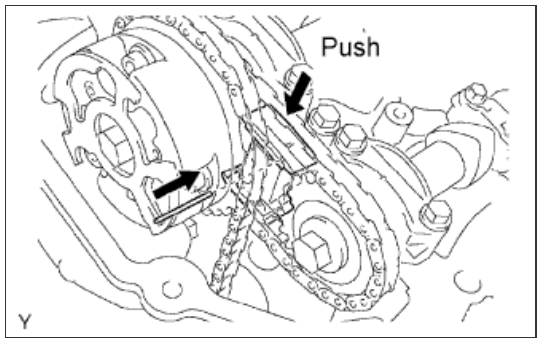


v. Remove the 4 bearing caps.

vi. Remove the camshaft timing gear set bolt with the No. 1 camshaft lifted up, and then remove the No. 1 camshaft and camshaft timing gear with the No. 2 chain.

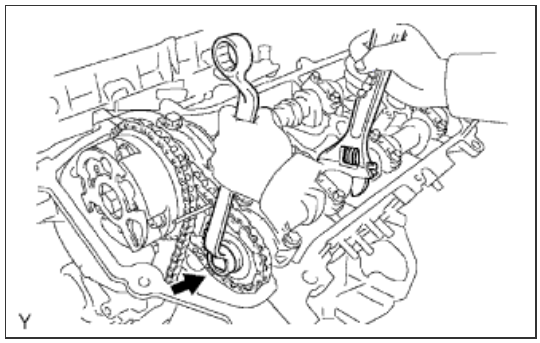
vii. Tie the No. 1 chain with a string as shown in the illustration.

NOTICE:



Be careful not to drop anything inside the timing chain cover.

f. Remove the No. 4 camshaft.

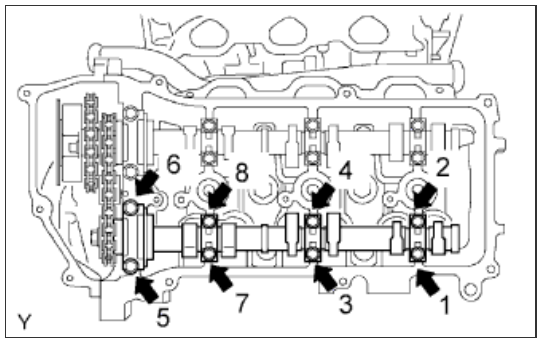


NOTICE:

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being removed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

i. While pushing down the No. 3 chain tensioner, insert a pin of φ1.0 mm (0.0394 in.) into the hole to fix the tensioner in place.

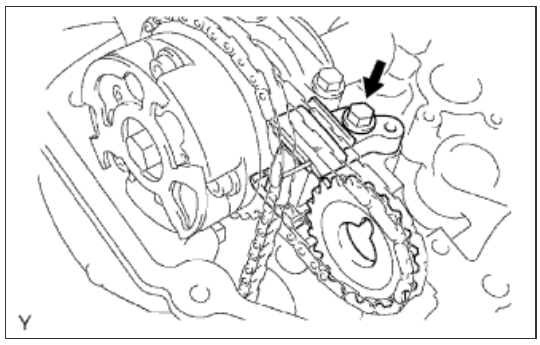
ii. Hold the hexagonal portion of the No. 4 camshaft with a wrench, and remove the camshaft timing sprocket set bolt.



NOTICE:

Be careful not to damage the cylinder head and valve lifter with the wrench.

iii. Separate the camshaft timing sprocket from the No. 4 camshaft.

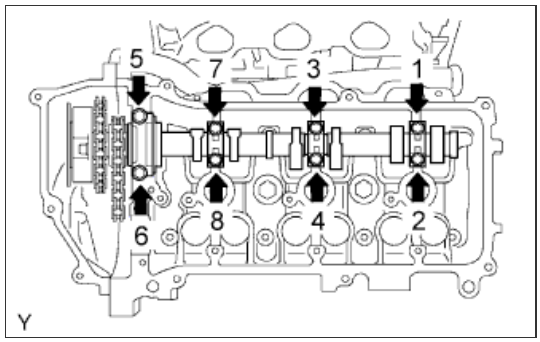


iv. Uniformly loosen and remove the 8 bearing cap bolts in the sequence shown in the illustration.

v. Remove the 4 bearing caps and No. 4 camshaft.

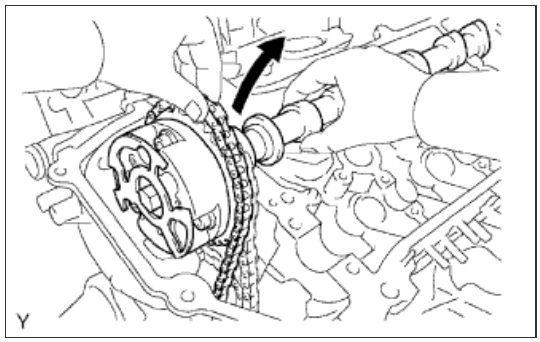
g. Remove the No. 3 chain tensioner.

i. Remove the No. 3 chain tensioner bolt, No. 3 chain tensioner and camshaft timing sprocket.



h. Remove the No. 3 camshaft.

NOTICE:

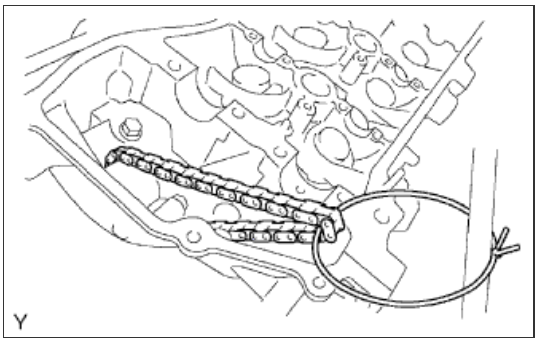


As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being removed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

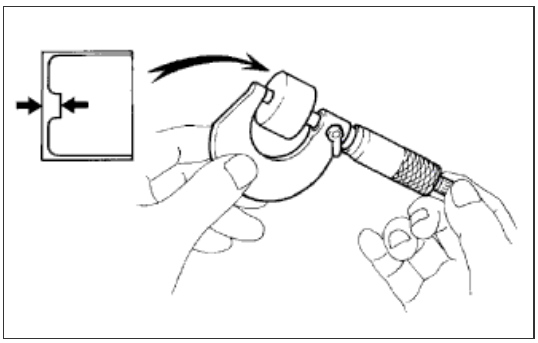
i. Using several steps, loosen and remove the 8 bearing cap bolts uniformly in the sequence shown in the illustration.

ii. Remove the 4 bearing caps.

iii. Hold the No. 1 chain, and remove the No. 3 camshaft with camshaft timing gear and No. 2 chain.



iv. Tie the No. 1 chain with a string as shown in the illustration.



NOTICE:

Be careful not to drop anything inside the timing chain cover.

i. Remove the 24 valve lifters from the cylinder head LH and RH.

j. etermine the size of the valve lifter to be installed according to the following formulas or charts.

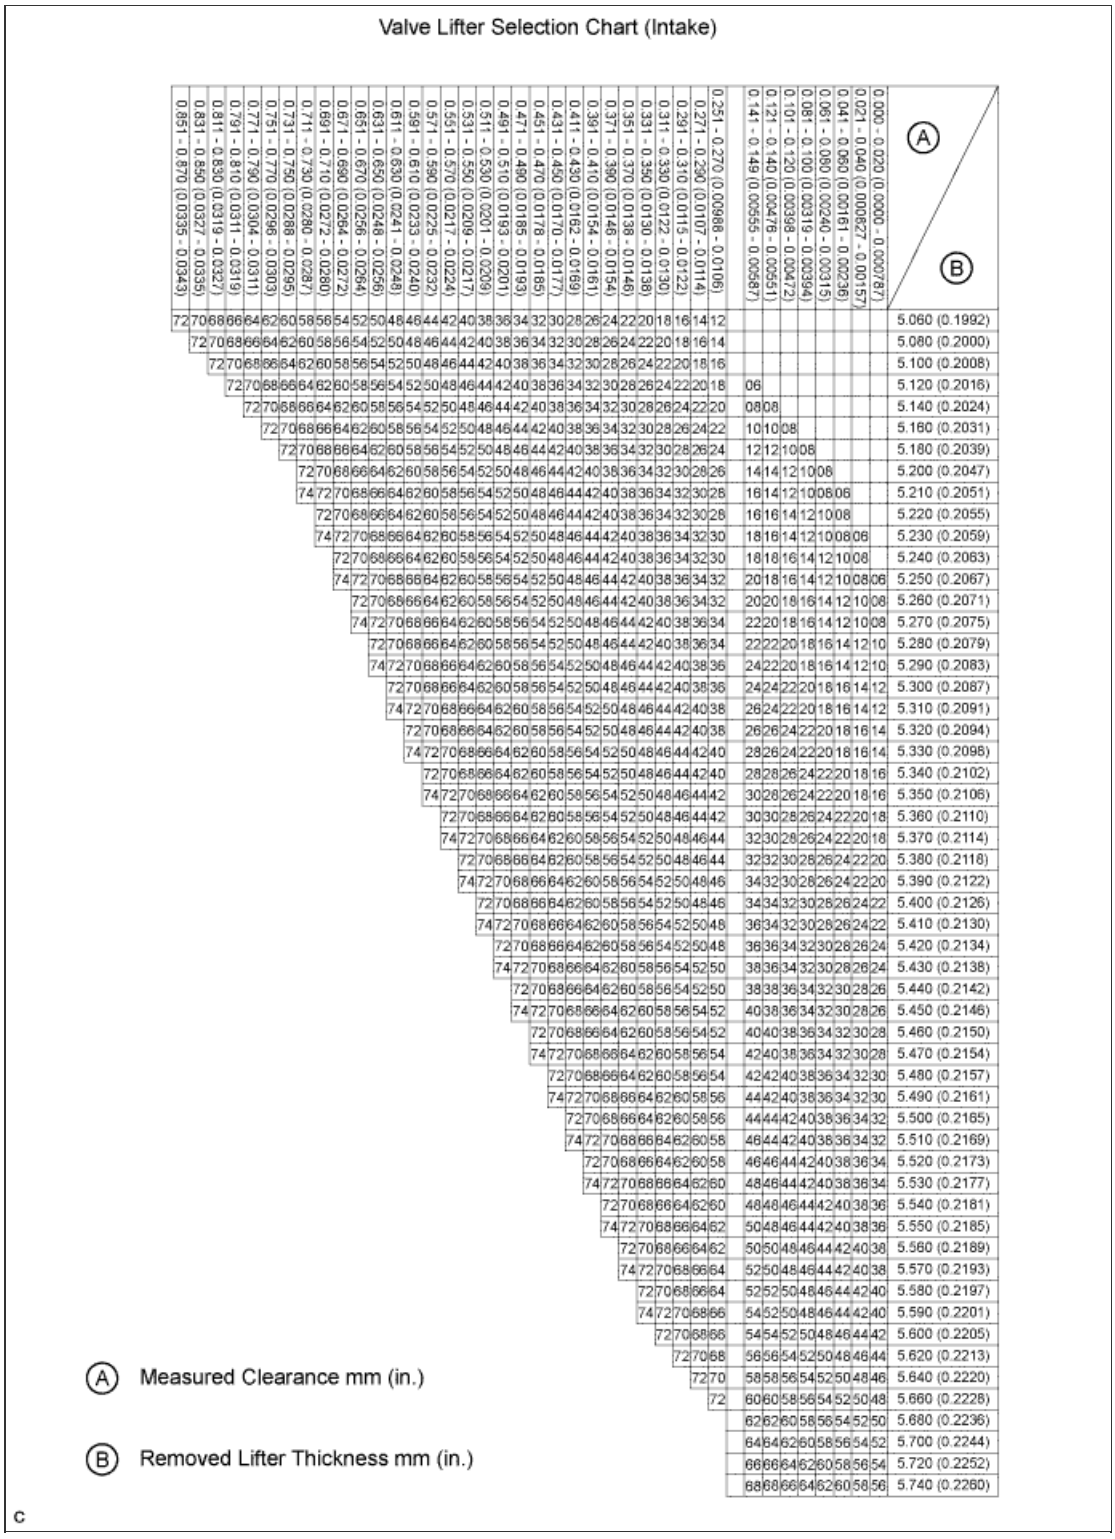
i. Using a micrometer, measure the thickness of the removed lifter.

ii. Calculate the thickness of a new lifter so that the valve clearance comes within the specified value.

T:
Thickness of removed lifter

A:
Measured valve clearance

N:
Thickness of new lifter



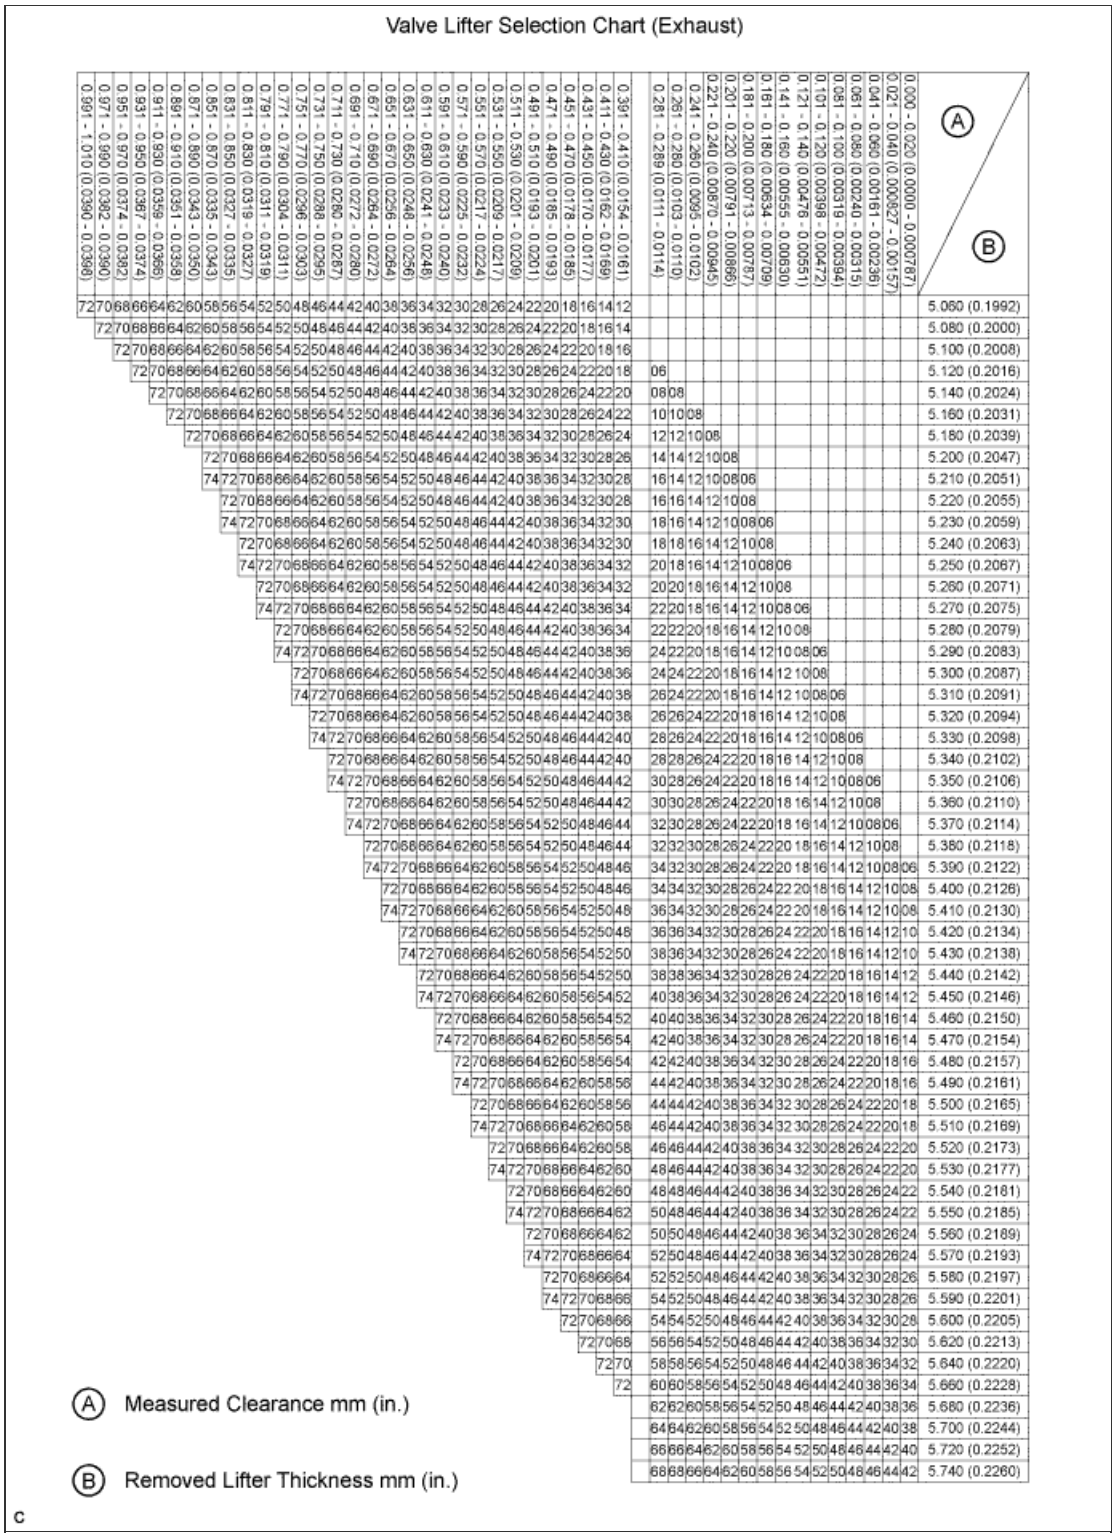
Intake:
N = T + (A - 0.20 mm (0.00787 in.))

Exhaust:
N = T + (A - 0.34 mm (0.0131 in.))

iii. Select a new lifter with a thickness as close as possible to the calculated value.

HINT:

Lifters are available in 35 sizes in increments of 0.020 mm (0.000787 in.), from 5.060 mm (0.1992 in.) to 5.740 mm (0.2260 in.).



Intake valve clearance (Cold):
0.15 to 0.25 mm (0.00591 to 0.00984 in.)
EXAMPLE:
The 5.250 mm (0.2067 in.) lifter is installed, and the measured clearance is 0.400 mm (0.0157 in.). Replace the 5.250 mm (0.2067 in.) lifter with a No. 46 lifter.

New Lifter Thickness:

Lifter No.	Thickness	Lifter No.	Thickness	Lifter No.	Thickness
06	5.060 mm (0.1992 in.)	30	5.300 mm (0.2087 in.)	54	5.540 mm (0.2181 in.)
08	5.080 mm (0.2000 in.)	32	5.320 mm (0.2094 in.)	56	5.560 mm (0.2189 in.)
10	5.100 mm (0.2008 in.)	34	5.340 mm (0.2102 in.)	58	5.580 mm (0.2197 in.)
	5.120 mm		5.360 mm		5.600 mm

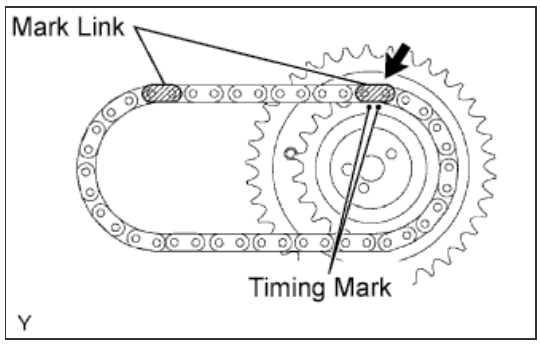
12	(0.2016 in.)	36	(0.2110 in.)	60	(0.2205 in.)
14	5.140 mm (0.2024 in.)	38	5.380 mm (0.2118 in.)	62	5.620 mm (0.2213 in.)
16	5.160 mm (0.2031 in.)	40	5.400 mm (0.2126 in.)	64	5.640 mm (0.2220 in.)
18	5.180 mm (0.2039 in.)	42	5.420 mm (0.2134 in.)	66	5.660 mm (0.2228 in.)
20	5.200 mm (0.2047 in.)	44	5.440 mm (0.2142 in.)	68	5.680 mm (0.2236 in.)
22	5.220 mm (0.2055 in.)	46	5.460 mm (0.2150 in.)	70	5.700 mm (0.2244 in.)
24	5.240 mm (0.2063 in.)	48	5.480 mm (0.2157 in.)	72	5.720 mm (0.2252 in.)
26	5.260 mm (0.2071 in.)	50	5.500 mm (0.2165 in.)	74	5.740 mm (0.2260 in.)
28	5.280 mm (0.2079 in.)	52	5.520 mm (0.2173 in.)	-	-

Exhaust valve clearance (Cold):
0.29 to 0.39 mm (0.0114 to 0.0154 in.)
EXAMPLE:
The 5.340 mm (0.210 in.) lifter is installed, and the measured clearance is 0.480 mm (0.0189 in.). Replace the 5.340 mm (0.210 in.) lifter with a No. 48 lifter.

New Lifter Thickness:

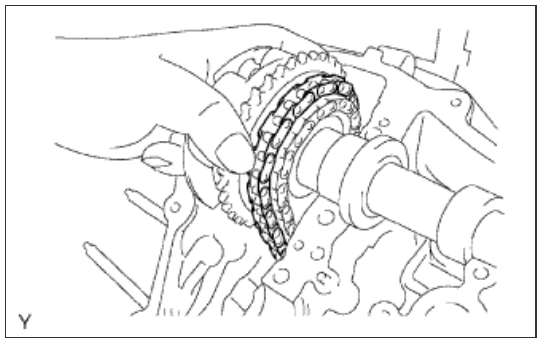
Lifter No.	Thickness	Lifter No.	Thickness	Lifter No.	Thickness
06	5.060 mm (0.1992 in.)	30	5.300 mm (0.2087 in.)	54	5.540 mm (0.2181 in.)
08	5.080 mm (0.2000 in.)	32	5.320 mm (0.2094 in.)	56	5.560 mm (0.2189 in.)
10	5.100 mm (0.2008 in.)	34	5.340 mm (0.2102 in.)	58	5.580 mm (0.2197 in.)
	5.120 mm		5.360 mm		5.600 mm

12	(0.2016 in.)	36	(0.2110 in.)	60	(0.2205 in.)
14	5.140 mm (0.2024 in.)	38	5.380 mm (0.2118 in.)	62	5.620 mm (0.2213 in.)
16	5.160 mm (0.2031 in.)	40	5.400 mm (0.2126 in.)	64	5.640 mm (0.2220 in.)
18	5.180 mm (0.2039 in.)	42	5.420 mm (0.2134 in.)	66	5.660 mm (0.2228 in.)
20	5.200 mm (0.2047 in.)	44	5.440 mm (0.2142 in.)	68	5.680 mm (0.2236 in.)
22	5.220 mm (0.2051 in.)	46	5.460 mm (0.2150 in.)	70	5.700 mm (0.2244 in.)
24	5.240 mm (0.2063 in.)	48	5.480 mm (0.2157 in.)	72	5.720 mm (0.2252 in.)
26	5.260 mm (0.2071 in.)	50	5.500 mm (0.2165 in.)	74	5.740 mm (0.2260 in.)
28	5.280 mm (0.2079 in.)	52	5.520 mm (0.2173 in.)	-	-



k. Install the No. 3 camshaft.

NOTICE:

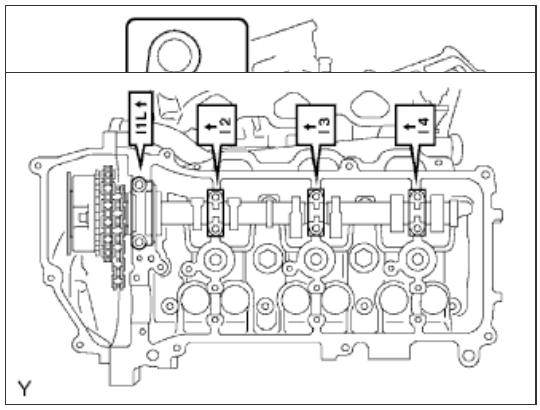


As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

i. Align the mark link (yellow) with the timing mark (2-dot mark) of the camshaft timing gear shown in the illustration.

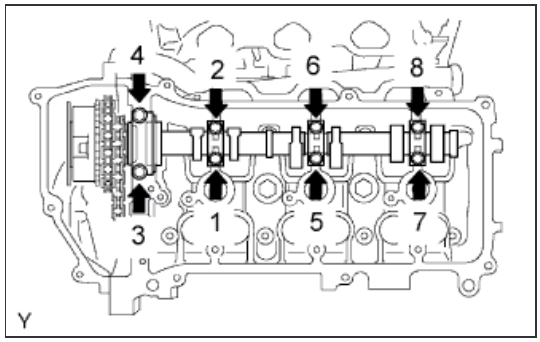
ii. Apply a light coat of engine oil to the thrust portions and journals of the No. 3 camshaft.

iii. Temporarily put the No. 1 chain on the No. 2 chain of the camshaft timing gear.



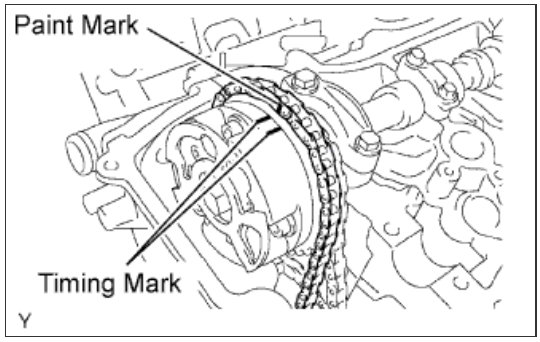
iv. Set the No. 3 camshaft onto the cylinder head LH with the cam lobes of the No. 2 cylinder facing downward as shown in the illustration.

v. Apply a light coat of engine oil to the 4 bearing caps.



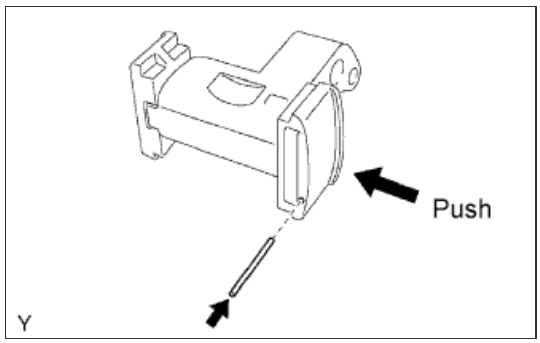
vi. Set the 4 bearing caps in their proper locations.

vii. Apply a light coat of engine oil to the threads of the 8 bearing cap bolts.



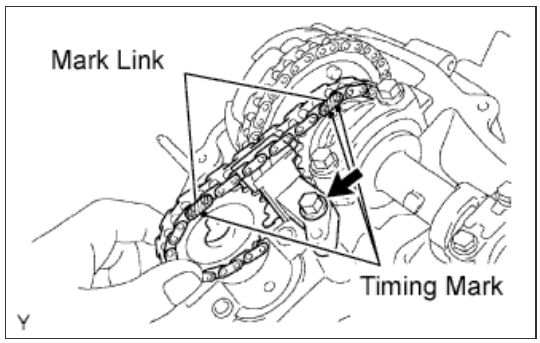
viii. Uniformly install the 8 bearing cap bolts in several steps in the order shown in the illustration.

Torque:
for 10 mm head bolt:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }
for 12 mm head bolt:
24 N*m{ 245 kgf*cm , 18 ft.*lbf }



ix. Set the paint mark of the No. 1 chain between the timing marks of the camshaft timing gear.

l. Install the No. 3 chain tensioner.



i. While pushing in the tensioner, insert a pin of φ1.0 mm (0.0394 in.) into the hole to fix the tensioner in place.

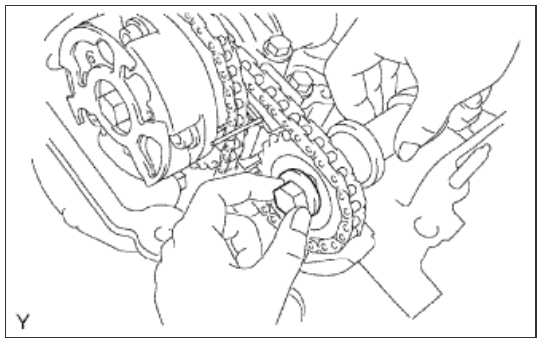
ii. Temporarily install the camshaft timing sprocket and No. 3 chain tensioner with the bolt and align the mark links (yellow) with the timing marks (1-dot mark and 2-dot mark) of the camshaft timing gear and sprocket.

iii. Tighten the No. 3 chain tensioner bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

m. Install the No. 4 camshaft.

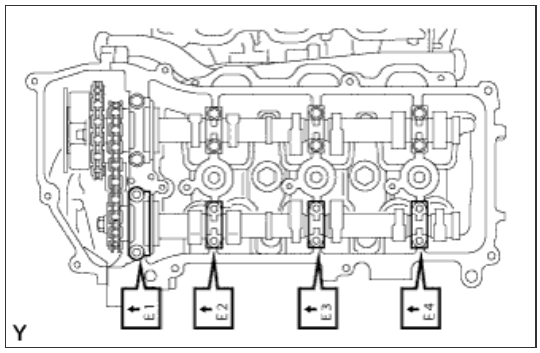
NOTICE:



As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

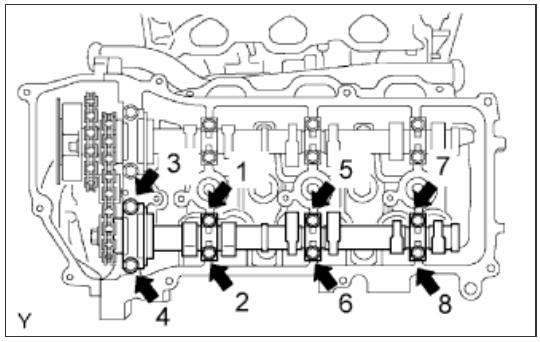
i. Apply a light coat of engine oil to the thrust portions and journals of the No. 4 camshaft.

ii. Apply a light coat of engine oil to the threads and under the head of the camshaft timing sprocket set bolt.



iii. Align the knock pin hole on the camshaft timing sprocket with the knock pin of the No. 4 camshaft, and insert the No. 4 camshaft into the camshaft timing sprocket.

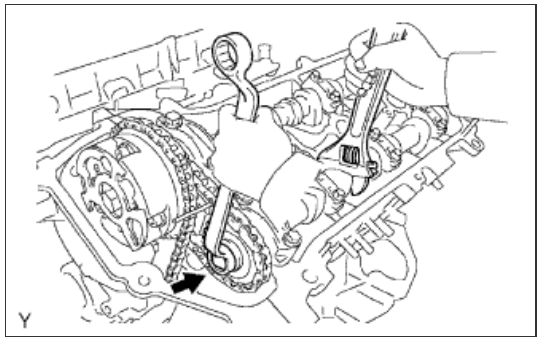
iv. Temporarily install the camshaft timing sprocket set bolt.



v. Set the 4 bearing caps in their proper locations.

vi. Apply a light coat of engine oil to the threads and under the heads of the 8 bearing cap bolts.

vii. Uniformly install the 8 bearing cap bolts in several steps in the order shown in the illustration.

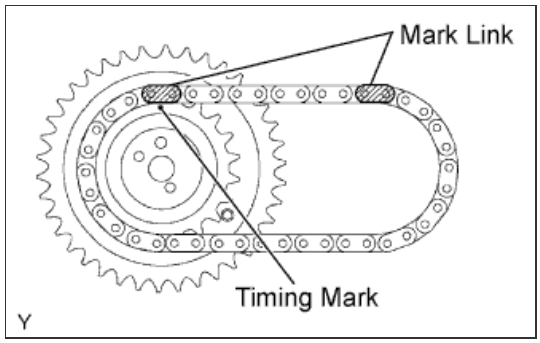


Torque:
for 10 mm head bolt:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }
for 12 mm head bolt:
24 N*m{ 245 kgf*cm , 18 ft.*lbf }

viii. Hold the hexagonal portion of the No. 4 camshaft with a wrench, and tighten the camshaft timing sprocket set bolt.

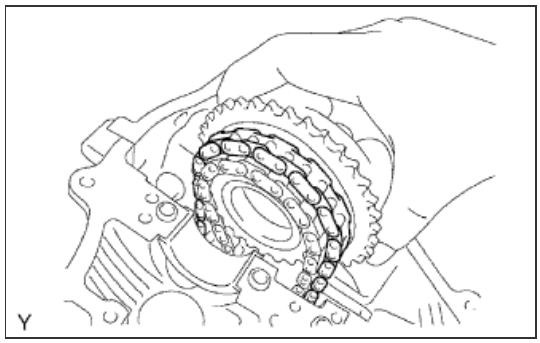
Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

ix. Remove the pin from the No. 3 chain tensioner.



n. Install the No. 1 camshaft.

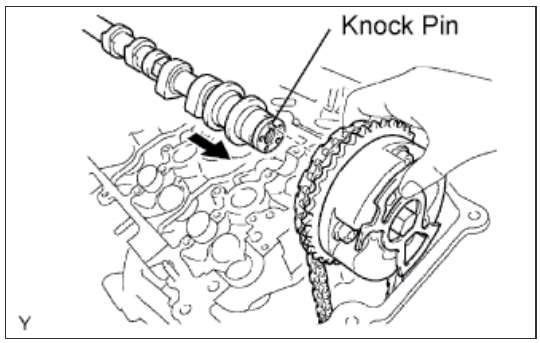
NOTICE:



As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

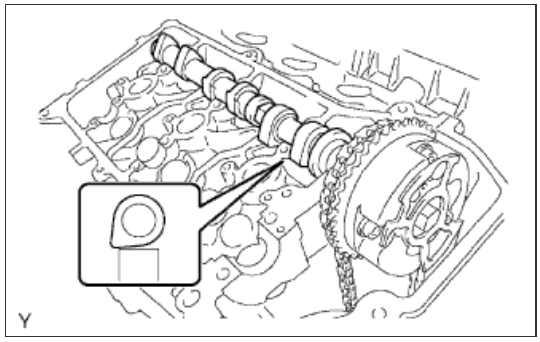
i. Align the mark link (yellow) with the timing mark (1-dot mark) of the camshaft timing gear as shown in the illustration.

ii. Apply a light amount of engine oil to the thrust portions and journals of the camshaft.



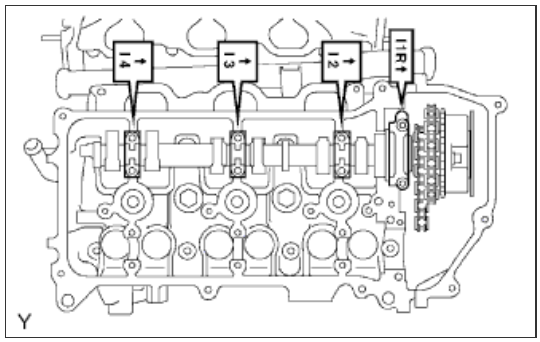
iii. Temporarily put the No. 1 chain on the No. 2 chain of the camshaft timing gear.

iv. Align the knock pin hole of the camshaft timing gear with the knock pin of the No. 1 camshaft, and insert the No. 1 camshaft into the camshaft timing gear.



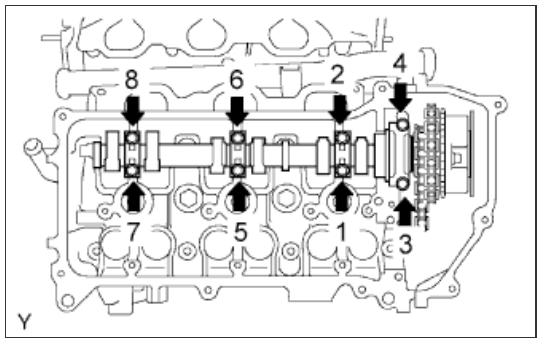
v. Apply a light coat of engine oil to the threads and under the head of the camshaft timing gear set bolt.

vi. Temporarily install the camshaft timing gear set bolt.



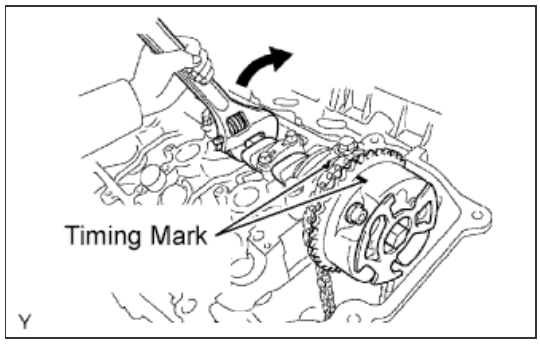
vii. Set the No. 1 camshaft onto the cylinder head RH with the cam lobes of the No. 1 cylinder facing downward as shown in the illustration.

viii. Apply a light coat of engine oil to the 4 bearing caps.

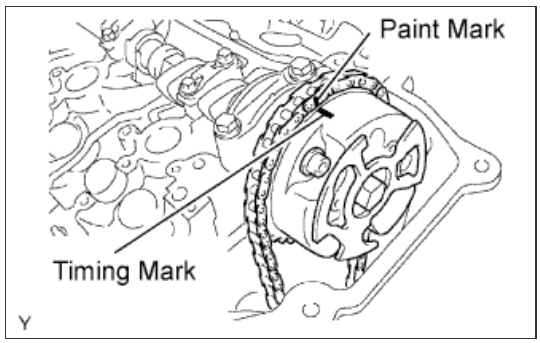


ix. Set the 4 bearing caps in their proper locations.

x. Apply a light coat of engine oil to the threads and under the heads of the 8 bearing cap bolts.

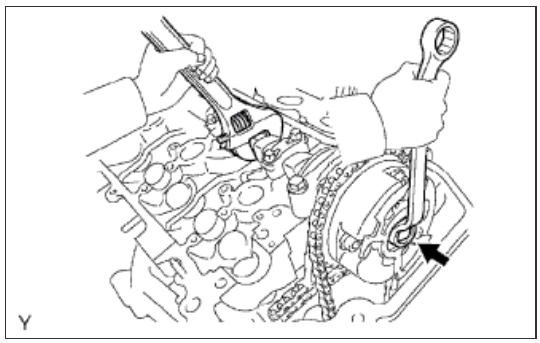


xi. Uniformly install the 8 bearing cap bolts in several steps in the order shown in the illustration.

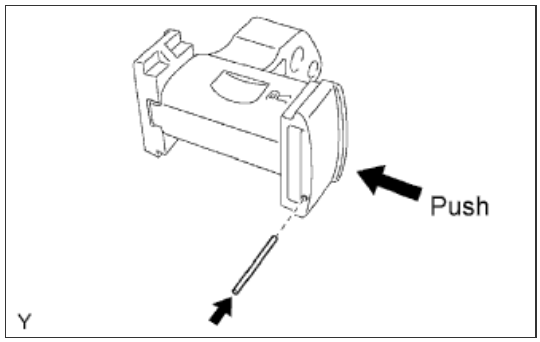


Torque:
for 10 mm head bolt:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }
for 12 mm head bolt:
24 N*m{ 245 kgf*cm , 18 ft.*lbf }

xii. Rotate the No. 1 camshaft clockwise using the hexagonal portion of the No. 1 camshaft so that the timing mark of the camshaft timing gear is aligned with the timing mark of the camshaft bearing cap.



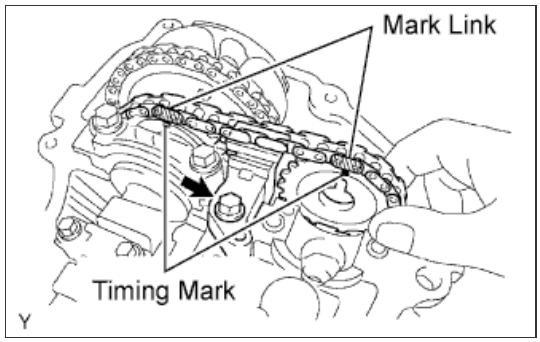
xiii. Align the paint mark of the No. 1 chain with the timing mark of the camshaft timing gear.



xiv. Hold the hexagonal portion of the No. 1 camshaft with a wrench, and tighten the camshaft timing gear set bolt.

Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

o. Install the No. 2 chain tensioner.



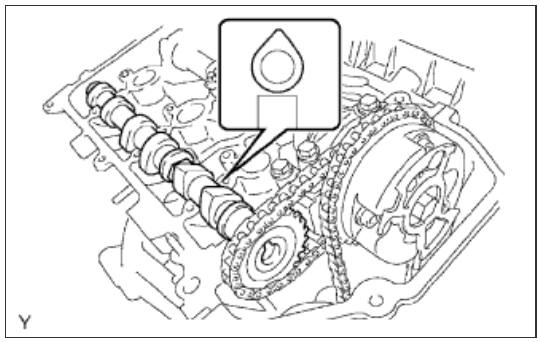
i. While pushing in the tensioner, insert a pin of φ1.0 mm (0.0394 in.) into the hole to fix the tensioner in place.

ii. Temporarily install the camshaft timing sprocket and No. 2 chain tensioner with the bolt and align the mark links (yellow) with the timing marks (1-dot mark and 2-dot mark) of the camshaft timing gear and sprocket.

iii. Tighten the No. 2 chain tensioner bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

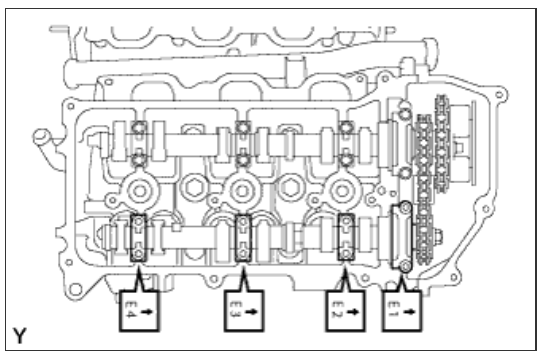
p. Install the No. 2 camshaft.



NOTICE:

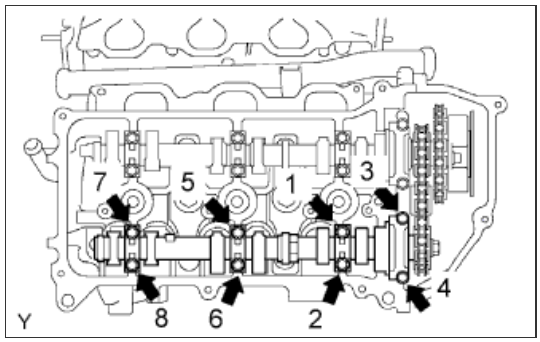
As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

i. Apply a light coat of engine oil to the thrust portions and journals of the No. 2 camshaft.



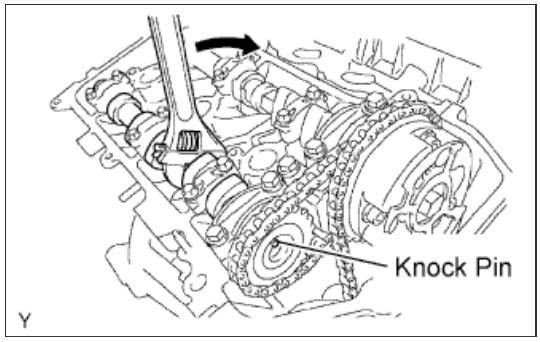
ii. Set the No. 2 camshaft onto the cylinder head RH with the cam lobes of the No. 1 cylinder facing upward as shown in the illustration.

iii. Apply a light coat of engine oil to the 4 bearing caps.



iv. Set the 4 bearing caps in their proper locations.

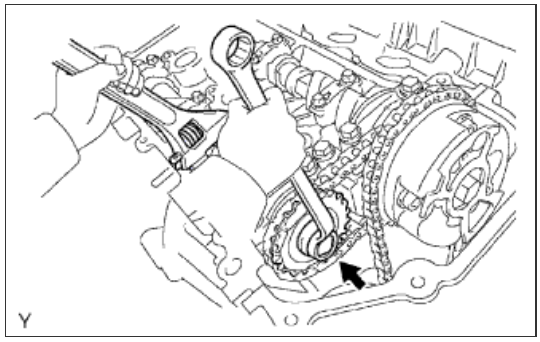
v. Apply a light coat of engine oil to the threads and under the heads of the 8 bearing cap bolts.



vi. Uniformly install the 8 bearing cap bolts in several steps in the order shown in the illustration.

Torque:
for 10 mm head bolt:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }
for 12 mm head bolt:
24 N*m{ 245 kgf*cm , 18 ft.*lbf }

vii. Rotate the No. 2 camshaft clockwise using a wrench so that the knock pin of the No. 2 camshaft is aligned with the knock pin hole of the camshaft timing sprocket.



viii. Apply a light coat of engine oil to the threads and under the head of the camshaft timing sprocket set bolt.

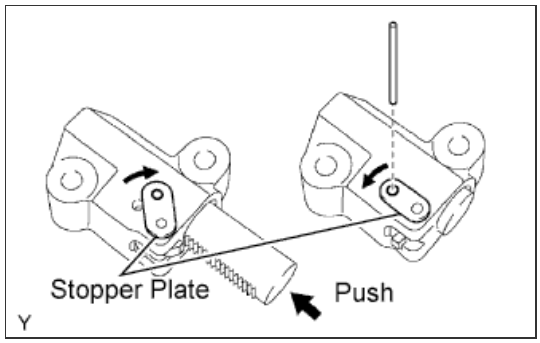
ix. Hold the hexagonal portion of the No. 2 camshaft with a wrench, and install the camshaft timing sprocket set bolt.

Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

x. Remove the pin from the No. 2 chain tensioner.

q. Install the No. 1 chain tensioner.

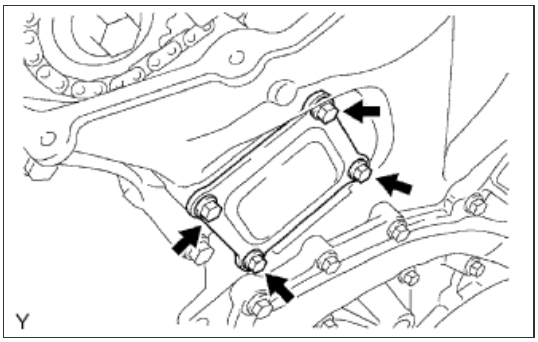
i. While turning the stopper plate of the tensioner clockwise, push in the plunger of the tensioner as shown in the illustration.



ii. While turning the stopper plate of the tensioner counterclockwise, insert a bar of φ3.5 mm (0.138 in.) into the holes on the stopper plate and tensioner to fix the stopper plate in place.

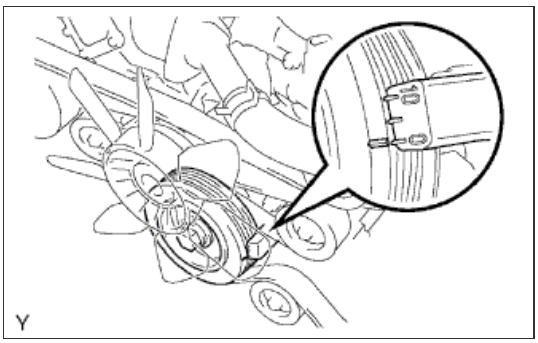
iii. Apply a light coat of engine oil to the threads and under the heads of the 2 No. 1 chain tensioner bolts.

iv. Install the No. 1 chain tensioner with the 2 bolts.

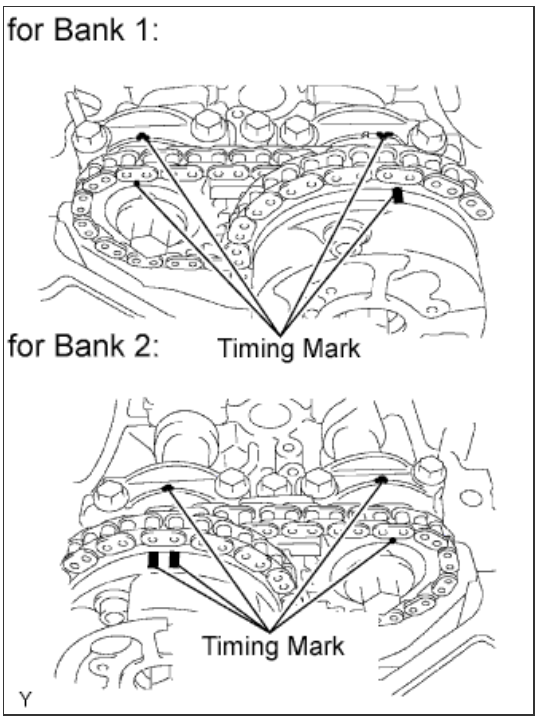


Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

v. Remove the bar from the chain tensioner.



vi. Install a new gasket and the timing chain cover plate with the 4 bolts.



Torque:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

vii. Turn the crankshaft pulley 2 complete revolutions slowly, and align the notch with the timing mark "0" of the timing chain cover.

viii. Check that the timing marks of the camshaft timing gears and sprockets are aligned with the timing marks of the bearing caps as shown in the illustration.

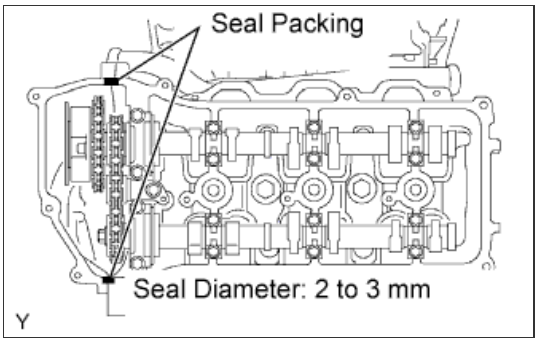
11. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY LH

a. Remove any old packing (FI) material and be careful not to drop any oil on the contact surfaces of the cylinder head, timing chain cover and cylinder head cover.

b. Apply seal packing as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

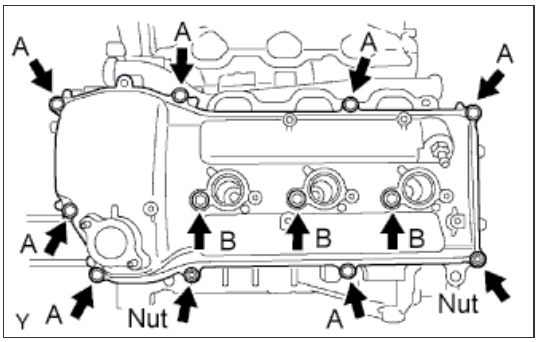
Standard seal diameter:
2 to 3 mm (0.0787 to 0.118 in.)



NOTICE:

- **Remove any oil from the contact surface.**

- **Install the head cover within 3 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**



c. Install a new gasket to the cylinder head cover.

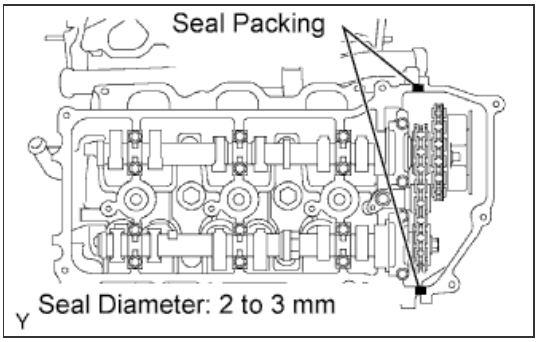
d. Install the seal washers to the bolts.

e. Temporarily install the cylinder head cover with the 10 bolts and 2 nuts. Tighten the bolts and nuts uniformly in several steps.

Torque:
for bolt A:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }
for bolt B and nut:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

12. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY RH

a. Remove any old packing (FI) material and be careful not to drop any oil on the contact surfaces of the cylinder head, timing chain cover and cylinder head cover.



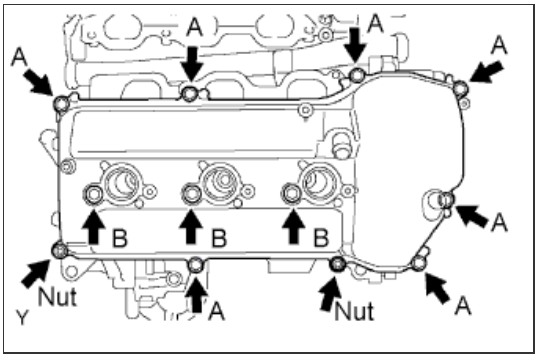
b. Apply seal packing as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
2 to 3 mm (0.0787 to 0.118 in.)

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the head cover within 3 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**



c. Install a new gasket to the cylinder head cover.

d. Install the seal washers to the bolts.

e. Temporarily install the cylinder head cover with the 10 bolts and 2 nuts. Tighten the bolts and nuts uniformly in several steps.

Torque:
for bolt A:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }
for bolt B and nut:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

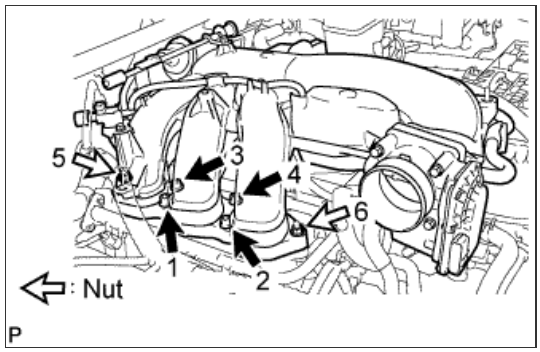
13. INSTALL IGNITION COIL ASSEMBLY

a. Install the 6 ignition coils with the 6 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. Connect the 6 connectors to the 6 ignition coils.

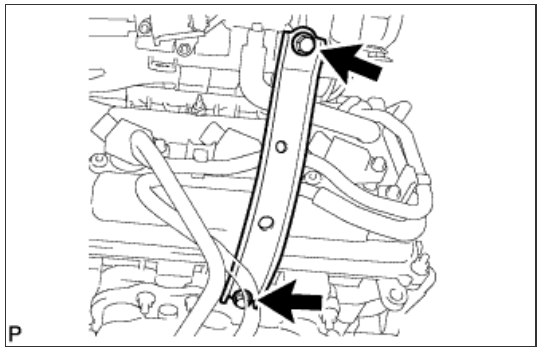
14. INSTALL INTAKE AIR SURGE TANK



NOTICE:
Do not apply oil to the bolts and nuts listed below: :

il Application rohibited Bolt/Nut
Bolt for surge tank and intake manifold
Nut for surge tank and intake manifold

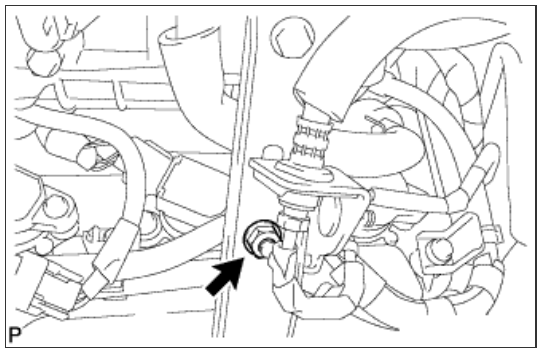
a. Install a new gasket to the intake air surge tank.



b. Using an 8 mm hexagon wrench, install the intake air surge tank with the 4 bolts and 2 nuts in the order shown in the illustration.

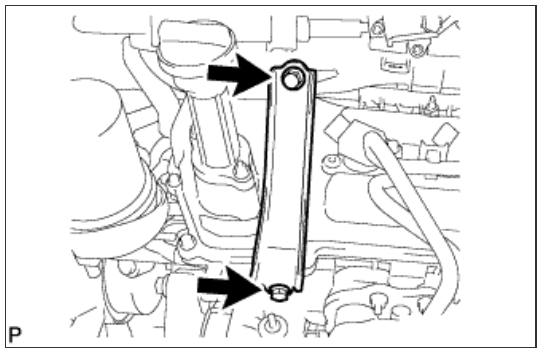
Torque:
28 N*m{ 286 kgf*cm , 21 ft.*lbf }

c. Install the No. 2 surge tank stay with the 2 bolts.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

d. for aual Transmission:

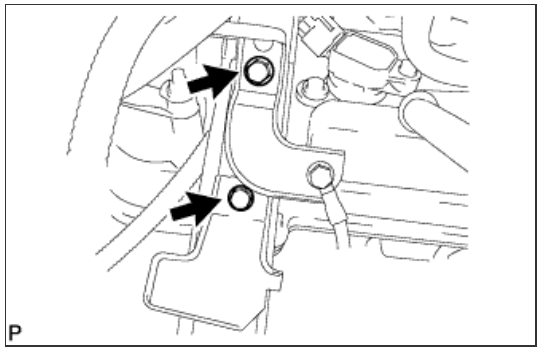


i. Install the bracket to the No. 2 surge tank stay with the nut.

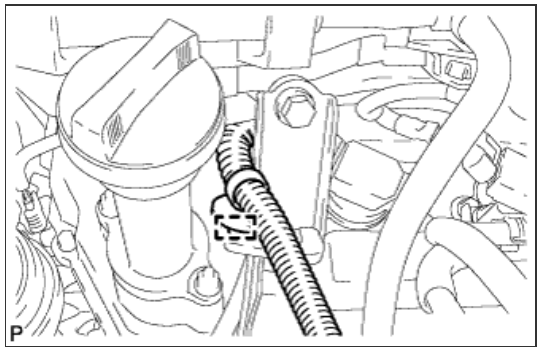
Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

e. Install the No. 1 surge tank stay with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



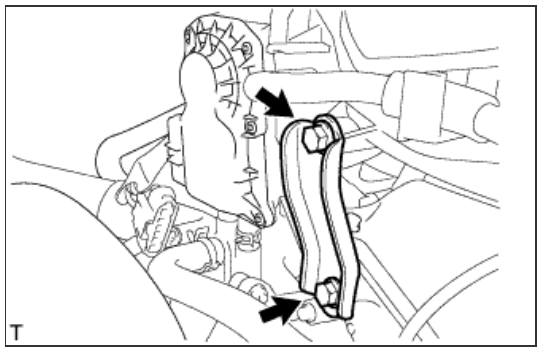
f. Install the oil baffle plate with the bolt.



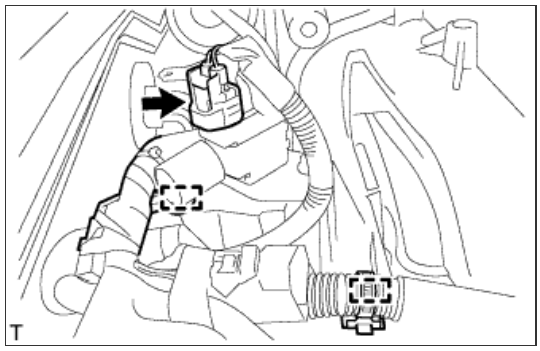
Torque:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

g. Install the bracket to the No. 1 surge tank stay with the bolt.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



h. Attach the wire harness clamp.

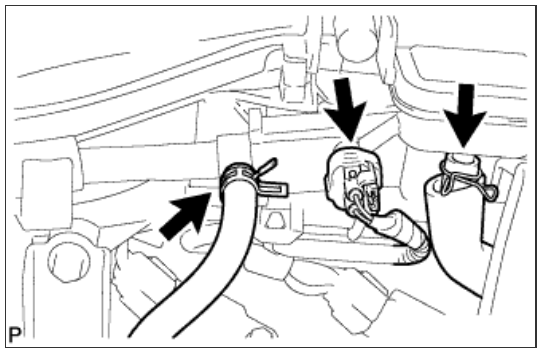


i. Install the throttle body bracket with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

j. Connect the vacuum switching valve (for ACIS) connector.

k. Attach the 2 wire harness clamps.



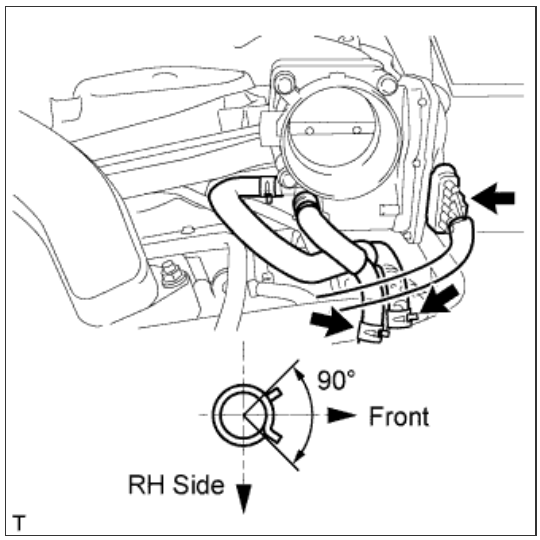
l. Connect the No. 1 ventilation hose.

m. Connect the purge S connector.

n. Connect the purge line hose.

HINT:

Connect the hose so that the direction of the hose clamp is as indicated in the illustration.



o. Connect the No. 4 and No. 5 water by-pass hose.

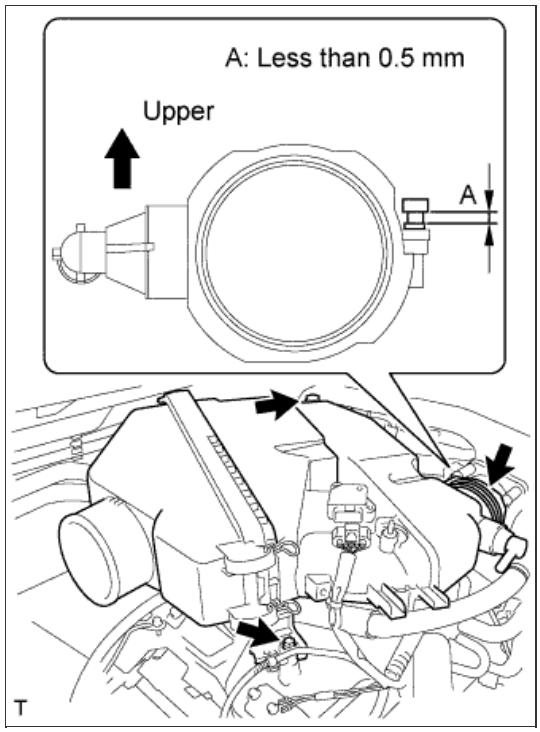
HINT:

Connect the hoses so that the direction of the hose clamps is as shown in the illustration.

p. Connect the throttle body connector.

15. INSTALL AIR CLEANER ASSEMBLY

a. Install the air cleaner assembly with the 2 bolts.

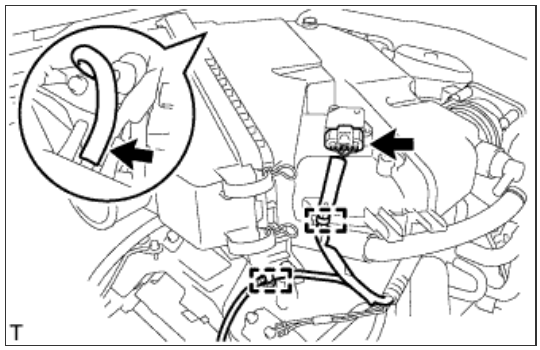


Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

b. Tighten the hose clamp.

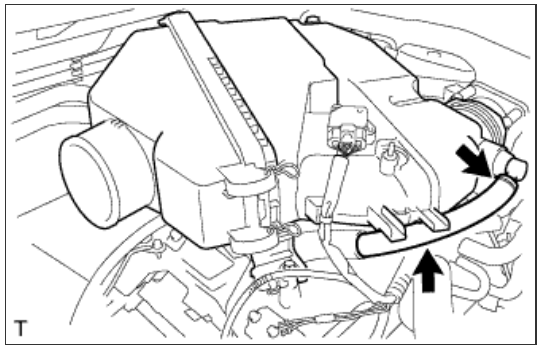
HINT:

Tighten the hose clamp until it reaches the specified protrusion height labeled A shown in the illustration.



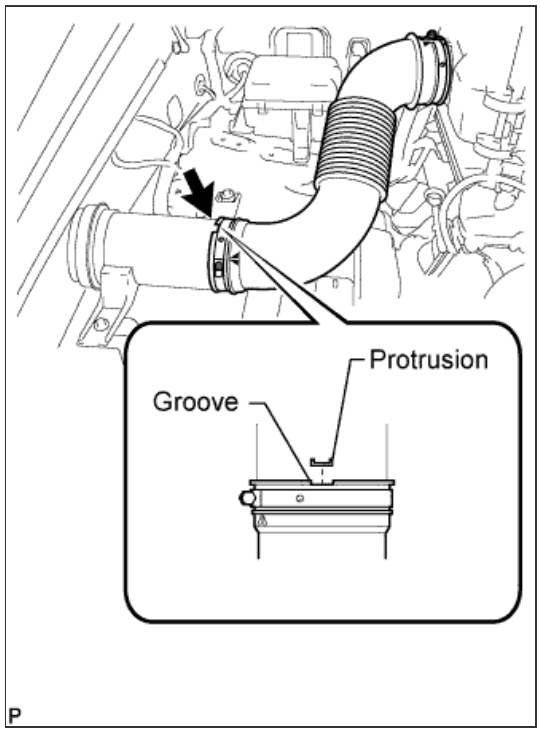
Standard protrusion height:
Less than 0.5 mm (0.0197 in.)

c. Connect the A meter connector.



d. Attach the 2 wire harness clamps.

e. Connect the vacuum hose.

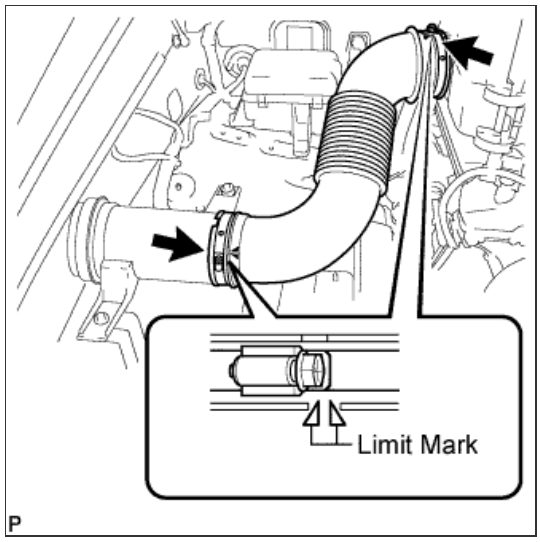


f. Attach the hose clamp.

g. Connect the No. 2 ventilation hose.

16. CONNECT NO. 2 AIR CLEANER HOSE

a. Align the protrusion of the pre-cleaner with the groove of the No. 2 air cleaner hose as shown in the illustration.



b. Tighten the 2 hose clamps.

Torque:
4.0 N*m{ 41 kgf*cm , 35 in.*lbf }

HINT:

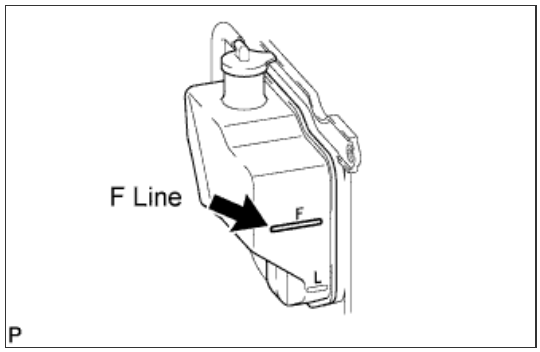
Tighten the clamp until the end of the clamp band is within both limit marks.

17. ADD ENGINE COOLANT

a. Add engine coolant.

Standard Capacity:

Item		Specified condition
for Automatic transmission	w/o Rear Heater	11.2 liters (11.8 US qts, 9.9 Imp. qts)
	w/ Rear Heater	14.4 liters (15.2 US qts, 12.7 Imp. qts)
for aual transmission	w/o Rear Heater	12.0 liters (12.7 US qts, 10.6 Imp. qts)
	w/ Rear Heater	14.6 liters (15.4 US qts, 12.8 Imp. qts)



NOTICE:

o not substitute plain water for engine coolant.

HINT:

T TA vehicles are filled with T TA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use T TA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the reservoir cap.

d. ress the No. 1 and No. 2 radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Set the air conditioning as follows while warming up the engine.

Item	Condition
Fan speed	Any setting except off
Temperature	Toward WAR
Air conditioning switch	ff

g. Start the engine and warm it up until the thermostat opens.

HINT:

The thermostat opening timing can be confirmed by pressing the No. 2 radiator hose by hand, and checking when the engine coolant starts to flow inside the hose.

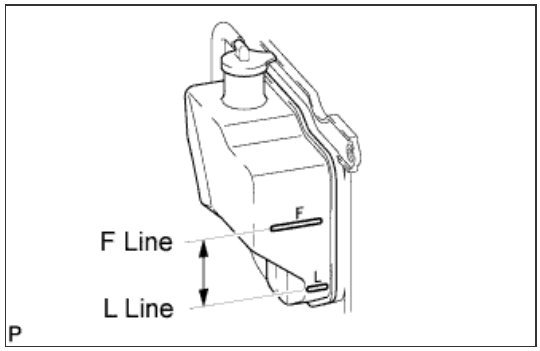
h. aintain the engine speed at 2000 to 2500 rpm.

NOTICE:

- **Make sure that the radiator reservoir still has some coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**
- **Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the F line.**
- **Run the engine at 2000 rpm until the coolant level has stabilized.**

i. ress the No. 1 and No. 2 radiator hoses several times by hand to bleed air.

CAUTION:



- **Wear protective gloves. Heat areas on the parts may injure your hands.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the fan.**

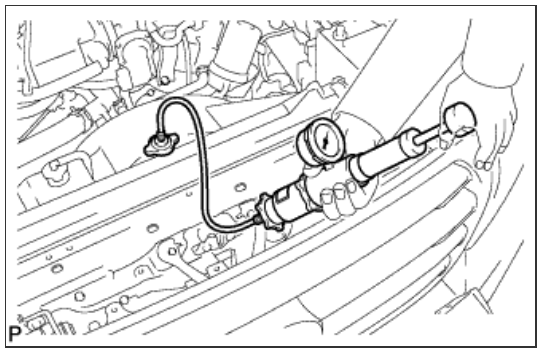
j. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

o not remove the radiator cap while the engine and radiator are still hot. ressurized, hot engine coolant and steam may be released and cause serious burns.

k. Check that the coolant level is between the F and L lines.
If the coolant level is below the L line, repeat all of the procedures above.
If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.

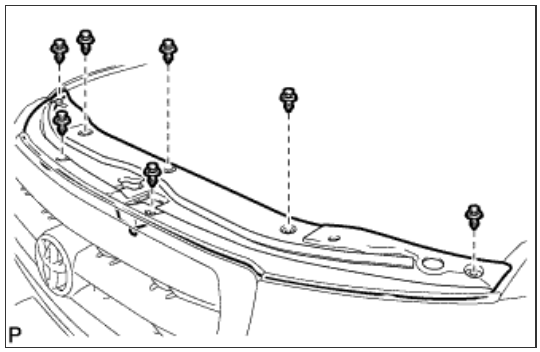
18. INSPECT FOR COOLANT LEAK



CAUTION:

o not remove the radiator cap while the engine and radiator are still hot. ressurized, hot engine coolant and steam may be released and cause serious burns.

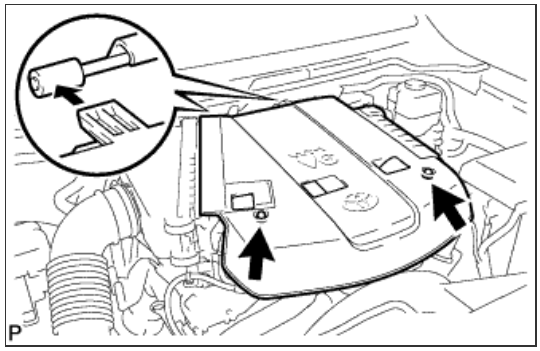
a. Fill the radiator with coolant and attach a radiator cap tester.



b. Warm up the engine.

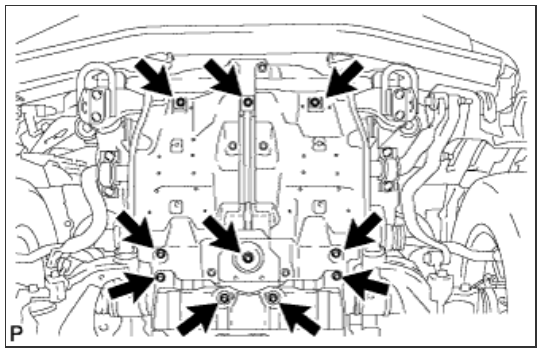
c. Using the radiator cap tester, increase the pressure inside the radiator to 123 k a(1.3 kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.

19. INSTALL UPPER RADIATOR SUPPORT SEAL



a. Install the radiator support seal with the 7 clips.

20. INSTALL V-BANK COVER



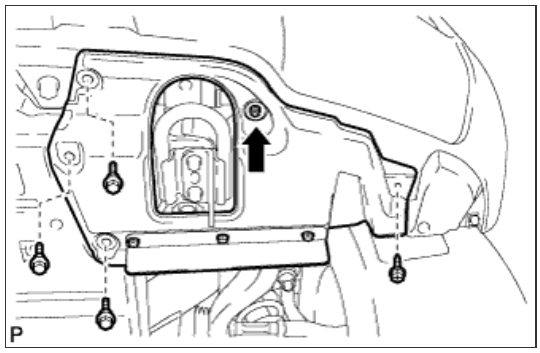
a. Install the -bank cover with the 2 cap nuts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

21. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the under cover with the 10 bolts.

22. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH



HINT:

Use the same procedures described for the LH side.

23. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. ush in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the 3 bolts and screw.

24. INSPECT IGNITION TIMING

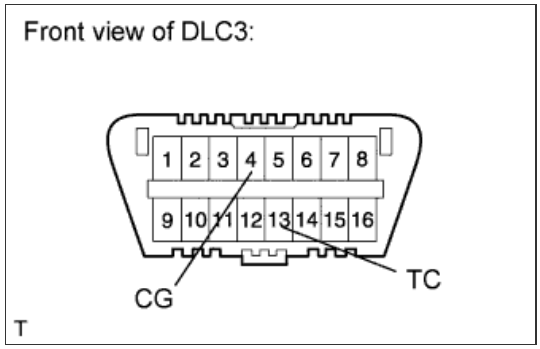
NOTICE:

- **Turn all electrical systems off.**
- **Perform the inspection when the cooling fan motor is turned off.**

a. Warm up the engine.

b. When using the intelligent tester:

i. Connect the intelligent tester to the LC3



ii. nter the following menus: owertrain / ngine and Ct / ta List / All ta / IGN Advance.

iii. Inspect the ignition timing during idling.

Standard ignition timing:
8 to 12° BTDC @ idling (transmission in neutral position and A/C switch off)

iv. Check that the ignition timing advances immediately when the engine speed is increased.

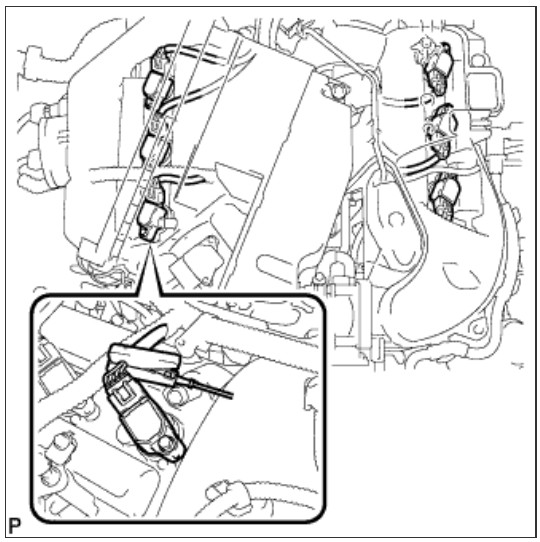
c. When not using the intelligent tester:

i. Using SST, connect terminals 13 (TC) and 4 (C) of the LC3

SST
09843-18040

NOTICE:

Be sure not to improperly connect the terminals. This may damage the engine.



ii. Remove the air cleaner cap.

iii. ull out the wire harness shown in the illustration.

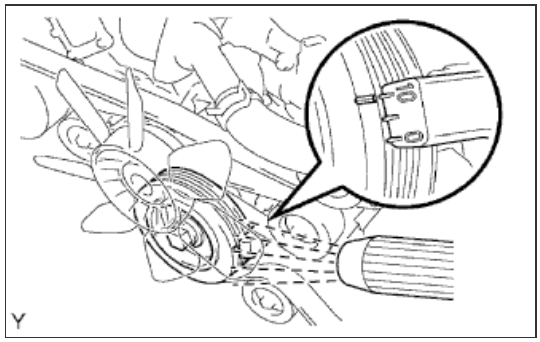
iv. Connect the tester probe of a timing light to the wire of the ignition coil connector for the No. 1 cylinder.

NOTICE:

- **Use a timing light that detects primary signals.**
- **After checking, be sure to wrap the wire harness with tape.**

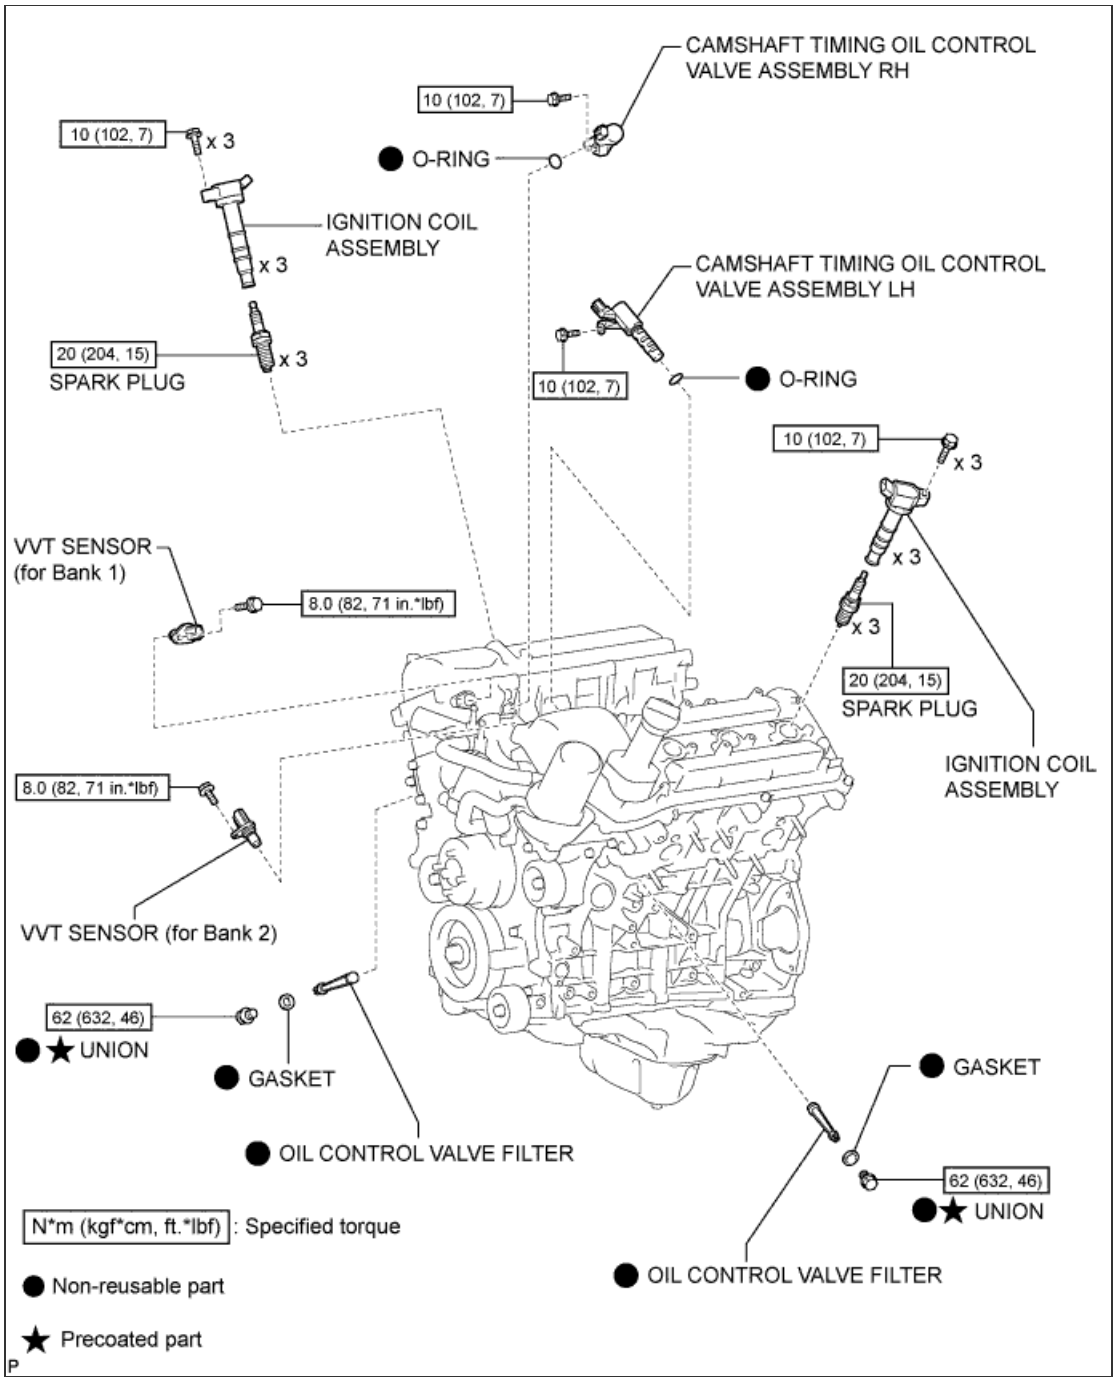
v. Inspect the ignition timing during idling.

Standard ignition timing:
8 to 12° BTDC @ idling (transmission in neutral position and A/C switch off)

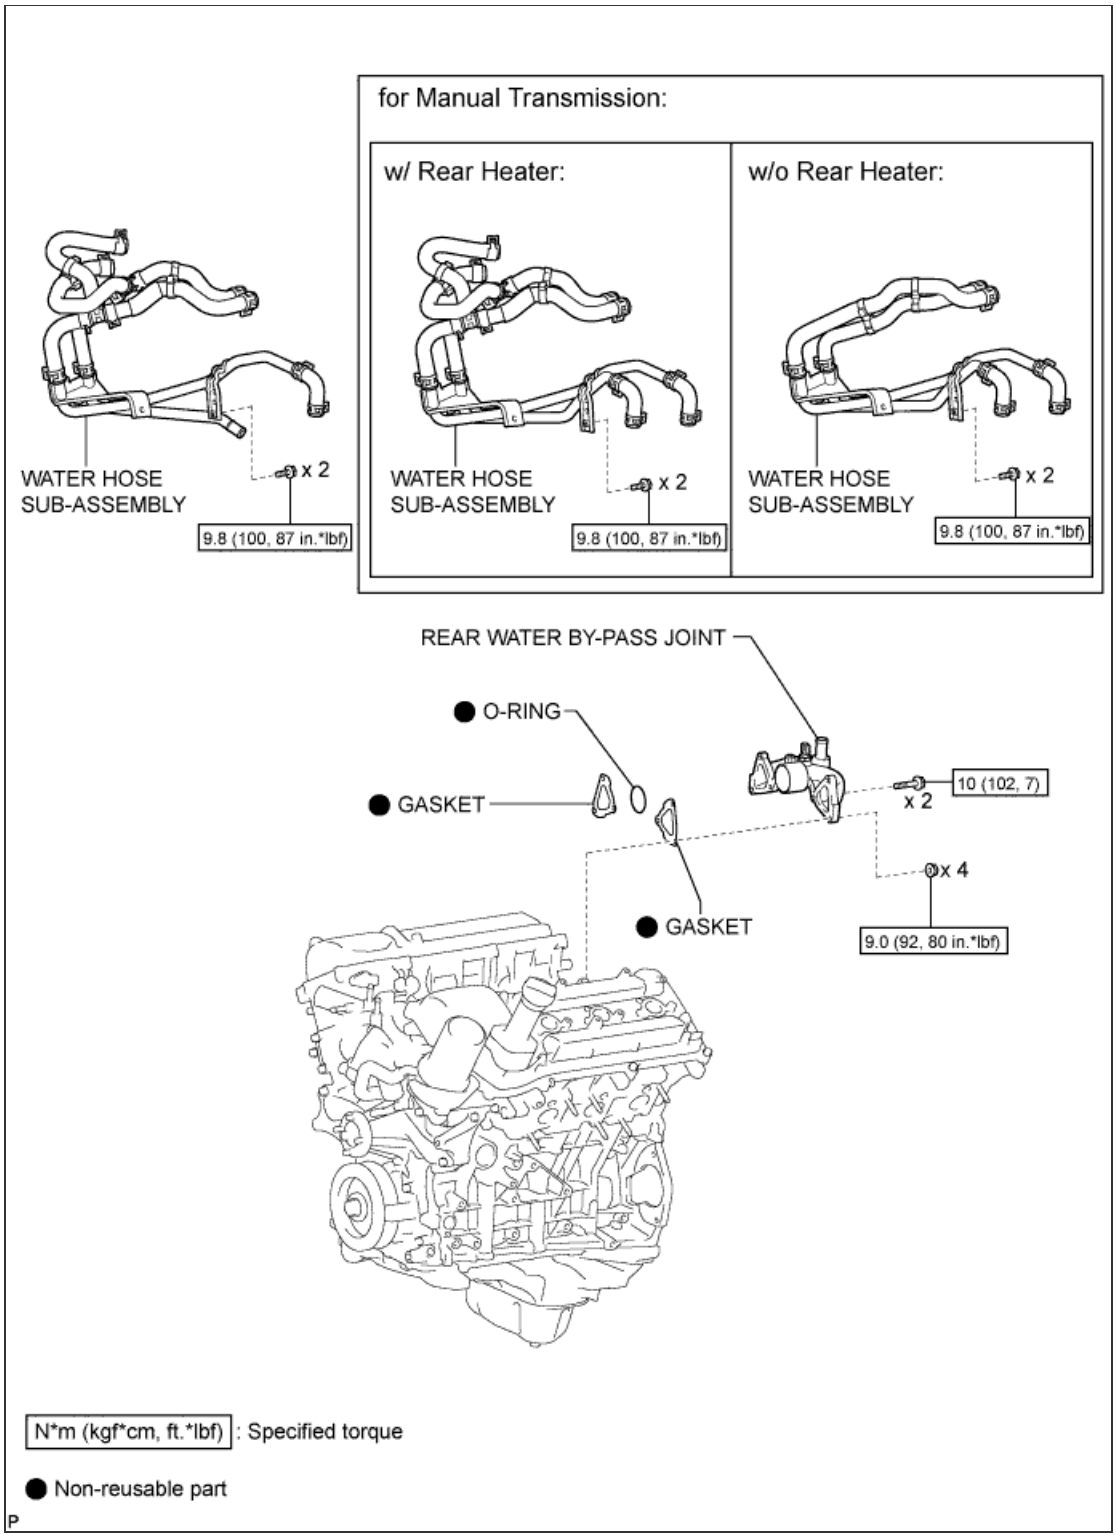


vi. Remove SST from the LC3

vii. Inspect the ignition timing during idling.



Standard ignition timing:
7 to 24° BTDC @ idling (transmission in neutral position and A/C switch off)



viii. isconnect the timing light from the engine.

ix. Install the air cleaner cap.

P

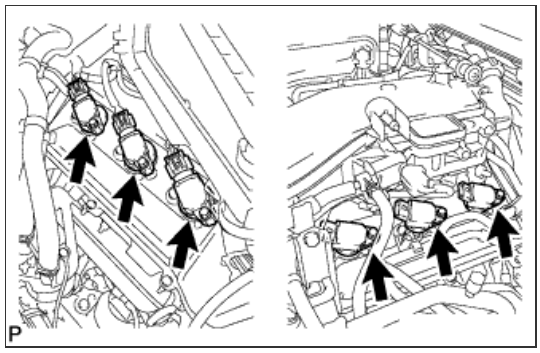
for Preparation Click here



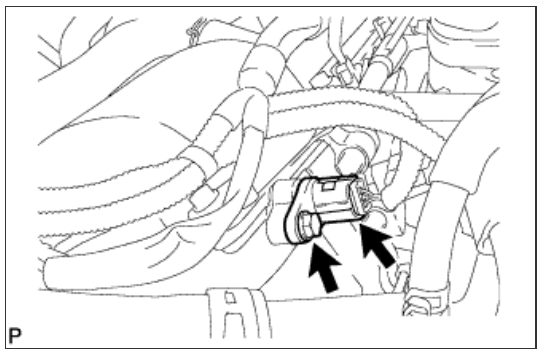
1. REMOVE ENGINE ASSEMBLY

a. Remove the engine assembly (Click here).

2. REMOVE IGNITION COIL ASSEMBLY

a. Disconnect the ignition coil connectors.

b. Remove the bolts and ignition coils.

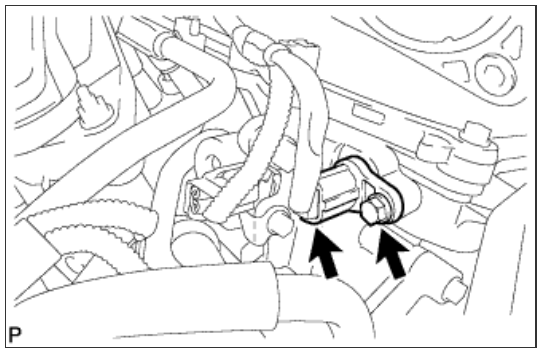


3. REMOVE SPARK PLUG

a. Remove the spark pl gs.

4. REMOVE VVT SENSOR (for Bank 1)

a. Disconnect the sensor connector.

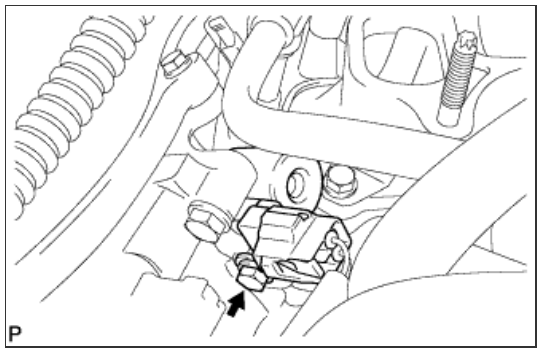


b. Remove the bolt and sensor.

5. REMOVE VVT SENSOR (for Bank 2)

a. Disconnect the sensor connector.

b. Remove the bolt and sensor.

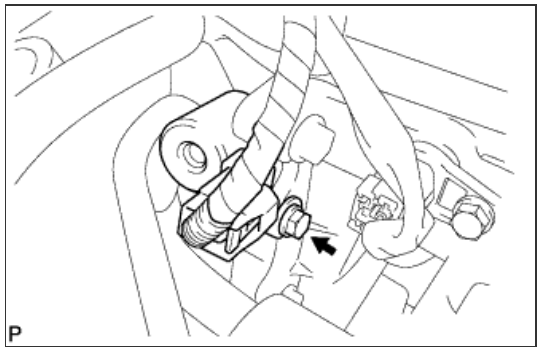


6. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY RH

a. Disconnect the oil control valve connector.

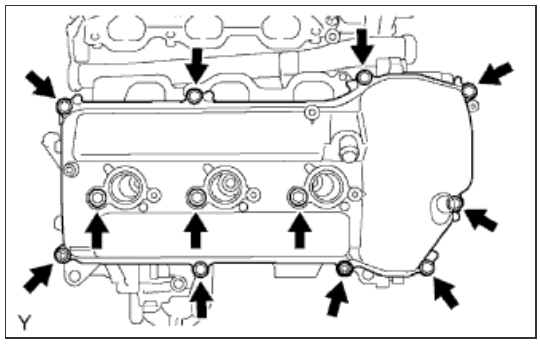
b. Remove the bolt and oil control valve.

c. Remove the O-ring from the oil control valve.



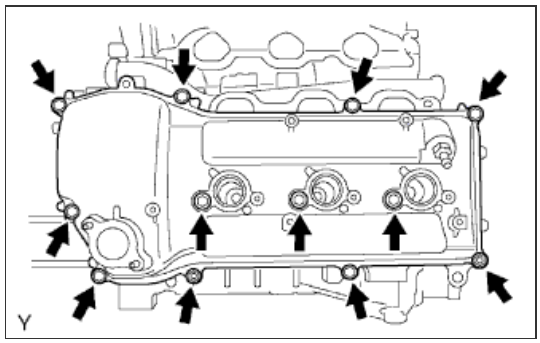
7. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY LH

a. Disconnect the oil control valve connector.



b. Remove the bolt and oil control valve.

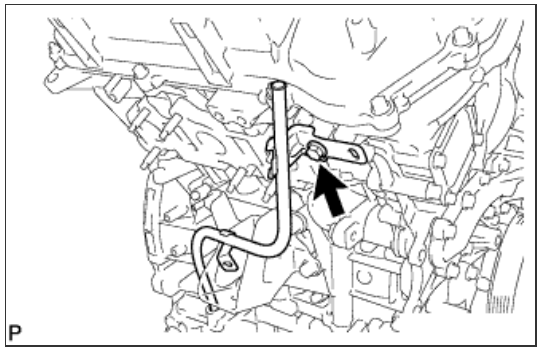
c. Remove the O-ring from the oil control valve.



8. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY RH

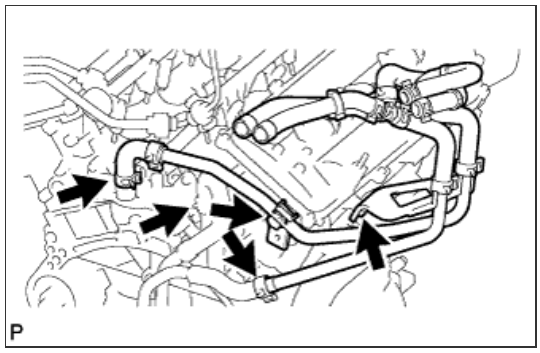
a. Remove the 10 bolts, 3 seal hers, 2 n ts, cylinder head cover and gasket.

9. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY LH



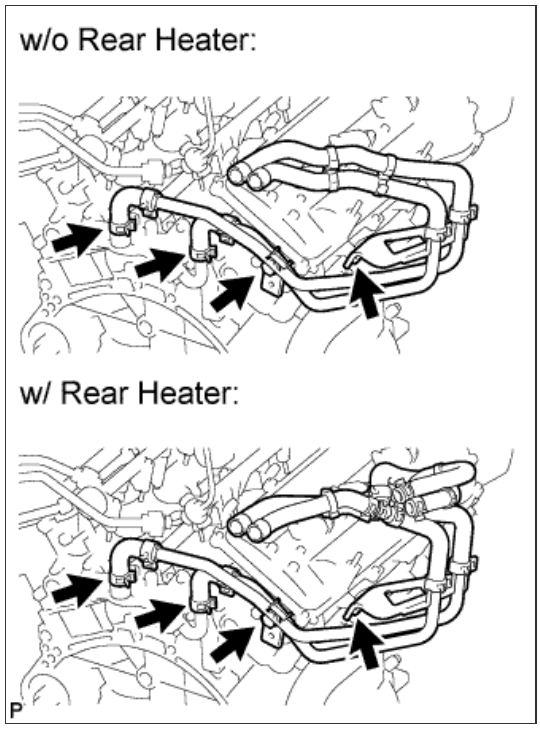
a. Remove the 10 bolts, 3 seal hers, 2 n ts, cylinder head cover and gasket.

10. REMOVE ENGINE OIL LEVEL DIPSTICK GUIDE



a. Remove the bolt and dipstick g ide.

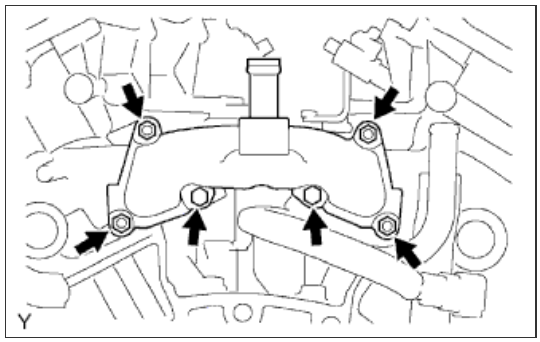
b. Remove the O-ring from the dipstick g ide.



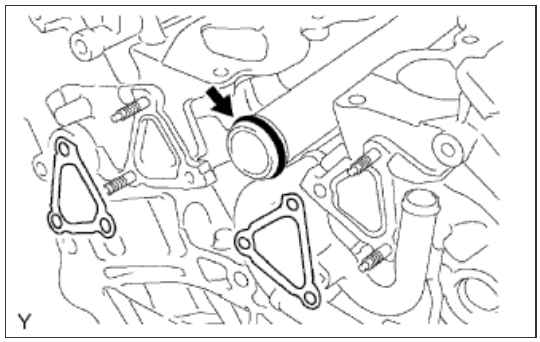
11. DISCONNECT WATER HOSE SUB-ASSEMBLY (for Automatic Transmission)

a. Remove the 2 bolts and disconnect the 3 ter hoses.

12. DISCONNECT WATER HOSE SUB-ASSEMBLY (for Manual Transmission)



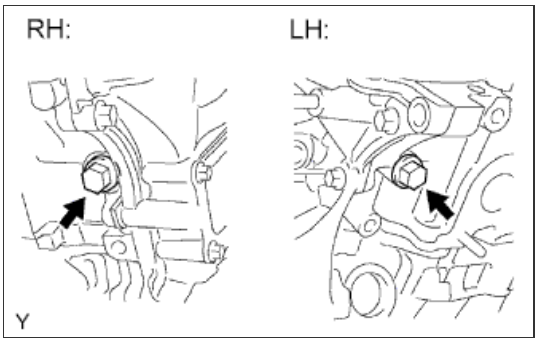
a. Remove the 2 bolts and disconnect the 2 ter hoses.



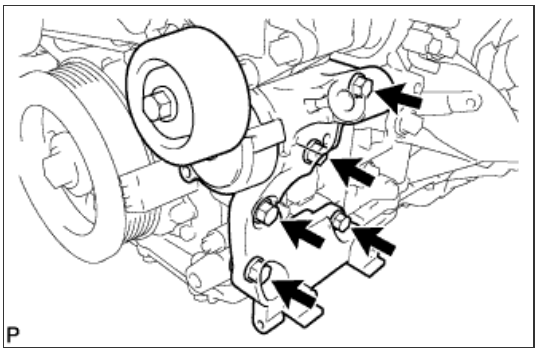
13. REMOVE REAR WATER BY-PASS JOINT

a. Disconnect the engine coolant temperat e sensor connector.

b. Remove the 2 bolts, 4 n ts, rear ter by-pass joint and 2 gaskets.

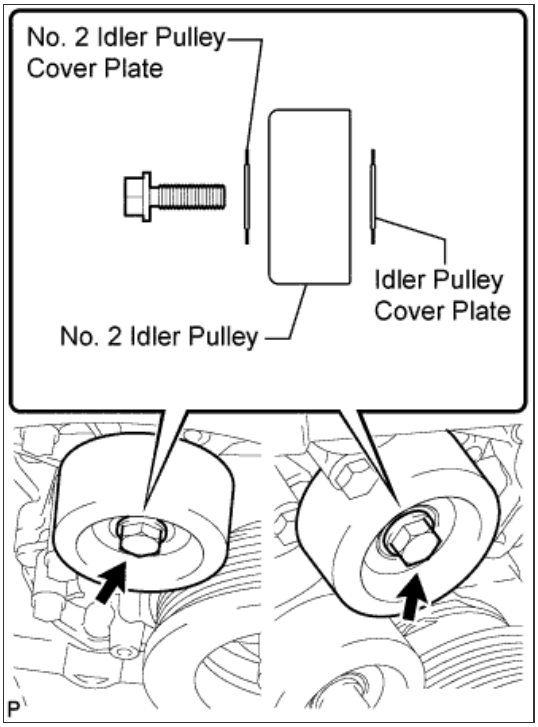


c. Remove the O-ring from the No. 1 ter o tlet pipe.



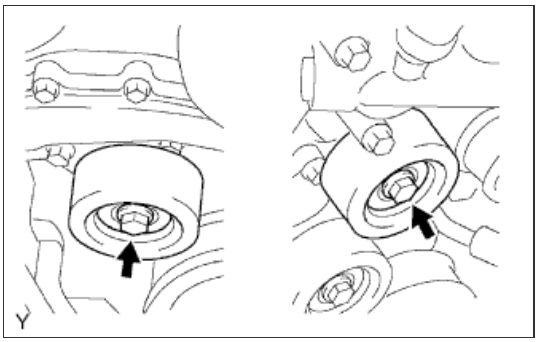
14. REMOVE OIL CONTROL VALVE FILTER

a. Remove the 2 nions, 2 filters and 2 gaskets from the cylinder head LH and RH.



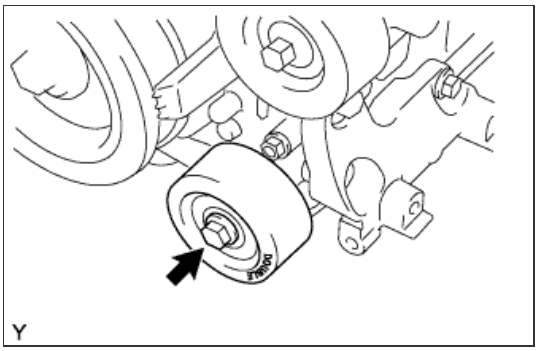
15. REMOVE V-RIBBED BELT TENSIONER ASSEMBLY

a. Remove the 5 bolts and V-ribbed belt tensioner.

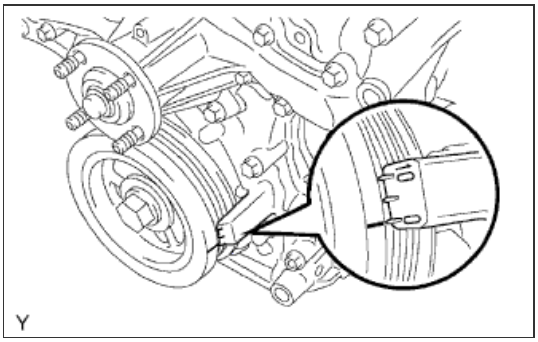


16. REMOVE NO. 2 IDLER PULLEY SUB-ASSEMBLY

a. P ey Cover Plate:
Remove the 2 bolts, 2 No. 2 idler p ey cover plate, 2 idler p ey and 2 idler p ey cover plate.

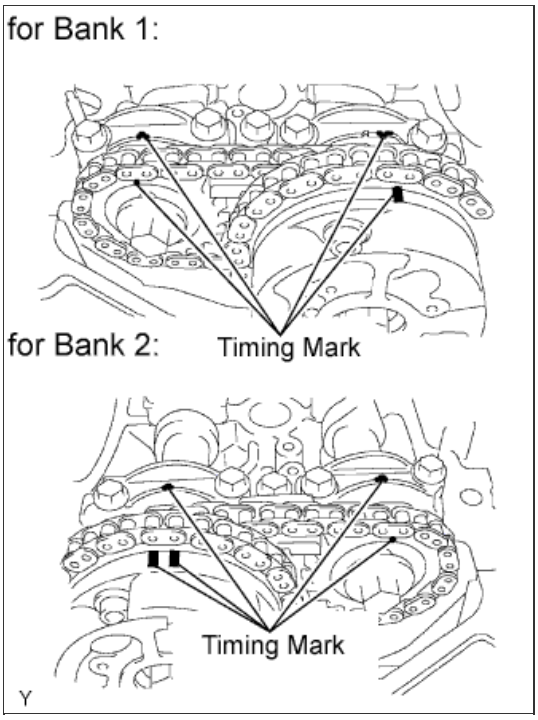


b. o P ey Cover Plate:
Remove the 2 bolts and 2 No. 2 idler p eys.



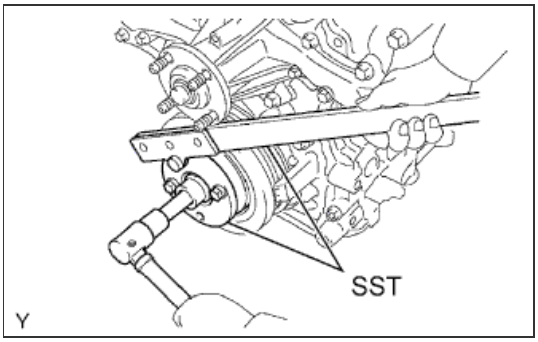
17. REMOVE NO. 1 IDLER PULLEY SUB-ASSEMBLY

a. Remove the bolt and No. 1 idler p ey.

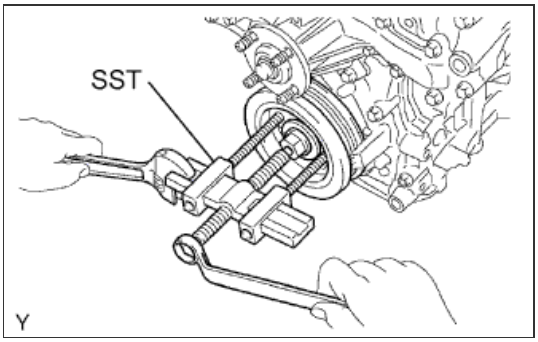


18. REMOVE CRANKSHAFT PULLEY

a. T n the crankshaft p ey, and align the notch ith the timing mark of the timing chain cover.

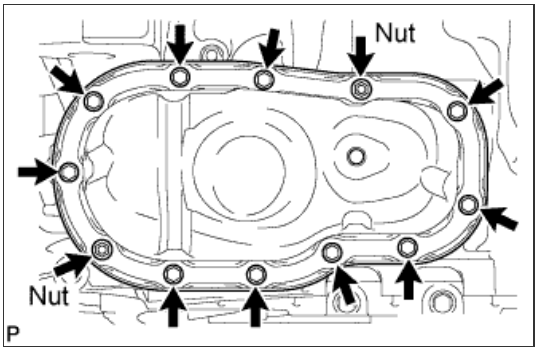


b. Check that the timing marks of the camshaft timing gears and sprockets are aligned ith the timing marks of the bearing caps as sho n in the ill tration.



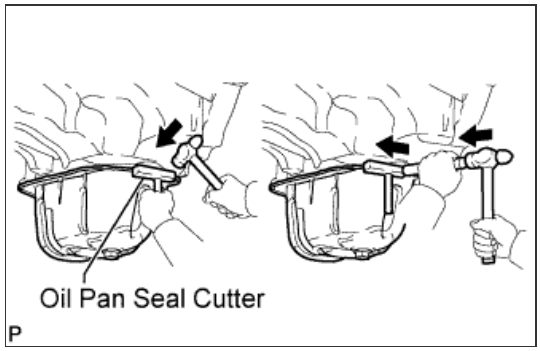
c. ing SST, hold the crankshaft p ey and loosen the p ey set bolt.

SST
09213-54015 (91651-60855)
09330-00021



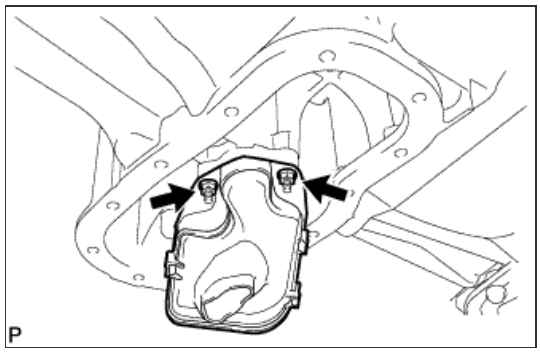
d. ing the p ey set bolt and SST, remove the crankshaft p ey.

SST
09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05030)

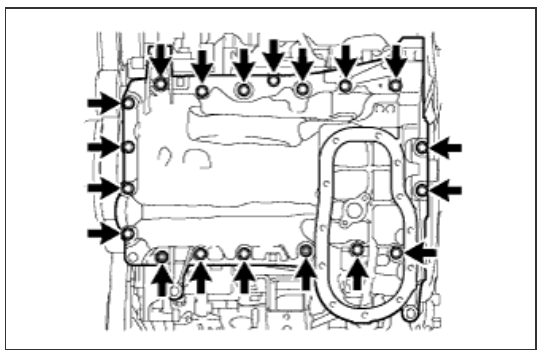


19. REMOVE NO. 2 OIL PAN SUB-ASSEMBLY

a. Remove the 10 bolts and 2 n ts.



b. nsert the blade of an oil pan seal c tter bet een the oil pans. C t thro gh the applied sealer and remove the No. 2 oil pan.

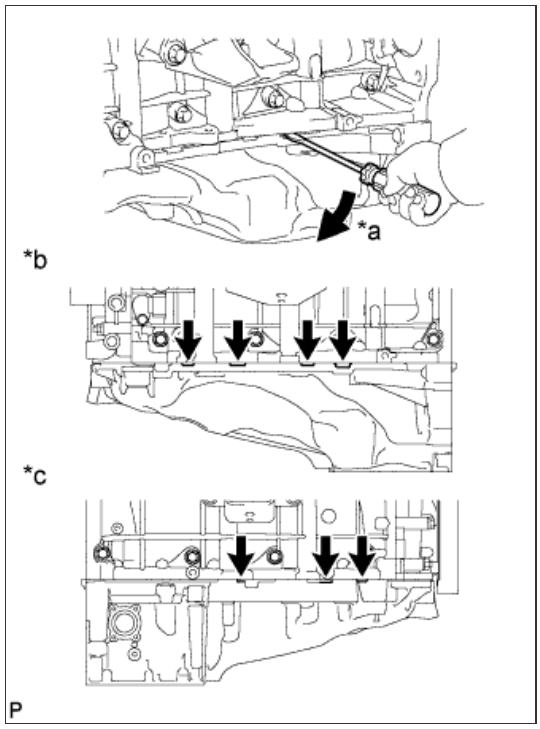


20. REMOVE OIL STRAINER SUB-ASSEMBLY

a. Remove the 2 n ts, oil strainer and gasket.

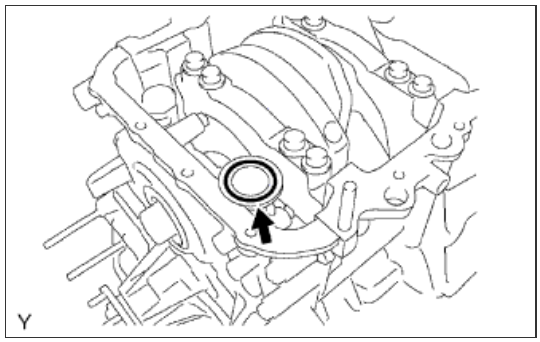
21. REMOVE OIL PAN SUB-ASSEMBLY

a. Remove the 17 bolts and 2 n ts.



b. ing a scre iver, remove the oil pan by prying bet een the oil pan and cylinder block as sho n in the ill tration.

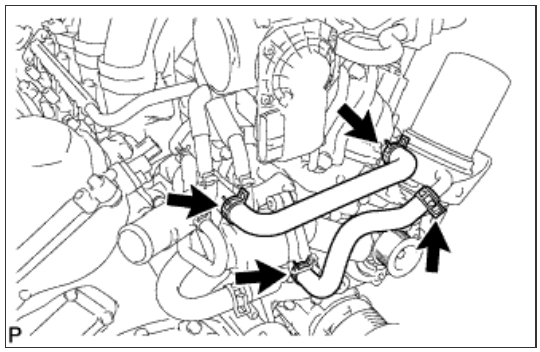
Text in Illustration



*a	Pry
*b	LH Side
*c	RH Side

NOTICE:

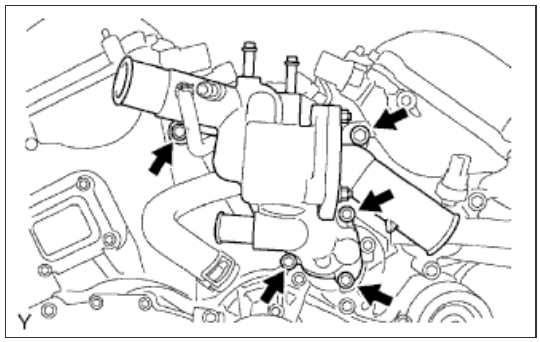
Be caref not to damage the contact s es of the cylinder block and oil pan.



c. Remove the O-ring from the timing chain cover.

22. REMOVE NO. 2 OIL COOLER HOSE

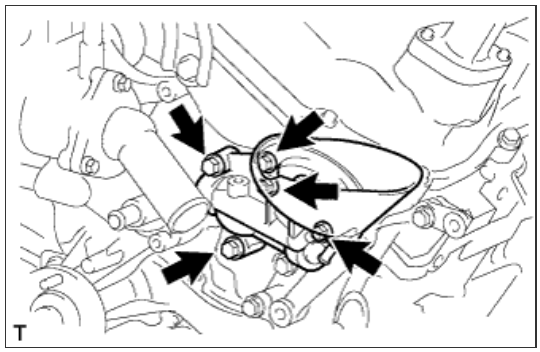
a. Remove the oil cooler hose.



23. REMOVE OIL COOLER HOSE

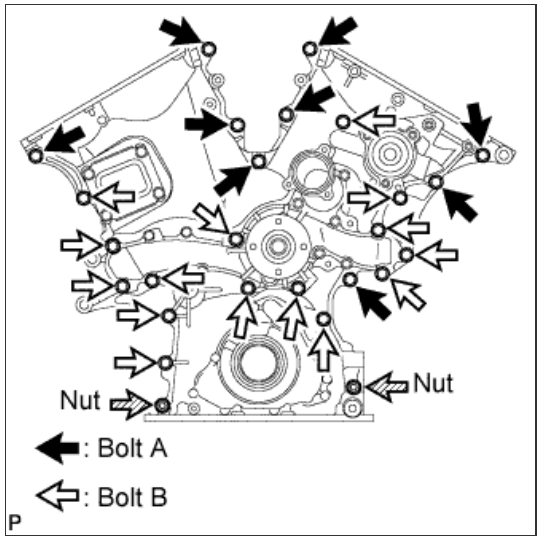
a. Remove the oil cooler hose.

24. REMOVE WATER INLET HOUSING



a. Remove the 5 bolts and ter inlet ho ing.

b. Remove the O-ring and gasket from the ter o tlet pipe and ter p mp.

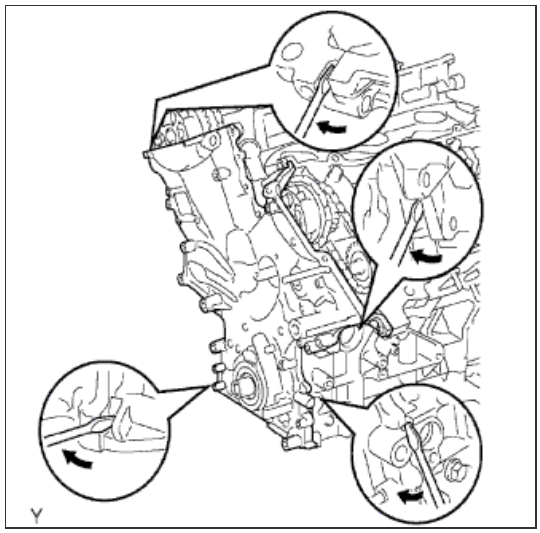


25. REMOVE OIL FILTER BRACKET SUB-ASSEMBLY

a. Remove the 3 bolts, 2 n ts, oil filter bracket and O-ring.

26. REMOVE TIMING CHAIN COVER SUB-ASSEMBLY

a. Remove the 24 bolts labeled and B, and the 2 n ts.



b. Remove the timing chain cover by prying bet een the timing chain cover and cylinder head or cylinder block ith a scre iver.

NOTICE:

Be caref not to damage the contact s es of the timing chain cover, cylinder block and cylinder head.

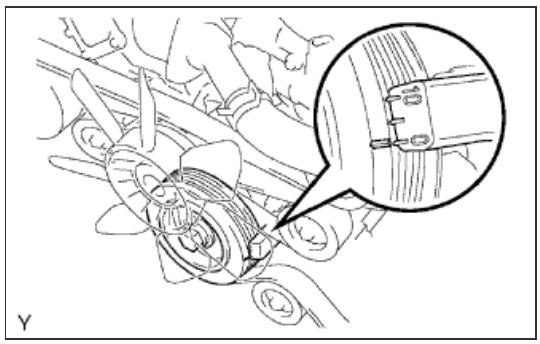
c. Remove the O-ring from the cylinder head LH side.

27. REMOVE FRONT CRANKSHAFT OIL SEAL

a. the timing chain case is removed:

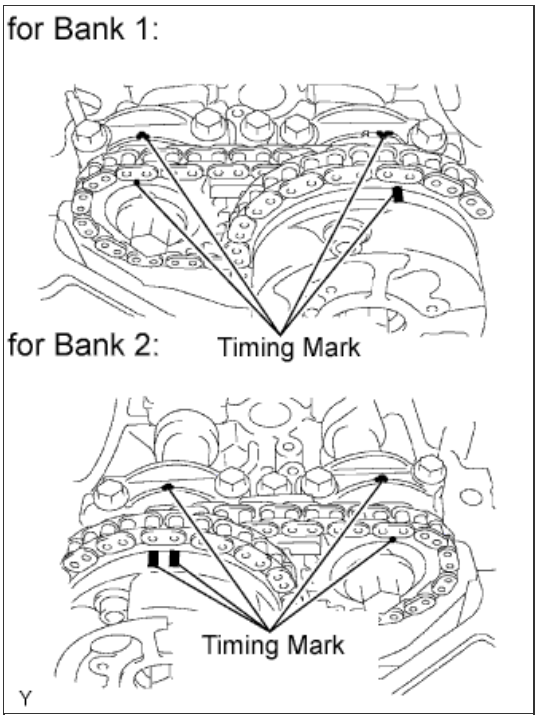
i. ing a scre iver and ooden block, pry o t the oil seal.

HINT:



Tape the scre iver tip before e.

NOTICE:



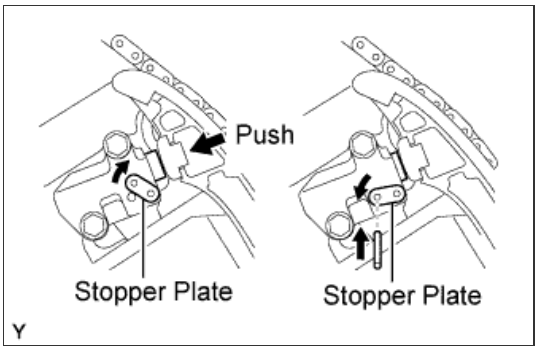
Do not damage the s e of the oil seal press fit hole and crankshaft.

28. SET NO. 1 CYLINDER TO TDC/COMPRESSION

a. T n the crankshaft p ey, and align its groove ith the timing mark of the timing chain cover.

b. Check that the timing marks of the camshaft timing gears and sprockets are aligned ith the timing marks of the bearing caps as sho n in the ill tration. not, t n the crankshaft 1 complete revol tion (3 and align the timing marks as above.

29. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY



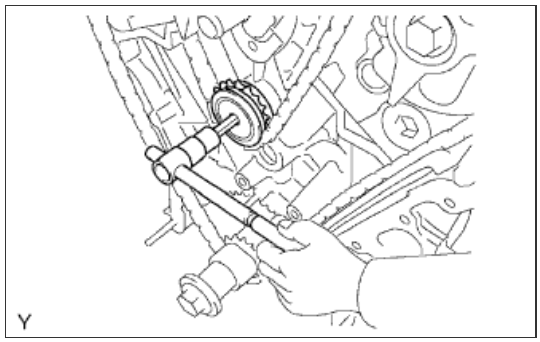
NOTICE:

- **Never rotate the crankshaft with the chain tensioner removed.**
- **When rotating the camshaft with the timing chain removed, rotate the crankshaft counterclockwise 40° from the TDC first.**

a. While t ning the stopper plate of the tensioner clock ise, p h in the pl nger of the chain tensioner as sho n in the ill tration.

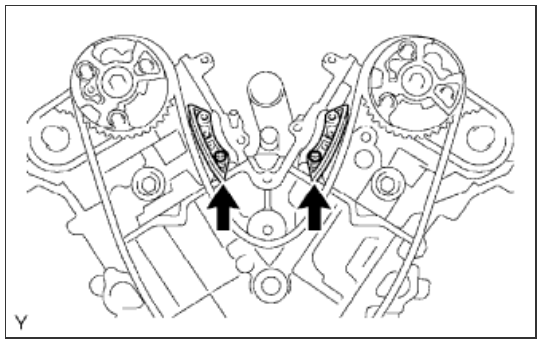
b. While t ning the stopper plate of the tensioner co nterclock ise, insert a bar of φ3.5 mm (0.138 in.) into the holes on the stopper plate and tensioner to fix the stopper plate in place.

c. Remove the 2 bolts and chain tensioner.



30. REMOVE CHAIN TENSIONER SLIPPER

a. Remove the chain tensioner slipper.

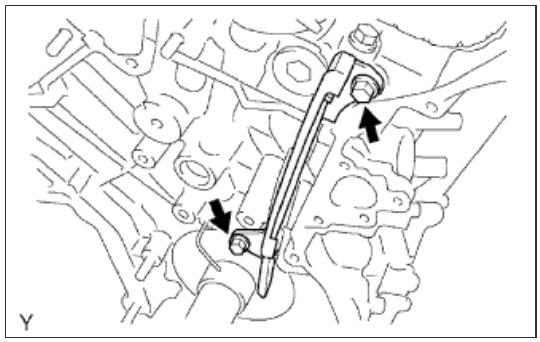


31. REMOVE NO. 1 IDLE GEAR SHAFT

a. ing a 10 mm hexagon ench, remove the No. 2 idle gear shaft, No. 1 idle gear and No. 1 idle gear shaft.

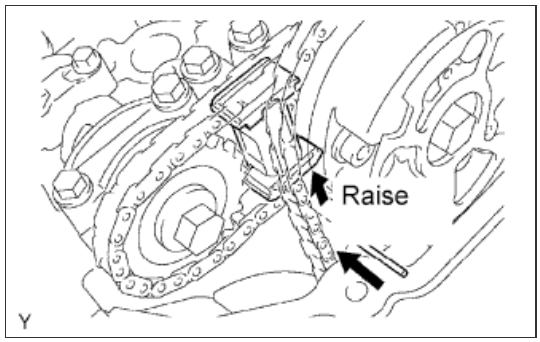
32. REMOVE NO. 2 CHAIN VIBRATION DAMPER

a. Remove the 2 No. 2 chain vibration dampers.



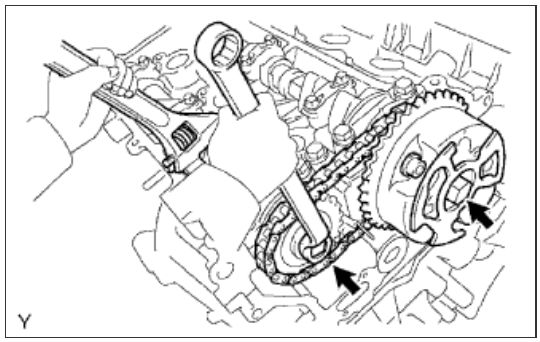
33. REMOVE NO. 1 CHAIN SUB-ASSEMBLY

a. Remove the No. 1 chain.



34. REMOVE NO. 1 CHAIN VIBRATION DAMPER

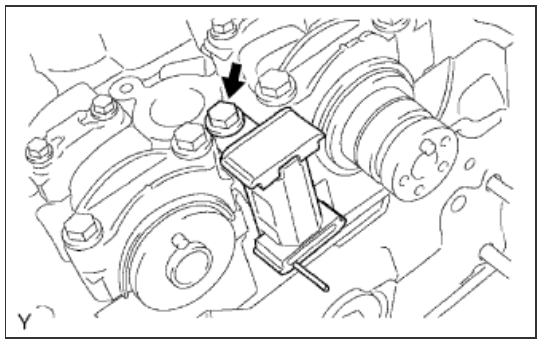
a. Remove the 2 bolts and No. 1 chain vibration damper.



35. REMOVE CAMSHAFT TIMING GEARS AND NO. 2 CHAIN

a. While raising the No. 2 chain tensioner, insert a pin of φ1.0 mm (0.0394 in.) into the hole to fix the tensioner in place.

b. Hold the hexagonal portion of the camshaft ith a ench, and remove the 2 bolts, camshaft timing gear, camshaft timing sprocket and No. 2 chain.

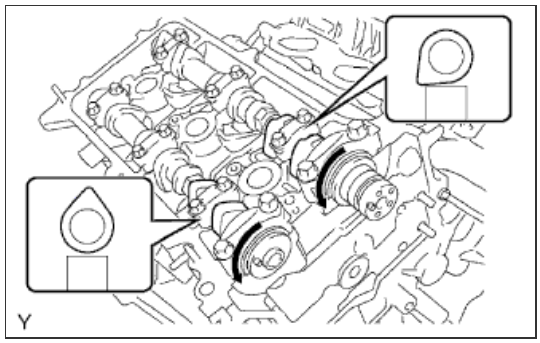


NOTICE:

- **Be careful not to damage the cylinder head and valve lifter with the wrench.**
- **Do not disassemble the camshaft timing gear.**

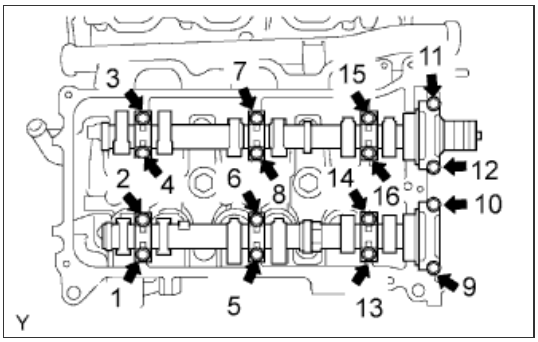
36. REMOVE NO. 2 CHAIN TENSIONER ASSEMBLY

a. Remove the bolt and No. 2 chain tensioner.



37. REMOVE NO. 1 CAMSHAFT AND NO. 2 CAMSHAFT

NOTICE:

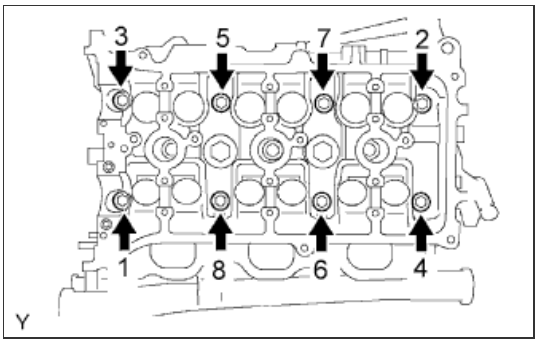


the thr t clearance of the camshaft is small, the camshaft m t be kept level hile it is being removed. the camshaft is not kept level, the portion of the cylinder head hich receives the shaft thr t may crack or be damaged, ca ing the camshaft to seize or break. To avoid this, the follo ing steps sho be carried o t.

a. Rotate the camshafts co nterclock ise ing a ench so that the cam lobes of the No. 1 cylinder face each direction as sho n in the ill tration.

b. niformly loosen and remove the 1 bearing cap bolts in the seq ence sho n in the ill tration.

c. Remove the 8 bearing caps and 2 camshafts.

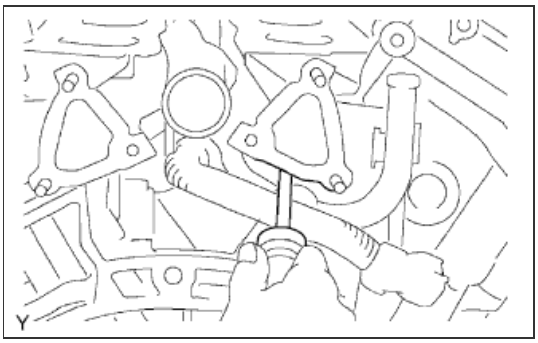


38. REMOVE CYLINDER HEAD SUB-ASSEMBLY RH

a. ing a 10 mm bi-hexagon ench, niformly loosen the 8 cylinder head bolts in the seq ence sho n in the ill tration. Remove the 8 cylinder head bolts and plate hers.

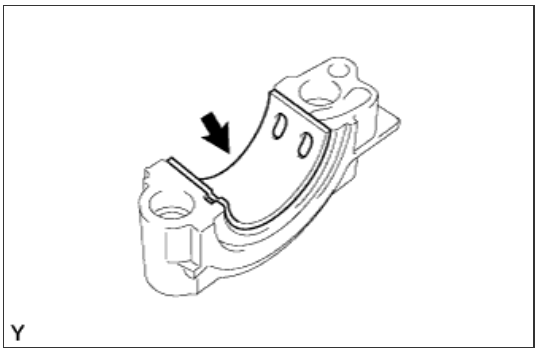
NOTICE:

- **Be careful not to drop the plate washers into the cylinder head.**
- **Cylinder head warpage or cracking could result from removing bolts in the incorrect order.**



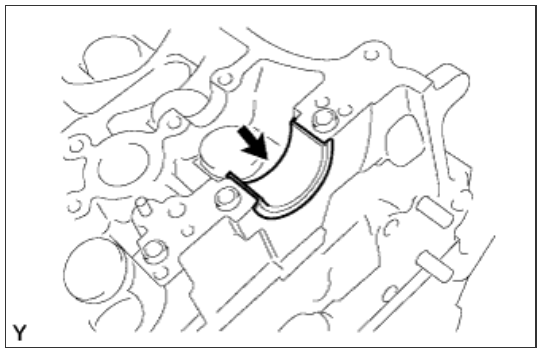
b. Lift the cylinder head from the do els on the cylinder block, and place the cylinder head on ooden blocks on a bench.

NOTICE:



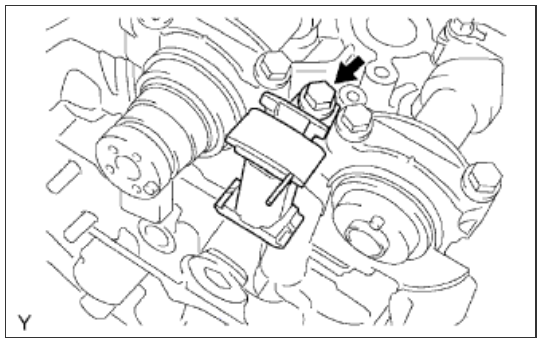
Be caref not to damage the contact s es of the cylinder head and cylinder block.

HINT:



the cylinder head is diffic t to lift off, pry bet een the cylinder head and cylinder block ith a scre iver.

39. REMOVE NO. 1 CAMSHAFT BEARING

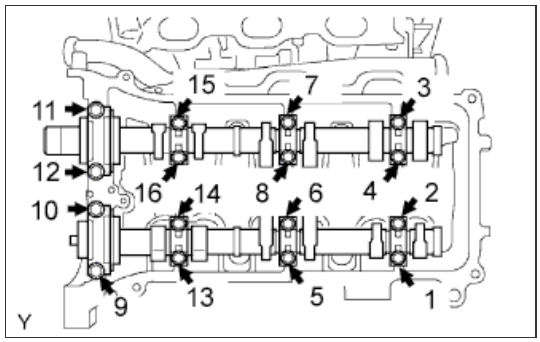


40. REMOVE NO. 2 CAMSHAFT BEARING

41. REMOVE CYLINDER HEAD GASKET

42. REMOVE NO. 3 CHAIN TENSIONER ASSEMBLY

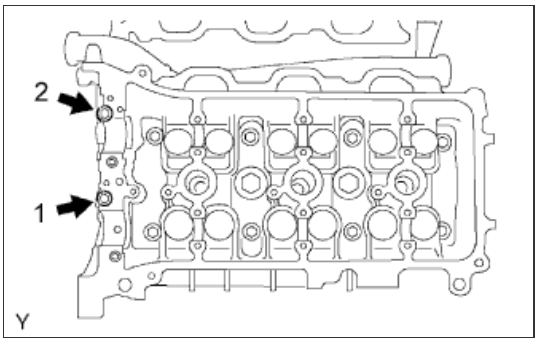
a. Remove the bolt and No. 3 chain tensioner.



43. REMOVE NO. 3 CAMSHAFT AND NO. 4 CAMSHAFT

NOTICE:

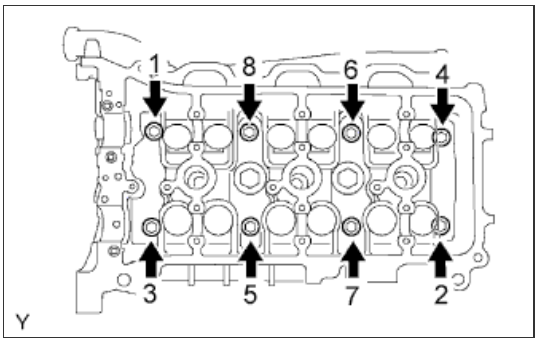
the thr t clearance of the camshaft is small, the camshaft m t be kept level hile it is being removed. the camshaft is not kept level, the portion of the cylinder head hich receives the shaft thr t may crack or be damaged, ca ing the camshaft to seize or break. To avoid this, the follo ing steps sho be carried o t.



a. niformly loosen and remove the 1 bearing cap bolts in the seq ence sho n in the ill tration.

b. Remove the 8 bearing caps and 2 camshafts.

44. REMOVE CYLINDER HEAD SUB-ASSEMBLY LH

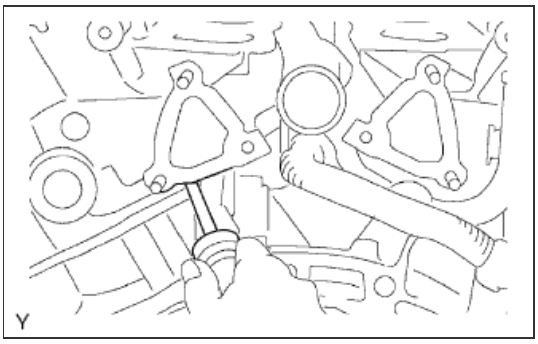


a. niformly loosen and remove the 2 cylinder head bolts in the seq ence sho n in the ill tration.

b. ing a 10 mm bi-hexagon ench, niformly loosen the 8 cylinder head bolts in the seq ence sho n in the ill tration. Remove the 8 cylinder head bolts and plate hers.

NOTICE:

- **Be careful not to drop the plate washers into the cylinder head.**
- **Cylinder head warpage or cracking could result from removing bolts in the incorrect order.**



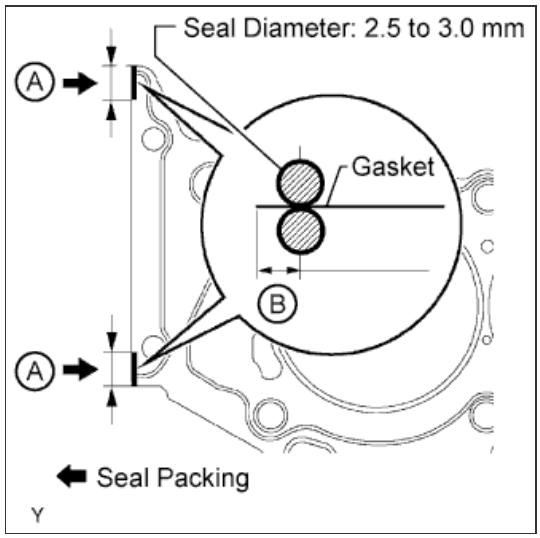
c. Lift the cylinder head from the do els on the cylinder block, and place the cylinder head on ooden blocks on a bench.

NOTICE:

Be caref not to damage the contact s es of the cylinder head and cylinder block.

HINT:

the cylinder head is diffic t to lift off, pry bet een the cylinder head and cylinder block ith a scre iver.



45. REMOVE NO. 2 CYLINDER HEAD GASKET

for Preparation Click here

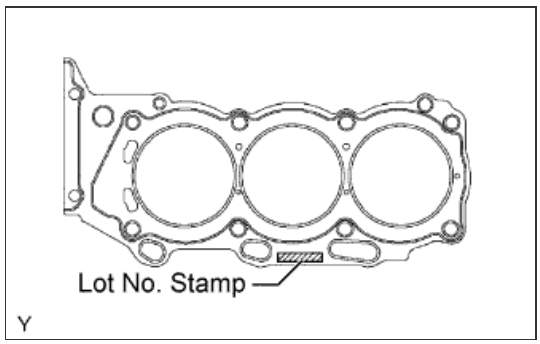
1. INSTALL NO. 2 CYLINDER HEAD GASKET

a. Remove any old pac ng (ma e al and be ca eful no o d op any oil on e con ac ace of e cylinde ead and cylinde bloc

b. ly eal pac ng o a new cylinde ead ga e a own in e illu a on.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
2.5 to 3.0 mm (0.0984 to 0.118 in.)



Seal Packing Application Range

em	ecified Condi on
A	10 o 15 mm (0.3 o 0.5 in.)
B	1.25 o 1.5 mm (0.04 o 0.05 in.)

HINT:

- **Remove any oil from the contact surface.**
- **Install the cylinder head gasket within 3 minutes after applying the seal packing.**
- **Do not add engine oil within 2 hours of installation.**

c. lace e cylinde ead ga e on e cylinde bloc ace wi e f on face of e Lo No. amp upwa d.

NOTICE:

Be ca eful of e in alla on di ec on.

2. INSTALL CYLINDER HEAD SUB-ASSEMBLY LH

a. lace e cylinde ead on e cylinde ead ga e

NOTICE:

- **Ensure that no oil is on the mounting surface of the cylinder head.**
- **Gently place the cylinder head in order not to damage the gasket with the bottom part of the cylinder head.**

b. n all e 8 cylinde ead bol and pla e wa e

HINT:

- **The cylinder head bolts are tightened in 3 progressive steps.**
- **If any cylinder head bolt is broken or deformed, replace it.**

Torque:
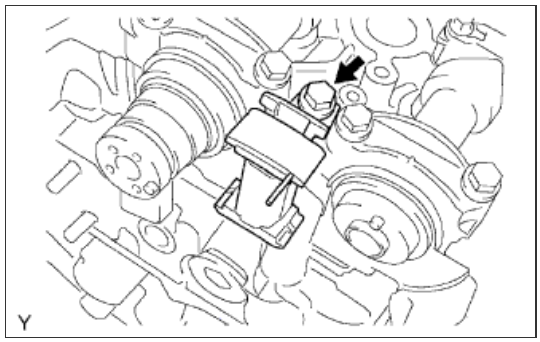
for 10 mm head bolt:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }
for 12 mm head bolt:
24 N*m{ 245 kgf*cm , 18 ft.*lbf }



4. INSTALL NO. 3 CHAIN TENSIONER ASSEMBLY

a. W le pu ng in e en one in e a pin of φ1.0 mm (0.03 in.) in o e ole o fix e en one in place.

b. n all e No. 3 c ain en one wi e bol

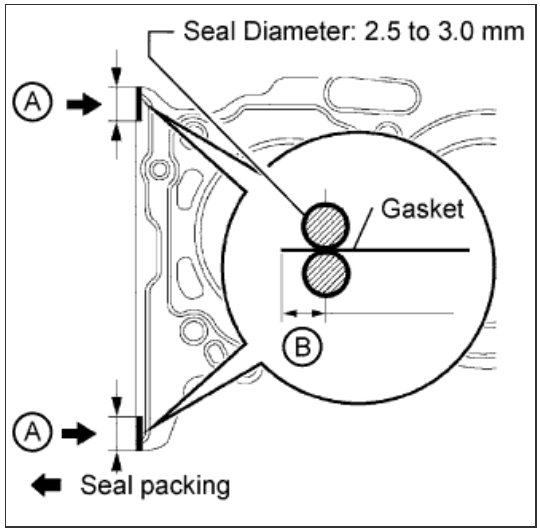
Torque:
21 N*m 214 kgf*cm , 15 ft.*lbf

5. INSTALL CYLINDER HEAD GASKET

a. Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the cylinder head and cylinder block.

b. Apply seal packing to a new cylinder head gasket as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

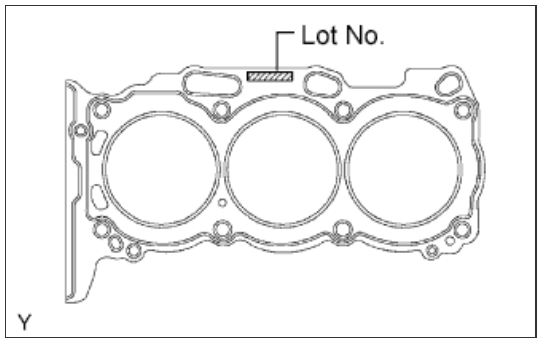


Standard seal diameter:
2.5 to 3.0 mm (0.0984 to 0.118 in.)

Seal Packing Application Range

Item	Specified Condition
A	10 to 15 mm (0.394 to 0.591 in.)
B	1.25 to 1.5 mm (0.0492 to 0.0591 in.)

HINT:



- **Remove any oil from the contact surface.**
- **Install the cylinder head gasket within 3 minutes after applying the seal packing.**
- **Do not add engine oil within 2 hours of installation.**

c. Place the cylinder head gasket on the cylinder block surface with the front face of the Lot No. stamp upward.

NOTICE:

Be careful of the installation direction.

6. INSTALL CYLINDER HEAD SUB-ASSEMBLY RH

a. Place the cylinder head on the cylinder head gasket.

NOTICE:

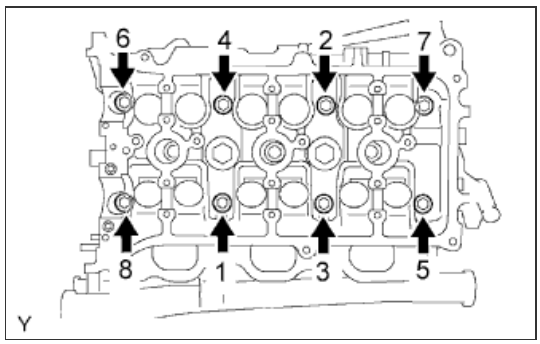
- **Ensure that no oil is on the mounting surface of the cylinder head.**
- **Gently place the cylinder head in order not to damage the gasket with the bottom part of the cylinder head.**

b. Install the 8 cylinder head bolts and plate washers.

HINT:

- **The cylinder head bolts are tightened in 3 progressive steps.**
- **If any cylinder head bolt is broken or deformed, replace it.**

i. Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.

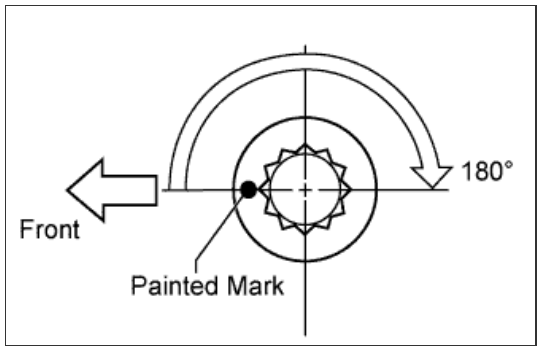


ii. Install the plate washers to the cylinder head bolts.

c. Step 1:

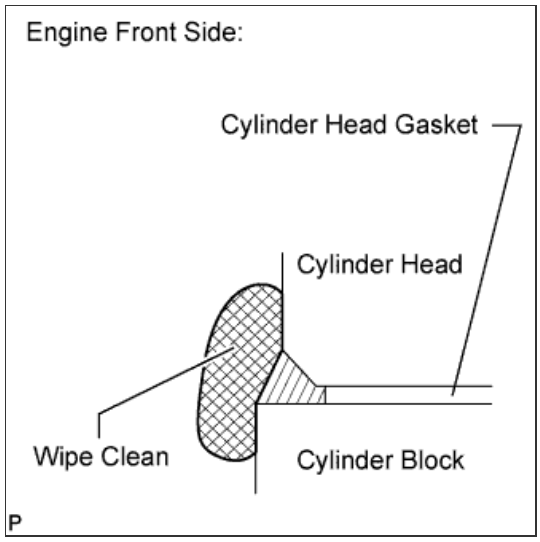
i. Using a 10 mm bi-hexagon wrench, install and uniformly tighten the 8 cylinder head bolts with plate washers in several steps in the sequence shown in the illustration.

Torque:
36 N*m{ 367 kgf*cm , 27 ft.*lbf }



If any one of the cylinder head bolts does not meet the torque specification, replace the cylinder head bolt.

d. Step 2:

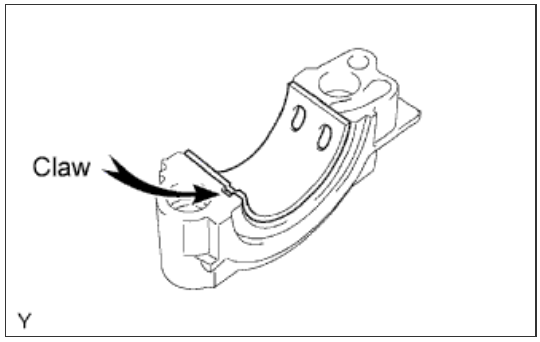


i. Mark the cylinder head bolt heads with paint as shown in the illustration.

ii. Tighten the cylinder head bolts 180° in the sequence shown in step 1.

e. Check that the painted marks are now facing rearward.

f. Seal packing will seep out from the front side of engine. Thoroughly wipe off the seal packing that seeps out.

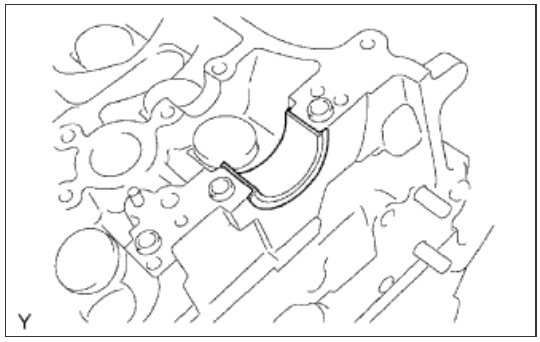


7. INSTALL NO. 1 CAMSHAFT BEARING

a. Align the bearing claw with the claw groove of the bearing cap, and push in the No. 1 camshaft bearing.

NOTICE:

- **Install the bearing while aligning it with the oil hole in the bearing cap.**
- **Clean the backside of the bearing and the contact surface of the bearing cap and prevent oil from adhering to them.**



8. INSTALL NO. 2 CAMSHAFT BEARING

a. Install the No. 2 camshaft bearing to the cylinder head.

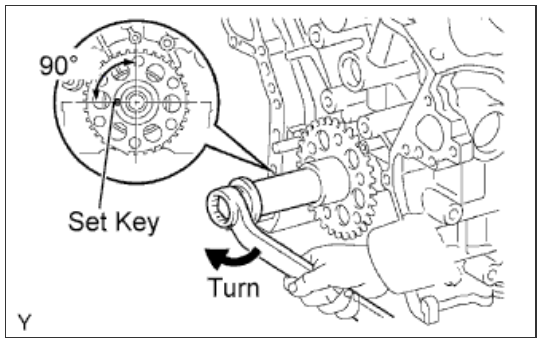
NOTICE:

Clean the backside of the bearing and the contact surface of the cylinder head and prevent oil from adhering to them.

9. INSTALL NO. 1 CAMSHAFT AND NO. 2 CAMSHAFT

NOTICE:

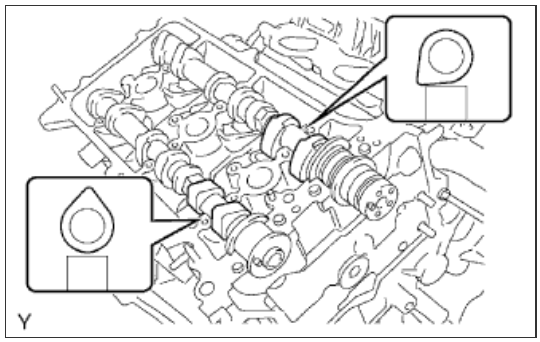
As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.



a. Set the crankshaft position.

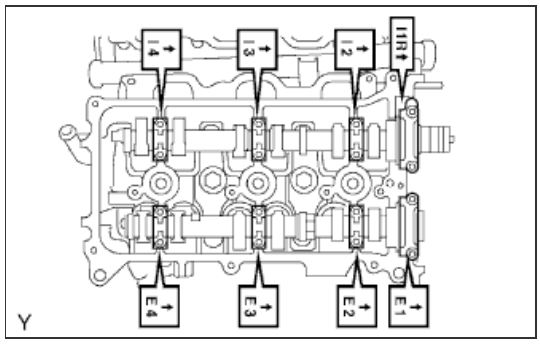
i. Using the crankshaft pulley set bolt, turn the crankshaft, and set the crankshaft set key into the left horizontal position.

NOTICE:



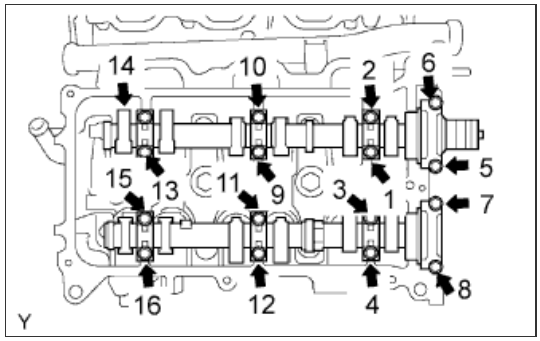
Having the crankshaft at the wrong angle can cause the piston head and valve head to come into contact with each other when the camshaft is installed, causing damage. Always set the crankshaft to the correct angle.

b. Apply a light coat of engine oil to the thrust portions and journals of the camshafts.



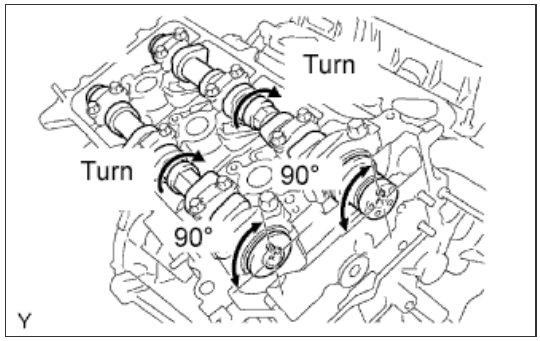
c. Place the 2 camshafts onto the cylinder head with the cam lobes of the No. 1 cylinder facing each direction as shown in the illustration.

d. Apply a light coat of engine oil to the 8 bearing caps.



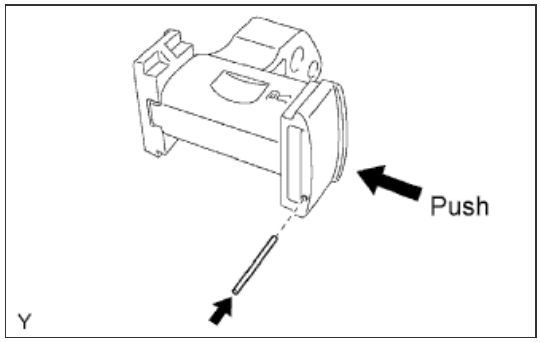
e. Set the 8 bearing caps in their proper locations.

f. Apply a light coat of engine oil to the threads and under the heads of the 16 bearing cap bolts.

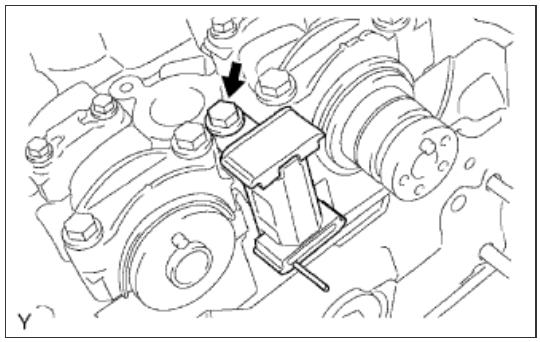


g. Uniformly install the 16 bearing cap bolts in several steps in the order shown in the illustration.

Torque:
for 10 mm head bolt:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }
for 12 mm head bolt:
24 N*m{ 245 kgf*cm , 18 ft.*lbf }

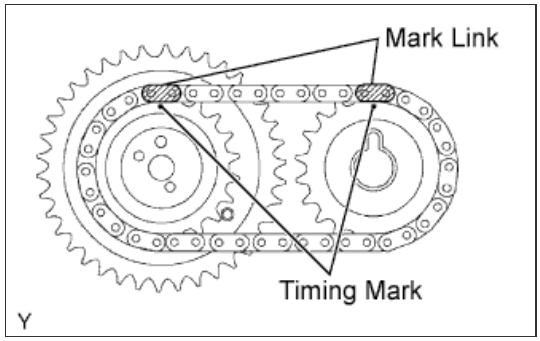


h. Using a wrench, turn the camshafts clockwise until the camshaft knock pin is at a position 90° to the cylinder head.



10. INSTALL NO. 2 CHAIN TENSIONER ASSEMBLY

a. While pushing in the tensioner, insert a pin of φ1.0 mm (0.0394 in.) into the hole to fix the tensioner in place.

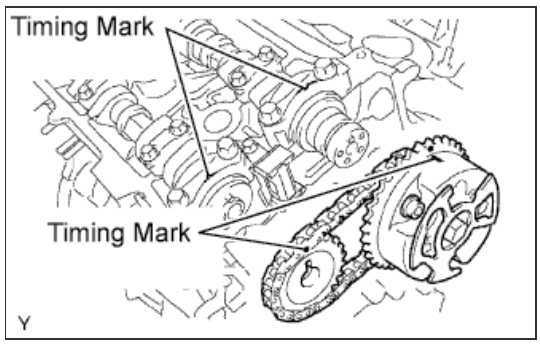


b. Install the No. 2 chain tensioner with the bolt.

Torque:
21 N*m 214 kgf*cm , 15 ft.*lbf

11. INSTALL CAMSHA T TIMING GEARS AND NO. 2 CHAIN

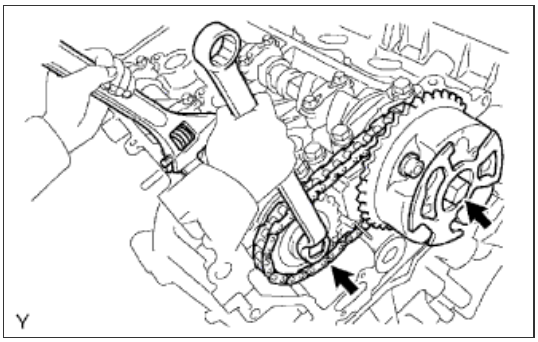
a. Align the mark links (yellow) of the No. 2 chain with the timing marks (1-dot mark) of the camshaft timing gear and sprocket as shown in the illustration.



b. Align the timing marks on the camshaft timing gear and sprocket with the timing marks on the bearing caps, and install the camshaft timing gear and sprocket with the No. 2 chain to the camshafts.

c. Temporarily install the camshaft timing gear set bolt and camshaft timing sprocket set bolt.

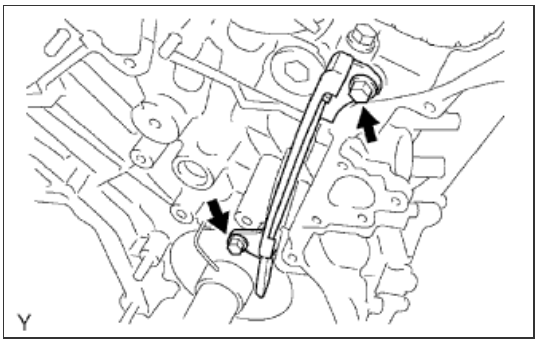
NOTICE:



Do not push the camshaft timing gear assembly to the camshaft forcibly when installing it.

d. Hold the hexagonal portion of the camshaft with a wrench, and tighten the 2 bolts.

Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }



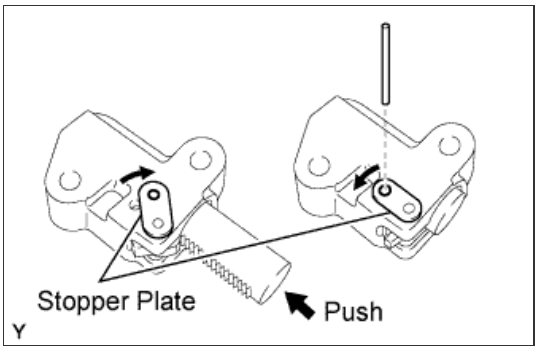
e. Remove the pin from the No. 2 chain tensioner.

12. INSTALL NO. 1 CHAIN VIBRATION DAMPER

a. Install the No. 1 chain vibration damper with the 2 bolts.

Torque:
19 N*m{ 194 kgf*cm , 14 ft.*lbf }

13. INSTALL CHAIN TENSIONER SLIPPER

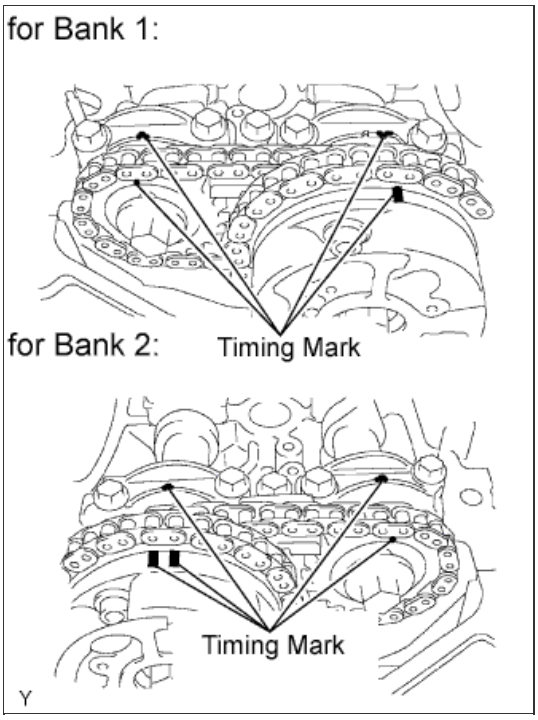


14. INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY

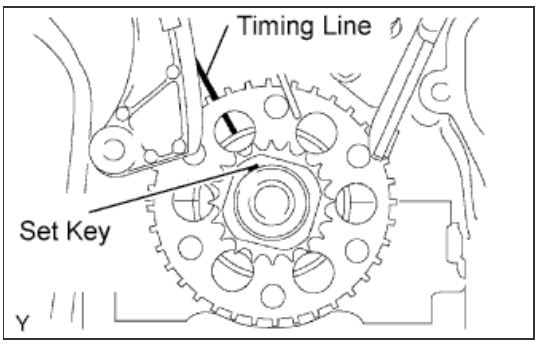
a. While turning the stopper plate of the tensioner clockwise, push in the plunger of the tensioner as shown in the illustration.

b. While turning the stopper plate of the tensioner counterclockwise, insert a bar of φ3.5 mm (0.138 in.) into the holes on the stopper plate and tensioner to fix the stopper plate in place.

c. Install the chain tensioner with the 2 bolts.

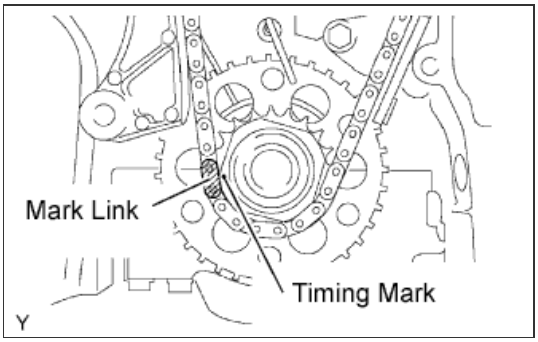


Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

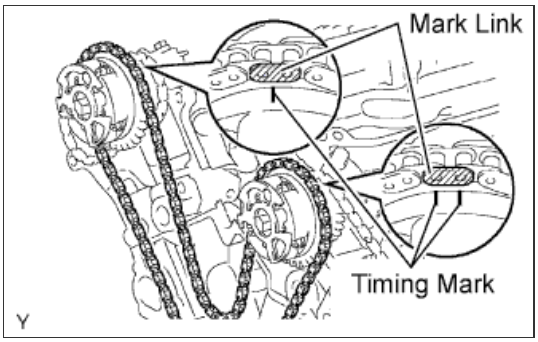


15. INSTALL NO. 1 CHAIN SUB-ASSEMBLY

a. Set the No. 1 cylinder to TDC/compression.

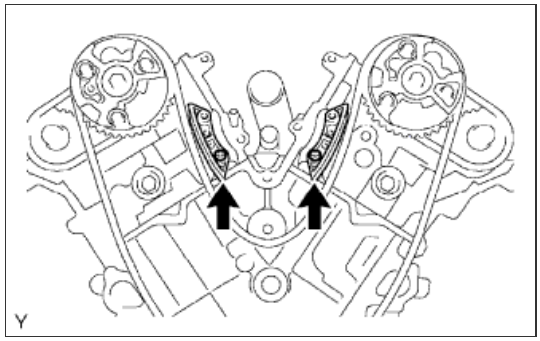


i. Align the timing marks of the camshaft timing gears and sprockets with the timing marks of the bearing caps.



ii. Install the crankshaft pulley set bolt, and turn the crankshaft to align the crankshaft set key with the timing line of the cylinder block.

b. Align the mark link (yellow) with the timing mark of the crankshaft timing gear.



c. Align the mark links (orange) with the timing marks of the camshaft timing gears, and install the No. 1 chain.

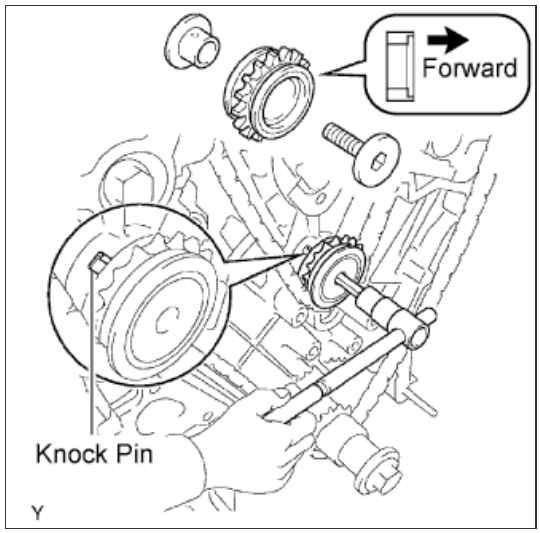
16. INSTALL NO. 2 CHAIN VIBRATION DAMPER

a. Install the 2 No. 2 chain vibration dampers.

17. INSTALL NO. 1 IDLE GEAR SHAFT

a. Apply a light coat of engine oil to the rotating surface of the No. 1 idle gear shaft.

b. Temporarily install the No. 1 idle gear shaft and No. 1 idle gear with the No. 2 idle gear shaft while aligning the knock pin of the No. 1 idle gear shaft with the knock pin groove of the cylinder block.



NOTICE:

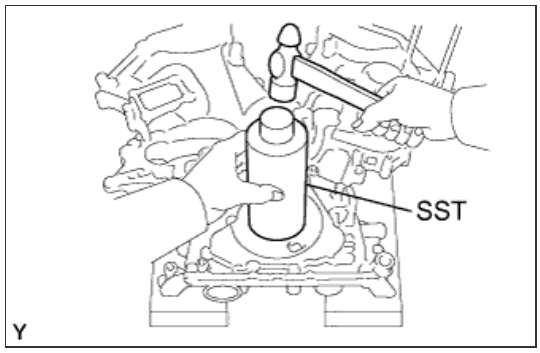
Be careful of the idle gear direction.

c. Using a 10 mm hexagon wrench, tighten the No. 2 idle gear shaft.

Torque:
60 N*m{ 612 kgf*cm , 44 ft.*lbf }

d. Remove the bar from the chain tensioner.

18. INSTALL FRONT CRANKSHAFT OIL SEAL

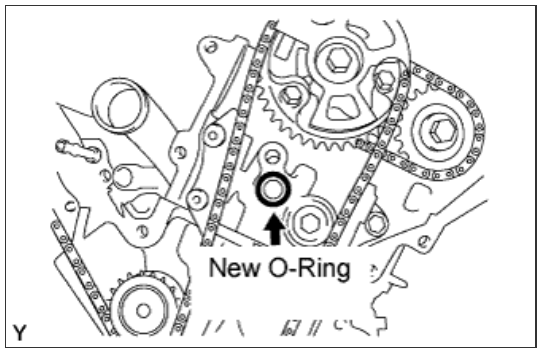


a. Using SST and a hammer, tap in a new oil seal until its surface is flush with the timing chain cover edge.

SST
09226-10010

NOTICE:

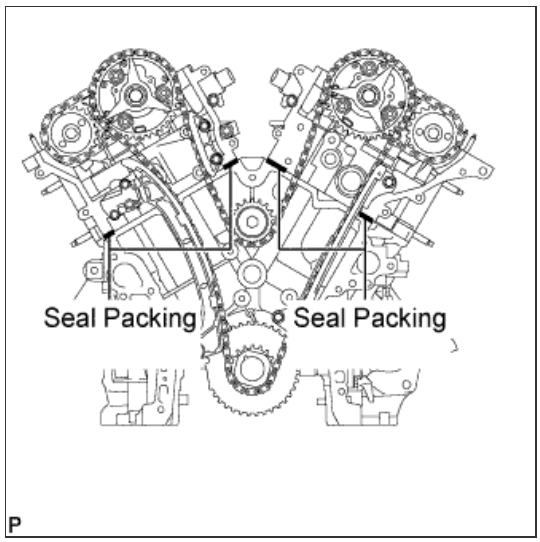
- **Keep the lip free from foreign matter.**
- **Do not tap the oil seal at an angle.**



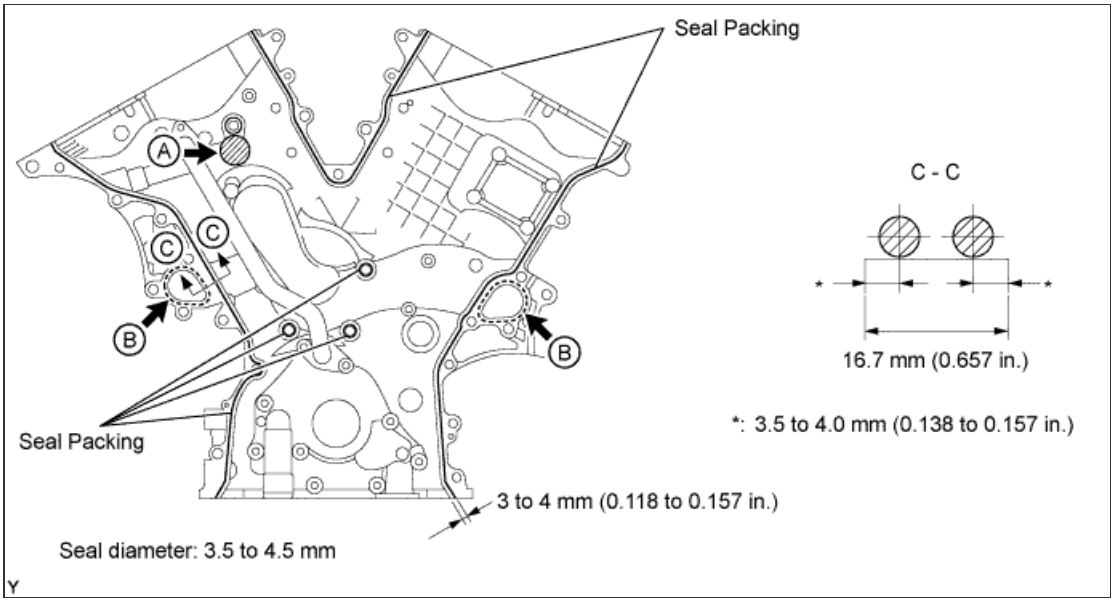
b. Apply MP grease to the lip of the oil seal.

19. INSTALL TIMING CHAIN COVER SUB-ASSEMBLY

a. Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the timing chain cover, cylinder head and cylinder block.



b. Install a new O-ring to the cylinder head for bank 2 as shown in the illustration.



c. Apply seal packing as shown in the illustration.

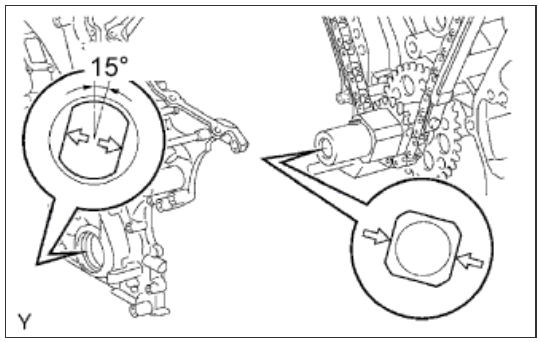
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
3.0 to 4.0 mm (0.118 to 0.157 in.)

d. Apply seal packing in a continuous line to the timing chain cover as shown in the illustration.

Seal packing:
for water related part:
Toyota Genuine Seal Packing 1282B, Three Bond 1282B or equivalent
for oil related part:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
3.5 to 4.5 mm (0.138 to 0.177 in.)



HINT:

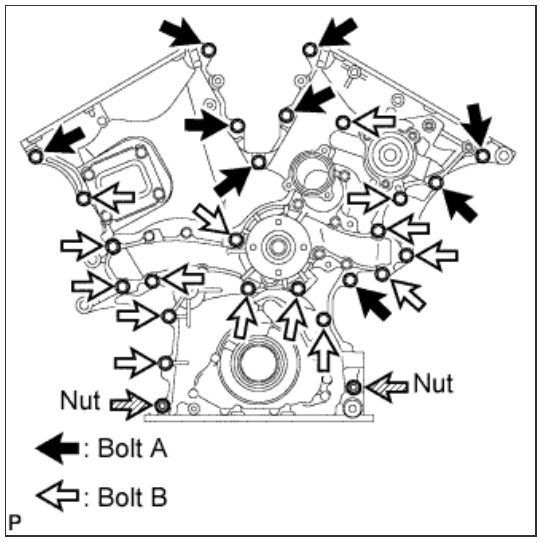
Water related parts are labeled "B" in the illustration.

NOTICE:

- **Install the timing chain cover within 3 minutes after applying seal packing. After installing it, the timing chain cover bolts and nuts must be tightened within 15 minutes. Otherwise the seal packing must be removed and reapplied.**
- **Do not apply seal packing to "A" shown in the illustration.**

e. Align the keyway of the oil pump drive rotor with the rectangular portion of the crankshaft timing gear, and slide the timing chain cover into place.

f. Install the timing chain cover with the 24 bolts labeled A and B, and the 2 nuts. Tighten the bolts and nuts uniformly in several steps.



Torque:
23 N*m{ 235 kgf*cm , 17 ft.*lbf }

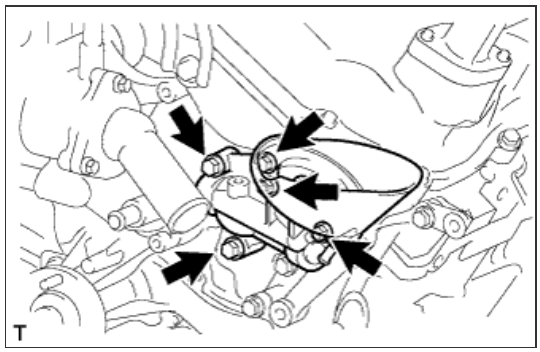
NOTICE:

- **Make sure not to wrap the No. 1 chain and slipper over the timing chain cover seal line.**
- **Install the timing chain cover 15 minutes or more after installing the water pump.**

Standard Bolt:

Item	Quantity	Length
Bolt A	9	25 mm (0.984 in.)
Bolt B	15	55 mm (2.17 in.)

NOTICE:



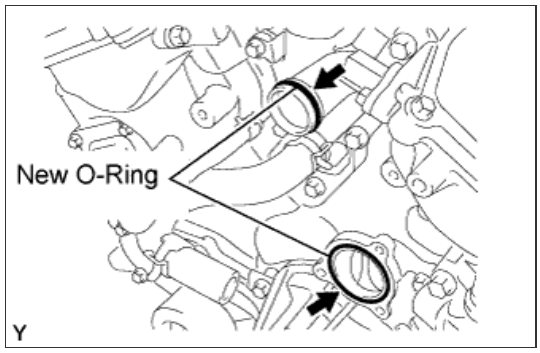
Make sure that there is no oil on the bolt threads.

20. INSTALL OIL FILTER BRACKET SUB-ASSEMBLY

a. Set a new O-ring to the timing chain cover.

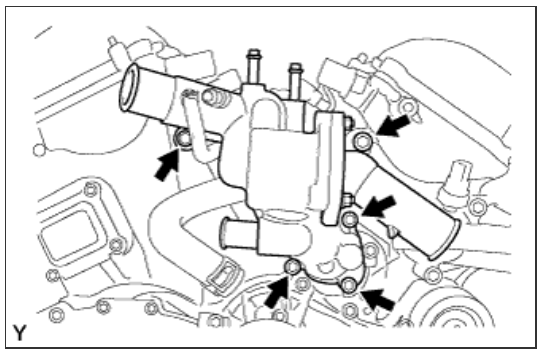
b. Install the oil filter bracket with the 3 bolts and 2 nuts.

Torque:
19 N*m{ 194 kgf*cm , 14 ft.*lbf }



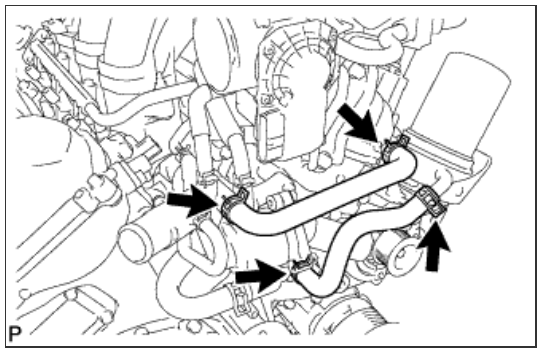
21. INSTALL WATER INLET HOUSING

a. Apply soapy water to a new O-ring, install it to the water outlet pipe.



b. Install a new O-ring to the water pump.

c. Install a new gasket to the water pump.



d. Install the water inlet with the 5 bolts.

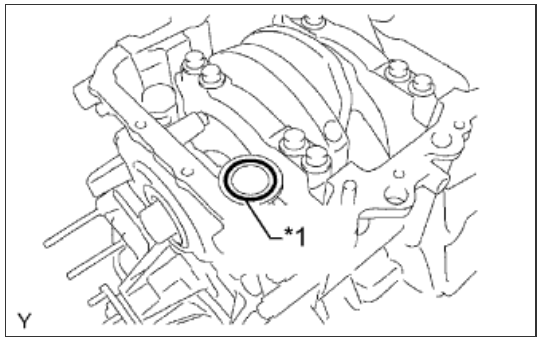
Torque:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

22. INSTALL OIL COOLER HOSE

a. Install the oil cooler hose.

23. INSTALL NO. 2 OIL COOLER HOSE

a. Install the oil cooler hose.



24. INSTALL OIL PAN SUB-ASSEMBLY

a. Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the cylinder block, rear oil seal retainer and oil pan.

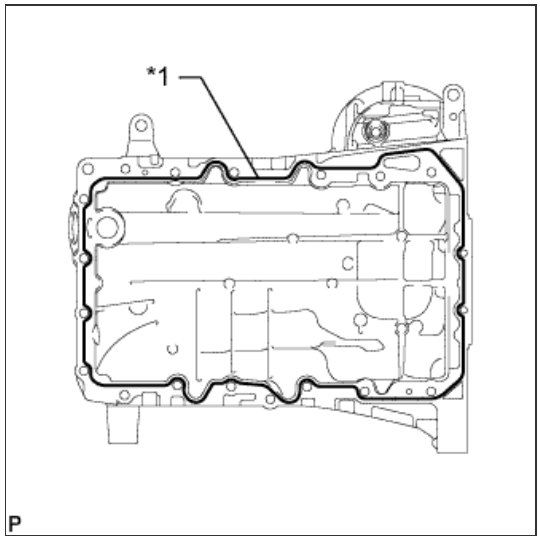
b. Install a new O-ring to the timing chain cover.

Text in Illustration

*1	New O-Ring

c. Apply seal packing in a continuous line as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent



Standard seal diameter:
3 to 4 mm (0.118 to 0.157 in.)

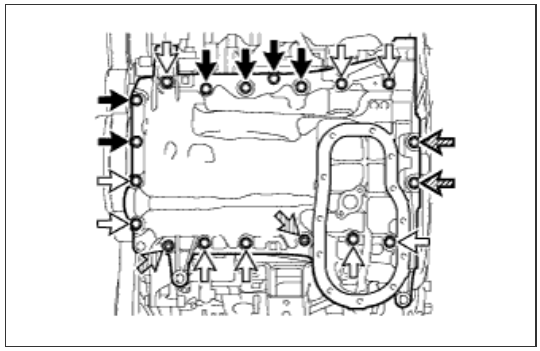
Text in Illustration

*1	Seal Packing

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the oil pan within 3 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after installing.**

d. Install the oil pan with the 17 bolts (A, B and C) and 2 nuts. Tighten the bolts and nuts uniformly in several steps.



Torque:
for bolt A, B and nut:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
for bolt C:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

Text in Illustration

	Bolt A
	Bolt B
	Bolt C
	Nut

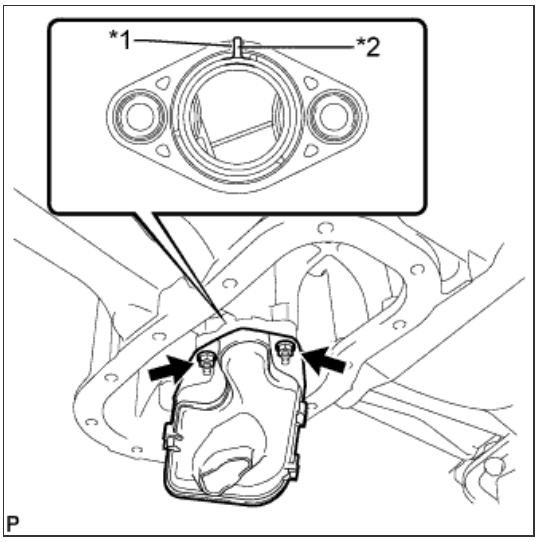
Standard Bolt:

Item	Quantity	Length
A	6	25 mm (0.984 in.)
B	9	45 mm (1.77 in.)
C	2	14 mm (0.551 in.)

25. INSTALL OIL STRAINER SUB-ASSEMBLY

a. Install a new gasket to the oil strainer.

Text in Illustration



*1	Groove
*2	Protrusion

HINT:

Align the protrusion of the gasket with the groove of the oil strainer.

b. Install the oil strainer with the 2 nuts.

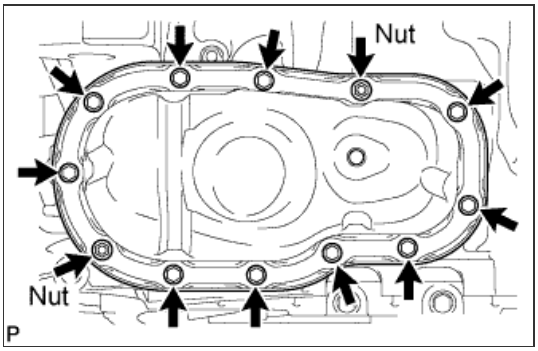
Torque:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

26. INSTALL NO. 2 OIL PAN SUB-ASSEMBLY

a. Apply seal packing in a continuous line as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
3 to 4 mm (0.118 to 0.157 in.)

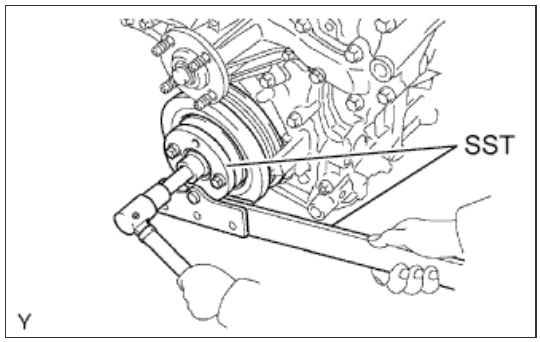


NOTICE:

- **Remove any oil from the contact surface.**
- **Install the No. 2 oil pan within 3 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**

b. Install the No. 2 oil pan with the 10 bolts and 2 nuts. Tighten the bolts and nuts uniformly in several steps.

Torque:
for bolt:
9.0 N*m{ 92 kgf*cm , 81 in.*lbf }
for nut:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

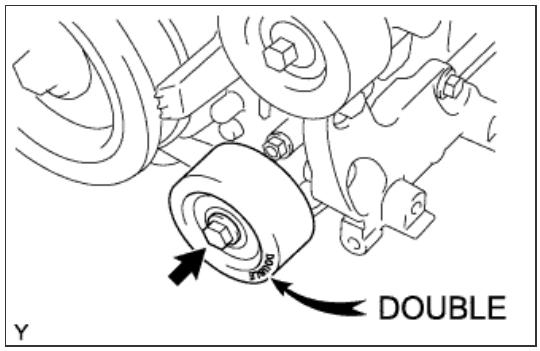


27. INSTALL CRANKSHAFT PULLEY

a. Using SST, install the crankshaft pulley with the pulley set bolt.

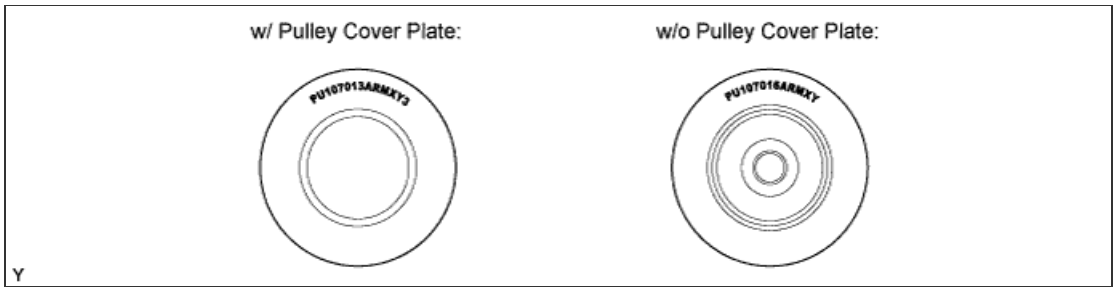
SST
09213-54015 (91651-60855)
09330-00021

Torque:
250 N*m{ 2549 kgf*cm , 184 ft.*lbf }



28. INSTALL NO. 1 IDLER PULLEY SUB-ASSEMBLY

a. Install the No. 1 idler pulley with the bolt.



Torque:
54 N*m{ 551 kgf*cm , 40 ft.*lbf }

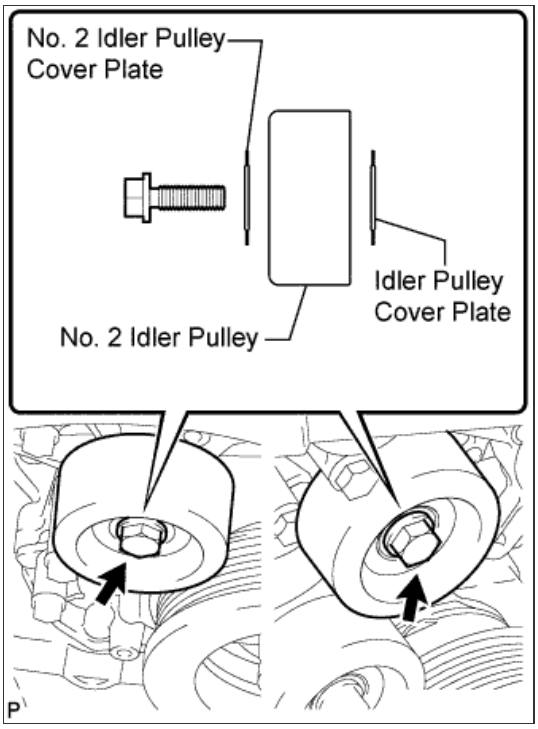
HINT:

"DOUBLE" is marked on the No. 1 idler pulley to distinguish it from the No. 2 idler pulley.

29. INSTALL NO. 2 IDLER PULLEY SUB-ASSEMBLY

a. w/ Pulley Cover Plate:

i. Install the idler pulley cover plate, idler pulley and No. 2 idler pulley cover plate with the bolt.



Torque:
54 N*m{ 551 kgf*cm , 40 ft.*lbf }

NOTICE:

If it is necessary to replace the pulley or either plate, replace the No. 2 idler pulley cover plate, No. 2 idler pulley and idler pulley cover plate as a set with new parts.

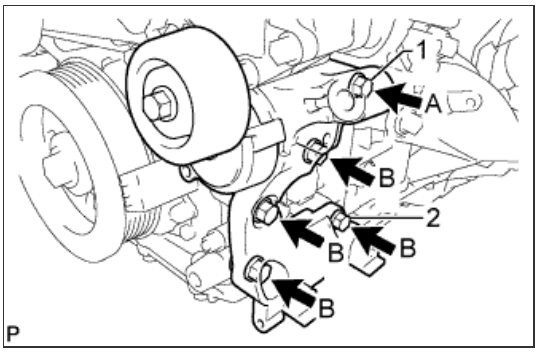
b. w/o Pulley Cover Plate:
Install the 2 No. 2 idler pulleys with the 2 bolts.

Torque:
54 N*m{ 551 kgf*cm , 40 ft.*lbf }

30. INSTALL V-RIBBED BELT TENSIONER ASSEMBLY

a. emporarily install the V-ribbed belt tensioner with the 5 bolts.

b. Tighten bolt 1 and 2 in numerical order.



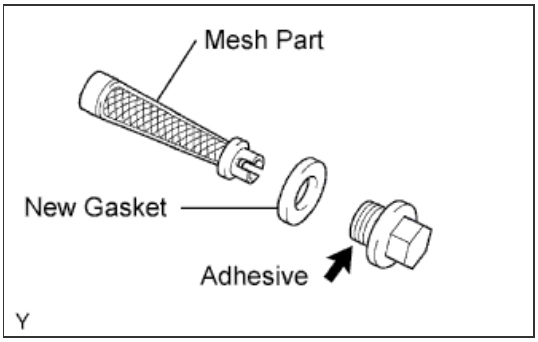
Torque:
36 N*m{ 367 kgf*cm , 27 ft.*lbf }

c. Tighten the other bolts.

Torque:
36 N*m{ 367 kgf*cm , 27 ft.*lbf }

Standard Bolt:

Item	Length
A	70 mm (2.76 in.)
B	33 mm (1.30 in.)

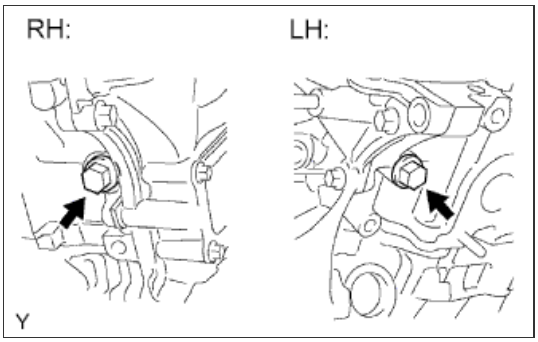


31. INSTALL OIL CONTROL VALVE FILTER

a. Install 2 new gaskets to 2 new unions.

b. Insert new filters to the unions.

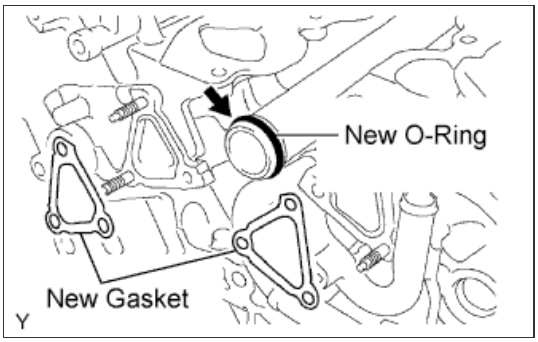
c. Apply adhesive to 2 or 3 threads of the unions.



Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

d. Install the unions to the cylinder head LH and RH.

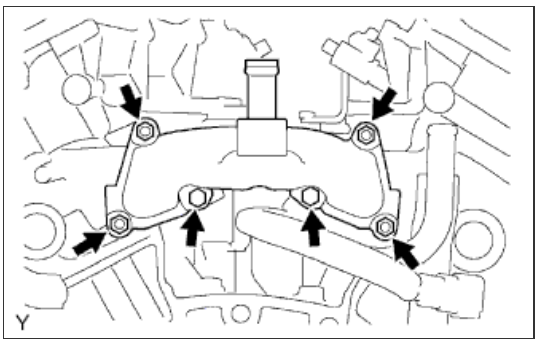
Torque:



62 N*m 632 kgf*cm , 46 ft.*lbf

32. INSTALL REAR WATER BY-PASS JOINT

a. Apply soapy water to a new ring.

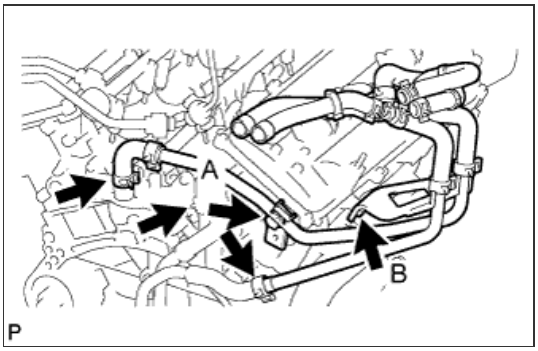


b. Install the O-ring to the water outlet pipe, and set 2 new gaskets to the water ports LH and RH.

c. Install the rear water by-pass joint with the 2 bolts and 4 nuts.

Torque:
for bolt:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }
for nut:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

d. Connect the engine coolant temperature sensor connector.

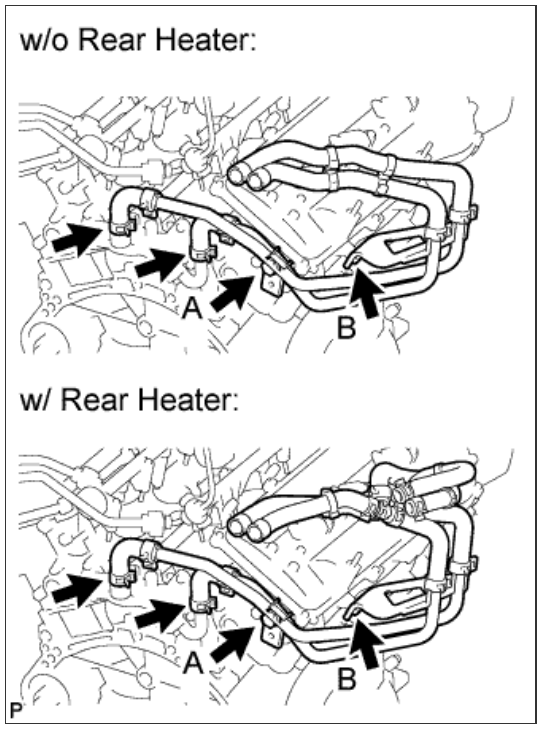


33. INSTALL WATER HOSE SUB-ASSEMBLY (for Automatic Transmission)

a. Temporarily install the heater water pipe, and then tighten the 2 bolts.

Torque:
for bolt A:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }
for bolt B:
13 N*m{ 138 kgf*cm , 10 ft.*lbf }

b. Connect the 3 water hoses.



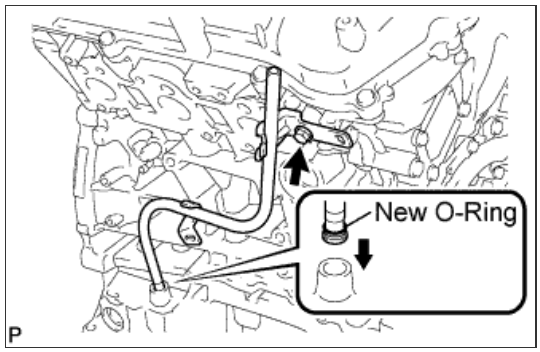
34. INSTALL WATER HOSE SUB-ASSEMBLY (for Manual Transmission)

a. Temporarily install the heater water pipe, and then tighten the 2 bolts.

Torque:
for bolt A:
9.8 N*m 100 kgf*cm , 87 in.*lbf }
for bolt B:
13 N*m{ 138 kgf*cm , 10 ft.*lbf }

b. Connect the 2 water hoses.

35. INSTALL ENGINE OIL LEVEL DIPSTICK GUIDE



a. Install a new O-ring to the dipstick guide.

b. Apply a light coat of engine oil to the O-ring.

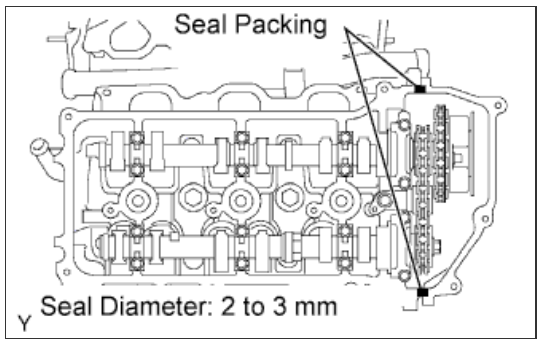
c. Push the dipstick guide end into the guide hole.

d. Install the dipstick guide with the bolt.

Torque:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

36. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY RH

a. Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the cylinder head, timing chain cover and cylinder head cover.



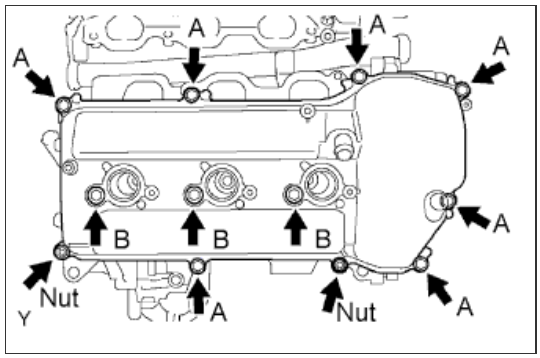
b. Apply seal packing as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
2 to 3 mm (0.0787 to 0.118 in.)

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the head cover within 3 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**



c. Install a new gasket to the cylinder head cover.

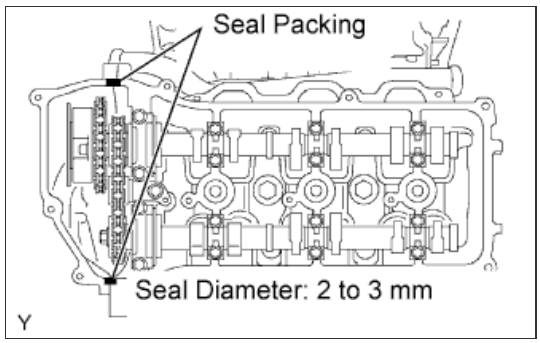
d. Install the seal washers to the bolts.

e. emporarily install the cylinder head cover with the 10 bolts and 2 nuts. Tighten the bolts and nuts uniformly in several steps.

Torque:
for bolt A:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }
for bolt B and nut:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

37. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY LH

a. Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the cylinder head, timing chain cover and cylinder head cover.



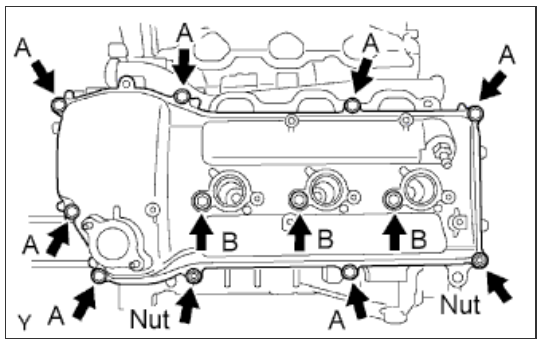
b. Apply seal packing as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
2 to 3 mm (0.0787 to 0.118 in.)

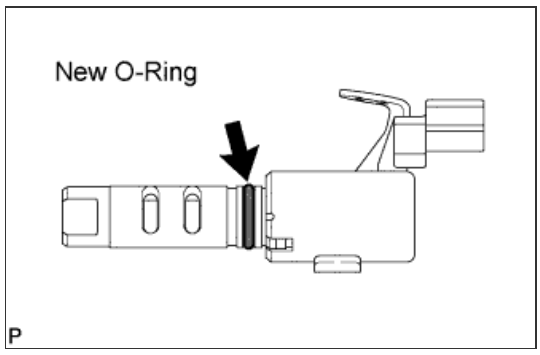
NOTICE:

- **Remove any oil from the contact surface.**
- **Install the head cover within 3 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**



c. Install a new gasket to the cylinder head cover.

d. Install the seal washers to the bolts.

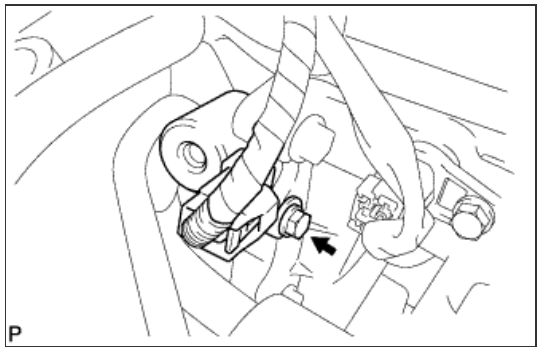


e. Temporarily install the cylinder head cover with the 10 bolts and 2 nuts. Tighten the bolts and nuts uniformly in several steps.

Torque:
for bolt A:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }
for bolt B and nut:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

38. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY LH

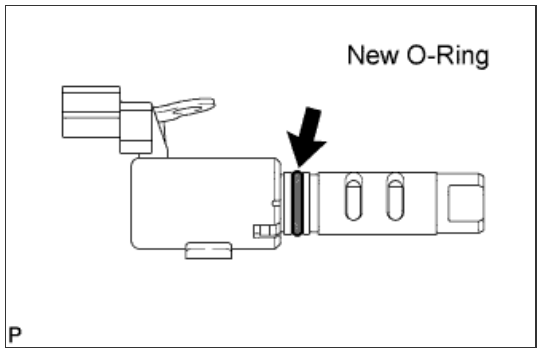
a. Apply a light coat of engine oil to a new O-ring and install it to the oil control valve.



b. Install the oil control valve with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

NOTICE:

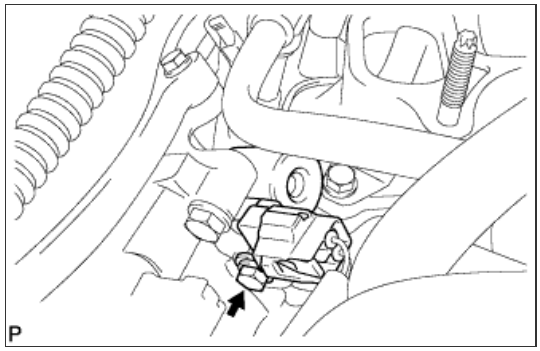


- **Do not allow foreign matter to contact the oil seal face of the oil control valve (connecting surface with cylinder head).**
- **Be careful that the O-ring is not cracked when installing the oil control valve.**

c. Connect the oil control valve connector.

39. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY RH

a. Apply a light coat of engine oil to a new O-ring and install it to the oil control valve.



b. Install the oil control valve with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

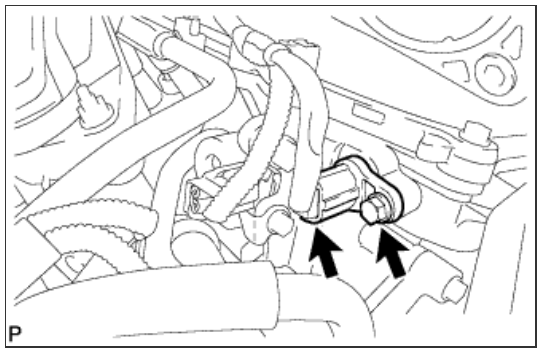
NOTICE:

- **Do not allow foreign matter to contact the oil seal face of the oil control valve (connecting surface with cylinder head).**
- **Be careful that the O-ring is not cracked when installing the oil control valve.**

c. Connect the camshaft timing oil control valve connector.

40. INSTALL VVT SENSOR (for Bank 2)

a. Apply a light coat of engine oil to the O-ring of the VVT sensor.



NOTICE:

- **When reusing the sensor, inspect the O-ring.**
- **If the O-ring has scratches or cuts, replace the sensor.**

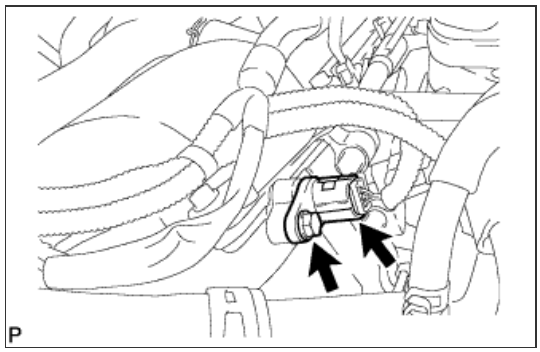
b. Install the VVT sensor with the bolt.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

c. Connect the sensor connector.

41. INSTALL VVT SENSOR (for Bank 1)

a. Apply a light coat of engine oil to the O-ring of the sensor.



NOTICE:

- **When reusing the sensor, inspect the O-ring.**
- **If the O-ring has scratches or cuts, replace the sensor.**

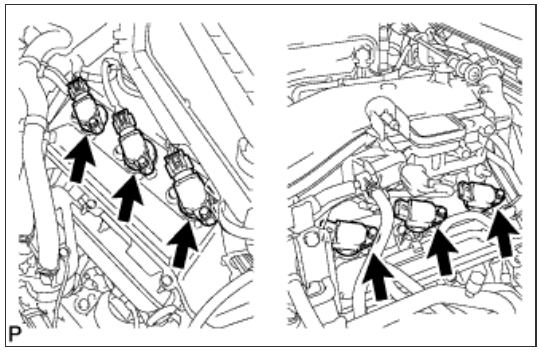
b. Install the sensor with the bolt.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

c. Connect the sensor connector.

42. INSTALL SPARK PLUG

a. Install the 6 spark plugs.

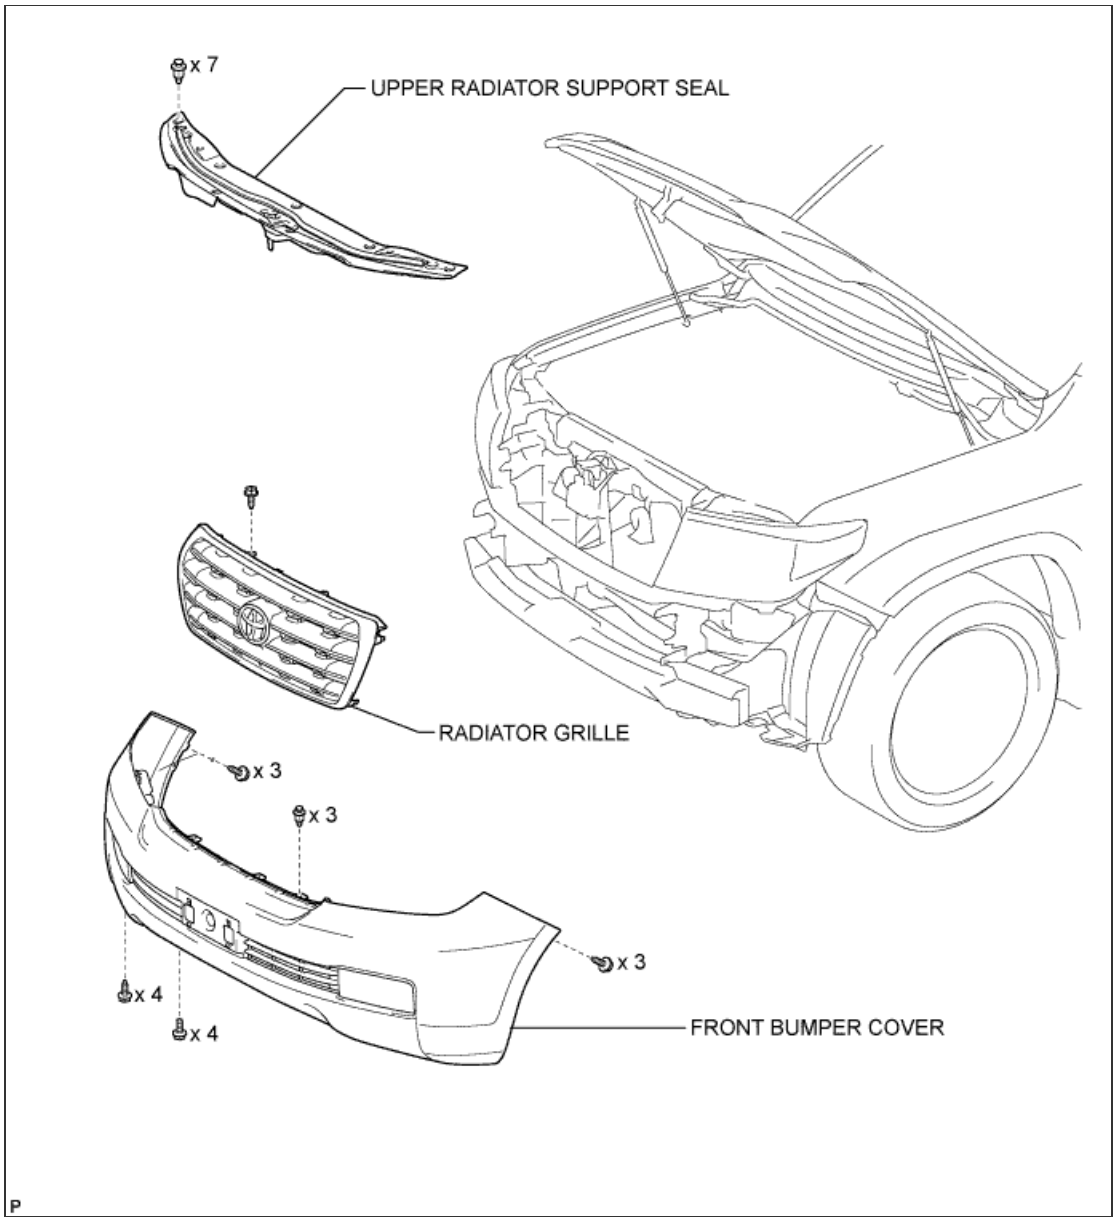


Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

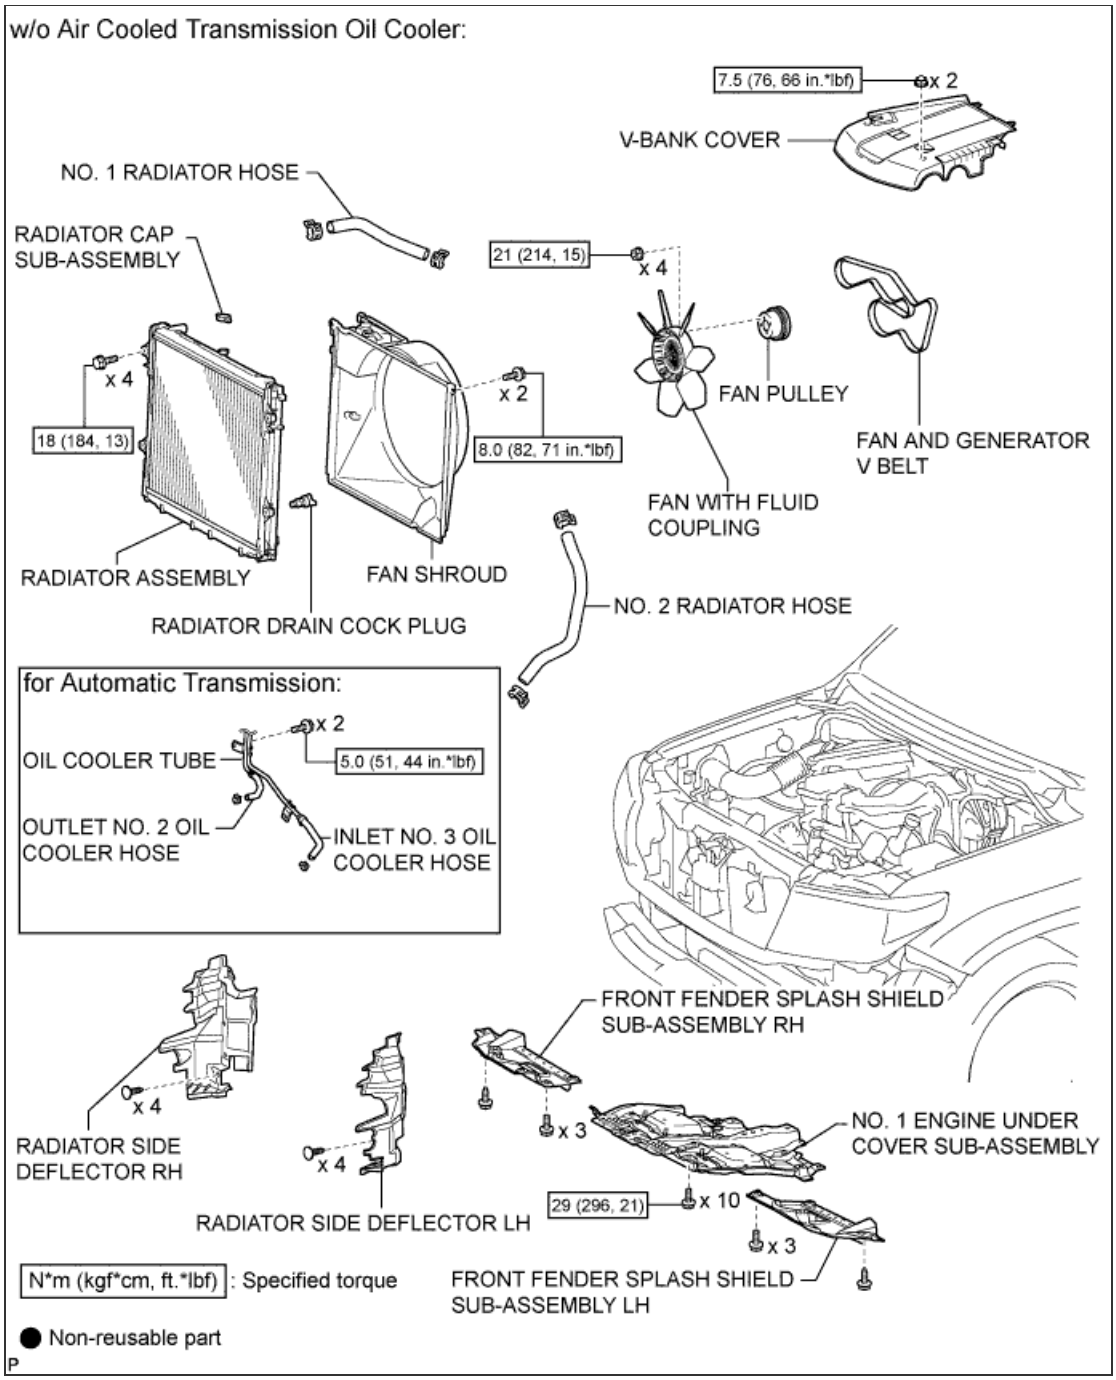
43. INSTALL IGNITION COIL ASSEMBLY

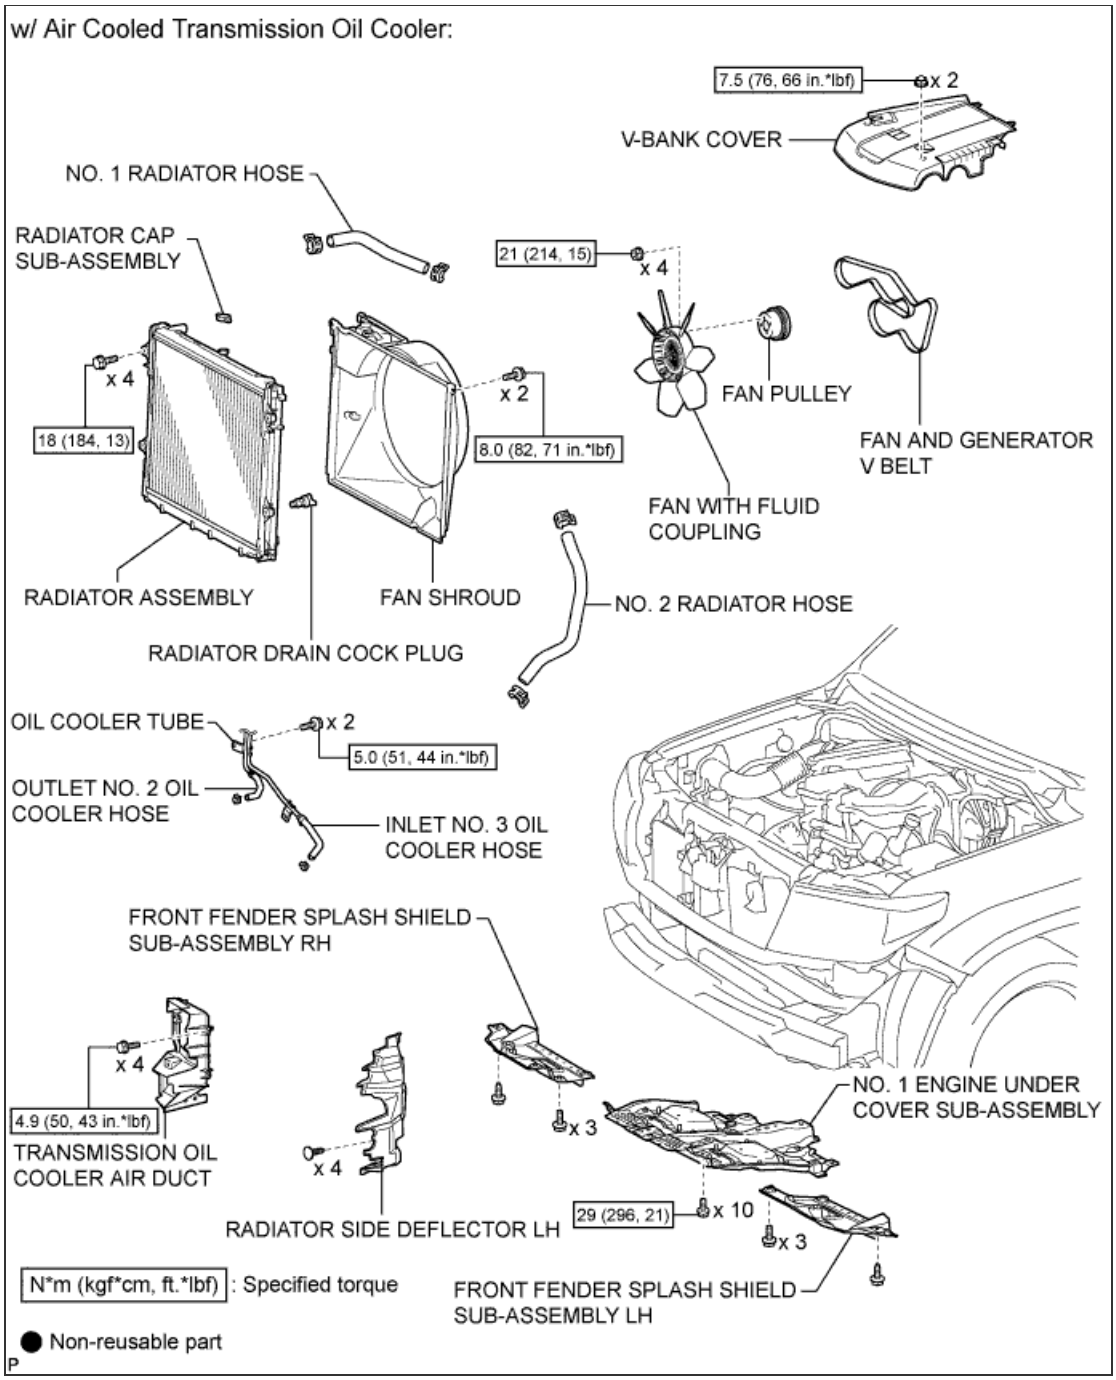
a. Install the 6 ignition coils with the 6 bolts.

Torque:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

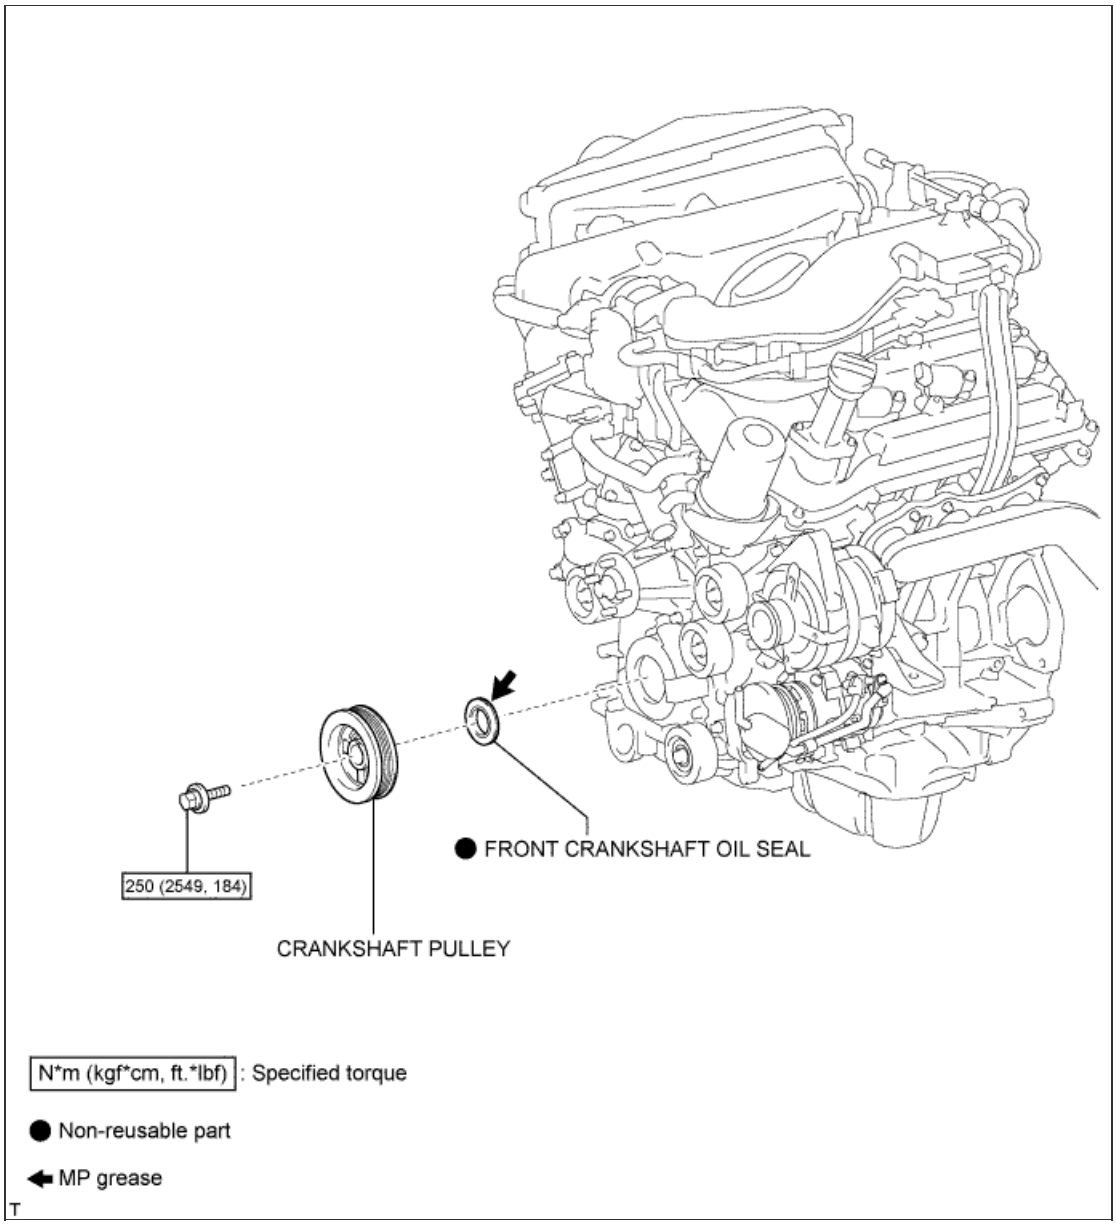


b. Connect the 6 ignition coil connectors.





44. INSTALL ENGINE ASSEMBLY



a. Install the engine assembly (Click here).

for Preparation Click here

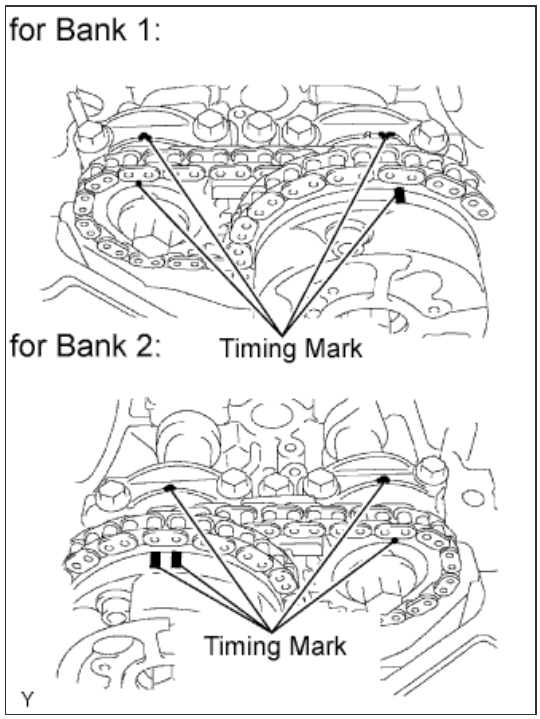
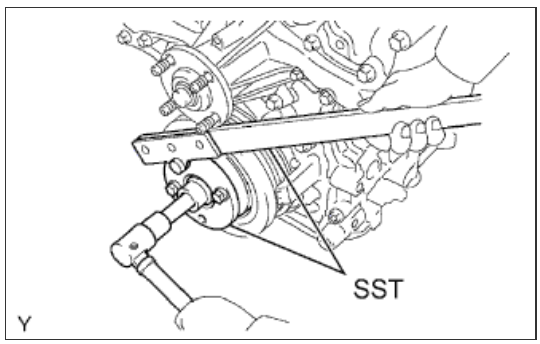
1. REMOVE RADIATOR ASSEMBLY



a. Remove the radiator (Click here).

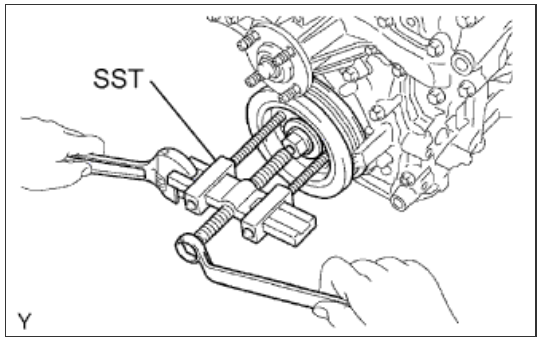
2. REMOVE CRANKSHAFT PULLEY

a. Turn the crankshaft pulley, and align the notch with the timing mark "0" of the timing chain cover.



b. Check that the timing marks of the camshaft timing gears and sprockets are aligned with the timing marks of the bearing caps as shown in the illustration.

c. Using SST, hold the crankshaft pulley and loosen the pulley set bolt.

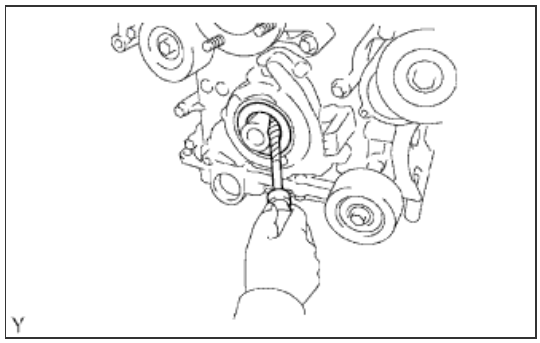


SST
09213-54015 (91651-60855)
09330-00021

d. Using the pulley set bolt and SST, remove the crankshaft pulley.

SST

09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05030)

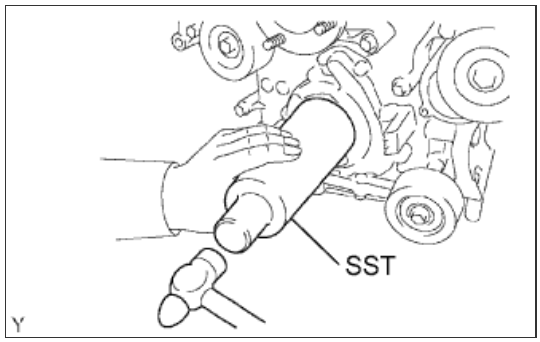


3. REMOVE FRONT CRANKSHAFT OIL SEAL

a. Using a screwdriver, pry out the oil seal.

NOTICE:

Be careful not to damage the crankshaft. Wrap the tip of the screwdriver with tape.



for Preparation Click here

1. INSTALL FRONT CRANKSHAFT OIL SEAL

a. Apply MP grease to the lip of a new oil seal.

b. Using and a hammer, tap in the oil seal until its surface is flush with the timing chain cover edge.

SST
09226-10010

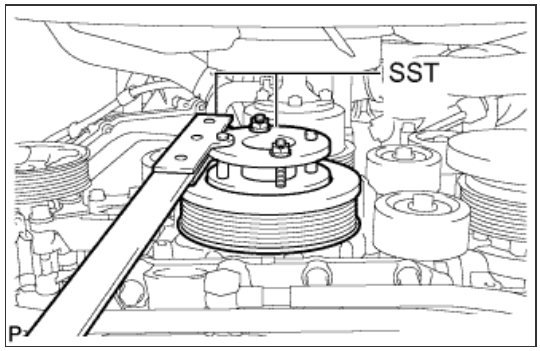
for Preparation Click here

1. REMOVE AUTOMATIC TRANSMISSION ASSEMBLY (for Automatic Transmission)

a. Remove the automatic transmission (Click here).

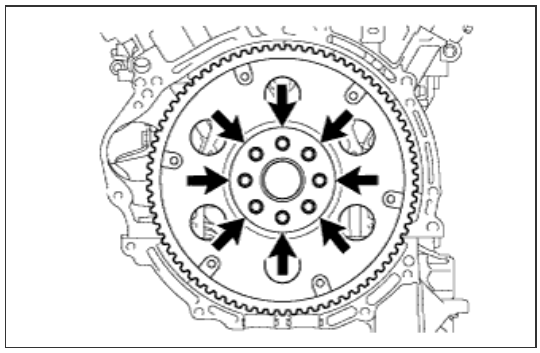


2. REMOVE MANUAL TRANSMISSION ASSEMBLY (for Manual Transmission)

a. Remove the manual transmission (Click here).

3. REMOVE DRIVE PLATE AND RING GEAR SUB-ASSEMBLY (for Automatic Transmission)

a. Using SST, hold the crankshaft.



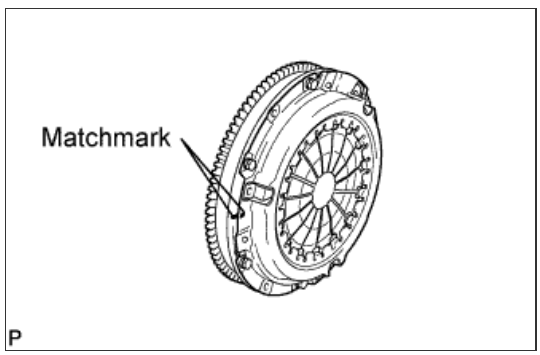
SST
09213-54015 (91651-60855)
09330-00021

b. Remove the 8 bolts, rear spacer, drive plate and front spacer.

NOTICE:

Do not reuse the bolts.

4. REMOVE CLUTCH COVER ASSEMBLY (for Manual Transmission)



a. Put matchmarks on the clutch cover and flywheel.

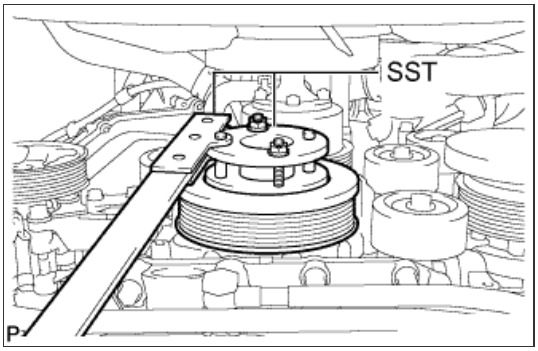
b. Loosen each set bolt one turn at a time until spring tension is released.

c. Remove the 6 set bolts, and pull off the clutch cover.

NOTICE:

Do not drop the clutch disc.

5. REMOVE CLUTCH DISC ASSEMBLY (for Manual Transmission)

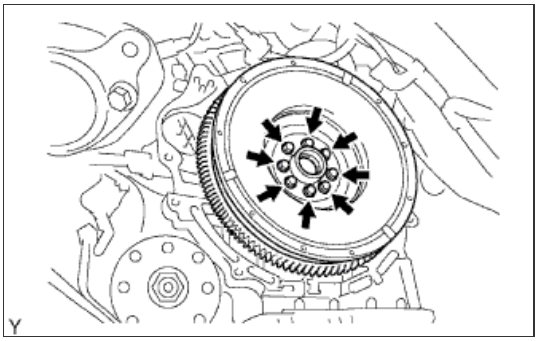


NOTICE:

Keep the lining part of the clutch disc, pressure plate and surface of the flywheel away from oil and foreign matter.

6. REMOVE FLYWHEEL SUB-ASSEMBLY (for Manual Transmission)

a. Using SST, hold the crankshaft.

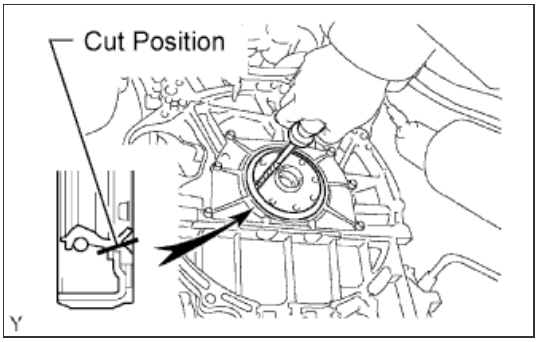


SST
09213-54015 (91651-60855)
09330-00021

b. Remove the 8 bolts and flywheel.

NOTICE:

Do not reuse the bolts.



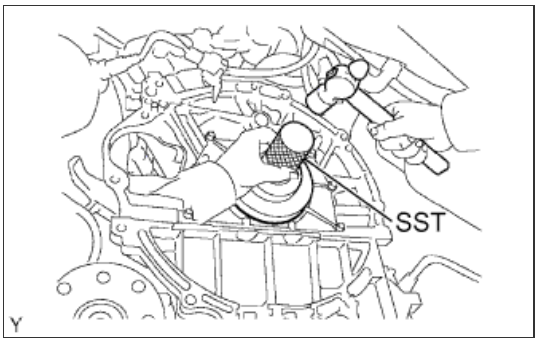
7. REMOVE REAR CRANKSHAFT OIL SEAL

a. Using a knife, cut off the lip of the oil seal.

b. Using a screwdriver, pry out the oil seal.

NOTICE:

Be careful not to damage the crankshaft. Tape the screwdriver tip before use.



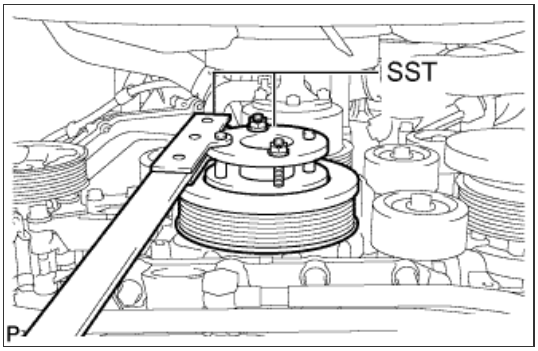
for Preparation Click here

1. INSTALL REAR CRANKSHAFT OIL SEAL

a. Apply MP grease to the lip of a new oil seal.

b. Using SST and a hammer, tap in the oil seal until its surface is flush with the rear oil seal retainer edge.

SST
09223-78010

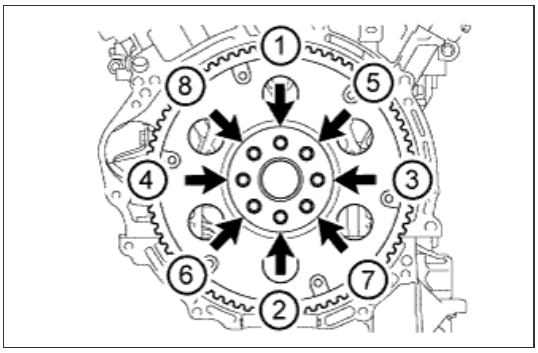


2. INSTALL DRIVE PLATE AND RING GEAR SUB-ASSEMBLY (for Automatic Transmission)

a. Using SST, hold the crankshaft.

SST
09213-54015 (91651-60855)
09330-00021

b. Temporarily install the front spacer, drive plate and rear spacer with the 8 bolts.

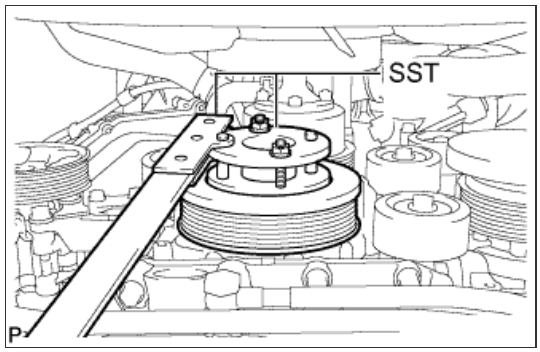


c. Tighten the 8 bolts uniformly in several steps in the order shown in the illustration.

Torque:
83 N*m{ 846 kgf*cm , 61 ft.*lbf }

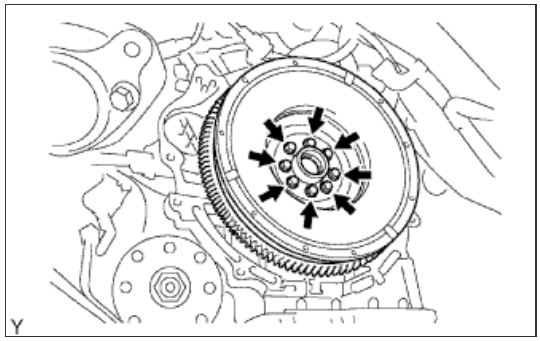
NOTICE:

Do not start the engine for at least 1 hour after installing.



3. INSTALL FLYWHEEL SUB-ASSEMBLY (for Manual Transmission)

a. Using SST, hold the crankshaft.

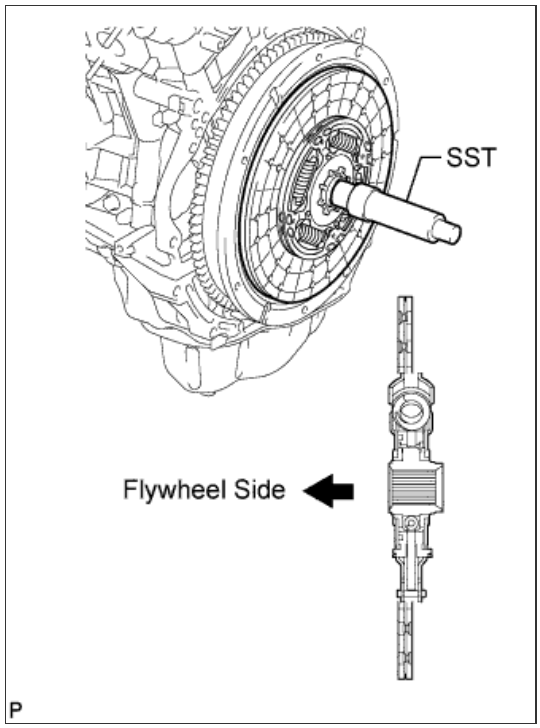


SST
09213-54015 (91651-60855)
09330-00021

b. Temporarily install the flywheel with the 8 bolts.

c. Install and tighten the 8 mounting bolts uniformly in several steps.

Torque
83 N*m{ 846 kgf*cm , 61 ft.*lbf }



4. INSTALL CLUTCH DISC ASSEMBLY (for Manual Transmission)

a. Insert SST into the clutch disc, then insert the clutch disc into the flywheel.

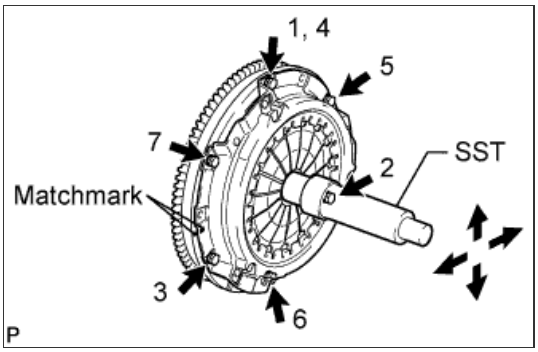
SST
09301-00110

NOTICE:

Take care not to insert the clutch disc in the wrong direction.

5. INSTALL CLUTCH COVER ASSEMBLY (for Manual Transmission)

a. Align the matchmark on the clutch cover with the one on the flywheel.

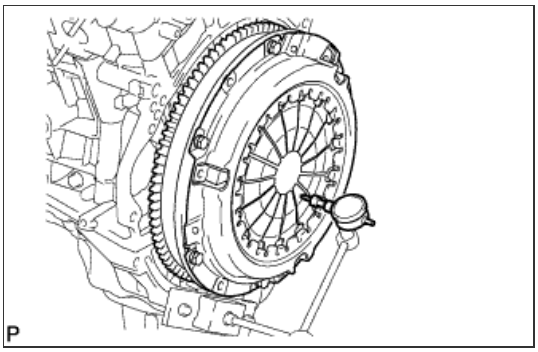


b. In the order shown in the illustration, temporarily install the 6 bolts starting from the bolt located near the knock pin on the top.

c. Check that the disc is in the center by lightly moving SST up and down, and left and right.

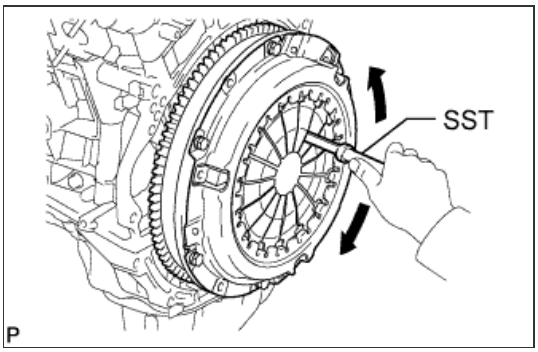
SST
09301-00110

.Evenly tighten the bolts by following the order shown in the illustration.



Torque
19 N m 195 k f m 14 ft. lbf

. INSPECT AND ADJUST CLUTCH COVER ASSEMBLY

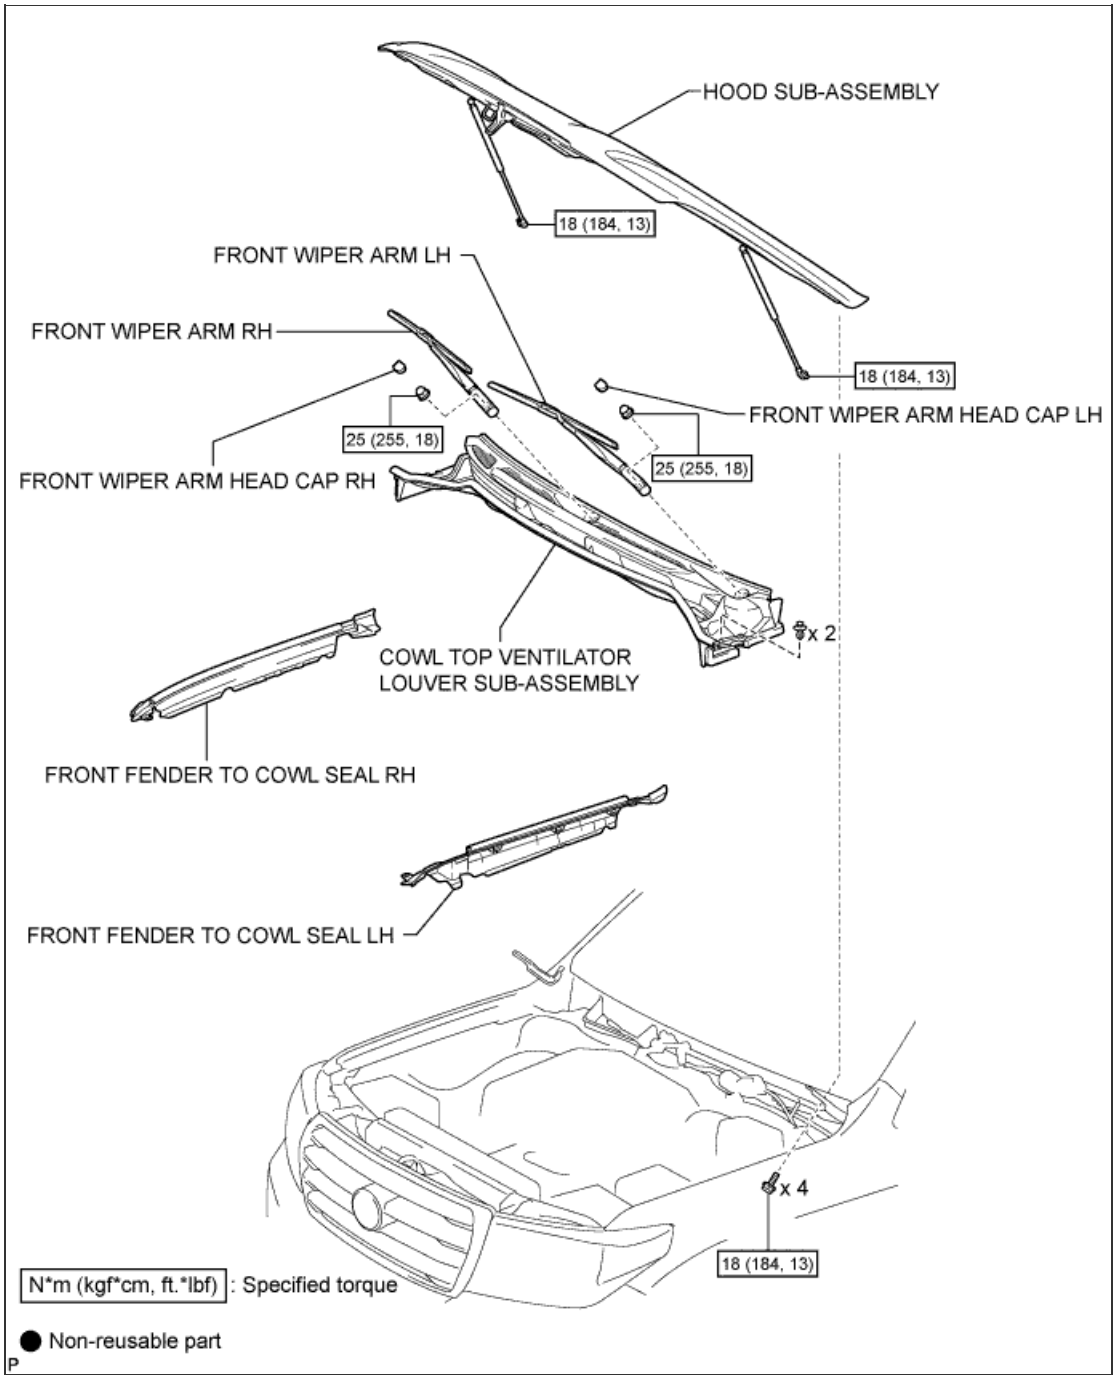


a. Using a dial indicator with a roller instrument, check the diaphragm spring tip alignment.

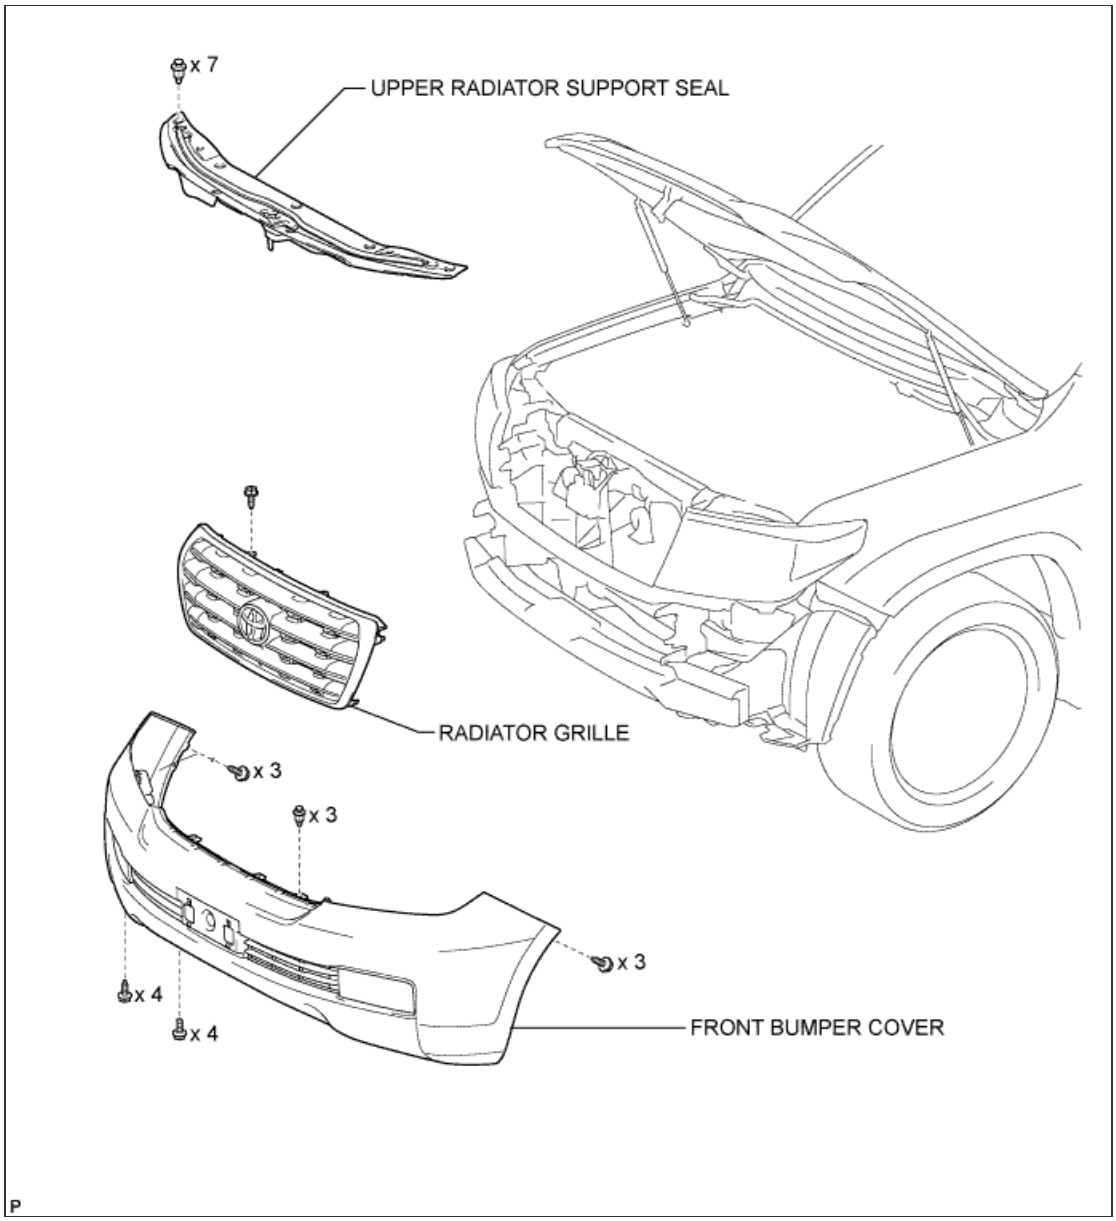
Maximum Misalignment:
1.3 mm (0.0512 in.)

b. If the alignment is not as specified, adjust the diaphragm spring tip alignment using SST.

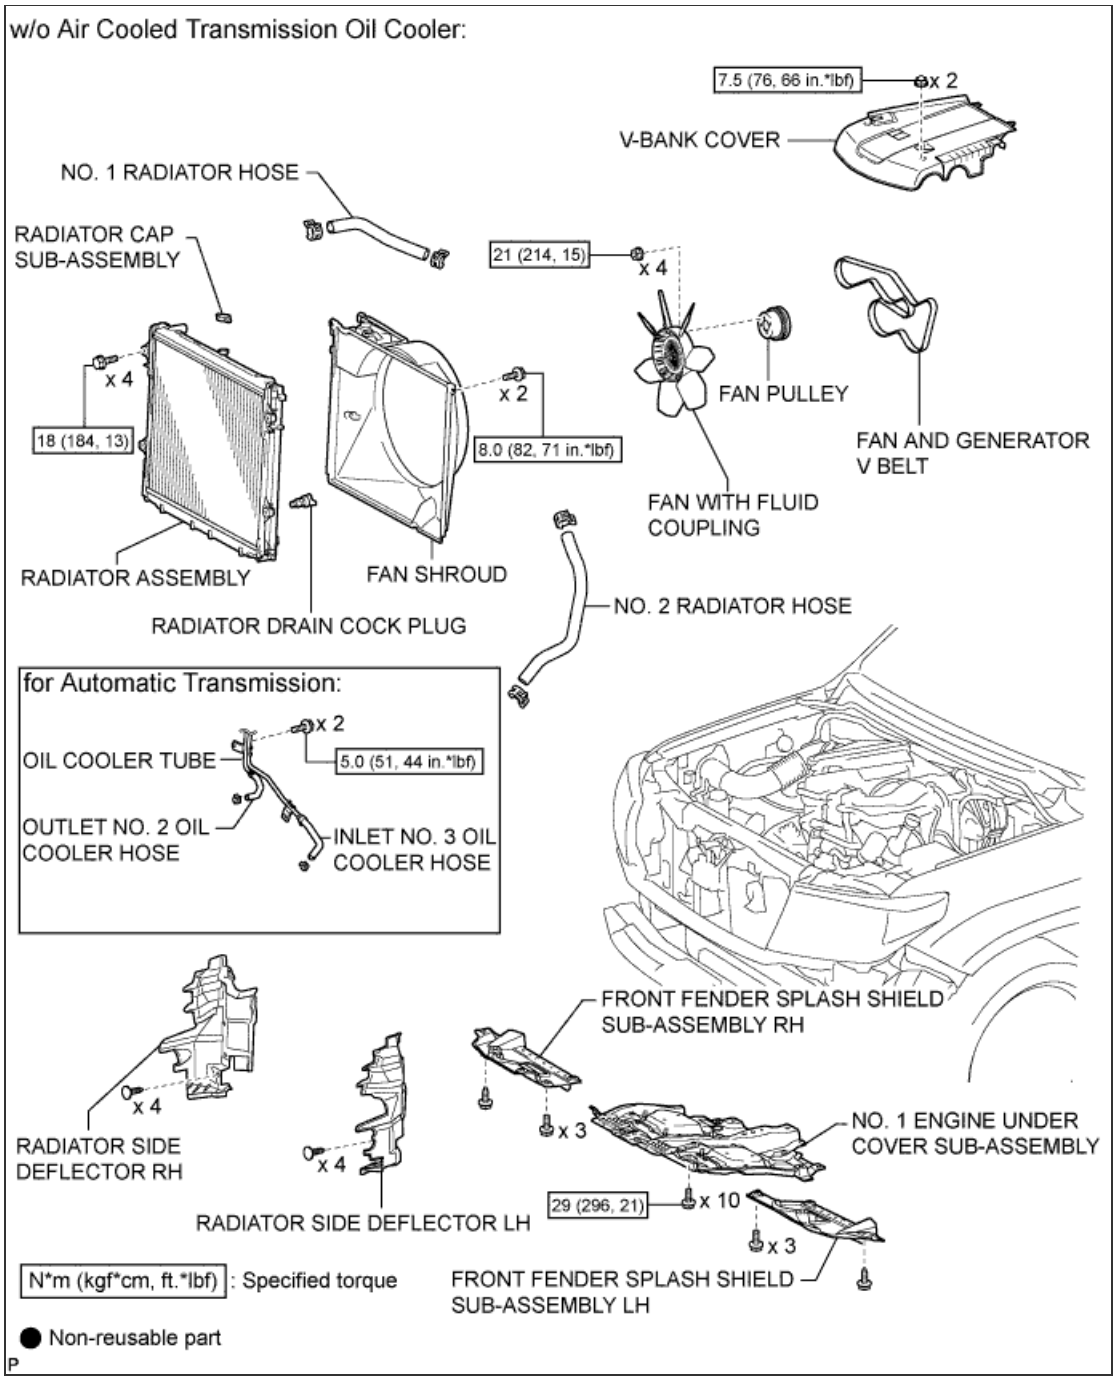
SST
09333-00013



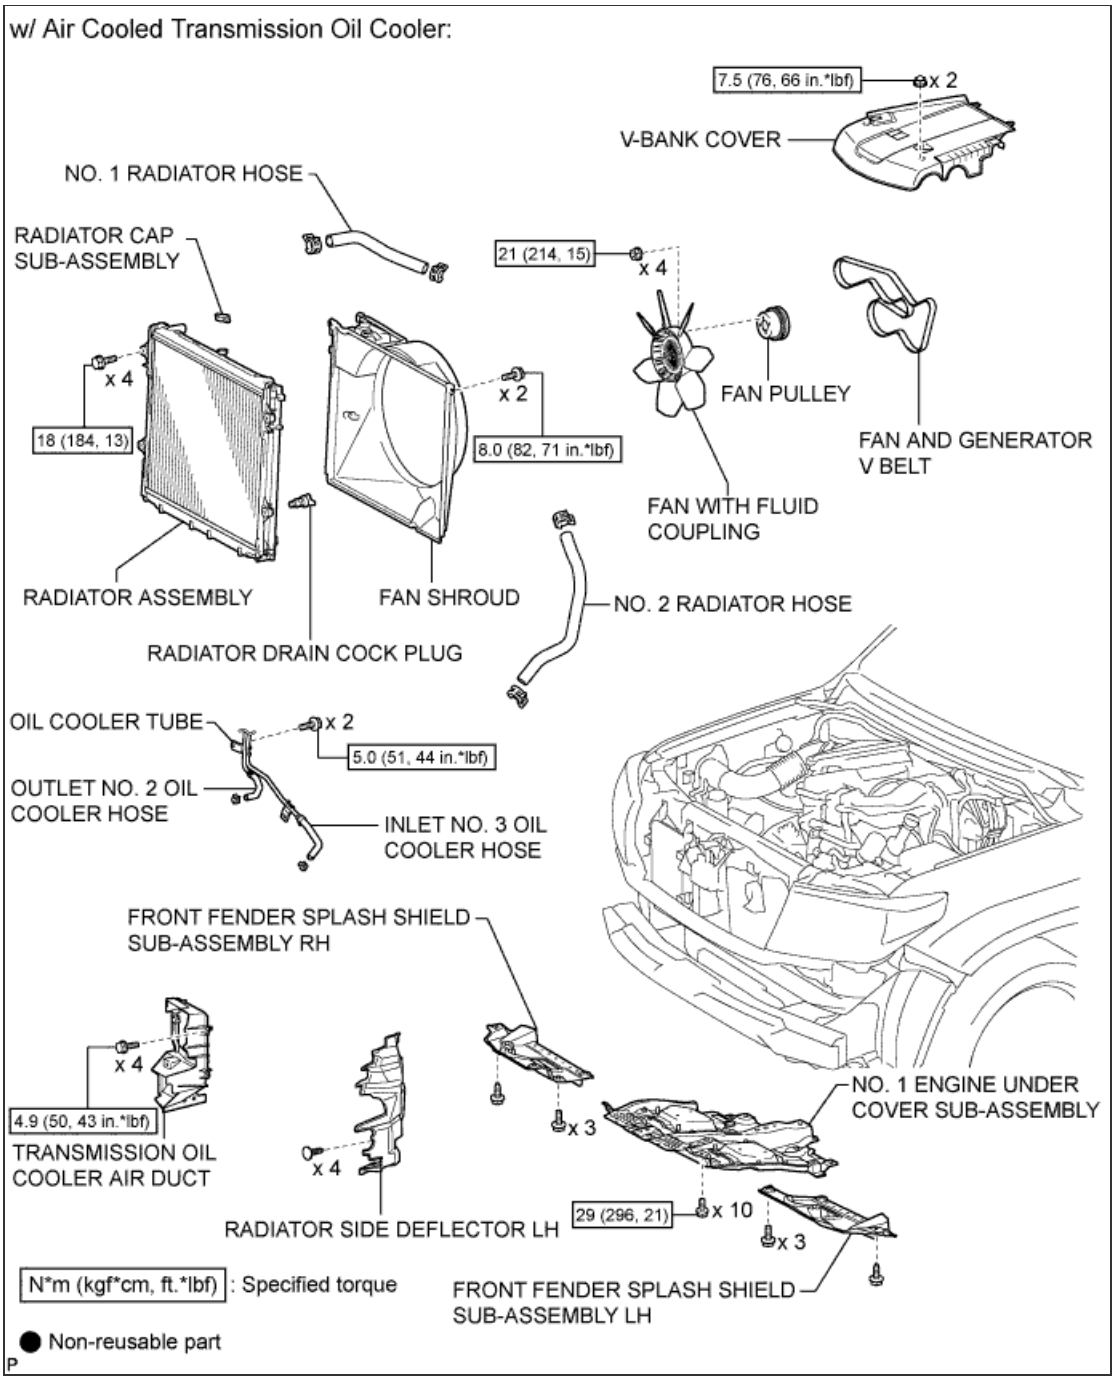
7. INSTALL AUTOMATIC TRANSMISSION ASSEMBLY (for Automatic Transmission)



a. Install the automatic transmission (Click here).



8. INSTALL MANUAL TRANSMISSION ASSEMBLY (for Manual Transmission)



a. Install the manual transmission (Click here).

P

for Preparation Click here

1. DISCHARGE FUEL SYSTEM PRESSURE

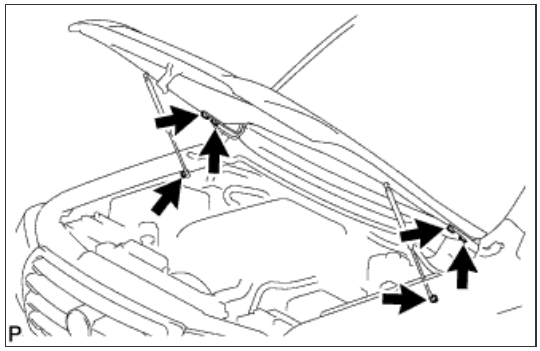
a. Discharge the f el system pressure (Click here).

2. PRECAUTION

NOTICE:

After turning the ignition switch off waiting time may be required bef e disconnecting the cable fr the battery terminal. Theref e, make sure to read the disconnecting the cable fr the battery terminal notice bef e proceeding with work (Click here).

3. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL



NOTICE:

When disconnecting the cable, some systems need to be initiali ed after the cable is reconnected (Click here).

4. REMOVE HOOD SUB-ASSEMBLY

a. Remove the 2 hood support bolts and disconnect the hood supports.

b. Remove the 4 bolts and hood.

5. REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

a. Remove the cowl top ventilator louver (Click here).

6. REMOVE RADIATOR ASSEMBLY

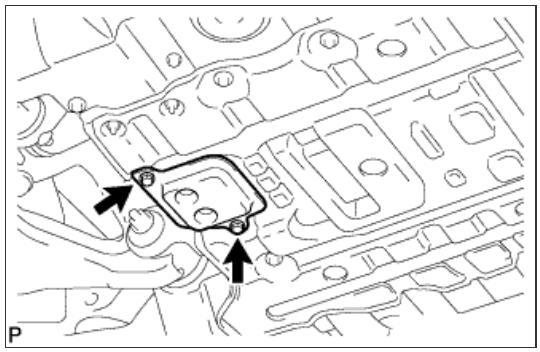
a. Remove the radiator assembly (Click here).

7. DRAIN ENGINE OIL

a. Remove the oil filler cap.

b. Remove the 2 bolts and service hole cover fr the No. 2 engine under cover.

c. Remove the oil drain plug, and drain the engine oil fr the oil pan.

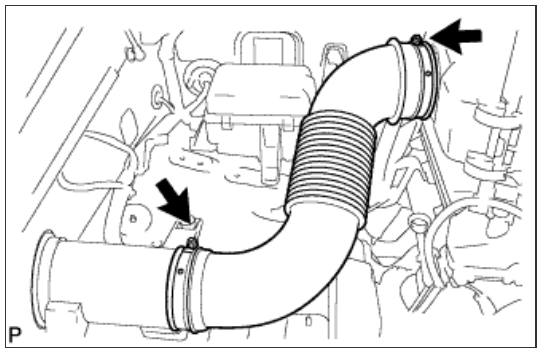


NOTICE:

Collect the oil in an oil disposal container.

d. Wipe the oil pan and drain plug.

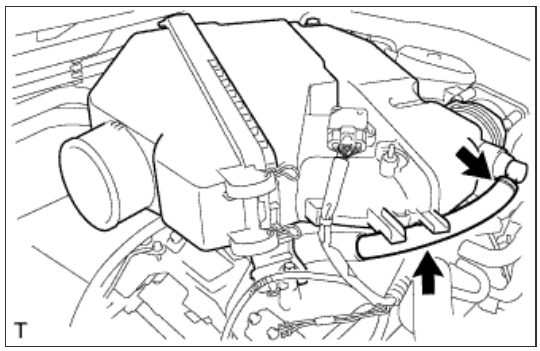
e. Install a new gasket and the drain plug.



Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

8. REMOVE NO. 2 ENGINE UNDER COVER

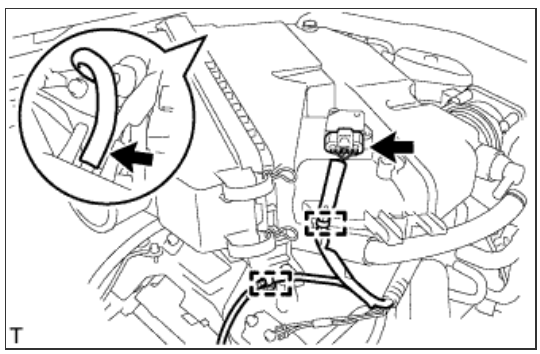
9. REMOVE NO. 2 AIR CLEANER HOSE



a. Loosen the 2 hose clamps and remove the air cleaner hose.

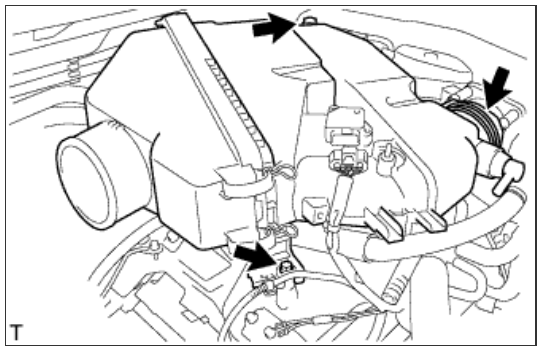
10. REMOVE AIR CLEANER ASSEMBLY

a. Disconnect the No. 2 ventilation hose.



b. Detach the hose clamp.

c. Disconnect the vacuum hose.

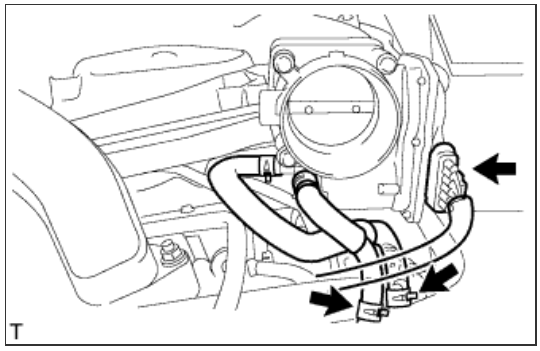


d. Disconnect the MAF meter connector.

e. Using a clip remover, detach the 2 wire harness clamps.

f. Loosen the hose clamp.

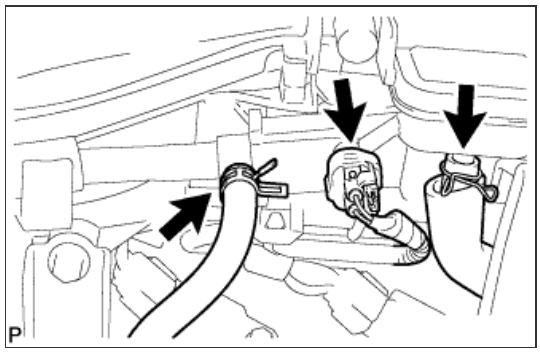
g. Remove the 2 bolts and air cleaner assembly.



11. REMOVE INTAKE AIR SURGE TANK

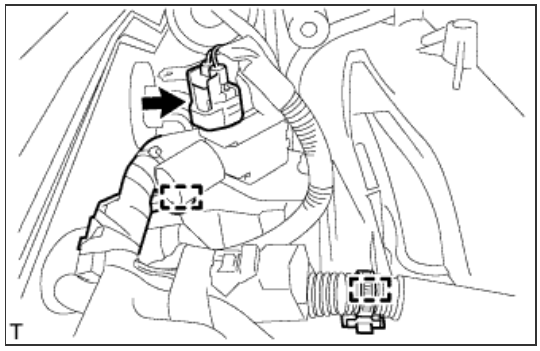
a. Disconnect the throttle body connector.

b. Disconnect the No. 4 water by sa hose.



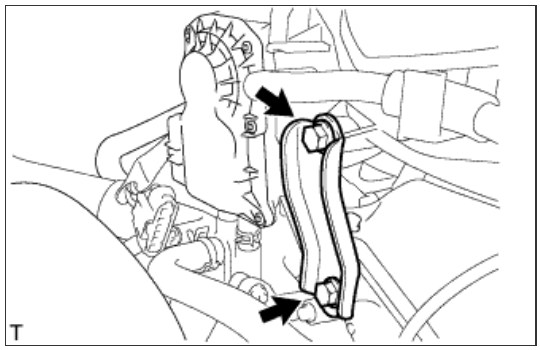
c. Disconnect the No. 5 water by sa hose.

d. Disconnect the purge line hose.

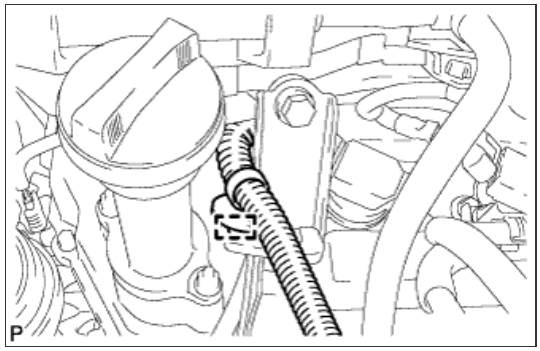


e. Disconnect the purge VSV connector.

f. Disconnect the No. 1 ventilation hose.

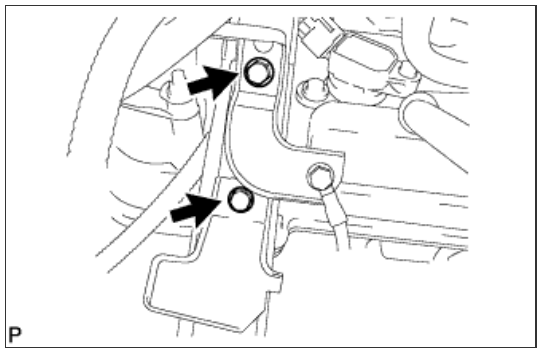


g. Disconnect the vacuum switching valve (f ACIS) connector.

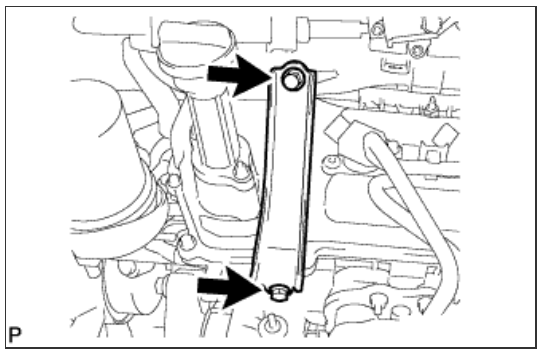


h. Using a clip remover, detach the 2 wire harness clamps.

i. Remove the 2 bolts and throttle body bracket.

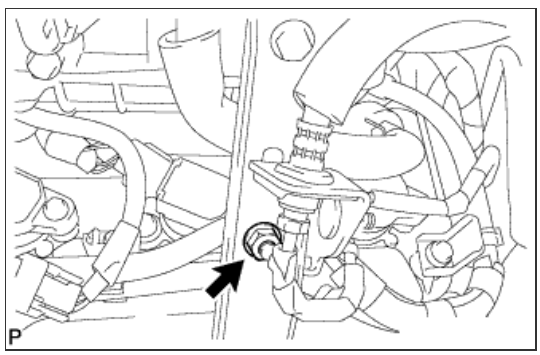


j. Using a clip remover, detach the wire harness clamp.

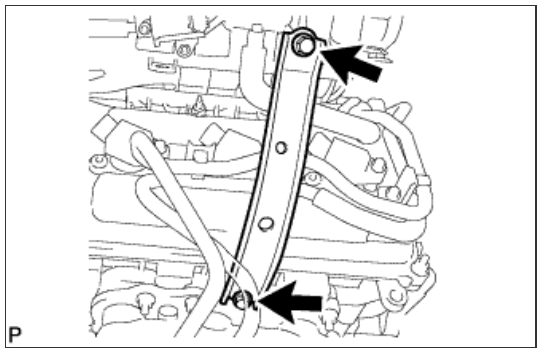


k. Remove the bolt and bracket fr the No. 1 surge tank stay.

l. Remove the bolt and oil baff e plate.

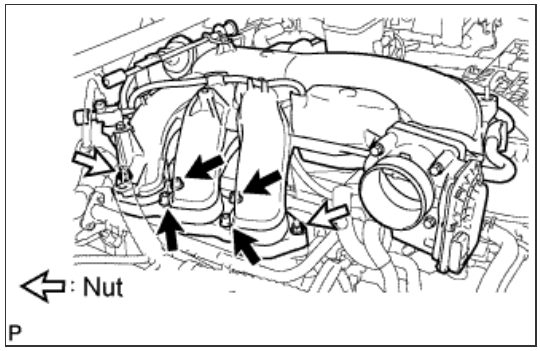


m. Remove the 2 bolts and No. 1 surge tank stay.

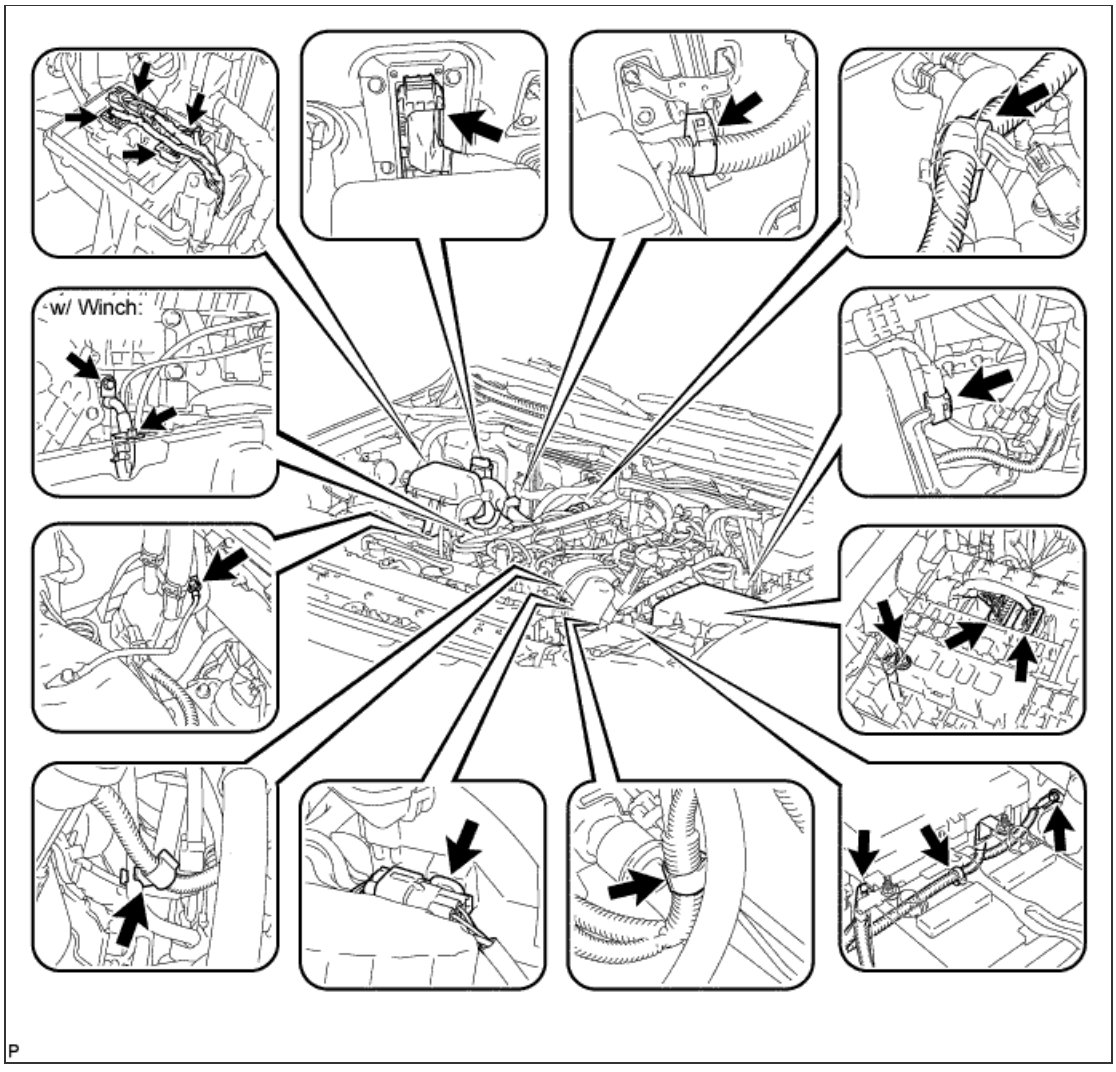


n. f Manual Transmission:

i. Remove the nut.



o. Remove the 2 bolts and No. 2 surge tank stay.



p. Remove the 2 nuts.

q. Using an 8 mm hexagon wrench, remove the 4 bolts. Then remove the intake air surge tank and gasket.

12. DISCONNECT ENGINE WIRE

a. Disconnect the ECM connector.

b. Remove the junction block cover.

c. Disconnect the 4 connectors fr the junction block.

d. Using a clip remover, detach the 2 wire harness clamps and wire harness.

e. Remove the bolt and ground cables.

f. Remove the engine room relay block cover.

g. Disconnect the 2 connectors fr the engine room relay block.

h. Remove the nut fr the engine room relay block, and disconnect the No. 2 engine wire cover.

i. Detach the wire harness fr the clamp.

j. Disconnect the connector, and using a clip remover, detach the engine wire to wire connector clamp fr the engine room relay block.

k. Detach the wire harness fr the body.

l. Detach the wire harness clamp fr the hose.

m. off the battery positive cable cover, and then remove the nut and battery positive cable.

n. Remove the bolt and ground cable and detach the wire harness clamp.

o. w/ Winch:
Remove the 2 bolts and winch ground wire.

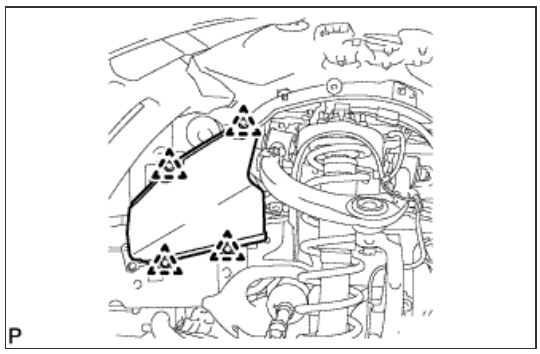
13. REMOVE FRONT NO. 2 EXHAUST PIPE ASSEMBLY

a. Disconnect the heated oxygen sensor connector.

b. Remove the 2 nuts and fr t exhaust pipe.

c. Remove the gasket fr the fr t exhaust pipe.

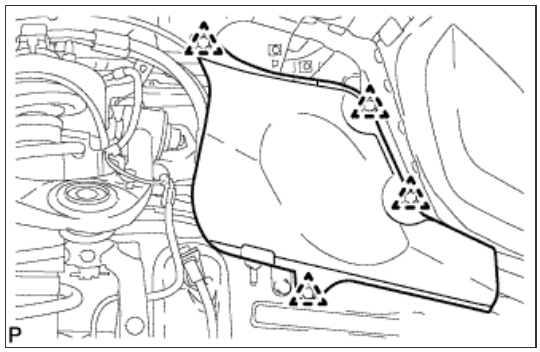
14. REMOVE FRONT EXHAUST PIPE ASSEMBLY



a. Disconnect the heated oxygen sensor connector.

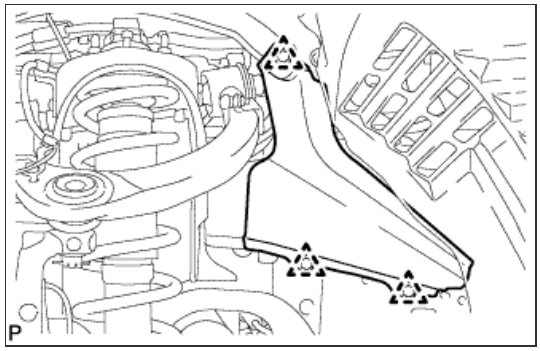
b. Remove the 2 nuts and fr t exhaust pipe.

c. Remove the gasket fr the fr t exhaust pipe.



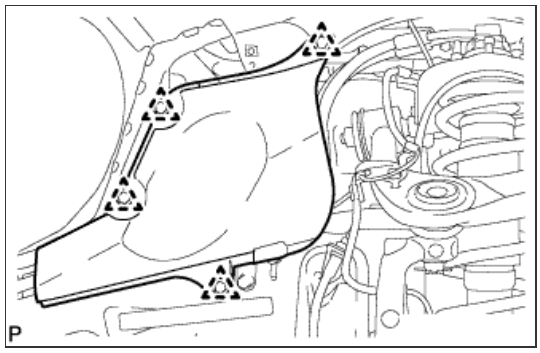
15. REMOVE FRONT FENDER APRON SEAL LH

a. Using a clip remover, remove the 4 clips and fender apron seal.



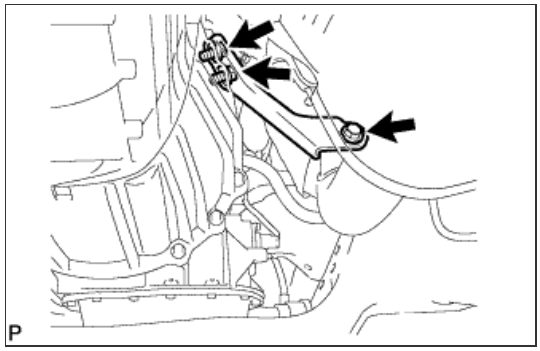
16. REMOVE FRONT FENDER APRON SEAL REAR LH

a. Using a clip remover, remove the 4 clips and fender apron seal.



17. REMOVE FRONT FENDER APRON SEAL FRONT RH

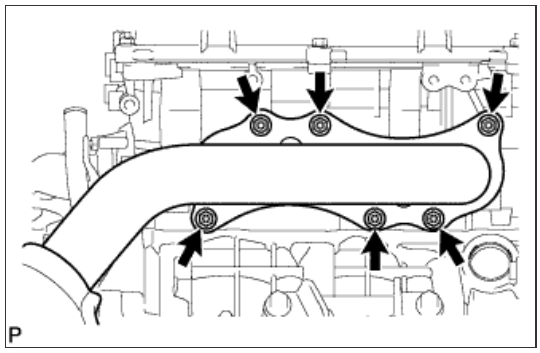
a. Using a clip remover, remove the 3 clips and fender apron seal.



18. REMOVE FRONT FENDER APRON SEAL REAR RH

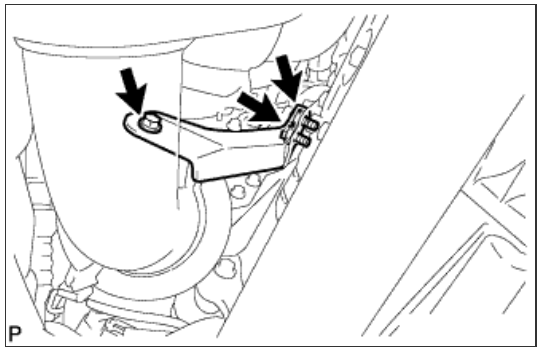
a. Using a clip remover, remove the 4 clips and fender apron seal.

19. REMOVE MANIFOLD STAY



a. Remove the 3 bolts and No. 1 manif stay.

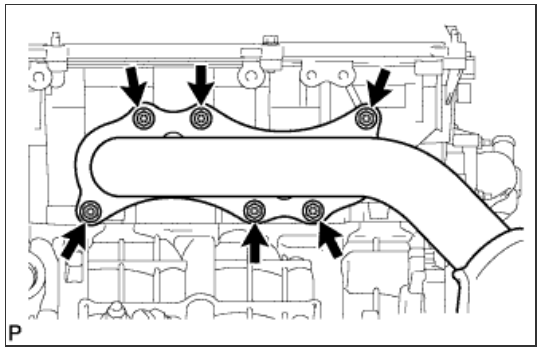
20. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY RH



a. Disconnect the air f el ratio sensor connector.

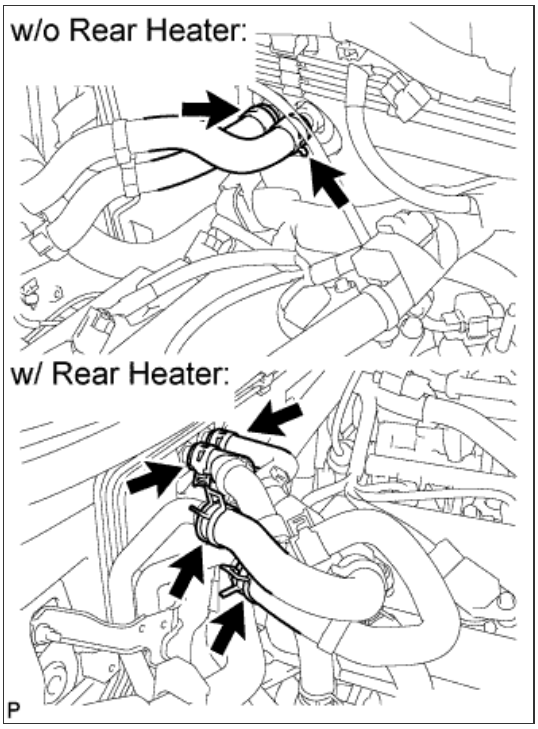
b. Remove the 6 nuts, exhaust manif and gasket fr the cylinder head RH.

21. REMOVE NO. 2 MANIFOLD STAY



a. Remove the 3 bolts and No. 2 manif stay.

22. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY LH



a. Disconnect the air f el ratio sensor connector.

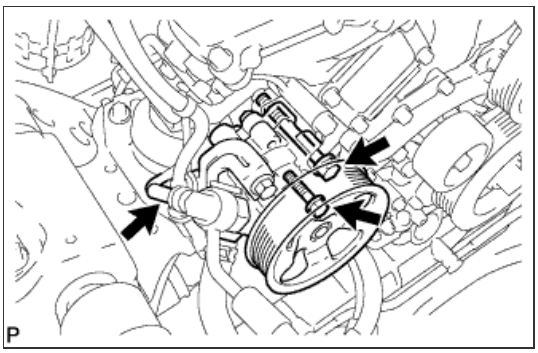
b. Remove the 6 nuts, exhaust manif and gasket fr the cylinder head LH.

23. DISCONNECT WATER HOSE SUB-ASSEMBLY

a. Disconnect the water hoses.

24. DISCONNECT VANE PUMP ASSEMBLY

a. Disconnect the power steering oil pressure switch connector.

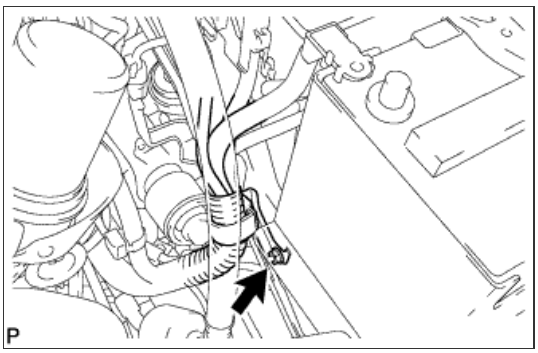


b. Remove the 2 bolts, and disconnect the vane pump.

NOTICE:

Do not hit other parts with the pulley when disconnecting the vane pump.

HINT:

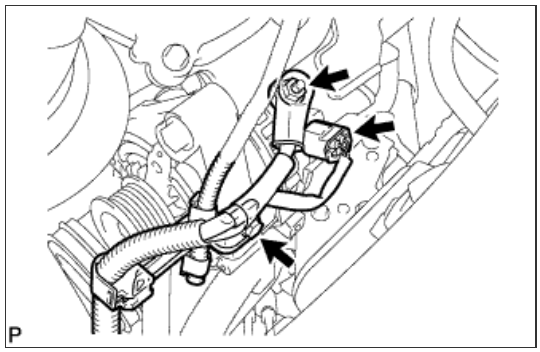


Make sure to suspend the vane pump securely.

25. REMOVE BATTERY

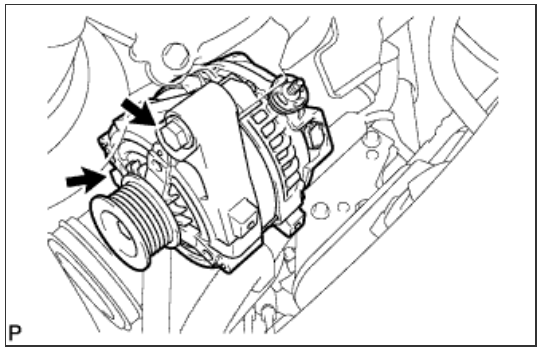
26. REMOVE GENERATOR ASSEMBLY

a. Remove the nut and disconnect the wire harness clamp bracket.



b. Disconnect the generator connector.

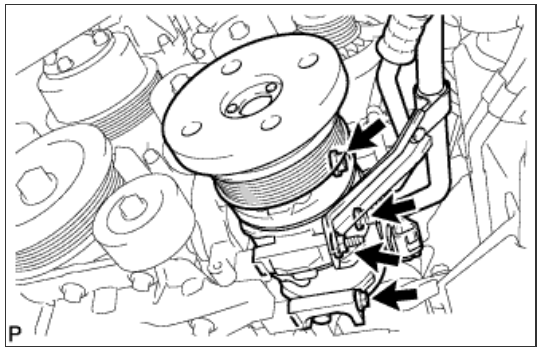
c. Remove the terminal cap.



d. Remove the nut and disconnect the generator wire.

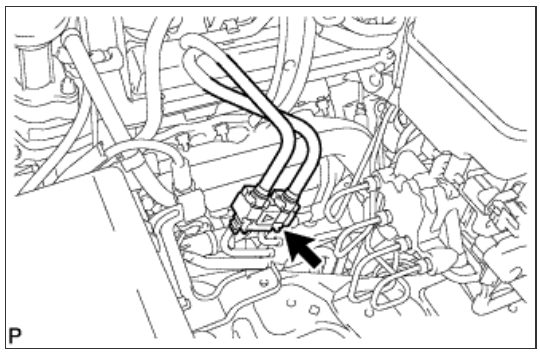
e. Remove the wire harness clamp.

f. Remove the bolt and disconnect the wire harness clamp bracket.



g. Remove the 2 bolts and generator.

27. DISCONNECT COOLER COMPRESSOR ASSEMBLY

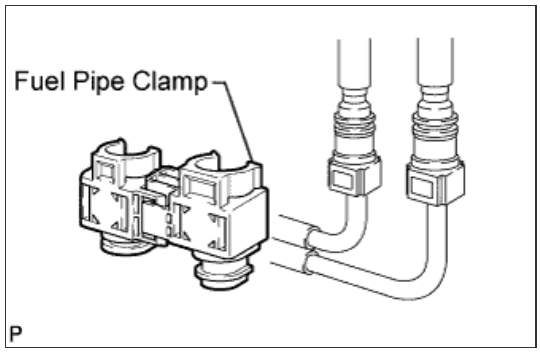


a. Disconnect the cooler compressor connector.

b. Remove the nut, 3 bolts and stud bolt, and disconnect the cooler compressor.

28. DISCONNECT NO. 1 AND NO. 2 FUEL PIPES

a. Disconnect the No. 1 and No. 2 f el pipe.

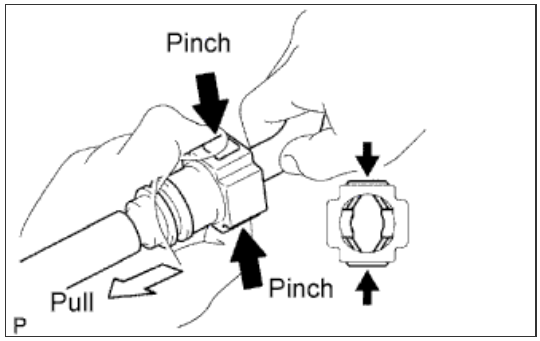


i. Remove the f el pipe clamp fr the f el tube connector.

HINT:

Check f dirt or mud on the pipe and around the connector bef e

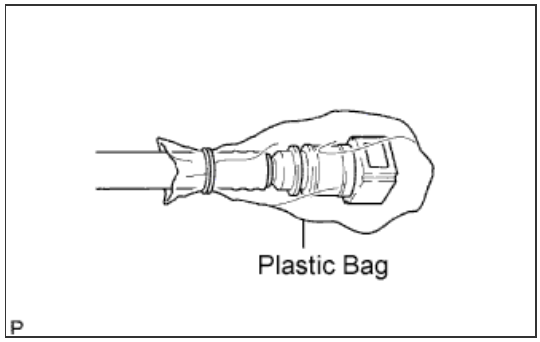
disconnecting it. Clean if necessary.



ii. inch the connector and disconnect the connector and pipe.

HINT:

If the connector and the pipe are stuck together, pinch the connector, push and pull the pipe to disconnect the pipe and pull it out.



NOTICE:

Do not use any tools.

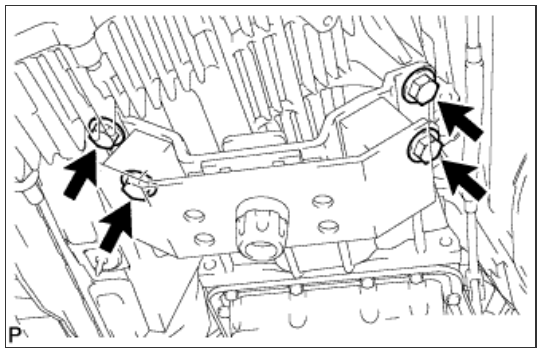
iii. Check f dirt or mud on the seal surface of the disconnected pipe. Clean if necessary.

iv. To protect the disconnected pipe and connector fr damage and contamination, cover it with a plastic bag.

29. REMOVE MANUAL TRANSMISSION ASSEMBLY (for Manual Transmission)

a. Remove the manual transmission fr the vehicle (Click here).

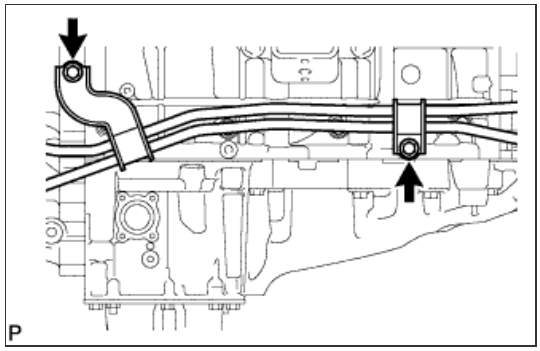
30. REMOVE AUTOMATIC TRANSMISSION ASSEMBLY (for Automatic Transmission)



a. Remove the automatic transmission fr the vehicle (Click here).

31. REMOVE REAR NO. 1 ENGINE MOUNTING INSULATOR

HINT:



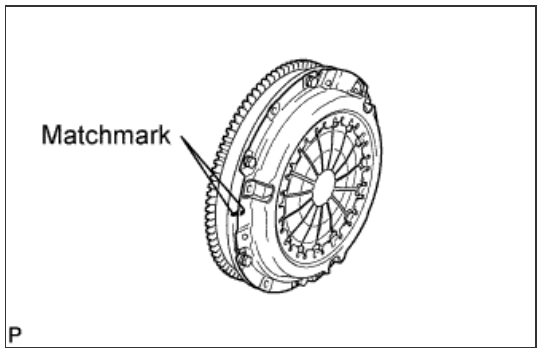
Only perf r this procedure when replacement of the engine mounting insulator is necessary.

a. Remove the 4 bolts and rear engine mounting insulator fr the transmission.

32. DISCONNECT NO. 1 OIL COOLER HOSE TUBE SUB-ASSEMBLY (for Automatic Transmission)

a. Remove the 2 bolts and cooler hose tube.

33. REMOVE CLUTCH COVER ASSEMBLY (for Manual Transmission)



a. t matchmarks on the clutch cover and f eeh

b. Loosen each set bolt one turn at a time until spring tension is released.

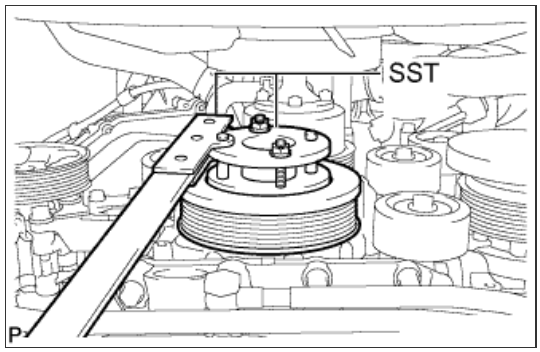
c. Remove the 6 set bolts, and pull off the clutch cover.

NOTICE:

Do not drop the clutch disc.

34. REMOVE CLUTCH DISC ASSEMBLY (for Manual Transmission)

NOTICE:

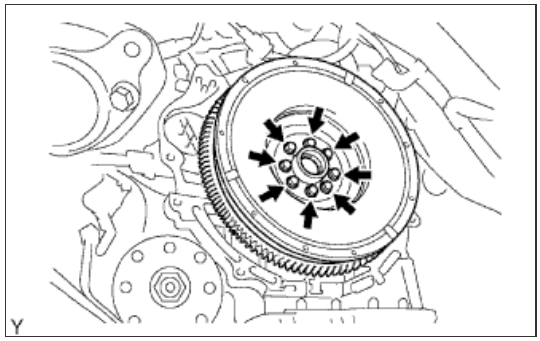


Keep the lining part of the clutch disc, pressure plate and surface of the flywheel away from oil and foreign matter.

35. REMOVE FLYWHEEL SUB-ASSEMBLY (for Manual Transmission)

a. Using SST, hold the crankshaft.

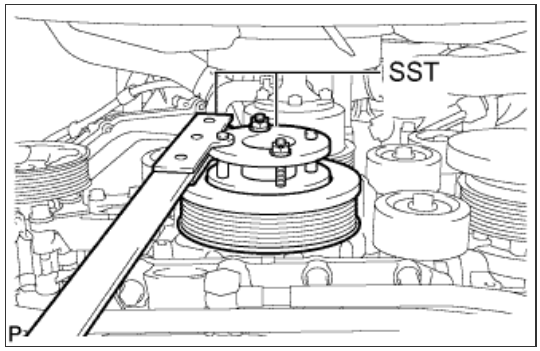
SST



09213-54015 (91651-60855)
09330-00021

b. Remove the 8 bolts and flywheel.

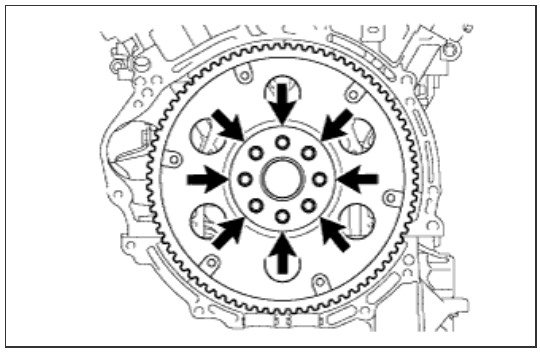
NOTICE:



Do not reuse the bolts.

36. REMOVE DRIVE PLATE AND RING GEAR SUB-ASSEMBLY (for Automatic Transmission)

a. Using SST, hold the crankshaft.



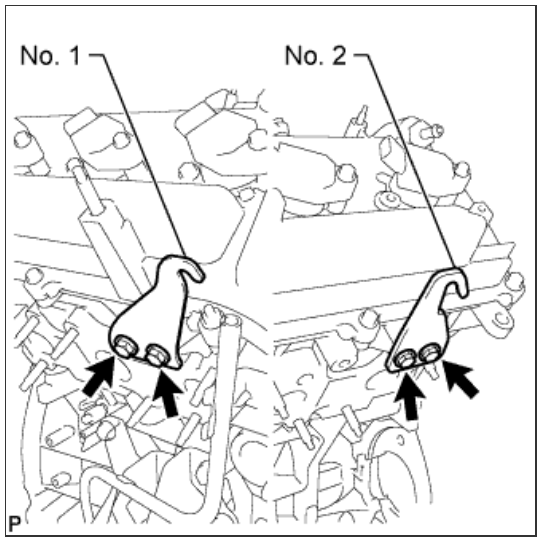
SST
09213-54015 (91651-60855)
09330-00021

b. Remove the 8 bolts, rear spacer, drive plate and front spacer.

NOTICE:

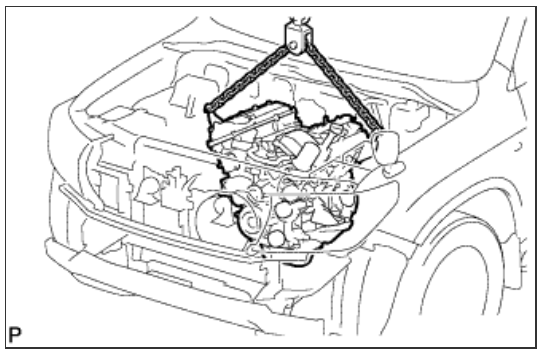
Do not reuse the bolts.

37. REMOVE ENGINE ASSEMBLY



a. Install 2 engine hangers with 4 bolts as shown in the illustration.

Part No.



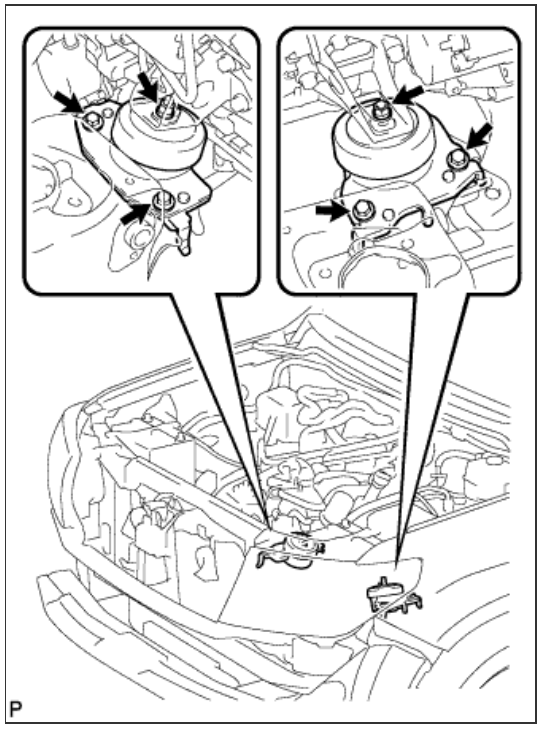
Item	art No.
No. 1 engine hanger	12281
o. 2 engine hanger	12282

Bolt		11	A87

Torque:
33 N*m{ 336 kgf*cm , 24 ft.*lbf }

b. Attach an engine sling device and hang a engine with a chain block.

c. Remove the 2 nuts and 4 bolts from the front engine mounting insulator LH and RH.



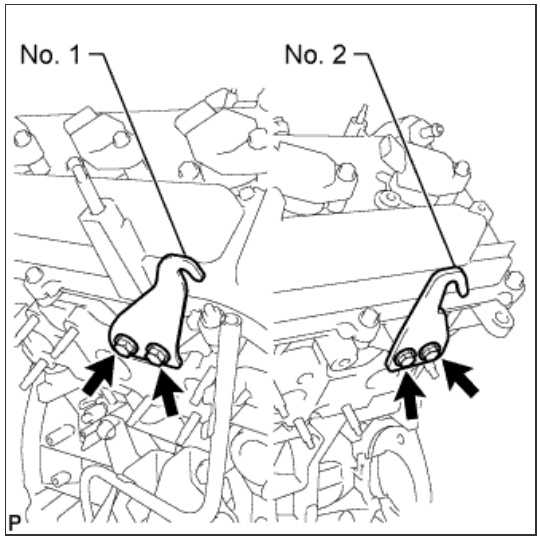
d. Lift the engine out of the vehicle carefully.

NOTICE:

Make sure the engine is clear of all wiring and hoses.

e. Remove the front engine mounting insulator LH and RH.

f. lace the engine onto a working bench.



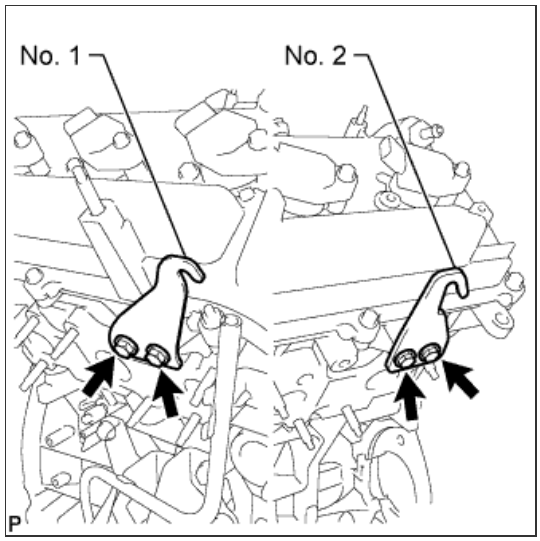
38. INSTALL ENGINE STAND

a. Install the engine onto an engine stand with bolts.

39. REMOVE ENGINE HANGER

a. Remove the 4 bolts and 2 engine hangers.

for Preparation Click here



1. INSTALL ENGINE HANGER

a. Install 2 engine hangers with 4 bolts as shown in the illustration.

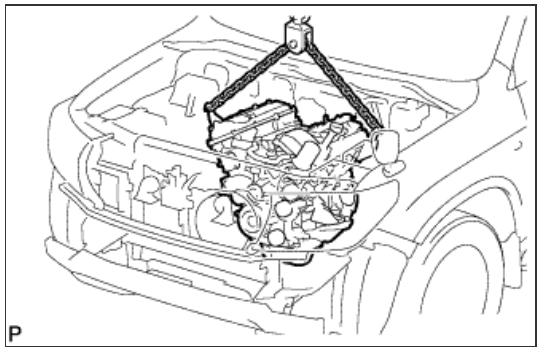
Part No.

Item	Part No.
No. 1 engine hanger	12281-31070
No. 2 engine hanger	12282-31050
Bolt	90119-08A87

Torque:
33 N*m{ 336 kgf*cm , 24 ft.*lbf }

2. REMOVE ENGINE STAND

a. Attach an engine sling device and hang the engine with a chain block.



b. Lift the engine, and remove it from the engine stand.

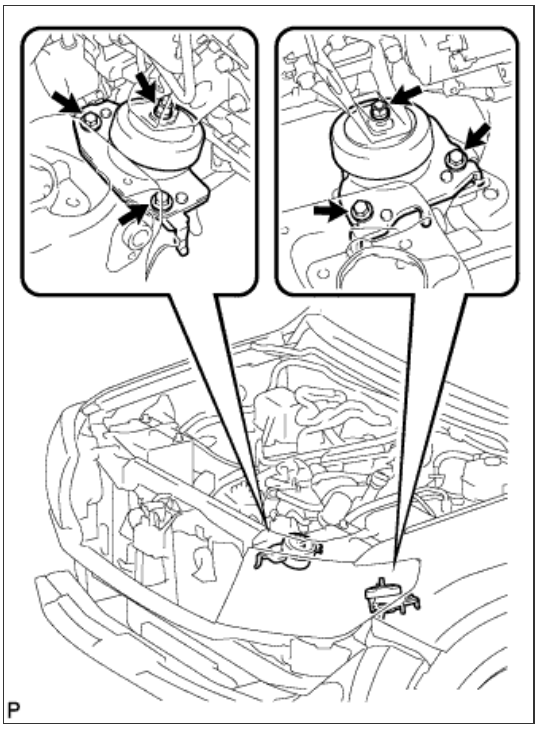
c. Place the engine onto a work bench.

3. INSTALL ENGINE ASSEMBLY

a. Attach an engine sling device and hang the engine with a chain block.

b. Slowly lower the engine into the engine compartment.

c. Install the front engine mounting insulator LH with the 2 bolts and nut.



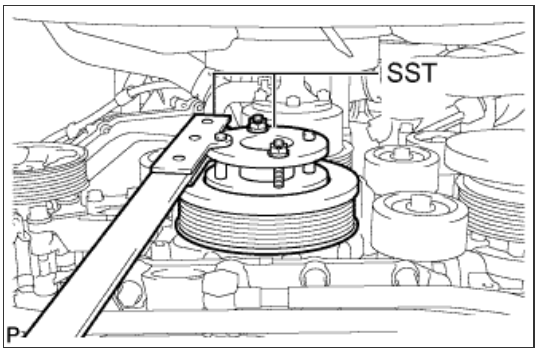
Torque:
for bolt:
79 N*m{ 806 kgf*cm , 58 ft.*lbf }
for nut:
72 N*m{ 734 kgf*cm , 53 ft.*lbf }

d. Install the front engine mounting insulator RH with the 2 bolts and nut.

Torque:
for bolt:

79 N*m{ 806 kgf*cm , 58 ft.*lbf }
for nut:
72 N*m{ 734 kgf*cm , 53 ft.*lbf }

e. Remove the 2 engine hangers and 4 bolts.

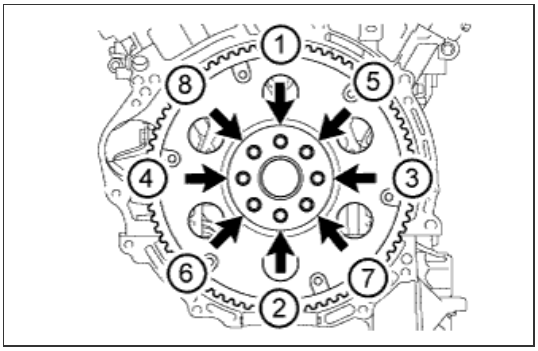


4. INSTALL DRIVE PLATE AND RING GEAR SUB-ASSEMBLY (for Automatic Transmission)

a. Using SST, hold the crankshaft.

SST
09213-54015 (91651-60855)
09330-00021

b. Temporarily install the front spacer, drive plate and rear spacer with the 8 bolts.

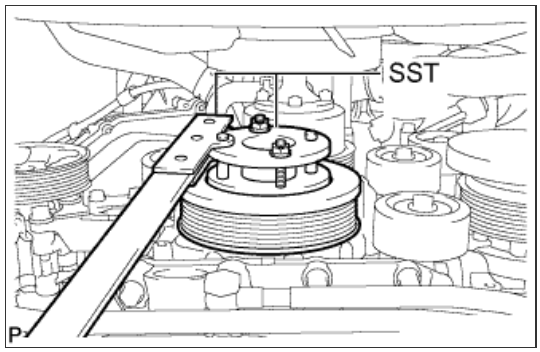


c. Tighten the 8 bolts uniformly in several steps in the order shown in the illustration.

Torque:
83 N*m{ 846 kgf*cm , 61 ft.*lbf }

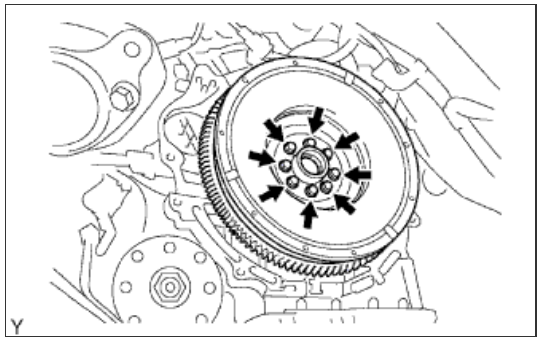
NOTICE:

Do not start the engine for at least 1 hour after installing.



5. INSTALL FLYWHEEL SUB-ASSEMBLY (for Manual Transmission)

a. Using SST, hold the crankshaft.

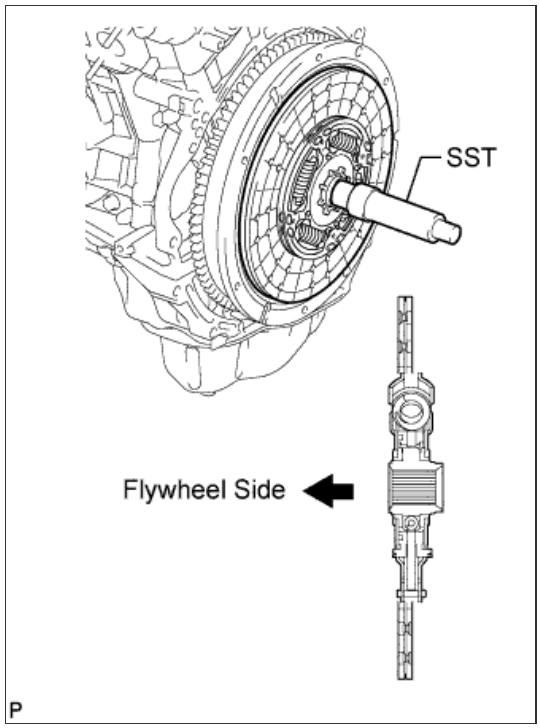


SST
09213-54015 (91651-60855)
09330-00021

b. Temporarily install the flywheel with the 8 bolts.

c. Install and tighten the 8 mounting bolts uniformly in several steps.

Torque:
83 N*m{ 846 kgf*cm , 61 ft.*lbf }



6. INSTALL CLUTCH DISC ASSEMBLY (for Manual Transmission)

a. Insert SST into the clutch disc, then insert the clutch disc into the flywheel.

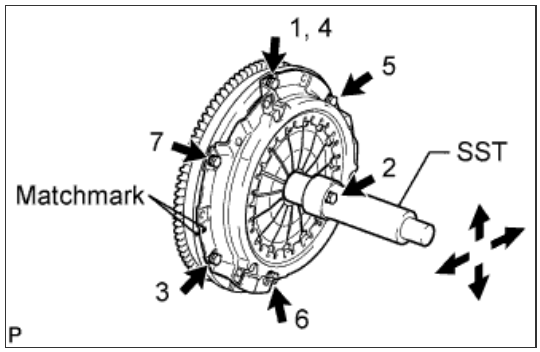
SST
09301-00110

NOTICE:

Take care not to insert the clutch disc in the wrong direction.

7. INSTALL CLUTCH COVER ASSEMBLY (for Manual Transmission)

a. Align the matchmark on the clutch cover with the one on the flywheel.

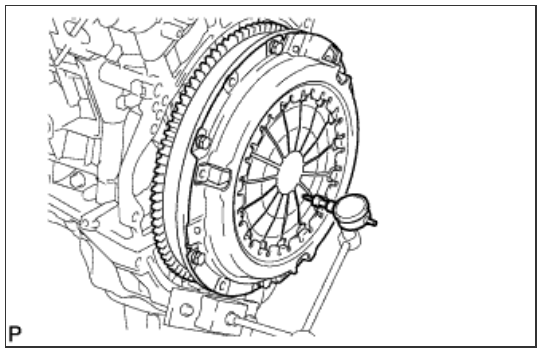


b. In the order shown in the illustration, temporarily install the 6 bolts starting from the bolt located near the knock pin on the top.

c. Check that the disc is in the center by lightly moving SST up and down, and left and right.

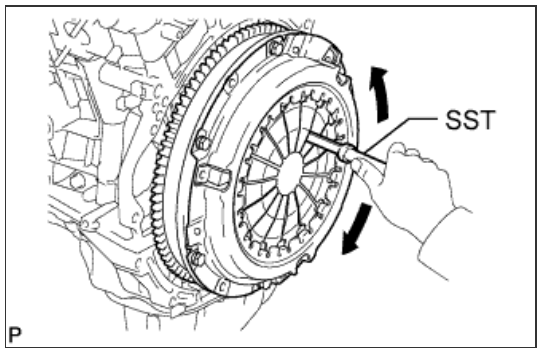
SST
09301-00110

d. Evenly tighten the bolts by following the order shown in the illustration.



Torque:
19 N*m{ 195 kgf*cm , 14 ft.*lbf }

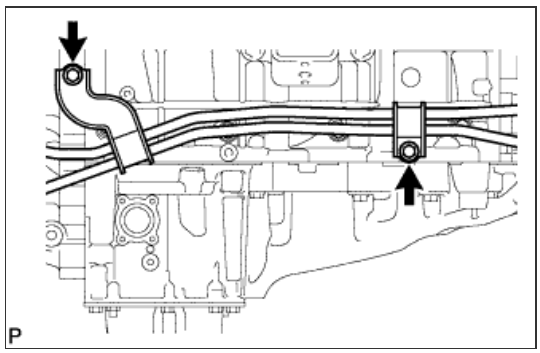
8. INSPECT AND ADJUST CLUTCH COVER ASSEMBLY (for Manual Transmission)



a. Using a dial indicator with a roller instrument, check the diaphragm spring tip alignment.

Maximum Misalignment:
1.3 mm (0.0512 in.)

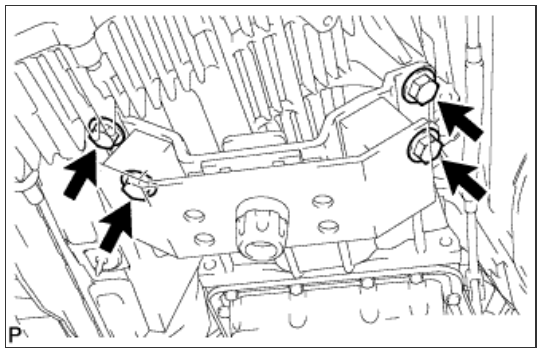
b. If the alignment is not as specified, adjust the diaphragm spring tip alignment using SST.



SST
09333-00013

9. CONNECT NO. 1 OIL COOLER HOSE TUBE SUB-ASSEMBLY

a. Connect the cooler hose tube with the 2 bolts.



Torque:
14 N*m{ 143 kgf*cm , 10 ft.*lbf }

10. INSTALL REAR NO. 1 ENGINE MOUNTING INSULATOR

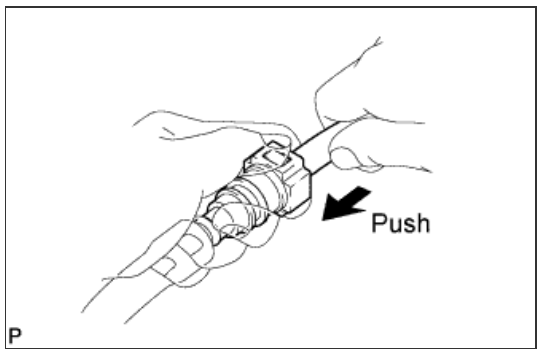
a. Install the rear engine mounting insulator to the transmission with the 4 bolts.

Torque:
59 N*m{ 602 kgf*cm , 44 ft.*lbf }

11. INSTALL MANUAL TRANSMISSION ASSEMBLY (for Manual Transmission)

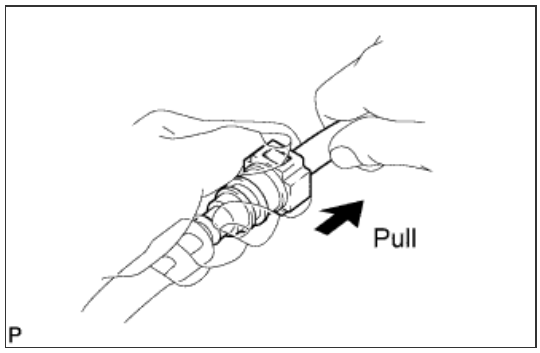
a. Install the manual transmission to the vehicle (Click here).

12. INSTALL AUTOMATIC TRANSMISSION ASSEMBLY (for Automatic Transmission)



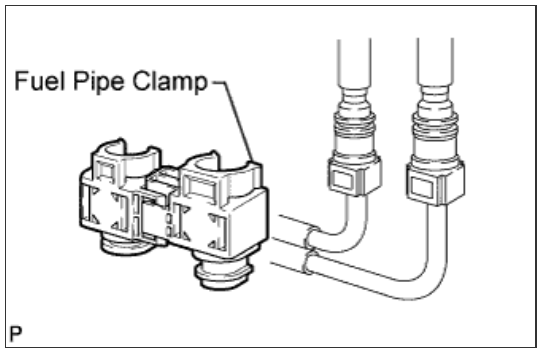
a. Install the automatic transmission to the vehicle (Click here).

13. CONNECT NO. 1 AND NO. 2 FUEL PIPE



a. Connect the No. 1 and No. 2 fuel pipe.

i. Check that there is no damage or contamination in the connector part of the pipe.

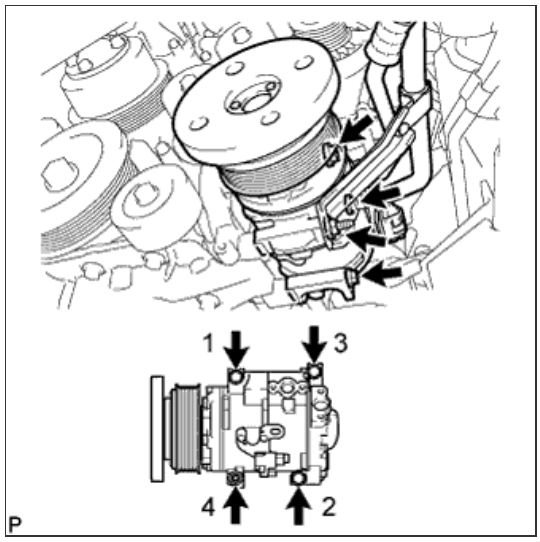


ii. Align the axis of the connector with the axis of the pipe. Push the pipe into the connector until the connector makes a "click" sound. If the connection is tight, apply a small amount of fresh engine oil on the tip of the pipe.

iii. After having finished the connection, try to pull apart the pipe and the connector and confirm that they are securely connected.

b. Install the fuel pipe clamp to the connector.

14. CONNECT COOLER COMPRESSOR ASSEMBLY

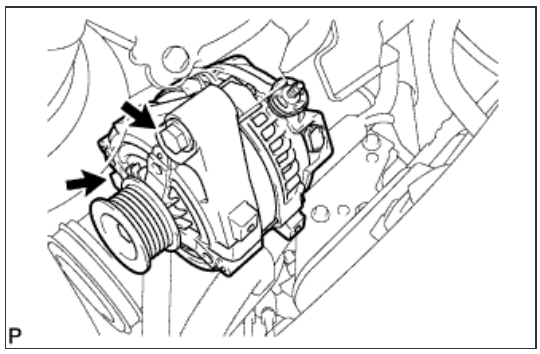


a. Fix the cooler compressor in place with the stud bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. Install the cooler compressor with the nut and 3 bolts in several steps in the sequence shown in the illustration.

Torque:
24 N*m{ 250 kgf*cm , 18 ft.*lbf }



c. Connect the cooler compressor connector.

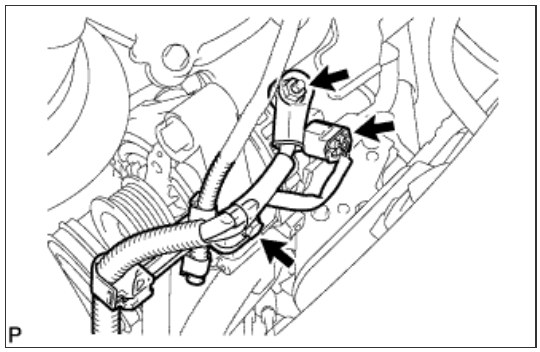
15. INSTALL GENERATOR ASSEMBLY

a. Install the generator with the 2 bolts.

Torque:
43 N*m{ 438 kgf*cm , 32 ft.*lbf }

b. Connect the wire harness clamp bracket with the bolt.

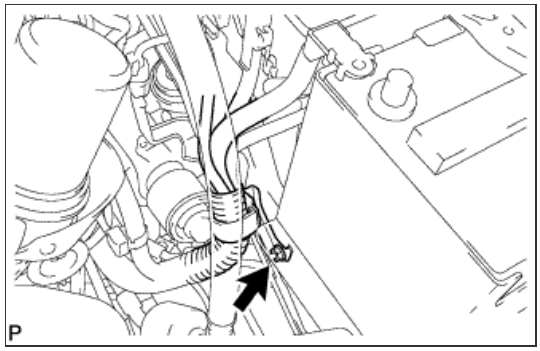
Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



c. Install the wire harness clamp to the bracket.

d. Connect the generator wire with the nut.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

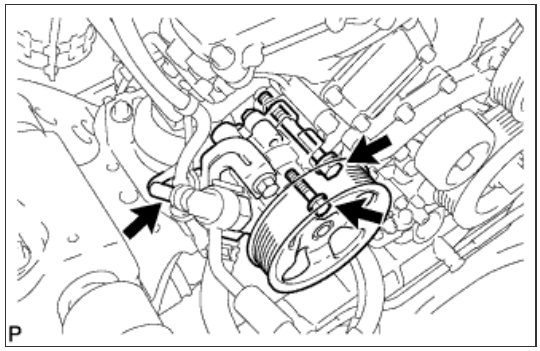


e. Install the terminal cap.

f. Connect the generator connector.

g. Connect the wire harness clamp bracket with the nut.

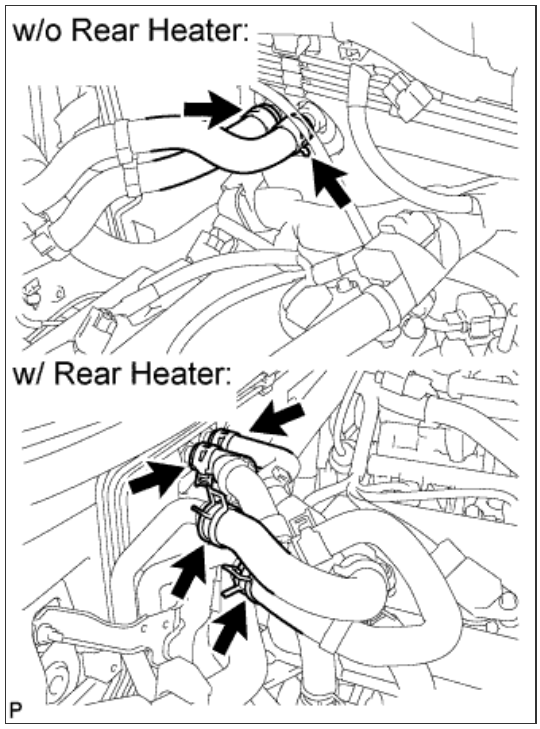
Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



16. INSTALL BATTERY

17. CONNECT VANE PUMP ASSEMBLY

a. Connect the vane pump with the 2 bolts.

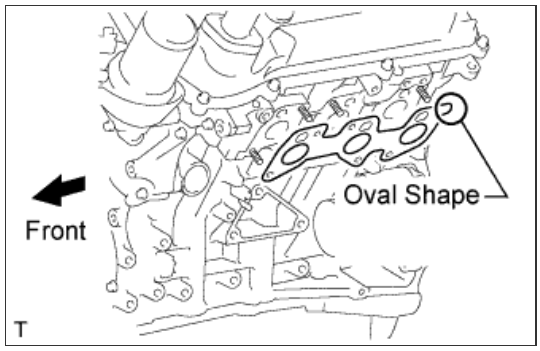


Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. Connect the power steering oil pressure switch connector.

18. CONNECT WATER HOSE SUB-ASSEMBLY

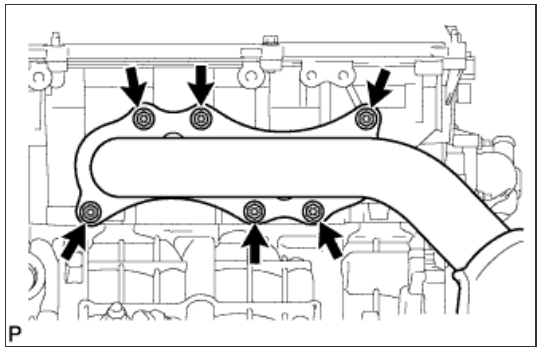
a. Connect the water hoses.



19. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY LH

a. Set a new gasket to the cylinder head LH with the oval shape facing rearward.

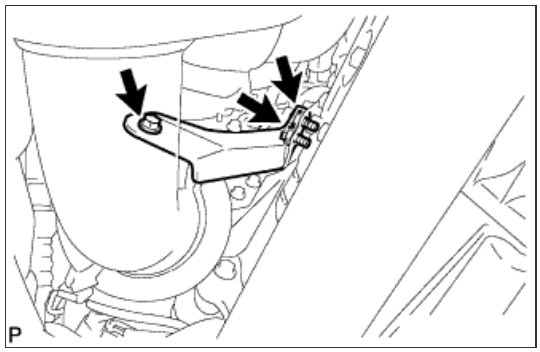
NOTICE:



Be careful of the installation direction.

b. Install the exhaust manifold with 6 new nuts.

Torque:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }

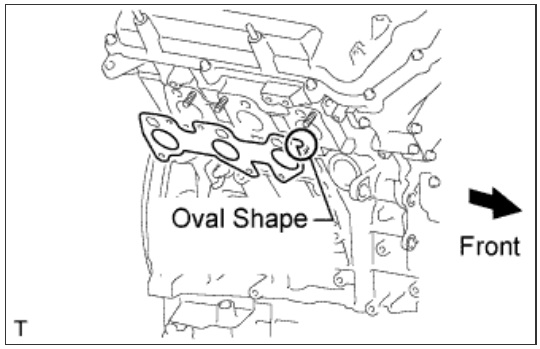


c. Connect the air fuel ratio sensor connector.

20. INSTALL NO. 2 MANIFOLD STAY

a. Install the No. 2 manifold stay with the 3 bolts.

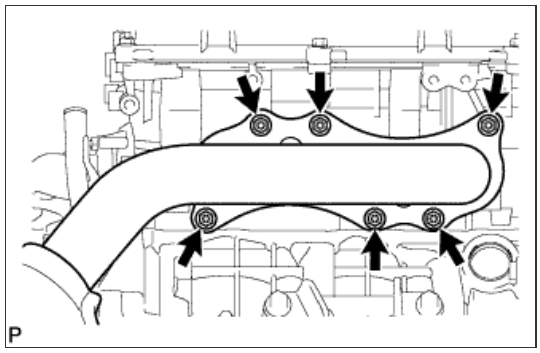
Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }



21. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY RH

a. Set a new gasket to the cylinder head RH with the oval shape facing forward.

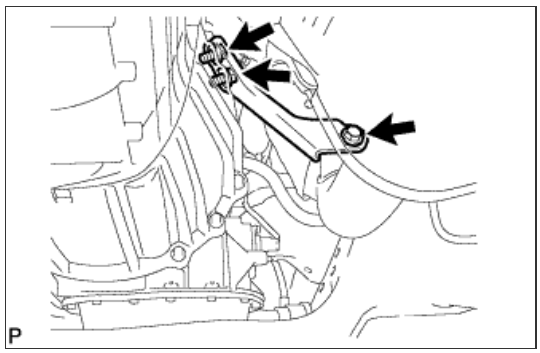
NOTICE:



Be careful of the installation direction.

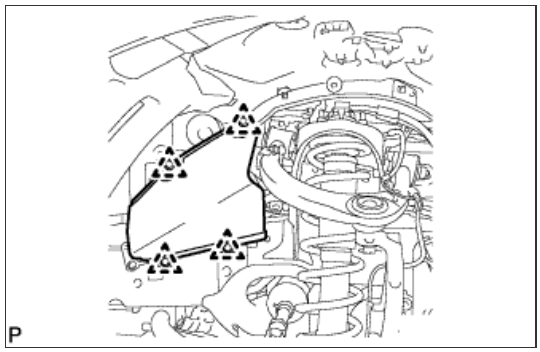
b. Install the exhaust manifold with 6 new nuts.

Torque:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }



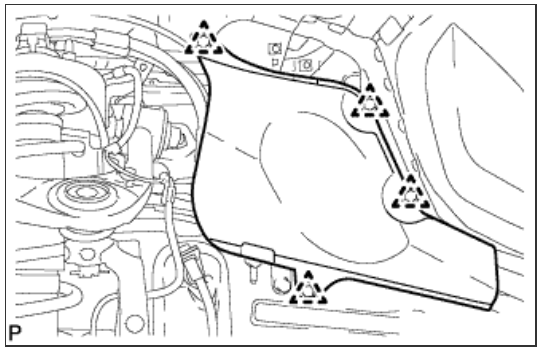
c. Connect the air fuel ratio sensor connector.

22. INSTALL MANIFOLD STAY



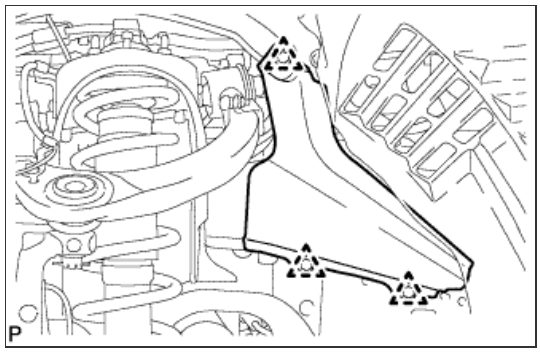
a. Install the No. 1 manifold stay with the 3 bolts.

Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }



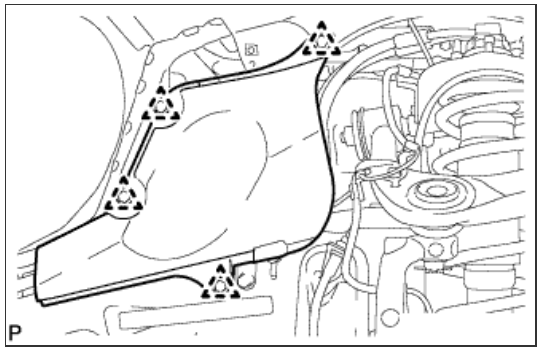
23. INSTALL FRONT FENDER APRON SEAL LH

a. Install the fender apron seal with the 4 clips.



24. INSTALL FRONT FENDER APRON SEAL REAR LH

a. Install the fender apron seal with the 4 clips.



25. INSTALL FRONT FENDER APRON SEAL FRONT RH

a. Install the fender apron seal with the 3 clips.

26. INSTALL FRONT FENDER APRON SEAL REAR RH

a. Install the fender apron seal with the 4 clips.

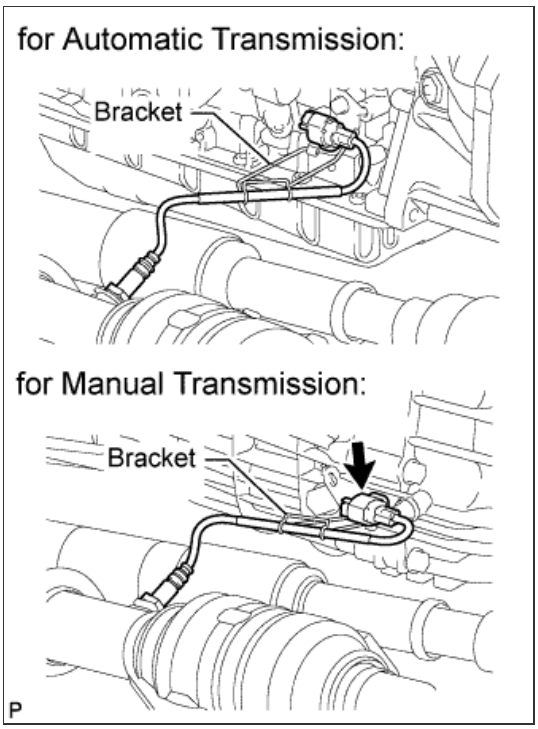
27. INSTALL FRONT EXHAUST PIPE ASSEMBLY

a. Install a new gasket and the front exhaust pipe to the exhaust manifold RH with 2 new nuts.

Torque:
54 N*m{ 554 kgf*cm , 40 ft.*lbf }

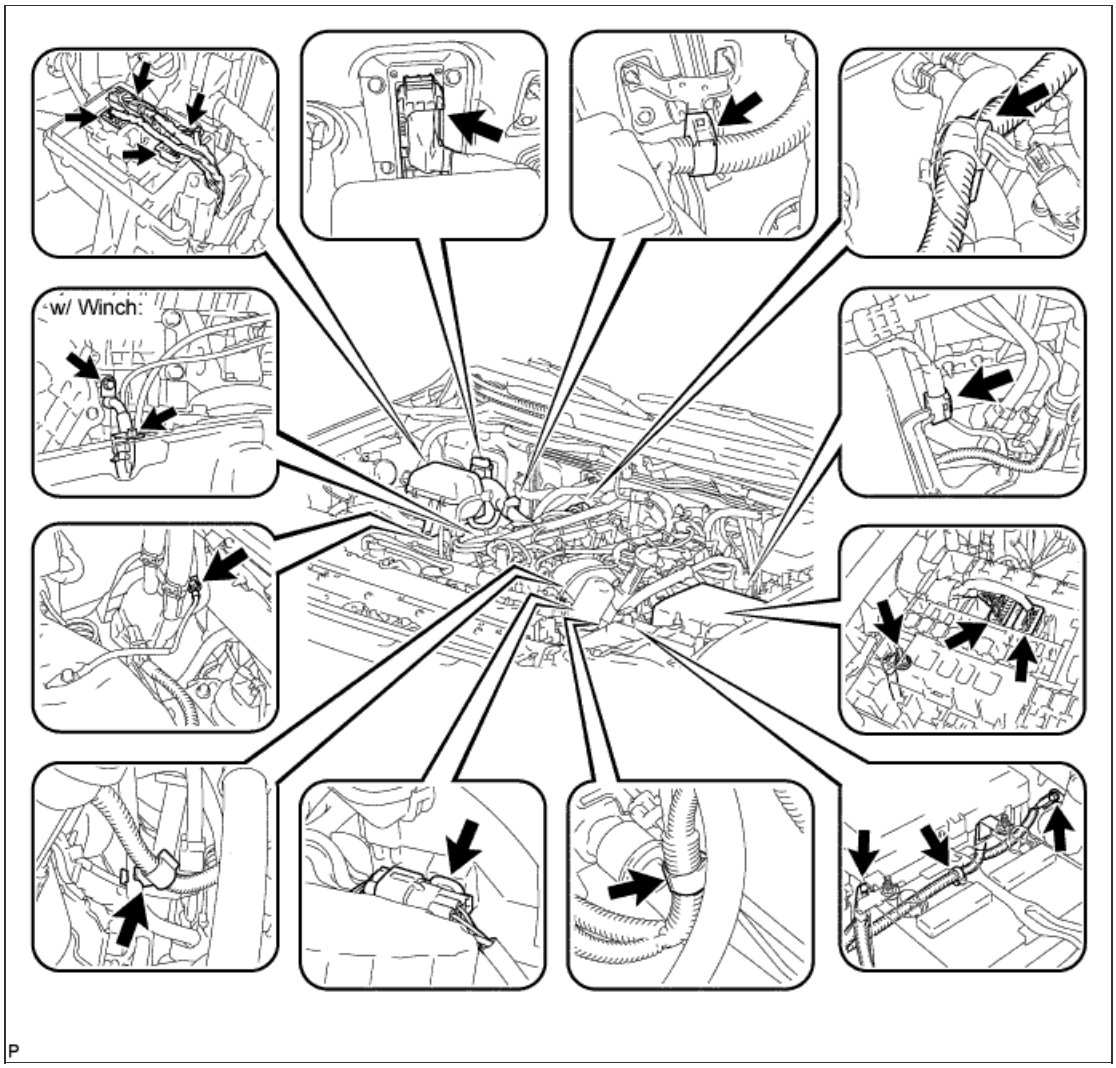
b. Connect the heated oxygen sensor connector.

28. INSTALL FRONT NO. 2 EXHAUST PIPE ASSEMBLY



a. Install a new gasket and the front No. 2 exhaust pipe to the exhaust manifold LH with 2 new nuts.

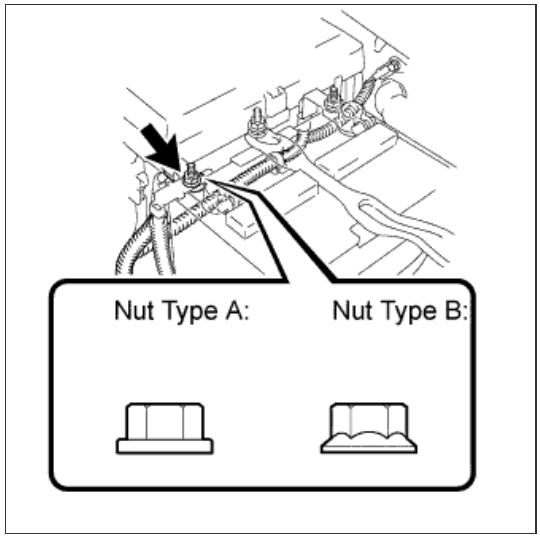
Torque:
54 N*m{ 554 kgf*cm , 40 ft.*lbf }



b. Connect the heated oxygen sensor connector.

HINT:

Hook the wire harness to the bracket.



29. CONNECT ENGINE WIRE

a. Install the ground cable with the bolt and attach the wire harness clamp.

Torque:
8.4 N*m{ 86 kgf*cm , 74 in.*lbf }

b. Install the battery positive cable with the nut.

Torque:
for nut type A:
13 N*m{ 130 kgf*cm , 9 ft.*lbf }
for nut type B:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

HINT:

The torque value differs depending on the shape of the nut that came with the vehicle.

c. Connect the battery positive cable cover.

d. Install the 2 ground cables with the 2 bolts.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

e. Attach the wire harness clamp to the hose.

f. Attach the wire harness clamp to the body.

g. Attach the engine wire to wire connector clamp to the engine room relay block side, and connect the connector.

h. Connect the wire harness with the clamp.

i. Connect the No. 2 engine wire cover to the engine room relay block, and install the No. 2 engine wire with the nut.

Torque:

10 N*m{ 102 kgf*cm , 7 ft.*lbf }

j. Connect the 2 connectors to the engine room relay block.

k. Attach the 2 wire harness clamps and wire harness.

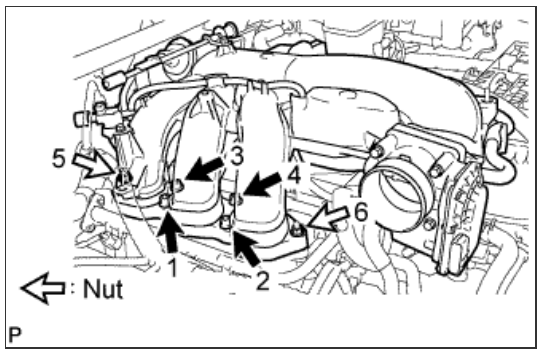
l. Connect the 4 connectors to the junction block.

m. Connect the ECM connector.

n. w/ Winch:
Install the winch ground wire with the 2 bolts.

Torque:
Cylinder block side:
19 N*m{ 196 kgf*cm , 14 ft.*lbf }
Body side:
29 N*m{ 300 kgf*cm , 22 ft.*lbf }

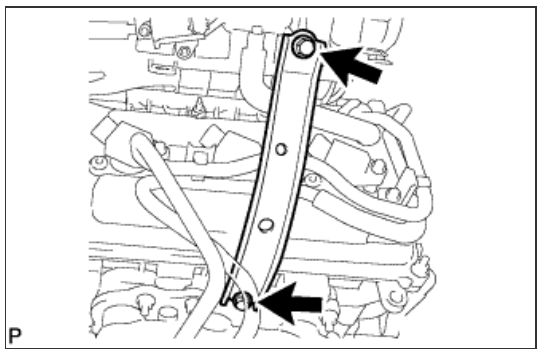
30. INSTALL INTAKE AIR SURGE TANK



NOTICE:
Do not apply oil to the bolts and nuts listed below: :

Oil Application Prohibited Bolt/Nut
Bolt for surge tank and intake manifold
Nut for surge tank and intake manifold

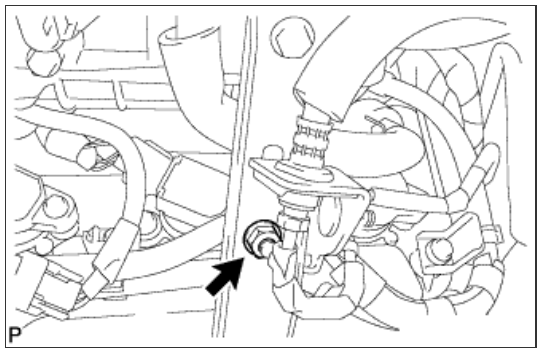
a. Install a new gasket to the intake air surge tank.



b. Using an 8 mm hexagon wrench, install the intake air surge tank with the 4 bolts and 2 nuts in the order shown in the illustration.

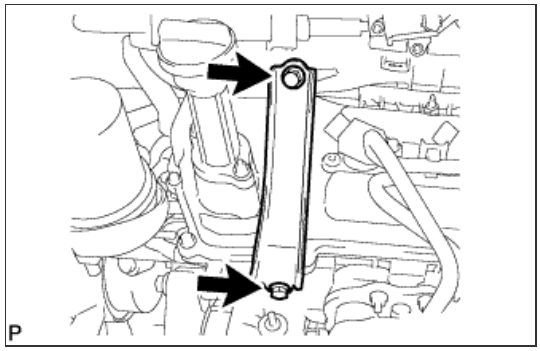
Torque:
28 N*m{ 286 kgf*cm , 21 ft.*lbf }

c. Install the No. 2 surge tank stay with the 2 bolts.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

d. for Manual Transmission:

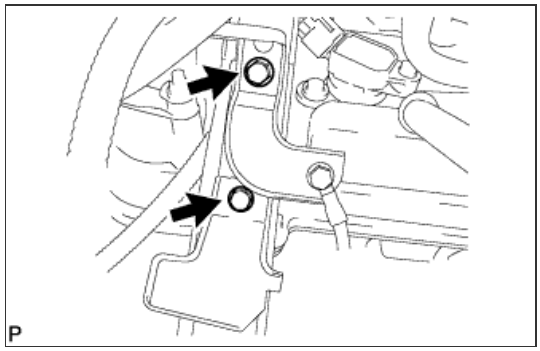


i. Install the bracket to the No. 2 surge tank stay with the nut.

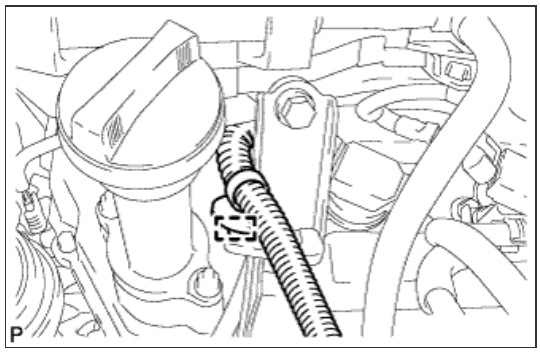
Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

e. Install the No. 1 surge tank stay with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



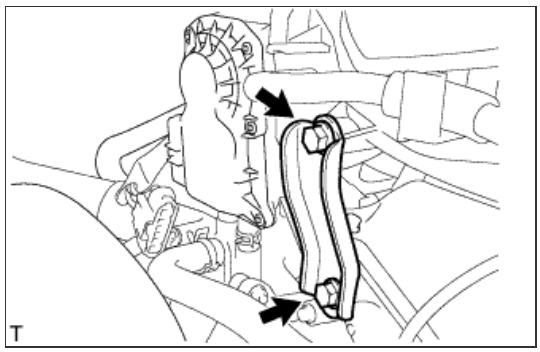
f. Install the oil baffle plate with the bolt.



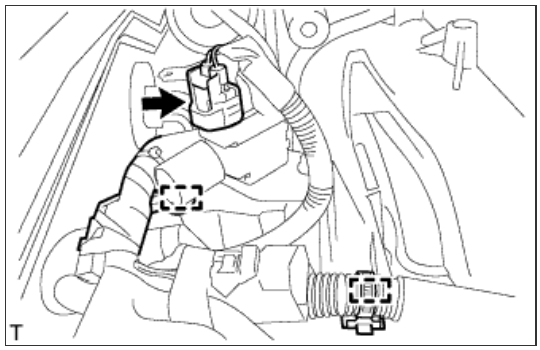
Torque:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

g. Install the bracket to the No. 1 surge tank stay with the bolt.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



h. Attach the wire harness clamp.

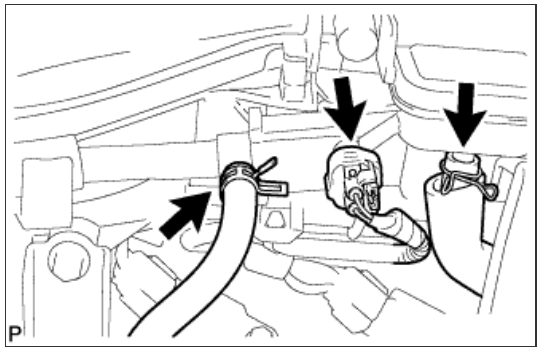


i. Install the throttle body bracket with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

j. Connect the vacuum switching valve (for ACIS) connector.

k. Attach the 2 wire harness clamps.



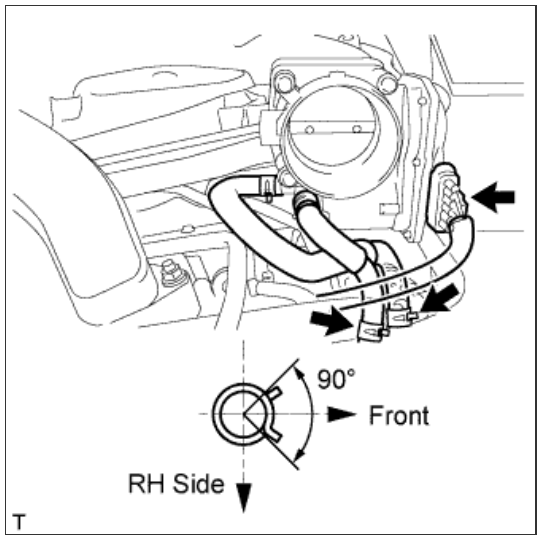
l. Connect the No. 1 ventilation hose.

m. Connect the purge VSV connector.

n. Connect the purge line hose.

HINT:

Connect the hose so that the direction of the hose clamp is as indicated in the illustration.



o. Connect the No. 4 and No. 5 water by-pass hose.

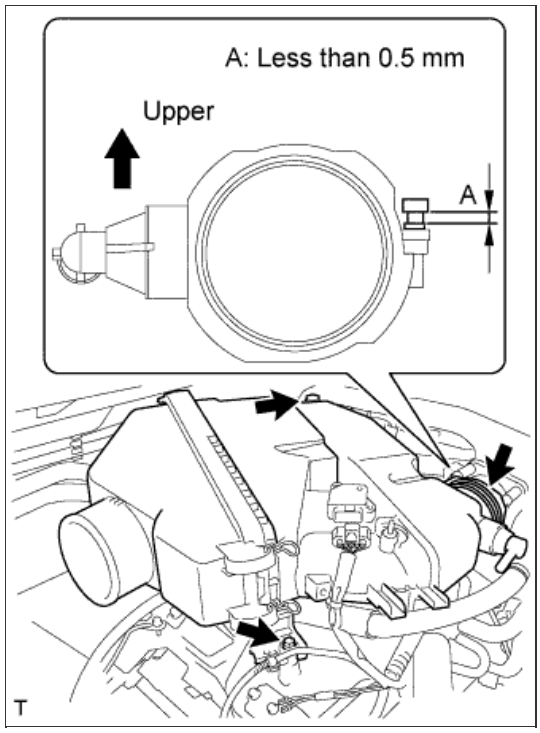
HINT:

Connect the hoses so that the direction of the hose clamps is as shown in the illustration.

p. Connect the throttle body connector.

31. INSTALL AIR CLEANER ASSEMBLY

a. Install the air cleaner assembly with the 2 bolts.

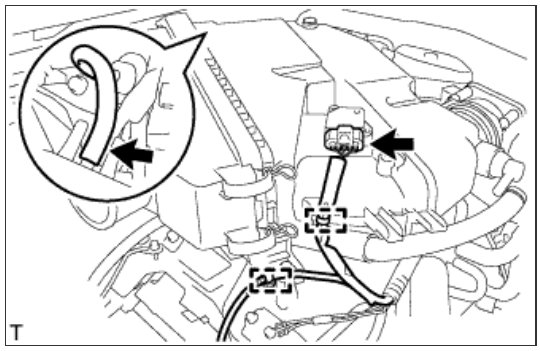


Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

b. Tighten the hose clamp.

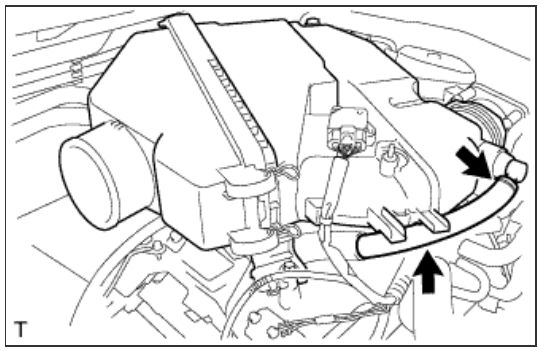
HINT:

Tighten the hose clamp until it reaches the specified protrusion height labeled A shown in the illustration.



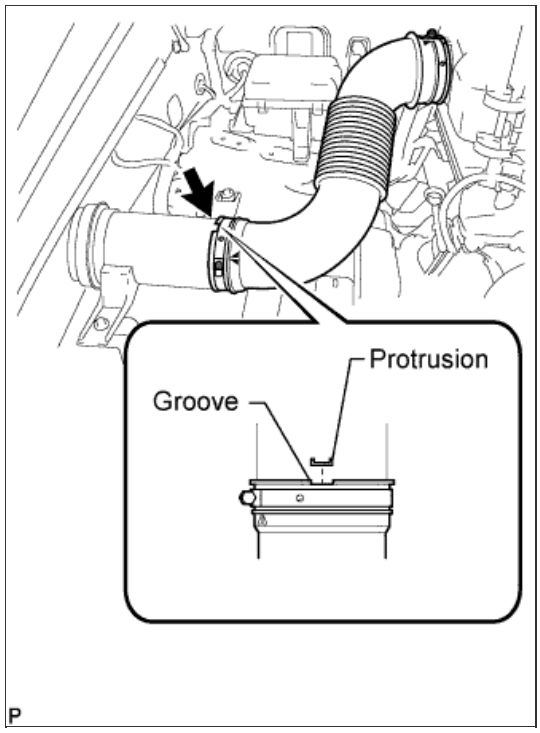
Standard protrusion height:
Less than 0.5 mm (0.0197 in.)

c. Connect the MAF meter connector.



d. Attach the 2 wire harness clamps.

e. Connect the vacuum hose.

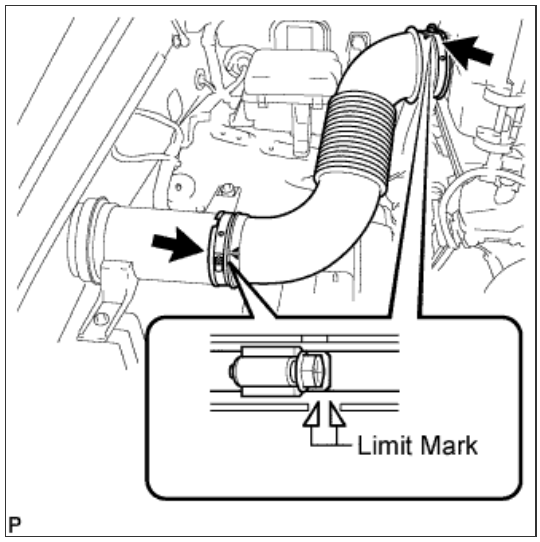


f. Attach the hose clamp.

g. Connect the No. 2 ventilation hose.

32. INSTALL NO. 2 AIR CLEANER HOSE

a. Align the protrusion of the pre-cleaner with the groove of the No. 2 air cleaner hose as shown in the illustration.



b. Tighten the 2 hose clamps.

Torque:
4.0 N*m{ 41 kgf*cm , 35 in.*lbf }

HINT:

Tighten the clamp until the end of the clamp band is within both limit marks.

33. INSTALL RADIATOR ASSEMBLY

a. Install the radiator assembly (Click here).

34. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

a. Install the cowl top ventilator louver (Click here).

35. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

36. ADD ENGINE OIL

a. Remove the oil filler cap.

b. Add new oil.

Standard Oil Grade:

Oil Grade	Oil Viscosity (SAE)
API grade SL "Energy-Conserving", SM "Energy-Conserving", SN "Resource-Conserving" or ILSAC multigrade engine oil	5W-30 10W-30
API grade SL, SM or SN multigrade engine oil	15W-40 20W-50

Standard Oil Capacity:

Item	Specified Condition
Drain and refill with oil filter change	5.2 liters (5.5 US qts, 4.6 Imp. qts)
Drain and refill without oil filter change	4.9 liters (5.2 US qts, 4.3 Imp. qts)
Dry fill	6.0 liters (6.3 US qts, 5.3 Imp. qts)

c. Install the oil filler cap.

37. INSPECT FOR FUEL LEAK

a. Connect the intelligent tester to the DLC3.

b. Turn the ignition switch to ON and intelligent tester on.

NOTICE:

Do not start the engine.

c. Enter the following menus: Powertrain / Engine and ECT / Active Test / Activate the Fuel Pump Speed Control.

d. Check that there are no fuel leaks after doing maintenance anywhere on the fuel system.

38. INSPECT FOR OIL LEAK

39. INSPECT FOR EXHAUST GAS LEAK

If gas is leaking, tighten the areas necessary to stop the leak. Replace damaged parts as necessary.

40. CHECK ENGINE OIL LEVEL

a. Warm up the engine so that the coolant temperature is approximately 80°C (176°F). Check the engine oil level dipstick 5 minutes after the engine is stopped. Then add engine oil to the full level of the engine oil level dipstick.

41. INSTALL NO. 2 ENGINE UNDER COVER

42. PERFORM RESET MEMORY (for Automatic Transmission)

a. Perform the Reset Memory procedures (Click here).

43. INSPECT IGNITION TIMING

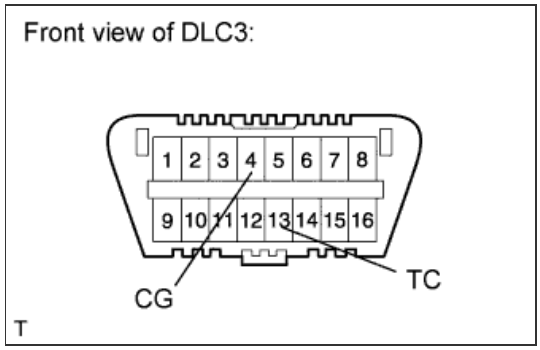
NOTICE:

- **Turn all electrical systems off.**
- **Perform the inspection when the cooling fan motor is turned off.**

a. Warm up the engine.

b. When using the intelligent tester:

i. Connect the intelligent tester to the DLC3.



ii. Enter the following menus: Powertrain / Engine and ECT / Data List / All Data / IGN Advance.

iii. Inspect the ignition timing during idling.

Standard ignition timing:
8 to 12° BTDC @ idling (transmission in neutral position and A/C switch off)

iv. Check that the ignition timing advances immediately when the engine speed is increased.

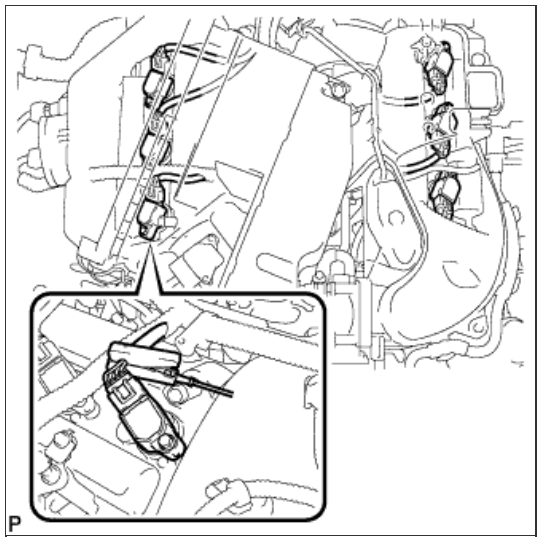
c. When not using the intelligent tester:

i. Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.

SST
09843-18040

NOTICE:

Be sure not to improperly connect the terminals. This may damage the engine.



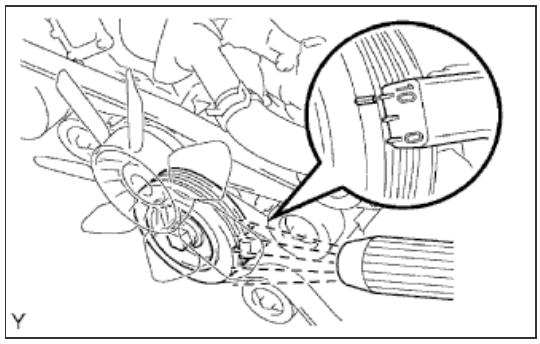
ii. Remove the air cleaner cap.

iii. Pull out the wire harness shown in the illustration.

iv. Connect the tester probe of a timing light to the wire of the ignition coil connector for the No. 1 cylinder.

NOTICE:

- **Use a timing light that detects primary signals.**
- **After checking, be sure to wrap the wire harness with tape.**



v. Inspect the ignition timing during idling.

Standard ignition timing:
8 to 12° BTDC @ idling (transmission in neutral position and A/C switch off)

vi. Remove SST from the DLC3.

vii. Inspect the ignition timing during idling.

Standard ignition timing:
7 to 24° BTDC @ idling (transmission in neutral position and A/C switch off)

viii. Disconnect the timing light from the engine.

ix. Install the air cleaner cap.

NOTICE:

- **Turn all the electrical systems off.**
- **Perform the inspection when the cooling fan motor is turned off.**

a. Warm up the engine.

b. When using the intelligent tester:

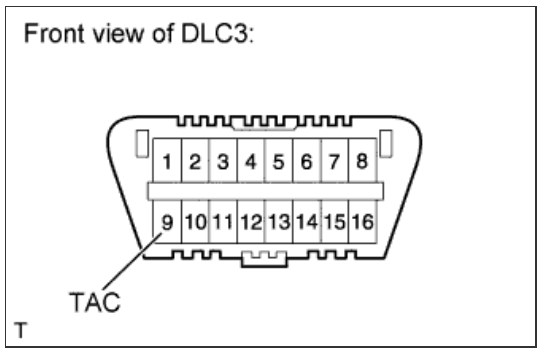
i. Connect the intelligent tester to the DLC3.

ii. Enter the following menus: Powertrain / Engine and ECT / Data List / All Data / Engine Speed.

iii. Inspect the engine idling speed.

Standard idling speed:
650 to 750 rpm (transmission in neutral position and A/C switch off)

c. When not using the intelligent tester:



i. Connect SST to terminal 9 (TAC) of the DLC3.

SST
09843-18030

ii. Race the engine at 2500 rpm for approximately 90 seconds.

iii. Inspect the engine idling speed.

Standard idling speed:
650 to 750 rpm (transmission in neutral position and A/C switch off)

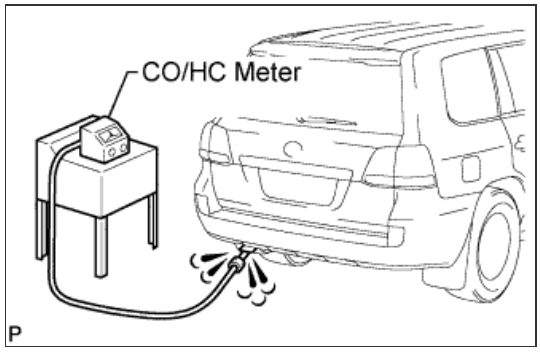
45. INSPECT CO/HC

HINT:

This check is to determine whether or not the idle CO/HC concentration complies with regulations.

a. Start the engine.

b. Run the engine at 2500 rpm for approximately 180 seconds.



c. Insert the CO/HC meter testing probe at least 40 cm (1.31 ft) into the tailpipe during idling.

d. Immediately check the CO/HC concentration during idling and/or at 2500 rpm.

HINT:

When carrying out the 2 tests (idling and 2500 rpm), the measurement orders are prescribed by the applicable local regulations.

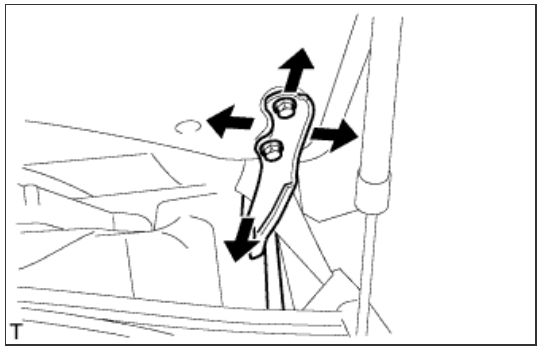
e. If the CO/HC concentration does not comply with regulations, perform troubleshooting in the order given below.

i. Check the A/F sensor operation (Click here) and heated oxygen sensor operation (Click here).

ii. See the table below for possible causes, and then inspect and correct the corresponding causes if necessary.

CO	HC	Symptom	Causes
Normal	High	Rough idling	1. Faulty ignition: • Incorrect timing • Plugs are contaminated or shorted, or plug gaps are defective 2. Incorrect valve clearance

			3. Leaky intake and exhaust valves 4. Leaky cylinders
Low	High	Rough idling (Fluctuating HC reading)	1. Vacuum leaks: • Ventilation hoses • Intake manifold • Throttle body 2. Lean mixture causing misfire
High	High	Rough idle (Black smoke from exhaust)	1. Restricted air filter 2. Faulty SFI system: • Faulty pressure regulator • Defective engine coolant temperature sensor • Faulty mass air flow meter • Faulty ECM • Faulty injectors • Faulty throttle position sensor



46. INSTALL HOOD SUB-ASSEMBLY

a. Install the hood with the 4 bolts.

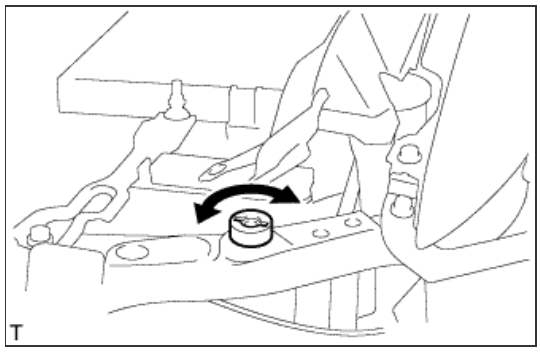
Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }

47. ADJUST HOOD SUB-ASSEMBLY

a. Adjust the hood position.

i. Loosen the 4 hinge bolts of the hood.

ii. Move the hood and adjust the clearance between the hood and front fender.



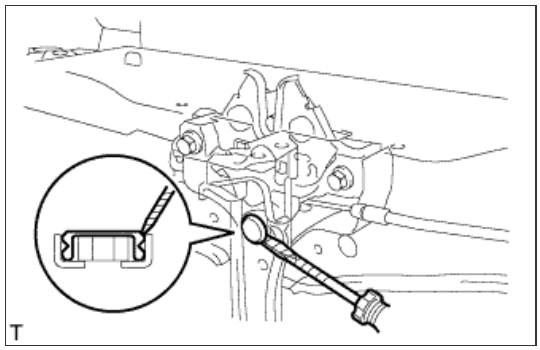
iii. Tighten the 4 hinge bolts of the hood after the adjustment.

Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }

iv. Adjust the cushion rubber so that the height of the hood and fender are aligned.

HINT:

Raise or lower the hood front end by turning the cushion rubber.

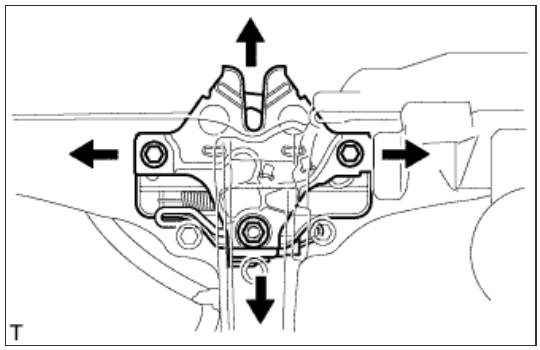


b. Adjust the hood lock.

i. Using a screwdriver, remove the hood lock nut cap as shown in the illustration.

HINT:

Tape the screwdriver tip before use.



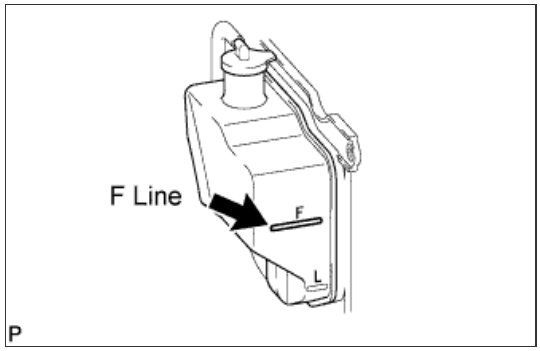
ii. Loosen the 2 bolts and hood lock nut.

iii. Adjust the hood lock position so that the striker can enter it smoothly.

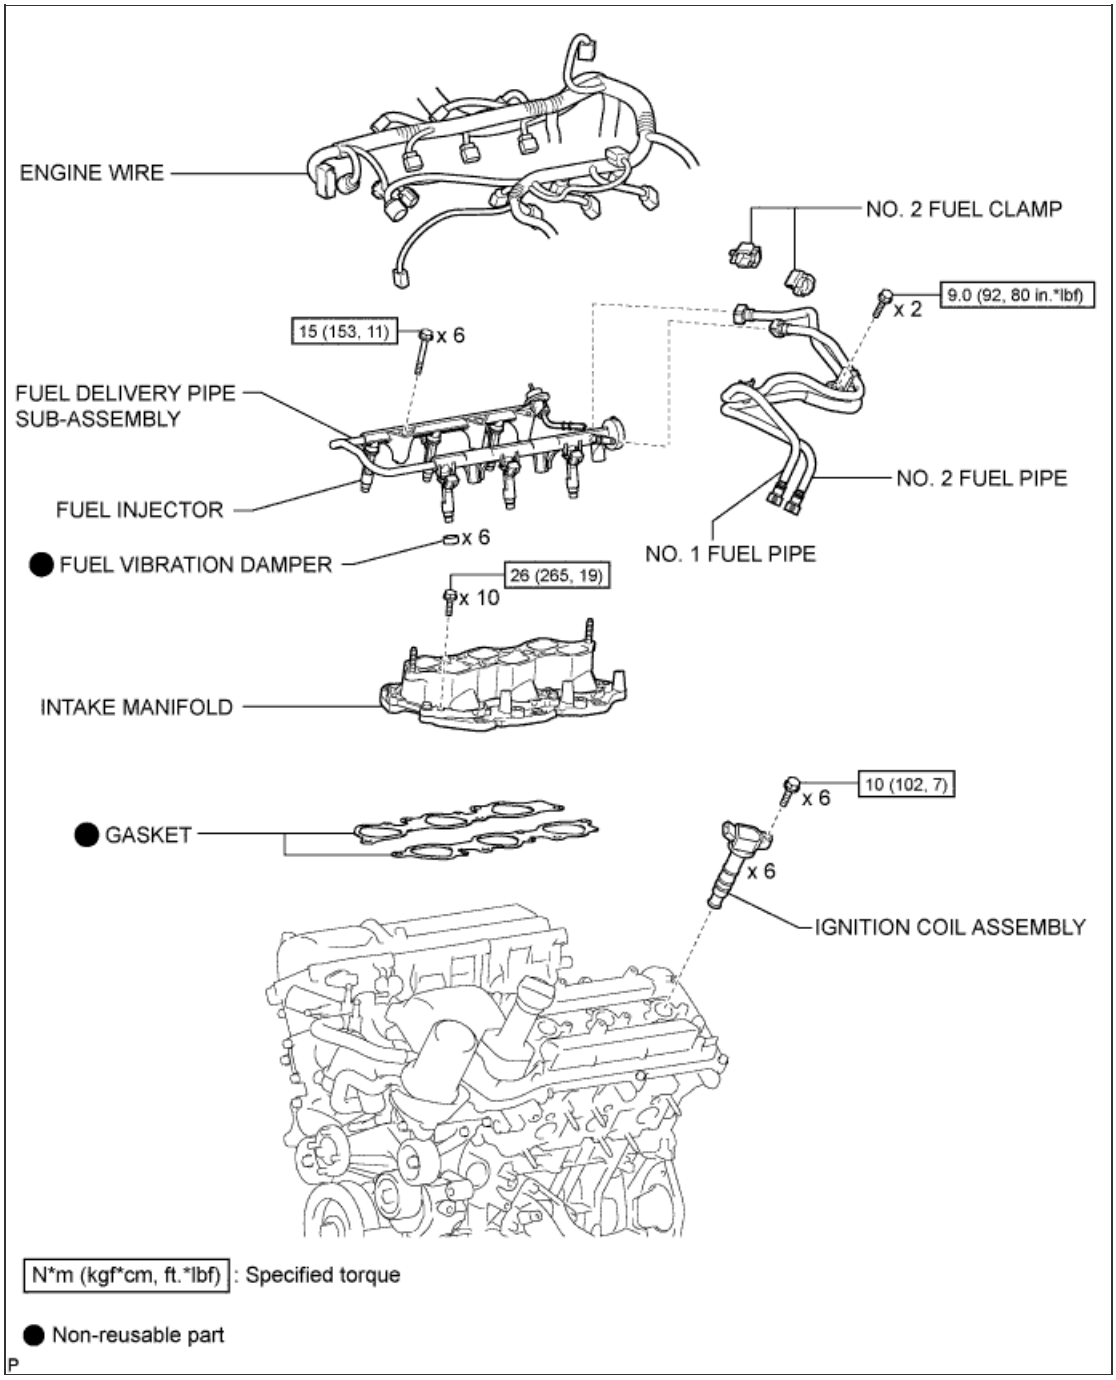
iv. Tighten the bolts and nut after the adjustment.

Torque:
5.5 N*m{ 56 kgf*cm , 49 in.*lbf }

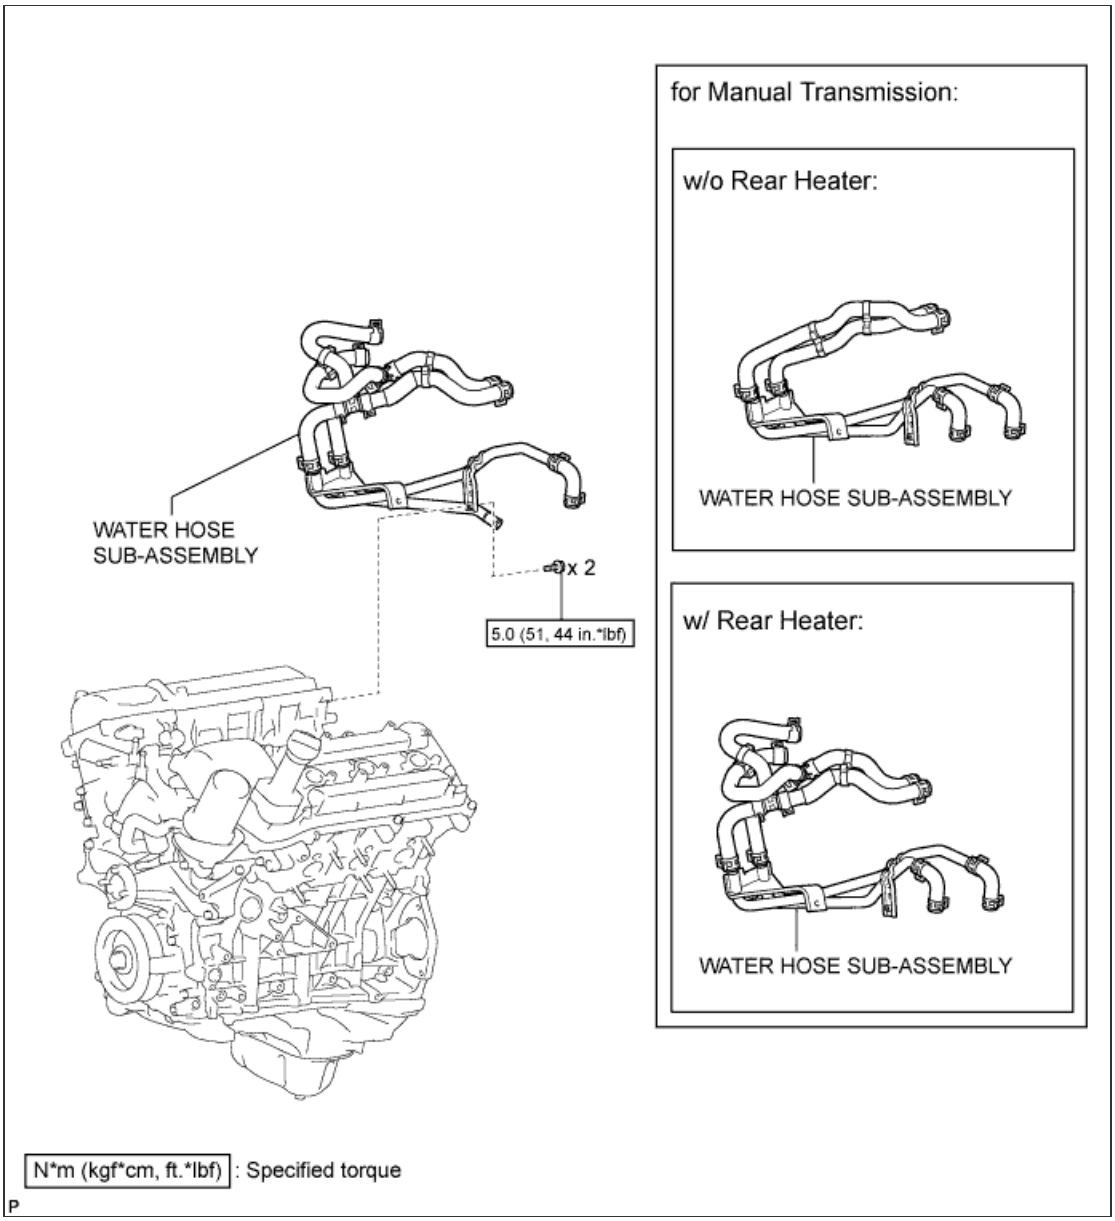
v. Install a new cap.



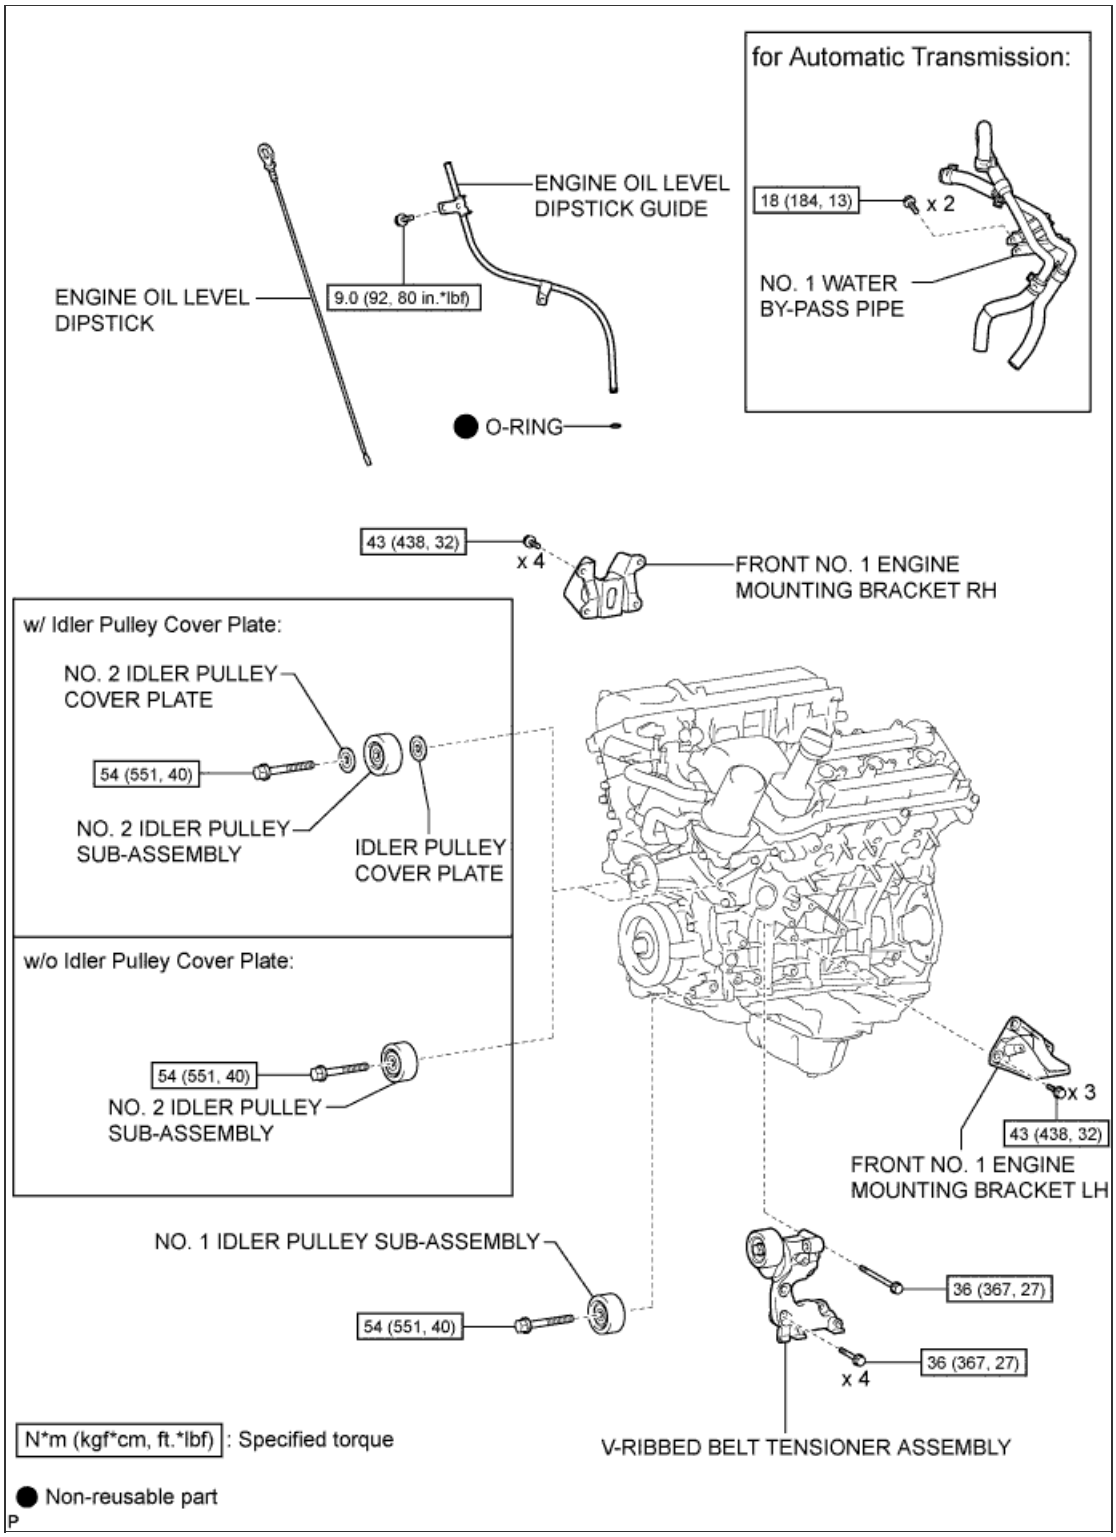
48. INSPECT COOLANT LEVEL AT RESERVOIR



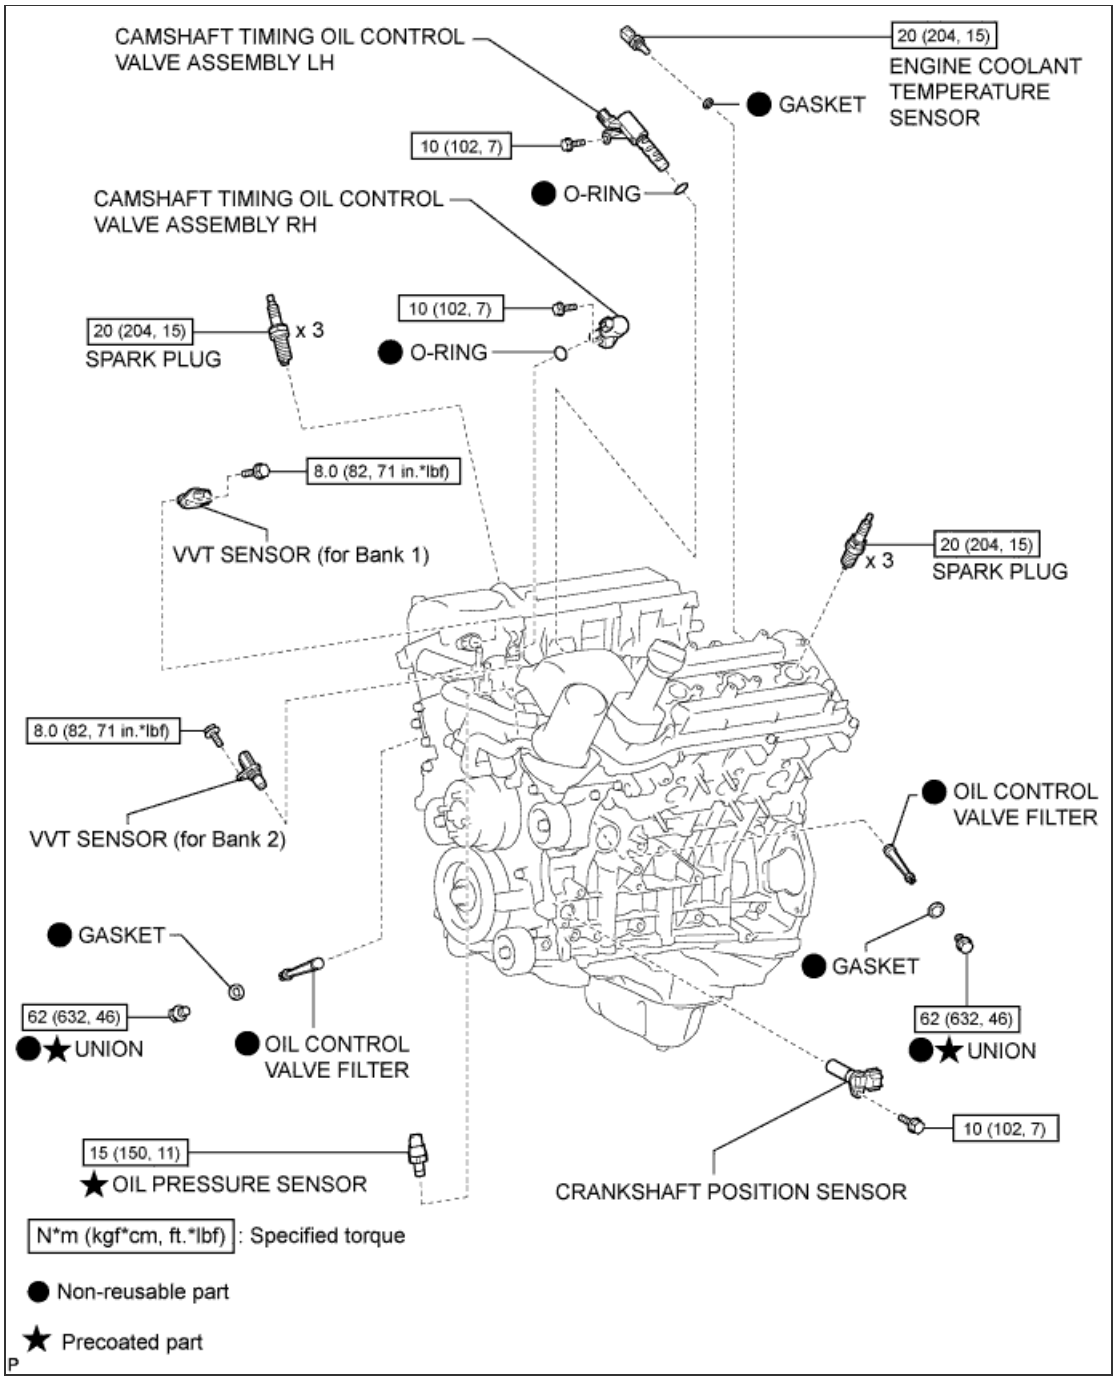
a. Check that the engine coolant level is between the L and F lines when the engine is cold.
If the engine coolant is low, check for leaks and add "TOYOTA Super Long Life Coolant" or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite and non-borate coolant with long-life hybrid organic acid technology to the F line.

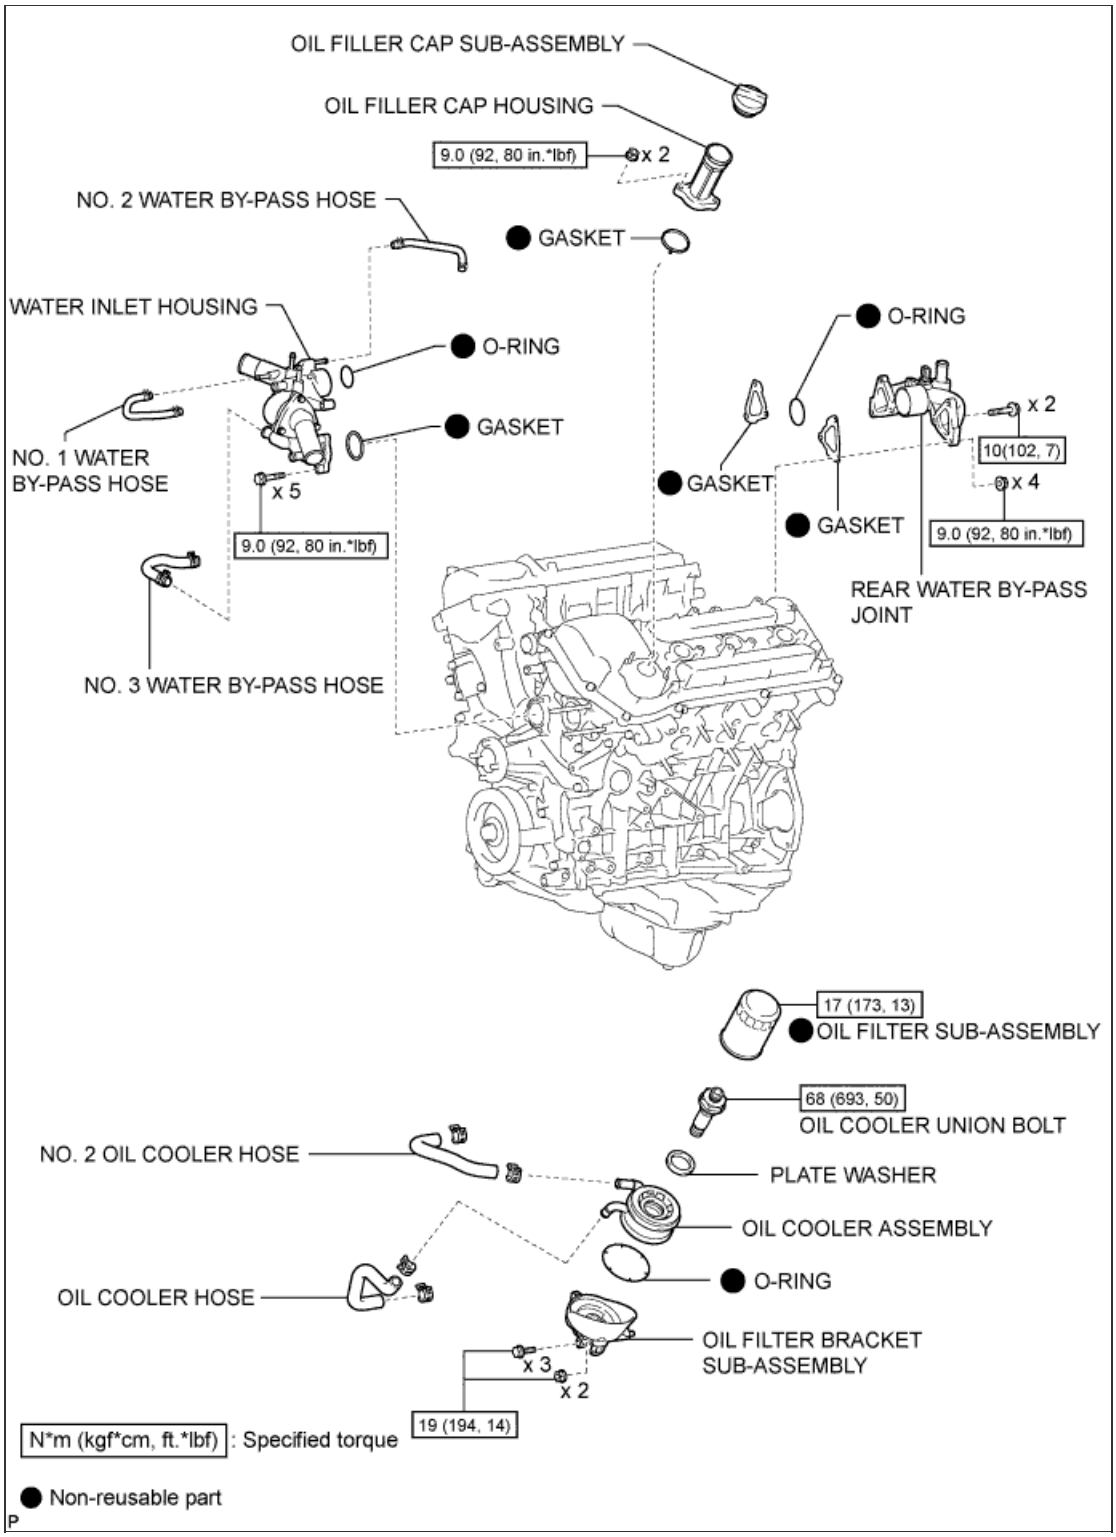


NOTICE:



Do not substitute plain water for engine coolant.





for Preparation Click here

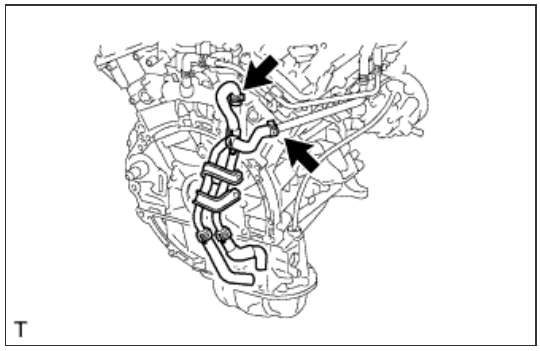
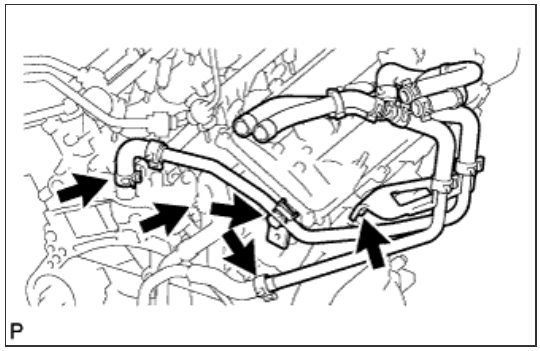
1. REMOVE OIL PRESSURE SENSOR



a. Using a 24 mm deep socket wrench, remove the oil pressure sensor.

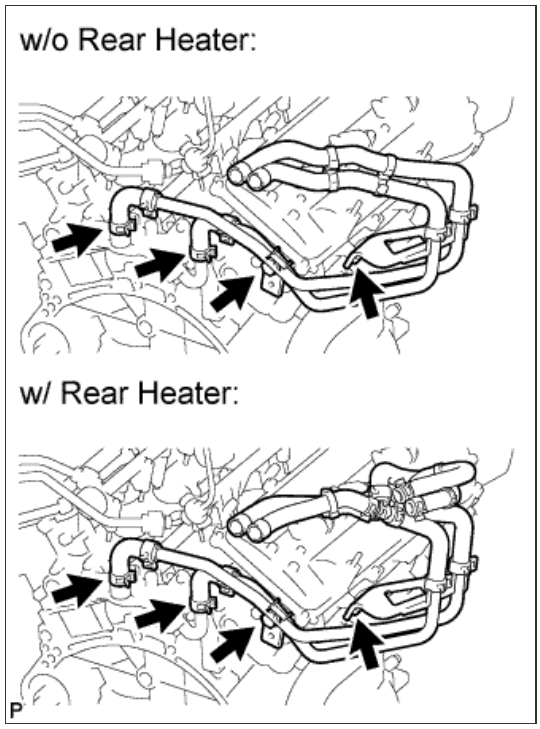
2. REMOVE ENGINE COOLANT TEMPERATURE SENSOR

a. Remove the engine coolant temperature sensor and gasket.



3. DISCONNECT NO. 1 WATER BY-PASS PIPE (for Automatic Transmission)

a. Disconnect the 2 water by-pass pipe hoses and remove the pipe.

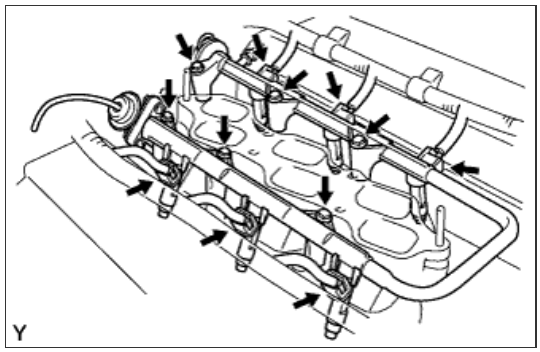


4. DISCONNECT WATER HOSE SUB-ASSEMBLY (for Automatic Transmission)

a. Remove the 2 bolts and disconnect the water hose.

5. DISCONNECT WATER HOSE SUB-ASSEMBLY (for Manual Transmission)

a. Remove the 2 bolts and disconnect the water hose.

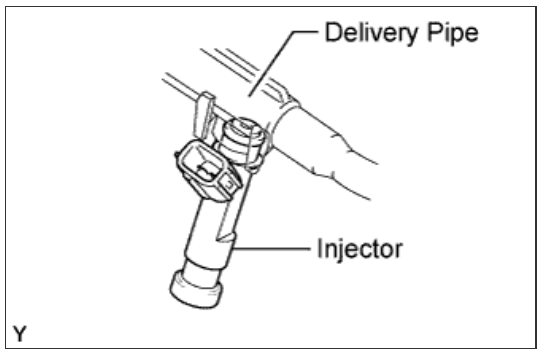


6. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY

a. Disconnect the 6 fuel injector connectors.

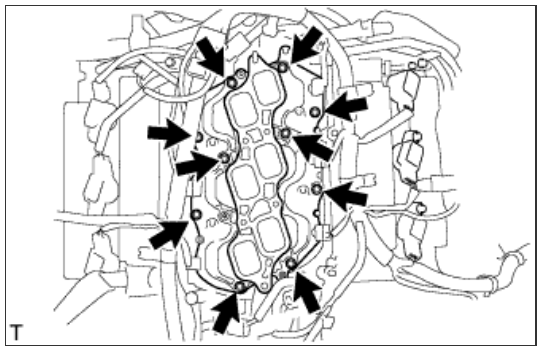
b. Remove the 6 bolts and fuel delivery pipe together with the 6 fuel injectors.

NOTICE:



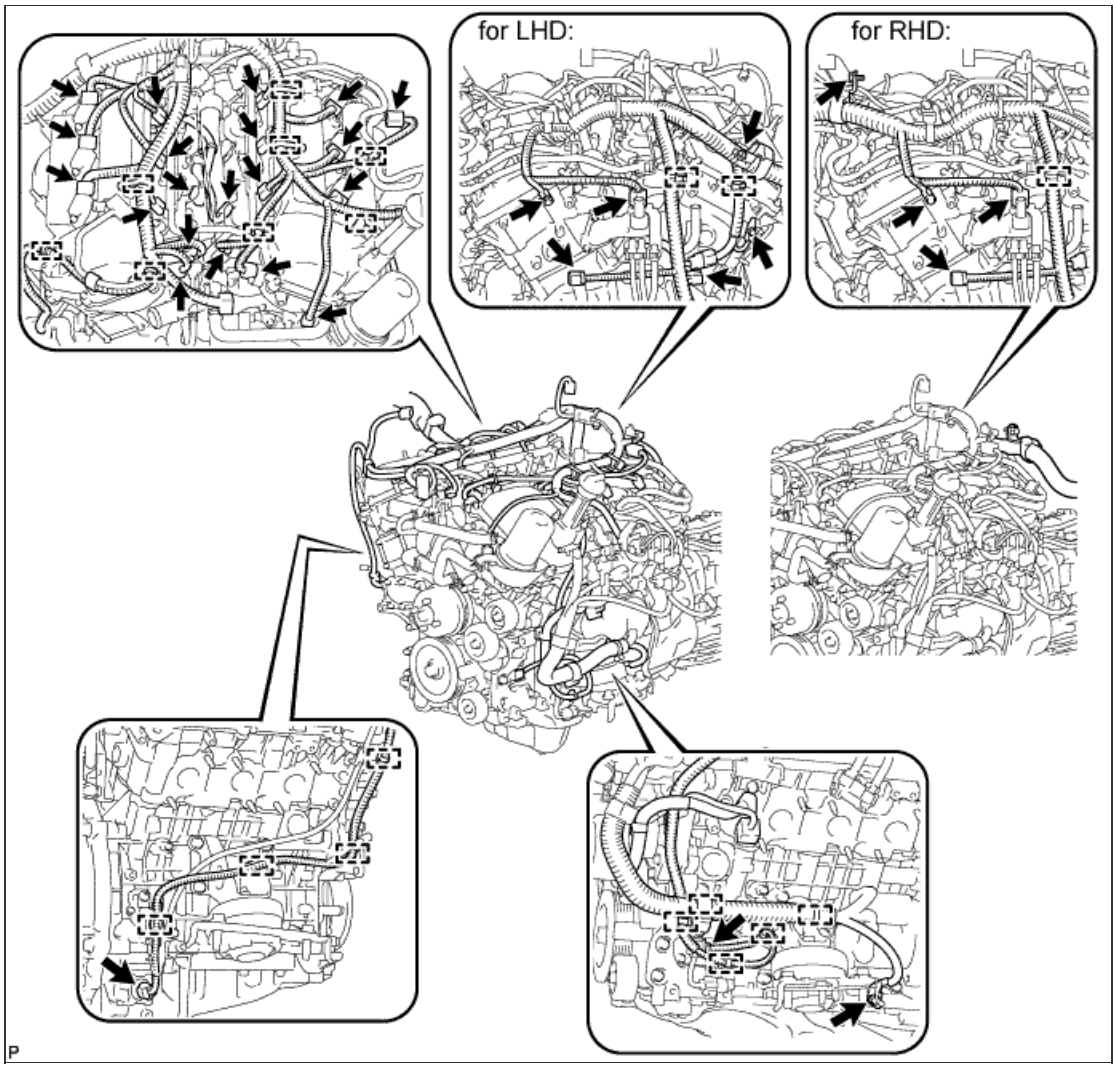
Be careful not to drop the injectors when removing the fuel delivery pipe.

7. REMOVE FUEL INJECTOR



a. Pull the 6 fuel injectors from the fuel delivery pipe.

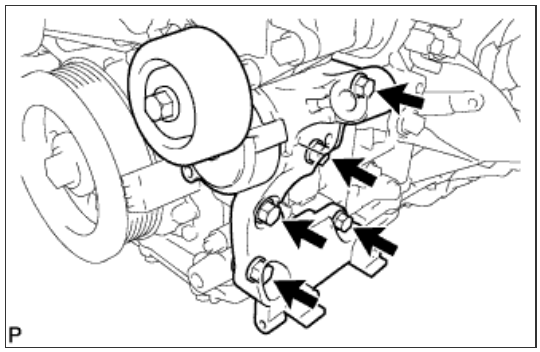
b. Remove the O-ring and injector vibration insulator from each fuel injector.



8. REMOVE INTAKE MANIFOLD

a. Remove the 10 bolts, intake manifold and 2 gaskets.

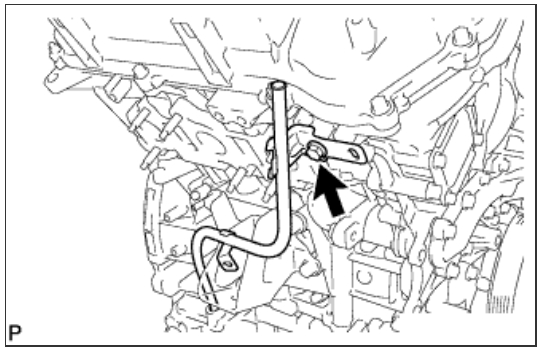
. REMOVE ENGINE WIRE



10. REMOVE IGNITION COIL ASSEMBLY

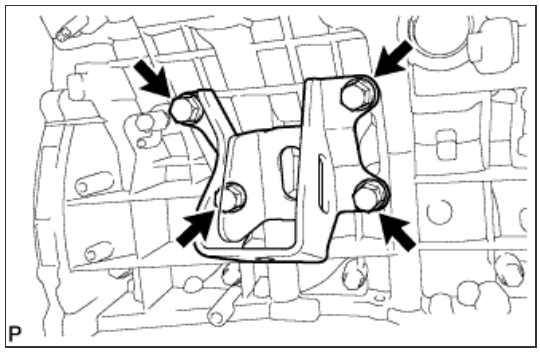
a. Remove the 6 bolts and 6 ignition coils.

11. REMOVE V-RIBBED BELT TENSIONER ASSEMBLY



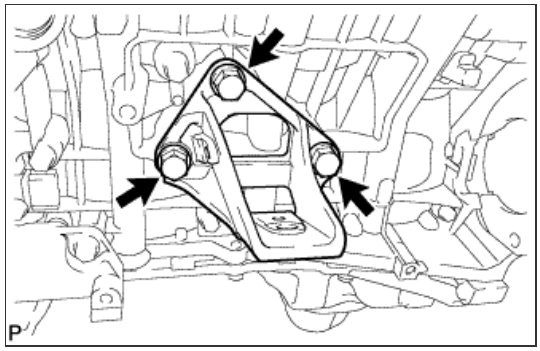
a. Remove the 5 bolts and V-ribbed belt tensioner.

12. REMOVE ENGINE OIL LEVEL DIPSTICK GUIDE



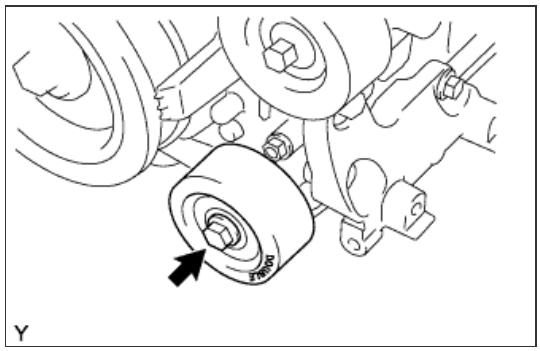
a. Remove the bolt and dipstick guide.

b. Remove the O-ring from the dipstick guide.



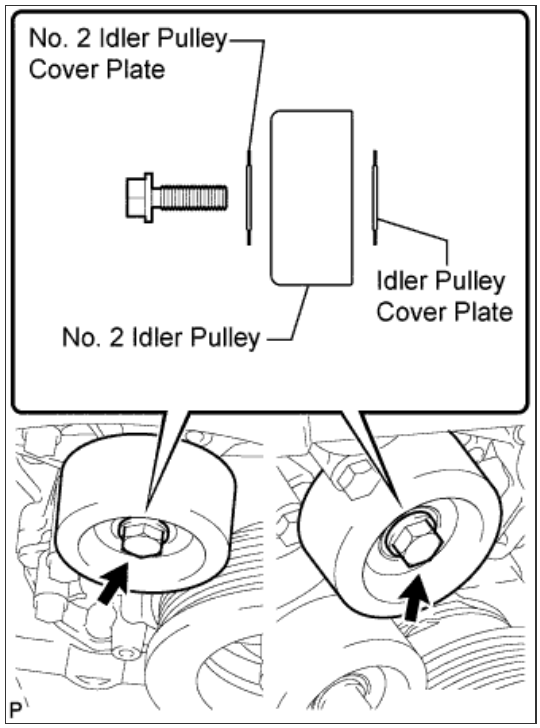
13. REMOVE FRONT NO. 1 ENGINE MOUNTING BRACKET RH

a. Remove the 4 bolts and front No. 1 engine mounting bracket RH.



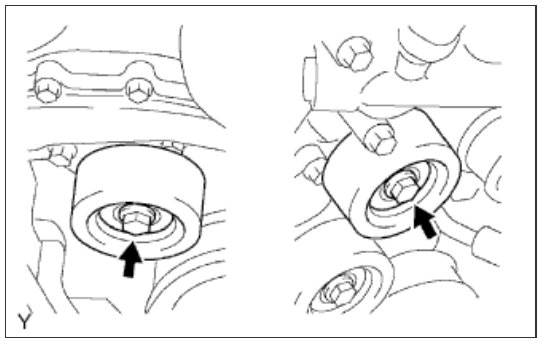
14. REMOVE FRONT NO. 1 ENGINE MOUNTING BRACKET LH

a. Remove the 3 bolts and front No. 1 engine mounting bracket LH.



15. REMOVE NO. 1 IDLER PULLEY SUB-ASSEMBLY

a. Remove the bolt and No. 1 idler pulley.



16. REMOVE NO. 2 IDLER PULLEY SUB-ASSEMBLY

a. w/ Pulley Cover Plate:
Remove the 2 bolts, 2 No. 2 idler pulley cover plate, 2 idler pulley and 2 idler pulley cover plate.

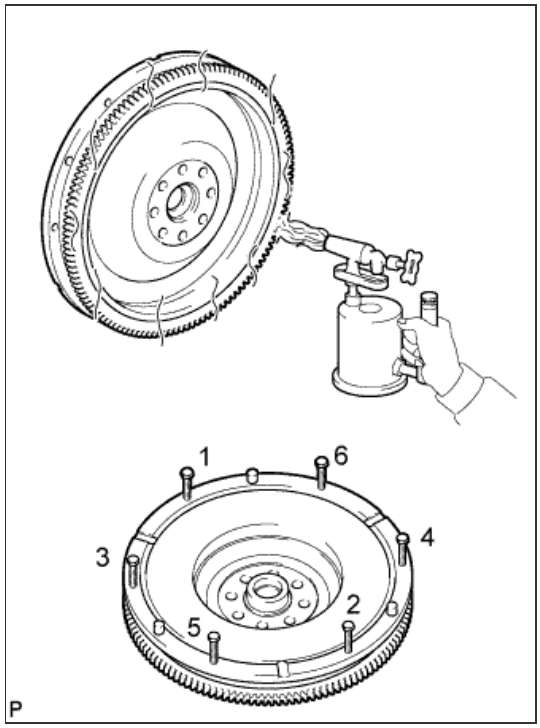
b. w/o Pulley Cover Plate:
Remove the 2 bolts and 2 No. 2 idler pulleys.

17. REMOVE FLYWHEEL RING GEAR (for Manual Transmission)

HINT:

If the flywheel ring gear is deformed or the gears are damaged, replace it.

CAUTION:

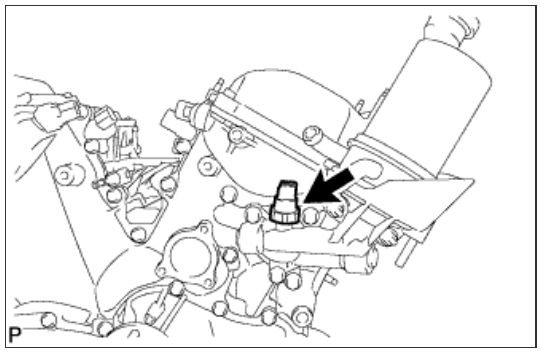


Wear protective gloves. Hot ares on the flywheel ring gear may injure your hands.

a. Using a torch, heat the ring gear evenly to approximately 200°C (392°F).

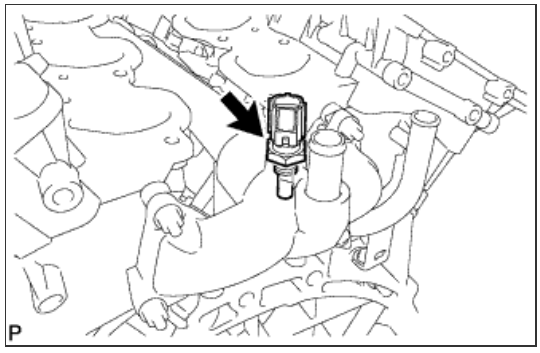
b. Temporarily install 6 bolts (8 mm x 1.25 pitch) with a length of 70 mm or more to the flywheel.

c. Uniformly tighten the 6 bolts in the order shown in the illustration.



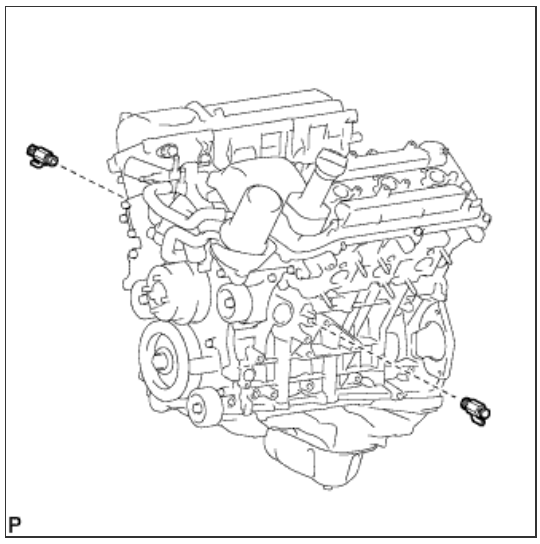
d. Remove the ring gear from the flywheel.

for Preparation Click here



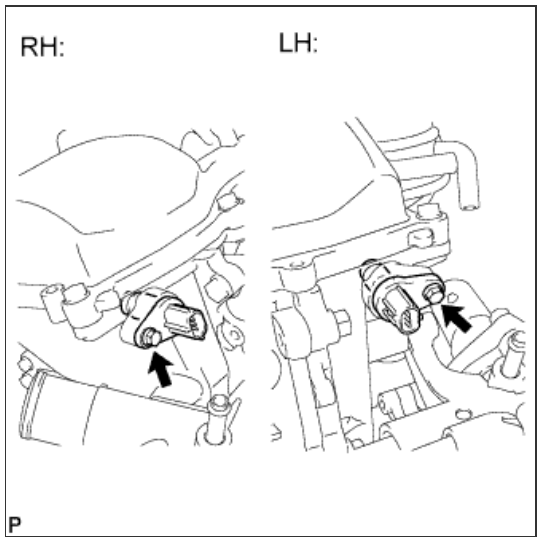
1. REMOVE OIL PRESSURE SENSOR

a. Using a 24 mm deep socket wrench, remove the oil pressure sensor.



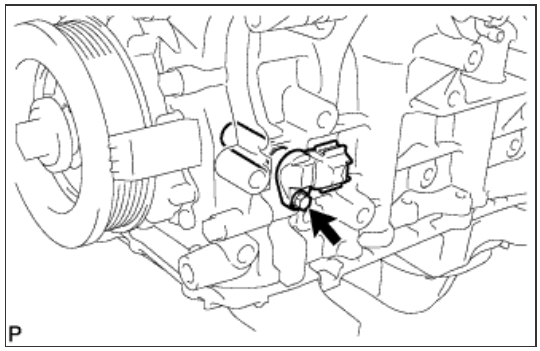
2. REMOVE ENGINE COOLANT TEMPERATURE SENSOR

a. Remove the engine coolant temperature sensor and gasket.



3. REMOVE CYLINDER BLOCK WATER DRAIN COCK SUB-ASSEMBLY

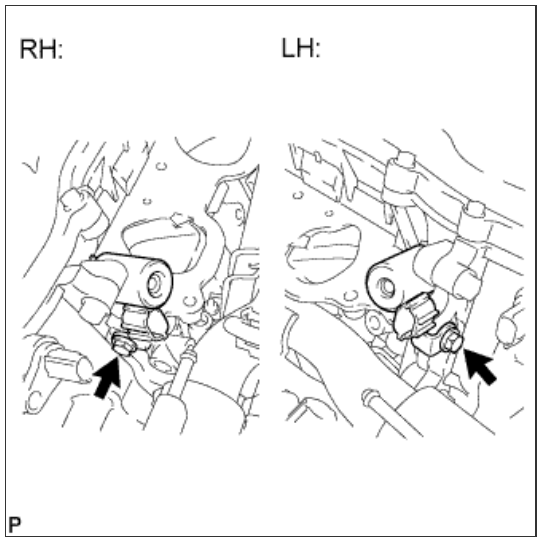
a. Remove the 2 water drain cocks.



4. REMOVE VVT SENSOR

a. Remove the 2 bolts and 2 VVT sensors from the cylinder head LH and RH.

5. REMOVE CRANKSHAFT POSITION SENSOR

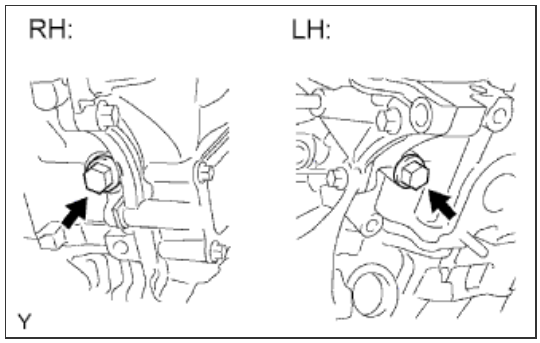


a. Remove the bolt and crankshaft position sensor.

6. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY RH

a. Remove the bolt and camshaft timing oil control valve from the cylinder head.

b. Remove the O-ring.



7. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY LH

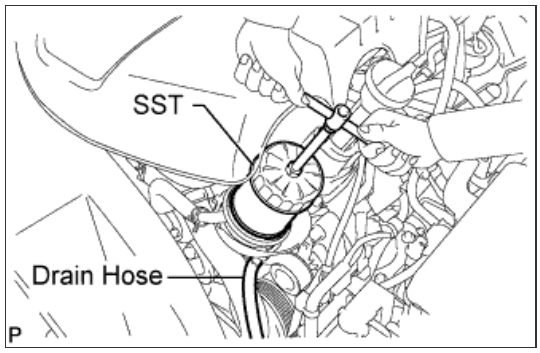
a. Remove the bolt and camshaft timing oil control valve from the cylinder head.

b. Remove the O-ring.

8. REMOVE OIL CONTROL VALVE FILTER

a. Remove the 2 unions, 2 filters and 2 gaskets from the cylinder head LH and RH.

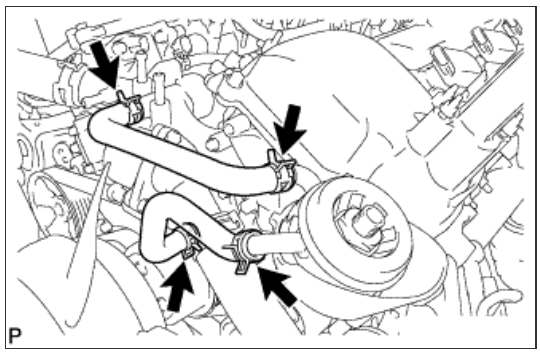
9. REMOVE OIL FILTER SUB-ASSEMBLY



a. Remove the drain pipe cap.

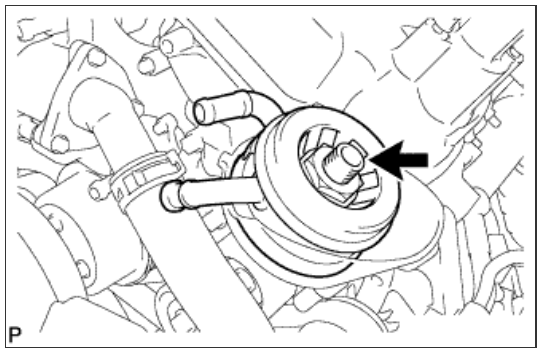
b. Using SST, remove the oil filter.

SST
09228-07501



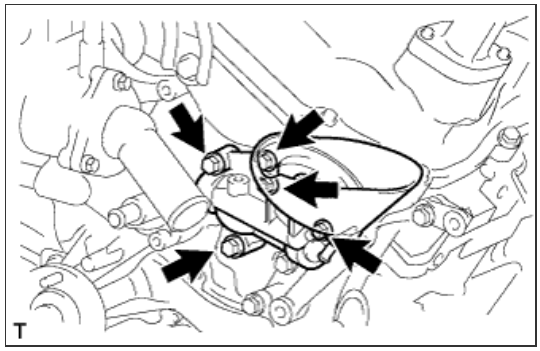
HINT:

- **Put the disposal container beneath the drain hose to collect the oil from the oil filter cover.**
- **Drain hose inside diameter: 8 mm (0.315 in.**
- **Drain hose len h: 900 mm (2.95 ft.**



10. REMOVE OIL COOLER ASSEMBLY

a. Remove the oil cooler hose and No. 2 oil cooler hose.



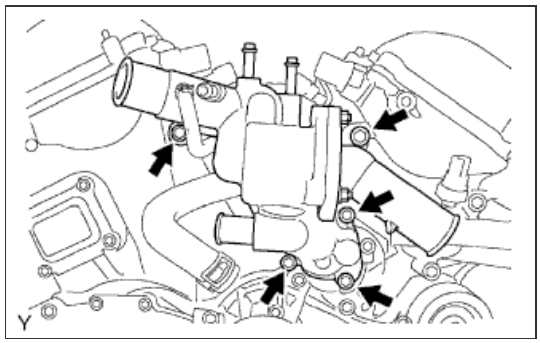
b. Remove the union bolt, plate washer and oil cooler.

c. Remove the O-ring from the oil cooler.

11. REMOVE OIL FILTER BRACKET SUB-ASSEMBLY

a. Remove the 3 bolts, 2 nuts, oil filter bracket and O-ring.

12. DISCONNECT NO. 1 WATER BY-PASS HOSE

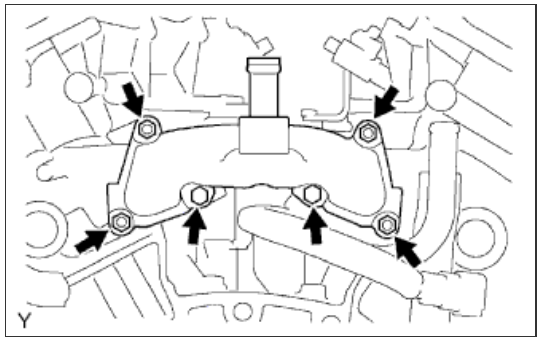


13. DISCONNECT NO. 2 WATER BY-PASS HOSE

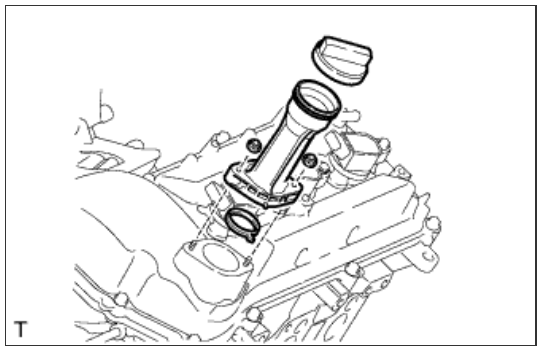
14. DISCONNECT NO. 3 WATER BY-PASS HOSE

15. REMOVE WATER INLET HOUSING

a. Remove the 5 bolts and water inlet housing.



b. Remove the O-ring and gasket from the water outlet pipe and water pump.



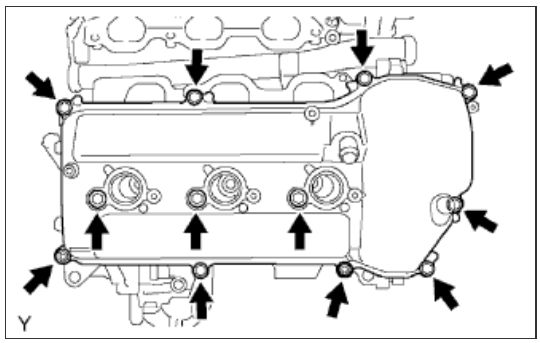
16. REMOVE REAR WATER BY-PASS OINT

a. Remove the 2 bolts, 4 nuts, rear water by-pass joint and 2 gaskets.

b. Remove the O-ring from the No. 1 water outlet pipe.

17. REMOVE OIL FILLER CAP SUB-ASSEMBLY

18. REMOVE OIL FILLER CAP HOUSING



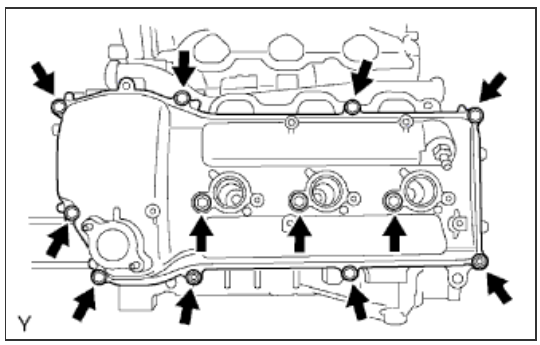
a. Remove the 2 nuts, oil filler cap housing and gasket.

19. REMOVE SPARK PLUG

a. Remove the 6 spark plugs.

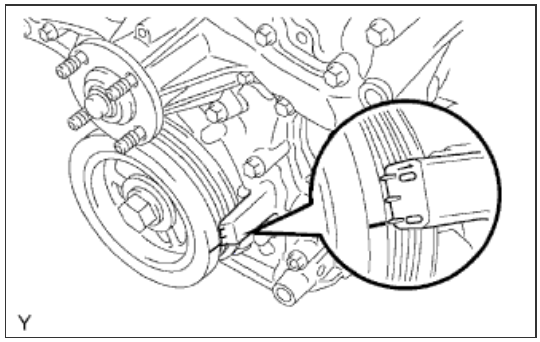
20. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY RH

a. Remove the 10 bolts, 3 seal washers, 2 nuts, cylinder head cover and gasket.



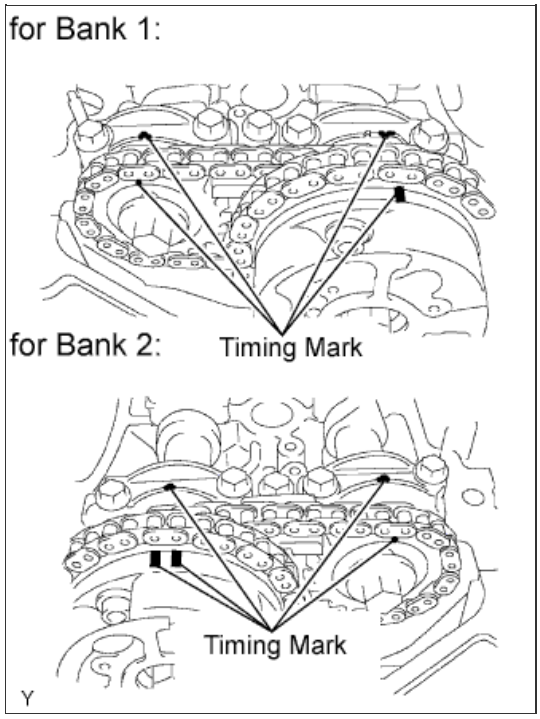
21. REMOVE VENTILATION VALVE SUB-ASSEMBLY

a. Remove the ventilation valve.



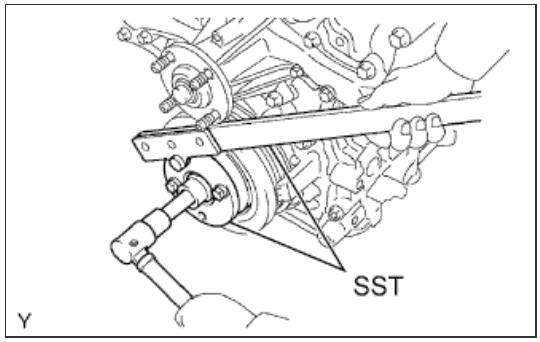
22. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY LH

a. Remove the 10 bolts, 3 seal washers, 2 nuts, cylinder head cover and gasket.

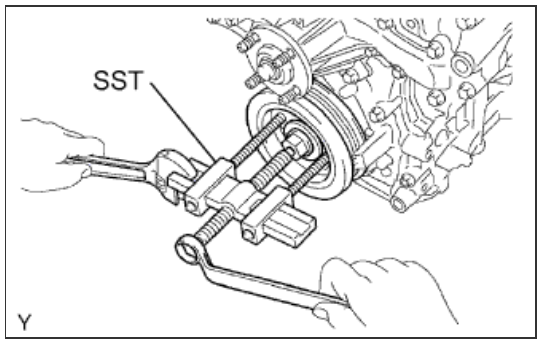


23. REMOVE CRANKSHAFT PULLEY

a. Turn the crankshaft pulley, and align the notch with the timing mark "0" of the timing chain cover.



b. Check that the timing marks of the camshaft timing gears and sprockets are aligned with the timing marks of the bearing caps as shown in the illustration.

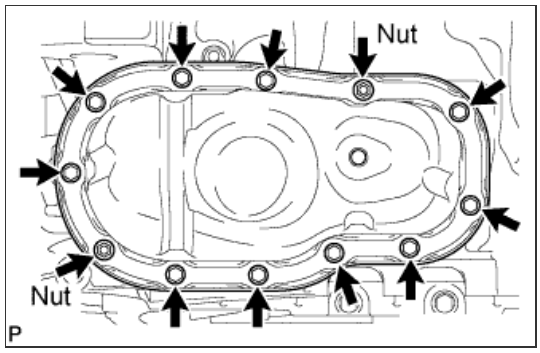


c. Using SST, hold the crankshaft pulley and loosen the pulley set bolt.

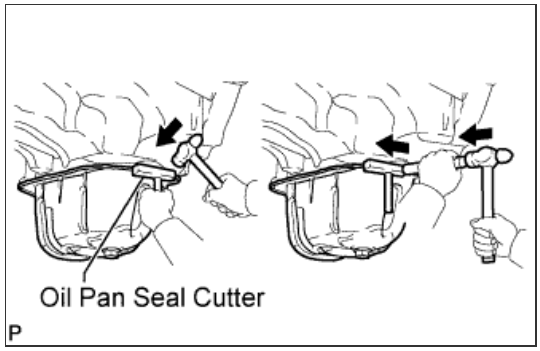
SST
09213-54015 (91651-60855
09330-00021

d. Using the pulley set bolt and SST, remove the crankshaft pulley.

SST
09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05030)



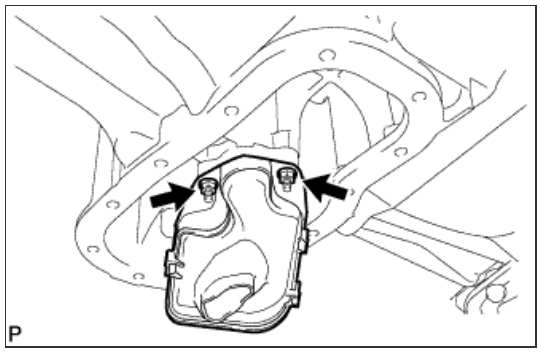
24. REMOVE OIL PAN DRAIN PLUG



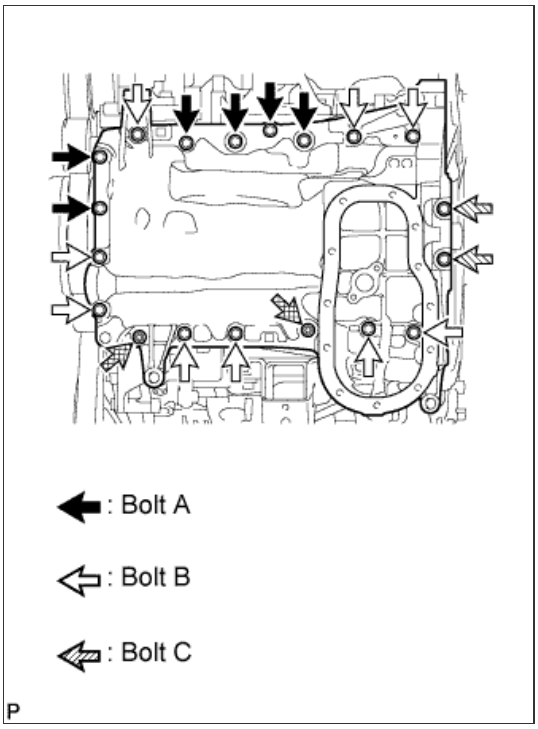
a. Remove the drain plug and gasket.

25. REMOVE NO. 2 OIL PAN SUB-ASSEMBLY

a. Remove the 10 bolts and 2 nuts.



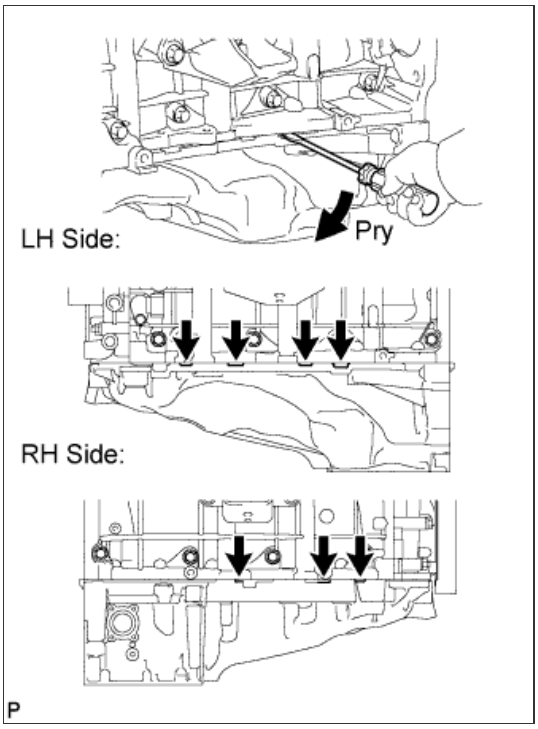
b. Insert the blade of an oil pan seal cutter between the oil pans. Cut through the applied sealer and remove the No. 2 oil pan.



26. REMOVE OIL STRAINER SUB-ASSEMBLY

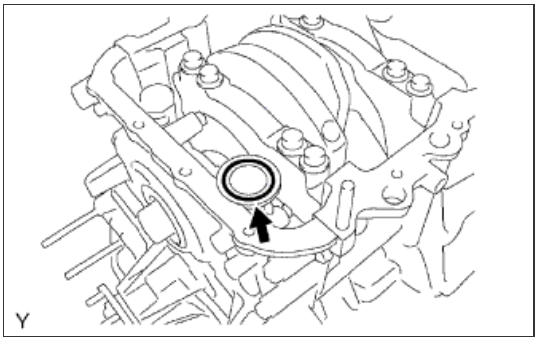
a. Remove the 2 nuts, oil strainer and gasket.

27. REMOVE OIL PAN SUB-ASSEMBLY



a. Remove the 17 bolts (A, B, C) and 2 nuts.

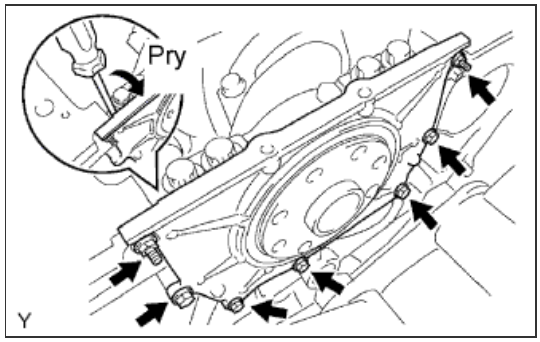
b. Using a screwdriver, remove the oil pan by prying between the oil pan and cylinder block as shown in the illustration.



NOTICE:

Be careful not to damage the contact surfaces of the cylinder block and oil pan.

c. Remove the O-ring from the timing chain cover.

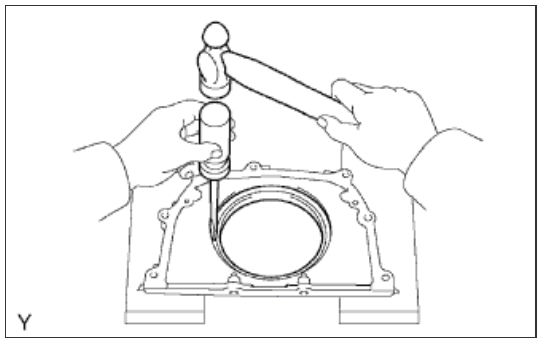


d. Remove the 4 stud bolts from the oil pan.

28. REMOVE ENGINE REAR OIL SEAL RETAINER

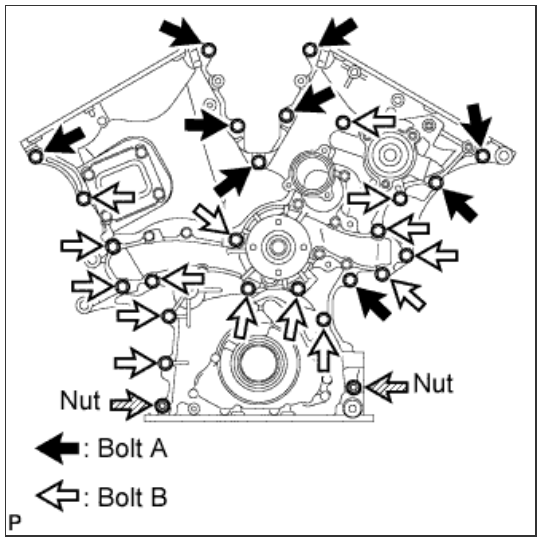
a. Remove the 5 bolts and 2 nuts.

b. Using a screwdriver, remove the oil seal retainer by prying between the oil seal retainer and crankshaft bearing cap.



29. REMOVE REAR CRANKSHAFT OIL SEAL

a. Using a screwdriver and hammer, tap out the oil seal.

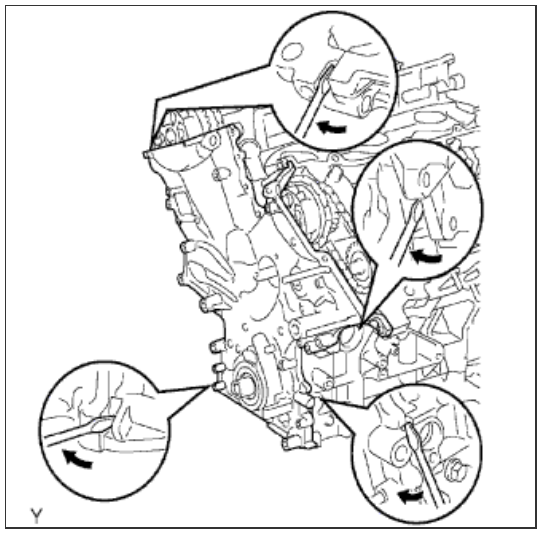


NOTICE:

Be careful not to damage the rear oil seal retainer.

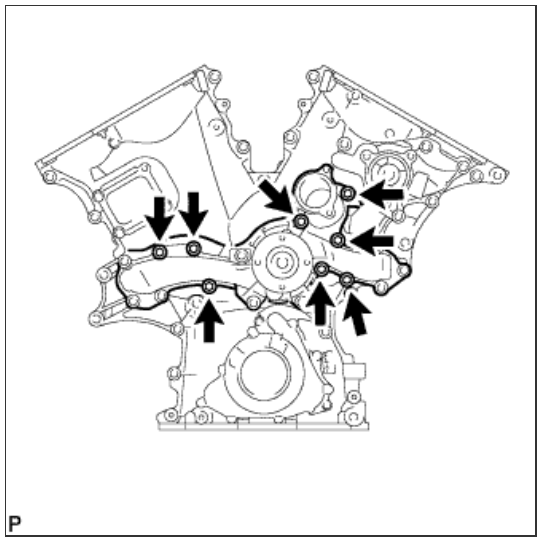
30. REMOVE TIMING CHAIN COVER SUB-ASSEMBLY

a. Remove the 24 bolts labeled A and B, and the 2 nuts.



b. Remove the timing chain cover by prying between the timing chain cover and cylinder head or cylinder block with a screwdriver.

NOTICE:



Be careful not to damage the contact surfaces of the timing chain cover, cylinder block and cylinder head.

c. Remove the O-ring from the cylinder head LH side.

31. REMOVE WATER PUMP ASSEMBLY

a. Remove the 8 bolts, water pump and gasket.

32. REMOVE FRONT CRANKSHAFT OIL SEAL

a. If the timing chain case is removed:

i. Using a screwdriver and wooden block, pry out the oil seal.

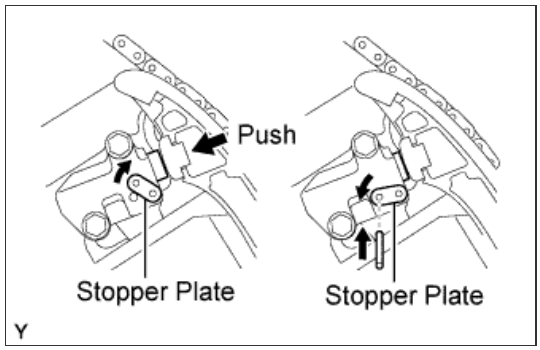
HINT:

Tape the screwdriver tip before use.

NOTICE:

Do not damage the surface of the oil seal press fit hole and crankshaft.

33. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY



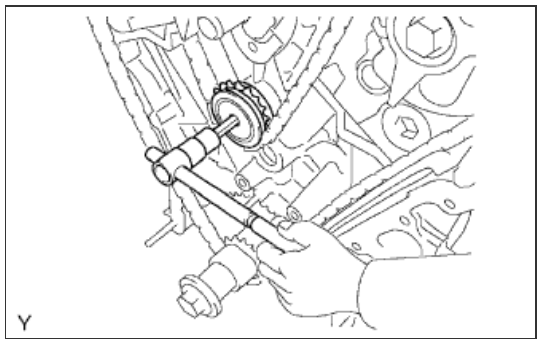
NOTICE:

- **Never rotate the crankshaft with the chain tensioner removed.**
- **When rotatin the camshaft with the timin chain removed, rotate the crankshaft counterclockwise 40 from the TDC first.**

a. While turning the stopper plate of the tensioner clockwise, push in the plunger of the chain tensioner as shown in the illustration.

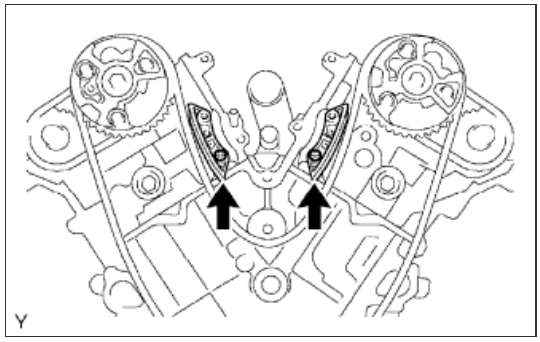
b. While turning the stopper plate of the tensioner counterclockwise, insert a bar of φ3.5 mm (0.138 in.) into the holes on the stopper plate and tensioner to fi the stopper plate in place.

c. Remove the 2 bolts and chain tensioner.



34. REMOVE CHAIN TENSIONER SLIPPER

a. Remove the chain tensioner slipper.

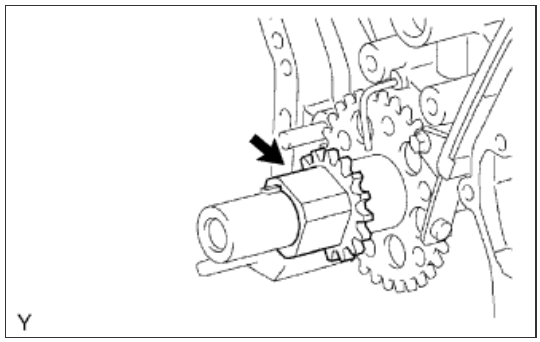


35. REMOVE NO. 1 IDLE GEAR SHAFT

a. Using a 10 mm he agon wrench, remove the No. 2 idle gear shaft, No. 1 idle gear and No. 1 idle gear shaft.

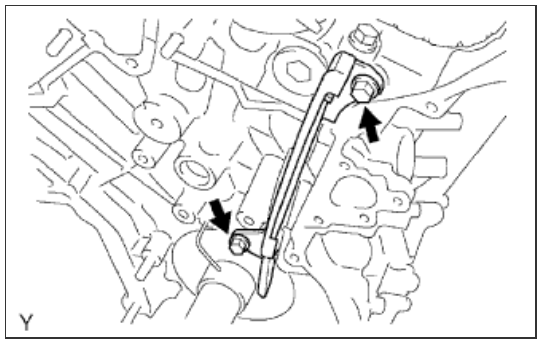
36. REMOVE NO. 2 CHAIN VIBRATION DAMPER

a. Remove the 2 No. 2 chain vibration dampers.



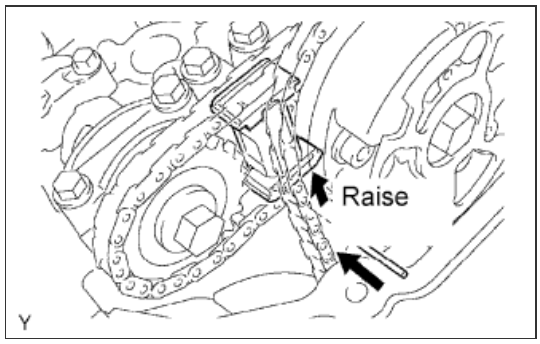
37. REMOVE NO. 1 CHAIN SUB-ASSEMBLY

a. Remove the No. 1 chain.



38. REMOVE CRANKSHAFT TIMING SPROCKET

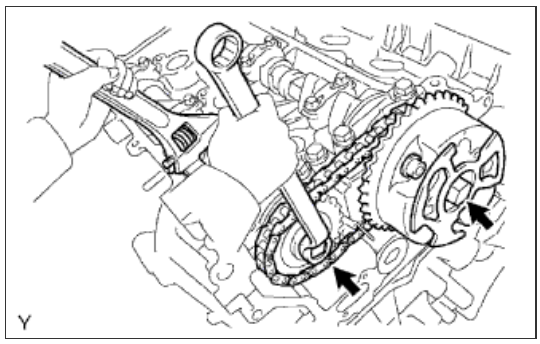
a. Remove the crankshaft timing sprocket.



39. REMOVE NO. 1 CHAIN VIBRATION DAMPER

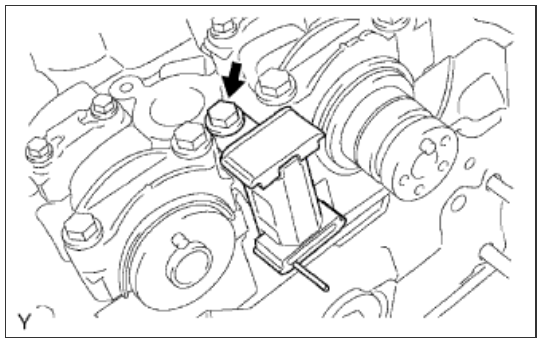
a. Remove the 2 bolts and No. 1 chain vibration damper.

40. REMOVE CAMSHAFT TIMING GEARS AND NO. 2 CHAIN (for Bank 1



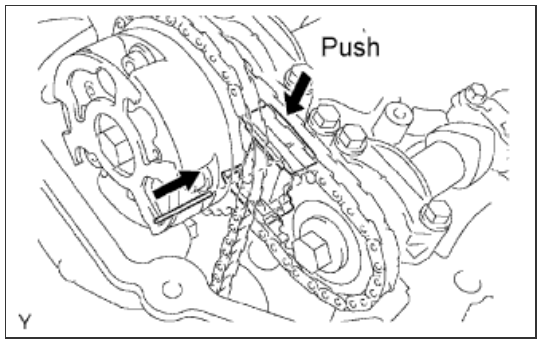
a. While raising the No. 2 chain tensioner, insert a pin of φ1.0 mm (0.0394 in.) into the hole to fi the tensioner in place.

b. Hold the he agonal portion of the camshaft with a wrench, and remove the 2 bolts, camshaft timing gear, camshaft timing sprocket and No. 2 chain.



NOTICE:

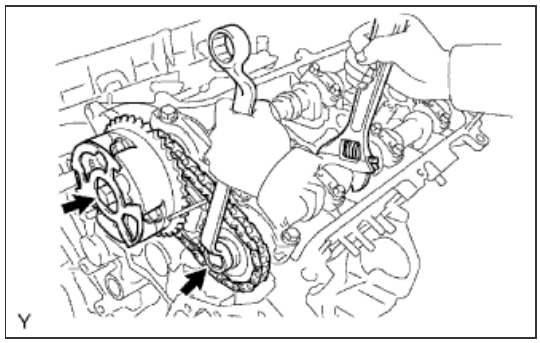
- **Be careful not to dama the c linder head and valve lifter with the wrench.**
- **Do not disassemble the camshaft timin ear**



41. REMOVE NO. 2 CHAIN TENSIONER ASSEMBLY

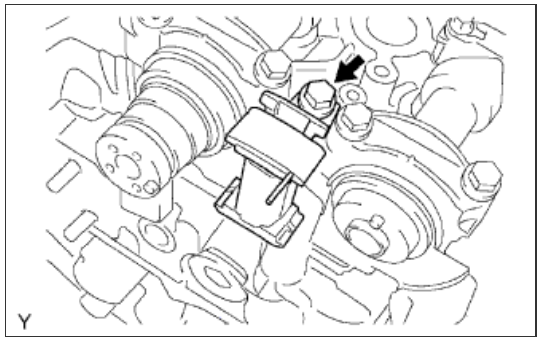
a. Remove the bolt and No. 2 chain tensioner.

42. REMOVE CAMSHAFT TIMING GEARS AND NO. 2 CHAIN (for Bank 2



a. While raising the No. 3 chain tensioner, insert a pin of φ1.0 mm (0.0394 in.) into the hole to fi the tensioner in palace.

b. Hold the he agonal portion of the camshaft with a wrench, and remove the 2 bolts, camshaft timing gear, camshaft timing sprocket and No. 2 chain.

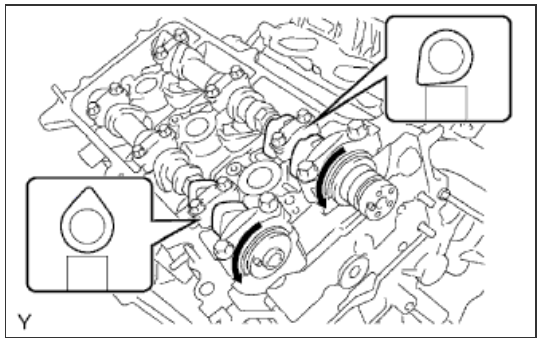


NOTICE:

- **Be careful not to dama the c linder head and valve lifter with the wrench.**
- **Do not disassemble the camshaft timin ear**

43. REMOVE NO. 3 CHAIN TENSIONER ASSEMBLY

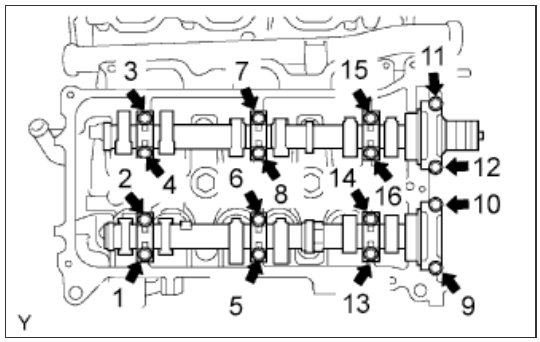
a. Remove the bolt and No. 3 chain tensioner.



44. REMOVE NO. 1 CAMSHAFT AND NO. 2 CAMSHAFT (for Bank 1

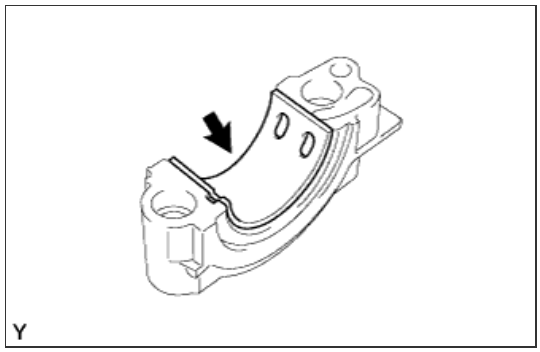
NOTICE:

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being removed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

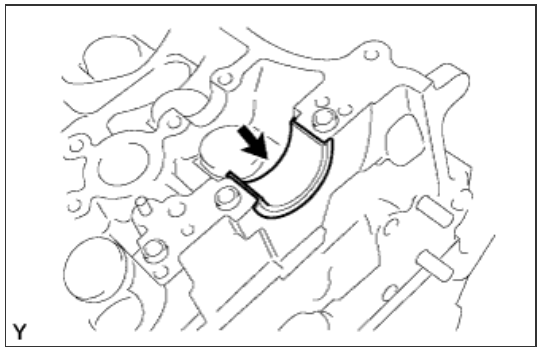


a. Remove the No. 1 and No. 2 camshafts.

i. Rotate the camshafts counterclockwise using a wrench so that the cam lobes of the No. 1 cylinder face each direction as shown in the illustration.



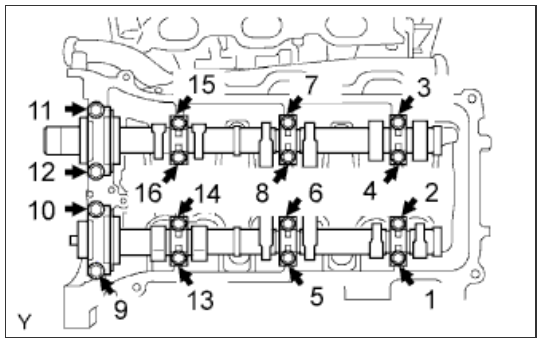
ii. Uniformly loosen and remove the 16 bearing cap bolts in the sequence shown in the illustration.



iii. Remove the 8 bearing caps and 2 camshafts.

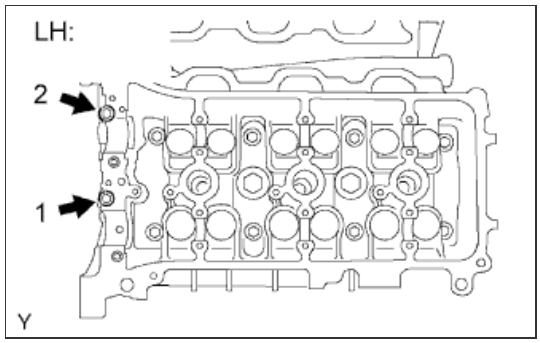
45. REMOVE NO. 1 CAMSHAFT BEARING (for Bank 1

46. REMOVE NO. 2 CAMSHAFT BEARING (for Bank 1



47. REMOVE NO. 3 CAMSHAFT AND NO. 4 CAMSHAFT (for Bank 2

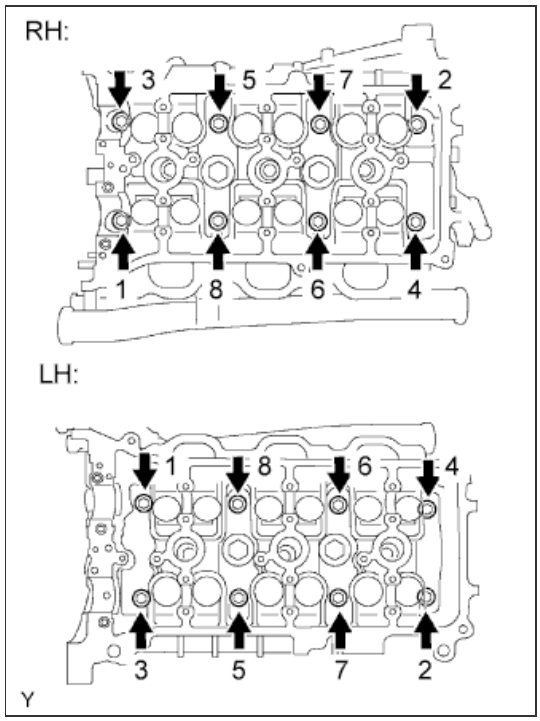
a. Remove the No. 3 and No. 4 camshafts.



i. Uniformly loosen and remove the 16 bearing cap bolts in the sequence shown in the illustration.

ii. Remove the 8 bearing caps and 2 camshafts.

48. REMOVE CYLINDER HEADS

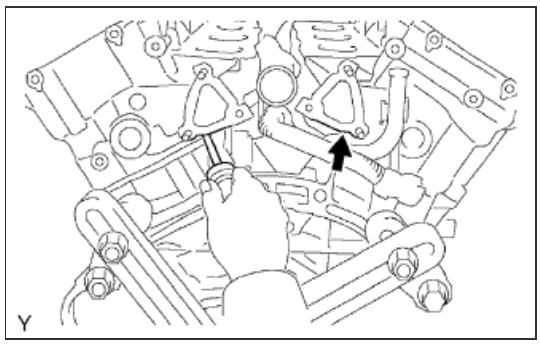


a. Using a 10 mm bi-he agon wrench, uniformly loosen the 2 bolts in the sequence shown in the illustration. Remove the 2 cylinder head bolts and plate washers.

b. Using a 10 mm bi-he agon wrench, uniformly loosen the 16 bolts in the sequence shown in the illustration. Remove the 16 cylinder head bolts and plate washers.

NOTICE:

- **Be careful not to drop the plate washers into the c linder head.**
- **C linder head warpa or crackin could result from removin bolts in the incorrect order.**



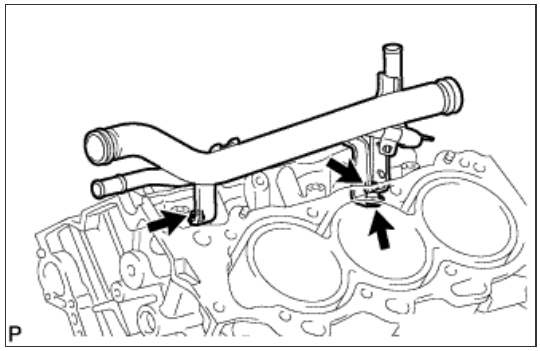
c. Lift the cylinder head from the dowels on the cylinder block, and place the 2 cylinder heads on wooden blocks on a bench.

NOTICE:

Be careful not to damage the contact surfaces of the cylinder head and cylinder block.

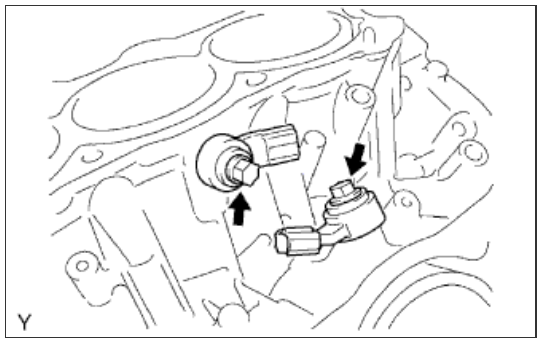
HINT:

If the cylinder head is difficult to lift off, pry between the cylinder head and cylinder block with a screwdriver.



49. REMOVE CYLINDER HEAD GASKET

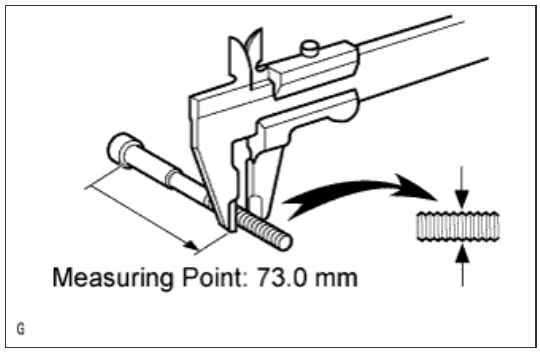
50. REMOVE NO. 2 CYLINDER HEAD GASKET



51. REMOVE NO. 1 WATER OUTLET PIPE

a. Remove the 3 bolts and water outlet pipe.

52. REMOVE KNOCK SENSOR



a. Remove the 2 bolts and 2 knock sensors.

for Preparation Click here

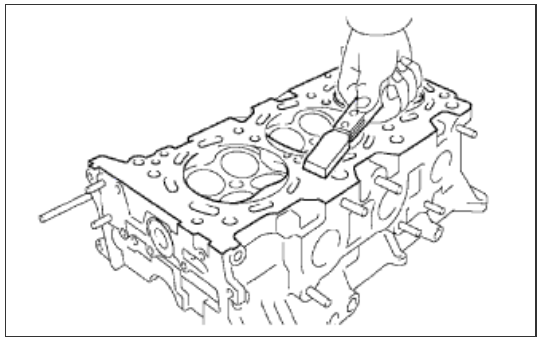
1. INSPECT CYLINDER HEAD SET BOLT

a. Using a vernier caliper, measure the outside thread diameter of the bolt.

Measuring point:
73.0 mm (2.87 in.)

Standard outside diameter:
10.85 to 11.0 mm (0.427 to 0.433 in.)

Minimum outside diameter:
10.7 mm (0.421 in.)

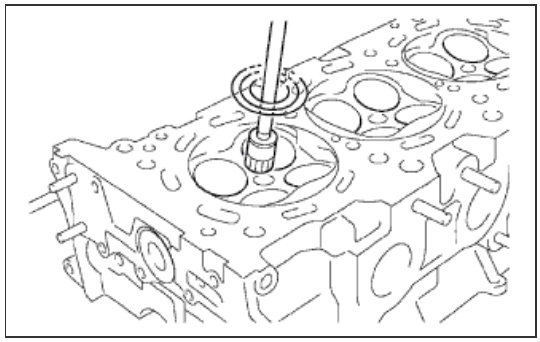


HINT:

If a visual check reveals no excessively thin areas, check the center of the bolt (see illustration) and find the area that has the smallest diameter.

If the diameter is less than the minimum, replace the cylinder head bolt.

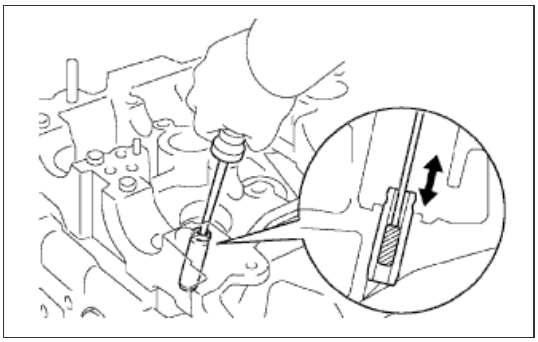
2. CLEAN CYLINDER HEAD SUB-ASSEMBLY



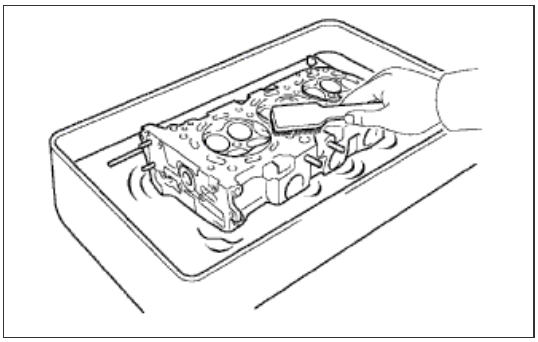
a. Using a gasket scraper, remove all the gasket material from the cylinder block contact surface.

NOTICE:

Be careful not to scratch the cylinder block contact surface.



b. Using a wire brush, remove all the carbon from the combustion chambers.



NOTICE:

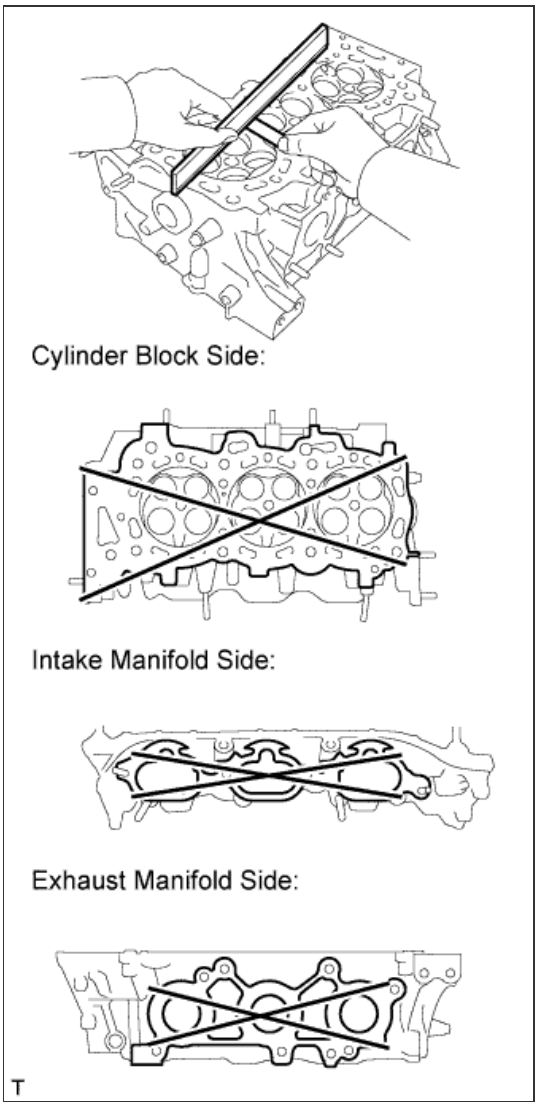
Be careful not to scratch the combustion chambers.

c. Using a valve guide bushing brush and solvent, clean all the valve guide bushes.

d. Using a soft brush and solvent, thoroughly clean the cylinder head.

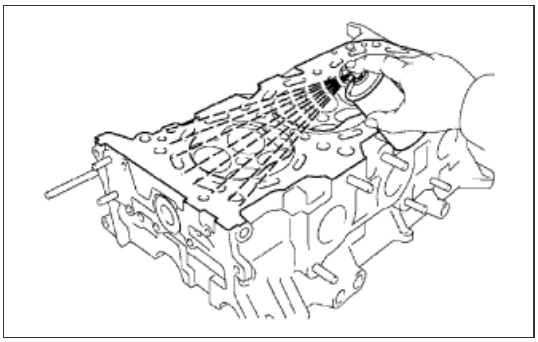
3. INSPECT CYLINDER HEAD SUB-ASSEMBLY

a. Using a precision straightedge and feeler gauge, measure the warpage of the contact surfaces of the cylinder block and manifolds.



Standard Warpage:

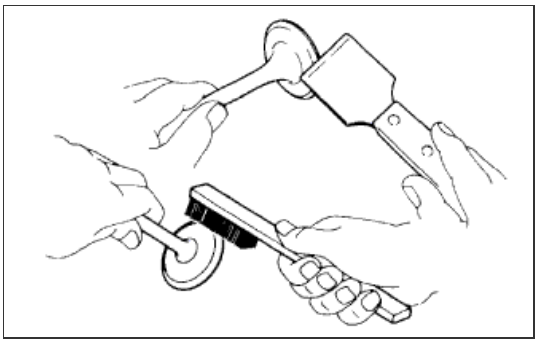
Item	Specified Condition
Cylinder block side	0.05 mm (0.00197 in.)
Intake manifold side	0.08 mm (0.00315 in.)
Exhaust manifold side	0.08 mm (0.00315 in.)



Maximum Warpage:

Item	Specified Condition
Cylinder block side	0.10 mm (0.00394 in.)
Intake manifold side	0.10 mm (0.00394 in.)
Exhaust manifold side	0.10 mm (0.00394 in.)

If the warpage is more than the maximum, replace the cylinder head sub-assembly.

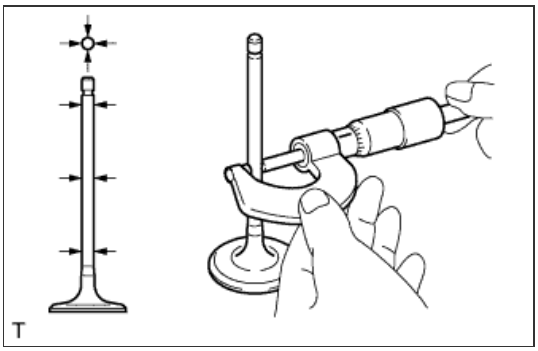


b. Using a dye penetrant, check the intake ports, exhaust ports and cylinder surface for cracks.
If there are cracks, replace the cylinder head sub-assembly.

4. CLEAN VALVE

a. Using a gasket scraper, chip off any carbon from the valve head.

b. Using a wire brush, thoroughly clean the valve.

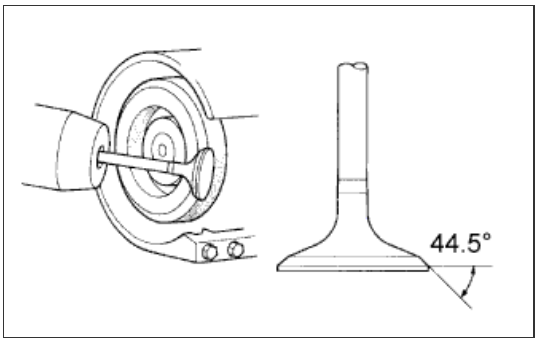


5. INSPECT VALVE

a. Using a micrometer, measure the diameter of the valve stem.

Standard Valve Stem Diameter:

Item	Specified Condition
Intake	5.470 to 5.485 mm (0.2154 to 0.2159 in.)
Exhaust	5.465 to 5.480 mm (0.2152 to 0.2156 in.)



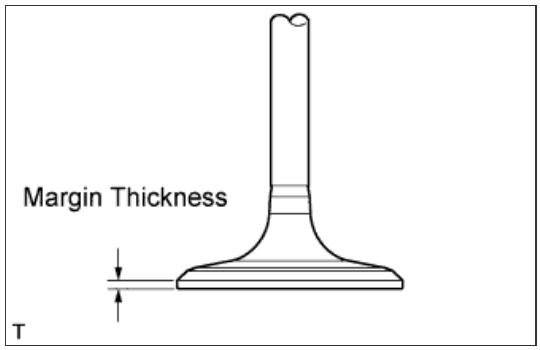
b. Inspect the valve face angle.

i. Grind the valve enough to remove pits and carbon.

ii. Check that the valve is ground to the correct valve face angle.

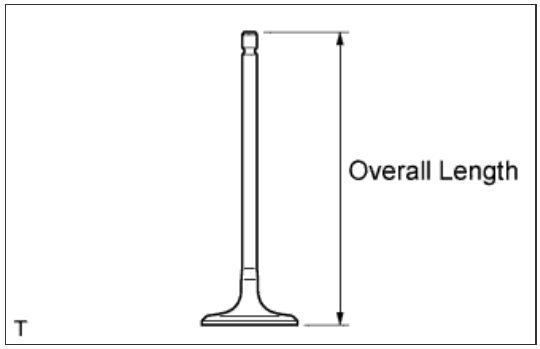
Standard valve face angle:
44.5°

c. Using a vernier caliper, measure the valve head margin thickness.



i. Using a vernier caliper, check the valve head margin thickness.

Standard margin thickness:
1.0 mm (0.0394 in.)



Minimum margin thickness:

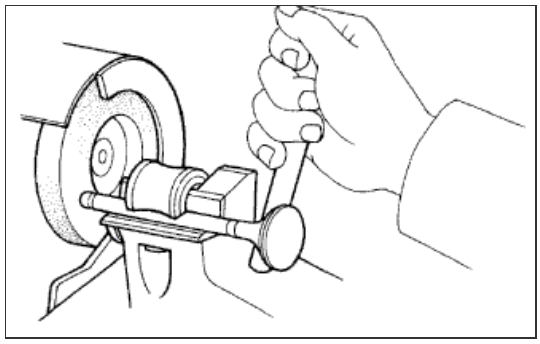
0.5 mm (0.0197 in.)

If the margin thickness is less than the minimum, replace the valve.

d. Using a vernier caliper, measure the overall length of the valve.

i. Using a vernier caliper, check the overall length.

Standard Overall Length:



Item	Specified Condition
Intake	106.95 mm (4.21 in.)
Exhaust	105.80 mm (4.15 in.)

Minimum Overall Length:

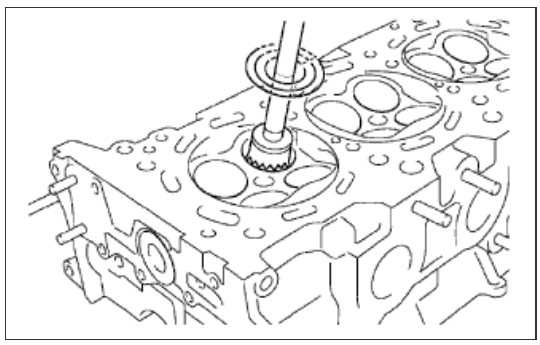
Item	Specified Condition
Intake	106.40 mm (4.19 in.)
Exhaust	105.30 mm (4.15 in.)

If the overall length is less than the minimum, replace the valve.

e. Inspect the valve stem tip.

i. Check the surface of the valve stem tip for wear.

NOTICE:



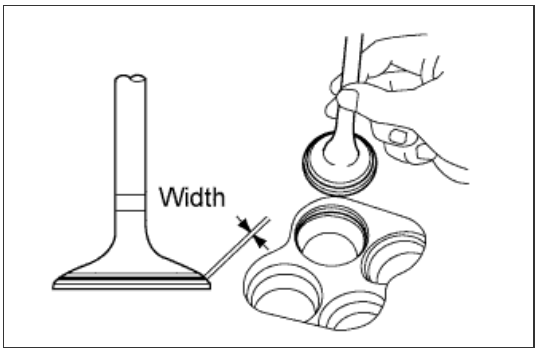
Do not grind the valve so it becomes shorter than the minimum overall length.

If the valve stem tip is worn, resurface the tip with a grinder or replace the valve.

6. CLEAN VALVE SEAT

a. Using a 45° carbide cutter, resurface the valve seats.

b. Clean the valve seats.



7. INSPECT VALVE SEAT

a. Apply a light coat of Prussian blue to the valve face.

b. Lightly press the valve face against the valve seat.

NOTICE:

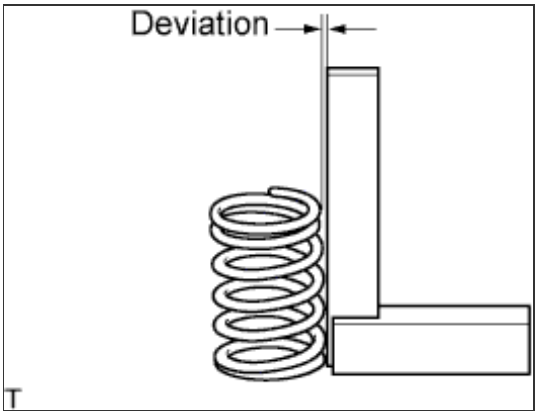
Do not rotate the valve.

c. Check the valve face and valve seat by using the following procedure.

i. If Prussian blue appears around the entire valve face, the valve face is concentric. If not, replace the valve.

ii. If Prussian blue appears around the entire valve seat, the guide and valve face are concentric. If not, resurface the valve seat.

iii. Check that the seat contacts the middle of the valve face with the width below.

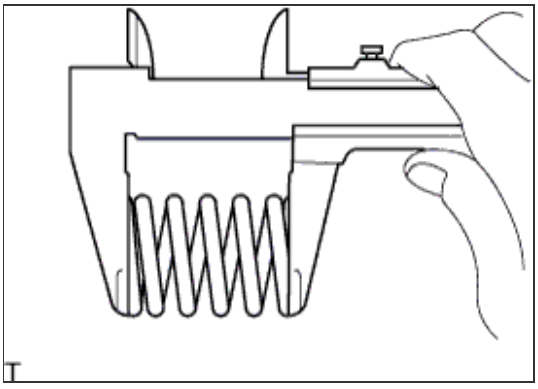


Standard idth:
1.0 to 1.4 mm (0.0394 to 0.0551 in.)

8. INSPECT INNER COMPRESSION SPRING

a. Using a steel square, measure the deviation of the inner compression spring.

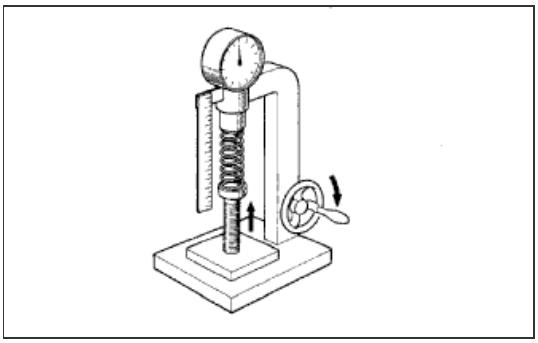
Maximum deviation:
2.0 mm (0.0787 in.)



If the deviation is more than the maximum, replace the inner compression spring.

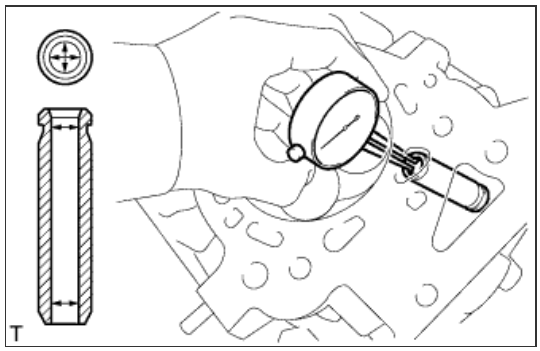
b. Using a vernier caliper, measure the free length of the inner compression spring.

Standard free length:
47.80 mm (1.88 in.)



If the free length is not as specified, replace the inner compression spring.

c. Using a spring tester, measure the tension of the inner compression spring at the standard installed length.



Standard installed tension:
186 to 206 N (19 to 21 kgf, 42 to 46 lbf) at 33.3 mm (1.31 in.)

If the installed tension is not as specified, replace the inner compression spring.

9. INSPECT VALVE GUIDE BUSH OIL CLEARANCE

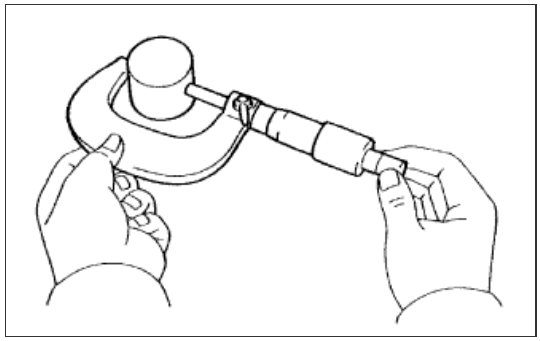
a. Using a caliper gauge, measure the inside diameter of the guide bush.

Standard bush inside diameter:
5.51 to 5.53 mm (0.217 to 0.218 in.)

b. Subtract the valve stem diameter measurement from the guide bush inside diameter measurement.

Standard Oil Clearance:

Item	Specified Condition
Intake	0.025 to 0.060 mm (0.000984 to 0.00236 in.)
Exhaust	0.030 to 0.065 mm (0.00118 to 0.00256 in.)



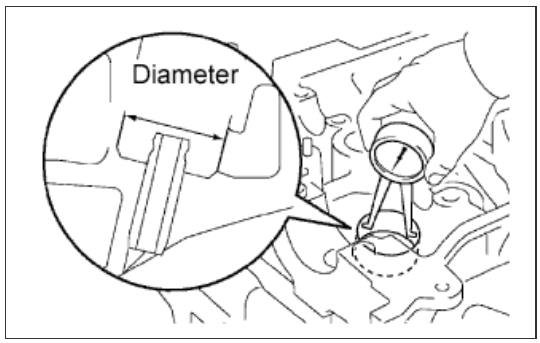
Maximum Oil Clearance:

Item	Specified Condition
Intake	0.08 mm (0.00315 in.)
Exhaust	0.10 mm (0.00394 in.)

If the oil clearance is more than the maximum, replace the valve and valve guide bush.

10. INSPECT VALVE LIFTER

a. Using a micrometer, measure the valve lifter diameter.



Standard valve lifter diameter:
30.966 to 30.976 mm (1.219 to 1.220 in.)

If the result is not as specified, replace the valve lifter.

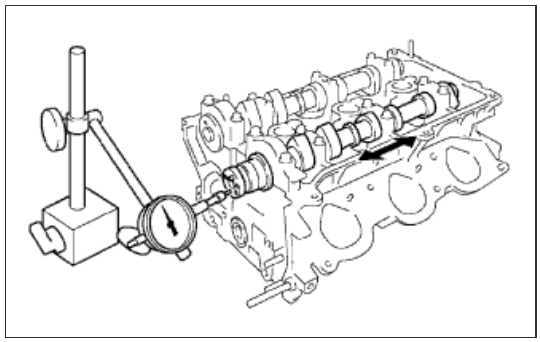
11. INSPECT VALVE LIFTER OIL CLEARANCE

a. Using a caliper gauge, measure the lifter bore diameter of the cylinder head.

Standard lifter bore diameter:
31.009 to 31.025 mm (1.220 to 1.221 in.)

b. Subtract the valve lifter diameter measurement (see "Inspect Valve Lifter" procedure) from the lifter bore diameter measurement.

Standard oil clearance:
0.033 to 0.059 mm (0.00130 to 0.00232 in.)



Maximum oil clearance:
0.08 mm (0.00315 in.)

If the oil clearance is more than the maximum, replace the valve lifter.
If necessary, replace the cylinder head.

12. INSPECT CAMSHAFT THRUST CLEARANCE

a. Install the camshafts (Click here).

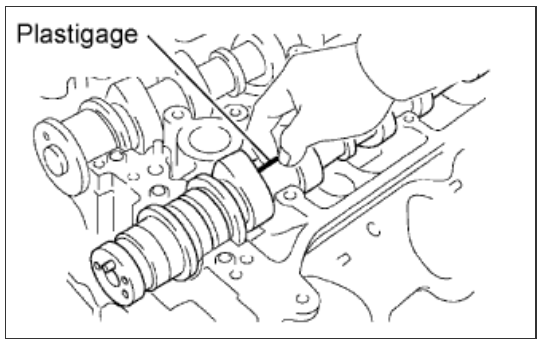
b. Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.

Standard thrust clearance:
0.04 to 0.09 mm (0.00157 to 0.00354 in.)

Maximum thrust clearance:
0.11 mm (0.00433 in.)

If the thrust clearance is more than the maximum, replace the camshafts.
If necessary, replace the camshaft bearing caps and cylinder head as a set.

13. INSPECT CAMSHAFT OIL CLEARANCE



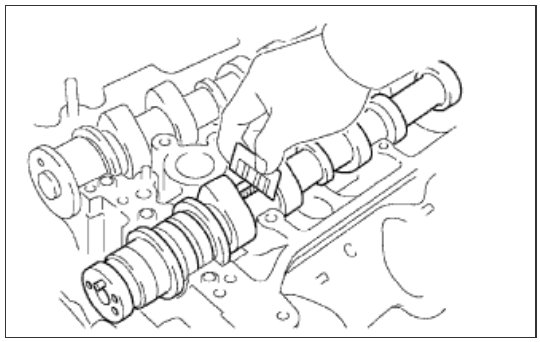
a. Clean the camshaft bearing caps, camshaft bearings and camshaft journals.

b. Install the camshaft bearing (Click here).

c. Place the camshafts on the cylinder head.

d. Lay a strip of Plastigage across each of the camshaft journals.

e. Install the camshaft bearing caps (Click here).



NOTICE:

Do not turn the camshafts.

f. Remove the camshaft bearing caps (Click here).

g. Measure the Plastigage at its widest point.

Standard Oil Clearance (for Cylinder Head RH):

Item	Specified Condition
No. 1 (Intake)	0.008 to 0.038 mm (0.000315 to 0.00150 in.)
No. 1 (Exhaust)	0.040 to 0.079 mm (0.00157 to 0.00311 in.)
Others	0.025 to 0.062 mm (0.000984 to 0.00244 in.)

Standard Oil Clearance (for Cylinder Head LH):

Item	Specified Condition
No. 1	0.040 to 0.079 mm (0.00157 to 0.00311 in.)
Others	0.025 to 0.062 mm (0.000984 to 0.00244 in.)

Maximum Oil Clearance (for Cylinder Head RH):

Item	Specified Condition
No. 1 (Intake)	0.07 mm (0.00276 in.)
Others	0.10 mm (0.00394 in.)

Maximum Oil Clearance (for Cylinder Head LH):

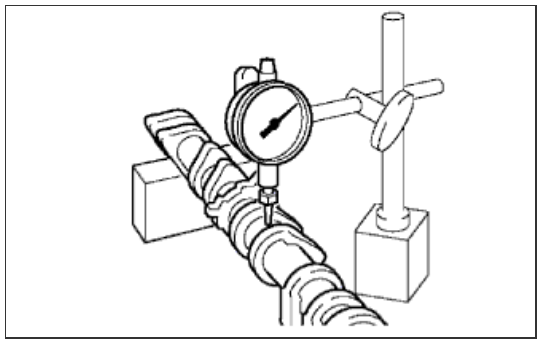
Item	Specified Condition
-	0.10 mm (0.00394 in.)

If the oil clearance is more than the maximum, replace the camshaft bearings and/or camshaft.
If necessary, replace the camshaft bearing caps and cylinder head together.

Reference:

Item	Specified Condition
Cylinder head journal bore diameter	40.009 to 40.017 mm (1.5752 to 1.5755 in.)

Camshaft bearing center wall thickness (Mark "2")	2.004 to 2.008 mm (0.0789 to 0.0791 in.)
Camshaft journal diameter	35.971 to 35.985 mm (1.4162 to 1.4167 in.)



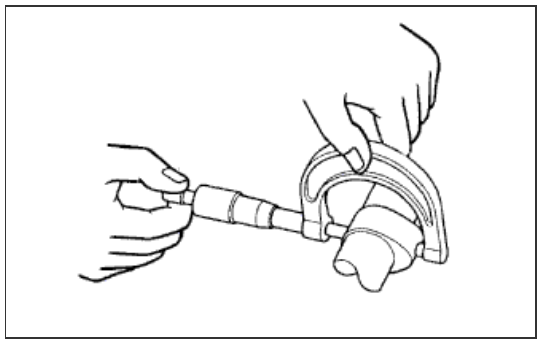
h. Remove the Plastigage completely.

i. Remove the camshafts.

. Remove the camshaft bearing.

14. INSPECT CAMSHAFT

a. Inspect the camshaft runout.



i. Place the camshaft on V-blocks.

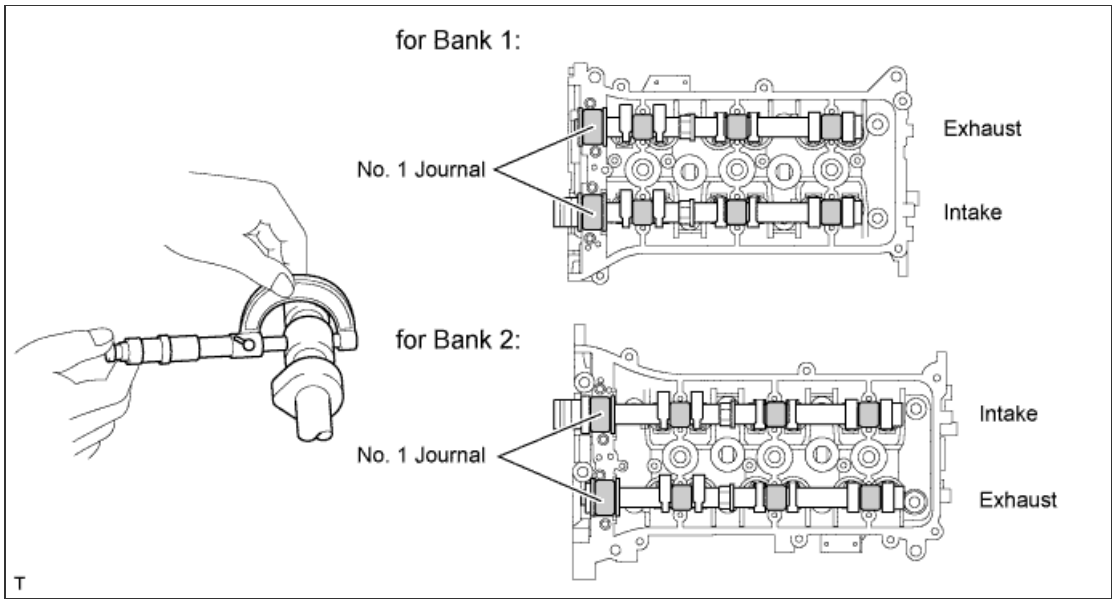
ii. Using a dial indicator, measure the runout at the center journal.

Maximum runout:
0.06 mm (0.00236 in.)

If the runout is more than the maximum, replace the camshaft.

b. Inspect the cam lobes.

i. Using a micrometer, measure the cam lobe height.



Standard Cam Lobe Height:

Item	Specified Condition
Intake	44.168 to 44.268 mm (1.739 to 1.742 in.)
Exhaust	44.580 to 44.680 mm (1.755 to 1.759 in.

Minimum Cam Lobe Height:

Item	Specified Condition
Intake	44.018 mm (1.73 in.)
Exhaust	44.430 mm (1.75 in.)

If the cam lobe height is less than the minimum, replace the camshaft.

c. Inspect the camshaft journals.

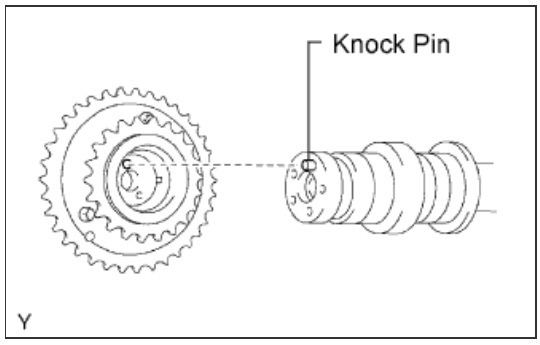
i. Using a micrometer, measure the journal diameter.

Standard ournal Diameter:

Item	Specified Condition
No. 1	35.971 to 35.985 mm (1.416 to 1.417 in.)
Other	22.959 to 22.975 mm (0.904 to 0.905 in.)

If the journal diameter is not as specified, check the oil clearance.

15. INSPECT CAMSHAFT TIMING GEAR ASSEMBLY



a. Fix the intake camshaft with a vise.

NOTICE:

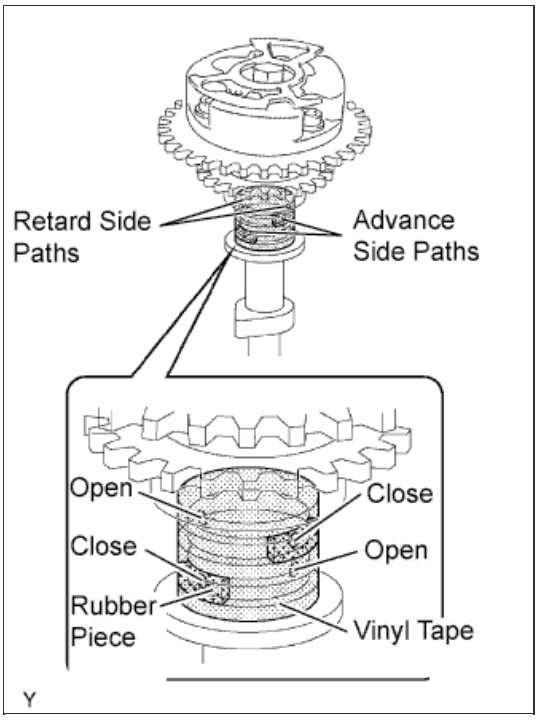
Be careful not to damage the camshaft.

b. Align the knock pin hole in the camshaft timing gear with the knock pin of the camshaft, and install the camshaft timing gear with the bolt.

Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

c. Confirm the camshaft timing gear is locked.

d. Release the lock pin.

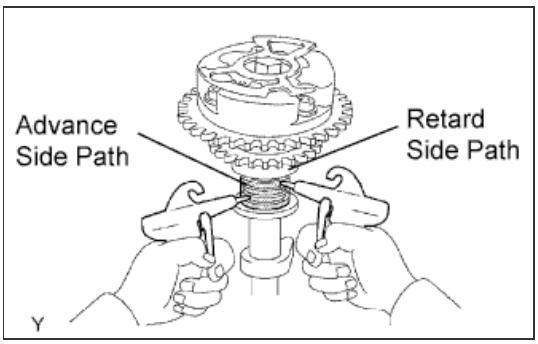


i. Cover the 4 oil paths of the cam journal with vinyl tape as shown in the illustration.

HINT:

One of the 2 grooves on the cam journal is for retard side paths (upper) and the other is for advance side paths (lower). Each groove has 2 oil paths. Plug one of the oil paths for each groove with rubber pieces as shown in the illustration before wrapping the

cam journal with tape.

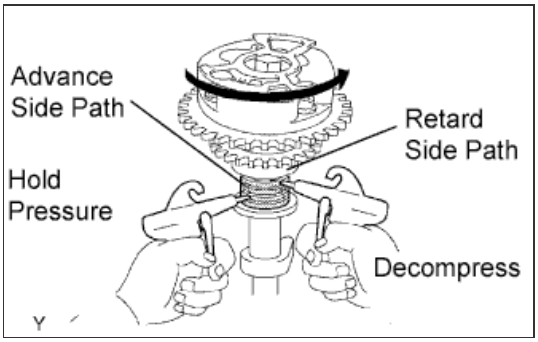


ii. Prink a hole in the tape at the 2 oil holes not plugged with rubber pieces.

iii. Apply about 200 kPa (2.0 kgf/cm^2, 28 psi) of air pressure to the two broken paths (the advance side path and the retard side path).

NOTICE:

Cover the paths with a cloth to avoid oil splashing.



iv. Confirm that the camshaft timing gear rotates in the advance direction when reducing the air pressure applied to the retard path.

HINT:

When the lock pin is released, the camshaft timing gear rotates in the advance direction.

v. When the camshaft timing gear comes to the most advanced position, release the air pressure from the retard side path, and then release the air pressure from the advance side path.

NOTICE:

The camshaft timing gear occasionally shifts to the retard side abruptly if air compression of the advanced side path is released first. This often results in the breakage of the lock pin.

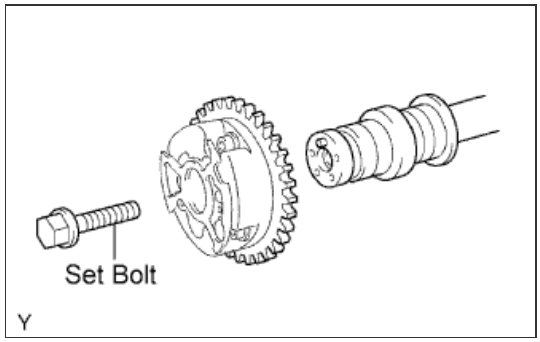
e. Check for smooth rotation.

i. Except the position where the lock pin meets at the most retarded angle, turn the camshaft timing gear back and forth and check the movable range and that there is no disturbance.

Standard:
Movable smoothly in the range of about 31°

NOTICE:

Be sure to perform this check by hand, instead of with air pressure.



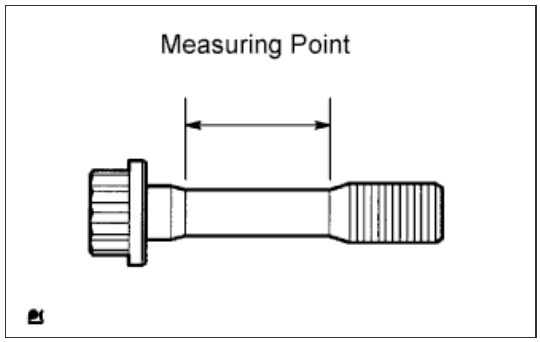
f. Check the lock in the most retarded position.

i. Confirm that the camshaft timing gear is locked at the most retarded position.

g. Remove the set bolt and camshaft timing gear.

NOTICE:

Be sure not to remove the other 3 bolts.



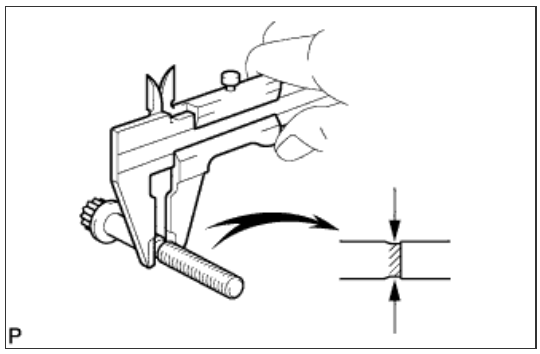
16. INSPECT CONNECTING ROD BOLT

a. Using a vernier caliper, measure the tension portion diameter of the bolt.

Standard diameter:
7.2 to 7.3 mm (0.283 to 0.287 in.)

Minimum diameter:
7.0 mm (0.276 in.)

If the diameter is less than the minimum, replace the connecting rod bolt.

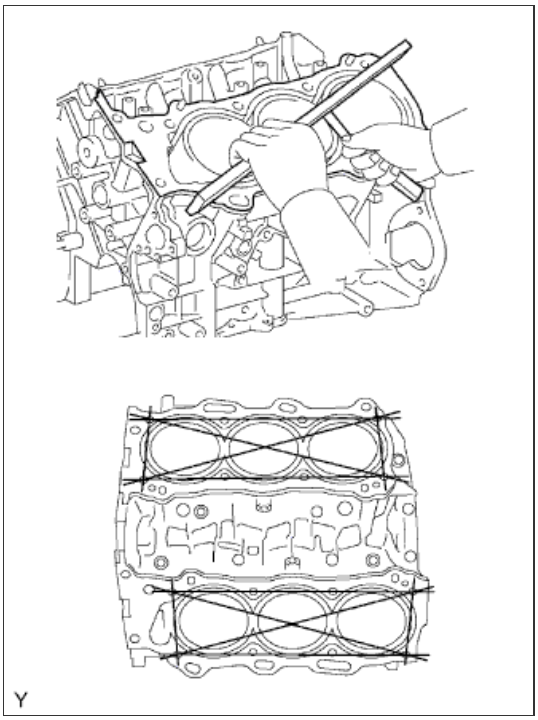


17. INSPECT CRANKSHAFT BEARING CAP SET BOLT

a. Using a vernier caliper, measure the tension portion diameter of the bolt.

Standard diameter:
10.0 to 10.2 mm (0.394 to 0.402 in.)

If the diameter is less than the minimum, replace the crankshaft bearing cap set bolt.

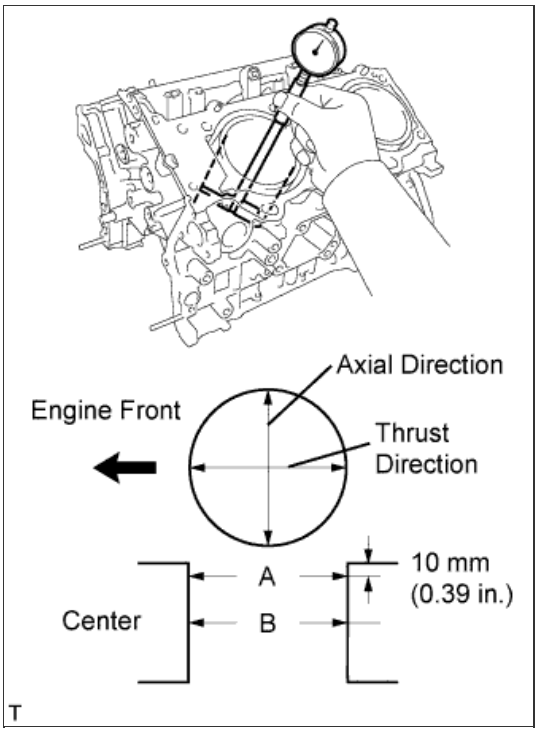


18. INSPECT CYLINDER BLOCK FOR FLATNESS

a. Using a precision straightedge and feeler gauge, measure the warpage of the contact surface of the cylinder head gasket.

Maximum warpage:
0.05 mm (0.00197 in.)

If the warpage is more than the maximum, replace the cylinder block.

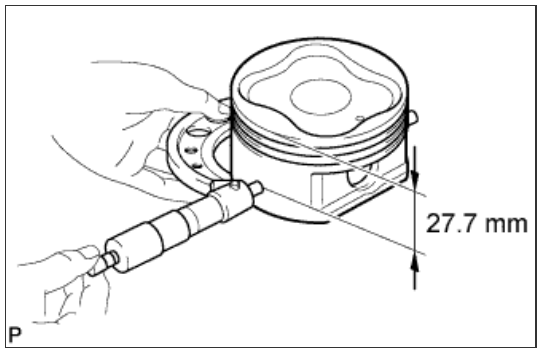


19. INSPECT CYLINDER BORE

a. Using a cylinder gauge, measure the cylinder bore diameter at positions A and B in the thrust and axial directions.

Standard diameter:
94.000 to 94.012 mm (3.7008 to 3.7013 in.)

Maximum diameter:
94.132 mm (3.7060 in.)



If the diameter is more than the maximum, replace the cylinder block.

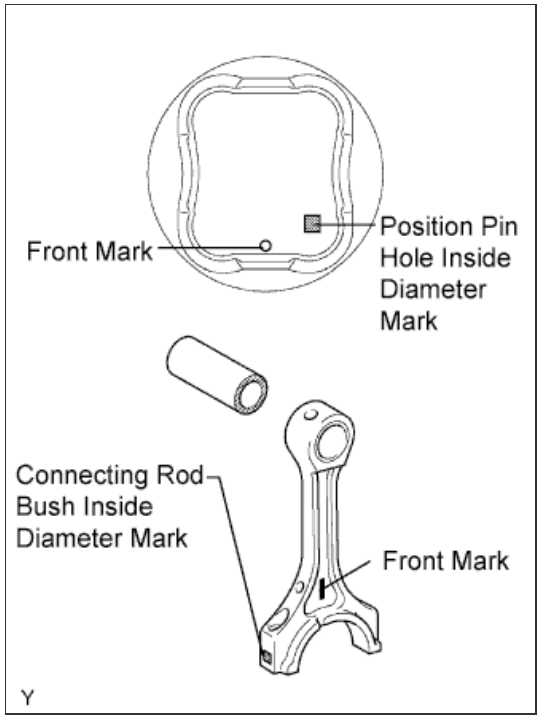
20. INSPECT PISTON WITH PIN SUB-ASSEMBLY

a. Using a micrometer, measure the piston diameter at a right angle to the piston pin center line, 27.7 mm (1.091 in.) from the piston head.

Piston diameter:
93.910 to 93.920 mm (3.6972 to 3.6976 in.)

21. INSPECT PISTON OIL CLEARANCE

a. Subtract the piston diameter measurement from the cylinder bore diameter measurement.

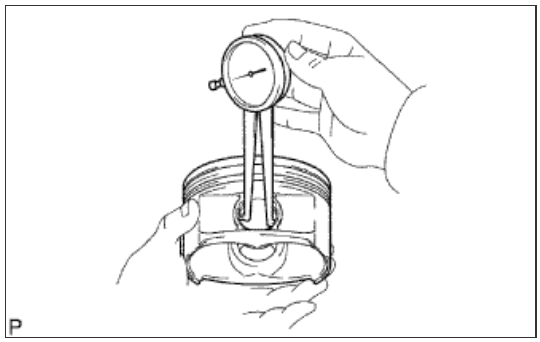


Standard oil clearance:
0.080 to 0.102 mm (0.00315 to 0.00401 in.)

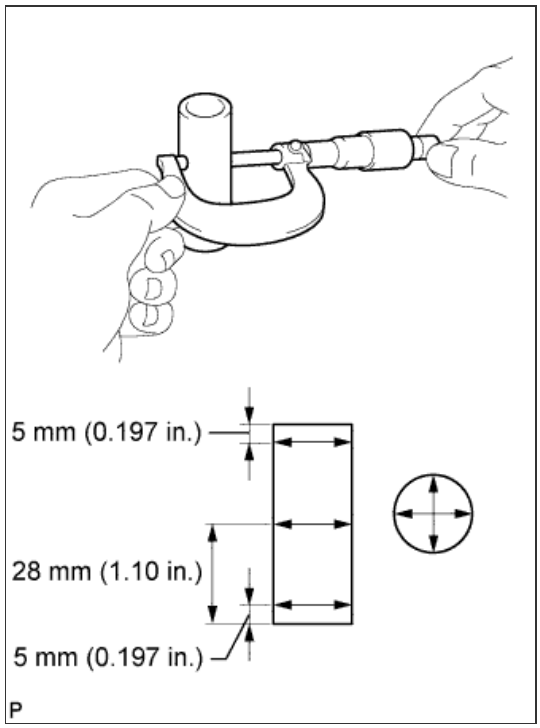
Maximum oil clearance:
0.13 mm (0.00512 in.)

If the oil clearance is more than the maximum, replace all 6 pistons. If necessary, replace the cylinder block.

22. INSPECT PISTON PIN OIL CLEARANCE



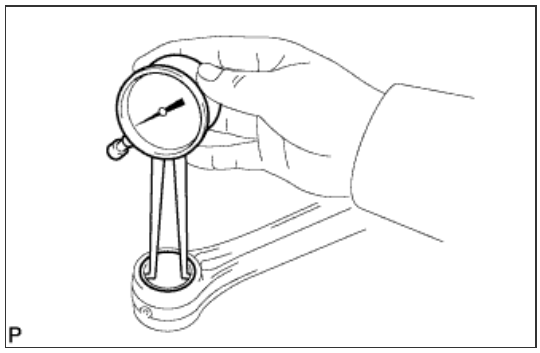
a. Check each mark on the piston and connecting rod.



b. Using a caliper gauge, measure the inside diameter of the piston pin hole.

Standard Piston Pin Hole Inside Diameter:

Mark	Specified Condition
A	22.001 to 22.004 mm (0.86618 to 0.86630 in.)
B	22.005 to 22.007 mm (0.86634 to 0.86642 in.)
C	22.008 to 22.010 mm (0.86645 to 0.86653 in.)



c. Using a micrometer, measure the piston pin diameter.

Standard Piston Pin Diameter:

Mark	Specified Condition
A	21.997 to 22.000 mm (0.86602 to 0.86614 in.)
B	22.001 to 22.003 mm (0.86618 to 0.86626 in.)
C	22.004 to 22.006 mm (0.86630 to 0.86642 in.)

d. Using a caliper gauge, measure the inside diameter of the connecting rod bush.

Standard Bush Inside Diameter:

Mark	Specified Condition
A	22.005 to 22.008 mm (0.86634 to 0.86645 in.)
B	22.009 to 22.011 mm (0.86649 to 0.86657 in.)
C	22.012 to 22.014 mm (0.86661 to 0.86669 in.)

e. Subtract the piston pin diameter measurement from the piston pin hole diameter measurement.

Standard oil clearance:
0.001 to 0.007 mm (0.0000394 to 0.000276 in.)

Maximum oil clearance:
0.040 mm (0.00157 in.)

If the oil clearance is more than the maximum, replace the piston and piston pin as a set.

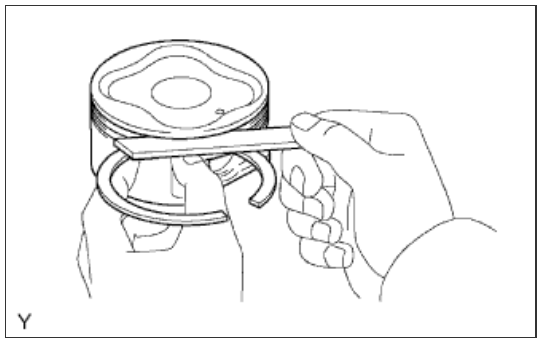
f. Subtract the piston pin diameter measurement from the bush inside diameter measurement.

Standard oil clearance:
0.005 to 0.011 mm (0.000197 to 0.000433 in.)

Maximum oil clearance:
0.050 mm (0.00197 in.)

If the oil clearance is more than the maximum, replace the bush (Click here). If necessary, replace the connecting rod and piston pin as a set.

23. INSPECT RING GROOVE CLEARANCE

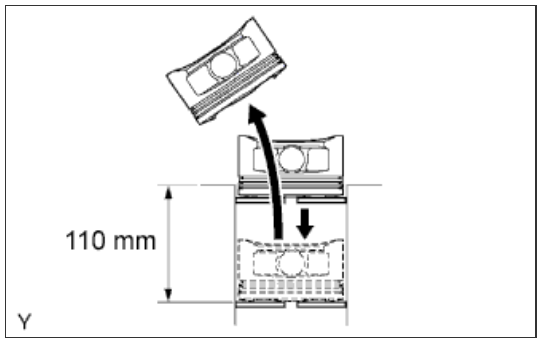


a. Using a feeler gauge, measure the clearance between a new piston ring and the wall of the ring groove.

Standard Ring Groove Clearance:

Item	Specified Condition
No. 1 Compression Ring	0.02 to 0.07 mm (0.000787 to 0.00276 in.)

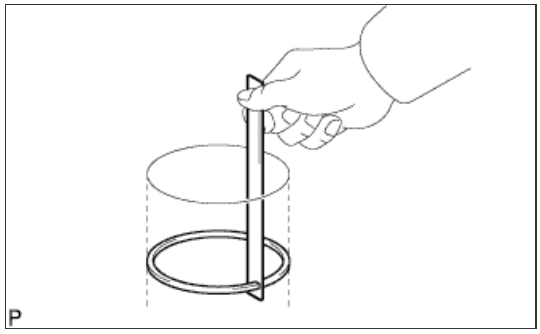
No. 2 Compression Ring	0.02 to 0.06 mm (0.000787 to 0.00236 in.)
Oil Ring	0.07 to 0.15 mm (0.00276 to 0.00590 in.)



If the clearance is not as specified, replace the piston with pin sub-assembly.

24. INSPECT PISTON RING END GAP

a. Insert the piston ring into the cylinder bore.



b. Using a piston, push the piston ring a little beyond the bottom of the ring travel, 110 mm (4.33 in.) from the top of the cylinder block.

c. Using a feeler gauge, measure the end gap.

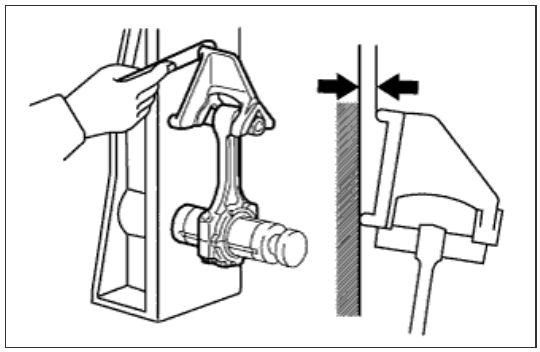
Standard End Gap:

Item	Specified Condition
No. 1 Compression Ring	0.30 to 0.40 mm (0.0118 to 0.0157 in.)
No. 2 Compression Ring	0.40 to 0.50 mm (0.0157 to 0.0197 in.)
Oil Ring (side rail)	0.10 to 0.40 mm (0.00394 to 0.0157 in.)

Maximum End Gap:

Item	Specified Condition
No. 1 Compression Ring	1.0 mm (0.0394 in.)
No. 2 Compression Ring	1.1 mm (0.0433 in.)
Oil Ring (side rail)	1.0 mm (0.0394 in.)

If the end gap is more than the maximum, replace the piston ring. If the end gap is more than the maximum even with a new piston ring, rebore all 6 cylinders or replace the cylinder block sub-assembly.

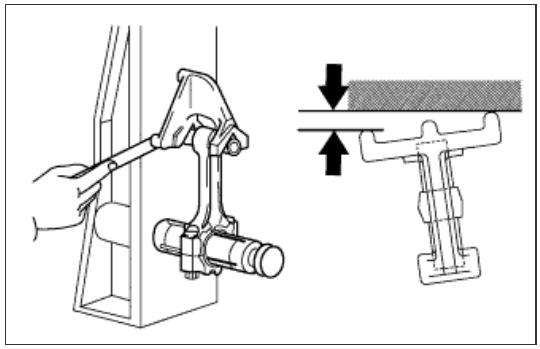


25. INSPECT CONNECTING ROD SUB-ASSEMBLY

a. Using a rod aligner and feeler gauge, check the connecting rod alignment.

i. Check for bend.

Maximum bend:
0.05 mm (0.00197 in.) per 100 mm (3.94 in.)

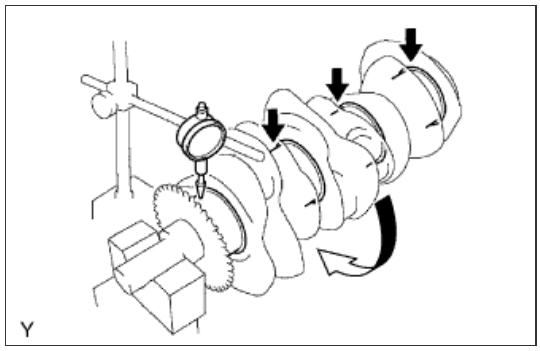


If the bend is more than the maximum, replace the connecting rod sub-assembly.

ii. Check for twist.

Maximum t ist:
0.15 mm (0.00591 in.) per 100 mm (3.94 in.)

If the twist is more than the maximum, replace the connecting rod sub-assembly.



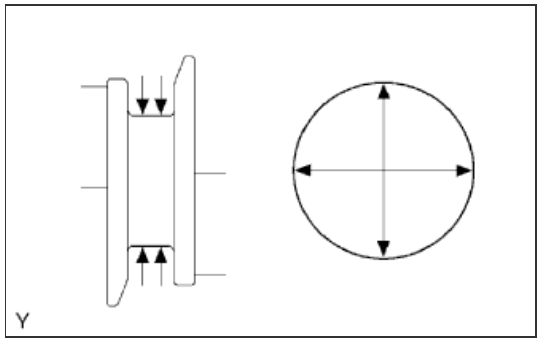
26. INSPECT CRANKSHAFT

a. Using a dial indicator and V-blocks, measure the runout as shown in the illustration.

Maximum circle runout:
0.06 mm (0.00236 in.)

If the circle runout is more than the maximum, replace the crankshaft.

b. Using a micrometer, measure the diameter of each main journal.



Standard diameter:
71.988 to 72.000 mm (2.8342 to 2.8346 in.)

If the diameter is not as specified, check the oil clearance. If necessary, replace the crankshaft.

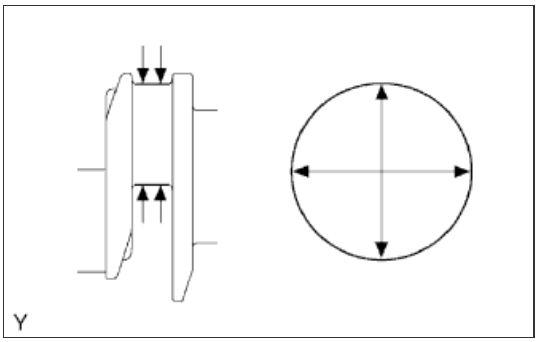
c. Check each main journal for taper and out-of-round as shown in the illustration.

Maximum taper and out-of-round:
0.02 mm (0.000787 in.)

If the taper and out-of-round is more than the maximum, replace the crankshaft.

d. Using a micrometer, measure the diameter of each crank pin.

Standard diameter:
55.992 to 56.000 mm (2.2044 to 2.2047 in.)



If the diameter is not as specified, check the oil clearance. If necessary, replace the crankshaft.

e. Check each crank pin for taper and out-of-round as shown in the illustration.

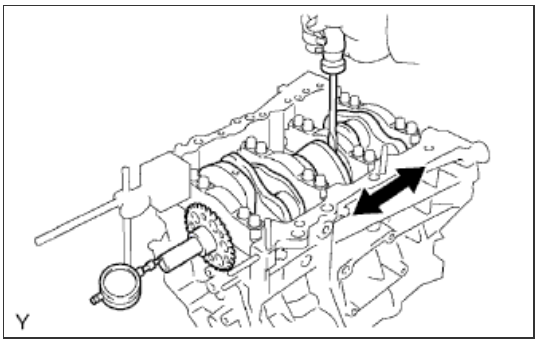
Maximum taper and out-of-round:

0.02 mm (0.000787 in.)

If the taper and out-of-round is more than the maximum, replace the crankshaft.

27. INSPECT CRAN SHAFT THRUST CLEARANCE

a. Using a dial indicator, measure the thrust clearance while prying the crankshaft back and forth with a screwdriver.



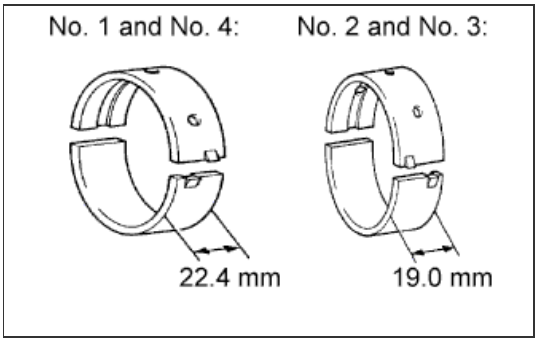
Standard thrust clearance:
0.04 to 0.24 mm (0.00157 to 0.00945 in.)

Maximum thrust clearance:
0.30 mm (0.0118 in.)

If the thrust clearance is more than the maximum, replace the thrust washers as a set.

Standard thrust washer thickness:
1.93 to 1.98 mm (0.0760 to 0.0780 in.)

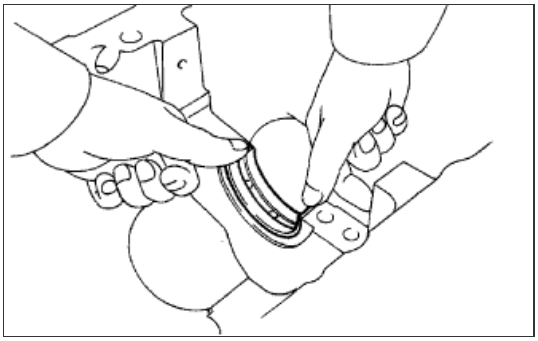
If necessary, replace the crankshaft.



28. INSPECT CRANKSHAFT OIL CLEARANCE

HINT:

Main bearings come in widths of 19.0 mm (0.748 in.) and 22.4 mm (0.882 in.). Install the 22.4 mm (0.882 in.) bearings in the No. 1 and No. 4 cylinder block journal positions with the main bearing caps. Install the 19.0 mm (0.748 in.) bearings in the No. 2 and No. 3 positions.

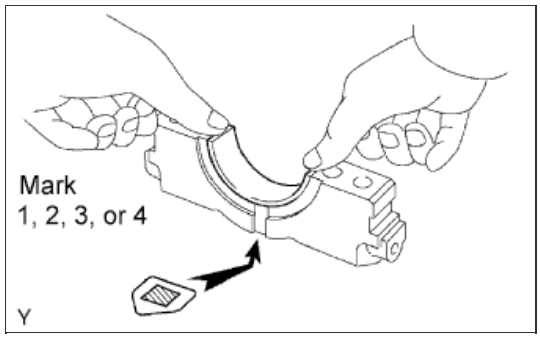


a. Clean each main journal and bearing.

b. Align the bearing claw with the claw groove of the cylinder block, and push in the 4 upper bearings.

NOTICE:

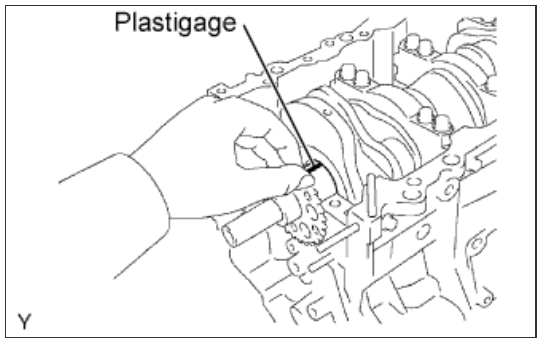
- **Do not apply engine oil to the bearings and contact surfaces.**
- **Do not allow coolant to come into contact with the bearing inner surface.**
- **If any coolant comes into contact with the bearing inner surface, replace the bearing with a new one.**



c. Align the bearing claw with the claw groove of the main bearing cap, and push in the 4 lower bearings.

NOTICE:

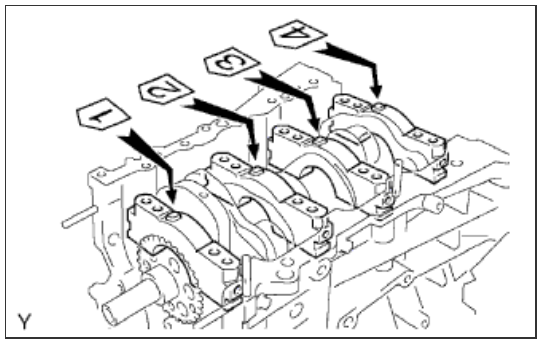
- **Do not apply engine oil to the bearings and contact surfaces.**
- **Do not allow coolant to come into contact with the bearing inner surface.**
- **If any coolant comes into contact with the bearing inner surface, replace the bearing with a new one.**



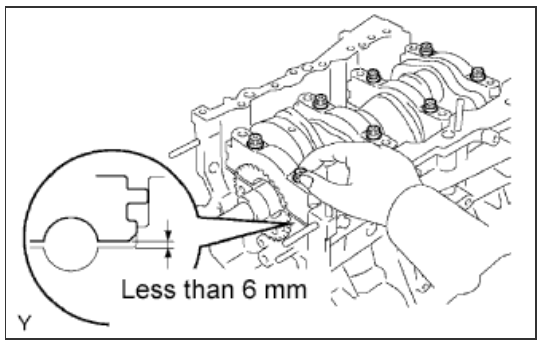
HINT:

A number marked on each main bearing cap indicates the installation position.

d. Place the crankshaft on the cylinder block.

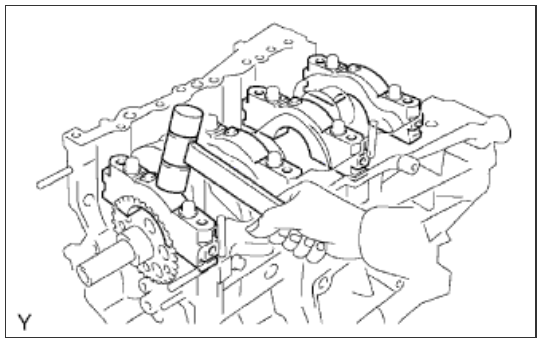


e. Lay a strip of Plastigage across each journal.



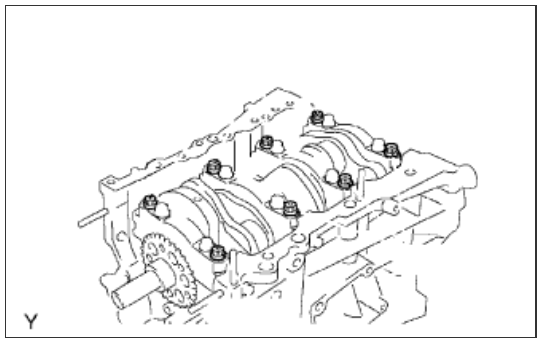
f. Examine the front marks and numbers and set the crankshaft bearing caps on the cylinder block.

g. Apply a light coat of engine oil to the threads of the crankshaft bearing cap bolts.



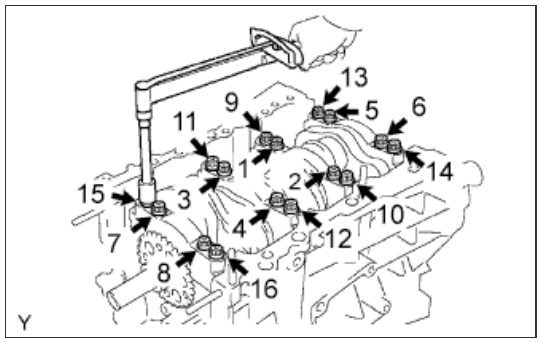
h. Temporarily install the 8 crankshaft bearing cap bolts to the inside positions.

i. Tighten the 2 bolts for each bearing cap until the clearance between the crankshaft bearing cap and the cylinder block becomes less than 6 mm (0.236 in.).



j. Using a plastic-faced hammer, lightly tap the crankshaft bearing cap to ensure a proper fit.

k. Apply a light coat of engine oil to the threads of the crankshaft bearing bolts and



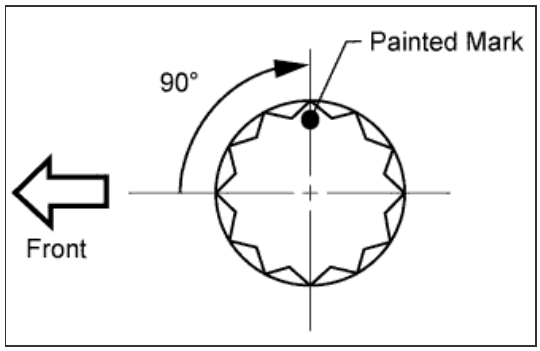
temporarily install the 8 crankshaft bearing cap bolts to the outside positions.

l. Step 1:

i. Uniformly tighten the 16 bolts in several steps in the order shown in the illustration.

Tor ue:
1 N*m{ 622 kgf*cm , 45 ft.*lbf }

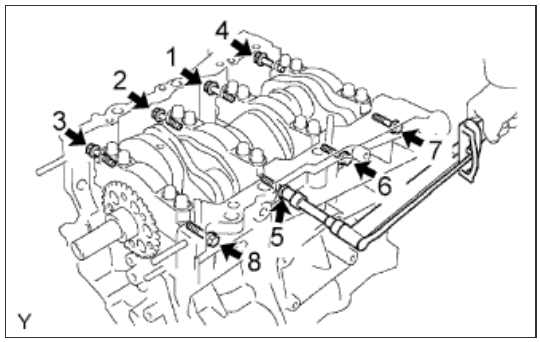
m. Step 2:



i. Mark the front side of the crankshaft bearing cap bolts with paint.

ii. Tighten the bearing cap bolts 90° in the order shown in step 1.

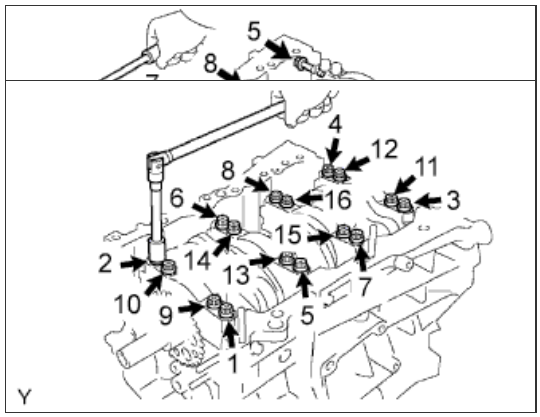
n. Check that the painted marks are now at a 90° angle to the front.



NOTICE:

Do not turn the crankshaft.

o. Install and uniformly tighten the 8 crankshaft bearing cap bolts in several steps in the sequence shown in the illustration.

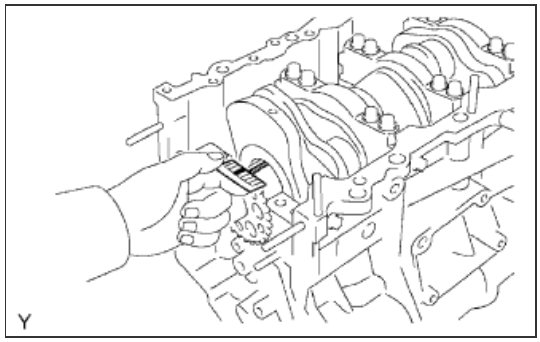


Torque:
26 N*m{ 262 kgf*cm , 19 ft.*lbf }

p. Remove the crankshaft bearing caps.

i. Step 1:
Uniformly loosen and remove the 8 bearing cap bolts in the sequence shown in the illustration.

ii. Step 2:
Uniformly loosen and remove the 16 bearing cap bolts in the sequence shown in the illustration.



. Measure the Plastigage at its widest point.

Standard oil clearance:
0.018 to 0.030 mm (0.000709 to 0.00118 in.)

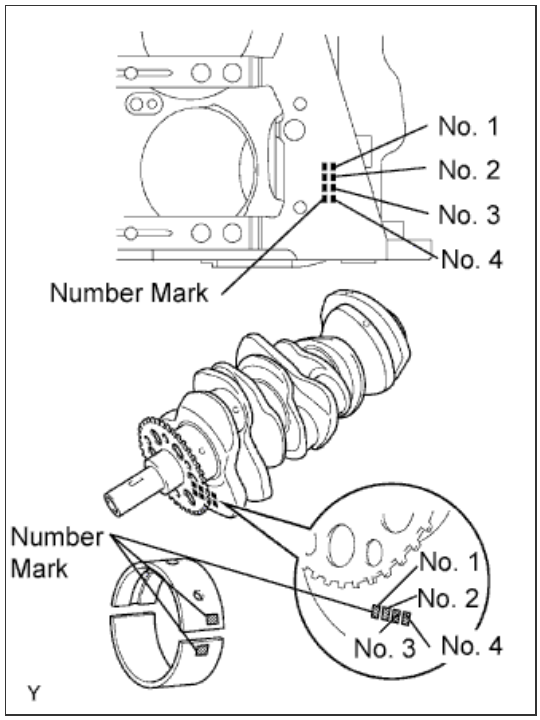
Maximum clearance:
0.046 mm (0.00181 in.)

If the oil clearance is more than the maximum, replace the bearings. If necessary, replace the crankshaft.

NOTICE:

Completely remove the Plastigage.

r. If replacing a bearing, replace it with one that has the same number. If the number of the bearing cannot be determined, select the correct bearing by adding together the numbers imprinted on the cylinder block and crankshaft, then refer to the table below for the appropriate bearing number. There are 5 sizes of standard bearings, marked "1", "2", "3", "4" and "5" accordingly.



Journal Bearings:

Cylinder block (A) + Crankshaft (B)	Use Bearing
0 - 5	"1"
6 - 11	"2"
12 - 17	"3"
18 - 23	"4"
24 - 28	"5"

HINT:

Example:

Cylinder block "11" (A) + Crankshaft "06" (B) = Total number 17 (Use bearing "3")

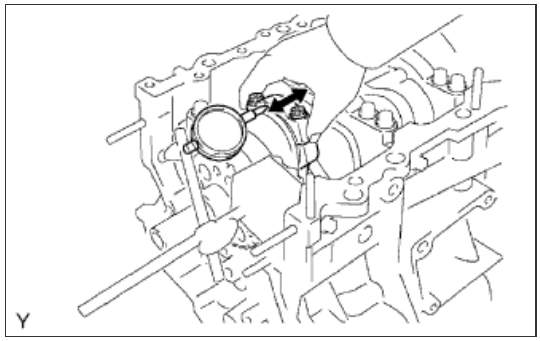
Standard Journal Diameter:

Item	Mark	Specified Condition
Cylinder block main journal bore	"00"	77.000 mm (3.03149 in.)
	"01"	77.001 mm (3.03152 in.)
	"02"	77.002 mm (3.03156 in.)
	"03"	77.003 mm (3.03160 in.)
	"04"	77.004 mm (3.03164 in.)
	"05"	77.005 mm (3.03168 in.)
	"06"	77.006 mm (3.03172 in.)
	"07"	77.007 mm (3.03176 in.)

diameter (A)	"08"	77.008 mm (3.03180 in.)
	"09"	77.009 mm (3.03184 in.)
	"10"	77.010 mm (3.03188 in.)
	"11"	77.011 mm (3.03192 in.)
	"12"	77.012 mm (3.0396 in.)
	"13"	77.013 mm (3.03200 in.)
	"14"	77.014 mm (3.03204 in.)
	"15"	77.015 mm (3.03208 in.)
	"16"	77.016 mm (3.03211 in.)
Crankshaft main journal diameter (B)	"00"	71.999 to 72.000 mm (2.83460 to 2.83464 in.)
	"01"	71.998 to 71.999 mm (2.83456 to 2.83460 in.)
	"02"	71.997 to 71.998 mm (2.83452 to 2.83456 in.)
	"03"	71.996 to 71.997 mm (2.83448 to 2.83452 in.)
	"04"	71.995 to 71.996 mm (2.83440 to 2.83448 in.)
	"05"	71.994 to 71.995 mm (2.83440 to 2.83444 in.)
	"06"	71.993 to 71.994 mm (2.83436 to 2.83440 in.)
	"07"	71.992 to 71.993 mm (2.83432 to 2.83436 in.)
	"08"	71.991 to 71.992 mm (2.83428 to 2.83432 in.)
	"09"	71.990 to 71.991 mm (2.83424 to 2.83428 in.)
	"10"	71.989 to 71.990 mm (2.83420 to 2.83424 in.)
	"11"	71.988 to 71.989 mm (2.83416 to 2.83420 in.)

Standard Bearing Center Wall Thickness:

Mark	Specified Condition
"1"	2.488 to 2.491 mm (0.0980 to 0.0981 in.)
"2"	2.491 to 2.494 mm (0.0981 to 0.0982 in.)
"3"	2.494 to 2.497 mm (0.0982 to 0.0983 in.)
"4"	2.497 to 2.500 mm (0.0983 to 0.0984 in.)
"5"	2.500 to 2.503 mm (0.0984 to 0.0985 in.)



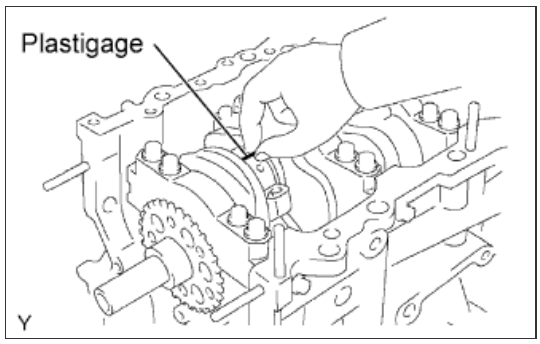
29. INSPECT CONNECTING ROD THRUST CLEARANCE

a. Using a dial indicator, measure the thrust clearance while moving the connecting rod back and forth.

Standard thrust clearance:
0.15 to 0.30 mm (0.00591 to 0.0118 in.)

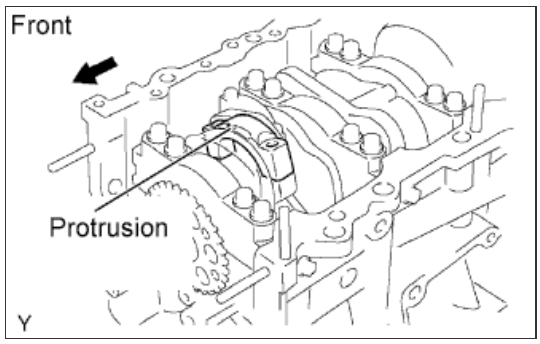
Maximum thrust clearance:
0.35 mm (0.0138 in.)

If the thrust clearance is more than the maximum, replace one or more connecting rods as necessary.
If necessary, replace the crankshaft.



30. INSPECT CONNECTING ROD OIL CLEARANCE

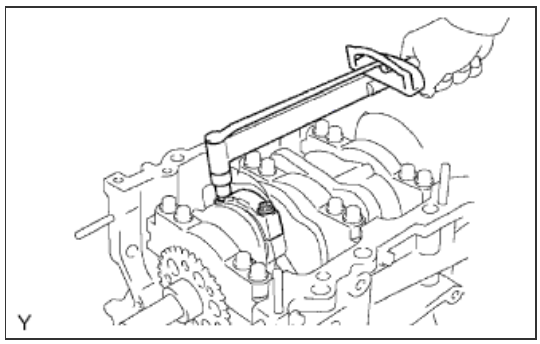
a. Install the crankshaft bearing (Click here).



b. Install the crankshaft (Click here).

c. Lay a strip of Plastigage across the crank pin.

d. Set the connecting rod cap so that the protrusion is facing the correct direction.

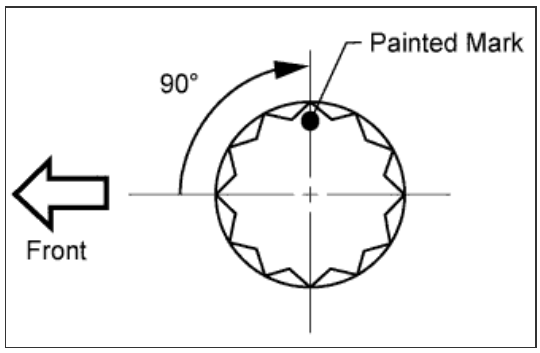


e. Apply a light coat of engine oil to the threads of the connecting rod cap bolts.

f. Step 1:

i. Install and alternately tighten the bolts of the connecting rod cap in several steps.

Torque:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }



g. Step 2:

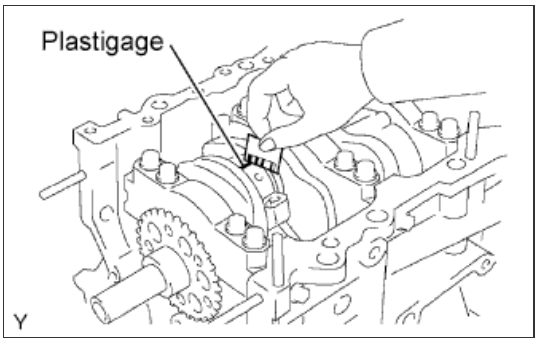
i. Mark the front side of each connecting rod cap bolt with paint.

ii. Tighten the bearing cap bolts in step 1 90°.

h. Remove the 2 bolts, connecting rod cap and lower bearing.

i. Measure the Plastigage at its widest point.

Standard oil clearance:
0.026 to 0.046 mm (0.00102 to 0.00181 in.)

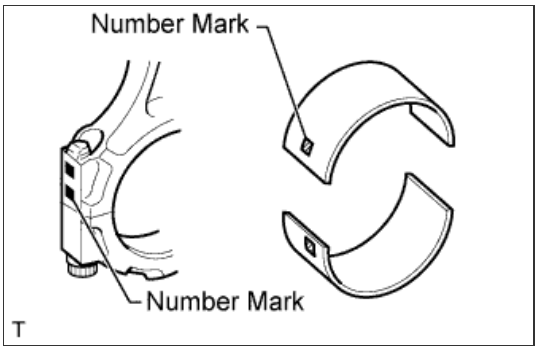


Maximum oil clearance:
0.066 mm (0.00260 in.)

If the oil clearance is more than the maximum, replace the bearings. If

necessary, replace the crankshaft.

NOTICE:



Completely remove the Plastigage.

. If replacing a bearing, replace it with one that has the same number marked on the connecting rod. There are 4 sizes of standard bearings, marked "1 ", "2", "3" and "4" accordingly.

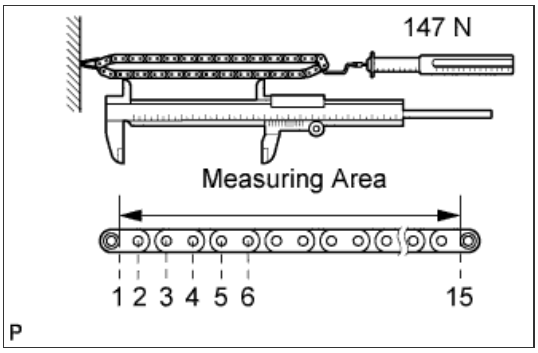
Standard Bearing Center Wall Thickness:

Mark	Specified Condition
1	1.484 to 1.487 mm (0.05843 to 0.05854 in.)
2	1.487 to 1.490 mm (0.05854 to 0.05866 in.)
3	1.490 to 1.493 mm (0.05866 to 0.05878 in.)
4	1.493 to 1.496 mm (0.05878 to 0.05900 in.)

k. Remove the crankshaft (Click here).

l. Remove the crankshaft bearing.

31. INSPECT NO. 1 CHAIN SUB-ASSEMBLY



a. Using a spring scale, pull the No. 1 chain with a force of 147 N (15 kgf, 33.1 lbf) and measure the length of the No. 1 chain by using a vernier caliper.

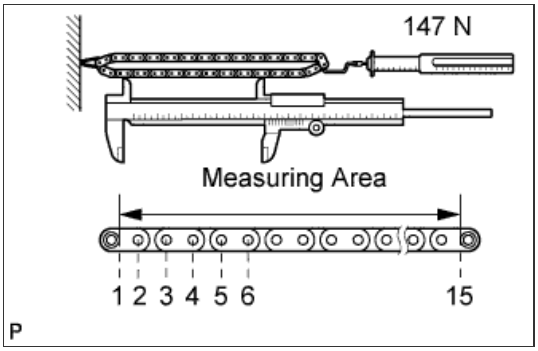
Maximum chain elongation:
146.8 mm (5.78 in.)

HINT:

Perform the measurement at 3 random places.

If a measurement is more than the maximum, replace the No. 1 chain.

32. INSPECT NO. 2 CHAIN SUB-ASSEMBLY



a. Using a spring scale, pull the No. 2 chain with a force of 147 N (15 kgf, 33.1 lbf) and measure the length of the No. 2 chain by using a vernier caliper.

Maximum chain elongation:
146.8 mm (5.78 in.)

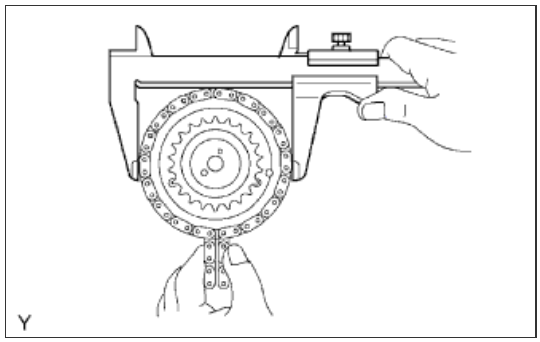
HINT:

Perform the measurement at 3 random places.

If a measurement is more than the maximum, replace the No. 2 chain.

33. INSPECT CAMSHAFT TIMING GEAR ASSEMBLY

a. Wrap the No. 1 chain around the gear place for the No. 1 chain.



b. Using a vernier caliper, measure the timing gear with the No. 1 chain.

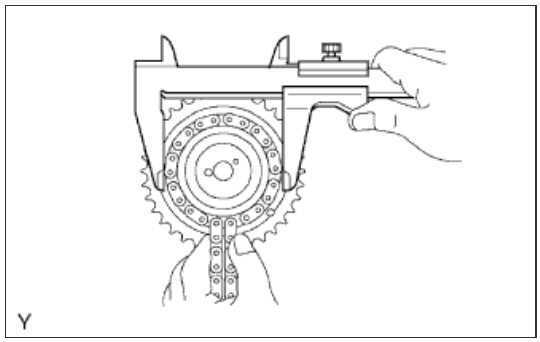
Minimum gear diameter (ith chain):
115.5 mm (4.55 in.)

HINT:

The vernier caliper must contact the chain rollers for the measurement.

If the diameter is less than the minimum, replace the No. 1 chain and camshaft timing gear assembly.

c. Wrap the No. 2 chain around the gear place for the No. 2 chain.



d. Using a vernier caliper, measure the timing gear with the No. 2 chain.

Minimum gear diameter (with chain):
73.1 mm (2.88 in.)

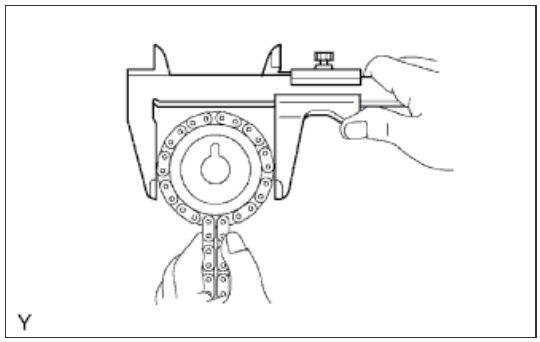
HINT:

The vernier caliper must contact the chain rollers for the measurement.

If the diameter is less than the minimum, replace the No. 2 chain and camshaft timing gear assembly.

34. INSPECT CAMSHAFT TIMING SPROCKET

a. Wrap the No. 2 chain around the sprocket.



b. Using a vernier caliper, measure the camshaft timing sprocket diameter with the No. 2 chain.

Minimum gear diameter (with chain):
73.1 mm (2.88 in.)

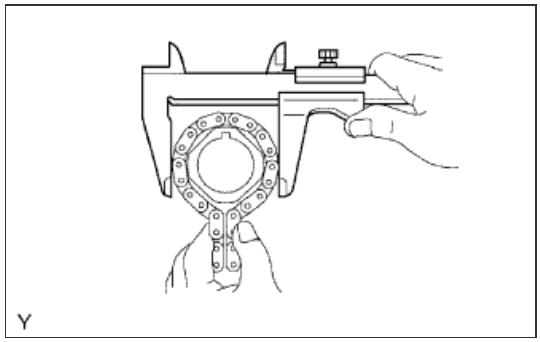
HINT:

The vernier caliper must contact the chain rollers for the measurement.

If the diameter is less than the minimum, replace the No. 2 chain and camshaft timing sprocket.

35. INSPECT CRANKSHAFT TIMING SPROCKET

a. Wrap the No. 1 chain around the sprocket.



b. Using a vernier caliper, measure the crankshaft timing sprocket diameter with the No. 1 chain.

Minimum gear diameter (with chain):
61.0 mm (2.40 in.)

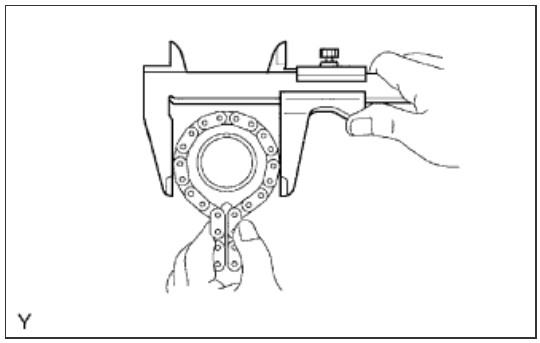
HINT:

The vernier caliper must contact the chain rollers for the measurement.

If the diameter is less than the minimum, replace the No. 1 chain and crankshaft timing sprocket.

3 . INSPECT NO. 1 IDLE GEAR

a. Wrap the No. 1 chain around the gear.

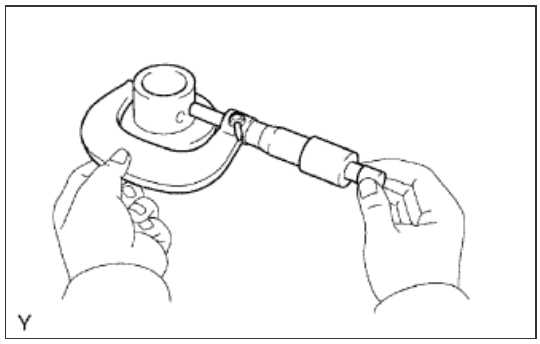


b. Using a vernier caliper, measure the No. 1 idle gear with the No. 1 chain.

Minimum gear diameter (with chain):
61.0 mm (2.40 in.)

HINT:

The vernier caliper must contact the chain rollers for the measurement.



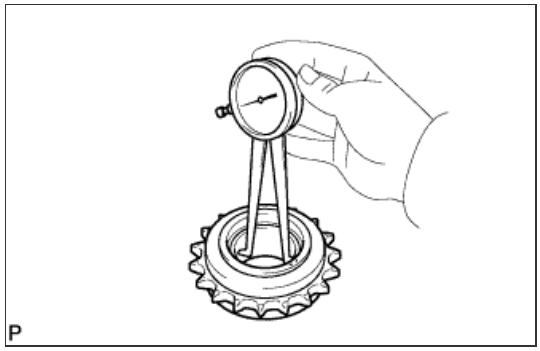
If the diameter is less than the minimum, replace the No. 1 chain and No. 1 idle gear.

37. INSPECT NO. 1 IDLE GEAR SHAFT OIL CLEARANCE

a. Using a micrometer, measure the No. 1 idle gear shaft diameter.

Standard idle gear shaft diameter:
22.987 to 23.000 mm (0.905 to 0.906 in.)

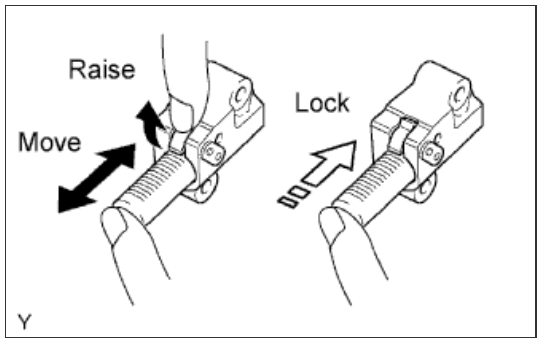
b. Using a caliper gauge, measure the inside diameter of the idle gear.



Standard idle gear inside diameter:
23.02 to 23.03 mm (0.906 to 0.907 in.)

c. Subtract the idle gear shaft diameter measurement from the idle gear inside diameter measurement.

Standard oil clearance:
0.020 to 0.043 mm (0.000787 to 0.00169 in.)

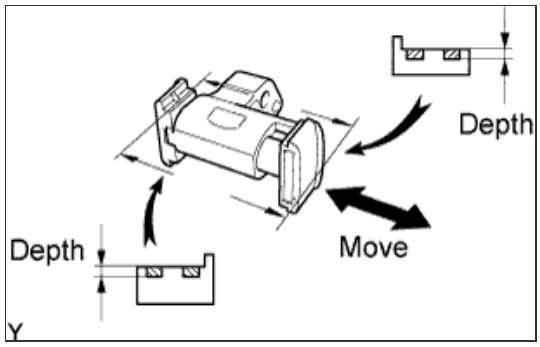


Maximum oil clearance:
0.093 mm (0.00366 in.)

If the thrust oil clearance is more than the maximum, replace the idle gear shaft and idle gear.

38. INSPECT NO. 1 CHAIN TENSIONER ASSEMBLY

a. Move the stopper plate upward to release the lock. Push the plunger and check that it moves smoothly.
If necessary, replace the chain tensioner assembly.



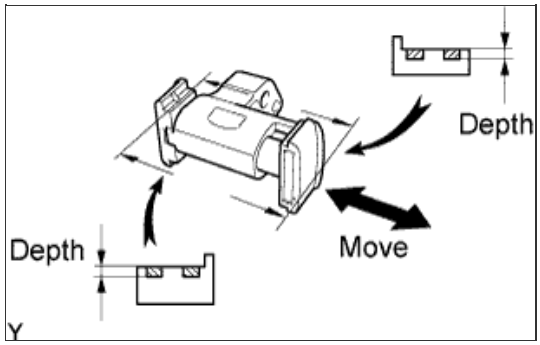
39. INSPECT NO. 2 CHAIN TENSIONER ASSEMBLY

a. Check that the plunger moves smoothly.

b. Measure the worn depth of the chain tensioner.

Maximum depth:
1.0 mm (0.0394 in.)

If the depth is more than the maximum, replace the No. 2 chain tensioner assembly.



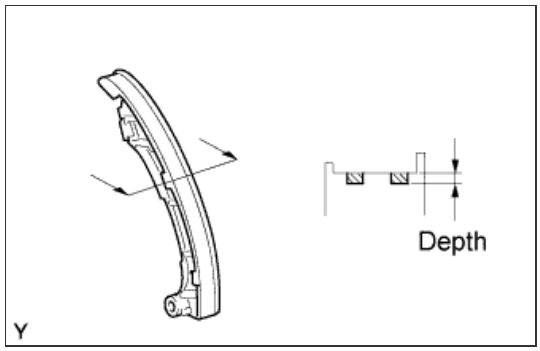
40. INSPECT NO. 3 CHAIN TENSIONER ASSEMBLY

a. Check that the plunger moves smoothly.

b. Measure the worn depth of the chain tensioner.

Maximum depth:
1.0 mm (0.0394 in.)

If the depth is more than the maximum, replace the No. 3 chain tensioner assembly.

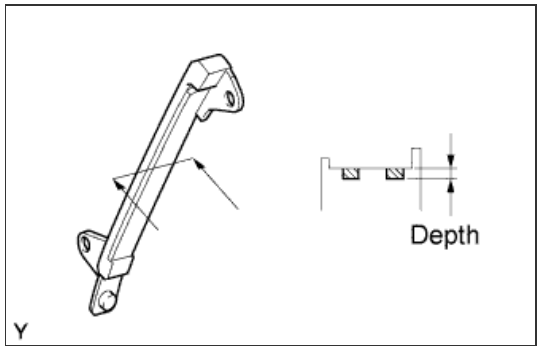


41. INSPECT CHAIN TENSIONER SLIPPER

a. Measure the worn depth of the chain tensioner slipper.

Maximum depth:
1.0 mm (0.0394 in.)

If the depth is more than the maximum, replace the chain tensioner slipper.

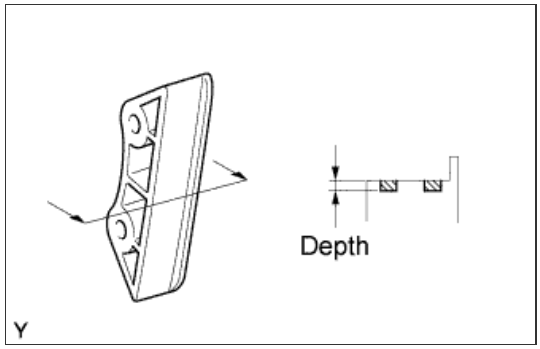


42. INSPECT NO. 1 CHAIN VIBRATION DAMPER

a. Measure the worn depth of the No. 1 chain vibration damper.

Maximum depth:
1.0 mm (0.0394 in.)

If the depth is more than the maximum, replace the No. 1 chain vibration damper.

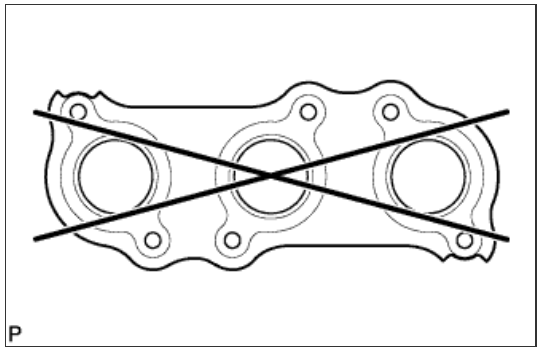


43. INSPECT NO. 2 CHAIN VIBRATION DAMPER

a. Measure the worn depth of the No. 2 chain vibration damper.

Maximum depth:
1.0 mm (0.0394 in.)

If the depth is more than the maximum, replace the No. 2 chain vibration damper.

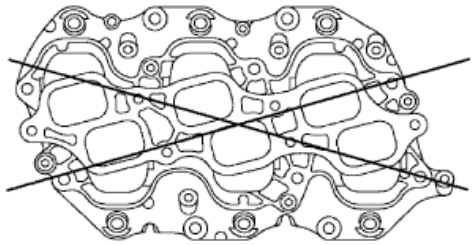


44. INSPECT EXHAUST MANIFOLD FOR FLATNESS

a. Using a precision straightedge and feeler gauge, measure the warpage of the contact surface of the cylinder head.

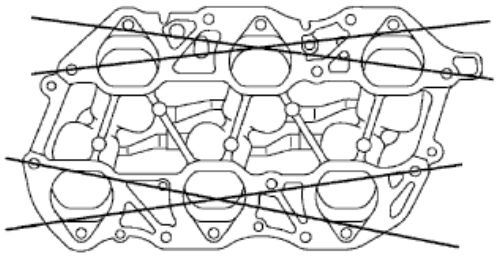
Maximum warpage:
0.70 mm (0.0276 in.)

If warpage is more than the maximum, replace the exhaust manifold.



45. INSPECT INTAKE MANIFOLD FOR FLATNESS

a. Using a precision straightedge and feeler gauge, measure the warpage of the contact surface of the cylinder head and intake air surge tank.



Maximum warpage:
for intake air surge tank side:
0.80 mm (0.0315 in.)
for cylinder head side:
0.20 mm (0.00787 in.)

If warpage is more than the maximum, replace the intake manifold.

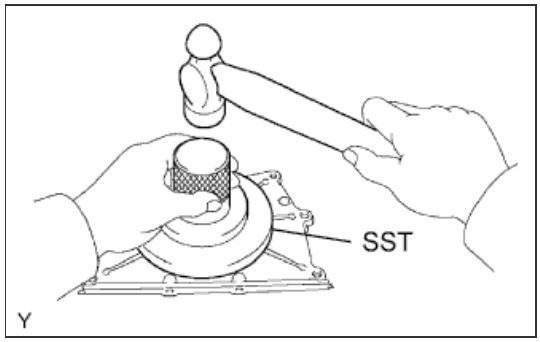
Intake Air Surge Tank Side:

Cylinder Head Side:

Y

for Preparation Click here

HINT:



- **Thoroughly clean all parts to be assembled.**
- **Before installing the parts, apply new engine oil to all sliding and rotating surfaces.**
- **Replace all gaskets, O-rings and oil seals with new ones.**

1. INSTALL REAR CRANKSHAFT OIL SEAL

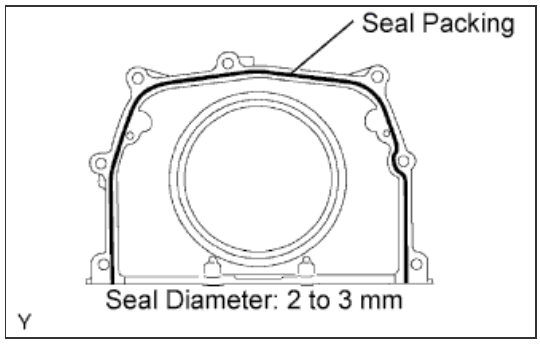
a. Using SST and a hammer, tap in a new oil seal until its surface is flush with the rear oil seal retainer edge.

SST
09223-78010

b. Apply MP grease to the lip of the oil seal.

2. INSTALL ENGINE REAR OIL SEAL RETAINER

a. Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the oil seal retainer and cylinder block.



b. Apply seal packing in a continuous line as shown in the illustration.

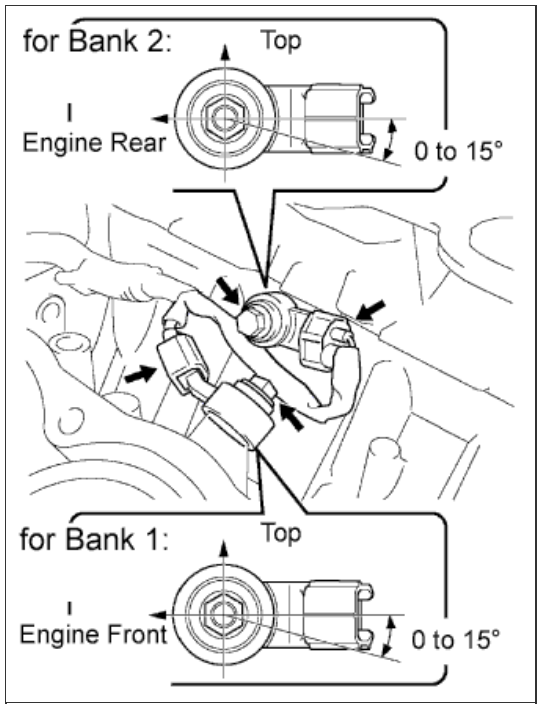
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

NOTICE:

Parts must be assembled within 3 minutes of application. Otherwise the seal packing must be removed and reapplied.

Standard seal diameter:
2 to 3 mm 0.00315 to 0.00472 in.)

c. Install the oil seal retainer with the olts and 2 nuts.

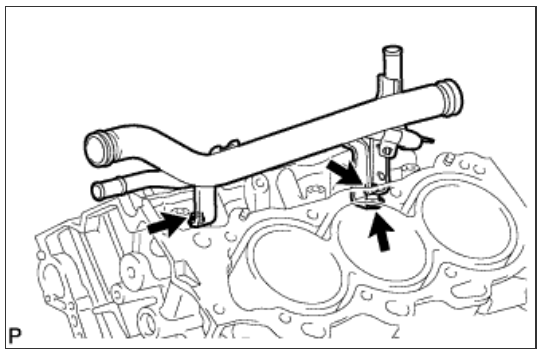


Torque:
for nut:
9.0 N m 92 kgf cm , 80 in. lbf
for bolt:
10 N m 102 kgf cm , 7 ft. lbf

3. INSTALL KNOCK SENSOR

a. Install the knock sensors with the olts as shown in the illustration.

Torque:
20 N m 204 kgf cm , 15 ft. lbf



b. onnect the knock sensor connectors.

4. INSTALL NO. 1 ATER OUTLET PIPE

a. Install the water outlet pipe with the olts.

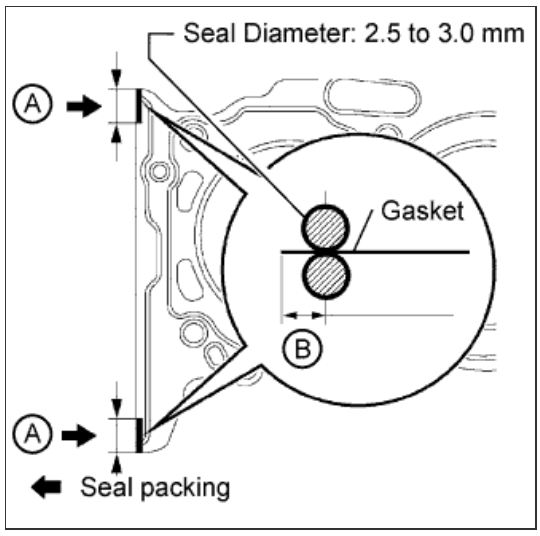
Torque:
10 N m 102 kgf cm , 7 ft. lbf

5. INSTALL CYLIN ER HEA GASKET for Bank 1)

a. Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the cylinder head and cylinder block.

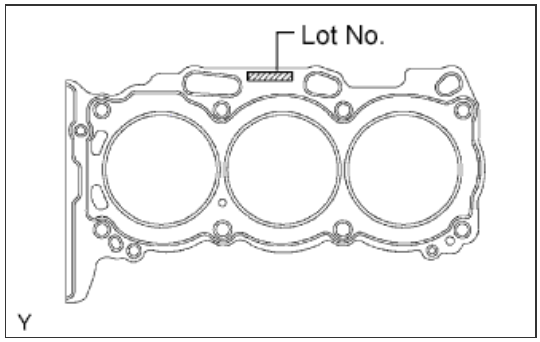
b. Apply seal packing to a new cylinder head gasket as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent



Standard seal diameter:
2.5 to 3.0 mm 0.0984 to 0.118 in.)

Seal Packing Application Range



Item	Specified ondition
A	10 to 15 mm (0.3 to 0.5 in.)
B	1.25 to 1.5 mm (0.04 to 0.05 in.)

HINT:

- **Remove any oil from the contact surface.**
- **Install the cylinder head gasket within 3 minutes after applying the seal packing.**
- **not add engine oil within 2 hours of installation.**

c. Place the cylinder head gasket on the cylinder block surface with the front face of the ot No. stamp upward.

NOTICE:

Be careful of the installation direction.

. INSTALL CYLIN ER HEA SUB-ASSEMBLY RH for Bank 1)

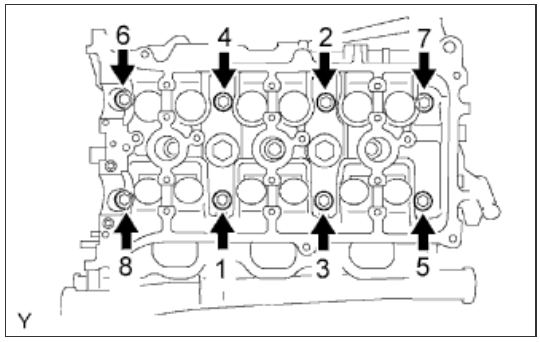
a. Place the cylinder head on the cylinder head gasket.

NOTICE:

- **Ensure that no oil is on the mounting surface of the cylinder head.**
- **Gently place the cylinder head in order not to damage the gasket with the bottom part of the cylinder head.**

b. Install the cylinder head bolts and plate washers.

HINT:



- **The cylinder head bolts are tightened in 3 progressive steps.**
- **If any cylinder head bolt is broken or deformed, replace it.**

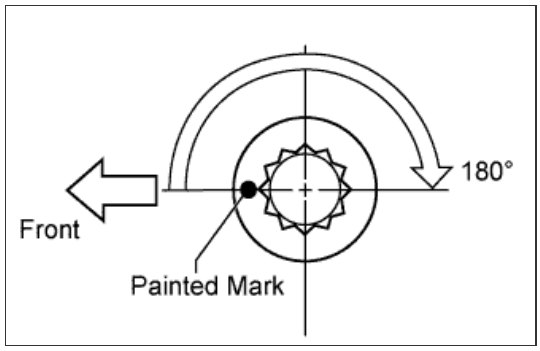
i. Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.

ii. Install the plate washers to the cylinder head bolts.

c. Step 1:

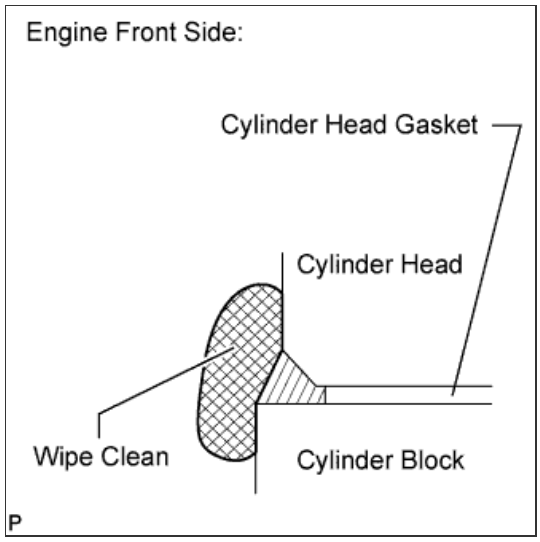
i. Using a 10 mm bi-he agon wrench, install and uniformly tighten the cylinder head bolts with plate washers in several steps in the se uence shown in the illustration.

Torque:
3 N m 3 7 kgf cm , 27 ft. lbf



If any one of the cylinder head bolts does not meet the torque specification, replace the cylinder head bolt.

d. Step 2:



i. Mark the cylinder head bolt heads with paint as shown in the illustration.

ii. Tighten the cylinder head bolts 180° in the se uence shown in step 1.

e. heck that the painted marks are now facing rearward.

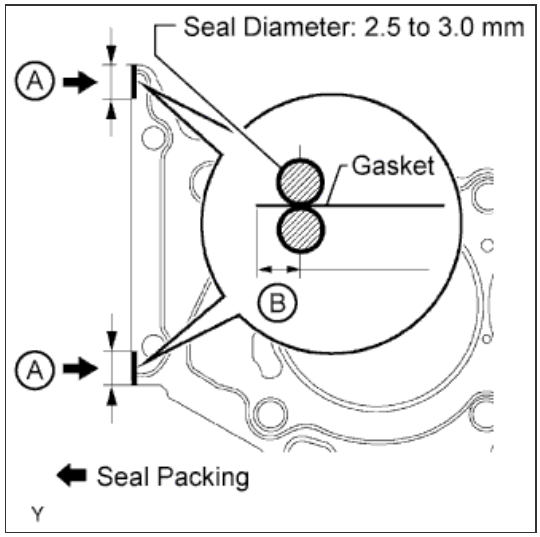
f. Seal packing will seep out from the front side of engine. Thoroughly wipe off the seal packing that seeps out.

7. INSTALL NO. 2 CYLIN ER HEA GASKET for Bank 2)

a. Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the cylinder head and cylinder block.

b. Apply seal packing to a new cylinder head gasket as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

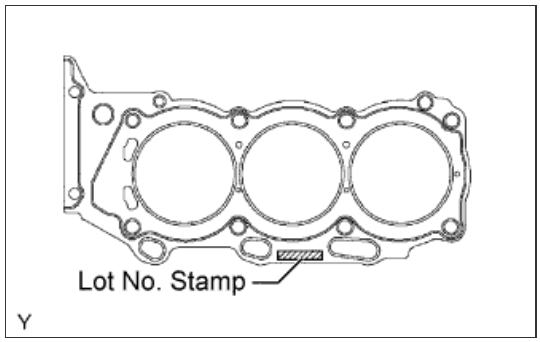


Standard seal diameter:
2.5 to 3.0 mm 0.0984 to 0.118 in.)

Seal Packing Application Range

Item	Specified ondition
A	10 to 15 mm (0.3 to 0.5 in.)
B	1.25 to 1.5 mm (0.04 to 0.05 in.)

HINT:



- **Remove any oil from the contact surface.**
- **Install the cylinder head gasket within 3 minutes after applying the seal packing.**
- **ot add engine oil within 2 hours of installation.**

c. Place the cylinder head gasket on the cylinder block surface with the front face of the ot No. stamp upward.

NOTICE:

Be careful of the installation direction.

8. INSTALL CYLIN ER HEA SUB-ASSEMBLY LH for Bank 2)

a. Place the cylinder head on the cylinder head gasket.

NOTICE:

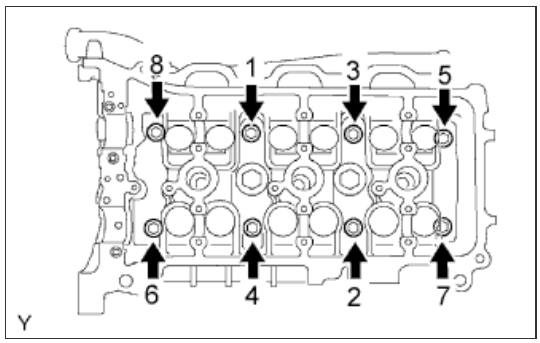
- **Ensure that no oil is on the mounting surface of the cylinder head.**
- **Gently place the cylinder head in order not to damage the gasket with the bottom part of the cylinder head.**

b. Install the cylinder head bolts and plate washers.

HINT:

- **The cylinder head bolts are tightened in 3 progressive steps.**
- **If any cylinder head bolt is broken or deformed, replace it.**

i. Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.



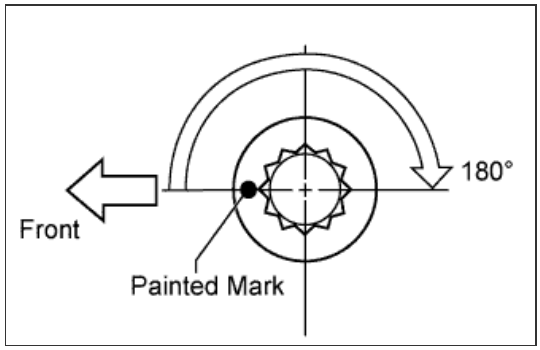
ii. Install the plate washers to the cylinder head bolts.

c. Step 1:

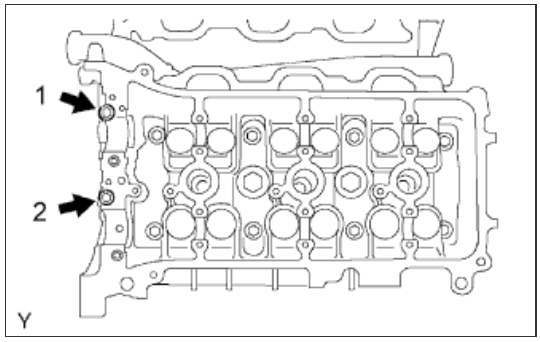
i. Using a 10 mm bi-he agon wrench, install and uniformly tighten the cylinder head bolts with plate washers in several steps in the se uence shown in the illustration.

Torque:
3 N m 3 7 kgf cm , 27 ft. lbf

If any one of the cylinder head bolts does not meet the torque specification, replace the cylinder head bolt.



d. Step 2:

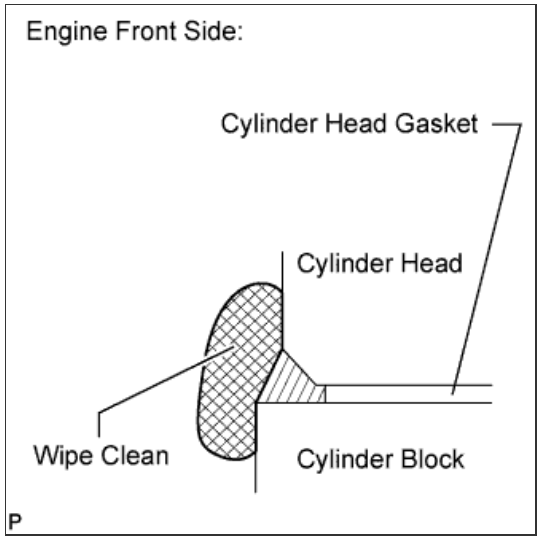


i. Mark the cylinder head bolt heads with paint as shown in the illustration.

ii. Tighten the cylinder head bolts 180° in the se uence shown in step 1.

e. heck that the painted marks are now facing rearward.

f. Install the olts in the order shown in the illustration.

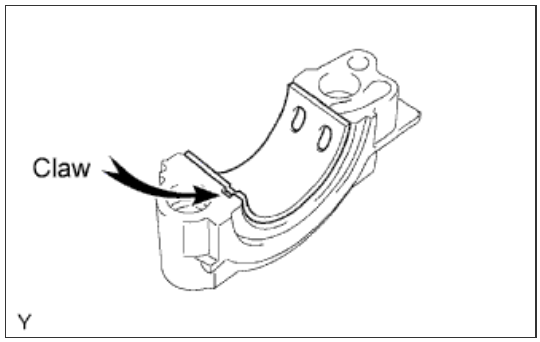


i. Apply a light coat of engine oil to the threads of the cylinder head bolts.

ii. Install the cylinder head bolts. Using several steps, tighten the olts uniformly in the se uence shown in the illustration.

Torque:
30 N m 30 kgf cm , 22 ft. lbf

g. Seal packing will seep out from the front side of the engine. Thoroughly wipe off seal packing that seeps out.

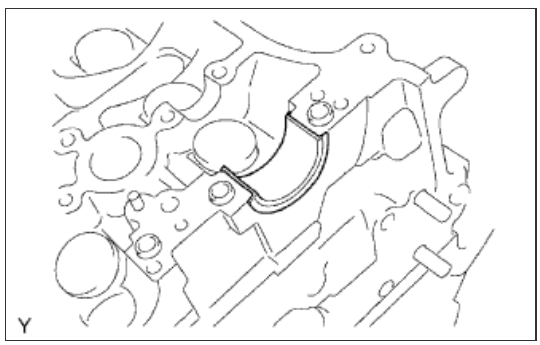


9. INSTALL NO. 1 CAMSHAFT BEARING

a. Align the aring claw with the claw groove of the aring cap, and push in the o. 1 camshaft bearing.

NOTICE:

- **Install the bearing while aligning it with the oil hole in the bearing cap.**
- **Clean the backside of the bearing and the contact surface of the bearing cap and prevent oil from adhering to them.**



10. INSTALL NO. 2 CAMSHAFT BEARING

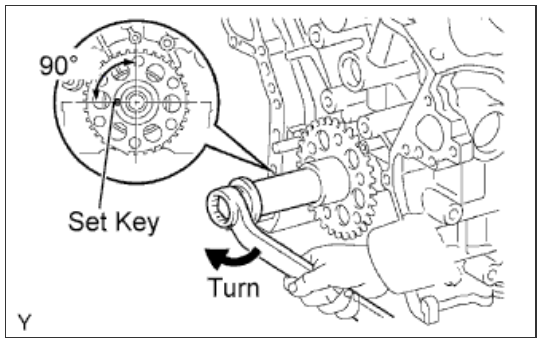
a. Install the o. 2 camshaft bearing to the cylinder head.

NOTICE:

lean the ackside of the aring and the contact surface of the cylinder head and prevent oil from adhering to them.

11. INSTALL NO. 1 CAMSHAFT AN NO. 2 CAMSHAFT

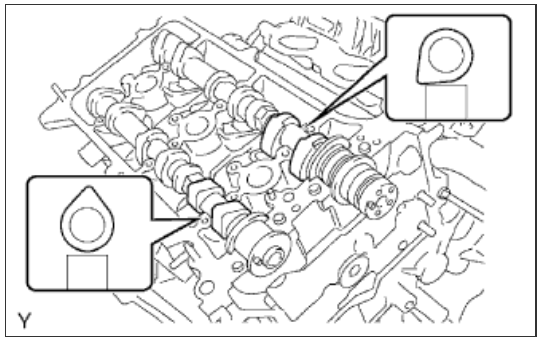
NOTICE:



As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

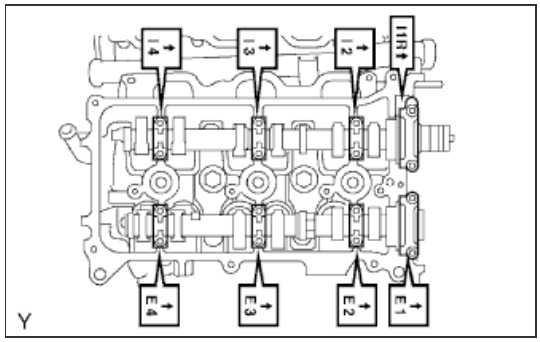
a. Set the crankshaft position.

i. Using the crankshaft pulley set bolt, turn the crankshaft, and set the crankshaft set key into the left horizontal position.



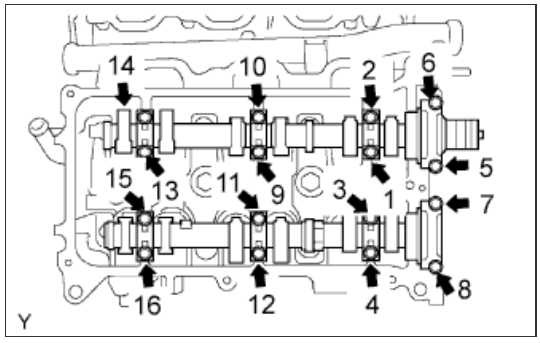
NOTICE:

Having the crankshaft at the wrong angle can cause the piston head and valve head to come into contact with each other when the camshaft is installed, causing damage. Always set the crankshaft to the correct angle.



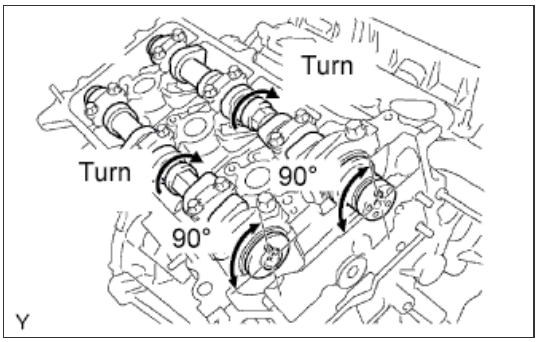
b. Apply new engine oil to the thrust portion and journals of the camshafts.

c. Place the camshafts onto the cylinder head with the cam lobes of the o. 1 cylinder facing each direction as shown in the illustration.



d. Set the aring caps in their proper locations.

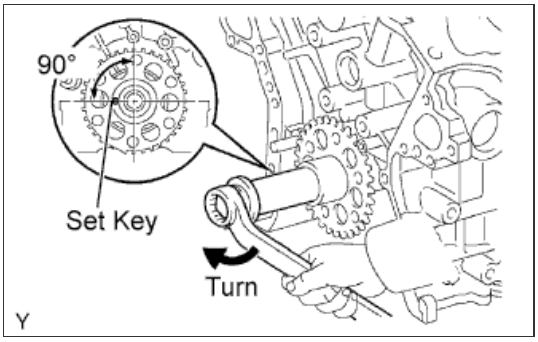
e. Apply a light coat of engine oil to the threads and under the heads of the aring cap bolts.



f. Uniformly install the olts in several steps in the order shown in the illustration.

Torque:
for 10 mm head bolt:
9.0 N m 92 kgf cm , 80 in. lbf
for 12 mm head bolt:
24 N m 245 kgf cm , 18 ft. lbf

g. Using a wrench, turn the camshafts clockwise until the camshaft knock pin is at a position to the cylinder head.

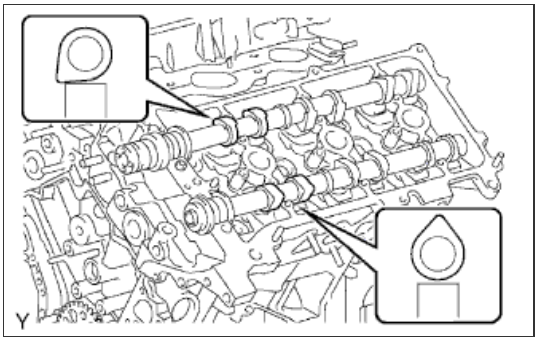


12. INSTALL NO. 3 CAMSHAFT AN NO. 4 CAMSHAFT

NOTICE:

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

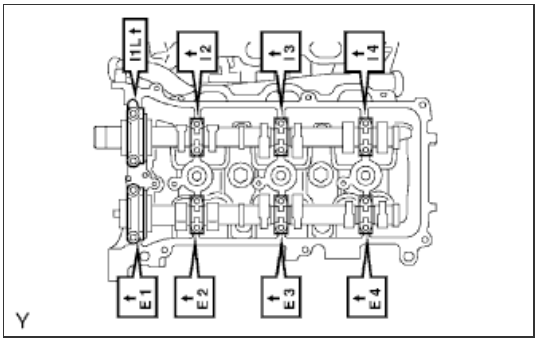
a. Set the crankshaft position.



i. Using the crankshaft pulley set bolt, turn the crankshaft, and set the crankshaft set key into the left horizontal position.

NOTICE:

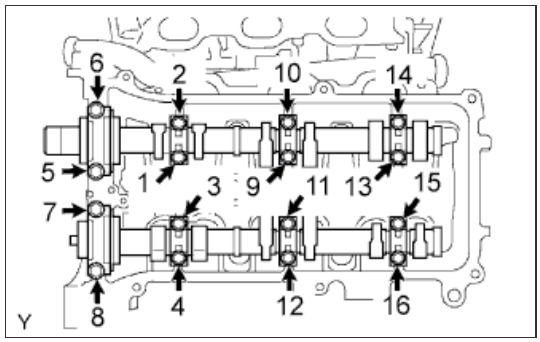
Having the crankshaft at the wrong angle can cause the piston head and valve head to come into contact with each other when the camshaft is installed, causing damage. Always set the crankshaft to the correct angle.



b. Apply new engine oil to the thrust portion and journals of the camshafts.

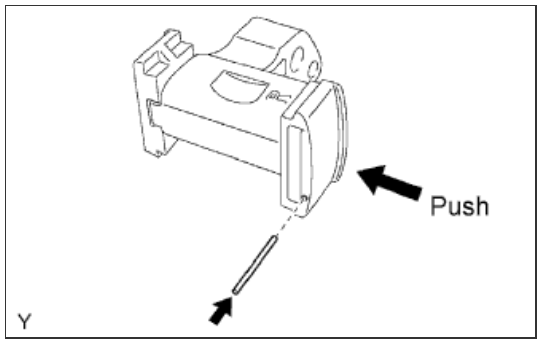
c. Place the camshafts onto the cylinder head with the cam lobes of the o. 2 cylinder facing as shown in the illustration.

d. Set the aring caps in their proper locations.



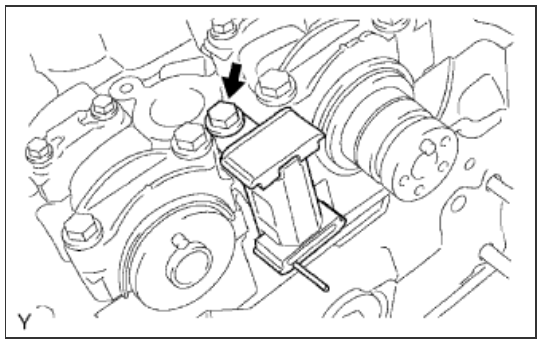
e. Apply a light coat of engine oil to the threads and under the heads of the aring cap bolts.

f. Uniformly install the olts in several steps in the order shown in the illustration.



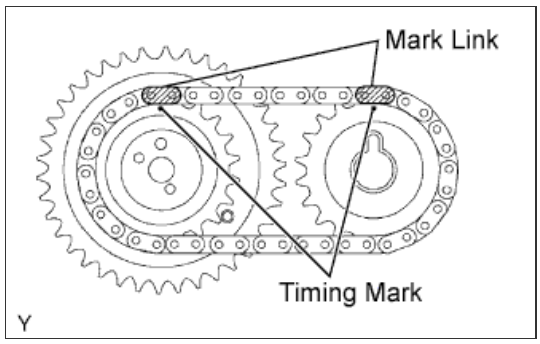
Torque:
for 10 mm head bolt:

9.0 N m 92 kgf cm , 80 in. lbf
for 12 mm head bolt:
24 N m 245 kgf cm , 18 ft. lbf



13. INSTALL NO. 2 CHAIN TENSIONER ASSEMBLY for Bank 1)

a. While pushing in the tensioner, insert a pin of φ1.0 mm (0.03 in.) into the hole to fix the tensioner in place.

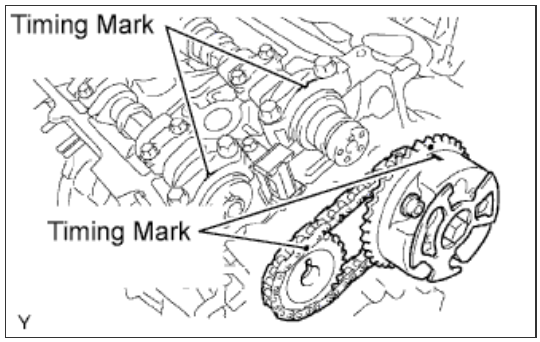


b. Install the o. 2 chain tensioner with the olt.

Torque:
21 N m 214 kgf cm , 15 ft. lbf

14. INSTALL CAMSHAFT TIMING GEARS AN NO. 2 CHAIN for Bank 1)

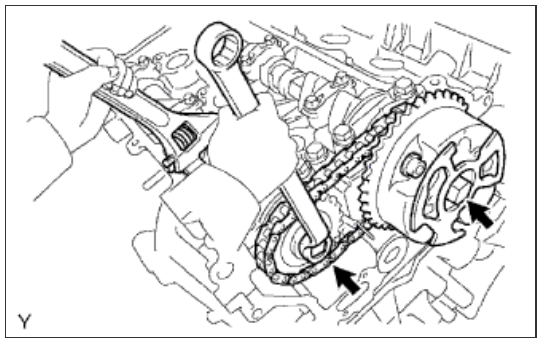
a. Align the mark links (yellow) of the o. 2 chain with the timing marks (1-dot mark) of the camshaft timing gear and sprocket as shown in the illustration.



b. Align the timing marks on the camshaft timing gear and sprocket with the timing marks on the aring caps, and install the camshaft timing gear and sprocket with the o. 2 chain to the camshafts.

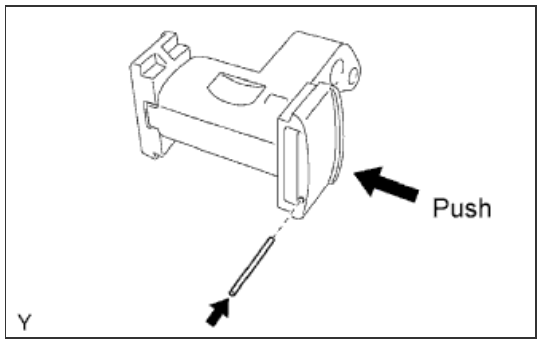
c. Temporarily install the camshaft timing gear set bolt and camshaft timing sprocket set bolt.

NOTICE:



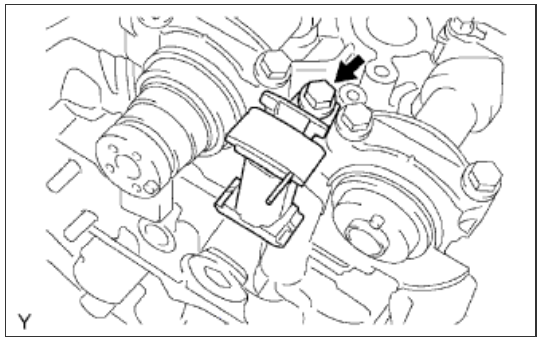
Do not push the camshaft timing gear assembly to the camshaft forcibly when installing it.

d. Hold the he agonal portion of the camshaft with a wrench, and tighten the olts.



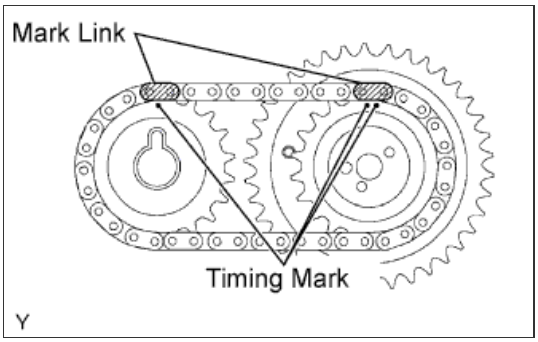
Torque:
100 N m 1020 kgf cm , 74 ft. lbf

e. Remove the pin from the o. 2 chain tensioner.



15. INSTALL NO. 3 CHAIN TENSIONER ASSEMBLY for Bank 2)

a. While pushing in the tensioner, insert a pin of φ1.0 mm (0.03 in.) into the hole to fix the tensioner in place.

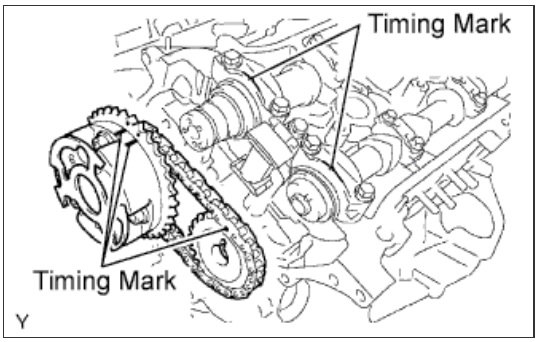


b. Install the o. 3 chain tensioner with the olt.

Torque:
21 N m 214 kgf cm , 15 ft. lbf

1 . INSTALL CAMSHAFT TIMING GEARS AN NO. 2 CHAIN for Bank 2)

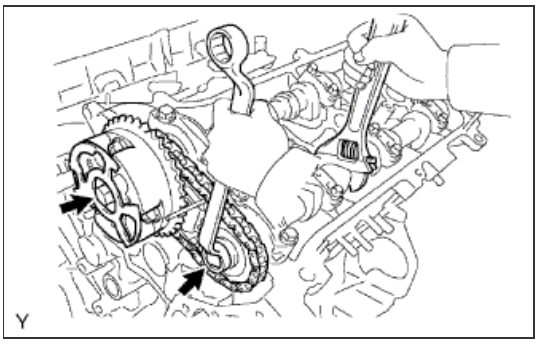
a. Align the mark links (yellow) of the o. 2 chain with the timing marks (1-dot mark and 2-dot mark) of the camshaft timing gear and sprocket as shown in the illustration.



b. Align the timing marks on the camshaft timing gear and sprocket with the timing marks on the aring caps, and install the camshaft timing gear and sprocket with the o. 2 chain to the camshafts.

c. Temporarily install the camshaft timing gear set bolt and camshaft timing sprocket set bolt.

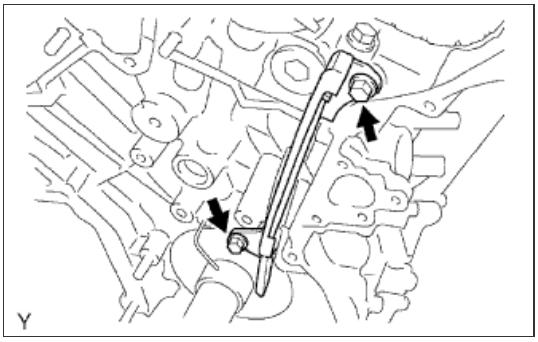
NOTICE:



Do not push the camshaft timing gear assembly to the camshaft forcibly when installing it.

d. Hold the he agonal portion of the camshaft with a wrench, and tighten the olts.

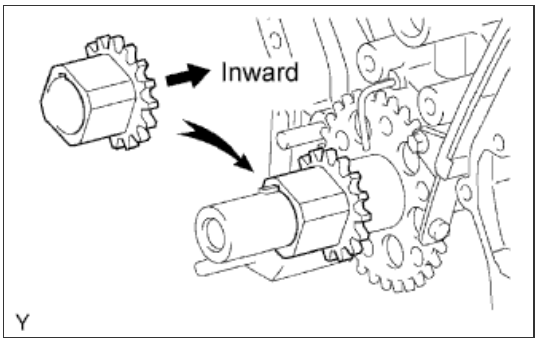
Torque:
100 N m 1020 kgf cm , 74 ft. lbf



e. Remove the pin from the o. 3 chain tensioner.

17. INSTALL NO. 1 CHAIN VIBRATION AMPER

a. Install the o. 1 chain vibration damper with the olts.



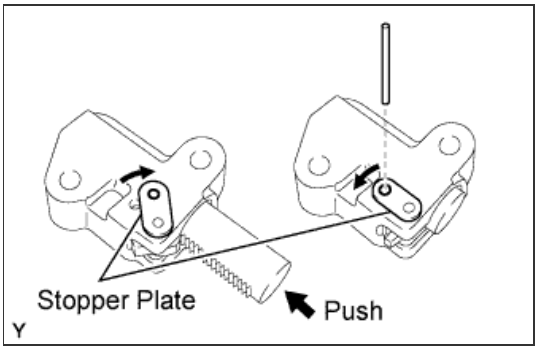
Torque:
19 N m 194 kgf cm , 14 ft. lbf

18. INSTALL CRANKSHAFT TIMING GEAR

a. Align the timing gear set key with the key groove of the timing gear.

b. Install the timing gear onto the crankshaft with the gear facing inward as shown in the illustration.

19. INSTALL CHAIN TENSIONER SLIPPER

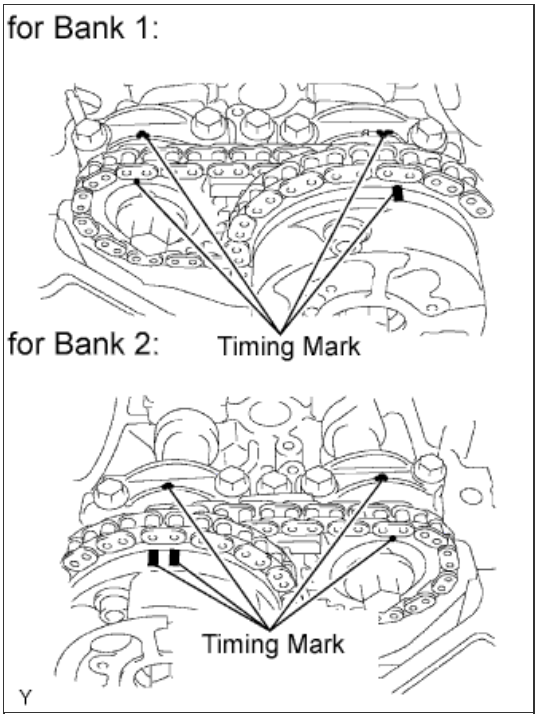


20. INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY

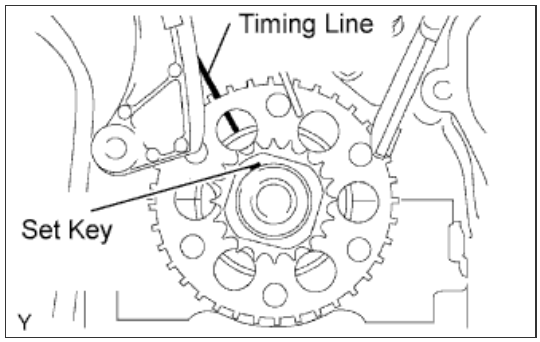
a. While turning the stopper plate of the tensioner clockwise, push in the plunger of the tensioner as shown in the illustration.

b. While turning the stopper plate of the tensioner counterclockwise, insert a bar of φ3.5 mm (0.138 in.) into the holes on the stopper plate and tensioner to fix the stopper plate in place.

c. Install the chain tensioner with the olts.

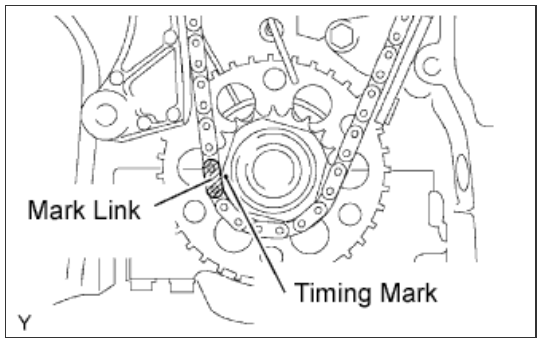


Torque:
10 N m 102 kgf cm , 7 ft. lbf

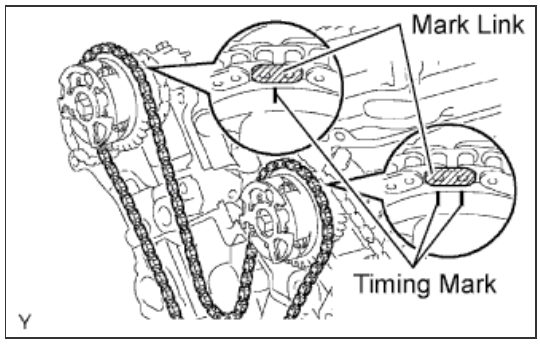


21. INSTALL NO. 1 CHAIN SUB-ASSEMBLY

a. Set the o. 1 cylinder to TD compression.

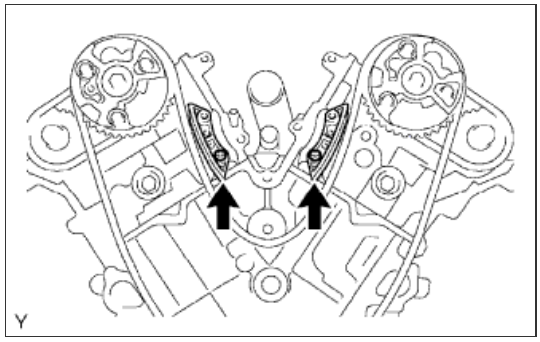


i. Align the timing marks of the camshaft timing gears and sprockets with the timing marks of the aring caps.



ii. Install the crankshaft pulley set bolt, and turn the crankshaft to align the crankshaft set key with the timing line of the cylinder block.

b. Align the mark link (yellow) with the timing mark of the crankshaft timing gear.



c. Align the mark links (orange) with the timing marks of the camshaft timing gears, and install the o. 1 chain.

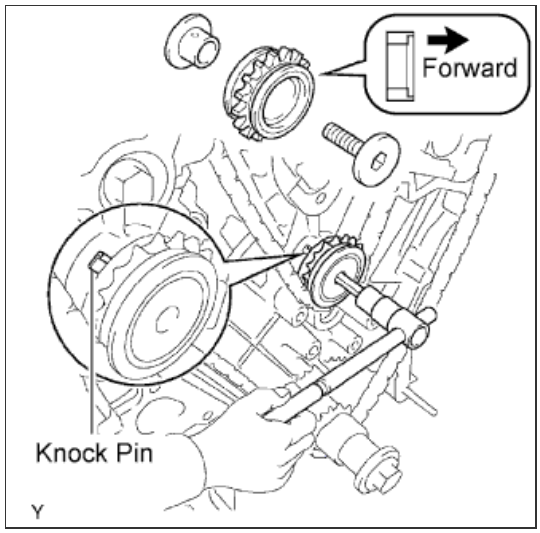
22. INSTALL NO. 2 CHAIN VIBRATION AMPER

a. Install the o. 2 chain vibration dampers.

23. INSTALL NO. 1 I LE GEAR SHAFT

a. Apply a light coat of engine oil to the rotating surface of the o. 1 idle gear shaft.

b. Temporarily install the o. 1 idle gear shaft and No. 1 idle gear with the o. 2 idle gear shaft while aligning the knock pin of the o. 1 idle gear shaft with the knock pin groove of the cylinder block.



NOTICE:

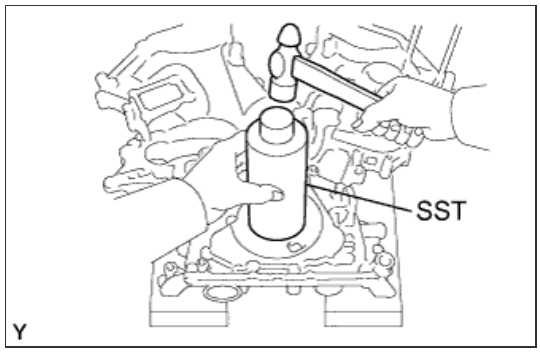
Be careful of the idle gear direction.

c. Using a 10 mm he agon wrench, tighten the o. 2 idle gear shaft.

Torque:
0 N m 12 kgf cm , 44 ft. lbf

d. Remove the ar from the chain tensioner.

24. INSTALL FRONT CRANKSHAFT OIL SEAL

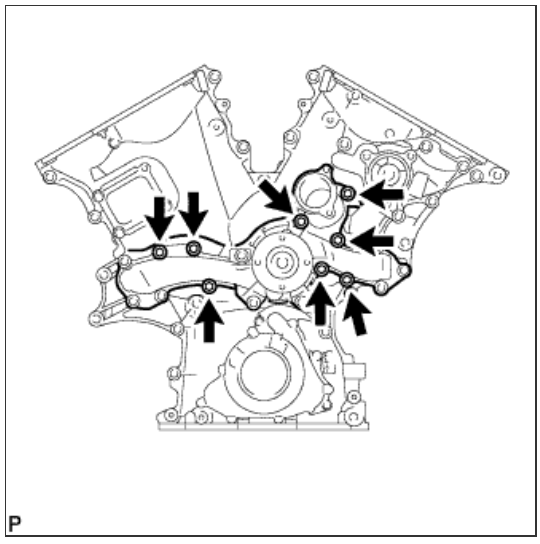


a. Using SST and a hammer, tap in a new oil seal until its surface is flush with the timing chain cover edge.

SST
0922 -10010

NOTICE:

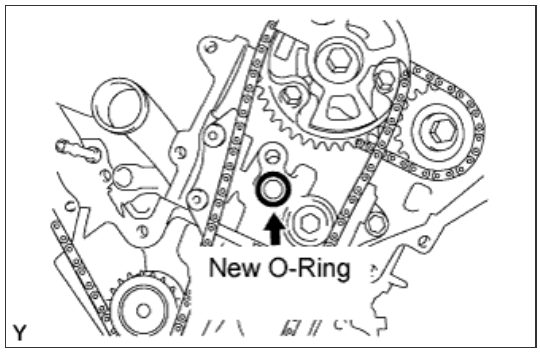
- **Keep the lip free from foreign matter.**
- **not tap the oil seal at an angle.**



b. Apply MP grease to the lip of the oil seal.

25. INSTALL ATER PUMP ASSEMBLY

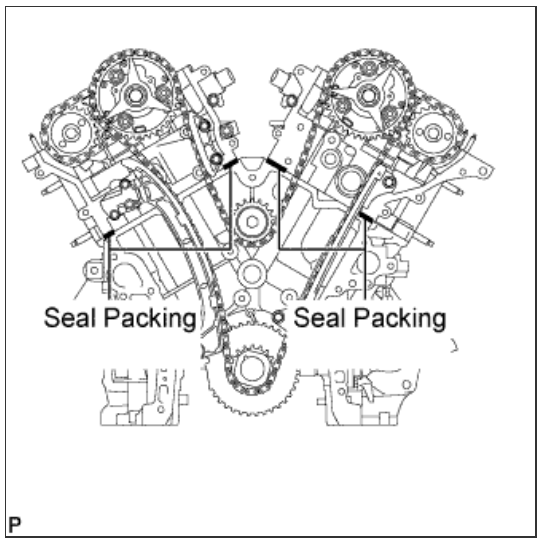
a. Install a new gasket and the water pump with the olts.



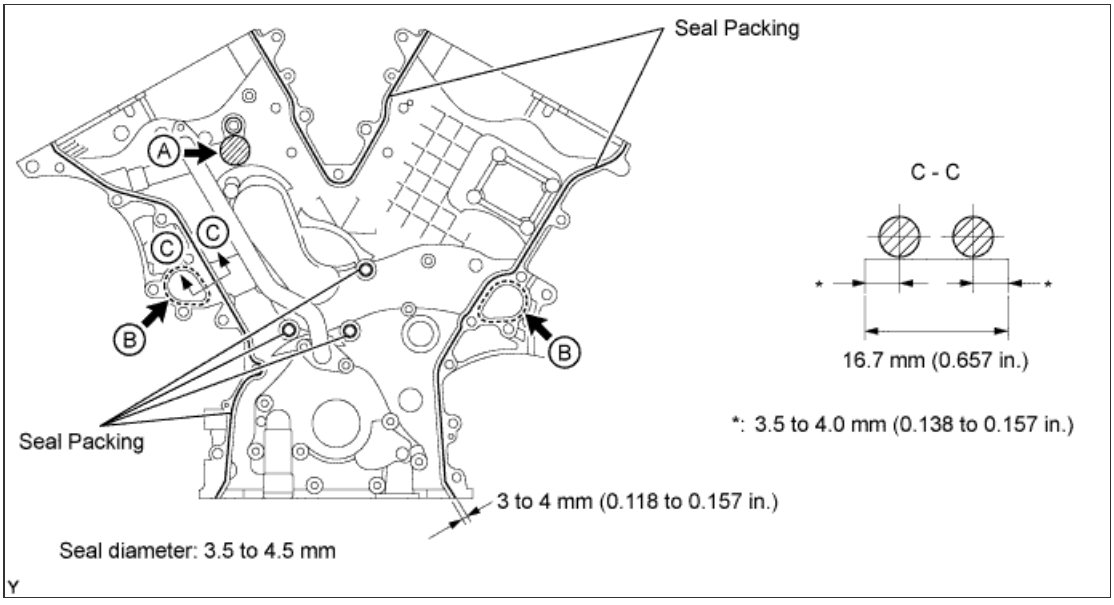
Torque:
9.0 N m 92 kgf cm , 80 in. lbf

2 . INSTALL TIMING CHAIN COVER SUB-ASSEMBLY

a. Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the timing chain cover, cylinder head and cylinder block.



b. Install a new O-ring to the cylinder head for bank 2 as shown in the illustration.



c. Apply seal packing as shown in the illustration.

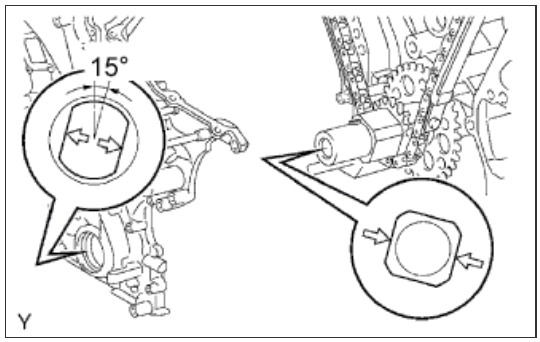
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
3.0 to 4.0 mm 0.118 to 0.157 in.)

d. Apply seal packing in a continuous line to the timing chain cover as shown in the illustration.

Seal packing:
for water related part:
Toyota Genuine Seal Packing 1282B, Three Bond 1282B or equivalent
for oil related part:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
3.5 to 4.5 mm 0.138 to 0.177 in.)



HINT:

Water related parts are labeled "B" in the illustration.

NOTICE:

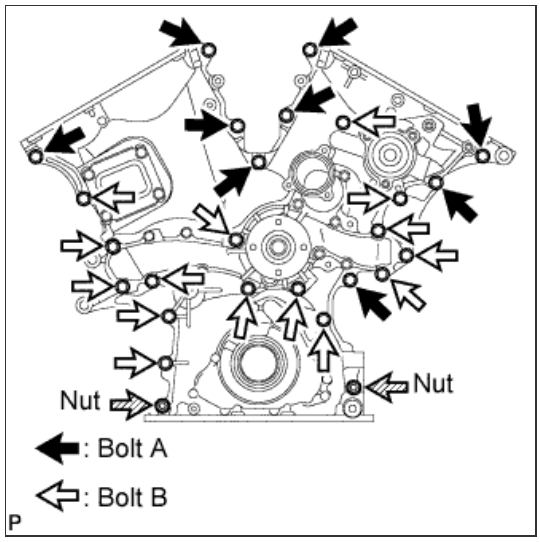
- **Install the timing chain cover within 3 minutes after applying seal packing. After installing it, the timing chain cover bolts and nuts must be tightened within 15 minutes. Otherwise the seal packing must be removed and reapplied.**
- **ɑnot apply seal packing to A shown in the illustration.**

e. Align the keyway of the oil pump drive rotor with the rectangular portion of the crankshaft timing gear, and slide the timing chain cover into place.

f. Install the timing chain cover with the olts labeled A and B, and the nuts. Tighten the olts and nuts uniformly in several steps.

Torque:
23 N m 235 kgf cm , 17 ft. lbf

NOTICE:



- **Make sure not to wrap the No. 1 chain and slipper over the timing chain cover seal line.**
- **Install the timing chain cover 15 minutes or more after installing the water pump.**

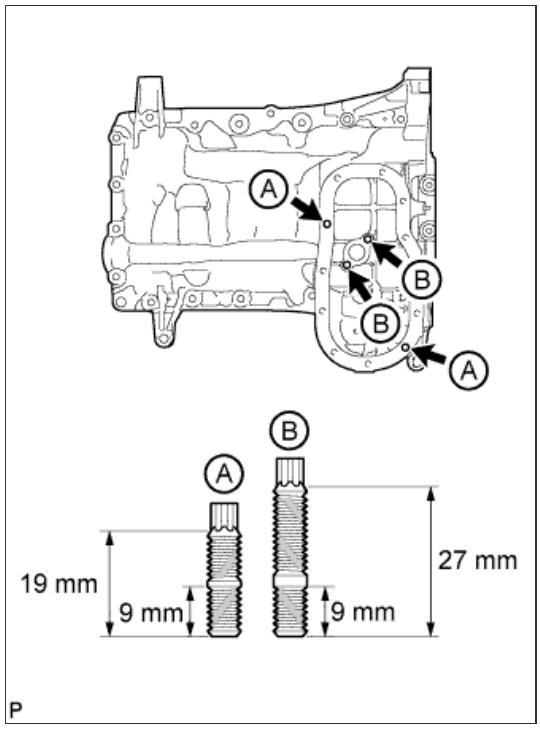
Standard Bolt:

Item	uantity	Length
Bolt A		mm (0. in.)
Bolt B	15	55 mm (2.17 in.)

NOTICE:

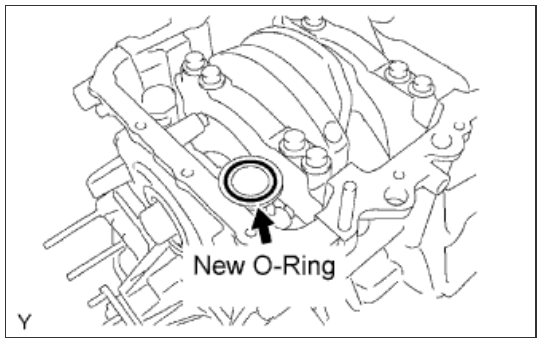
Make sure that there is no oil on the olt threads.

27. INSTALL OIL PAN SUB-ASSEMBLY



a. Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the cylinder block, rear oil seal retainer and oil pan.

b. Using an TORX" wrench, install the stud bolts.

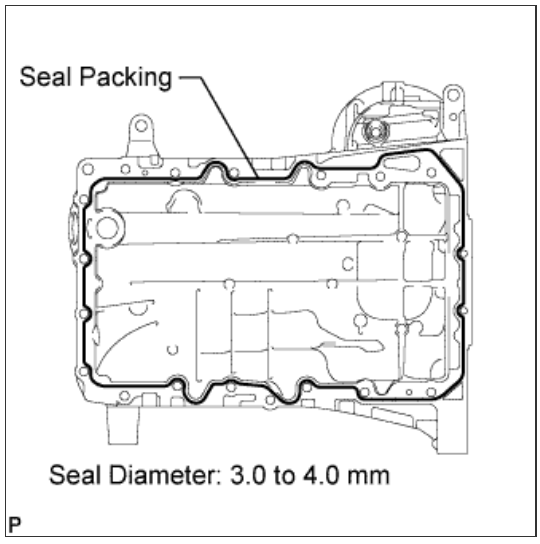


Torque:
4.0 N m 41 kgf cm , 35 in. lbf

Standard Bolt:

Item	Length
A	1 mm (0.748 in.)
	mm (0.354 in.)
B	27 mm (1.06 in.)
	mm (0.354 in.)

c. Install a new O-ring to the timing chain cover.



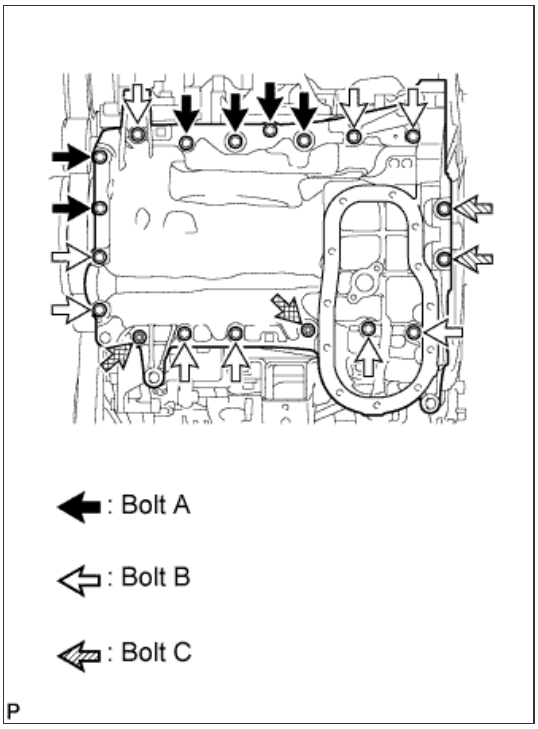
d. Apply seal packing in a continuous line as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
3 to 4 mm 0.118 to 0.157 in.)

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the oil pan within 3 minutes after applying seal packing.**
- **ot start the engine for at least 2 hours after installing.**



e. Install the oil pan with the olts and 2 nuts. Tighten the olts and nuts uniformly in several steps.

Torque:
for bolt A, B and nut:
21 N m 214 kgf cm , 15 ft. lbf
for bolt C:
10 N m 102 kgf cm , 7 ft. lbf

Standard Bolt:

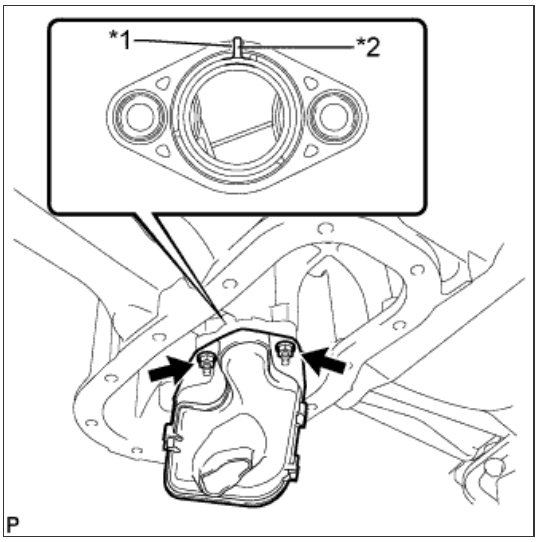
Item	uantity	Length

A	6	25 mm (0. in.)
B		mm (1.77 in.)
		mm (0.551 in.)

28. INSTALL OIL STRAINER SUB-ASSEMBLY

a. Install a new gasket to the oil strainer.

Te tn Illustration



1	Groove
	Protrusion

HINT:

Align the protrusion of the gasket with the groove of the oil strainer.

b. Install the oil strainer with the nuts.

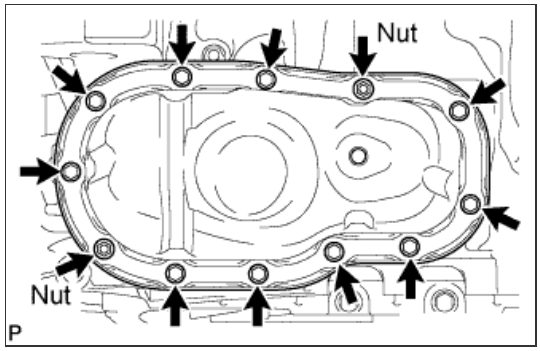
Torque:
9.0 N m 92 kgf cm , 80 in. lbf

29. INSTALL NO. 2 OIL PAN SUB-ASSEMBLY

a. Apply seal packing in a continuous line as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
3 to 4 mm 0.118 to 0.157 in.)



NOTICE:

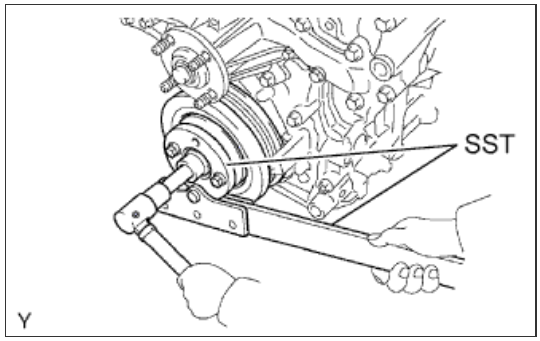
- **Remove any oil from the contact surface.**
- **Install the No. 2 oil pan within 3 minutes after applying seal packing.**
- **not start the engine for at least 2 hours after the installation.**

b. Install the o. 2 oil pan with the olts and 2 nuts. Tighten the olts and nuts uniformly in several steps.

Torque:
for bolt:
9.0 N m 92 kgf cm , 81 in. lbf
for nut:
10 N m 102 kgf cm , 7 ft. lbf

30. INSTALL OIL PAN RAIN PLUG

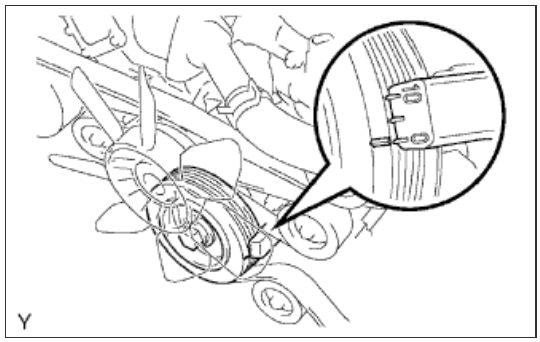
a. Install the drain plug and a new gasket.



Torque:
40 N m 408 kgf cm , 30 ft. lbf

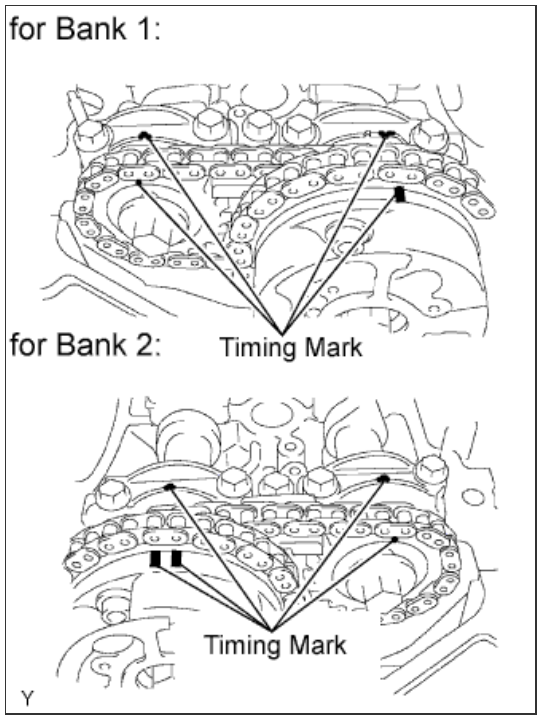
31. INSTALL CRANKSHAFT PULLEY

a. Using SST, install the crankshaft pulley with the pulley set bolt.



SST
09213-54015 91 51- 0855)
09330-00021

Torque:
250 N m 2549 kgf cm , 184 ft. lbf



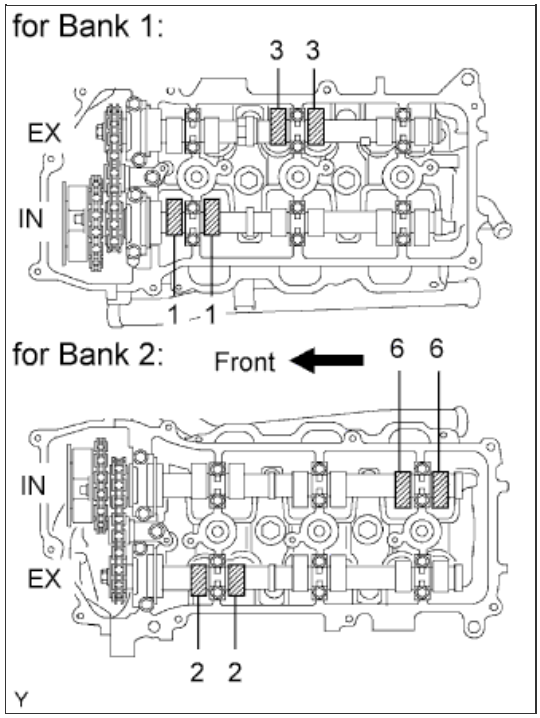
32. SET NO. 1 CYLIN ER TO T C COMPRESSION

a. Turn the crankshaft pulley, and align its groove with the timing mark "0" of the timing chain cover.

b. heck that the timing marks of the camshaft timing gears and sprockets are aligned with the timing marks of the aring caps as shown in the illustration. If not, turn the crankshaft 1 complete revolution (360°) and align the timing marks as above.

33. INSPECT VALVE CLEARANCE

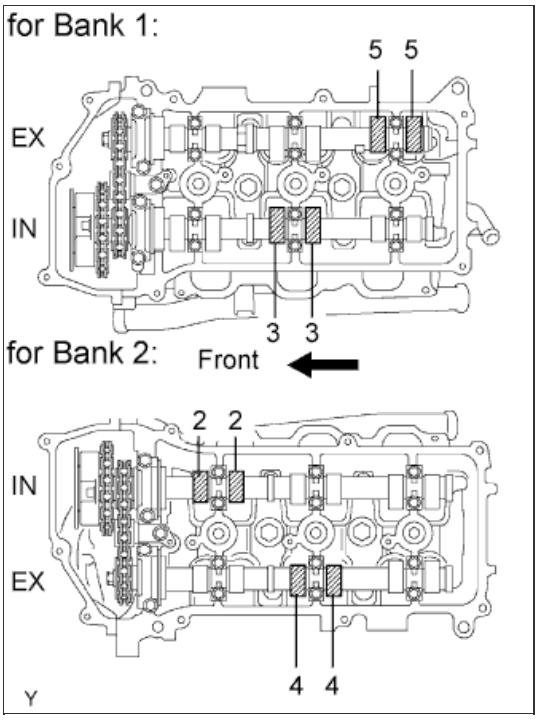
a. heck the valves indicated in the illustration.



i. Using a feeler gauge, measure the clearance tween the valve lifter and camshaft.

Standard Valve Clearance Cold):

Item	Specified ondition
Intake	.15 to 0.25 mm (0.005 to 0.00 in.)
haust	0.2 to 0.3 mm (0.0114 to 0.0154 in.)



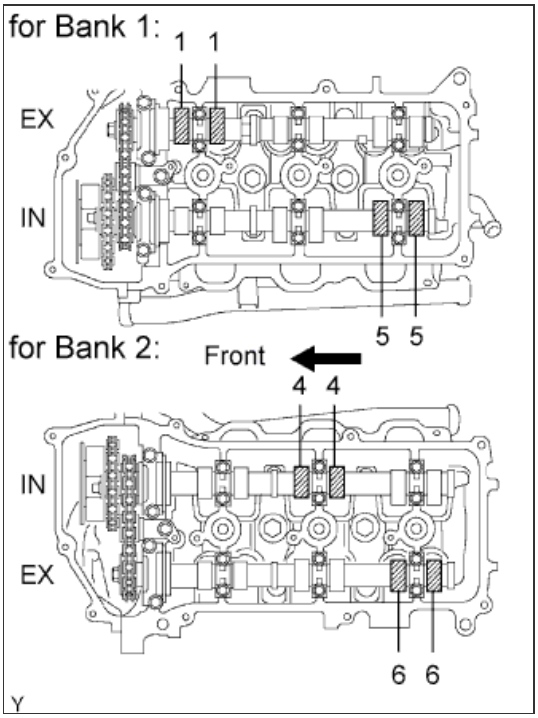
ii. Record the out-of-specification valve clearance measurements. They will be used later to determine the re ired replacement valve lifter.

b. Turn the crankshaft 2/3 of a revolution (240°).

c. heck the valves indicated in the illustration.

c. heck the valves indicated in the illustration.

i. Using a feeler gauge, measure the clearance tween the valve lifter and camshaft.



Standard Valve Clearance Cold):

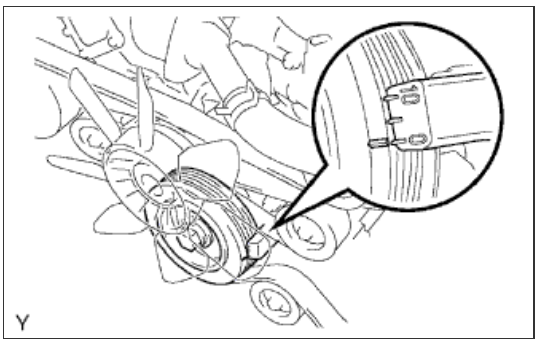
Item	Specified ondition
Intake	.15 to 0.25 mm (0.005 to 0.00 in.)
haust	0.2 to 0.3 mm (0.0114 to 0.0154 in.)

ii. Record the out-of-specification valve clearance measurements. They will be used later to determine the re ired replacement valve lifter.

d. Turn the crankshaft 2/3 of a revolution (240°).

e. heck the valves indicated in the illustration.

i. Using a feeler gauge, measure the clearance tween the valve lifter and camshaft.

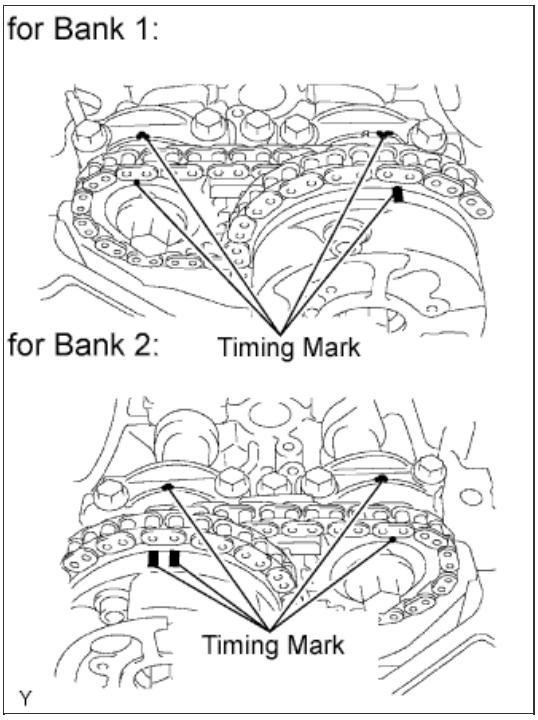


Standard Valve Clearance Cold):

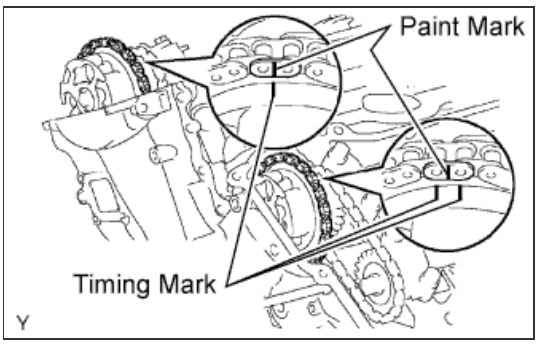
Item	Specified ondition
Intake	.15 to 0.25 mm (0.005 to 0.00 in.)
haust	0.2 to 0.3 mm (0.0114 to 0.0154 in.)

ii. Record the out-of-specification valve clearance measurements. They will be used later to determine the re ired replacement valve lifter.

34. A UST VALVE CLEARANCE



a. Set the o. 1 cylinder to TD compression.

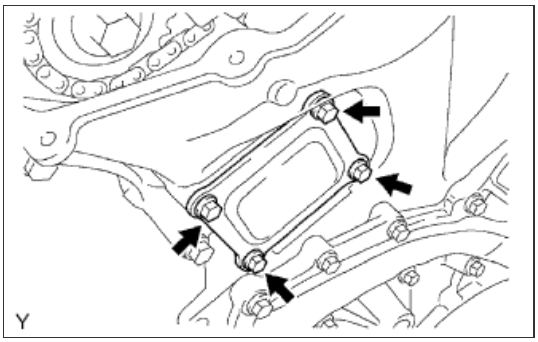


i. Turn the crankshaft pulley, and align the notch with the timing mark "0" of the timing chain cover.

ii. heck that the timing marks of the camshaft timing gears and

ii. Check that the timing marks of the camshaft timing gears and sprockets are aligned with the timing marks of the bearing caps as shown in the illustration.
If not, turn the crankshaft 1 complete revolution (360°) and align the timing marks as above.

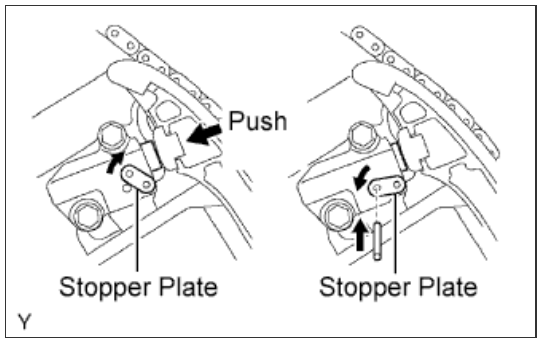
iii. Place paint marks on the chain links that correspond with the timing marks of the camshaft timing gears.



b. Remove the No. 1 chain tensioner.

NOTICE:

- **Never rotate the crankshaft with the No. 1 chain tensioner removed.**
- **When rotating the camshaft with the No. 1 chain removed, turn the crankshaft counterclockwise 40° from TDC first.**

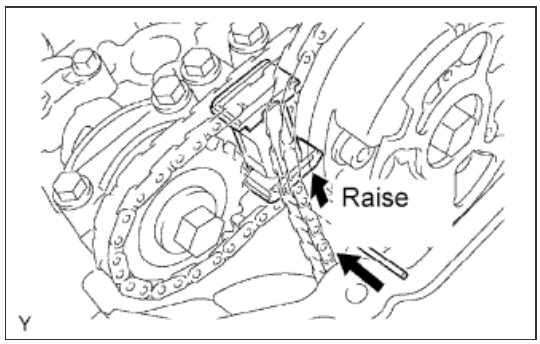


i. Remove the bolts, timing chain cover plate and gasket.

ii. While rotating the stopper plate of the No. 1 chain tensioner clockwise, push in the plunger of the No. 1 chain tensioner as shown in the illustration.

iii. While rotating the stopper plate of the tensioner counterclockwise downward, insert a bar of φ3.5 mm (0.138 in.) into the holes in the stopper plate and tensioner to fix the stopper plate in place.

iv. Remove the olts and No. 1 chain tensioner.

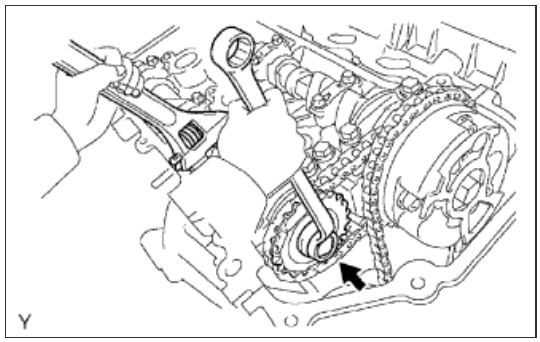


c. Remove the o. 2 camshaft.

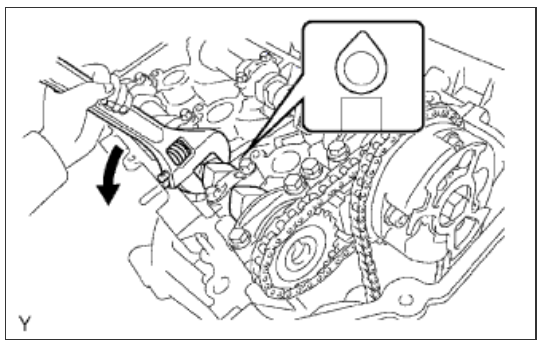
NOTICE:

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being removed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

i. While raising the o. 2 chain tensioner, insert a pin of φ1.0 mm (0.03 in.) into the hole to fix the tensioner in place.



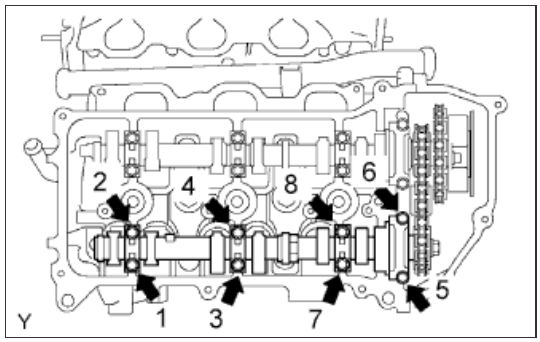
ii. Hold the he agonal portion of the o. 2 camshaft with a wrench, and remove the camshaft timing sprocket set bolt.



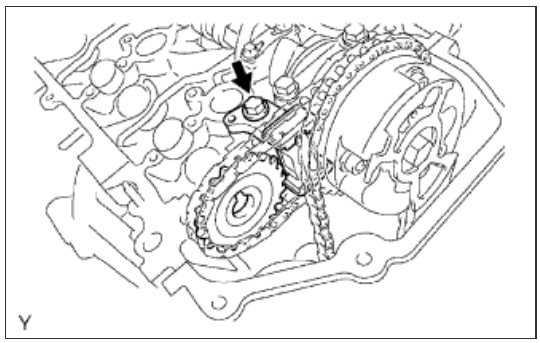
NOTICE:

Be careful not to damage the cylinder head and valve lifter with the wrench.

iii. Separate the camshaft timing sprocket from the o. 2 camshaft.



iv. Rotate the camshaft counterclockwise using the wrench so that the cam lobes of the o. 1 cylinder face upward as shown in the illustration.



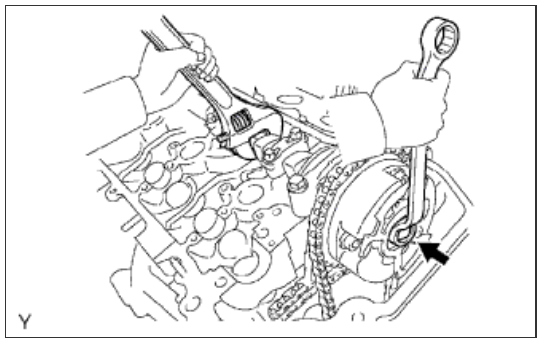
v. Uniformly loosen and remove the aring cap bolts in the se uence shown in the illustration.

vi. Remove the aring caps and No. 2 camshaft.

d. Remove the o. 2 chain tensioner.

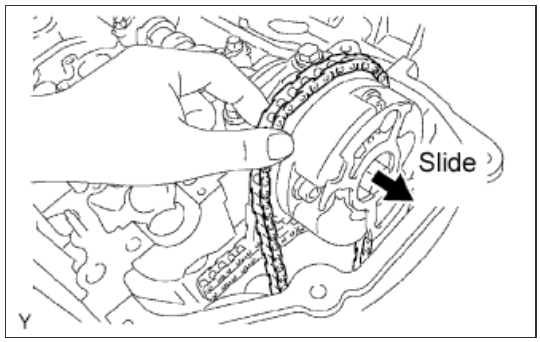
i. Remove the o. 2 chain tensioner bolt, No. 2 chain tensioner and camshaft timing sprocket.

e. Remove the o. 1 camshaft.



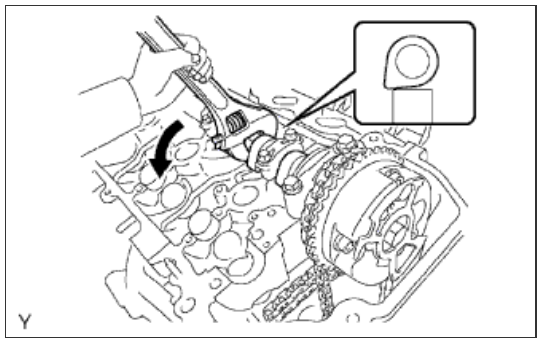
NOTICE:

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being removed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.



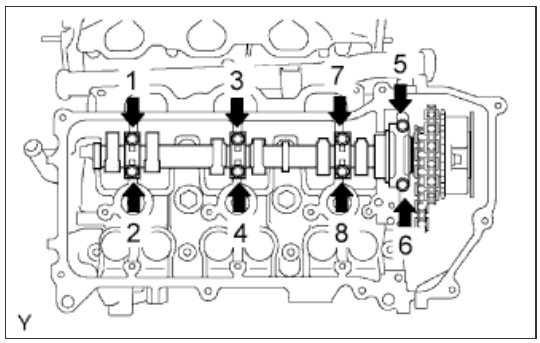
i. Hold the he agonal portion of the o. 1 camshaft with a wrench, and loosen the camshaft timing gear set bolt.

NOTICE:

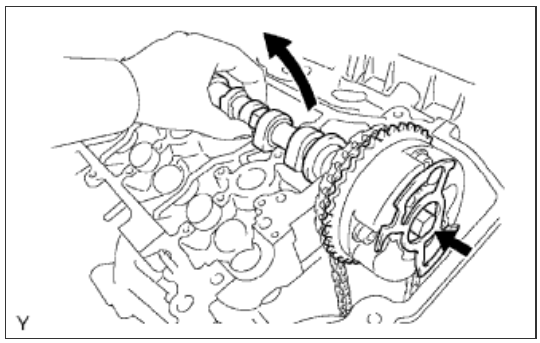


- **Be careful not to damage the cylinder head and valve lifter with the wrench.**
- **not disassemble the camshaft timing gear.**

ii. Slide the camshaft timing gear and separate the o. 1 chain from the camshaft timing gear.

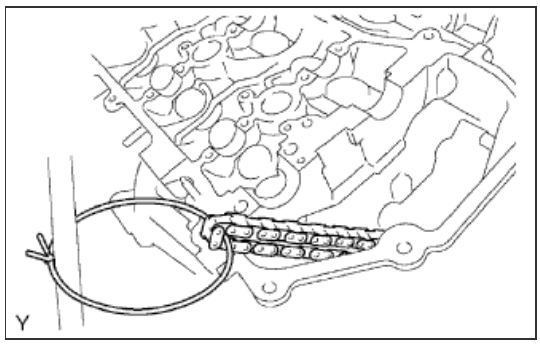


iii. Rotate the o. 1 camshaft counterclockwise using a wrench so that the cam lobes of the o. 1 cylinder face downward as shown in the illustration.



iv. Uniformly loosen and remove the bearing cap bolts in the sequence shown in the illustration.

v. Remove the bearing caps.

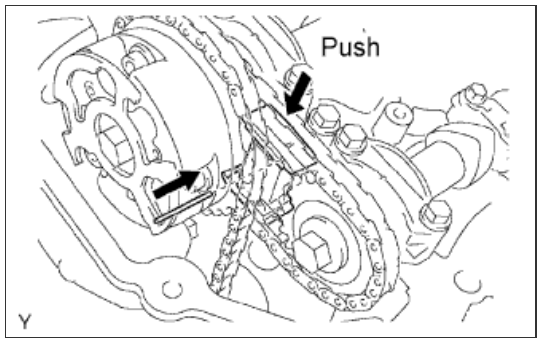


vi. Remove the camshaft timing gear set bolt with the No. 1 camshaft lifted up, and then remove the No. 1 camshaft and camshaft timing gear with the No. 2 chain.

vii. Tie the No. 1 chain with a string as shown in the illustration.

NOTICE:

Be careful not to drop anything inside the timing chain cover.

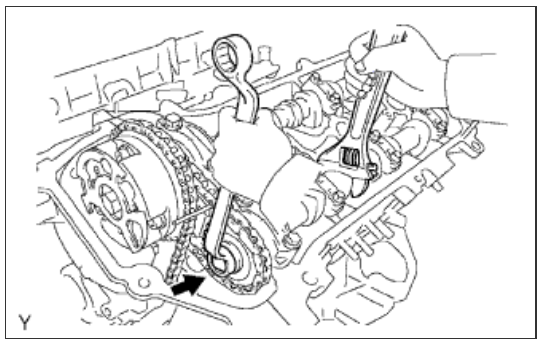


f. Remove the No. 4 camshaft.

NOTICE:

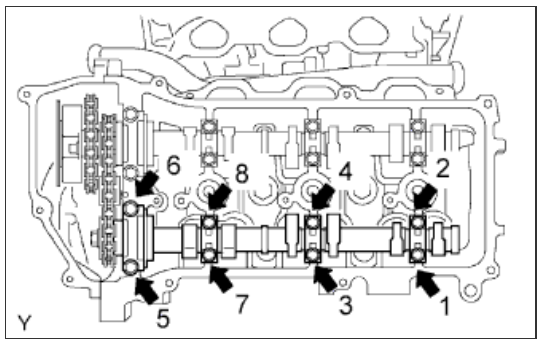
As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being removed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

i. While pushing down the No. 3 chain tensioner, insert a pin of φ1.0 mm (0.03 in.) into the hole to fix the tensioner in place.



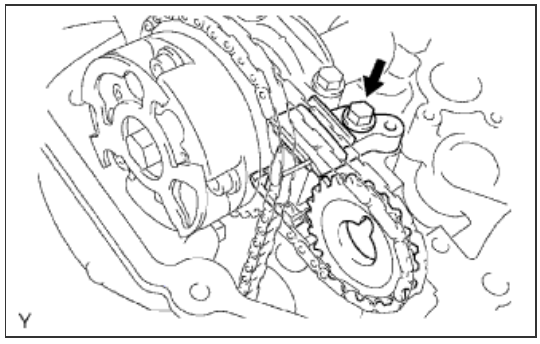
ii. Hold the he agonal portion of the o. 4 camshaft with a wrench, and remove the camshaft timing sprocket set bolt.

NOTICE:



Be careful not to damage the cylinder head and valve lifter with the wrench.

iii. Separate the camshaft timing sprocket from the o. 4 camshaft.

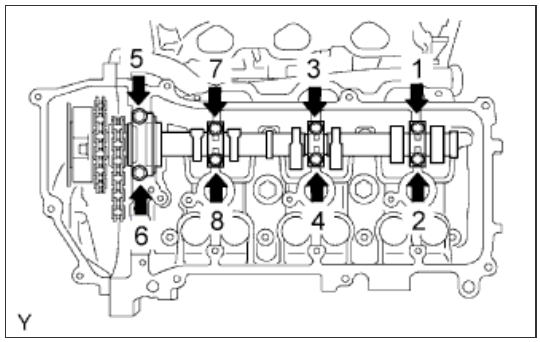


iv. Uniformly loosen and remove the aring cap bolts in the se uence shown in the illustration.

v. Remove the aring caps and No. 4 camshaft.

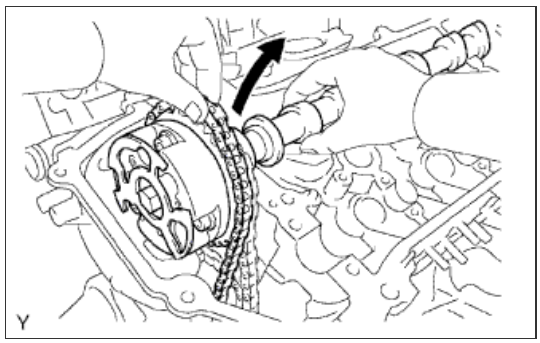
g. Remove the o. 3 chain tensioner.

i. Remove the o. 3 chain tensioner bolt, No. 3 chain tensioner and camshaft timing sprocket.



h. Remove the o. 3 camshaft.

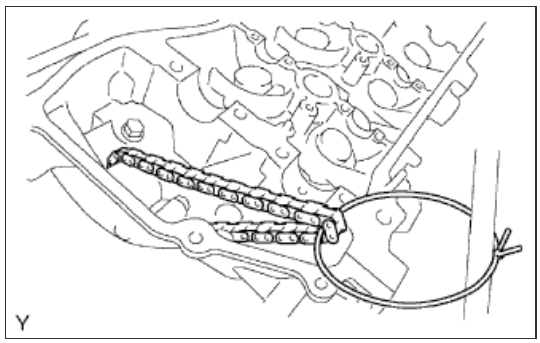
NOTICE:



As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being removed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

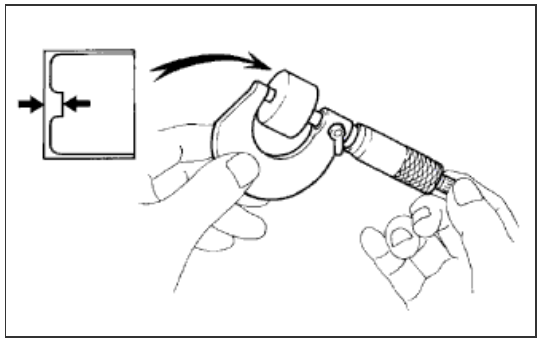
i. Using several steps, loosen and remove the aring cap bolts uniformly in the se uence shown in the illustration.

ii. Remove the aring caps.



iii. Hold the o. 1 chain, and remove the o. 3 camshaft with camshaft timing gear and No. 2 chain.

iv. Tie the o. 1 chain with a string as shown in the illustration.



NOTICE:

Be careful not to drop anything inside the timing chain cover.

i. Remove the valve lifters from the cylinder head LH and RH.

. Determine the size of the valve lifter to be installed according to the following formulas or charts.

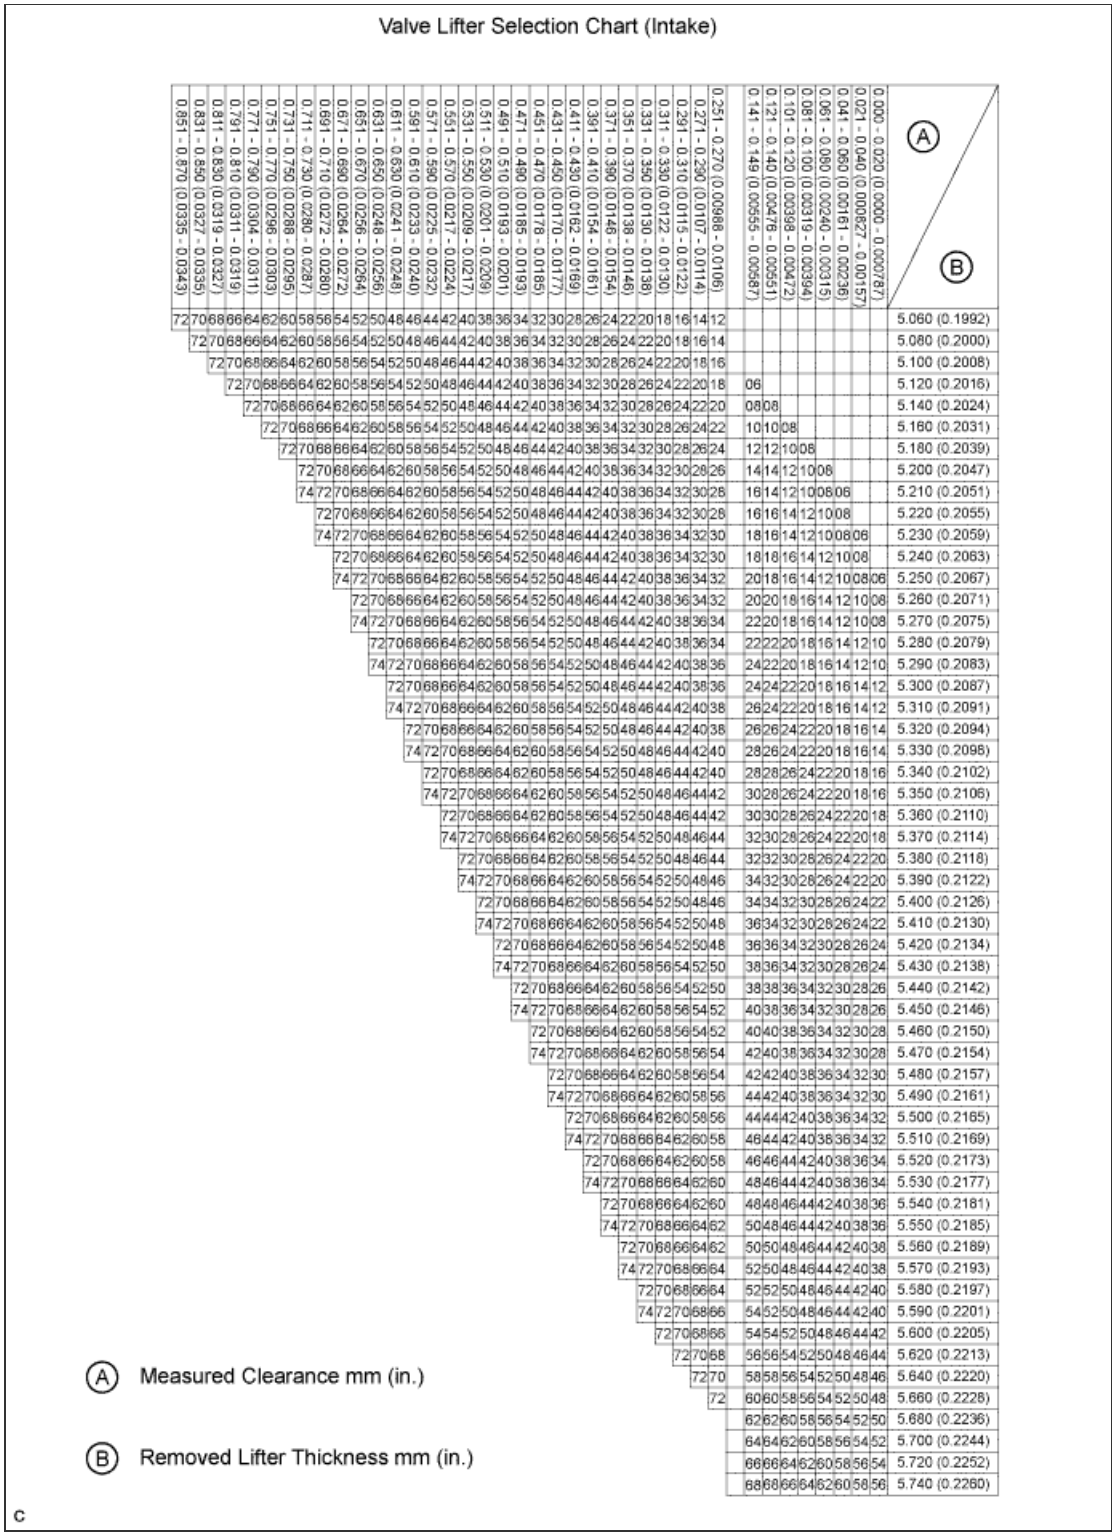
i. Using a micrometer, measure the thickness of the removed lifter.

ii. alculate the thickness of a new lifter so that the valve clearance comes within the specified value.

T:
Thickness of removed lifter

A:
Measured valve clearance

N:
Thickness of new lifter



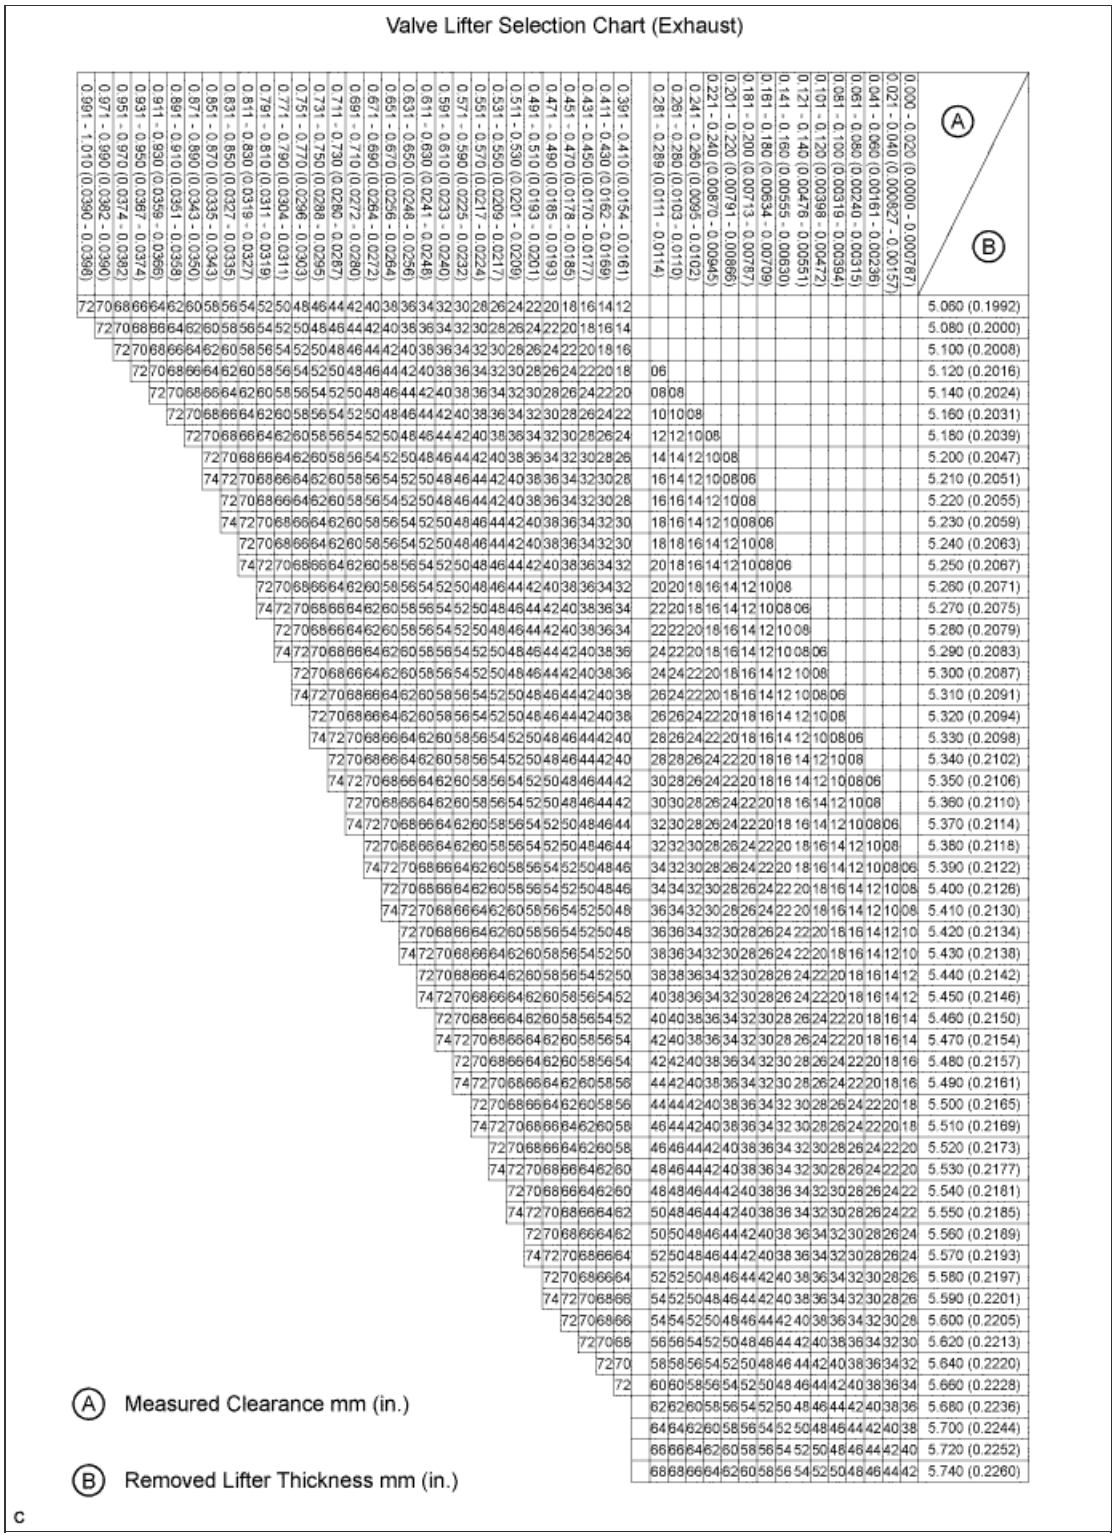
Intake:
N T A - 0.20 mm 0.00787 in.))

E haust:
N T A - 0.34 mm 0.0131 in.))

iii. Select a new lifter with a thickness as close as possible to the calculated value.

HINT:

Lifters are available in 35 sizes in increments of 0.020 mm (0.000787 in.), from 5.060 mm (0.1 in.) to 5.740 mm (0.2260 in.).



Intake valve clearance Cold):
0.15 to 0.25 mm 0.00591 to 0.00984 in.)
E AMPLE:
The 5.250 mm 0.20 7in.) lifter is installed, and the measured clearance is 0.400 mm 0.0157 in.). Replace the 5.250 mm 0.20 7in.) lifter with a No. 4 lifter.

New Lifter Thickness:

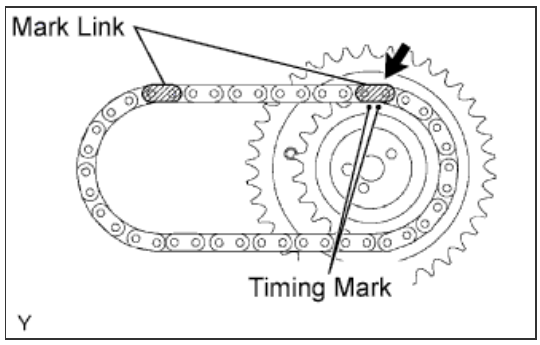
Lifter No.	Thickness	Lifter No.	Thickness	Lifter No.	Thickness
06	5.060 mm (0.1 in.)	30	5.300 mm (0.2087 in.)	54	5.540 mm (0.2181 in.)
08	5.080 mm (0.2000 in.)	32	5.320 mm (0.20 in.)	56	5.560 mm (0.218 in.)
10	5.100 mm (0.2008 in.)	34	5.340 mm (0.2102 in.)	58	5.580 mm (0.21 in.)

12	5.120 mm (0.2016 in.)	36	5.360 mm (0.2110 in.)	60	5.600 mm (0.2205 in.)
14	5.140 mm (0.2024 in.)	38	5.380 mm (0.2118 in.)	62	5.620 mm (0.2213 in.)
16	5.160 mm (0.2031 in.)	40	5.400 mm (0.2126 in.)	64	5.640 mm (0.2220 in.)
18	5.180 mm (0.203 in.)	42	5.420 mm (0.2134 in.)	66	5.660 mm (0.2228 in.)
20	5.200 mm (0.2047 in.)	44	5.440 mm (0.2142 in.)	68	5.680 mm (0.2236 in.)
22	5.220 mm (0.2055 in.)	46	5.460 mm (0.2150 in.)	70	5.700 mm (0.2244 in.)
24	5.240 mm (0.2063 in.)	48	5.480 mm (0.2157 in.)	72	5.720 mm (0.2252 in.)
26	5.260 mm (0.2071 in.)	50	5.500 mm (0.2165 in.)	74	5.740 mm (0.2260 in.)
28	5.280 mm (0.207 in.)	52	5.520 mm (0.2173 in.)	-	-

E haust valve clearance Cold):
0.29 to 0.39 mm 0.0114 to 0.0154 in.)
E AMPLE:
The 5.340 mm 0.210 in.) lifter is installed, and the measured clearance is 0.480 mm 0.0189 in.). Replace the 5.340 mm 0.210 in.) lifter with a No. 48 lifter.

New Lifter Thickness:

Lifter No.	Thickness	Lifter No.	Thickness	Lifter No.	Thickness
06	5.060 mm (0.1 in.)	30	5.300 mm (0.2087 in.)	54	5.540 mm (0.2181 in.)
08	5.080 mm (0.2000 in.)	32	5.320 mm (0.20 in.)	56	5.560 mm (0.218 in.)
10	5.100 mm (0.2008 in.)	34	5.340 mm (0.2102 in.)	58	5.580 mm (0.21 in.)
	5.120 mm		5.360 mm		5.600 mm



12	(0.2016 in.)	36	(0.2110 in.)	60	(0.2205 in.)
14	5.140 mm (0.2024 in.)	38	5.380 mm (0.2118 in.)	62	5.620 mm (0.2213 in.)

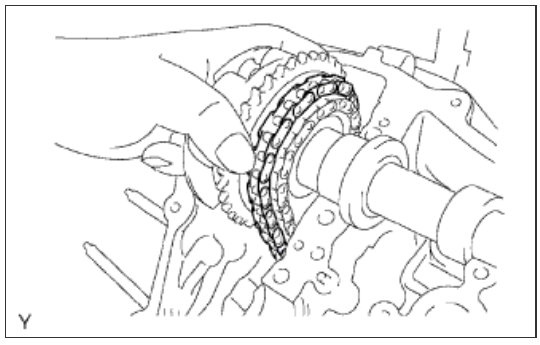
28	5.280 mm (0.207 in.)	52	5.520 mm (0.2173 in.)	-	-

k. Install the o. 3 camshaft.

NOTICE:

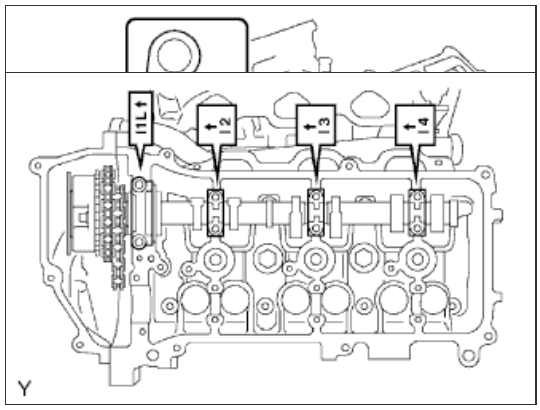


As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

i. Align the mark link (yellow) with the timing mark (2-dot mark) of the camshaft timing gear shown in the illustration.

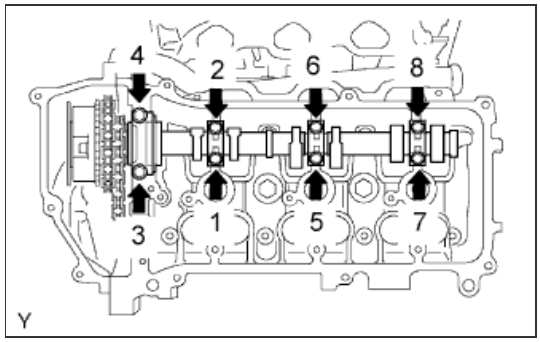
ii. Apply a light coat of engine oil to the thrust portions and journals of the o. 3 camshaft.

iii. Temporarily put the o. 1 chain on the o. 2 chain of the camshaft timing gear.



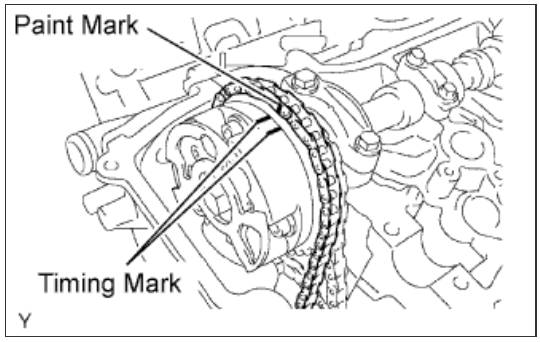
iv. Set the o. 3 camshaft onto the cylinder head LH with the cam lobes of the o. 2 cylinder facing downward as shown in the illustration.

v. Apply a light coat of engine oil to the aring caps.



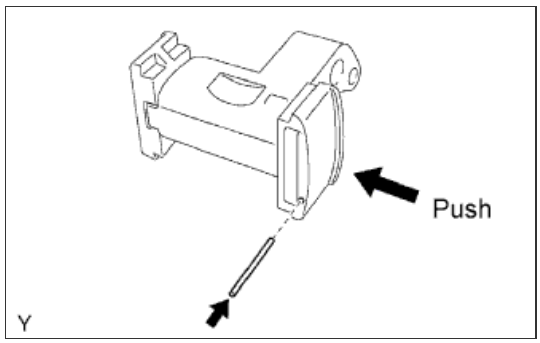
vi. Set the aring caps in their proper locations.

vii. Apply a light coat of engine oil to the threads of the aring cap bolts.



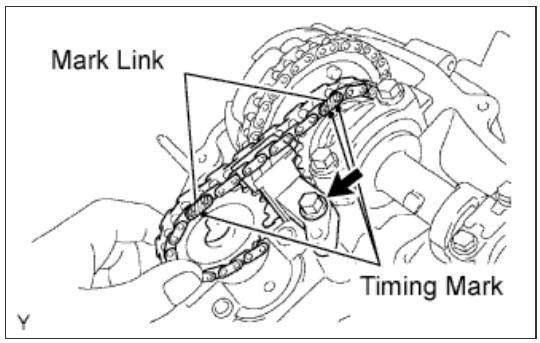
viii. Uniformly install the aring cap bolts in several steps in the order shown in the illustration.

Torque:
for 10 mm head bolt:
9.0 N m 92 kgf cm , 80 in. lbf
for 12 mm head bolt:
24 N m 245 kgf cm , 18 ft. lbf



i . Set the paint mark of the o. 1 chain between the timing marks of the camshaft timing gear.

l. Install the o. 3 chain tensioner.



i. While pushing in the tensioner, insert a pin of φ1.0 mm (0.03 in.) into the hole to fix the tensioner in place.

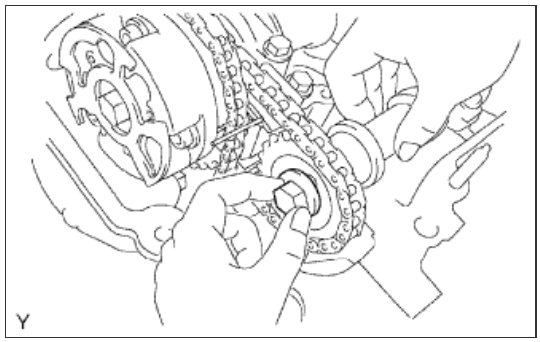
ii. Temporarily install the camshaft timing sprocket and No. 3 chain tensioner with the olt and align the mark links (yellow) with the timing marks (1-dot mark and 2-dot mark) of the camshaft timing gear and sprocket.

iii. Tighten the o. 3 chain tensioner bolt.

Torque:
21 N m 214 kgf cm , 15 ft. lbf

m. Install the o. 4 camshaft.

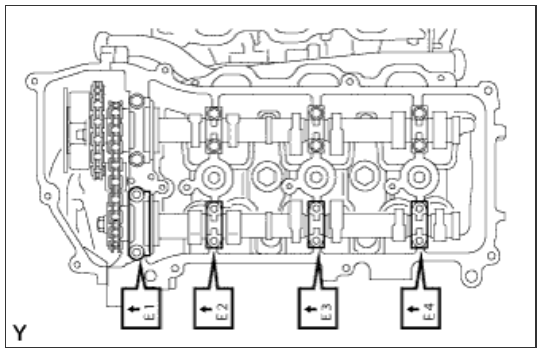
NOTICE:



As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

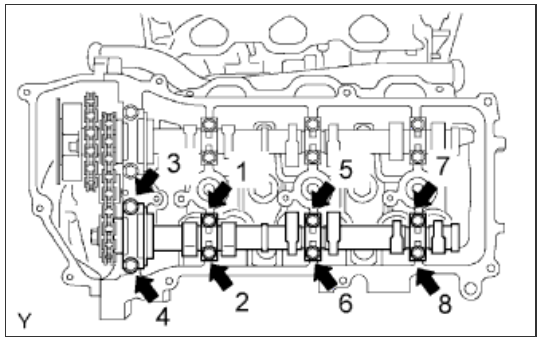
i. Apply a light coat of engine oil to the thrust portions and journals of the o. 4 camshaft.

ii. Apply a light coat of engine oil to the threads and under the head of the camshaft timing sprocket set bolt.



iii. Align the knock pin hole on the camshaft timing sprocket with the knock pin of the o. 4 camshaft, and insert the o. 4 camshaft into the camshaft timing sprocket.

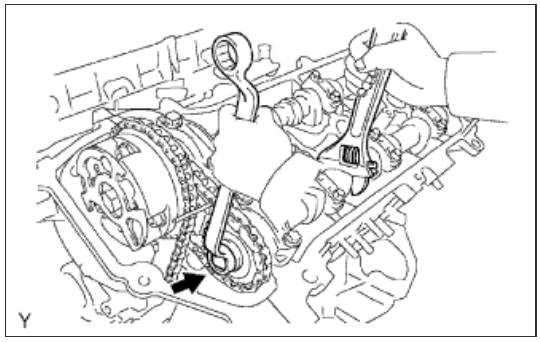
iv. Temporarily install the camshaft timing sprocket set bolt.



v. Set the aring caps in their proper locations.

vi. Apply a light coat of engine oil to the threads and under the heads of the aring cap bolts.

vii. Uniformly install the aring cap bolts in several steps in the order shown in the illustration.

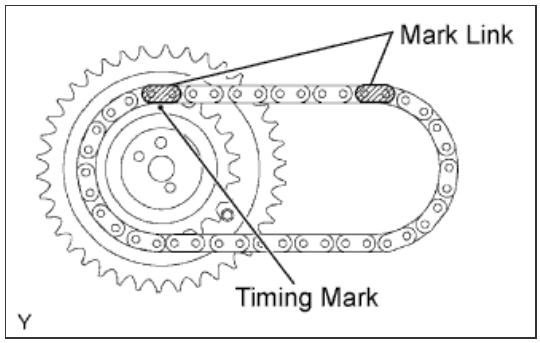


Torque:
for 10 mm head bolt:
9.0 N m 92 kgf cm , 80 in. lbf
for 12 mm head bolt:
24 N m 245 kgf cm , 18 ft. lbf

viii. Hold the he agonal portion of the o. 4 camshaft with a wrench, and tighten the camshaft timing sprocket set bolt.

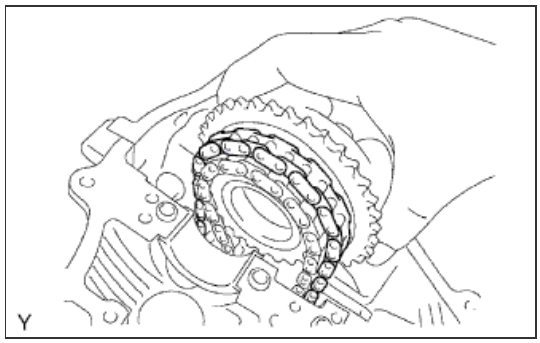
Torque:
100 N m 1020 kgf cm , 74 ft. lbf

i . Remove the pin from the o. 3 chain tensioner.



n. Install the o. 1 camshaft.

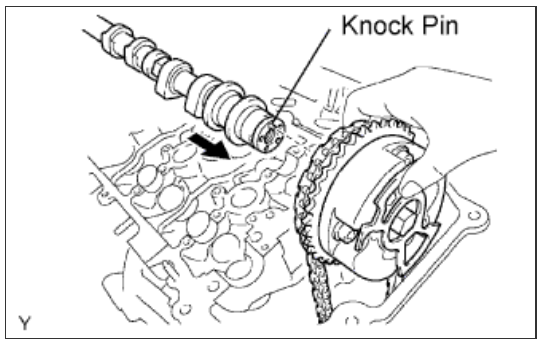
NOTICE:



As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

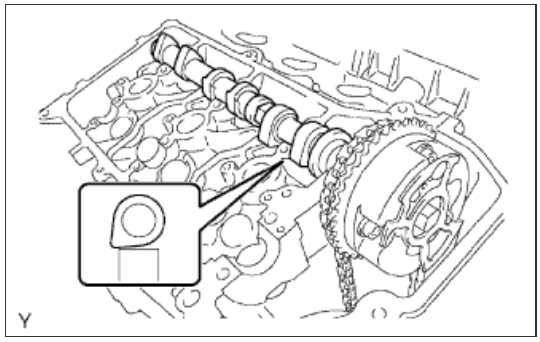
i. Align the mark link (yellow) with the timing mark (1-dot mark) of the camshaft timing gear as shown in the illustration.

ii. Apply a light amount of engine oil to the thrust portions and journals of the camshaft.



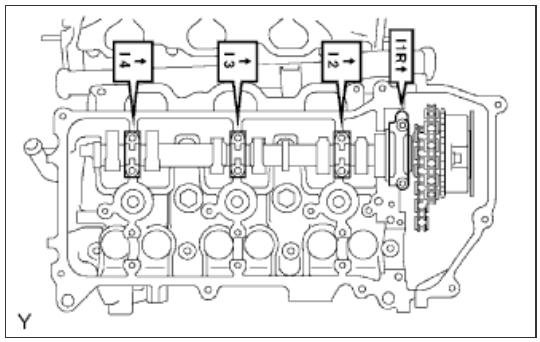
iii. Temporarily put the o. 1 chain on the o. 2 chain of the camshaft timing gear.

iv. Align the knock pin hole of the camshaft timing gear with the knock pin of the o. 1 camshaft, and insert the o. 1 camshaft into the camshaft timing gear.



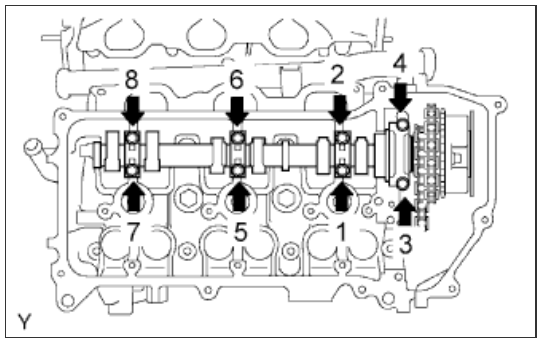
v. Apply a light coat of engine oil to the threads and under the head of the camshaft timing gear set bolt.

vi. Temporarily install the camshaft timing gear set bolt.



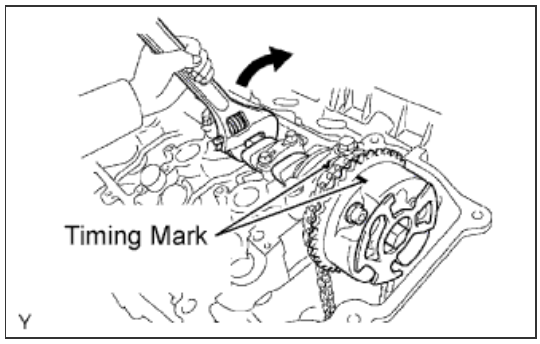
vii. Set the o. 1 camshaft onto the cylinder head RH with the cam lobes of the o. 1 cylinder facing downward as shown in the illustration.

viii. Apply a light coat of engine oil to the aring caps.

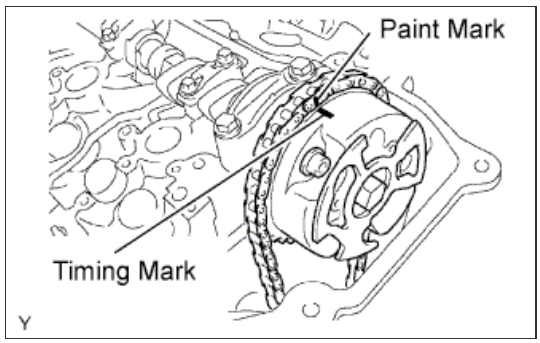


i . Set the aring caps in their proper locations.

. Apply a light coat of engine oil to the threads and under the heads of the aring cap bolts.

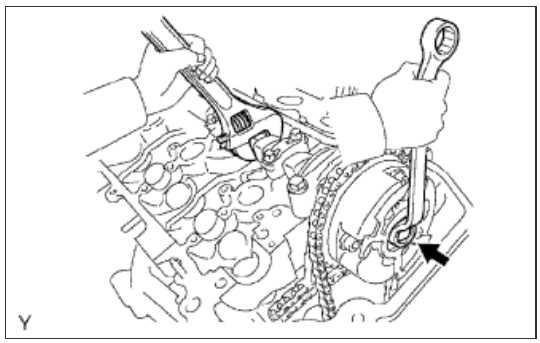


i. Uniformly install the aring cap bolts in several steps in the order shown in the illustration.

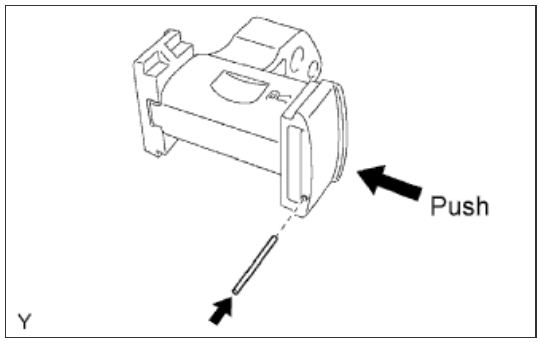


Torque:
for 10 mm head bolt:
9.0 N m 92 kgf cm , 80 in. lbf
for 12 mm head bolt:
24 N m 245 kgf cm , 18 ft. lbf

ii. Rotate the o. 1 camshaft clockwise using the he agonal portion of the o. 1 camshaft so that the timing mark of the camshaft timing gear is aligned with the timing mark of the camshaft bearing cap.



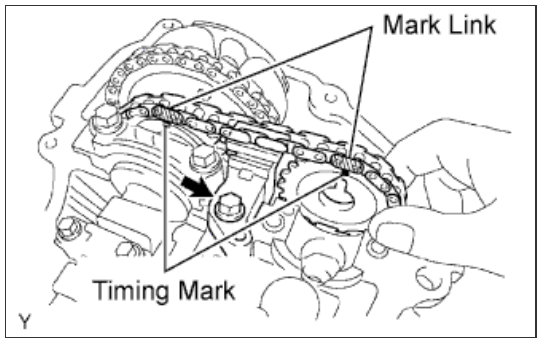
iii. Align the paint mark of the o. 1 chain with the timing mark of the camshaft timing gear.



iv. Hold the he agonal portion of the o. 1 camshaft with a wrench, and tighten the camshaft timing gear set bolt.

Torque:
100 N m 1020 kgf cm , 74 ft. lbf

o. Install the o. 2 chain tensioner.



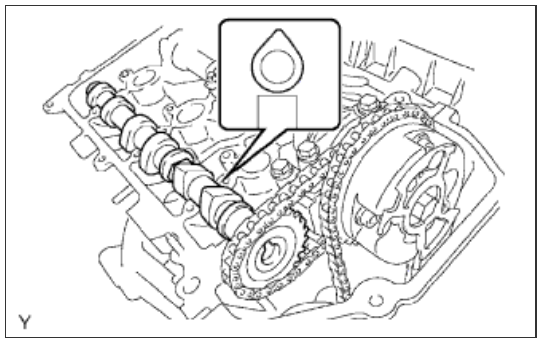
i. While pushing in the tensioner, insert a pin of φ1.0 mm (0.03 in.) into the hole to fix the tensioner in place.

ii. Temporarily install the camshaft timing sprocket and No. 2 chain tensioner with the olt and align the mark links (yellow) with the timing marks (1-dot mark and 2-dot mark) of the camshaft timing gear and sprocket.

iii. Tighten the o. 2 chain tensioner bolt.

Torque:
21 N m 214 kgf cm , 15 ft. lbf

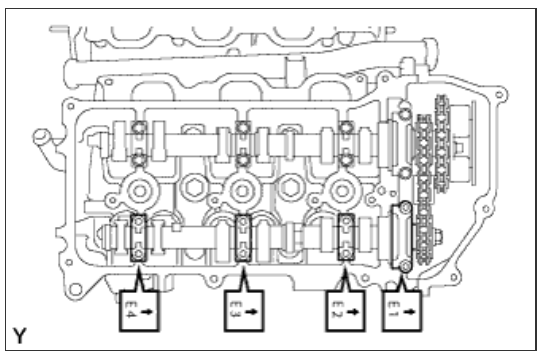
p. Install the o. 2 camshaft.



NOTICE:

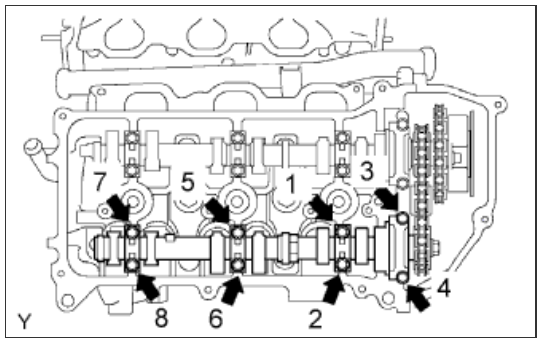
As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged, causing the camshaft to seize or break. To avoid this, the following steps should be carried out.

i. Apply a light coat of engine oil to the thrust portions and journals of the o. 2 camshaft.



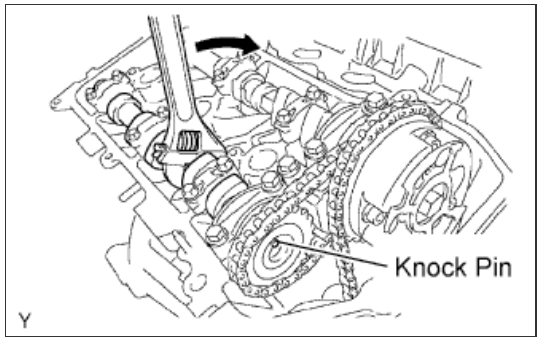
ii. Set the o. 2 camshaft onto the cylinder head RH with the cam lobes of the o. 1 cylinder facing upward as shown in the illustration.

iii. Apply a light coat of engine oil to the aring caps.



iv. Set the aring caps in their proper locations.

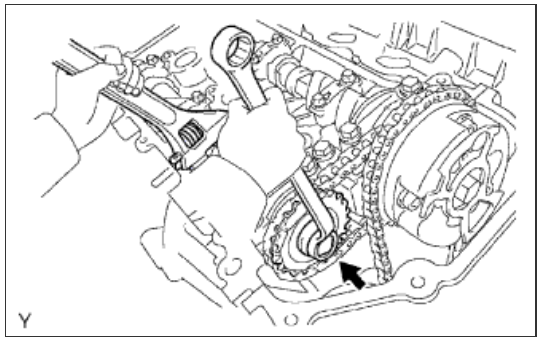
v. Apply a light coat of engine oil to the threads and under the heads of the aring cap bolts.



vi. Uniformly install the aring cap bolts in several steps in the order shown in the illustration.

Torque:
for 10 mm head bolt:
9.0 N m 92 kgf cm , 80 in. lbf
for 12 mm head bolt:
24 N m 245 kgf cm , 18 ft. lbf

vii. Rotate the o. 2 camshaft clockwise using a wrench so that the knock pin of the o. 2 camshaft is aligned with the knock pin hole of the camshaft timing sprocket.



viii. Apply a light coat of engine oil to the threads and under the head of the camshaft timing sprocket set bolt.

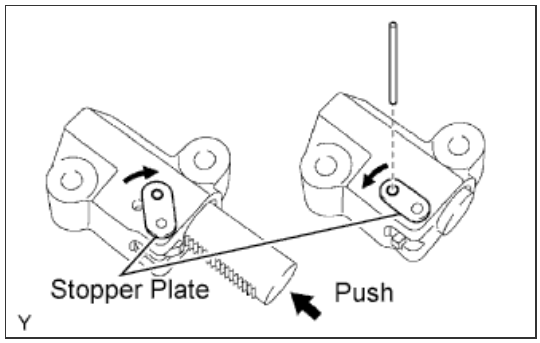
i . Hold the he agonal portion of the o. 2 camshaft with a wrench, and install the camshaft timing sprocket set bolt.

Torque:
100 N m 1020 kgf cm , 74 ft. lbf

. Remove the pin from the o. 2 chain tensioner.

q. Install the o. 1 chain tensioner.

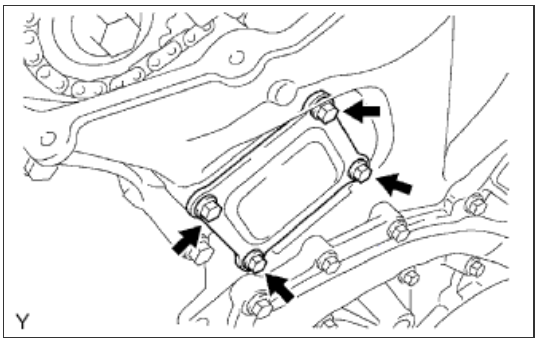
i. While turning the stopper plate of the tensioner clockwise, push in the plunger of the tensioner as shown in the illustration.



ii. While turning the stopper plate of the tensioner counterclockwise, insert a bar of φ3.5 mm (0.138 in.) into the holes on the stopper plate and tensioner to fix the stopper plate in place.

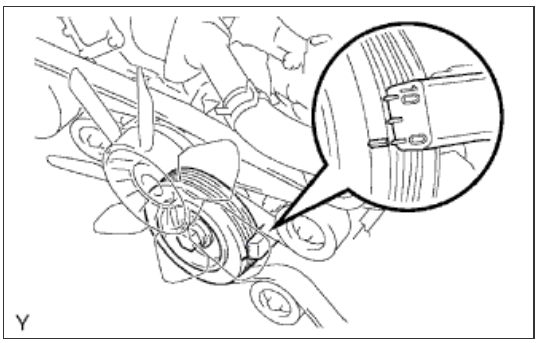
iii. Apply a light coat of engine oil to the threads and under the heads of the o. 1 chain tensioner bolts.

iv. Install the o. 1 chain tensioner with the olts.

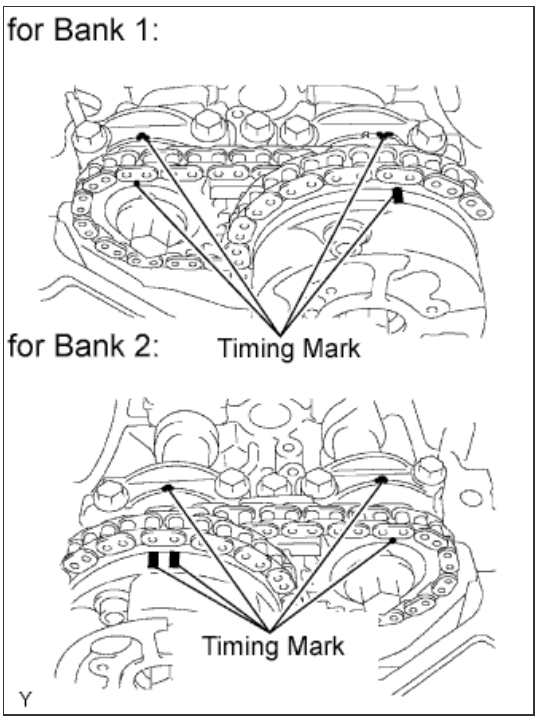


Torque:
10 N m 102 kgf cm , 7 ft. lbf

v. Remove the ar from the chain tensioner.



vi. Install a new gasket and the timing chain cover plate with the olts.



Torque:
9.0 N m 92 kgf cm , 80 in. lbf

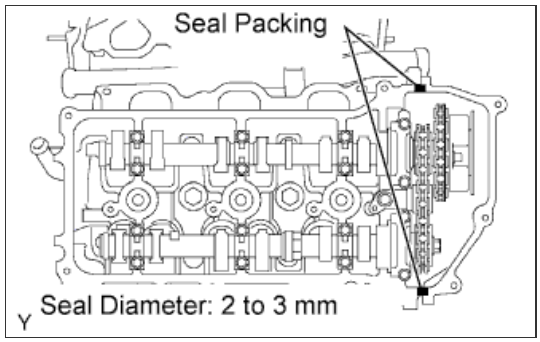
vii. Turn the crankshaft pulley complete revolutions slowly, and align the notch with the timing mark "0" of the timing chain cover.

viii. heck that the timing marks of the camshaft timing gears and sprockets are aligned with the timing marks of the aring caps as shown in the illustration.

35. INSTALL CYLIN ER HEA COVER SUB-ASSEMBLY RH

a. Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the cylinder head, timing chain cover and cylinder head cover.

b. Apply seal packing as shown in the illustration.



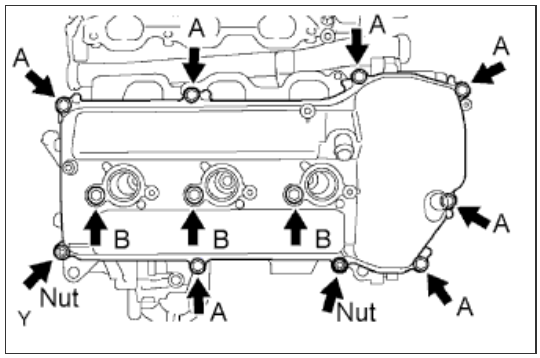
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
2 to 3 mm 0.0787 to 0.118 in.)

NOTICE:

- **Remove any oil from the contact surface.**

- **Install the head cover within 3 minutes after applying seal packing.**
- **not start the engine for at least 2 hours after the installation.**



c. Install a new gasket to the cylinder head cover.

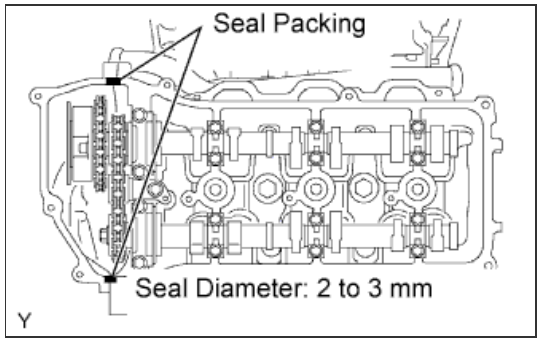
d. Install the seal washers to the olts.

e. Temporarily install the cylinder head cover with the olts and 2 nuts. Tighten the olts and nuts uniformly in several steps.

Torque:
for bolt A:
10 N m 102 kgf cm , 7 ft. lbf
for bolt B and nut:
9.0 N m 92 kgf cm , 80 in. lbf

3 . INSTALL CYLIN ER HEA COVER SUB-ASSEMBLY LH

a. Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the cylinder head, timing chain cover and cylinder head cover.



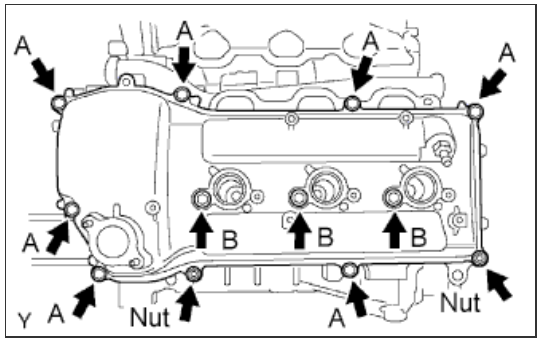
b. Apply seal packing as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
2 to 3 mm 0.0787 to 0.118 in.)

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the head cover within 3 minutes after applying seal packing.**
- **not start the engine for at least 2 hours after the installation.**

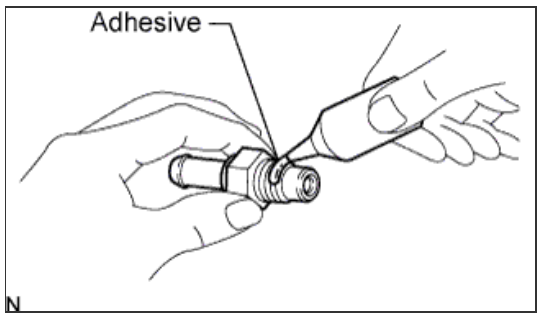


c. Install a new gasket to the cylinder head cover.

d. Install the seal washers to the olts.

e. Temporarily install the cylinder head cover with the olts and 2 nuts. Tighten the olts and nuts uniformly in several steps.

Torque:
for bolt A:
10 N m 102 kgf cm , 7 ft. lbf
for bolt B and nut:
9.0 N m 92 kgf cm , 80 in. lbf



37. INSTALL VENTILATION VALVE SUB-ASSEMBLY

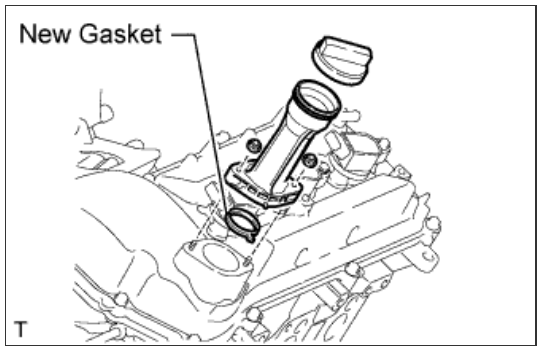
a. Apply adhesive to the threads of the ventilation valve.

Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent

b. Install the ventilation valve to the cylinder head cover.

Torque:
27 N m 275 kgf cm , 20 ft. lbf

38. INSTALL SPARK PLUG



a. Install the spark plugs.

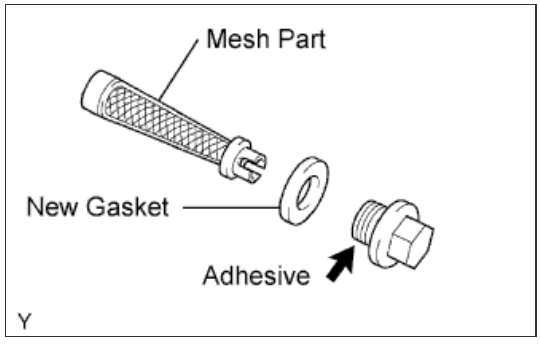
Torque:
20 N m 204 kgf cm , 15 ft. lbf

39. INSTALL OIL FILLER CAP HOUSING

a. Install a new gasket and the oil filler cap housing with the nuts.

Torque:
9.0 N m 92 kgf cm , 80 in. lbf

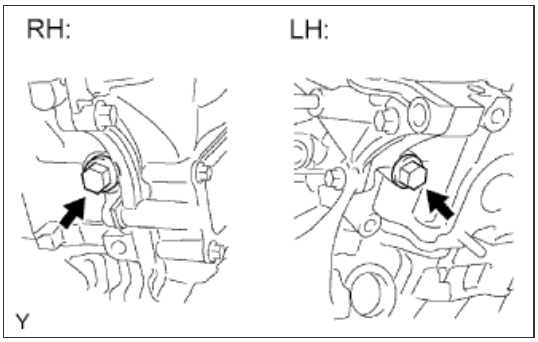
0. INSTALL OIL FILLER CAP SUB-ASSEMBLY



41. INSTALL OIL CONTROL VALVE FILTER

a. Install 2 new gaskets to 2 new unions.

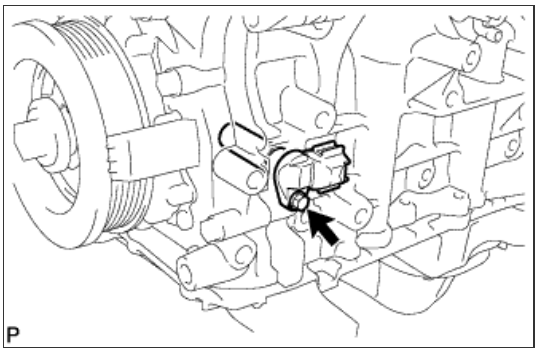
b. Insert new filters to the unions.



c. Apply adhesive to 2 or 3 threads of the unions.

Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

d. Install the unions to the cylinder head LH and RH.

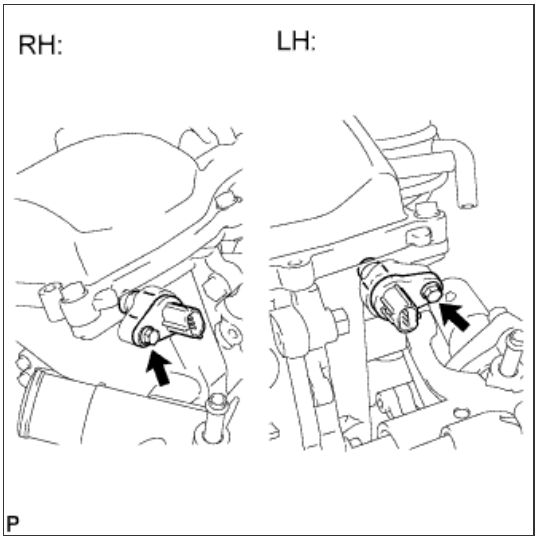


Torque:
2 N m 32 kgf cm , 4 ft. lbf

42. INSTALL CRANKSHAFT POSITION SENSOR

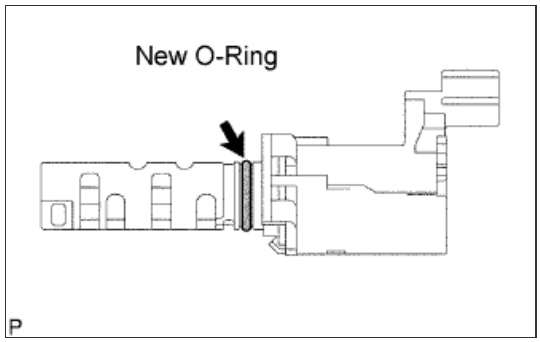
a. Install the sensor with the olt.

Torque:
10 N m 102 kgf cm , 7 ft. lbf



3. INSTALL VVT SENSOR

a. Apply a light coat of engine oil to the ring of each T sensor.

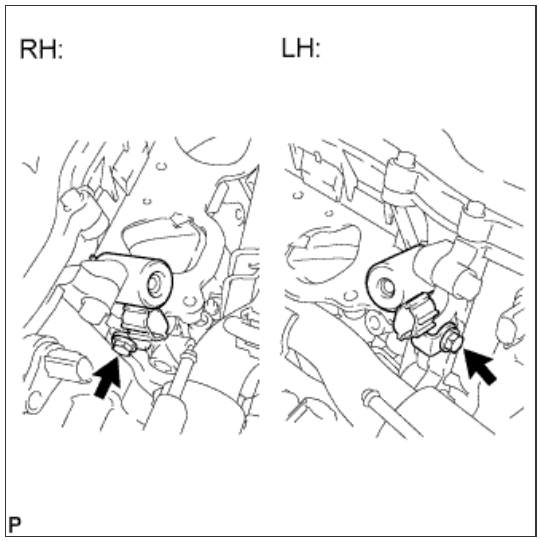


b. Install the T sensors with the olts.

Torque:
8.0 N m 82 kgf cm , 71 in. lbf

. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY LH

a. Apply a light coat of engine oil to a new O-ring and install it to the camshaft timing oil control valve.



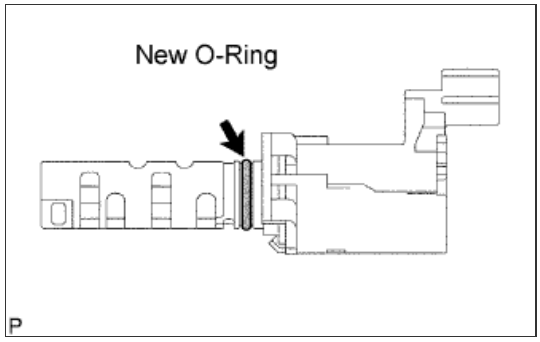
b. Install the camshaft timing oil control valve with the olt.

Torque:
10 N m 102 kgf cm , 7 ft. lbf

NOTICE:

Be careful that the ring is not cracked when installing the camshaft timing oil control valve.

45. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY RH

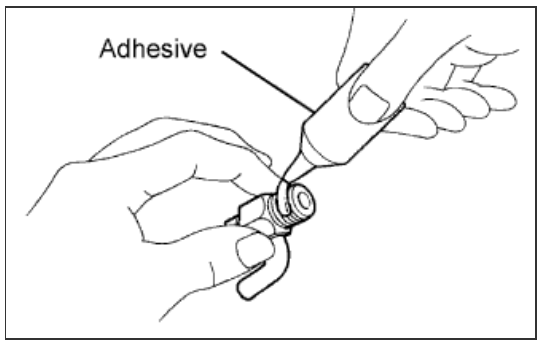


a. Apply a light coat of engine oil to a new O-ring and install it to the camshaft timing oil control valve.

b. Install the camshaft timing oil control valve with the olt.

Torque:
10 N m 102 kgf cm , 7 ft. lbf

NOTICE:



Be careful that the ring is not cracked when installing the camshaft timing oil control valve.

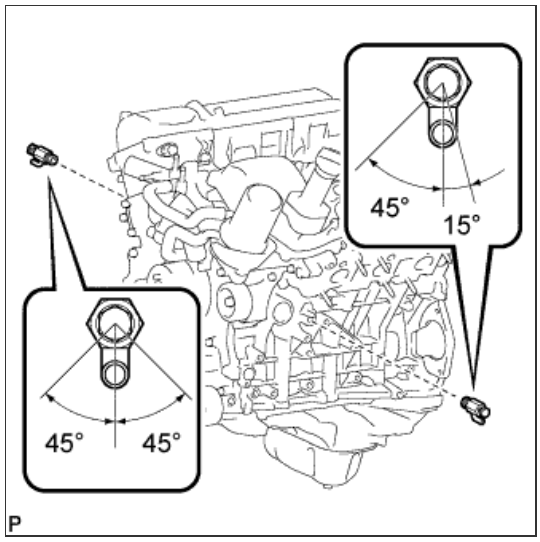
4 . INSTALL CYLIN ER BLOCK ATER RAIN COCK SUB-ASSEMBLY

a. Apply adhesive to 2 or 3 threads of the drain cock end.

Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent

b. Install the drain cock.

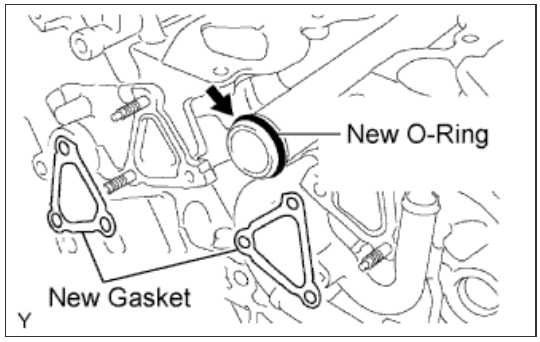
Torque:
25 N m 255 kgf cm , 18 ft. lbf



NOTICE:

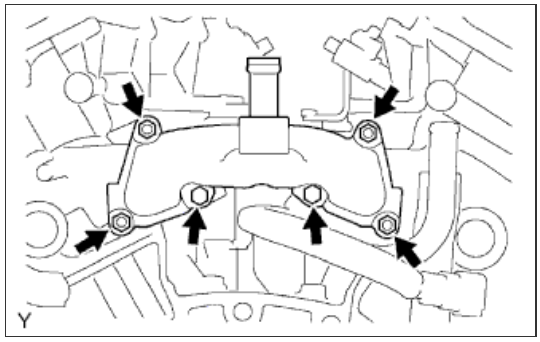
- **Install the drain cock within 3 minutes after applying adhesive.**
- **ɑnot e pose the drain cock to coolant within 1 hour after installing.**

c. Rotate the drain cock clockwise as shown in the illustration.



NOTICE:

- **ɑnot rotate the drain cock by more than 1 revolution 3 0 after tightening the drain cock to the specified torque.**
- **ɑnot loosen the drain cock after setting it correctly.**

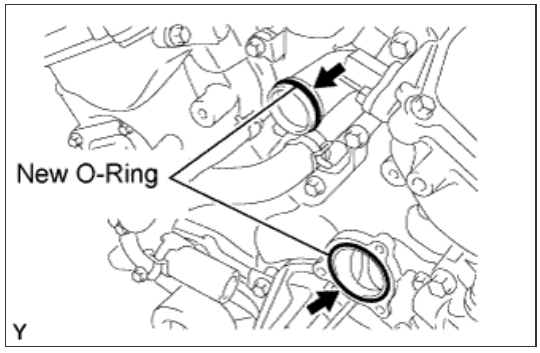


47. INSTALL REAR ATER BY-PASS OINT

a. Apply soapy water to a new O-ring, and install it to the water outlet pipe. Then set 2 new gaskets to the water ports LH and RH.

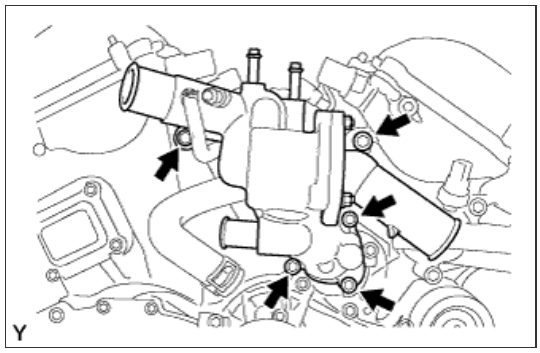
b. Install the rear water by-pass joint with the olts and 4 nuts.

Torque:
for bolt:
10 N m 102 kgf cm , 7 ft. lbf
for nut:
9.0 N m 92 kgf cm , 80 in. lbf



8. INSTALL ATER INLET HOUSING

a. Apply soapy water to a new O-ring, install it to the water outlet pipe.



b. Install a new O-ring to the water pump.

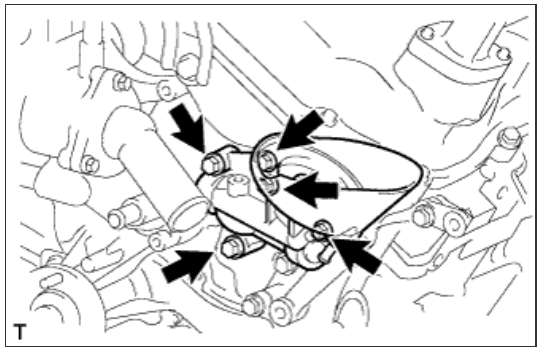
c. Install a new gasket to the water pump.

d. Install the water inlet with the olts.

Torque:
9.0 N m 92 kgf cm , 80 in. lbf

9. CONNECT NO. 3 ATER BY-PASS HOSE

50. CONNECT NO. 2 ATER BY-PASS HOSE



51. CONNECT NO. 1 ATER BY-PASS HOSE

52. INSTALL OIL FILTER BRACKET SUB-ASSEMBLY

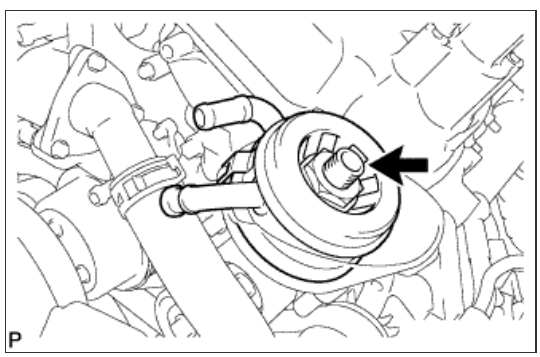
a. Set a new O-ring to the timing chain cover.

b. Install the oil filter bracket with the olts and 2 nuts.

Torque:
19 N m 194 kgf cm , 14 ft. lbf

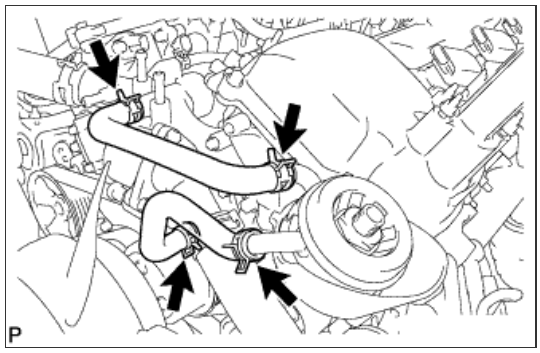
53. INSTALL OIL COOLER ASSEMBLY

a. lean the oil cooler contact surface on the cooler mounting.



b. Apply a light coat of engine oil to a new O-ring, and install it into the oil cooler.

c. Apply a light coat of engine oil to the threads of the oil cooler union bolt.



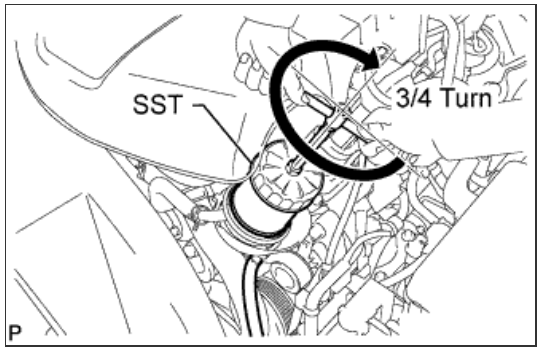
d. Align the protrusion of the oil filter bracket with the cutout of the oil cooler.

e. Install the oil cooler with the plate washer and oil cooler union bolt.

Torque:
8 N m 93 kgf cm , 50 ft. lbf

f. Install the oil cooler hose and No. 2 oil cooler hose.

54. INSTALL OIL FILTER SUB-ASSEMBLY



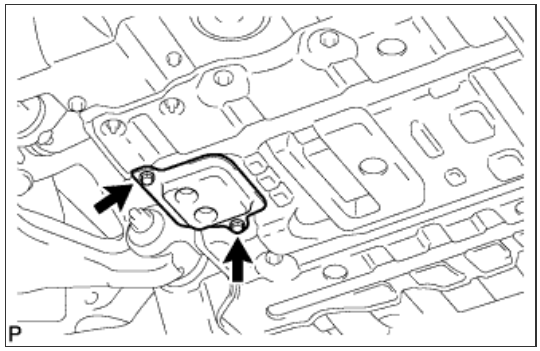
a. heck and clean the oil filter installation surface.

b. Apply clean engine oil to the gasket of a new oil filter.

c. Lightly screw the oil filter into place hand. Tighten it until the gasket contacts the seat.

d. Using SST, tighten the oil filter. Depending on the work space available, choose from the following.

SST
09228-07501



i. If enough space is available, use a torque wrench to tighten the oil filter.

Torque:
17 N m 173 kgf cm , 13 ft. lbf

ii. If enough space is not available to use a torque wrench, tighten the oil filter a 3/4 turn by hand or with a common wrench.

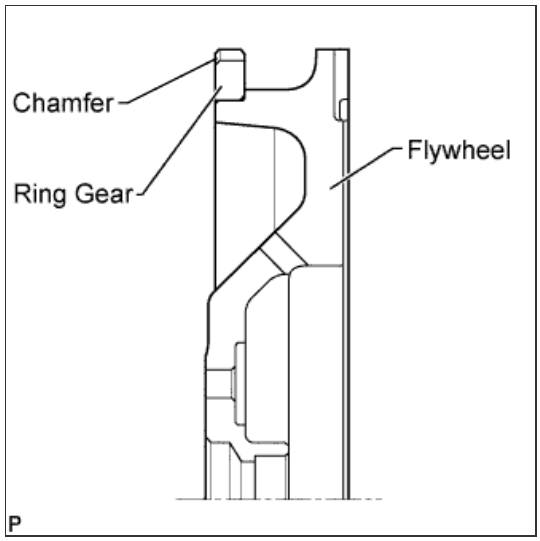
e. Install the service hole cover to the o. 2 engine under cover with the olts.

Torque:
10 N m 102 kgf cm , 7 ft. lbf

for Preparation Click here

1. INSTALL FLYWHEEL RING GEAR (for Manual Transmission)

a. Using a torch, heat the ring gear evenly to approximately 200°C (392°F).



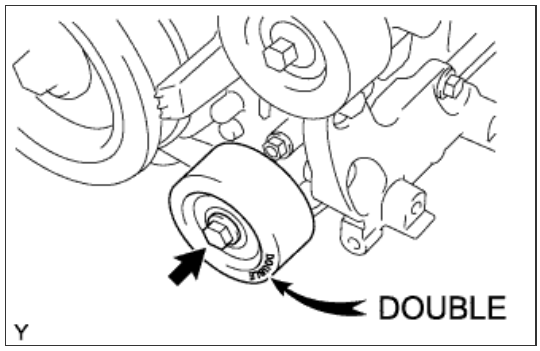
NOTICE:

Be careful not to overheat the ring gear.

b. Using a brass bar, tap the ring gear onto the flywheel with its chamfered gear teeth facing the block.

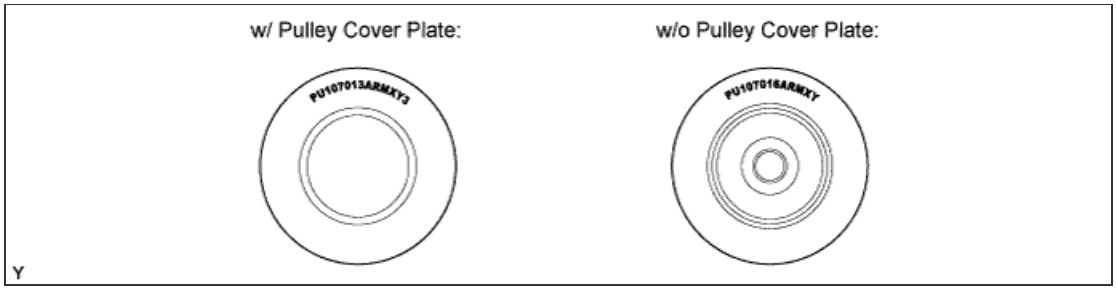
NOTICE:

After installing, allow the ring gear to cool before handling.



2. INSTALL NO. 1 IDLER PULLEY SUB-ASSEMBLY

a. Install the No. 1 idler pulley with the bolt.



Torque:
54 N*m{ 551 kgf*cm , 40 ft.*lbf }

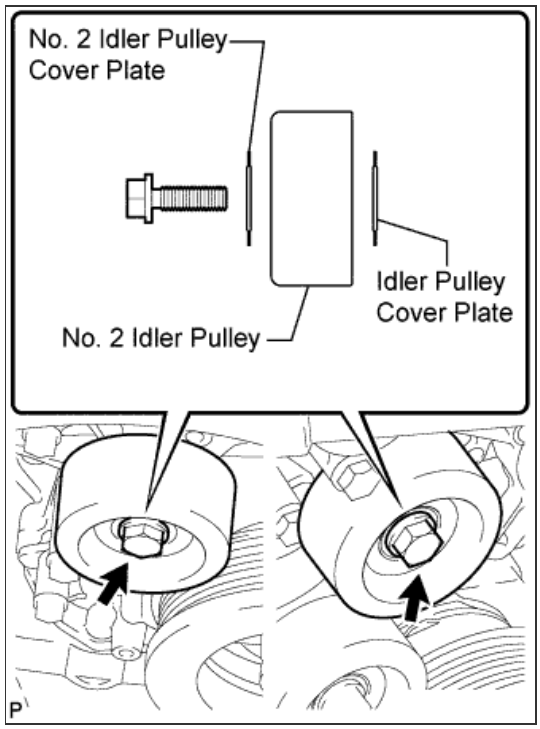
HINT:

"DOUBLE" is marked on the No. 1 idler pulley to distinguish it from the No. 2 idler pulley.

3. INSTALL NO. 2 IDLER PULLEY SUB-ASSEMBLY

a. w/ Pulley Cover Plate:

i. Install the idler pulley cover plate, idler pulley and No. 2 idler pulley cover plate with the bolt.



Torque:
54 N*m{ 551 kgf*cm , 40 ft.*lbf }

NOTICE:

If it is necessary to replace the pulley or either plate, replace the No. 2 idler pulley cover plate, No. 2 idler pulley and idler pulley cover plate as a set with new parts.

b. w/o Pulley Cover Plate:
Install the 2 No. 2 idler pulleys with the 2 bolts.

Torque:
54 N*m{ 551 kgf*cm , 40 ft.*lbf }

4. INSTALL FRONT NO. 1 ENGINE MOUNTING BRACKET LH

a. Install the engine mounting bracket with the 3 bolts.

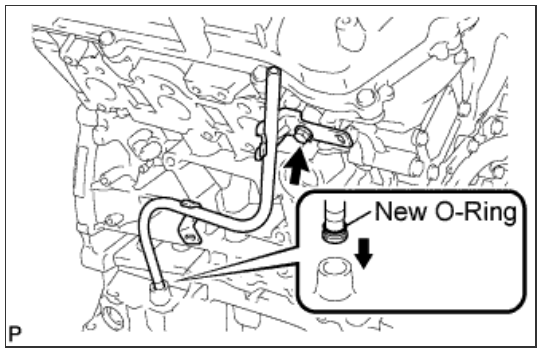
Torque:
43 N*m{ 438 kgf*cm , 32 ft.*lbf }

5. INSTALL FRONT NO. 1 ENGINE MOUNTING BRACKET RH

a. Install the engine mounting RH with the 4 bolts.

Torque:
43 N*m{ 438 kgf*cm , 32 ft.*lbf }

6. INSTALL ENGINE OIL LEVEL DIPSTICK GUIDE



a. Install a new O-ring to the dipstick guide.

b. Apply a light coat of engine oil to the O-ring.

c. Push the dipstick guide end into the guide hole.

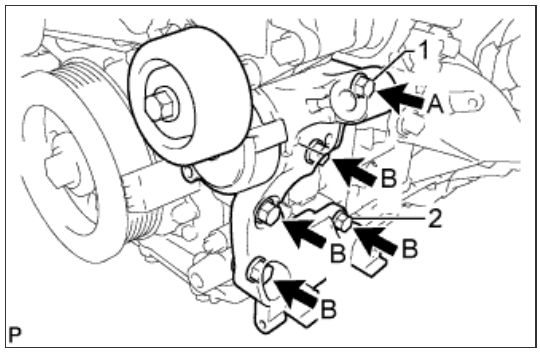
d. Install the dipstick guide with the bolt.

Torque:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

7. INSTALL V-RIBBED BELT TENSIONER ASSEMBLY

a. Temporarily install the V-ribbed belt tensioner with the 5 bolts.

b. Tighten bolt 1 and 2 in numerical order.



Torque:
36 N*m{ 367 kgf*cm , 27 ft.*lbf }

c. Tighten the other bolts.

Torque:
36 N*m{ 367 kgf*cm , 27 ft.*lbf }

Standard Bolt:

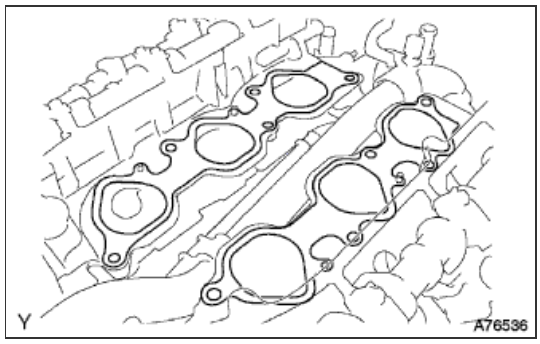
Item	Length
A	70 mm (2.76 in.)
B	33 mm (1.30 in.)

8. INSTALL IGNITION COIL ASSEMBLY

a. Install the 6 ignition coils with the 6 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

9. INSTALL ENGINE WIRE



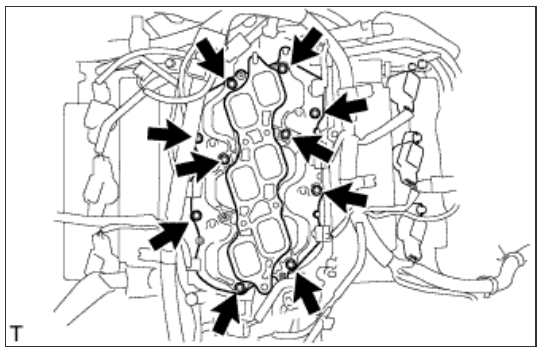
10. INSTALL INTAKE MANIFOLD

a. Set a new gasket on each cylinder head.

NOTICE:

- **Align the port holes of the gasket and cylinder head.**
- **Be careful of the installation direction.**

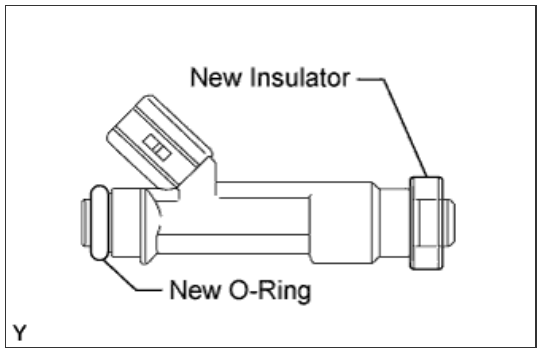
b. Set the intake manifold on the cylinder heads.



c. Install and uniformly tighten the 10 bolts in several passes.

Torque:
26 N*m{ 265 kgf*cm , 19 ft.*lbf }

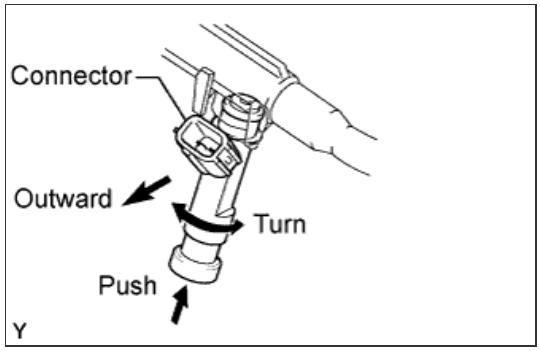
HINT:



Tighten the inner installation bolts of the intake manifold before tightening the outer bolts.

11. INSTALL FUEL INJECTOR

a. Install a new insulator onto each fuel injector.



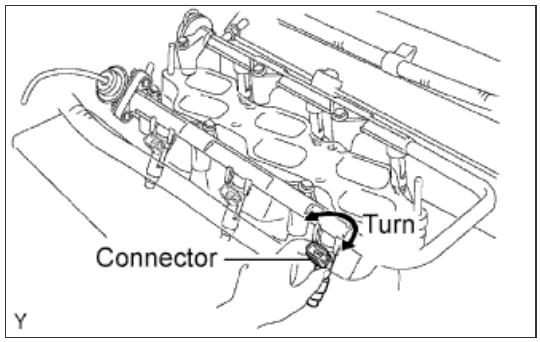
b. Apply a light coat of spindle oil or gasoline to each new O-ring and install one onto each fuel injector.

c. Install the 6 injectors.

i. While turning each fuel injector left and right, install it onto the fuel delivery pipe.

ii. Position the fuel injector connectors facing outward.

12. INSTALL FUEL DELIVERY PIPE SUB-ASSEMBLY



a. Place the fuel delivery pipe together with the 6 fuel injectors on the intake manifold.

b. Temporarily install the 6 bolts, which are used to hold the fuel delivery pipe, to the intake manifold.

c. Check that the fuel injectors rotate smoothly.

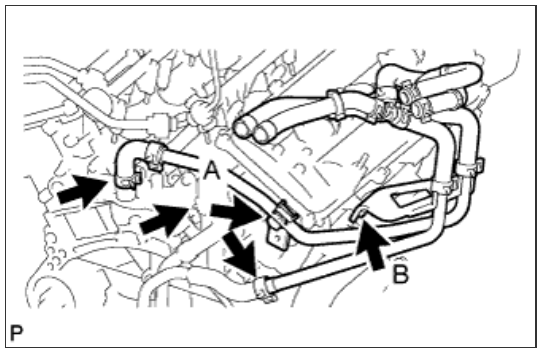
HINT:

If the fuel injectors do not rotate smoothly, replace the O-ring of any injector that does not rotate smoothly.

d. Position the fuel injector connectors facing outward.

e. Tighten the 6 bolts, which are used to hold the fuel delivery pipe, to the intake manifold.

Torque:
15 N*m{ 153 kgf*cm , 11 ft.*lbf }



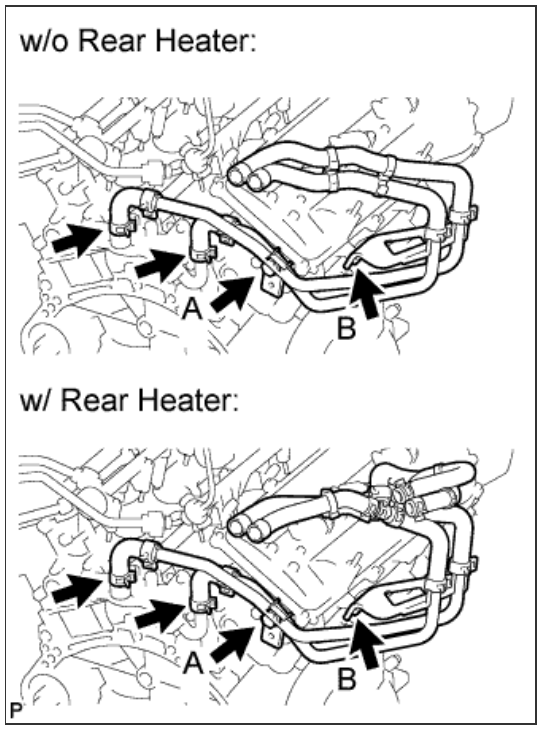
f. Connect the 6 fuel injector connectors.

13. CONNECT WATER HOSE SUB-ASSEMBLY (for Automatic Transmission)

a. Connect the heater water by-pass pipe hose to the rear water by-pass joint.

b. Temporarily install the heater water pipe, and then tighten the 2 bolts in the order shown in the illustration.

Torque:
for bolt A:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }
for bolt B:
13 N*m{ 138 kgf*cm , 10 ft.*lbf }



14. CONNECT WATER HOSE SUB-ASSEMBLY (for Manual Transmission)

a. Connect the heater water by-pass pipe hose to the rear water by-pass joint.

b. Temporarily install the heater water pipe, and then tighten the 2 bolts in the order shown in the illustration.

Torque:
for bolt A:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }
for bolt B:
13 N*m{ 138 kgf*cm , 10 ft.*lbf }

15. CONNECT NO. 1 WATER BY-PASS PIPE (for Automatic Transmission)

a. Connect the water by-pass pipe hoses to the water by-pass pipe and No. 1 water outlet pipe.

16. INSTALL ENGINE COOLANT TEMPERATURE SENSOR

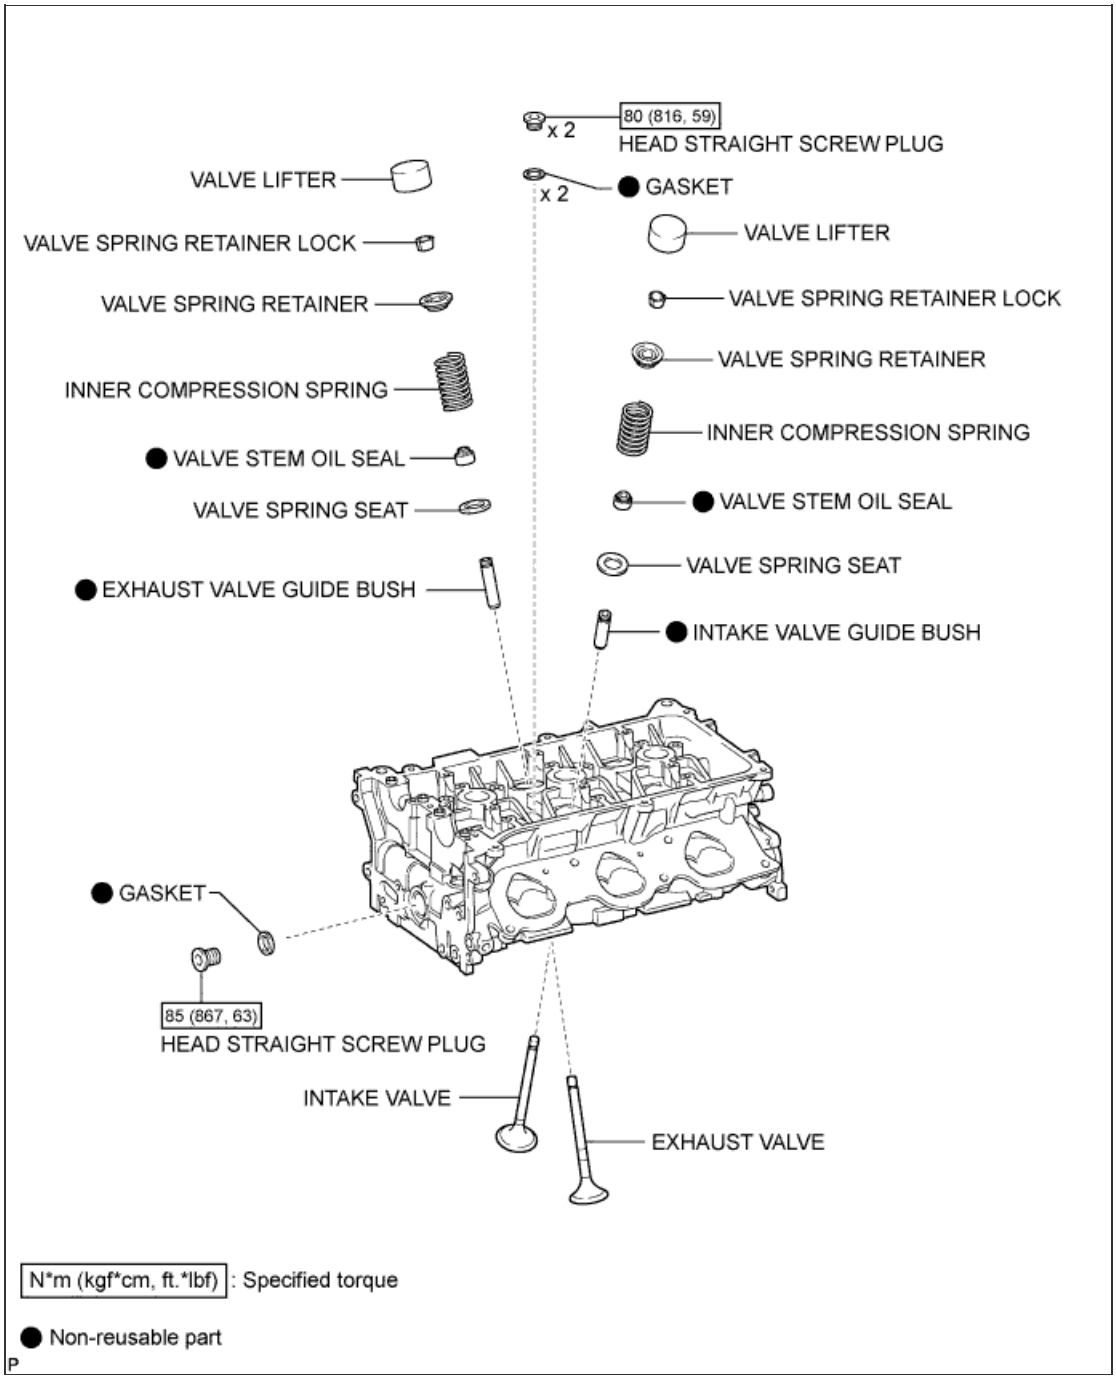
a. Install a new gasket and the engine coolant temperature sensor.

Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

17. INSTALL OIL PRESSURE SENSOR

a. Apply adhesive to 2 or 3 threads of the oil pressure sensor.

Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent



b. Using a 24 mm deep socket wrench, install the oil pressure sensor.

Torque:
15 N*m{ 150 kgf*cm , 11 ft.*lbf }

NOTICE:

Do not start the engine within 1 hour of installation.

for Preparation Click here

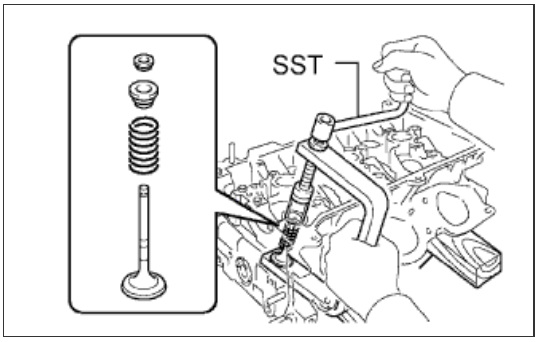
for Preparation Click here

1. REMO E ALE LIF ER

HIN

Arrange the valve lifters in the correct order.

REMO E ALE

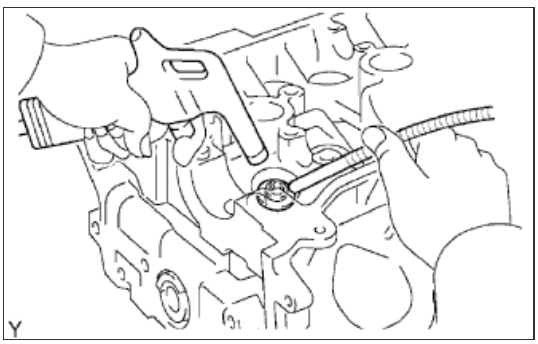


HIN

Arrange the valves, inner compression springs, valve spring retainers and valve spring retainer locks in the correct order.

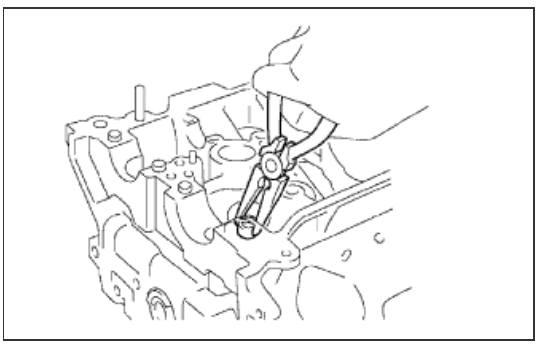
a lace the cylinder head on wooden blocks.

Using SST, compress the inner compression spring and remove the valve spring retainer lock.



SST

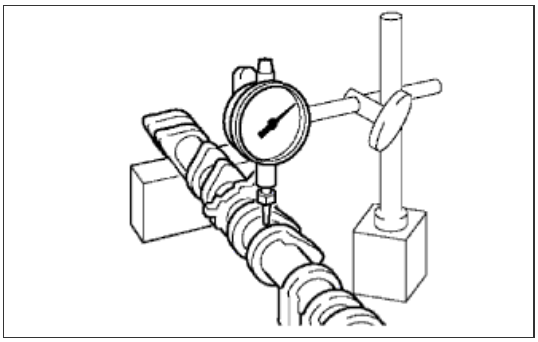
c Remove the valve, inner compression spring and valve spring retainer.



REMO E ALE SPRING SEA

a Using compressed air and a magnetic finger, remove the valve spring seat by blowing air.

REMO E ALE S EM OIL SEAL

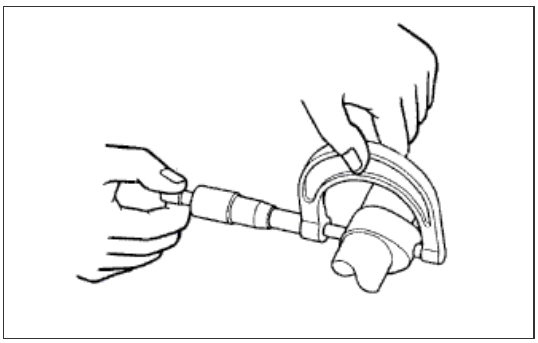


a. Using needle-nose pliers, remove the valve stem oil seal.

for Preparation Click here

1. INSPECT CAMSHAFTS

a. Inspect the camshaft runout.



i. Place the camshaft on V-blocks.

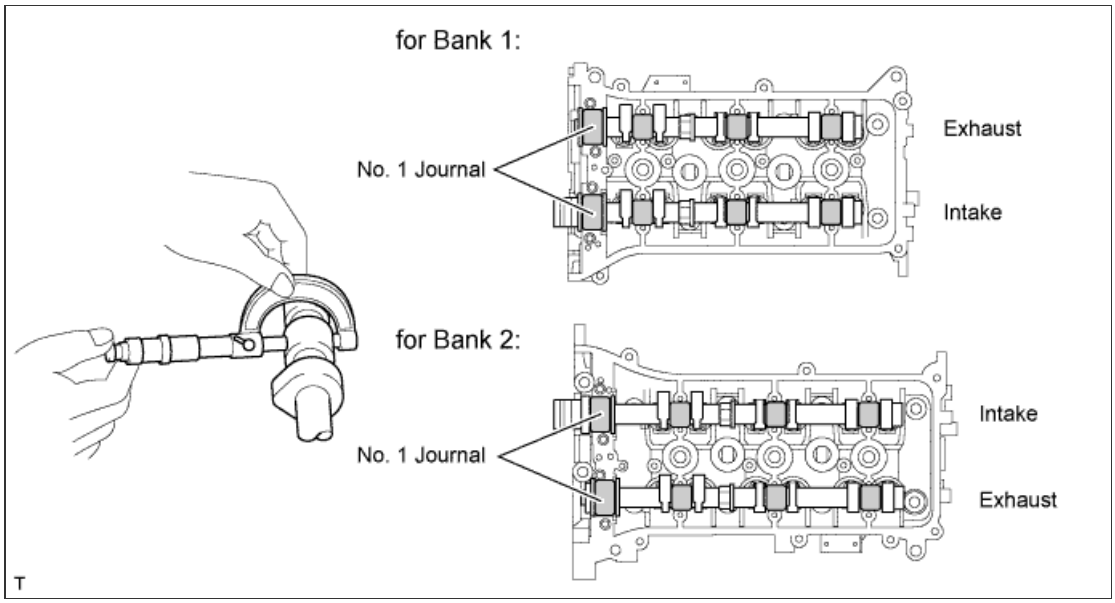
ii. Using a dial indicator, measure the runout at the center journal.

Maximum runout:
0.06 mm (0.00236 in.)

If the runout is more than the maximum, replace the camshaft.

b. Inspect the cam lobes.

i. Using a micrometer, measure the cam lobe height.



Standard Cam Lobe Height:

Item	Specified Condition
Intake	44.168 to 44.268 mm (1.739 to 1.742 in.)
Exhaust	44.580 to 44.680 mm (1.755 to 1.759 in.

Minimum Cam Lobe Height:

Item	Specified Condition
Intake	44.018 mm (1.73 in.)
Exhaust	44.430 mm (1.75 in.)

If the cam lobe height is less than the minimum, replace the camshaft.

c. Inspect the camshaft journals.

i. Using a micrometer, measure the journal diameter.

Standard Journal Diameter:

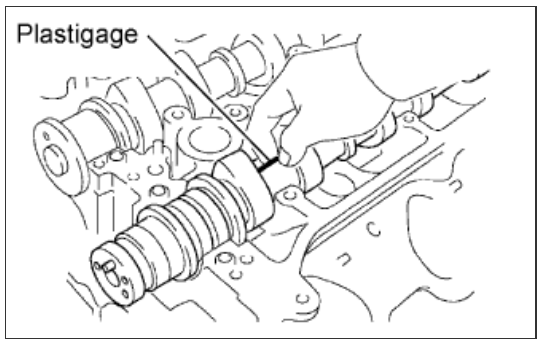
Item	Specified Condition
No. 1	35.971 to 35.985 mm (1.416 to 1.417 in.)
Other	22.959 to 22.975 mm (0.904 to 0.905 in.)

If the journal diameter is not as specified, check the oil clearance.

2. INSPECT CAMSHAFT OIL CLEARANCE

a. Clean the camshaft bearing caps, camshaft bearings and camshaft journals.

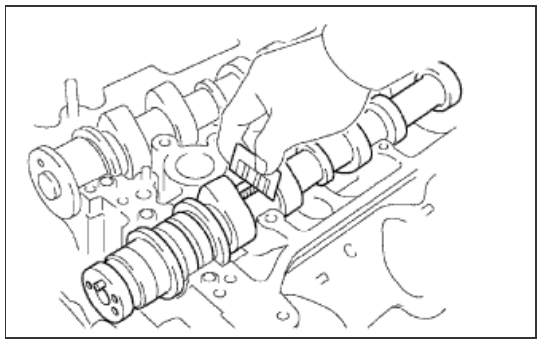
b. Install the camshaft bearing (Click here).



c. Place the camshafts on the cylinder head.

d. Lay a strip of Plastigage across each of the camshaft journals.

e. Install the camshaft bearing caps (Click here).



NOTICE:

Do not turn the camshafts.

f. Remove the camshaft bearing caps (Click here).

g. Measure the Plastigage at its widest point.

Standard Oil Clearance (for Cylinder Head RH):

Item	Specified Condition
No. 1 (Intake)	0.008 to 0.038 mm (0.000315 to 0.00150 in.)
No. 1 (Exhaust)	0.040 to 0.079 mm (0.00157 to 0.00311 in.)
Others	0.025 to 0.062 mm (0.000984 to 0.00244 in.)

Standard Oil Clearance (for Cylinder Head LH):

Item	Specified Condition
No. 1	0.040 to 0.079 mm (0.00157 to 0.00311 in.)
Others	0.025 to 0.062 mm (0.000984 to 0.00244 in.)

Maximum Oil Clearance (for Cylinder Head RH):

Item	Specified Condition
No. 1 (Intake)	0.07 mm (0.00276 in.)
Others	0.10 mm (0.00394 in.)

Maximum Oil Clearance (for Cylinder Head LH):

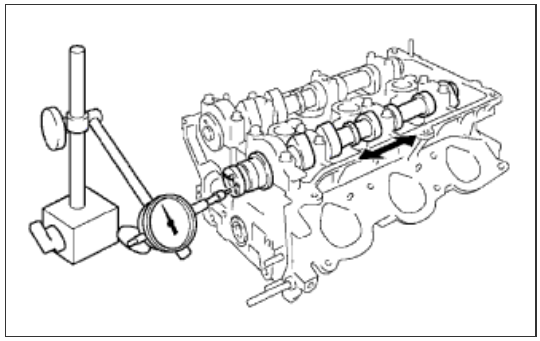
Item	Specified Condition
-	0.10 mm (0.00394 in.)

If the oil clearance is more than the maximum, replace the camshaft bearings and/or camshaft.
If necessary, replace the camshaft bearing caps and cylinder head together.

Reference:

Item	Specified Condition
Cylinder head journal bore diameter	40.009 to 40.017 mm (1.5752 to 1.5755 in.)
Camshaft bearing center wall thickness (Mark "2")	2.004 to 2.008 mm (0.0789 to 0.0791 in.)
Camshaft journal diameter	35.971 to 35.985 mm (1.4162 to 1.4167 in.)

h. Remove the Plastigage completely.



i. Remove the camshafts.

j. Remove the camshaft bearing.

3. INSPECT CAMSHAFT THRUST CLEARANCE

a. Install the camshafts (Click here).

b. Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.

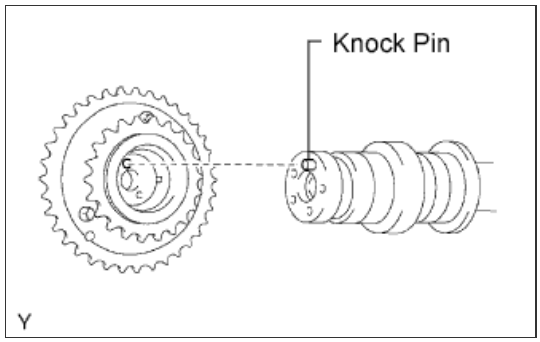
Standard thrust clearance:
0.04 to 0.09 mm (0.00157 to 0.00354 in.)

Maximum thrust clearance:
0.11 mm (0.00433 in.)

If the thrust clearance is more than the maximum, replace the camshafts.
If necessary, replace the camshaft bearing caps and cylinder head as a set.

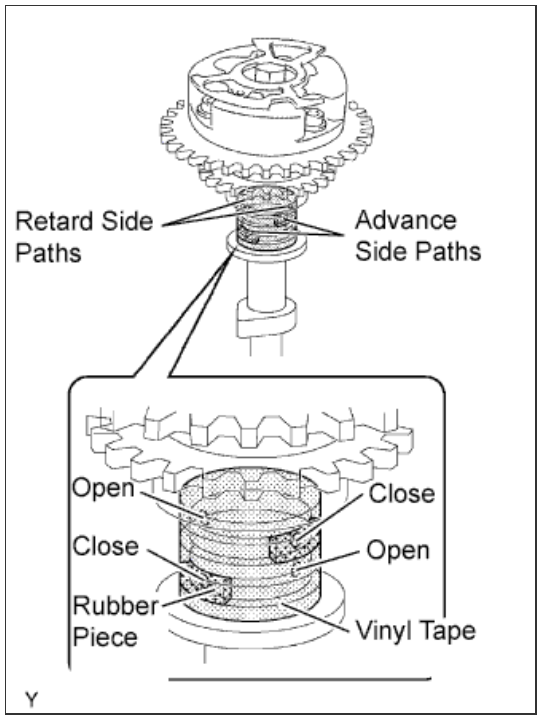
4. INSPECT CAMSHAFT TIMING GEAR ASSEMBLY

a. Fix the intake camshaft with a vise.



NOTICE:

Be careful not to damage the camshaft.

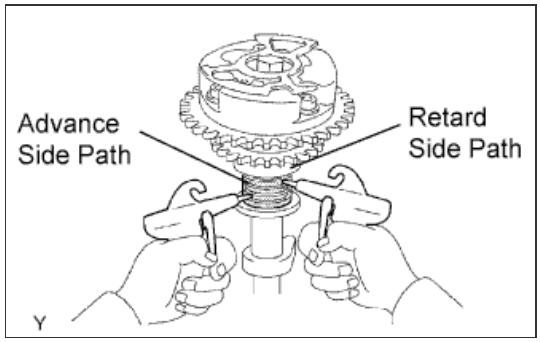


b. Align the knock pin hole in the camshaft timing gear with the knock pin of the camshaft, and install the camshaft timing gear with the bolt.

Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

c. Confirm the camshaft timing gear is locked.

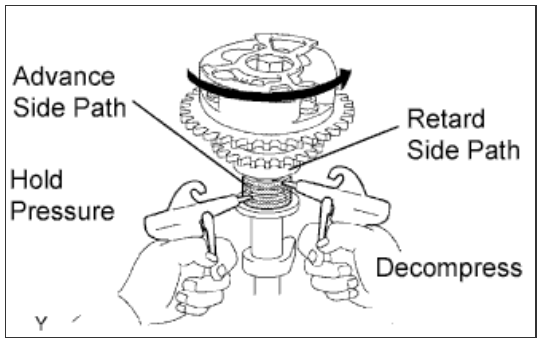
d. Release the lock pin.



i. Cover the 4 oil paths of the cam journal with vinyl tape as shown in the illustration.

HINT:

One of the 2 grooves on the cam journal is for retard side paths (upper) and the other is for advance side paths (lower). Each groove has 2 oil paths. Plug one of the oil paths for each groove with rubber pieces as shown in the illustration before wrapping the cam journal with tape.



ii. Prink a hole in the tape at the 2 oil holes not plugged with rubber pieces.

iii. Apply about 200 kPa (2.0 kgf/cm^2, 28 psi) of air pressure to the two broken paths (the advance side path and the retard side path).

NOTICE:

Cover the paths with a cloth to avoid oil splashing.

iv. Confirm that the camshaft timing gear rotates in the advance direction when reducing the air pressure applied to the retard path.

HINT:

When the lock pin is released, the camshaft timing gear rotates in the advance direction.

v. When the camshaft timing gear comes to the most advanced position, release the air pressure from the retard side path, and then release the air pressure from the advance side path.

NOTICE:

The camshaft timing gear occasionally shifts to the retard side abruptly if air compression of the advanced side path is released first. This often results in the breakage of the lock pin.

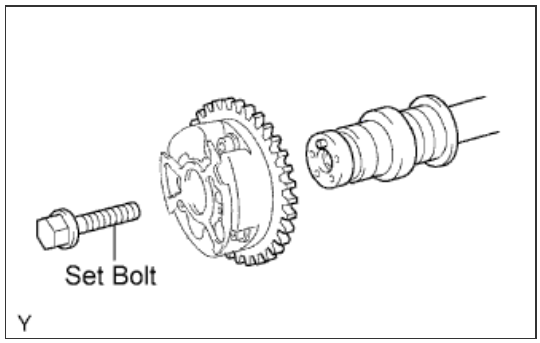
e. Check for smooth rotation.

i. Except the position where the lock pin meets at the most retarded angle, turn the camshaft timing gear back and forth and check the movable range and that there is no disturbance.

Standard:
Movable smoothly in the range of about 31 °

NOTICE:

Be sure to perform this check by hand, instead of with air pressure.



f. Check the lock in the most retarded position.

i. Confirm that the camshaft timing gear is locked at the most retarded position.

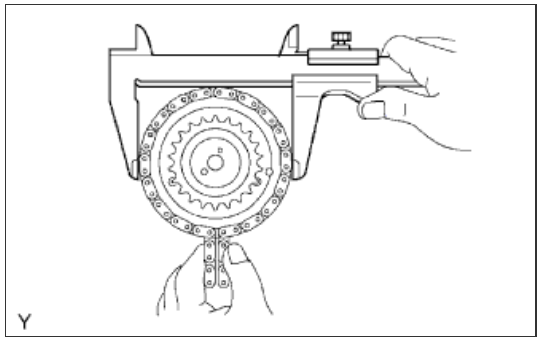
g. Remove the set bolt and camshaft timing gear.

NOTICE:

Be sure not to remove the other 3 bolts.

5. INSPECT CAMSHAFT TIMING GEAR ASSEMBLY

a. Wrap the No. 1 chain around the gear place for the No. 1 chain.



b. Using a vernier caliper, measure the timing gear with the No. 1 chain.

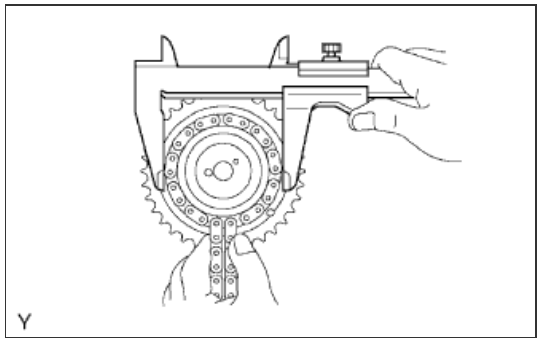
Minimum gear diameter (with chain):
115.5 mm (4.55 in.)

HINT:

The vernier caliper must contact the chain rollers for the measurement.

If the diameter is less than the minimum, replace the No. 1 chain and camshaft timing gear assembly.

c. Wrap the No. 2 chain around the gear place for the No. 2 chain.



d. Using a vernier caliper, measure the timing gear with the No. 2 chain.

Minimum gear diameter (with chain):
73.1 mm (2.88 in.)

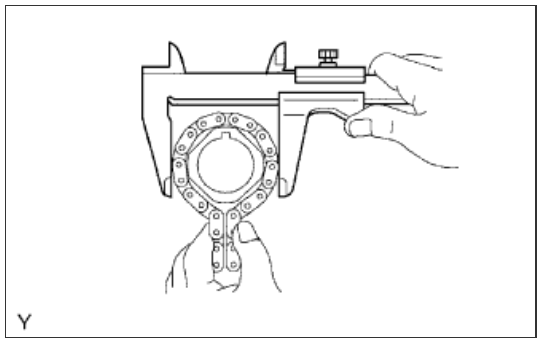
HINT:

The vernier caliper must contact the chain rollers for the measurement.

If the diameter is less than the minimum, replace the No. 2 chain and camshaft timing gear assembly.

6. INSPECT CAMSHAFT TIMING SPROCKET

a. Wrap the No. 1 chain around the sprocket.



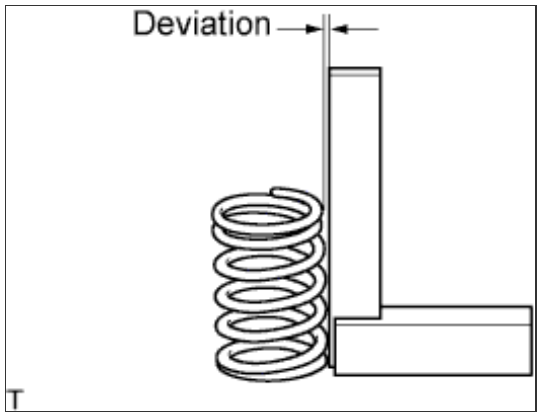
b. Using a vernier caliper, measure the crankshaft timing sprocket diameter with the No. 1 chain.

Minimum gear diameter (with chain):
61.0 mm (2.40 in.)

HINT:

The vernier caliper must contact the chain rollers for the measurement.

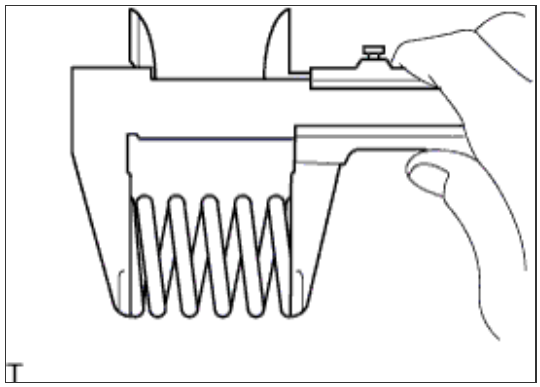
If the diameter is less than the minimum, replace the No. 1 chain and crankshaft timing sprocket.



7. INSPECT INNER COMPRESSION SPRING

a. Using a steel square, measure the deviation of the inner compression spring.

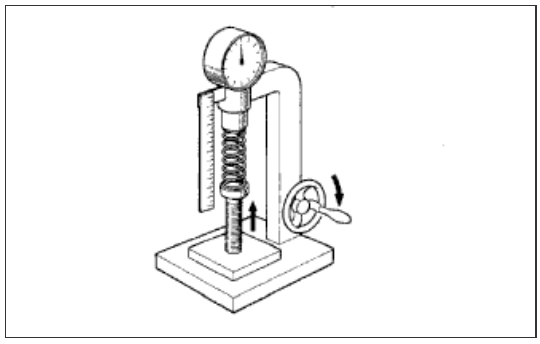
Maximum deviation:
2.0 mm (0.0787 in.)



If the deviation is more than the maximum, replace the inner compression spring.

b. Using a vernier caliper, measure the free length of the inner compression spring.

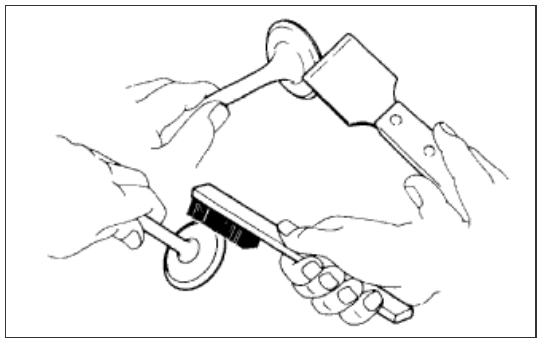
Standard free length:
47.80 mm (1.88 in.)



If the free length is not as specified, replace the inner compression spring.

c. Using a spring tester, measure the tension of the inner compression spring at the standard installed length.

Standard installed tension:
186 to 206 N (19 to 21 kgf, 42 to 46 lbf) at 33.3 mm (1.31 in.)

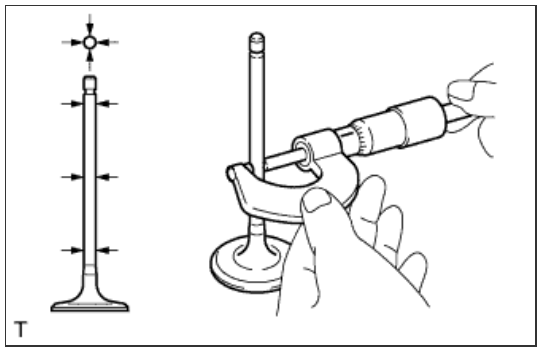


If the installed tension is not as specified, replace the inner compression spring.

8. CLEAN VALVE

a. Using a gasket scraper, chip off any carbon from the valve head.

b. Using a wire brush, thoroughly clean the valve.

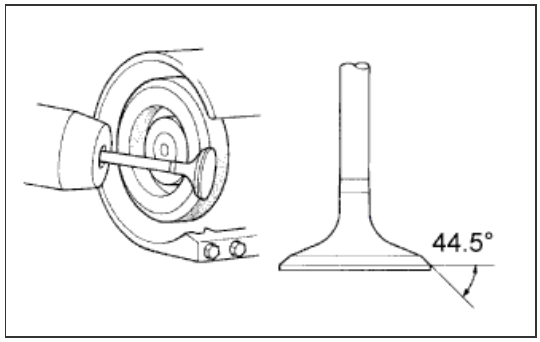


9. INSPECT AL E

a. Using a micrometer, measure the diameter of the valve stem.

Standard al Stem Diameter:

Item	Specified Condition
Intake	5.470 to 5.485 mm (0.2154 to 0.2159 in.)
Exhaust	5.465 to 5.480 mm (0.2152 to 0.2156 in.)

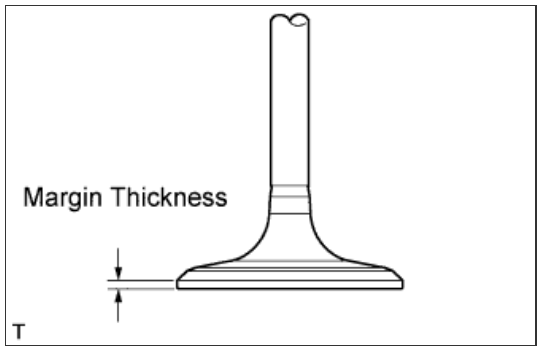


b. Inspect the valve face angle.

i. Grind the valve enough to remove pits and carbon.

ii. Check that the valve is ground to the correct valve face angle.

Standard valve face angle:
44.5



c. Using a vernier caliper, measure the valve head margin thickness.

i. Using a vernier caliper, check the valve head margin thickness.

Standard margin thickness:
1.0 mm (0.0394 in.)

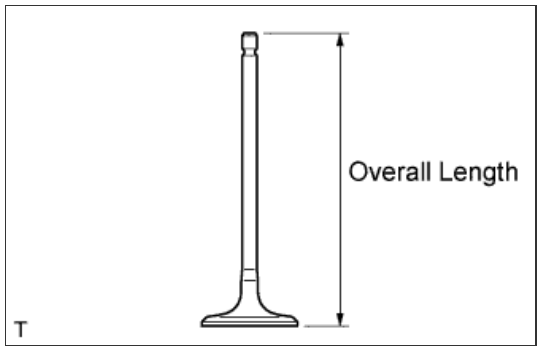
Minimum margin thickness:
0.5 mm (0.0197 in.)

If the margin thickness is less than the minimum, replace the valve.

d. Using a vernier caliper, measure the overall length of the valve.

i. Using a vernier caliper, check the overall length.

Standard Overall Length:



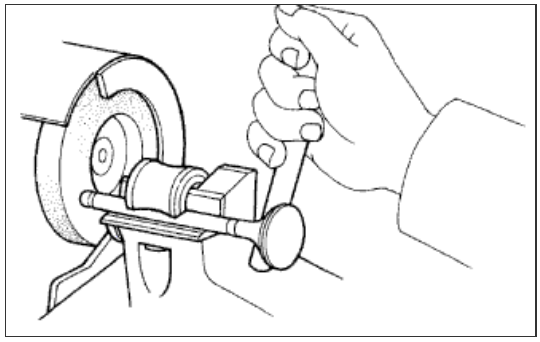
Item	Specified Condition
Intake	106.95 mm (4.21 in.)
Exhaust	105.80 mm (4.15 in.)

Minimum Overall Length:

Item	Specified Condition

Intake	106.40 mm (4.19 in.)
Exhaust	105.30 mm (4.15 in.)

If the overall length is less than the minimum, replace the valve.



e. Inspect the valve stem tip.

i. Check the surface of the valve stem tip for wear.

NOTICE:

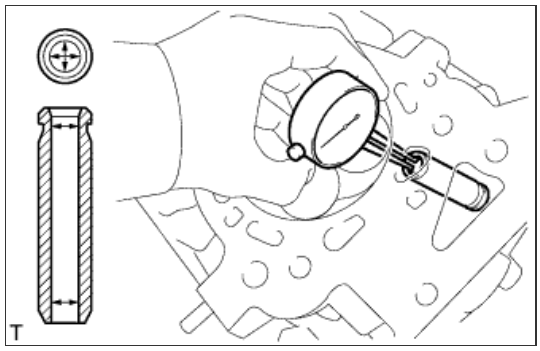
Do not grind the valve so it becomes shorter than the minimum overall length.

If the valve stem tip is worn, resurface the tip with a grinder or replace the valve.

10. INSPECT VALVE GUIDE BUSH OIL CLEARANCE

a. Using a caliper gauge, measure the inside diameter of the guide bush.

Standard bush inside diameter:
5.51 to 5.53 mm (0.217 to 0.218 in.)



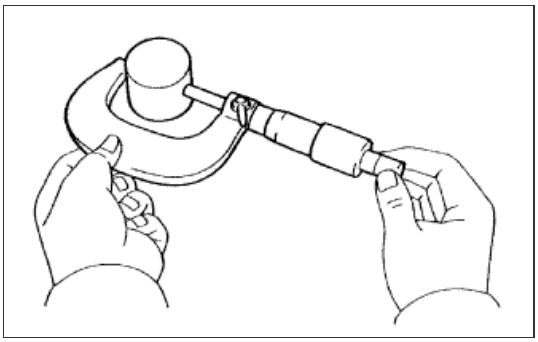
b. Subtract the valve stem diameter measurement from the guide bush inside diameter measurement.

Standard Oil Clearance:

Item	Specified Condition
Intake	0.025 to 0.060 mm (0.000984 to 0.00236 in.)
Exhaust	0.030 to 0.065 mm (0.00118 to 0.00256 in.)

Maximum Oil Clearance:

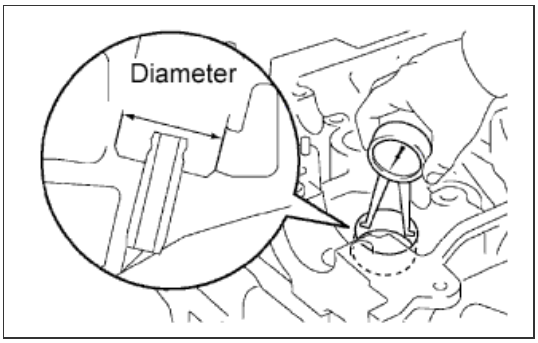
Item	Specified Condition
Intake	0.08 mm (0.00315 in.)
Exhaust	0.10 mm (0.00394 in.)



If the oil clearance is more than the maximum, replace the valve and valve guide bush.

11. INSPECT VALVE LIFTER

a. Using a micrometer, measure the valve lifter diameter.



Standard valve lifter diameter:
30.966 to 30.976 mm (1.219 to 1.220 in.)

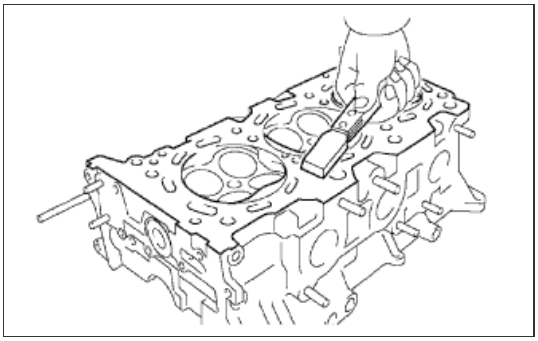
If the result is not as specified, replace the valve lifter.

12. INSPECT AL E LIFTER OIL CLEARANCE

a. Using a caliper gauge, measure the lifter bore diameter of the cylinder head.

Standard lifter bore diameter:
31.009 to 31.025 mm (1.220 to 1.221 in.)

b. Subtract the valve lifter diameter measurement (see "Inspect Valve Lifter" procedure) from the lifter bore diameter measurement.

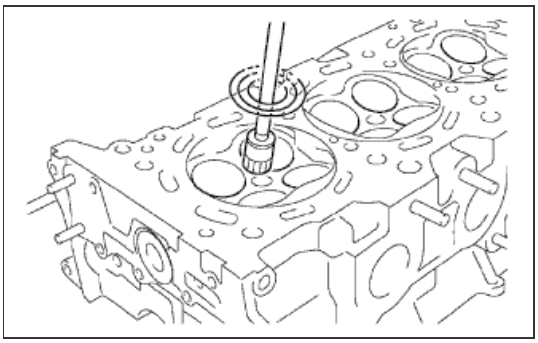


Standard oil clearance:
0.033 to 0.059 mm (0.00130 to 0.00232 in.)

Maximum oil clearance:
0.08 mm (0.00315 in.)

If the oil clearance is more than the maximum, replace the valve lifter.
If necessary, replace the cylinder head.

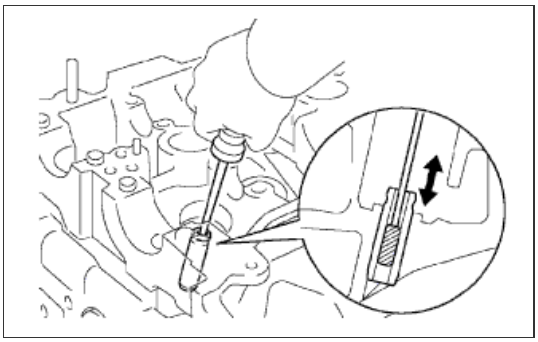
13. CLEAN CYLINDER HEAD SUB-ASSEMBLY



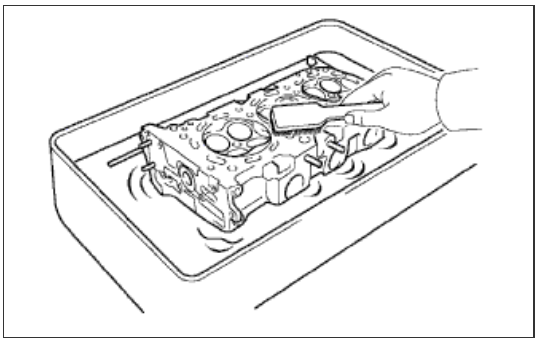
a. Using a gasket scraper, remove all the gasket material from the cylinder block contact surface.

NOTICE:

Be careful not to scratch the cylinder block contact surface.



b. Using a wire brush, remove all the carbon from the combustion chambers.



NOTICE:

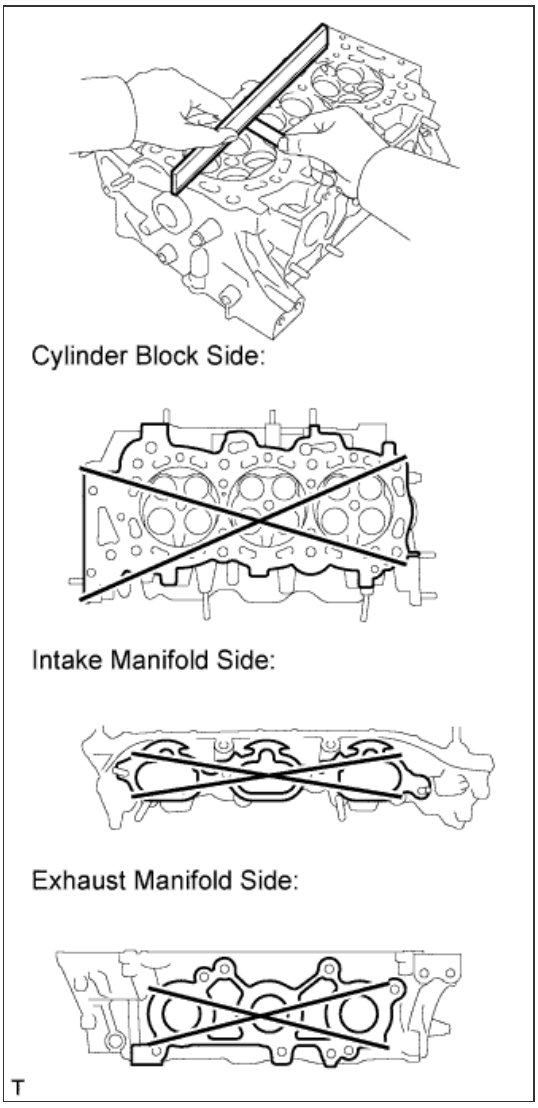
Be careful not to scratch the combustion chambers.

c. Using a valve guide bushing brush and solvent, clean all the valve guide bushes.

d. Using a soft brush and solvent, thoroughly clean the cylinder head.

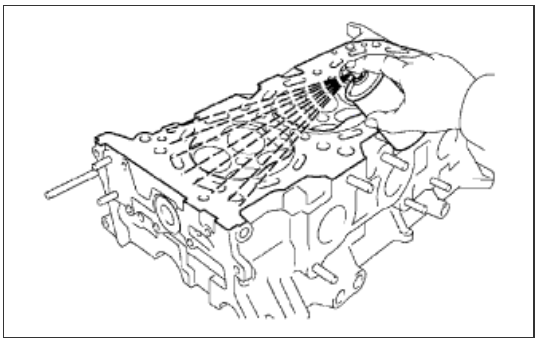
14. INSPECT CYLINDER HEAD SUB ASSEMBLY

a. Using a precision straightedge and feeler gauge, measure the warpage of the contact surfaces of the cylinder block and manifolds.



Standard warpage:

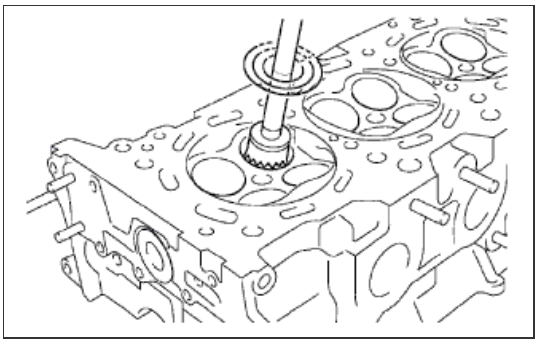
Item	Specified Condition
Cylinder block side	0.05 mm (0.00197 in.)
Intake manifold side	0.08 mm (0.00315 in.)
Exhaust manifold side	0.08 mm (0.00315 in.)



Maximum warpage:

Item	Specified Condition
Cylinder block side	0.10 mm (0.00394 in.)
Intake manifold side	0.10 mm (0.00394 in.)
Exhaust manifold side	0.10 mm (0.00394 in.)

If the warpage is more than the maximum, replace the cylinder head sub-assembly.



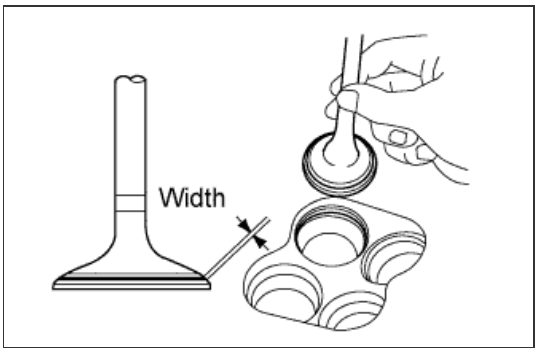
b. Using a dye penetrant, check the intake ports, exhaust ports and cylinder surface for cracks.
If there are cracks, replace the cylinder head sub-assembly.

15. CLEAN AL E SEAT

a. Using a 45° carbide cutter, resurface the valve seats.

b. Clean the valve seats.

16. INSPECT VALVE SEAT



a. Apply a light coat of Prussian blue to the valve face.

b. Lightly press the valve face against the valve seat.

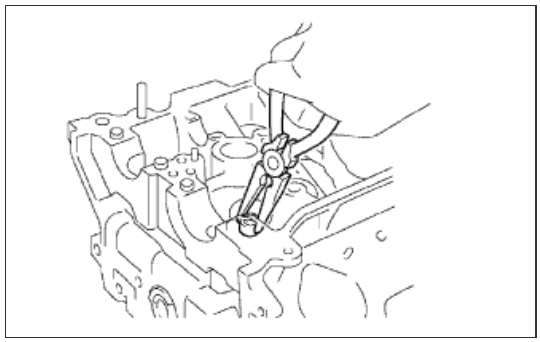
NOTICE:

Do not rotate the valve.

c. Check the valve face and valve seat by using the following procedure.

i. If Prussian blue appears around the entire valve face, the valve face is concentric. If not, replace the valve.

ii. If Prussian blue appears around the entire valve seat, the guide and valve face are concentric. If not, resurface the valve seat.

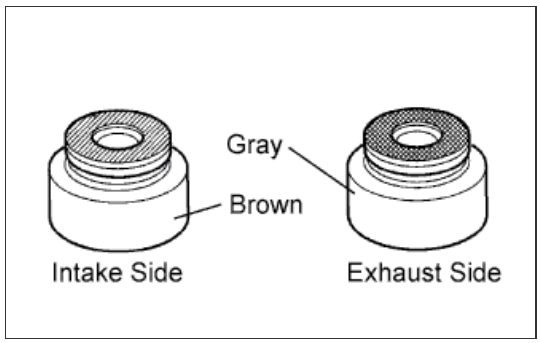


iii. Check that the seat contacts the middle of the valve face with the width below.

Standard width:
1.0 to 1.4 mm (0.0394 to 0.0551 in.)

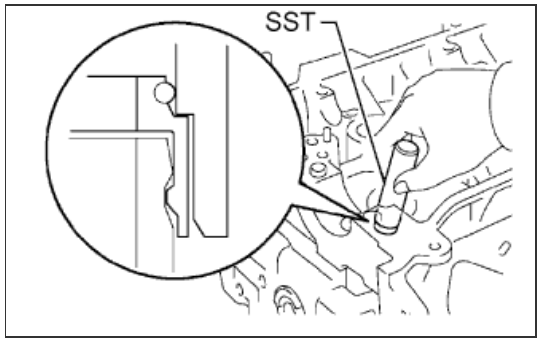
for Preparation Click here

1. REPLACE VALVE STEM OIL SEAL



a. Using needle-nose pliers, remove the valve stem oil seal.

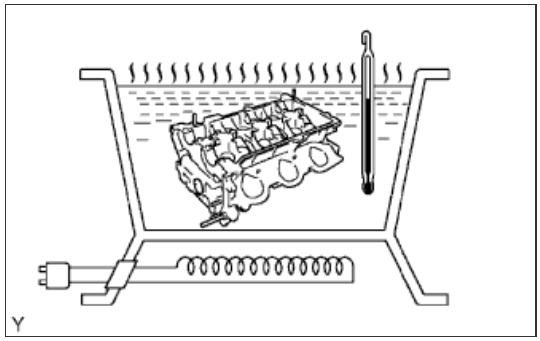
b. Apply a light coat of engine oil to the valve stem oil seal.



HINT:

The intake valve stem oil seal is light brown and the exhaust valve stem oil seal is gray.

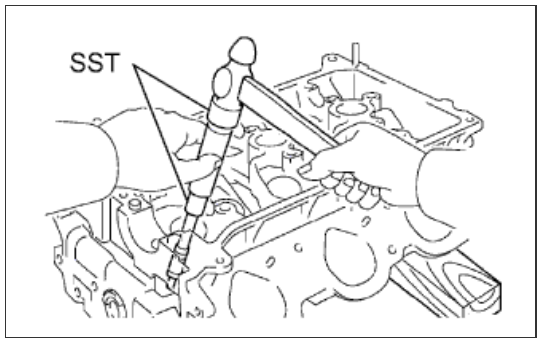
c. Using SST and a hammer, push in a new valve stem oil seal.



SST
09201-41020

2. REPLACE VALVE GUIDE BUSH

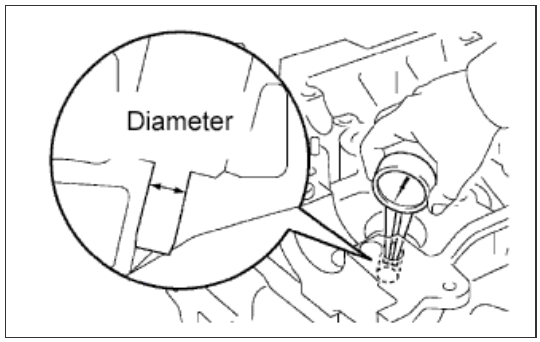
a. Gradually heat the cylinder head to 80 to 90°C (176 to 212°F).



b. Place the cylinder head on wooden blocks.

c. Using SST and hammer, tap out the valve guide bush.

c. Using SST and hammer, tap out the valve guide bush.

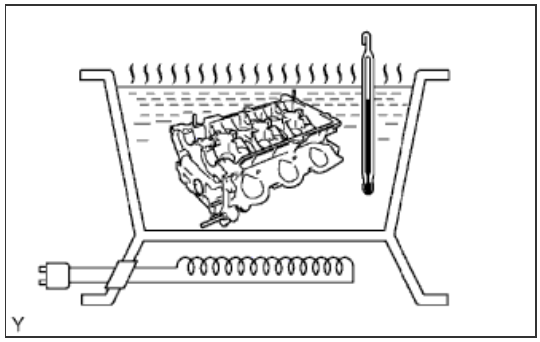


SST
09201-10000
09201-01055
09950-70010 (09951-07100)

d. Using a caliper gauge, measure the bush bore diameter of the cylinder head.

Standard bush bore diameter:
10.295 to 10.315 mm (0.405 to 0.406 in.)

If the bush bore diameter of the cylinder head is more than 10.315 mm (0.406 in.), machine the bush bore to a diameter of 10.345 to 10.365 mm (0.407 to 0.408 in.).

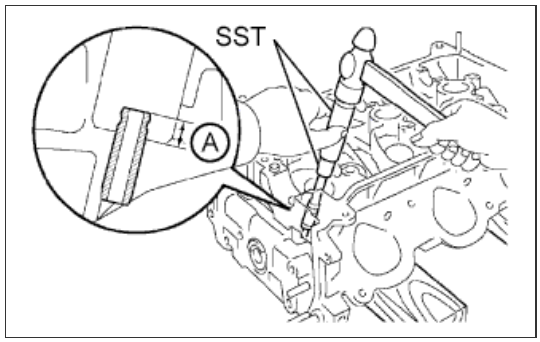


Standard Valve Guide Bush Diameter:

Item	Specified Condition
STD	10.333 to 10.344 mm (0.4068 to 0.4072 in.)
O/S 0.05	10.383 to 10.394 mm (0.4088 to 0.4092 in.)

If the bush bore diameter of the cylinder head is more than 10.365 mm (0.4081 in.), replace the cylinder head.

e. Gradually heat the cylinder head to 80 to 100°C (176 to 212°F).



f. Place the cylinder head on wooden blocks.

g. Using SST, tap in a new valve guide bush to the standard protrusion height labeled A shown in the illustration.

SST
09201-10000
09201-01055
09950-70010 (09951-07100)

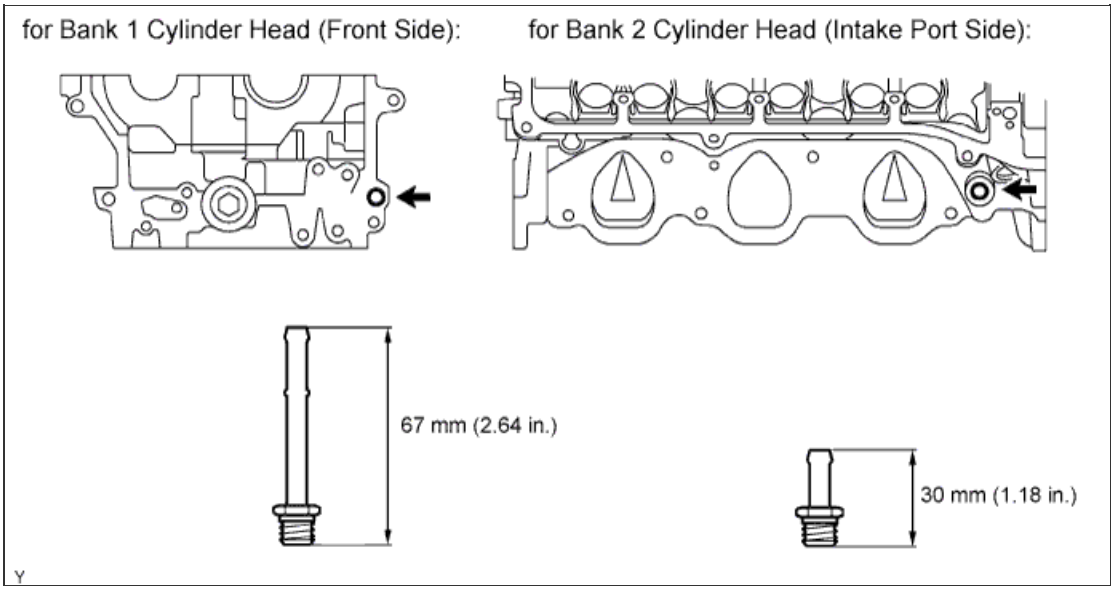
Standard protrusion height:
9.3 to 9.7 mm (0.366 to 0.382 in.)

h. Using a sharp 5.5 mm reamer, ream the valve guide bush to obtain the standard specified clearance between the valve guide bush and valve stem.

Standard Overall Length:

Item	Specified Condition
Intake	0.025 to 0.060 mm (0.00984 to 0.00236 in.)
Exhaust	0.030 to 0.065 mm (0.00118 to 0.00256 in.)

3. REPLACE UNION



a. Remove the union from the bank 1 cylinder head (front side) and bank 2 cylinder head (intake port side).

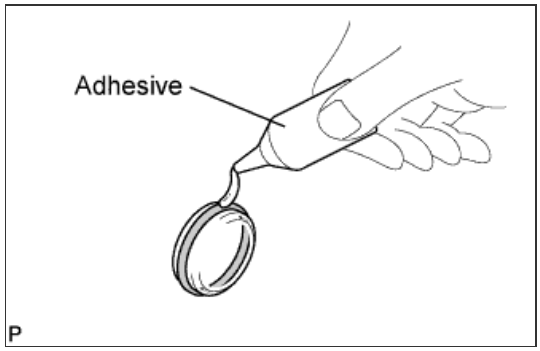
b. Apply adhesive to 2 or 3 threads of the bolt ends of new unions.

Adhesive:
Toyota Genuine Seal Adhesive 1324, Three Bond 1324 or equivalent

c. Using a 12 mm deep socket wrench, install the 2 unions.

Torque:
15 N m 150 kgf cm , 11 ft. lbf

4. REPLACE TIGHT PLUG

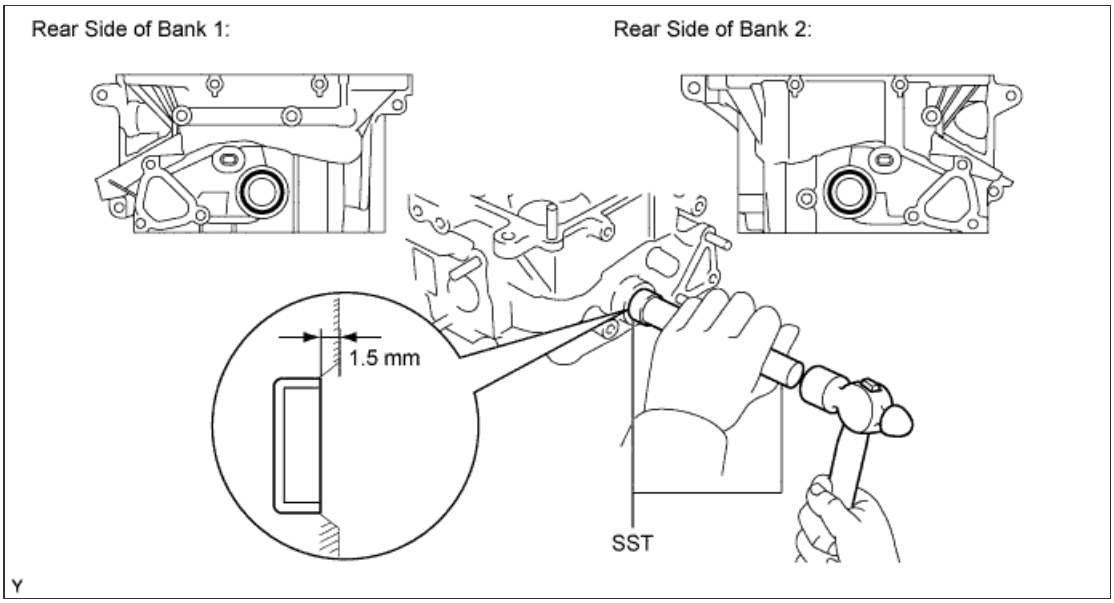


NOTICE:

If water leaks from the tight plug or the plug corrodes, replace it.

a. Remove the tight plugs.

b. Apply adhesive around new tight plugs.

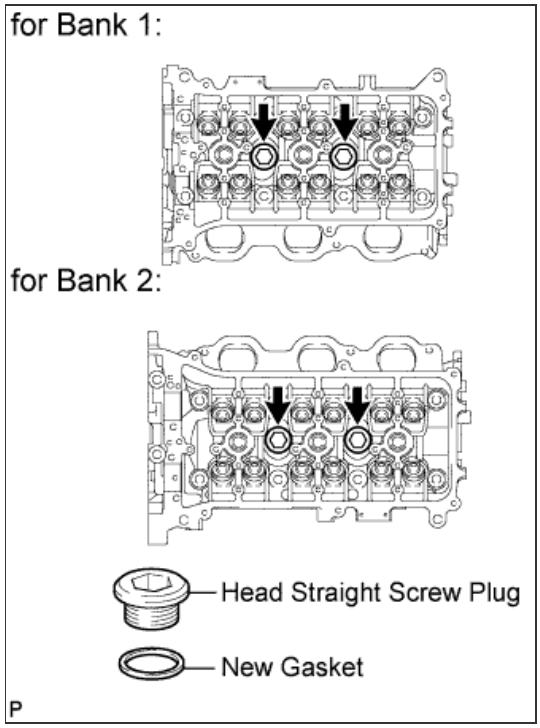


Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent

c. Using SST and a hammer, tap in the tight plugs to the standard depth.

SST
09950-60010 (09951-00250)
09950-70010 (09951-07150)

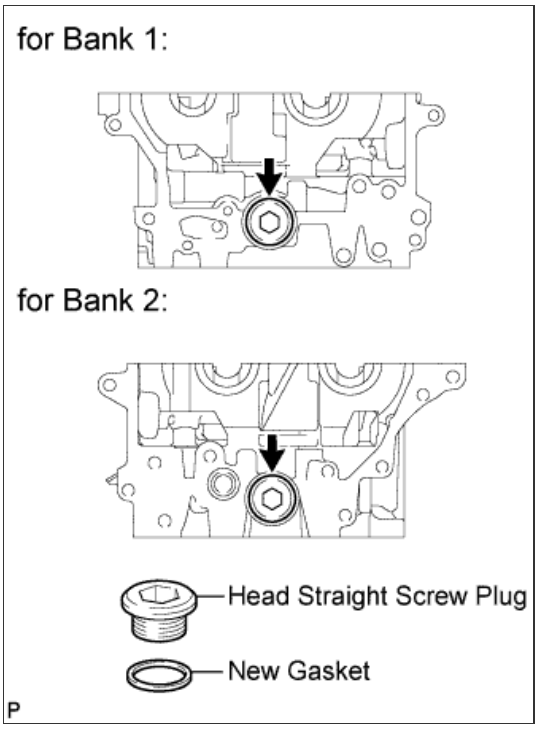
Standard depth:
1.5 mm (0.0591 in.)



5. REPLACE HEAD STRAIGHT SCRE PLUG

a. Using a 14 mm hexagon wrench, remove the straight screw plug and gasket.

b. Using a 14 mm hexagon wrench, install a new gasket and straight screw plug.



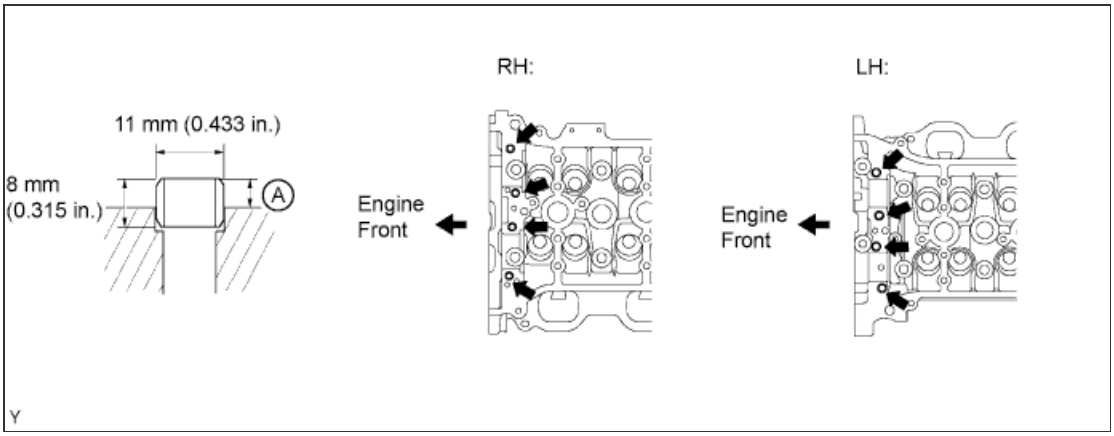
Torque:
80 N m 816 kgf cm , 59 ft. lbf

c. Using a 14 mm hexagon wrench, remove the straight screw plug and gasket.

d. Using a 14 mm hexagon wrench, install a new gasket and straight screw plug.

Torque:
85 N m 867 kgf cm , 63 ft. lbf

6. REPLACE RING PIN



NOTICE:

It is not necessary to remove the ring pin unless it is being replaced.

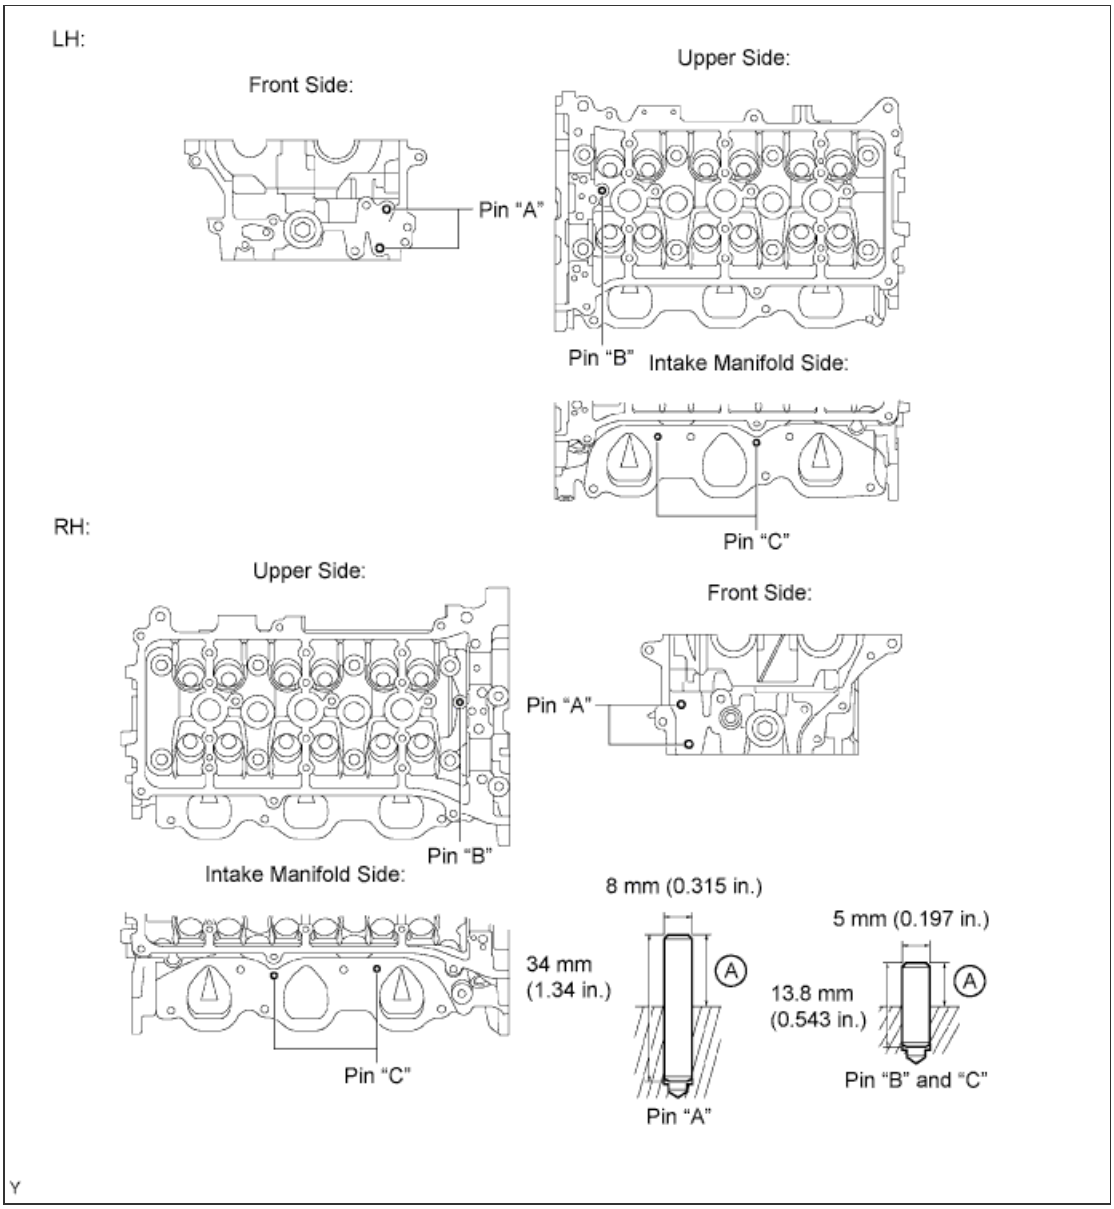
a. Remove the ring pins.

b. Using a plastic-faced hammer, tap in new ring pins until they reach the standard protrusion height labeled A shown in the illustration.

Standard protrusion height:
2.7 to 3.3 mm (0.106 to 0.0969 in.)

7. REPLACE STRAIGHT PIN

NOTICE:



It is not necessary to remove the straight pin unless it is being replaced.

a. Remove the straight pins.

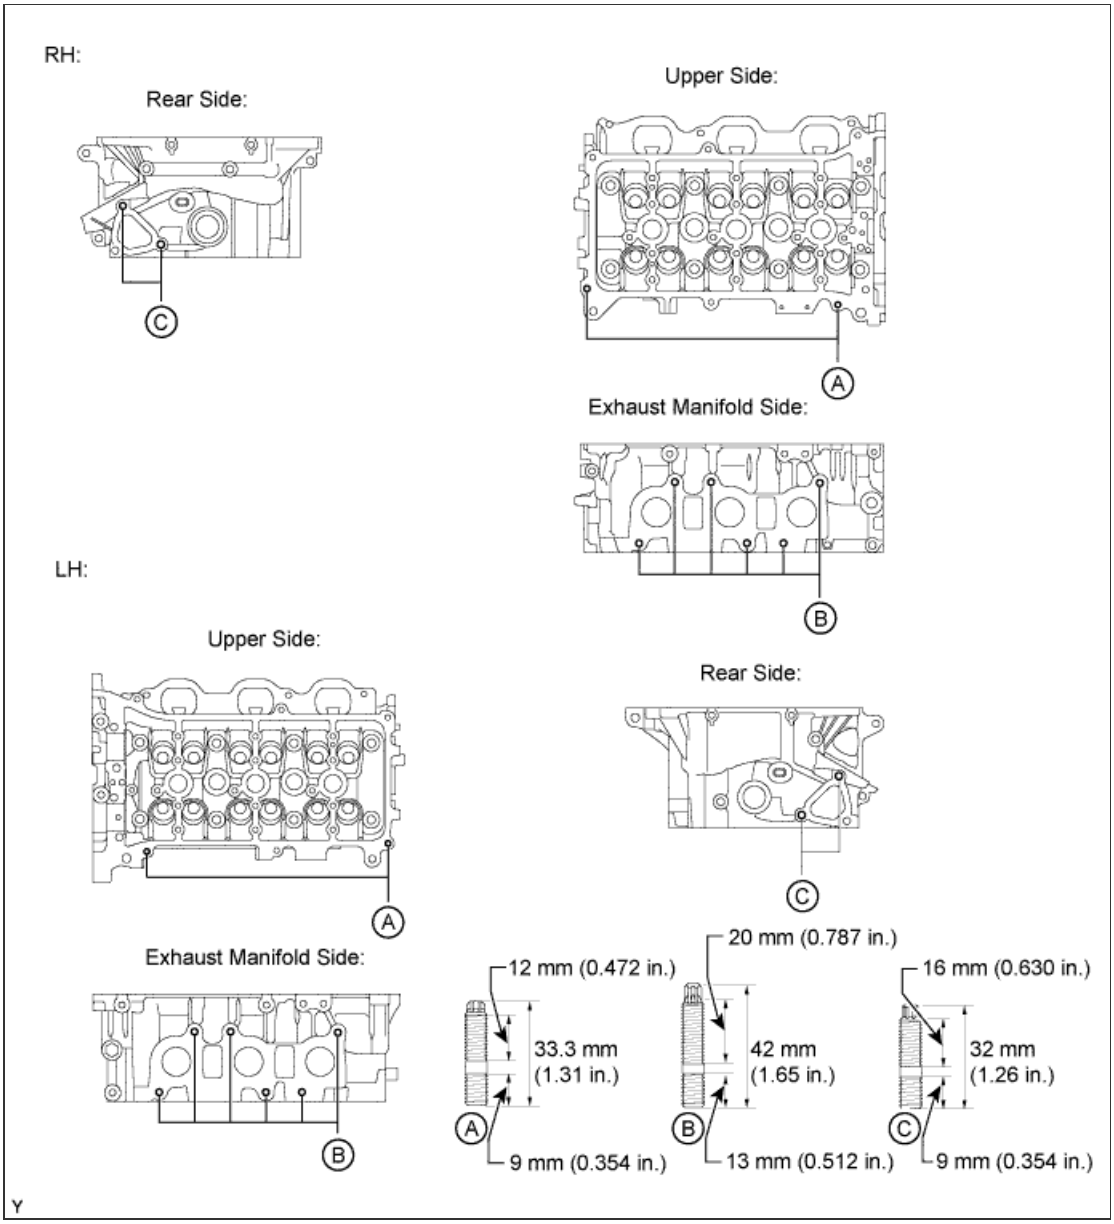
b. Using a plastic-faced hammer, tap in new straight pins until they reach the standard protrusion height labeled A shown in the illustration below.

Standard Protrusion Height:

Item	Specified Condition
Pin "A"	17.5 to 19.5 mm (0.689 to 0.768 in.)
Pin "B"	7.5 to 8.5 mm (0.295 to 0.335 in.)
Pin "C"	7.0 to 9.0 mm (0.276 to 0.354 in.)

8. REPLACE STUD BOLT

NOTICE:



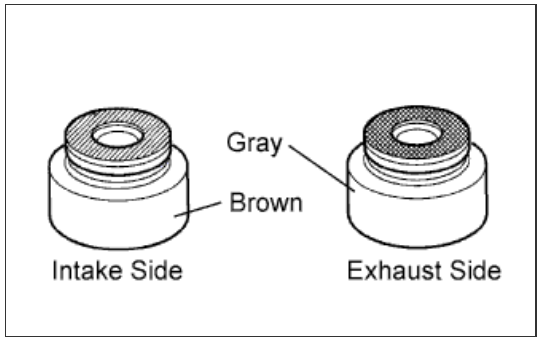
If a stud bolt is deformed or its threads are damaged, replace it.

a. Using an E5 and E7 "TORX" socket wrench, remove the stud bolts.

b. Using an E5 and E7 "TORX" socket wrench, install new stud bolts.

Torque:

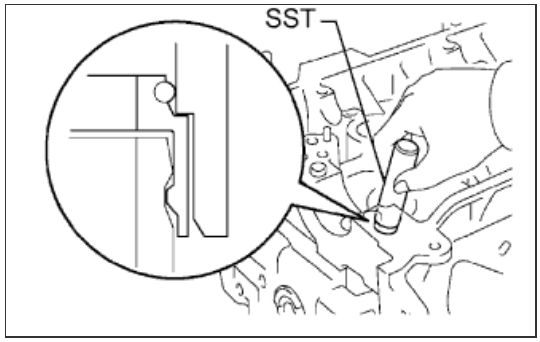
for stud bolt A:
4.0 N m 41 kgf cm , 35 in. lbf
for stud bolt B:
9.5 N m 97 kgf cm , 84 in. lbf
for stud bolt C:
4.0 N m 41 kgf cm , 35 in. lbf



for Preparation Click here

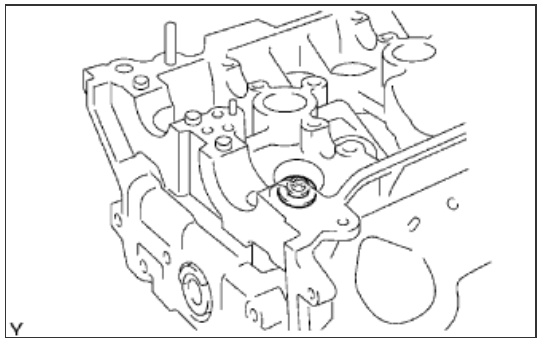
1. INS ALL AE S EM OIL SEAL

HIN



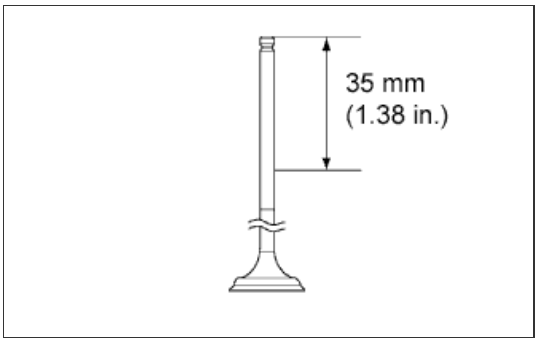
The intake valve stem oil seal is light brown and the exhaust valve stem oil seal is gray.

a Apply a light coat of engine oil to the valve stem oil seal.



Using SST, push in a new valve stem oil seal.

SST



N$ ALL AE SPRING SEA

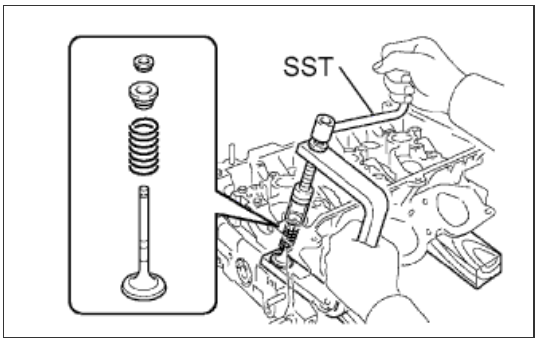
a Install the valve spring seat.

N$ ALL AE

a. Apply plenty of engine oil to the tip area of the exhaust valve shown in the illustration.

b. Place the cylinder head on wooden blocks.

c. Install the valve, inner compression spring and valve spring retainer to the cylinder head.

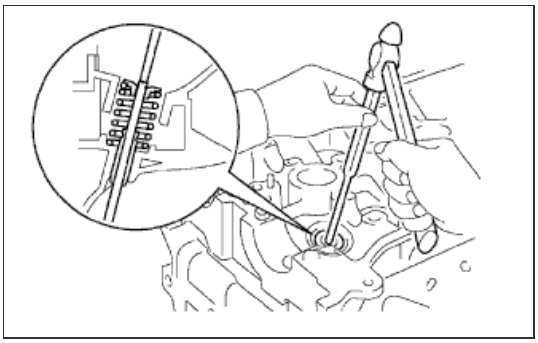


NOTICE:

Install the same parts in the same combination to their original locations.

d. Using SST, compress the inner compression spring and place the valve spring retainer lock around the valve stem.

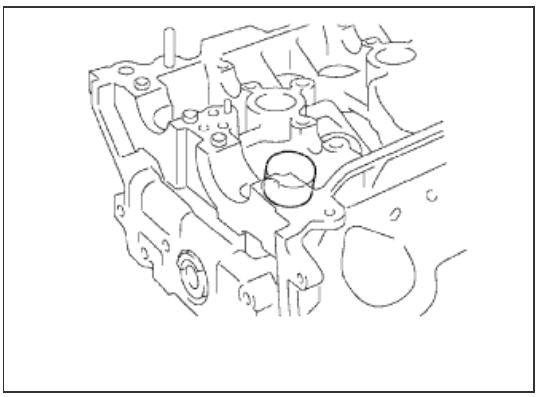
SST



09202-0020 (09202-00010)

e. Using a pin punch 5 and hummer, lightly tap the valve stem tip to ensure a proper fit.

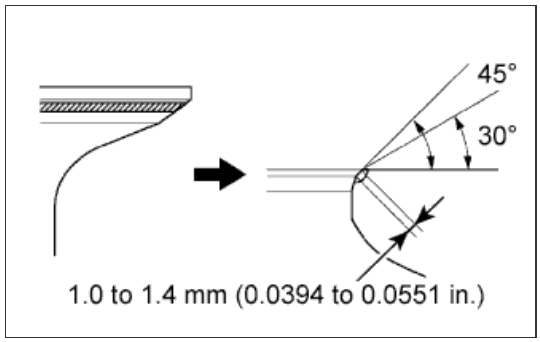
NOTICE:



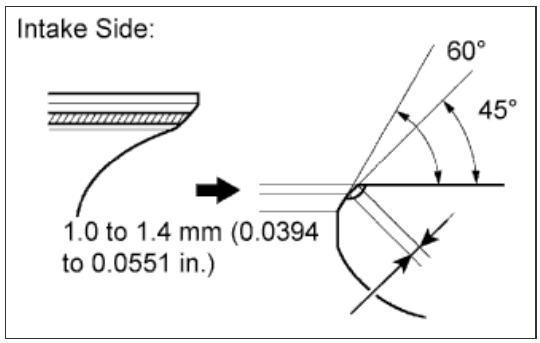
Be careful not to damage the valve stem tip.

4. INSTALL VALVE LIFTER

a. Apply engine oil to the valve stem end and valve lifter, and install the valve lifter to the valve stem.

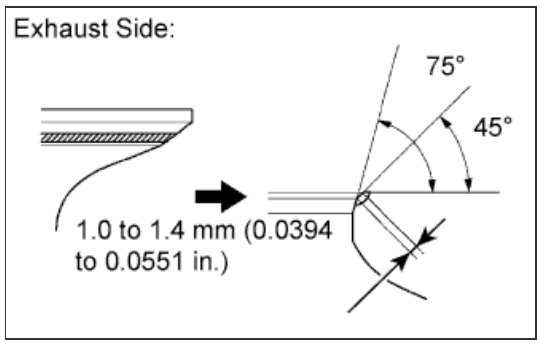


b. Check that the valve lifter rotates smoothly by hand.



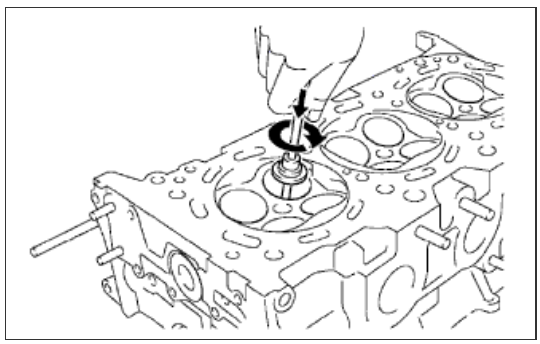
for Preparation Click here

1. REPAIR VALVE SPRIN EA

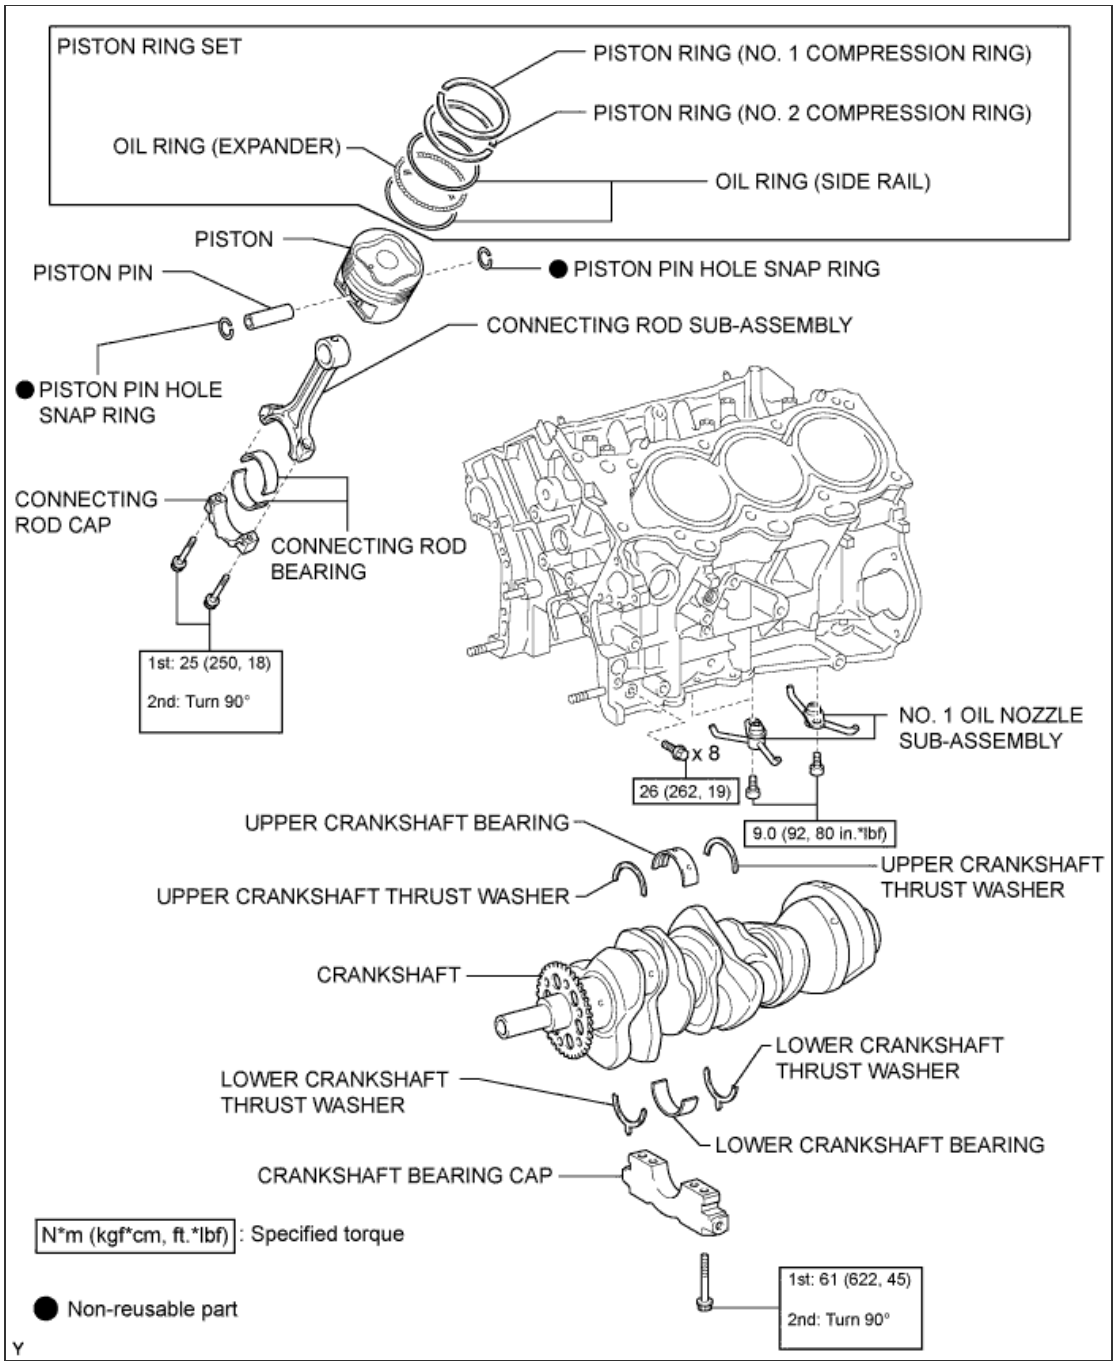


a. If the seating is too high to the valve face, use 30° and 45° cutters to correct the seat.

b. Intake Side:
If the seating is too low to the valve face, use 60° and 45° cutters to correct the seat.



c. Exhaust Side:
If the seating is too low to the valve face, use 75° and 45° cutters to correct the seat.

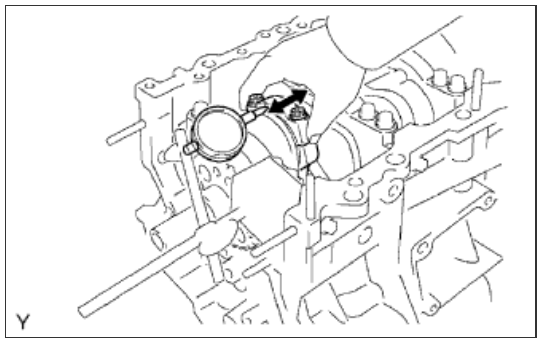


d. Hand-lap the valve and valve seat with an abrasive compound.

e. After lapping the valve by hand, clean the valve and valve seat.

for Preparation Click here

for Preparation Click here



1. INSPECT CONNECTING ROD THRUST CLEARANCE

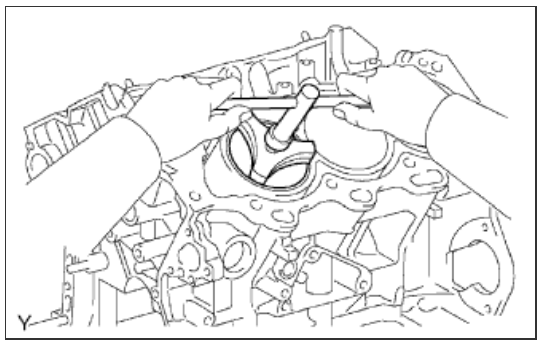
a. Using a dial indicator, measure the thrust clearance while moving the connecting rod back and forth.

Standard thrust clearance:
0.15 to 0.30 mm (0.00591 to 0.0118 in.)

Maximum thrust clearance:
0.35 mm (0.0138 in.)

If the thrust clearance is more than the maximum, replace one or more connecting rods as necessary.
If necessary, replace the crankshaft.

2. REMOVE PISTON SUB-ASSEMBLY WITH CONNECTING ROD



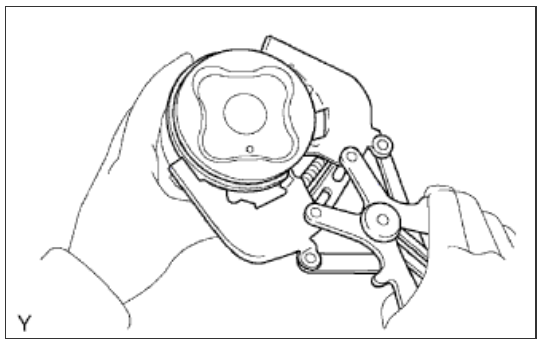
a. Using a ridge reamer, remove all the carbon from the top of the cylinder.

b. Uniformly loosen the connecting rod bolts, and remove the connecting rod cap with bearing.

c. Push out the piston with connecting rod and upper bearing through the top of the cylinder block.

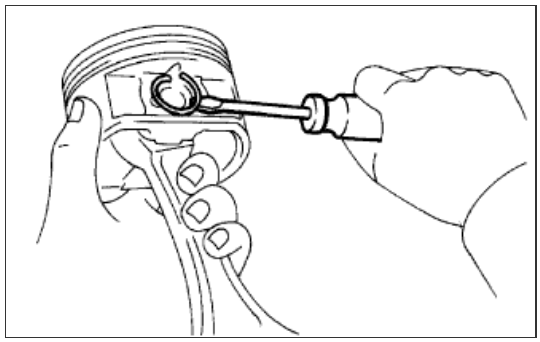
HINT:

- **Keep the bearings, connecting rod and cap together.**
- **Arrange the piston and connecting rod assemblies in the correct order.**



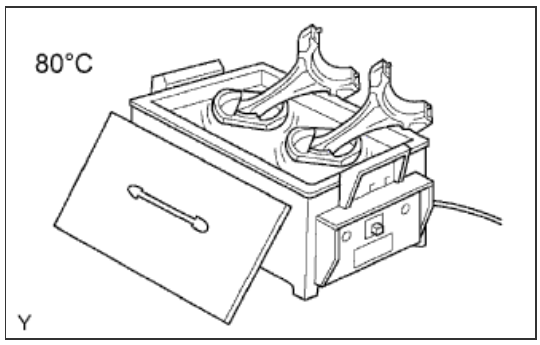
3. REMOVE CONNECTING ROD BEARING

4. REMOVE PISTON RING SET



a. Using a piston ring expander, remove the 2 compression rings.

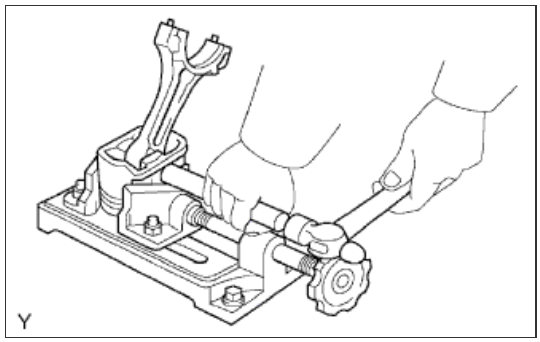
b. Remove the 2 side rails and oil ring (expander) by hand.



5. REMOVE PISTON PIN HOLE SNAP RING

a. Using a screwdriver, pry out the 2 snap rings.

6. REMOVE PISTON WITH PIN SUB-ASSEMBLY



a. Gradually heat the piston to approximately 80°C (176°F).

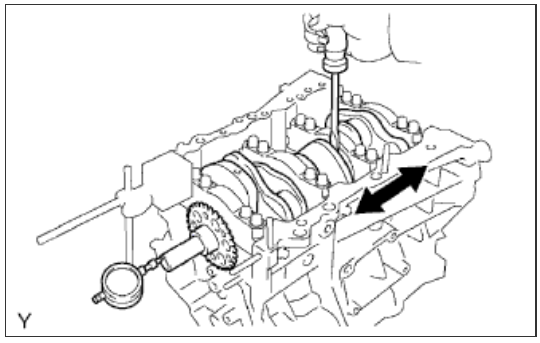
b. Using a plastic-faced hammer and brass bar, lightly tap out the piston pin and remove the connecting rod.

HINT:

- **The piston and pin are a matched set.**
- **Arrange the pistons, pins, rings, connecting rods and bearings in the correct order.**

7. INSPECT CRANKSHAFT THRUST CLEARANCE

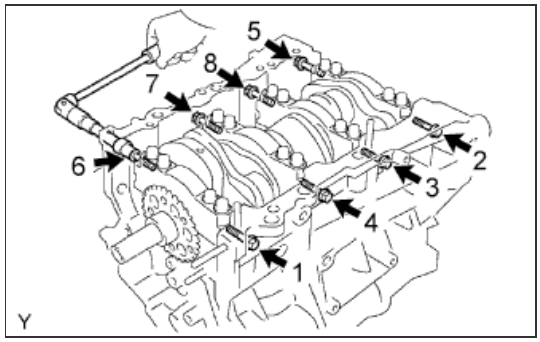
a. Using a dial indicator, measure the thrust clearance while prying the crankshaft back and forth with a screwdriver.



Standard thrust clearance:
0.04 to 0.24 mm (0.00157 to 0.00945 in.)

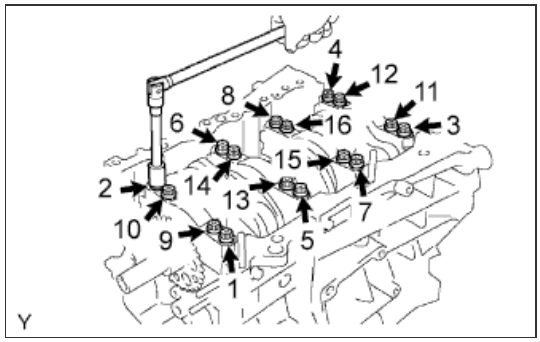
Maximum thrust clearance:
0.30 mm (0.0118 in.)

If the thrust clearance is more than the maximum, replace the thrust washers as a set.



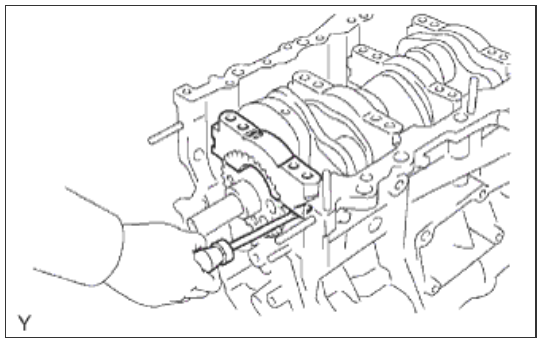
Standard thrust washer thickness:
1.93 to 1.98 mm (0.0760 to 0.0780 in.)

If necessary, replace the crankshaft.



8. REMOVE CRANKSHAFT

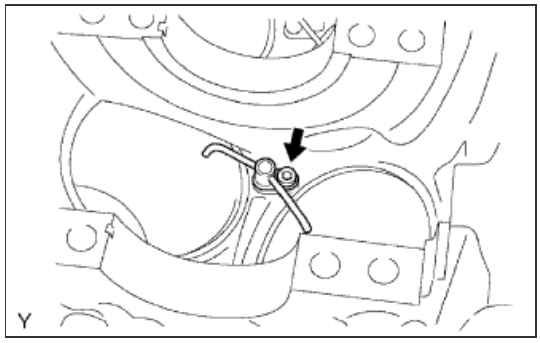
a. Using several steps, loosen and remove the 8 bearing cap bolts and seal washers uniformly in the sequence shown in the illustration.



b. Using several steps, loosen and remove the 16 bearing cap bolts uniformly in the sequence shown in the illustration.

c. Using a screwdriver, pry out the bearing caps. Remove the 4 bearing caps and lower bearings.

NOTICE:

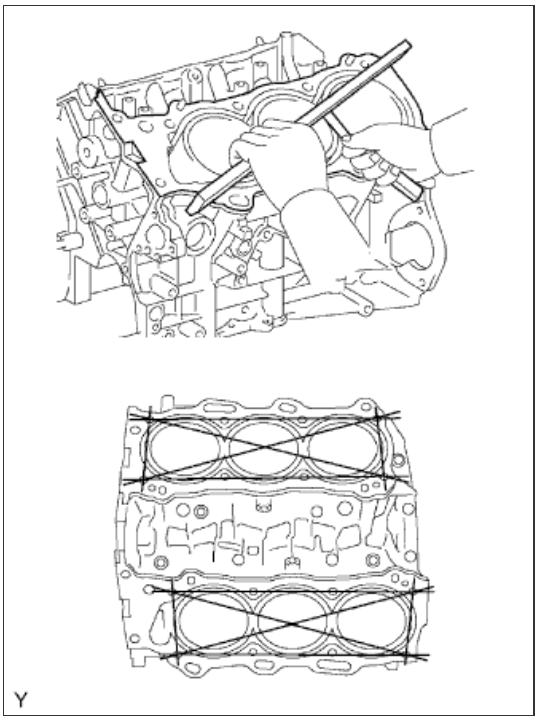


- **Push up on the cap little by little, alternating from the right and left side until the cap can be removed.**
- **Be careful not to damage the joint surfaces of the cylinder block and bearing cap.**

9. REMOVE CRANKSHAFT BEARING

10. REMOVE NO. 1 OIL NOZZLE SUB-ASSEMBLY

a. Using a 5 mm hexagon socket wrench, remove the 3 bolts and 3 oil nozzles.



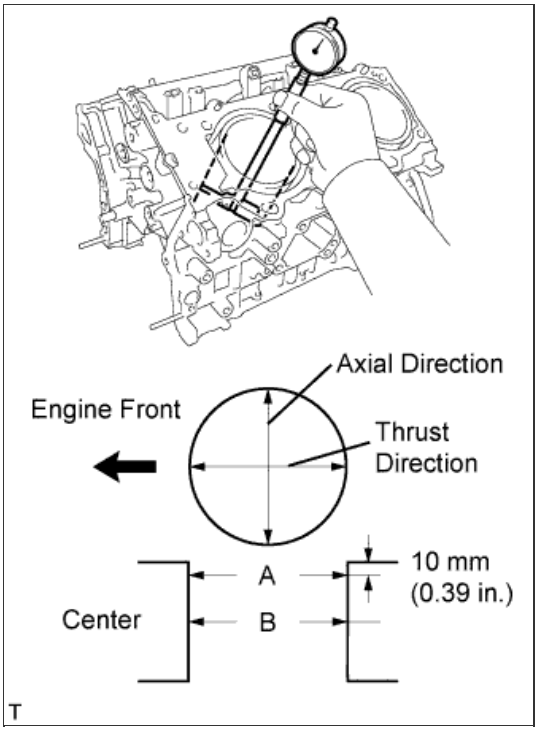
for Preparation Click here

1. INSPECT CYLINDER BLOCK FOR FLATNESS

a. Using a precision straightedge and feeler gauge, measure the warpage of the contact surface of the cylinder head gasket.

Maximum warpage:
0.05 mm (0.00197 in.)

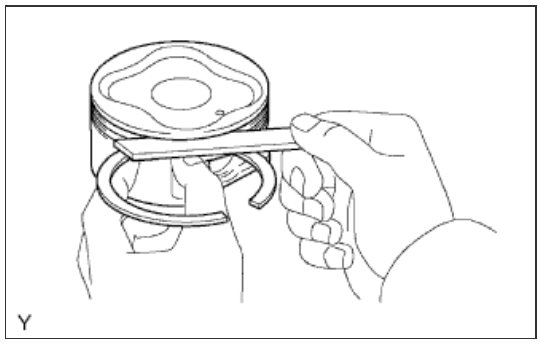
If the warpage is more than the maximum, replace the cylinder block.



2. INSPECT CYLINDER BORE

a. Using a cylinder gauge, measure the cylinder bore diameter at positions A and B in the thrust and axial directions.

Standard diameter:
94.000 to 94.012 mm (3.7008 to 3.7013 in.)



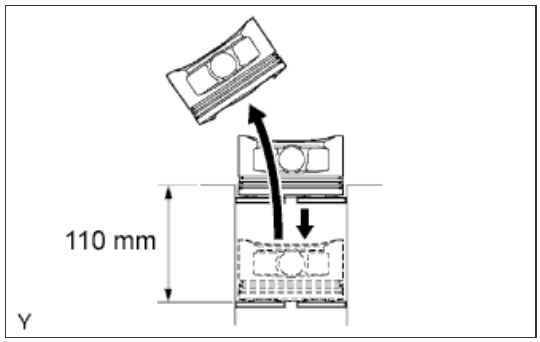
Maximum diameter:
94.132 mm (3.7060 in.)

If the diameter is more than the maximum, replace the cylinder block.

3. INSPECT RING GROOVE CLEARANCE

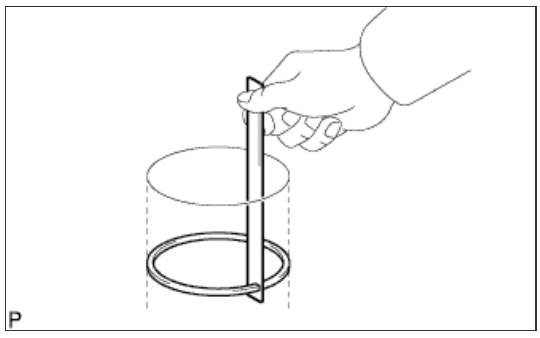
a. Using a feeler gauge, measure the clearance between a new piston ring and the wall of the ring groove.

Standard Ring Groove Clearance:



Item	Specified Condition
No. 1 Compression Ring	0.02 to 0.07 mm (0.0007 to 0.00276 in.)
No. 2 Compression Ring	0.02 to 0.06 mm (0.0007 to 0.00236 in.)
Oil Ring	0.07 to 0.15 mm (0.00276 to 0.00590 in.)

If the clearance is not as specified, replace the piston with pin sub-assembly.



4. INSPECT PISTON RING END GAP

a. Insert the piston ring into the cylinder bore.

b. Using a piston, push the piston ring a little beyond the bottom of the ring travel, 110 mm (4.33 in.) from the top of the cylinder block.

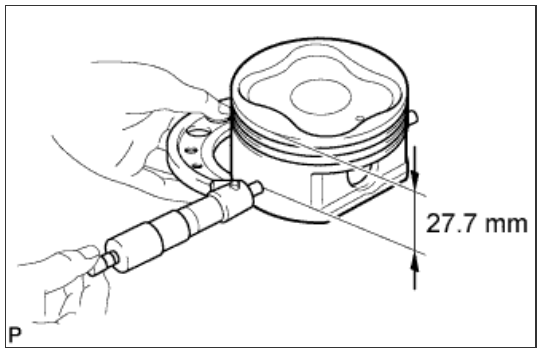
c. Using a feeler gauge, measure the end gap.

Standard End Gap:

Item	Specified Condition
No. 1 Compression Ring	0.30 to 0.40 mm (0.011 to 0.0157 in.)
No. 2 Compression Ring	0.40 to 0.50 mm (0.0157 to 0.0197 in.)
Oil Ring (side rail)	0.10 to 0.40 mm (0.00394 to 0.0157 in.)

Maximum End Gap:

Item	Specified Condition
No. 1 Compression Ring	1.0 mm (0.0394 in.)
No. 2 Compression Ring	1.1 mm (0.0433 in.)
Oil Ring (side rail)	1.0 mm (0.0394 in.)



If the end gap is more than the maximum, replace the piston ring. If the end gap is more than the maximum even with a new piston ring, rebore all 6 cylinders or replace the cylinder block sub-assembly.

5. INSPECT PISTON WITH PIN SUB-ASSEMBLY

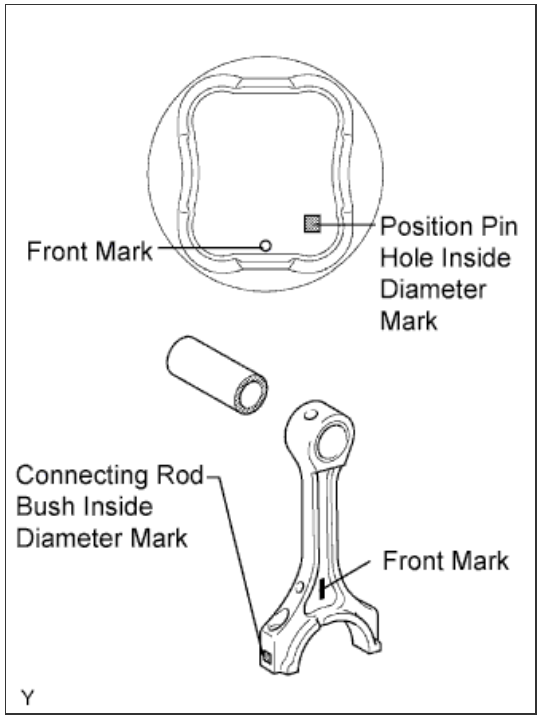
a. Using a micrometer, measure the piston diameter at a right angle to the piston pin center line, 27.7 mm (1.091 in.) from the piston head.

Piston diameter:

93.910 to 93.920 mm (3.6972 to 3.6976 in.)

6. INSPECT PISTON OIL CLEARANCE

a. Subtract the piston diameter measurement from the cylinder bore diameter measurement.

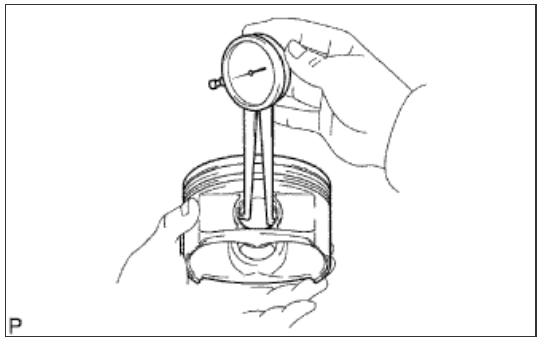


Standard oil clearance:
0.080 to 0.102 mm (0.00315 to 0.00401 in.)

Maximum oil clearance:
0.13 mm (0.00512 in.)

If the oil clearance is more than the maximum, replace all 6 pistons. If necessary, replace the cylinder block.

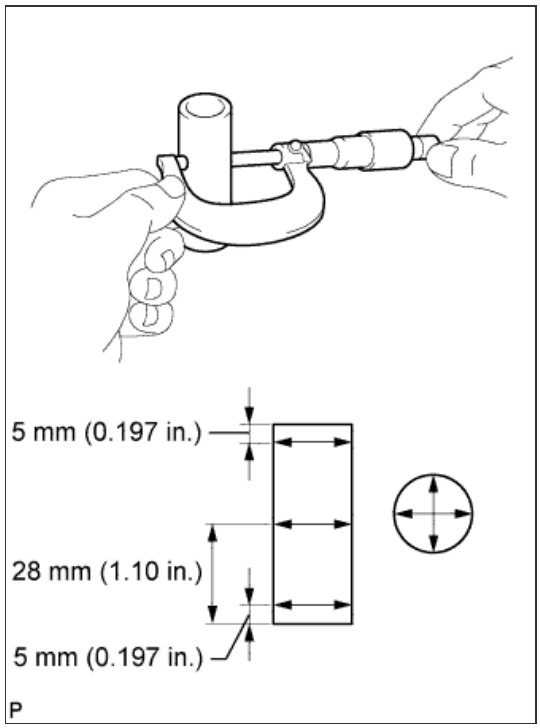
7. INSPECT PISTON PIN OIL CLEARANCE



a. Check each mark on the piston and connecting rod.

b. Using a caliper gauge, measure the inside diameter of the piston pin hole.

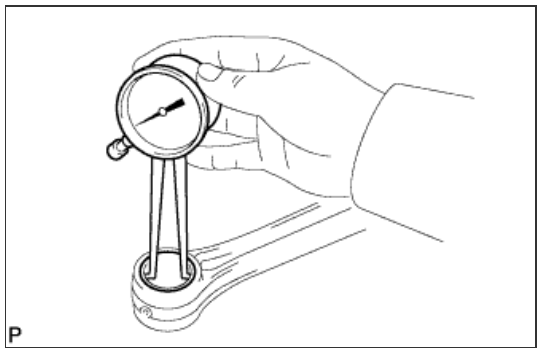
Standard Piston Pin Hole Inside Diameter:



Mark	Specified Condition
A	22.001 to 22.004 mm (0. 1 to 0. 0 in.)
B	22.005 to 22.007 mm (0. to 0. in.)
C	22.00 to 22.010 mm (0. to 0. in.)

c. Using a micrometer, measure the piston pin diameter.

Standard Piston Pin Diameter:



Mark	Specified Condition
A	21.997 to 22.000 mm (0. 02 to 0. 14 in.)
B	22.001 to 22.003 mm (0. 1 to 0. in.)
C	22.004 to 22.006 mm (0. 0 to 0. in.)

d. Using a caliper gauge, measure the inside diameter of the connecting rod bush.

Standard Bush Inside Diameter:

Mark	Specified Condition
A	22.005 to 22.00 mm (0. to 0. in.)
B	22.009 to 22.011 mm (0. to 0. in.)
C	22.012 to 22.014 mm (0. 1 to 0. in.)

e. Subtract the piston pin diameter measurement from the piston pin hole diameter measurement.

Standard oil clearance:
0.001 to 0.007 mm (0.0000394 to 0.000276 in.)

Maximum oil clearance:
0.040 mm (0.00157 in.)

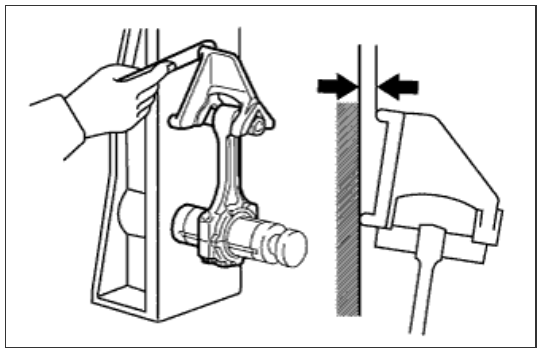
If the oil clearance is more than the maximum, replace the piston and piston pin as a set.

f. Subtract the piston pin diameter measurement from the bush inside diameter measurement.

Standard oil clearance:
0.005 to 0.011 mm (0.000197 to 0.000433 in.)

Maximum oil clearance:
0.050 mm (0.00197 in.)

If the oil clearance is more than the maximum, replace the bush (Click here). If necessary, replace the connecting rod and piston pin as a set.

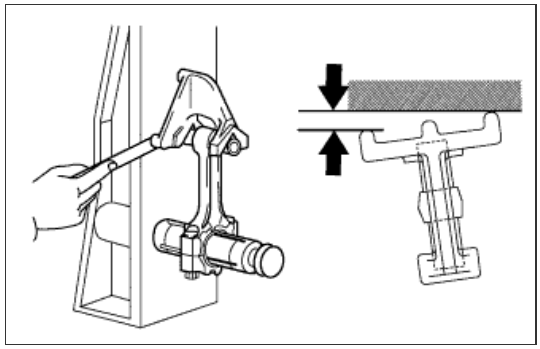


8. INSPECT CONNECTING ROD SUB-ASSEMBLY

a. Using a rod aligner and feeler gauge, check the connecting rod alignment.

i. Check for bend.

Maximum bend:
0.05 mm (0.00197 in.) per 100 mm (3.94 in.)

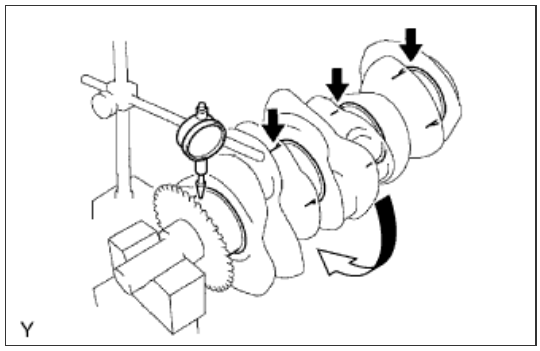


If the bend is more than the maximum, replace the connecting rod sub-assembly.

ii. Check for twist.

Maximum twist:
0.15 mm (0.00591 in.) per 100 mm (3.94 in.)

If the twist is more than the maximum, replace the connecting rod sub-assembly.



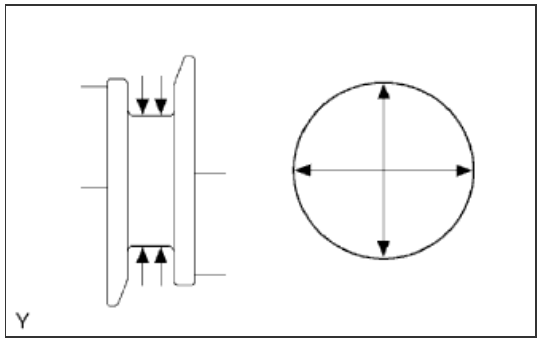
9. INSPECT CRANKSHAFT

a. Using a dial indicator and V-blocks, measure the runout as shown in the illustration.

Maximum circle runout:
0.06 mm (0.00236 in.)

If the circle runout is more than the maximum, replace the crankshaft.

b. Using a micrometer, measure the diameter of each main journal.



Standard diameter:
71.988 to 72.000 mm (2.8342 to 2.8346 in.)

If the diameter is not as specified, check the oil clearance. If necessary, replace the crankshaft.

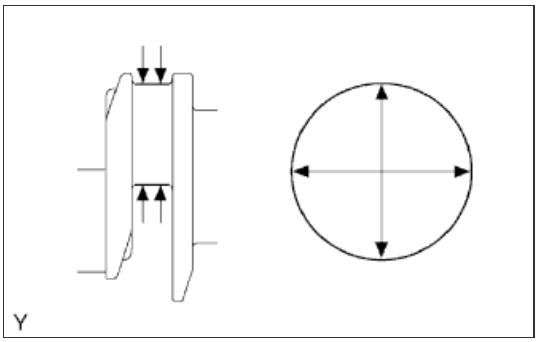
c. Check each main journal for taper and out-of-round as shown in the illustration.

Maximum taper and out-of-round:
0.02 mm (0.000787 in.)

If the taper and out-of-round is more than the maximum, replace the crankshaft.

d. Using a micrometer, measure the diameter of each crank pin.

Standard diameter:
55.992 to 56.000 mm (2.2044 to 2.2047 in.)

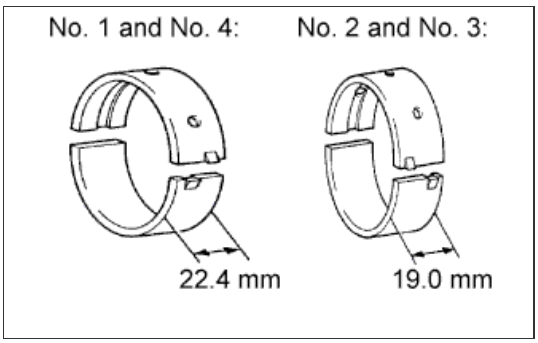


If the diameter is not as specified, check the oil clearance. If necessary, replace the crankshaft.

e. Check each crank pin for taper and out-of-round as shown in the illustration.

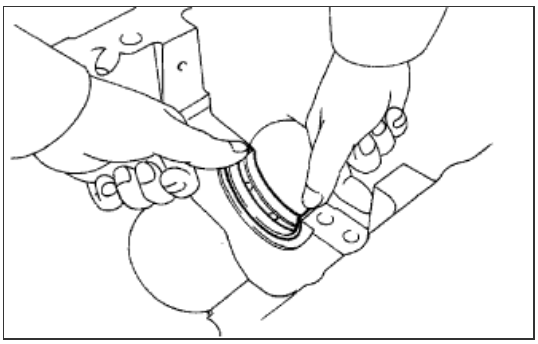
Maximum taper and out-of-round:

0.02 mm (0.000787 in.)



If the taper and out-of-round is more than the maximum, replace the crankshaft.

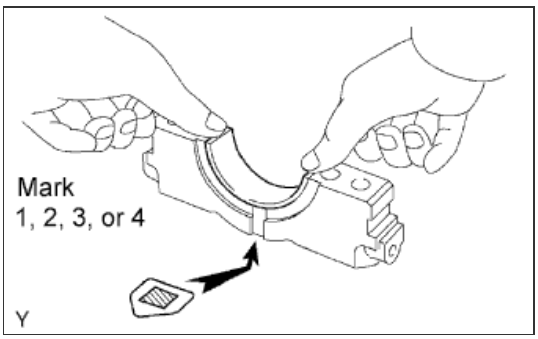
10. INSPECT CRANKSHAFT OIL CLEARANCE



HINT:

Main bearings come in widths of 19.0 mm (0.74 in.) and 22.4 mm (0. in.). Install the 22.4 mm (0. in.) bearings in the No. 1 and No. 4 cylinder block journal positions with the main bearing caps. Install the 19.0 mm (0.74 in.) bearings in the No. 2 and No. 3 positions.

a. Clean each main journal and bearing.



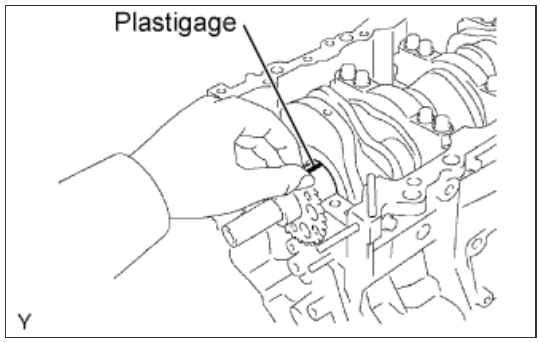
b. Align the bearing claw with the claw groove of the cylinder block, and push in the 4 upper bearings.

NOTICE:

- **Do not apply engine oil to the bearings and contact surfaces.**
- **Do not allow coolant to come into contact with the bearing inner surface.**
- **If any coolant comes into contact with the bearing inner surface, replace the bearing with a new one.**

c. Align the bearing claw with the claw groove of the main bearing cap, and push in the 4 lower bearings.

NOTICE:

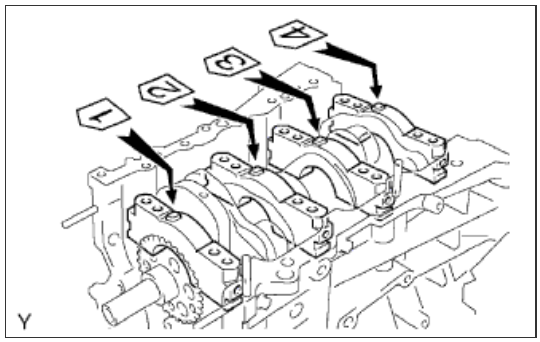


- **Do not apply engine oil to the bearings and contact surfaces.**
- **Do not allow coolant to come into contact with the bearing inner surface.**
- **If any coolant comes into contact with the bearing inner surface, replace the bearing with a new one.**

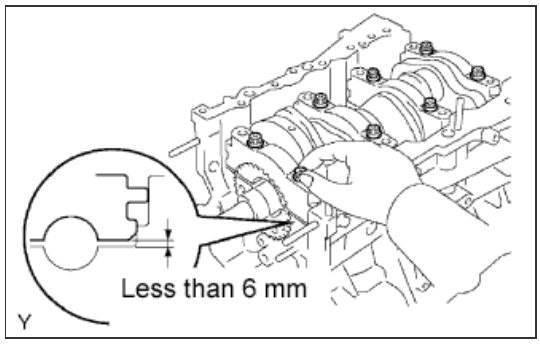
HINT:

A number marked on each main bearing cap indicates the installation position.

d. Place the crankshaft on the cylinder block.

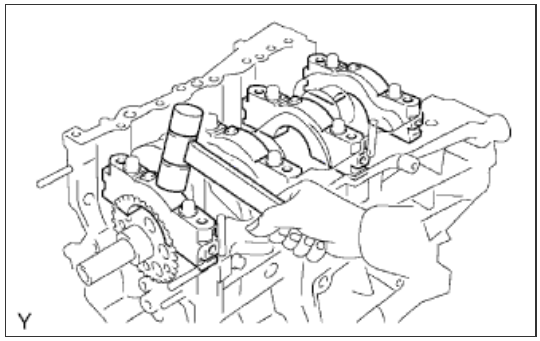


e. Lay a strip of Plastigage across each journal.

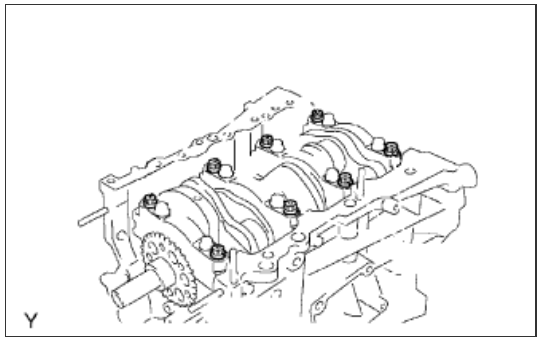


f. xamine the front marks and numbers and set the crankshaft bearing caps on the cylinder block.

g. Apply a light coat of engine oil to the threads of the crankshaft bearing cap bolts.

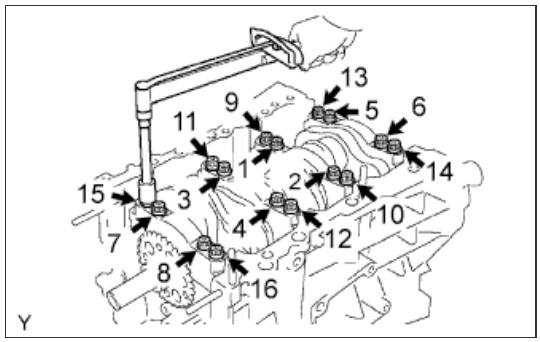


h. emporarily install the crankshaft bearing cap bolts to the inside positions.



i. ghten the 2 bolts for each bearing cap until the clearance between the crankshaft bearing cap and the cylinder block becomes less than 6 mm (0.236 in.).

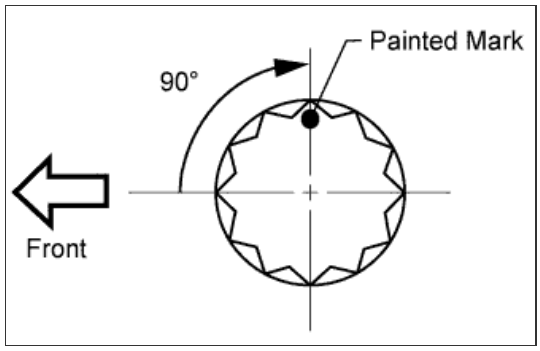
j. Using a plastic-faced hammer, lightly tap the crankshaft bearing cap to ensure a proper fit.



k. Apply a light coat of engine oil to the threads of the crankshaft bearing bolts and temporarily install the crankshaft bearing cap bolts to the outside positions.

l. Step 1:

i. Uniformly tighten the 16 bolts in several steps in the order shown in the illustration.

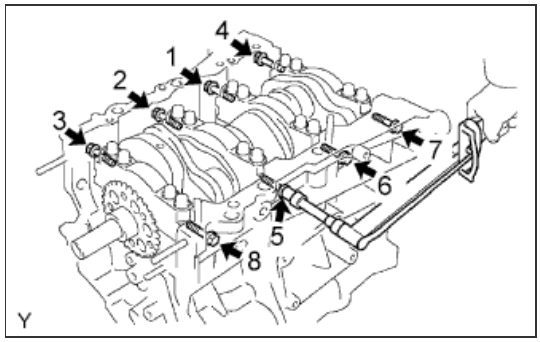


Torque:
61 N*m{ 622 kgf*cm , 45 ft.*lbf }

m. Step 2:

i. Mark the front side of the crankshaft bearing cap bolts with paint.

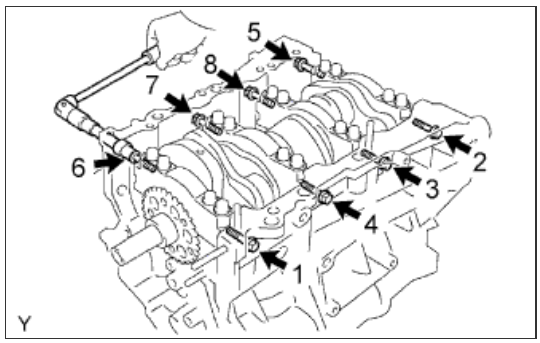
ii. ghten the bearing cap bolts 90° in the order shown in step 1.



n. Check that the painted marks are now at a 90° angle to the front.

NOTICE:

Do not turn the crankshaft.



o. Install and uniformly tighten the crankshaft bearing cap bolts in several steps in the sequence shown in the illustration.

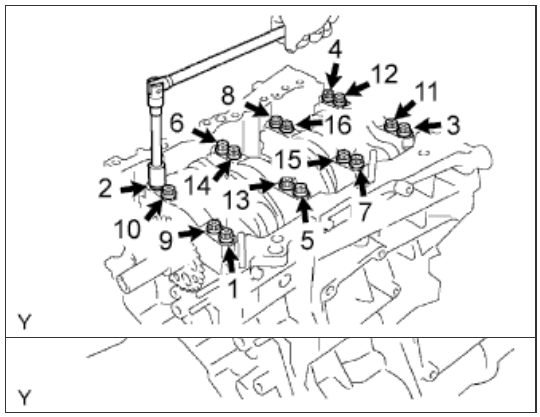
Torque:
26 N*m{ 262 kgf*cm , 19 ft.*lbf }

p. Remove the crankshaft bearing caps.

i. Step 1:
Uniformly loosen and remove the bearing cap bolts in the sequence shown in the illustration.

ii. Step 2:
Uniformly loosen and remove the 16 bearing cap bolts in the sequence shown in the illustration.

q. Measure the Plastigage at its widest point.



Standard oil clearance:
0.018 to 0.030 mm (0.000709 to 0.00118 in.)

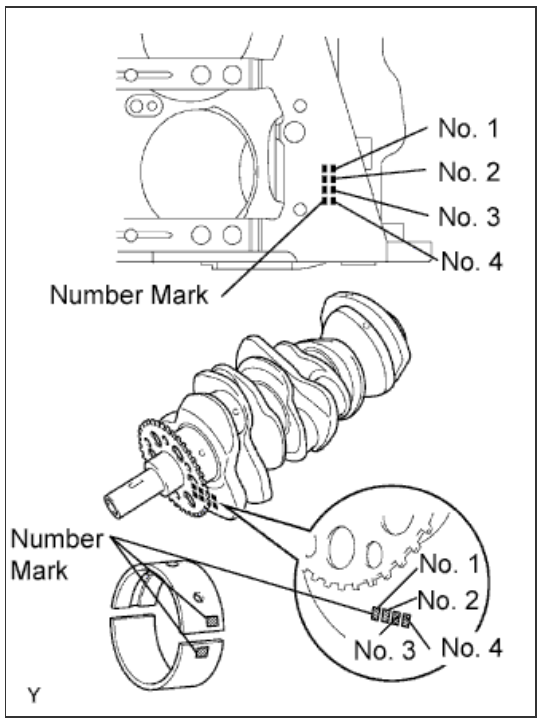
Maximum clearance:
0.046 mm (0.00181 in.)

If the oil clearance is more than the maximum, replace the bearings. If necessary, replace the crankshaft.

NOTICE:

Completely remove the Plastigage.

r. If replacing a bearing, replace it with one that has the same number. If the number of the bearing cannot be determined, select the correct bearing by adding together the numbers imprinted on the cylinder block and crankshaft, then refer to the table below for the appropriate bearing number. here are 5 sizes of standard bearings, marked "1", "2", "3", "4" and "5" accordingly.



Journal Bearings:

Cylinder block (A) Crankshaft (B)	Use Bearing
0 - 5	"1"
6 - 11	"2"
12 - 17	"3"
1	

HINT:

xample:

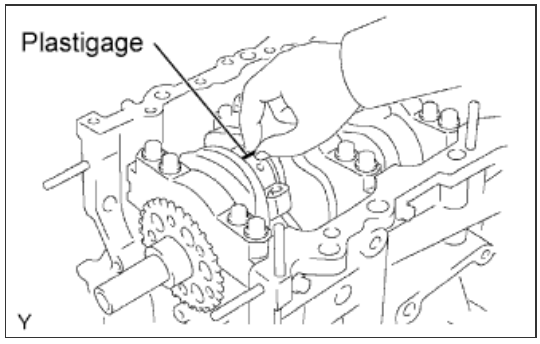
Cylinder block "11" (A) Crankshaft "06" (B) otal number 17 (Use bearing "3")

Standard Journal Diameter:

Item	Mark	Specified Condition
Cylinder block main journal bore diameter (A)	"00"	77.000 mm (3.03149 in.)
	"01"	77.001 mm (3.03152 in.)
	"02"	77.002 mm (3.03156 in.)
	"03"	77.003 mm (3.03160 in.)
	"04"	77.004 mm (3.03164 in.)
	"05"	77.005 mm (3.0316 in.)
	"06"	77.006 mm (3.03172 in.)
	"07"	77.007 mm (3.03176 in.)
	"0	.00 mm (3.031 0 in.)
	"09"	77.009 mm (3.031 in.)
	"10"	77.010 mm (3.031 in.)
	"11"	77.011 mm (3.03192 in.)
	"12"	77.012 mm (3.0396 in.)
	"13"	77.013 mm (3.03200 in.)
	"14"	77.014 mm (3.03204 in.)
	"15"	77.015 mm (3.0320 in.)
	"16"	77.016 mm (3.03211 in.)
	"00"	71.999 to 72.000 mm (2. 0 to 2. in.)

Crankshaft main journal diameter (B)	"01"	71.99 to 71.999 mm (2. to 2. 0 in.)
	"02"	71.997 to 71.99 mm (2. to 2. in.)
	"03"	71.996 to 71.997 mm (2. to 2. in.)
	"04"	71.995 to 71.996 mm (2. 0 to 2. in.)
	"05"	71.994 to 71.995 mm (2. 0 to 2. in.)
	"06"	71.993 to 71.994 mm (2. to 2. 0 in.)
	"07"	71.992 to 71.993 mm (2. to 2. in.)
	"0	1.991 to 71.992 mm (2. to 2. in.)
	"09"	71.990 to 71.991 mm (2. to 2. in.)
	"10"	71.9 to 71.990 mm (2. 0 to 2. in.)
	"11"	71.9 to 71.9 mm (2. 16 to 2. 0 in.)

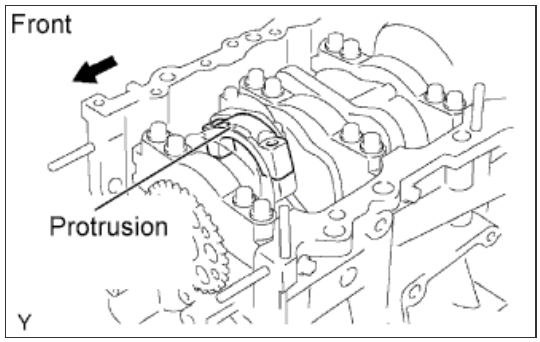
Standard Bearing Center Wall Thickness:



Mark	Specified Condition
"1"	2.4 to 2.491 mm (0.09 0 to 0.09 1 in.)
"2"	2.491 to 2.494 mm (0.09 1 to 0.09 in.)
"3"	2.494 to 2.497 mm (0.09 to 0.09 in.)
"4"	2.497 to 2.500 mm (0.09 to 0.09 in.)
"5"	2.500 to 2.503 mm (0.09 to 0.09 in.)

11. INSPECT CONNECTING ROD OIL CLEARANCE

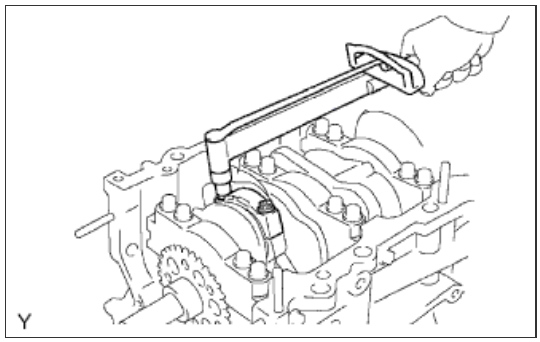
a. Install the crankshaft bearing (Click here).



b. Install the crankshaft (Click here).

c. Lay a strip of Plastigage across the crank pin.

d. Set the connecting rod cap so that the protrusion is facing the correct direction.

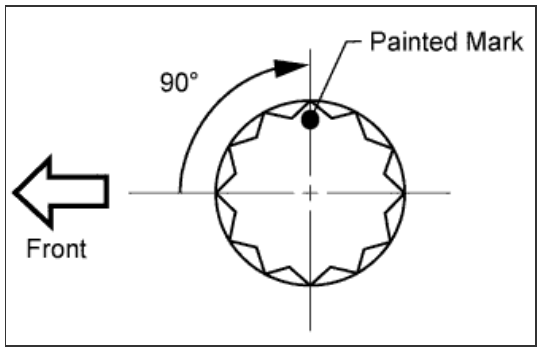


e. Apply a light coat of engine oil to the threads of the connecting rod cap bolts.

f. Step 1:

i. Install and alternately tighten the bolts of the connecting rod cap in several steps.

Torque:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }



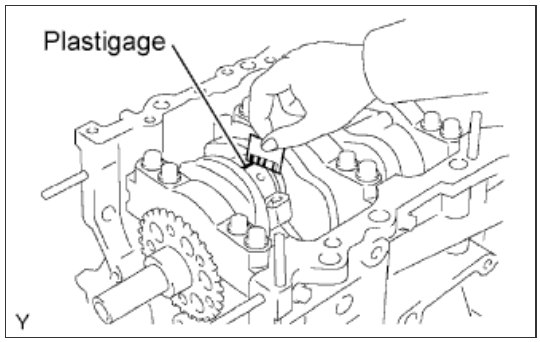
g. Step 2:

i. Mark the front side of each connecting rod cap bolt with paint.

ii. ghten the bearing cap bolts in step 1 90°.

h. Remove the 2 bolts, connecting rod cap and lower bearing.

i. Measure the Plastigage at its widest point.

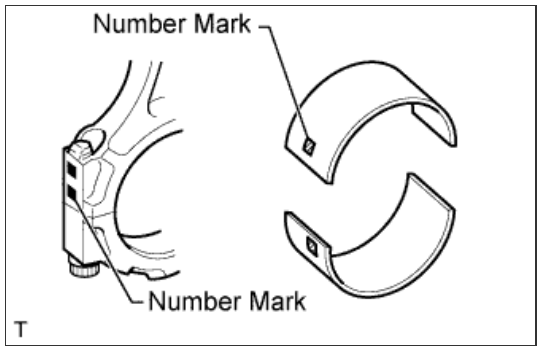


Standard oil clearance:
0.026 to 0.046 mm (0.00102 to 0.00181 in.)

Maximum oil clearance:
0.066 mm (0.00260 in.)

If the oil clearance is more than the maximum, replace the bearings. If necessary, replace the crankshaft.

NOTICE:



Completely remove the Plastigage.

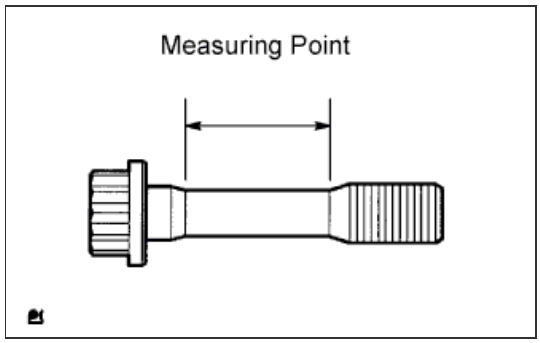
j. If replacing a bearing, replace it with one that has the same number marked on the connecting rod. here are 4 sizes of standard bearings, marked "1 ", "2", "3" and "4" accordingly.

Standard Bearing Center Wall Thickness:

Mark	Specified Condition
1	1.4 to 1.4 mm (0.05 to 0.05 in.)
2	1.4 to 1.490 mm (0.05 to 0.05 in.)
3	1.490 to 1.493 mm (0.05 to 0.05 in.)
4	1.493 to 1.496 mm (0.05 to 0.05900 in.)

k. Remove the crankshaft (Click here).

l. Remove the crankshaft bearing.



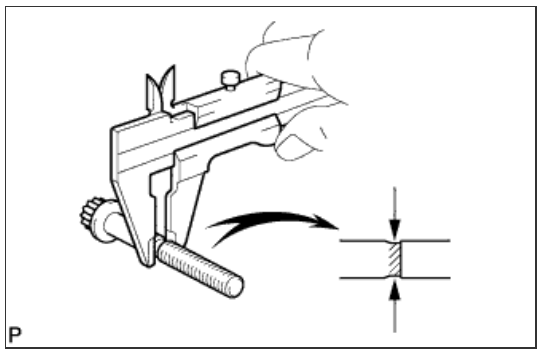
12. INSPECT CONNECTING ROD BOLT

a. Using a vernier caliper, measure the tension portion diameter of the bolt.

Standard diameter:
7.2 to 7.3 mm (0.283 to 0.287 in.)

Minimum diameter:
7.0 mm (0.276 in.)

If the diameter is less than the minimum, replace the connecting rod bolt.



13. INSPECT CRANKSHAFT BEARING CAP SET BOLT

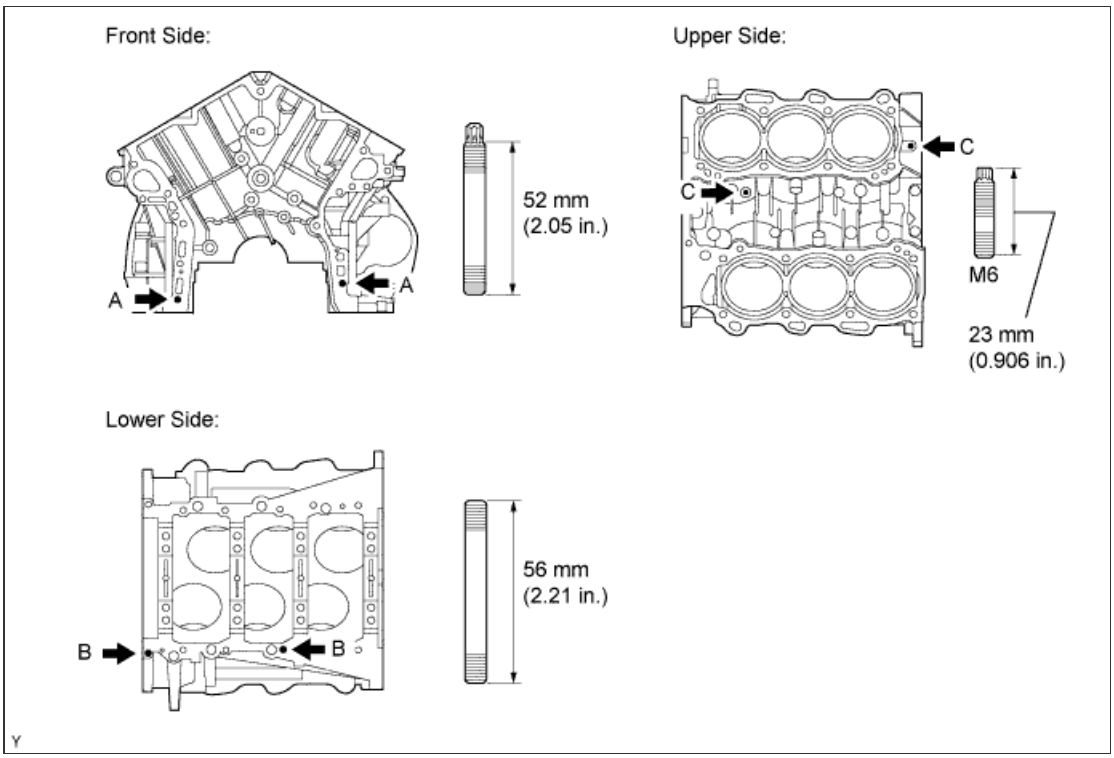
a. Using a vernier caliper, measure the tension portion diameter of the bolt.

Standard diameter:
10.0 to 10.2 mm (0.394 to 0.402 in.)

If the diameter is less than the minimum, replace the crankshaft bearing cap set bolt.

for Preparation Click here

1. REPLACE STUD BOLT



NOTICE:

If a stud bolt is deformed or its threads are damaged, replace it.

a. Remove the stud bolts.

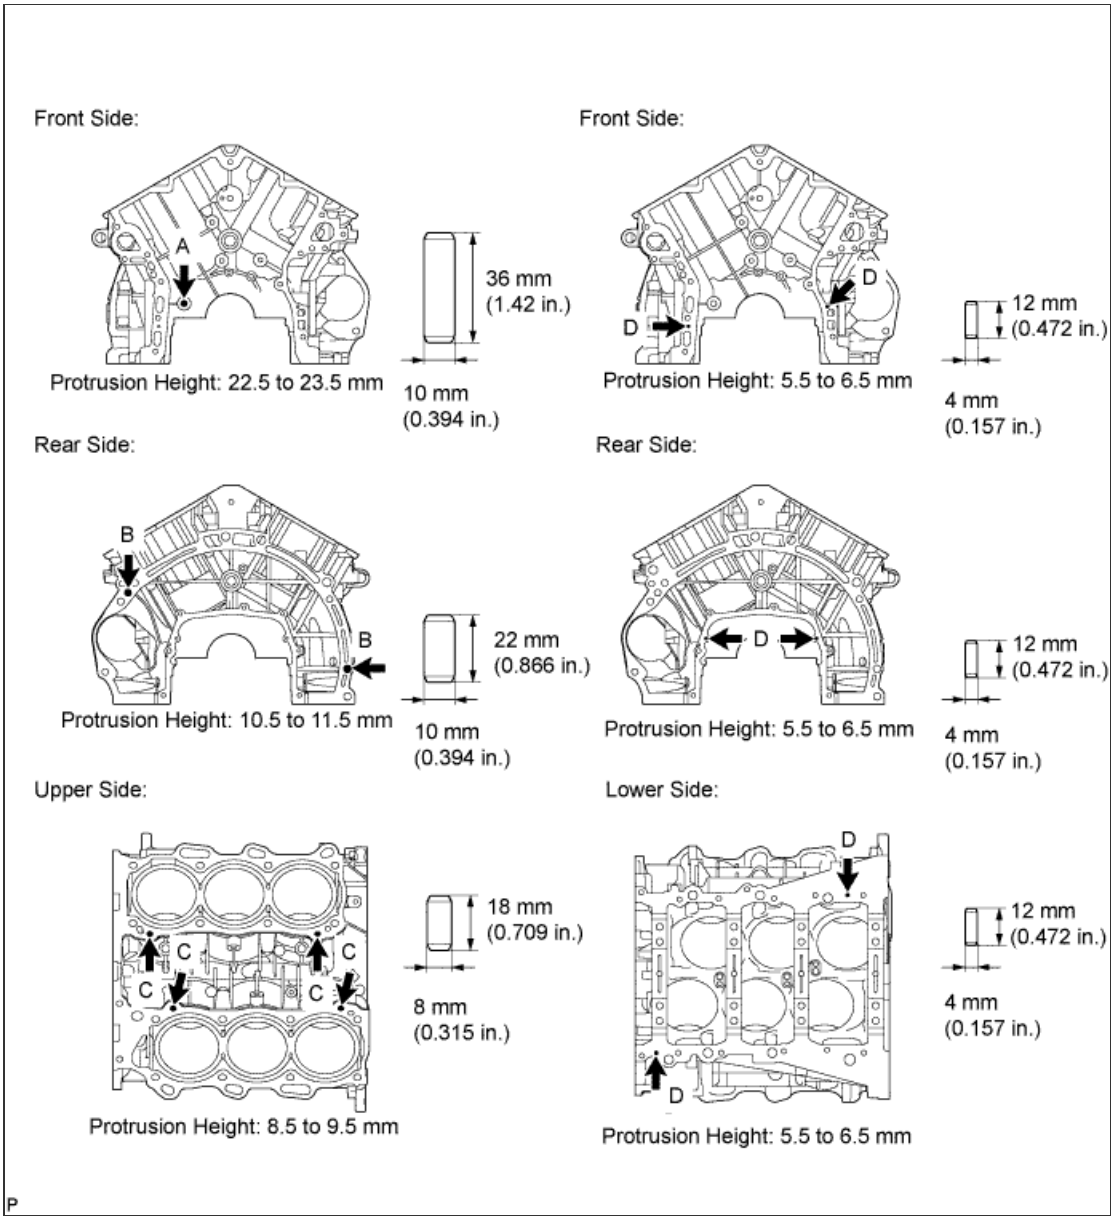
b. Install new stud bolts.

Torque:
for stud bolt A and B:
11 N*m{ 112 kgf*cm , 8 ft.*lbf }
for stud bolt C:
4.0 N*m{ 41 kgf*cm , 35 in.*lbf }

2. REPLACE STRAIGHT PIN

NOTICE:

It is not necessary to remove the straight pin unless it is being replaced.



a. Remove the straight pins.

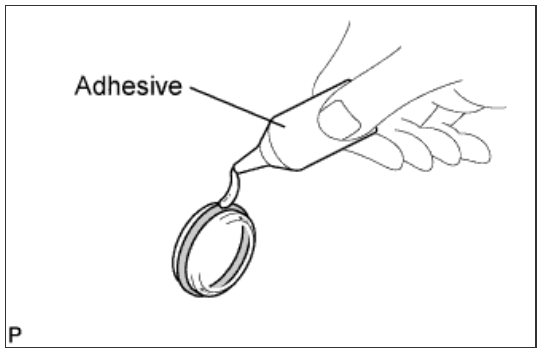
b. Using a plastic-faced hammer, tap in new straight pins to the cylinder block.

Standard Protrusion Height:

Item	Specified Condition
Pin "A"	22.5 to 23.5 mm (0.889 to

	0.925 in.)
Pin "B"	10.5 to 11.5 mm (0.413 to 0.453 in.)
Pin "C"	8.5 to 9.5 mm (0.335 to 0.374 in.)
Pin "D"	5.5 to 6.5 mm (0.217 to 0.256 in.)

3. REPLACE CYLINDER BLOCK TIGHT PLUG

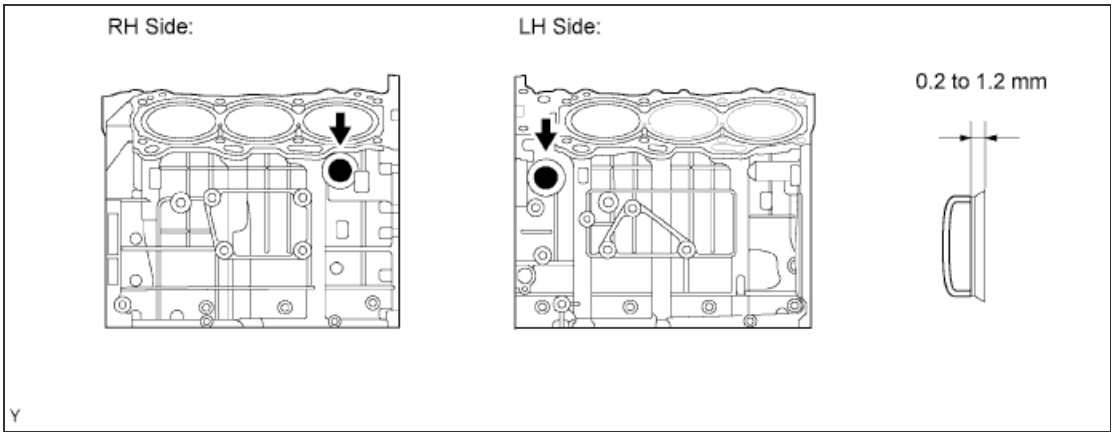


NOTICE:

If water leaks from the tight plug or the plug corrodes, replace it.

a. Remove the tight plugs.

b. Apply adhesive around new tight plugs.

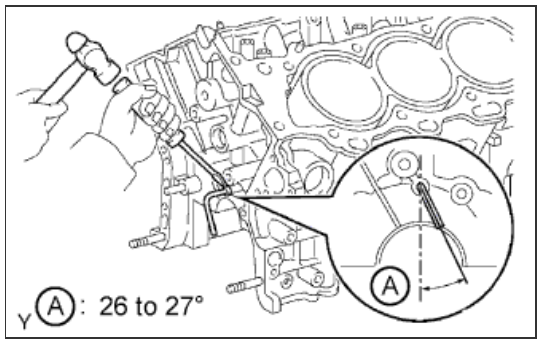


Adhesive:
To ota Genuine Adhesive 1324, Three Bond 1324 or equivalent

c. Using SST and a hammer, tap in the tight plugs to the standard depth.

SST
09950- 0010 09951-00350
09950-70010 09951-07150

Standard depth:
0.2 to 1.2 mm 0.00787 to 0.0472 in.

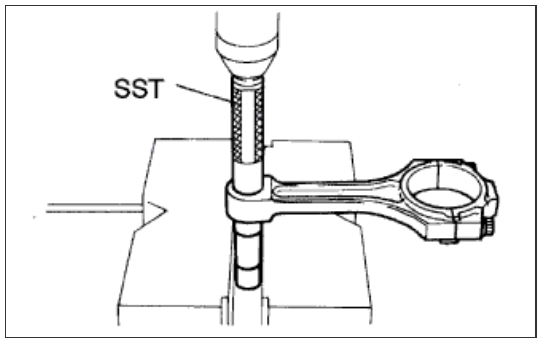


4. REPLACE OIL JET

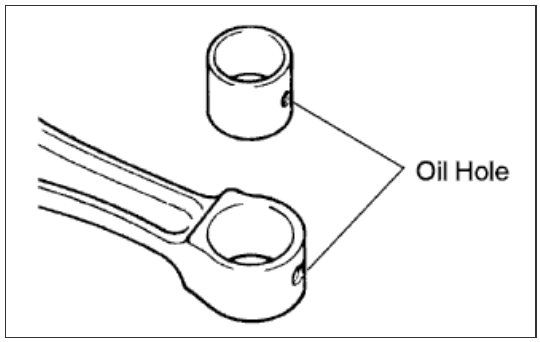
NOTICE:

It is not necessary to remove the oil jet unless it is being replaced.

a. Using a screwdriver and hammer, tap out the oil jet.



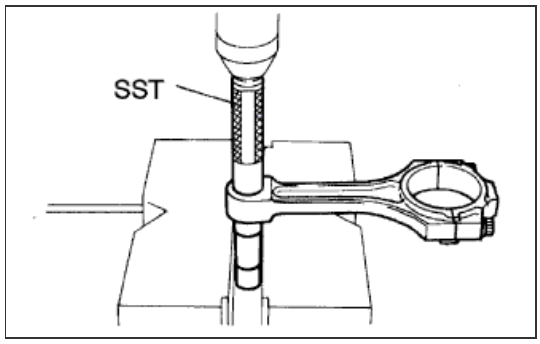
b. Using a screwdriver and hammer, tap in a new oil jet as shown in the illustration.



5. REPLACE CONNECTING ROD SMALL END BUSH

a. Using SST and a press, press out the bush.

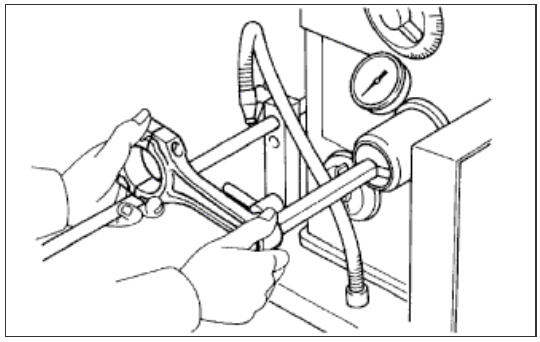
SST
09222-30010



b. Align the oil holes of a new bush and the connecting rod.

c. Using SST and a press, press in the bush.

SST
09222-30010

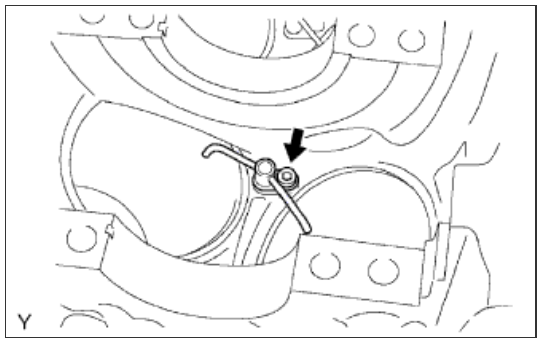


d. Using a pin hole grinder, hone the bush to obtain the standard oil clearance between the bush and piston pin.

Standard oil clearance:
0.005 to 0.011 mm 0.000197 to 0.000433 in.

HINT:

Check that the piston pin fits at a normal room temperature. Coat the piston pin with engine oil, and push it into the connecting rod with a thumb.

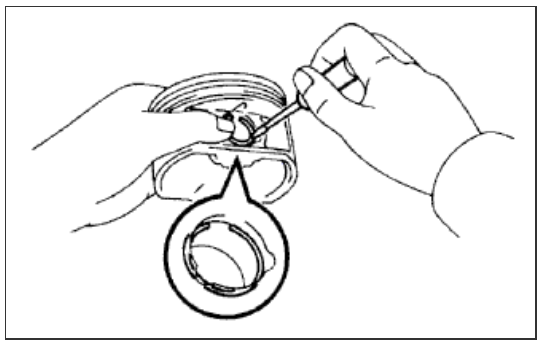


for Preparation Click here

1. INSTALL NO. 1 OIL NOZZLE SUB-ASSEMBLY

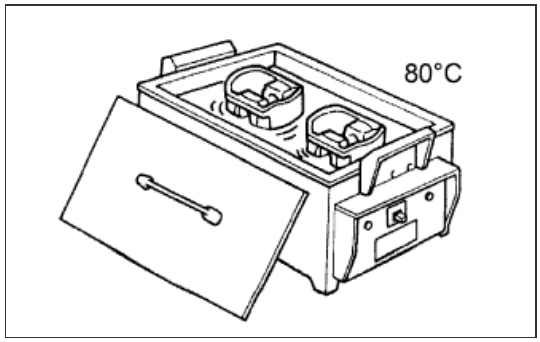
a. Using a 5 mm hexagon socket wrench, install the 3 oil nozzles with the 3 bolts.

Torque:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }



2. INSTALL PISTON PIN HOLE SNAP RING

a. Using a screwdriver, install a new snap ring on one side of the piston pin hole.

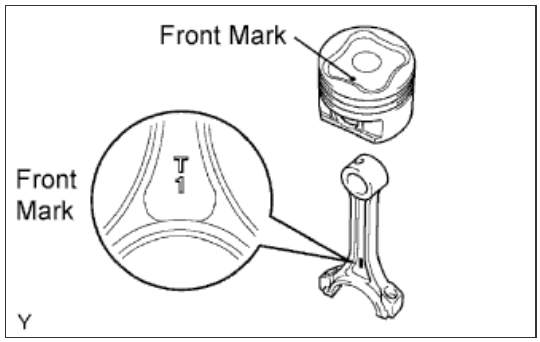


HINT:

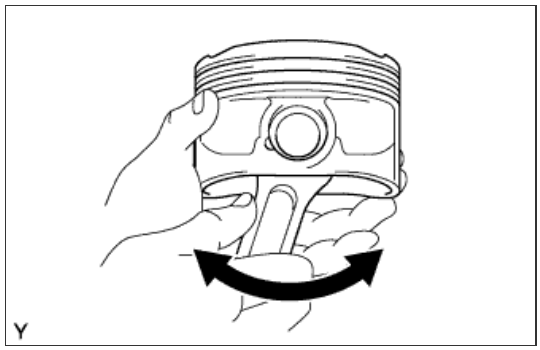
Be sure that the end gap of the snap ring is not aligned with the pin hole cutout portion of the piston.

3. INSTALL WITH PIN PISTON SUB-ASSEMBLY

a. Gradually heat the piston to approximately 80°C (176°F).



b. Coat the piston pin with engine oil.

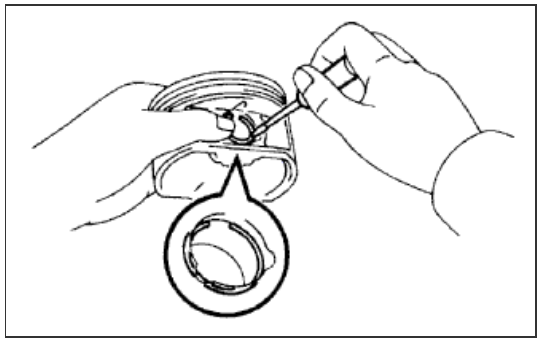


c. Align the front marks of the piston and connecting rod, and push in the piston pin with your thumb.

HINT:

The piston and pin are a matched set.

d. Check the fitting condition between the piston and piston pin by trying to move the piston back and forth on the piston pin.

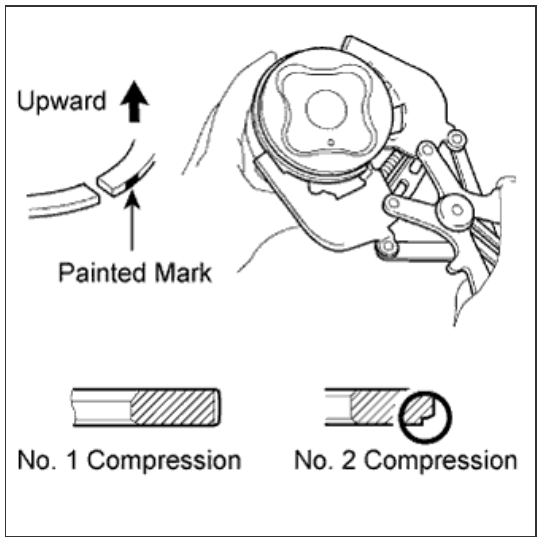


4. INSTALL PISTON PIN HOLE SNAP RING

a. Using a screwdriver, install a new snap ring at the other end of the piston pin hole.

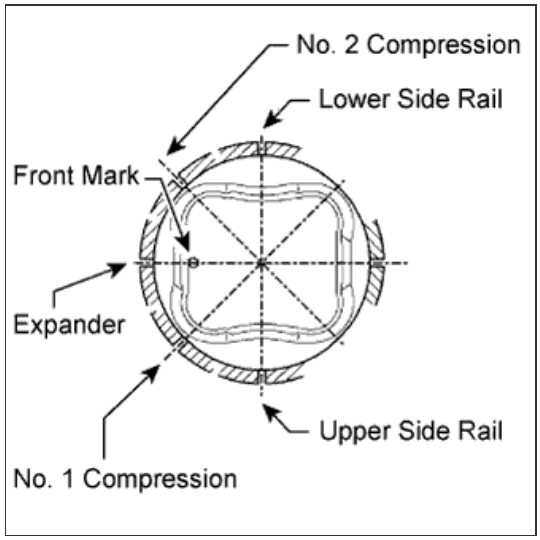
HINT:

Be sure that the end gap of the snap ring is not aligned with the pin hole cutout portion of the piston.



5. INSTALL PISTON RING SET

a. Install the oil ring (expander) and 2 side rails by hand.



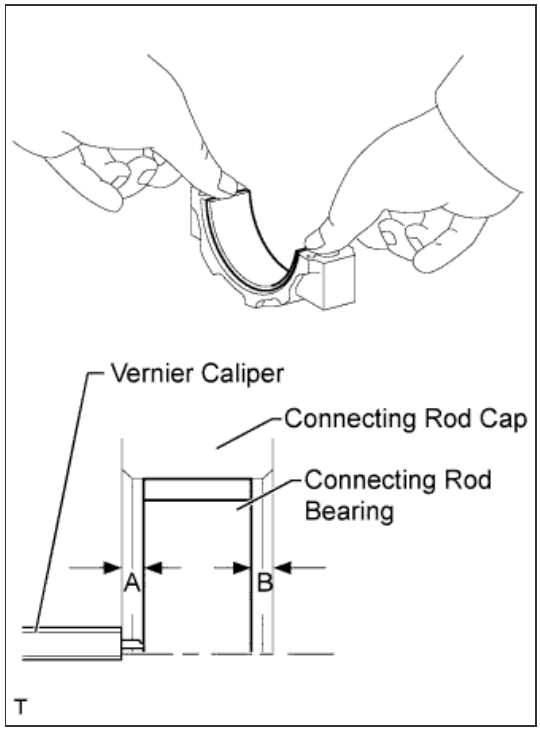
b. Using a piston ring expander, install the 2 compression rings.

NOTICE:

Install the No. 2 compression ring with the painted mark on the right side.

c. Position the piston rings so that the ring ends are as shown in the illustration.

6. INSTALL CONNECTING ROD BEARING



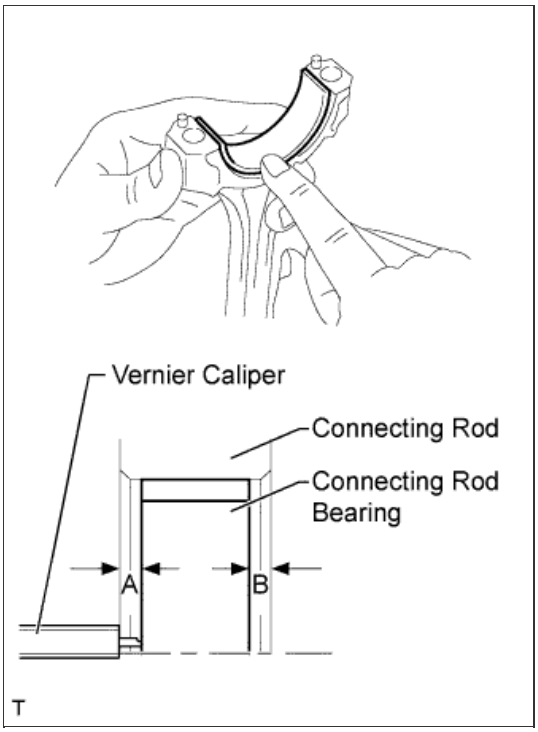
a. Install the bearing to the connecting rod cap.

b. Using a vernier caliper, measure the distance between the connecting rod cap edge and connecting rod bearing edge.

Dimension A - B or B - A:
0 to 0.7 mm (0 to 0.0276 in.)

NOTICE:

- **Clean the contact surface of the bearing and connecting rod cap.**
- **Do not apply engine oil to the bearing and its contact surface.**

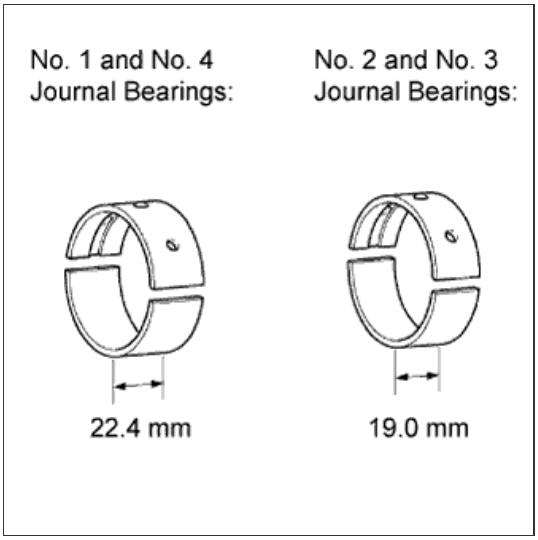


c. Install the bearing to the connecting rod.

d. Using a vernier caliper, measure the distance between the connecting rod edge and connecting rod bearing edge.

Dimension A - B or B - A:
0 to 0.7 mm (0 to 0.0276 in.)

NOTICE:



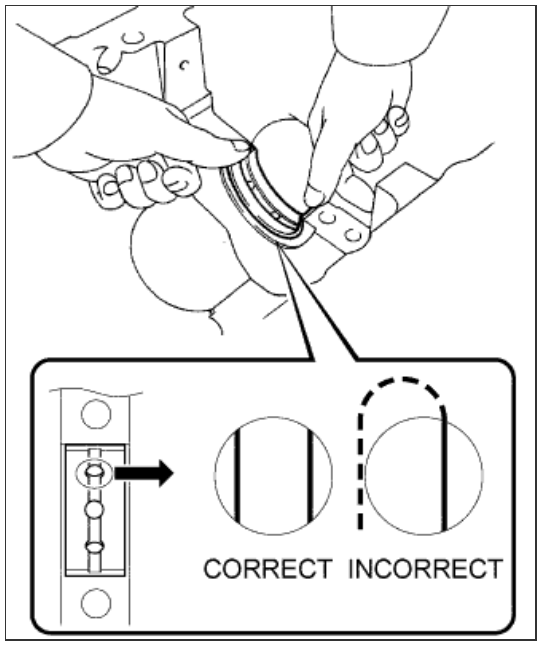
- **Clean the contact surface of the bearing and connecting rod.**
- **Do not apply engine oil to the bearing and its contact surface.**

7. INSTALL CRANKSHAFT BEARING

HINT:

Main bearings come in widths of 19.0 mm (0.748 in.) and 22.4 mm (0.882 in.). Install the 22.4 mm (0.882 in.) bearings in the No. 1 and No. 4 cylinder block journal positions with the bearing caps. Install the 19.0 mm (0.748 in.) bearings in the No. 2 and No. 3 positions.

a. Clean each main journal and bearing.



b. Install the upper bearing.

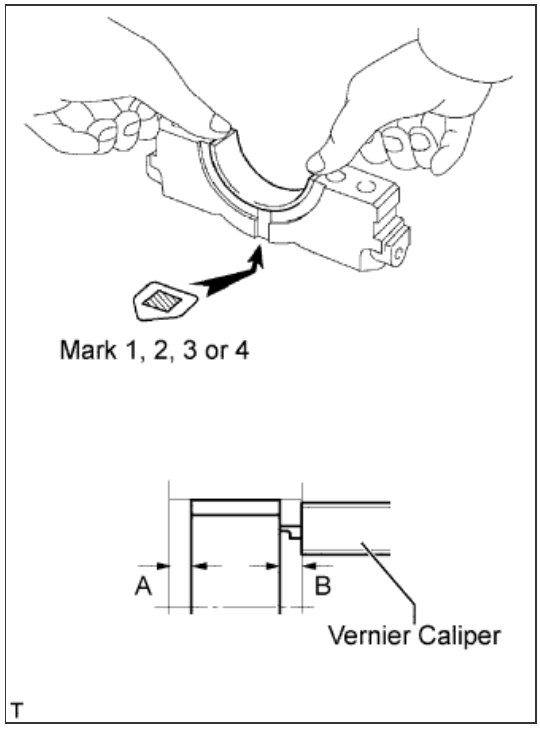
i. Install the upper bearing to the cylinder block as shown in the illustration.

NOTICE:

- **Do not apply engine oil to the bearings and the contact surface.**
- **Both sides of the oil groove in the cylinder block should be visible through the oil feed holes in the bearing. The amount visible on each side of the holes should be equal.**
- **Do not allow coolant to come into contact with the bearing inner surface.**
- **If any coolant comes into contact with the bearing**

inner surface, replace the bearing ith a ne one.

c. Install the lower bearing.



i. Install the lower bearings to the crankshaft bearing caps.

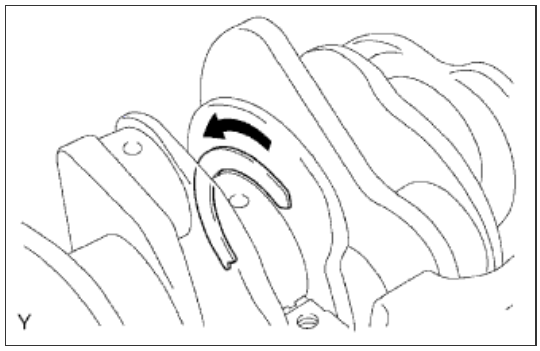
ii. Using a vernier caliper, measure the distance between the edge of the crankshaft bearing cap and the edge of the lower bearing.

Dimension A - B or B - A:
0 to 0.7 mm (0 to 0.0276 in.)

NOTICE:

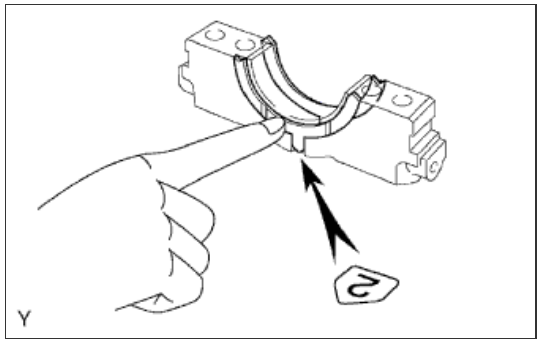
- **Do not apply engine oil to the bearings and the contact surfaces.**
- **Do not allo coolant to come into contact ith the bearing inner surface.**
- **If any coolant comes into contact ith the bearing inner surface, replace the bearing ith a ne one.**

8. INSTALL CRANKSHAFT



NOTICE:

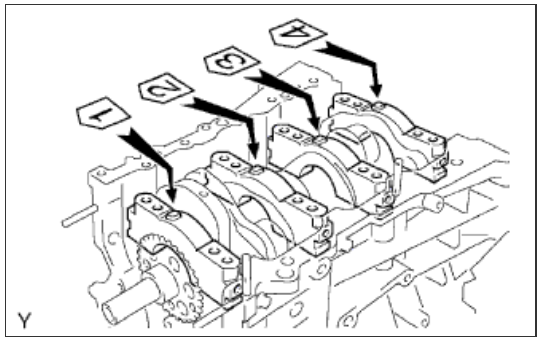
Clean the contact surface of each main journal and crank pin.



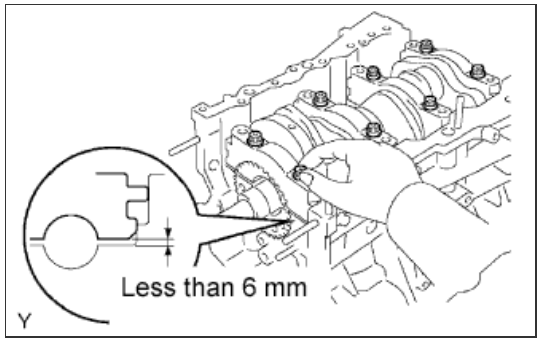
a. Apply new engine oil to the upper bearing and install the crankshaft to the cylinder block.

b. Push the crankshaft in the rear thrust direction to create clearance, and install a thrust washer to the No. 2 journal position with the oil groove facing the front of the engine.

c. Push the crankshaft in the forward thrust direction to create clearance, and install a thrust washer to the No. 2 journal position with the oil groove facing the rear of the engine.

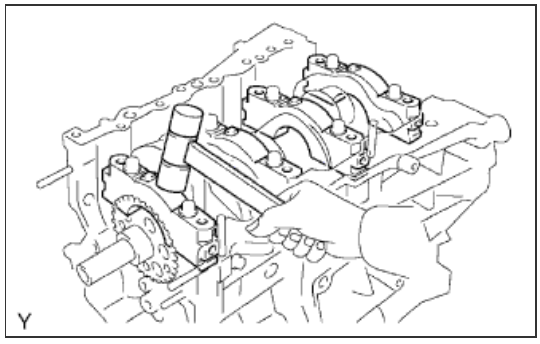


d. Install the 2 lower thrust washers on the No. 2 bearing cap with the grooves facing outward.

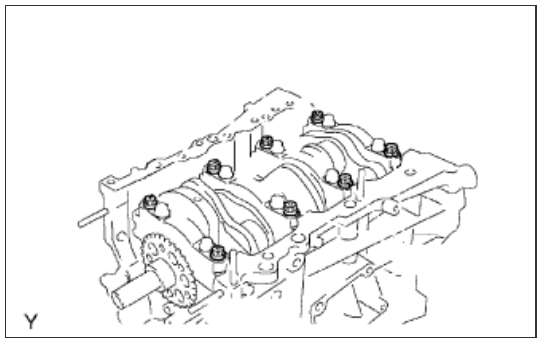


e. Examine the front marks and numbers and set the crankshaft bearing caps on the cylinder block.

f. Apply a light coat of engine oil to the threads of the crankshaft bearing cap bolts.

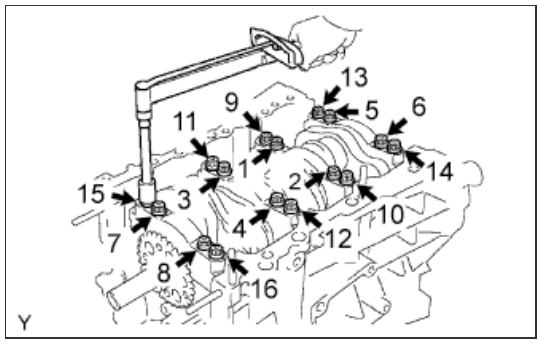


g. Temporarily install the 8 crankshaft bearing cap bolts to the inside positions.



h. Tighten the 2 bolts for each bearing cap until the clearance between the crankshaft bearing cap and the cylinder block becomes less than 6 mm (0.236 in.).

i. Using a plastic-faced hammer, lightly tap the crankshaft bearing cap to ensure a proper fit.

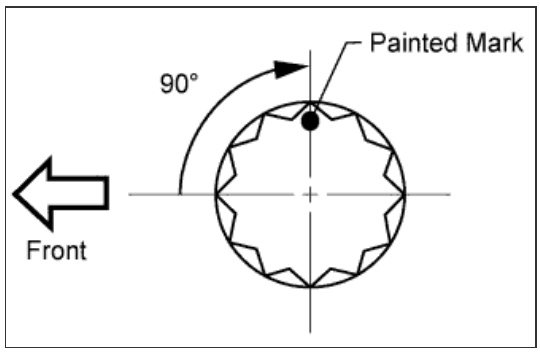


j. Apply a light coat of engine oil to the threads of the crankshaft bearing cap bolts and temporarily install the 8 crankshaft bearing bolts to the outside pistons.

k. Step 1:

i. Uniformly tighten the 16 bolts in the several steps in order shown in the illustration.

Torque:
61 N*m{ 622 kgf*cm , 45 ft.*lbf }

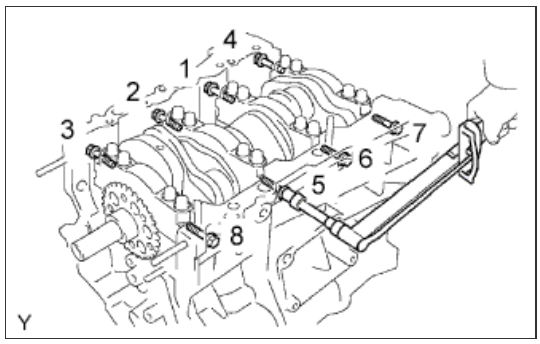


l. Step 2:

i. Mark the front side of the crankshaft bearing cap bolts with paint.

ii. Tighten the bearing cap bolts 90° in the order shown in step 1.

m. Check that the painted marks are now at a 90° angle to the front.



n. Check that the crankshaft turns smoothly.

o. Using several steps, install the 8 crankshaft bearing cap bolts uniformly in the sequence shown in the illustration.

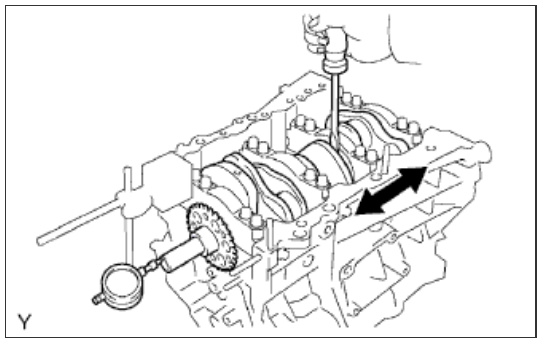
Torque:
26 N*m{ 262 kgf*cm , 19 ft.*lbf }

p. Check that the crankshaft turns smoothly.

9. INSPECT CRANKSHAFT THRUST CLEARANCE

a. Using a dial indicator, measure the thrust clearance while prying the crankshaft

back and forth with a screwdriver.

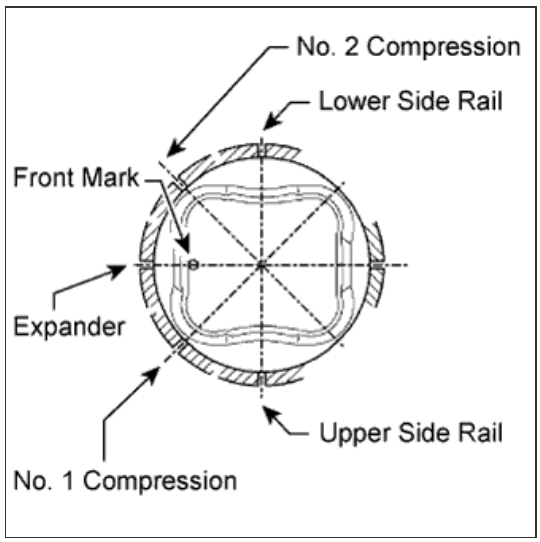


Standard thrust clearance:
0.04 to 0.24 mm (0.00157 to 0.00945 in.)

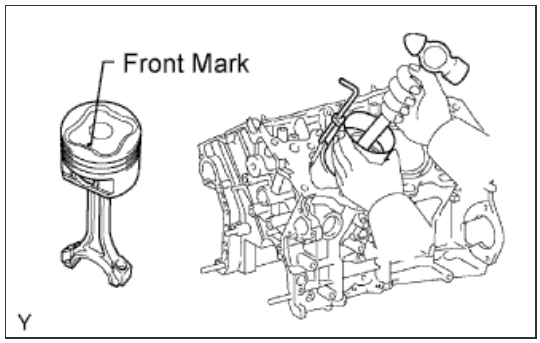
Maximum thrust clearance:
0.30 mm (0.0118 in.)

If the thrust clearance is more than the maximum, replace the thrust washers as a set.

Standard thrust washer thickness:
1.93 to 1.98 mm (0.0760 to 0.0780 in.)



If necessary, replace the crankshaft.

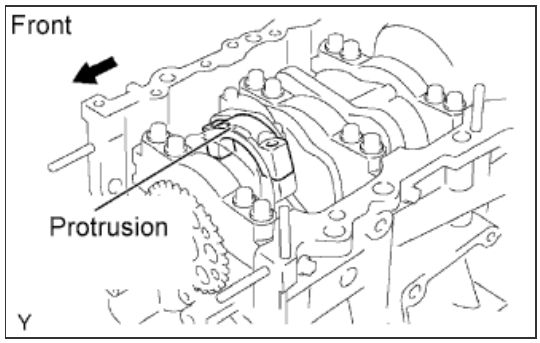


10. INSTALL PISTON SUB-ASSEMBLY WITH CONNECTING ROD

a. Apply engine oil to the cylinder walls, pistons, and surfaces of the connecting rod bearings.

b. Check the positions of the piston ring ends.

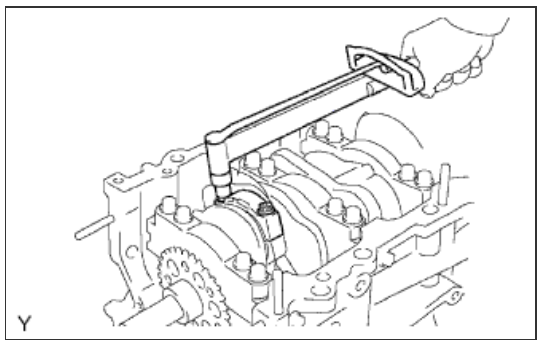
c. Using a hammer handle and piston ring compressor, press a piston and connecting rod assembly into each cylinder with the front mark of the piston facing forward.



d. Set the connecting rod cap so that the protrusion is facing the correct direction.

NOTICE:

Match the numbered connecting rod cap with the connecting rod.

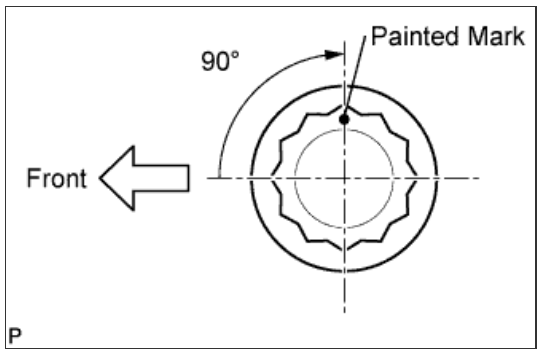


e. Apply a light coat of engine oil to the threads of the connecting rod cap bolts.

f. Step 1:

i. Install and alternately tighten the bolts of the connecting rod cap in several steps.

Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf }



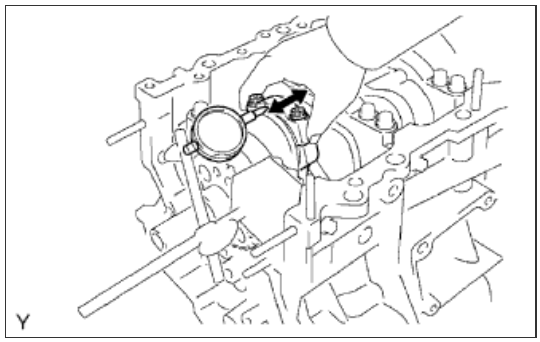
g. Step 2:

i. Mark the front side of each connecting rod cap bolt with paint.

ii. Tighten the cap bolts in step 1 90°.

h. Check that the painted marks are now at a 90° angle to the front.

i. Check that the crankshaft turns smoothly.



11. INSPECT CONNECTING ROD THRUST CLEARANCE

a. Using a dial indicator, measure the thrust clearance while moving the connecting rod back and forth.

Standard thrust clearance:
0.15 to 0.30 mm (0.00591 to 0.0118 in.)

Maximum thrust clearance:
0.35 mm (0.0138 in.)

If the thrust clearance is more than the maximum, replace one or more connecting rods as necessary.
If necessary, replace the crankshaft.

for Preparation Click here

1. INSPECT IGNITION TIMING

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. When using the intelligent tester:

i. Connect the intelligent tester to the DLC3.

ii. Start the engine and idle it.

iii. Turn the intelligent tester on.

iv. Enter the following menus: Powertrain / Engine and ECT / Data List / Primary / IGN Advance.

HINT:

Refer to the intelligent tester operator's manual for further details.

Standard ignition timing:
8 to 12° BTDC @ idling (transmission in neutral and A/C switch off)

v. Disconnect the intelligent tester from the DLC3.

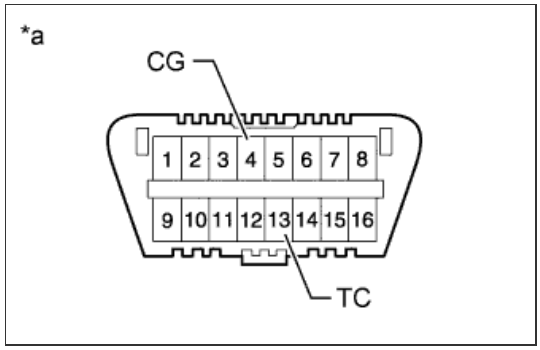
c. When not using the intelligent tester:

i. Connect the tester probe of a timing light to the wire of the ignition coil connector for the No. 1 cylinder.

NOTICE:

Use a timing light that detects primary signals.

ii. Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.



SST
09843-18040

Text in Illustration

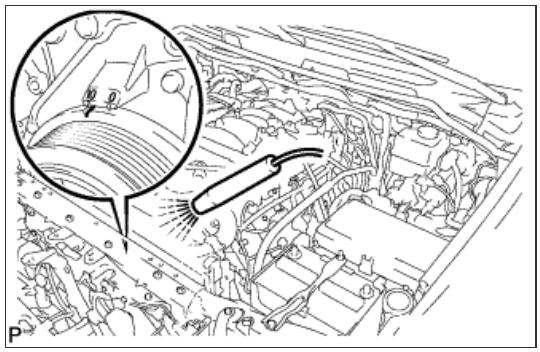
*a	Front view of DLC3

NOTICE:

- **Confirm the terminal numbers before connecting them. Connecting the wrong terminals can damage the engine.**
- **Switch off all accessories and the A/C before connecting the terminals.**

iii. Using the timing light, check the ignition timing.

Standard ignition timing:
8 to 12° BTDC @ idling (transmission in neutral and A/C switch off)



iv. Remove SST from the DLC3.

v. Check the ignition timing.

Standard ignition timing:
7 to 24° BTDC @ idling (transmission in neutral and A/C switch

off)

vi. Disconnect the timing light from the engine.

2. INSPECT ENGINE IDLE SPEED

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. When using the intelligent tester:

i. Connect the intelligent tester to the DLC3.

NOTICE:

Switch off all accessories and the A/C before connecting the intelligent tester.

ii. Race the engine at 2500 rpm for approximately 90 seconds.

iii. Turn the intelligent tester on.

iv. Enter the following menus: Powertrain / Engine and ECT / Data List / Primary / Engine Speed.

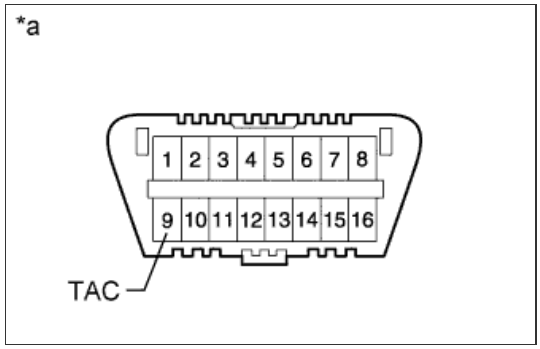
Standard idle speed:
650 to 750 rpm (transmission in neutral and A/C switch off)

HINT:

Refer to the intelligent tester operator's manual for further details.

If the idle speed is not as specified, check the air intake system.

v. Disconnect the intelligent tester from the DLC3.



c. When not using the intelligent tester:

i. Using SST, connect the tachometer probe to terminal 9 (TAC) of the DLC3.

SST
09843-18030

Text in Illustration

*a	Front view of DLC3

NOTICE:

- **Confirm the terminal number before connecting the probe. Connecting the probe to the wrong terminal can damage the engine.**
- **Switch off all accessories and the A/C before connecting the probe.**

ii. Race the engine at 2500 rpm for approximately 90 seconds.

iii. Check the idle speed.

Standard idle speed:
650 to 750 rpm (transmission in neutral and A/C switch off)

If the idle speed is not as specified, check the air intake system.

iv. Disconnect the tachometer probe from the DLC3.

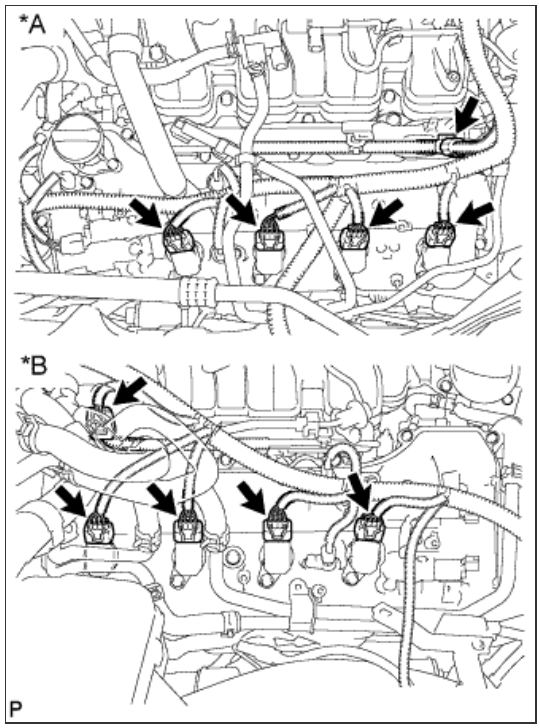
3. INSPECT COMPRESSION

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. Remove the V-bank cover.

c. Remove the air cleaner hose assembly (Click here).



d. Remove the air cleaner assembly (Click here).

e. Disconnect the water by-pass pipe assembly (Click here).

f. Disconnect the 2 injector connectors and 8 ignition coil connectors.

Text in Illustration

*A	for Bank 1
*B	for Bank 2

g. Remove the 8 bolts and 8 ignition coils (Click here).

h. Remove the 8 spark plugs (Click here).

i. Check the cylinder compression pressure.

NOTICE:

Check the compression pressure of each cylinder in the same way.

i. Insert a compression gauge into the spark plug hole.

ii. Fully open the throttle.

iii. While cranking the engine, measure the compression pressure.

Standard compression pressure:
1300 kPa (13.3 kgf/cm^2, 189 psi) or higher

Minimum pressure:
1000 kPa (10.2 kgf/cm^2, 145 psi)

Difference between each cylinder:
100 kPa (1.0 kgf/cm^2, 15 psi) or less

NOTICE:

- **Always use a fully charged battery to obtain an engine speed of 250 rpm or more.**
- **This measurement must be done as quickly as possible.**

iv. If the cylinder compression is low in one or more cylinders, pour a small amount of engine oil into the cylinder with low compression through its spark plug hole. Then inspect the cylinder compression pressure again.

HINT:

- **If adding oil helps boost the compression, it is likely that the piston rings and/or cylinder bore are worn or damaged.**
- **If pressure stays low, a valve may be stuck or seated improperly, or there may be leakage in the gasket.**

j. Install the 8 spark plugs (Click here).

k. Install the 8 ignition coils with the 8 bolts (Click here).

l. Connect the 2 injector connectors and 8 ignition coil connectors.

m. Connect the water by-pass pipe assembly (Click here).

n. Install the air cleaner assembly (Click here).

o. Install the air cleaner hose assembly (Click here).

p. Install the V-bank cover.

4. INSPECT CO/HC

HINT:

This check is used only to determine whether or not the idle CO/HC complies with regulations.

a. Start the engine.

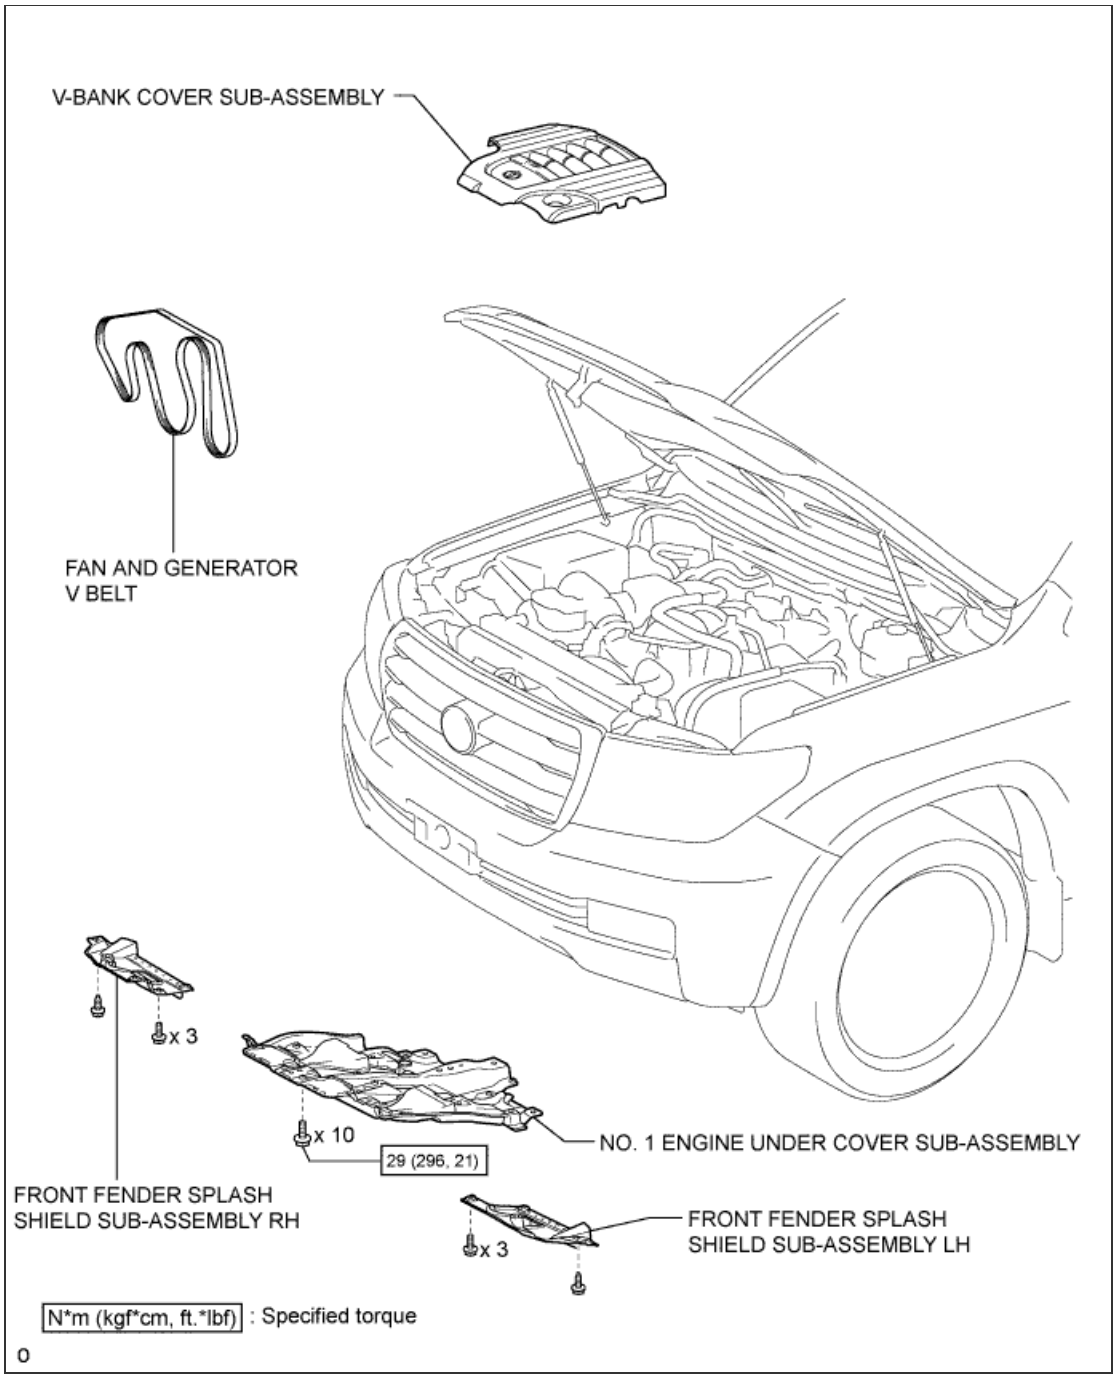
b. Keep the engine speed at 2500 rpm for approximately 180 seconds.

c. Insert the CO/HC meter testing probe at least 40 cm (1.31 ft.) into the tailpipe during idling.

d. Immediately check CO/HC concentration at idle and/or 2500 rpm.

HINT:

When performing the 2 mode (2500 rpm and idle) test, follow the measurement order prescribed by the applicable local regulations.



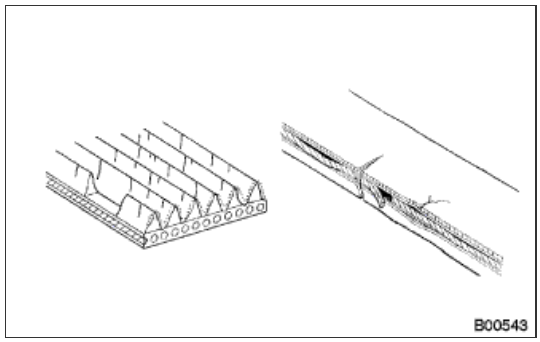
e. If the CO/HC concentration does not comply with the regulations, troubleshoot in the order given below.

i. Check the A/F sensor (Click here) and heated oxygen sensor (Click here) operation.

ii. See the table below for possible causes, and then inspect and correct the applicable causes if necessary.

CO	HC	Symptom	Cause
Normal	High	Rough idle	1. Faulty ignitions: • Incorrect timing • Plugs (contaminated, shorted or gaps are defective) 2. Incorrect valve clearance 3. Leaky intake and exhaust valves 4. Leaky cylinder
Low	High	Rough idle (Fluctuating HC reading)	1. Vacuum leaks: • PCV hose • Intake manifold • Throttle body 2. Lean mixture causing misfire
High	High	Rough idle (Black smoke from exhaust)	1. Restricted air filter 2. Faulty SFI system: • Faulty pressure regulator • Defective engine coolant temperature sensor • Faulty ECM • Faulty injectors • Faulty throttle position sensor • Faulty mass air flow meter

for Preparation Click here

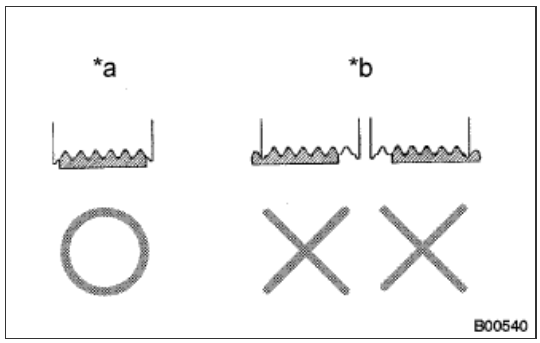


for Preparation Click here

1. INSPECT FAN & GENERATOR V BELT

a. Check the belt for wear, cracks or other signs of damage.
If any of the following defects is found, replace the fan and generator belt.

- The belt is cracked.
- The belt is worn out to the extent that the cords are exposed.
- The belt has chunks missing from the ribs.



b. Check that the belt fits properly in the ribbed grooves.

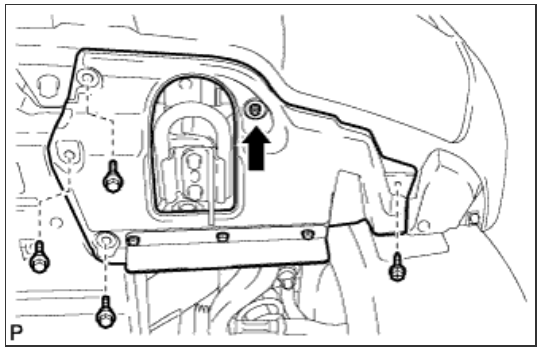
Text in Illustration

a	CORRECT
b	INCORRECT

HINT:

Check with your hand to confirm that the belt has not slipped out of the grooves on the bottom of the pulley. If it has slipped out, replace the fan and generator belt. Install a new fan and generator belt correctly.

2. INSPECT V-RIBBED BELT TENSIONER ASSEMBLY



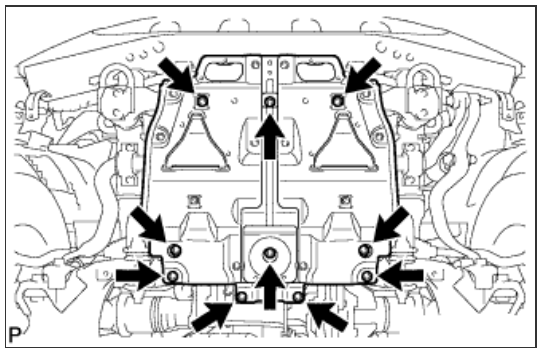
a. Check that nothing gets caught in the tensioner by turning it clockwise and counterclockwise. If a malfunction exists, replace the tensioner.

for Preparation Click here

1. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and screw.

b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



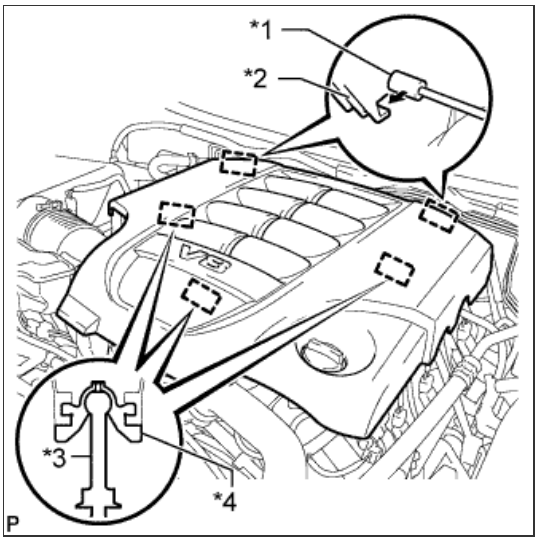
2. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

3. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and No. 1 engine under cover.



4. REMOVE V-BANK COVER SUB-ASSEMBLY

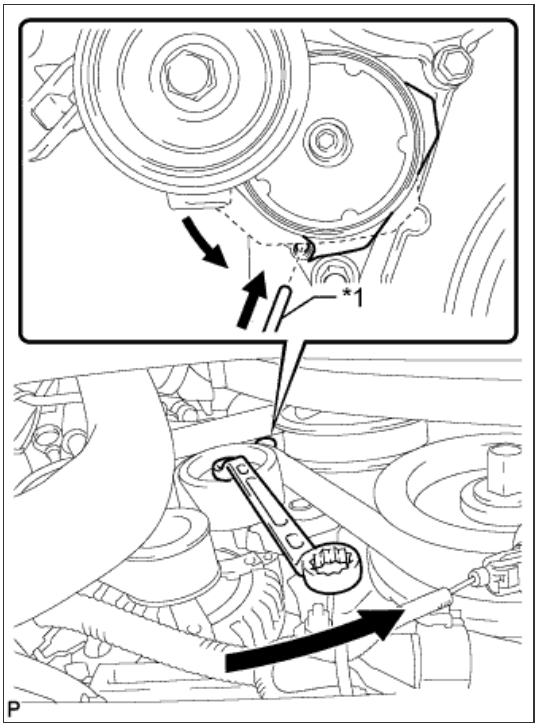
a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.

Text in Illustration

1	Bracket
2	Hook
3	Pin
	rommet

. REMOVE FAN GENERATOR V BELT

a. While turning the belt tensioner counterclockwise, align the service hole for the belt tensioner and the belt tensioner fixing position, and then insert a bar of 5 mm (0.197 in.) into the service hole to fix the belt tensioner in place.



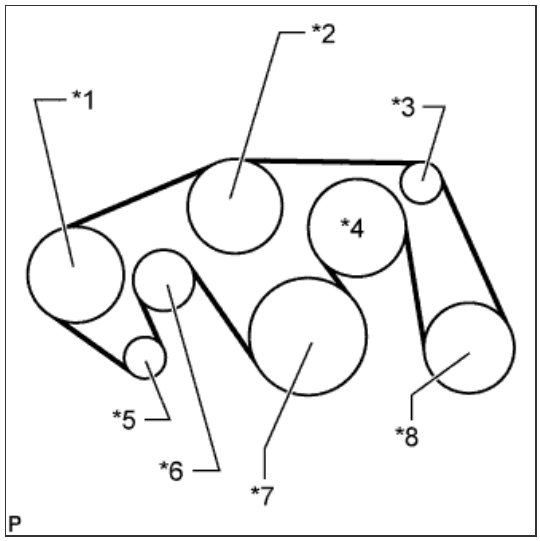
Text in Illustration

1	Bar

HINT:

The pulley bolt for the belt tensioner has a left-hand thread.

b. Remove the V belt.

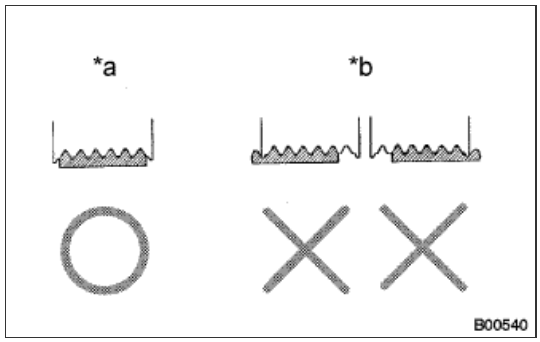


for Preparation Click here

1. INSTALL FAN & GENERATOR V BELT

a. Set the V belt onto every part.

b. While turning the belt tensioner counterclockwise, remove the bar.



Text in Illustration

*1	Vane Pump
*2	Water Pump
*3	No. 1 Idler
*4	Fan
*5	Generator
*6	Belt Tensioner
*7	Crankshaft

for Preparation Click here

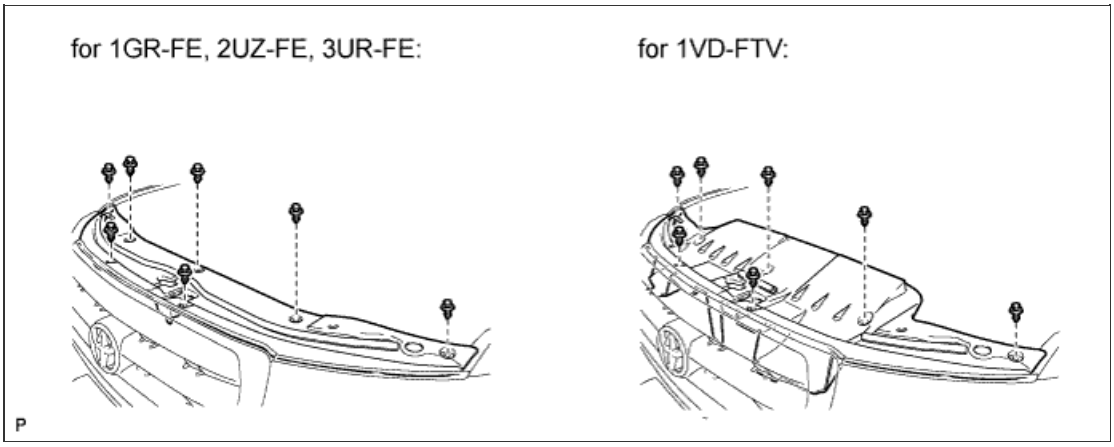
1. DISCHARGE FUEL SYSTEM PRESSURE

(Click here)



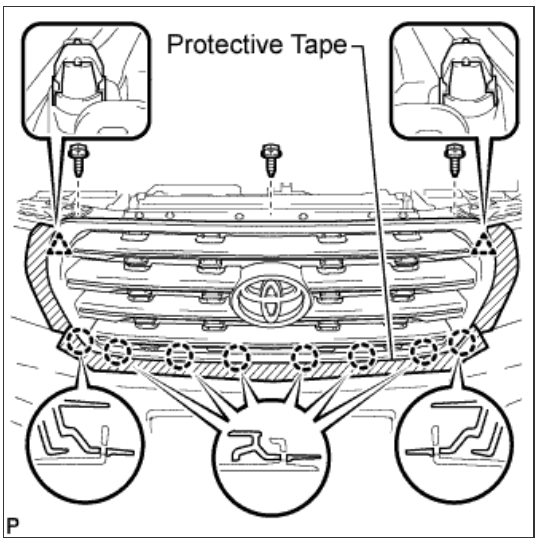
2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

3. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 7 clips and radiator support seal.

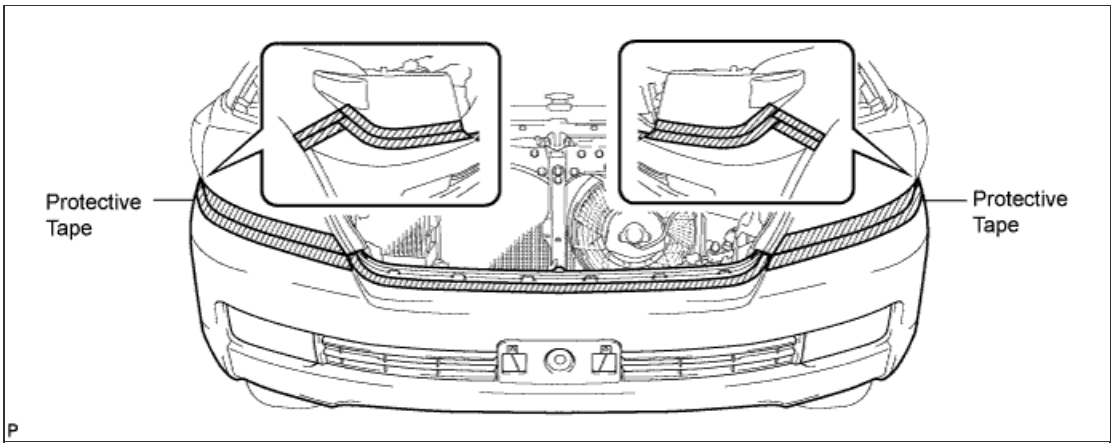


4. REMOVE RADIATOR GRILLE

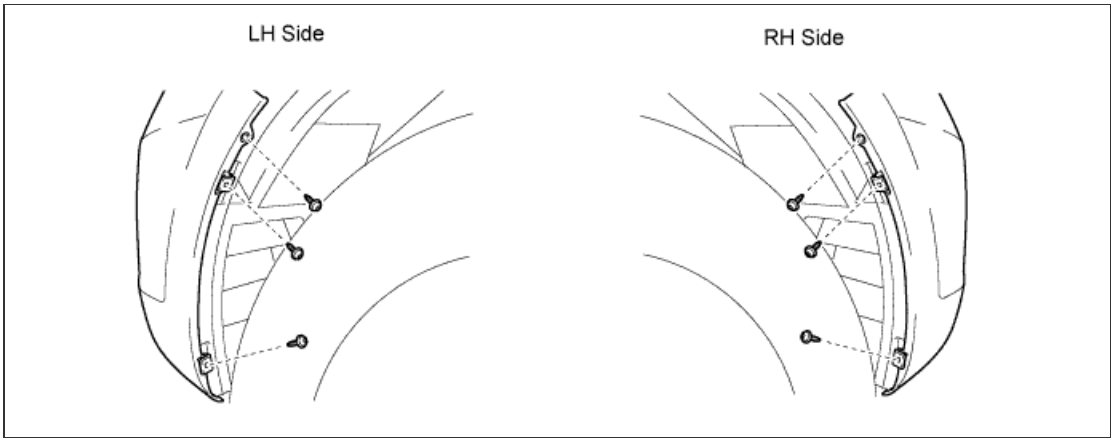
a. Put protective tape around the radiator grille.

b. Remove the 3 screws.

c. Detach the 2 clips and 8 claws, and remove the radiator grille.



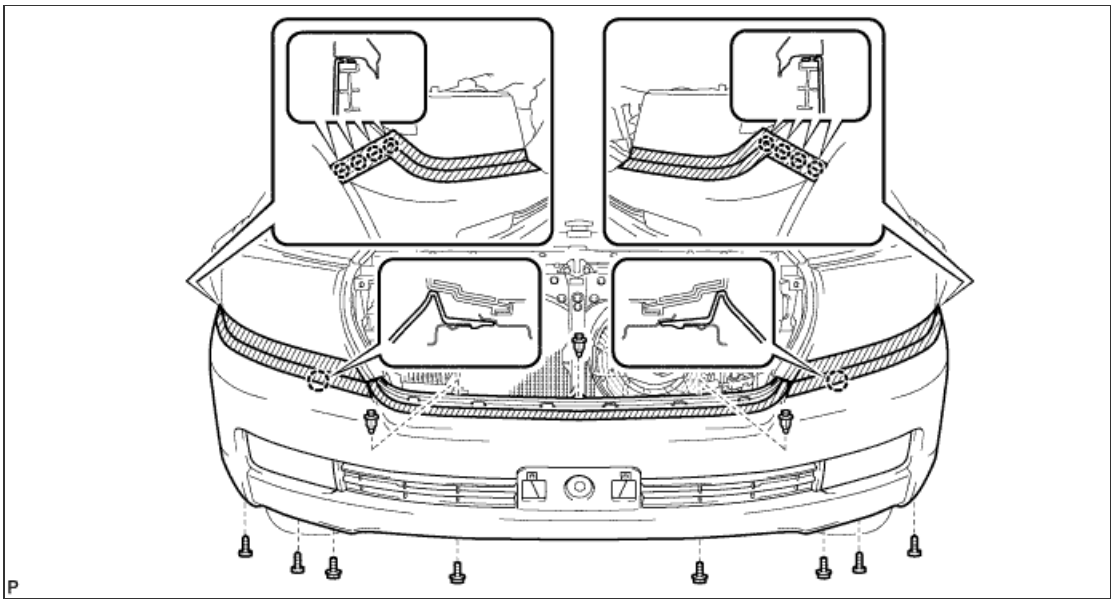
5. REMOVE FRONT BUMPER COVER



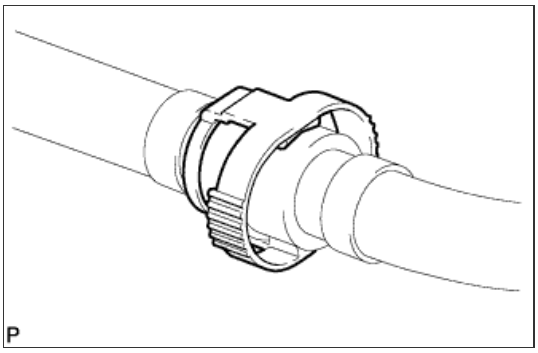
HINT:

For the front bumper cover with garnish, use the procedures described below.

a. Put protective tape around the bumper cover.



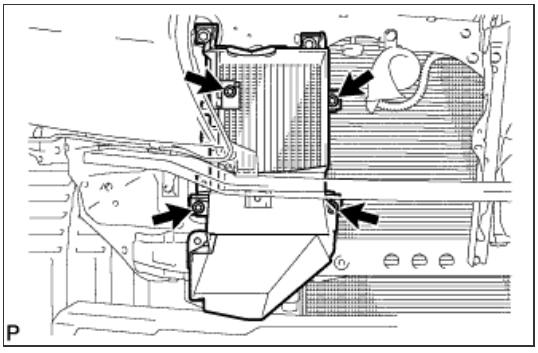
b. Using a T30 "TORX" socket, remove the 6 screws.



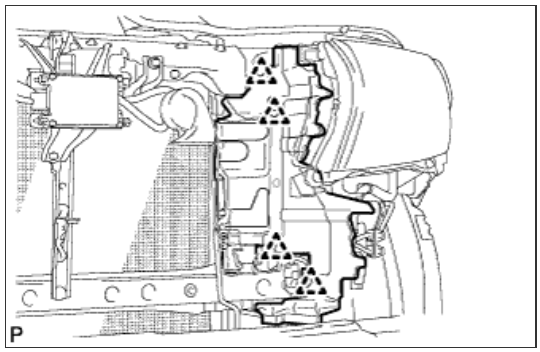
c. Remove the 3 clips, 4 screws and 4 bolts.

d. w/o TOYOTA Parking Assist-sensor System, w/o Fog Light:
Detach the 10 claws and remove the bumper cover.

e. w/ TOYOTA Parking Assist-sensor System or w/ Fog Light:
Detach the 10 claws, disconnect the No. 4 engine room wire connector and remove the bumper cover.

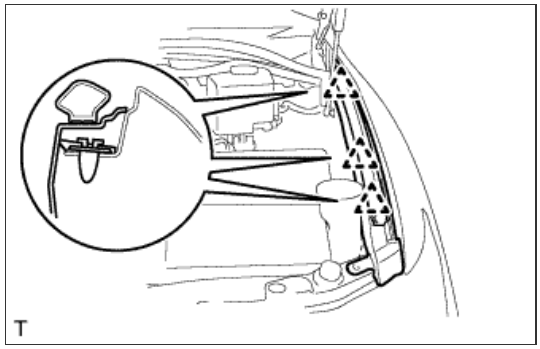


f. w/ Headlight Cleaner System:
Disconnect the headlight cleaner hose and remove the bumper cover.



6. REMOVE TRANSMISSION OIL COOLER AIR DUCT

a. Remove the 4 bolts and oil cooler air duct.



7. DISCONNECT RADIATOR SIDE DEFLECTOR LH

a. Using a clip remover, remove the 4 clips and disconnect the side deflector.

8. REMOVE FRONT FENDER MAIN SEAL LH

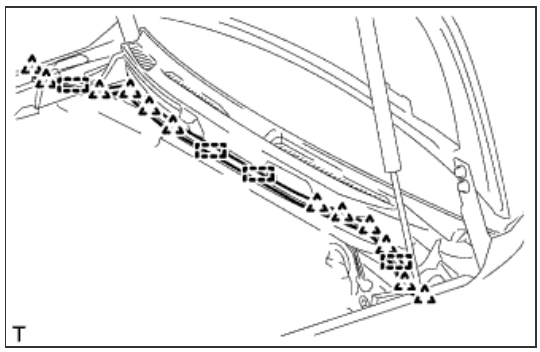
a. Using a clip remover, detach the 3 clips and remove the fender main seal.

9. REMOVE FRONT FENDER MAIN SEAL RH

HINT:

Use the same procedures described for the LH side.

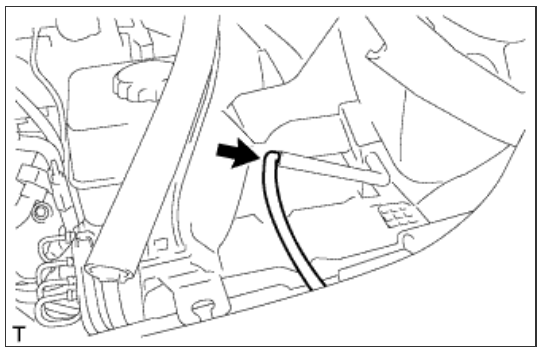
10. REMOVE FRONT WIPER ARM LH



a. Remove the nut, wiper arm and blade.

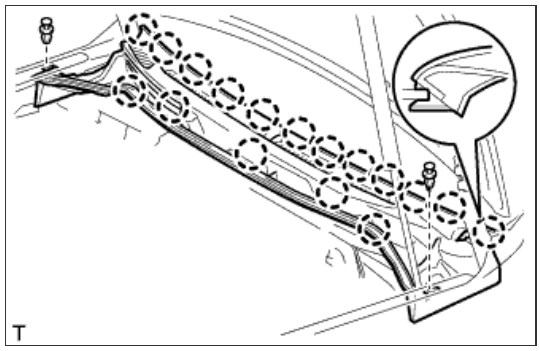
11. REMOVE FRONT WIPER ARM RH

a. Remove the nut, wiper arm and blade.



12. REMOVE HOOD TO COWL TOP SEAL

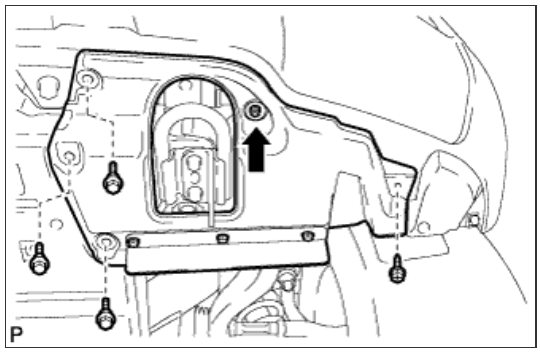
a. Using a clip remover, detach the 12 clips, 4 clamps and remove the hood to cowl top seal.



13. REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

a. Remove the washer hose.

b. Remove the 2 clips.

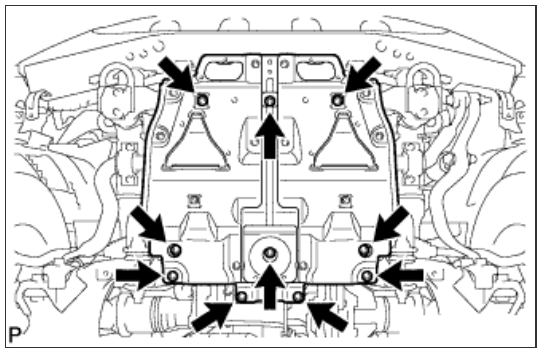


c. Detach the 17 claws and remove the cowl top ventilator louver sub-assembly.

14. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and screw.

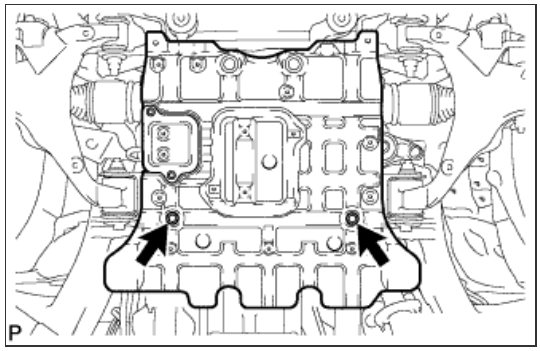
b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



15. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

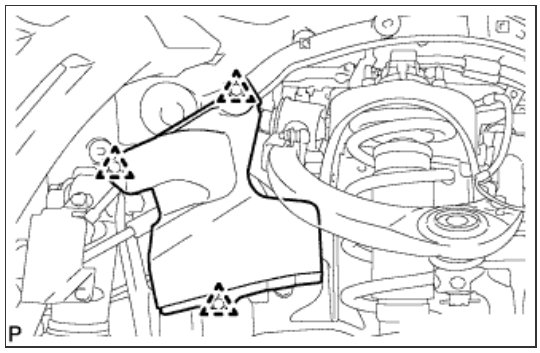
HINT:

Use the same procedures described for the LH side.



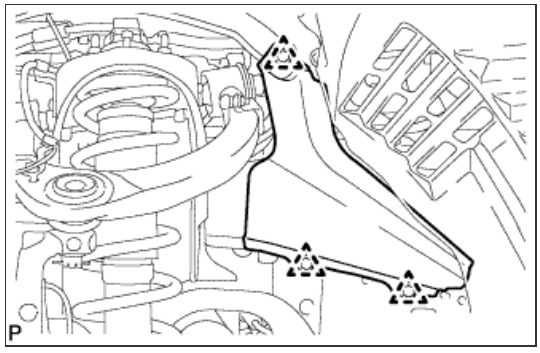
16. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and No. 1 engine under cover.



17. REMOVE NO. 2 ENGINE UNDER COVER

a. Remove the 2 bolts and No. 2 engine under cover.



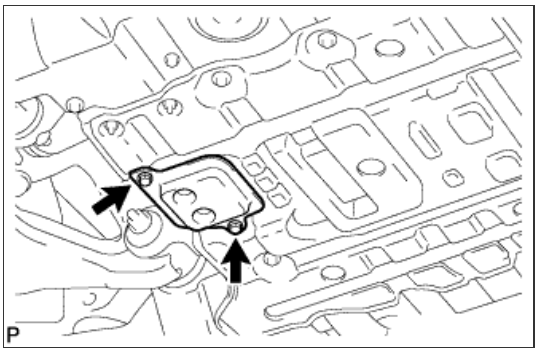
18. REMOVE FRONT FENDER APRON SEAL LH

a. Using a clip remover, remove the 3 clips and fender apron seal.

19. REMOVE FRONT FENDER APRON SEAL FRONT RH

a. Using a clip remover, remove the 3 clips and fender apron seal.

20. DRAIN ENGINE OIL



a. Remove the oil filler cap.

b. Remove the 2 bolts and No. 2 engine under cover seal.

c. Remove the oil pan drain plug and gasket, and drain the engine oil into a container.

d. Install a new gasket and the oil pan drain plug.

Tor e:
40 N*m 408 k f*cm , 30 ft.*lbf }

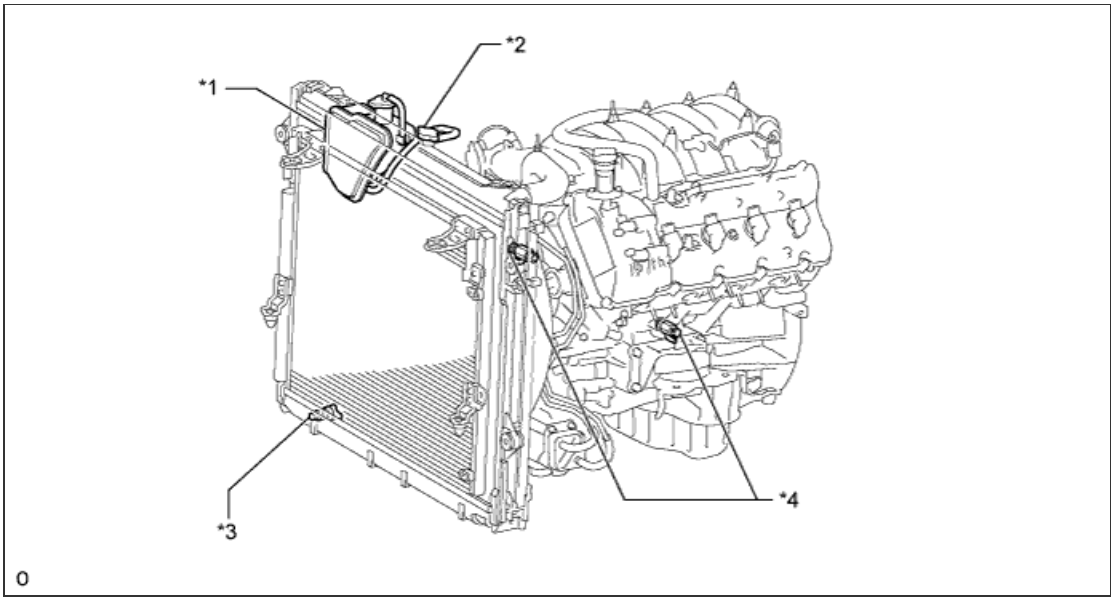
21. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Loosen the radiator drain cock plug.

HINT:



Collect the coolant in a container and dispose of it according to the regulations in your area.

b. Remove the radiator cap. Then drain the coolant from the radiator.

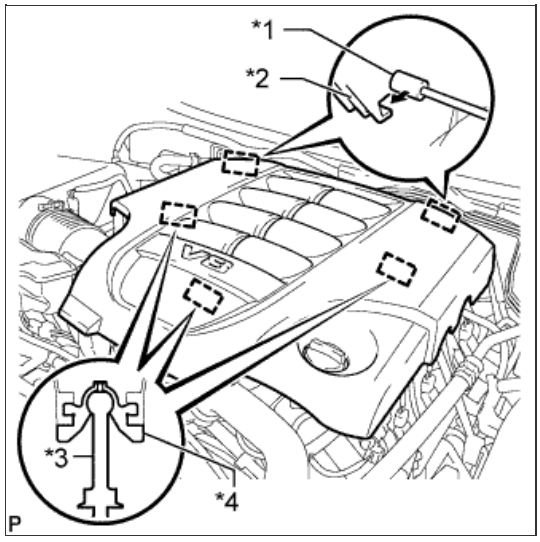
c. Loosen the 2 cylinder block drain cock plugs. Then drain the coolant from the engine.

d. Tighten the 2 cylinder block drain cock plugs.

Tor e:
13 N*m 133 k f*cm , 10 ft.*lbf }

Text in Illustration

*1	Radiator Reservoir	*2	Radiator Cap
*3	Radiator Drain Cock Plug	*4	Cylinder Block Drain Cock Plug



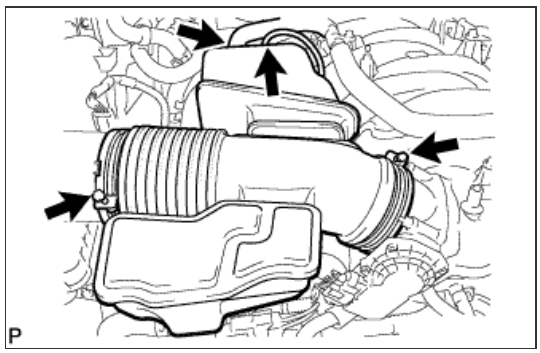
e. Tighten the radiator drain cock plug by hand.

22. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.

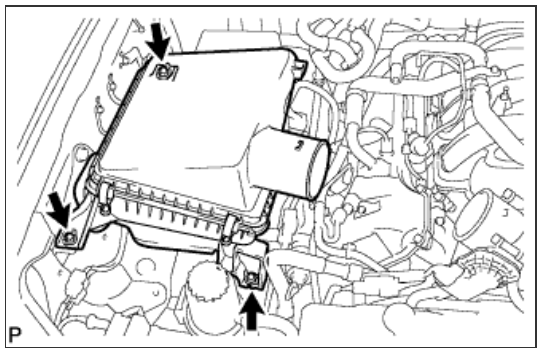
Text in Illustration

*1	Bracket
*2	Hook
*3	Pin
*4	Grommet



23. REMOVE AIR CLEANER HOSE ASSEMBLY

a. Disconnect the vacuum hose and No. 2 ventilation hose.

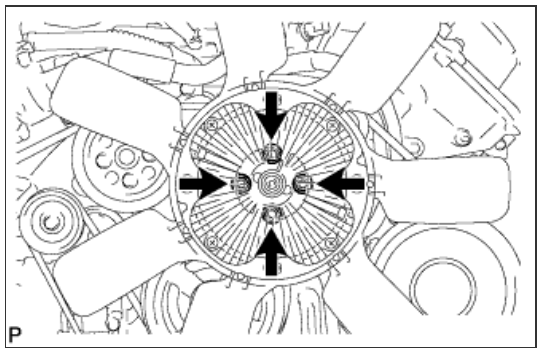


b. Loosen the 2 hose clamps.

c. Remove the air cleaner hose.

24. REMOVE AIR CLEANER ASSEMBLY

a. Remove the 3 bolts and air cleaner.



25. REMOVE NO. 1 RADIATOR HOSE

26. REMOVE NO. 2 RADIATOR HOSE

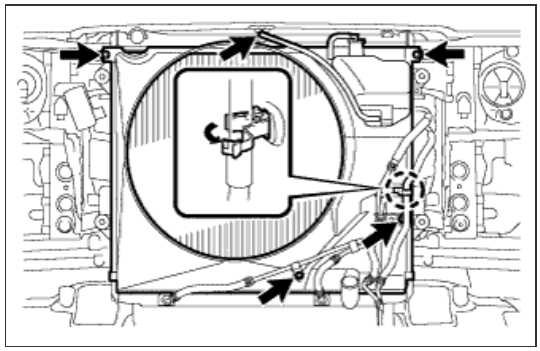
27. REMOVE FAN SHROUD

a. Loosen the 4 nuts holding the fluid coupling fan.

b. Remove the fan and generator V-belt (Click here).

c. Disconnect the reservoir hose from the upper radiator tank.

d. Detach the claw to open the flexible hose clamp.

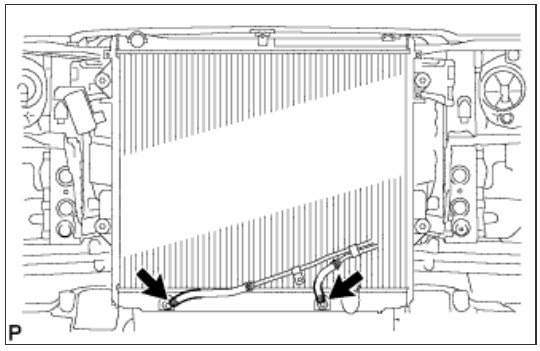


e. Remove the 2 bolts and disconnect the oil cooler tube from the fan shroud.

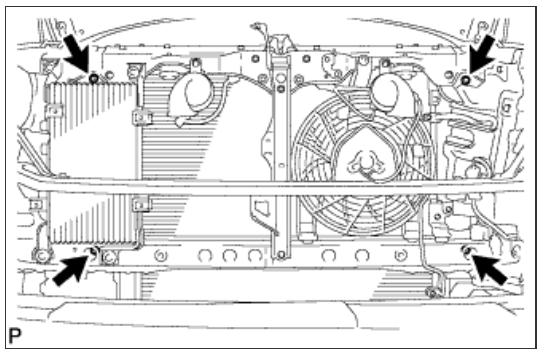
f. Remove the 2 bolts holding the fan shroud.

.Remove the 4 nuts of the fluid coupling fan, and then remove the shroud together with the coupling fan.

NOTICE:



Be careful not to damage the radiator core.

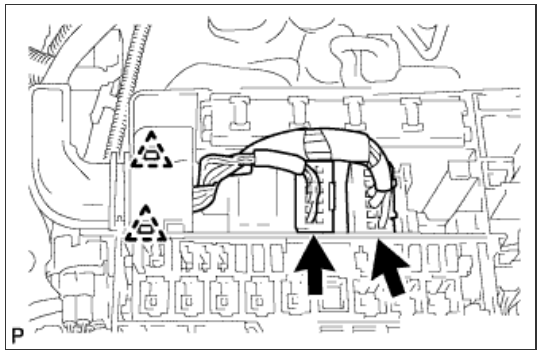


h. Remove the fan pulley.

28. REMOVE RADIATOR ASSEMBLY

a. Disconnect the 2 oil cooler hoses.

b. Remove the 4 bolts and radiator.



29. DISCONNECT ENGINE WIRE

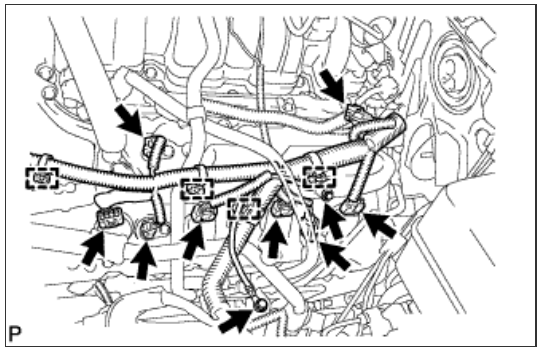
a. Engine Room L H Side:

a. Engine Room LH Side:

i. Remove the engine room relay block cover.

ii. Disconnect the 2 connectors and 2 clips from the engine room junction block.

iii. Disconnect the injector connector.



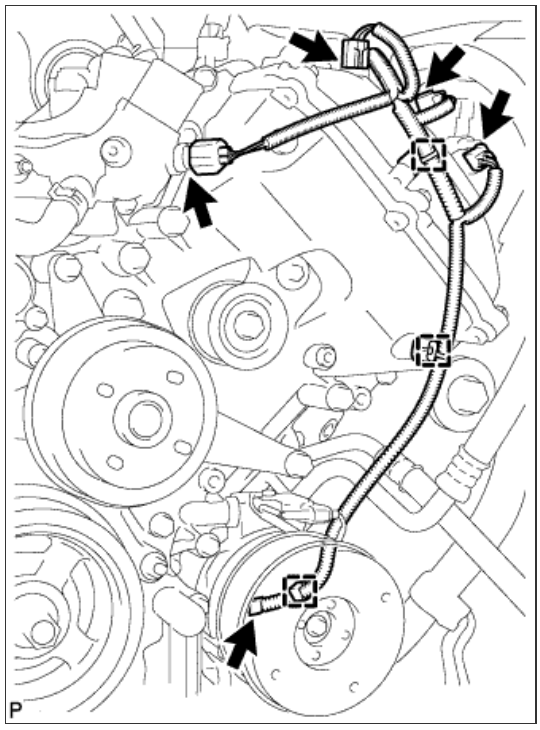
iv. Disconnect the 4 ignition coil connectors.

v. Disconnect the 2 VVT sensor connectors.

vi. Disconnect the 4 clamps.

vii. Remove the 2 bolts and ground wire.

viii. Disconnect the noise filter connector.



ix. Disconnect the engine coolant temperature sensor connector.

x. Disconnect the 2 camshaft timing oil control valve connectors.

xi. Disconnect the camshaft position sensor connector.

xii. Disconnect the 3 clamps.

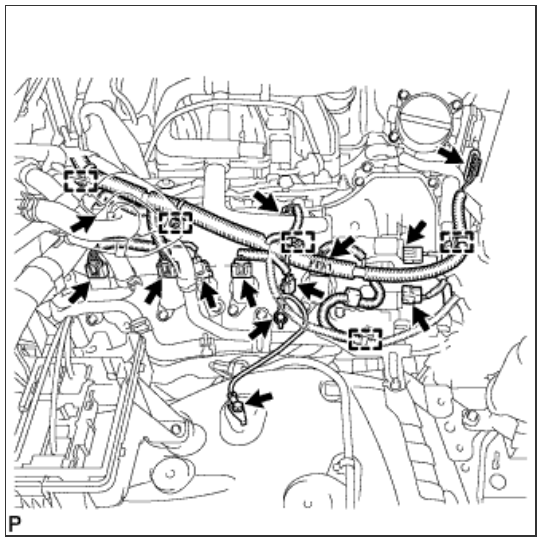
xiii. Disconnect the cooler compressor connector.

b. Engine Room RH Side:

i. Disconnect the 2 camshaft timing oil control valve connectors.

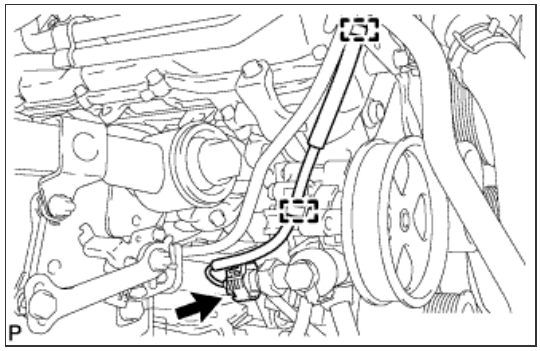
ii. Disconnect the 4 ignition coil connectors.

iii. Disconnect the injector connector.



iv. Disconnect the 2 VVT sensor connectors.

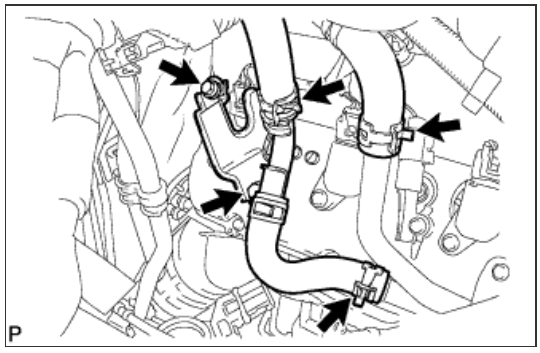
v. Disconnect the noise filter connector.



vi. Remove the 2 bolts and ground wire.

vii. Disconnect the throttle position sensor and throttle control motor connector.

viii. Disconnect the 5 clamps.

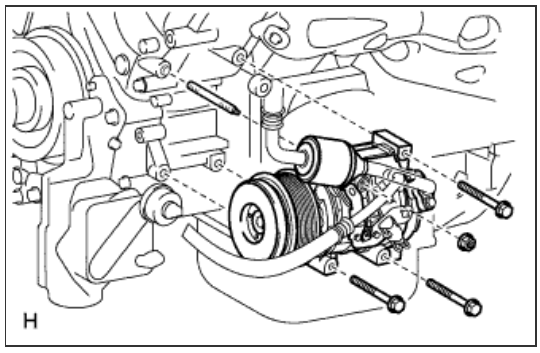


c. Disconnect the 2 clamps and power steering oil pressure switch connector.

30. DISCONNECT WATER PIPE AND HOSE SUB-ASSEMBLY

a. Disconnect the 3 hoses.

b. Remove the 2 bolts and disconnect the water pipe and hose from the cylinder head cover.

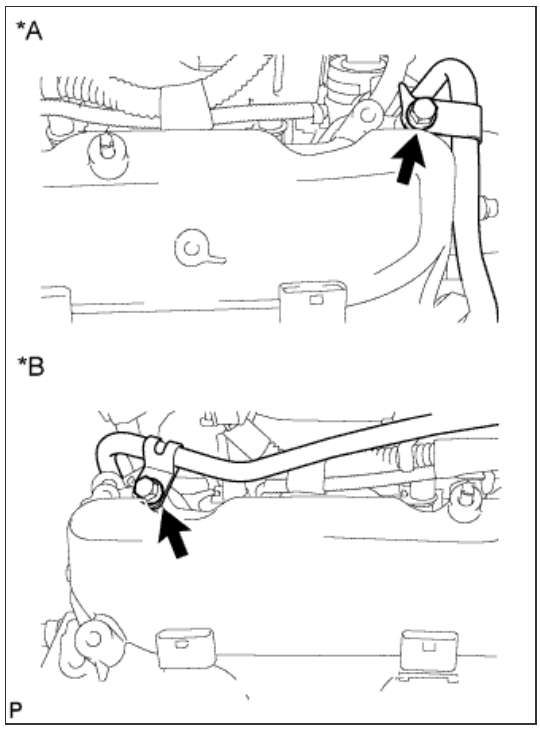


31. DISCONNECT COOLER COMPRESSOR ASSEMBLY

a. Remove the 3 bolts, nut and stud bolt, and disconnect the cooler compressor.

HINT:

It is not necessary to completely remove the compressor. With the hoses connected to the compressor, hang the compressor on the vehicle body with a rope.

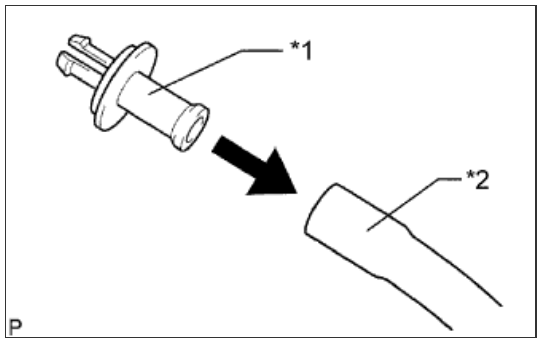


32. DISCONNECT NO. 2 FUEL TUBE SUB-ASSEMBLY

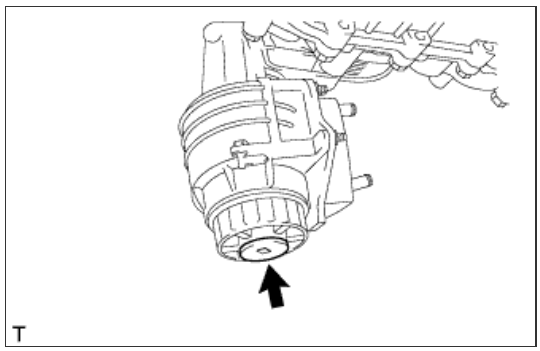
a. Remove the 2 bolts and disconnect the fuel tube.

Text in Illustration

*A	LH Side
*B	RH Side



33. REMOVE OIL FILTER ELEMENT



a. Connect a hose with an inside diameter of 15 mm (0.591 in.) to the pipe.

Text in Illustration

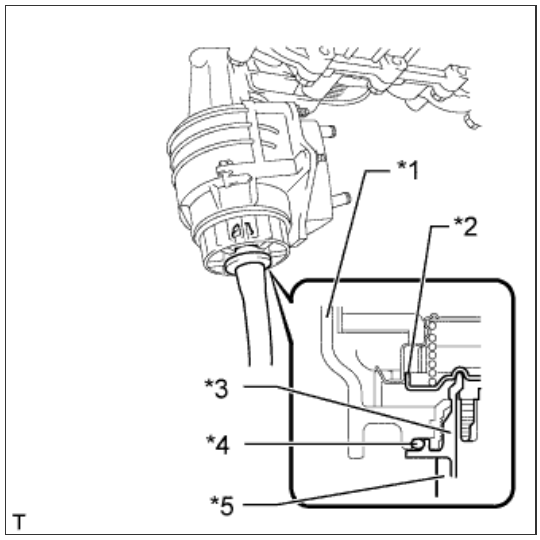
*1	Pipe
*2	Hose

b. Remove the oil filter drain plug.

c. Install the pipe to the oil filter cap.

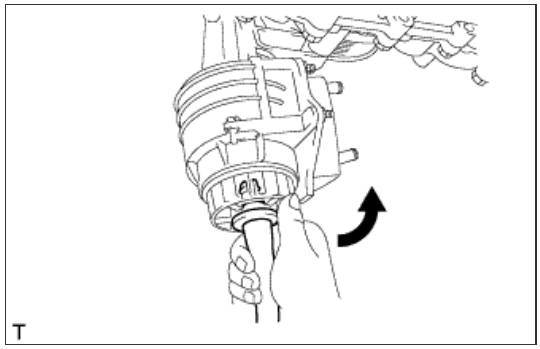
Text in Illustration

*1	Cap
*2	Valve
*3	Pipe
*4	O-Ring



*5	Hose

NOTICE:



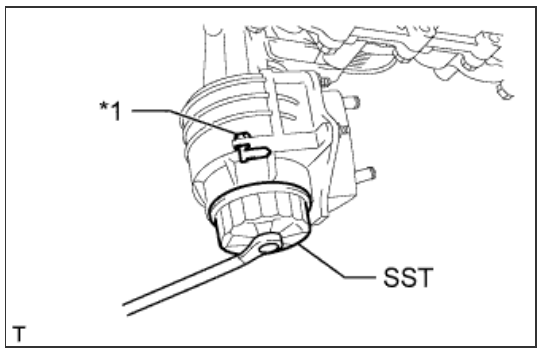
If the O-ring is removed with the drain plug, install the O-ring together with the pipe.

HINT:

Use a container to catch the draining oil.

d. Check that oil is drained from the oil filter. Then disconnect the pipe and remove the O-ring as shown in the illustration.

e. Using SST, remove the oil filter cap.



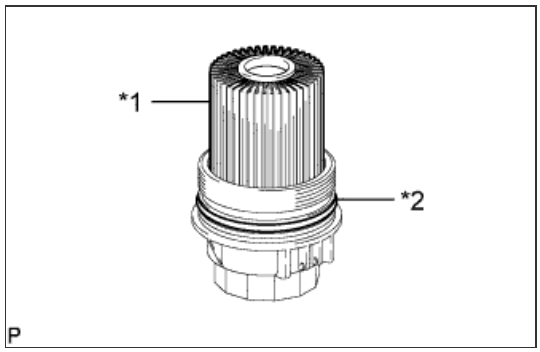
SST
09228-06501

Text in Illustration

*1	Oil Filter Bracket Clip

NOTICE:

Do not remove the oil filter bracket clip.



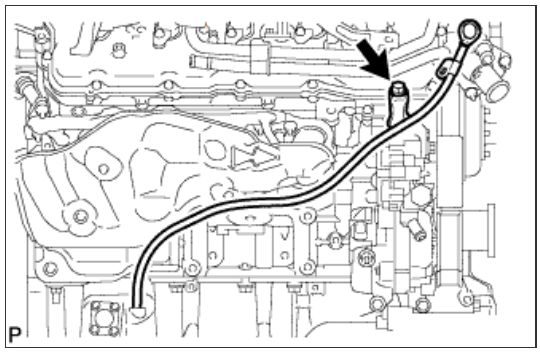
f. Remove the oil filter element and O-ring from the oil filter cap.

Text in Illustration

*1	Oil Filter Element
*2	O-Ring

NOTICE:

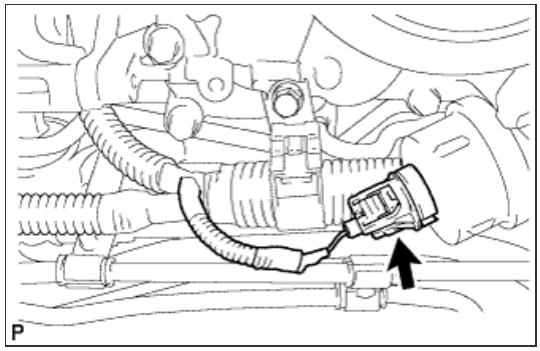
Be sure to remove the cap O-ring by hand, without using any tools, to prevent damage to the cap O-ring groove.



34. REMOVE ENGINE OIL LEVEL DIPSTICK GUIDE

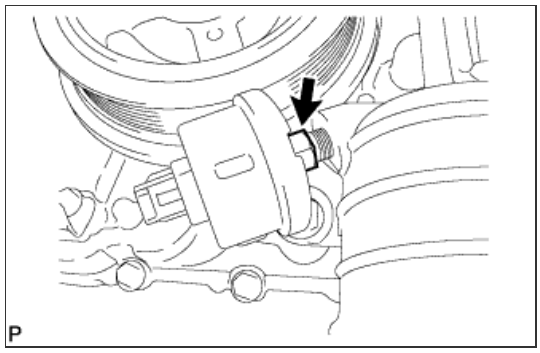
a. Disconnect the wire harness clamp.

b. Remove the dipstick.



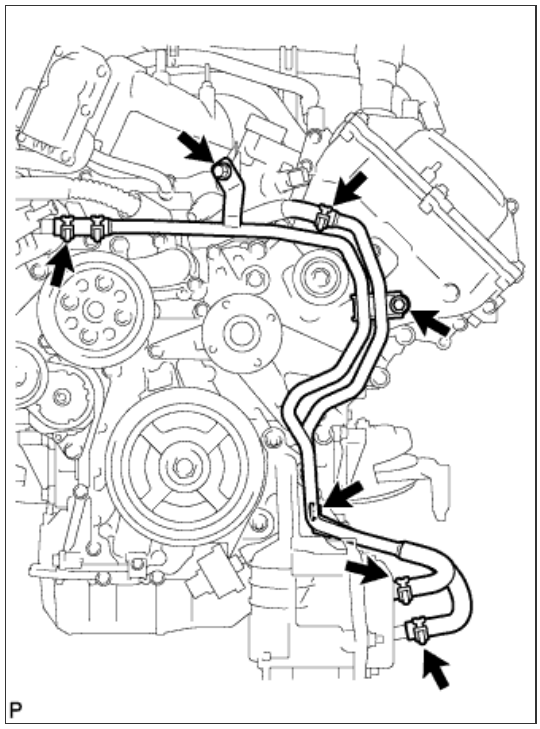
c. Remove the bolt and dipstick guide.

d. Remove the O-ring from the dipstick guide.



35. REMOVE OIL PRESSURE SENDER GAUGE ASSEMBLY

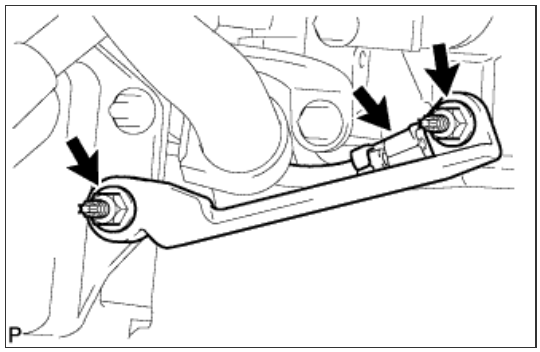
a. Disconnect the sender gauge connector.



b. Remove the oil pressure sender gauge.

36. REMOVE NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY

a. Remove the 3 bolts.

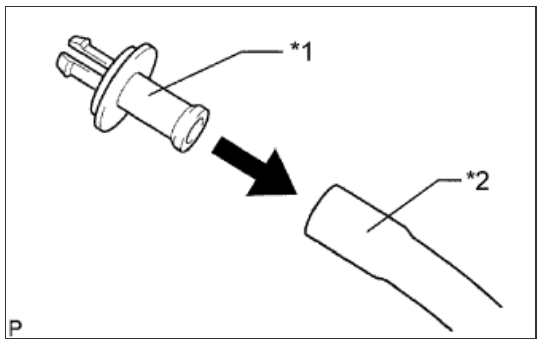


b. Disconnect the 4 hoses and remove the water by-pass pipe.

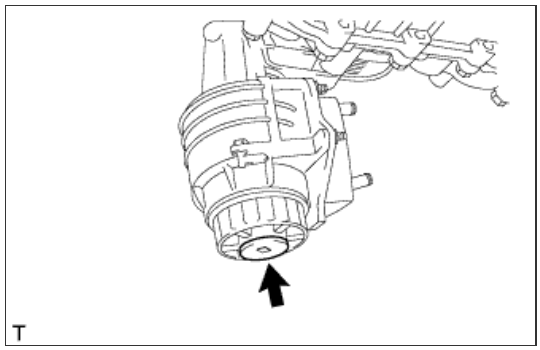
37. REMOVE NO. 1 OIL COOLER BRACKET

a. Remove the 2 nuts and bracket.

b. Disconnect the ground wire from the cylinder block.



38. REMOVE OIL FILTER BRACKET



a. Connect a hose with an inside diameter of 15 mm (0.591 in.) to the pipe.

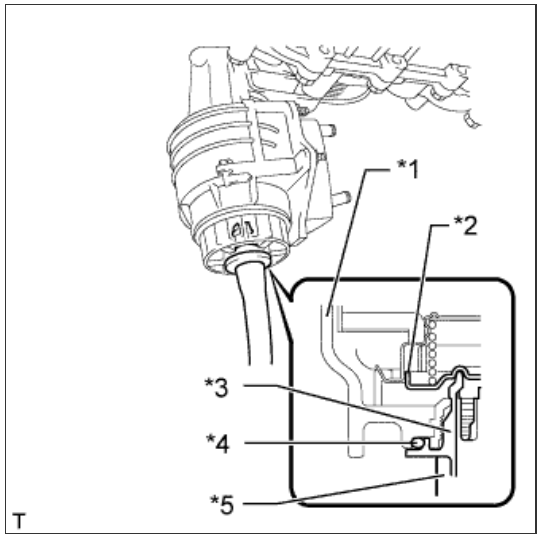
Text in Illusration

*1	Pipe
*2	Hose

b. Remove the oil filter drain plug.

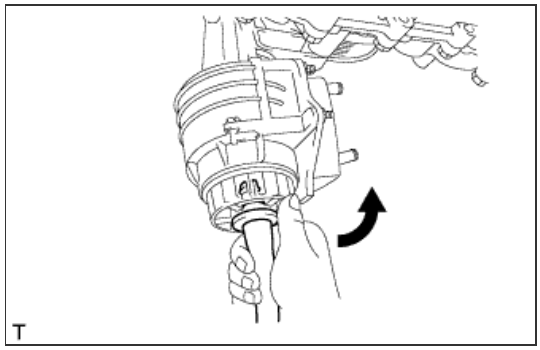
c. Install the pipe to the oil filter cap.

Text in Illustration



*1	Cap
*2	Valve
*3	Pipe
*4	O-Ring
*5	Hose

NOTICE:



If the O-ring is removed with the drain plug, install the O-ring together with the pipe.

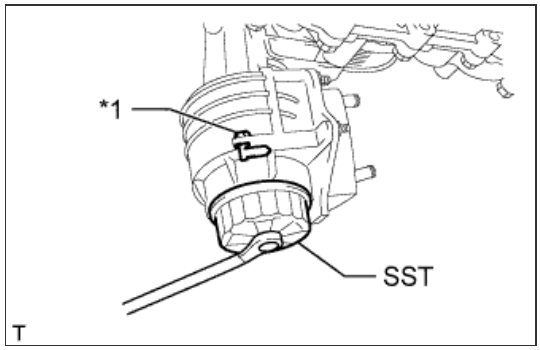
HINT:

Use a container to catch the draining oil.

d. Check that oil is drained from the oil filter. Then disconnect the pipe and remove the O-ring as shown in the illustration.

e. Using SST, remove the oil filter cap.

SST



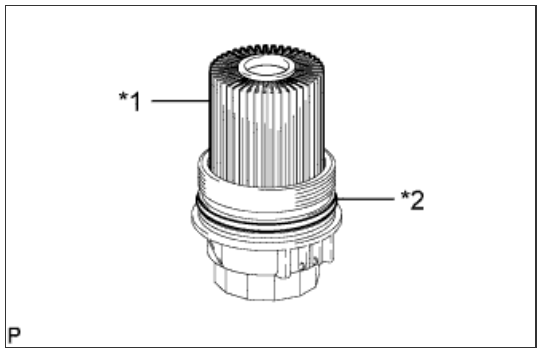
09228-06501

Text in Illustration

*1	Oil Filter Bracket Clip

NOTICE:

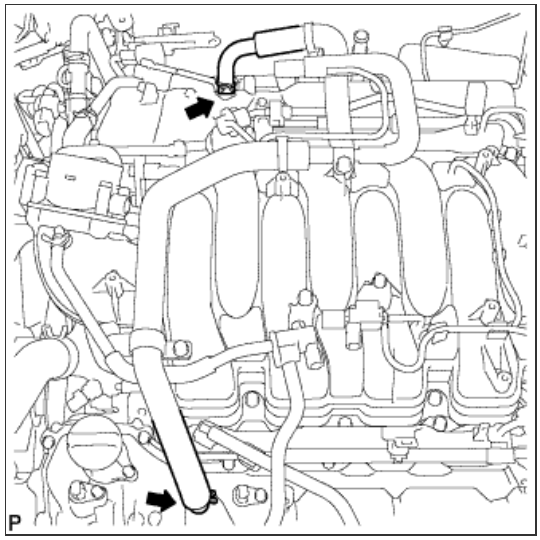
Do not remove the oil filter bracket clip.



f. Remove the oil filter element and O-ring from the oil filter cap.

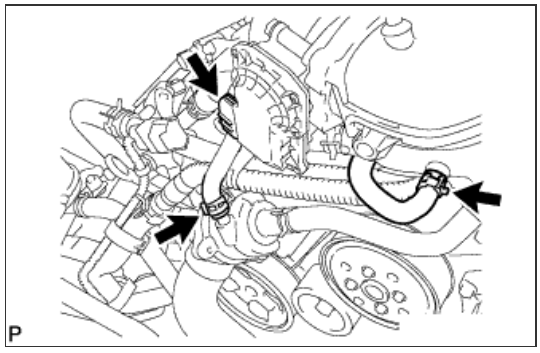
Text in Illustration

*1	Oil Filter Element
*2	O-Ring



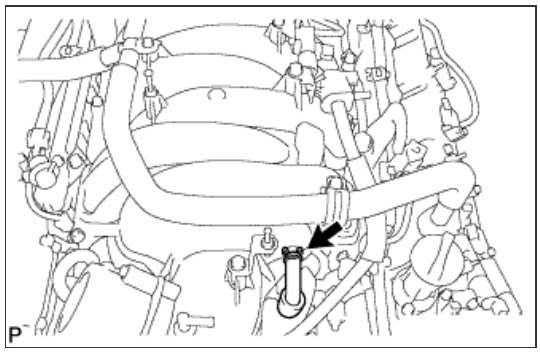
NOTICE:

Be sure to remove the cap O-ring by hand, without using any tools, to prevent damage to the cap O-ring groove.



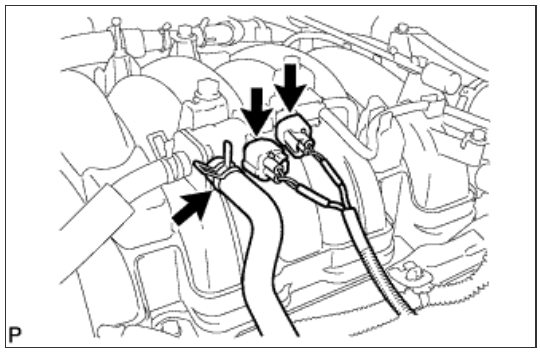
39. REMOVE INTAKE MANIFOLD

a. Disconnect the ventilation hose from the ventilation pipe of the cylinder head cover LH and RH.

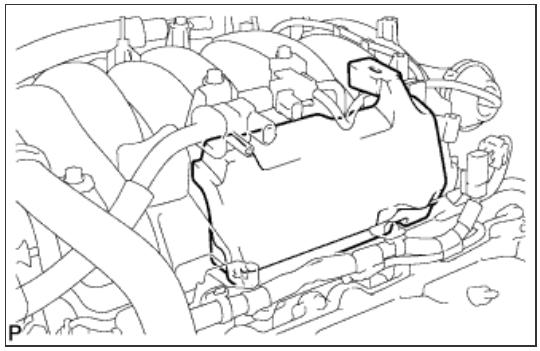


b. Disconnect the 2 water by-pass hoses.

c. Disconnect the throttle body connector.

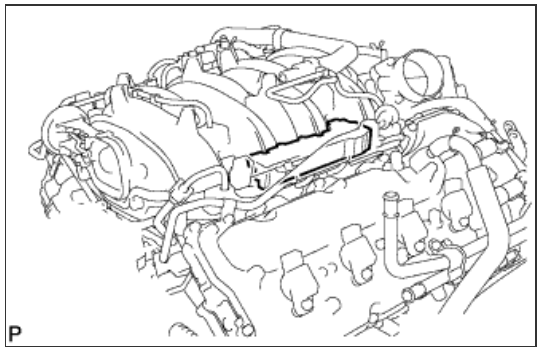


d. Disconnect the No. 1 ventilation hose.

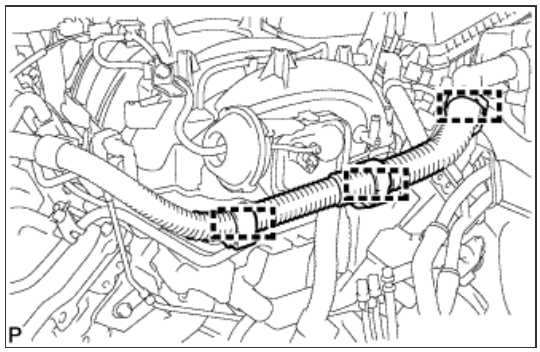


e. Disconnect the purge VSV connector.

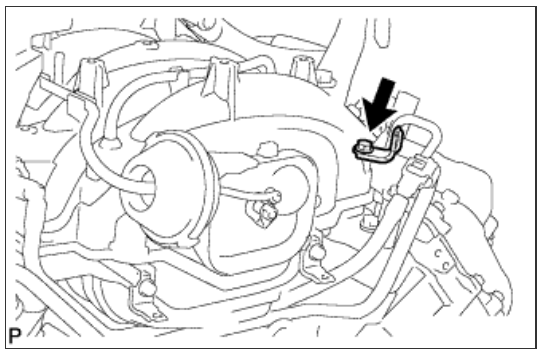
f. Disconnect the purge line hose from the purge VSV.



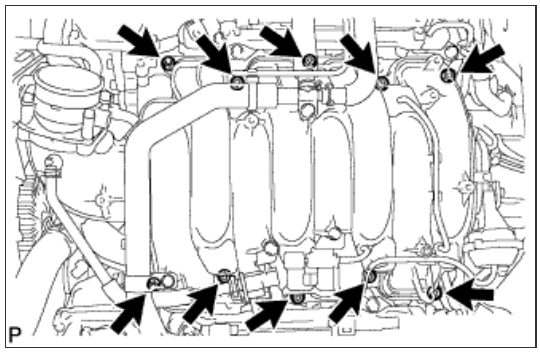
.Disconnect the vacuum switching valve connector (for ACIS).



h. Remove the No. 1 engine cover sub-assembly.

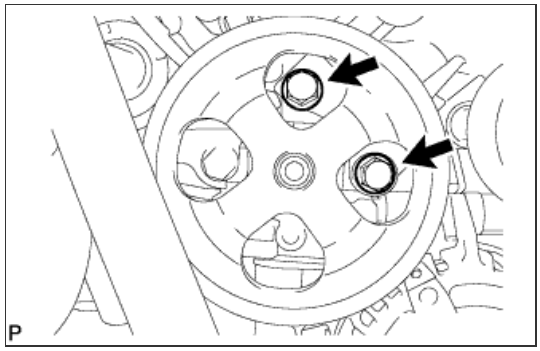


i. Remove the No. 3 engine cover.

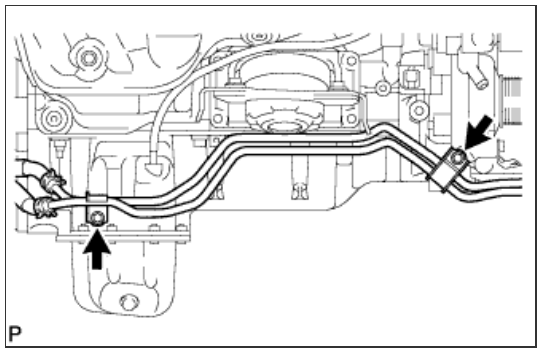


.Disconnect the 3 wire clamps from the 3 wire brackets.

k. Remove the bolt and wire bracket from the intake manifold.



l. Remove the 2 nuts, 8 bolts, intake manifold and 2 gaskets.

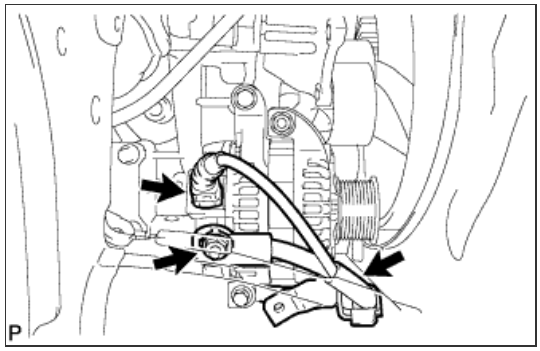


40. DISCONNECT VANE PUMP ASSEMBLY

a. Remove the 2 bolts and disconnect the vane pump.

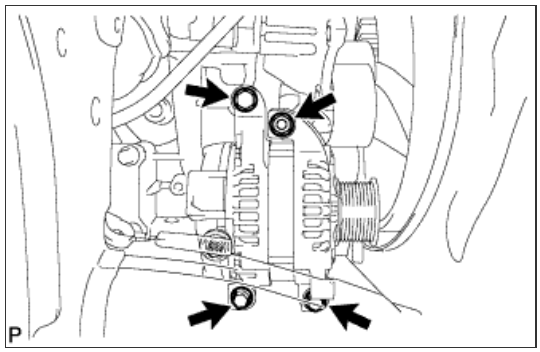
41. DISCONNECT OIL COOLER PIPE ASSEMBLY

a. Remove the 2 bolts and disconnect the oil cooler pipe.



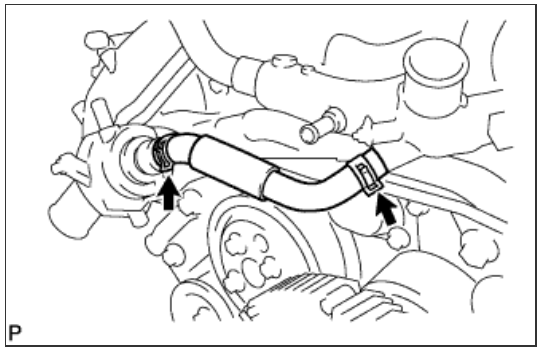
42. REMOVE GENERATOR ASSEMBLY

a. Disconnect the generator connector.



b. Remove the terminal cap and nut, and disconnect the generator wire.

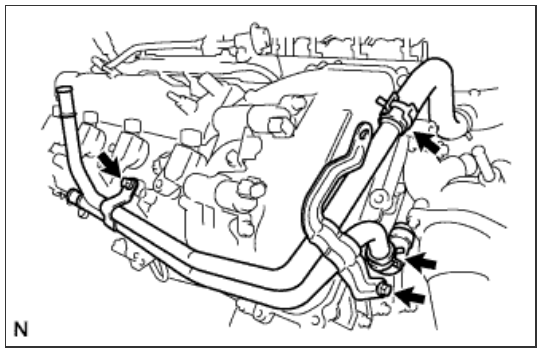
c. Remove the bolt and wire harness bracket from the generator.



d. Remove the 3 bolts, nut and generator.

e. Remove the stud bolt.

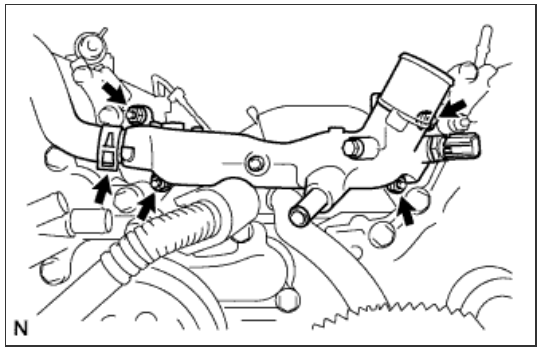
43. REMOVE NO. 1 WATER BY-PASS HOSE



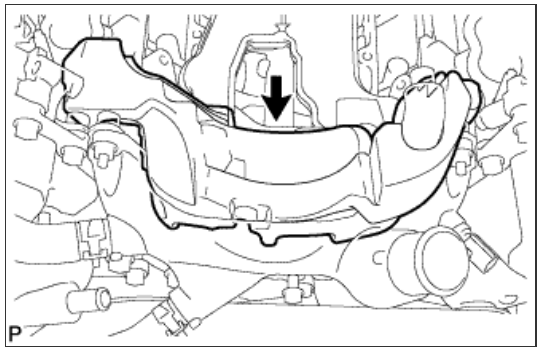
a. Remove the No. 1 water by-pass hose by disconnecting the hose from the water inlet housing and front water by-pass joint.

44. REMOVE WATER BY-PASS PIPE SUB-ASSEMBLY

a. Disconnect the 2 hoses.

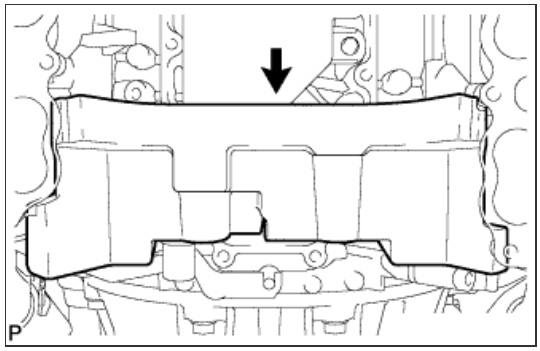


b. Remove the 2 bolts and water by-pass pipe.



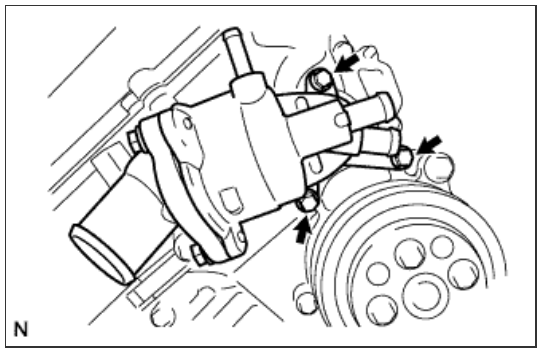
45. REMOVE FRONT WATER BY-PASS OINT

a. Disconnect the No. 2 water by-pass hose from the water by-pass joint.



b. Remove the 4 nuts, water by-pass joint and 2 gaskets.

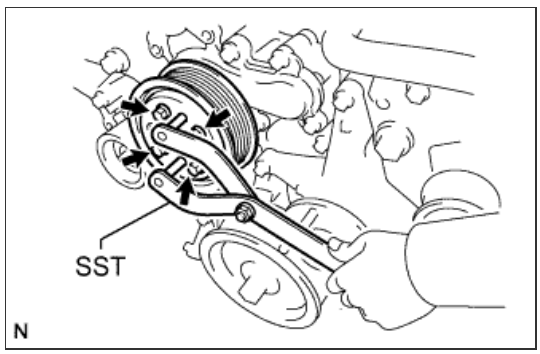
46. REMOVE NO. 2 ENGINE COVER



47. REMOVE NO. 1 ENGINE COVER

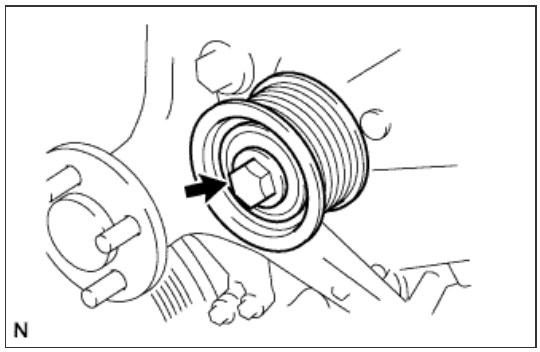
48. REMOVE WATER INLET HOUSING

a. Remove the 3 bolts, water inlet housing and gasket.



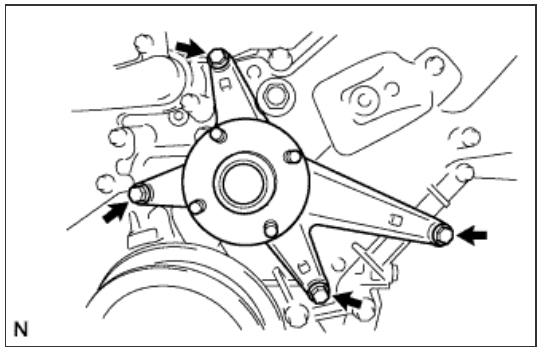
49. REMOVE WATER PUMP PULLEY

a. Using SST, hold the water pump pulley.



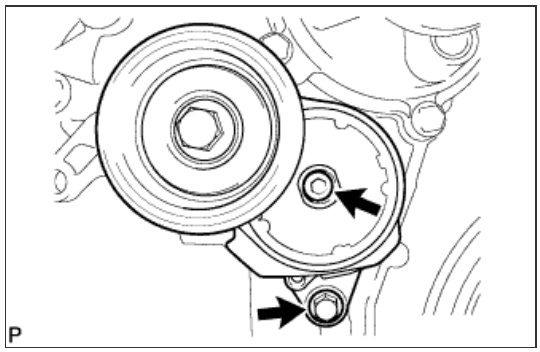
SST
09960-10010 09962-01000, 09963-01000

b. Remove the 4 bolts and water pump pulley.



50. REMOVE NO. 1 IDLER PULLEY SUB-ASSEMBLY

a. Remove the bolt and idler pulley.



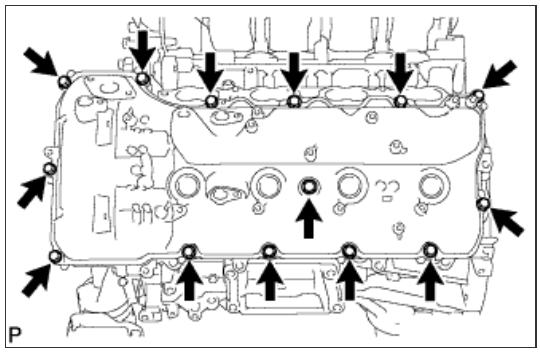
51. REMOVE FLUID COUPLING BRACKET

a. Remove the 4 bolts and fluid coupling bracket.

52. REMOVE V-RIBBED BELT TENSIONER ASSEMBLY

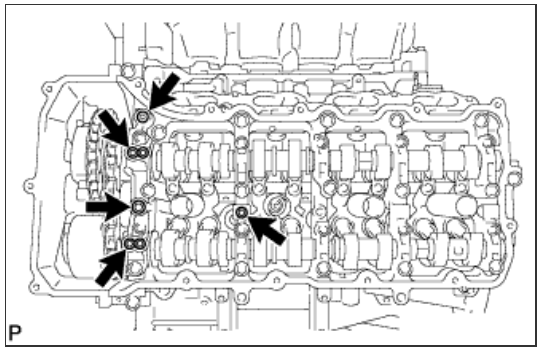
a. Remove the standard bolt, 6 mm hexagon wrench bolt and belt tensioner.

53. REMOVE IGNITION COIL ASSEMBLY



a. Remove the 8 bolts and 8 ignition coils.

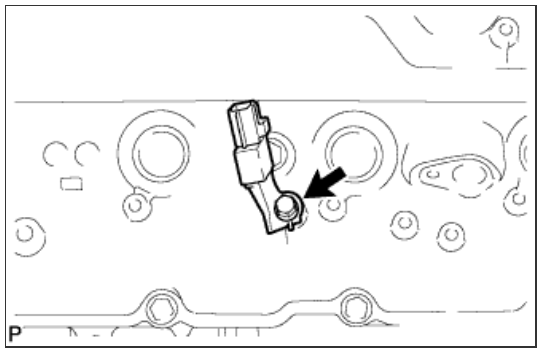
54. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY LH



a. Remove the 14 bolts, seal washer, cylinder head cover and gasket.

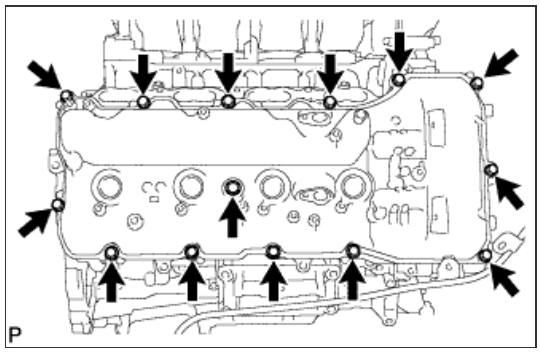
HINT:

Make sure the removed parts are returned to the same places they were removed from.

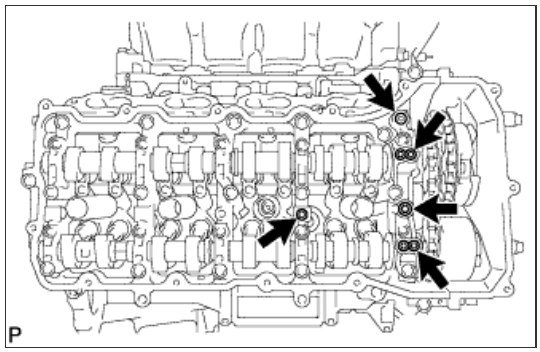


b. Remove the 5 gaskets from the camshaft bearing caps (No. 2, No. 3).

55. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY RH



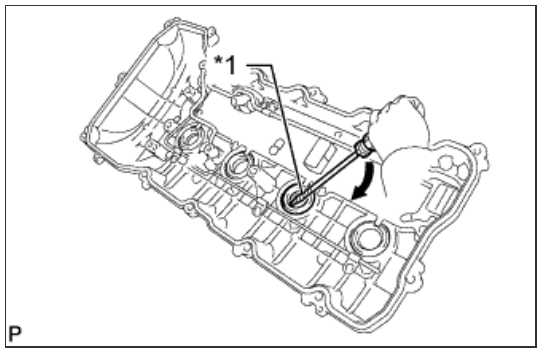
a. Remove the bolt and noise filter.



b. Remove the 14 bolts, seal washer, cylinder head cover and gasket.

HINT:

Make sure the removed parts are returned to the same places they were removed from.



c. Remove the 5 gaskets from the camshaft bearing caps (No. 1, No. 3).

56. REMOVE SPARK PLUG TUBE GASKET

a. Bend the 4 ventilation baffle plate claws on the cylinder head cover to an angle of 90° or more.

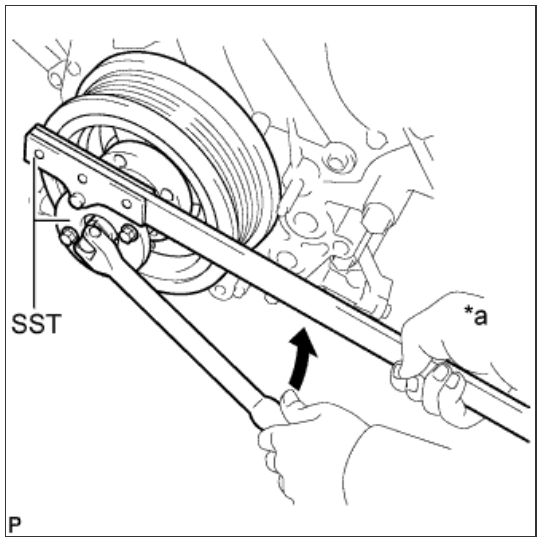
b. Using a screwdriver, pry out the gaskets.

Text in Illustration

*1	Tape
➡	Pry

NOTICE:

- **Be careful not to damage the cylinder head cover.**
- **Be careful not to damage the gasket when removing it, as the removed gasket needs to be used when installing a new one.**



HINT:

Tape the screwdriver tip before use.

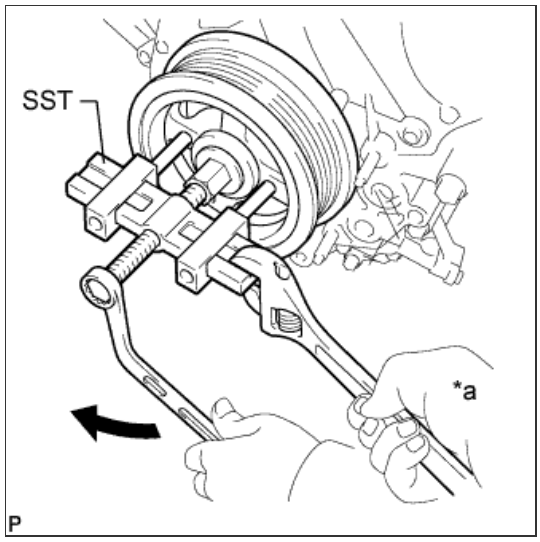
57. REMOVE CRANKSHAFT PULLEY

a. Using SST, loosen the crankshaft pulley set bolt until 2 or 3 threads are engaged.

SST
09213-70011
09330-00021

Text in Illustration

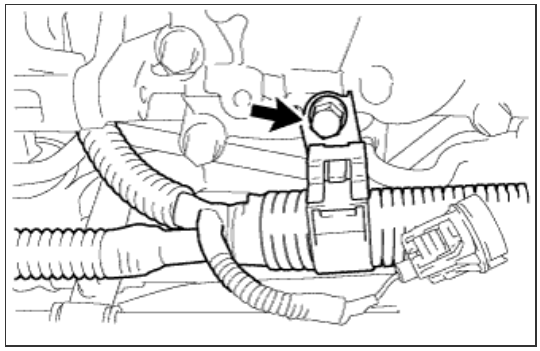
*a	Hold
➡	Turn



b. Using the pulley set bolt and SST, remove the crankshaft pulley.

SST
09950-50013 09951-05010, 09952-05010, 09953-05010, 09954-05011

Text in Illustration

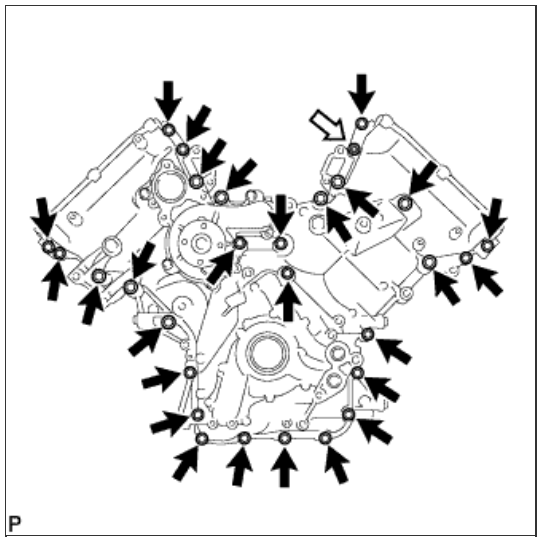


*a	Hold

➡	Turn

58. DISCONNECT WIRE HARNESS CLAMP BRACKET

a. Remove the bolt and disconnect the bracket.

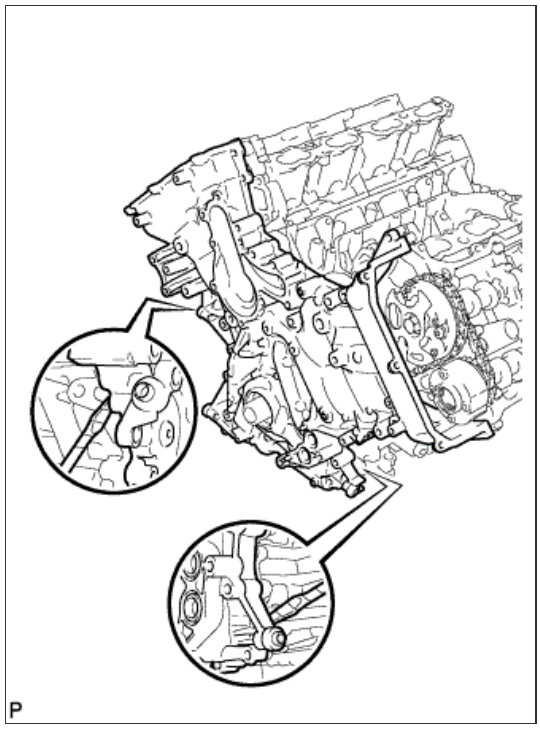


59. REMOVE TIMING CHAIN COVER SUB-ASSEMBLY

a. Remove the 28 bolts and nut shown in the illustration.

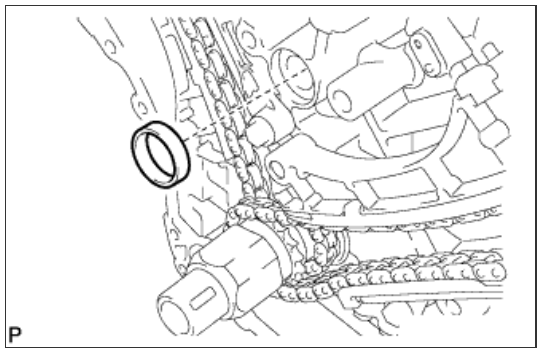
Text in Illustration

➡	Bolt
⇨	Nut



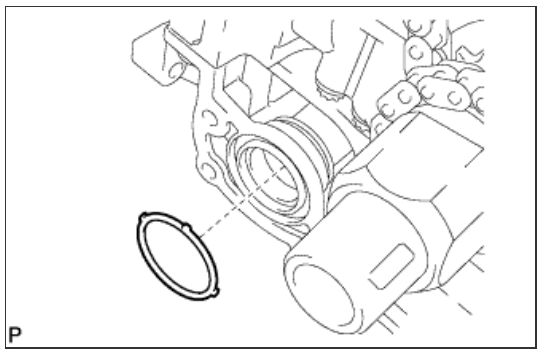
b. Remove the timing chain cover by prying between the timing chain cover and cylinder head or cylinder block with a screwdriver as shown in the illustration.

NOTICE:



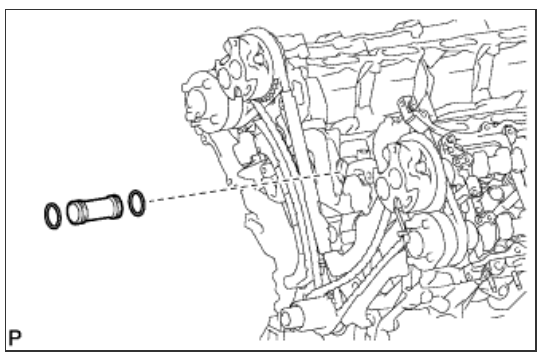
Be careful not to damage the contact surfaces of the cylinder head, cylinder block and chain cover.

HINT:



Tape the screwdriver tip before use.

c. Remove the oil pump gasket from the cylinder block.

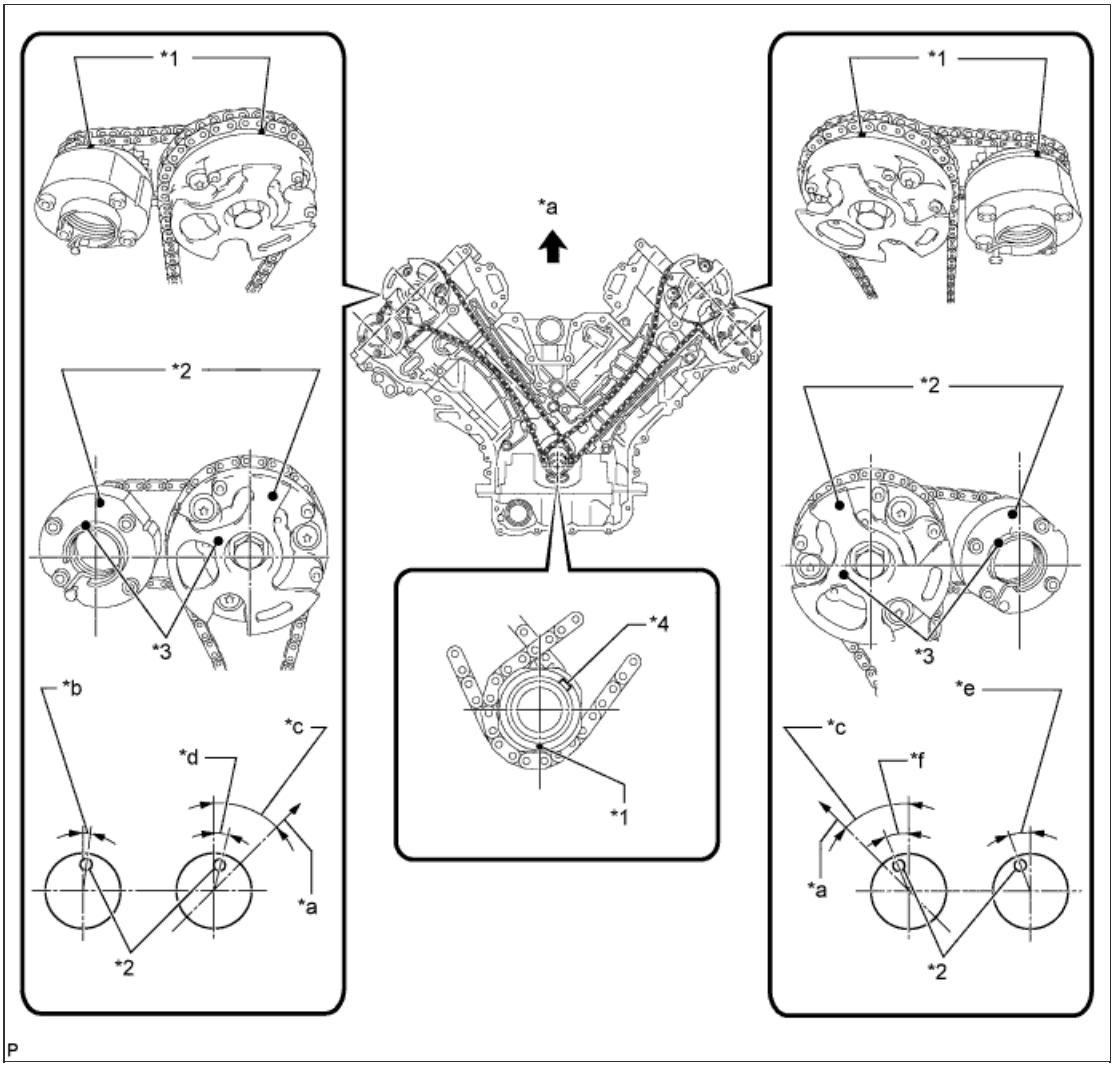


d. Remove the O-ring from the oil pan.

60. REMOVE WATER INLET PIPE

a. Remove the water inlet pipe.

b. Remove the 2 O-rings from the water inlet pipe.



61. SET NO. 1 CYLINDER TO TDC COMPRESSION

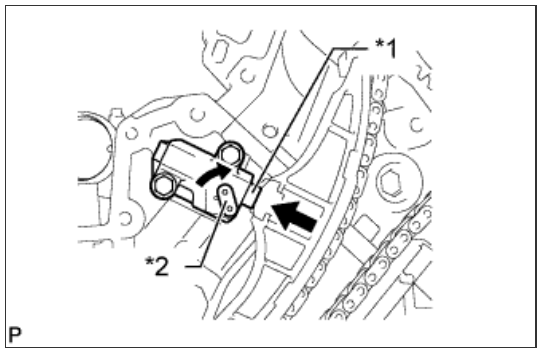
a. Temporarily install the crankshaft pulley bolt.

b. Rotate the crankshaft clockwise so that the timing marks on the crankshaft timing sprocket and camshaft timing gears are as shown in the illustration.

HINT:

If the timing marks do not align, rotate the crankshaft clockwise again and align the timing marks.

Text in Illustration

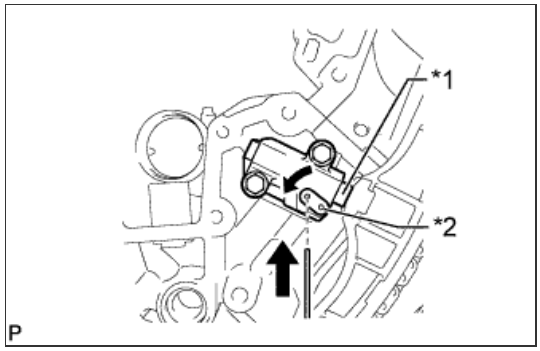


*1	Timing Mark	*2	Timing Mark Position
*3	Knock Pin Position	*4	Key
*a	Toward Ceiling	*b	Approximately 2°
*c	Approximately 45°	*d	Approximately 16°
*e	Approximately 18°	*f	Approximately 32°

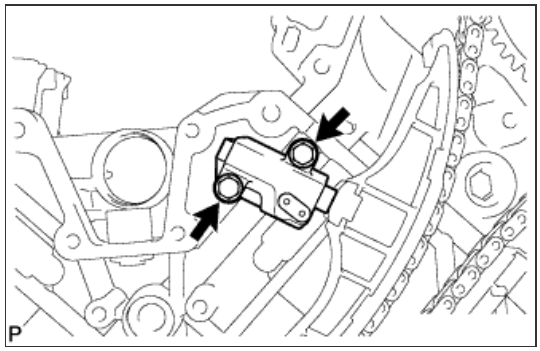
62. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY LH

a. Move the stopper plate clockwise to release the lock, and push the plunger deep into the tensioner.

Text in Illustration

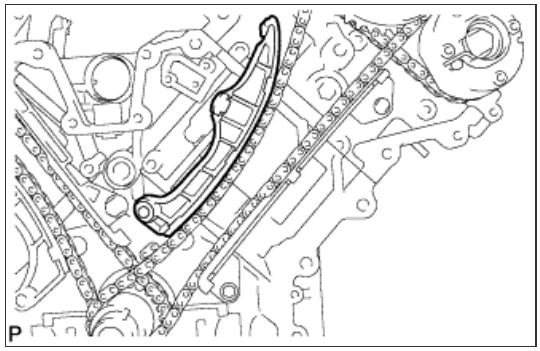


*1	Plunger
*2	Stopper Plate



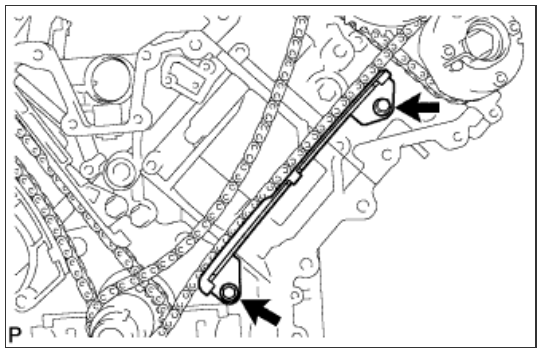
b. Move the stopper plate counterclockwise to set the lock, and insert a hexagon wrench into the stopper plate hole.

Text in Illustration

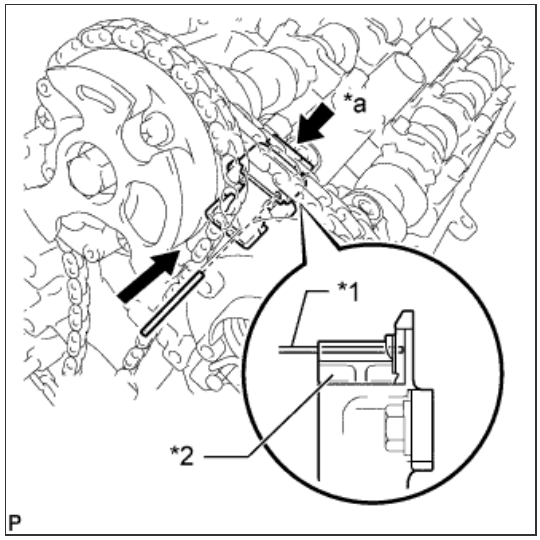


*1	Plunger
*2	Stopper Plate

c. Remove the 2 bolts, chain tensioner and gasket.



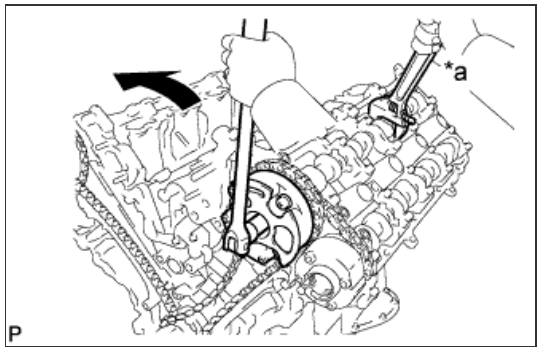
63. REMOVE NO. 1 CHAIN TENSIONER SLIPPER LH



64. REMOVE NO. 1 CHAIN VIBRATION DAMPER LH

a. Remove the 2 bolts and chain vibration damper.

65. REMOVE NO. 1 CHAIN SUB-ASSEMBLY LH

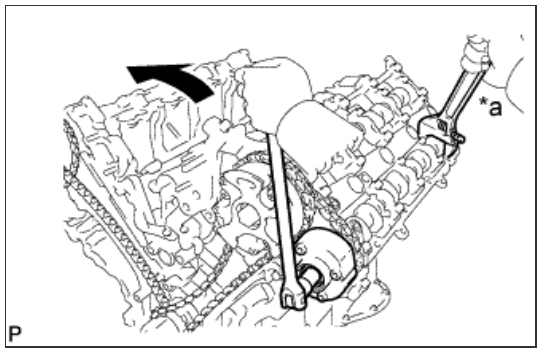


a. While pushing down the No. 3 chain tensioner, insert a pin of 1.0 mm (0.0394 in.) into the hole to fix it in place.

Text in Illustration

*1	Pin
*2	Plunger
*a	Push

b. Hold the hexagonal portion of the camshaft with a wrench and loosen the bolt.



Text in Illustration

*a	Hold
➡	Turn

NOTICE:

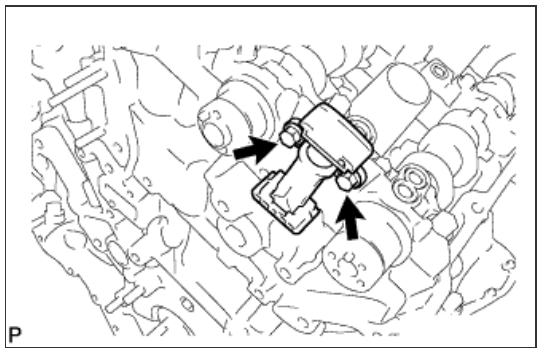
- **Be careful not to dama the c lider head with the wrench.**
- **Do not disassemble the camshaft timin er.**

c. Hold the hexagonal portion of the camshaft with a wrench and loosen the bolt.

Text in Illustration

*a	Hold
➡	Turn

NOTICE:



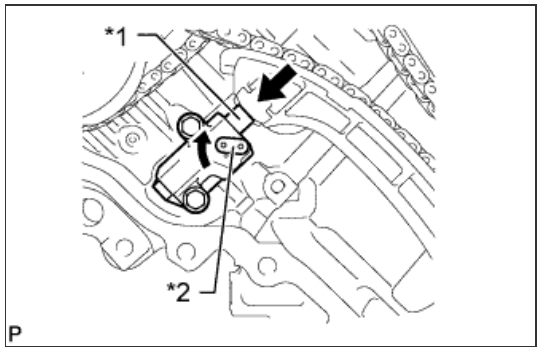
Be careful not to damage the cylinder head with the wrench.

d. Remove the 2 bolts. Then with the No. 1 and No. 2 chains still connected to the gears, remove the camshaft timing gear, camshaft timing exhaust gear and crankshaft timing sprocket LH.

e. Remove the No. 1 and No. 2 chains from the gears.

66. REMOVE NO. 3 CHAIN TENSIONER ASSEMBLY

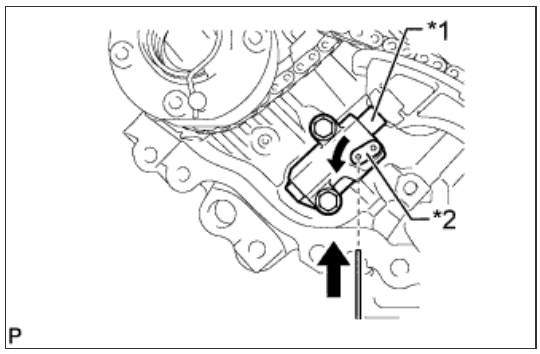
a. Remove the 2 bolts and chain tensioner.



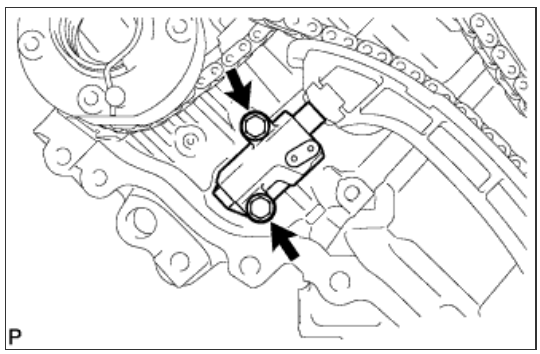
67. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY RH

a. Move the stopper plate clockwise to release the lock, and push the plunger deep into the tensioner.

Text in Illustration

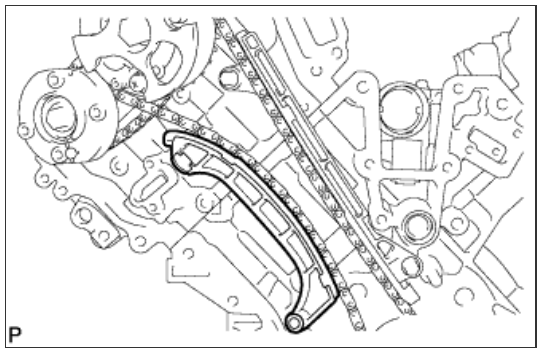


*1	Plunger
*2	Stopper Plate



b. Move the stopper plate counterclockwise to set the lock, and insert a hexagon wrench into the stopper plate hole.

Text in Illustration



*1	Plunger

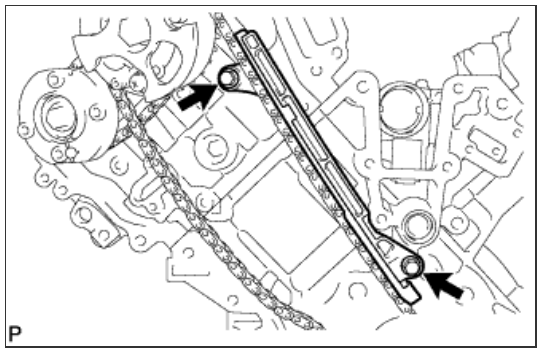
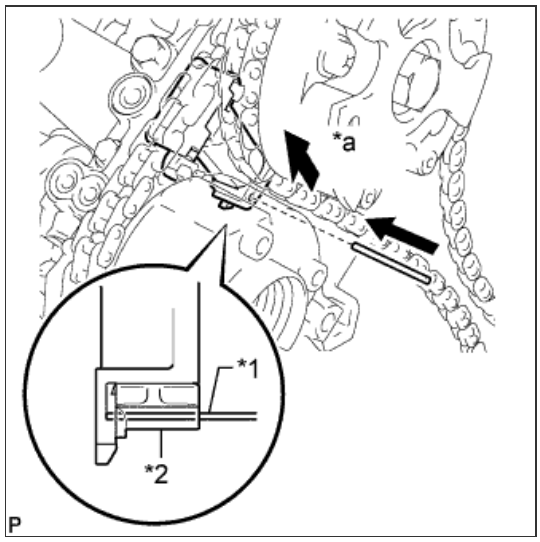
c. Remove the 2 bolts and chain tensioner.



68. REMOVE NO. 1 CHAIN TENSIONER SLIPPER RH

69. REMOVE NO. 1 CHAIN VIBRATION DAMPER RH

a. Remove the 2 bolts and vibration damper.

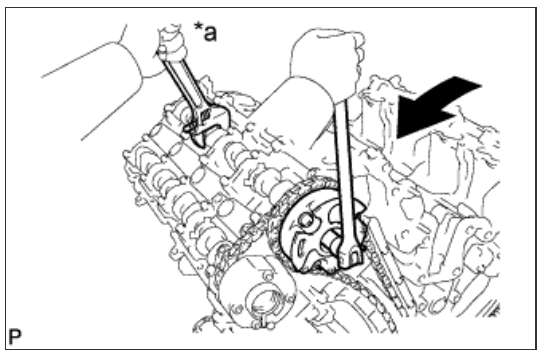


70. REMOVE NO. 1 CHAIN SUB-ASSEMBLY RH

a. While raising up the No. 2 chain tensioner, insert a pin of 1.0 mm (0.0394 in.) into the hole to fix it in place.

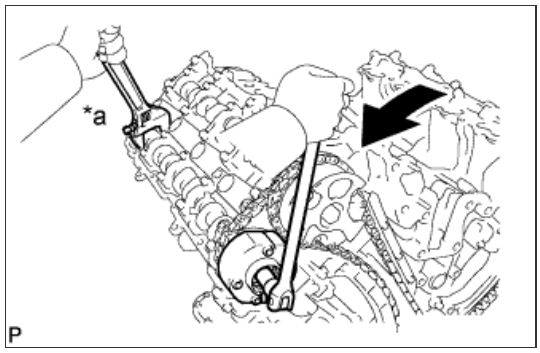
Text in Illustration

*1	Pin
*2	Plunger
*a	Push



b. Hold the hexagonal portion of the camshaft with a wrench and loosen the bolt.

Text in Illustration



*a	Hold
➡	Turn

NOTICE:

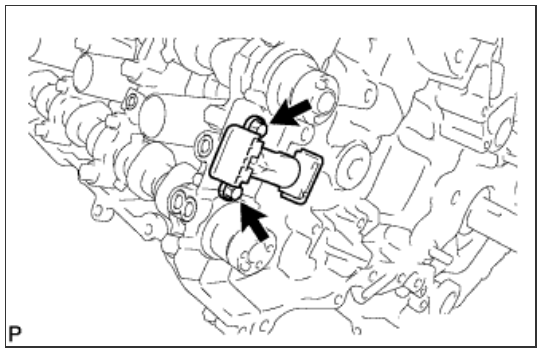
- **Be careful not to dama the c lider head with the wrench.**
- **Do not disassemble the camshaft timin er.**

c. Hold the hexagonal portion of the camshaft with a wrench and loosen the bolt.

Text in Illustration

*a	Hold
➡	Turn

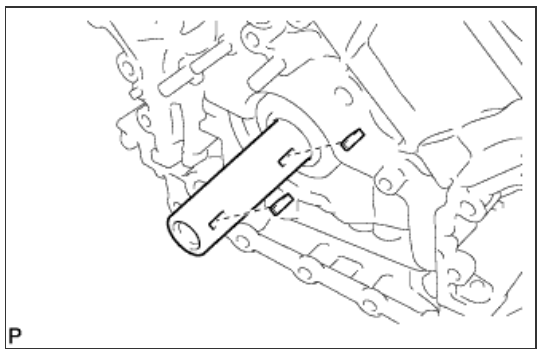
NOTICE:



Be careful not to damage the cylinder head with the wrench.

d. Remove the 2 bolts. Then with the No. 1 and No. 2 chains still connected to the gears, remove the camshaft timing gear, camshaft timing exhaust gear and crankshaft timing sprocket RH.

e. Remove the No. 1 and No. 2 chains from the gears.

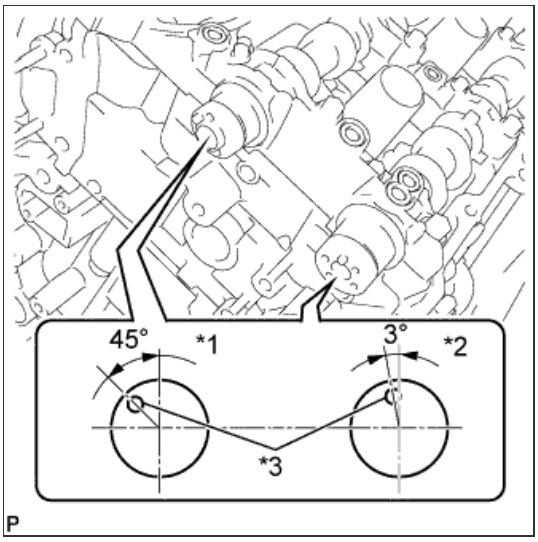


71. REMOVE NO. 2 CHAIN TENSIONER ASSEMBLY

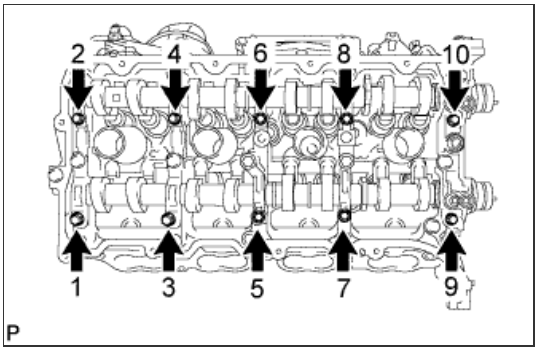
a. Remove the 2 bolts and chain tensioner.

72. REMOVE CRANKSHAFT TIMING GEAR KEY

a. Using a screwdriver, remove the 2 timing gear keys from the crankshaft.



73. REMOVE CAMSHAFT BEARING CAP LH



a. Make sure that the knock pin of the camshaft is positioned as shown in the illustration.

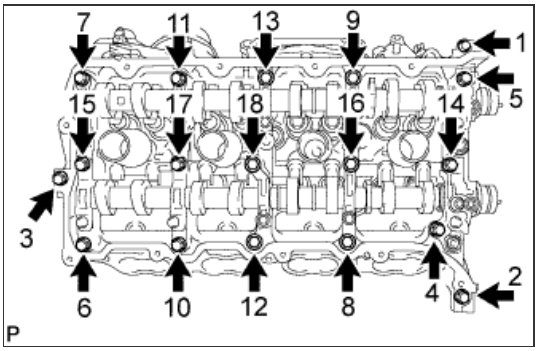
Text in Illustration

*1	IN
*2	EX
*3	Knock Pin

b. Uniformly loosen and remove the 10 bearing cap bolts in the sequence shown in the illustration.

c. Uniformly loosen and remove the 18 bearing cap bolts in the sequence shown in the illustration.

NOTICE:



Uniformly loosen the bolts while keeping the camshaft level.

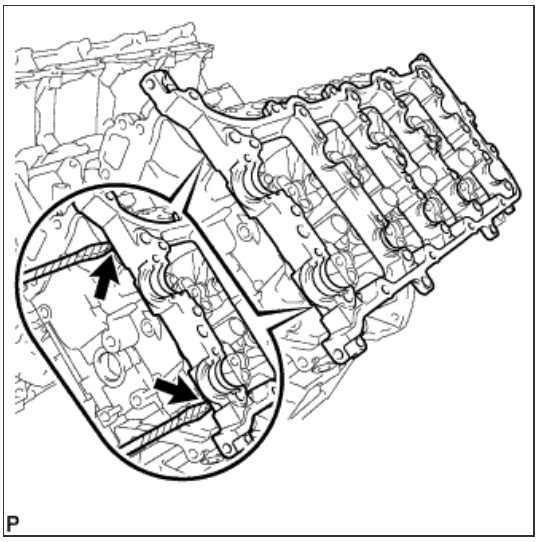
d. Remove the 6 bearing caps.

HINT:

Arrange the removed parts in the correct order.

e. Remove the No. 3 and No. 4 camshafts.

74. REMOVE CAMSHAFT HOUSING SUB-ASSEMBLY LH



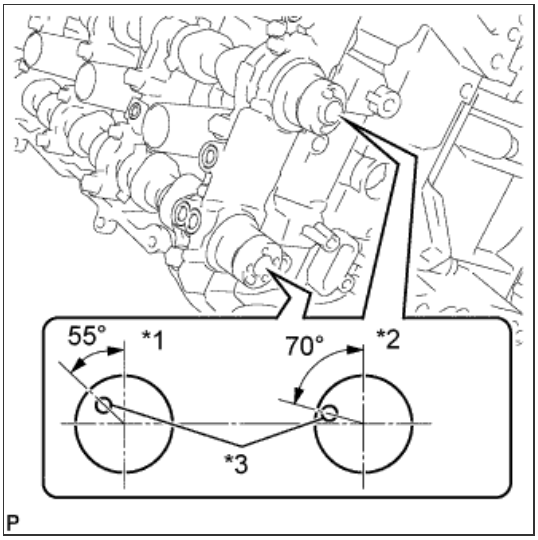
a. Remove the camshaft housing by prying between the cylinder head and camshaft housing with a screwdriver.

NOTICE:

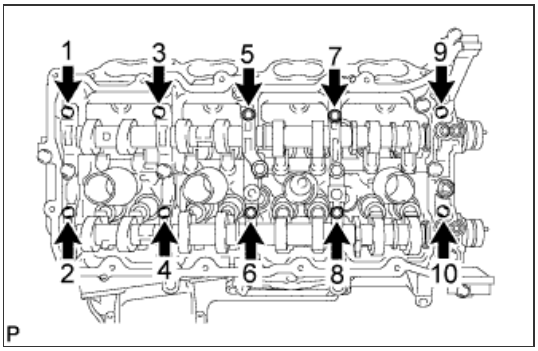
Be careful not to damage the contact surfaces of the cylinder head and camshaft housing.

HINT:

Tape the screwdriver tip before use.



75. REMOVE CAMSHAFT BEARING CAP RH



a. Make sure that the knock pin of the camshaft is positioned as shown in the illustration.

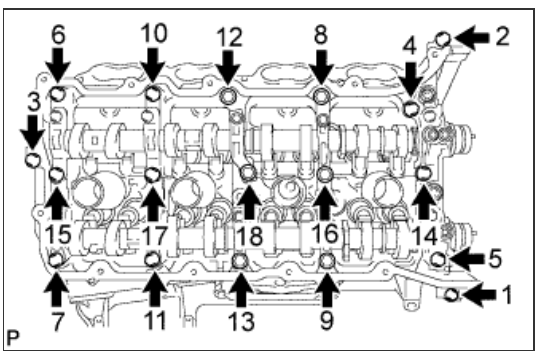
Text in Illustration

*1	EX
*2	IN
*3	Knock Pin

b. Uniformly loosen and remove the 10 bearing cap bolts in the sequence shown in the illustration.

c. Uniformly loosen and remove the 18 bearing cap bolts in the sequence shown in the illustration.

NOTICE:



Uniformly loosen the bolts while keeping the camshaft level.

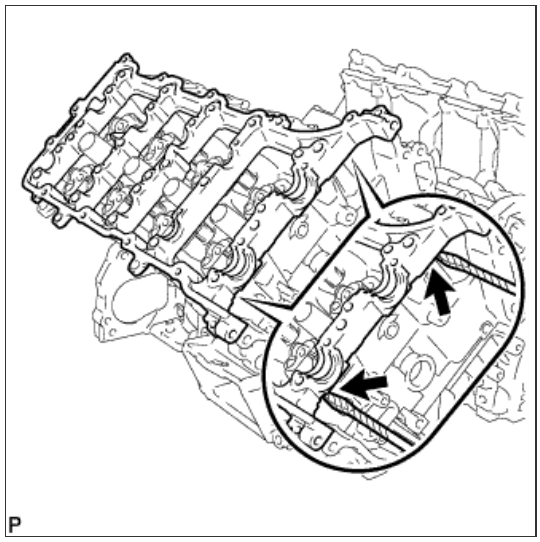
d. Remove the 6 bearing caps.

HINT:

Arrange the removed parts in the correct order.

e. Remove the No. 1 and No. 2 camshafts.

76. REMOVE CAMSHAFT HOUSING SUB-ASSEMBLY RH



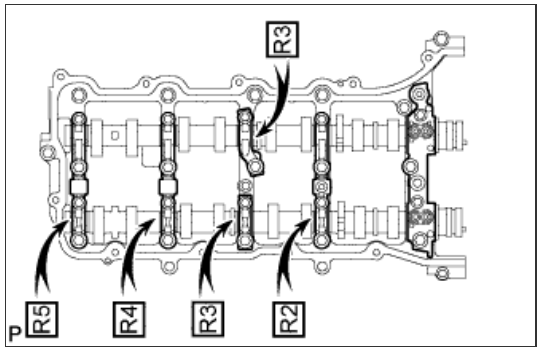
a. Remove the camshaft housing by prying between the cylinder head and camshaft housing with a screwdriver.

NOTICE:

Be careful not to damage the contact surfaces of the cylinder head and camshaft housing.

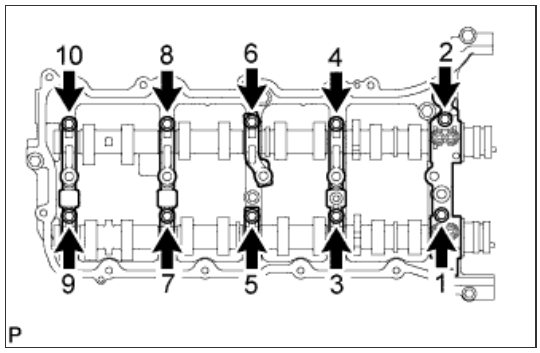
HINT:

Tape the screwdriver tip before use.



for Preparation Click here

1. INSTALL CAMSHAFT BEARING CAP RH

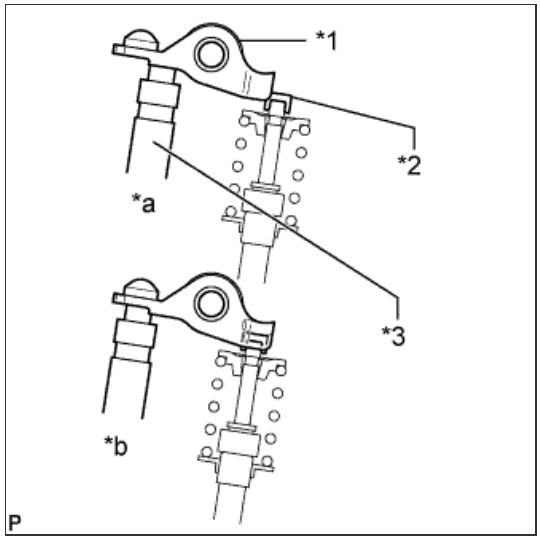


a. Apply a light coat of engine oil to the camshaft journals, camshaft housings and bearing caps.

b. Install the No. 1 and No. 2 camshafts to the camshaft housing.

c. Confirm the marks and numbers on the camshaft bearing caps and place them in their proper positions and directions.

d. Temporarily install the 10 bolts in the order shown in the illustration.



2. INSTALL CAMSHAFT HOUSING SUB-ASSEMBLY RH

a. Make sure that the valve rocker arms are installed as shown in the illustration.

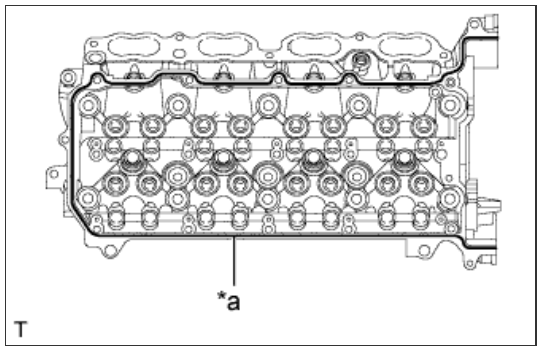
Text in Illustration

*1	Valve Rocker Arm
*2	Valve Stem Cap
*3	Valve Lash Adjuster
*a	INCORRECT
*b	CORRECT

b. Apply seal packing in a continuous line as shown in the illustration.

Seal packing:

Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent



Standard seal diameter:
3.5 to 4.0 mm (0.138 to 0.157 in.)

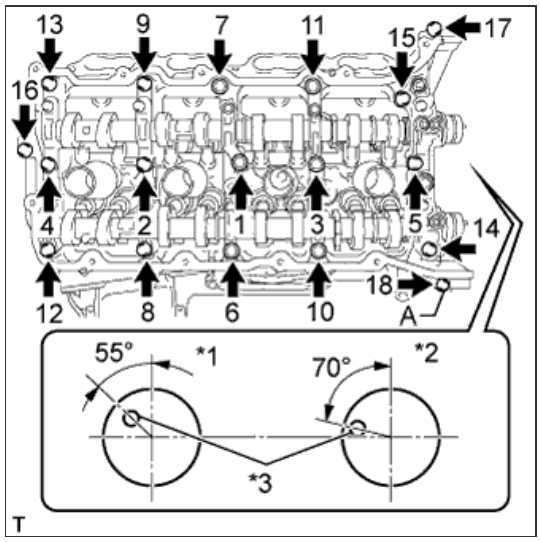
Text in Illustration

*a	3.5 to 4.0 mm

NOTICE:

- Remove any oil from the contact surface.
- Install the camshaft housing within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.

c. Install the camshaft housing, and install the 18 bolts in the order shown in the illustration.



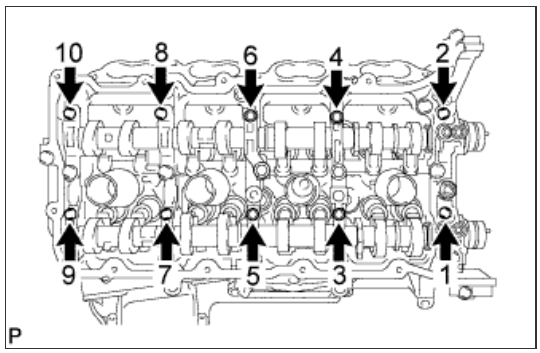
Torque:
for bolt A:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }
except bolt A:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }

Text in Illustration

*1	EX
*2	IN
*3	Knock Pin

NOTICE:

- Do not start the engine for at least 2 hours after the installation.
- Make sure that the knock pin of the camshaft is positioned as shown in the illustration before installing the camshaft housing.

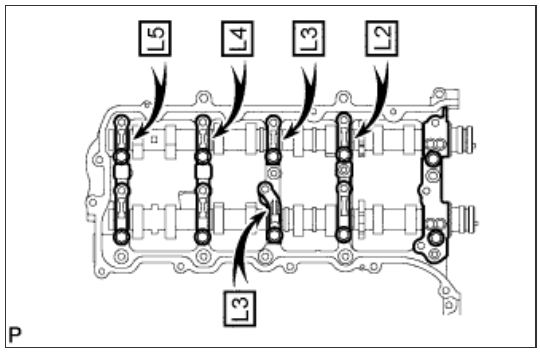


d. Tighten the 10 bolts in the order shown in the illustration.

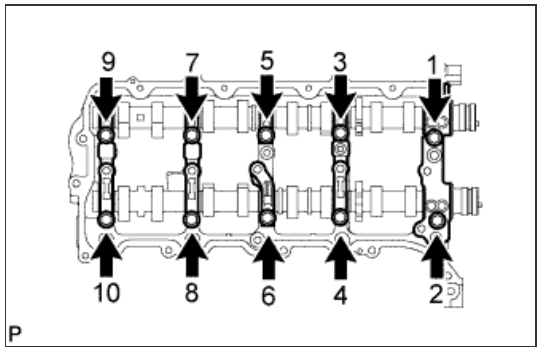
Torque:
16 N*m{ 163 kgf*cm , 12 ft.*lbf }

NOTICE:

Thoroughly wipe clean any seal packing.



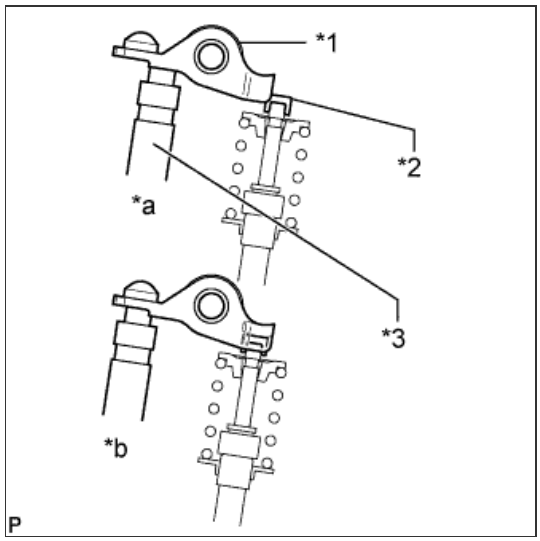
3. INSTALL CAMSHAFT BEARING CAP LH



a. Apply a light coat of engine oil to the camshaft journals, camshaft housings and bearing caps.

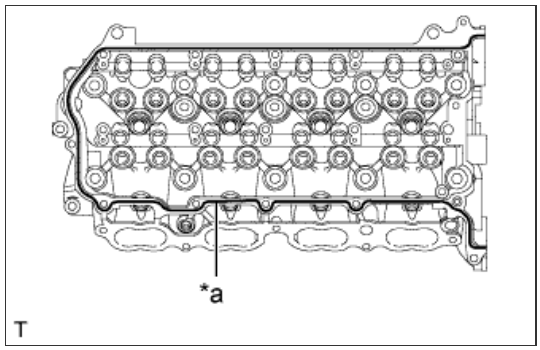
b. Install the No. 3 and No. 4 camshafts to the camshaft housing.

c. Confirm the marks and numbers on the camshaft bearing caps and place them in their proper positions and directions.



d. Temporarily install the 10 bolts in the order shown in the illustration.

4. INSTALL CAMSHAFT HOUSING SUB-ASSEMBLY LH



a. Make sure that the valve rocker arms are installed as shown in the illustration.

Text in Illustration

*1	Valve Rocker Arm
*2	Valve Stem Cap
*3	Valve Lash Adjuster
*a	INCORRECT
*b	CORRECT

b. Apply seal packing in a continuous line as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
3.5 to 4.0 mm (0.138 to 0.157 in.)

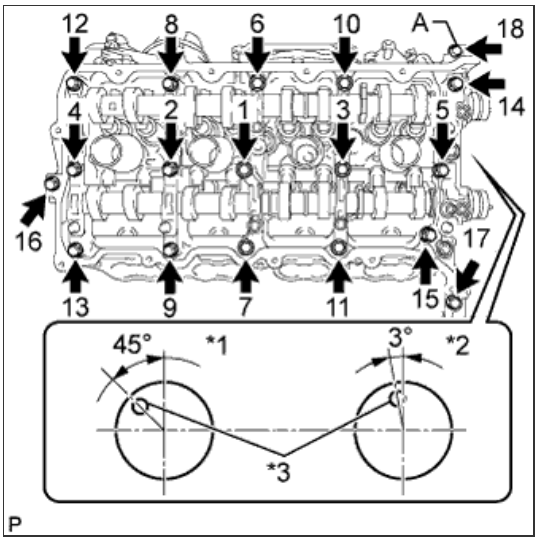
Text in Illustration

*a	3.5 to 4.0 mm

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the camshaft housing within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**

c. Install the camshaft housing, and install the 18 bolts in the order shown in the illustration.



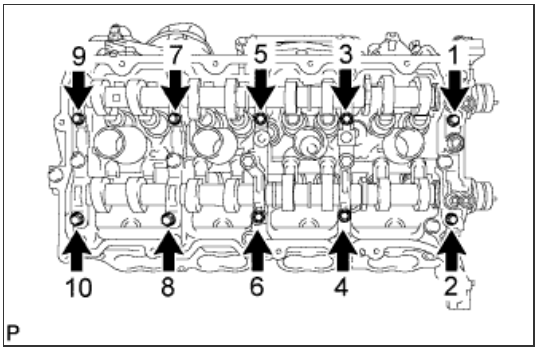
Torque:
for bolt A:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }
except bolt A:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }

Text in Illustration

*1	IN
*2	EX
*3	Knock Pin

NOTICE:

- **Do not start the engine for at least 2 hours after the installation.**
- **Make sure that the knock pin of the camshaft is positioned as shown in the illustration before installing the camshaft housing.**

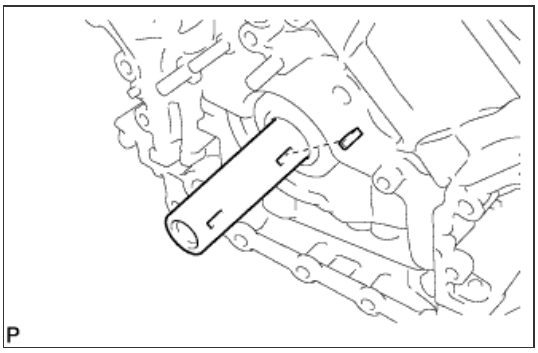


d. Tighten the 10 bolts in the order shown in the illustration.

Torque:
16 N*m{ 163 kgf*cm , 12 ft.*lbf }

NOTICE:

Thoroughly wipe clean any seal packing.



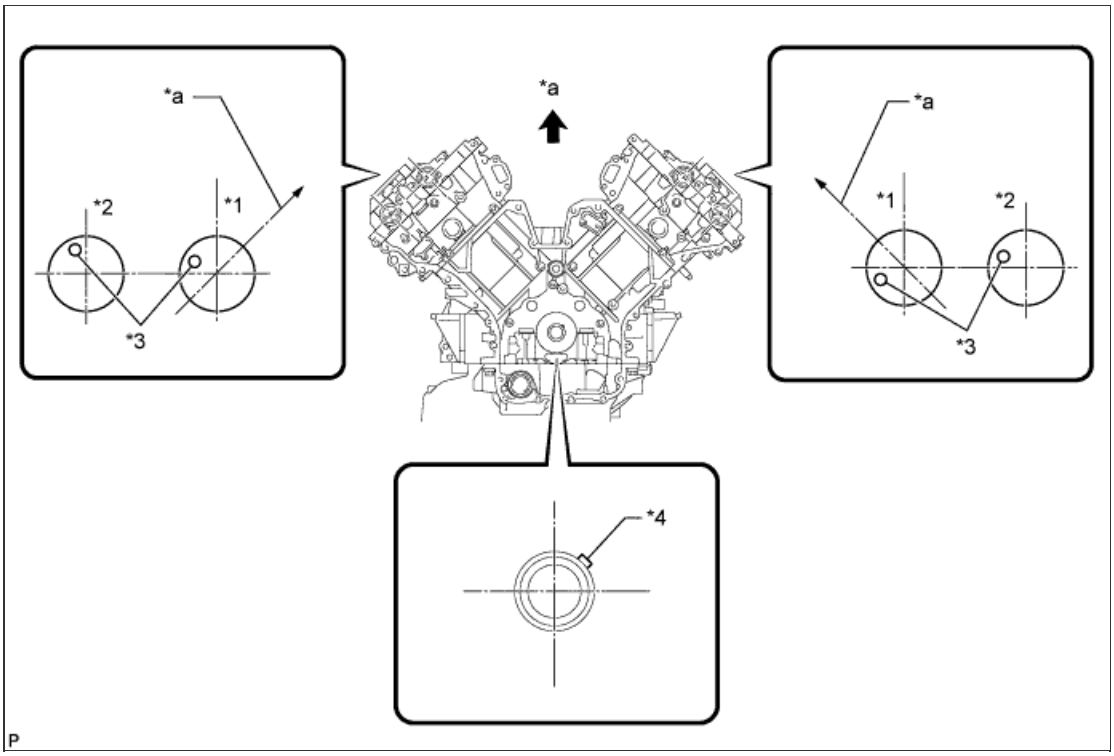
5. INSTALL CRANKSHAFT TIMING GEAR KEY

a. Install the timing gear key.

HINT:

The other timing gear key will be installed at a later step.

6. SET NO. 1 CYLINDER TO TDC/COMPRESSION



a. Temporarily install the crankshaft pulley bolt.

b. Rotate the crankshaft so that the timing gear key is as shown in the illustration. Then using a wrench, rotate each camshaft so that the timing marks are as shown in the illustration.

NOTICE:

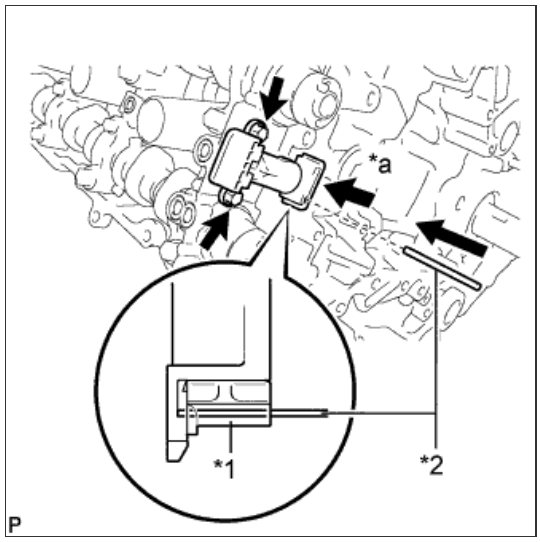
When the crankshaft or a camshaft is rotated excessively, the valves and pistons may interfere with each other.

c. Remove the crankshaft pulley bolt.

Text in Illustration

*1	IN	*2	EX
*3	Knock Pin	*4	Key
*a	Toward Ceiling	-	-

7. INSTALL NO. 2 CHAIN TENSIONER ASSEMBLY



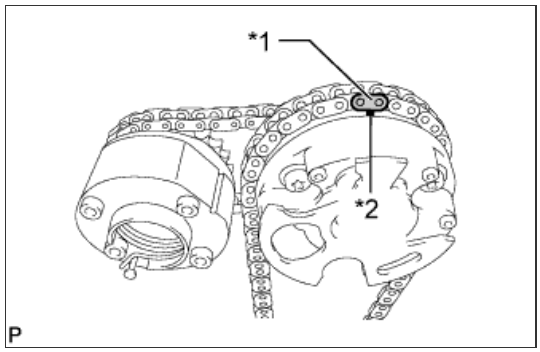
a. Install the chain tensioner with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

Text in Illustration

*1	Plunger
*2	Pin
*a	Push

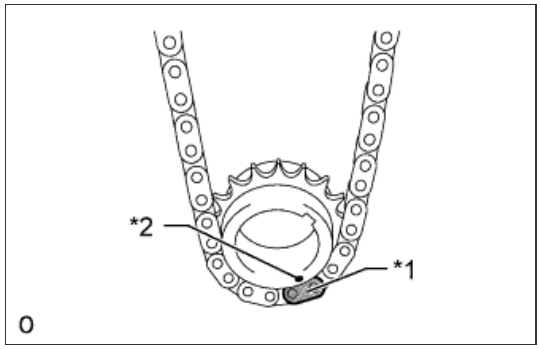
b. While raising up the No. 2 chain tensioner, insert a pin of 1.0 mm (0.0394 in.) into the hole to fix it in place.



8. INSTALL NO. 1 CHAIN SUB-ASSEMBLY RH

a. Align the No. 1 chain orange mark plate with the camshaft timing gear timing mark, and attach the chain to the gear as shown in the illustration.

Text in Illustration

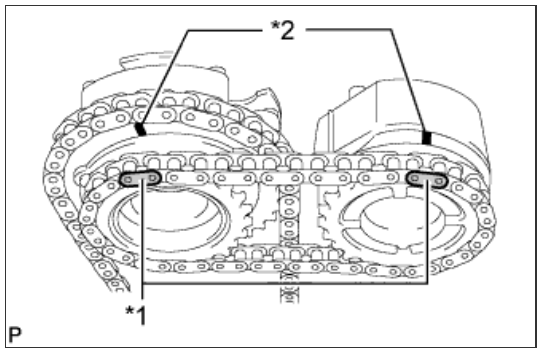


*1	Mark Plate
*2	Timing Mark

b. Align the No. 1 chain orange mark plate with the crankshaft timing sprocket timing mark, and attach the chain to the gear as shown in the illustration.

Text in Illustration

*1	Mark Plate
*2	Timing Mark



c. Align the No. 2 chain yellow mark plates with the timing marks of the camshaft timing gear assembly and camshaft timing exhaust gear assembly, and attach the No. 2 chain to the gears as shown in the illustration.

Text in Illustration

*1	Mark Plate
*2	Timing Mark

HINT:

The crankshaft timing sprocket RH and camshaft timing exhaust gear will be installed with the No. 1 and No. 2 chains connected to the gears.

d. Install the crankshaft timing sprocket RH to the crankshaft.

e. Align and attach the knock pin of the No. 1 camshaft with the pin hole of the camshaft timing gear.

f. Using the hexagonal portion of the No. 2 camshaft, align and attach the knock pin of the No. 2 camshaft with the pin hole of the camshaft timing exhaust gear.

g. Remove the pin from the No. 2 chain tensioner.

h. Using a wrench to hold the hexagonal portion of the No. 1 camshaft, temporarily install the bolt.

i. Using a wrench to hold the hexagonal portion of the No. 2 camshaft, temporarily install the bolt.

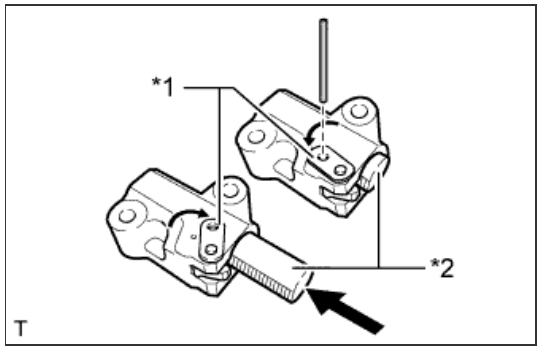
9. INSTALL NO. 1 CHAIN VIBRATION DAMPER RH

a. Install the vibration damper with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

10. INSTALL NO. 1 CHAIN TENSIONER SLIPPER RH

HINT:



If you cannot install the chain tensioner slipper due to the tension of the chain, use the hexagonal portion of the camshaft to loosen the chain, and then install the chain tensioner slipper.

11. INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY RH

a. Move the stopper plate clockwise to release the lock, and push the plunger deep into the tensioner.

Text in Illustration

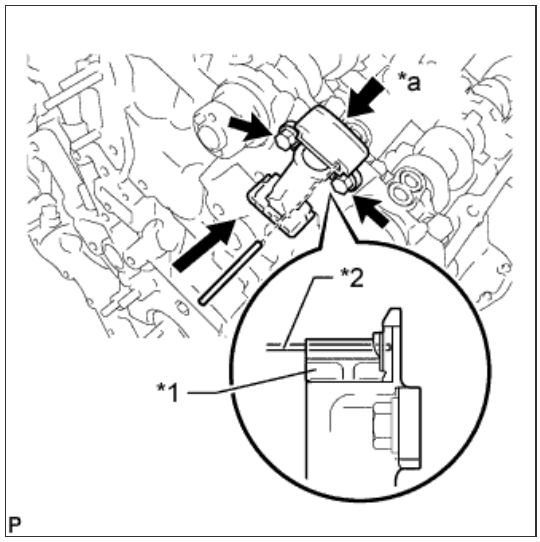
*1	Stopper Plate
*2	Plunger

b. Move the stopper plate counterclockwise to set the lock, and insert a hexagon wrench into the hole of the stopper plate.

c. Install the chain tensioner with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

d. Remove the hexagon wrench from the chain tensioner.



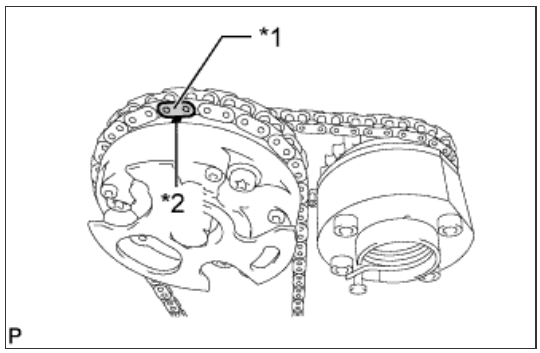
12. INSTALL NO. 3 CHAIN TENSIONER ASSEMBLY

a. Install the chain tensioner with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

Text in Illustration

*1	Plunger
*2	Pin
*a	Push

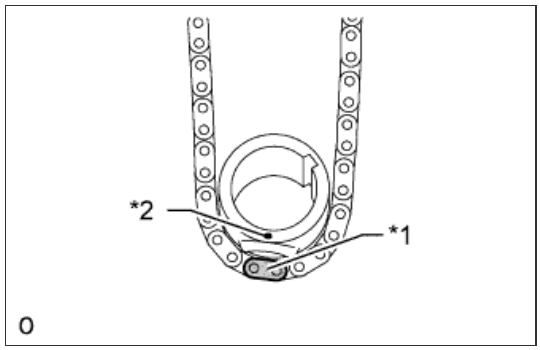


b. While pushing down the No. 2 chain tensioner, insert a pin of 1.0 mm (0.0394 in.) into the hole to fix it in place.

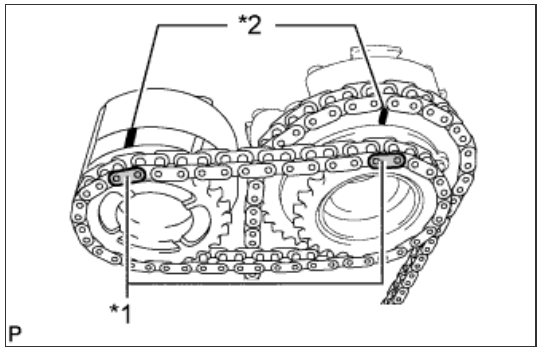
13. INSTALL NO. 1 CHAIN SUB-ASSEMBLY LH

a. Align the No. 1 chain orange mark plate with the camshaft timing gear timing mark, and attach the chain to the gear as shown in the illustration.

Text in Illustration



*1	Mark Plate
*2	Timing Mark



b. Align the No. 1 chain orange mark plate with the crankshaft timing sprocket timing mark, and attach the chain to the gear as shown in the illustration.

Text in Illustration

*1	Mark Plate
*2	Timing Mark

c. Align the No. 2 chain yellow mark plates with the timing marks of the camshaft timing gear assembly and camshaft timing exhaust gear assembly, and attach the No. 2 chain to the gears as shown in the illustration.

Text in Illustration

*1	Mark Plate
*2	Timing Mark

HINT:

The crankshaft timing sprocket LH and camshaft timing exhaust gear will be installed with the No. 1 and No. 2 chains connected to the gears.

d. Install the crankshaft timing sprocket LH to the crankshaft.

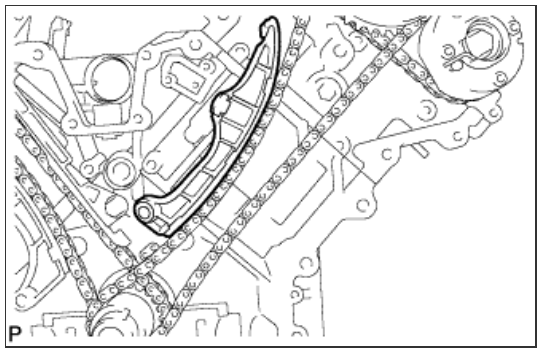
e. Align and attach the knock pin of the No. 3 camshaft with the pin hole of the camshaft timing gear.

f. Using the hexagonal portion of the No. 4 camshaft, align and attach the knock pin of the No. 4 camshaft with the pin hole of the camshaft timing exhaust gear.

NOTICE:

Because the timing mark positions of the gears may shift due to looseness of the No. 1 chain, use the hexagonal portion of the camshaft to hold the No. 3 camshaft in place until the No. 1 chain tensioner is installed.

g. Remove the pin from the No. 3 chain tensioner.



h. Using a wrench to hold the hexagonal portion of the No. 3 camshaft, temporarily install the bolt.

i. Using a wrench to hold the hexagonal portion of the No. 4 camshaft, temporarily install the bolt.

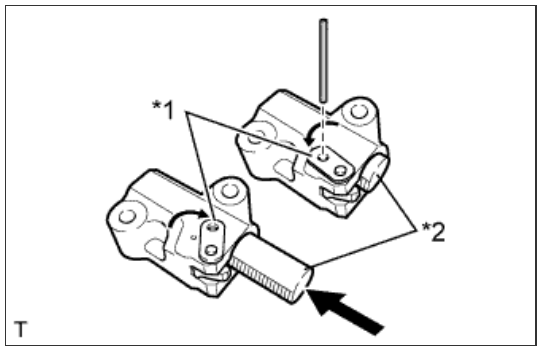
14. INSTALL NO. 1 CHAIN TENSIONER SLIPPER LH

HINT:

If you cannot install the chain tensioner slipper due to the tension of the chain, use the hexagonal portion of the camshaft to loosen the chain, and install the chain tensioner slipper.

15. INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY LH

a. Move the stopper plate clockwise to release the lock, and push the plunger deep into the tensioner.



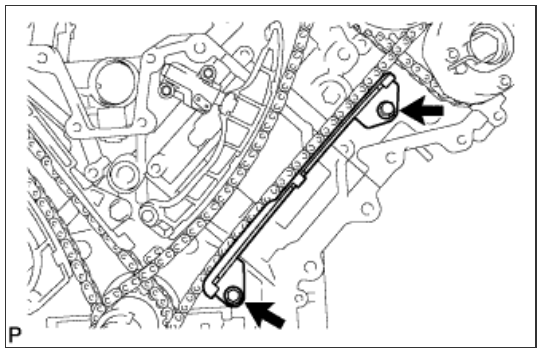
Text in Illustration

*1	Stopper Plate
*2	Plunger

b. Move the stopper plate counterclockwise to set the lock, and insert a hexagon wrench into the hole of the stopper plate.

c. Install a new gasket and the chain tensioner with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



16. INSTALL NO. 1 CHAIN VIBRATION DAMPER LH

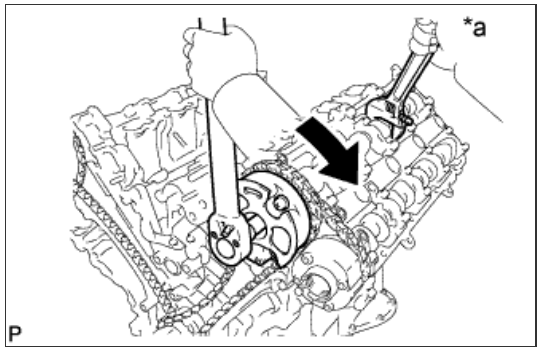
a. Install the vibration damper with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. Remove the hexagon wrench from the No. 1 chain tensioner.

17. TIGHTEN CAMSHAFT TIMING GEAR ASSEMBLY

a. for Bank 1:



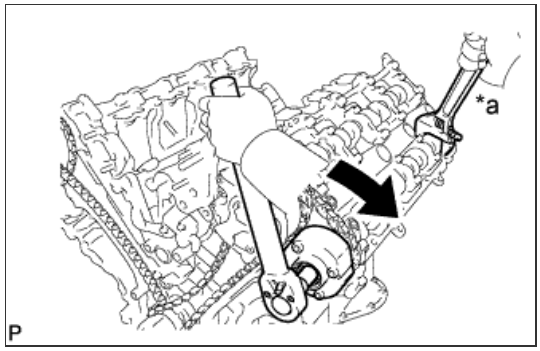
i. Using a wrench, hold the hexagonal portion of the No. 3 camshaft.

Text in Illustration

*a	Hold
➡	Turn

ii. Tighten the bolt of the camshaft timing gear.

Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

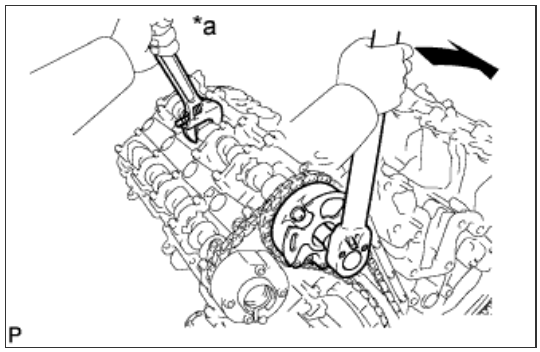


iii. Using a wrench to hold the hexagonal portion of the No. 4 camshaft, tighten the bolt of the camshaft timing exhaust gear.

Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

Text in Illustration

*a	Hold
➡	Turn



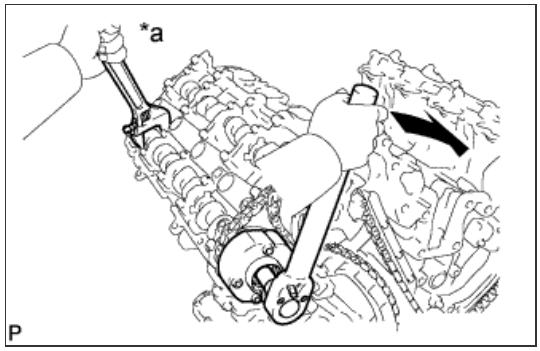
b. for Bank 2:

i. Using a wrench, hold the hexagonal portion of the No. 1 camshaft.

Text in Illustration

*a	Hold
➡	Turn

ii. Tighten the bolt of the camshaft timing gear.



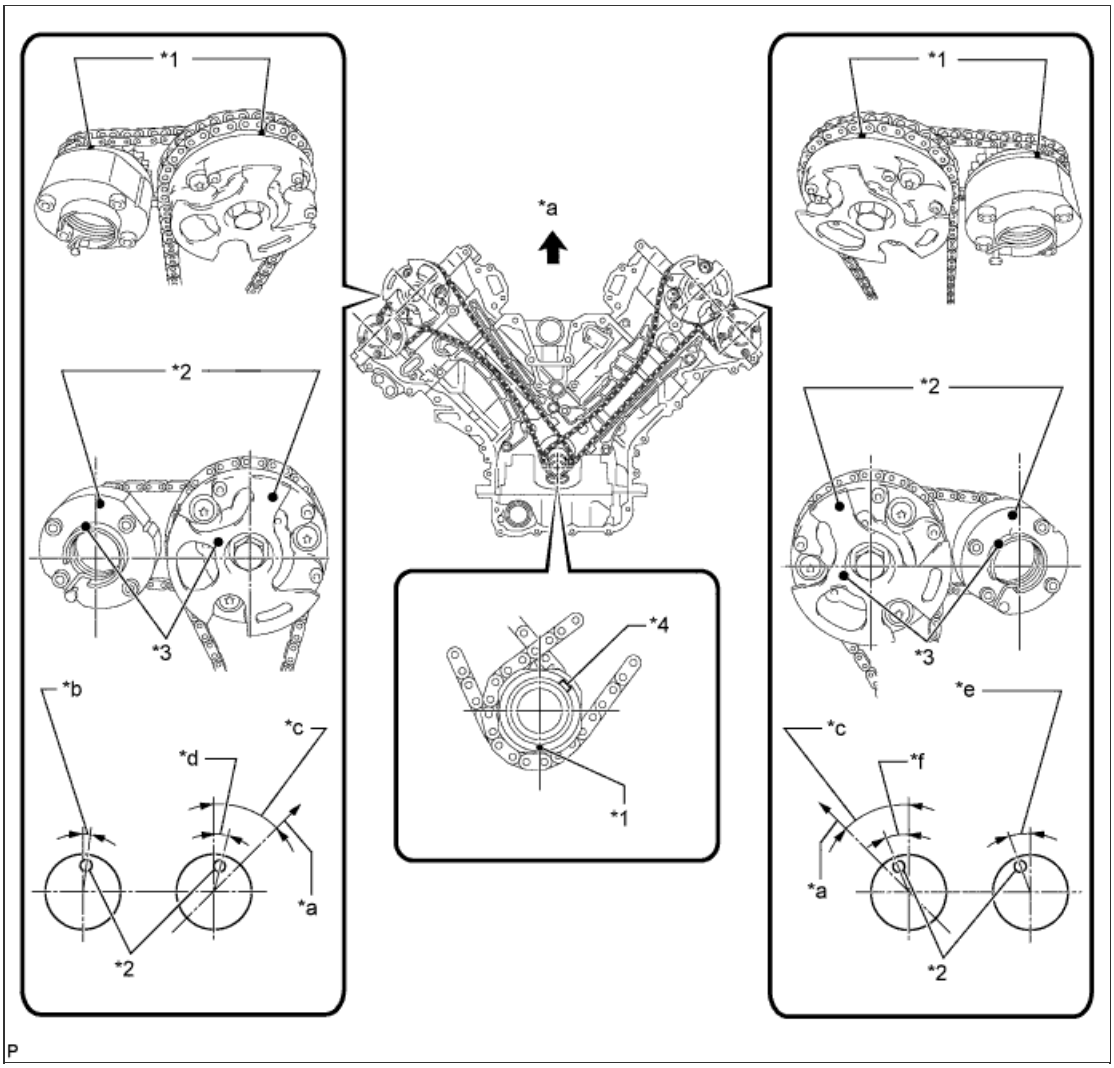
Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

iii. Using a wrench to hold the hexagonal portion of the No. 2 camshaft, tighten the bolt of the camshaft timing exhaust gear.

Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

Text in Illustration

*a	Hold
➡	Turn



18. CHECK NO. 1 CYLINDER TO TDC/COMPRESSION

a. Temporarily install the crankshaft pulley bolt.

b. Rotate the crankshaft clockwise, and check that the timing marks on the crankshaft timing sprocket and camshaft timing gears are as shown in the illustration.

c. Remove the crankshaft pulley bolt.

Text in Illustration

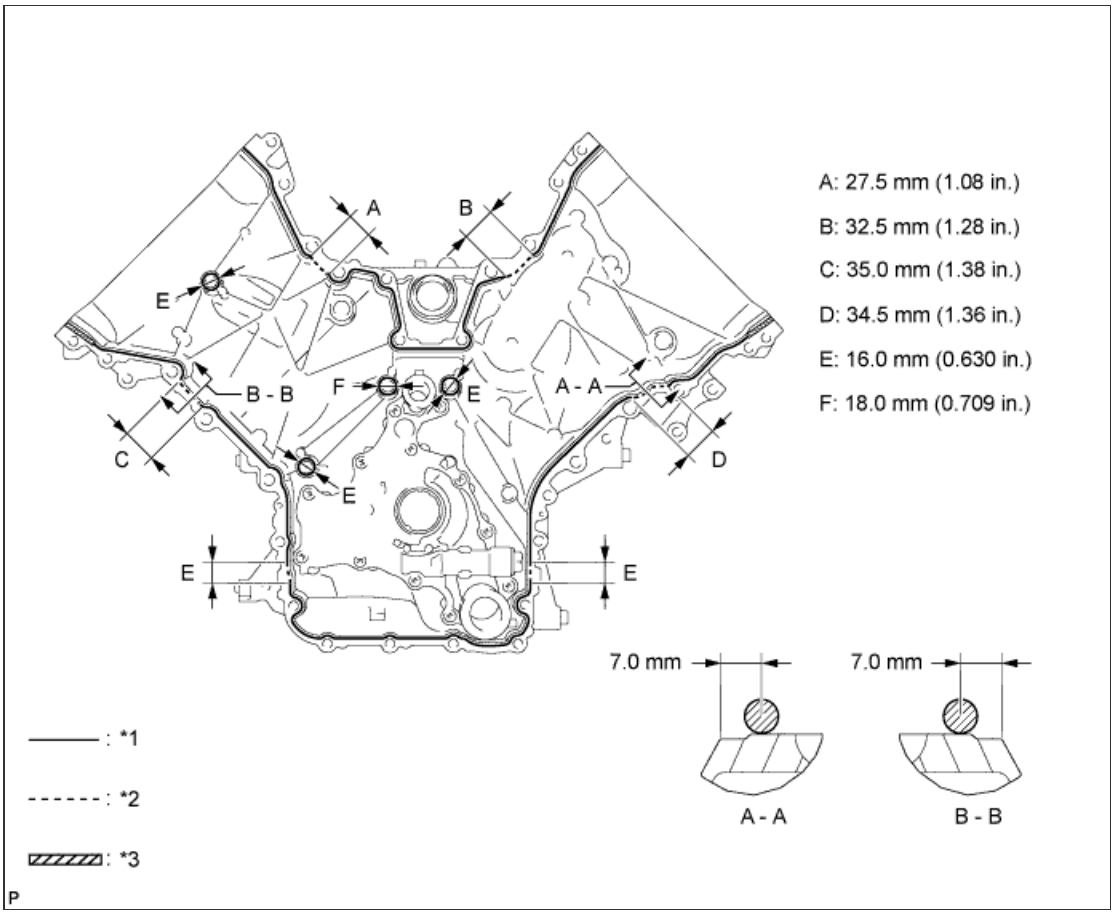
*1	Timing Mark	*2	Timing Mark Position
*3	Knock Pin Position	*4	Key
*a	Toward Ceiling	*b	Approximately 2°
*c	Approximately 45°	*d	Approximately 16°
*e	Approximately 18°	*f	Approximately 32°

19. INSTALL WATER INLET PIPE

a. Apply soapy water to 2 new O-rings and install them to the inlet pipe.

b. Install the inlet pipe to the No. 1 heat exchanger cover.

20. INSTALL TIMING CHAIN COVER SUB-ASSEMBLY



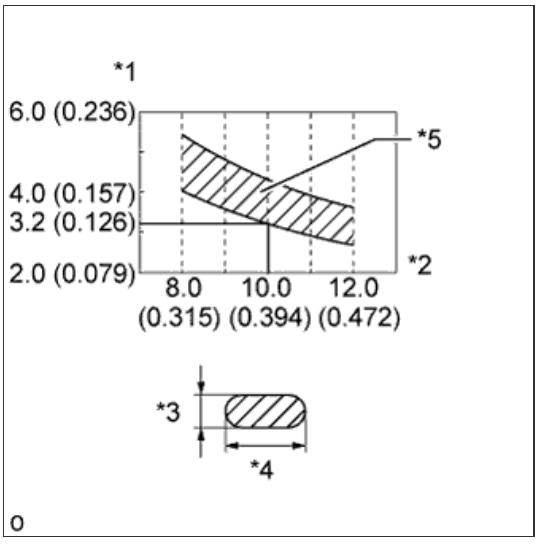
a. Apply a light coat of engine oil to a new oil pump gasket.

b. Install the oil pump gasket.

c. Apply a light coat of engine oil to a new O-ring.

d. Install the O-ring.

e. Apply seal packing in a continuous line to the timing chain cover as shown in the following illustration.



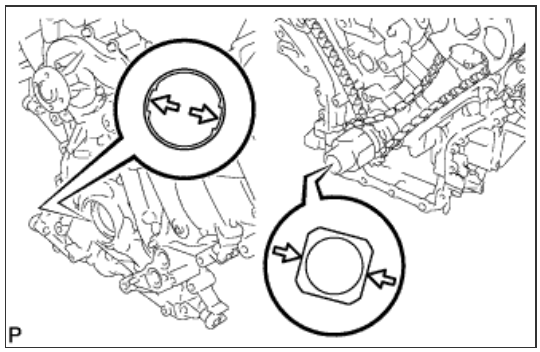
Text in Illustration

*1	Continuous line area	*2	Dashed line area
*3	Diagonal line area	-	-

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Apply Seal Packing as Follows:

Area	Seal Packing Diameter	Application Position from Inside Edge of Cover
Continuous Line Area	3.0 to 4.0 mm (0.118 to 0.157 in.)	2.5 mm (0.0984 in.)
Dashed Line Area	6.4 mm (0.252 in.) or more, or within OK area shown in illustration	7.0 mm (0.276 in.)
Diagonal Line Area	3.0 to 4.0 mm (0.118 to 0.157 in.)	5.5 mm (0.217 in.)



Text in Illustration

*1	Seal Packing Thickness mm (in.)
*2	Seal Packing Width mm (in.)
*3	Seal Packing Thickness
*4	Seal Packing Width
*5	OK Area

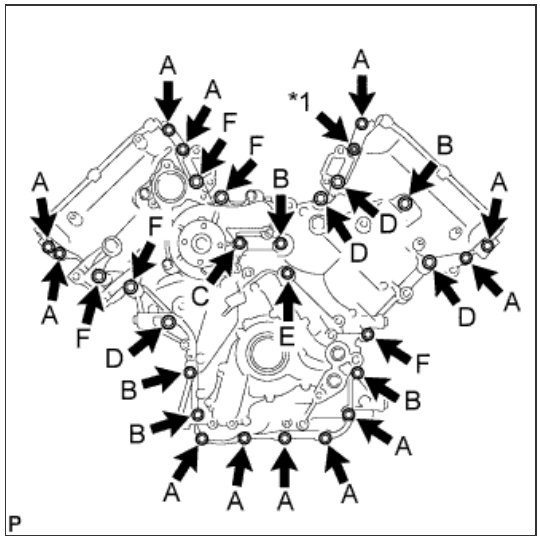
NOTICE:

- **When the contact surfaces are wet, wipe them with an oil-free cloth before applying seal packing.**
- **Install the chain cover within 3 minutes and tighten the bolts within 10 minutes after applying seal packing.**

f. Align the oil pump drive rotor spline and crankshaft as shown in the illustration. Install the spline and chain cover to the crankshaft.

g. Temporarily install the timing chain cover with the 28 bolts and nut.

Standard Bolt:

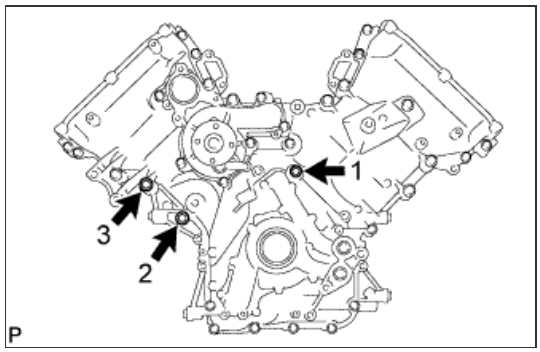


Item	Length	Thread Diameter
Bolt A	25 mm (0.984 in.)	8 mm (0.315 in.)
Bolt B	55 mm (2.17 in.)	8 mm (0.315 in.)
Bolt C	70 mm (2.76 in.)	8 mm (0.315 in.)
Bolt D	35 mm (1.38 in.)	10 mm (0.394 in.)
Bolt E	55 mm (2.17 in.)	10 mm (0.394 in.)
Bolt F	80 mm (3.15 in.)	10 mm (0.394 in.)

Text in Illustration

*1	Nut

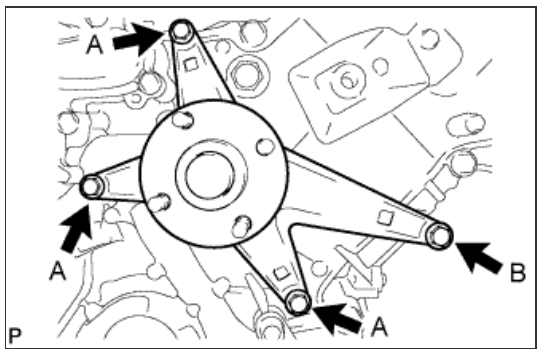
NOTICE:



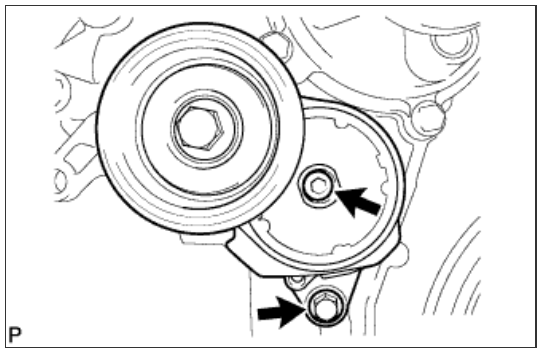
Make sure that there is no oil on the bolt threads.

h. Tighten the 3 bolts in several steps in the sequence shown in the illustration.

Torque:



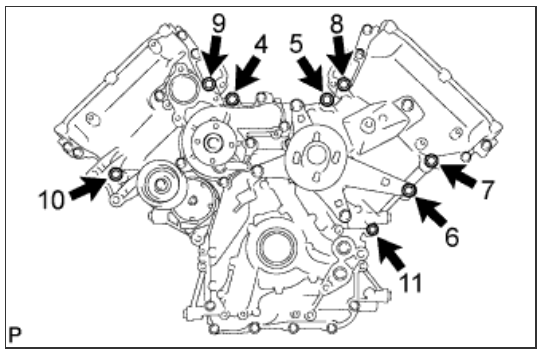
47 N*m{ 479 kgf*cm , 35 ft.*lbf }



i. Temporarily install the fluid coupling bracket with the 4 bolts.

Standard Bolt:

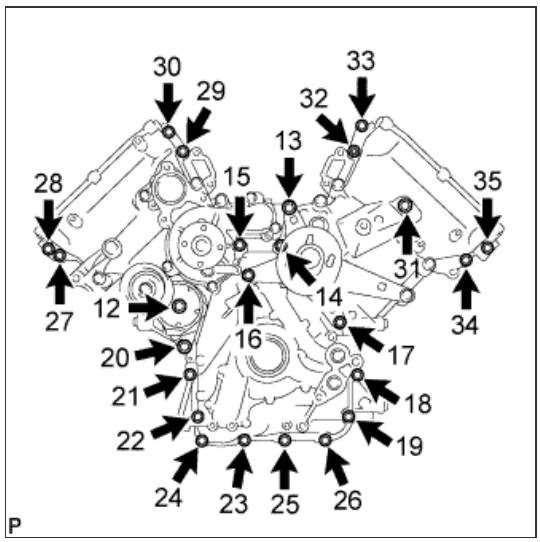
Item	Length	Thread Diameter
Bolt A	70 mm (2.76 in.)	8 mm (0.315 in.)
Bolt B	80 mm (3.15 in.)	10 mm (0.394 in.)



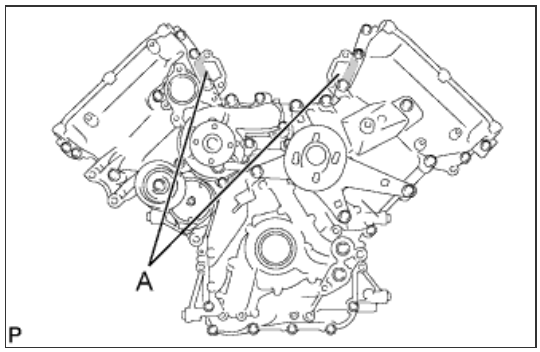
j. Temporarily install the belt tensioner with the standard bolt and 6 mm hexagon wrench bolt.

k. Tighten the 8 bolts labeled 4 to 11 in several steps in the sequence shown in the illustration.

Torque:
47 N*m{ 479 kgf*cm , 35 ft.*lbf }



l. Tighten the 23 bolts and nut labeled 12 to 35 in several steps in the sequence shown in the illustration.

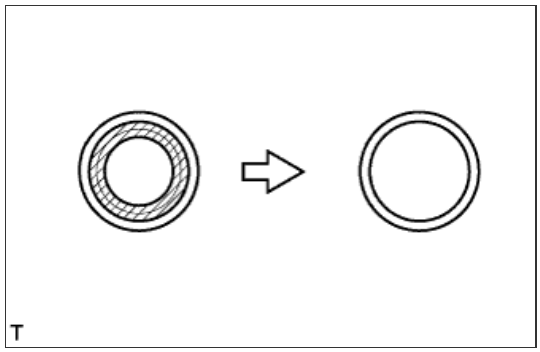


Torque:
23 N*m{ 235 kgf*cm , 17 ft.*lbf }

NOTICE:

- **Do not start the engine for at least 2 hours after installing.**

- **After the installation, if the seal packing has seeped out at the areas labeled A shown in the illustration, wipe it off.**



21. INSTALL SPARK PLUG TUBE GASKET

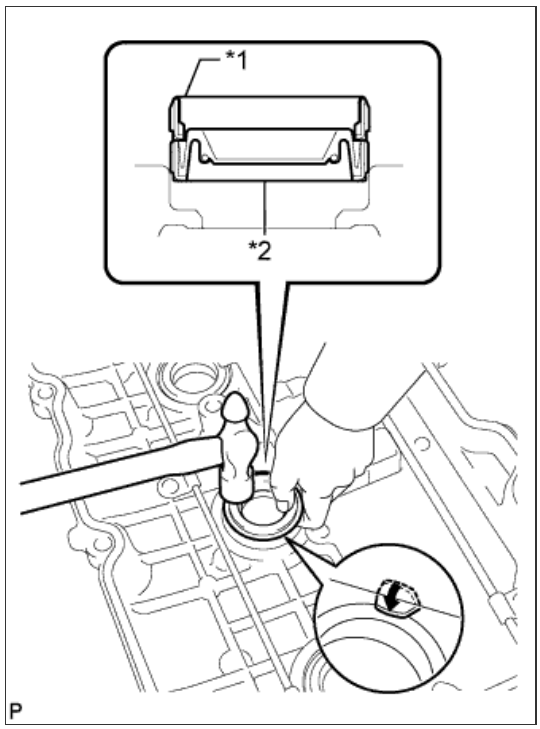
a. Using a cutter knife, cut off the seal part of the removed gasket.

Text in Illustration

	Area to cut off

b. Using the removed gasket and a hammer, tap in a new gasket until it stops.

Text in Illustration



*1	Removed Gasket
*2	New Gasket

HINT:

If the removed gasket does not fit on the new one, correct the removed one with pliers.

c. Apply a light coat of MP grease to the lip of the gasket.

d. Return the 4 ventilation baffle plate claws to the original positions.

22. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY LH

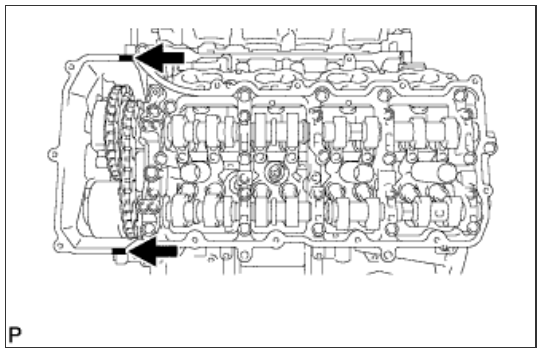
a. Install 5 new gaskets to the camshaft bearing caps (No. 2, No. 3).

b. Install a new gasket to the cylinder head cover.

NOTICE:

Remove any oil from the contact surface.

c. Apply seal packing as shown in the illustration.



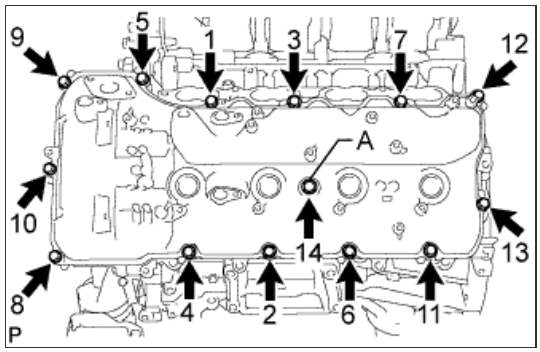
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Text in Illustration

	Seal Packing

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**



d. Install the cylinder head cover and a new seal washer with the 14 bolts in the order shown in the illustration.

Torque:
for bolt A:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
except bolt A:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

NOTICE:

Do not start the engine for at least 2 hours after the installation.

23. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY RH

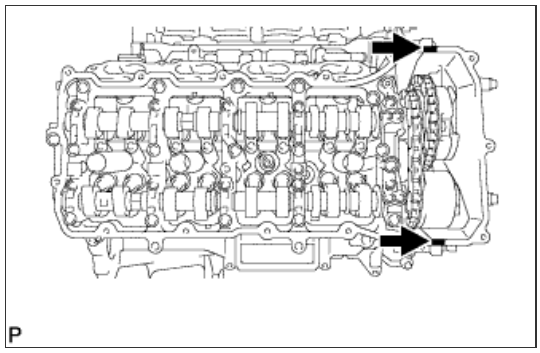
a. Install 5 new gaskets to the camshaft bearing caps. (No. 1, No. 3).

b. Install a new gasket to the cylinder head cover.

NOTICE:

Remove any oil from the contact surface.

c. Apply seal packing as shown in the illustration.



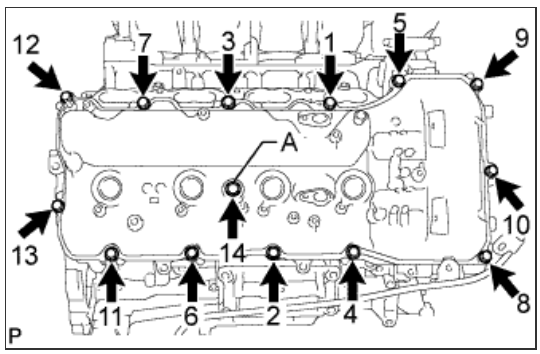
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Text in Illustration

➡	Seal Packing

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**



d. Install the cylinder head cover and a new seal washer with the 14 bolts in the order shown in the illustration.

Torque:
for bolt A:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
except bolt A:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

NOTICE:

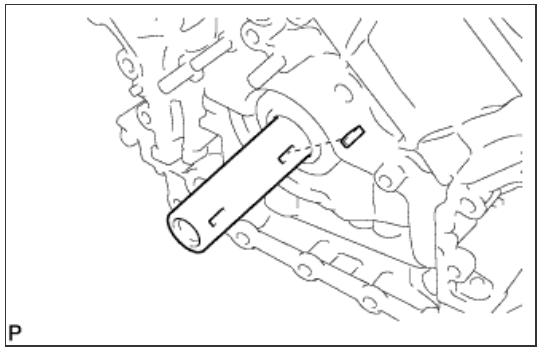
Do not start the engine for at least 2 hours after the installation.

e. Install the noise filter to the cylinder head cover with the bolt.

Torque:
7.0 N*m{ 71 kgf*cm , 62 in.*lbf }

24. INSTALL IGNITION COIL ASSEMBLY

a. Install the 8 ignition coils with the 8 bolts.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

25. INSTALL CRANKSHAFT TIMING GEAR KEY

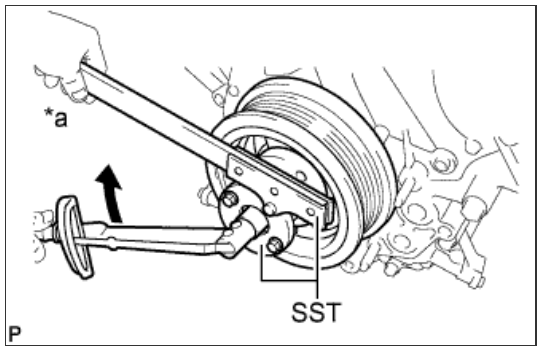
a. Install the timing gear key.

HINT:

The other timing gear key will be installed at a later step.

26. INSTALL CRANKSHAFT PULLEY

a. Align the pulley set key with the key groove of the pulley, and slide on the pulley.



b. Using SST, install the pulley set bolt.

SST
09213-70011
09330-00021

Torque:
300 N*m{ 3059 kgf*cm , 221 ft.*lbf }

Text in Illustration

*a	Hold
➡	Turn

27. CONNECT WIRE HARNESS CLAMP BRACKET

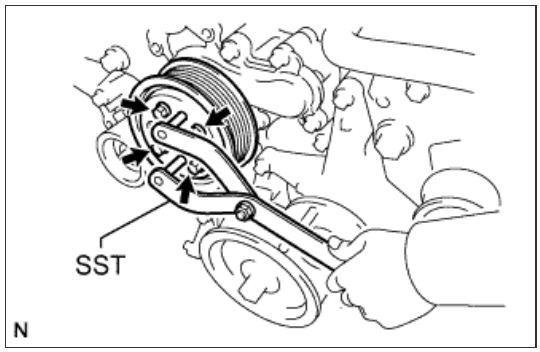
a. Connect the bracket to the timing chain cover with the bolt.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

28. INSTALL NO. 1 IDLER PULLEY SUB-ASSEMBLY

a. Install the idler pulley with the bolt.

Torque:
43 N*m{ 438 kgf*cm , 32 ft.*lbf }



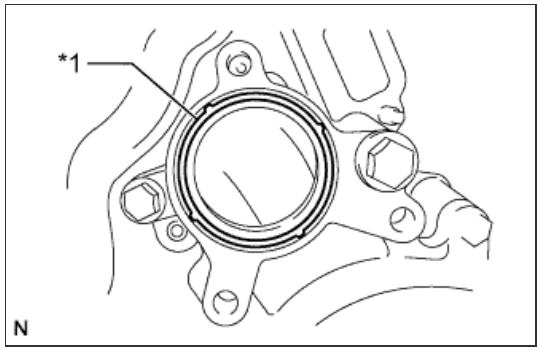
29. INSTALL WATER PUMP PULLEY

a. Temporarily install the pulley with the 4 bolts.

b. Using SST, hold the pulley and tighten the 4 bolts.

SST
09960-10010 (09962-01000, 09963-01000)

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



30. INSTALL WATER INLET HOUSING

a. Install a new gasket to the timing chain cover.

b. Install the water inlet with the 3 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

Text in Illustration

*1	Gasket

31. INSTALL NO. 1 ENGINE COVER

32. INSTALL NO. 2 ENGINE COVER

33. INSTALL FRONT WATER BY-PASS JOINT

a. Install 2 new gaskets and the water by-pass joint with the 4 nuts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. Connect the No. 2 water by-pass hose to the water by-pass joint.

34. INSTALL WATER BY-PASS PIPE SUB-ASSEMBLY

a. Connect the 2 hoses.

b. Install the water by-pass pipe with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

35. INSTALL NO. 1 WATER BY-PASS HOSE

a. Install the No. 1 water by-pass hose by connecting the hose to the water inlet housing and front water by-pass joint.

36. INSTALL GENERATOR ASSEMBLY

a. Install the stud bolt.

Torque:

10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. Install the generator with the 3 bolts and nut.

Torque:
43 N*m{ 438 kgf*cm , 32 ft.*lbf }

c. Connect the generator connector.

d. Connect the generator wire with the nut.

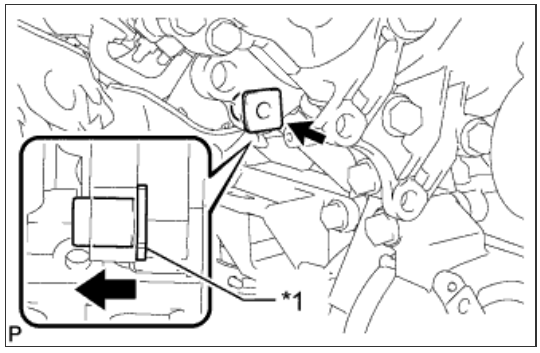
Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

e. Install the terminal cap.

f. Install the harness bracket to the generator with the bolt.

Torque:
31 N*m{ 316 kgf*cm , 23 ft.*lbf }

37. CONNECT OIL COOLER PIPE ASSEMBLY



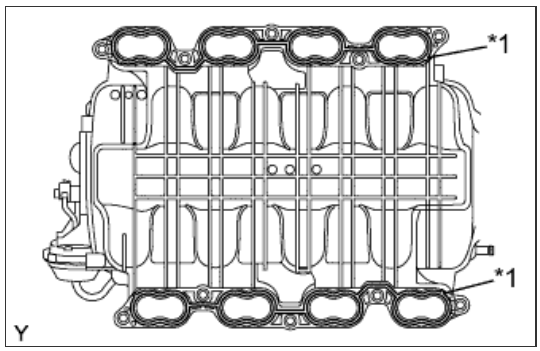
a. Connect the oil cooler pipe with the 2 bolts.

Torque:
14 N*m{ 143 kgf*cm , 10 ft.*lbf }

38. CONNECT VANE PUMP ASSEMBLY

HINT:

Before performing the following procedures, move the spacer until the vane pump can be installed.



Text in Illustration

*1	Spacer

a. Connect the vane pump to the timing chain cover with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

39. INSTALL INTAKE MANIFOLD

a. Place 2 new gaskets on the intake manifold.

Text in Illustration

*1	Gasket

b. Place the intake manifold on the cylinder head.

c. Install and uniformly tighten the 8 bolts and 2 nuts in several steps.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

d. Install the wire bracket to the intake manifold with the bolt.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

e. Connect the 3 wire clamps to the 3 wire brackets.

f. Install the No. 3 engine cover.

g. Install the No. 1 engine cover sub-assembly.

h. Connect the purge VSV connector.

i. Connect the purge line hose to the purge VSV.

j. Connect the vacuum switching valve connector (for ACIS).

k. Connect the No. 1 ventilation hose.

l. Connect the 2 water by-pass hoses.

m. Connect the throttle body connector.

n. Connect the ventilation hose to the ventilation pipe of the cylinder head cover LH and RH.

40. INSTALL OIL FILTER BRACKET

a. Apply a light coat of engine oil to 2 new O-rings.

b. Install the 2 O-rings to the timing chain cover.

c. Install the oil filter bracket with the 2 nuts and 2 bolts.

Torque:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }

41. INSTALL NO. 1 OIL COOLER BRACKET

a. Connect the ground wire to the cylinder block.

b. Install the oil cooler bracket with the 2 nuts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

42. INSTALL NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY

a. Connect the 4 hoses.

b. Install the water by-pass pipe with the 3 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

43. INSTALL OIL PRESSURE SENDER GAUGE ASSEMBLY

a. Apply adhesive to 2 or 3 threads of the oil pressure sender gauge.

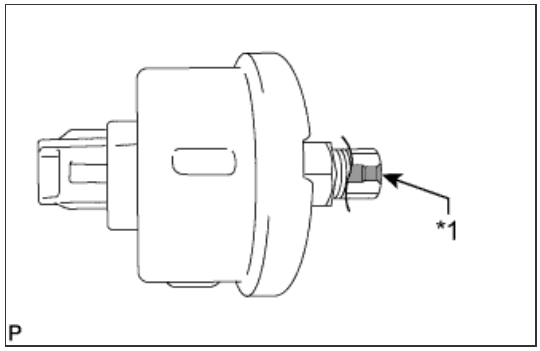
Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

NOTICE:

Do not allow adhesive to contact the oil hole.

Text in Illustration

*1	Oil Hole



b. Install the oil pressure sender gauge.

Torque:
15 N*m{ 153 kgf*cm , 11 ft.*lbf }

NOTICE:

Do not start the engine within 1 hour after installation.

c. Connect the sender gauge connector.

44. INSTALL ENGINE OIL LEVEL DIPSTICK GUIDE

a. Apply a light coat of engine oil to a new O-ring.

b. Install the O-ring to the guide.

c. Install the dipstick guide with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

d. Install the dipstick.

e. Connect the wire harness clamp.

45. INSTALL OIL FILTER ELEMENT

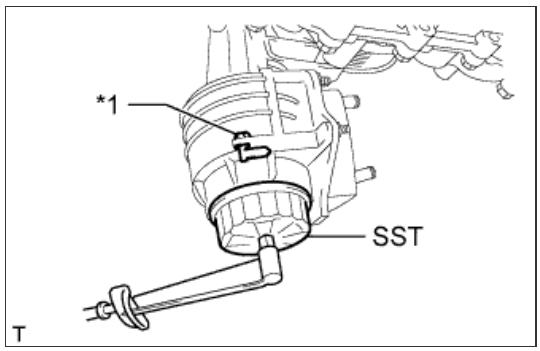
a. Clean the inside of the oil filter cap, its threads and its O-ring groove.

b. Apply a small amount of engine oil to a new O-ring and install it to the oil filter cap.

c. Set a new oil filter element to the oil filter cap.

d. Remove any dirt or foreign matter from the installation surface of the engine.

e. Apply a small amount of engine oil to the O-ring again and temporarily install the oil filter cap.



NOTICE:

Do not remove the oil filter bracket clip.

f. Using SST, tighten the oil filter cap.

SST
09228-06501

Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf }

Text in Illustration

*1	Oil Filter Bracket Clip

NOTICE:

- **When tightening the oil filter cap, do not remove the oil filter bracket clip.**
- **Make sure that the oil filter is installed securely as shown in the illustration.**
- **Be careful that the O-ring does not get caught between any surrounding parts.**

g. Apply a small amount of engine oil to a new drain plug O-ring, and install it to the oil filter cap.

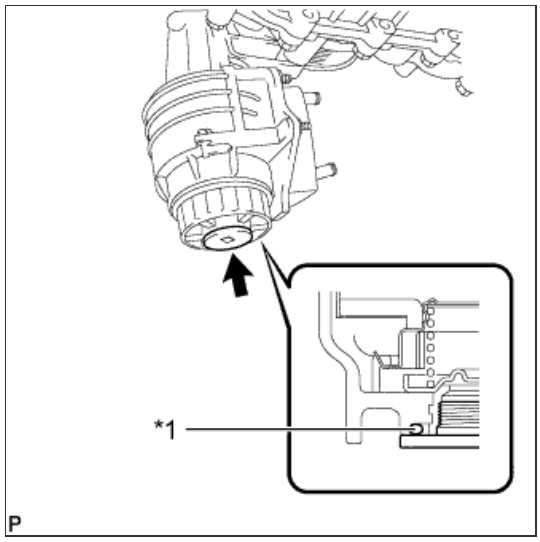
Text in Illustration

*1	O-Ring

NOTICE:

Before installing the O-ring, remove any dirt or foreign matter from the installation surface of the oil filter cap.

h. Install the oil filter drain plug.



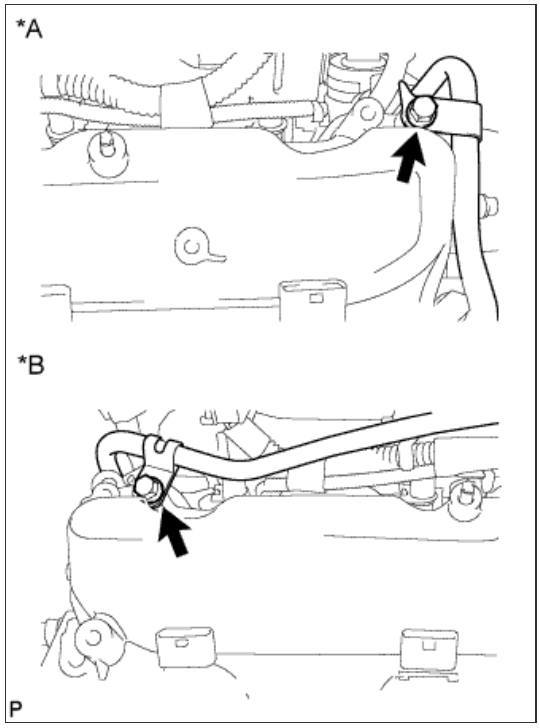
Torque:
13 N*m{ 127 kgf*cm , 9 ft.*lbf }

NOTICE:

Be careful that the O-ring does not get caught between any surrounding parts.

i. Install the No. 2 engine under cover seal with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



46. CONNECT NO. 2 FUEL TUBE SUB-ASSEMBLY

a. Connect the fuel tube with the 2 bolts.

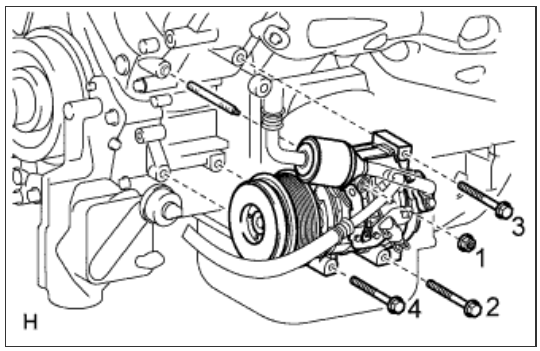
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

Text in Illustration

*A	LH Side
*B	RH Side

47. CONNECT COOLER COMPRESSOR ASSEMBLY

a. Install the cooler compressor with the stud bolt.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. Install the 3 bolts and nut.

Torque:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }

NOTICE:

Tighten the bolts and nut in the order shown in the illustration to install the cooler compressor.

48. CONNECT WATER PIPE AND HOSE SUB-ASSEMBLY

a. Connect the water pipe and hose to the cylinder head cover with the 2 bolts.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

b. Connect the 3 hoses.

49. CONNECT ENGINE WIRE

a. Connect the 2 clamps and power steering oil pressure switch connector.

b. Engine Room RH Side:

i. Connect the 5 clamps.

ii. Connect the throttle position sensor and throttle control motor connector.

iii. Install the ground wire with the 2 bolts.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

iv. Connect the noise filter connector.

v. Connect the 2 VVT sensor connectors.

vi. Connect the injector connector.

vii. Connect the 4 ignition coil connectors.

viii. Connect the 2 camshaft timing oil control valve connectors.

c. Engine Room LH Side:

i. Connect the cooler compressor connector.

ii. Connect the 3 clamps.

iii. Connect the camshaft position sensor connector.

iv. Connect the 2 camshaft timing oil control valve connectors.

v. Connect the engine coolant temperature sensor connector.

vi. Connect the 4 clamps.

vii. Install the ground wire with the 2 bolts.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

viii. Connect the noise filter connector.

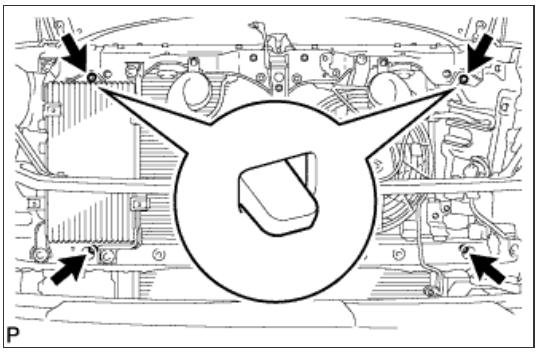
ix. Connect the 2 VVT sensor connectors.

x. Connect the 4 ignition coil connectors.

xi. Connect the injector connector.

xii. Connect the 2 connectors and 2 clips to the engine room junction block.

xiii. Install the engine room relay block cover.



50. INSTALL RADIATOR ASSEMBLY

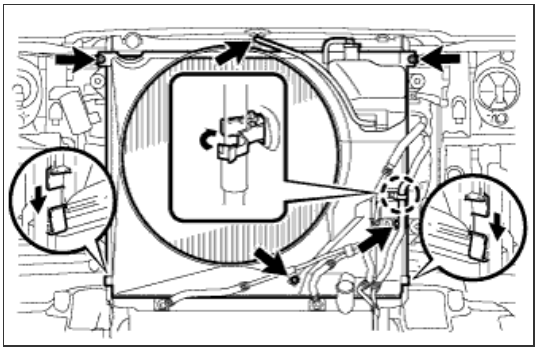
a. Set the radiator bracket hooks to the radiator support holes.

b. Install the radiator with the 4 bolts.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

c. Connect the 2 oil cooler hoses.

51. INSTALL FAN SHROUD



a. Install the fan pulley.

b. Place the shroud together with the coupling fan between the radiator and engine.

NOTICE:

Be careful not to damage the radiator core.

c. Temporarily install the fluid coupling fan to the fluid coupling bracket with the 4 nuts. Tighten the nuts as much as possible by hand.

d. Attach the claws of the shroud to the radiator as shown in the illustration.

e. Install the shroud with the 2 bolts.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

f. Connect the oil cooler tube to the fan shroud with the 2 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

g. Pass the hose through the flexible hose clamp and close the clamp as shown in the illustration.

h. Connect the reservoir hose to the upper radiator tank.

i. Install the fan and generator V-belt (Click here).

j. Tighten the 4 nuts of the fluid coupling fan.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

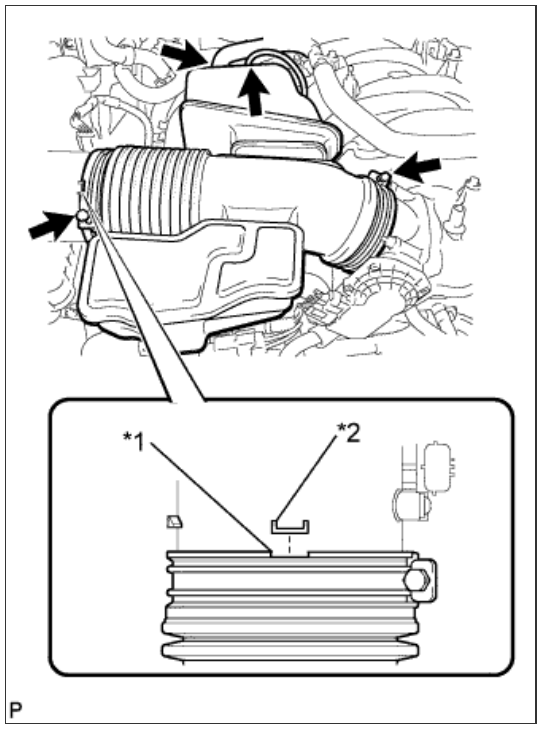
52. INSTALL NO. 2 RADIATOR HOSE

53. INSTALL NO. 1 RADIATOR HOSE

54. INSTALL AIR CLEANER ASSEMBLY

a. Install the air cleaner with the 3 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }



55. INSTALL AIR CLEANER HOSE ASSEMBLY

a. Install the air cleaner hose so that the protrusion of the air cleaner cap aligns

with the groove of the hose as shown in the illustration.

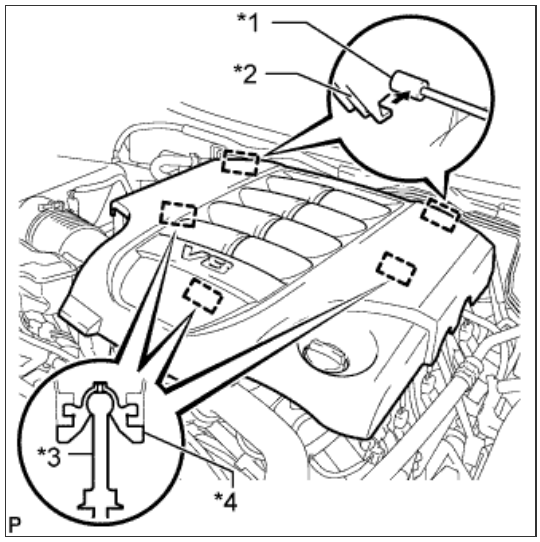
Text in Illustration

*1	Groove
*2	Protrusion

b. Tighten the 2 clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

c. Connect the vacuum hose.



d. Connect the No. 2 ventilation hose.

56. INSTALL V-BANK COVER SUB-ASSEMBLY

a. Attach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.

Text in Illustration

*1	Bracket
*2	Hook
*3	Pin
*4	Grommet

57. ADD ENGINE OIL

a. Add fresh oil and install the oil filler cap.

Standard Oil Grade:

Oil Grade	Oil Viscosity (SAE)
API grade SL "energy-conserving", API grade SM "energy-conserving" or ILSAC multigrade engine oil	5W-30 10W-30
API grade SL and SM multigrade engine oil	15W-40 20W-50

Standard Oil Capacity:

Item	Specified Condition
Drain and refill without oil filter change	7.1 liters (7.5 US qts, 6.2 Imp. qts)
Drain and refill with oil filter change	7.5 liters (7.9 US qts, 6.6 Imp. qts)

Dry fill	9.3 liters (9.8 US qts, 8.2 Imp. qts)

58. ADD ENGINE COOLANT

a. Add engine coolant.

Standard Capacity:

Item	Specified Condition
with rear heater	16.2 liters (17.1 US qts, 14.3 Imp. qts)
without rear heater	13.4 liters (14.2 US qts, 11.8 Imp. qts)

NOTICE:

Do not substitute plain water for engine coolant.

HINT:

TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the reservoir cap.

d. Press the No. 1 and No. 2 radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Start the engine and warm it up until the thermostat opens.

HINT:

The thermostat opening timing can be confirmed by pressing the radiator inlet hose by hand, and checking when the engine coolant starts to flow inside the hose.

g. Maintain the engine speed at 2000 to 2500 rpm.

NOTICE:

- **Make sure that the radiator reservoir still has some coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**
- **Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the F line.**
- **Run the engine at 2000 rpm until the coolant level has stabilized.**

h. Press the No. 1 and No. 2 radiator hoses several times by hand to bleed air.

CAUTION:

- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the fan.**

i. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

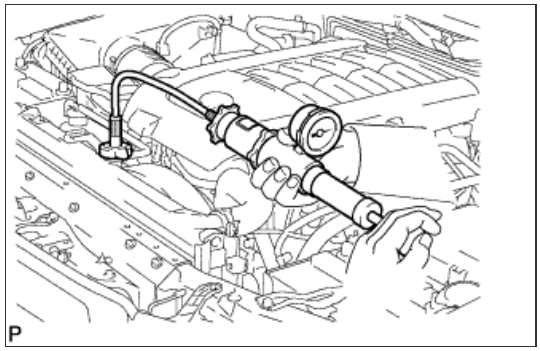
Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

j. Check that the coolant level is between the F and L lines.
If the coolant level is below the L line, repeat all of the procedures above.
If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.

59. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).



60. INSPECT FOR OIL LEAK

a. Start the engine. Make sure that there are no oil leaks from the area that was worked on.

61. INSPECT FOR COOLANT LEAK

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Fill the radiator with coolant and attach a radiator cap tester.

b. Warm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.

62. INSPECT ENGINE OIL LEVEL

a. Warm up the engine, stop the engine and wait 5 minutes. The oil level should be between the dipstick low level mark and full level mark. If low, check for leakage and add oil up to the full level mark.

NOTICE:

Do not fill engine oil above the full level mark.

63. INSPECT IGNITION TIMING

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. When using the intelligent tester:

i. Connect the intelligent tester to the DLC3.

ii. Start the engine and idle it.

iii. Turn the intelligent tester on.

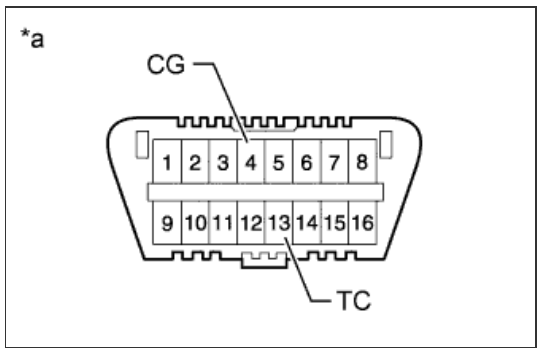
iv. Enter the following menus: Powertrain / Engine and ECT / Data List / Primary / IGN Advance.

HINT:

Refer to the intelligent tester operator's manual for further details.

Standard ignition timing:
8 to 12° BTDC @ idling (transmission in neutral and A/C switch off)

v. Disconnect the intelligent tester from the DLC3.



c. When not using the intelligent tester:

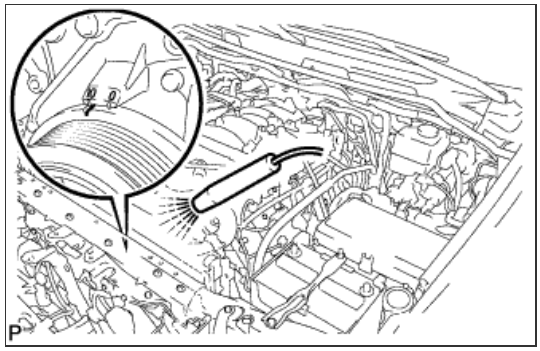
i. Connect the tester probe of a timing light to the wire of the ignition coil connector for the No. 1 cylinder.

NOTICE:

Use a timing light that detects primary signals.

ii. Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.

SST
09843-18040



Text in Illustration

*a	Front view of DLC3

NOTICE:

- **Confirm the terminal numbers before connecting them. Connecting the wrong terminals can damage the engine.**
- **Switch off all accessories and the A/C before connecting the terminals.**

iii. Using the timing light, check the ignition timing.

Standard ignition timing:
8 to 12° BTDC @ idling (transmission in neutral and A/C switch off)

iv. Remove SST from the DLC3.

v. Check the ignition timing.

Standard ignition timing:
7 to 24° BTDC @ idling (transmission in neutral and A/C switch off)

vi. Disconnect the timing light from the engine.

64. INSPECT ENGINE IDLE SPEED

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. When using the intelligent tester:

i. Connect the intelligent tester to the DLC3.

NOTICE:

Switch off all accessories and the A/C before connecting the intelligent tester.

ii. Race the engine at 2500 rpm for approximately 90 seconds.

iii. Turn the intelligent tester on.

iv. Enter the following menus: Powertrain / Engine and ECT / Data List / Primary / Engine Speed.

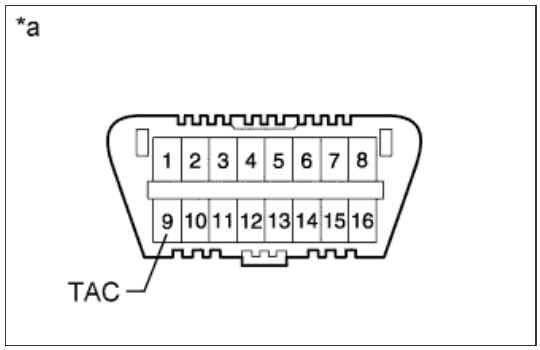
Standard idle speed:
650 to 750 rpm (transmission in neutral and A/C switch off)

HINT:

Refer to the intelligent tester operator's manual for further details.

If the idle speed is not as specified, check the air intake system.

v. Disconnect the intelligent tester from the DLC3.



c. When not using the intelligent tester:

i. Using SST, connect the tachometer probe to terminal 9 (TAC) of the DLC3.

SST
09843-18030

Text in Illustration

*a	Front view of DLC3

NOTICE:

- **Confirm the terminal number before connecting the probe. Connecting the probe to the wrong terminal can damage the engine.**
- **Switch off all accessories and the A/C before connecting the probe.**

ii. Race the engine at 2500 rpm for approximately 90 seconds.

iii. Check the idle speed.

Standard idle speed:
650 to 750 rpm (transmission in neutral and A/C switch off)

If the idle speed is not as specified, check the air intake system.

iv. Disconnect the tachometer probe from the DLC3.

65. INSTALL FRONT FENDER APRON SEAL FRONT RH

a. Install the fender apron seal with the 3 clips.

66. INSTALL FRONT FENDER APRON SEAL LH

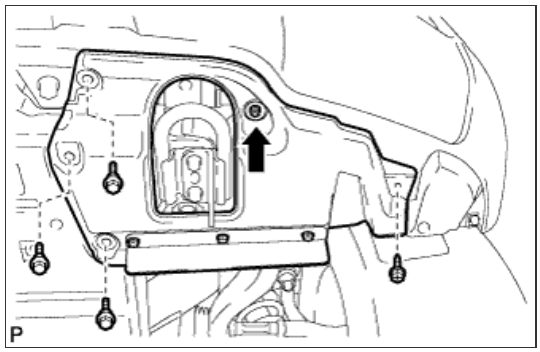
a. Install the fender apron seal with the 3 clips.

67. INSTALL NO. 2 ENGINE UNDER COVER

a. Install the No. 2 engine under cover with the 2 bolts.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

68. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY



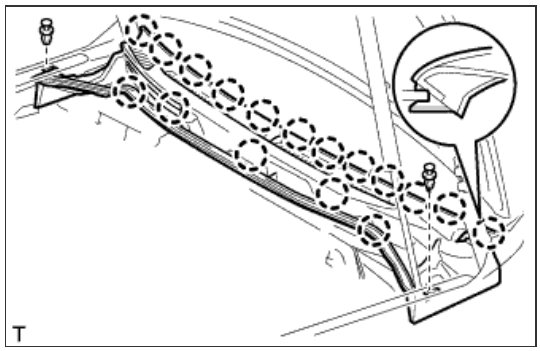
a. Install the No. 1 engine under cover with the 10 bolts.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

69. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

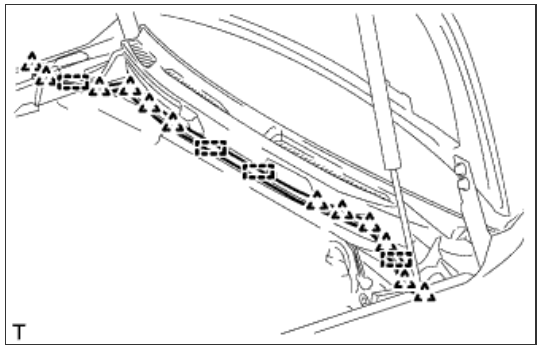
b. Install the 3 bolts and screw.



70. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

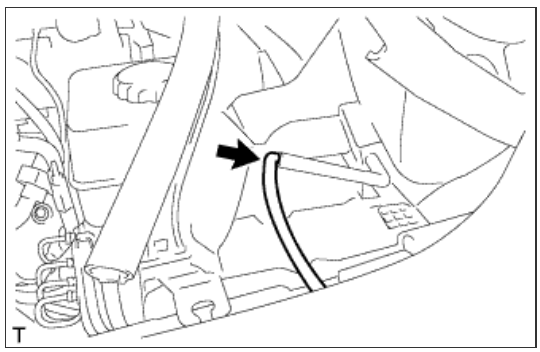
HINT:

Use the same procedures described for the LH side.



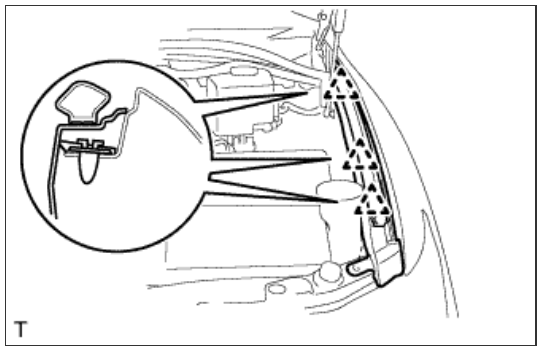
71. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

a. Push the ventilator louver in the direction indicated by the arrow in the illustration to attach the 17 claws and 2 clips and install the ventilator louver.



72. INSTALL HOOD TO COWL TOP SEAL

a. Attach the 12 clips and 4 clamps to install the hood to cowl top seal.

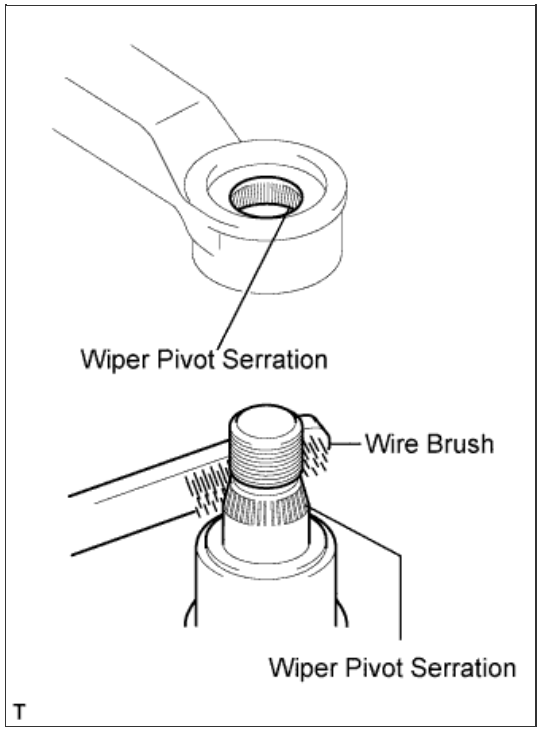


b. Install the washer hose.

73. INSTALL FRONT FENDER MAIN SEAL LH

a. Attach the 3 clips to install the fender main seal.

74. INSTALL FRONT FENDER MAIN SEAL RH



HINT:

Use the same procedures described for the LH side.

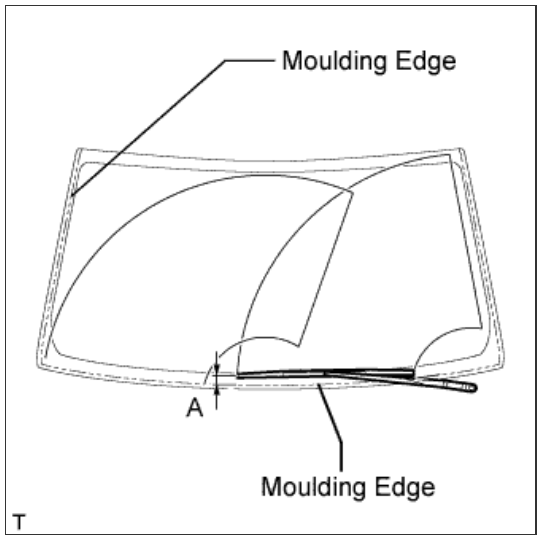
75. INSTALL FRONT WIPER ARM LH

a. Stop the wiper motor at the automatic stop position.

b. Clean the wiper pivot serration with a wire brush.

c. Install the wiper arm and blade with the nut. Make sure that the wiper arm and blade comes to the position shown in the illustration.

Standard Measurement:

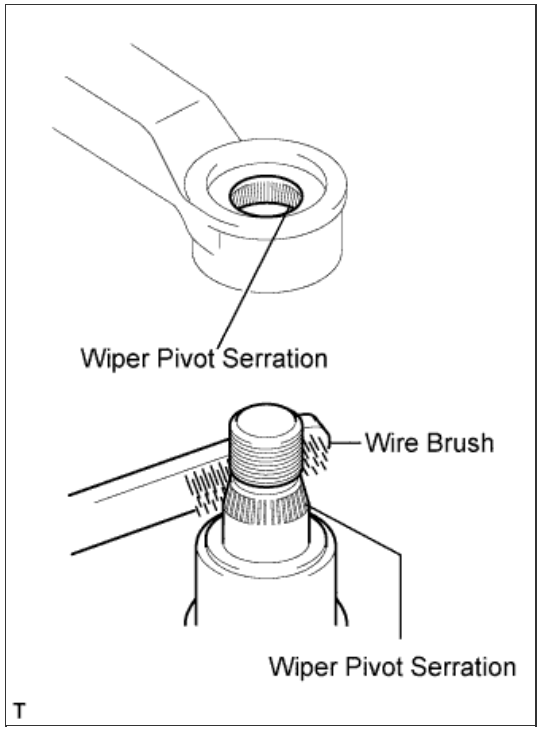


Position	Specified Condition
A	16.8 to 36.8 mm (0.661 to 1.45 in.)

Torque:

25 N*m{ 255 kgf*cm , 18 ft.*lbf }

HINT:



Hold down the wiper arm hinge with your hand while tightening the nut.

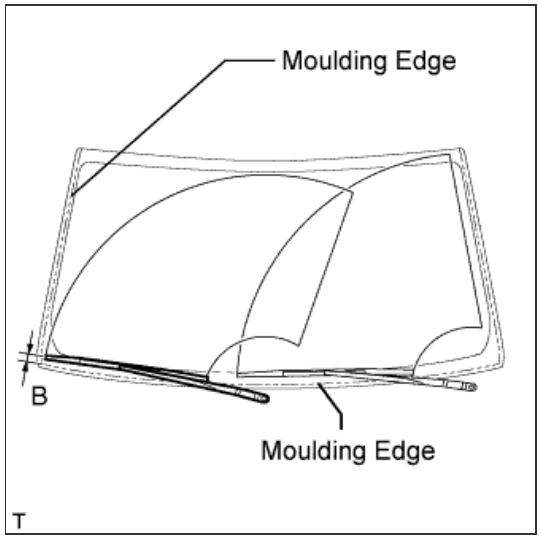
76. INSTALL FRONT WIPER ARM RH

a. Stop the wiper motor at the automatic stop position.

b. Clean the wiper pivot serration with a wire brush.

c. Install the wiper arm and blade with the nut. Make sure that the wiper arm and blade comes to the position shown in the illustration.

Standard Measurement:



Position	Specified Condition
B	20.0 to 40.0 mm (0.787 to 1.57 in.)

Torque:

25 N*m{ 255 kgf*cm , 18 ft.*lbf }

HINT:

Hold down the wiper arm hinge with your hand while tightening the nut.

d. Operate the front wipers while spraying washer fluid on the windshield glass. Make sure that the front wipers function properly and there is no interference with the vehicle body.

77. CONNECT RADIATOR SIDE DEFLECTOR LH

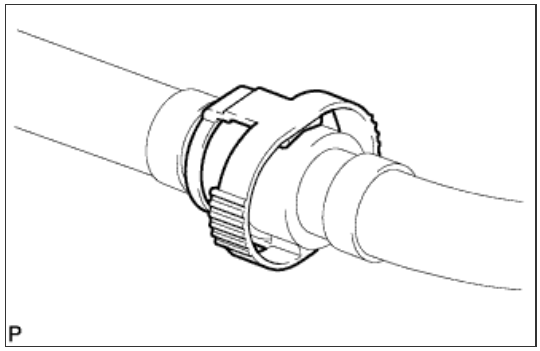
a. Connect the deflector with the 4 clips.

78. INSTALL TRANSMISSION OIL COOLER AIR DUCT

a. Install the oil cooler air duct with the 4 bolts.

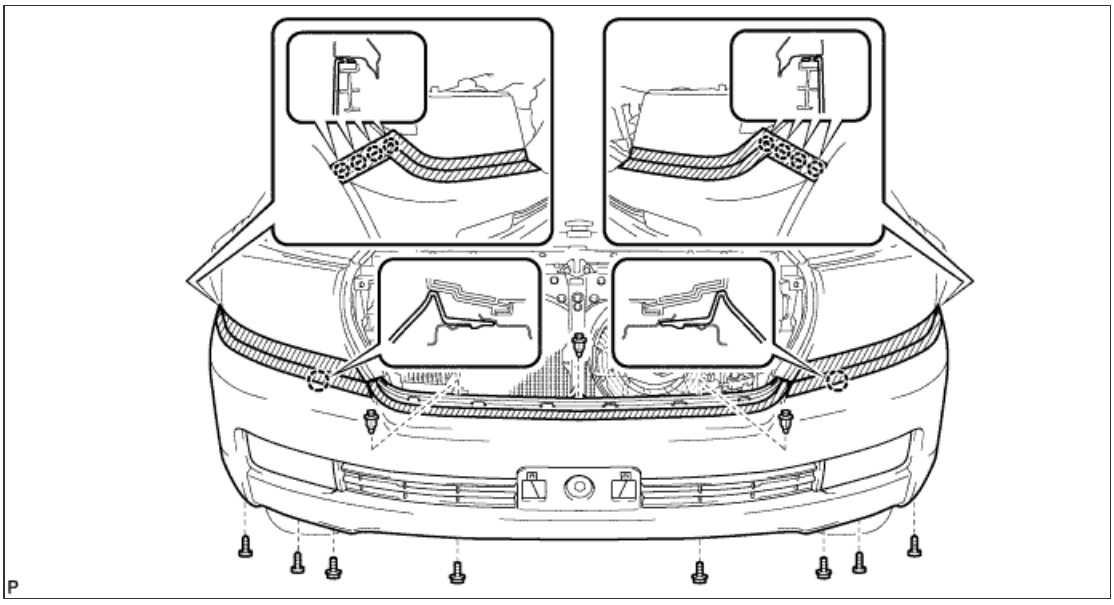
Torque:
4.9 N*m{ 50 kgf*cm , 43 in.*lbf }

79. INSTALL FRONT BUMPER COVER



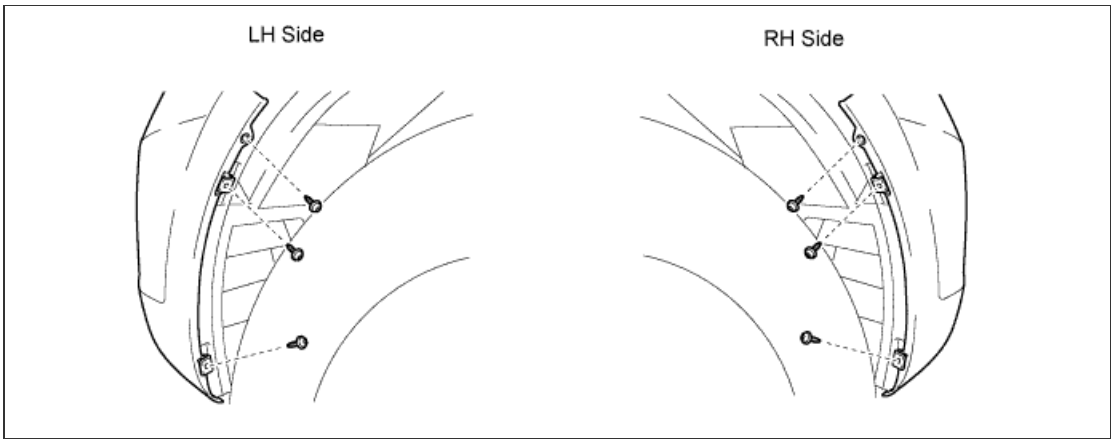
HINT:

For the front bumper cover with garnish, use the procedures described below.



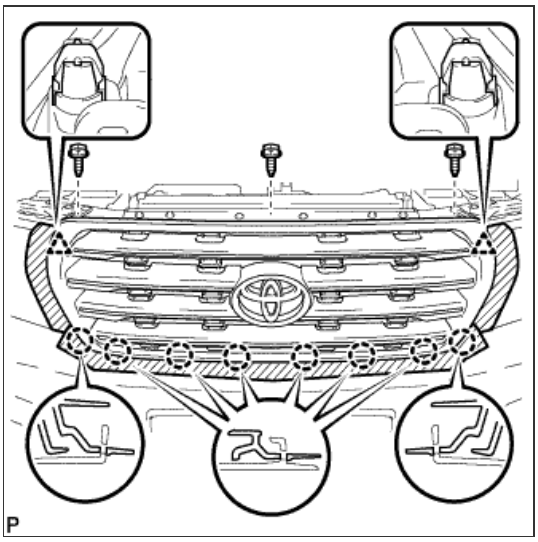
a. w/ Headlight Cleaner System:
Connect the headlight cleaner hose.

b. w/o TOYOTA Parking Assist-sensor System, w/o Fog Light:
Attach the 10 claws to install the bumper cover.



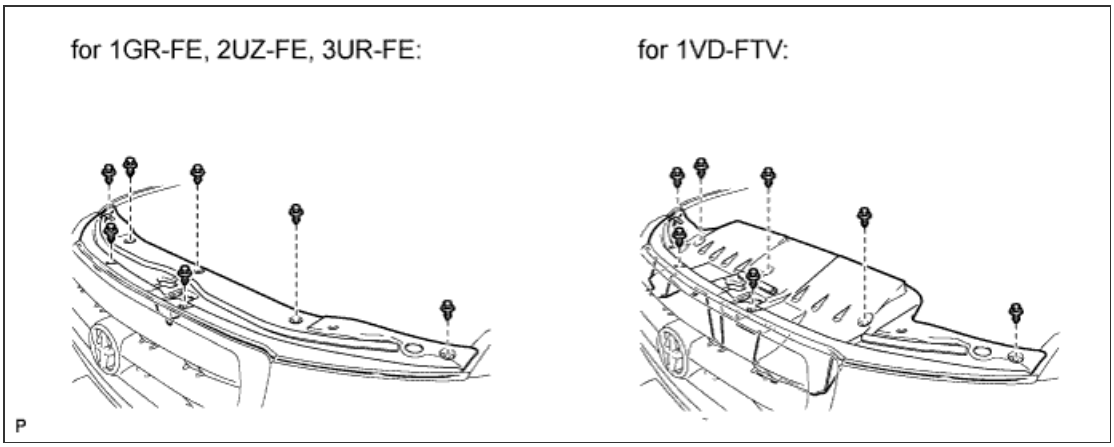
c. w/ TOYOTA Parking Assist-sensor System or w/ Fog Light:
Connect the No. 4 engine room wire connector and attach the 10 claws to install the bumper cover.

d. Install the 3 clips, 4 screws and 4 bolts.



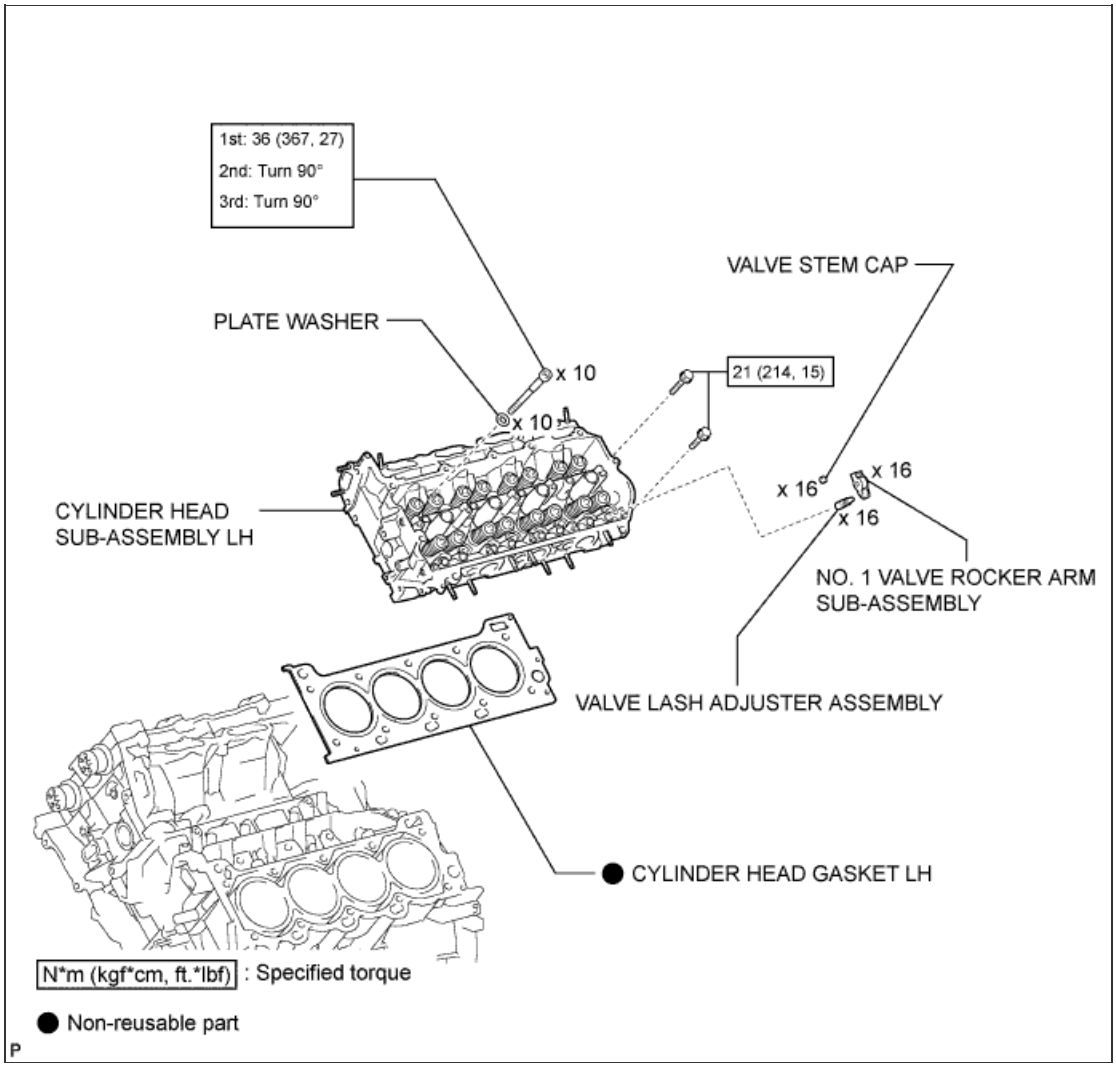
e. Using a T30 "TORX" socket, install the 6 screws.

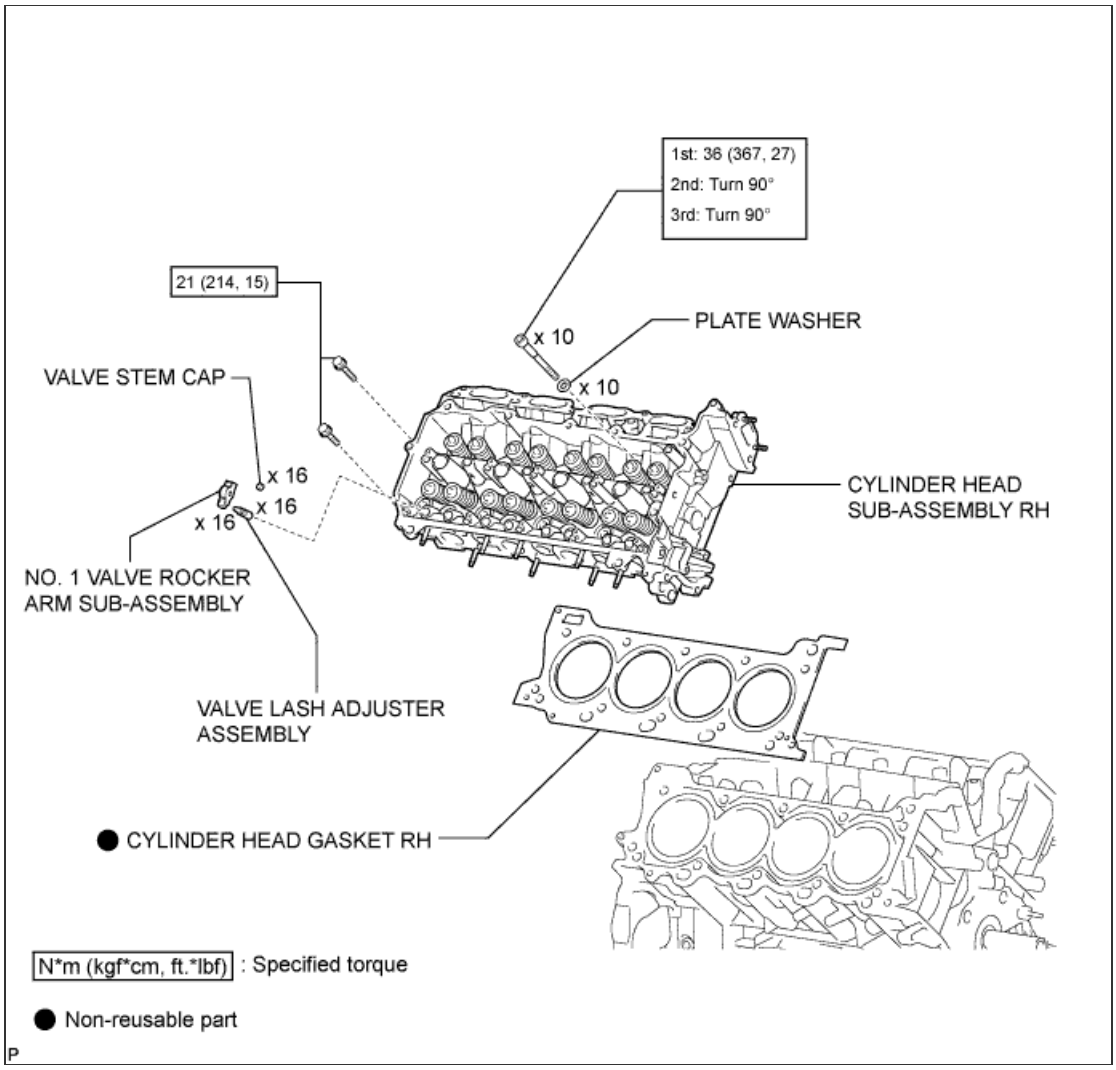
80. INSTALL RADIATOR GRILLE



a. Attach the 2 clips and 8 claws to install the radiator grille.

b. Install the 3 screws.





81. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the radiator support seal with the 7 clips.

for Preparation Click here

1. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY

(Click here)

2. REMOVE CAMSHAFT

(Click here)

3. REMOVE NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY

a. Remove the 32 valve rocker arms from the cylinder heads.

HINT:

Arrange the removed parts in the correct order.

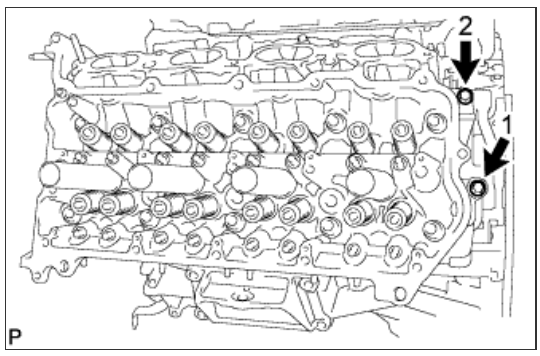
4. REMOVE VALVE LASH ADJUSTER ASSEMBLY

a. Remove the 32 valve lash adjusters from the cylinder heads.

HINT:

Arrange the removed parts in the correct order.

5. REMOVE VALVE STEM CAP



a. Remove the 32 valve stem caps from the cylinder heads.

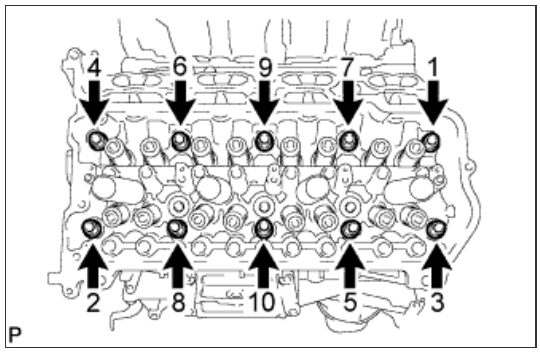
HINT:

Arrange the removed parts in the correct order.

6. REMOVE CYLINDER HEAD SUB-ASSEMBLY LH

a. Uniformly loosen and remove the 2 bolts in the sequence shown in the illustration.

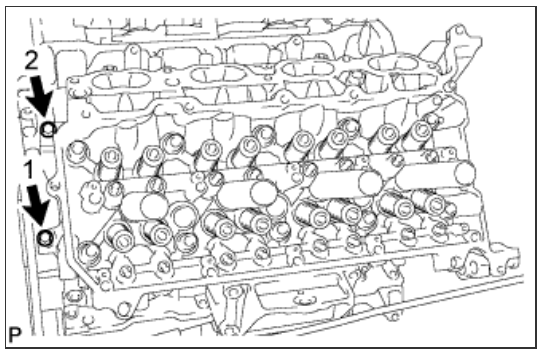
b. Using a 10 mm bi-hexagon wrench, uniformly loosen the 10 cylinder head bolts in the sequence shown in the illustration. Remove the 10 cylinder head bolts and plate washers.



NOTICE:

- **Be careful not to drop washers into the cylinder head.**
- **Head warpage or cracking could result from removing bolts in an incorrect order.**

HINT:

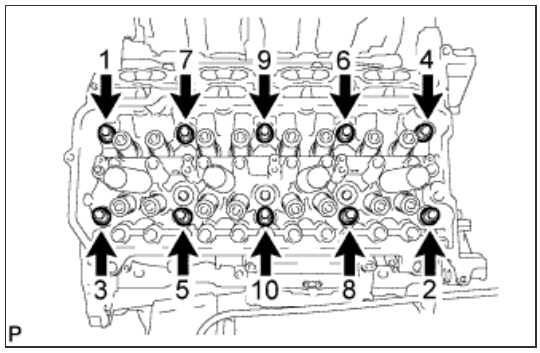


Be sure to arrange the removed parts for each installation position separately.

c. Remove the cylinder head and gasket.

7. REMOVE CYLINDER HEAD SUB-ASSEMBLY RH

a. Uniformly loosen and remove the 2 bolts in the sequence shown in the illustration.



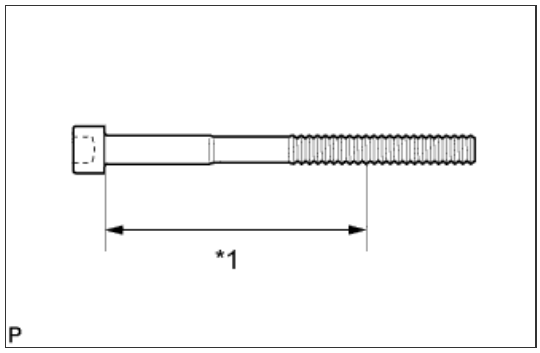
b. Using a 10 mm bi-hexagon wrench, uniformly loosen the 10 cylinder head bolts in the sequence shown in the illustration. Remove the 10 cylinder head bolts and plate washers.

NOTICE:

- **Be careful not to drop washers into the cylinder head.**
- **Head warpage or cracking could result from removing bolts in an incorrect order.**

HINT:

Be sure to arrange the removed parts for each installation position separately.



c. Remove the cylinder head and gasket.

for Preparation Click here

1. INSPECT CYLINDER HEAD SET BOLT

a. Using a vernier caliper, measure the diameter of the elongated thread at the measuring point.

Measuring point:
94 mm (3.7 in.) for intake side bolt
89 mm (3.5 in.) for exhaust side bolt

Standard diameter:
1 . to 11. mm (4 to 433 in.)

Minimum diameter:
1 . mm (417 in.)

Text in Illustration

*1	Measuring Point

If the diameter is less than the minimum, replace the cylinder head bolt.

HINT:

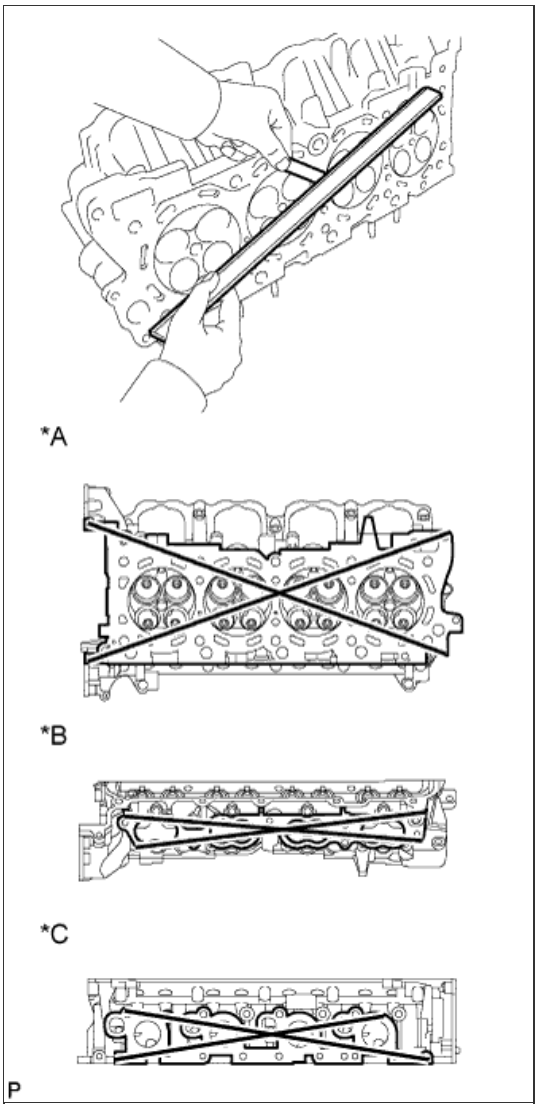
If a visual check reveals no excessively thin areas, check the center of the bolt (see illustration) and find the area that has the smallest diameter.

INSPECT CYLINDER HEAD SUB-ASSEMBLY

a. Using a precision straightedge and feeler gauge, measure the warpage of the surfaces where the cylinder head contacts the cylinder block and manifold.

Standard Warpage:

Item	Specified Condition
Cylinder head lower side	0.05 mm (0.00197 in.)
Intake side	0.08 mm (0.00315 in.)
Exhaust side	0.05 mm (0.00197 in.)



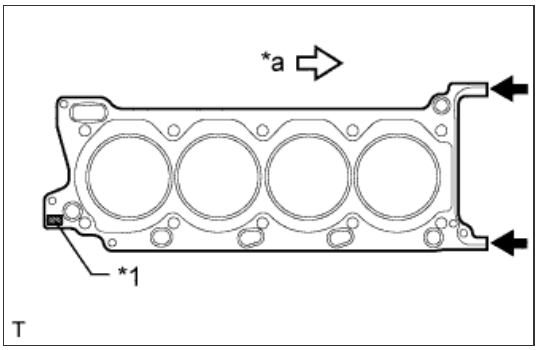
Maximum warpage:
1 mm (. 394 in.)

Text in Illustration

*A	Cylinder Head Lower Side
*B	Intake Side
*C	Exhaust Side

If the warpage is more than the maximum, replace the cylinder head.

b. Using a dye penetrant, check the intake ports, exhaust ports and cylinder surface for cracks.
If cracked, replace the cylinder head.



3. INSTALL CYLINDER HEAD SUB-ASSEMBLY RH

a. Clean the cylinder block with solvent.

b. Set the piston of the No. 1 cylinder to slightly ATDC.

c. Place the cylinder head gasket on the cylinder block surface with the front face of the Lot No. stamp upward.

Text in Illustration

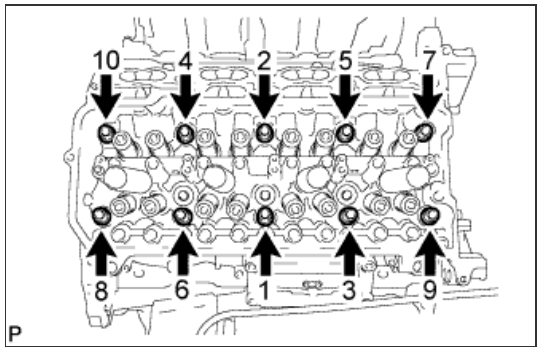
*1	Lot No.
*a	Front

NOTICE:

- **Be careful of the installation direction.**
- **Make sure that no oil is on the front end (indicated by the arrows) of the cylinder head gasket.**

d. Place the cylinder head on the cylinder block.

NOTICE:



- **Ensure that no oil is on the mounting surface of the cylinder head.**
- **Gently place the cylinder head in order not to damage the gasket with the bottom part of the head.**

HINT:

The cylinder head bolts are tightened in 3 progressive steps.

e. Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.

f. Step 1:

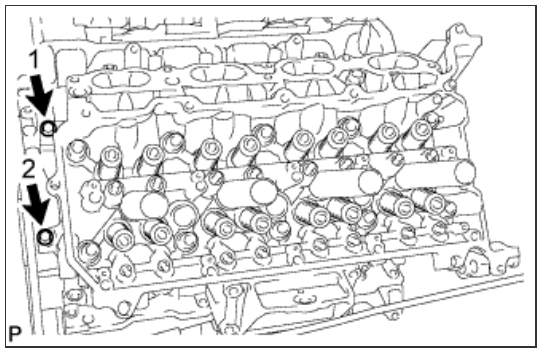
i. Using a 10 mm bi-hexagon wrench, install and uniformly tighten the 10 cylinder head bolts with the plate washers in several steps in the sequence shown in the illustration.

Torque:
3 N*m 3 kgf*cm , ft.*lbf

g. Step 2:

i. Mark the front side of each cylinder head bolt head with paint.

ii. Tighten the cylinder head bolts another 90°.



h. Step 3:

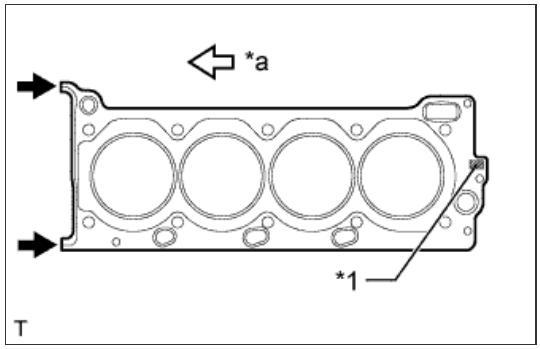
i. Tighten the cylinder head bolts an additional 90°.

ii. Check that the paint marks are now at a 180° angle to the front.

i. Install and uniformly tighten the 2 bolts in the sequence shown in the illustration.

Torque:
1 N*m 14 kgf*cm , 15 ft.*lbf

4. INSTALL CYLINDER HEAD SUB-ASSEMBLY LH



a. Clean the cylinder block with solvent.

b. Set the piston of the No. 1 cylinder to slightly ATDC.

c. Place the cylinder head gasket on the cylinder block surface with the front face of the Lot No. stamp upward.

Text in Illustration

*1	Lot No.
*a	Front

NOTICE:

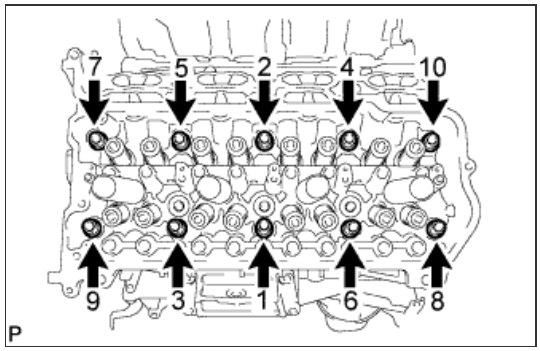
- **Be careful of the installation direction.**
- **Make sure that no oil is on the front end (indicated by the arrows) of the cylinder head gasket.**

d. Place the cylinder head on the cylinder block.

NOTICE:

- **Ensure that no oil is on the mounting surface of the cylinder head.**
- **Gently place the cylinder head in order not to damage the gasket with the bottom part of the head.**

HINT:



The cylinder head bolts are tightened in 3 progressive steps.

e. Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.

f. Step 1:

HINT:

The cylinder head bolts are tightened in 3 progressive steps.

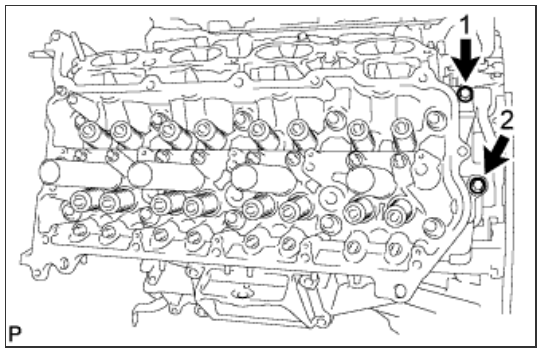
i. Using a 10 mm bi-hexagon wrench, install and uniformly tighten the 10 cylinder head bolts with the plate washers in several steps in the sequence shown in the illustration.

Torque:
3 N*m 3 kgf*cm , ft.*lbf

g. Step 2:

i. Mark the front side of each cylinder head bolt head with paint.

ii. Tighten the cylinder head bolts another 90°.



h. Step 3:

i. Tighten the cylinder head bolts an additional 90°.

ii. Check that the paint marks are now at a 180° angle to the front.

i. Install and uniformly tighten the 2 bolts in the sequence shown in the illustration.

Torque:
1 N*m 14 kgf*cm , 15 ft.*lbf

5. INSTALL VALVE STEM CAP

a. Apply a light coat of engine oil to the valve stem caps.

b. Install the 32 valve stem caps to the cylinder heads.

INSTALL VALVE LASH AD USTER ASSEMBLY

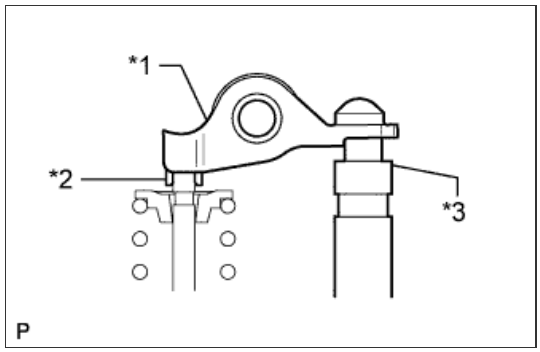
a. Inspect the valve lash adjuster before installing it (Click here).

b. Install the 32 valve lash adjusters to the cylinder heads.

NOTICE:

Install the lash adjuster to the same place it was removed from.

7. INSTALL NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY



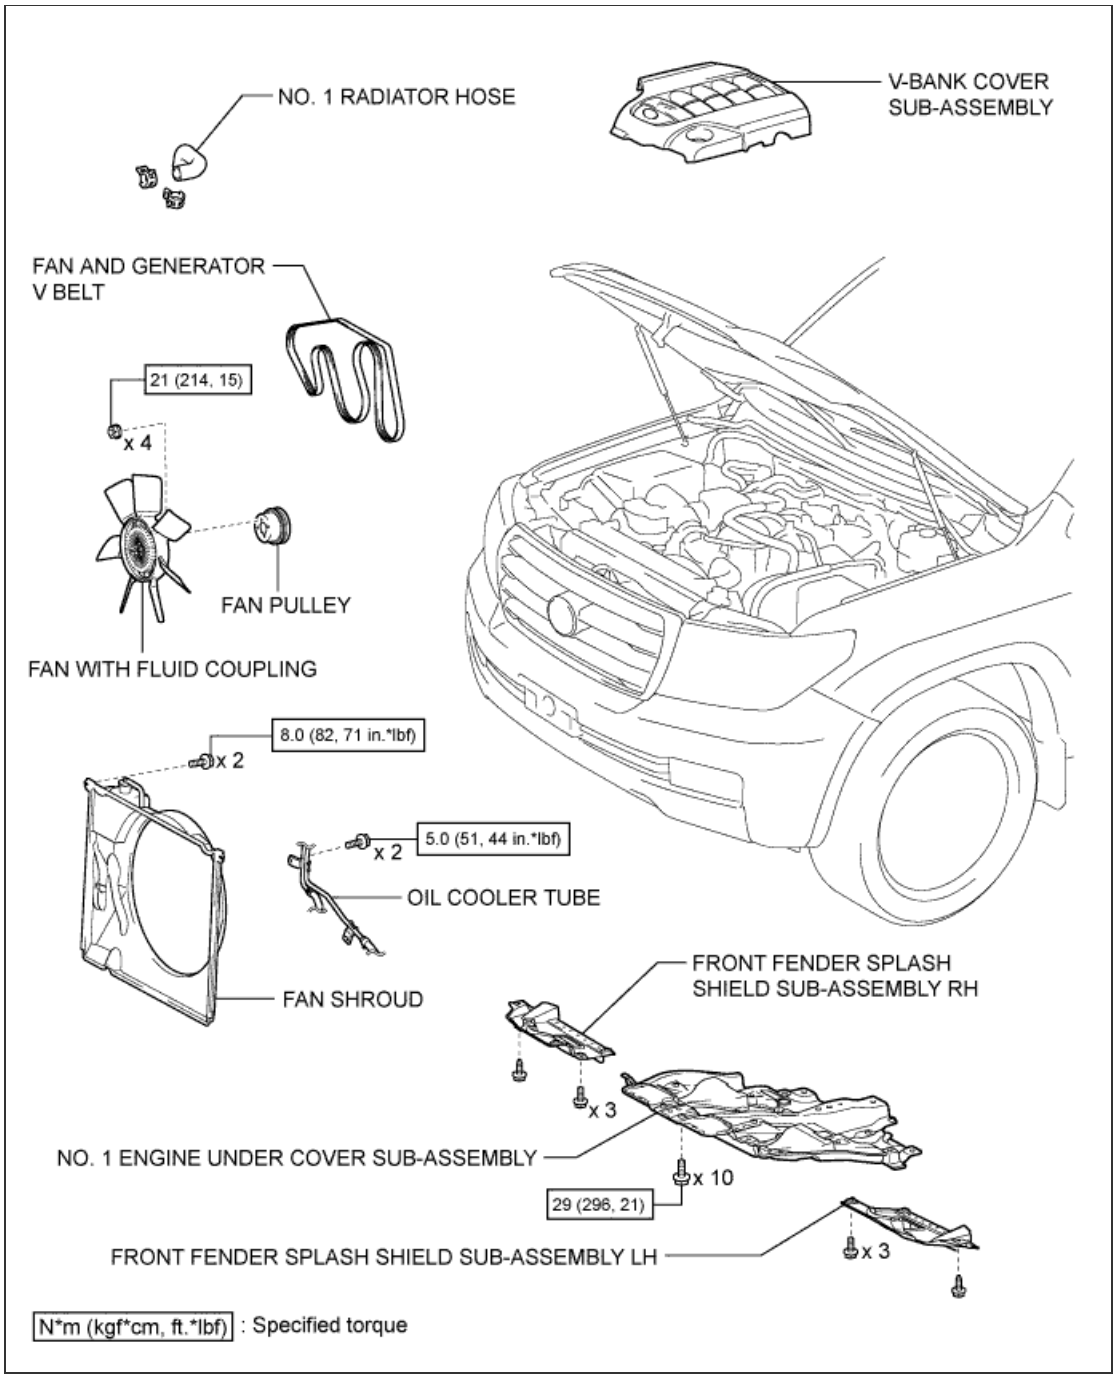
a. Apply engine oil to the lash adjuster tips and valve stem cap ends.

b. Install the 32 valve rocker arms as shown in the illustration.

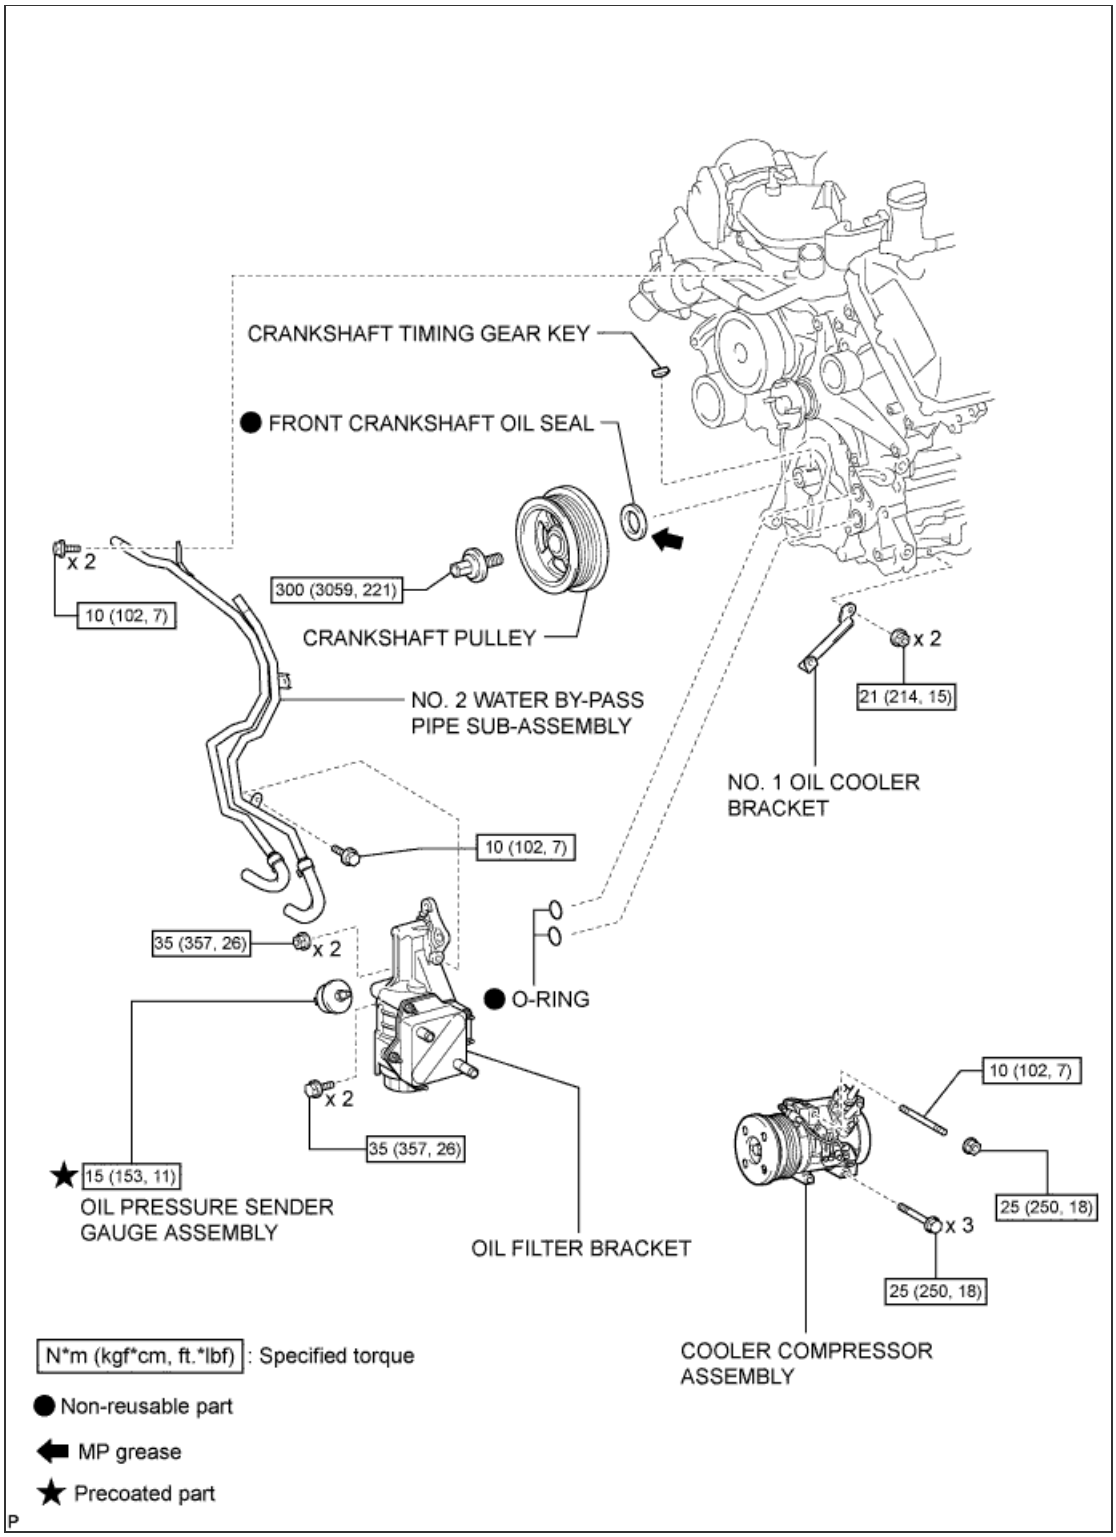
Text in Illustration

*1	Valve Rocker Arm

*2	Valve Stem Cap
*3	Valve Lash Adjuster



8. INSTALL CAMSHAFT



(Click here)

for Preparation Click here

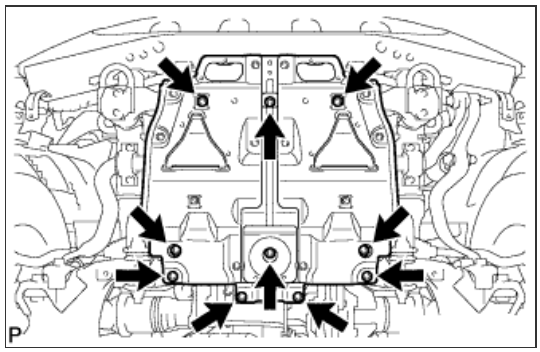
1. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and screw.

b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



2. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

3. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and No. 1 engine under cover.

4. DRAIN ENGINE COOLANT

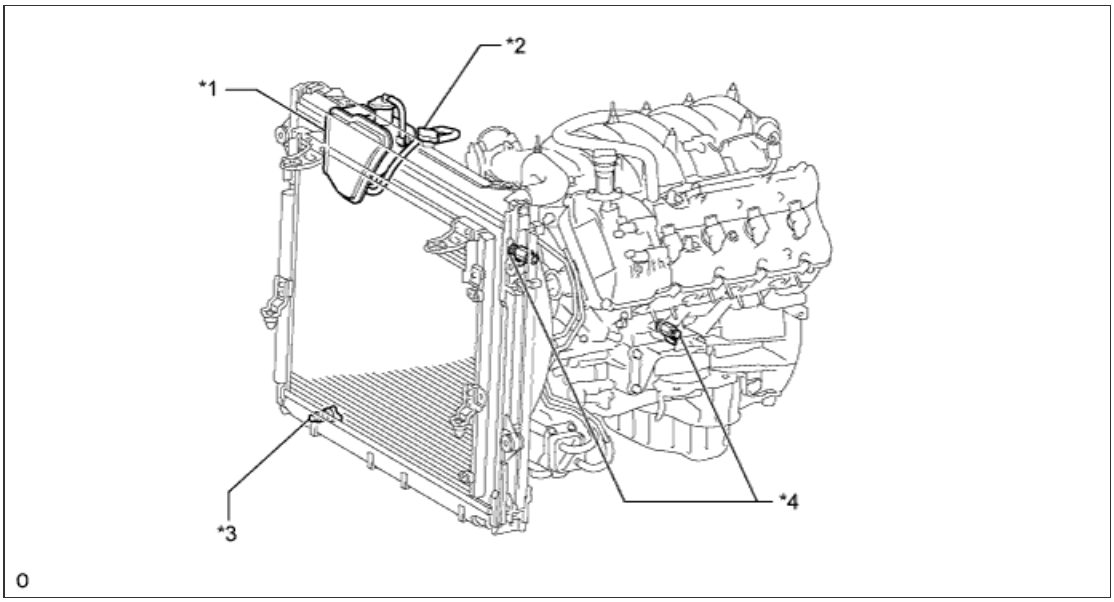
CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Loosen the radiator drain cock plug.

HINT:

Collect the coolant in a container and dispose of it according to the regulations in your area.



b. Remove the radiator cap. Then drain the coolant from the radiator.

c. Loosen the 2 cylinder block drain cock plugs. Then drain the coolant from the engine.

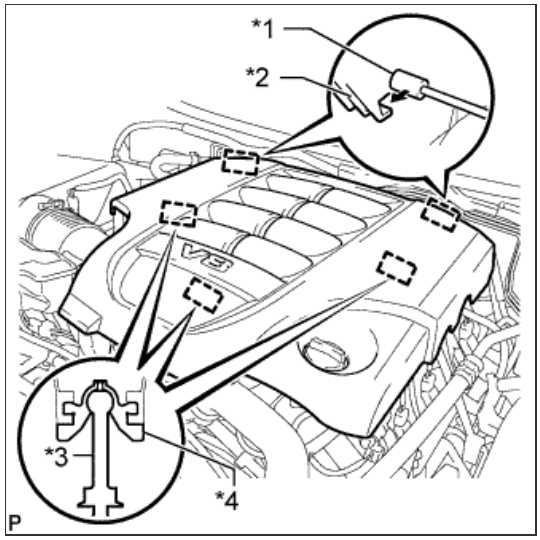
d. Tighten the 2 cylinder block drain cock plugs.

Torque:

13 N*m{ 133 kgf*cm , 10 ft.*lbf }

Text in Illu tration

*1	Radiator Reservoir	*2	Radiator Cap
*3	Radiator Drain Cock Plug	*4	Cylinder Block Drain Cock Plug



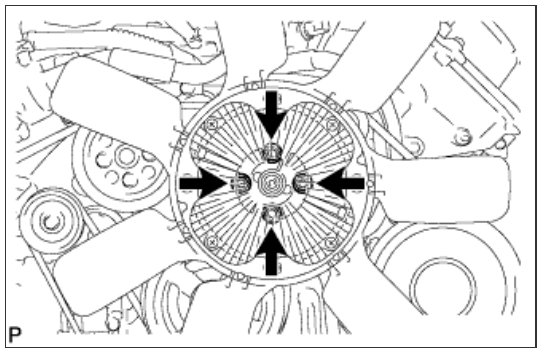
e. Tighten the radiator drain cock plug by hand.

5. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Raise the front of the V bank cover to detach the 3 pins. Then remove the 2 V bank cover hooks from the bracket, and remove the V bank cover.

Text in Illu tration

*1	Bracket
*2	Hook
*3	Pin
*4	Grommet



6. REMOVE NO. 1 RADIATOR HOSE

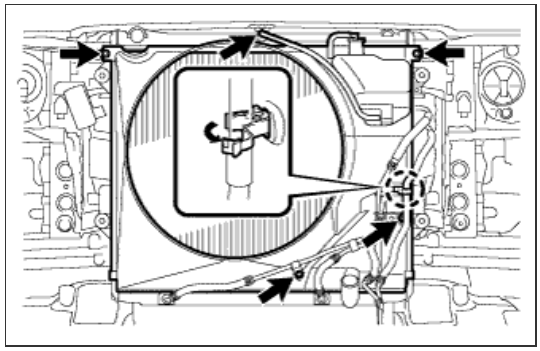
7. REMOVE FAN SHROUD

a. Loosen the 4 nuts holding the fluid coupling fan.

b. Remove the fan and generator V belt (Click here).

c. Disconnect the reservoir hose from the upper radiator tank.

d. Detach the claw to open the flexible hose clamp.

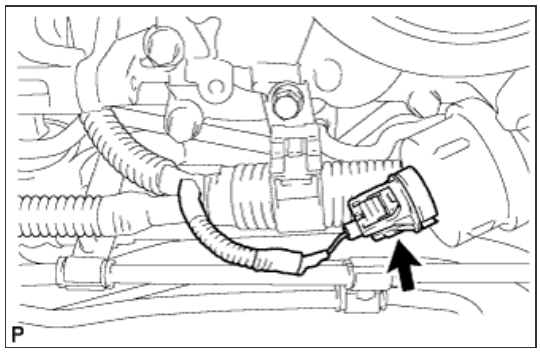


e. Remove the 2 bolts and disconnect the oil cooler tube from the fan shroud.

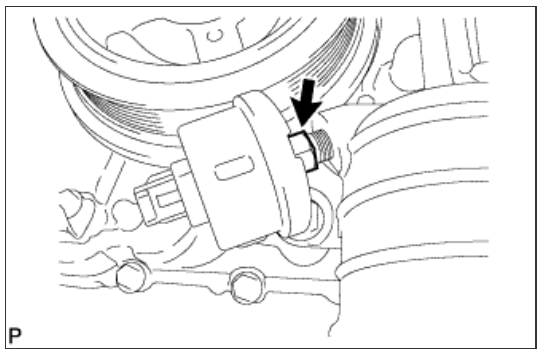
f. Remove the 2 bolts holding the fan shroud.

g. Remove the 4 nuts of the fluid coupling fan, and then remove the shroud together with the coupling fan.

NOTICE:



Be careful not to damage the radiator core.

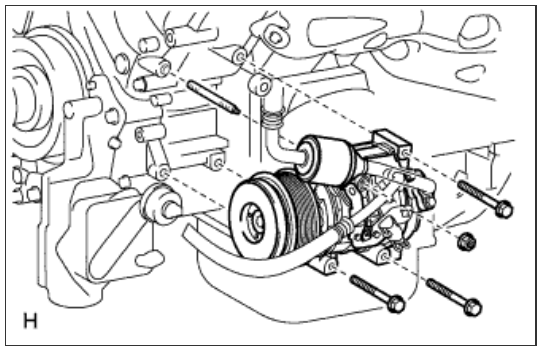


h. Remove the fan pulley.

8. REMOVE OIL PRESSURE SENDER GAUGE ASSEMBLY

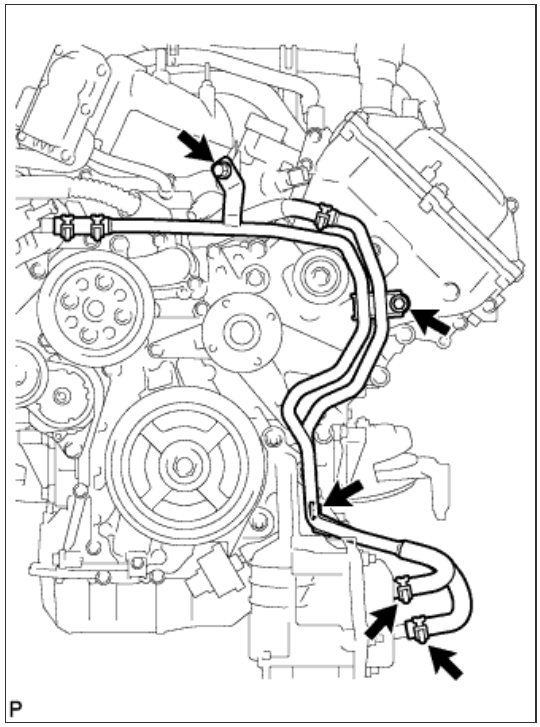
a. Disconnect the sender gauge connector.

b. Remove the oil pressure sender gauge.



9. DISCONNECT COOLER COMPRESSOR ASSEMBLY

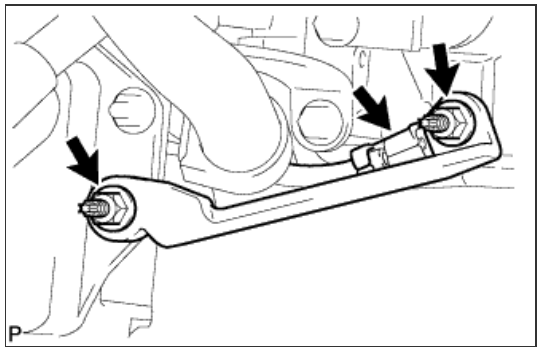
a. Remove the 3 bolts, nut and stud bolt, and disconnect the cooler compressor.



HINT:

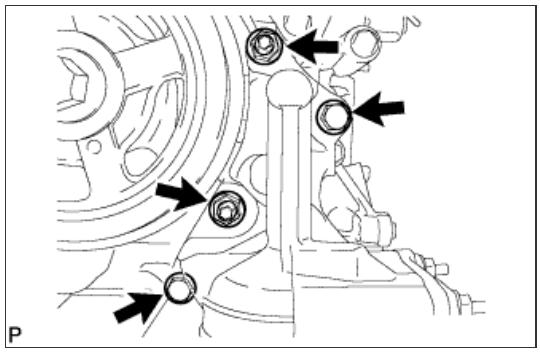
It is not necessary to completely remove the compressor. With the hoses connected to the compressor, hang the compressor on the vehicle body with a rope.

10. DISCONNECT NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY



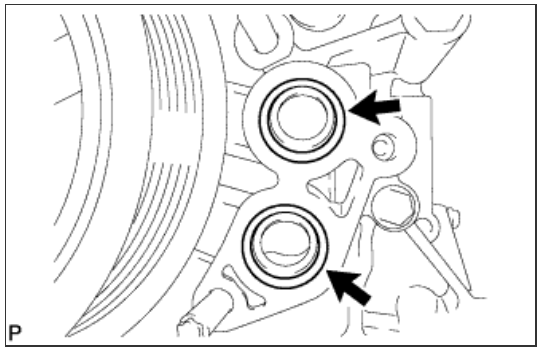
a. Remove the 3 bolts and disconnect the 2 water by pass hoses from the oil cooler.

11. REMOVE NO. 1 OIL COOLER BRACKET



a. Remove the 2 nuts and bracket.

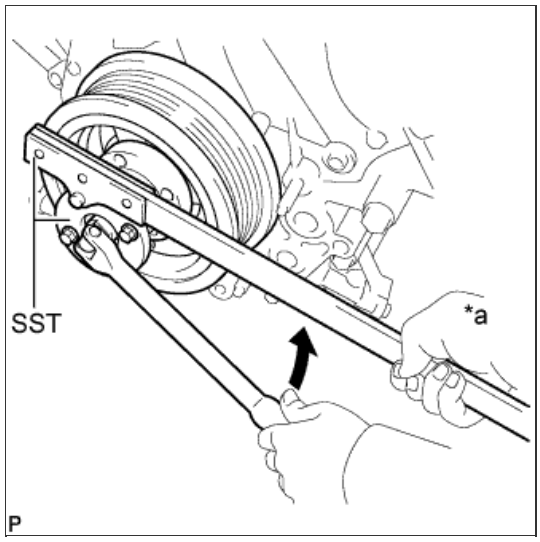
b. Disconnect the ground wire from the cylinder block.



12. REMOVE OIL FILTER BRACKET

a. Remove the 2 bolts, 2 nuts and filter bracket.

b. Remove the 2 O rings.



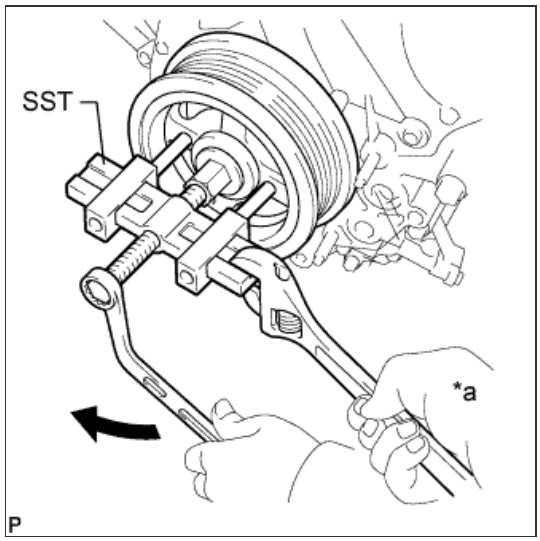
13. REMOVE CRANKSHAFT PULLEY

a. Using SST, loosen the crankshaft pulley set bolt until 2 or 3 threads are engaged.

SST
09213-70011
09330-00021

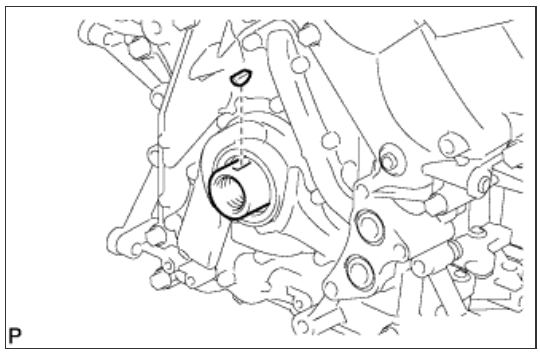
Text in Illu tration

*a	Hold
➡	Turn



b. Using the pulley set bolt and SST, remove the crankshaft pulley.

SST
09950-50013 (09951-05010, 09952-05010, 09953-05010, 09954-05011)



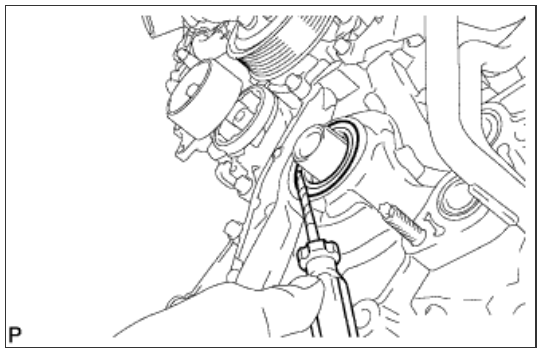
Text in Illu tration

*a	Hold
➡	Turn

14. REMOVE CRANKSHAFT TIMING GEAR KEY

a. Remove the crankshaft timing gear key from the crankshaft.

15. REMOVE FRONT CRANKSHAFT OIL SEAL



a. Using a screwdriver, pry out the oil seal.

NOTICE:

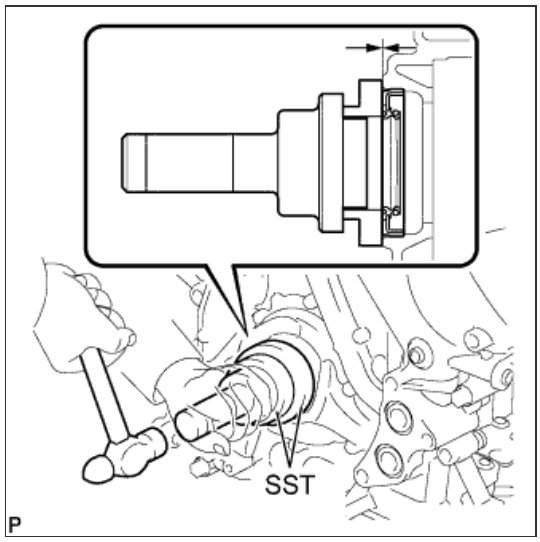
Do not damage the surface of the oil seal press fit hole and crankshaft.

HINT:

Tape the screwdriver tip before use.

for Preparation Click here

1. INSTALL FRONT CRANKSHAFT OIL SEAL



a. Apply MP grease to the lip of a new oil seal.

b. Using SST and a hammer, tap in the oil seal to a depth between 0 and 1.0 mm (0 and 0.0394 in.) from the timing chain cover edge.

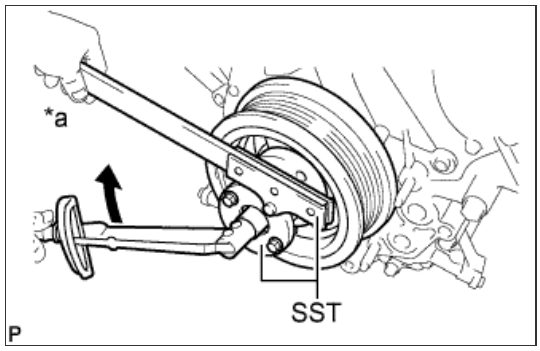
SST
09223-22010
09506-35010

NOTICE:

- **Keep the lip free from foreign matter.**
- **Do not tap the oil seal at an angle.**

2. INSTALL CRANKSHAFT TIMING GEAR KEY

a. Install the crankshaft timing gear key.



3. INSTALL CRANKSHAFT PULLEY

a. Align the pulley set key with the key groove of the pulley, and slide on the pulley.

b. Using SST, install the pulley set bolt.

SST
09213-70011
09330-00021

Torque:
300 N*m 3059 kgf*cm , 221 ft.*lbf }

Text in Illustration

*a	Hold
➡	Turn

4. INSTALL OIL FILTER BRACKET

a. Apply a light coat of engine oil to 2 new O-rings.

b. Install the 2 O-rings to the timing chain cover.

c. Install the oil filter bracket with the 2 nuts and 2 bolts.

Torque:

35 N*m 357 kgf*cm , 26 ft.*lbf }

5. INSTALL NO. 1 OIL COOLER BRACKET

a. Connect the ground wire to the cylinder block.

b. Install the oil cooler bracket with the 2 nuts.

Torque:
21 N*m 24 kgf*cm , 15 ft.*lbf }

6. CONNECT NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY

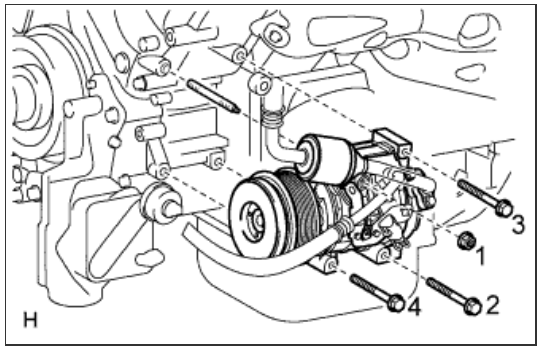
a. Connect the 2 water by-pass hoses to the oil cooler.

b. Install the 3 by-pass pipe bolts.

Torque:
10 N*m 102 kgf*cm , 7 ft.*lbf }

7. CONNECT COOLER COMPRESSOR ASSEMBLY

a. Install the cooler compressor with the stud bolt.



Torque:
10 N*m 102 kgf*cm , 7 ft.*lbf }

b. Install the 3 bolts and nut.

Torque:
25 N*m 30 kgf*cm , 18 ft.*lbf }

NOTICE:

Tighten the bolts and nut in the order shown in the illustration to install the cooler compressor.

8. INSTALL OIL PRESSURE SENDER GAUGE ASSEMBLY

a. Apply adhesive to 2 or 3 threads of the oil pressure sender gauge.

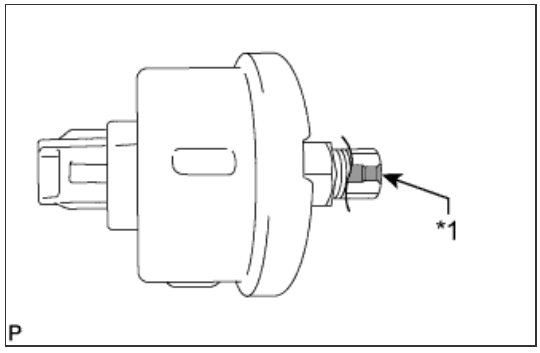
Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

NOTICE:

Do not allow adhesive to contact the oil hole.

Text in Illustration

*1	Oil Hole



b. Install the oil pressure sender gauge.

Torque:
15 N*m 153 kgf*cm , 11 ft.*lbf }

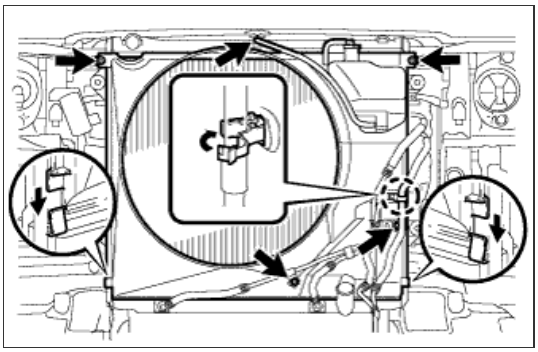
NOTICE:

Do not start the engine within 1 hour after installation.

c. Connect the sender gauge connector.

9. INSTALL FAN SHROUD

a. Install the fan pulley.



b. Place the shroud together with the coupling fan between the radiator and engine.

NOTICE:

Be careful not to damage the radiator core.

c. Temporarily install the fluid coupling fan to the fluid coupling bracket with the 4 nuts. Tighten the nuts as much as possible by hand.

d. Attach the claws of the shroud to the radiator as shown in the illustration.

e. Install the shroud with the 2 bolts.

Torque:
8.0 N*m 82 kgf*cm , 71 in.*lbf }

f. Connect the oil cooler tube to the fan shroud with the 2 bolts.

Torque:
5.0 N*m 51 kgf*cm , 44 in.*lbf }

g. Pass the hose through the flexible hose clamp and close the clamp as shown in the illustration.

h. Connect the reservoir hose to the upper radiator tank.

i. Install the fan and generator V-belt (Click here).

. Tighten the 4 nuts of the fluid coupling fan.

Torque:
21 N*m 214 kgf*cm , 15 ft.*lbf }

10. INSTALL NO. 1 RADIATOR HOSE

11. ADD ENGINE COOLANT

a. Add engine coolant.

Standard Capacity:

Item	Specified Condition
with rear heater	16.2 liters (17.1 US qts, 14.3 Imp. qts)
without rear heater	13.4 liters (14.2 US qts, 11.8 Imp. qts)

NOTICE:

Do not substitute plain water for engine coolant.

HINT:

TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the reservoir cap.

d. Press the No. 1 and No. 2 radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Start the engine and warm it up until the thermostat opens.

HINT:

The thermostat opening timing can be confirmed by pressing the radiator inlet hose by hand, and checking when the engine coolant starts to flow inside the hose.

g. Maintain the engine speed at 2000 to 2500 rpm.

NOTICE:

- **Make sure that the radiator reservoir still has some coolant in it.**
- **Pay attention to the needle of the ater temperature meter. Make sure that the needle does not sho an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**
- **Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the follo ing: 1) stop the engine, 2) ait until the coolant has cooled do n, and 3) add coolant until the coolant is filled to the F line.**
- **Run the engine at 2000 rpm until the coolant level has stabilized.**

h. Press the No. 1 and No. 2 radiator hoses several times by hand to bleed air.

CAUTION:

- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands a ay from the fan.**

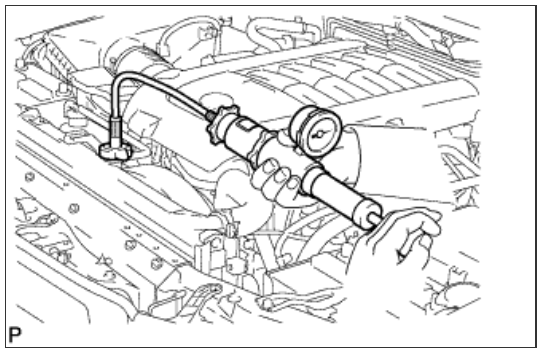
i. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

. Check that the coolant level is between the F and L lines.
If the coolant level is below the L line, repeat all of the procedures above.
If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.

12. INSPECT FOR COOLANT LEAK



CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Fill the radiator with coolant and attach a radiator cap tester.

b. Warm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.

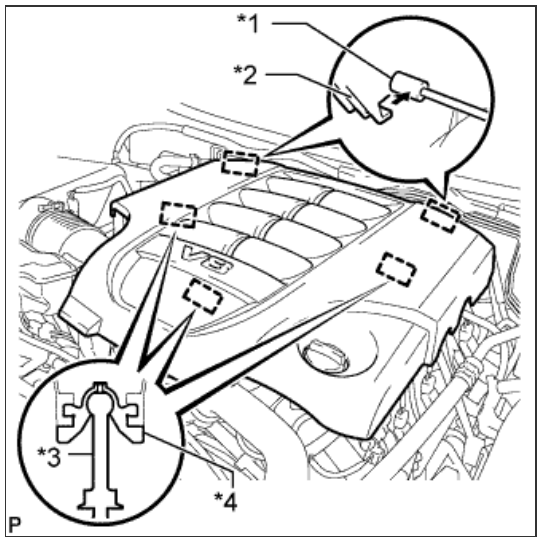
13. INSPECT FOR OIL LEAK

a. Start the engine. Make sure that there are no oil leaks from the area that was worked on.

14. INSPECT ENGINE OIL LE EL

a. Warm up the engine, stop the engine and wait 5 minutes. The oil level should be between the dipstick low level mark and full level mark.
If low, check for leakage and add oil up to the full level mark.

NOTICE:



Do not fill engine oil above the full level mark.

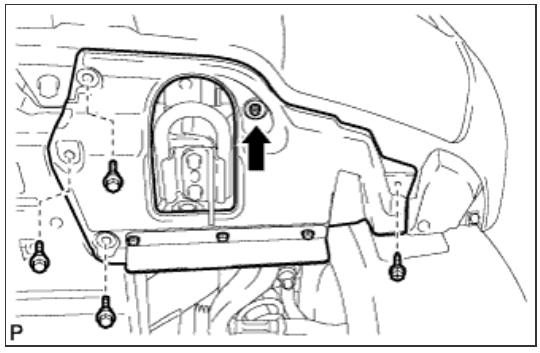
15. INSTALL -BANK CO ER SUB-ASSEMBLY

a. Attach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.

Text in Illustration

*1	Bracket
*2	Hook
*3	Pin
*4	Grommet

16. INSTALL NO. 1 ENGINE UNDER CO ER SUB-ASSEMBLY



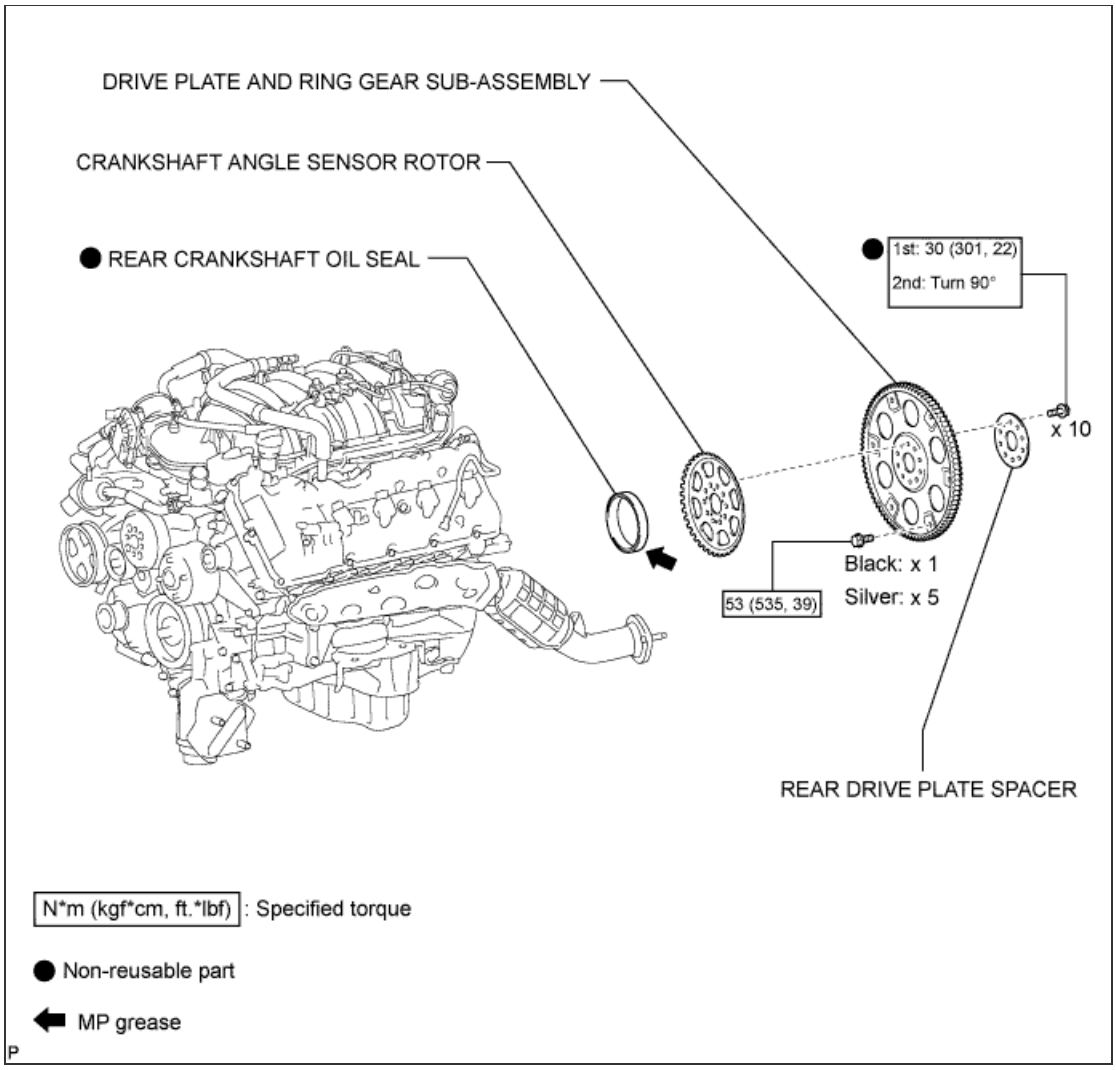
a. Install the No. 1 engine under cover with the 10 bolts.

Torque:
29 N*m 296 kgf*cm , 21 ft.*lbf }

17. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the 3 bolts and screw.



18. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

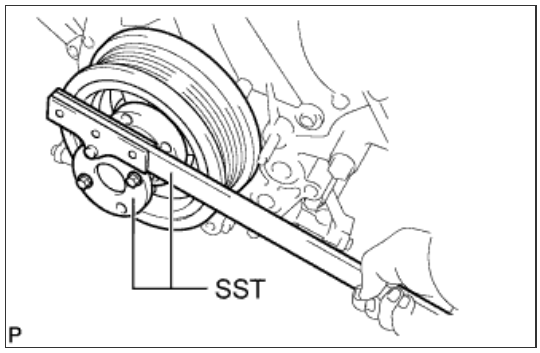
for Preparation Click here

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

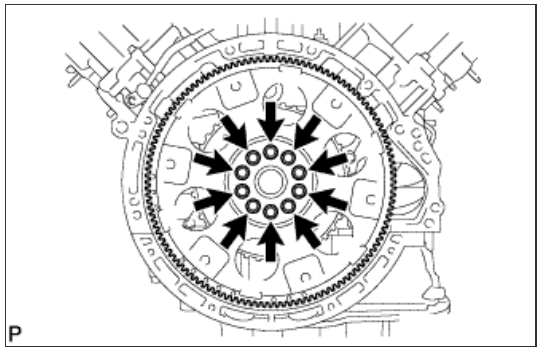
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).



2. REMOVE AUTOMATIC TRANSMISSION ASSEMBLY

(Click here)



3. REMOVE DRIVE PLATE AND RING GEAR SUB ASSEMBLY

a. Using SST, hold the crankshaft.

SST
09213
09330

b. Remove the 10 bolts, rear drive plate spacer, drive plate and crankshaft angle sensor rotor.

4. REMOVE REAR CRANKSHAFT OIL SEAL

a. Using a knife, cut off the lip of the oil seal.

b. Using a scre driver, pry out the oil seal.

Text in Ill tration

	t Position

HINT:

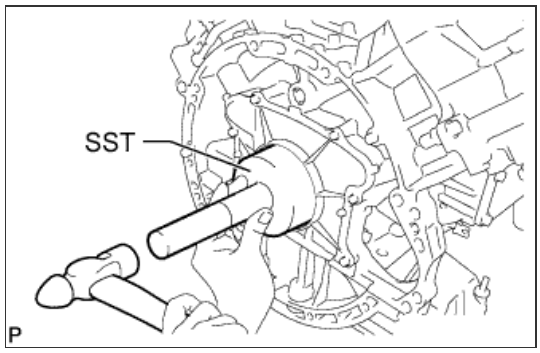
Tape the scre driver tip before use.

NOTICE:

Do not damage the surface of the oil seal press fit hole and crankshaft.

for Preparation Click here

1. INSTALL REAR CRANKSHAFT OIL SEAL

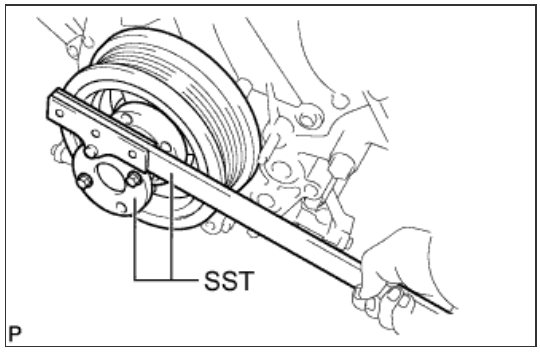


a. Apply MP grease to the lip of a new oil seal.

b. Using SST and a hammer, tap in the oil seal until its surface is flush with the rear oil seal retainer edge.

SST
09223-56010

NOTICE:

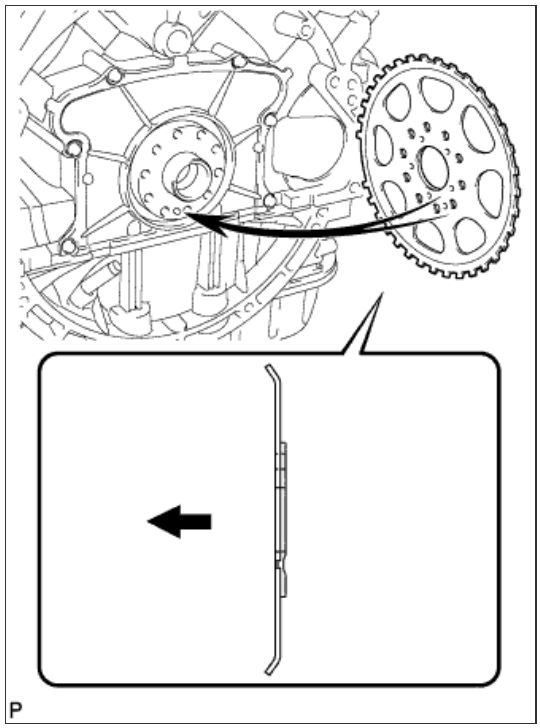


- **Keep the lip free from foreign matter.**
- **Do not tap on the oil seal at an angle.**

2. INSTALL DRIVE PLATE AND RING GEAR SUB-ASSEMBL

a. Using SST, hold the crankshaft.

SST
09213-70011
09330-00021

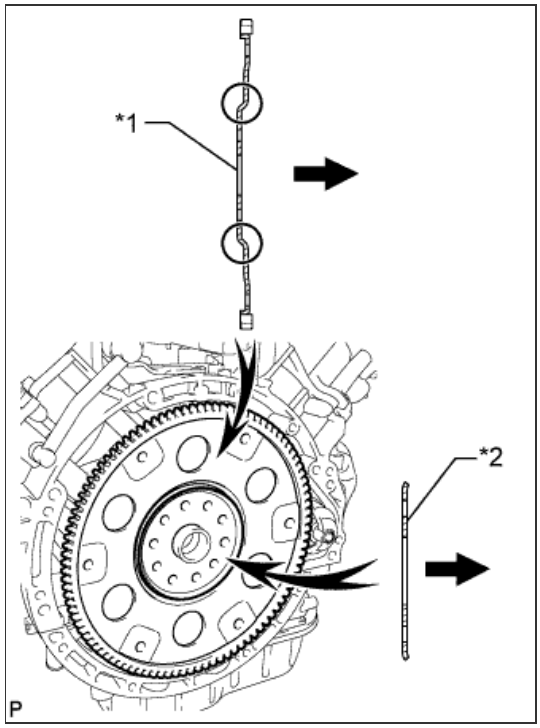


b. Install the crankshaft angle sensor rotor.

Text in Illustration

➡	Engine Side

HINT:



- **Align the pin hole of the crankshaft angle sensor rotor with the pin of the crankshaft.**
- **As the crankshaft angle sensor rotor is not reversible, be sure to install it so that it is facing in the direction shown in the illustration.**

c. Install the drive plate and rear drive plate spacer onto the crankshaft.

Text in Illustration

	rive Plate
	ear Drive Plate Spacer
➡	Automatic Transmission Side

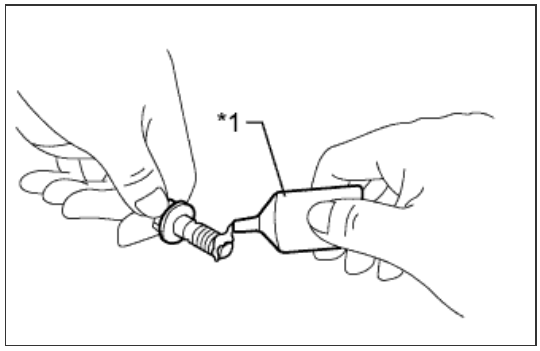
HINT:

As the rear drive plate spacer and the drive plate are not reversible, be sure to install them so that they are facing in the direction shown in the illustration.

d. Install the drive plate and ring gear and bolts.

HINT:

The bolts are tightened in 2 progressive steps.



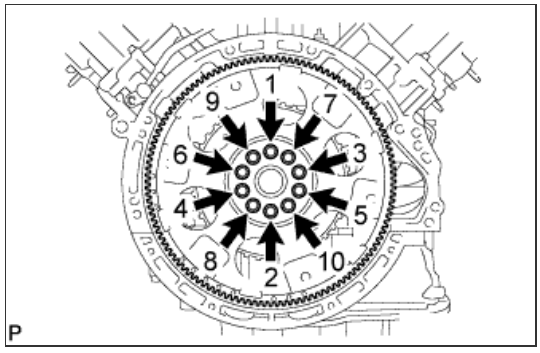
i. Clean the bolts and bolt holes.

ii. Apply adhesive to 2 or 3 threads at the end of each of the 10 bolts.

Adhesive:
To ota Genuine Adhesive 1324, Three Bond 1324 or equivalent

Text in Illustration

	dAesive



iii. Step 1:
Install and uniformly tighten 10 new bolts in the sequence shown in the illustration.

Torque:
30 N*m 301 kgf*cm , 22 ft.*lbf

NOTICE:

- **Do not reuse the drive plate installation bolts.**
- **Do not strike or damage the drive plate installation bolts. Be sure to handle them carefull .**

iv. Mark the upside of each drive plate installation bolt with paint.

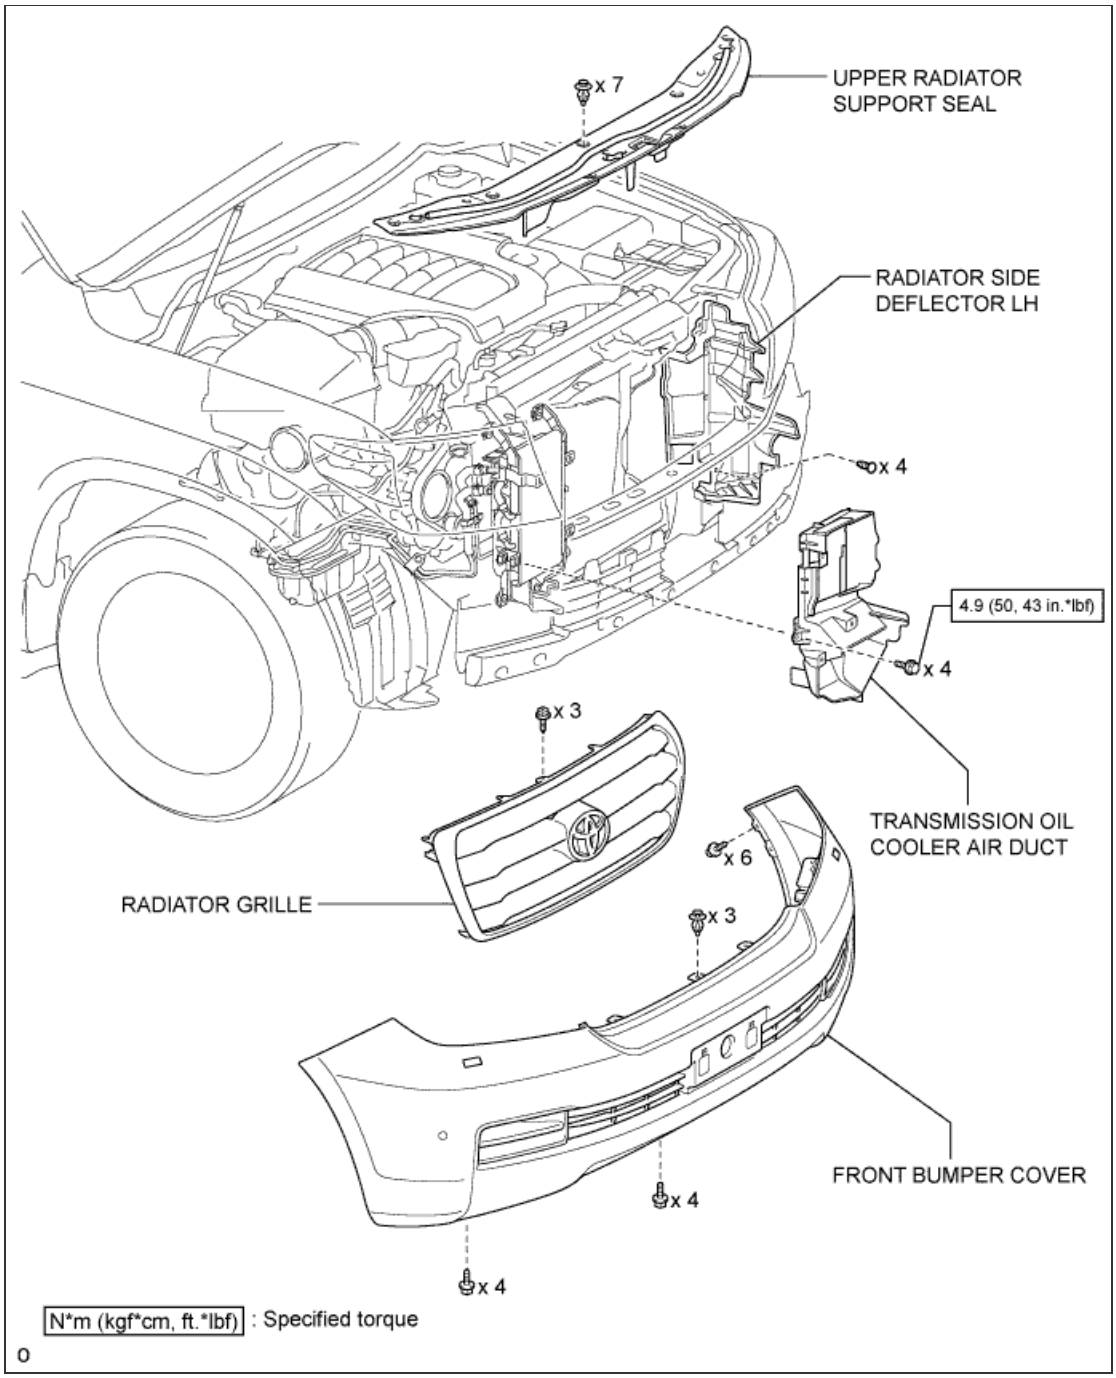
v. Step 2:
Tighten the cylinder head bolts another .

vi. Check that the painted marks are now at a angle to the upside.

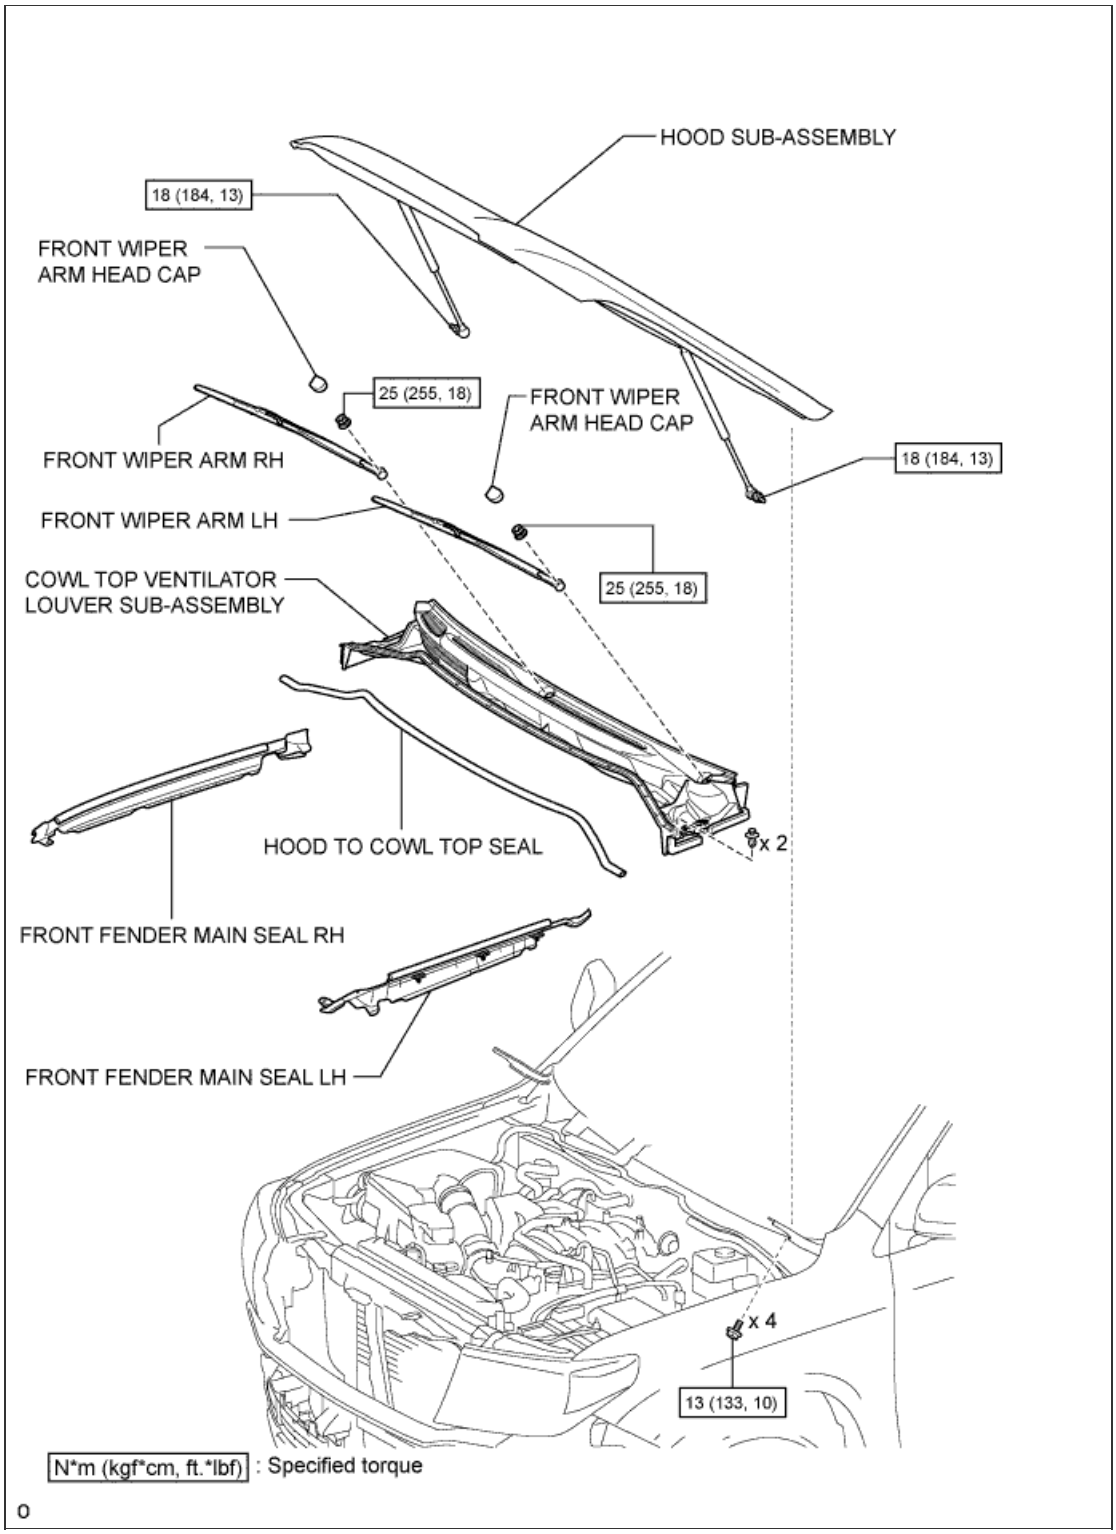
NOTICE:

Do not start the engine for at least an hour after installing the drive plate.

3. INSTALL AUTOMATIC TRANSMISSION ASSEMBL

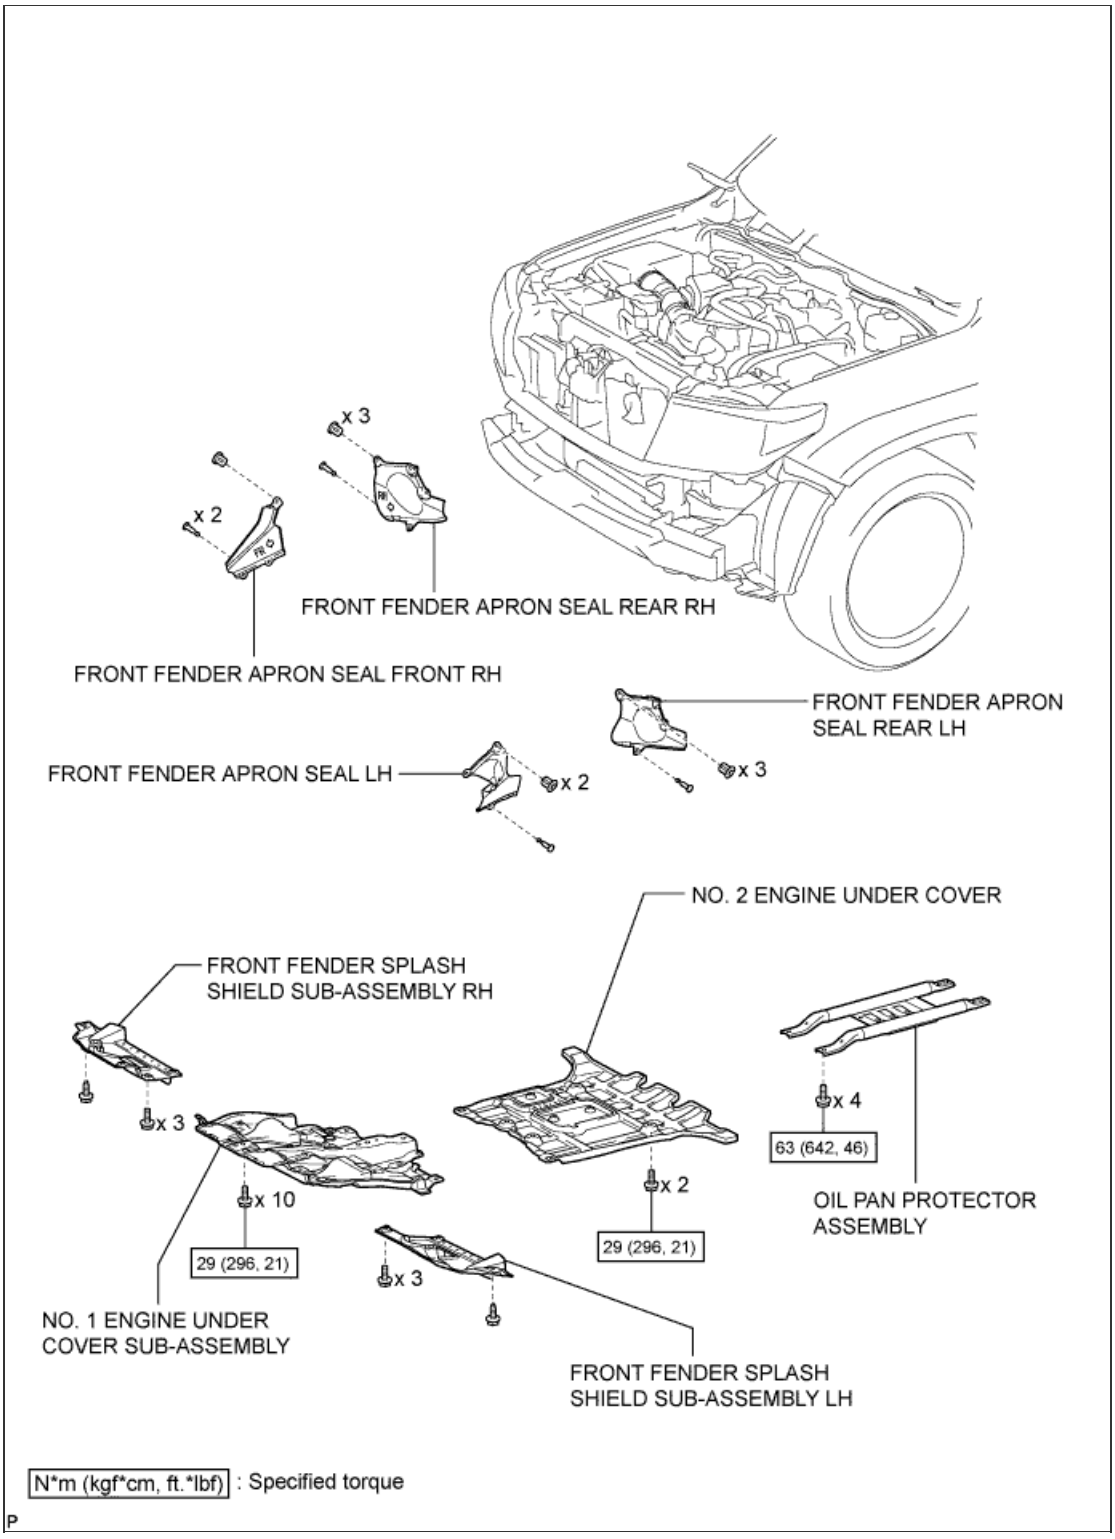


(Click here)

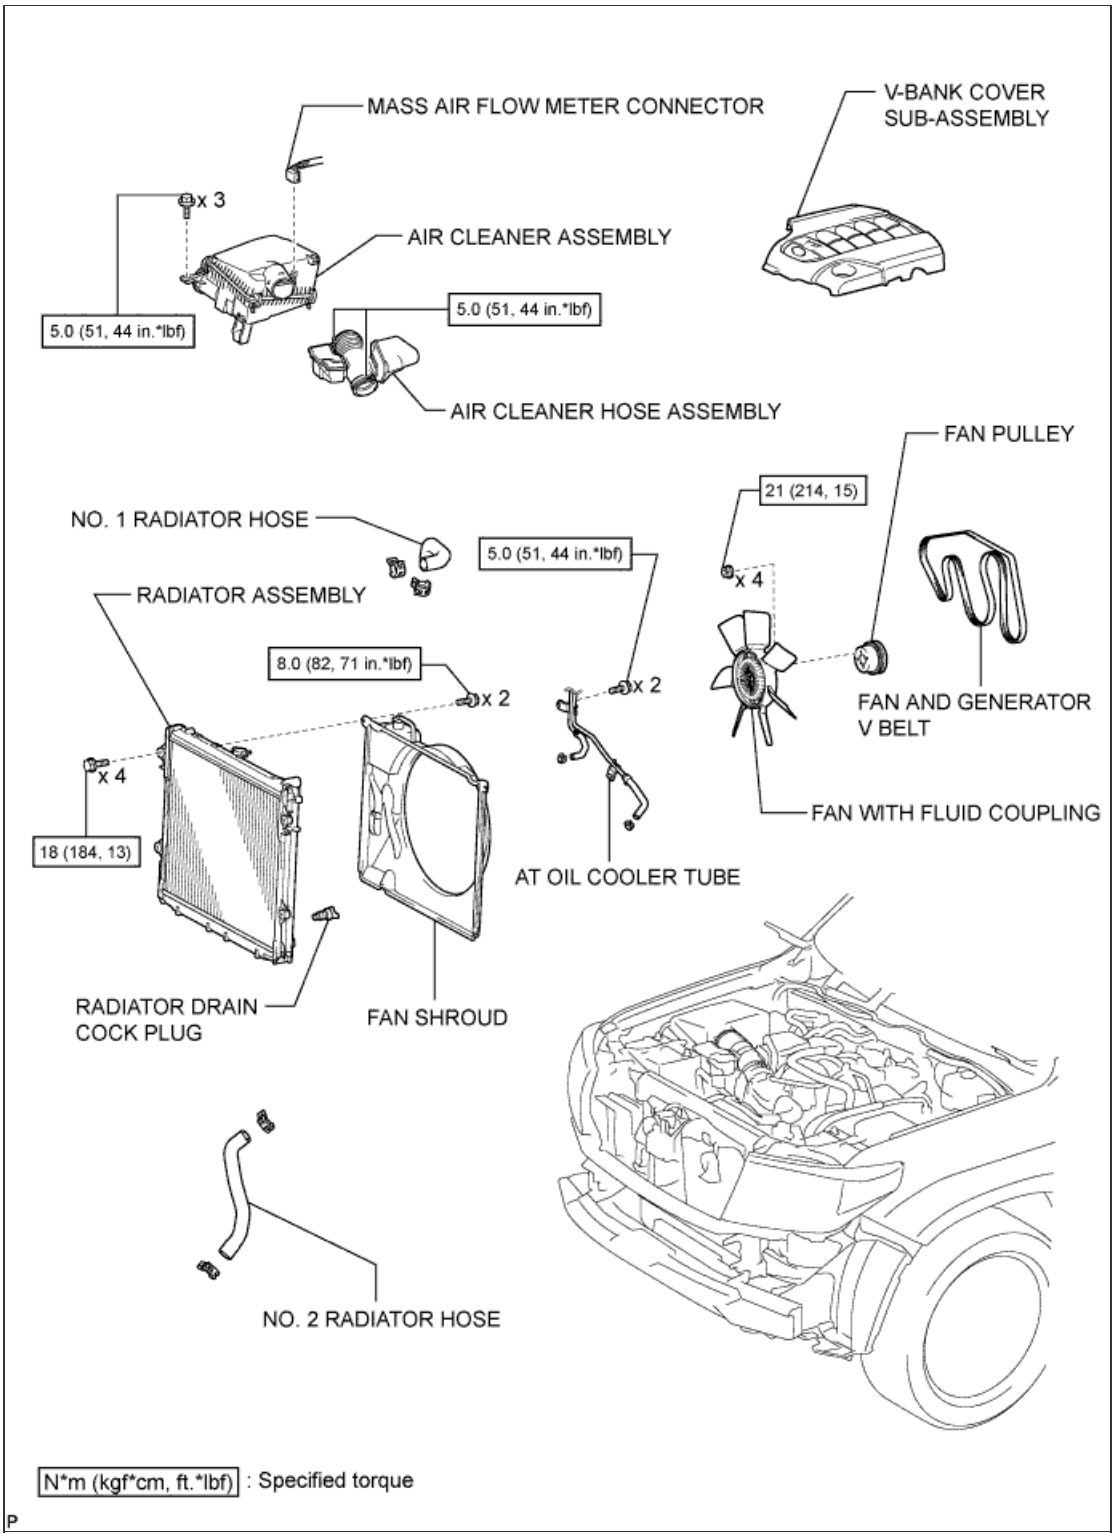


CONNECT CABLE TO NEGATIVE BATTER TERMINAL

NOTICE:



When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).



for Preparation Click here

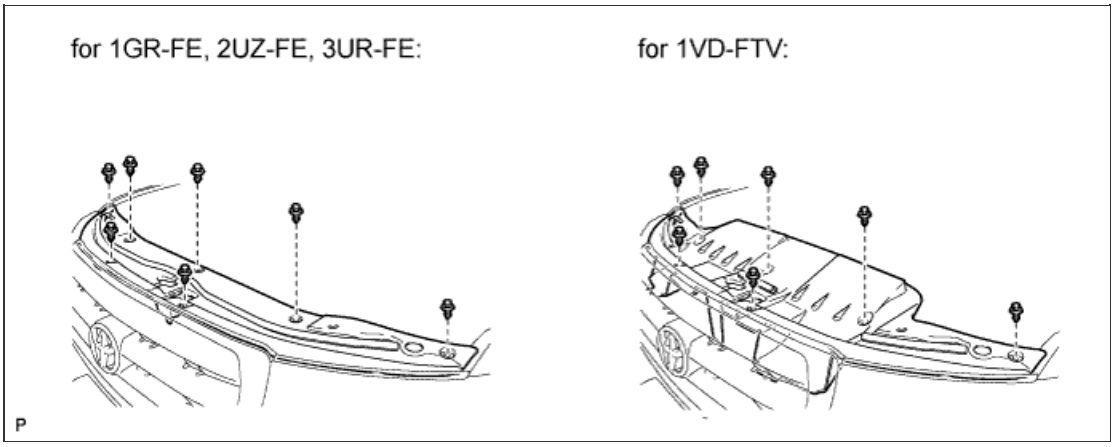
1. DISCHARGE FUEL SYSTEM PRESSURE

(Click here)



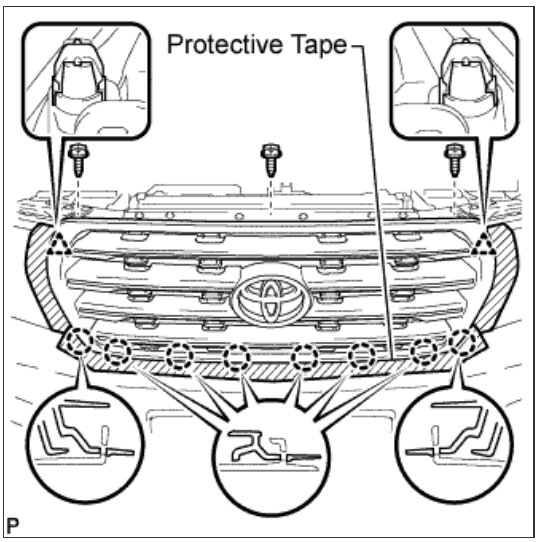
2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

3. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 7 clips and radiator support seal.

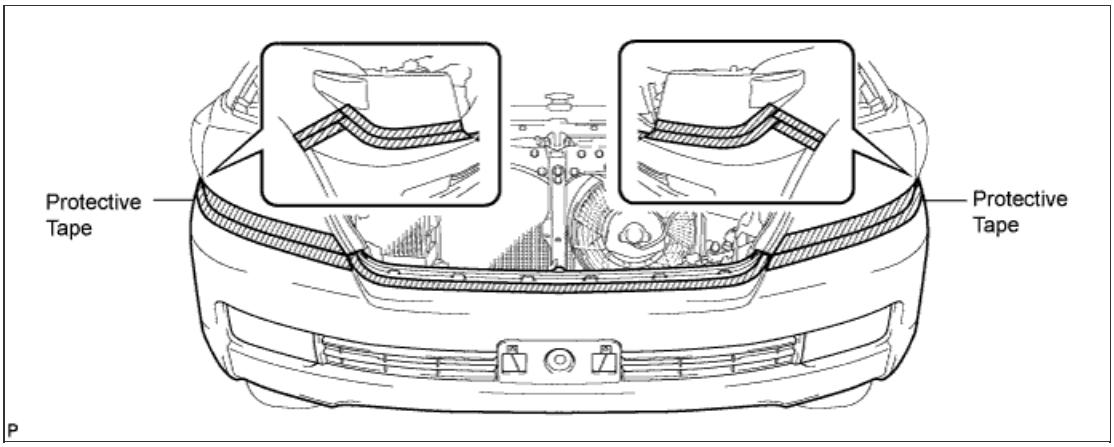


4. REMOVE RADIATOR GRILLE

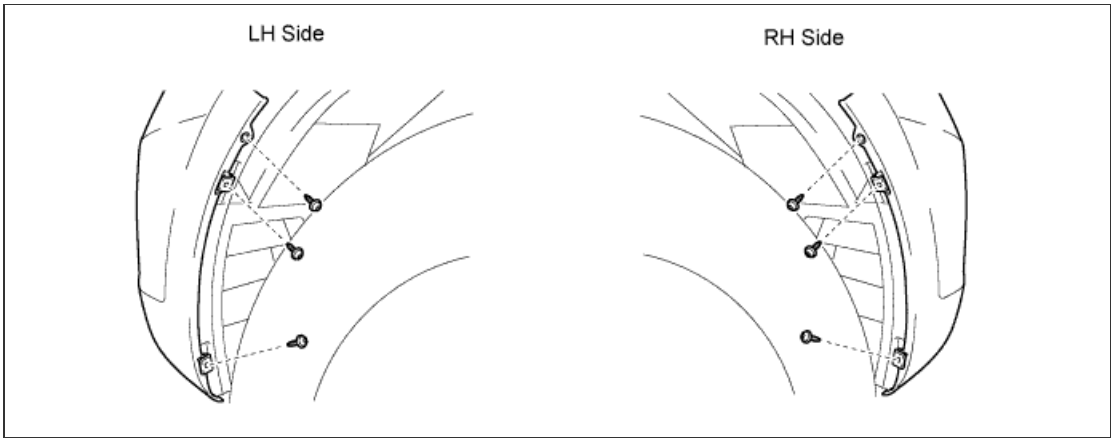
a. Put protective tape around the radiator grille.

b. Remove the 3 screws.

c. Detach the 2 clips and 8 claws, and remove the radiator grille.



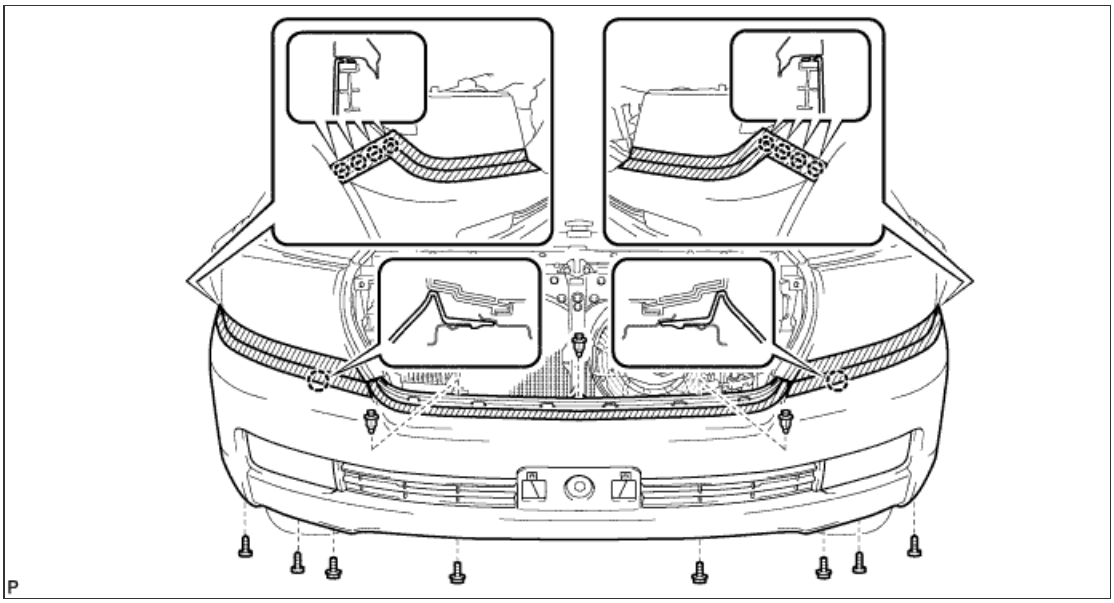
5. REMOVE FRONT BUMPER COVER



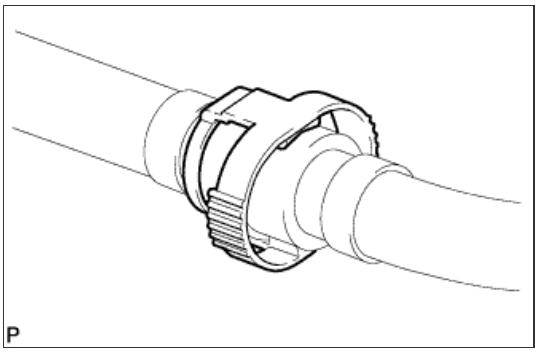
HINT:

For the front bumper cover with garnish, use the procedures described below.

a. Put protective tape around the bumper cover.



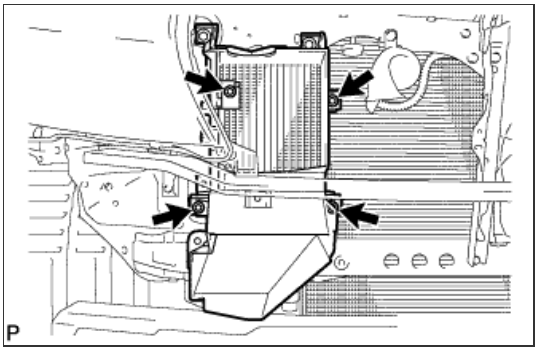
b. Using a T30 "TORX" socket, remove the 6 screws.



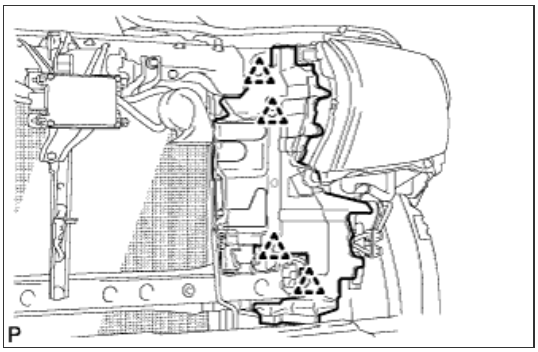
c. Remove the 3 clips, 4 screws and 4 bolts.

d. w/o TOYOTA Parking Assist-sensor System, w/o Fog Light:
Detach the 10 claws and remove the bumper cover.

e. w/ TOYOTA Parking Assist-sensor System or w/ Fog Light:
Detach the 10 claws, disconnect the No. 4 engine room wire connector and remove the bumper cover.



f. w/ Headlight Cleaner System:
Disconnect the headlight cleaner hose and remove the bumper cover.

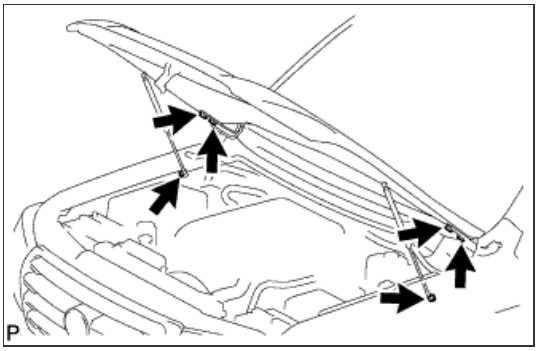


6. REMOVE TRANSMISSION OIL COOLER AIR DUCT

a. Remove the 4 bolts and oil cooler air duct.

7. DISCONNECT RADIATOR SIDE DEFLECTOR LH

a. Using a clip remover, remove the 4 clips and disconnect the side deflector.



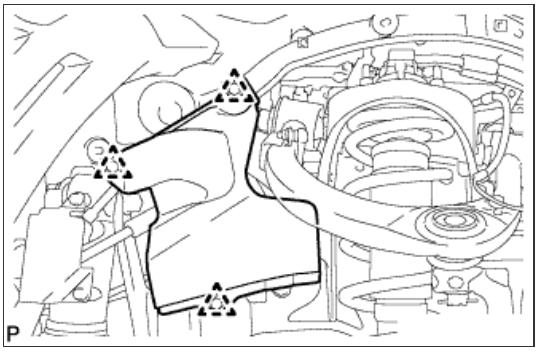
8. REMOVE HOOD SUB-ASSEMBLY

a. Remove the 2 hood support bolts and disconnect the hood supports.

CAUTION:

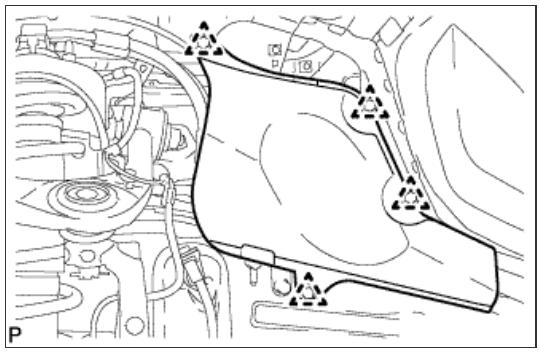
Remove the hood support assembly while supporting the hood by hand.

b. Remove the 4 bolts and hood.



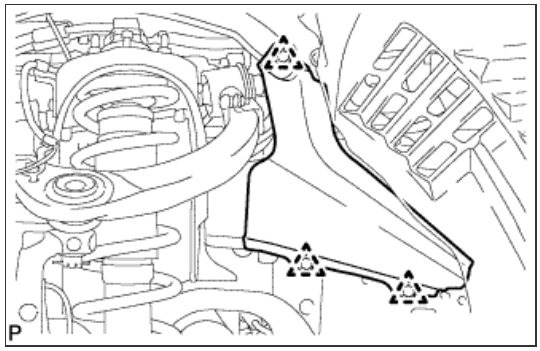
9. REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

(Click here)



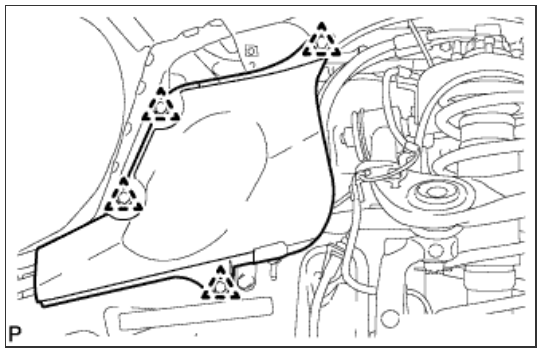
10. REMOVE FRONT FENDER APRON SEAL LH

a. Using a clip remover, remove the 3 clips and fender apron seal.



11. REMOVE FRONT FENDER APRON SEAL REAR LH

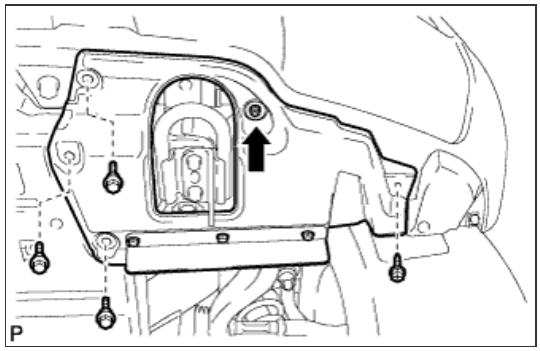
a. Using a clip remover, remove the 4 clips and fender apron seal.



12. REMOVE FRONT FENDER APRON SEAL FRONT RH

a. Using a clip remover, remove the 3 clips and fender apron seal.

13. REMOVE FRONT FENDER APRON SEAL REAR RH

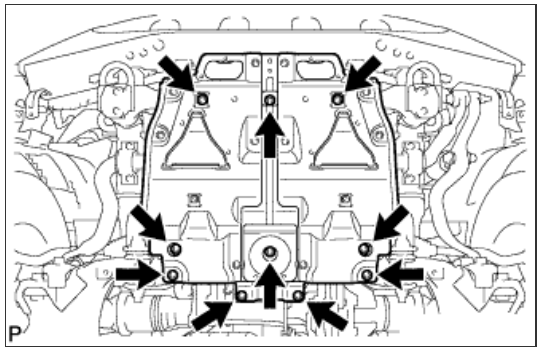


a. Using a clip remover, remove the 4 clips and fender apron seal.

14. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and screw.

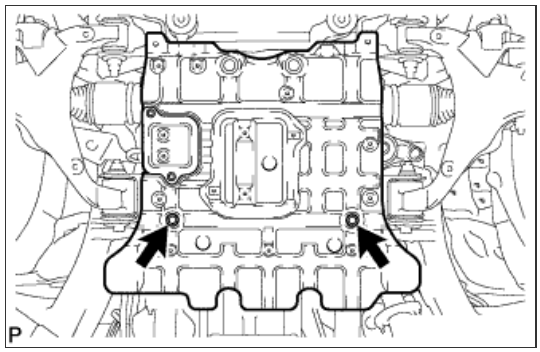
b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



15. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

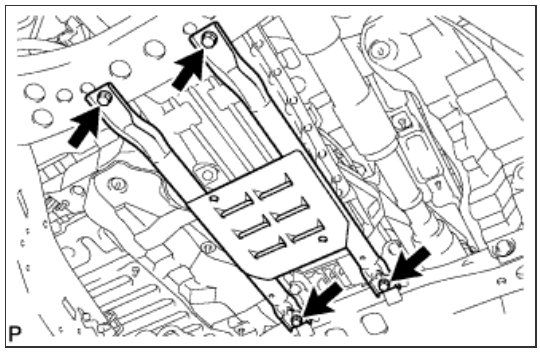
HINT:

Use the same procedures described for the LH side.



16. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and No. 1 engine under cover.



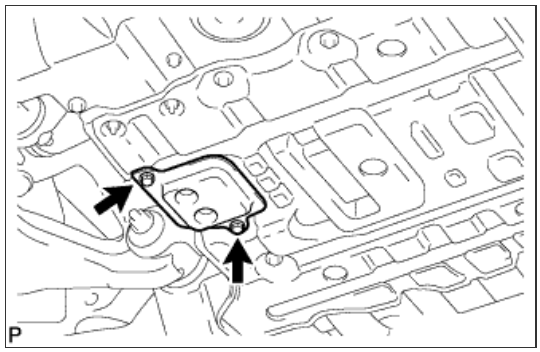
17. REMOVE NO. 2 ENGINE UNDER COVER

a. Remove the 2 bolts and No. 2 engine under cover.

18. REMOVE OIL PAN PROTECTOR ASSEMBLY

a. Remove the 4 bolts and oil pan protector assembly.

19. DRAIN ENGINE OIL



a. Remove the oil filler cap.

b. Remove the 2 bolts and No. 2 engine under cover seal.

c. Remove the oil pan drain plug and gasket, and drain the engine oil into a container.

d. Install a new gasket and the oil pan drain plug.

Tor e:
40 N*m 408 k f*cm , 30 ft.*lbf }

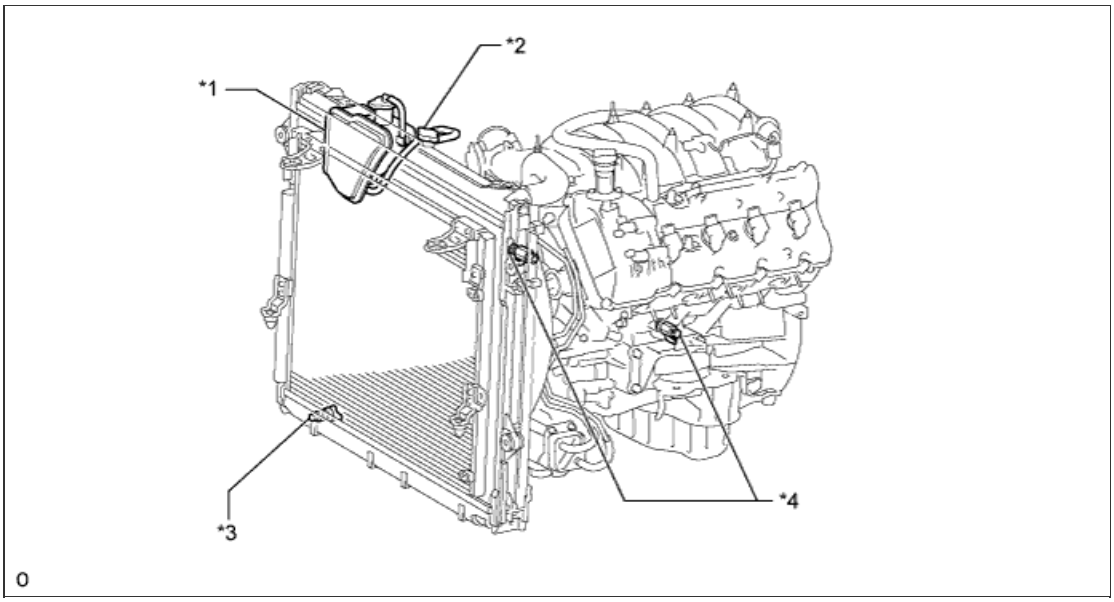
20. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Loosen the radiator drain cock plug.

HINT:



Collect the coolant in a container and dispose of it according to the regulations in your area.

b. Remove the radiator cap. Then drain the coolant from the radiator.

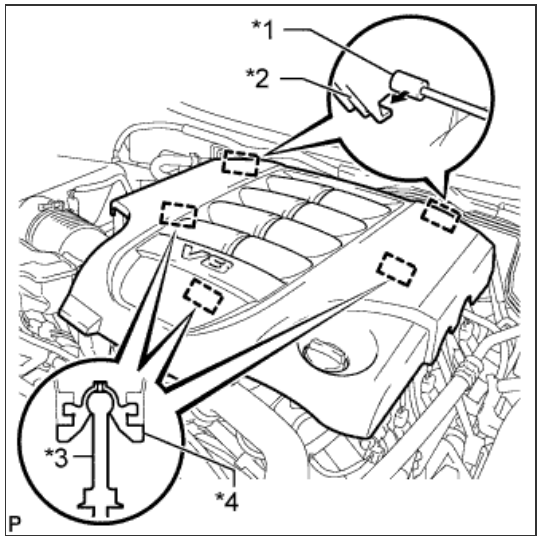
c. Loosen the 2 cylinder block drain cock plugs. Then drain the coolant from the engine.

d. Tighten the 2 cylinder block drain cock plugs.

Tor e:
13 N*m 133 k f*cm , 10 ft.*lbf }

Text in Illustration

*1	Radiator Reservoir	*2	Radiator Cap
*3	Radiator Drain Cock Plug	*4	Cylinder Block Drain Cock Plug



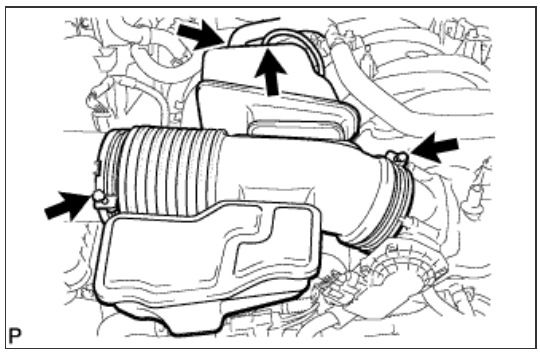
e. Tighten the radiator drain cock plug by hand.

21. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.

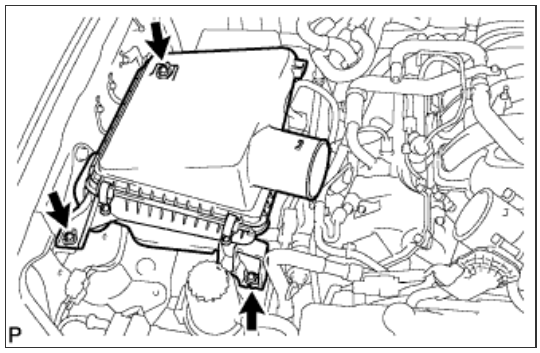
Text in Illustration

*1	Bracket
*2	Hook
*3	Pin
*4	Grommet



22. REMOVE AIR CLEANER HOSE ASSEMBLY

a. Disconnect the vacuum hose and No. 2 ventilation hose.

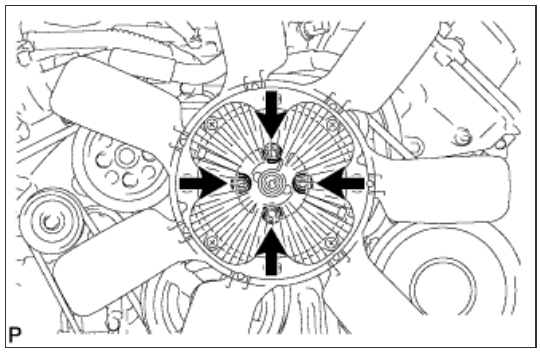


b. Loosen the 2 hose clamps.

c. Remove the air cleaner hose.

23. REMOVE AIR CLEANER ASSEMBLY

a. Remove the 3 bolts and air cleaner.



24. REMOVE NO. 1 RADIATOR HOSE

25. REMOVE NO. 2 RADIATOR HOSE

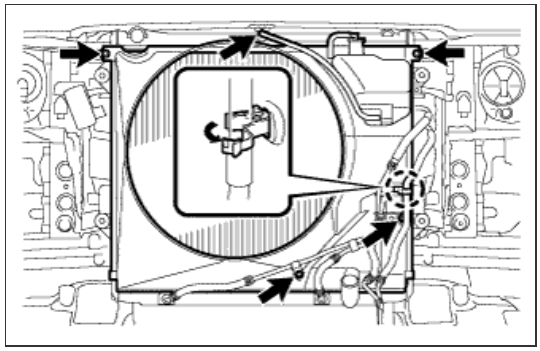
26. REMOVE FAN SHROUD

a. Loosen the 4 nuts holding the fluid coupling fan.

b. Remove the fan and generator V-belt (Click here).

c. Disconnect the reservoir hose from the upper radiator tank.

d. Detach the claw to open the flexible hose clamp.

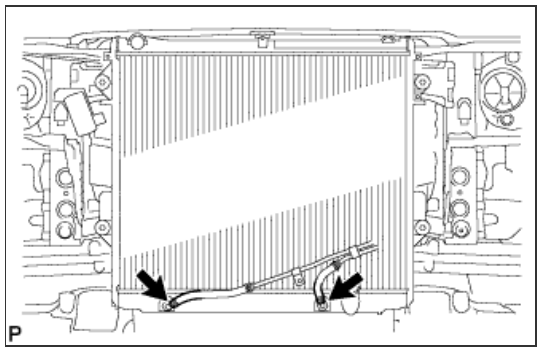


e. Remove the 2 bolts and disconnect the oil cooler tube from the fan shroud.

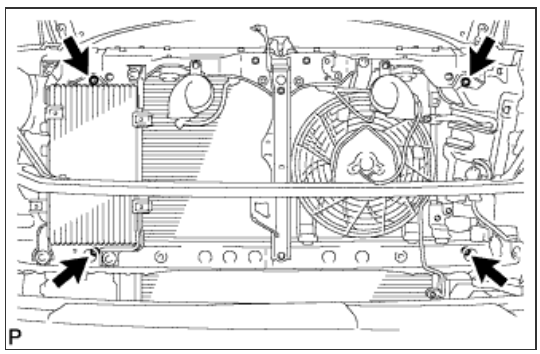
f. Remove the 2 bolts holding the fan shroud.

.Remove the 4 nuts of the fluid coupling fan, and then remove the shroud together with the coupling fan.

NOTICE:



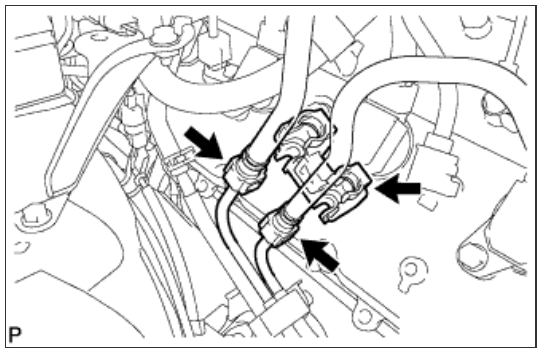
Be careful not to damage the radiator core.



h. Remove the fan pulley.

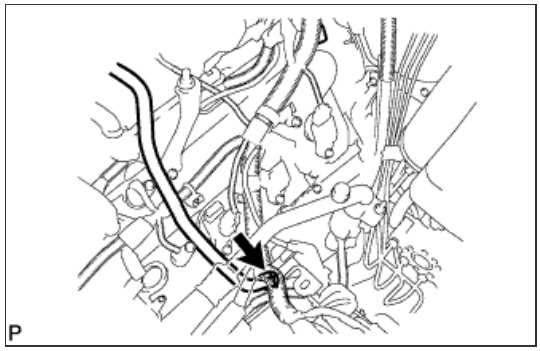
27. REMOVE RADIATOR ASSEMBLY

a. Disconnect the 2 oil cooler hoses.



b. Remove the 4 bolts and radiator.

28. DISCONNECT FUEL MAIN AND RETURN HOSE



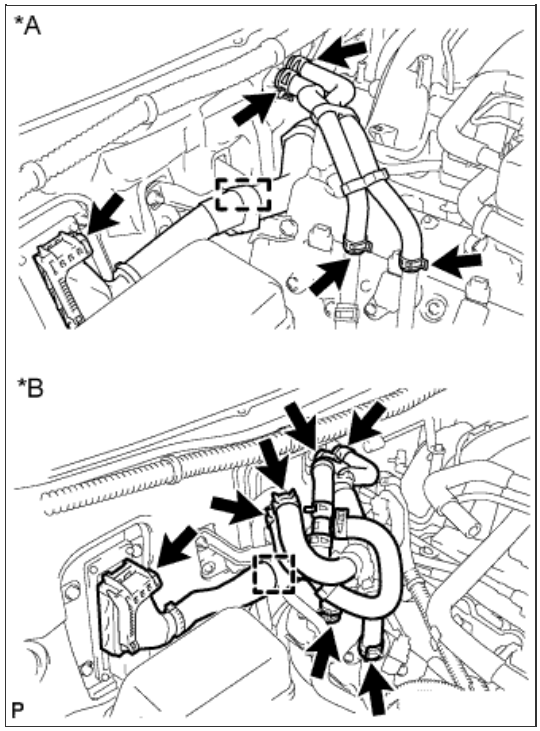
a. Remove the fuel pipe clamp.

b. Disconnect the fuel main and return hoses (Click here).

29. DISCONNECT WIRE HARNESS AND HOSE

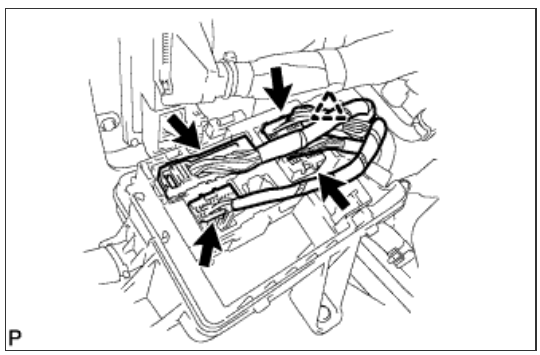
a. Disconnect the purge line hose.

b. Remove the heater hose.



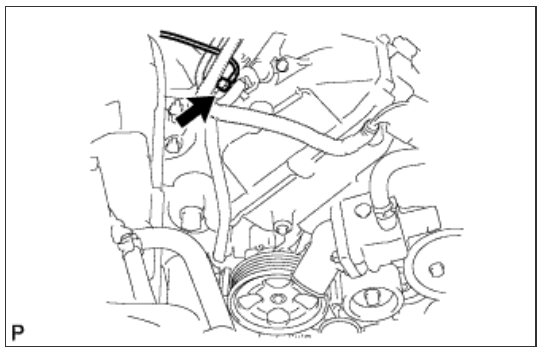
c. Disconnect the clamp and EC connector.

Text in Illustration



*A	w/o Rear Heater
*B	w/ Rear Heater

HINT:



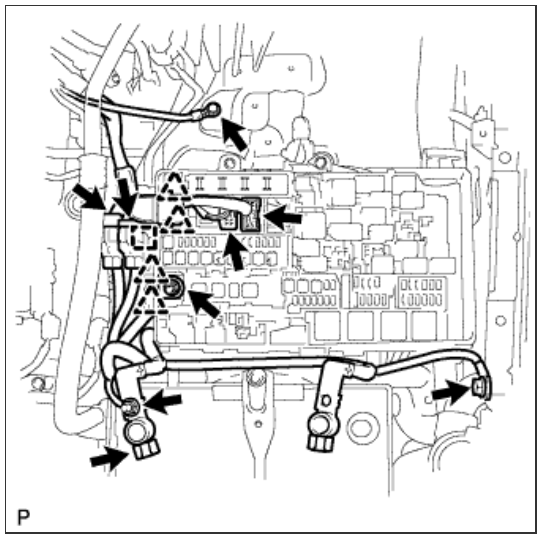
Refer to the following procedures to disconnect the EC connector (Click here).

d. Disconnect the 4 connectors and clamp from the connector holder block.

e. Remove the bolt and disconnect the ground wire.

f. Remove the nut and disconnect the wire from the positive ( ) battery cable.

.Disconnect the cable from the positive ( ) battery terminal.



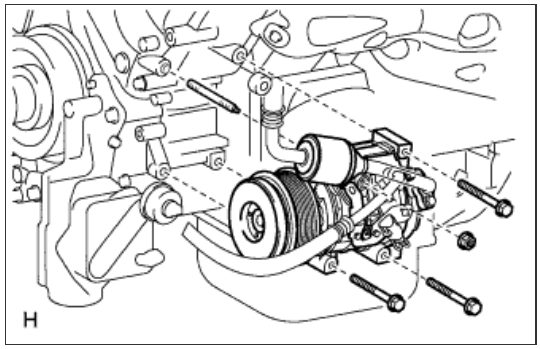
h. Remove the bolt and disconnect the ground wire from the body.

i. Remove the bolt and disconnect the ground wire from the bracket.

j. Remove the nut and disconnect the wire and 2 clips from the engine room unction block.

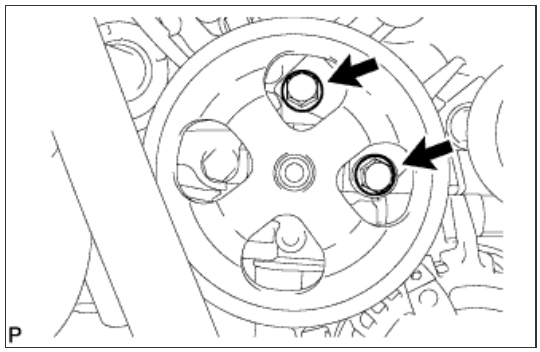
k. Disconnect the 2 connectors and 2 clips from the engine room unction block.

l. Disconnect the 2 connectors and clamp.



30. DISCONNECT COOLER COMPRESSOR ASSEMBLY

a. Remove the 3 bolts, nut and stud bolt, and disconnect the cooler compressor.

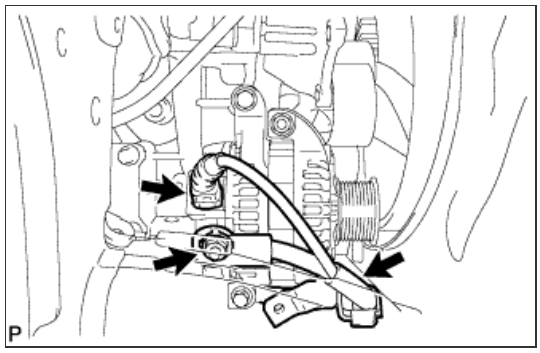


HINT:

It is not necessary to completely remove the compressor. With the hoses connected to the compressor, hang the compressor on the vehicle body with a rope.

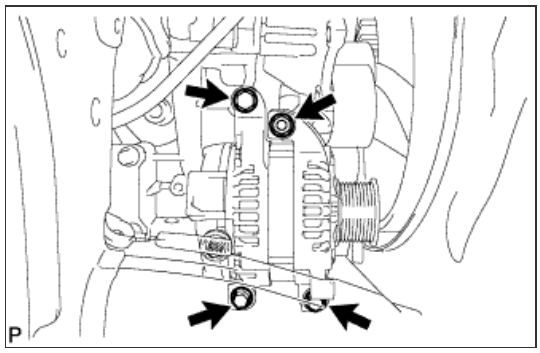
31. DISCONNECT VANE PUMP ASSEMBLY

a. Remove the 2 bolts and disconnect the vane pump.



32. REMOVE GENERATOR ASSEMBLY

a. Disconnect the generator connector.



b. Remove the terminal cap and nut, and disconnect the generator wire.

c. Remove the bolt and wire harness bracket from the generator.

d. Remove the 3 bolts, nut and generator.

e. Remove the stud bolt.

33. REMOVE TAILPIPE ASSEMBLY

a. Remove the bolt, clamp and gasket.

b. Remove the tailpipe from the 2 exhaust pipe supports.

c. Remove the bolt and clamp, and then disconnect the tailpipe from the center exhaust pipe.

34. REMOVE CENTER EXHAUST PIPE ASSEMBLY

a. Remove the 4 bolts.

b. Remove the center exhaust pipe from the 3 exhaust pipe supports.

c. Remove the 2 gaskets from the front exhaust pipe and front No. 2 exhaust pipe.

35. REMOVE FRONT NO. 2 EXHAUST PIPE ASSEMBLY

a. Disconnect the heated oxygen sensor connector.

b. Remove the bolt and disconnect the wire harness clamp bracket of the oxygen sensor from the transmission.

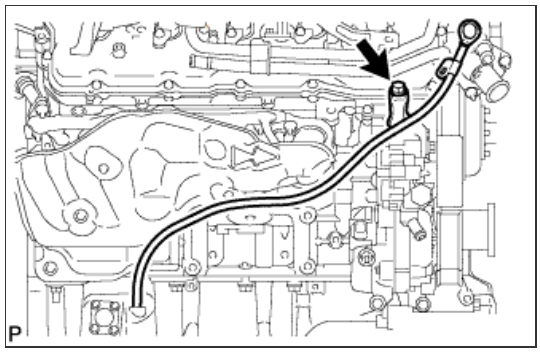
c. Remove the 2 nuts, front No. 2 exhaust pipe and gasket from the exhaust manifold LH.

36. REMOVE FRONT EXHAUST PIPE ASSEMBLY

a. Disconnect the heated oxygen sensor connector.

b. Remove the bolt and disconnect the wire harness clamp bracket of the oxygen sensor from the transmission.

c. Remove the 2 nuts, front exhaust pipe and gasket from the exhaust manifold RH.



37. REMOVE ENGINE OIL LEVEL DIPSTICK GUIDE

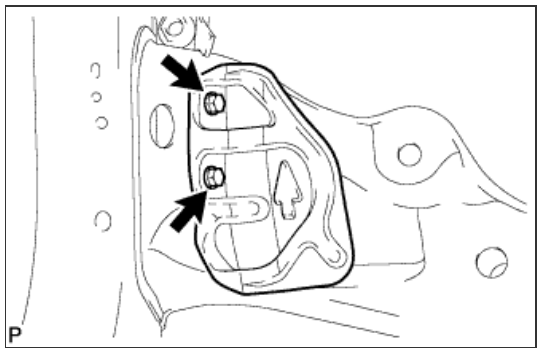
a. Disconnect the wire harness clamp.

b. Remove the dipstick.

c. Remove the bolt and dipstick guide.

d. Remove the O-ring from the dipstick guide.

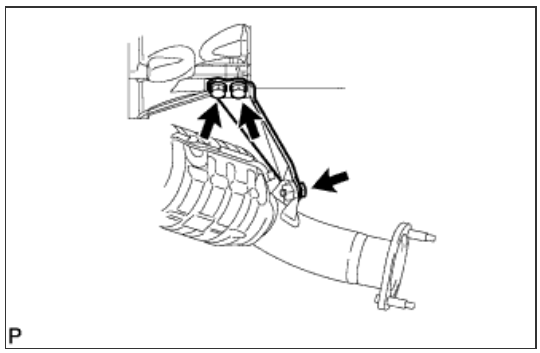
38. REMOVE FRONT PROPELLER SHAFT ASSEMBLY



(Click here)

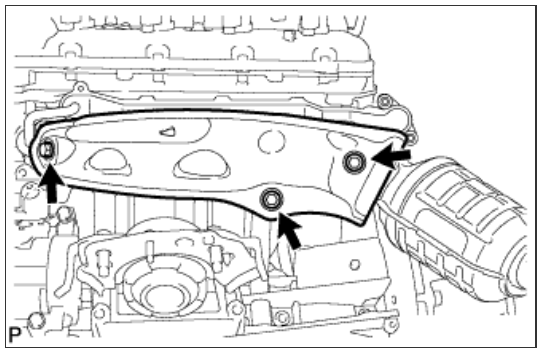
39. REMOVE REAR PROPELLER SHAFT ASSEMBLY

(Click here)



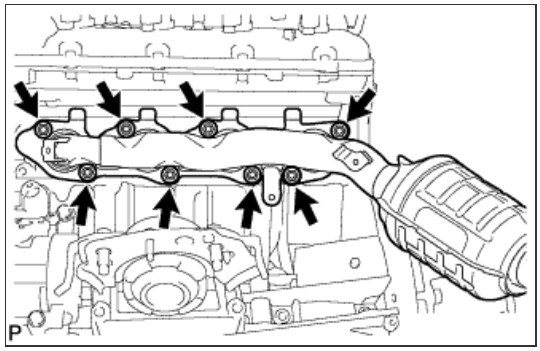
40. REMOVE PROPELLER SHAFT HEAT INSULATOR

a. Remove the 2 bolts and heat insulator.



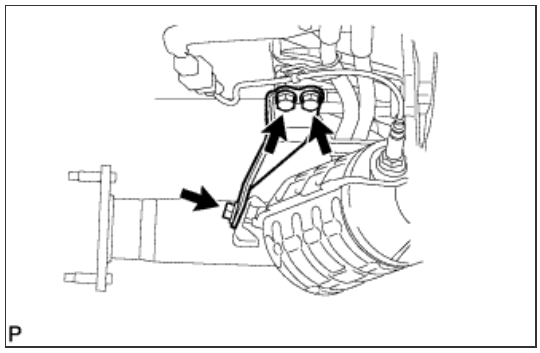
41. REMOVE NO. 2 MANIFOLD STAY

a. Remove the 3 bolts and manifold stay.



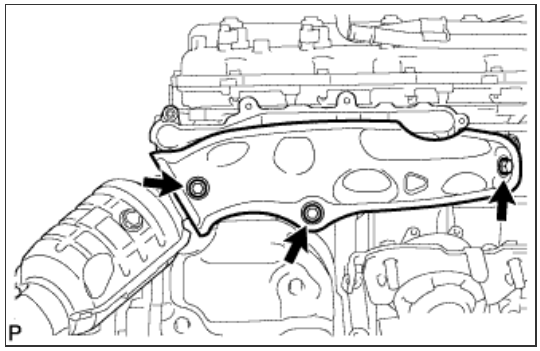
42. REMOVE NO. 2 EXHAUST MANIFOLD HEAT INSULATOR

a. Remove the 3 bolts and heat insulator.



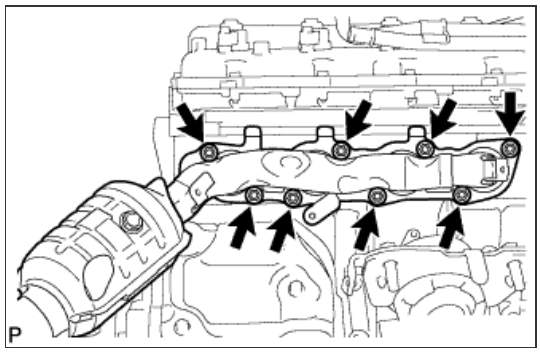
43. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY LH

a. Remove the 8 nuts, exhaust manifold and gasket.



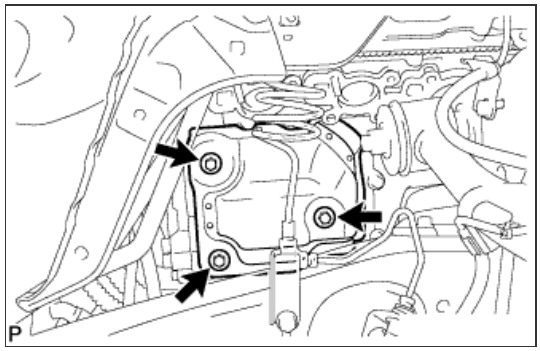
44. REMOVE NO. 1 MANIFOLD STAY

a. Remove the 3 bolts and manifold stay.



45. REMOVE NO. 1 EXHAUST MANIFOLD HEAT INSULATOR

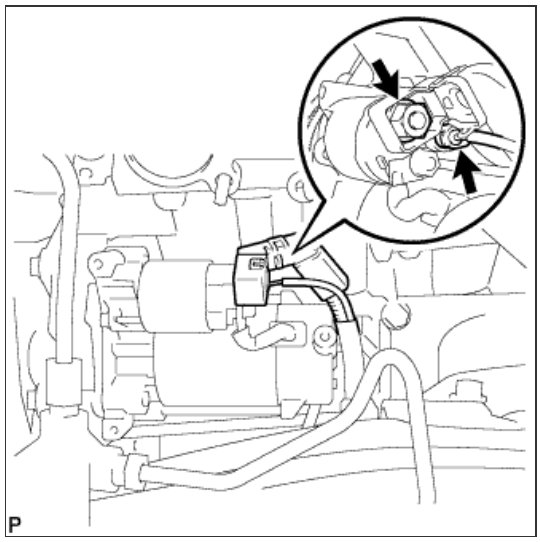
a. Remove the 3 bolts and heat insulator.



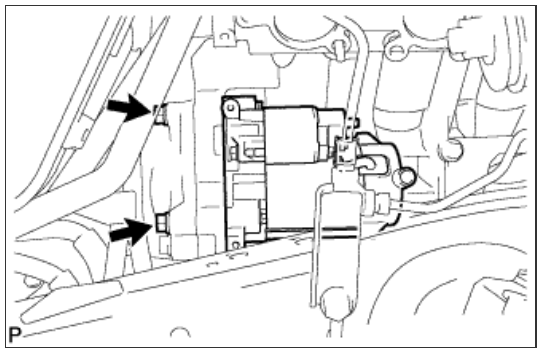
46. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY RH

a. Remove the 8 nuts, exhaust manifold and gasket.

47. REMOVE STARTER COVER

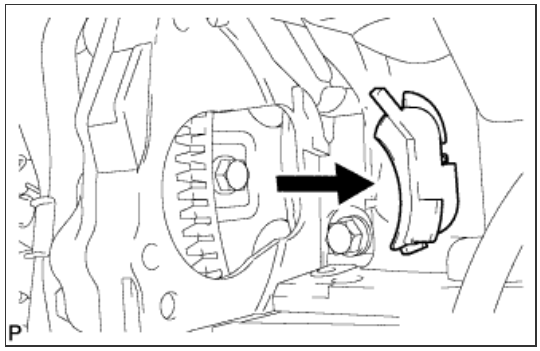


a. Remove the 3 bolts and starter cover.



48. REMOVE STARTER ASSEMBLY

a. Disconnect the starter connector.



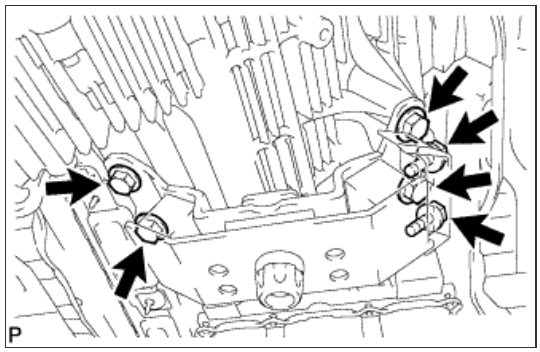
b. Remove the nut and disconnect the starter wire.

c. Remove the 2 bolts and starter.

d. Remove the flywheel housing side cover.

49. REMOVE AUTOMATIC TRANSMISSION ASSEMBLY

(Click here)

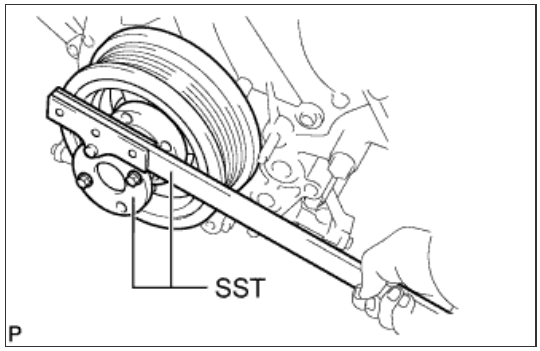


50. REMOVE REAR NO. 1 ENGINE MOUNTING INSULATOR

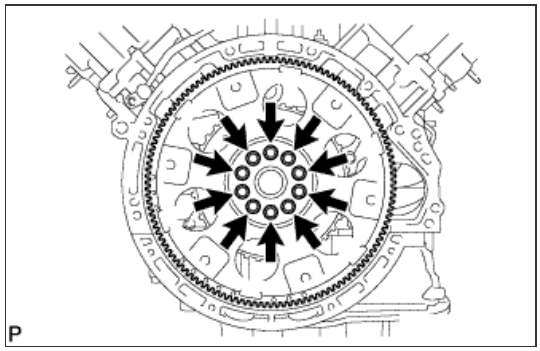
HINT:

Only perform this procedure when replacement of the engine mounting insulator is necessary.

a. Remove the 2 bolts and front engine mounting insulator RH.



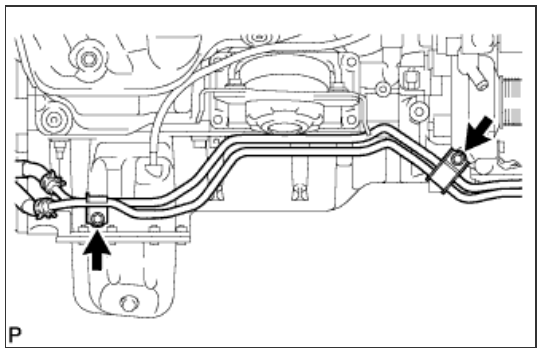
b. Remove the 4 bolts and rear engine mounting insulator from the transmission.



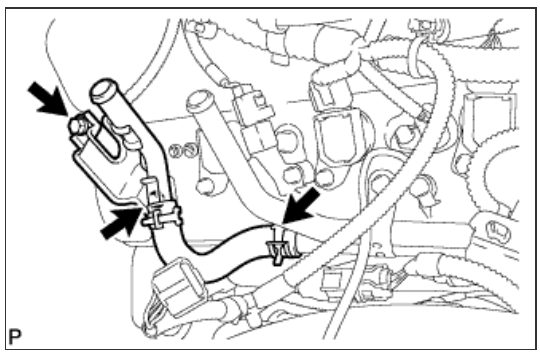
51. REMOVE DRIVE PLATE AND RING GEAR SUB-ASSEMBLY

a. Using SST, hold the crankshaft.

SST
09213-70011
09330-00021



b. Remove the 10 bolts, rear drive plate spacer, drive plate and crankshaft angle sensor rotor.

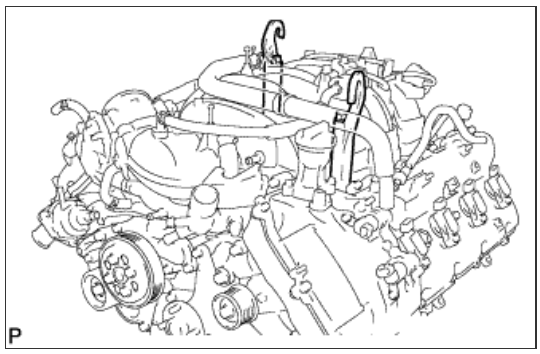


52. DISCONNECT OIL COOLER PIPE ASSEMBLY

a. Remove the 2 bolts and disconnect the oil cooler pipe.

53. REMOVE WATER PIPE AND HOSE SUB-ASSEMBLY

a. Remove the 2 bolts and disconnect the hose. Then remove the water pipe and hose.



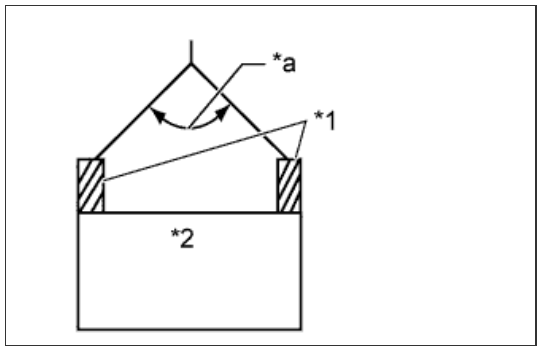
54. REMOVE ENGINE ASSEMBLY

a. Install 2 engine hangers with 2 bolts as shown in the illustration.

Tor e:
43 N*m 438 k f*cm , 32 ft.*lbf }

HINT:

Engine hanger	12281-381 0
Bolt	011 -14120

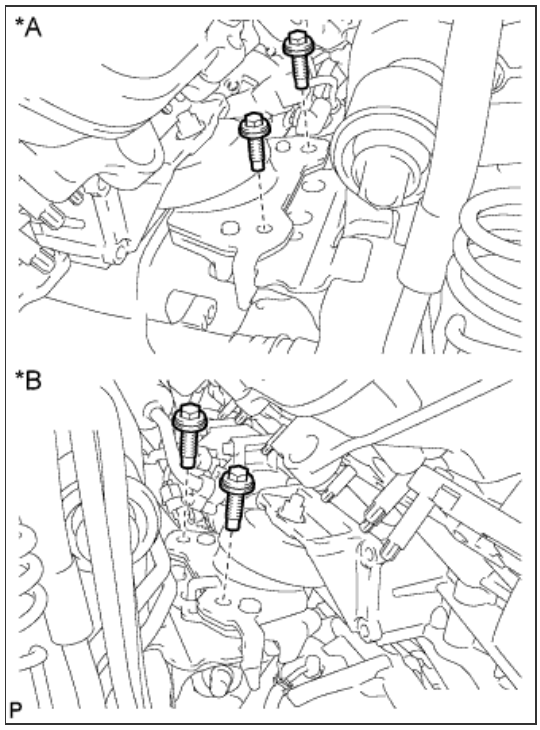


b. Attach an engine sling device and hang the engine with a chain block.

b. Attach an engine sling device and hang the engine with a chain block.

Text in Illustration

*1	Engine Hanger
*2	ENGINE
*a	0 or less



NOTICE:

When hanging the engine, make sure to hang the engine with the sling device s hanging angle at 0 or less. If not, the engine or engine hangers may be damaged.

c. Remove the 4 engine mounting insulator bolts.

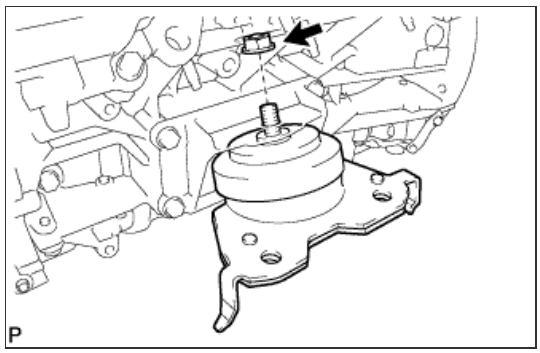
Text in Illustration

*A	RH
*B	LH

d. Lift the engine out from the vehicle slowly and carefully.

NOTICE:

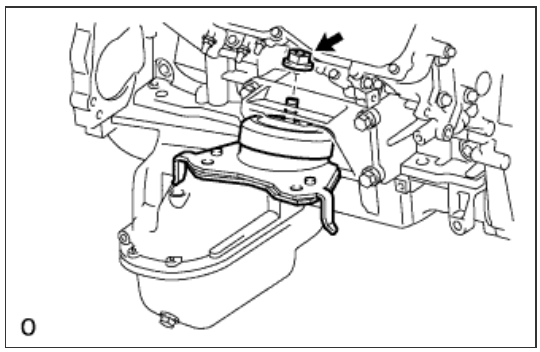
- **Make sure the en ine is clear of all irin hoses and cables.**
- **With the exception of installin the en ine assembly to an en ine stand or remo in the en ine assembly from an en ine stand, do not perform any dk on the en ine hile it is suspended, as doin so is dan erous.**
- **Pay attention to the an le of the slin de ice as the en ine assembly or en ine han ers may be dama ed or deformed if the an le is incorrect.**



55. INSTALL ENGINE ON ENGINE STAND

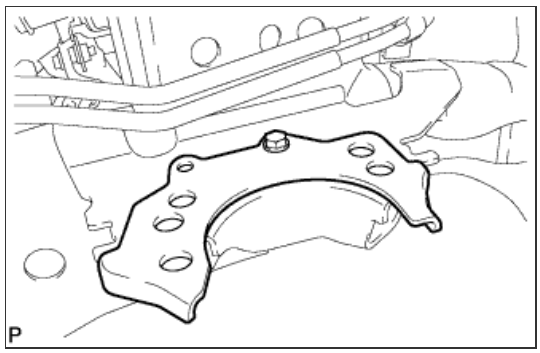
a. Install the engine onto an engine stand with bolts.

b. Remove the 2 bolts and 2 engine hangers.



56. REMOVE FRONT ENGINE MOUNTING INSULATOR LH

a. Remove the nut and mounting insulator.



57. REMOVE FRONT ENGINE MOUNTING INSULATOR RH

a. Remove the nut and mounting insulator.

58. REMOVE NO. 2 FRONT ENGINE MOUNTING BRACKET LH

a. Remove the bolt and No. 2 front engine mounting bracket LH.

for Preparation Click here

1. INSTALL NO. 2 FRONT ENGINE MOUNTING BRACKET LH

a. Install the No. 2 front engine mounting bracket with the bolt.

Torque:
32 N*m{ 326 kgf*cm , 24 ft.*lbf }

2. INSTALL FRONT ENGINE MOUNTING INSULATOR RH

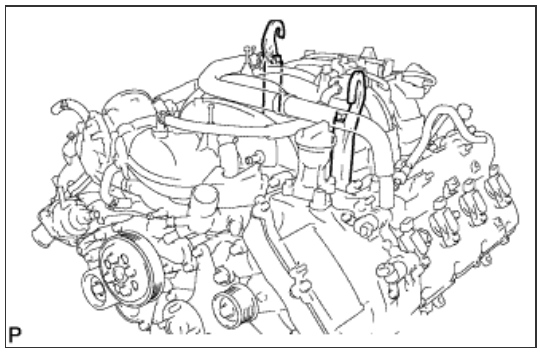
a. Install the mounting insulator with the nut.

Torque:
72 N*m{ 734 kgf*cm , 53 ft.*lbf }

3. INSTALL FRONT ENGINE MOUNTING INSULATOR LH

a. Install the mounting insulator with the nut.

Torque:
72 N*m{ 734 kgf*cm , 53 ft.*lbf }



4. REMOVE ENGINE STAND

a. Install 2 engine hangers with 2 bolts as shown in the illustration.

Torque:
43 N*m{ 438 kgf*cm , 32 ft.*lbf }

HINT:

ngine hanger	12281-38150
Bolt	

b. ttach an engine sling device and hang the engine with a chain block.

c. e o the bolts and engine assembly from the engine stand.

NOTICE:

- **With the exception of installing the engine assembly to an engine stand or removing the engine assembly from an engine stand, do not perform any work on the engine while it is suspended, as doing so is dangerous.**
- **Pay attention to the angle of the sling device as the engine assembly or engine hangers may be damaged or deformed if the angle is incorrect.**

5. INSTALL ENGINE ASSEMBLY

a. lowly lower the engine assembly into the engine compartment.

NOTICE:

ake sure that the engine is clear of all wiring and hoses.

b. ttach the engine mounting insulators to the vehicle.

c. Install the 4 engine mounting insulator bolts.

Torque:
79 N*m{ 806 kgf*cm , 58 ft.*lbf }

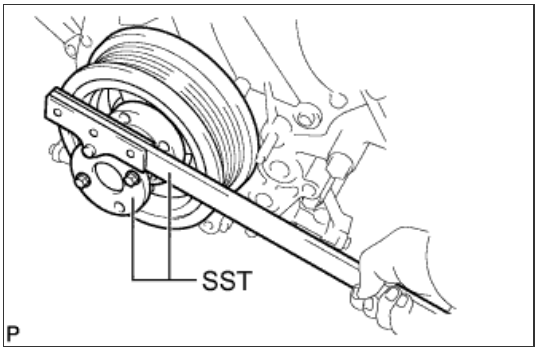
d. Remove the 2 bolts and 2 engine hangers.

6. INSTALL WATER PIPE AND HOSE SUB-ASSEMBLY

a. onect the hose and install the water pipe and hose with the 2 bolts.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

7. CONNECT OIL COOLER PIPE ASSEMBLY



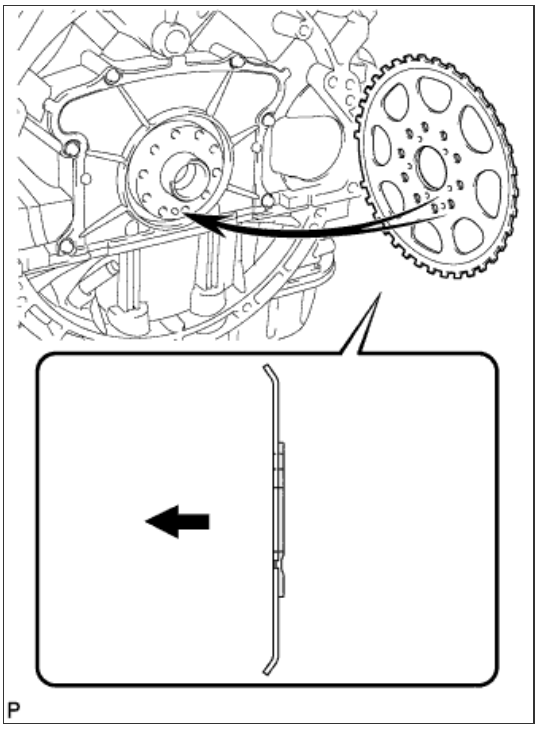
a. onect the oil cooler pipe with the 2 bolts.

Torque:
14 N*m{ 143 kgf*cm , 10 ft.*lbf }

8. INSTALL DRIVE PLATE AND RING GEAR SUB-ASSEMBLY

a. sing SST, hold the crankshaft.

SST
09213-70011
09330-00021



b. Install the crankshaft angle sensor rotor.

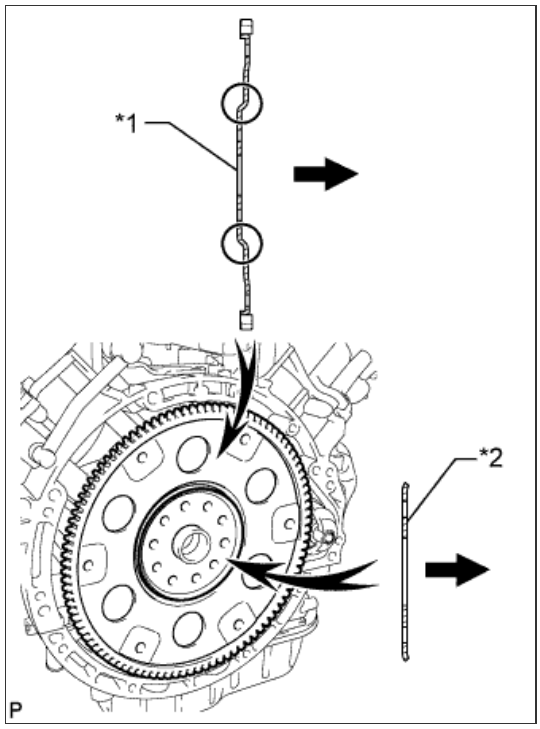
Text in Illustration

➡	ngine Side

HINT:

- **Align the pin hole of the crankshaft angle sensor rotor with the pin of the crankshaft.**
- **As the crankshaft angle sensor rotor is not reversible, be sure to install it so that it is facing in the direction shown in the illustration.**

c. Install the drive plate and rear drive plate spacer onto the crankshaft.



Text in Illustration

	Plate e

	ar Drive Plate Spacer
→	Automatic Transmission Side

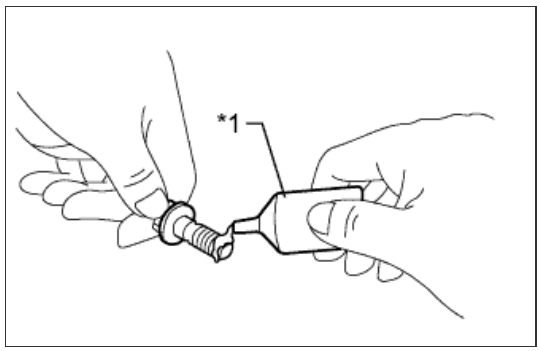
HINT:

As the rear drive plate spacer and the drive plate are not reversible, be sure to install them so that they are facing in the direction shown in the illustration.

d. Install the drive plate and ring gear and bolts.

HINT:

he bolts are tightened in 2 progressive steps.



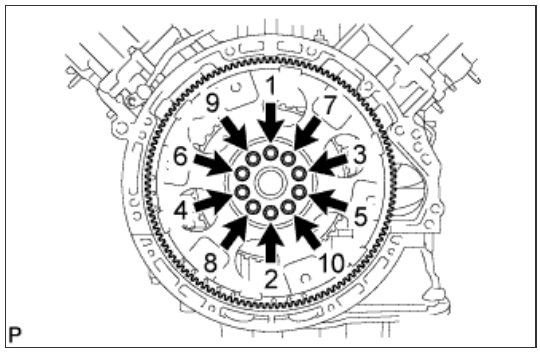
i. lean the bolts and bolt holes.

ii. Apply adhesive to 2 or 3 threads at the end of each of the 10 bolts.

Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent

Text in Illustration

1	Adhesive



iii. Step 1:
Install and uniformly tighten 10 new bolts in the sequence shown in the illustration.

Torque:
30 N*m{ 301 kgf*cm , 22 ft.*lbf }

NOTICE:

- **Do not reuse the drive plate installation bolts.**
- **Do not strike or damage the drive plate installation bolts. Be sure to handle them carefully.**

iv. Mark the upside of each drive plate installation bolt with paint.

v. Step 2:
Tighten the cylinder head bolts another 90°.

vi. Check that the painted marks are now at a 90° angle to the upside.

NOTICE:

Do not start the engine for at least an hour after installing the drive plate.

9. INSTALL REAR NO. 1 ENGINE MOUNTING INSULATOR

HINT:

Only perform this procedure when replacement of the engine mounting insulator is necessary.

a. Install the rear engine mounting insulator to the transmission with the 4 bolts.

Torque:
59 N*m{ 602 kgf*cm , 44 ft.*lbf }

b. Install the front engine mounting insulator RH with the 2 bolts.

Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

10. INSTALL AUTOMATIC TRANSMISSION ASSEMBLY

(Click here)

11. INSTALL STARTER ASSEMBLY

a. Install the flywheel housing side cover.

b. Install the starter with the 2 bolts.

Torque:
37 N*m{ 377 kgf*cm , 27 ft.*lbf }

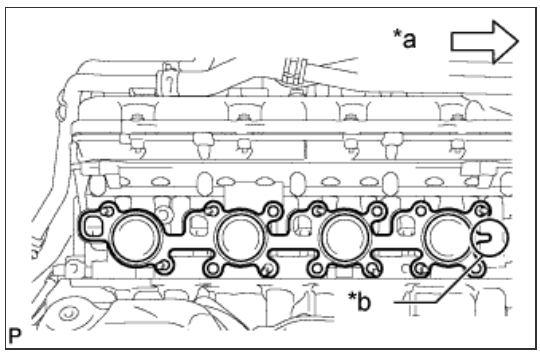
c. Install the starter wire with the nut.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

d. Connect the starter connector.

12. INSTALL STARTER COVER

a. Install the starter cover with the 3 bolts.



Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

13. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY RH

a. Install a new gasket to the cylinder head.

HINT:

Install the exhaust manifold gasket with the gasket tab facing toward the front of the engine.

Text in Illustration

*a	Front
*b	Tab

b. Install the exhaust manifold with 8 new nuts.

Torque:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }

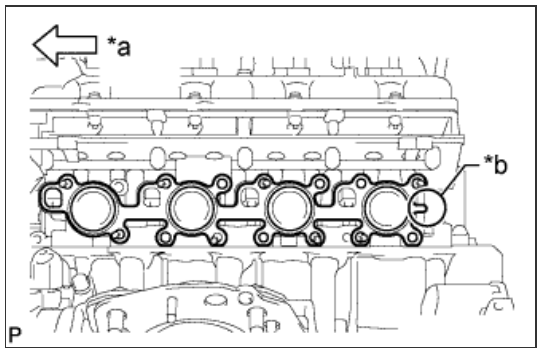
14. INSTALL NO. 1 EXHAUST MANIFOLD HEAT INSULATOR

a. Install the heat insulator with the 3 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

15. INSTALL NO. 1 MANIFOLD STAY

a. Install the manifold stay with the 3 bolts.



Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

16. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY LH

a. Install a new gasket to the cylinder head.

HINT:

Install the exhaust manifold gasket with the gasket tab facing toward the rear of the engine.

Text in Illustration

*a	Front
*b	Tab

b. Install the exhaust manifold with 8 new nuts.

Torque:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }

17. INSTALL NO. 2 EXHAUST MANIFOLD HEAT INSULATOR

a. Install the heat insulator with the 3 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

18. INSTALL NO. 2 MANIFOLD STAY

a. Install the manifold stay with the 3 bolts.

Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

19. INSTALL PROPELLER SHAFT HEAT INSULATOR

a. Install the heat insulator with the 2 bolts.

Torque:
16 N*m{ 160 kgf*cm , 12 ft.*lbf }

20. INSTALL REAR PROPELLER SHAFT ASSEMBLY

(Click here)

21. INSTALL FRONT PROPELLER SHAFT ASSEMBLY

(Click here)

22. INSTALL ENGINE OIL LEVEL DIPSTICK GUIDE

a. Apply a light coat of engine oil to a new O-ring.

b. Install the O-ring to the guide.

c. Install the dipstick guide with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

d. Install the dipstick.

e. Connect the wire harness clamp.

23. INSTALL FRONT EXHAUST PIPE ASSEMBLY

a. Install a new gasket and the front exhaust pipe to the exhaust manifold RH with 2 new nuts.

Torque:
54 N*m{ 551 kgf*cm , 40 ft.*lbf }

b. Install the wire harness clamp bracket of the oxygen sensor to the transmission with the bolt.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

c. Connect the heated oxygen sensor connector.

24. INSTALL FRONT NO. 2 EXHAUST PIPE ASSEMBLY

a. Install a new gasket and the front No. 2 exhaust pipe to the exhaust manifold LH with 2 new nuts.

Torque:
54 N*m{ 551 kgf*cm , 40 ft.*lbf }

b. Install the wire harness clamp bracket of the oxygen sensor to the transmission with the bolt.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

c. Connect the heated oxygen sensor connector.

25. INSTALL CENTER EXHAUST PIPE ASSEMBLY

a. Install 2 new gaskets to the front exhaust pipe and front No. 2 exhaust pipe.

b. Install the center exhaust pipe to the 3 exhaust pipe supports, and then install the 4 bolts.

Torque:
48 N*m{ 489 kgf*cm , 35 ft.*lbf }

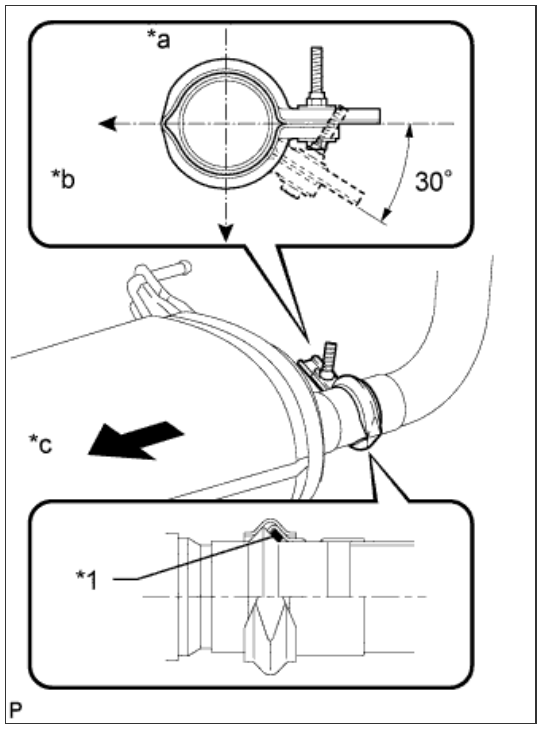
26. INSTALL TAILPIPE ASSEMBLY

a. Install the tailpipe to the 2 exhaust pipe supports.

b. Install a new gasket to the center exhaust pipe.

c. Connect the tailpipe to the center exhaust pipe.

d. Attach a new clamp to the tailpipe and center exhaust pipe. Then install the bolt to the clamp.



Torque:
32 N*m{ 326 kgf*cm , 24 ft.*lbf }

Text in Illustration

*1	Gasket
*a	Top
*b	LH Side
*c	Front

HINT:

Install the clamp within the angle range shown in the illustration.

27. INSTALL GENERATOR ASSEMBLY

a. Install the stud bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. Install the generator with the 3 bolts and nut.

Torque:
43 N*m{ 438 kgf*cm , 32 ft.*lbf }

c. Connect the generator connector.

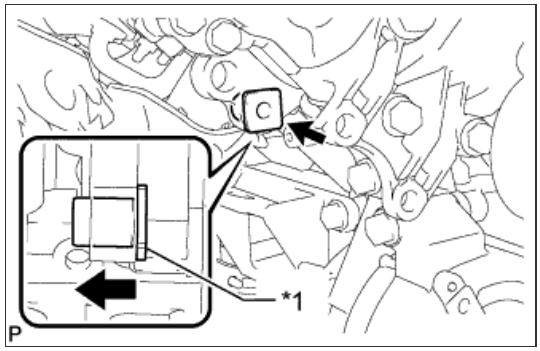
d. Connect the generator wire with the nut.

Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

e. Install the terminal cap.

f. Install the harness bracket to the generator with the bolt.

Torque:
31 N*m{ 316 kgf*cm , 23 ft.*lbf }



28. CONNECT VANE PUMP ASSEMBLY

HINT:

Before performing the following procedures, move the spacer until the vane pump can be installed.

Text in Illustration

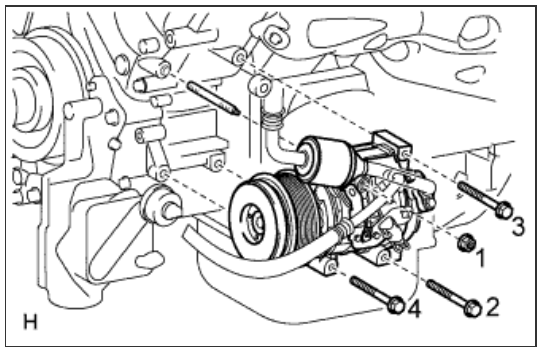
*1	Spacer

a. Connect the vane pump to the timing chain cover with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

29. CONNECT COOLER COMPRESSOR ASSEMBLY

a. Install the cooler compressor with the stud bolt.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. Install the 3 bolts and nut.

Torque:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }

NOTICE:

Tighten the bolts and nut in the order shown in the illustration to install the cooler compressor.

30. CONNECT WIRE HARNESS AND HOSE

a. Connect the clamp and 2 connectors.

b. Connect the 2 connectors and 2 clips to the engine room junction block.

c. Install the engine wire to the engine room junction block with the nut. Then connect the 2 clips.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

d. Install the ground wire to the bracket with the bolt.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

e. Install the ground wire to the body with the bolt.

Torque:
8.4 N*m{ 86 kgf*cm , 74 in.*lbf }

f. Connect the cable to the positive (+) battery terminal.

g. Install the wire to the positive (+) battery cable with the nut.

Torque:
5.4 N*m{ 55 kgf*cm , 48 in.*lbf }

h. Install the ground wire with the bolt.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

i. Connect the clamp and 4 connectors to the connector holder block.

j. Install the heater hose.

k. Connect the ECM connector and clamp.

HINT:

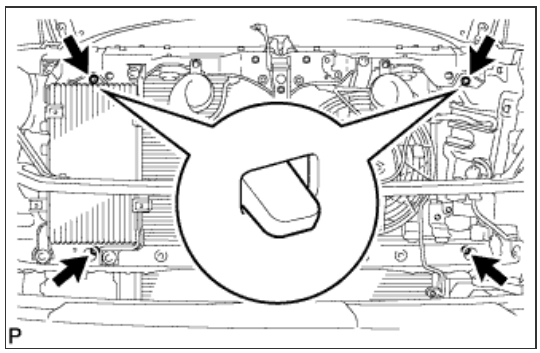
Refer to the following procedures to connect the ECM connector (Click here).

l. Connect the purge line hose.

31. CONNECT FUEL MAIN AND RETURN HOSE

a. Connect the fuel main and return hoses (Click here).

b. Install the fuel pipe clamp.



32. INSTALL RADIATOR ASSEMBLY

a. Set the radiator bracket hooks to the radiator support holes.

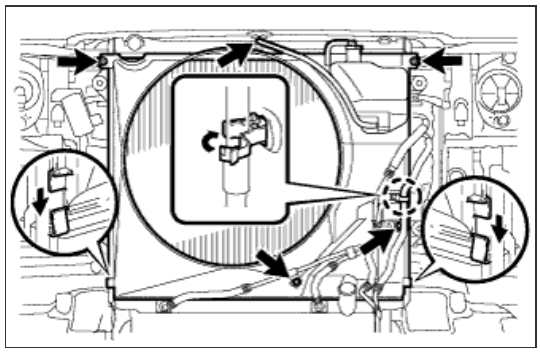
b. Install the radiator with the 4 bolts.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

c. Connect the 2 oil cooler hoses.

33. INSTALL FAN SHROUD

a. Install the fan pulley.



b. Place the shroud together with the coupling fan between the radiator and engine.

NOTICE:

Be careful not to damage the radiator core.

c. Temporarily install the fluid coupling fan to the fluid coupling bracket with the 4 nuts. Tighten the nuts as much as possible by hand.

d. Attach the claws of the shroud to the radiator as shown in the illustration.

e. Install the shroud with the 2 bolts.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

f. Connect the oil cooler tube to the fan shroud with the 2 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

g. Pass the hose through the flexible hose clamp and close the clamp as shown in the illustration.

h. Connect the reservoir hose to the upper radiator tank.

i. Install the fan and generator V-belt (Click here).

j. Tighten the 4 nuts of the fluid coupling fan.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

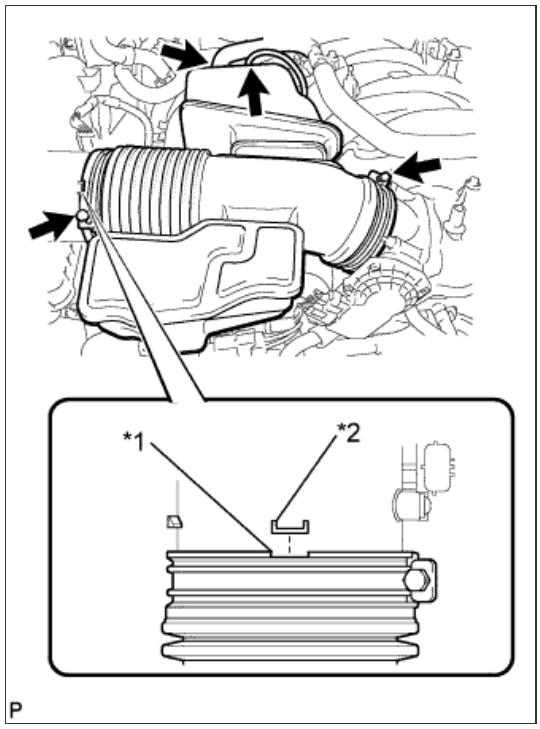
34. INSTALL NO. 2 RADIATOR HOSE

35. INSTALL NO. 1 RADIATOR HOSE

36. INSTALL AIR CLEANER ASSEMBLY

a. Install the air cleaner with the 3 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }



37. INSTALL AIR CLEANER HOSE ASSEMBLY

a. Install the air cleaner hose so that the protrusion of the air cleaner cap aligns

with the groove of the hose as shown in the illustration.

Text in Illustration

*1	Groove
*2	Protrusion

b. Tighten the 2 clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

c. Connect the vacuum hose.

d. Connect the No. 2 ventilation hose.

38. ADD ENGINE OIL

a. Add fresh oil and install the oil filler cap.

Standard Oil Grade:

Oil Grade	Oil Viscosity (SAE)
API grade SL "energy-conserving", API grade SM "energy-conserving" or ILSAC multigrade engine oil	5W-30 10W-30
API grade SL and SM multigrade engine oil	15W-40 20W-50

Standard Oil Capacity:

Item	Specified Condition
Drain and refill without oil filter change	7.1 liters (7.5 US qts, 6.2 Imp. qts)
Drain and refill with oil filter change	7.5 liters (7.9 US qts, 6.6 Imp. qts)
Dry fill	9.3 liters (9.8 US qts, 8.2 Imp. qts)

39. ADD ENGINE COOLANT

a. Add engine coolant.

Standard Capacity:

Item	Specified Condition
with rear heater	16.2 liters (17.1 US qts, 14.3 Imp. qts)
without rear heater	13.4 liters (14.2 US qts, 11.8 Imp. qts)

NOTICE:

Do not substitute plain water for engine coolant.

HINT:

TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the reservoir cap.

d. Press the No. 1 and No. 2 radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Start the engine and warm it up until the thermostat opens.

HINT:

The thermostat opening timing can be confirmed by pressing the radiator inlet hose by hand, and checking when the engine coolant starts to flow inside the hose.

g. Maintain the engine speed at 2000 to 2500 rpm.

NOTICE:

- **Make sure that the radiator reservoir still has some coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**
- **Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the F line.**
- **Run the engine at 2000 rpm until the coolant level has stabilized.**

h. Press the No. 1 and No. 2 radiator hoses several times by hand to bleed air.

CAUTION:

- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the fan.**

i. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

j. Check that the coolant level is between the F and L lines.
If the coolant level is below the L line, repeat all of the procedures above.
If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.

40. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

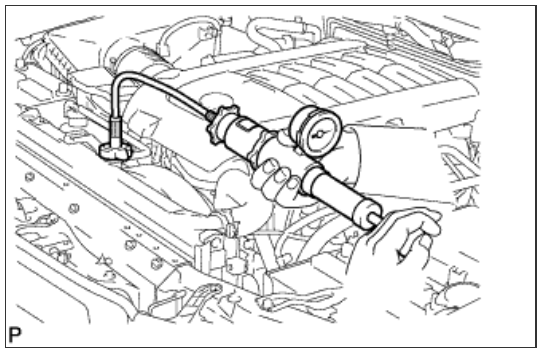
When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

41. INSPECT FOR OIL LEAK

a. Start the engine. Make sure that there are no oil leaks from the area that was worked on.

42. INSPECT FOR COOLANT LEAK

CAUTION:



Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Fill the radiator with coolant and attach a radiator cap tester.

b. Warm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no

external leaks are found, check the heater core, cylinder block and head.

43. INSPECT FOR EXHAUST GAS LEAK

If gas is leaking, tighten the areas necessary to stop the leak. Replace damaged parts as necessary.

44. INSPECT FOR FUEL LEAK

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG) and intelligent tester main switch on.

NOTICE:

Do not start the engine.

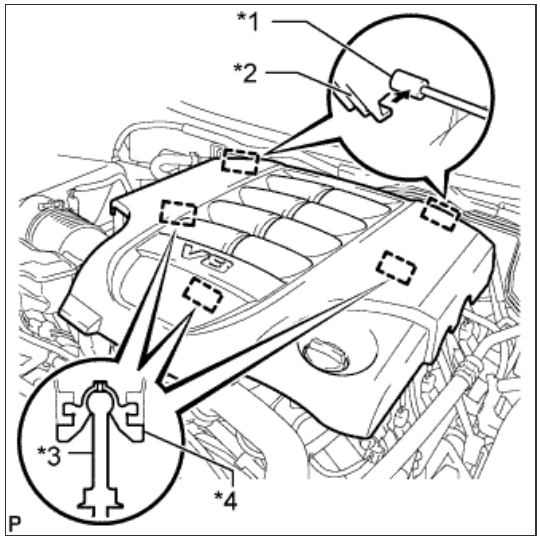
c. Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Fuel Pump / Speed.

d. Check that there are no fuel leaks after doing maintenance anywhere on the fuel system.

45. INSPECT SHIFT LEVER POSITION

a. When moving the shift lever from P to R with the ignition switch ON and the brake pedal depressed, make sure that it moves smoothly and correctly into position.

b. Check that the shift lever does not stop when moving the shift lever from R to P, and check that the shift lever does not stick when moving the shift lever from D to S.



c. Start the engine and make sure that the vehicle moves forward after moving the shift lever from N to D and moves rearward after moving the shift lever to R.
If the operation cannot be performed as specified, inspect the park/neutral position switch assembly and check the shift lever assembly installation condition.

46. INSTALL V-BANK COVER SUB-ASSEMBLY

a. Attach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.

Text in Illustration

*1	Bracket
*2	Hook
*3	Pin
*4	Grommet

47. INSTALL OIL PAN PROTECTOR ASSEMBLY

a. Install the oil pan protector with the 4 bolts.

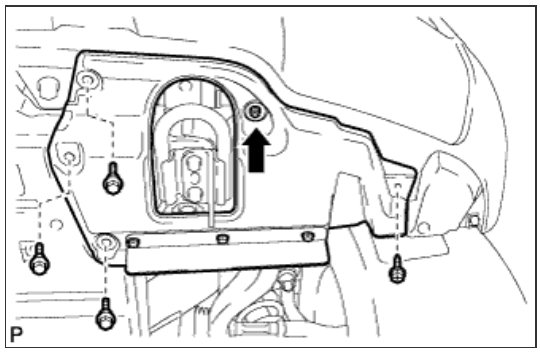
Torque:
63 N*m{ 642 kgf*cm , 46 ft.*lbf }

48. INSTALL NO. 2 ENGINE UNDER COVER

a. Install the No. 2 engine under cover with the 2 bolts.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

49. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY



a. Install the No. 1 engine under cover with the 10 bolts.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

50. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the 3 bolts and screw.

51. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

52. INSTALL FRONT FENDER APRON SEAL REAR RH

a. Install the fender apron seal with the 4 clips.

53. INSTALL FRONT FENDER APRON SEAL FRONT RH

a. Install the fender apron seal with the 3 clips.

54. INSTALL FRONT FENDER APRON SEAL REAR LH

a. Install the fender apron seal with the 4 clips.

55. INSTALL FRONT FENDER APRON SEAL LH

a. Install the fender apron seal with the 3 clips.

56. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

(Click here)

57. INSTALL HOOD SUB-ASSEMBLY

a. Install the hood with the 4 bolts.

Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }

b. Connect the 2 hood supports with the 2 hood support bolts.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

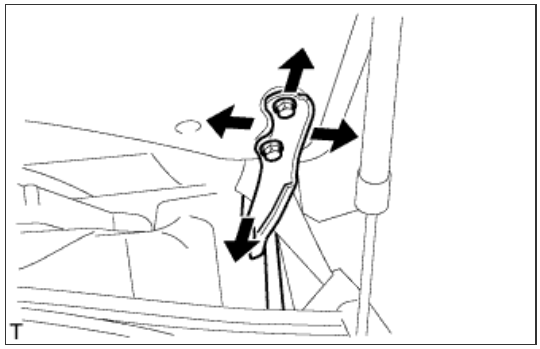
CAUTION:

Install the hood support while supporting the hood by hand.

NOTICE:

Check that the hood support is engaged in the ball joint and that it cannot be pulled out.

58. ADJUST HOOD SUB-ASSEMBLY

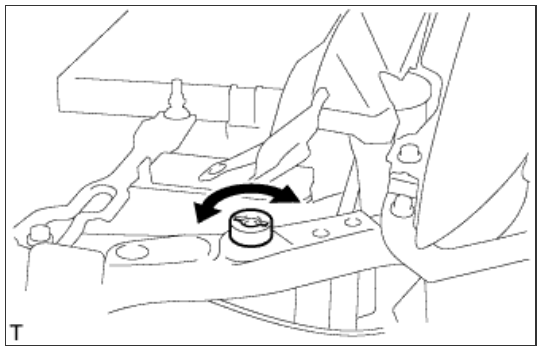


a. Adjust the hood position.

i. Loosen the 4 hinge bolts of the hood.

ii. Move the hood and adjust the clearance between the hood and front fender.

iii. Tighten the 4 hinge bolts of the hood after the adjustment.

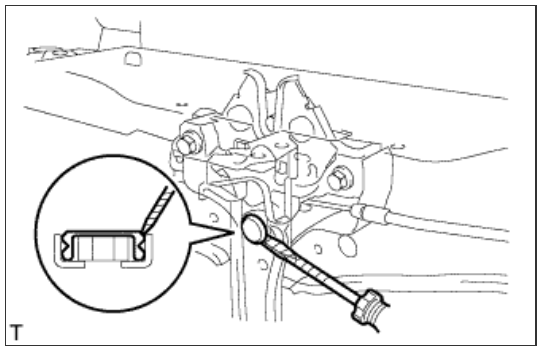


Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }

iv. Adjust the cushion rubber so that the height of the hood and fender are aligned.

HINT:

Raise or lower the hood front end by turning the cushion rubber.

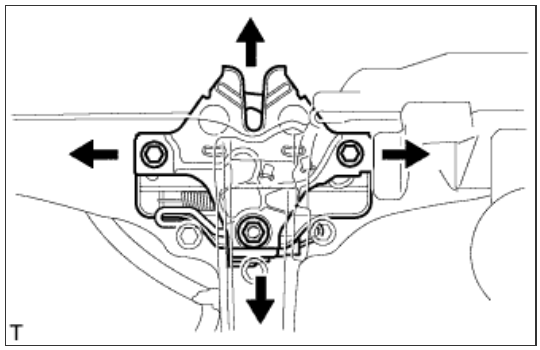


b. Adjust the hood lock.

i. Using a screwdriver, remove the hood lock nut cap as shown in the illustration.

HINT:

Tape the screwdriver tip before use.



ii. Loosen the 2 bolts and hood lock nut.

iii. Adjust the hood lock position so that the striker can enter it smoothly.

iv. Tighten the bolts and nut after the adjustment.

Torque:
5.5 N*m{ 56 kgf*cm , 49 in.*lbf }

v. Install a new cap.

59. CONNECT RADIATOR SIDE DEFLECTOR LH

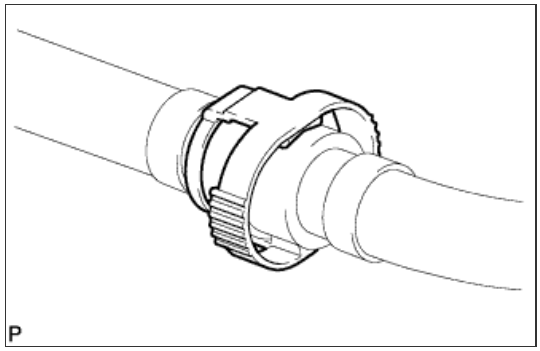
a. Connect the deflector with the 4 clips.

60. INSTALL TRANSMISSION OIL COOLER AIR DUCT

a. Install the oil cooler air duct with the 4 bolts.

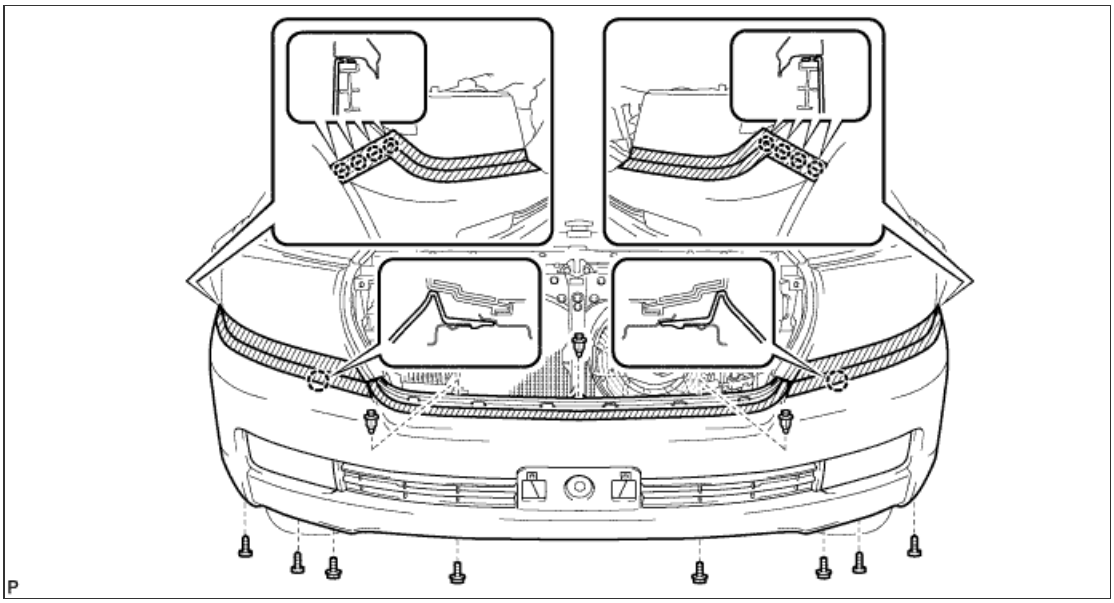
Torque:
4.9 N*m{ 50 kgf*cm , 43 in.*lbf }

61. INSTALL FRONT BUMPER COVER



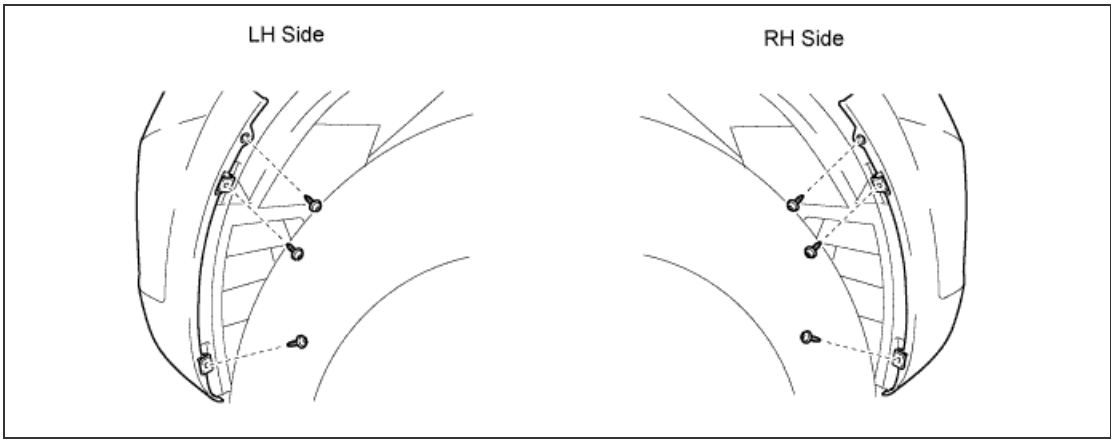
HINT:

For the front bumper cover with garnish, use the procedures described below.



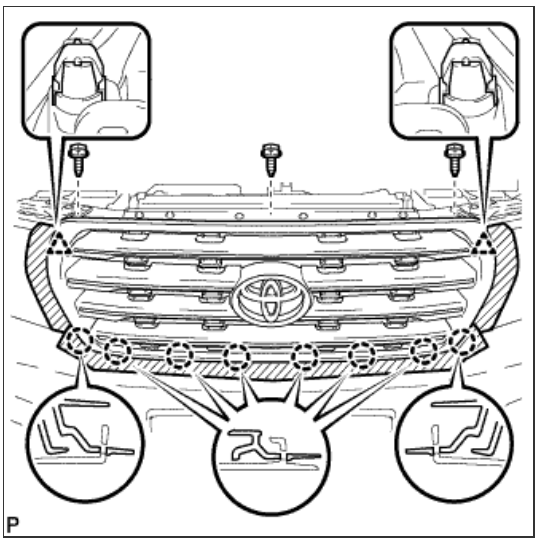
a. w/ Headlight Cleaner System:
Connect the headlight cleaner hose.

b. w/o TOYOTA Parking Assist-sensor System, w/o Fog Light:
Attach the 10 claws to install the bumper cover.



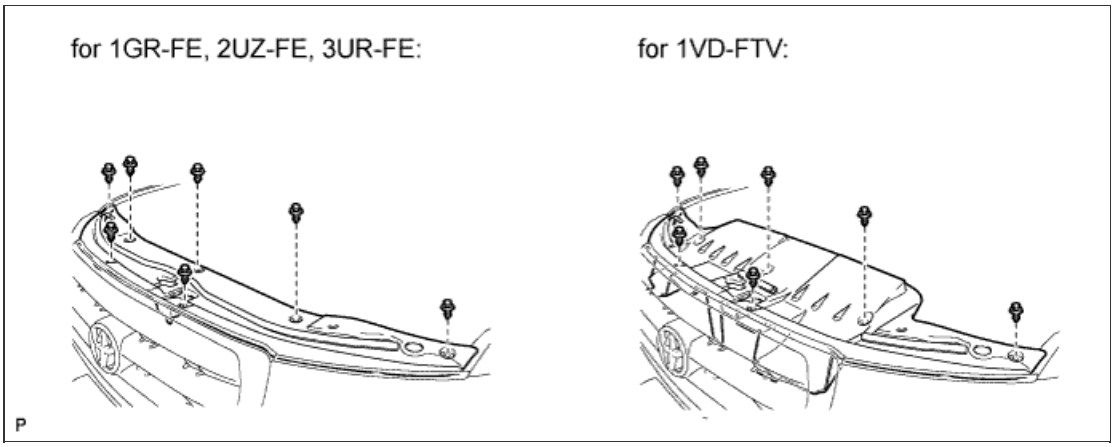
c. w/ TOYOTA Parking Assist-sensor System or w/ Fog Light:
Connect the No. 4 engine room wire connector and attach the 10 claws to install the bumper cover.

d. Install the 3 clips, 4 screws and 4 bolts.



e. Using a T30 "TORX" socket, install the 6 screws.

62. INSTALL RADIATOR GRILLE



a. Attach the 2 clips and 8 claws to install the radiator grille.

b. Install the 3 screws.

63. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the radiator support seal with the 7 clips.

64. INSPECT IGNITION TIMING

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. When using the intelligent tester:

i. Connect the intelligent tester to the DLC3.

ii. Start the engine and idle it.

iii. Turn the intelligent tester on.

iv. Enter the following menus: Powertrain / Engine and ECT / Data List / Primary / IGN Advance.

HINT:

Refer to the intelligent tester operator's manual for further details.

Standard ignition timing:
8 to 12° BTDC @ idling (transmission in neutral and A/C switch off)

v. Disconnect the intelligent tester from the DLC3.

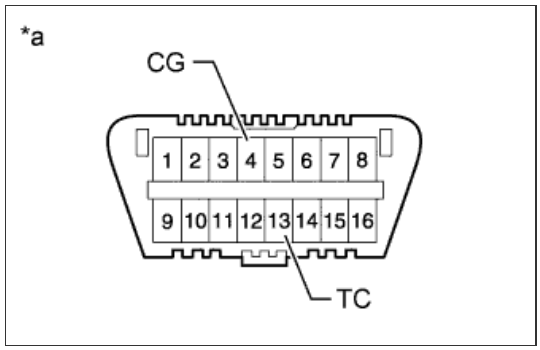
c. When not using the intelligent tester:

i. Connect the tester probe of a timing light to the wire of the ignition coil connector for the No. 1 cylinder.

NOTICE:

Use a timing light that detects primary signals.

ii. Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.



SST
09843-18040

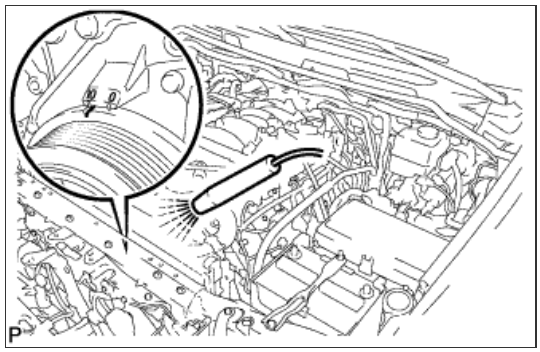
Text in Illustration

*a	Front view of DLC3

NOTICE:

- **Confirm the terminal numbers before connecting them. Connecting the wrong terminals can damage the engine.**
- **Switch off all accessories and the A/C before connecting the terminals.**

iii. Using the timing light, check the ignition timing.



Standard ignition timing:
8 to 12° BTDC @ idling (transmission in neutral and A/C switch off)

iv. Remove SST from the DLC3.

v. Check the ignition timing.

Standard ignition timing:
7 to 24° BTDC @ idling (transmission in neutral and A/C switch off)

vi. Disconnect the timing light from the engine.

65. INSPECT ENGINE IDLE SPEED

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. When using the intelligent tester:

i. Connect the intelligent tester to the DLC3.

NOTICE:

Switch off all accessories and the A/C before connecting the intelligent tester.

ii. Race the engine at 2500 rpm for approximately 90 seconds.

iii. Turn the intelligent tester on.

iv. Enter the following menus: Powertrain / Engine and ECT / Data List / Primary / Engine Speed.

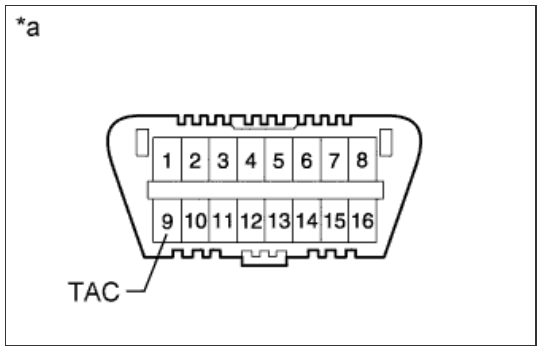
Standard idle speed:
650 to 750 rpm (transmission in neutral and A/C switch off)

HINT:

Refer to the intelligent tester operator's manual for further details.

If the idle speed is not as specified, check the air intake system.

v. Disconnect the intelligent tester from the DLC3.



c. When not using the intelligent tester:

i. Using SST, connect the tachometer probe to terminal 9 (TAC) of the DLC3.

SST
09843-18030

Text in Illustration

*a Front view of DLC3

NOTICE:

- **Confirm the terminal number before connecting the probe. Connecting the probe to the wrong terminal can damage the engine.**
- **Switch off all accessories and the A/C before connecting the probe.**

ii. Race the engine at 2500 rpm for approximately 90 seconds.

iii. Check the idle speed.

Standard idle speed:
650 to 750 rpm (transmission in neutral and A/C switch off)

If the idle speed is not as specified, check the air intake system.

iv. Disconnect the tachometer probe from the DLC3.

66. INSPECT CO/HC

HINT:

This check is used only to determine whether or not the idle CO/HC complies with regulations.

a. Start the engine.

b. Keep the engine speed at 2500 rpm for approximately 180 seconds.

c. Insert the CO/HC meter testing probe at least 40 cm (1.31 ft.) into the tailpipe during idling.

d. Immediately check CO/HC concentration at idle and/or 2500 rpm.

HINT:

When performing the 2 mode (2500 rpm and idle) test, follow the measurement order prescribed by the applicable local regulations.

e. If the CO/HC concentration does not comply with the regulations, troubleshoot in the order given below.

i. Check the A/F sensor (Click here) and heated oxygen sensor (Click here) operation.

ii. See the table below for possible causes, and then inspect and correct the applicable causes if necessary.

CO	HC	Symptom	Cause
Normal	High	Rough idle	1. Faulty ignitions: • Incorrect timing • Plugs (contaminated, shorted or gaps are defective) 2. Incorrect valve clearance 3. Leaky intake and exhaust valves 4. Leaky cylinder
Low	High	Rough idle (Fluctuating HC reading)	1. Vacuum leaks: • PCV hose • Intake manifold • Throttle body 2. Lean mixture causing misfire
High	High	Rough idle (Black smoke from exhaust)	1. Restricted air filter 2. Faulty SFI system: • Faulty pressure regulator • Defective engine coolant temperature sensor • Faulty ECM • Faulty injectors • Faulty throttle position sensor • Faulty mass air flow meter

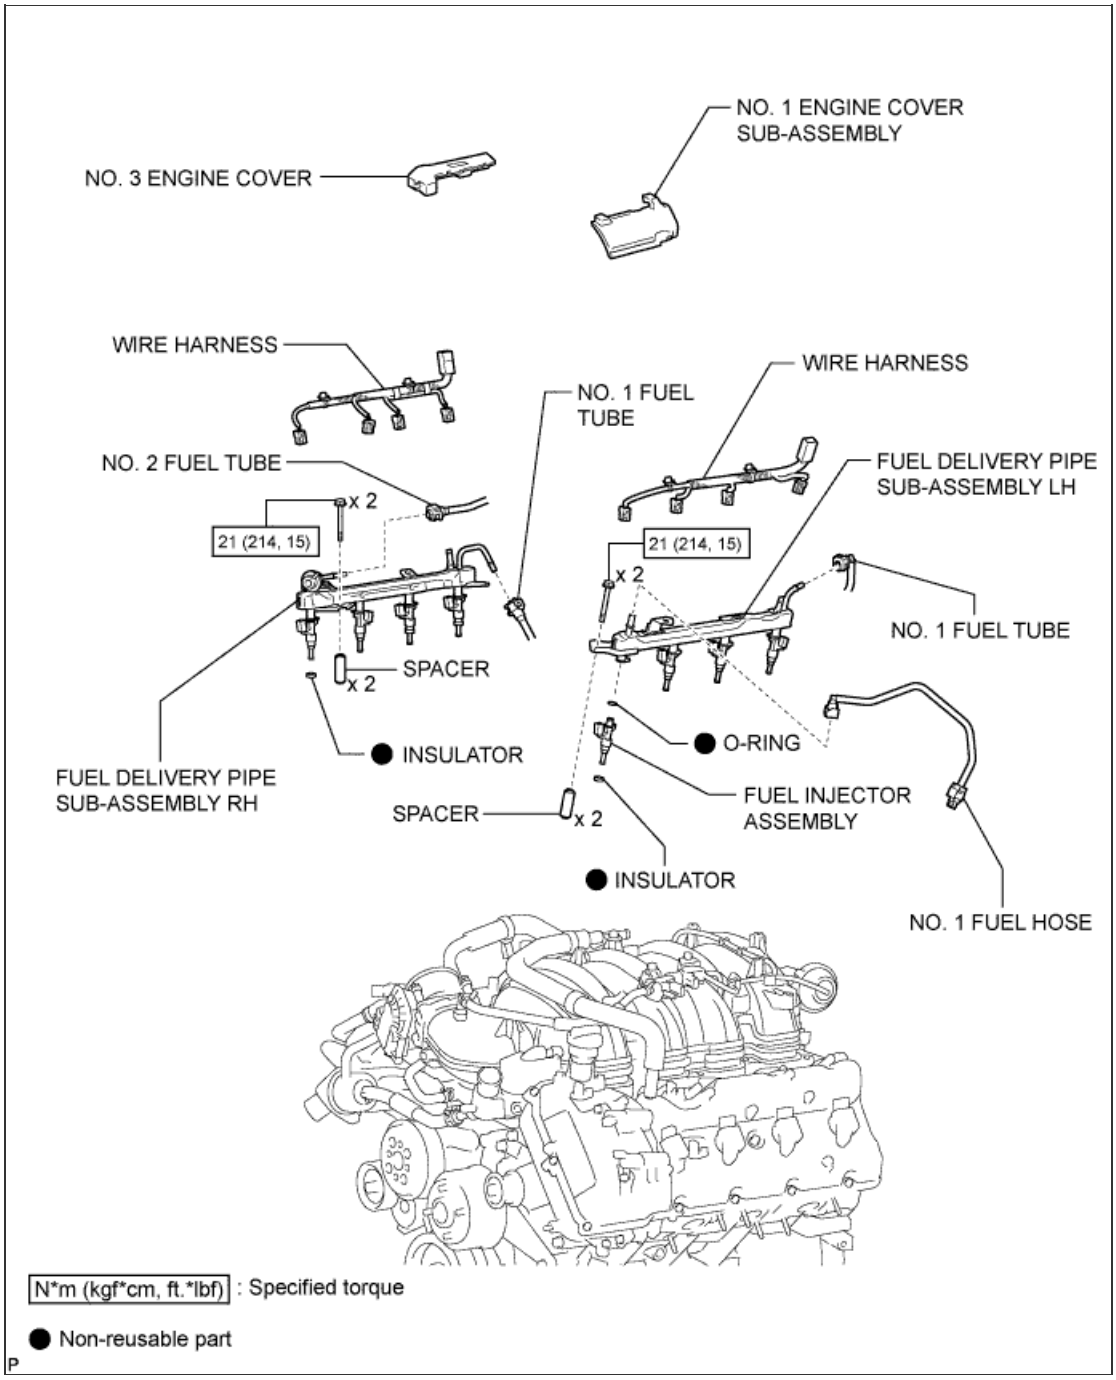
67. INSPECT ENGINE OIL LEVEL

a. Warm up the engine, stop the engine and wait 5 minutes. The oil level should be between the dipstick low level mark and full level mark.

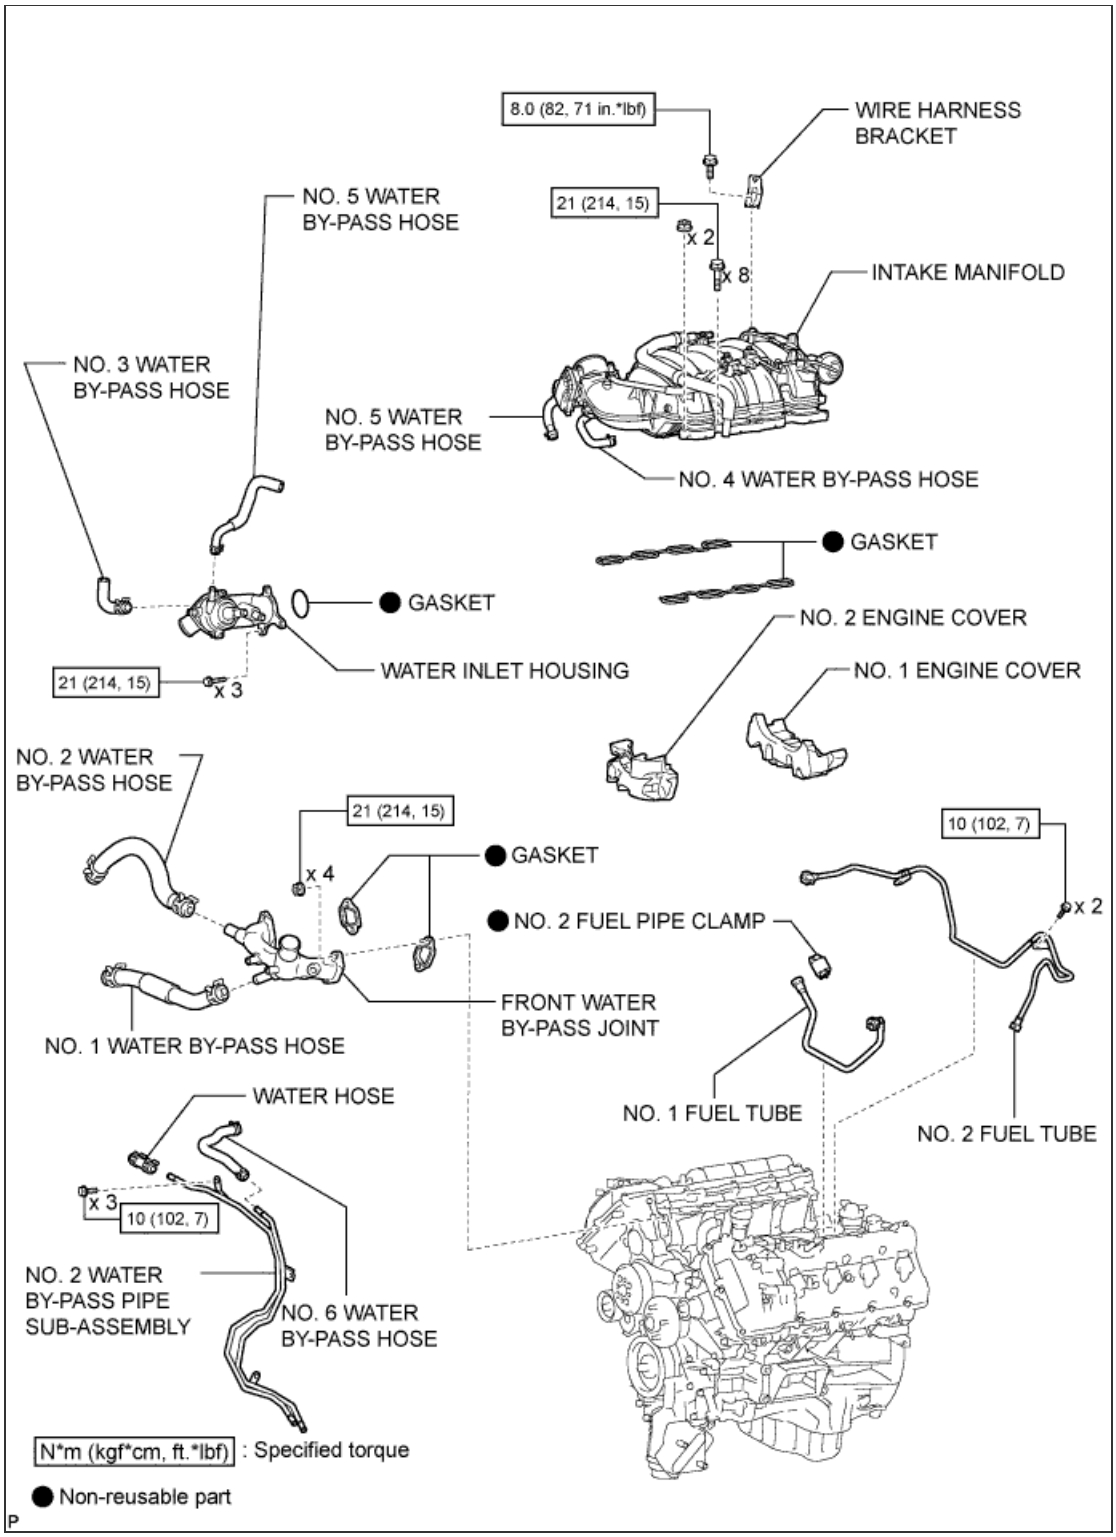
If low, check for leakage and add oil up to the full level mark.

NOTICE:

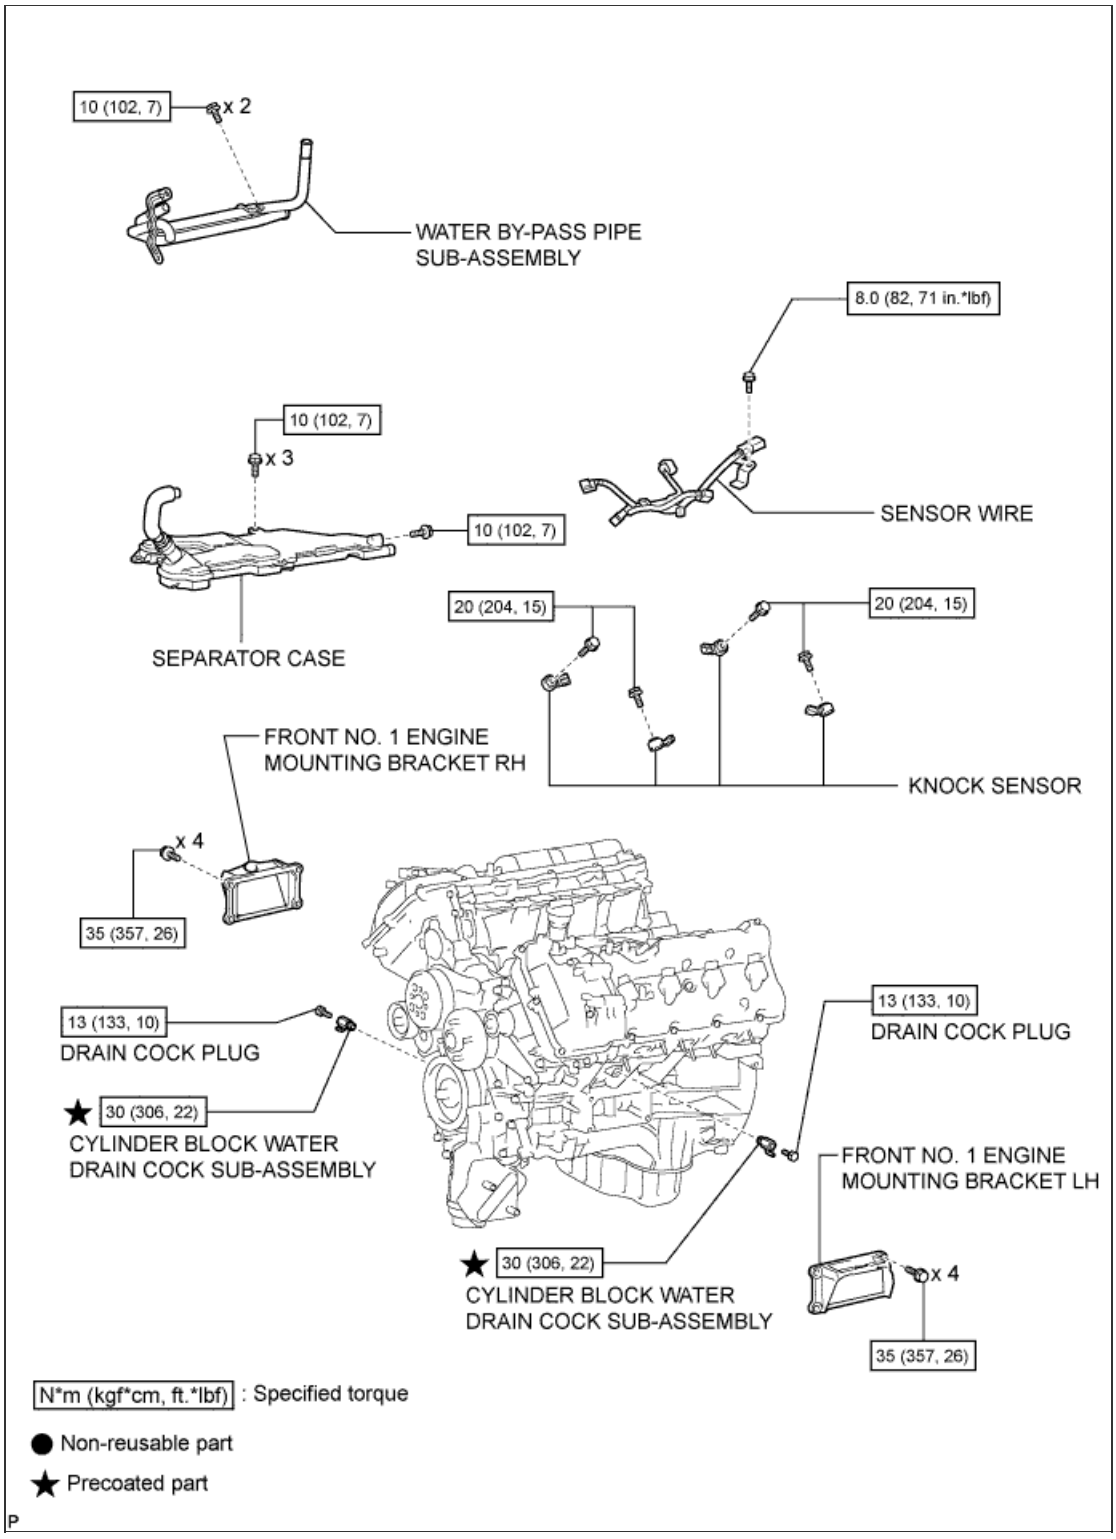
Do not fill engine oil above the full level mark.



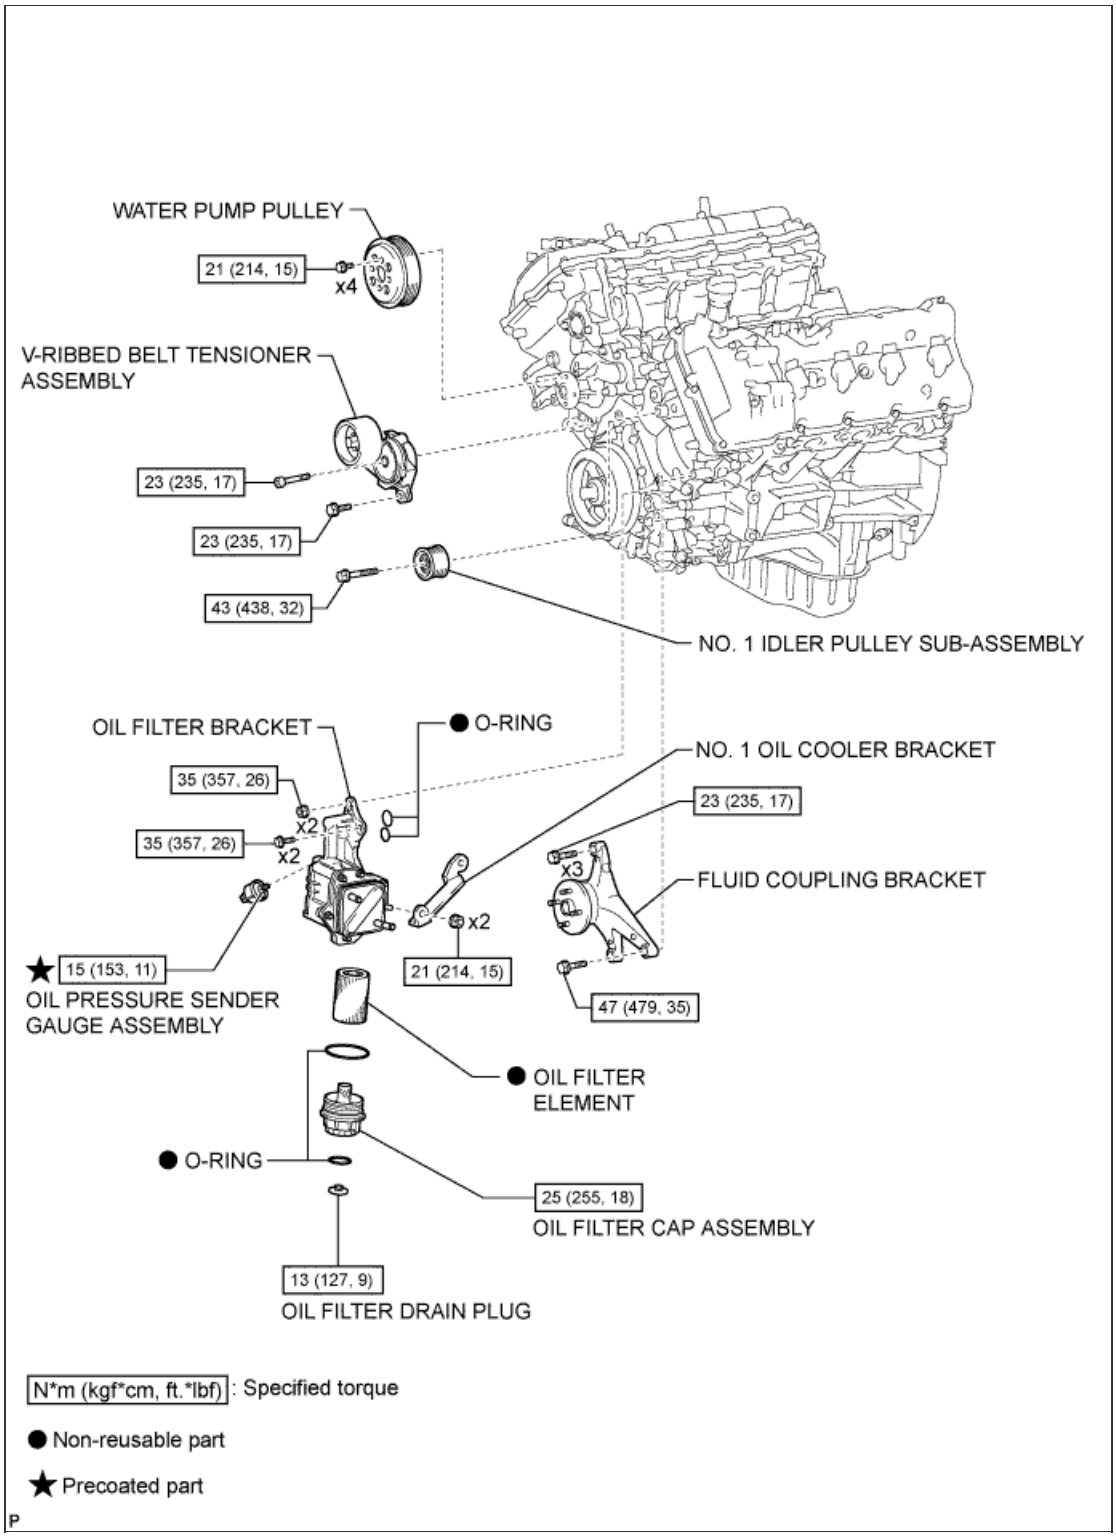
68. INSPECT ENGINE COOLANT LEVEL



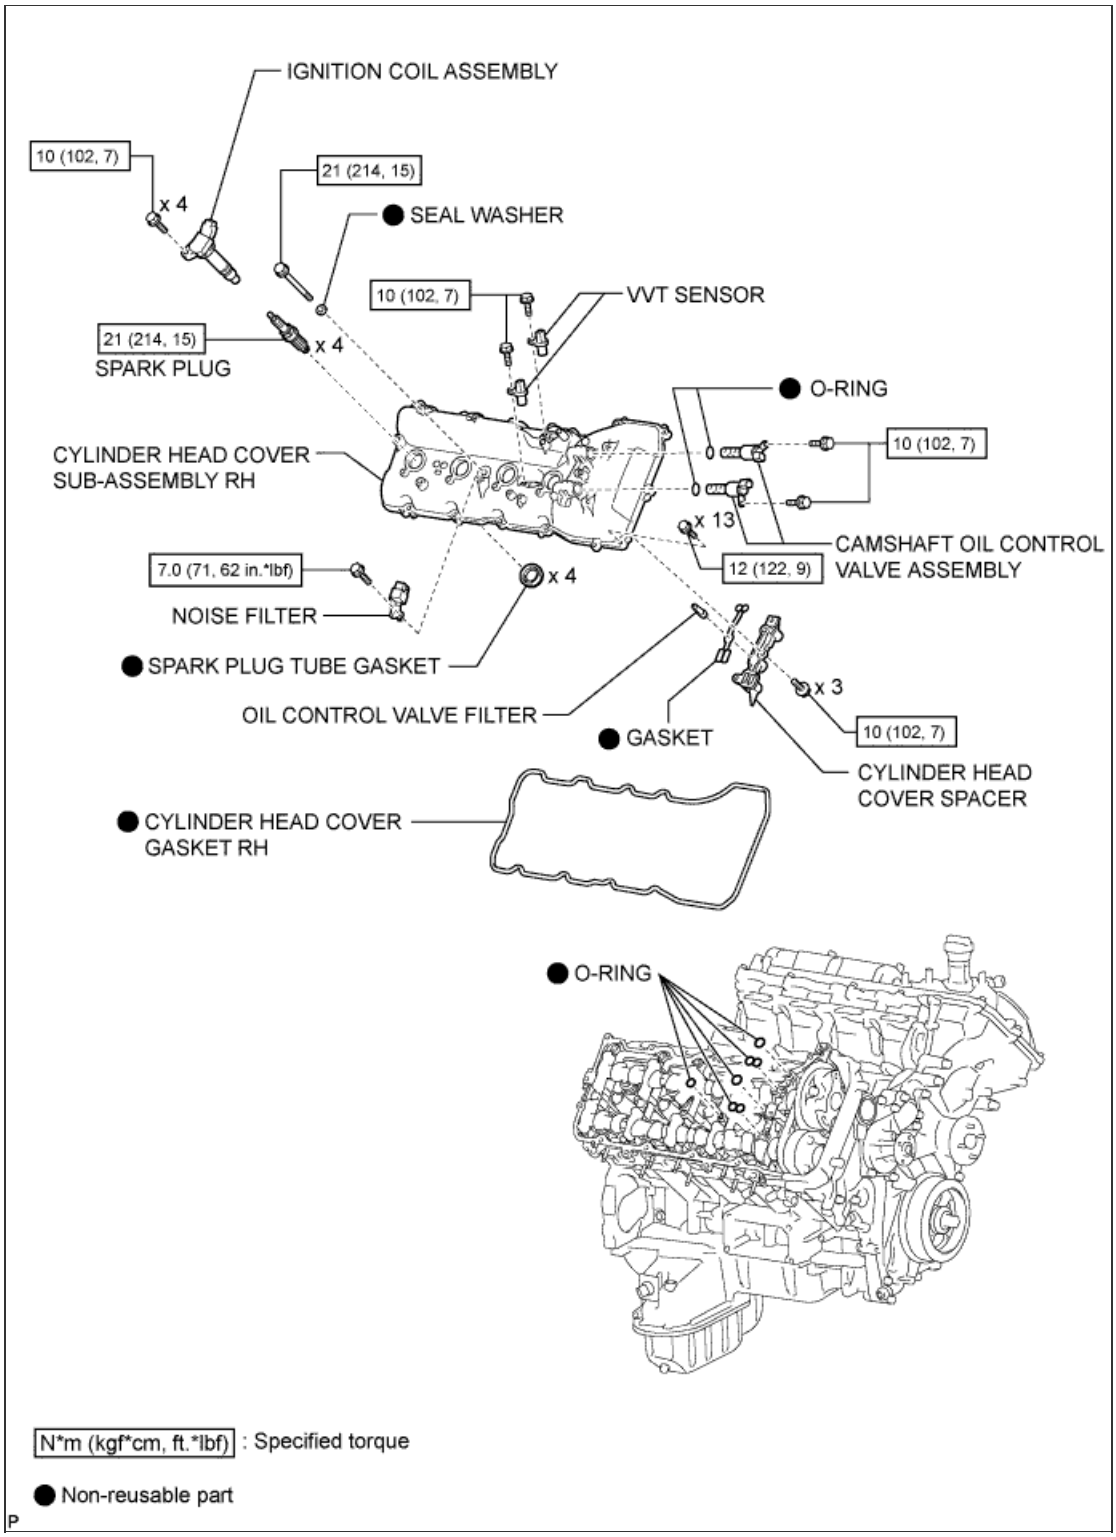
a. Check that the engine coolant level is between the L and F lines when the engine is cold.
If the engine coolant is below the L line, check for leaks and add "TOYOTA Super Long Life Coolant" or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite and non-borate coolant with long-life hybrid organic acid technology to the F line.



NOTICE:



Do not substitute plain water for engine coolant.



for Preparation Click here

1. REMOVE ENGINE WIRE

a. Engine LH Side:

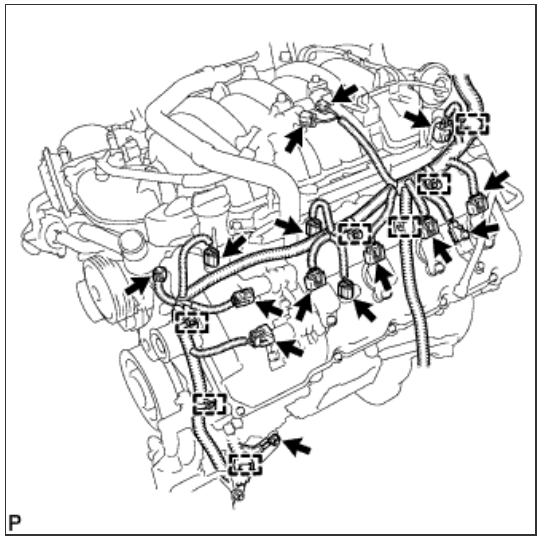
i. Disconnect the 2 camshaft timing control valve connectors.

ii. Disconnect the 4 ignition coil connectors.

iii. Disconnect the 2 VVT sensor connectors.

iv. Disconnect the camshaft position sensor connector.

v. Disconnect the vacuum switching valve connector (for ACIS).



vi. Disconnect the purge VSV connector.

vii. Disconnect the engine coolant temperature sensor connector.

viii. Disconnect the fuel injector connector.

ix. Disconnect the noise filter connector.

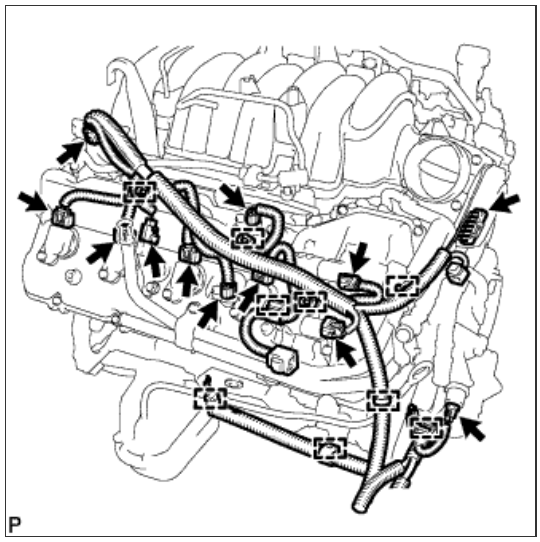
x. Remove the bolt and disconnect the 7 clamps.

b. Engine RH Side:

i. Disconnect the 2 camshaft timing control valve connectors.

ii. Disconnect the 4 ignition coil connectors.

iii. Disconnect the 2 VVT sensor connectors.



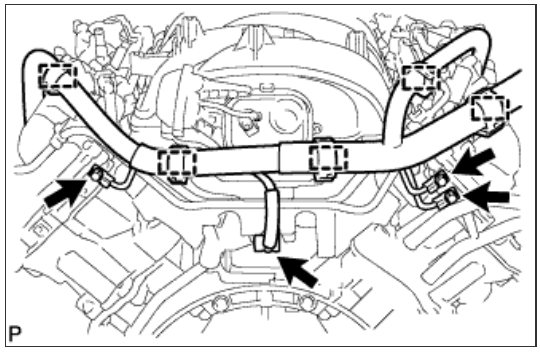
iv. Disconnect the fuel injector connector.

v. Disconnect the noise filter connector.

vi. Disconnect the throttle sensor connector.

vii. Disconnect the oil pressure sender gauge connector.

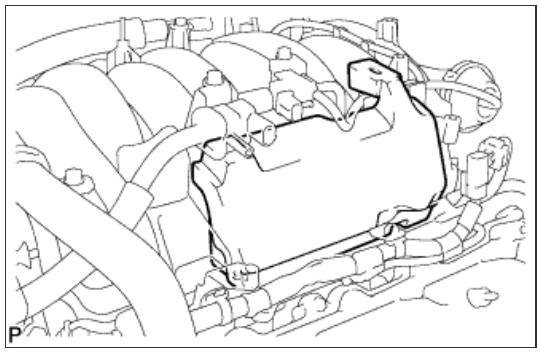
viii. Disconnect the 9 clamps.



c. Engine Rear Side:

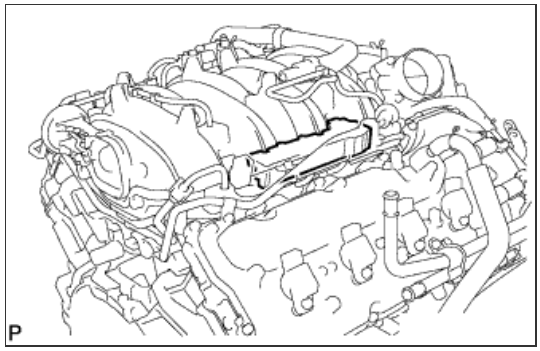
i. Disconnect the sensor wire connector.

ii. Disconnect the 5 clamps.



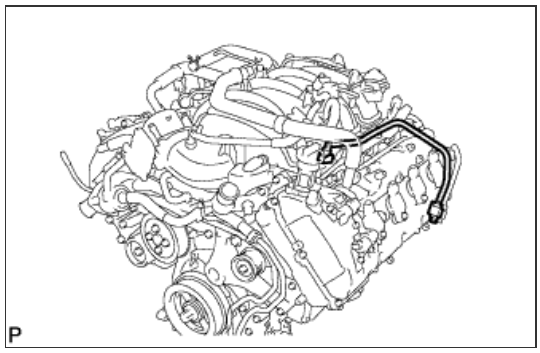
iii. Remove the 3 bolts.

d. Remove the engine wire.



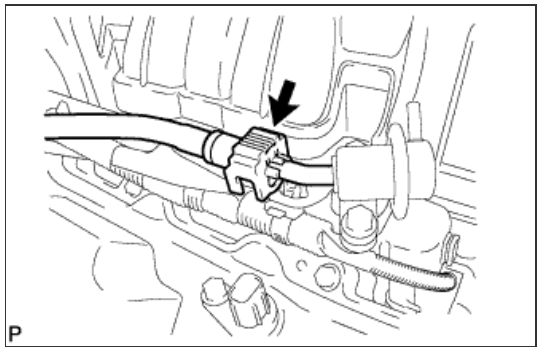
2. REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY

a. Remove the No. 1 engine cover sub-assembly.



3. REMOVE NO. 3 ENGINE COVER

a. Remove the No. 3 engine cover.

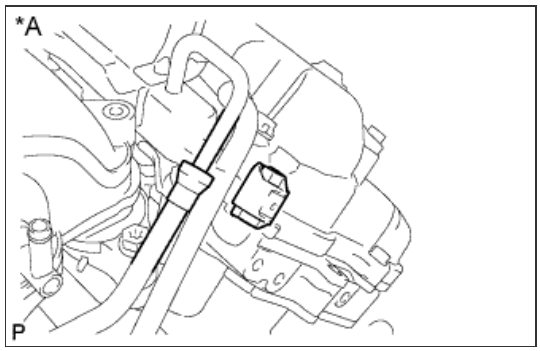


4. REMOVE NO. 1 FUEL HOSE

a. Remove the fuel hose (Click here).

5. DISCONNECT NO. 2 FUEL TUBE

a. Disconnect the No. 2 fuel tube from the fuel pressure regulator (Click here).

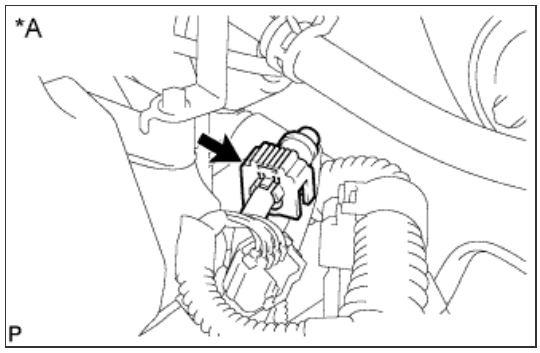


6. DISCONNECT NO. 1 FUEL TUBE

a. Disconnect the No. 1 fuel tube from the fuel delivery pipe RH (for metallic type) (Click here).

SST
09268-21011

Text in Illustration



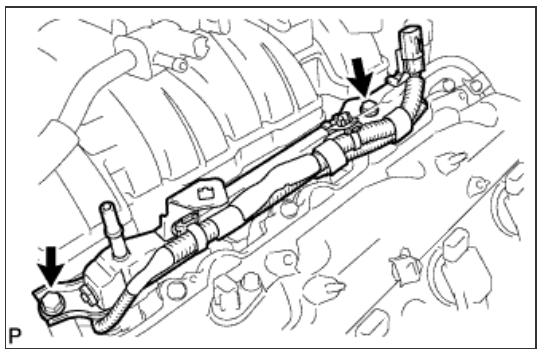
*A	RH Side

b. LH Side:
Disconnect the No. 1 fuel tube from the fuel delivery pipe LH (Click here).

Text in Illustration

*A	LH Side

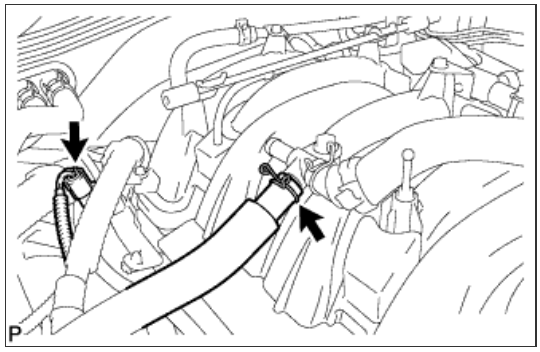
7. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY LH



a. Disconnect the No. 7 wire harness connector.

b. Remove the 2 bolts and fuel delivery pipe LH.

NOTICE

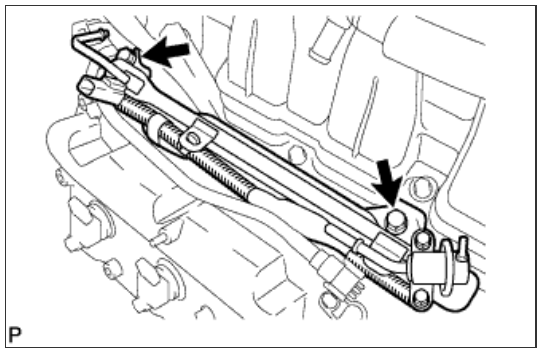


When removing the delivery pipe, hold the pipe by both ends and pull it straight upward.

c. Remove the 2 delivery pipe spacers and 4 insulators from the cylinder head LH.

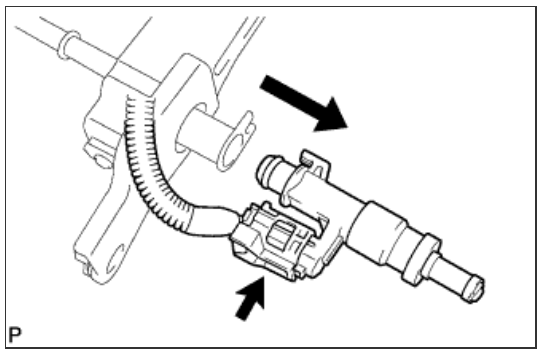
8. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY RH

a. Disconnect the ventilation hose and No. 6 wire harness connector.



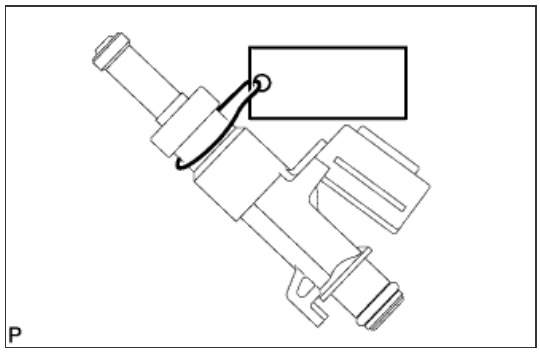
b. Remove the 2 bolts and fuel delivery pipe RH.

NOTICE



When removing the delivery pipe, hold the pipe by both ends and pull it straight upward.

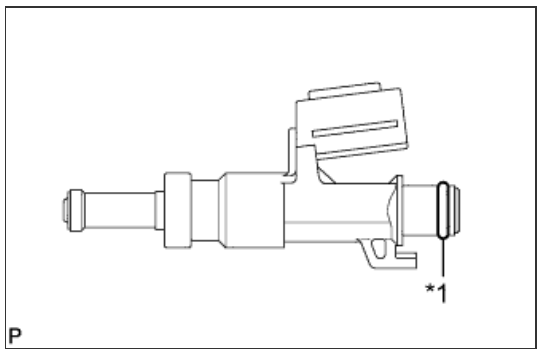
c. Remove the 2 delivery pipe spacers and 4 insulators from the cylinder head RH.



9. REMOVE FUEL INJECTOR ASSEMBLY

a. Remove the fuel injector from the fuel delivery pipe, and then disconnect the injector connector.

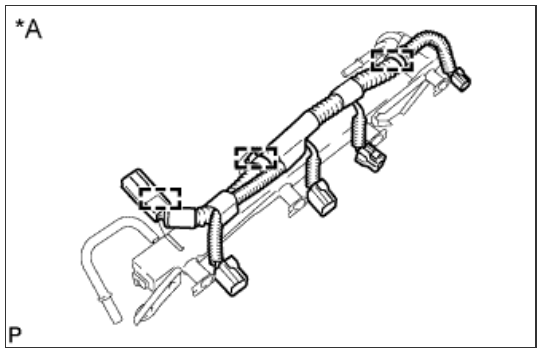
NOTICE



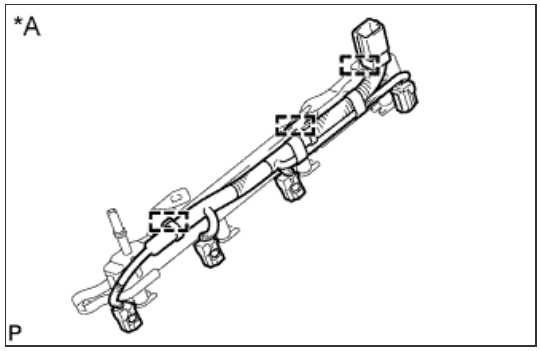
For reinstallation, attach a tag or label to the injector shaft.

b. Remove the O-ring from the fuel injector.

Text in Illustration



*1	O-Ring

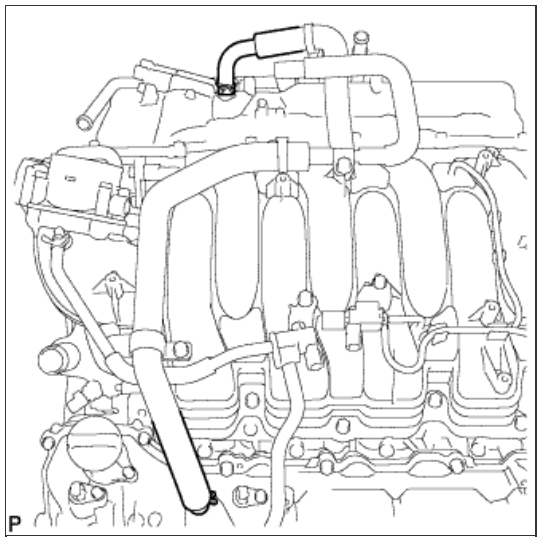


c. Detach the 3 clamps and then remove the No. 6 wire harness from the delivery pipe RH.

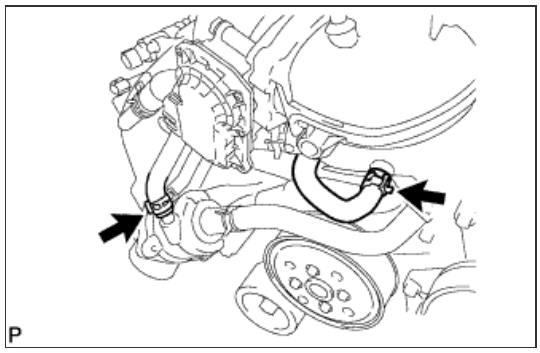
Text in Illustration

*A	Fuel Delivery Pipe RH

d. Detach the 3 clamps and then remove the No. 7 wire harness from the delivery pipe LH.

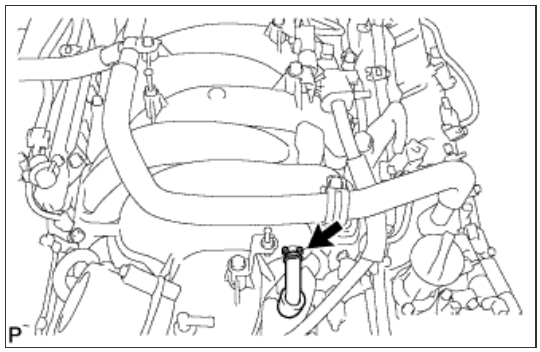


Text in Illustration

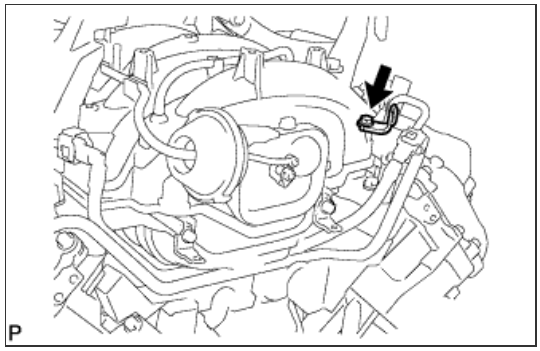


*A	Fuel Delivery Pipe LH

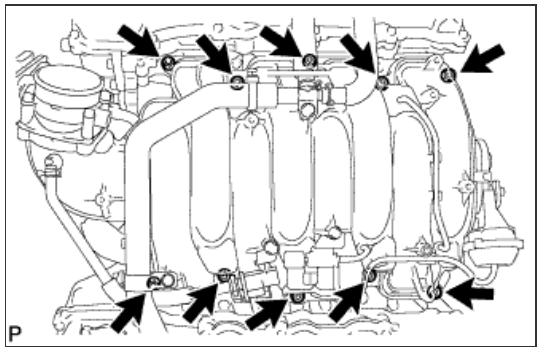
10. REMOVE INTAKE MANIFOLD



a. Disconnect the ventilation hose from the ventilation pipe of the cylinder head cover LH and RH.

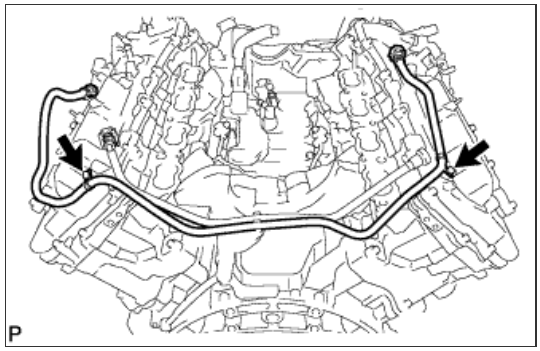


b. Disconnect the 2 water by-pass hoses.

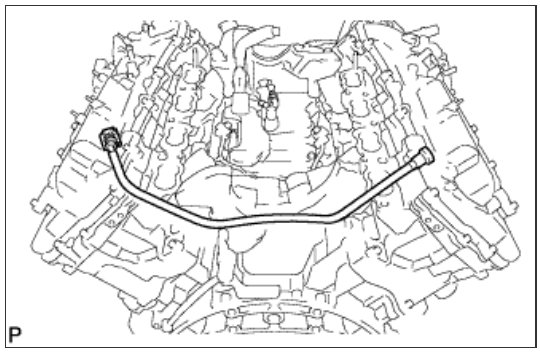


c. Disconnect the No. 1 ventilation hose.

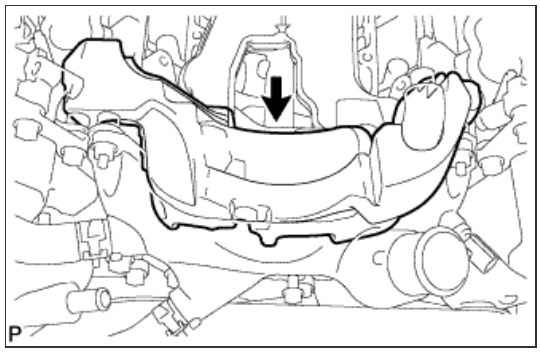
d. Remove the bolt and wire bracket from the intake manifold.



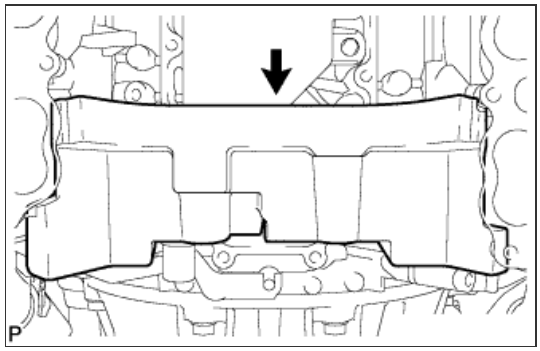
e. Remove the 2 nuts, 8 bolts, intake manifold and 2 gaskets.



11. REMOVE NO. 2 FUEL TUBE

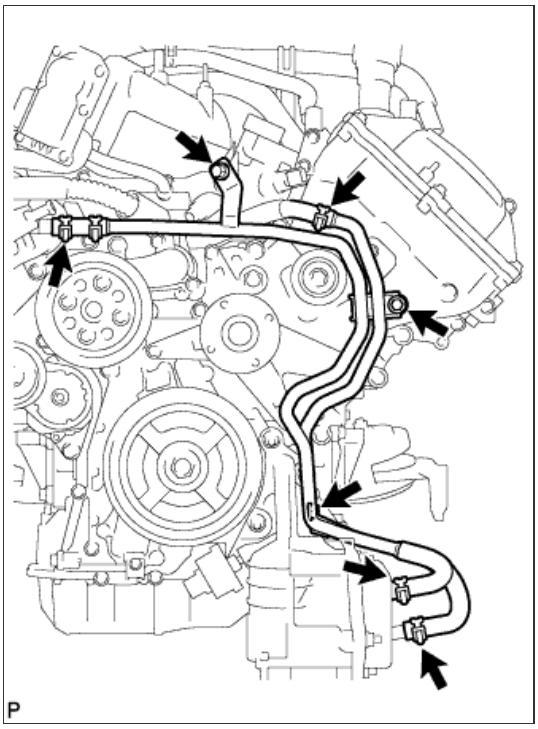


a. Remove the 2 bolts and No. 2 fuel tube.



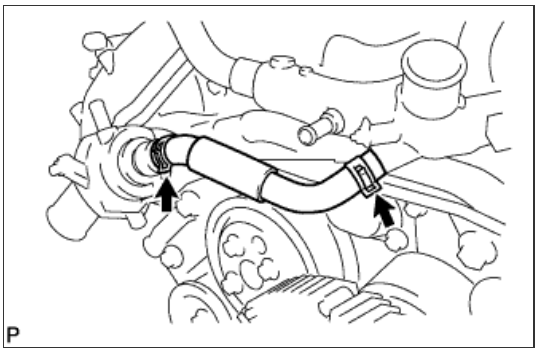
12. REMOVE NO. 1 FUEL TUBE

13. REMOVE NO. 2 ENGINE COVER



14. REMOVE NO. 1 ENGINE COVER

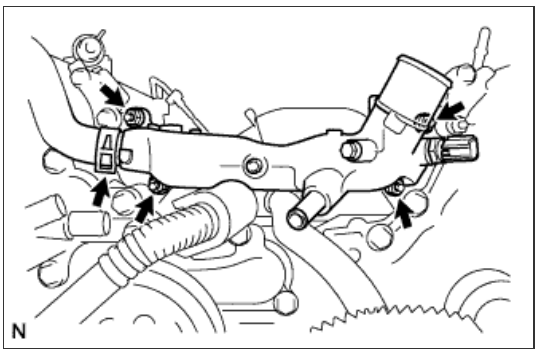
15. REMOVE NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY



a. Remove the 3 bolts.

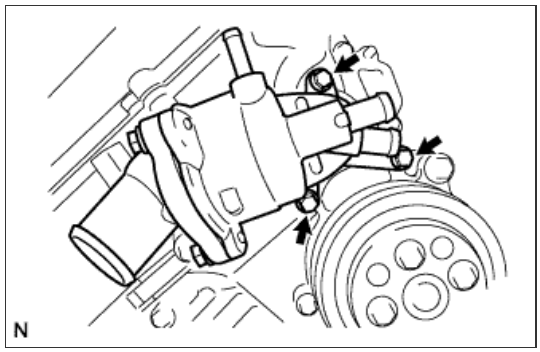
b. Disconnect the 4 hoses and remove the water by-pass pipe.

16. REMOVE NO. 1 WATER BY-PASS HOSE



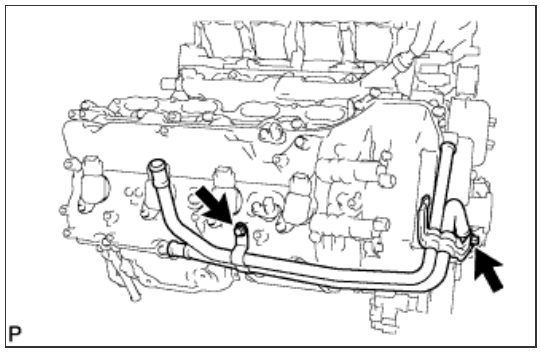
a. Remove the No. 1 water by-pass hose by disconnecting the hose from the water inlet housing and front water by-pass joint.

17. REMOVE FRONT WATER BY-PASS JOINT



a. Disconnect the No. 2 water by-pass hose from the water by-pass joint.

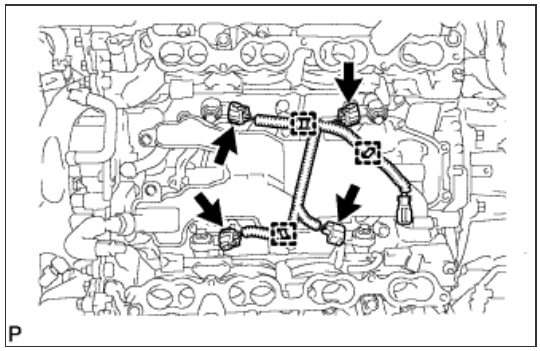
b. Remove the 4 nuts, water by-pass joint and 2 gaskets.



18. REMOVE WATER INLET HOUSING

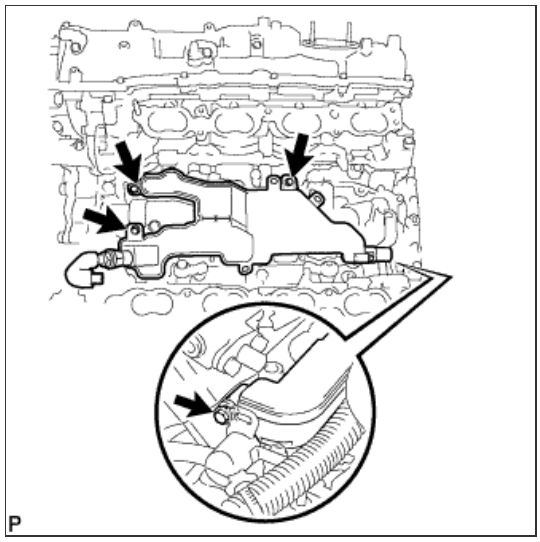
a. Remove the 3 bolts, water inlet housing and gasket.

19. REMOVE WATER BY-PASS PIPE SUB-ASSEMBLY



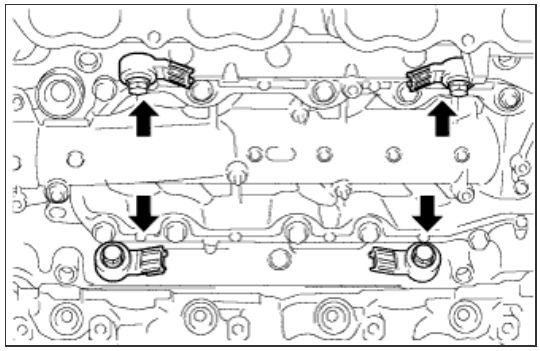
a. Remove the 2 bolts and water by-pass pipe.

20. REMOVE SENSOR WIRE



a. Disconnect the 4 knock sensor connectors.

b. Disconnect the 3 clamps. Then remove the sensor wire.

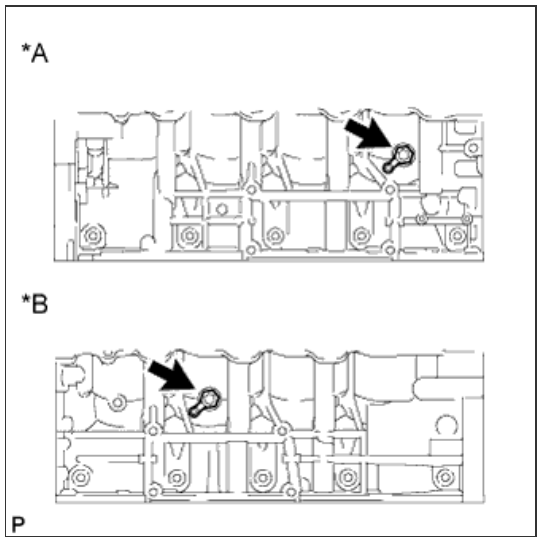


21. REMOVE SEPARATOR CASE

a. Remove the 4 bolts and separator case.

22. REMOVE KNOCK SENSOR

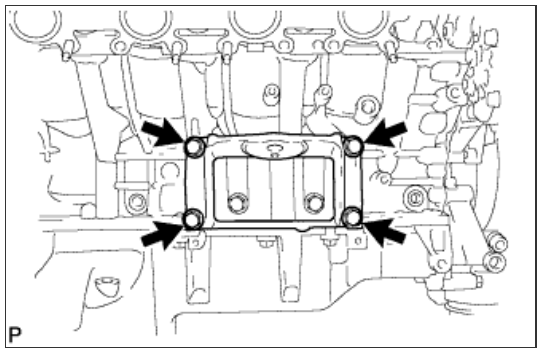
a. Remove the 4 bolts and 4 knock sensors.



23. REMOVE CYLINDER BLOCK WATER DRAIN COCK SUB-ASSEMBLY

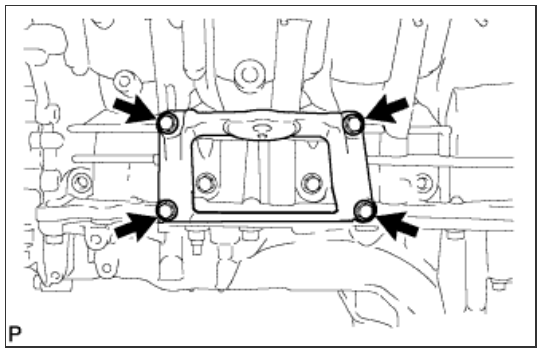
a. Remove the 2 water drain cock plugs from the water drain cocks.

b. Remove the 2 water drain cocks from the cylinder block.



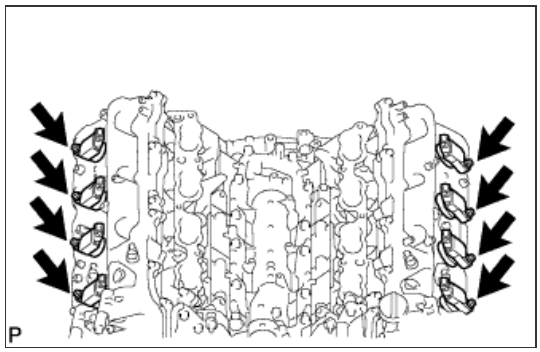
Text in Illustration

*A	RH
*B	LH



24. REMOVE FRONT NO. 1 ENGINE MOUNTING BRACKET RH

a. Remove the 4 bolts and mounting bracket.

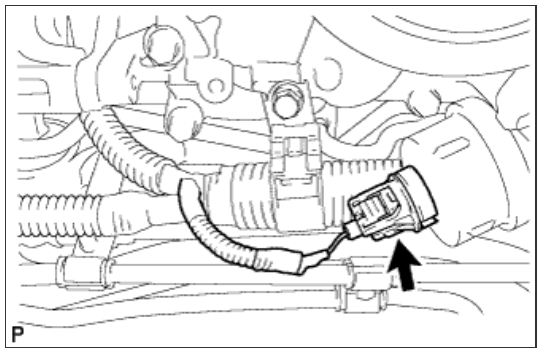


25. REMOVE FRONT NO. 1 ENGINE MOUNTING BRACKET LH

a. Remove the 4 bolts and mounting bracket.

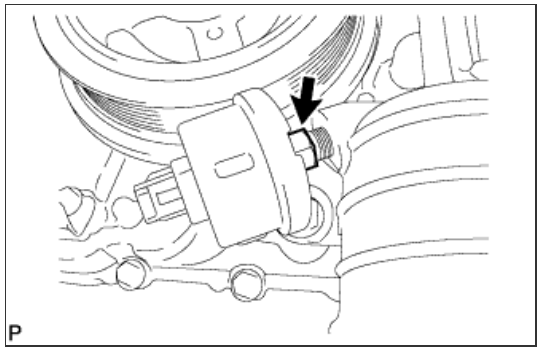
26. REMOVE IGNITION COIL ASSEMBLY

a. Remove the 8 bolts and 8 ignition coils.



27. REMOVE NOISE FILTER

a. Remove the 2 bolts and 2 noise filters from the cylinder head cover.

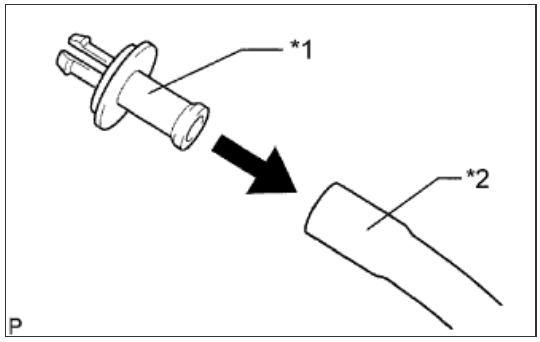


for Preparation Click here

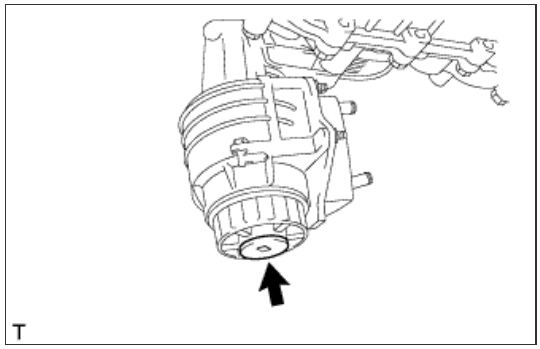
1. REMOVE OIL PRESSURE SENDER GAUGE ASSEMBLY

a. Disconnect the sender gauge connector.

b. Remove the oil pressure sender gauge.



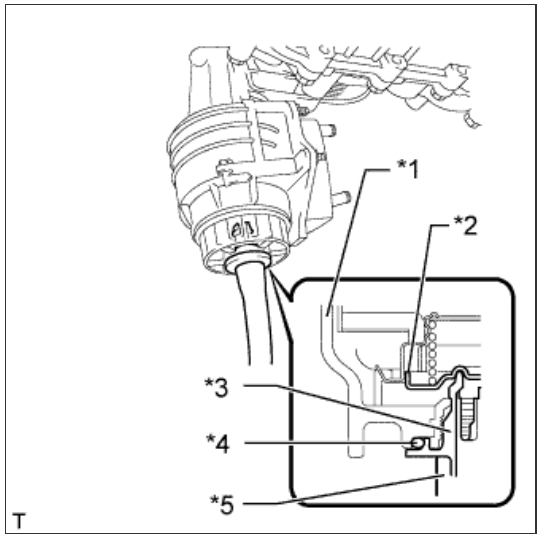
2. REMOVE OIL FILTER ELEMENT



a. Connect a hose with an inside diameter of 15 mm (0.591 in.) to the pipe.

Text in Illustration

*1	Pipe
*2	Hose

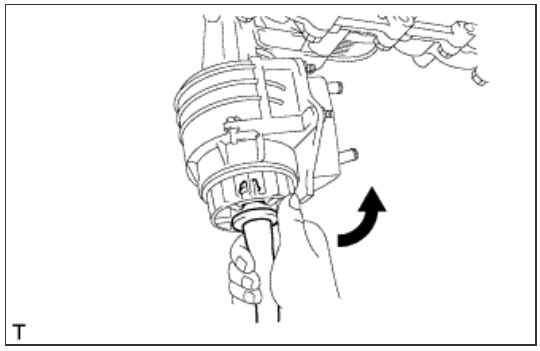


b. Remove the oil filter drain plug.

c. Install the pipe to the oil filter cap.

Text in Illustration

*1	Cap
*2	Valve
*3	Pipe
*4	O-Ring
*5	Hose



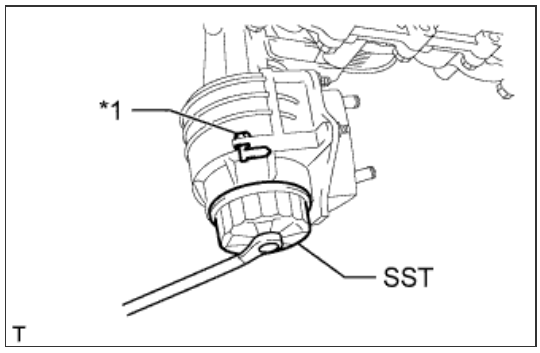
NOTICE:

If the O-ring is removed with the drain plug, install the O-ring together with the pipe.

HINT:

Use a container to catch the draining oil.

d. Check that oil is drained from the oil filter. Then disconnect the pipe and remove the O-ring as shown in the illustration.

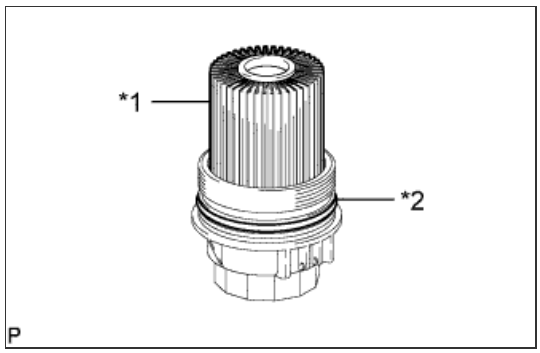


e. Using SST, remove the oil filter cap.

SST
09228-06501

Text in Illustration

*1	Oil Filter Bracket Clip



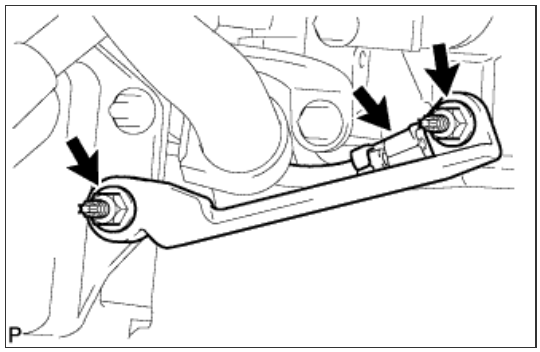
NOTICE:

Do not remove the oil filter bracket clip.

f. Remove the oil filter element and O-ring from the oil filter cap.

Text in Illustration

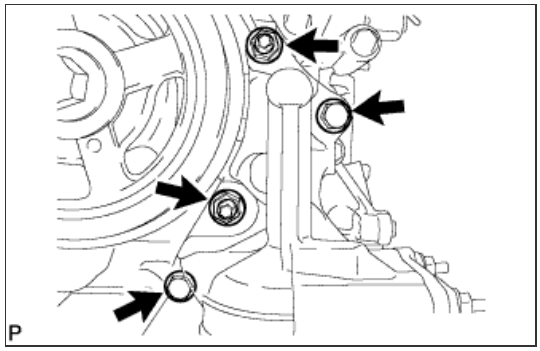
*1	Oil Filter Element
*2	O-Ring



NOTICE:

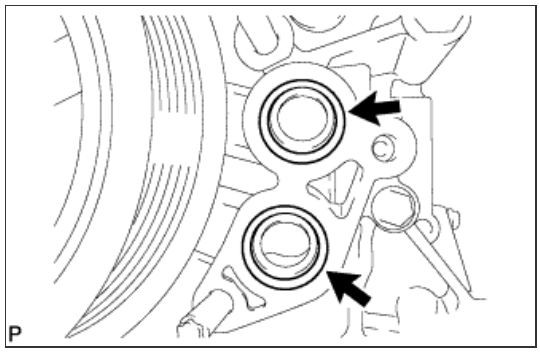
Be sure to remove the cap O-ring by hand, without using any tools, to prevent damage to the cap O-ring groove.

3. REMOVE NO. 1 OIL COOLER BRACKET



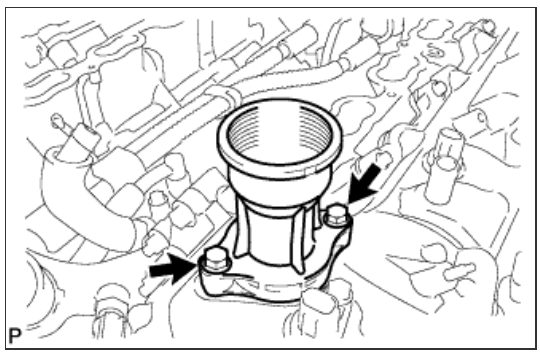
a. Remove the 2 nuts and bracket.

b. Disconnect the ground wire from the cylinder block.



4. REMOVE OIL FILTER BRACKET

a. Remove the 2 bolts, 2 nuts and filter bracket.

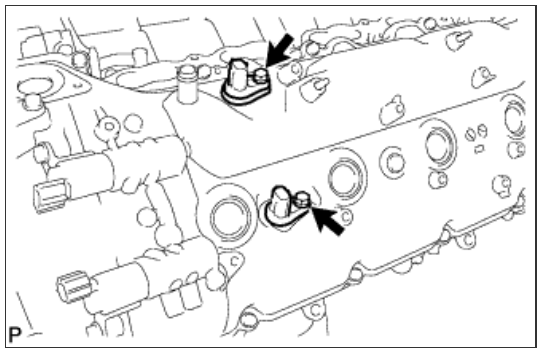


b. Remove the 2 O-rings.

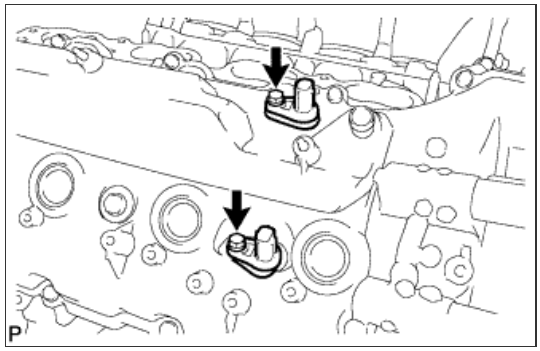
5. REMOVE OIL FILLER CAP SUB-ASSEMBLY

6. REMOVE OIL FILLER CAP HOUSING

a. Remove the 2 bolts, filler cap housing and gasket.



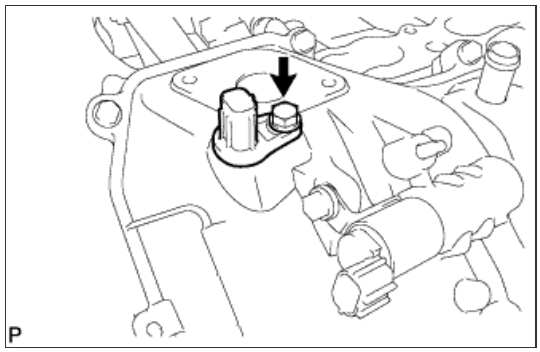
7. REMOVE SPARK PLUG



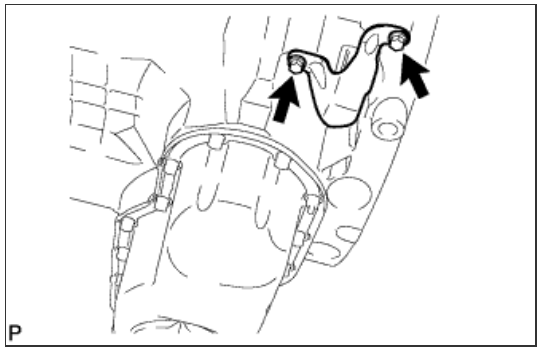
a. Using a 16 mm plug wrench, remove the 8 spark plugs.

8. REMOVE VVT SENSOR

a. LH:
Remove the 2 bolts and 2 VVT sensors.

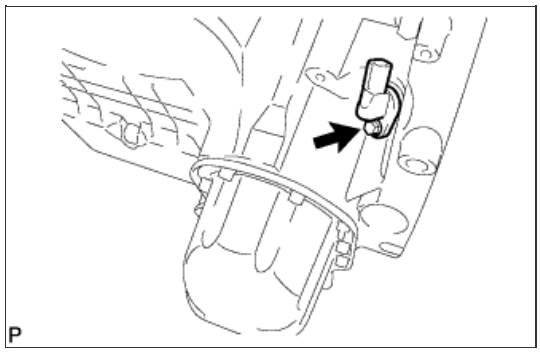


b. RH:
Remove the 2 bolts and 2 VVT sensors.



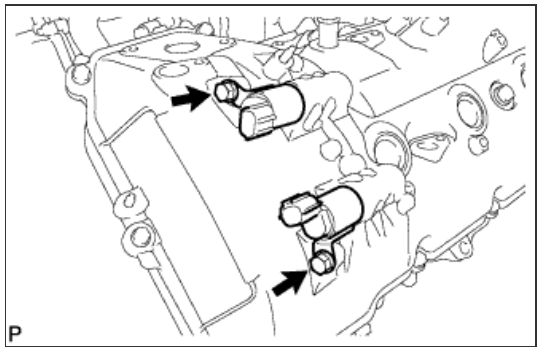
9. REMOVE CAMSHAFT POSITION SENSOR

a. Remove the bolt and camshaft position sensor.



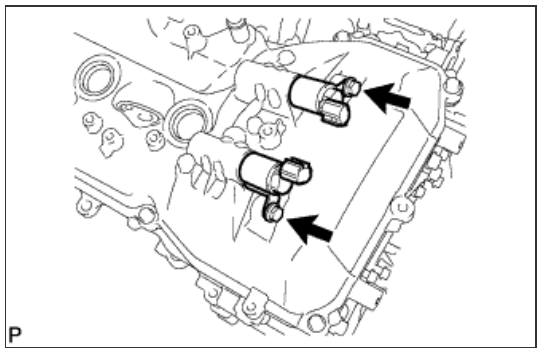
10. REMOVE CRANK POSITION SENSOR PROTECTOR

a. Remove the 2 bolts and sensor protector.



11. REMOVE CRANKSHAFT POSITION SENSOR

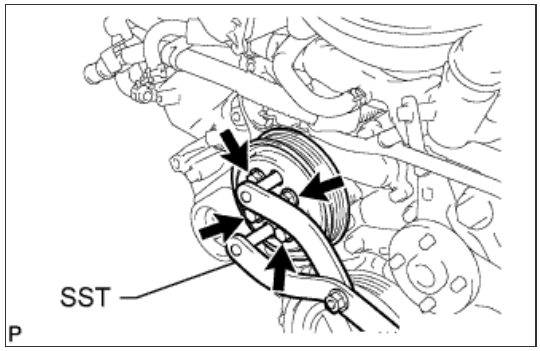
a. Remove the bolt and crankshaft position sensor.



12. REMOVE CAMSHAFT OIL CONTROL VALVE ASSEMBLY

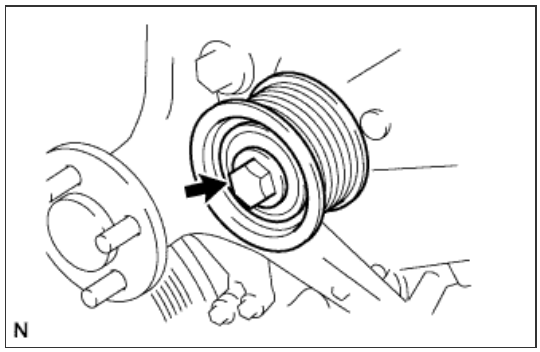
a. LH:
Remove the 2 bolts and 2 oil control valves.

b. RH:
Remove the 2 bolts and 2 oil control valves.



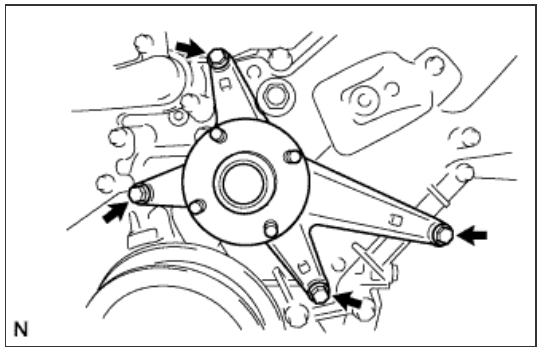
13. REMOVE WATER PUMP PULLEY

a. Using SST, hold the water pump pulley.



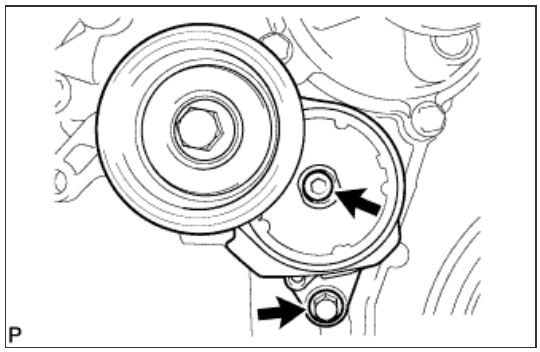
SST
09960-10010 (09962-01000, 09963-01000)

b. Remove the 4 bolts and water pump pulley.



14. REMOVE NO. 1 IDLER PULLEY SUB-ASSEMBLY

a. Remove the bolt and idler pulley.

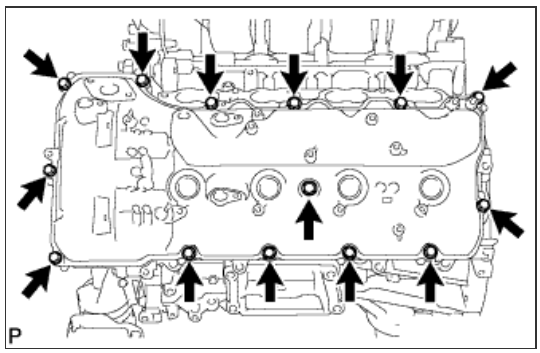


15. REMOVE FLUID COUPLING BRACKET

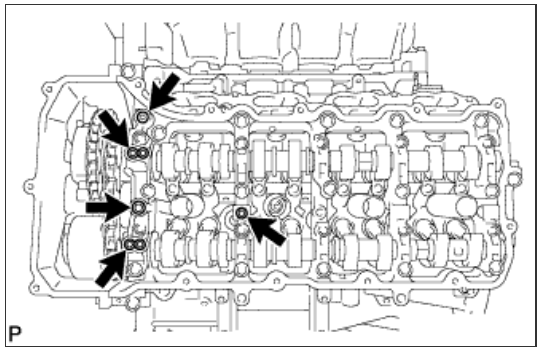
a. Remove the 4 bolts and fluid coupling bracket.

16. REMOVE V-RIBBED BELT TENSIONER ASSEMBLY

a. Remove the standard bolt, 6 mm hexagon wrench bolt and belt tensioner.



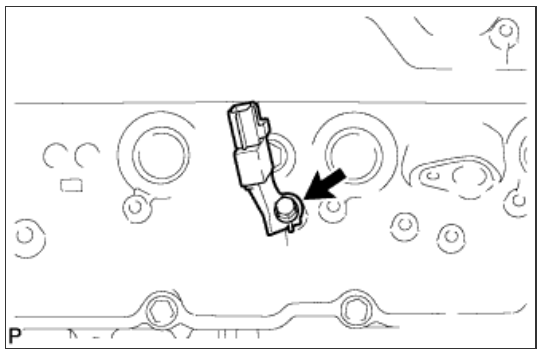
17. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY LH



a. Remove the 14 bolts, seal washer, cylinder head cover and gasket.

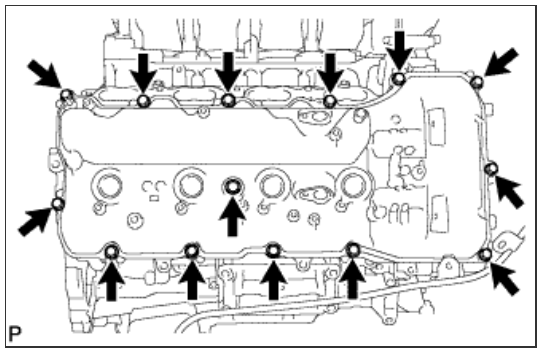
HINT:

Make sure the removed parts are returned to the same places they were removed from.

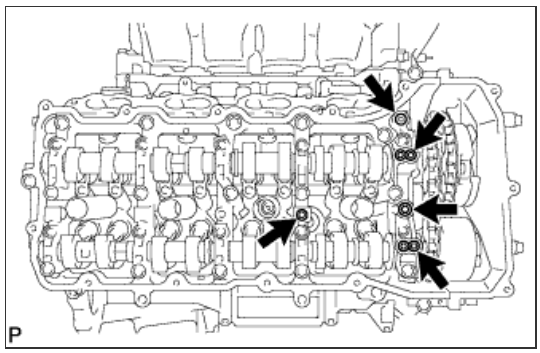


b. Remove the 5 gaskets from the camshaft bearing caps (No. 2, No. 3).

18. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY RH



a. Remove the bolt and noise filter.

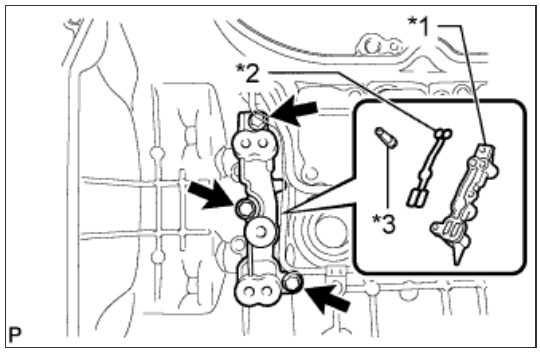


b. Remove the 14 bolts, seal washer, cylinder head cover and gasket.

HINT:

Make sure the removed parts are returned to the same places they were removed from.

c. Remove the 5 gaskets from the camshaft bearing caps (No. 1, No. 3).

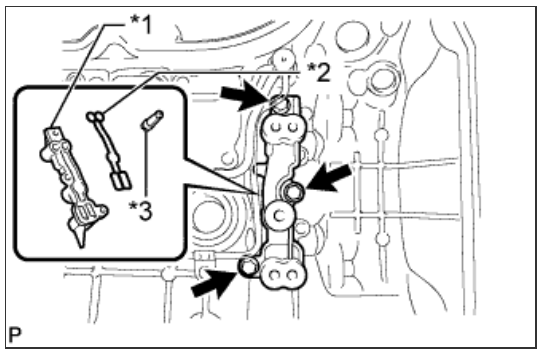


19. REMOVE OIL CONTROL VALVE FILTER

a. LH:
Remove the 3 bolts, cylinder head cover spacer, gasket and filter.

Text in Illustration

*1	Cylinder Head Cover Spacer
*2	Gasket

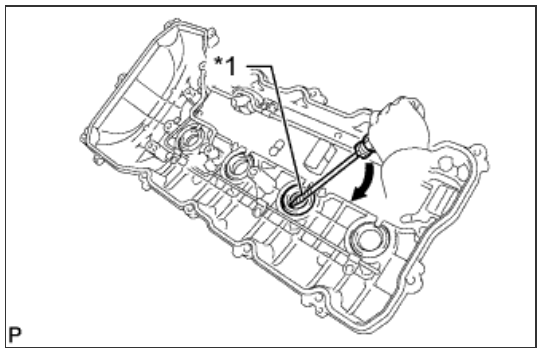


*3	Filter

b. RH:
Remove the 3 bolts, cylinder head cover spacer, gasket and filter.

Text in Illustration

*1	Cylinder Head Cover Spacer
*2	Gasket
*3	Filter



20. REMOVE SPARK PLUG TUBE GASKET

a. Bend the 4 ventilation baffle plate claws on the cylinder head cover to an angle of 90° or more.

b. Using a screwdriver, pry out the gaskets.

Text in Illustration

*1	Tape
➡	Pry

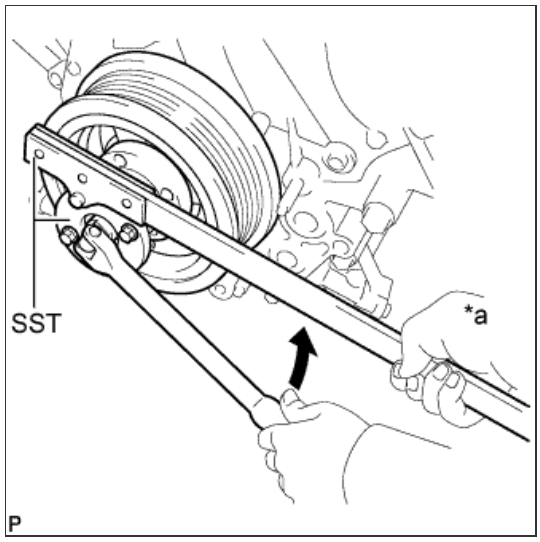
NOTICE:

- **Be careful not to damage the cylinder head cover.**
- **Be careful not to damage the gasket when removing it, as the removed gasket needs to be used when installing a new one.**

HINT:

Tape the screwdriver tip before use.

21. REMOVE CRANKSHAFT PULLEY



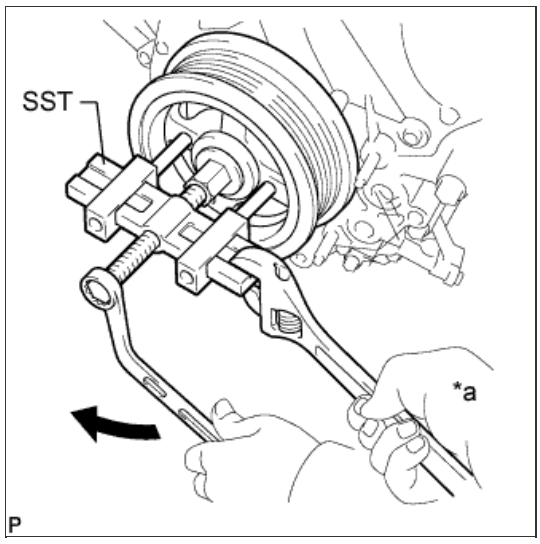
a. Using SST, loosen the crankshaft pulley set bolt until 2 or 3 threads are engaged.

SST

09213-70011
09330-00021

Text in Illustration

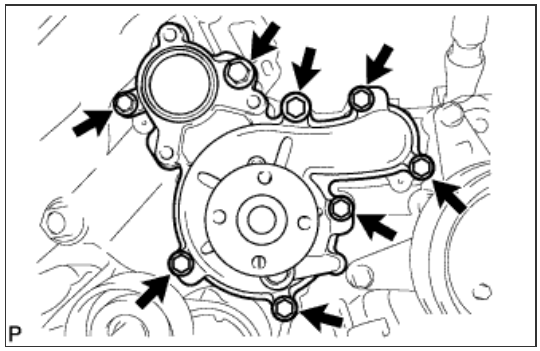
*a	Hold
➡	Turn



b. Using the pulley set bolt and SST, remove the crankshaft pulley.

SST

09950-50013 (09951-05010, 09952-05010, 09953-05010, 09954-05011)

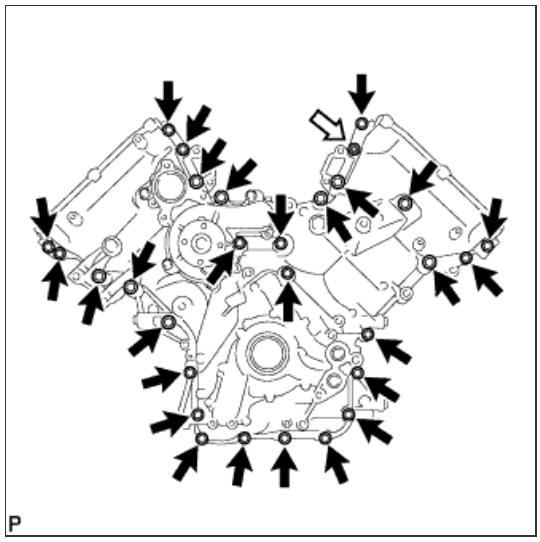


Text in Illustration

*a	Hold
➡	Turn

22. REMOVE WATER PUMP ASSEMBLY

a. Remove the 8 bolts, water pump and gasket.



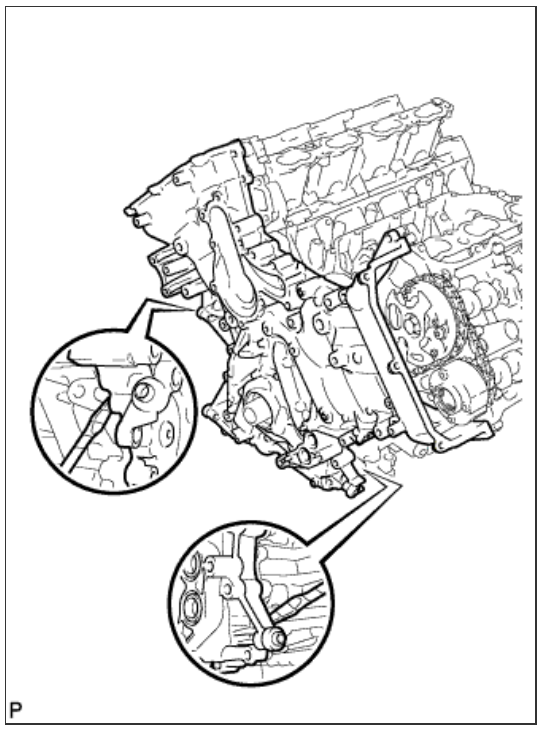
23. REMOVE TIMING CHAIN COVER SUB-ASSEMBLY

a. Remove the 28 bolts and nut shown in the illustration.

Text in Illustration

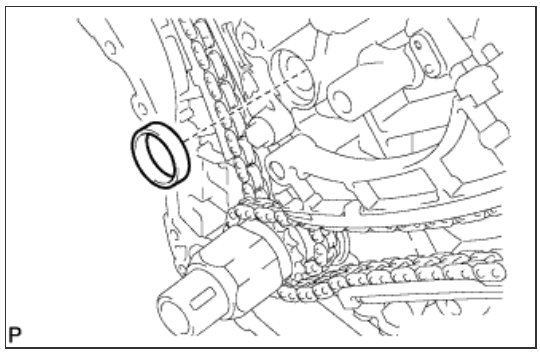
➡	Bolt

⇨	Nut



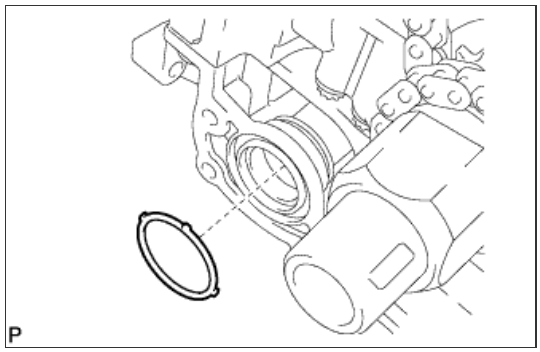
b. Remove the timing chain cover by prying between the timing chain cover and cylinder head or cylinder block with a screwdriver as shown in the illustration.

NOTICE:



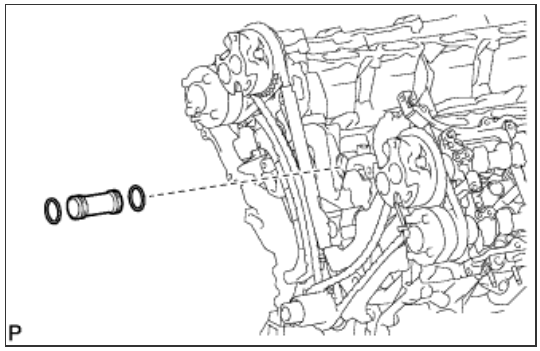
Be careful not to damage the contact surfaces of the cylinder head, cylinder block and chain cover.

HINT:



Tape the screwdriver tip before use.

c. Remove the oil pump gasket from the cylinder block.



d. Remove the O-ring from the oil pan.

24. REMOVE WATER INLET PIPE

a. Remove the water inlet pipe.

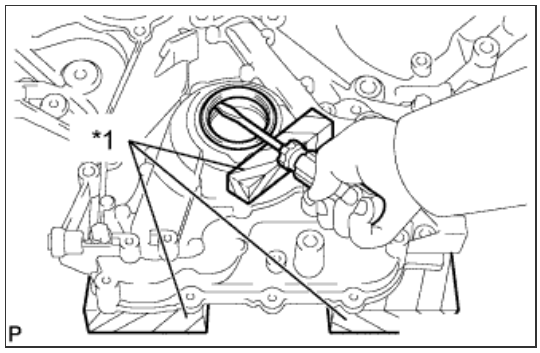
b. Remove the 2 O-rings from the water inlet pipe.

25. REMOVE FRONT CRANKSHAFT OIL SEAL

a. Place the timing chain cover on wooden blocks.

b. Using a screwdriver and wooden block, pry out the oil seal.

Text in Illustration



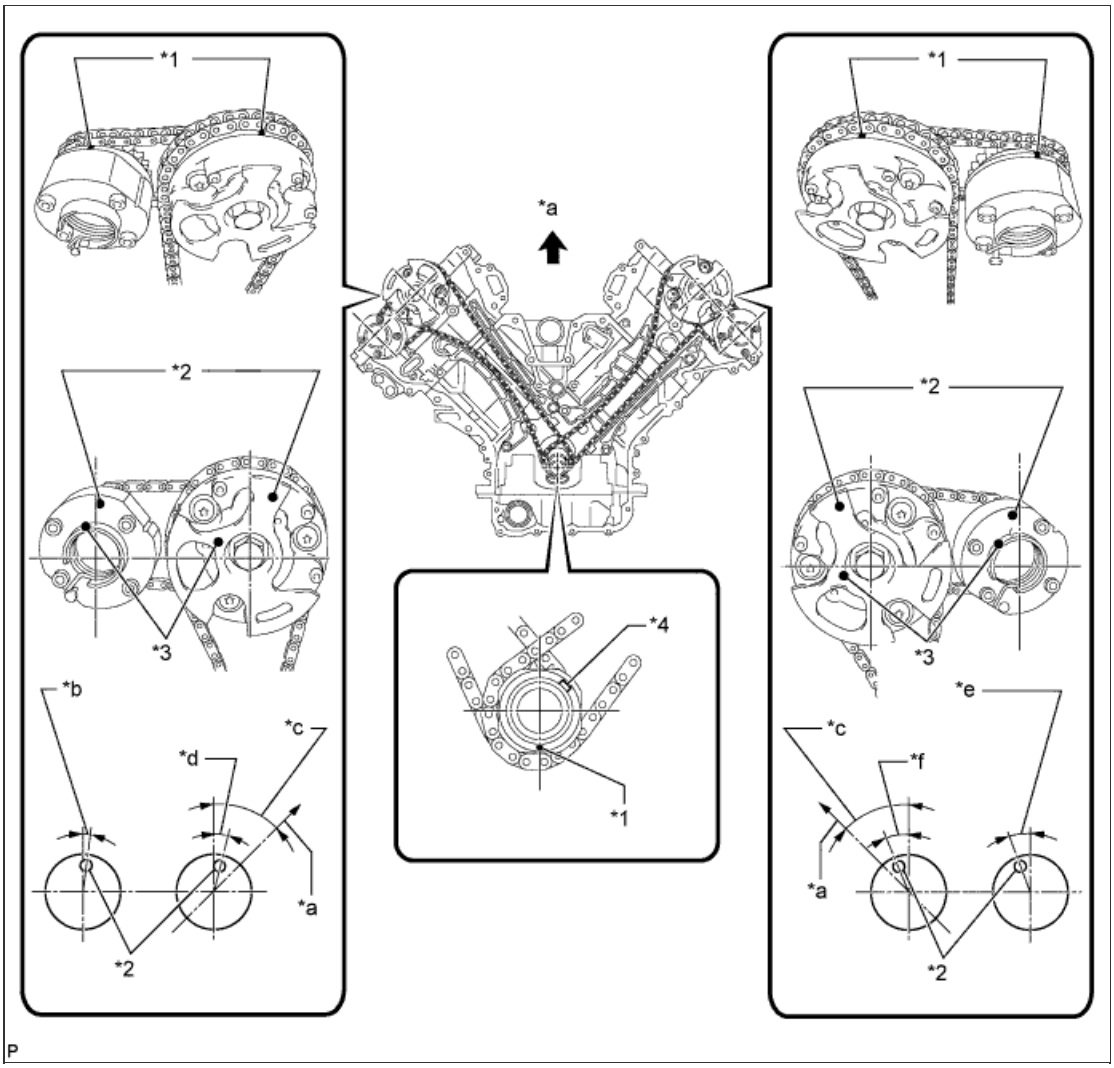
*1	Wooden Block

NOTICE:

Do not damage the surface of the oil seal press fit hole.

HINT:

Tape the screwdriver tip before use.



26. SET NO. 1 CYLINDER TO TDC/COMPRESSION

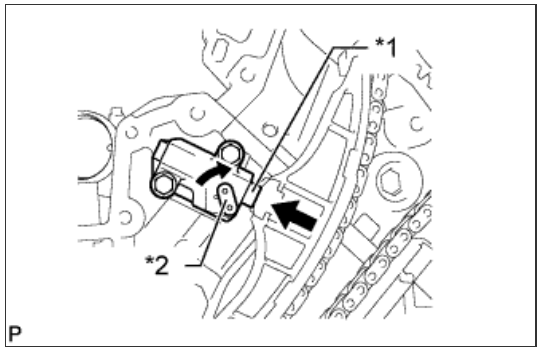
a. Temporarily install the crankshaft pulley bolt.

b. Rotate the crankshaft clockwise so that the timing marks on the crankshaft timing sprocket and camshaft timing gears are as shown in the illustration.

HINT:

If the timing marks do not align, rotate the crankshaft clockwise again and align the timing marks.

Text in Illustration



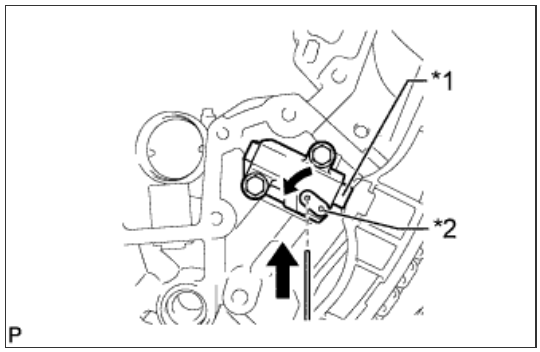
*1	Timing Mark	*2	Timing Mark Position
*3	Knock Pin Position	*4	Key
*a	Toward Ceiling	*b	Approximately 2°
*c	Approximately 45°	*d	Approximately 16°
*e	Approximately 18°	*f	Approximately 32°

27. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY LH

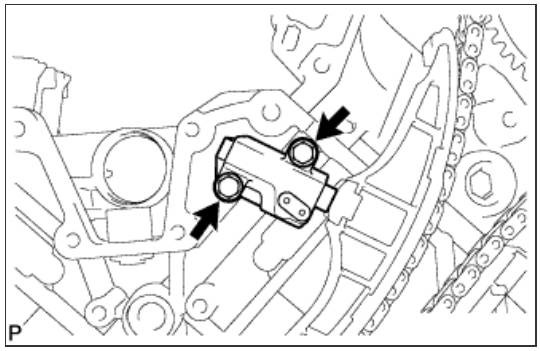
a. Move the stopper plate clockwise to release the lock, and push the plunger deep into the tensioner.

Text in Illustration

*1	Plunger
*2	Stopper Plate

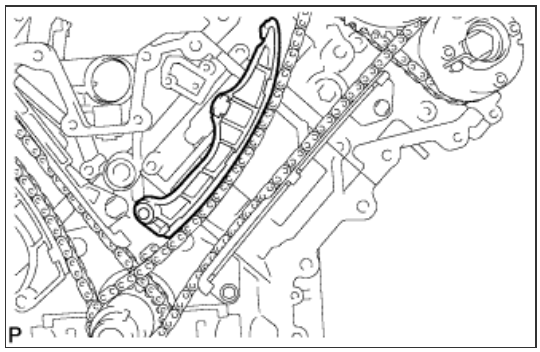


b. Move the stopper plate counterclockwise to set the lock, and insert a hexagon wrench into the stopper plate hole.



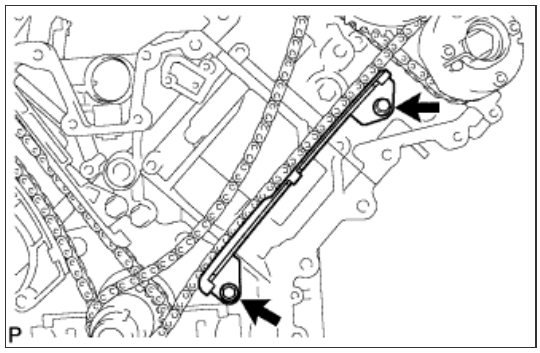
Text in Illustration

*1	Plunger



*2	Stopper Plate

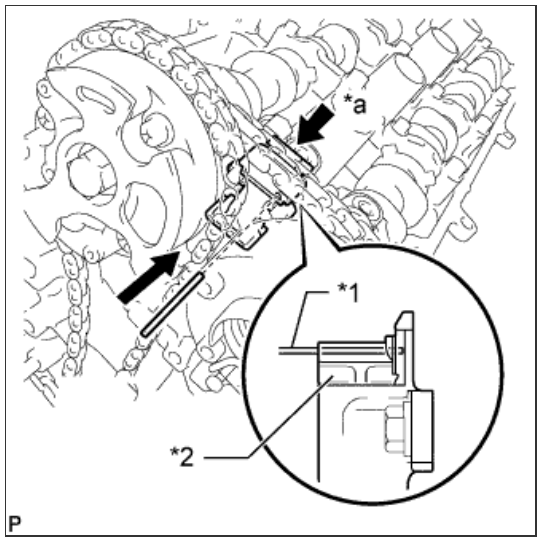
c. Remove the 2 bolts, chain tensioner and gasket.



28. REMOVE NO. 1 CHAIN TENSIONER SLIPPER LH

29. REMOVE NO. 1 CHAIN VIBRATION DAMPER LH

a. Remove the 2 bolts and chain vibration damper.

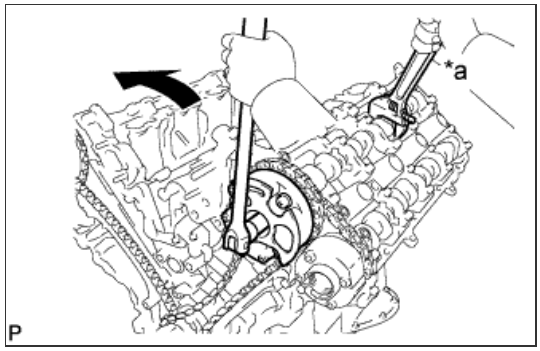


30. REMOVE NO. 1 CHAIN SUB-ASSEMBLY LH

a. While pushing down the No. 3 chain tensioner, insert a pin of 1.0 mm (0.0394 in.) into the hole to fix it in place.

Text in Illustration

*1	Pin
*2	Plunger
*a	Push



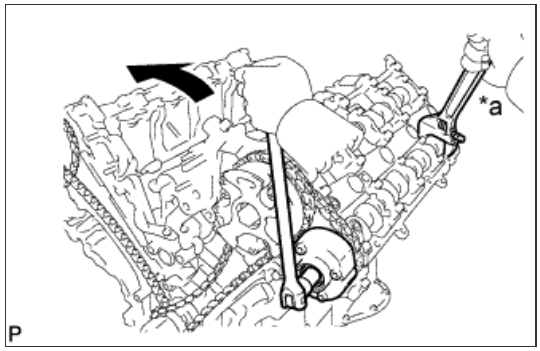
b. Hold the hexagonal portion of the camshaft with a wrench and loosen the bolt.

Text in Illustration

*a	Hold
➡	Turn

NOTICE:

- **Be careful not to damage the cylinder head with the wrench.**
- **Do not disassemble the camshaft timing gear.**



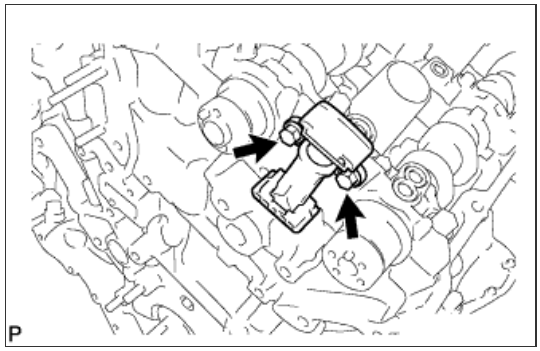
c. Hold the hexagonal portion of the camshaft with a wrench and loosen the bolt.

Text in Illustration

*a	Hold
➡	Turn

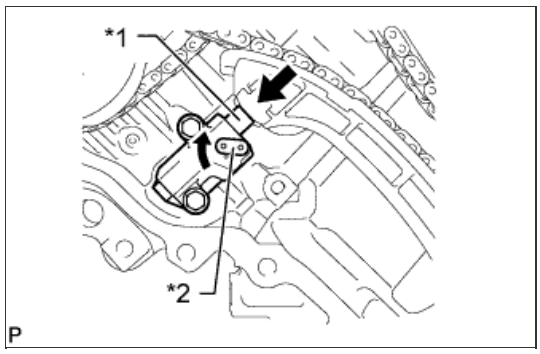
NOTICE:

Be careful not to damage the cylinder head with the wrench.



d. Remove the 2 bolts. Then with the No. 1 and No. 2 chains still connected to the gears, remove the camshaft timing gear, camshaft timing exhaust gear and crankshaft timing sprocket LH.

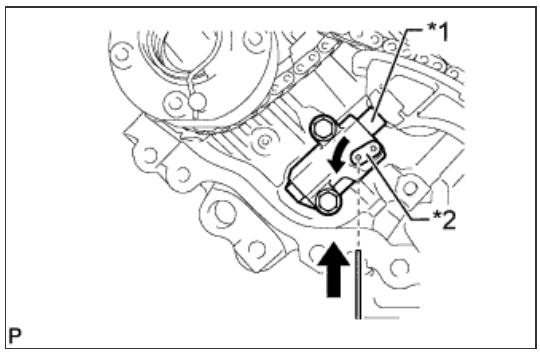
e. Remove the No. 1 and No. 2 chains from the gears.



31. REMOVE NO. 3 CHAIN TENSIONER ASSEMBLY

a. Remove the 2 bolts and chain tensioner.

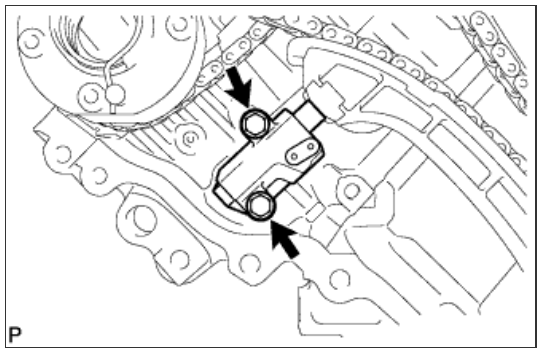
32. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY RH



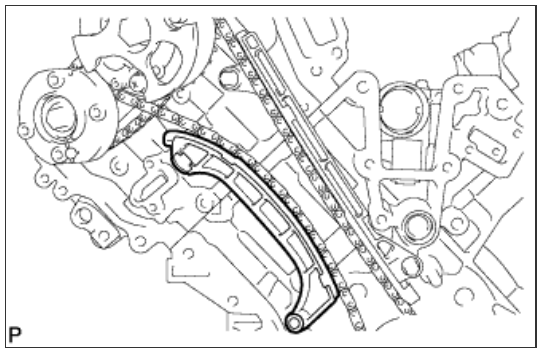
a. Move the stopper plate clockwise to release the lock, and push the plunger deep into the tensioner.

Text in Illustration

*1	Plunger
*2	Stopper Plate



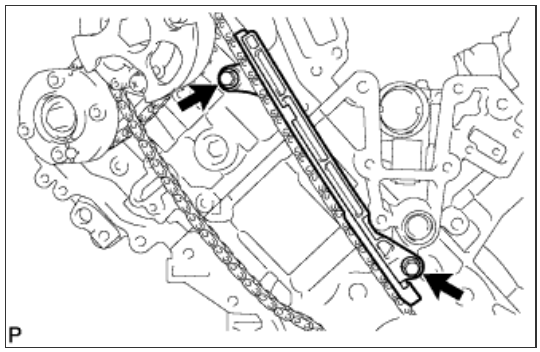
b. Move the stopper plate counterclockwise to set the lock, and insert a hexagon wrench into the stopper plate hole.



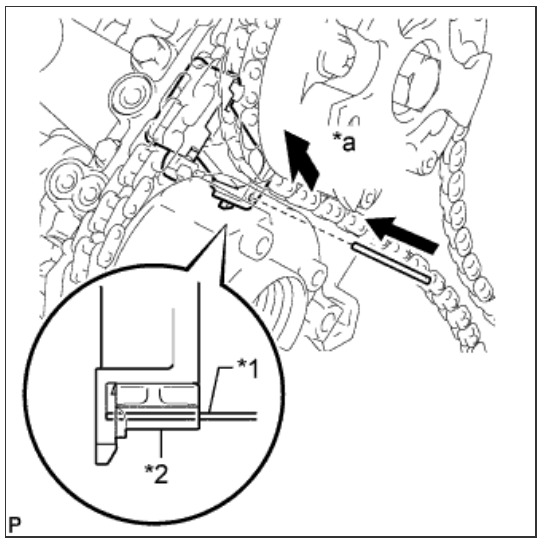
Text in Illustration

*1	Plunger
*2	Stopper Plate

c. Remove the 2 bolts and chain tensioner.



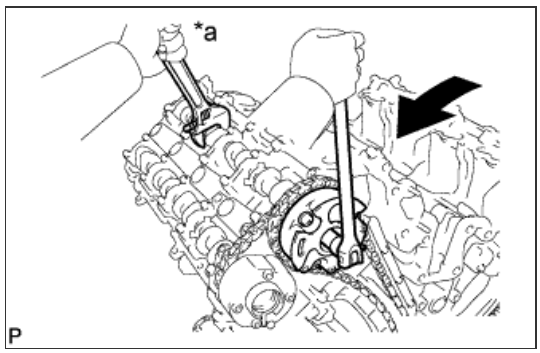
33. REMOVE NO. 1 CHAIN TENSIONER SLIPPER RH



34. REMOVE NO. 1 CHAIN VIBRATION DAMPER RH

a. Remove the 2 bolts and vibration damper.

35. REMOVE NO. 1 CHAIN SUB-ASSEMBLY RH

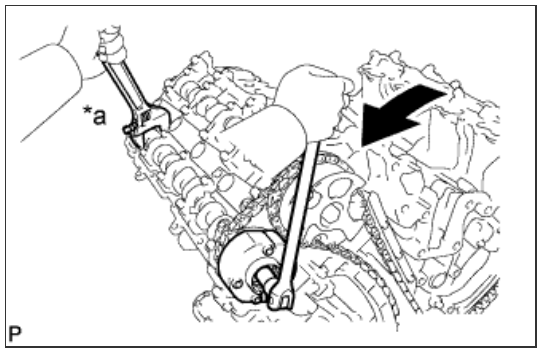


a. While raising up the No. 2 chain tensioner, insert a pin of 1.0 mm (0.0394 in.) into the hole to fix it in place.

Text in Illustration

*1	Pin
*2	Plunger
*a	Push

b. Hold the hexagonal portion of the camshaft with a wrench and loosen the bolt.



Text in Illustration

*a	Hold
➡	Turn

NOTICE:

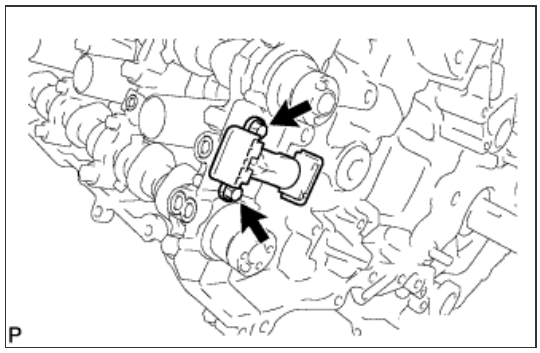
- **Be careful not to damage the cylinder head with the wrench.**
- **Do not disassemble the camshaft timing gear.**

c. Hold the hexagonal portion of the camshaft with a wrench and loosen the bolt.

Text in Illustration

*a	Hold
➡	Turn

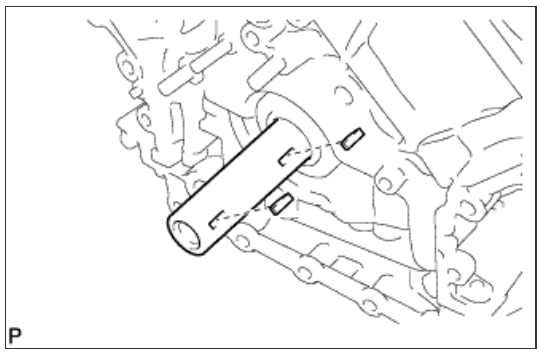
NOTICE:



Be careful not to damage the cylinder head with the wrench.

d. Remove the 2 bolts. Then with the No. 1 and No. 2 chains still connected to the gears, remove the camshaft timing gear, camshaft timing exhaust gear and crankshaft timing sprocket RH.

e. Remove the No. 1 and No. 2 chains from the gears.

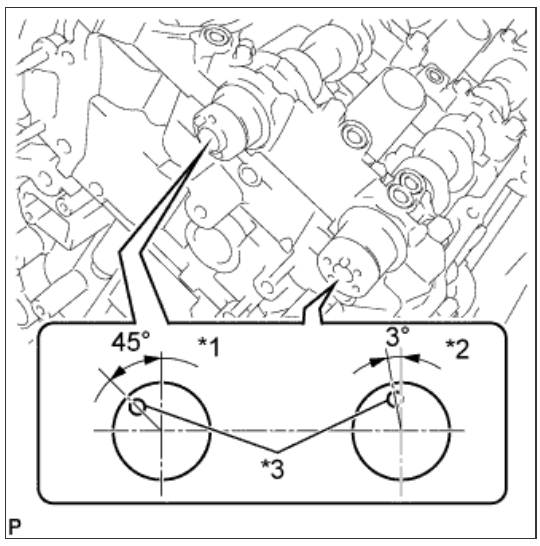


36. REMOVE NO. 2 CHAIN TENSIONER ASSEMBLY

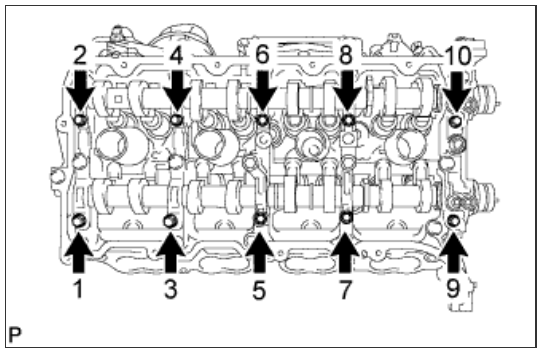
a. Remove the 2 bolts and chain tensioner.

37. REMOVE CRANKSHAFT TIMING GEAR KEY

a. Using a screwdriver, remove the 2 timing gear keys from the crankshaft.



38. REMOVE CAMSHAFT BEARING CAP LH



a. Make sure that the knock pin of the camshaft is positioned as shown in the illustration.

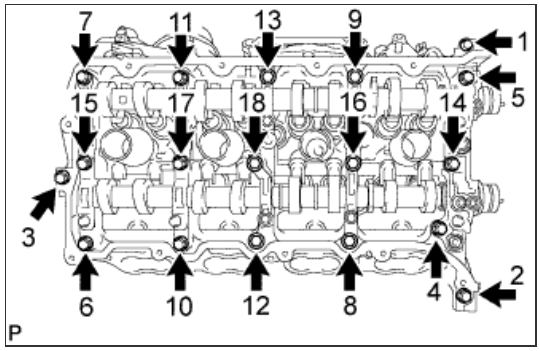
Text in Illustration

*1	IN
*2	EX
*3	Knock Pin

b. Uniformly loosen and remove the 10 bearing cap bolts in the sequence shown in the illustration.

c. Uniformly loosen and remove the 18 bearing cap bolts in the sequence shown in the illustration.

NOTICE:



Uniformly loosen the bolts while keeping the camshaft level.

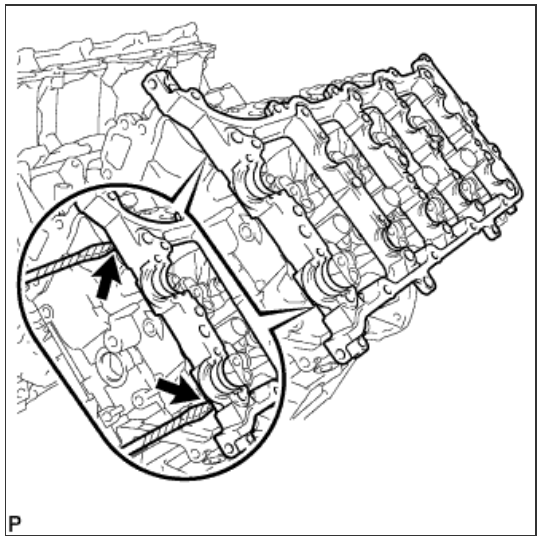
d. Remove the 6 bearing caps.

HINT:

Arrange the removed parts in the correct order.

e. Remove the No. 3 and No. 4 camshafts.

39. REMOVE CAMSHAFT HOUSING SUB-ASSEMBLY LH



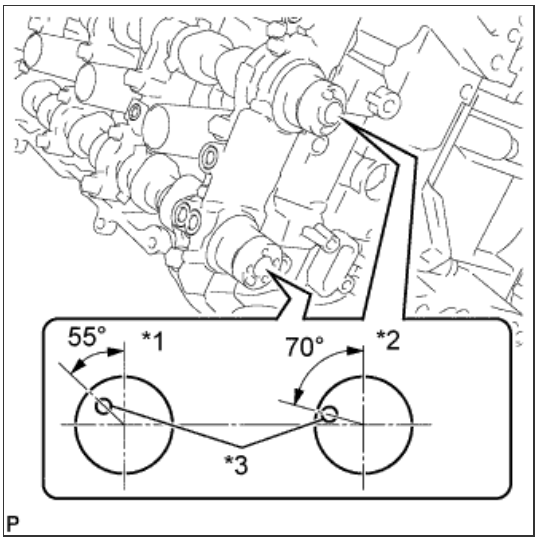
a. Remove the camshaft housing by prying between the cylinder head and camshaft housing with a screwdriver.

NOTICE:

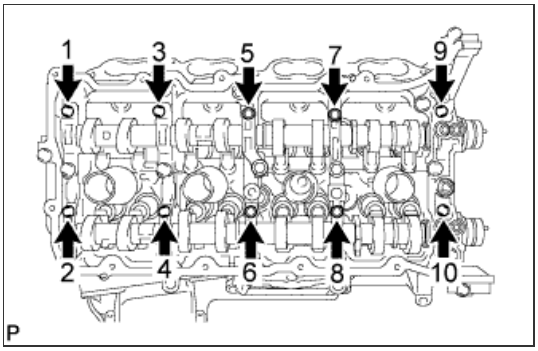
Be careful not to damage the contact surfaces of the cylinder head and camshaft housing.

HINT:

Tape the screwdriver tip before use.



40. REMOVE CAMSHAFT BEARING CAP RH



a. Make sure that the knock pin of the camshaft is positioned as shown in the illustration.

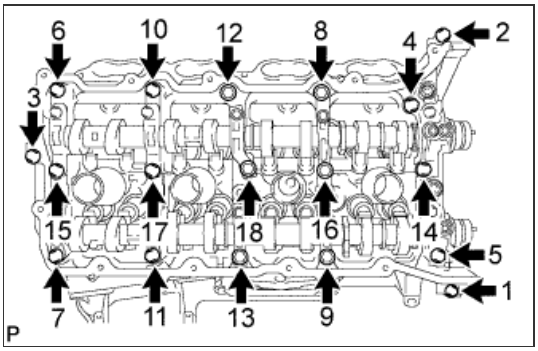
Text in Illustration

*1	EX
*2	IN
*3	Knock Pin

b. Uniformly loosen and remove the 10 bearing cap bolts in the sequence shown in the illustration.

c. Uniformly loosen and remove the 18 bearing cap bolts in the sequence shown in the illustration.

NOTICE:



Uniformly loosen the bolts while keeping the camshaft level.

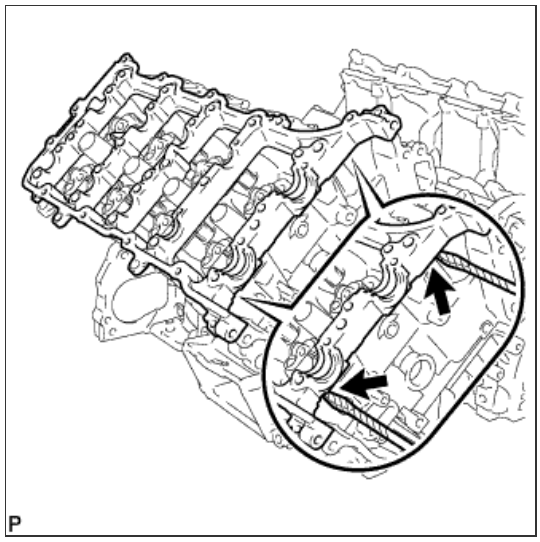
d. Remove the 6 bearing caps.

HINT:

Arrange the removed parts in the correct order.

e. Remove the No. 1 and No. 2 camshafts.

41. REMOVE CAMSHAFT HOUSING SUB-ASSEMBLY RH



a. Remove the camshaft housing by prying between the cylinder head and camshaft housing with a screwdriver.

NOTICE:

Be careful not to damage the contact surfaces of the cylinder head and camshaft housing.

HINT:

Tape the screwdriver tip before use.

42. REMOVE NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY

a. Remove the 32 valve rocker arms from the cylinder heads.

HINT:

Arrange the removed parts in the correct order.

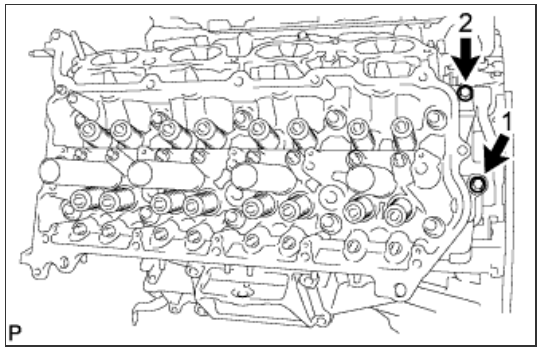
43. REMOVE VALVE LASH ADJUSTER ASSEMBLY

a. Remove the 32 valve lash adjusters from the cylinder heads.

HINT:

Arrange the removed parts in the correct order.

44. REMOVE VALVE STEM CAP



a. Remove the 32 valve stem caps from the cylinder heads.

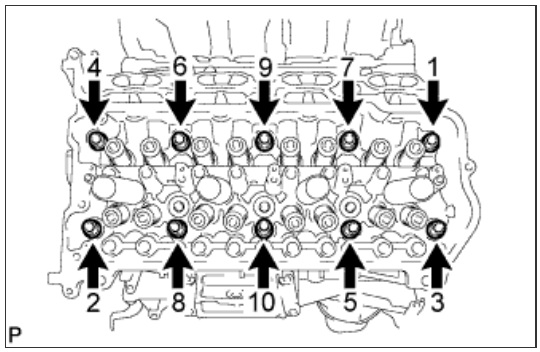
HINT:

Arrange the removed parts in the correct order.

45. REMOVE CYLINDER HEAD SUB-ASSEMBLY LH

a. Uniformly loosen and remove the 2 bolts in the sequence shown in the illustration.

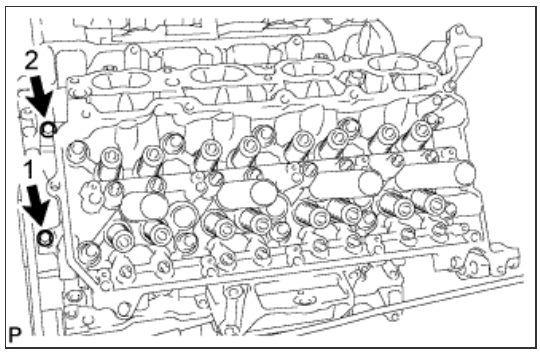
b. Using a 10 mm bi-hexagon wrench, uniformly loosen the 10 cylinder head bolts in the sequence shown in the illustration. Remove the 10 cylinder head bolts and plate washers.



NOTICE:

- **Be careful not to drop washers into the cylinder head.**
- **Head warpage or cracking could result from removing bolts in an incorrect order.**

HINT:



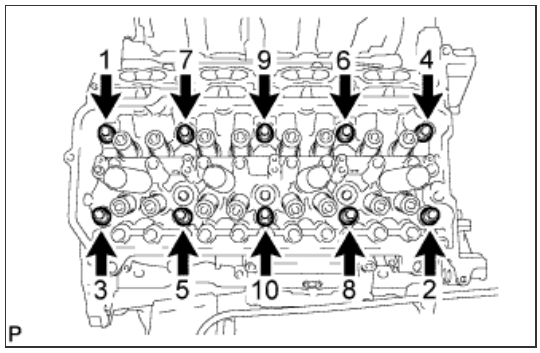
Be sure to arrange the removed parts for each installation position separately.

c. Remove the cylinder head and gasket.

46. REMOVE CYLINDER HEAD SUB-ASSEMBLY RH

a. Uniformly loosen and remove the 2 bolts in the sequence shown in the illustration.

b. Using a 10 mm bi-hexagon wrench, uniformly loosen the 10 cylinder head bolts in the sequence shown in the illustration. Remove the 10 cylinder head bolts and plate washers.



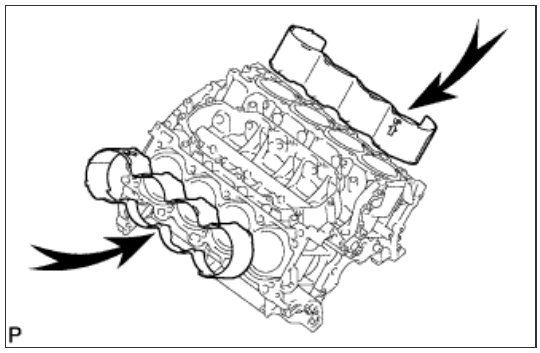
NOTICE:

- **Be careful not to drop washers into the cylinder head.**
- **Head warpage or cracking could result from removing bolts in an incorrect order.**

HINT:

Be sure to arrange the removed parts for each installation position separately.

c. Remove the cylinder head and gasket.

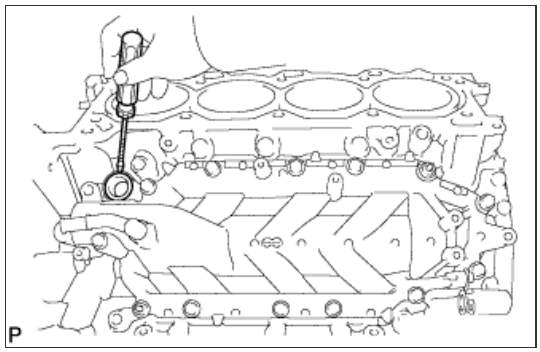


47. REMOVE CYLINDER BLOCK WATER JACKET SPACER

a. Remove the 2 water jacket spacers from the cylinder block.

NOTICE:

Be sure to remove the water jacket spacers. If not, they may fall and become damaged when the cylinder block is inverted.



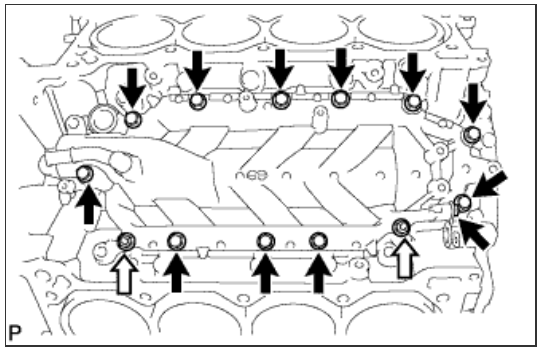
48. REMOVE VENTILATION PIPE GASKET

a. Using a screwdriver, pry out the ventilation pipe gasket.

a. Using a screwdriver, pry out the ventilation pipe gasket.

HINT:

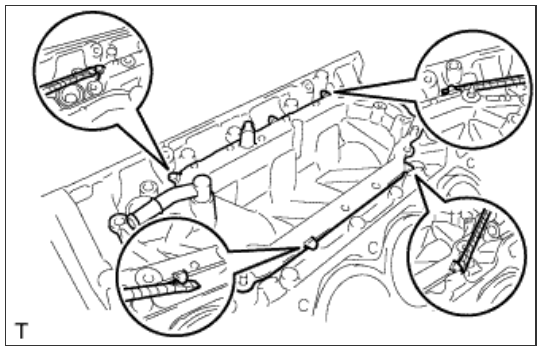
Tape the screwdriver tip before use.



49. REMOVE NO. 1 HEAT EXCHANGER COVER

a. Remove the 12 bolts and 2 nuts.

Text in Illustration

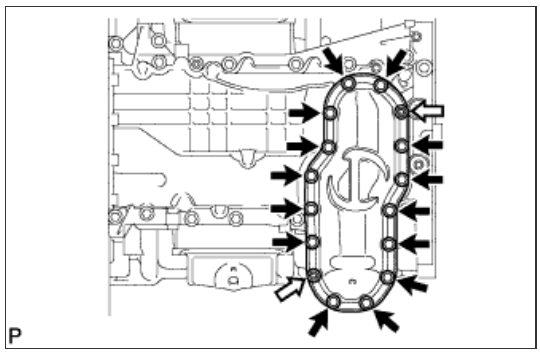


➡	Bolt
⇨	Nut

b. Remove the heat exchanger by prying between the heat exchanger and cylinder block with a screwdriver.

HINT:

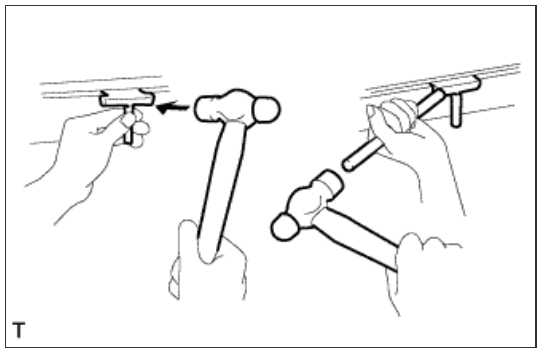
Tape the screwdriver tip before use.



50. REMOVE NO. 2 OIL PAN SUB-ASSEMBLY

a. Remove the 14 bolts and 2 nuts.

Text in Illustration

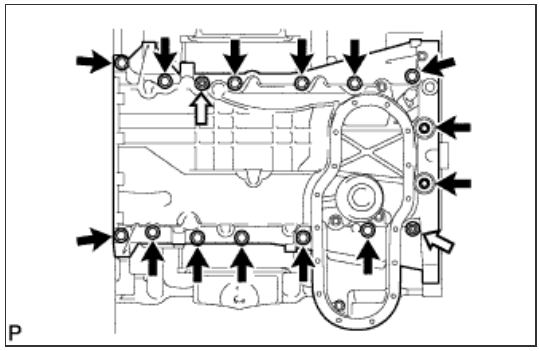


➡	Bolt
⇨	Nut

b. Insert the blade of an oil pan seal cutter between the oil pans. Cut through the applied sealer and remove the No. 2 oil pan.

NOTICE:

Be careful not to damage the contact surfaces of the oil pans.

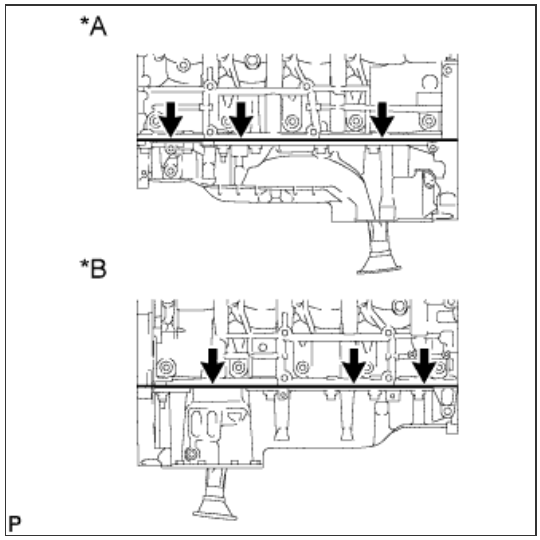


51. REMOVE NO. 1 OIL PAN SUB-ASSEMBLY

a. Remove the 14 bolts and 2 nuts.

Text in Illustration

➡	Bolt
⇨	Nut



HINT:

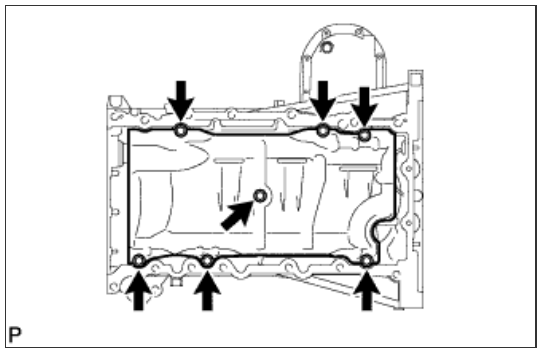
Be sure to clean the bolts and stud bolts, and check the threads for cracks or other damage.

b. Remove the oil pan by prying between the oil pan and cylinder block with a screwdriver.

Text in Illustration

*A	LH Side
*B	RH Side

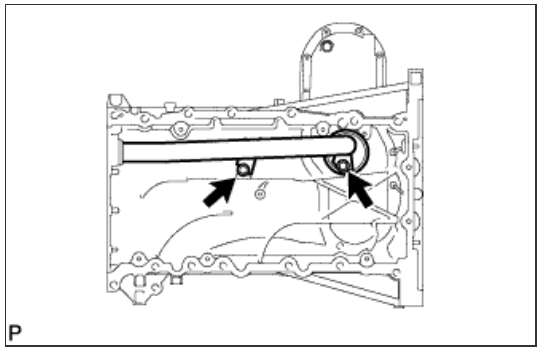
NOTICE:



Be careful not to damage the contact surfaces of the cylinder block and oil pan.

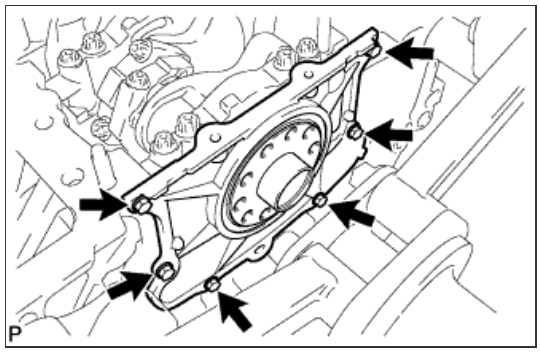
HINT:

Tape the screwdriver tip before use.



52. REMOVE NO. 1 OIL PAN BAFFLE PLATE

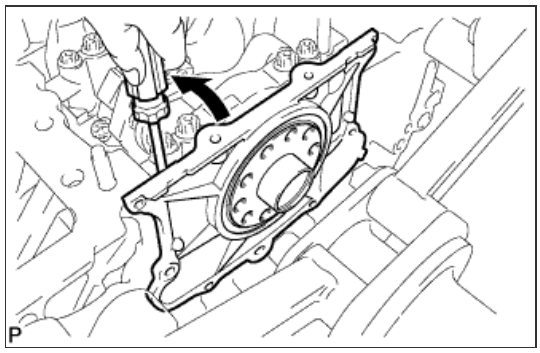
a. Remove the 7 bolts and baffle plate.



53. REMOVE OIL STRAINER SUB-ASSEMBLY

a. Remove the 2 bolts, oil strainer and O-ring.

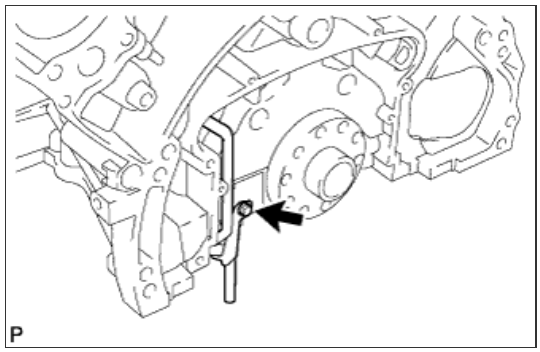
54. REMOVE ENGINE REAR OIL SEAL RETAINER



a. Remove the 6 bolts and oil seal retainer.

b. Using a screwdriver, pry out the oil seal retainer.

HINT:

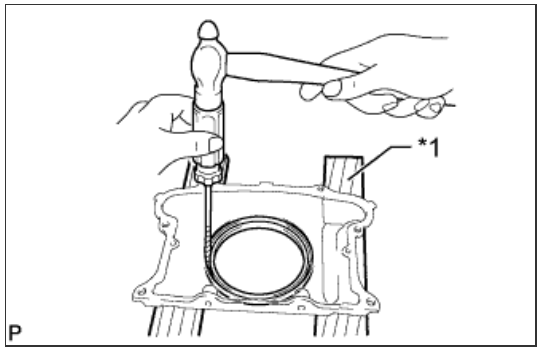


Tape the screwdriver tip before use.

55. REMOVE OIL DRAIN PIPE SUB-ASSEMBLY

a. Remove the bolt and oil drain pipe.

b. Remove the O-ring.



56. REMOVE REAR CRANKSHAFT OIL SEAL

a. Place the oil seal retainer on wooden blocks.

Text in Illustration

*1	Wooden Block

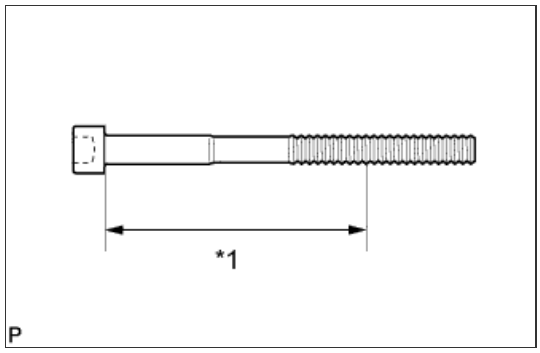
b. Using a screwdriver and hammer, tap out the oil seal.

57. REMOVE RING PIN

NOTICE:

It is not necessary to remove the ring pin unless it is being replaced.

58. REMOVE STUD BOLT



NOTICE:

If the stud bolt is deformed or its threads are damaged, replace it.

for Preparation Click here

1. INSPECT CYLINDER HEAD SET BOLT

a. Using a vernier caliper, measure the diameter of the elongated thread at the measuring point.

Measuring point:
94 mm (3.7 in.) for intake side bolt
89 mm (3.5 in.) for exhaust side bolt

Standard diameter:
1 .85 to 11. mm (.4 to .433 in.)

Minimum diameter:
1 . mm (.417 in.)

Text in Illustration

*1	Measuring Point

If the diameter is less than the minimum, replace the cylinder head bolt.

HINT:

If a visual check reveals no excessively thin areas, check the center of the bolt (see illustration) and find the area that has the smallest diameter.

. INSPECT NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY

a. Turn the roller by hand to check that it turns smoothly.
If the roller does not turn smoothly, replace the valve rocker arm.

3. INSPECT VALVE LASH AD USTER ASSEMBLY

NOTICE:

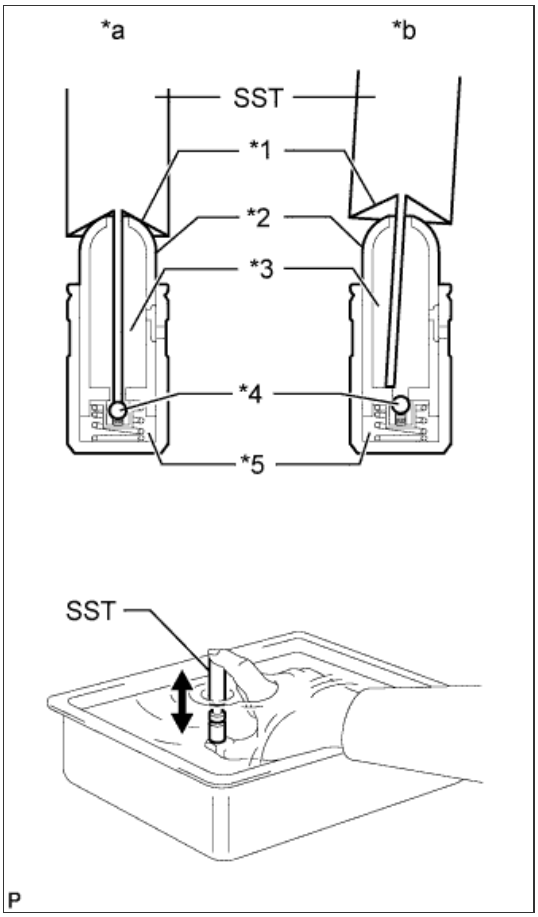
- **Keep the adjuster free from dirt and foreign objects.**
- **Use only clean engine oil.**

a. Place the lash adjuster into a container full of new engine oil.

b. Insert the tip of SST into the lash adjuster plunger and use the tip to press down on the check ball inside the plunger.

SST
9 1

c. Squeeze SST and the lash adjuster together to move the plunger up and down 5 to 6 times.



d. Check the movement of the plunger and bleed air.

OK:
Plunger moves up and down.

Text in Illustration

*1	Taper Part
*2	Plunger
*3	Low Pressure Chamber
*4	Check Ball
*5	High Pressure Chamber

*a	CORRECT
*b	INCORRECT

NOTICE:

When bleeding high-pressure air from the compression chamber, make sure that the tip of SST is actually pressing the check ball as shown in the illustration. If the check ball is not pressed, air will not bleed.

e. After bleeding the air, remove SST. Then try to quickly and firmly press the plunger with your fingers.

OK:
Plunger can be pressed 3 times.

If the plunger can still be compressed after pressing it 3 times, replace the valve lash adjuster with a new one.

4. INSPECT CAMSHA T SUB-ASSEMBLY

a. Inspect the camshaft for runout.

i. Place the camshaft on V-blocks.

ii. Using a dial indicator, measure the circle runout at the center journal.

Maximum circle runout:
. 4 mm (. 157 in.)

If the circle runout is more than the maximum, replace the camshaft sub-assembly.

HINT:

Check the oil clearance after replacing the camshaft.

b. Using a micrometer, measure the cam lobe height.

Standard Cam Lobe Height:

Item	Specified Condition
Intake	44.291 to 44.441 mm (1.744 to 1.750 in.)
Exhaust	44.196 to 44.346 mm (1.740 to 1.746 in.)

Minimum Cam Lobe Height:

Item	Specified Condition
Intake	44.241 mm (1.742 in.)
Exhaust	44.146 mm (1.738 in.)

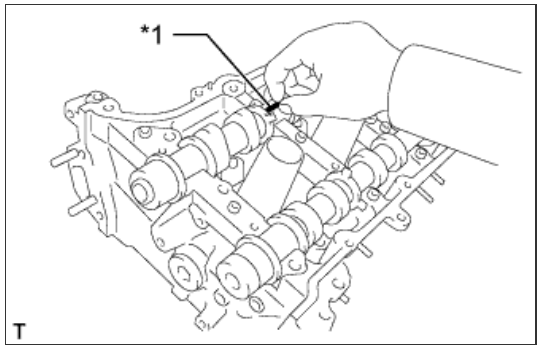
If the cam lobe height is less than the minimum, replace the camshaft sub-assembly.

c. Using a micrometer, measure the journal diameter.

Standard ournal Diameter:

Item	Specified Condition
No. 1 journal	29.956 to 29.970 mm (1.179 to 1.180 in.)

Other journals	25.959 to 25.975 mm (1.022 to 1.023 in.)



If the journal diameter is not as specified, check the oil clearance.

5. INSPECT CAMSHA T OIL CLEARANCE

a. Clean the bearing caps, camshaft housing and camshaft journals.

b. Place the camshafts on the camshaft housing.

c. Lay a strip of Plastigage across each of the camshaft journals.

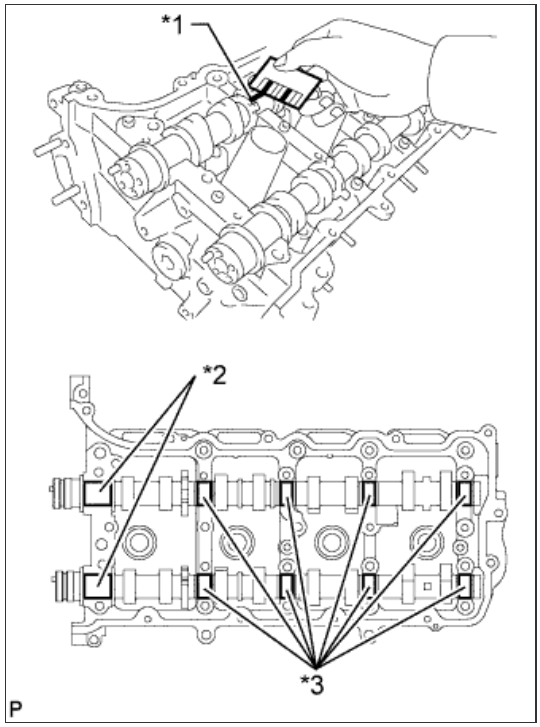
Text in Illustration

*1	Plastigage

d. Install the camshaft bearing caps (Click here).

NOTICE:

Do not turn the camshaft.



e. Install the camshaft housing (Click here).

NOTICE:

Do not turn the camshaft.

f. Remove the camshaft bearing caps (Click here).

g. Measure the Plastigage at its widest point.

Standard Oil Clearance:

Item	Specified Condition
No. 1 journal	0.030 to 0.065 mm (0.00118 to 0.00256 in.)
Other journals	0.025 to 0.062 mm (0.000984 to 0.00244 in.)

Maximum Oil Clearance:

Item	Specified Condition
No. 1 journal	0.10 mm (0.00394 in.)
Other journals	0.09 mm (0.00354 in.)

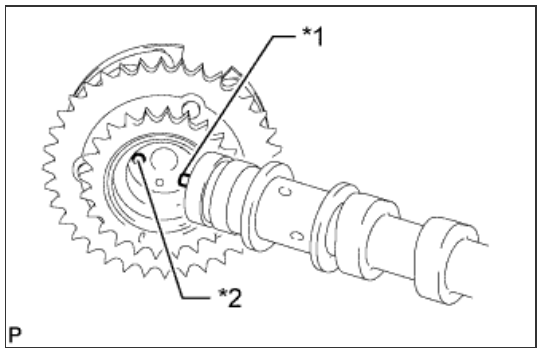
Text in Illustration

*1	Plastigage
*2	No. 1 Journal
*3	Other Journals

If the oil clearance is more than the maximum, replace the camshaft. If necessary, replace the camshaft housing.

. INSPECT CAMSHA T TIMING GEAR

a. Install the camshaft bearing caps (Click here).



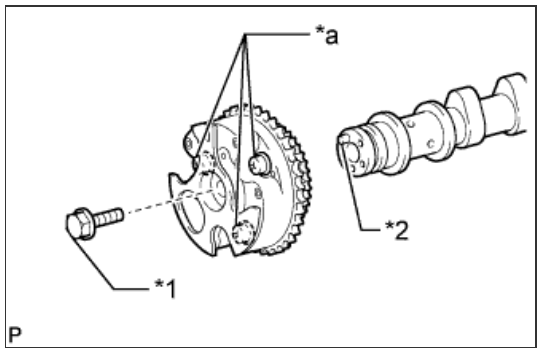
HINT:

Only install the intake camshaft.

b. Install the camshaft housing (Click here).

c. Apply a light coat of engine oil to the camshaft and camshaft timing gear.

d. Using the hexagonal portion of the camshaft, align and attach the knock pin of the camshaft with the pin hole of the camshaft timing gear.

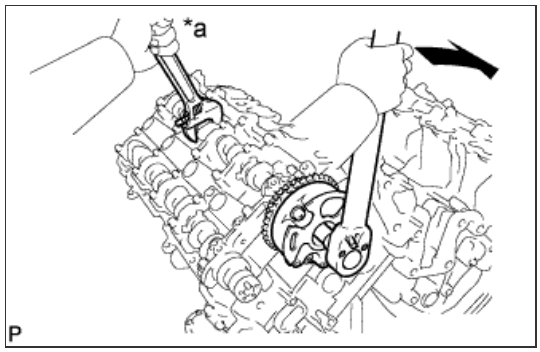


Text in Illustration

*1	Knock Pin
*2	Key Groove

NOTICE:

- **Do not forcefully push on the camshaft timing gear. This may cause the camshaft knock pin tip to damage the installation surface of the camshaft timing gear.**
- **Do not loosen or remove the 3 bolts shown in the illustration. If any of them are loosened or removed the backlash of the gear in the timing tube will go out of adjustment. In this case replace the camshaft timing gear assembly with a new one.**



Text in Illustration

*1	lange Bolt
*2	Knock Pin
*a	Do not remove

e. pply a light coat of engine oil to the threads and under the head of the bolt.

f. Using a wrench to hold the hexagonal portion of the camshaft, install the camshaft timing gear with the bolt.

Torque:
1 N*m{ 1 kgf*cm 74 ft.*lbf }

Text in Illustration

*a	Hold
	Turn

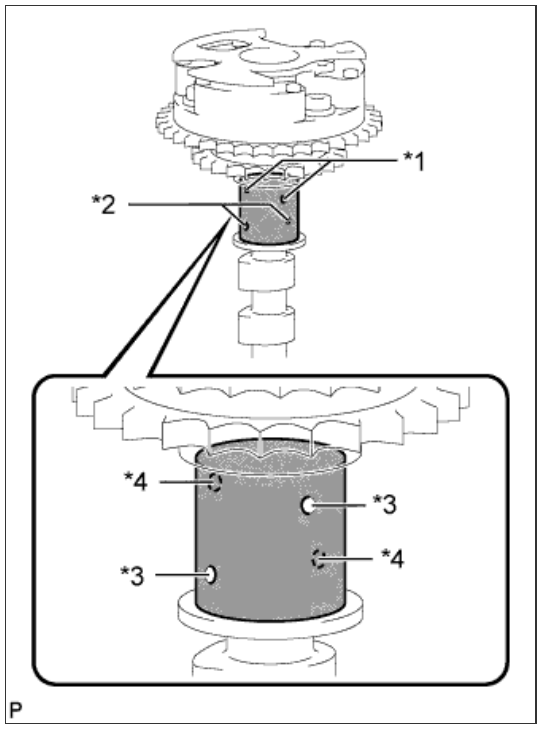
g. Remove the camshaft bearing caps (Click here).

h. Check the lock of the camshaft timing gear.

i. Make sure that the camshaft timing gear is locked.

NOTICE:

Be careful not to damage the camshaft.

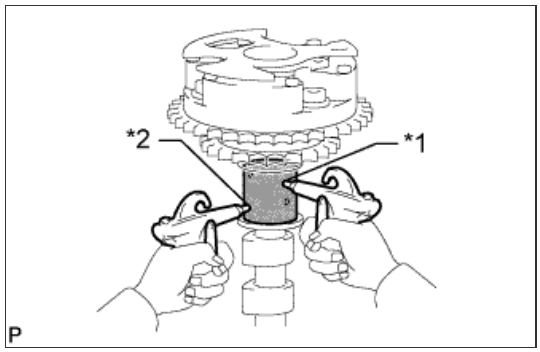


i. Release the lock pin.

i. Cover the 4 oil paths of the cam journal with vinyl tape as shown in the illustration.

ii. Break through the tape of the advance side path and retard side path as shown in the illustration.

Text in Illustration

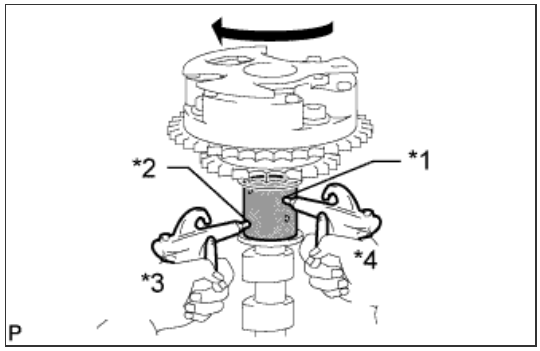


*1	Advance Side Path
*2	Retard Side Path
*3	Open
*4	Close
	Vinyl Tape

iii. pply approximately 200 kPa (2.0 kgf m^2, 29 psi) of air pressure to the two broken paths.

Text in Illustration

*1	dvance Side Path
*2	Retard Side Path



NOTICE:

Cover the paths with a piece of cloth when applying pressure to keep oil from splashing.

iv. Check that the camshaft timing gear revolves in the advance direction when reducing the air pressure applied to the retard side path.

Text in Illustration

*1	Advance Side Path
*2	Retard Side Path
*3	Decompress
*4	Hold Pressure

HINT:

This operation releases the lock pin for the most retarded position.

v. When the camshaft timing gear reaches the most advanced position, release the air pressure from the retard side path and advance side path, in that order.

NOTICE:

Do not release the air pressure from the advance side path first. The gear may abruptly shift in the retard direction and break the lock pin.

j. Check for smooth rotation.

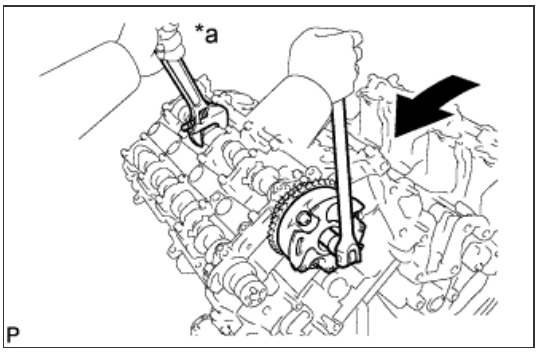
i. Turn the camshaft timing gear within its movable range (21°) 2 or 3 times, but do not turn it to the most retarded position. Make sure that the gear turns smoothly.

NOTICE:

Do not use air pressure to perform the smooth rotation check.

k. Check the lock in the most retarded position.

i. Confirm that the camshaft timing gear is locked at the most retarded position.



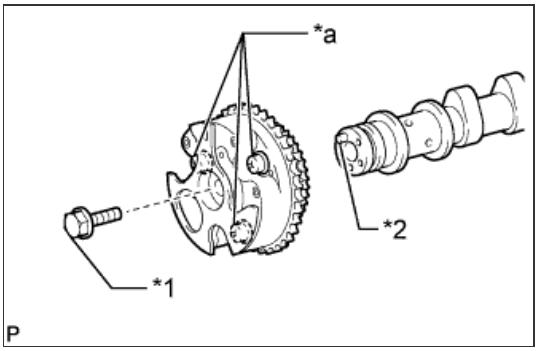
l. Install the camshaft bearing caps (Click here).

HINT:

Only install the intake camshaft.

m. Install the camshaft housing (Click here).

n. Hold the hexagonal portion of the camshaft with a wrench and loosen the bolt.



Text in Illustration

*a	Hold
➡	Turn

o. Remove the camshaft bearing caps (Click here).

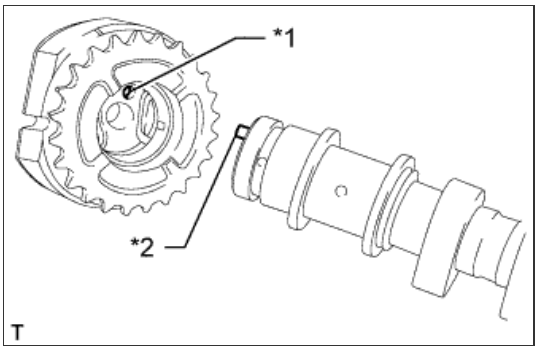
p. Remove the flange bolt and camshaft timing gear.

Text in Illustration

*1	Flange Bolt
*2	Knock Pin
*a	Do not remove

7. INSPECT CAMSHA T TIMING E HAUST GEAR

a. Install the camshaft bearing caps (Click here).



HINT:

Only install the exhaust camshaft.

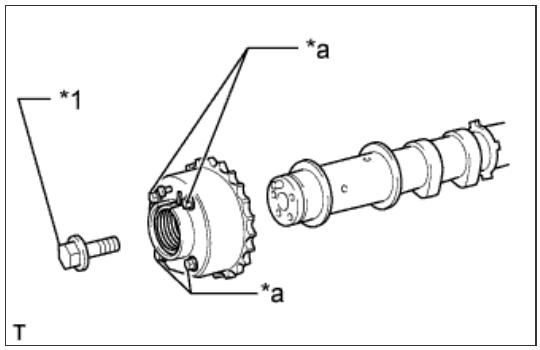
b. Install the camshaft housing (Click here).

c. Apply a light coat of engine oil to the camshaft and camshaft timing exhaust gear.

d. Using the hexagonal portion of the camshaft, align and attach the knock pin of the camshaft with the pin hole of the camshaft timing exhaust gear.

Text in Illustration

*1	Key Groove
*2	Knock Pin



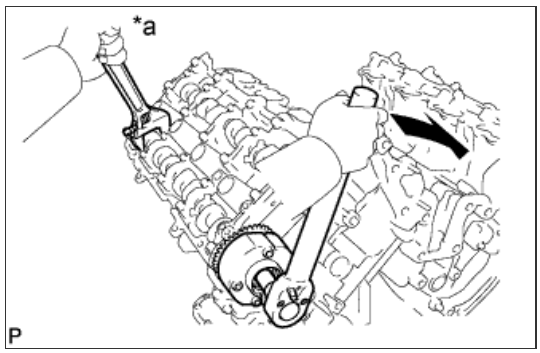
NOTICE:

- **Do not forcefully push on the camshaft timing exhaust gear. This may cause the camshaft knock pin tip to damage the installation surface of the camshaft timing exhaust gear.**
- **Do not loosen or remove the 4 bolts shown in the illustration. If any of them are loosened or removed the backlash of the gear in the timing tube will go out of adjustment. In this case replace the camshaft timing exhaust gear assembly with a new one.**

Text in Illustration

*1	lange Bolt
*a	Do not remove

e. pply a light coat of engine oil to the threads and under the head of the bolt.



f. Using a wrench to hold the hexagonal portion of the camshaft, install the camshaft timing exhaust gear with the bolt.

Torque:
1 N*m{ 1 kgf*cm 74 ft.*lbf }

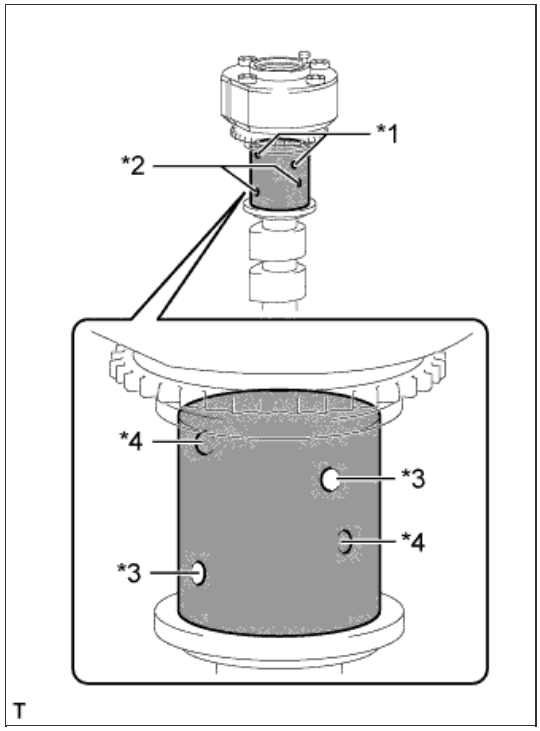
Text in Illustration

*a	Hold
➡	Turn

g. Remove the camshaft bearing caps (Click here).

h. Check the camshaft timing exhaust gear lock.

i. Make sure that the camshaft timing exhaust gear is locked.



i. Release the lock pin.

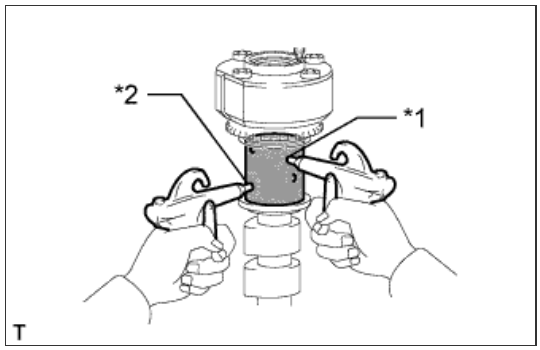
i. Cover the 4 oil paths of the cam journal with vinyl tape as shown in the illustration.

ii. Break through the tape of the advance side path and retard side path as shown in the illustration.

Text in Illustration

*1	Advance Side Path
*2	Retard Side Path
*3	Open
*4	Close
■	Vinyl Tape

iii. Apply approximately 200 kPa (2.0 kgf/cm^2, 29 psi) of air pressure to the two broken paths (the advance side path and the retard side path).

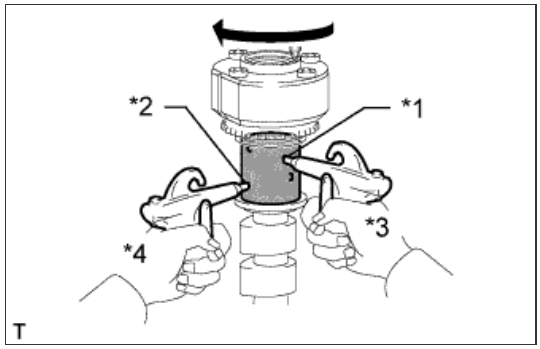


Text in Illustration

*1	Advance Side Path
*2	Retard Side Path

NOTICE:

Cover the paths with a piece of cloth when applying pressure to



keep oil from splashing.

iv. Check that the camshaft timing exhaust gear turns in the retard direction when reducing the air pressure applied to the advance side path.

Text in Illustration

*1	Advance Side Path
*2	Retard Side Path
*3	Decompress
*4	Hold Pressure

HINT:

The lock pin is released and the camshaft timing exhaust gear turns in the retard direction.

v. When the camshaft timing exhaust gear moves to the most retarded position, release the air pressure from the advance side path, and then release the air pressure from the retard side path.

NOTICE:

Be sure to release the air pressure from the advance side path first. If the air pressure of the retard side path is released first, the camshaft timing exhaust gear may abruptly shift in the advance direction and break the lock pin or other parts.

j. Check for smooth rotation.

i. Turn the camshaft timing exhaust gear within its movable range (18.5°) 2 or 3 times, but do not turn it to the most advanced position. Make sure that the gear turns smoothly.

NOTICE:

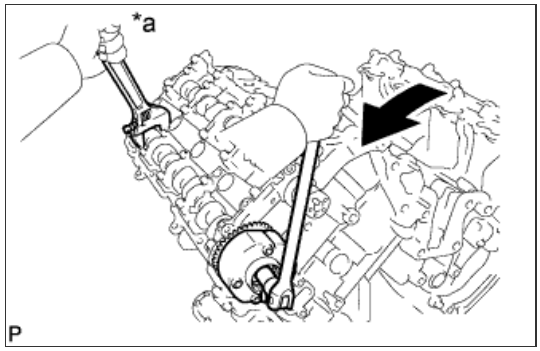
When the air pressure is released from the advance side path and then from the retard side path, the gear automatically returns to the most advanced position due to the advance assist spring operation, and locks. Gradually release the air pressure from the retard side path before performing the smooth rotation check.

k. Check the lock at the most advanced position.

i. Make sure that the camshaft timing exhaust gear is locked at the most advanced position.

l. Install the camshaft bearing caps (Click here).

HINT:



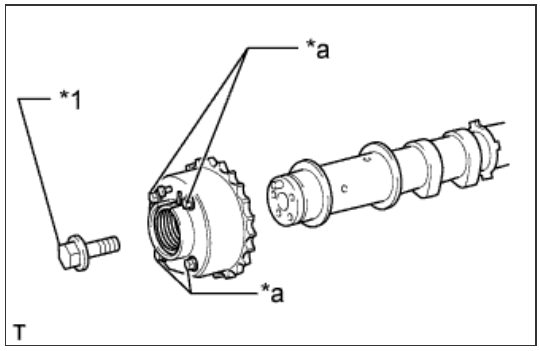
Only install the exhaust camshaft.

m. Install the camshaft housing (Click here).

n. Hold the hexagonal portion of the camshaft with a wrench and loosen the bolt.

Text in Illustration

*a	Hold
➡	Turn

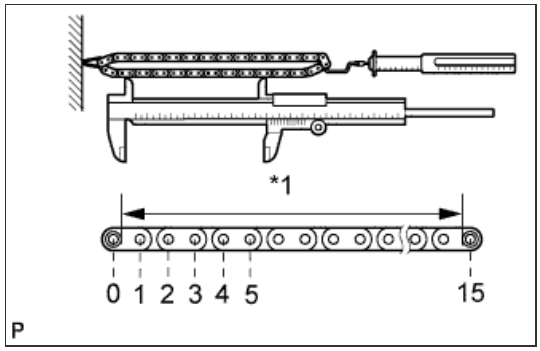


o. Remove the camshaft bearing caps (Click here).

p. Remove the flange bolt and camshaft timing exhaust gear.

Text in Illustration

*1	lange Bolt
*a	Do not remove



8. INSPECT NO. 1 CHAIN SUB-ASSEMBLY

a. Using a spring scale, pull the chain with a force of 147 N (15 kgf, 33.0 lbf) as shown in the illustration.

b. Using a vernier caliper, measure the length of 15 pins.

Maximum chain elongation:
13 .9 mm (5.39 in.)

Text in Illustration

*1	Measuring rea

HINT:

Perform the measurement at 3 random places.

If the elongation is more than the maximum, replace the No. 1 chain.

9. INSPECT NO. CHAIN SUB-ASSEMBLY

a. Using a spring scale, pull the chain with a force of 147 N (15 kgf, 33.0 lbf) as shown in the illustration.

b. Using a vernier caliper, measure the length of 15 pins.

Maximum chain elongation:
137. mm (5.4 in.)

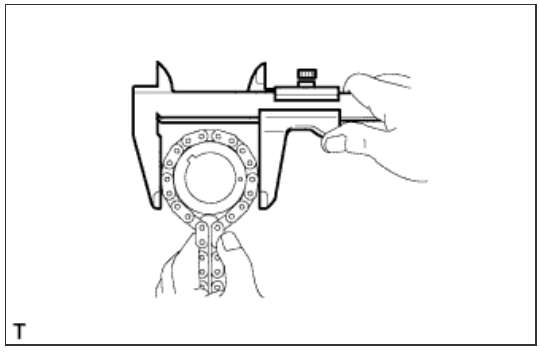
HINT:

Perform the measurement at 3 random places.

If the elongation is more than the maximum, replace the No. 2 chain.

1 . INSPECT CRANKSHA T TIMING SPROCKET RH

a. Wrap the chain around the sprocket.



b. Using a vernier caliper, measure the sprocket diameter with the chain.

Minimum sprocket diameter (with chain):
1.4 mm (.4 in.)

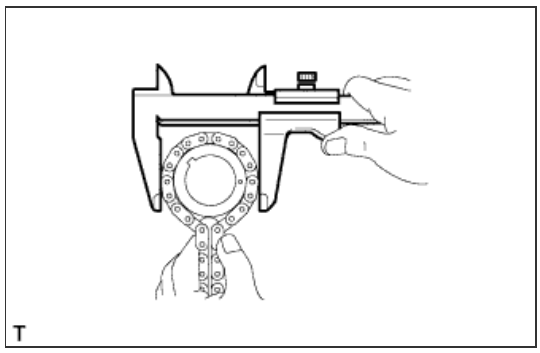
If the diameter is less than the minimum, replace the chain and crankshaft timing sprocket RH.

HINT:

The vernier caliper must contact the chain rollers for the measurement.

11. INSPECT CRANKSHA T TIMING SPROCKET LH

a. Wrap the chain around the sprocket.



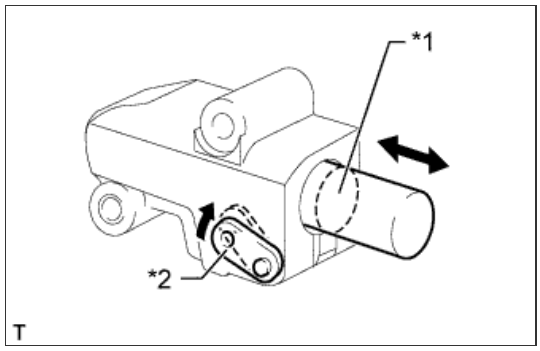
b. Using a vernier caliper, measure the sprocket diameter with the chain.

Minimum sprocket diameter (with chain):
1.4 mm (.4 in.)

If the diameter is less than the minimum, replace the chain and crankshaft timing sprocket LH.

HINT:

The vernier caliper must contact the chain rollers for the measurement.



1 . INSPECT NO. 1 CHAIN TENSIONER ASSEMBLY

a. Move the stopper plate clockwise to release the lock. Push the plunger and check that it moves smoothly.

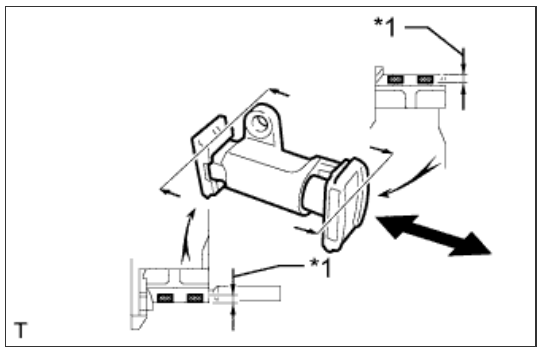
Text in Illustration

*1	Plunger
*2	Stopper Plate

If necessary, replace the No. 1 chain tensioner.

13. INSPECT NO. CHAIN TENSIONER ASSEMBLY

a. Check that the plunger moves smoothly.



b. Measure the worn depth of the chain tensioner.

Maximum depth:
.9 mm (. 354 in.)

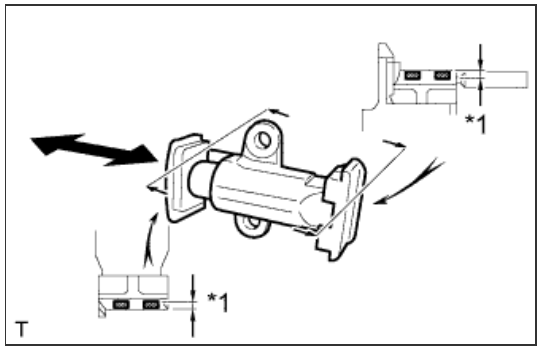
Text in Illustration

*1	Depth

If the depth is more than the maximum, replace the No. 2 chain tensioner.

14. INSPECT NO. 3 CHAIN TENSIONER ASSEMBLY

a. Check that the plunger moves smoothly.



b. Measure the worn depth of the chain tensioner.

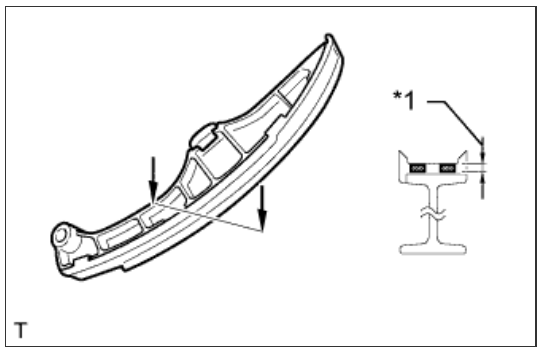
Maximum depth:
.9 mm (. 354 in.)

Text in Illustration

*1	Depth

If the depth is more than the maximum, replace the No. 3 chain tensioner.

15. INSPECT NO. 1 CHAIN TENSIONER SLIPPER



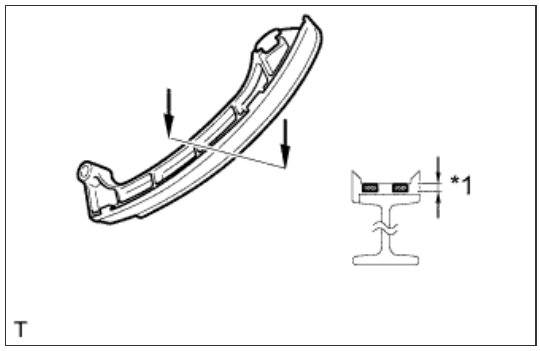
a. for LH
Measure the worn depth of the chain tensioner slipper.

Maximum depth:
1. mm (. 394 in.)

Text in Illustration

*1	Depth

If the depth is more than the maximum, replace the No. 1 chain tensioner slipper.



b. for RH
Measure the worn depth of the chain tensioner slipper.

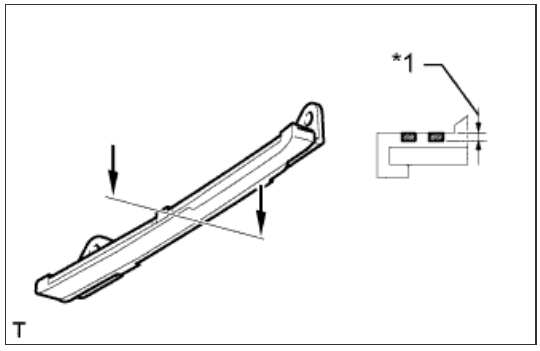
Maximum depth:
1. mm (. 394 in.)

Text in Illustration

*1	Depth

If the depth is more than the maximum, replace the No. 1 chain tensioner slipper.

1 . INSPECT NO. 1 CHAIN VIBRATION DAMPER



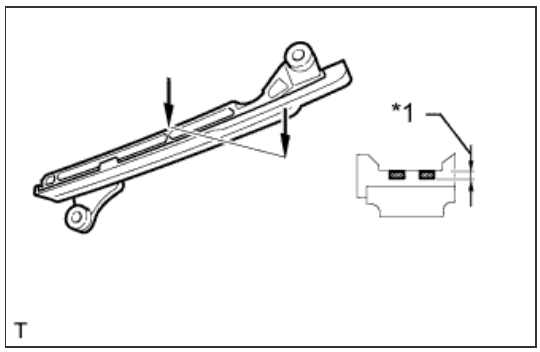
a. for LH
Measure the worn depth of the chain vibration damper.

Maximum depth:
1. mm (. 394 in.)

Text in Illustration

*1	Depth

If the depth is more than the maximum, replace the No. 1 chain vibration damper.



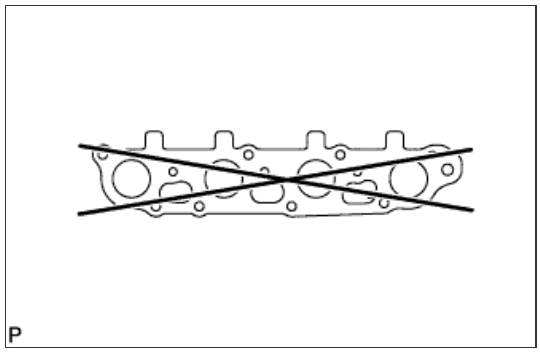
b. for RH
Measure the worn depth of the chain vibration damper.

Maximum depth:
1. mm (. 394 in.)

Text in Illustration

*1	Depth

If the depth is more than the maximum, replace the No. 1 chain vibration damper.

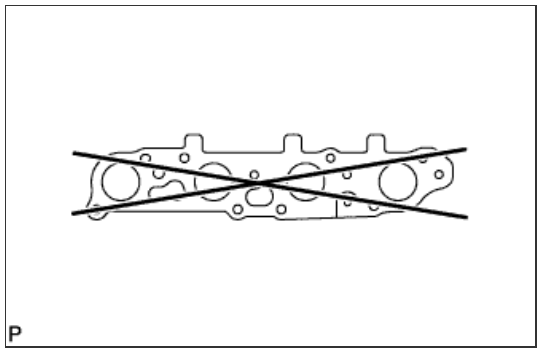


17. INSPECT E HAUST MANI OLD SUB-ASSEMBLY LH

a. Using a precision straightedge and feeler gauge, measure the warpage of the surface where the exhaust manifold LH contacts the cylinder head.

Maximum warpage:
.7 mm (. in.)

If the warpage is more than the maximum, replace the exhaust manifold LH.



18. INSPECT E HAUST MANI OLD SUB-ASSEMBLY RH

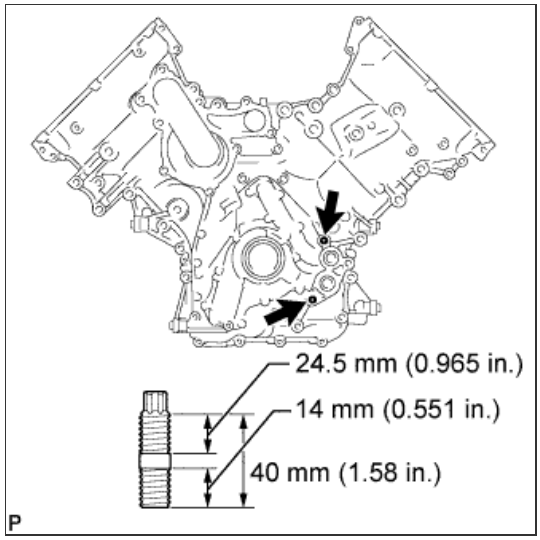
a. Using a precision straightedge and feeler gauge, measure the warpage of the surface where the exhaust manifold RH contacts the cylinder head.

Maximum warpage:
.7 mm (. in.)

If the warpage is more than the maximum, replace the exhaust manifold RH.

for Preparation Click here

1. INSTALL STUD BOLT

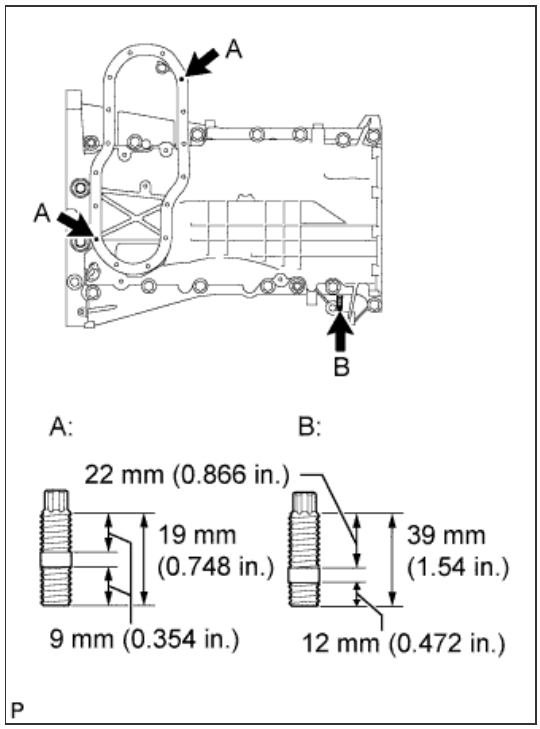


NOTICE:

If the stud bolt is deformed or its threads are damaged, replace it.

a. Install the timing chain cover stud bolt.

i. Using an E10 "TORX" socket wrench, install the 2 stud bolts as shown in the illustration.



Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

b. Install the oil pan stud bolt.

i. Using an E6 and E7 "TORX" socket wrench, install the 3 stud bolts as shown in the illustration.

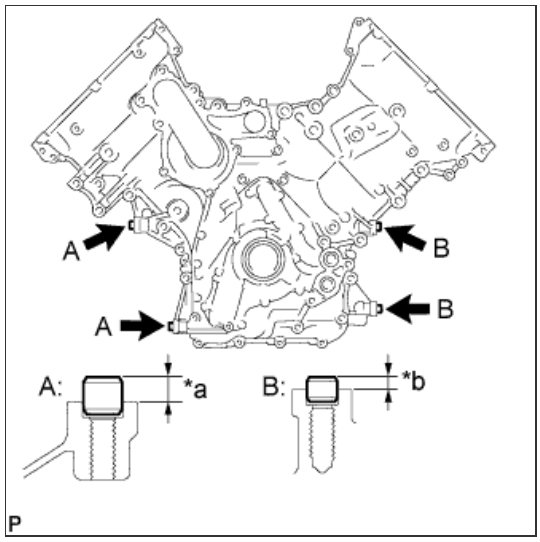
Torque:
for stud bolt A:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }
for stud bolt B:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

2. INSTALL RING PIN

NOTICE:

It is not necessary to remove the ring pin unless it is being replaced.

a. Using a plastic-faced hammer, tap in new ring pins to the timing chain cover.



Standard Protrusion:

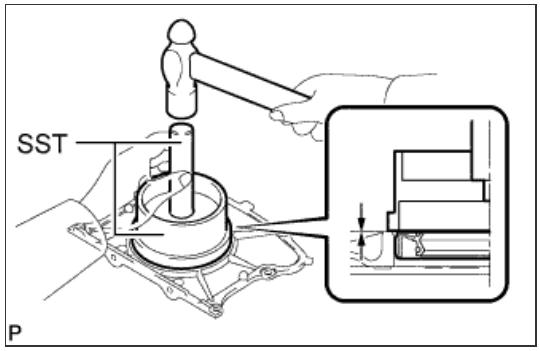
Item	Ring Pin Diameter	Specified Condition

Ring pin A	13 mm (0.512 in.)	7.5 to 8.5 mm (0.295 to 0.335 in.)
Ring pin B	11 mm (0.433 in.)	3.6 to 4.6 mm (0.142 to 0.181 in.)

Text in Illustration

*a	7.5 to 8.5 mm
*b	3.6 to 4.6 mm

3. INSTALL REAR CRANKS AFT OIL SEAL



a. Using SST, tap in a new oil seal until its surface is flush with the oil seal retainer edge.

SST
09223-15030
09950-70010 09951-07100

Standard depth:
0 to 1.0 mm 0 to 0.0394 in.

NOTICE:

- **Keep the lip free from foreign matter.**
- **Do not tap on the oil seal at an angle.**

4. INSTALL OIL DRAIN PIPE SUB-ASSEMBLY

a. Apply a light coat of engine oil to a new O-ring.

b. Install the O-ring to the drain pipe.

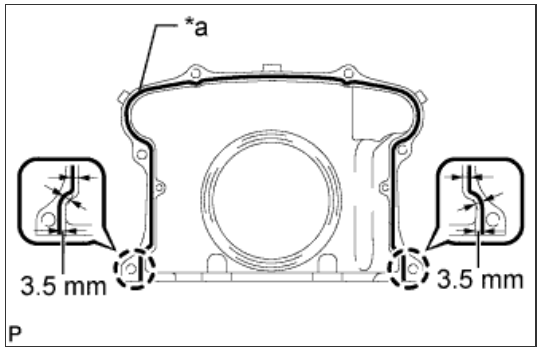
c. Install the oil drain pipe with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

5. INSTALL ENGINE REAR OIL SEAL RETAINER

a. Apply seal packing in a continuous line as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent



Standard Seal diameter:
2.0 to 3.0 mm 0.0787 to 0.118 in.

Application position from inside edge of retainer:
3.5 mm 0.138 in.

Text in Illustration

*a	2.0 to 3.0 mm

NOTICE:

- Remove any oil from the contact surface.
- Install the oil seal retainer within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.

b. Install the oil seal retainer with the 6 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

NOTICE:

- Do not start the engine for at least 2 hours after installing.
- hen installing the oil seal retainer, make sure the lip of the oil seal is not damaged.
- hen installing the oil seal retainer, make sure the lip of the oil seal is not folded incorrectly.

6. INSTALL OIL STRAINER SUB-ASSEMBLY

a. Apply a light coat of engine oil to a new O-ring.

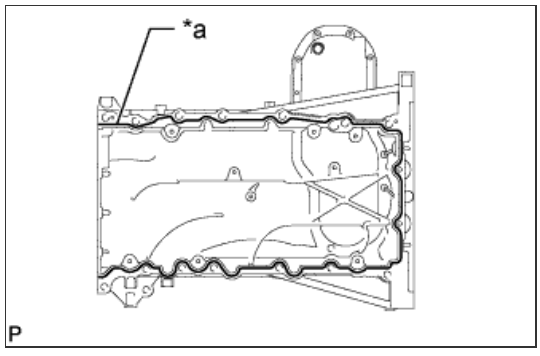
b. Install the O-ring to the oil strainer.

c. Install the oil strainer with the 2 bolts.

Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

NOTICE:

Make sure the O-ring is not twisted or damaged.



7. INSTALL NO. 1 OIL PAN BAFFLE PLATE

a. Install the baffle plate with the 7 bolts.

Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

8. INSTALL NO. 1 OIL PAN SUB-ASSEMBLY

a. Apply seal packing in a continuous line as shown in the illustration.

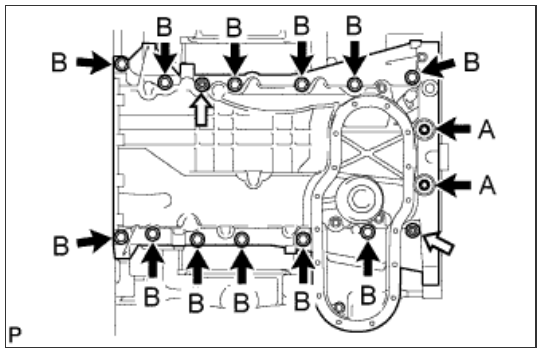
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
3.0 to 4.0 mm 0.118 to 0.157 in.

Text in Illustration

*a	3.0 to 4.0 mm

NOTICE:



- Remove any oil from the contact surface.
- Install the oil pan within 3 minutes and tighten the bolts and nuts within 15 minutes after applying seal packing.

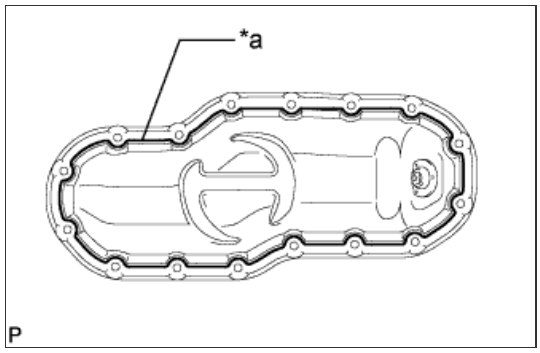
b. Install the oil pan with the 14 bolts and 2 nuts.

Torque:
for bolt A:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }
for bolt B:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }
for nut:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }

Text in Illustration

➡	Bolt
⇨	Nut

NOTICE:



Do not start the engine for at least 2 hours after installing.

Standard Bolt:

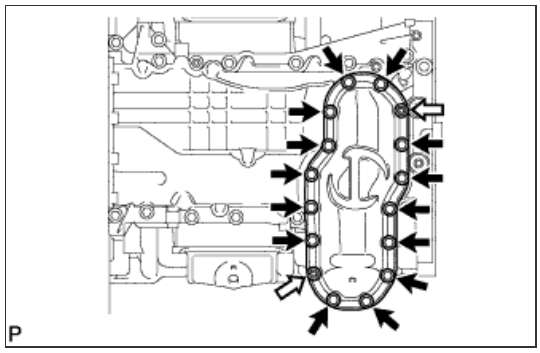
Item	Length	Thread Diameter
Bolt A	92 mm (3.62 in.)	6 mm (0.236 in.)
Bolt B	30 mm (1.18 in.)	10 mm (0.394 in.)

9. INSTALL NO. 2 OIL PAN SUB-ASSEMBLY

a. Apply seal packing in a continuous line as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
3.0 to 4.0 mm 0.118 to 0.157 in.



Text in Illustration

*a	3.0 to 4.0 mm

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the oil pan within 3 minutes and tighten the bolts and nuts within 15 minutes after applying seal packing.**

b. Install the oil pan with the 14 bolts and 2 nuts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

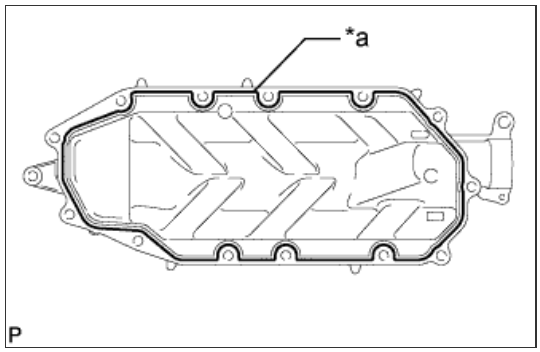
Text in Illustration

➡	Bolt
⇨	Nut

NOTICE:

Do not start the engine for at least 2 hours after installing.

10. INSTALL NO. 1 EAT EXC ANGER CO ER



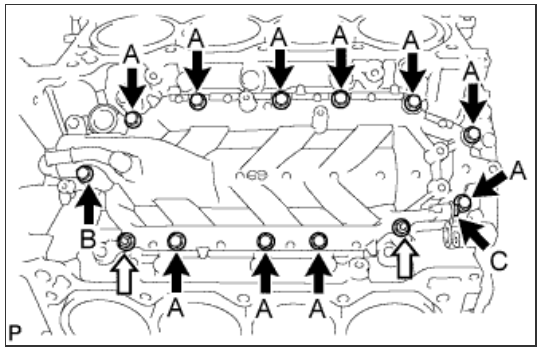
a. Apply seal packing in a continuous line as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing 1282B, Three Bond 1282B or equivalent

Standard seal diameter:
3.0 to 4.0 mm 0.118 to 0.157 in.

Text in Illustration

*a	3.0 to 4.0 mm



NOTICE:

- Remove any oil from the contact surface.
- Install the heat exchanger cover within 3 minutes and tighten the bolts and nuts within 15 minutes after applying seal packing.

b. Install the heat exchanger cover with the 12 bolts and 2 nuts.

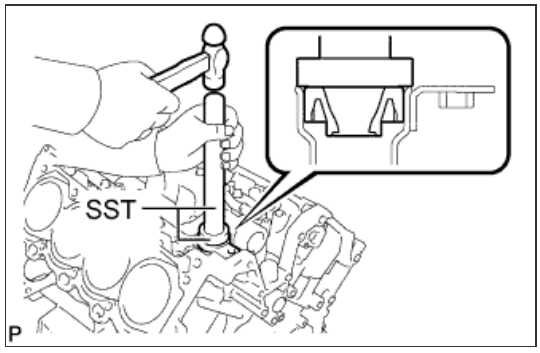
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

Text in Illustration

➡	Bolt
⇨	Nut

NOTICE:

Do not start the engine for at least 2 hours after installing.



Standard Bolt:

Item	Length	Thread Diameter
Bolt A	20 mm (0.787 in.)	8 mm (0.315 in.)
Bolt B	70 mm (2.76 in.)	8 mm (0.315 in.)
Bolt C	16 mm (0.630 in.)	6 mm (0.236 in.)

11. INSTALL ENTILATION PIPE GASKET

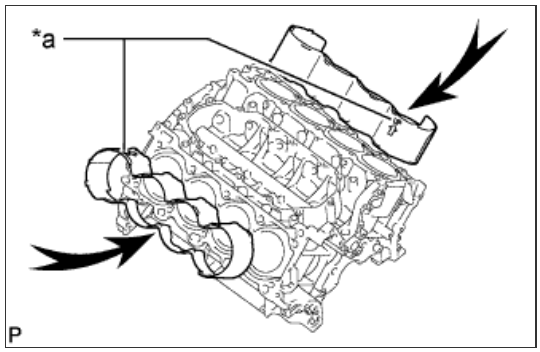
a. Using SST, evenly tap in a new ventilation pipe gasket until its surface is flush with the lip of the ventilation pipe.

SST
09950-60010 09951-00360
09950-70010 09951-07100

NOTICE:

- Do not tap the gasket at an angle.
- Do not tap the gasket excessively.

12. INSTALL CYLINDER BLOCK ATER JACKET SPACER



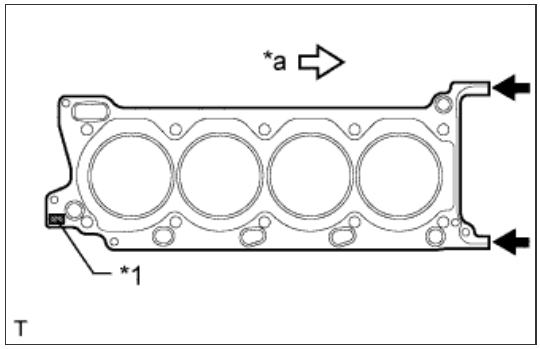
a. Install the 2 water jacket spacers as shown in the illustration.

Text in Illustration

*a	UP Mark

INT:

- Face the cutouts indicated b the arrows in illustration away from the engine.
- Face the UP mark as shown in the illustration.



13. INSTALL CYLINDER EAD SUB-ASSEMBLY R

a. Clean the cylinder block with solvent.

b. Set the piston of the No. 1 cylinder to slightly ATDC.

c. Place the cylinder head gasket on the cylinder block surface with the front face of the Lot No. stamp upward.

Text in Illustration

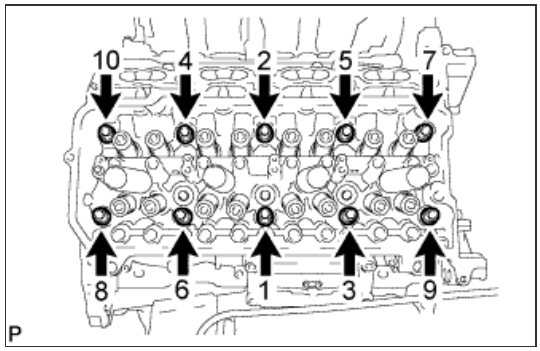
*1	Lot No.
*a	Front

NOTICE:

- **Be careful of the installation direction.**
- **Make sure that no oil is on the front end indicated b the arrows of the cylinder head gasket.**

d. Place the cylinder head on the cylinder block.

NOTICE:



- **Ensure that no oil is on the mounting surface of the cylinder head.**
- **Gently place the cylinder head in order not to damage the gasket with the bottom part of the head.**

INT:

The cylinder head bolts are tightened in 3 progressive steps.

e. Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.

f. Step 1:

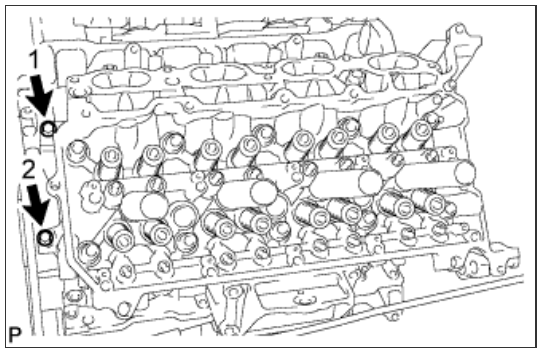
i. Using a 10 mm bi-hexagon wrench, install and uniformly tighten the 10 cylinder head bolts with the plate washers in several steps in the sequence shown in the illustration.

Torque:
36 N*m{ 367 kgf*cm , 27 ft.*lbf }

g. Step 2:

i. Mark the front side of each cylinder head bolt head with paint.

ii. Tighten the cylinder head bolts another 90°.



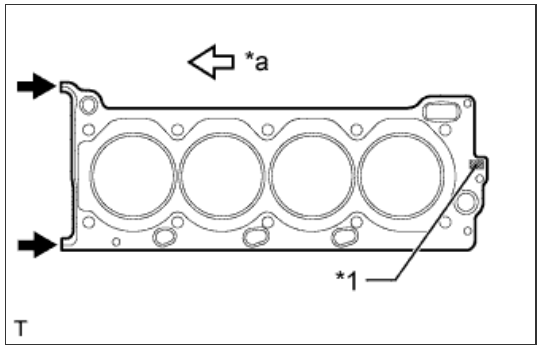
h. Step 3:

i. Tighten the cylinder head bolts an additional 90°.

ii. Check that the paint marks are now at a 180° angle to the front.

i. Install and uniformly tighten the 2 bolts in the sequence shown in the illustration.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



14. INSTALL CYLINDER EAD SUB-ASSEMBLY L

a. Clean the cylinder block with solvent.

b. Set the piston of the No. 1 cylinder to slightly ATDC.

c. Place the cylinder head gasket on the cylinder block surface with the front face of the Lot No. stamp upward.

Text in Illustration

*1	Lot No.
*a	Front

NOTICE:

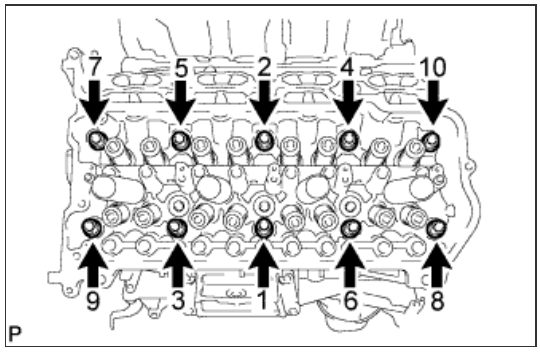
- **Be careful of the installation direction.**
- **Make sure that no oil is on the front end indicated b the arrows of the cylinder head gasket.**

d. Place the cylinder head on the cylinder block.

NOTICE:

- **Ensure that no oil is on the mounting surface of the cylinder head.**
- **Gently place the cylinder head in order not to damage the gasket with the bottom part of the head.**

INT:



The cylinder head bolts are tightened in 3 progressive steps.

e. Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.

f. Step 1:

INT:

The cylinder head bolts are tightened in 3 progressive steps.

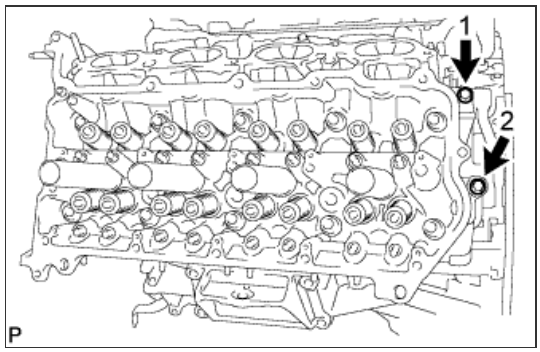
i. Using a 10 mm bi-hexagon wrench, install and uniformly tighten the 10 cylinder head bolts with the plate washers in several steps in the sequence shown in the illustration.

Torque:
36 N*m{ 367 kgf*cm , 27 ft.*lbf }

g. Step 2:

i. Mark the front side of each cylinder head bolt head with paint.

ii. Tighten the cylinder head bolts another 90°.



h. Step 3:

i. Tighten the cylinder head bolts an additional 90°.

ii. Check that the paint marks are now at a 180° angle to the front.

i. Install and uniformly tighten the 2 bolts in the sequence shown in the illustration.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

15. INSTALL AL E STEM CAP

a. Apply a light coat of engine oil to the valve stem caps.

b. Install the 32 valve stem caps to the cylinder heads.

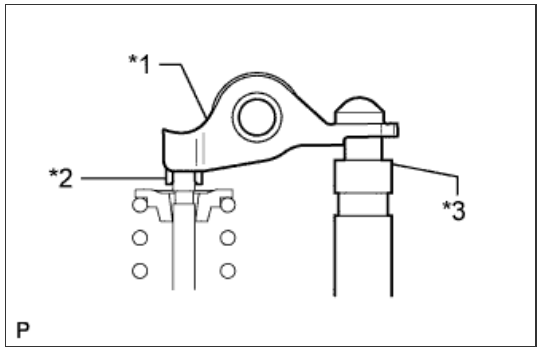
16. INSTALL AL E LAS ADJUSTER ASSEMBLY

a. Inspect the valve lash adjuster before installing it (Click here).

b. Install the 32 valve lash adjusters to the cylinder heads.

NOTICE:

Install the lash adjuster to the same place it was removed from.



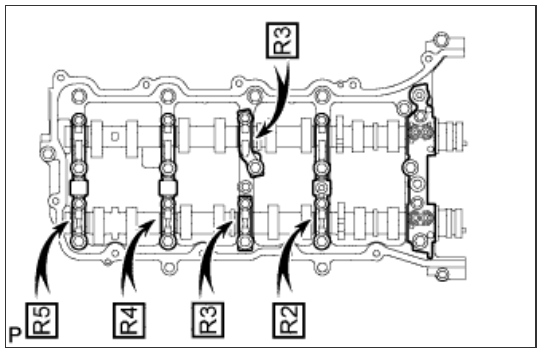
17. INSTALL NO. 1 AL E ROCKER ARM SUB-ASSEMBLY

a. Apply engine oil to the lash adjuster tips and valve stem cap ends.

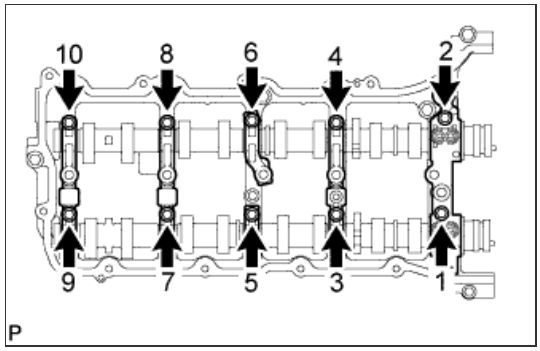
b. Install the 32 valve rocker arms as shown in the illustration.

Text in Illustration

*1	Valve Rocker Arm
*2	Valve Stem Cap
*3	Valve Lash Adjuster



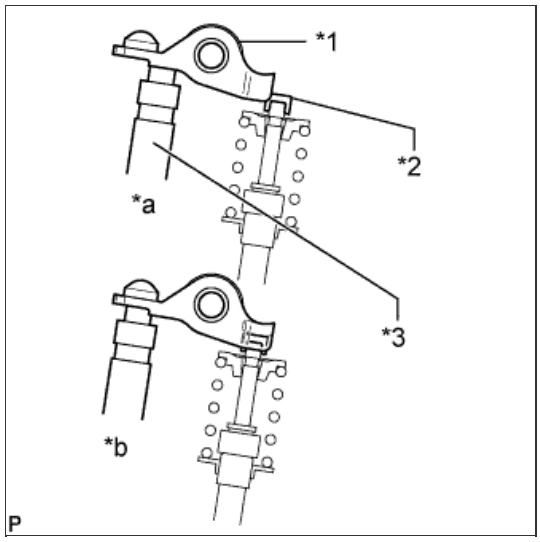
18. INSTALL CAMS AFT BEARING CAP R



a. Apply a light coat of engine oil to the camshaft journals, camshaft housings and bearing caps.

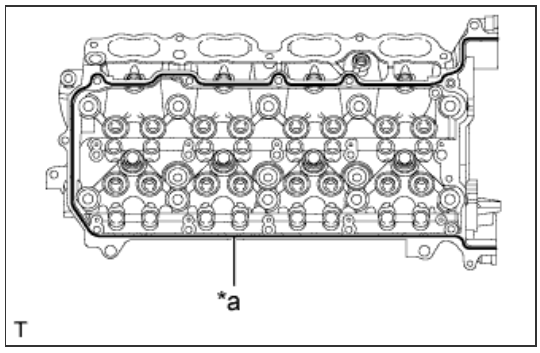
b. Install the No. 1 and No. 2 camshafts to the camshaft housing.

c. Confirm the marks and numbers on the camshaft bearing caps and place them in their proper positions and directions.



d. Temporarily install the 10 bolts in the order shown in the illustration.

19. INSTALL CAMS AFT OUSING SUB-ASSEMBLY R



a. Make sure that the valve rocker arms are installed as shown in the illustration.

Text in Illustration

*1	Valve Rocker Arm
*2	Valve Stem Cap
*3	Valve Lash Adjuster
*a	INCORRECT
*b	CORRECT

b. Apply seal packing in a continuous line as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

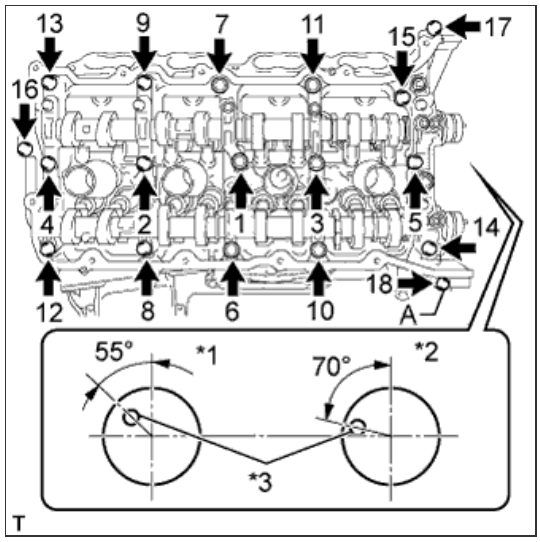
Standard seal diameter:
3.5 to 4.0 mm 0.138 to 0.157 in.

Text in Illustration

*a	3.5 to 4.0 mm

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the camshaft housing within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**



c. Install the camshaft housing, and install the 18 bolts in the order shown in the

illustration.

Torque:
for bolt A:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }
except bolt A:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }

Text in Illustration

Torque:
16 N*m{ 163 kgf*cm , 12 ft.*lbf }

NOTICE:

Thoroughly wipe clean any seal packing.

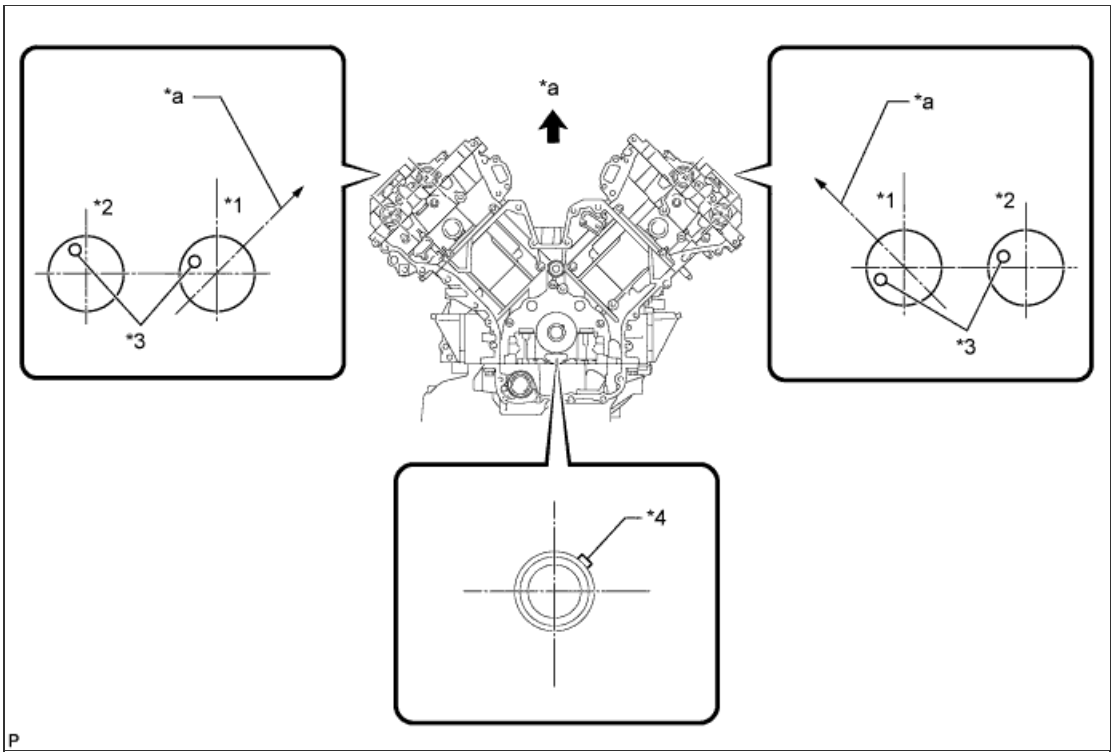
22. INSTALL CRANKS AFT TIMING GEAR KEY

a. Install the timing gear key.

INT:

The other timing gear key will be installed at a later step.

23. SET NO. 1 CYLINDER TO TDC COMPRESSION



a. Temporarily install the crankshaft pulley bolt.

b. Rotate the crankshaft so that the timing gear key is as shown in the illustration. Then using a wrench, rotate each camshaft so that the timing marks are as shown in the illustration.

NOTICE:

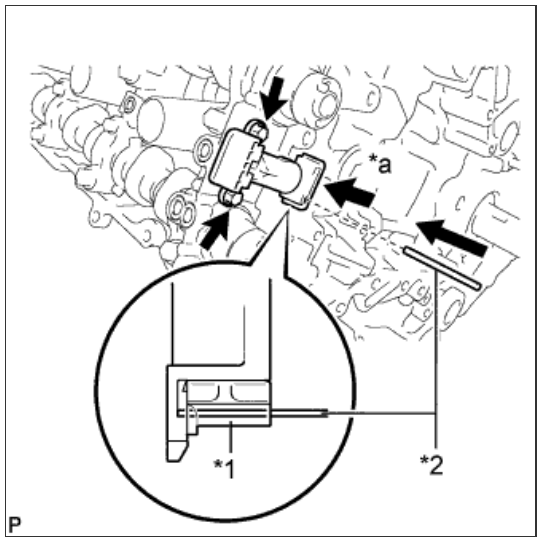
When the crankshaft or a camshaft is rotated excessively, the valves and pistons may interfere with each other.

c. Remove the crankshaft pulley bolt.

Text in Illustration

*1	IN	*2	EX
*3	Knock Pin	*4	Key
*a	Toward Ceiling	-	-

24. INSTALL NO. 2 C AIN TENSIONER ASSEMBLY



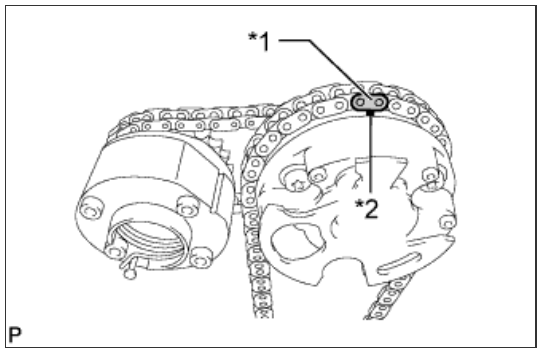
a. Install the chain tensioner with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

Text in Illustration

*1	Plunger
*2	Pin
*a	Push

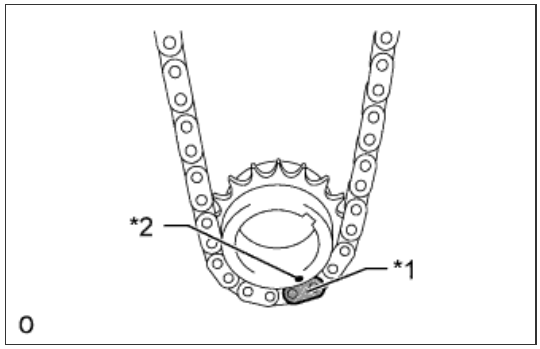
b. While raising up the No. 2 chain tensioner, insert a pin of 1.0 mm (0.0394 in.) into the hole to fix it in place.



25. INSTALL NO. 1 C AIN SUB-ASSEMBLY R

a. Align the No. 1 chain orange mark plate with the camshaft timing gear timing mark, and attach the chain to the gear as shown in the illustration.

Text in Illustration

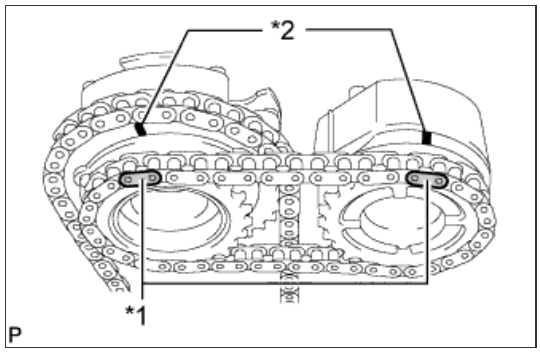


*1	Mark Plate
*2	Timing Mark

b. Align the No. 1 chain orange mark plate with the crankshaft timing sprocket timing mark, and attach the chain to the gear as shown in the illustration.

Text in Illustration

*1	Mark Plate
*2	Timing Mark



c. Align the No. 2 chain yellow mark plates with the timing marks of the camshaft timing gear assembly and camshaft timing exhaust gear assembly, and attach the No. 2 chain to the gears as shown in the illustration.

Text in Illustration

*1	Mark Plate
*2	Timing Mark

INT:

The crankshaft timing sprocket RH and camshaft timing exhaust gear will be installed with the No. 1 and No. 2 chains connected to the gears.

d. Install the crankshaft timing sprocket RH to the crankshaft.

e. Align and attach the knock pin of the No. 1 camshaft with the pin hole of the camshaft timing gear.

f. Using the hexagonal portion of the No. 2 camshaft, align and attach the knock pin of the No. 2 camshaft with the pin hole of the camshaft timing exhaust gear.

g. Remove the pin from the No. 2 chain tensioner.

h. Using a wrench to hold the hexagonal portion of the No. 1 camshaft, temporarily install the bolt.

i. Using a wrench to hold the hexagonal portion of the No. 2 camshaft, temporarily install the bolt.

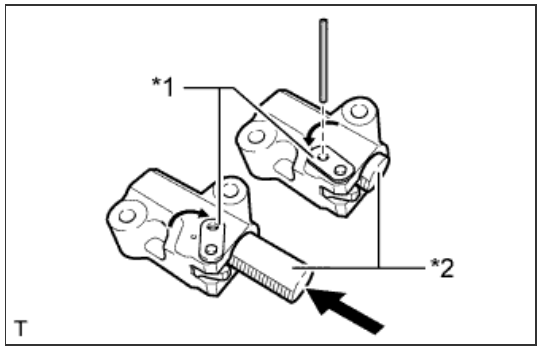
26. INSTALL NO. 1 C AIN IBRATION DAMPER R

a. Install the vibration damper with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

27. INSTALL NO. 1 C AIN TENSIONER SLIPPER R

INT:



If you cannot install the chain tensioner slipper due to the tension of the chain, use the hexagonal portion of the camshaft to loosen the chain, and then install the chain tensioner slipper.

28. INSTALL NO. 1 C AIN TENSIONER ASSEMBLY R

a. Move the stopper plate clockwise to release the lock, and push the plunger deep into the tensioner.

Text in Illustration

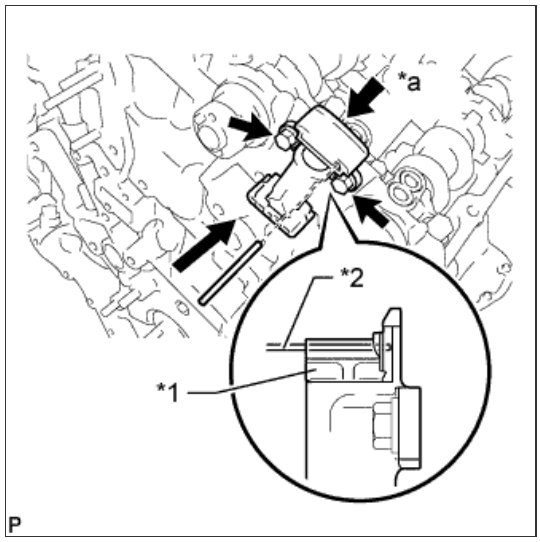
*1	Stopper Plate
*2	Plunger

b. Move the stopper plate counterclockwise to set the lock, and insert a hexagon wrench into the hole of the stopper plate.

c. Install the chain tensioner with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

d. Remove the hexagon wrench from the chain tensioner.



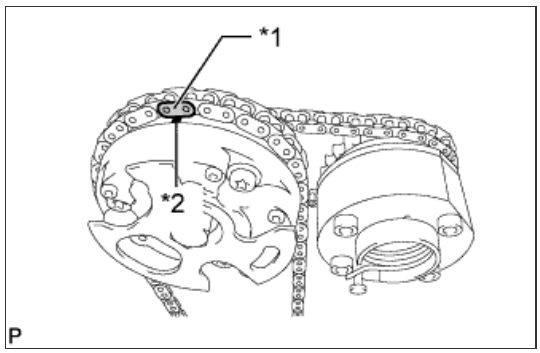
29. INSTALL NO. 3 C AIN TENSIONER ASSEMBLY

a. Install the chain tensioner with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

Text in Illustration

*1	Plunger
*2	Pin
*a	Push

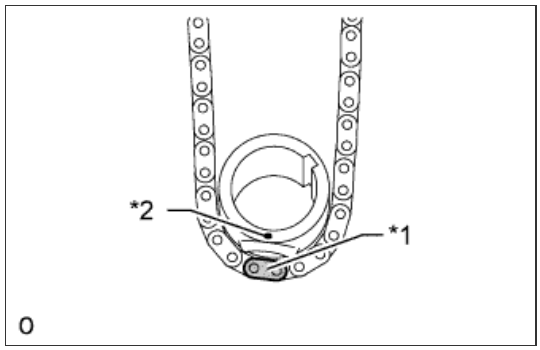


b. While pushing down the No. 2 chain tensioner, insert a pin of 1.0 mm (0.0394 in.) into the hole to fix it in place.

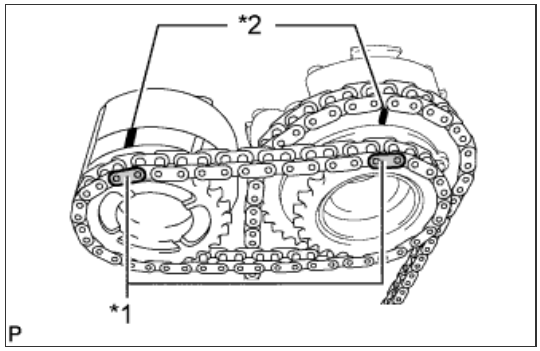
30. INSTALL NO. 1 C AIN SUB-ASSEMBLY L

a. Align the No. 1 chain orange mark plate with the camshaft timing gear timing mark, and attach the chain to the gear as shown in the illustration.

Text in Illustration



*1	Mark Plate
*2	Timing Mark



b. Align the No. 1 chain orange mark plate with the crankshaft timing sprocket timing mark, and attach the chain to the gear as shown in the illustration.

Text in Illustration

*1	Mark Plate
*2	Timing Mark

c. Align the No. 2 chain yellow mark plates with the timing marks of the camshaft timing gear assembly and camshaft timing exhaust gear assembly, and attach the No. 2 chain to the gears as shown in the illustration.

Text in Illustration

*1	Mark Plate
*2	Timing Mark

INT:

The crankshaft timing sprocket LH and camshaft timing exhaust gear will be installed with the No. 1 and No. 2 chains connected to the gears.

d. Install the crankshaft timing sprocket LH to the crankshaft.

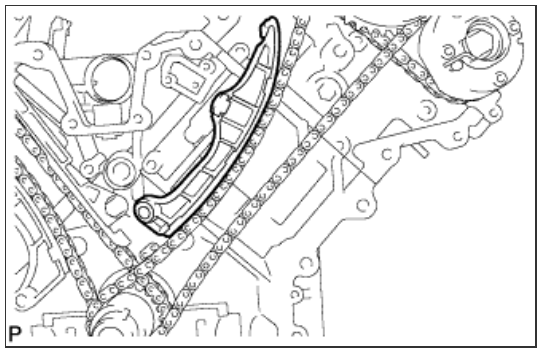
e. Align and attach the knock pin of the No. 3 camshaft with the pin hole of the camshaft timing gear.

f. Using the hexagonal portion of the No. 4 camshaft, align and attach the knock pin of the No. 4 camshaft with the pin hole of the camshaft timing exhaust gear.

NOTICE:

Because the timing mark positions of the gears may shift due to looseness of the No. 1 chain, use the hexagonal portion of the camshaft to hold the No. 3 camshaft in place until the No. 1 chain tensioner is installed.

g. Remove the pin from the No. 3 chain tensioner.



h. Using a wrench to hold the hexagonal portion of the No. 3 camshaft, temporarily install the bolt.

i. Using a wrench to hold the hexagonal portion of the No. 4 camshaft, temporarily install the bolt.

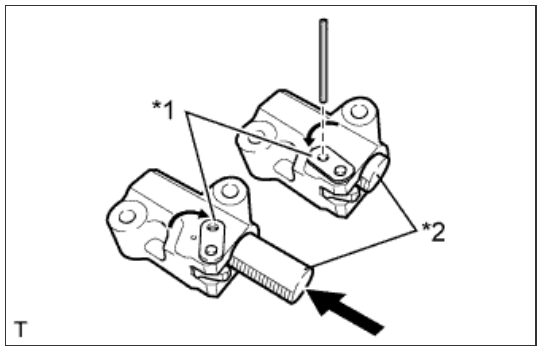
31. INSTALL NO. 1 C AIN TENSIONER SLIPPER L

INT:

If you cannot install the chain tensioner slipper due to the tension of the chain, use the hexagonal portion of the camshaft to loosen the chain, and install the chain tensioner slipper.

32. INSTALL NO. 1 C AIN TENSIONER ASSEMBLY L

a. Move the stopper plate clockwise to release the lock, and push the plunger deep into the tensioner.



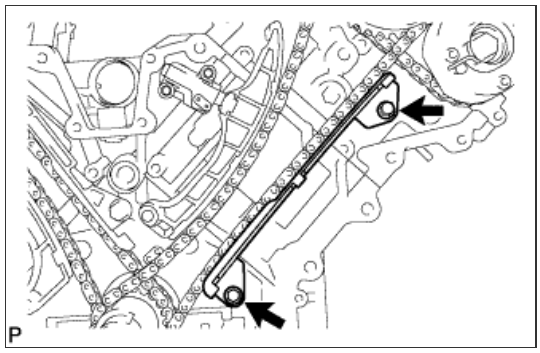
Text in Illustration

*1	Stopper Plate
*2	Plunger

b. Move the stopper plate counterclockwise to set the lock, and insert a hexagon wrench into the hole of the stopper plate.

c. Install a new gasket and the chain tensioner with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



33. INSTALL NO. 1 C AIN IBRATION DAMPER L

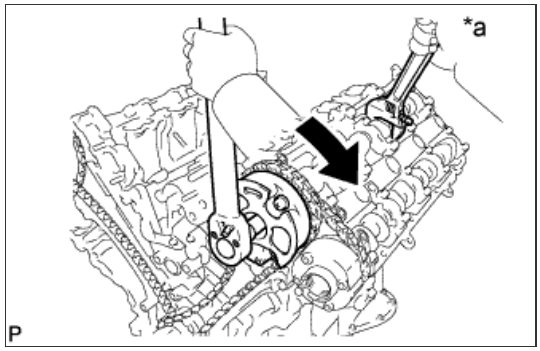
a. Install the vibration damper with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. Remove the hexagon wrench from the No. 1 chain tensioner.

34. TIG TEN CAMS AFT TIMING GEAR

a. for Bank 1:



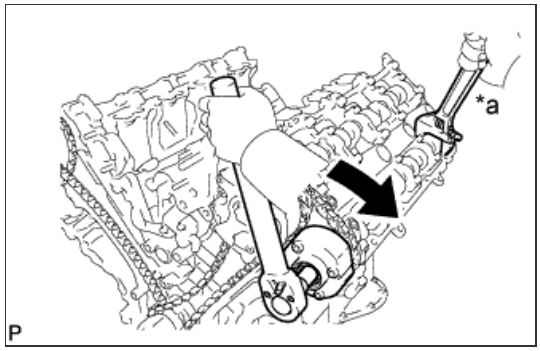
i. Using a wrench, hold the hexagonal portion of the No. 3 camshaft.

Text in Illustration

*a	Hold
➡	Turn

ii. Tighten the bolt of the camshaft timing gear.

Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

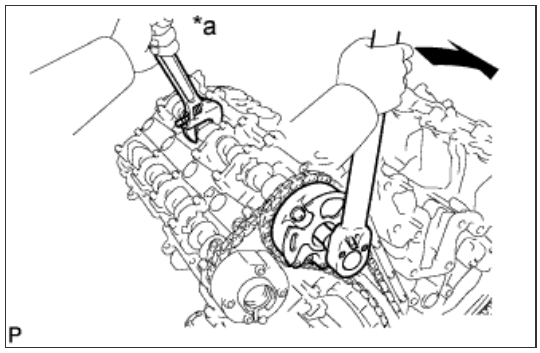


iii. Using a wrench to hold the hexagonal portion of the No. 4 camshaft, tighten the bolt of the camshaft timing exhaust gear.

Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

Text in Illustration

*a	Hold
➡	Turn



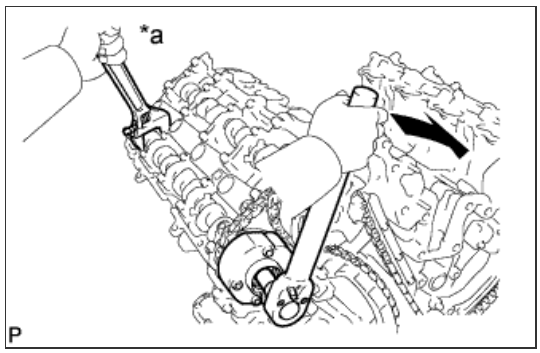
b. for Bank 2:

i. Using a wrench, hold the hexagonal portion of the No. 1 camshaft.

Text in Illustration

*a	Hold
➡	Turn

ii. Tighten the bolt of the camshaft timing gear.



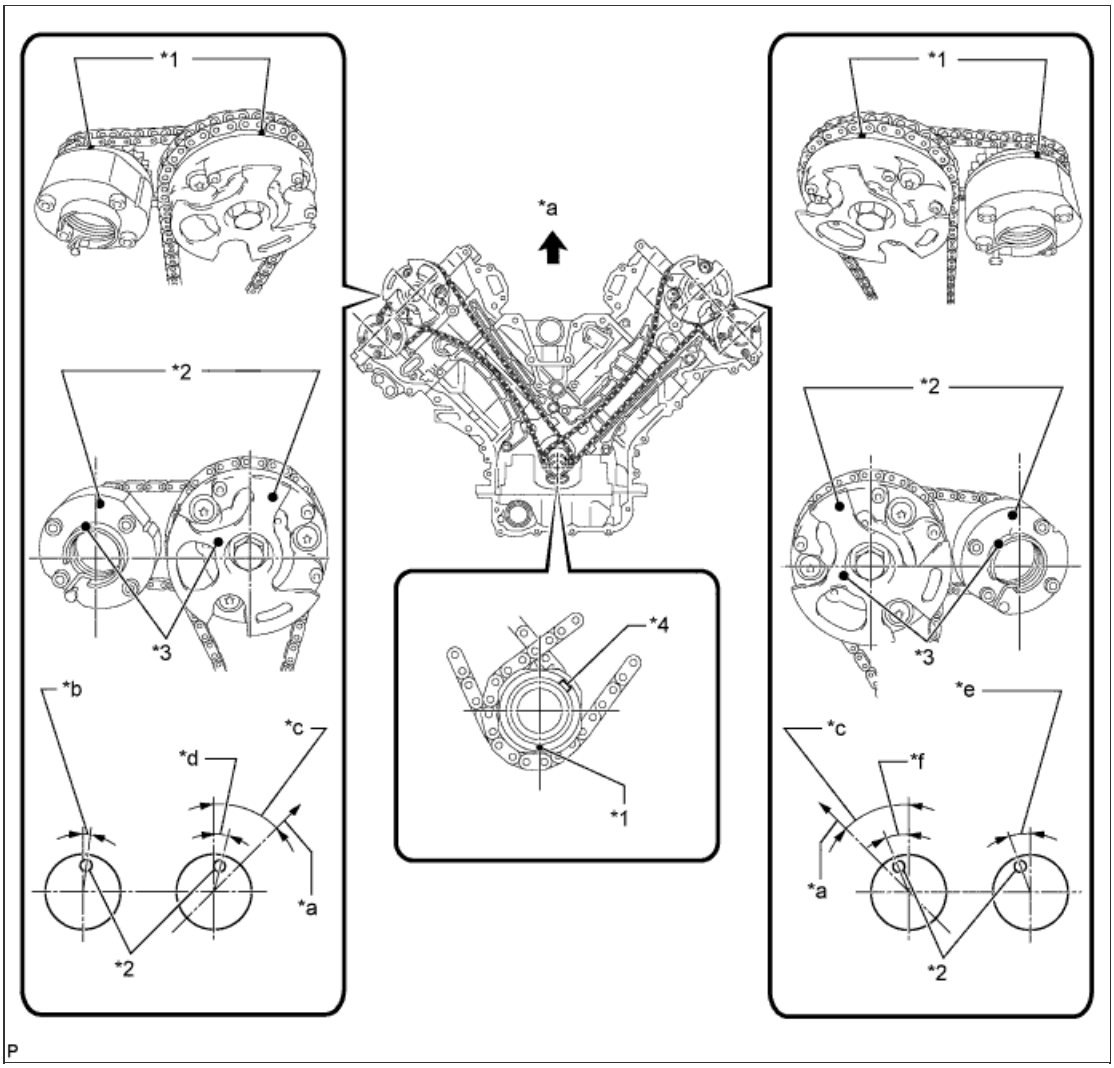
Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

iii. Using a wrench to hold the hexagonal portion of the No. 2 camshaft, tighten the bolt of the camshaft timing exhaust gear.

Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

Text in Illustration

*a	Hold
➡	Turn



35. C ECK NO. 1 CYLINDER TO TDC COMPRESSION

a. Temporarily install the crankshaft pulley bolt.

b. Rotate the crankshaft clockwise, and check that the timing marks on the crankshaft timing sprocket and camshaft timing gears are as shown in the illustration.

c. Remove the crankshaft pulley bolt.

Text in Illustration

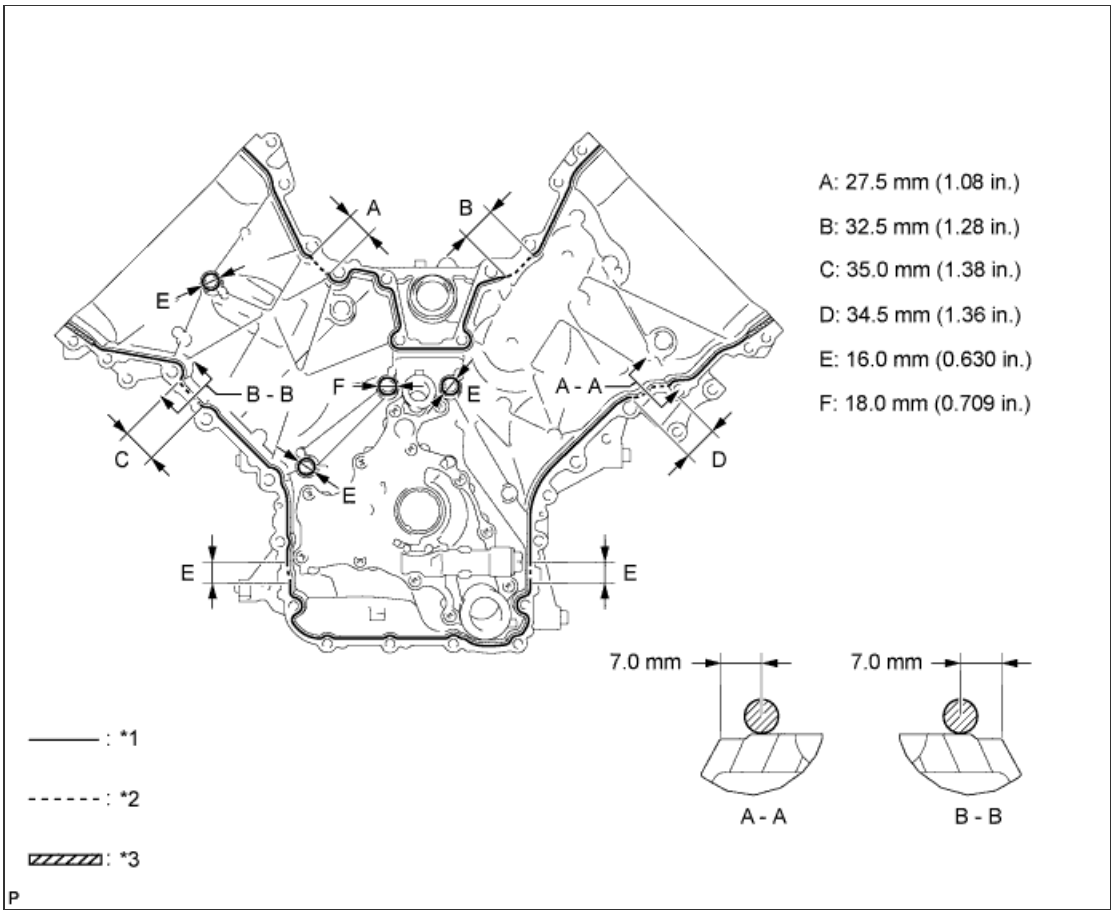
*1	Timing Mark	*2	Timing Mark Position
*3	Knock Pin Position	*4	Key
*a	Toward Ceiling	*b	Approximately 2°
*c	Approximately 45°	*d	Approximately 16°
*e	Approximately 18°	*f	Approximately 32°

36. INSTALL ATER INLET PIPE

a. Apply soapy water to 2 new O-rings and install them to the inlet pipe.

b. Install the inlet pipe to the No. 1 heat exchanger cover.

37. INSTALL TIMING C AIN CO ER SUB-ASSEMBLY



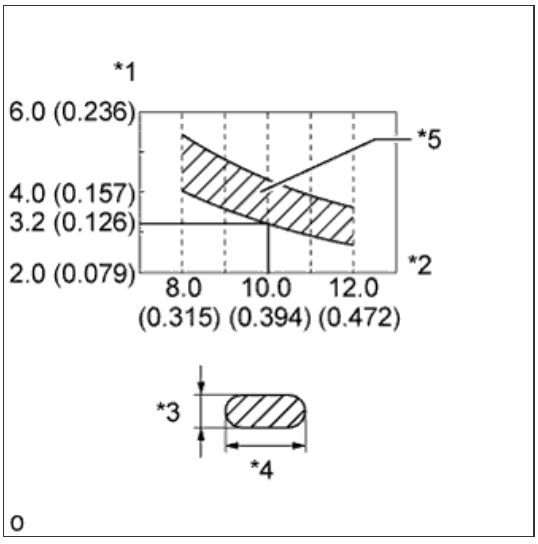
a. Apply a light coat of engine oil to a new oil pump gasket.

b. Install the oil pump gasket.

c. Apply a light coat of engine oil to a new O-ring.

d. Install the O-ring.

e. Apply seal packing in a continuous line to the timing chain cover as shown in the following illustration.



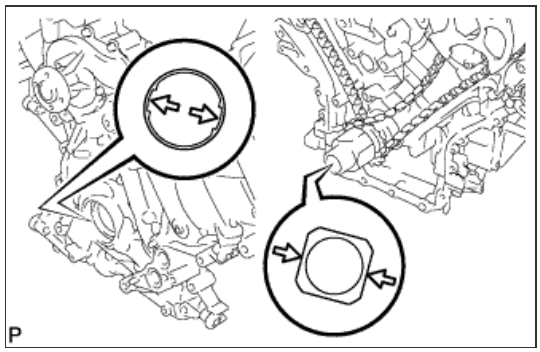
Text in Illustration

*1	Continuous line area	*2	Dashed line area
*3	Diagonal line area	-	-

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Apply Seal Packing as Follows:

Area	Seal Packing Diameter	Application Position from Inside Edge of Cover
Continuous Line Area	3.0 to 4.0 mm (0.118 to 0.157 in.)	2.5 mm (0.0984 in.)
Dashed Line Area	6.4 mm (0.252 in.) or more, or within OK area shown in illustration	7.0 mm (0.276 in.)
Diagonal Line Area	3.0 to 4.0 mm (0.118 to 0.157 in.)	5.5 mm (0.217 in.)



Text in Illustration

*1	Seal Packing Thickness mm (in.)
*2	Seal Packing Width mm (in.)
*3	Seal Packing Thickness
*4	Seal Packing Width
*5	OK Area

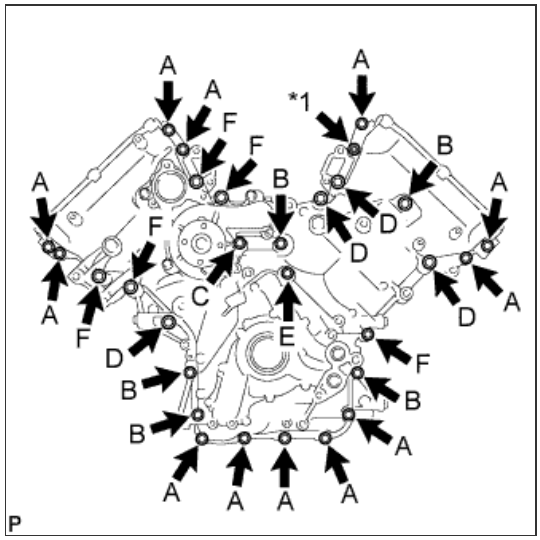
NOTICE:

- **hen the contact surfaces are wet, wipe them with an oil-free cloth before applying seal packing.**
- **Install the chain cover within 3 minutes and tighten the bolts within 10 minutes after applying seal packing.**

f. Align the oil pump drive rotor spline and crankshaft as shown in the illustration. Install the spline and chain cover to the crankshaft.

g. Temporarily install the timing chain cover with the 28 bolts and nut.

Standard Bolt:

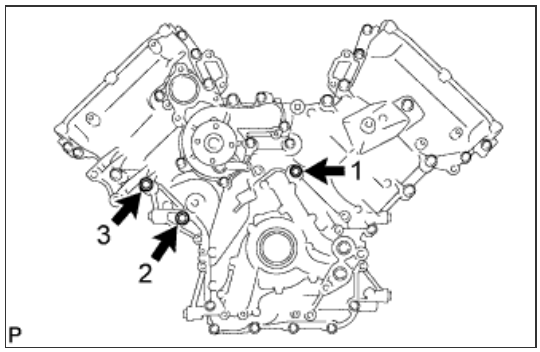


Item	Length	Thread Diameter
Bolt A	25 mm (0.984 in.)	8 mm (0.315 in.)
Bolt B	55 mm (2.17 in.)	8 mm (0.315 in.)
Bolt C	70 mm (2.76 in.)	8 mm (0.315 in.)
Bolt D	35 mm (1.38 in.)	10 mm (0.394 in.)
Bolt E	55 mm (2.17 in.)	10 mm (0.394 in.)
Bolt F	80 mm (3.15 in.)	10 mm (0.394 in.)

Text in Illustration

*1	Nut

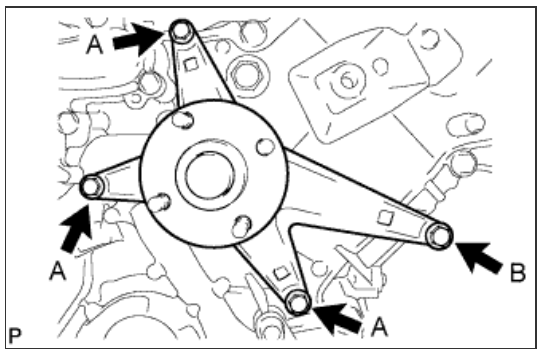
NOTICE:



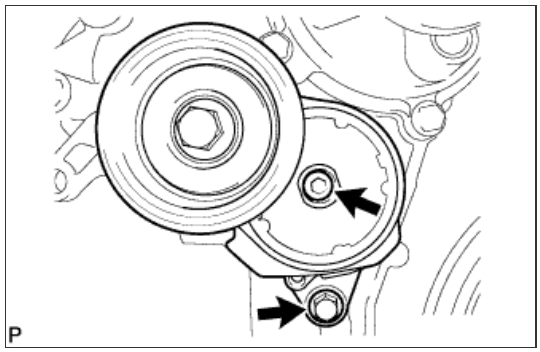
Make sure that there is no oil on the bolt threads.

h. Tighten the 3 bolts in several steps in the sequence shown in the illustration.

Torque:



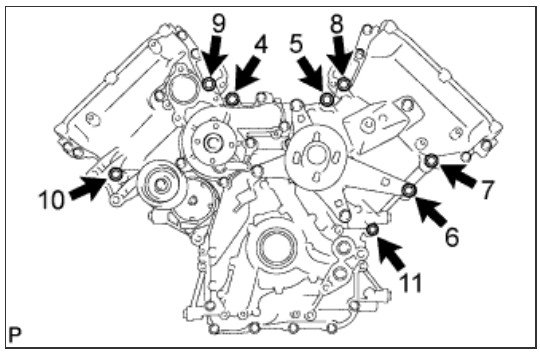
47 N*m{ 479 kgf*cm , 35 ft.*lbf }



i. Temporarily install the fluid coupling bracket with the 4 bolts.

Standard Bolt:

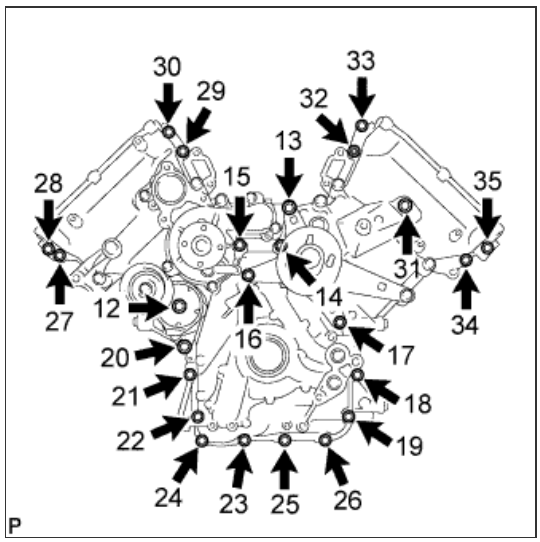
Item	Length	Thread Diameter
Bolt A	70 mm (2.76 in.)	8 mm (0.315 in.)
Bolt B	80 mm (3.15 in.)	10 mm (0.394 in.)



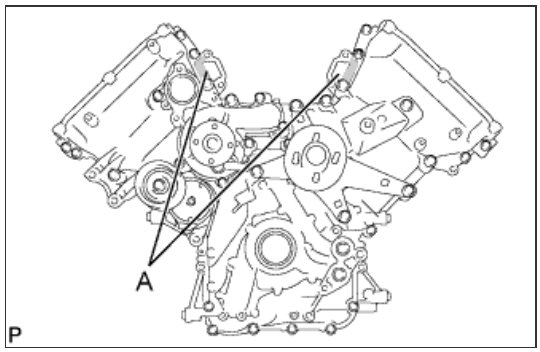
.Temporarily install the belt tensioner with the standard bolt and 6 mm hexagon wrench bolt.

k. Tighten the 8 bolts labeled 4 to 11 in several steps in the sequence shown in the illustration.

Torque:
47 N*m{ 479 kgf*cm , 35 ft.*lbf }



l. Tighten the 23 bolts and nut labeled 12 to 35 in several steps in the sequence shown in the illustration.



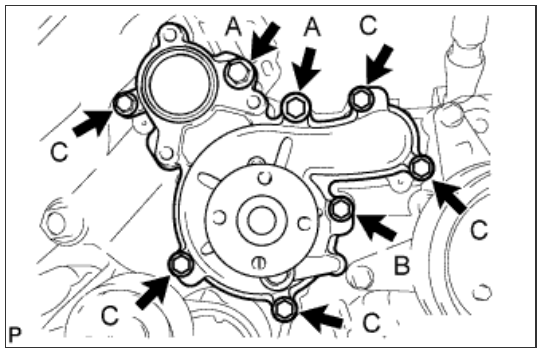
Torque:
23 N*m{ 235 kgf*cm , 17 ft.*lbf }

NOTICE:

- **Do not start the engine for at least 2 hours after installing.**

- **After the installation, if the seal packing has seeped out at the areas labeled A shown in the illustration, wipe it off.**

38. INSTALL ATER PUMP ASSEMBLY



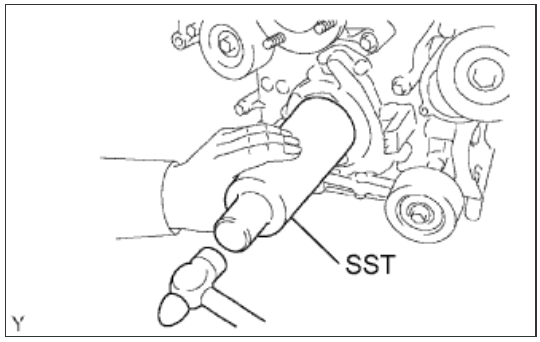
a. Install a new gasket and the water pump with the 8 bolts shown in the illustration.

Torque:
for bolt A:
47 N*m{ 479 kgf*cm , 35 ft.*lbf }

for bolt B:
23 N*m{ 235 kgf*cm , 17 ft.*lbf }
for bolt C:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

Standard Bolt:

Item	Length	Thread Diameter
Bolt A	80 mm (3.15 in.)	10 mm (0.394 in.)
Bolt B	70 mm (2.76 in.)	8 mm (0.315 in.)
Bolt C	25 mm (0.984 in.)	8 mm (0.315 in.)



39. INSTALL FRONT CRANKS AFT OIL SEAL

a. Apply MP grease to the lip of a new oil seal.

b. Using SST and a hammer, tap in the oil seal until its surface is flush with the timing chain cover edge.

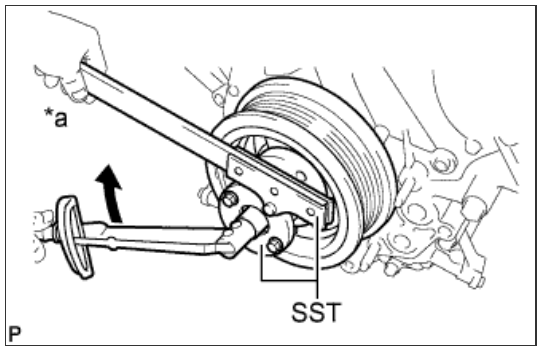
SST
09226-10010

40. INSTALL CRANKS AFT TIMING GEAR KEY

a. Install the crankshaft timing gear key.

41. INSTALL CRANKS AFT PULLEY

a. Align the pulley set key with the key groove of the pulley, and slide on the pulley.



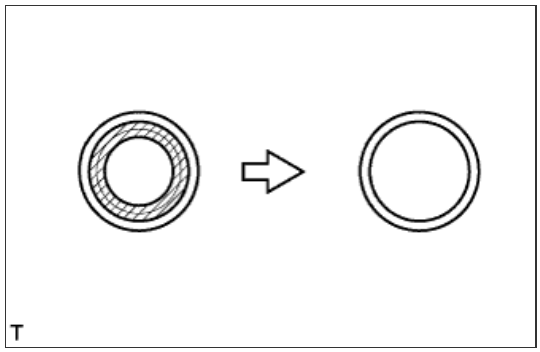
b. Using SST, install the pulley set bolt.

SST
09213-70011
09330-00021

Torque:
300 N*m{ 3059 kgf*cm , 221 ft.*lbf }

Text in Illustration

*a	Hold
➡	Turn



42. INSTALL SPARK PLUG TUBE GASKET

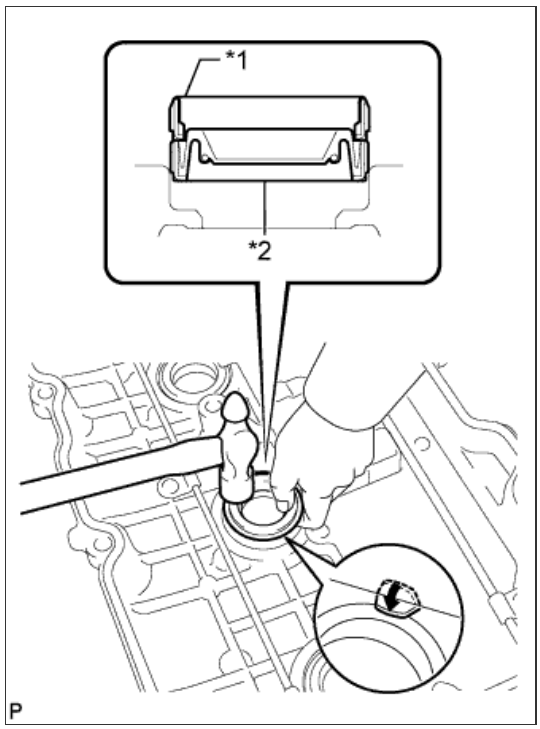
a. Using a cutter knife, cut off the seal part of the removed gasket.

Text in Illustration

	Area to cut off

b. Using the removed gasket and a hammer, tap in a new gasket until it stops.

Text in Illustration



*1	Removed Gasket
*2	New Gasket

INT:

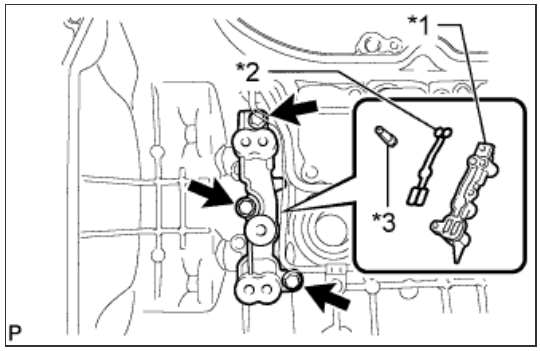
If the removed gasket does not fit on the new one, correct the removed one with pliers.

c. Apply a light coat of MP grease to the lip of the gasket.

d. Return the 4 ventilation baffle plate claws to the original positions.

43. INSTALL OIL CONTROL AL E FILTER

a. LH:



i. Install the filter in the cylinder head.

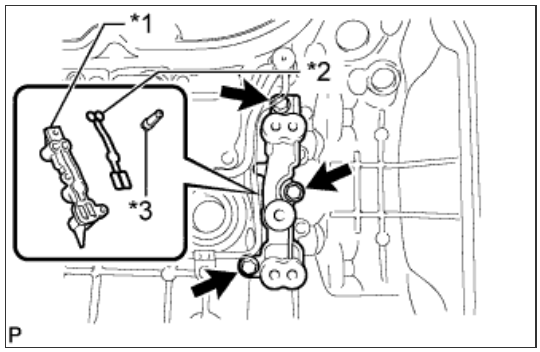
Text in Illustration

*1	Cylinder Head Cover Spacer
*2	Gasket
*3	Filter

ii. Install a new gasket and the cylinder head cover spacer with the 3 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. RH:



i. Install the filter in the cylinder head.

Text in Illustration

*1	Cylinder Head Cover Spacer
*2	Gasket
*3	Filter

ii. Install a new gasket and the cylinder head cover spacer with the 3 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

44. INSTALL CYLINDER EAD CO ER SUB-ASSEMBLY R

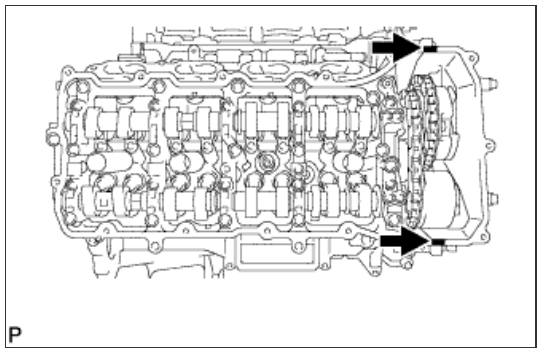
a. Install 5 new gaskets to the camshaft bearing caps. (No. 1, No. 3).

b. Install a new gasket to the cylinder head cover.

NOTICE:

Remove any oil from the contact surface.

c. Apply seal packing as shown in the illustration.



Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

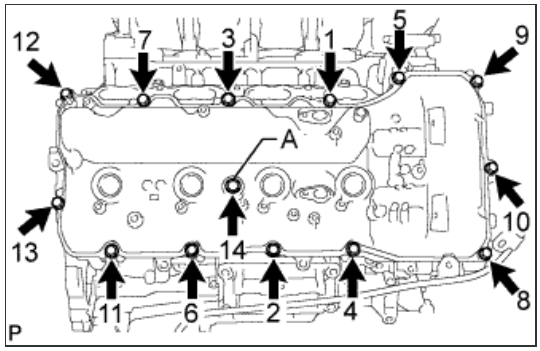
Text in Illustration

➡	Seal Packing

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**

d. Install the cylinder head cover and a new seal washer with the 14 bolts in the order shown in the illustration.



Torque:
for bolt A:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
except bolt A:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

NOTICE:

Do not start the engine for at least 2 hours after the installation.

e. Install the noise filter to the cylinder head cover with the bolt.

Torque:
7.0 N*m{ 71 kgf*cm , 62 in.*lbf }

45. INSTALL CYLINDER EAD CO ER SUB-ASSEMBLY L

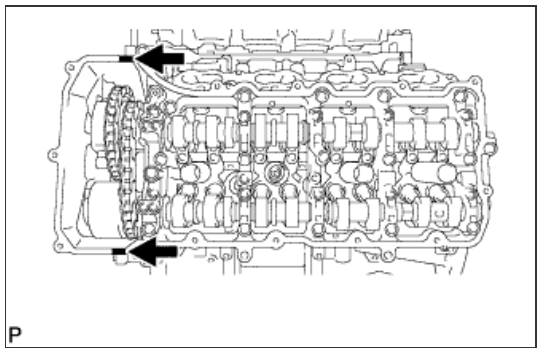
a. Install 5 new gaskets to the camshaft bearing caps (No. 2, No. 3).

b. Install a new gasket to the cylinder head cover.

NOTICE:

Remove any oil from the contact surface.

c. Apply seal packing as shown in the illustration.



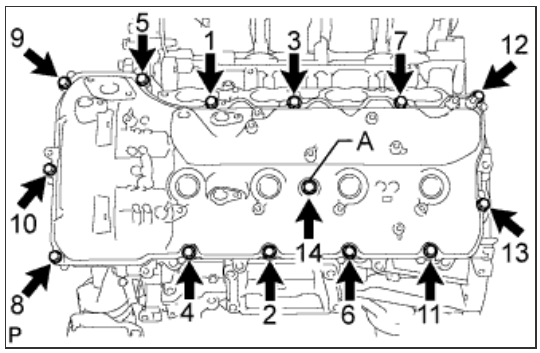
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Text in Illustration

➡	Seal Packing

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**



d. Install the cylinder head cover and a new seal washer with the 14 bolts in the order shown in the illustration.

Torque:
for bolt A:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
except bolt A:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

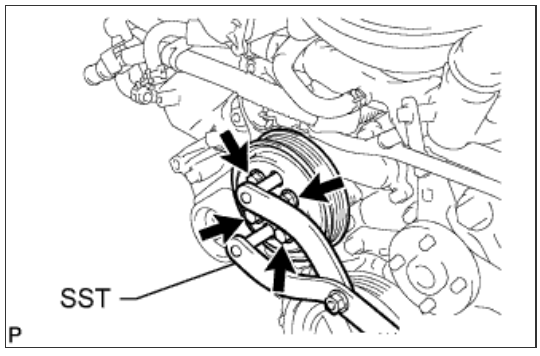
NOTICE:

Do not start the engine for at least 2 hours after the installation.

46. INSTALL NO. 1 IDLER PULLEY SUB-ASSEMBLY

a. Install the idler pulley with the bolt.

Torque:
43 N*m{ 438 kgf*cm , 32 ft.*lbf }



47. INSTALL ATER PUMP PULLEY

a. Temporarily install the pulley with the 4 bolts.

b. Using SST, hold the pulley and tighten the 4 bolts.

SST
09960-10010 09962-01000, 09963-01000

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

48. INSTALL CAMS AFT OIL CONTROL AL E ASSEMBLY

a. for Bank 1:

i. Apply a light coat of engine oil to 2 new O-rings.

ii. Install the 2 O-rings to the 2 oil control valves.

iii. Install the 2 oil control valves with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. for Bank 2:

i. Apply a light coat of engine oil to 2 new O-rings.

ii. Install the 2 O-rings to the 2 oil control valves.

iii. Install the 2 oil control valves with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

49. INSTALL CRANKS AFT POSITION SENSOR

a. Install the crankshaft position sensor with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

50. INSTALL CRANK POSITION SENSOR PROTECTOR

a. Install the sensor protector with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

51. INSTALL CAMS AFT POSITION SENSOR

a. Install the camshaft position sensor with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

52. INSTALL T SENSOR

a. for Bank 1:

i. Install the 2 VVT sensors with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. for Bank 2:

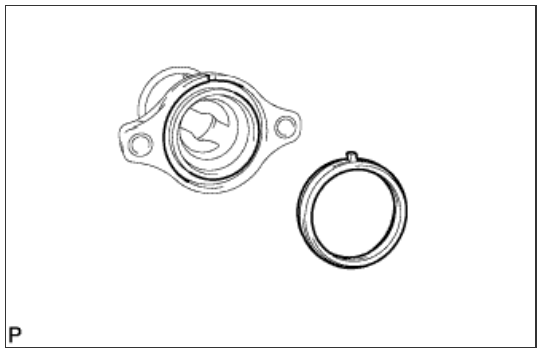
i. Install the 2 VVT sensors with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

53. INSTALL SPARK PLUG

a. Using a 16 mm plug wrench, install the 8 spark plugs.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



54. INSTALL OIL FILLER CAP OUSING

a. Align the protrusion of a new gasket with the cutout of the oil filler cap housing,

and install the gasket to the housing.

b. Install the cap housing with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

55. INSTALL OIL FILLER CAP SUB-ASSEMBLY

56. INSTALL OIL FILTER BRACKET

a. Apply a light coat of engine oil to 2 new O-rings.

b. Install the 2 O-rings to the timing chain cover.

c. Install the oil filter bracket with the 2 nuts and 2 bolts.

Torque:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }

57. INSTALL NO. 1 OIL COOLER BRACKET

a. Connect the ground wire to the cylinder block.

b. Install the oil cooler bracket with the 2 nuts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

58. INSTALL OIL FILTER ELEMENT

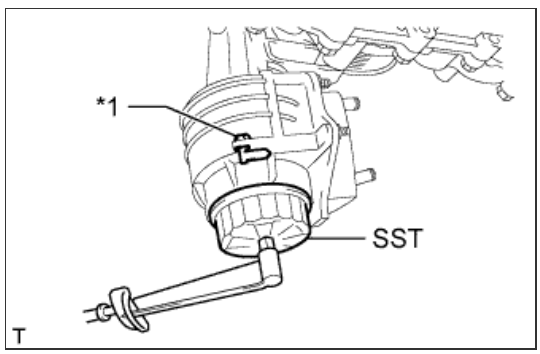
a. Clean the inside of the oil filter cap, its threads and its O-ring groove.

b. Apply a small amount of engine oil to a new O-ring and install it to the oil filter cap.

c. Set a new oil filter element to the oil filter cap.

d. Remove any dirt or foreign matter from the installation surface of the engine.

e. Apply a small amount of engine oil to the O-ring again and temporarily install the oil filter cap.



NOTICE:

Do not remove the oil filter bracket clip.

f. Using SST, tighten the oil filter cap.

SST
09228-06501

Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf }

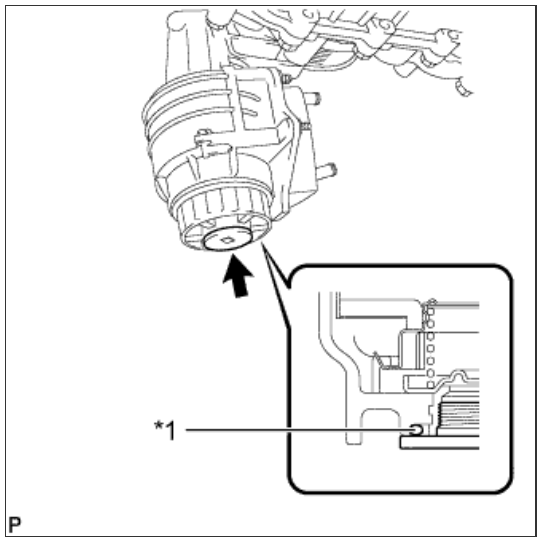
Text in Illustration

*1	Oil Filter Bracket Clip

NOTICE:

- **hen tightening the oil filter cap, do not remove the oil filter bracket clip.**
- **Make sure that the oil filter is installed securely as shown in the illustration.**

- **Be careful that the O-ring does not get caught between any surrounding parts.**



g. Apply a small amount of engine oil to a new drain plug O-ring, and install it to the oil filter cap.

Text in Illustration

*1	O-Ring

NOTICE:

Before installing the O-ring, remove any dirt or foreign matter from the installation surface of the oil filter cap.

h. Install the oil filter drain plug.

Torque:
13 N*m{ 127 kgf*cm , 9 ft.*lbf }

NOTICE:

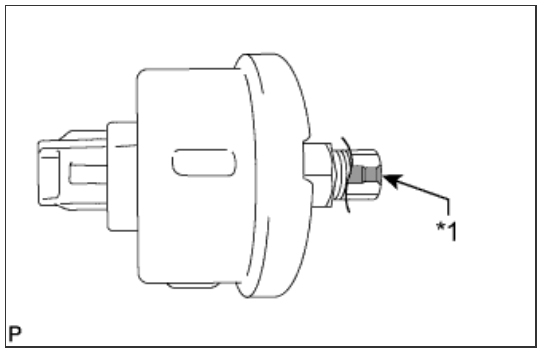
Be careful that the O-ring does not get caught between any surrounding parts.

i. Install the No. 2 engine under cover seal with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

59. INSTALL OIL PRESSURE SENDER GAUGE ASSEMBLY

a. Apply adhesive to 2 or 3 threads of the oil pressure sender gauge.



Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

NOTICE:

Do not allow adhesive to contact the oil hole.

Text in Illustration

*1	Oil Hole

b. Install the oil pressure sender gauge.

Torque:
15 N*m{ 153 kgf*cm , 11 ft.*lbf }

NOTICE:

Do not start the engine within 1 hour after installation.

c. Connect the sender gauge connector.

for Preparation Click here

1. INSTALL NOISE FILTER

a. Install the 2 noise filters to the cylinder head cover with the 2 bolts.

Torque:
7.0 N*m{ 71 kgf*cm , 62 in.*lbf }

2. INSTALL IGNITION COIL ASSE L

a. Install the 8 ignition coils with the 8 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

3. INSTALL FRONT NO. 1 ENGINE OUNTING BRACKET LH

a. Install the mounting bracket with the 4 bolts.

Torque:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }

4. INSTALL FRONT NO. 1 ENGINE OUNTING BRACKET RH

a. Install the mounting bracket with the 4 bolts.

Torque:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }

5. INSTALL C LINDER BLOCK WATER DRAIN COCK SUB-ASSE L

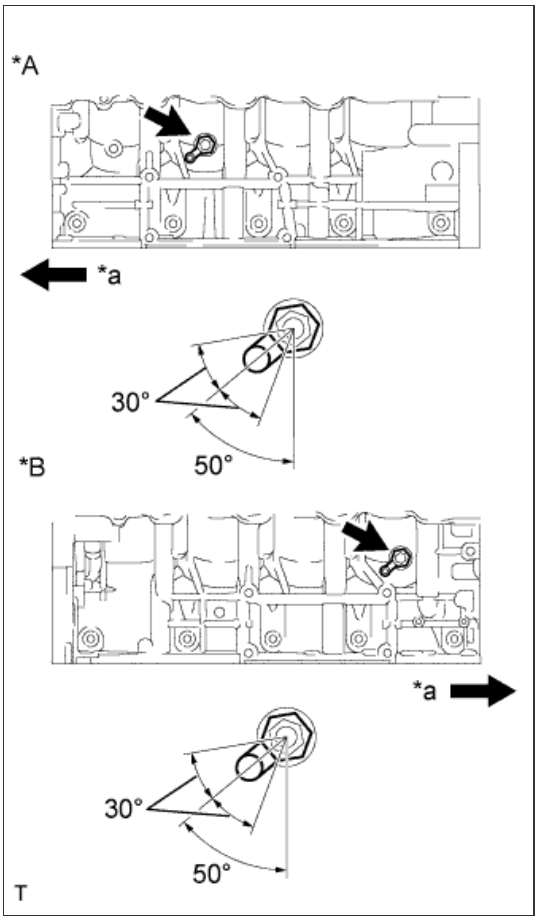
a. Apply adhesive to 2 or 3 threads of the drain cocks.

Adhe i e:
Toyota Genuine Adhe i e 1344, Three Bond 1344 or equi alent

b. Install the water drain cocks as shown in the illustration.

Torque:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }

Text in Illu tration



*A	LH
*B	RH
*a	Front

NOTICE:

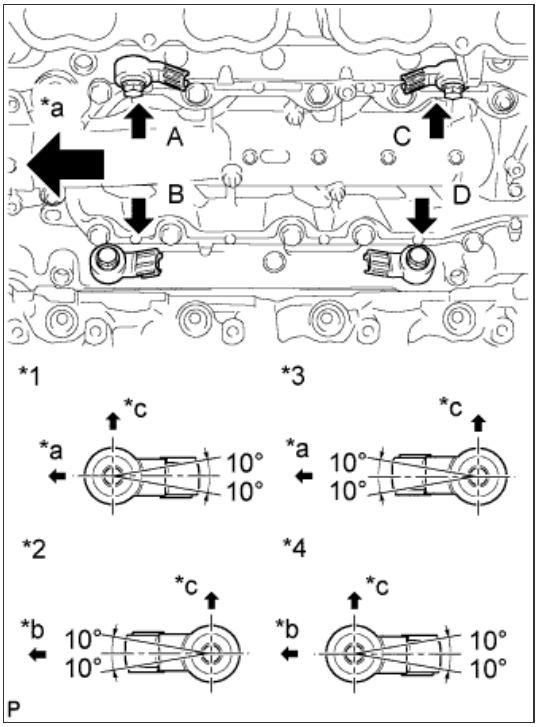
- **Do not rotate the drain cock more than 1 re olution 360 after tightening the drain cock to the pecified torque.**
- **Do not loo en the drain cock to ad u t them. If an ad u tment i nece ary, remo e the drain cock and rein tall them.**

c. Install the water drain cock plugs to the water drain cocks.

Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }

6. INSTALL KNOCK SENSOR

a. Install the 4 sensors with the 4 bolts so that the sensors are angled as shown in the illustration.



Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

Text in Illu tration

*1	Bank 2 Sensor 1
*2	Bank 1 Sensor 1
*3	Bank 2 Sensor 2
*4	Bank 1 Sensor 2
*a	Front
*b	Rear
*c	Top

NOTICE:

The acceptable installation angle of the sensor is between 10° upward and downward from the horizontal position.

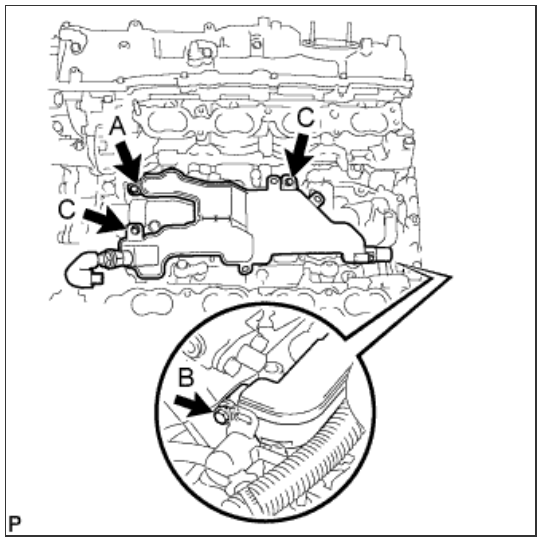
7. INSTALL SEPARATOR CASE

a. After inserting the pipe on the rear of the separator case into the oil return pipe and the pipe on the front into the ventilation pipe, temporarily install bolt A.

b. Temporarily install bolt B and tighten bolt A.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

c. Install the bolts labeled C.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

d. Tighten bolt B.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

Standard Bolt:

Item	Length	Thread Diameter
Bolt A	25 mm (0.984 in.)	6 mm (0.236 in.)
Bolt B and C	16 mm (0.630 in.)	6 mm (0.236 in.)

8. INSTALL SENSOR WIRE

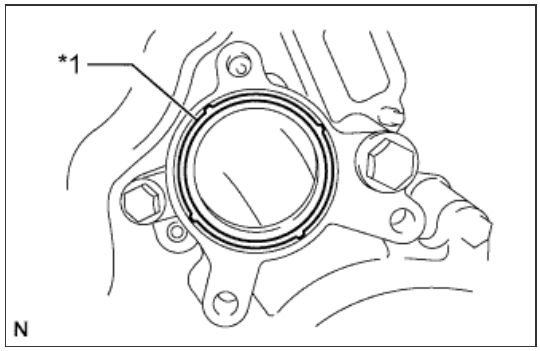
a. Connect the 3 clamps and 4 knock sensor connectors.

INSTALL WATER B PASS PIPE SUB-ASSE L

a. Install the water by-pass pipe with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

10. INSTALL WATER INLET HOUSING



a. Install a new gasket to the timing chain cover.

b. Install the water inlet with the 3 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

Text in Illustration

*1	Gasket

11. INSTALL FRONT WATER B PASS OINT

a. Install 2 new gaskets and the water by-pass joint with the 4 nuts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. Connect the No. 2 water by-pass hose to the water by-pass joint.

12. INSTALL NO. 1 WATER B PASS HOSE

a. Install the No. 1 water by-pass hose by connecting the hose to the water inlet housing and front water by-pass joint.

13. INSTALL NO. 2 WATER B PASS PIPE SUB-ASSE L

a. Connect the 4 hoses.

b. Install the water by-pass pipe with the 3 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

14. INSTALL NO. 1 ENGINE CO ER

15. INSTALL NO. 2 ENGINE CO ER

16. INSTALL NO. 1 FUEL TUBE

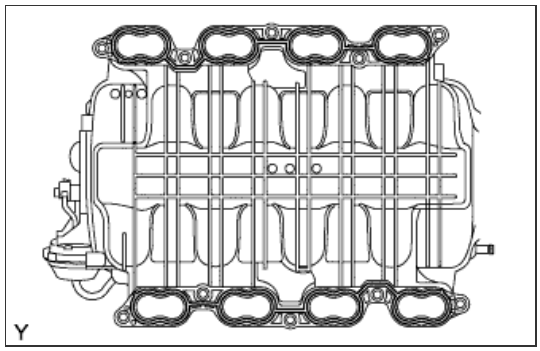
17. INSTALL NO. 2 FUEL TUBE

a. Install the No. 2 fuel tube with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

18. INSTALL INTAKE AIFOLD

a. Place 2 new gaskets on the intake manifold.



b. Place the intake manifold on the cylinder head.

c. Install and uniformly tighten the 8 bolts and 2 nuts in several steps.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

d. Install the wire bracket to the intake manifold with the bolt.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

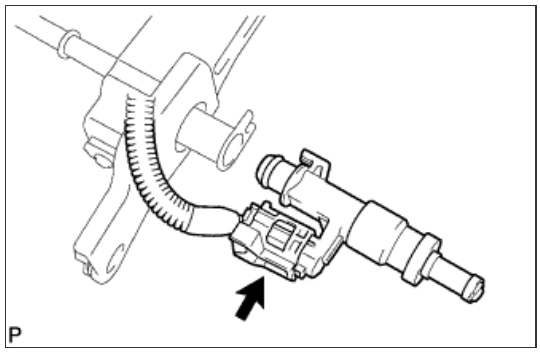
e. Connect the No. 1 ventilation hose.

f. Connect the 2 water by-pass hoses.

g. Connect the ventilation pipe to the ventilation pipe of the cylinder head cover LH and RH.

19. INSTALL FUEL IN ECTOR ASSE L

a. Attach the 3 clamps to install the No. 6 wire harness to the delivery pipe RH.



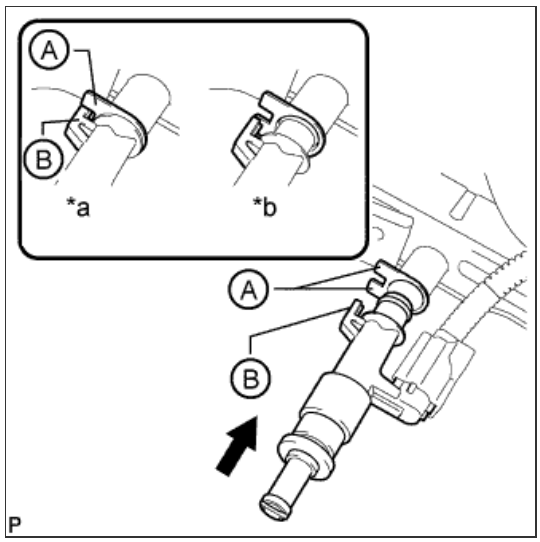
b. Attach the 3 clamps to install the No. 7 wire harness to the delivery pipe LH.

c. Apply gasoline or spindle oil to a new O-ring and install it to the injector.

NOTICE:

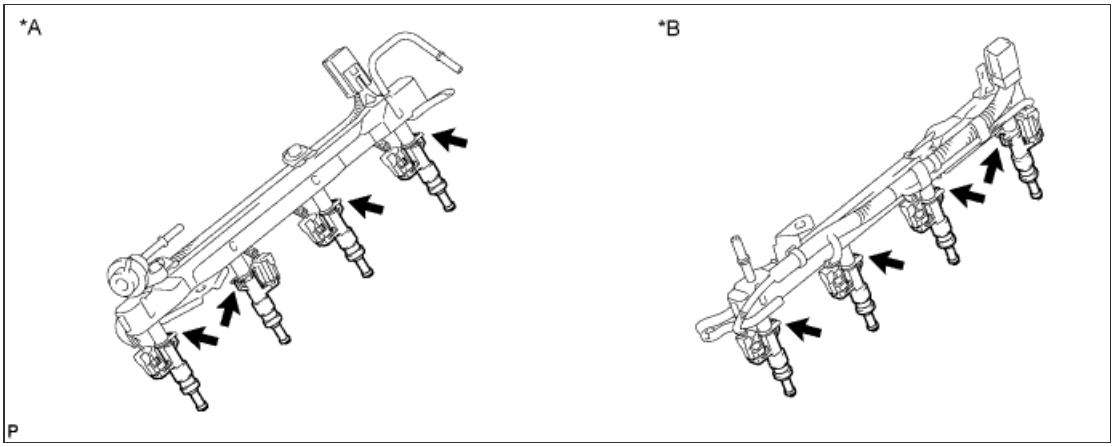
Make sure that there is no damage or foreign material in the groove of the injector when installing the O-ring.

d. Connect the injector connector.



e. Install the injector to the delivery pipe as shown in the illustration.

Text in Illustration



*a	CORRECT
*b	INCORRECT

NOTICE:

- ake sure that there are no scratches or foreign matter in or around the insertion hole of the deli ery pipe.
- When inserting the injector, be careful not to damage the O-ring.
- Attach the part of the injector labeled B bet een the parts of the deli ery pipe labeled A.

f. Check that each injector is installed to the delivery pipe facing the direction shown in the illustration.

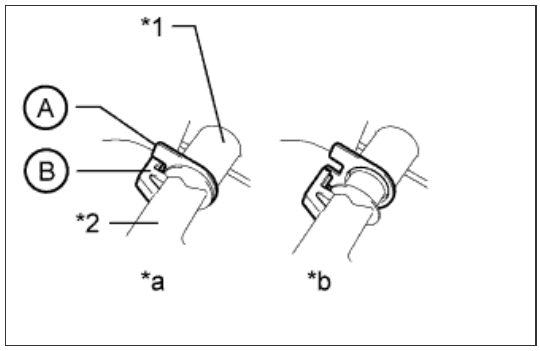
Text in Illustration

*A	Fuel Delivery Pipe RH	*B	Fuel Delivery Pipe LH

20. INSTALL FUEL DELI ER PIPE SUB-ASSE L RH

a. Install the 2 delivery pipe spacers and 4 insulators to the cylinder head RH.

b. Install the delivery pipe (with injectors) to the cylinder head RH.



c. Install the 2 bolts.

Torque:

21 N*m{ 214 kgf*cm , 15 ft.*lbf }

NOTICE:

Make sure that the part of the injector labeled B is between the parts of the delivery pipe labeled A.

Text in Illustration

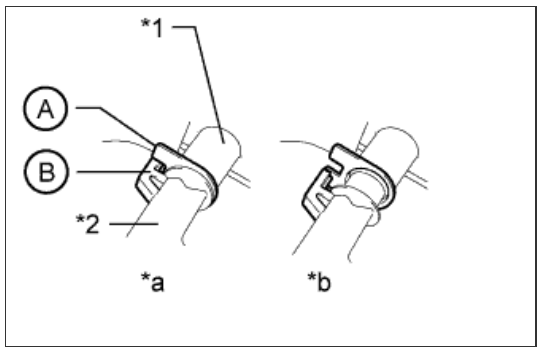
*1	Delivery Pipe
*2	Injector
*a	CORRECT
*b	INCORRECT

d. Connect the No. 6 wire harness connector.

e. Connect the ventilation hose.

21. INSTALL FUEL DELI ER PIPE SUB-ASSE L LH

a. Install the 2 delivery pipe spacers and 4 insulators to the cylinder head LH.



b. Install the delivery pipe (with injectors) to the cylinder head LH.

c. Install the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

NOTICE:

Make sure that the part of the injector labeled B is between the parts of the delivery pipe labeled A.

Text in Illustration

*1	Delivery Pipe
*2	Injector
*a	CORRECT
*b	INCORRECT

d. Connect the No. 7 wire harness connector.

22. CONNECT NO. 1 FUEL TUBE

a. LH Side:
Connect the No. 1 fuel tube to the delivery pipe LH (Click here).

b. Connect the No. 1 fuel tube to the delivery pipe RH (for metallic type) (Click here).

23. CONNECT NO. 2 FUEL TUBE

a. Connect the No. 2 fuel tube to the fuel pressure regulator (Click here).

24. INSTALL NO. 1 FUEL HOSE

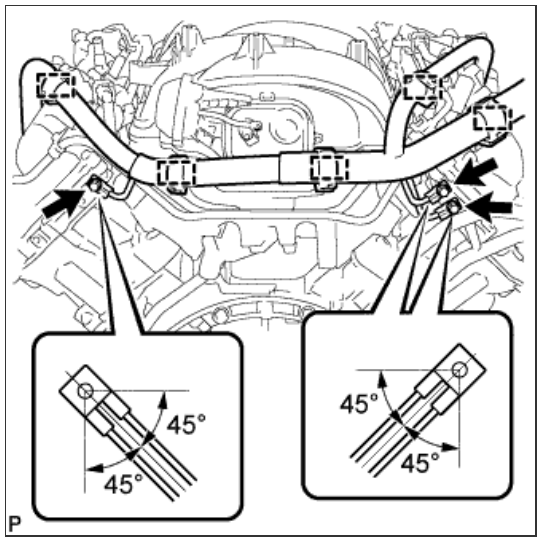
a. Install the fuel hose (Click here).

25. INSTALL NO. 3 ENGINE CO ER

26. INSTALL NO. 1 ENGINE CO ER SUB-ASSE L

27. INSTALL ENGINE WIRE

a. Install the engine wire.



b. Engine Rear Side:

i. Install the 3 bolts as shown in the illustration.

Torque:
8.5 N*m{ 87 kgf*cm , 75 in.*lbf }

ii. Connect the 5 clamps.

iii. Connect the sensor wire connector.

c. Engine RH Side:

i. Connect the 9 clamps.

ii. Connect the oil pressure sender gauge connector.

iii. Connect the throttle sensor connector.

i .Connect the noise filter connector.

.Connect the fuel injector connector.

i. Connect the 2 VVT sensor connectors.

HINT:

The wire harnesses on the exhaust side are wrapped with white tape.

ii. Connect the 4 ignition coil connectors.

iii. Connect the 2 camshaft timing control valve connectors.

HINT:

The wire harnesses on the exhaust side are wrapped with white tape.

d. Engine LH Side:

i. Connect the 7 clamps and install the engine wire with the bolt.

Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

ii. Connect the noise filter connector.

iii. Connect the fuel injector connector.

i .Connect the engine coolant temperature sensor connector.

.Connect the purge VSV connector.

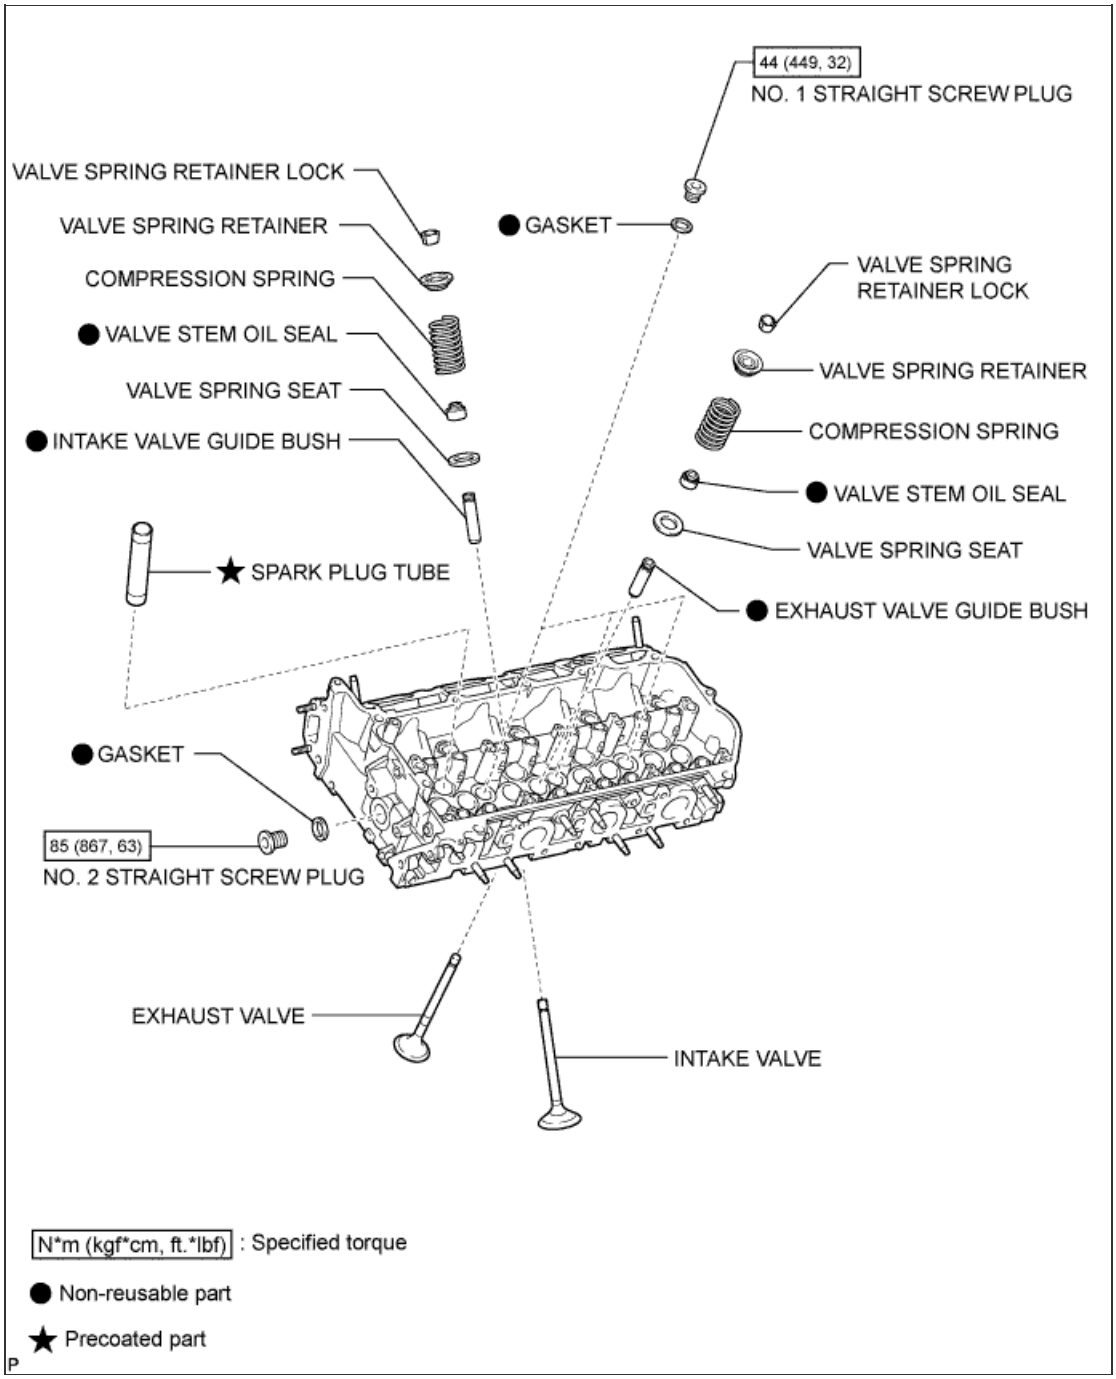
i. Connect the vacuum switching valve connector (for ACIS).

ii. Connect the camshaft position sensor connector.

iii. Connect the 2 VVT sensor connectors.

HINT:

The wire harnesses on the exhaust side are wrapped with white tape.



ix. Connect the 4 ignition coil connectors.

x. Connect the 2 camshaft timing control valve connectors.

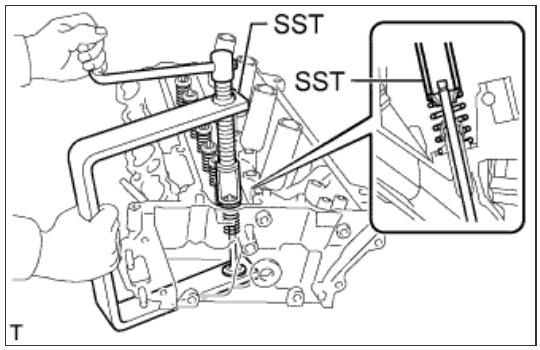
HINT:

The wire harnesses on the exhaust side are wrapped with white tape.

for Preparation Click here

for Preparation Click here

1. REMOVE INTAKE VALVE



a. Using SST and wooden blocks, compress the compression spring and remove the valve spring retainer locks.

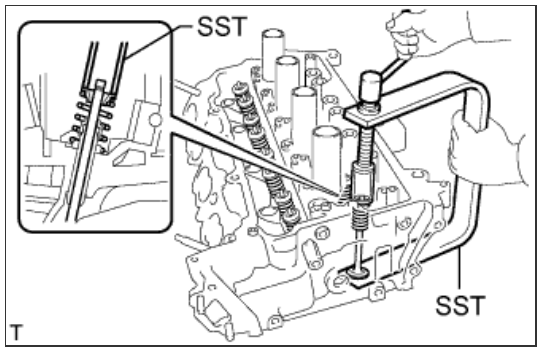
SST
09202-70020 (09202-00010)

b. Remove the retainer, compression spring and valve.

HINT:

Arrange the removed parts in the correct order.

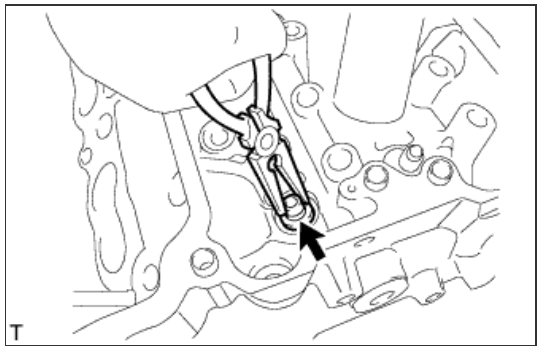
2. REMOVE EXHAUST VALVE



a. Using SST and wooden blocks, compress the compression spring and remove the valve spring retainer locks.

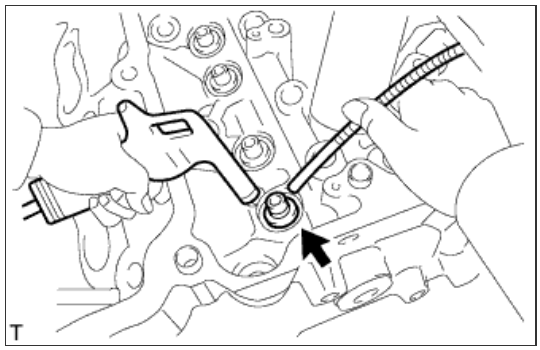
SST
09202-70020 (09202-00010)

b. Remove the retainer, compression spring and valve.



HINT:

Arrange the removed parts in the correct order.



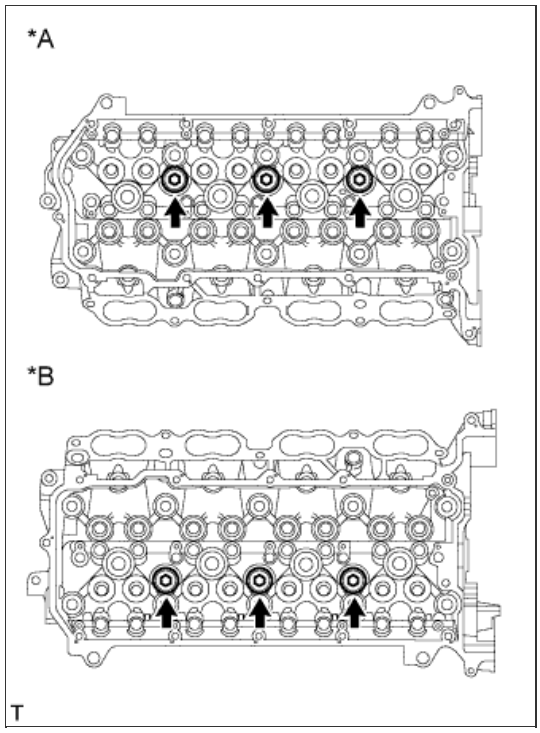
3. REMOVE VALVE STEM OIL SEAL

a. Using needle-nose pliers, remove the oil seals.

4. REMOVE VALVE SPRING SEAT

a. Using compressed air and a magnet hand, remove the valve spring seat by blowing air onto it.

5. REMOVE NO. 1 STRAIGHT SCREW PLUG



NOTICE:

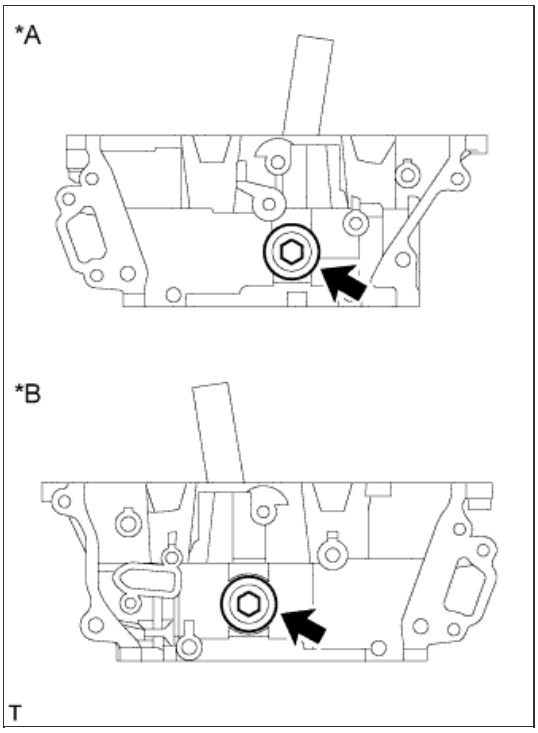
If water leaks from the No. 1 straight screw plug or the plug is corroded, replace it.

a. Using a 10 mm hexagon wrench, remove the 6 screw plugs and 6 gaskets.

Text in Illustration

*A	LH
*B	RH

6. REMOVE NO. 2 STRAIGHT SCREW PLUG



NOTICE:

If water leaks from the No. 2 straight screw plug or the plug is corroded, replace it.

a. Using a 14 mm hexagon wrench, remove the 2 screw plugs and 2 gaskets.

Text in Illustration

*A	LH
*B	RH

7. REMOVE STUD BOLT

NOTICE:

If the stud bolt is deformed or its threads are damaged, replace it.

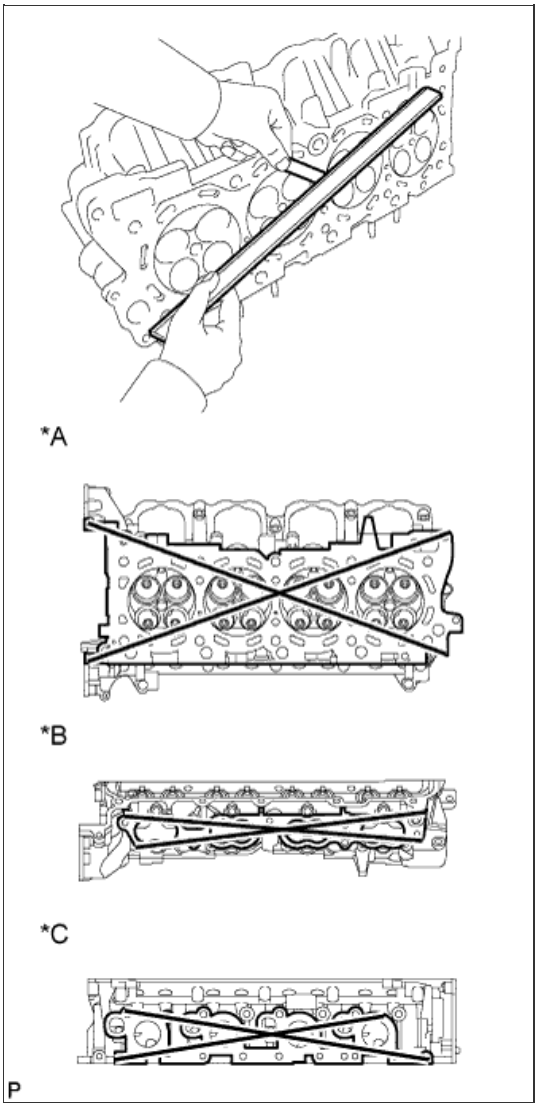
for Preparation Click here

1. INSPECT CYLINDER HEAD SUB-ASSEMBLY

a. Using a precision straightedge and feeler gauge, measure the warpage of the surfaces where the cylinder head contacts the cylinder block and manifold.

Standard Warpage:

Item	Specified Condition
Cylinder head lower side	0.05 mm (0.00197 in.)
Intake side	0.08 mm (0.00315 in.)
Exhaust side	0.05 mm (0.00197 in.)



Maximum warpage:
0.10 mm (0.003 in.)

Text in Illustration

*A	Cylinder Head Lower Side
*B	Intake Side
*C	Exhaust Side

If the warpage is more than the maximum, replace the cylinder head.

b. Using a dye penetrant, check the intake ports, exhaust ports and cylinder surface for cracks.
If cracked, replace the cylinder head.

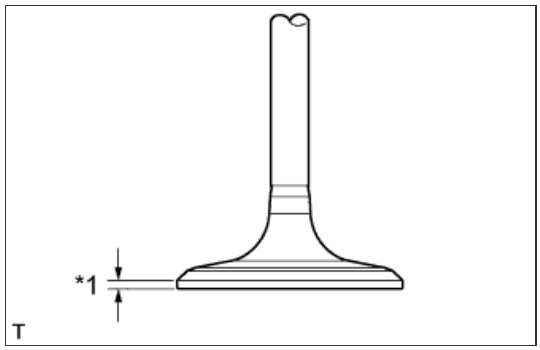
2. INSPECT INTAKE VALVE

a. Using a micrometer, measure the diameter of the valve stem.

Standard valve stem diameter:
5.470 to 5.485 mm (0.215 to 0.216 in.)

If the diameter is not as specified, replace the valve and guide bush.

b. Using a vernier caliper, measure the valve head margin thickness.



Standard margin thickness:
1.25 mm (0.04 in.)

Minimum margin thickness:
0.50 mm (0.01 in.)

Text in Illustration

*1	Margin Thickness

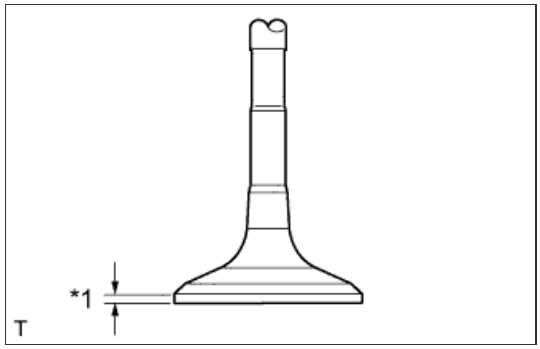
If the margin thickness is less than the minimum, replace the intake valve.

c. Using a vernier caliper, measure the valve overall length.

Standard overall length:
105.85 mm (4.17 in.)

Minimum overall length:
105.35 mm (4.15 in.)

If the overall length is less than the minimum, replace the intake valve.



3. INSPECT EXHAUST VALVE

a. Using a micrometer, measure the diameter of the valve stem.

Standard valve stem diameter:
5.465 to 5.480 mm (0.215 to 0.216 in.)

If the diameter is not as specified, replace the valve and guide bush.

b. Using a vernier caliper, measure the valve head margin thickness.

Standard margin thickness:
1.4 mm (0.0551 in.)

Minimum margin thickness:
0.50 mm (0.01 in.)

Text in Illustration

*1	Margin Thickness

If the margin thickness is less than the minimum, replace the exhaust valve.

c. Using a vernier caliper, measure the valve overall length.

Standard overall length:
110.40 mm (4.35 in.)

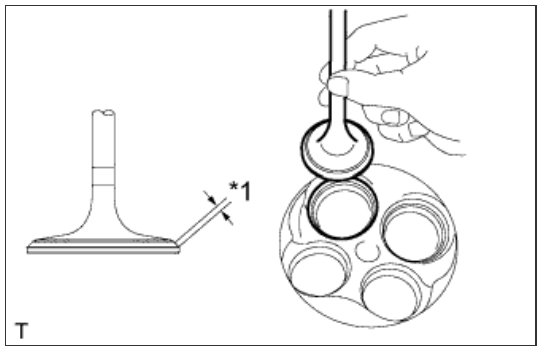
Minimum overall length:
10 .0 mm (4.33 in.)

If the overall length is less than the minimum, replace the exhaust valve.

4. INSPECT INTAKE VALVE SEAT

a. Apply a light coat of Prussian blue to the valve face.

b. Lightly press the valve face against the valve seat.



HINT:

Do not rotate the valve while pressing the valve.

c. Check the valve face and valve seat.

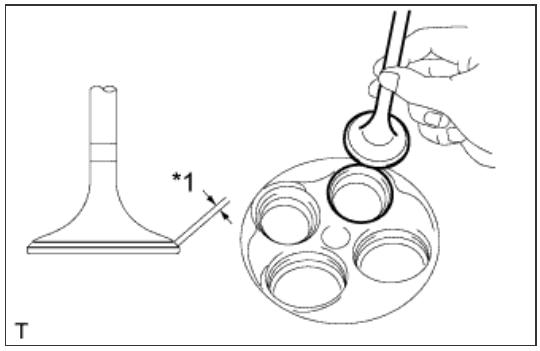
Text in Illustration

*1	Width

i. Check that the contact surfaces of the valve seat and valve face are in the middle area of their respective surfaces, with the width between 1.1 and 1.5 mm (0.0433 and 0.0591 in.).
If not, correct the valve seat.

ii. Check that the contact surfaces of the valve seat and valve face are even around the entire valve seat.
If not, correct the valve seat.

5. INSPECT EXHAUST VALVE SEAT



a. Apply a light coat of Prussian blue to the valve face.

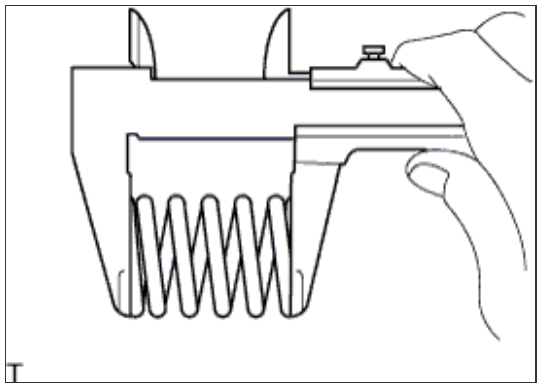
b. Lightly press the valve face against the valve seat.

HINT:

Do not rotate the valve while pressing the valve.

c. Check the valve face and valve seat.

Text in Illustration

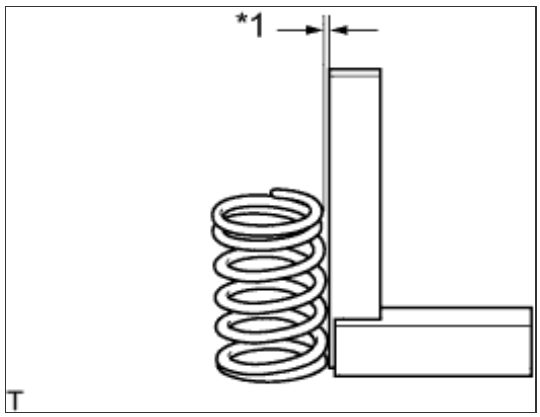


*1	Width

i. Check that the contact surfaces of the valve seat and valve face are in the middle area of their respective surfaces, with the width between 1.1 and 1.5 mm (0.0433 and 0.0591 in.).
If not, correct the valve seat.

ii. Check that the contact surfaces of the valve seat and valve face are even around the entire valve seat.
If not, correct the valve seat.

6. INSPECT COMPRESSION SPRING



a. Using a vernier caliper, measure the free length of the inner compression spring.

Standard free length:
4 . mm (1. in.)

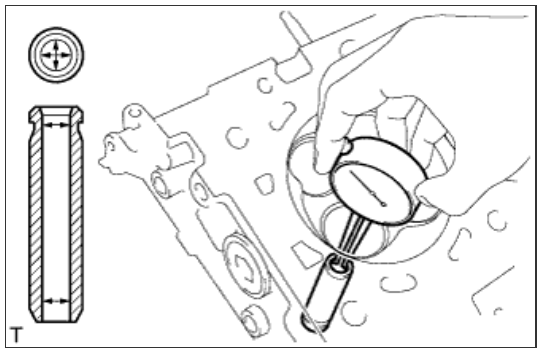
If the free length is not as specified, replace the spring.

b. Using a steel square, measure the deviation of the inner compression spring.

Maximum deviation:
1.0 mm (0.03 in.)

Maximum angle (reference):
2

Text in Illustration



*1	Deviation

If the deviation is more than the maximum, replace the spring.

7. INSPECT VALVE GUIDE BUSH OIL CLEARANCE

a. Using a caliper gauge, measure the inside diameter of the guide bush.

Standard bush inside diameter:
5.51 to 5.53 mm (0.217 to 0.218 in.)

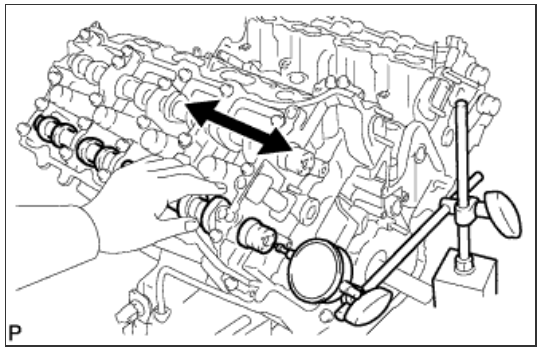
b. Subtract the valve stem diameter measurement from the guide bush inside diameter measurement.

Standard Oil Clearance:

Item	Specified Condition
Intake	0.025 to 0.060 mm (0.000984 to 0.00236 in.)
Exhaust	0.030 to 0.065 mm (0.00118 to 0.00256 in.)

Maximum Oil Clearance:

Item	Specified Condition
Intake	0.08 mm (0.00315 in.)
Exhaust	0.10 mm (0.00394 in.)



If the oil clearance is more than the maximum, replace the valve and guide bush.

8. INSPECT CAMSHA T THRUST CLEARANCE

a. Inspect the bank 1 camshafts.

i. Install the bank 1 camshafts.

ii. Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.

Standard thrust clearance:
0.08 to 0.135 mm (0.00315 to 0.00531 in.)

Maximum thrust clearance:
0.15 mm (0.005 1 in.)

If the thrust clearance is more than the maximum, replace the camshaft housing. If the thrust surface is damaged, replace the camshaft.

b. Inspect the bank 2 camshafts.

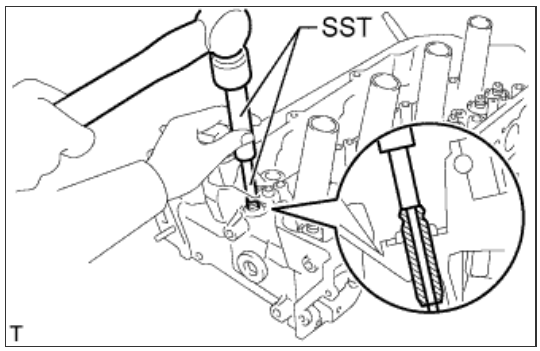
i. Install the bank 2 camshafts.

ii. Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.

Standard thrust clearance:
0.08 to 0.135 mm (0.00315 to 0.00531 in.)

Maximum thrust clearance:
0.15 mm (0.005 1 in.)

If the thrust clearance is more than the maximum, replace the camshaft housing. If the thrust surface is damaged, replace the camshaft.



for Preparation Click here

1. REPLACE INTAKE VALVE GUIDE BUSH

a. Heat the cylinder head to approximately 80 to 100°C (176 to 212°F).

b. Place the cylinder head on wooden blocks.

c. Using SST and a hammer, tap out the valve guide bush.

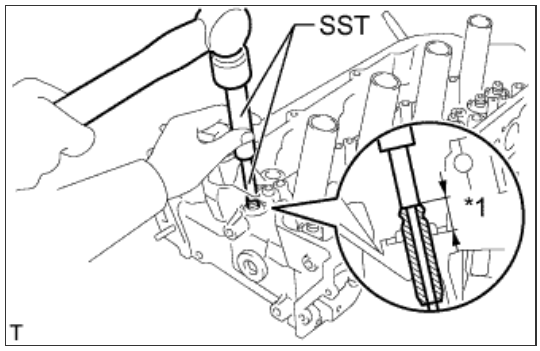
SST
09201-10000 (09201-01050)
09950-70010 (09951-07100)

d. Using a caliper gauge, measure the bush bore diameter of the cylinder head side.

Standard bush bore diameter:
10.285 to 10.306 mm (0.405 to 0.406 in.)

If the bush bore diameter of the cylinder head is between 10.285 and 10.306 mm (0.405 and 0.406 in.), proceed to the next step.
If the bush bore diameter of the cylinder head is 10.356 mm (0.408 in.) or more, replace the cylinder head.

e. Select a new guide bush (STD or O/S 0.05), and measure its diameter.



f. Machine the bush bore diameter of the cylinder head side to the diameter of the selected guide bush.

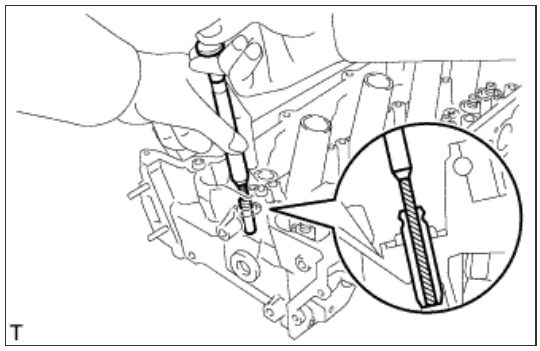
Bush Bore Diameter:

Bush Size	Specified Condition
STD	10.333 to 10.344 mm (0.4068 to 0.4072 in.)
O/S 0.05	10.383 to 10.394 mm (0.4088 to 0.4092 in.)

Standard bush length:
41.3 to 41.7 mm (1.63 to 1.64 in.)

g. Using SST and a hammer, tap in a new guide bush to the standard protrusion height.

SST
09201-10000 (09201-01050)
09950-70010 (09951-07100)



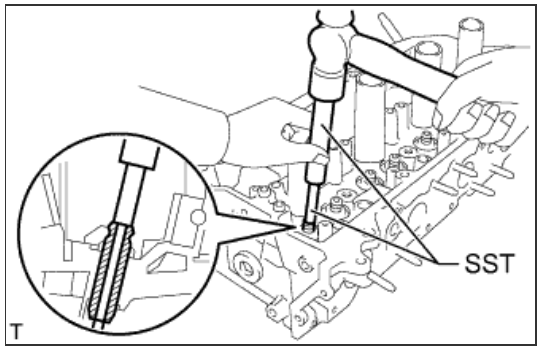
Standard protrusion height:
14.3 to 14.7 mm (0.563 to 0.579 in.)

Text in Illustration

*1	Height

h. Using a sharp 5.5 mm reamer, ream the guide bush to obtain the standard oil clearance between the guide bush and valve stem.

Standard oil clearance:
0.025 to 0.060 mm (0.000984 to 0.00236 in.)



2. REPLACE EXHAUST VALVE GUIDE BUSH

a. Heat the cylinder head to approximately 80 to 100°C (176 to 212°F).

b. Place the cylinder head on wooden blocks.

c. Using SST and a hammer, tap out the valve guide bush.

SST
09201-10000 (09201-01050)
09950-70010 (09951-07100)

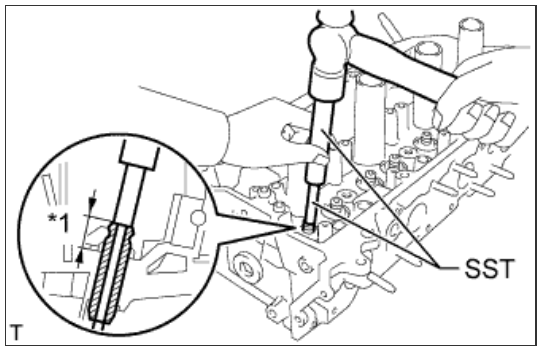
d. Using a caliper gauge, measure the bush bore diameter of the cylinder head.

Standard bush bore diameter:
10.285 to 10.306 mm (0.405 to 0.406 in.)

If the bush bore diameter of the cylinder head is between 10.285 and 10.306 mm (0.405 and 0.406 in.), proceed to the next step.
If the bush bore diameter of the cylinder head is 10.356 mm (0.408 in.) or more, replace the cylinder head.

e. Select a new guide bush (STD or O/S 0.05), and measure its diameter.

f. Machine the bush bore diameter of the cylinder head side to the diameter of the selected guide bush.



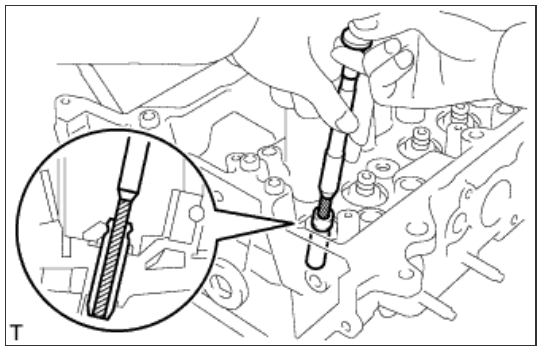
Bush Bore Diameter:

Bush Size	Specified Condition
STD	10.333 to 10.344 mm (0.4068 to 0.4072 in.)
O/S 0.05	10.383 to 10.394 mm (0.4088 to 0.4092 in.)

Standard bush length:
46.8 to 47.2 mm (1.84 to 1.86 in.)

g. Using SST and a hammer, tap in a new guide bush to the standard protrusion height.

SST
09201-10000 (09201-01050)
09950-70010 (09951-07100)



Standard protrusion height:
14.3 to 14.7 mm (0.563 to 0.579 in.)

Text in Illustration

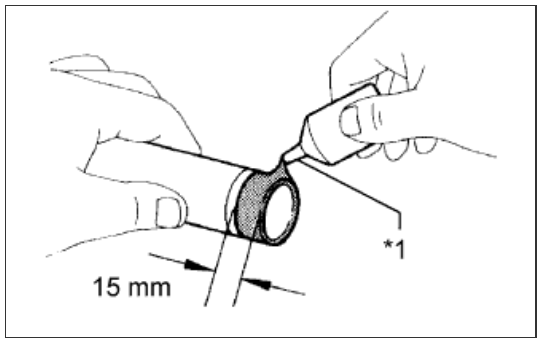
*1	Height

h. Using a sharp 5.5 mm reamer, ream the guide bush to obtain the standard oil clearance between the guide bush and valve stem.

Standard oil clearance:
0.030 to 0.065 mm (0.00118 to 0.00256 in.)

3. REPLACE SPARK PLUG TUBE

HINT:



When using a new cylinder head, the spark plug tubes must be replaced.

a. Remove the spark plug tube.

b. Apply adhesive to the end of a new spark plug tube.

Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent.

Standard seal diameter:
15 mm (0.591 in.)

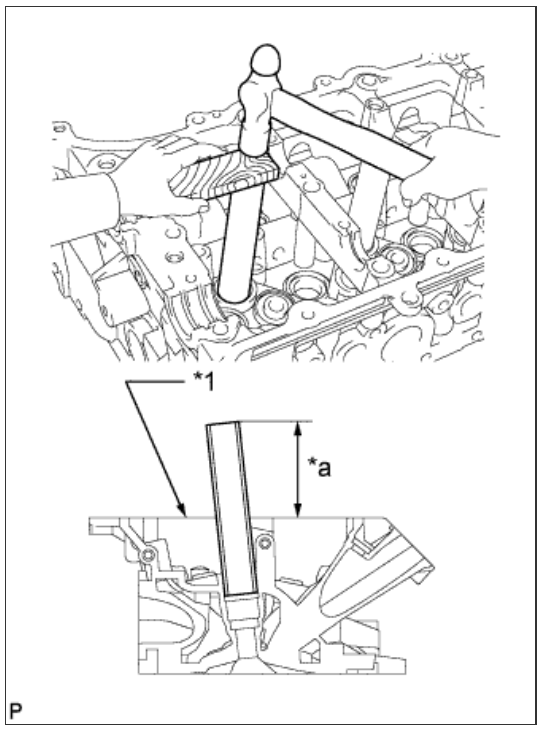
Text in Illustration

*1	Adhesive

NOTICE:

- **Install the spark plug tube within 3 minutes after applying adhesive.**
- **Be careful not to deform the spark plug tube.**
- **Be careful not to expose the seal to coolant for at least 1 hour after installing it.**

c. Using a wooden block and hammer, tap in the spark plug tube to the specified protrusion height.



Standard protrusion height:
75.1 to 76.1 mm (2.96 to 3.00 in.)

Text in Illustration

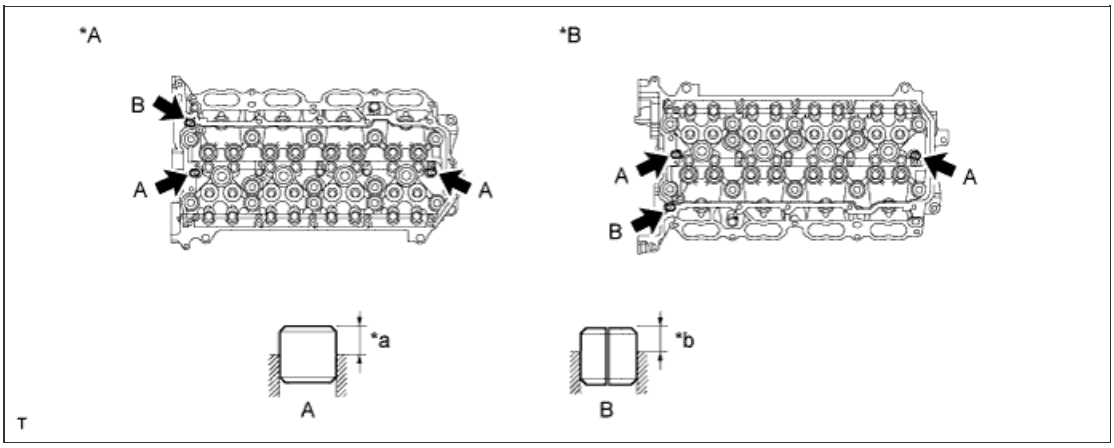
*1	Cylinder Head Top Surface
*a	75.1 to 76.1 mm

NOTICE:

To avoid tapping in the spark plug tube too far, measure the protrusion height while tapping it.

4. REPLACE RING PIN

N TICE:



It is not necessary to remove the ring pin unless it is being replaced.

a. Remove the ring pins.

b. Using a plastic-faced hammer, tap in new ring pins to the cylinder head.

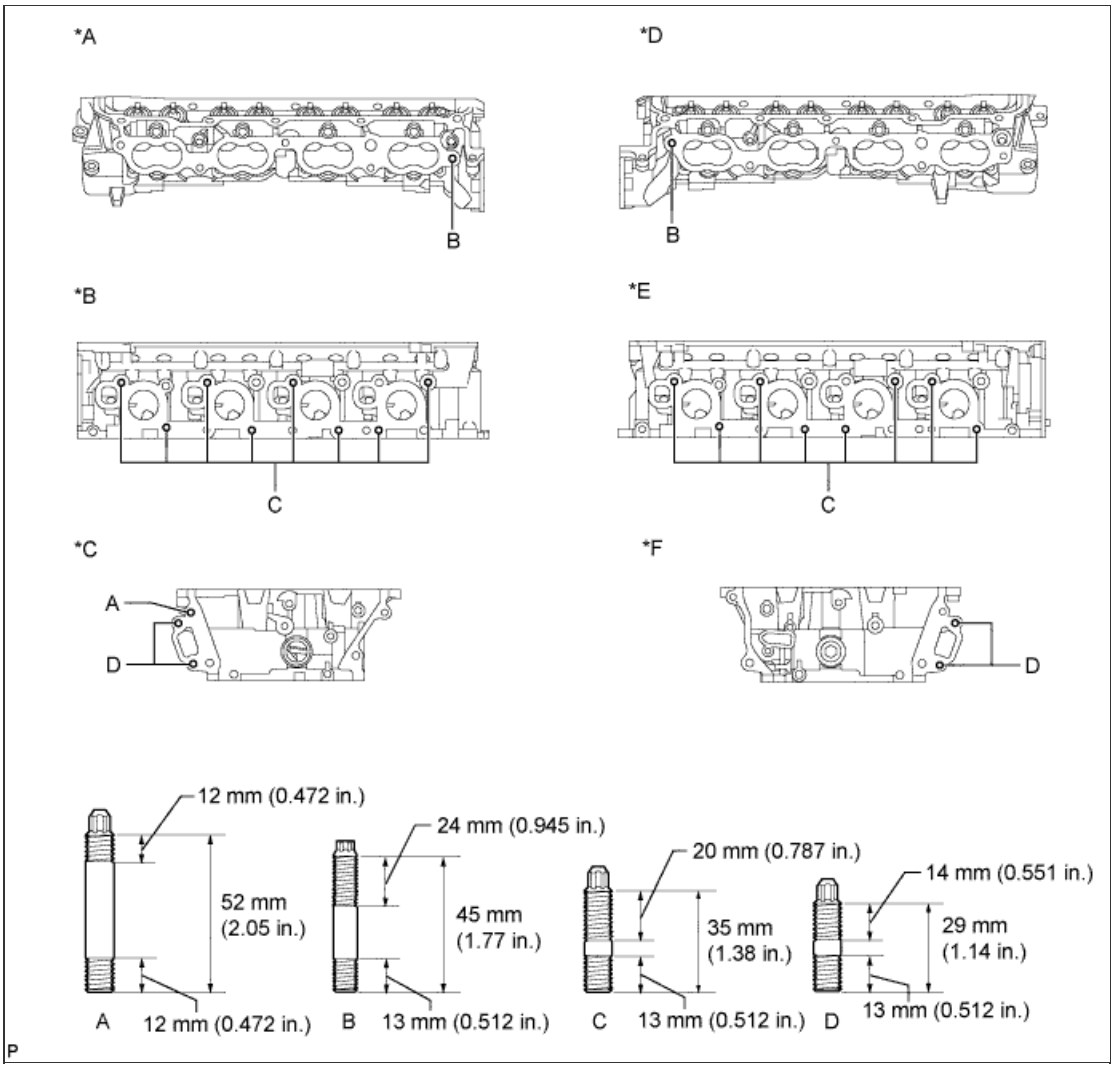
Standard Protrusion:

Item	Specified Condition
Ring pin A	5.5 to 6.5 mm (0.217 to 0.256 in.)
Ring pin B	3.5 to 6.5 mm (0.138 to 0.256 in.)

Text in Illustration

*A	for Bank 1	*B	for Bank 2
*a	5.5 to 6.5 mm	*b	3.5 to 6.5 mm

for Preparation Click here



1. INSTALL STUD BOLT

NOTICE:

If the stud bolt is deformed or its threads are damaged, replace it.

a. Using E7 and E8 "TORX" socket wrenches, install the stud bolts.

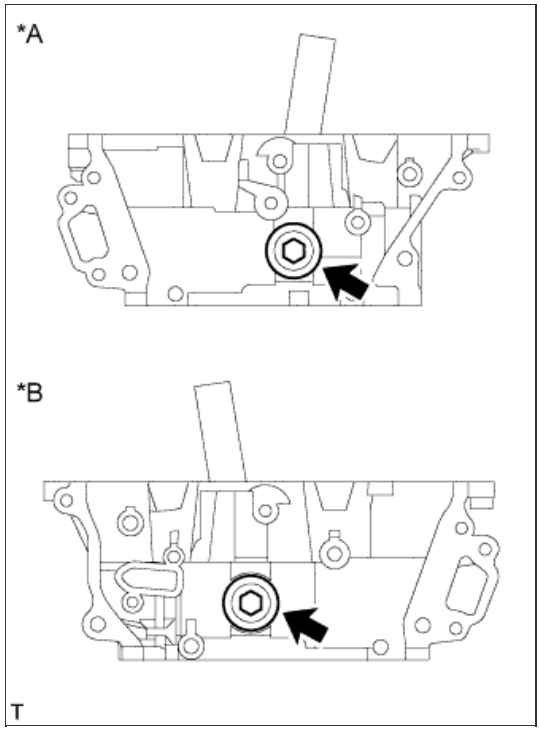
Torque:
for stud bolts A, B, C and D:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

Text in Illustration

*A	LH for Intake Side	*B	LH for Exhaust Side
*C	LH for Front Side	*D	RH for Intake Side
*E	RH for Exhaust Side	*F	RH for Front Side

2. INSTALL NO. 2 STRAIGHT SCREW PLUG

NOTICE:



If water leaks from the No. 2 straight screw plug or the plug is corroded, replace it.

a. Using a 14 mm hexagon wrench, install 2 new gaskets and the 2 straight screw plugs.

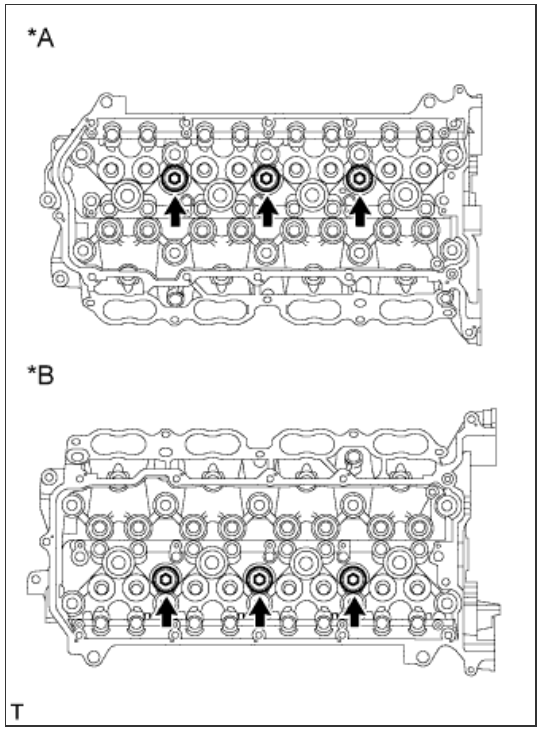
Torque:
85 N* 867 kgf*c , 63 ft.*lbf }

Text in Illustration

*A	LH
*B	RH

3. INSTALL NO. 1 STRAIGHT SCREW PLUG

NOTICE:



If water leaks from the No. 1 straight screw plug or the plug is corroded, replace it.

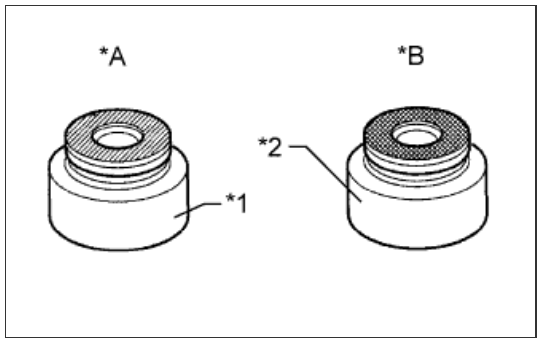
a. Using a 10 mm hexagon wrench, install 6 new gaskets and the 6 straight screw plugs.

Torque:
44 N* 449 kgf*cm , 32 ft.*lbf }

Text in Illustration

*A	LH
*B	RH

4. INSTALL VALVE SPRING SEAT



a. Install the valve spring seats to the cylinder head.

5. INSTALL VALVE STEM OIL SEAL

a. Apply a light coat of engine oil to new oil seals.

Text in Illustration

*A	Intake Side
*B	Exhaust Side
*1	Brown
*2	Gray

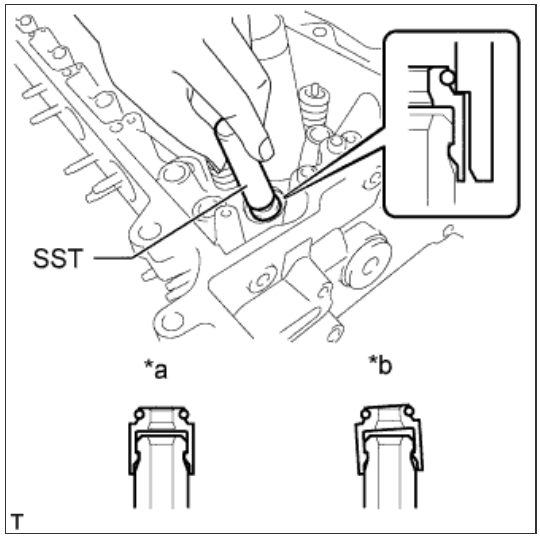
NOTICE:

Pay attention when installing the intake and exhaust oil seals. For example, installing the intake oil seal into the exhaust side or installing the exhaust oil seal into the intake side can cause installation problems later.

HINT:

The intake valve oil seals are brown and the exhaust valve oil seals are gray.

b. Using SST, push in the oil seals.



SST
09201-41020

Text in Illustration

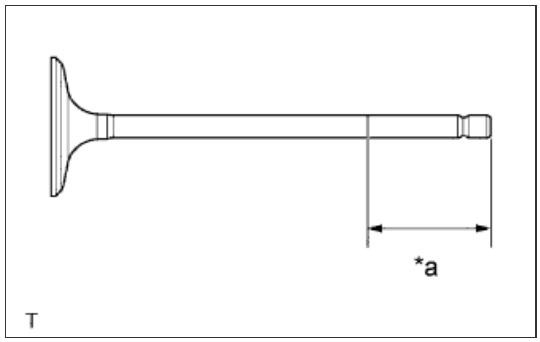
*a	CORRECT
*b	INCORRECT

NOTICE:

Failure to use SST will cause the seal to be damaged or improperly seated.

6. INSTALL INTAKE VALVE

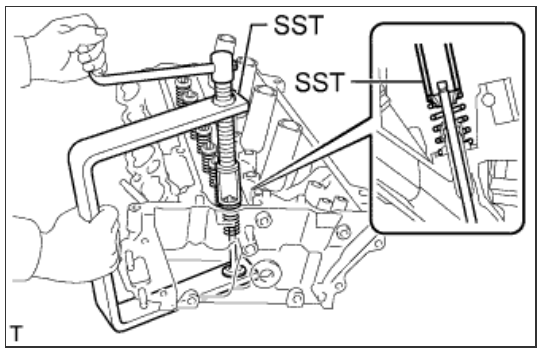
a. Apply plenty of engine oil to the tip area of the intake valve shown in the illustration.



b. Install the valve, compression spring and spring retainer to the cylinder head.

Text in Illustration

*a	40 mm (1.57 in.) or more

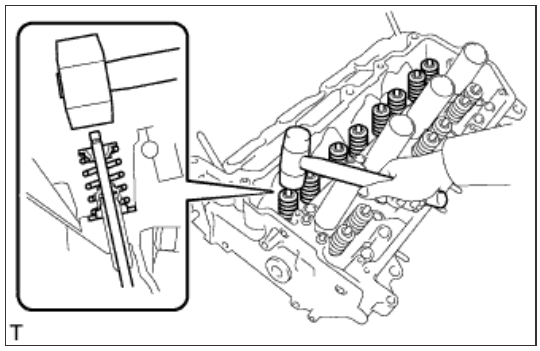


NOTICE:

Install the same parts in the same combination to their original locations.

c. Using SST and wooden blocks, compress the spring and install the retainer locks.

SST
09202-70020 (09202-00010)



d. Using a plastic-faced hammer, lightly tap the valve stem tip to ensure a proper

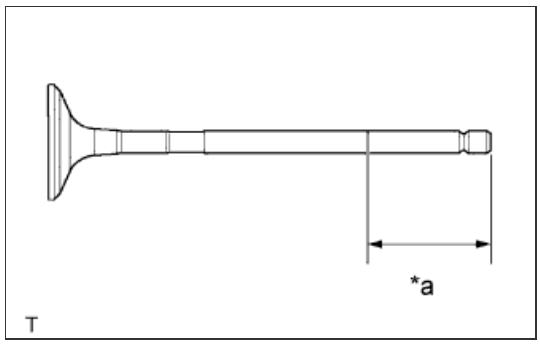
fit.

NOTICE:

Be careful not to damage the retainer.

7. INSTALL E HAUST VALVE

a. Apply plenty of engine oil to the tip area of the exhaust valve shown in the illustration.

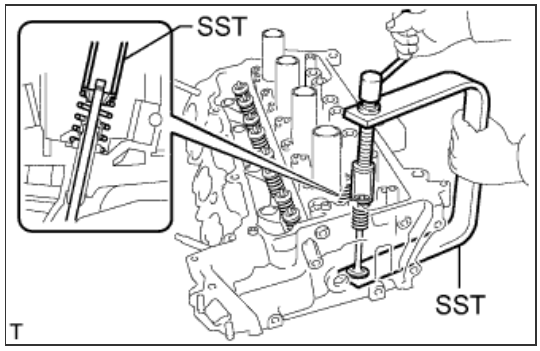


b. Install the valve, compression spring and spring retainer to the cylinder head.

Text in Illustration

*a	40 mm (1.57 in.) or more

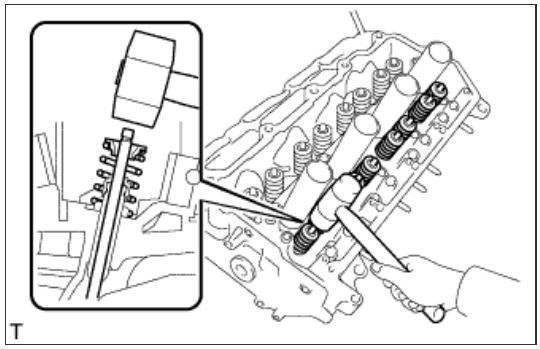
NOTICE:



Install the same parts in the same combination to their original locations.

c. Using SST and wooden blocks, compress the spring and install the retainer locks.

SST

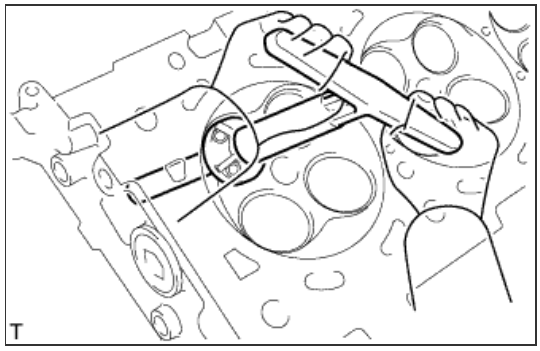


09202-70020 (09202-00010)

d. Using a plastic-faced hammer, lightly tap the valve stem tip to ensure a proper fit.

NOTICE:

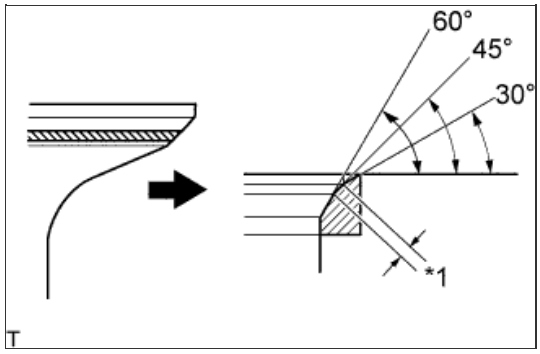
Be careful not to damage the retainer.



for Preparation Click here

1. REPAIR INTAKE VALVE SEAT

NOTICE:



- **Repair the seat while checking the seating position.**
- **Keep the lip free of foreign matter.**
- **Take off the cutter gradually to make the intake valve seat smooth.**

a. Using a 45° cutter, resurface the valve seat so that the valve seat width is more than the specification.

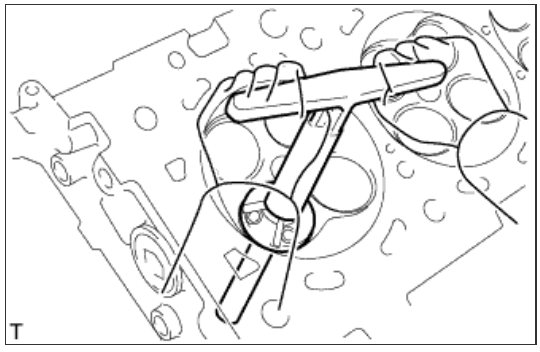
b. Using 30° and 60° cutters, correct the valve seat so that the valve contacts the entire circumference of the seat. The contact should be in the center of the valve seat, and the valve seat width should be maintained within the specified range around the entire circumference of the seat.

Standard width:
1.1 to 1.5 mm (. to . 1 in.)

Text in Illustration

*1	Width

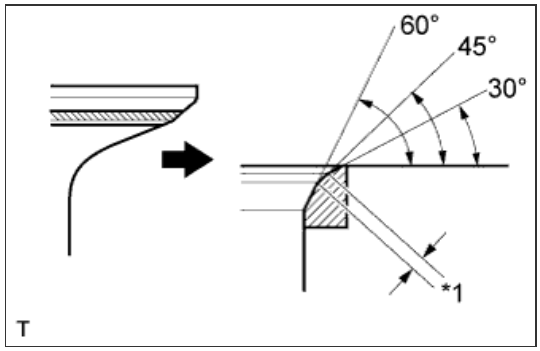
c. Hand-lap the valve and valve seat with an abrasive compound.



d. Check the valve seating position.

. REPAIR E HA ST VALVE SEAT

NOTICE:

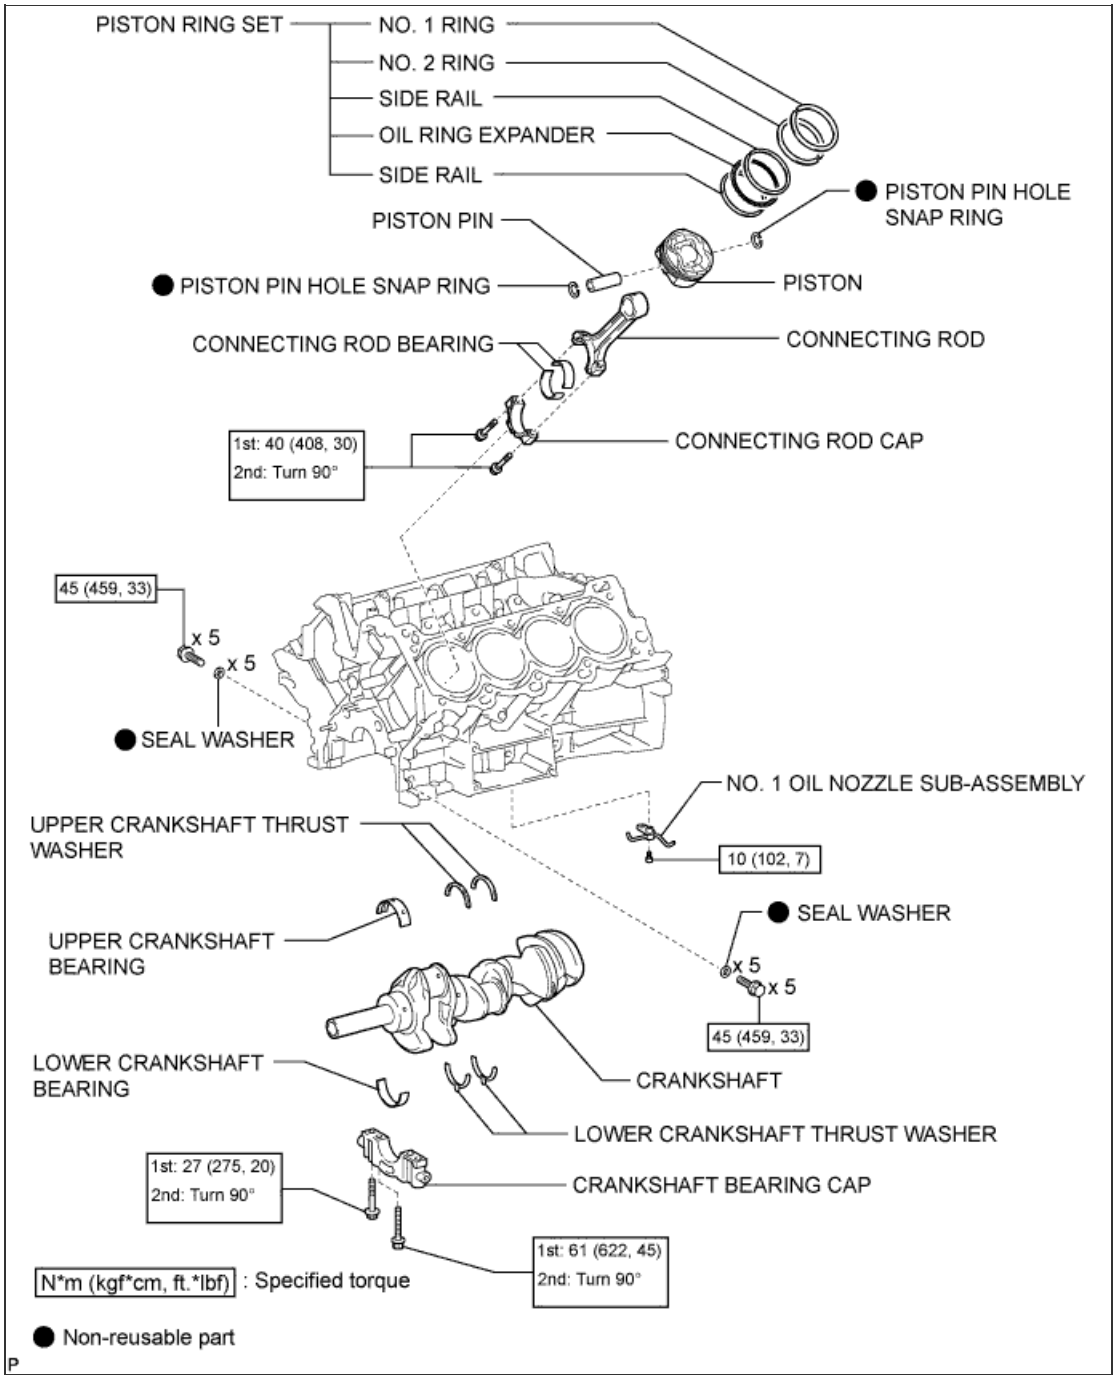


- **Repair the seat while checking the seating position.**
- **Keep the lip free of foreign matter.**
- **Take off the cutter gradually to make the exhaust valve seat smooth.**

a. Using a 45° cutter, resurface the valve seat so that the valve seat width is more than the specification.

b. Using 30° and 60° cutters, correct the valve seat so that the valve contacts the entire circumference of the seat. The contact should be in the center of the valve seat, and the valve seat width should be maintained within the specified range around the entire circumference of the seat.

Standard width:
1.1 to 1.5 mm (. to . 1 in.)



Text in Illustration

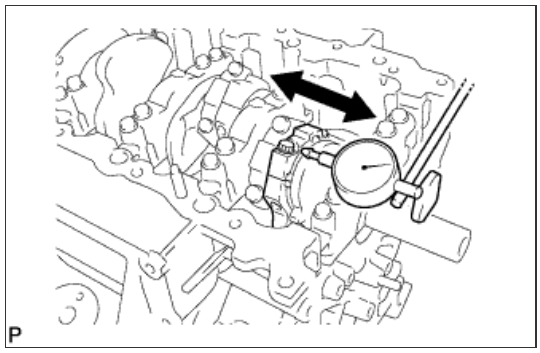
*1	Width

c. Hand-lap the valve and valve seat with an abrasive compound.

d. Check the valve seating position.

for Preparation Click here

for Preparation Click here

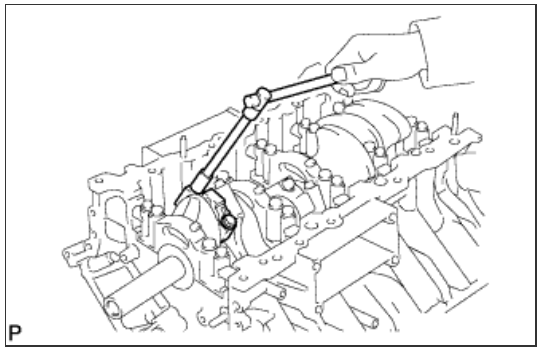


1. INSPECT CONNECTING ROD THRUST CLEARANCE

a. Using a dial indicator, measure the thrust clearance while moving the connecting rod back and forth.

Standard thrust clearance:
0.15 to 0.55 mm (0.005 1 to 0.0217 in.)

Maximum thrust clearance:
0.70 mm (0.0276 in.)

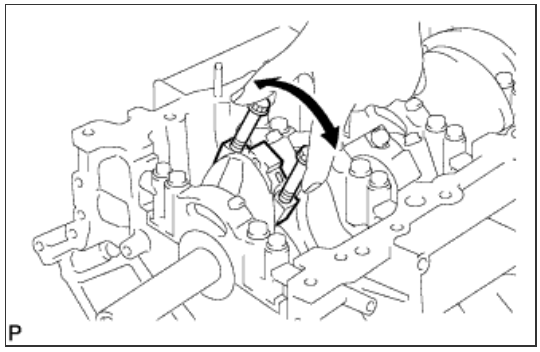


If the thrust clearance is more than the maximum, replace one or more connecting rods as necessary.
If necessary, replace the crankshaft.

2. INSPECT CONNECTING ROD OIL CLEARANCE

a. Check that the front mark on the connecting rod and cap are aligned to ensure correct reassembly.

b. Remove the 2 connecting rod cap bolts.

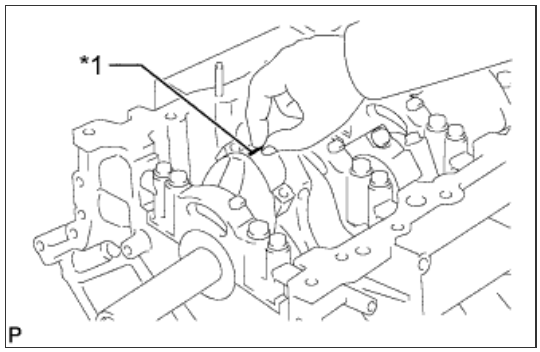


c. Using the 2 removed connecting rod cap bolts, remove the connecting rod cap and lower bearing by wiggling the connecting rod cap right and left.

HINT:

Keep the lower bearing inserted to the connecting rod cap.

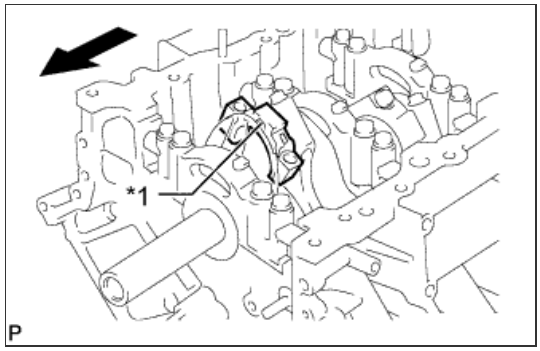
d. Check the crank pin and bearing for pitting and scratches.
If the crank pin or bearing is damaged, replace the bearings. If necessary, replace the crankshaft.



e. Clean the crank pin and bearing.

f. Lay a strip of Plastigage on the crank pin.

Text in Illustration



*1	Plastigage

g. Place the connecting rod cap on the connecting rod with the front mark facing forward.

Text in Illustration

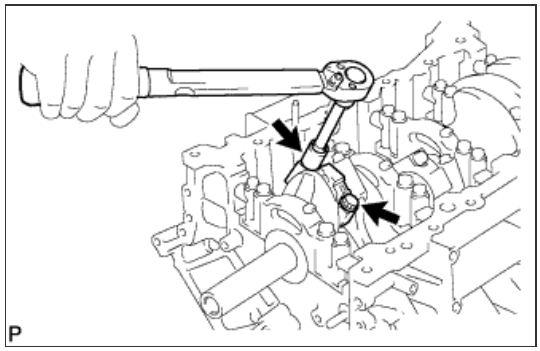
*1	Front Mark
➡	Front

h. Install and alternately tighten the bolts of the connecting rod cap in several steps.

Tor ue:
40 N m 408 kgf cm , 30 ft. lbf

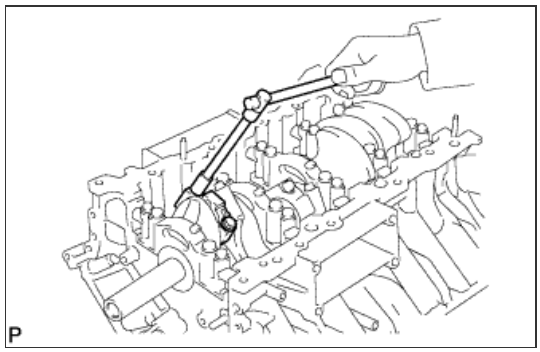
NOTICE:

Do not turn the crankshaft.



i. Mark the front side of each connecting rod cap bolt with paint.

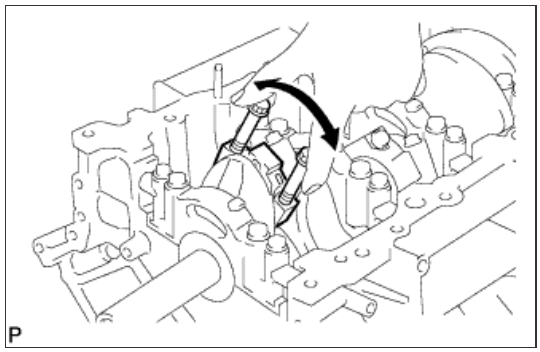
j. Tighten the cap bolts 90° as shown in the illustration.



k. Check that the painted marks are now at a 90° angle to the front.

NOTICE:

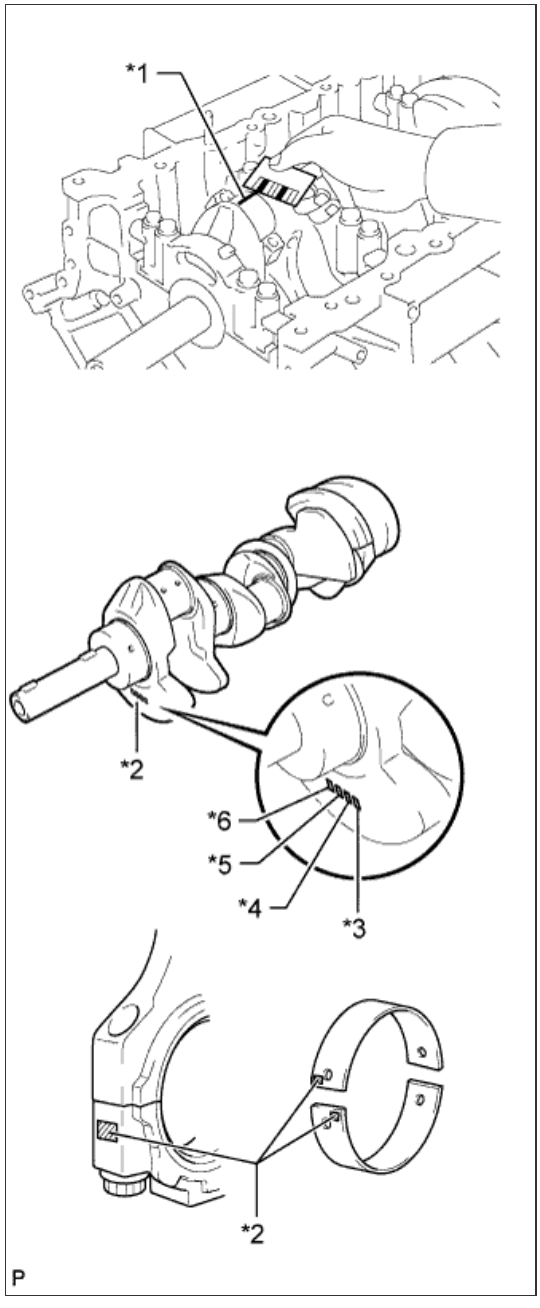
Do not turn the crankshaft.



l. Remove the 2 connecting rod cap bolts.

m. Using the 2 removed connecting rod cap bolts, remove the connecting rod cap and lower bearing by wiggling the connecting rod cap right and left.

HINT:



Keep the lower bearing inserted to the connecting rod cap.

n. Measure the Plastigage at its widest point.

Standard oil clearance:
0.025 to 0.050 mm (0.000 to 0.001 in.)

Maximum oil clearance:
0.070 mm (0.00276 in.)

Text in Illustration

*1	Plastigage
*2	Number Mark
*3	No. 1
*4	No. 2
*5	No. 3
*6	No. 4

If the oil clearance is more than the maximum, replace the bearings. If necessary, replace the crankshaft.

HINT:

- **If replacing a bearing, replace it with one that has the same number as its respective connecting rod cap. The standard thickness of each bearing is indicated by a 1, 2, 3 or 4 mark on its surface.**
- **Select the correct bearing by adding together the number marks imprinted on the connecting rod big end and crank pin.**

Example:

Connecting rod "1" + Crank pin "2" = 3 (Use bearing "3")

Reference:

Standard Sized Bearing Center Wall Thickness:

Mark	Thickness
2	1.489 to 1.492 mm (0.0586 to 0.0587 in.)
3	1.492 to 1.495 mm (0.0587 to 0.0589 in.)
4	1.495 to 1.498 mm (0.0589 to 0.0590 in.)
5	1.498 to 1.501 mm (0.0590 to 0.0591 in.)
6	1.501 to 1.504 mm (0.0591 to 0.0592 in.)
7	1.504 to 1.507 mm (0.0592 to 0.0593 in.)

Connecting Rod Big End Inside Diameter:

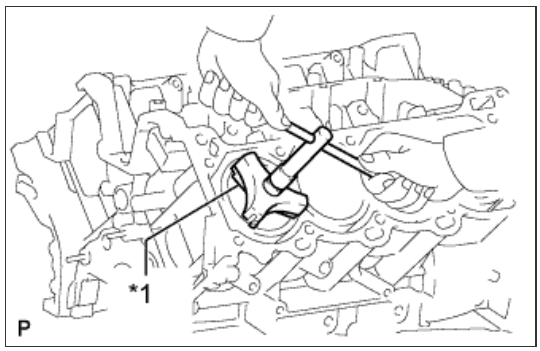
Mark	Thickness
1	59.000 to 59.006 mm (2.32283 to 2.32307 in.)
2	59.006 to 59.012 mm (2.32307 to 2.32330 in.)
3	59.012 to 59.018 mm (2.32330 to 2.32354 in.)
	59.018 to 59.024 mm

4	(2.32354 to 2.32377 in.)

Crankshaft Pin Diameter:

Mark	Thickness
1	55.994 to 56.000 mm (2.20448 to 2.20472 in.)
2	55.988 to 55.994 mm (2.20425 to 2.20448 in.)
3	55.982 to 55.988 mm (2.20401 to 2.20425 in.)

o. Completely remove the Plastigage.



p. Perform the inspection above for each cylinder.

3. REMOVE PISTON AND CONNECTING ROD

a. Using a ridge reamer, remove all the carbon from the top of the cylinder.

Text in Illustration

*1	Ridge Reamer

b. Remove the 16 cap bolts, 8 connecting rod caps and 8 lower bearings.

c. Push the 8 pistons and 8 connecting rods through the top of the cylinder block.

HINT:

- **Keep the bearing, connecting rod and cap together.**
- **Arrange the piston and connecting rods in the correct order.**

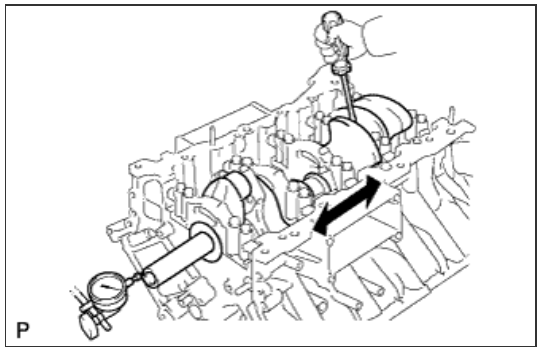
4. REMOVE CONNECTING ROD BEARING

a. Remove the connecting rod bearings from the connecting rods and connecting rod caps.

HINT:

Arrange the removed parts in the correct order.

5. INSPECT CRANKSHA T THRUST CLEARANCE

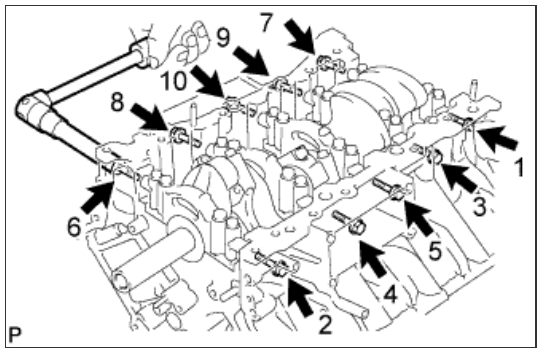


a. Using a dial indicator, measure the thrust clearance while prying the crankshaft back and forth with a screwdriver.

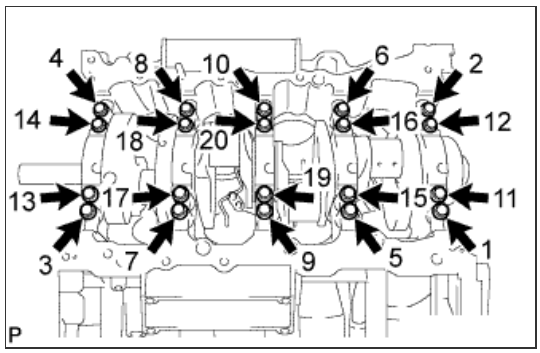
Standard thrust clearance:
0.020 to 0.220 mm (0.000787 to 0.00866 in.)

Maximum thrust clearance:
0.30 mm (0.0118 in.)

If the thrust clearance is more than the maximum, replace the thrust washers as a set. If necessary, replace the crankshaft.



Standard thrust washer thickness:
2.44 to 2.4 mm (0.0 1 to 0.0 0 in.)



6. REMOVE CRANKSHA T

a. Uniformly loosen and remove the 10 bearing cap bolts and 10 seal washers in

several steps in the sequence shown in the illustration.

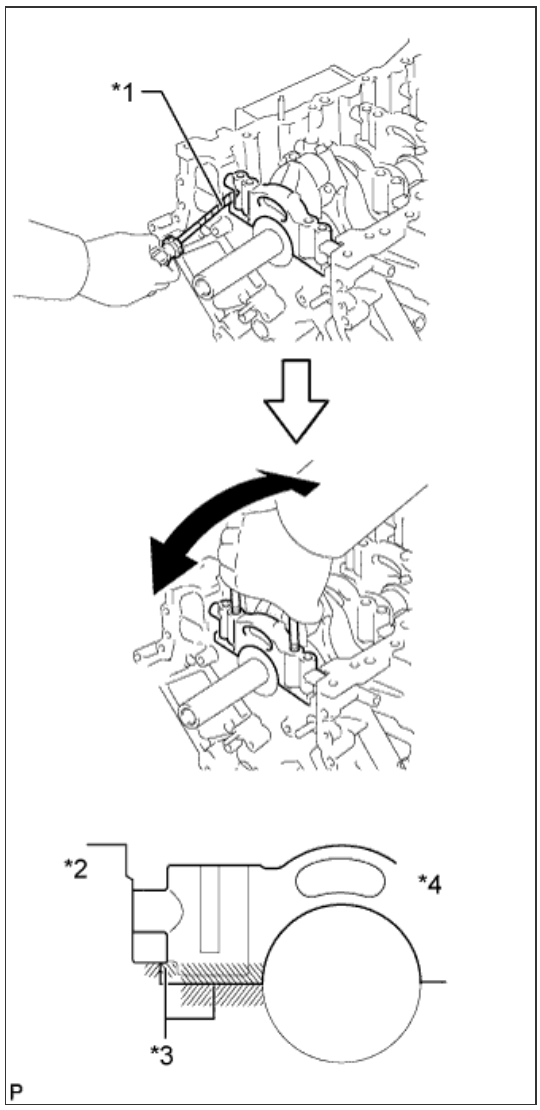
b. Uniformly loosen and remove the 20 bearing cap bolts in several steps in the sequence shown in the illustration.

c. Using a screwdriver, slightly pry up the 5 main bearing caps.

Text in Illustration

*1	Protective Tape
*2	Cylinder Block
*3	Joint Surface
*4	Bearing Cap

NOTICE:



- **Be careful not to damage the joint surface of the cylinder block and main bearing caps.**
- **Pry up the left and right side of the cap little by little.**

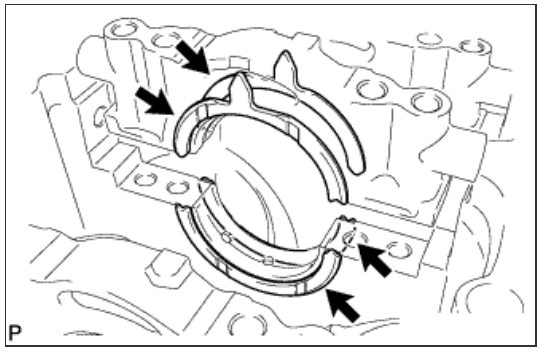
HINT:

Tape the screwdriver tip before use.

d. Using the 2 inside position crankshaft bearing cap bolts, loosen each crankshaft bearing cap by moving it forward and backward, and remove each crankshaft bearing cap.

e. Remove the crankshaft.

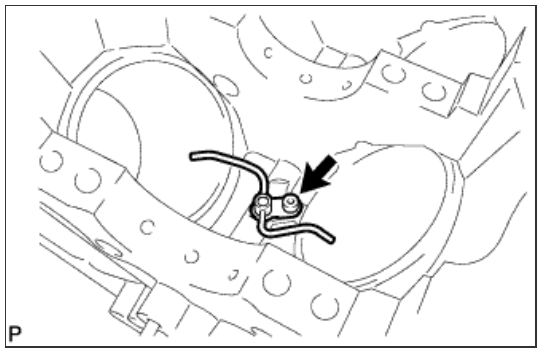
7. REMOVE CRANKSHA T BEARING



a. Remove the crankshaft bearings from the bearing caps and cylinder block.

HINT:

Arrange the removed parts in the correct order.

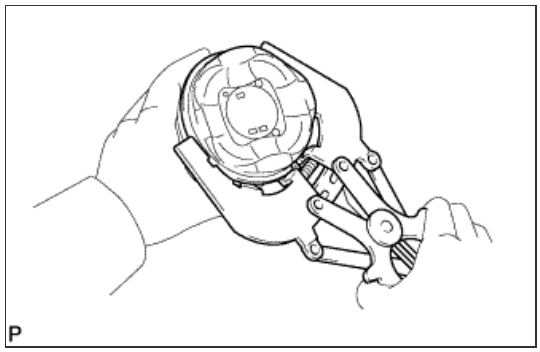


8. REMOVE CRANKSHA T THRUST WASHER SET

a. Remove the thrust washer set from the cylinder block and No. 3 bearing cap.

REMOVE NO. 1 OIL NO LSUB-ASSEMBLY

a. Using a 5 mm hexagon wrench, remove the 4 bolts and 4 oil nozzles.



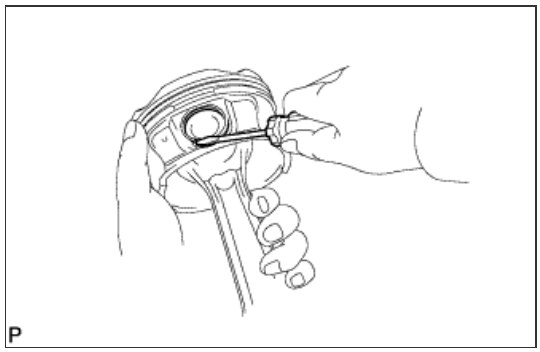
10. REMOVE PISTON RING SET

HINT:

Arrange the piston rings in the correct order.

a. Using a piston ring expander, remove the 2 compression rings.

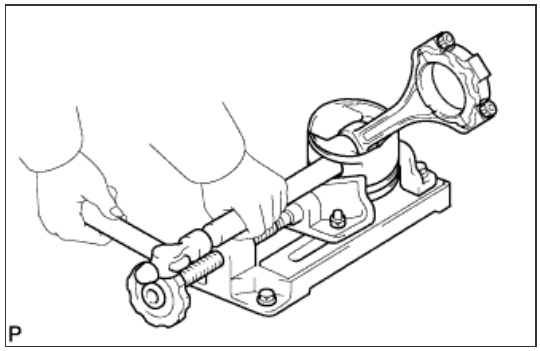
b. Remove the 2 side rails and oil ring expander by hand.



11. REMOVE PISTON WITH PIN SUB-ASSEMBLY

a. Disconnect the connecting rod from the piston.

i. Using a small screwdriver, pry off the 2 snap rings from the piston.



ii. Gradually heat the piston to approximately 80°C (176°F).

iii. Using a brass bar and plastic faced hammer, lightly tap out the piston pin. Then remove the connecting rod.

HINT:

- **The piston and pin are a matched set.**
- **Arrange the pistons, pins, rings, connecting rods and bearings in the correct order.**

b. Clean the piston.

i. Using a gasket scraper, remove the carbon from the piston top.

ii. Using a groove cleaning tool or broken ring, clean the piston ring grooves.

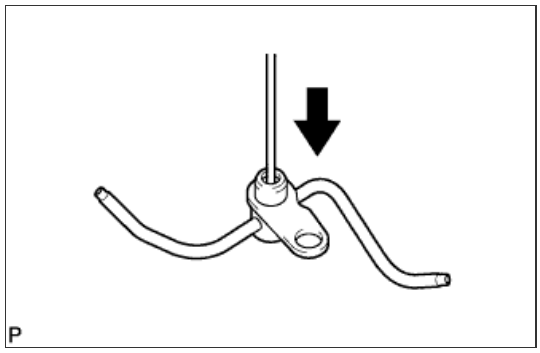
iii. Using solvent and a brush, thoroughly clean the piston.

NOTICE:

Do not use a wire brush.

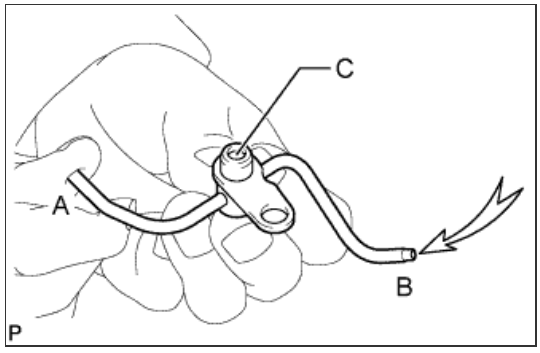
12. REMOVE STUD BOLT

NOTICE:



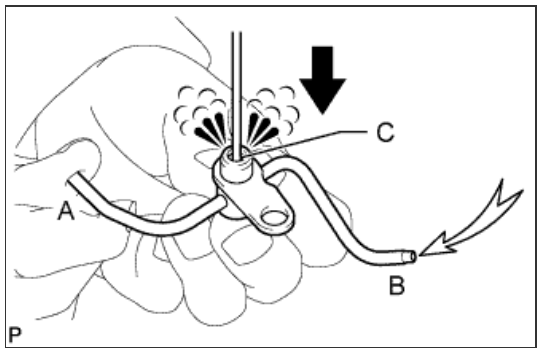
If the stud bolt is deformed or its threads are damaged, replace it.

for Preparation Click here



1. INSPECT NO. 1 OIL NOZZLE SUB-ASSEMBLY

a. Push the check valve with a pin to check if it is stuck.
If stuck, replace the No. 1 oil nozzle sub-assembly.

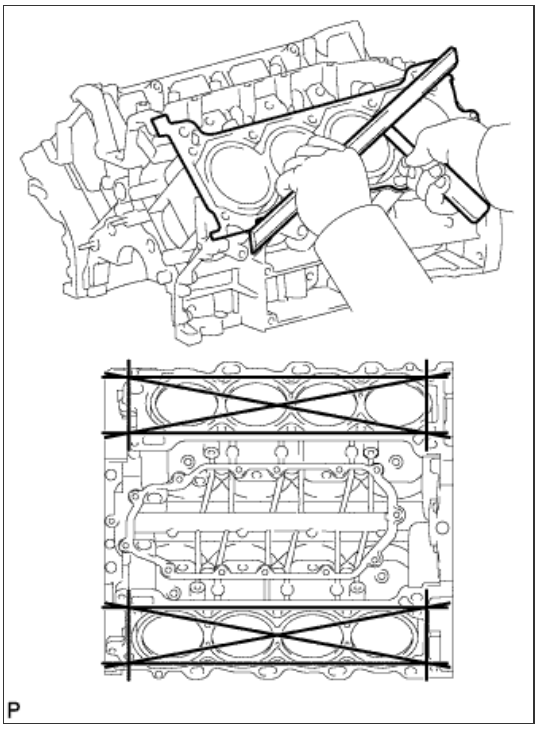


b. Push the check valve with a pin to check if it moves smoothly.
If it does not move smoothly, clean or replace the No. 1 oil nozzle sub-assembly.

c. While covering A, apply air into B. Check that air does not leak through C.
Perform the check again while covering B and applying air into A.
If air leaks, clean or replace the No. 1 oil nozzle sub-assembly.

d. Push the check valve while covering A, and apply air into B. Check that air passes through C. Perform the check again while covering B, pushing the check valve and applying air into A.
If air does not pass through C, clean or replace the No. 1 oil nozzle sub-assembly.

2. CHECK CYLINDER BLOCK SUB-ASSEMBLY



a. Visually check the cylinder for vertical scratches.
If necessary, replace the cylinder block.

3. INSPECT CYLINDER BLOCK FOR WARPAGE

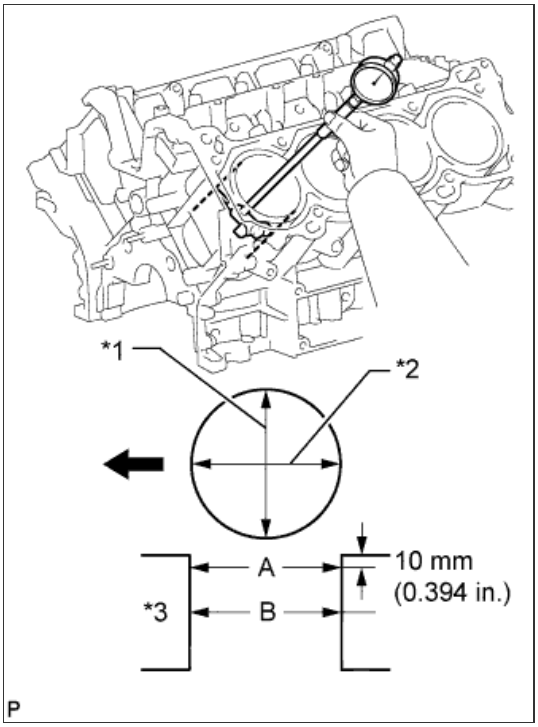
a. Using a precision straightedge and feeler gauge, measure the warpage of the surfaces where the cylinder head gaskets contact the cylinder block.

Maximum warpage:
0.07 mm (0.00276 in.)

If the warpage is more than the maximum, replace the cylinder block.

4. INSPECT CYLINDER BORE

a. Using a cylinder gauge, measure the cylinder bore diameter at positions A and B in the thrust and axial directions.



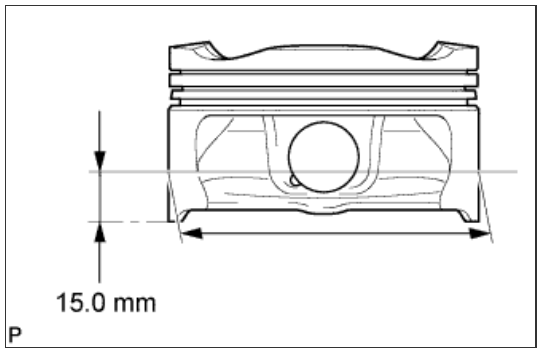
Standard diameter:
94.000 to 94.012 mm (3.7008 to 3.7013 in.)

Maximum diameter:
94.200 mm (3.7087 in.)

Text in Illustration

*1	Thrust Direction
*2	Axial Direction
*3	Center
➡	Front

If the diameter is more than the maximum, replace the cylinder block.



5. INSPECT PISTON SUB-ASSEMBLY WITH PIN

a. Using a micrometer, measure the piston diameter at a position that is 15.0 mm (0.591 in.) from the bottom of the piston (refer to the illustration).

Standard diameter:
93.950 to 93.960 mm (3.6988 to 3.6992 in.)

Minimum diameter:
93.815 mm (3.6935 in.)

If the diameter is less than the minimum, replace the piston.

6. INSPECT PISTON OIL CLEARANCE

a. Measure the cylinder bore diameter in the thrust direction.

b. Subtract the piston diameter measurement from the cylinder bore diameter measurement.

Standard oil clearance:
0.020 to 0.072 mm (0.000787 to 0.00283 in.)

Maximum oil clearance:
0.385 mm (0.0152 in.)

If the oil clearance is more than the maximum, replace all the pistons. If necessary, replace the cylinder block.

7. INSPECT RING GROOVE CLEARANCE

a. Using a feeler gauge, measure the clearance between a new piston ring and the wall of the ring groove.

Standard Ring Groove Clearance:

Item	Specified Condition
No. 1 ring	0.020 to 0.070 mm (0.000787 to 0.00276 in.)
No. 2 ring	0.020 to 0.060 mm (0.000787 to 0.00236 in.)
Oil ring expander	0.070 to 0.145 mm (0.00276 to 0.00571 in.)

If the clearance is not as specified, replace the piston.

8. INSPECT PISTON RING END GAP

a. Insert the piston ring into the cylinder bore.

b. Using a piston, push the piston ring a little beyond the bottom of the ring travel, 60 mm (2.36 in.) from the top of the cylinder block.

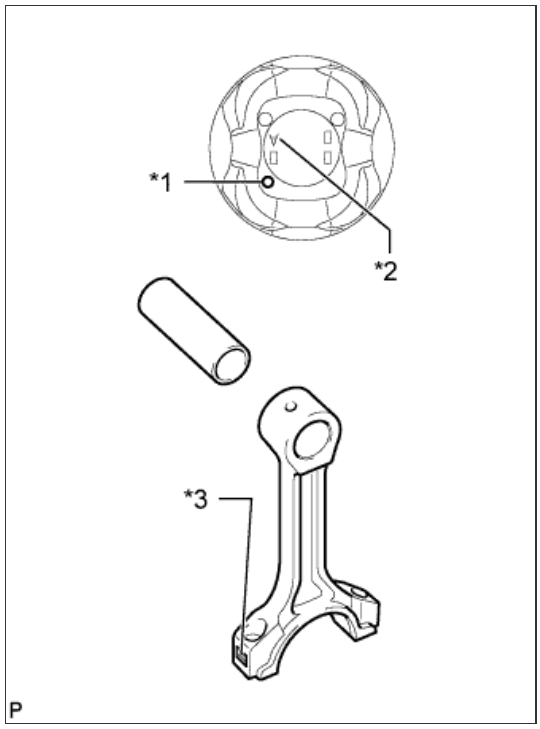
c. Using a feeler gauge, measure the end gap.

Standard End Gap:

Item	Specified Condition
No. 1 ring	0.23 to 0.33 mm (0.00906 to 0.0130 in.)
No. 2 ring	0.40 to 0.50 mm (0.0157 to 0.0197 in.)
Oil ring expander	0.10 to 0.40 mm (0.00394 to 0.0157 in.)

Maximum End Gap:

Item	Specified Condition
No. 1 ring	0.42 mm (0.0165 in.)
No. 2 ring	0.55 mm (0.0217 in.)
Oil ring expander	0.45 mm (0.0177 in.)

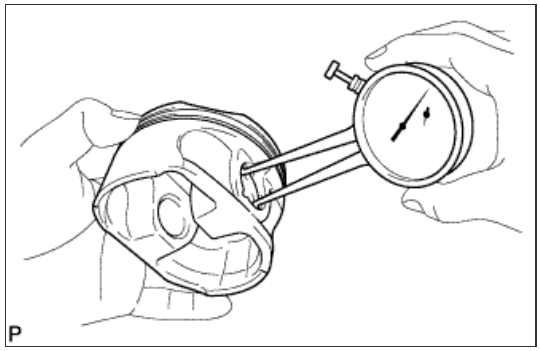


If the end gap is more than the maximum, replace the piston ring. If the end gap is more than the maximum even with a new piston ring, replace the cylinder block.

9. INSPECT PISTON PIN OIL CLEARANCE

a. Check each mark on the piston, piston pin and connecting rod.

Text in Illustration



*1	Front Mark
*2	Position Pin Hole Inside Diameter Mark
*3	Connecting Rod Bush Inside Diameter Mark

b. Using a caliper gauge, measure the inside diameter of the piston pin hole.

Standard Piston Pin Hole Inside Diameter:

Mark	Specified Condition
A	21.998 to 22.001 mm (0.86606 to 0.86618 in.)
B	22.001 to 22.004 mm (0.86618 to 0.86630 in.)
C	22.004 to 22.007 mm (0.86630 to 0.86642 in.)

c. Using a micrometer, measure the piston pin diameter.

Standard Piston Pin Diameter:

Mark	Specified Condition
A	21.997 to 22.000 mm (0.86602 to 0.86614 in.)
B	22.000 to 22.003 mm (0.86614 to 0.86626 in.)
C	22.003 to 22.006 mm (0.86626 to 0.86638 in.)

d. Subtract the piston pin diameter measurement from the piston pin hole diameter measurement.

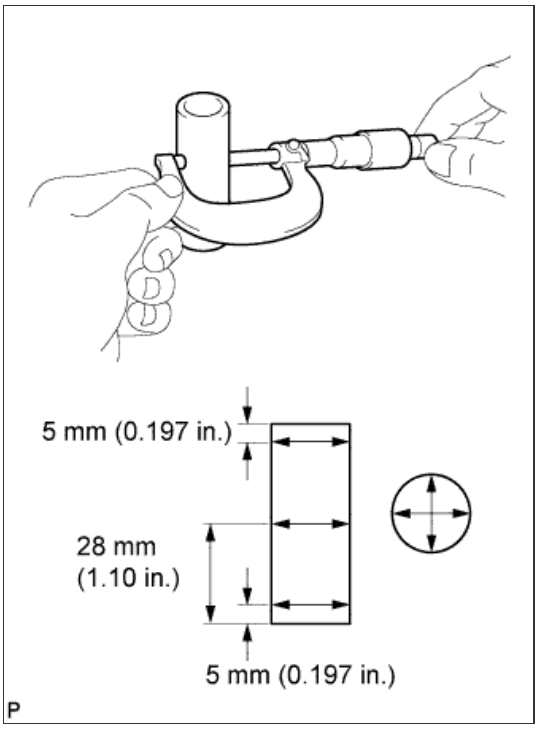
Standard oil clearance:
-0.002 to 0.004 mm (-0.0000787 to 0.000157 in.)

Maximum oil clearance:
0.015 mm (0.000591 in.)

If the oil clearance is more than the maximum, replace the piston and piston pin as a set.

e. Using a caliper gauge, measure the inside diameter of the connecting rod bush.

Standard Bush Inside Diameter:



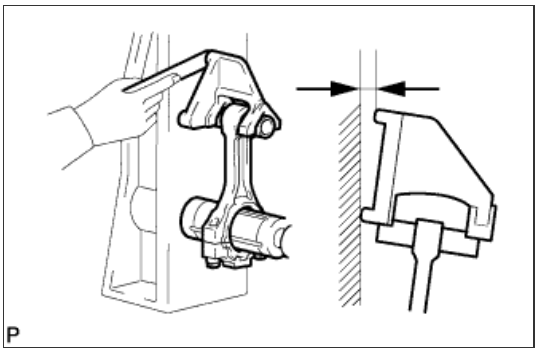
Mark	Specified Condition
A	22.005 to 22.008 mm (0.86634 to 0.86645 in.)
B	22.008 to 22.011 mm (0.86645 to 0.86657 in.)
C	22.011 to 22.014 mm (0.86657 to 0.86669 in.)

f. Subtract the piston pin diameter measurement from the bush inside diameter measurement.

Standard oil clearance:
0.005 to 0.011 mm (0.000197 to 0.000433 in.)

Maximum oil clearance:
0.03 mm (0.00118 in.)

If the oil clearance is more than the maximum, replace the connecting rod, and replace the piston and pin as a set.

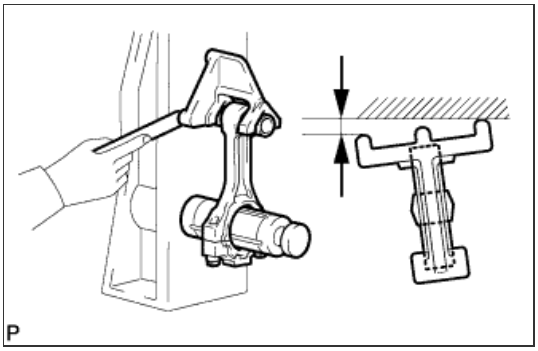


10. INSPECT CONNECTING ROD SUB-ASSEMBLY

a. Using a rod aligner and feeler gauge, check the connecting rod alignment.

i. Check for bend.

Maximum bend:
0.05 mm (0.00197 in.) per 100 mm (3.94 in.)



If the bend is more than the maximum, replace the connecting rod.

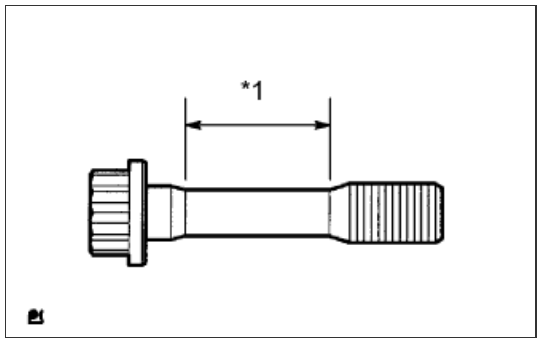
ii. Check for twist.

Maximum twist:
0.15 mm (0.00591 in.) per 100 mm (3.94 in.)

If the twist is more than the maximum, replace the connecting rod.

11. INSPECT CONNECTING ROD BOLT

a. Using a vernier caliper, measure the tension portion diameter of the bolt.



Standard diameter:
8.5 to 8.6 mm (0.335 to 0.339 in.)

Minimum diameter:
8.3 mm (0.327 in.)

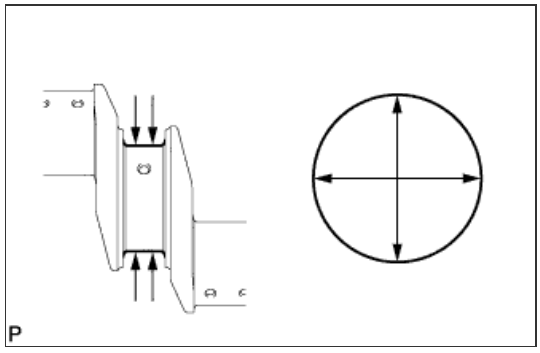
Text in Illustration

*1	Measuring Point

If the diameter is less than the minimum, replace the bolt.

12. INSPECT CRANKSHAFT

a. Inspect circle runout.



i. Place the crankshaft on V-blocks.

ii. Using a dial indicator, measure the circle runout at the center journal.

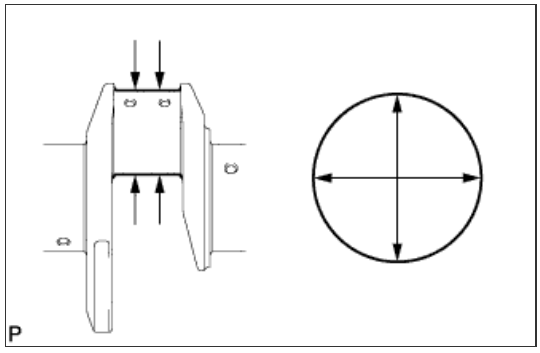
Maximum circle runout:
0.06 mm (0.00236 in.)

If the circle runout is more than the maximum, replace the crankshaft.

b. Inspect the main journals.

i. Using a micrometer, measure the diameter of each main journal.

Standard journal diameter:
66.988 to 67.000 mm (2.6373 to 2.6378 in.)



If the diameter is not as specified, check the oil clearance. If necessary, replace the crankshaft.

ii. Check each main journal for taper and out-of-round as shown in the illustration.

Maximum taper and out-of-round:
0.02 mm (0.000787 in.)

If the taper and out-of-round is more than the maximum, replace the crankshaft.

c. Inspect the crank pins.

i. Using a micrometer, measure the diameter of each crank pin.

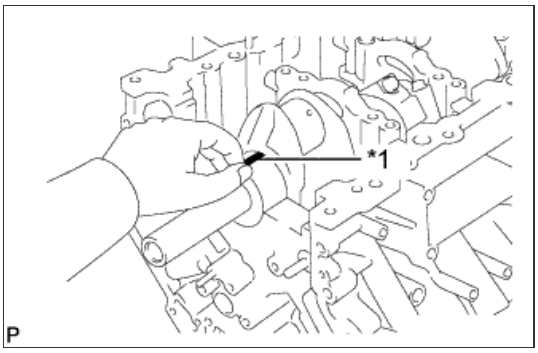
Standard crank pin diameter:
55.982 to 56.000 mm (2.2040 to 2.2047 in.)

If the diameter is not as specified, check the oil clearance. If necessary, replace the crankshaft.

ii. Check each crank pin for taper and out-of-round as shown in the illustration.

Maximum taper and out-of-round:
0.02 mm (0.000787 in.)

If the taper and out-of-round is more than the maximum, replace the crankshaft.



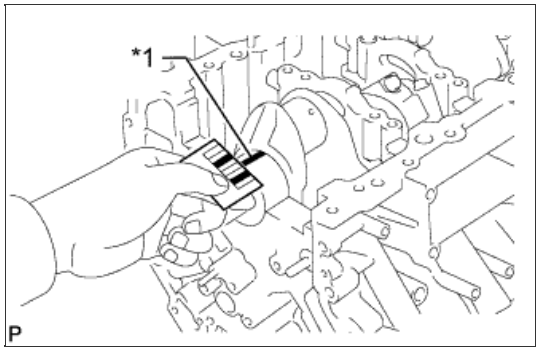
13. INSPECT CRANKSHAFT OIL CLEARANCE

a. Clean each main journal and bearing.

b. Check each main journal and bearing for pitting and scratches.
If the journal or bearing is damaged, replace the bearing.

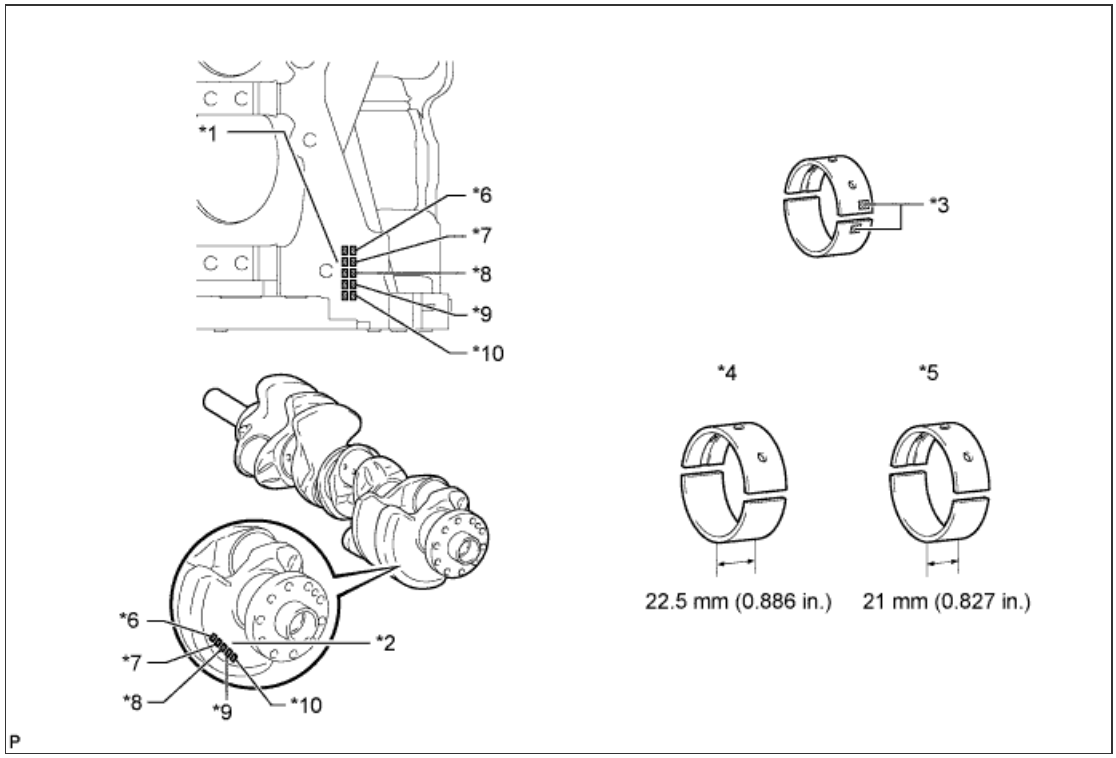
c. Place the crankshaft on the cylinder block.

d. Lay a strip of Plastigage across each journal.



Text in Illustration

*1	Plastigage



e. Install the crankshaft bearing caps (Click here).

f. Remove the 30 bolts and bearing caps.

g. Measure the Plastigage at its widest point.

Standard Oil Clearance:

Number Mark	Specified Condition
No. 1 and No. 5 journals	0.017 to 0.030 mm (0.000669 to 0.00118 in.)
Other journals	0.024 to 0.037 mm (0.000945 to 0.00146 in.)

Maximum Oil Clearance:

Number Mark	Specified Condition
No. 1 and No. 5 journals	0.050 mm (0.00197 in.)
Other journals	0.060 mm (0.00236 in.)

Text in Illustration

*1	Plastigage

If the oil clearance is more than the maximum, replace the bearings. If necessary, replace the crankshaft.

HINT:

If replacing a bearing, replace it with one that has the same number. If the number of the bearing cannot be determined, select the correct bearing by adding together the numbers imprinted on the cylinder block and crankshaft. Refer to the table below for the appropriate bearing number. There are 6 sizes of standard bearings. For the No. 1 and No. 5 position bearings, use bearings marked 4, 5, 6, 7, 8 or 9. For other bearings, use bearings marked 3, 4, 5, 6, 7 or 8.

Text in Illustration

*1	Cylinder Block Number Mark	*2	Crankshaft Number Mark
*3	Number Mark	*4	No. 1 and No. 5 Journal Bearings
*5	No. 2, No. 3 and No. 4 Journal Bearings	*6	No. 1
*7	No. 2	*8	No. 3
*9	No. 4	*10	No. 5

Example:
Cylinder block "07" + Crankshaft "06" = Total number 13 (Use upper bearing "6" and lower bearing "7")

HINT:

A = Cylinder block number mark

B = Crankshaft number mark

Standard Bearing Center Wall Thickness:

No. 1 and No. 5 Journals

(A) + (B)	Upper Bearing		Lower Bearing

h. Completely remove the Plastigage.

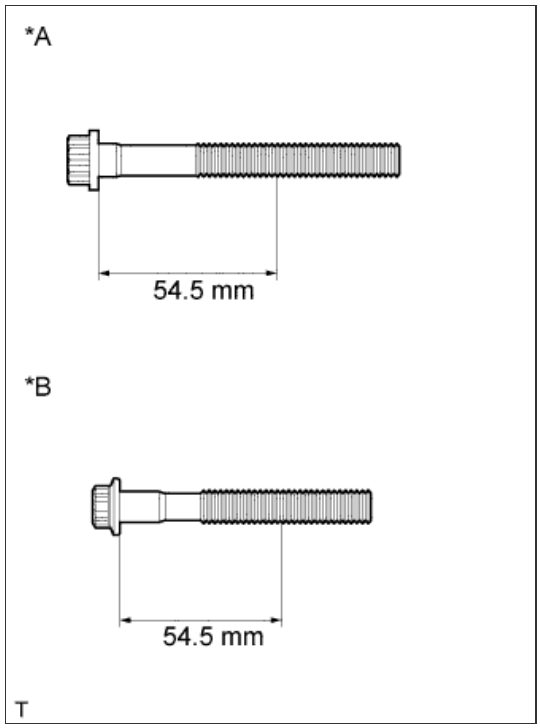
14. INSPECT CRANKSHAFT BEARING CAP SET BOLT

a. Using a vernier caliper, measure the minimum diameter of the elongated thread at the measuring point.

Measuring point:
54.5 mm (2.15 in.)

Standard Diameter:

Item	Specified Condition
Bolt A	10.5 to 11.0 mm (0.413 to 0.433 in.)
Bolt B	9.5 to 10.0 mm (0.374 to 0.394 in.)



Minimum Diameter:

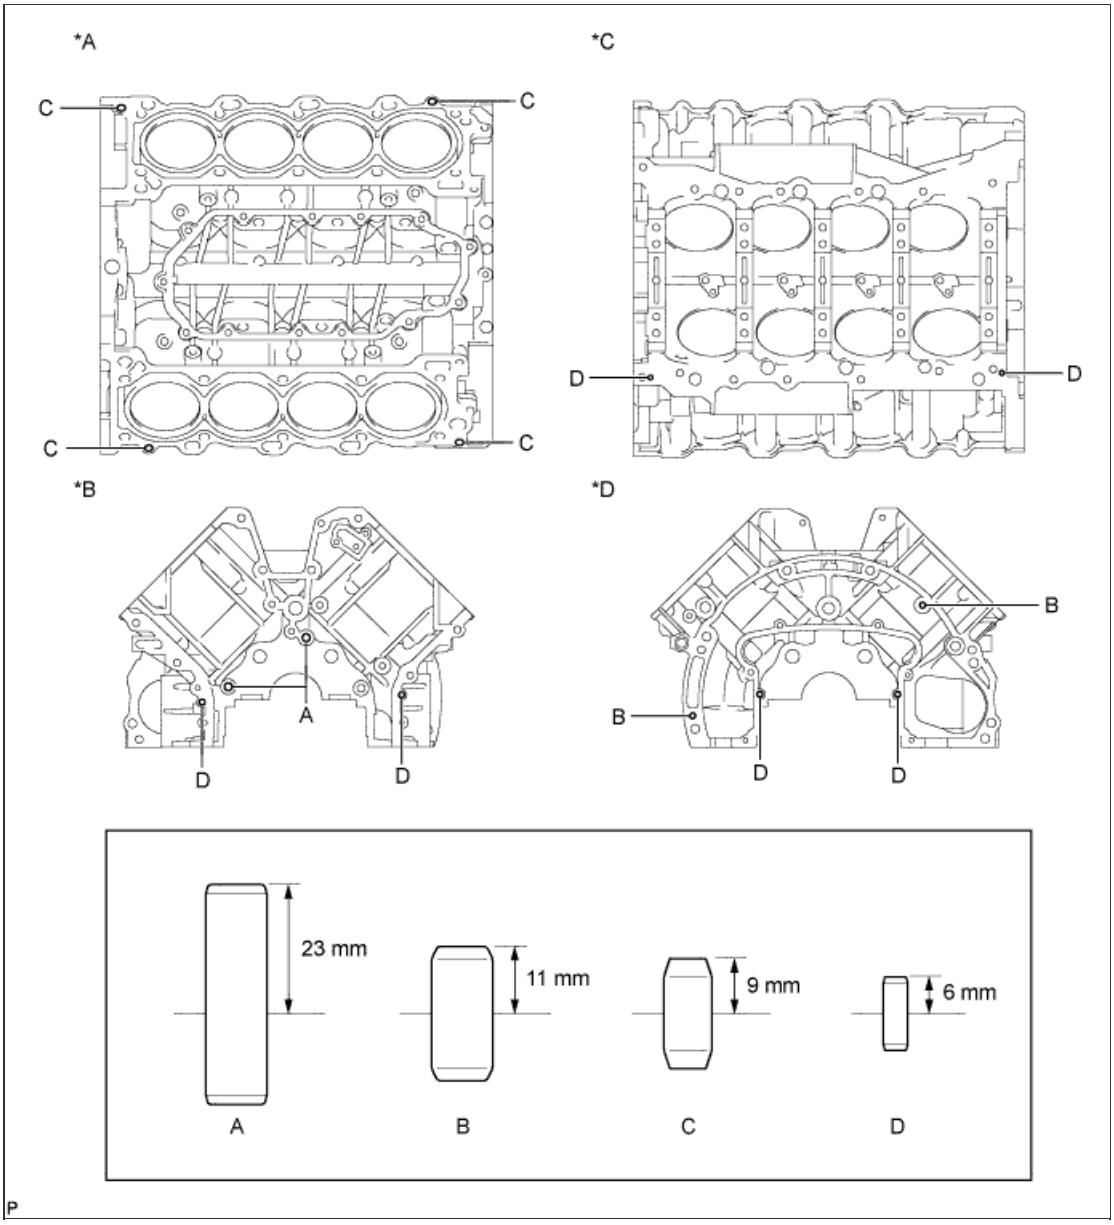
Item	Specified Condition
Bolt A	10.4 mm (0.409 in.)
Bolt B	9.4 mm (0.370 in.)

Text in Illustration

*A	Bolt A
*B	Bolt B

If the diameter is less than the minimum, replace the bolt.

for Preparation Click here



1. REPLACE STRAIGHT PIN

NOTICE:

It is not necessary to remove the straight pin unless it is being replaced.

a. Remove the straight pins.

b. Using a plastic-faced hammer, tap in new straight pins to the cylinder block.

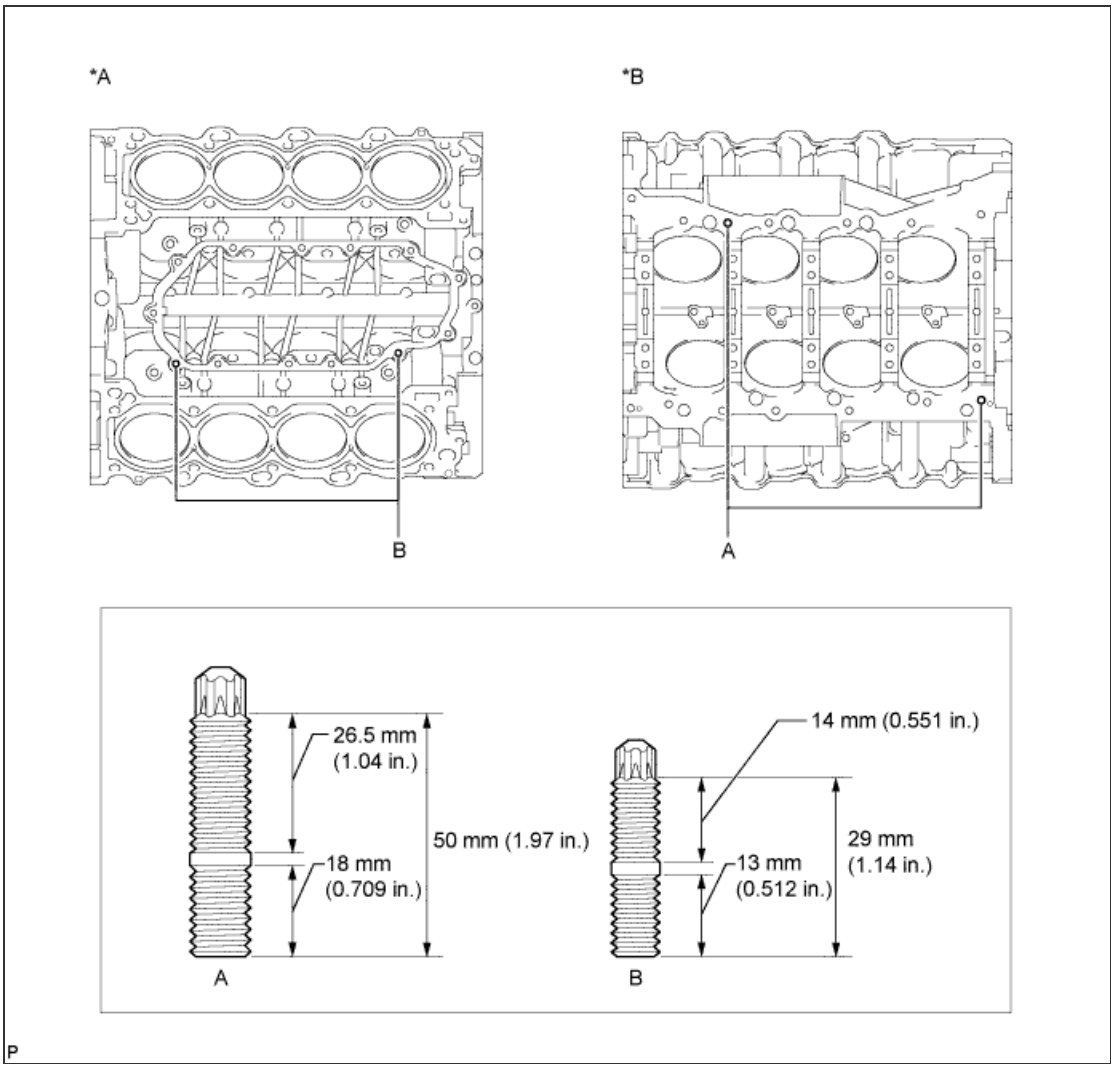
Text in Illustration

*A	Upper Side	*B	Front Side
*C	Lower Side	*D	Rear Side

Standard Protrusion:

Item	Pin Diameter	Specified Condition

Pin A	10 mm (0.394 in.)	23 mm (0.906 in.)
Pin B	10 mm (0.394 in.)	11 mm (0.433 in.)
Pin C	8 mm (0.315 in.)	9 mm (0.354 in.)
Pin D	4 mm (0.157 in.)	6 mm (0.236 in.)



for Preparation Click here

1. INSTALL STUD BOLT

NOTICE:

If the stud bolt is deformed or its threads are damaged, replace it.

a. Using an E8 "TORX" socket wrench, install the stud bolts.

Text in Illustration

*A	Upper Side	*B	Lower Side

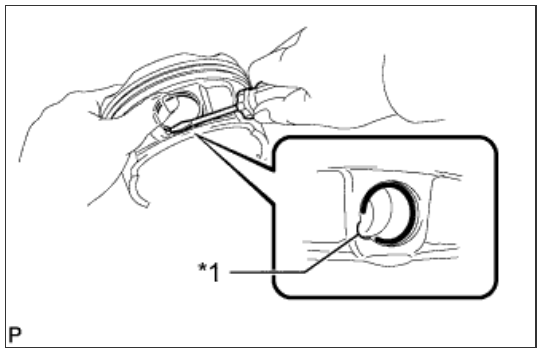
Torque:

for stud bolt A:

20 N* 204 kgf*c , 15 ft.*lbf }

for stud bolt B:

9.0 N* 92 kgf*c , 80 in.*lbf }



2. INSTALL NO. 1 OIL NO LE SUB-ASSEMBLY

a. Using a 5 mm hexagon wrench, install the 4 oil nozzles with the 4 bolts.

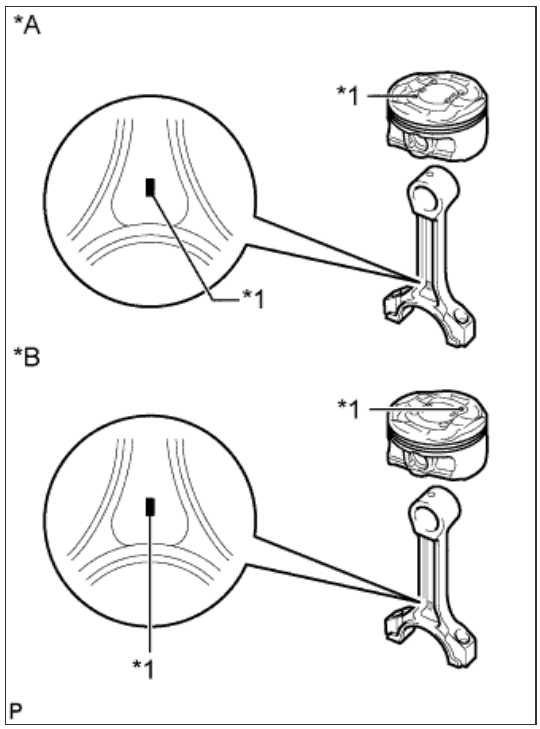
Torque:
10 N* 102 kgf*c , 7 ft.*lbf }

3. INSTALL PISTON IT PIN SUB-ASSEMBLY

a. Using a small screwdriver, install a new snap ring at one end of the piston pin hole.

Text in Illustration

*1	Service Hole



INT:

Be sure that the end gap of the snap ring is not aligned with the service hole of the piston.

b. Gradually heat the piston to approximately 80°C (176°F).

c. Coat the piston pin and connecting rod with engine oil.

d. Align the front marks of the piston and connecting rod as shown in the illustration. Then push in the piston pin with your thumb until the piston pin contacts the snap ring.

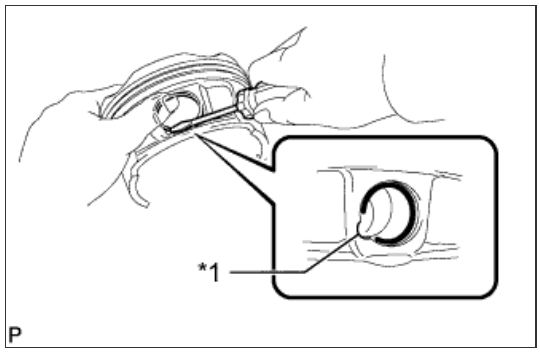
Text in Illustration

*A	LH
*B	RH
*1	Front Mark

NOTICE:

For the LH side, perform the assembly so that the front marks of the piston and connecting rod are on the same side. For the RH side, perform the assembly so that the front marks of the piston and connecting rod are on opposite sides.

INT:



The piston and pin are a matched set.

e. Check the fitting condition between the piston and piston pin.

i. Move the connecting rod back and forth on the piston pin. Check the fitting condition.
If abnormal movement is felt, replace the piston and pin as a set.

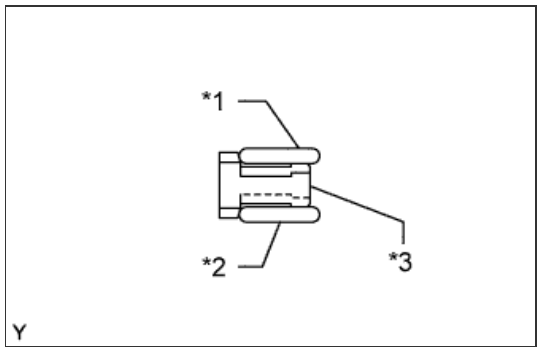
ii. Rotate the piston back and forth on the piston pin. Check the fitting condition.
If abnormal movement is felt, replace the piston and pin as a set.

f. Using a small screwdriver, install a new snap ring at the other end of the piston pin hole.

Text in Illustration

*1	Service Hole

INT:



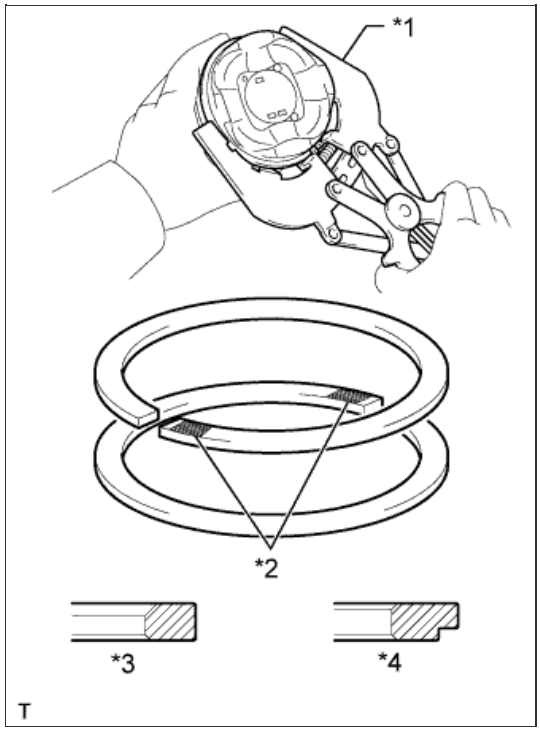
Be sure that the end gap of the snap ring is not aligned with the service hole of the piston.

4. INSTALL PISTON RIN SET

a. Install the oil ring expander and 2 side rails by hand.

Text in Illustration

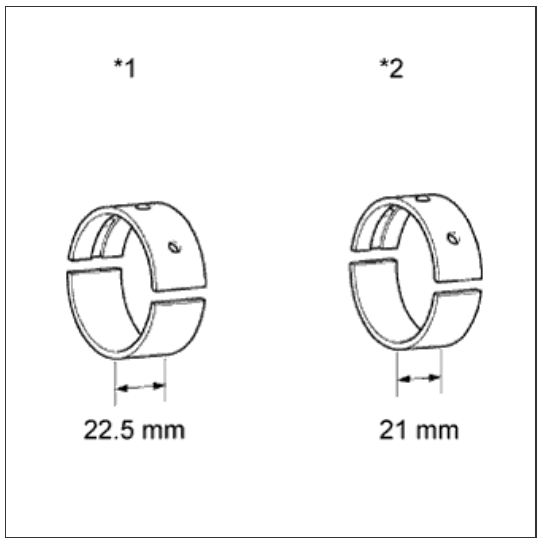
*1	Side Rail Upper
*2	Side Rail Lower
*3	Oil Ring Expander



b. Using a piston ring expander, install the 2 compression rings so that the paint marks are positioned as shown in the illustration.

Paint Mark:

Piston Ring	Paint Mark
No. 1	Blue
No. 2	Orange



Text in Illustration

*1	Piston Ring Expander
*2	Paint Mark
*3	No. 1 Ring
*4	No. 2 Ring

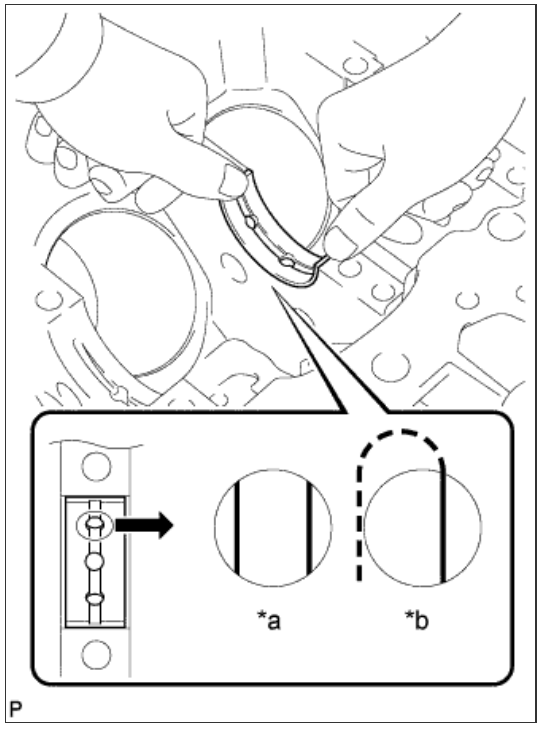
5. INSTALL CRANKS AFT BEARIN

a. Clean the main journal and both surfaces of the bearing.

b. Install the upper bearing.

Text in Illustration

*1	No. 1 and No. 5 Journal Bearings
*2	No. 2, No. 3 and No. 4 Journal Bearings



NOTICE:

Main bearings come in widths of 21 mm (0.827 in.) and 22.5 mm (0.886 in.). Install the 22.5 mm (0.886 in.) bearings in the No. 1 and No. 5 cylinder block journal positions with the main bearing caps. Install the 21 mm (0.827 in.) bearings in the No. 2, No. 3 and No. 4 positions.

i. Install the upper bearing to the cylinder block as shown in the illustration.

Text in Illustration

*a	CORRECT
*b	INCORRECT

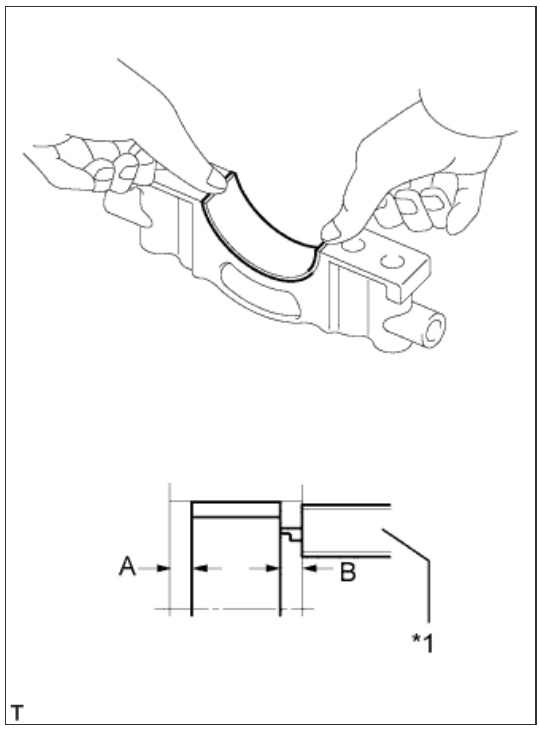
NOTICE:

- **Do not apply engine oil to the bearings and the contact surfaces.**
- **Both sides of the oil groove in the cylinder block should be visible through the oil feed holes in the bearing. The amount visible on each side of the holes should be equal.**
- **Do not allow coolant to come into contact with the bearing inner surface.**
- **If any coolant comes into contact with the bearing inner surface, replace the bearing with a new one.**

c. Install the lower bearing.

NOTICE:

- **Be sure to install the selected bearing.**
- **Main bearings come in widths of 21 mm (0.827 in.) and 22.5 mm (0.886 in.). Install the 22.5 mm (0.886 in.) bearings in the No. 1 and No. 5 cylinder block journal positions with the main bearing caps. Install the 21 mm (0.827 in.) bearings in the No. 2, No. 3 and No. 4 positions.**



i. Install the lower bearings to the crankshaft bearing caps.

ii. Using a vernier caliper, measure the distance between the crankshaft bearing cap edge and the lower bearing edge.

Dimension A - B or B - A:
0 to 0.7 mm (0 to 0.0276 in.)

Text in Illustration

*1	Vernier Caliper

NOTICE:

- **Do not apply engine oil to the bearings and the contact surfaces.**
- **Do not allow coolant to come into contact with the bearing inner surface.**
- **If any coolant comes into contact with the bearing inner surface, replace the bearing with a new one.**

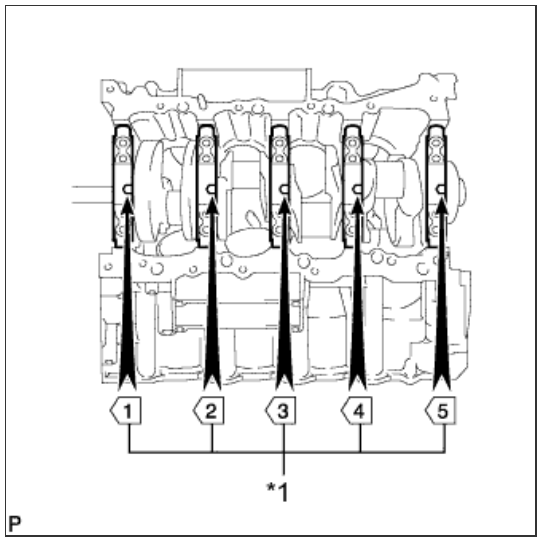
6. INSTALL CRANKSHAFT THRUST WASHER SET

a. Apply engine oil to the thrust washer set.

b. Install the 4 thrust washers to the No. 3 journal position of the cylinder block and crankshaft bearing cap with the oil grooves facing outward.

7. INSTALL CRANKSHAFT

a. Apply engine oil to the upper bearing and lower bearing, then place the crankshaft on the cylinder block.



b. Confirm the front marks and numbers of the crankshaft bearing caps, and install the crankshaft bearing caps on the cylinder block.

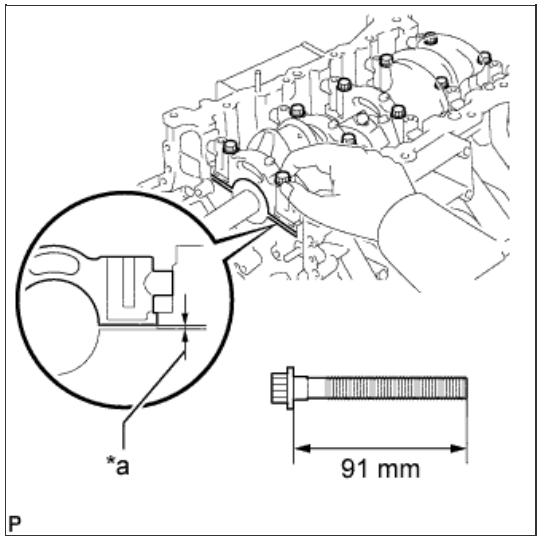
Text in Illustration

*1	Number Mark

HINT:

A number is marked on each main bearing cap to indicate the installation position.

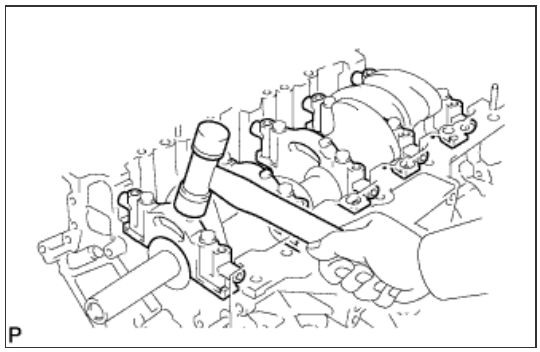
c. Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.



d. Temporarily install the 10 crankshaft bearing cap bolts to the inside positions.

e. Push the crankshaft bearing cap by hand until the clearance between the crankshaft bearing cap and cylinder block is less than 6 mm (0.236 in.).

Bolt length:
91 mm (3.58 in.)

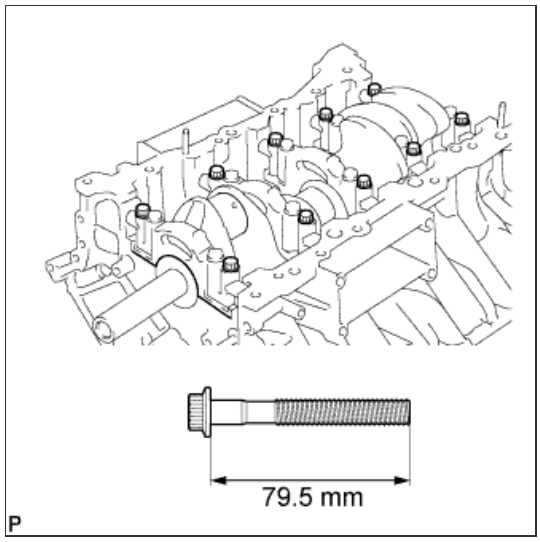


Text in Illustration

*a	Less than 6 mm

f. Using a plastic-faced hammer, lightly tap the crankshaft bearing cap to ensure a proper fit.

g. Apply a light coat of engine oil to the threads and under the heads of the 10 crankshaft bearing cap bolts.

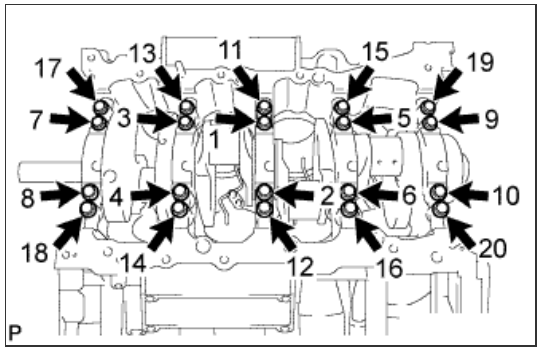


h. Temporarily install the 10 crankshaft bearing cap bolts to the outside positions.

Bolt length:
79.5 mm (3.13 in.)

HINT:

The main bearing cap bolts are tightened in 2 progressive steps.



i. Step 1:

i. Uniformly tighten the 20 crankshaft bearing cap bolts in the sequence shown in the illustration.

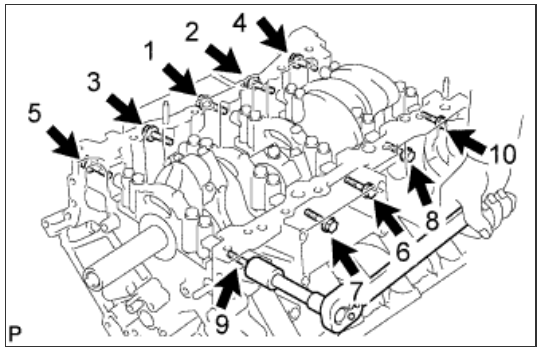
Torque:
for inside position:
61 N*m{ 22 kgf*cm , 45 ft.*lbf }
for outside position:
27 N*m{ 275 kgf*cm , 20 ft.*lbf }

If any of the main bearing cap bolts does not meet the specified torque, replace it.

j. Step 2:

i. Mark the front of the bearing cap bolts with paint.

ii. Tighten the bearing cap bolts 90° in the order shown in step 1.



iii. Check that the painted marks are now at a 90° angle to the front.

k. Check that the crankshaft turns smoothly.

l. Install and uniformly tighten the 10 crankshaft bearing cap bolts and 10 new seal washers in several steps in the sequence shown in the illustration.

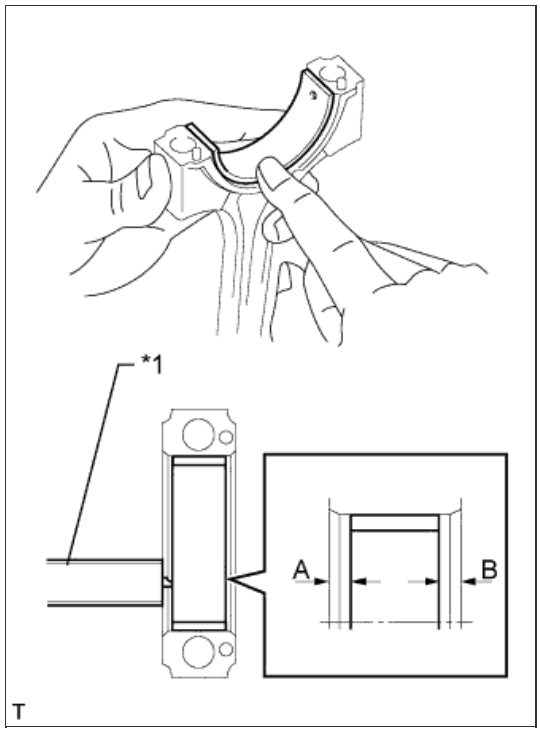
Torque:
45 N*m{ 459 kgf*cm , 33 ft.*lbf }

m. Check that the crankshaft turns smoothly.

8. INSTALL CONNECTING ROD BEARING

a. Install the connecting rod bearings to the connecting rods and bearing caps.

b. Using a vernier caliper, measure the distance between the connecting rod and bearing cap edges, and each connecting rod bearing edge.



Dimension A - B or B - A:
0 to 0.7 mm (0 to 0.0276 in.)

Text in Illustration

*1	Vernier Caliper

NOTICE:

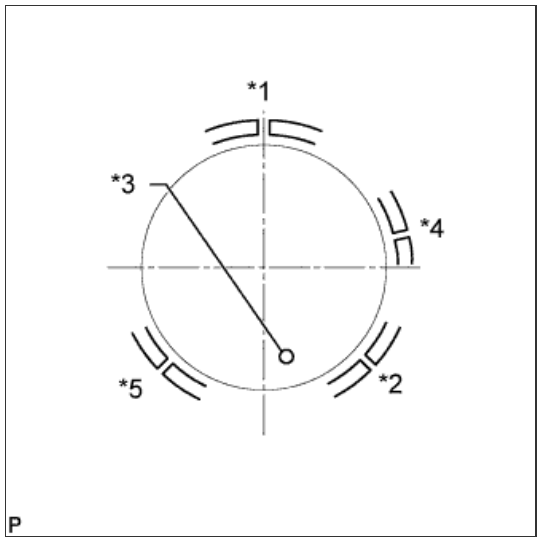
- **Do not apply engine oil to the bearings and the contact surfaces.**
- **Do not allow coolant to come into contact with the bearing inner surface.**
- **If any coolant comes into contact with the bearing inner surface, replace the bearing with a new one.**

9. INSTALL PISTON AND CONNECTING ROD

a. Apply engine oil to the cylinder walls, the pistons, and the surfaces of the connecting rod bearings.

b. Position the piston rings so that the ring ends are as shown in the illustration.

Text in Illustration

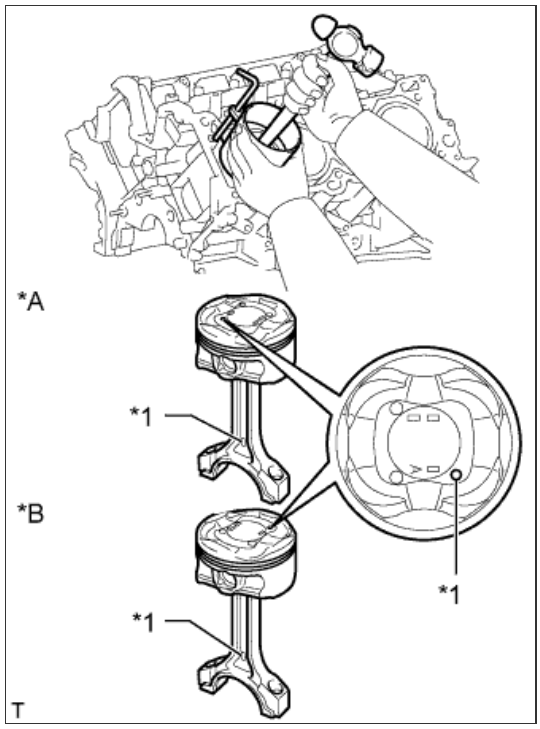


*1	Side Rail Upper
*2	Side Rail Lower
*3	Front Mark
*4	No. 1 Ring
*5	No. 2 Ring

NOTICE:

Do not align the ring ends.

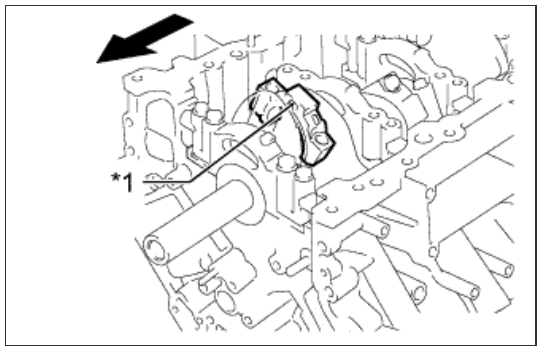
HINT:



The expander ends can be placed anywhere.

c. Using a hammer handle and piston ring compressor, push the correctly numbered piston and connecting rod into the cylinder with the front mark of the piston facing forward.

Text in Illustration



*A	LH
*B	RH
*1	Front Mark

d. Place the connecting rod cap on the connecting rod.

i. Match the numbered connecting rod cap with the connecting rod.

ii. Place the connecting rod cap on the connecting rod, and check that the front mark of the connecting rod cap is facing the direction indicated in the chart below.

Front Mark:

Item	Front Mark
Bank 1	Front side
Bank 2	Rear side

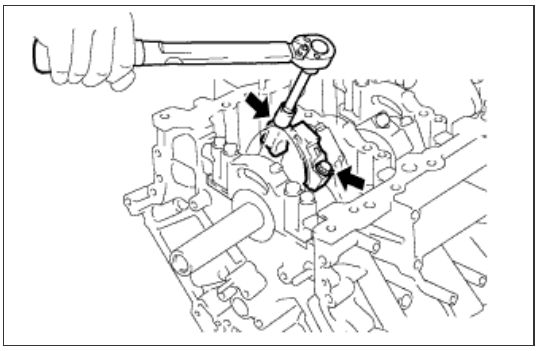
Text in Illustration

*1	Front Mark
➡	Front

e. Apply a light coat of engine oil to the threads and under the heads of the connecting rod cap bolts.

f. Temporarily install the connecting rod cap bolts.

HINT:



The connecting rod cap bolts are tightened in 2 progressive steps.

g. Step 1:

i. Install and alternately tighten the bolts of the connecting rod cap in several steps.

Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

h. Step 2:

i. Mark the front side of each connecting rod cap bolt with paint.

ii. Tighten the cap bolts 90° as shown in the illustration in the order in step 1.

iii. Check that the painted marks are now at a 90° angle to the front.

i. Check that the crankshaft turns smoothly.

for Preparation Click here

1. INSPECT IGNITION TIMING

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. When using the intelligent tester:

i. Connect the intelligent tester to the DLC3.

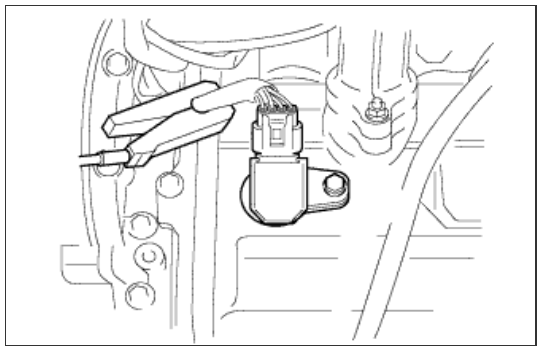
NOTICE:

Switch off all accessories and the A/C before connecting the intelligent tester.

ii. Start the engine and idle it.

iii. Push the intelligent tester main switch ON.

iv. Enter the following menus: Powertrain / Engine and ECT / Data List / Primary / IGN Advance.



HINT:

Refer to the intelligent tester operator's manual for further details.

Standard ignition timing:
5 to 15° BTDC @ idling (transmission in neutral and A/C switch off)

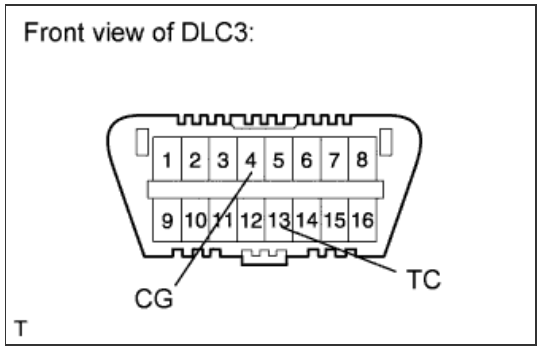
v. Disconnect the intelligent tester from the DLC3.

c. When not using the intelligent tester:

i. Remove the 2 nuts and V-bank cover.

ii. Connect the tester probe of a timing light to the wire of the ignition coil connector for the No. 1 cylinder.

NOTICE:



Use a timing light that detects primary signals.

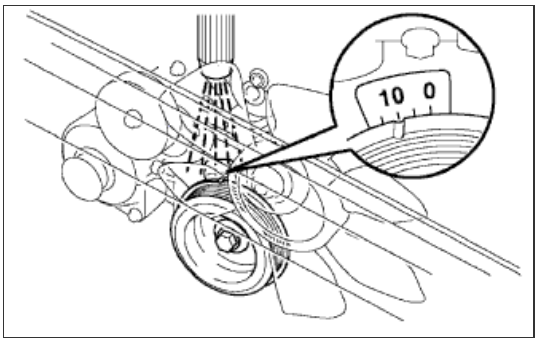
iii. Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.

SST
09843-18040

NOTICE:

- **Confirm the terminal numbers before connecting them. Connecting the wrong terminals can damage the engine.**
- **Switch off all accessories and the A/C.**

iv. Using the timing light, check the ignition timing.



Ignition timing:
5 to 15° BTDC @ idling (transmission in neutral and A/C switch off)

v. Remove SST from the DLC3.

vi. Disconnect the timing light from the engine.

vii. Install the V-bank cover with the 2 nuts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

2. INSPECT ENGINE IDLE SPEED

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. When using the intelligent tester:

i. Connect the intelligent tester to the DLC3.

NOTICE:

Switch off all accessories and the A/C before connecting the intelligent tester.

ii. Race the engine at 2500 rpm for approximately 90 seconds.

iii. Push the intelligent tester main switch ON.

iv. Enter the following menus: Powertrain / Engine and ECT / Data List / Primary / Engine Speed.

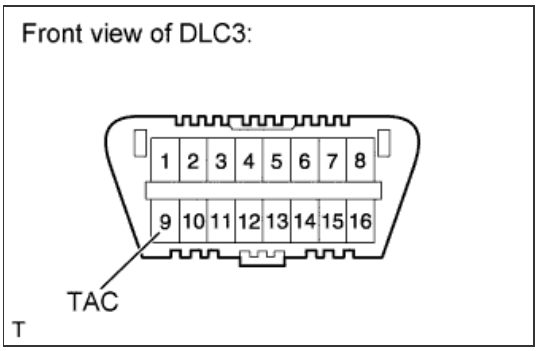
Standard idle speed:
650 to 750 rpm (transmission in neutral and A/C switch off)

HINT:

Refer to the intelligent tester operator's manual for further details.

If the idle speed is not as specified, check the air intake system.

v. Disconnect the intelligent tester from the DLC3.



c. When not using the intelligent tester:

i. Using SST, connect a tachometer probe to terminal 9 (TAC) of the DLC3.

SST
09843-18030

NOTICE:

- **Confirm the terminal number before connecting the probe. Connecting the probe to the wrong terminal can damage the engine.**
- **Switch off all accessories and the A/C.**

ii. Race the engine at 2500 rpm for approximately 90 seconds.

iii. Check the idle speed.

Standard idle speed:
650 to 750 rpm (transmission in neutral and A/C switch off)

If the idle speed is not as specified, check the air intake system.

iv. Disconnect the tachometer from the DLC3.

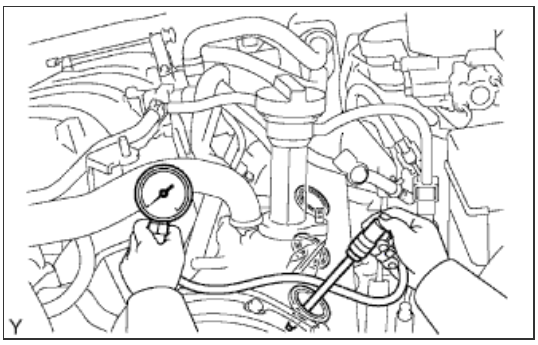
3. INSPECT COMPRESSION

a. Warm up and stop the engine.

   i. Allow the engine to warm up to a normal operating temperature.

b. Check for DTCs (Click here).

c. Remove the 2 nuts and V-bank cover.



d. Remove the air cleaner hose assembly.

e. Disconnect the 8 injector connectors and 8 ignition coil connectors.

f. Remove the 8 bolts and 8 ignition coils.

g. Remove the 8 spark plugs.

h. Check the cylinder compression pressure.

NOTICE:

Check the compression pressure of each cylinder in the same way.

   i. Insert a compression gauge into the spark plug hole.

   ii. Fully open the throttle.

   iii. While cranking the engine, measure the compression pressure.

Standard compression pressure:
1373 kPa (14.0 kgf/cm^2, 199 psi) or more

Minimum pressure:
1030 kPa (10.5 kgf/cm^2, 149 psi)

Difference between each cylinder:
98 kPa (1.0 kgf/cm^2, 14.2 psi) or less

NOTICE:

- **Always use a fully charged battery to obtain an engine speed of 250 rpm or more.**
- **This measurement must be done as quickly as possible.**

   iv. If the cylinder compression is low in one or more cylinders, pour a small amount of engine oil into the cylinder with low compression through its spark plug hole. Then inspect the cylinder compression pressure again.

HINT:

- **If adding oil helps boost the compression, it is likely that the piston rings and/or cylinder bore are worn or damaged.**
- **If pressure stays low, a valve may be stuck or seated improperly, or there may be leakage in the gasket.**

i. Install the 8 spark plugs.

Torque:
18 N*m{ 178 kgf*cm , 13 ft.*lbf }

j. Install the 8 ignition coils with the 8 bolts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

k. Connect the 8 injector connectors and 8 ignition coil connectors.

l. Install the air cleaner hose assembly.

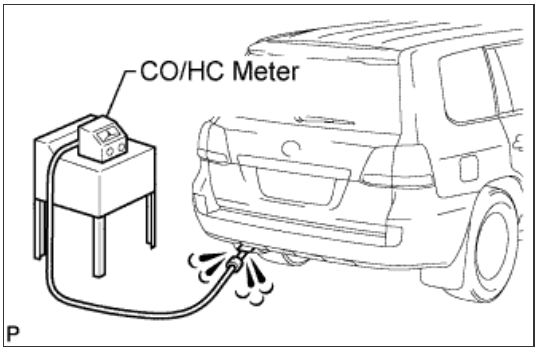
Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

m. Install the V-bank cover with the 2 nuts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

n. Clear the DTCs (Click here).

4. INSPECT CO/HC



HINT:

This check is used only to determine whether or not the idle CO/HC complies with regulations.

a. Warm up the engine.

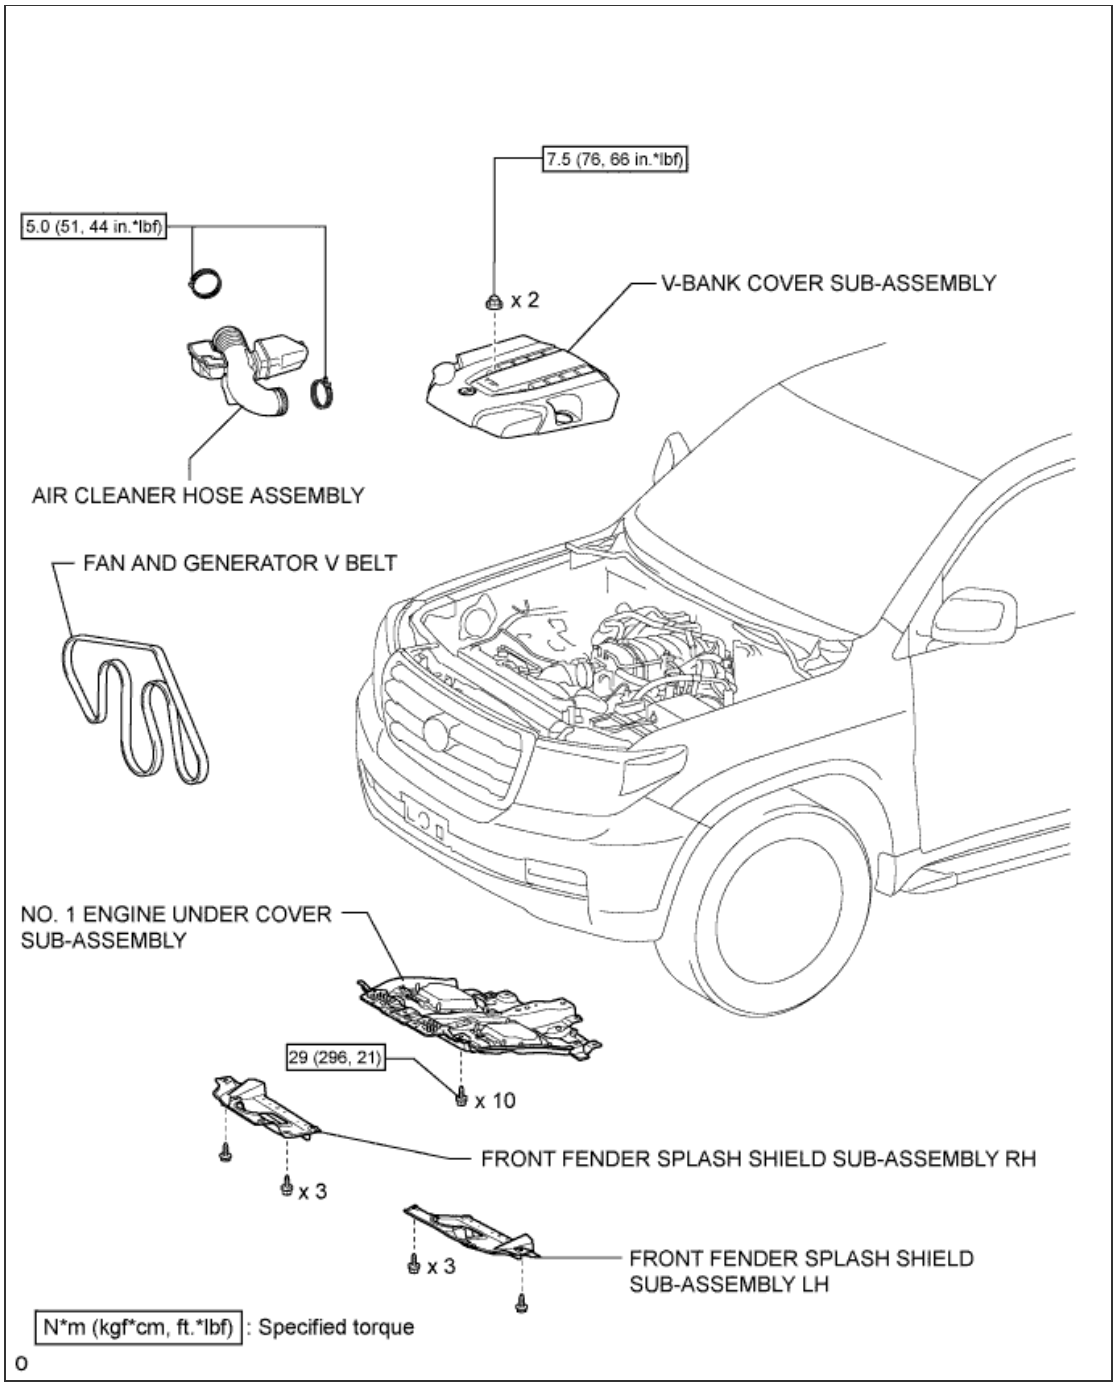
b. Keep the engine speed at 2500 rpm for approximately 180 seconds.

c. Insert the CO/HC meter testing probe at least 40 cm (1.31 ft.) into the tailpipe during idling.

d. Immediately check CO/HC concentration at idle and/or 2500 rpm.

HINT:

When performing the 2 mode (2500 rpm and idle) test, follow the measurement order prescribed by the applicable local regulations.



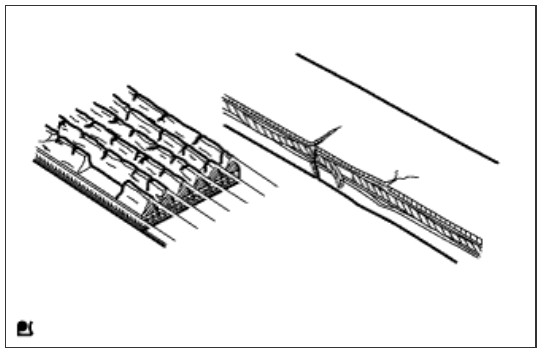
e. If the CO/HC concentration does not comply with regulations, troubleshoot in the order given below.

i. Check the A/F sensor (Click here) and heated oxygen sensor (Click here) operation.

ii. See the table below for possible causes, and then inspect and correct the applicable causes if necessary.

CO	HC	Symptom	Cause
Normal	High	Rough idle	1. Faulty ignitions: • Incorrect timing • Plugs (contaminated, shorted or gaps are defective) 2. Incorrect valve clearance 3. Leaky intake and exhaust valves 4. Leaky cylinder
Low	High	Rough idle (Fluctuating HC reading)	1. Vacuum leaks: • PCV hose • Intake manifold • Throttle body 2. Lean mixture causing misfire
High	High	Rough idle (Black smoke from exhaust)	1. Restricted air filter 2. Faulty SFI system: • Faulty pressure regulator • Defective ECT sensor • Faulty ECM • Faulty injectors • Faulty throttle position sensor • Faulty MAF meter

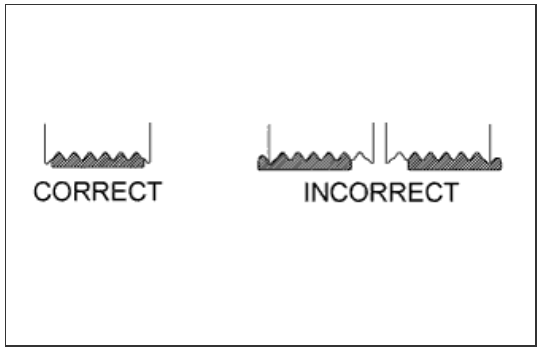
for Preparation [Click here]



for Preparation Click here

1. INSPECT FAN & GENERATOR V BELT

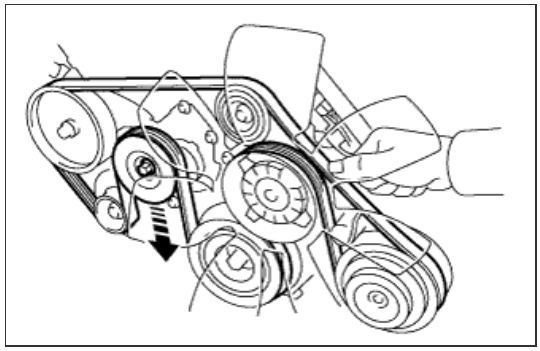
a. Check the belt for wear, cracks or other signs of damage.
If any of the following defects is found, replace the fan and generator V belt.



- The belt is cracked.
- The belt is worn out to the extent that the cords are exposed.
- The belt has chunks missing from the ribs.

b. Check that the belt fits properly in the ribbed grooves.

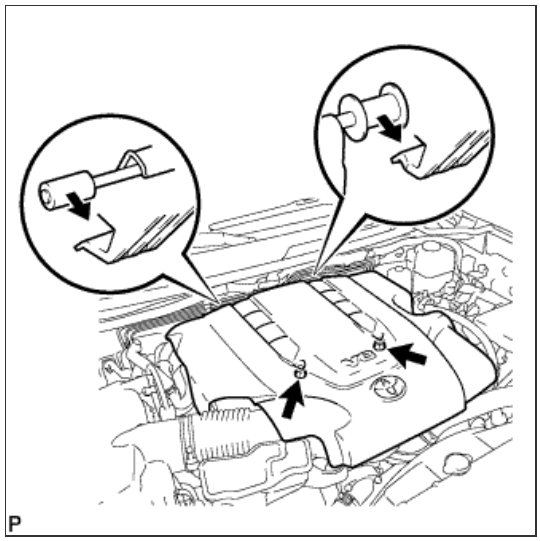
HINT:



Check with your hand to confirm that the belt has not slipped out of the groove on the bottom to the pulley. If it has slipped out, replace the fan and generator V belt. Install a new fan and generator V belt correctly.

2. INSPECT V-RIBBED BELT TENSIONER ASSEMBLY

a. Check that the belt tensioner moves downward when the belt is pressed down at the point indicated in the illustration with approximately 98 N (10 kgf, 22.0 lbf) of force.

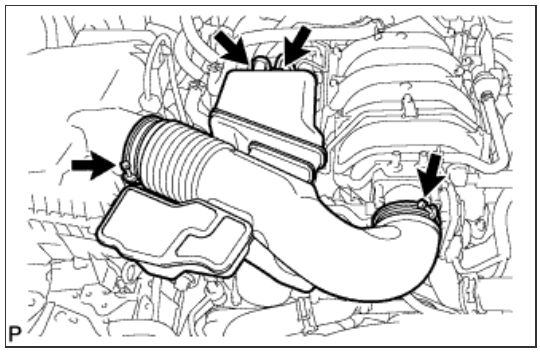


b. Check that nothing gets caught in the tensioner by turning it clockwise and counterclockwise.
If a malfunction exists, replace the tensioner.

for Preparation Click here

1. REMOVE V-BANK COVER SUB-ASSEMBLY

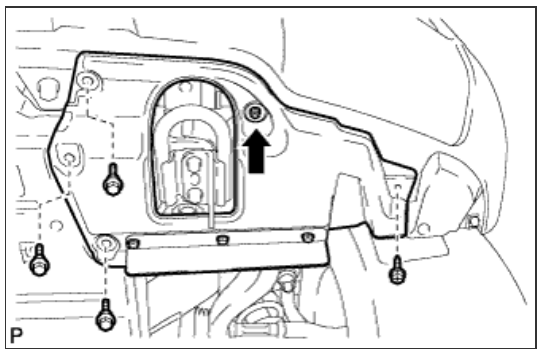
a. Remove the 2 nuts and V-bank cover.



2. REMOVE AIR CLEANER HOSE ASSEMBLY

a. Disconnect the vacuum transmitting hose and No. 2 venti ation hose.

b. Loosen the 2 hose c amps.

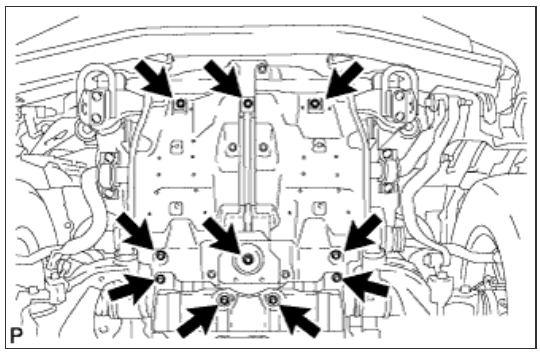


c. Remove the air c aner hose.

3. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bo ts and screw.

b. Turn the c ip indicated by the arrow in the i stration to remove the fender sp ash shie d.



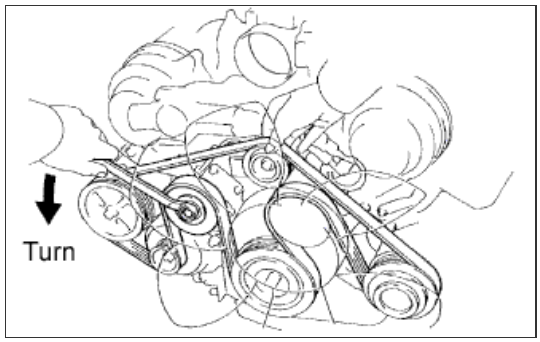
4. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

5. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and No. 1 engine under cover.

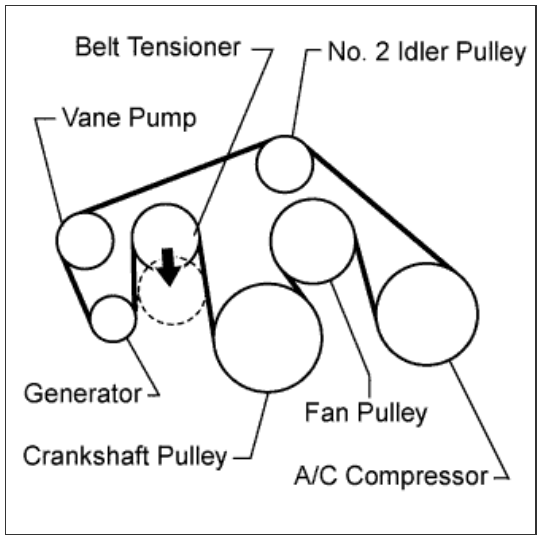


6. REMOVE FAN & GENERATOR V BELT

a. Loosen the belt tension by turning the belt tensioner counterclockwise, and then remove the fan and generator V belt.

HINT:

The pulley bolt for the belt tensioner has left-hand thread.

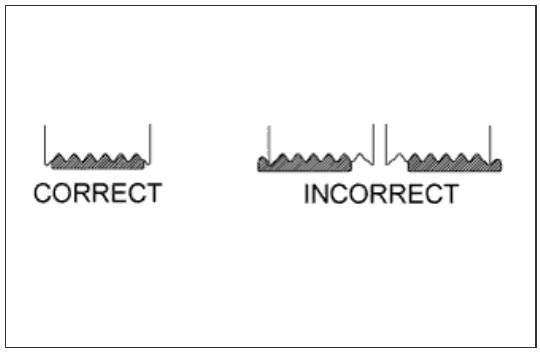


for Preparation Click here

1. INSTALL FAN & GENERATOR V BELT

a. Set the V belt onto every part except the belt tensioner, as shown in the illustration.

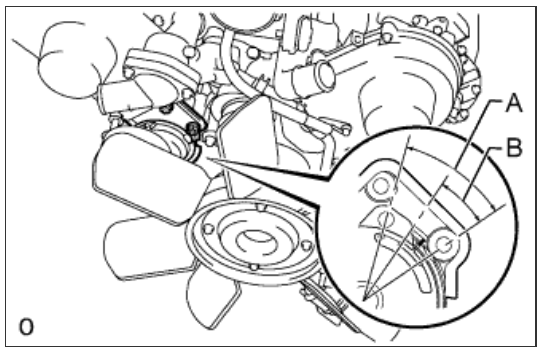
b. Loosen the V belt by turning the belt tensioner counterclockwise.



c. Set the V belt to the belt tensioner.

d. Check that the belt fits properly in the ribbed grooves.

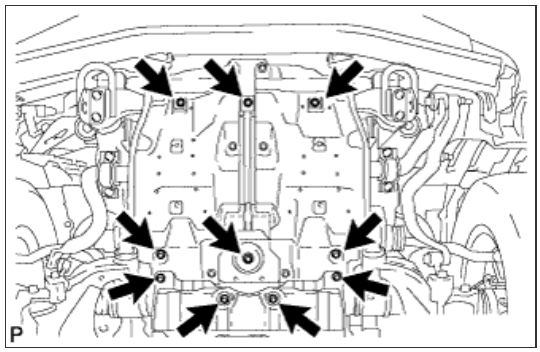
HINT:



Make sure to check by hand that the belt has not slipped out of the grooves on the bottom of the pulley.

e. Check that the arrow on the belt tensioner is within area "A".
If the arrow is outside area "A", replace the fan and generator V belt.

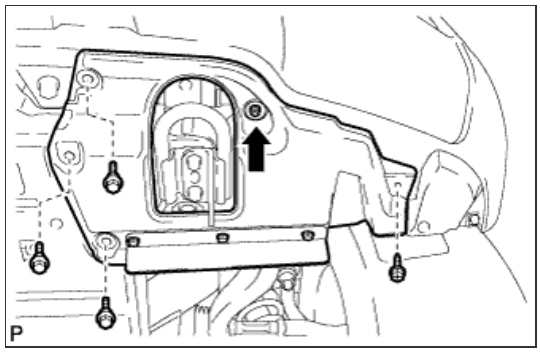
HINT:



When a new belt is installed, the arrow should be within area "B". If not, the fan and generator V belt is not installed correctly.

2. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.



Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

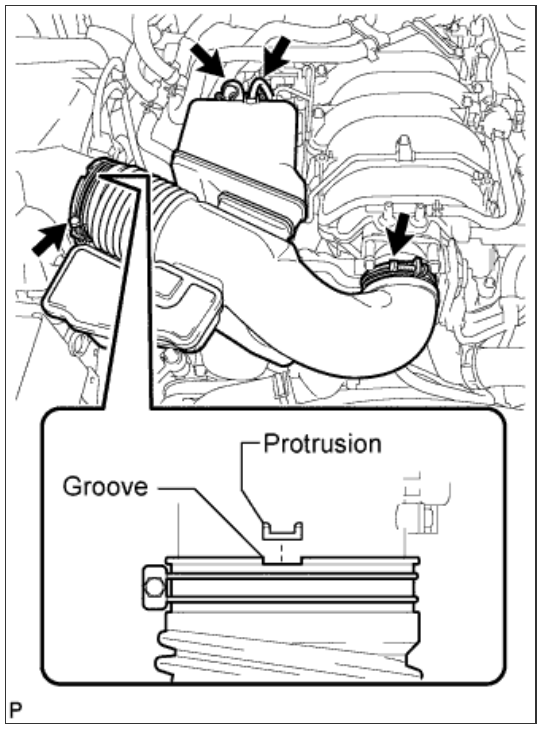
b. Install the 3 bolts and screw.

4. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

5. INSTALL AIR CLEANER HOSE ASSEMBLY



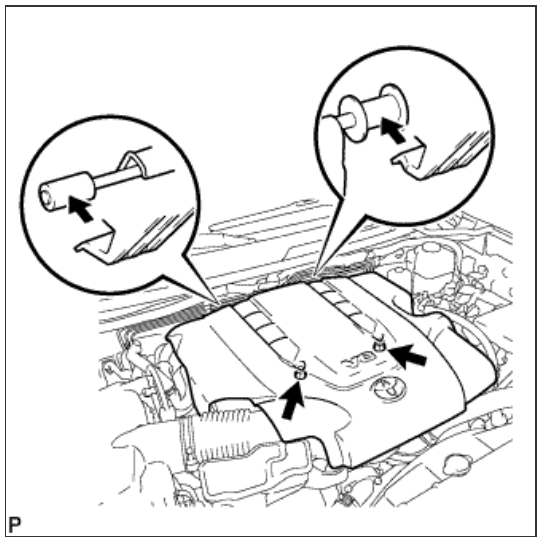
a. Install the air cleaner hose so that the protrusion of the air cleaner cap aligns with the groove of the hose as shown in the illustration.

b. Tighten the 2 clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

c. Connect the vacuum transmitting hose.

d. Connect the No. 2 ventilation hose.



6. INSTALL V-BANK COVER SUB-ASSEMBLY

a. Attach the 2 V-bank cover hooks to the bracket.

b. Install the V-bank cover with the 2 nuts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

for Preparation Click here

1. DISCHARGE FUEL SYSTEM PRESSURE

a. Discharge the fuel system pressure (Click here).

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

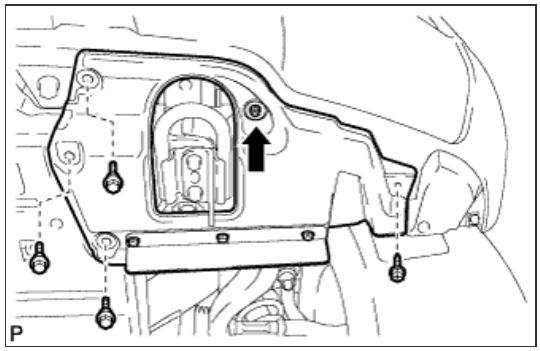
CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

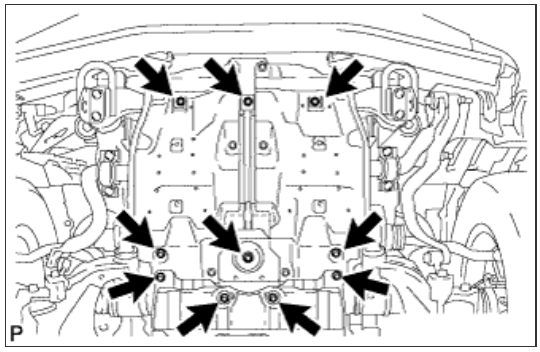
3. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH



HINT:

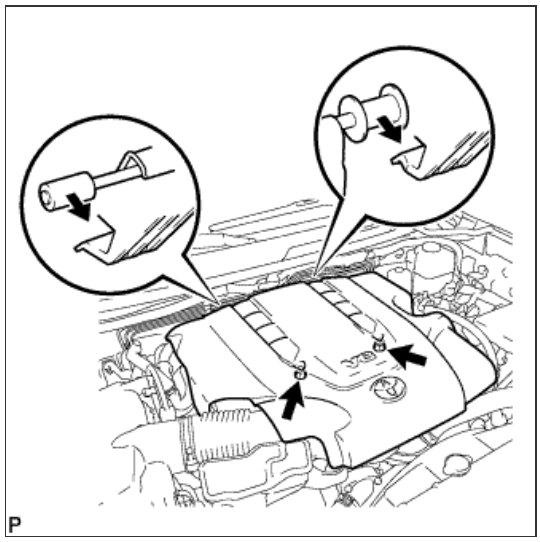
Use the same procedures described for the LH side.

4. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH



a. Remove the 3 bolts and screw.

b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.

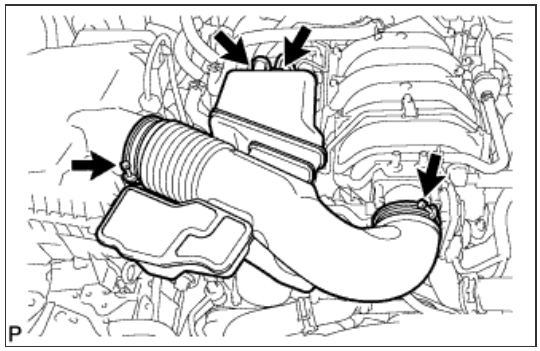


5. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and No. 1 engine under cover.

6. REMOVE V-BANK COVER SUB-ASSEMBLY

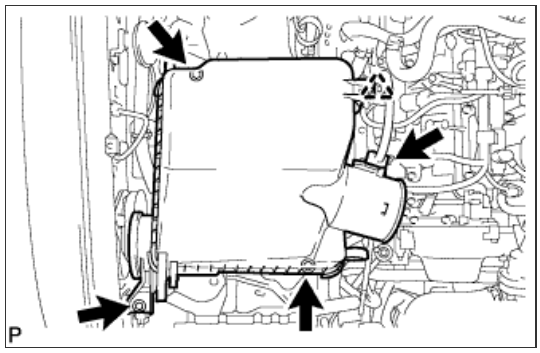
a. Remove the 2 nuts and V-bank cover.



7. REMOVE AIR CLEANER HOSE ASSEMBLY

a. Disconnect the vacuum transmitting hose and No. 2 ventilation hose.

b. Loosen the 2 hose clamps.

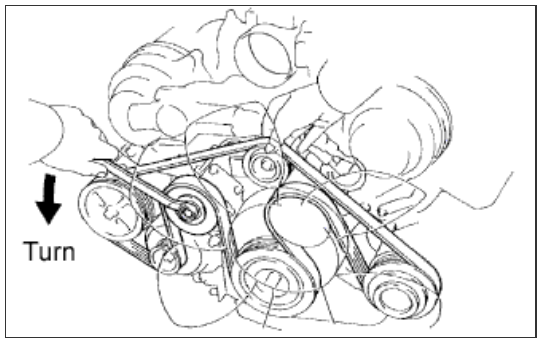


c. Remove the air cleaner hose.

8. REMOVE AIR CLEANER ASSEMBLY

a. Disconnect the clamp and MAF connector.

b. Remove the 3 bolts and air cleaner.

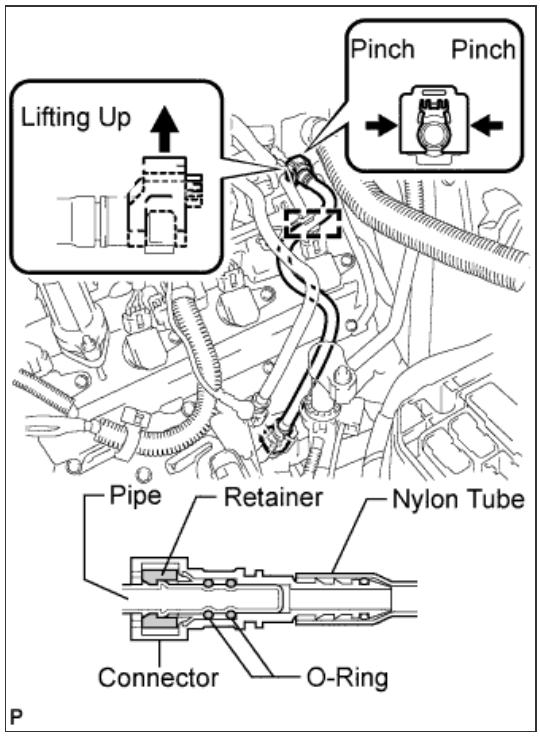


9. REMOVE FAN & GENERATOR V BELT

a. Loosen the belt tension by turning the belt tensioner counterclockwise, and then remove the fan and generator V belt.

HINT:

The pulley bolt for the belt tensioner has left-hand thread.



1 . REMOVE NO. 2 FUEL HOSE

a. for engine side:

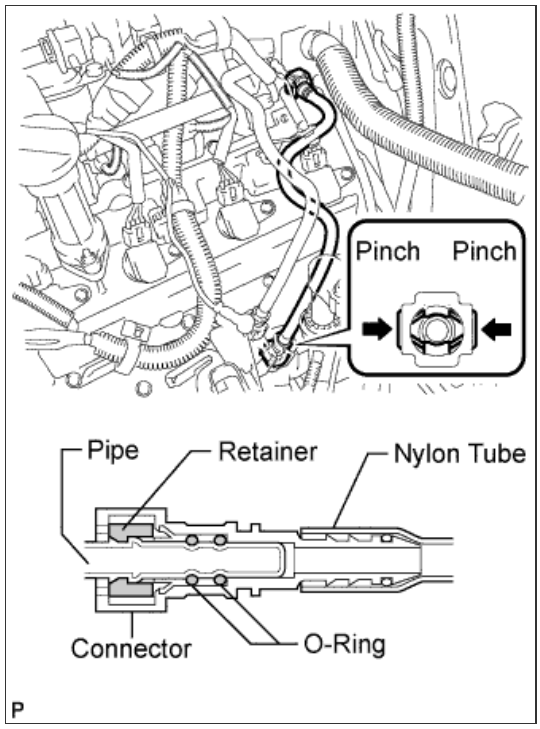
i. Detach the fuel hose clamp.

ii. Detach the lock claw by lifting up the cover, as shown in the illustration.

iii. Pinch and pull the No. 2 fuel hose connector to disconnect the connector from the No. 3 fuel pipe.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**



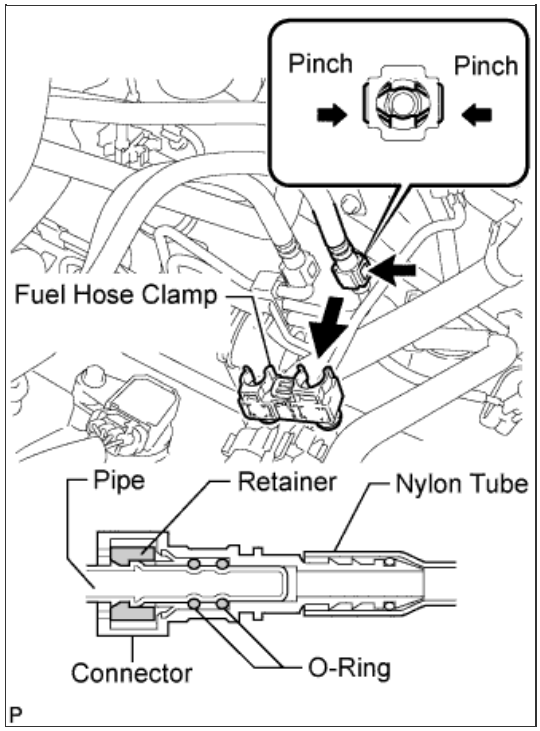
b. for body side:

i. Pinch and pull the No. 2 fuel hose connector to disconnect the connector from the fuel pipe.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**

- If the pipe and connector are t dto ether, pinch the connector between your fingers and turn it carefully to disconnect it.



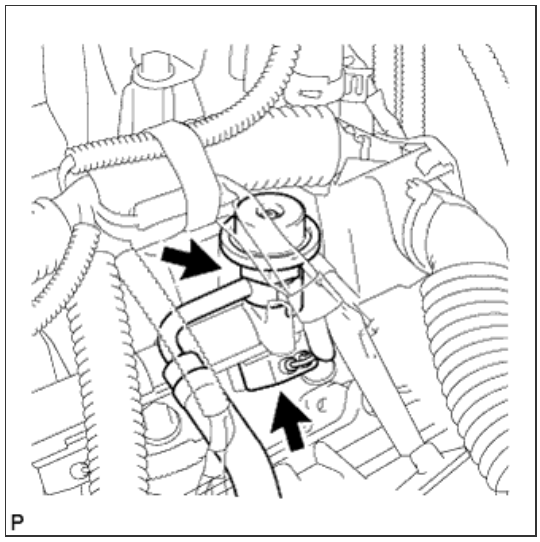
11. DISCONNECT FUEL HOSE

a. Remove the fuel hose clamp.

b. Pinch and pull the fuel hose connector to disconnect the connector from the fuel pipe.

NOTICE:

- Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.
- Do not use any tools to separate the pipe and connector.
- Do not forcefully bend or twist the nylon tube.
- Check for foreign matter on the pipe seal surface. Clean if necessary.
- Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.
- If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.



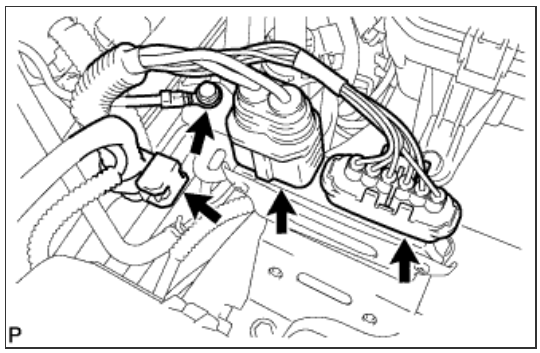
12. REMOVE FUEL PRESSURE PULSATION DAMPER ASSEMBLY

a. Disconnect the fuel injector connector.

b. Remove the pulsation damper, upper gasket, fuel hose and lower gasket.

NOTICE:

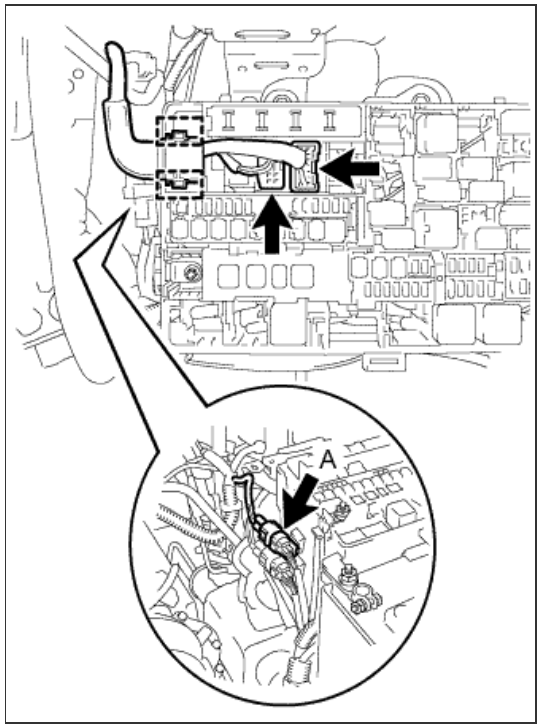
- Put a cloth or equivalent under the delivery pipe.
- Slowly loosen the pulsation damper.



13. DISCONNECT WIRE HARNESS

a. Disconnect the 2 air injection control driver connectors.

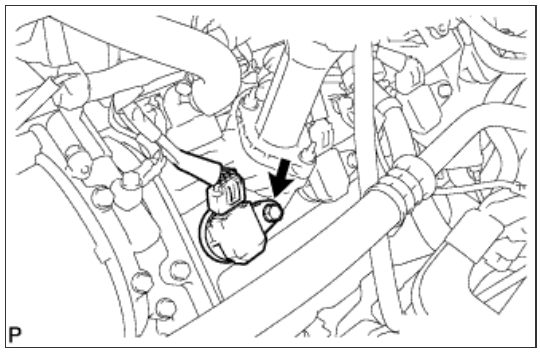
b. Remove the bolt and disconnect the ground wire.



c. Disconnect the wire harness clamp.

d. Disconnect the 2 clamps and 2 connectors from the engine room relay block.

e. Disconnect connector A from the engine room relay block.

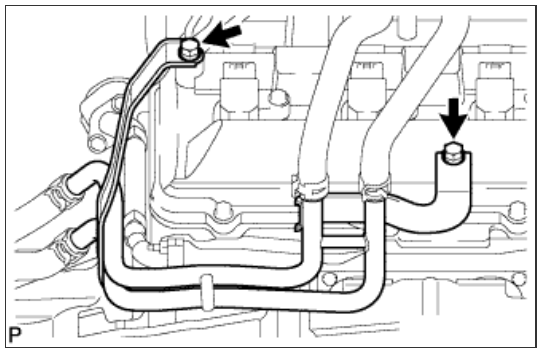


f. Disconnect the wire harness clamp from the cylinder head cover LH.

14. REMOVE IGNITION COIL ASSEMBLY

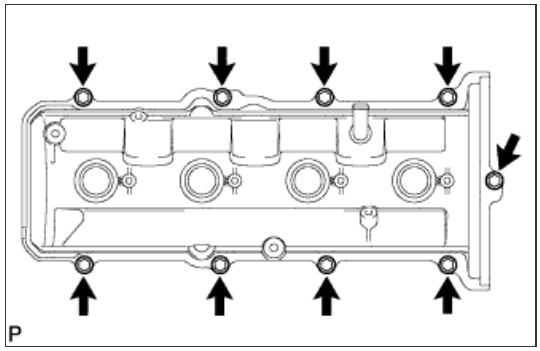
a. Disconnect the 8 ignition coil connectors.

b. Remove the 8 bolts and pull out the 8 ignition coils.



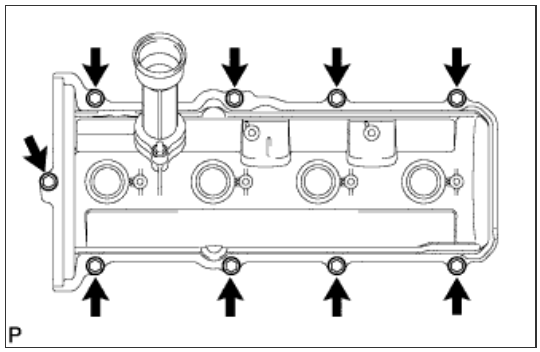
15. REMOVE SPARK PLUG

a. Remove the 8 spark plugs.



16. DISCONNECT NO. 1 WATER BY-PASS PIPE (w/ Air Cooled Transmission Oil Cooler)

a. Remove the 2 bolts and disconnect the water by-pass pipe from the cylinder head cover RH.



17. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY

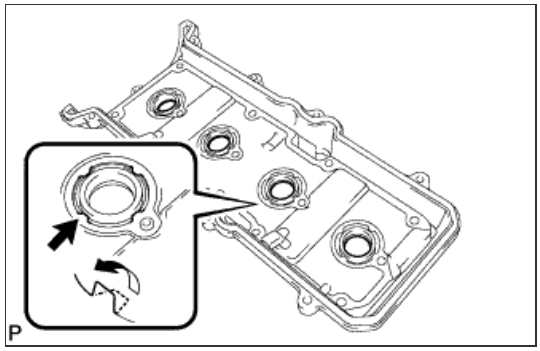
a. Remove the 9 bolts, cylinder head cover and gasket.

18. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY LH

a. Remove the 9 bolts, cylinder head cover and gasket.

1 . REMOVE SPARK PLUG TUBE GASKET

a. Bend the 8 ventilation case claws of the cylinder head cover to an angle of 90° or more.



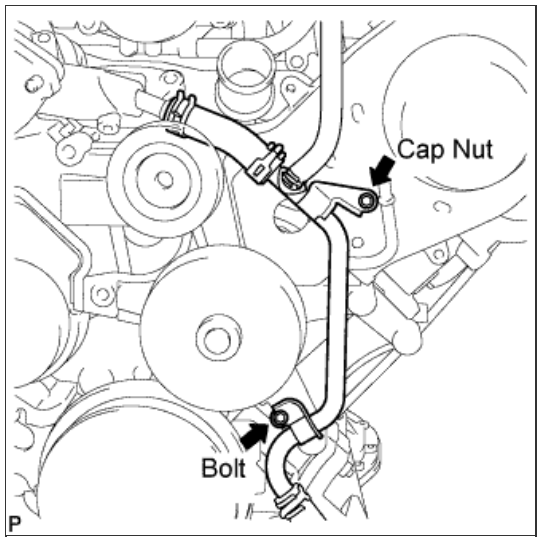
b. Using a screwdriver, pry out the gaskets.

NOTICE:

- **Be careful not to damage the cylinder head cover.**
- **Be careful not to damage the gasket when removing it, as the removed gasket needs to be reused when installing a new one.**

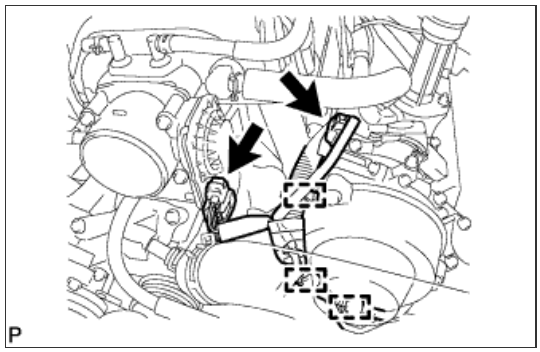
HINT:

Tape the screwdriver tip before use.



20. REMOVE SEMICIRCULAR PLUG

a. Remove the 4 semicircular plugs from the cylinder heads.

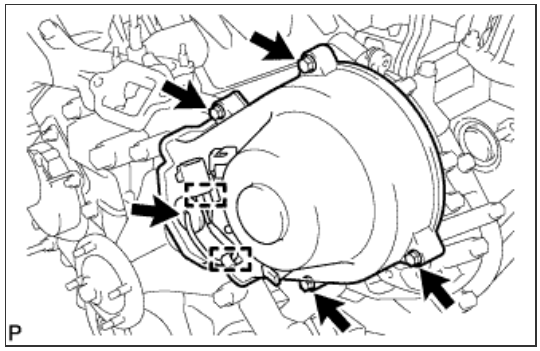


21. DISCONNECT OIL COOLER PIPE

a. Remove the cap nut and bolt. Then disconnect the oil cooler pipe.

22. REMOVE NO. 3 TIMING BELT COVER SUB-ASSEMBLY LH

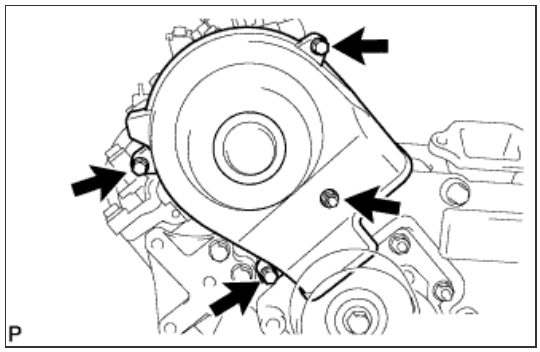
a. Detach the 3 wire clamps and disconnect the camshaft timing oil control valve connector and control motor connector.



b. Disconnect the camshaft position sensor connector.

c. Disconnect the camshaft position sensor wire from the 2 wire clamps on the timing belt cover.

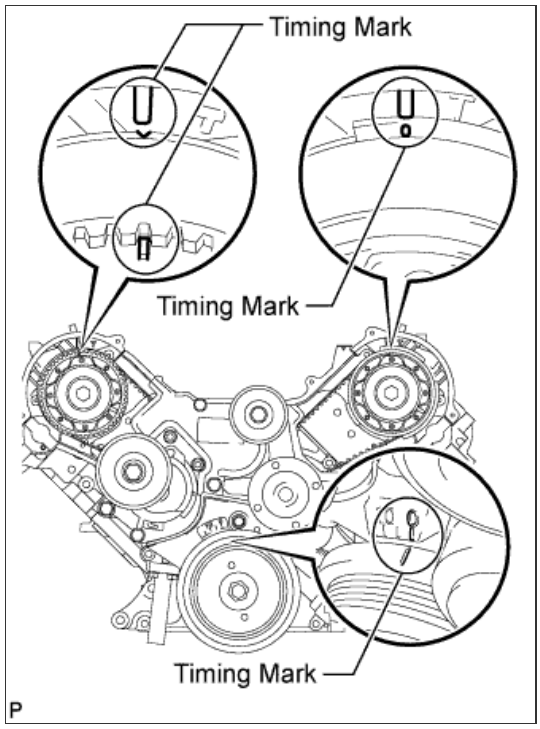
d. Remove the wire grommet from the timing belt cover.



e. Remove the 4 bolts.

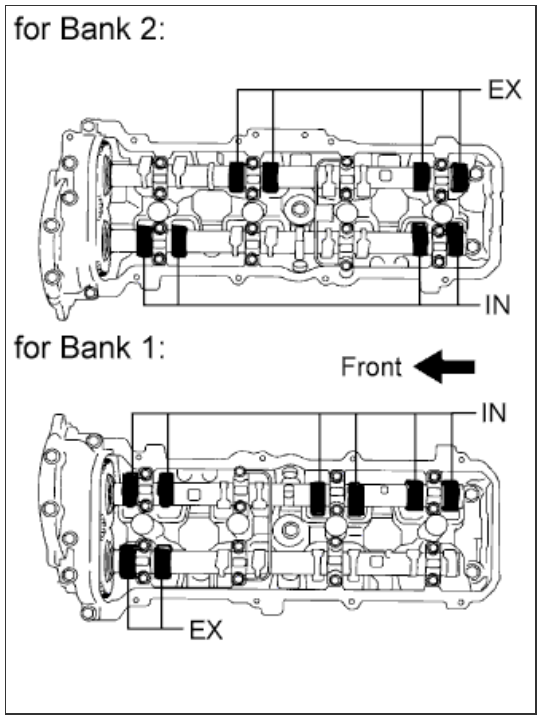
f. Pull the cover outward, pull the camshaft position sensor wire out of the cover, and remove the cover.

23. REMOVE NO. 3 TIMING BELT COVER SUB-ASSEMBLY RH



a. Remove the 3 bolts, nut and timing belt cover.

24. SET NO. 1 CYLINDER TO TDC/COMPRESSION



a. Turn the crankshaft damper to align its notch with timing mark 0 of the No. 1 timing belt cover.

b. Check that the timing marks of the camshaft timing pulleys and timing belt rear plates are aligned.
If not, turn the crankshaft 1 complete revolution (360) and align the marks as above.

25. INSPECT VALVE CLEARANCE

a. Check only the valves indicated.

i. Using a feeler gauge, measure the clearance between the valve lifter and camshaft.

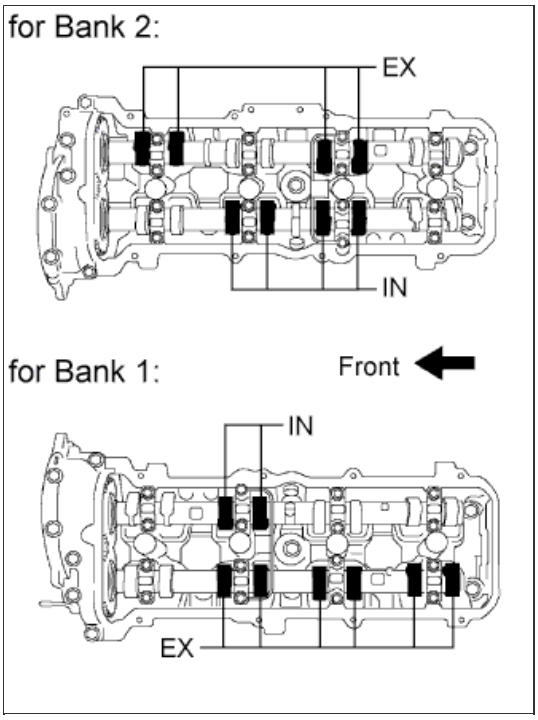
Standard Val e Clearance Cold):

Item	Specified Condition
Intake	0.15 to 0.25 mm (0.00591 to 0.00984 in.)
Exhaust	0.25 to 0.35 mm (0.00984 to 0.0138 in.)

ii. Record the out-of-specification valve clearance measurements. They will be used later to determine the required replacement adjusting shim.

b. Turn the crankshaft 1 complete revolution (360°) and align the camshaft timing marks.

c. Check only the valves indicated in the illustration.



i. Using a feeler gauge, measure the clearance between the valve lifter and camshaft.

Standard Valve Clearance (Cold):

Item	Specified Condition
Intake	0.15 to 0.25 mm (0.00591 to 0.00984 in.)
Exhaust	0.25 to 0.35 mm

	(0.00984 to 0.0138 in.)

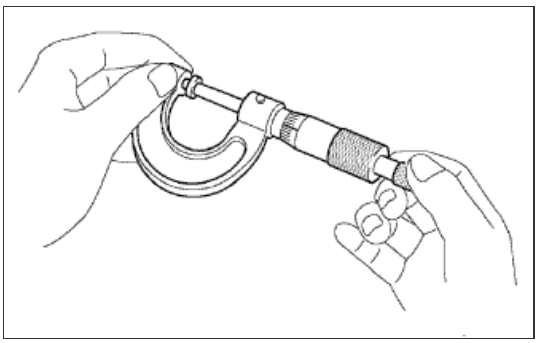
ii. Record the out-of-specification valve clearance measurements. They will be used later to determine the required replacement adjusting shim.

26. ADJUST VALVE CLEARANCE

a. Remove the timing belt (Click here).

b. Remove the camshaft (Click here).

c. Remove the valve lifter and adjusting shim.



NOTICE:

Be careful not to drop the adjusting shim into the cylinder head.

HINT:

Arrange the removed parts in the correct order.

d. Using a micrometer, measure the thickness of the removed shim.

e. Determine the replacement adjusting shim size according to the formula or charts below.

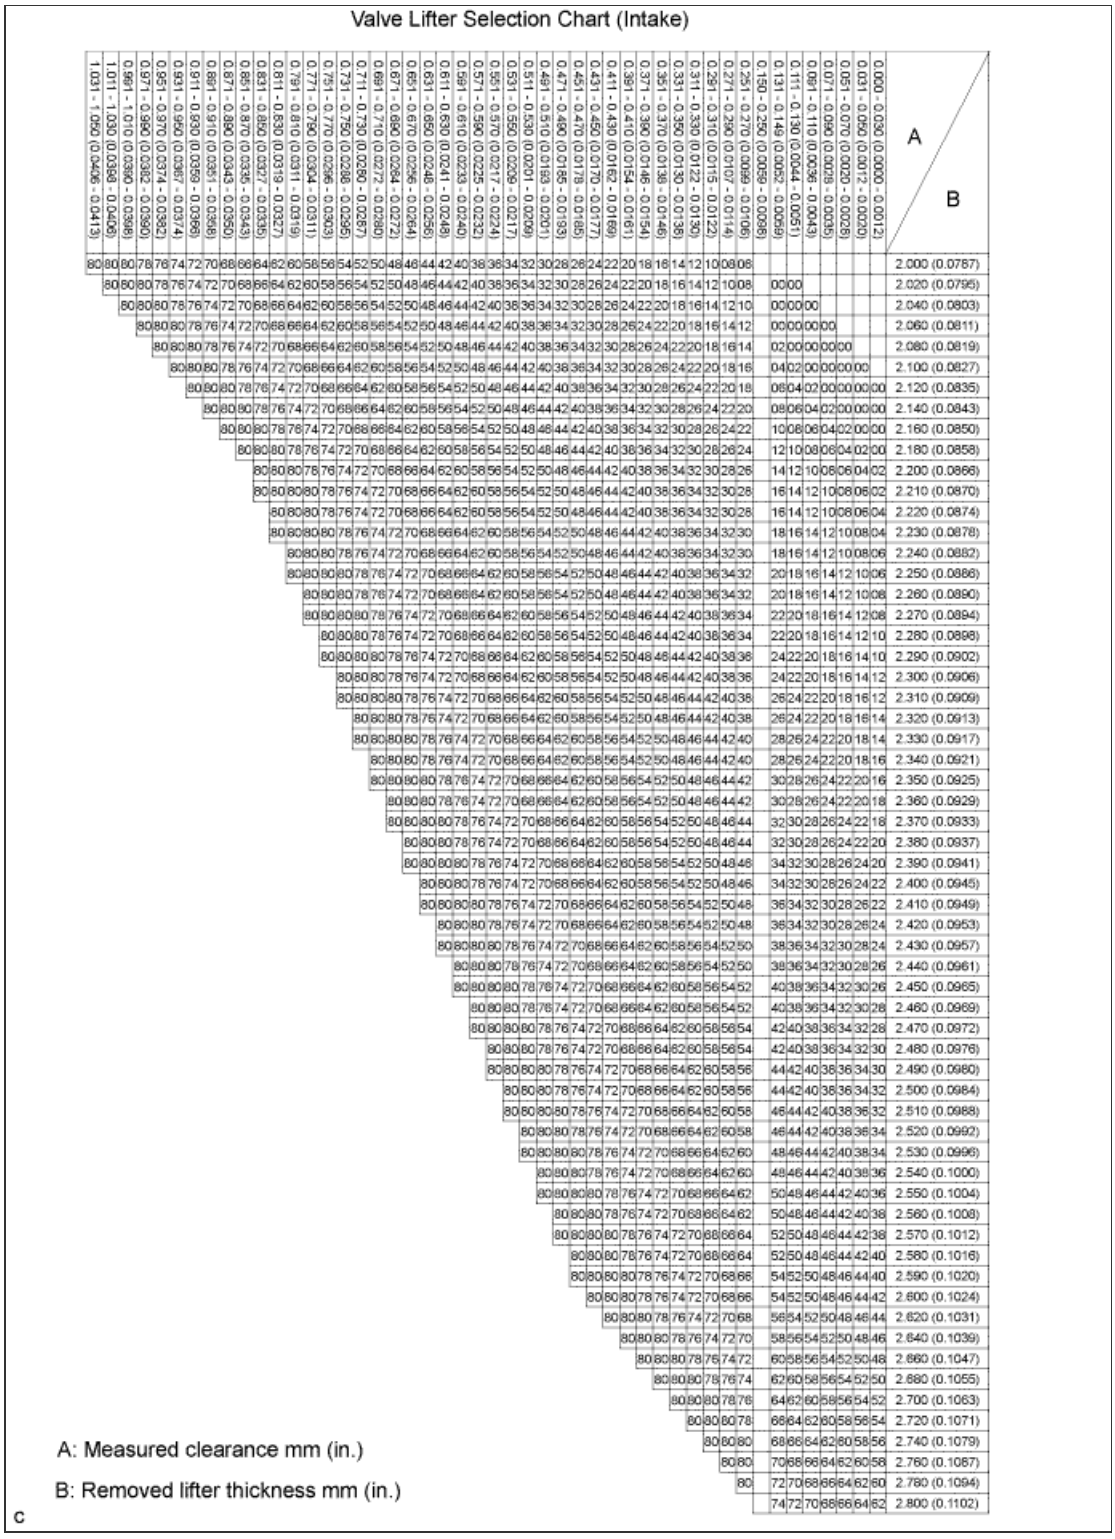
i. Calculate the thickness of a new shim so that the valve clearance comes within the specified value.

T:
Thickness of removed shim

A:
Measured valve clearance

N:
Thickness of new shim

Intake:
N = T + (A - 0.20 mm (0.00787 in.))



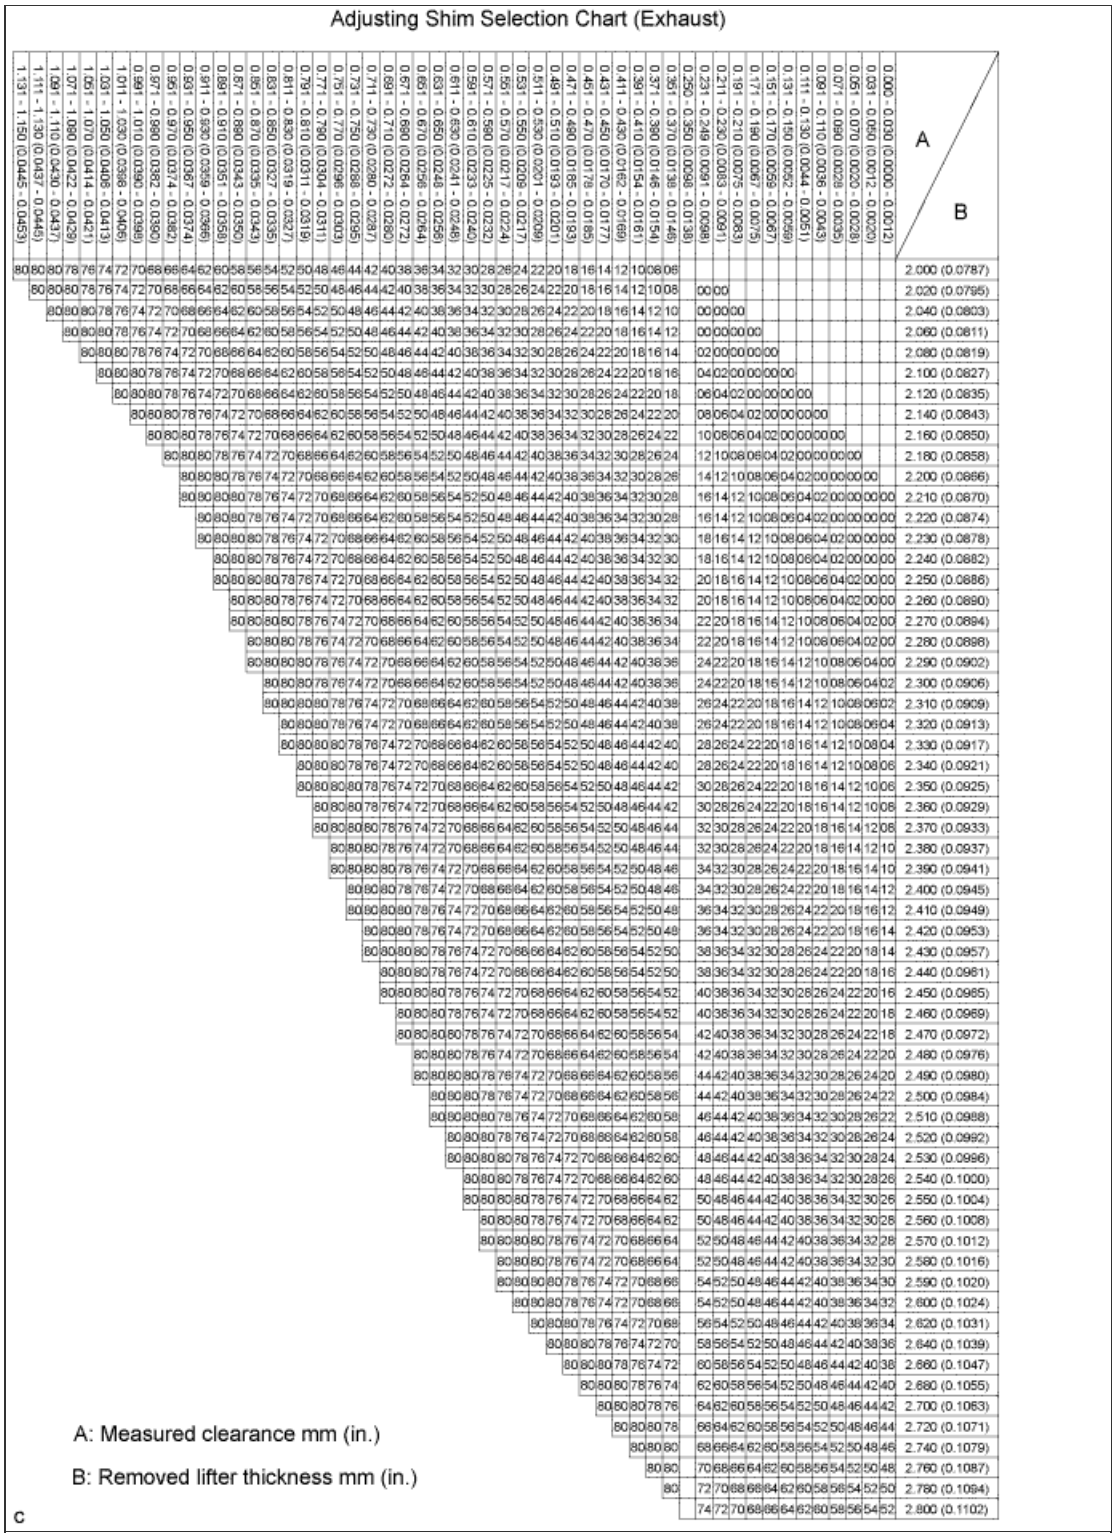
Exhaust:
N = T + (A - 0.30 mm (0.0118 in.))

ii. Select a new shim with a thickness as close as possible to the calculated value.

HINT:

- **Shims are available in 41 increments of 0.020 mm (0.000787 in.), from 2.00 mm (0.0787 in.) to 2.80 mm (0.1102 in.) and 33 increments of 0.025 mm (0.000984 in.), from 2.50 mm (0.0984 in.) to 3.30 mm (0.1299 in.).**

- **Refer to the Ad in t Shim Selection Chart.**



Intake la e clearance Cold):
.15 to .25 mm . 5 1 to . 4 in.)
E AMPLE:
The 2.3 mm . in) him i in tled, and the mea ed clearance i .44 mm . 173 in.). Replace the 2.3 mm . in) him ith a No. 54 him.

Ne Shim Thickne :

f. Apply a light coat of engine oil to the valve lifters, adjusting shims and valve stem tip.

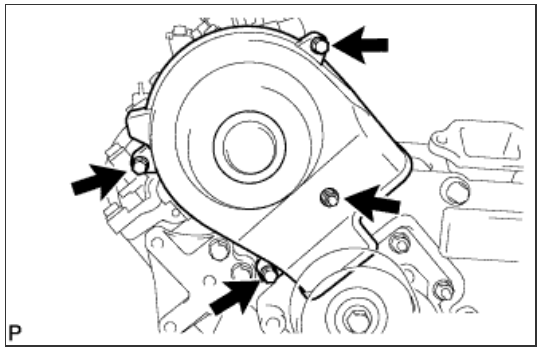
. Place a new adjusting shim on the valve stem.

NOTICE:

Be careful not to drop the adjusting shim into the cylinder head.

h. Place the valve lifter.

i. Install the camshaft (Click here).



j. Install the timing belt (Click here).

k. Check the valve clearance.
If the result is not as specified, adjust the valve clearance.

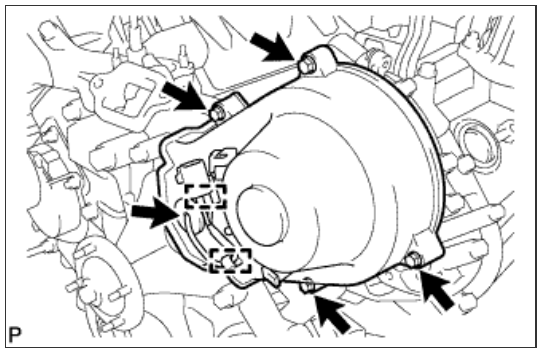
27. INSTALL NO. 3 TIMING BELT COVER SUB-ASSEMBLY RH

a. Install the timing belt cover with the 3 bolts and nut.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

28. INSTALL NO. 3 TIMING BELT COVER SUB-ASSEMBLY LH

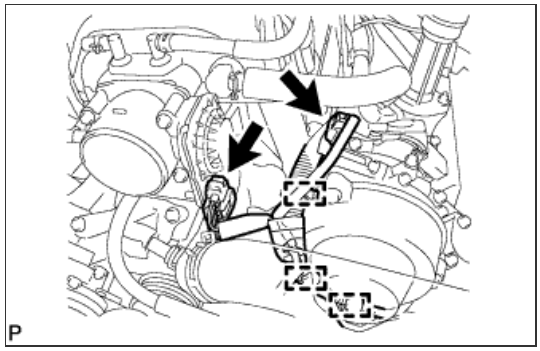
a. Pass the camshaft position sensor wire through the cover hole.



b. Install the timing belt cover with the 4 bolts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

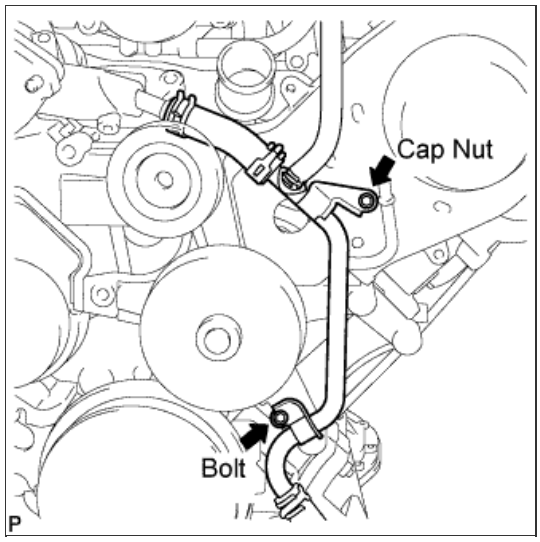
c. Install the wire grommet to the timing belt cover.



d. Connect the sensor connector.

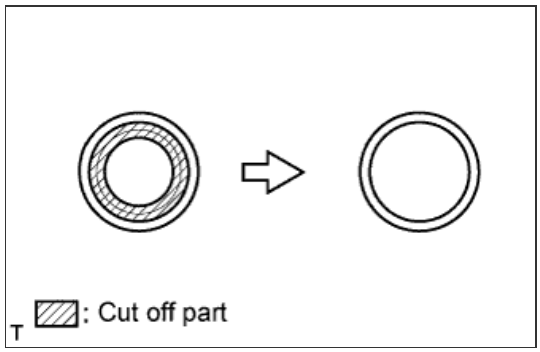
e. Install the sensor wire to the 2 wire clamps on the cover.

f. Connect the engine wire to the 3 wire clamps.



. Connect the camshaft timing oil control valve connector and control motor connector.

2 . CONNECT OIL COOLER PIPE



a. Install the oil cooler pipe with the cap nut and bolt.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

30. INSTALL SPARK PLUG TUBE GASKET

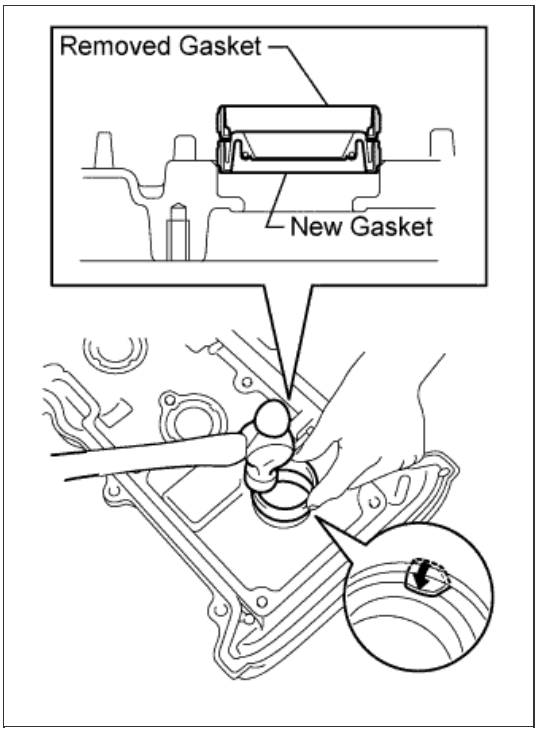
a. Using a cutter knife, cut off the seal part of the removed gasket.

b. Using the removed gasket and a hammer, tap in a new gasket until it stops.

NOTICE:

Do not tap on the oil seal at an angle.

HINT:



If the removed gasket does not fit on the new one, correct the removed one with pliers.

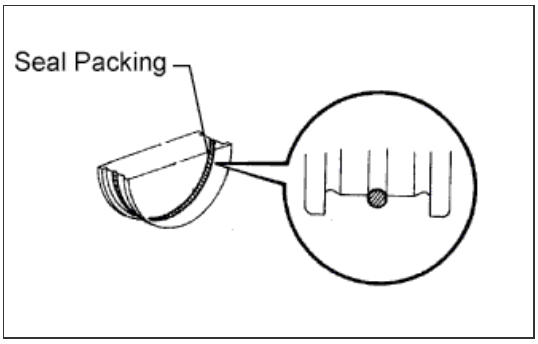
c. Apply a light coat of MP grease to the lip of the gasket.

NOTICE:

eep the lip free from foreign matter.

d. Return the 8 ventilation case claws to the original positions.

31. INSTALL SEMICIRCULAR PLUG



a. Apply seal packing to the semicircular plug grooves.

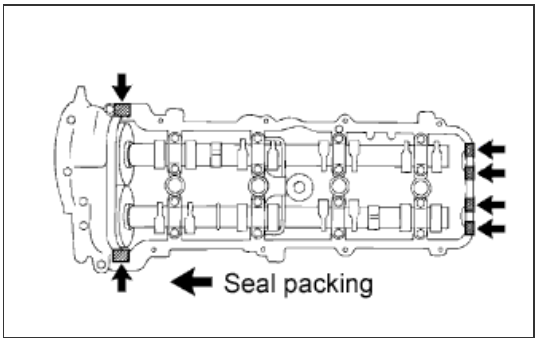
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

b. Install the 4 semicircular plugs to the cylinder heads.

NOTICE:

Install the cylinder head cover within 3 minutes after applying seal packing.

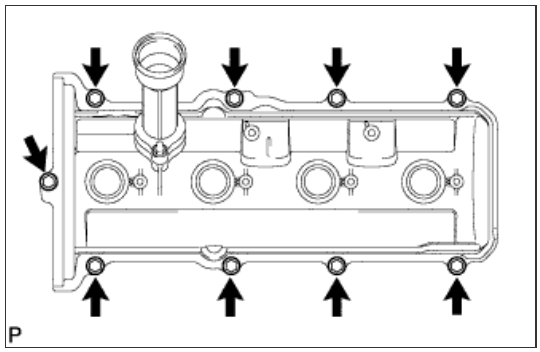
32. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY LH



a. Install a new gasket to the cylinder head cover.

b. Apply seal packing to the cylinder head as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent



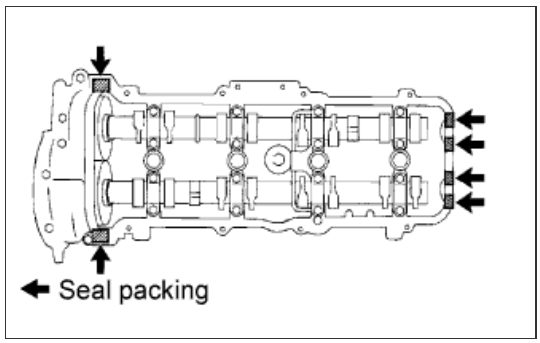
NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes after applying seal packing.**

c. Install the cylinder head cover with the 9 bolts. Uniformly tighten the bolts in several steps.

Torque:
6.0 N*m{ 61 kgf*cm , 53 in.*lbf }

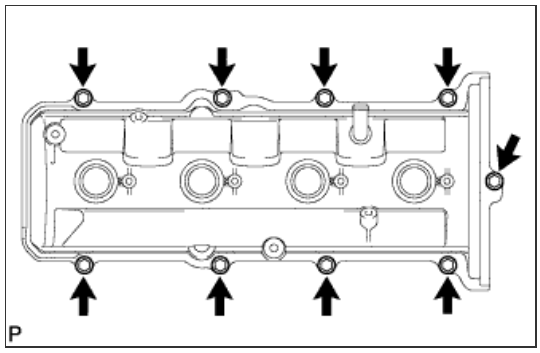
33. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY



a. Install a new gasket to the cylinder head cover.

b. Apply seal packing to the cylinder head as shown in the illustration.

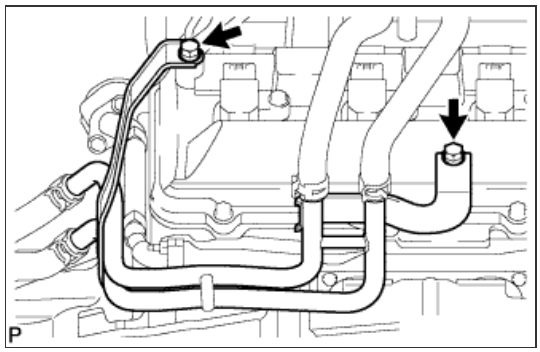
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent



NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes after applying seal packing.**

c. Install the cylinder head cover with the 9 bolts. Uniformly tighten the bolts in several steps.



Torque:
6.0 N*m{ 61 kgf*cm , 53 in.*lbf }

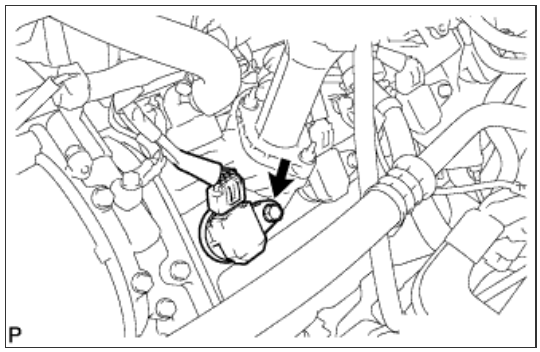
34. CONNECT NO. 1 WATER BY-PASS PIPE (w/ Air Cooled Transmission Oil Cooler)

a. Connect the water by-pass pipe to the cylinder head cover RH with the 2 bolts.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

35. INSTALL SPARK PLUG

a. Install the 8 spark plugs.



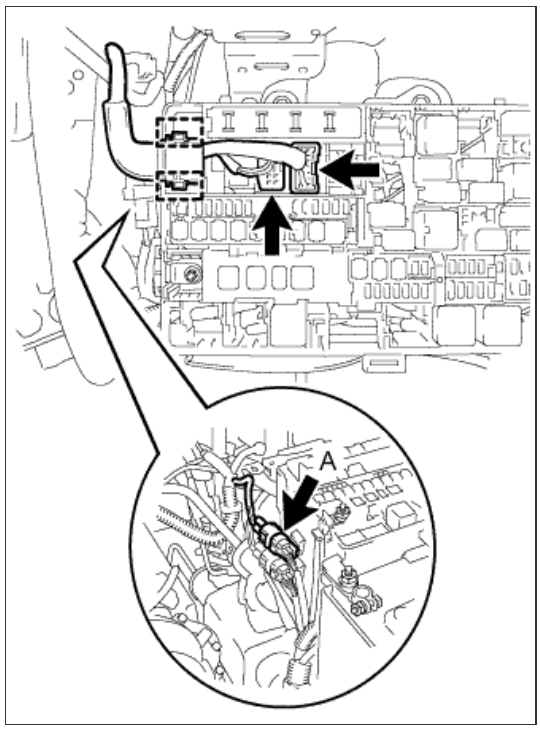
Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

36. INSTALL IGNITION COIL ASSEMBLY

a. Install the 8 ignition coils with the 8 bolts.

Torque:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

b. Connect the 8 ignition coil connectors.

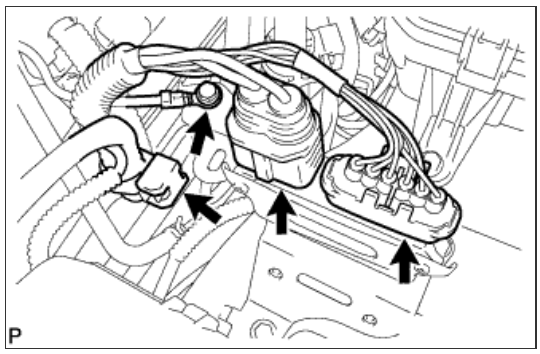


37. CONNECT WIRE HARNESS

a. Connect connector A to the engine room relay block.

b. Connect the 2 connectors and 2 clamps to the engine room relay block.

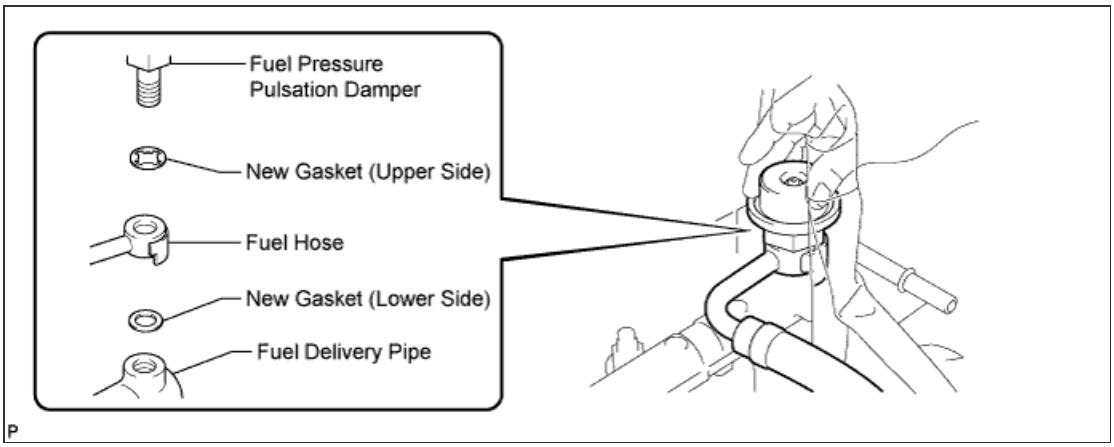
c. Connect the wire harness clamp to the cylinder head cover LH.



d. Connect the wire harness clamp.

e. Connect the ground wire with the bolt.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }



f. Connect the 2 air injection control driver connectors.

38. INSTALL FUEL PRESSURE PULSATION DAMPER ASSEMBLY

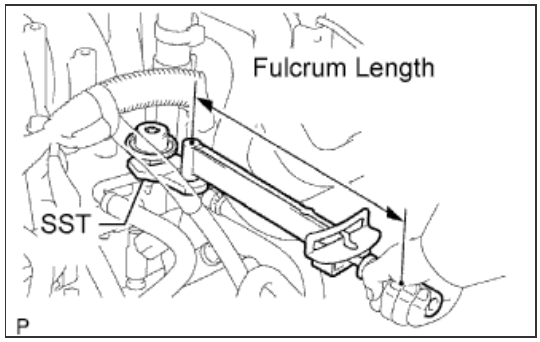
a. Install 2 new gaskets and the fuel hose with the fuel pressure pulsation damper

a. Install 2 new gaskets and the fuel hose with the fuel pressure pulsation damper.

NOTICE:

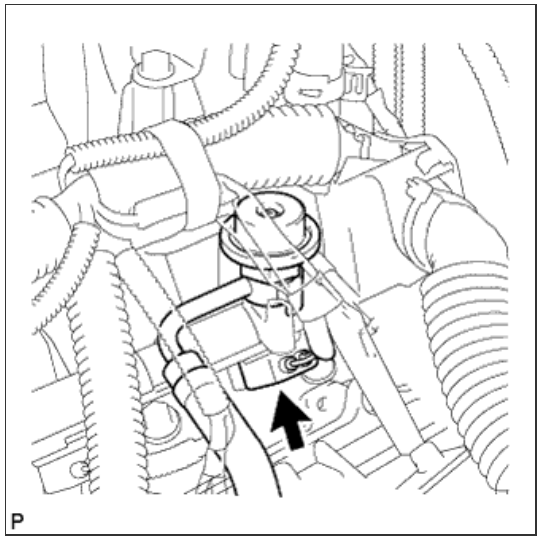
Make sure to install the gaskets in the order shown in the illustration, as the shape of the upper side and lower side gaskets is different.

b. Tighten the fuel pressure pulsation damper by hand.



c. Using SST, tighten the union bolt.

SST
09612-24014 (09617-24011)



Torque:
with SST:
33 N*m{ 340 kgf*cm , 24 ft.*lbf }
without SST:
39 N*m{ 398 kgf*cm , 29 ft.*lbf }

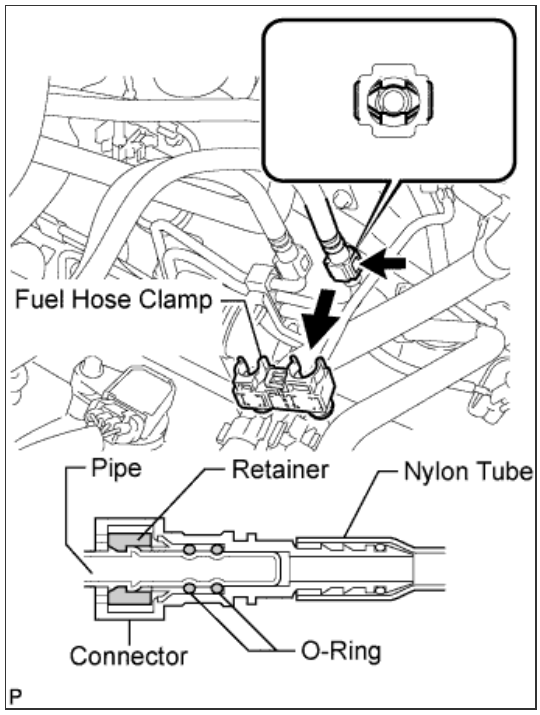
HINT:

- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.).**
- **Make sure SST and the wrench are connected in a straight line.**

d. Connect the fuel injector connector.

39. CONNECT FUEL HOSE

a. Connect the fuel hose.



HINT:

Push the parts together firmly until a click sound is heard.

NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

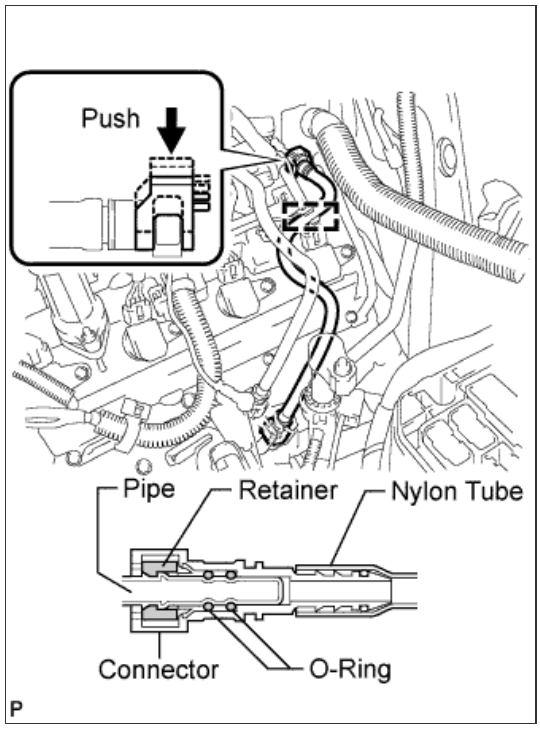
b. Install the fuel hose clamp.

40. INSTALL NO. 2 FUEL HOSE

a. for engine side:

i. Connect the fuel hose to the No. 3 fuel pipe.

HINT:



Push the parts together firmly until a click sound is heard.

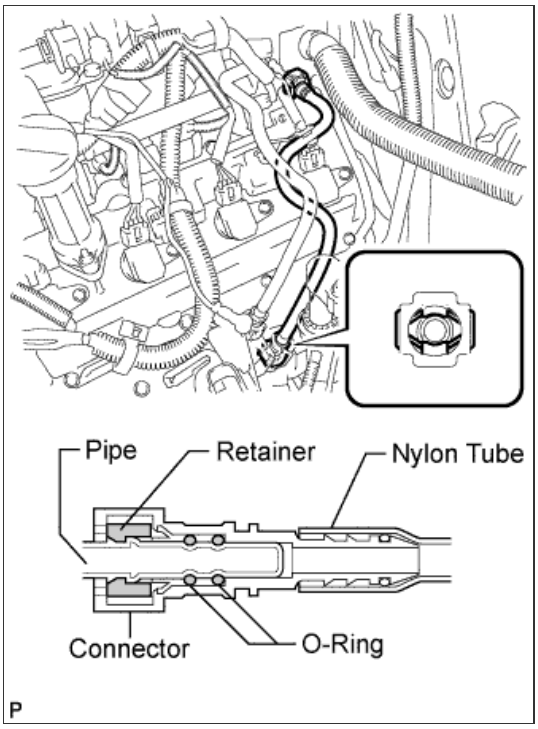
NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

ii. Attach the lock claws to the connector by pushing down on the cover, as shown in the illustration.

iii. Attach the fuel hose clamp.

b. for body side:



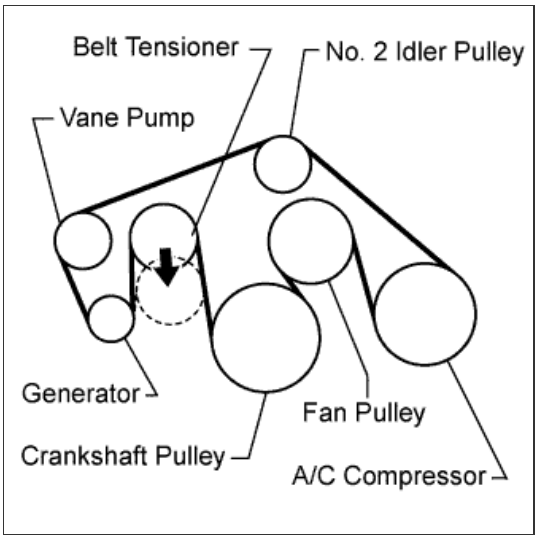
i. Connect the fuel hose to the fuel pipe.

HINT:

Push the parts together firmly until a click sound is heard.

NOTICE:

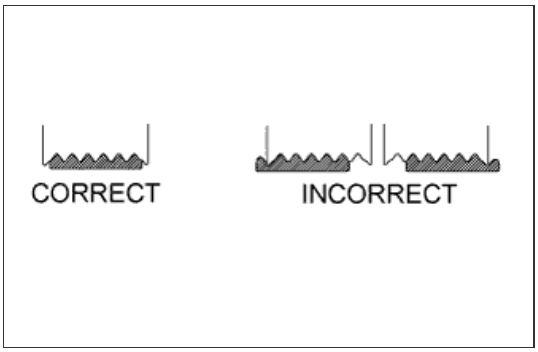
- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**



41. INSTALL FAN & GENERATOR V BELT

a. Set the V belt onto every part except the belt tensioner, as shown in the illustration.

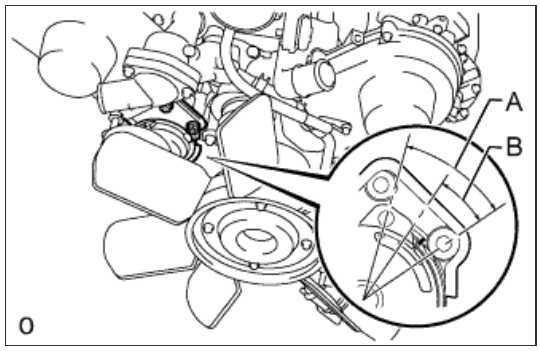
b. Loosen the V belt by turning the belt tensioner counterclockwise.



c. Set the V belt to the belt tensioner.

d. Check that the belt fits properly in the ribbed grooves.

HINT:

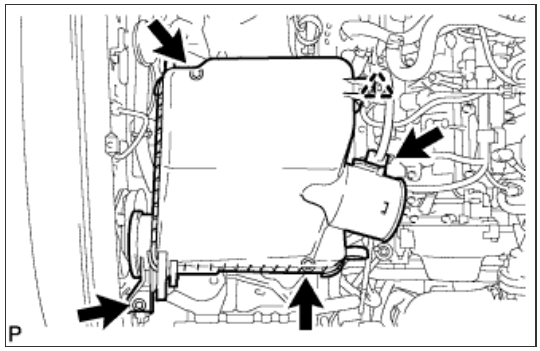


Make sure to check by hand that the belt has not slipped out of the grooves on the bottom of the pulley.

e. Check that the arrow on the belt tensioner is within area A .
f the arrow is outside area A, replace the fan and generator V belt.

HINT:

When a new belt is installed, the arrow should be within area If not, the fan and generator V belt is not installed correctly.



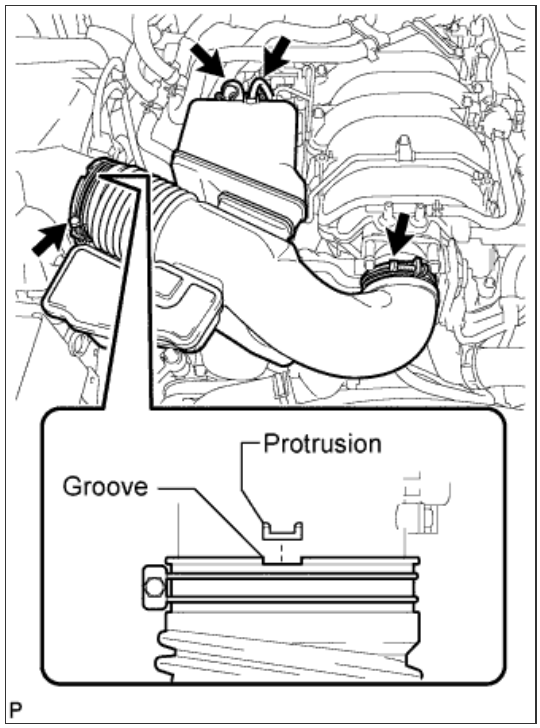
42. INSTALL AIR CLEANER ASSEMBLY

a. Install the air cleaner with the 3 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

b. Connect the clamp and MAF connector.

43. INSTALL AIR CLEANER HOSE ASSEMBLY



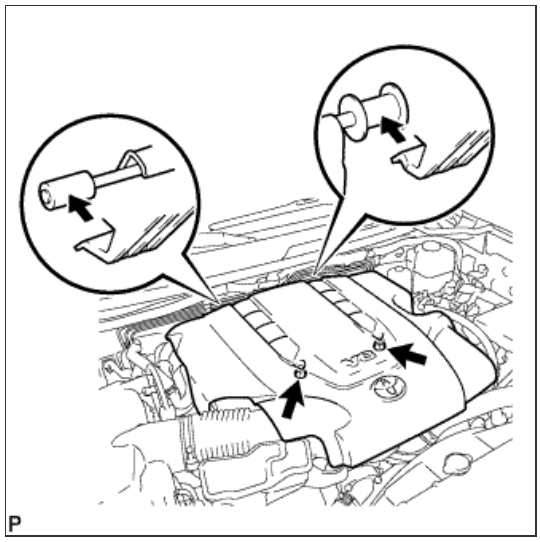
a. Install the air cleaner hose so that the protrusion of the air cleaner cap aligns with the groove of the hose as shown in the illustration.

b. Tighten the 2 clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

c. Connect the vacuum transmitting hose.

d. Connect the No. 2 ventilation hose.



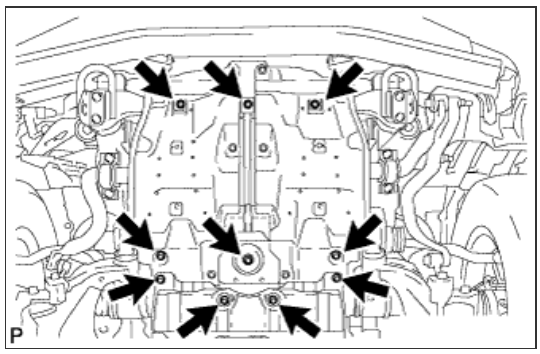
44. INSTALL V-BANK COVER SUB-ASSEMBLY

a. Attach the 2 V-bank cover hooks to the bracket.

b. Install the V-bank cover with the 2 nuts.

Tor e:
7.5 N 76 k f c, 66 in. lbf }

45. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

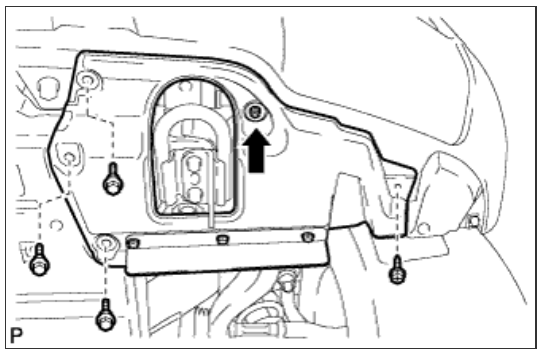


NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

46. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.

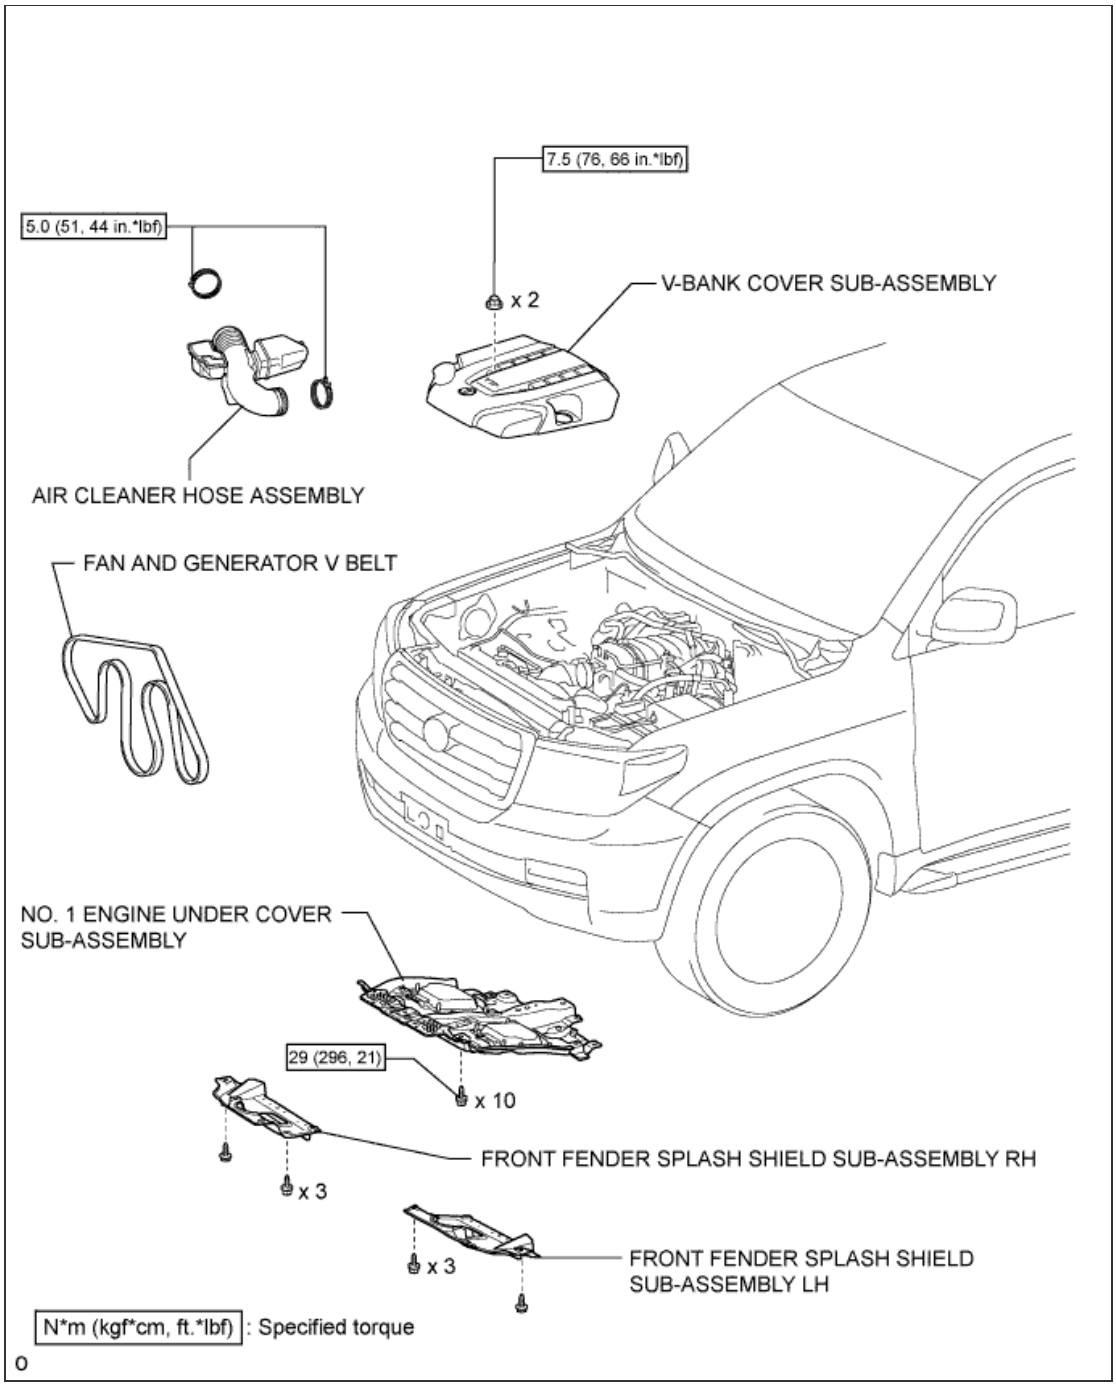


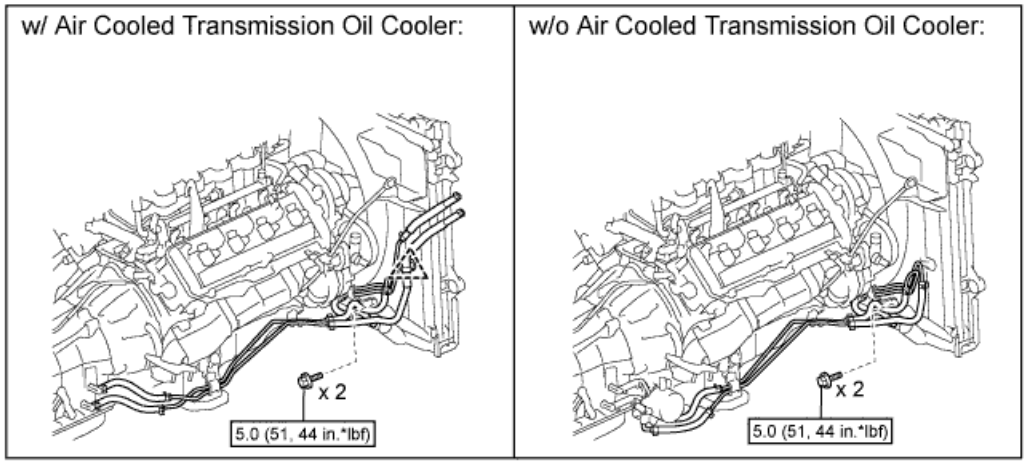
Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

47. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

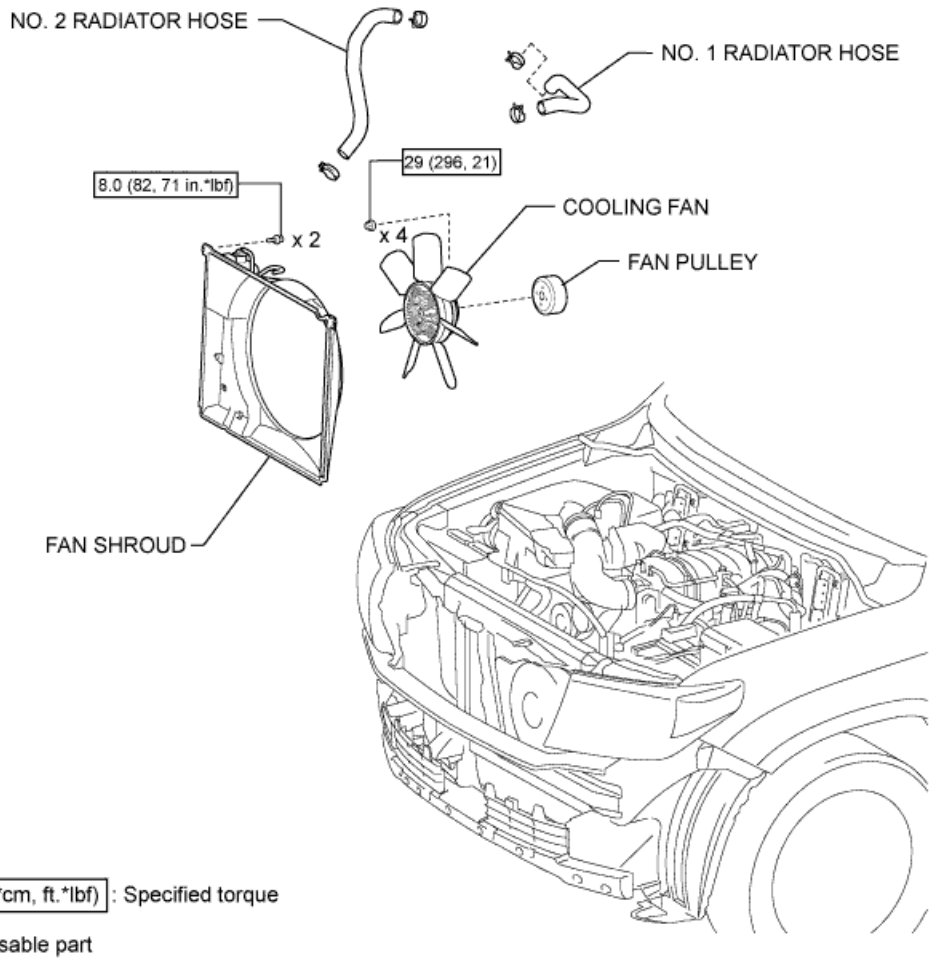
a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the 3 bolts and screw.





48. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH



HINT:

Use the same procedures described for the LH side.

for Preparation Click here

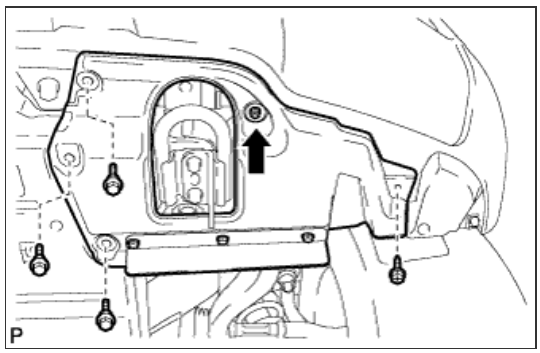
for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.



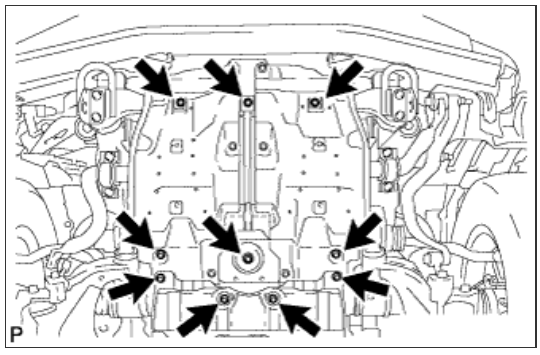
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and screw.

b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.

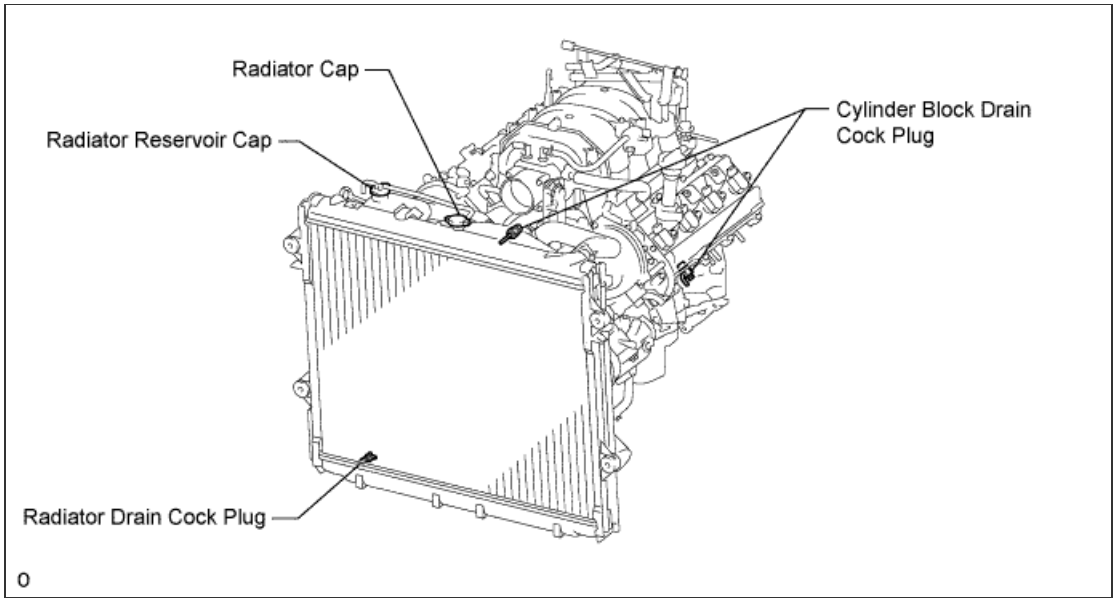


3. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

4. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY



a. Remove the 10 bolts and No. 1 engine under cover.

5. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

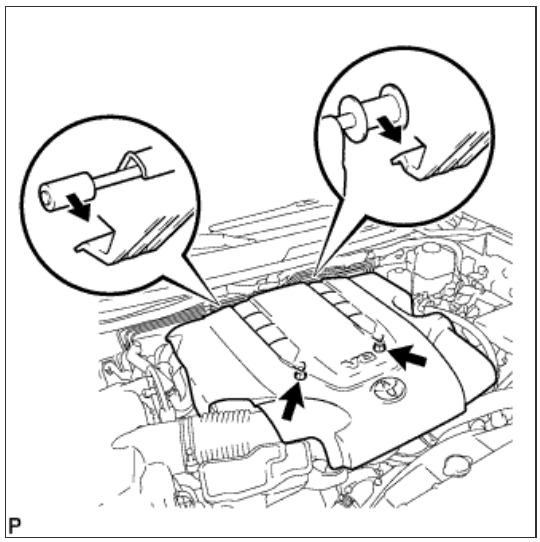
a. Loosen the radiator drain cock plug.

b. Remove the radiator cap. Then drain the coolant.

HINT:

Collect the coolant in a container and dispose of it according to the regulations in your area.

c. Loosen the 2 cylinder block drain cock plugs. Then drain the coolant from the engine.



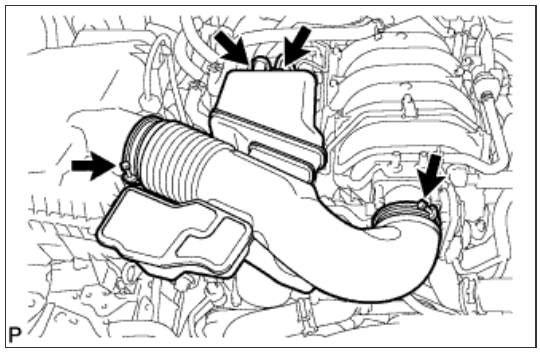
d. Tighten the 2 cylinder block drain cock plugs.

Torque:
13 N*m{ 130 kgf*cm , 9 ft.*lbf }

e. Tighten the radiator drain cock plug by hand.

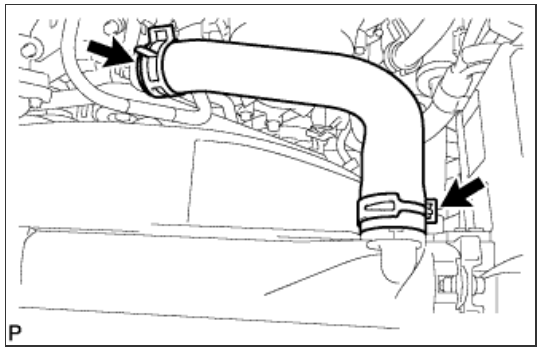
6. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Remove the 2 nuts and V-bank cover.



7. REMOVE AIR CLEANER HOSE ASSEMBLY

a. Disconnect the vacuum transmitting hose and No. 2 ventilation hose.

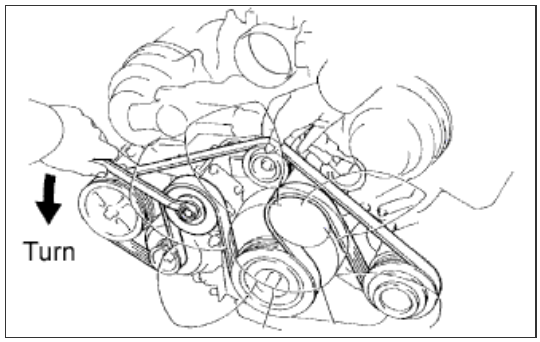


b. Loosen the 2 hose clamps.

c. Remove the air cleaner hose.

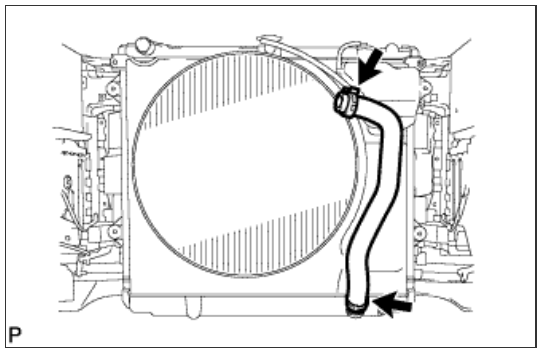
8. REMOVE NO. 1 RADIATOR HOSE

a. Using needle-nose pliers, grip the claws of the clamps and slide the clamps to remove the radiator hose.



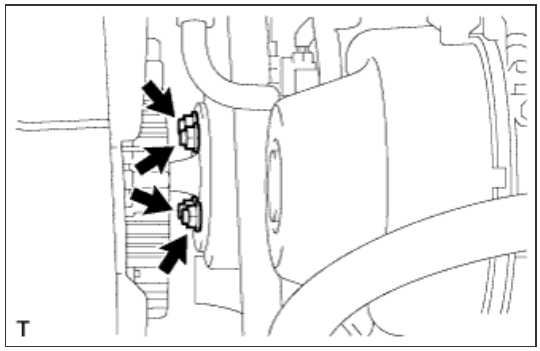
9. REMOVE FAN & GENERATOR V BELT

a. Loosen the belt tension by turning the belt tensioner counterclockwise, and then remove the fan and generator V belt.



HINT:

The pulley bolt for the belt tensioner has left-hand thread.



10. REMOVE NO. 2 RADIATOR HOSE

a. Using needle-nose pliers, grip the claws of the clamps and slide the clamps to remove the radiator hose.

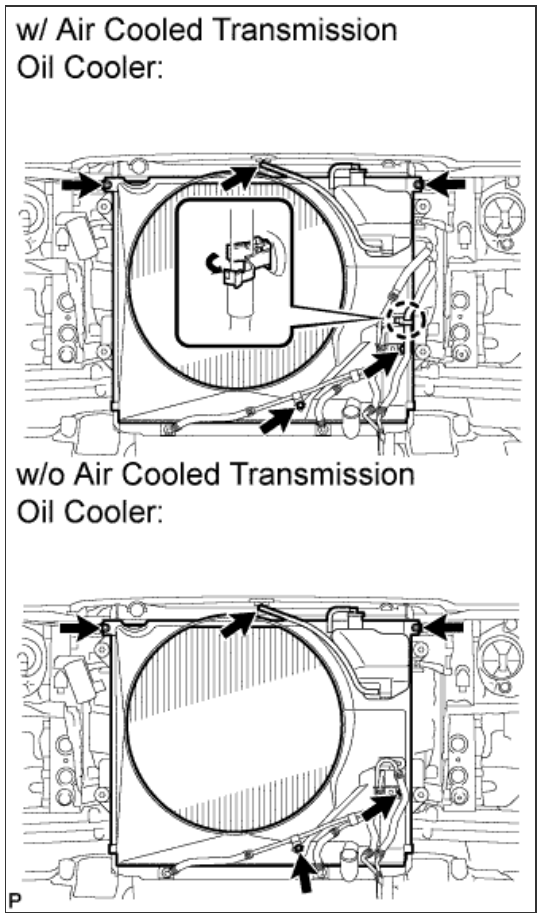
11. REMOVE FAN SHROUD

a. Loosen the 4 nuts holding the cooling fan.

b. Disconnect the reservoir hose from the upper side of the radiator tank.

c. w/ Air Cooled Transmission Oil Cooler:
Detach the claw to open the flexible hose clamp.

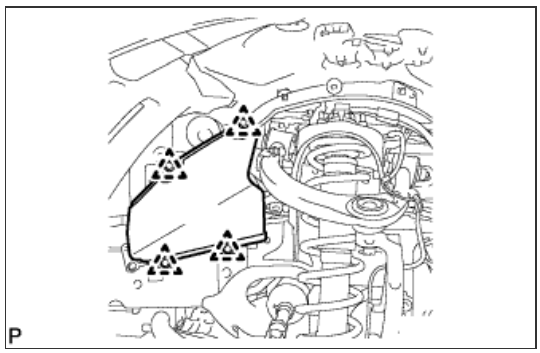
d. Remove the 2 bolts and disconnect the oil cooler tube from the fan shroud.



e. Remove the 2 bolts holding the fan shroud.

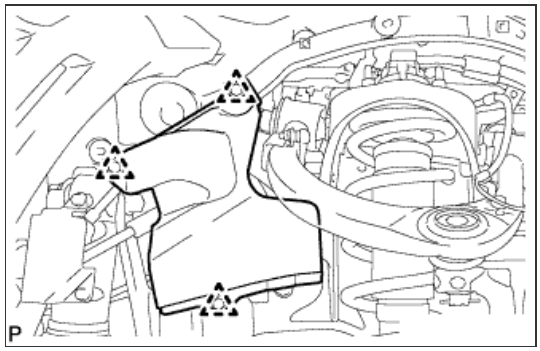
f. Remove the 4 nuts of the cooling fan, and then remove the shroud together with the cooling fan.

NOTICE:



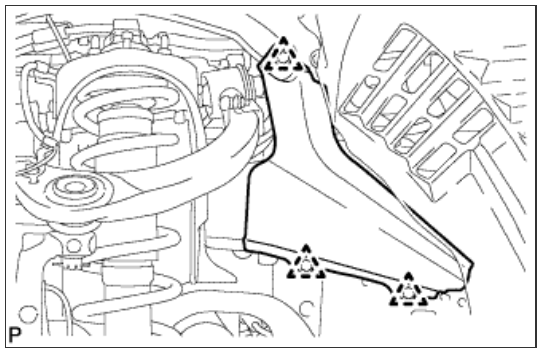
Be careful not to damage the radiator core.

g. Remove the fan pulley from the water pump.



12. REMOVE FRONT FENDER APRON SEAL LH

a. Using a clip remover, remove the 4 clips and fender apron seal.

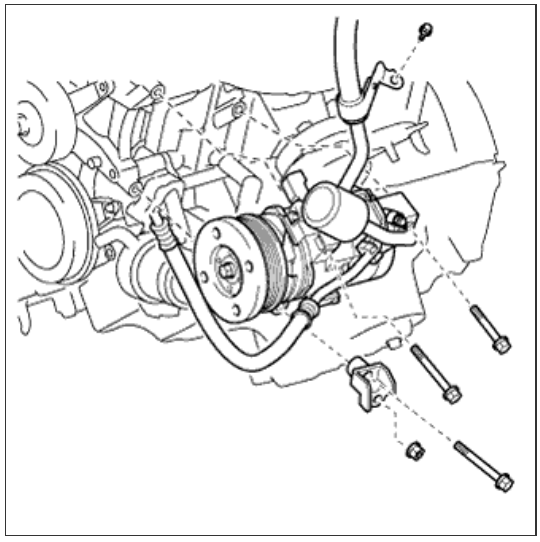


13. REMOVE FRONT FENDER APRON SEAL LH (w/ KDSS)

a. Using a clip remover, remove the 3 clips and fender apron seal.

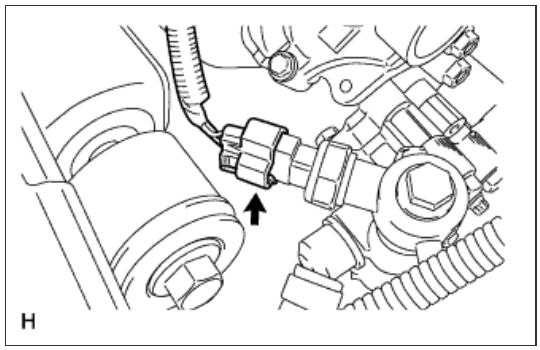
14. REMOVE FRONT FENDER APRON SEAL FRONT RH

a. Using a clip remover, remove the 3 clips and fender apron seal.



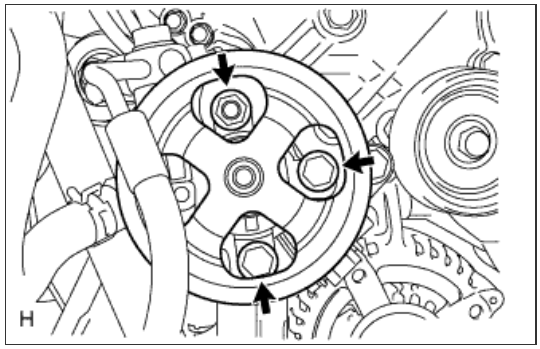
15. DISCONNECT COOLER COMPRESSOR ASSEMBLY

a. Disconnect the connector.



b. Remove the bolt. Then disconnect the cooler refrigerant suction hose from the cylinder head cover.

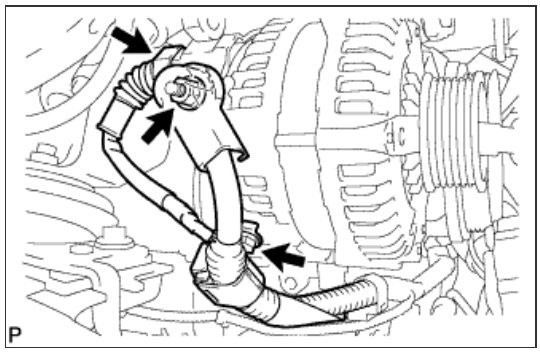
c. Remove the 3 bolts, nut and No. 1 compressor stay and disconnect the cooler compressor.



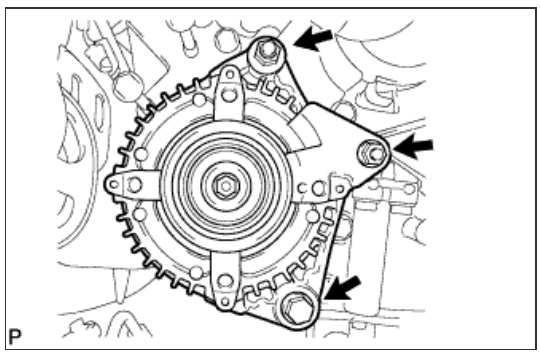
16. DISCONNECT VANE PUMP ASSEMBLY

a. Disconnect the connector.

b. Remove the 2 bolts and nut. Then disconnect the vane pump.



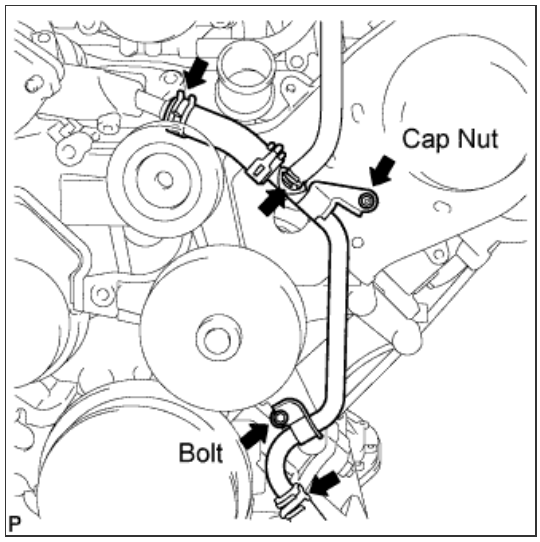
17. REMOVE GENERATOR ASSEMBLY



a. Disconnect the generator connector.

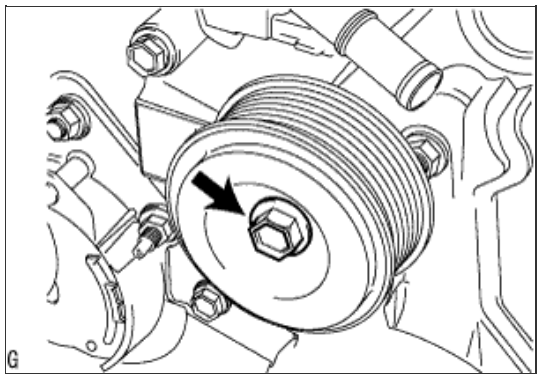
b. Remove the terminal cap and nut, and disconnect the generator wire.

c. Remove the bolt and disconnect the wire harness bracket from the generator.



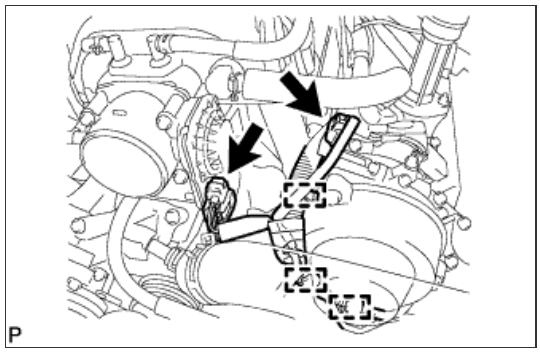
d. Remove the bolt, 2 nuts and generator.

18. REMOVE OIL COOLER PIPE



a. Remove the cap nut and bolt.

b. Using needle-nose pliers, grip the claws of the clamps and slide the clamps to disconnect the 3 water by-pass hoses and remove the oil cooler pipe.

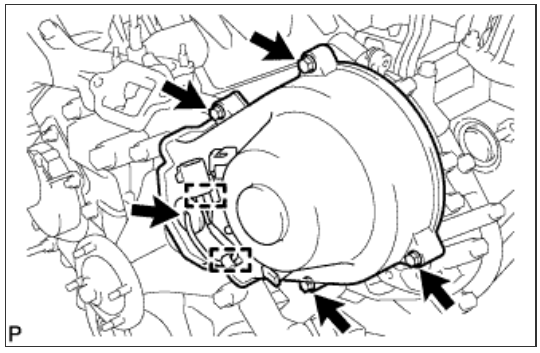


1 . REMOVE NO. 2 IDLER PULLEY SUB-ASSEMBLY

a. Remove the pulley bolt, cover plate and idler pulley.

20. REMOVE NO. 3 TIMING BELT COVER SUB-ASSEMBLY LH

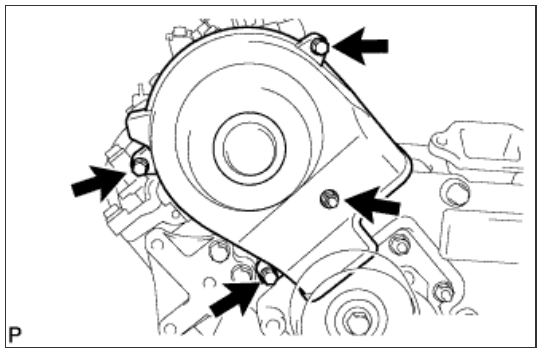
a. Detach the 3 wire clamps and disconnect the camshaft timing oil control valve connector and control motor connector.



b. Disconnect the camshaft position sensor connector.

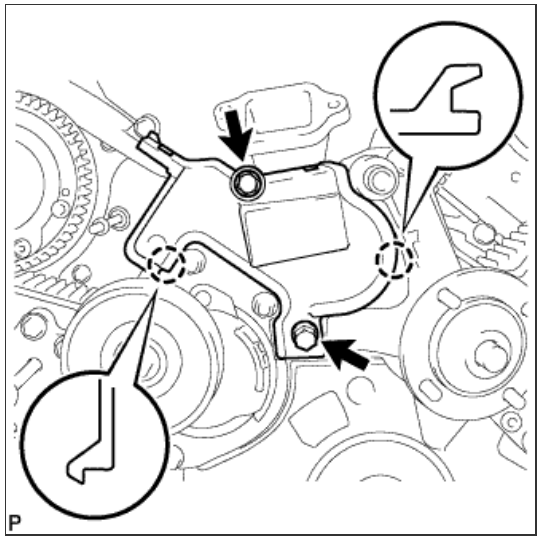
c. Disconnect the camshaft position sensor wire from the 2 wire clamps on the timing belt cover.

d. Remove the wire grommet from the timing belt cover.



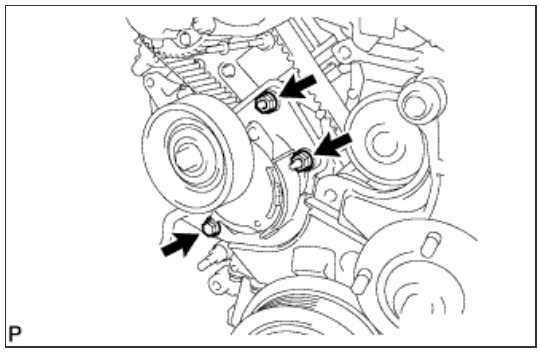
e. Remove the 4 bolts.

f. Pull the cover outward, pull the camshaft position sensor wire out of the cover, and remove the cover.



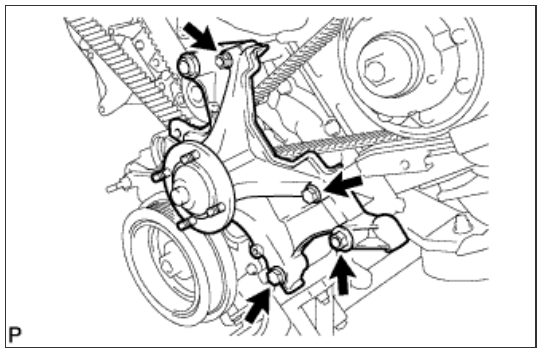
21. REMOVE NO. 3 TIMING BELT COVER SUB-ASSEMBLY RH

a. Remove the 3 bolts, nut and timing belt cover.



22. REMOVE NO. 2 TIMING BELT COVER SUB-ASSEMBLY

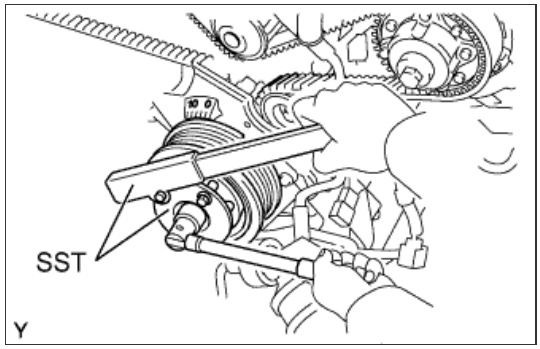
a. Remove the 2 bolts and detach the 2 claws, and then remove the No. 2 timing belt cover.



23. REMOVE V-RIBBED BELT TENSIONER ASSEMBLY

a. Remove the bolt, 2 nuts and V-ribbed belt tensioner.

24. REMOVE FAN BRACKET SUB-ASSEMBLY

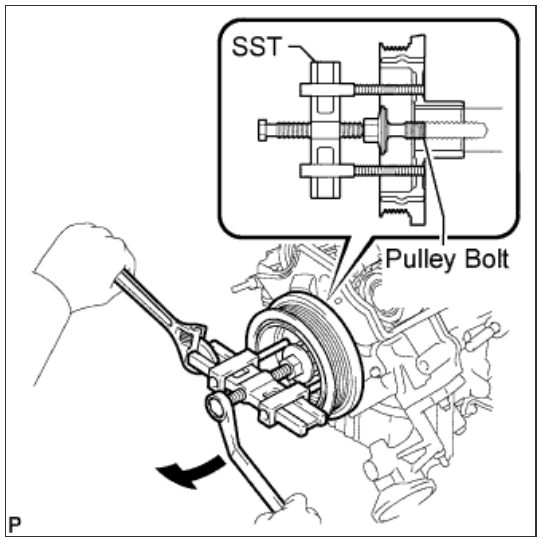


a. Remove the 2 nuts, 2 bolts and fan bracket.

25. REMOVE CRANKSHAFT DAMPER SUB-ASSEMBLY

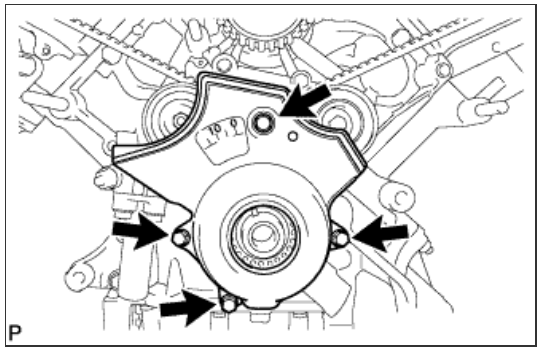
a. Using SST, hold the crankshaft damper and loosen the pulley bolt. Further loosen the bolt until 2 or 3 threads are screwed into the crankshaft.

SST
09213-70011 (09213-70020)
09330-00021 (09330-00030)



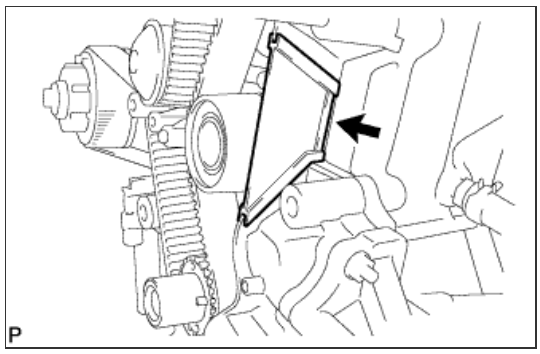
b. Using SST and the pulley bolt, remove the crankshaft damper.

SST
09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05031)



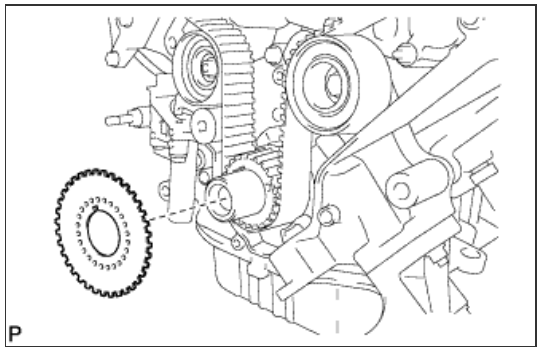
HINT:

Apply a lubricant to the threads and end of SST.



26. REMOVE NO. 1 TIMING BELT COVER

a. Remove the 4 bolts and timing belt cover.

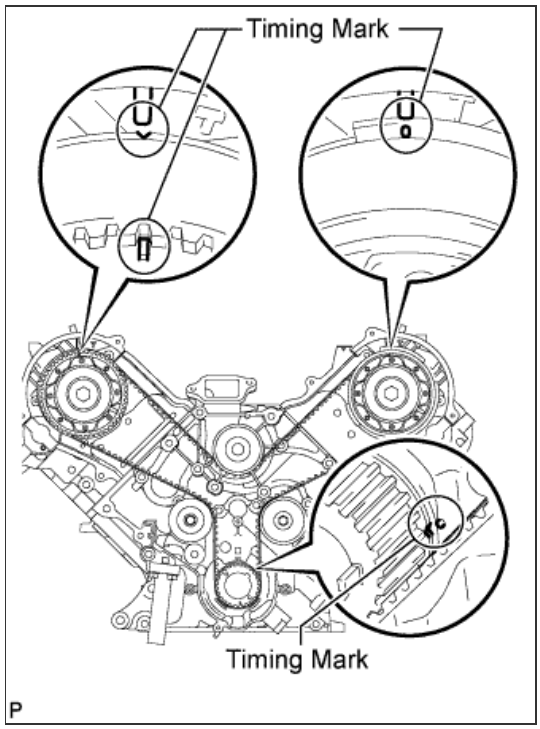


27. REMOVE TIMING BELT COVER SPACER

a. Remove the cover spacer and gasket.

28. REMOVE NO. 1 CRANKSHAFT POSITION SENSOR PLATE

a. Remove the position sensor plate from the crankshaft.

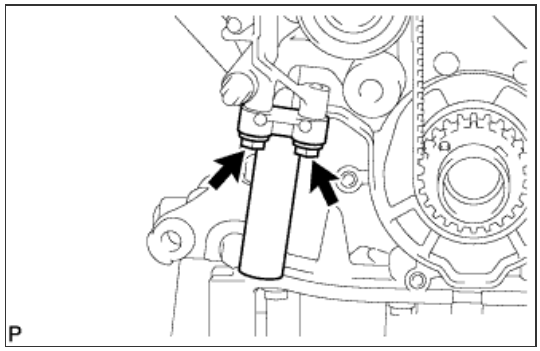


29. SET NO. 1 CYLINDER TO TDC/COMPRESSION

a. Temporarily install the pulley bolt.

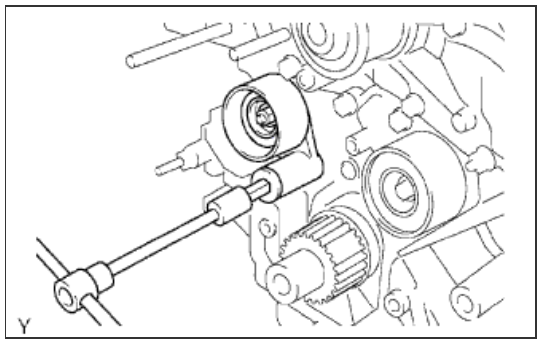
b. Rotate the crankshaft clockwise so that the timing marks on the crankshaft timing pulley and camshaft timing pulleys are as shown in the illustration.

HINT:



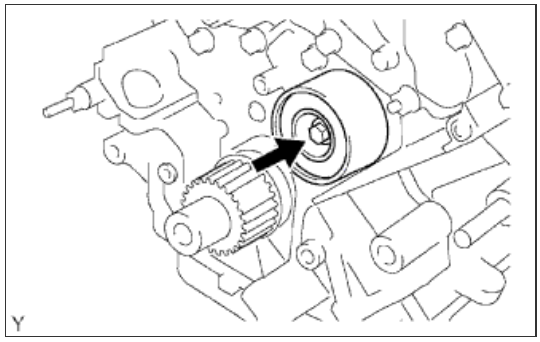
- **If the timing marks do not align, rotate the crankshaft clockwise again and align the timing marks.**
- **When reusing the timing belt, put a timing mark on the belt where the timing marks on the belt and timing pulley are aligned after rotating the crankshaft.**

30. REMOVE TIMING BELT



a. Alternately loosen the 2 bolts, then remove the bolts, timing belt tensioner and dust seal.

b. Remove the timing belt.

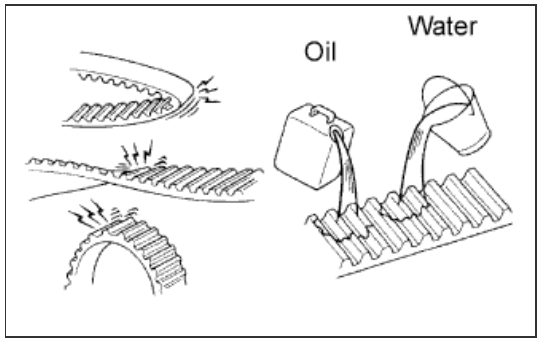


31. REMOVE NO. 1 TIMING BELT IDLER SUB-ASSEMBLY

a. Using a 10 mm hexagon wrench, remove the idler shaft, timing belt idler and plate washer.

32. REMOVE NO. 2 TIMING BELT IDLER SUB-ASSEMBLY

a. Remove the bolt and timing belt idler.



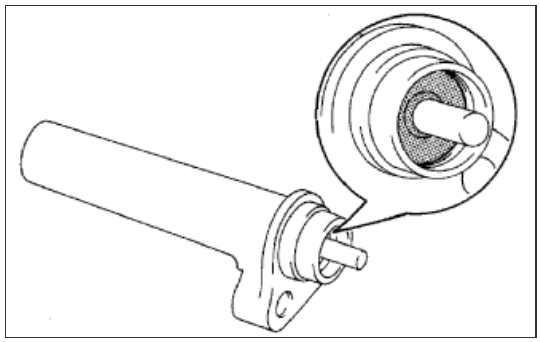
for Preparation Click here

1. INSPECT TIMING BELT

a. Visually check the timing belt for excessive wear, frayed cords, etc.
If necessary, replace the timing belt.

NOTICE:

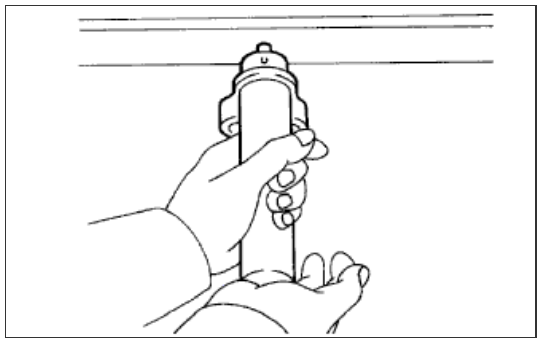
- **Do not bend or twist the timing belt or turn it inside out.**
- **Do not allow the timing belt to come into contact with oil, water or steam.**



2. INSPECT TIMING BELT TENSIONER ASSEMBLY

a. Visually check the seal portion of the tensioner for oil leakage.
If leakage is found, replace the timing belt tensioner assembly.

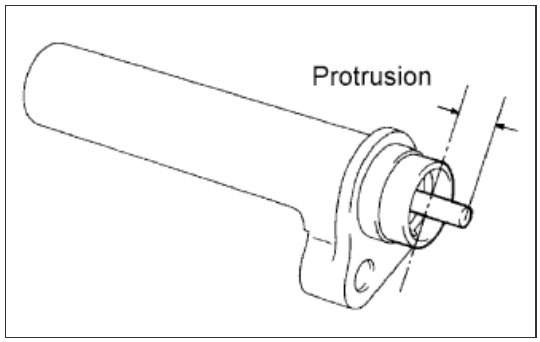
HINT:



If there is only a faint trace of oil on the push rod, the tensioner does not need to be replaced.

b. Hold the tensioner with both hands and push the push rod strongly as shown to check that it does not move.
If the push rod moves, replace the timing belt tensioner assembly.

NOTICE:

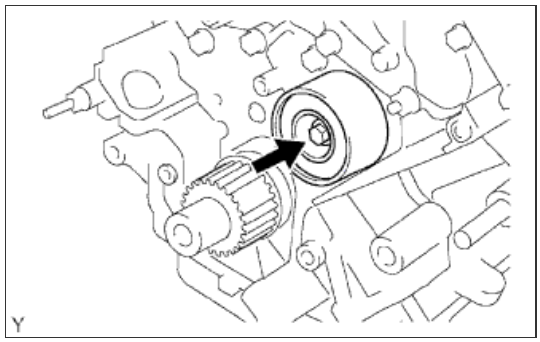


Never face the tensioner push rod downward.

c. Measure the protrusion of the push rod from the housing end.

Standard protrusion:
9.5 to 10.5 mm (0.374 to 0.413 in.)

If the protrusion is not as specified, replace the timing belt tensioner assembly.



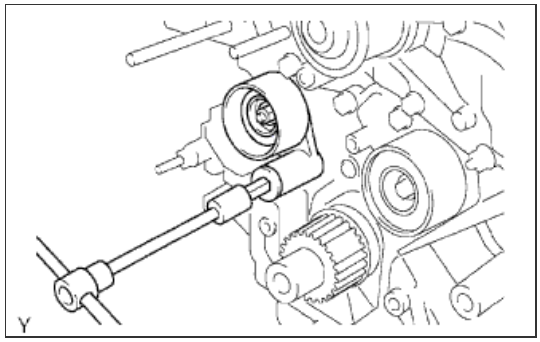
Protrusion

for Preparation Click here

1. INSTALL NO. 2 TIMING BELT IDLER SUB-ASSEMBLY

a. Install the timing belt idler with the bolt.

Torque:
35 N*m{ 352 kgf*cm , 25 ft.*lbf }

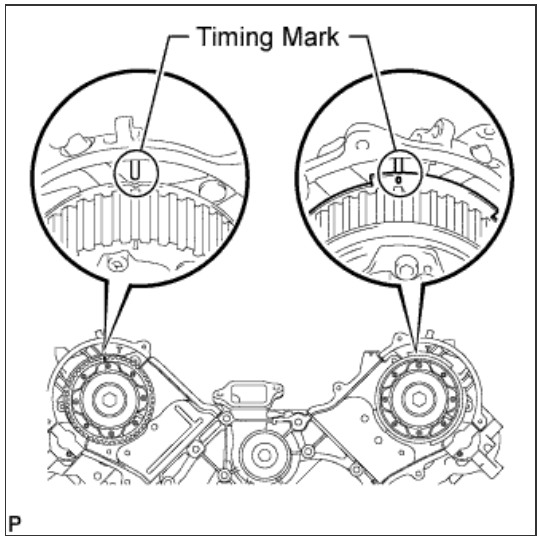


2. INSTALL NO. 1 TIMING BELT IDLER SUB-ASSEMBLY

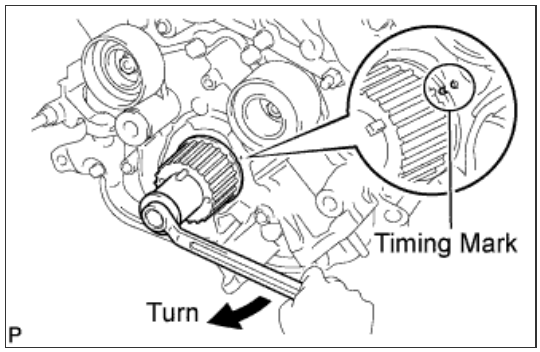
a. When reusing the timing belt idler shaft, apply adhesive to 2 or 3 of the threads.

Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent

b. Using a 10 mm hexagon wrench, install the plate washer and timing belt idler with the idler shaft.

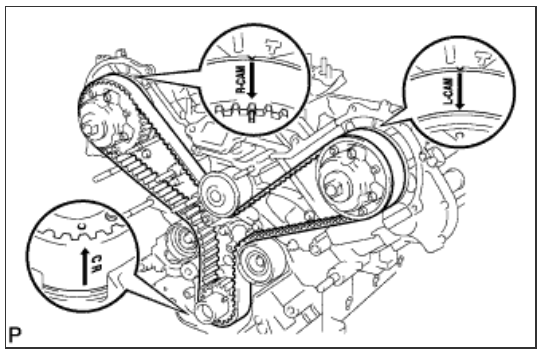


Torque:
35 N*m{ 352 kgf*cm , 25 ft.*lbf }



3. INSTALL TIMING BELT

a. Set the No. 1 cylinder to TDC/compression.

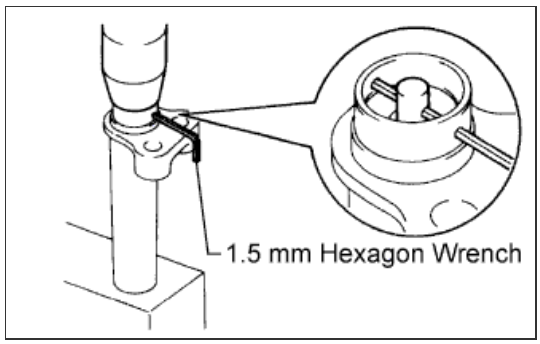


i. Turn the hexagonal portion of the camshaft to align the timing marks of the camshaft timing pulleys and timing belt plates.

ii. Using the pulley bolt, turn the crankshaft to align the timing marks of the crankshaft timing pulley and oil pump body.

b. Install the timing belt.

i. Remove any oil or water from each pulley, and keep them clean.



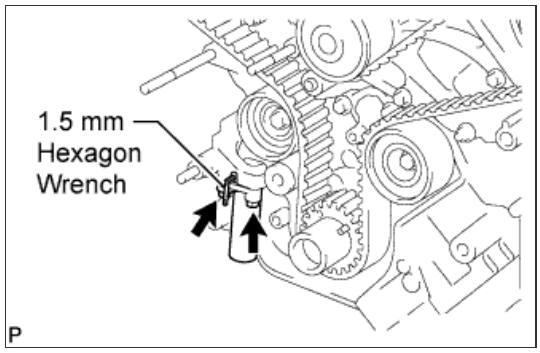
NOTICE:

Only wipe the pulleys. Do not use any cleansing agent on the pulleys.

ii. Face the front mark (arrow) on the timing belt forward.

iii. Align the timing marks on the timing belt and crankshaft timing pulley, and the timing belt and camshaft timing pulleys, and install the timing belt.

c. Install the belt tensioner.



i. Remove the dust seal from the belt tensioner.

ii. Using a press, slowly press in the push rod using a force of 981 to 9807 N (100 to 1000 kgf, 220.5 to 2204.7 lbf).

iii. Align the holes of the push rod and housing, and pass a 1.5 mm hexagon wrench through the holes to keep the setting position of the push rod.

iv. Release the press.

v. Install the dust seal to the belt tensioner.

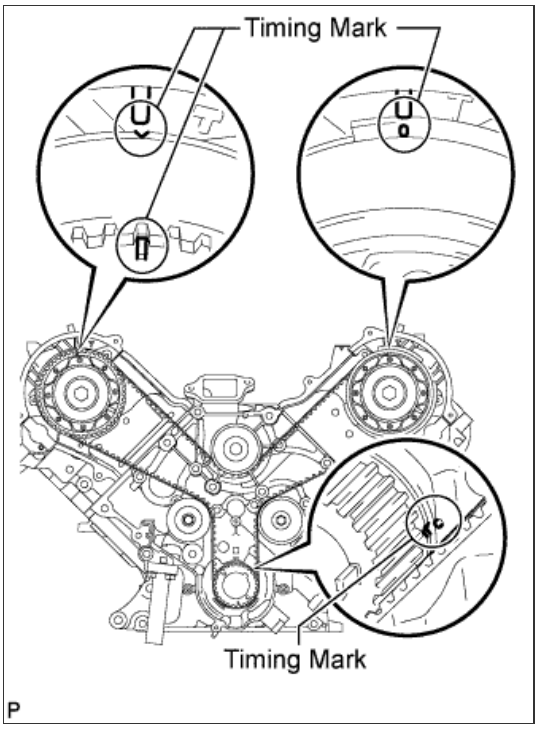
vi. Temporarily install the belt tensioner with the 2 bolts.

vii. Tighten the 2 bolts.

Torque:
26 N*m{ 265 kgf*cm , 19 ft.*lbf }

viii. Using pliers, remove the 1.5 mm hexagon wrench from the timing belt tensioner.

4. CHECK NO. 1 CYLINDER TO TDC/COMPRESSION



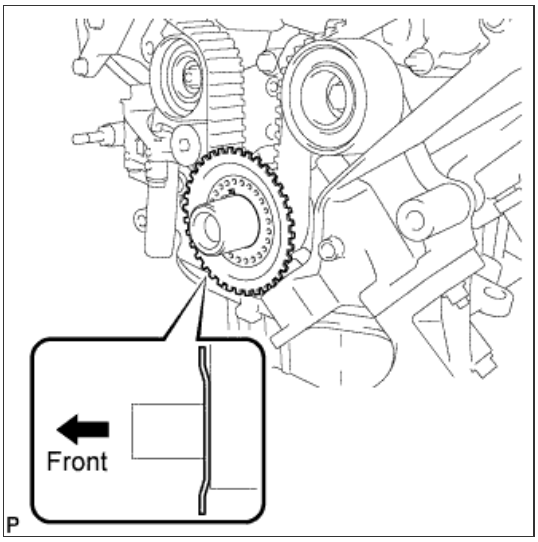
a. Using the pulley bolt, slowly turn the crankshaft timing pulley 2 revolutions from the TDC to TDC.

NOTICE:

Always turn the crankshaft timing pulley clockwise.

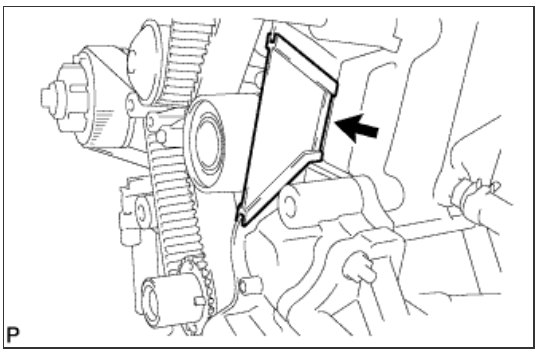
b. Check that each pulley is aligned with each timing mark as shown in the illustration.
If the timing marks are not aligned, remove the timing belt and reinstall it.

c. Remove the pulley bolt.



5. INSTALL NO. 1 CRANKSHAFT POSITION SENSOR PLATE

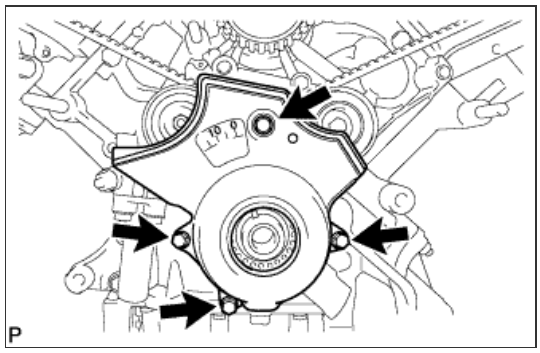
a. Install the sensor plate as shown in the illustration.



NOTICE:

Take care not to install the sensor plate in a wrong direction.

6. INSTALL TIMING BELT COVER SPACER

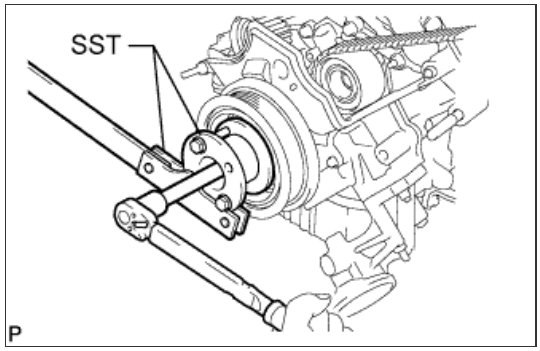


a. Install the cover spacer and gasket.

7. INSTALL NO. 1 TIMING BELT COVER

a. Install the timing belt cover with the 4 bolts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

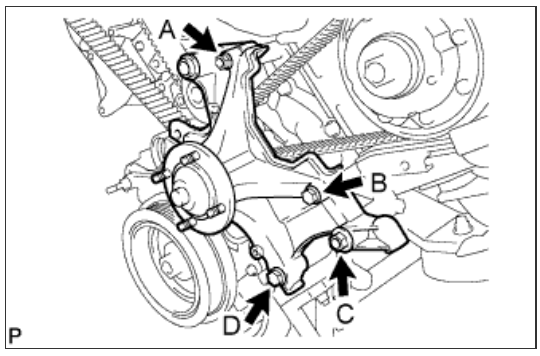


8. INSTALL CRANKSHAFT DAMPER SUB-ASSEMBLY

a. Align the pulley set key with the key groove of the crankshaft damper.

b. Using SST, hold the crankshaft pulley and install the pulley bolt.

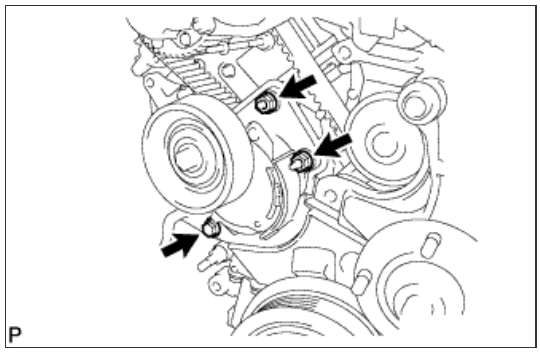
SST
09213-70011 (09213-70020)
09330-00021 (09330-00030)



Torque:
245 N*m{ 2498 kgf*cm , 181 ft.*lbf }

9. INSTALL FAN BRACKET SUB-ASSEMBLY

a. Install the fan bracket with the 2 bolts and 2 nuts.

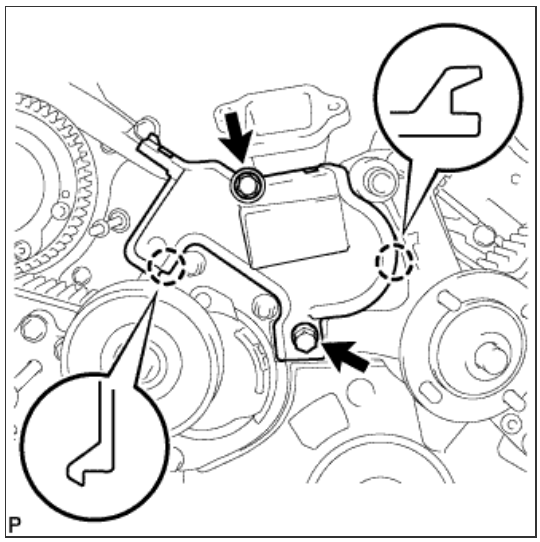


Torque:
for nut A, bolt B:
16 N*m{ 163 kgf*cm , 12 ft.*lbf }
for nut C, bolt D:
32 N*m{ 326 kgf*cm , 24 ft.*lbf }

10. INSTALL V-RIBBED BELT TENSIONER ASSEMBLY

a. Install the belt tensioner with the bolt and 2 nuts.

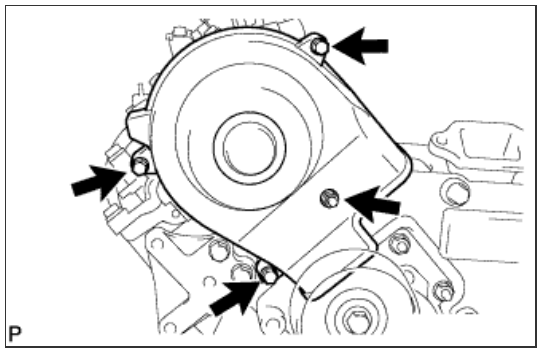
Torque:
16 N*m{ 163 kgf*cm , 12 ft.*lbf }



11. INSTALL NO. 2 TIMING BELT COVER SUB-ASSEMBLY

a. Install the timing belt cover and fit the 2 claws into each part.

b. Install the 2 bolts.



Torque:
16 N*m{ 163 kgf*cm , 12 ft.*lbf }

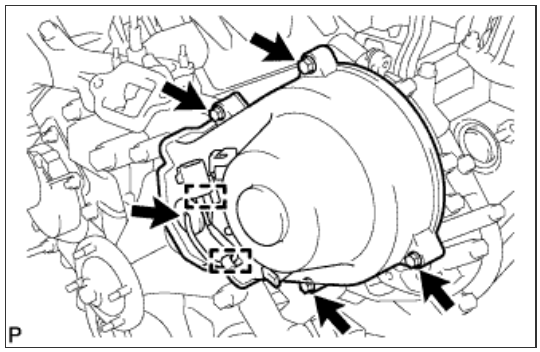
12. INSTALL NO. 3 TIMING BELT COVER SUB-ASSEMBLY RH

a. Install the timing belt cover with the 3 bolts and nut.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

13. INSTALL NO. 3 TIMING BELT COVER SUB-ASSEMBLY LH

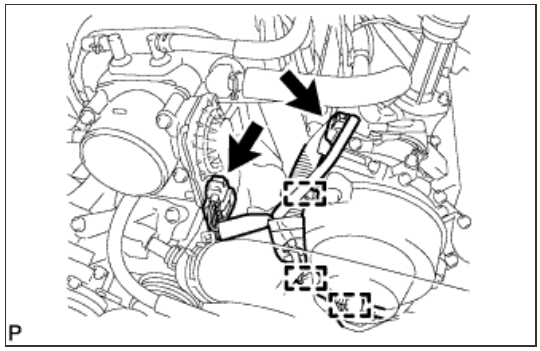
a. Pass the camshaft position sensor wire through the cover hole.



b. Install the timing belt cover with the 4 bolts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

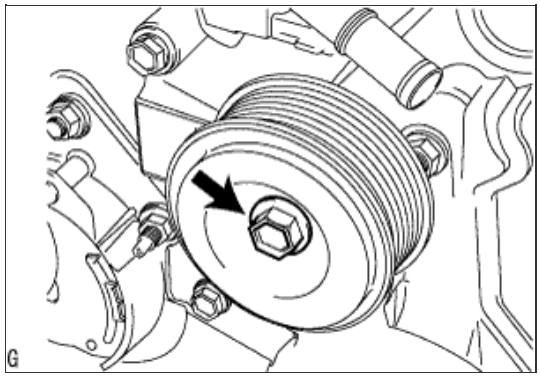
c. Install the wire grommet to the timing belt cover.



d. Connect the sensor connector.

e. Install the sensor wire to the 2 wire clamps on the cover.

f. Connect the engine wire to the 3 wire clamps.

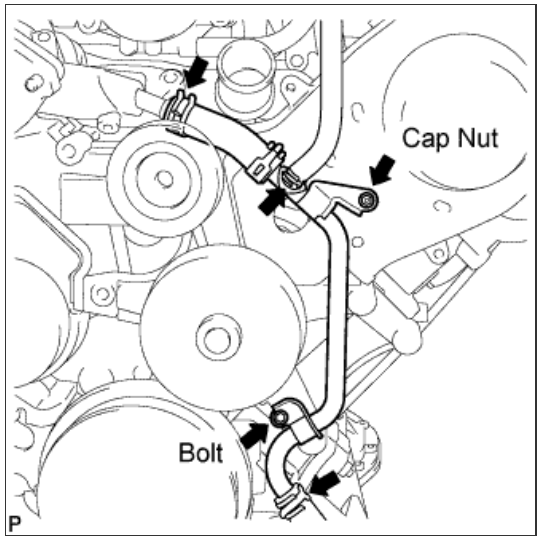


g. Connect the camshaft timing oil control valve connector and control motor connector.

14. INSTALL NO. 2 IDLER PULLEY SUB-ASSEMBLY

a. Install the idler pulley and cover plate with the bolt.

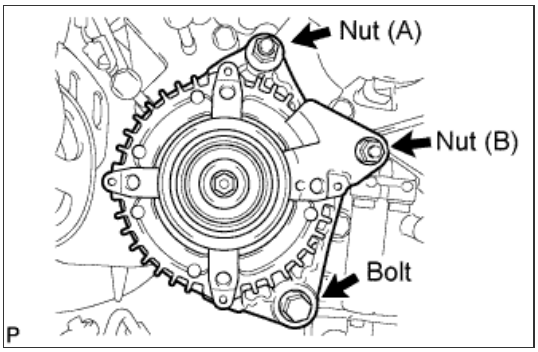
Torque:
39 N*m{ 398 kgf*cm , 29 ft.*lbf }



15. INSTALL OIL COOLER PIPE

a. Using needle-nose pliers, grip the claws of the clamps and slide the clamps to connect the 3 water by-pass hoses.

b. Install the oil cooler pipe with the cap nut and bolt.



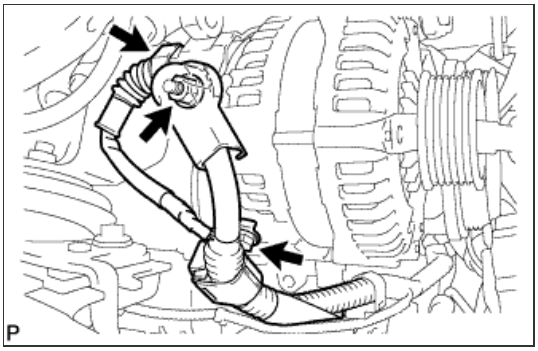
Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

16. INSTALL GENERATOR ASSEMBLY

a. Install the generator with the bolt and 2 nuts.

Torque:
for bolt and nut (A):
39 N*m{ 398 kgf*cm , 29 ft.*lbf }
for nut (B):
16 N*m{ 158 kgf*cm , 11 ft.*lbf }

b. Connect the generator connector.

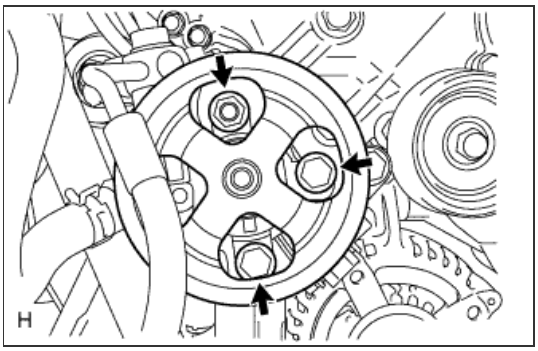


c. Connect the generator wire with the nut.

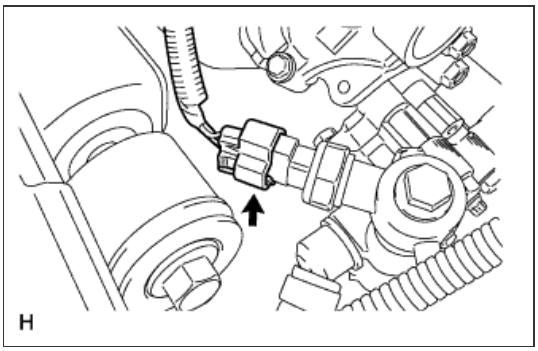
Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

d. Install the terminal cap.

e. Connect the harness bracket to the generator with the bolt.



Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



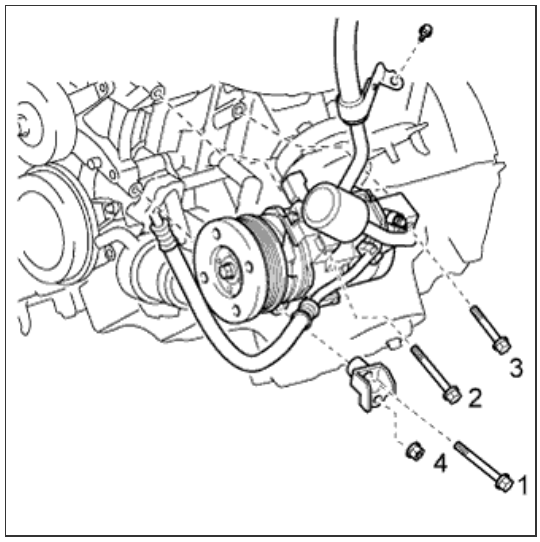
17. CONNECT VANE PUMP ASSEMBLY

a. Connect the vane pump with the 2 bolts and nut.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. Connect the connector.

18. CONNECT COOLER COMPRESSOR ASSEMBLY



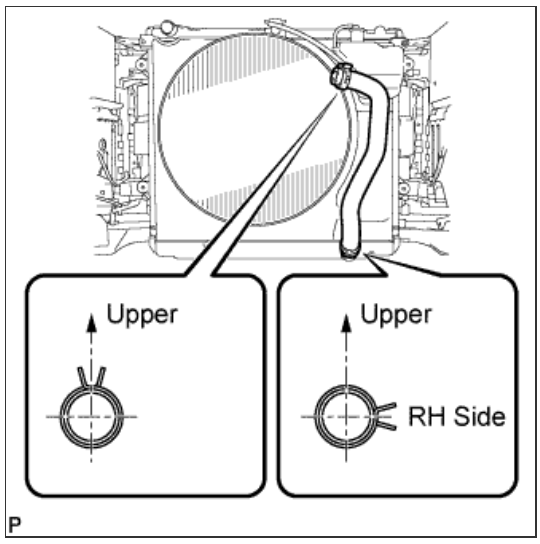
a. Connect the compressor. Then install it and the No. 1 compressor stay with the

nut and 3 bolts.

Torque:
for bolt:
45 N*m{ 459 kgf*cm , 33 ft.*lbf }
for nut:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }

HINT:

Tighten the bolts in the order shown in the illustration to install the cooler compressor.



b. Install the cooler refrigerant suction hose with the bolt.

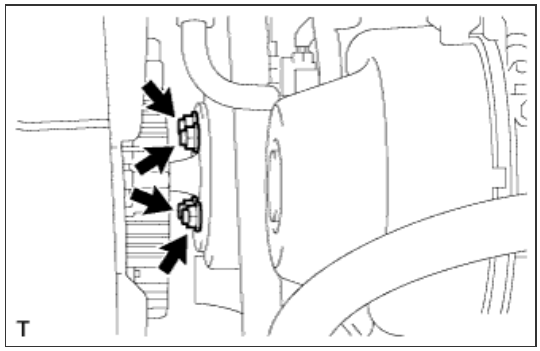
Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

c. Connect the connector.

19. INSTALL NO. 2 RADIATOR HOSE

a. Using needle-nose pliers, grip the claws of the clamps and slide the clamps to install the radiator hose.

20. INSTALL FAN SHROUD



a. Install the fan pulley to the water pump.

b. Place the shroud together with the cooling fan between the radiator and engine.

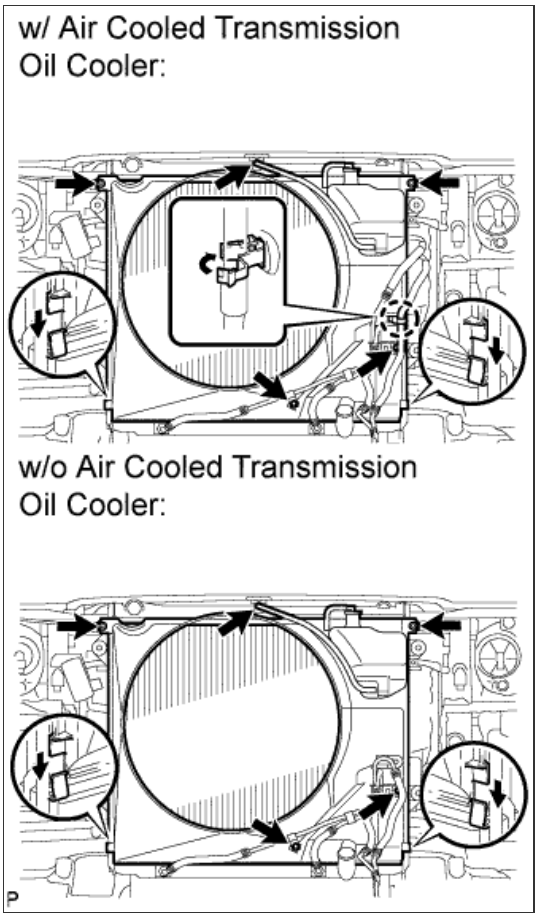
NOTICE:

Be careful not to damage the radiator core.

c. Temporarily install the cooling fan to the water pump with the 4 nuts. Tighten the nuts as much as possible by hand.

d. Attach the claws of the shroud to the radiator as shown in the illustration.

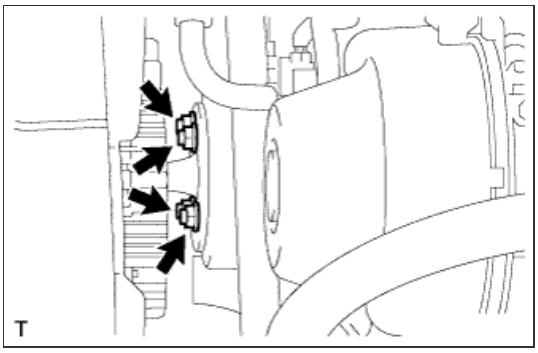
e. Install the shroud with the 2 bolts.



Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

f. Connect the oil cooler tube to the fan shroud with the 2 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

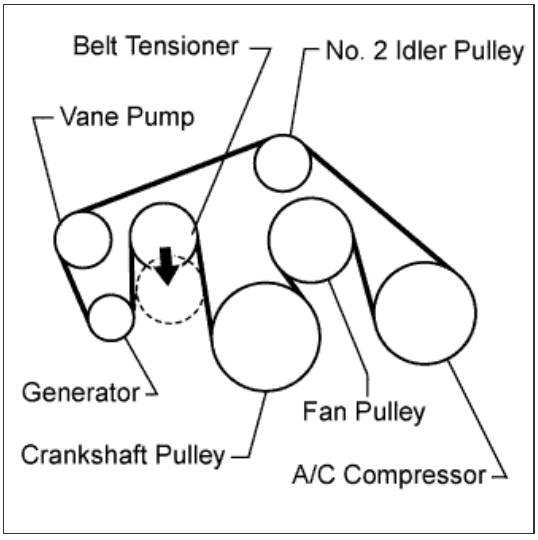


g. w/ Air Cooled Transmission Oil Cooler:
Pass the hose through the flexible hose clamp and close the clamp as shown in the illustration.

h. Connect the reservoir hose to the upper side of the radiator tank.

i. Tighten the 4 nuts of the cooling fan.

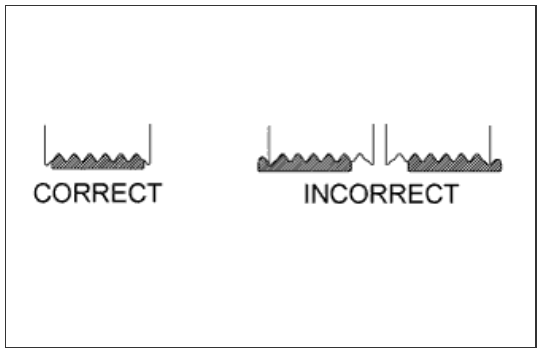
Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }



21. INSTALL FAN & GENERATOR V BELT

a. Set the V belt onto every part except the belt tensioner, as shown in the illustration.

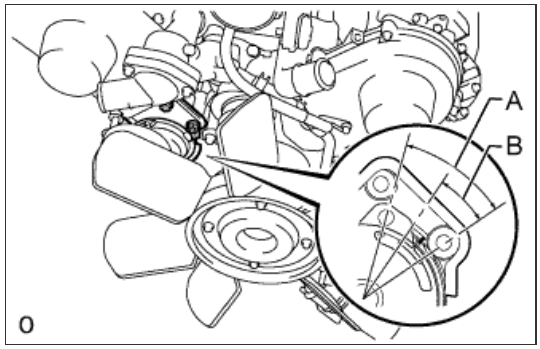
b. Loosen the V belt by turning the belt tensioner counterclockwise.



c. Set the V belt to the belt tensioner.

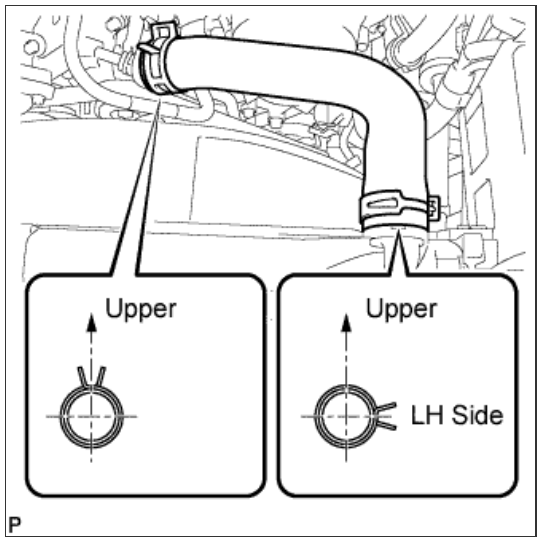
d. Check that the belt fits properly in the ribbed grooves.

HINT:



Make sure to check by hand that the belt has not slipped out of the grooves on the bottom of the pulley.

e. Check that the arrow on the belt tensioner is within area "A".
If the arrow is outside area "A", replace the fan and generator V belt.



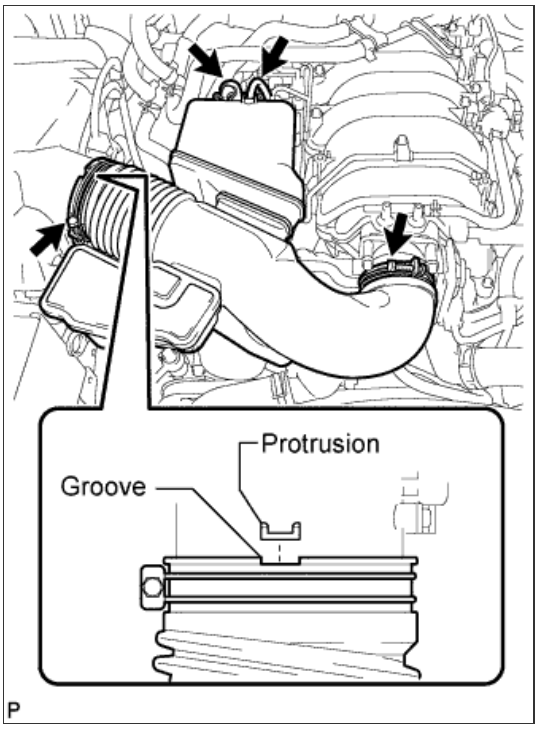
HINT:

When a new belt is installed, the arrow should be within area "B". If not, the fan and generator V belt is not installed correctly.

22. INSTALL NO. 1 RADIATOR HOSE

a. Using needle-nose pliers, grip the claws of the clamps and slide the clamps to install the radiator hose.

23. INSTALL AIR CLEANER HOSE ASSEMBLY



a. Install the air cleaner hose so that the protrusion of the air cleaner cap aligns with the groove of the hose as shown in the illustration.

b. Tighten the 2 clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

c. Connect the vacuum transmitting hose.

d. Connect the No. 2 ventilation hose.

24. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

25. ADD ENGINE COOLANT

a. Add engine coolant.

Standard Capacity:

Item		Specified Condition
w/o Transmission oil cooler	w/o Rear Heater	13.4 liters (14.2 US qts, 11.8 Imp. qts)
	w/ Rear Heater	16.3 liters (17.2 US qts, 14.3 Imp. qts)
w/ Transmission oil cooler	w/o Rear Heater	14.1 liters (14.9 US qts, 12.4 Imp. qts)
	w/ Rear Heater	16.9 liters (17.9 US qts, 14.9 Imp. qts)

HINT:

TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

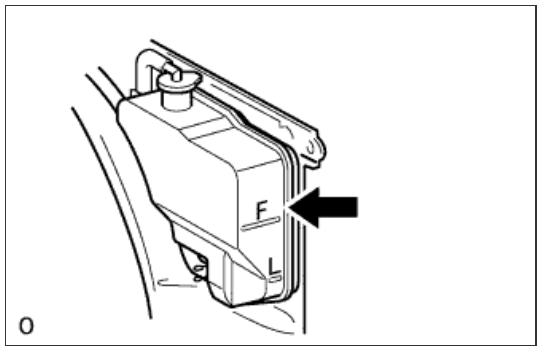
b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the radiator reservoir cap.

d. Press the inlet and outlet radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Start the engine and warm it up until the thermostat opens.



NOTICE:

Switch off the A/C.

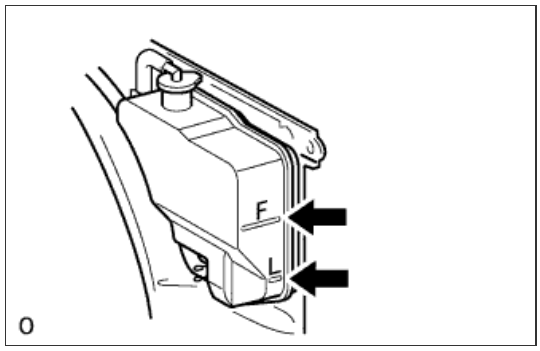
g. Maintain the engine speed at 2000 to 2500 rpm.

NOTICE:

- **Make sure that the radiator reservoir still has some coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**
- **Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the F line.**
- **Run the engine at 2000 rpm until the coolant level has stabilized.**

h. Press the inlet and outlet radiator hoses several times by hand to bleed air.

CAUTION:



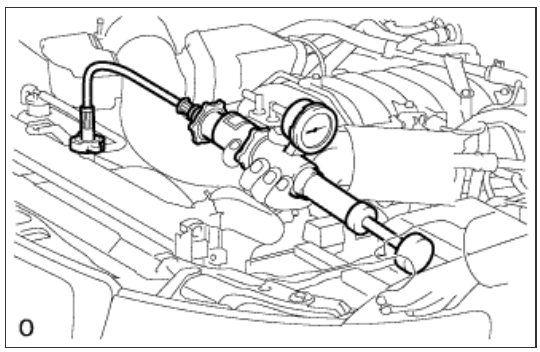
- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the cooling fan.**

i. Stop the engine, and wait until the engine coolant cools down to the ambient temperature.

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

j. Check that the coolant level is between the F and L lines. If the coolant level is below the L line, repeat all of the procedures above. If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.



26. INSPECT FOR COOLANT LEAK

a. Fill the radiator with coolant and attach a radiator cap tester.

b. Warm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.

27. INSPECT IGNITION TIMING

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. When using the intelligent tester:

i. Connect the intelligent tester to the DLC3.

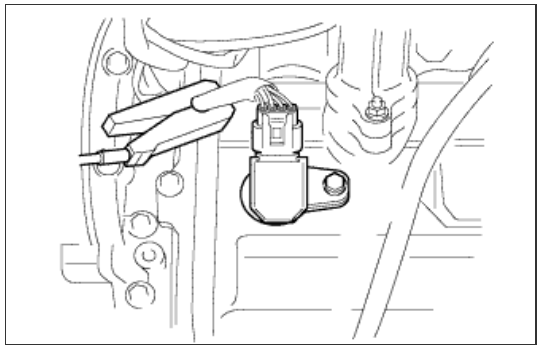
NOTICE:

Switch off all accessories and the A/C before connecting the intelligent tester.

ii. Start the engine and idle it.

iii. Push the intelligent tester main switch ON.

iv. Enter the following menus: Powertrain / Engine and ECT / Data List / Primary / IGN Advance.



HINT:

Refer to the intelligent tester operator's manual for further details.

Standard ignition timing:
5 to 15° BTDC @ idling (transmission in neutral and A/C switch off)

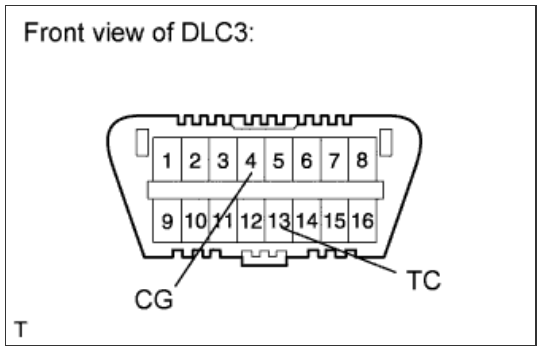
v. Disconnect the intelligent tester from the DLC3.

c. When not using the intelligent tester:

i. Remove the 2 nuts and V-bank cover.

ii. Connect the tester probe of a timing light to the wire of the ignition coil connector for the No. 1 cylinder.

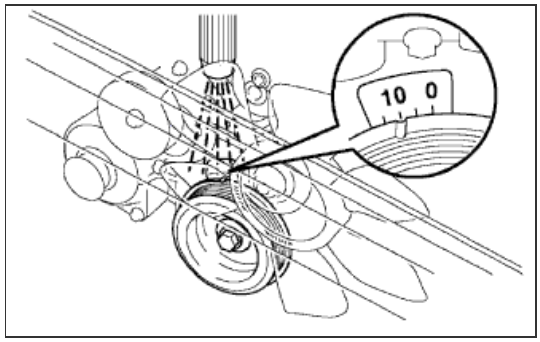
NOTICE:



Use a timing light that detects primary signals.

iii. Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.

SST
09843-18040



NOTICE:

- **Confirm the terminal numbers before connecting them. Connecting the wrong terminals can damage the engine.**
- **Switch off all accessories and the A/C.**

iv. Using the timing light, check the ignition timing.

Ignition timing:
5 to 15° BTDC @ idling (transmission in neutral and A/C switch off)

v. Remove SST from the DLC3.

vi. Disconnect the timing light from the engine.

vii. Install the V-bank cover with the 2 nuts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

28. INSPECT ENGINE IDLE SPEED

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. When using the intelligent tester:

i. Connect the intelligent tester to the DLC3.

NOTICE:

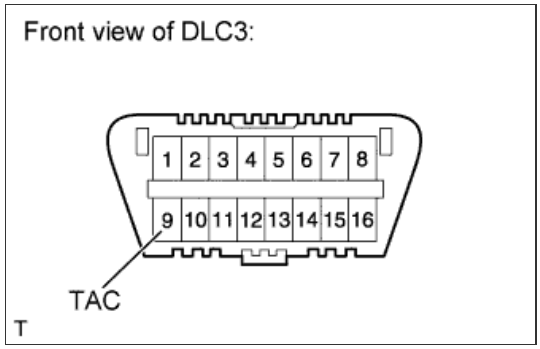
Switch off all accessories and the A/C before connecting the intelligent tester.

ii. Race the engine at 2500 rpm for approximately 90 seconds.

iii. Push the intelligent tester main switch ON.

iv. Enter the following menus: Powertrain / Engine and ECT / Data List / Primary / Engine Speed.

Standard idle speed:
650 to 750 rpm (transmission in neutral and A/C switch off)



HINT:

Refer to the intelligent tester operator's manual for further details.

If the idle speed is not as specified, check the air intake system.

v. Disconnect the intelligent tester from the DLC3.

c. When not using the intelligent tester:

i. Using SST, connect a tachometer probe to terminal 9 (TAC) of the DLC3.

SST
09843-18030

NOTICE:

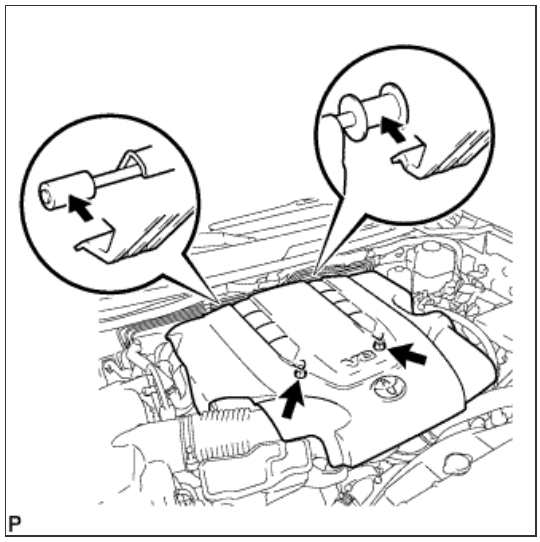
- **Confirm the terminal number before connecting the probe. Connecting the probe to the wrong terminal can damage the engine.**
- **Switch off all accessories and the A/C.**

ii. Race the engine at 2500 rpm for approximately 90 seconds.

iii. Check the idle speed.

Standard idle speed:
650 to 750 rpm (transmission in neutral and A/C switch off)

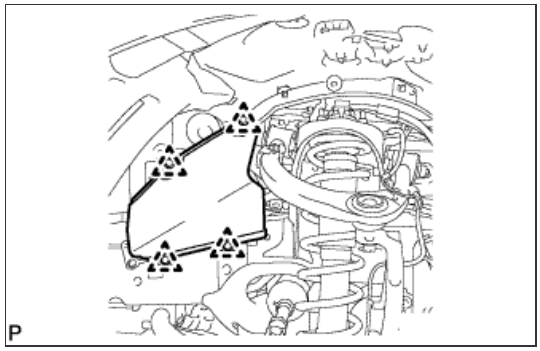
If the idle speed is not as specified, check the air intake system.



iv. Disconnect the tachometer from the DLC3.

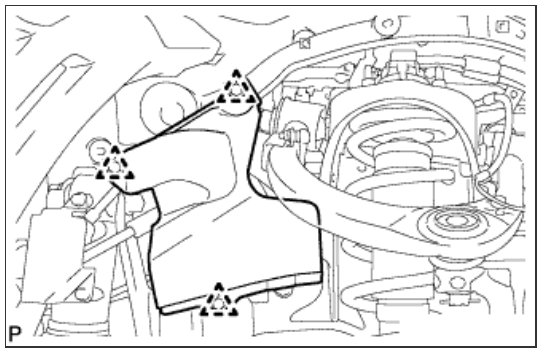
29. INSTALL V-BANK COVER SUB-ASSEMBLY

a. Attach the 2 V-bank cover hooks to the bracket.



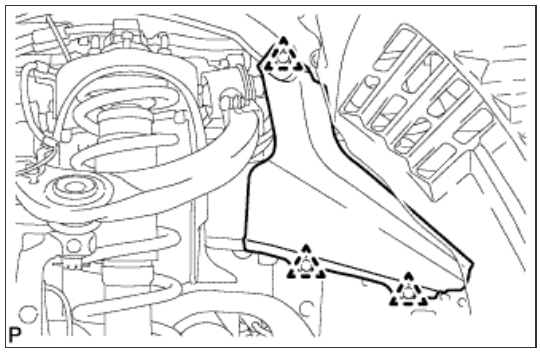
b. Install the V-bank cover with the 2 nuts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }



30. INSTALL FRONT FENDER APRON SEAL LH

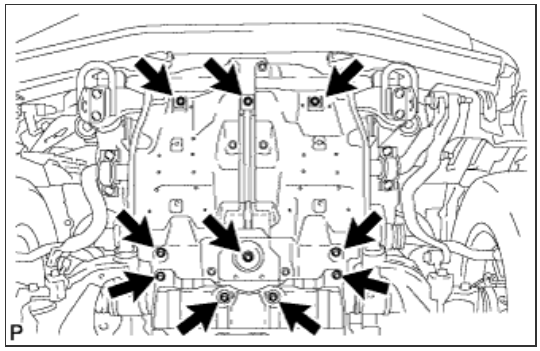
a. Install the fender apron seal with the 4 clips.



31. INSTALL FRONT FENDER APRON SEAL LH (w/ KDSS)

a. Install the fender apron seal with the 3 clips.

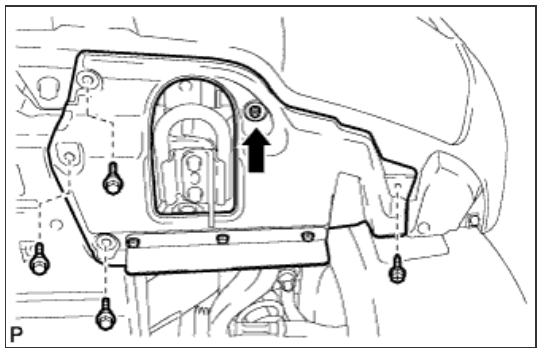
32. INSTALL FRONT FENDER APRON SEAL FRONT RH



a. Install the fender apron seal with the 3 clips.

33. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.



Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

34. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

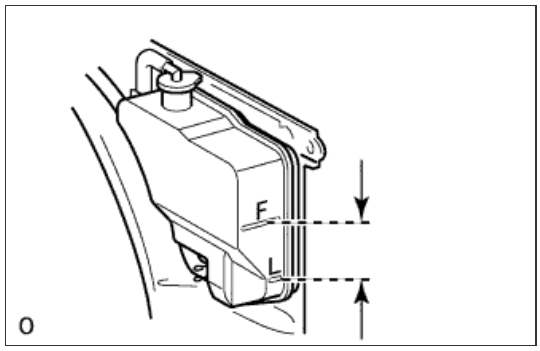
a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the 3 bolts and screw.

35. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

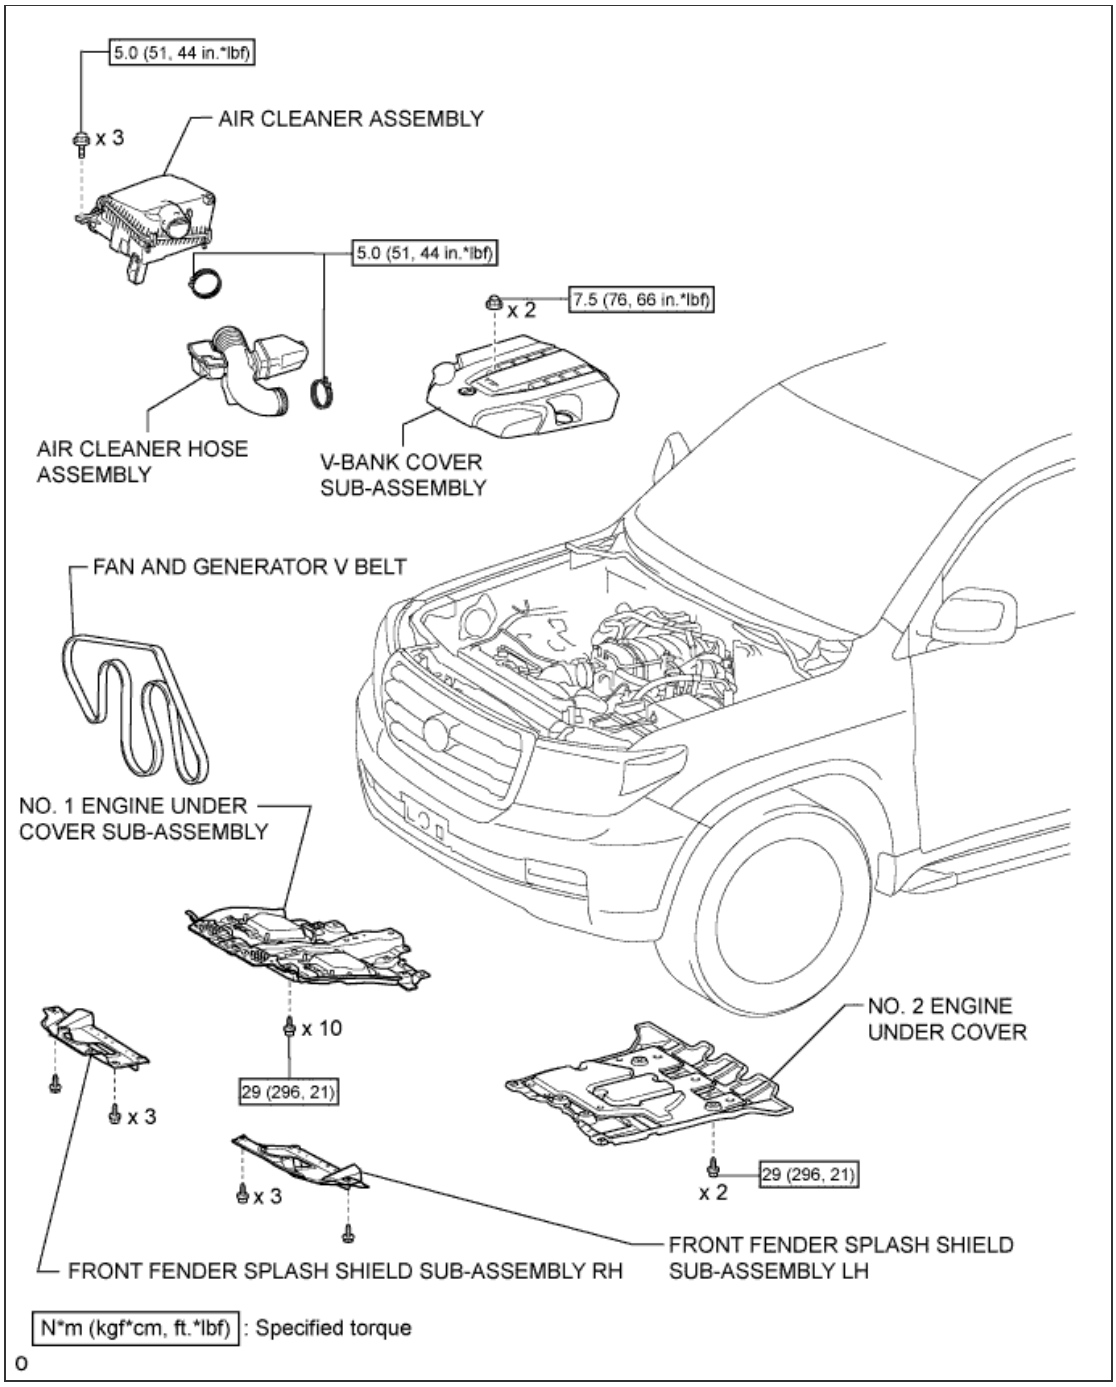
HINT:

Use the same procedures described for the LH side.

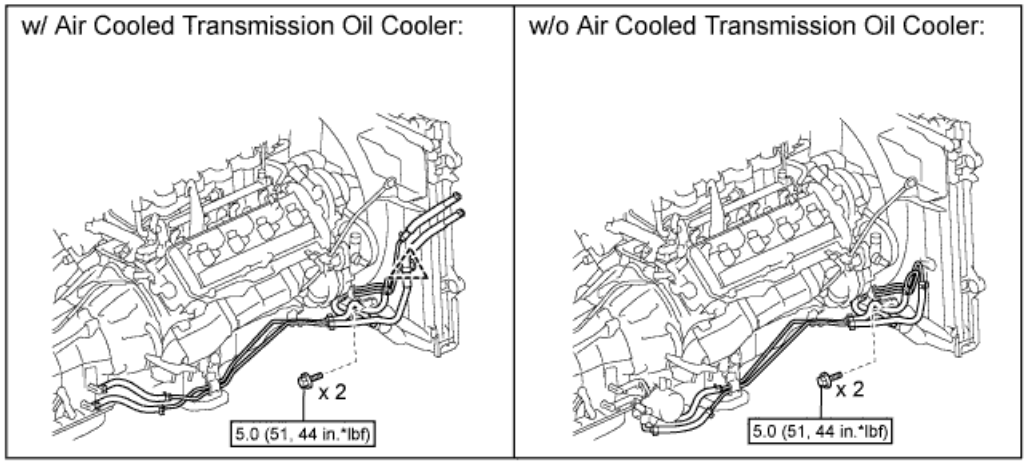


36. INSPECT ENGINE COOLANT LEVEL

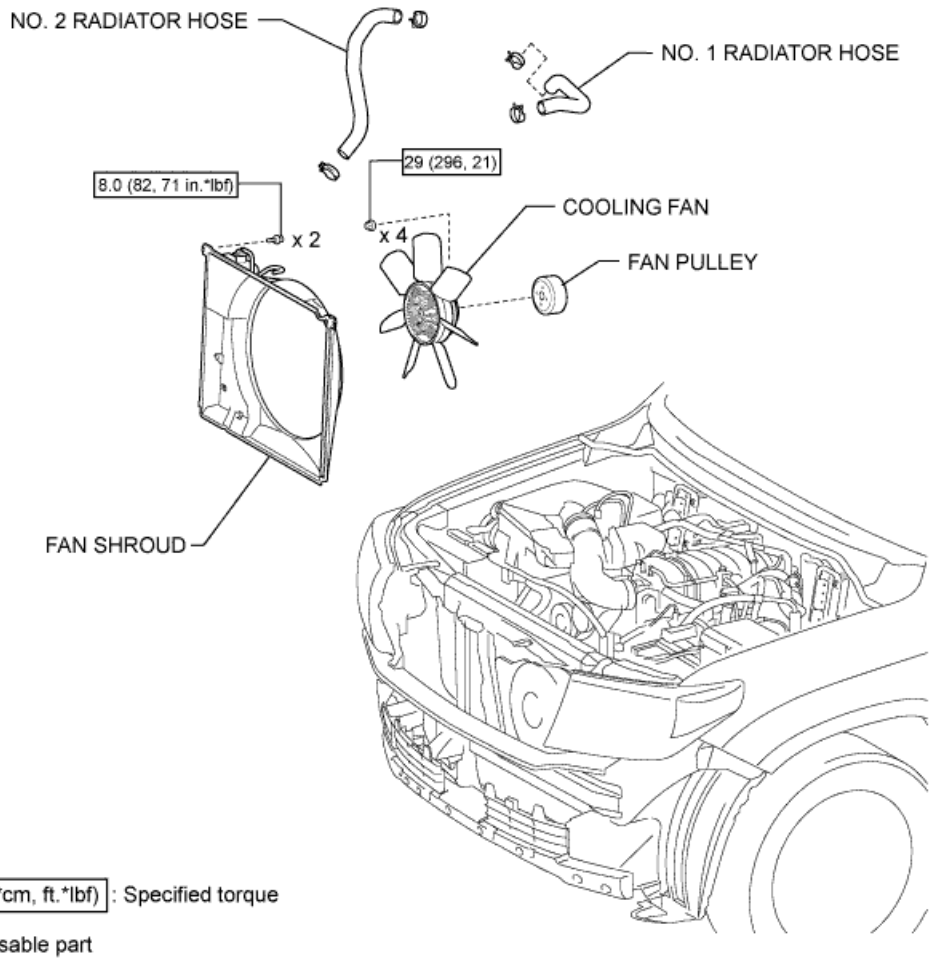
a. Check that the engine coolant level is between the L and F lines when the engine is cold.
If the engine coolant is low, check for leaks and add "TOYOTA Super Long Life Coolant" or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite and non-borate coolant with long-life hybrid organic acid technology to the F line.



NOTICE:



Do not substitute plain water for engine coolant.



b. Remove the radiator cap, and check that the coolant level is up to the radiator filler hole.

for Preparation Click here

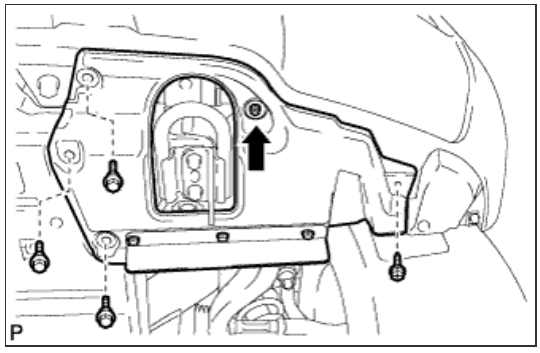
1. DISCHARGE FUEL SYSTEM PRESSURE

a. Discharge the fuel system pressure (Click here).

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.



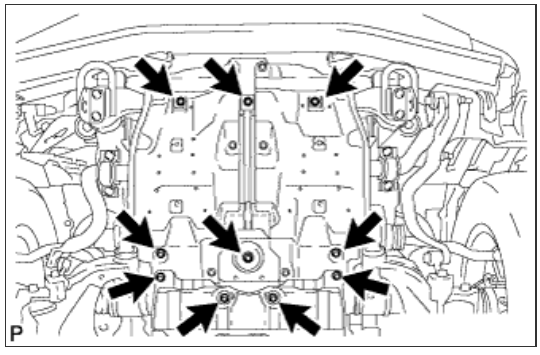
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

3. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and screw.

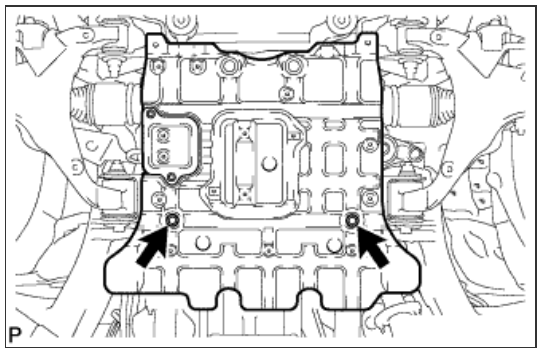
b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



4. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

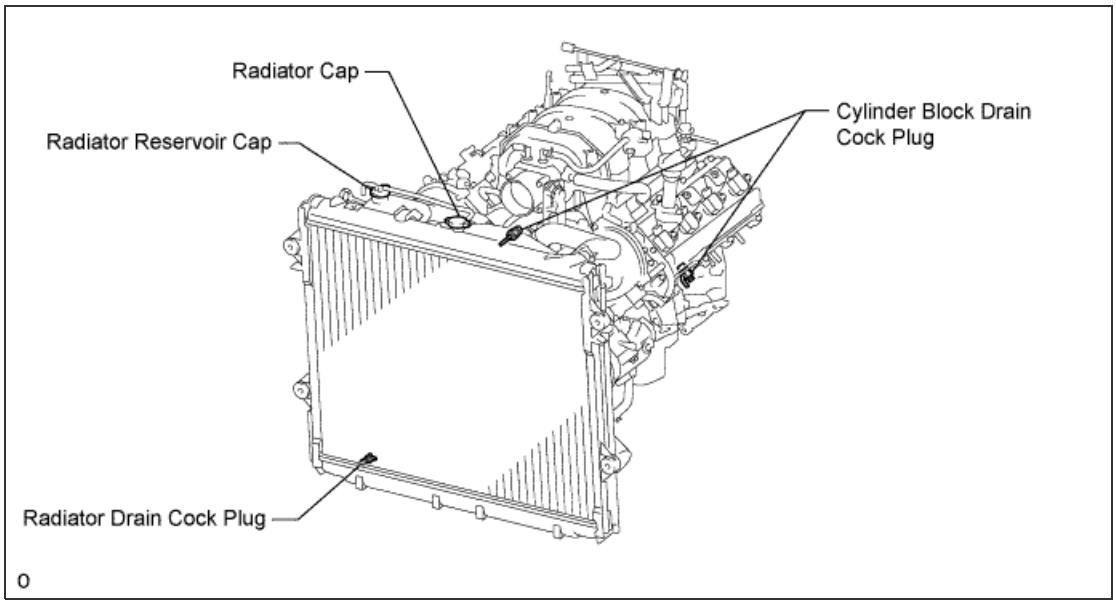
Use the same procedures described for the LH side.



5. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and No. 1 engine under cover.

6. REMOVE NO. 2 ENGINE UNDER COVER



a. Remove the 2 bolts and No. 2 engine under cover.

7. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Loosen the radiator drain cock plug.

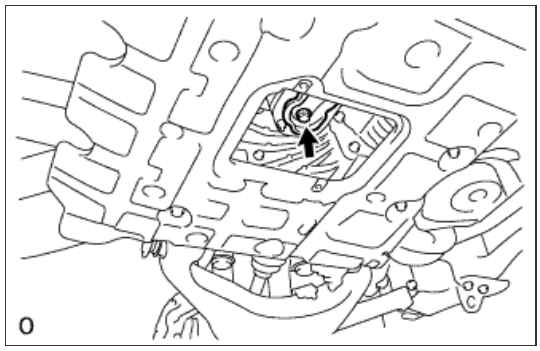
b. Remove the radiator cap. Then drain the coolant.

HINT:

Collect the coolant in a container and dispose of it according to the regulations in your area.

c. Loosen the 2 cylinder block drain cock plugs. Then drain the coolant from the engine.

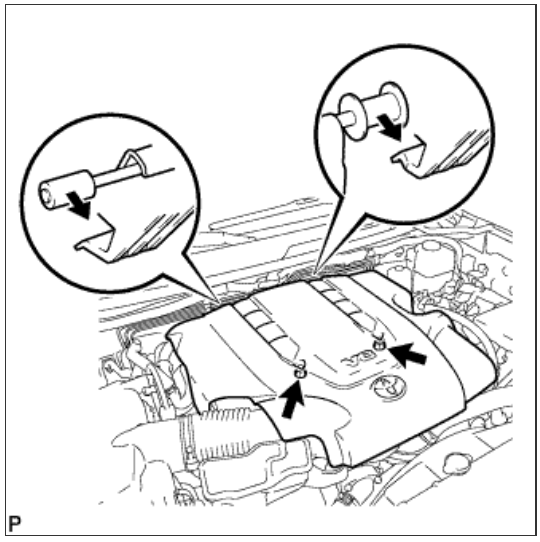
d. Tighten the 2 cylinder block drain cock plugs.



Torque:
13 N*m{ 130 kgf*cm , 9 ft.*lbf }

e. Tighten the radiator drain cock plug by hand.

8. DRAIN ENGINE OIL

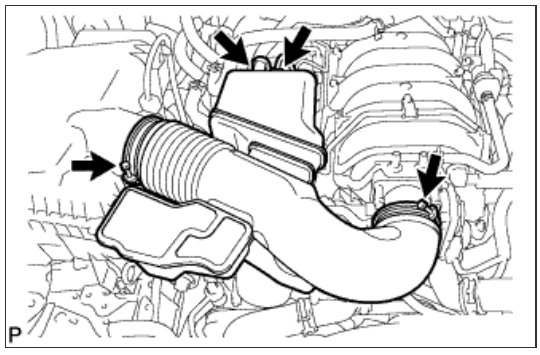


a. Remove the oil drain plug and gasket, and drain the engine oil into a container.

b. Remove the oil drain plug and gasket, and drain the engine oil into a container.

9. REMOVE V-BANK COVER SUB-ASSEMBLY

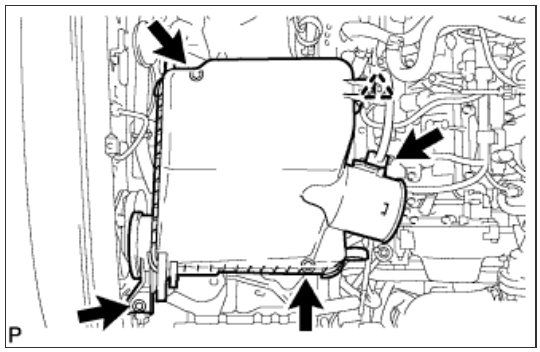
a. Remove the 2 nuts and V-bank cover.



10. REMOVE AIR CLEANER HOSE ASSEMBLY

a. Disconnect the vacuum transmitting hose and No. 2 ventilation hose.

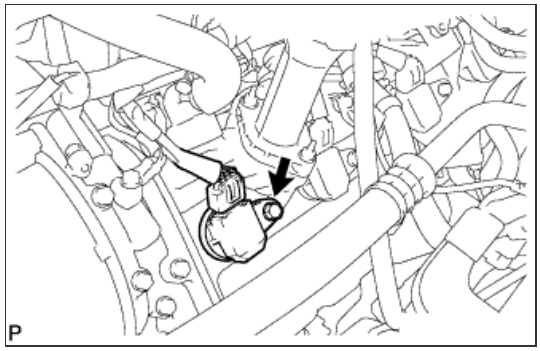
b. Loosen the 2 hose clamps.



c. Remove the air cleaner hose.

11. REMOVE AIR CLEANER ASSEMBLY

a. Disconnect the clamp and connector.

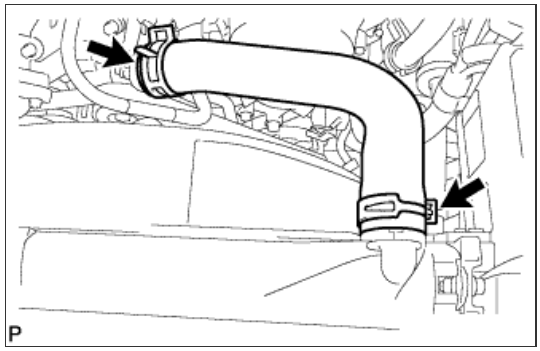


b. Remove the 3 bolts and air cleaner.

12. REMOVE IGNITION COIL ASSEMBLY

a. Disconnect the 8 ignition coil connectors.

b. Remove the 8 bolts and pull out the 8 ignition coils.

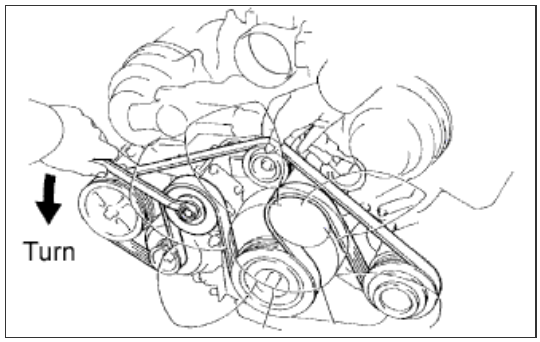


13. REMOVE SPARK PLUG

a. Remove the 8 spark plugs.

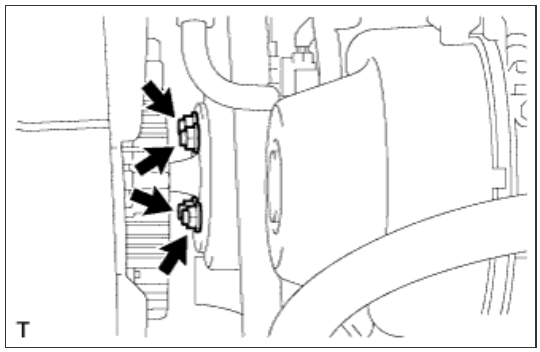
14. REMOVE NO. 1 RADIATOR HOSE

a. Using needle-nose pliers, grip the claws of the clamps and slide the clamps to remove the radiator hose.



15. REMOVE FAN & GENERATOR V BELT

a. Loosen the belt tension by turning the belt tensioner counterclockwise, and then remove the fan and generator V belt.



HINT:

The pulley bolt for the belt tensioner has left-hand thread.

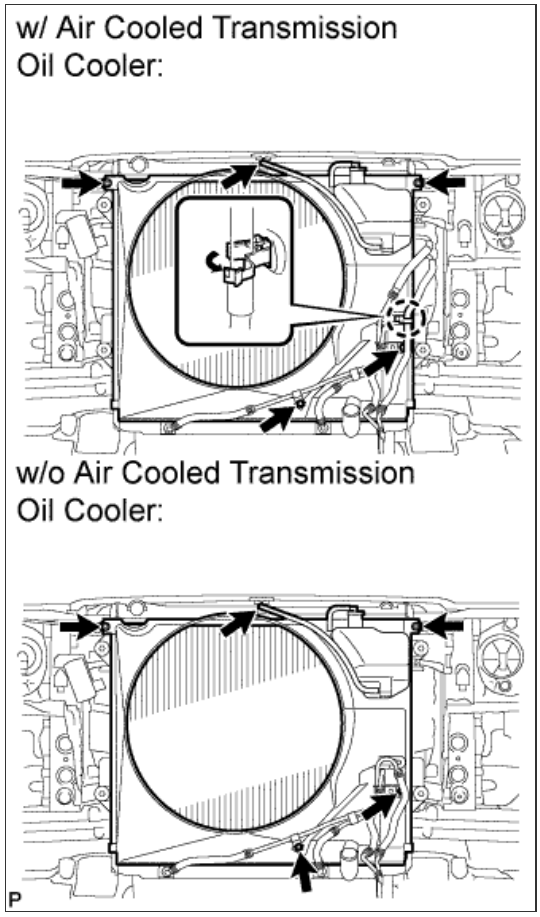
16. REMOVE FAN SHROUD

a. Loosen the 4 nuts holding the cooling fan.

b. Disconnect the reservoir hose from the upper side of the radiator tank.

c. w/ Air Cooled Transmission Oil Cooler:
Detach the claw to open the flexible hose clamp.

d. Remove the 2 bolts and disconnect the oil cooler tube from the fan shroud.

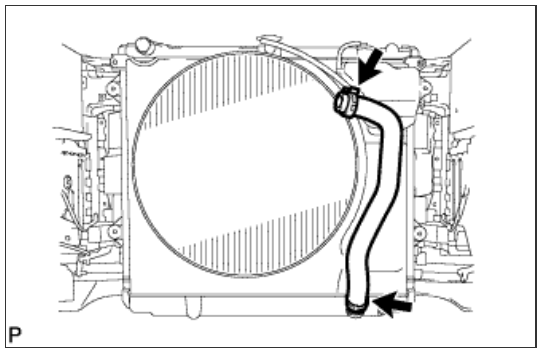


e. Remove the 2 bolts holding the fan shroud.

f. Remove the 4 nuts of the cooling fan, and then remove the shroud together with the cooling fan.

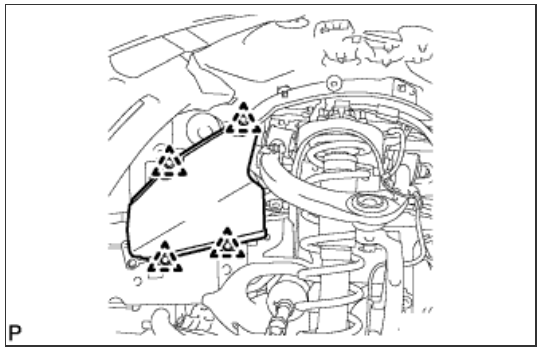
NOTICE:

Be careful not to damage the radiator core.



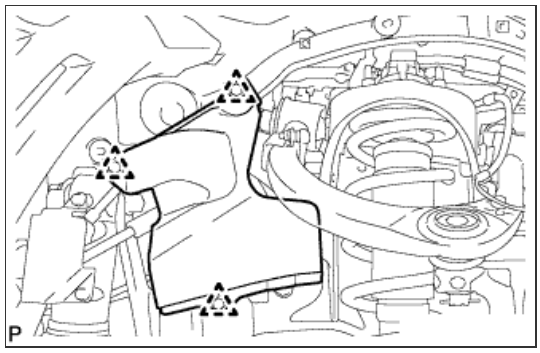
g. Remove the fan pulley from the water pump.

17. REMOVE NO. 2 RADIATOR HOSE



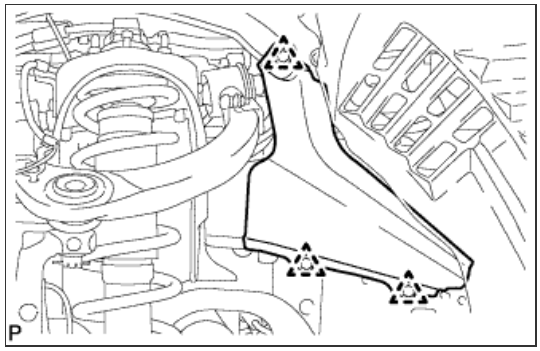
a. Using needle-nose pliers, grip the claws of the clamps and slide the clamps to

remove the radiator hose.



18. REMOVE FRONT FENDER APRON SEAL LH

a. Using a clip remover, remove the 4 clips and fender apron seal.

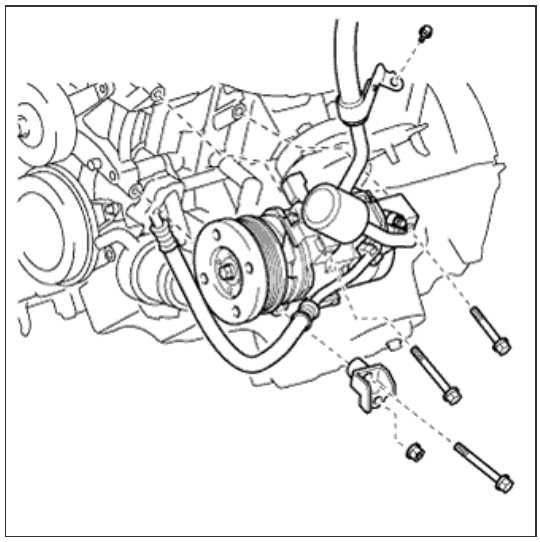


19. REMOVE FRONT FENDER APRON SEAL LH (w/ KDSS)

a. Using a clip remover, remove the 3 clips and fender apron seal.

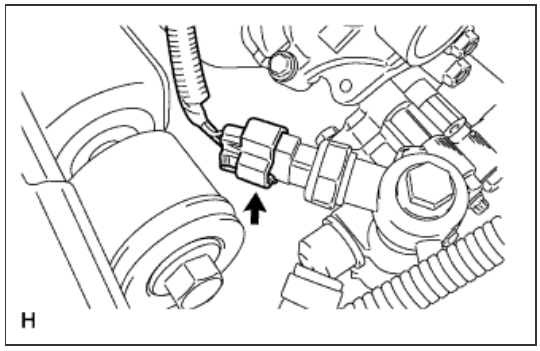
20. REMOVE FRONT FENDER APRON SEAL FRONT RH

a. Using a clip remover, remove the 3 clips and fender apron seal.



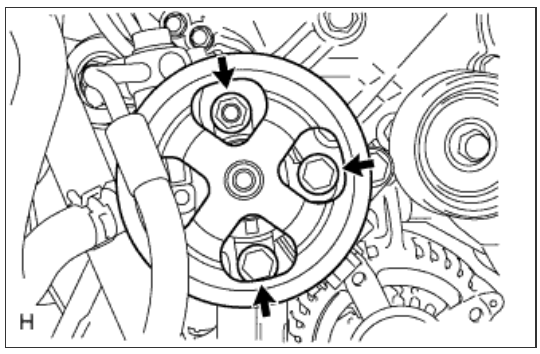
21. DISCONNECT COOLER COMPRESSOR ASSEMBLY

a. Disconnect the connector.



b. Remove the bolt. Then disconnect the cooler refrigerant suction hose from the cylinder head cover.

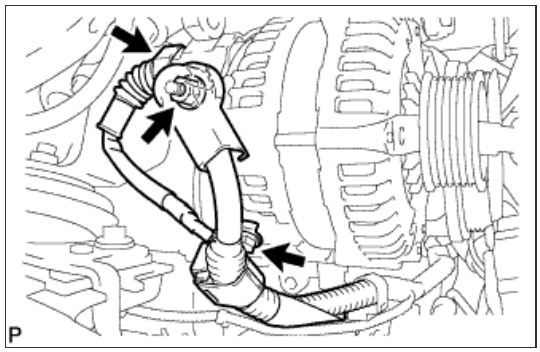
c. Remove the 3 bolts, nut and No. 1 compressor stay and disconnect the cooler compressor.



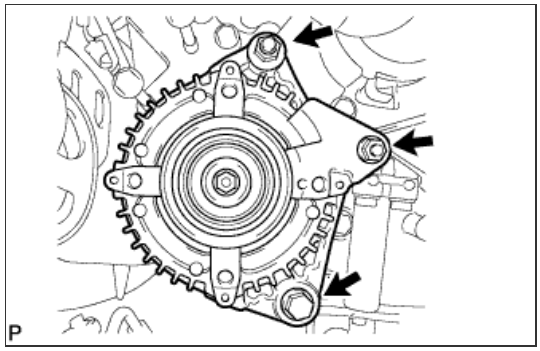
22. DISCONNECT VANE PUMP ASSEMBLY

a. Disconnect the connector.

b. Remove the 2 bolts and nut. Then disconnect the vane pump.



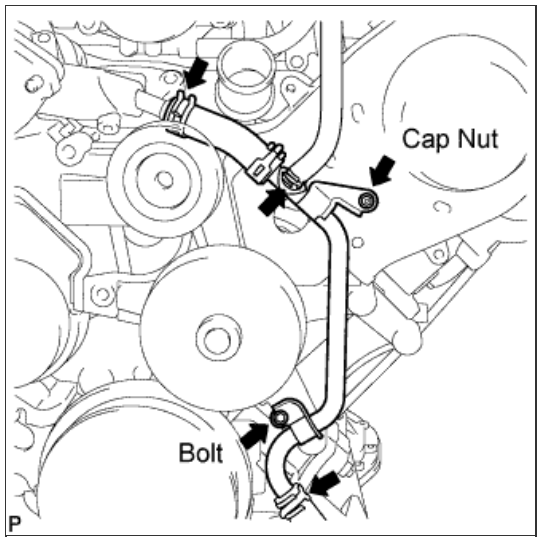
23. REMOVE GENERATOR ASSEMBLY



a. Disconnect the generator connector.

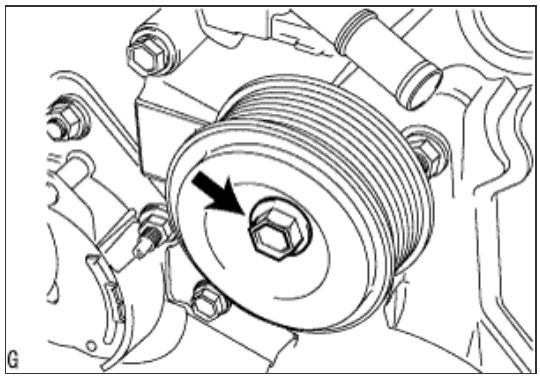
b. Remove the terminal cap and nut, and disconnect the generator wire.

c. Remove the bolt and disconnect the wire harness bracket from the generator.



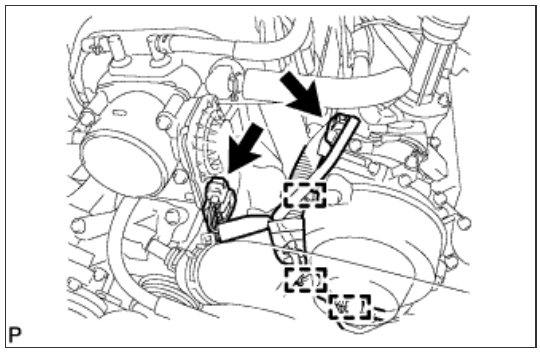
d. Remove the bolt, 2 nuts and generator.

24. REMOVE OIL COOLER PIPE



a. Remove the cap nut and bolt.

b. Using needle-nose pliers, grip the claws of the clamps and slide the clamps to disconnect the 3 water by-pass hoses and remove the oil cooler pipe.

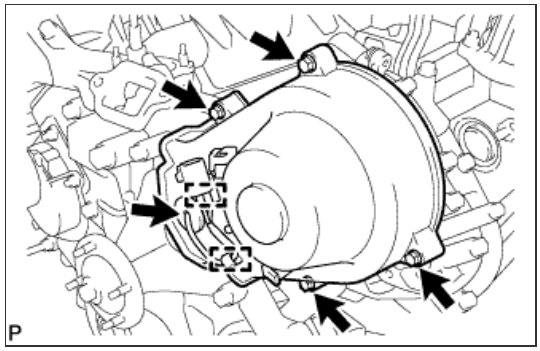


25. REMOVE NO. 2 IDLER PULLEY SUB-ASSEMBLY

a. Remove the pulley bolt, cover plate and idler pulley.

26. REMOVE NO. 3 TIMING BELT COVER SUB-ASSEMBLY LH

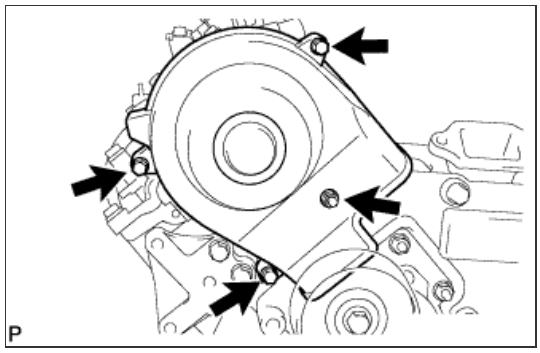
a. Detach the 3 wire clamps and disconnect the camshaft timing oil control valve connector and control motor connector.



b. Disconnect the camshaft position sensor connector.

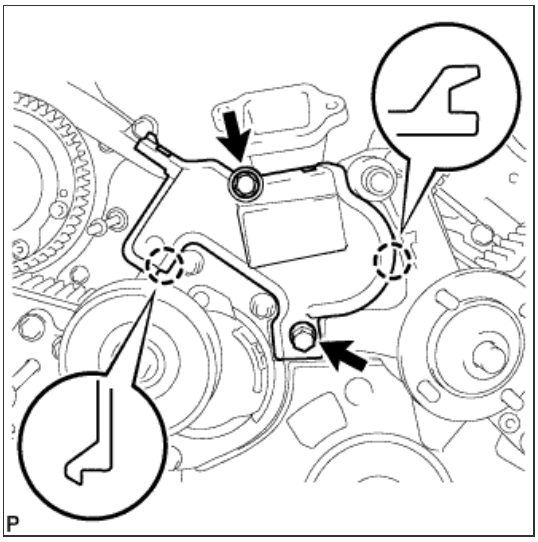
c. Disconnect the camshaft position sensor wire from the 2 wire clamps on the timing belt cover.

d. Remove the wire grommet from the timing belt cover.



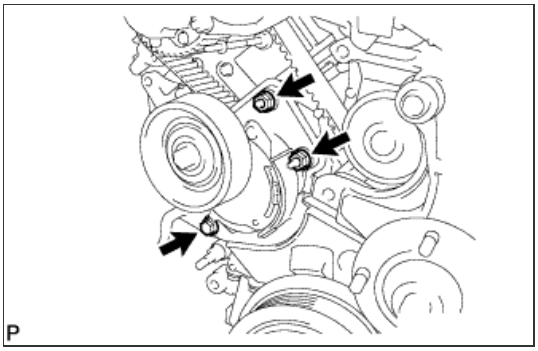
e. Remove the 4 bolts.

f. Pull the cover outward, pull the camshaft position sensor wire out of the cover, and remove the cover.



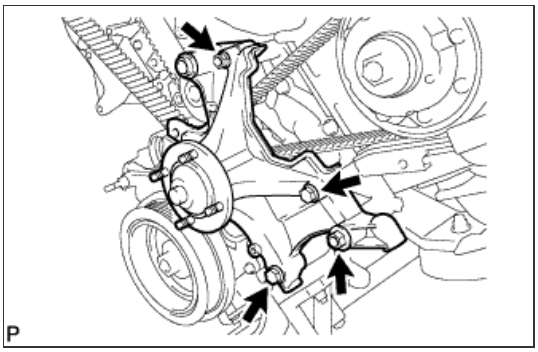
27. REMOVE NO. 3 TIMING BELT COVER SUB-ASSEMBLY RH

a. Remove the 3 bolts, nut and timing belt cover.



28. REMOVE NO. 2 TIMING BELT COVER SUB-ASSEMBLY

a. Remove the 2 bolts and detach the 2 claws, and then remove the No. 2 timing belt cover.

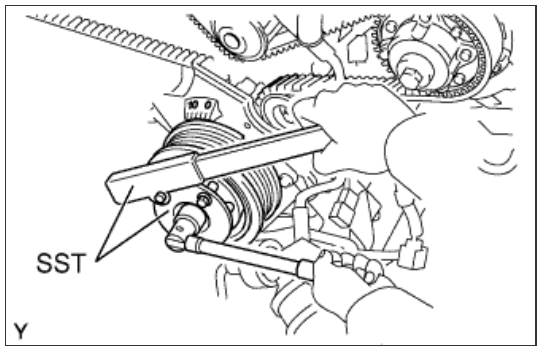


29. REMOVE V-RIBBED BELT TENSIONER ASSEMBLY

a. Remove the bolt, 2 nuts and V-ribbed belt tensioner.

30. REMOVE FAN BRACKET SUB-ASSEMBLY

a. Remove the 2 nuts, 2 bolts and fan bracket.

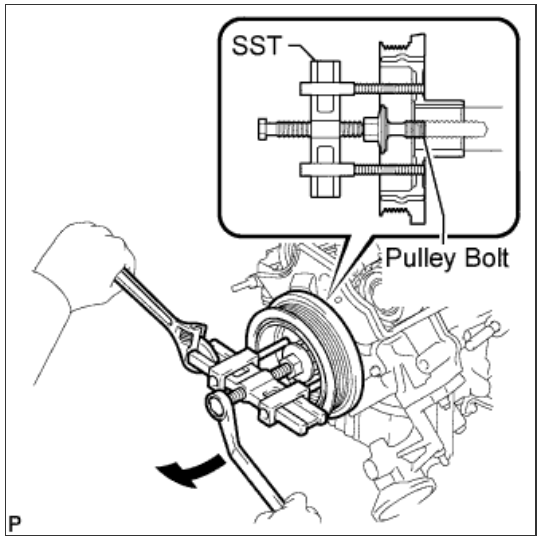


31. REMOVE CRANKSHAFT DAMPER SUB-ASSEMBLY

a. Using SST, hold the crankshaft damper and loosen the pulley bolt. Further loosen the bolt until 2 or 3 threads are screwed into the crankshaft.

SST

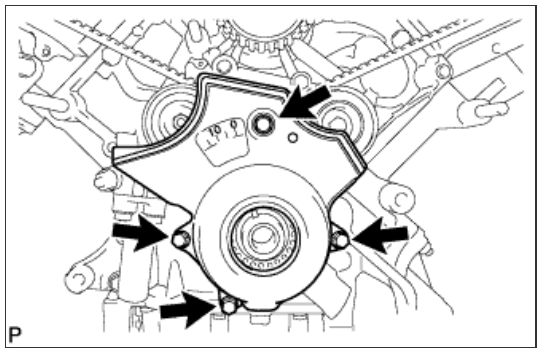
09213-70011 (09213-70020)
09330-00021 (09330-00030)



b. Using SST and the pulley bolt, remove the crankshaft damper.

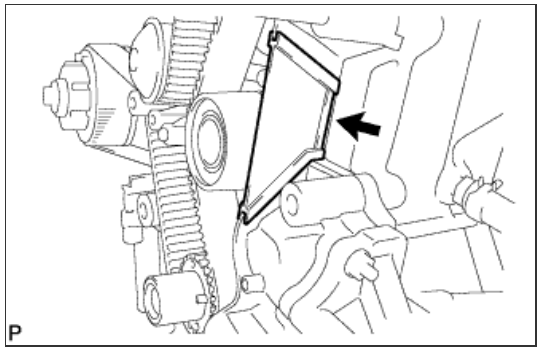
SST

09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05031)



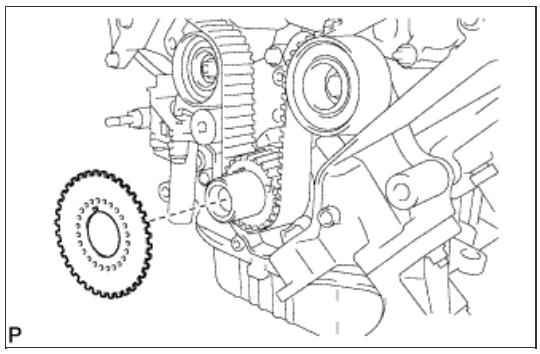
HINT:

Apply a lubricant to the threads and end of SST.



32. REMOVE NO. 1 TIMING BELT COVER

a. Remove the 4 bolts and timing belt cover.

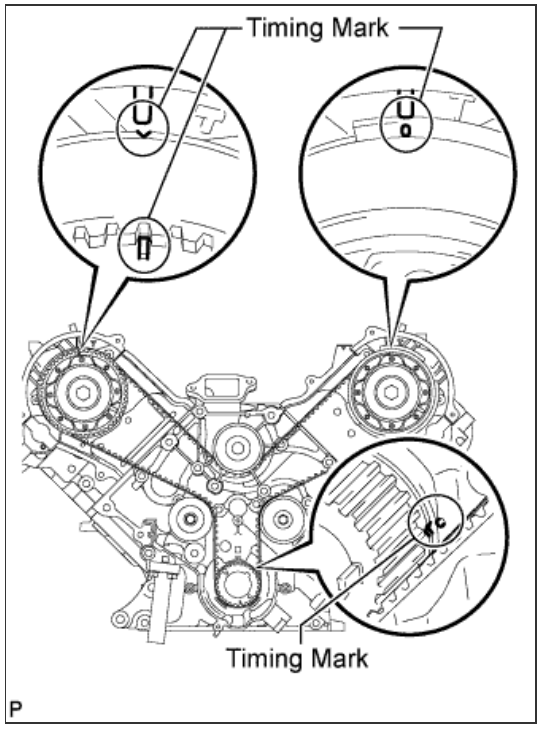


33. REMOVE TIMING BELT COVER SPACER

a. Remove the cover spacer and gasket.

34. REMOVE NO. 1 CRANKSHAFT POSITION SENSOR PLATE

a. Remove the position sensor plate from the crankshaft.

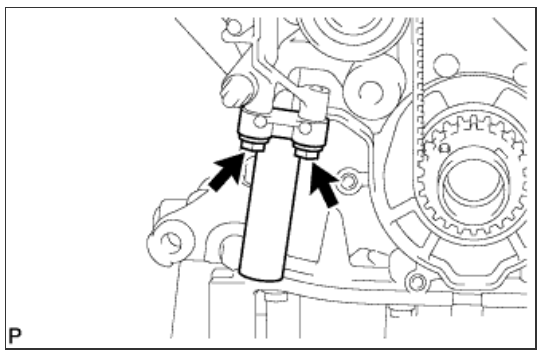


35. SET NO. 1 CYLINDER TO TDC/COMPRESSION

a. Temporarily install the pulley bolt.

b. Rotate the crankshaft clockwise so that the timing marks on the crankshaft timing pulley and camshaft timing pulleys are as shown in the illustration.

HINT:

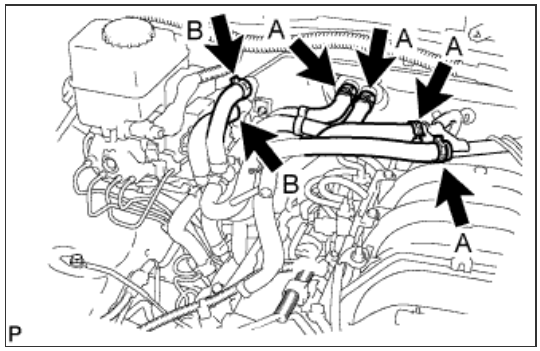


- **If the timing marks do not align, rotate the crankshaft clockwise again and align the timing marks.**
- **When reusing the timing belt, put a timing mark on the belt where the timing marks on the belt and timing pulley are aligned after rotating the crankshaft.**

36. REMOVE TIMING BELT

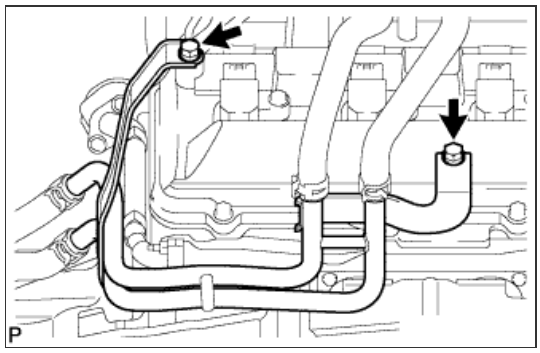
a. Alternately loosen the 2 bolts, then remove the bolts, timing belt tensioner and dust seal.

b. Remove the timing belt.



37. DISCONNECT WATER HOSE SUB-ASSEMBLY

a. Disconnect the water by-pass hose.



i. w/ Rear Heater:
Disconnect the water hoses labeled A and B.

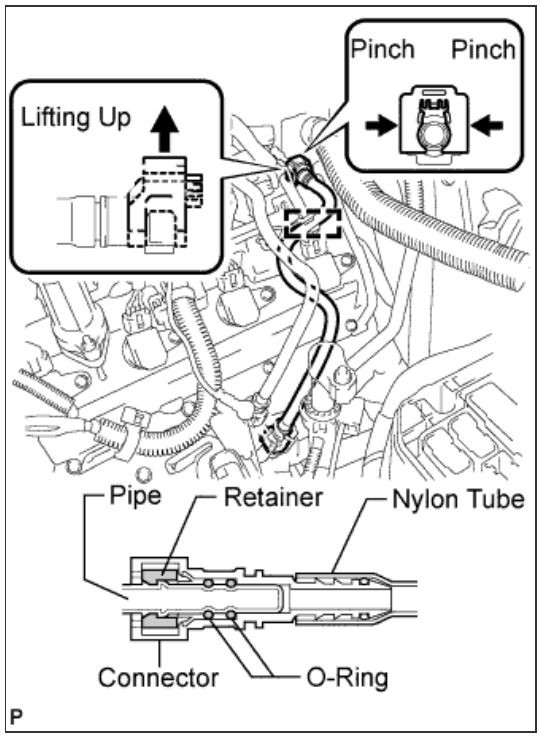
ii. w/o Rear Heater:
Disconnect the water hoses labeled A.

38. DISCONNECT NO. 1 WATER BY-PASS PIPE (w/ Air Cooled Transmission Oil Cooler)

a. Remove the 2 bolts. Then disconnect the water by-pass pipe from the cylinder head cover RH.

39. REMOVE NO. 2 FUEL HOSE

a. for engine side:



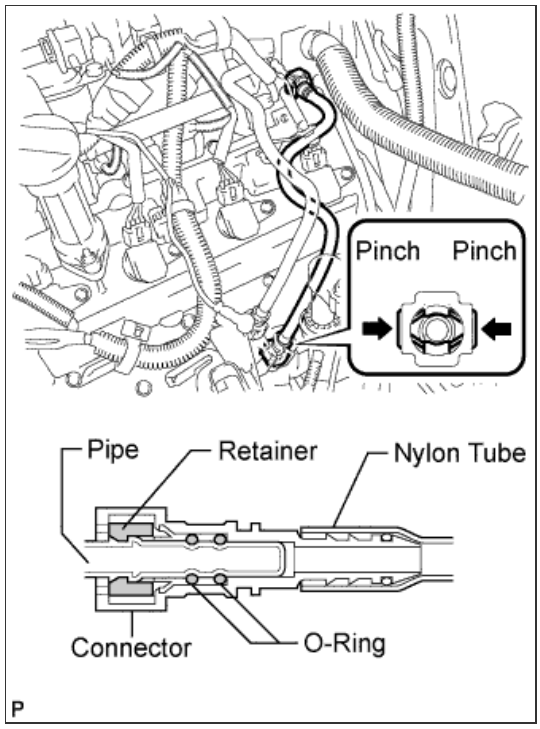
i. Detach the fuel hose clamp.

ii. Detach the lock claw by lifting up the cover, as shown in the illustration.

iii. Pinch and pull the No. 2 fuel hose connector to disconnect the connector from the No. 3 fuel pipe.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**



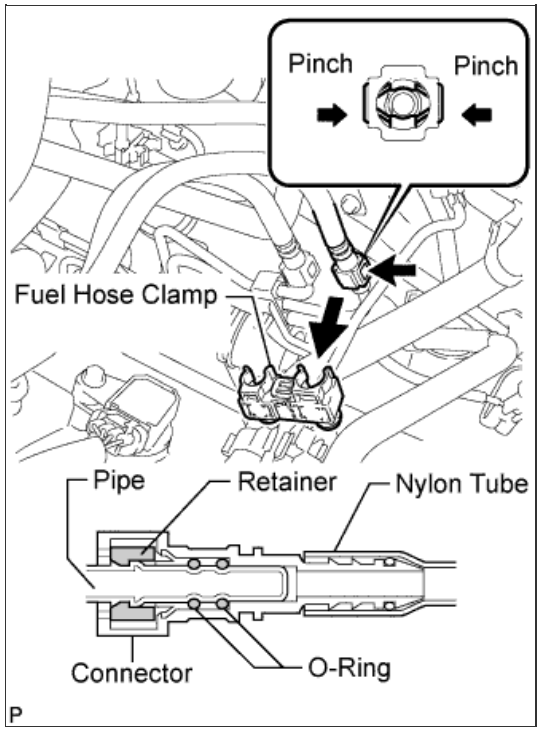
b. for body side:

b. for body side:

i. Pinch and pull the No. 2 fuel hose connector to disconnect the connector from the fuel pipe.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**



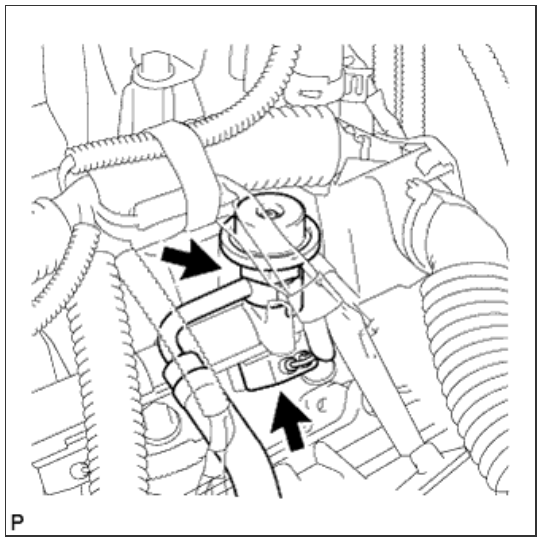
40. DISCONNECT FUEL HOSE

a. Remove the fuel hose clamp.

b. Pinch and pull the fuel hose connector to disconnect the connector from the fuel pipe.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**



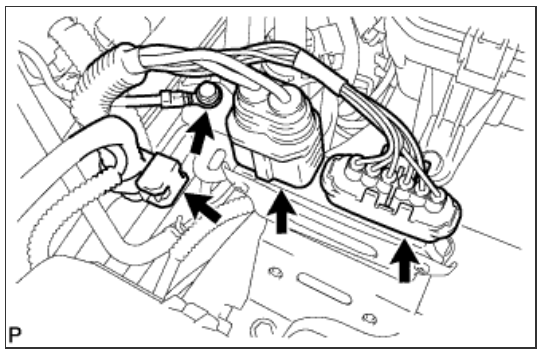
41. REMOVE FUEL PRESSURE PULSATION DAMPER ASSEMBLY

a. Disconnect the fuel injector connector.

b. Remove the pulsation damper, upper gasket, fuel hose and lower gasket.

NOTICE:

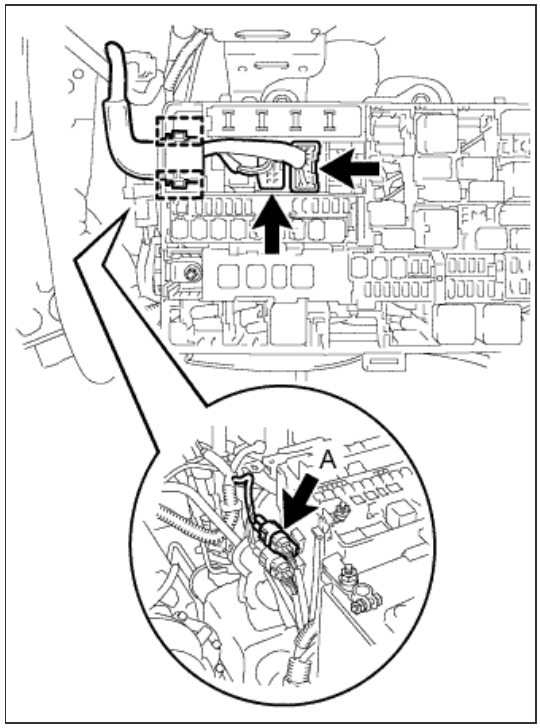
- **Put a cloth or equivalent under the delivery pipe.**
- **Slowly loosen the pulsation damper.**



42. SEPARATE WIRE HARNESS

a. Disconnect the 2 air injection control driver connectors.

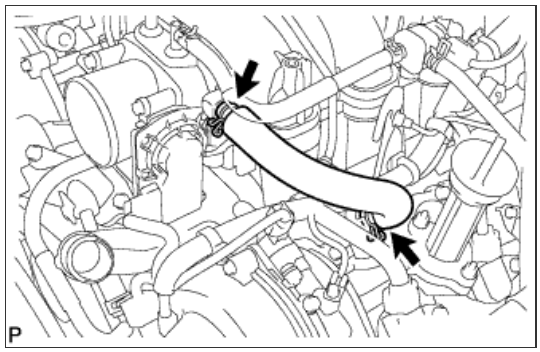
b. Remove the bolt and disconnect the ground wire.



c. Disconnect the wire harness clamp.

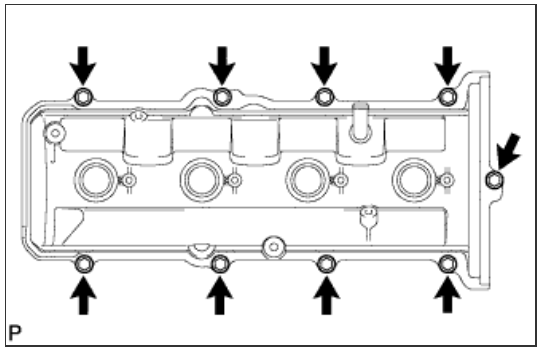
d. Disconnect the 2 clamps and 2 connectors from the engine room relay block.

e. Disconnect connector A from the engine room relay block.



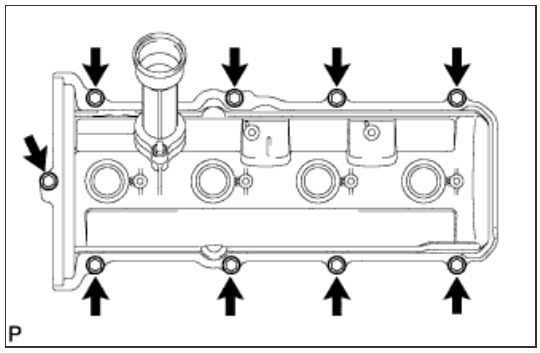
f. Disconnect the wire harness clamp from the cylinder head cover LH.

43. REMOVE NO. 1 VENTILATION HOSE



a. Remove the No. 1 ventilation hose from the intake manifold and ventilation

valve.



44. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY

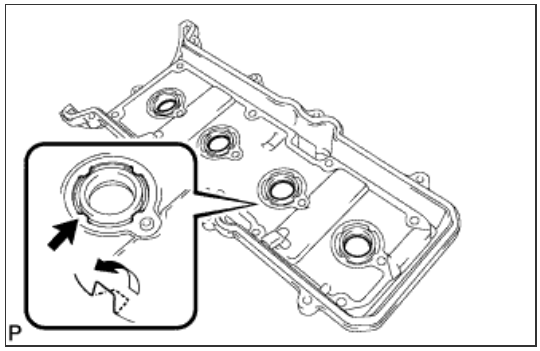
a. Remove the 9 bolts, cylinder head cover and gasket.

45. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY LH

a. Remove the 9 bolts, cylinder head cover and gasket.

46. REMOVE SPARK PLUG TUBE GASKET

a. Bend the 8 ventilation case claws of the cylinder head cover to an angle of 90° or more.



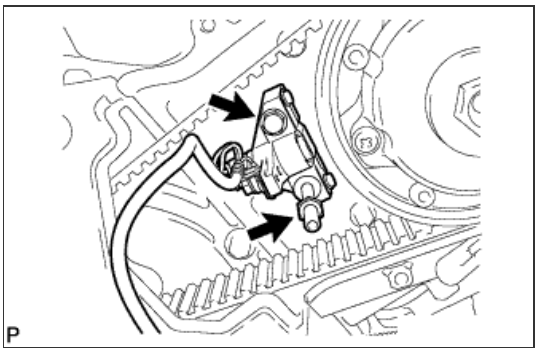
b. Using a screwdriver, pry out the gaskets.

NOTICE:

- **Be careful not to damage the cylinder head cover.**
- **Be careful not to damage the gasket when removing it, as the removed gasket needs to be reused when installing a new one.**

HINT:

Tape the screwdriver tip before use.

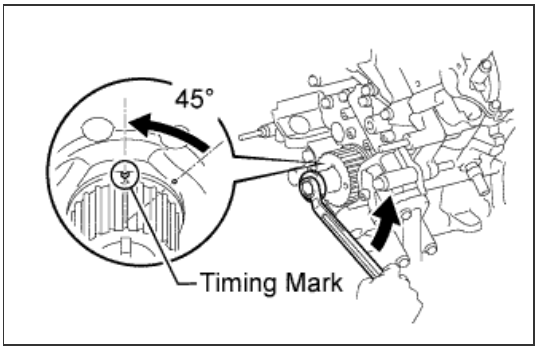


47. REMOVE SEMICIRCULAR PLUG

a. Remove the 4 semicircular plugs from the cylinder heads.

48. REMOVE CAMSHAFT POSITION SENSOR ASSEMBLY

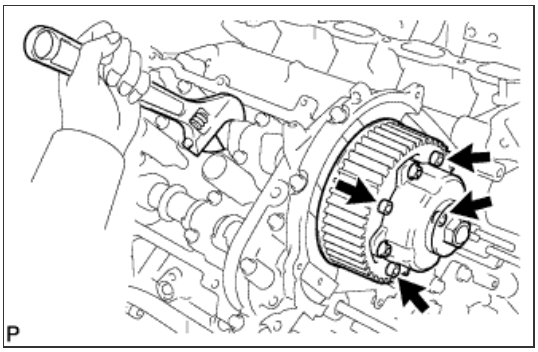
a. Remove the bolt, stud bolt and camshaft position sensor.



49. REMOVE CAMSHAFT TIMING PULLEY

a. Using the pulley set bolt, turn the crankshaft counterclockwise by approximately 45°.

NOTICE:

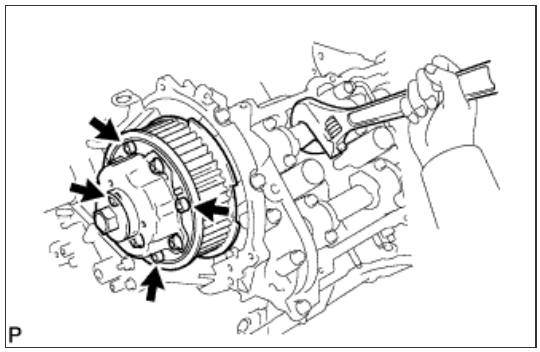


f the timing belt is disengaged, having the crankshaft pulley at a wrong angle can cause the piston head and valve head to come into contact with each other when removing the camshaft timing pulley and camshaft, causing damage. So always set the crankshaft pulley at the correct angle.

b. Hold the hexagonal portion of the camshaft with a wrench and remove the 4 bolts indicated by the arrows in the illustration and timing pulley.

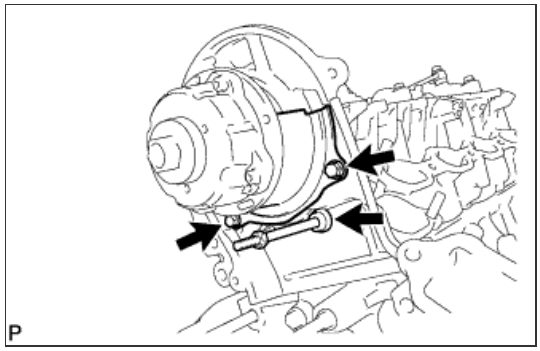
NOTICE:

- **Do not loosen or remove the 4 bolts that are not indicated by the arrows in the illustration. If any of them are loosened or removed, the backlash of the gear in the timing tube will go out of adjustment. In this case, replace the timing tube assembly with a new one.**
- **Be careful not to damage the cylinder head with the wrench.**



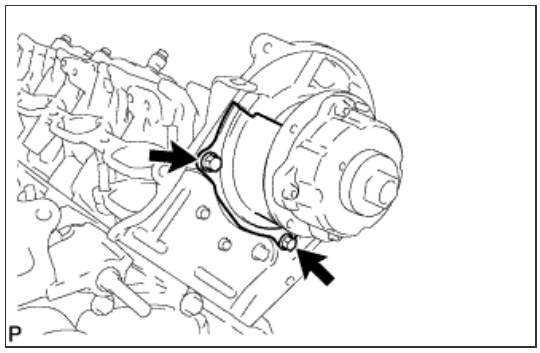
50. REMOVE CAMSHAFT TIMING PULLEY SUB-ASSEMBLY LH

a. Hold the hexagonal portion of the camshaft with a wrench and remove the 4 bolts indicated by the arrows in the illustration and timing pulley.



NOTICE:

- **Do not loosen or remove the 4 bolts that are not indicated by the arrows in the illustration. If any of them are loosened or removed, the backlash of the gear in the timing tube will go out of adjustment. In this case, replace the timing tube assembly with a new one.**
- **Be careful not to damage the cylinder head with the wrench.**



51. REMOVE REAR NO. 2 TIMING BELT PLATE RH

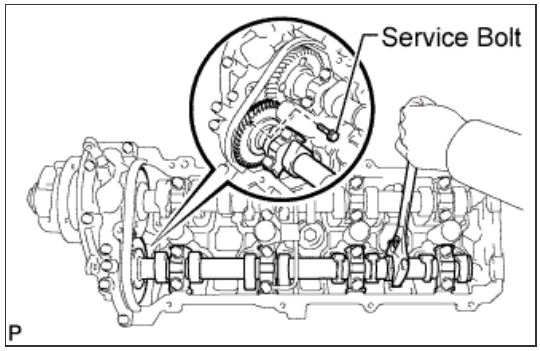
a. Remove the 2 bolts, stud bolt and timing belt plate.

52. REMOVE REAR NO. 2 TIMING BELT PLATE LH

a. Remove the 2 bolts and timing belt plate.

53. REMOVE CAMSHAFT (for Bank 1)

a. Bring the service bolt hole of the sub-gear upward by turning the hexagonal portion of the exhaust camshaft with a wrench.

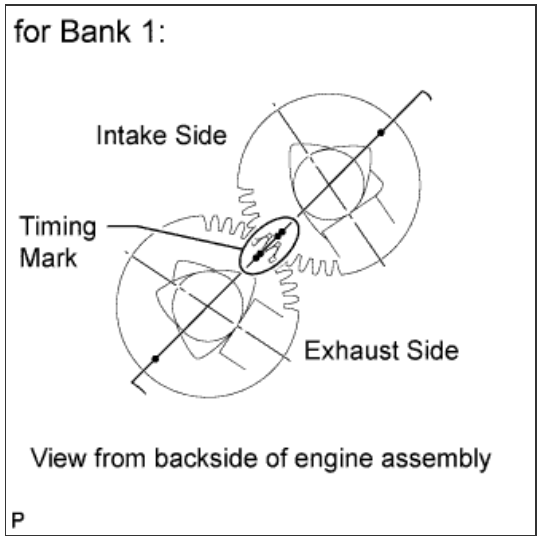


b. Secure the sub-gear to the driven gear with a service bolt.

Recommended Service Bolt:

Thread Diameter	Thread Pitch	Bolt Length
6.0 mm	1.0 mm	16 to 20 mm (0.630 to 0.787 in.)

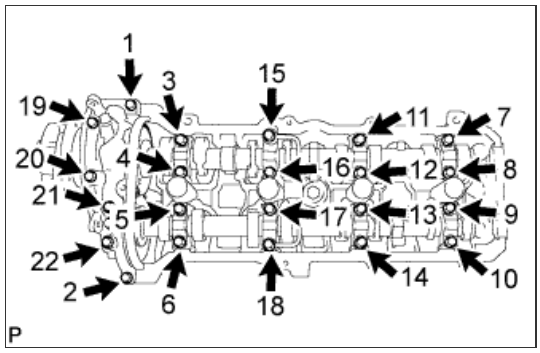
HINT:



When removing the camshafts, make sure that the torsional spring force of the sub-gear has been eliminated by the above operation.

c. Using a wrench, turn the camshaft so that the timing marks (2 dot marks each) on the camshaft drive and driven gears are aligned, as shown in the illustration.

HINT:

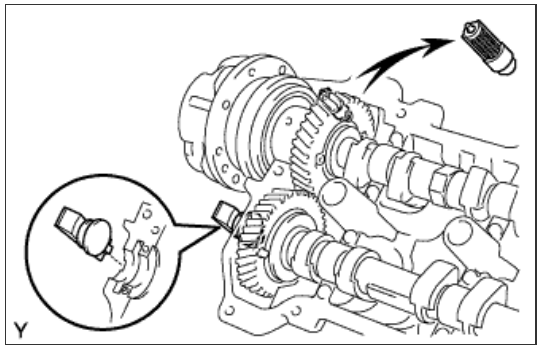


The position shown in the illustration is the most stable position for the exhaust camshaft.

d. Uniformly loosen and remove the 22 bearing cap bolts in several steps, in the order shown in the illustration.

NOTICE:

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being removed. f the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged. To avoid this, the following steps should be carried out.



e. Remove the cap bolts, 4 seal washers, oil feed pipe, 9 bearing caps, camshaft housing plug, oil control valve filter and camshafts.

NOTICE:

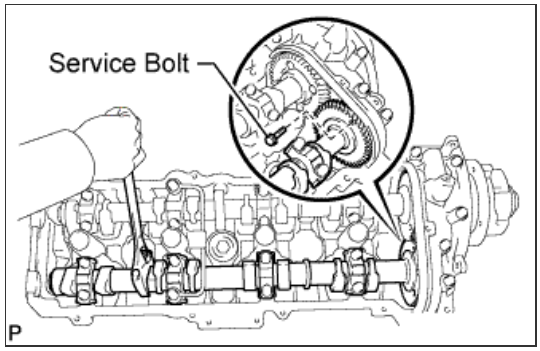
- **Do not forcibly pry the camshaft with a tool.**
- **Do not damage the reception part of the thrust on the cylinder head side.**

HINT:

Arrange the bearing caps in the correct order.

54. REMOVE CAMSHAFT (for Bank 2)

a. Bring the service bolt hole of the sub-gear upward by turning the hexagonal portion of the exhaust camshaft with a wrench.



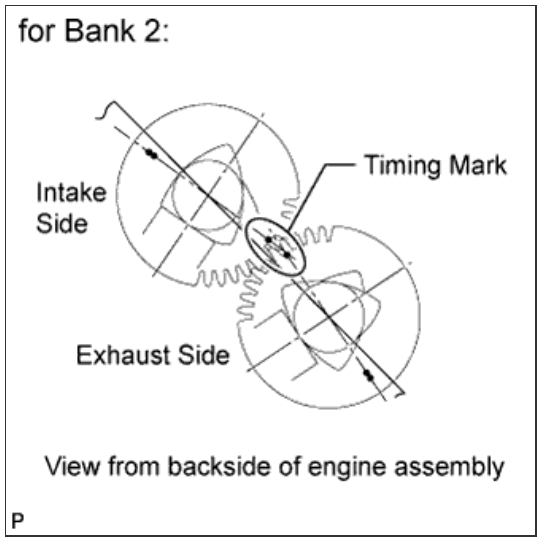
b. Secure the sub-gear to the driven gear with a service bolt.

Recommended Service Bolt:

Thread Diameter	Thread Pitch	Bolt Length
6.0 mm	1.0 mm	16 to 20 mm (0.630 to 0.787 in.)

HINT:

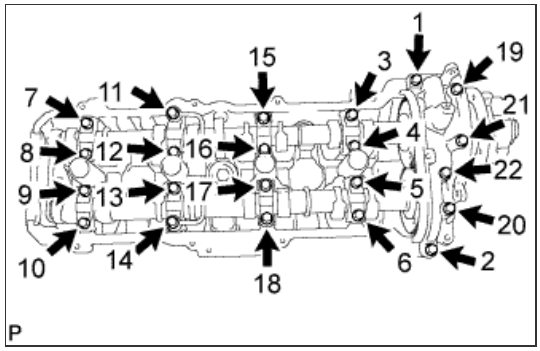
When removing the camshafts, make sure that the torsional spring force of the sub-gear has been eliminated by the above operation.



c. Using a wrench, turn the camshaft so that the timing marks (1 dot mark each) on

the camshaft drive and driven gears are aligned, as shown in the illustration.

HINT:

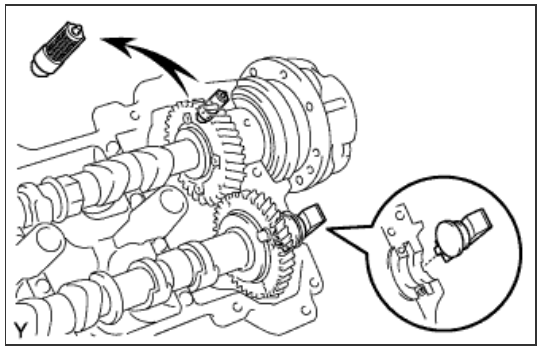


The position shown in the illustration is the most stable position for the exhaust camshaft.

d. Uniformly loosen and remove the 22 bearing cap bolts in several steps, in the order shown in the illustration.

NOTICE:

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being removed. f the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged. To avoid this, the following steps should be carried out.



e. Remove the cap bolts, 4 seal washers, oil feed pipe, 9 bearing caps, camshaft housing plug, oil control valve filter and camshafts.

NOTICE:

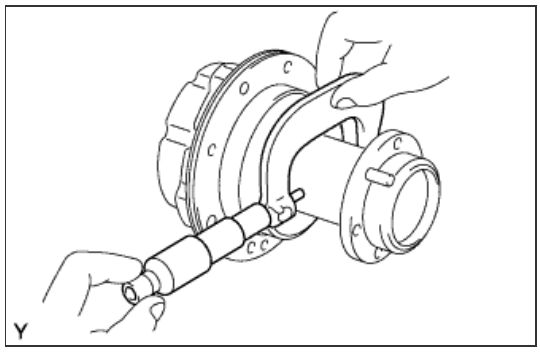
- **Do not forcibly pry the camshaft with a tool.**
- **Do not damage the reception part of the thrust on the cylinder head side.**

HINT:

Arrange the bearing caps in the correct order.

55. INSPECT CAMSHAFT TIMING TUBE ASSEMBLY

a. Using a micrometer, measure the journal diameter.



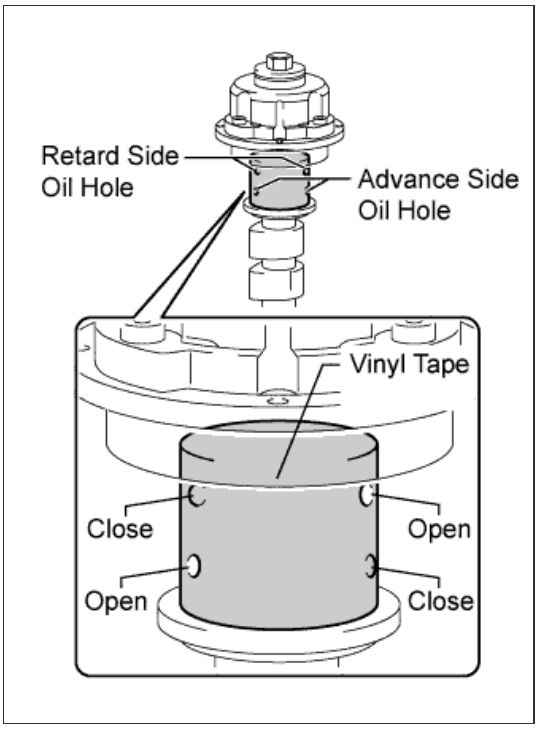
Standard journal diameter:
39.955 to 39.964 mm (1.5730 to 1.5734 in.)

f the journal diameter is not as specified, check the oil clearance. f necessary, replace the camshaft and cylinder head.

b. nstall the camshaft timing tube to the camshaft (Click here).

c. Check the lock of the camshaft timing tube.

i. Check that the camshaft timing tube is locked.

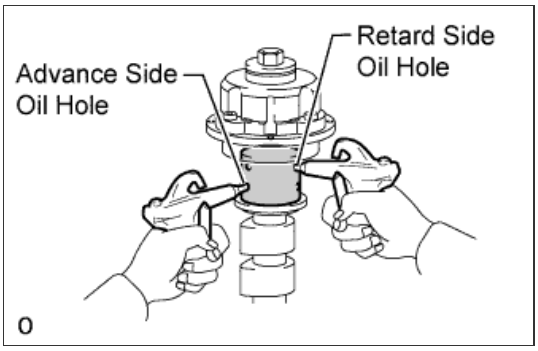


d. Release the lock pin.

i. Clean the camshaft timing tube journal with non-residue solvent.

ii. Wrap tape around the entire journal to block the 4 oil holes as shown in the illustration.

iii. Open a hole in the tape at 2 places, one in the retard side oil hole and one in the advance side oil hole as shown in the illustration.



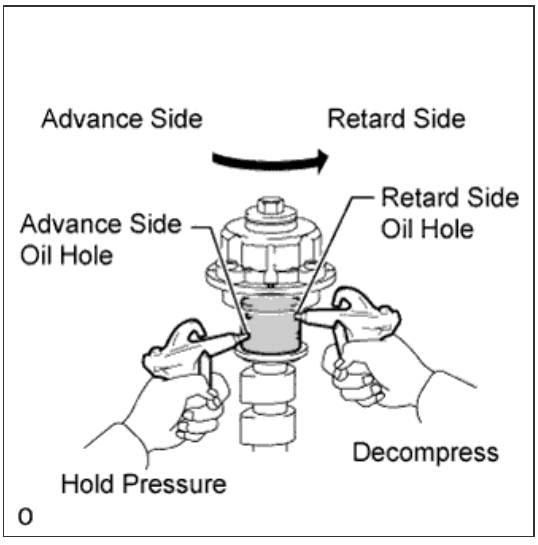
iv. Apply approximately 200 kPa (2.0 kgf/cm^2, 29 psi) of air pressure to the 2 open oil holes (the advance side oil hole and the retard side oil hole).

NOTICE:

Cover the oil holes with a piece of cloth when applying pressure to keep oil from splashing.

HINT:

The lock pin will be released when air pressure is applied.



v. Check that the camshaft timing tube revolves in the advance direction when reducing the air pressure applied to the retard side oil hole.

vi. When the camshaft timing tube reaches the most advanced position, release the air pressure from the retard side oil hole and advance side oil hole, in that order.

NOTICE:

- **Do not release the air pressure from the advance side oil hole first. The tube may abruptly shift in the retard direction and break the lock pin.**
- **When releasing the air pressure from the retard side oil hole, do not release the air pressure too quickly to prevent damage.**

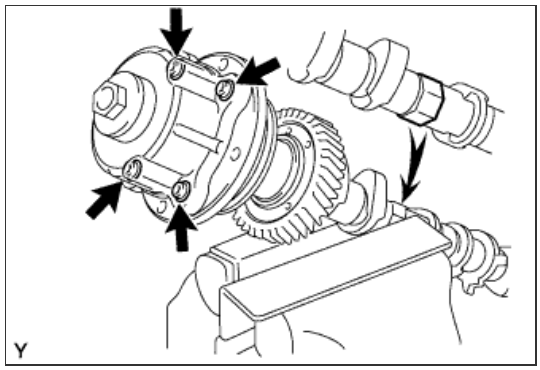
e. Check for smooth rotation.

i. Apply 60 kPa (0.6 kgf/cm^2, 8.7 psi) of air pressure to the retard side oil hole to release the lock pin.

ii. Turn the camshaft timing tube within its movable range (21°) 2 or 3 times, but do not turn it to the most retarded position. ake sure that the camshaft timing tube turns smoothly.

NOTICE:

Do not use air pressure to perform the smooth rotation check. Always perform the check by hand.



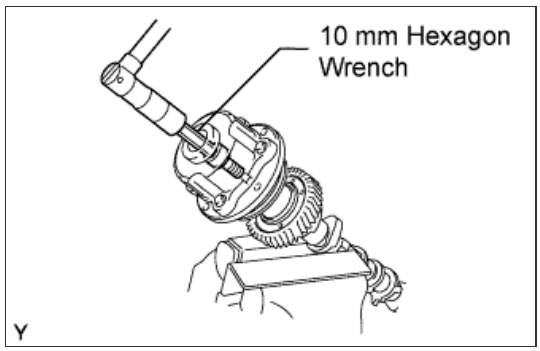
f. Check the lock in the most retarded position.

i. Confirm that the camshaft timing tube is locked at the most retarded position.

g. Remove the camshaft timing tube (Click here).

56. REMOVE CAMSHAFT TIMING TUBE ASSEMBLY

a. ount the hexagonal portion of the camshaft in a vise.



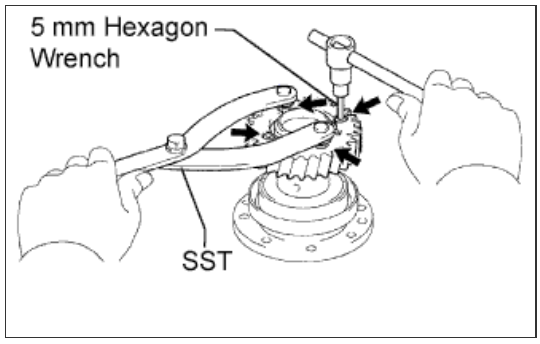
NOTICE:

- **Be careful not to damage the camshaft.**
- **Do not loosen or remove the 4 bolts shown in the illustration. If any of them are loosened or removed, the backlash of the gear in the timing tube will go out of adjustment. In this case, replace the timing tube assembly with a new one.**

b. Remove the screw plug and seal washer.

c. Using a 10 mm hexagon wrench, remove the bolt and timing tube.

57. REMOVE CAMSHAFT DRIVE GEAR



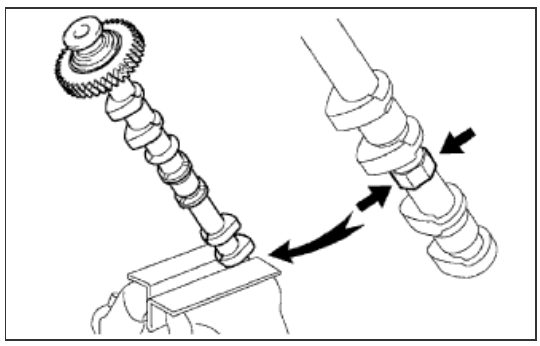
a. Using SST and a 5 mm hexagon wrench, remove the 4 bolts, drive gear and oil seal.

SST

09960-10010 (09962-01000, 09963-00500)

NOTICE:

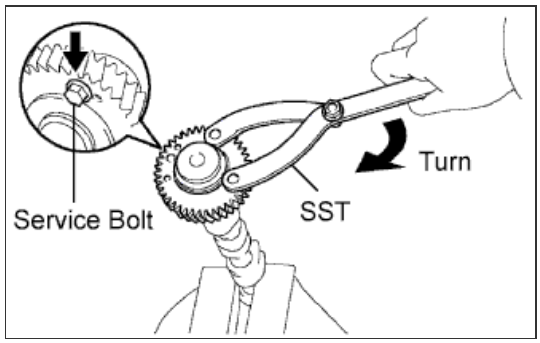
Be careful not to damage the timing tube.



58. REMOVE CAMSHAFT SUB-GEAR

a. ount the hexagonal portion of the camshaft in a vise.

NOTICE:

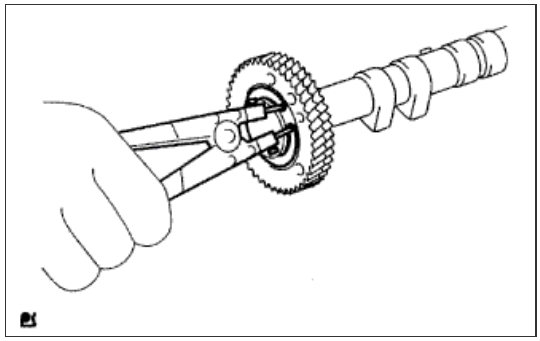


Be careful not to damage the camshaft.

b. Using SST, turn the sub-gear clockwise, and remove the service bolt.

SST

09960-10010 (09962-01000, 09963-00500)

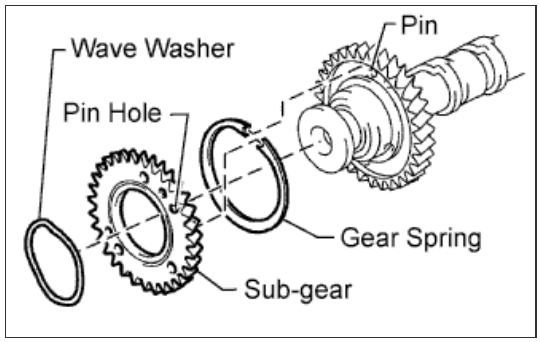


c. Using snap ring pliers, remove the snap ring.

d. Remove the wave washer, sub-gear and gear spring.

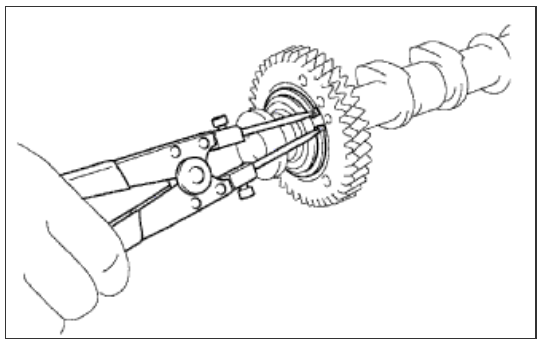
HINT:

Arrange the camshaft sub-gears and gear spring (LH and RH).



for Preparation Click here

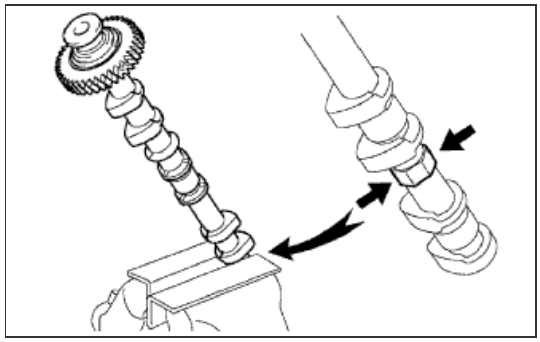
1. INSTALL CAMSHAFT SUB-GEAR



a. Install the gear spring, sub-gear and wave washer.

HINT:

Attach the pins on the gears to the gear spring ends.

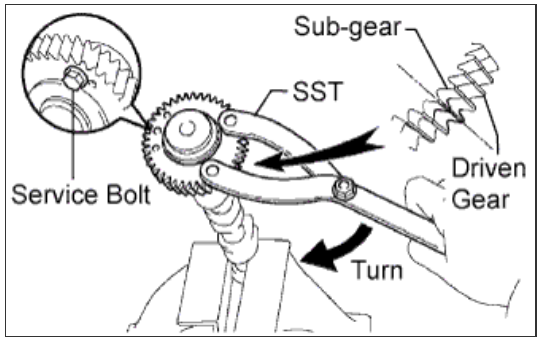


b. Using snap ring pliers, install the snap ring.

c. Mount the hexagonal portion of the camshaft in a vise.

NOTICE:

Be careful not to damage the camshaft.



d. Using SST, align the holes of the driven gear and sub-gear by turning the sub-gear clockwise, and temporarily install a service bolt.

SST

09960-10010 (09962-01000, 09963-00500)

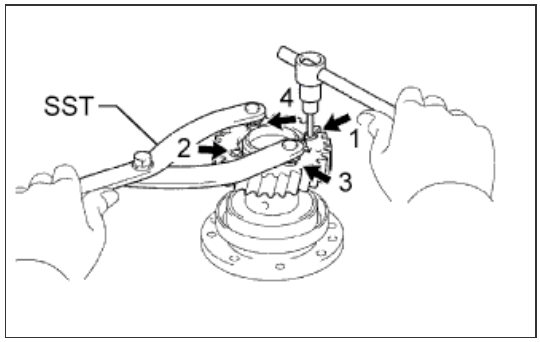
Recommended Service Bolt:

Thread Diameter	Thread Pitch	Bolt Length
6 mm	1.0 mm	16 to 20 mm (0.630 to 0.787 in.)

e. Align the gear teeth of the driven gear and sub-gear, and tighten the service bolt.

2. INSTALL CAMSHAFT DRIVE GEAR

a. Align the timing tube knock pin with the knock pin groove of the drive gear, and temporarily install the drive gear with the 4 bolts.



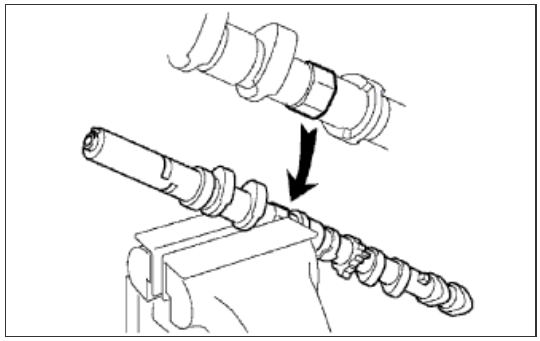
b. Using SST and a 5 mm hexagon wrench, uniformly tighten the 4 bolts in several steps, in the sequence shown in the illustration.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

SST
09960-10010 (09962-01000, 09963-00500)

NOTICE:

Be careful not to damage the timing tube.



3. INSTALL CAMSHAFT TIMING TUBE ASSEMBLY

a. Mount the hexagonal portion of the camshaft in a vise.

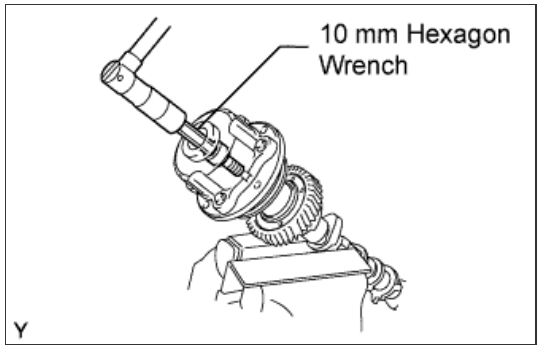
NOTICE:

Be careful not to damage the camshaft.

b. Apply a light coat of engine oil to the camshaft and camshaft timing tube.

c. Align the camshaft knock pin with the knock pin hole of the timing tube, and push the timing tube by hand until the camshaft knock pin touches the bottom of the timing tube knock pin hole.

NOTICE:



Do not forcefully push on the camshaft timing tube. This may cause the camshaft knock pin tip to damage the installation surface of the camshaft timing tube.

d. Using a 10 mm socket hexagon wrench, install the bolt.

Torque:
78 N*m{ 795 kgf*cm , 58 ft.*lbf }

e. Install the seal washer and screw plug.

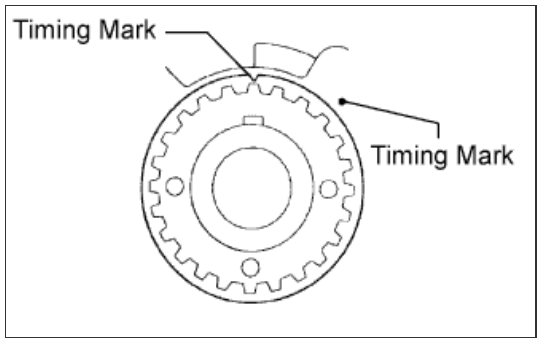
Torque:
15 N*m{ 153 kgf*cm , 11 ft.*lbf }

4. INSTALL CAMSHAFT (for Bank 1)

NOTICE:

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged. To avoid this, the following steps should be carried out.

HINT:



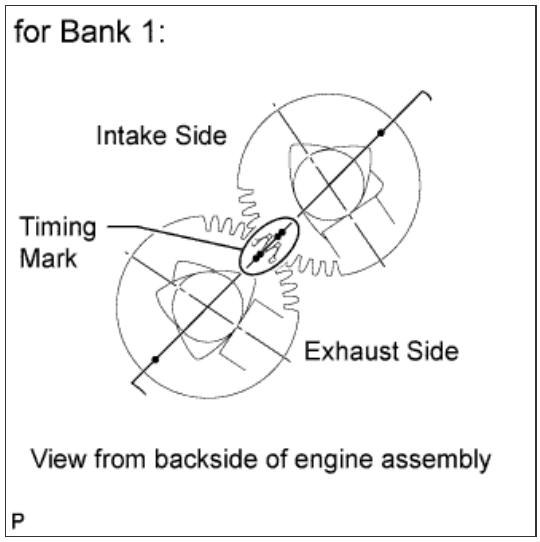
When performing this procedure to adjust the valve clearance, it is not necessary to apply seal packing to the No. 5 bearing cap and camshaft housing plug.

a. heck that the timing mark of the crankshaft timing pulley is in the position

shown in the illustration, and that the piston is below the TD of compression.

NOTICE:

Having the crankshaft pulley at a wrong angle can cause the piston head and valve head to come into contact with each other when removing the camshaft. Always set the crankshaft pulley at the correct angle as shown in the illustration.



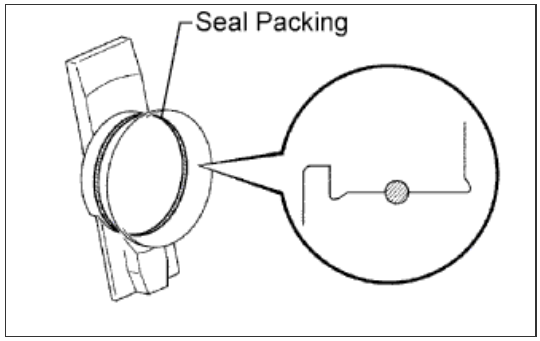
b. Apply a light coat of engine oil to the cam lobe and gear of the camshaft and the journal of the cylinder head.

c. Using a wrench, align the timing marks (2 dot marks each) of the camshaft drive and driven gears, and set the No. 3 and No. 4 camshafts in place.

HINT:

The position shown in the illustration is the most stable position for the exhaust camshaft.

d. Apply seal packing to the camshaft housing plug groove.

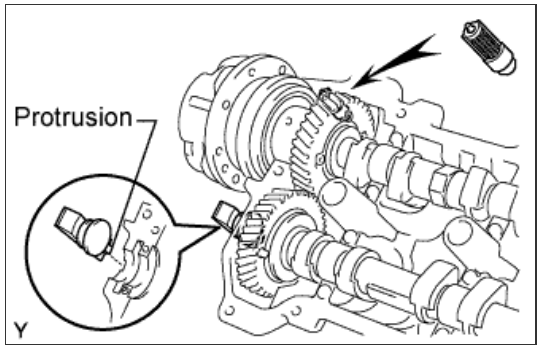


HINT:

Remove any old packing (FIPG) material before applying new seal packing.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

NOTICE:

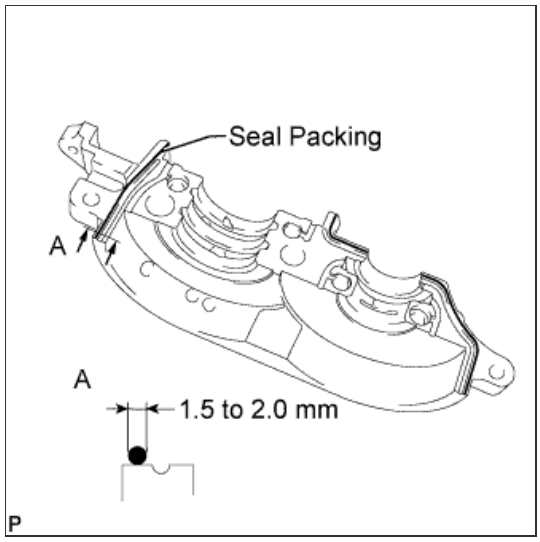


- **Be careful of the installation direction.**
- **Remove any oil from the contact surface.**

e. Install the camshaft housing plug and oil control valve filter to the cylinder head as shown in the illustration.

HINT:

Align the protrusion on the camshaft housing plug with the groove of the cylinder head and install the plug.



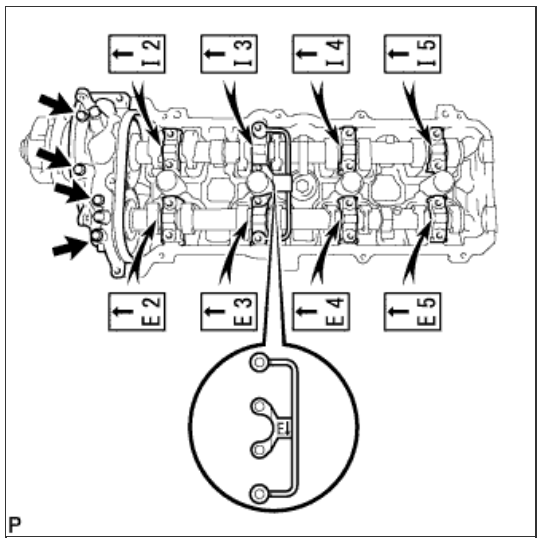
f. Apply seal packing to the No. 5 bearing cap as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
1.5 to 2.0 mm (0.0591 to 0.0787 in.)

NOTICE:

Install the No. 5 bearing cap and housing plug within 3 minutes.

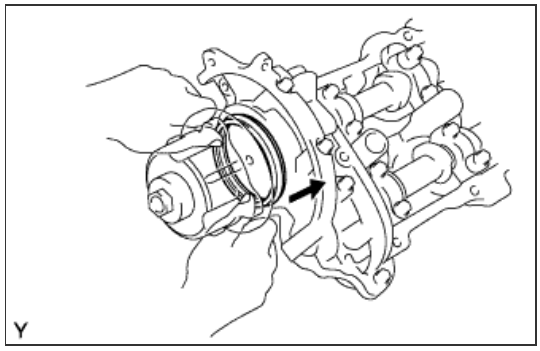


g. Install a new seal washer to each bearing cap bolt indicated by an arrow in the illustration, and apply engine oil to the threads of the bolts. Then temporarily install them.

h. Apply engine oil to the threads and washer part of the bearing cap bolts not indicated in the illustration.

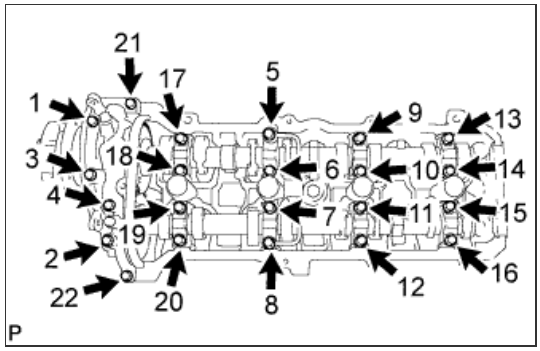
i. Temporarily install the oil feed pipe and bearing caps with the 18 bearing cap bolts, as shown in the illustration.

Bolt Length:



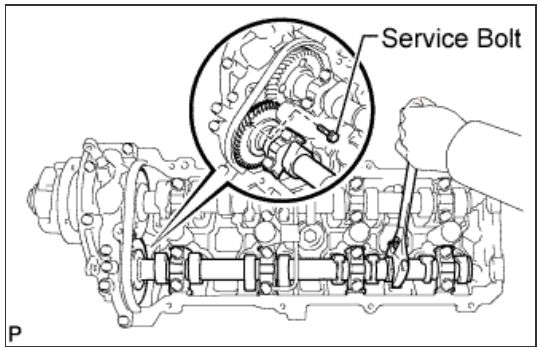
Item	Length
Bolt A with seal washer	94 mm (3.70 in.)
Bolt B with seal washer	72 mm (2.84 in.)
Bolt	25 mm (0.984 in.)
Bolt D	55 mm (2.17 in.)
Bolt	40 mm (1.58 in.)

HINT:



Face the arrow imprinted on the oil feed pipe to the exhaust side.

j. Push in the camshaft setting oil seal.



k. Uniformly tighten the 22 bearing cap bolts in several steps, in the sequence shown in the illustration.

Torque:
for bolt 21, 22:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }
for other bolt:
16 N*m{ 163 kgf*cm , 12 ft.*lbf }

l. Bring the service bolt installed in the driven sub-gear upward by turning the hexagonal portion of the camshaft with a wrench.

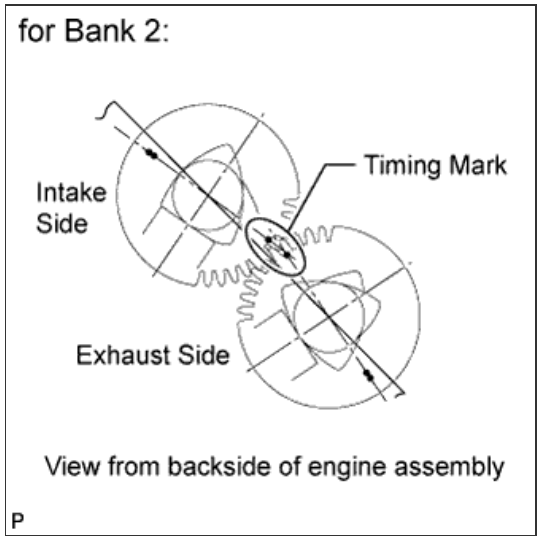
m. Remove the service bolt.

5. INSTALL CAMSHAFT (for Bank 2)

NOTICE:

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged. To avoid this, the following steps should be carried out.

HINT:



When performing this procedure to adjust the valve clearance, it is not necessary to apply seal packing to the No. 1 bearing cap and camshaft housing plug.

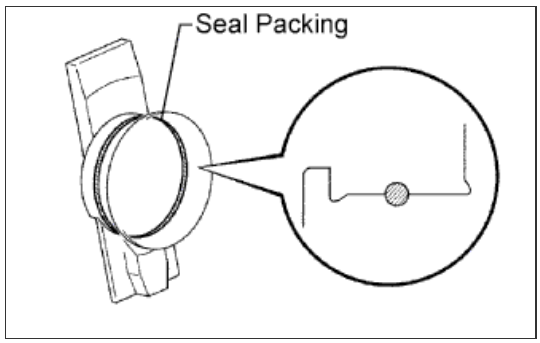
a. Apply a light coat of engine oil to the cam lobe and gear of the camshaft and the journal of the cylinder head.

b. Using a wrench, align the timing marks (1 dot mark each) of the camshaft drive and driven gears, and set the camshaft and No. 2 camshaft in place.

HINT:

The position shown in the illustration is the most stable position for the exhaust camshaft.

c. Apply seal packing to the camshaft housing plug groove.



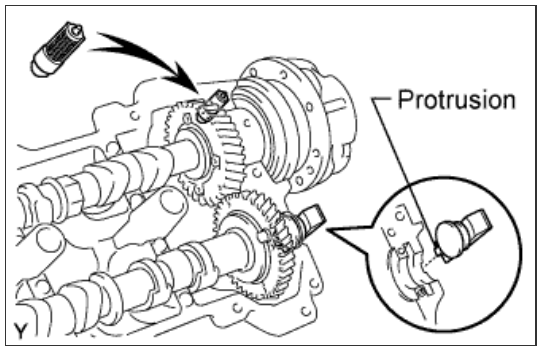
HINT:

Remove any old packing (FIPG) material before applying new seal packing.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

NOTICE:

- **Be careful of the installation direction.**
- **Remove any oil from the contact surface.**

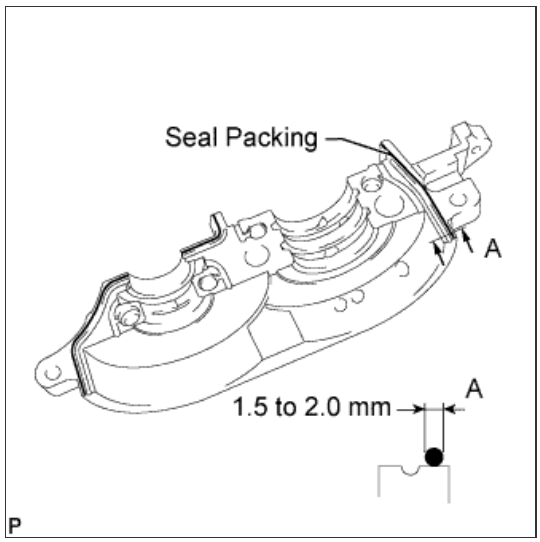


d. Install the camshaft housing plug and oil control valve filter to the cylinder head as shown in the illustration.

HINT:

Align the protrusion on the camshaft housing plug with the groove of the

cylinder head and install the plug.



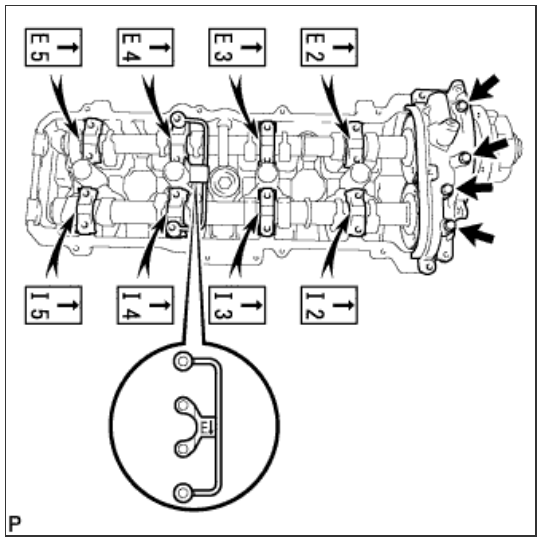
e. Apply seal packing to the No. 1 bearing cap as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
1.5 to 2.0 mm (0.0591 to 0.0787 in.)

NOTICE:

Install the No. 1 bearing cap and housing plug within 3 minutes.

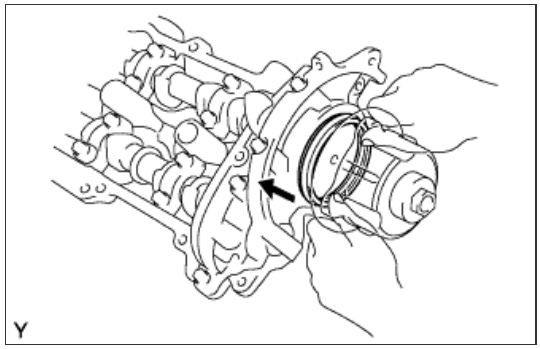


f. Install a new seal washer to each bearing cap bolt indicated by an arrow in the illustration, and apply engine oil to the threads of the bolts. Then temporarily install them.

g. Apply engine oil to the threads and washer part of the bearing cap bolts not indicated in the illustration.

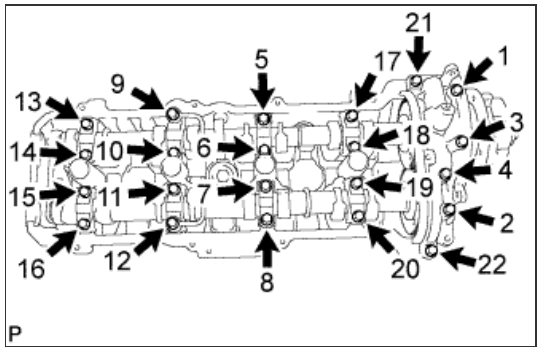
h. Temporarily install the oil feed pipe and bearing caps with the 18 bearing cap bolts, as shown in the illustration.

Bolt Length:



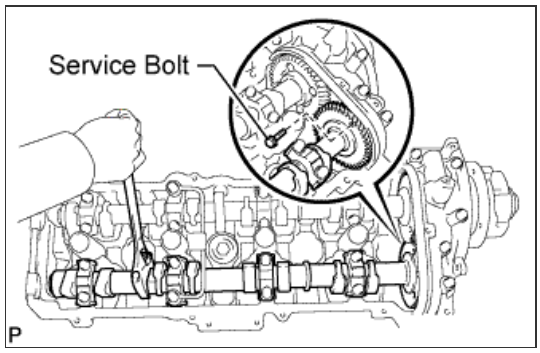
Item	Length
Bolt A with seal washer	94 mm (3.70 in.)
Bolt B with seal washer	72 mm (2.84 in.)
Bolt	25 mm (0.984 in.)
Bolt D	55 mm (2.17 in.)
Bolt	40 mm (1.58 in.)

HINT:



Face the arrow imprinted on the oil feed pipe to the exhaust side.

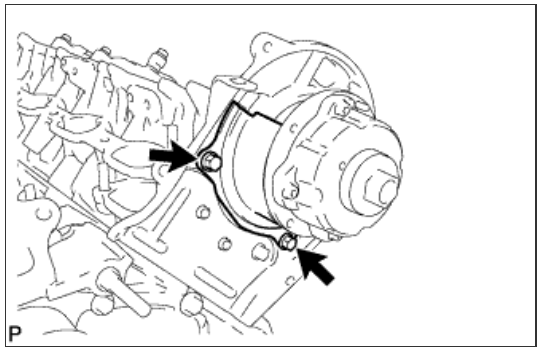
i. Push in the camshaft setting oil seal.



j. Uniformly tighten the 22 bearing cap bolts in several steps, in the sequence shown in the illustration.

Torque:
for bolt 21, 22:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }
for other bolt:
16 N*m{ 163 kgf*cm , 12 ft.*lbf }

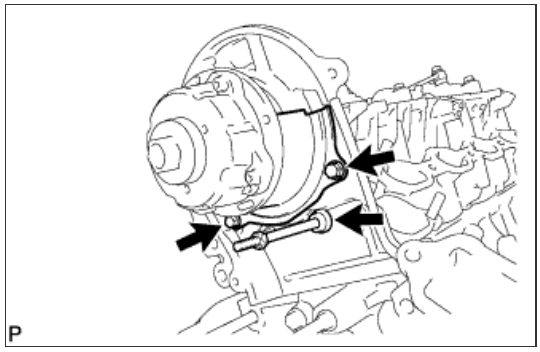
k. Bring the service bolt installed in the driven sub-gear upward by turning the hexagonal portion of the camshaft with a wrench.



l. Remove the service bolt.

6. INSTALL REAR NO. 2 TIMING BELT PLATE LH

a. Install the timing plate with the 2 bolts.



Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

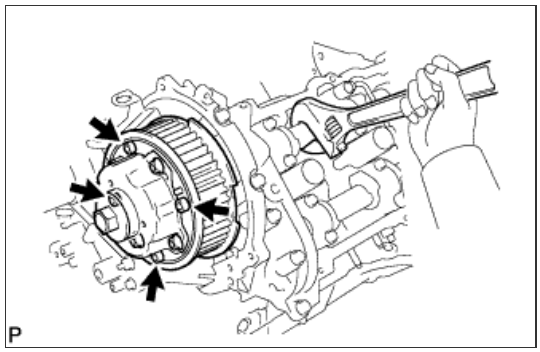
7. INSTALL REAR NO. 2 TIMING BELT PLATE RH

a. Install the timing plate with the 2 bolts and stud bolt.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

8. INSTALL CAMSHAFT TIMING PULLEY SUB-ASSEMBLY LH

a. Align the camshaft timing tube knock pin with the knock pin groove of the timing



a. Align the camshaft timing tube knock pin with the knock pin groove of the timing pulley.

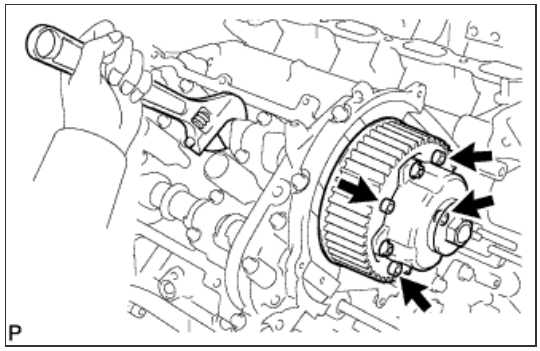
b. Temporarily install the 4 bolts of the camshaft timing pulley.

c. Hold the hexagonal portion of the camshaft with a wrench.

d. Using a 5 mm hexagon wrench, tighten the 4 bolts.

Torque:
8.1 N*m{ 83 kgf*cm , 72 in.*lbf }

9. INSTALL CAMSHAFT TIMING PULLEY

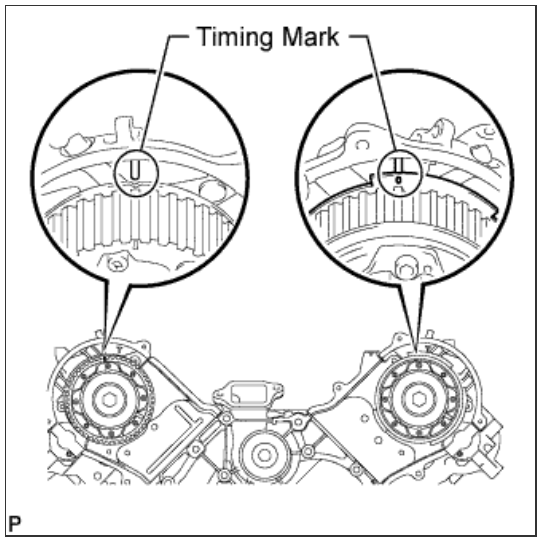


a. Align the camshaft timing tube knock pin with the knock pin groove of the timing pulley.

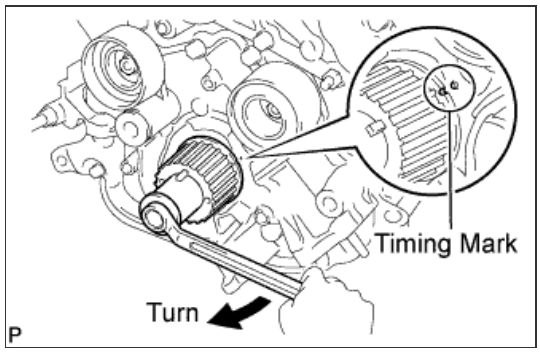
b. Temporarily install the 4 bolts of the camshaft timing pulley.

c. Hold the hexagonal portion of the camshaft with a wrench.

d. Using a 5 mm hexagon wrench, tighten the 4 bolts.

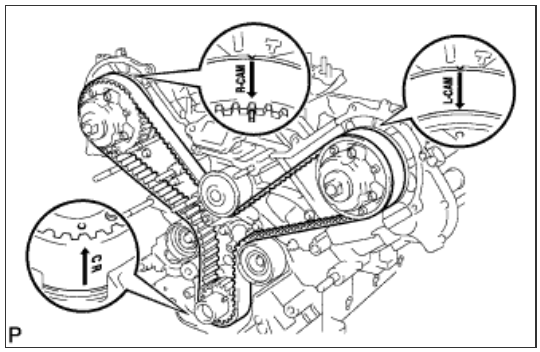


Torque:
8.1 N*m{ 83 kgf*cm , 72 in.*lbf }



10. INSTALL TIMING BELT

a. Set the No. 1 cylinder to TD compression.

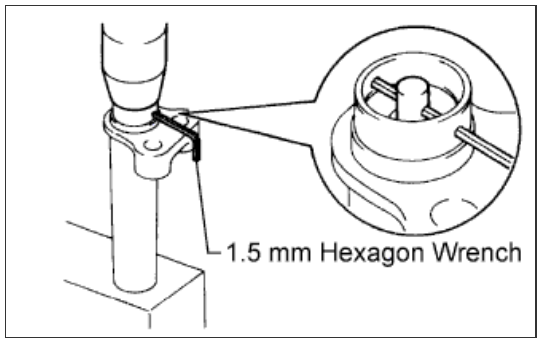


i. Turn the hexagonal portion of the camshaft to align the timing marks of the camshaft timing pulleys and timing belt plates.

ii. Using the pulley bolt, turn the crankshaft to align the timing marks of the crankshaft timing pulley and oil pump body.

b. Install the timing belt.

i. Remove any oil or water from each pulley, and keep them clean.



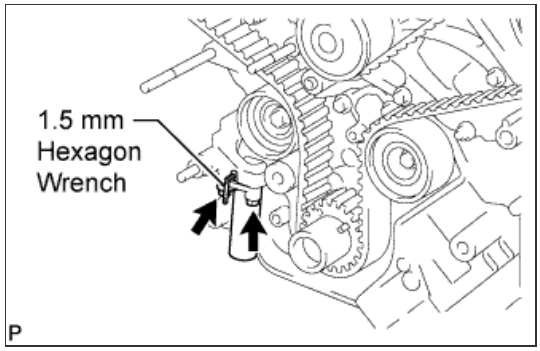
NOTICE:

nly wipe the pulleys. Do not use any cleansing agent on the pulleys.

ii. Face the front mark (arrow) on the timing belt forward.

iii. Align the timing marks on the timing belt and crankshaft timing pulley, and the timing belt and camshaft timing pulleys, and install the timing belt.

c. Install the belt tensioner.



i. Remove the dust seal from the belt tensioner.

ii. Using a press, slowly press in the push rod using a force of 981 to 9807 N (100 to 1000 kgf, 220.5 to 2204.7 lbf).

iii. Align the holes of the push rod and housing, and pass a 1.5 mm hexagon wrench through the holes to keep the setting position of the push rod.

iv. Release the press.

v. Install the dust seal to the belt tensioner.

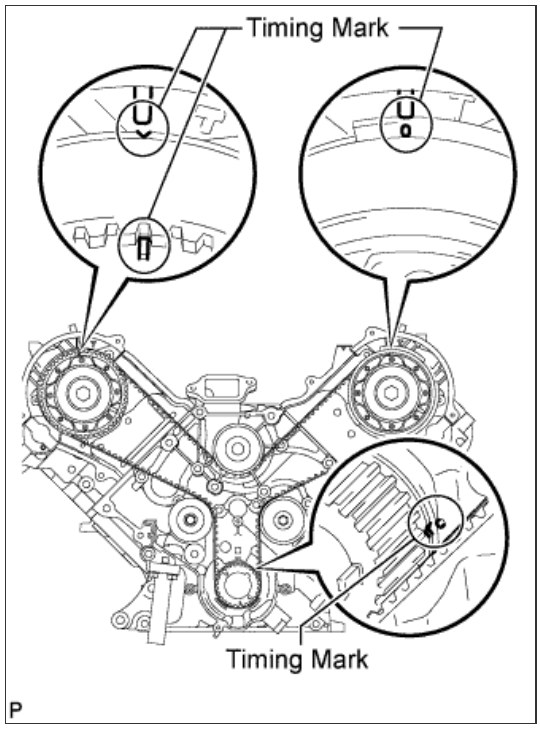
vi. Temporarily install the belt tensioner with the 2 bolts.

vii. Tighten the 2 bolts.

Torque:
26 N*m{ 265 kgf*cm , 19 ft.*lbf }

viii. Using pliers, remove the 1.5 mm hexagon wrench from the timing belt tensioner.

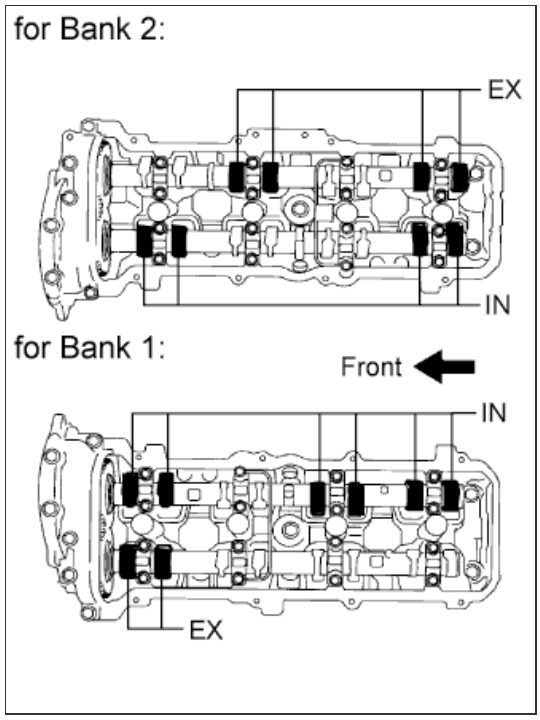
11. CHECK NO. 1 CYLINDER TO TDC/COMPRESSION



a. Using the pulley bolt, slowly turn the crankshaft timing pulley 2 revolutions from the TD to TD .

NOTICE:

Always turn the crankshaft timing pulley clockwise.



b. heck that each pulley is aligned with each timing mark as shown in the illustration.
If the timing marks are not aligned, remove the timing belt and reinstall it.

c. Remove the pulley bolt.

12. INSPECT VALVE CLEARANCE

a. heck only the valves indicated.

i. Using a feeler gauge, measure the clearance between the valve lifter and camshaft.

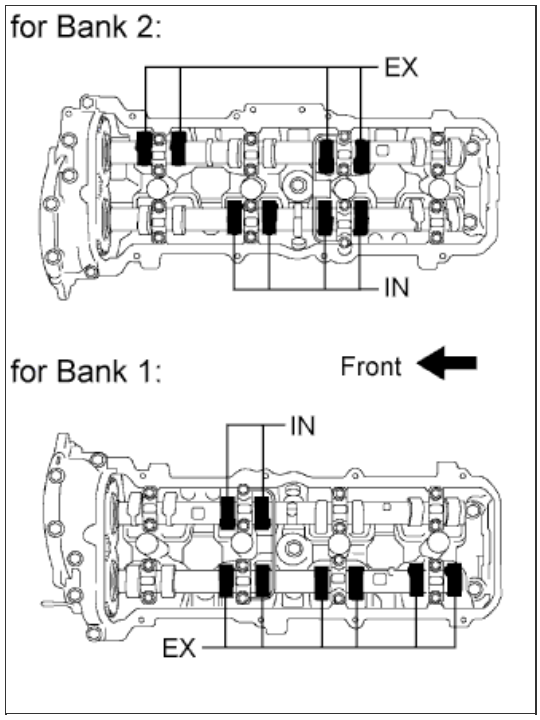
Standard Valve Clearance (Cold):

Item	Specified ondition
Intake	0.15 to 0.25 mm (0.00591 to 0.00984 in.)
xhaust	0.25 to 0.35 mm (0.00984 to 0.0138 in.)

ii. Record the out-of-specification valve clearance measurements. They will be used later to determine the required replacement adjusting shim.

b. Turn the crankshaft 1 complete revolution (360°) and align the camshaft timing marks.

c. heck only the valves indicated in the illustration.



i. Using a feeler gauge, measure the clearance between the valve lifter and camshaft.

Standard Valve Clearance (Cold):

Item	Specified ondition
Intake	0.15 to 0.25 mm (0.00591 to 0.00984 in.)
xhaust	0.25 to 0.35 mm

	(0.00984 to 0.0138 in.)

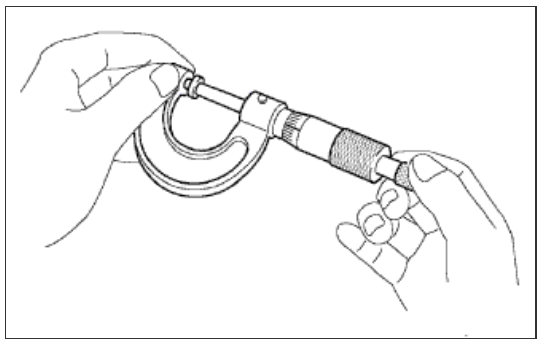
ii. Record the out-of-specification valve clearance measurements. They will be used later to determine the required replacement adjusting shim.

13. ADJUST VALVE CLEARANCE

a. Remove the timing belt (lick here).

b. Remove the camshaft (lick here).

c. Remove the valve lifter and adjusting shim.



NOTICE:

Be careful not to drop the adjusting shim into the cylinder head.

HINT:

Arrange the removed parts in the correct order.

d. Using a micrometer, measure the thickness of the removed shim.

e. Determine the replacement adjusting shim size according to the formula or charts below.

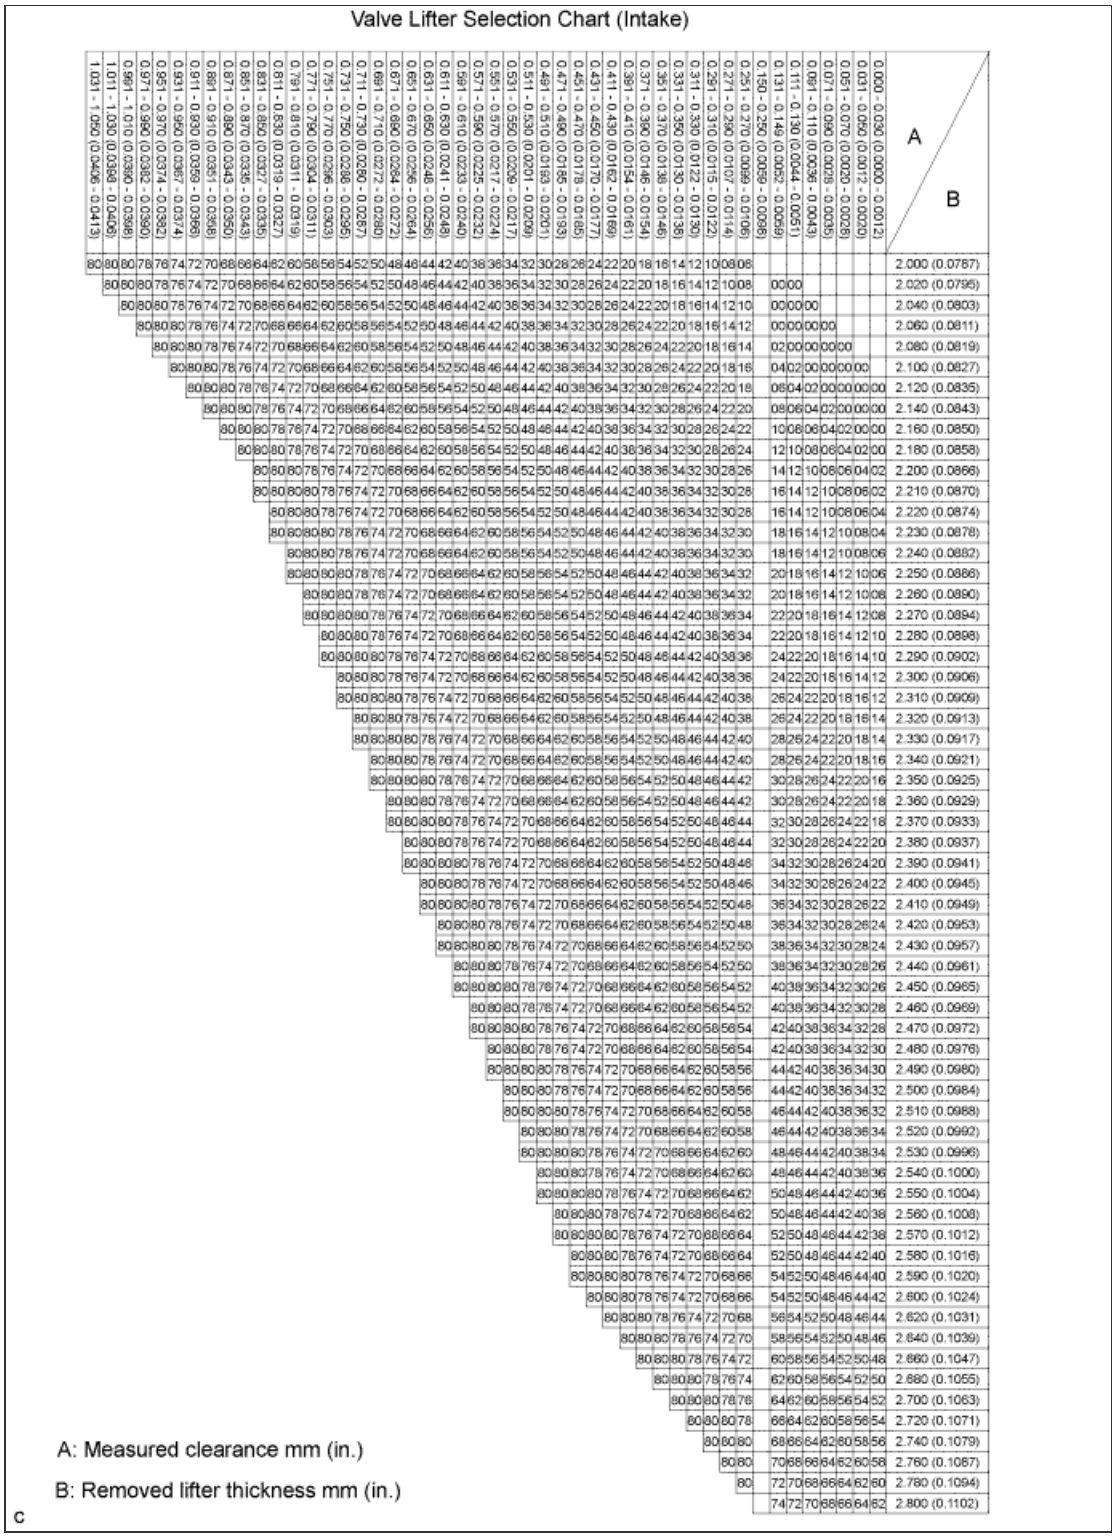
i. alculate the thickness of a new shim so that the valve clearance comes within the specified value.

T:
Thickness of removed shim

A:
Measured valve clearance

N:
Thickness of new shim

Intake:
N = T + (A - 0.20 mm (0.00787 in.))



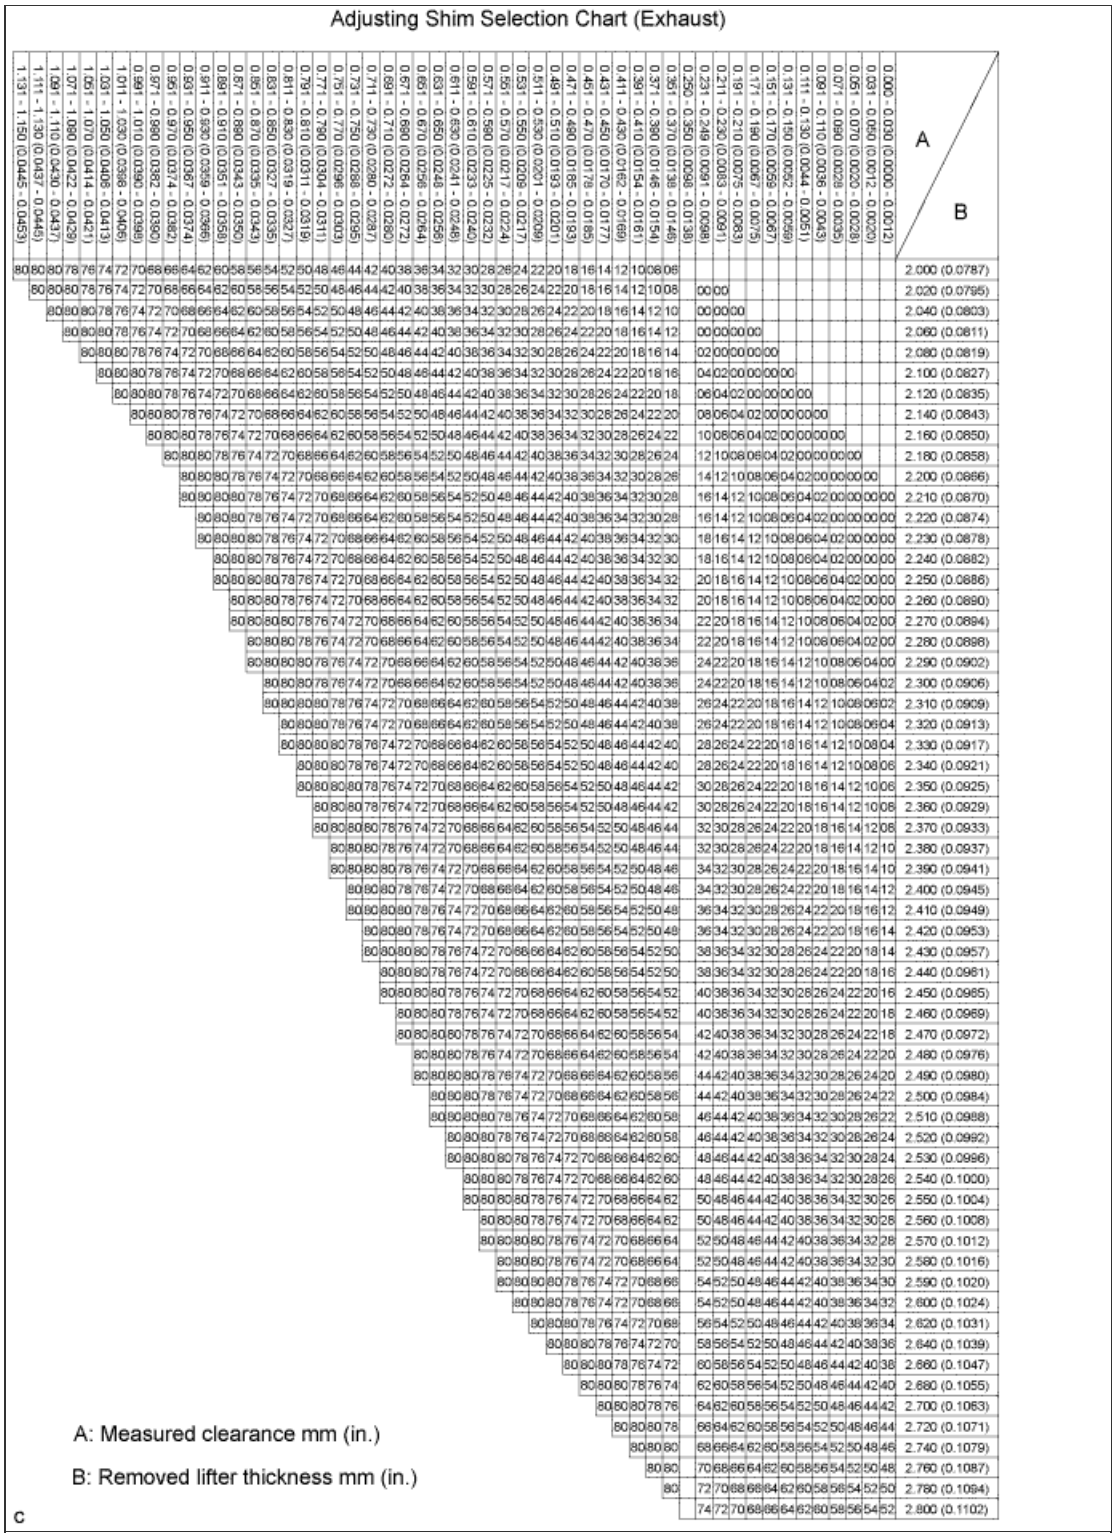
Exhaust:
N = T + (A - 0.30 mm (0.0118 in.))

ii. Select a new shim with a thickness as close as possible to the calculated value.

HINT:

- **Shims are available in 41 increments of 0.020 mm (0.000787 in.), from 2.00 mm (0.0787 in.) to 2.80 mm (0.1102 in.) and 33 increments of 0.025 mm (0.000984 in.), from 2.50 mm (0.0984 in.) to 3.30 mm (0.1299 in.).**

- **Refer to the Adjusting Shim Selection Chart.**



Intake valve clearance (Cold):
0.15 to 0.25 mm (0.00591 to 0.00984 in.)
EXAMPLE:
The 2.300 mm (0.0906 in.) shim is installed, and the measured clearance is 0.440 mm (0.0173 in.). Replace the 2.300 mm (0.0906 in.) shim with a No. 54 shim.

New Shim Thickness:

Shim No.	Thickness	Shim No.	Thickness	Shim No.	Thickness
00	2.000 mm (0.0787 in.)	28	2.280 mm (0.0898 in.)	56	2.560 mm (0.1008 in.)
02	2.020 mm (0.0795 in.)	30	2.300 mm (0.0906 in.)	58	2.580 mm (0.1016 in.)

04	2.040 mm (0.0803 in.)	32	2.320 mm (0.0913 in.)	60	2.600 mm (0.1024 in.)
06	2.060 mm (0.0811 in.)	34	2.340 mm (0.0921 in.)	62	2.620 mm (0.1031 in.)
08	2.080 mm (0.0819 in.)	36	2.360 mm (0.0929 in.)	64	2.640 mm (0.1039 in.)
10	2.100 mm (0.0827 in.)	38	2.380 mm (0.0937 in.)	66	2.660 mm (0.1047 in.)
12	2.120 mm (0.0835 in.)	40	2.400 mm (0.0945 in.)	68	2.680 mm (0.1055 in.)
14	2.140 mm (0.0843 in.)	42	2.420 mm (0.0953 in.)	70	2.700 mm (0.1063 in.)
16	2.160 mm (0.0850 in.)	44	2.440 mm (0.0961 in.)	72	2.720 mm (0.1071 in.)
18	2.180 mm (0.0858 in.)	46	2.460 mm (0.0969 in.)	74	2.740 mm (0.1079 in.)
20	2.200 mm (0.0866 in.)	48	2.480 mm (0.0976 in.)	76	2.760 mm (0.1087 in.)
22	2.220 mm (0.0874 in.)	50	2.500 mm (0.0984 in.)	78	2.780 mm (0.1094 in.)
24	2.240 mm (0.0882 in.)	52	2.520 mm (0.0992 in.)	80	2.800 mm (0.1102 in.)
26	2.260 mm (0.0890 in.)	54	2.540 mm (0.1000 in.)	-	-

Exhaust valve clearance (Cold):
0.25 to 0.35 mm (0.00984 to 0.0138 in.)
EXAMPLE:
The 2.300 mm (0.0906 in.) shim is installed, and the measured clearance is 0.440 mm (0.0173 in.). Replace the 2.300 mm (0.0906 in.) shim with a No. 44 shim.

New Shim Thickness:

Shim No.	Thickness	Shim No.	Thickness	Shim No.	Thickness
00	2.000 mm (0.0787 in.)	28	2.280 mm (0.0898 in.)	56	2.560 mm (0.1008 in.)
02	2.020 mm (0.0795 in.)	30	2.300 mm (0.0906 in.)	58	2.580 mm (0.1016 in.)
04	2.040 mm (0.0803 in.)	32	2.320 mm (0.0913 in.)	60	2.600 mm (0.1024 in.)
	2.060 mm		2.340 mm		2.620 mm

06	(0.0811 in.)	34	(0.0921 in.)	62	(0.1031 in.)
08	2.080 mm (0.0819 in.)	36	2.360 mm (0.0929 in.)	64	2.640 mm (0.1039 in.)
10	2.100 mm (0.0827 in.)	38	2.380 mm (0.0937 in.)	66	2.660 mm (0.1047 in.)
12	2.120 mm (0.0835 in.)	40	2.400 mm (0.0945 in.)	68	2.680 mm (0.1055 in.)
14	2.140 mm (0.0843 in.)	42	2.420 mm (0.0953 in.)	70	2.700 mm (0.1063 in.)
16	2.160 mm (0.0850 in.)	44	2.440 mm (0.0961 in.)	72	2.720 mm (0.1071 in.)
18	2.180 mm (0.0858 in.)	46	2.460 mm (0.0969 in.)	74	2.740 mm (0.1079 in.)
20	2.200 mm (0.0866 in.)	48	2.480 mm (0.0976 in.)	76	2.760 mm (0.1087 in.)
22	2.220 mm (0.0874 in.)	50	2.500 mm (0.0984 in.)	78	2.780 mm (0.1094 in.)
24	2.240 mm (0.0882 in.)	52	2.520 mm (0.0992 in.)	80	2.800 mm (0.1102 in.)
26	2.260 mm (0.0890 in.)	54	2.540 mm (0.1000 in.)	-	-

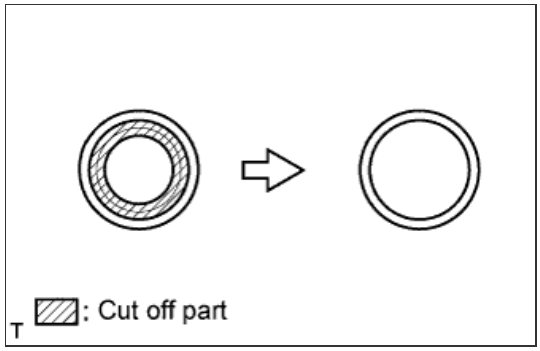
f. Apply a light coat of engine oil to the valve lifters, adjusting shims and valve stem tip.

g. Place a new adjusting shim on the valve stem.

NOTICE:

Be careful not to drop the adjusting shim into the cylinder head.

h. Place the valve lifter.



i. Install the camshaft (lick here).

j. Install the timing belt (lick here).

k. heck the valve clearance.
If the result is not as specified, adjust the valve clearance.

14. INSTALL SPARK PLUG TUBE GASKET

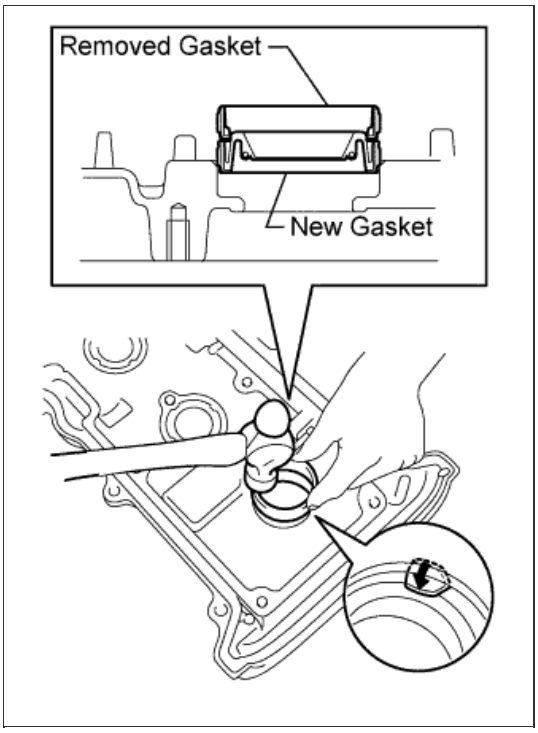
a. Using a cutter knife, cut off the seal part of the removed gasket.

b. Using the removed gasket and a hammer, tap in a new gasket until it stops.

NOTICE:

Do not tap on the oil seal at an angle.

HINT:



If the removed gasket does not fit on the new one, correct the removed one with pliers.

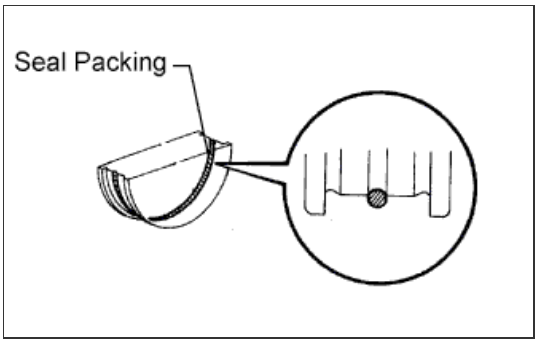
c. Apply a light coat of MP grease to the lip of the gasket.

NOTICE:

eep the lip free from foreign matter.

d. Return the 8 ventilation case claws to the original positions.

15. INSTALL SEMICIRCULAR PLUG



a. Apply seal packing to the semicircular plug grooves.

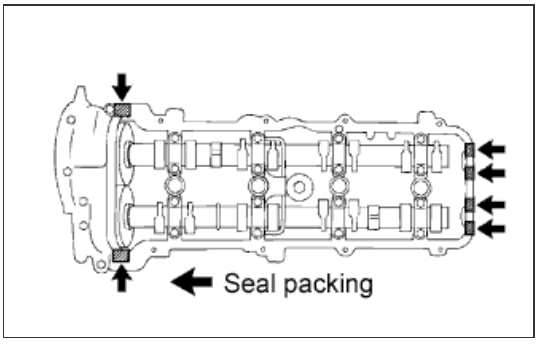
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

b. Install the 4 semicircular plugs to the cylinder heads.

NOTICE:

Install the cylinder head cover within 3 minutes after applying seal packing.

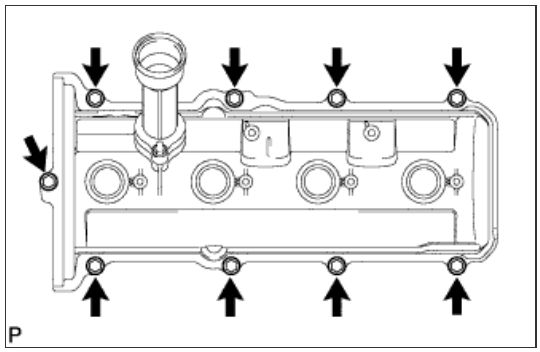
16. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY LH



a. Install a new gasket to the cylinder head cover.

b. Apply seal packing to the cylinder head as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent



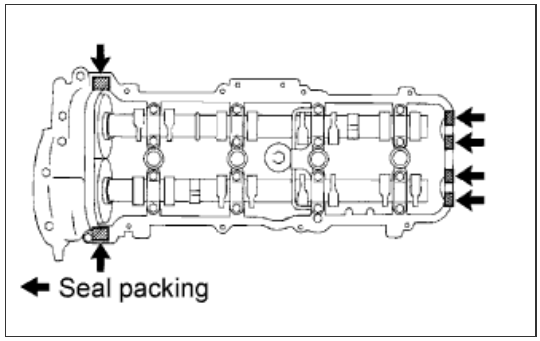
NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes after applying seal packing.**

c. Install the cylinder head cover with the 9 bolts. Uniformly tighten the bolts in several steps.

Torque:
6.0 N*m{ 61 kgf*cm , 53 in.*lbf }

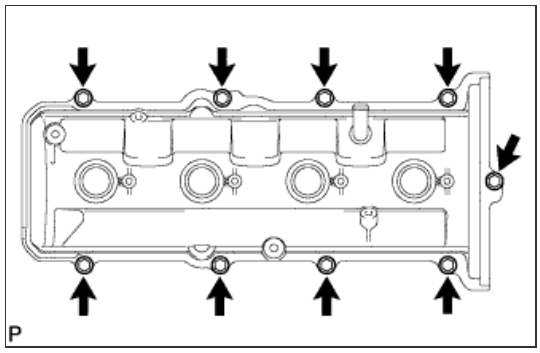
17. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY



a. Install a new gasket to the cylinder head cover.

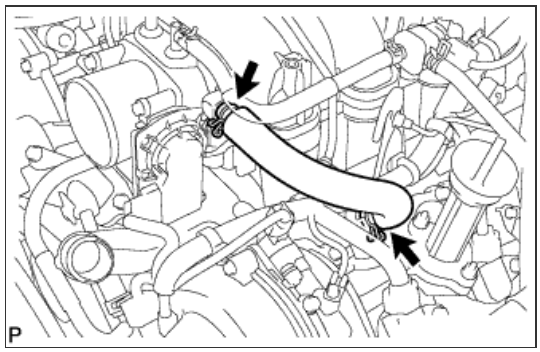
b. Apply seal packing to the cylinder head as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent



NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes after applying seal packing.**



c. Install the cylinder head cover with the 9 bolts. Uniformly tighten the bolts in several steps.

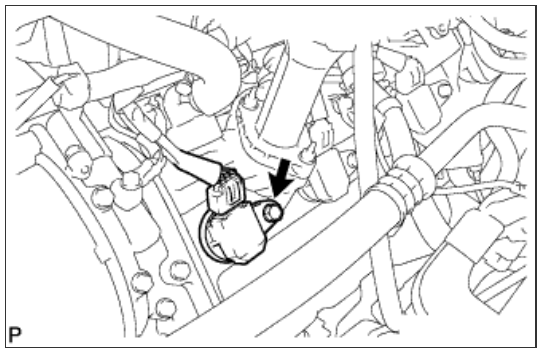
Torque:
6.0 N*m{ 61 kgf*cm , 53 in.*lbf }

18. INSTALL NO. 1 VENTILATION HOSE

a. Install the No. 1 ventilation hose to the intake manifold and ventilation valve.

19. INSTALL SPARK PLUG

a. Install the 8 spark plugs.



Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

20. INSTALL IGNITION COIL ASSEMBLY

a. Install the 8 ignition coils with the 8 bolts.

Torque:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

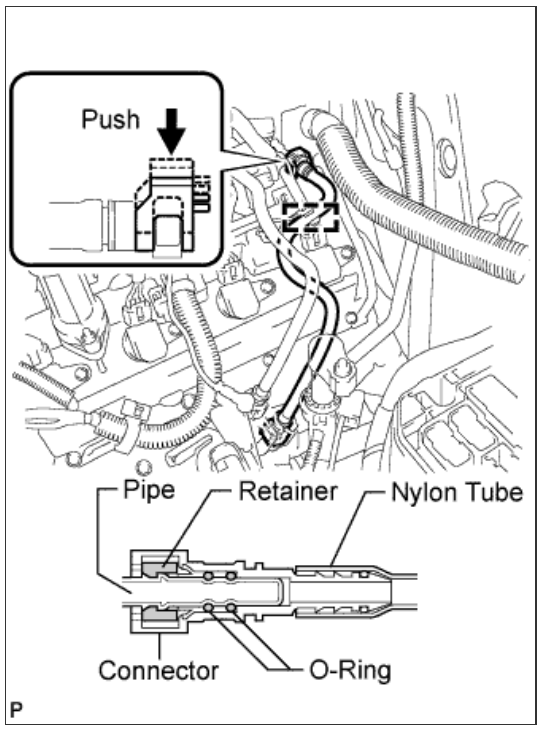
b. onnect the 8 ignition coil connectors.

21. INSTALL NO. 2 FUEL HOSE

a. for engine side:

i. onnect the fuel hose to the No. 3 fuel pipe.

HINT:



Push the parts together firmly until a click sound is heard.

NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

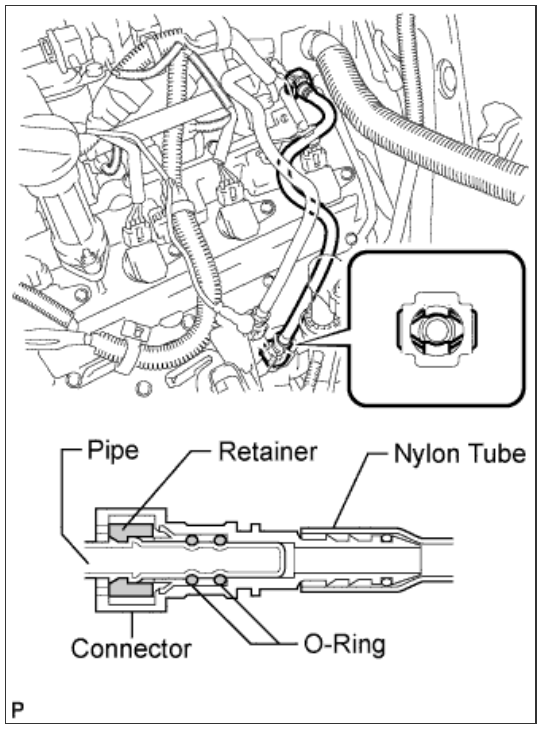
ii. Attach the lock claws to the connector by pushing down on the cover, as shown in the illustration.

iii. Attach the fuel hose clamp.

b. for body side:

i. onnect the fuel hose to the fuel pipe.

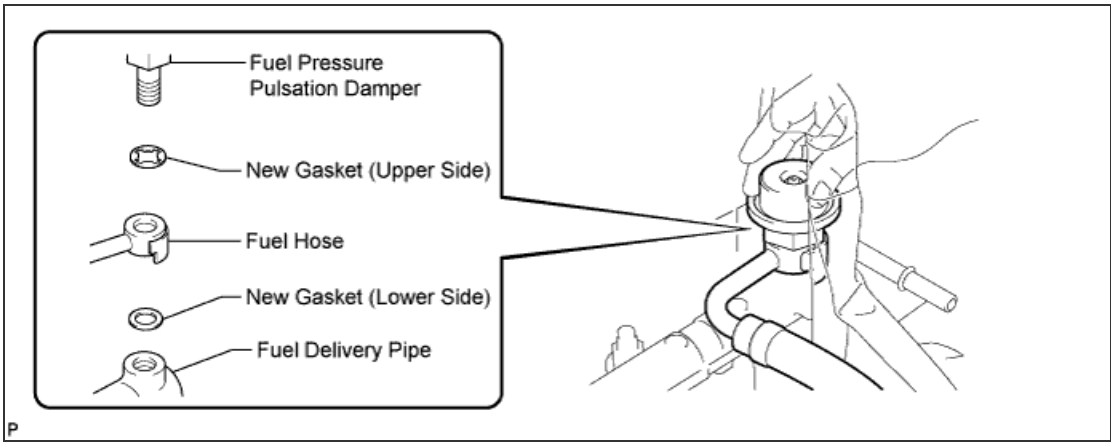
HINT:



Push the parts together firmly until a click sound is heard.

NOTICE:

- **Before installing the tube connectors to the pipes,**



check if there is any damage or foreign matter in the connectors.

- After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.

22. INSTALL FUEL PRESSURE PULSATION DAMPER ASSEMBLY

a. Install 2 new gaskets and the fuel hose with the fuel pressure pulsation damper.

NOTICE:

Make sure to install the gaskets in the order shown in the illustration, as the shape of the upper side and lower side gaskets is different.

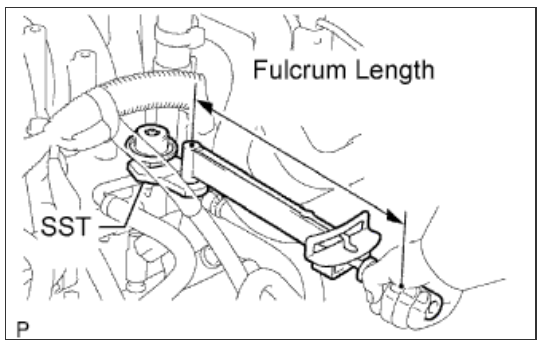
b. Tighten the fuel pressure pulsation damper by hand.

c. Using SST, tighten the union bolt.

SST

09612-24014 (09617-24011)

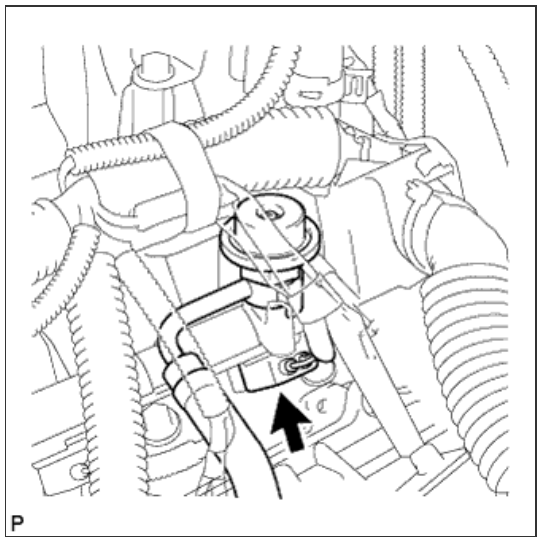
Torque:



with SST:

33 N*m{ 340 kgf*cm , 24 ft.*lbf }

without SST:



39 N*m{ 398 kgf*cm , 29 ft.*lbf }

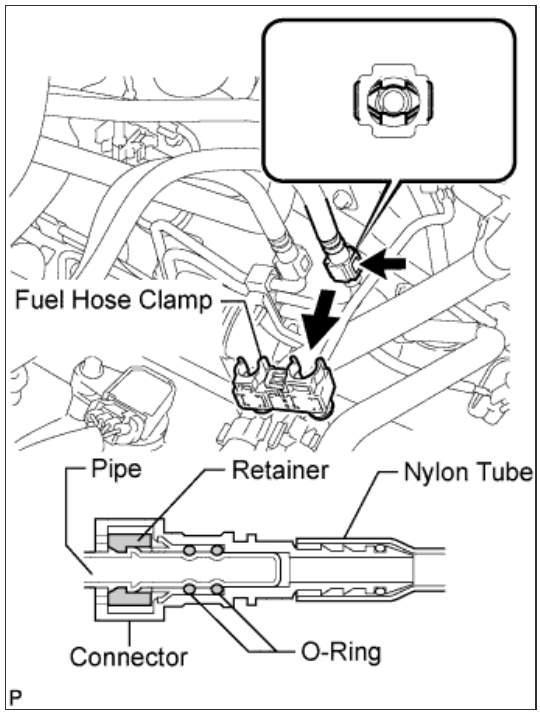
HINT:

- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.).**
- **Make sure SST and the wrench are connected in a straight line.**

d. onnect the fuel injector connector.

23. CONNECT FUEL HOSE

a. onnect the fuel hose.



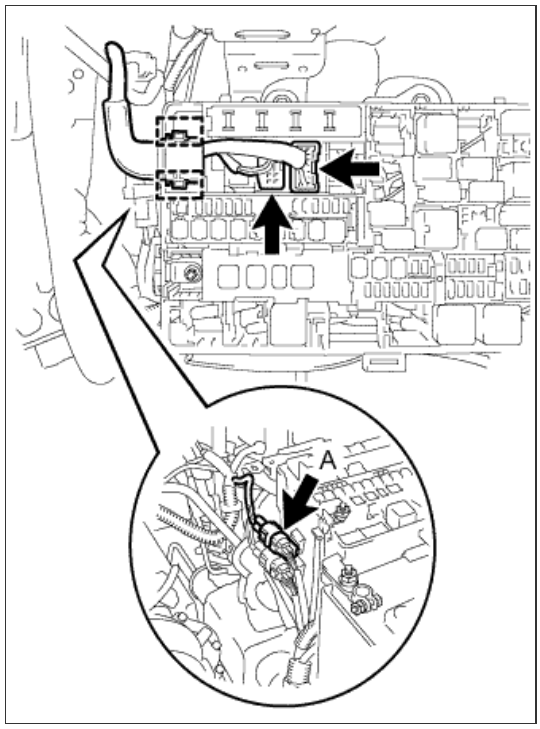
HINT:

Push the parts together firmly until a click sound is heard.

NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Install the fuel hose clamp.

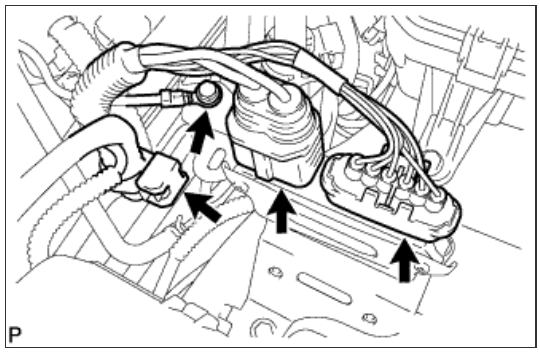


24. CONNECT WIRE HARNESS

a. onnect connector A to the engine room relay block.

b. onnect the 2 connectors and 2 clamps to the engine room relay block.

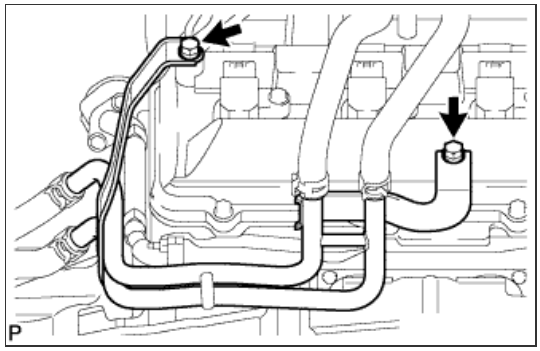
c. onnect the wire harness clamp to the cylinder head cover LH.



d. onnect the wire harness clamp.

e. onnect the ground wire with the bolt.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

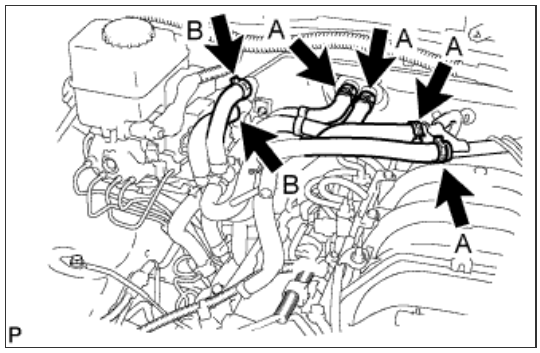


f. onnect the 2 air injection control driver connectors.

25. INSTALL NO. 1 WATER BY-PASS PIPE (w/ Air Cooled Transmission Oil Cooler)

a. Install the water by-pass pipe with the 2 bolts.

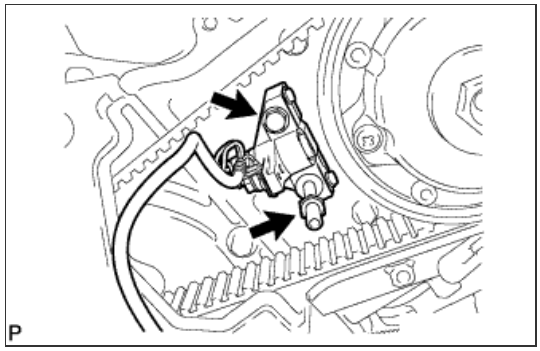
Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }



26. CONNECT WATER HOSE SUB-ASSEMBLY

a. onnect the water by-pass hose.

i. w/ Rear Heater:
onnect the water hoses labeled A and B.

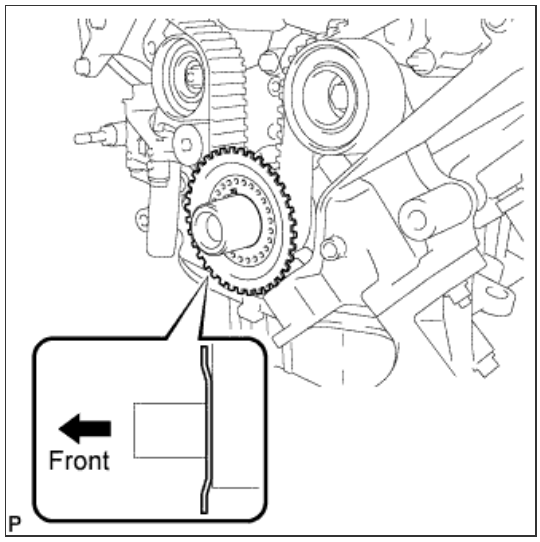


ii. w/o Rear Heater:
onnect the water hoses labeled A.

27. INSTALL CAMSHAFT POSITION SENSOR ASSEMBLY

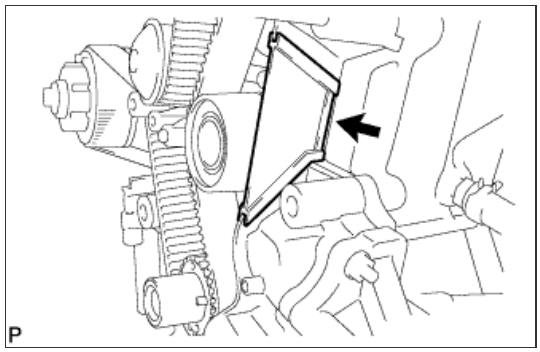
a. Install the camshaft position sensor with the bolt and stud bolt.

Torque:
7.5 N*m{ 80 kgf*cm , 66 in.*lbf }



28. INSTALL NO. 1 CRANKSHAFT POSITION SENSOR PLATE

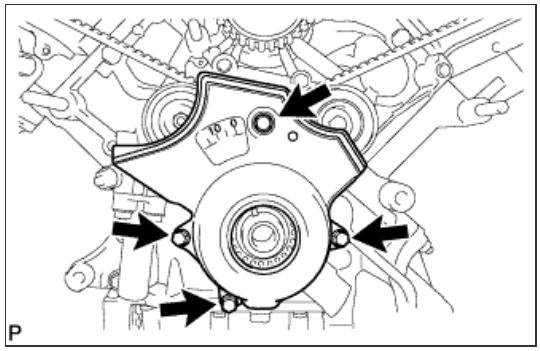
a. Install the sensor plate as shown in the illustration.



NOTICE:

Take care not to install the sensor plate in a wrong direction.

29. INSTALL TIMING BELT COVER SPACER

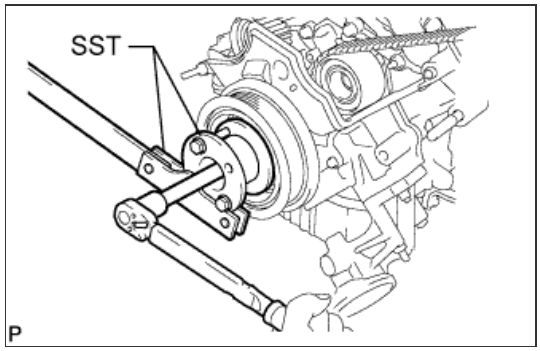


a. Install the cover spacer and gasket.

30. INSTALL NO. 1 TIMING BELT COVER

a. Install the timing belt cover with the 4 bolts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

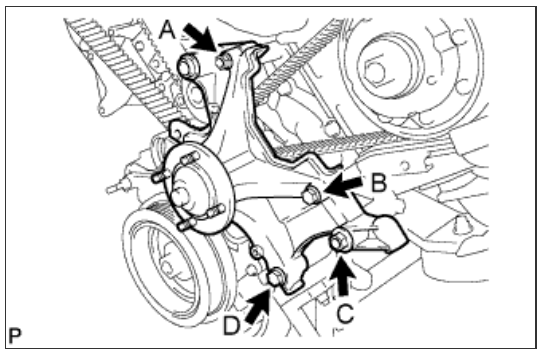


31. INSTALL CRANKSHAFT DAMPER SUB-ASSEMBLY

a. Align the pulley set key with the key groove of the crankshaft damper.

b. Using SST, hold the crankshaft pulley and install the pulley bolt.

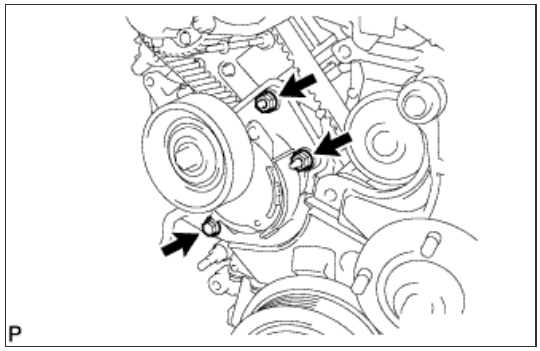
SST
09213-70011 (09213-70020)
09330-00021 (09330-00030)



Torque:
245 N*m{ 2498 kgf*cm , 181 ft.*lbf }

32. INSTALL FAN BRACKET SUB-ASSEMBLY

a. Install the fan bracket with the 2 bolts and 2 nuts.

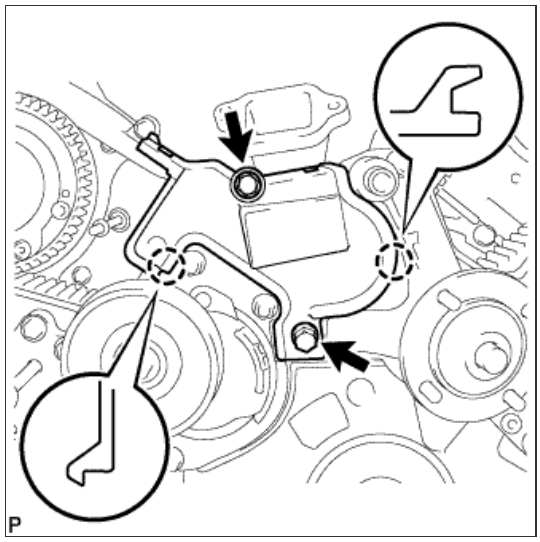


Torque:
for nut A, bolt B:
16 N*m{ 163 kgf*cm , 12 ft.*lbf }
for nut C, bolt D:
32 N*m{ 326 kgf*cm , 24 ft.*lbf }

33. INSTALL V-RIBBED BELT TENSIONER ASSEMBLY

a. Install the belt tensioner with the bolt and 2 nuts.

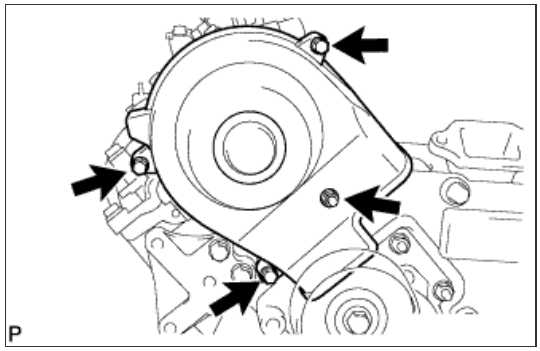
Torque:
16 N*m{ 163 kgf*cm , 12 ft.*lbf }



34. INSTALL NO. 2 TIMING BELT COVER SUB-ASSEMBLY

a. Install the timing belt cover and fit the 2 claws into each part.

b. Install the 2 bolts.



Torque:
16 N*m{ 163 kgf*cm , 12 ft.*lbf }

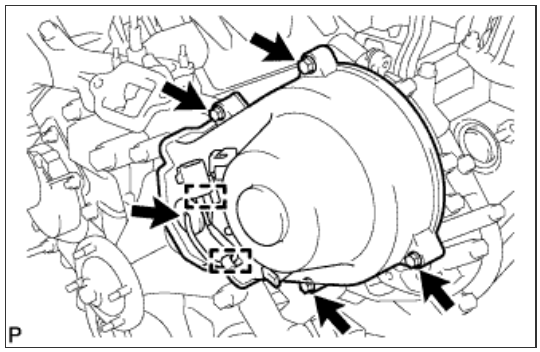
35. INSTALL NO. 3 TIMING BELT COVER SUB-ASSEMBLY RH

a. Install the timing belt cover with the 3 bolts and nut.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

36. INSTALL NO. 3 TIMING BELT COVER SUB-ASSEMBLY LH

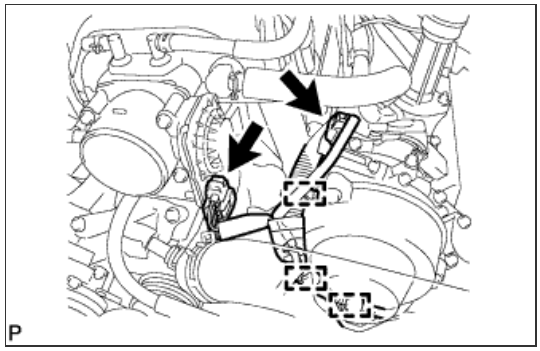
a. Pass the camshaft position sensor wire through the cover hole.



b. Install the timing belt cover with the 4 bolts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

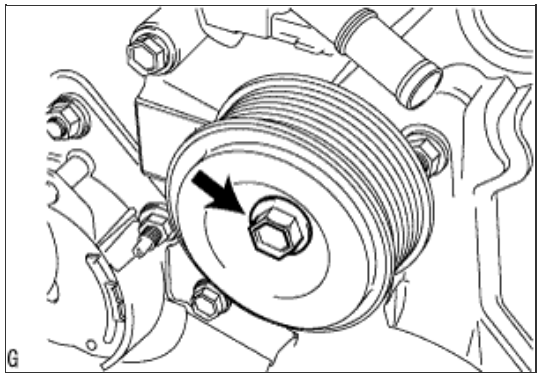
c. Install the wire grommet to the timing belt cover.



d. onnect the sensor connector.

e. Install the sensor wire to the 2 wire clamps on the cover.

f. onnect the engine wire to the 3 wire clamps.

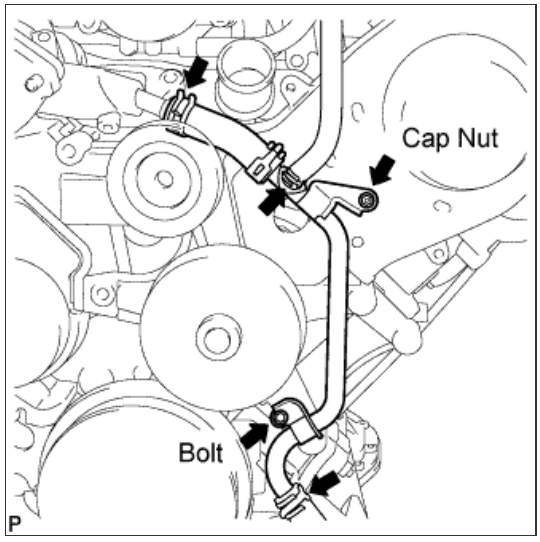


g. onnect the camshaft timing oil control valve connector and control motor connector.

37. INSTALL NO. 2 IDLER PULLEY SUB-ASSEMBLY

a. Install the idler pulley and cover plate with the bolt.

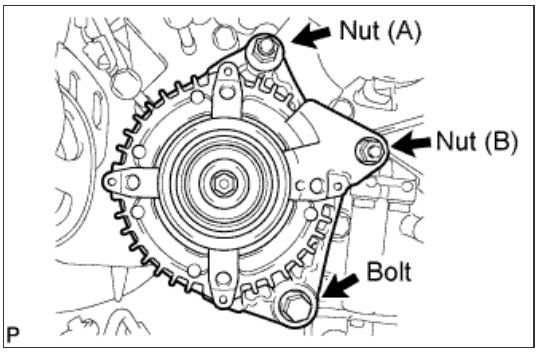
Torque:
39 N*m{ 398 kgf*cm , 29 ft.*lbf }



38. INSTALL OIL COOLER PIPE

a. Using needle-nose pliers, grip the claws of the clamps and slide the clamps to connect the 3 water by-pass hoses.

b. Install the oil cooler pipe with the cap nut and bolt.



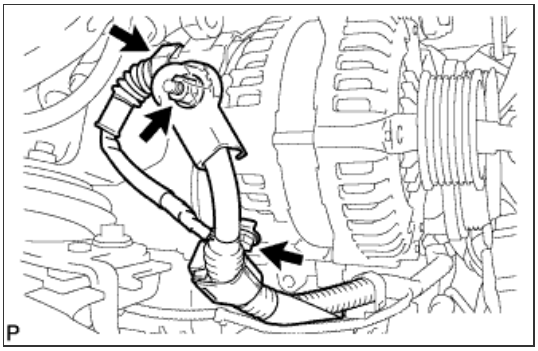
Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

39. INSTALL GENERATOR ASSEMBLY

a. Install the generator with the bolt and 2 nuts.

Torque:
for bolt and nut (A):
39 N*m{ 398 kgf*cm , 29 ft.*lbf }
for nut (B):
16 N*m{ 158 kgf*cm , 11 ft.*lbf }

b. onnect the generator connector.

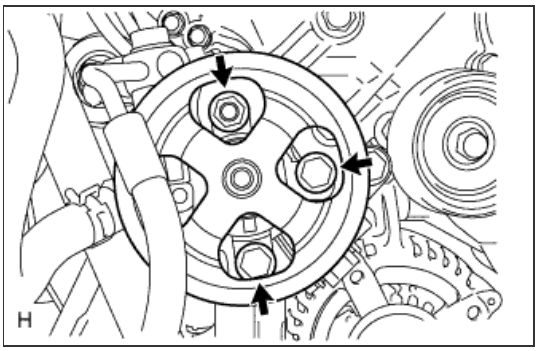


c. onnect the generator wire with the nut.

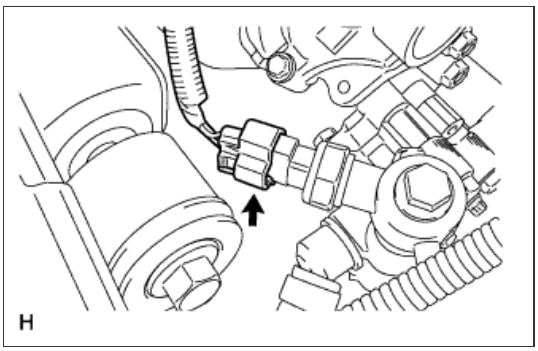
Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

d. Install the terminal cap.

e. onnect the harness bracket to the generator with the bolt.



Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



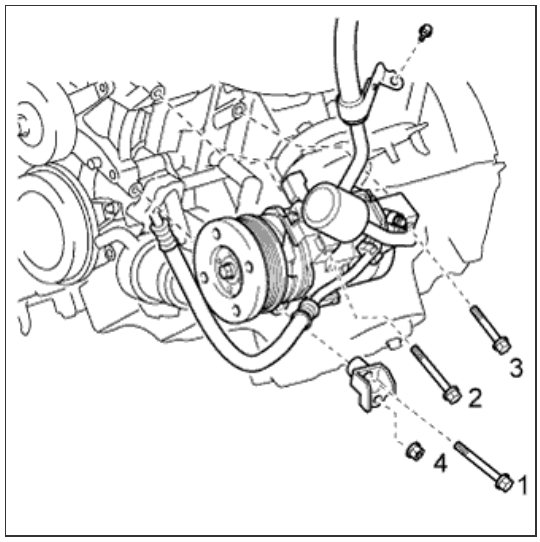
40. CONNECT VANE PUMP ASSEMBLY

a. onnect the vane pump with the 2 bolts and nut.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. onnect the connector.

41. CONNECT COOLER COMPRESSOR ASSEMBLY



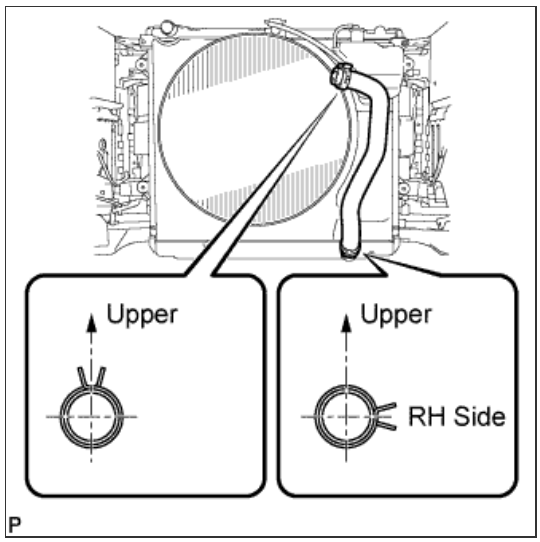
a. onnect the compressor. Then install it and the No. 1 compressor stay with the

nut and 3 bolts.

Torque:
for bolt:
45 N*m{ 459 kgf*cm , 33 ft.*lbf }
for nut:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }

HINT:

Tighten the bolts in the order shown in the illustration to install the cooler compressor.



b. Install the cooler refrigerant suction hose with the bolt.

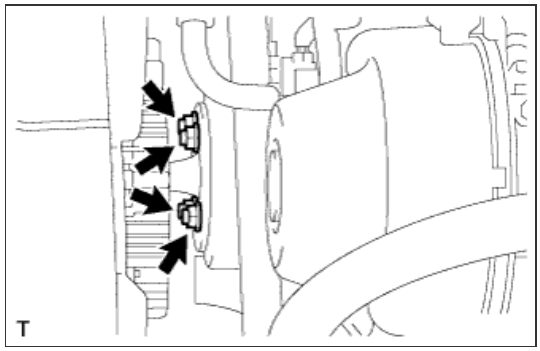
Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

c. onnect the connector.

42. INSTALL NO. 2 RADIATOR HOSE

a. Using needle-nose pliers, grip the claws of the clamps and slide the clamps to install the radiator hose.

43. INSTALL FAN SHROUD



a. Install the fan pulley to the water pump.

b. Place the shroud together with the cooling fan between the radiator and engine.

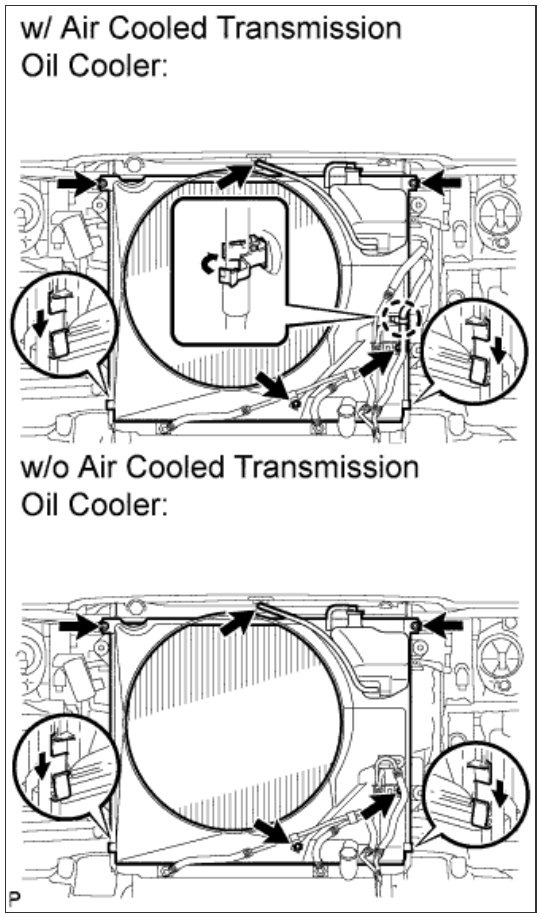
NOTICE:

Be careful not to damage the radiator core.

c. Temporarily install the cooling fan to the water pump with the 4 nuts. Tighten the nuts as much as possible by hand.

d. Attach the claws of the shroud to the radiator as shown in the illustration.

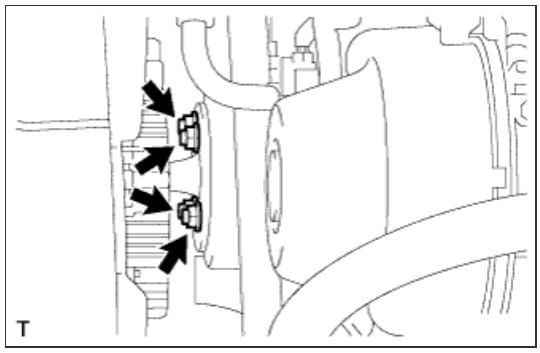
e. Install the shroud with the 2 bolts.



Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

f. onnect the oil cooler tube to the fan shroud with the 2 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

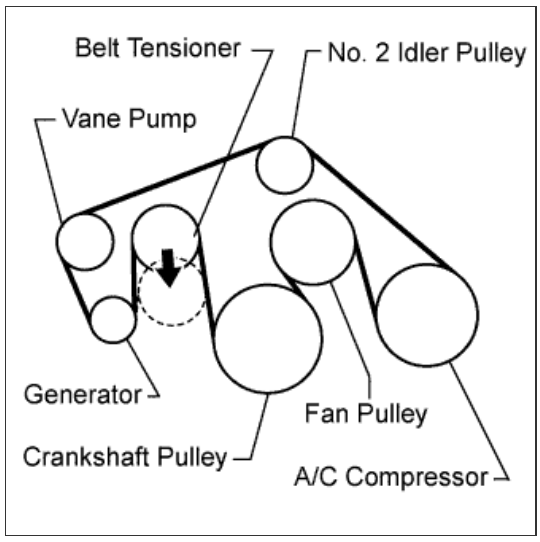


g. w/ Air ooled Transmission il ooler:
Pass the hose through the flexible hose clamp and close the clamp as shown in the illustration.

h. onnect the reservoir hose to the upper side of the radiator tank.

i. Tighten the 4 nuts of the cooling fan.

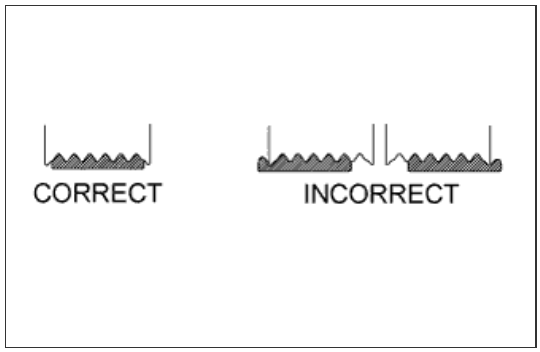
Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }



44. INSTALL FAN & GENERATOR V BELT

a. Set the belt onto every part except the belt tensioner, as shown in the illustration.

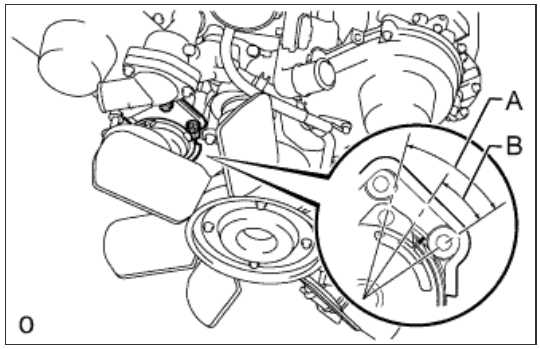
b. Loosen the belt by turning the belt tensioner counterclockwise.



c. Set the belt to the belt tensioner.

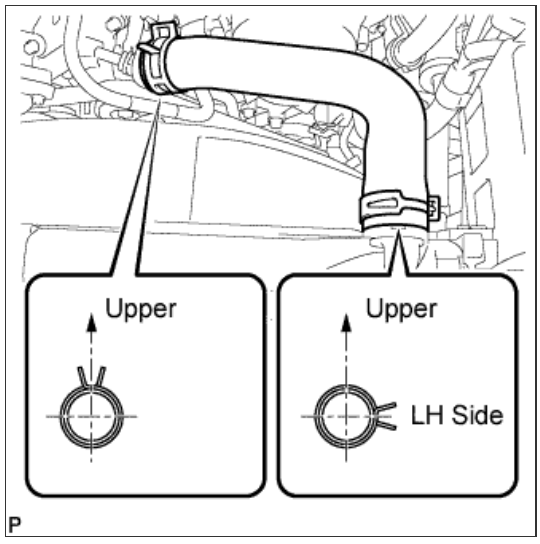
d. heck that the belt fits properly in the ribbed grooves.

HINT:



Make sure to check by hand that the belt has not slipped out of the grooves on the bottom of the pulley.

e. heck that the arrow on the belt tensioner is within area A .
If the arrow is outside area A , replace the fan and generator belt.

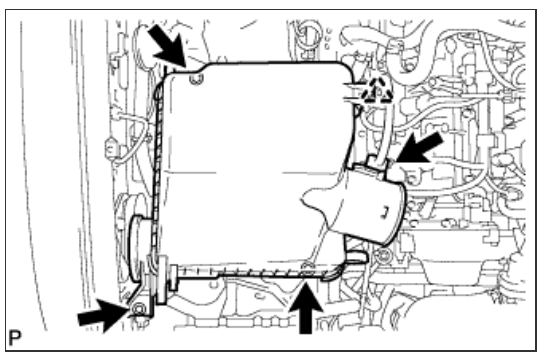


HINT:

When a new belt is installed, the arrow should be within area B . If not, the fan and generator belt is not installed correctly.

45. INSTALL NO. 1 RADIATOR HOSE

a. Using needle-nose pliers, grip the claws of the clamps and slide the clamps to install the radiator hose.



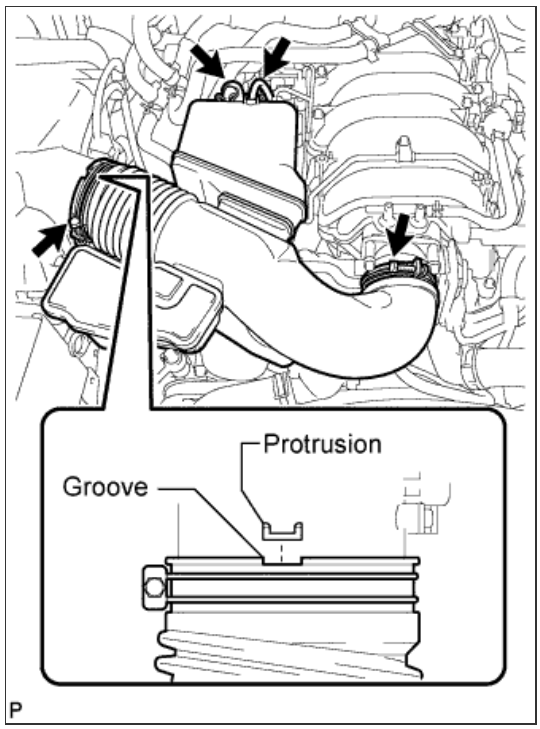
46. INSTALL AIR CLEANER ASSEMBLY

a. Install the air cleaner with the 3 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

b. onnect the clamp and MAF connector.

47. INSTALL AIR CLEANER HOSE ASSEMBLY



a. Install the air cleaner hose so that the protrusion of the air cleaner cap aligns with the groove of the hose as shown in the illustration.

b. Tighten the 2 clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

c. onnect the vacuum transmitting hose.

d. onnect the No. 2 ventilation hose.

48. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (lick here).

49. ADD ENGINE OIL

a. Install a new gasket and the drain plug.

Torque:
39 N*m{ 398 kgf*cm , 29 ft.*lbf }

b. Add new engine oil.

Standard Engine Oil:

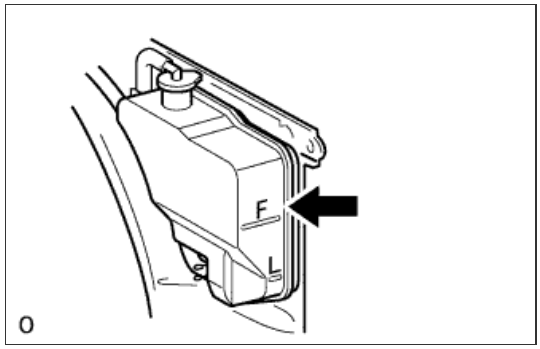
il Grade	il iscosity (SA)
API grade SL nergy-onserving , SM nergy-onserving or ILSA multigrade engine oil	10W-30 (10W-30 is best choice for fuel economy and good starting in cold weather).
API grade SL or SM multigrade engine oil	10W-30

Standard Oil Capacity:

Item	Specified ondition
Drain and refill with oil filter change	6.2 liters (6.6 US qts, 5.5 Imp. qts)
Drain and refill without oil filter change	5.7 liters (6.0 US qts, 5.0 Imp. qts)
Dry fill	7.1 liters (7.5 US qts, 6.2 Imp. qts)

50. ADD ENGINE COOLANT

a. Add engine coolant.



Standard Capacity:

Item		Specified ondition
w/o Transmission oil cooler	w/o Rear Heater	13.4 liters (14.2 US qts, 11.8 Imp. qts)
	w/ Rear Heater	16.3 liters (17.2 US qts, 14.3 Imp. qts)
w/ Transmission oil cooler	w/o Rear Heater	14.1 liters (14.9 US qts, 12.4 Imp. qts)
	w/ Rear Heater	16.9 liters (17.9 US qts, 14.9 Imp. qts)

HINT:

T TA vehicles are filled with T TA SLL at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use T TA SLL or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the radiator reservoir cap.

d. Press the inlet and outlet radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Start the engine and warm it up until the thermostat opens.

NOTICE:

Switch off the A/ .

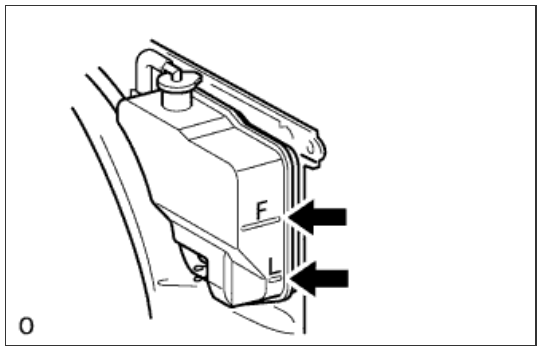
g. Maintain the engine speed at 2000 to 2500 rpm.

NOTICE:

- **Make sure that the radiator reservoir still has some coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**
- **Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the F line.**
- **Run the engine at 2000 rpm until the coolant level has stabilized.**

h. Press the inlet and outlet radiator hoses several times by hand to bleed air.

CAUTION:



- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the cooling fan.**

i. Stop the engine, and wait until the engine coolant cools down to the ambient temperature.

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

j. heck that the coolant level is between the F and L lines. If the coolant level is below the L line, repeat all of the procedures above. If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.

51. INSPECT FOR FUEL LEAK

a. onnect the intelligent tester to the DL 3

b. Turn the engine switch on (IG) and intelligent tester .

NOTICE:

Do not start the engine.

c. nter the following menus: Powertrain / ngine and T / Active Test / Activate the Fuel Pump Speed ontrol.

d. heck that there are no fuel leaks after doing maintenance anywhere on the fuel system.

52. INSPECT FOR OIL LEAK

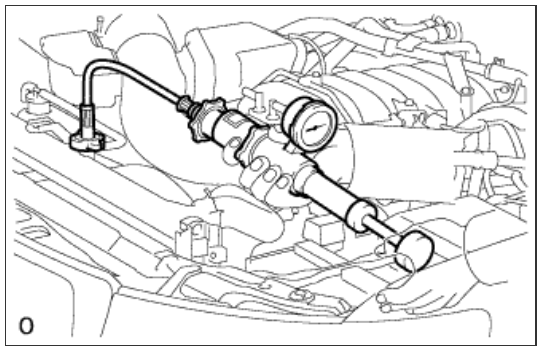
a. Start the engine. Make sure that there are no oil leaks from the area that was worked on.

53. INSPECT ENGINE OIL LEVEL

a. Warm up the engine, then stop the engine and wait for 5 minutes.

b. heck that the engine oil level is between the low level and full level marks on the dipstick.
If low, check for leakage and add oil up to the full level mark.

NOTICE:



Do not fill engine oil above the full level mark.

54. INSPECT FOR COOLANT LEAK

a. Fill the radiator with coolant and attach a radiator cap tester.

b. Warm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.

55. INSPECT IGNITION TIMING

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. When using the intelligent tester:

i. onnect the intelligent tester to the DL 3

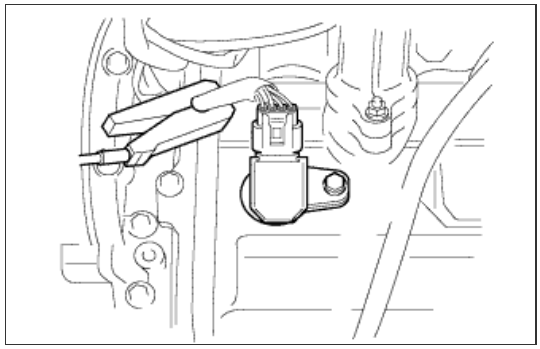
NOTICE:

Switch off all accessories and the A/ before connecting the intelligent tester.

ii. Start the engine and idle it.

iii. Push the intelligent tester main switch .

iv. nter the following menus: Powertrain / ngine and T / Data List / Primary / IGN Advance.



HINT:

Refer to the intelligent tester operator s manual for further details.

Standard ignition timing:
5 to 15° BTDC @ idling (transmission in neutral and A/C switch off)

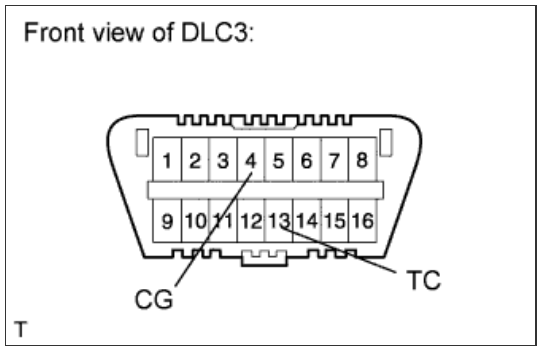
v. Disconnect the intelligent tester from the DL 3

c. When not using the intelligent tester:

i. Remove the 2 nuts and -bank cover.

ii. onnect the tester probe of a timing light to the wire of the ignition coil connector for the No. 1 cylinder.

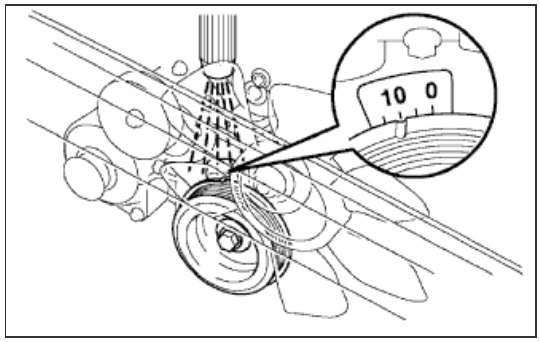
NOTICE:



Use a timing light that detects primary signals.

iii. Using SST, connect terminals 13 (T and 4 (of the DL 3

SST
09843-18040



NOTICE:

- **Confirm the terminal numbers before connecting them. Connecting the wrong terminals can damage the engine.**
- **Switch off all accessories and the A/C.**

iv. Using the timing light, check the ignition timing.

Ignition timing:
5 to 15° BTDC @ idling (transmission in neutral and A/C switch off)

v. Remove SST from the DL 3

vi. Disconnect the timing light from the engine.

vii. Install the -bank cover with the 2 nuts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

56. INSPECT ENGINE IDLE SPEED

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. When using the intelligent tester:

i. onnect the intelligent tester to the DL 3

NOTICE:

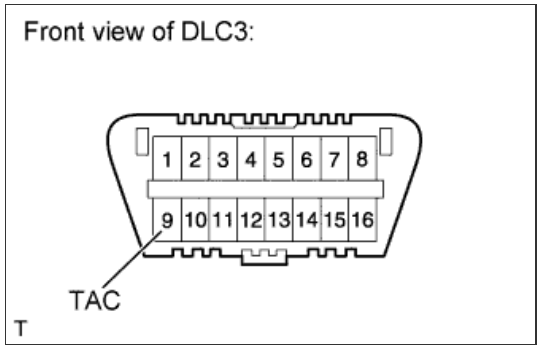
Switch off all accessories and the A/ before connecting the intelligent tester.

ii. Race the engine at 2500 rpm for approximately 90 seconds.

iii. Push the intelligent tester main switch .

iv. nter the following menus: Powertrain / ngine and T / Data List / Primary / ngine Speed.

Standard idle speed:
650 to 750 rpm (transmission in neutral and A/C switch off)



HINT:

Refer to the intelligent tester operator s manual for further details.

If the idle speed is not as specified, check the air intake system.

v. Disconnect the intelligent tester from the DL 3

c. When not using the intelligent tester:

i. Using SST, connect a tachometer probe to terminal 9 (TA)f the DL 3

SST
09843-18030

NOTICE:

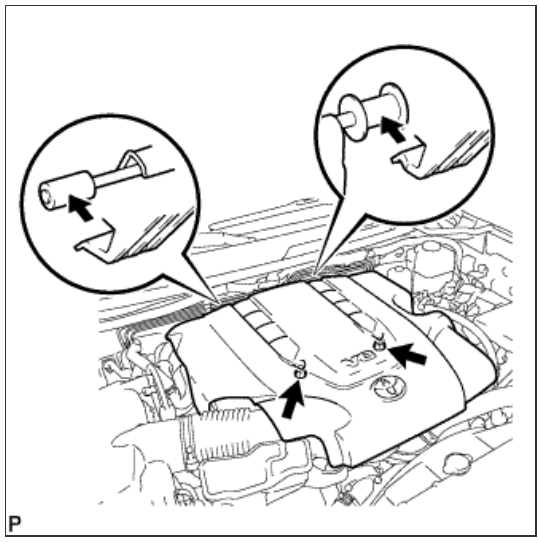
- **Confirm the terminal number before connecting the probe. Connecting the probe to the wrong terminal can damage the engine.**
- **Switch off all accessories and the A/C.**

ii. Race the engine at 2500 rpm for approximately 90 seconds.

iii. heck the idle speed.

Standard idle speed:
650 to 750 rpm (transmission in neutral and A/C switch off)

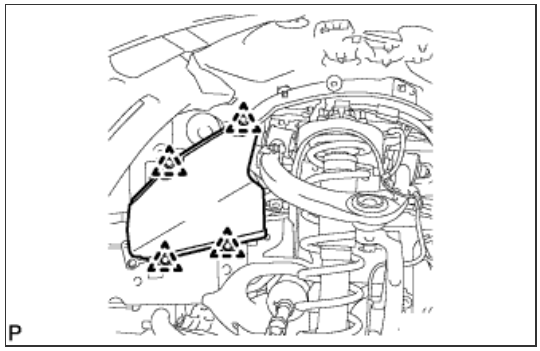
If the idle speed is not as specified, check the air intake system.



iv. Disconnect the tachometer from the DL 3

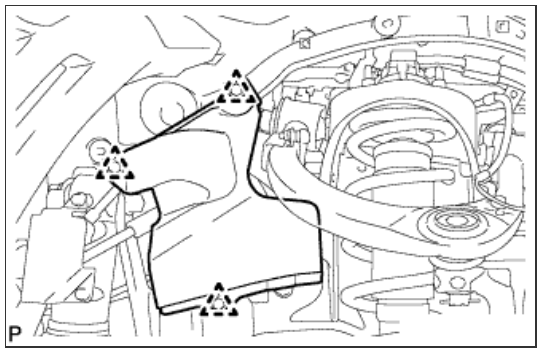
57. INSTALL V-BANK COVER SUB-ASSEMBLY

a. Attach the 2 -bank cover hooks to the bracket.



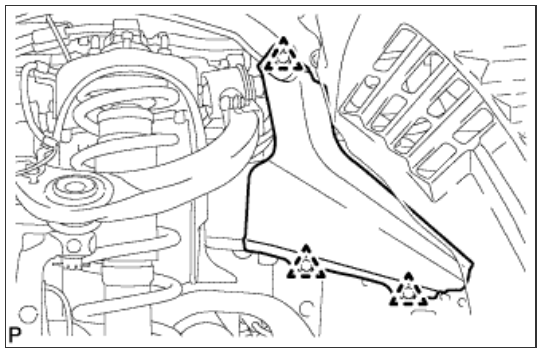
b. Install the -bank cover with the 2 nuts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }



58. INSTALL FRONT FENDER APRON SEAL LH

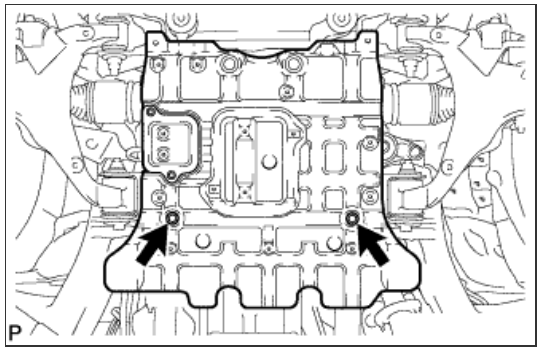
a. Install the fender apron seal with the 4 clips.



59. INSTALL FRONT FENDER APRON SEAL LH (w/ KDSS)

a. Install the fender apron seal with the 3 clips.

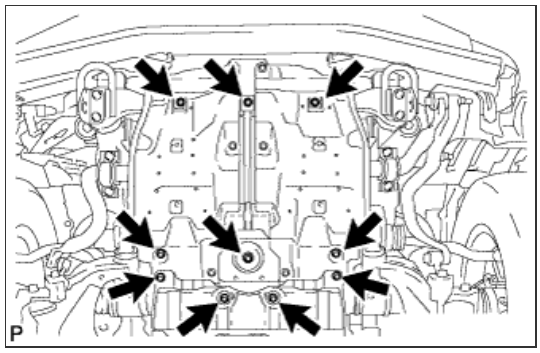
60. INSTALL FRONT FENDER APRON SEAL FRONT RH



a. Install the fender apron seal with the 3 clips.

61. INSTALL NO. 2 ENGINE UNDER COVER

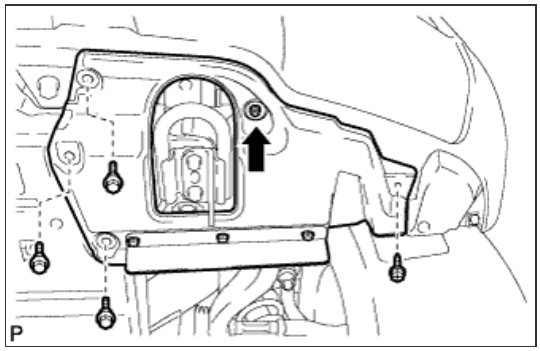
a. Install the No. 2 engine under cover with the 2 bolts.



Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

62. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.



Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

63. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

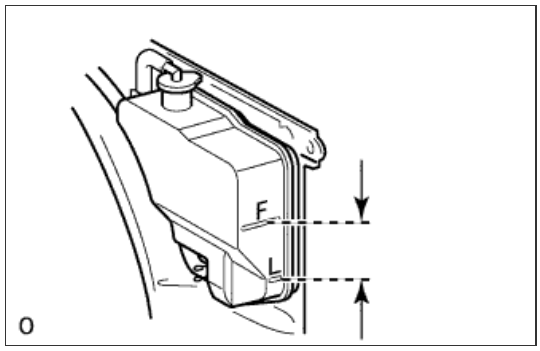
a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the 3 bolts and screw.

64. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

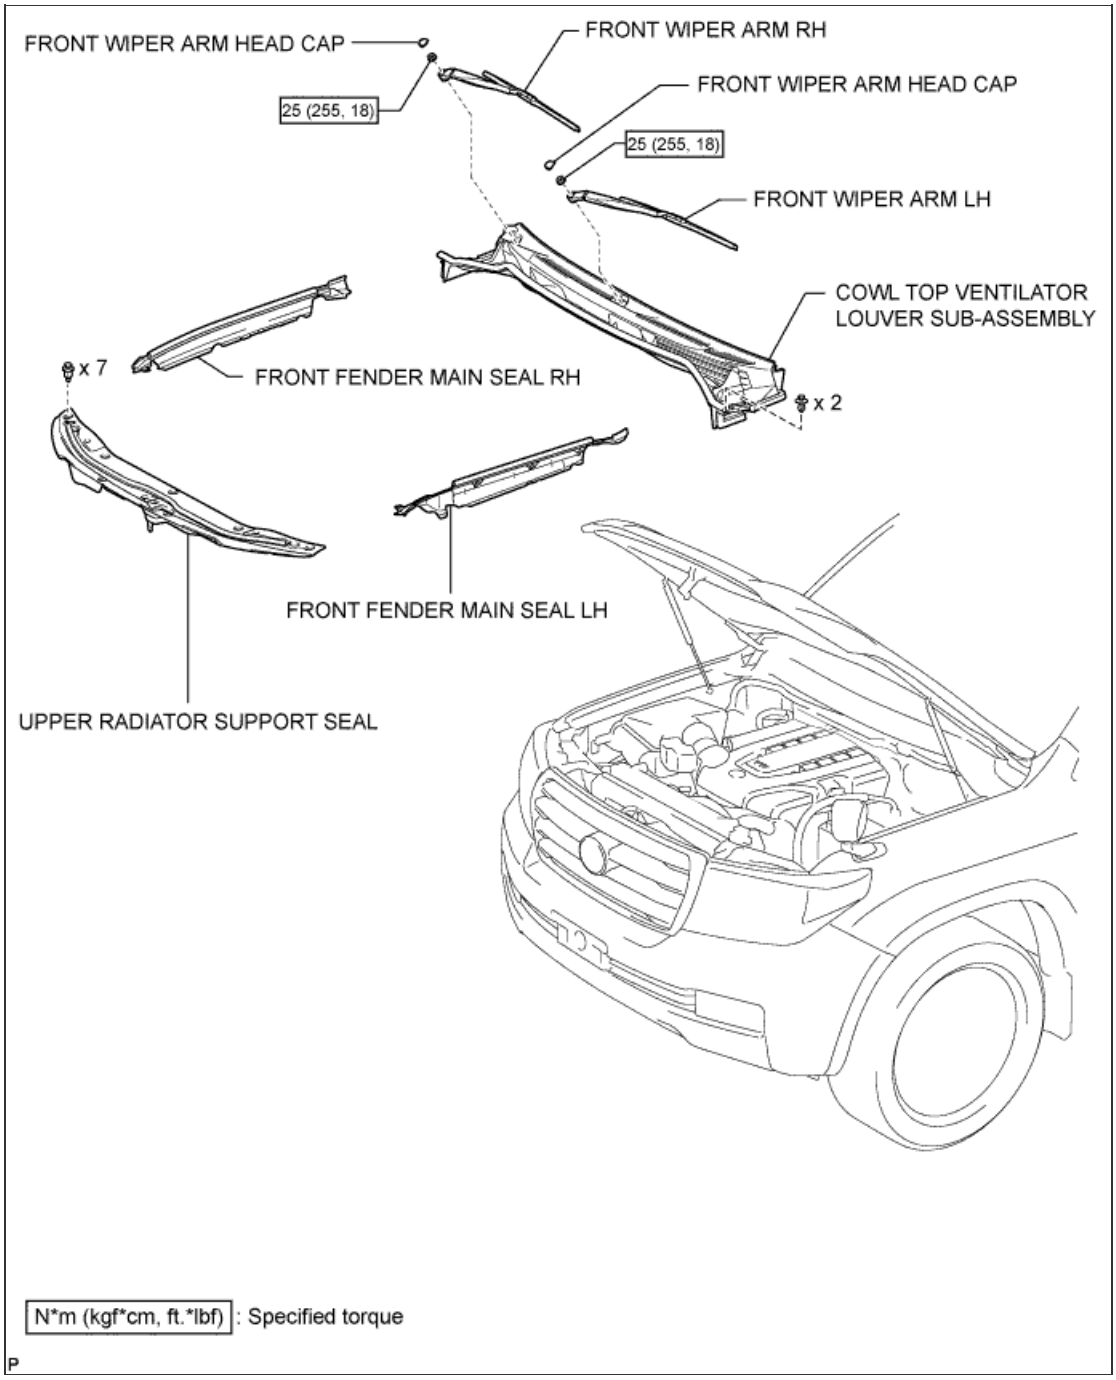
HINT:

Use the same procedures described for the LH side.

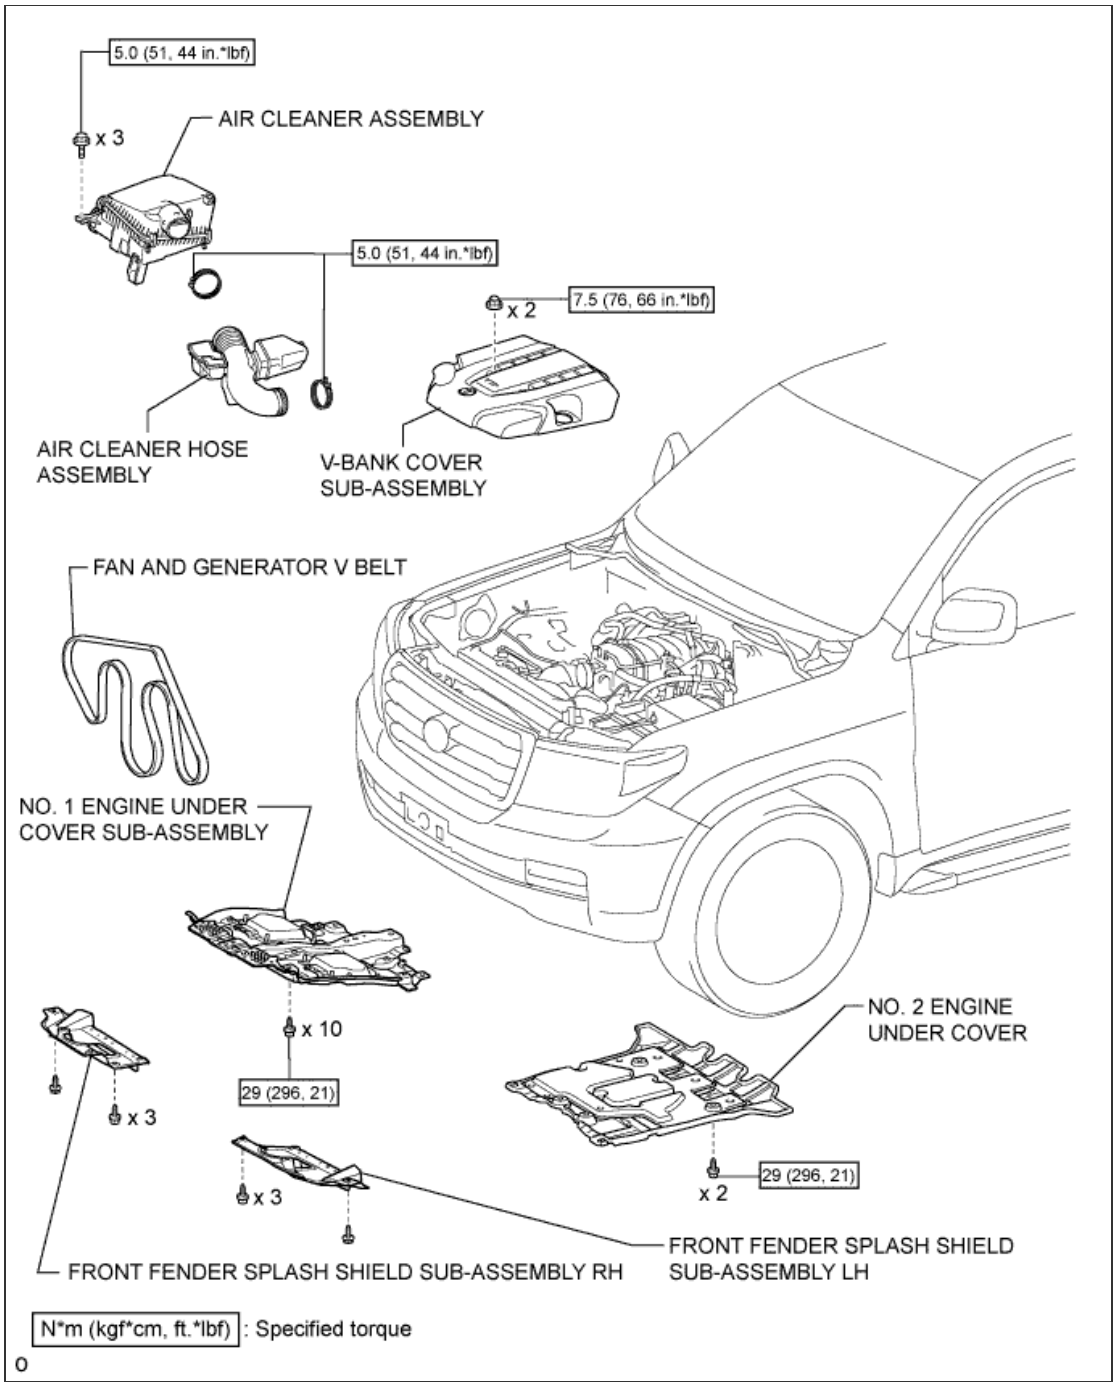


65. INSPECT ENGINE COOLANT LEVEL

a. heck that the engine coolant level is between the L and F lines when the engine is cold.
If the engine coolant is low, check for leaks and add T TA Super Long Life oolant or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite and non-borate coolant with long-life hybrid organic acid technology to the F line.

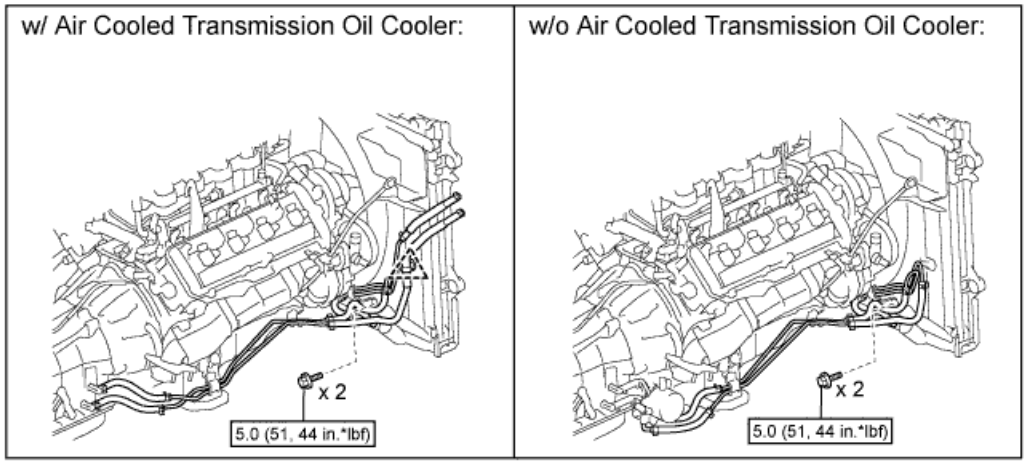


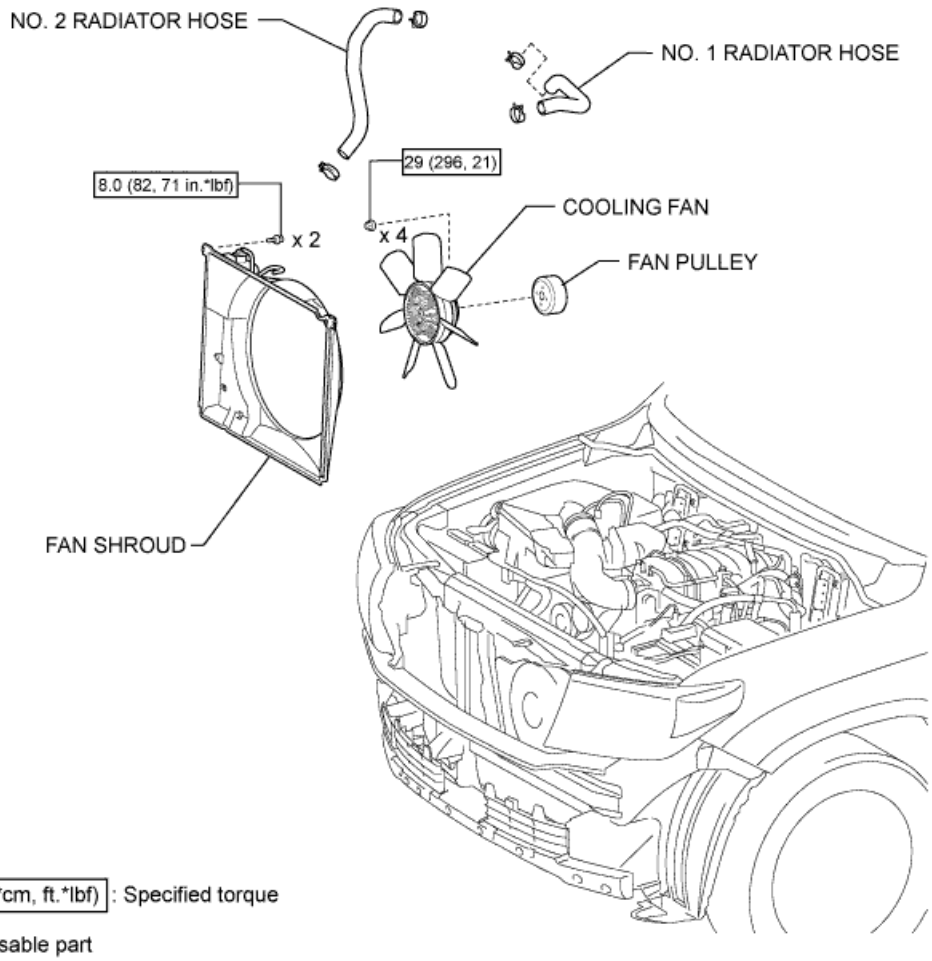
NOTICE:



Do not substitute plain water for engine coolant.

b. Remove the radiator cap, and check that the coolant level is up to the radiator filler hole.





for Preparation Click here

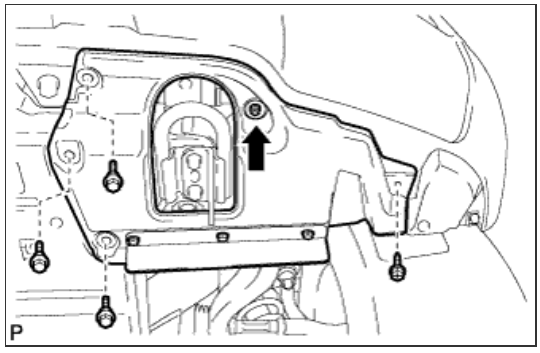
1. DISCHARGE FUEL SYSTEM PRESSURE

a. Discharge the fuel system pressure (Click here).

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.



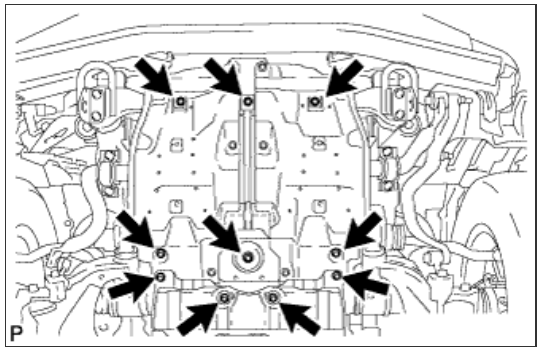
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

3. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and screw.

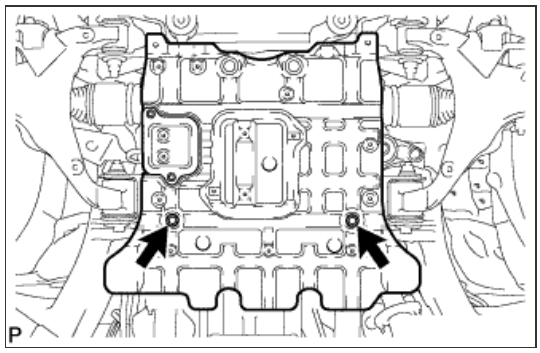
b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



4. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

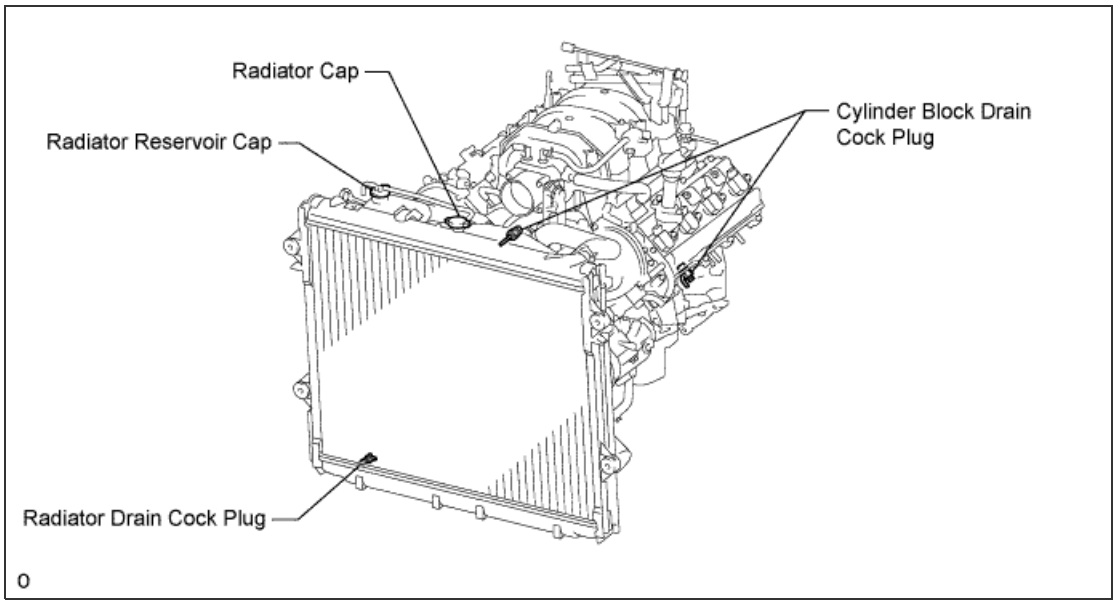
Use the same procedures described for the LH side.



5. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and No. 1 engine under cover.

6. REMOVE NO. 2 ENGINE UNDER COVER



a. Remove the 2 bolts and No. 2 engine under cover.

7. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Loosen the radiator drain cock plug.

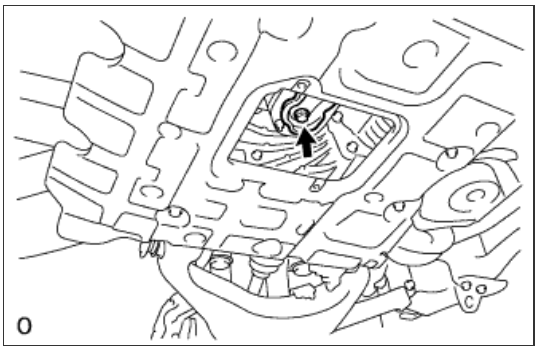
b. Remove the radiator cap. Then drain the coolant.

HINT:

Collect the coolant in a container and dispose of it according to the regulations in your area.

c. Loosen the 2 cylinder block drain cock plugs. Then drain the coolant from the engine.

. Tighten the 2 cylinder block drain cock plugs.



Torq e:
13 N 13 k f c 9 ft. lbf }

e. Tighten the radiator drain cock plug by hand.

. DRAIN ENGINE OIL

a. Remove the oil drain plug and gasket, and drain the engine oil into a container.

b. Remove the oil drain plug and gasket, and drain the engine oil into a container.

9. DISCONNECT FRONT NO. 2 EXHAUST PIPE ASSEMBLY

a. Disconnect the air fuel ratio sensor connector.

b. Disconnect the heated oxygen sensor connector.

c. Remove the 3 nuts and 2 bolts, disconnect the front No. 2 exhaust pipe from the exhaust manifold LH and center exhaust pipe, and then remove the 2 gaskets.

HINT:

It is not necessary to remove the front No. 2 exhaust pipe from the vehicle.

. Remove the bolt and disconnect the exhaust manifold LH from the No. 2 manifold stay.

1 . DISCONNECT FRONT EXHAUST PIPE ASSEMBLY

a. Disconnect the air fuel ratio sensor connector.

b. Disconnect the heated oxygen sensor connector.

c. Detach the heated oxygen sensor wire clamp.

. Remove the 3 nuts and 2 bolts, disconnect the front exhaust pipe from the exhaust manifold RH and center exhaust pipe, and then remove the 2 gaskets.

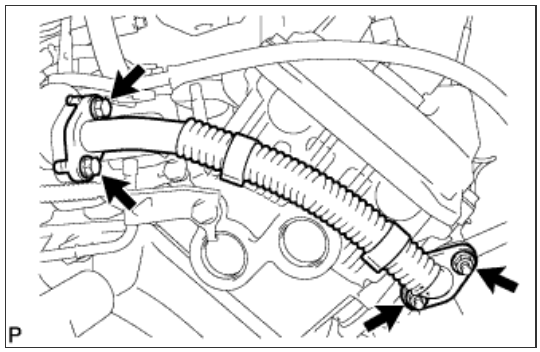
HINT:

It is not necessary to remove the front exhaust pipe from the vehicle.

e. Remove the bolt and disconnect the exhaust manifold RH from the manifold stay RH.

11. REMOVE CO L TOP VENTILATOR LOUVER SUB-ASSEMBLY

a. Remove the cowl top ventilator louver (Click here).

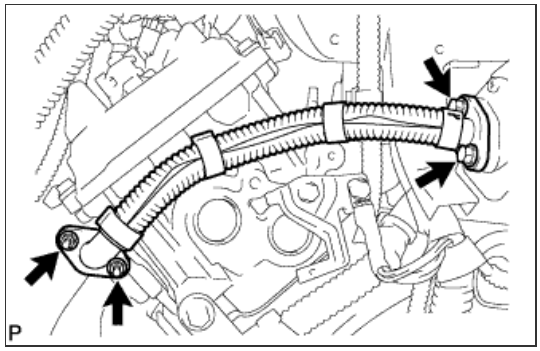


12. REMOVE INTAKE MANIFOLD

a. Remove the intake manifold (Click here).

13. REMOVE AIR TUBE SUB-ASSEMBLY RH Secon ar Air In ection S te

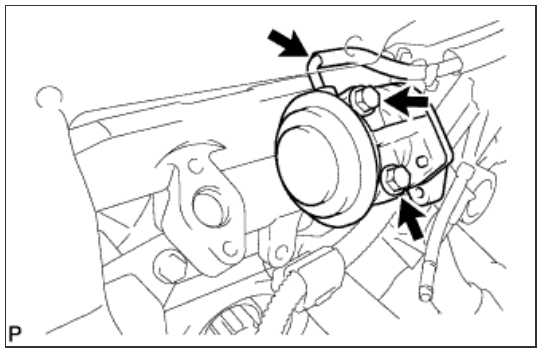
a. Remove the 2 bolts, 2 nuts and air tube sub-assembly.



b. Remove the 2 gaskets.

14. REMOVE NO. 3 AIR TUBE Secon ar Air In ection S te

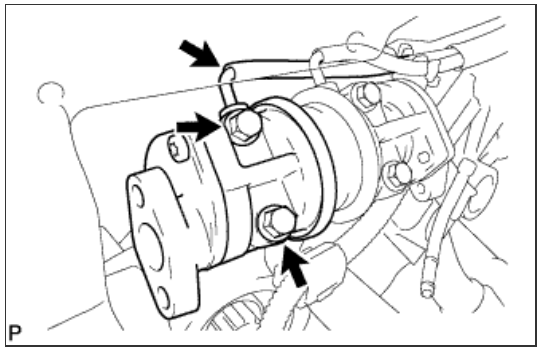
a. Remove the 2 bolts, 2 nuts and No. 3 air tube.



b. Remove the 2 gaskets.

15. REMOVE NO. 1 AIR S ITCHING VALVE ASSEMBLY Secon ar Air In ection S te

a. Remove the vacuum switching valve hose from the No. 1 air switching valve.

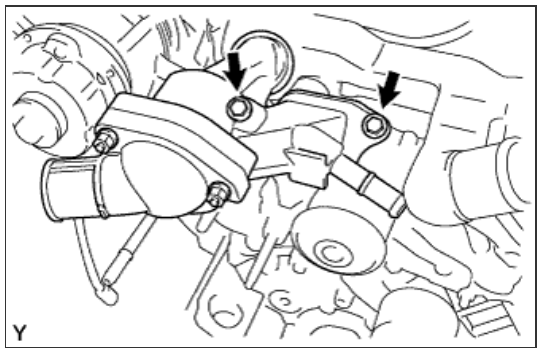


b. Remove the 2 bolts, gasket and No. 1 air switching valve from the rear water by-pass joint.

16. REMOVE NO. 2 AIR S ITCHING VALVE ASSEMBLY Secon ar Air In ection S te

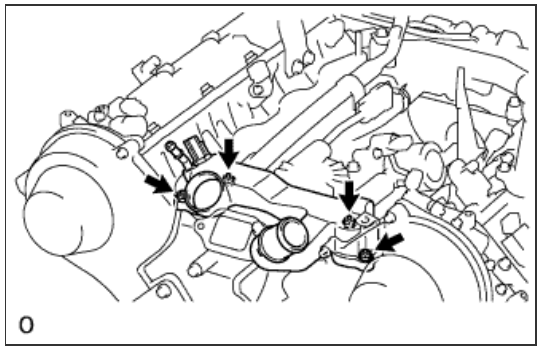
a. Remove the vacuum switching valve hose from the No. 2 air switching valve.

b. Remove the 2 bolts, gasket and No. 2 air switching valve from the rear water by-pass joint.



17. REMOVE ATER INLET HOUSING

a. Remove the 2 bolts holding the water inlet housing to the water pump.



b. Disconnect the water inlet housing from the front water by-pass joint and water pump. Then remove the water inlet and inlet housing assembly.

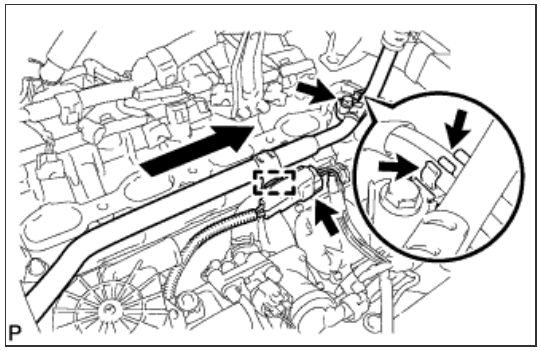
c. Remove the O-ring from the water inlet housing.

1 . REMOVE FRONT ATER BY-PASS OINT

a. Remove the 4 nuts, front water by-pass joint and 2 gaskets.

19. REMOVE ATER BY-PASS PIPE SUB-ASSEMBLY

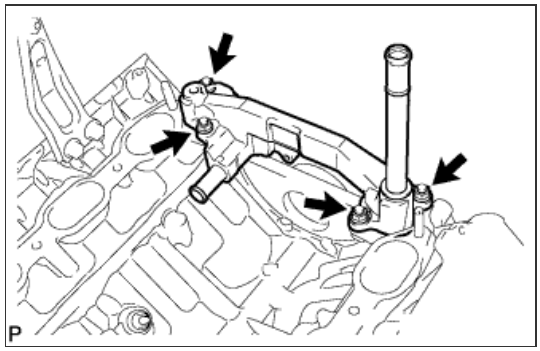
a. Disconnect the connector.



b. Disconnect the wire harness clamp from the water by-pass pipe.

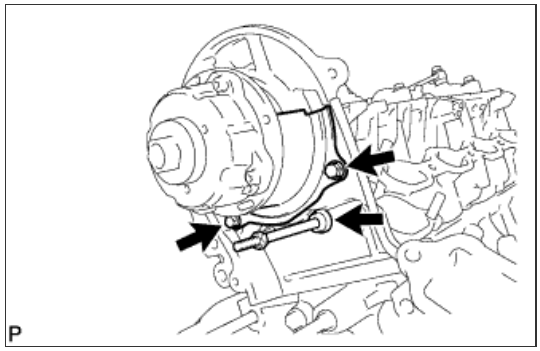
c. Disconnect the 2 vacuum switching valve hoses from the water by-pass pipe clamp.

. Remove the bolt.



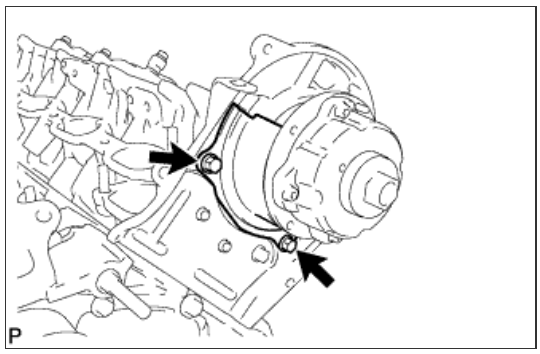
e. Pull out the water by-pass pipe.

f. Remove the O-ring from the water by-pass pipe.



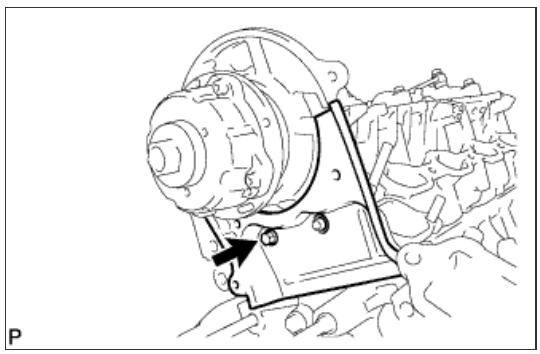
2 . REMOVE REAR ATER BY-PASS OINT

a. Remove the 4 nuts, water by-pass joint and 2 gaskets.



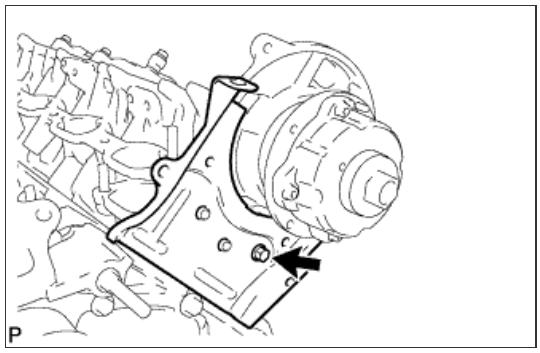
21. REMOVE REAR NO. 2 TIMING BELT PLATE RH

a. Remove the 2 bolts, stud bolt and timing belt plate.



22. REMOVE REAR NO. 2 TIMING BELT PLATE LH

a. Remove the 2 bolts and timing belt plate.

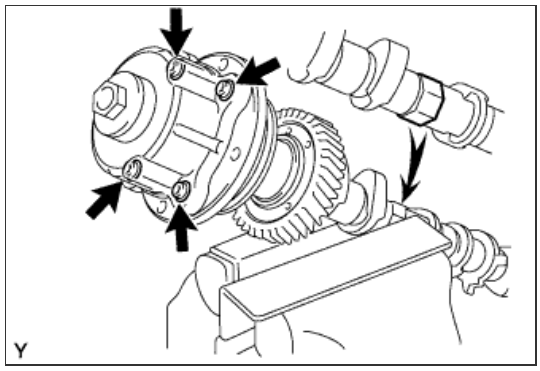


23. REMOVE REAR TIMING BELT PLATE RH

a. Remove the bolt and rear timing belt plate.

24. REMOVE REAR TIMING BELT PLATE LH

a. Remove the bolt and rear timing belt plate.

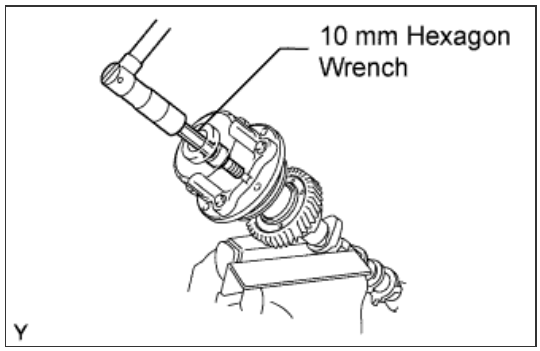


25. REMOVE CAMSHAFT

a. Remove the camshaft (Click here).

26. REMOVE CAMSHAFT TIMING TUBE ASSEMBLY

a. ount the hexagonal portion of the camshaft in a vise.



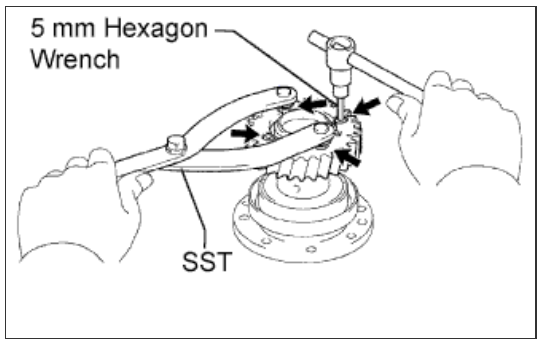
NOTICE:

- **Be caref l not to a a e the ca haft.**
- **Do not loosen or re oe the 4 bolts shown in the ill tration. If an of the are loosene or re oe the backlash of the ear in the ti in t be will œ t of a t ent. In this case replace the ti in t be asse bl with a new one.**

b. Remove the screw plug and seal washer.

c. Using a 10 mm hexagon wrench, remove the bolt and timing tube.

27. REMOVE CAMSHAFT DRIVE GEAR



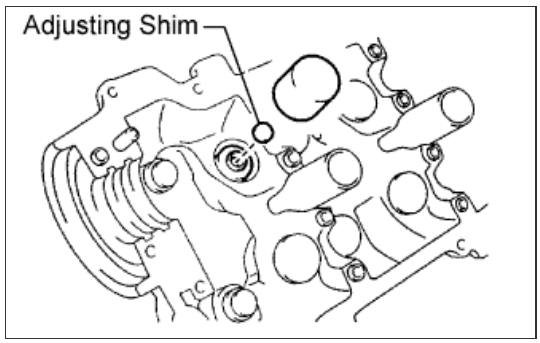
a. Using SST and a 5 mm hexagon wrench, remove the 4 bolts, drive gear and oil seal.

SST

-16 1 2- 16 3- 6 5

NOTICE:

Be careful not to damage the timing tube.

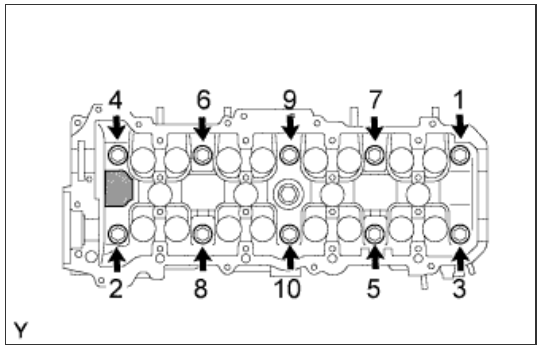


2 . REMOVE VALVE LIFTER

a. Remove the valve lifters and adjusting shims from the cylinder head.

HINT:

rrange the removed parts in the correct order.

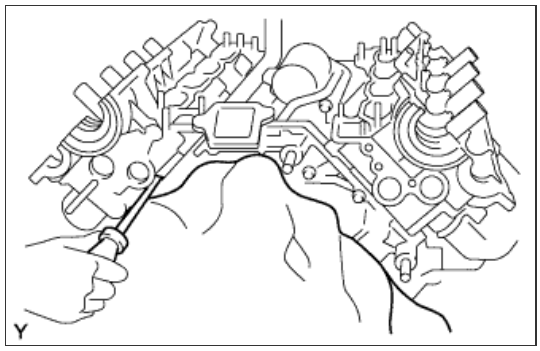


29. REMOVE CYLINDER HEAD SUB-ASSEMBLY

a. Uniformly loosen the 10 cylinder head bolts on the cylinder head in several passes, in the se uence shown in the illustration.

b. Remove the bolts and plate washers.

NOTICE:



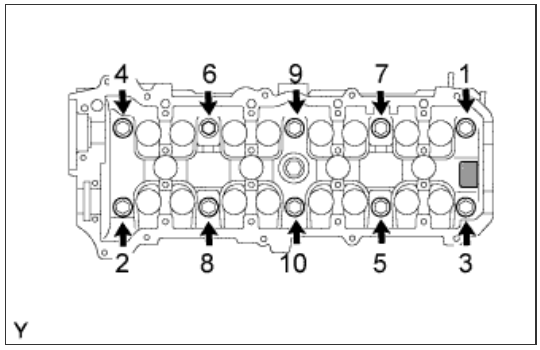
- C lin er hea warpa e or crackin co l res lt fro re oin bolts in the incorrect or er.
- Do not rop the plate washer for the c lin er hea bolt of the c lin er hea .

c. Remove the cylinder head by prying between the cylinder block and cylinder head with a screwdriver.

NOTICE:

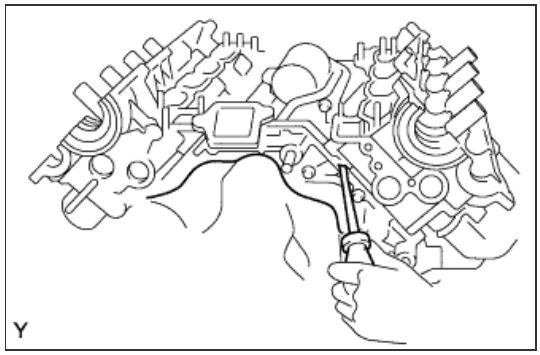
- Be caref l not to a a e the contact s rfaces of the c lin er hea an c lin er block.
- The c lin er hea sho l not be tilte so as to sec re the al e lifter. If the c lin er hea is tilte re oe the al e lifter an check that the a tin shi is set correctl .

3 . REMOVE CYLINDER HEAD GASKET



31. REMOVE CYLINDER HEAD LH

a. Uniformly loosen the 10 cylinder head bolts on the cylinder head in several passes, in the se uence shown in the illustration.



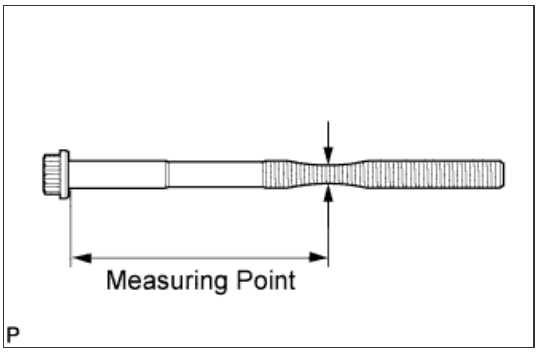
b. Remove the bolts and plate washers.

NOTICE:

- C lin er hea warpa e or crackin co l res lt fro re oin bolts in the incorrect or er.
- Do not rop the plate washer for the c lin er hea bolt of the c lin er hea .

c. Remove the cylinder head by prying between the cylinder block and cylinder head with a screwdriver.

NOTICE:



- **Be caref l not to a a e the contact s rfaces of the c lin er hea an c lin er block.**
- **The c lin er hea sho l not be tilte so as to sec re the al e lifter. If the c lin er hea is tilte re oe the al e lifter an check that the a tin shi is set correctl .**

32. REMOVE CYLINDER HEAD GASKET LH

for Preparation Click here

1. INSPECT CYLINDER HEAD SET BOLT

a. Using a vernier caliper, measure the thread outside diameter of the bolt.

Measuring Point:

Item	Specified Condition
Intake side	82 mm (3.23 in.)
Exhaust side	86 mm (3.39 in.)

Standard outside diameter:
9.810 to 9.960 mm (0.386 to 0.392 in.)

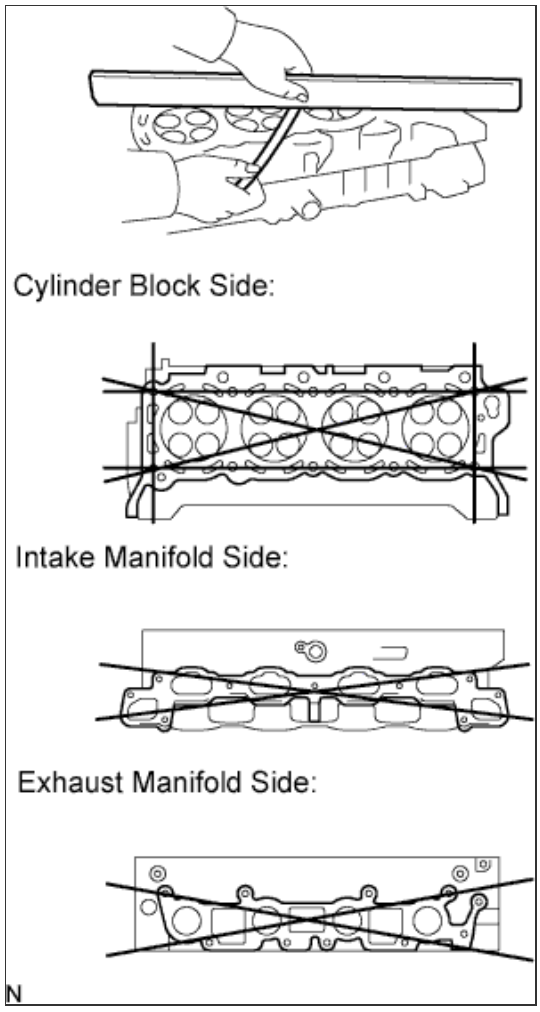
Minimum outside diameter:
9.700 mm (0.382 in.)

If the outside diameter is less than the minimum, replace the cylinder head set bolt.

HINT:

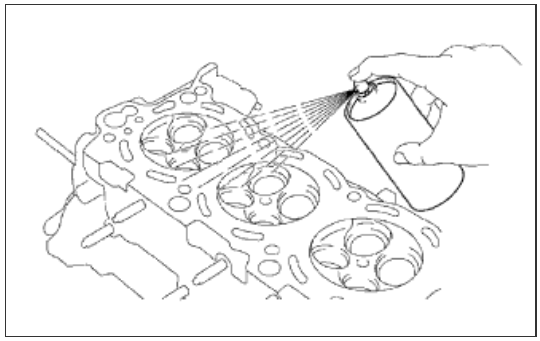
If a visual check reveals no excessively thin areas, check the center of the bolt (see illustration) and find the area that has the minimum diameter.

2. INSPECT CYLINDER HEAD SUB-ASSEMBLY



a. Using a precision straightedge and feeler gauge, measure the surfaces contacting the cylinder block and manifolds for warpage.

Standard Warpage:



Item	Specified Condition
Cylinder block side	0 to 0.05 mm (0 to 0.00197 in.)
Intake manifold side	0 to 0.08 mm (0 to 0.00315 in.)
Exhaust manifold side	0 to 0.08 mm (0 to 0.00315 in.)

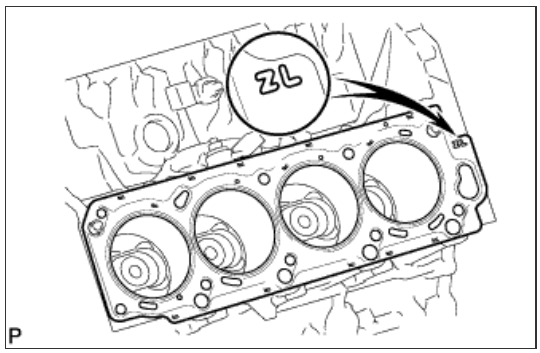
Maximum warpage:
0.10 mm (0.00394 in.)

If the warpage is more than the maximum, replace the cylinder head sub-assembly.

b. Using a dye penetrant, check the combustion chamber, intake ports, exhaust ports and cylinder block surface for cracks.
If the cylinder head is cracked, replace it.

3. INSTALL CYLINDER HEAD GASKET LH

a. Clean the cylinder block and cylinder head with solvent.



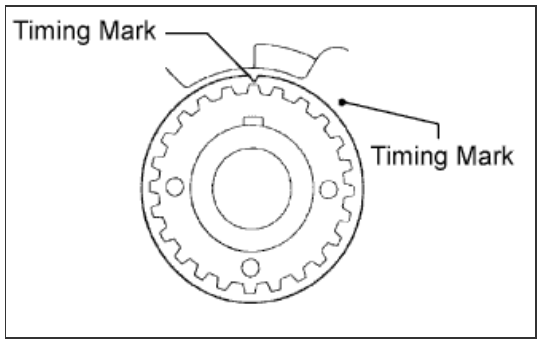
b. Place a new cylinder head gasket in position on the cylinder block.

HINT:

A mark is placed on the rear side of the cylinder head gasket to distinguish the LH and RH sides, a "2R" mark for the RH side and a "2L" mark for the LH side.

NOTICE:

Be careful of the installation direction.



4. INSTALL CYLINDER HEAD LH

HINT:

The cylinder head bolts are tightened in 3 progressive steps.

a. Check that the timing mark of the crankshaft timing pulley is in the position shown in the illustration, and that the piston is below the TDC of compression.

b. Install the cylinder head with the exhaust manifold to the cylinder block.

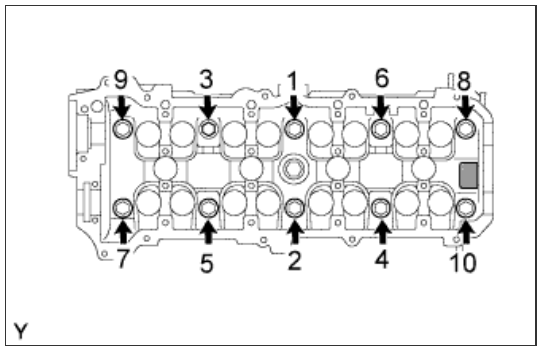
NOTICE:

Ensure that no oil is on the mounting surface of the cylinder head.

c. Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.

d. Step 1:

i. Set the plate washer to the cylinder head bolt.



ii. Install and uniformly tighten the 10 cylinder head bolts and plate washers in the sequence shown in the illustration.

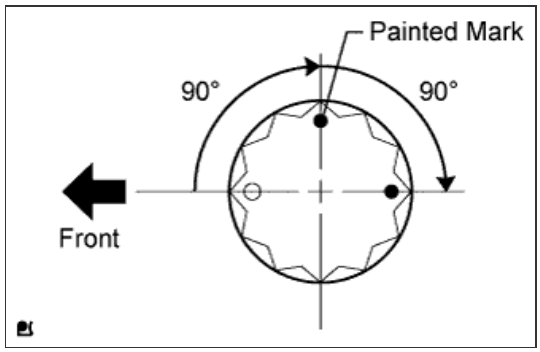
Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

If any one of the cylinder head bolts does not meet the torque specification, replace the cylinder head bolt.

NOTICE:

Do not drop the plate washer for the cylinder head bolt of the cylinder head.

e. Step 2:



i. Mark the cylinder head bolt head with paint as shown in the illustration.

ii. Tighten the cylinder head bolts 90° in the sequence shown in step 1.

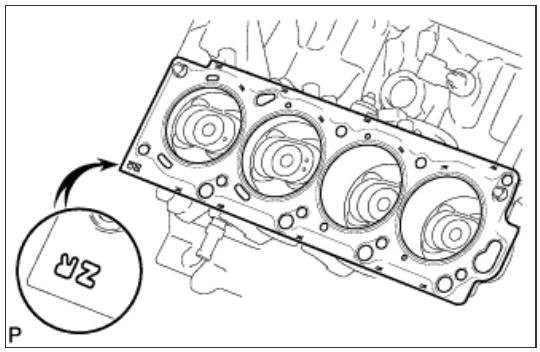
f. Step 3:

i. Tighten the cylinder head bolts another 90° in the sequence shown in step 1.

ii. Check that the painted marks are now facing rearward.

5. INSTALL CYLINDER HEAD GASKET

a. Clean the cylinder block and cylinder head with solvent.



b. Place a new cylinder head gasket in position on the cylinder block.

HINT:

A mark is placed on the rear side of the cylinder head gasket to distinguish the LH and RH sides, a "2R" mark for the RH side and a "2L" mark for the LH side.

NOTICE:

Be careful of the installation direction.

6. INSTALL CYLINDER HEAD SUB-ASSEMBLY

HINT:

The cylinder head bolts are tightened in 3 progressive steps.

a. Install the cylinder head with the exhaust manifold to the cylinder block.

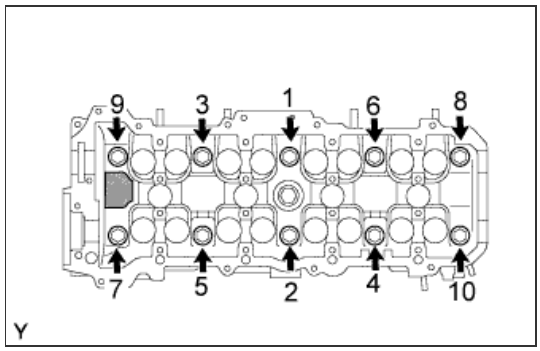
NOTICE:

Ensure that no oil is on the mounting surface of the cylinder head.

b. Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.

c. Step 1:

i. Set the plate washer to the cylinder head bolt.



ii. Install and uniformly tighten the 10 cylinder head bolts and plate washers in the sequence shown in the illustration.

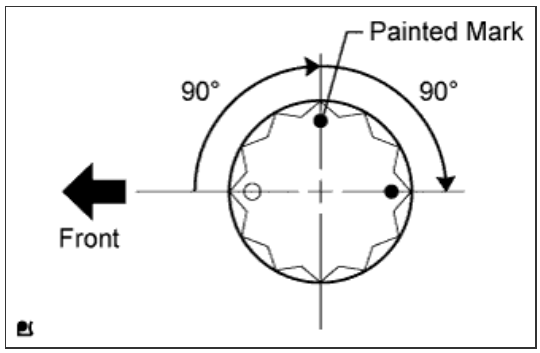
Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

If any one of the cylinder head bolts does not meet the torque specification, replace the cylinder head bolt.

NOTICE:

Do not drop the plate washer for the cylinder head bolt of the cylinder head.

d. Step 2:



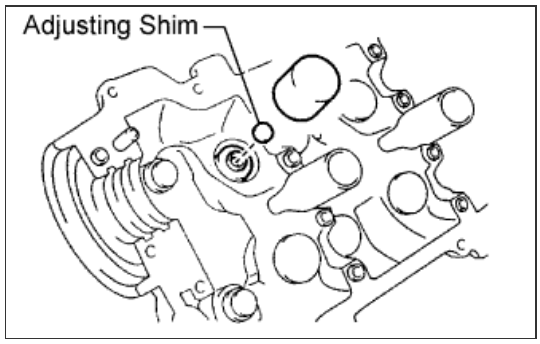
i. Mark the cylinder head bolt head with paint as shown in the illustration.

ii. Tighten the cylinder head bolts 90° in the sequence shown in step 1.

e. Step 3:

i. Tighten the cylinder head bolts another 90° in the sequence shown in step 1.

ii. Check that the painted marks are now facing rearward.



7. INSTALL VALVE LIFTER

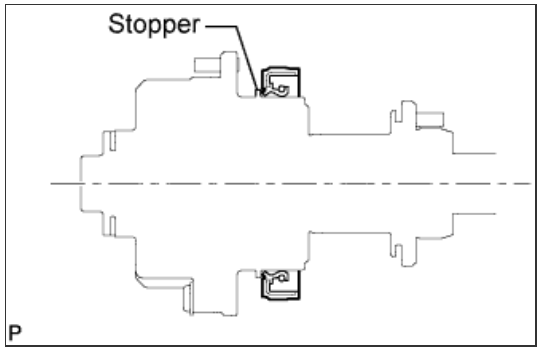
a. Apply a light coat of engine oil to the valve lifters and adjusting shims.

b. Install the valve lifters and shims to the cylinder head.

c. Check that the valve lifter rotates smoothly by hand.

8. INSTALL CAMSHAFT SETTING OIL SEAL

a. Apply MP grease to the lip of a new oil seal.



NOTICE:

- **Do not allow foreign matter to contact the lip of the oil seal.**
- **Do not allow MP grease to contact the dust seal.**

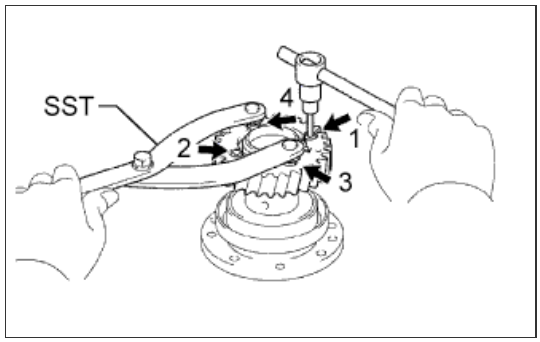
b. Insert the oil seal into the camshaft timing tube until it reaches the stopper.

NOTICE:

- **Be careful of the installation direction.**
- **Do not turn over the lip of the oil seal.**

9. INSTALL CAMSHAFT DRIVE GEAR

a. Align the timing tube knock pin with the knock pin groove of the drive gear, and temporarily install the drive gear with the 4 bolts.



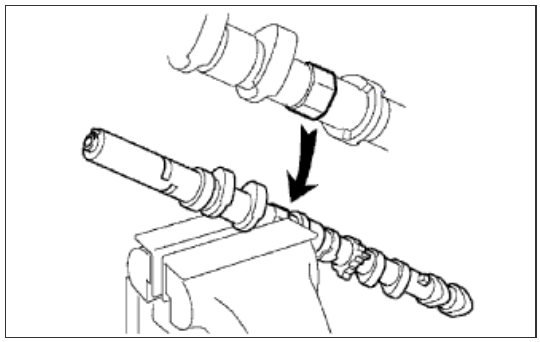
b. Using SST and a 5 mm hexagon wrench, uniformly tighten the 4 bolts in several steps, in the sequence shown in the illustration.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

SST
09960-10010 (09962-01000, 09963-00500)

NOTICE:

Be careful not to damage the timing tube.

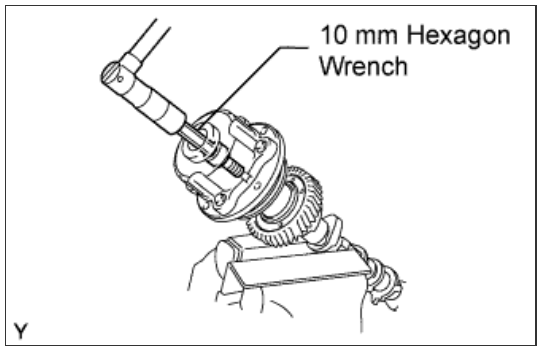


10. INSTALL CAMSHAFT TIMING TUBE ASSEMBLY

a. Mount the hexagonal portion of the camshaft in a vise.

NOTICE:

Be careful not to damage the camshaft.



b. Apply a light coat of engine oil to the camshaft and camshaft timing tube.

c. Align the camshaft knock pin with the knock pin hole of the timing tube, and push the timing tube by hand until the camshaft knock pin touches the bottom of the timing tube knock pin hole.

NOTICE:

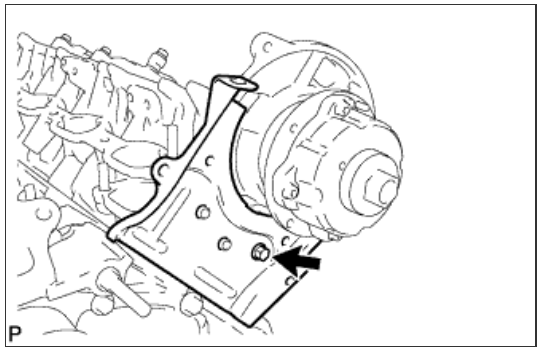
Do not forcefully push on the camshaft timing tube. This may cause the camshaft knock pin tip to damage the installation surface of the camshaft timing tube.

d. Using a 10 mm socket hexagon wrench, install the bolt.

Torque:
78 N*m{ 795 kgf*cm , 58 ft.*lbf }

e. Install the seal washer and screw plug.

Torque:
15 N*m{ 153 kgf*cm , 11 ft.*lbf }

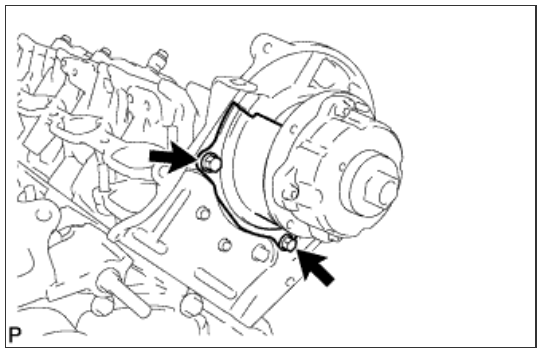


11. INSTALL CAMSHAFT

a. Install the camshaft (Click here).

12. INSTALL REAR TIMING BELT PLATE LH

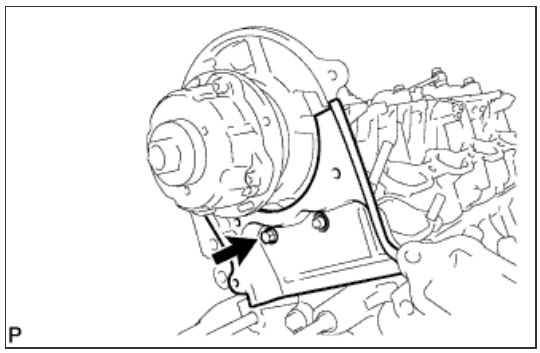
a. Install the timing belt plate with the bolt.



Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

13. INSTALL REAR NO. 2 TIMING BELT PLATE LH

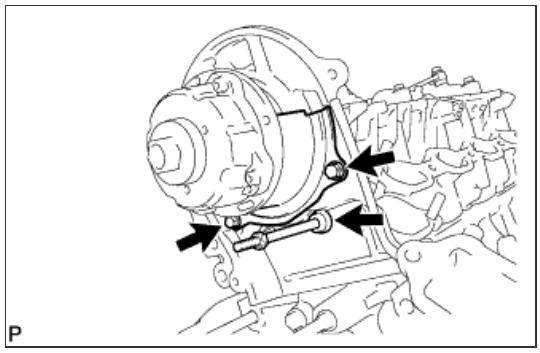
a. Install the timing plate with the 2 bolts.



Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

14. INSTALL REAR TIMING BELT PLATE RH

a. Install the timing belt plate with the bolt.

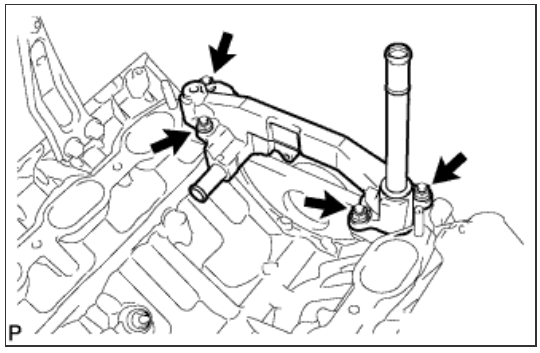


Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

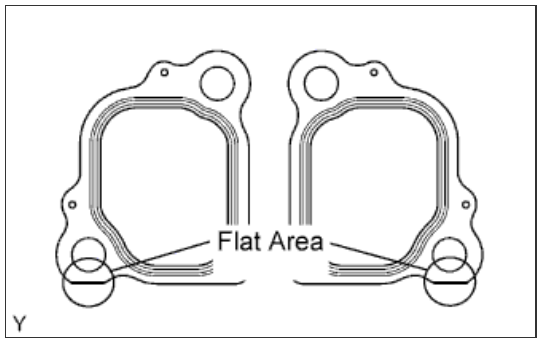
15. INSTALL REAR NO. 2 TIMING BELT PLATE RH

a. Install the timing plate with the 2 bolts and stud bolt.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }



16. INSTALL REAR WATER BY-PASS JOINT



a. Install 2 new gaskets and the water by-pass joint with the 4 nuts.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

HINT:

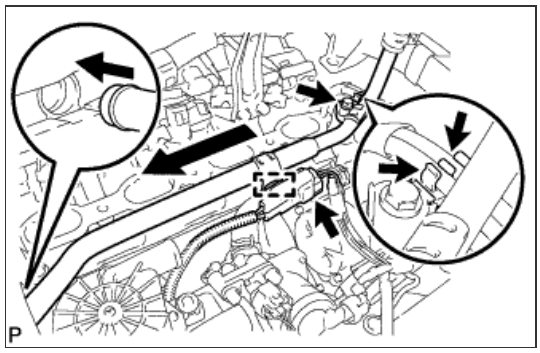
With the flat-bottom of each new gasket facing downward as shown in the illustration, install the 2 gaskets to the engine rear side.

17. INSTALL WATER BY-PASS PIPE SUB-ASSEMBLY

a. Apply soapy water to the O-ring.

b. Install a new O-ring to the water by-pass pipe.

c. Push in the water by-pass pipe.



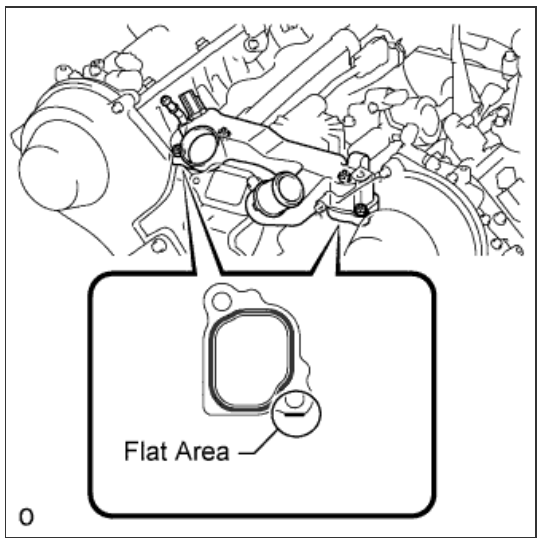
d. Install the water by-pass pipe with the bolt.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

e. Connect the 2 vacuum switching valve hoses to the water by-pass pipe clamp.

f. Connect the wire harness clamp.

g. Connect the connector.



18. INSTALL FRONT WATER BY-PASS JOINT

a. Install 2 new gaskets and the water by-pass joint with the 4 nuts.

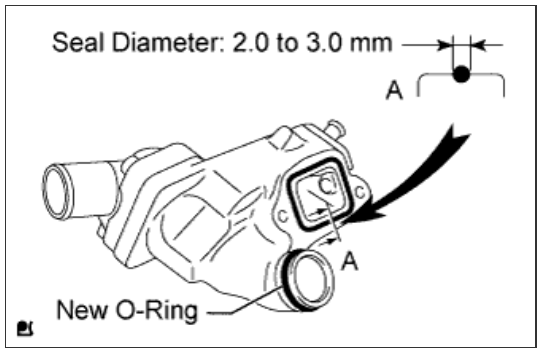
Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

HINT:

With the flat-bottom of each new gasket facing downward as shown in the illustration, install the 2 gaskets to the engine front side.

19. INSTALL WATER INLET HOUSING

a. Apply soapy water to a new O-ring and install it to the water inlet housing.



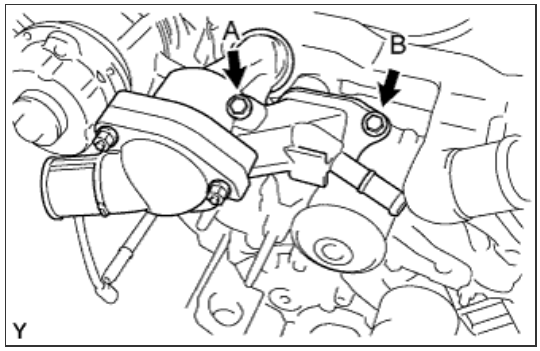
b. Apply seal packing in a continuous line to the places shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing 1282B, Three Bond 1282B or equivalent

Standard seal diameter:
2.0 to 3.0 mm (0.0787 to 0.118 in.)

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the water inlet housing within 3 minutes after applying seal packing.**

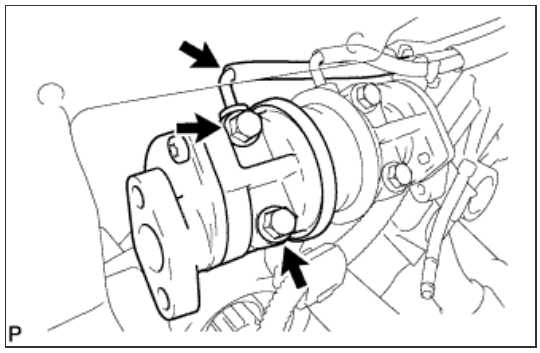


c. Temporarily install the water inlet housing with the 2 bolts.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

Bolt Length:

Item	Length
Bolt A	77 mm (3.03 in.)
Bolt B	22 mm (0.866 in.)

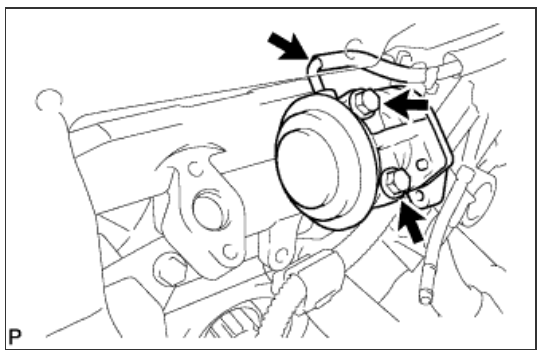


20. INSTALL NO. 2 AIR SWITCHING VALVE ASSEMBLY (w/ Secondary Air Injection System)

a. Install a new gasket and the No. 2 air switching valve to the rear water by-pass joint with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. Connect the vacuum switching valve hose to the No. 2 air switching valve.

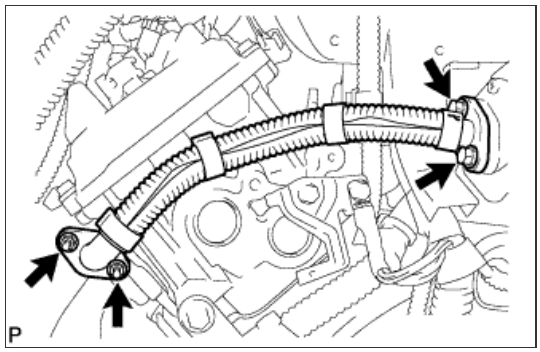


21. INSTALL NO. 1 AIR SWITCHING VALVE ASSEMBLY (w/ Secondary Air Injection System)

a. Install a new gasket and the No. 1 air switching valve to the rear water by-pass joint with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. Connect the vacuum switching valve hose to the No. 1 air switching valve.



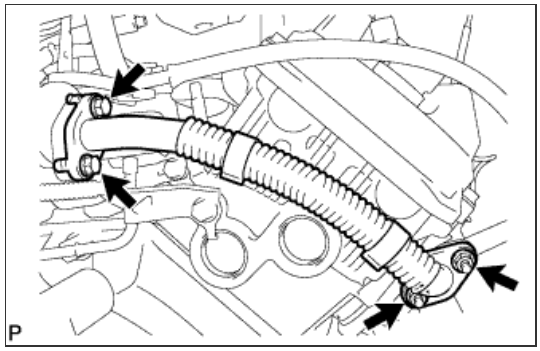
22. INSTALL NO. 3 AIR TUBE (w/ Secondary Air Injection System)

a. Install a new gasket and connect the No. 3 air tube to the exhaust manifold with the 2 nuts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. Install a new gasket and connect the No. 3 air tube to the No. 2 air switching valve with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



23. INSTALL AIR TUBE SUB-ASSEMBLY RH (w/ Secondary Air Injection System)

a. Install a new gasket and connect the air tube to the exhaust manifold with the 2 nuts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. Install a new gasket and connect the air tube to the No. 1 air switching valve with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

24. INSTALL INTAKE MANIFOLD

a. Install the intake manifold (Click here).

25. CONNECT FRONT EXHAUST PIPE ASSEMBLY

a. Install the exhaust manifold RH with the bolt.

Torque:
36 N*m{ 367 kgf*cm , 27 ft.*lbf }

b. Install the 2 gaskets to the front exhaust pipe and connect the front exhaust pipe to the exhaust manifold RH and center exhaust pipe. Then install the 3 nuts and 2 bolts.

Torque:
for bolt:
48 N*m{ 489 kgf*cm , 35 ft.*lbf }
for nut:
54 N*m{ 554 kgf*cm , 40 ft.*lbf }

c. Connect the air fuel ratio sensor connector.

d. Connect the heated oxygen sensor connector.

e. Attach the heated oxygen sensor wire clamp.

26. CONNECT FRONT NO. 2 EXHAUST PIPE ASSEMBLY

a. Install the exhaust manifold LH with the bolt.

Torque:
36 N*m{ 367 kgf*cm , 27 ft.*lbf }

b. Install the 2 gaskets to the front No. 2 exhaust pipe and connect the front No. 2 exhaust pipe to the exhaust manifold LH and center exhaust pipe. Then install the 3 nuts and 2 bolts.

Torque:
for bolt:
48 N*m{ 489 kgf*cm , 35 ft.*lbf }

for nut:
54 N*m{ 554 kgf*cm , 40 ft.*lbf }

c. Connect the air fuel ratio sensor connector.

d. Connect the heated oxygen sensor connector.

27. ADD ENGINE OIL

a. Install a new gasket and the drain plug.

Torque:
39 N*m{ 398 kgf*cm , 29 ft.*lbf }

b. Add new engine oil.

Standard Engine Oil:

Oil Grade	Oil Viscosity (SAE)
API grade SL "Energy-Conserving", SM "Energy-Conserving" or ILSAC multigrade engine oil	10W-30 (10W-30 is best choice for fuel economy and good starting in cold weather).
API grade SL or SM multigrade engine oil	10W-30

Standard Oil Capacity:

Item	Specified Condition
Drain and refill with oil filter change	6.2 liters (6.6 US qts, 5.5 Imp. qts)
Drain and refill without oil filter change	5.7 liters (6.0 US qts, 5.0 Imp. qts)
Dry fill	7.1 liters (7.5 US qts, 6.2 Imp. qts)

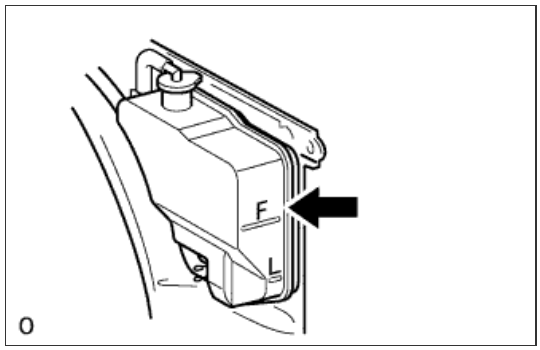
28. ADD ENGINE COOLANT

a. Add engine coolant.

Standard Capacity:

Item		Specified Condition
w/o Transmission oil cooler	w/o Rear Heater	13.4 liters (14.2 US qts, 11.8 Imp. qts)
	w/ Rear Heater	16.3 liters (17.2 US qts, 14.3 Imp. qts)
w/ Transmission oil cooler	w/o Rear Heater	14.1 liters (14.9 US qts, 12.4 Imp. qts)
	w/ Rear Heater	16.9 liters (17.9 US qts, 14.9 Imp. qts)

HINT:



TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the radiator reservoir cap.

d. Press the inlet and outlet radiator hoses several times by hand, and then check

the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Start the engine and warm it up until the thermostat opens.

NOTICE:

Switch off the A/C.

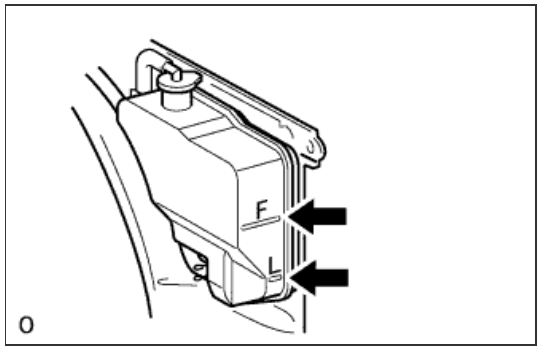
g. Maintain the engine speed at 2000 to 2500 rpm.

NOTICE:

- **Make sure that the radiator reservoir still has some coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**
- **Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the F line.**
- **Run the engine at 2000 rpm until the coolant level has stabilized.**

h. Press the inlet and outlet radiator hoses several times by hand to bleed air.

CAUTION:



- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the cooling fan.**

i. Stop the engine, and wait until the engine coolant cools down to the ambient temperature.

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

j. Check that the coolant level is between the F and L lines. If the coolant level is below the L line, repeat all of the procedures above. If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.

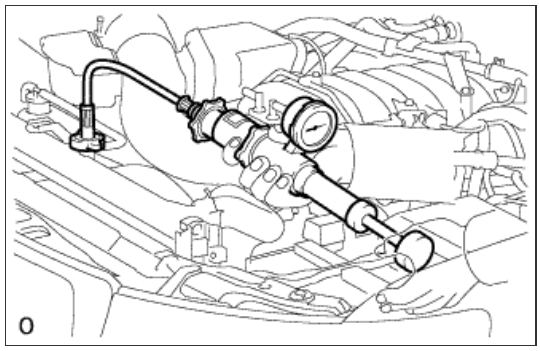
29. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

30. INSPECT FOR OIL LEAK

a. Start the engine. Make sure that there are no oil leaks from the area that was worked on.



31. INSPECT FOR COOLANT LEAK

a. Fill the radiator with coolant and attach a radiator cap tester.

b. Warm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to 123

kPa (1.3 kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.

32. INSPECT FOR FUEL LEAK

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG) and intelligent tester ON.

NOTICE:

Do not start the engine.

c. Enter the following menus: Powertrain / Engine and ECT / Active Test / Activate the Fuel Pump Speed Control.

d. Check that there are no fuel leaks after doing maintenance anywhere on the fuel system.

33. INSPECT FOR EXHAUST GAS LEAK

If gas is leaking, tighten the areas necessary to stop the leak. Replace damaged parts as necessary.

34. CHECK ENGINE OIL LEVEL

a. Warm up the engine, then stop the engine and wait for 5 minutes.

b. Check that the engine oil level is between the low level and full level marks on the dipstick.
If low, check for leakage and add oil up to the full level mark.

NOTICE:

Do not fill engine oil above the full level mark.

35. INSPECT IGNITION TIMING

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. When using the intelligent tester:

i. Connect the intelligent tester to the DLC3.

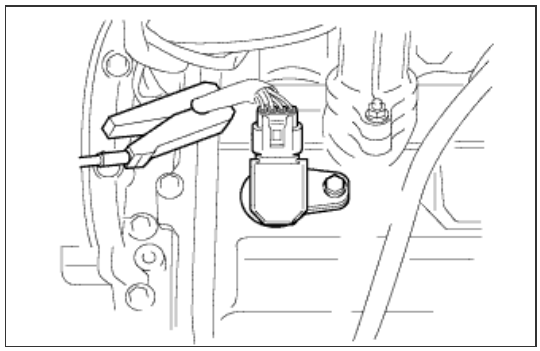
NOTICE:

Switch off all accessories and the A/C before connecting the intelligent tester.

ii. Start the engine and idle it.

iii. Push the intelligent tester main switch ON.

iv. Enter the following menus: Powertrain / Engine and ECT / Data List / Primary / IGN Advance.



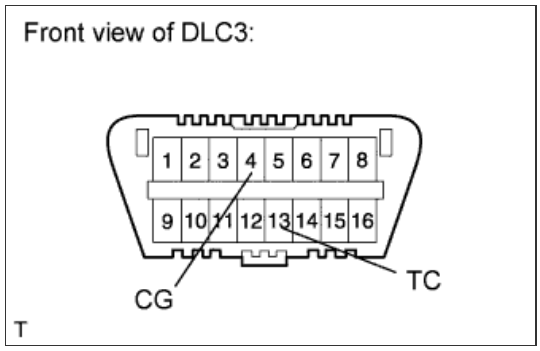
HINT:

Refer to the intelligent tester operator's manual for further details.

Standard ignition timing:
5 to 15° BTDC @ idling (transmission in neutral and A/C switch off)

v. Disconnect the intelligent tester from the DLC3.

c. When not using the intelligent tester:



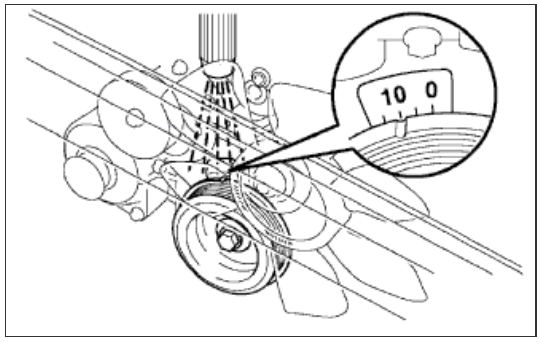
i. Remove the 2 nuts and V-bank cover.

ii. Connect the tester probe of a timing light to the wire of the ignition coil connector for the No. 1 cylinder.

NOTICE:

Use a timing light that detects primary signals.

iii. Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.



SST
09843-18040

NOTICE:

- **Confirm the terminal numbers before connecting them. Connecting the wrong terminals can damage the engine.**
- **Switch off all accessories and the A/C.**

iv. Using the timing light, check the ignition timing.

Ignition timing:
5 to 15° BTDC @ idling (transmission in neutral and A/C switch off)

v. Remove SST from the DLC3.

vi. Disconnect the timing light from the engine.

vii. Install the V-bank cover with the 2 nuts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

36. INSPECT ENGINE IDLE SPEED

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. When using the intelligent tester:

i. Connect the intelligent tester to the DLC3.

NOTICE:

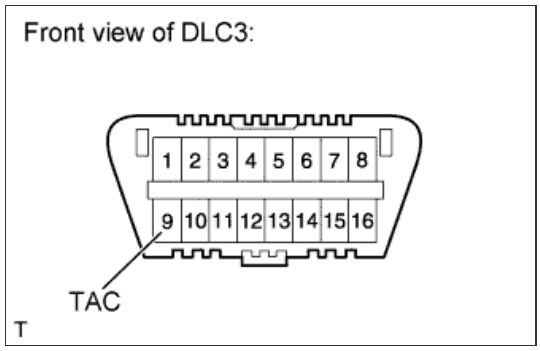
Switch off all accessories and the A/C before connecting the intelligent tester.

ii. Race the engine at 2500 rpm for approximately 90 seconds.

iii. Push the intelligent tester main switch ON.

iv. Enter the following menus: Powertrain / Engine and ECT / Data List / Primary / Engine Speed.

Standard idle speed:
650 to 750 rpm (transmission in neutral and A/C switch off)



HINT:

Refer to the intelligent tester operator's manual for further details.

If the idle speed is not as specified, check the air intake system.

. Disconnect the intelligent tester from the DLC3.

c. When not using the intelligent tester:

i. Using SST, connect a tachometer probe to terminal 9 (TAC) of the DLC3.

SST
09843-18030

NOTICE:

- **Confirm the terminal number before connecting the probe. Connecting the probe to the wrong terminal can damage the engine.**
- **Switch off all accessories and the A/C.**

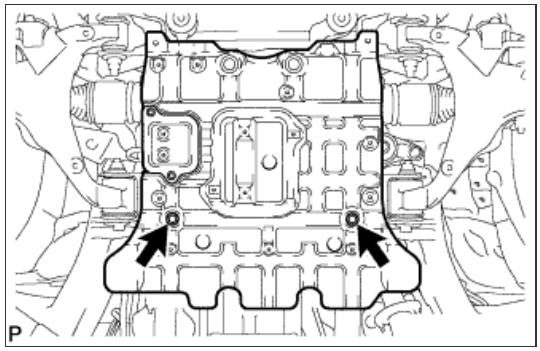
ii. Race the engine at 2500 rpm for approximately 90 seconds.

iii. Check the idle speed.

Standard idle speed:
650 to 750 rpm (transmission in neutral and A/C switch off)

If the idle speed is not as specified, check the air intake system.

iv. Disconnect the tachometer from the DLC3.

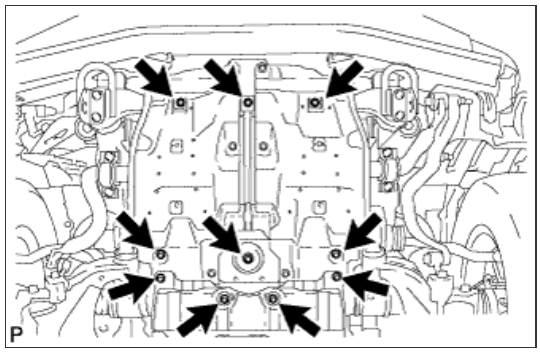


37. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

a. Install the cowl top ventilator louver (Click here).

38. INSTALL NO. 2 ENGINE UNDER COVER

a. Install the No. 2 engine under cover with the 2 bolts.



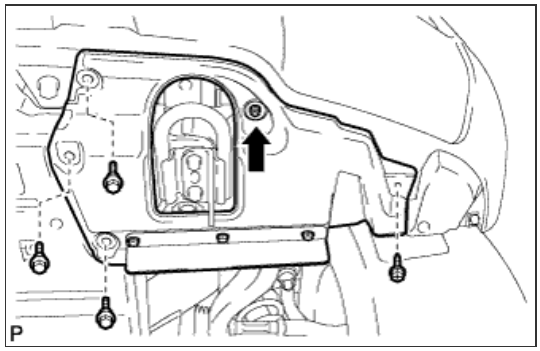
Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

39. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

40. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH



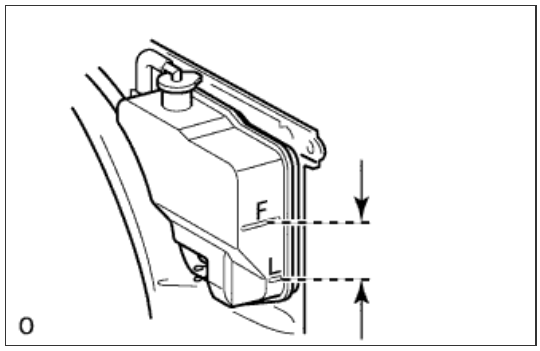
HINT:

Use the same procedures described for the LH side.

41. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

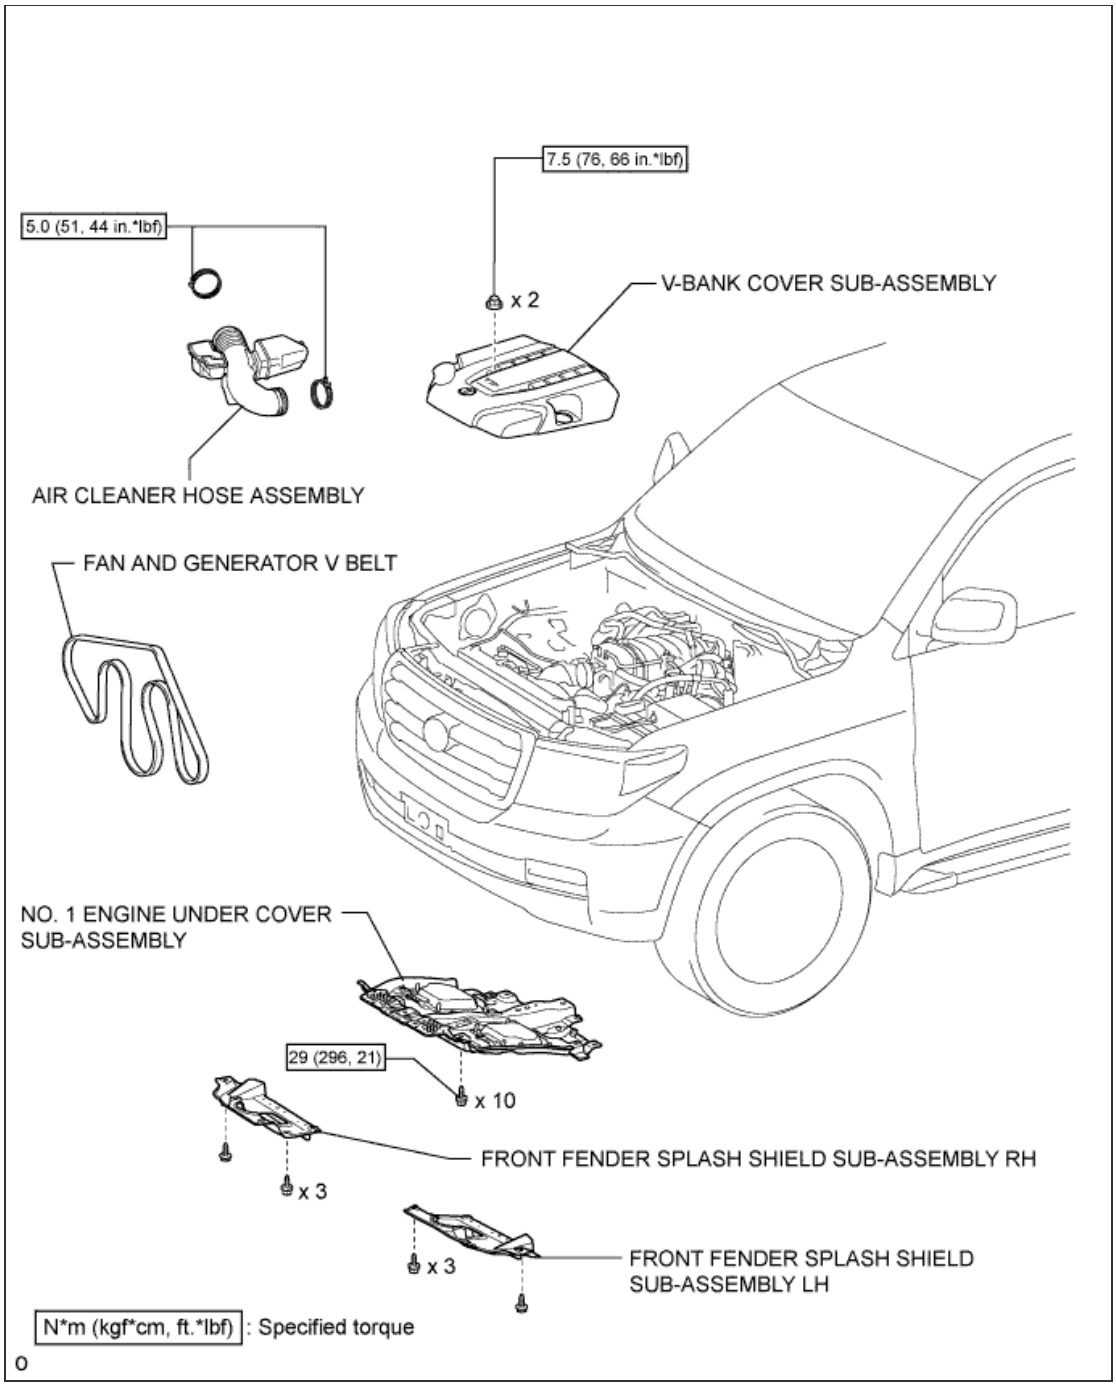
a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the 3 bolts and screw.

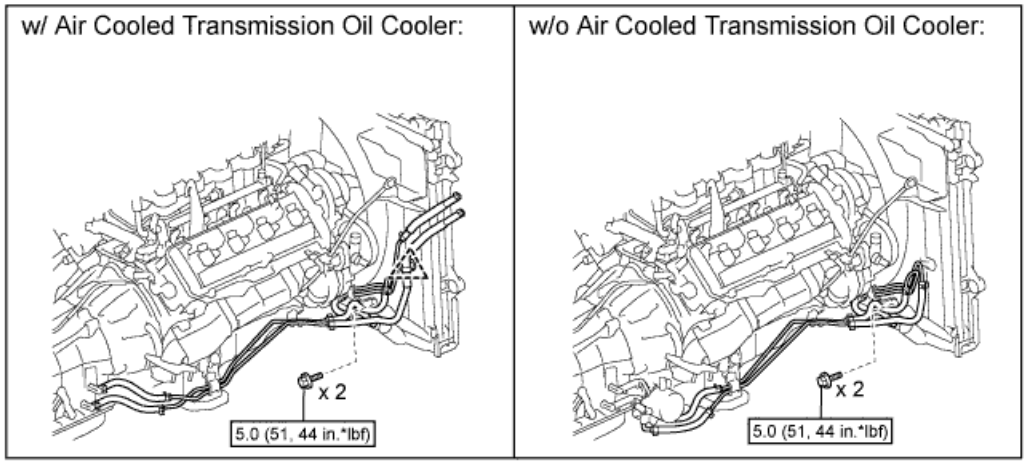


42. INSPECT ENGINE COOLANT LEVEL

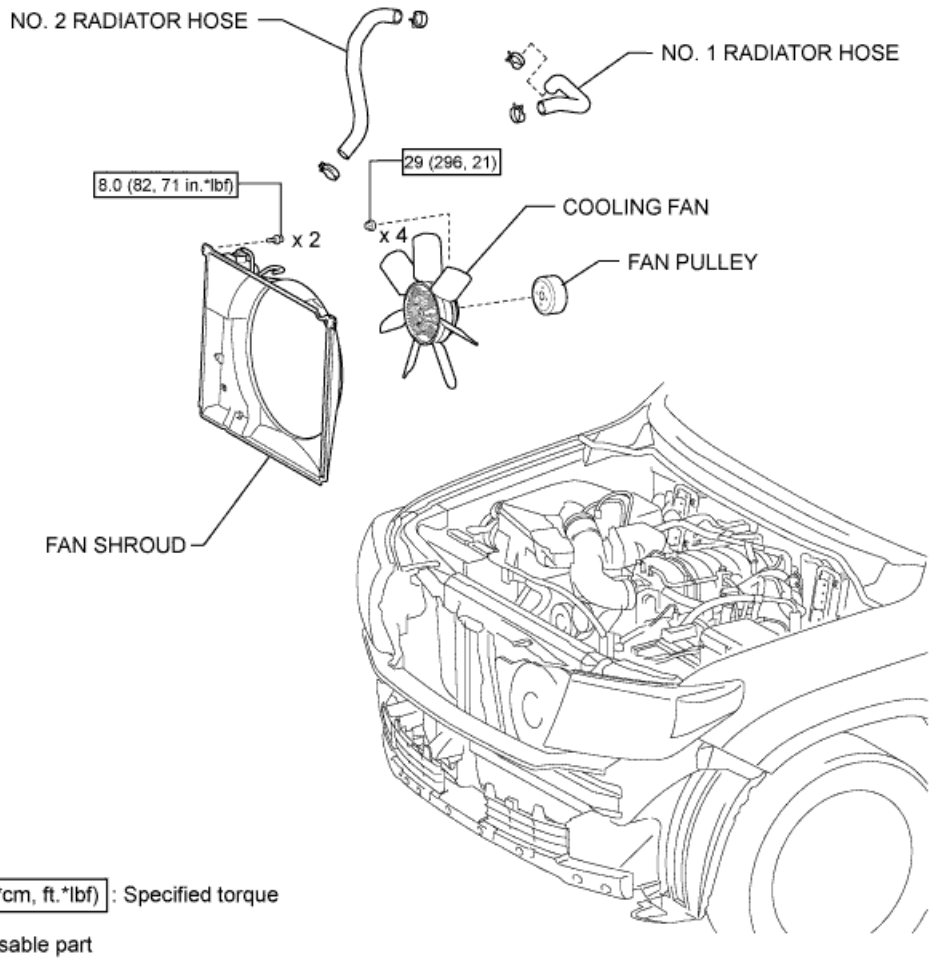
a. Check that the engine coolant level is between the L and F lines when the engine is cold.
If the engine coolant is low, check for leaks and add "TOYOTA Super Long Life Coolant" or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite and non-borate coolant with long-life hybrid organic acid technology to the F line.



NOTICE:



Do not substitute plain water for engine coolant.



b. Remove the radiator cap, and check that the coolant level is up to the radiator filler hole.

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

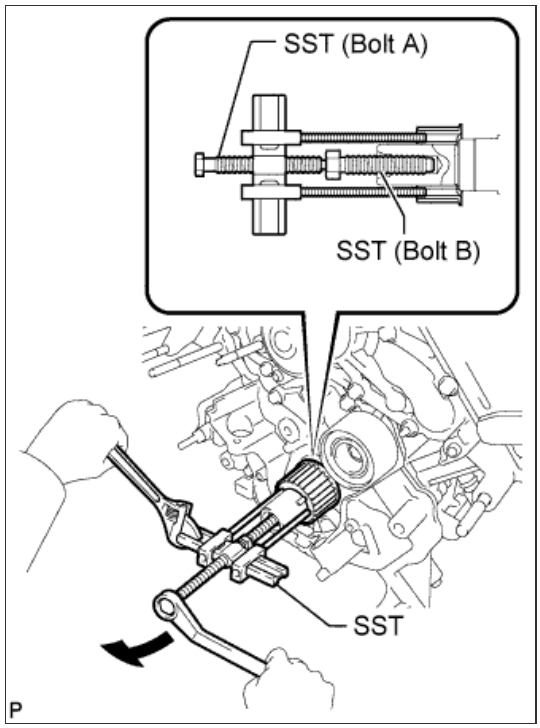
When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE TIMING BELT

a. Remove the timing belt (Click here).

3. REMOVE CRANKSHAFT TIMING PULLEY

a. Using SST, remove the timing pulley.



SST
0

HINT:

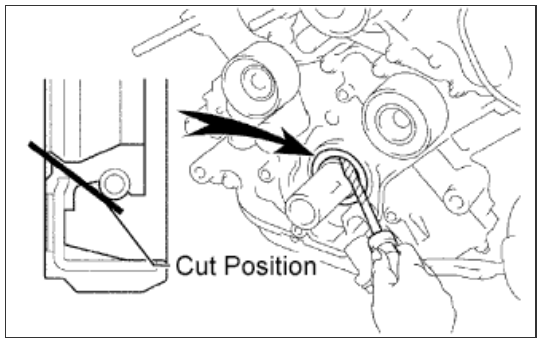
Apply a lubricant to the threads and end of SST.

Parts Nu er:

Item	Parts number
SST (Bolt A)	09953-05020
SST (Bolt B)	09953-05010

4. REMOVE OIL PUMP SEAL

a. Using a knife, cut off the lip of the oil seal.



b. Using a screwdriver, pry out the oil seal.

NOTICE:

Do not damage the surface of the oil seal press fit hole and crankshaft.

HINT:

Tape the screwdriver tip before use.

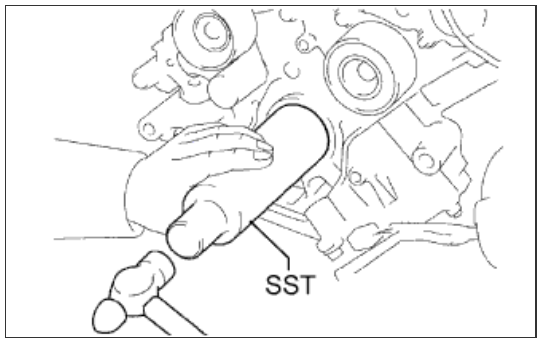
Cut Position

for Preparation Click here

1. INSTALL OIL PUMP SEAL

a. Apply MP grease to the lip of a new oil seal.

NOTICE:



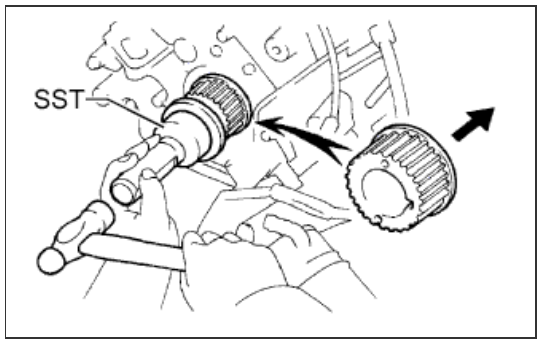
- **Do not allow foreign matter to contact the lip of the oil seal.**
- **Do not allow MP grease to contact the dust seal.**

b. Using SST and a hammer, tap in the oil seal until its surface is flush with the oil pump body edge.

SST
09316-60011 09316-00011

NOTICE:

- **Keep the lip of the oil seal free from foreign matter.**
- **Do not tap the oil seal at an angle.**



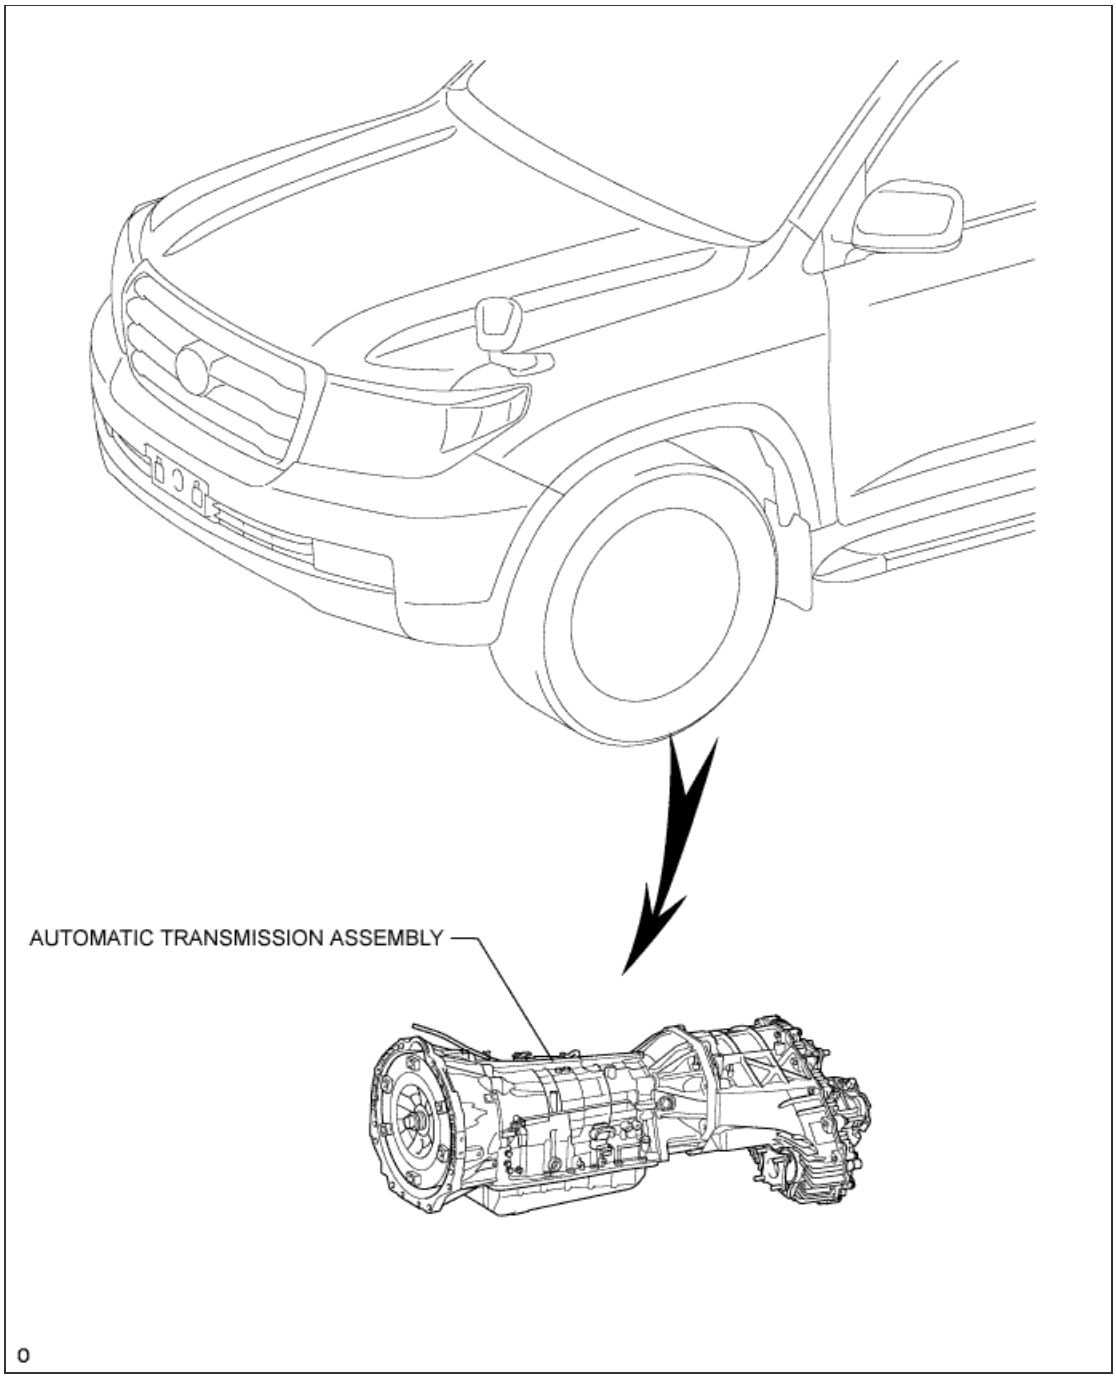
. INSTALL CRANKSHAFT TIMIN PULLEY

a. Align the timing pulley set key with the key groove of the pulley.

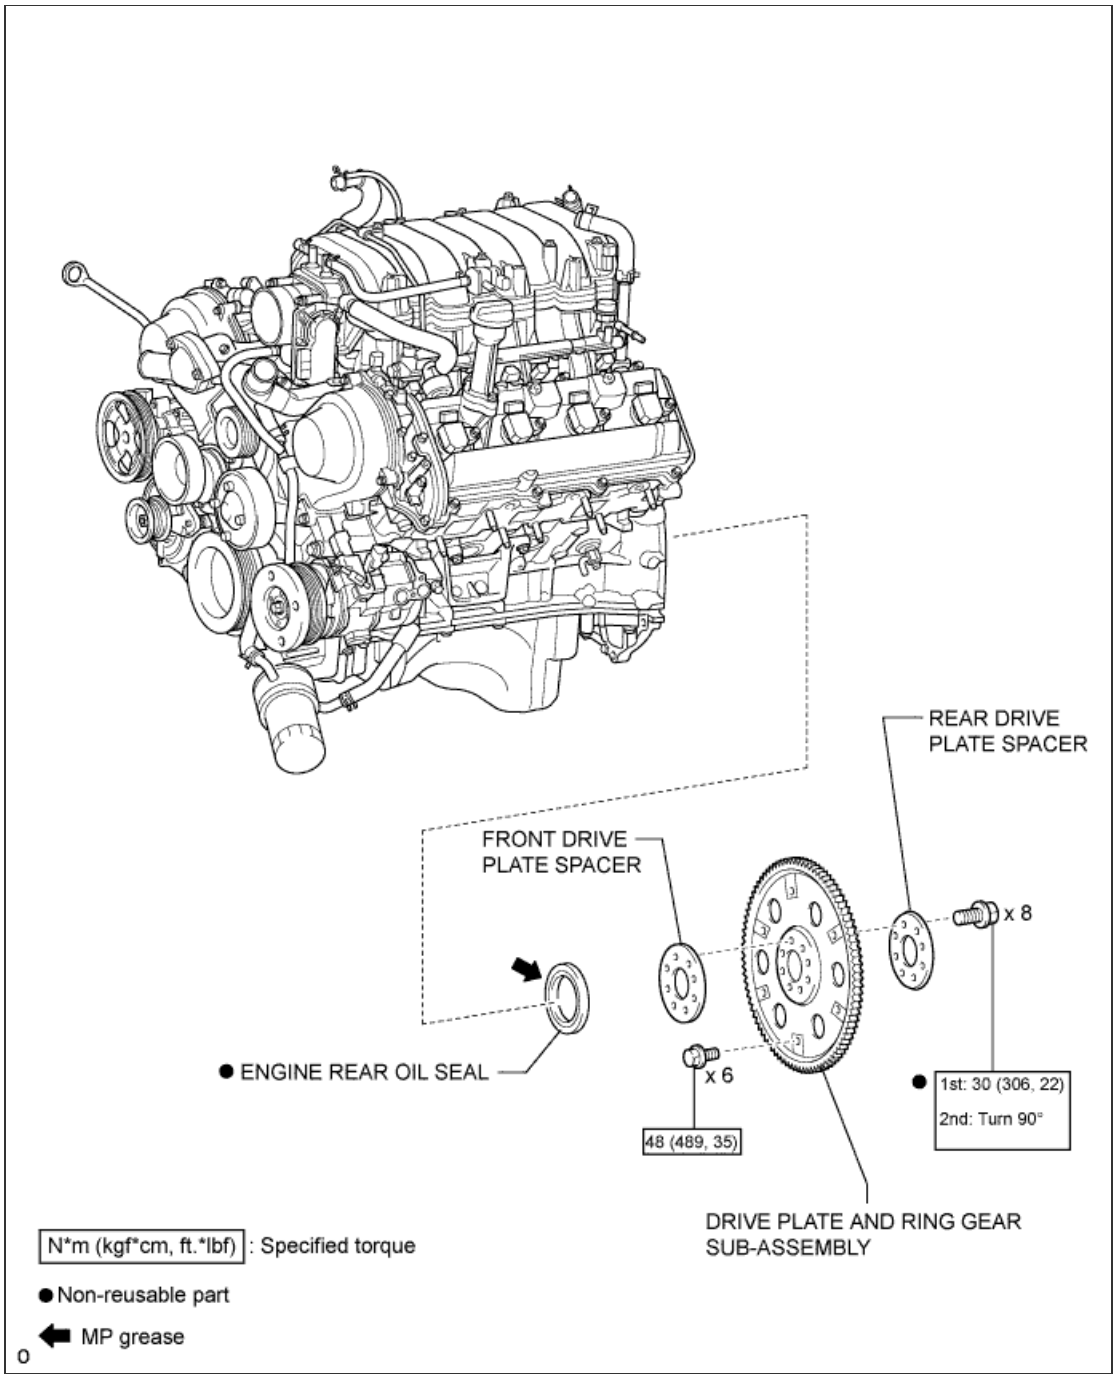
b. Using SST and a hammer, tap in the timing pulley with the flange side facing inward.

SST
09 3-46011

3. INSTALL TIMIN ELT



a. Install the timing belt (Click here).



4. CONNECT CABLE TO NE ATI E BATTERY TERMINAL

NOTICE:

hen disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

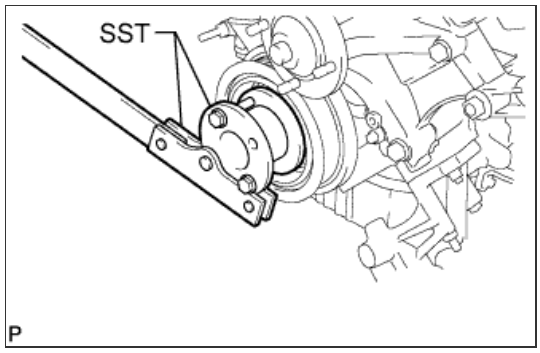
CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

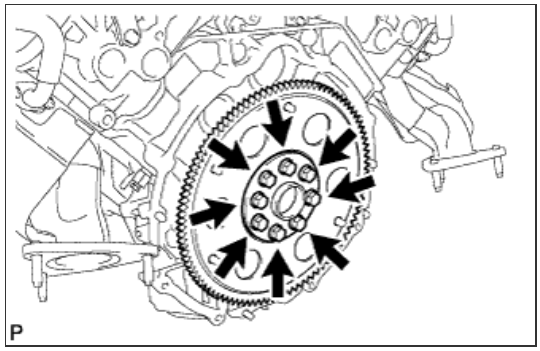
When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE AUTOMATIC TRANSMISSION ASSEMBLY



a. Remove the automatic transmission (Click here).

3. REMOVE DRIVE PLATE AND RING GEAR SUB ASSEMBLY



a. Using SST, hold the crankshaft damper.

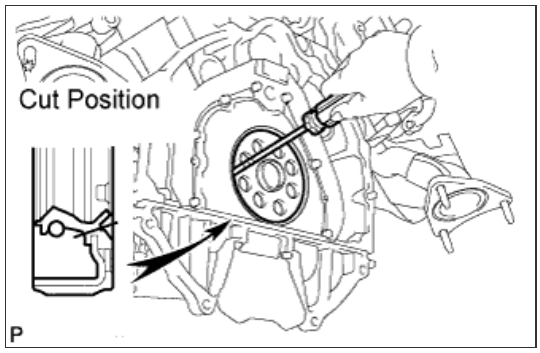
SST

09213	(09213
09330	(09330

. Remove the 8 bolts, front drive plate spacer, drive plate and rear drive plate spacer.

4. REMOVE ENGINE REAR OIL SEAL

a. Using a knife, cut off the lip of the oil seal.



. Using a screwdriver, pry out the oil seal.

NOTICE:

Do not damage the surface of the oil seal press fit hole and crankshaft.

HINT:

Tape the screwdriver tip before use.

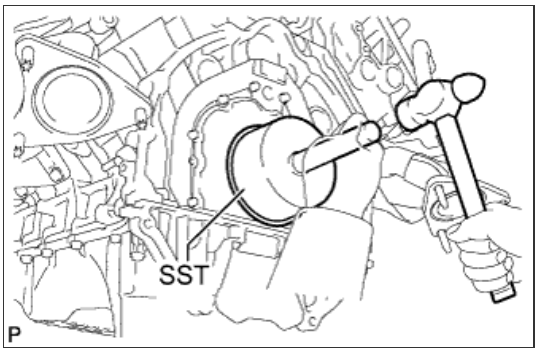
Cut Position
P

for Preparation Click here

1. INSTALL ENGINE REAR OIL SEAL

a. Apply MP grease to the lip of a new oil seal.

NOTICE:



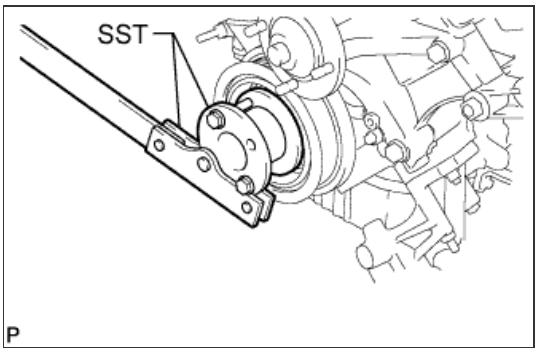
- **Do not allow foreign matter to contact the lip of the oil seal.**
- **Do not allow MP grease to contact the dust seal.**

b. Using SST and a hammer, tap in the oil seal until its surface is flush with the rear oil seal retainer edge.

SST
09223-56010

NOTICE:

- **Keep the lip of the oil seal free from foreign matter.**
- **Do not tap on the oil seal at an angle.**

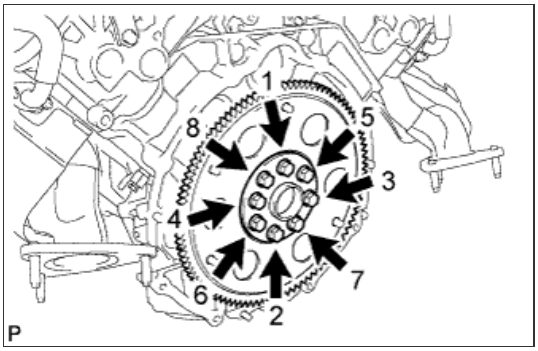


2. INSTALL DRI E PLATE AND RING GEAR SUB-ASSEMBLY

a. Using SST, hold the crankshaft.

SST
09213-70011 (09213-70020)
09330-00021 (09330-00030)

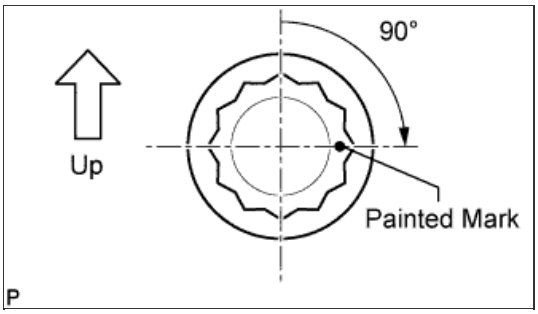
b. Install the front drive plate spacer, drive plate and rear drive plate spacer to the crankshaft.



c. Install and uniformly tighten 8 new bolts in the sequence shown in the illustration.

Tor ue:
30 N m 306 kgf m 22 ft. lbf }

NOTICE:



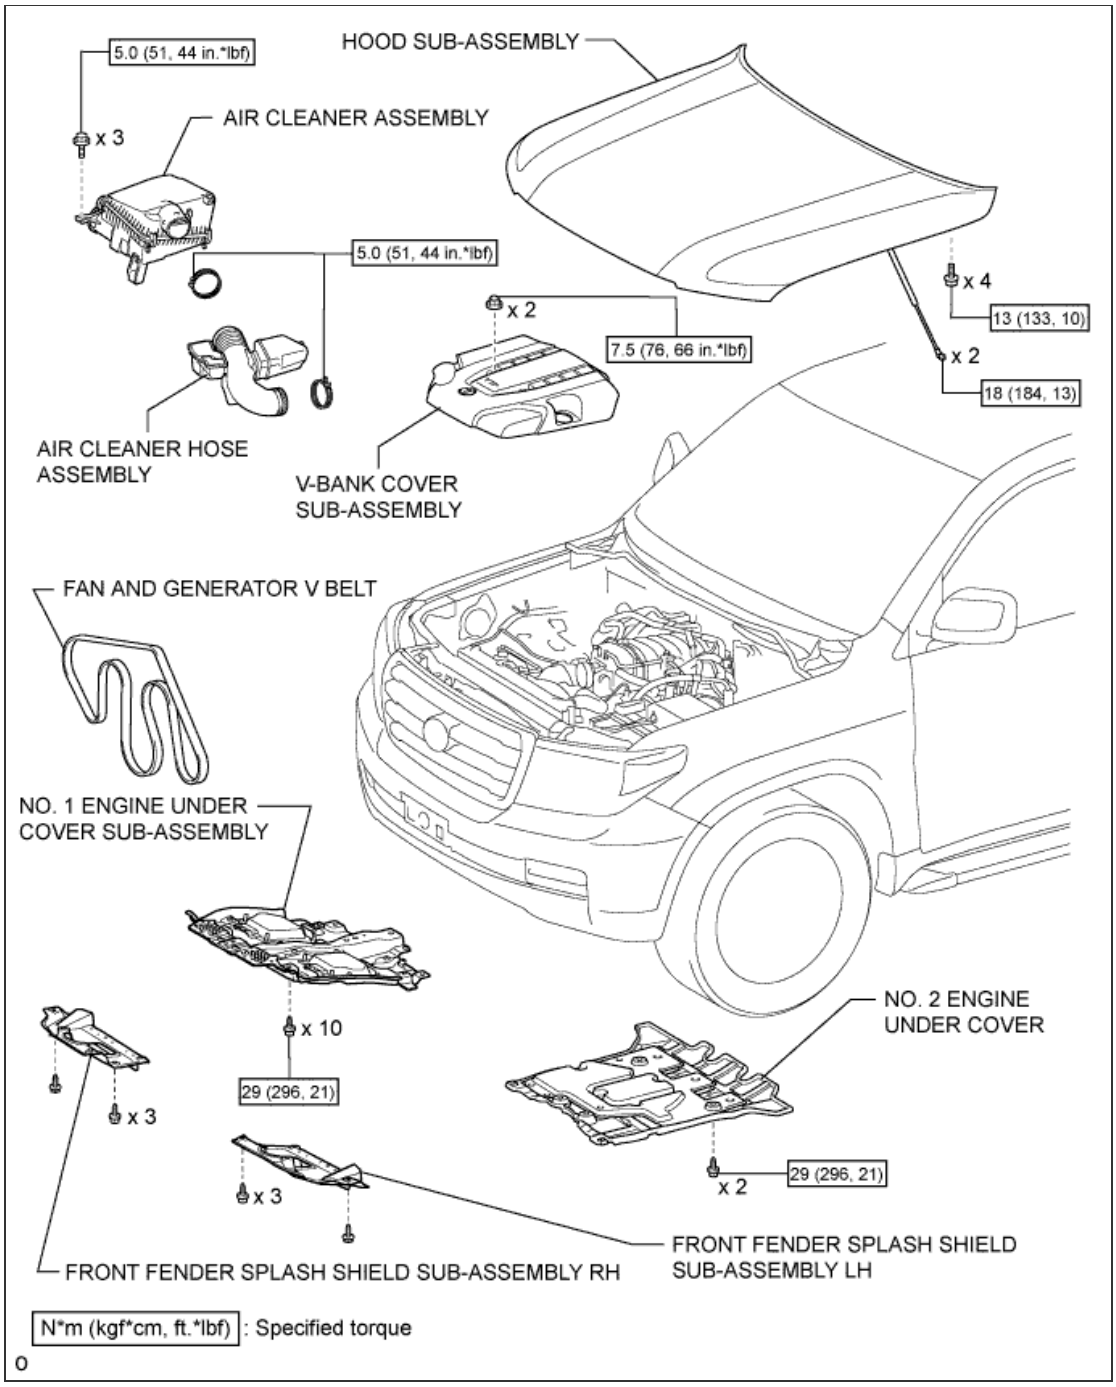
- **Do not reuse the drive plate installation bolts.**
- **Do not impact or damage the drive plate installation bolts. Be sure to handle them carefully.**

d. Mark the upside of each drive plate installation bolt with paint.

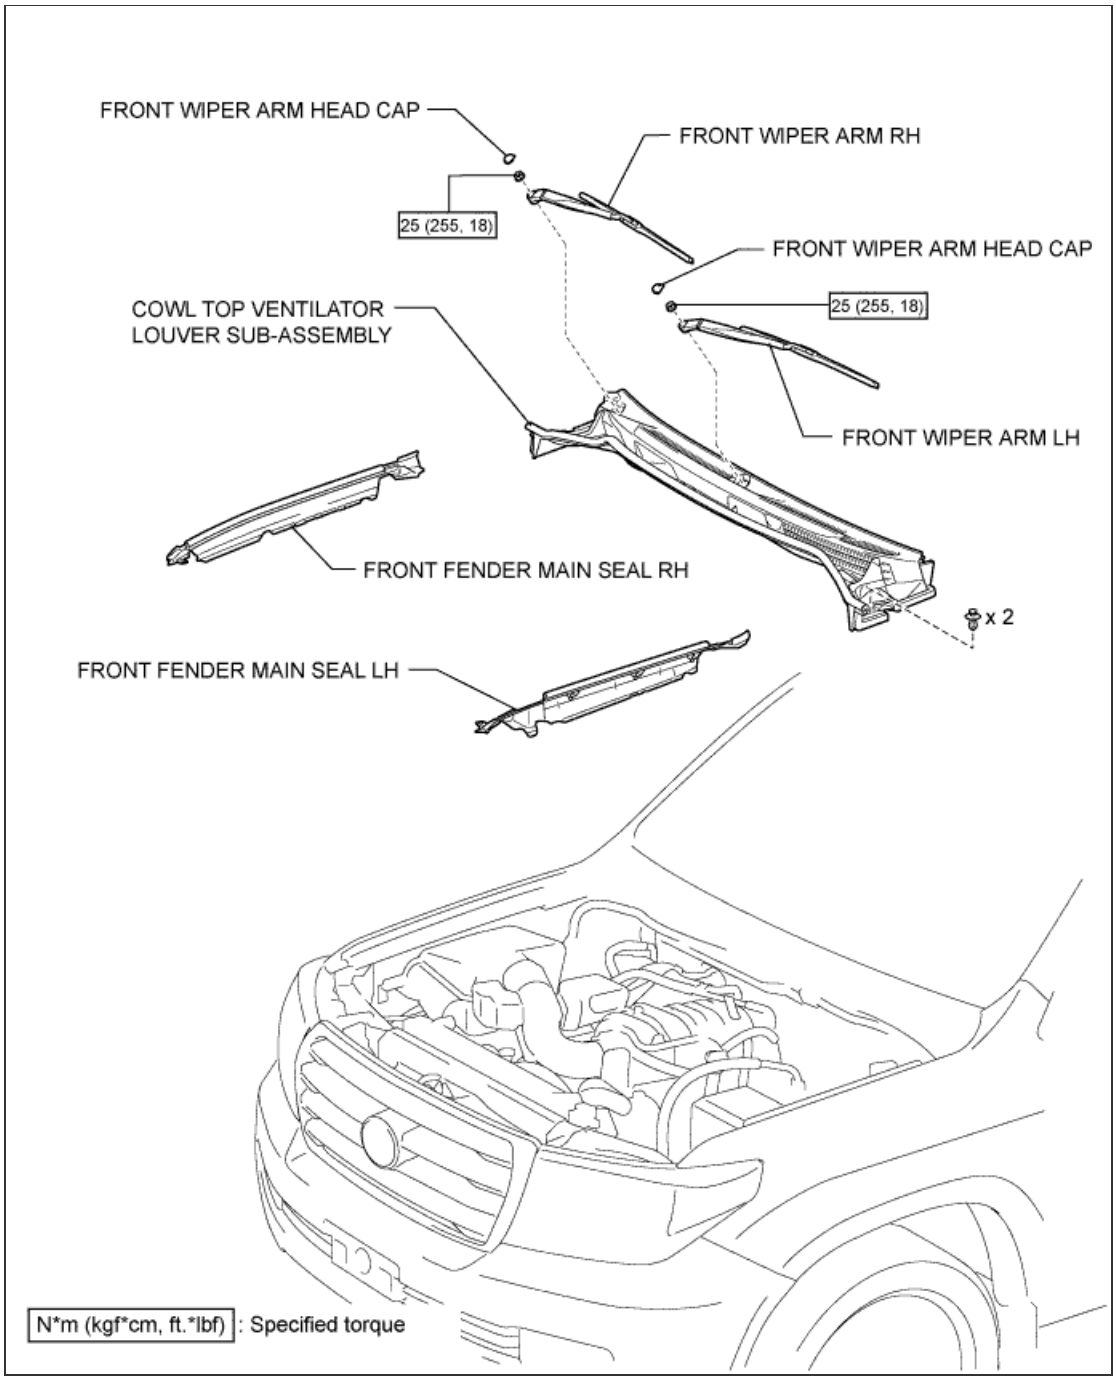
e. Tighten the drive plate installation bolts another 90° as shown.

f. Check that the painted marks are now at a 90° angle to the upside.

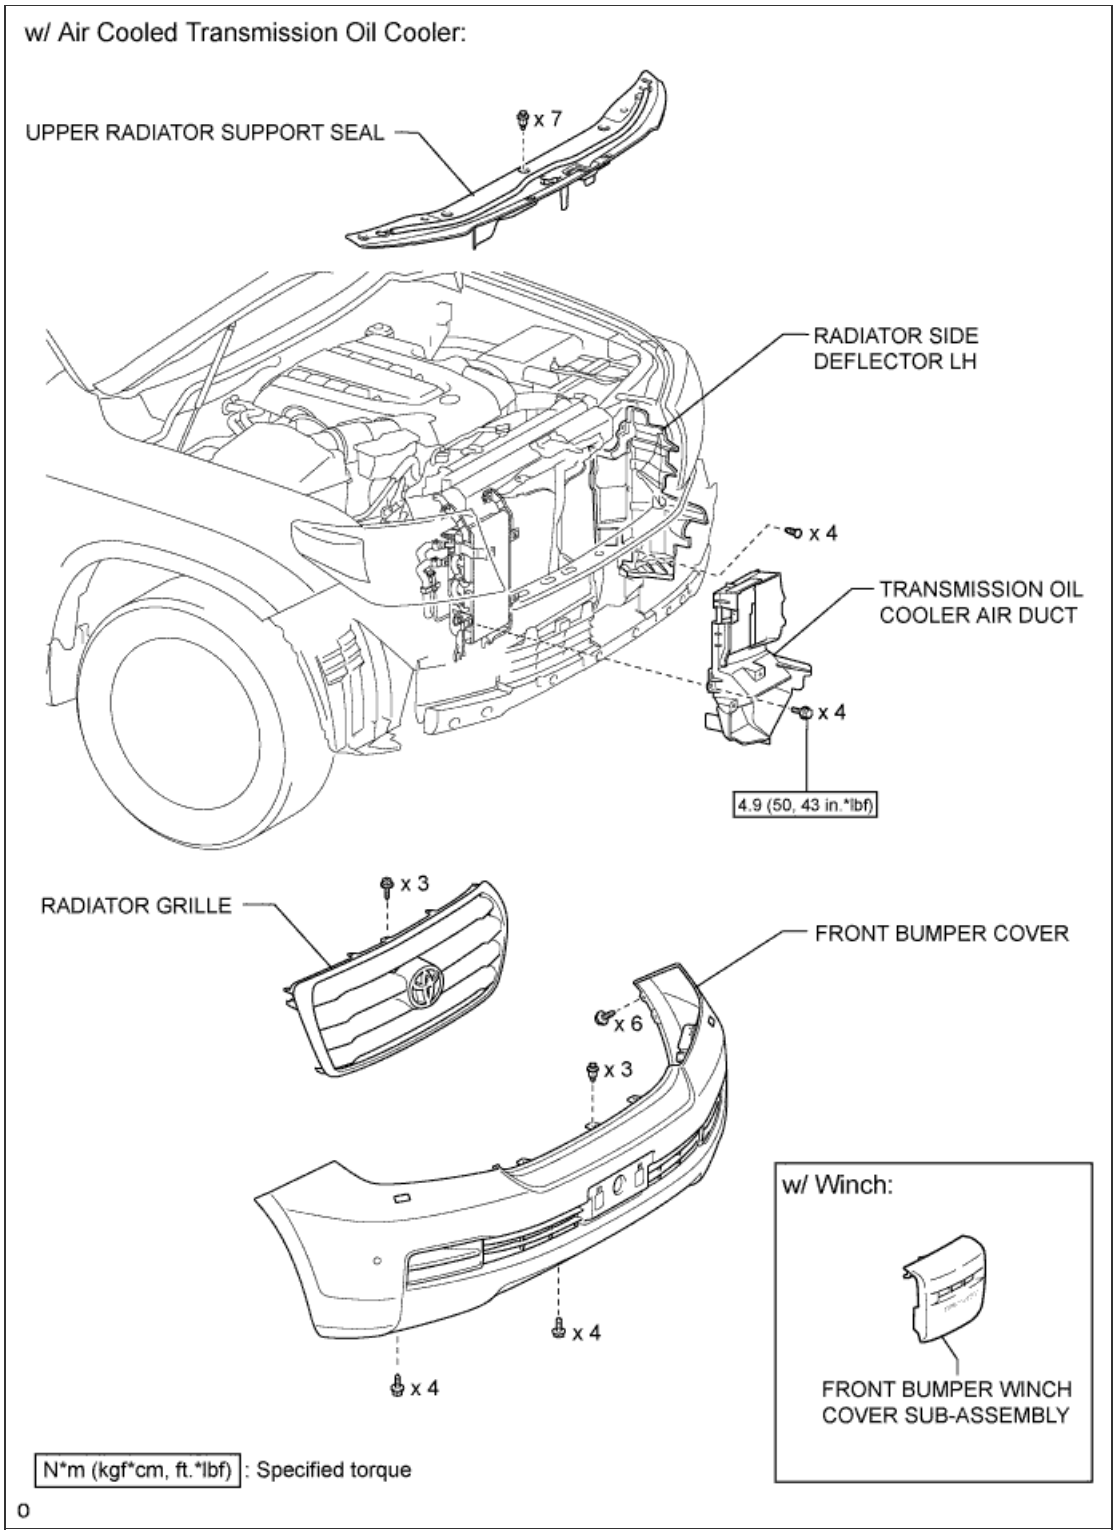
3. INSTALL AUTOMATIC TRANSMISSION ASSEMBLY



a. Install the automatic transmission (Click here).



4. CONNECT CABLE TO NEGATI E BATTERY TERMINAL



NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

P

for Preparation Click here

1. DISCHARGE FUEL SYSTEM PRESSURE

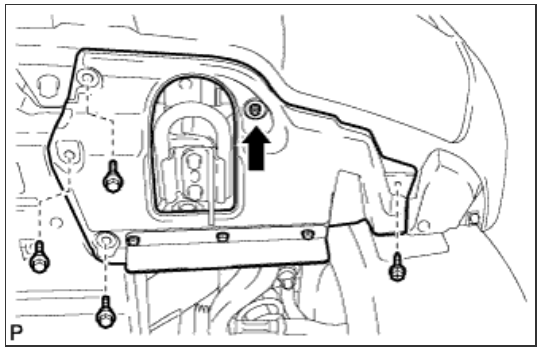
a. Discharge the fuel system pressure (Click here).

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:



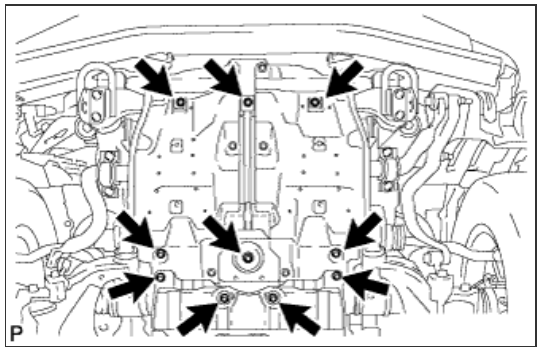
When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

3. REMOVE FRONT TIRE

4. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and screw.

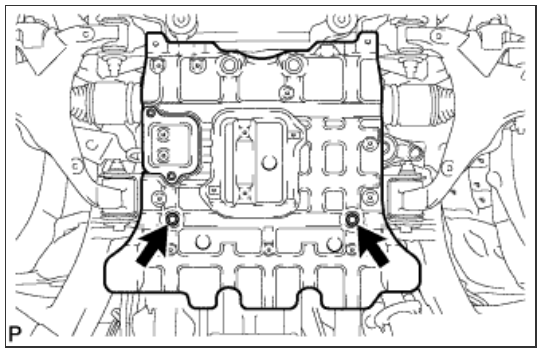
b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



5. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

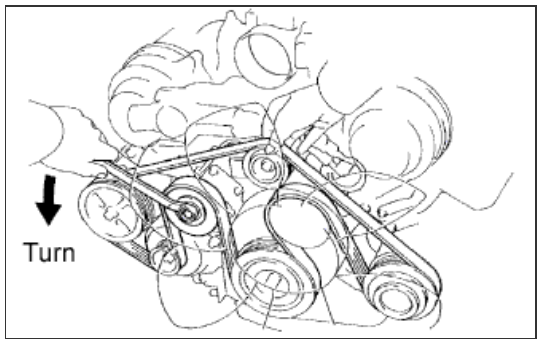


6. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 1 bolts and No. 1 engine under cover.

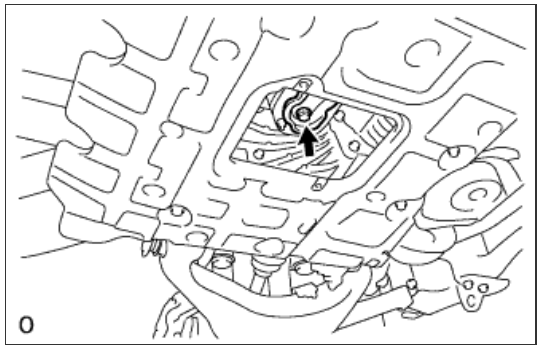
7. REMOVE NO. 2 ENGINE UNDER COVER

a. Remove the 2 bolts and No. 2 engine under cover.



8. REMOVE FAN & GENERATOR V BELT

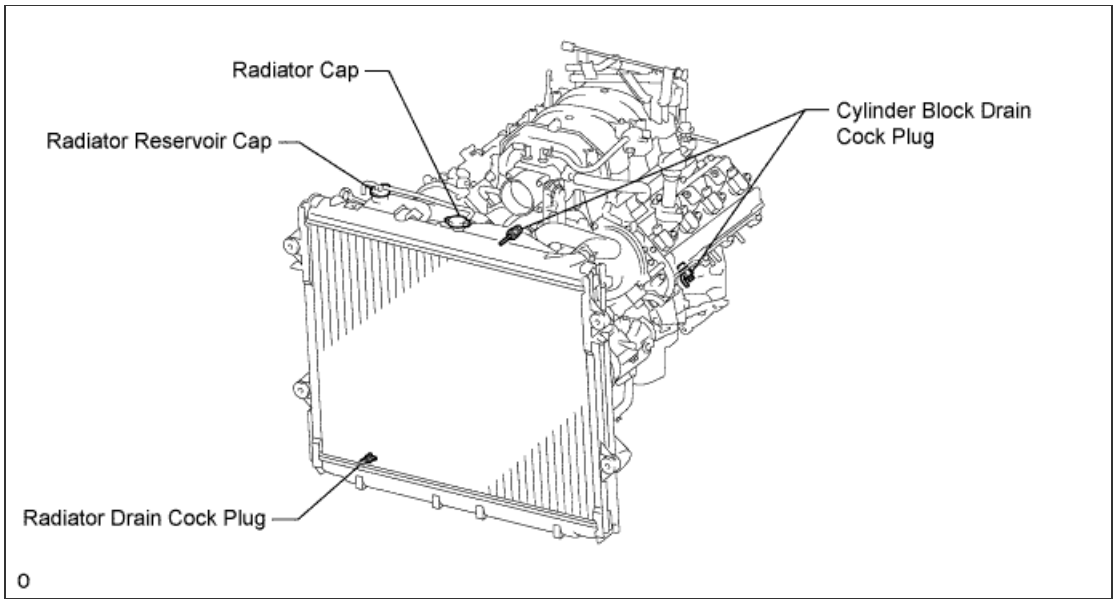
a. Loosen the belt tension by turning the belt tensioner counterclockwise, and then remove the fan and generator V belt.



HINT:

The pulley bolt for the belt tensioner has left-hand thread.

9. DRAIN ENGINE OIL



a. Remove the oil drain plug and gasket, and drain the engine oil into a container.

10. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

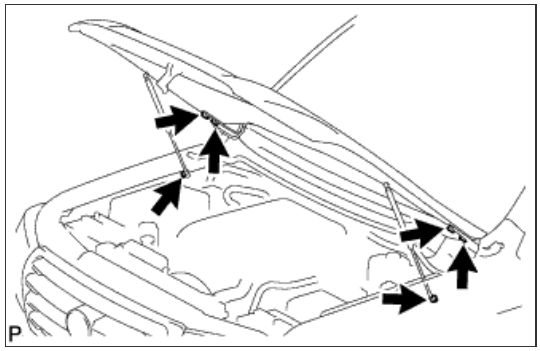
a. Loosen the radiator drain cock plug.

b. Remove the radiator cap. Then drain the coolant.

HINT:

Collect the coolant in a container and dispose of it according to the regulations in your area.

c. Loosen the 2 cylinder block drain cock plugs. Then drain the coolant from the engine.



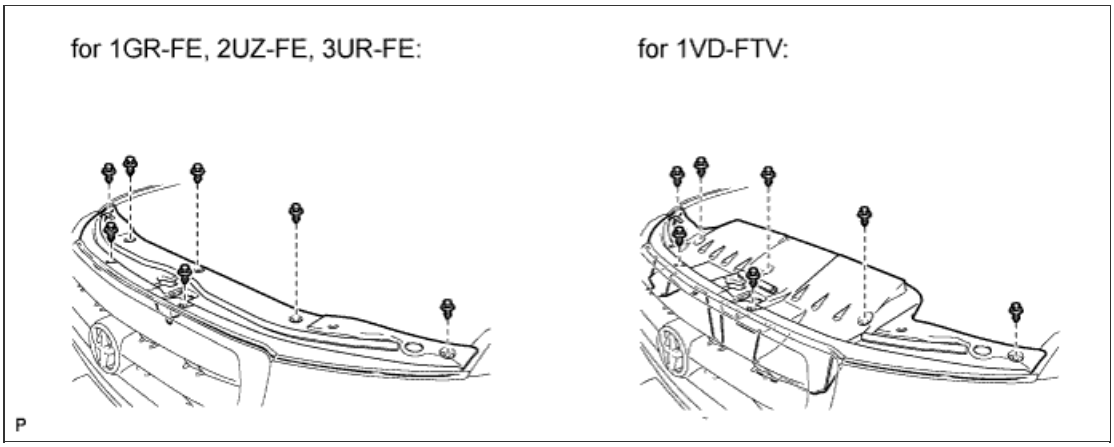
d. Tighten the 2 cylinder block drain cock plugs.

Torque:
13 N*m{ 130 kgf*cm , 9 ft.*lbf }

e. Tighten the radiator drain cock plug by hand.

11. REMOVE HOOD SUB-ASSEMBLY

a. Remove the 2 hood stay bolts. Then disconnect the 2 hood supports.



NOTICE:

- **Avoid touching the stroke portions of the rod as much as possible to prevent foreign matter from attaching to it. Be sure to hold the cylinders while servicing.**
- **Do not wear cotton gloves or other similar materials when handling the rod. Fibers may attach to the rod and result in gas leaks.**
- **Do not apply any load to the cylinders in the horizontal direction in order to prevent the rod from being deformed.**
- **Remove the hood support while supporting the hood by hand.**

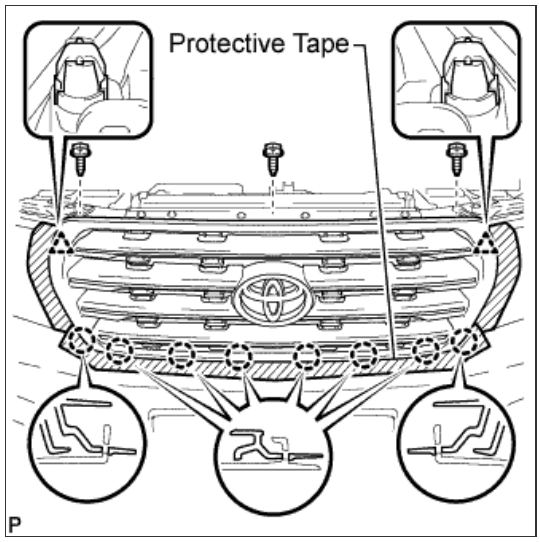
b. Remove the 4 bolts and hood.

12. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 7 clips and radiator support seal.

13. REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

a. Remove the cowl top ventilator louver (Click here).



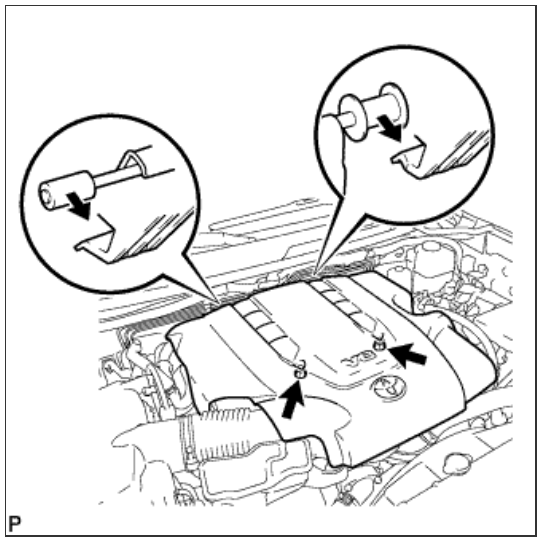
14. REMOVE FRONT BUMPER WINCH COVER SUB-ASSEMBLY (w/ Winch)

15. REMOVE RADIATOR GRILLE

a. Put protective tape around the radiator grille.

b. Remove the 3 screws.

c. Detach the 2 clips and 8 claws, and remove the radiator grille.



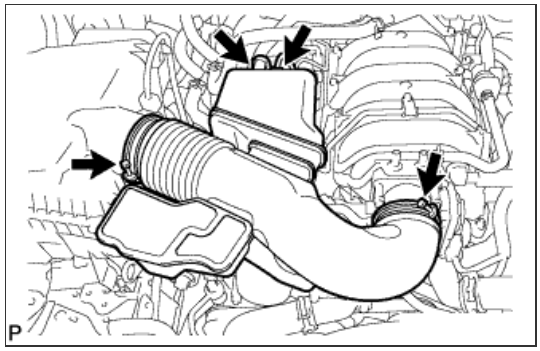
16. REMOVE FRONT BUMPER COVER

a. for Standard:
Remove the front bumper cover (Click here).

b. w/ Winch:
Remove the front bumper cover (Click here).

17. REMOVE V-BANK COVER SUB-ASSEMBLY

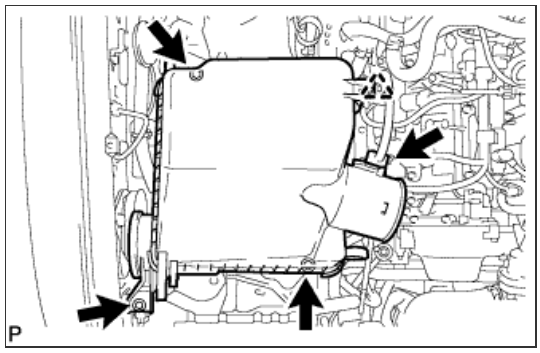
a. Remove the 2 nuts and V-bank cover.



18. REMOVE AIR CLEANER HOSE ASSEMBLY

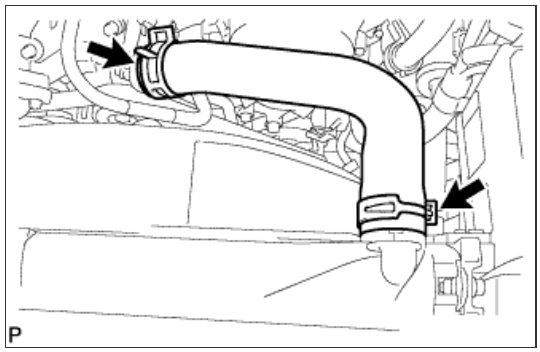
a. Disconnect the vacuum transmitting hose and No. 2 ventilation hose.

b. Loosen the 2 hose clamps.



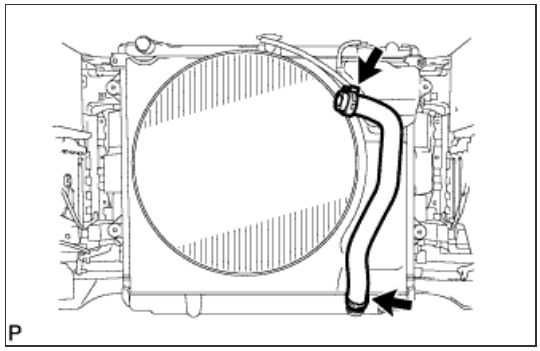
c. Remove the air cleaner hose.

19. REMOVE AIR CLEANER ASSEMBLY



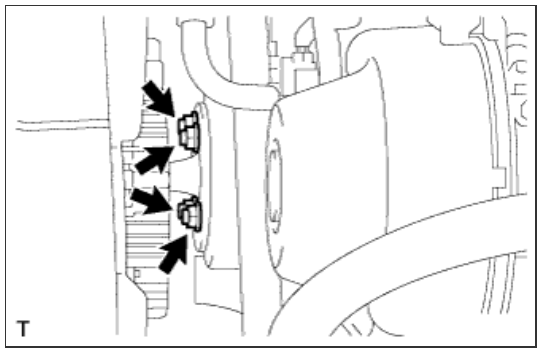
a. Disconnect the clamp and MAF connector.

b. Remove the 3 bolts and air cleaner.



20. REMOVE NO. 1 RADIATOR HOSE

a. Using needle-nose pliers, grip the claws of the clamps and slide the clamps to remove the radiator hose.



21. REMOVE NO. 2 RADIATOR HOSE

a. Using needle-nose pliers, grip the claws of the clamps and slide the clamps to remove the radiator hose.

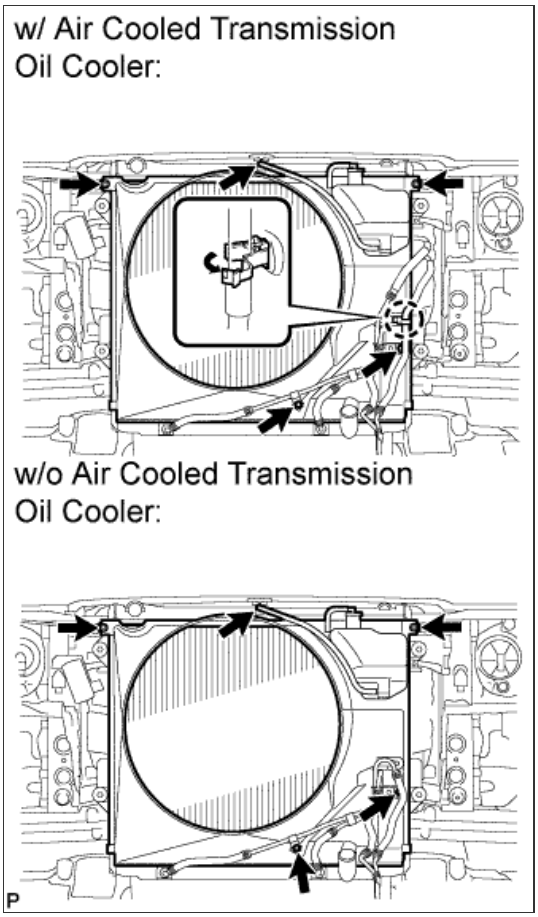
22. REMOVE FAN SHROUD

a. Loosen the 4 nuts holding the cooling fan.

b. Disconnect the reservoir hose from the upper side of the radiator tank.

c. w/ Air Cooled Transmission Oil Cooler:
Detach the claw to open the fle ible hose clamp.

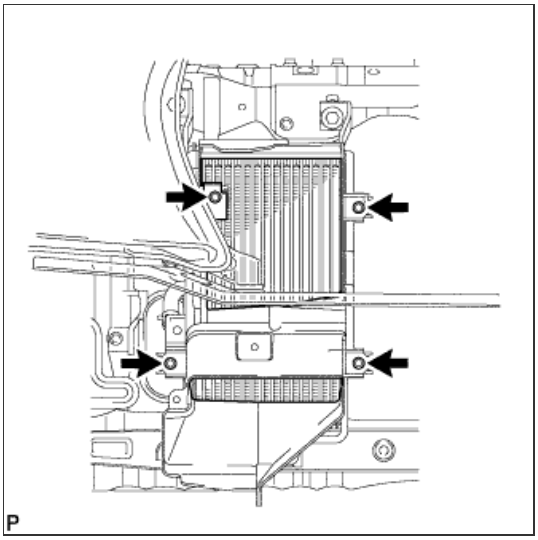
d. Remove the 2 bolts and disconnect the oil cooler tube from the fan shroud.



e. Remove the 2 bolts holding the fan shroud.

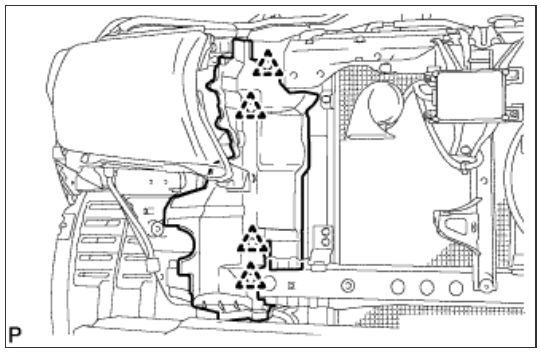
f. Remove the 4 nuts of the cooling fan, and then remove the shroud together with the cooling fan.

NOTICE:



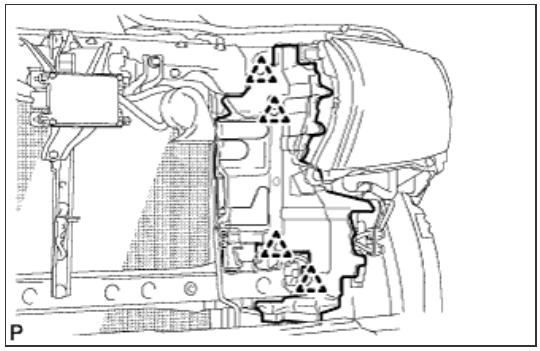
Be careful not to damage the radiator core.

g. Remove the fan pulley from the water pump.



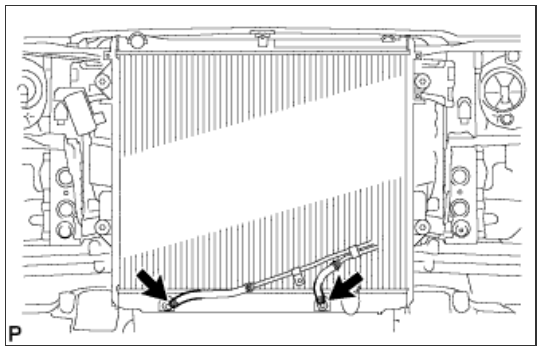
23. REMOVE TRANSMISSION OIL COOLER AIR DUCT (w/ Air Cooled Transmission Oil Cooler)

a. Remove the 4 bolts and transmission oil cooler air duct.



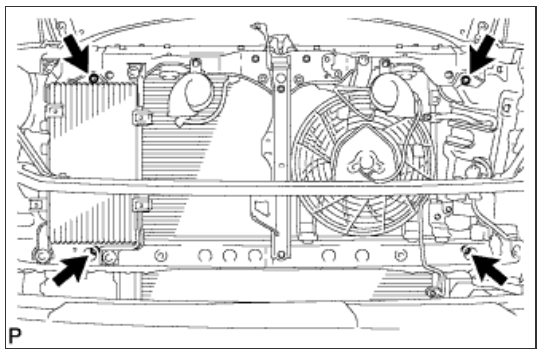
24. REMOVE RADIATOR SIDE DEFLECTOR RH (w/o Air Cooled Transmission Oil Cooler)

a. Using a clip remover, remove the 4 clips and disconnect the side deflector.



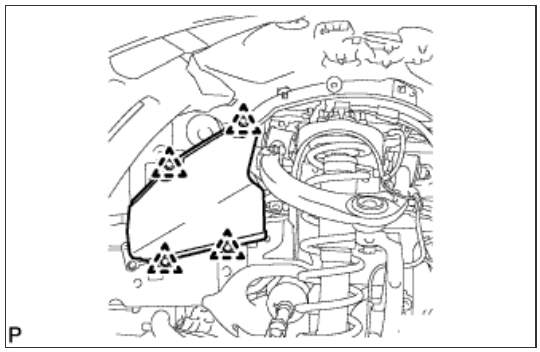
25. REMOVE RADIATOR SIDE DEFLECTOR LH

a. Using a clip remover, remove the 4 clips and disconnect the side deflector.

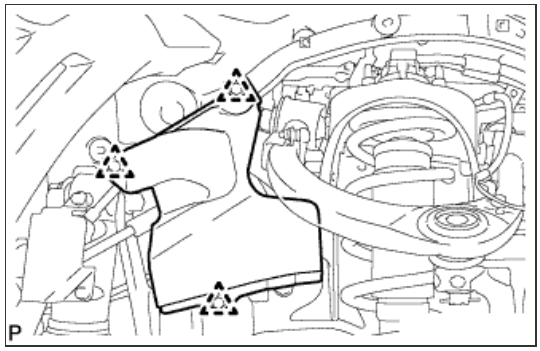


26. REMOVE RADIATOR ASSEMBLY

a. Using needle-nose pliers, grip the claws of the clamps and slide the clamps to disconnect the 2 oil cooler hoses.

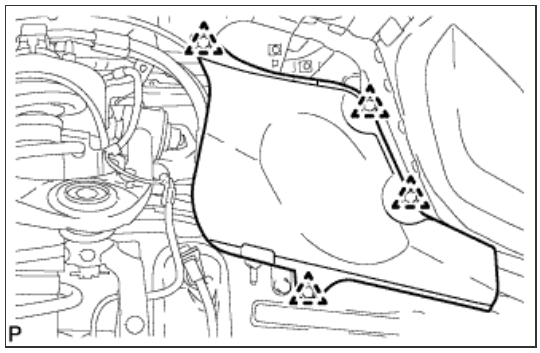


b. Remove the 4 bolts and radiator.



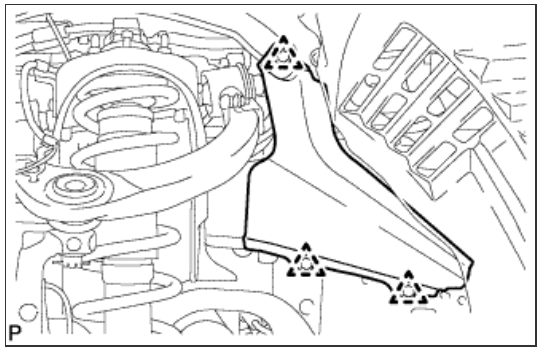
27. REMOVE FRONT FENDER APRON SEAL LH

a. Using a clip remover, remove the 4 clips and fender apron seal.



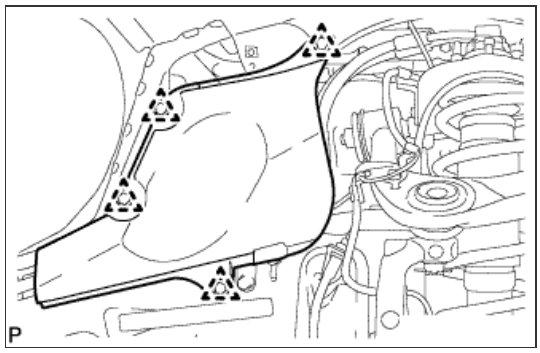
28. REMOVE FRONT FENDER APRON SEAL LH (w/ KDSS)

a. Using a clip remover, remove the 3 clips and fender apron seal.



29. REMOVE FRONT FENDER APRON SEAL REAR LH

a. Using a clip remover, remove the 4 clips and fender apron seal.

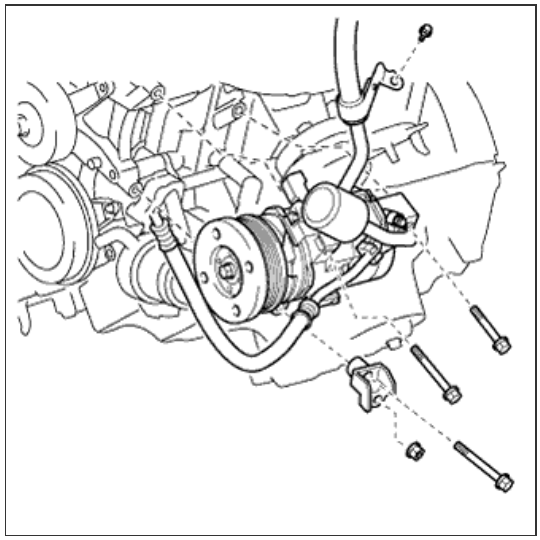


30. REMOVE FRONT FENDER APRON SEAL FRONT RH

a. Using a clip remover, remove the 3 clips and fender apron seal.

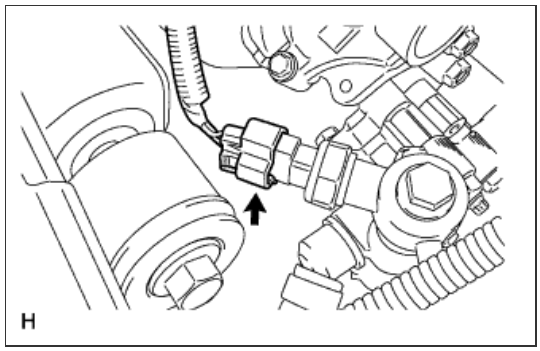
31. REMOVE FRONT FENDER APRON SEAL REAR RH

a. Using a clip remover, remove the 4 clips and fender apron seal.



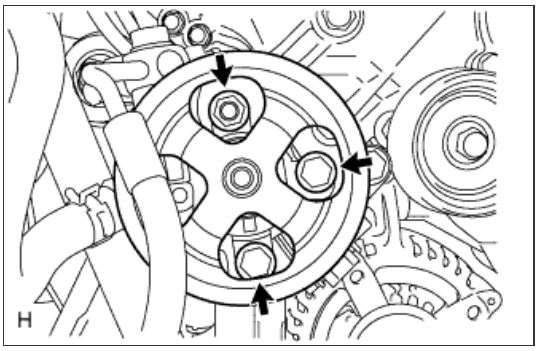
32. DISCONNECT COOLER COMPRESSOR ASSEMBLY

a. Disconnect the connector.



b. Remove the bolt. Then disconnect the cooler refrigerant suction hose from the cylinder head cover.

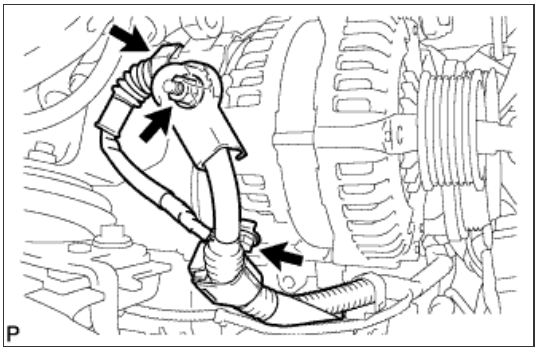
c. Remove the 3 bolts, nut and No. 1 compressor stay and disconnect the cooler compressor.



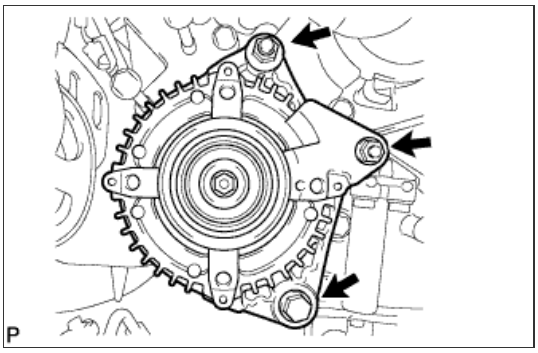
33. DISCONNECT VANE PUMP ASSEMBLY

a. Disconnect the connector.

b. Remove the 2 bolts and nut. Then disconnect the vane pump.



34. REMOVE GENERATOR ASSEMBLY

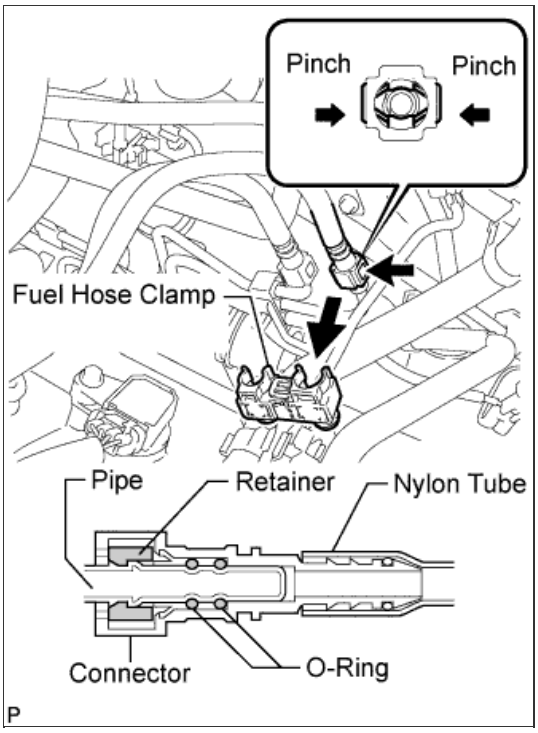


a. Disconnect the generator connector.

b. Remove the terminal cap and nut, and disconnect the generator wire.

c. Remove the bolt and disconnect the wire harness bracket from the generator.

d. Remove the bolt, 2 nuts and generator.



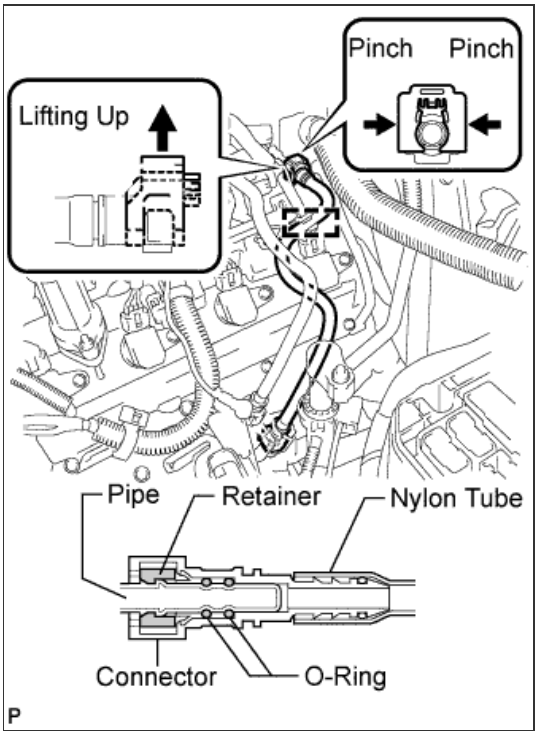
35. DISCONNECT FUEL HOSE

a. Remove the fuel hose clamp.

b. Pinch and pull the fuel hose connector to disconnect the connector from the fuel pipe.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**



36. REMOVE NO. 2 FUEL HOSE

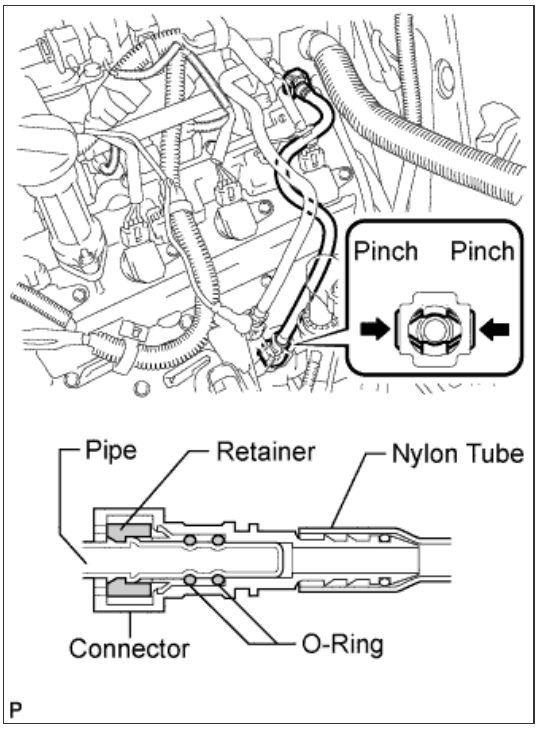
a. for engine side:

i. Detach the fuel hose clamp.

ii. Detach the lock claw by lifting up the cover, as shown in the illustration.

iii. Pinch and pull the No. 2 fuel hose connector to disconnect the connector from the No. 3 fuel pipe.

NOTICE:



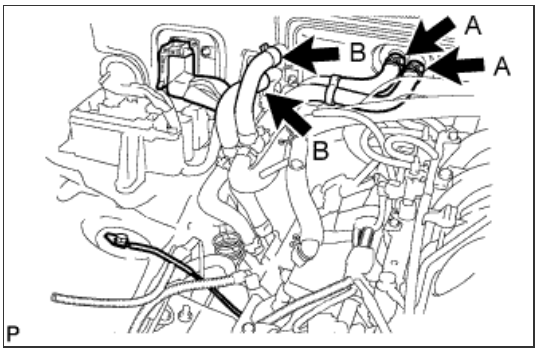
- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**

b. for body side:

i. Pinch and pull the No. 2 fuel hose connector to disconnect the connector from the fuel pipe.

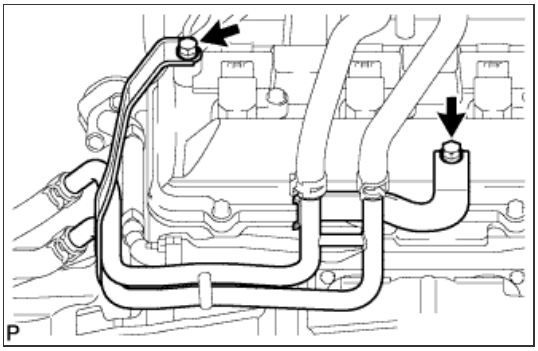
NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**



37. DISCONNECT WATER HOSE SUB-ASSEMBLY

a. Disconnect the water hose.

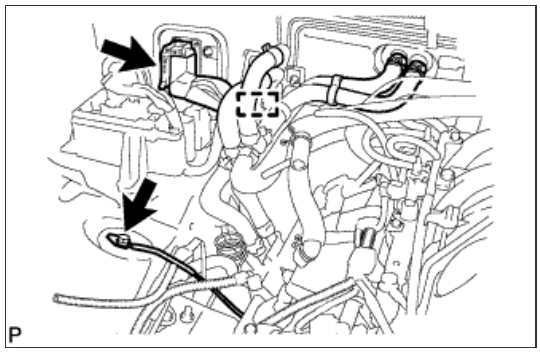


i. w/ Rear Heater:
Disconnect the water hoses labeled A and B.

ii. w/o Rear Heater:
Disconnect the water hoses labeled A.

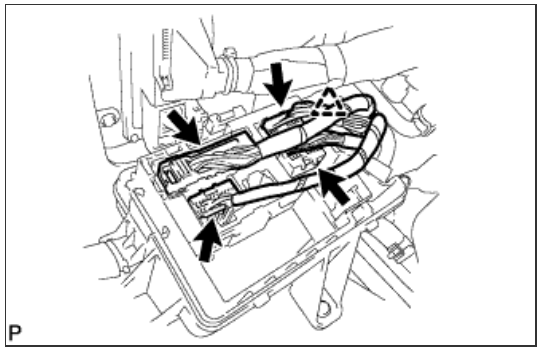
38. DISCONNECT NO. 1 WATER BY-PASS PIPE (w/ Air Cooled Transmission Oil Cooler)

a. Remove the 2 bolts and disconnect the water by-pass pipe from the cylinder head cover RH.



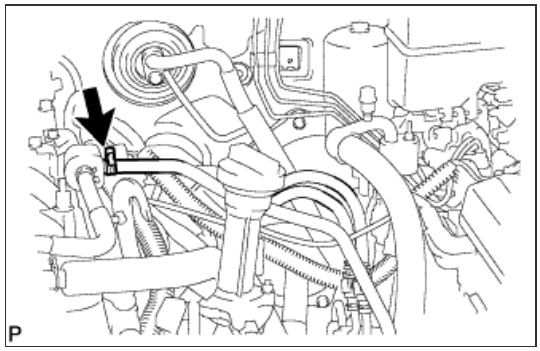
39. DISCONNECT WIRE HARNESS

a. Disconnect the clamp and CM connector.



HINT:

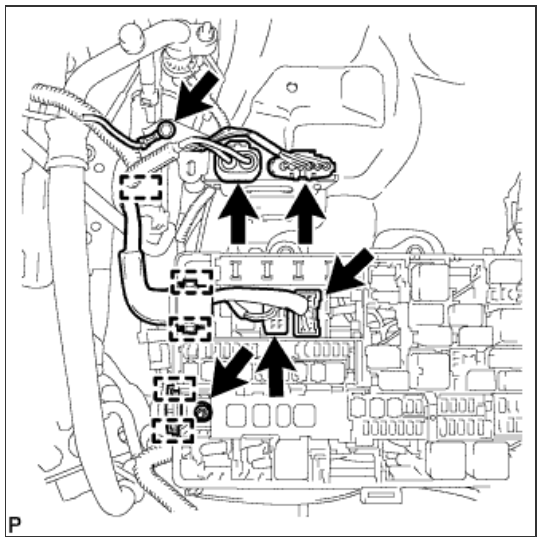
Refer to the following procedures to disconnect the CM connector (Click here).



b. Remove the bolt and disconnect the ground wire.

c. Disconnect the 4 connectors and clamp from the connector holder block.

d. Disconnect the purge line hose from the purge VSV.

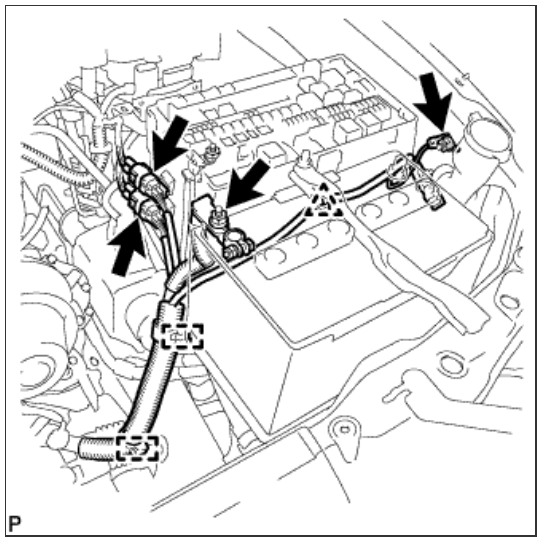


e. Disconnect the 2 air injection control driver connectors.

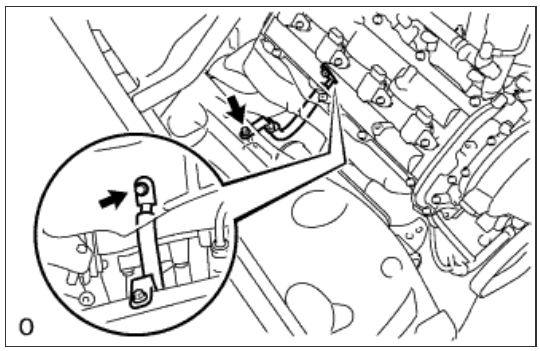
f. Disconnect the wire harness clamp.

g. Remove the bolt and disconnect the ground wire.

h. Disconnect the 2 clamps and 2 connectors from the engine room relay block.



i. Remove the nut and disconnect the 2 clamps and wire harness from the engine room relay block.



j. Remove the nut and disconnect the wire harness from the positive (+) battery terminal.

k. Disconnect the 2 connectors and 2 connector clamps from the engine room relay block.

l. Remove the bolt and disconnect the 3 clamps and ground wire.

. w/ Winch:
Remove the 2 bolts and disconnect the winch ground wire.

4 . REMOVE EXHAUST TAILPIPE ASSEMBLY

a. Remove the bolt, clamp and gasket.

b. Remove the tailpipe from the 2 e haust pipe supports.

41. REMOVE EXHAUST CENTER PIPE ASSEMBLY

a. Remove the 4 bolts.

b. Remove the center e haust pipe from the 3 e haust pipe supports.

c. Remove the 2 gaskets from the front e haust pipe and front No. 2 e haust pipe.

42. REMOVE NO. 2 EXHAUST FRONT PIPE ASSEMBLY

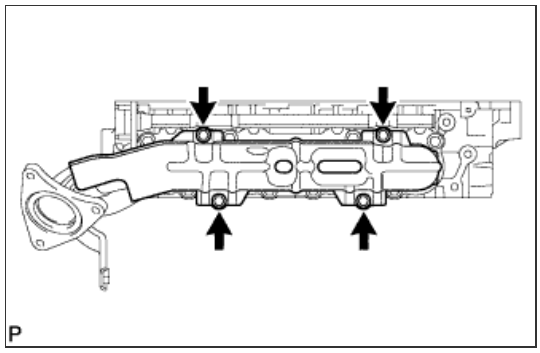
a. Disconnect the air fuel ratio sensor connector.

b. Disconnect the heated o ygen sensor connector.

c. Remove the 3 nuts, front No. 2 e haust pipe and gasket.

43. REMOVE EXHAUST FRONT PIPE ASSEMBLY

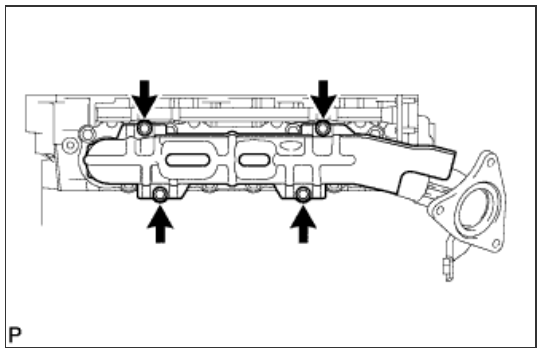
a. Disconnect the air fuel ratio sensor connector.



b. Disconnect the heated o ygen sensor connector.

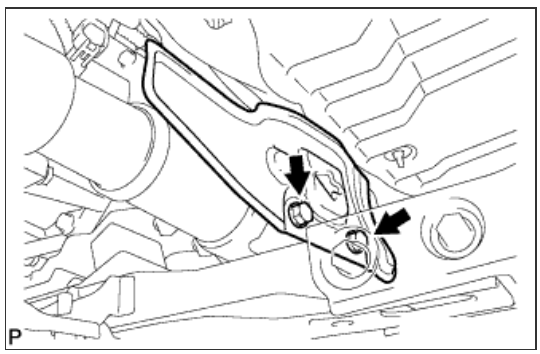
c. Detach the heated o ygen sensor wire clamp.

d. Remove the 3 nuts, front e haust pipe and gasket.



44. REMOVE NO. 1 EXHAUST MANIFOLD HEAT INSULATOR

a. Remove the 4 bolts and heat insulator.

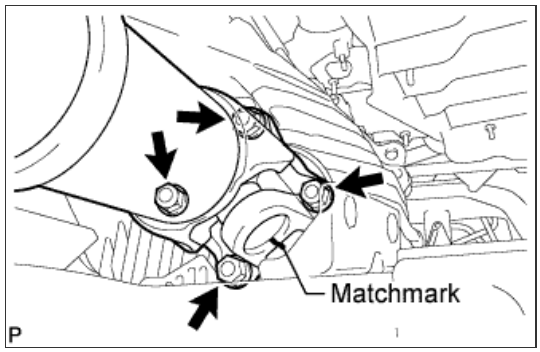


45. REMOVE NO. 2 EXHAUST MANIFOLD HEAT INSULATOR

a. Remove the 4 bolts and heat insulator.

46. REMOVE PROPELLER SHAFT HEAT INSULATOR

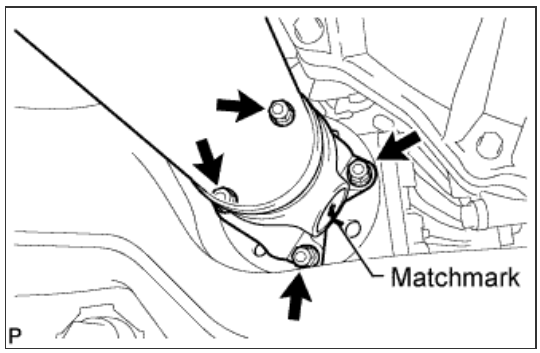
a. Remove the 2 bolts and insulator.



47. REMOVE FRONT PROPELLER SHAFT ASSEMBLY

a. for 1GR-F , 2U -F and Center Grease Fitting type:

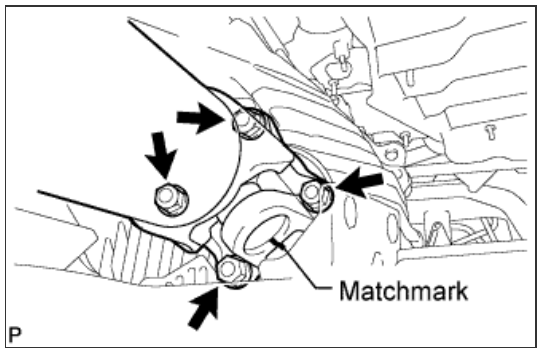
i. Place matchmarks on the propeller shaft flange and transfer flange.



ii. Remove the 4 nuts and 4 washers.

iii. Place matchmarks on the propeller shaft flange and differential.

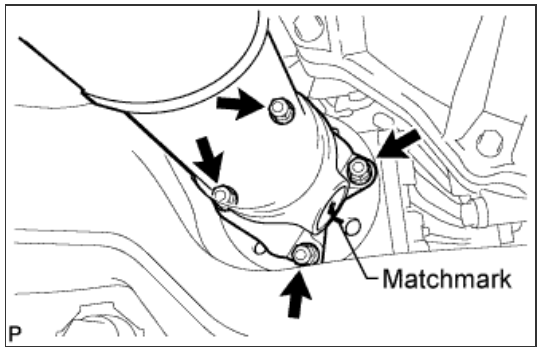
i . Remove the 4 nuts and 4 washers.



. Remove the front propeller shaft.

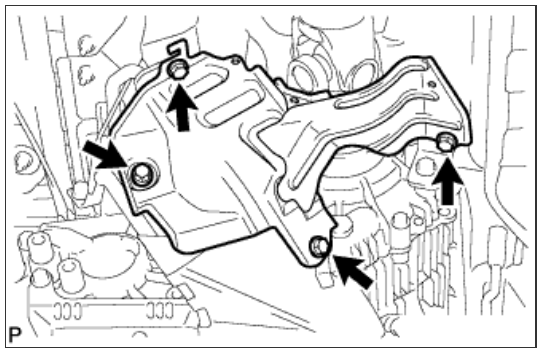
b. for 1VD-FTV:

i. Place matchmarks on the propeller shaft flange and transfer flange.



ii. Remove the 4 nuts and 4 washers.

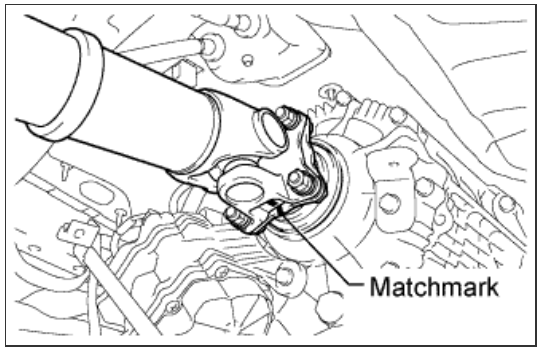
iii. Place matchmarks on the propeller shaft flange and differential.



iv. Remove the 4 nuts and 4 washers.

v. Remove the front propeller shaft.

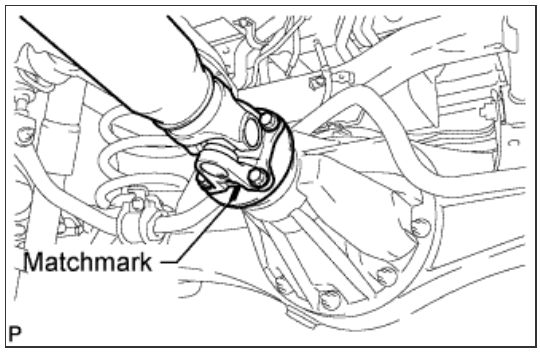
48. REMOVE TRANSFER HEAT INSULATOR



a. Remove the 4 bolts and insulator.

4 . REMOVE PROPELLER SHAFT ASSEMBLY

a. Place matchmarks on the propeller shaft flange and transfer.



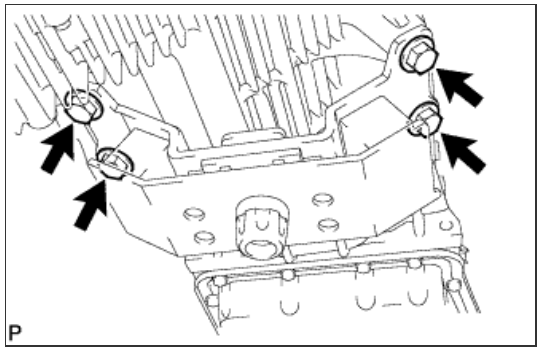
b. Remove the 4 nuts and 4 washers.

c. Place matchmarks on the propeller shaft flange and rear differential.

d. Remove the 4 nuts, 4 bolts and 4 washers.

e. Remove the rear propeller shaft.

50. REMOVE AUTOMATIC TRANSMISSION ASSEMBLY



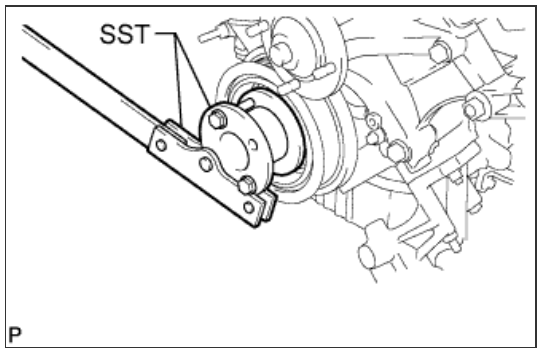
a. Remove the automatic transmission (Click here).

51. REMOVE REAR NO. 1 ENGINE MOUNTING INSULATOR

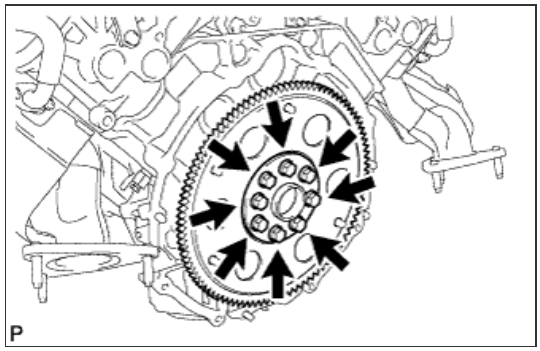
HINT:

Perform this procedure only when replacement of the engine mounting insulator is necessary.

a. Remove the 4 bolts and rear No. 1 engine mounting insulator.



52. REMOVE DRIVE PLATE AND RING GEAR SUB-ASSEMBLY



a. Using SST, hold the crankshaft damper.

SST

213-7	11	213-7	2
33	21	33	3

b. Remove the 8 bolts, front drive plate spacer, drive plate and rear drive plate spacer.

53. REMOVE ENGINE ASSEMBLY

a. Attach an engine sling device and hang the engine with a chain block.

NOTICE:

Pay attention to the angle of the sling device, as the engine assembly or engine hanger No. 1 may be damaged or deformed.

b. Remove the 4 engine mounting insulator bolts.

c. Lift the engine out from the vehicle slowly and carefully.

NOTICE:

Make sure the engine is clear of all wiring, hoses and cables.

54. INSTALL ENGINE ON ENGINE STAND

a. nstall the engine onto an engine stand with bolts.

for Preparation Click here

1. REMOVE ENGINE STAND

a. Attach an engine sling device and hang the engine with a chain block.

NOTICE:

ay attention to the angle of the sling device, as the engine assembly o ngine hange ay be damaged o e e

b. e thebolts and engine assembly f the engine stand.

2. INSTALL ENGINE ASSEMBLY

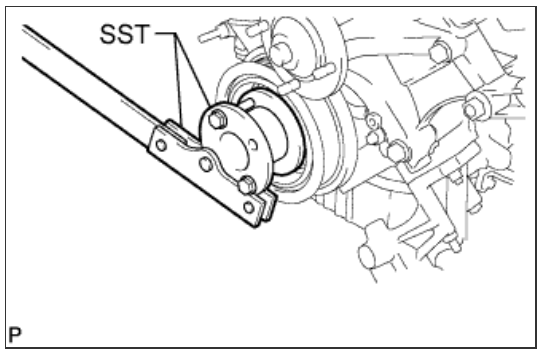
a. Slowly lowe the engine assembly into the engine compa tment.

NOTICE:

Make su hat the engine is clea all wi ing and hoses.

b. Attach the engine mounting insulato s to the vehicle.

c. Install the 4 engine mounting insulato ts. I



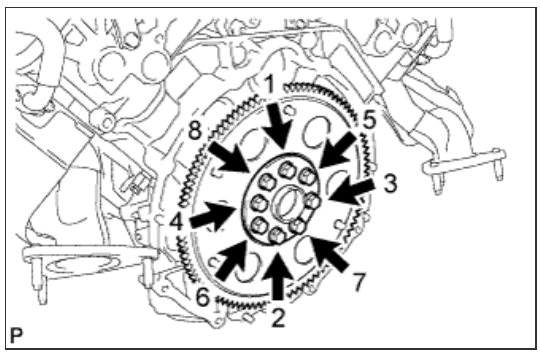
Torque:
79 N*m{ 806 kgf*cm , 58 ft.*lbf }

3. INSTALL DRIVE PLATE AND RING GEAR SUB-ASSEMBLY

a. Using SST, hold the c ankshaft.

SST
09213-70011 (09213-70020)
09330-00021 (09330-00030)

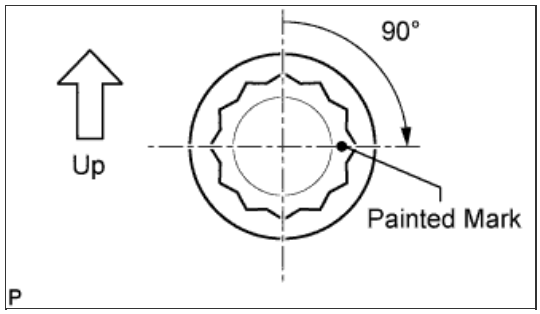
b. Install the f nt d ive plate space ive plate and a ive plate space to the c ankshaft.



c. Install and unifo tighten 8 new bolts in the sequence shown in the illust ation.

Torque:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }

NOTICE:

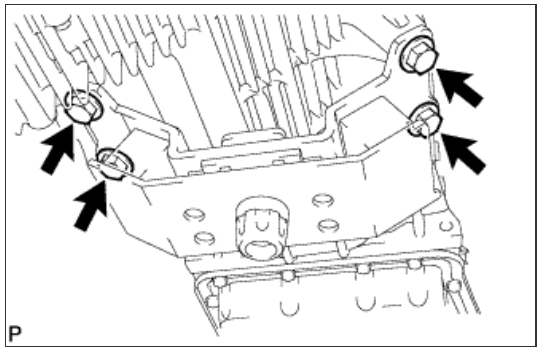


- **Do not reuse the drive plate installation bolts.**
- **Do not impact or damage the drive plate installation bolts. Be sure to handle them carefully.**

d. Ma the upside of each d ive plate installation bolt with paint.

e. Tighten the d ive plate installation bolts anothe as shown.

f. Check that the painted ma s a now at a 90° angle to the upside.



4. INSTALL REAR NO. 1 ENGINE MOUNTING INSULATOR

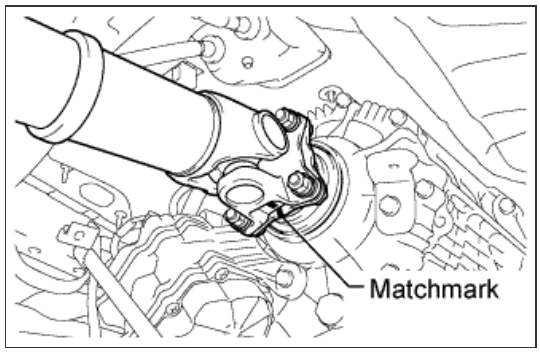
HINT:

e this p cedu e nly when e adement of the engine mounting insulato is necessa

a. nstall the a ngine mounting insulato ith the 4 bolts.

Torque:
59 N*m{ 602 kgf*cm , 44 ft.*lbf }

5. INSTALL AUTOMATIC TRANSMISSION ASSEMBLY

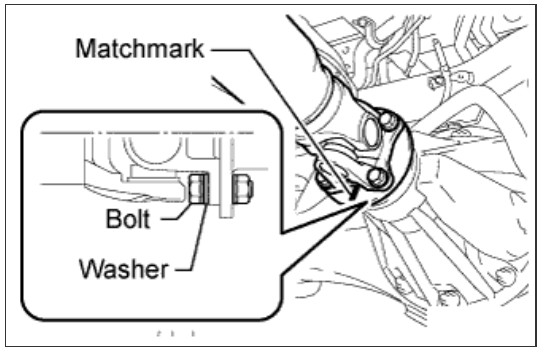


a. Install the automatic t ansmission (Click he e

6. INSTALL PROPELLER SHAFT ASSEMBLY

a. Align the matchma s on the p ell haft flange and t ansfe

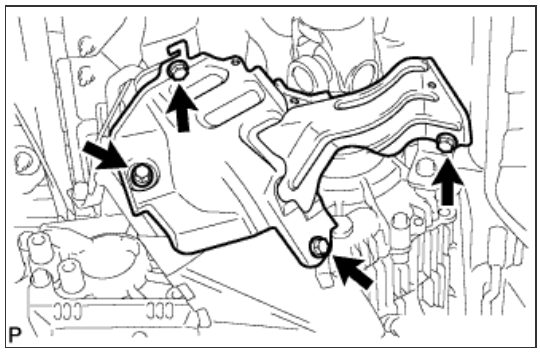
b. nnect the p ell haft with the 4 washe s and 4 nuts.



Torque:
88 N*m{ 900 kgf*cm , 65 ft.*lbf }

c. Align the matchma s on the p ell haft flange and a iffe ential.

d. Install the p ell haft with the 4 bolts, 4 washe s and 4 nuts.



Torque:
88 N*m{ 900 kgf*cm , 65 ft.*lbf }

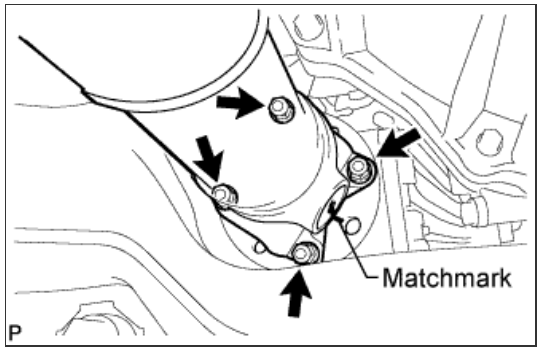
7. INSTALL TRANSFER HEAT INSULATOR

a. Install the insulato ith the 4 bolts.

Torque:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }

8. INSTALL FRONT PROPELLER SHAFT ASSEMBLY

NOTICE:

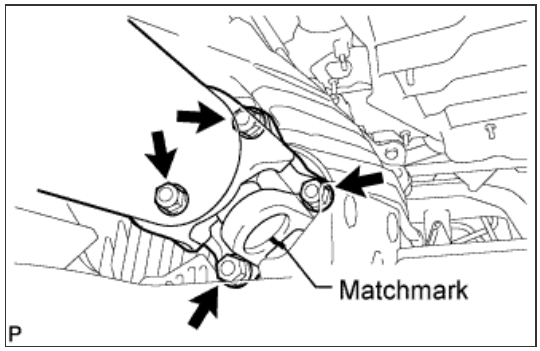


Refe to the components illust ation fo the installation di etion of the p elshaft.

a. fo

i. Align the matchma s on the p elshaft flange and diffe ential.

ii. Connect the p elshaft with the 4 washe s and 4 nuts.

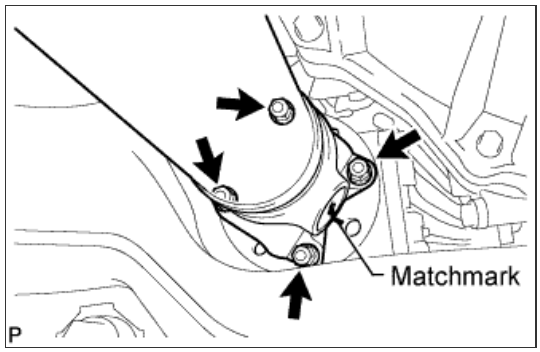


Torque:
88 N*m{ 900 kgf*cm , 65 ft.*lbf }

iii. Align the matchma s on the yoke and t ansfe ange.

iv. Install the p elshaft with the 4 washe s and 4 nuts.

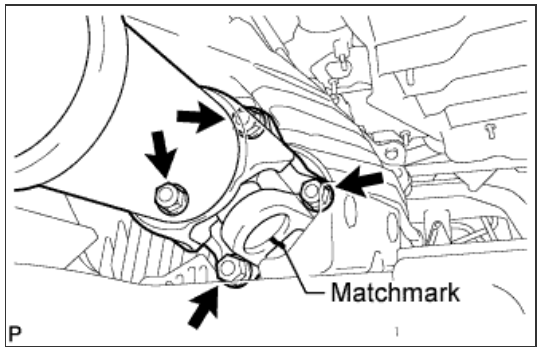
Torque:
88 N*m{ 900 kgf*cm , 65 ft.*lbf }



b. fo and Cente ase Fitting type:

i. Align the matchma s on the p elshaft flange and diffe ential.

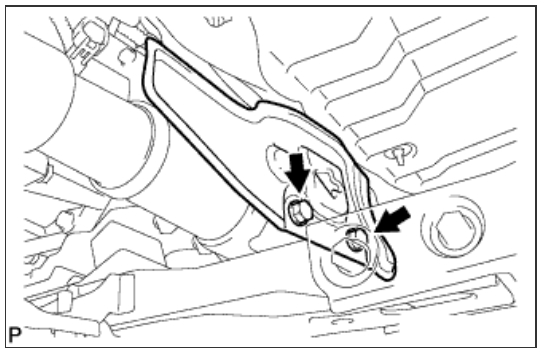
ii. Connect the p elshaft with the 4 washe s and 4 nuts.



Torque:
88 N*m{ 900 kgf*cm , 65 ft.*lbf }

iii. Align the matchma s on the p eshaft flange and t ansfe dnge.

iv. Install the p eshaft with the 4 washe s and 4 nuts.

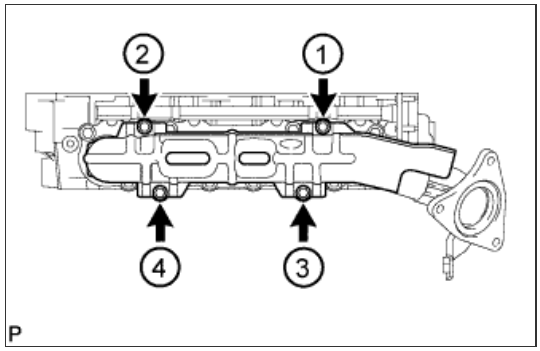


Torque:
88 N*m{ 900 kgf*cm , 65 ft.*lbf }

9. INSTALL PROPELLER SHAFT HEAT INSULATOR

a. Install the insulato ith the 2 bolts.

Torque:
16 N*m{ 160 kgf*cm , 12 ft.*lbf }

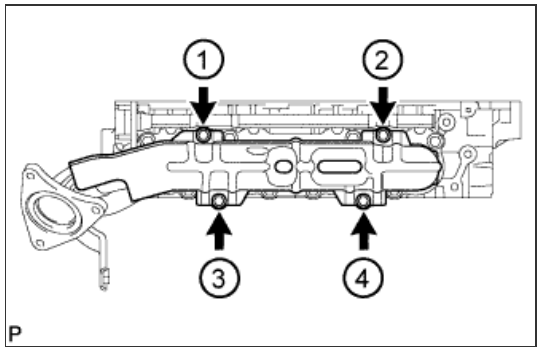


10. INSTALL NO. 2 EXHAUST MANIFOLD HEAT INSULATOR

a. Tempo a ily install the heat insulato ith the 4 bolts.

b. Unifo tighten the 4 bolts in seve al steps, in the sequence shown in the illust ation.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }



11. INSTALL NO. 1 EXHAUST MANIFOLD HEAT INSULATOR

a. Tempo a ily install the heat insulato ith the 4 bolts.

b. Unifo tighten the 4 bolts in seve al steps, in the sequence shown in the illust ation.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

12. INSTALL EXHAUST FRONT PIPE ASSEMBLY

a. Install a new gasket and the f nt exhaust pipe to the exhaust manifold with new nuts.

Torque:
54 N*m{ 554 kgf*cm , 40 ft.*lbf }

b. Connect the ai atio senso connecto

c. nnect the heated oxygen senso connecto

d. Attach the heated oxygen senso i clamp.

13. INSTALL NO. 2 EXHAUST FRONT PIPE ASSEMBLY

a. Install a new gasket and the f nt No. 2 exhaust pipe to the exhaust manifold LH with new nuts.

Torque:
54 N*m{ 554 kgf*cm , 40 ft.*lbf }

b. Connect the ai atio senso connecto

c. nnect the heated oxygen senso connecto

14. INSTALL EXHAUST CENTER PIPE ASSEMBLY

a. nstall the cente e abst pipe to the exhaust pipe supports.

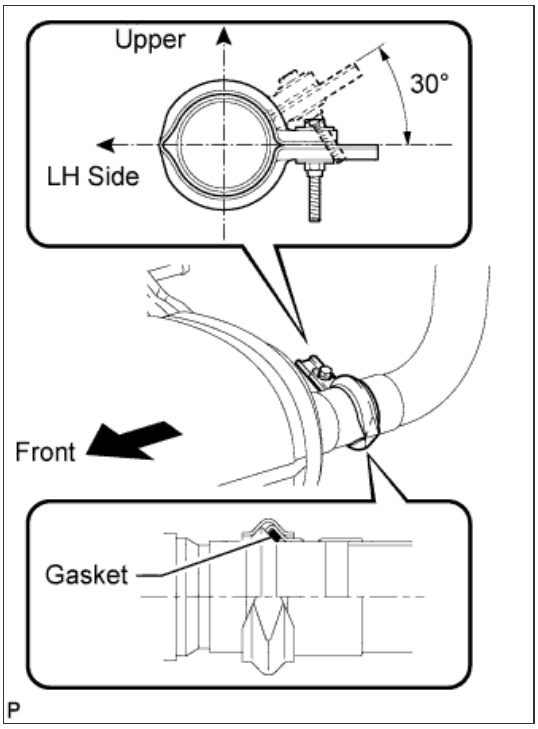
b. Install 2 new gaskets to the front exhaust pipe and front No. 2 exhaust pipe.

c. Install the 4 bolts.

Torque:
48 N*m{ 489 kgf*cm , 35 ft.*lbf }

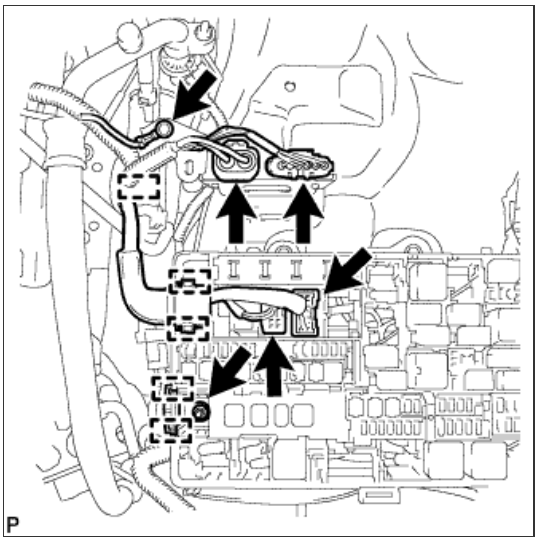
15. INSTALL EXHAUST TAILPIPE ASSEMBLY

a. Install the tailpipe to the 2 exhaust pipe supports.



b. Install a new gasket to the center exhaust pipe.

c. Connect the tailpipe and center exhaust pipe with a new clamp.



Torque:
32 N*m{ 326 kgf*cm , 24 ft.*lbf }

HINT:

Install the clamp within the angle range shown in the illustration.

16. CONNECT WIRE HARNESS

a. Connect the 2 clamps and 2 connectors to the engine room relay block.

b. Connect the wire harness and 2 clamps and install the nut.

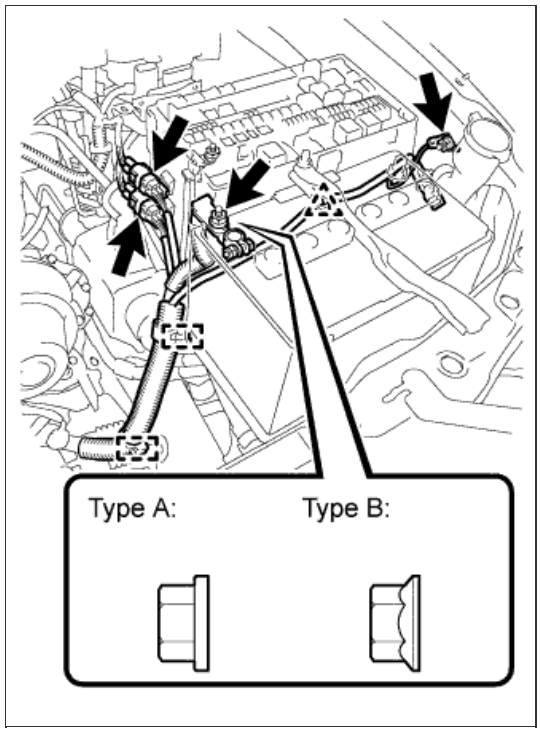
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

c. Connect the wire harness clamp to the air injection control driver bracket.

d. Connect the ground wire and install the bolt.

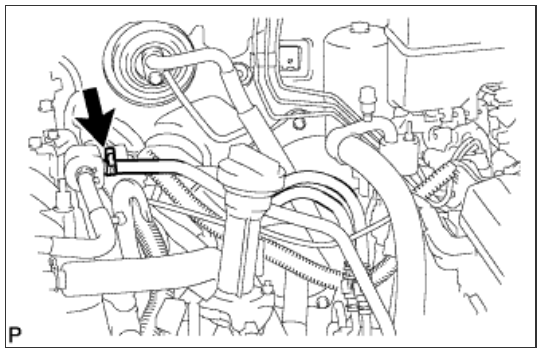
Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

e. Connect the 2 air injection control driver connectors.



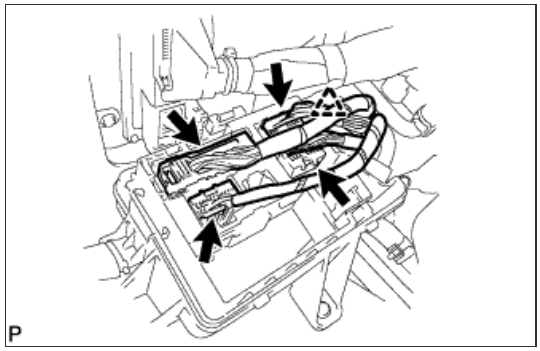
f. Connect the 3 clamps and ground wire and install the bolt.

Torque:
8.4 N*m{ 86 kgf*cm , 74 in.*lbf }



g. Connect the 2 connector clamps to the engine room relay block. Then connect the 2 connectors.

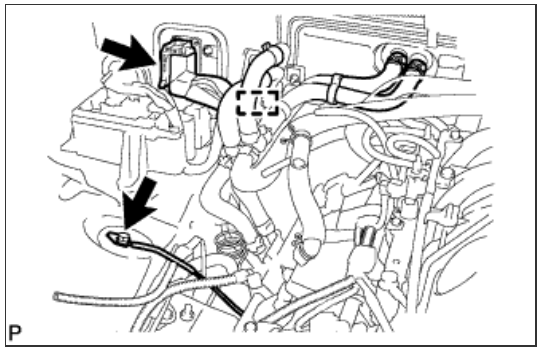
h. Install the wire harness to the positive (+) battery terminal with the nut.



Torque:
for type A nut:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }
for type B nut:
7.6 N*m{ 77 kgf*cm , 67 in.*lbf }

i. Connect the purge line hose to the purge VSV.

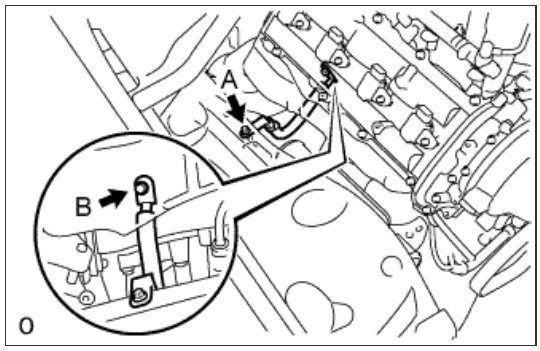
j. Connect the 4 connectors and clamp to the connector holder block.



k. Install the ground wire and install the bolt.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

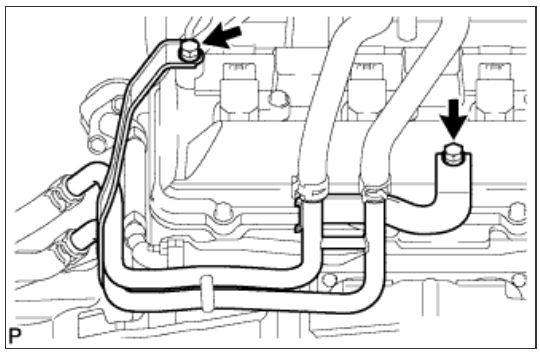
l. Connect the clamp and ECM connector.



HINT:

Refer to the following procedures to connect the ECM connector (Click here).

m. w/ Winch:
Connect the winch ground wire and install the 2 bolts.

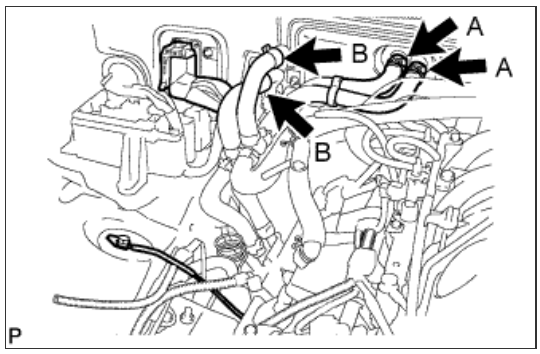


Torque:
for bolt A:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }
for bolt B:
19 N*m{ 194 kgf*cm , 14 ft.*lbf }

17. CONNECT NO. 1 WATER BY-PASS PIPE (w/ Air Cooled Transmission Oil Cooler)

a. Connect the water by-pass pipe to the cylinder head cover RH with the 2 bolts.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }



18. CONNECT WATER HOSE SUB-ASSEMBLY

a. Connect the water hose.

i. w/ Rear Heater:
Connect the water hoses labeled A and B.

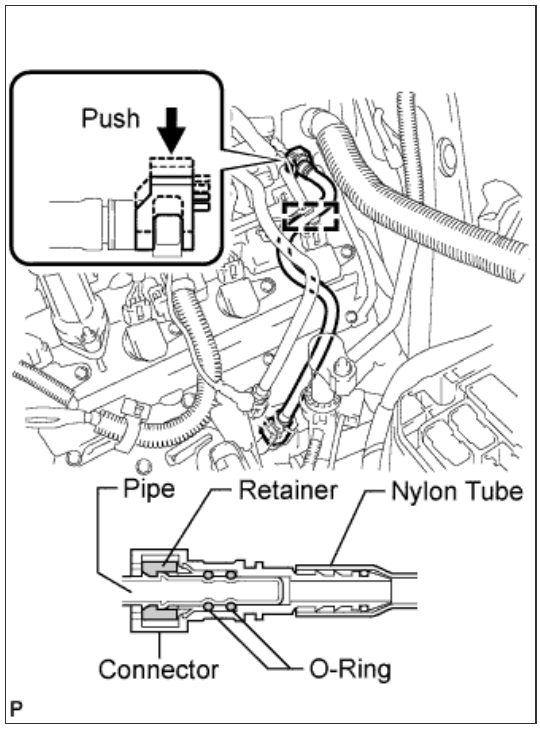
ii. w/o Rear Heater:
Connect the water hoses labeled A.

19. INSTALL NO. 2 FUEL HOSE

a. for engine side:

i. Connect the fuel hose to the No. 3 fuel pipe.

HINT:



Push the parts together firmly until a "click" sound is heard.

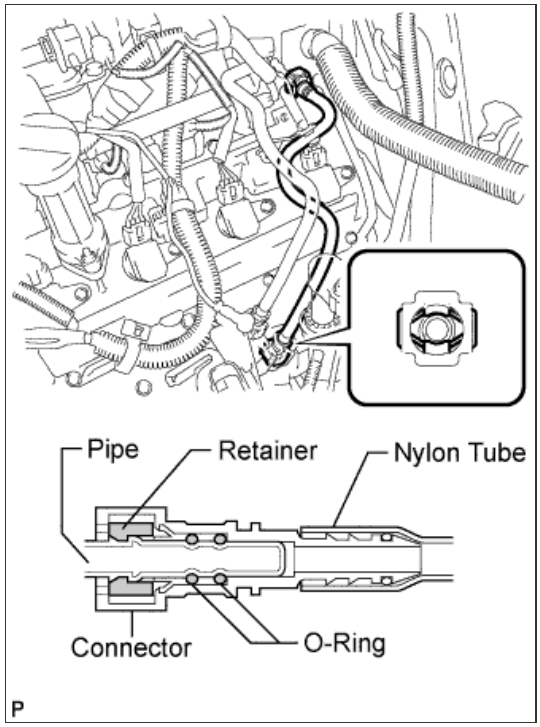
NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

ii. Attach the lock claws to the connector by pushing down on the cover, as shown in the illustration.

iii. Attach the fuel hose clamp.

b. for body side:



i. Connect the fuel hose to the fuel pipe.

HINT:

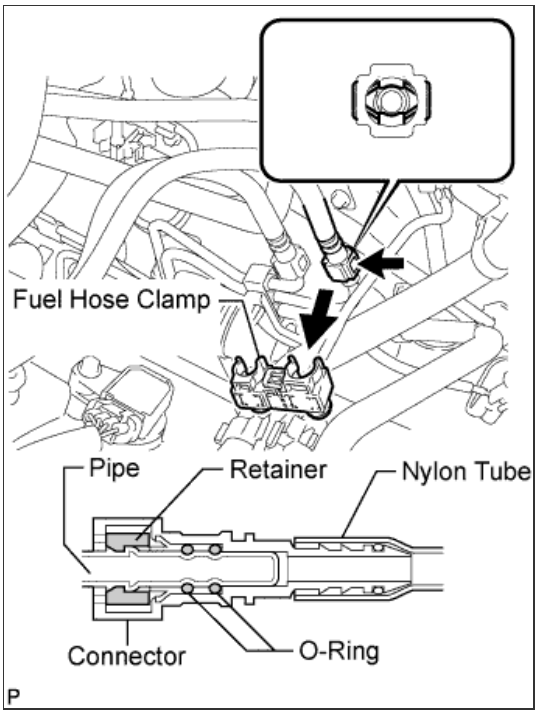
Push the parts together firmly until a "click" sound is heard.

NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

20. CONNECT FUEL HOSE

a. Connect the fuel hose.

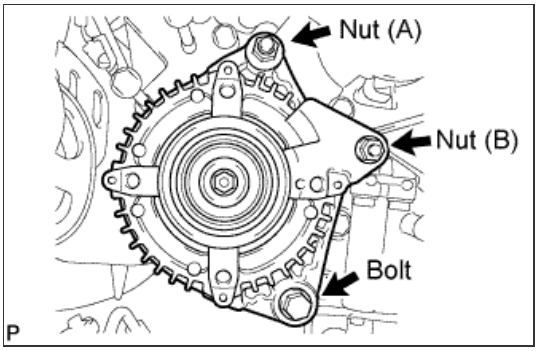


HINT:

Push the parts together firmly until a "click" sound is heard.

NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**



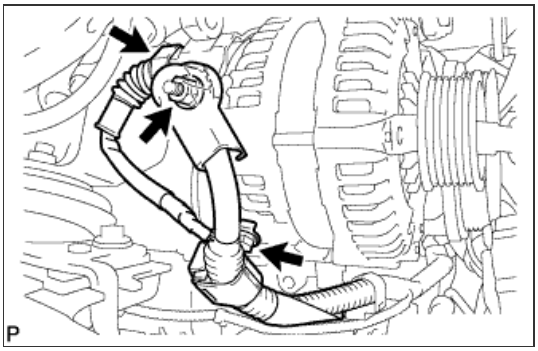
b. Install the fuel hose clamp.

21. INSTALL GENERATOR ASSEMBLY

a. Install the generator with the bolt and 2 nuts.

Torque:
for bolt and nut (A):
39 N*m{ 398 kgf*cm , 29 ft.*lbf }
for nut (B):
16 N*m{ 158 kgf*cm , 11 ft.*lbf }

b. Connect the generator connector.

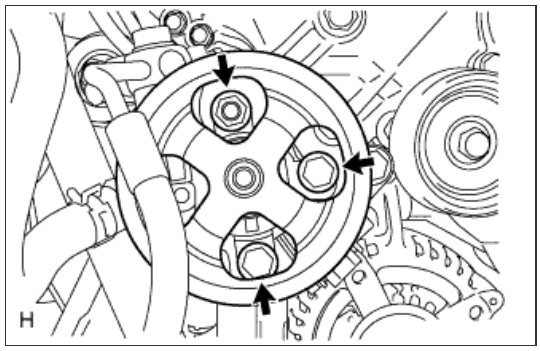


c. Connect the generator wire with the nut.

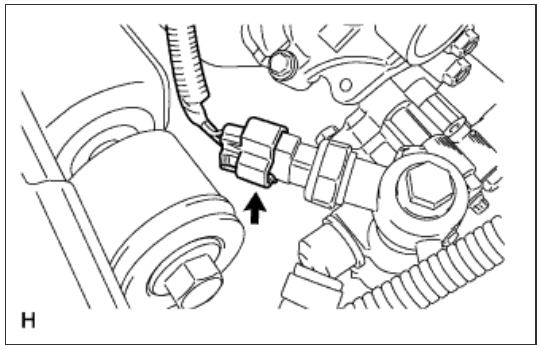
Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

d. Install the terminal cap.

e. Connect the harness bracket to the generator with the bolt.



Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



22. CONNECT VANE PUMP ASSEMBLY

a. Connect the vane pump with the 2 bolts and nut.

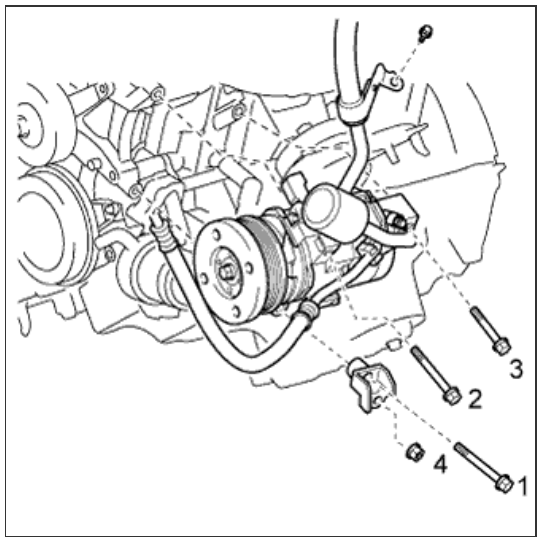
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. Connect the connector.

23. CONNECT COOLER COMPRESSOR ASSEMBLY

a. Connect the compressor. Then install it and the No. 1 compressor stay with the nut and 3 bolts.

Torque:
for bolt:
45 N*m{ 459 kgf*cm , 33 ft.*lbf }
for nut:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }



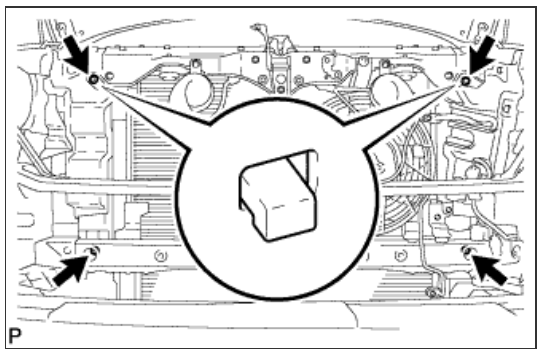
HINT:

Tighten the bolts in the order shown in the illustration to install the cooler compressor.

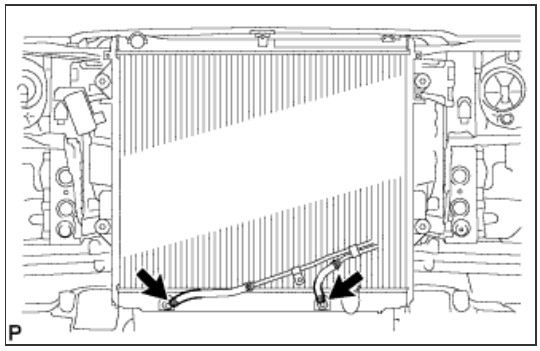
b. Install the cooler refrigerant suction hose with the bolt.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

c. Connect the connector.



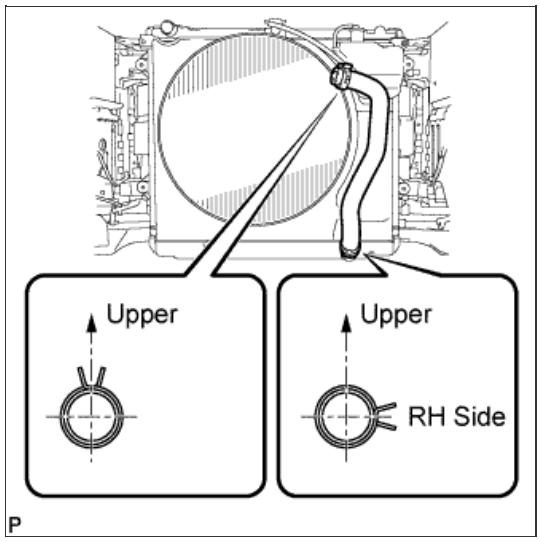
24. INSTALL RADIATOR ASSEMBLY



a. Set the radiator bracket hooks to the radiator support holes.

b. Install the radiator with the 4 bolts.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

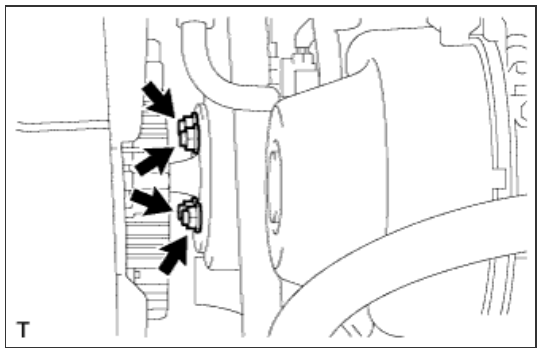


c. Connect the 2 oil cooler hoses.

25. INSTALL NO. 2 RADIATOR HOSE

a. Using needle-nose pliers, grip the claws of the clamps and slide the clamps to install the radiator hose.

26. INSTALL FAN SHROUD



a. Install the fan pulley to the water pump.

b. Place the shroud together with the cooling fan between the radiator and engine.

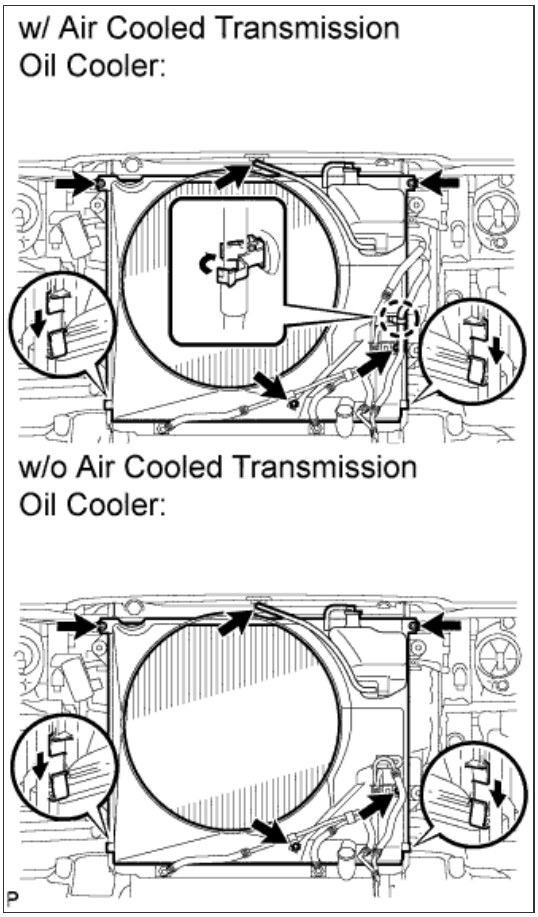
NOTICE:

Be careful not to damage the radiator core.

c. Temporarily install the cooling fan to the water pump with the 4 nuts. Tighten the nuts as much as possible by hand.

d. Attach the claws of the shroud to the radiator as shown in the illustration.

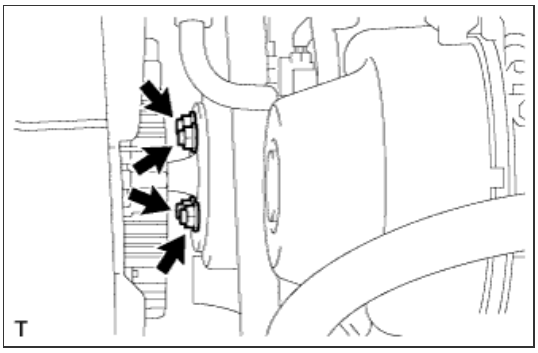
e. Install the shroud with the 2 bolts.



Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

f. Connect the oil cooler tube to the fan shroud with the 2 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

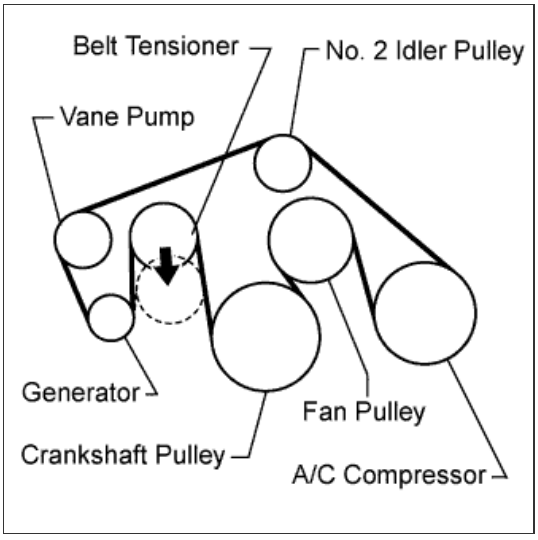


g. w/ Air Cooled Transmission Oil Cooler:
Pass the hose through the flexible hose clamp and close the clamp as shown in the illustration.

h. Connect the reservoir hose to the upper side of the radiator tank.

i. Tighten the 4 nuts of the cooling fan.

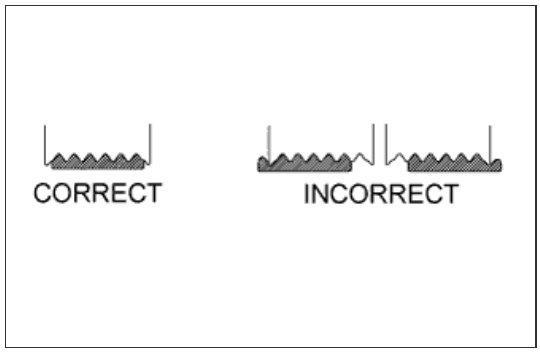
Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }



27. INSTALL FAN & GENERATOR V BELT

a. Set the V belt onto every part except the belt tensioner, as shown in the illustration.

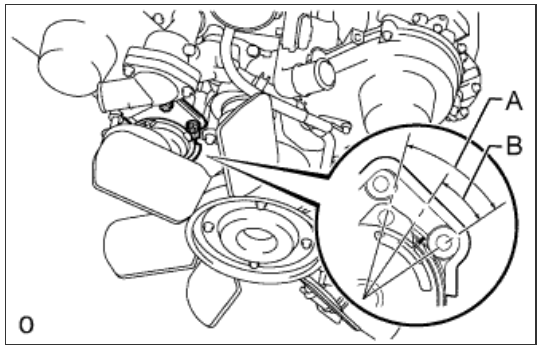
b. Loosen the V belt by turning the belt tensioner counterclockwise.



c. Set the V belt to the belt tensioner.

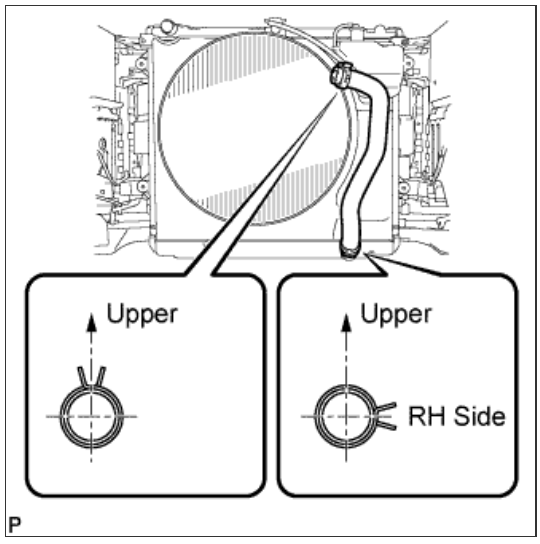
d. Check that the belt fits properly in the ribbed grooves.

HINT:



Make sure to check by hand that the belt has not slipped out of the grooves on the bottom of the pulley.

e. Check that the arrow on the belt tensioner is within area "A".
If the arrow is outside area "A", replace the fan and generator V belt.

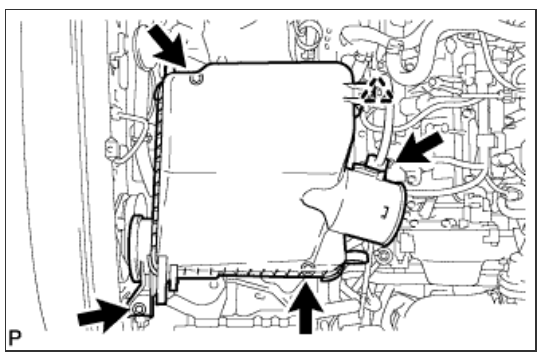


HINT:

When a new belt is installed, the arrow should be within area "B". If not, the fan and generator V belt is not installed correctly.

28. INSTALL NO. 1 RADIATOR HOSE

a. Using needle-nose pliers, grip the claws of the clamps and slide the clamps to install the radiator hose.



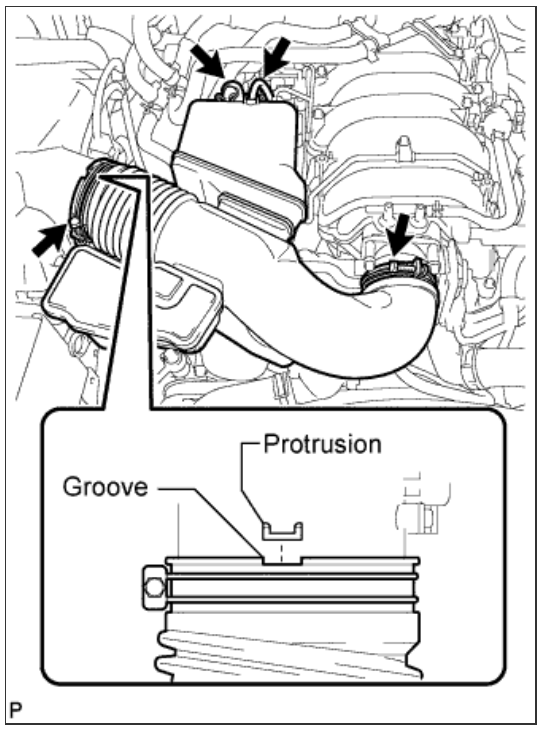
29. INSTALL AIR CLEANER ASSEMBLY

a. Install the air cleaner with the 3 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

b. Connect the clamp and MAF connector.

30. INSTALL AIR CLEANER HOSE ASSEMBLY



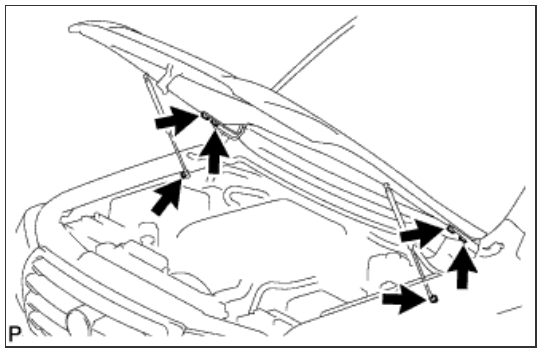
a. Install the air cleaner hose so that the protrusion of the air cleaner cap aligns with the groove of the hose as shown in the illustration.

b. Tighten the 2 clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

c. Connect the vacuum transmitting hose.

d. Connect the No. 2 ventilation hose.



31. INSTALL HOOD SUB-ASSEMBLY

a. Install the hood with the 4 bolts.

Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }

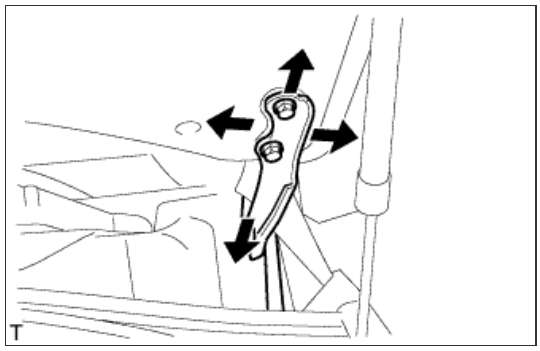
b. Install the 2 hood supports with the 2 hood stay bolts.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

NOTICE:

- **Avoid touching the stroke portions of the rod as much as possible to prevent foreign matter from attaching to it. Be sure to hold the cylinders while servicing.**
- **Do not wear cotton gloves or other similar materials when handling the rod. Fibers may attach to the rod and result in gas leaks.**
- **Do not apply any load to the cylinders in the horizontal direction in order to prevent the rod from being deformed.**
- **Install the hood support while supporting the hood by hand.**

32. ADJUST HOOD SUB-ASSEMBLY

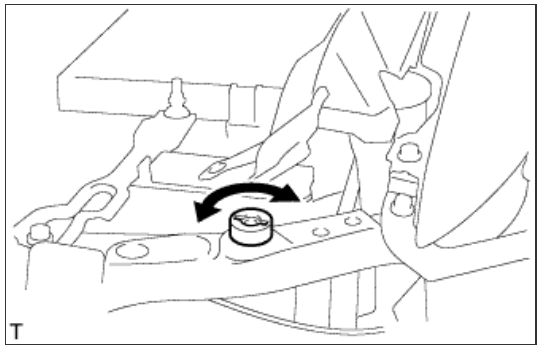


a. Adjust the hood position.

i. Loosen the 4 hinge bolts of the hood.

ii. Move the hood and adjust the clearance between the hood and front fender.

iii. Tighten the 4 hinge bolts of the hood after the adjustment.

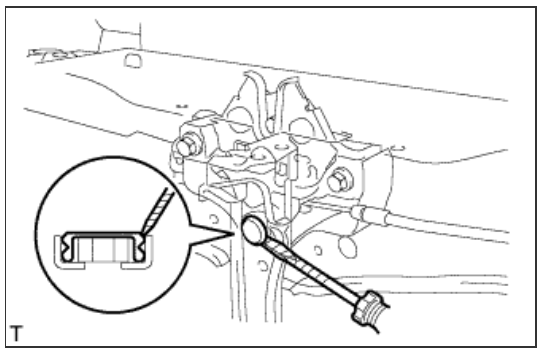


Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }

iv. Adjust the cushion rubber so that the height of the hood and fender are aligned.

HINT:

Raise or lower the hood front end by turning the cushion rubber.

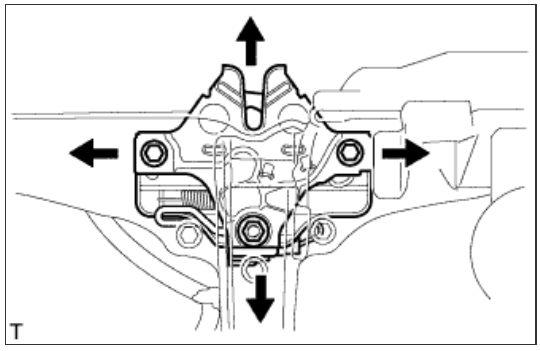


b. Adjust the hood lock.

i. Using a screwdriver, remove the hood lock nut cap as shown in the illustration.

HINT:

Tape the screwdriver tip before use.



ii. Loosen the 2 bolts and hood lock nut.

iii. Adjust the hood lock position so that the striker can enter it smoothly.

iv. Tighten the bolts and nut after the adjustment.

Torque:
5.5 N*m{ 56 kgf*cm , 49 in.*lbf }

v. Install a new cap.

33. ADD ENGINE OIL

a. Install a new gasket and the drain plug.

Torque:
39 N*m{ 398 kgf*cm , 29 ft.*lbf }

b. Add new engine oil.

Standard Engine Oil:

Oil Grade	Oil Viscosity (SAE)

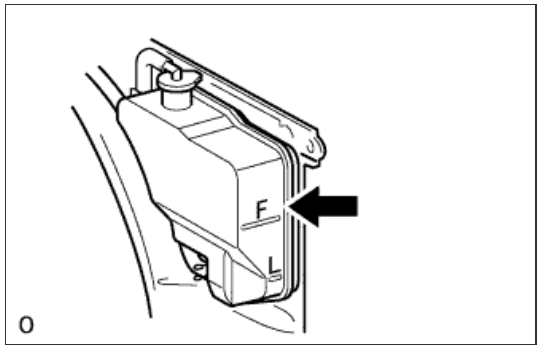
API grade SL "Energy-Conserving", SM "Energy-Conserving" or ILSAC multigrade engine oil	10W-30 (10W-30 is best choice for fuel economy and good starting in cold weather).
API grade SL or SM multigrade engine oil	10W-30

Standard Oil Capacity:

Item	Specified Condition
Drain and refill with oil filter change	6.2 liters (6.6 US qts, 5.5 Imp. qts)
Drain and refill without oil filter change	5.7 liters (6.0 US qts, 5.0 Imp. qts)
Dry fill	7.1 liters (7.5 US qts, 6.2 Imp. qts)

34. ADD ENGINE COOLANT

a. Add engine coolant.



Standard Capacity:

Item		Specified Condition
w/o Transmission oil cooler	w/o Rear Heater	13.4 liters (14.2 US qts, 11.8 Imp. qts)
	w/ Rear Heater	16.3 liters (17.2 US qts, 14.3 Imp. qts)
w/ Transmission oil cooler	w/o Rear Heater	14.1 liters (14.9 US qts, 12.4 Imp. qts)
	w/ Rear Heater	16.9 liters (17.9 US qts, 14.9 Imp. qts)

HINT:

TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the radiator reservoir cap.

d. Press the inlet and outlet radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Start the engine and warm it up until the thermostat opens.

NOTICE:

Switch off the A/C.

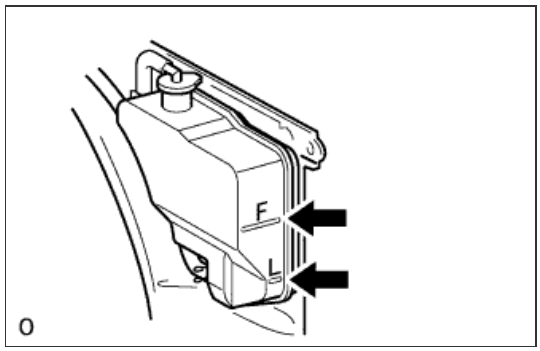
g. Maintain the engine speed at 2000 to 2500 rpm.

NOTICE:

- **Make sure that the radiator reservoir still has some coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**
- **Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the F line.**
- **Run the engine at 2000 rpm until the coolant level has stabilized.**

h. Press the inlet and outlet radiator hoses several times by hand to bleed air.

CAUTION:



- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the cooling fan.**

i. Stop the engine, and wait until the engine coolant cools down to the ambient temperature.

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

j. Check that the coolant level is between the F and L lines. If the coolant level is below the L line, repeat all of the procedures above. If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.

35. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

36. INSPECT FOR FUEL LEAK

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG) and intelligent tester ON.

NOTICE:

Do not start the engine.

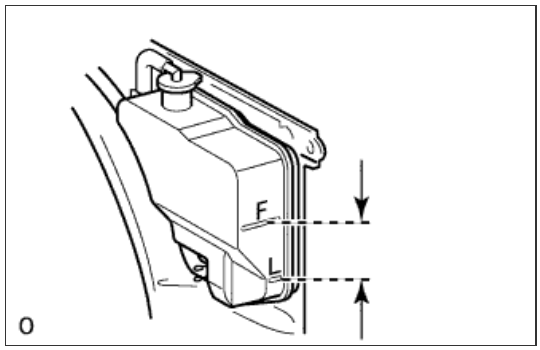
c. Enter the following menus: Powertrain / Engine and ECT / Active Test / Activate the Fuel Pump Speed Control.

d. Check that there are no fuel leaks after doing maintenance anywhere on the fuel system.

37. INSPECT FOR EXHAUST GAS LEAK

If gas is leaking, tighten the areas necessary to stop the leak. Replace damaged parts as necessary.

38. INSPECT FOR COOLANT LEAK



a. Check that the engine coolant level is between the L and F lines when the engine is cold.
If the engine coolant is low, check for leaks and add "TOYOTA Super Long Life Coolant" or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite and non-borate coolant with long-life hybrid organic acid technology to the F line.

NOTICE:

Do not substitute plain water for engine coolant.

b. Remove the radiator cap, and check that the coolant level is up to the radiator

filler hole.

39. INSPECT FOR OIL LEAK

a. Start the engine. Make sure that there are no oil leaks from the area that was worked on.

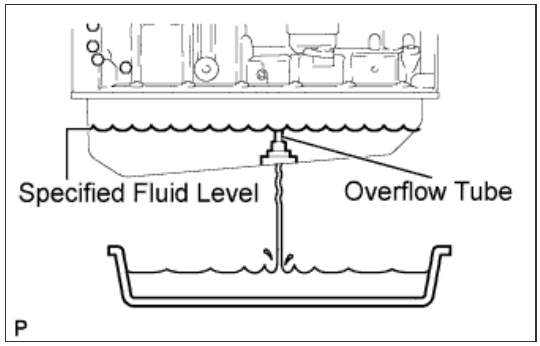
40. INSPECT ENGINE OIL LEVEL

a. Warm up the engine, then stop the engine and wait for 5 minutes.

b. Check that the engine oil level is between the low level and full level marks on the dipstick.
If low, check for leakage and add oil up to the full level mark.

NOTICE:

Do not fill engine oil above the full level mark.



41. CHECK FLUID LEVEL

NOTICE:

The fluid temperature must be between 38 to 45°C (100 to 113°F) to accurately check the fluid level.

a. Remove the overflow plug with the engine idling.

b. Check that fluid comes out of the overflow tube.
If fluid does not come out, proceed to the "Transmission Refill" procedures.
If fluid comes out, wait until the overflow slows to a trickle and proceed to the "Complete" procedures.

42. INSPECT SHIFT LEVER POSITION

a. When moving the shift lever from P to R with the engine switch on (IG) and the brake pedal depressed, make sure that it moves smoothly and correctly into position.

b. Check that the shift lever does not stop when moving the shift lever from R to P, and check that the shift lever does not stick when moving the shift lever from D to S.

c. Start the engine and make sure that the vehicle moves forward after moving the shift lever from N to D and moves rearward after moving the shift lever to R.
If the operation cannot be performed as specified, inspect the park/neutral position switch assembly and check the shift lever assembly installation condition.

43. INSPECT IGNITION TIMING

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. When using the intelligent tester:

i. Connect the intelligent tester to the DLC3.

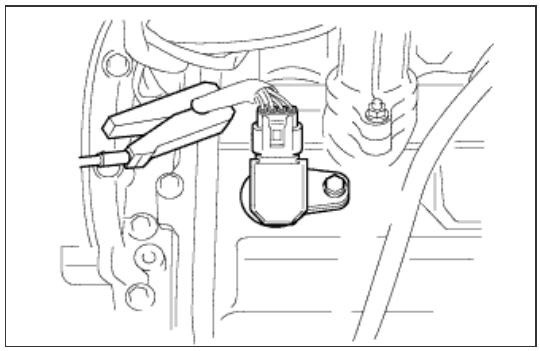
NOTICE:

Switch off all accessories and the A/C before connecting the intelligent tester.

ii. Start the engine and idle it.

iii. Push the intelligent tester main switch ON.

iv. Enter the following menus: Powertrain / Engine and ECT / Data List / Primary / IGN Advance.



HINT:

Refer to the intelligent tester operator's manual for further details.

Standard ignition timing:
5 to 15° BTDC @ idling (transmission in neutral and A/C switch off)

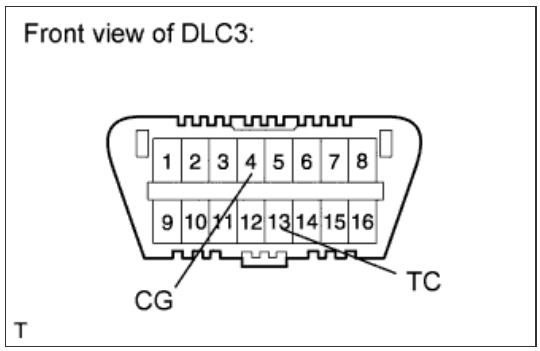
v. Disconnect the intelligent tester from the DLC3.

c. When not using the intelligent tester:

i. Remove the 2 nuts and V-bank cover.

ii. Connect the tester probe of a timing light to the wire of the ignition coil connector for the No. 1 cylinder.

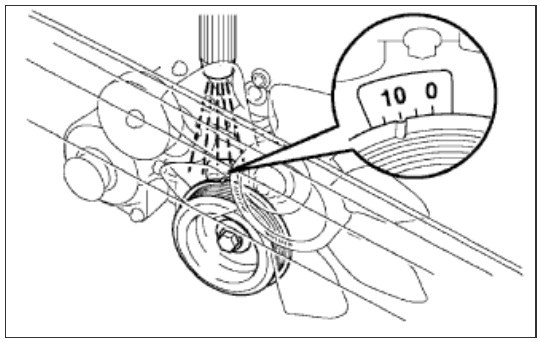
NOTICE:



Use a timing light that detects primary signals.

iii. Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.

SST
09843-18040



NOTICE:

- **Confirm the terminal numbers before connecting them. Connecting the wrong terminals can damage the engine.**
- **Switch off all accessories and the A/C.**

iv. Using the timing light, check the ignition timing.

Ignition timing:
5 to 15° BTDC @ idling (transmission in neutral and A/C switch off)

v. Remove SST from the DLC3.

vi. Disconnect the timing light from the engine.

vii. Install the V-bank cover with the 2 nuts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

44. INSPECT ENGINE IDLE SPEED

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. When using the intelligent tester:

i. Connect the intelligent tester to the DLC3.

NOTICE:

Switch off all accessories and the A/C before connecting the intelligent tester.

ii. Race the engine at 2500 rpm for approximately 90 seconds.

iii. Push the intelligent tester main switch ON.

iv. Enter the following menus: Powertrain / Engine and ECT / Data List / Primary / Engine Speed.

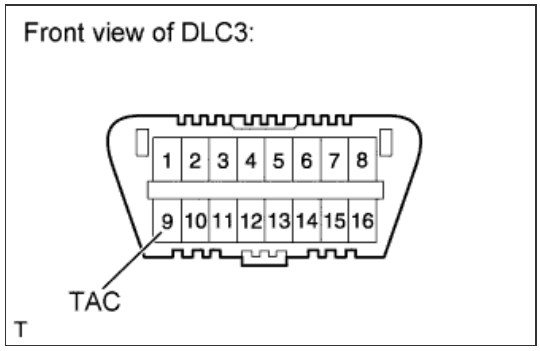
Standard idle speed:
650 to 750 rpm (transmission in neutral and A/C switch off)

HINT:

Refer to the intelligent tester operator's manual for further details.

If the idle speed is not as specified, check the air intake system.

v. Disconnect the intelligent tester from the DLC3.



c. When not using the intelligent tester:

i. Using SST, connect a tachometer probe to terminal 9 (TAC) of the DLC3.

SST
09843-18030

NOTICE:

- **Confirm the terminal number before connecting the probe. Connecting the probe to the wrong terminal can damage the engine.**
- **Switch off all accessories and the A/C.**

ii. Race the engine at 2500 rpm for approximately 90 seconds.

iii. Check the idle speed.

Standard idle speed:
650 to 750 rpm (transmission in neutral and A/C switch off)

If the idle speed is not as specified, check the air intake system.

iv. Disconnect the tachometer from the DLC3.

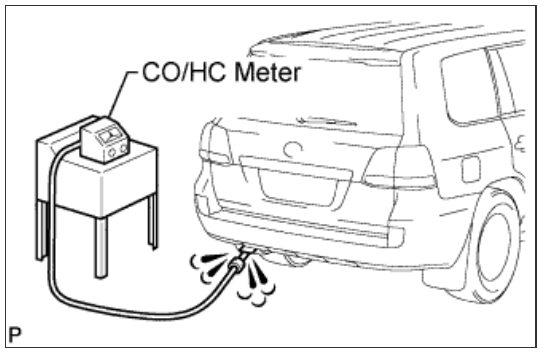
45. INSPECT CO/HC

HINT:

This check is used only to determine whether or not the idle CO/HC complies with regulations.

a. Warm up the engine.

b. Keep the engine speed at 2500 rpm for approximately 180 seconds.



c. Insert the CO/HC meter testing probe at least 40 cm (1.31 ft.) into the tailpipe during idling.

d. Immediately check CO/HC concentration at idle and/or 2500 rpm.

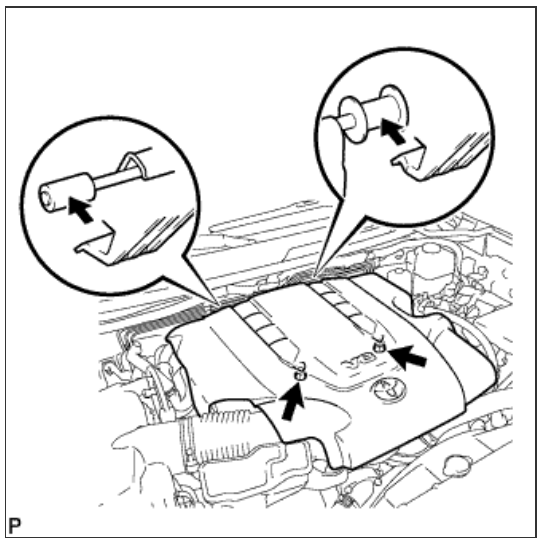
HINT:

When performing the 2 mode (2500 rpm and idle) test, follow the measurement order prescribed by the applicable local regulations.

e. If the C concentration does not comply with regulations, troubleshoot in the order given below.

i. Check the A/F sensor (Click here) and heated oxygen sensor (Click here) operation.

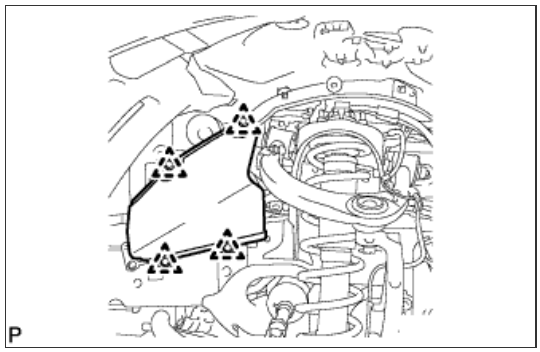
ii. See the table below for possible causes, and then inspect and correct the applicable causes if necessary.



CO	HC	Symptom	Cause
Normal	High	Rough idle	1. Faulty ignitions: • Incorrect timing • Plugs (contaminated, shorted or gaps are defective) 2. Incorrect valve clearance 3. Leaky intake and exhaust valves 4. Leaky cylinder
Low	High	Rough idle (Fluctuating HC reading)	1. Vacuum leaks: • PCV hose • Intake manifold • Throttle body 2. Lean mixture causing misfire
High	High	Rough idle (Black smoke from exhaust)	1. Restricted air filter 2. Faulty SFI system: • Faulty pressure regulator • Defective ECT sensor • Faulty ECM • Faulty injectors • Faulty throttle position sensor • Faulty MAF meter

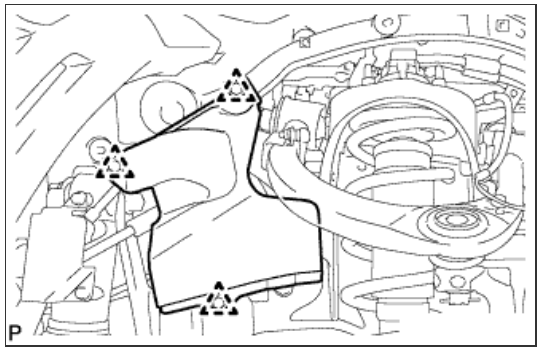
46. INSTALL V-BANK COVER SUB-ASSEMBLY

a. Attach the 2 V-bank cover hooks to the bracket.



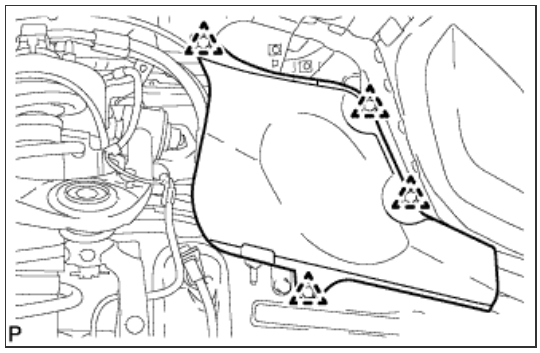
b. Install the V-bank cover with the 2 nuts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }



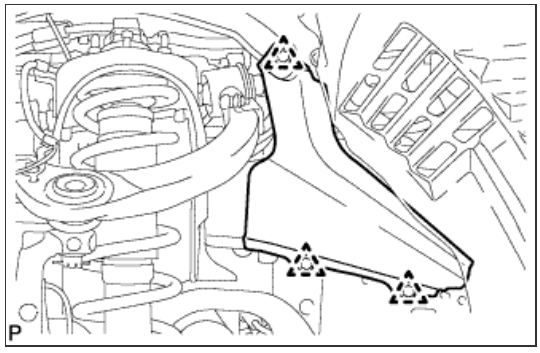
47. INSTALL FRONT FENDER APRON SEAL LH

a. Install the fender apron seal with the 4 clips.



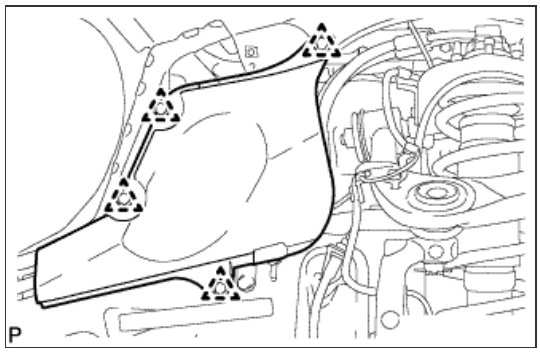
48. INSTALL FRONT FENDER APRON SEAL LH (w/ KDSS)

a. Install the fender apron seal with the 3 clips.



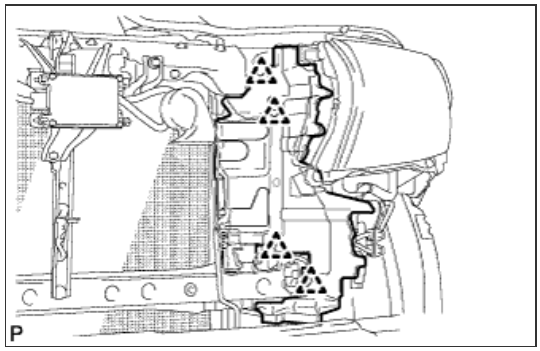
49. INSTALL FRONT FENDER APRON SEAL REAR LH

a. Install the fender apron seal with the 4 clips.



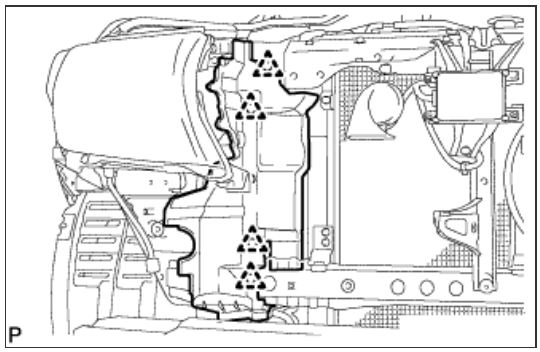
50. INSTALL FRONT FENDER APRON SEAL FRONT RH

a. Install the fender apron seal with the 3 clips.



51. INSTALL FRONT FENDER APRON SEAL REAR RH

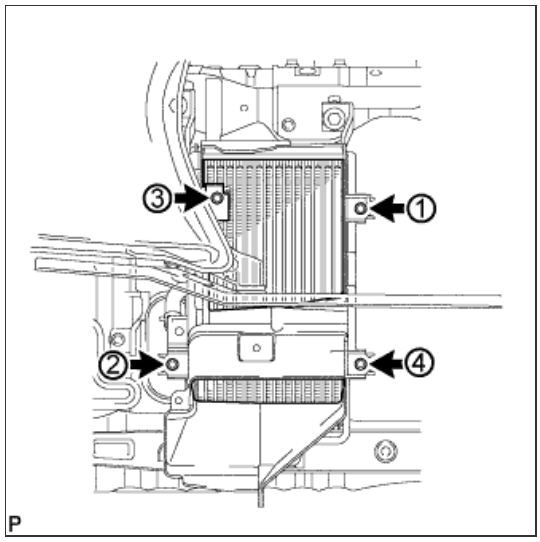
a. Install the fender apron seal with the 4 clips.



52. CONNECT RADIATOR SIDE DEFLECTOR LH

a. Connect the deflector with the 4 clips.

53. CONNECT RADIATOR SIDE DEFLECTOR RH (w/o Air Cooled Transmission Oil Cooler)



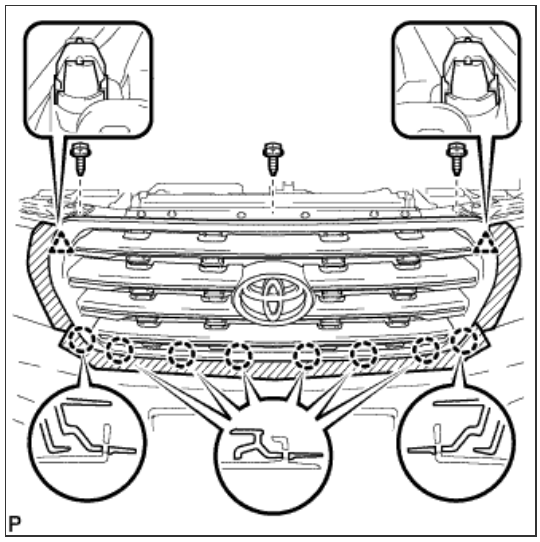
a. Connect the deflector with the 4 clips.

54. INSTALL TRANSMISSION OIL COOLER AIR DUCT (w/ Air Cooled Transmission Oil Cooler)

a. Install the oil cooler air duct with the 4 bolts in the sequence shown in the illustration.

Torque:
4.9 N*m{ 50 kgf*cm , 43 in.*lbf }

55. INSTALL FRONT BUMPER COVER

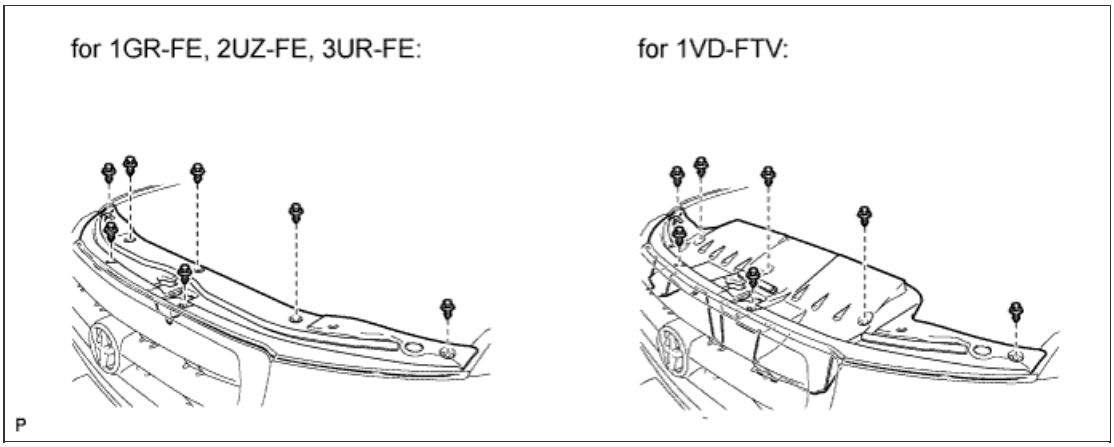


a. for Standard:
Install the front bumper (Click here).

b. w/ Winch:
Install the front bumper (Click here).

56. INSTALL RADIATOR GRILLE

a. Attach the 2 clips and 8 claws to install the radiator grille.

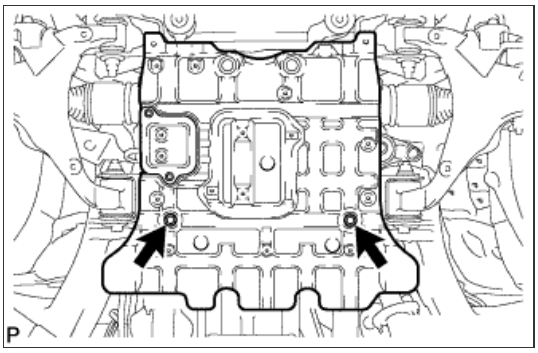


b. Install the 3 screws.

57. INSTALL FRONT BUMPER WINCH COVER SUB-ASSEMBLY (w/ Winch)

58. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the radiator support seal with the 7 clips.

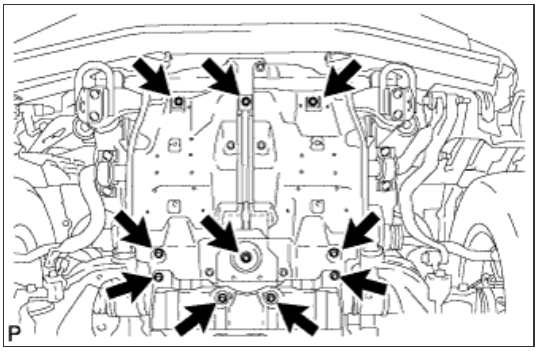


59. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

a. Install the cowl top ventilator (Click here).

60. INSTALL NO. 2 ENGINE UNDER COVER

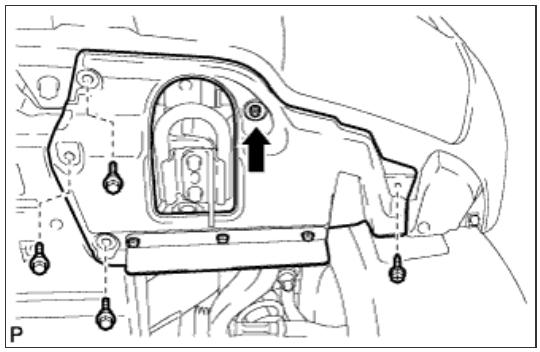
a. Install the No. 2 engine under cover with the 2 bolts.



Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

61. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.



Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

62. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the 3 bolts and screw.

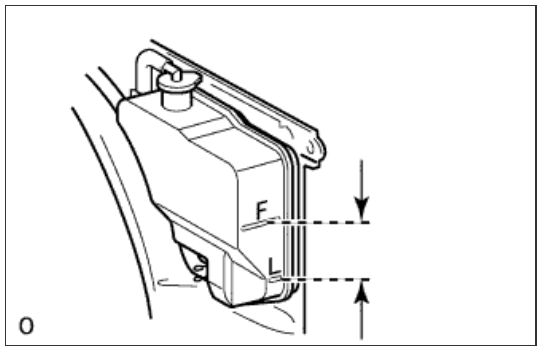
63. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

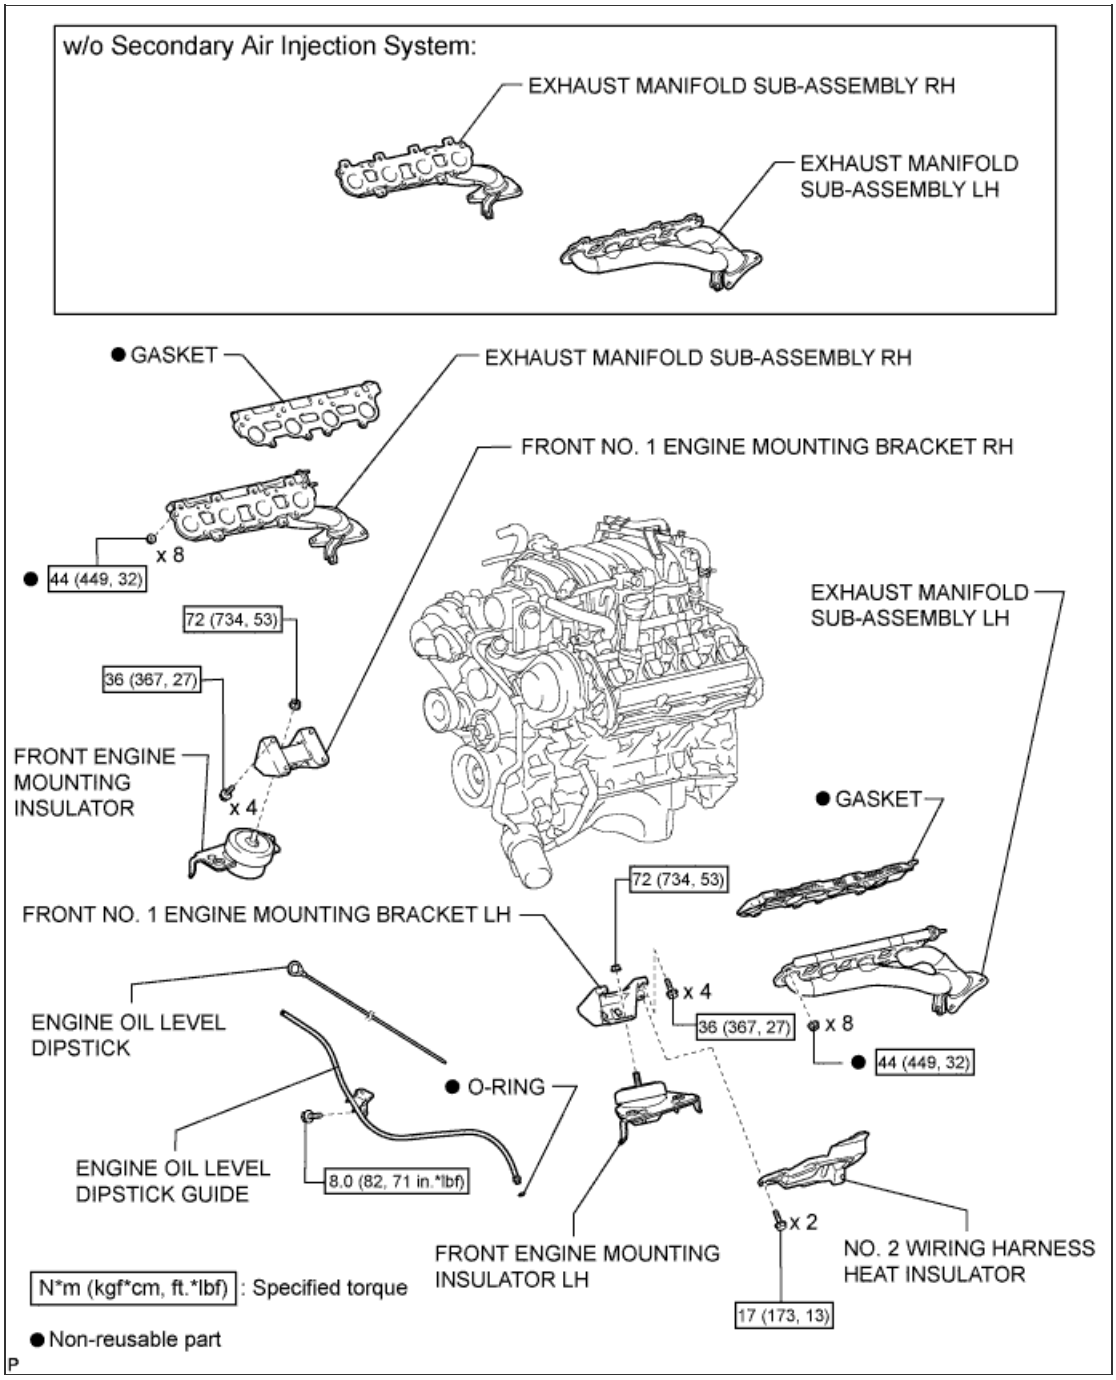
64. INSTALL FRONT WHEEL

Torque:
for aluminum wheel:
131 N*m{ 1336 kgf*cm , 97 ft.*lbf }
for steel wheel:
209 N*m{ 2131 kgf*cm , 154 ft.*lbf }

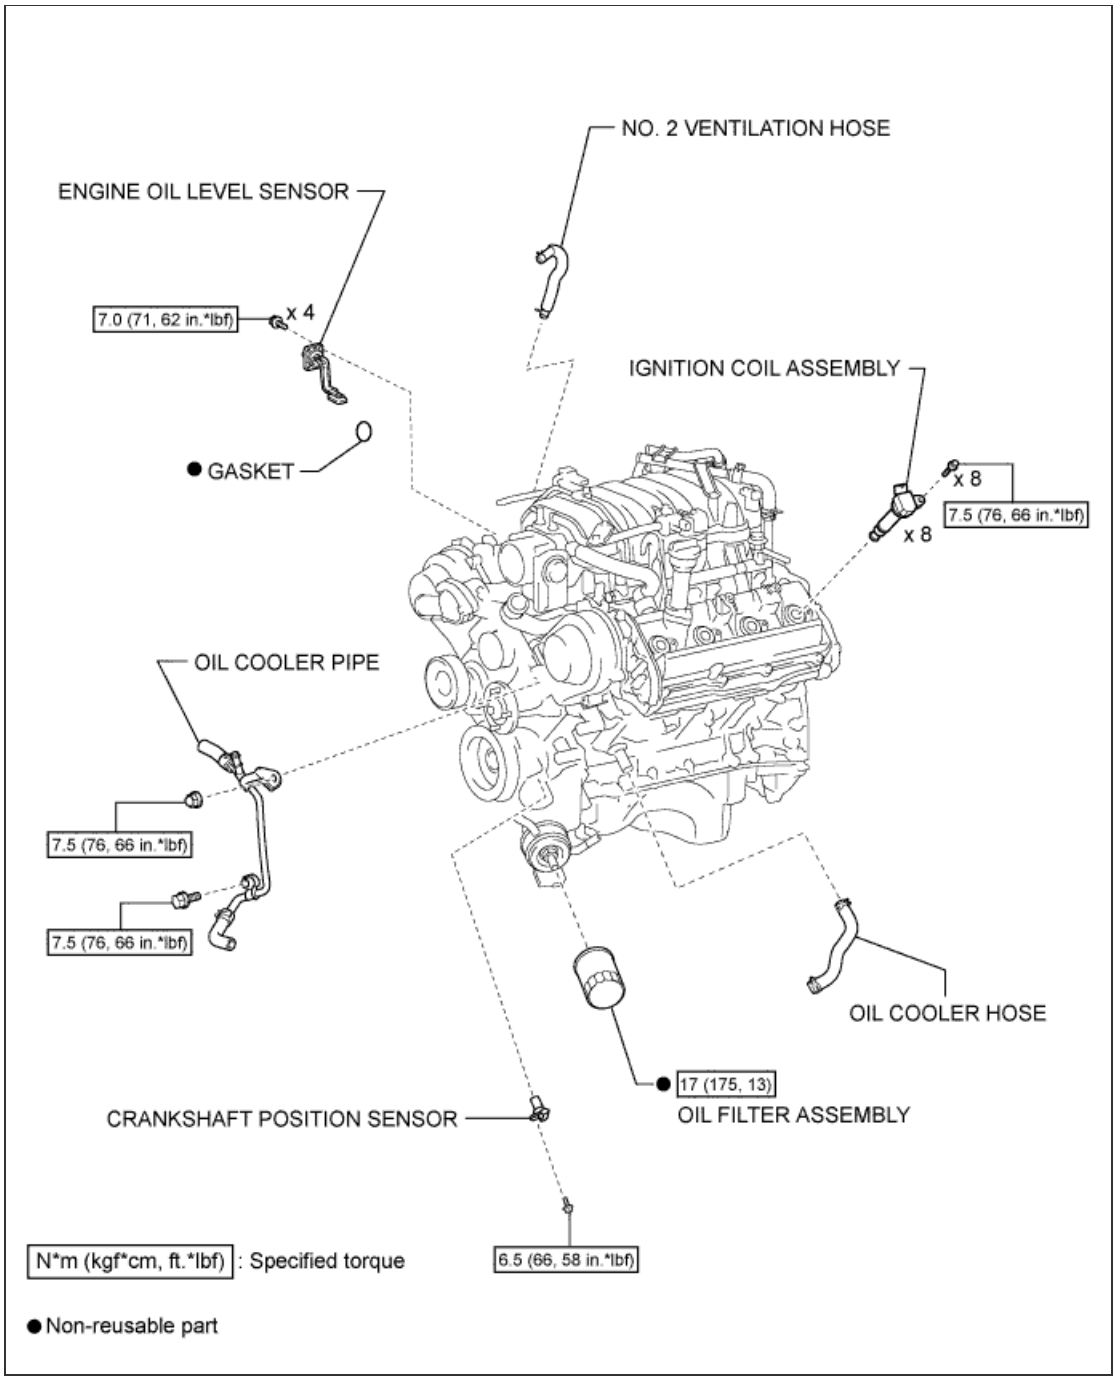


65. INSPECT ENGINE COOLANT LEVEL

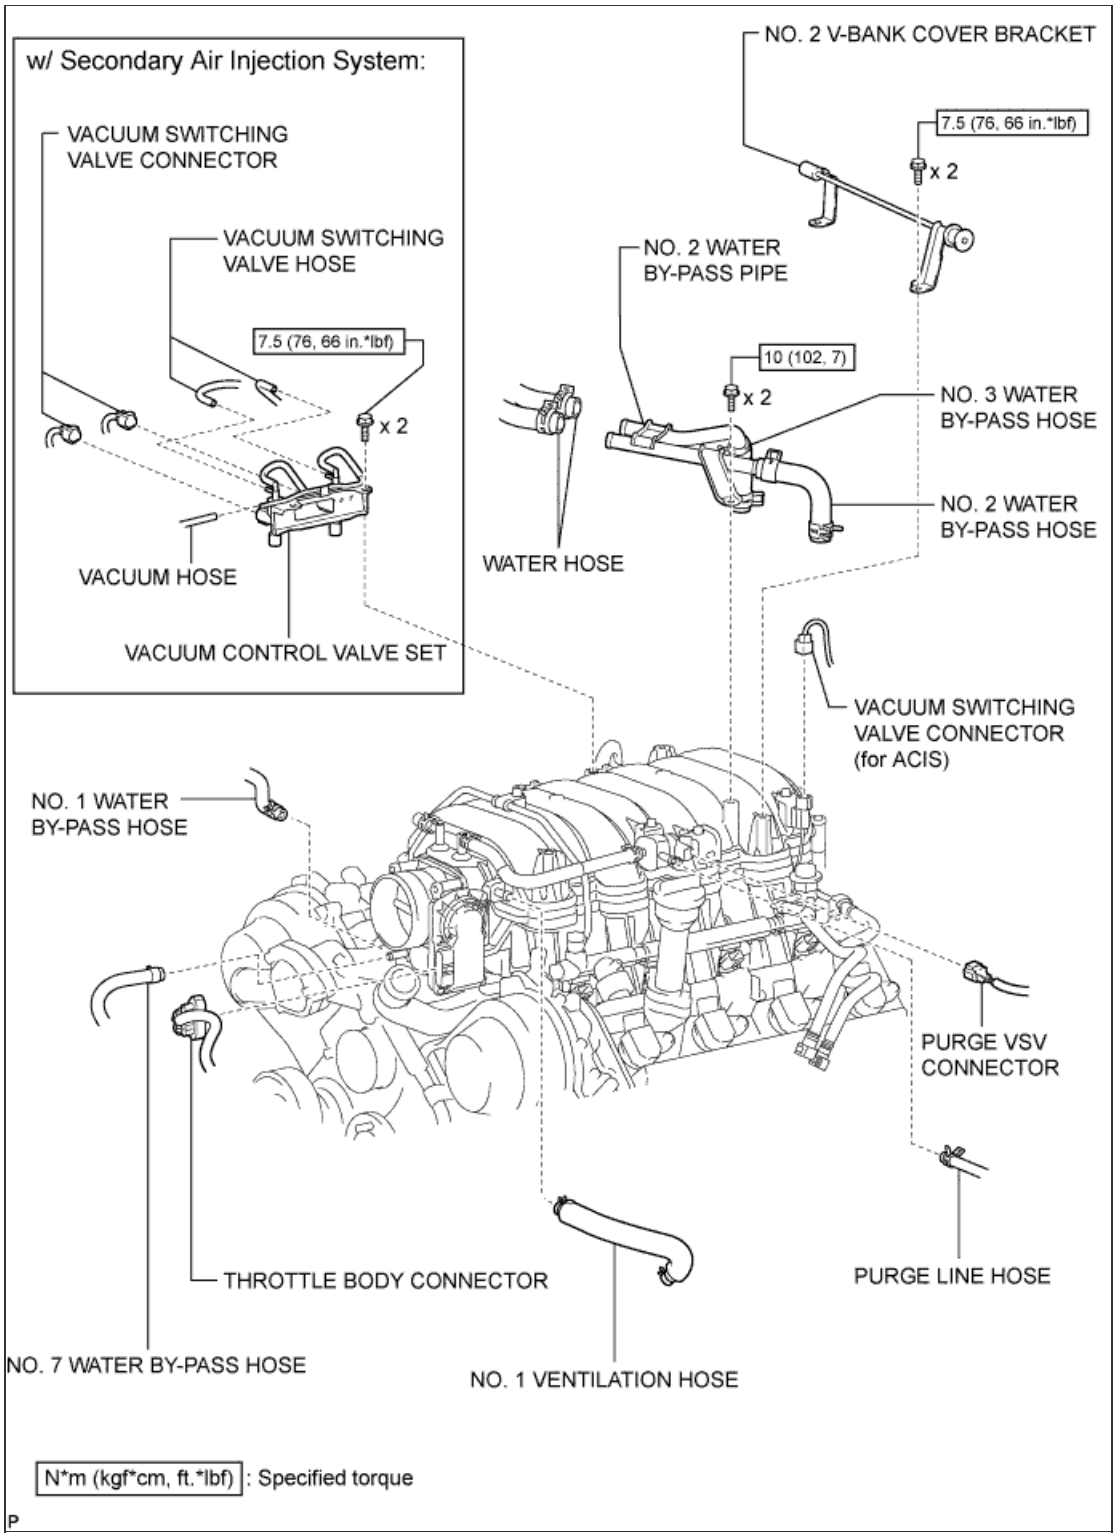
a. Check that the engine coolant level is between the L and F lines when the engine is cold.
If the engine coolant is low, check for leaks and add "TOYOTA Super Long Life Coolant" or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite and non-borate coolant with long-life hybrid organic acid technology to the F line.



NOTICE:



Do not substitute plain water for engine coolant.



b. Remove the radiator cap, and check that the coolant level is up to the radiator filler hole.

OIL FILTER ASSEMBLY

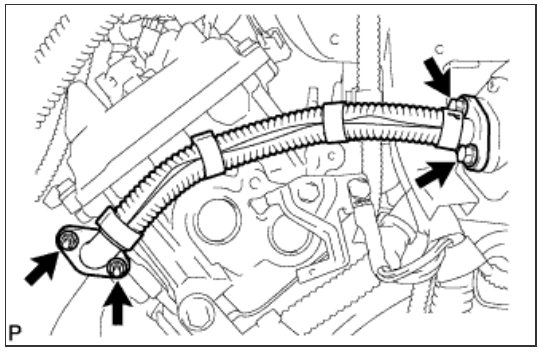
for Preparation Click here

1. REMOVE ENGINE OIL LEVEL DIPSTICK GUIDE

a. Remove the dipstick.

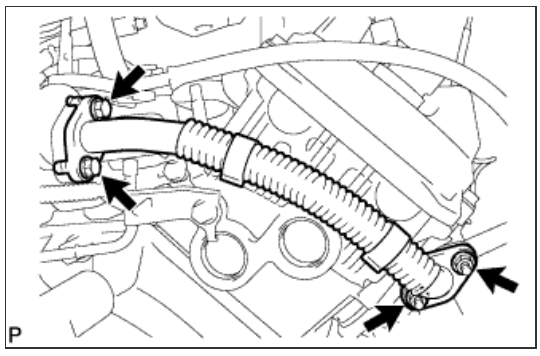
b. Remove the bolt and dipstick guide.



c. Remove the O-ring from the dipstick guide.

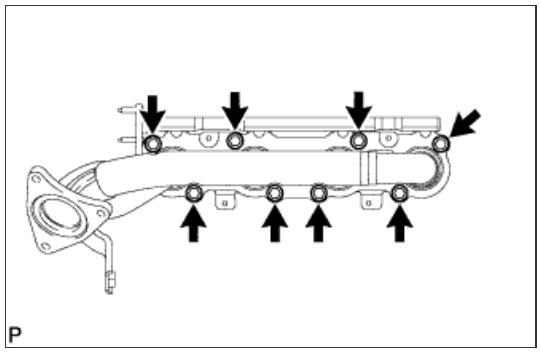
2. REMOVE NO. 3 AIR TUBE (w/ Secondary Air Injection System)

a. Remove the 2 bolts, 2 nuts and No. 3 air tube.



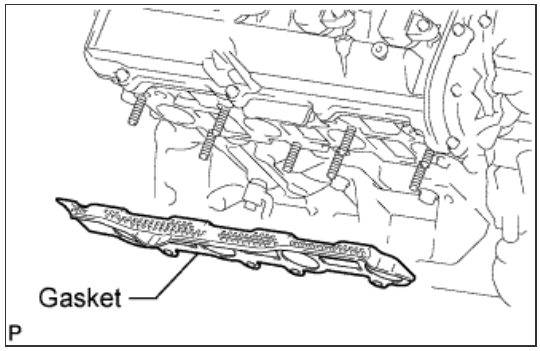
b. Remove the 2 gaskets.

3. REMOVE AIR TUBE SUB-ASSEMBLY R (w/ Secondary Air Injection System)



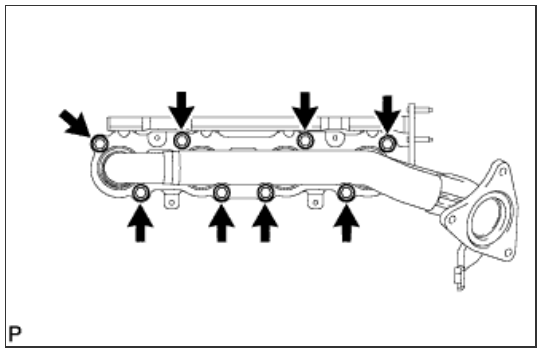
a. Remove the 2 bolts, 2 nuts and air tube sub-assembly.

b. Remove the 2 gaskets.

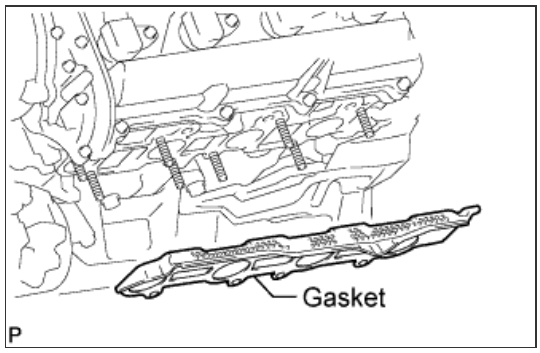


4. REMOVE E UST MANIFOLD SUB-ASSEMBLY R (w/ Secondary Air Injection System)

a. Remove the 8 nuts and exhaust manifold.

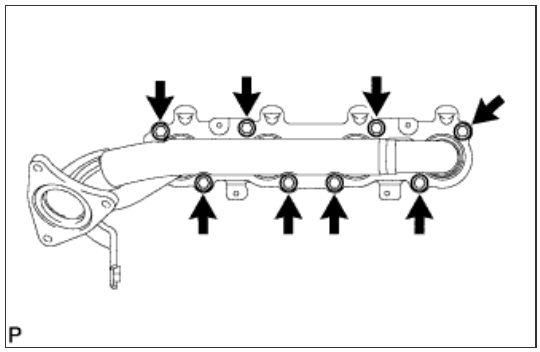


b. Remove the gasket from the cylinder head RH.

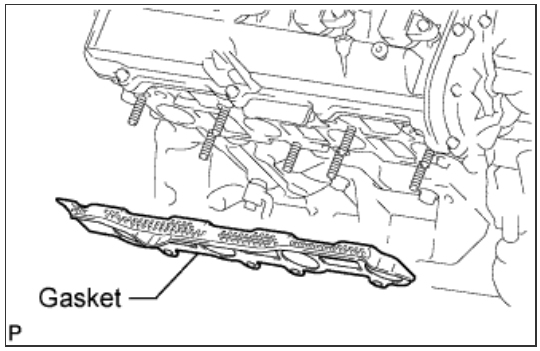


5. REMOVE E UST MANIFOLD SUB-ASSEMBLY L (w/ Secondary Air Injection System)

a. Remove the 8 nuts and exhaust manifold.

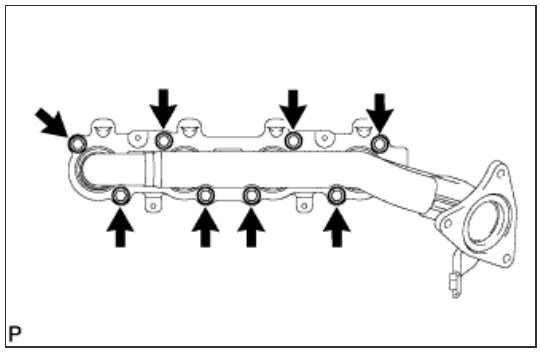


b. Remove the gasket from the cylinder head LH.

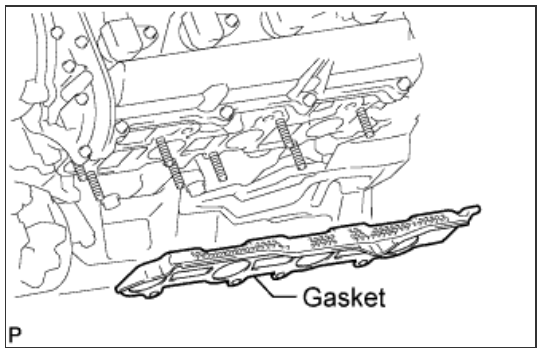


6. REMOVE E UST MANIFOLD SUB-ASSEMBLY R (w/o Secondary Air Injection System)

a. Remove the 8 nuts and exhaust manifold.

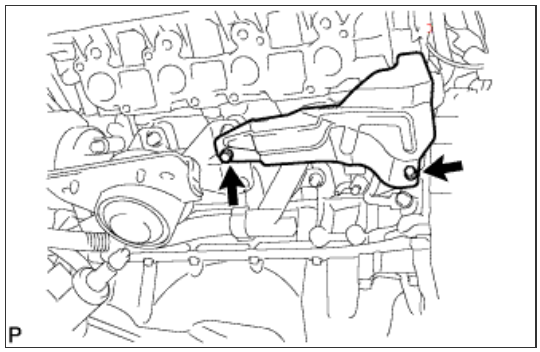


b. Remove the gasket from the cylinder head RH.

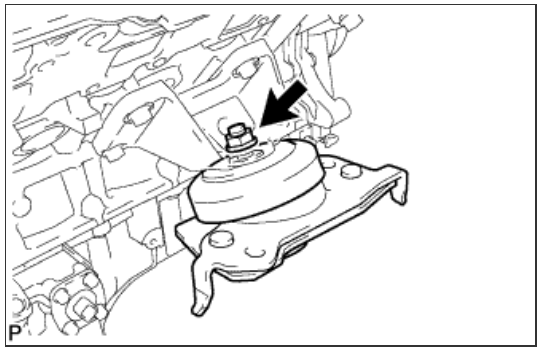


7. REMOVE E UST MANIFOLD SUB-ASSEMBLY L (w/o Secondary Air Injection System)

a. Remove the 8 nuts and exhaust manifold.

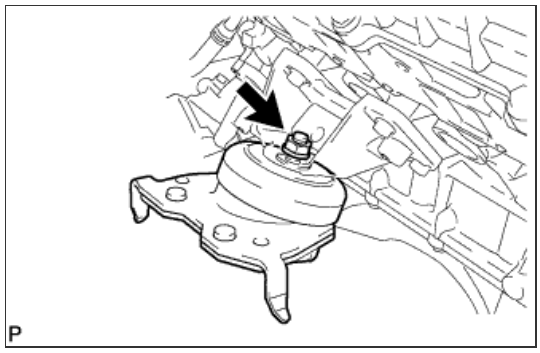


b. Remove the gasket from the cylinder head LH.



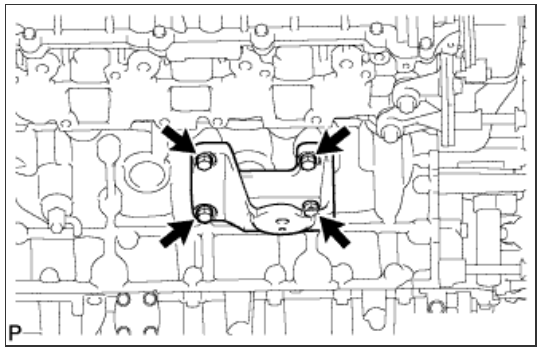
8. REMOVE NO. 2 IRING ARNESS EAT INSULATOR

a. Remove the 2 bolts and No. 2 wiring harness heat insulator.



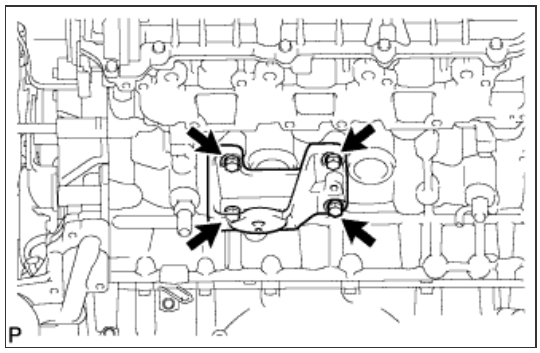
9. REMOVE FRONT ENGINE MOUNTING INSULATOR

a. Remove the nut and engine mounting insulator.



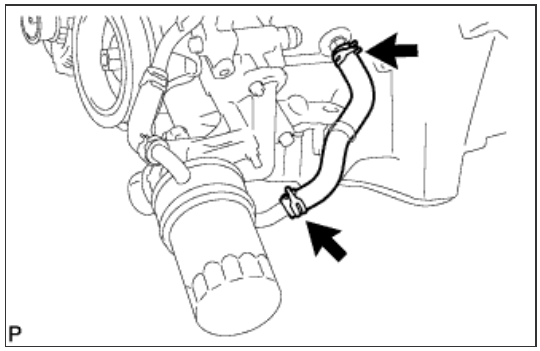
10. REMOVE FRONT ENGINE MOUNTING INSULATOR L

a. Remove the nut and engine mounting insulator LH.



11. REMOVE FRONT NO. 1 ENGINE MOUNTING BRACKET R

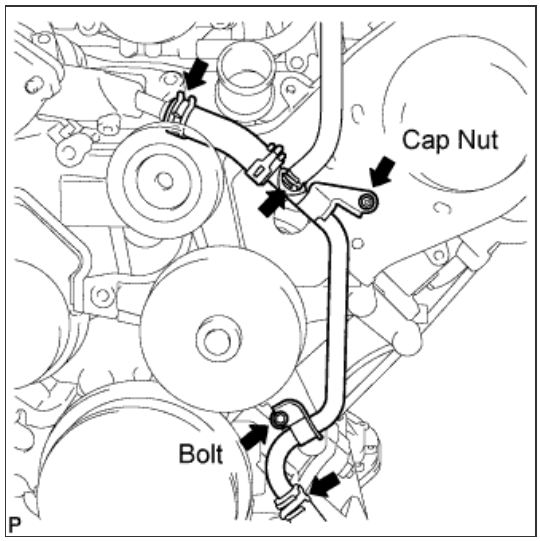
a. Remove the 4 bolts and No. 1 engine mounting bracket RH.



12. REMOVE FRONT NO. 1 ENGINE MOUNTING BRACKET L

a. Remove the 4 bolts and No. 1 engine mounting bracket LH.

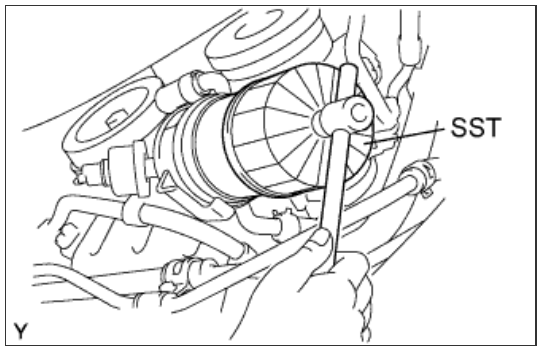
13. REMOVE OIL COOLER OSE



a. Using needle-nose pliers, grip the claws of the clamps and slide the clamps to remove the oil cooler hose.

14. REMOVE OIL COOLER PIPE

a. Remove the cap nut and bolt.

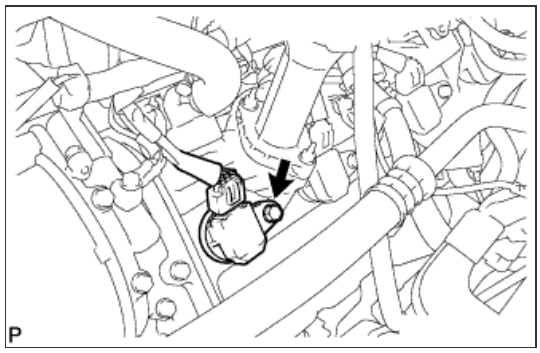


b. Using needle-nose pliers, grip the claws of the clamps and slide the clamps to disconnect the 3 water by-pass hoses and remove the oil cooler pipe.

15. REMOVE OIL FILTER ASSEMBLY

a. Using SST, remove the oil filter.

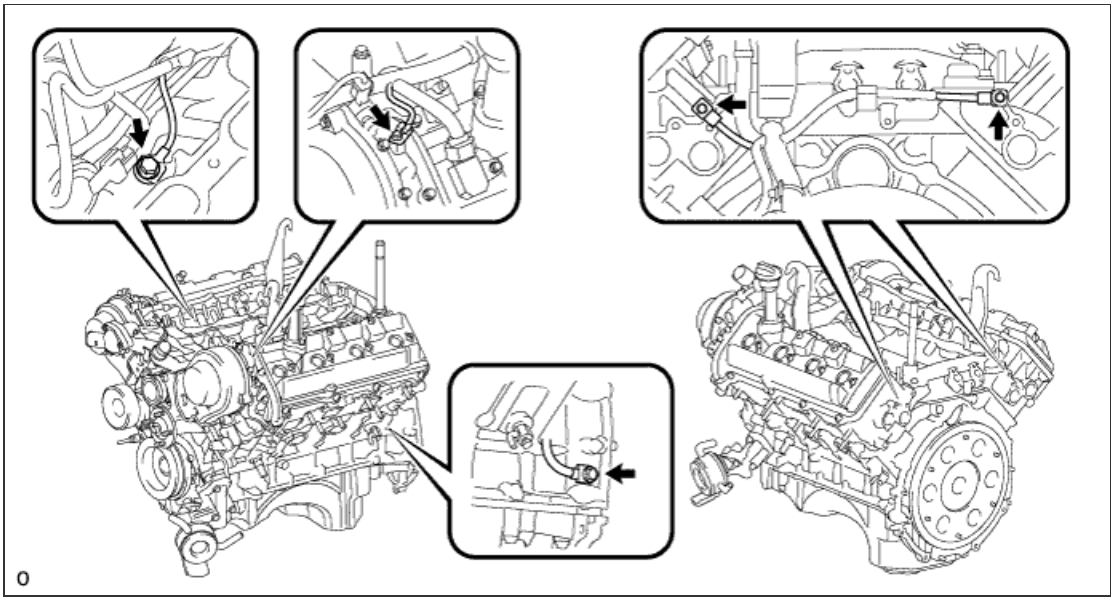
SST
09228-07501



16. REMOVE INTAKE MANIFOLD

a. Remove the intake manifold (Click here).

17. REMOVE IGNITION COIL ASSEMBLY



a. Disconnect the 8 ignition coil connectors.

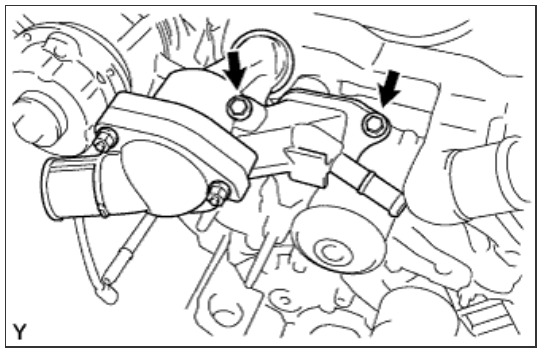
b. Remove the 8 bolts and pull out the 8 ignition coils.

18. DISCONNECT ENGINE IRE

a. Remove the bolt and disconnect the ground wire from the No. 5 bearing cap.

b. Remove the bolt and disconnect the ground wire from the left side of the engine.

c. Remove the 2 bolts and disconnect the 2 ground wires from the cylinder head and cylinder head LH rear side.

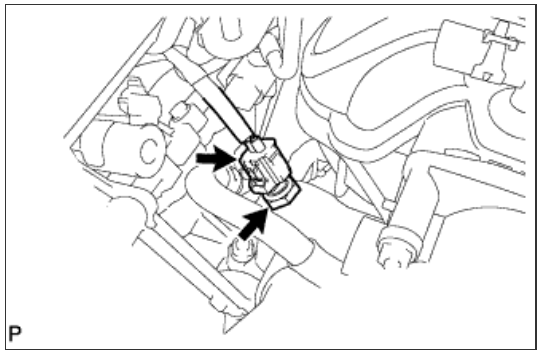


d. Remove the bolt and disconnect the ground wire from the inside left side of the V-bank.

19. REMOVE WATER INLET HOUSING

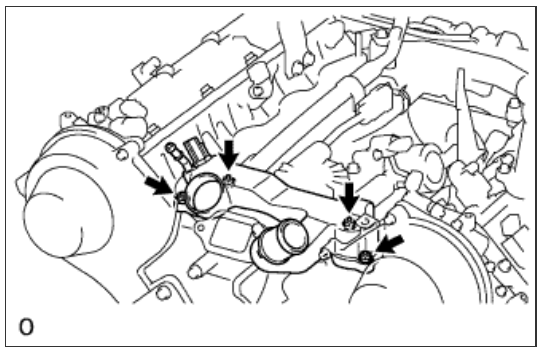
a. Remove the 2 bolts holding the water inlet housing to the water pump.

b. Disconnect the water inlet housing from the front water by-pass joint and water pump. Then remove the water inlet and inlet housing assembly.



c. Remove the O-ring from the water inlet housing.

20. REMOVE ENGINE COOLANT TEMPERATURE SENSOR



a. Disconnect the sensor connector.

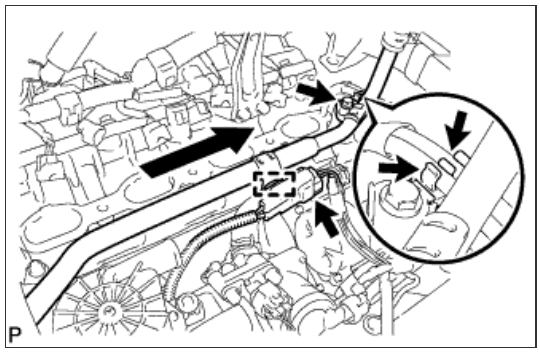
b. Using a 19 mm deep socket wrench, remove the sensor and gasket.

21. REMOVE FRONT WATER BY-PASS JOINT

a. Remove the 4 nuts, front water by-pass joint and 2 gaskets.

22. REMOVE WATER BY-PASS PIPE SUB-ASSEMBLY

a. Disconnect the connector.

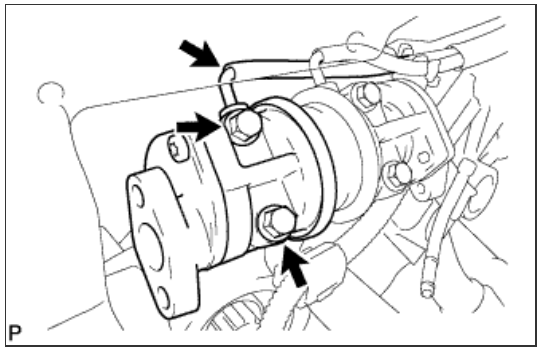


b. Disconnect the wire harness clamp from the water by-pass pipe.

c. Disconnect the 2 vacuum switching valve hoses from the water by-pass pipe clamp.

d. Remove the bolt.

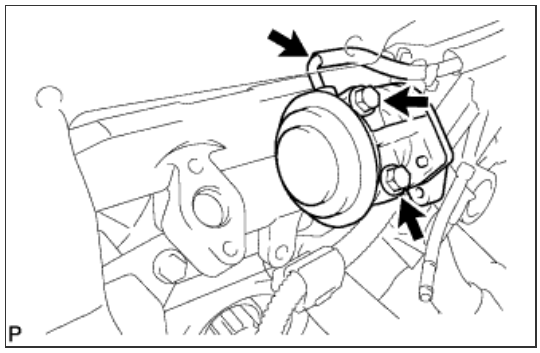
e. Pull out the water by-pass pipe.



f. Remove the O-ring from the water by-pass pipe.

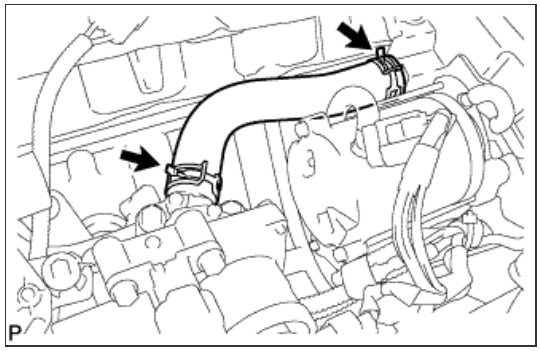
23. REMOVE NO. 2 AIR S ITC ING VALVE ASSEMBLY (w/ Secondary Air Injection System)

a. Remove the vacuum switching valve hose from the No. 2 air switching valve.



b. Remove the 2 bolts, gasket and No. 2 air switching valve from the rear water by-pass joint.

24. REMOVE NO. 1 AIR S ITC ING VALVE ASSEMBLY (w/ Secondary Air Injection System)

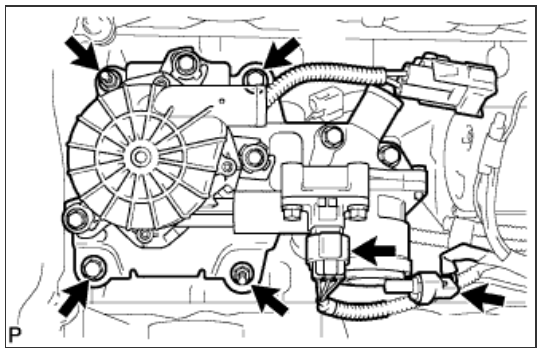


a. Remove the vacuum switching valve hose from the No. 1 air switching valve.

b. Remove the 2 bolts, gasket and No. 1 air switching valve from the rear water by-pass joint.

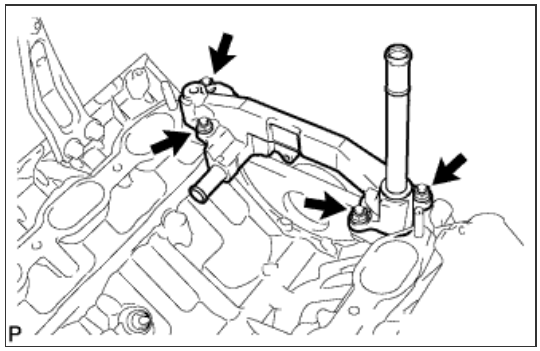
25. REMOVE NO. 2 AIR IN ECTION SYSTEM OSE (w/ Secondary Air Injection System)

a. Remove the No. 2 air injection system hose from the rear water by-pass joint and air switching valve.



26. REMOVE AIR PUMP IT BRACKET AND AIR S ITC ING VALVE (w/ Secondary Air Injection System)

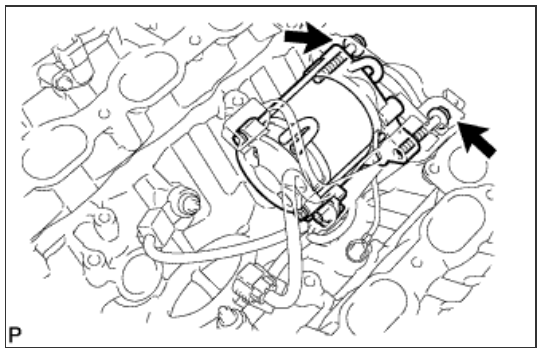
a. Disconnect the air switching valve connector.



b. Disconnect the air pressure sensor connector.

c. Remove the 2 bolts, 2 nuts and air pump with bracket.

27. REMOVE REAR WATER BY-PASS JOINT

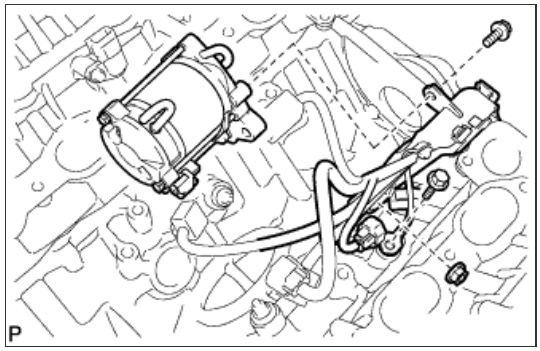


a. Remove the 4 nuts, water by-pass joint and 2 gaskets.

28. REMOVE STARTER ASSEMBLY

a. Remove the 2 bolts holding the starter to the cylinder block.

b. Disconnect the starter from the cylinder block.

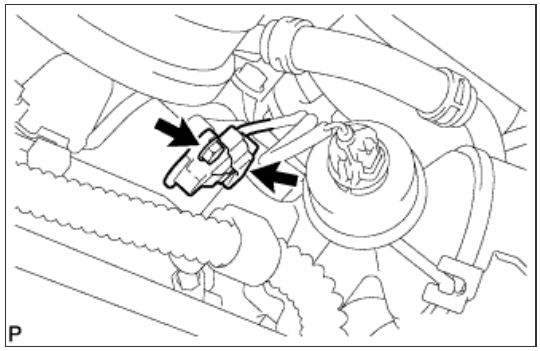


c. Remove the bolt and disconnect the engine wire protector from the starter.

d. Remove the bolt and disconnect the ground wire.

e. Disconnect the starter connector.

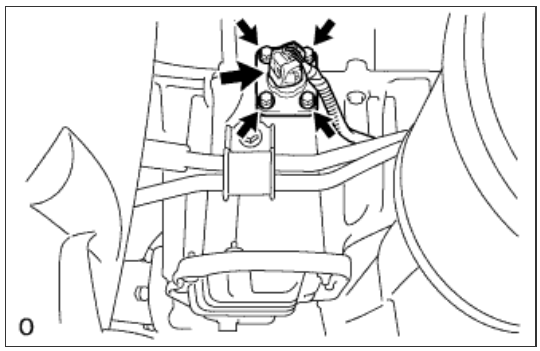
f. Remove the nut and disconnect the starter wire.



. Remove the starter.

29. REMOVE CRANKSHAFT POSITION SENSOR

a. Disconnect the sensor connector.

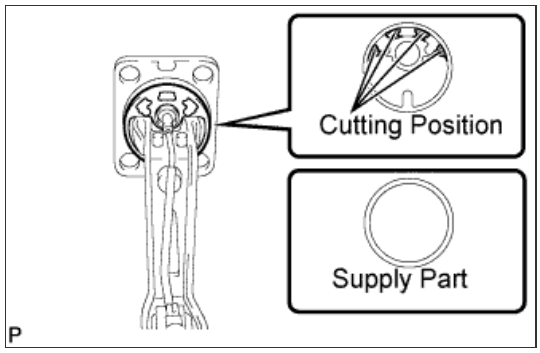


b. Remove the bolt and sensor.

30. REMOVE ENGINE OIL LEVEL SENSOR

a. Disconnect the oil level sensor connector.

b. Remove the 4 bolts and oil level sensor.

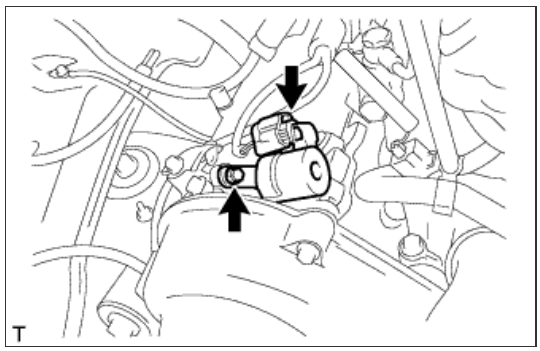


c. Cut off the gasket as shown in the illustration.

d. Remove the gasket from the oil level sensor.

INT

After cutting away the parts of the gasket shown in the illustration, remove only the outer part of the gasket.

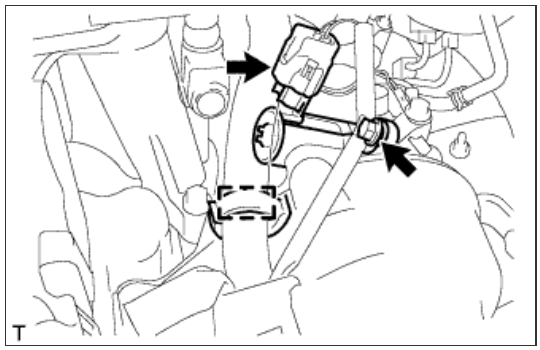


31. REMOVE CAMS AT TIMING OIL CONTROL VALVE ASSEMBLY R

a. Disconnect the oil control valve connector.

b. Remove the bolt and camshaft timing oil control valve.

c. Remove the O-ring from the camshaft timing oil control valve.

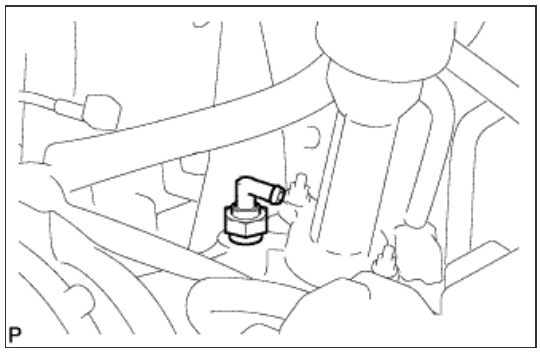


32. REMOVE CAMS AT TIMING OIL CONTROL VALVE ASSEMBLY L

a. Disconnect the oil control valve connector and wire harness clamp.

b. Remove the bolt and camshaft timing oil control valve.

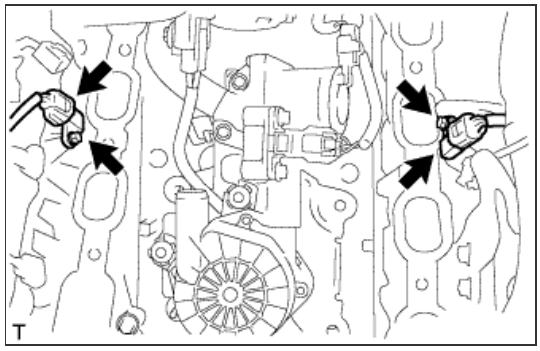
c. Remove the O-ring from the camshaft timing oil control valve.



33. REMOVE VENTILATION VALVE COVER

a. Remove the ventilation valve cover from the ventilation valve.

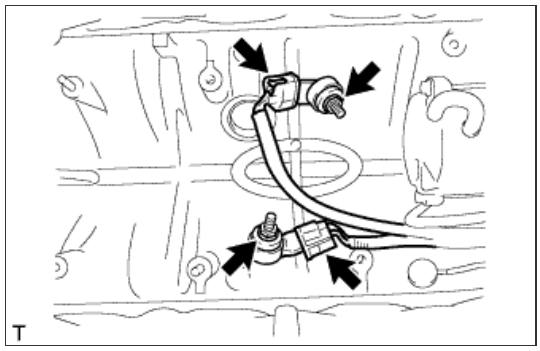
34. REMOVE VENTILATION VALVE SUB-ASSEMBLY



a. Remove the ventilation valve from the cylinder head cover sub-assembly LH.

35. REMOVE CAMS AT POSITION SENSOR

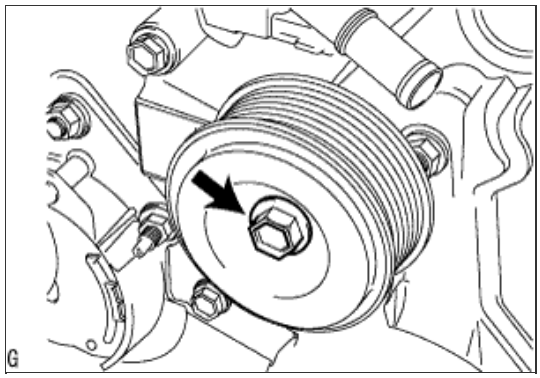
a. Disconnect the 2 sensor connectors.



b. Remove the 2 bolts and 2 sensors.

36. REMOVE KNOCK CONTROL SENSOR

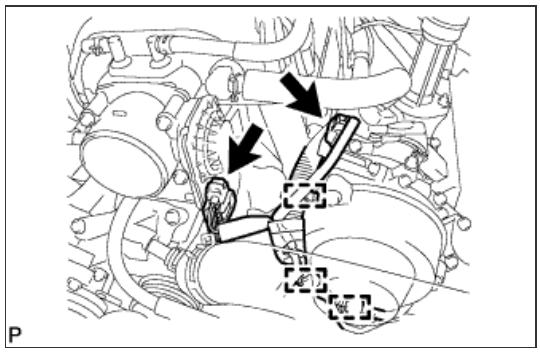
a. Disconnect the 2 sensor connectors.



b. Remove the 2 nuts and 2 sensors.

T

for Preparation Click here

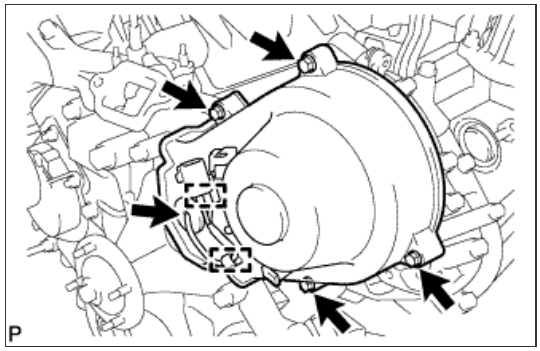


1. REMOVE NO. 2 IDLER PULLEY SUB-ASSEMBLY

a. Remove the pulley bolt, cover plate and idler pulley.

2. REMOVE NO. 3 TIMING BELT COVER SUB-ASSEMBLY LH

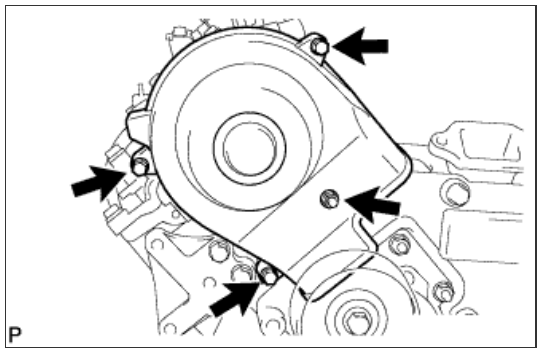
a. Detach the 3 wire clamps and disconnect the camshaft timing oil control valve connector and control motor connector.



b. Disconnect the camshaft position sensor connector.

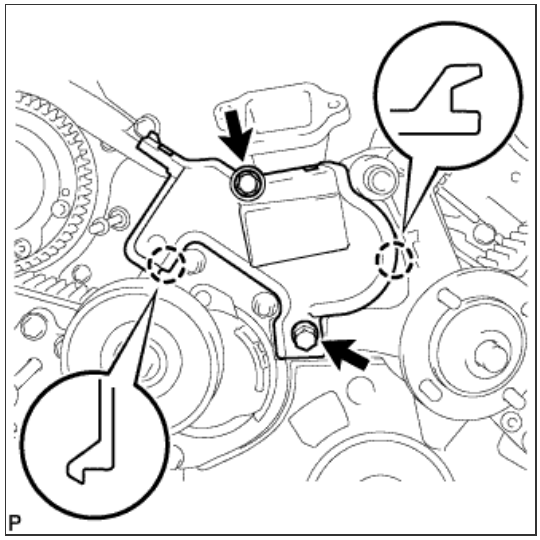
c. Disconnect the camshaft position sensor wire from the 2 wire clamps on the timing belt cover.

d. Remove the wire grommet from the timing belt cover.



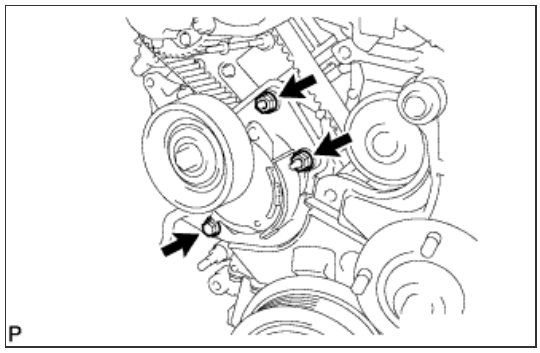
e. Remove the 4 bolts.

f. Pull the cover outward, pull the camshaft position sensor wire out of the cover, and remove the cover.



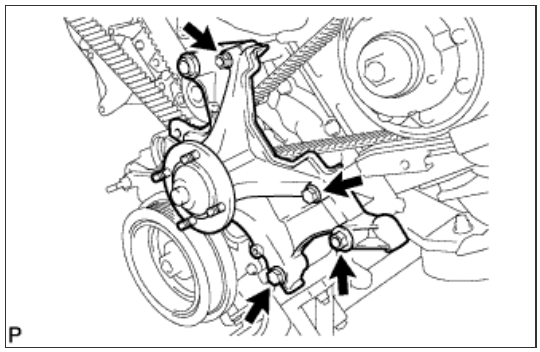
3. REMOVE NO. 3 TIMING BELT COVER SUB-ASSEMBLY RH

a. Remove the 3 bolts, nut and timing belt cover.



4. REMOVE NO. 2 TIMING BELT COVER SUB-ASSEMBLY

a. Remove the 2 bolts and detach the 2 claws, and then remove the No. 2 timing belt cover.

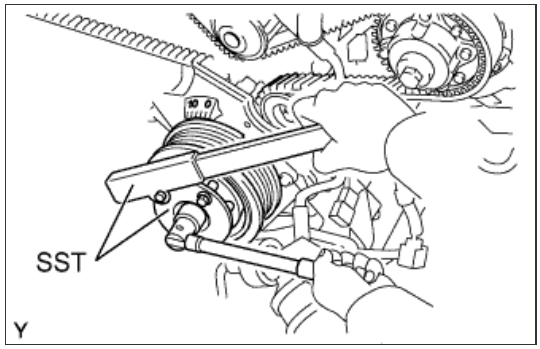


5. REMOVE V-RIBBED BELT TENSIONER ASSEMBLY

a. Remove the bolt, 2 nuts and V-ribbed belt tensioner.

6. REMOVE FAN BRACKET SUB-ASSEMBLY

a. Remove the 2 nuts, 2 bolts and fan bracket.

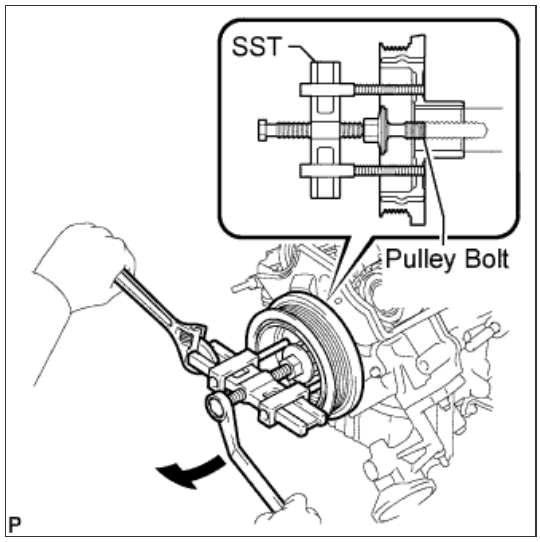


7. REMOVE CRANKSHAFT DAMPER SUB-ASSEMBLY

a. Using SST, hold the crankshaft damper and loosen the pulley bolt. Further loosen the bolt until 2 or 3 threads are screwed into the crankshaft.

SST

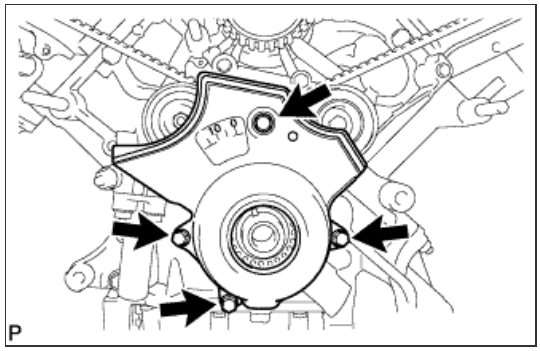
213-70011 (09213-70020)
09330-00021 (09330-00030)



b. Using SST and the pulley bolt, remove the crankshaft damper.

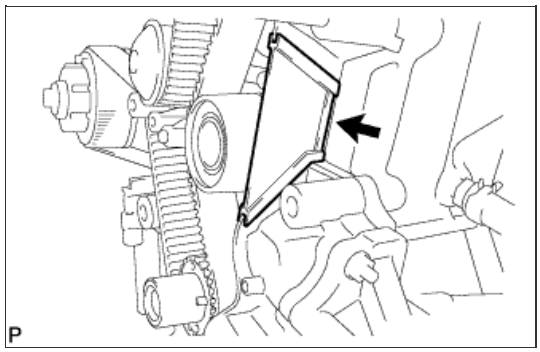
SST

09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05031)



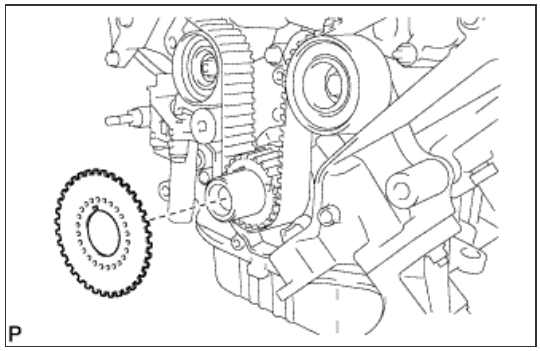
HINT:

Apply a lubricant to the threads and end of SST.



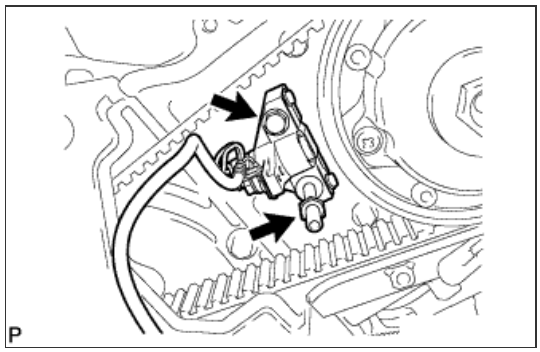
8. REMOVE NO. 1 TIMING BELT COVER

a. Remove the 4 bolts and timing belt cover.



. REMOVE TIMING BELT COVER SPACER

a. Remove the cover spacer and gasket.

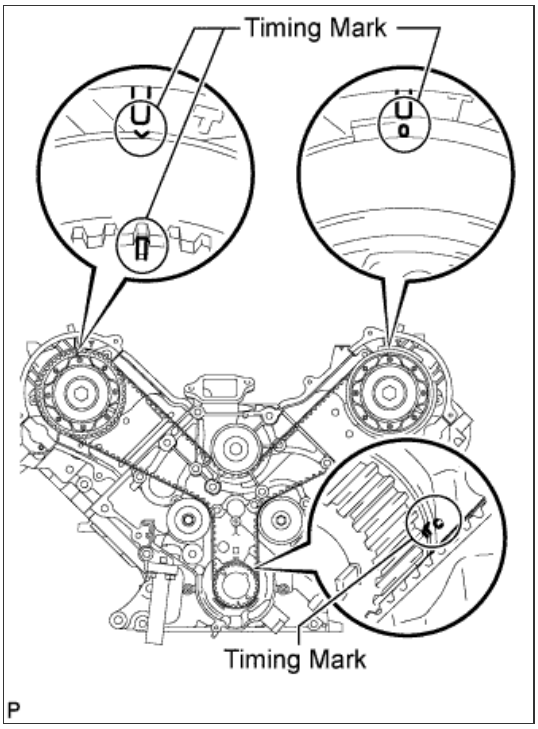


1 . REMOVE NO. 1 CRANKSHAFT POSITION SENSOR PLATE

a. Remove the position sensor plate from the crankshaft.

11. REMOVE CAMSHAFT POSITION SENSOR ASSEMBLY

a. Remove the bolt, stud bolt and camshaft position sensor.

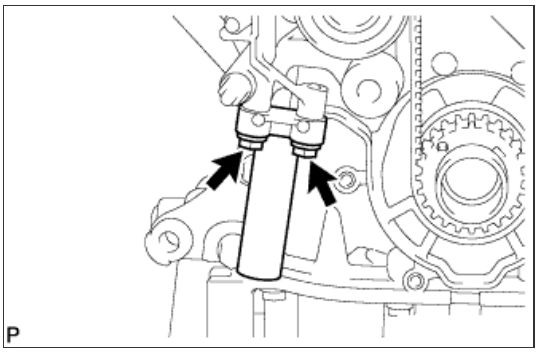


12. SET NO. 1 CYLINDER TO TDC COMPRESSION

a. Temporarily install the pulley bolt.

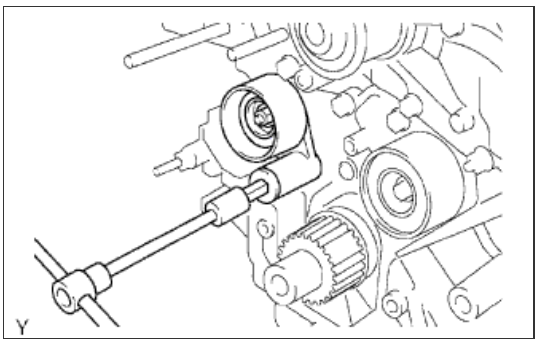
b. Rotate the crankshaft clockwise so that the timing marks on the crankshaft timing pulley and camshaft timing pulleys are as shown in the illustration.

HINT



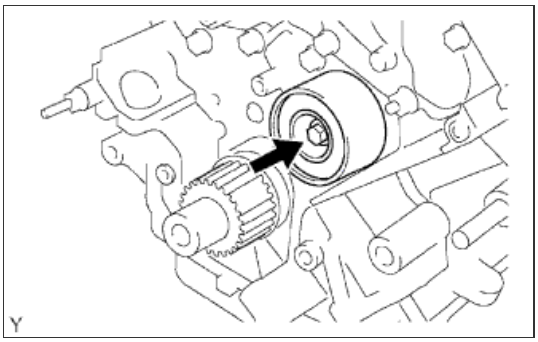
- **If the ti ing ak do not align, rotate the crank haft clock i e again and align the ti ing ak .**
- **hen re ing the ti ing belt, p ta ti ing ak on the belt here the ti ing ak on the belt and ti ing p lley are aligned after rotating the crank haft.**

13. REMOVE TIMING BELT



a. Alternately loosen the 2 bolts, then remove the bolts, timing belt tensioner and dust seal.

b. Remove the timing belt.



14. REMOVE NO. 1 TIMING BELT IDLER SUB-ASSEMBLY

a. Using a 10 mm hexagon wrench, remove the idler shaft, timing belt idler and plate washer.

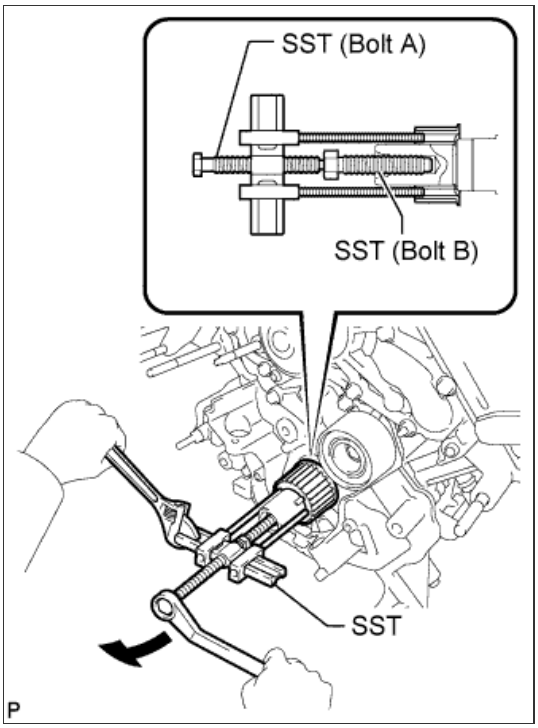
15. REMOVE NO. 2 TIMING BELT IDLER SUB-ASSEMBLY

a. Remove the bolt and timing belt idler.

16. REMOVE CRANKSHAFT TIMING PULLEY

a. Using SST, remove the timing pulley.

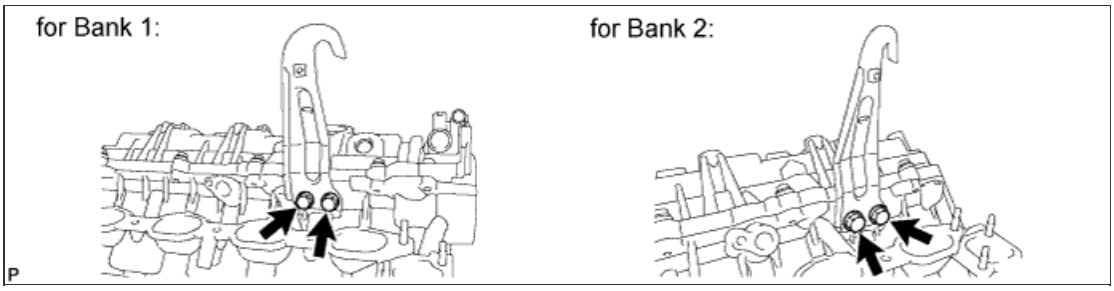
SST



09950-50013 (09951-05010, 09952-05010, 09953-05010, 09953-05020, 09954-05011)

HINT:

Apply a lubricant to the threads and end of SST.



Parts Number:

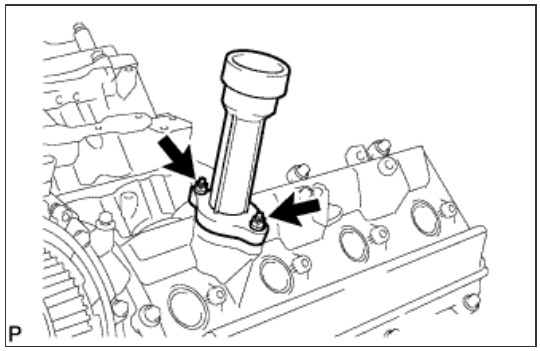
Item	Parts number
SST (Bolt A)	09953-05020
SST (Bolt B)	09953-05010

17. REMOVE NO. 1 ENGINE HANGER

a. Remove the 2 bolts and engine hanger.

18. REMOVE SPARK PLUG

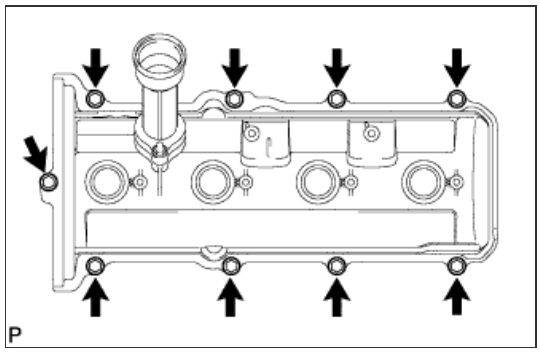
a. Remove the 8 spark plugs.



1 . REMOVE OIL FILLER CAP SUB-ASSEMBLY

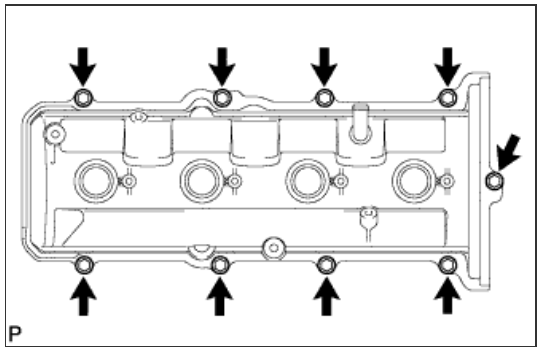
a. Remove the oil filler cap.

b. Remove the gasket from the oil filler cap.



2 . REMOVE OIL FILLER CAP HOUSING

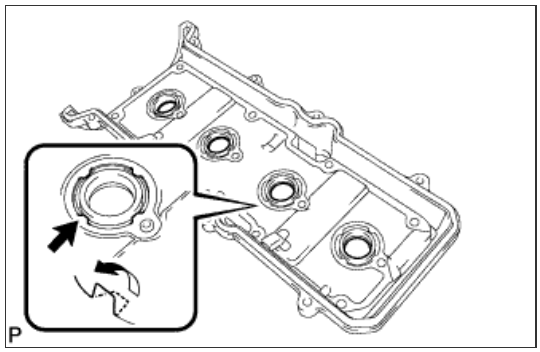
a. Remove the 2 nuts, housing and gasket.



21. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY LH

a. Remove the 9 bolts, cylinder head cover and gasket.

22. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY



a. Remove the 9 bolts, cylinder head cover and gasket.

23. REMOVE SPARK PLUG TUBE GASKET

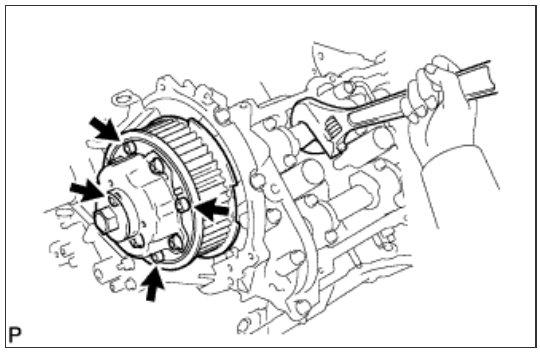
a. Bend the 8 ventilation case claws of the cylinder head cover to an angle of 90° or more.

b. Using a screwdriver, pry out the gaskets.

NOTICE

- **Be caref l not to da ae the cylinder head cover.**
- **Be caref l not to da ae the ga ket hen re oving it, a the re oved ga ket need to be re ed hen in tlling a ne one.**

HINT



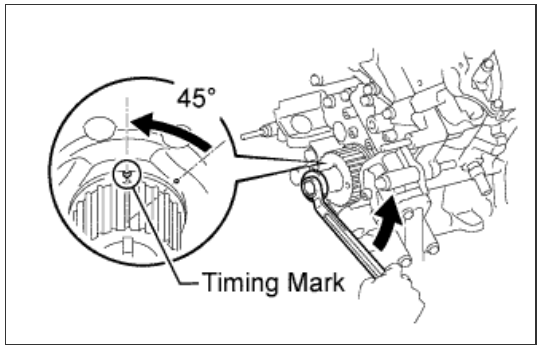
Tape the screwdriver tip before use.

24. REMOVE SEMICIRCULAR PLUG

a. Remove the 4 semicircular plugs from the cylinder heads.

25. REMOVE CAMSHAFT TIMING PULLEY SUB-ASSEMBLY LH

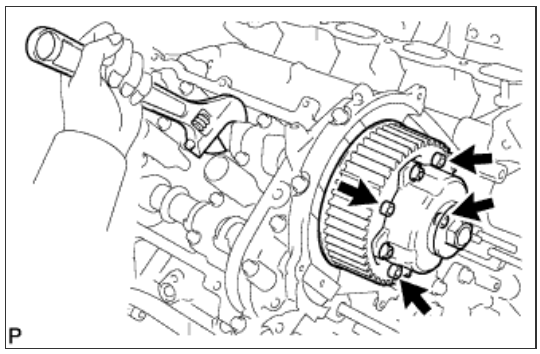
a. Hold the hexagonal portion of the camshaft with a wrench and remove the 4 bolts indicated by the arrows in the illustration and timing pulley.



NOTICE

- **Do not loo en or re ove the 4 bolt that are not indicated by the arro in the ill tion. If any of the are loo ened or re oved, the backla h of the gear in the ti ing t be ill go o t of adj ent. In thi ca e, replace the ti ing t be a e bly ith a ne one.**
- **Be caref l not to da ae the cylinder head ith the nch.**

26. REMOVE CAMSHAFT TIMING PULLEY

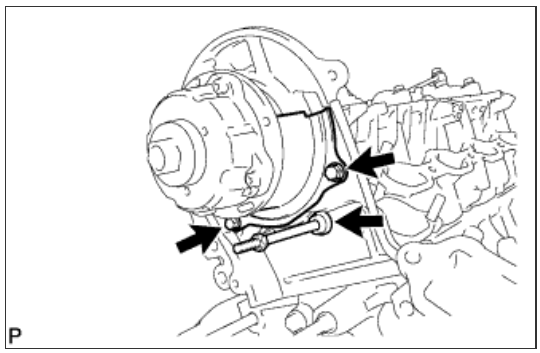


a. Using the pulley set bolt, turn the crankshaft counterclockwise by approximately 45°.

NOTICE:

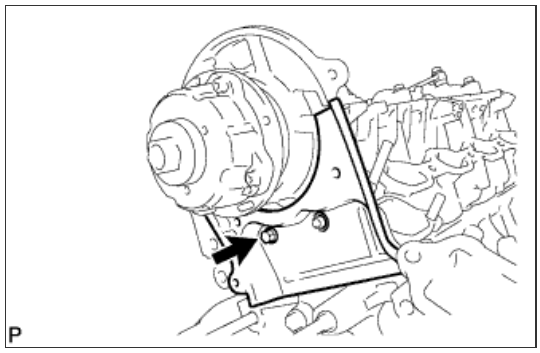
If the timing belt is disengaged, having the crankshaft pulley at a wrong angle can cause the piston head and valve head to come into contact with each other when removing the camshaft timing pulley and camshaft, causing damage. So always set the crankshaft pulley at the correct angle.

b. Hold the hexagonal portion of the camshaft with a wrench and remove the 4 bolts indicated by the arrows in the illustration and timing pulley.



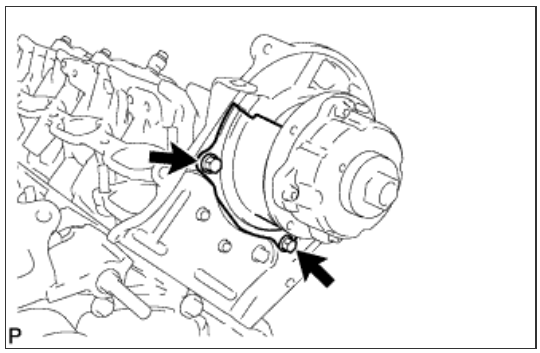
NOTICE:

- **Do not loosen or remove the 4 bolts that are not indicated by the arrows in the illustration. If any of them are loosened or removed, the backlash of the gear in the timing tube will go out of adjustment. In this case, replace the timing tube assembly with a new one.**
- **Be careful not to damage the cylinder head with the wrench.**



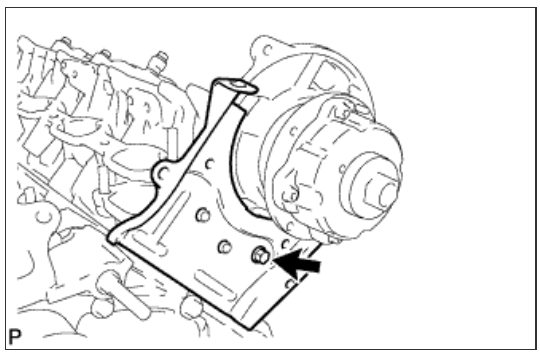
27. REMOVE REAR NO. 2 TIMING BELT PLATE RH

a. Remove the 2 bolts, stud bolt and timing belt plate.



28. REMOVE REAR TIMING BELT PLATE RH

a. Remove the bolt and rear timing belt plate.



2 . REMOVE REAR NO. 2 TIMING BELT PLATE LH

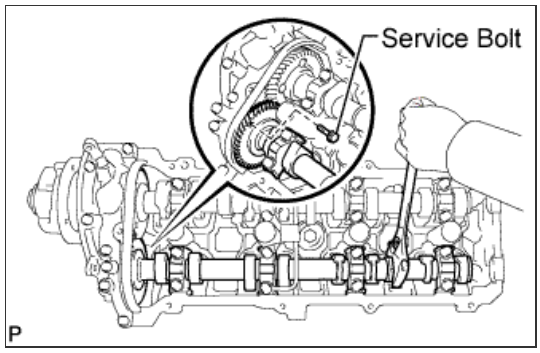
a. Remove the 2 bolts and timing belt plate.

30. REMOVE REAR TIMING BELT PLATE LH

a. Remove the bolt and rear timing belt plate.

31. REMOVE CAMSHAFT (for Bank 1)

a. Bring the service bolt hole of the sub-gear upward by turning the hexagonal portion of the exhaust camshaft with a wrench.

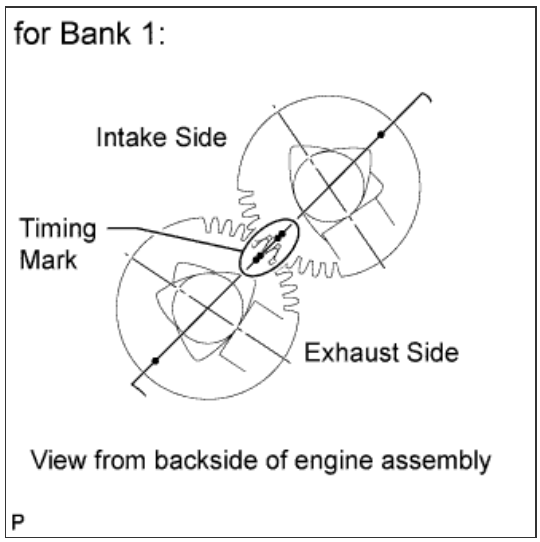


b. Secure the sub-gear to the driven gear with a service bolt.

Recommended Service Bolt:

Thread Diameter	Thread Pitch	Bolt Length
6.0 mm	1.0 mm	16 to 20 mm (0.630 to 0.787 in.)

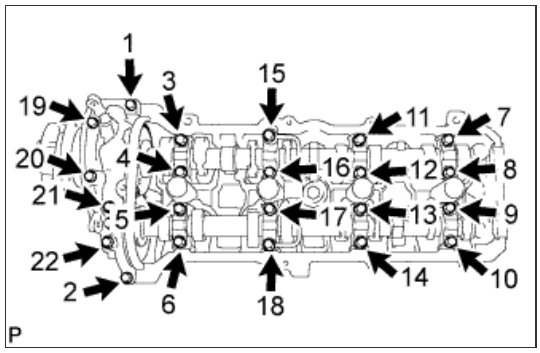
HINT:



When removing the camshafts, make sure that the torsional spring force of the sub-gear has been eliminated by the above operation.

c. Using a wrench, turn the camshaft so that the timing marks (2 dot marks each) on the camshaft drive and driven gears are aligned, as shown in the illustration.

HINT:

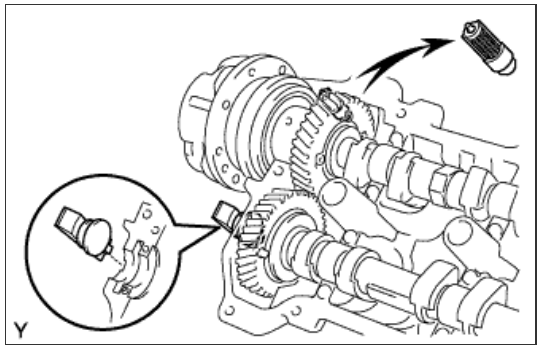


The position shown in the illustration is the most stable position for the exhaust camshaft.

d. Uniformly loosen and remove the 22 bearing cap bolts in several steps, in the order shown in the illustration.

NOTICE:

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being removed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged. To avoid this, the following steps should be carried out.



e. Remove the cap bolts, 4 seal washers, oil feed pipe, 9 bearing caps, camshaft housing plug, oil control valve filter and camshafts.

NOTICE:

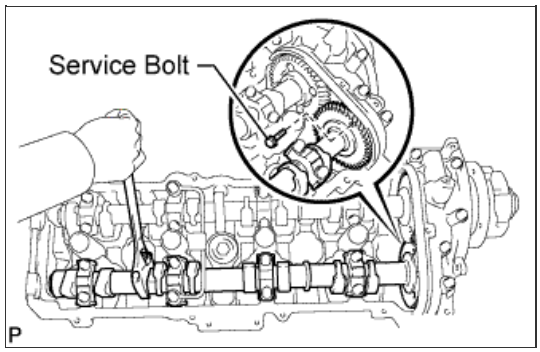
- **Do not forcibly pry the camshaft with a tool.**
- **Do not damage the reception part of the thrust on the cylinder head side.**

HINT:

Arrange the bearing caps in the correct order.

32. REMOVE CAMSHAFT (for Bank 2)

a. Bring the service bolt hole of the sub-gear upward by turning the hexagonal portion of the exhaust camshaft with a wrench.

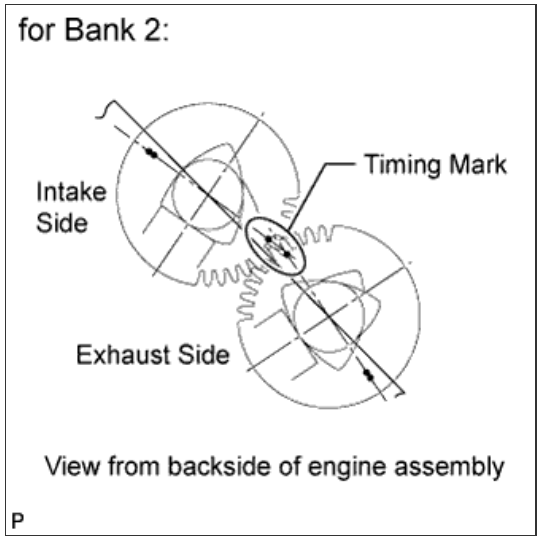


b. Secure the sub-gear to the driven gear with a service bolt.

Recommended Service Bolt:

Thread Diameter	Thread Pitch	Bolt Length
6.0 mm	1.0 mm	16 to 20 mm (0.630 to 0.787 in.)

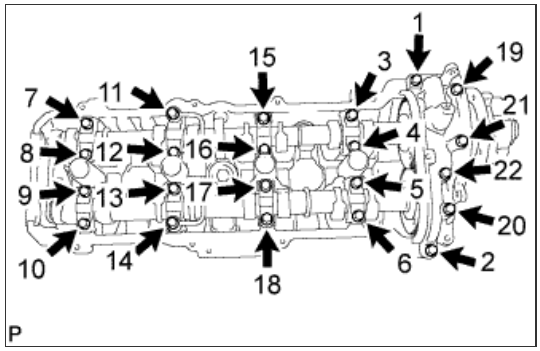
HINT:



When removing the camshafts, make sure that the torsional spring force of the sub-gear has been eliminated by the above operation.

c. Using a wrench, turn the camshaft so that the timing marks (1 dot mark each) on the camshaft drive and driven gears are aligned, as shown in the illustration.

HINT:

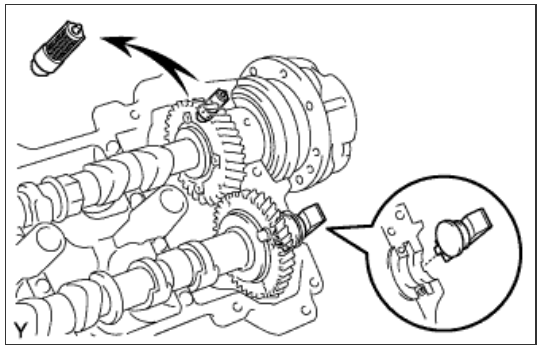


The position shown in the illustration is the most stable position for the exhaust camshaft.

d. Uniformly loosen and remove the 22 bearing cap bolts in several steps, in the order shown in the illustration.

NOTICE:

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being removed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged. To avoid this, the following steps should be carried out.



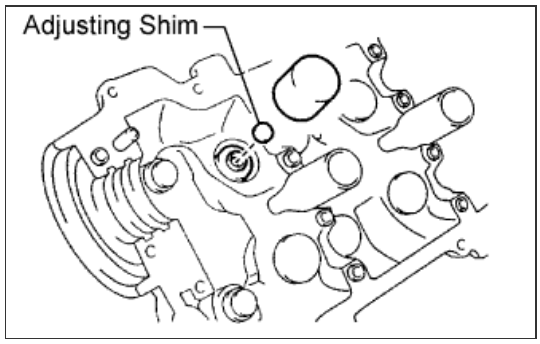
e. Remove the cap bolts, 4 seal washers, oil feed pipe, 9 bearing caps, camshaft housing plug, oil control valve filter and camshafts.

NOTICE:

- **Do not forcibly pry the camshaft with a tool.**
- **Do not damage the reception part of the thrust on the cylinder head side.**

HINT:

Arrange the bearing caps in the correct order.

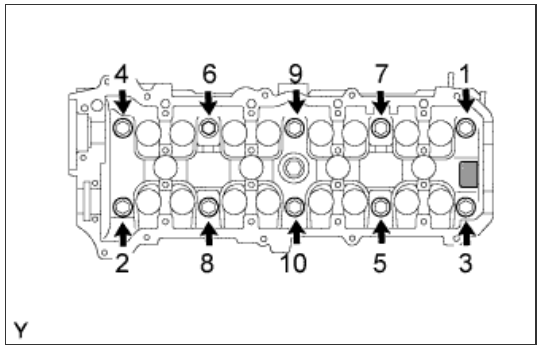


33. REMOVE VALVE LIFTER

a. Remove the valve lifters and adjusting shims from the cylinder head.

HINT

Arrange the removed parts in the correct order.

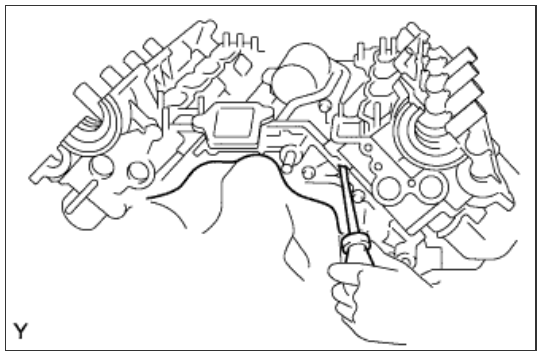


34. REMOVE CYLINDER HEAD LH

a. Uniformly loosen the 10 cylinder head bolts on the cylinder head in several passes, in the sequence shown in the illustration.

b. Remove the bolts and plate washers.

NOTICE:



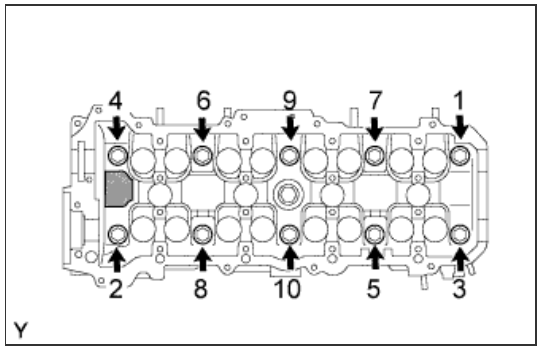
- **Cylinder head warpage or cracking could result from removing bolts in the incorrect order.**
- **Do not drop the plate washer for the cylinder head bolt of the cylinder head.**

c. Remove the cylinder head by prying between the cylinder block and cylinder head with a screwdriver.

NOTICE:

- **Be careful not to damage the contact surfaces of the cylinder head and cylinder block.**
- **The cylinder head should not be tilted so as to secure the valve lifter. If the cylinder head is tilted, remove the valve lifter and check that the adjusting shim is set correctly.**

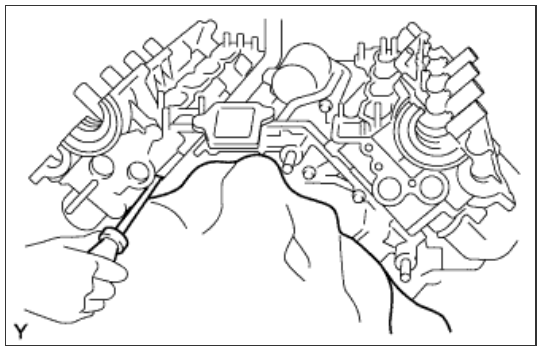
35. REMOVE CYLINDER HEAD GASKET LH



36. REMOVE CYLINDER HEAD SUB-ASSEMBLY

a. Uniformly loosen the 10 cylinder head bolts on the cylinder head in several passes, in the sequence shown in the illustration.

b. Remove the bolts and plate washers.

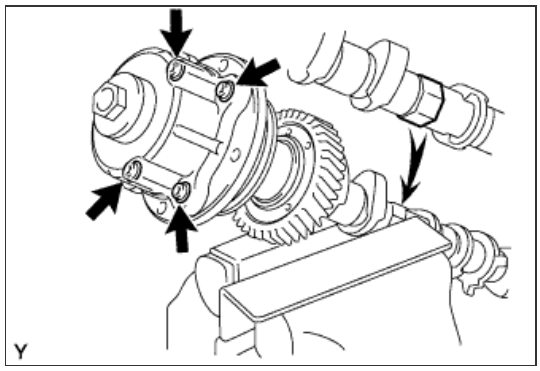


NOTICE:

- **Cylinder head warpage or cracking could result from removing bolts in the incorrect order.**
- **Do not drop the plate washer for the cylinder head bolt of the cylinder head.**

c. Remove the cylinder head by prying between the cylinder block and cylinder

c. Remove the cylinder head by prying between the cylinder block and cylinder head with a screwdriver.



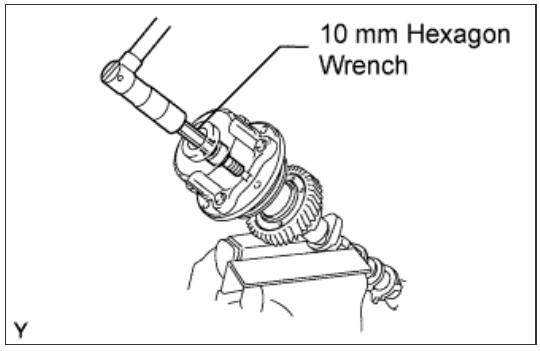
NOTICE

- **Be careful not to damage the contact surface of the cylinder head and cylinder block.**
- **The cylinder head should not be tilted or a force to exceed the valve lifter. If the cylinder head is tilted, remove the valve lifter and check that the adjusting shim is set correctly.**

37. REMOVE CYLINDER HEAD GASKET RH

38. REMOVE CAMSHAFT TIMING TUBE ASSEMBLY

a. Mount the hexagonal portion of the camshaft in a vise.



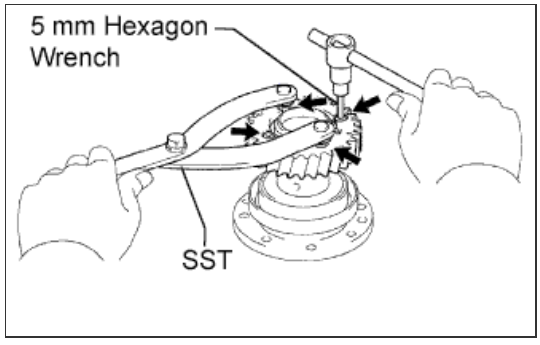
NOTICE:

- **Be careful not to damage the camshaft.**
- **Do not loosen or remove the 4 bolts shown in the illustration. If any of them are loosened or removed, the backlash of the gear in the timing tube will go out of adjustment. In this case, replace the timing tube assembly with a new one.**

b. Remove the screw plug and seal washer.

c. Using a 10 mm hexagon wrench, remove the bolt and timing tube.

39. REMOVE CAMSHAFT DRIVE GEAR



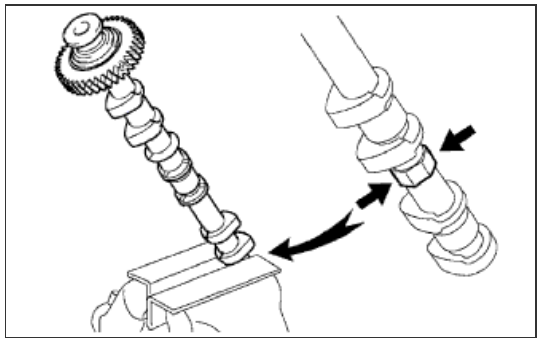
a. Using SST and a 5 mm hexagon wrench, remove the 4 bolts, drive gear and oil seal.

SST

09960-10010 (09962-01000, 09963-00500)

NOTICE:

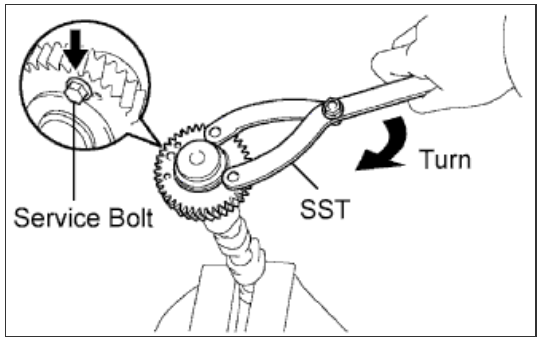
Be careful not to damage the timing tube.



40. REMOVE CAMSHAFT SUB-GEAR

a. Mount the hexagonal portion of the camshaft in a vise.

NOTICE

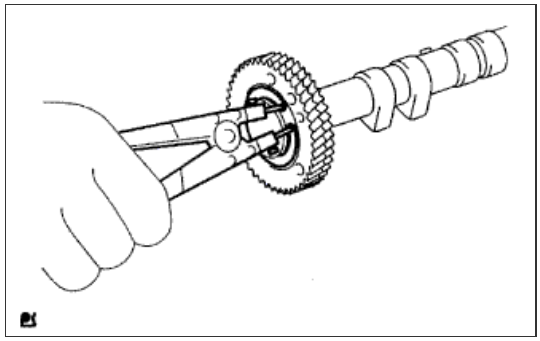


Be careful not to damage the camshaft.

b. Using SST, turn the sub-gear clockwise, and remove the service bolt.

SST

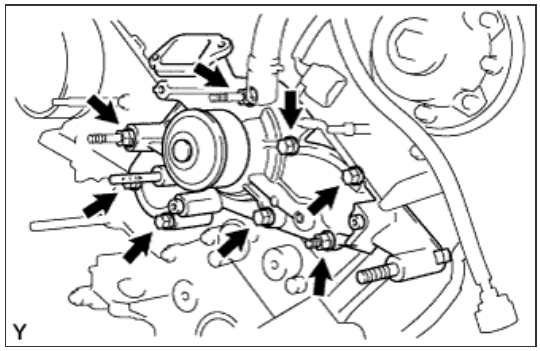
60-10010 (09962-01000, 09963-00500)



c. Using snap ring pliers, remove the snap ring.

d. Remove the wave washer, sub-gear and gear spring.

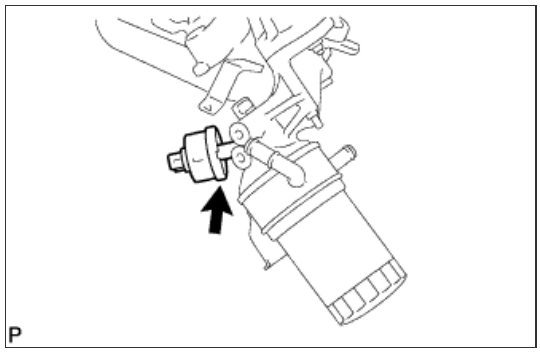
HINT:



Arrange the camshaft sub-gears and gear spring (LH and RH).

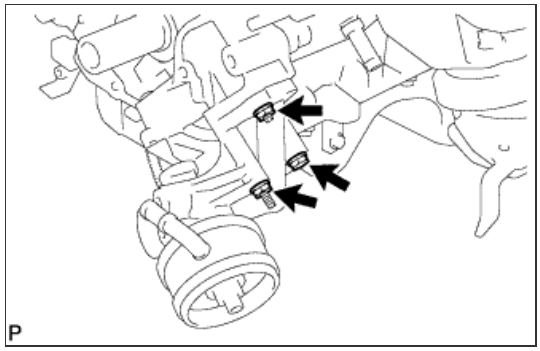
41. REMOVE WATER PUMP ASSEMBLY

a. Remove the 5 bolts, 2 stud bolts, nut, water pump and gasket.



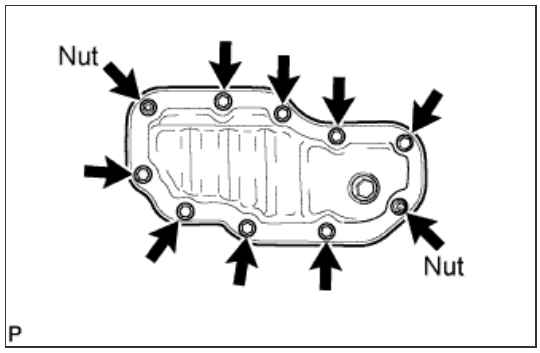
b. Remove the O-ring from the water by-pass pipe.

42. REMOVE OIL PRESSURE SENDER GAUGE ASSEMBLY



a. Disconnect the sender gauge connector.

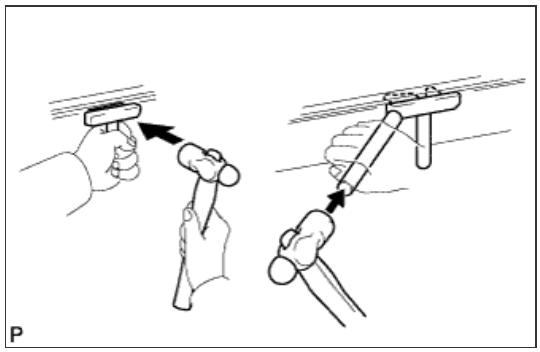
b. Remove the sender gauge.



43. REMOVE OIL FILTER BRACKET SUB-ASSEMBLY

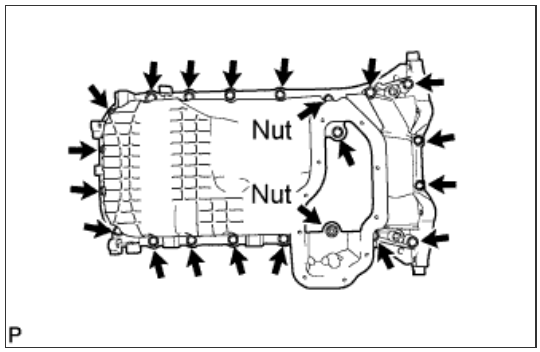
a. Remove the bolt, nut, stud bolt, oil filter bracket and gasket.

44. REMOVE NO. 2 OIL PAN SUB-ASSEMBLY



a. Remove the 8 bolts and 2 nuts.

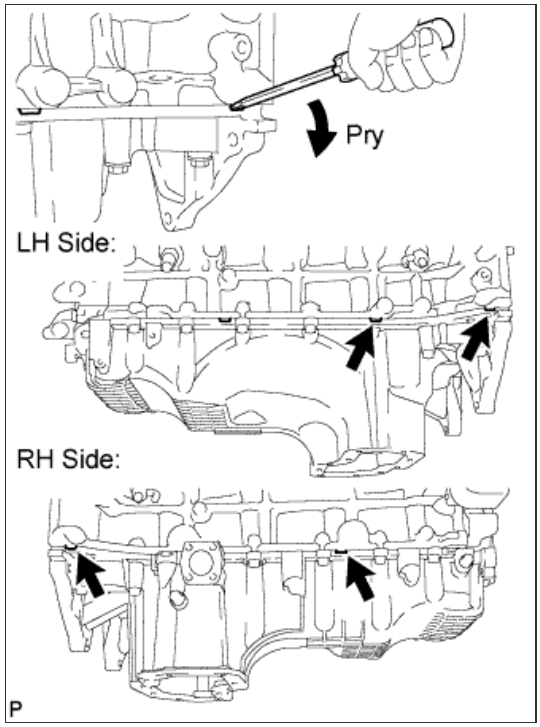
b. Insert the blade of an oil pan seal cutter between the oil pans, cut off applied sealer and remove the No. 2 oil pan.



NOTICE:

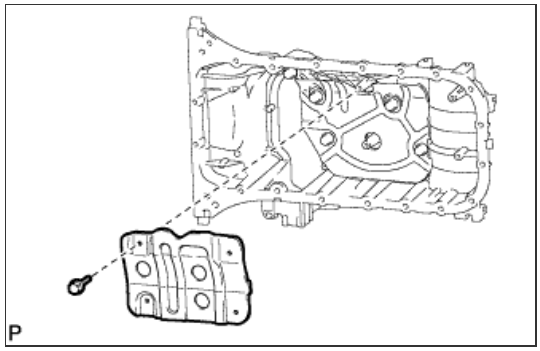
- **Be careful not to damage the No. 2 oil pan contact surface of the oil pan.**
- **Be careful not to damage the No. 2 oil pan flange.**

45. REMOVE OIL PAN SUB-ASSEMBLY



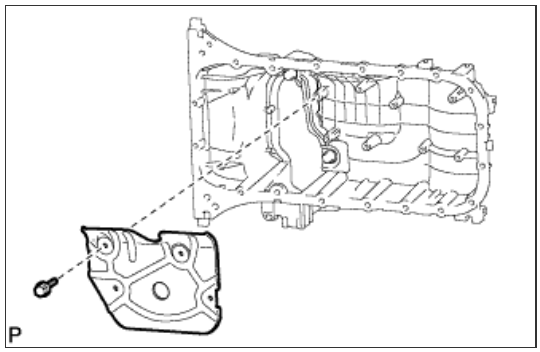
a. Remove the 19 bolts and 2 nuts.

b. Using a screwdriver, remove the oil pan by prying between the oil pan and cylinder block as shown in the illustration.



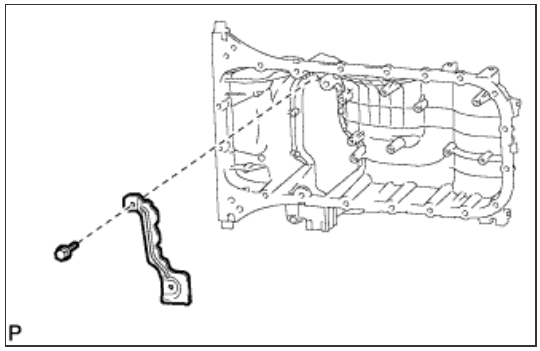
NOTICE

Be careful not to damage the contact surfaces of the cylinder block and oil pan.



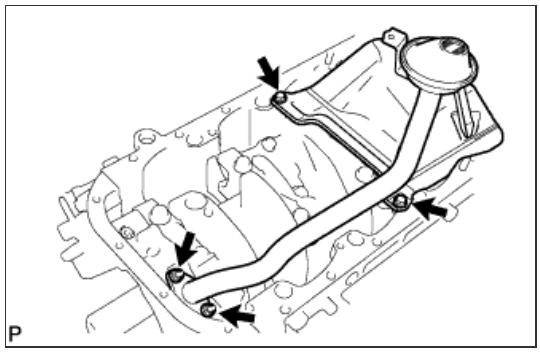
46. REMOVE NO. 1 OIL PAN BAFFLE PLATE

a. Remove the 4 bolts and baffle plate.



47. REMOVE NO. 2 OIL PAN BAFFLE PLATE

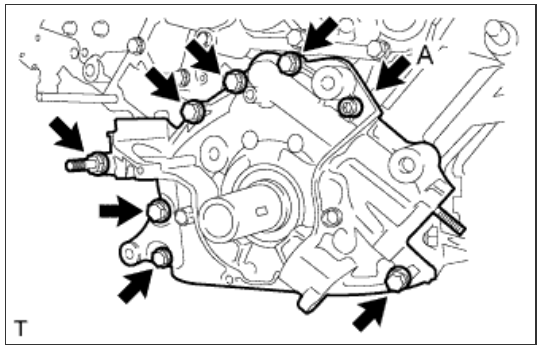
a. Remove the 4 bolts and baffle plate.



48. REMOVE NO. 3 OIL PAN BAFFLE PLATE

a. Remove the 2 bolts and baffle plate.

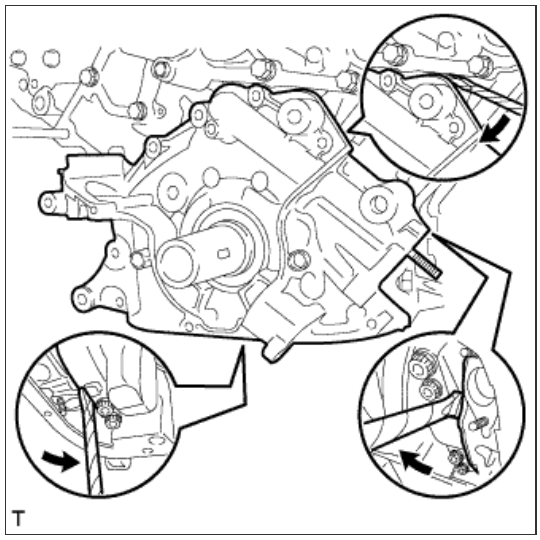
49. REMOVE OIL STRAINER SUB-ASSEMBLY



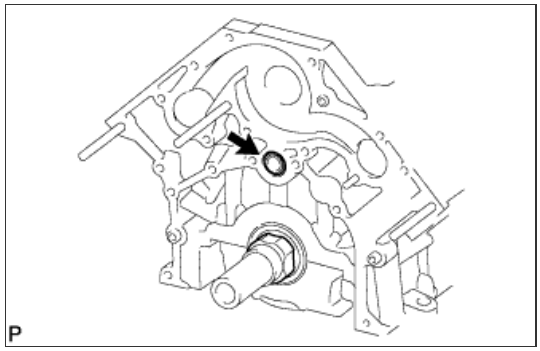
a. Remove the 2 bolts, 2 nuts, oil strainer and gasket.

50. REMOVE OIL PUMP ASSEMBLY

a. Using a 6 mm hexagon wrench, remove bolt A.



b. Remove the 6 bolts and stud bolt.

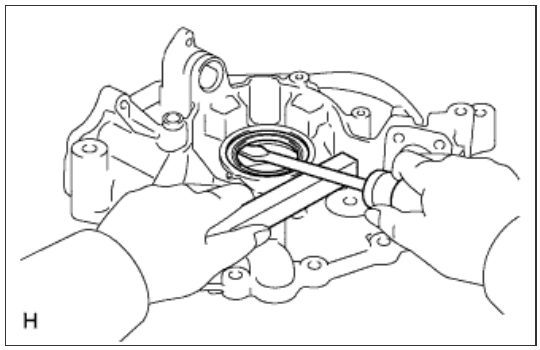


c. Using a screwdriver, remove the oil pump by prying the portions between the oil pump and cylinder block shown in the illustration.

NOTICE

Be careful not to damage the contact surfaces of the cylinder block and oil pump.

d. Remove the O-ring from the cylinder block.

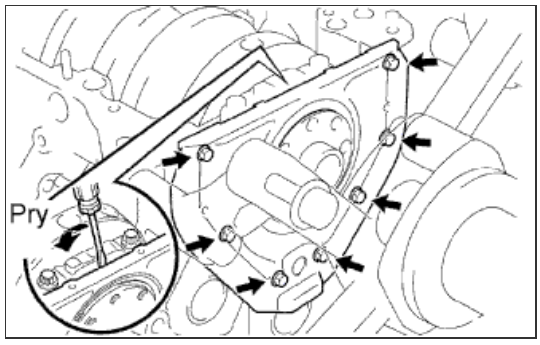


51. REMOVE OIL PUMP SEAL

a. Using a screwdriver and wooden block, pry out the oil seal.

NOTICE

Do not damage the surface of the oil seal press fit hole.

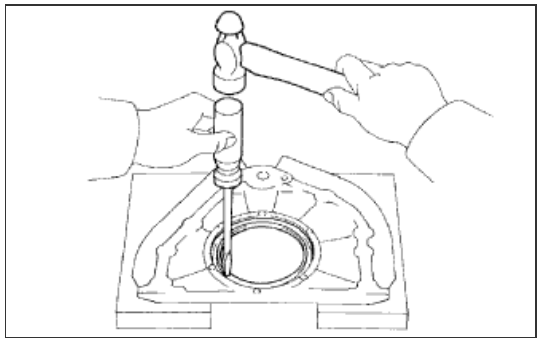


52. REMOVE ENGINE REAR OIL SEAL RETAINER

a. Remove the 7 bolts.

b. Using a screwdriver, remove the oil seal retainer by prying in between the oil seal retainer and crankshaft bearing cap.

c. Remove the O-ring.



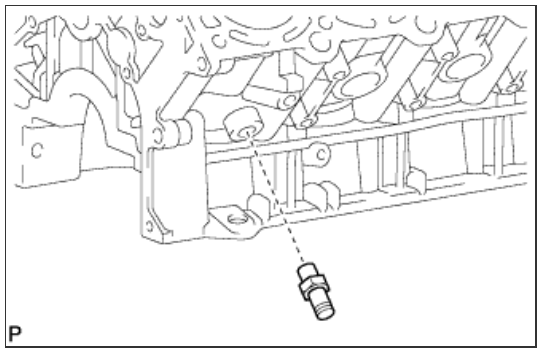
53. REMOVE ENGINE REAR OIL SEAL

a. Place the rear oil seal retainer on wooden blocks.

b. Using a screwdriver and hammer, tap out the oil seal.

NOTICE

Do not damage the surface of the oil seal press fit hole.

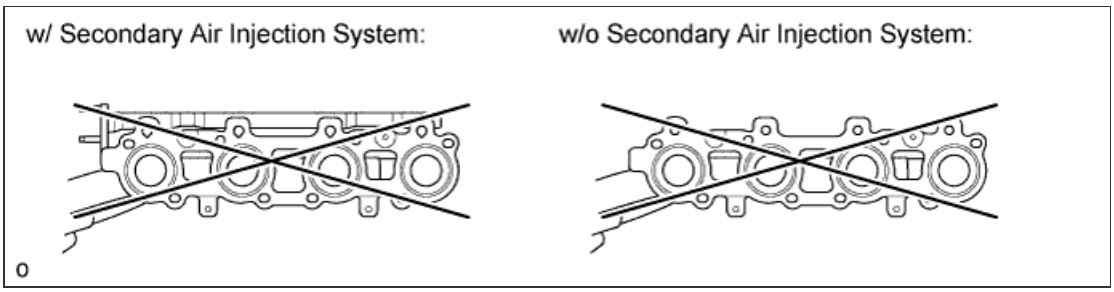


54. REMOVE CYLINDER BLOCK ATER DRAIN COCK SUB-ASSEMBLY

a. Remove the 2 drain cock plugs from the drain cock.

b. Remove the 2 drain cocks.

55. REMOVE CYLINDER BLOCK UNION

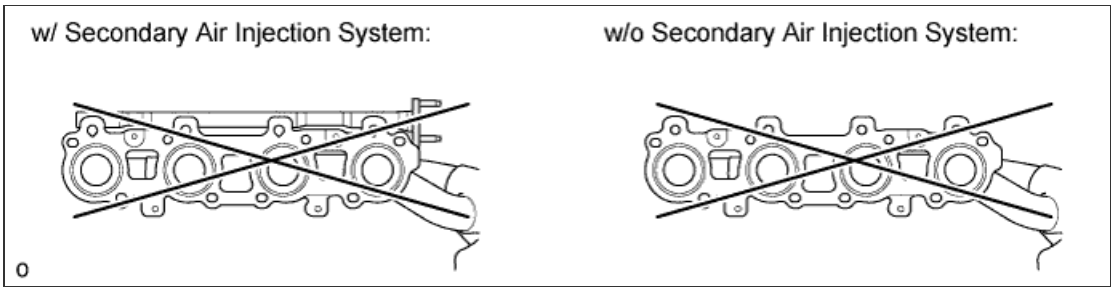


a. Remove the union from the cylinder block.

for Preparation Click here

1. INSPECT EXHAUST MANIFOLD SUB-ASSEMBLY LH

a. Using a precision straightedge and feeler gauge, measure the warpage of the contact surface between the cylinder head and exhaust manifold.



Maximum warpage:
0.50 mm (0.0197 in.)

If the warpage is more than the maximum, replace the exhaust manifold.

2. INSPECT EXHAUST MANIFOLD SUB-ASSEMBLY H

a. Using a precision straightedge and feeler gauge, measure the warpage of the contact surface between the cylinder head and exhaust manifold.

Maximum warpage:
0.50 mm (0.0197 in.)

If the warpage is more than the maximum, replace the exhaust manifold.

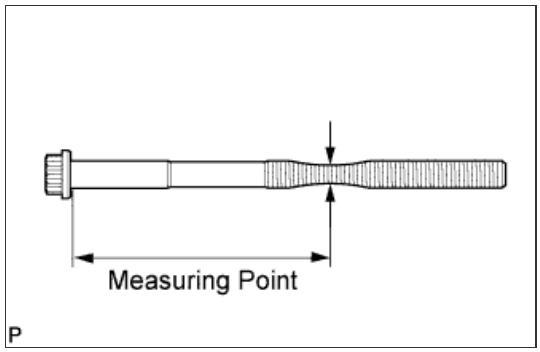
3. INSPECT CYLINDE HEAD SET BOLT

a. Using a vernier caliper, measure the thread outside diameter of the bolt.

Measuring Point:

Item	Specified Condition
Intake side	82 mm (3.23 in.)

Exhaust side	86 mm (3.39 in.)



Standard outside diameter:
9.810 to 9.960 mm (0.386 to 0.392 in.)

Minimum outside diameter:
9.700 mm (0.382 in.)

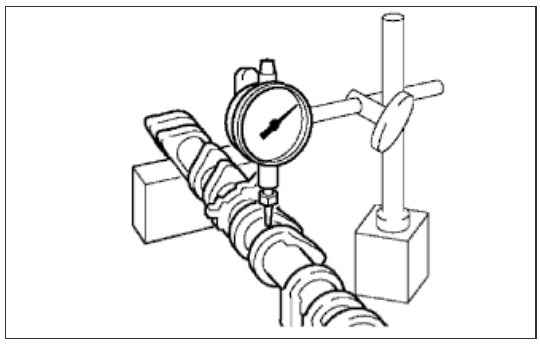
If the outside diameter is less than the minimum, replace the cylinder head set bolt.

HINT:

If a visual check reveals no excessively thin areas, check the center of the bolt (see illustration) and find the area that has the minimum diameter.

4. INSPECT CAMSHAFT

a. Inspect the circle runout.



i. Place the camshaft on V-blocks.

ii. Using a dial indicator, measure the circle runout at the center journal.

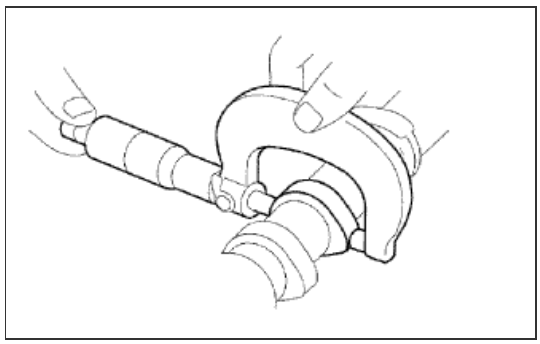
Standard circle runout:
0 to 0.06 mm (0 to 0.00236 in.)

Maximum circle runout:
0.08 mm (0.00315 in.)

If the circle runout is more than the maximum, replace the camshaft.

b. Inspect the cam lobes.

i. Using a micrometer, measure the cam lobe height.



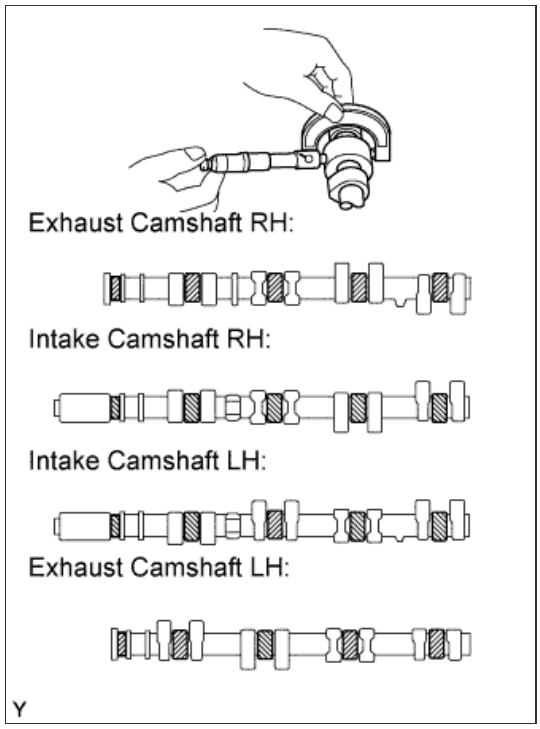
Standard Cam Lobe Height:

Item	Specified Condition
Intake	42.61 to 42.71 mm (1.6776 to 1.6815 in.)
Exhaust	42.63 to 42.73 mm (1.6783 to 1.6823 in.)

Minimum Cam Lobe Height:

Item	Specified Condition
Intake	42.46 mm (1.6717 in.)
Exhaust	42.48 mm (1.6724 in.)

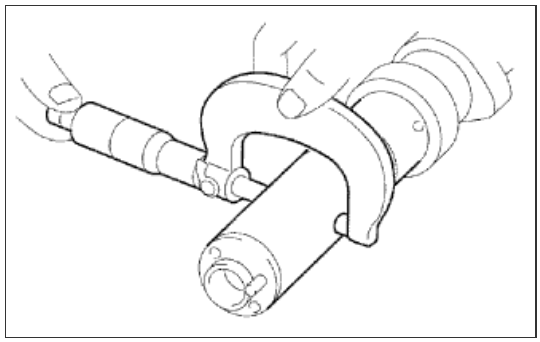
If the cam lobe height is less than the minimum, replace the camshaft.



c. Inspect the camshaft journals.

i. Using a micrometer, measure the journal diameter.

Standard journal diameter:
26.954 to 26.970 mm (1.061 to 1.062 in.)



If the journal diameter is not as specified, check the oil clearance. If necessary, replace the camshaft.

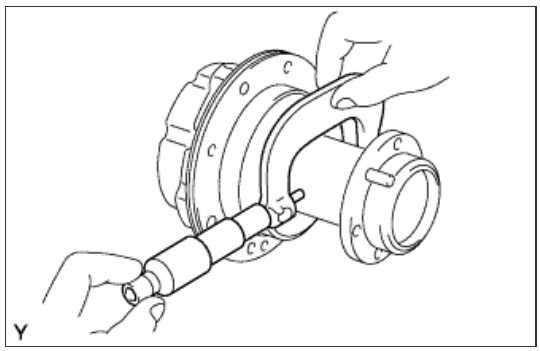
ii. Using a micrometer, measure the journal diameter for the camshaft timing tube.

Standard journal diameter:
30.984 to 31.000 mm (1.2198 to 1.2204 in.)

If the journal diameter is not as specified replace the camshaft.

5. INSPECT CAMSHAFT TIMING TUBE ASSEMBLY

a. Using a micrometer, measure the journal diameter.



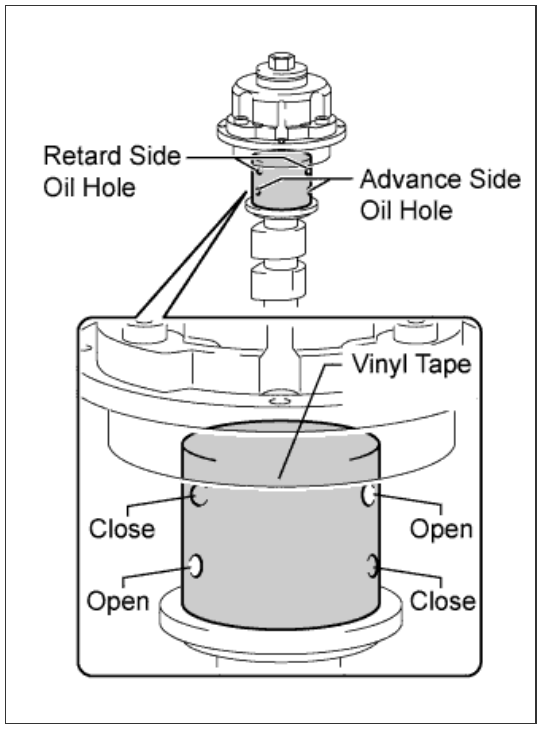
Standard journal diameter:
39.955 to 39.964 mm (1.5730 to 1.5734 in.)

If the journal diameter is not as specified, check the oil clearance. If necessary, replace the camshaft and cylinder head.

b. Install the camshaft timing tube to the camshaft (Click here).

c. Check the lock of the camshaft timing tube.

i. Check that the camshaft timing tube is locked.

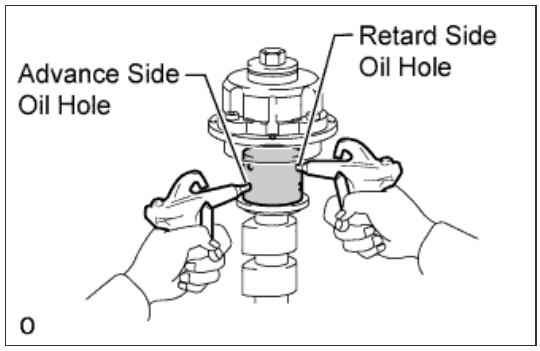


d. Release the lock pin.

i. Clean the camshaft timing tube journal with non-residue solvent.

ii. Wrap tape around the entire journal to block the 4 oil holes as shown in the illustration.

iii. Open a hole in the tape at 2 places, one in the retard side oil hole and one in the advance side oil hole as shown in the illustration.



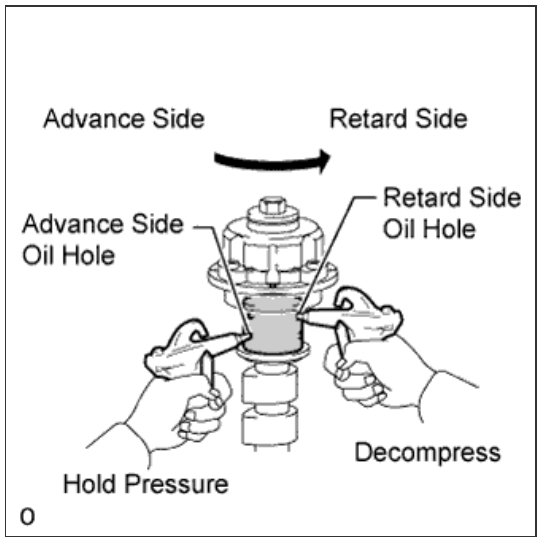
iv. Apply approximately 200 kPa (2.0 kgf/cm^2, 29 psi) of air pressure to the 2 open oil holes (the advance side oil hole and the retard side oil hole).

NOTICE:

Cover the oil holes with a piece of cloth when applying pressure to keep oil from splashing.

HINT:

he lock pin will be released when air pressure is applied.



v. Check that the camshaft timing tube revolves in the advance direction when reducing the air pressure applied to the retard side oil hole.

vi. When the camshaft timing tube reaches the most advanced position, release the air pressure from the retard side oil hole and advance side oil hole, in that order.

NOTICE:

- **Do not release the air pressure from the advance side oil hole first. The tube may abruptly shift in the retard direction and break the lock pin.**
- **When releasing the air pressure from the retard side oil hole, do not release the air pressure too quickly to prevent damage.**

e. Check for smooth rotation.

i. Apply 60 kPa (0.6 kgf/cm^2, 8.7 psi) of air pressure to the retard side oil hole to release the lock pin.

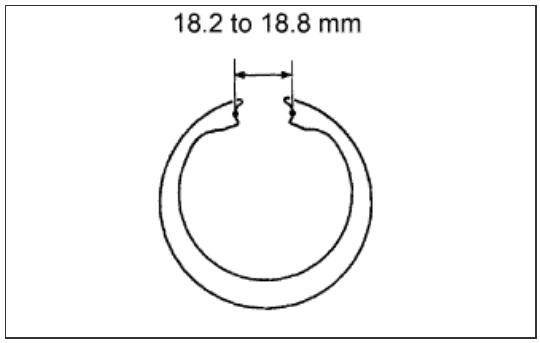
ii. rn the camshaft timing tube within its movable range (21) 2 or 3 times, but do not turn it to the most retarded position. Make sure that the camshaft timing tube turns smoothly.

NOTICE:

Do not use air pressure to perform the smooth rotation check. Always perform the check by hand.

f. Check the lock in the most retarded position.

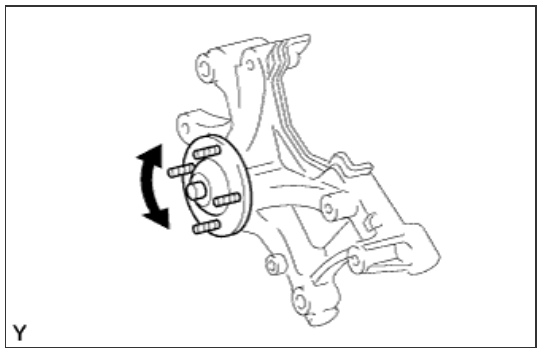
i. Confirm that the camshaft timing tube is locked at the most retarded position.



g. Remove the camshaft timing tube (Click here).

6. INSPECT CAMSHAFT GEA SP ING

a. Using a vernier caliper, measure the gap distance of the gear spring.

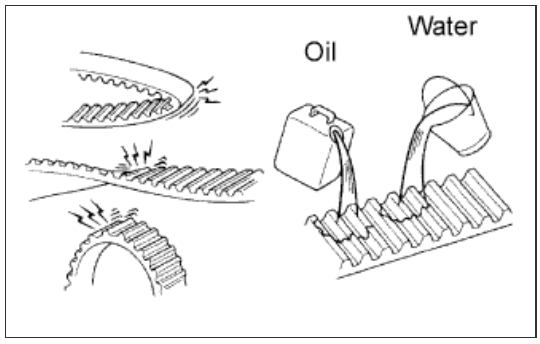


Standard gap distance:
18.2 to 18.8 mm (0.717 to 0.740 in.)

If the gap distance is not as specified, replace the camshaft gear spring.

7. INSPECT FAN B ACKET SUB-ASSEMBLY

a. Check that the fan bracket turns smoothly by turning it.
If necessary, replace the fan bracket.

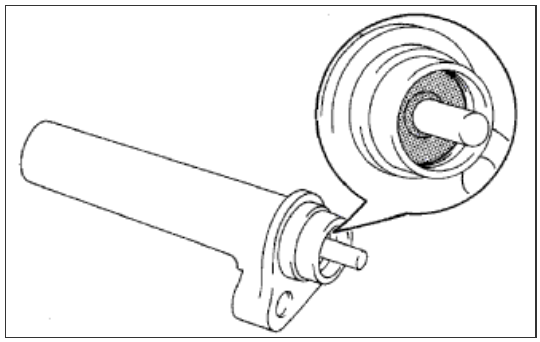


8. INSPECT TIMING BELT

a. Visually check the timing belt for excessive wear, frayed cords, etc.
If necessary, replace the timing belt.

NOTICE:

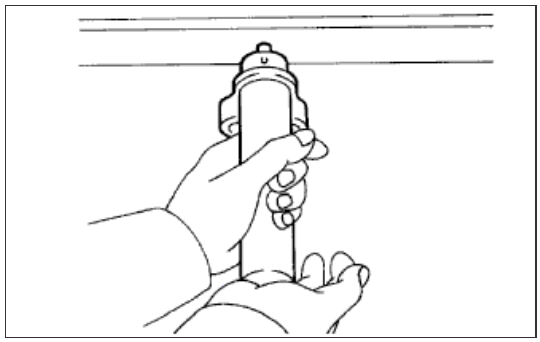
- **Do not bend or twist the timing belt or turn it inside out.**
- **Do not allow the timing belt to come into contact with oil, water or steam.**



9. INSPECT TIMING BELT TENSIONE ASSEMBLY

a. Visually check the seal portion of the tensioner for oil leakage.
If leakage is found, replace the timing belt tensioner assembly.

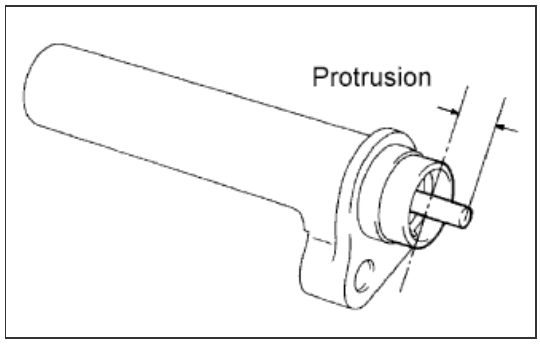
HINT:



If there is only a faint trace of oil on the push rod, the tensioner does not need to be replaced.

b. Hold the tensioner with both hands and push the push rod strongly as shown to check that it does not move.
If the push rod moves, replace the timing belt tensioner assembly.

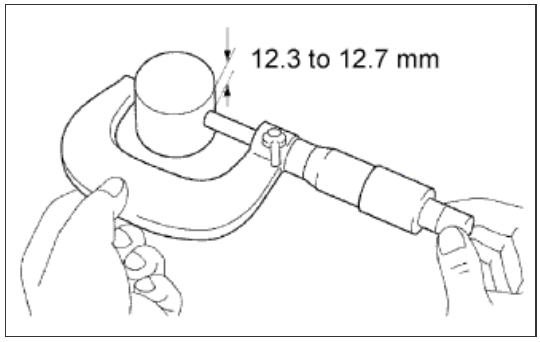
NOTICE:



Never face the tensioner push rod downward.

c. Measure the protrusion of the push rod from the housing end.

Standard protrusion:
9.5 to 10.5 mm (0.374 to 0.413 in.)

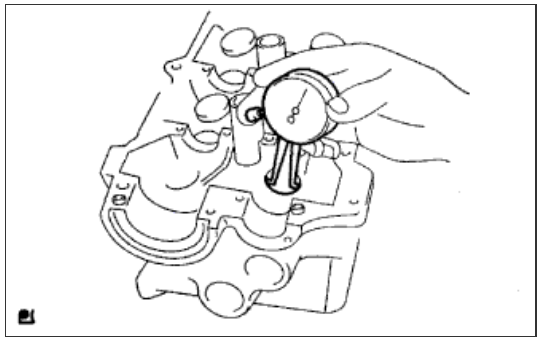


If the protrusion is not as specified, replace the timing belt tensioner assembly.

10. INSPECT VALVE LIFTE

a. Using a micrometer, measure the lifter diameter at a position 12.3 to 12.7 mm (0.484 to 0.500 in.) from the top surface.

Standard lifter diameter:
30.968 to 30.976 mm (1.2192 to 1.2195 in.)



b. Using a caliper gauge, measure the lifter bore diameter of the cylinder head.

Standard lifter bore diameter:
31.000 to 31.016 mm (1.220 to 1.221 in.)

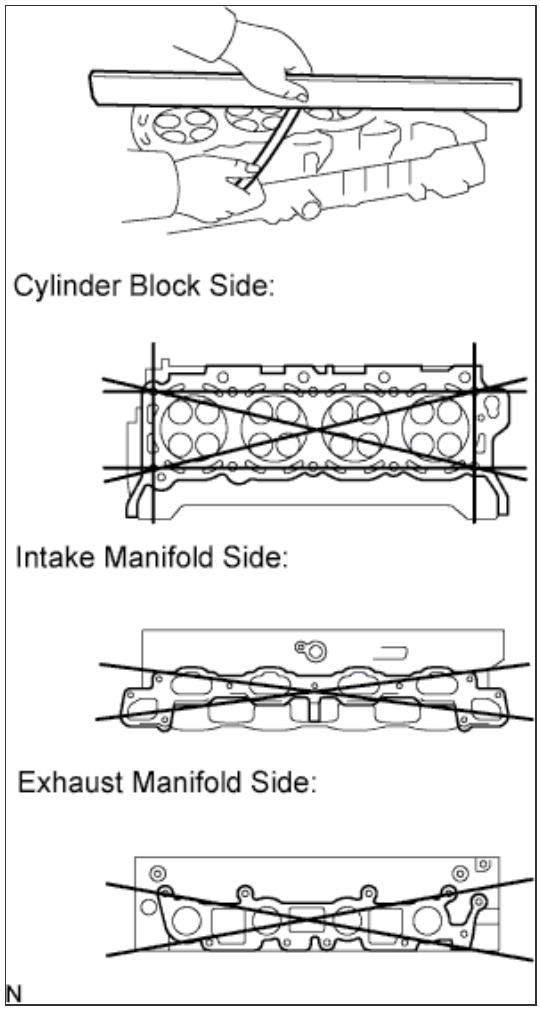
c. Subtract the lifter diameter measurement from the lifter bore diameter measurement.

Standard oil clearance:
0.024 to 0.050 mm (0.000945 to 0.00197 in.)

Maximum oil clearance:
0.07 mm (0.00276 in.)

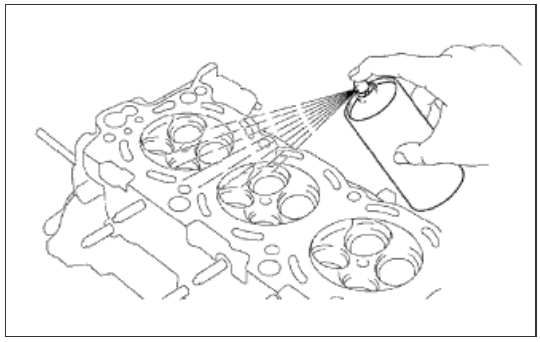
If the oil clearance is more than the maximum, replace the lifter. If necessary, replace the cylinder head sub-assembly.

11. INSPECT CYLINDE HEAD SUB-ASSEMBLY



a. Using a precision straightedge and feeler gauge, measure the surfaces contacting the cylinder block and manifolds for warpage.

Standard Warpage:



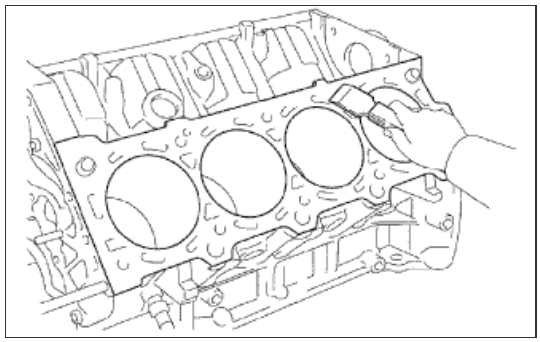
Item	Specified Condition
Cylinder block side	0 to 0.05 mm (0 to 0.00197 in.)
Intake manifold side	0 to 0.08 mm (0 to 0.00315 in.)
Exhaust manifold side	0 to 0.08 mm (0 to 0.00315 in.)

Maximum warpage:
0.10 mm (0.00394 in.)

If the warpage is more than the maximum, replace the cylinder head sub-assembly.

b. Using a dye penetrant, check the combustion chamber, intake ports, exhaust ports and cylinder block surface for cracks.
If the cylinder head is cracked, replace it.

12. INSPECT CYLINDE BLOCK SUB-ASSEMBLY



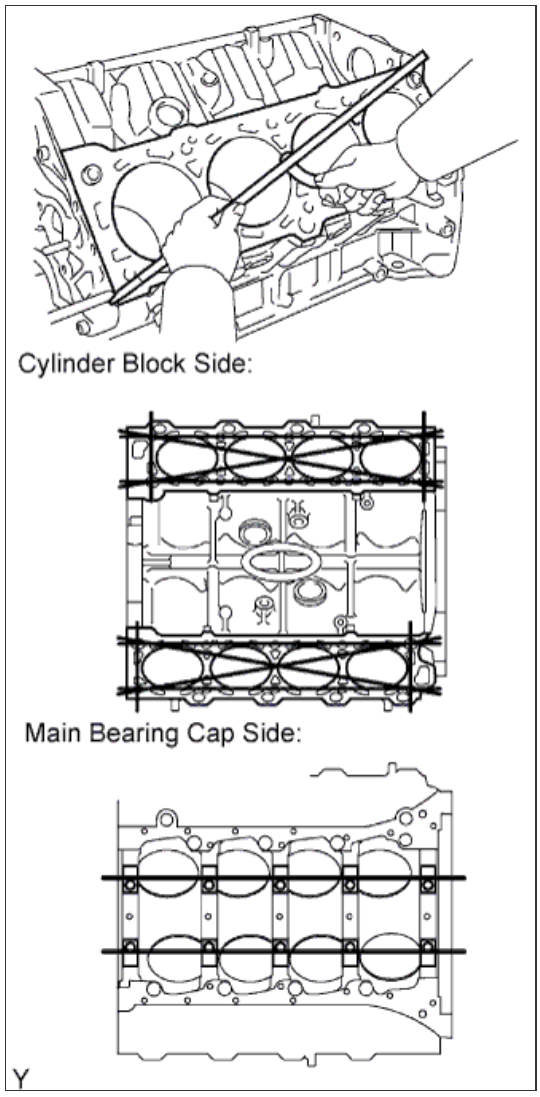
a. Clean the cylinder block.

i. Using a gasket scraper, remove all the gasket material from the top surface of the cylinder block.

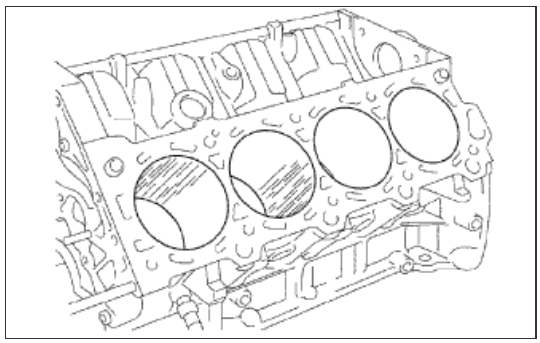
ii. Using a soft brush and solvent, thoroughly clean the cylinder block.

NOTICE:

If the cylinder is washed at high temperatures, the cylinder liner sticks out beyond the cylinder block. Always wash the cylinder block at a temperature of 45 C (113) or less.



b. Using a precision straightedge and feeler gauge, measure the surfaces contacting the cylinder head and main bearing cap for warpage.



Standard warpage:
0 to 0.05 mm (0 to 0.00197 in.)

Maximum warpage:
0.07 mm (0.00276 in.)

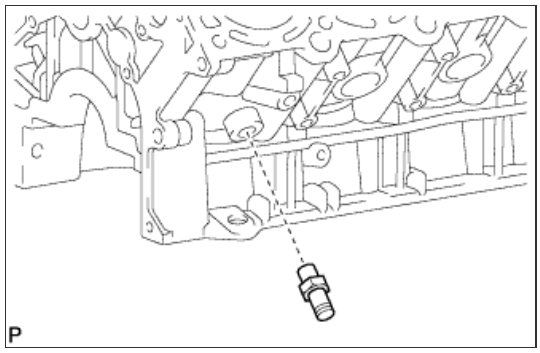
If the warpage is more than the maximum, replace the cylinder block.

c. Visually check the cylinder for vertical scratches.
If deep scratches are present, rebore all 8 cylinders and replace all 8 pistons. If necessary, replace the cylinder block.

for Preparation Click here

1. INSTALL CYLINDER BLOCK UNION

a. Apply seal packing to 2 or 3 threads of the cylinder block union.

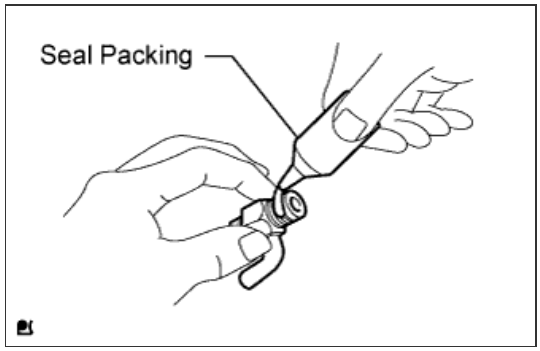


Seal packing:
Toyota Genuine Seal Packing 1282B, Three Bond 1282B or equivalent

b. Install the union to the cylinder block.

Torque:
49 N*m{ 500 kgf*cm , 36 ft.*lbf

NOTICE:



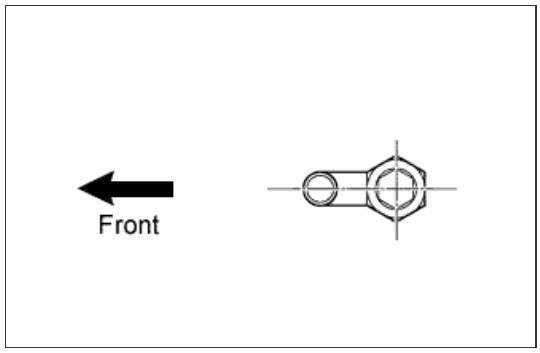
Install the cylinder block union within 3 minutes and tighten the union within 15 minutes after applying seal packing.

2. INSTALL CYLINDER BLOCK WATER DRAIN COCK SUB-ASSEMBLY

a. Apply seal packing to 2 or 3 threads of the drain cock.

Seal packing:
Toyota Genuine Seal Packing 1282B, Three Bond 1282B or equivalent

b. Install the 2 drain cocks as shown in the illustration.



Torque:
49 N*m{ 500 kgf*cm , 36 ft.*lbf

NOTICE:

- **Do not rotate the drain cocks more than 1 revolution 60 after tightening the drain cocks to the specified torque.**
- **Do not loosen the drain cocks to adjust them. If an adjustment is necessary, remove the drain cocks and reinstall them.**

c. Install the 2 drain cock plugs to the drain cock.

Torque:
13 N*m{ 130 kgf*cm , 9 ft.*lbf

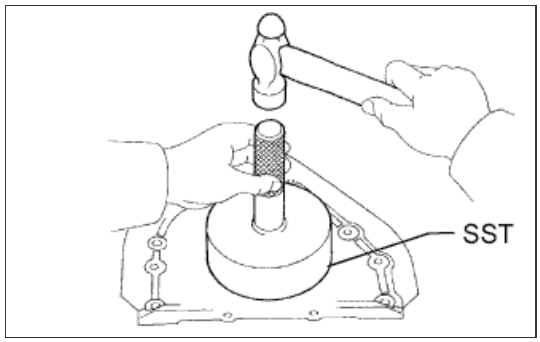
. INSTALL ENGINE REAR OIL SEAL

a. Place the oil seal retainer on wooden blocks.

b. Using SST and a hammer, tap in a new oil seal until its surface is flush with the

rear oil seal retainer edge.

SST
09223-56010



NOTICE:

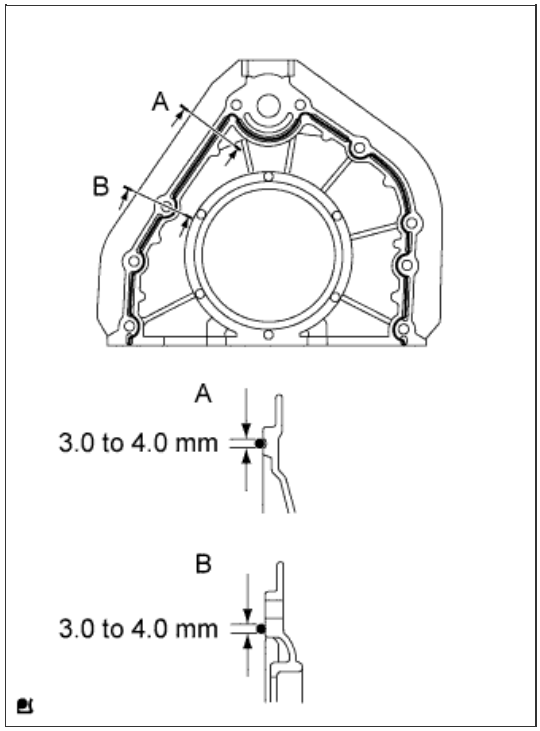
Do not tap on the oil seal at an angle.

c. Apply MP grease to the lip of the oil seal.

NOTICE:

- **Do not allow foreign matter to contact the lip of the oil seal.**
- **Do not allow MP grease to contact the dust seal.**

4. INSTALL ENGINE REAR OIL SEAL RETAINER



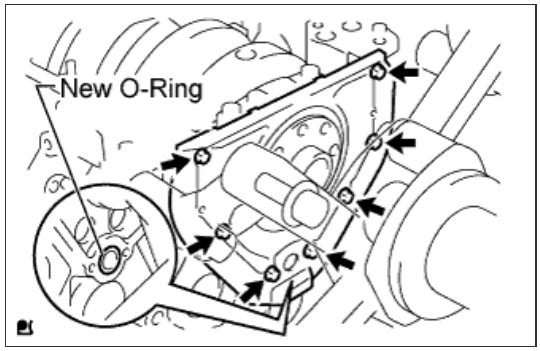
a. Apply seal packing to the oil seal retainer as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
3.0 to 4.0 mm 0.118 to 0.157 in.)

NOTICE:

- **Install the oil seal retainer within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Be careful not to drop any oil on the contact surfaces of the oil seal retainer and cylinder block.**



b. Install a new O-ring to the cylinder block.

c. Install the oil seal retainer with the 7 bolts.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf

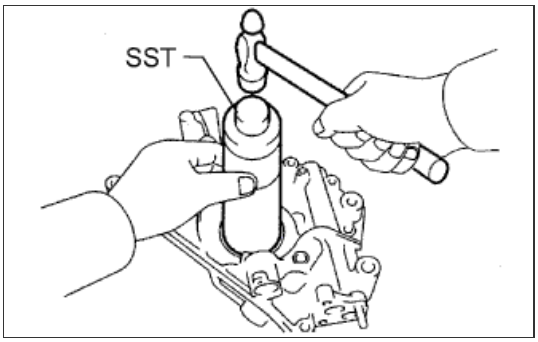
NOTICE:

Do not expose the seal to engine oil for at least an hour after installing it.

5. INSTALL OIL PUMP SEAL

a. Place the oil pump on a wooden block.

b. Using SST and a hammer, tap in a new oil seal until its surface is flush with the oil pump body edge.



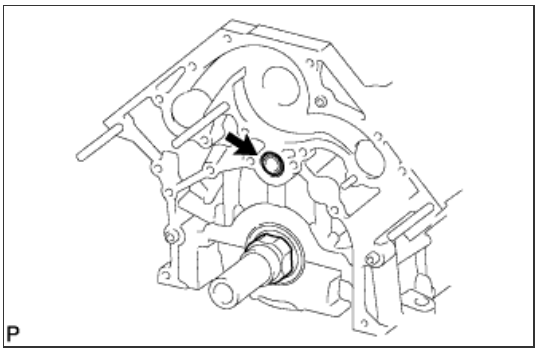
SST

09316-60011 09316-00011)

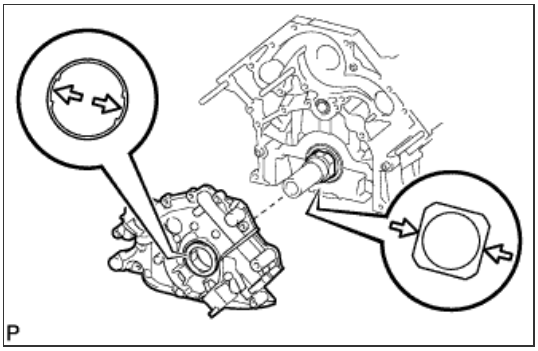
NOTICE:

Do not tap the oil seal at an angle.

c. Apply MP grease to the lip of the oil seal.



NOTICE:

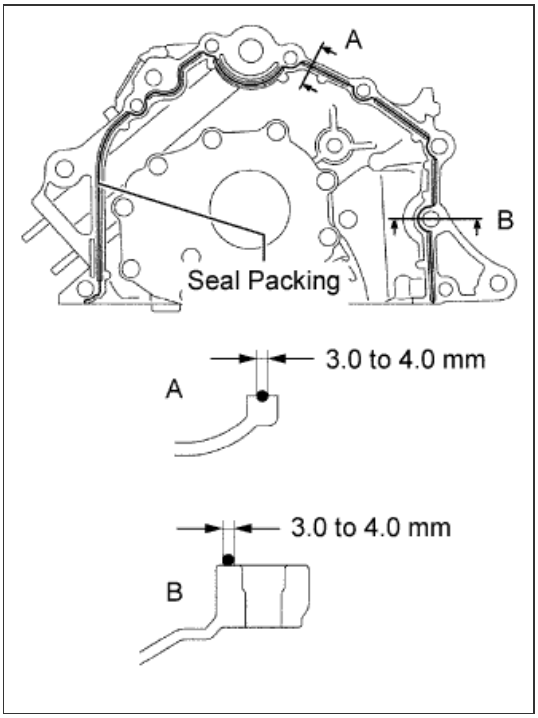


- **Do not allow foreign matter to contact the lip of the oil seal.**
- **Do not allow MP grease to contact the dust seal.**

6. INSTALL OIL PUMP ASSEMBLY

a. Apply a light coat of engine oil to a new O-ring and install it to the cylinder block.

b. Align the oil pump drive rotor spline and the crankshaft as shown in the illustration.



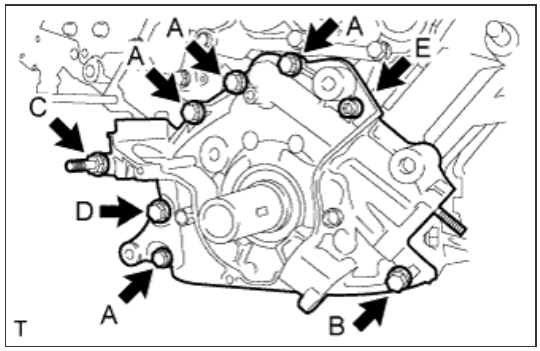
c. Apply seal packing to the oil pump as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
3.0 to 4.0 mm 0.118 to 0.157 in.)

NOTICE:

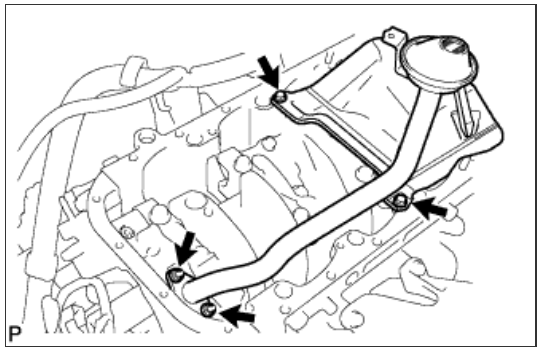
- **Install the oil pump within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Be careful not to drop any oil on the contact surfaces of the oil pump and cylinder block.**
- **Do not e pose the seal to engine oil for at least 2 hours after installing it.**



d. Install the oil pump with the stud bolt, 6 standard bolts and the 6 mm hexagon wrench bolt. Uniformly tighten the bolts in several steps.

Torque:
for bolt A, B, C, E:
16 N*m{ 163 kgf*cm , 12 ft.*lbf
for bolt D:
31 N*m{ 316 kgf*cm , 23 ft.*lbf

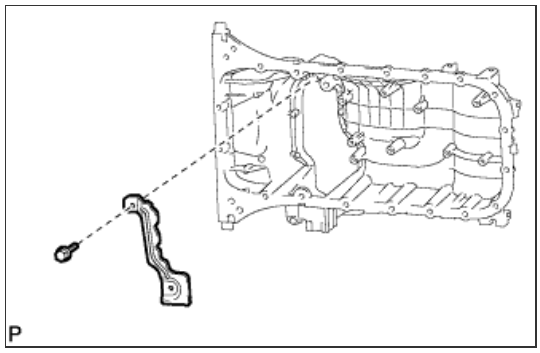
Bolt Length:



Item	Bolt Head Size	Length
Bolt A	12 mm	35 mm (1.38 in.)
Bolt B	12 mm	50 mm (1.97 in.)
Bolt C	14 mm	103 mm (4.06 in.)
Bolt D	14 mm	44 mm (1.73 in.)
Bolt E	6 mm hexagon	28 mm (1.10 in.)

7. INSTALL OIL STRAINER SUB-ASSEMBLY

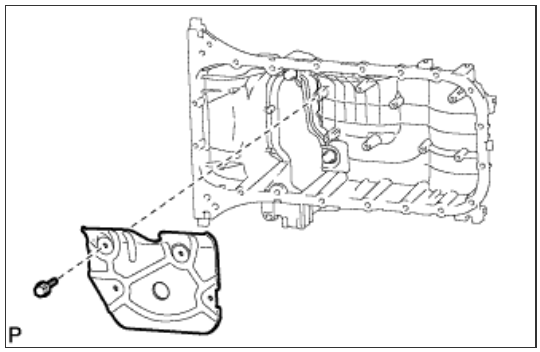
a. Install a new gasket and the oil strainer with the 2 bolts and 2 nuts.



Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf

8. INSTALL NO. 3 OIL PAN BA LE PLATE

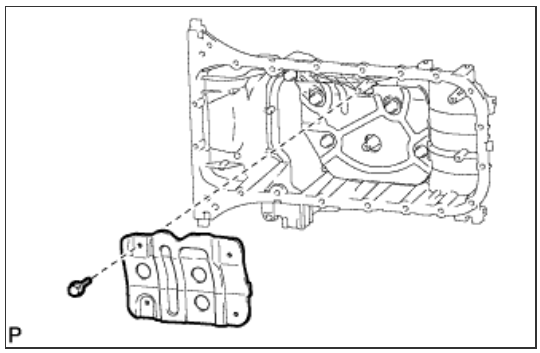
a. Install the baffle plate with the 2 bolts.



Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf

9. INSTALL NO. 2 OIL PAN BA LE PLATE

a. Install the baffle plate with the 4 bolts.



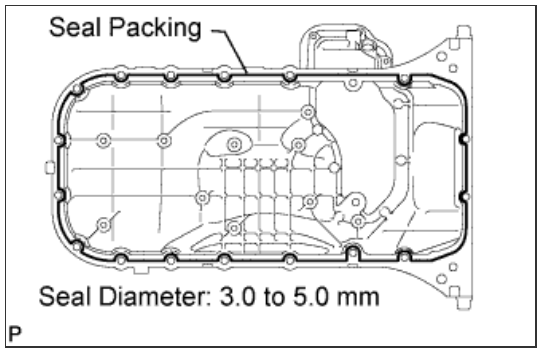
Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf

10. INSTALL NO. 1 OIL PAN BA LE PLATE

a. Install the baffle plate with the bolts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf

11. INSTALL OIL PAN SUB-ASSEMBLY

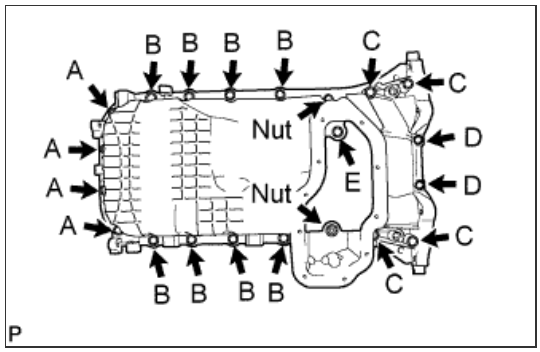


a. Apply seal packing to the oil pan as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
3.0 to 5.0 mm 0.118 to 0.197 in.)

NOTICE:



- **Install the oil pan within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Be careful not to drop any oil on the contact surfaces of the oil pan and cylinder block.**
- **Do not e pose the seal to engine oil for at least 2 hours after installing it.**

b. Temporarily install the oil pan with the 19 bolts and 2 nuts.

Bolt Length:

Item	Bolt Head Size	Length
Bolt A	10 mm	22 mm (0.866 in.)
Bolt B	12 mm	25 mm (0.98 in.)
Bolt	12 mm	60 mm (2.36 in.)
Bolt D	10 mm	35 mm (1.38 in.)
Bolt E	10 mm	22 mm (0.866 in.)

NOTICE:

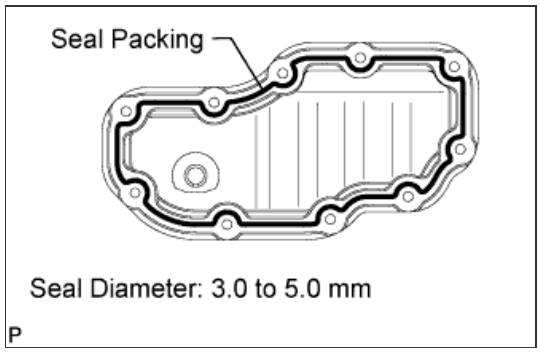
Make sure the rear ends of the oil pan and cylinder block are aligned. If not, the oil pan may become damaged.

c. Uniformly tighten the bolts and nuts in several passes.

Torque:

for bolt A, D, E:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf
for bolt B, C, nut:
28 N*m{ 286 kgf*cm , 21 ft.*lbf

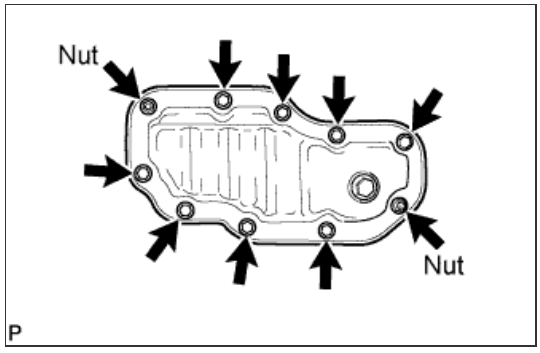
12. INSTALL NO. 2 OIL PAN SUB-ASSEMBLY



a. Apply seal packing to the No. 2 oil pan as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
3.0 to 5.0 mm 0.118 to 0.197 in.)

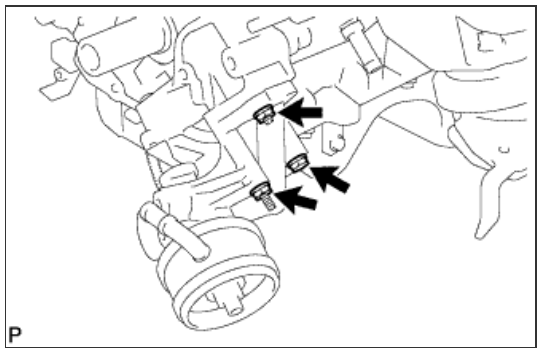


NOTICE:

- Install the oil pan within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.
- Be careful not to drop any oil on the contact surfaces of the oil pan and No. 2 oil pan.
- Do not e pose the seal to engine oil for at least 2 hours after installing it.

b. Install the No. 2 oil pan with the 8 bolts and 2 nuts. Uniformly tighten the bolts and nuts in several passes.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf

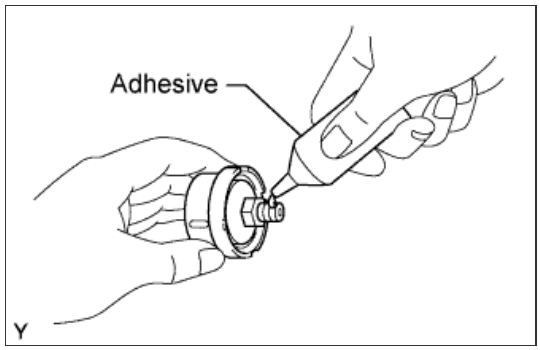


13. INSTALL OIL LTER BRACKET SUB-ASSEMBLY

a. Install a new gasket to the oil filter bracket.

b. Install the oil filter bracket with the bolt, stud bolt and nut.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf



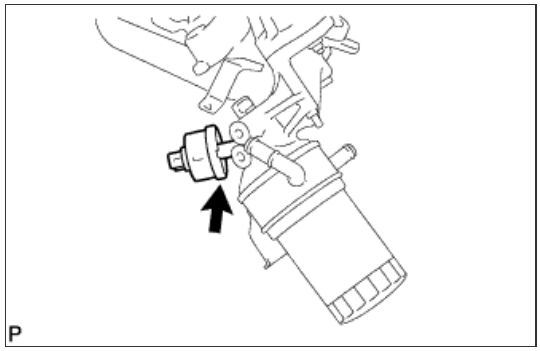
14. INSTALL OIL PRESSURE SENDER GAUGE ASSEMBLY

a. Apply adhesive to 2 or 3 threads of the sender gauge.

Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

NOTICE:

Do not let adhesive adhere to the oil hole.



b. Install the sender gauge.

Torque:
15 N*m{ 153 kgf*cm , 11 ft.*lbf

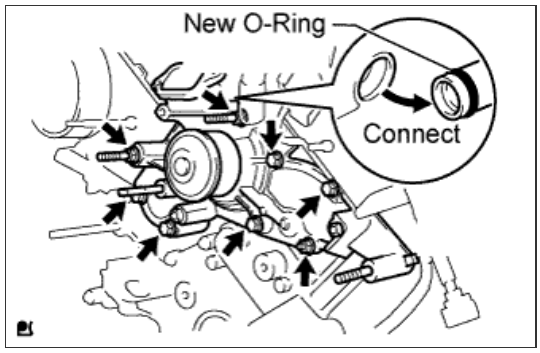
NOTICE:

Do not start the engine within 1 hour of installation.

c. onnect the sender gauge connector.

15. INSTALL WATER PUMP ASSEMBLY

a. Apply soapy water to a new O-ring.



b. Install the O-ring to the water by-pass pipe end.

c. Install a new gasket to the cylinder block.

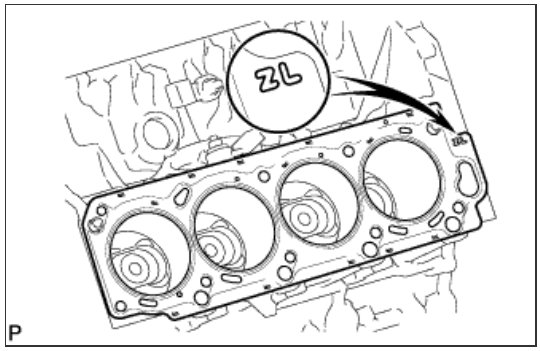
d. onnect the water pump to the water by-pass pipe end.

e. Temporarily install the water pump with the 5 bolts, 2 stud bolts and nut. Uniformly tighten the bolts, stud bolts and nut in several passes.

Torque:
for bolt:
21 N*m{ 214 kgf*cm , 15 ft.*lbf
for stud bolt, nut:
18 N*m{ 184 kgf*cm , 13 ft.*lbf

16. INSTALL CYLINDER AD GASKET L

a. lean the cylinder block and cylinder head with solvent.



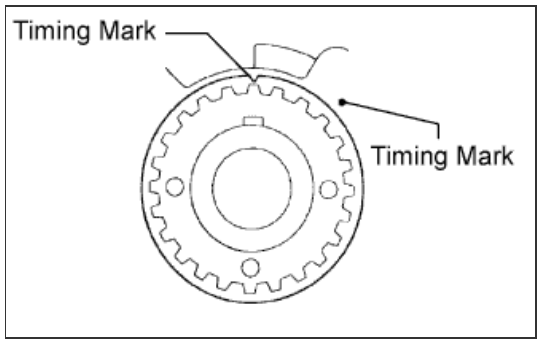
b. Place a new cylinder head gasket in position on the cylinder block.

IN:

A mark is placed on the rear side of the cylinder head gasket to distinguish the LH and RH sides, a "2 mark for the RH side and a "2L" mark for the LH side.

NOTICE:

Be careful of the installation direction.



17. INSTALL CYLINDER AD L

IN:

The cylinder head bolts are tightened in 3 progressive steps.

a. Check that the timing mark of the crankshaft timing pulley is in the position shown in the illustration, and that the piston is below the TDC of compression.

b. Install the cylinder head with the exhaust manifold to the cylinder block.

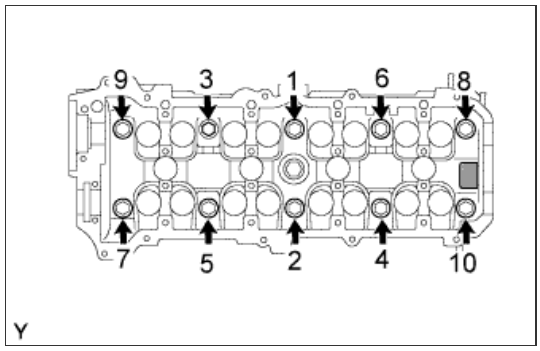
NOTICE:

Ensure that no oil is on the mounting surface of the cylinder head.

c. Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.

d. Step 1:

i. Set the plate washer to the cylinder head bolt.



ii. Install and uniformly tighten the 10 cylinder head bolts and plate washers in the sequence shown in the illustration.

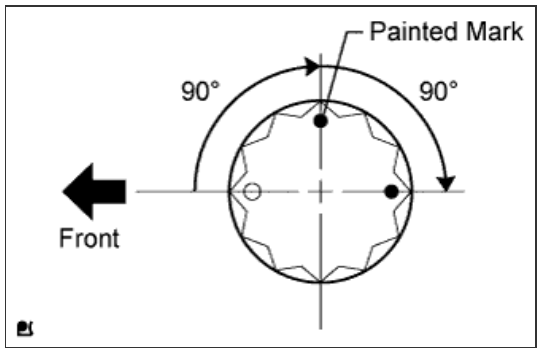
Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf

If any one of the cylinder head bolts does not meet the torque specification, replace the cylinder head bolt.

NOTICE:

Do not drop the plate washer for the cylinder head bolt of the cylinder head.

e. Step 2:



i. Mark the cylinder head bolt head with paint as shown in the illustration.

ii. Tighten the cylinder head bolts 90° in the sequence shown in step 1.

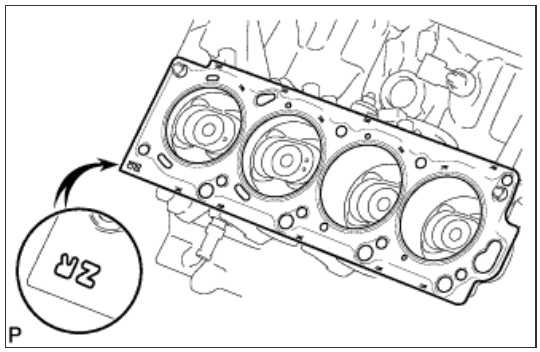
f. Step 3:

i. Tighten the cylinder head bolts another 90° in the sequence shown in step 1.

ii. Check that the painted marks are now facing rearward.

18. INSTALL CYLINDER HEAD GASKET

a. Clean the cylinder block and cylinder head with solvent.



b. Place a new cylinder head gasket in position on the cylinder block.

IN:

A mark is placed on the rear side of the cylinder head gasket to distinguish the LH and RH sides, a "2 mark for the RH side and a "2L" mark for the LH side.

NOTICE:

Be careful of the installation direction.

19. INSTALL CYLINDER AD SUB-ASSEMBLY

IN:

The cylinder head bolts are tightened in 3 progressive steps.

a. Install the cylinder head with the exhaust manifold to the cylinder block.

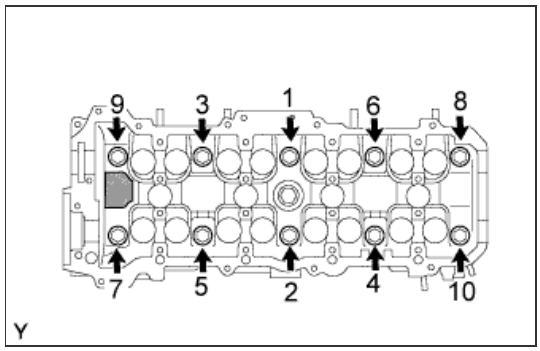
NOTICE:

Ensure that no oil is on the mounting surface of the cylinder head.

b. Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.

c. Step 1:

i. Set the plate washer to the cylinder head bolt.



ii. Install and uniformly tighten the 10 cylinder head bolts and plate washers in the sequence shown in the illustration.

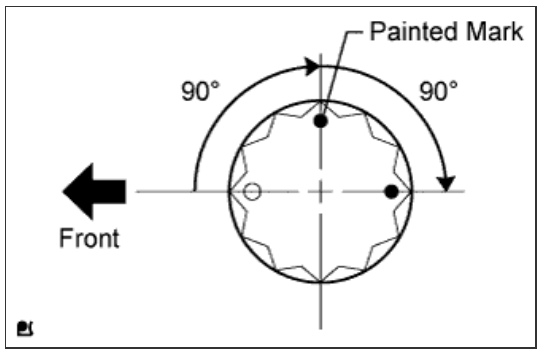
Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf

If any one of the cylinder head bolts does not meet the torque specification, replace the cylinder head bolt.

NOTICE:

Do not drop the plate washer for the cylinder head bolt of the cylinder head.

d. Step 2:



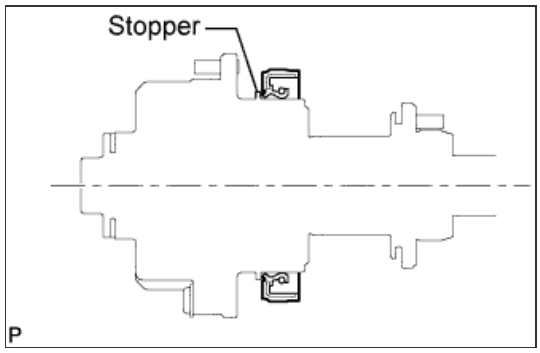
i. Mark the cylinder head bolt head with paint as shown in the illustration.

ii. Tighten the cylinder head bolts 90° in the sequence shown in step 1.

e. Step 3:

i. Tighten the cylinder head bolts another 90° in the sequence shown in step 1.

ii. Check that the painted marks are now facing rearward.



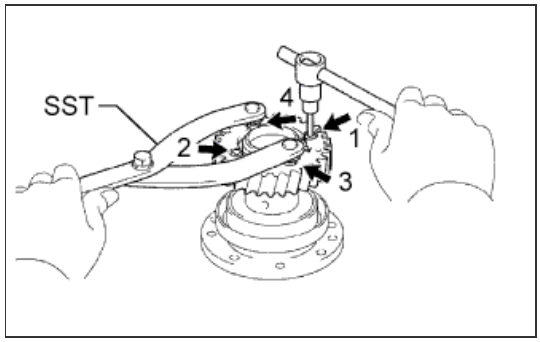
20. INSTALL CAMS A T SETTING OIL SEAL

a. Apply MP grease to the lip of a new oil seal.

NOTICE:

- **Do not allow foreign matter to contact the lip of the oil seal.**
- **Do not allow MP grease to contact the dust seal.**

b. Insert the oil seal into the camshaft timing tube until it reaches the stopper.



NOTICE:

- **Be careful of the installation direction.**
- **Do not turn over the lip of the oil seal.**

21. INSTALL CAMS A T DRI E GEAR

a. Align the timing tube knock pin with the knock pin groove of the drive gear, and temporarily install the drive gear with the bolts.

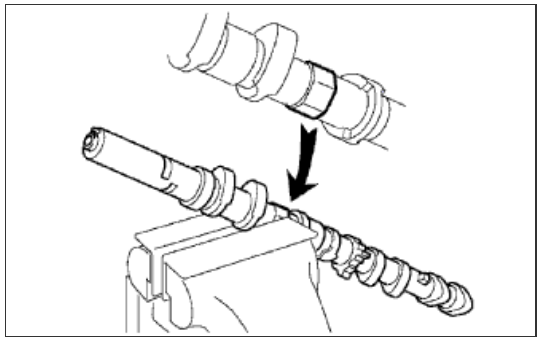
b. Using SST and a 5 mm hexagon wrench, uniformly tighten the bolts in several steps, in the sequence shown in the illustration.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf

SST
9960-10010 09962-01000, 09963-00500)

NOTICE:

Be careful not to damage the timing tube.



22. INSTALL CAMS A T TIMING TUBE ASSEMBLY

a. Mount the hexagonal portion of the camshaft in a vise.

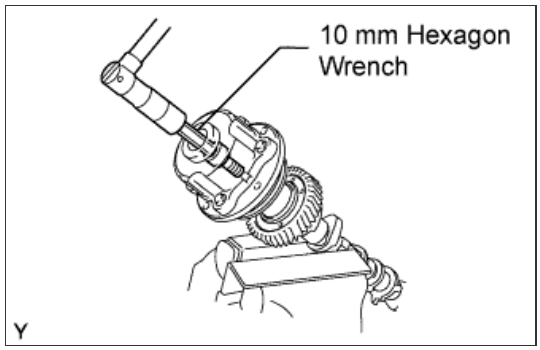
NOTICE:

Be careful not to damage the camshaft.

b. Apply a light coat of engine oil to the camshaft and camshaft timing tube.

c. Align the camshaft knock pin with the knock pin hole of the timing tube, and push the timing tube by hand until the camshaft knock pin touches the bottom of the timing tube knock pin hole.

NOTICE:



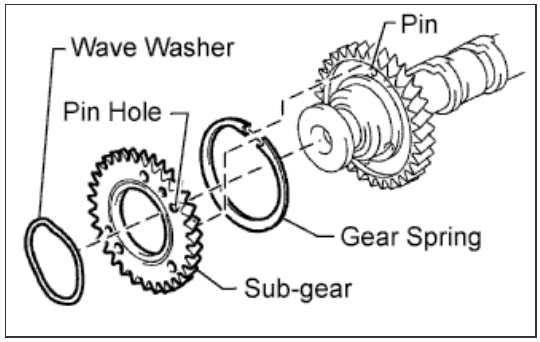
Do not forcefully push on the camshaft timing tube. This may cause the camshaft knock pin tip to damage the installation surface of the camshaft timing tube.

d. Using a 10 mm socket hexagon wrench, install the bolt.

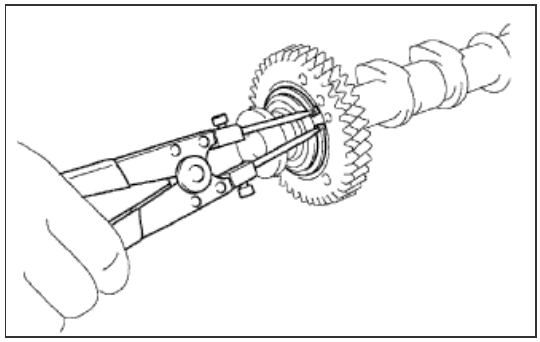
Torque:
78 N*m{ 795 kgf*cm , 58 ft.*lbf

e. Install the seal washer and screw plug.

Torque:
15 N*m{ 153 kgf*cm , 11 ft.*lbf



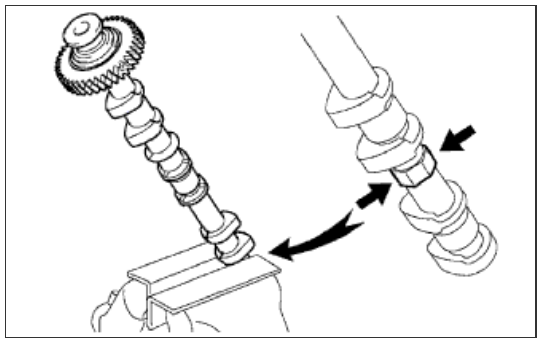
23. INSTALL CAMS A T SUB-GEAR



a. Install the gear spring, sub-gear and wave washer.

IN:

Attach the pins on the gears to the gear spring ends.

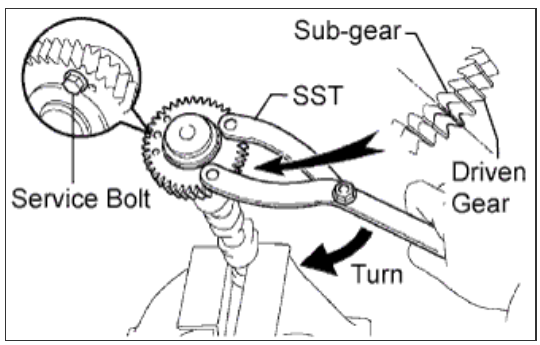


b. Using snap ring pliers, install the snap ring.

c. Mount the hexagonal portion of the camshaft in a vise.

NOTICE:

Be careful not to damage the camshaft.



d. Using SST, align the holes of the driven gear and sub-gear by turning the sub-gear clockwise, and temporarily install a service bolt.

SST
09960-10010 09962-01000, 09963-00500)

Recommended Service Bolt:

Thread Diameter	Thread Pitch	Bolt Length
6 mm	1.0 mm	16 to 2 mm (0.630 to 0.787 in.)

e. Align the gear teeth of the driven gear and sub-gear, and tighten the service bolt.

24. INSTALL AL ELI TER

a. Apply a light coat of engine oil to the valve lifters, adjusting shims and valve stem tips.

b. Install the valve lifters and adjusting shims.

NOTICE:

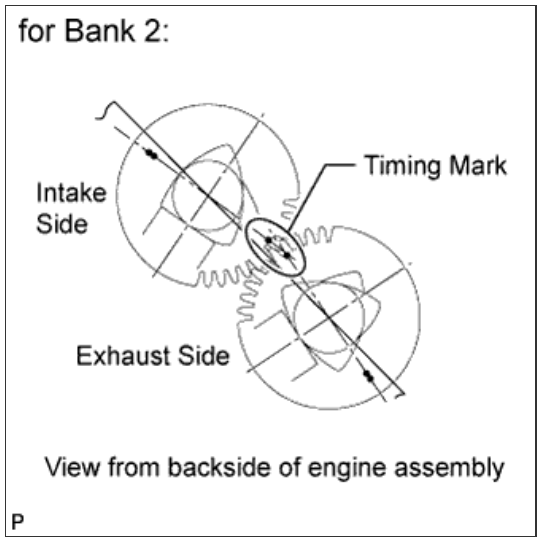
Be careful not to drop the adjusting shim into the cylinder head.

25. INSTALL CAMS A T for Bank 2)

NOTICE:

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged. To avoid this, the following steps should be carried out.

IN:



When performing this procedure to adjust the valve clearance, it is not necessary to apply seal packing to the No. 1 bearing cap and camshaft housing plug.

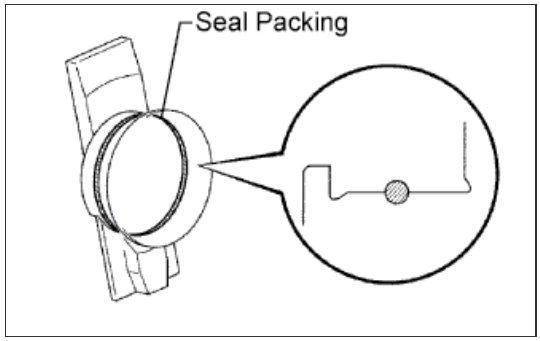
a. Apply a light coat of engine oil to the cam lobe and gear of the camshaft and the journal of the cylinder head.

b. Using a wrench, align the timing marks (1 dot mark each) of the camshaft drive and driven gears, and set the camshaft and No. 2 camshaft in place.

IN:

The position shown in the illustration is the most stable position for the exhaust camshaft.

c. Apply seal packing to the camshaft housing plug groove.

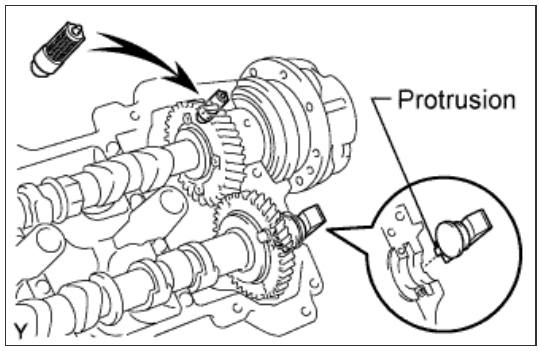


IN:

Remove any old packing (IPG) material before applying new seal packing.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

NOTICE:

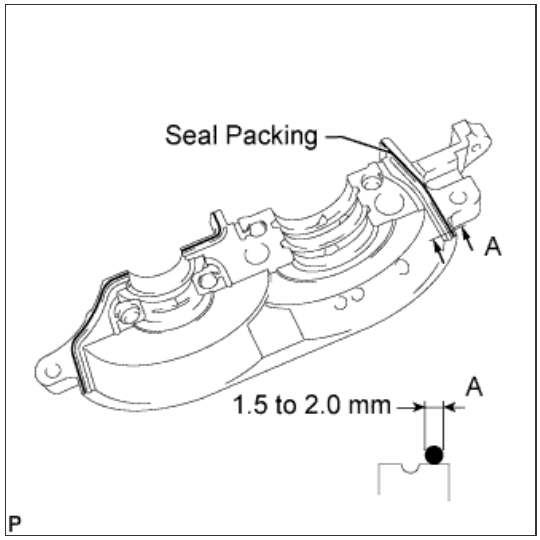


- **Be careful of the installation direction.**
- **Remove any oil from the contact surface.**

d. Install the camshaft housing plug and oil control valve filter to the cylinder head as shown in the illustration.

IN:

Align the protrusion on the camshaft housing plug with the groove of the cylinder head and install the plug.



e. Apply seal packing to the No. 1 bearing cap as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

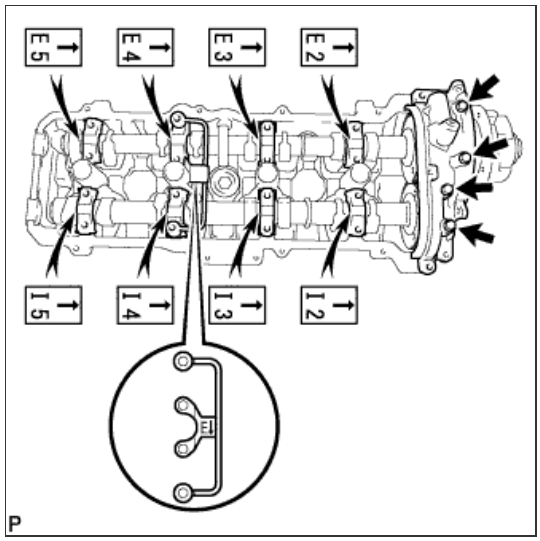
Standard seal diameter:
1.5 to 2.0 mm 0.0591 to 0.0787 in.)

NOTICE:

Install the No. 1 bearing cap and housing plug within 3 minutes.

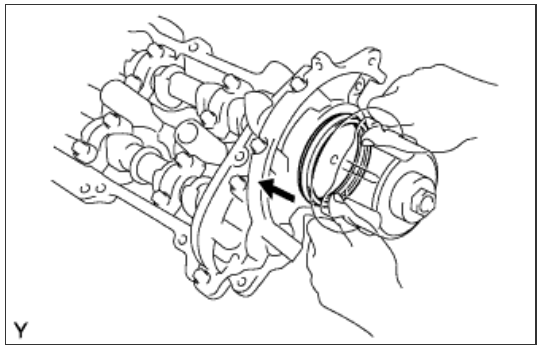
f. Install a new seal washer to each bearing cap bolt indicated by an arrow in the illustration, and apply engine oil to the threads of the bolts. Then temporarily install them.

g. Apply engine oil to the threads and washer part of the bearing cap bolts not indicated in the illustration.



h. Temporarily install the oil feed pipe and bearing caps with the 18 bearing cap bolts, as shown in the illustration.

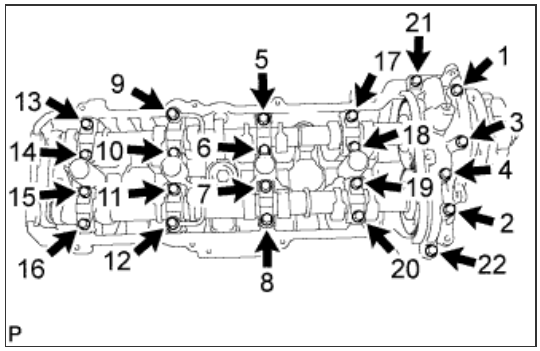
Bolt Length:



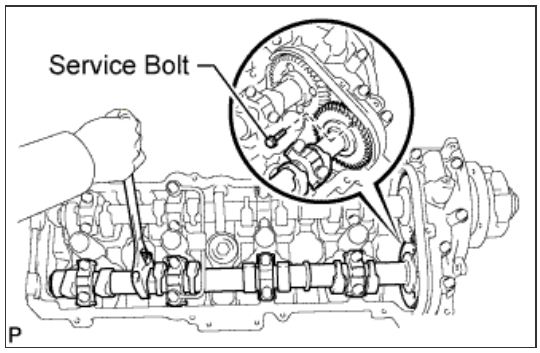
Item	Length
Bolt A with seal washer	94 mm (3.70 in.)
Bolt B with seal washer	72 mm (2.84 in.)
Bolt C	25 mm (0.984 in.)
Bolt D	55 mm (2.17 in.)
Bolt E	40 mm (1.58 in.)

IN:

Face the arrow imprinted on the oil feed pipe to the exhaust side.



i. Push in the camshaft setting oil seal.



j. Uniformly tighten the 22 bearing cap bolts in several steps, in the sequence shown in the illustration.

Torque:
for bolt 21, 22:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf
for other bolt:
16 N*m{ 163 kgf*cm , 12 ft.*lbf

k. Bring the service bolt installed in the driven sub-gear upward by turning the hexagonal portion of the camshaft with a wrench.

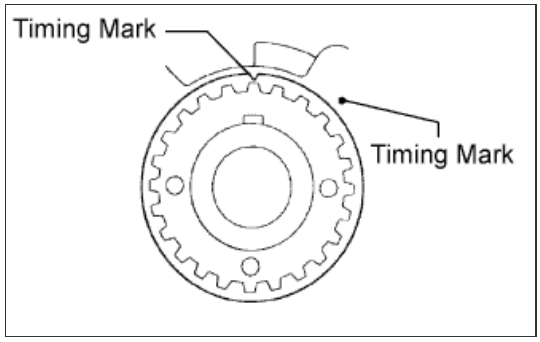
l. Remove the service bolt.

26. INSTALL CAMS A T for Bank 1)

NOTICE:

As the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, the portion of the cylinder head which receives the shaft thrust may crack or be damaged. To avoid this, the following steps should be carried out.

IN:

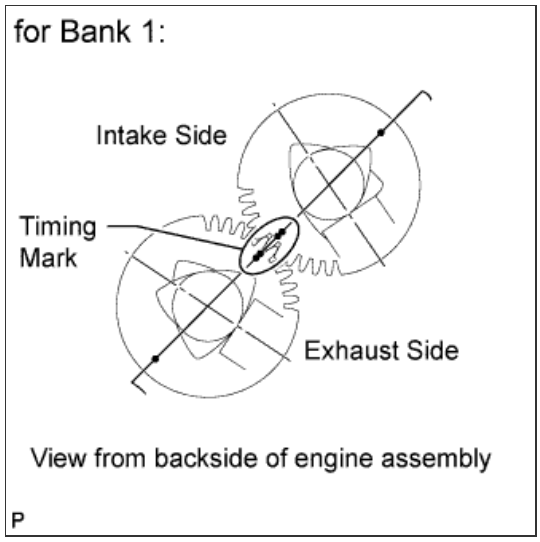


When performing this procedure to adjust the valve clearance, it is not necessary to apply seal packing to the No. 5 bearing cap and camshaft housing plug.

a. heck that the timing mark of the crankshaft timing pulley is in the position shown in the illustration, and that the piston is below the TD of compression.

NOTICE:

Having the crankshaft pulley at a wrong angle can cause the piston head and valve head to come into contact with each other when removing the camshaft. Always set the crankshaft pulley at the correct angle as shown in the illustration.



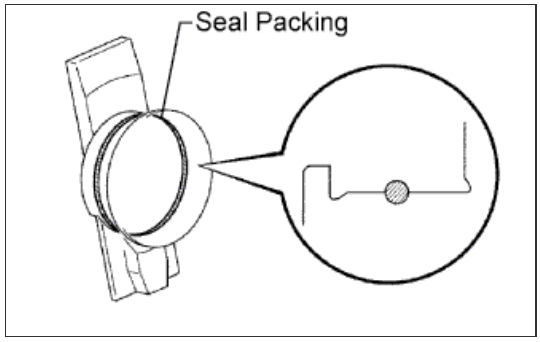
b. Apply a light coat of engine oil to the cam lobe and gear of the camshaft and the journal of the cylinder head.

c. Using a wrench, align the timing marks (2 dot marks each) of the camshaft drive and driven gears, and set the No. 3 and No. 4 camshafts in place.

IN:

The position shown in the illustration is the most stable position for the exhaust camshaft.

d. Apply seal packing to the camshaft housing plug groove.

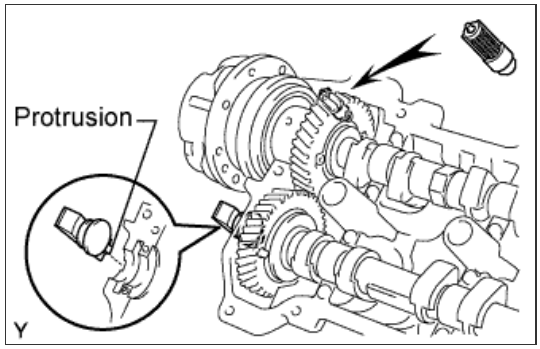


HINT:

Remove any old packing (IPG) material before applying new seal packing.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

NOTICE:

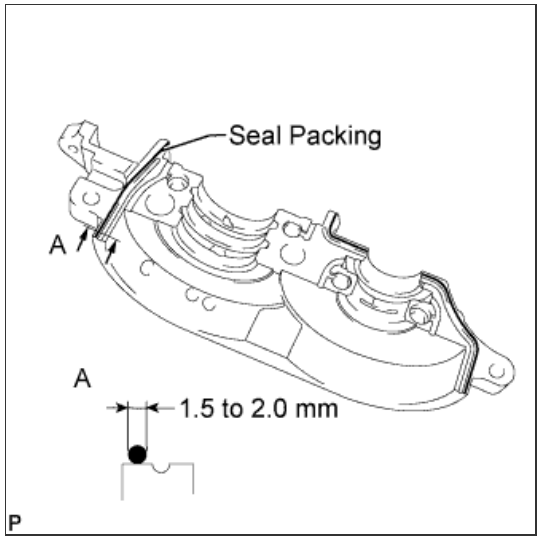


- **Be careful of the installation direction.**
- **Remove any oil from the contact surface.**

e. Install the camshaft housing plug and oil control valve filter to the cylinder head as shown in the illustration.

HINT:

Align the protrusion on the camshaft housing plug with the groove of the cylinder head and install the plug.



f. Apply seal packing to the No. 5 bearing cap as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
1.5 to 2.0 mm 0.0591 to 0.0787 in.)

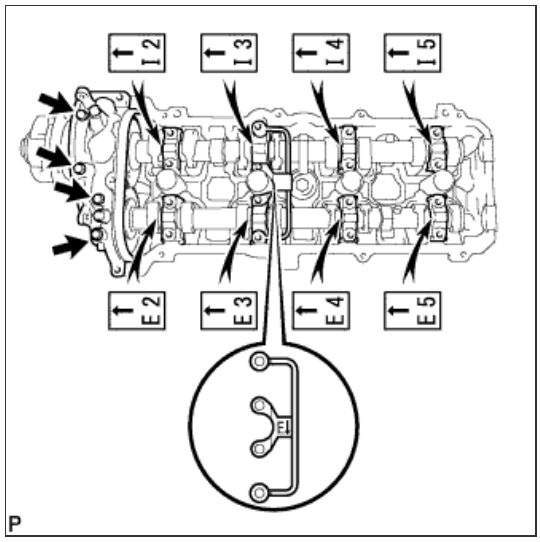
NOTICE:

Install the No. 5 bearing cap and housing plug within 3 minutes.

g. Install a new seal washer to each bearing cap bolt indicated by an arrow in the illustration, and apply engine oil to the threads of the bolts. Then temporarily

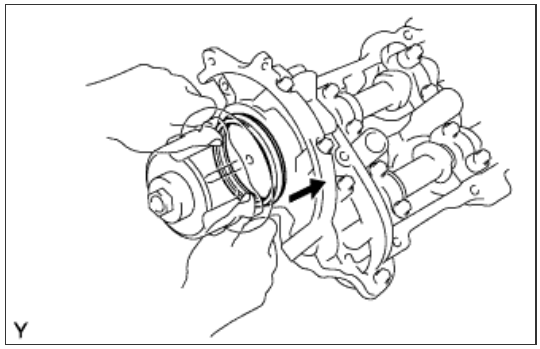
install them.

h. Apply engine oil to the threads and washer part of the bearing cap bolts not indicated in the illustration.



i. Temporarily install the oil feed pipe and bearing caps with the 18 bearing cap bolts, as shown in the illustration.

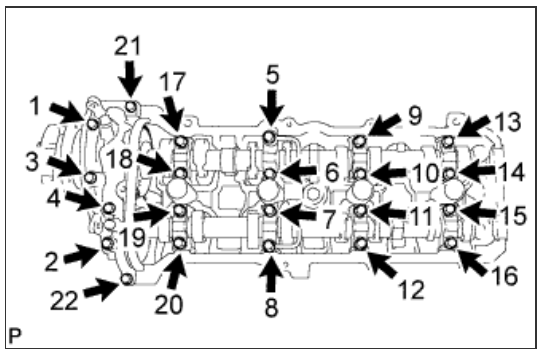
Bolt Length:



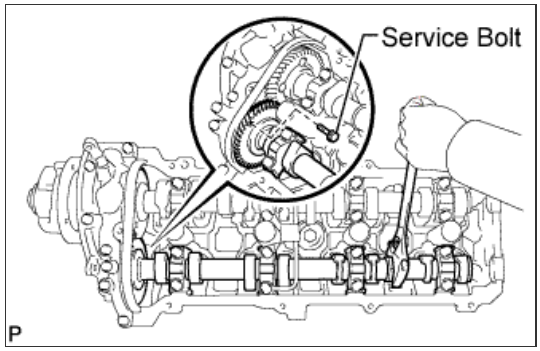
Item	Length
Bolt A with seal washer	9 mm (3.70 in.)
Bolt B with seal washer	72 mm (2.84 in.)
Bolt C	25 mm (0.984 in.)
Bolt D	55 mm (2.17 in.)
Bolt E	40 mm (1.58 in.)

HINT:

Face the arrow imprinted on the oil feed pipe to the exhaust side.



j. Push in the camshaft setting oil seal.

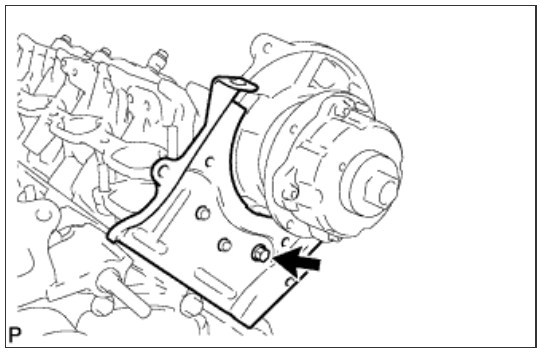


k. Uniformly tighten the 22 bearing cap bolts in several steps, in the sequence shown in the illustration.

Torque:
for bolt 21, 22:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf
for other bolt:
16 N*m{ 163 kgf*cm , 12 ft.*lbf

l. Bring the service bolt installed in the driven sub-gear upward by turning the hexagonal portion of the camshaft with a wrench.

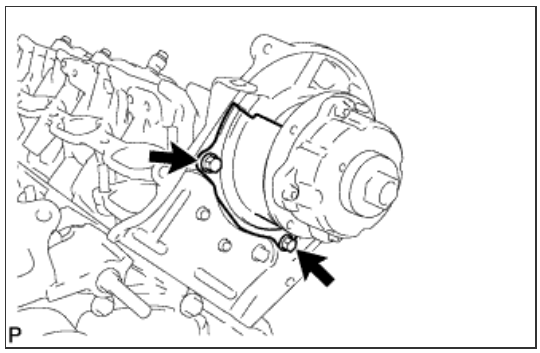
m. Remove the service bolt.



27. INSTALL REAR TIMING BELT PLATE L

a. Install the timing belt plate with the bolt.

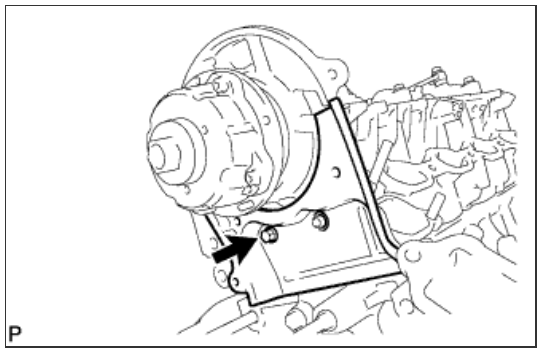
Torque:



7.5 N*m{ 76 kgf*cm , 66 in.*lbf

28. INSTALL REAR NO. 2 TIMING BELT PLATE L

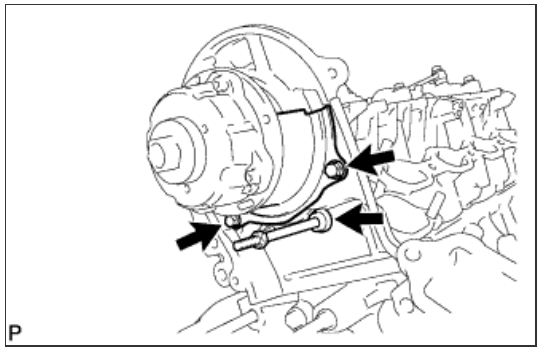
a. Install the timing plate with the 2 bolts.



Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf

29. INSTALL REAR TIMING BELT PLATE R

a. Install the timing belt plate with the bolt.



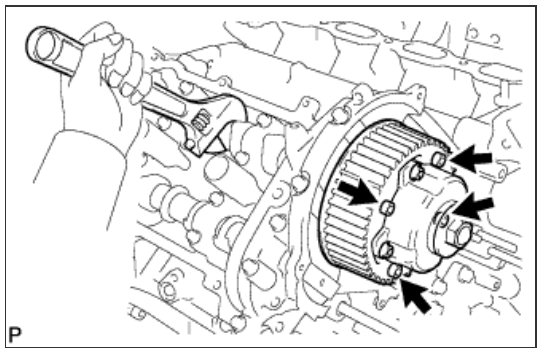
Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf

. INSTALL REAR NO. 2 TIMING BELT PLATE R

a. Install the timing plate with the 2 bolts and stud bolt.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf

1. INSTALL CAMS A T TIMING PULLEY



a. Align the camshaft timing tube knock pin with the knock pin groove of the timing pulley.

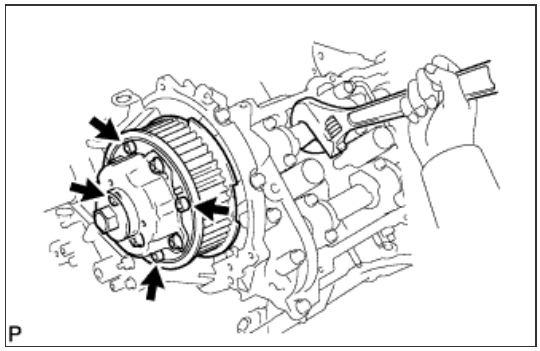
b. Temporarily install the bolts of the camshaft timing pulley.

c. Hold the hexagonal portion of the camshaft with a wrench.

d. Using a 5 mm hexagon wrench, tighten the bolts.

Torque:
8.1 N*m{ 83 kgf*cm , 72 in.*lbf

2. INSTALL CAMS A T TIMING PULLEY SUB-ASSEMBLY L



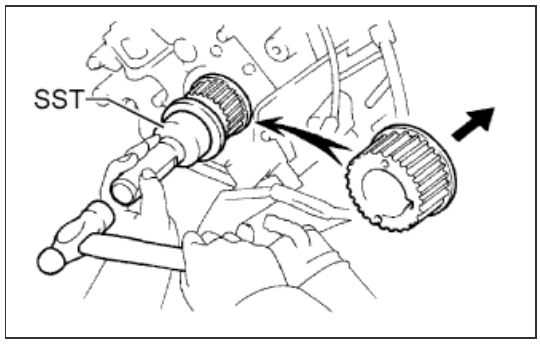
a. Align the camshaft timing tube knock pin with the knock pin groove of the timing pulley.

b. Temporarily install the bolts of the camshaft timing pulley.

c. Hold the hexagonal portion of the camshaft with a wrench.

d. Using a 5 mm hexagon wrench, tighten the bolts.

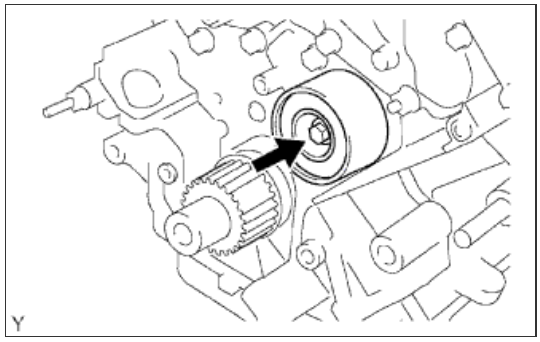
Torque:
8.1 N*m{ 83 kgf*cm , 72 in.*lbf



. INSTALL CRANKS A T TIMING PULLEY

a. Align the timing pulley set key with the key groove of the pulley.

b. Using SST and a hammer, tap in the timing pulley with the flange side facing inward.

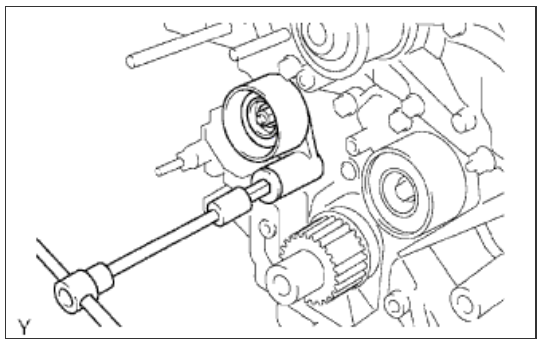


SST
09223-46011

34. INSTALL NO. 2 TIMING BELT IDLER SUB-ASSEMBLY

a. Install the timing belt idler with the bolt.

Torque:
35 N*m{ 352 kgf*cm , 25 ft.*lbf

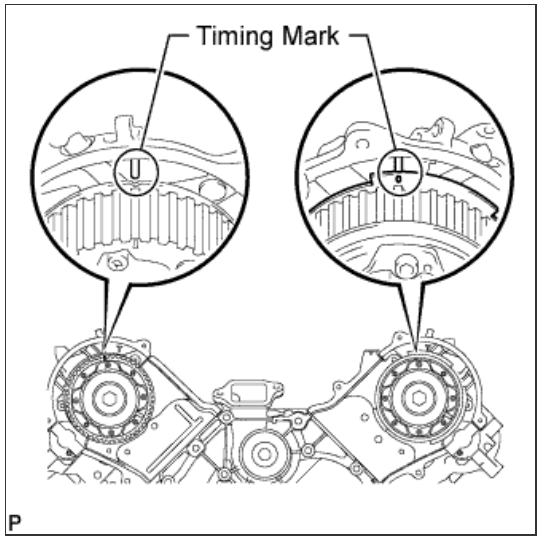


35. INSTALL NO. 1 TIMING BELT IDLER SUB-ASSEMBLY

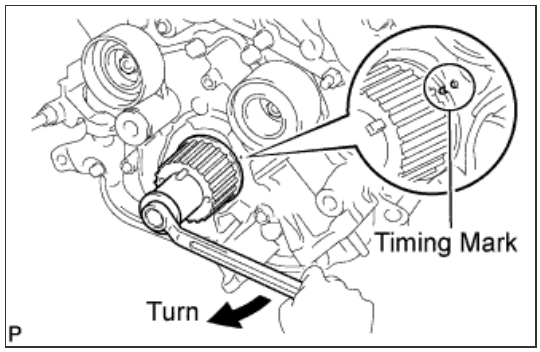
a. When reusing the timing belt idler shaft, apply adhesive to 2 or 3 of the threads.

Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent

b. Using a 10 mm hexagon wrench, install the plate washer and timing belt idler with the idler shaft.



Torque:
35 N*m{ 352 kgf*cm , 25 ft.*lbf



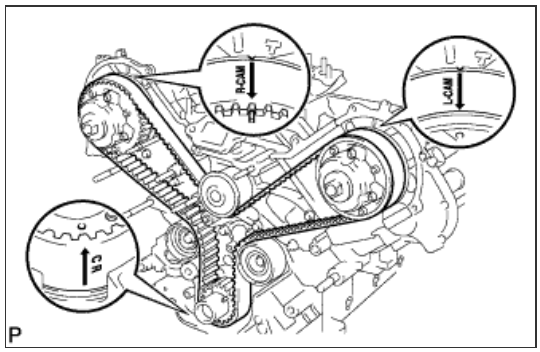
. INSTALL TIMING BELT

a. Set the No. 1 cylinder to TDC/compression.

i. Turn the hexagonal portion of the camshaft to align the timing marks of the camshaft timing pulleys and timing belt plates.

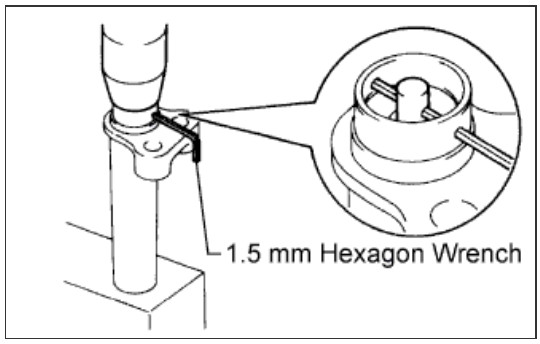
ii. Using the pulley bolt, turn the crankshaft to align the timing marks of the crankshaft timing pulley and oil pump body.

b. Install the timing belt.



i. Remove any oil or water from each pulley, and keep them clean.

NOTICE:



Only wipe the pulleys. Do not use any cleansing agent on the pulleys.

ii. Face the front mark (arrow) on the timing belt forward.

iii. Align the timing marks on the timing belt and crankshaft timing pulley, and the timing belt and camshaft timing pulleys, and install the timing belt.

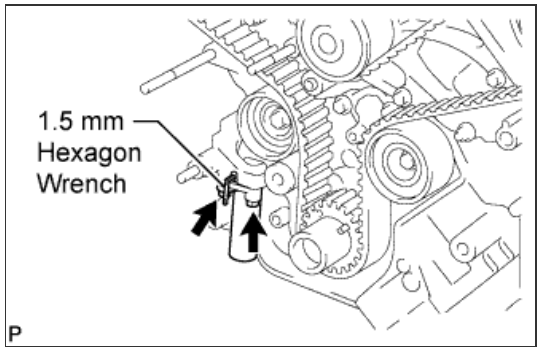
c. Install the belt tensioner.

i. Remove the dust seal from the belt tensioner.

ii. Using a press, slowly press in the push rod using a force of 981 to 9807 N (100 to 1000 kgf, 22 .5 to 22 .7 lbf).

iii. Align the holes of the push rod and housing, and pass a 1.5 mm hexagon wrench through the holes to keep the setting position of the push rod.

iv. Release the press.



v. Install the dust seal to the belt tensioner.

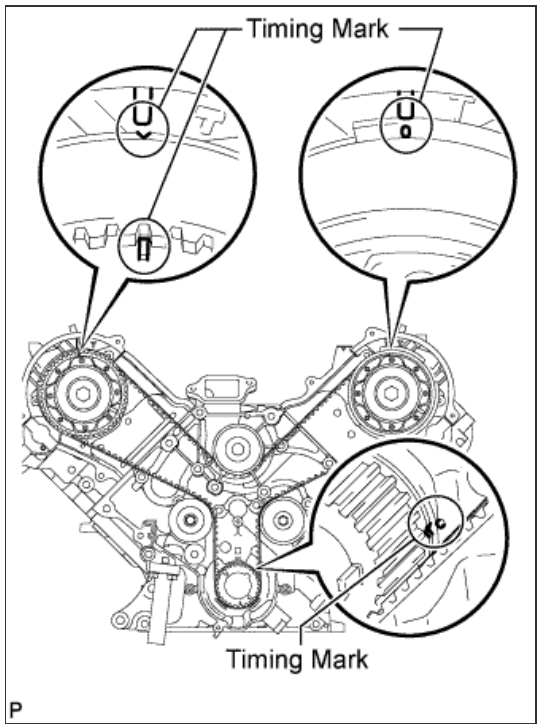
vi. Temporarily install the belt tensioner with the 2 bolts.

vii. Tighten the 2 bolts.

Torque:
26 N*m{ 265 kgf*cm , 19 ft.*lbf

viii. Using pliers, remove the 1.5 mm hexagon wrench from the timing belt tensioner.

37. C EK NO. 1 CYLINDER TO TDC COMPRESSION



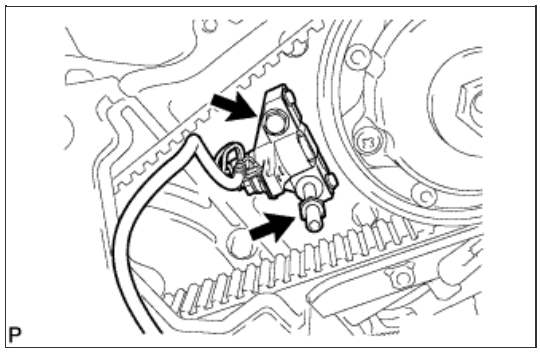
a. Using the pulley bolt, slowly turn the crankshaft timing pulley 2 revolutions from the TD to TD .

NOTICE:

Always turn the crankshaft timing pulley clockwise.

b. heck that each pulley is aligned with each timing mark as shown in the illustration.
If the timing marks are not aligned, remove the timing belt and reinstall it.

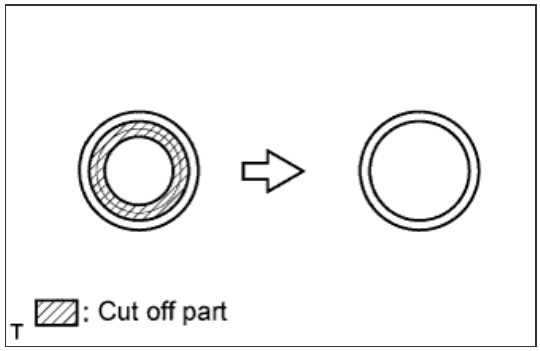
c. Remove the pulley bolt.



38. INSPECT AL E CLEARANCE

a. Inspect the valve clearance (lick here).
If the result is not as specified, adjust the valve clearance (lick here).

39. INSTALL CAMS A T POSITION SENSOR ASSEMBLY



a. Install the camshaft position sensor with the bolt and stud bolt.

Torque:
7.5 N*m{ 80 kgf*cm , 66 in.*lbf

40. INSTALL SPARK PLUG TUBE GASKET

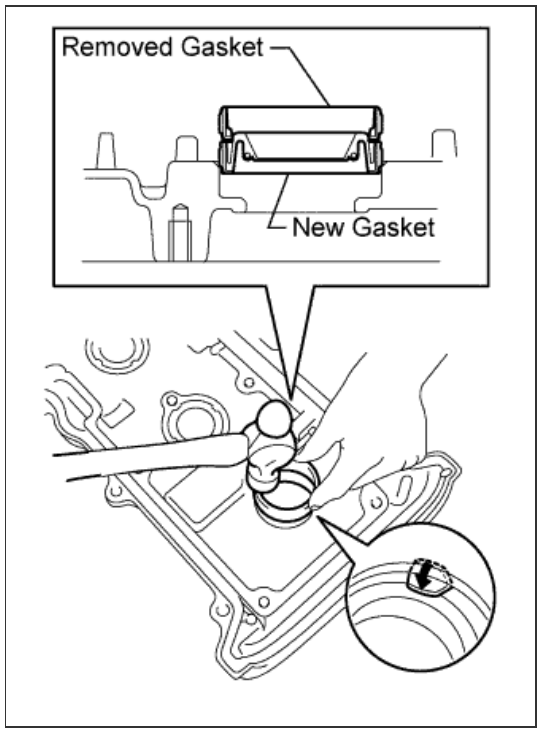
a. Using a cutter knife, cut off the seal part of the removed gasket.

b. Using the removed gasket and a hammer, tap in a new gasket until it stops.

NOTICE:

Do not tap on the oil seal at an angle.

HINT:



If the removed gasket does not fit on the new one, correct the removed one with pliers.

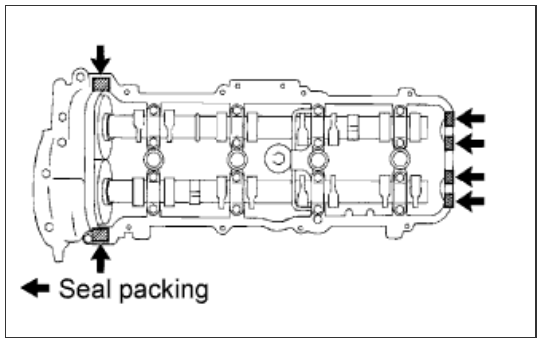
c. Apply a light coat of MP grease to the lip of the gasket.

NOTICE:

Keep the lip free from foreign matter.

d. Return the 8 ventilation case claws to the original positions.

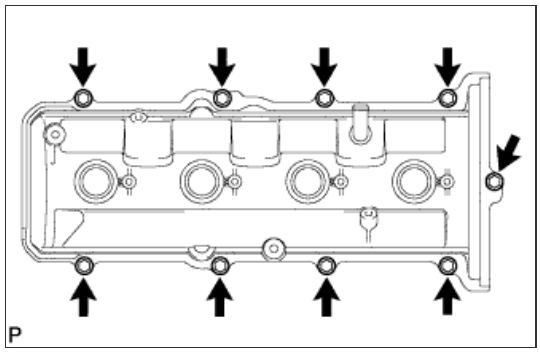
41. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY



a. Install a new gasket to the cylinder head cover.

b. Apply seal packing to the cylinder head as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent



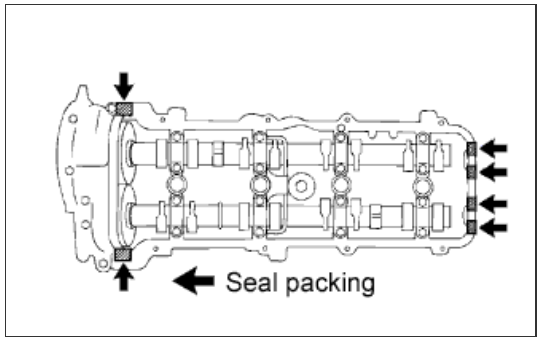
NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes after applying seal packing.**

c. Install the cylinder head cover with the 9 bolts. Uniformly tighten the bolts in several steps.

Torque:
6.0 N*m{ 61 kgf*cm , 53 in.*lbf

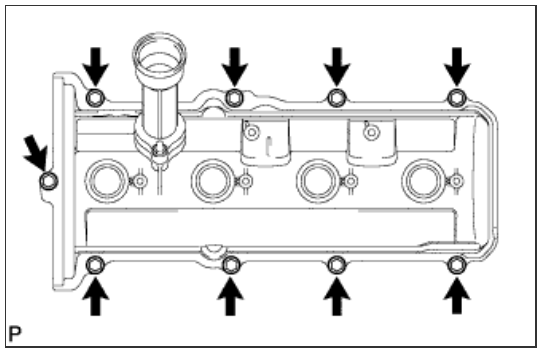
42. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY L



a. Install a new gasket to the cylinder head cover.

b. Apply seal packing to the cylinder head as shown in the illustration.

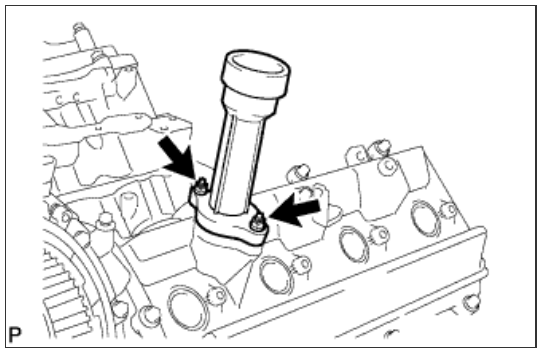
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent



NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes after applying seal packing.**

c. Install the cylinder head cover with the 9 bolts. Uniformly tighten the bolts in several steps.



Torque:
6.0 N*m{ 61 kgf*cm , 53 in.*lbf

43. INSTALL OIL FILLER CAP HOUSING

a. Install a new gasket and the housing with the 2 nuts.

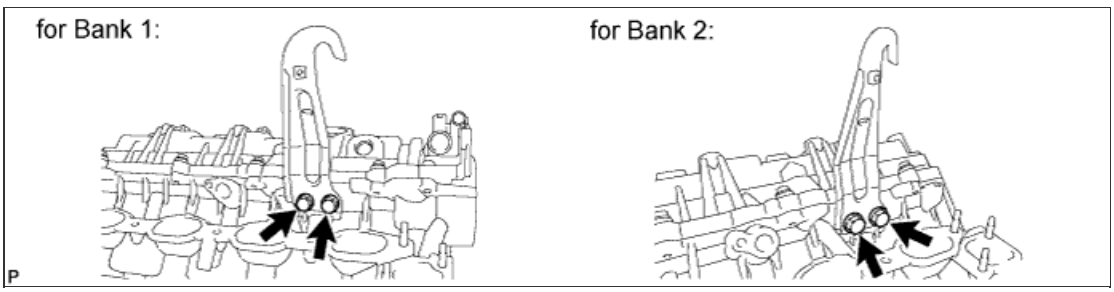
Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf

44. INSTALL OIL ILLER CAP SUB-ASSEMBLY

a. Install a new gasket to the oil filler cap.

b. Install the oil filler cap.

45. INSTALL SPARK PLUG



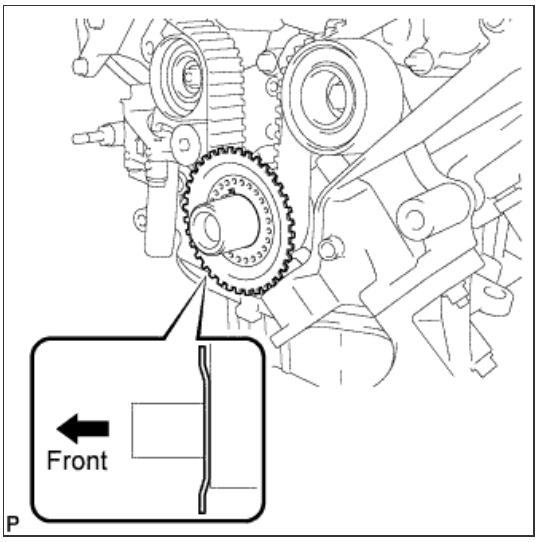
a. Install the 8 spark plugs.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf

46. INSTALL NO. 1 ENGINE ANGER

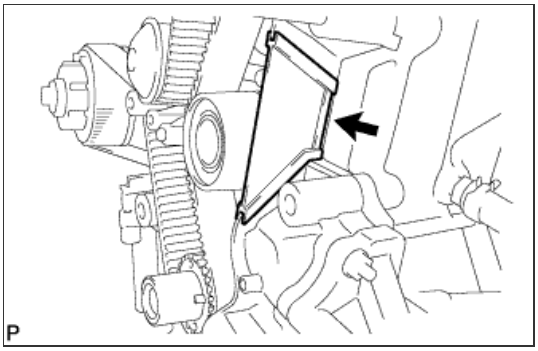
a. Install the engine hanger with the 2 bolts.

Torque:
37 N*m{ 377 kgf*cm , 27 ft.*lbf



47. INSTALL NO. 1 CRANKS A T POSITION SENSOR PLATE

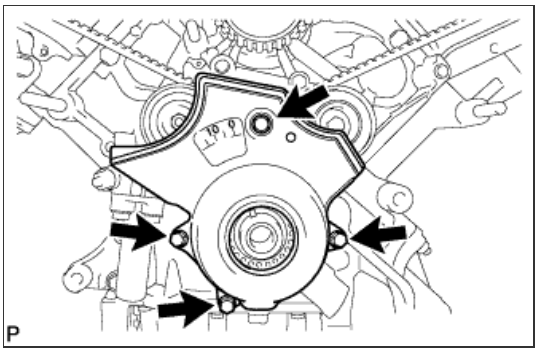
a. Install the sensor plate as shown in the illustration.



NOTICE:

Take care not to install the sensor plate in a wrong direction.

48. INSTALL TIMING BELT CO B SPACER

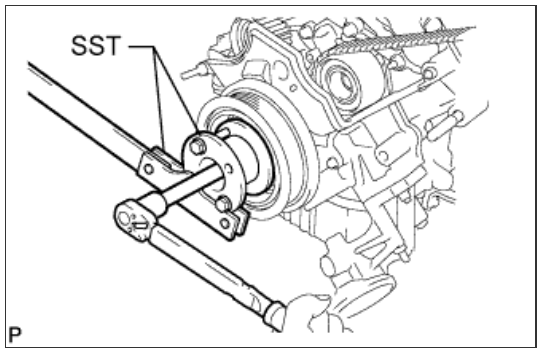


a. Install the cover spacer and gasket.

49. INSTALL NO. 1 TIMING BELT CO B

a. Install the timing belt cover with the bolts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf

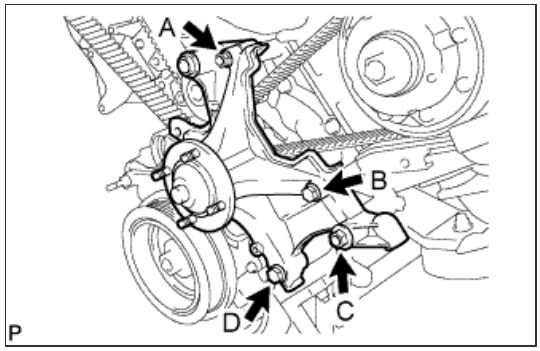


50. INSTALL CRANKS A T DAMPER SUB-ASSEMBLY

a. Align the pulley set key with the key groove of the crankshaft damper.

b. Using SST, hold the crankshaft pulley and install the pulley bolt.

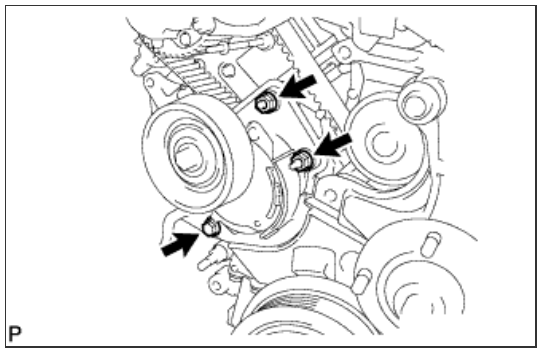
SST
09213-70011 09213-70020)
09330-00021 09330-00030)



Torque:
245 N*m{ 2498 kgf*cm , 181 ft.*lbf

51. INSTALL AN BRACKET SUB-ASSEMBLY

a. Install the fan bracket with the 2 bolts and 2 nuts.

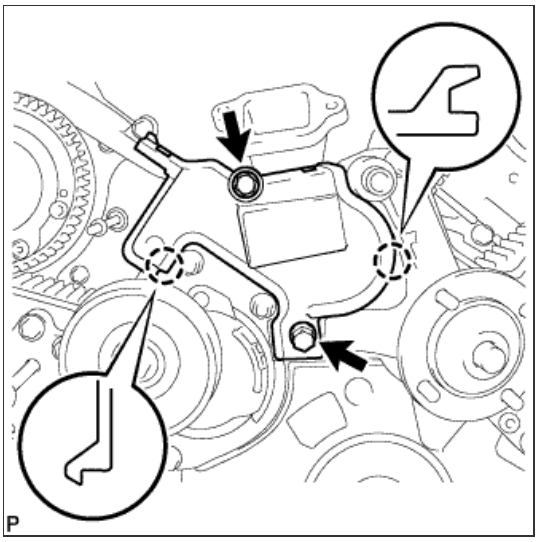


Torque:
for nut A, bolt B:
16 N*m{ 163 kgf*cm , 12 ft.*lbf
for nut C, bolt D:
32 N*m{ 326 kgf*cm , 24 ft.*lbf

52. INSTALL -RIBBED BELT TENSIONER ASSEMBLY

a. Install the belt tensioner with the bolt and 2 nuts.

Torque:
16 N*m{ 163 kgf*cm , 12 ft.*lbf



53. INSTALL NO. 2 TIMING BELT CO ER SUB-ASSEMBLY

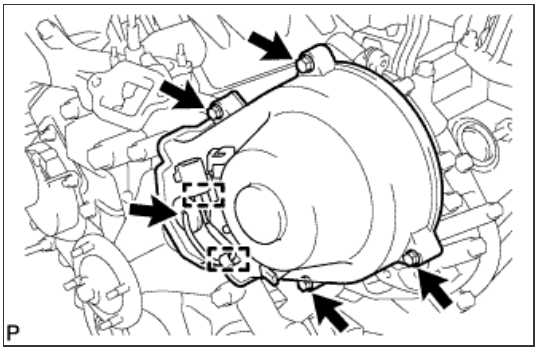
a. Install the timing belt cover and fit the 2 claws into each part.

b. Install the 2 bolts.

Torque:
16 N*m{ 163 kgf*cm , 12 ft.*lbf

54. INSTALL NO. 3 TIMING BELT CO B SUB-ASSEMBLY L

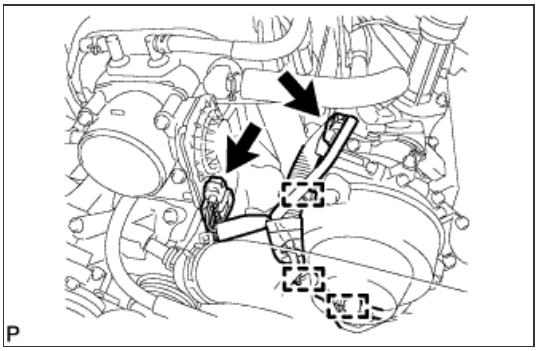
a. Pass the camshaft position sensor wire through the cover hole.



b. Install the timing belt cover with the bolts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf

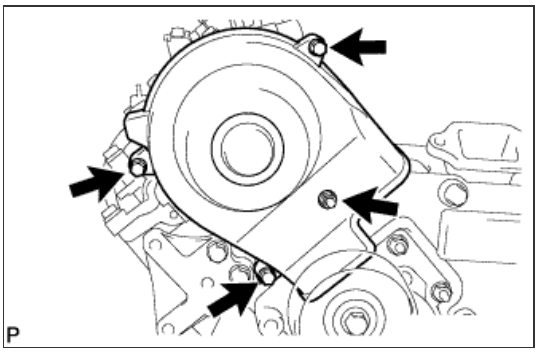
c. Install the wire grommet to the timing belt cover.



d. onnect the sensor connector.

e. Install the sensor wire to the 2 wire clamps on the cover.

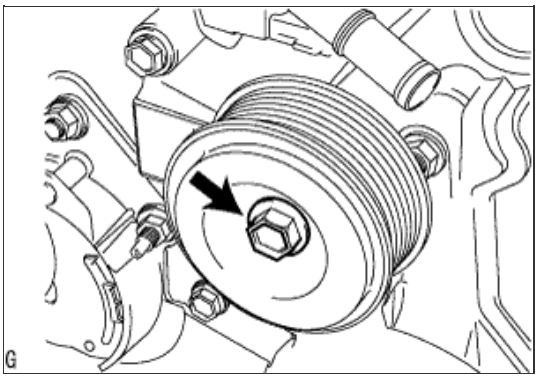
f. onnect the engine wire to the 3 wire clamps.



g. Connect the camshaft timing oil control valve connector and control motor connector.

55. INSTALL NO. 3 TIMING BELT CO B SUB-ASSEMBLY R

a. Install the timing belt cover with the 3 bolts and nut.

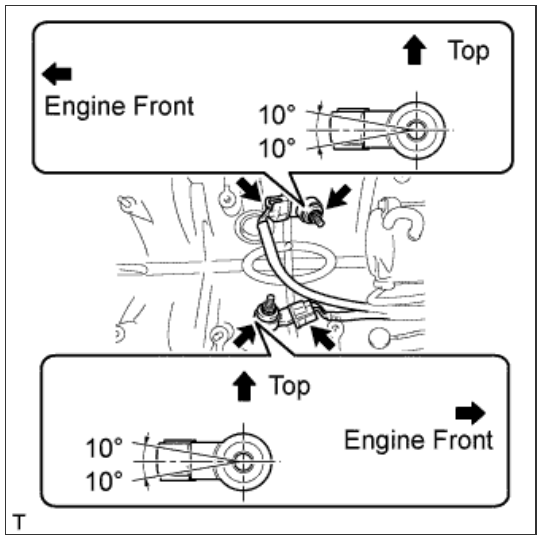


Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf

56. INSTALL NO. 2 IDLER PULLEY SUB-ASSEMBLY

a. Install the idler pulley and cover plate with the bolt.

Torque:
39 N*m{ 398 kgf*cm , 29 ft.*lbf



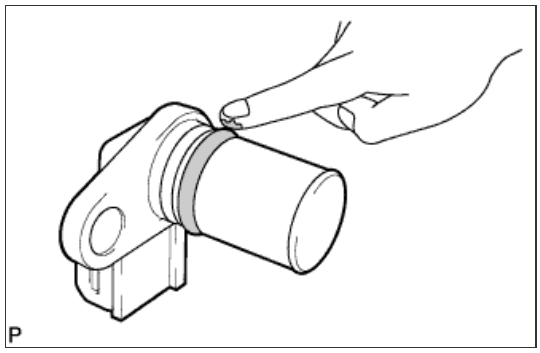
for Preparation Click here

1. INSTALL KNOCK CONTROL SENSOR

a. Install the 2 sensors with the 2 nuts as shown in the illustration.

Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

b. Connect the 2 sensor connectors.

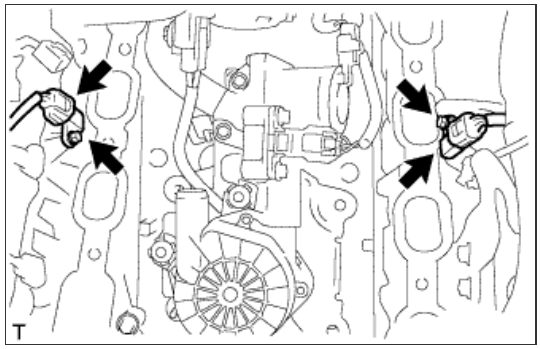


2. INSTALL CAMSHAFT POSITION SENSOR

a. Apply a light coat of engine oil to the O-ring.

NOTICE:

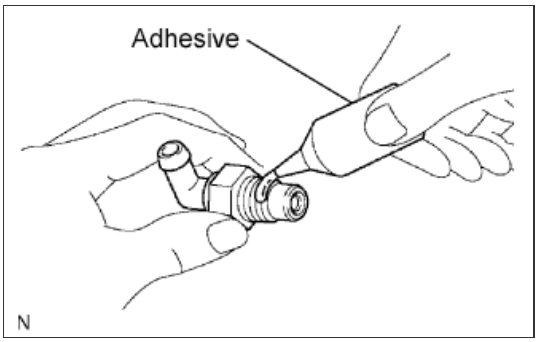
When reusing the sensor, inspect the O-ring.



If the O-ring has scratches or cuts, replace the sensor.

b. Install the 2 sensors with the 2 bolts.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

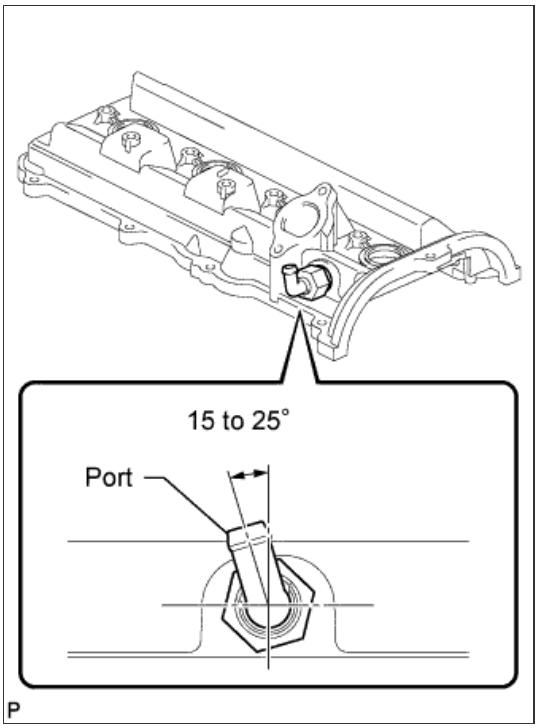


c. Connect the 2 sensor connectors.

3. INSTALL VENTILATION VALVE SUB-ASSEMBLY

a. Apply adhesive to 2 or 3 threads of the ventilation valve.

Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent



b. Install the ventilation valve to the cylinder head cover sub-assembly LH.

Torque:
27 N*m{ 275 kgf*cm , 20 ft.*lbf }

HINT:

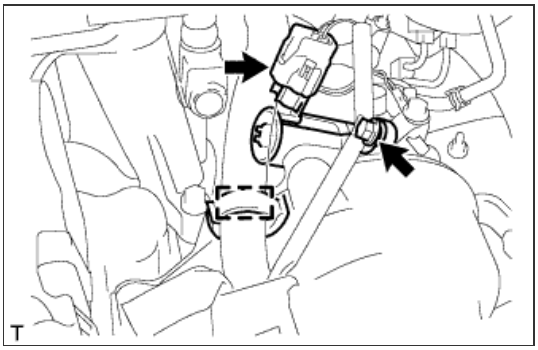
After applying the specified torque, rotate the ventilation valve clockwise until the port facing in the direction indicated in the illustration.

4. INSTALL VENTILATION VALVE COVER

a. Install the ventilation valve cover to the ventilation valve.

5. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY LH

a. Install a new O-ring to the camshaft timing oil control valve.



b. Apply a light coat of engine oil to the O-ring.

c. Install the camshaft timing oil control valve with the bolt.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

NOTICE:

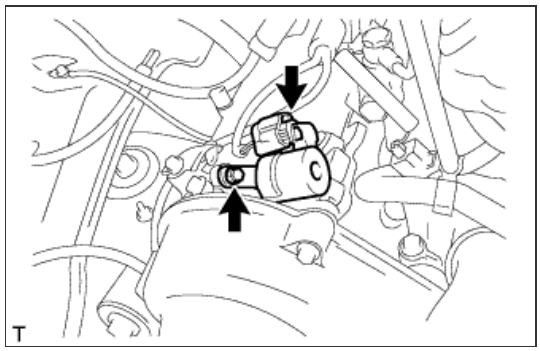
- **o not allow foreign matter to contact the oil seal face of the oil control valve connecting surface with cylinder head cover .**
- **Be careful that the O-ring is not cracked when installing the oil control valve.**

d. Connect the camshaft timing oil control valve connector and wire harness clamp.

6. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY RH

a. Install a new O-ring to the camshaft timing oil control valve.

b. Apply a light coat of engine oil to the O-ring.



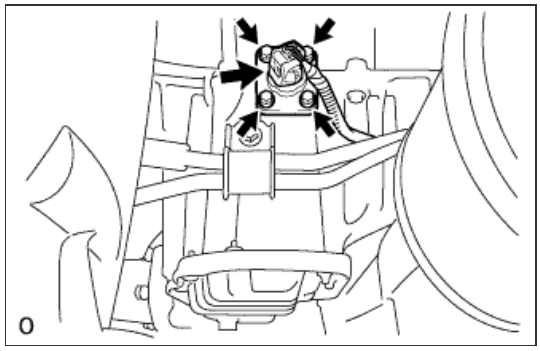
c. Install the oil control valve with the bolt.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

NOTICE:

- **o not allow foreign matter to contact the oil seal face of the oil control valve connecting surface with cylinder head cover .**
- **Be careful that the O-ring is not cracked when installing the oil control valve.**

d. Connect the camshaft timing oil control valve connector.



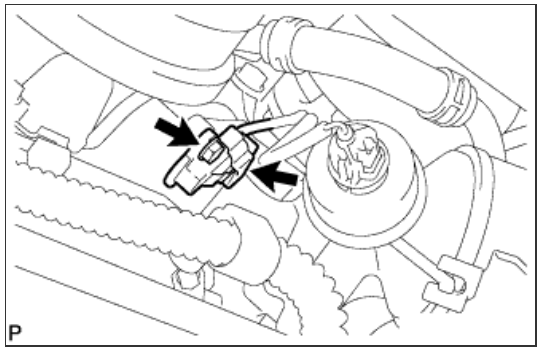
7. INSTALL ENGINE OIL LEVEL SENSOR

a. Clean the oil level sensor installation surface.

b. Install a new gasket and the oil level sensor with the 4 bolts.

Torque:
7.0 N*m{ 71 kgf*cm , 62 in.*lbf }

c. Connect the oil level sensor connector.



INSTALL CRANKSHAFT POSITION SENSOR

a. Install the sensor with the bolt.

Torque:
6.5 N*m{ 66 kgf*cm , 5 in.*lbf }

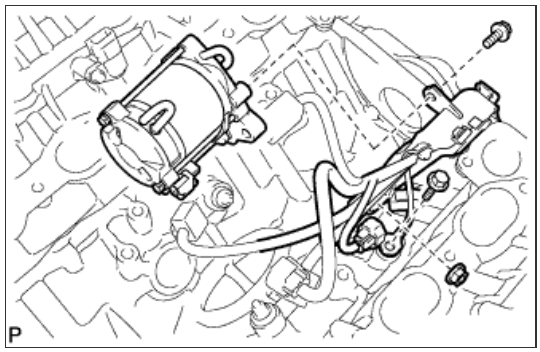
b. Connect the sensor connector.

9. INSTALL STARTER ASSEMBLY

a. Connect the starter wire with the nut.

Torque:
9. N*m{ 100 kgf*cm , 7 in.*lbf }

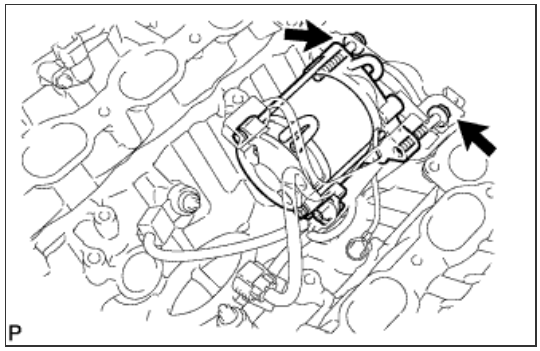
b. Connect the starter connector.



c. Connect the starter to the cylinder block.

d. Connect the ground wire with the bolt.

Torque:
17 N*m{ 173 kgf*cm , 13 ft.*lbf }

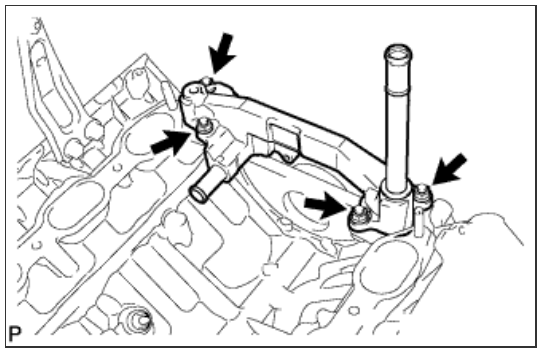


e. Connect the engine wire protector to the starter with the bolt.

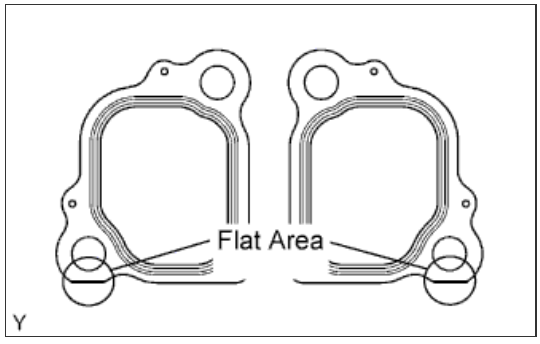
Torque:
17 N*m{ 173 kgf*cm , 13 ft.*lbf }

f. Install the starter with the 2 bolts.

Torque:
25 N*m{ 255 kgf*cm , 1 ft.*lbf }



10. INSTALL REAR WATER BY-PASS JOINT

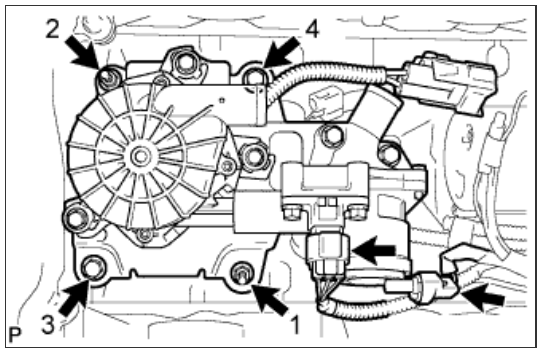


a. Install 2 new gaskets and the water by-pass joint with the 4 nuts.

Torque:
1 N*m{ 1 4 kgf*cm , 13 ft.*lbf }

HINT:

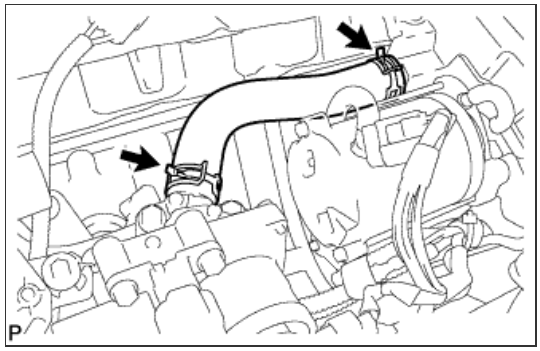
With the flat-bottom of each new gasket facing downward as shown in the illustration, install the 2 gaskets to the engine rear side.



11. INSTALL AIR PUMP WITH BRACKET AN AIR SWITCHING VALVE Secondary Air Injection System

a. Install the air pump with bracket with the 2 bolts and 2 nuts in the order shown in the illustration.

Torque:
16 N*m{ 163 kgf*cm , 12 ft.*lbf }

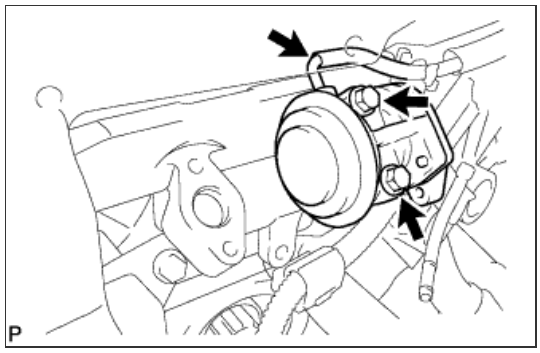


b. Connect the pressure sensor connector.

c. Connect the air switching valve connector.

12. INSTALL NO. 2 AIR INJECTION SYSTEM HOSE Secondary Air Injection System

a. Install the hose.

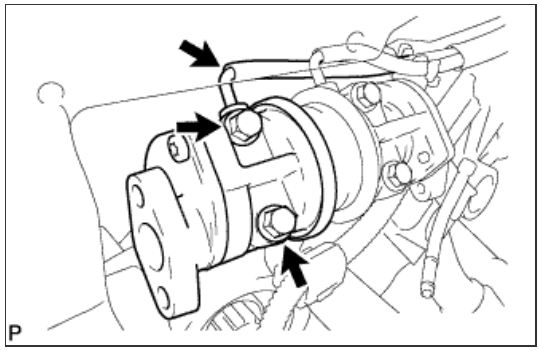


13. INSTALL NO. 1 AIR SWITCHING VALVE ASSEMBLY Secondary Air Injection System

a. Install a new gasket and the No. 1 air switching valve to the rear water by-pass joint with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. Connect the vacuum switching valve hose to the No. 1 air switching valve.



14. INSTALL NO. 2 AIR SWITCHING VALVE ASSEMBLY Secondary Air Injection System

a. Install a new gasket and the No. 2 air switching valve to the rear water by-pass joint with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

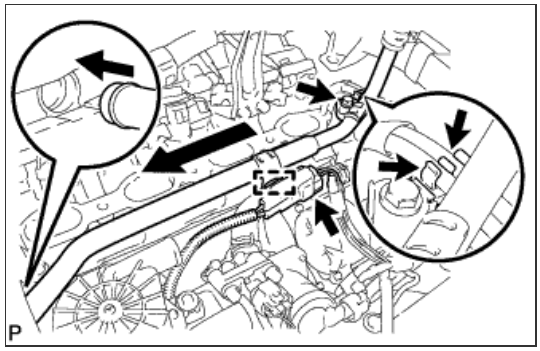
b. Connect the vacuum switching valve hose to the No. 2 air switching valve.

15. INSTALL WATER BY-PASS PIPE SUB-ASSEMBLY

a. Apply soapy water to the O-ring.

b. Install a new O-ring to the water by-pass pipe.

c. Push in the water by-pass pipe.



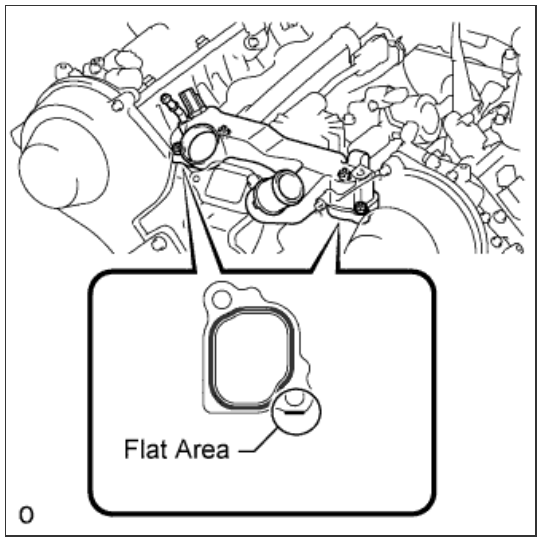
d. Install the water by-pass pipe with the bolt.

Torque:
1 N*m{ 1 4 kgf*cm , 13 ft.*lbf }

e. Connect the 2 vacuum switching valve hoses to the water by-pass pipe clamp.

f. Connect the wire harness clamp.

g. Connect the connector.



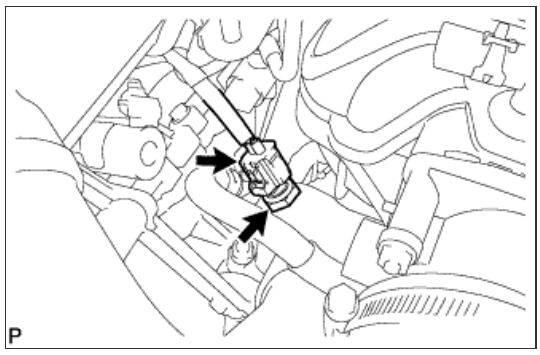
16. INSTALL FRONT WATER BY-PASS JOINT

a. Install 2 new gaskets and the water by-pass joint with the 4 nuts.

Torque:
1 N*m{ 1 4 kgf*cm , 13 ft.*lbf }

HINT:

With the flat-bottom of each new gasket facing downward as shown in the illustration, install the 2 gaskets to the engine front side.

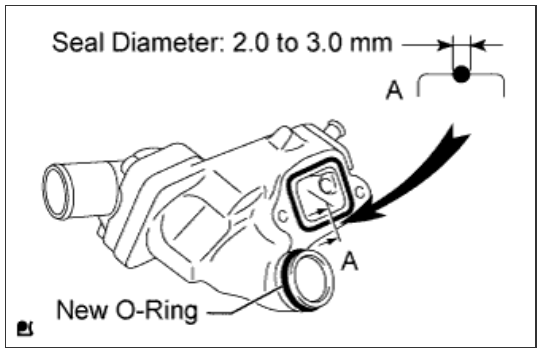


17. INSTALL ENGINE COOLANT TEMPERATURE SENSOR

a. Install a new gasket to the sensor.

b. Using a 19 mm deep socket wrench, install the sensor.

Torque:
20 N*m{ 200 kgf*cm , 14 ft.*lbf }

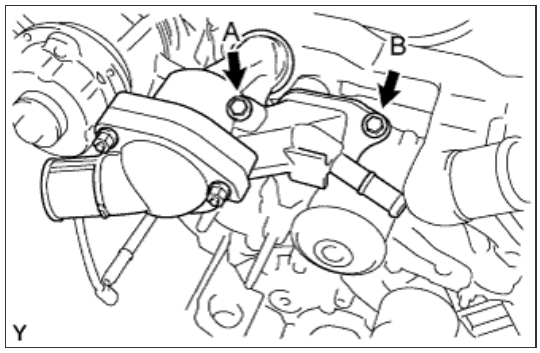


c. Connect the sensor connector.

1 INSTALL WATER INLET HOUSING

a. Apply soapy water to a new O-ring and install it to the water inlet housing.

b. Apply seal packing in a continuous line to the places shown in the illustration.



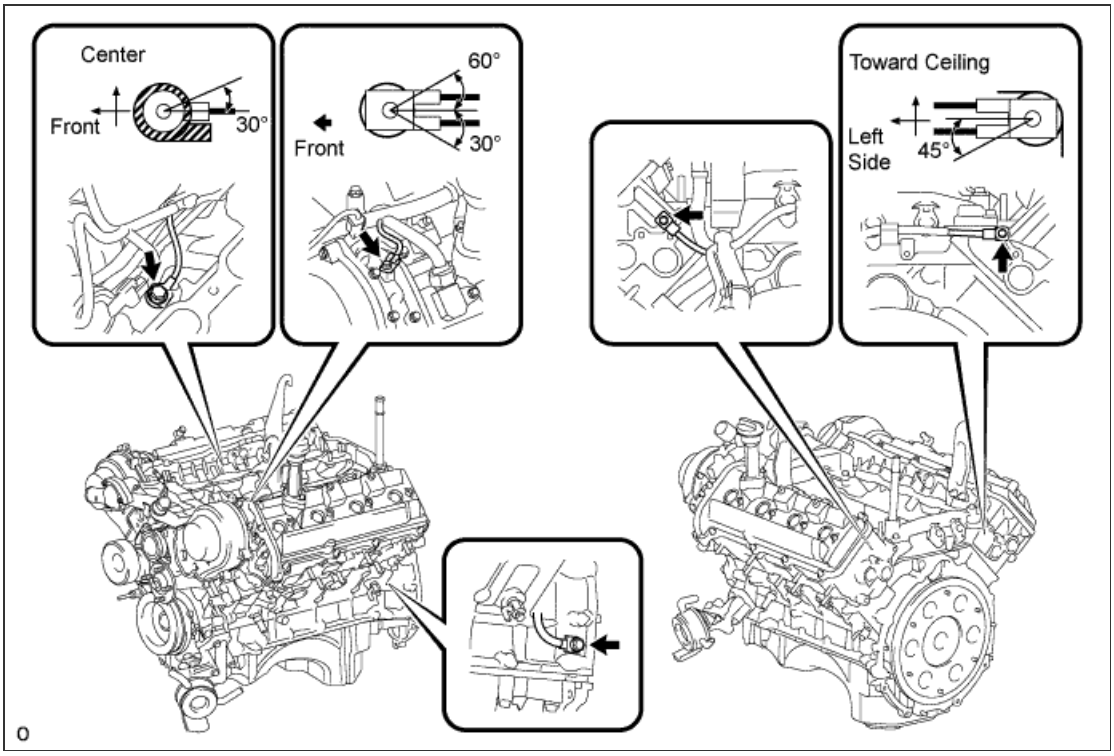
Seal packing:
Toyota Genuine Seal Packing 12 2B, Three Bond 12 2B or equivalent

Standard seal diameter:
2.0 to 3.0 mm 0.07 7 to 0.11 in.

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the water inlet housing within 3 minutes after applying seal packing.**

c. Temporarily install the water inlet housing with the 2 bolts.



Torque:
1 N*m{ 1 4 kgf*cm , 13 ft.*lbf }

Bolt Length:

Item	Length
Bolt A	77 mm (3.03 in.)
Bolt B	22 mm (0.866 in.)

19. CONNECT ENGINE WIRE

a. Connect the ground wire to the No. 5 bearing cap and install the bolt, as shown in the illustration.

Torque:
4 N*m{ 6kgf*cm , 74 in.*lbf }

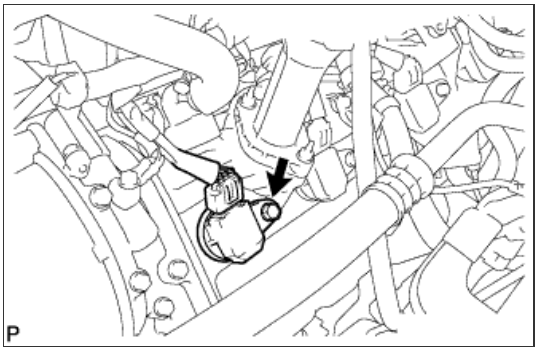
b. Connect the ground wire to the left side of the engine and install the bolt.

Torque:
17 N*m{ 173 kgf*cm , 13 ft.*lbf }

c. Connect the ground wire to the inside left side of the V-bank and install the bolt, as shown in the illustration.

Torque:
17 N*m{ 173 kgf*cm , 13 ft.*lbf }

d. Connect each ground wire to the cylinder head and cylinder head LH rear side and install the 2 bolts, as shown in the illustration.



Torque:
4 N*m{ 6kgf*cm , 74 in.*lbf }

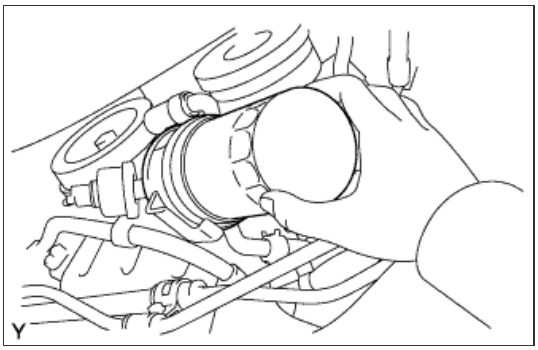
20. INSTALL IGNITION COIL ASSEMBLY

a. Install the 8 ignition coils with the 8 bolts.

Torque:
9.0 N*m{ 92 kgf*cm , 0 in.*lbf }

b. Connect the 8 ignition coil connectors.

21. INSTALL INTAKE MANIFOL



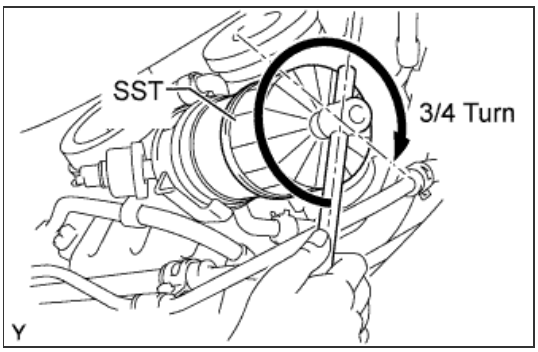
a. Install the intake manifold (Click here).

22. INSTALL OIL FILTER ASSEMBLY

a. Clean and check the oil filter installation surface.

b. Apply clean engine oil to the gasket of a new oil filter.

c. Lightly screw the oil filter into place by hand. Tighten it until the gasket contacts the seat.



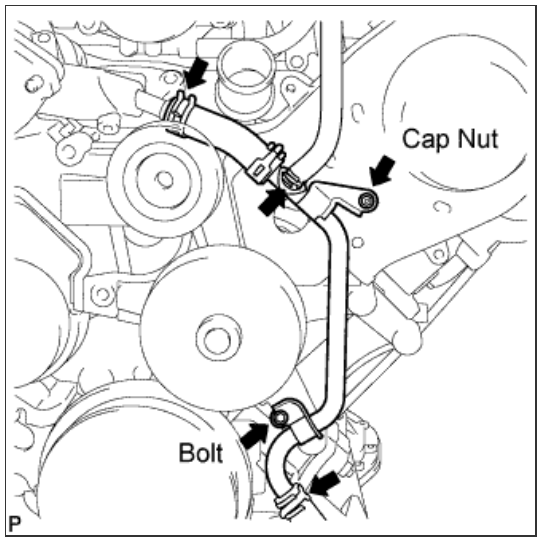
d. Using SST, tighten the oil filter. Choose from the following to tighten the oil filter.

SST
0922 -07501

i. Using a torque wrench, tighten the oil filter.

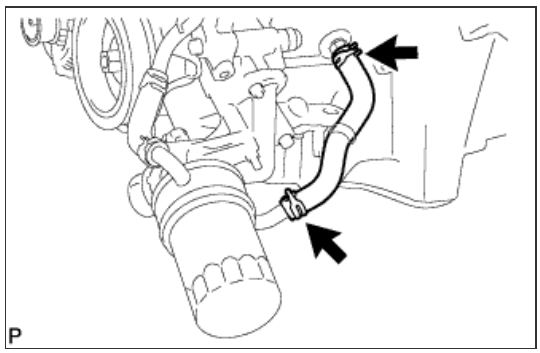
Torque:
17 N*m{ 175 kgf*cm , 13 ft.*lbf }

ii. Tighten the oil filter a 3/4 turn by hand or with a common wrench.



23. INSTALL OIL COOLER PIPE

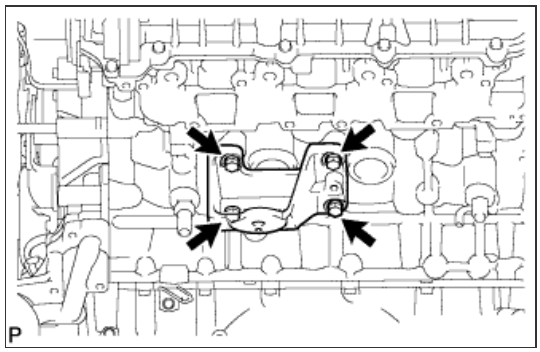
a. Using needle-nose pliers, grip the claws of the clamps and slide the clamps to connect the 3 water by-pass hoses.



b. Install the oil cooler pipe with the cap nut and bolt.

Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

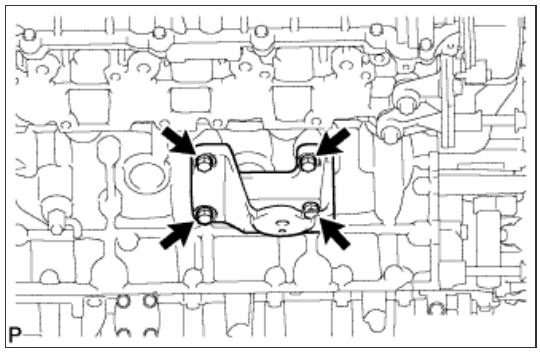
24. INSTALL OIL COOLER HOSE



a. Using needle-nose pliers, grip the claws of the clamps and slide the clamps to connect the oil cooler hose.

25. INSTALL FRONT NO. 1 ENGINE MOUNTING BRACKET LH

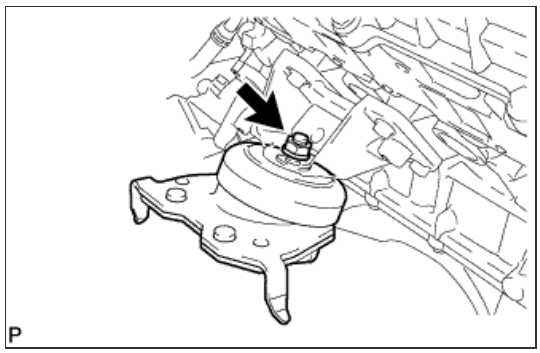
a. Install the engine mounting bracket with the 4 bolts.



Torque:
36 N*m{ 367 kgf*cm , 27 ft.*lbf }

26. INSTALL FRONT NO. 1 ENGINE MOUNTING BRACKET RH

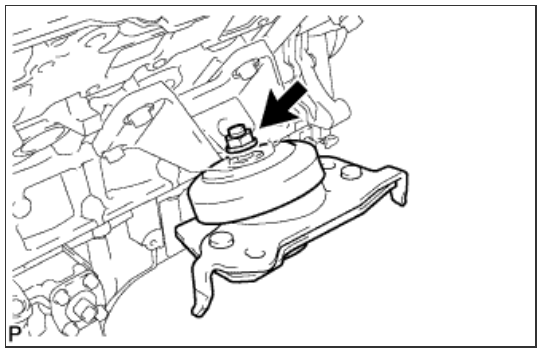
a. Install the engine mounting bracket with the 4 bolts.



Torque:
36 N*m{ 367 kgf*cm , 27 ft.*lbf }

27. INSTALL FRONT ENGINE MOUNTING INSULATOR LH

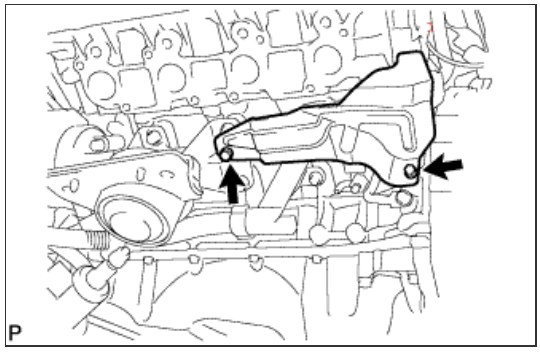
a. Install the engine mounting insulator with the nut.



Torque:
72 N*m{ 734 kgf*cm , 53 ft.*lbf }

2 INSTALL FRONT ENGINE MOUNTING INSULATOR

a. Install the engine mounting insulator with the nut.

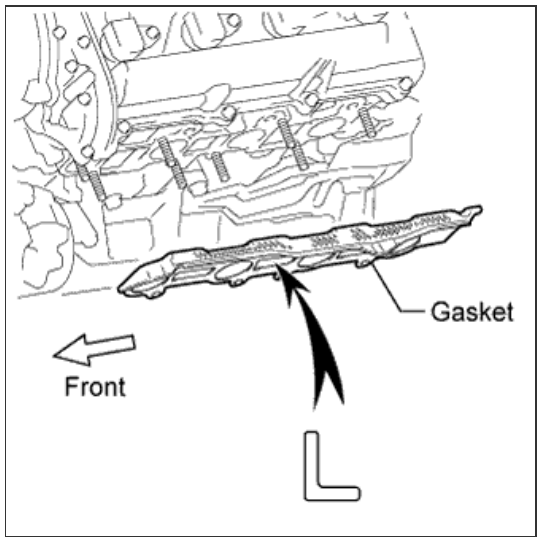


Torque:
72 N*m{ 734 kgf*cm , 53 ft.*lbf }

29. INSTALL NO. 2 WIRING HARNESS HEAT INSULATOR

a. Install the wiring harness heat insulator with the 2 bolts.

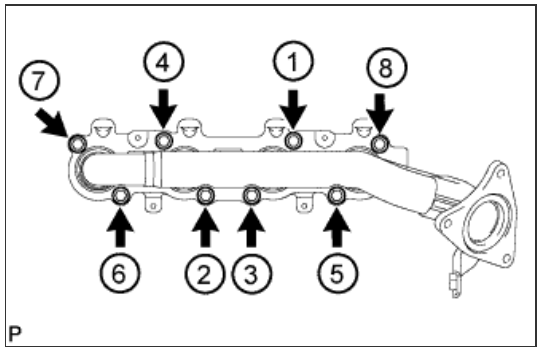
Torque:
17 N*m{ 173 kgf*cm , 13 ft.*lbf }



30. INSTALL EXHAUST MANIFOL SUB-ASSEMBLY LH o Secondary Air Injection System

a. Place a new gasket on the cylinder head with the "L" mark facing the manifold side.

NOTICE:

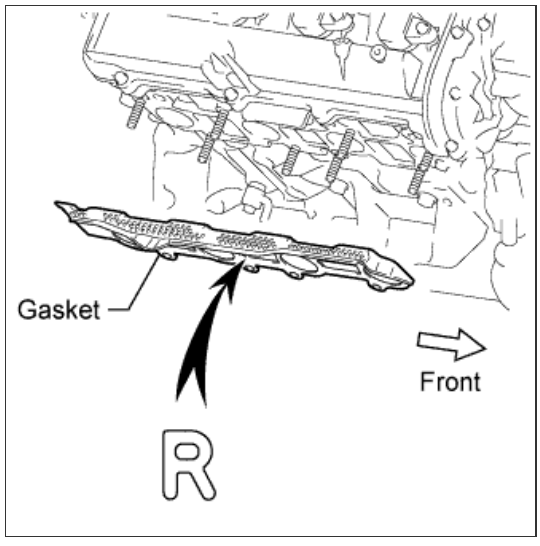


Be careful of the installation direction.

b. Temporarily install the exhaust manifold with 8 new nuts, and then uniformly tighten the nuts in several steps, in the sequence shown in the illustration.

Torque:

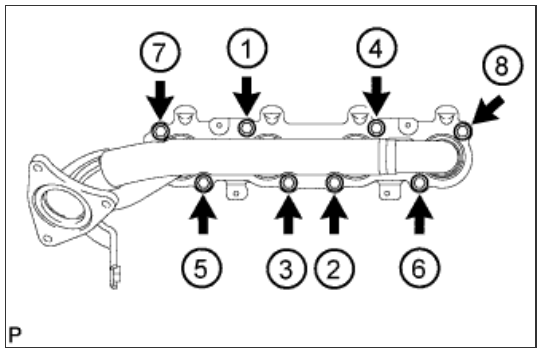
44 N*m{ 449 kgf*cm , 32 ft.*lbf }



31. INSTALL EXHAUST MANIFOL SUB-ASSEMBLY RH o Secondary Air Injection System

a. Place a new gasket on the cylinder head with the "R" mark facing the manifold side.

NOTICE:

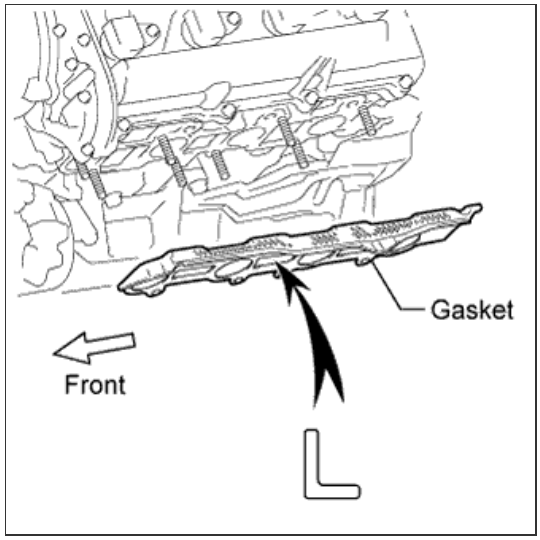


Be careful of the installation direction.

b. Temporarily install the exhaust manifold with 8 new nuts, and then uniformly tighten the nuts in several steps, in the sequence shown in the illustration.

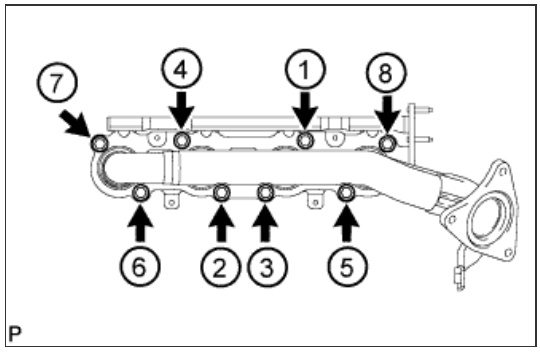
Torque:

44 N*m{ 429 kgf*cm , 32 ft.*lbf }



32. INSTALL EXHAUST MANIFOL SUB-ASSEMBLY LH Secondary Air Injection System

a. Place a new gasket on the cylinder head with the "L" mark facing the manifold side.

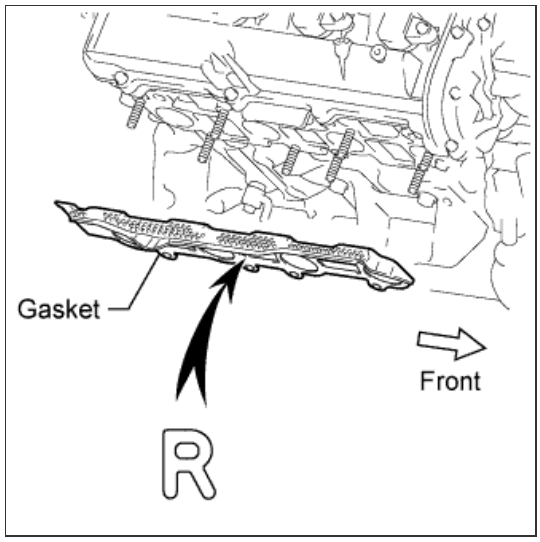


NOTICE:

Be careful of the installation direction.

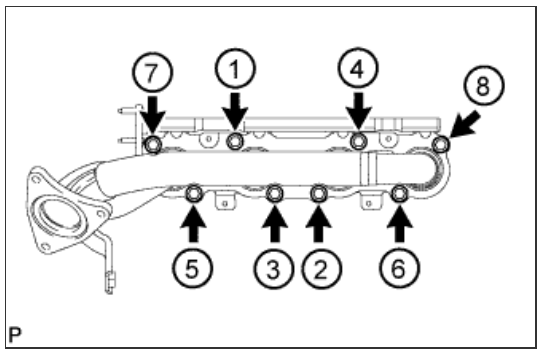
b. Temporarily install the exhaust manifold with 8 new nuts, and then uniformly tighten the nuts in several steps, in the sequence shown in the illustration.

Torque:
44 N*m{ 449 kgf*cm , 32 ft.*lbf }



33. INSTALL EXHAUST MANIFOL SUB-ASSEMBLY RH Secondary Air Injection System

a. Place a new gasket on the cylinder head with the "R" mark facing the manifold side.

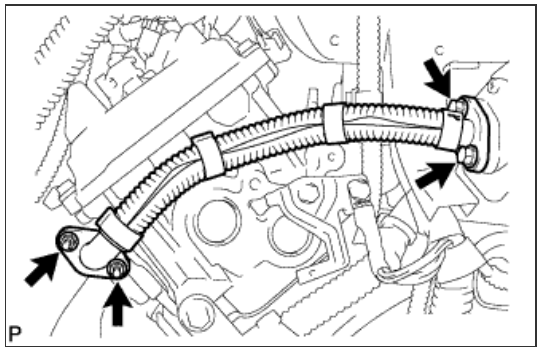


NOTICE:

Be careful of the installation direction.

b. Temporarily install the exhaust manifold with 8 new nuts, and then uniformly tighten the nuts in several steps, in the sequence shown in the illustration.

Torque:
44 N*m{ 429 kgf*cm , 32 ft.*lbf }



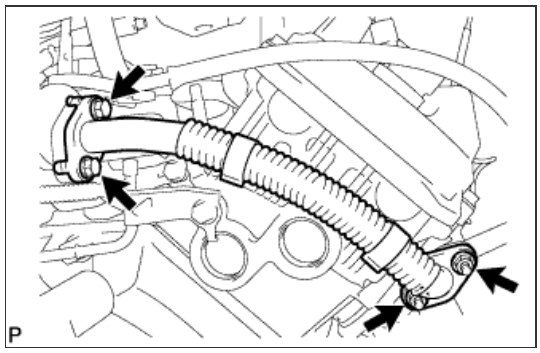
34. INSTALL NO. 3 AIR TUBE Secondary Air Injection System

a. Install a new gasket and connect the No. 3 air tube to the exhaust manifold with the 2 nuts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. Install a new gasket and connect the No. 3 air tube to the No. 2 air switching valve with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



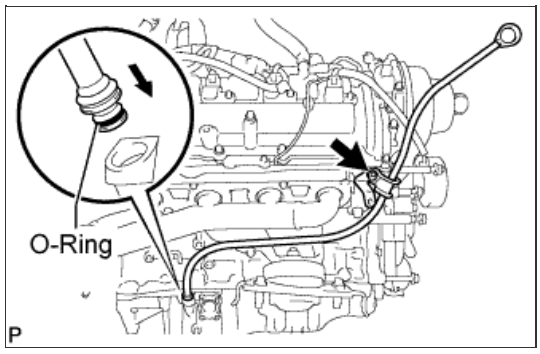
35. INSTALL AIR TUBE SUB-ASSEMBLY RH Secondary Air Injection System

a. Install a new gasket and connect the air tube to the exhaust manifold with the 2 nuts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

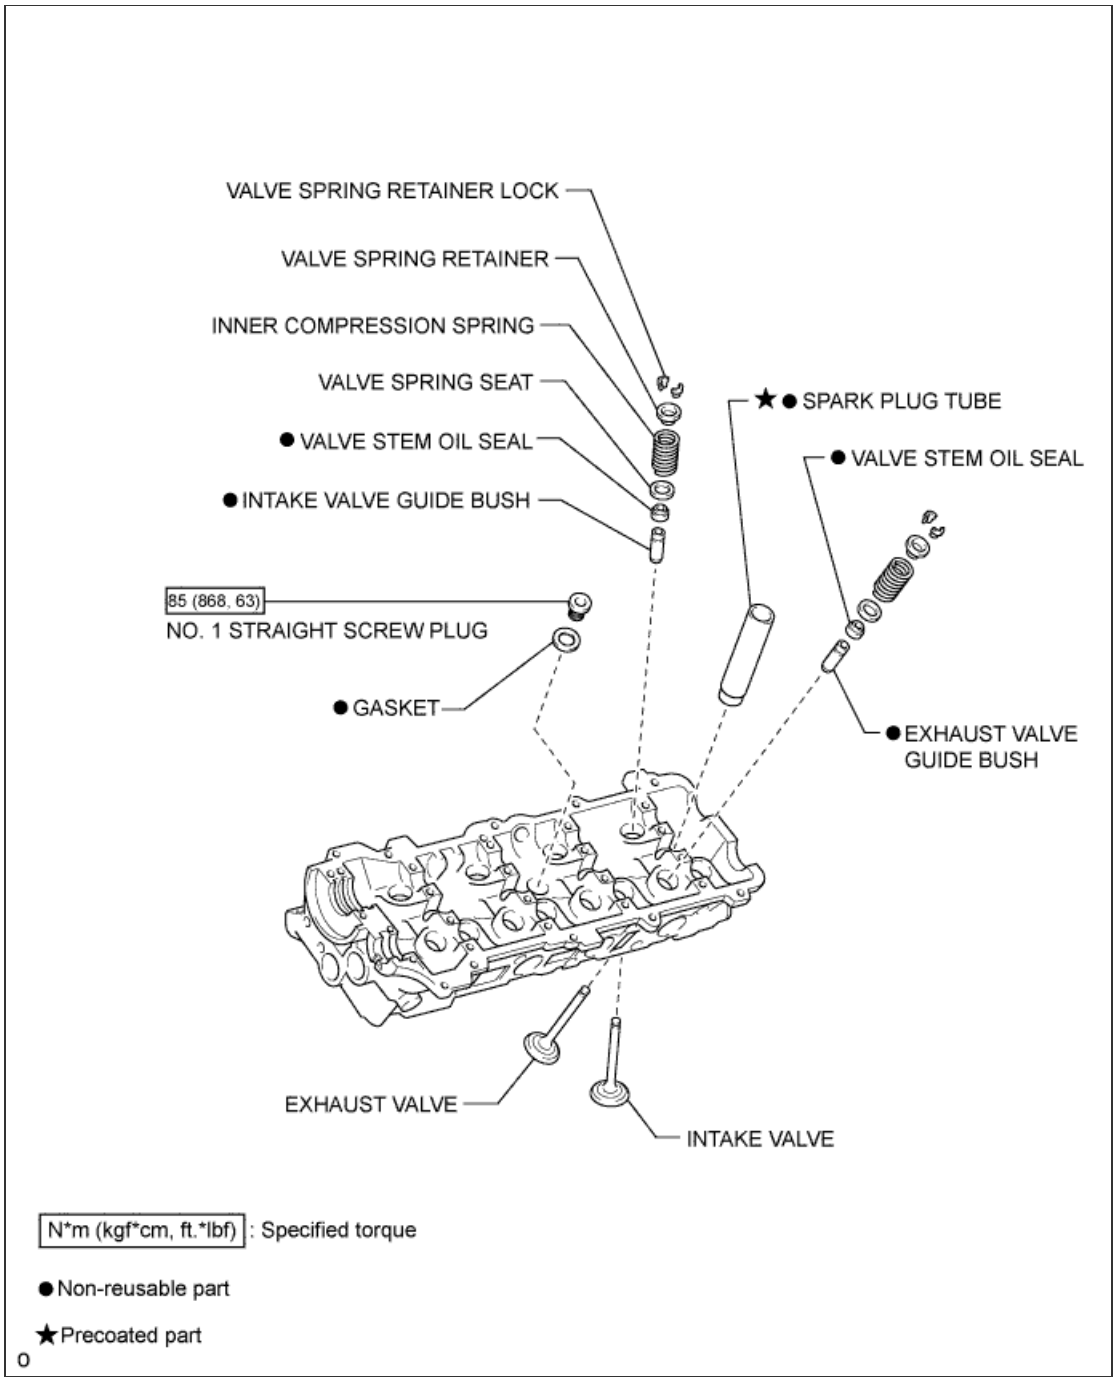
b. Install a new gasket and connect the air tube to the No. 1 air switching valve with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



a. Apply a light coat of engine oil to a new O-ring.

b. Install a new O-ring to the guide.



c. Install the dipstick guide with the bolt.

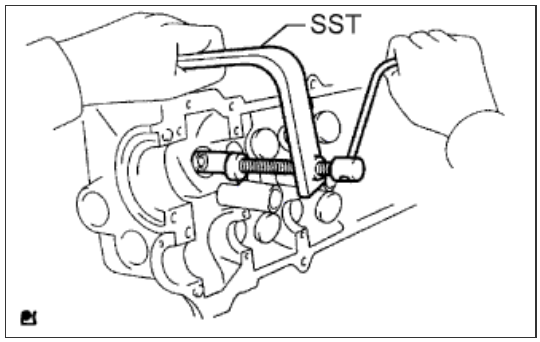
Torque:
0 N*m{ 2 kgf*cm , 71 in.*lbf }

d. Install the dipstick.

for Preparation Click here

for Preparation Click here

1. REMOVE INTAKE VALVE



a. Using SST, compress the compression spring and remove the 2 valve spring retainer locks.

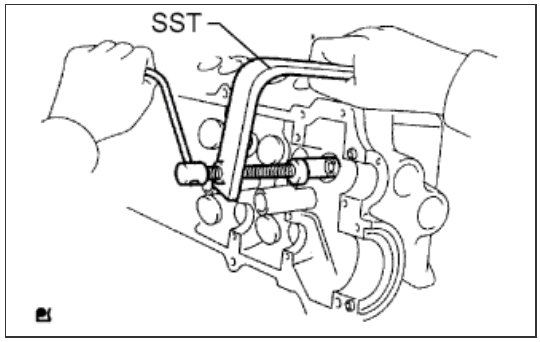
SST
09202-70020 (09202-00010, 09202-01010, 09202-01020)

b. Remove the spring retainer, inner compression spring and valve.

HINT:

Arrange the removed parts in the correct order.

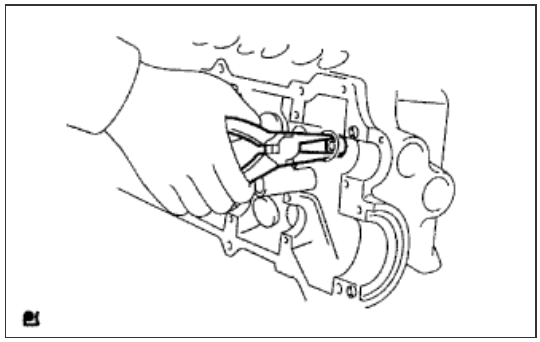
2. REMOVE E HAUST VALVE



a. Using SST, compress the compression spring and remove the 2 valve spring retainer locks.

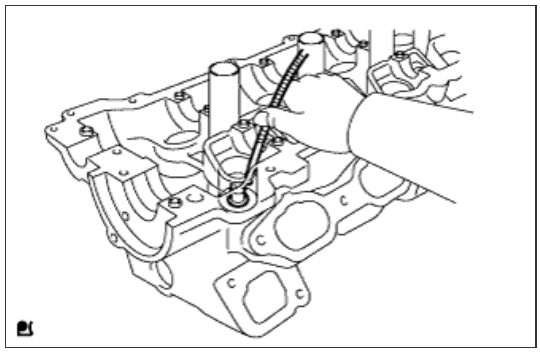
SST
09202-70020 (09202-00010, 09202-01010, 09202-01020)

b. Remove the spring retainer, inner compression spring and valve.



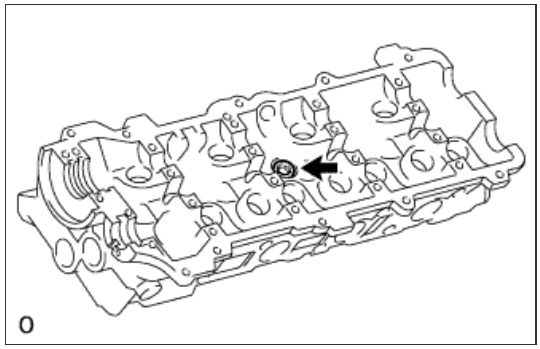
HINT:

Arrange the removed parts in the correct order.



3. REMOVE VALVE STEM OIL SEAL

a. Using needle nose pliers, remove the stem oil seals.



4. REMOVE VALVE SPRING SEAT

a. Using compressed air and a magnetic finger, remove the valve spring seat by blowing air onto it.

5. REMOVE NO. 1 STRAIGHT SCREW PLUG

a. Using a 14 mm hexagon wrench, remove the screw plugs and gasket.

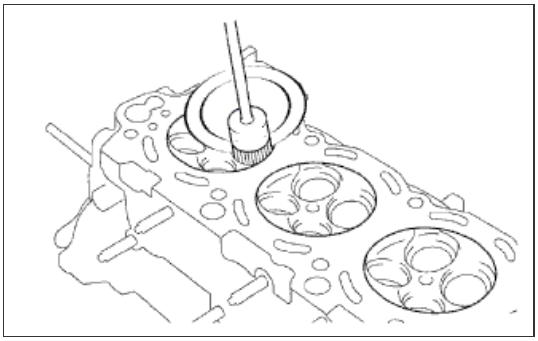
6. REMOVE STUD BOLT

NOTICE:

If the stud bolt is deformed or its threads are damaged, replace it.

for Preparation Click here

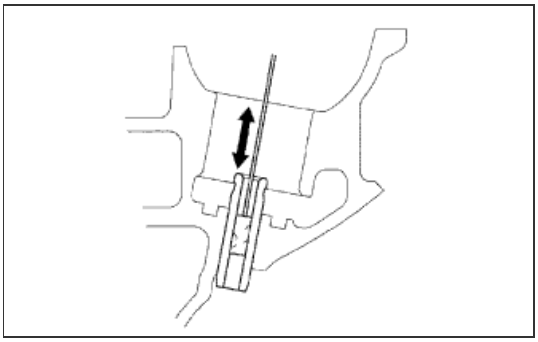
1. CLEAN CYLINDER HEAD SUB-ASSEMBLY



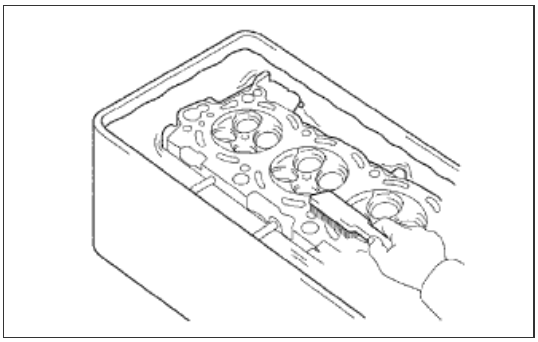
a. Using a gasket scraper, remove all the gasket material from the cylinder block contact surface.

NOTICE:

Be careful not to scratch the cylinder block contact surface.



b. Using a wire brush, remove all the carbon from the combustion chambers.



NOTICE:

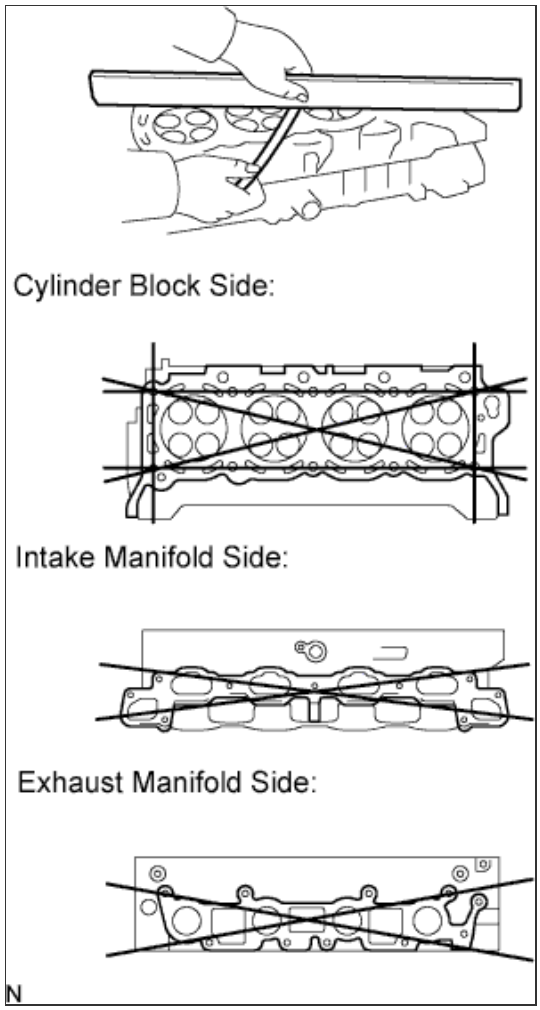
Be careful not to scratch the cylinder block contact surface.

c. Using a valve guide bushing brush and solvent, clean all the guide bushes.

d. Using a soft brush and solvent, thoroughly clean the cylinder head.

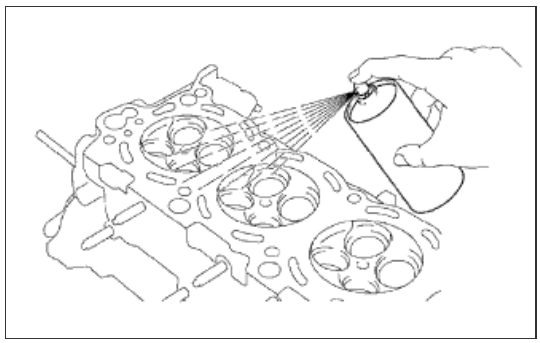
2. INSPECT CYLINDER HEAD SUB-ASSEMBLY

a. Using a precision straightedge and feeler gauge, measure the surfaces



a. Using a precision straightedge and feeler gauge, measure the surfaces contacting the cylinder block and manifolds for warpage.

Standard Warpage:



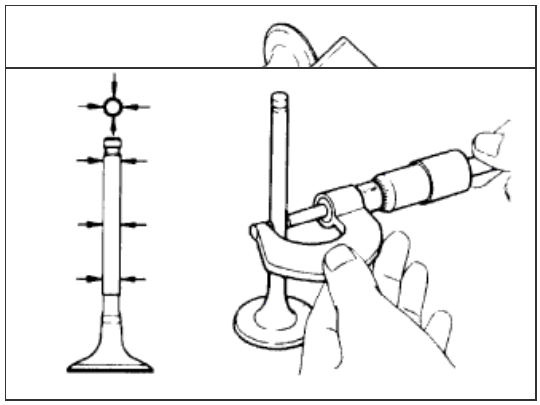
Item	Specified Condition
Cylinder block side	0 to 0.05 mm (0 to 0.00197 in.)
Intake manifold side	0 to 0.08 mm (0 to 0.00315 in.)
Exhaust manifold side	0 to 0.08 mm (0 to 0.00315 in.)

Maximum warpage:
0.10 mm (0.00394 in.)

If the warpage is more than the maximum, replace the cylinder head sub-assembly.

b. Using a dye penetrant, check the combustion chamber, intake ports, exhaust ports and cylinder block surface for cracks.
If the cylinder head is cracked, replace it.

3. INSPECT INTAKE VALVE



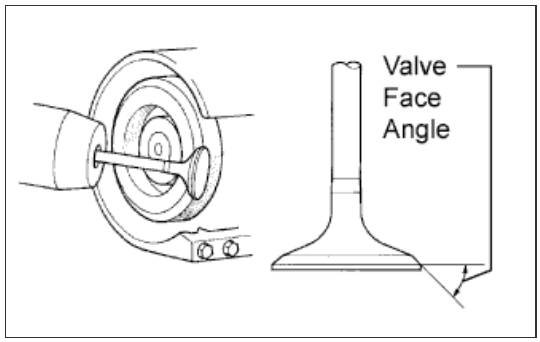
a. Clean the valves.

i. Using a gasket scraper, chip off any carbon from the valve head.

ii. Using a wire brush, thoroughly clean the valve.

b. Using a micrometer, measure the diameter of the valve stem.

Standard valve stem diameter:
5.470 to 5.485 mm (0.215 to 0.216 in.)



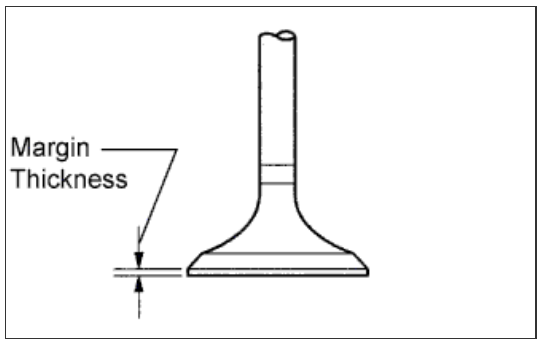
c. Check the valve face angle.

i. Grind the valve sufficiently to remove pits and carbon.

ii. Check that the valve is ground to the correct valve face angle.

Standard valve face angle:
44.5°

If the valve face is worn, replace the valve.

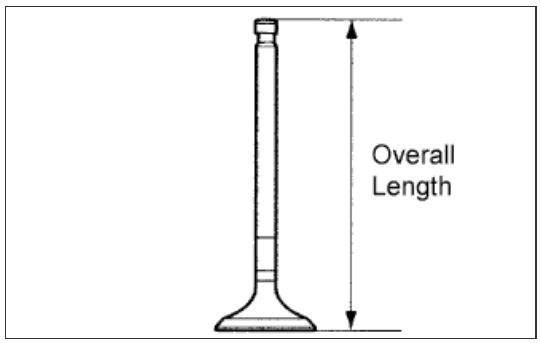


d. Check the valve head margin thickness.

Standard margin thickness:
1.0 mm (0.0394 in.)

Minimum margin thickness:
0.5 mm (0.0197 in.)

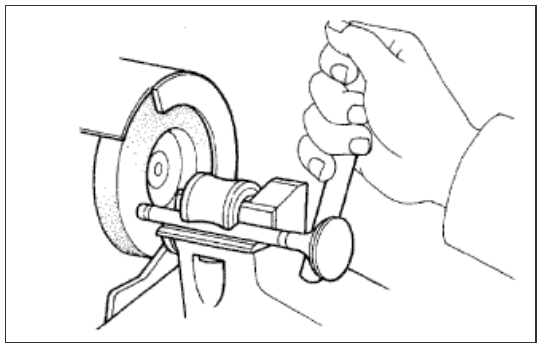
If the margin thickness is less than the minimum, replace the valve.



e. Check the valve overall length.

Standard overall length:
95.05 mm (3.74 in.)

Minimum overall length:
94.55 mm (3.72 in.)

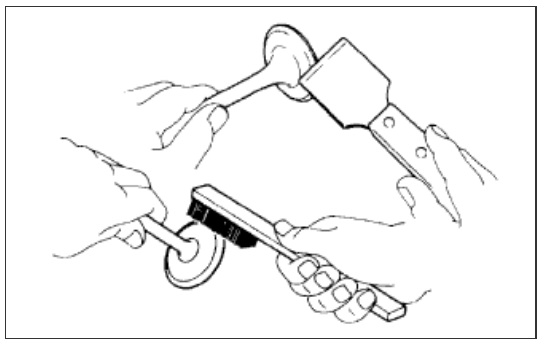


If the overall length is less than the minimum, replace the valve.

f. Check the surface of the valve stem tip for wear.
If the valve stem tip is worn, resurface the tip with a grinder or replace the valve.

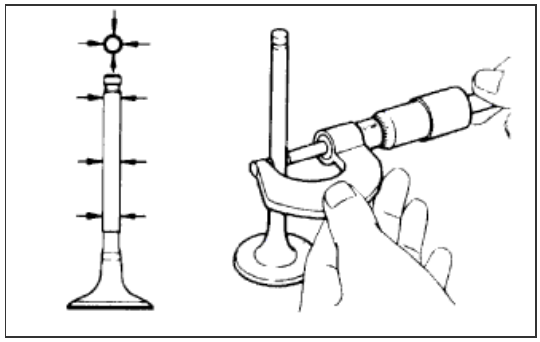
NOTICE:

Be careful not to grind off more than the minimum length.



4. INSPECT EXHAUST VALVE

a. Clean the valves.

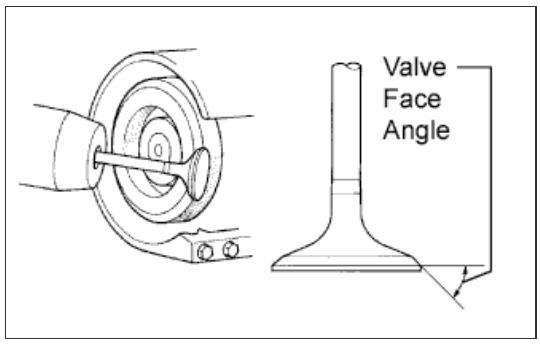


i. Using a gasket scraper, chip off any carbon from the valve head.

ii. Using a wire brush, thoroughly clean the valve.

b. Using a micrometer, measure the diameter of the valve stem.

Standard valve stem diameter:
5.465 to 5.480 mm (0.215 to 0.216 in.)



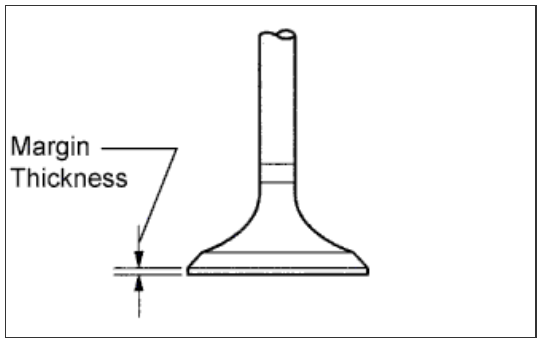
c. Check the valve face angle.

i. Grind the valve sufficiently to remove pits and carbon.

ii. Check that the valve is ground to the correct valve face angle.

Standard valve face angle:
44.5°

If the valve face is worn, replace the valve.

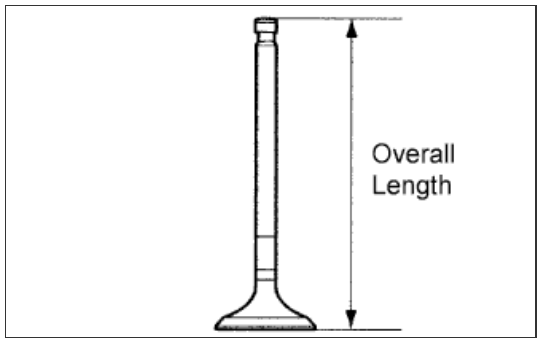


d. Check the valve head margin thickness.

Standard margin thickness:
1.0 mm (0.0394 in.)

Minimum margin thickness:
0.5 mm (0.0197 in.)

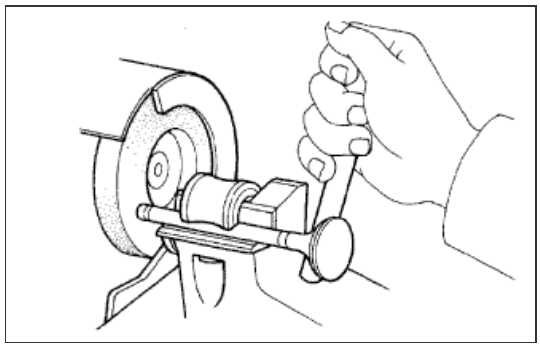
If the margin thickness is less than the minimum, replace the valve.



e. Check the valve overall length.

Standard overall length:
95.10 mm (3.744 in.)

Minimum overall length:
94.60 mm (3.724 in.)



If the overall length is less than the minimum, replace the valve.

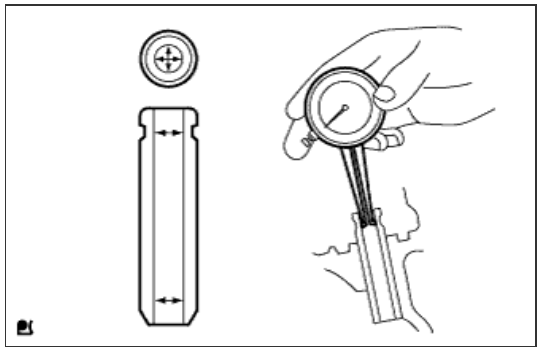
f. Check the surface of the valve stem tip for wear.
If the valve stem tip is worn, resurface the tip with a grinder or replace the valve.

NOTICE:

Be careful not to grind off more than the minimum length.

5. INSPECT INTAKE VALVE GUIDE BUSH

a. Using a caliper gauge, measure the inside diameter of the guide bush.



Standard bush inside diameter:
5.510 to 5.530 mm (0.217 to 0.218 in.)

b. Subtract the valve stem diameter measurement from the guide bush inside diameter measurement.

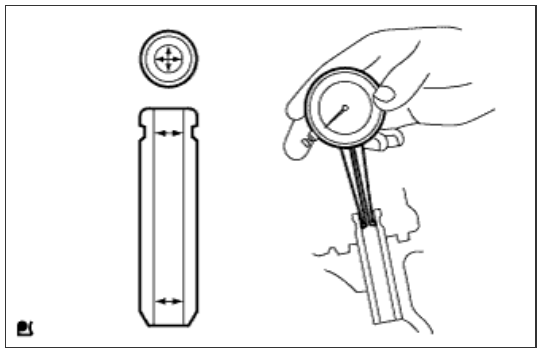
Standard oil clearance:
0.025 to 0.060 mm (0.000984 to 0.00236 in.)

Maximum oil clearance:
0.08 mm (0.00314 in.)

If the oil clearance is more than the maximum, replace the valve and guide bush.

6. INSPECT EXHAUST VALVE GUIDE BUSH

a. Using a caliper gauge, measure the inside diameter of the guide bush.



Standard bush inside diameter:
5.510 to 5.530 mm (0.217 to 0.218 in.)

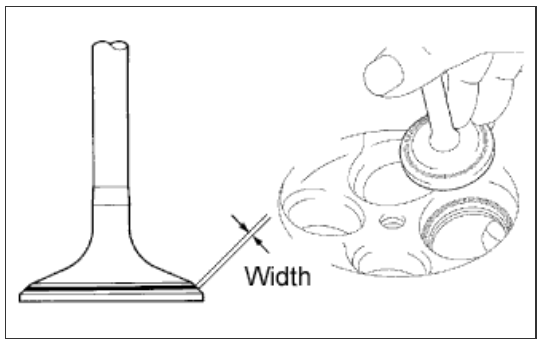
b. Subtract the valve stem diameter measurement from the guide bush inside diameter measurement.

Standard oil clearance:
0.030 to 0.065 mm (0.00118 to 0.00256 in.)

Maximum oil clearance:
0.10 mm (0.00394 in.)

If the oil clearance is more than the maximum, replace the valve and guide bush.

7. INSPECT INTAKE VALVE SEAT



a. Apply a light coat of Prussian blue to the valve face.

b. Lightly press the valve against the seat.

HINT:

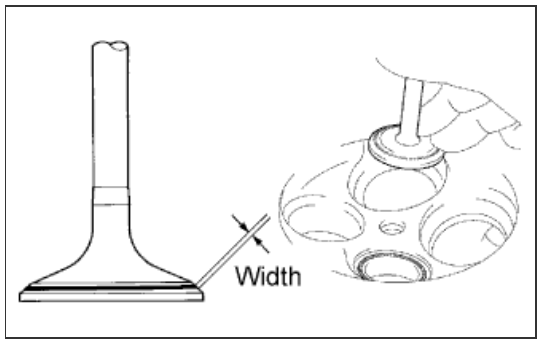
Do not rotate the valve while pressing it.

c. Check the valve face and seat.

i. Check that the contact surfaces of the valve seat and valve face are in the middle area of their respective surfaces, with the width between 1.0 to 1.4 mm (0.0394 to 0.0551 in.).
If not, correct the valve seat.

ii. Check that the contact surfaces of the valve seat and valve face are even around the entire valve seat.
If not, correct the valve seat.

8. INSPECT EXHAUST VALVE SEAT



a. Apply a light coat of Prussian blue to the valve face.

b. Lightly press the valve against the seat.

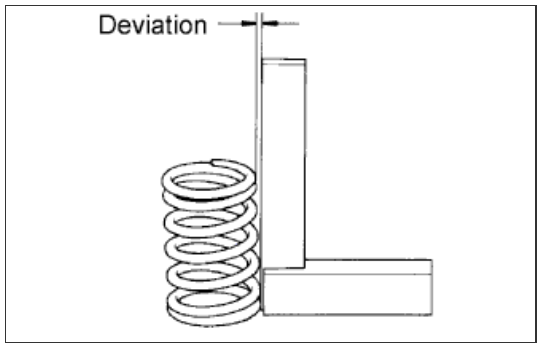
HINT:

Do not rotate the valve while pressing it.

c. Check the valve face and seat.

i. Check that the contact surfaces of the valve seat and valve face are in the middle area of their respective surfaces, with the width between 1.0 to 1.4 mm (0.0394 to 0.0551 in.).
If not, correct the valve seat.

ii. Check that the contact surfaces of the valve seat and valve face are even around the entire valve seat.
If not, correct the valve seat.

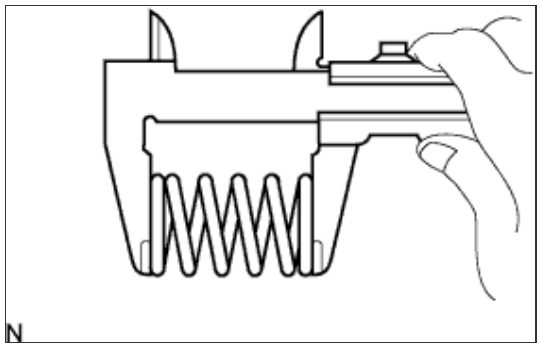


9. INSPECT INNER COMPRESSION SPRING

a. Using steel squares, measure the deviation of the spring.

Maximum deviation:
2.0 mm (0.0787 in.)

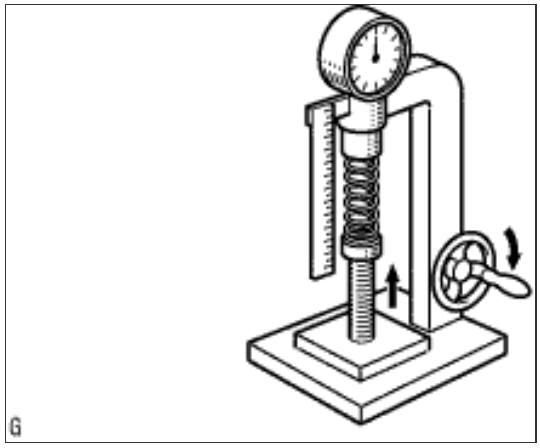
If the deviation is more than the maximum, replace the inner compression



spring.

b. Using a vernier caliper, measure the free length of the spring.

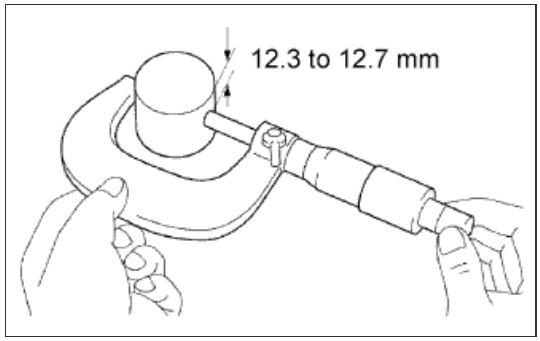
Standard free length:
51.29 mm (2.02 in.)



If the free length is not as specified, replace the inner compression spring.

c. Using a spring tester, measure the tension of the inner compression spring when it is compressed to the specified installation length.

Standard installed tension:
210 to 226 N (21 to 23 kgf, 47.2 to 50.7 lbf) at 33.4 mm (1.31 in.)



If the installed tension is not as specified, replace the inner compression spring.

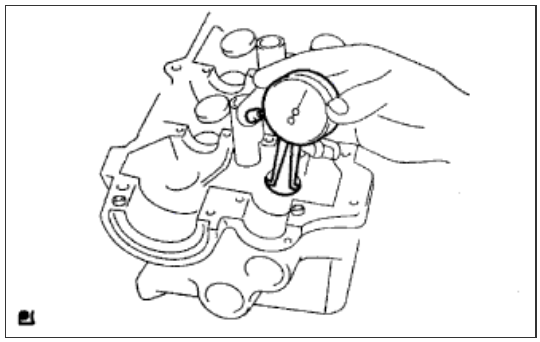
10. INSPECT VALVE LI TER

a. Using a micrometer, measure the lifter diameter at a position 12.3 to 12.7 mm (0.484 to 0.500 in.) from the top surface.

Standard lifter diameter:
30.968 to 30.976 mm (1.2192 to 1.2195 in.)

b. Using a caliper gauge, measure the lifter bore diameter of the cylinder head.

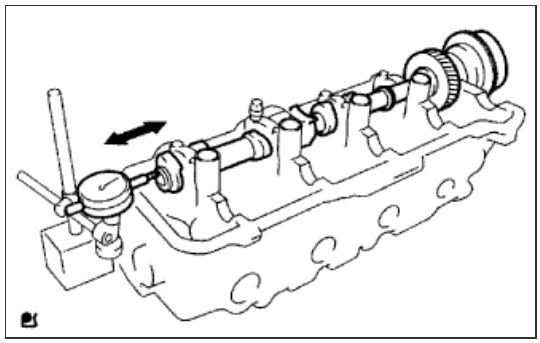
Standard lifter bore diameter:
31.000 to 31.016 mm (1.220 to 1.221 in.)



c. Subtract the lifter diameter measurement from the lifter bore diameter measurement.

Standard oil clearance:

0.024 to 0.050 mm (0.000945 to 0.00197 in.)



Maximum oil clearance:
0.07 mm (0.00276 in.)

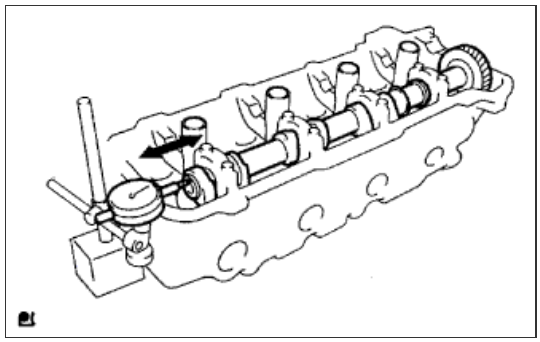
If the oil clearance is more than the maximum, replace the lifter. If necessary, replace the cylinder head sub-assembly.

11. INSPECT CAMSHA T THRUST CLEARANCE

a. Inspect the clearance on the intake side.

i. Install the camshaft.

ii. Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.



Standard thrust clearance:
0 to 0.040 mm (0 to 0.00157 in.)

Maximum thrust clearance:
0.12 mm (0.00472 in.)

If the thrust clearance is more than the maximum, replace the camshaft. If necessary, replace the cylinder head sub-assembly.

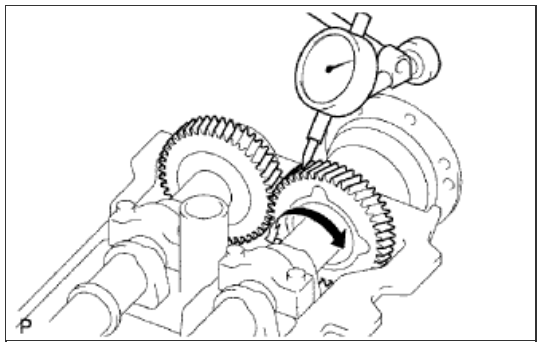
iii. Remove the camshaft.

b. Inspect the clearance on the exhaust side.

i. Install the camshaft.

ii. Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.

Standard thrust clearance:
0.030 to 0.070 mm (0.00118 to 0.00276 in.)



Maximum thrust clearance:
0.10 mm (0.00394 in.)

If the thrust clearance is more than the maximum, replace the camshaft. If necessary, replace the cylinder head sub-assembly.

iii. Remove the camshaft.

12. INSPECT CAMSHA T GEAR BACKLASH

a. for Bank 1:

i. Install the drive gear to the camshaft timing tube.

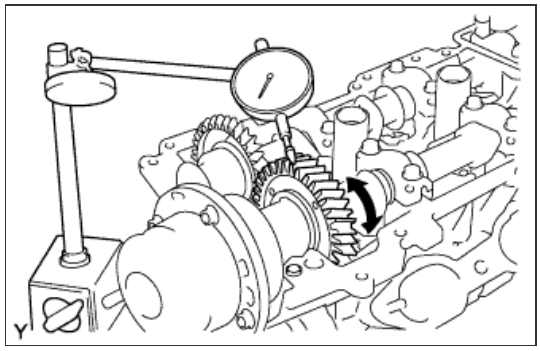
ii. Install the camshaft timing tube to the No. 3 camshaft.

iii. Install the No. 3 camshaft and No. 4 camshaft without installing the camshaft sub-gear and No. 5 bearing cap.

iv. Using a dial indicator, measure the backlash.

Standard backlash:
0.020 to 0.200 mm (0.000787 to 0.00787 in.)

Maximum backlash:
0.30 mm (0.0118 in.)



If the backlash is more than the maximum, replace the drive gear and No. 4 camshaft.

v. Remove the No. 3 camshaft and No. 4 camshaft.

vi. Remove the camshaft timing tube from the No. 3 camshaft.

vii. Remove the drive gear from the camshaft timing tube.

b. for Bank 2:

i. Install the drive gear to the camshaft timing tube.

ii. Install the camshaft timing tube to the camshaft.

iii. Install the camshaft and No. 2 camshaft without installing the camshaft sub-gear and No. 1 bearing cap.

iv. Using a dial indicator, measure the backlash.

Standard backlash:
0.020 to 0.200 mm (0.000787 to 0.00787 in.)

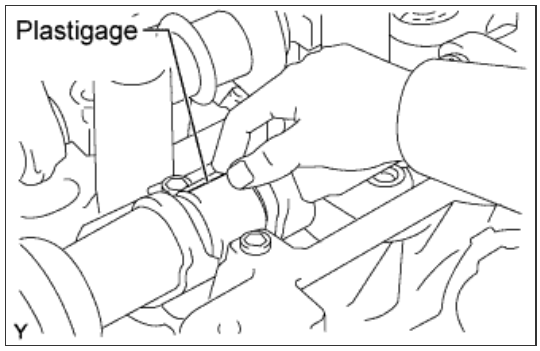
Maximum backlash:
0.30 mm (0.0118 in.)

If the backlash is more than the maximum, replace the drive gear and No. 2 camshaft.

v. Remove the camshaft and No. 2 camshaft.

vi. Remove the camshaft timing tube from the camshaft.

vii. Remove the drive gear from the camshaft timing tube.



13. INSPECT CAMSHA T OIL CLEARANCE

a. Clean the bearing caps and camshaft journals.

b. Check the bearings for flaking and scoring.
If the bearings are damaged, replace the cylinder head sub-assembly.

c. Place the camshafts on the cylinder head.

d. Lay a strip of Plastigage across each of the camshaft journals.

e. Install the bearing caps.

HINT:

- **or Bank 1:**
  Refer to the following procedures (Click here).
- **or Bank 2:**
  Refer to the following procedures (Click here).

NOTICE:

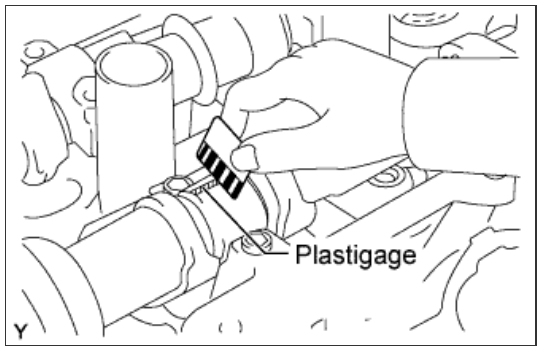
Do not turn the camshaft.

f. Remove the bearing caps.

HINT:

- **or Bank 1:**
  Refer to the following procedures (Click here).
- **or Bank 2:**
  Refer to the following procedures (Click here).

g. Measure the Plastigage at its widest point.



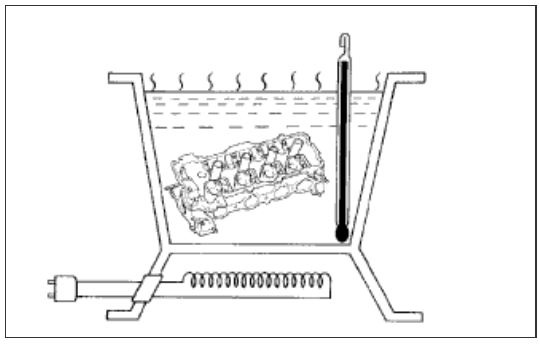
Standard oil clearance:
0.030 to 0.071 mm (0.00118 to 0.00280 in.)

Maximum oil clearance:
0.10 mm (0.00394 in.)

If the oil clearance is more than the maximum, replace the camshaft. If necessary, replace the cylinder head sub-assembly.

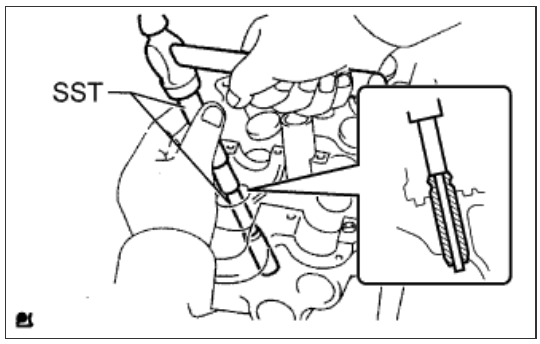
h. Remove the camshafts.

i. Completely remove the Plastigage.



for Preparation Click here

1. REPLACE INTAKE VALVE GUIDE BUSH

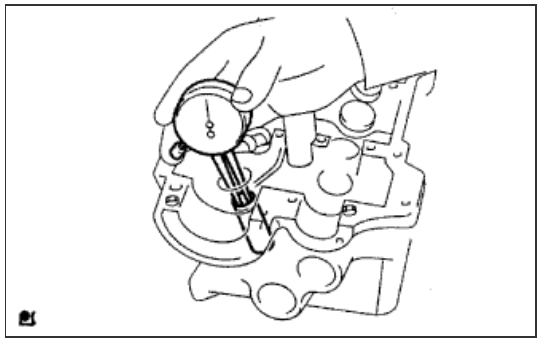


a. Gradually heat the cylinder head to approximately 80 to 100°C (176 to 212°F).

b. Place the cylinder head on wooden blocks.

c. Using SST and a hammer, tap out the guide bush.

SST
09201-01055
09950-70010 (09951-07100)



d. Using a caliper gauge, measure the bush bore diameter of the cylinder head.

Standard cylinder bore diameter:
10.285 to 10.306 mm (0.405 to 0.406 in.)

If the bush bore diameter of the cylinder head is between 10.285 to 10.356 mm (0.405 to 0.408 in.), proceed to the next step.
If the bush bore diameter of the cylinder head is more than 10.356 mm (0.408 in.), replace the cylinder head.

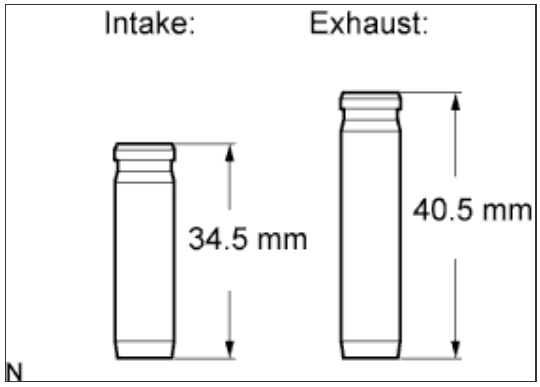
e. Select a new guide bush (STD or O/S 0.05), and measure its diameter.

f. Machine the bush bore diameter of the cylinder head side to the diameter of the selected guide bush.

B h Bore Diameter:

Bush Size	Specified Condition
Use STD	10.333 to 10.344 mm (0.4068 to 0.4072 in.)
Use O/S 0.05	10.383 to 10.394 mm (0.4087 to 0.4092 in.)

HINT:

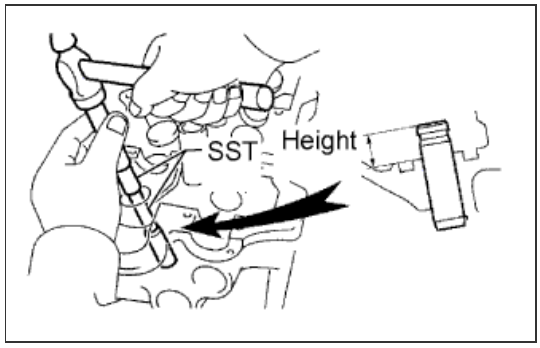


Different bushes are used for the intake and exhaust.

Standard B h Length:

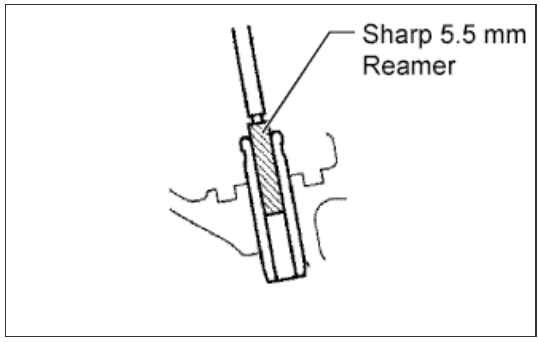
Item	Specified Condition
Intake	34.5 mm (1.36 in.)

Exhaust	40.5 mm (1.59 in.)



g. Gradually heat the cylinder head to approximately 80 to 100°C (176 to 212°F).

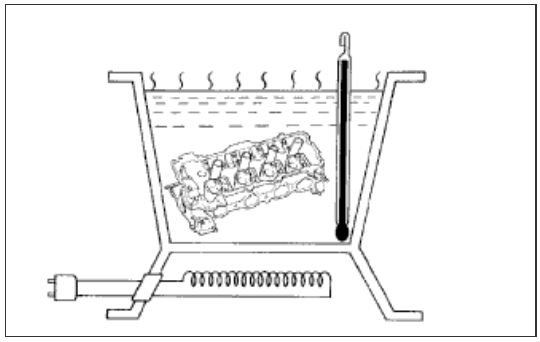
h. Using SST and a hammer, tap in a new guide bush to the specified protrusion height.



SST
09201-01055
09950-70010 (09951-07100)

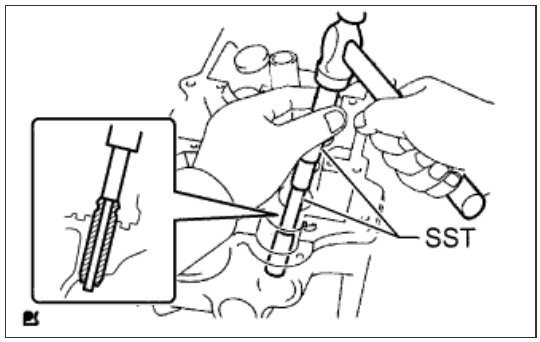
Standard protr ion height:
9.2 to 9.8 mm (0.362 to 0.386 in.)

i. Using a sharp 5.5 mm reamer, ream the guide bush to obtain the standard clearance between the guide bush and valve stem.



Standard oil clearance:
0.025 to 0.060 mm (0.000984 to 0.00236 in.)

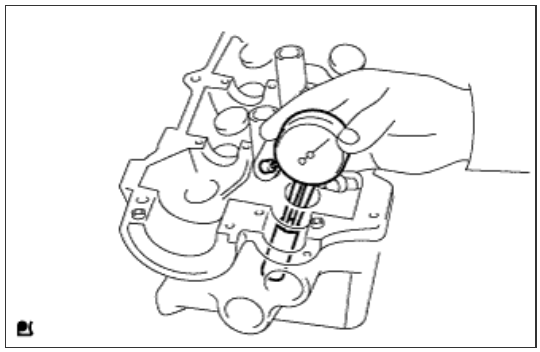
2. REPLACE EXHAUST VALVE GUIDE BUSH



a. Gradually heat the cylinder head to approximately 80 to 100°C (176 to 212°F).

b. Place the cylinder head on wooden blocks.

c. Using SST and a hammer, tap out the guide bush.



SST
09201-01055
09950-70010 (09951-07100)

d. Using a caliper gauge, measure the bush bore diameter of the cylinder head.

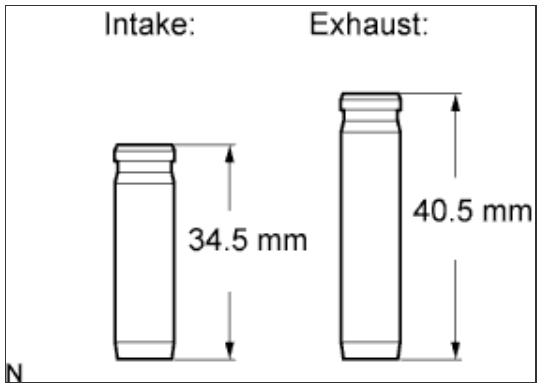
Standard cylinder bore diameter:
10.285 to 10.306 mm (0.405 to 0.406 in.)

If the bush bore diameter of the cylinder head is between 10.285 to 10.356 mm (0.405 to 0.408 in.), proceed to the next step.
If the bush bore diameter of the cylinder head is more than 10.356 mm (0.408 in.), replace the cylinder head.

e. Select a new guide bush (STD or O/S 0.05), and measure its diameter.

f. Machine the bush bore diameter of the cylinder head side to the diameter of the selected guide bush.

B h Bore Diameter:



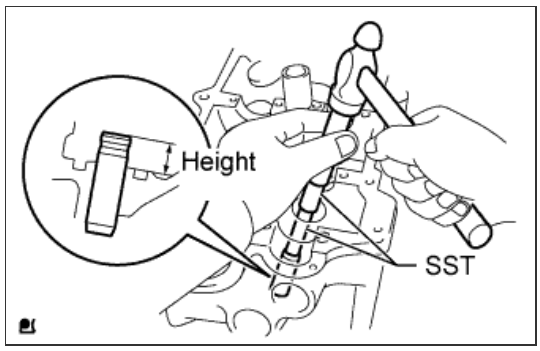
Bush Size	Specified Condition
Use STD	10.333 to 10.344 mm (0.4068 to 0.4072 in.)
Use O/S 0.05	10.383 to 10.394 mm (0.4087 to 0.4092 in.)

HINT:

Different bushes are used for the intake and exhaust.

Standard B h Length:

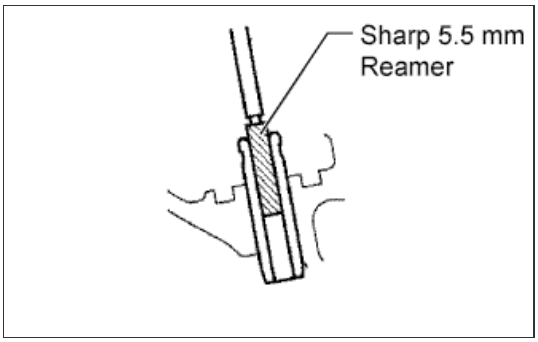
Item	Specified Condition
Intake	34.5 mm (1.36 in.)
Exhaust	40.5 mm (1.59 in.)



g. Gradually heat the cylinder head to approximately 80 to 100°C (176 to 212°F).

h. Using SST and a hammer, tap in a new guide bush to the specified protrusion height.

SST
09201-01055
09950-70010 (09951-07100)



Standard protr ion height:
8.2 to 8.8 mm (0.323 to 0.346 in.)

i. Using a sharp 5.5 mm reamer, ream the guide bush to obtain the standard

clearance between the guide bush and valve stem.

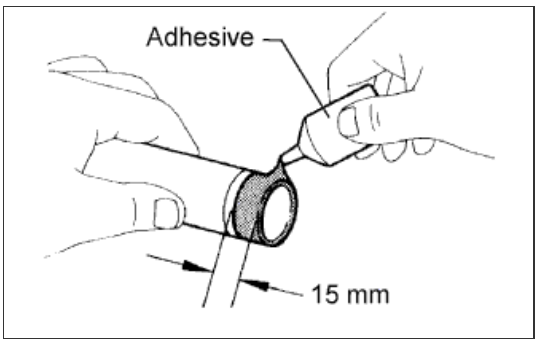
Standard oil clearance:
0.030 to 0.065 mm (0.00118 to 0.00256 in.)

3. REPLACE SPARK PLUG TUBE

HINT:

When using a new cylinder head, the spark plug tubes must be replaced.

a. Remove the spark plug tubes.



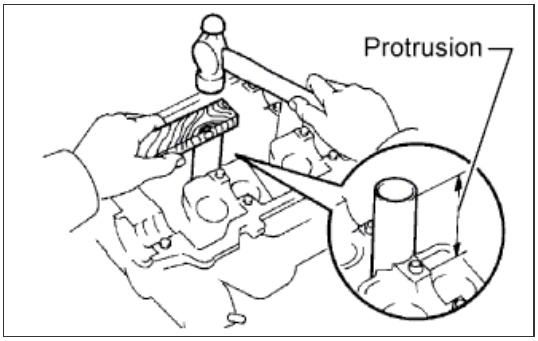
b. Apply adhesive to the end of a new spark plug tube.

Standard adhesive width:
15 mm (0.591 in.)

Adhesive:
Toyota Gen ine Adhesive 1324, Three Bond 1324 or e ivalent.

N TICE:

Install the spark plug tube within 3 minutes after applying adhesive.

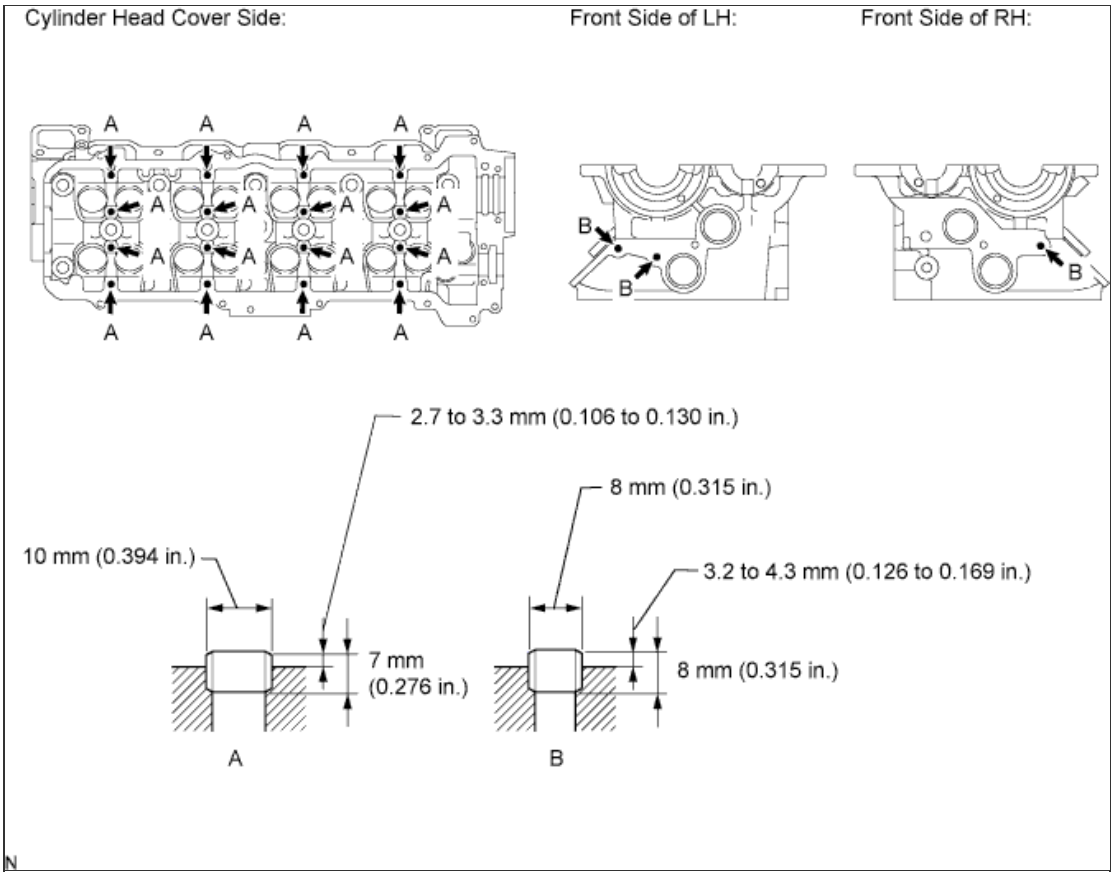


c. Using a wooden block and hammer, tap in the spark plug tube until it is protruding 40.9 to 42.1 mm (1.61 to 1.66 in.) from the camshaft bearing cap installation surface of the cylinder head.

Standard protr ion:
40.9 to 42.1 mm (1.61 to 1.66 in.)

N TICE:

- **To avoid tapping in a new spark pl t be too far, meas re the protr ion height while tapping it.**
- **Be caref l not to deform the spark pl t be.**
- **Be caref l not to expose the seal to coolant for at least 1 ho r after installing it.**



4. REPLACE RING PIN

N TICE:

It is not necessary to remove the ring pin unless it is being replaced.

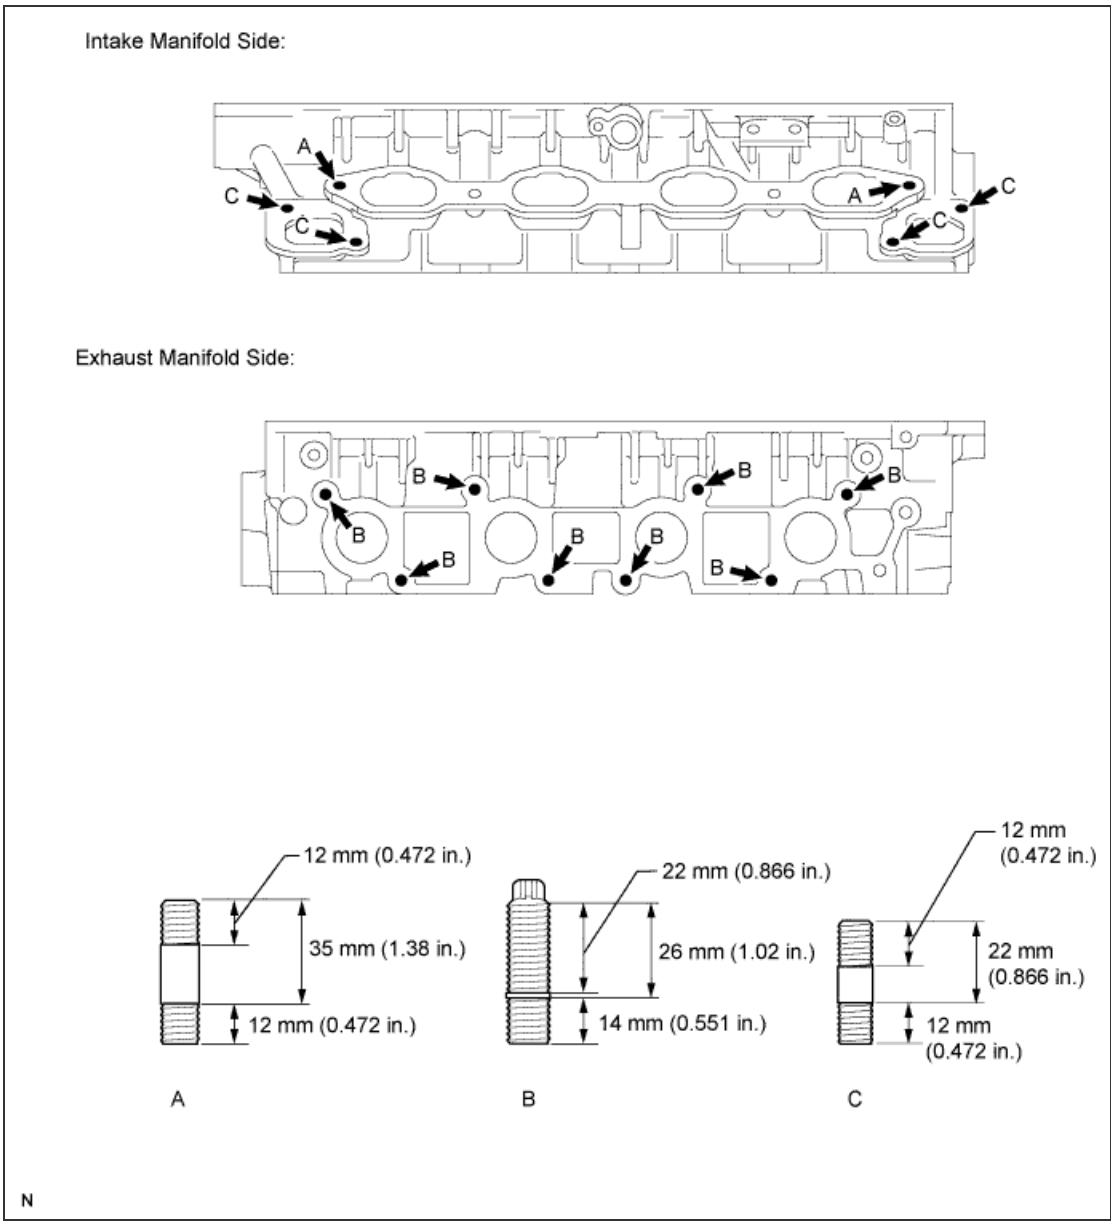
a. Remove the ring pin.

b. Using a plastic-faced hammer, tap in new ring pins until they stop.

Standard Protr ion:

Item	Specified Condition
A	2.7 to 3.3 mm (0.106 to 0.130 in.)
B	3.2 to 4.3 mm (0.126 to 0.169 in.)

for Preparation Click here

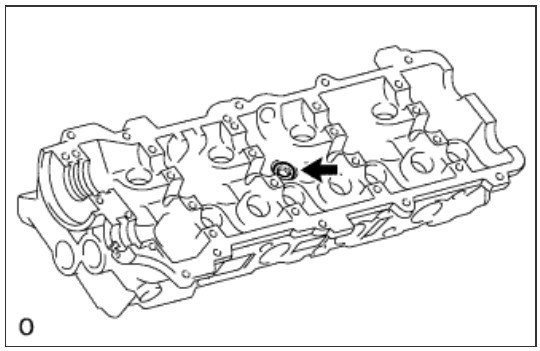


1. INSTALL STUD BOLT

NOTICE:

If a stud bolt is deformed or the threads are damaged, replace it.

a. Using an E10 "TORX" socket wrench, install the stud bolts A, B and C.



Torque:
for stud bolt A, C:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }
for stud bolt B:
15 N*m{ 153 kgf*cm , 11 ft.*lbf }

2. INSTALL NO. 1 STRAIGHT SCREW PLUG

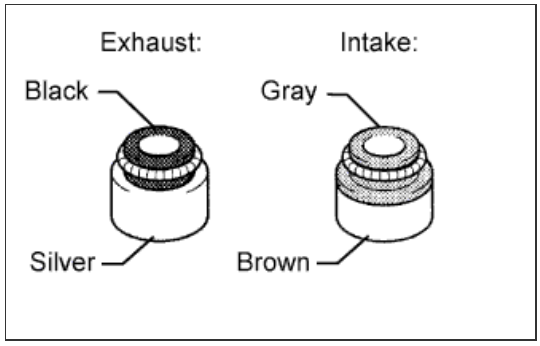
a. Using a 14 mm hexagon wrench, install 2 new gaskets and the 2 straight screw plugs.

Torque:
85 N*m{ 868 kgf*cm , 63 ft.*lbf }

3. INSTALL VALVE SPRING SEAT

a. Install the valve spring seats to the cylinder head.

4. INSTALL VALVE STEM OIL SEAL



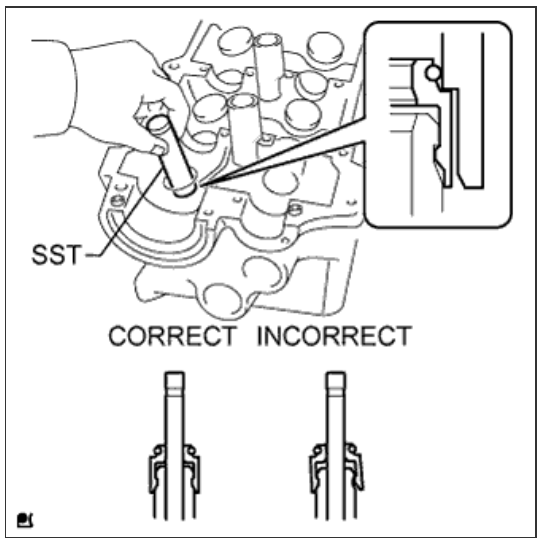
a. Apply a light coat of engine oil to a new stem oil seal.

NOTICE:

Pay close attention when installing the intake and exhaust oil seals. For example, installing the intake oil seal into the exhaust or installing the exhaust oil seal to the intake can cause installation problems later.

HINT:

The intake valve oil seal is gray/brown and the exhaust valve oil seal is black/silver.

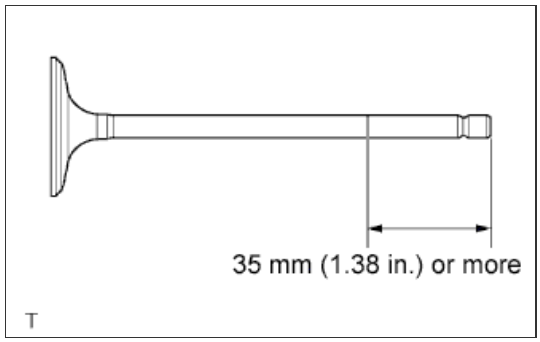


b. Using SST, push in the oil seal.

SST
09201-41020

NOTICE:

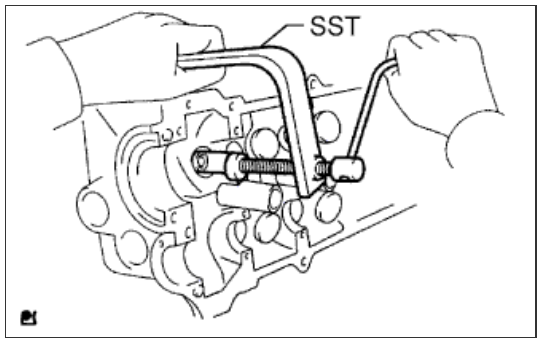
Failure to use SST will cause the seal to be damaged or improperly seated.



5. INSTALL INTAKE VALVE

a. Apply plenty of engine oil to the tip area of the intake valve shown in the illustration.

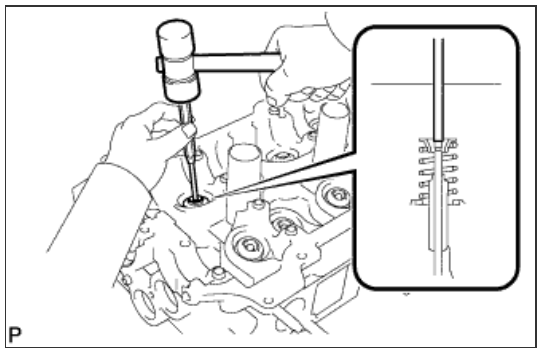
b. Install the valve, inner compression spring and spring retainer to the cylinder head.



NOTICE:

Install the same parts in the same combination to their original locations.

c. Using SST, compress the compression spring and place the 2 spring retainer locks around the valve stem.

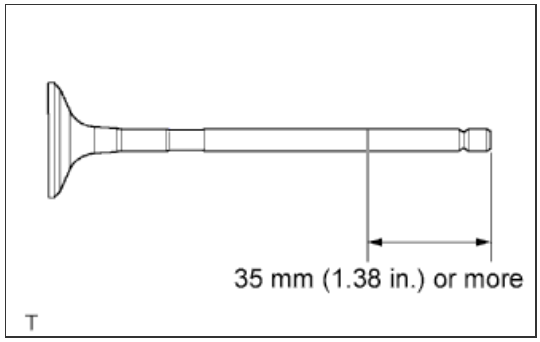


SST
09202-70020 (09202-00010, 09202-01010, 09202-01020)

d. Using a plastic-faced hammer and 5 mm pin punch, lightly tap the valve stem tip to ensure a proper fit.

NOTICE:

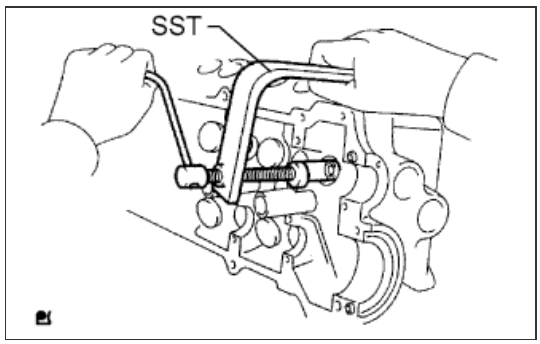
Do not damage the valve stem tip.



6. INSTALL EXHAUST VALVE

a. Apply plenty of engine oil to the tip area of the exhaust valve shown in the illustration.

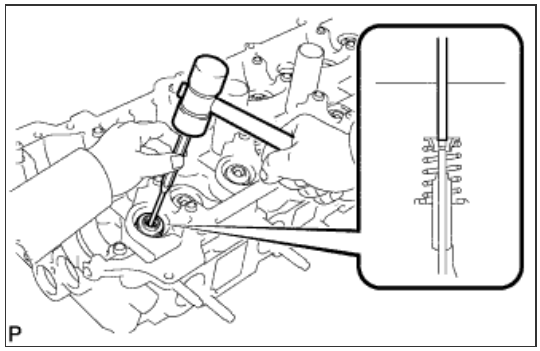
b. Install the valve, inner compression spring and spring retainer to the cylinder head.



NOTICE:

Install the same parts in the same combination to their original locations.

c. Using SST, compress the compression spring and place the 2 spring retainer locks around the valve stem.

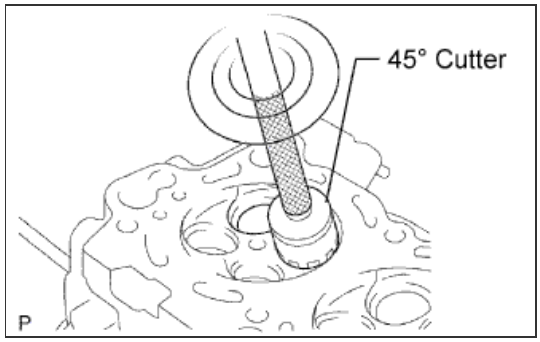


SST
09202-70020 (09202-00010, 09202-01010, 09202-01020)

d. Using a plastic-faced hammer and 5 mm pin punch, lightly tap the valve stem tip to ensure a proper fit.

NOTICE:

Do not damage the valve stem tip.

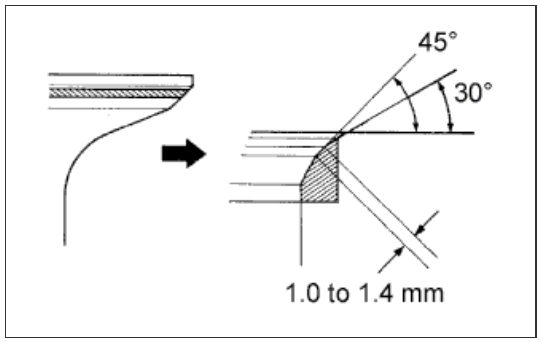


for Preparation Click here

1. REPAIR INTAKE VALVE SEAT

NOTICE:

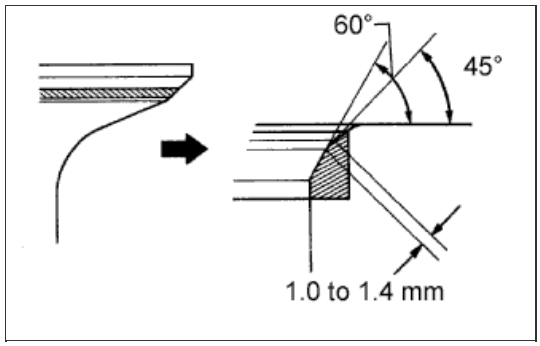
- **Repair the seat while checking the seating position.**
- **Keep the lip free of foreign matter.**
- **Take off a cutter gradually to make the intake valve seat smooth.**



a. Using a 45° cutter, resurface the valve seats.

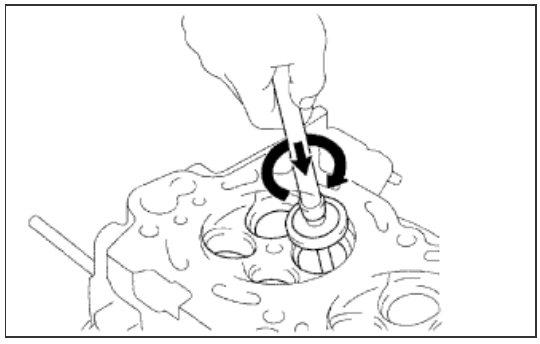
HINT:

Only remove the amount of metal necessary to clean the seats.



b. If the seating is too high on the valve face:
Use ° and 45° cutters to correct the seat.

c. If the seating is too low on the valve face:
Use 60° and 45° cutters to correct the seat.



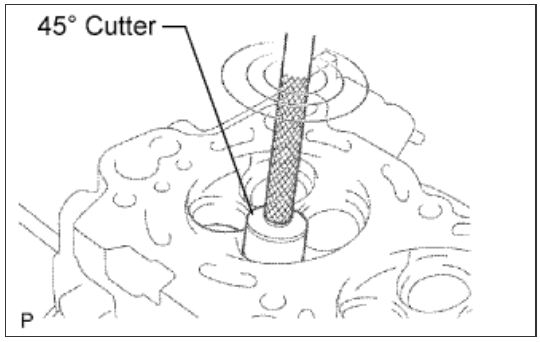
d. Check that the seat contact is in the middle of the valve face and has the following width.

Standard width:
1. to 1.4 mm (. to . 1 in.)

e. Hand-lap the valve and valve seat with an abrasive compound.

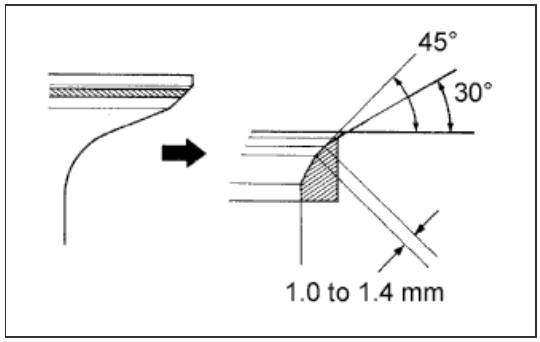
f. Clean and check the valve seating position.

2. REPAIR E HAUST VALVE SEAT



NOTICE:

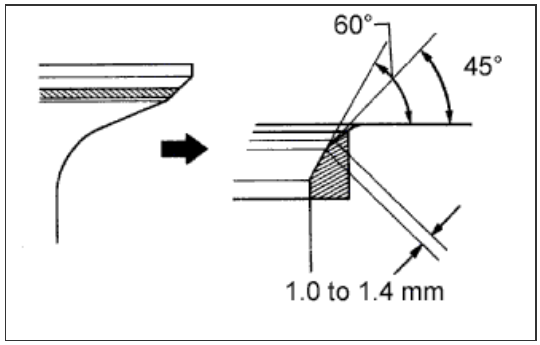
- **Repair the seat while checking the seating position.**
- **Keep the lip free of foreign matter.**
- **Take off a cutter gradually to make the exhaust valve seat smooth.**



a. Using a 45° cutter, resurface the valve seats.

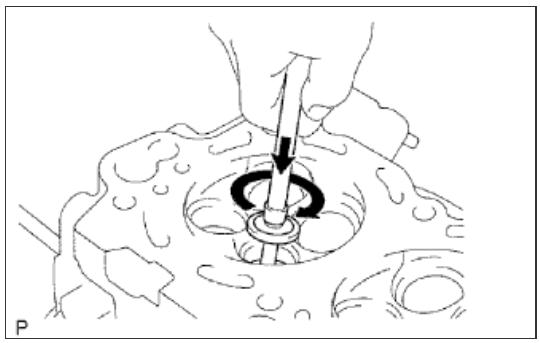
HINT:

Only remove the amount of metal necessary to clean the seats.



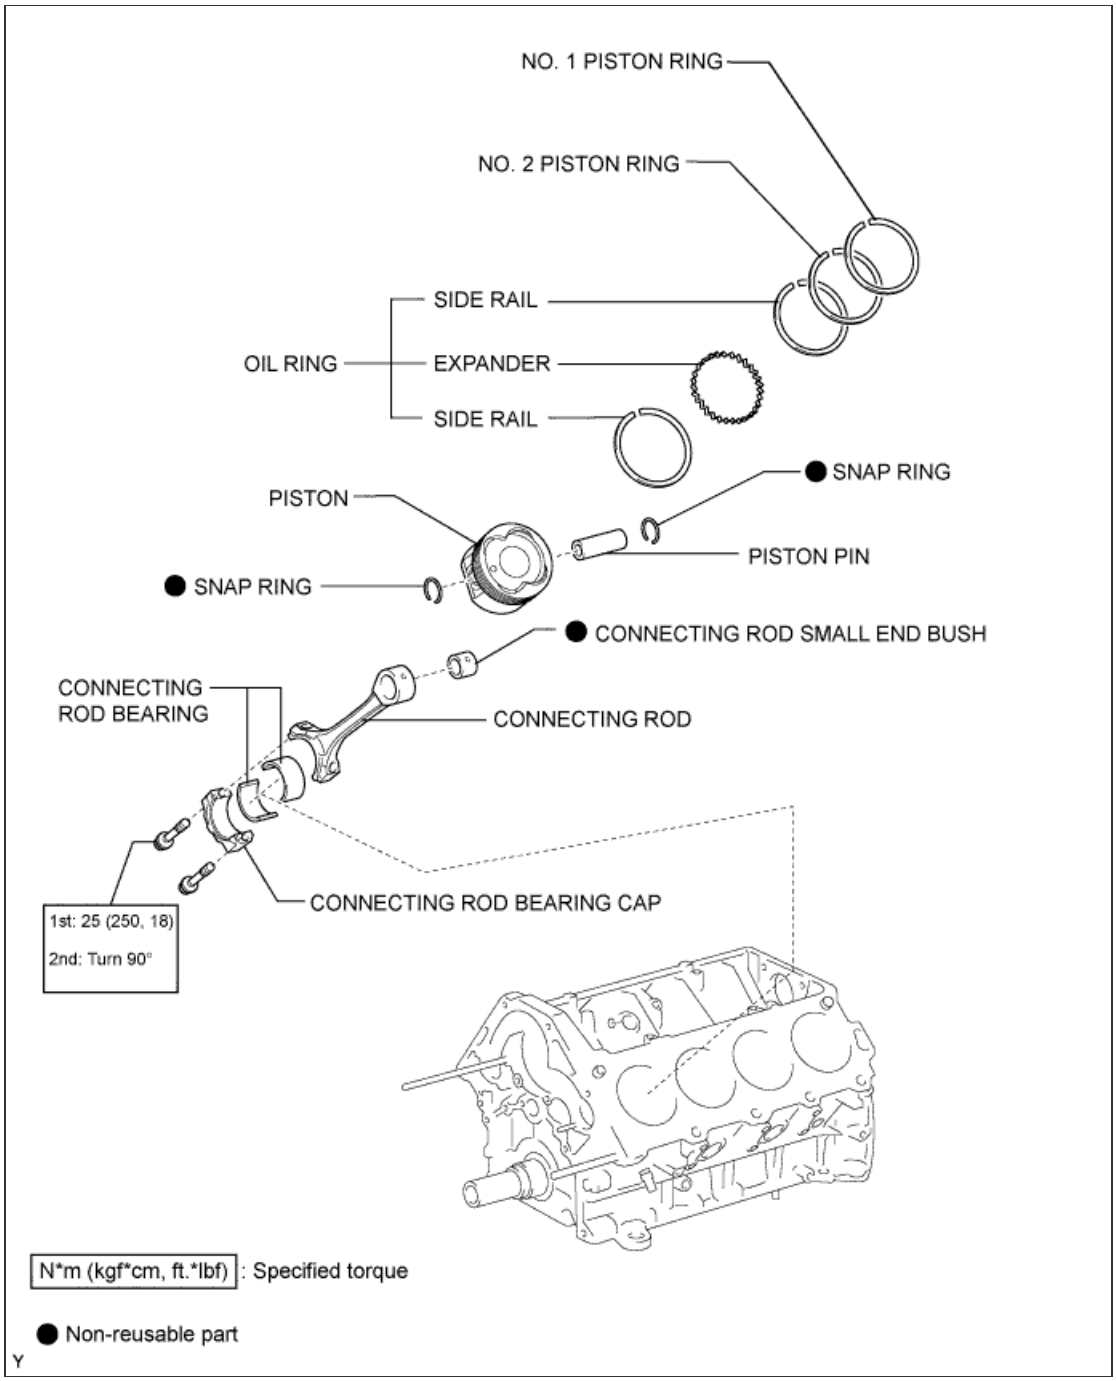
b. If the seating is too high on the valve face:
Use ° and 45° cutters to correct the seat.

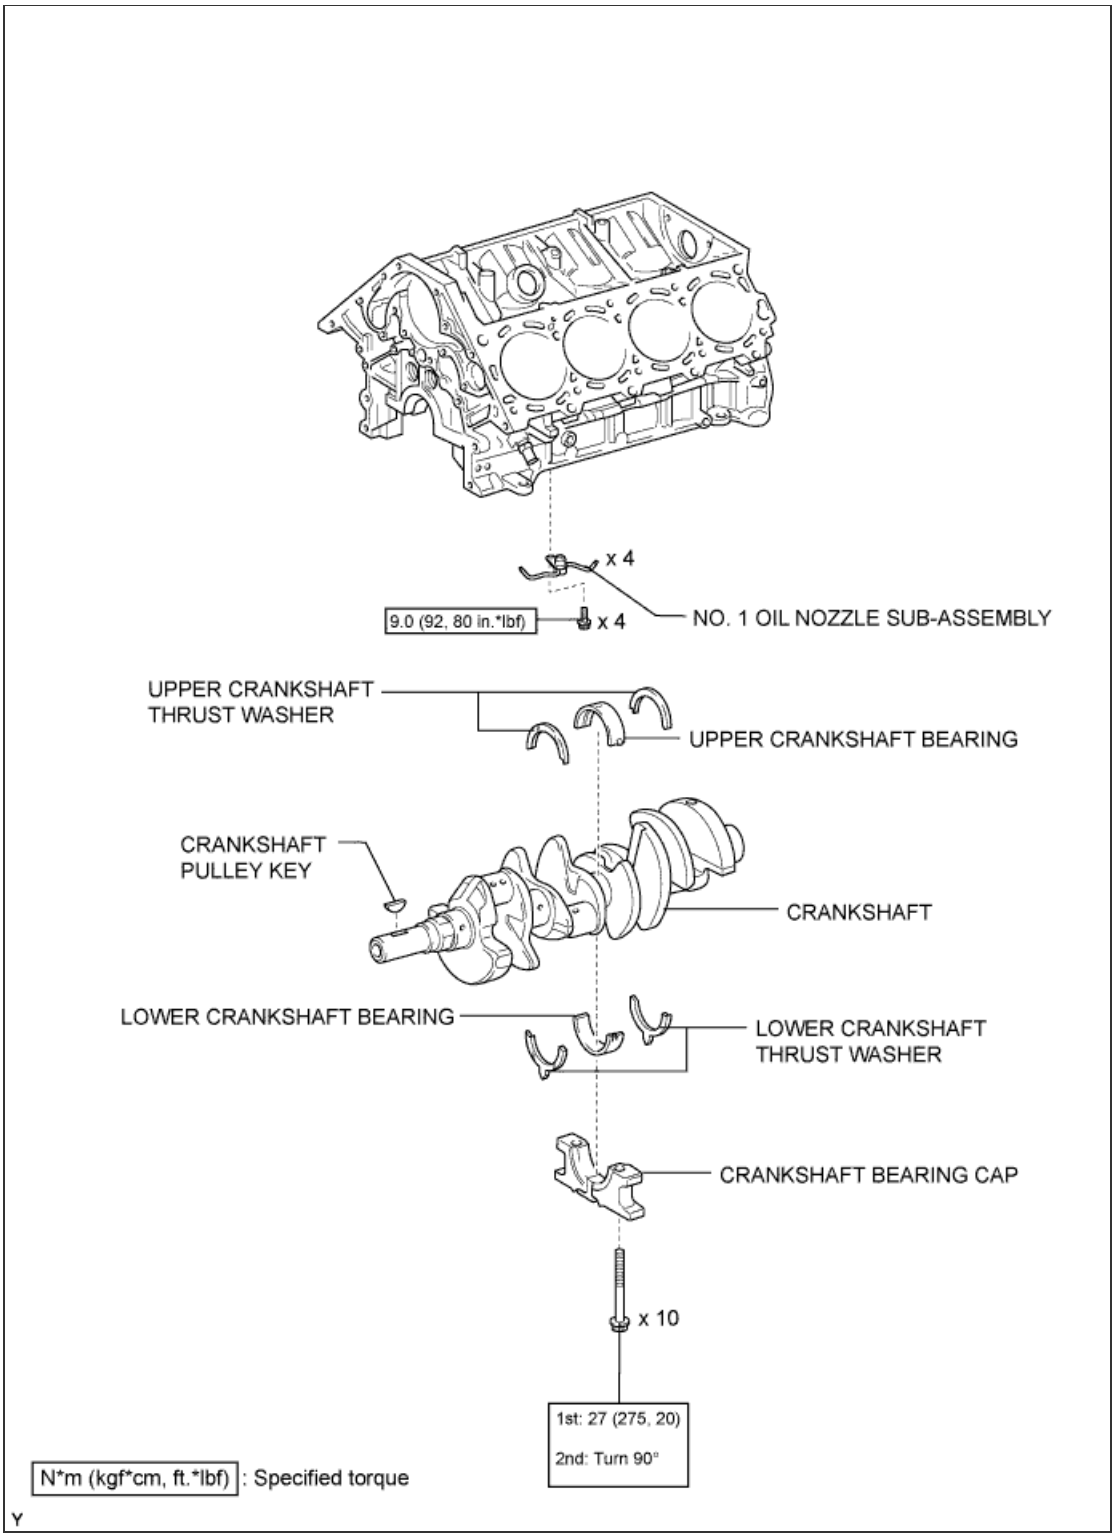
c. If the seating is too low on the valve face:
Use 60° and 45° cutters to correct the seat.



d. Check that the seat contact is in the middle of the valve face and has the following width.

Standard width:
1. to 1.4 mm (. to . 1 in.)





e. Hand-lap the valve and valve seat with an abrasive compound.

f. Clean and check the valve seating position.

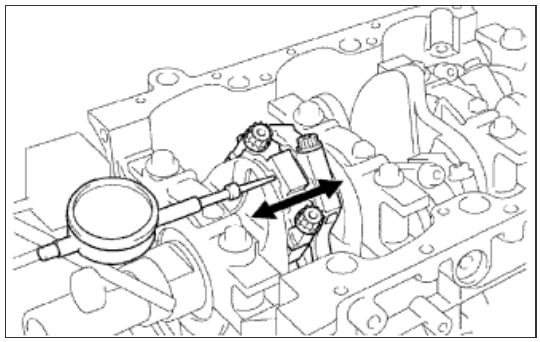
1. INSPECT CONNECTING ROD THRUST CLEARANCE

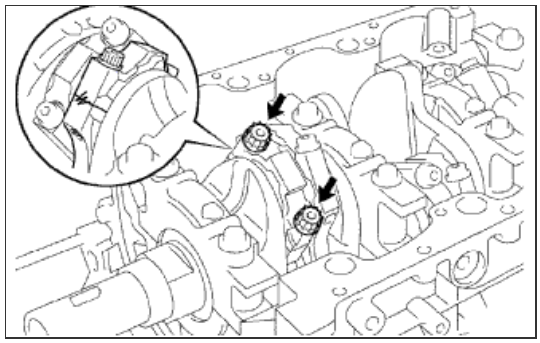


a. Using a dial indicator, measure the thrust clearance while moving the connecting rod back and forth.

Standard thrust clearance:
0.160 to 0.290 mm (0.00630 to 0.0114 in.)

Maximum thrust clearance:
0.35 mm (0.0138 in.)

If the thrust clearance is more than the maximum, replace the connecting rod assembly. If necessary, replace the crankshaft.

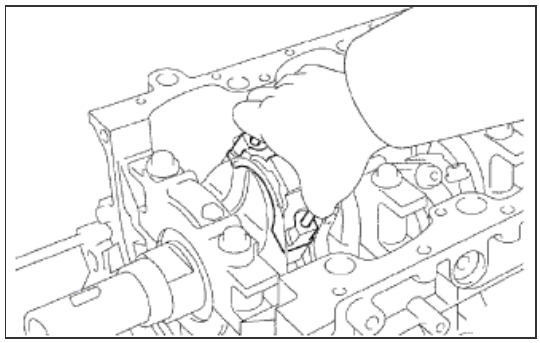


Standard connecting rod thickness:
22.880 to 22.920 mm (0.901 to 0.902 in.)

2. INSPECT CONNECTING ROD OIL CLEARANCE

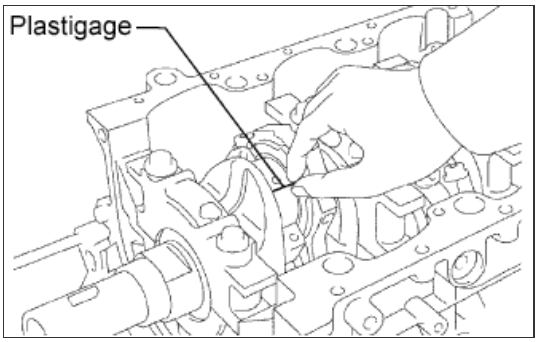
a. Check the matchmarks on the connecting rod and cap to ensure correct reassembly.

b. Remove the 2 connecting rod cap bolts.



c. Using the 2 removed connecting rod cap bolts, remove the connecting rod cap and lower bearing by wiggling the connecting rod cap right and left.

HINT:

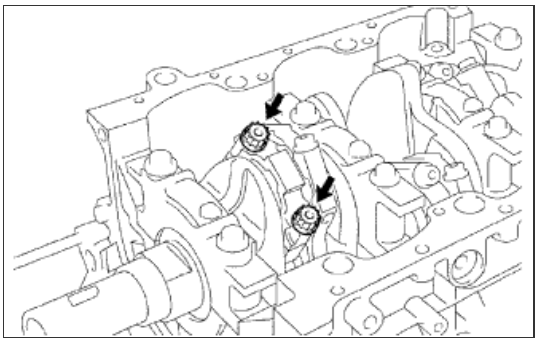


Keep the lower bearing and connecting rod cap together.

d. Clean the crank pin and bearing.

e. Check the crank pin and bearing for pitting and scratches.
If the crank pin or bearing is damaged, replace the bearings. If necessary, replace the crankshaft.

f. Lay a strip of Plastigage across the crank pin.



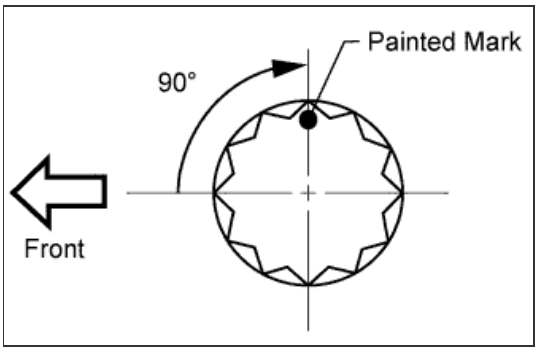
g. Install the connecting rod cap with the 2 bolts.

Torque:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }

NOTICE:

Do not turn the crankshaft.

If any one of the connecting rod cap bolts does not meet the torque specification, replace the connecting rod cap bolts.



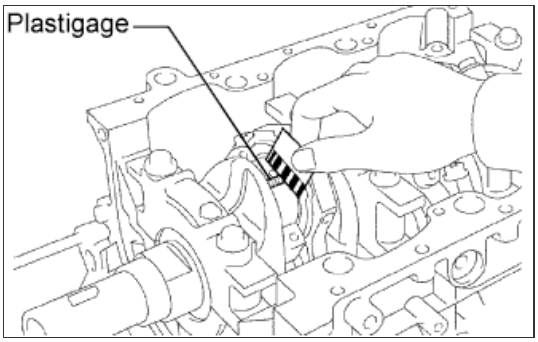
h. Mark the front side of each connecting rod cap bolt with paint.

i. Tighten the cap bolts 90° as shown.

j. Check that the painted marks are now at a 90° angle to the front.

k. Remove the 2 bolts, connecting rod cap and lower bearing.

l. Measure the Plastigage at its widest point.



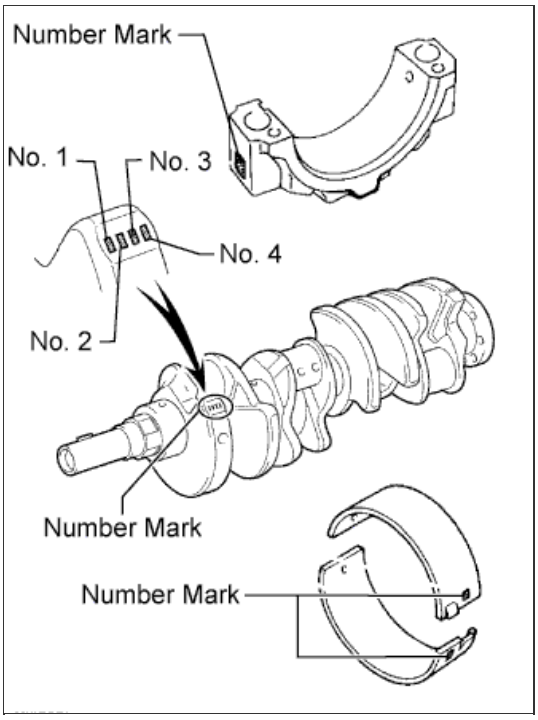
Standard oil clearance:
0.021 to 0.047 mm (0.000827 to 0.00185 in.)

Maximum oil clearance:
0.059 mm (0.00232 in.)

If the oil clearance is more than the maximum, replace the bearings. If necessary, replace the crankshaft.

HINT:

If replacing a standard bearing, replace it with one that has the same number. If the number of the bearing cannot be determined, select the correct bearing by adding together the numbers imprinted on the connecting rod cap and crankshaft. Then select the bearing with the same number as the total. There are 6 sizes of standard bearings, marked 2, 3, 4, 5, 6 and 7.



EXAMPLE:
Connecting rod cap "3" + Crankshaft "1" = "4" (Use bearing "4")

Standard Bearing Chart:

Item	Connecting Rod	Crankshaft	Use Bearing
Number Mark	1	1	2
	1	2	3
	2	1	
	1	3	4
	2	2	
	3	1	

	2	3	
	3	2	5
	4	1	
	3	3	6
	4	2	
	4	3	7

Standard Connecting Rod Big End Inside Diameter:

Number Mark	Specified Condition
Mark 1	55.000 to less than 55.006 mm (2.1654 to less than 2.1656 in.)
Mark 2	55.006 to less than 55.012 mm (2.1656 to less than 2.1658 in.)
Mark 3	55.012 to less than 55.018 mm (2.1658 to less than 2.1661 in.)
Mark 4	55.018 to less than 55.024 mm (2.1661 to less than 2.1663 in.)

Standard Crankshaft Crank Pin Diameter:

Number Mark	Specified Condition
Mark 1	51.994 to less than 52.000 mm (2.0470 to less than 2.0472 in.)
Mark 2	51.988 to less than 51.994 mm (2.0468 to less than 2.0470 in.)
Mark 3	51.982 to less than 51.988 mm (2.0465 to less than 2.0468 in.)

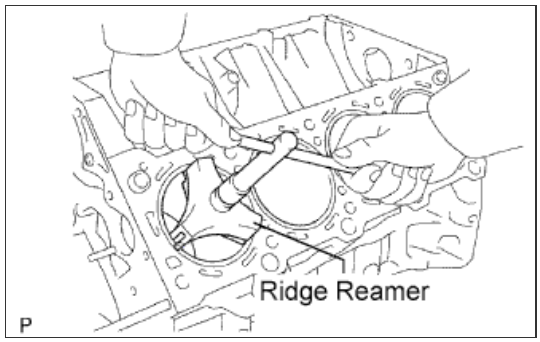
Standard Si ed Bearing Center all Thickness:

Number Mark	Specified Condition
Mark 2	1.487 to less than 1.490 mm (0.0585 to less than 0.0587 in.)
Mark 3	1.490 to less than 1.493 mm (0.0587 to less than 0.0588 in.)
Mark 4	1.493 to less than 1.496 mm (0.0588 to less than 0.0589 in.)
Mark 5	1.496 to less than 1.499 mm (0.0589 to less than 0.0590 in.)
Mark 6	1.499 to less than 1.502 mm (0.0590 to less than 0.0591 in.)
Mark 7	1.502 to less than 1.505 mm (0.0591 to less than 0.0593 in.)

m. Completely remove the Plastigage.

n. Perform the inspection above for each cylinder.

3. REMOVE PISTON AND CONNECTING ROD



a. Using a ridge reamer, remove all the carbon from the top of the cylinder.

b. Remove the 16 cap bolts and 8 connecting rod caps.

c. Push the piston, connecting rod assembly and upper bearing through the top of the cylinder block.

HINT:

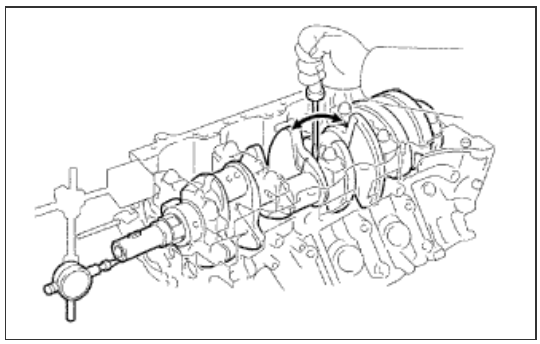
- **Keep the bearings, connecting rod and cap together.**
- **Arrange the piston and connecting rod in the correct order.**
- **Be sure to arrange the remo ed piston and connecting rod assemblies in such a ay that they can be reinstalled exactly as before.**

4. REMOVE CONNECTING ROD BEARING

a. Remove the connecting rod bearings from the connecting rods and connecting rod caps.

HINT:

Arrange the removed parts in the correct order.



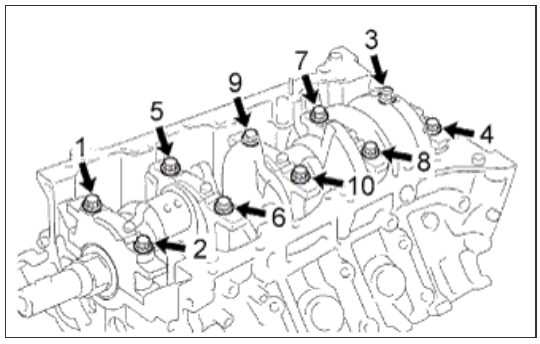
5. INSPECT CRANKSHA T THRUST CLEARANCE

a. Using a dial indicator, measure the thrust clearance while prying the crankshaft back and forth with a screwdriver.

Standard thrust clearance:
0.020 to 0.220 mm (0.000787 to 0.00866 in.)

Maximum thrust clearance:
0.30 mm (0.0118 in.)

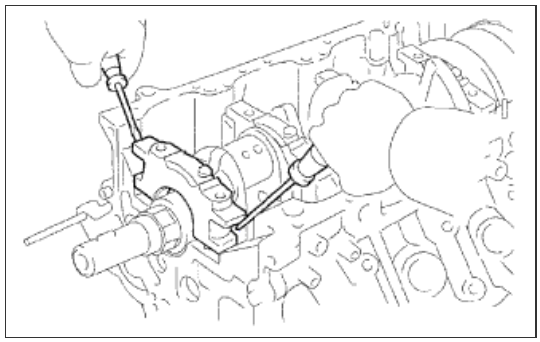
If the thrust clearance is more than the maximum, replace the thrust washers as a set. If necessary, replace the crankshaft.



Standard Thrust asher Thickness:

Item	Specified Condition
Standard	2.440 to 2.490 mm (0.0961 to 0.0980 in.)
O/S (0.125)	2.565 to 2.615 mm (0.101 to 0.103 in.)

6. REMOVE CRANKSHA T



a. Uniformly loosen and remove the 10 crankshaft bearing cap bolts in the sequence shown in the illustration.

b. Using 2 screwdrivers, gradually pry up and remove the 5 crankshaft bearing caps, 5 lower bearings and 2 lower thrust washers (No. 3 crankshaft bearing cap only).

NOTICE:

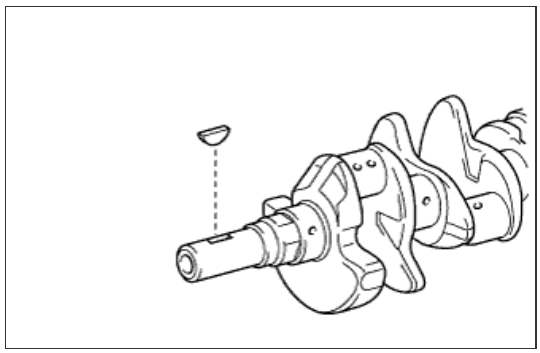
Be careful not to damage the contact surface between the cylinder block and bearing cap.

HINT:

- **Keep the lo er bearing and crankshaft bearing cap together.**
- **Arrange the remo ed parts in the correct order.**
- **Be sure to arrange the bearing caps and lo er thrust ashers in such a ay that they can be reinstalled exactly as before.**

c. Lift out the crankshaft.

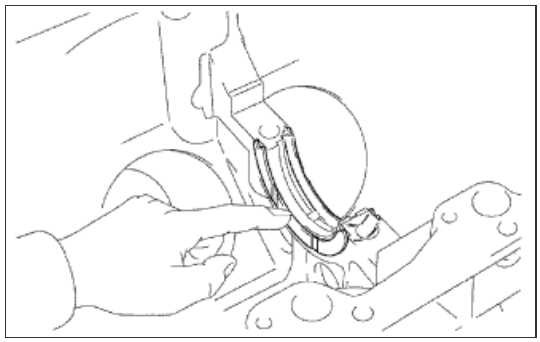
d. Remove the crankshaft bearings and upper thrust washers from the cylinder block.



HINT:

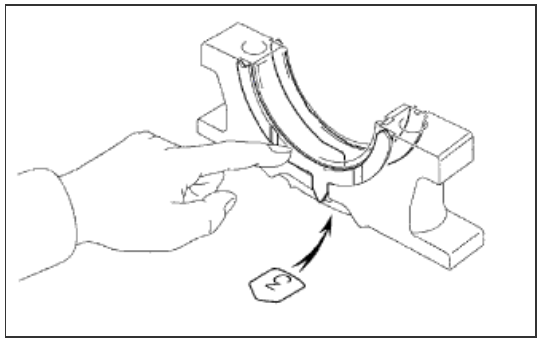
Arrange the bearings and thrust washers in the correct order.

e. Check each crankshaft journal and bearing for pitting and scratches.
If the journal or bearing is damaged, replace the bearings. If necessary, replace the crankshaft.



7. REMOVE CRANKSHA T PULLEY KEY

a. Using a screwdriver, remove the pulley key from the crankshaft.



8. REMOVE CRANKSHA T THRUST ASHER SET

a. Remove the thrust washer set (upper side) from the cylinder block.

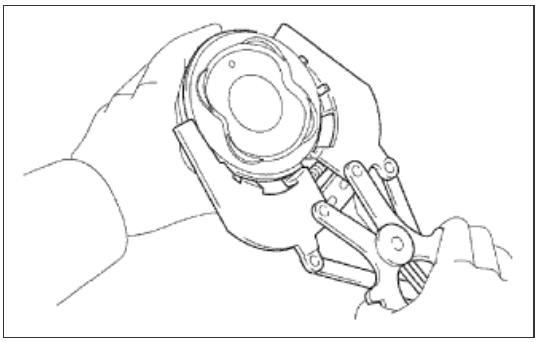
b. Remove the thrust washer set (lower side) from the No. 3 bearing cap.

9. REMOVE CRANKSHA T BEARING

a. Remove the crankshaft bearings from the cylinder block and bearing caps.

HINT:

Arrange the removed parts in the correct order.



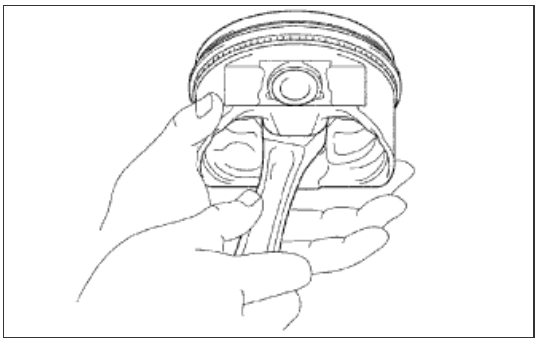
10. REMOVE PISTON RING SET

HINT:

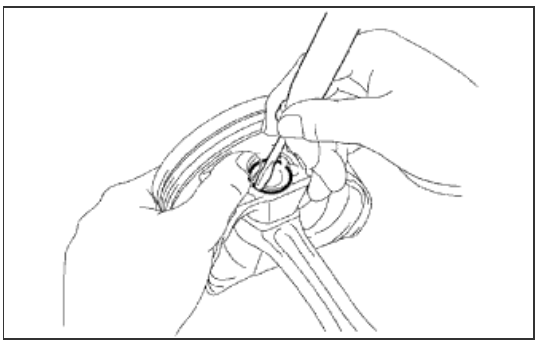
Arrange the piston rings in the correct order.

a. Using a piston ring expander, remove the No. 1 and No. 2 piston rings.

b. Remove the oil ring (2 side rails and expander) by hand.



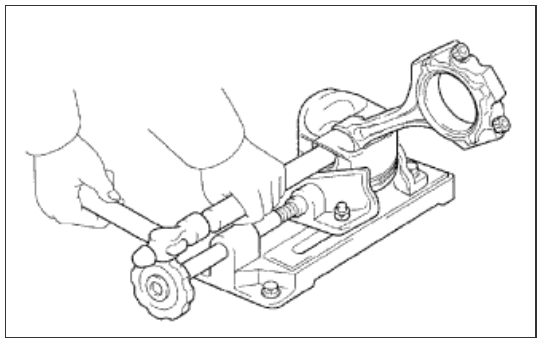
11. REMOVE PISTON SUB-ASSEMBLY ITH PIN



a. Check the fitting condition between the piston and piston pin.

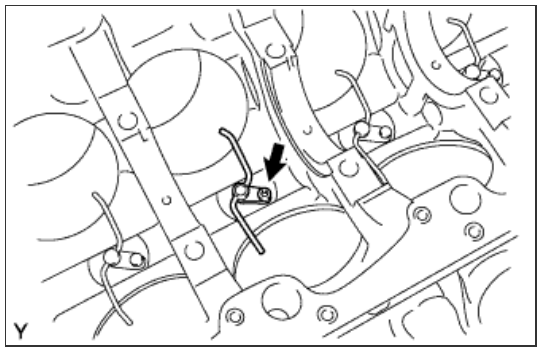
i. Move the connecting rod back and forth on the piston pin. Check the fitting condition.
If abnormal movement is felt, replace the piston and pin as a set.

ii. Rotate the piston back and forth on the piston pin. Check the fitting condition.
If abnormal movement is felt, replace the piston and pin as a set.



b. Using a small screwdriver, pry out the 2 snap rings.

c. Using a plastic-faced hammer and brass bar, lightly tap out the piston pin. Then remove the connecting rod.



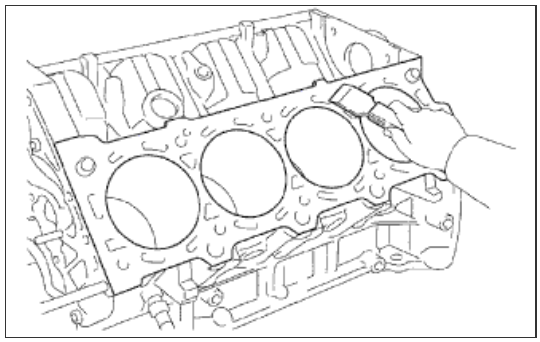
HINT:

- **The piston and pin are a matched set.**
- **Be sure to arrange the remo ed pistons, pins, rings, connecting rods and bearings in such a ay that the parts can be reinstalled exactly as before.**
- **Arrange the remo ed parts in the correct order.**

12. REMOVE NO. 1 OIL NOZZLE SUB-ASSEMBLY

a. Using a 5 mm hexagon wrench, remove the 4 bolts and 4 oil nozzles.

13. REMOVE STUD BOLT



NOTICE:

If a stud bolt is deformed or the threads are damaged, replace it.

for Preparation Click here

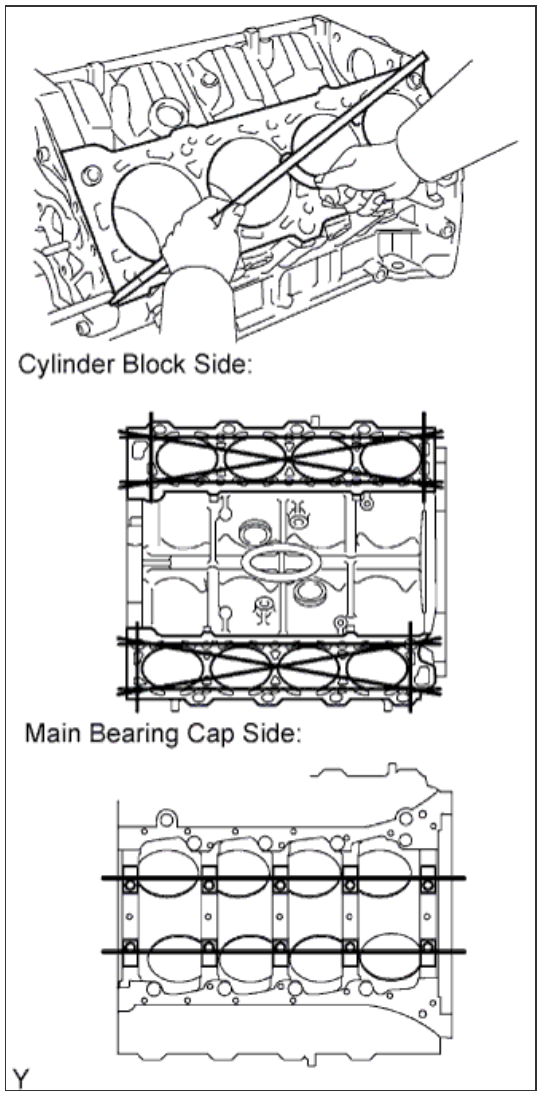
1. INSPECT CYLINDER BLOCK SUB-ASSEMBLY

a. Clean the cylinder block.

i. Using a gasket scraper, remove all the gasket material from the top surface of the cylinder block.

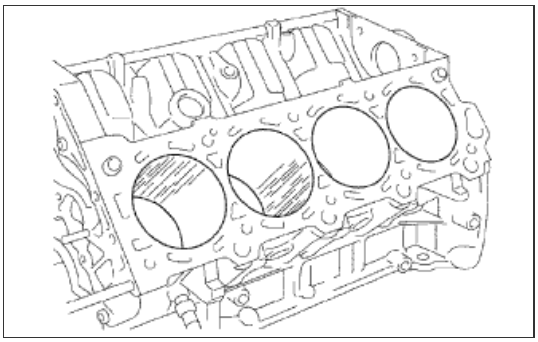
ii. Using a soft brush and solvent, thoroughly clean the cylinder block.

NOTICE:



If the cylinder is washed at high temperatures, the cylinder liner sticks out beyond the cylinder block. Always wash the cylinder block at a temperature of 45°C (113°F) or less.

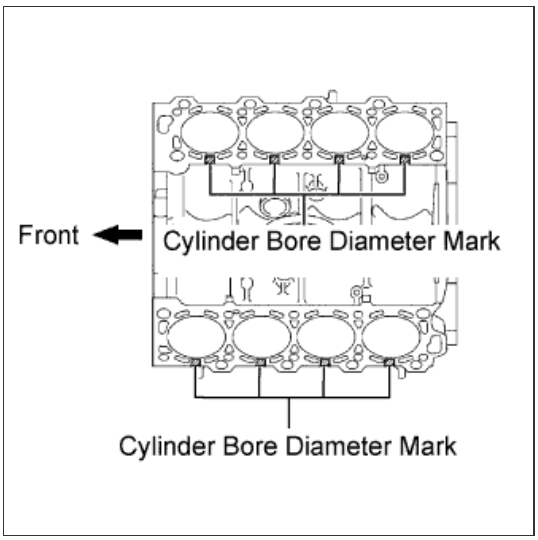
b. Using a precision straightedge and feeler gauge, measure the surfaces contacting the cylinder head and main bearing cap for warpage.



Standard warpage:
0 to 0.05 mm (0 to 0.00197 in.)

Maximum warpage:
0.07 mm (0.00276 in.)

If the warpage is more than the maximum, replace the cylinder block.



c. Visually check the cylinder for vertical scratches.
If deep scratches are present, rebore all 8 cylinders and replace all 8 pistons. If necessary, replace the cylinder block.

2. INSPECT CYLINDER BORE

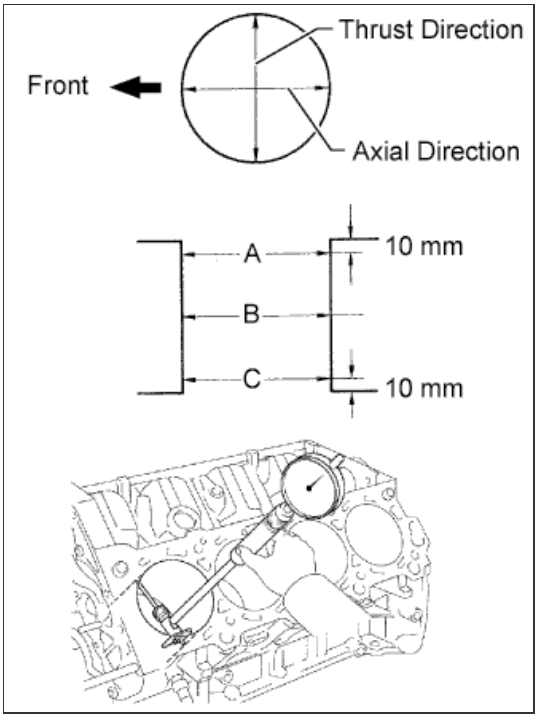
INT:

There are 3 standard cylinder bore diameter sizes, marked "1", "2" and "3" accordingly. The mark is stamped on the top of the cylinder block.

a. Inspect the cylinder bore diameter.

i. Using a cylinder gauge, measure the cylinder bore diameter at positions A, B and C in the thrust and axial directions.

Measurement Cylinder Bore Position:

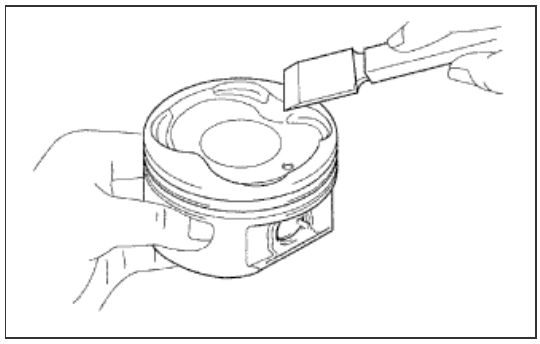


Position	Specified Condition
A	10 mm (0.394 in.) from top edge
B	Center
C	10 mm (0.394 in.) from bottom edge

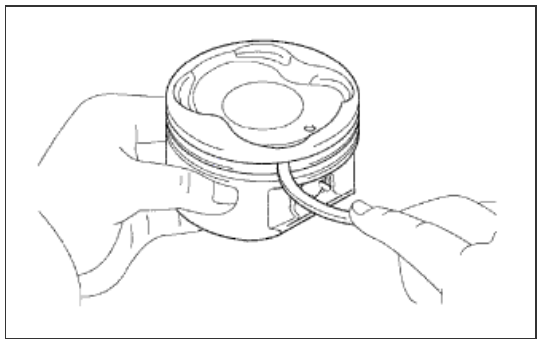
Standard Diameter:

Number Mark	Specified Condition
Mark 1	94.002 to 94.010 mm (3.70087 to 3.70118 in.)
Mark 2	94.011 to 94.020 mm (3.70122 to 3.70157 in.)
Mark 3	94.021 to 94.028 mm (3.70161 to 3.70189 in.)

Maximum diameter:
94.230 mm (3.71 in.)



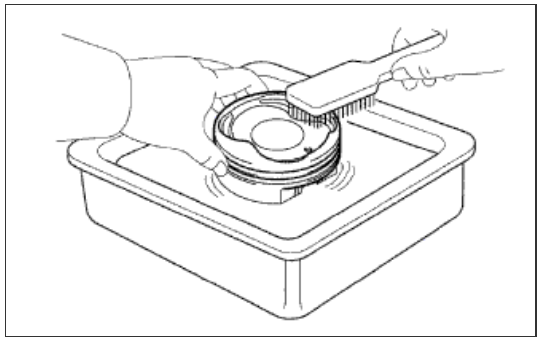
If the diameter is more than the maximum, rebore all 8 cylinders and replace all 8 pistons. If necessary, replace the cylinder block.



3. INSPECT PISTON SUB-ASSEMBLY WIT PIN

a. Clean the piston.

i. Using a gasket scraper, remove the carbon from the piston top.

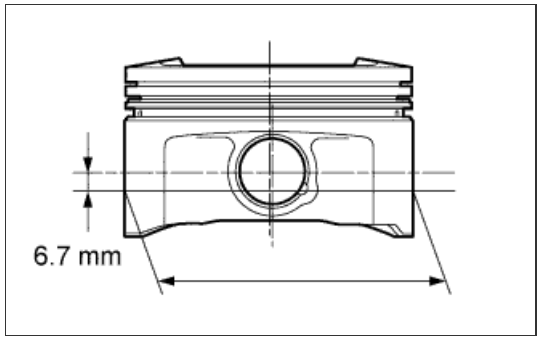


ii. Using a groove cleaning tool or broken ring, clean the piston ring grooves.

iii. Using solvent and a brush, thoroughly clean the piston.

NOTICE:

Do not use a wire brush.

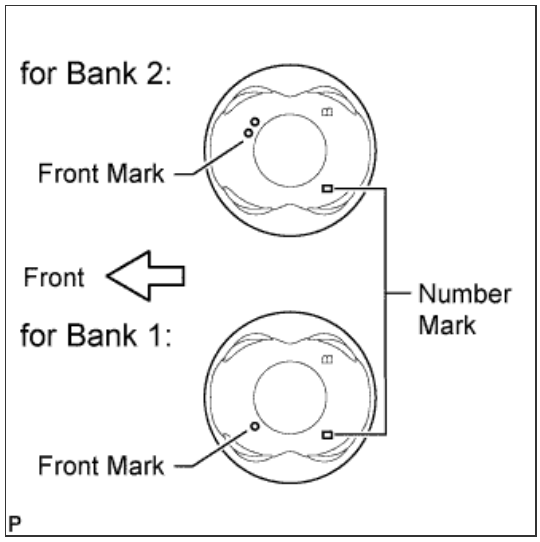


b. Inspect the piston diameter.

i. Using a micrometer, measure the piston diameter at a position that is 6.7 mm (0.264 in.) downward from the center of the piston pin hole (refer to the illustration).

Standard Piston Diameter:

Piston	Specified Condition
STD	93.968 to 93.996 mm (3.670 to 3.701 in.)
O/S (0.50)	94.468 to 94.496 mm (3.719 to 3.720 in.)



INT:

There are 3 standard diameter sizes, marked "1", "2" and "3". The mark is stamped on the piston top.

Standard Piston Diameter:

Number ark	Specified Condition
ark 1	93.942 to 93.952 mm (3.6985 to 3.6989 in.)
ark 2	93.952 to 93.960 mm (3.6989 to 3.6992 in.)
ark 3	93.960 to 93.970 mm (3.6992 to 3.6996 in.)

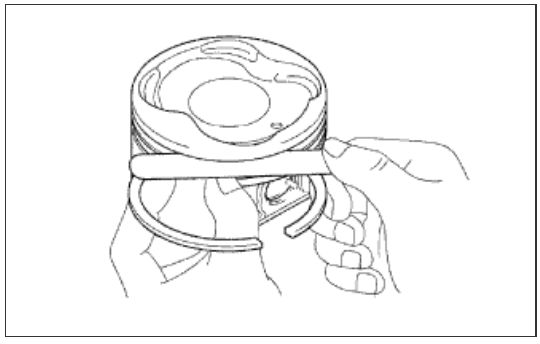
4. INSPECT PISTON OIL CLEARANCE

a. easure the cylinder bore diameter in the thrust directions.

b. Subtract the piston diameter measurement from the cylinder bore diameter measurement.

Standard oil clearance:
0.050 to 0.068 mm (0.00197 to 0.00268 in.)

Maximum oil clearance:
0.13 mm (0.00512 in.)



If the oil clearance is more than the maximum, replace all 8 pistons and rebore all 8 cylinders. If necessary, replace the cylinder block.

INT:

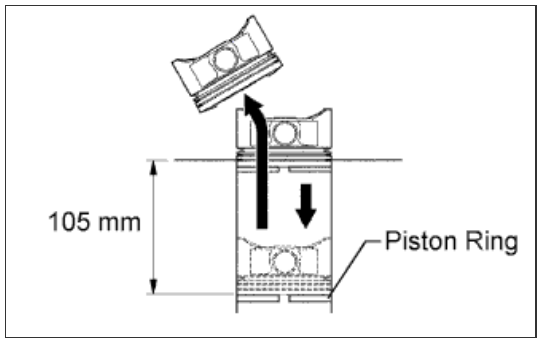
When replacing the cylinder block, use a piston with the same number mark as the cylinder diameter marked on the cylinder block.

5. INSPECT RING GROOVE CLEARANCE

a. Inspect the piston ring groove clearance.

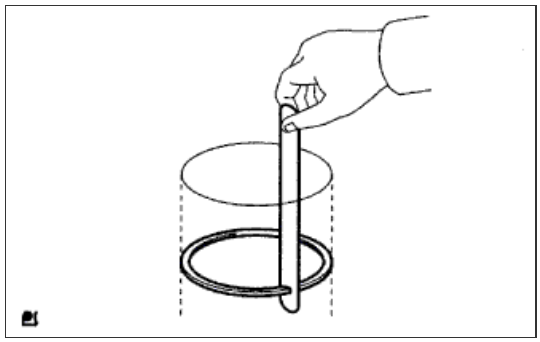
i. Using a feeler gauge, measure the clearance between a new piston ring and the wall of the ring groove.

Standard Ring Groove Clearance:



Piston Ring	Specified Condition
No. 1	0.030 to 0.080 mm (0.00118 to 0.00315 in.)
No. 2	0.020 to 0.060 mm (0.000787 to 0.00236 in.)

If the clearance is not as specified, replace the piston.



6. INSPECT PISTON RING END GAP

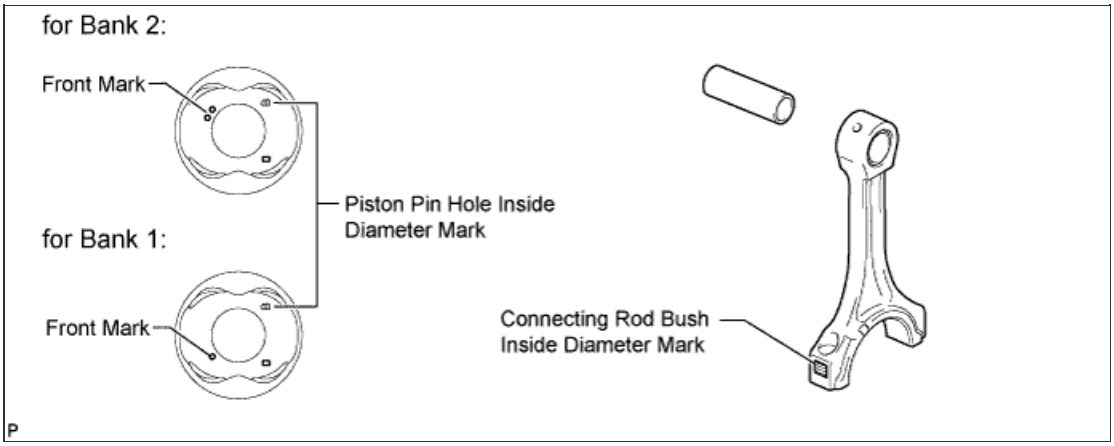
a. Insert the piston ring into the cylinder bore.

b. Using a piston, push the piston ring a little beyond the bottom of the ring travel, 105 mm (4.13 in.) from the top of the cylinder block.

c. Using a feeler gauge, measure the end gap.

Standard End Gap:

Piston Ring	Specified Condition
No. 1 piston ring	0.300 to 0.400 mm (0.0118 to 0.0157 in.)
No. 2 piston ring	0.400 to 0.550 mm (0.0157 to 0.0217 in.)
Oil ring (Side rail)	0.130 to 0.380 mm (0.00512 to 0.0150 in.)



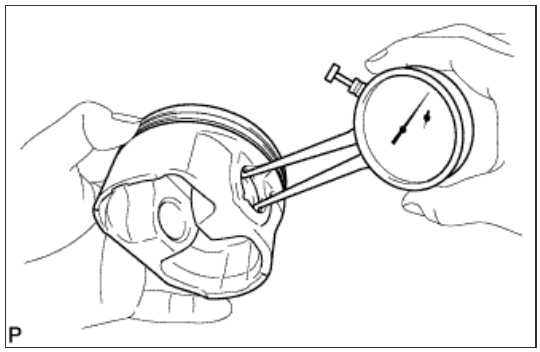
Maximum End Gap:

Piston Ring	Specified Condition
No. 1 piston ring	1.10 mm (0.0433 in.)
No. 2 piston ring	1.30 mm (0.0512 in.)
Oil ring (Side rail)	0.90 mm (0.0354 in.)

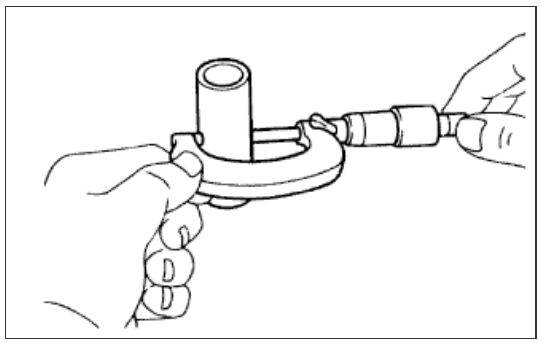
If the end gap is more than the maximum, replace the piston ring. If the end gap is more than the maximum even with a new piston ring, rebore all 8 cylinders or replace the cylinder block sub-assembly.

7. INSPECT PISTON PIN OIL CLEARANCE

a. Check each mark on the piston and connecting rod.



b. Using a caliper gauge, measure the inside diameter of the piston pin hole.



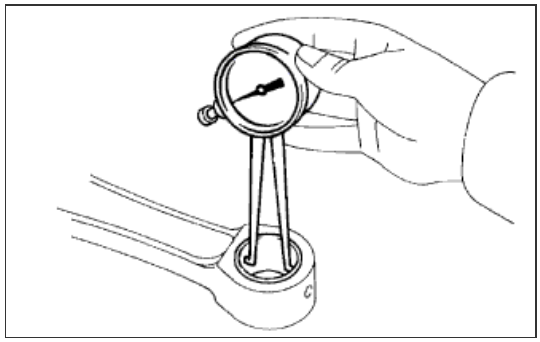
Standard Piston Pin ole Inside Diameter:

Mark	Specified Condition
A	21.998 to 22.001 mm (0.86606 to 0.86618 in.)

B	22.002 to 22.004 mm (0.86622 to 0.86630 in.)
C	22.005 to 22.007 mm (0.86634 to 0.86642 in.)

c. Using a micrometer, measure the piston pin diameter.

Standard Piston Pin Diameter:



Piston Pin	Specified Condition
A	21.997 to 22.000 mm (0.86602 to 0.86614 in.)
B	22.001 to 22.003 mm (0.86618 to 0.86626 in.)
C	22.004 to 22.006 mm (0.86630 to 0.86638 in.)

d. Subtract the piston pin diameter measurement from the piston pin hole diameter measurement.

Standard oil clearance:
-0.002 to 0.004 mm (-0.0000787 to 0.000157 in.)

If the oil clearance is more than the maximum, replace the piston and piston pin as a set.

e. Using a caliper gauge, measure the inside diameter of the connecting rod bush.

Standard Bush Inside Diameter:

Bush	Specified Condition
A	22.005 to 22.008 mm (0.86633 to 0.86646 in.)
B	22.009 to 22.011 mm (0.86650 to 0.86657 in.)
C	22.012 to 22.014 mm (0.86661 to 0.86669 in.)

If the bush inside diameter is not as specified, replace the connecting rod small end bush and check the oil clearance.

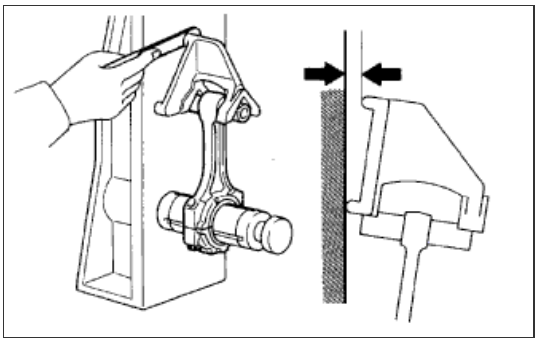
f. Subtract the piston pin diameter measurement from the bush inside diameter measurement.

Standard oil clearance:
0.005 to 0.011 mm (0.000197 to 0.000433 in.)

Maximum oil clearance:
0.05 mm (0.00197 in.)

If the oil clearance is more than the maximum, replace the connecting rod small end bush. If necessary, replace the piston and piston pin with a new piston and pin set.

8. INSPECT CONNECTING ROD SUB-ASSEMBLY

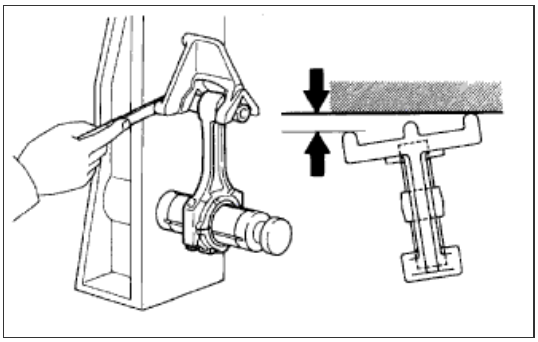


a. Using a rod aligner and feeler gauge, check the connecting rod alignment.

i. Check if the connecting rod is bent.

Maximum bend:

0.05 mm (0.00197 in.) per 100 mm (3.94 in.)



If the bend is more than the maximum, replace the connecting rod sub-assembly.

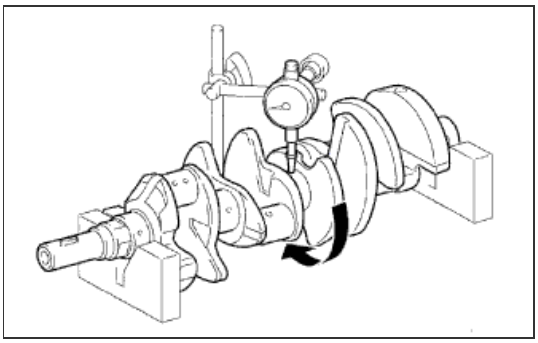
ii. Check if the connecting rod is twisted.

Maximum twist:
0.15 mm (0.00591 in.) per 100 mm (3.94 in.)

If the twist is more than the maximum, replace the connecting rod sub-assembly.

9. INSPECT CRANKS AFT

a. Inspect for circle runout.



i. Place the crankshaft on V-blocks.

ii. Using a dial indicator, measure the circle runout at the center journal.

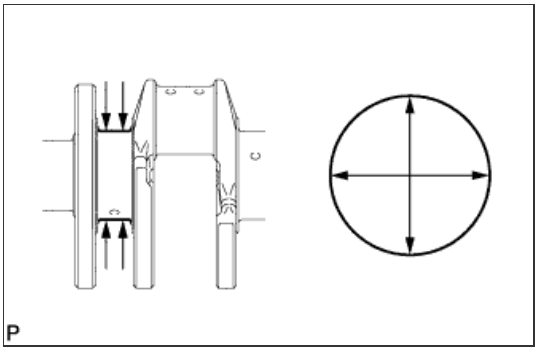
Standard circle runout:
0 to 0.06 mm (0 to 0.00236 in.)

Maximum circle runout:
0.08 mm (0.00315 in.)

If the circle runout is more than the maximum, replace the crankshaft.

b. Inspect the main journals.

i. Using a micrometer, measure the diameter of each main journal.



Standard diameter:
66.988 to 67.000 mm (2.6373 to 2.6378 in.)

If the diameter is not as specified, check the oil clearance. If necessary, replace the crankshaft.

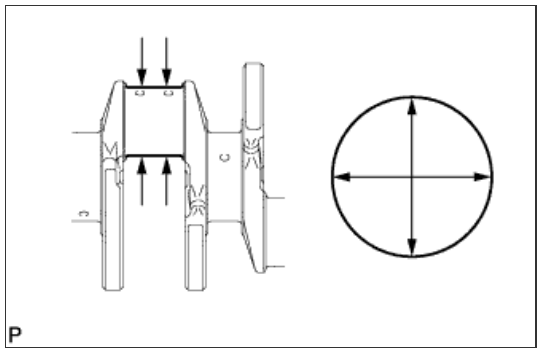
ii. Check each main journal for taper and out of round as shown in the illustration.

Maximum taper and out of round:
0.02 mm (0.000787 in.)

If the taper and out of round is more than the maximum, replace the crankshaft.

c. Inspect the crank pins.

i. Using a micrometer, measure the diameter of each crank pin.



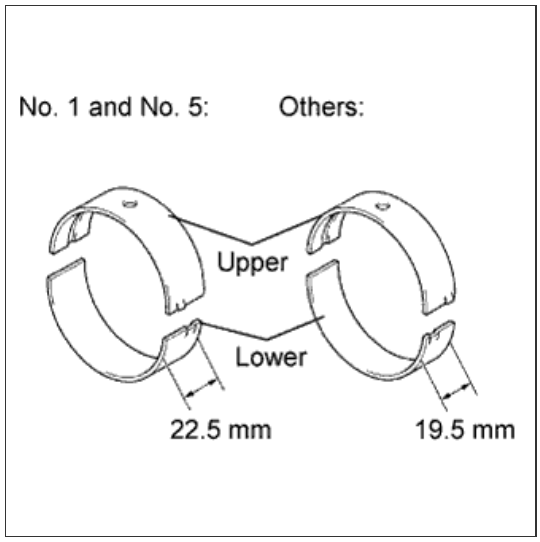
Standard diameter:
51.982 to 52.000 mm (2.0465 to 2.0472 in.)

If the diameter is not as specified, check the oil clearance. If necessary, replace the crankshaft.

ii. Check each crank pin for taper and out of round as shown in the illustration.

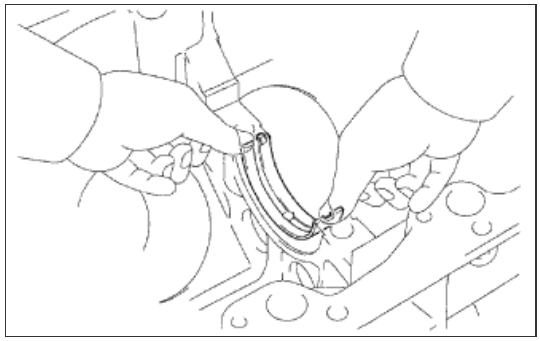
Maximum taper and out of round:
0.02 mm (0.000787 in.)

If the taper and out of round is more than the maximum, replace the crankshaft.



10. INSPECT CRANKS AFT OIL CLEARANCE

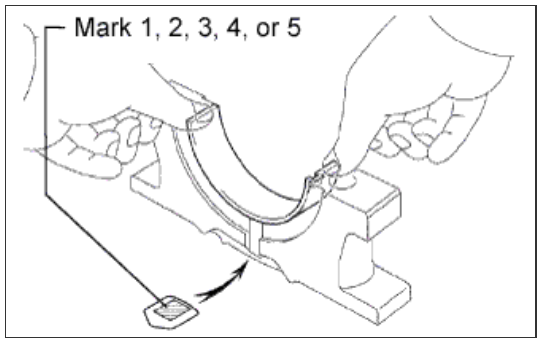
a. Clean each crankshaft journal and bearing.



INT:

- **Main bearings come in widths of 19.5 mm (0.768 in.) and 22.5 mm (0.886 in.). Install the 22.5 mm (0.886 in.) bearings in the No. 1 and No. 5 cylinder block journal positions with the crankshaft bearing cap. Install the 19.5 mm (0.768 in.) bearings in the other positions.**
- **Upper bearings have an oil groove and oil holes lower bearings do not.**

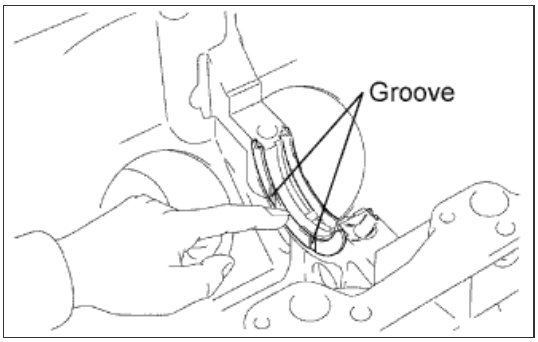
b. Check each crankshaft journal and bearing for pitting and scratches.
If the journal or bearing is damaged, replace the bearings. If necessary, replace the crankshaft.



c. Align the bearing claw with the claw groove of the cylinder block, and push in the 5 upper bearings.

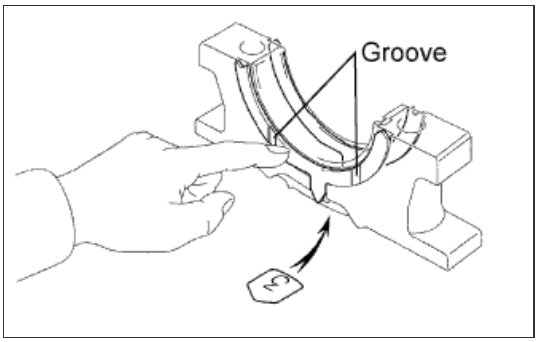
d. Align the bearing claw with the claw groove of the crankshaft bearing cap, and push in the 5 lower bearings.

INT:



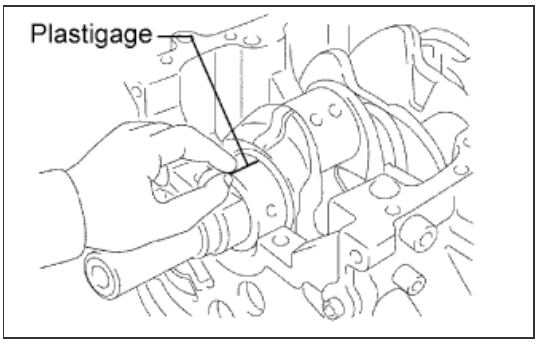
A number is marked on each bearing cap to indicate the installation position.

e. Apply engine oil to the thrust washer set.



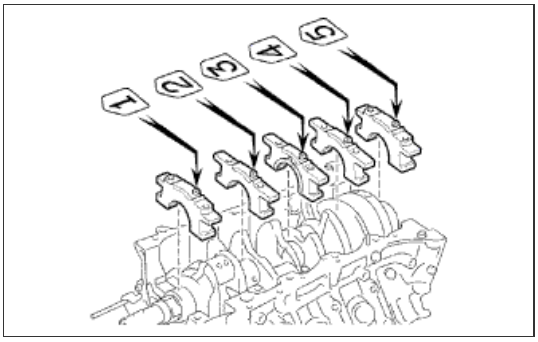
f. Install the 2 thrust washers under the No. 3 journal position of the cylinder block

with the oil grooves facing outward.



g. Install the 2 thrust washers on the No. 3 crankshaft bearing cap with the grooves facing outward.

h. Place the crankshaft on the cylinder block.



i. Lay a strip of Plastigage across each journal.

j. Examine the front mark and number, and install the 5 crankshaft bearing caps to the cylinder block.

INT:

A number is marked on each bearing cap to indicate the installation position.

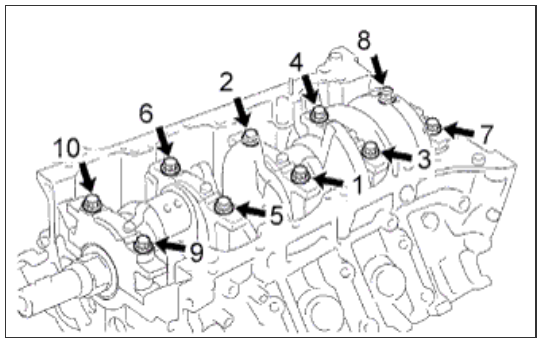
k. Apply a light coat of engine oil to the threads and under the heads of the crankshaft bearing cap bolts.

l. Install the 10 crankshaft bearing cap bolts.

INT:

If any one of the main bearing cap bolts is broken or deformed, replace it.

i. Uniformly tighten the 10 crankshaft bearing cap bolts in several passes in the sequence shown in the illustration.

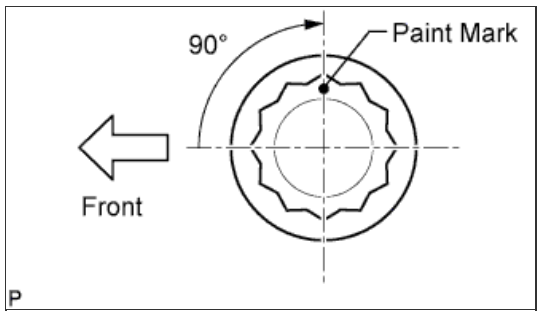


Torque:

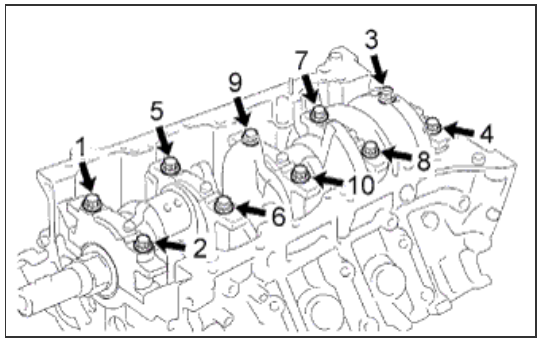
27 N*m{ 275 kgf*cm 20 ft.*lbf

NOTICE:

Do not turn the crankshaft.



If any of the bearing cap bolts cannot meet the torque specification, replace the bearing cap bolt.

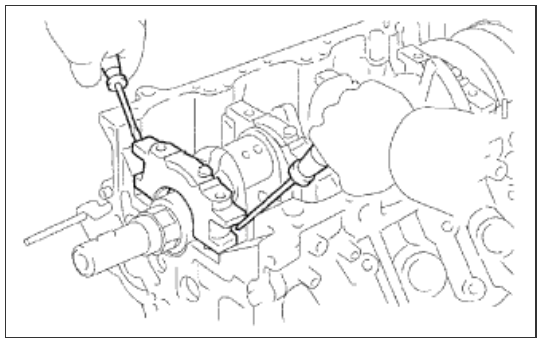


ii. ark the front of the crankshaft bearing cap bolts with paint.

iii. Tighten the crankshaft bearing cap bolts 90° as shown in the illustration.

iv. Check that the painted marks are now at a 90° angle to the front.

m. Uniformly loosen and remove the 10 crankshaft bearing cap bolts in the sequence shown in the illustration.



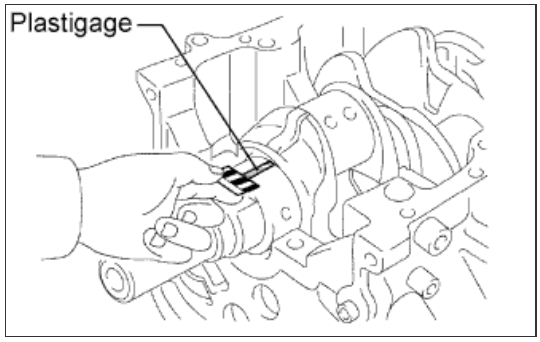
n. Using 2 screwdrivers, gradually pry up and remove the 5 crankshaft bearing caps, 5 lower bearings and 2 lower thrust washers (No. 3 crankshaft bearing cap only).

NOTICE:

Be careful not to damage the contact surfaces of the cylinder block and bearing cap.

INT:

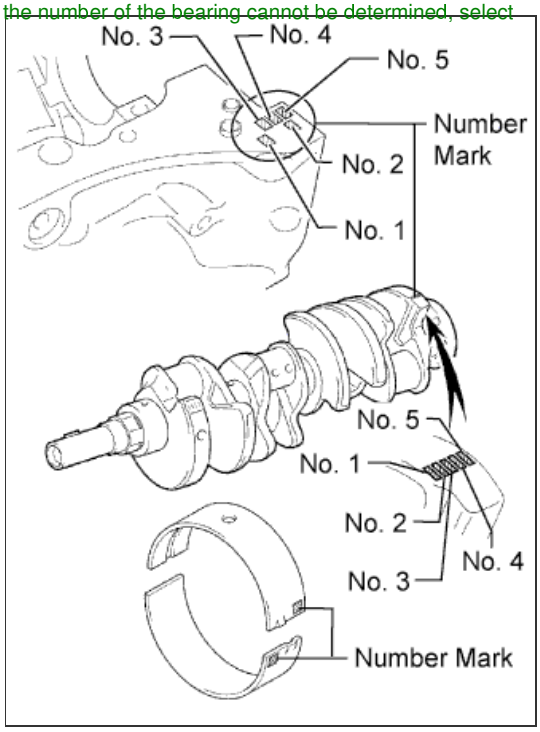
- **Keep the lower bearing and crankshaft bearing cap together.**
- **Arrange the removed parts in the correct order.**



o. Measure the Plastigage at its widest point.

Standard Oil Clearance:

Number Mark	Specified Condition
No. 1 and No. 5	0.028 to 0.046 mm (0.00110 to 0.00181 in.)
Other	0.040 to 0.058 mm (0.00157 to 0.00228 in.)



Maximum oil clearance:
0.065 mm (0.00256 in.)

If the oil clearance is more than the maximum, replace the bearings. If necessary, replace the crankshaft.

INT:

If replacing a standard bearing, replace it with one that has the same number. If the number of the bearing cannot be determined, select the correct bearing by adding together the numbers imprinted on the cylinder block and crankshaft. Then refer to the table below for the appropriate bearing number. There are 5 sizes of standard bearings. For No. 1 and No. 5 position bearings, use bearings marked 3, 4, 5, 6 and 7. For other position bearings, use bearings marked 1, 2, 3, 4 and 5.

E A PLE:
No. 1 and No. 5 journal
Cylinder block (A) "7" + Crankshaft (B) "6" = Total number 13
(Use bearing "5")
Other journal
Cylinder block (A) "7" + Crankshaft (B) "6" = Total number 13
(Use bearing "3")

A = Cylinder block number mark
B = Crankshaft number mark

INT:

(Cylinder block journal diameter - crankshaft journal diameter - 5) X 1000 = A + B

Bearing Chart:

(A) + (B)	No. 1 and No. 5 Journal	Other Journal
0 to 6	3	1
6 to 11	4	2
12 to 17	5	3
18 to 23	6	4
24 to 28	7	5

Standard Cylinder Block Crankshaft Journal Bore Diameter (A):

Number Mark	Specified Condition
Mark 00	72.000 mm (2.83465 in.)
Mark 01	72.001 mm (2.83469 in.)
Mark 02	72.002 mm (2.83472 in.)
Mark 03	72.003 mm (2.83476 in.)
Mark 04	72.004 mm (2.83480 in.)
Mark 05	72.005 mm (2.83484 in.)
Mark 06	72.006 mm (2.83488 in.)
Mark 07	72.007 mm (2.83492 in.)
Mark 08	72.008 mm (2.83496 in.)
Mark 09	72.009 mm (2.83500 in.)
Mark 10	72.010 mm (2.83504 in.)
Mark 11	72.011 mm (2.83508 in.)
Mark 12	72.012 mm (2.83512 in.)
Mark 13	72.013 mm (2.83516 in.)
Mark 14	72.014 mm (2.83520 in.)
Mark 15	72.015 mm (2.83524 in.)
Mark 16	72.016 mm (2.83528 in.)

Standard Crankshaft Journal Diameter (B):

Number Mark	Specified Condition
Mark 00	67.000 mm (2.63780 in.)
Mark 01	66.999 mm (2.63776 in.)
Mark 02	66.998 mm (2.63772 in.)
Mark 03	66.997 mm (2.63768 in.)
Mark 04	66.996 mm (2.63764 in.)
Mark 05	66.995 mm (2.63760 in.)
Mark 06	66.994 mm (2.63756 in.)
Mark 07	66.993 mm (2.63752 in.)
Mark 08	66.992 mm (2.63748 in.)
Mark 09	66.991 mm (2.63744 in.)

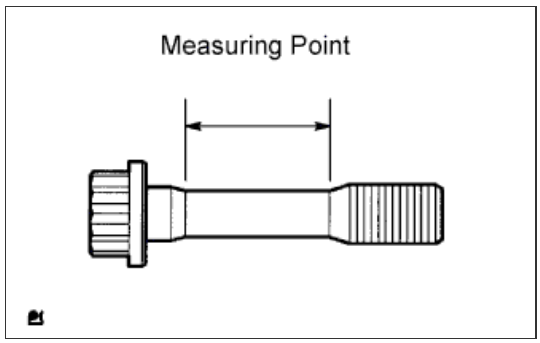
ark 10	66.990 mm (2.63740 in.)
ark 11	66.989 mm (2.63736 in.)
ark 12	66.988 mm (2.63732 in.)

Standard Bearing Center Wall Thickness:

Number ark	Specified Condition
ark 1	2.481 to less than 2.484 mm (0.0977 to less than 0.0978 in.)
ark 2	2.484 to less than 2.487 mm (0.0978 to less than 0.0979 in.)
ark 3	2.487 to less than 2.490 mm (0.0979 to less than 0.0980 in.)
ark 4	2.490 to less than 2.493 mm (0.0980 to less than 0.0981 in.)
ark 5	2.493 to less than 2.496 mm (0.0981 to less than 0.0983 in.)
ark 6	2.496 to less than 2.499 mm (0.0983 to less than 0.0984 in.)
ark 7	2.499 to less than 2.502 mm (0.0984 to less than 0.0985 in.)

p. Completely remove the Plastigage.

q. Perform the inspection above for each journal.



11. INSPECT CONNECTING ROD BOLT

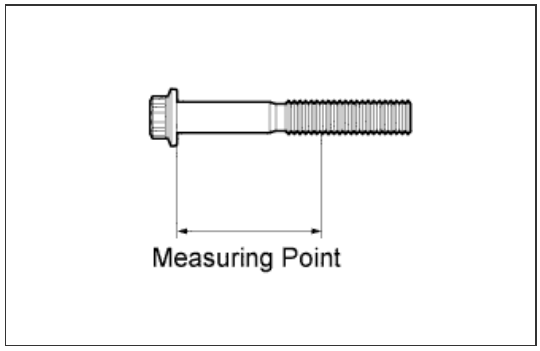
a. Using a vernier caliper, measure the tension portion of the connecting rod bolt.

Standard diameter:
7.200 to 7.300 mm (0.283 to 0.287 in.)

Minimum diameter:
7.00 mm (0.276 in.)

If the diameter is less than the minimum, replace the connecting rod bolt.

12. INSPECT CRANKS AFT BEARING CAP BOLT

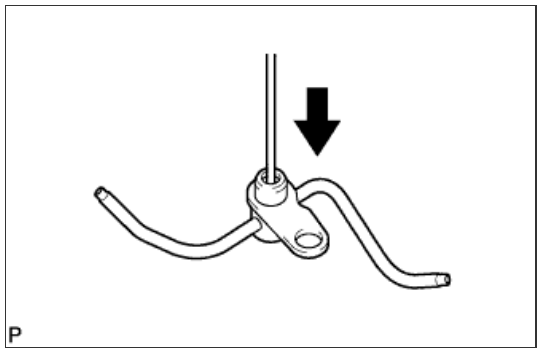


a. Using a vernier caliper, measure the thread outside diameter of the main bearing cap bolt.

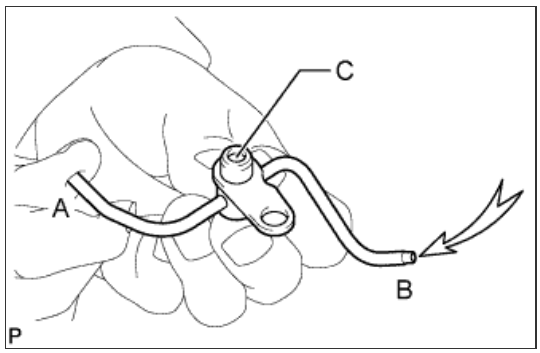
Measuring point:
67.0 mm (2.64 in.)

Standard diameter:
10.760 to 10.970 mm (0.424 to 0.432 in.)

Minimum diameter:
10.40 mm (0.409 in.)

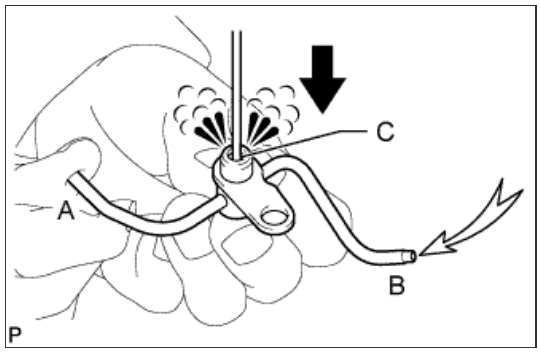


If the diameter is less than the minimum, replace the crankshaft bearing cap bolt.



13. INSPECT NO. 1 OIL NO LE SUB-ASSEMBLY

a. Push the check valve with a pin to check if it is stuck.
If stuck, replace the oil nozzle sub-assembly.



b. Push the check valve with a pin to check if it moves smoothly.
If it does not move smoothly, clean or replace the No. 1 oil nozzle sub-assembly.

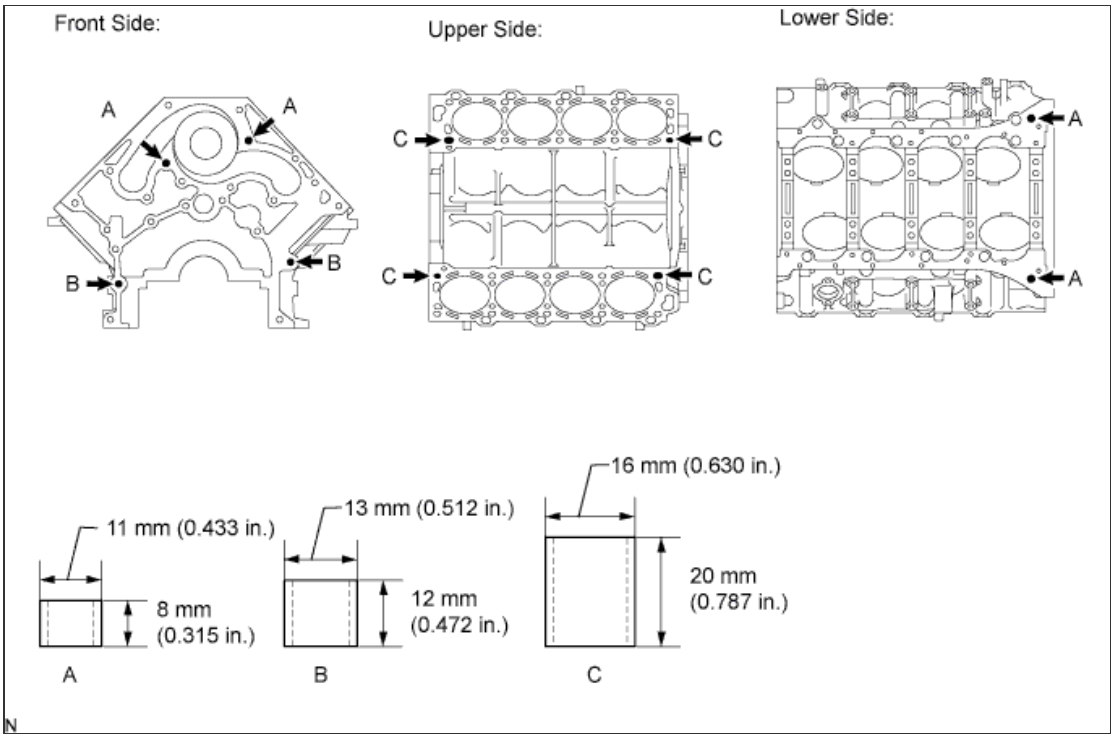
c. While covering A, apply air into B. Check that air does not leak through C.
Perform the check again while covering B and applying air into A.
If air leaks, clean or replace the No. 1 oil nozzle sub-assembly.

d. Push the check valve while covering A, and apply air into B. Check that air passes through C. Perform the check again while covering B, pushing the check valve and applying air into A.
If air does not pass through C, clean or replace the No. 1 oil nozzle sub-assembly.

for Preparation Click here

1. REPLACE RING PIN

NOTICE:



It is not necessary to remove the ring pin unless it is being replaced.

a. Remove the ring pin.

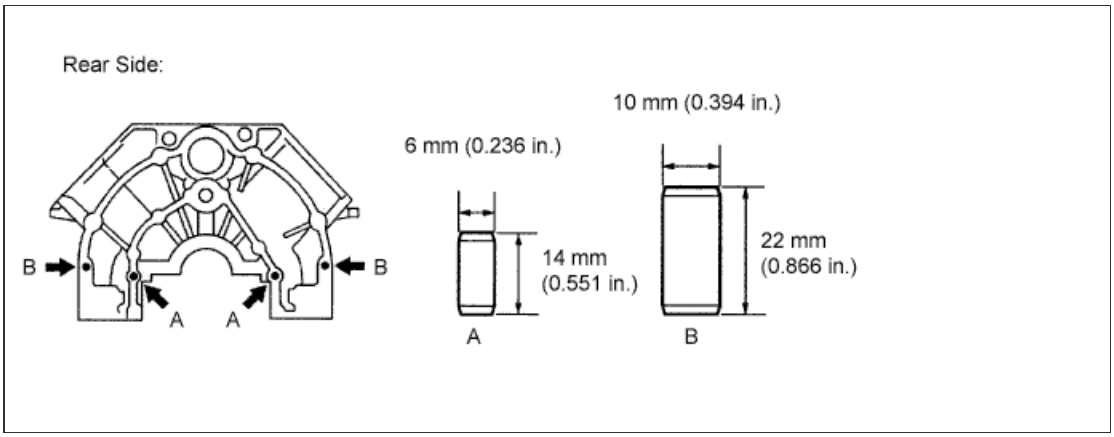
b. Using a plastic-faced hammer, tap in new ring pins until they stop.

Standard Protrusion:

Ring Pin	Specified Condition
A	3.5 to 4.5 mm (0.138 to 0.177 in.)
B	6.5 to 7.5 mm (0.256 to 0.295 in.)
C	9.0 to 10.0 mm (0.354 to 0.394 in.)

2. REPLACE STRAIGHT PIN

NOTICE:



It is not necessary to remove the straight pin unless it is being replaced.

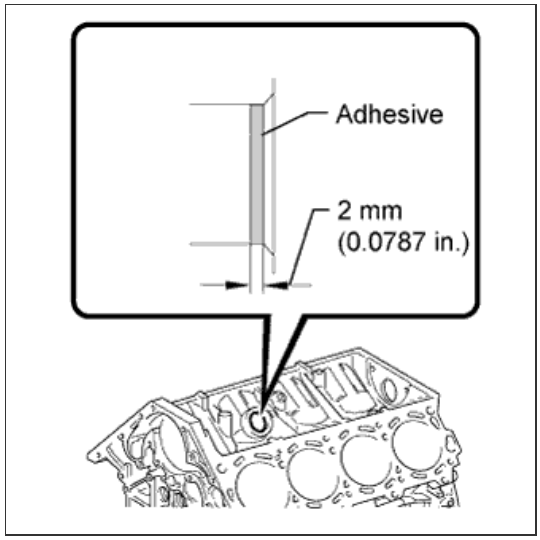
a. Remove the straight pin.

b. Using a plastic-faced hammer, tap in new straight pins until they stop.

Standard Protrusion:

Straight Pin	Specified Condition
A	5.5 to 6.5 mm (0.217 to 0.256 in.)
B	10.5 to 11.5 mm (0.413 to 0.453 in.)

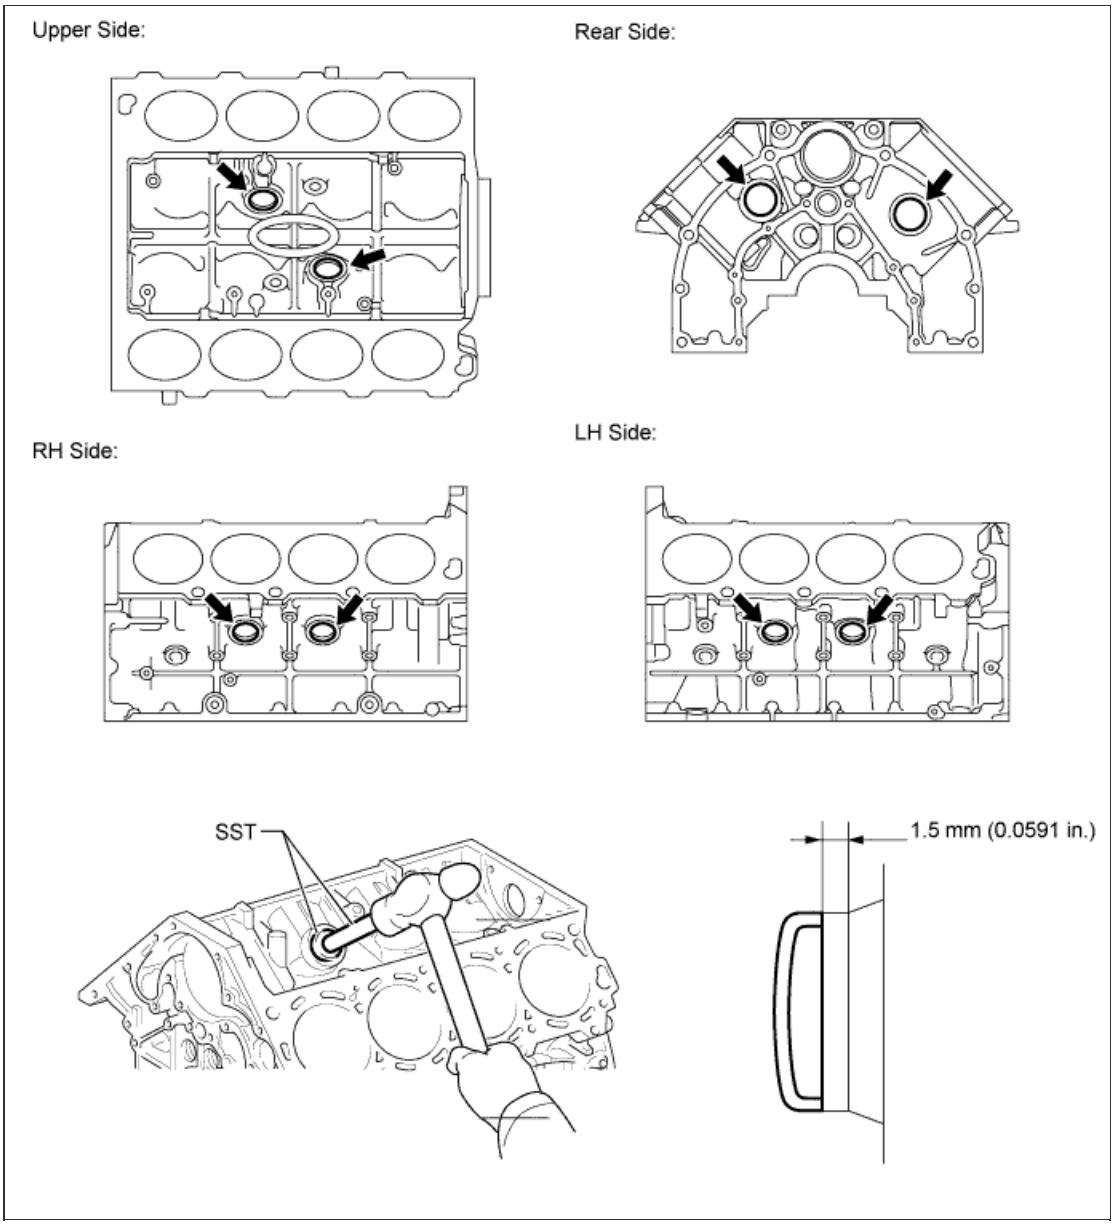
3. REPLACE CYLINDER BLOCK TIGHT PLUG



NOTICE:

If water leaks from the tight plug or the plug corrodes, replace it.

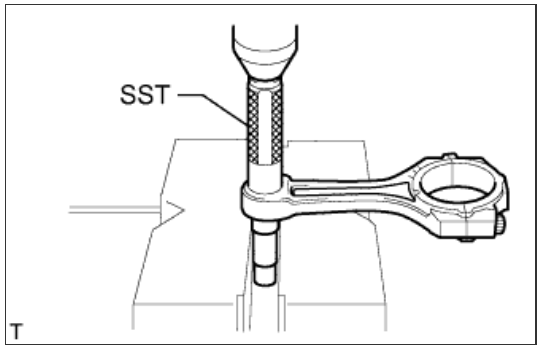
a. Remove the tight plugs.



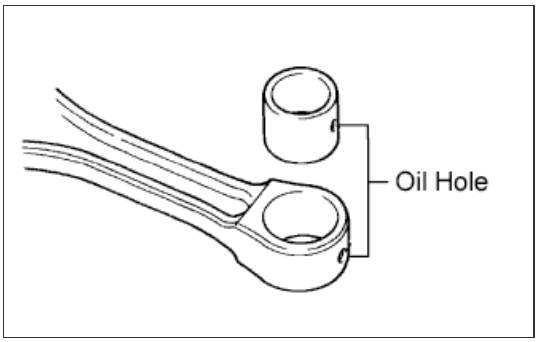
b. Apply adhesive to the inner circumference of the holes where the tight plugs contact.

Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent

c. Using SST and a hammer, tap in new tight plugs as shown in the illustration.



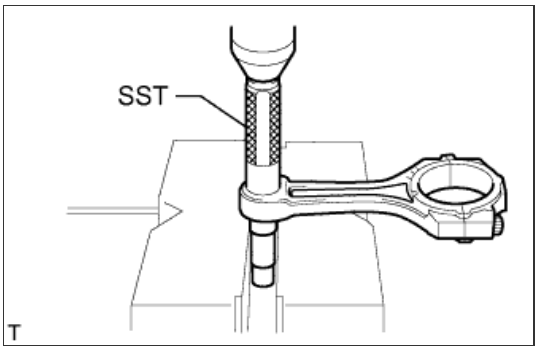
SST
09950-60010 (09951-00340)
09950-70010 (09951-07100)



4. REPLACE CONNECTING ROD SMALL END BUSH

a. Using SST and a press, press out the bushing.

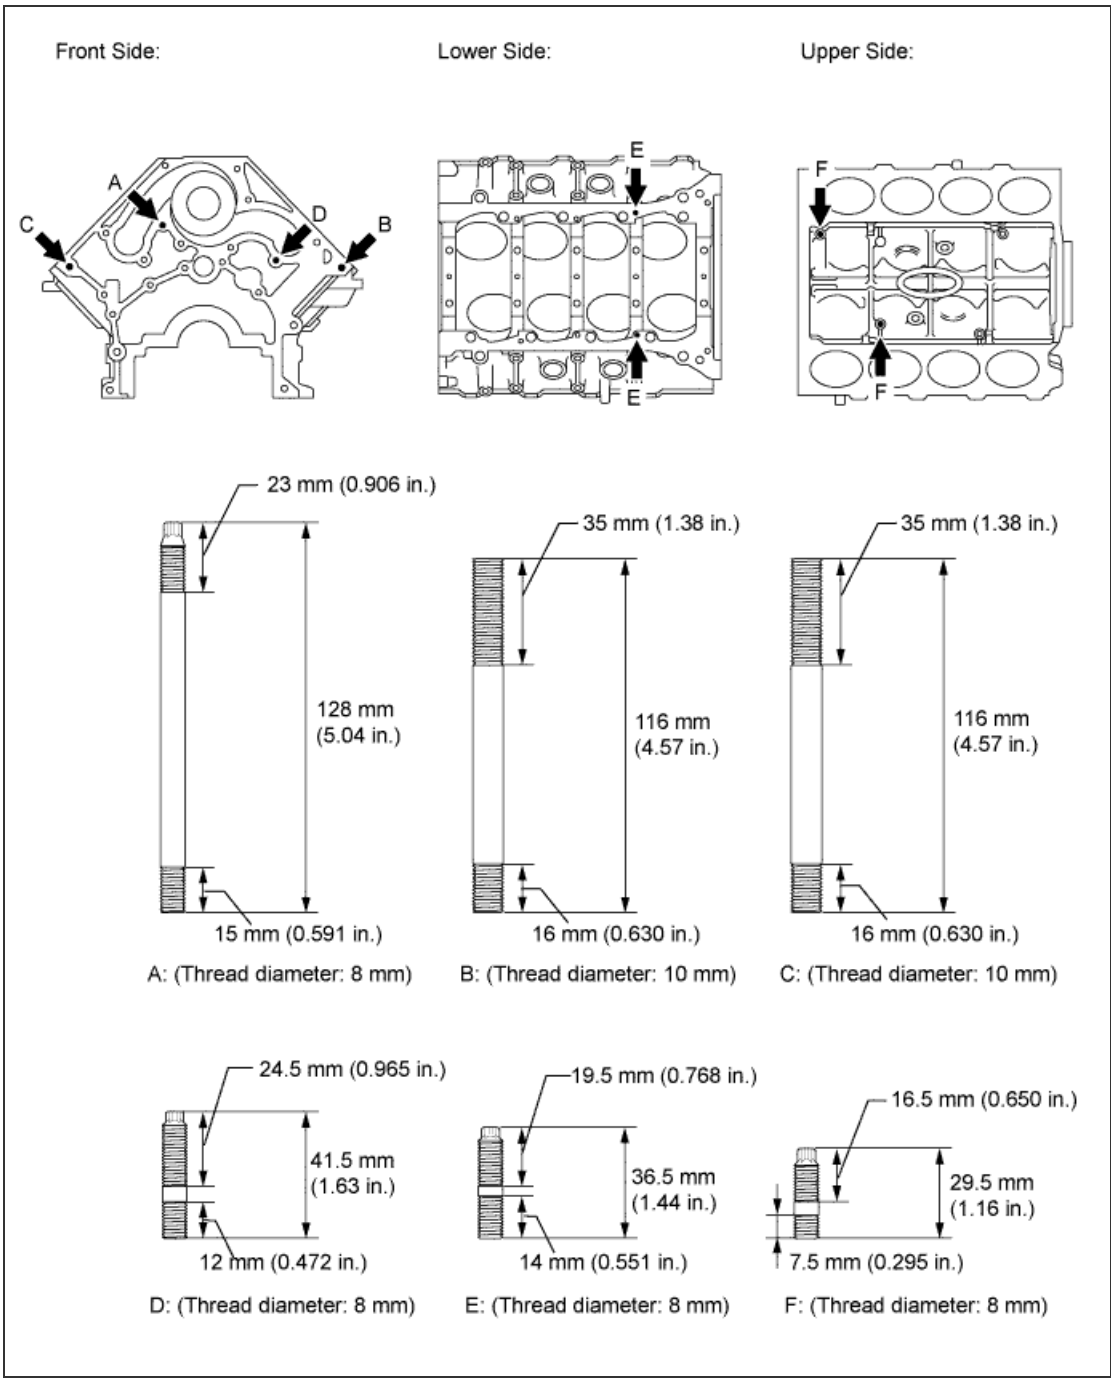
SST
09222-30010



b. Align the oil holes of a new bushing and the connecting rod.

c. Using SST and a press, press in the bushing.

SST
09222-30010



for Preparation Click here

1. INSTALL STUD BOLT

NOTICE:

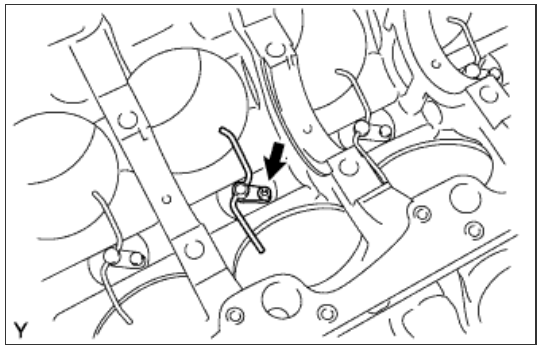
If a stud bolt is deformed or the threads are damaged, replace it.

a. Using E7 and E8 "TORX" socket wrenches, install the stud bolts.

Torque:

for stud bolt A, B, F:

8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

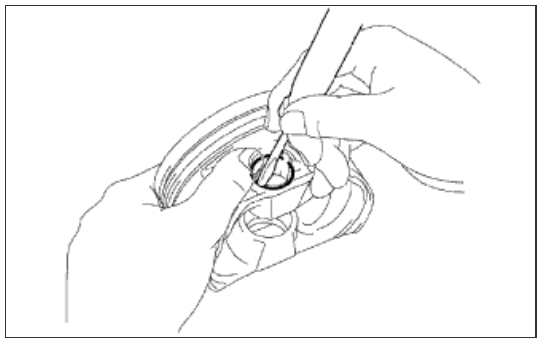


for stud bolt C:

20 N*m{ 204 kgf*cm , 15 ft.*lbf }
for stud bolt D:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }
for stud bolt E:
14 N*m{ 143 kgf*cm , 10 ft.*lbf }

2. INSTALL NO. 1 OIL NO LE SUB-ASSEMBLY

a. Using a 5 mm hexagon wrench, install the 4 oil nozzles with the 4 bolts.



Torque:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

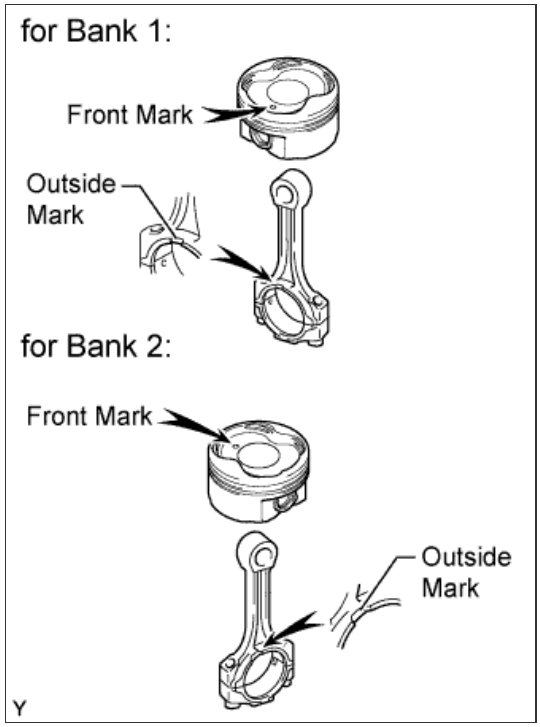
3. INSTALL PISTON SUB-ASSEMBLY WITH PIN

a. Using a small screwdriver, install a new snap ring on one side of the piston pin hole.

b. Coat the piston, piston pin and connecting rod with engine oil.

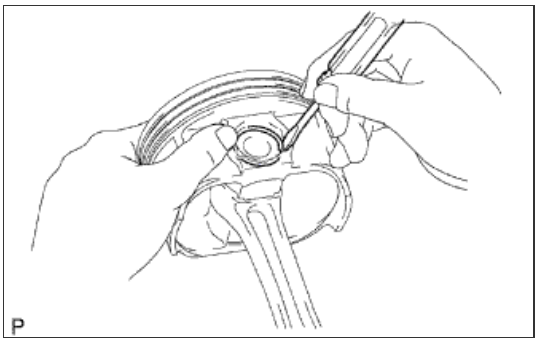
c. Align the marks of the piston and connecting rod as shown in the illustration. Then push in the piston pin with your thumb until the piston pin contacts the snap ring.

Front Mark:



Item	Front Mark
for Bank 1	1
for Bank 2	2

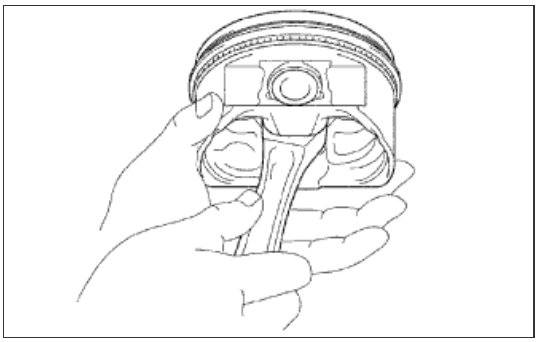
NOTICE:



For bank 1 side, perform the assembly so that the marks of the piston and connecting rod are on the same side. For bank 2 side, perform the assembly so that the marks of the piston and connecting rod are on opposite sides.

HINT:

The piston and pin are a matched set.

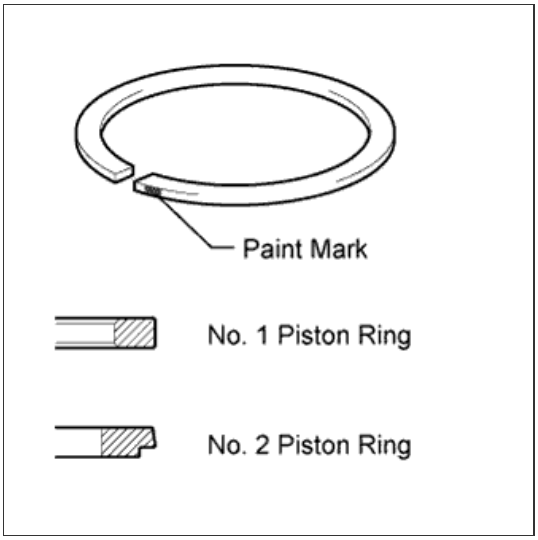


d. Using a small screwdriver, install a new snap ring on the other side of the piston pin hole.

e. Check the fitting condition between the piston and piston pin.

i. Move the connecting rod back and forth on the piston pin. Check the fitting condition.
If abnormal movement is felt, replace the piston and pin as a set.

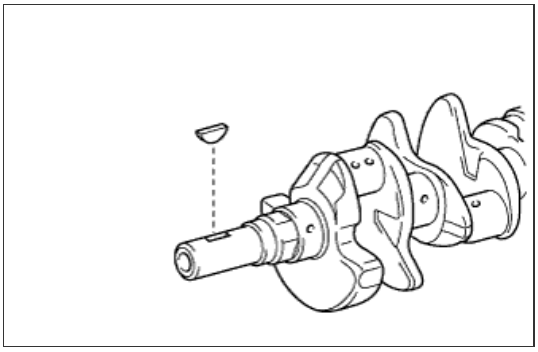
ii. Rotate the piston back and forth on the piston pin. Check the fitting condition.
If abnormal movement is felt, replace the piston and pin as a set.



4. INSTALL PISTON RIN SET

a. Install the oil ring expander and 2 side rails by hand.

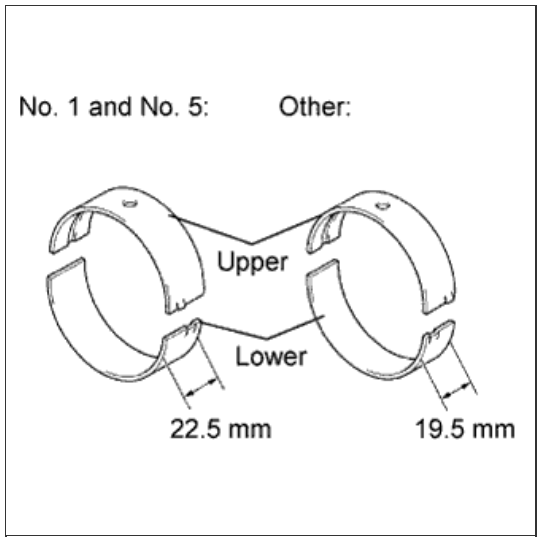
b. Using a piston ring expander, install the No. 1 and No. 2 piston rings.



Paint Mark:

Piston Ring	Paint Mark
No. 1	Green Color
No. 2	Peach Color

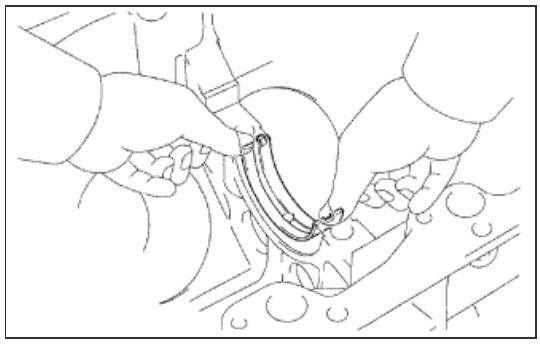
5. INSTALL CRANKSHAFT PULLEY KEY



a. Install the pulley key to the crankshaft.

6. INSTALL CRANKSHAFT BEARIN

HINT:

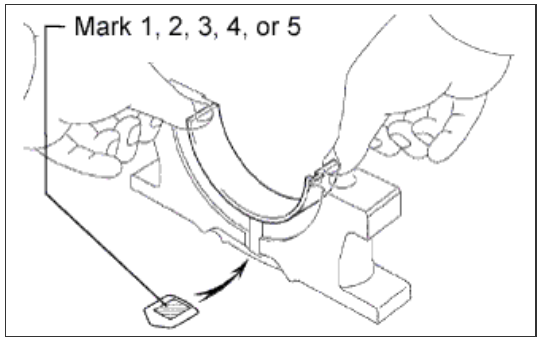


- **Main bearings come in widths of 19.5 mm (0.768 in.) and 22.5 mm (0.886 in.). Install the 22.5 mm (0.886 in.) bearings in the No. 1 and No. 5 c linder block journal positions with the crankshaft bearing cap. Install the 19.5 mm (0.768 in.) bearings in the other positions.**
- **Upper bearings ha e an oil groo e and oil holes lower bearings do not.**

a. Align the bearing claw with the claw groove of the cylinder block, and push in the 5 upper bearings.

NOTICE:

Do not apply engine oil to the bearings and the contact surfaces.

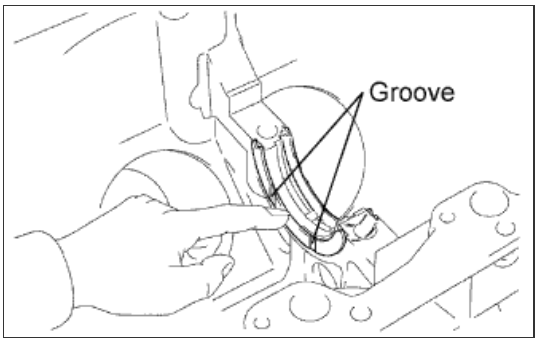


b. Align the bearing claw with the claw groove of the crankshaft bearing cap, and push in the 5 lower bearings.

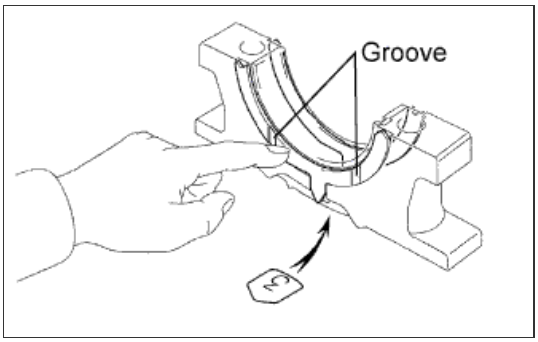
NOTICE:

Do not apply engine oil to the bearings and the contact surfaces.

HINT:



A number is marked on each bearing cap to indicate the installation position.



7. INSTALL CRANKSHAFT THRUST WASHER SET

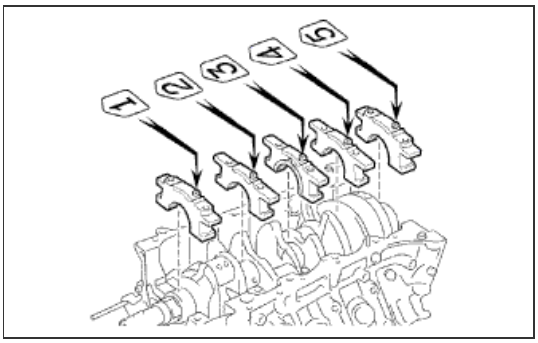
a. Apply engine oil to the thrust washer set.

b. Install the 2 thrust washers under the No. 3 journal position of the cylinder block with the oil grooves facing outward.

c. Install the 2 thrust washers on the No. 3 crankshaft bearing cap with the grooves facing outward.

8. INSTALL CRANKSHAFT

a. Apply engine oil to the upper bearing and lower bearing, then place the crankshaft on the cylinder block.



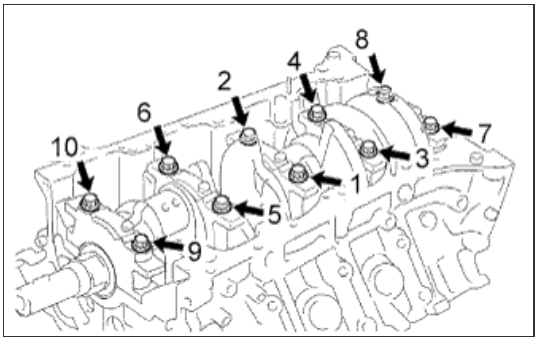
b. Install the 5 crankshaft bearing caps in their proper locations.

HINT:

Place the bearing caps on the level and let them return to their original positions by their own weight.

NOTICE:

Do not install the bearing caps by tapping them.



c. Apply a light coat of engine oil on the threads and under the heads of the bearing cap bolts.

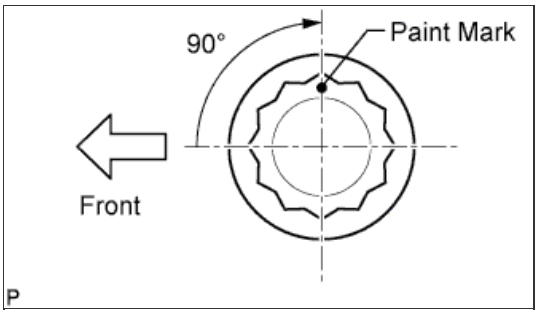
d. Install the 1 crankshaft bearing cap bolts.

HINT:

If any one of the bearing cap bolts is broken or deformed, replace it.

i. Uniformly tighten the 1 crankshaft bearing cap bolts in several passes in the sequence shown in the illustration.

Torque:
27 N*m{ 275 kgf*cm , 20 ft.*lbf }



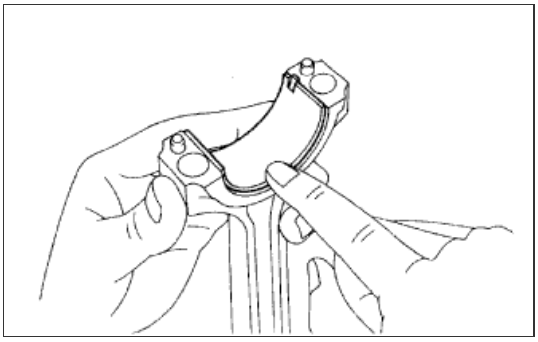
If any of the bearing cap bolts cannot meet the torque specification, replace the bearing cap bolt.

ii. Mark the front of the crankshaft bearing cap bolts with paint.

iii. Tighten the crankshaft bearing cap bolts 9 as shown in the illustration.

i . Check that the painted marks are now at a 9 angle to the front.

e. Check that the crankshaft turns smoothly.



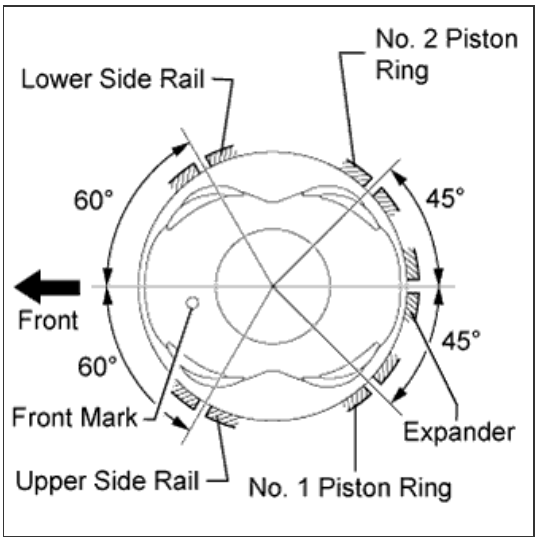
9. INSTALL CONNECTIN ROD BEARIN

a. Align the bearing claw with the groove of the connecting rod or connecting cap.

b. Install the bearings in the connecting rod and connecting rod cap.

NOTICE:

Do not apply engine oil to the bearings and the contact surfaces.

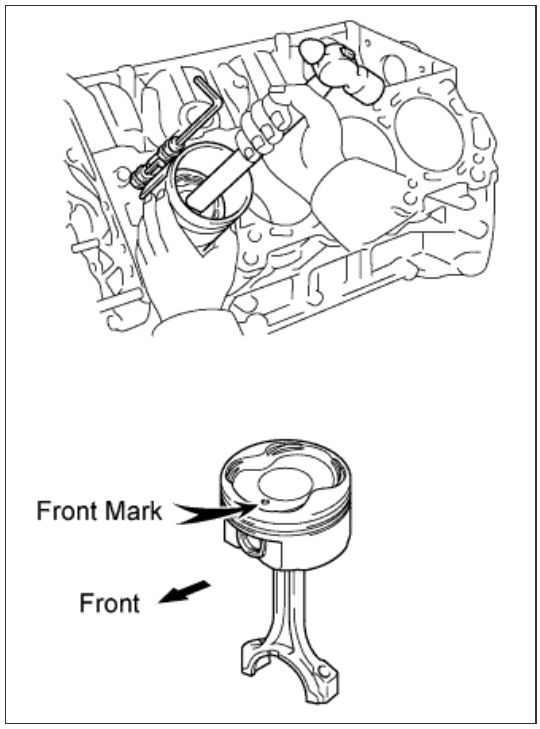


10. INSTALL PISTON AND CONNECTIN ROD

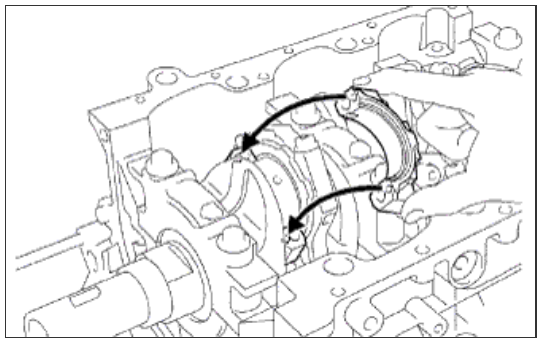
a. Apply engine oil to the cylinder walls, the pistons, and the surfaces of the connecting rod bearings.

b. Position the piston rings so that the ring ends are as shown in the illustration.

NOTICE:



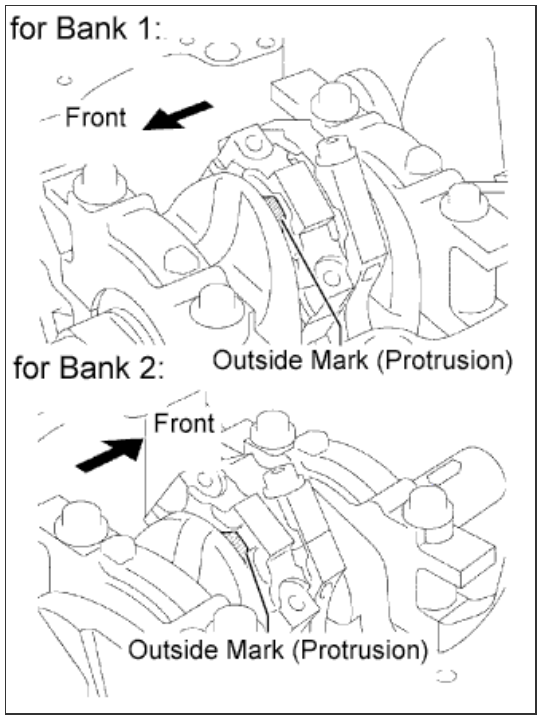
Do not align the ring ends.



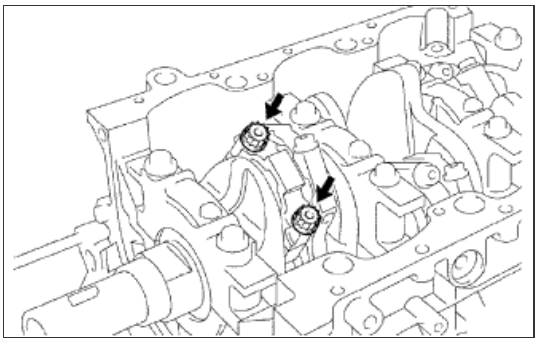
c. Using a hammer handle and piston ring compressor, press a piston and connecting rod assembly into each cylinder with the front mark of the piston facing forward.

Front Mark:

Item	Front Mark
for Bank 1	1
for Bank 2	2



d. Place the connecting rod cap on the connecting rod.



i. Match the numbered connecting rod cap with the connecting rod.

ii. Align the pin groove of the connecting rod cap with the pins of the connecting rod, and install the connecting rod cap.

iii. Check that the outside mark of the connecting rod cap is facing in the correct direction.

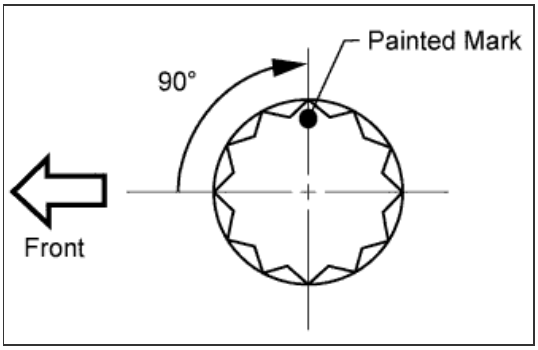
e. Apply a light coat of engine oil on the threads and under the heads of the connecting rod cap bolts.

f. Install the connecting rod cap bolts.

HINT:

If any one of the connecting rod cap bolts is broken or deformed, replace it.

i. Install and alternately tighten the 2 connecting rod cap bolts in several passes.



Torque:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }

If any of the connecting rod cap bolts cannot meet the torque specification, replace the connecting rod cap bolts.

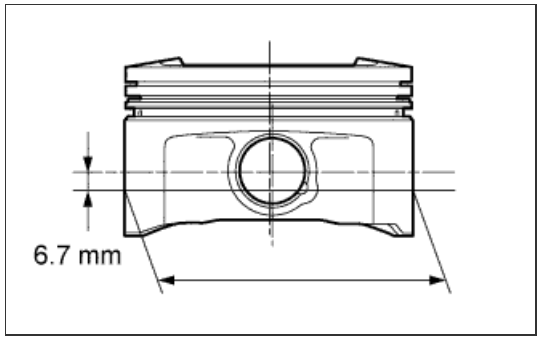
ii. Mark the front of the connecting cap bolt with paint.

iii. Tighten the cap bolts 9 as shown in the illustration.

i . Check that the painted marks are now at a 9 angle to the front.

g. Check that the crankshaft turns smoothly.

for Preparation Click here



HINT:

- **Bore all 8 cylinders to fit the O/S piston outside diameter.**
- **Replace all the piston rings with ones to match the O/S pistons.**

1. BORE CYLINDER

a. Prepare 4 new O/S pistons.

b. Using a micrometer, measure the piston diameter at a position that is 6.7 mm (0.264 in.) downward from the center of the piston pin hole.

Standard piston diameter (O/S 0.50):
94.468 to 94.496 mm (3.719 to 3.720 in.)

c. Calculate the amount each cylinder is to be rebored as follows.

HINT:

Size to be rebored = P + C - H
P = Piston diameter
C = Piston oil clearance: 0.050 to 0.068 mm (0.00197 to 0.00268 in.)
H = Allowance for honing: 0.02 mm (0.000787 in.) or less

d. Bore and hone the cylinders to the calculated dimensions.

NOTICE:

Excess honing will destroy the finished roundness.

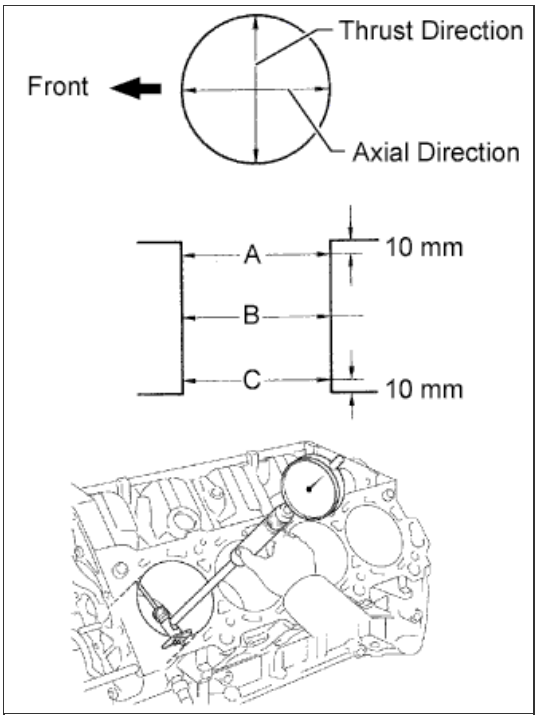
e. Using a cylinder gauge, measure the cylinder bore diameter and calculate the honing allowance.

HINT:

Honing allowance = cylinder bore diameter - (piston diameter + oil clearance)

f. Finish the cylinder bore using the calculated value.

g. Using a cylinder gauge, measure the cylinder bore diameter.



Measurement Cylinder Bore Position:

Position	Specified Condition
A	10 mm (0.394 in.) from top edge
B	Center
C	10 mm (0.394 in.) from bottom edge

Standard oil clearance:
0.050 to 0.068 mm (0.00197 to 0.00268 in.)

Maximum taper and out-of-round:
0.02 mm (0.000787 in.)

Maximum difference in diameter between each cylinder:
0.05 mm (0.00197 in.)

Thrust Direction
Front
Axial Direction
A
B
C
10 mm
10 mm

1. INSPECT ENGINE IDLE SPEED

NOTICE:

- **Turn all the electrical systems and the A/C off.**
- **When checking the idle speed, move the shift lever to neutral.**

HINT:

- **For more information about the intelligent tester, refer to its operator's manual.**
- **If an intelligent tester is not available, use a tachometer tester probe as a substitute.**

a. When using the intelligent tester:

i. Warm up the engine.

ii. Connect the intelligent tester to the DLC3.

iii. Enter the following menus:
Powertrain / Engine / Data List / Engine Speed.

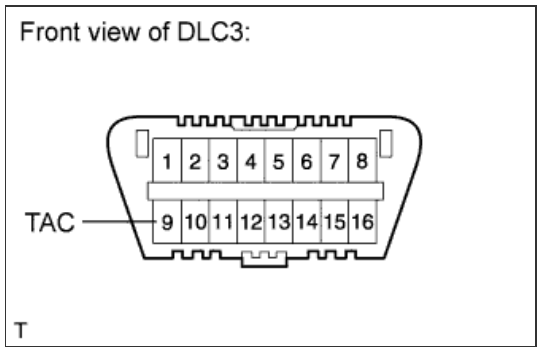
HINT:

Refer to the intelligent tester operator's manual for help selecting the Data List.

iv. Inspect the engine idle speed.

Standard Idle Speed:

Item	Specified Condition
for Automatic Transmission	550 to 650 rpm
for Manual Transmission	500 to 600 rpm



v. Disconnect the intelligent tester from the DLC3.

b. When not using the intelligent tester:

i. Warm up and stop the engine.

ii. Connect a tester probe of a tachometer to terminal 9 (TAC) of the DLC3 with SST.

SST
09843-18030

iii. Inspect the engine idle speed.

Standard Idle Speed:

Item	Specified Condition
for Automatic Transmission	550 to 650 rpm
for Manual Transmission	500 to 600 rpm

iv. Disconnect the tester probe from terminal 9 (TAC) of the DLC3.

2. INSPECT MAXIMUM ENGINE SPEED

a. Start the engine.

b. Fully depress the accelerator pedal.

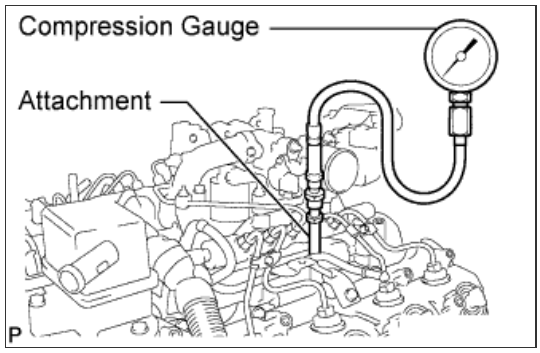
c. Check the maximum engine speed.

Maximum engine speed:
4700 to 4900 rpm

3. INSPECT COMPRESSION

a. Warm up and stop the engine.

b. Remove the 8 glow plugs (Click here).



c. Disconnect all connectors from the 8 injectors.

d. Inspect the cylinder compression pressure.

i. Insert SST (attachment) into the glow plug hole.

SST
09992-00026 (09992-00410, 09992-00211)

Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }

ii. Connect SST (compression gauge) to SST (attachment).

iii. While cranking the engine, measure the compression pressure.

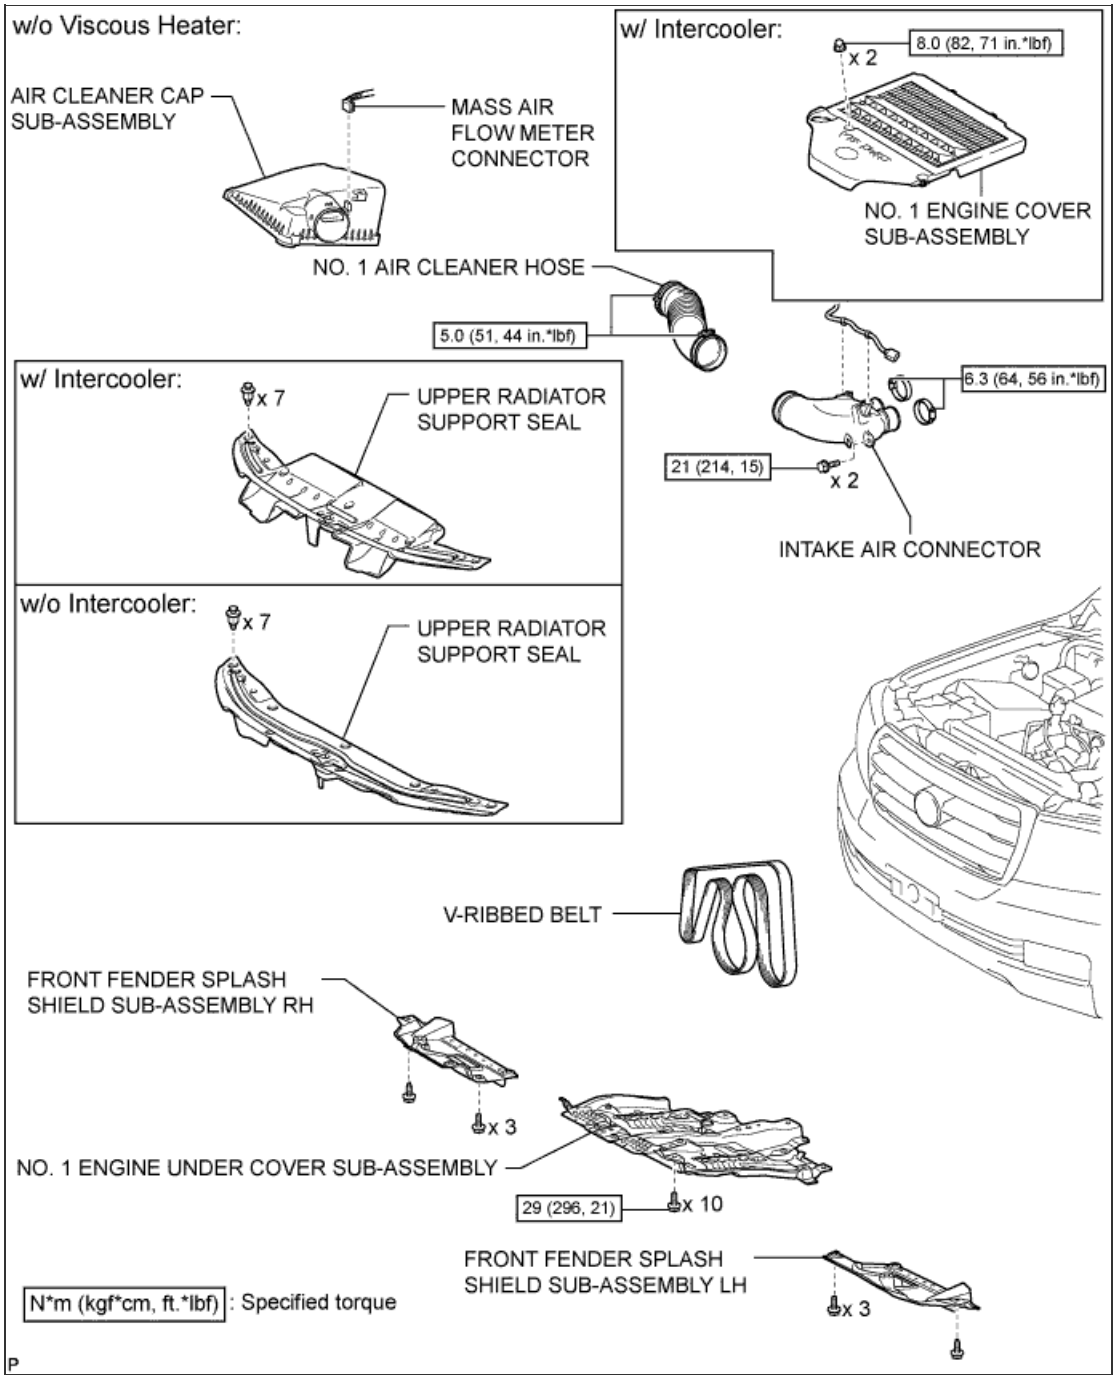
Standard compression pressure (normal condition):
2700 kPa (27.5 kgf/cm^2, 392 psi)

Minimum compression pressure:
2200 kPa (22.4 kgf/cm^2, 319 psi)

Difference between each cylinder:
500 kPa (5.1 kgf/cm^2, 73 psi) or less

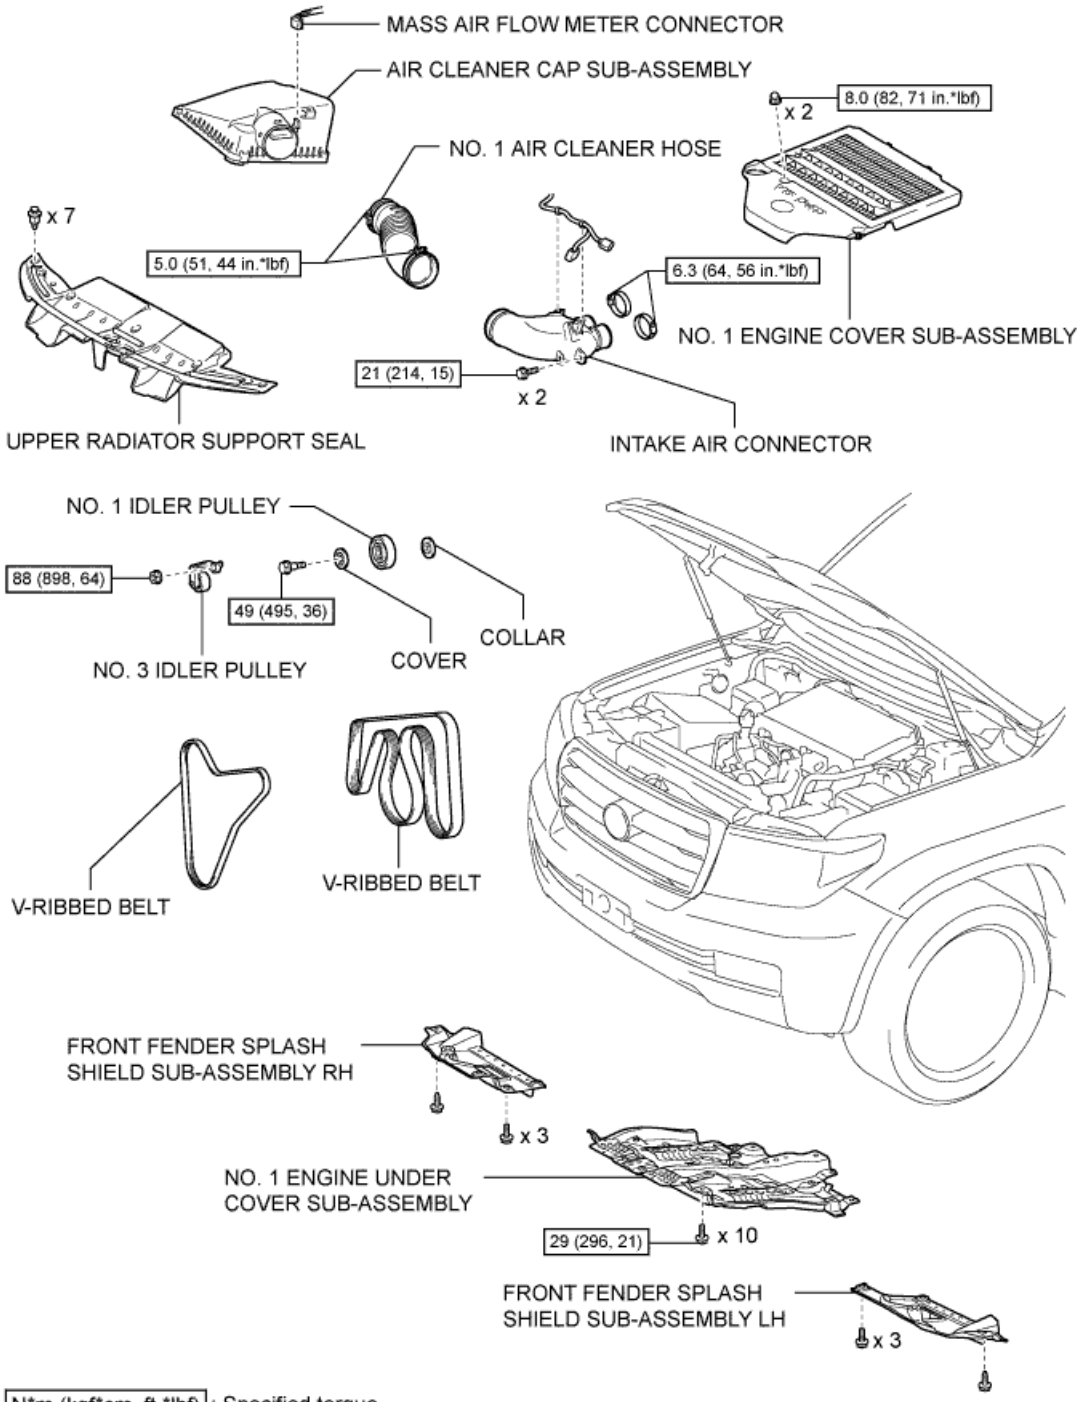
NOTICE:

- **Use a fully-charged battery so the engine speed can be increased to 280 rpm or more.**
- **Inspect the other cylinders in the same way.**
- **Measure the compression as quickly as possible.**



iv. If the cylinder compression is low, pour a small amount of engine oil into the cylinder through the glow plug holes. Then inspect the cylinder compression again.
If adding oil increases the compression pressure, the piston rings and/or cylinder bore may be worn or damaged.
If the pressure stays low, the valve may be stuck or seated improperly, or there may be leakage from the gasket.

v. Remove SST (attachment and compression gauge).



e. Connect all connectors to the 8 injectors.

f. Install the 8 glow plugs (Click here).

for Preparation [Click here]

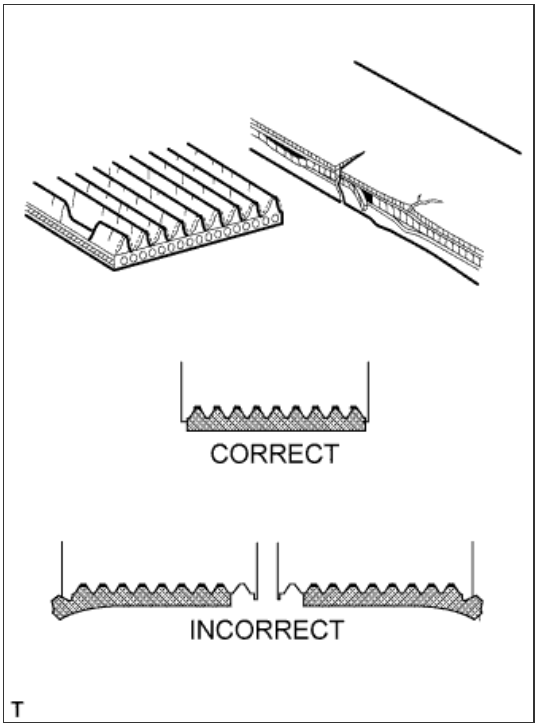
w/ Viscous Heater:

P

for Preparation Click here

1. INSPECT V-RIBBED BELT

a. Check the belt for wear, cracks or other signs of damage.
If any of the following defects is found, replace the V-ribbed belt.



- The belt is cracked.
- The belt is worn out to the extent that the cords are exposed.
- The belt has chunks missing from the ribs.

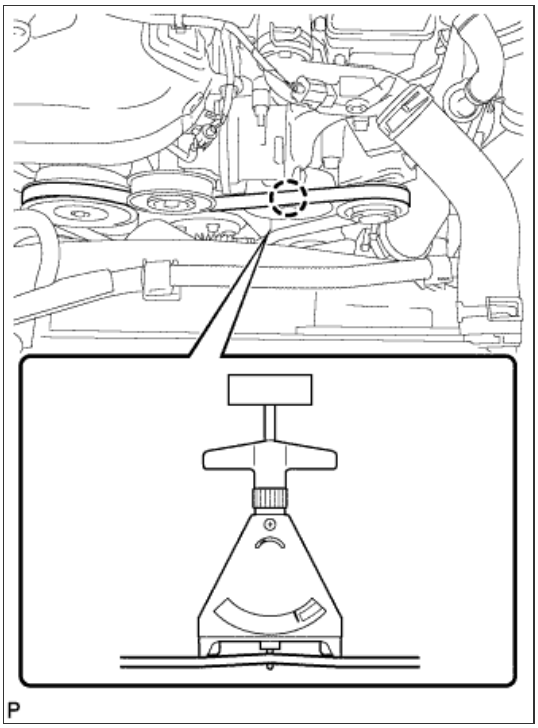
b. Check that the belt fits properly in the ribbed grooves.

HINT:

Check with your hand to confirm that the belt has not slipped out of the groove on the bottom of the pulley.

If it has slipped out, replace the V-ribbed belt. Install a new V-ribbed belt.

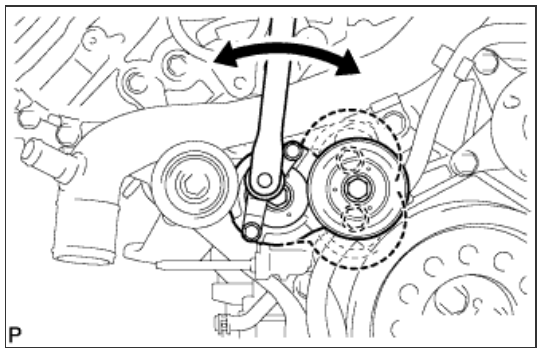
2. INSPECT V-RIBBED BELT TENSION (w/ Viscous Heater)



a. Using a belt tension gauge, inspect the belt tension.

Standard Belt Tension:

Item	Specified Condition
New belt	400 to 650 N (41 to 66 kgf, 89.9 to 146.1 lbf)
Used belt	300 to 500 N (31 to 51 kgf, 67.4 to 112.4 lbf)

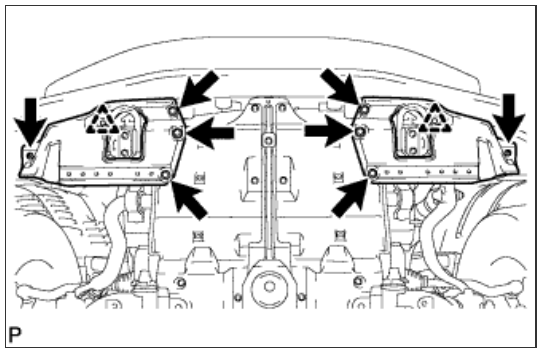


HINT:

- **A "new belt" is a belt which has been used for less than 5 minutes on a running engine.**
- **A "used belt" is a belt which has been used on a running engine for 5 minutes or more.**
- **After installing a new belt, run the engine for approximately 5 minutes and then recheck the tension.**

3. INSPECT V-RIBBED BELT TENSIONER ASSEMBLY

a. Check that nothing gets caught in the tensioner by turning it clockwise and counterclockwise.
If a malfunction exists, replace the tensioner.

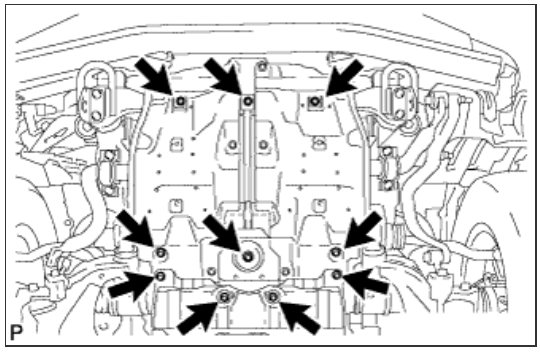


for Preparation Click here

1. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and screw.

b. Loosen the clip and remove the splash shield.



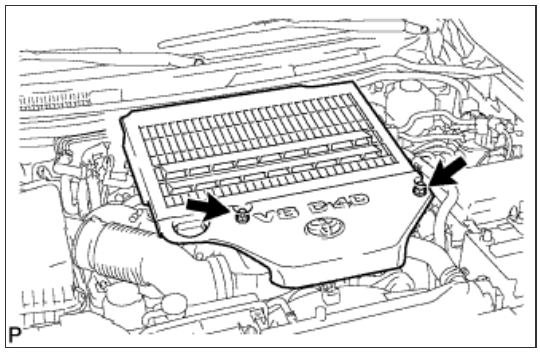
2. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

a. Remove the 3 bolts and screw.

b. Loosen the clip and remove the splash shield.

3. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and under cover.

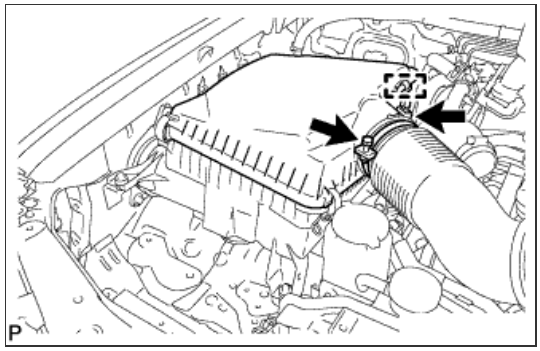


4. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the clips and upper radiator support seal.

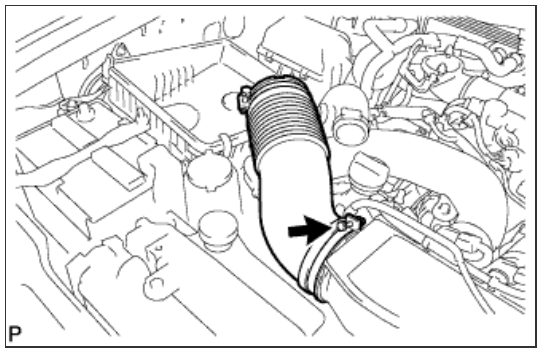
5. REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY (w/ Intercooler)

a. Remove the 2 nuts and No. 1 engine cover.



6. REMOVE AIR CLEANER CAP SUB-ASSEMBLY

a. Loosen the hose clamp.



b. Disconnect the mass air flow meter connector and using a clip remover, detach the wire harness clamp from the air cleaner cap.

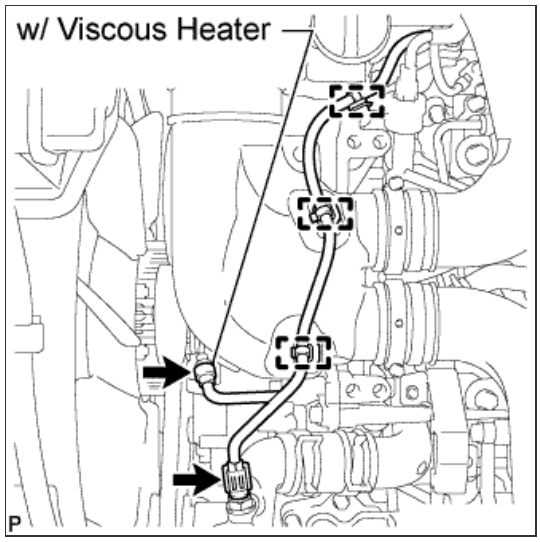
c. Detach the clamps and remove the air cleaner cap.

7. REMOVE NO. 1 AIR CLEANER HOSE

a. Loosen the hose clamp and remove the No. 1 air cleaner hose.

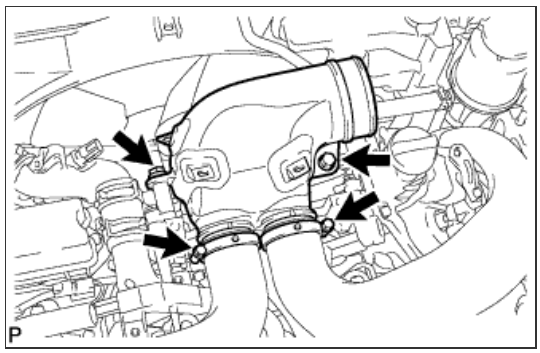
8. REMOVE INTAKE AIR CONNECTOR

a. w/o iscous Heater:



i. Disconnect the connector from the water temperature sensor.

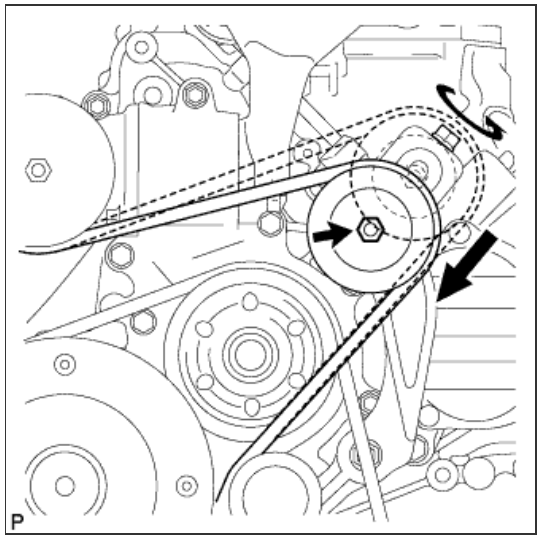
ii. Using a clip remover, detach the 3 wire harness clamps.



b. w/ iscous Heater:

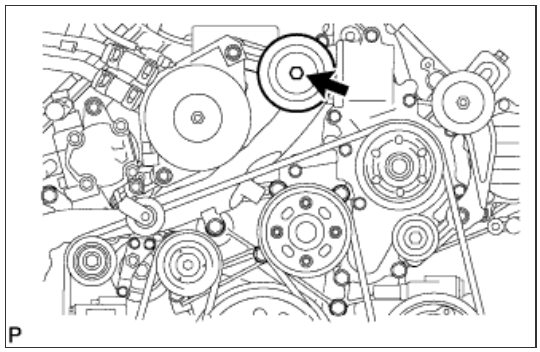
i. Disconnect the 2 connectors from the viscous with magnet clutch heater and water temperature sensor.

ii. Using a clip remover, detach the 3 wire harness clamps.



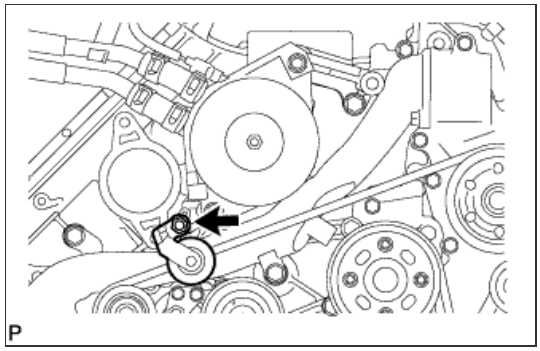
c. Loosen the 2 hose clamps and remove the 2 bolts and intake air connector.

9. REMOVE V-RIBBED BELT (w/ Visco Heater)



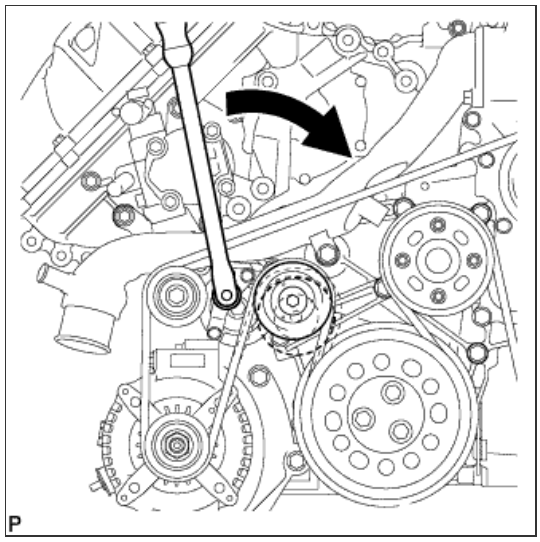
a. Loosen the lock nut and turn the bolt counterclockwise.

b. Remove the ibbed belt.



10. REMOVE NO. 1 IDLER PULLEY (w/ Visco Heater)

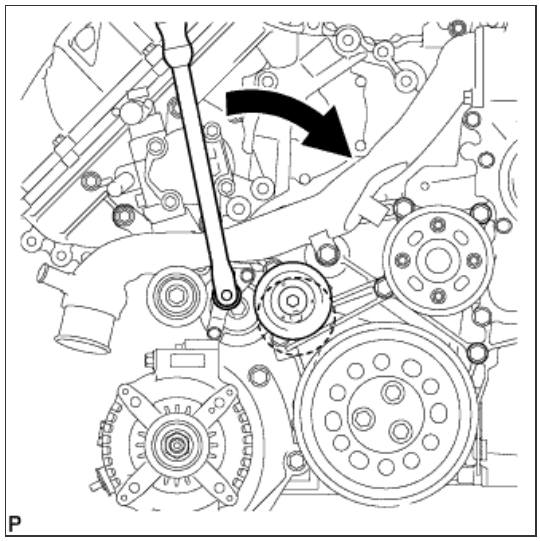
a. Remove the bolt, cover, No. 1 idler pulley and collar.



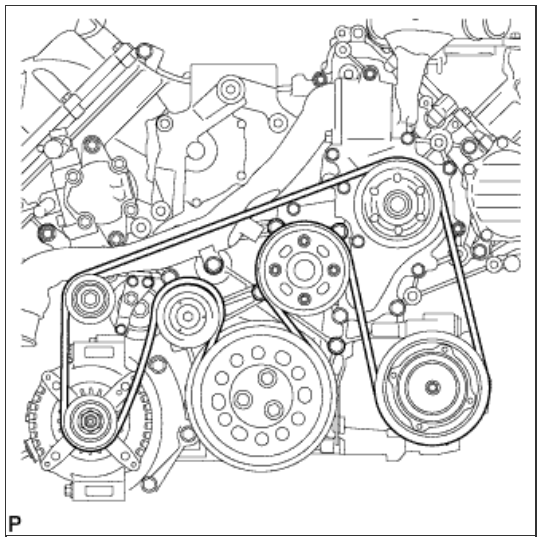
11. REMOVE NO. 3 IDLER PULLEY (w/ Visco Heater)

a. Remove the nut and No. 3 idler pulley.

12. REMOVE V-RIBBED BELT



a. Using a wrench to the ibbed belt tensioner bracket, turn the wrench clockwise and remove the ibbed belt.

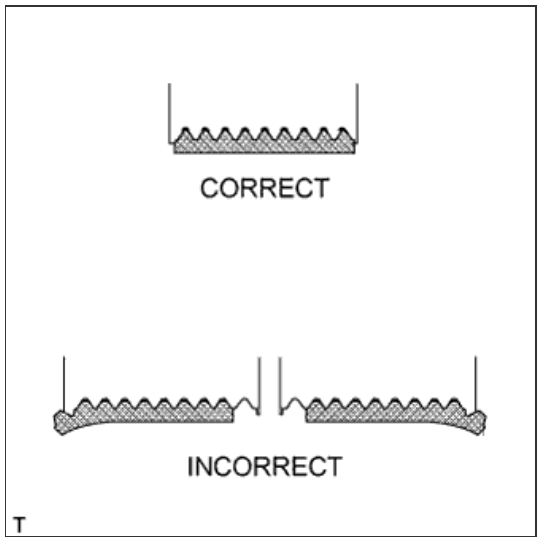


for Preparation Click here

1. INSTALL V-RIBBED BELT

a. Attach a wrench to the V-ribbed belt tensioner bracket and turn the wrench clockwise.

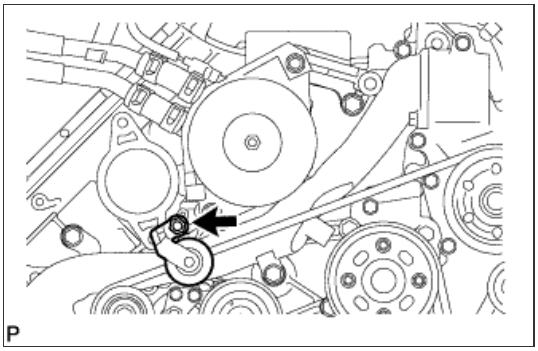
b. Install the V-ribbed belt as shown in the illustration.



c. Check that the belt fits properly in the ribbed grooves.

HINT:

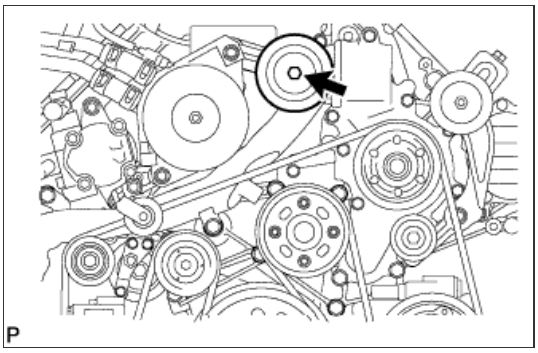
Check with your hand to confirm that the belt has not slipped out of the groove on the bottom of the pulley.



If it has slipped out, replace the V-ribbed belt. Install a new V-ribbed belt.

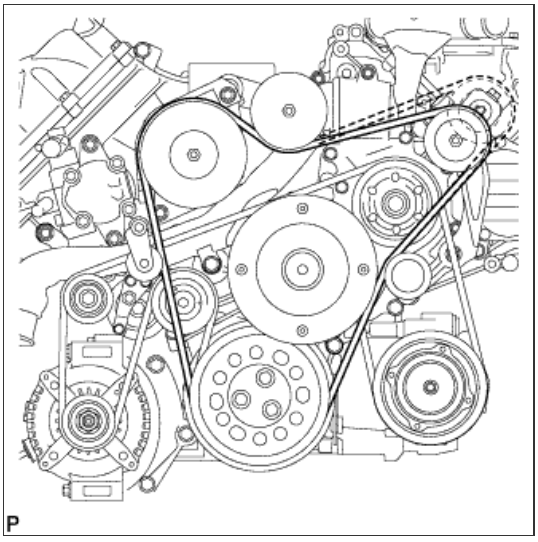
2. INSTALL NO. 3 IDLER PULLEY (w/ Viscous Heater)

a. Align the No. 3 idler pulley bracket knock pin and No. 1 idler pulley bracket knock pin hole and install the No. 3 idler pulley with the nut.



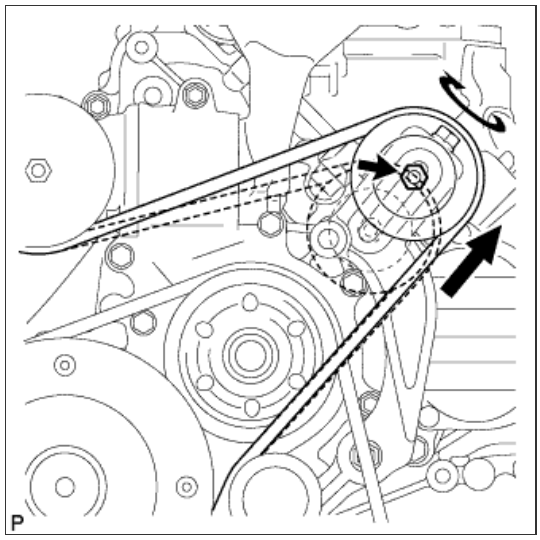
Torque:
88 N*m{ 898 kgf*cm , 64 ft.*lbf }

3. INSTALL NO. 1 IDLER PULLEY (w/ Viscous Heater)



a. Install the collar, No. 1 idler pulley and cover with the bolt.

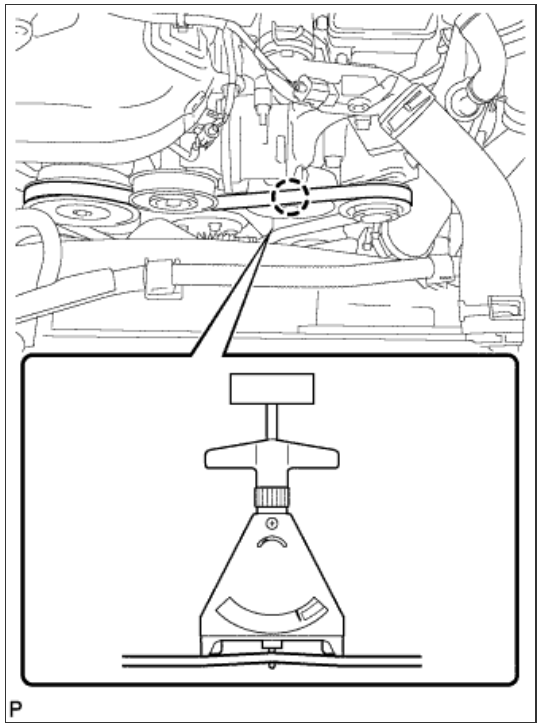
Torque:
49 N*m{ 495 kgf*cm , 36 ft.*lbf }



4. INSTALL V-RIBBED BELT (w/ Viscous Heater)

a. Install the V-ribbed belt as shown in the illustration.

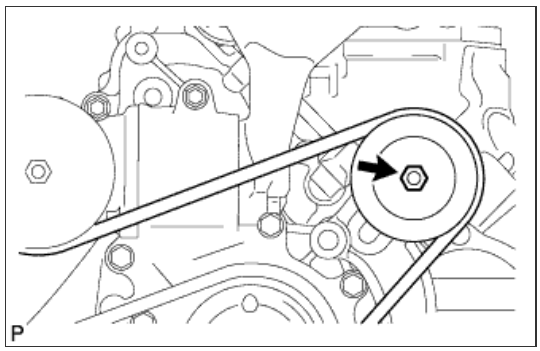
b. Temporarily install the lock nut, and turn the bolt clockwise.



c. Using a belt tension gauge, adjust belt tension.

Standard Belt Tension:

Item	Specified Condition
New belt	400 to 650 N (41 to 66 kgf, 89.9 to 146.1 lbf)
Used belt	300 to 500 N (31 to 51 kgf, 67.4 to 112.4 lbf)

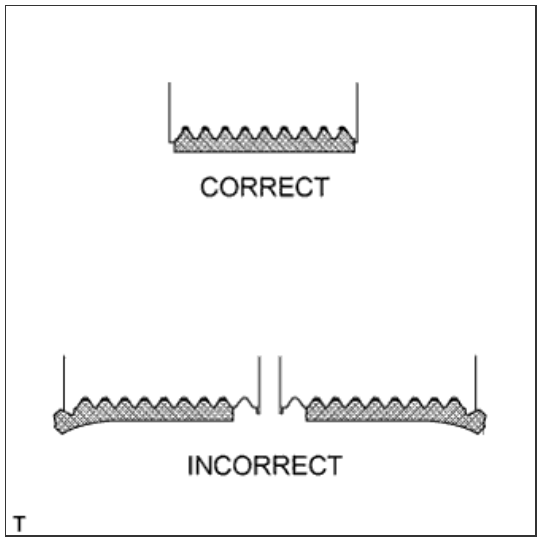


HINT:

- **A "new belt" is a belt which has been used for less than 5 minutes on a running engine.**
- **A "used belt" is a belt which has been used on a running engine for 5 minutes or more.**
- **After installing a new belt, run the engine for approximately 5 minutes and then recheck the tension.**

d. Tighten the nut.

Torque:
4 N*m{ 4 8 kgf*cm , 3 ft.*lbf }



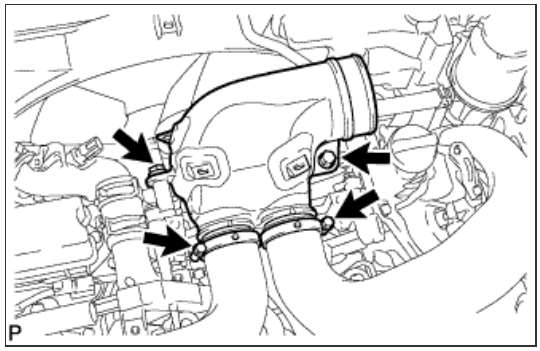
e. Check that the belt fits properly in the ribbed grooves.

HINT:

Check with your hand to confirm that the belt has not slipped out of the groove on the bottom of the pulley.

If it has slipped out, replace the V-ribbed belt. Install a new V-ribbed belt.

5. INSTALL INTA E AIR CONNECTOR

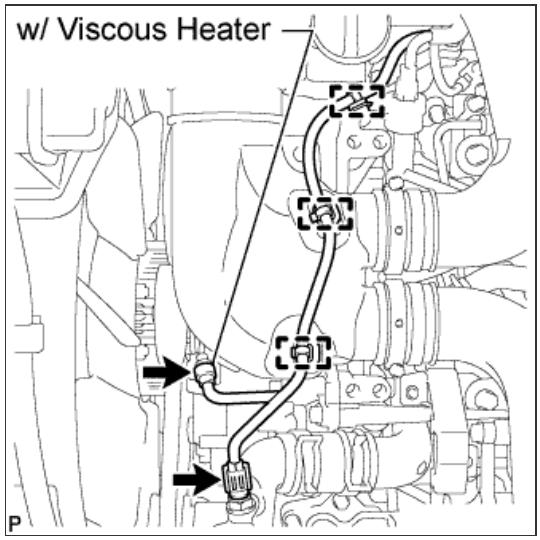


a. Connect the intake air connector to the No. 1 and No. 2 air cleaner pipes.

b. Install the connector with the 2 bolts.

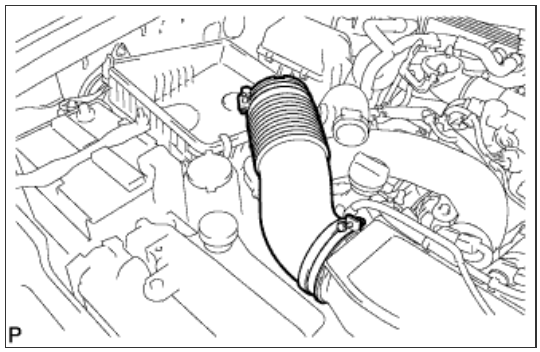
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

c. Tighten the 2 hose clamps.



Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

d. Attach the 3 wire harness clamps.

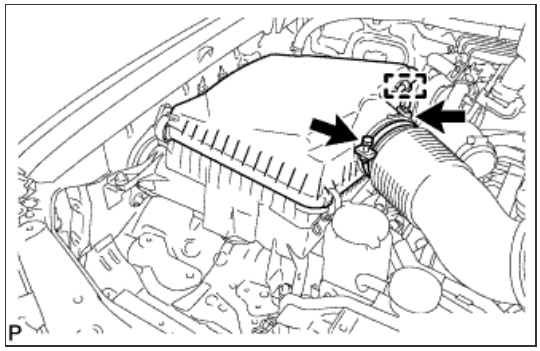


e. w/o Viscous Heater:
Connect the connector to the water temperature sensor.

f. w/ Viscous Heater:
Connect the 2 connectors to the water temperature sensor and viscous with magnet clutch heater.

6. TEMPORARILY INSTALL NO. 1 AIR CLEANER HOSE

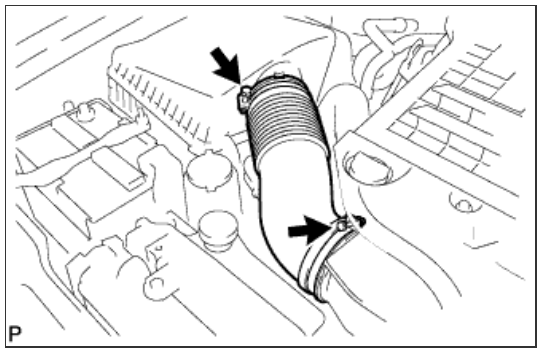
a. Temporarily install the air cleaner hose to the intake air connector.



7. INSTALL AIR CLEANER CAP SUB-ASSE BLY

a. Connect the air cleaner cap to the air cleaner hose, and install the air cleaner cap with the 4 clamps.

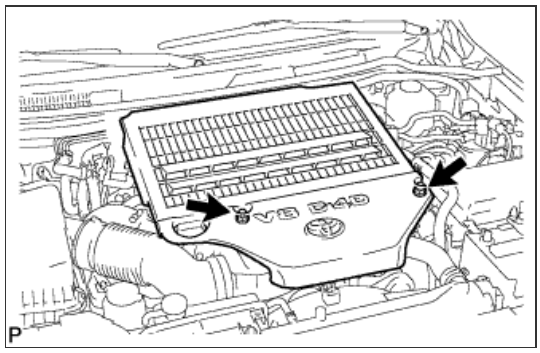
b. Connect the mass air flow meter connector and attach the wire harness clamp to the air cleaner cap.



c. Attach the wire harness clamp.

d. Align the protrusion of air cleaner cap and concave portion of air cleaner hose.

e. Tighten the 2 hose clamps.

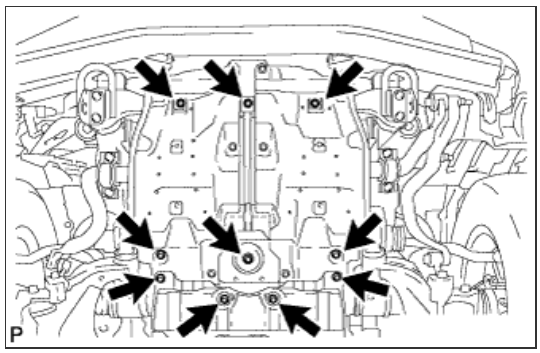


Torque:
5. N*m{ 51 kgf*cm , 44 in.*lbf }

8. INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY (w/ Intercooler)

a. Install the engine cover with the 2 nuts.

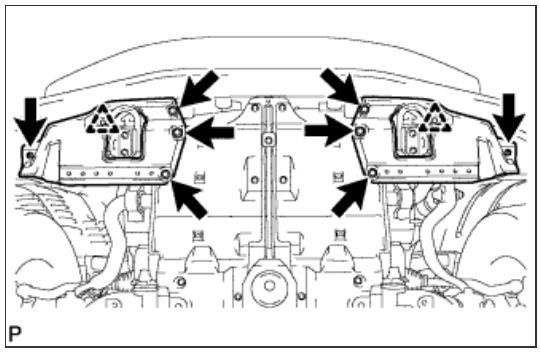
Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



9. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the upper radiator support seal with the 7 clips.

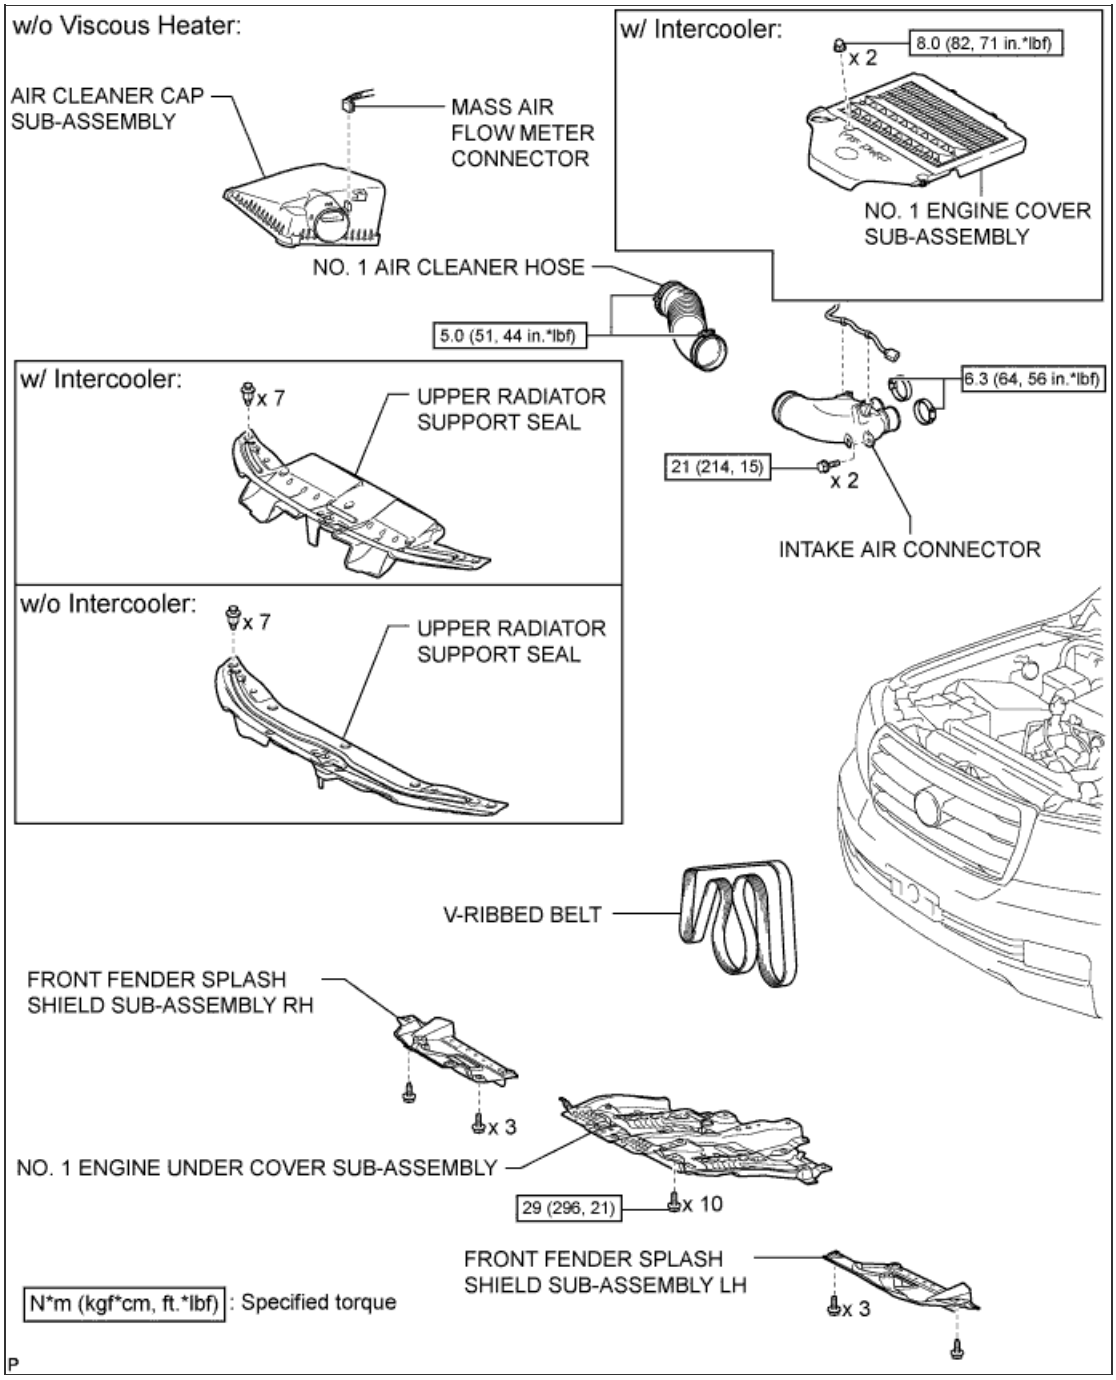
10. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY



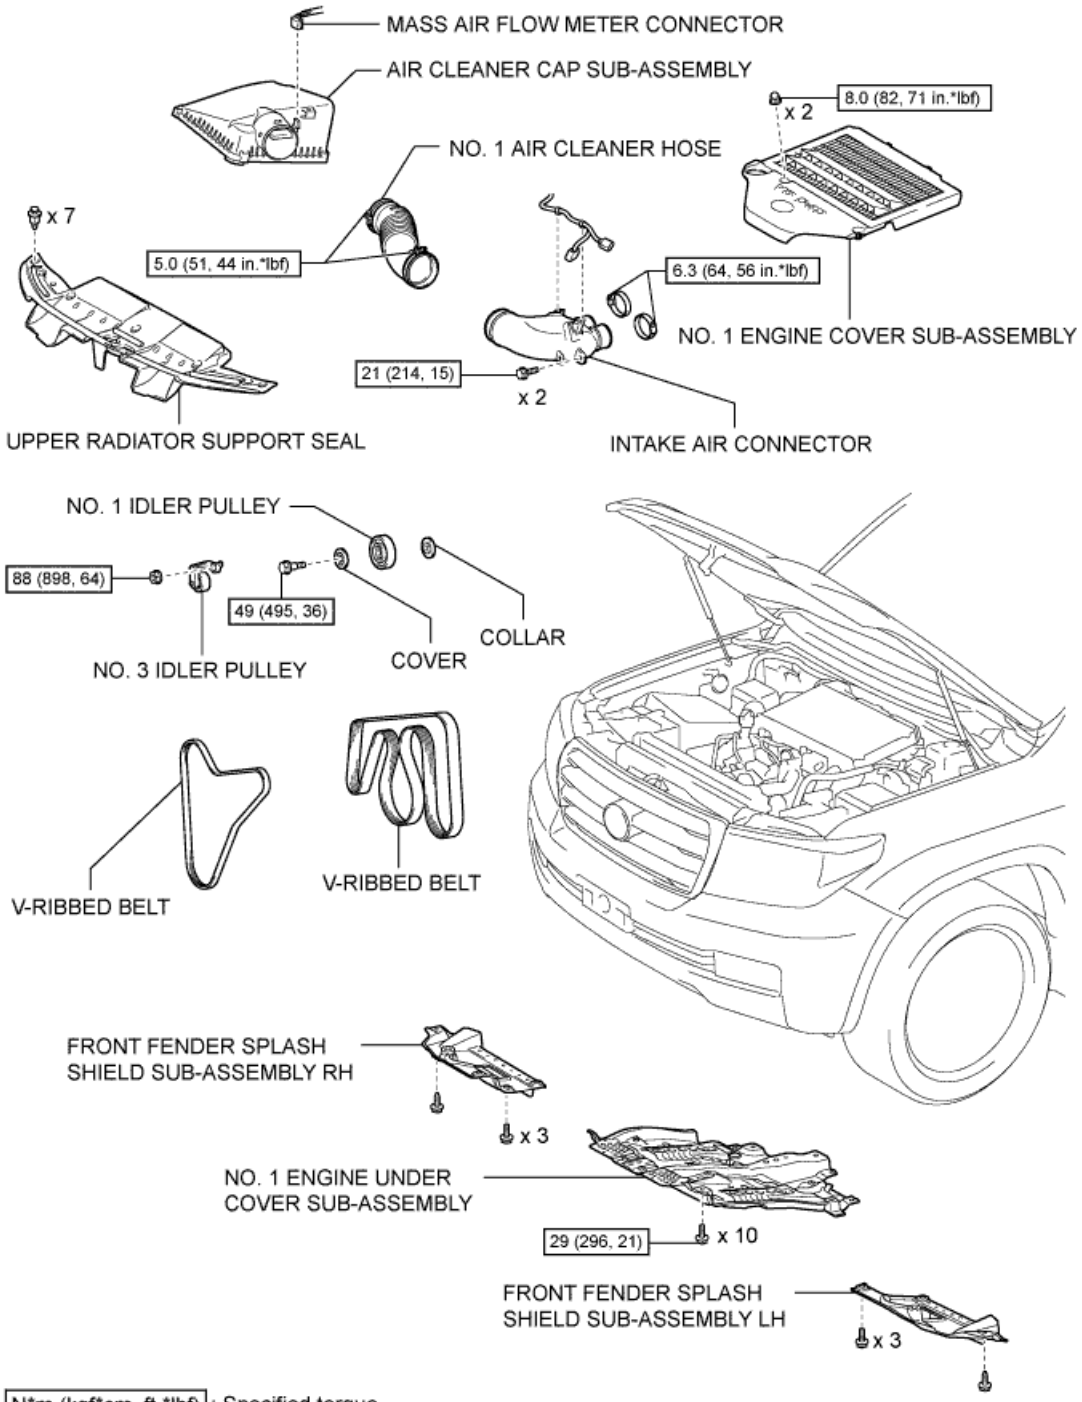
a. Install the engine under cover with the 10 bolts.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

11. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

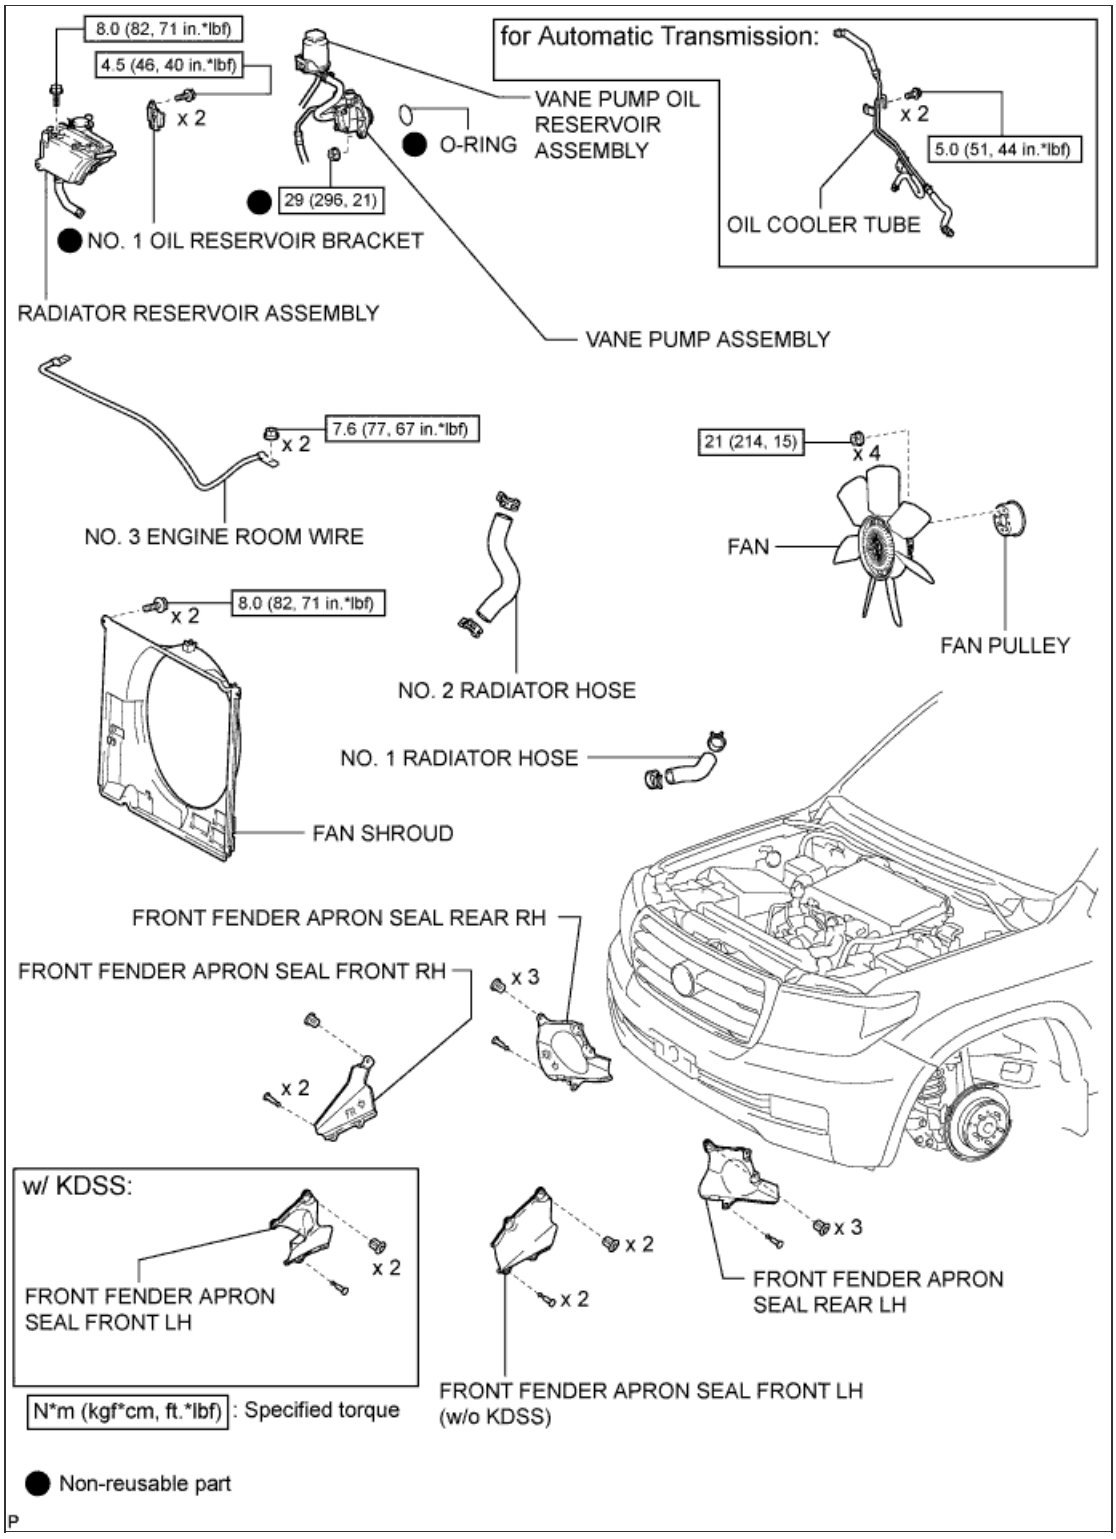


a. Install the splash shield with the clip, and then install the 3 bolts and screw.



12. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Install the splash shield with the clip, and then install the 3 bolts and screw.



for Preparation Click here

CAUTION:

When replacing an injector (including interchanging injectors between cylinders), common rail, cylinder head, or intake manifold, replace the corresponding injection pipes with a new one.

1. CHECK INJECTOR COMPENSATION CODE

NOTICE:

- **When a fuel injector is replaced, the new fuel injector compensation code must be input into the ECM. When the ECM is replaced, all of the existing fuel injector compensation codes must be input into the new ECM.**
- **Fuel injector compensation codes are unique, 30 digit, alphanumeric values printed on the head portion of each fuel injector. If an incorrect fuel injector compensation code is input into the ECM, the engine assembly may rattle or engine idling may become rough. In addition, engine failure may occur and the life of the engine may be shortened.**

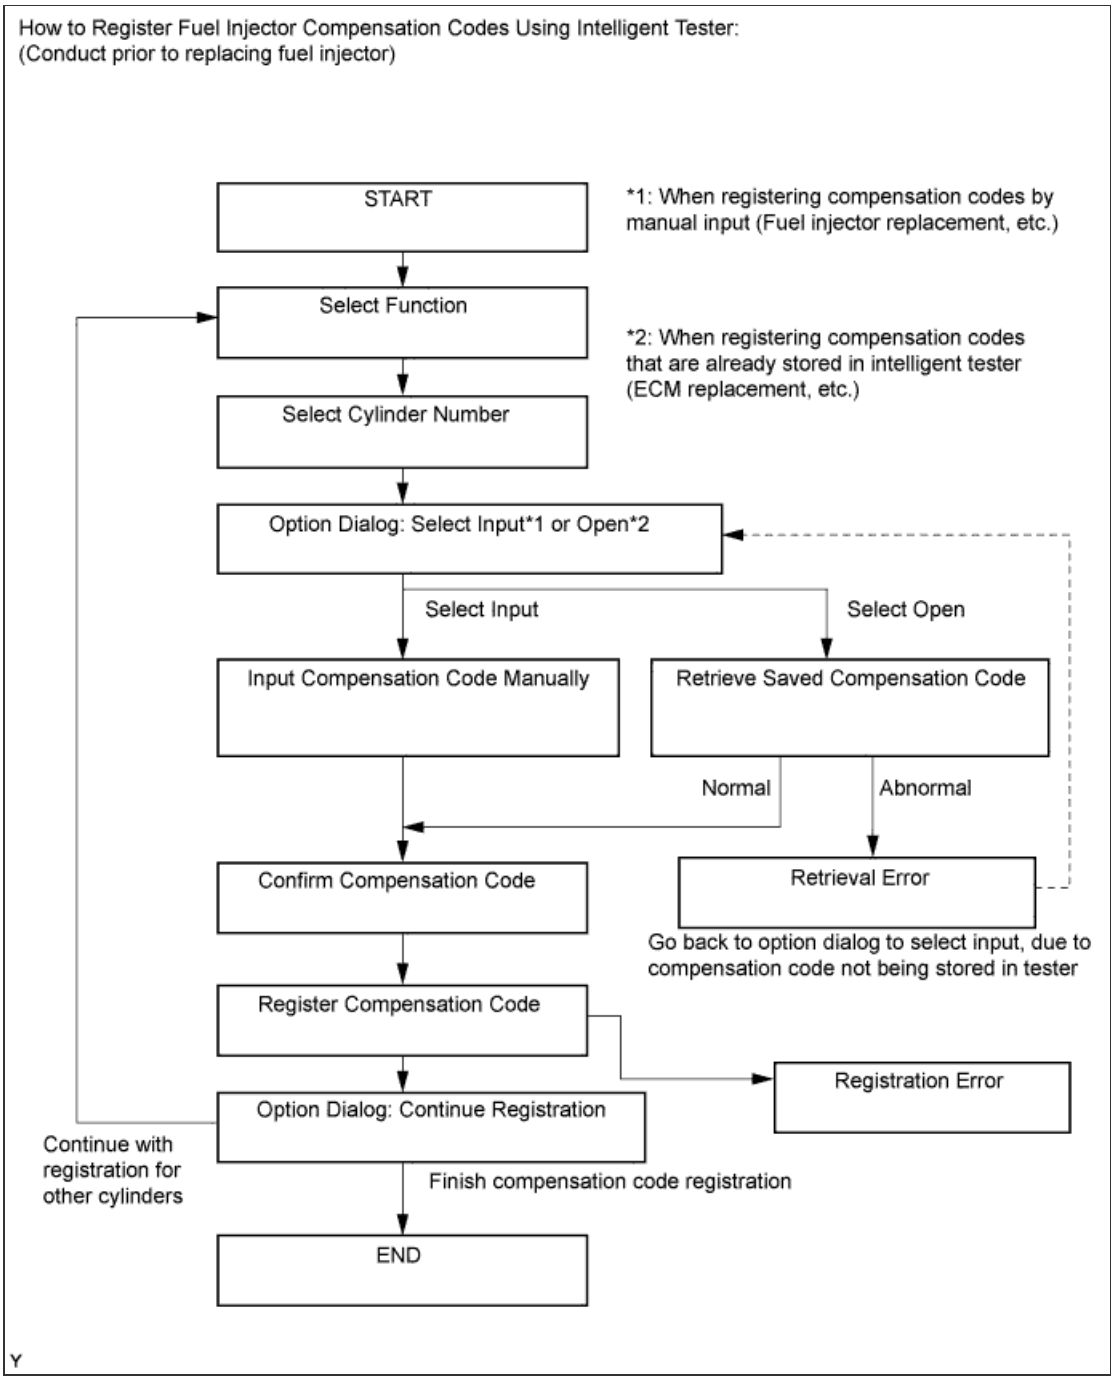
a. After replacing fuel injector(s) with new one(s), input compensation code(s) of fuel injector(s) into ECM as follows:

HINT:

- **Each fuel injector has different fuel injection characteristics. In order to optimize the fuel injections, the ECM uses the compensation codes to balance the different fuel injections between each fuel injector.**
- **When you first turn the ignition switch to ON after replacing the ECM or a fuel injector(s), DTC P1601 is set. This is to inform you that registration of a fuel injector compensation code(s) is/are required. Manually clear the DTC upon completion of the compensation code registration.**

i. Input the compensation code(s), which is/are imprinted on the head portion(s) of the new fuel injector(s), into the intelligent tester.

ii. Input the new compensation code(s) into the ECM using the tester.



iii. Turn the tester off and turn the ignition switch off.

iv. Wait for at least 30 seconds.

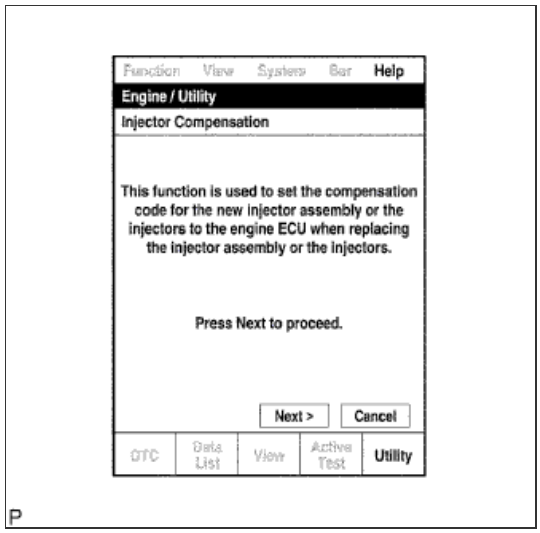
v. Turn the ignition switch to ON and turn the tester on.

vi. Clear DTC P1601 stored in the ECM using the tester (Click here).

b. Register compensation code.

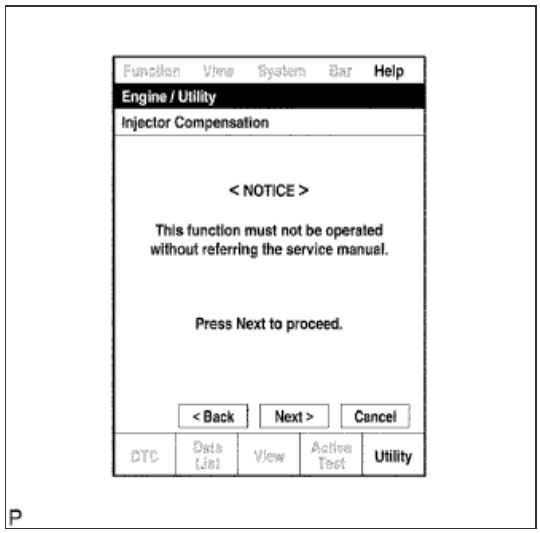
i. Connect the intelligent tester to the DLC3.

ii. Turn the ignition switch to ON.



NOTICE:

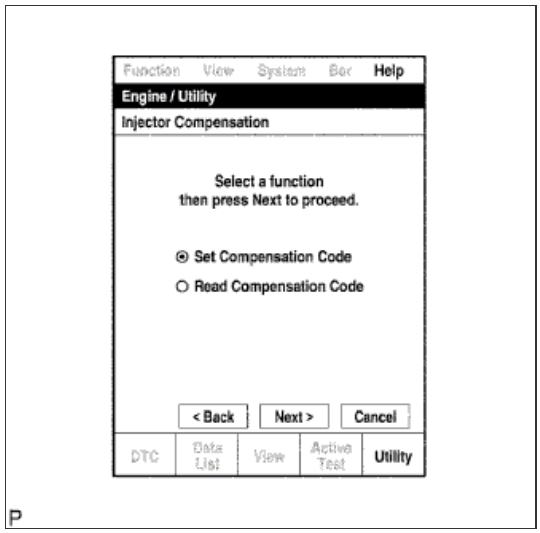
Do not start the engine.



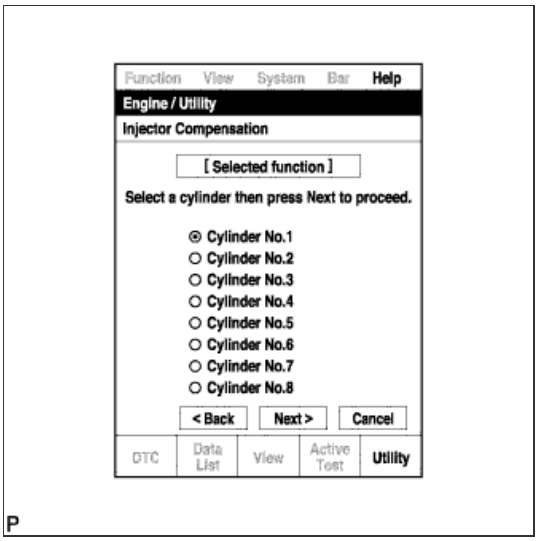
iii. Turn the tester on.

iv. Enter the following menus: Powertrain / Engine / Utility / Injector Compensation.

v. Press Next.

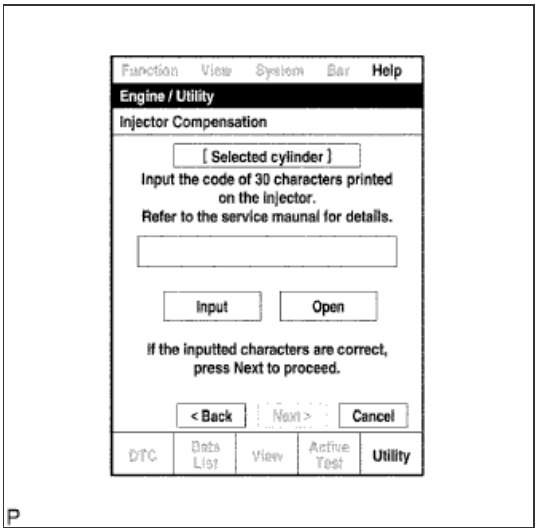


vi. Press Next again to proceed.



vii. Select et Compensation Code .

viii. Press Next.



ix. Select the number of the cylinder corresponding to the fuel injector compensation code that you want to read.

x. Press Next.

xi. Register compensation code.

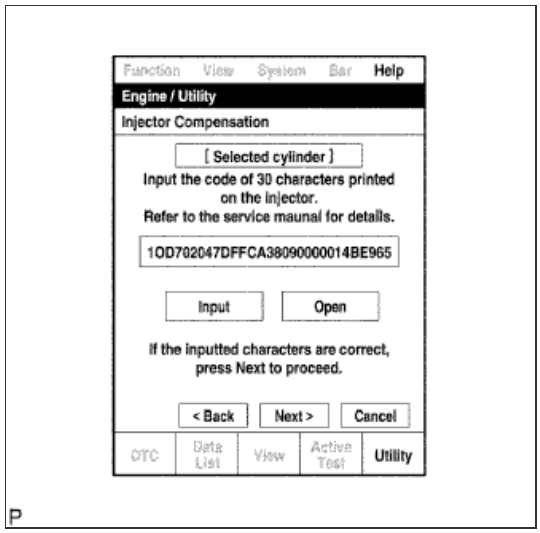
1. Press Input.

2. Manually input the cylinder compensation code using the keyboard on the tester screen. The code is a 30 digit, alphanumeric value printed on the injector head portion.

HINT:

Each fuel injector compensation code is uni ue. The compensation code for each selected cylinder must be input into the tester correctly.

3. Confirm that the compensation code for the selected cylinder is correct, and then press O .



xii. Check that the compensation code displayed on the screen is correct by comparing it with the 30 digit alphanumeric value on the head portion of the fuel injector.

NOTICE:

If an incorrect fuel injector compensation code is input into the ECM, the engine may rattle or engine idling may become rough. In addition, engine failure may occur and the life of the engine may be shortened.

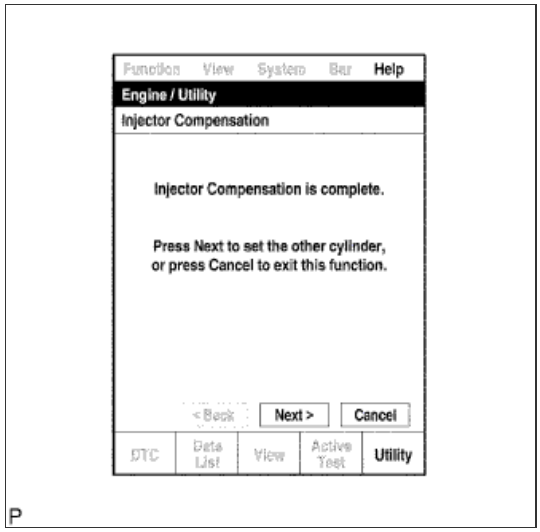
HINT:

- **If a wrong compensation code is input or read, return to the Input Value screen by pressing Input.**
- **The saving process may fail due to a problem with the wire harness or a bad connection with the DLC3. Check the wire harness and DLC3 connection. If no problem is found with either, the ECM may be malfunctioning. Check the ECM and repeat this operation.**

xiii. Press Next to register the compensation code in the ECM.

HINT:

- **If the registration process fails, the compensation code may be incorrect. Check the compensation code again.**
- **If the input compensation code fails to register even though it is input correctly, there may be a problem with the wire harness or a bad connection with the DLC3. Check the wire harness and DLC3 connection. If no problem is found with either, the ECM may be malfunctioning. Check the ECM and restart this operation.**



xiv. If you want to continue with other compensation code registrations, press Next. To finish the registration, press Cancel.

xv. Turn the ignition switch off and then turn the tester off.

xvi. Wait for at least 30 seconds.

xvii. Turn the ignition switch to ON and then turn the tester on.

xviii. Clear DTC P1601 stored in the ECM using the tester (Click here).

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

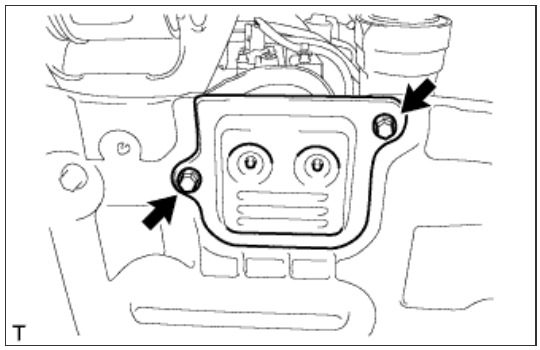
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

a. Disconnect the cables from the negative (-) main battery and sub-battery terminals.

3. DRAIN ENGINE OIL

a. Remove the 2 bolts and No. 2 engine under cover seal from the No. 2 engine under cover.



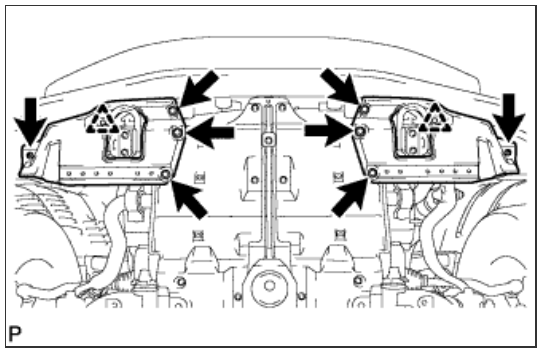
b. Remove the oil filler cap.

c. Remove the oil pan drain plug and gasket, and then drain the engine oil into a container.

d. Install a new gasket and the oil pan drain plug.

Torque:

3 N m{ 387 kgf*cm , 28 ft.*lbf }



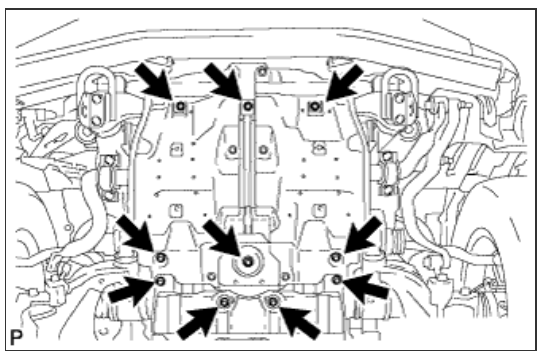
4. REMOVE FRONT WHEEL

5. DRAIN CLUTCH FLUID (for Manual Transmission)

6. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and screw.

b. Loosen the clip and remove the splash shield.



7. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

a. Remove the 3 bolts and screw.

b. Loosen the clip and remove the splash shield.

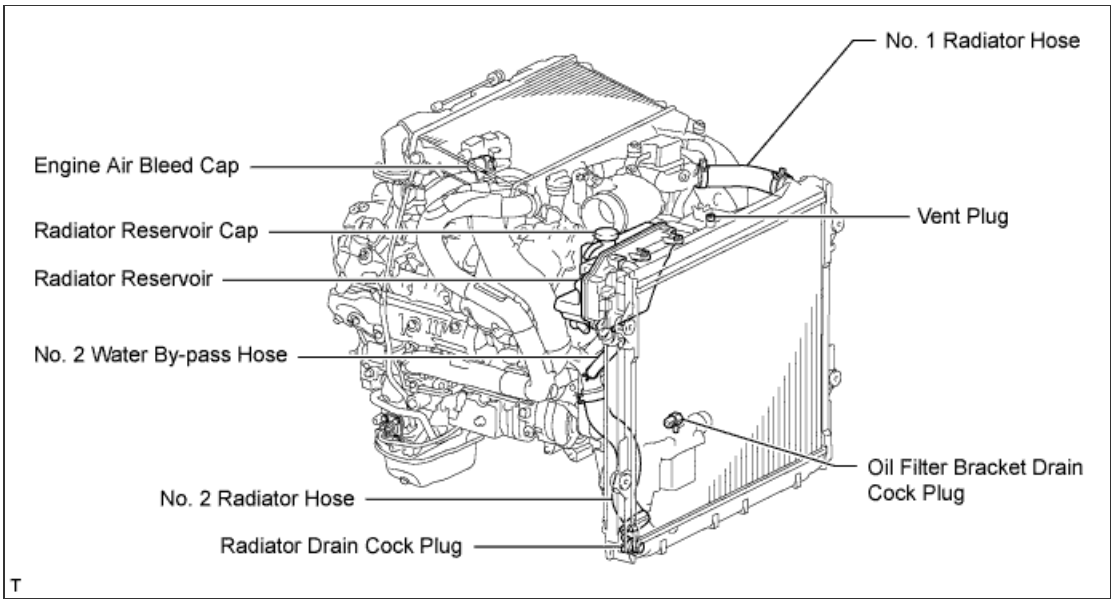
8. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and under cover.

9. REMOVE ENGINE COOLANT

CAUTION:

Do not remove the radiator reservoir cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

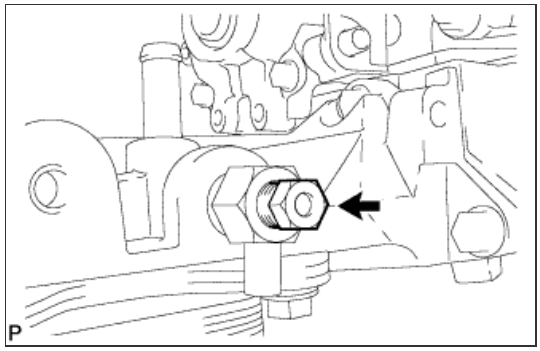


HINT:

Collect the coolant in a container and dispose of it according to the regulations in your area.

a. Loosen the radiator drain cock plug.

b. Remove the radiator reservoir cap to drain the coolant in the radiator.

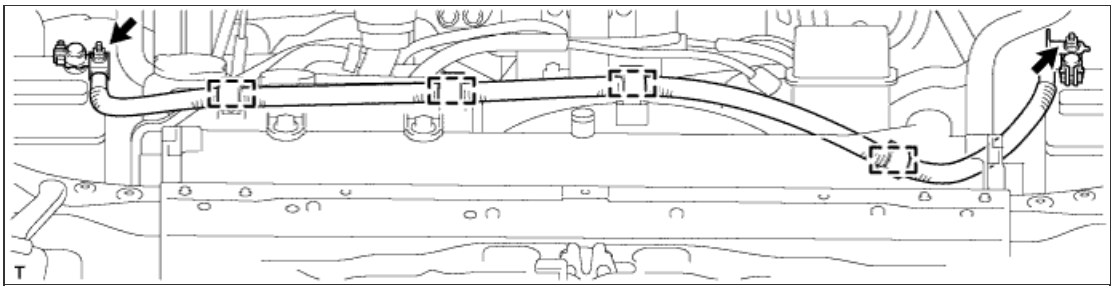


c. Loosen the oil filter bracket drain cock plug to drain the coolant in the engine.

d. Tighten the radiator drain cock plug by hand.

e. Tighten the oil filter bracket drain cock plug.

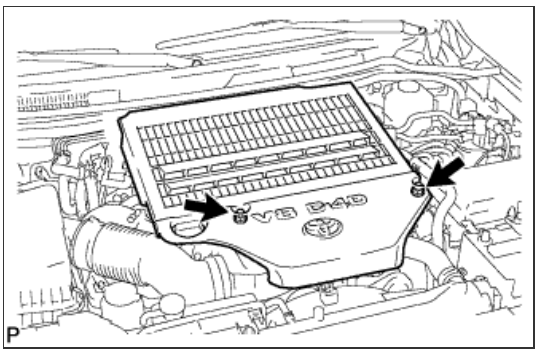
Torque:
13 N m{ 133 kgf*cm , 10 ft.*lbf }



10. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 7 clips and upper radiator support seal.

11. REMOVE NO. 3 ENGINE ROOM WIRE

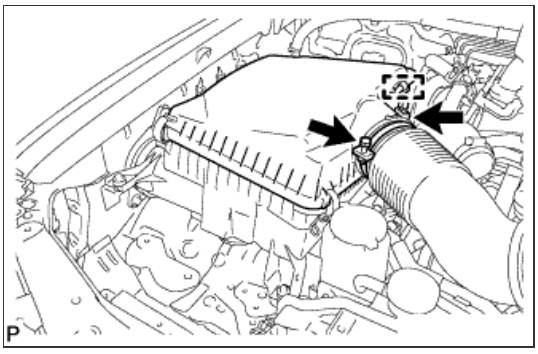


a. Disconnect the 4 wire harness clamps.

b. Remove the 2 nuts and No. 3 engine room wire.

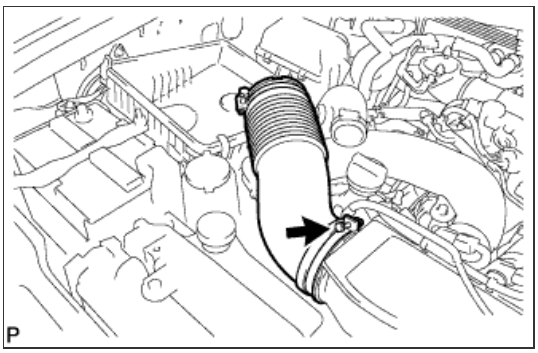
12. REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY (w/ Intercooler)

a. Remove the 2 nuts and No. 1 engine cover.



13. REMOVE AIR CLEANER CAP SUB-ASSEMBLY

a. Loosen the hose clamp.



b. Disconnect the mass air flow meter connector and using a clip remover, detach the wire harness clamp from the air cleaner cap.

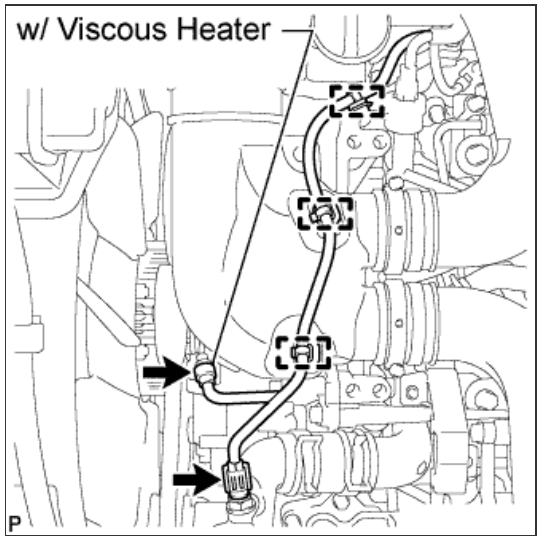
c. Detach the 4 clamps and remove the air cleaner cap.

14. REMOVE NO. 1 AIR CLEANER HOSE

a. Loosen the hose clamp and remove the No. 1 air cleaner hose.

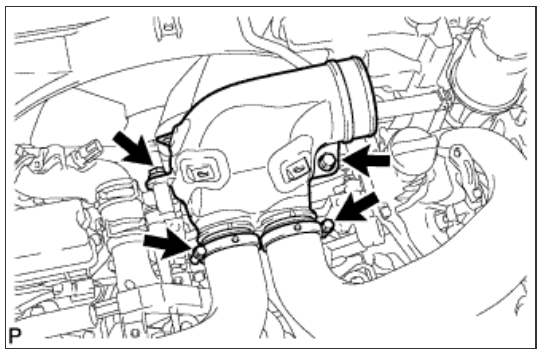
15. REMOVE INTAKE AIR CONNECTOR

a. w/o Viscous Heater:



i. Disconnect the connector from the water temperature sensor.

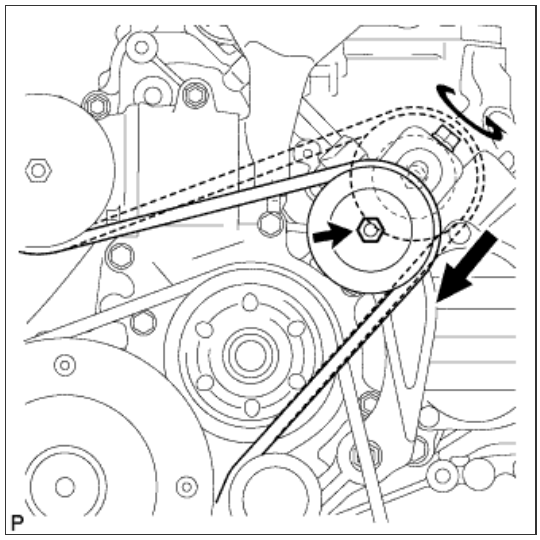
ii. Using a clip remover, detach the 3 wire harness clamps.



b. w/ Viscous Heater:

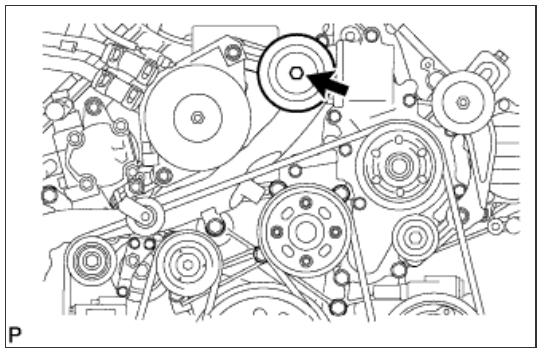
i. Disconnect the 2 connectors from the viscous with magnet clutch heater and water temperature sensor.

ii. Using a clip remover, detach the 3 wire harness clamps.



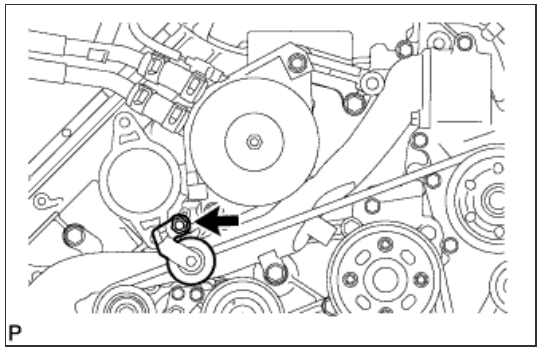
c. Loosen the 2 hose clamps and remove the 2 bolts and intake air connector.

16. REMOVE V RIBBED BELT (w/ Viscous Heater)



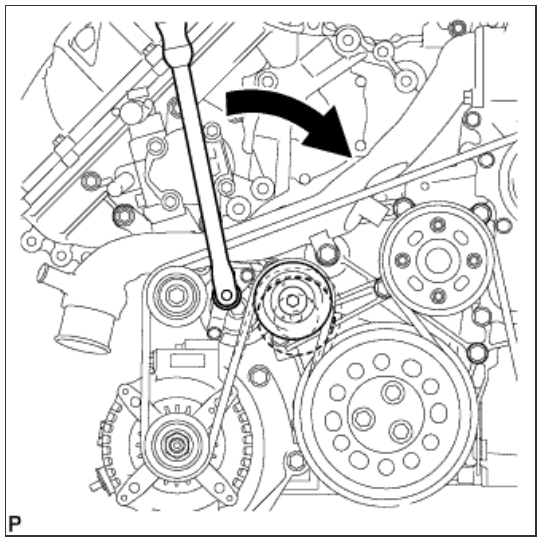
a. Loosen the lock nut and turn the bolt counterclockwise.

b. Remove the V-ribbed belt.



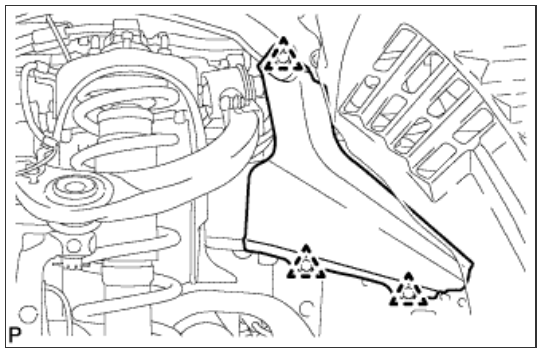
17. REMOVE NO. 1 IDLER PULLEY (w/ Viscous Heater)

a. Remove the bolt, cover, No. 1 idler pulley and collar.



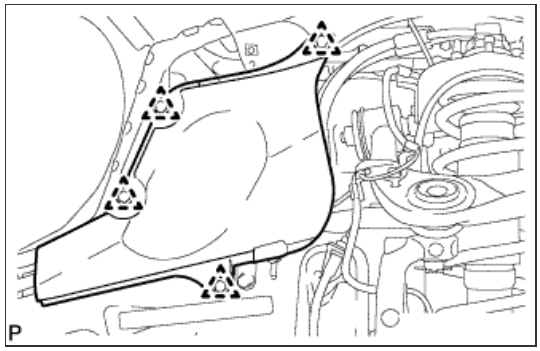
1 . REMOVE NO. 3 IDLER PULLEY (w/ Viscous Heater)

a. Remove the nut and No. 3 idler pulley.



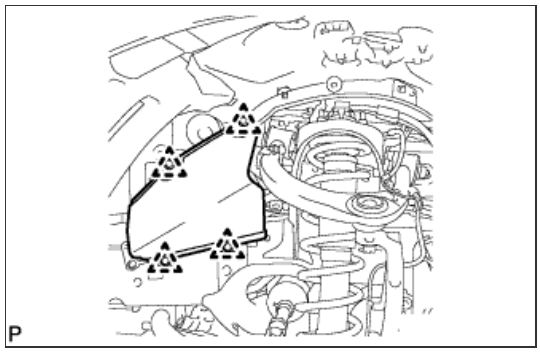
19. REMOVE V-RIBBED BELT

a. Using a wrench to the V-ribbed belt tensioner bracket, turn the wrench clockwise and remove the V-ribbed belt.



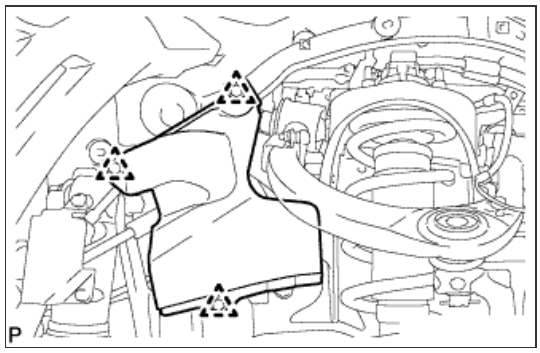
20. REMOVE FRONT FENDER APRON SEAL FRONT RH

a. Remove the 3 clips and front fender apron seal front RH.



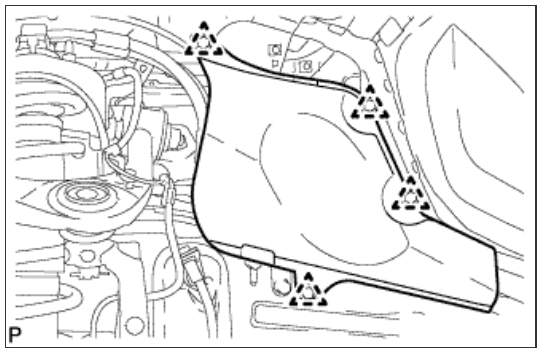
21. REMOVE FRONT FENDER APRON SEAL REAR RH

a. Remove the 4 clips and front fender apron seal rear RH.

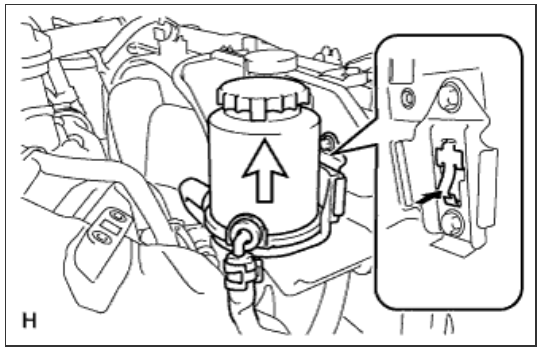


22. REMOVE FRONT FENDER APRON SEAL FRONT LH

a. w/o DSS:
Remove the 4 clips and front fender apron seal front LH.

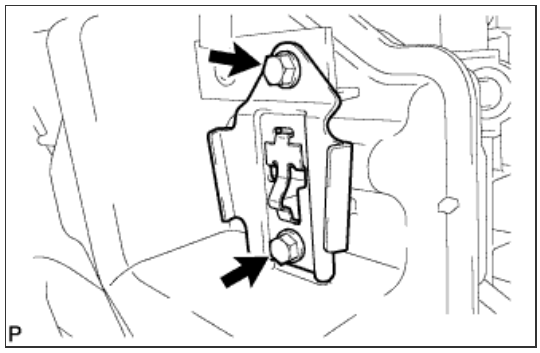


b. w/ DSS:
Remove the 3 clips and front fender apron seal front LH.



23. REMOVE FRONT FENDER APRON SEAL REAR LH

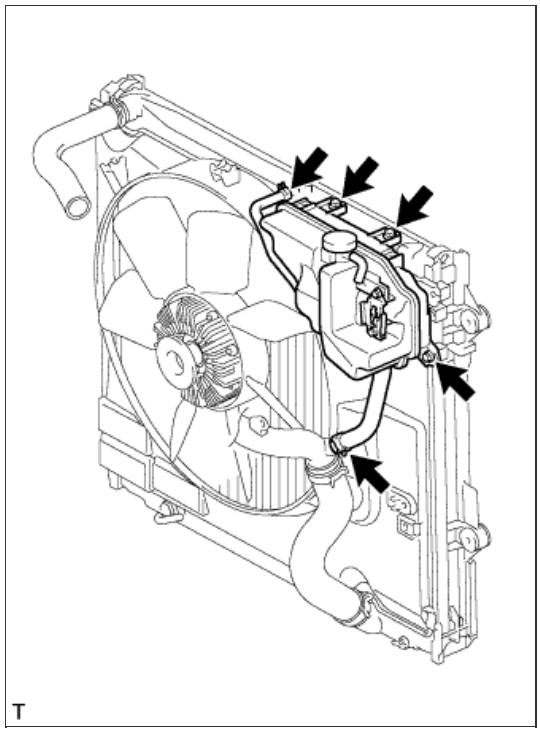
a. Install the front fender apron seal rear LH with the 4 clips.



24. REMOVE VANE PUMP OIL RESERVOIR ASSEMBLY

a. Insert a screwdriver between the reservoir and oil reservoir bracket, push the claw, and then disconnect the reservoir by pulling it upwards.

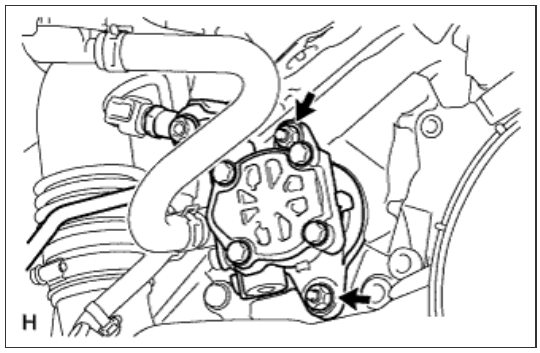
25. REMOVE NO. 1 OIL RESERVOIR BRACKET



a. Remove the 2 bolts and bracket.

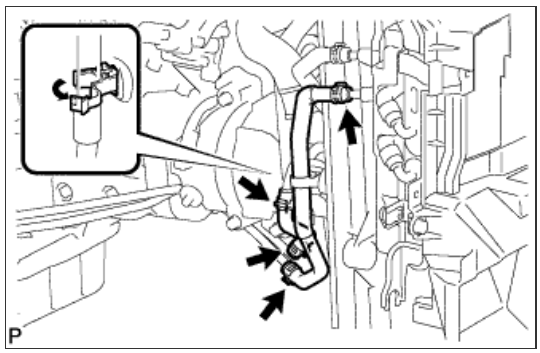
26. REMOVE RADIATOR RESERVOIR ASSEMBLY

a. Disconnect the 2 hoses.



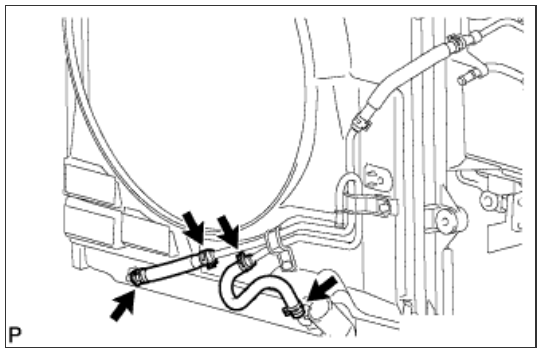
b. Remove the 3 bolts and radiator reservoir.

27. REMOVE VANE PUMP ASSEMBLY

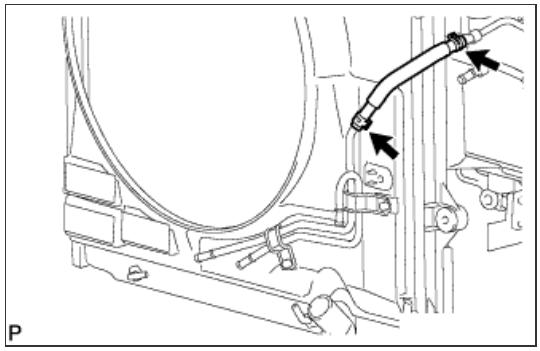


a. Remove the 2 nuts and vane pump.

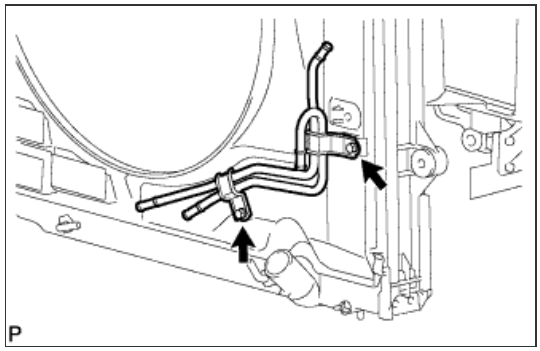
b. Remove the O-ring from the vane pump.



28. REMOVE OIL COOLER TUBE (for Automatic Transmission)

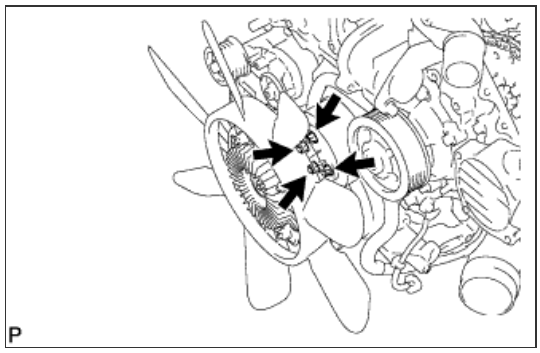


a. Disconnect the inlet and outlet No. 1 oil cooler hose.

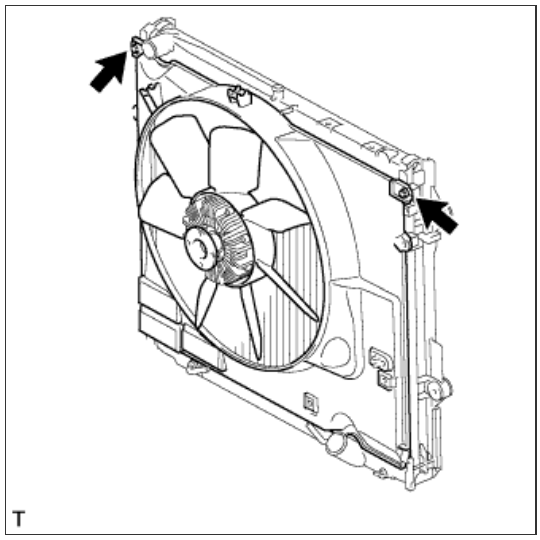


b. Disconnect the inlet No. 2 and No. 3 oil cooler hoses.

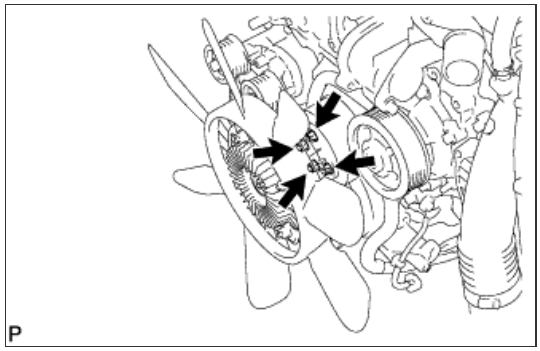
c. Disconnect the inlet No. 4 oil cooler hose.



d. Remove the 2 bolts and transmission oil cooler tube.

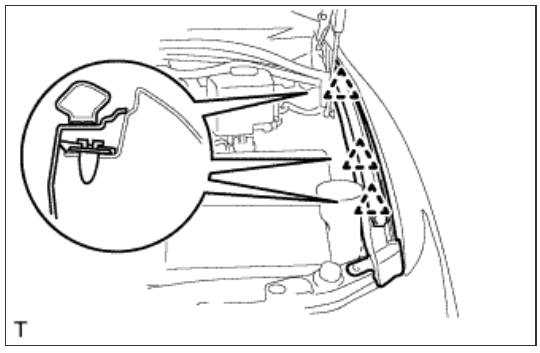


29. REMOVE FAN SHROUD WITH FAN



a. Loosen the 4 nuts holding the fluid coupling fan.

b. Remove the 2 bolts holding the fan shroud.



c. Remove the 4 nuts of the fluid coupling fan, and then remove the shroud together with the fluid coupling fan.

30. REMOVE FRONT FENDER MAIN SEAL LH

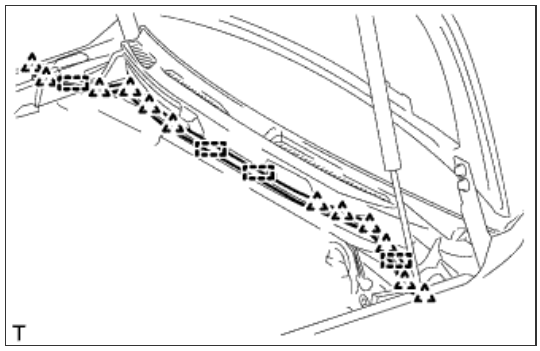
a. Using a clip remover, detach the 3 clips and remove the fender main seal.

31. REMOVE FRONT FENDER MAIN SEAL RH

HINT:

Use the same procedures described for the LH side.

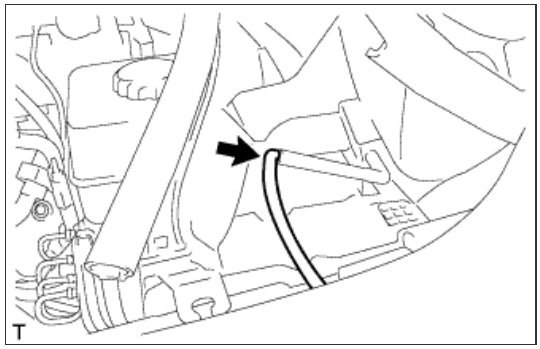
32. REMOVE FRONT WIPER ARM LH



a. Remove the nut, wiper arm and blade.

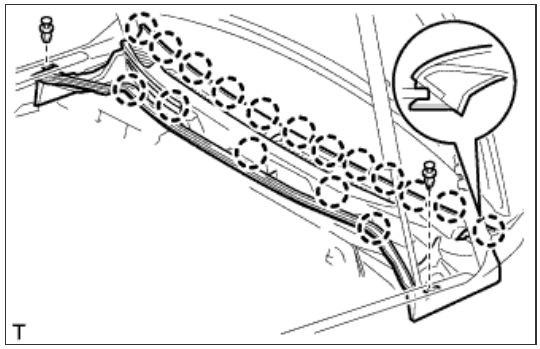
33. REMOVE FRONT WIPER ARM RH

a. Remove the nut, wiper arm and blade.



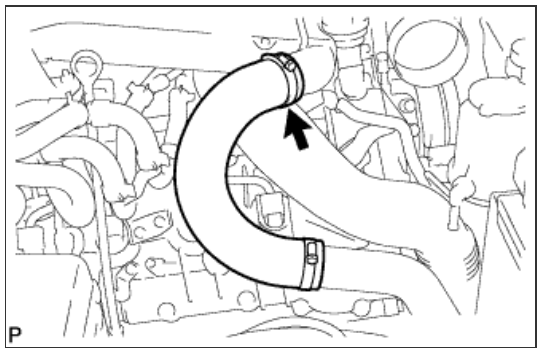
3 . REMOVE HOOD TO COWL TOP SEAL

a. Using a clip remover, detach the 12 clips, 4 clamps and remove the hood to cowl top seal.



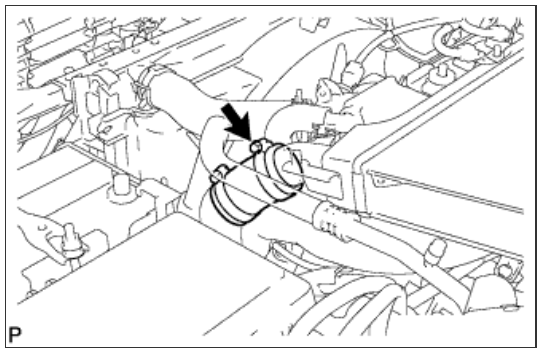
35. REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

a. Remove the washer hose.

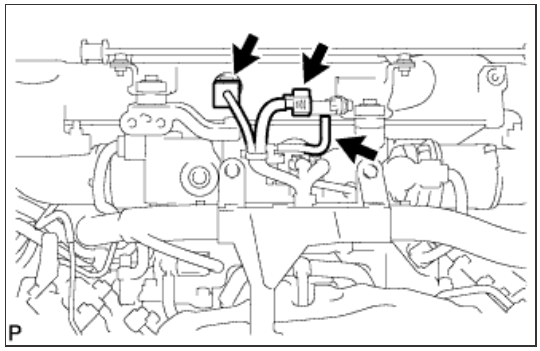


b. Remove the 2 clips.

c. Detach the 17 claws and remove the cowl top ventilator louver sub-assembly.



36. REMOVE INTERCOOLER ASSEMBLY (w/ Intercooler)

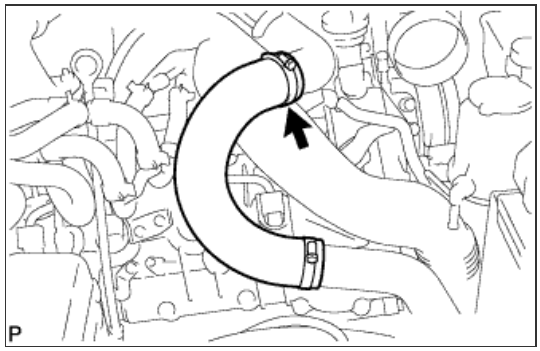


a. Loosen the No. 1 air hose clamp.

b. Loosen the No. 2 air hose clamp.

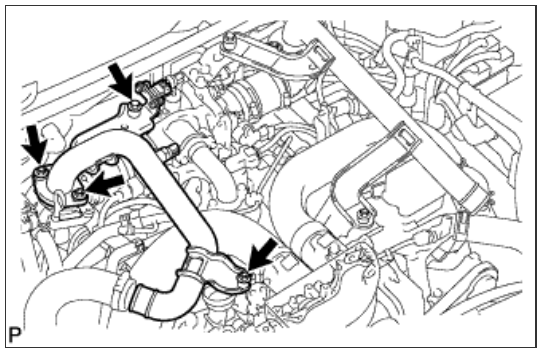
c. Disconnect the turbo pressure sensor connector, intake air temperature sensor connector and vacuum hose.

d. Remove the 6 nuts, 2 bolts and intercooler.



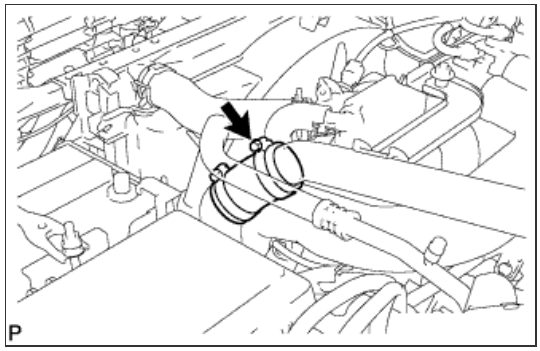
e. Remove the 2 gaskets from the air tube LH and RH.

3 . REMOVE NO. 1 COOL AIR INLET (w/o Intercooler)



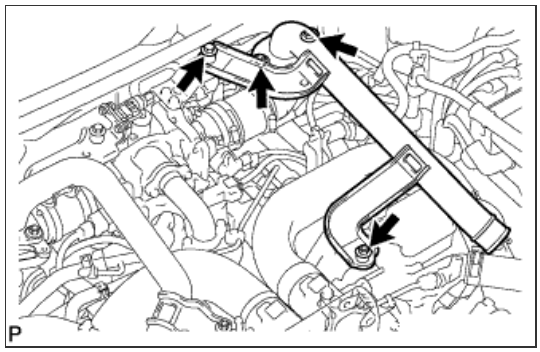
a. Loosen the No. 1 air hose clamp.

b. Disconnect the turbo pressure sensor connector, intake air temperature sensor connector and vacuum hose.



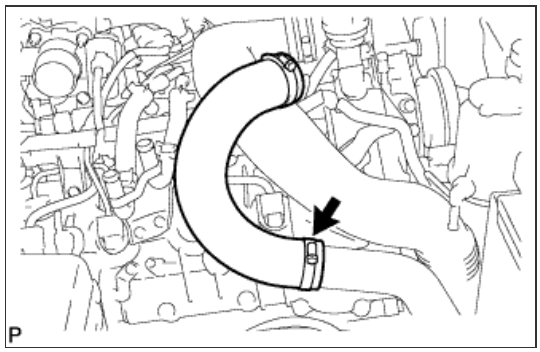
c. Remove the 3 nuts, bolt and No. 1 cool air inlet.

d. Remove the gasket from the air tube RH.



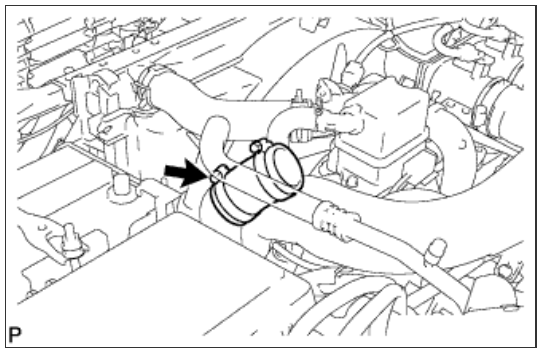
3 . REMOVE NO. 2 COOL AIR INLET (w/o Intercooler)

a. Loosen the No. 2 air hose clamp.



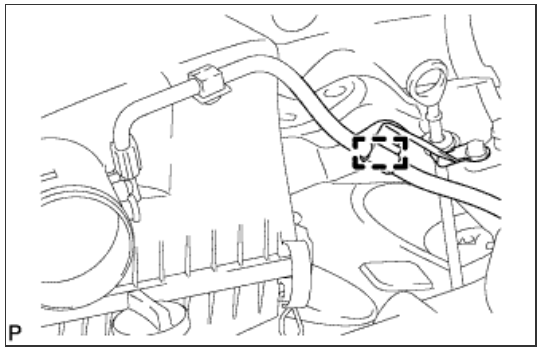
b. Remove the 3 nuts, bolt and No. 2 cool air inlet.

c. Remove the gasket from the air tube LH.



39. REMOVE NO. 1 AIR HOSE

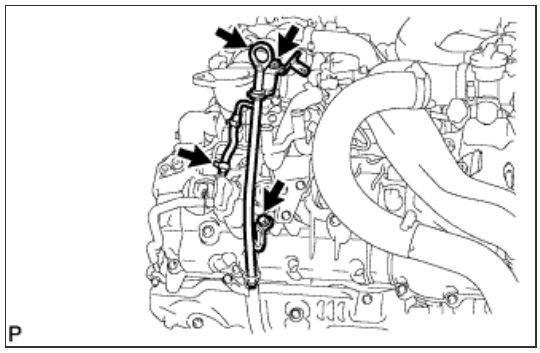
a. Loosen the hose clamp and remove the No. 1 air hose.



40. REMOVE NO. 2 AIR HOSE

a. Loosen the hose clamp and remove the No. 2 air hose.

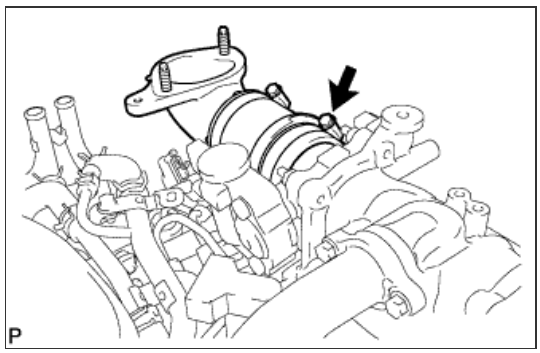
1. REMOVE NO. 2 ENGINE OIL LEVEL DIPSTICK GUIDE



a. Disconnect the wire harness clamp from the No. 2 engine oil level dipstick guide.

b. Disconnect the ventilation hose from the cylinder head cover RH.

c. Remove the 2 bolts and No. 2 engine oil level dipstick guide.

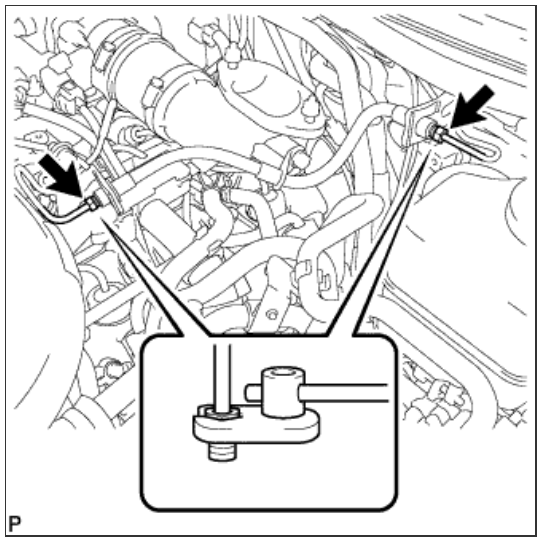


d. Remove the O-ring from the No. 2 engine oil level dipstick guide.

42. REMOVE AIR TUBE SUB-ASSEMBLY RH

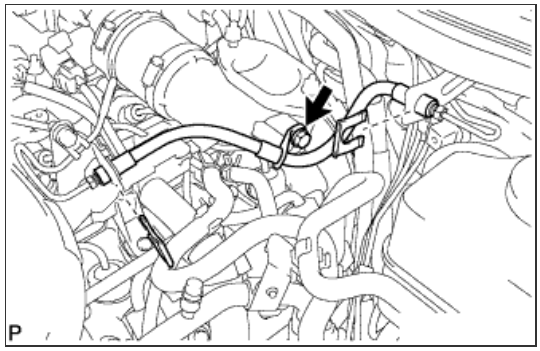
a. Loosen the hose clamp.

b. Remove the air tube from the throttle body.



43. REMOVE CLUTCH HOSE (for Manual Transmission)

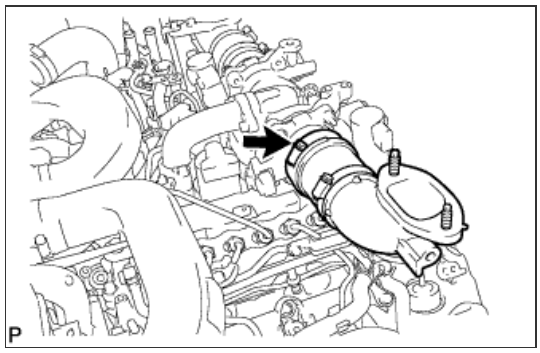
a. Disconnect the 2 flexible hose tubes from the clutch hose with a 10 mm union nut wrench while holding the flexible hose with a wrench.



NOTICE:

- **Do not bend or damage the flexible hose tubes.**
- **Do not allow any foreign matter such as dirt and dust to enter the flexible hose tubes from the connecting point.**

b. Remove the 2 clips.

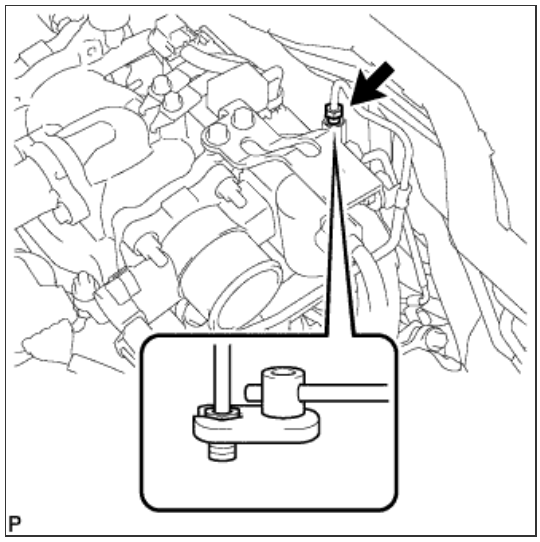


c. Remove the bolt and clutch hose.

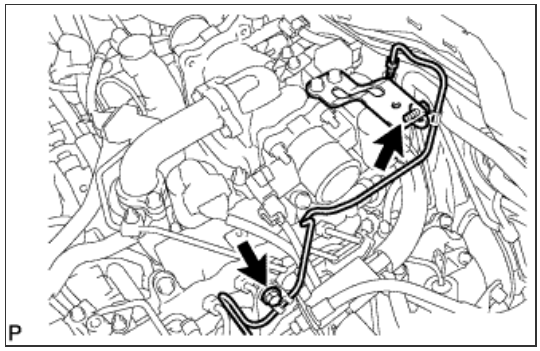
44. REMOVE AIR TUBE SUB-ASSEMBLY LH

a. Loosen the hose clamp.

b. Remove the air tube from the throttle body.

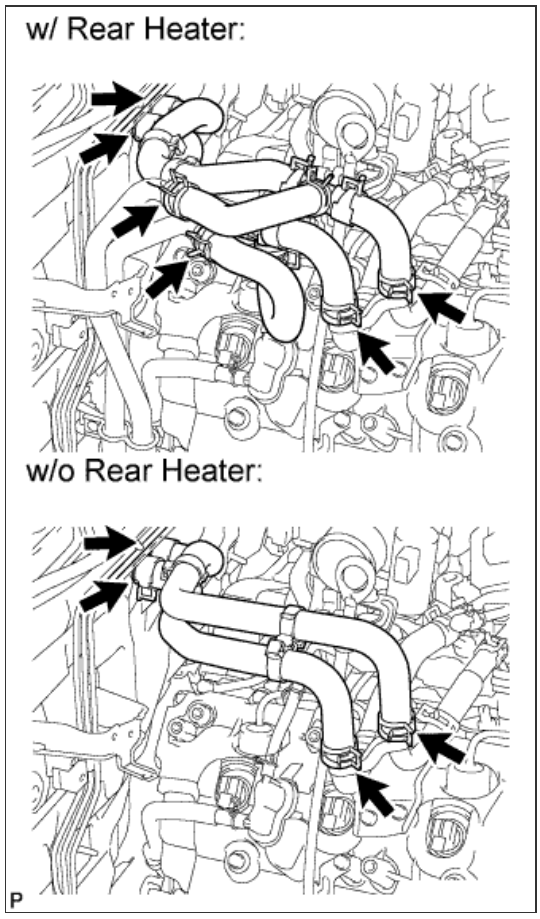


45. REMOVE TUBE CONNECTOR TO FLEXIBLE HOSE TUBE (for Manual Transmission)



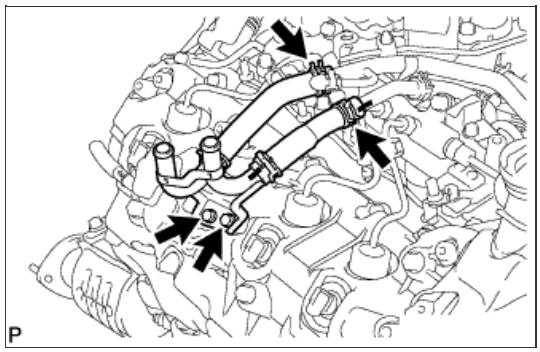
a. Using a 10 mm union nut wrench, disconnect the tube connector to flexible hose tube from the clutch tube to release cylinder 2 way.

NOTICE:

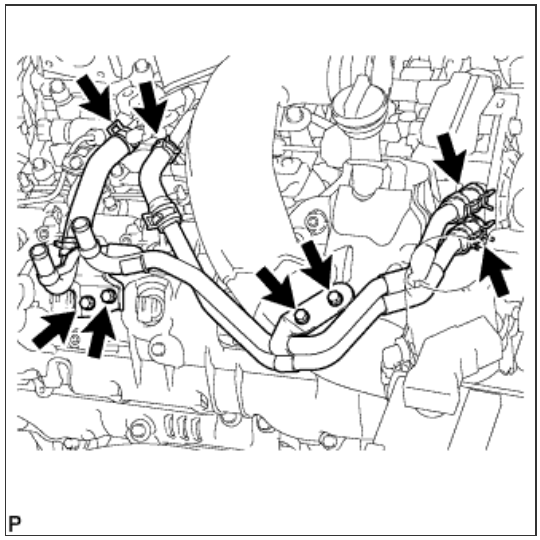


- **Do not bend or damage the flexible hose tube.**
- **Do not allow any foreign matter such as dirt and dust to enter the flexible hose tube from the connecting point.**

b. Remove the 2 bolts and tube connector to flexible hose tube.



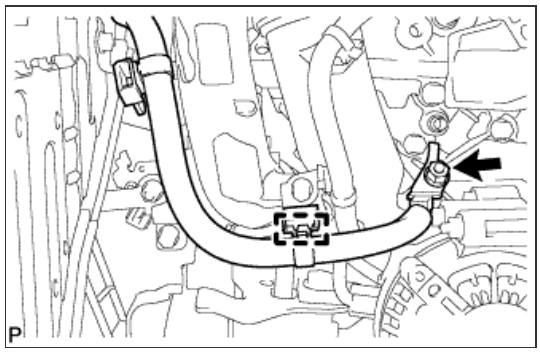
6. DISCONNECT WATER HOSE SUB-ASSEMBLY



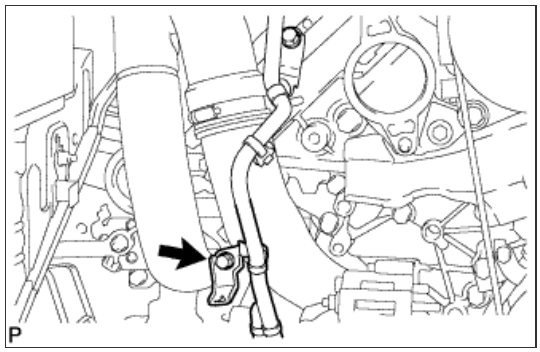
. REMOVE NO. 3 WATER BY PASS PIPE (w/o Viscous Heater)

a. Remove the 2 bolts and disconnect the 2 water hose ends, and then remove the No. 3 water by-pass pipe.

. REMOVE HEATER WATER PIPE SUB-ASSEMBLY (w/ Viscous Heater)

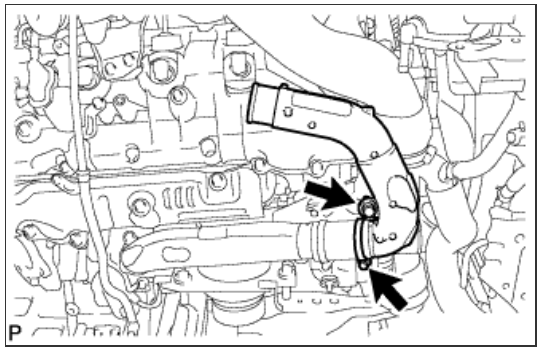


a. Remove the 4 bolts and disconnect the 4 water hose ends, and then remove the heater water pipe.



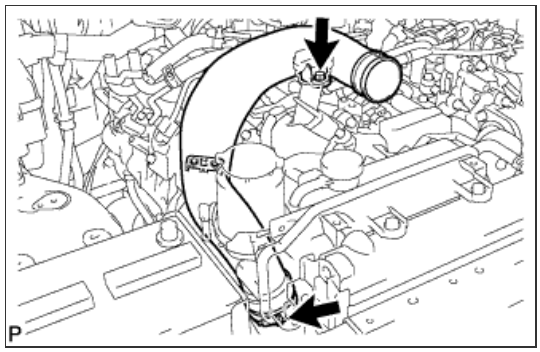
49. REMOVE NO. 3 AIR TUBE

a. Disconnect the wire harness from the clamp.



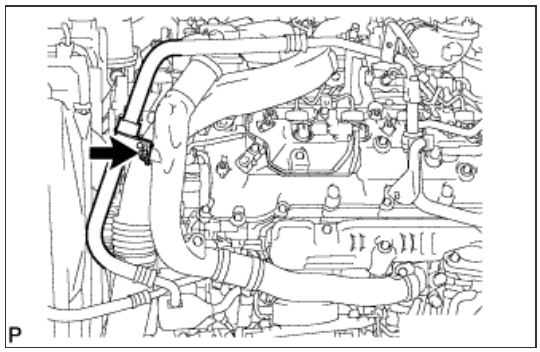
b. Remove the nut and ground wire.

c. Remove the bolt and disconnect the wire harness bracket.



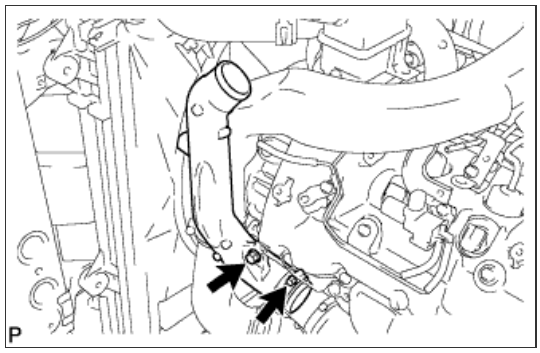
d. Loosen the hose clamp and remove the bolt and No. 3 air tube.

0. REMOVE NO. 1 AIR CLEANER PIPE SUB-ASSEMBLY



a. Loosen the hose clamp.

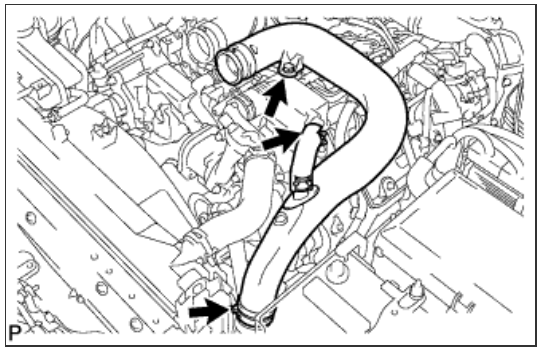
b. Remove the bolt and No. 1 air cleaner pipe.



51. REMOVE NO. 4 AIR TUBE

a. Remove the bolt and disconnect the suction hose.

b. Loosen the hose clamp and remove the bolt and No. 4 air tube.

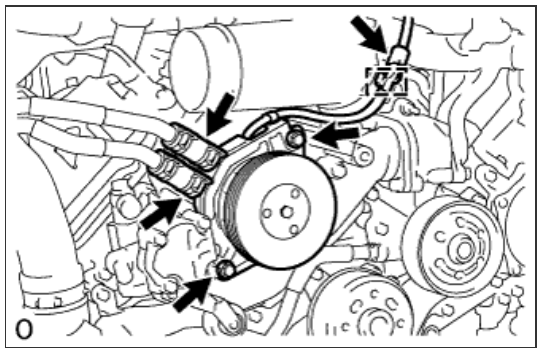


2. REMOVE NO. 2 AIR CLEANER PIPE SUB-ASSEMBLY

a. Disconnect the ventilation hose from the oil separator.

b. Loosen the hose clamp.

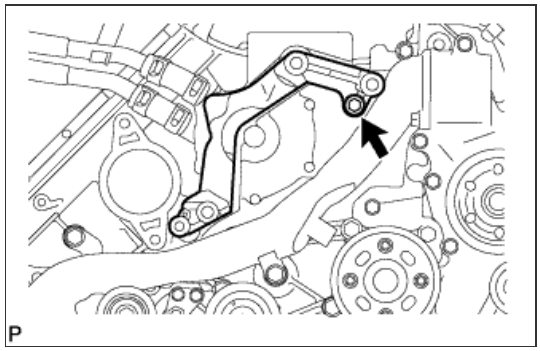
c. Remove the bolt and No. 2 air cleaner pipe.



53. REMOVE VISCOUS HEATER ASSEMBLY WITH MAGNET CLUTCH (w/ Viscous Heater)

a. Disconnect the connector and detach the clamp.

b. Using pliers, grip the claws of the clips and slide the 2 clips.

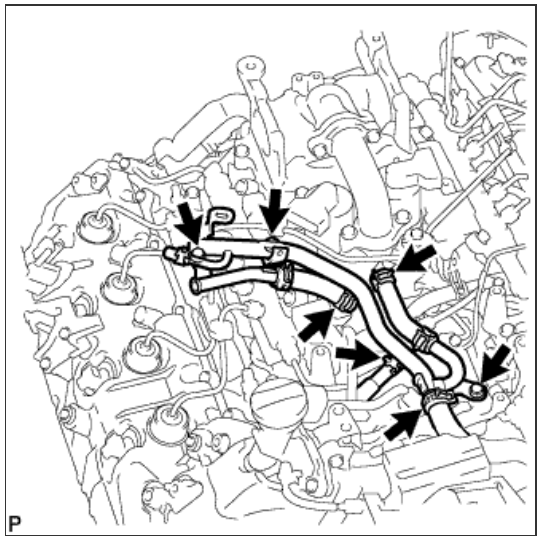


c. Disconnect the 2 heater hoses.

d. Remove the 2 bolts and heater assembly.

54. REMOVE NO. 1 IDLER PULLEY BRACKET (w/ Viscous Heater)

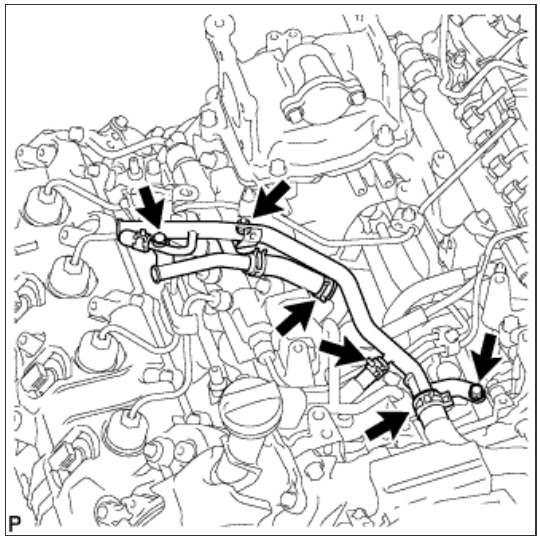
a. Remove the bolt and No. 1 idler pulley bracket.



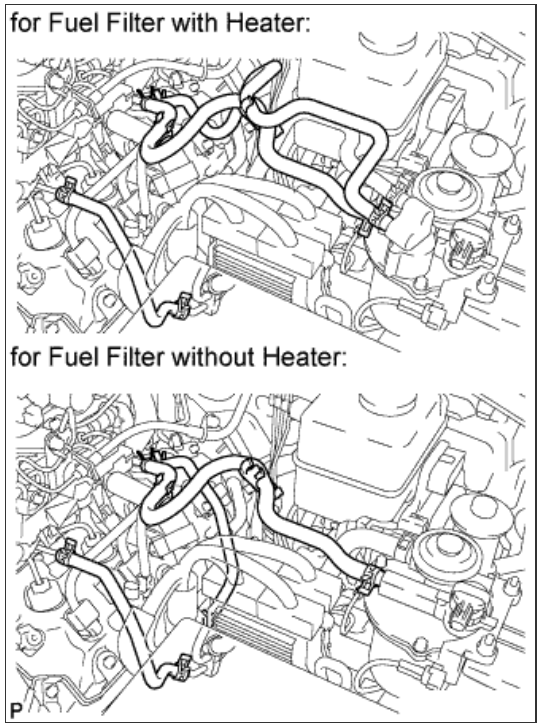
55. REMOVE NO. 4 WATER BY-PASS PIPE

a. w/ EGR System:

i. Remove the 2 bolts and nut.



ii. Disconnect the 4 water hose ends, and then remove the No. 4 water by-pass pipe.



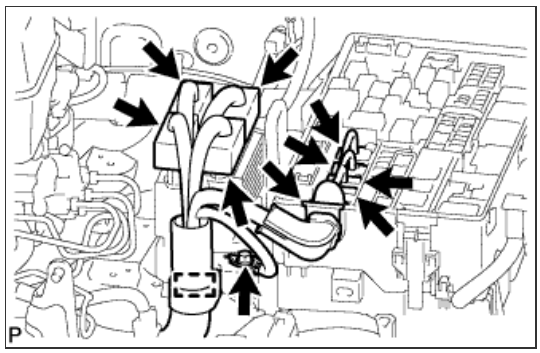
b. w/o EGR System:

i. Remove the 2 bolts and nut.

ii. Disconnect the 3 water hose ends, and then remove the No. 4 water by-pass pipe.

6. DISCONNECT FUEL HOSE

. DISCONNECT ENGINE WIRE

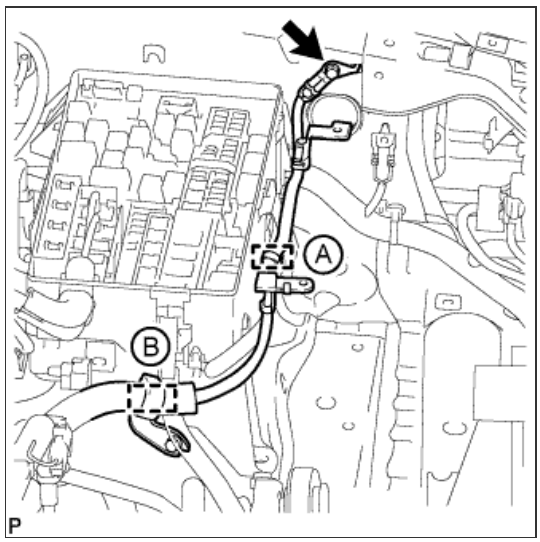


a. LH Side:

i. Disconnect the 4 connectors from the injector driver.

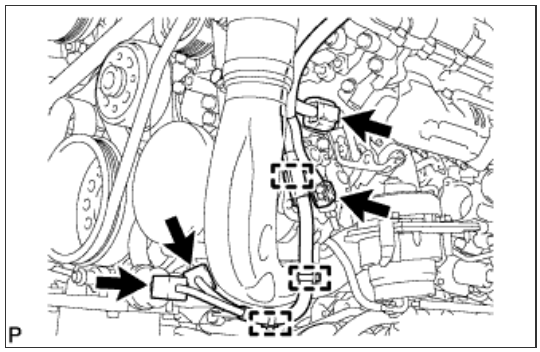
ii. Remove the 4 connectors and detach the wire harness holder from the relay block.

iii. Remove the bolt and disconnect the ground wire.



iv. Disconnect the wire harness from the wire harness clamp holder.

v. Remove the bolt and disconnect the ground wire from the body panel.



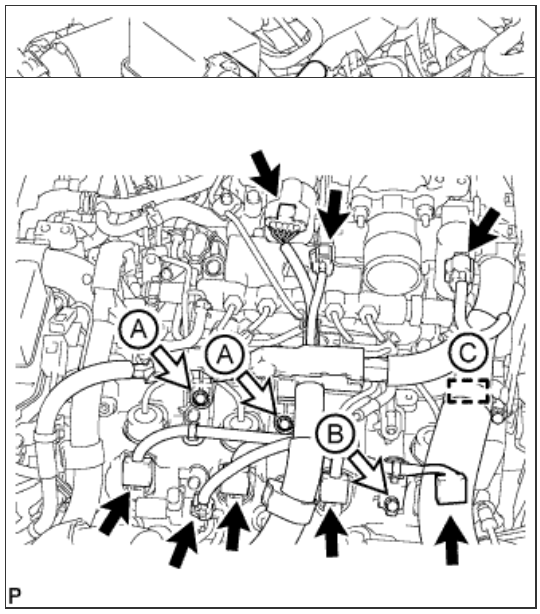
vi. Using a clip remover, detach the ground wire clamp labeled A from the relay block side.

vii. Disconnect the wire harness from the wire harness clamp holder labeled B.

viii. Disconnect the 4 connectors.

ix. Using a clip remover, detach the 3 wire harness clamps.

x. Disconnect the 2 connectors.

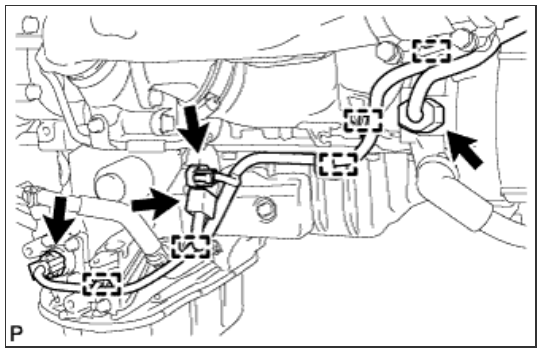


xi. Using a clip remover, detach the 3 wire harness clamps.

xii. Disconnect the connectors.

xiii. Remove the 2 bolts labeled A and disconnect the engine wire protector.

xiv. Remove the bolt labeled B and engine wire harness bracket.

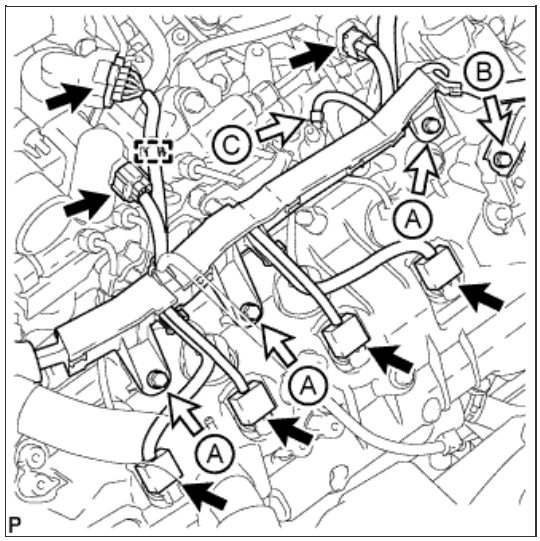


xv. for RHD:
Disconnect the wire harness from the wire harness clamp holder labeled C.

b. RH Side:

i. Disconnect the 4 connectors.

ii. Using a clip remover, detach the wire harness clamps.



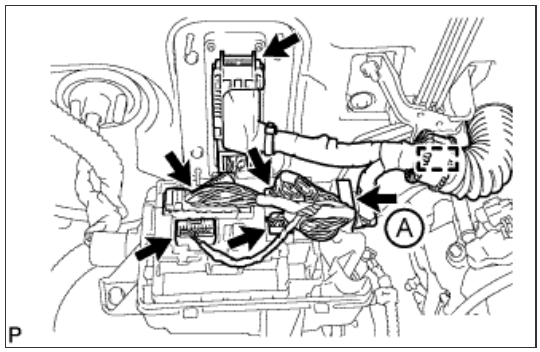
iii. Disconnect the 7 connectors.

iv. Using a clip remover, detach the wire harness clamp.

v. Remove the 3 bolts labeled A and disconnect the wire harness protector.

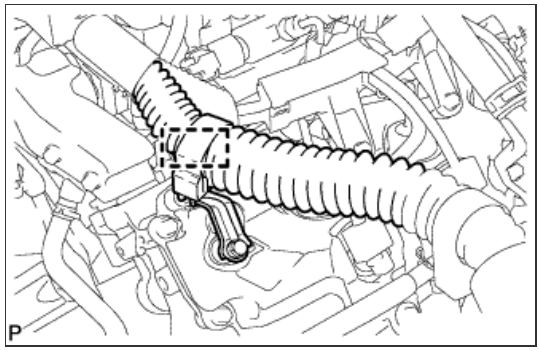
vi. Remove the bolt labeled B and wire harness bracket.

vii. Remove the nut labeled C and glow plug wire harness.



c. for LHD:

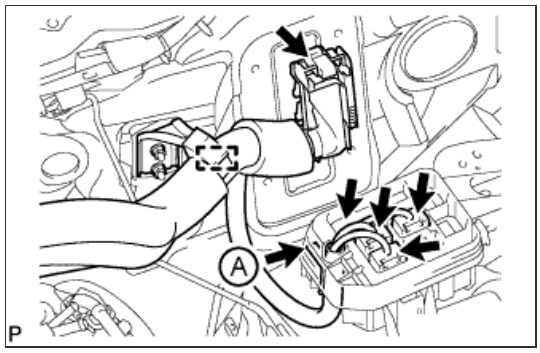
i. Disconnect the 4 connectors, and detach the wire harness tab labeled A from the relay block.



ii. Disconnect the ECM connector.

iii. Disconnect the wire harness from the wire harness clamp holder.

d. for RHD:



i. Disconnect the wire harness from the wire harness clamp holder.

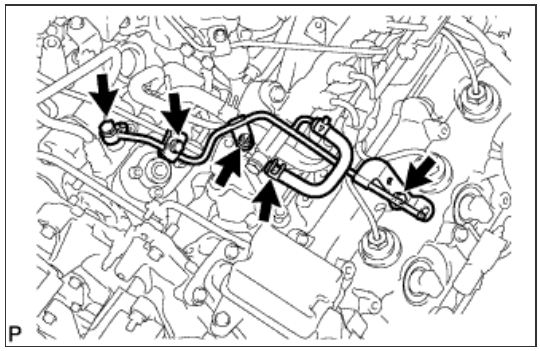
ii. Disconnect the 4 connectors, and detach the wire harness tab labeled A from the relay block.

iii. Disconnect the ECM connector.

iv. Disconnect the wire harness from the wire harness clamp holder.

. REMOVE NO. 2 FUEL PIPE SUB-ASSEMBLY

NOTICE:



- **After removing a fuel pipe, to prevent dirt or foreign objects from entering the fuel pipe ends, cover the fuel pipe ends with plastic bags.**
- **After removing a fuel pipe, to prevent dirt or foreign objects from entering the fuel supply pump hole, cover the hole with protective tape.**

a. Disconnect the fuel hose from the No. nozzle leakage pipe.

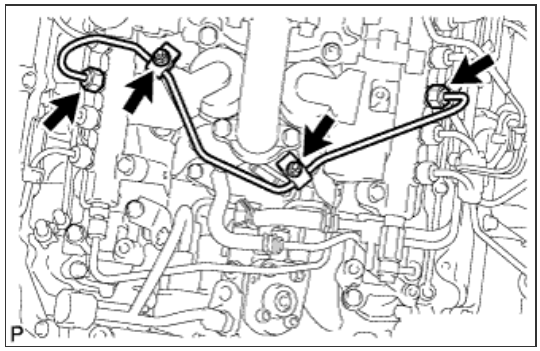
b. Remove the bolt and No. 2 injection pipe clamp.

c. Remove the union bolt and gasket.

d. Remove the bolt, nut and No. 2 fuel pipe.

59. REMOVE NO. 6 INJECTION PIPE SUB-ASSEMBLY

NOTICE:



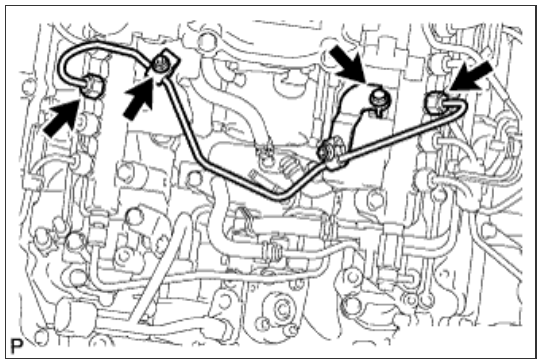
After removing an injection pipe, to prevent dirt or foreign objects from entering the common rail holes, cover the holes with protective tape.

a. w/ EGR System:

i. Using a union nut wrench, loosen the No. 6 injection pipe ends.

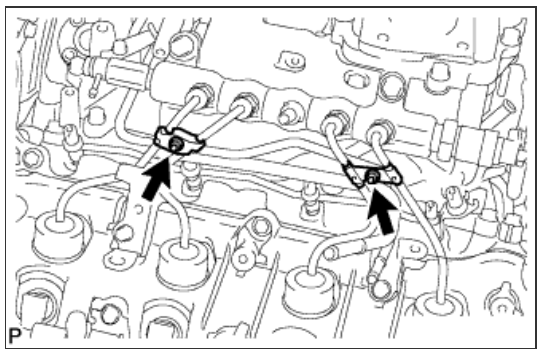
ii. Remove the 2 nuts and 2 No. 2 injection pipe clamps.

iii. Remove the No. 6 injection pipe.



b. w/o EGR System:

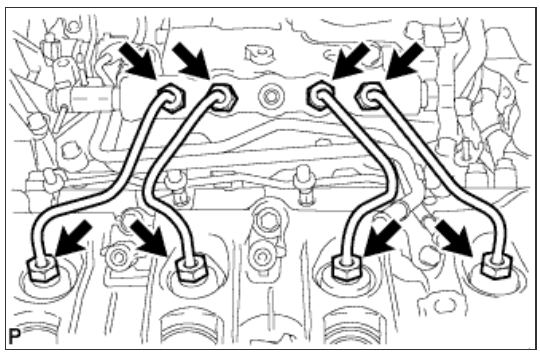
i. Using a union nut wrench, loosen the No. 6 injection pipe ends.



ii. Remove the nut and No. 2 injection pipe clamp.

iii. Remove the bolt and No. 6 injection pipe.

60. REMOVE INJECTION PIPE LH

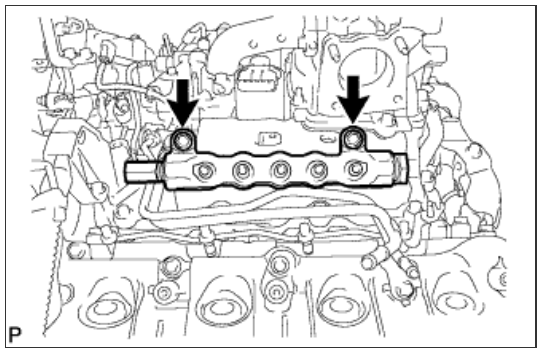


a. w/ Intercooler:
Remove the 2 nuts and 4 injection pipe clamps.

b. Using a union nut wrench, remove the 4 injection pipes.

NOTICE:

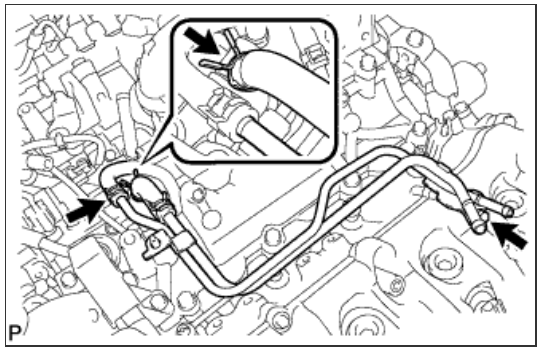
After removing an injection pipe, to prevent dirt or foreign objects from entering the common rail holes or injector holes, cover the holes with protective tape.



61. REMOVE COMMON RAIL ASSEMBLY LH

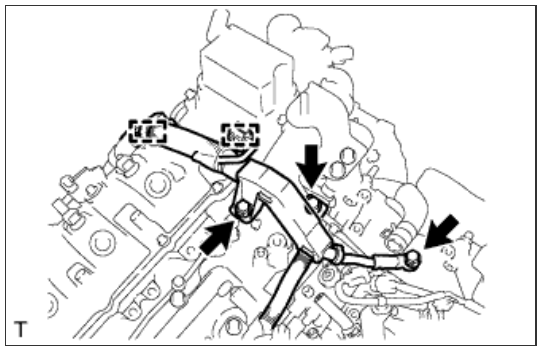
a. Remove the 2 bolts and common rail.

NOTICE:



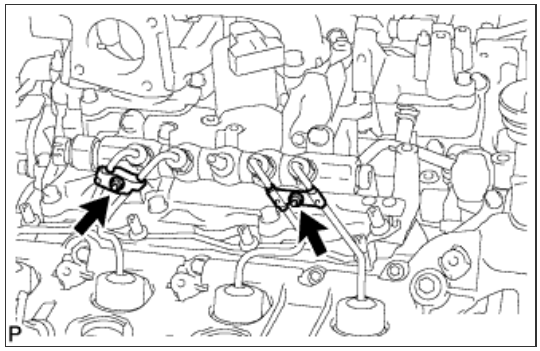
Do not remove the fuel pressure limiter from the common rail. If it is removed, replace the common rail.

62. REMOVE FUEL FILTER TO INJECTION PUMP FUEL PIPE SUB-ASSEMBLY



a. Disconnect the 2 hoses from the fuel pipe.

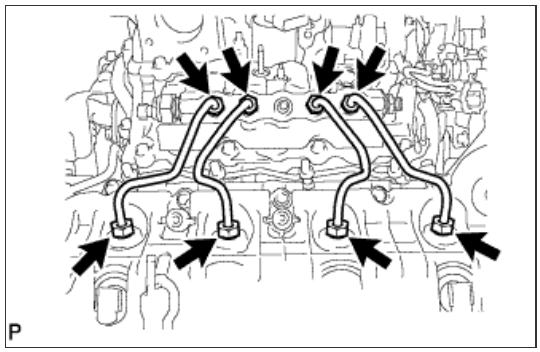
b. Remove the bolt and fuel filter to injection pump fuel pipe.



63. DISCONNECT NO. 2 ENGINE WIRE

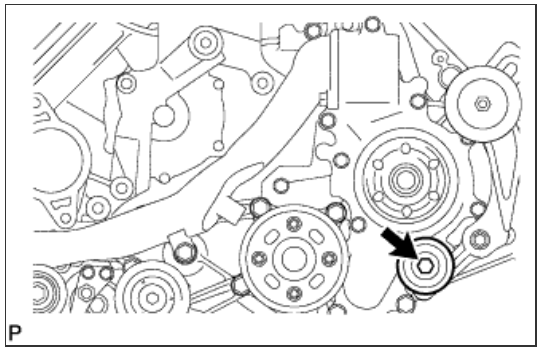
a. Remove the 3 bolts and using a clip remover, detach the 2 wire harness clamps, and then disconnect the No. 2 engine wire.

64. REMOVE INJECTION PIPE RH



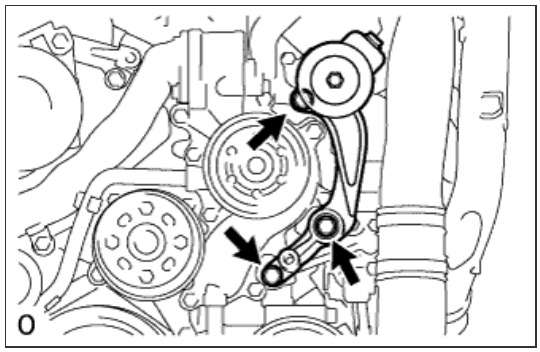
a. w/ Intercooler:
Remove the 2 nuts and 4 injection pipe clamps.

b. Using a union nut wrench, remove the 4 injection pipes.



NOTICE:

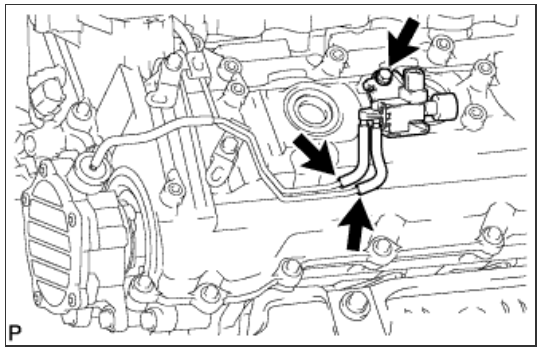
After removing an injection pipe, to prevent dirt or foreign objects from entering the common rail holes or injector holes, cover the holes with protective tape.



6 . REMOVE NO. 2 IDLER PULLEY (w/ Viscous Heater)

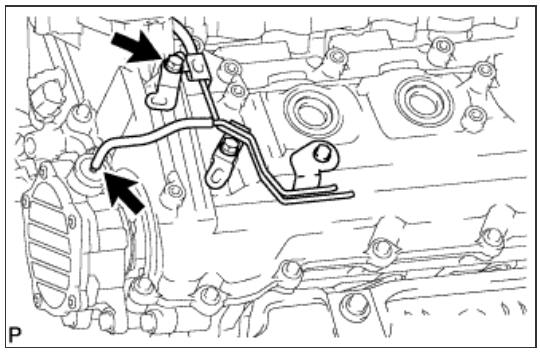
a. Remove the bolt and No. 2 idler pulley.

66. REMOVE NO. 2 IDLER PULLEY BRACKET (w/ Viscous Heater)



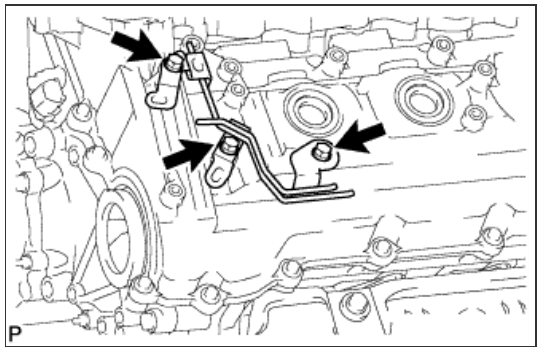
a. Remove the 3 bolts and idler pulley bracket.

67. REMOVE NO. 1 VACUUM SWITCHING VALVE ASSEMBLY (w/ Intercooler)



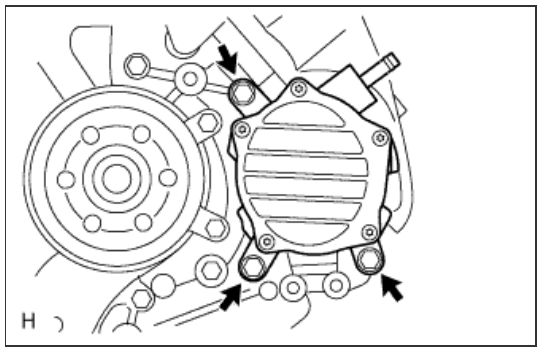
a. Disconnect the 2 vacuum hoses.

b. Remove the bolt and vacuum switching valve.

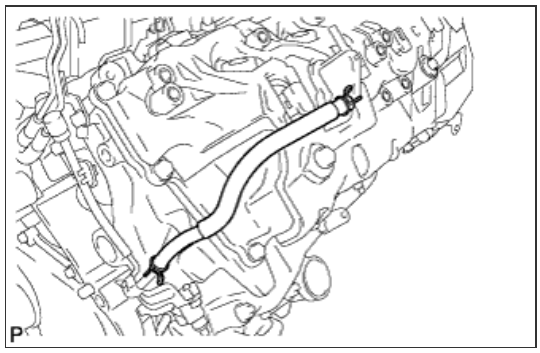


68. REMOVE NO. 1 VACUUM TRANSMITTING PIPE SUB-ASSEMBLY

a. w/ Intercooler:
Disconnect the 2 vacuum hoses.

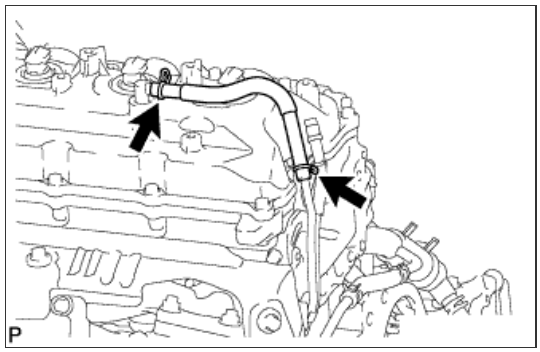


b. Remove the 3 bolts and vacuum transmitting pipe.



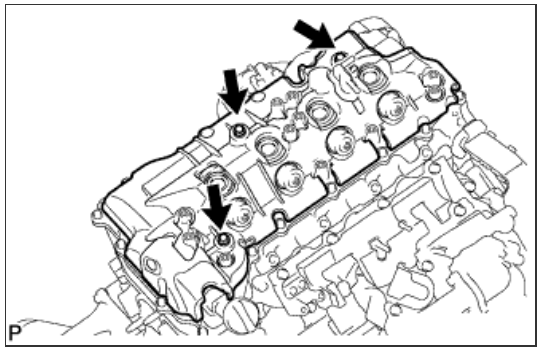
6 . REMOVE VACUUM PUMP ASSEMBLY (w/ Intercooler)

a. Remove the 3 bolts and vacuum pump.

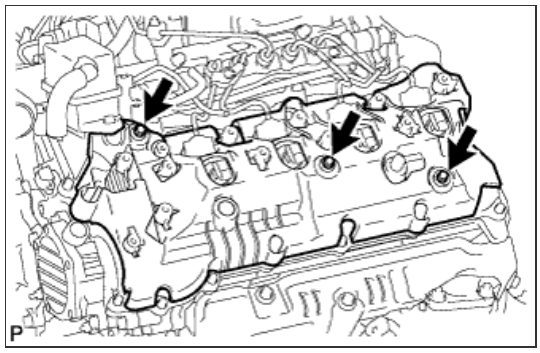


b. Remove the 2 O-rings.

70. DISCONNECT NO. 2 VENTILATION HOSE



71. DISCONNECT NO. 3 VENTILATION HOSE

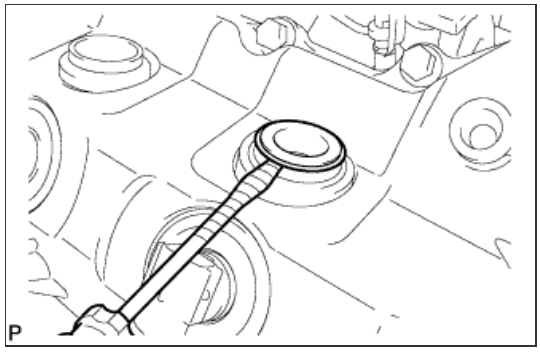


2. REMOVE CYLINDER HEAD COVER SILENCER RH (w/ Intercooler)

a. Remove the 3 bolts and cylinder head cover silencer.

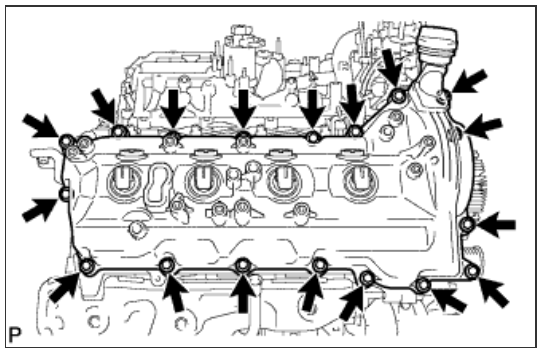
73. REMOVE CYLINDER HEAD COVER SILENCER LH (w/ Intercooler)

a. Remove the 3 bolts and cylinder head cover silencer.



74. REMOVE NOZZLE HOLDER SEAL RH

a. Using a small screwdriver, remove the 4 holder seals by prying the portion between each holder seal and the cutout part of the cylinder head cover.

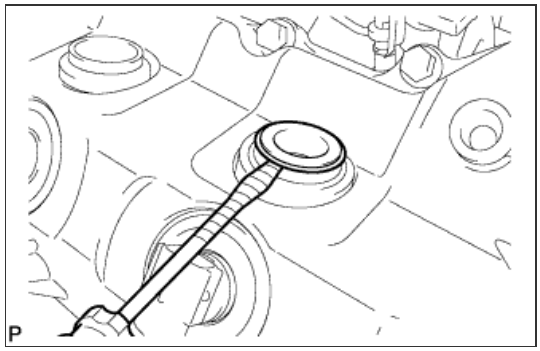


HINT:

Tape the screwdriver tip before use.

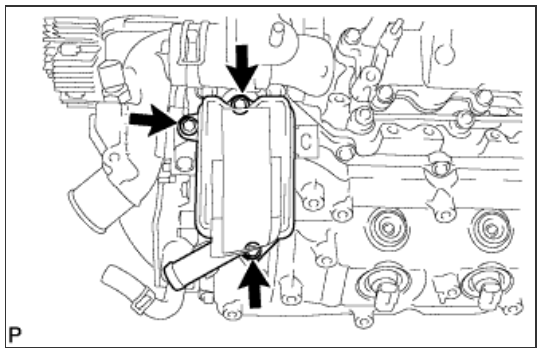
75. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY RH

a. Remove the 1 bolts, cylinder head cover and gasket.



6. REMOVE NO LE HOLDER GASKET RH

a. Using a small screwdriver, remove the 4 holder seals by prying the portion between each holder seal and the cutout part of the cylinder head cover.

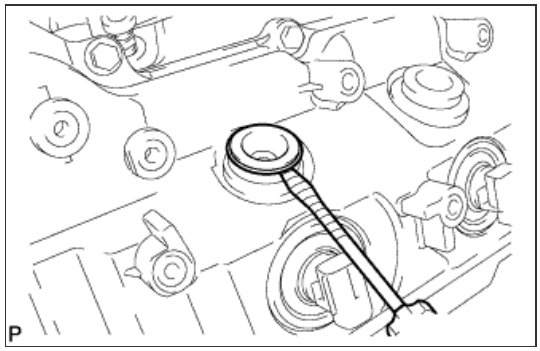


HINT:

Tape the screwdriver tip before use.

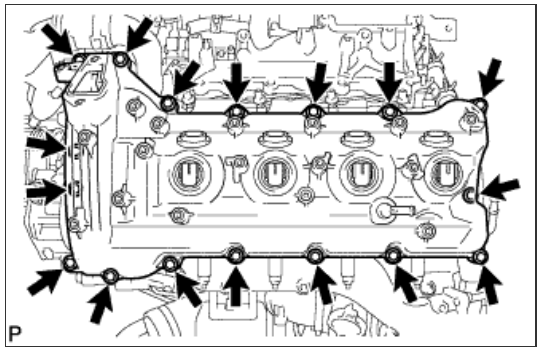
77. REMOVE OIL SEPARATOR ASSEMBLY

a. Remove the 3 bolts, oil separator and gasket.



78. REMOVE NOZZLE HOLDER SEAL LH

a. Using a small screwdriver, remove the 4 holder seals by prying the portion between each holder seal and the cutout part of the cylinder head cover.

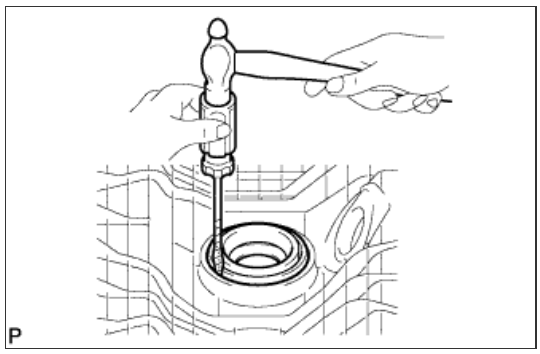


HINT:

Tape the screwdriver tip before use.

. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY LH

a. Remove the 17 bolts, cylinder head cover and gasket.

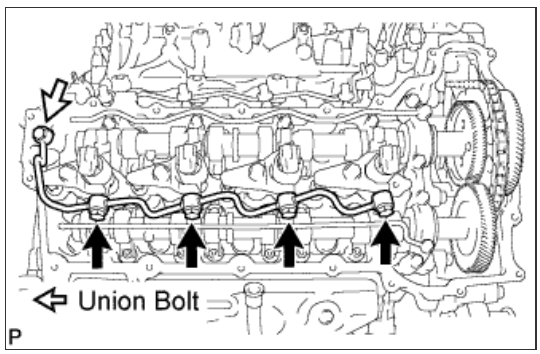


80. REMOVE NOZZLE HOLDER GASKET LH

a. Using a small screwdriver and hammer, remove the 4 nozzle holder gaskets.

HINT:

Tape the screwdriver tip before use.

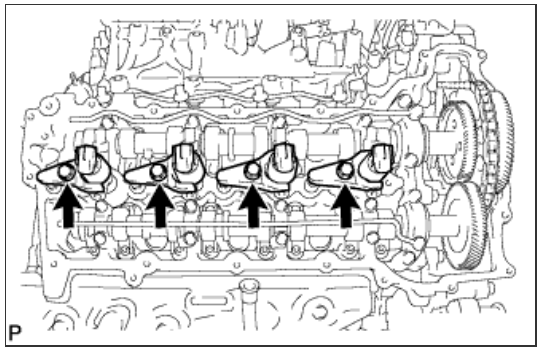


81. REMOVE FUEL INJECTOR RH

a. Remove the union bolt, 4 hollow screws, gaskets and nozzle leakage pipe.

NOTICE:

- **When removing the nozzle leakage pipe, place a cushion under the pipe.**
- **Be careful not to deform or scratch the union seal surface.**
- **After removing the nozzle leakage pipe, put it in a plastic bag to prevent foreign matter from contaminating its injector inlet.**



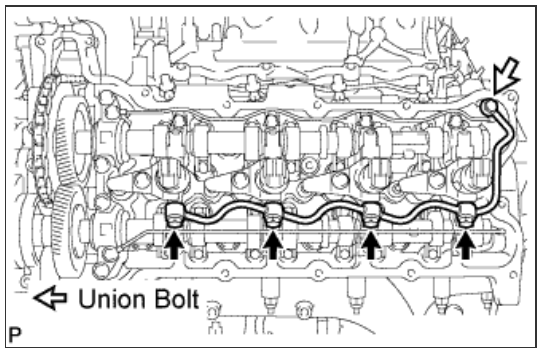
b. Remove the 4 bolts, 4 washers, 4 nozzle holder clamps and 4 injectors.

HINT:

Arrange the injectors, holder clamps, washers and bolts in the correct order.

c. Remove the O-ring from each injector.

d. Remove the 4 injection nozzle seats from the cylinder head.

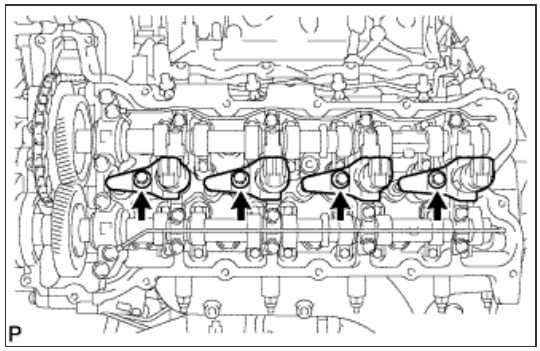


82. REMOVE FUEL INJECTOR LH

a. Remove the union bolt, 4 hollow screws, gaskets and No. 2 nozzle leakage pipe.

NOTICE:

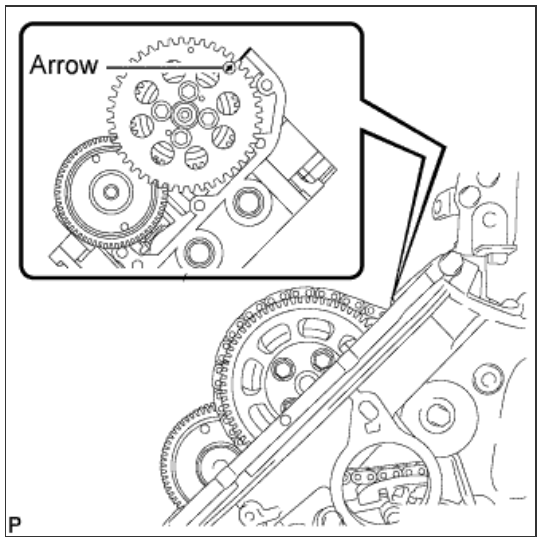
- **When removing the nozzle leakage pipe, place a cushion under the pipe.**
- **Be careful not to deform or scratch the union seal surface.**
- **After removing the nozzle leakage pipe, put it in a plastic bag to prevent foreign matter from contaminating its injector inlet.**



b. Remove the 4 bolts, 4 washers, 4 nozzle holder clamps and 4 injectors.

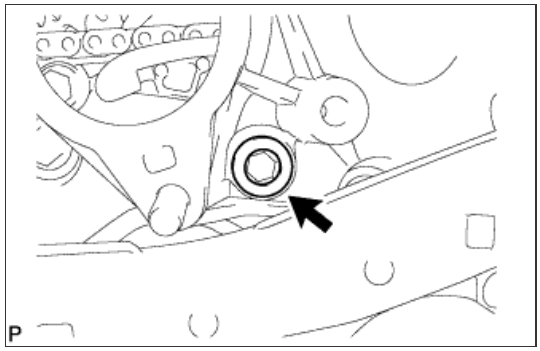
HINT:

Arrange the injectors, holder clamps, washers and bolts in the correct order.



c. Remove the O-ring from each injector.

d. Remove the 4 injection nozzle seats from the cylinder head.

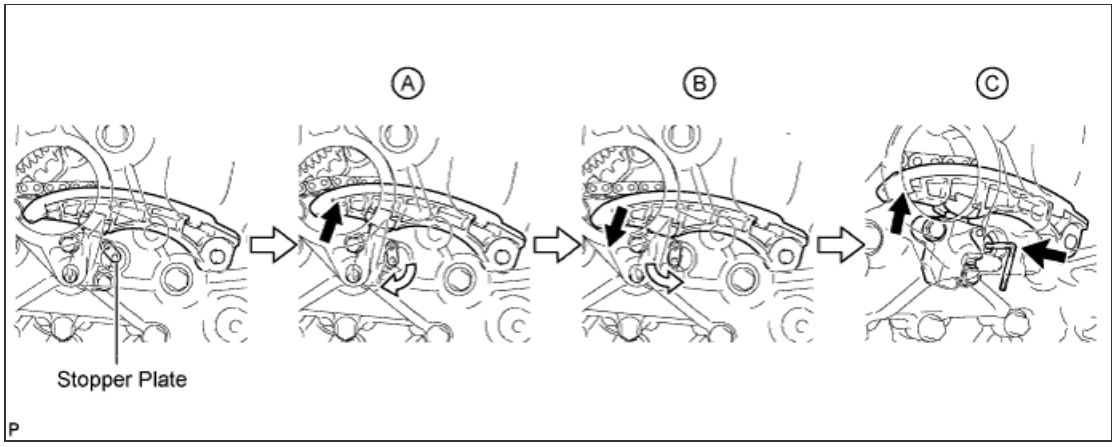


83. REMOVE NO. 1 AND NO. 2 CAMSHAFTS

a. Rotate the crankshaft clockwise, and align the No. 1 camshaft timing sprocket arrow with the cylinder head upper surface.

b. Using a 10 mm hexagon wrench, remove the taper screw plug.

c. Fix the No. 1 chain tensioner in place.

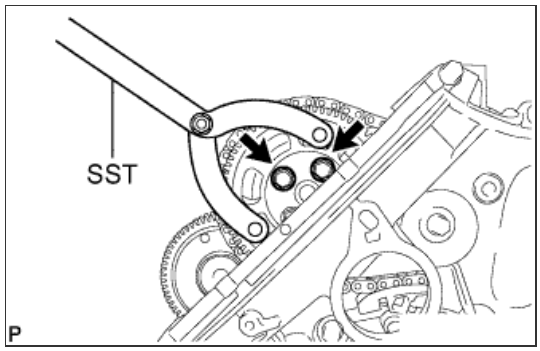


i. Push the tensioner slipper away from the tensioner, and move the stopper plate clockwise to release the lock as shown in A.

ii. Push down the tensioner slipper and move the stopper plate counterclockwise to set the lock as shown in B.

iii. Push the tensioner slipper away from the tensioner, and insert a hexagon wrench into the stopper plate hole as shown in C.

NOTICE:

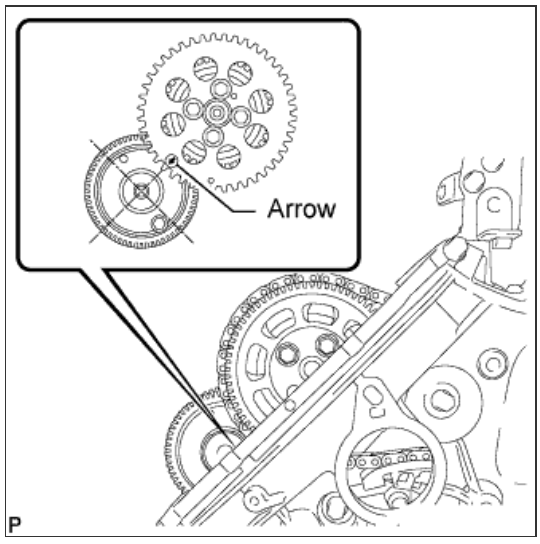


Do not drop the hexagon wrench into the engine.

d. Using SST, hold the pump drive shaft gear.

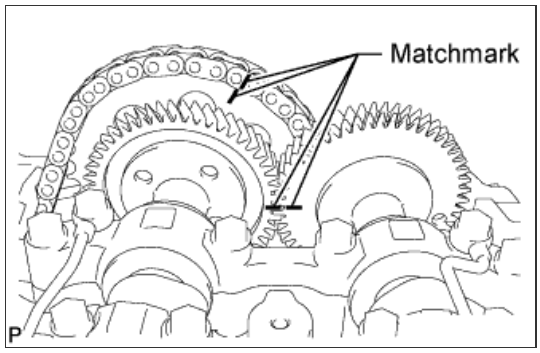
SST

0 60 10010 (0 62-01000, 09963-01000)



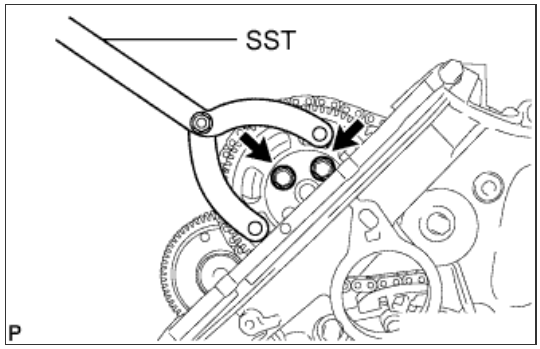
e. Remove the 2 bolts.

f. Rotate the crankshaft clockwise 360° so that the No. 1 camshaft timing sprocket arrow points at the No. 1 camshaft center.



NOTICE:

Do not rotate the crankshaft counterclockwise in order to align the sprocket arrow and camshaft center.



g. Place matchmarks on the No. 1 timing chain and No. 1 camshaft timing sprocket.

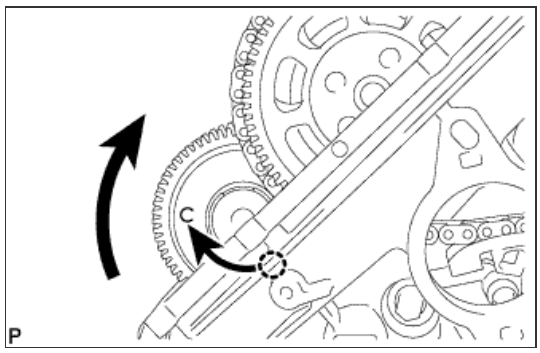
h. Place matchmarks on the No. 1 and No. 2 camshaft gears.

i. Using SST, hold the pump drive shaft gear.

SST
0 60 10010 (0 62-01000, 09963-01000)

j. Remove the 2 bolts and pump drive shaft gear.

k. Disconnect the No. 1 timing chain and No. 1 camshaft timing sprocket from the No. 2 camshaft.



NOTICE:

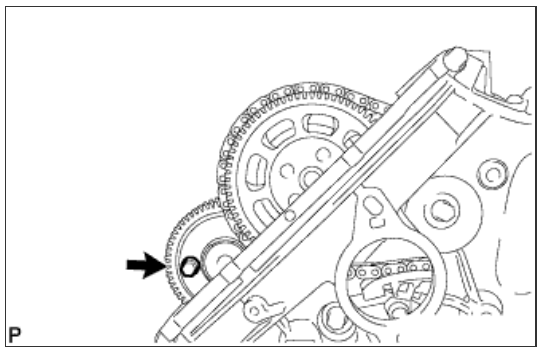
- **Do not remove the No. 1 camshaft timing sprocket from the No. 1 timing chain.**
- **Do not rotate the crankshaft until the No. 1 timing chain and No. 1 camshaft timing sprocket are connected to the No. 2 camshaft.**

HINT:

If fixing the No. 1 camshaft timing sprocket in place, pass a rope or e uivalent through one of the No. 1 camshaft timing sprocket holes and tie the sprocket and chain together.

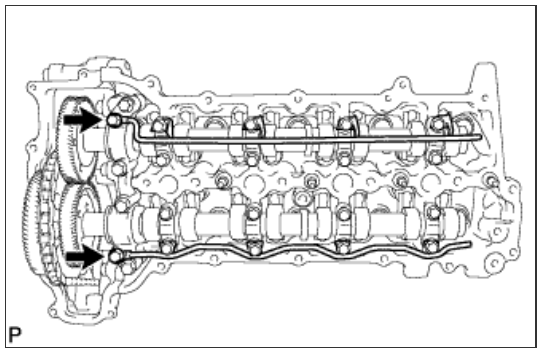
l. Turn the No. 1 camshaft clockwise so that the bolt is easier to install.

m. Using a 6 mm x 1.0 pitch service bolt with a length of 16 mm or more, fix the No. 1 camshaft in place.



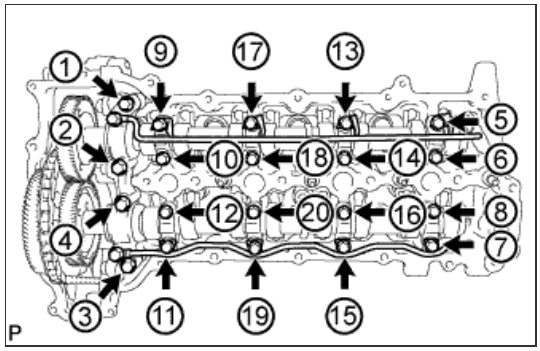
Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

NOTICE:

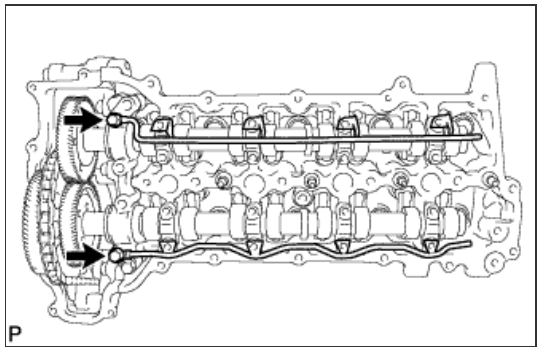


Do not drop the bolt into the engine.

HINT:

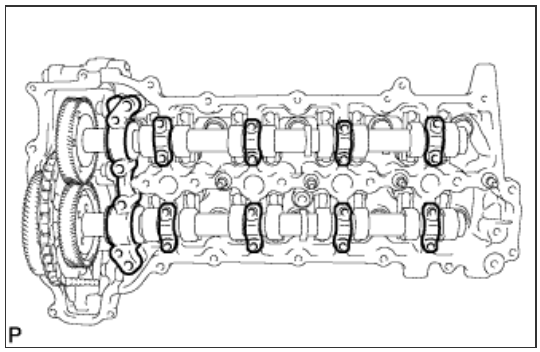


If it is difficult to install the bolt, rotate the camshaft so that the bolt is easier to install.

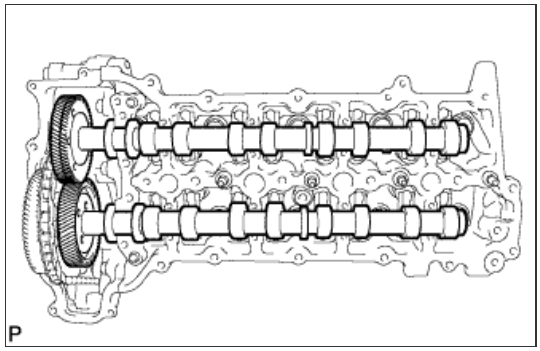


n. Loosen the 2 union bolts.

o. Uniformly loosen and remove the 20 bolts in the se uence shown in the illustration.



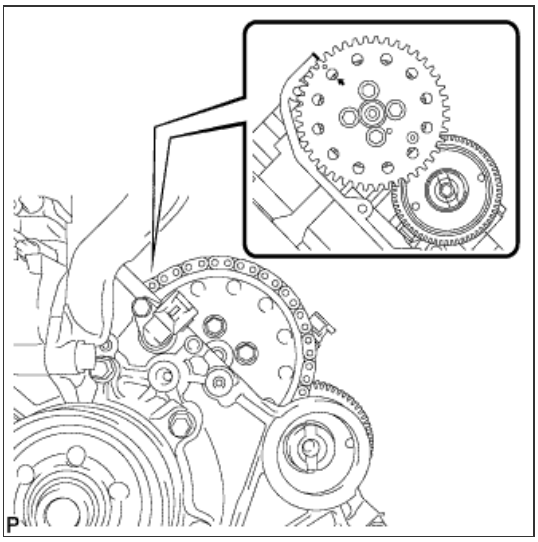
p. Remove the 2 union bolts and No. 1 and No. 2 oil feed pipes.



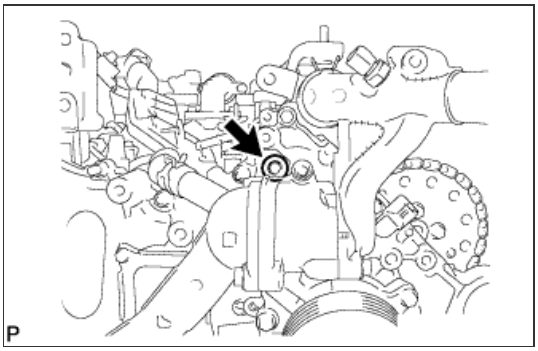
q. Remove the No. 3 camshaft bearing caps and No. 1 camshaft bearing cap.

HINT:

Be sure to arrange the removed parts for each installation position separately.



r. Remove the No. 1 and No. 2 camshafts.

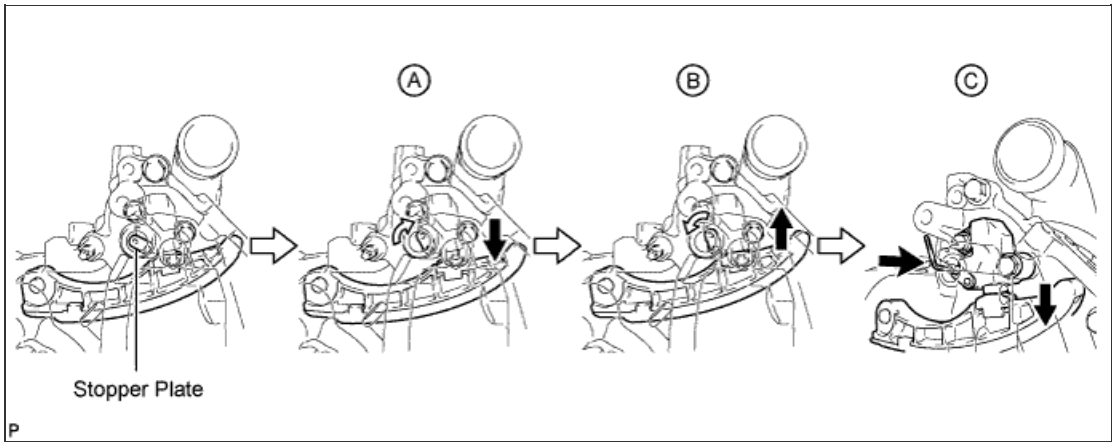


. REMOVE NO. 3 AND NO. 4 CAMSHAFTS

a. Rotate the crankshaft clockwise, and align the No. 2 camshaft timing sprocket arrow with the cylinder head upper surface.

b. Using a 10 mm hexagon wrench, remove the taper screw plug.

c. Fix the No. 2 chain tensioner in place.

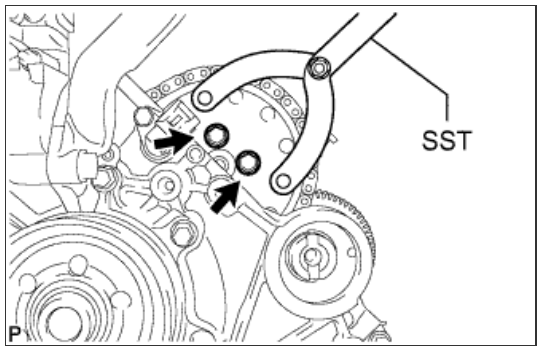


i. Push the tensioner slipper away from the tensioner, and move the stopper plate clockwise to release the lock as shown in A.

ii. Push up the tensioner slipper and move the stopper plate counterclockwise to set the lock as shown in B.

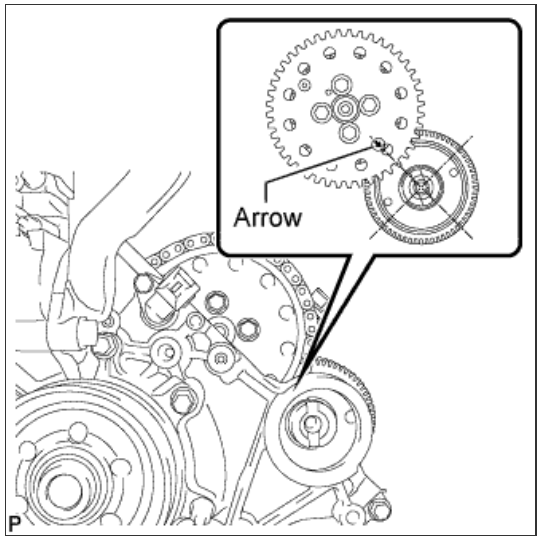
iii. Push the tensioner slipper away from the tensioner, and insert a hexagon wrench into the stopper plate hole as shown in C.

NOTICE:



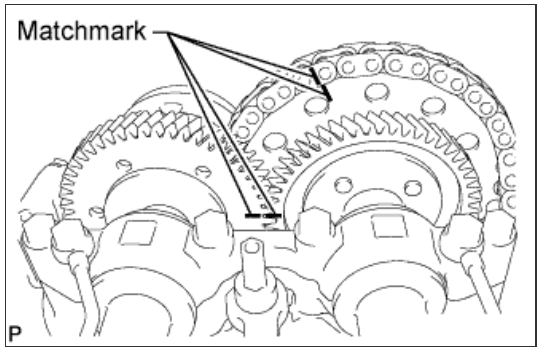
Do not drop the hexagon wrench into the engine.

d. Using SST, hold the No. 2 camshaft timing sprocket.



SST

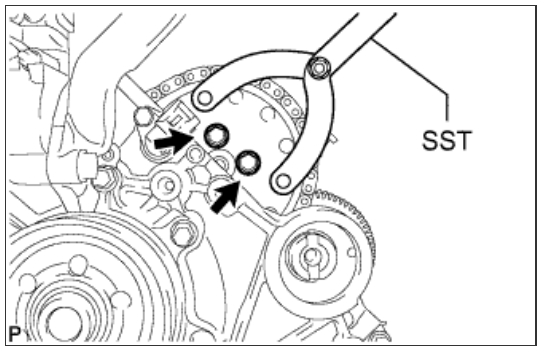
0 60 10010 (0 62-01000, 09963-01000)



e. Remove the 2 bolts.

f. Rotate the crankshaft clockwise 360° so that the No. 2 camshaft timing sprocket arrow points at the No. 4 camshaft center.

g. Place matchmarks on the No. 2 timing chain and No. 2 camshaft timing sprocket.



h. Place matchmarks on the No. 3 and No. 4 camshaft gears.

i. Using SST, hold the No. 2 camshaft timing sprocket.

SST

09960-10010 (09962-01000, 09963-01000)

j. Remove the 2 bolts, and disconnect the No. 2 timing chain and No. 2 camshaft timing sprocket from the No. 3 camshaft.

NOTICE:

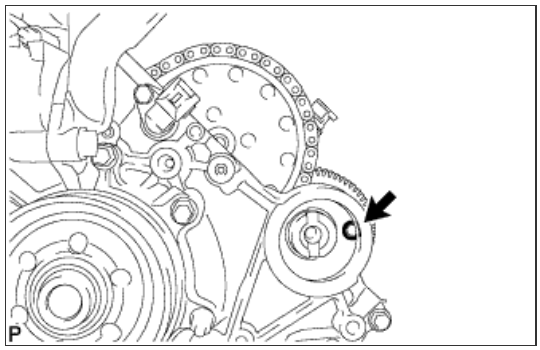
- **Do not remove the No. 2 camshaft timing sprocket from the No. 2 timing chain.**
- **Do not rotate the crankshaft until the No. 2 timing chain and No. 2 camshaft timing sprocket are connected to the No. 3 camshaft.**

HINT:

If fixing the No. 2 camshaft timing sprocket in place, pass a rope or e uivalent through one of the No. 2 camshaft timing sprocket holes and tie the sprocket and chain together.

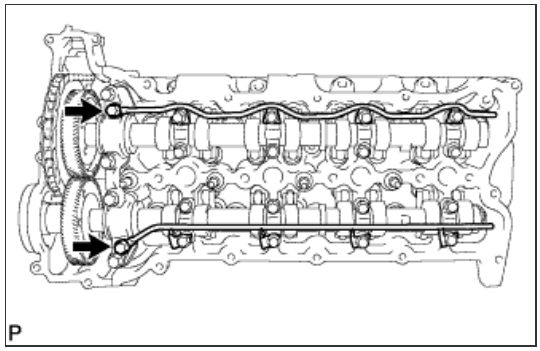
k. Using a 6 mm x 1.0 pitch service bolt with a length of 16 mm or more, fix the No.

4 camshaft in place.



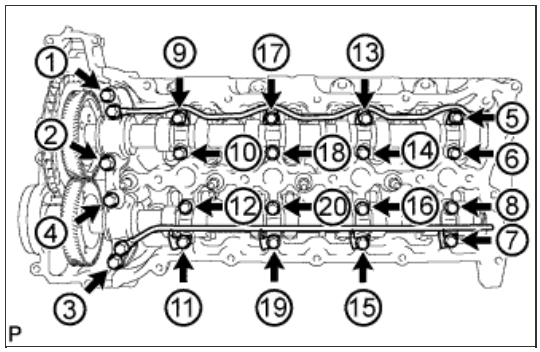
Torque:
.0 N m{ 82 kgf*cm , 71 in.*lbf }

NOTICE:

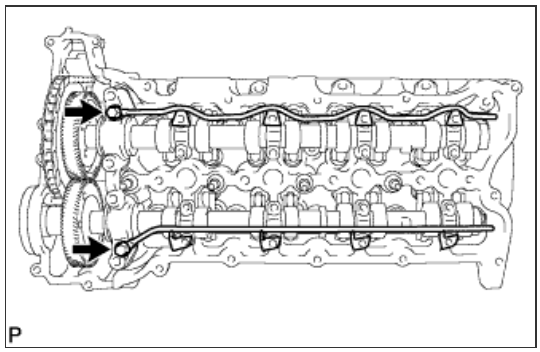


Do not drop the bolt into the chain cover.

HINT:

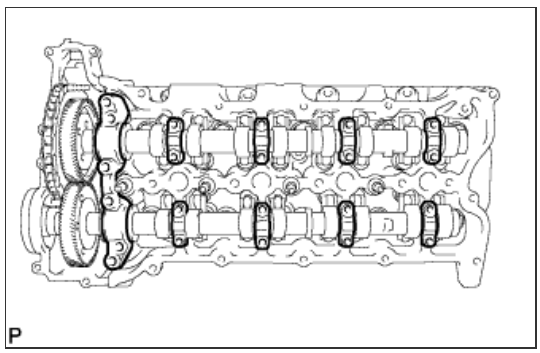


If it is difficult to install the bolt, rotate the camshaft so that the bolt is easier to install.

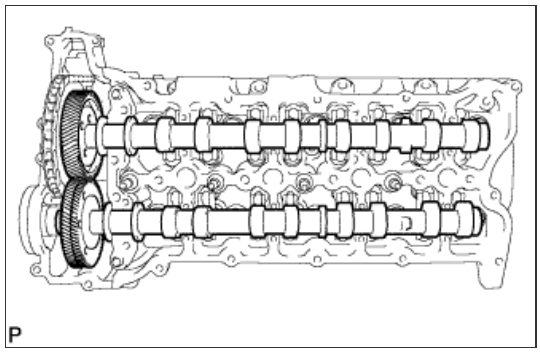


l. Loosen the 2 union bolts.

m. Uniformly loosen and remove the 20 bolts in the se uence shown in the illustration.



n. Remove the 2 union bolts and No. 3 and No. 4 oil feed pipes.



o. Remove the No. 3 camshaft bearing caps and No. 4 camshaft bearing cap.

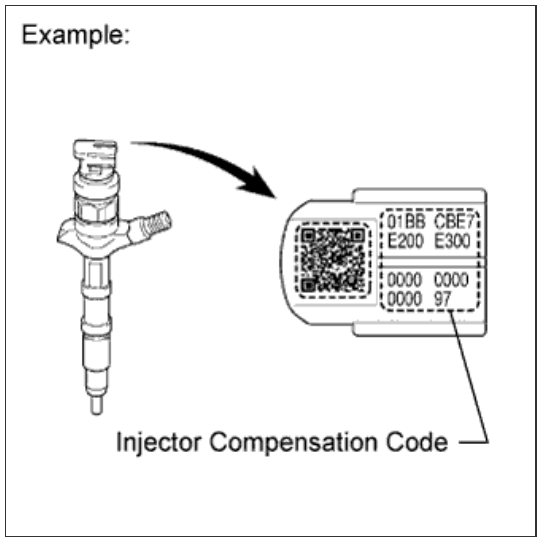
HINT:

Be sure to arrange the removed parts for each installation position separately.

p. Remove the No. 3 and No. 4 camshafts.

P

for Preparation Click here



CAUTION:

When replacing an injector (including interchanging injectors between cylinders), common rail, cylinder head, or intake manifold, replace the corresponding injection pipes with a new one.

1. CHECK INJECTOR COMPENSATION CODE

NOTICE:

- **When a fuel injector is replaced, the new fuel injector compensation code must be input into the ECM. When the ECM is replaced, all of the existing fuel injector compensation codes must be input into the new ECM.**
- **Fuel injector compensation codes are unique, 30 digit, alphanumeric values printed on the head portion of each fuel injector. If an incorrect fuel injector compensation code is input into the ECM, the engine assembly may rattle or engine idling may become rough. In addition, engine failure may occur and the life of the engine may be shortened.**

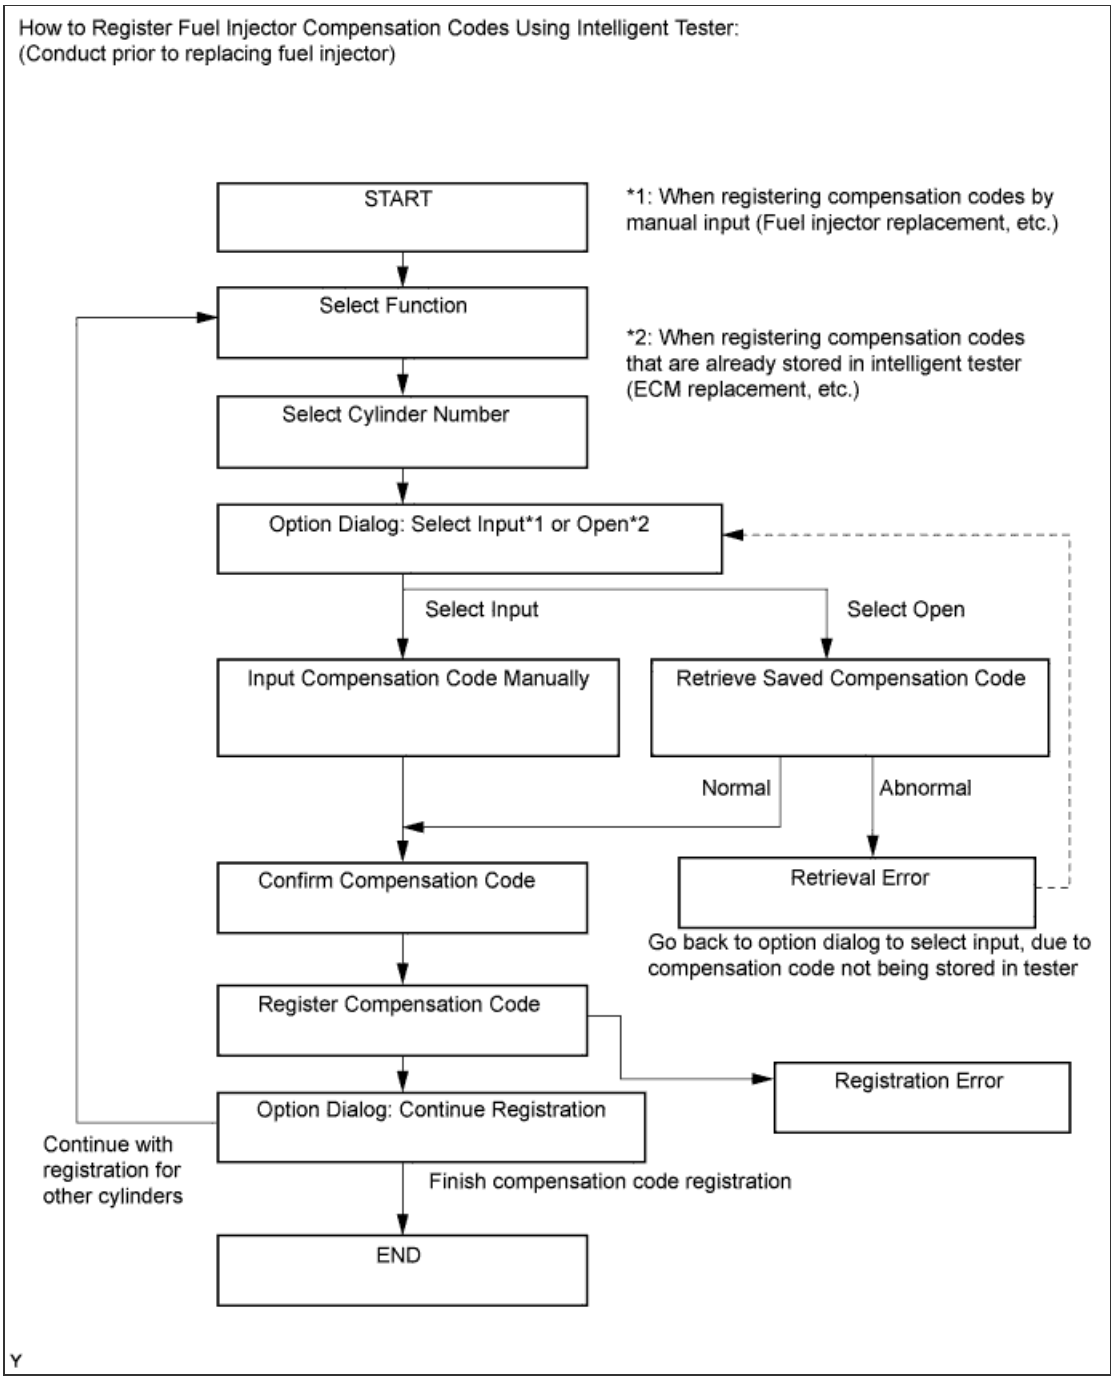
a. After replacing fuel injector(s) with new one(s), input compensation code(s) of fuel injector(s) into ECM as follows:

HINT:

- **Each fuel injector has different fuel injection characteristics. In order to optimize the fuel injections, the ECM uses the compensation codes to balance the different fuel injections between each fuel injector.**
- **When you first turn the ignition switch to ON after replacing the ECM or a fuel injector(s), DTC P1601 is set. This is to inform you that registration of a fuel injector compensation code(s) is/are required. Manually clear the DTC upon completion of the compensation code registration.**

i. Input the compensation code(s), which is/are imprinted on the head portion(s) of the new fuel injector(s), into the intelligent tester.

ii. Input the new compensation code(s) into the ECM using the tester.



iii. Turn the tester off and turn the ignition switch off.

iv. Wait for at least 30 seconds.

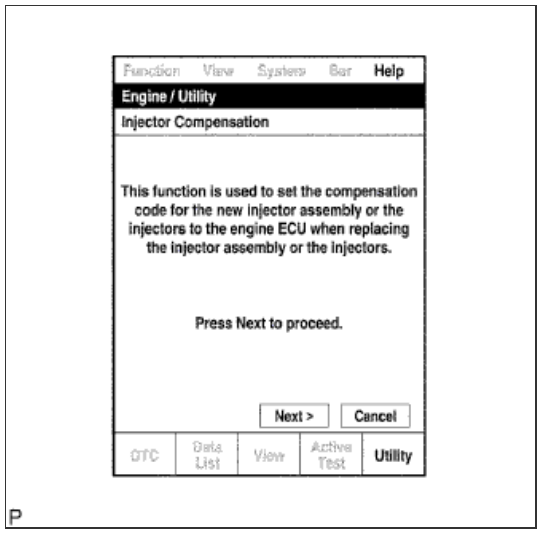
v. Turn the ignition switch to ON and turn the tester on.

vi. Clear DTC P1601 stored in the ECM using the tester (Click here).

b. Register compensation code.

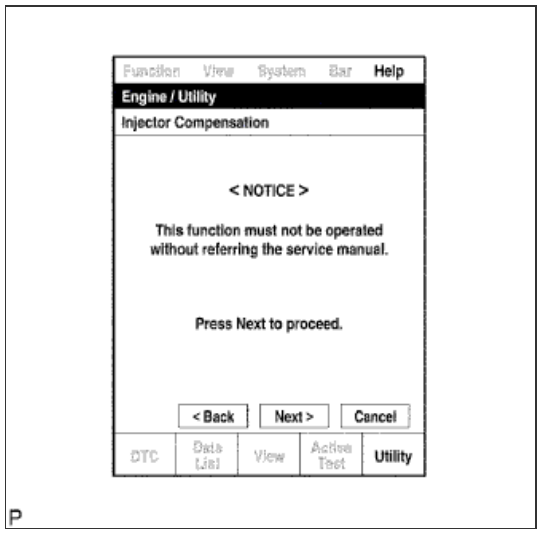
i. Connect the intelligent tester to the DLC3.

ii. Turn the ignition switch to ON.



NOTICE:

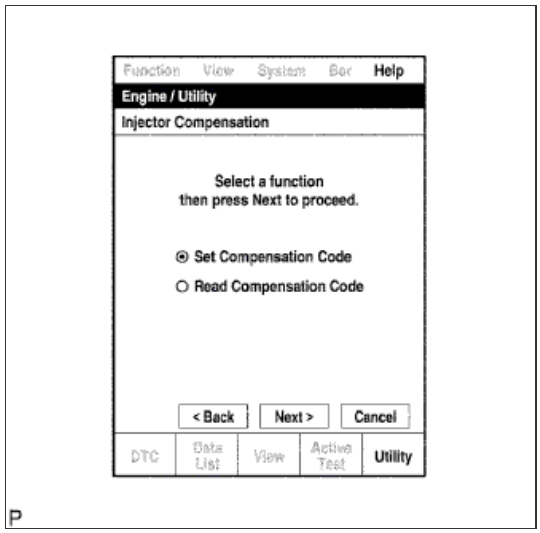
Do not start the engine.



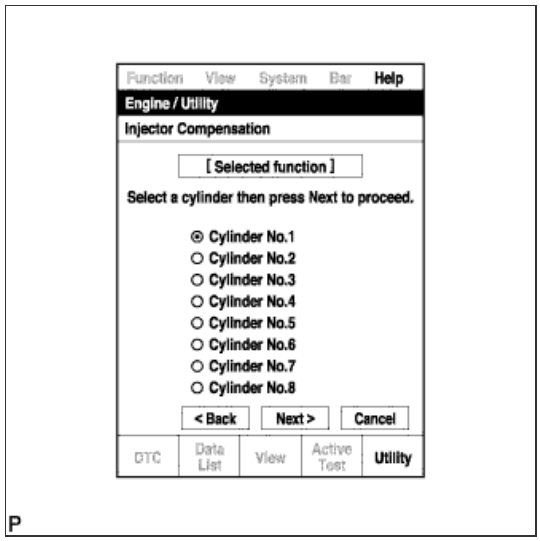
iii. Turn the tester on.

iv. Enter the following menus: Powertrain / Engine / Utility / Injector Compensation.

v. Press Next.

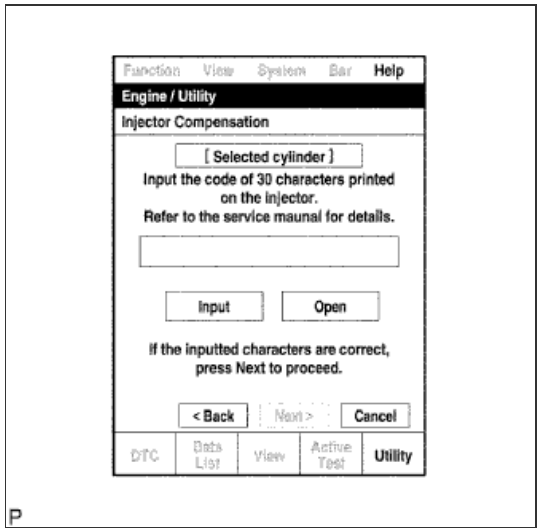


vi. Press Next again to proceed.



vii. Select et Compensation Code .

viii. Press Next.



ix. Select the number of the cylinder corresponding to the fuel injector compensation code that you want to read.

x. Press Next.

xi. Register compensation code.

1. Press Input.

2. Manually input the cylinder compensation code using the keyboard on the tester screen. The code is a 30 digit, alphanumeric value printed on the injector head portion.

HINT:

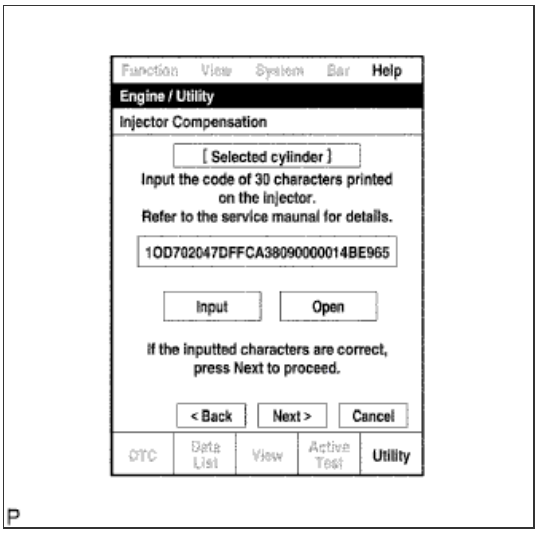
Each fuel injector compensation code is uni ue. The compensation code for each selected cylinder must be input into the tester correctly.

3. Confirm that the compensation code for the selected cylinder is correct, and then press O .

xii. Check that the compensation code displayed on the screen is correct by comparing it with the 30 digit alphanumeric value on the head portion of the fuel injector.

NOTICE:

If an incorrect fuel injector compensation code is input into the ECM, the engine may rattle or engine idling may become rough. In addition, engine failure may occur and the life of the engine may be shortened.



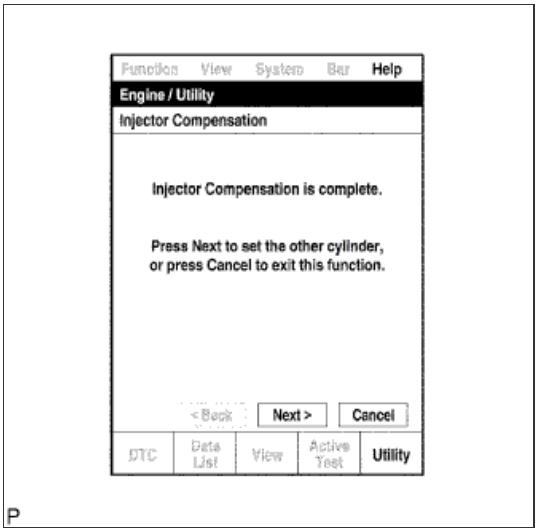
HINT:

- **If a wrong compensation code is input or read, return to the Input Value screen by pressing Input.**
- **The saving process may fail due to a problem with the wire harness or a bad connection with the DLC3. Check the wire harness and DLC3 connection. If no problem is found with either, the ECM may be malfunctioning. Check the ECM and repeat this operation.**

xiii. Press Next to register the compensation code in the ECM.

HINT:

- **If the registration process fails, the compensation code may be incorrect. Check the compensation code again.**
- **If the input compensation code fails to register even though it is input correctly, there may be a problem with the wire harness or a bad connection with the DLC3. Check the wire harness and DLC3 connection. If no problem is found with either, the ECM may be malfunctioning. Check the ECM and restart this operation.**



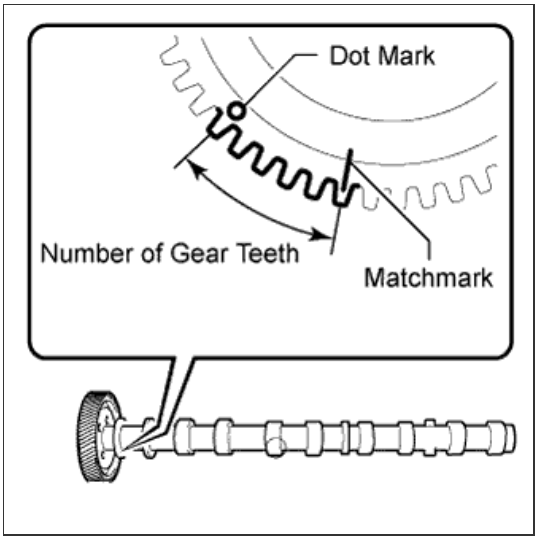
xiv. If you want to continue with other compensation code registrations, press Next. To finish the registration, press Cancel.

xv. Turn the ignition switch off and then turn the tester off.

xvi. Wait for at least 30 seconds.

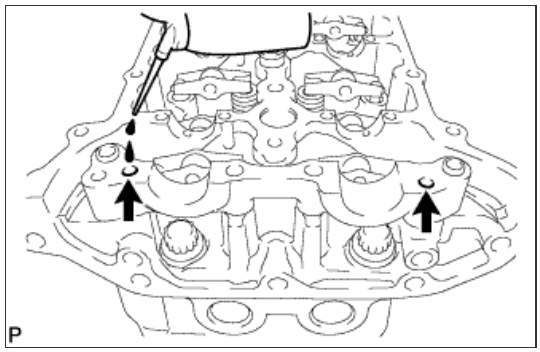
xvii. Turn the ignition switch to ON and then turn the tester on.

xviii. Clear DTC P1601 stored in the ECM using the tester (Click here).



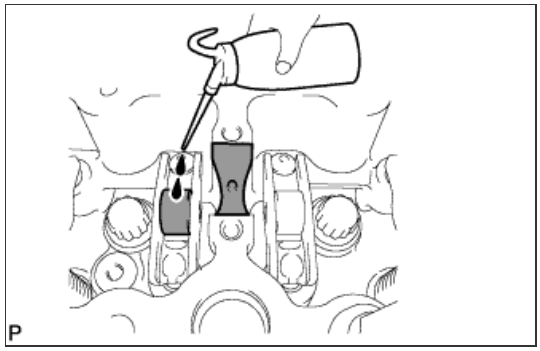
2. INSTALL NO. 3 AND NO. 4 CAMSHAFTS

NOTICE:



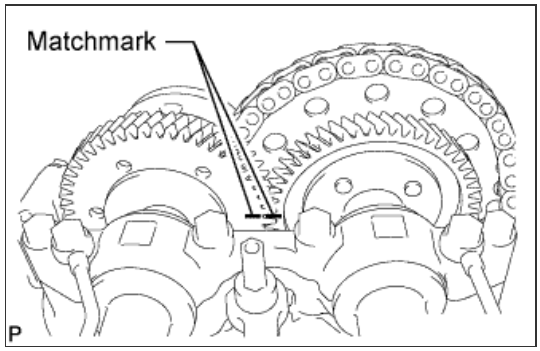
If replacing a camshaft with a new one, make a matchmark on the new camshaft in the same place as the old camshaft. Determine the matchmark placement by using the dot mark as a reference point and counting the number of gear teeth from the dot mark to the matchmark as shown in the illustration.

a. w/o Intercooler:
When replacing the No. 4 camshaft with a new one, install a new hole plug (Click here).

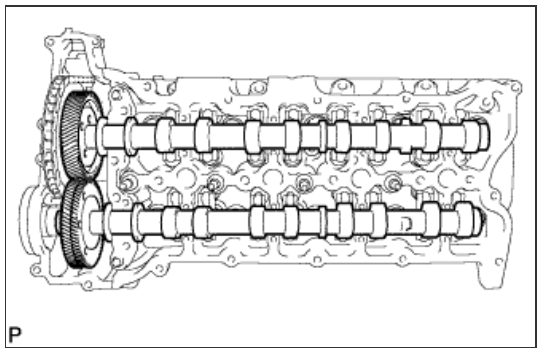


b. Add more than 19 cc (1.16 cu. in.) of engine oil into the cylinder head side oil

holes.



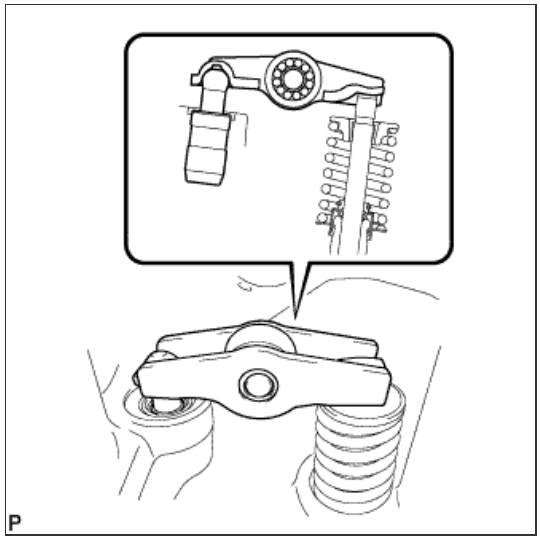
c. Apply engine oil to the rollers of the valve rocker arms and the camshaft housing of the cylinder head.



d. Install the No. 3 and No. 4 camshafts.

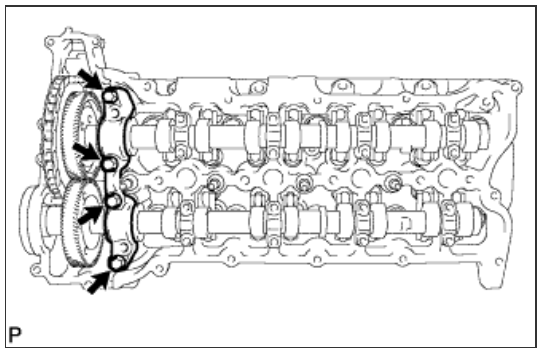
i. Apply engine oil to the camshaft journals, lobes, thrust portion and gears.

ii. Align the matchmarks of the No. 3 and No. 4 camshaft timing gears as shown in the illustration.



e. Place the camshafts into the cylinder head.

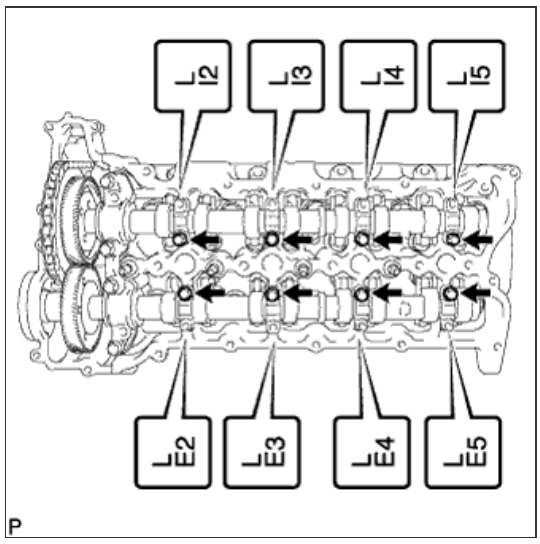
NOTICE:



Before and after setting the camshafts, firmly set the rocker arms to the lash adjusters.

f. Install the No. 4 camshaft bearing cap.

i. Align the No. 4 camshaft bearing cap and the ring pins of the No. 5 camshaft bearing cap.

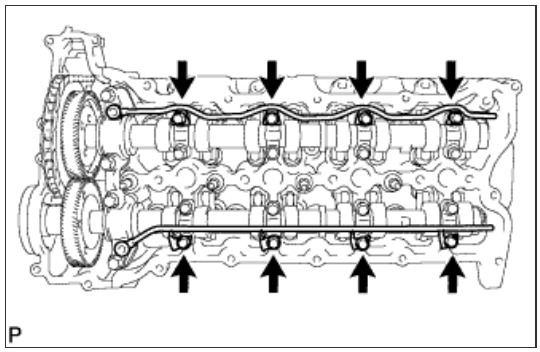


ii. Temporarily install the 4 bolts by hand.

g. Install the No. 3 camshaft bearing caps.

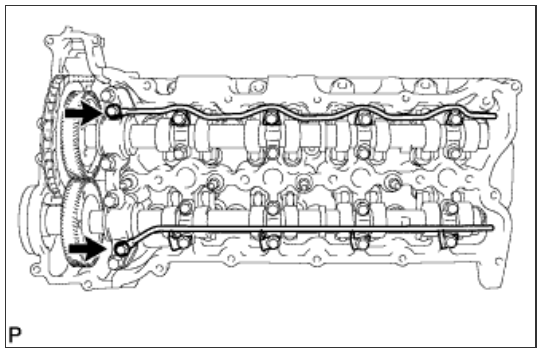
i. Confirm the marks and numbers on the camshaft bearing caps and place them in their proper position and direction.

ii. Temporarily install the 8 bolts, which are not installed with the oil feed pipe, by hand.



h. Temporarily install the No. 3 and No. 4 camshaft oil feed pipes with the 8 bolts by hand.

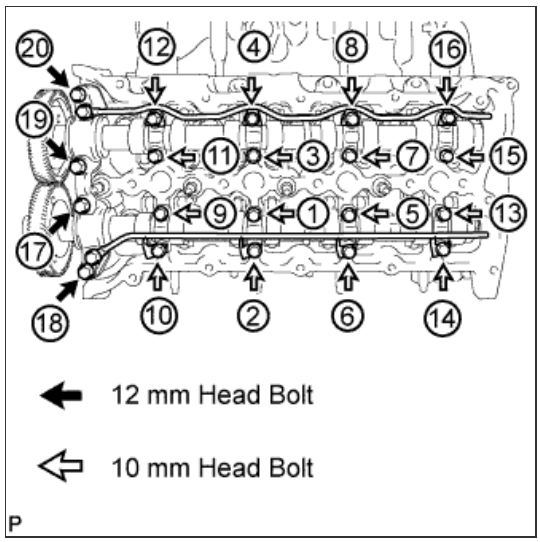
NOTICE:



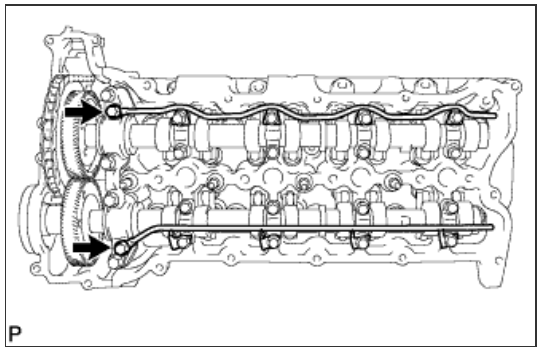
If even one of the pipe bolt holes does not match its camshaft bearing cap bolt hole, replace the camshaft oil feed pipe.

HINT:

The pipe is bent on the intake side, and straight on the exhaust side.



i. Temporarily install the 2 union bolts by hand.

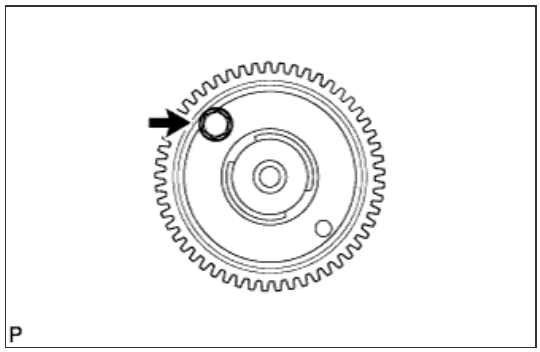


j. Uniformly tighten the 20 bolts in several steps in the order shown in the illustration.

Torque:
for 12 mm head bolt of No. 4 camshaft bearing cap:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
for 10 mm head bolt of No. 3 camshaft bearing cap:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

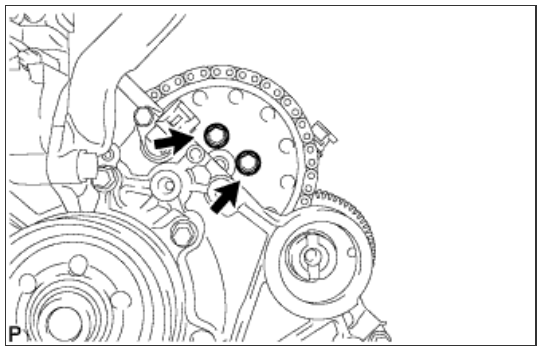
k. Tighten the 2 union bolts.

Torque:
17 N*m{ 173 kgf*cm , 13 ft.*lbf }



l. Remove the service bolt from the No. 4 camshaft timing gear.

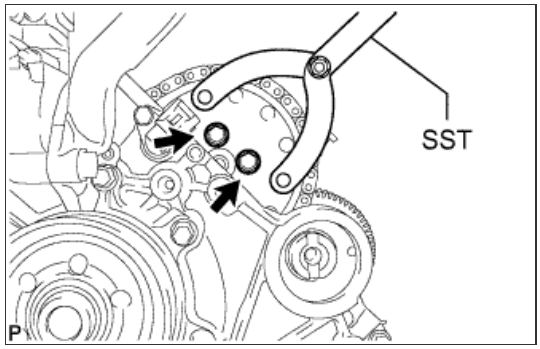
NOTICE:



Do not drop the bolt into the engine.

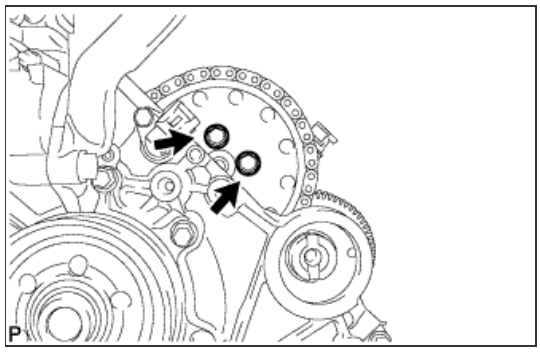
HINT:

If the bolt is difficult to remove, rotate the camshaft and remove the bolt. Then realign the matchmarks of the No. 3 and No. 4 camshaft timing gears.



m. Temporarily install the No. 2 timing chain and No. 2 camshaft timing sprocket to the No. 3 camshaft with the 2 bolts.

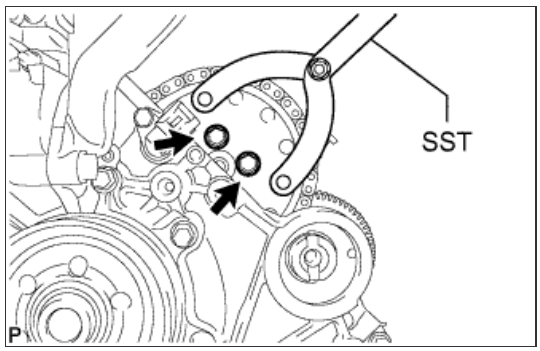
n. Using SST, hold the No. 2 camshaft timing sprocket. Tighten the 2 bolts.



SST
09960-10010 (09962-01000, 09963-01000)

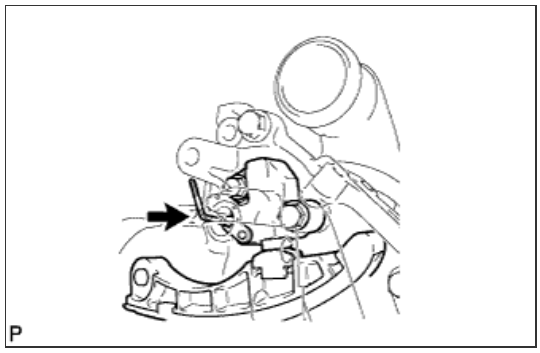
Torque:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }

o. Rotate the crankshaft pulley clockwise so that the 2 remaining pump drive shaft gear bolts can be installed.



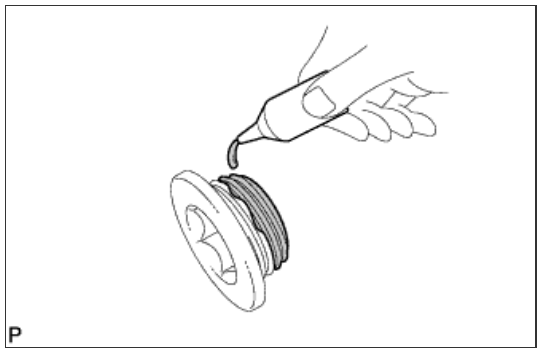
p. Temporarily install the 2 bolts to the No. 3 camshaft.

q. Using SST, hold the No. 2 camshaft timing sprocket. Tighten the 2 bolts.



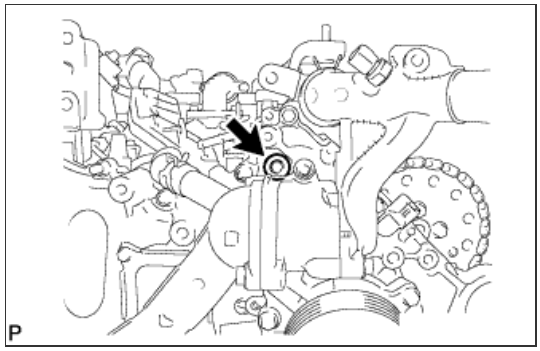
SST
09960-10010 (09962-01000, 09963-01000)

Torque:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }



r. Remove the hexagon wrench from the No. 2 chain tensioner.

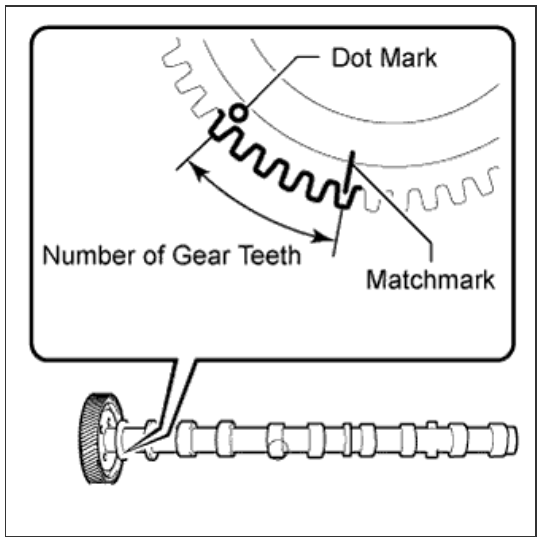
s. Remove the adhesive from the threads of the taper screw plug and the bolt hole of the timing gear case.



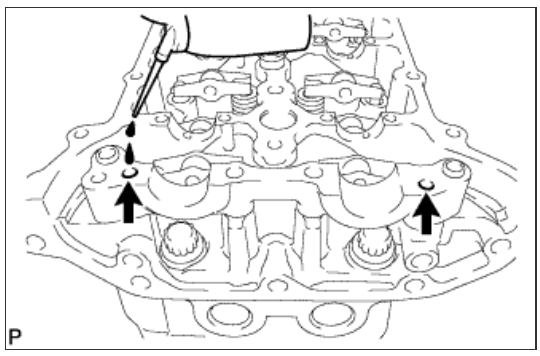
t. Apply adhesive to 3 or more threads of the taper screw plug.

Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

u. Using a 10 mm hexagon wrench, install the taper screw plug.

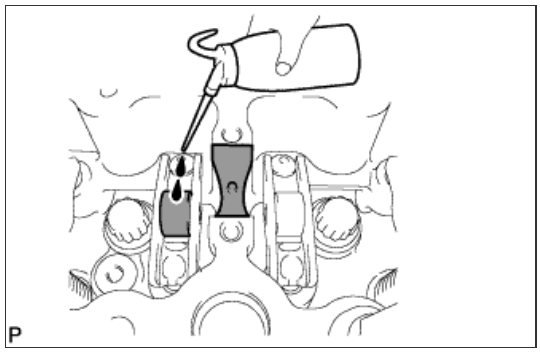


Torque:
15 N*m{ 153 kgf*cm , 11 ft.*lbf }



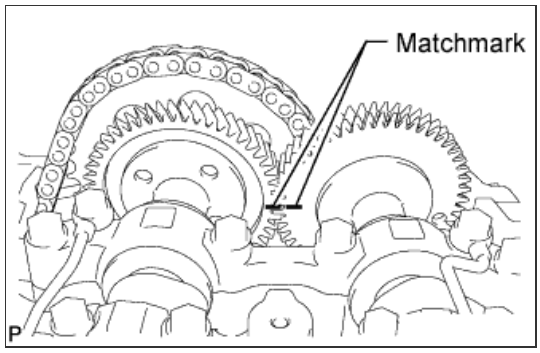
3. INSTALL NO. 1 AND NO. 2 CAMSHAFTS

NOTICE:

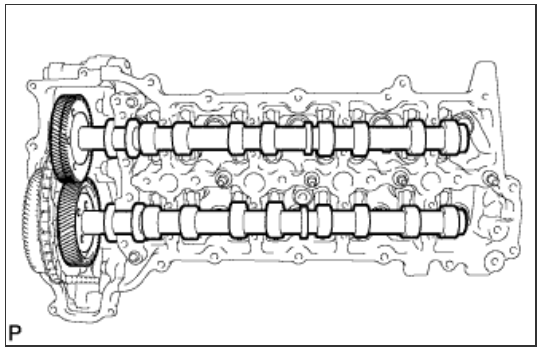


If replacing a camshaft with a new one, make a matchmark on the new camshaft in the same place as the old camshaft. Determine the matchmark placement by using the dot mark as a reference point and counting the number of gear teeth from the dot mark to the matchmark as shown in the illustration.

a. Add more than 19 cc (1.16 cu. in.) of engine oil into the cylinder head side oil holes.



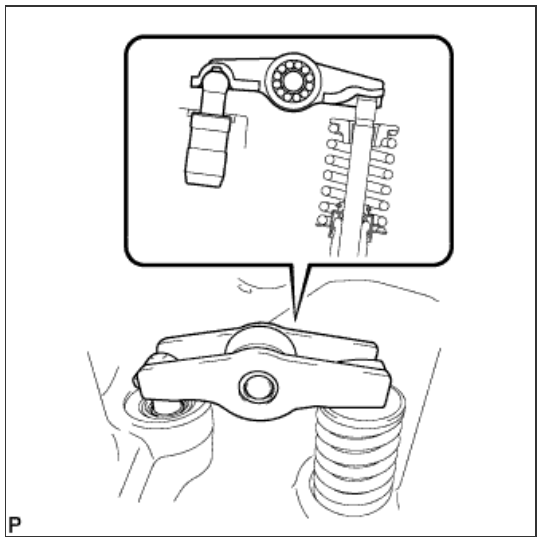
b. Apply engine oil to the rollers of the valve rocker arms and the camshaft housing of the cylinder head.



c. Install the No. 1 and No. 2 camshafts.

i. Apply engine oil to the camshaft journals, lobes, thrust portion and gears.

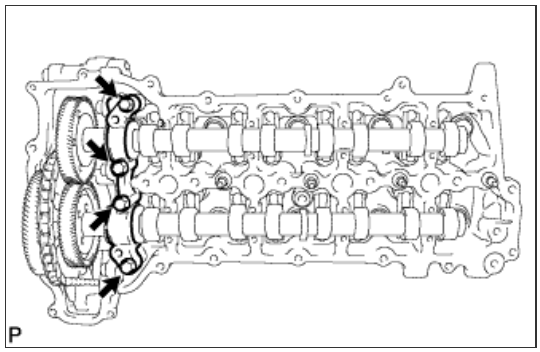
ii. Align the matchmarks of the No. 1 and No. 2 camshaft timing gears as shown in the illustration.



iii. Place the 2 camshafts into the cylinder head.

NOTICE:

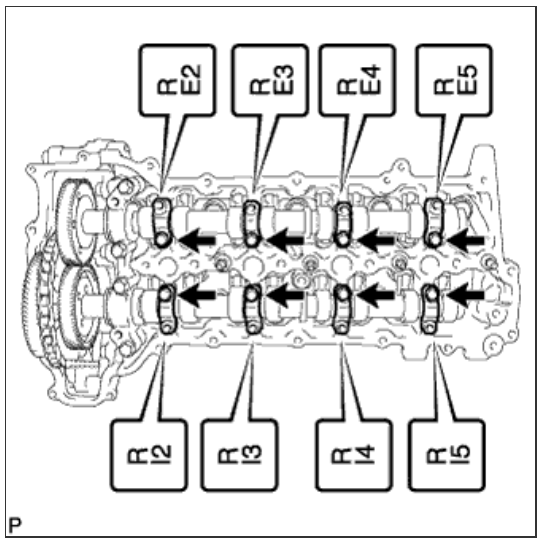
Before and after setting the camshafts, firmly set the rocker arms to the lash adjusters.



d. Install the No. 1 camshaft bearing cap.

d. Install the No. 1 camshaft bearing cap.

i. Align the No. 1 camshaft bearing cap and the ring pins of the No. 2 camshaft bearing cap.

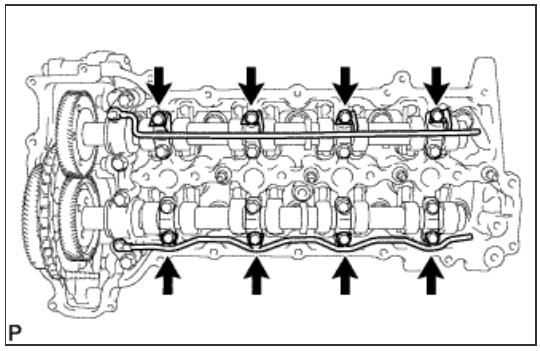


ii. Temporarily install the 4 bolts by hand.

e. Install the No. 3 camshaft bearing caps.

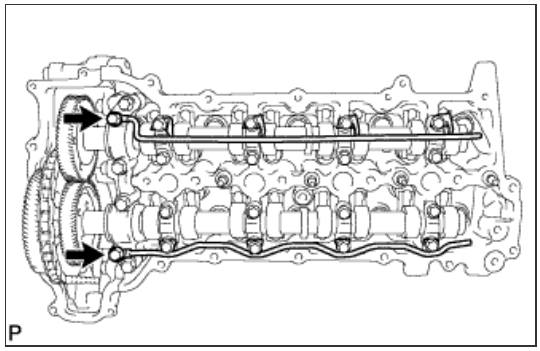
i. Confirm the marks and numbers on the camshaft bearing caps and place them in their proper position and direction.

ii. Temporarily install the 8 bolts, which are not installed with the oil feed pipe, by hand.



f. Temporarily install the No. 1 and No. 2 camshaft oil feed pipes with the 8 bolts by hand.

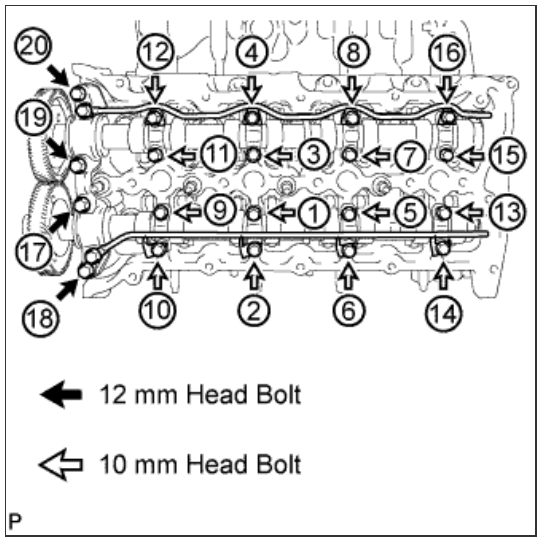
NOTICE:



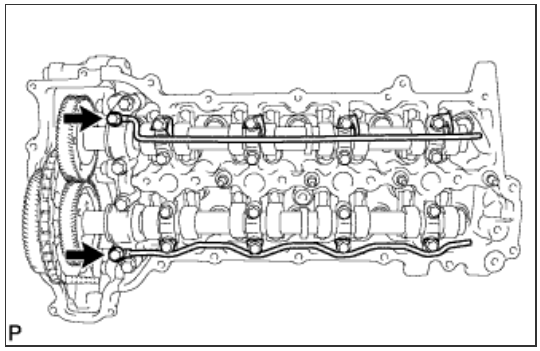
If even one of the pipe bolt holes does not match its camshaft bearing cap bolt hole, replace the camshaft oil feed pipe.

HINT:

The pipe is bent on the intake side, and straight on the exhaust side.



g. Temporarily install the 2 union bolts by hand.

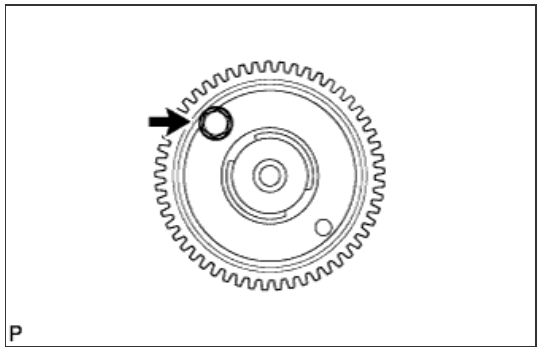


h. Uniformly tighten the 20 bolts in several steps in the order shown in the illustration.

Torque:
for 12 mm head bolt of No. 1 camshaft bearing cap:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
for 10 mm head bolt of No. 3 camshaft bearing cap:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

i. Tighten the 2 union bolts.

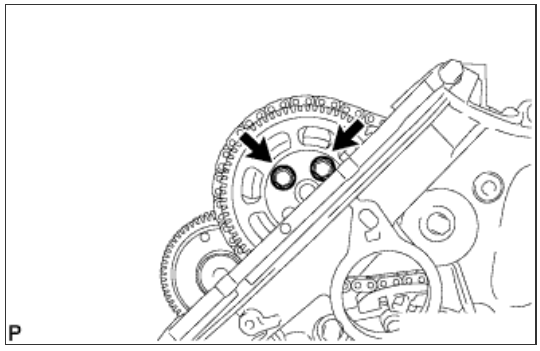
Torque:
17 N*m{ 173 kgf*cm , 13 ft.*lbf }



j. Remove the service bolt from the No. 1 camshaft timing gear.

NOTICE:

Do not drop the bolt into the engine.

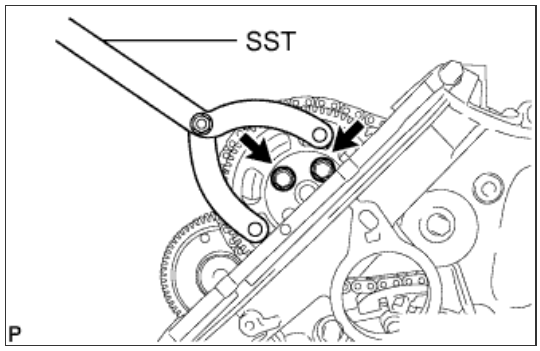


HINT:

If the bolt is difficult to remove, rotate the camshaft and remove the bolt. Then realign the matchmarks of the No. 1 and No. 2 camshaft timing gears.

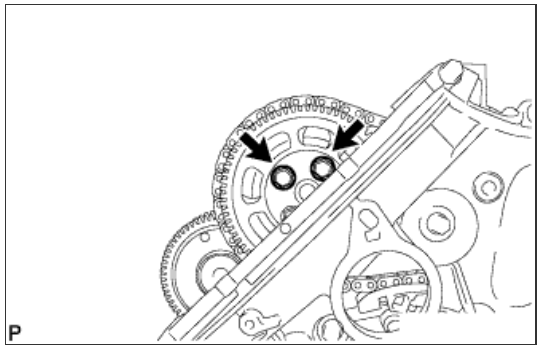
k. Temporarily install the No. 1 timing chain and No. 1 camshaft timing sprocket to the No. 2 camshaft.

l. Temporarily install the pump drive shaft gear with the 2 bolts.



m. Using SST, hold the pump drive shaft gear. Tighten the 2 bolts.

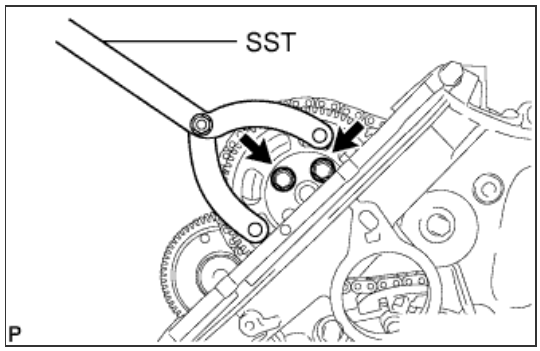
SST
09960-10010 (09962-01000, 09963-01000)



Torque:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }

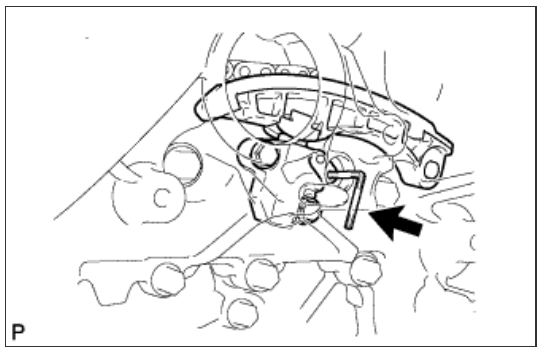
n. Rotate the crankshaft clockwise so that the 2 remaining pump drive shaft gear

bolts can be installed.



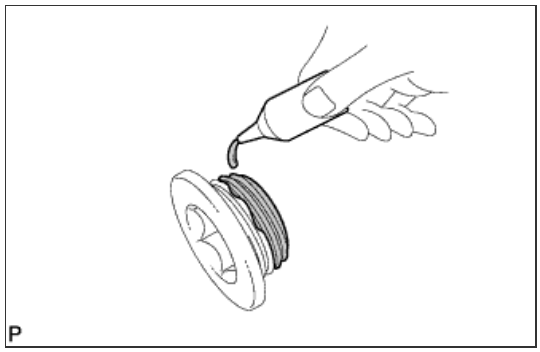
o. Temporarily install the 2 bolts to the pump drive shaft gear.

p. Using SST, hold the pump drive shaft gear. Tighten the 2 bolts.



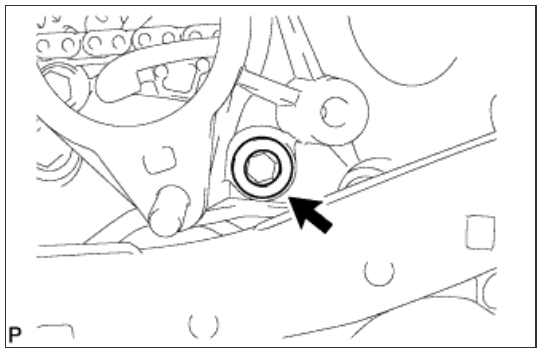
SST
09960-10010 (09962-01000, 09963-01000)

Torque:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }



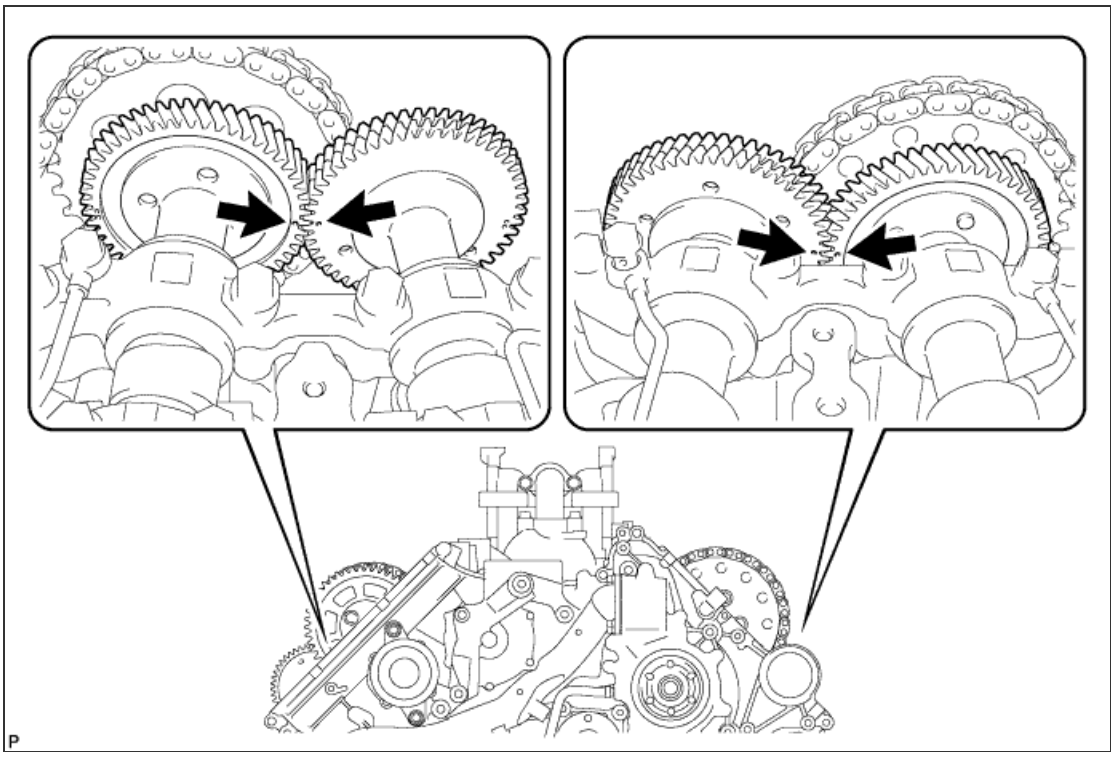
q. Remove the hexagon wrench.

r. Remove the adhesive from the threads of the taper screw plug and the bolt hole of the timing gear case.



s. Apply adhesive to 3 or more threads of the taper screw plug.

Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

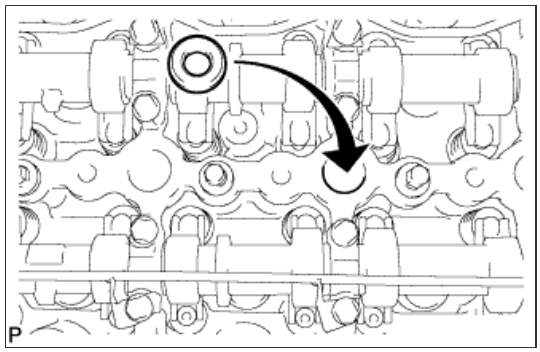


t. Using a 10 mm hexagon wrench, install the taper screw plug.

Torque:
15 N*m{ 153 kgf*cm , 11 ft.*lbf }

4. CHECK NO. 1 CYLINDER TO TDC/COMPRESSION

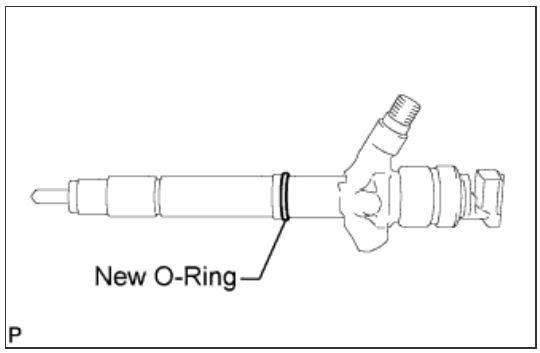
a. Rotate the crankshaft clockwise 3 times or more, and check that the timing marks of the camshafts (1 dot mark each) align. If the timing marks of the camshafts do not align, repeat the rIstall No. 3 and No. 4 Camshafts and rIstall No. 1 and No. 2 Camshafts procedures.



5. INSTALL FUEL INJECTOR LH

NOTICE:

Be sure to install the injector, holder clamp and bolt in their original positions.



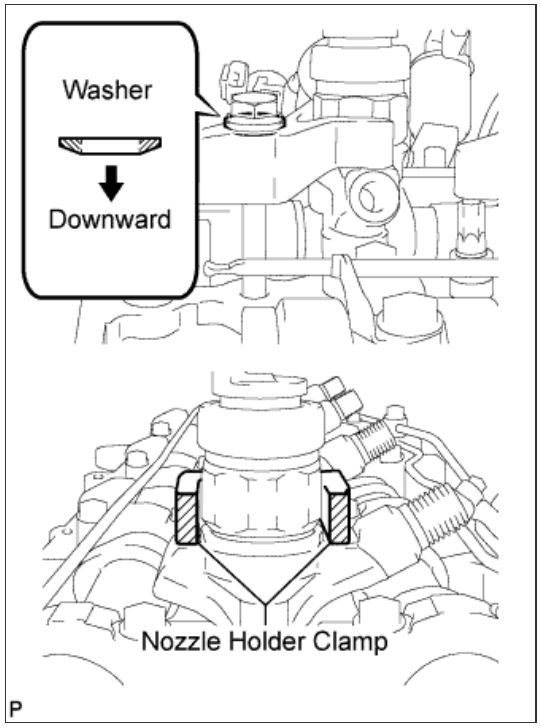
a. Install 4 new injection nozzle seats to the cylinder head.

b. Apply a light amount of clean engine oil to 4 new O rings.

c. Install the O rings to each injector as shown in the illustration.

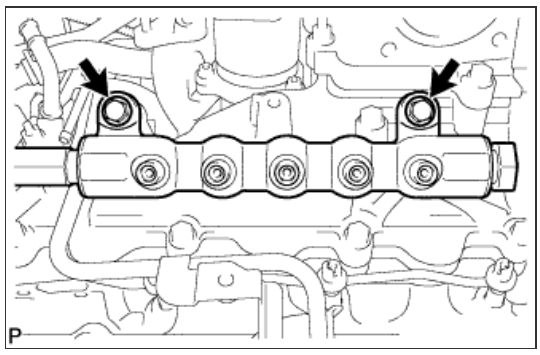
d. Insert the 4 injectors into the cylinder head.

NOTICE:



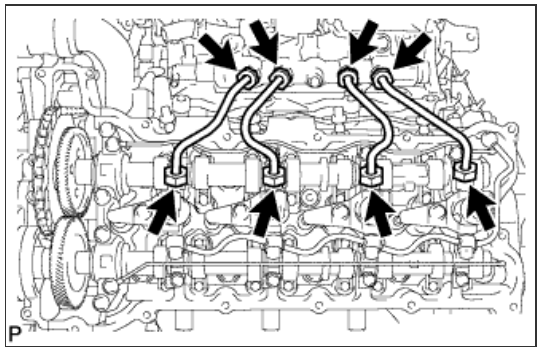
- **Insert the injector until it touches the nozzle seat surface.**
- **After installing the injector to the cylinder head, the O-ring may prevent the injector from fully seating. If so, pull out the injector and reinstall it.**
- **Always return an injector to the same place it was removed from.**

e. For an injector that has been replaced with a new injector, register the injector compensation code.



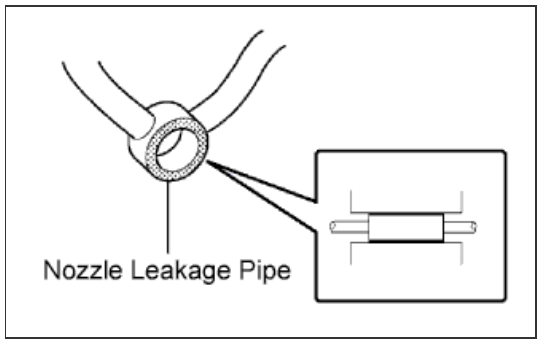
f. Temporarily install 4 new washers and the 4 nozzle clamps with the 4 clamp bolts.

NOTICE:



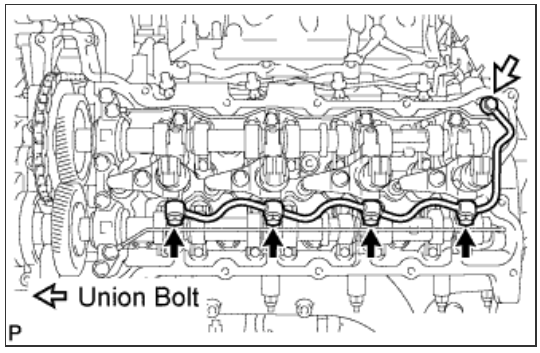
- **The fork portion of the nozzle holder clamp must be set to the injector.**
- **Before tightening the bolts, check that the nozzle holder clamp is set properly.**
- **To tighten the clamp bolts, first tighten them by hand until they cannot be turned further. Then, tighten the bolts to the specified torque in a later step.**
- **When tightening the bolts, be careful not to tilt the bolt and clamp.**
- **Do not reuse the washer.**

g. Temporarily install the common rail L with the 2 bolts.



h. Temporarily install the 4 new injection pipes to the common rail and injector.

i. Check the nozzle leakage pipe. Check that there are no scratches or dents on the 5 union seal surfaces. If scratches or dents are present, replace the nozzle leakage pipe.

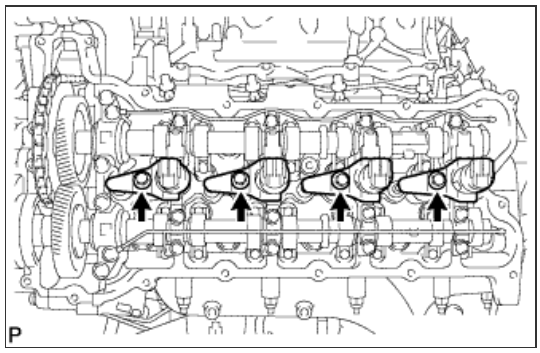


j. Set the leakage pipe and 5 new gaskets in place.

k. Temporarily install the leakage pipe with the 4 hollow screws and union bolt.

HINT:

To position the injectors, loosely tighten the 4 hollow screws and union bolt.

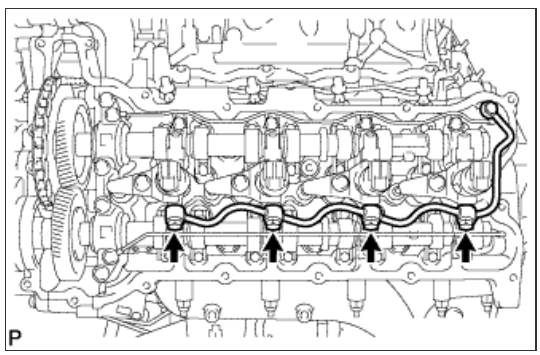


l. Tighten the 4 holder clamp bolts.

Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf }

m. Remove the 4 injection pipes.

n. Remove the 2 bolts and common rail L .

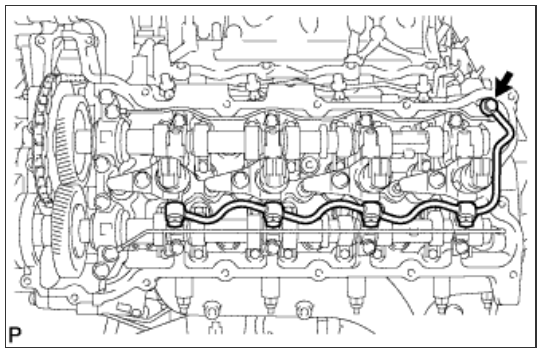


o. Tighten the 4 hollow screws.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

NOTICE:

If a hollow screw is accidentally tightened beyond the tor ue specification, it must be replaced together with the nozzle leakage pipe.

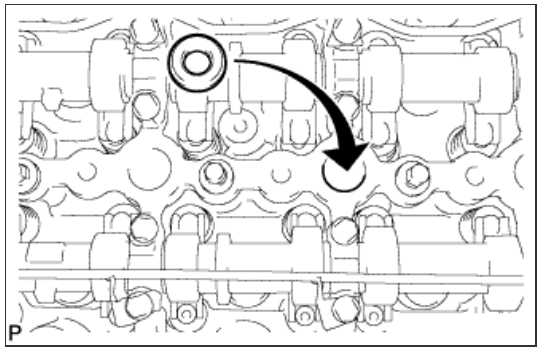


p. Tighten the union bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

NOTICE:

If a hollow screw is accidentally tightened beyond the tor ue specification, it must be replaced together with the nozzle leakage pipe.

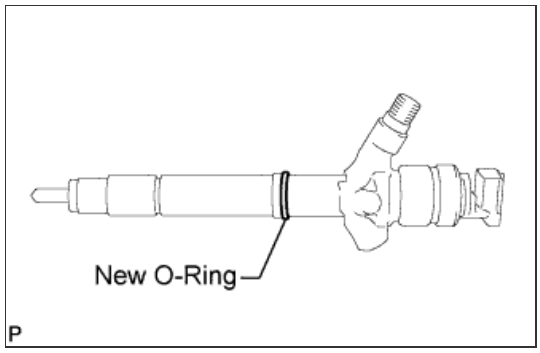


6. INSTALL FUEL INJECTOR RH

NOTICE:

Be sure to install the injector, holder clamp and bolt in their original positions.

a. Install 4 new injection nozzle seats to the cylinder head.



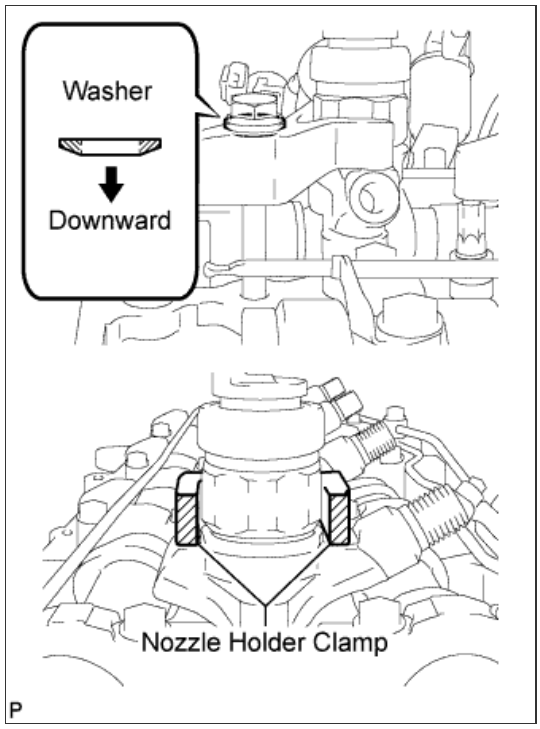
b. Apply a light amount of clean engine oil to 4 new O rings.

c. Install the O rings to each injector as shown in the illustration.

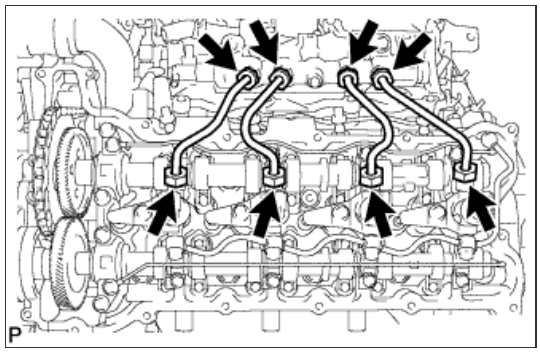
d. Insert the 4 injectors into the cylinder head.

NOTICE:

- **Insert the injector until it touches the nozzle seat surface.**
- **After installing the injector to the cylinder head, the O-ring may prevent the injector from fully seating. If so, pull out the injector and reinstall it.**
- **Always return an injector to the same place it was removed from.**



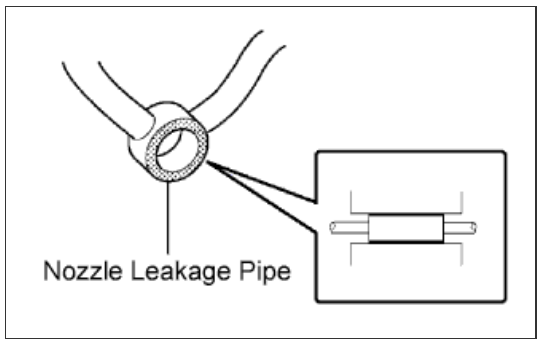
e. For an injector that has been replaced with a new injector, register the injector compensation code.



f. Temporarily install 4 new washers and the 4 nozzle clamps with the 4 clamp bolts.

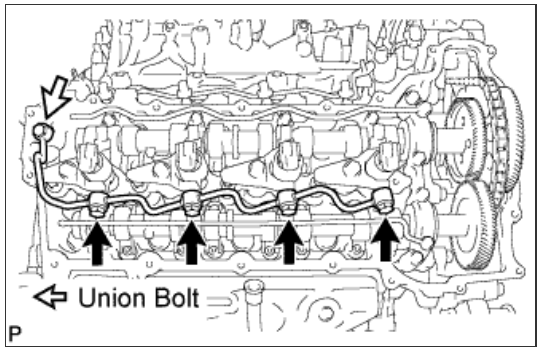
NOTICE:

- **The fork portion of the nozzle holder clamp must be set to the injector.**
- **Before tightening the bolts, check that the nozzle holder clamp is set properly.**
- **To tighten the clamp bolts, first tighten them by hand until they cannot be turned further. Then, tighten the bolts to the specified torque in a later step.**
- **When tightening the bolts, be careful not to tilt the bolt and clamp.**
- **Do not reuse the washer.**



g. Temporarily install the 4 new injection pipes to the common rail and injector.

h. Check the nozzle leakage pipe. Check that there are no scratches or dents on the 5 union seal surfaces. If scratches or dents are present, replace the nozzle leakage pipe.

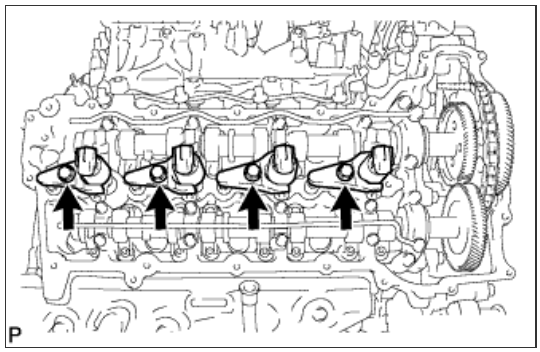


i. Set the leakage pipe and 5 new gaskets in place.

j. Temporarily install the leakage pipe with the 4 hollow screws and union bolt.

HINT:

To position the injectors, loosely tighten the 4 hollow screws and union bolt.

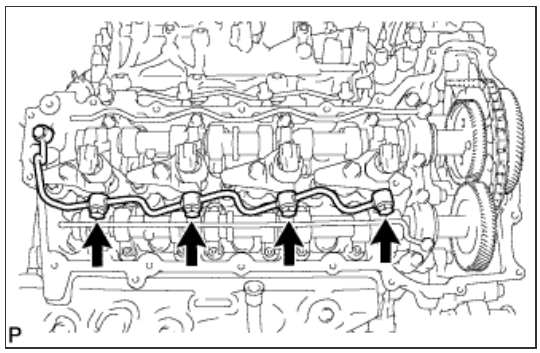


k. Tighten the 4 holder clamp bolts.

Torque:

25 N*m{ 255 kgf*cm , 18 ft.*lbf }

l. Remove the 4 injection pipes.

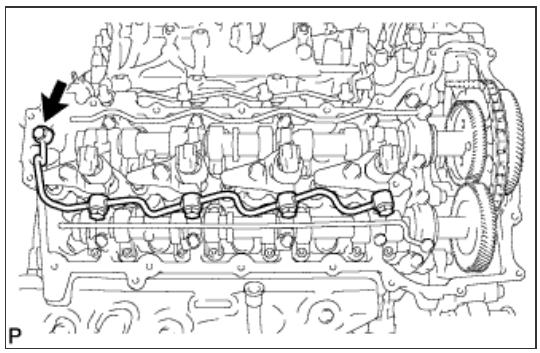


m. Tighten the 4 hollow screws.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

NOTICE:

If a hollow screw is accidentally tightened beyond the tor ue specification, it must be replaced together with the nozzle leakage pipe.

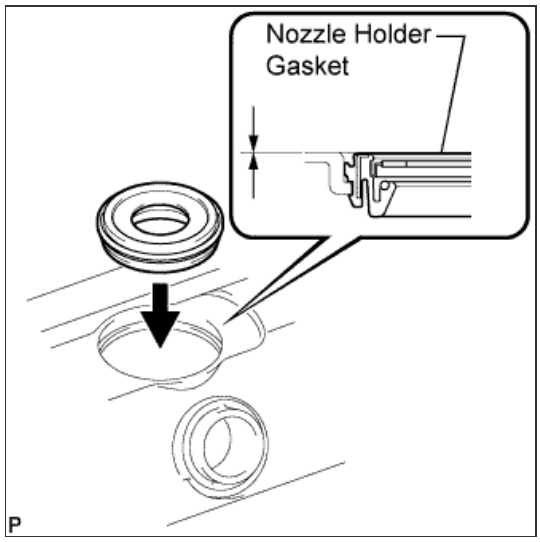


n. Tighten the union bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

NOTICE:

If a hollow screw is accidentally tightened beyond the tor ue specification, it must be replaced together with the nozzle leakage pipe.

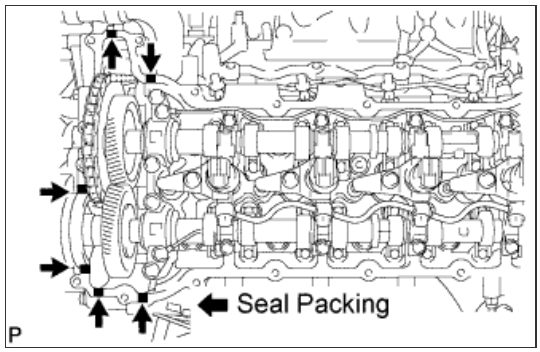


7. INSTALL NOZZLE HOLDER GASKET LH

a. Press 4 new nozzle holder gaskets into the cylinder head cover L .

NOTICE:

After installing the nozzle holder gasket, check that it dose not protrude from the cylinder head cover.



8. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY LH

a. Apply seal packing as shown in the illustration.

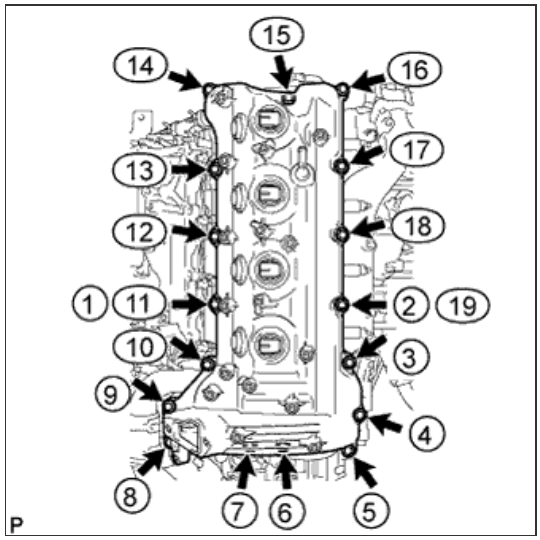
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**

b. Install a new gasket to the cylinder head cover.

NOTICE:



Remove any oil from the contact surface.

c. Temporarily install the cylinder head cover with the 17 bolts. Tighten the 17 bolts in the order shown in the illustration.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

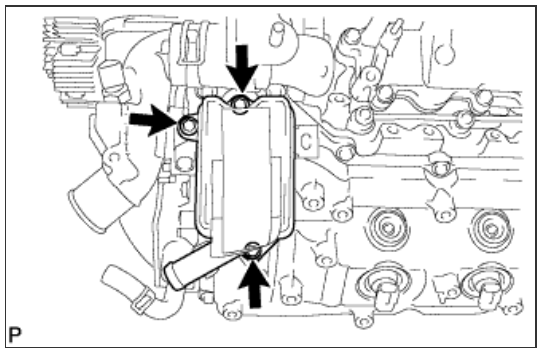
HINT:

After tightening the bolts, check that the bolts at step 11 and 19 are tightened to the specified tor ue.

9. INSTALL NOZZLE HOLDER SEAL LH

a. Press 4 new holder seals into the cylinder head cover L .

10. INSTALL OIL SEPARATOR ASSEMBLY



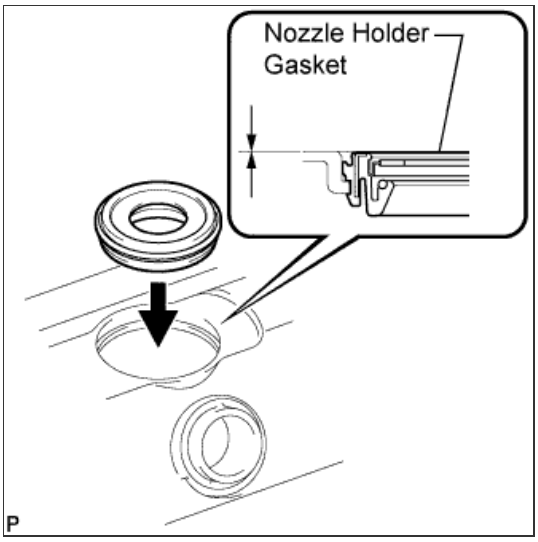
a. Install a new gasket to the oil separator.

NOTICE:

Remove any oil from the contact surface.

b. Install the oil separator with the 3 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



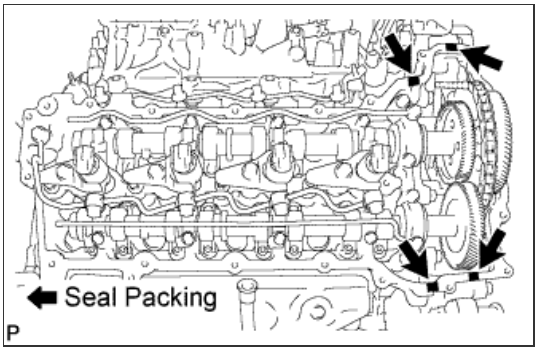
11. INSTALL NOZZLE HOLDER GASKET RH

a. Press 4 new nozzle holder gaskets into the cylinder head cover R .

NOTICE:

After installing the nozzle holder gasket, check that it dose not protrude from

the cylinder head cover.



12. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY RH

a. Apply seal packing as shown in the illustration.

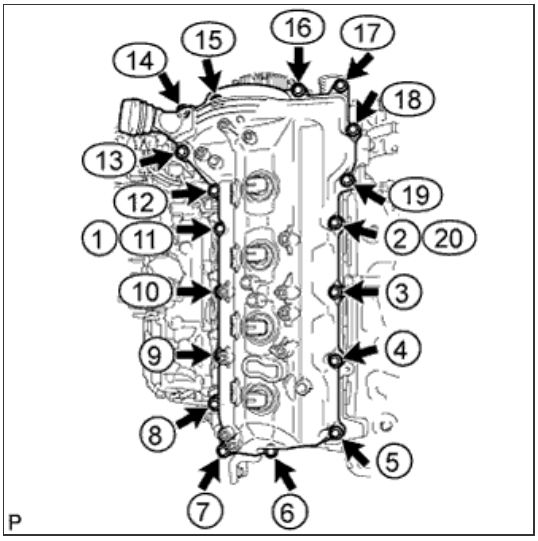
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**

b. Install a new gasket to the cylinder head cover.

NOTICE:



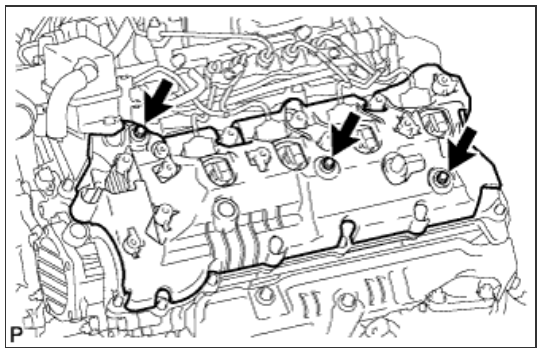
Remove any oil from the contact surface.

c. Temporarily install the cylinder head cover with the 18 bolts. Tighten the 18 bolts in the order shown in the illustration.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

HINT:

After tightening the bolts, check that the bolts at step 11 and 20 are tightened to the specified tor ue.

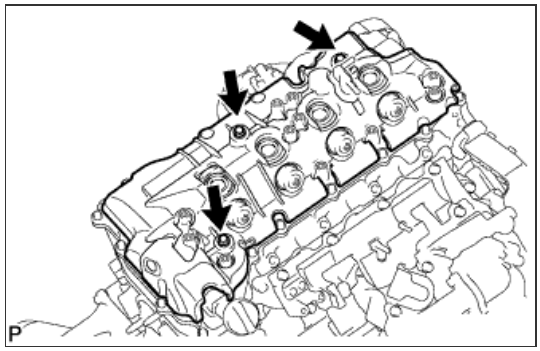


13. INSTALL NOZZLE HOLDER SEAL RH

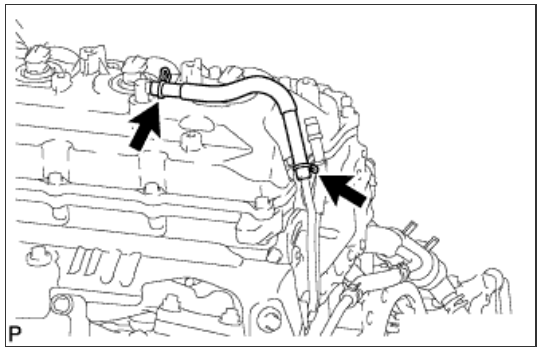
a. Press 4 new holder seals into the cylinder head cover R .

14. INSTALL CYLINDER HEAD COVER SILENCER LH (w/ Intercooler)

a. Install the cylinder head cover silencer with the 3 bolts.

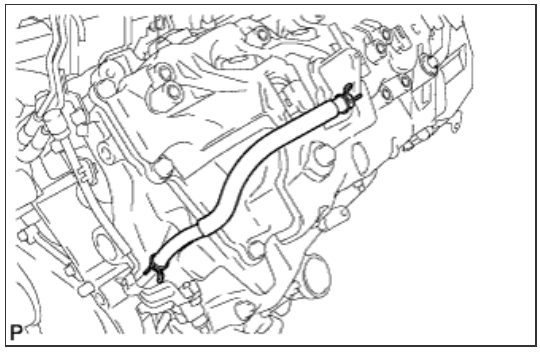


Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }



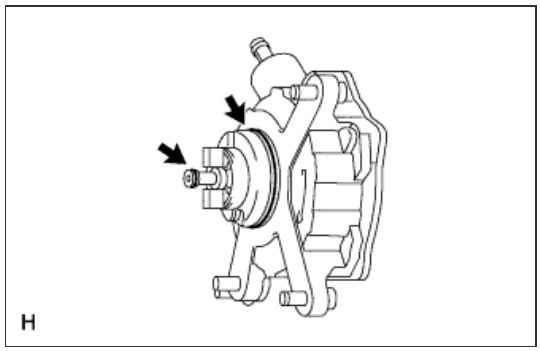
15. INSTALL CYLINDER HEAD COVER SILENCER RH (w/ Intercooler)

a. Install the cylinder head cover silencer with the 3 bolts.



Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

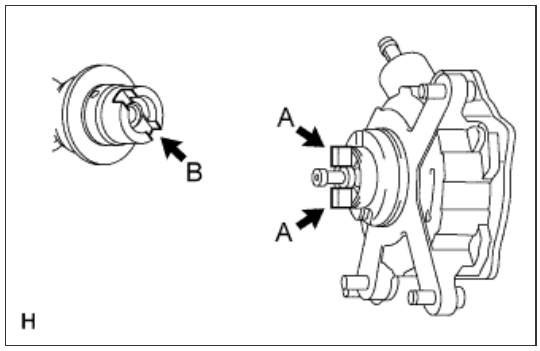
16. CONNECT NO. 3 VENTILATION HOSE



17. CONNECT NO. 2 VENTILATION HOSE

18. INSTALL VACUUM PUMP ASSEMBLY (w/ Intercooler)

a. Apply engine oil to 2 new O rings.

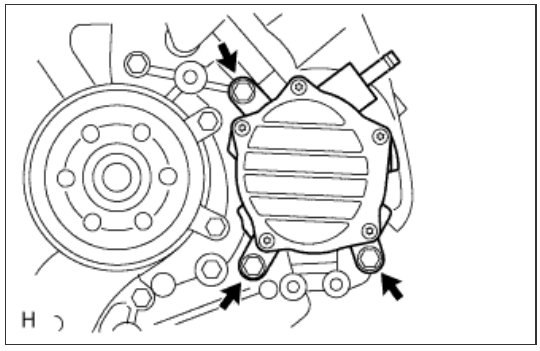


b. Install the 2 O rings to the vacuum pump.

c. Install the vacuum pump so that the coupling teeth of the vacuum pump (labeled A) and the groove of the camshaft (labeled B) are aligned.

NOTICE:

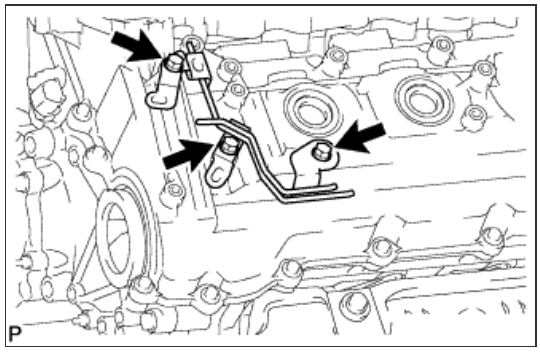
Be careful not to damage the O ring.



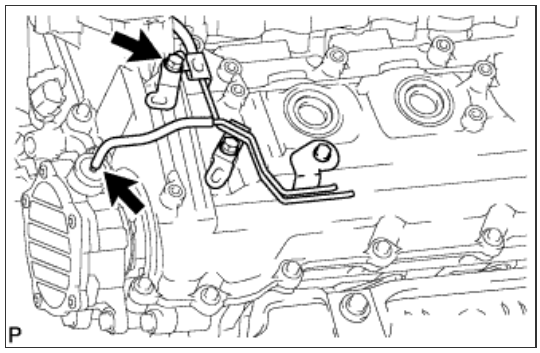
d. Install the vacuum pump with the 3 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

NOTICE:



Confirm that the vacuum pump is not at an angle, and that there is no clearance between the fitting surfaces.

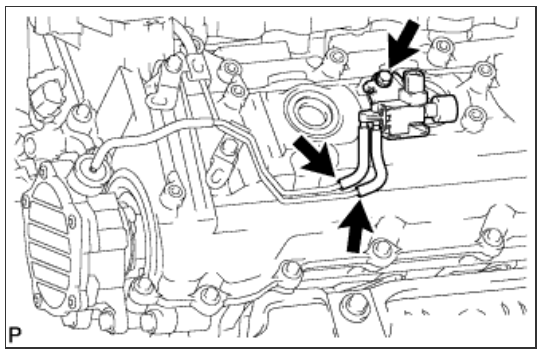


19. INSTALL NO. 1 VACUUM TRANSMITTING PIPE SUB-ASSEMBLY

a. Install the vacuum transmitting pipe with the 3 bolts.

Torque:
6.0 N*m{ 61 kgf*cm , 53 in.*lbf }

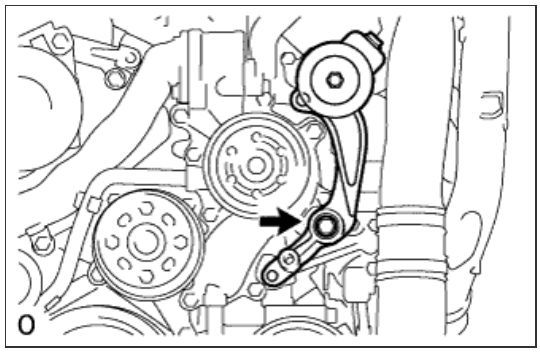
b. w/ Intercooler:
Connect the 2 vacuum hoses.



20. INSTALL NO. 1 VACUUM SWITCHING VALVE ASSEMBLY (w/ Intercooler)

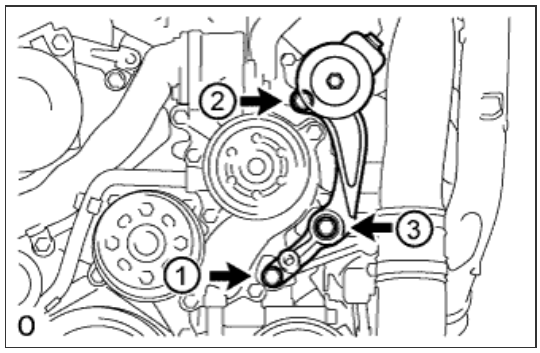
a. Install vacuum switching valve with the bolt.

Torque:
6.0 N*m{ 61 kgf*cm , 53 in.*lbf }



b. Connect the 2 vacuum hoses.

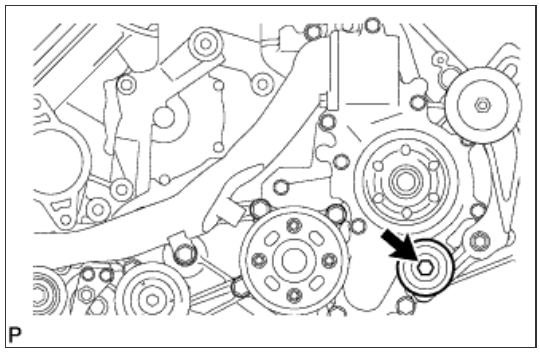
21. INSTALL NO. 2 IDLER PULLEY BRACKET (w/ Viscous Heater)



a. Temporarily install the No. 2 idler pulley bracket with the bolt.

b. Temporarily install the 2 bolts to the No. 2 idler pulley bracket bolt hole.

c. Uniformly tighten the 3 bolts of the No. 2 idler pulley bracket in the order shown in the illustration.

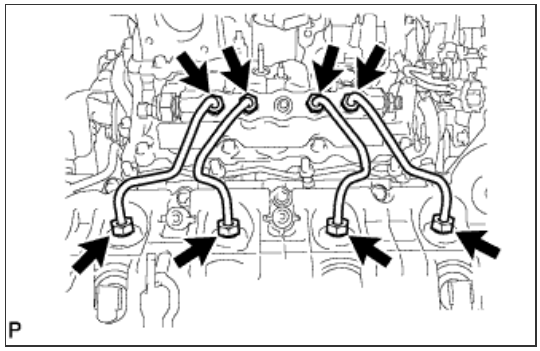


Torque:
49 N*m{ 495 kgf*cm , 36 ft.*lbf }

22. INSTALL NO. 2 IDLER PULLEY (w/ Viscous Heater)

a. Install the collar, No. 2 idler pulley and cover with the bolt.

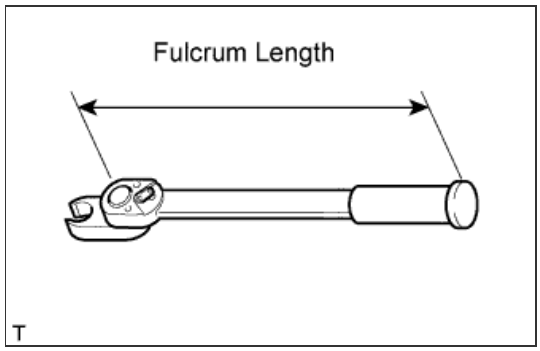
Torque:
49 N*m{ 495 kgf*cm , 36 ft.*lbf }



23. INSTALL INJECTION PIPE RH

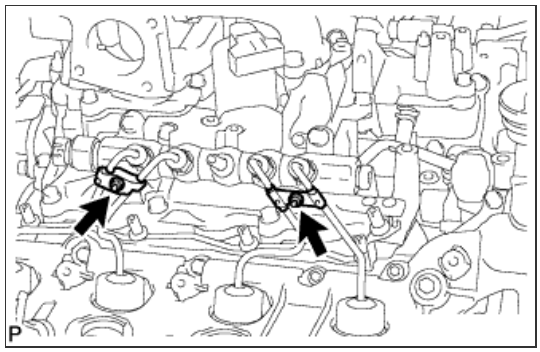
a. Using a union nut wrench, install the 4 new injection pipes.

Torque:
without union nut wrench:
34 N*m{ 347 kgf*cm , 25 ft.*lbf }
with union nut wrench:
31 N*m{ 316 kgf*cm , 23 ft.*lbf }



NOTICE:

Make sure there is no damage or foreign matter on the seal surfaces.

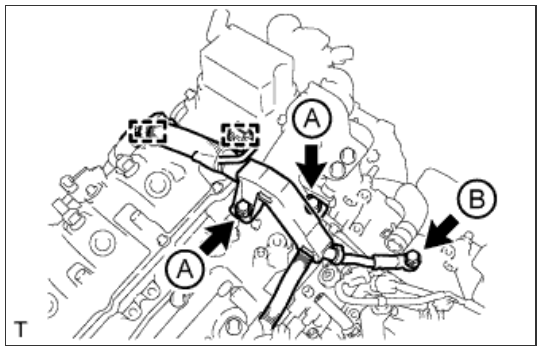


HINT:

- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.).**
- **Make sure the union nut wrench and the torque wrench are connected in a straight line.**

b. w/ Intercooler:
Install the 4 injection pipe clamps with the 2 nuts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }



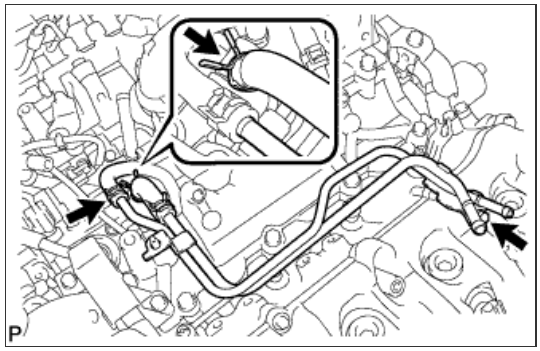
24. CONNECT NO. 2 ENGINE WIRE

a. Connect the No. 2 engine wire with the 3 bolts.

Torque:
for bolt A:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }
for bolt B:

32 N*m{ 326 kgf*cm , 24 ft.*lbf }

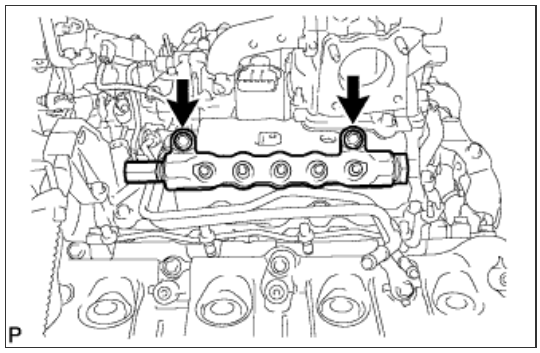
b. Attach the 2 wire harness clamps.



25. INSTALL FUEL FILTER TO INJECTION PUMP FUEL PIPE SUB-ASSEMBLY

a. Install the fuel filter to injection pump fuel pipe with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

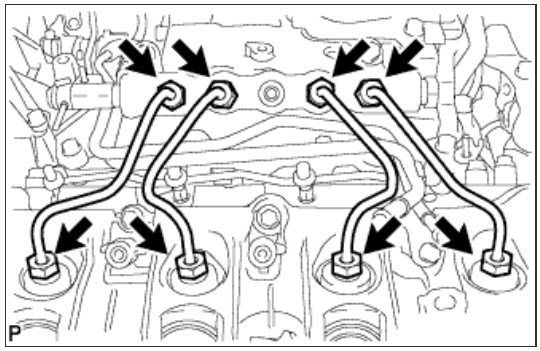


b. Connect the 2 hoses to the fuel pipe.

26. INSTALL COMMON RAIL ASSEMBLY LH

a. Install the common rail with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



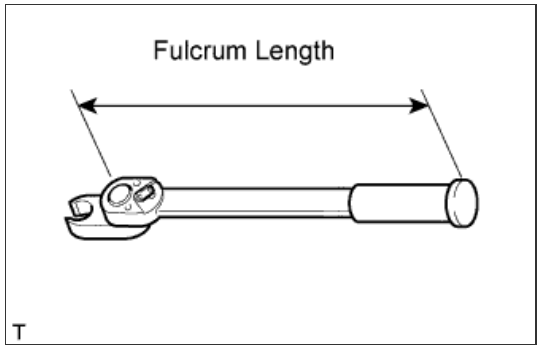
27. INSTALL INJECTION PIPE LH

a. Using a union nut wrench, install the 4 new injection pipes.

Torque:
without union nut wrench:
34 N*m{ 347 kgf*cm , 25 ft.*lbf }
with union nut wrench:
31 N*m{ 316 kgf*cm , 23 ft.*lbf }

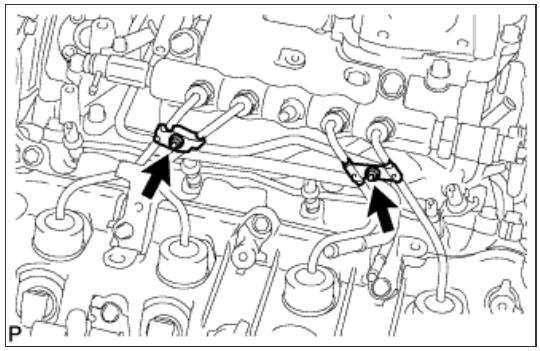
NOTICE:

Make sure there is no damage or foreign matter on the seal surfaces.



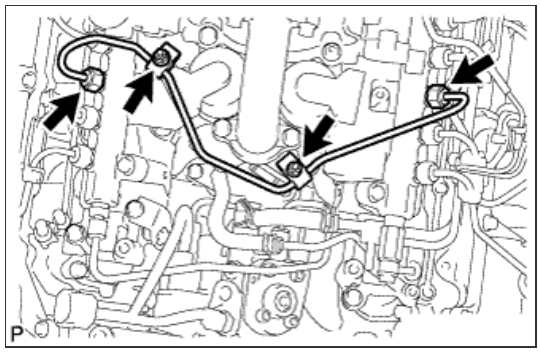
HINT:

- **Use a torque wrench with a fulcrum length of 30 cm (11.8**



in.).

- **Make sure the union nut wrench and the torque wrench are connected in a straight line.**



b. w/ Intercooler:
Install the 4 injection pipe clamps with the 2 nuts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

28. INSTALL NO. 6 INJECTION PIPE SUB-ASSEMBLY

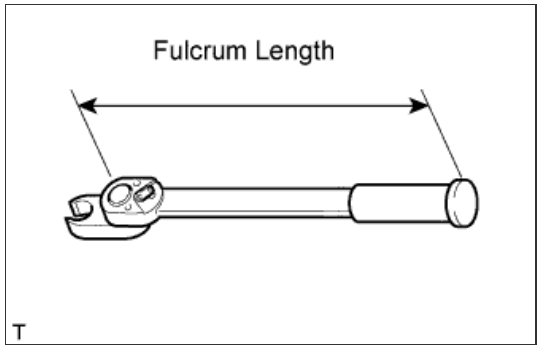
a. w/ EGR System:

i. Temporarily install a new No. 6 injection pipe to the common rail L and R .

NOTICE:

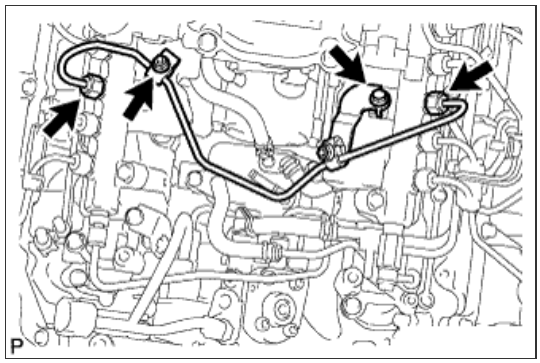
Make sure there is no damage or foreign matter on the seal surfaces.

ii. Install the 2 No. 2 injection pipe clamps with the 2 nuts.



Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

iii. Using a union nut wrench, tighten the No. 6 injection pipe ends.



Torque:
without union nut wrench:
34 N*m{ 347 kgf*cm , 25 ft.*lbf }
with union nut wrench:
31 N*m{ 316 kgf*cm , 23 ft.*lbf }

HINT:

- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.).**
- **Make sure the union nut wrench and the torque wrench are connected in a straight line.**

b. w/o EGR System:

i. Temporarily install a new No. 6 injection pipe to the common rail L and R .

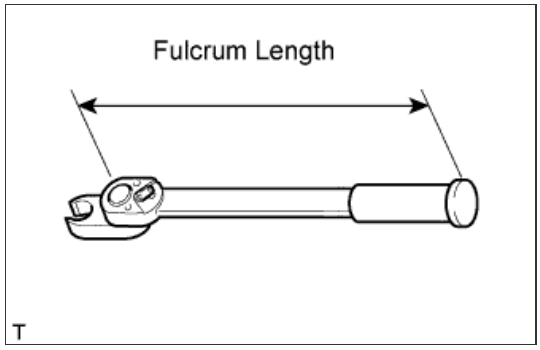
NOTICE:

Make sure there is no damage or foreign matter on the seal surfaces.

ii. Install the bracket to the No. 3 intake manifold with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

iii. Install the No. 2 injection pipe clamp with the nut.



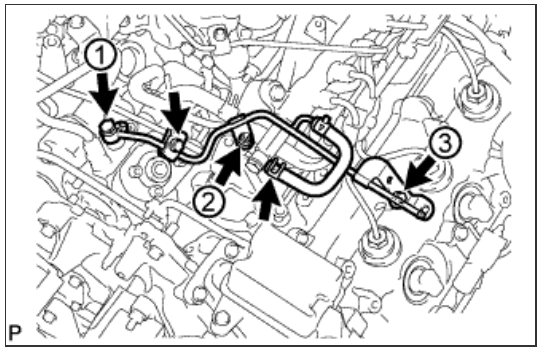
Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

iv. Using a union nut wrench, tighten the No. 6 injection pipe ends.

Torque:
without union nut wrench:
34 N*m{ 347 kgf*cm , 25 ft.*lbf }
with union nut wrench:
31 N*m{ 316 kgf*cm , 23 ft.*lbf }

HINT:

- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.).**
- **Make sure the union nut wrench and the torque wrench are connected in a straight line.**



29. INSTALL NO. 2 FUEL PIPE SUB-ASSEMBLY

NOTICE:

Check for damage and foreign matter on the fuel pipe installation surface of the supply pump.

If there is foreign matter, remove it from the installation surface. If the installation surface is damaged, replace the fuel supply pump.

a. Temporarily install a new gasket and the No. 2 fuel pipe with the union bolt, nut and bolt.

b. Tighten the union bolt, nut and bolt in the order shown in the illustration.

Torque:
for union bolt:
10 N*m{ 105 kgf*cm , 8 ft.*lbf }
for bolt and nut:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

c. Install the No. 2 injection pipe clamp with the bolt.

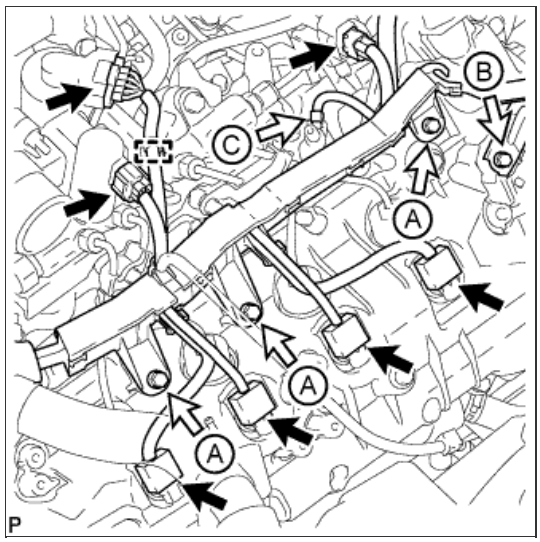
Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

d. Connect the fuel hose to the No. 5 nozzle leakage pipe.

30. CONNECT ENGINE WIRE

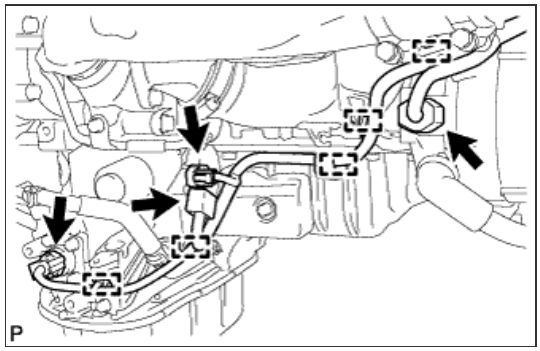
a. R side:

i. Install the engine wire harness protector with the 3 bolts labeled A.



ii. Connect the 7 connectors.

iii. Attach the wire harness clamp.

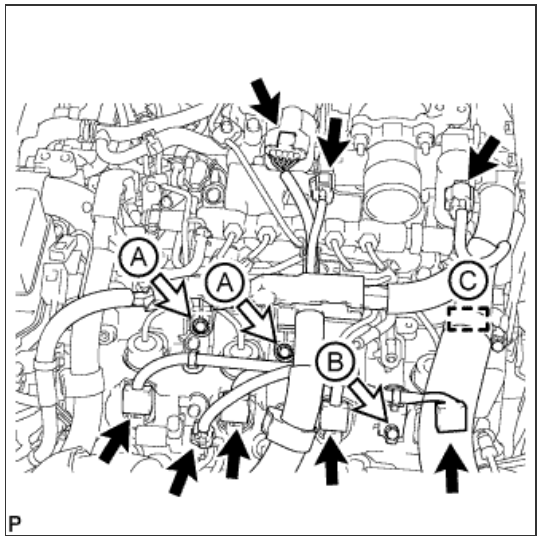


iv. Install the wire harness bracket with the bolt labeled B.

v. Install the glow plug wire harness with the nut labeled C.

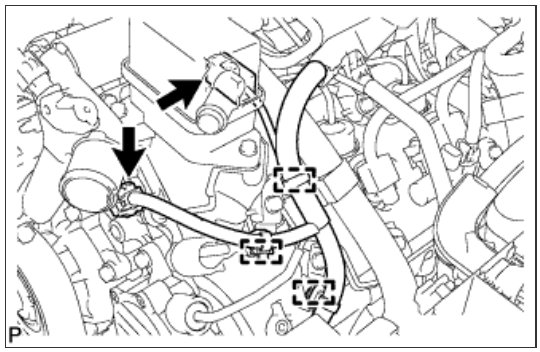
Torque:
4.0 N*m{ 41 kgf*cm , 35 in.*lbf }

vi. Attach the 5 wire harness clamps and connect the 4 connectors.



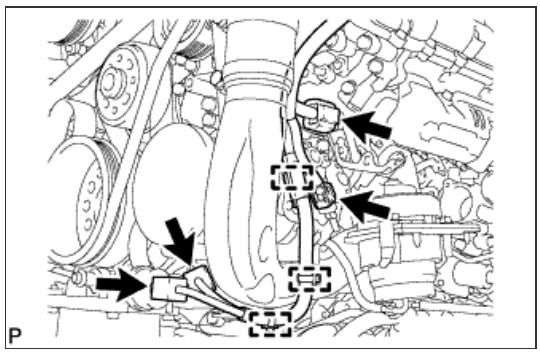
b. L side:

i. Install the engine wire harness protector with the 2 bolts labeled A.



ii. Connect the 8 connectors.

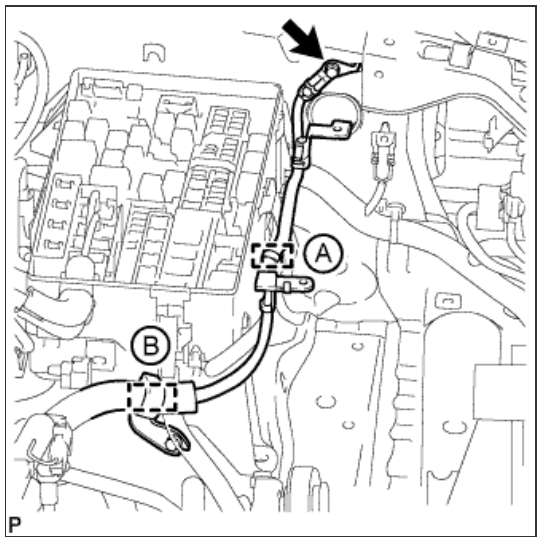
iii. Install the wire harness bracket with the bolt labeled B.



iv. for R D:
Connect the wire harness with the wire harness clamp holder labeled C.

v. Attach the 3 wire harness clamps and connect the 2 connectors.

vi. Attach the 3 wire harness clamps and connect the 4 connectors.



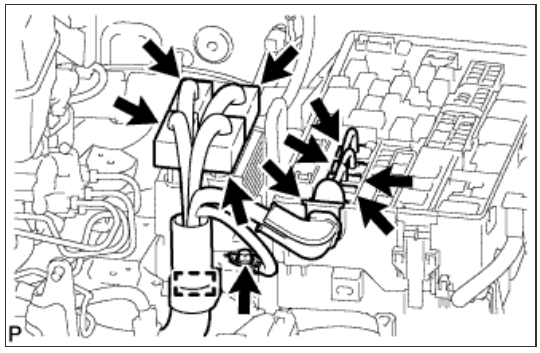
vii. Connect the wire harness with the wire harness clamp holder labeled B.

viii. Attach the ground wire clamp labeled A to the relay block side.

ix. Install the ground wire to the body panel with the bolt.

Torque:
8.4 N*m{ 87 kgf*cm , 74 in.*lbf }

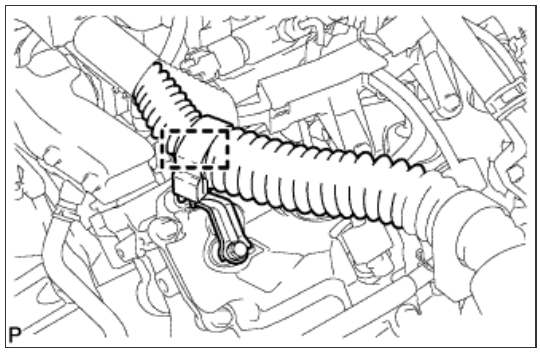
x. Connect the 4 connectors to the injector driver.



xi. Install the ground wire with the bolt.

Torque:
8.4 N*m{ 86 kgf*cm , 74 in.*lbf }

xii. Connect the wire harness holder to the relay block.

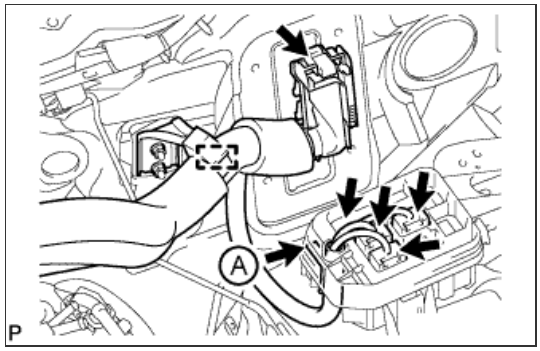


xiii. Connect the 4 connectors to the relay block.

xiv. Connect the wire harness with the wire harness clamp holder.

c. for R D:

i. Connect the wire harness with the wire harness clamp holder.

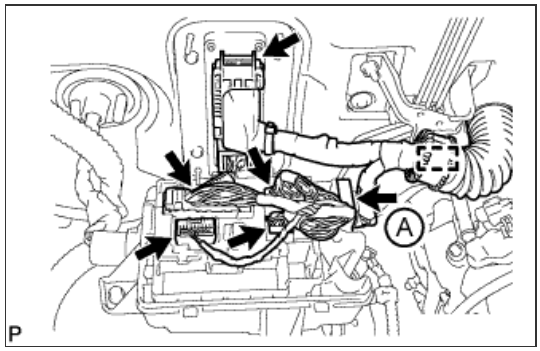


ii. Connect the ECM connector to the ECM.

iii. Connect the wire harness with the wire harness clamp holder.

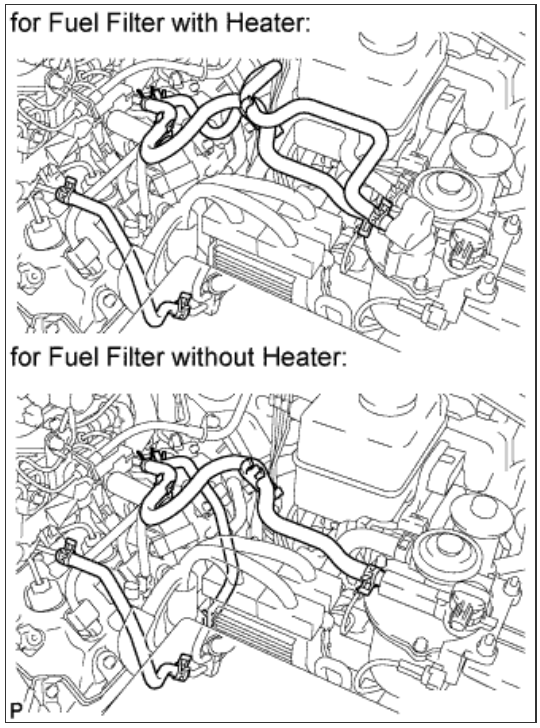
iv. Attach the wire harness tab labeled A to the relay block.

v. Connect the 4 connectors to the relay block.



d. for L D:

i. Connect the wire harness with the wire harness clamp holder.

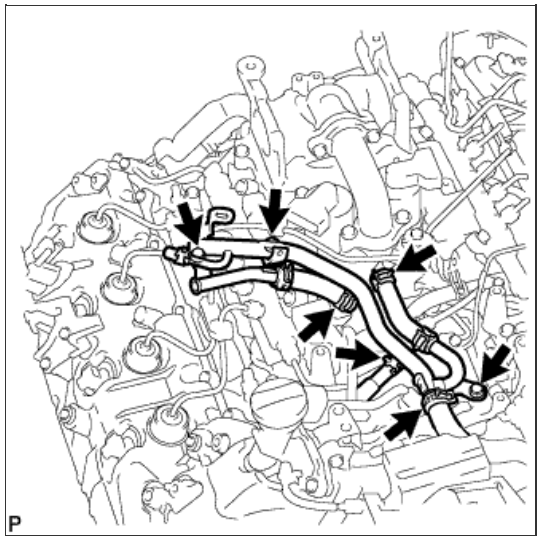


ii. Connect the ECM connector to the ECM.

iii. Attach the wire harness tab labeled A to the relay block.

iv. Connect the 4 connectors to the relay block.

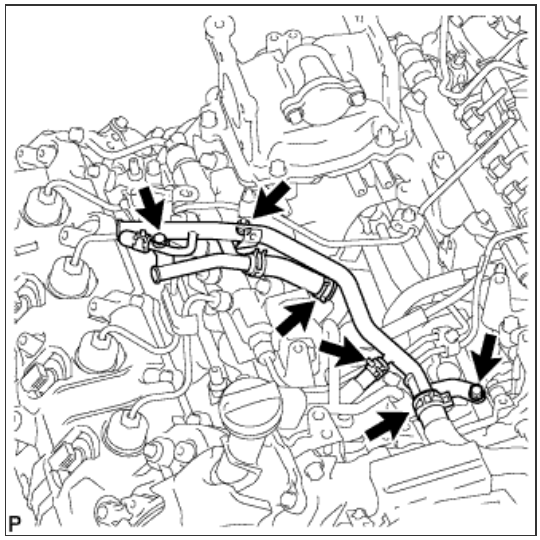
31. CONNECT FUEL HOSE



32. INSTALL NO. 4 WATER BY-PASS PIPE

a. w/ EGR System:
Connect the 4 water hose ends, and temporarily install the No. 4 water by pass pipe with the 2 bolts and nut.

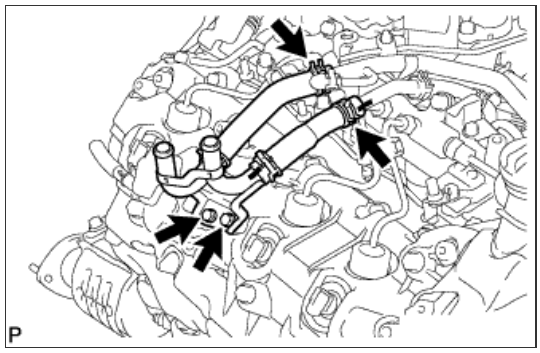
b. First tighten the 2 bolts and then tighten the nut.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

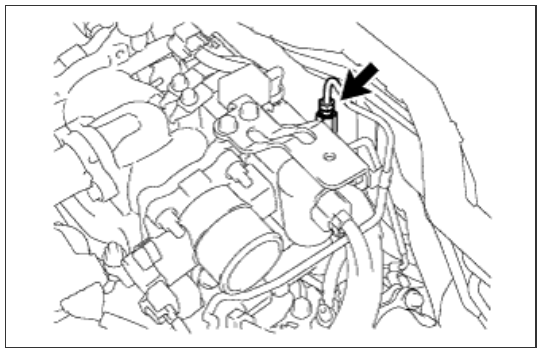
c. w/o EGR System:
Connect the 3 water hose ends, and temporarily install the No. 4 water by pass pipe with the 2 bolts and nut.

d. First tighten the 2 bolts and then tighten the nut.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

33. INSTALL NO. 3 WATER BY-PASS PIPE (w/o Viscous Heater)

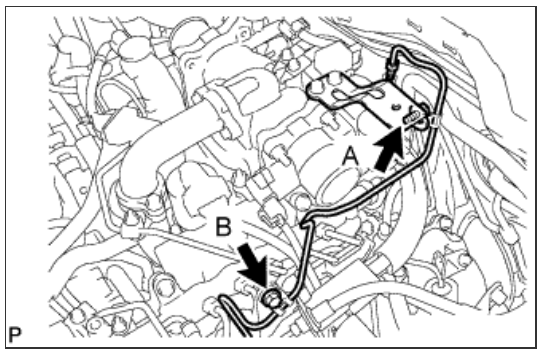


a. Connect the 2 water hose ends, and install the No. 3 water by pass pipe with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

34. INSTALL TUBE CONNECTOR TO FLEXIBLE HOSE TUBE (for Manual Transaxle)

a. Temporarily install the flare nut of the tube connector to flexible hose tube to the clutch tube to release cylinder 2 way by hand.

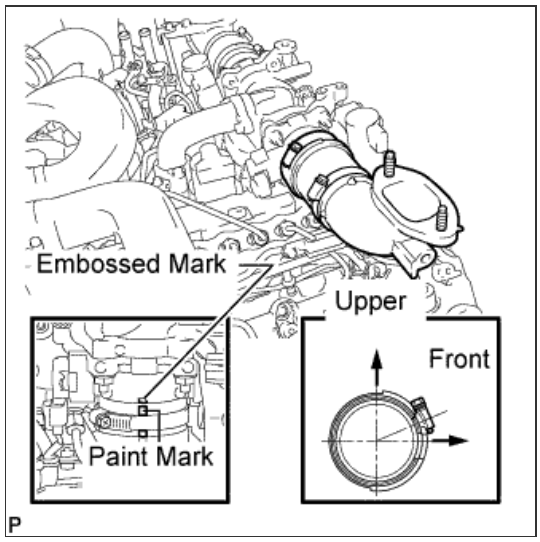


b. Temporarily install the tube connector to flexible hose tube with the 2 bolts.

c. Tighten the bolt labeled A.

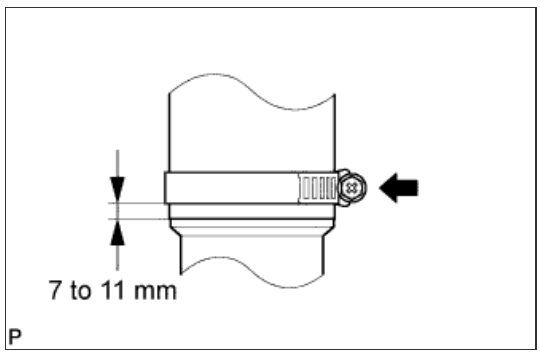
Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

NOTICE:



Tighten the bolt labeled B after installing the clutch hose.

35. INSTALL AIR TUBE SUB-ASSEMBLY LH



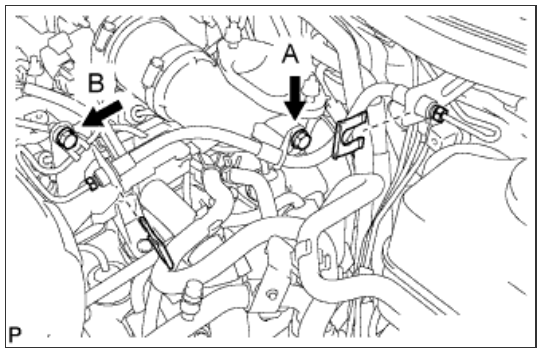
a. Install the air tube to the throttle body.

b. Align the embossed mark of the throttle body with the paint mark of the No. 4 air hose.

c. Tighten the hose clamp so that it is 7 to 11 mm (0.276 to 0.433 in.) from the end of the hose as shown in the illustration.

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

36. INSTALL CLUTCH HOSE (for Manual Transmission)



a. Connect the clutch hose to the air tube with the bolt labeled A.

b. Temporarily install the clutch hose to the clutch master cylinder tube to flexible hose tube and tube connector to flexible hose tube, and fix it in place with the 2 clips.

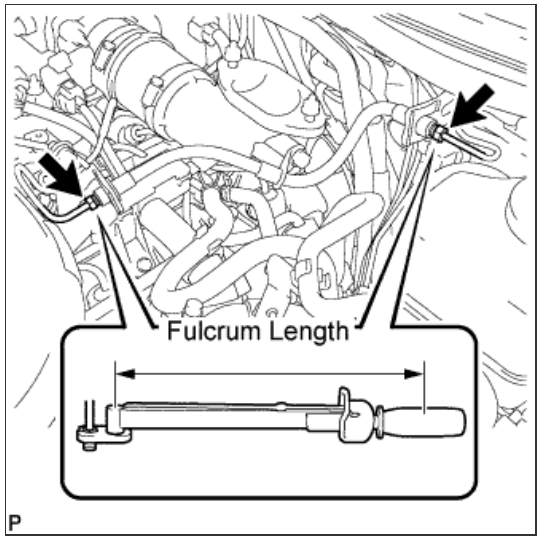
Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

c. Tighten the bolt labeled B.

Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

d. Tighten the flexible hose tube.

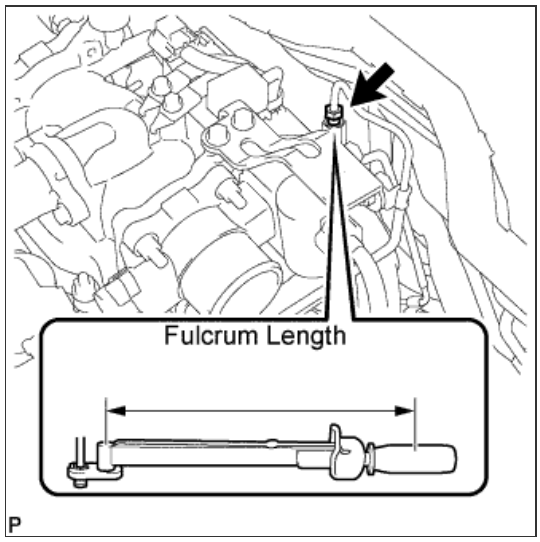
NOTICE:



- **Do not bend or damage the flexible hose tube.**
- **Do not allow any foreign matter such as dirt and dust to enter the flexible hose tube from the connecting points.**

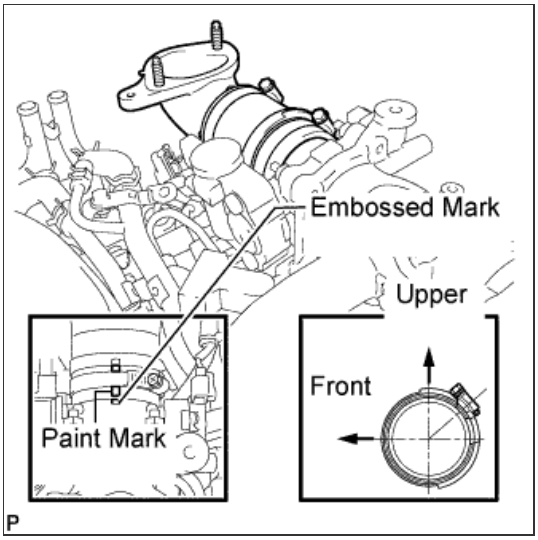
HINT:

- **Use a torque wrench with a fulcrum length of 30 cm (11.8 in.). If using a torque wrench with a length that is not 30 cm (11.8 in.), calculate the torque specification for the torque wrench and SST based on the "without SST" torque specification (Click here).**
- **Make sure union nut wrench and the wrench are connected in a straight line.**



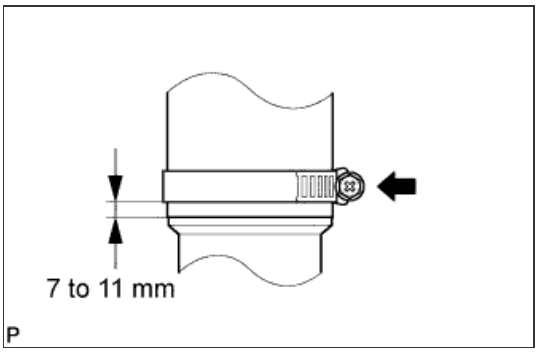
i. Using a 10 mm union nut wrench, tighten the 2 flare nuts of the flexible hose tube.

Torque:
without union nut wrench:
15 N*m{ 154 kgf*cm , 11 ft.*lbf }
with union nut wrench:
14 N*m{ 141 kgf*cm , 10 ft.*lbf }



ii. Using a 10 mm union nut wrench, tighten the flare nut of the flexible hose tube.

Torque:
without union nut wrench:
15 N*m{ 154 kgf*cm , 11 ft.*lbf }
with union nut wrench:
14 N*m{ 141 kgf*cm , 10 ft.*lbf }



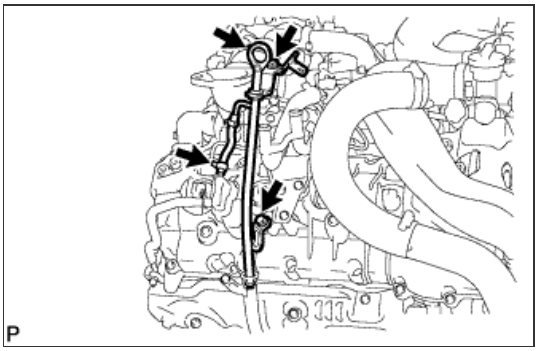
a. Install the air tube to the throttle body.

b. Align the embossed mark of the throttle body with the paint mark of the No. 4 air hose.

c. Tighten the hose clamp so that it is 7 to 11 mm (0.276 to 0.433 in.) from the end of the hose as shown in the illustration.

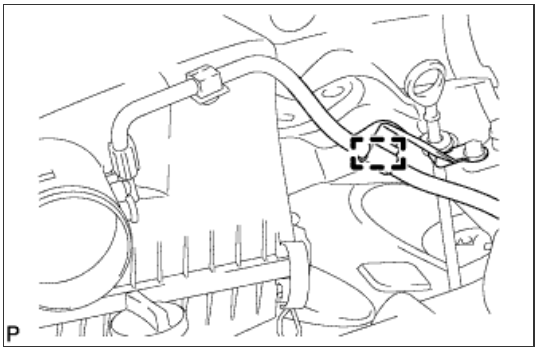
Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

38. INSTALL NO. 2 ENGINE OIL LEVEL DIPSTICK GUIDE



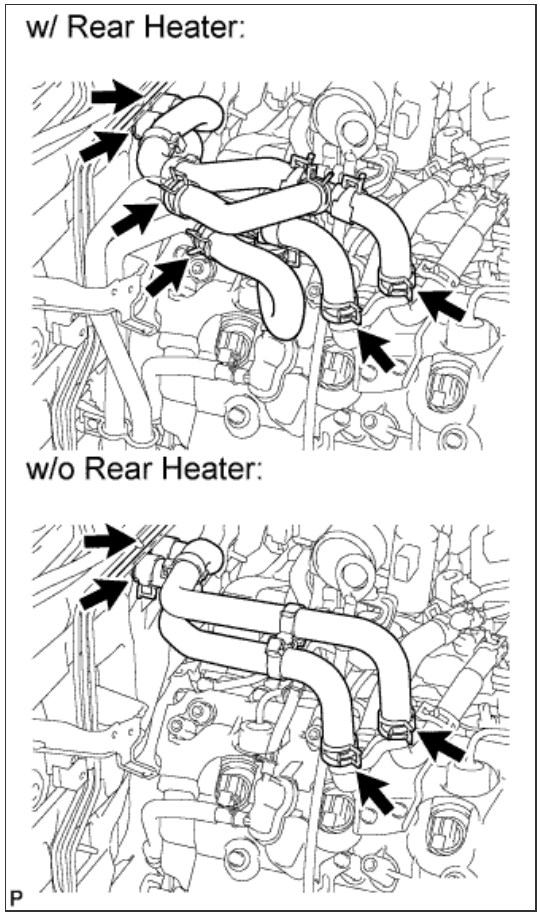
a. Apply a light coat of engine oil to a new O ring.

b. Install the O ring to the No. 2 engine oil level dipstick guide.



c. Install the No. 2 engine oil level dipstick guide with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



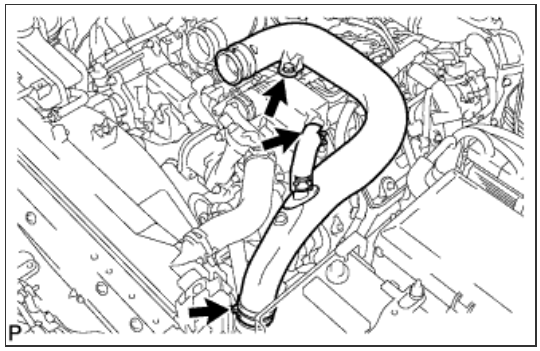
d. Connect the ventilation hose to the cylinder head cover R .

e. Connect the wire harness clamp to the No. 2 engine oil level dipstick guide bracket.

39. CONNECT WATER HOSE SUB-ASSEMBLY

40. INSTALL NO. 2 AIR CLEANER PIPE SUB-ASSEMBLY

a. Connect the No. 2 air cleaner pipe to the No. 2 intake air connector pipe.



b. Connect the ventilation hose to the oil separator.

c. Install the pipe with the bolt.

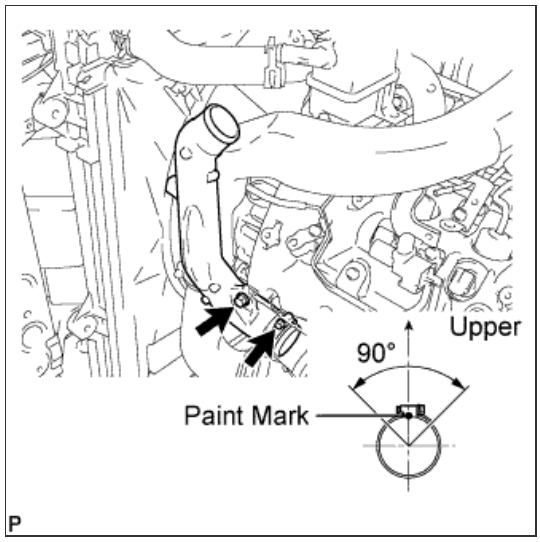
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

d. Tighten the hose clamp.

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

41. INSTALL NO. 4 AIR TUBE

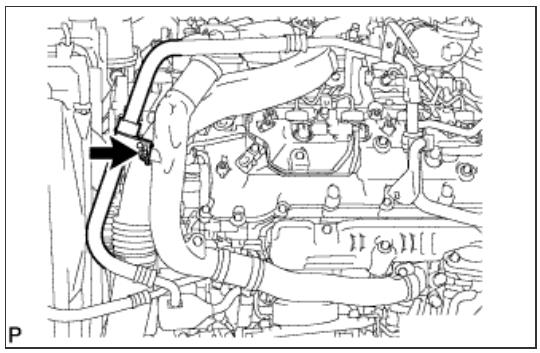
a. Install the No. 4 air tube with the bolt.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. Tighten the hose clamp.

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

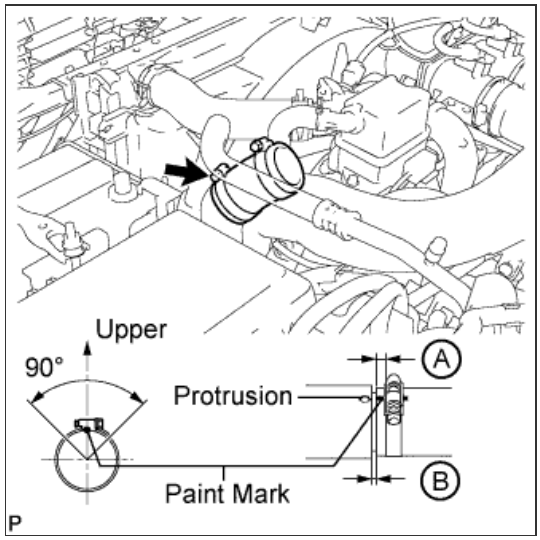


HINT:

Make sure the direction of the hose clamp is as shown in the illustration.

c. Install the suction hose with the bolt.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }



42. INSTALL NO. 2 AIR HOSE

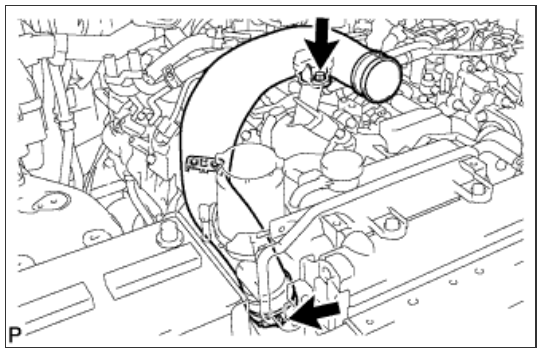
a. Connect the No. 2 air hose with the hose clamp.

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

HINT:

- **Align the paint mark of the air hose with the protrusion and push in the air hose so that distance B is 0 to 3 mm (0 to 0.118 in.).**
- **Position the clamp so that distance A is 2 to 6 mm (0.0787 to 0.236 in.).**
- **Make sure the direction of the hose clamp is as shown in the illustration.**

43. INSTALL NO. 1 AIR CLEANER PIPE SUB-ASSEMBLY



a. Connect the No. 1 air cleaner pipe to the No. 1 intake air connector pipe.

b. Install the pipe with the bolt.

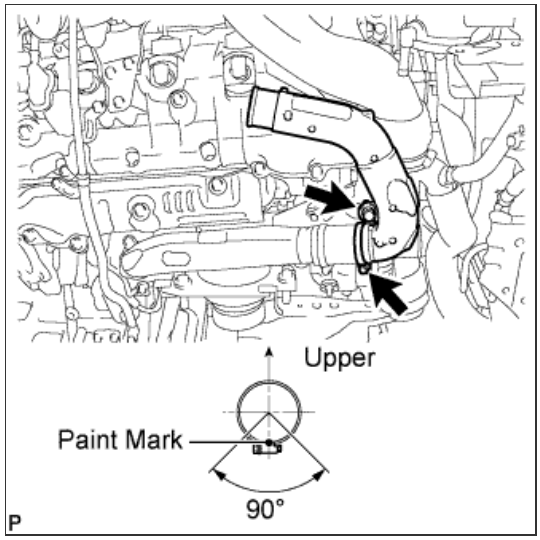
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

c. Tighten the hose clamp.

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

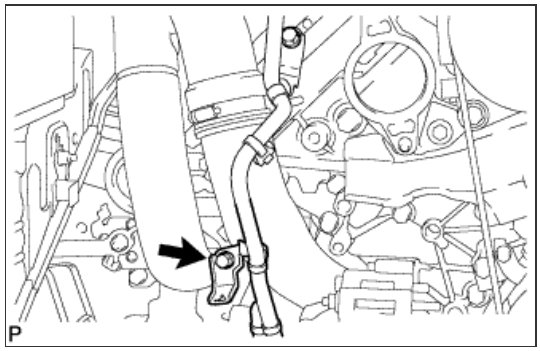
44. INSTALL NO. 3 AIR TUBE

a. Install the No. 3 air tube with the bolt.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

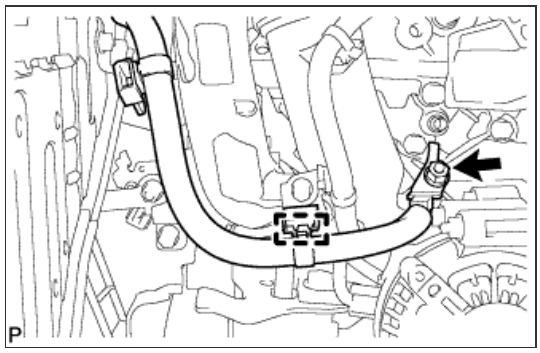
b. Tighten the hose clamp.



Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

HINT:

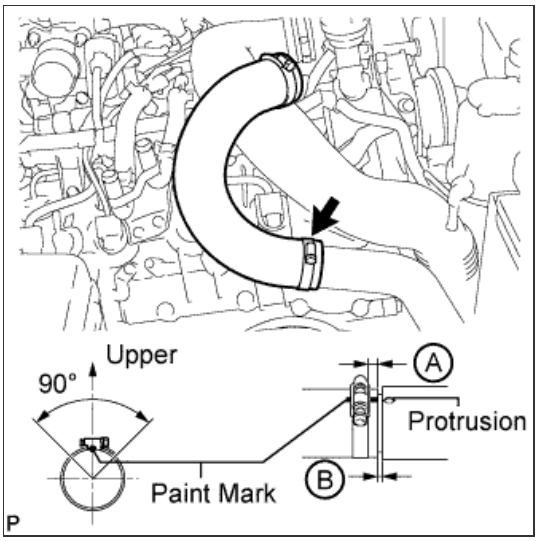
Make sure the direction of the hose clamp is as shown in the illustration.



c. Install the wire harness bracket with the bolt.

d. Install the ground wire with the nut, and attach the wire harness clamp.

Torque:
8.4 N*m{ 87 kgf*cm , 74 in.*lbf }

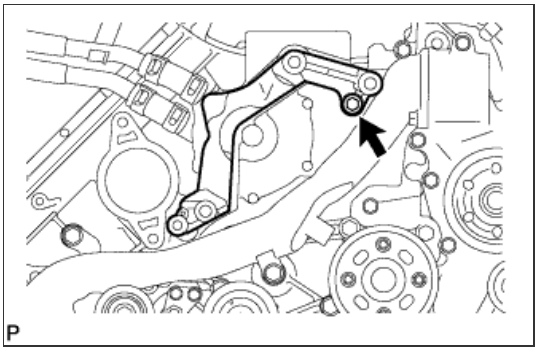


45. INSTALL NO. 1 AIR HOSE

a. Connect the No. 1 air hose with the hose clamp.

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

HINT:



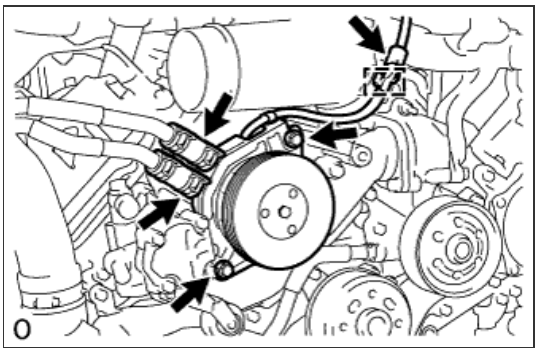
- **Align the paint mark of the air hose with the protrusion and push in the air hose so that distance B is 0 to 3 mm (0 to 0.118 in.).**
- **Position the clamp so that distance A is 2 to 6 mm (0.0787 to 0.236 in.).**
- **Make sure the direction of the hose clamp is as shown in the illustration.**

46. INSTALL NO. 1 IDLER PULLEY BRACKET (w/ Viscous Heater)

a. Install the No. 1 idler pulley bracket with the bolt.

Torque:
49 N*m{ 495 kgf*cm , 36 ft.*lbf }

47. INSTALL VISCOUS HEATER ASSEMBLY WITH MAGNET CLUTCH (w/ Viscous Heater)

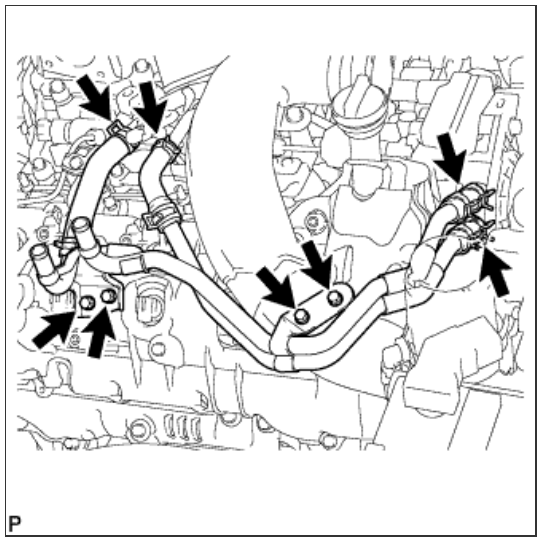


a. Install the heater assembly with the 2 bolts.

Torque:
48.5 N*m{ 495 kgf*cm , 36 ft.*lbf }

b. Connect the 2 heater hoses.

c. Using pliers, grip the claws of the clips and slide the 2 clips.

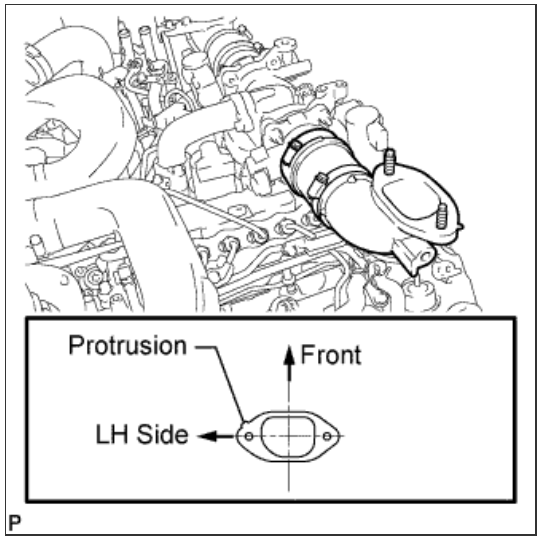


d. Connect the connector and attach the clamp.

48. INSTALL HEATER WATER PIPE SUB-ASSEMBLY (w/ Viscous Heater)

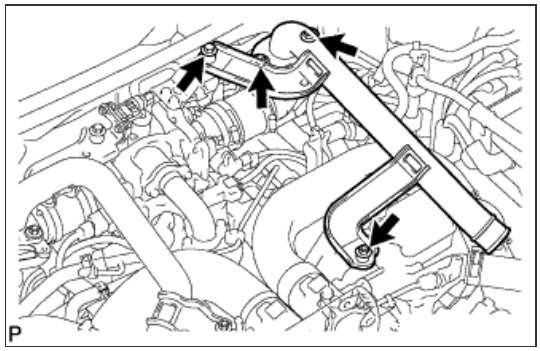
a. Connect the 4 water hose ends, and install the water pipe with the 4 bolts.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }



49. INSTALL NO. 2 COOL AIR INLET (w/o Intercooler)

a. Install a new gasket to the air tube L .



HINT:

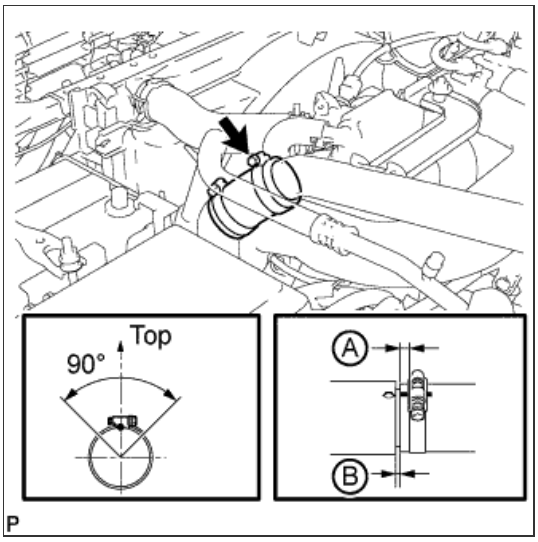
Install the gasket with the protrusion facing as shown in the illustration.

b. Install the No. 2 cool air inlet with the 3 nuts and bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

c. Connect the No. 2 air hose to the No. 2 cool air inlet.

d. Tighten the No. 2 air hose clamp.



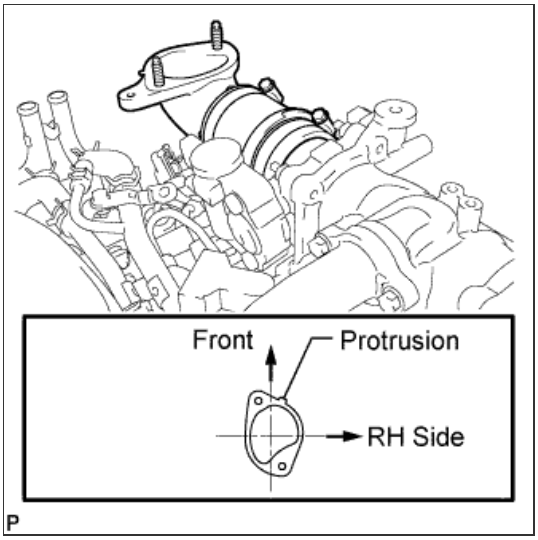
Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

HINT:

- **Align the paint mark of the air hose with the protrusion and push on the air hose so that distance B is 0 to 3 mm (0 to 0.118 in.).**
- **Position the clamp so that distance A is 2 to 6 mm (0.0787 to**

0.236 in.).

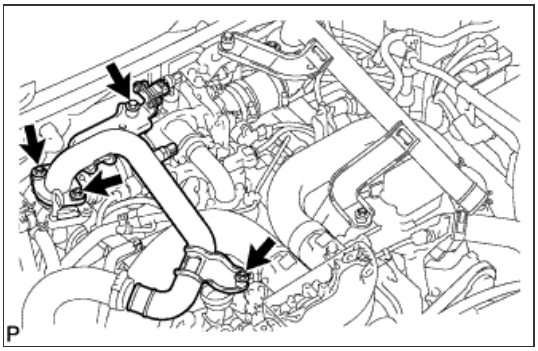
- **Make sure the direction of the hose clamp is as shown in the illustration.**



50. INSTALL NO. 1 COOL AIR INLET (w/o Intercooler)

a. Install a new gasket to the air tube R .

HINT:



Install the gasket with the protrusion facing as shown in the illustration.

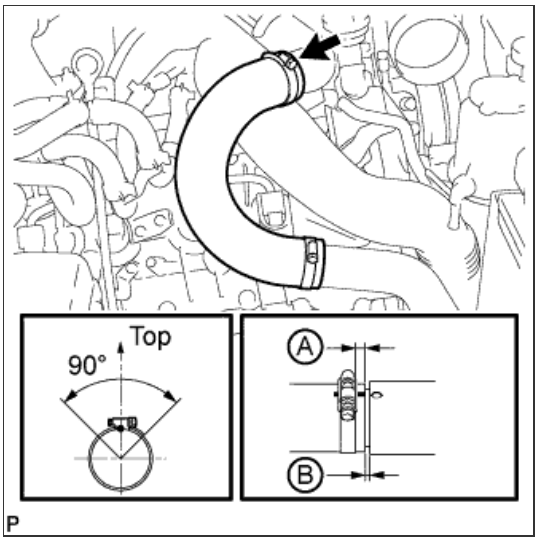
b. Install the No. 1 cool air inlet with the 3 nuts and bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

c. Connect the vacuum hose, intake air temperature sensor connector and turbo pressure sensor connector.

d. Connect the No. 1 air hose to the No. 1 cool air inlet.

e. Tighten the No. 1 air hose clamp.



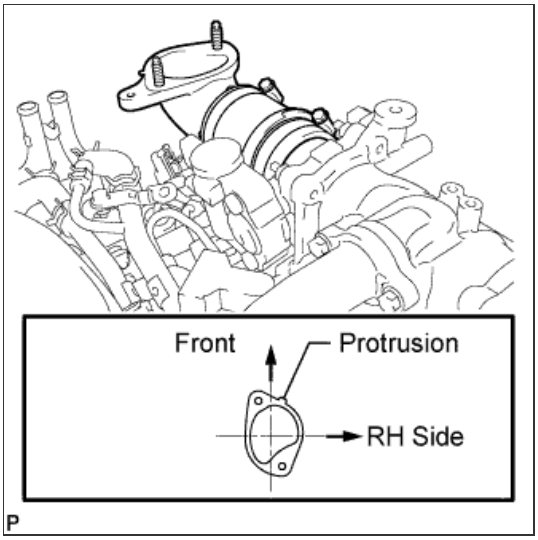
Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

HINT:

- **Align the paint mark of the air hose with the protrusion and push on the air hose so that distance B is 0 to 3 mm (0 to 0.118 in.).**
- **Position the clamp so that distance A is 2 to 6 mm (0.0787 to**

0.236 in.).

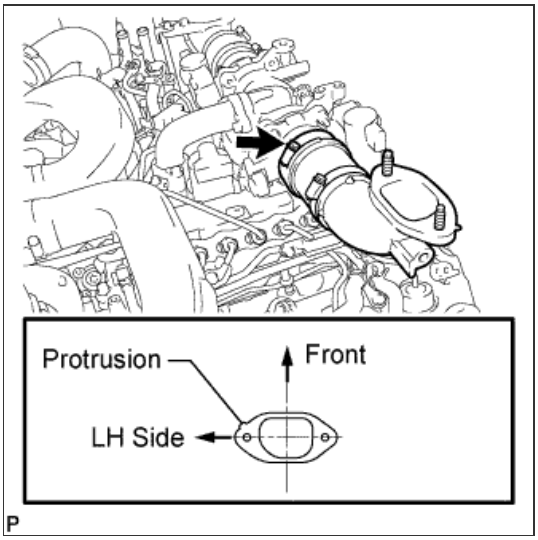
- **Make sure the direction of the hose clamp is as shown in the illustration.**



51. INSTALL INTERCOOLER ASSEMBLY (w/ Intercooler)

a. Install a new gasket to the air tube R .

HINT:

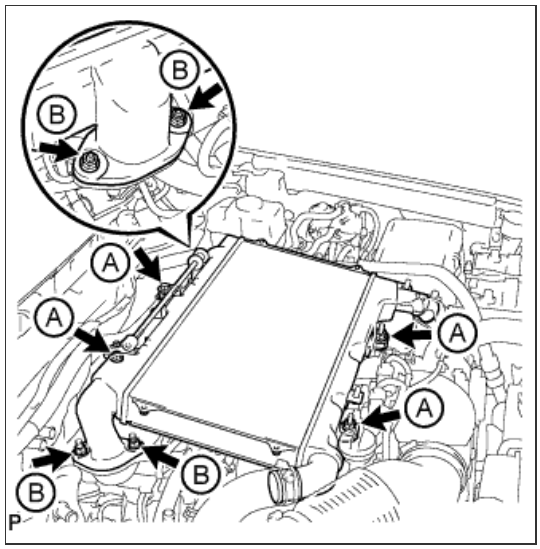


Install the gasket with the protrusion facing as shown in the illustration.

b. Install a new gasket to the air tube L .

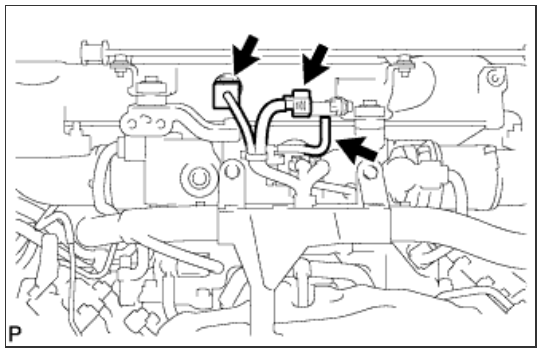
HINT:

Install the gasket with the protrusion facing as shown in the illustration.



c. Align the No. 1 and No. 2 air hoses and intercooler pipes and connect them, and install the intercooler with the 2 bolts and 2 nuts labeled A in the illustration.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

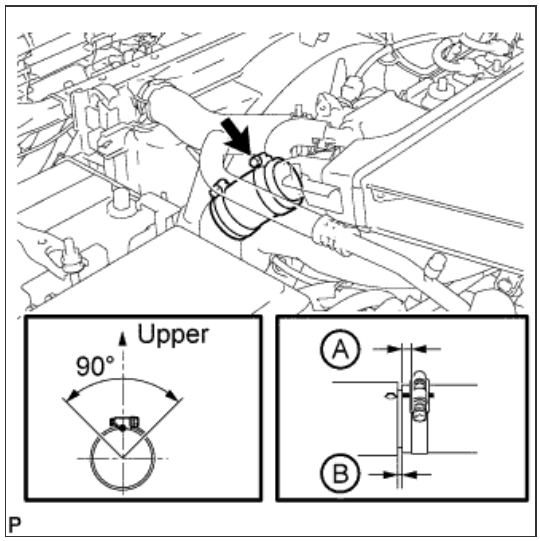


d. Temporarily install the 4 nuts labeled B in the illustration.

e. Tighten the air tube L and R with the 4 nuts labeled B shown in the illustration.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

f. Connect the vacuum hose, intake air temperature sensor connector and turbo pressure sensor connector.

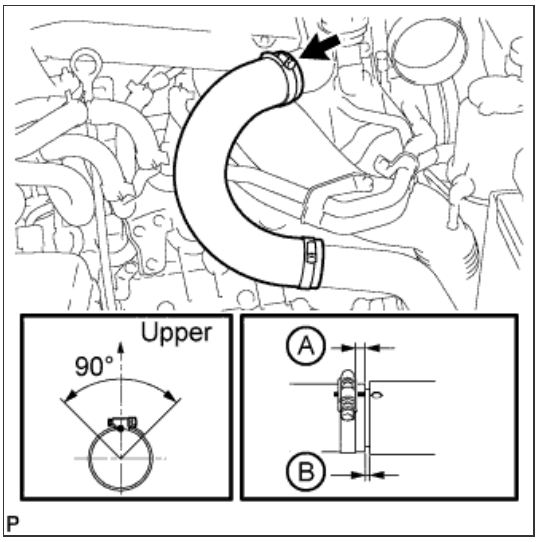


g. Tighten the clamp of the No. 2 air hose.

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

HINT:

- **Align the paint mark of the air hose with the protrusion and push in the air hose so that distance B is 0 to 3 mm (0 to 0.118 in.).**
- **Position the clamp so that distance A is 2 to 6 mm (0.0787 to 0.236 in.).**
- **Make sure the direction of the hose clamp is as shown in the illustration.**



h. Tighten the clamp of the No. 1 air hose.

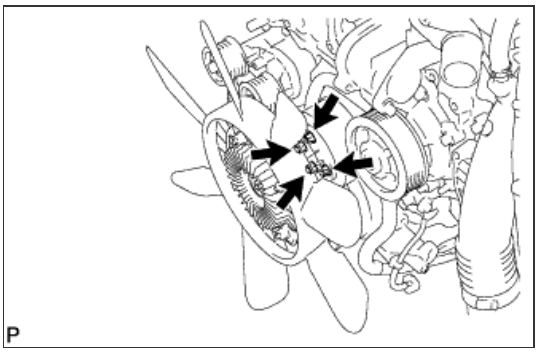
Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

HINT:

- **Align the paint mark of the air hose with the protrusion and push in the air hose so that distance B is 0 to 3 mm (0 to 0.118 in.).**
- **Position the clamp so that distance A is 2 to 6 mm (0.0787 to 0.236 in.).**
- **Make sure the direction of the hose clamp is as shown in the illustration.**

2. INSTALL FAN SHROUD WITH FAN

a. Install the shroud together with the fluid coupling fan between the radiator and engine components.

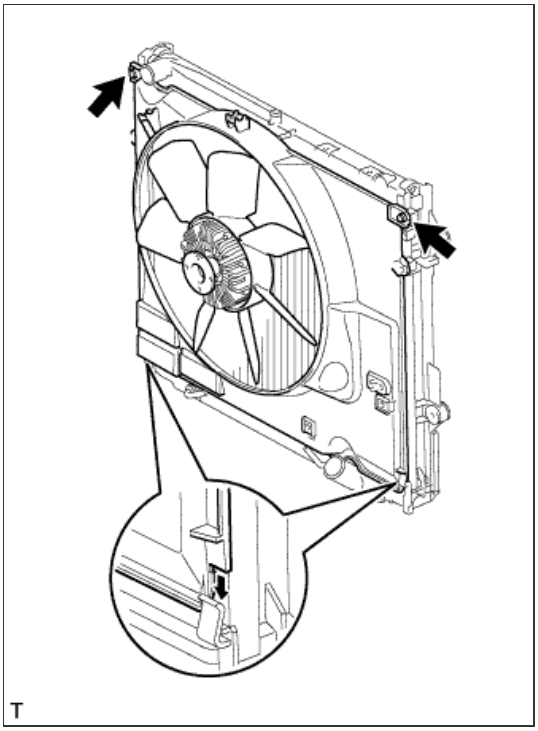


NOTICE:

Be careful not to damage the radiator core.

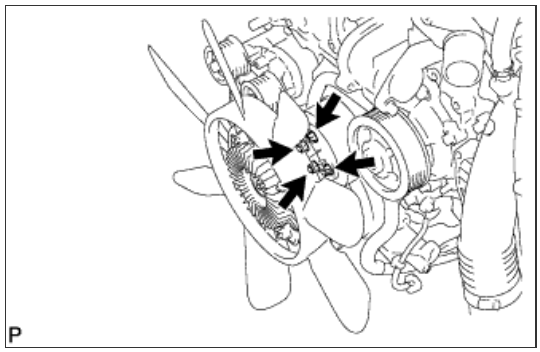
b. Temporarily install the fluid coupling fan to the fan bracket with the 4 nuts.

HINT:



Tighten the nuts as much as possible by hand.

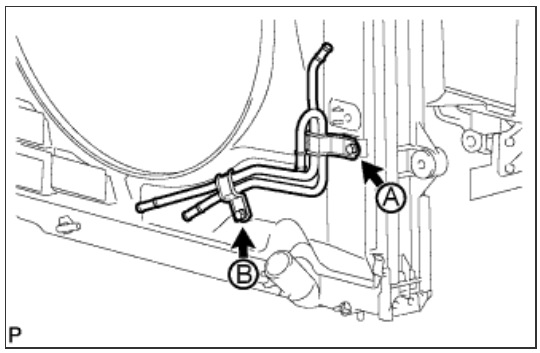
c. Attach the shroud claws to the radiator.



d. Install the shroud with the 2 bolts.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

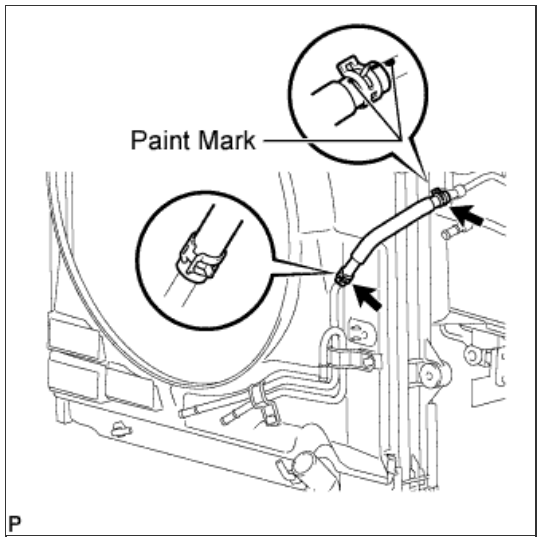
e. Tighten the 4 nuts of the fluid coupling fan.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

53. INSTALL OIL COOLER TUBE (for Automatic Transmission)

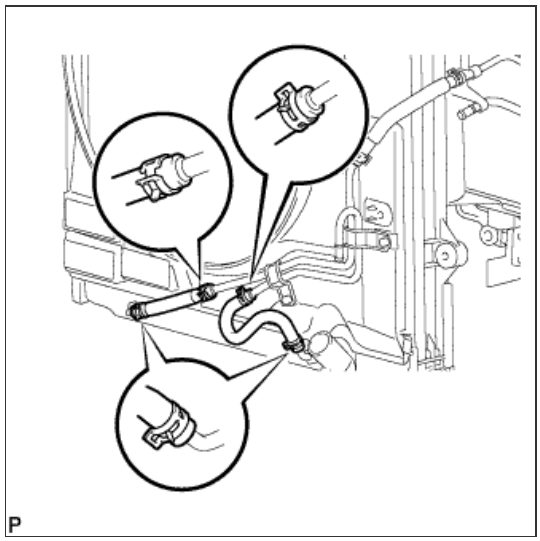
a. Temporarily install the oil cooler tube to the fan shroud with the bolt labeled A. Install the bolt labeled B. Then tighten the bolt labeled A to the specified tor ue.



Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

b. Connect the inlet No. 4 oil cooler hose as shown in the illustration.

NOTICE:

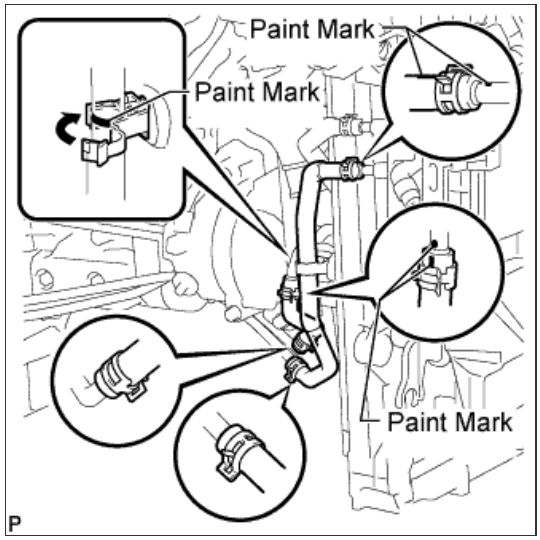


Make sure the pinching portion of each clip is facing the direction shown in the illustration.

c. Connect the inlet No. 2 and No. 3 oil cooler hoses as shown in the illustration.

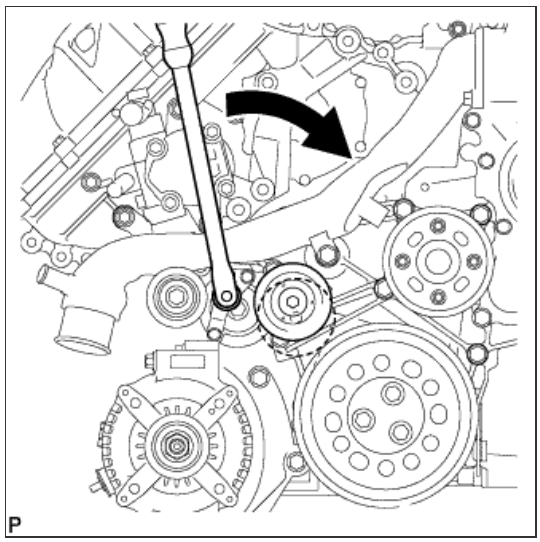
NOTICE:

Make sure the pinching portion of each clip is facing the direction shown in the illustration.



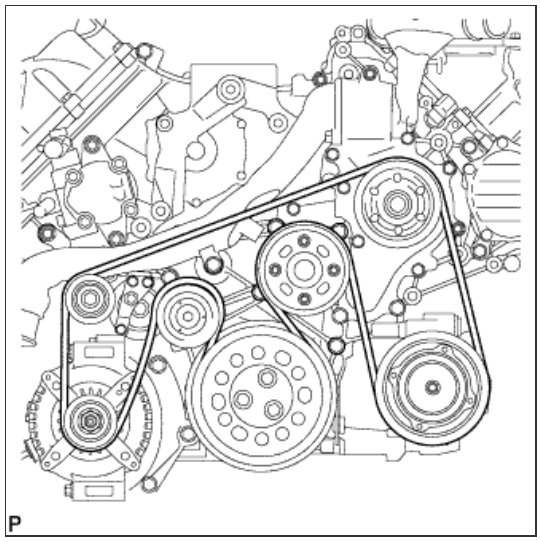
d. Connect the inlet and outlet No. 1 oil cooler hoses as shown in the illustration.

NOTICE:



Make sure the pinching portion of each clip is facing the direction shown in the illustration.

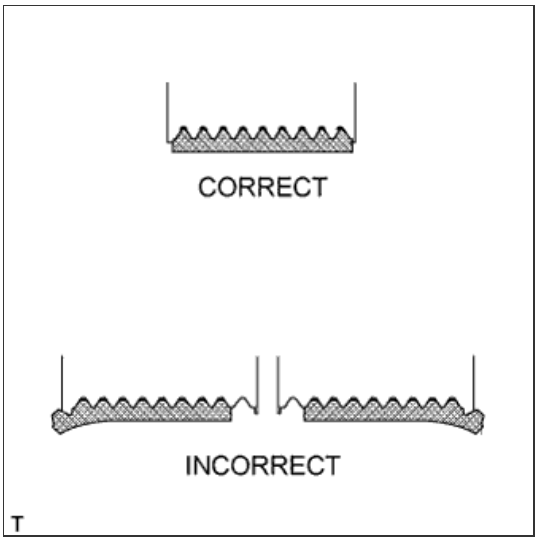
e. Pass the hose through the flexible hose clamp and close the clamp shown in the illustration.



54. INSTALL V-RIBBED BELT

a. Attach a wrench to the ribbed belt tensioner bracket and turn the wrench clockwise.

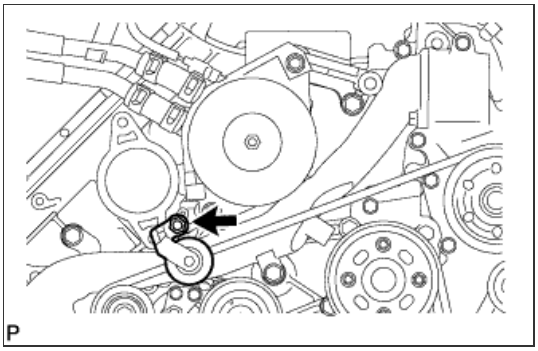
b. Install the ribbed belt as shown in the illustration.



c. Check that the belt fits properly in the ribbed grooves.

HINT:

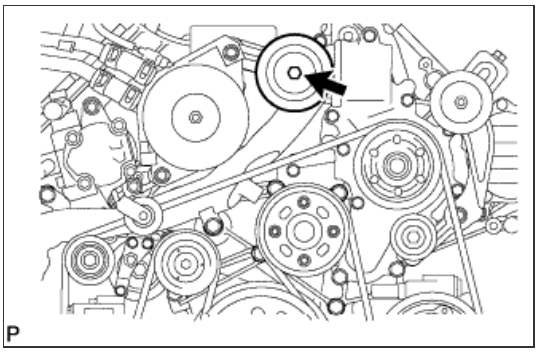
Check with your hand to confirm that the belt has not slipped out of the groove on the bottom of the pulley.



If it has slipped out, replace the ribbed belt. Install a new ribbed belt.

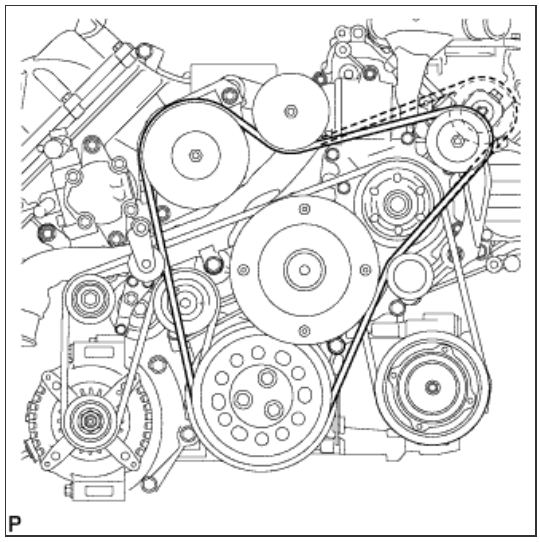
. INSTALL NO. 3 IDLER PULLEY (w/ Viscous Heater)

a. Align the No. 3 idler pulley bracket knock pin and No. 1 idler pulley bracket knock pin hole and install the No. 3 idler pulley with the nut.



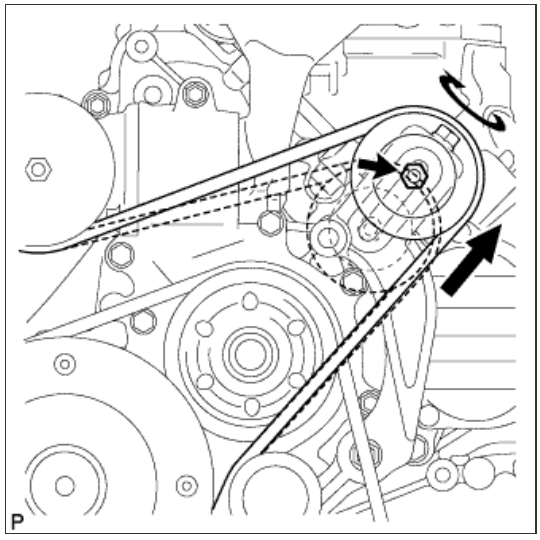
Torque:
88 N*m{ 898 kgf*cm , 64 ft.*lbf }

56. INSTALL NO. 1 IDLER PULLEY (w/ Viscous Heater)



a. Install the collar, No. 1 idler pulley and cover with the bolt.

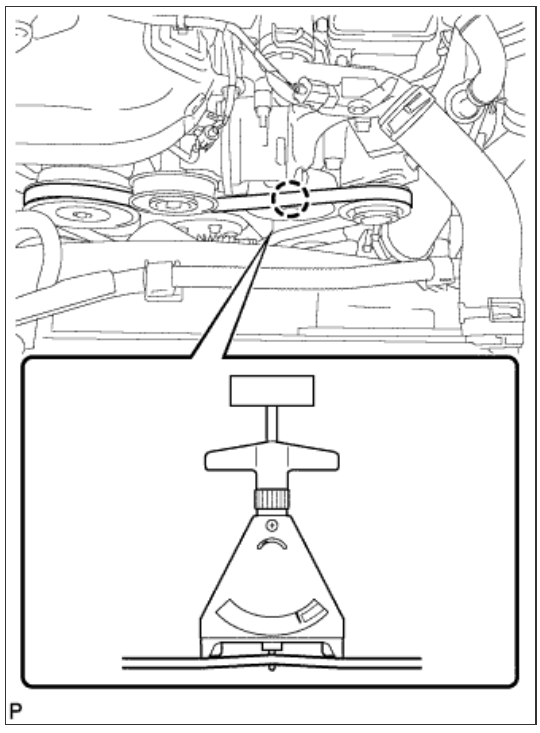
Torque:
49 N*m{ 495 kgf*cm , 36 ft.*lbf }



57. INSTALL V-RIBBED BELT (w/ Viscous Heater)

a. Install the ribbed belt as shown in the illustration.

b. Temporarily install the lock nut, and turn the bolt clockwise.

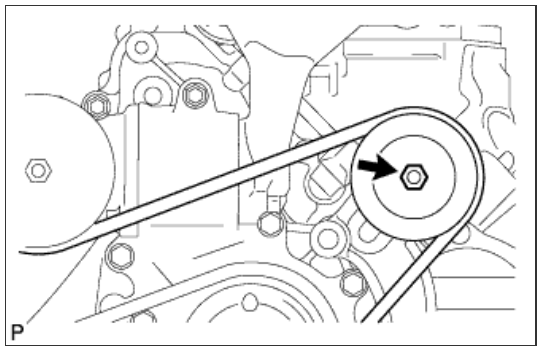


c. Using a belt tension gauge, adjust belt tension.

Standard elt Tension:

Item	Specified Condition
New belt	400 to 650 N (41 to 66 kgf, 89.9 to 146.1 lbf)
Used belt	300 to 500 N (31 to 51 kgf, 67.4 to 112.4 lbf)

HINT:

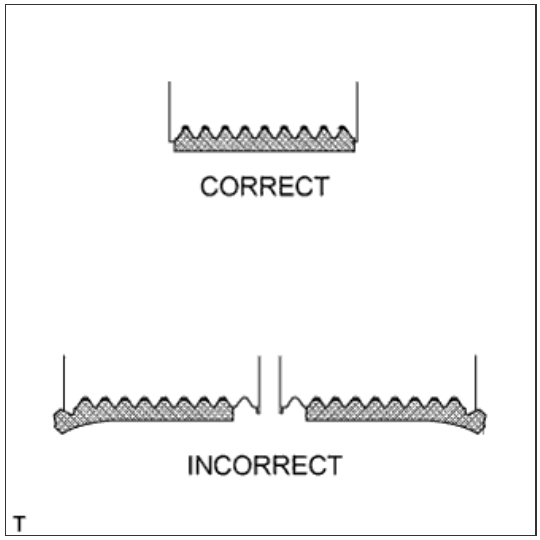


- **A "new belt" is a belt which has been used for less than 5 minutes on a running engine.**
- **A "used belt" is a belt which has been used on a running engine for 5 minutes or more.**
- **After installing a new belt, run the engine for approximately 5 minutes and then recheck the tension.**

d. Tighten the nut.

Torque:

40 N*m{ 408 kgf*cm , 30 ft.*lbf }

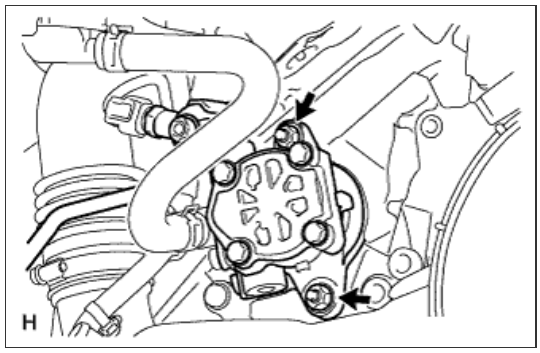


e. Check that the belt fits properly in the ribbed grooves.

HINT:

Check with your hand to confirm that the belt has not slipped out of the groove on the bottom of the pulley.

If it has slipped out, replace the ribbed belt. Install a new ribbed belt.

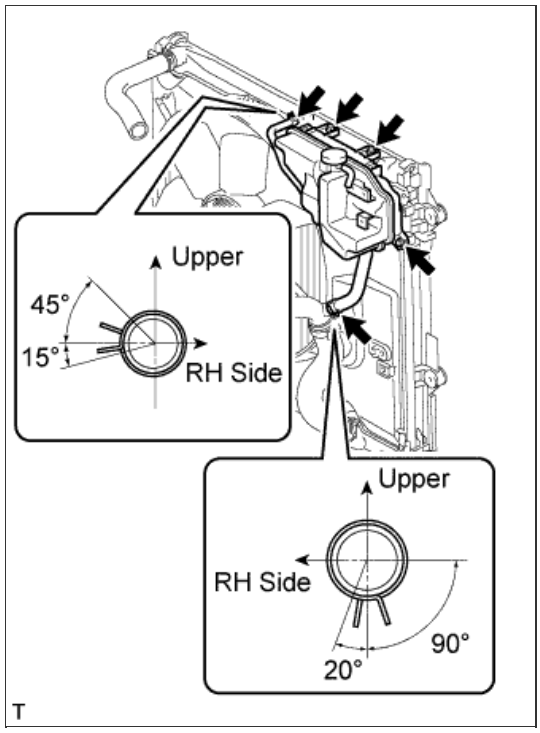


58. INSTALL VANE PUMP ASSEMBLY

a. Apply a light coat of engine oil to a new O ring, and install it to the vane pump.

b. Install the vane pump with 2 new nuts.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

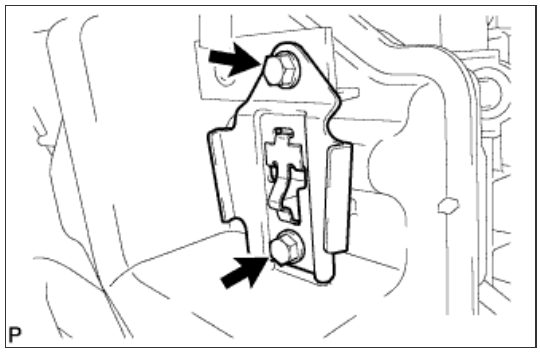


59. INSTALL RADIATOR RESERVOIR ASSEMBLY

a. Install the radiator reservoir with the 3 bolts.

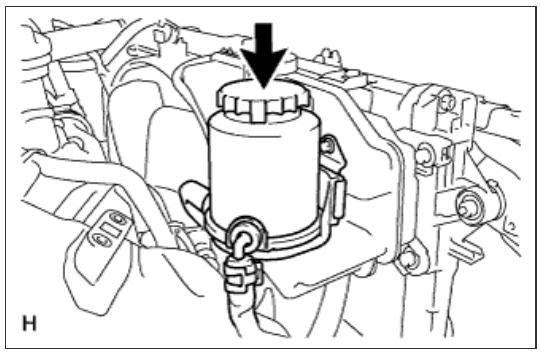
b. Connect the 2 hoses to the upper radiator tank and water inlet.

HINT:



Make sure the directions of the hose clamps are as shown in the illustration.

60. INSTALL NO. 1 OIL RESERVOIR BRACKET



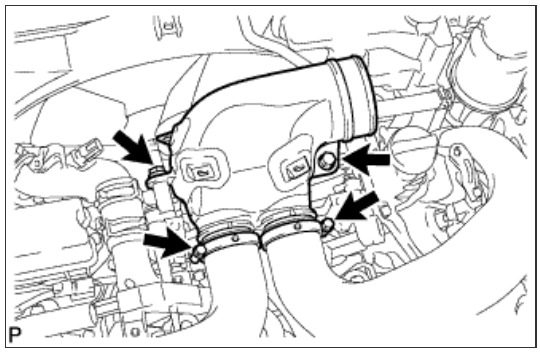
a. Install a new bracket with the 2 bolts.

Torque:
4.5 N*m{ 46 kgf*cm , 40 in.*lbf }

61. INSTALL VANE PUMP OIL RESERVOIR ASSEMBLY

a. Install the vane pump oil reservoir to the bracket.

62. INSTALL INTAKE AIR CONNECTOR

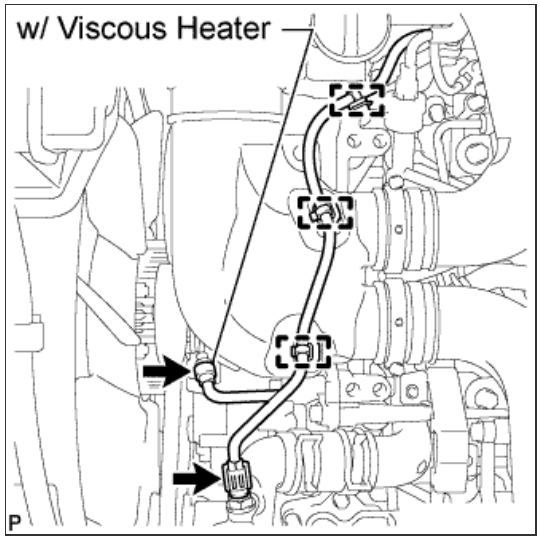


a. Connect the intake air connector to the No. 1 and No. 2 air cleaner pipes.

b. Install the connector with the 2 bolts.

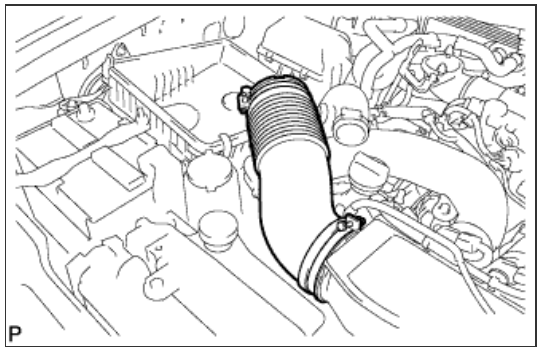
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

c. Tighten the 2 hose clamps.



Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

d. Attach the 3 wire harness clamps.

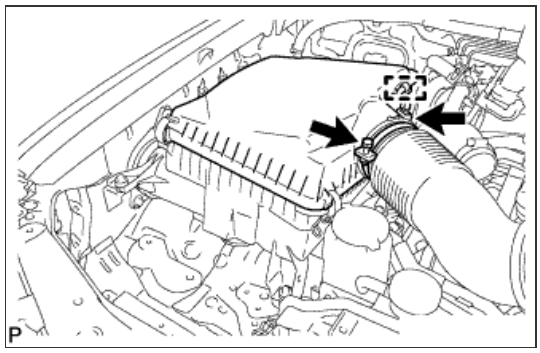


e. w/o iscous eater:
Connect the connector to the water temperature sensor.

f. w/ iscous eater:
Connect the 2 connectors to the water temperature sensor and viscous with magnet clutch heater.

63. TEMPORARILY INSTALL NO. 1 AIR CLEANER HOSE

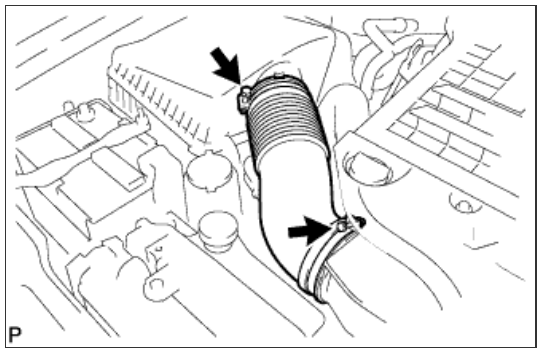
a. Temporarily install the air cleaner hose to the intake air connector.



64. INSTALL AIR CLEANER CAP SUB-ASSEMBLY

a. Connect the air cleaner cap to the air cleaner hose, and install the air cleaner cap with the 4 clamps.

b. Connect the mass air flow meter connector and attach the wire harness clamp to the air cleaner cap.

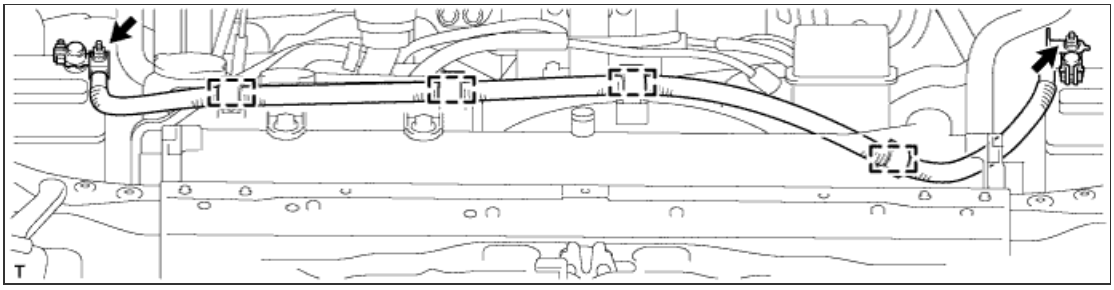


c. Attach the wire harness clamp.

d. Align the protrusion of air cleaner cap and concave portion of air cleaner hose.

e. Tighten the 2 hose clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }



65. INSTALL NO. 3 ENGINE ROOM WIRE

a. Install the No. 3 engine room wire to the main battery and sub attery positive terminals with the 2 nuts.

Torque:
7.6 N*m{ 77 kgf*cm , 67 in.*lbf }

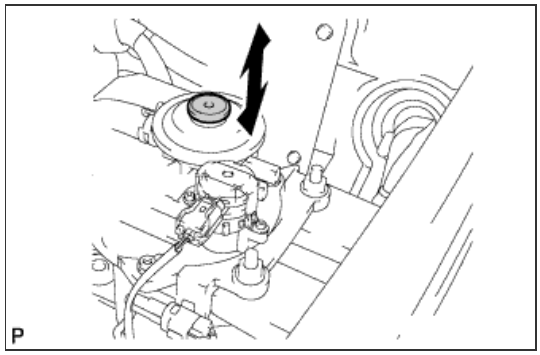
b. Connect the No. 3 engine room wire with the 4 clamps.

66. ADD ENGINE OIL

a. Add fresh oil.

Standard Engine Oil:

Oil Grade	Oil iscosity (SAE)
G DLD 1, API CF , API CF or ACEA B1 (You may also use API CE or CD)	5W 30 10W 30 15W 0 20W 0 (5W 30 is best choice for fuel economy and good starting in cold weather).



Standard Capacity:

Item	Specified Condition
Drain and refill with oil filter change	9.2 liters (9.7 US ts, 8.1 Imp. ts)
Drain and refill without oil filter change	8.2 liters (8.7 US ts, 7.2 Imp. ts)
Dry fill	9.9 liters (10.5 US ts, 8.7 Imp. ts)

b. Install the oil filler cap.

67. BLEED AIR FROM FUEL SYSTEM

a. Using the hand pump indicated by the arrow in the illustration, bleed the fuel system. Continue pumping until pumping becomes difficult.

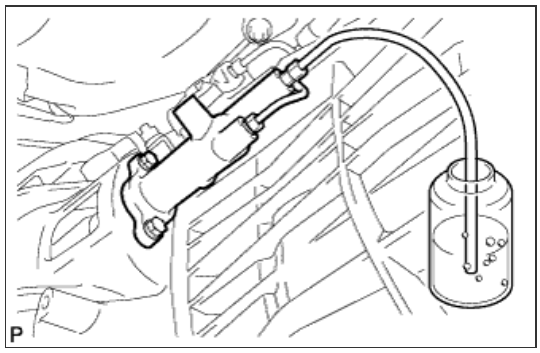
6 . EED CLUTCH LINE

a. Remove the release cylinder bleeder plug cap.

b. Connect a vinyl tube to the bleeder plug.

c. Depress the clutch pedal several times, and then loosen the bleeder plug while the pedal is depressed.

d. When fluid no longer comes out, tighten the bleeder plug, and then release the clutch pedal.



e. Repeat the previous 2 steps until all the air in the fluid is completely bled.

f. Tighten the bleeder plug.

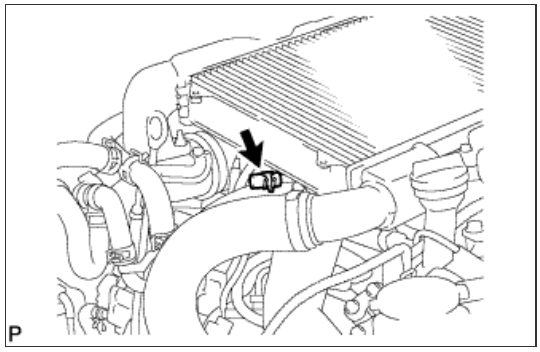
Torque:
11 N*m{ 110 kgf*cm , 8 ft.*lbf }

g. Install the bleeder plug cap.

h. Check that all the air has been bled from the clutch line.

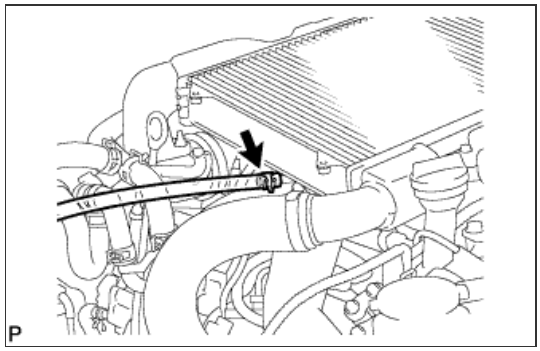
69. INSPECT FOR CLUTCH FLUID LEAK

70. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



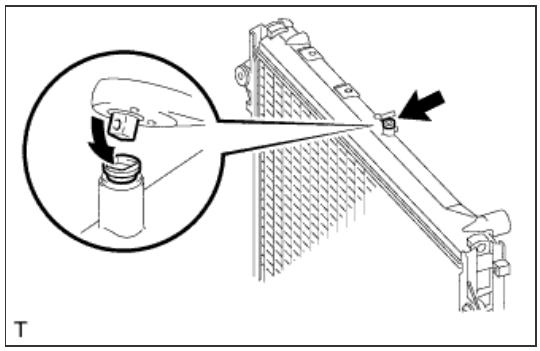
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

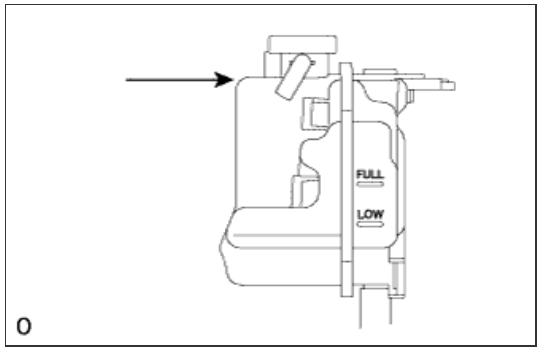


a. Connect the cables to negative ( ) main battery and sub attery battery terminals.

71. ADD ENGINE COOLANT



a. Remove the engine air bleed cap.



b. Connect a clear hose to the engine air bleed pipe.

c. Using a wrench, remove the vent plug.

d. Fill the radiator with TOYOTA SLLC to the radiator reservoir filler neck.

HINT:

Pour TOYOTA SLLC until it spills out of the engine air bleed pipe.

Standard Capacity (for Automatic Transmission):

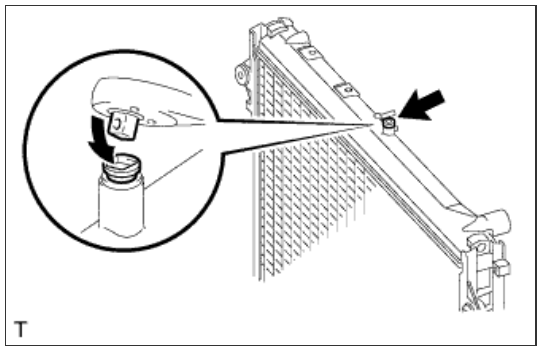
Item	Specified Condition
Front heater only	14.8 liters (15.6 US ts, 13.0 Imp. ts)
Front heater and rear heater	17.6 liters (18.6 US ts, 15.5 Imp. ts)
Front heater with viscous heater	15.2 liters (16.1 US ts, 13.4 Imp. ts)
Front heater and rear heater with viscous heater	18.0 liters (19.0 US ts, 15.4 Imp. ts)

Standard capacity (for Manual Transmission):
15.4 liters (16.3 US qts, 13.6 Imp. qts)

NOTICE:

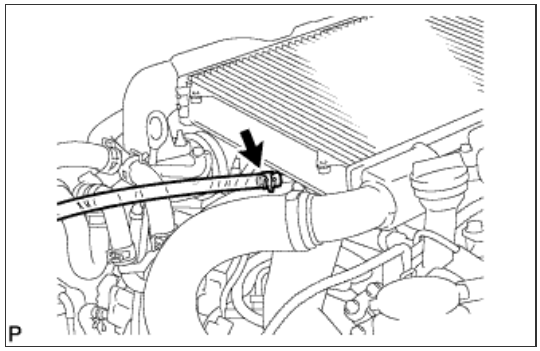
Do not substitute plain water for engine coolant.

HINT:



TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high uality ethylene glycol based non silicate, non amine, non nitrite, non brate coolant with long life hybrid organic acid technology (coolant with long life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

e. Install the vent plug.

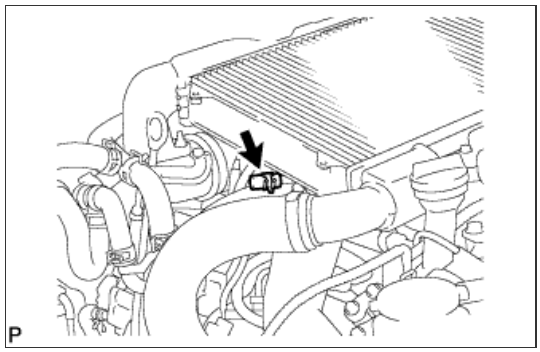


Torque:
2.0 N*m{ 20 kgf*cm , 18 in.*lbf }

NOTICE:

Do not tighten the plug to 5.0 N m (51 kgf cm, 44 in. lbf) or more, as the plug will be damaged.

f. Disconnect the clear hose from the engine air bleed pipe.



g. Install the engine air bleed cap when coolant comes out.

h. Install the radiator reservoir cap.

i. Start the engine.

NOTICE:

Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the FULL line.

j. Maintain an engine speed of 3000 rpm for approximately 10 minutes so that the thermostat opens and air bleeding is performed.

CAUTION:

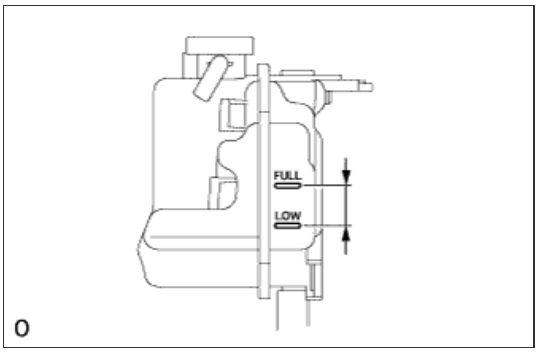
When pressing the radiator hoses:

- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the radiator fan**

NOTICE:

- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**

HINT:



The thermostat opening timing can be confirmed by pressing the No. 2 radiator hose by hand, and checking when the engine coolant starts to flow inside the hose.

k. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

Do not remove the radiator reservoir cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

l. Check that the coolant level is between the FULL and LOW lines.
If the coolant level is above the FULL line, drain coolant so that the coolant level is between the FULL and LOW lines.

72. INSPECT FOR FUEL LEAK

a. Perform Active Test.

i. Connect the intelligent tester to the DLC3.

ii. Turn the ignition switch to ON.

iii. Start the engine.

iv. Turn the intelligent tester ON.

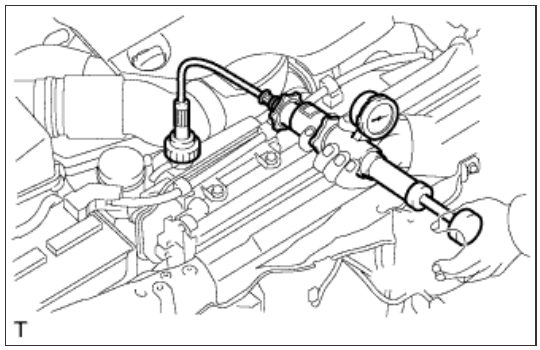
v. Enter the following menus: Powertrain / Engine / Active Test.

vi. Perform the Active Test.

Tester Display	Test Detail	Control Range	Diagnostic Note
Test the Fuel Leak	Pressurizes fuel inside common rail and checks for fuel leaks	Stop/Start	• The fuel inside the common rail is pressurized to the specified value and the engine speed increases to 2000 rpm when Start is selected. • The above conditions are preserved while Start is selected.

73. INSPECT FOR OIL LEAK

74. INSPECT FOR COOLANT LEAK



CAUTION:

Do not remove the radiator reservoir cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

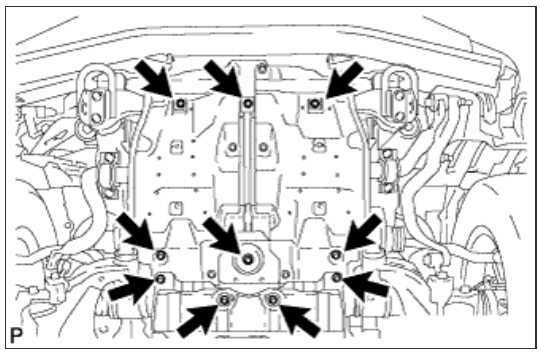
a. Fill the radiator with coolant and attach a radiator cap tester to the radiator reservoir.

b. Warm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 17.8 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks.
If no external leaks are found, check the cylinder block and cylinder head.

7 . WARM UP ENGINE

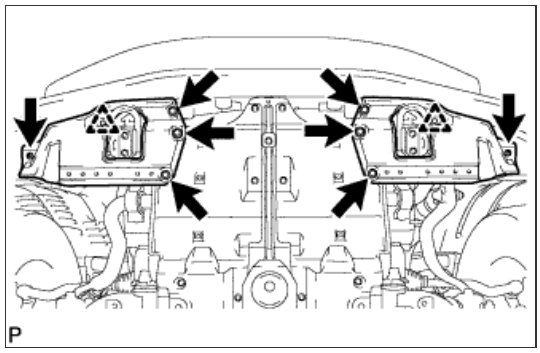
NOTICE:



In order to bleed air from the chain tensioner, drive the vehicle with the engine at 3000 rpm for 60 seconds or more.

76. INSPECT FOR EXHAUST GAS LEAK

77. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

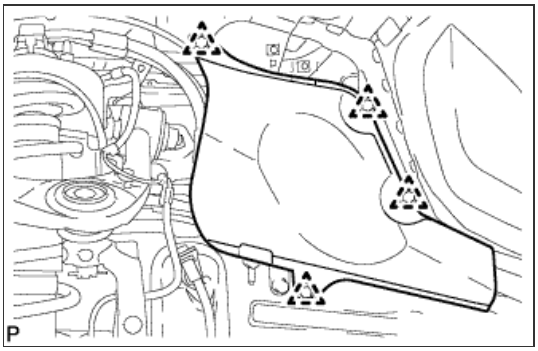


a. Install the engine under cover with the 10 bolts.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

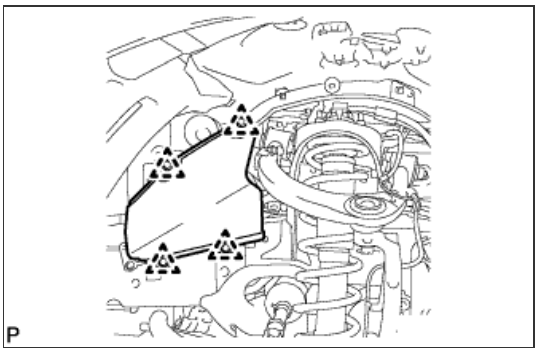
78. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

a. Install the splash shield with the clip, and then install the 3 bolts and screw.



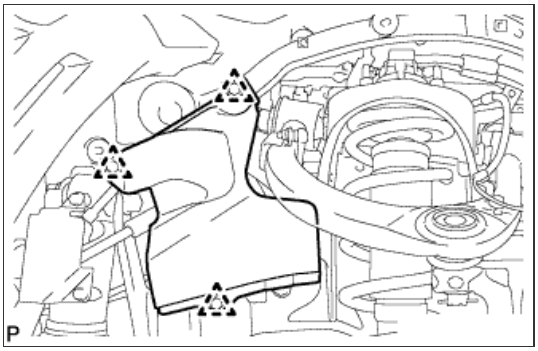
79. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Install the splash shield with the clip, and then install the 3 bolts and screw.



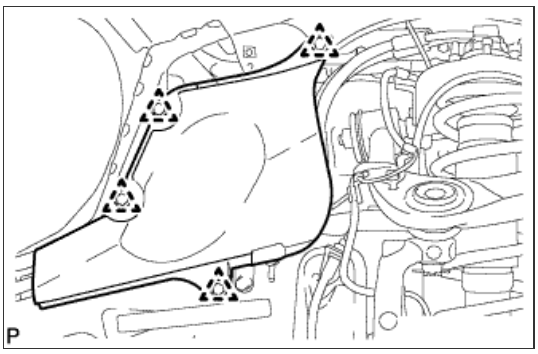
80. INSTALL FRONT FENDER APRON SEAL REAR LH

a. Install the front fender apron seal rear L with the 4 clips.



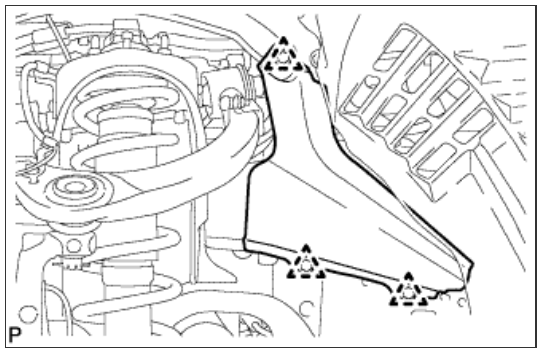
1. INSTALL FRONT FENDER APRON SEAL FRONT LH

a. w/o DSS:
Install the front fender apron seal front L with the 4 clips.



b. w/ DSS:
Install the front fender apron seal front L with the 3 clips.

82. INSTALL FRONT FENDER APRON SEAL REAR RH

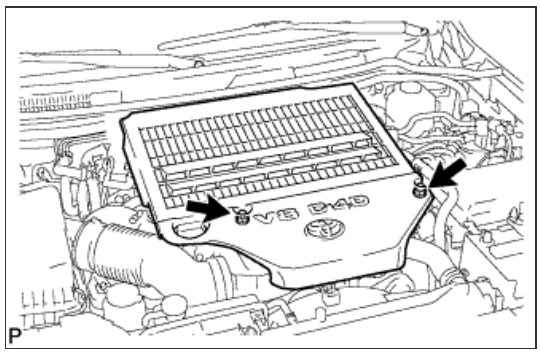


a. Install the front fender apron seal rear R with the 4 clips.

83. INSTALL FRONT FENDER APRON SEAL FRONT RH

a. Install the front fender apron seal front R with the 3 clips.

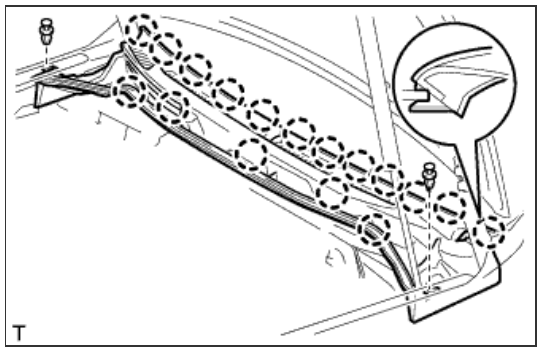
a. Install the front fender apron seal front RH with the 3 clips.



4. INSTALL FRONT WHEEL

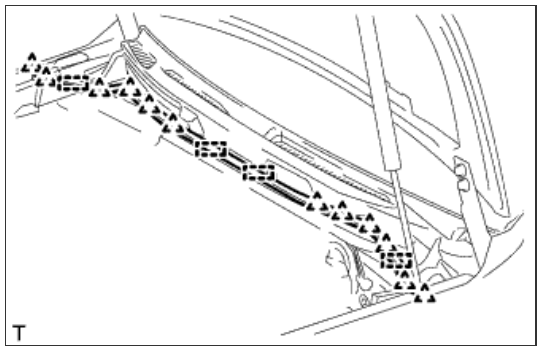
Torque:
for Aluminum Wheel:
131 N*m{ 1336 kgf*cm , 97 ft.*lbf }
for Steel Wheel:
209 N*m{ 2131 kgf*cm , 154 ft.*lbf }

85. INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY (w/ Intercooler)



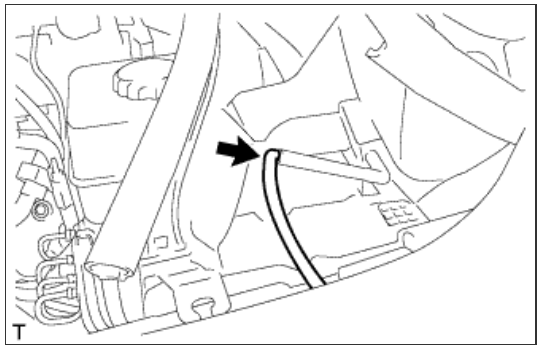
a. Install the engine cover with the 2 nuts.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



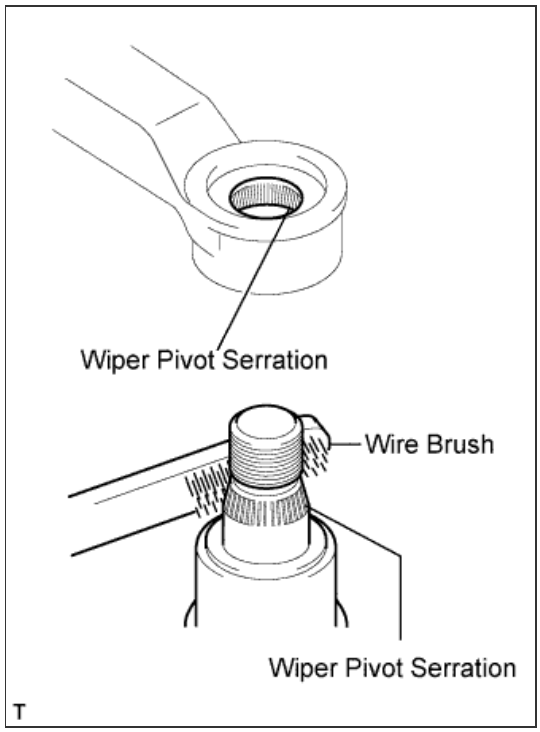
86. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

a. Push the ventilator louver in the direction indicated by the arrow in the illustration to attach the 17 claws and 2 clips and install the ventilator louver.



87. INSTALL HOOD TO COWL TOP SEAL

a. Attach the 12 clips and 4 clamps to install the hood to cowl top seal.



b. Install the washer hose.

. INSTALL FRONT WIPER ARM RH

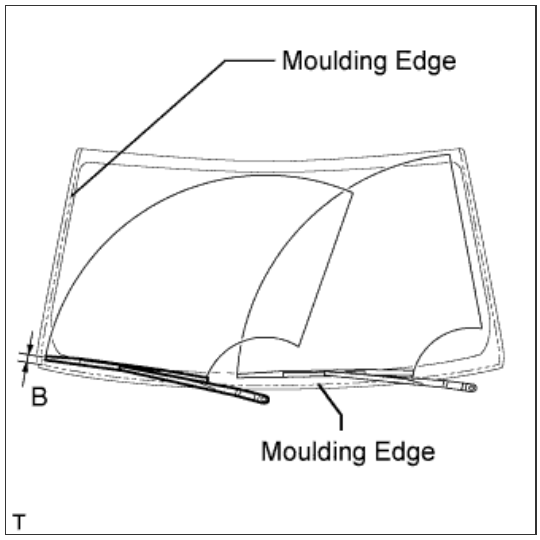
a. Stop the wiper motor at the automatic stop position.

b. Clean the wiper pivot serration with a wire brush.

c. Install the wiper arm and blade with the nut. Make sure that the wiper arm and blade comes to the position shown in the illustration.

Standard Measurement:

Position	Specified Condition
B	20.0 to 40.0 mm (0.787 to 1.57 in.)

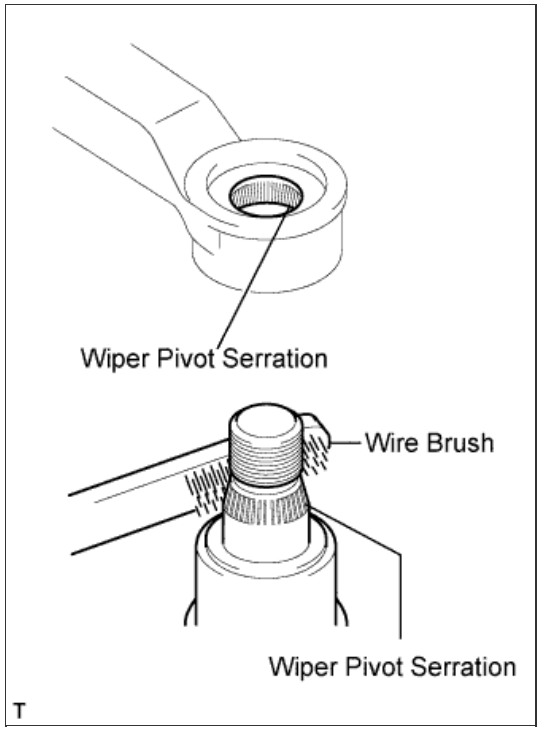


Torque:

25 N*m{ 255 kgf*cm , 18 ft.*lbf }

HINT:

old down the wiper arm hinge with your hand while tightening the nut.



d. Operate the front wipers while spraying washer fluid on the windshield glass. Make sure that the front wipers function properly and there is no interference with the vehicle body.

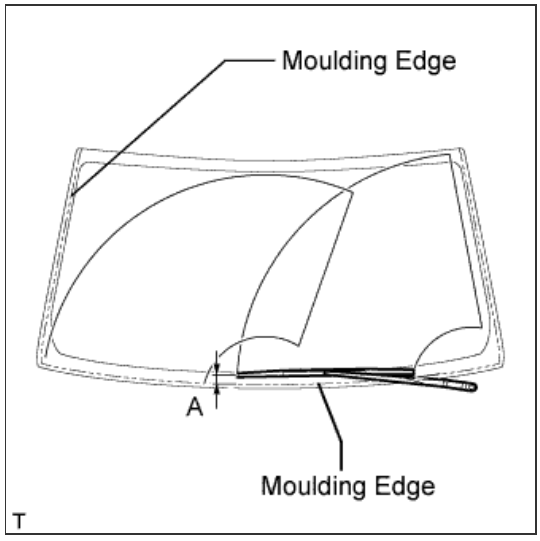
9. INSTALL FRONT WIPER ARM LH

a. Stop the wiper motor at the automatic stop position.

b. Clean the wiper pivot serration with a wire brush.

c. Install the wiper arm and blade with the nut. Make sure that the wiper arm and blade comes to the position shown in the illustration.

Standard Measurement:



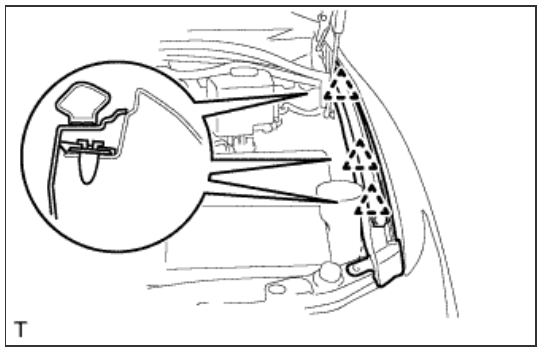
Position	Specified Condition
A	16.8 to 36.8 mm (0.661 to 1.45 in.)

Torque:

25 N*m{ 255 kgf*cm , 18 ft.*lbf }

HINT:

old down the wiper arm hinge with your hand while tightening the nut.



90. INSTALL FRONT FENDER MAIN SEAL RH

HINT:

Use the same procedures described for the L side.

91. INSTALL FRONT FENDER MAIN SEAL LH

a. Attach the 3 clips to install the fender main seal.

92. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the upper radiator support seal with the 7 clips.

93. INSPECT ENGINE IDLE SPEED

NOTICE:

- **Turn all the electrical systems and the A/C off.**
- **When checking the idle speed, move the shift lever to neutral.**

HINT:

- **For more information about the intelligent tester, refer to its operator's manual.**
- **If an intelligent tester is not available, use a tachometer tester probe as a substitute.**

a. When using the intelligent tester:

i. Warm up the engine.

ii. Connect the intelligent tester to the DLC3.

iii. Enter the following menus:
Powertrain / Engine / Data List / Engine Speed.

HINT:

Refer to the intelligent tester operator s manual for help selecting the Data List.

iv. Inspect the engine idle speed.

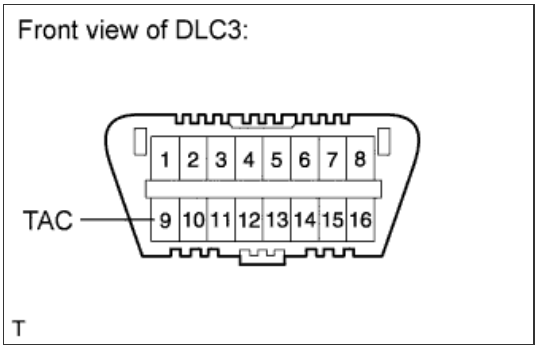
Standard Idle Speed:

Item	Specified Condition
for Automatic Transmission	550 to 650 rpm
for Manual Transmission	500 to 600 rpm

v. Disconnect the intelligent tester from the DLC3.

b. When not using the intelligent tester:

i. Warm up and stop the engine.



ii. Connect a tester probe of a tachometer to terminal 9 (TAC) of the DLC3 with SST.

SST
09843-18030

iii. Inspect the engine idle speed.

Standard Idle Speed:

Item	Specified Condition
for Automatic Transmission	550 to 650 rpm
for Manual Transmission	500 to 600 rpm

iv. Disconnect the tester probe from terminal 9 (TAC) of the DLC3.

94. INSPECT MAXIMUM ENGINE SPEED

a. Start the engine.

b. Fully depress the accelerator pedal.

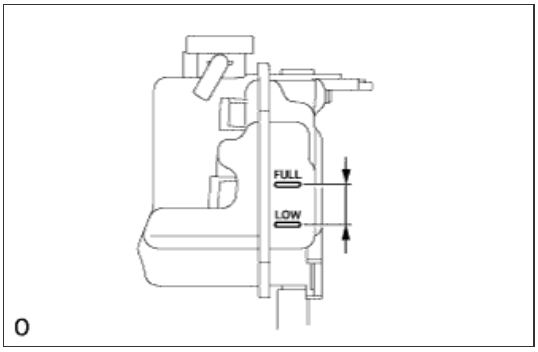
c. Check the maximum engine speed.

Maximum engine speed:
4700 to 4900 rpm

95. CHECK ENGINE OIL LEVEL

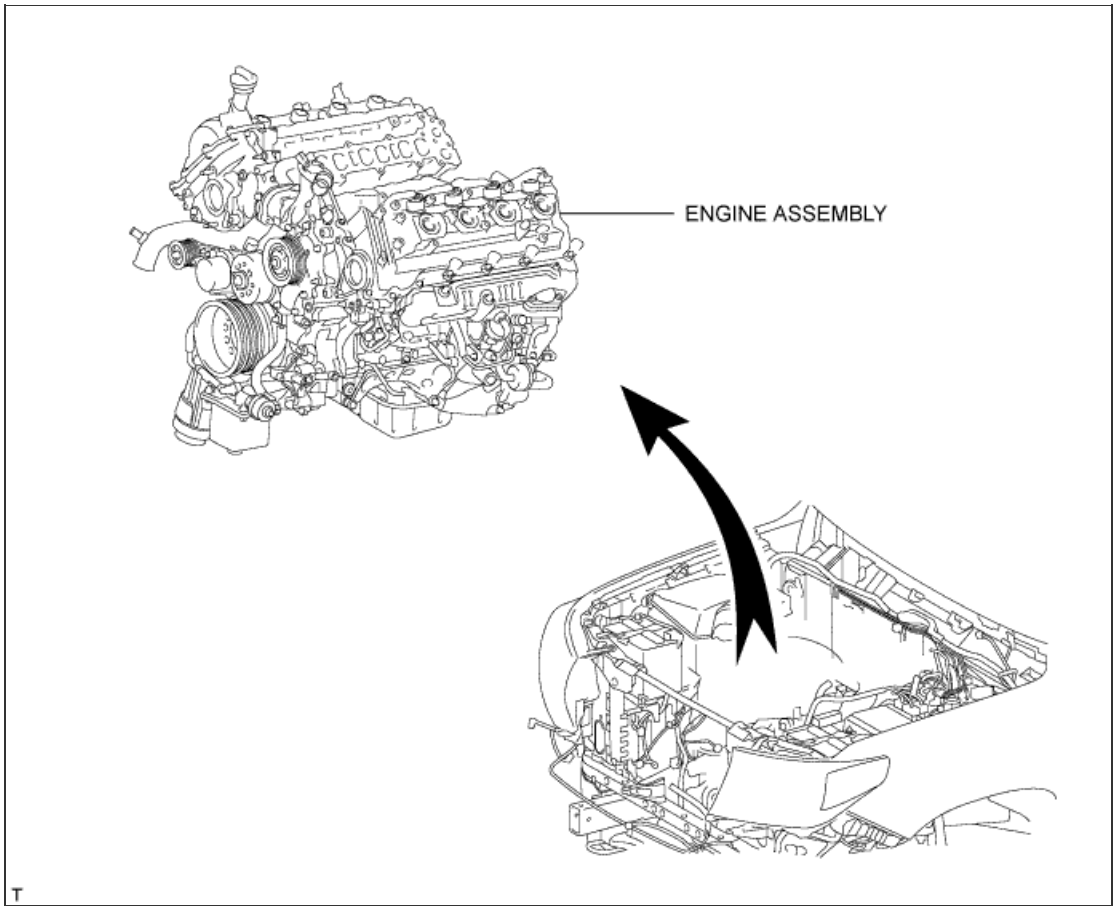
a. Warm up the engine, stop the engine and wait 5 minutes. The engine oil level should be between the dipstick low level mark and full level mark.
If low, check for leakage and add oil up to the full level mark.

NOTICE:

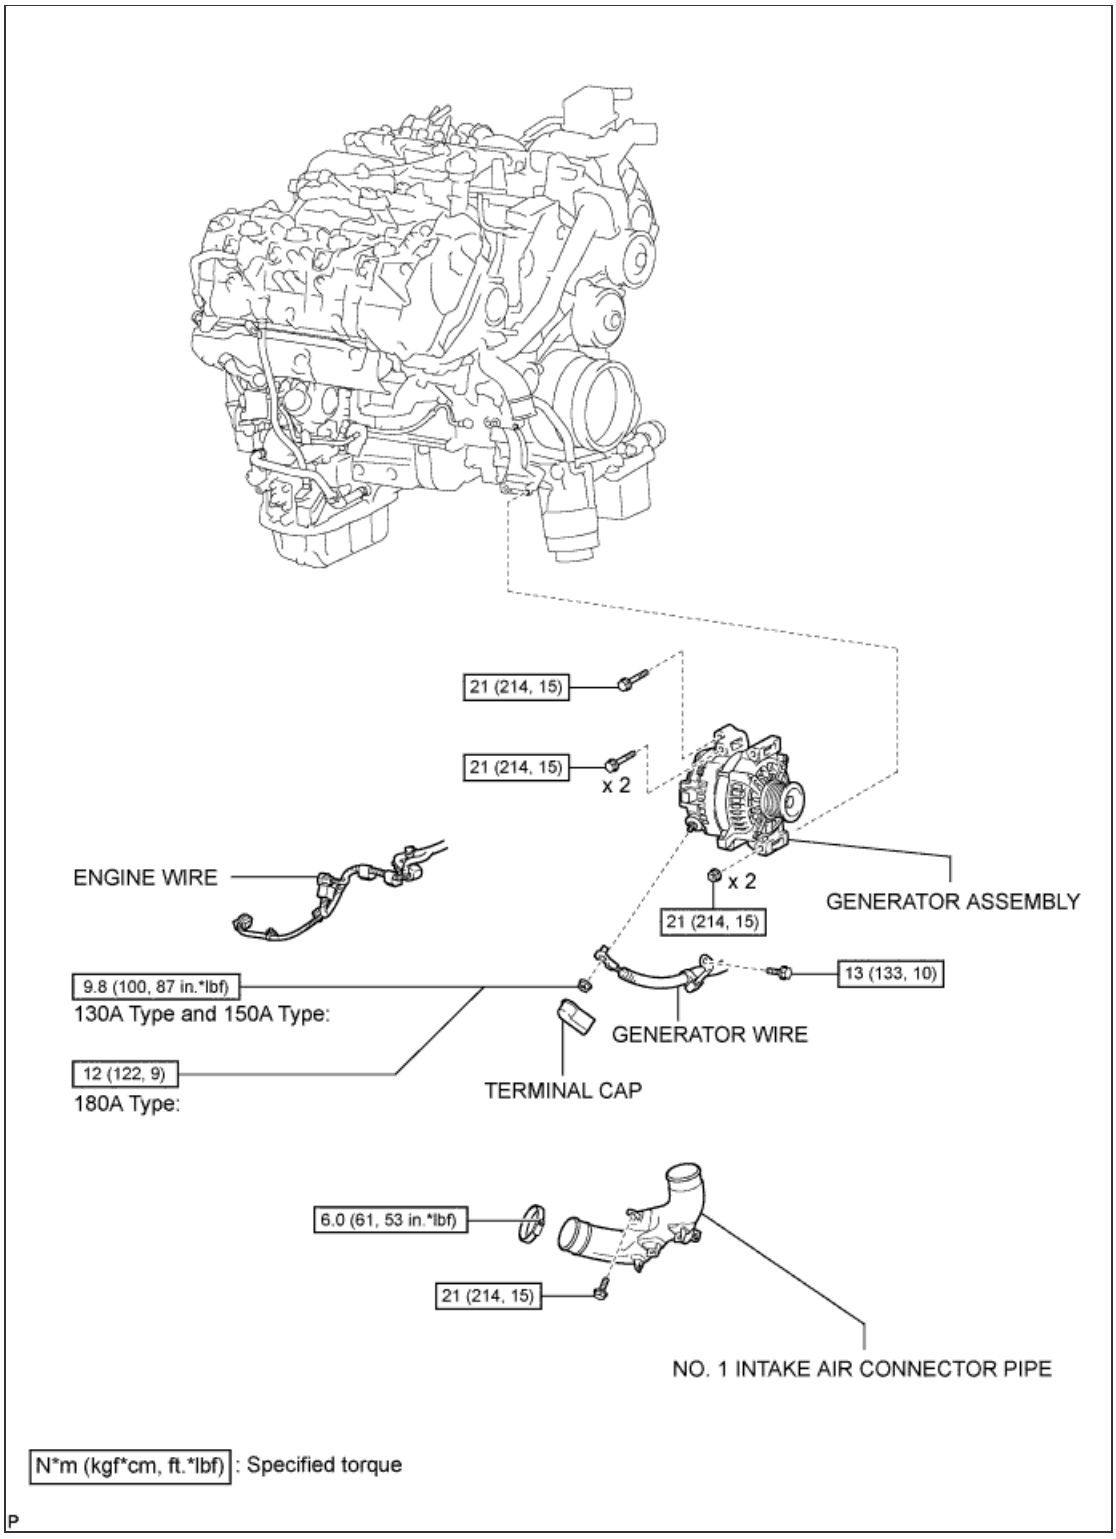


Do not fill engine oil above the full level mark.

96. INSPECT ENGINE COOLANT LEVEL IN RESERVOIR



a. Check that the engine coolant level is between the LOW and FULL lines when the engine is cold.
If the engine coolant is low, check for leaks and add TOYOTA Super Long Life Coolant (SLLC) or similar high uality ethylene glycol based non silicate, non amine, non nitrite and non brate coolant with long life hybrid organic acid technology to the FULL line.



NOTICE:

Do not substitute plain water for engine coolant.

P

for Preparation Click here

CAUTION:

When replacing an injector (including interchanging injectors between cylinders), common rail, cylinder head, or intake manifold, replace the corresponding injection pipes with a new one.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

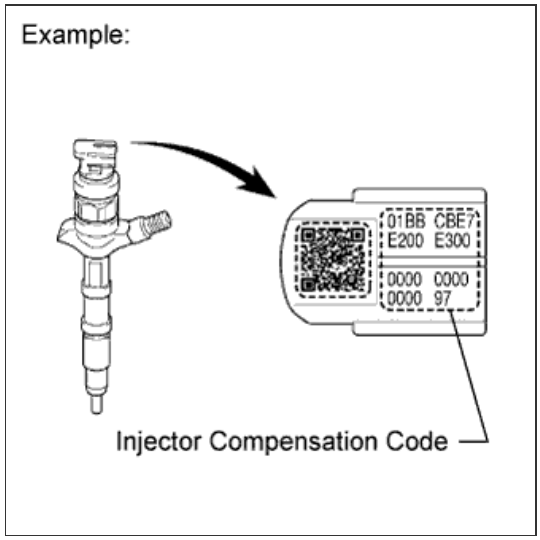
CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

a. Disconnect the cables from the negative (-) main battery and sub-battery terminals.



2. REMOVE ENGINE ASSEMBLY

a. Remove the engine assembly from the vehicle (Click here).

3. CHECK INJECTOR COMPENSATION CODE

NOTICE:

- **When a fuel injector is replaced, the new fuel injector compensation code must be input into the ECM. When the ECM is replaced, all of the existing fuel injector compensation codes must be input into the new ECM.**
- **Fuel injector compensation codes are unique, 30 digit, alphanumeric values printed on the head portion of each fuel injector. If an incorrect fuel injector compensation code is input into the ECM, the engine assembly may rattle or engine idling may become rough. In addition, engine failure may occur and the life of the engine may be shortened.**

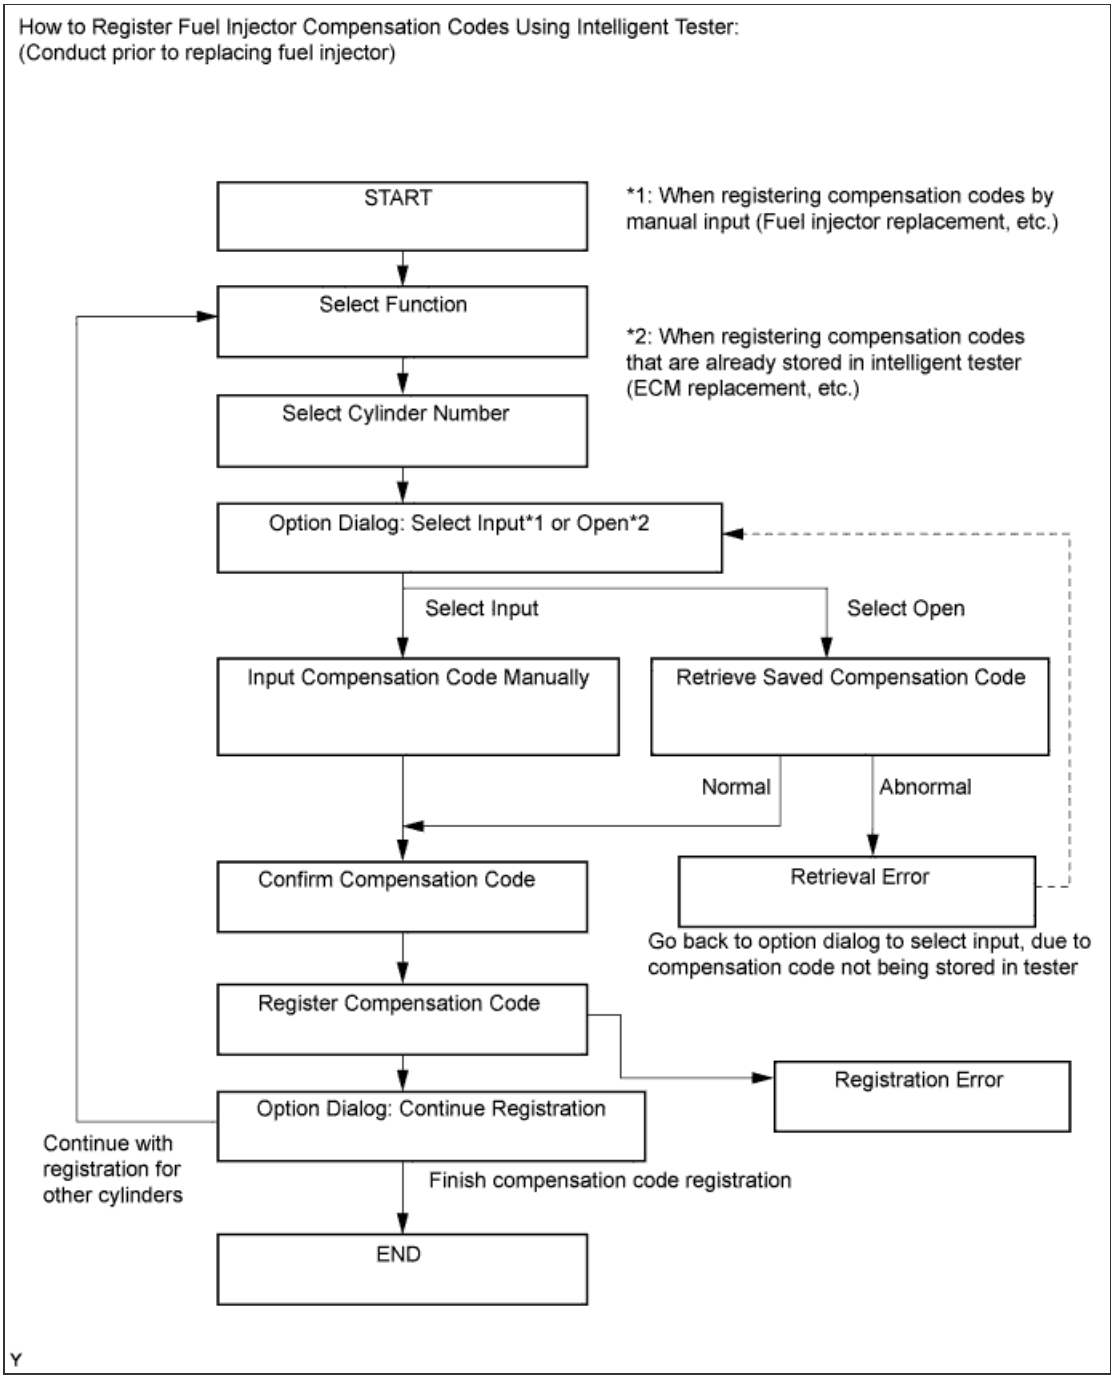
a. After replacing fuel injector(s) with new one(s), input compensation code(s) of fuel injector(s) into ECM as follows:

HINT:

- **Each fuel injector has different fuel injection characteristics. In order to optimize the fuel injections, the ECM uses the compensation codes to balance the different fuel injections between each fuel injector.**
- **When you first turn the ignition switch to ON after replacing the ECM or a fuel injector(s), DTC P1601 is set. This is to inform you that registration of a fuel injector compensation code(s) is/are required. Manually clear the DTC upon completion of the compensation code registration.**

i. Input the compensation code(s), which is/are imprinted on the head portion(s) of the new fuel injector(s), into the intelligent tester.

ii. Input the new compensation code(s) into the ECM using the tester.



iii. Turn the tester off and turn the ignition switch off.

iv. Wait for at least 30 seconds.

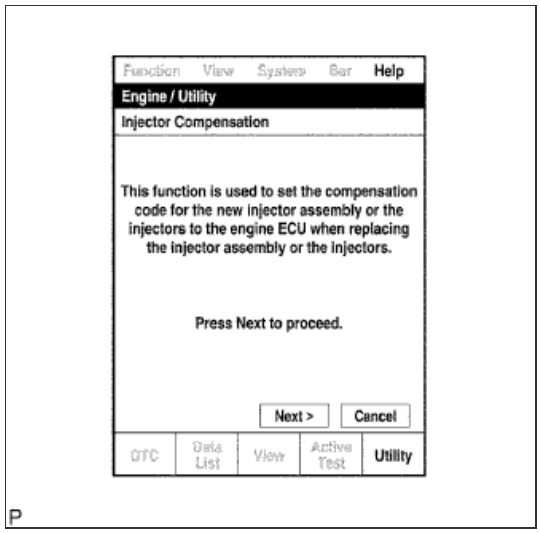
v. Turn the ignition switch to ON and turn the tester on.

vi. Clear DTC P1601 stored in the ECM using the tester (Click here).

b. Register compensation code.

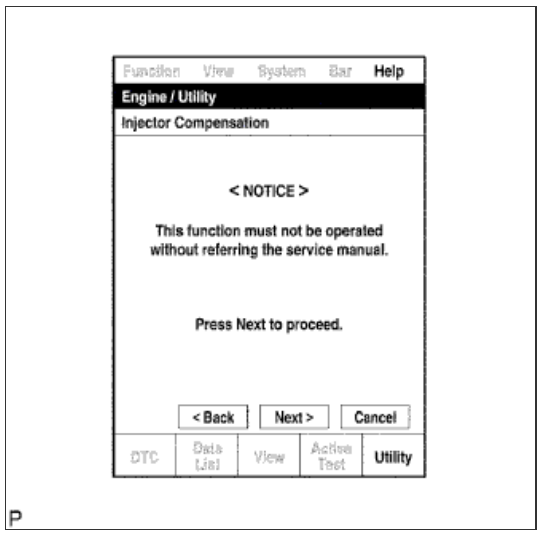
i. Connect the intelligent tester to the DLC3.

ii. Turn the ignition switch to ON.



NOTICE:

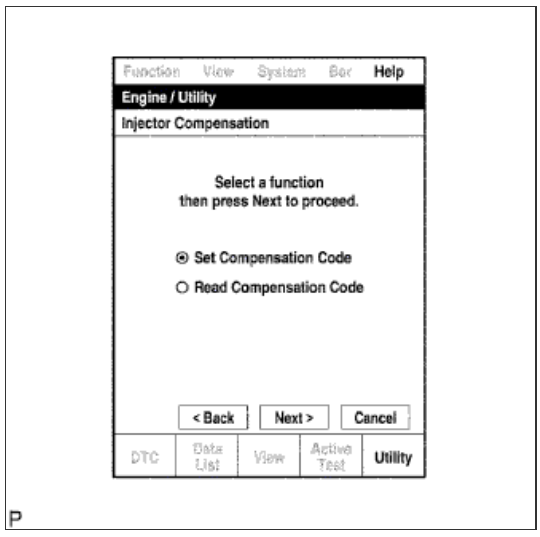
Do not start the engine.



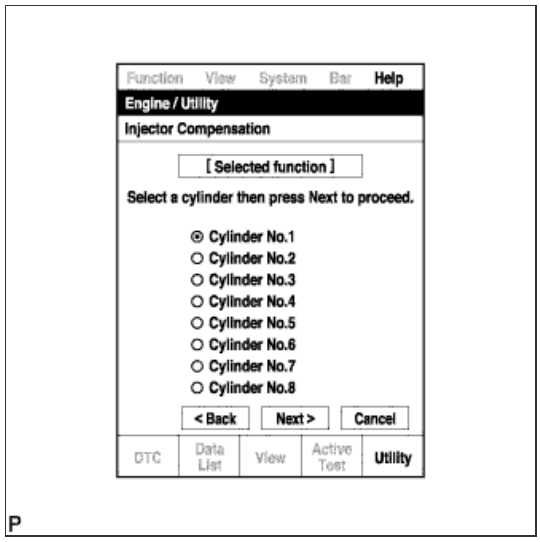
iii. Turn the tester on.

iv. Enter the following menus: Powertrain / Engine / Utility / Injector Compensation.

v. Press Next.

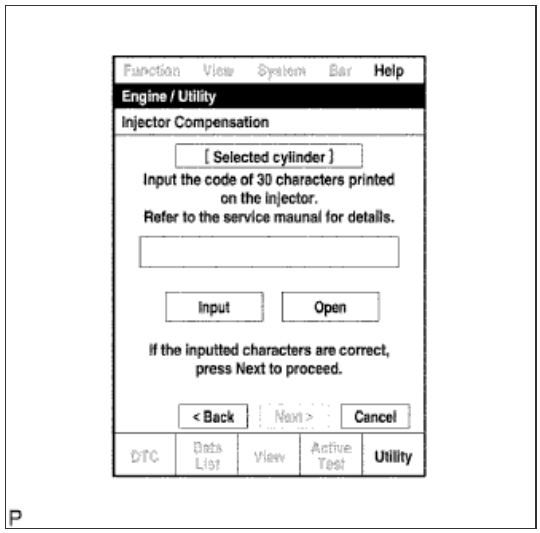


vi. Press Next again to proceed.



vii. Select "Set Compensation Code".

viii. Press Next.



ix. Select the number of the cylinder corresponding to the fuel injector compensation code that you want to read.

x. Press Next.

xi. Register compensation code.

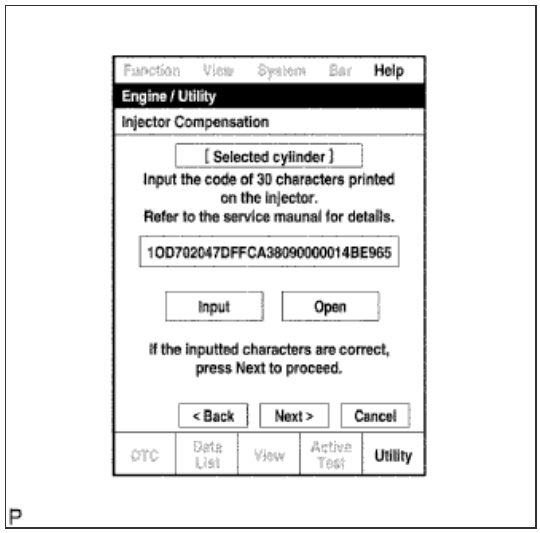
1. Press Input.

2. Manually input the cylinder compensation code using the keyboard on the tester screen. The code is a 30 digit, alphanumeric value printed on the injector head portion.

HINT:

Each fuel injector compensation code is unique. The compensation code for each selected cylinder must be input into the tester correctly.

3. Confirm that the compensation code for the selected cylinder is correct, and then press OK.



xii. Check that the compensation code displayed on the screen is correct by comparing it with the 30 digit alphanumeric value on the head portion of the fuel injector.

NOTICE:

If an incorrect fuel injector compensation code is input into the ECM, the engine may rattle or engine idling may become rough. In addition, engine failure may occur and the life of the engine may be shortened.

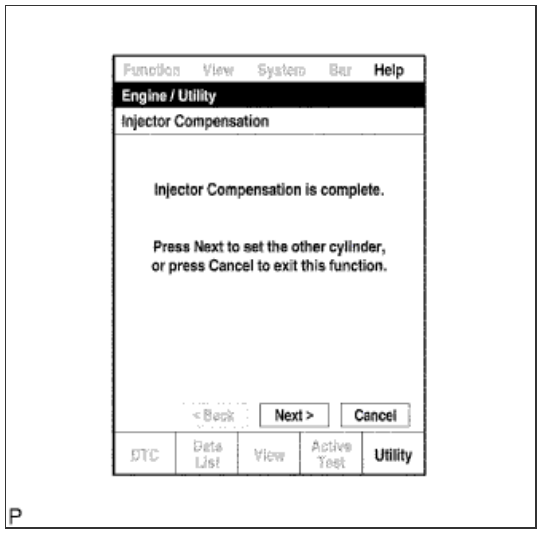
HINT:

- **If a wrong compensation code is input or read, return to the Input Value screen by pressing Input.**
- **The saving process may fail due to a problem with the wire harness or a bad connection with the DLC3. Check the wire harness and DLC3 connection. If no problem is found with either, the ECM may be malfunctioning. Check the ECM and repeat this operation.**

xiii. Press Next to register the compensation code in the ECM.

HINT:

- **If the registration process fails, the compensation code may be incorrect. Check the compensation code again.**
- **If the input compensation code fails to register even though it is input correctly, there may be a problem with the wire harness or a bad connection with the DLC3. Check the wire harness and DLC3 connection. If no problem is found with either, the ECM may be malfunctioning. Check the ECM and restart this operation.**

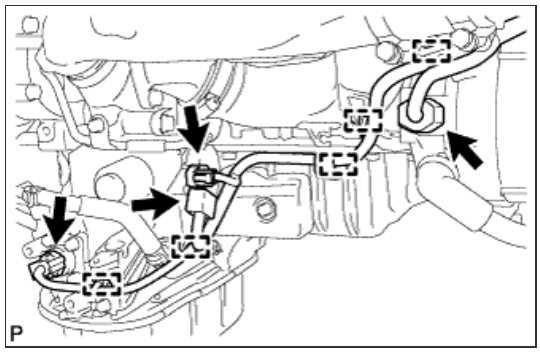


xiv. If you want to continue with other compensation code registrations, press Next. To finish the registration, press Cancel.

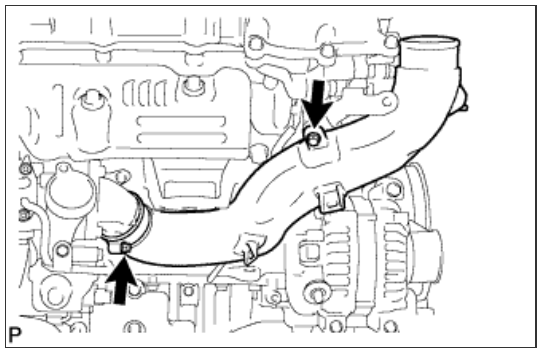
xv. Turn the ignition switch off and then turn the tester off.

xvi. Wait for at least 30 seconds.

xvii. Turn the ignition switch to ON and then turn the tester on.



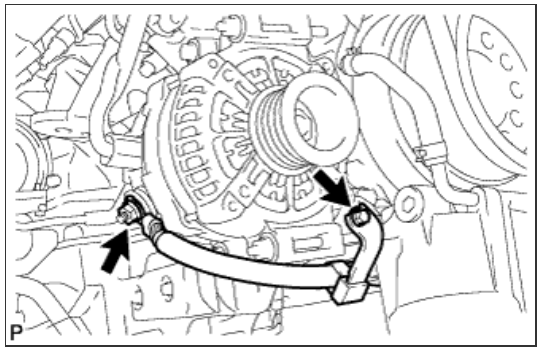
xviii. Clear DTC P1601 stored in the ECM using the tester (Click here).



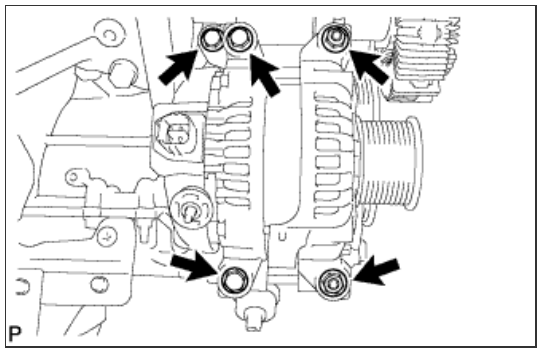
4. REMOVE NO. 1 INTAKE AIR CONNECTOR PIPE

a. Disconnect the 4 connectors.

b. Using a clip remover, detach the 5 wire harness clamps.

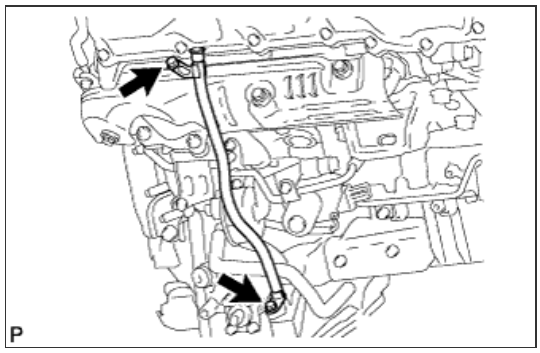


c. Loosen the hose clamp, and remove the bolt and No. 1 intake air connector pipe.

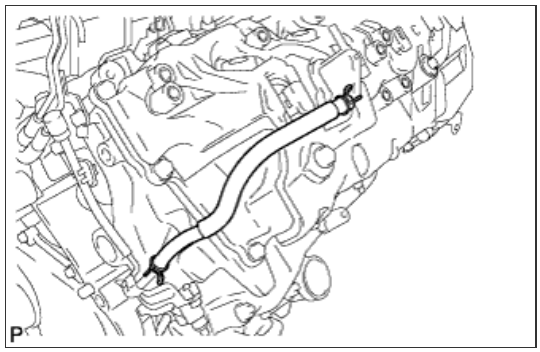


. REMOVE GENERATOR ASSEMBLY

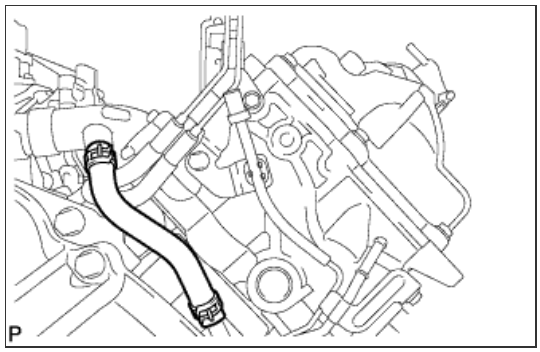
a. Remove the nut and bolt, and disconnect the generator positive (+) cable.



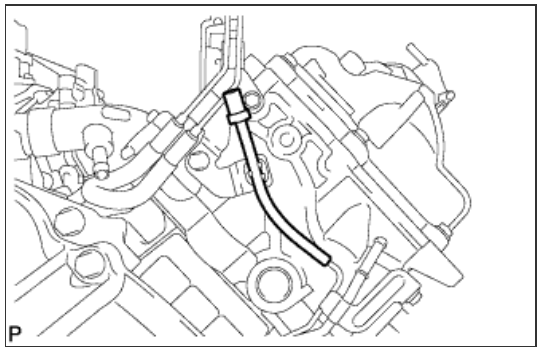
b. Remove the 3 bolts, 2 nuts and generator.



. REMOVE NO. 1 ENGINE OIL LEVEL DIPSTICK GUIDE

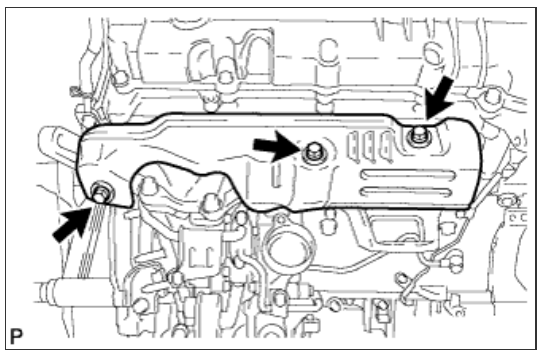


a. Remove the 2 bolts and No. 1 engine oil level dipstick guide.

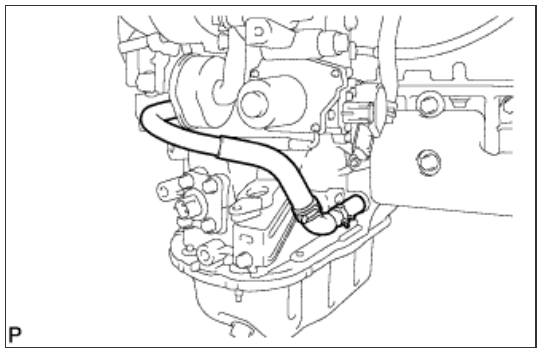


7. DISCONNECT NO. 2 VENTILATION HOSE

8. DISCONNECT NO. 2 TURBO WATER HOSE

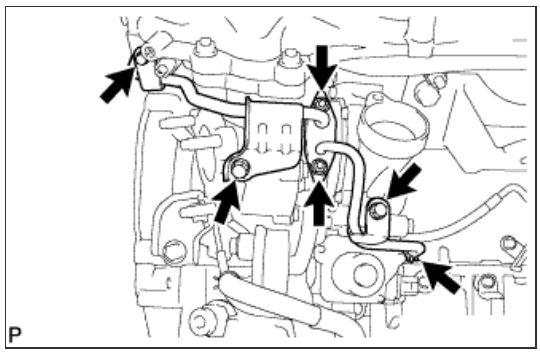


. DISCONNECT BREATHER PLUG RH



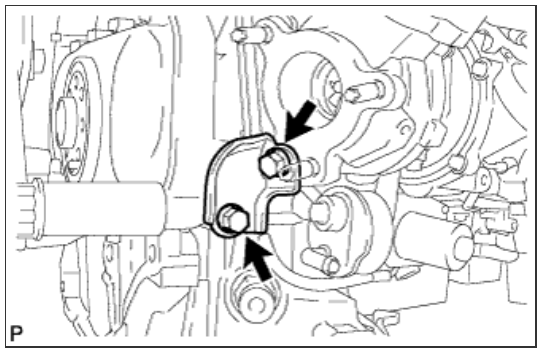
10. REMOVE NO. 1 E HAUST MANIFOLD HEAT INSULATOR

a. Remove the 3 bolts and No. 1 exhaust manifold heat insulator.



11. DISCONNECT NO. 1 OUTLET TURBO OIL HOSE

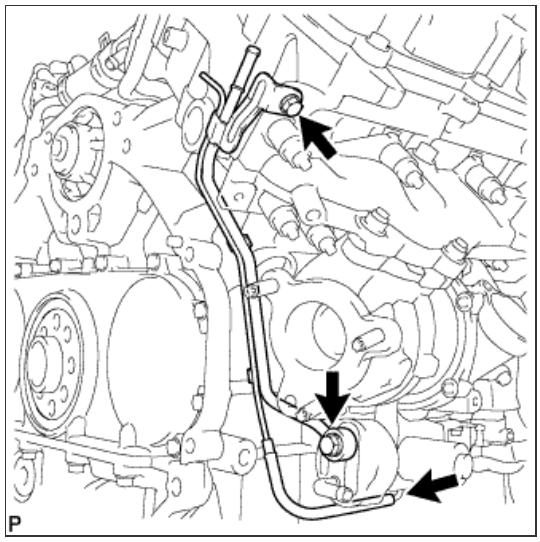
12. REMOVE NO. 1 TURBO WATER PIPE SUB ASSEMBLY



a. Disconnect the water hose.

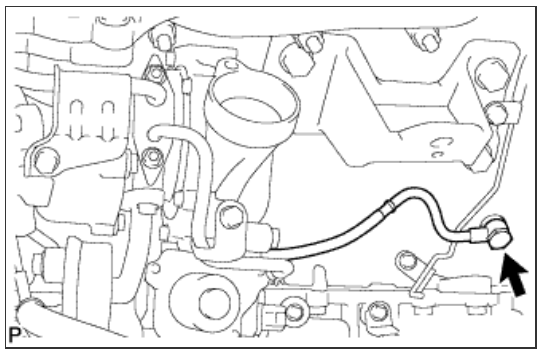
b. Remove the 3 bolts, 2 nuts, No. 1 turbo water pipe and gasket.

13. REMOVE NO. 1 TURBOCHARGER STAY



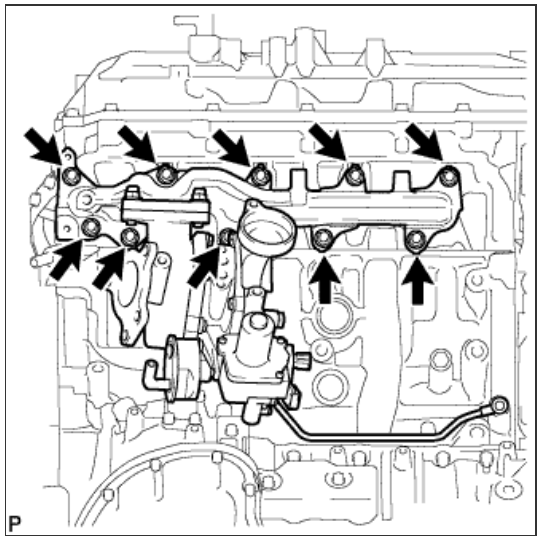
a. Remove the 2 bolts and No. 1 turbocharger stay.

14. REMOVE NO. 1 VENTILATION TUBE SUB ASSEMBLY

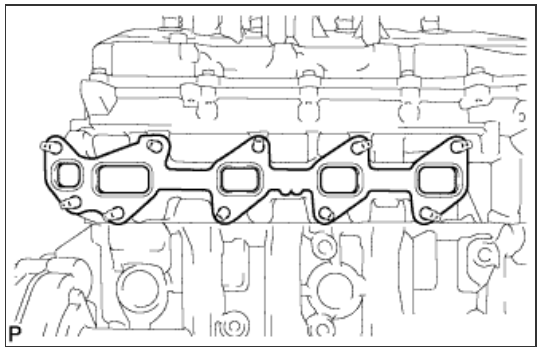


a. Disconnect the vacuum hose.

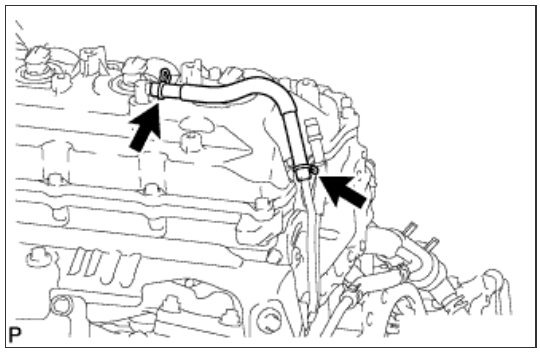
b. Remove the union bolt, bolt, No. 1 ventilation tube and gasket.



1 . REMOVE NO. 1 TURBOCHARGER SUB ASSEMBLY WITH E HAUST MANIFOLD RH



a. Remove the union bolt and gasket, and disconnect the No. 1 inlet turbo oil pipe from the cylinder block.



b. Remove the 10 nuts, 10 collars, and No. 1 turbocharger with exhaust manifold RH.
